ORA-54041: Visibility of an abstract data type column cannot be changed.

Cause: An attempt was made to alter the visibility of an abstract data type column.

Action: Specify the column visibility change with a supported data type.

ORA-54042: Invisible column is not supported on this type of table.

Cause: An attempt was made to create or alter the visibility of a column on an unsupported table type. Invisible columns are only supported for heap and index-organized tables (IOT).

Action: These columns are not supported, change the DDL.

ORA-54043: Including column of an IOT cannot be an invisible column.

Cause: An attempt was made to alter the visibility of the included column of an index-organized table (IOT).

Action: This is not supported.

ORA-54044: Visibility of a column having a column-level object privilege cannot be changed.

Cause: An attempt was made to alter the visibility of a column with a column-level object privilege.

Action: Revoke the column-level object privilege before making the column invisible.

ORA-54045: An invisible column cannot be granted a column-level object privilege.

Cause: An attempt was made to grant a column-level object privilege to an invisible column.

Action: Modify the column to make it visible and then grant the column-level object privilege.

ORA-54046: Column visibility modifications cannot be combined with any other modified column DDL option.

Cause: An attempt was made to combine the modification of the visibility of a column with other modified column property changes.

Action: Separate column visibility modifications into a standalone DDL.

ORA-54047: virtual columns not allowed for XMLType tables with object-relational storage

Cause: An attempt was made to create an object-relational XMLType table with virtual columns.

Action: Do not create virtual columns for XMLType tables with object-relational storage . This feature is not available.

ORA-54048: Column expression modifications cannot be combined with any other column DDL operation.

Cause: An attempt was made to combine the modification of the expression of a column with other column operations.

Action: Separate column expression modifications into a standalone DDL.

ORA-54049: expression edition column is not supported for an external table

Cause: An attempt was made to create or alter an external table with an edition expression column.

Action: These columns are not supported; change the DDL.

ORA-54050: Unsupported type or attribute on redacted column.

Cause: An attempt was made to alter a column with a redaction policy, so as to give that column an unsupported type or attribute. Virtual columns are not supported by data redaction. Columns with the INVISIBLE attribute are not supported by data redaction (this applies to both user-specified hidden columns and system-generated hidden columns). Vector encoded columns are not supported by data redaction.

Action: Specify the name of a non-redacted column, or use the DROP_POLICY PL/SQL procedure in the DBMS_REDACT package to remove the redaction policy from the column before altering it. Look in the REDACTION_POLICIES and REDACTION_COLUMNS catalog views for a list of all redaction policies and redacted columns.

ORA-54051: System-generated virtual column cannot be a primary key.

Cause: An attempt was made to specify a system-generated virtual column * as a primary key.

Action: None

ORA-54052: System-generated functional index virtual column cannot be renamed.

Cause: An attempt was made to rename a system-generated functional index virtual column.

Action: None

ORA-54053: The visibility of a column from a table owned by a SYS user cannot be changed.

Cause: An attempt was made to alter the visibility of a column from a table owned by SYS user.

Action: Execute the DDL on a table not owned by a SYS user.

ORA-54054: System-generated virtual column or guard column cannot be in a constraint.

Cause: An attempt was made to add a constraint containing the system generated virtual column or guard column.

Action: None

ORA-54055: In-Memory virtual column expression cannot refer to a system-generated or hidden column.

Cause: An attempt was made to create a virtual column expression on a system-generated or hidden column.

Action: Avoid creating a virtual column expression on a system-generated or hidden column.

ORA-54056: unsupported operation on sensitive column

Cause: An attempt was made to either alter the visibility of a sensitive column or change the sensitive column to vector encode.

Action: Specify the name of a non-sensitive column, or use the DROP_SENSITIVE_COLUMN PL/SQL procedure in the DBMS_TSDP_MANAGE package to remove the sensitivity of the column before altering it.

ORA-54057: A column which is a audit column of a Fine Grained Auditing policy cannot be modified to an invisible column.

Cause: An attempt was made to modify a column which was a audit column of a FGA policy to an invisible column.

Action: Drop the FGA policy containing the column as audit column before modifying the column.

ORA-54058: '*' not allowed in SELECT expressions without FROM clause

Cause: An attempt was made to use '*' in select expression list without a FROM clause.

Action: Specify explicit columns or expressions in select list that does not include a '*'

ORA-54500 to ORA-56978

ORA-54500: invalid combination of elements

Cause: The geometry did not start from the correct level in the hierarchy.

Action: Correct the hierarchy in the geometry.

ORA-54501: no holes expected

Cause: The geometry contained one or more unexpected holes.

Action: Remove any holes in the geometry.

ORA-54502: solid not closed

Cause: The solid geometry was not closed i.e., faces of solid are not 2-manifold due to incorrectly defined, oriented, or traversed line segment because each edge of a solid must be traversed exactly twice, once in one direction and once in the reverse direction.

Action: Correct the orientation of the edges of the neighboring polygons.

ORA-54503: incorrect solid orientation

Cause: The orientation of the solid was not correct.

Action: Correct the orientation or specification of the outer or inner solid geometry according to the geometry rules for such a solid.

ORA-54504: multiple outer geometries

Cause: The geometry contained more than one outer geometry.

Action: Remove all but one of the outer geometries.

ORA-54505: ring does not lie on a plane

Cause: The ring was not flat.

Action: Make sure all of the vertices of the ring are on the same plane.

ORA-54506: compound curve not supported for 3-D geometries

Cause: The 3-D geometry contained one or more compound curves, which are not supported for 3-D geometries.

Action: Remove all compound curves from the geometry.

ORA-54507: duplicate points in multipoint geometry

Cause: The multipoint geometry had two points that either had identical coordinates or were the same point considering the geometry tolerance.

Action: Make sure all points are different, considering the tolerance.

ORA-54508: overlapping surfaces in a multisolid geometry

Cause: The multisolid geometry contained one or more fully or partially overlapping surfaces.

Action: Ensure that the multisolid geometry contains no overlapping areas.

ORA-54509: solid not attached to composite solid

Cause: To connect solids in a composite solid geometry, at least one of the faces of a solid must be shared (fully or partially) with only another solid. However, at least one of the faces in this composite solid was not shared by exactly two solids only.

Action: Ensure that at least one face in a composite solid is shared by exactly two solids.

ORA-54510: no outer geometry expected

Cause: An outer geometry was found when only inner geometries were expected.

Action: Remove all outer geometries.

ORA-54511: edges of inner and outer solids intersect

Cause: An inner solid had a common edge with outer solid.

Action: Ensure that edges of inner and outer solids do not intersect.

ORA-54512: a vertex of an inner solid is outside corresponding outer solid

Cause: A solid geometry contained an inner solid with at least one vertex outside its corresponding outer solid.

Action: Ensure that all vertices of inner solids are not outside their corresponding outer solid.

ORA-54513: inner solid surface overlaps outer solid surface

Cause: One or more faces of an inner solid surface either fully or partially overlapped an outer solid surface.

Action: Ensure that inner and outer surfaces have no shared (fully or partially overlapping) faces.

ORA-54514: overlapping areas in multipolygon

Cause: A multipolygon geometry contained one or more common (shared, fully or partially overlapped) polygons.

Action: Ensure that no polygons in a multipolygon overlap.

ORA-54515: outer rings in a composite surface intersect

Cause: Outer rings, either on the same plane or different planes, in a composite surface intersected.

Action: Ensure that outer rings do not intersect. They can share edges.

ORA-54516: adjacent outer rings of composite surface cannot be on same plane

Cause: The conditional flag was set, and a composite surface had at least two outer rings sharing a common edge on the same plane.

Action: Change those outer rings into one larger outer ring.

ORA-54517: outer ring is on the same plane and overlaps another outer ring

Cause: An outer ring in a composite surface shared a common area with another outer ring.

Action: Ensure that no outer rings fully or partially overlap.

ORA-54518: shared edge of composite surface not oriented correctly

Cause: A shared edge (one shared by two polygons) in a composite surface was not correctly oriented. Each shared edge must be oriented in one direction with respect to its first polygon and then in the reverse direction with respect to its second polygon.

Action: Reverse one of the directions of the shared edge with respect to its polygons.

ORA-54519: polygon (surface) not attached to composite surface

Cause: Not all polygons of a surface had a common (fully or partially shared) edge.

Action: Ensure that each polygon is attached to the composite surface by one of its edges.

ORA-54520: inner ring not on the same plane as its outer ring

Cause: An inner ring was not on the same plane as its outer ring.

Action: Ensure that each inner ring is on the same plane as its outer ring.

ORA-54521: inner ring is not inside or is touching outer ring more than once

Cause: An inner ring either was not inside its outer ring or touched its outer ring more than once.

Action: Ensure that the inner ring is inside its outer ring and does not touch the outer ring more than once. If an inner ring touches its outer ring more than once, then the outer ring is no longer a topologically simple or singly connected polygon (ring).

ORA-54522: inner rings of same outer ring cannot intersect or share boundary

Cause: Two inner rings of the same outer ring intersected or shared a boundary.

Action: Ensure that line segments of an inner ring do not intersect or fully or partially coincide with line segments of another inner ring sharing the same outer ring.

ORA-54523: inner rings of same outer ring cannot touch more than once

Cause: Two inner rings of the same outer ring touched more than once.

Action: Ensure that inner rings of the same outer ring touch at no more than one point.

ORA-54524: inner ring cannot be inside another inner ring of same outer ring

Cause: An inner ring was inside another ring of the same outer ring.

Action: Ensure that no inner ring is inside another inner ring of the same outer ring.

ORA-54525: incorrect box volume due to wrong ordinates

Cause: The rectangular box in shortcut format did not have its first x,y,z coordinates either all greater or less than its second x,y,z coordinates.

Action: Make sure that the first x,y,z coordinates are either all greater or all less than the second x,y,z coordinates.

ORA-54526: multi or composite geometry must be decomposed before extraction

Cause: The extraction could not be performed because the multi or composite geometry must first be decomposed into simple geometries (with or without inner geometries). The multi or composite geometry had a gtype of GTYPE_MULTISOLID, GTYPE_MULTISURFACE, GTYPE_MULTICURVE, GTYPE_MULTIPOINT, or GTYPE_COLLECTION, or the geometry was a line string.

Action: Use the MULTICOMP_TOSIMPLE parameter to element extractor to decompose the multi or composite geometry to a simple geometry.

ORA-54527: operation not permitted on a simple geometry

Cause: A MULTICOMP_TOSIMPLE parameter to element extractor was attempted on a geometry that is already simple.

Action: Do not use the MULTICOMP_TOSIMPLE parameter to element extractor on simple geometries.

ORA-54528: inner composite surfaces or surfaces with inner ring(s) expected

Cause: An INNER_OUTER parameter to element extractor was attempted on a surface that was not simple or composite.

Action: Ensure that the etype of the geometry for the INNER_OUTER parameter to element extractor is ETYPE_SURFACE or ETYPE_COMPOSITESURFACE.

ORA-54529: geometry should have multi-level hierarchy (like triangle)

Cause: The geometry did not have the multi-level hierarchy required for this operation. For example, if the parameter to element extractor (hierarchy level) is not LOWER_LEVEL, but the geometry etype is ETYPE_SOLID and gtype is GTYPE_SOLID, an extract operation is not allowed, because a simple solid can only be decomposed into lower level geometries, such as composite surfaces.

Action: Ensure that the geometry has the appropriate hierarchy. For example, if the geometry etype is ETYPE_SOLID and gtype is GTYPE_SOLID, the parameter to element extractor (hierarchy level) should be LOWER_LEVEL.

ORA-54530: invalid etype for element at element offset

Cause: An invalid etype was encountered.

Action: Correct the etype of the geometry.

ORA-54531: invalid orientation for element at element offset

Cause: The orientation of the current geometry was not valid.

Action: Reverse the orientation of the geometry.

ORA-54532: incomplete composite surface

Cause: The end of composite surface was reached before all necessary surfaces were defined.

Action: Add more surfaces to match the geometry definition, or reduce the specified number of surfaces.

ORA-54533: invalid etype in composite surface of solid

Cause: The etype of the composite surface of a solid was not valid.

Action: Ensure that the etype is orient*1000+ETYPE_SOLID, where orient is 1 for outer solid and 2 for inner solid.

ORA-54534: incorrect box surface due to wrong specification

Cause: The elemInfo definition was not correct for the surface of the axis aligned box.

Action: Change the interpretation to 3 in the elemInfo definition.

ORA-54535: incorrect box surface because it is on arbitrary plane

Cause: The axis aligned box surface was not on the yz, xz, or xy plane.

Action: Ensure that the first and fourth coordinates, or the second and fifth coordinates, or the third and sixth coordinates are the same. This means that the surface is on the yz, xz or xy plane, respectively.

ORA-54536: axis aligned box surface not defined properly

Cause: The inner geometry etype did not start with 2, or the outer geometry etype did not start with 1, or both occurred.

Action: Use the correct etype for the inner and outer geometries.

ORA-54537: incorrect box surface due to wrong orientation

Cause: The rectangular surface in shortcut format did not have its first x,y,z coordinates all greater than or equal to or all less than or equal to its second x,y,z coordinates.

Action: Ensure that the first x,y,z coordinates are either all greater than or equal to or all less than or equal to the second x,y,z coordinates.

ORA-54538: unexpected gtype

Cause: The gtype of the geometry was not GTYPE_SOLID, GTYPE_SURFACE, GTYPE_CURVE or GTYPE_POINT.

Action: Correct the elemInfo array to fix any invalid gtype and etypes that violate the geometry hierarchy.

ORA-54539: cannot process the geometry(s) for this operation

Cause: The geometry had errors in it.

Action: Validate the geometry or geometries to ensure that each is valid.

ORA-54540: at least one element must be a surface or solid

Cause: One of the geometries had holes, and the geometries were neither (A) simple, composite, or multisurfaces, or (B) simple, composite, or multisurfaces. (Surfaces and solids are the only geometries that can have holes. Points and curves cannot have holes.)

Action: Ensure that each geometry having holes is a surface or solid (simple, composite, or multi).

ORA-54545: holes incorrectly defined

Cause: The holes were defined with incorrect etype.

Action: Ensure that the etype is correct in the definition of the inner geometry.

ORA-54546: volume of solid cannot be 0 or less

Cause: The solid geometry having one outer and multiple inner geometries had a negative or zero volume.

Action: Correct the orientation or specification of the outer solid geometry to obey outer geometry rules so that the outer geometry has a positive volume. Additionally, correct the orientation or specification of inner solid geometries to obey inner geometry rules so that each inner geometry has a negative volume.

ORA-54547: wrong input for COUNT_SHARED_EDGES

Cause: The COUNT_SHARED_EDGES parameter value was not 1 or 2.

Action: Ensure that the COUNT_SHARED_EDGES parameter value is either 1 or 2.

ORA-54548: input geometry gtype must be GTYPE_POLYGON for extrusion

Cause: The input geometry gtype was not GTYPE_POLYGON.

Action: Ensure that the gtype of the input polygon is GTYPE_POLYGON.

ORA-54549: input geometry has incorrect elemInfo

Cause: The input 2-D polygon did not have only one outer ring.

Action: Ensure that the input 2-D polygon has only one outer ring.

ORA-54550: input 2-D polygon not valid

Cause: The 2-D polygon violated the rules for polygons and rings.

Action: Correct the polygon definition.

ORA-54551: grdHeight and/or Height array sizes incorrect

Cause: The sizes of grdHeight and Height arrays were not equal to half the size of input 2-D polygon's ordinates array. As a result, each point in the 2-D polygon could not be extruded from the grdHeight entry to the Height entry.

Action: Ensure that the sizes of the grdHeight and Height arrays are half that of input 2-D polygon ordinates array.

ORA-54552: height entries must be >= to ground height entries

Cause: In the definition of a solid, the height values were less than the ground height.

Action: Ensure that that height values are greater than or equal to ground height values.

ORA-54553: incorrect geometry for appending

Cause: The geometry could not be appended to a homogeneous collection (for example, multi-geometry) or to a heterogeneous geometry (for example, collection). In other words, the gtype of the geometry to be appended was neither GTYPE_COLLECTION or GTYPE_MULTI-X (where X is point, curve, surface, or solid).

Action: Ensure that the geometries involved in the append operation have appropriate gtypes.

ORA-54554: arcs are not supported as defined

Cause: An arc was defined in a geometry type in which arcs are not supported. Arcs are supported for 2-D (circle) polygons, 2-D compound polygons, 2-D single arc, and 2-D compound (composite) curves only.

Action: Remove or simplify the arcs.

ORA-54555: invalid geometry dimension

Cause: The geometry did not have three dimensions.

Action: Ensure that geometry has three dimensions.

ORA-54556: operation is not supported for 3-D geometry

Cause: A 3-D geometry was passed into an operation that supports only 2-D geometries.

Action: Check the Spatial documentation for operations that are supported and not supported on 3-D geometries.

ORA-54557: incomplete composite solid

Cause: The end of composite solid was reached before all necessary solids were defined.

Action: Add more solids to match the geometry definition, or reduce the specified number of solids.

ORA-54558: 3D SRID is not found for the corresponding 2D SRID

Cause: In extruding a 2D polygon into a 3D geometry, the SRID conversion function did not find an equivalent 3D SRID of the 2D SRID.

Action: Specify a 2D SRID that has a 3D equivalent

ORA-54559: query element and source geometry cannot be the same

Cause: A query element geometry and a source geometry were the same, which prevented a label pointing query element in the source geometry from being output.

Action: Redefine the query element or the source geometry so that a label can be output.

ORA-54560: query element cannot be a collection or multitype geometry

Cause: A query element was a collection geometry or a multitype geometry. Such geometries are not permitted in a query element because they are at the top of the geometry hierarchy. A query element must be part of the source geometry.

Action: Redefine the query element or the source geometry so that a label can be output.

ORA-54601: CREATE_PC: invalid parameters for creation of Point Cloud

Cause: An invalid or unknown parameter was specified in the creation of Point Cloud.

Action: Check for valid set of parameters.

ORA-54602: CREATE_PC: input points table *string* does not exist

Cause: The specified table for loading points into a Point Cloud did not exist.

Action: Create the points table with appropriate columns, and then create the Point Cloud.

ORA-54603: CREATE_PC: specified total dimensionality cannot exceed 8

Cause: The specified total dimensionality for the Point Cloud exceeded the maximum limit of 8.

Action: Create the Point Cloud with fewer dimensions. You can store the rest in the output points table.

ORA-54604: CREATE_PC: input points table should not be empty

Cause: The input points table had no data.

Action: Insert data into the input points table and then create the Point Cloud.

ORA-54605: CREATE_PC: scratch-tables/views (*string*) exist and need to be dropped

Cause: Transient tables/views from a previous CREATE_PC operation were still in existence.

Action: Delete the invalid Point Cloud from the base table (for cleanup of scratch tables), and initialize and create the Point Cloud again. Alternately, use SDO_UTIL.DROP_WORK_TABLES with oidstring as the parameter.

ORA-54607: CREATE_PC: error fetching data from input points table

Cause: An internal read error occurred during Point Cloud creation.

Action: Contact Oracle Support Services with the error number reported.

ORA-54608: CREATE_PC: error writing Point Cloud LOB

Cause: An internal LOB write error occurred during Point Cloud creation. The cause might be lack of table space.

Action: Look for information from other errors in the stack, or contact Oracle Support Services with the error number reported.

ORA-54609: CREATE_PC: input extent cannot be null

Cause: The extent of the Point Cloud was null.

Action: Specify an extent for the Point Cloud that is not null.

ORA-54610: CREATE_PC: input extent cannot be more than 2-D for geodetic data

Cause: The extent of the Point Cloud was more than 2-D for geodetic data.

Action: Change the extent to 2-D (longitude, latitude).

ORA-54611: INIT: either invalid basetable/schema or they do not exist

Cause: The base table or schema, or both, were invalid strings; or the base table and schema combination did not exist.

Action: Ensure that the specified base table exists in the specified schema before performing the initialization operation.

ORA-54613: INIT: internal error creating DML trigger

Cause: The necessary privileges to create the trigger were not granted.

Action: Grant the necessary privileges to create the trigger. If necessary, contact Oracle Support Services for help with privileges for trigger creation.

ORA-54614: INIT: block table name has to be unique

Cause: The specified block table name was not unique. For example, it might have been used for another block table.

Action: Specify a different block table name.

ORA-54616: INIT: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54617: CLIP_PC: invalid Point Cloud; extent is empty

Cause: The input Point Cloud for the CLIP_PC operation was invalid.

Action: Specify a point cloud that was created using the CREATE_PC procedure.

ORA-54618: CLIP_PC: SRIDs of query and Point Cloud are incompatible

Cause: The Point Cloud and the query geometry had incompatible SRID values.

Action: Change the query SRID to be compatible with that of the Point Cloud.

ORA-54619: CLIP_PC: query and BLKID parameters cannot both be null

Cause: Both the query and BLKID parameters were null in the call to the CLIP_PC operation.

Action: Either specify a query geometry that is not null, or specify a BLKID for use as a query.

ORA-54620: CLIP_PC: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54621: TO_GEOMETRY: TOTAL_DIMENSIONALITY not same as in INIT operation

Cause: The specified TOTAL_DIMENSIONALITY was invalid.

Action: Ensure that the TOTAL_DIMENSIONALITY matches that specified in the call to the initialization operation.

ORA-54622: TO_GEOMETRY: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54623: CREATE_PC: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54640: PARTITION_TABLE utility: invalid input parameters [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54641: PARTITION_TABLE utility: scratch tables exist with oidstr = string

Cause: Scratch tables/views could not be created because they already existed.

Action: Use SDO_UTIL.DROP_WORK_TABLES with the specified oidstr parameter to clean up the scratch tables.

ORA-54642: PARTITION_TABLE utility: invalid SORT_DIMENSION specified

Cause: An invalid string was specified for the SORT_DIMENSION.

Action: Specify the SORT_DIMENSION as 'BEST_DIM', 'DIMENSION_1', 'DIMENSION_2', or 'DIMENSION_3'.

ORA-54643: PARTITION_TABLE utility: invalid WORKTABLESPACE parameter

Cause: An invalid string was specified for the WORKTABLESPACE parameter.

Action: Specify an existing valid tablespace for WORKTABLESPACE (to hold the scratch tables).

ORA-54644: PARTITION_TABLE utility: error in reading input, output tables

Cause: The names for the input/output tables were invalid, or the tables did not exist or did not have the right structure.

Action: Check the Spatial documentation for PARTITION_TABLE.

ORA-54651: CREATE_TIN: invalid parameters specified in creation of TIN

Cause: An invalid or unknown parameter was specified in the creation of the TIN.

Action: Check the Spatial documentation for CREATE_TIN.

ORA-54652: CREATE_TIN: input points table *string* does not exist

Cause: The specified table for loading points into a TIN did not exist.

Action: Create the points table with appropriate columns, and then create the TIN.

ORA-54653: CREATE_TIN: specified total dimensionality cannot exceed 8

Cause: The specified total dimensionality for the TIN exceeded the maximum limit of 8.

Action: Create the TIN with fewer dimensions. You can store the rest in the output points table.

ORA-54654: CREATE_TIN: input points table should not be empty

Cause: The input points table had no data.

Action: Insert data into the input points table, and then create the TIN.

ORA-54655: CREATE_TIN: scratch tables/views(*string*) exist and need to be dropped

Cause: Transient tables from previous CREATE_TIN operation still existed.

Action: Delete the invalid TIN from the base table (for cleanup of scratch tables), and initialize and create the TIN again. Alternately, use SDO_UTIL.DROP_WORK_TABLES with oidstring as its parameter.

ORA-54656: CREATE_TIN: error fetching data from input points table

Cause: An internal read error occurred during TIN creation.

Action: Contact Oracle Support Services with the error number reported.

ORA-54657: CREATE_TIN: error writing TIN LOB

Cause: An internal LOB write error occurred during TIN creation. The cause might be lack of table space.

Action: Look for information from other errors in the stack, or contact Oracle Support Services with the error number reported.

ORA-54658: CREATE_TIN: input extent cannot be null

Cause: The extent of the TIN was null.

Action: Specify an extent for the TIN that is not null.

ORA-54659: CREATE_TIN: input extent has to be 2-D for geodetic data

Cause: The extent of the TIN was more than 2-D for geodetic data.

Action: Change the extent to 2-D (longitude, latitude).

ORA-54660: CLIP_TIN: invalid Point Cloud; extent is empty

Cause: The input TIN for the CLIP_TIN operation was invalid.

Action: Specify a TIN that was created using the CREATE_TIN operation.

ORA-54661: CLIP_TIN: SRIDs of query and TIN are incompatible

Cause: The TIN and the query geometry had incompatible SRID values.

Action: Change the query geometry SRID to be compatible with that of TIN.

ORA-54662: CLIP_TIN: query and blkid parameters cannot both be null

Cause: Both the query and blkid parameters were null in the call to the CLIP_TIN operation.

Action: Either specify a query geometry that is not null, or specify a blkid for use as a query.

ORA-54663: CLIP_TIN: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54664: TO_GEOMETRY: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54665: CREATE_TIN: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54666: query gtype is a superset of the source geometry

Cause: A query element geometry was at a higher level in the geometry hierarchy than the source geometry.

Action: Try replacing the source geometry with the query geometry.

ORA-54667: query element cannot be matched to an element in source geometry (string)

Cause: A query element geometry was not a part of the source geometry.

Action: Redefine the query element or the source geometry.

ORA-54668: a 2D SRID cannot be used with a 3D geometry

Cause: A 2D SRID was used with a 3D geometry.

Action: Replace the 2D SRID with an appropriate 3D SRID.

ORA-55150: Spatial Web Services operation failed: string

Cause: There was an error in the Spatial Web Services operation or the parameters.

Action: Check the error message and take the appropriate action or contact Oracle Support Services.

ORA-55151: WCS is not enabled.

Cause: Web Coverage Service (WCS) metadata tables were not found.

Action: Ensure that WCS is enabled in the proper schema.

ORA-55152: WCS temporary tables do not exist.

Cause: The Web Coverage Service (WCS) operation required temporary tables, but these tables did not exist.

Action: Ensure that the WCS temporary tables exist in the schema of the coverage, and that the WCS schema has privileges to create, update, and delete rows in the WCS temporary tables.

ORA-55153: WCS publish coverage failed: *string*

Cause: Web Coverage Service (WCS) parameter values were invalid, the user had insufficient privileges, or the coverage was already published.

Action: Ensure that all parameter values are not null, the WCS schema has privileges to access the coverage, and the coverage is not already published. The schema of the coverage must grant access privileges to the WCS schema.

ORA-55154: Request to grant or revoke privileges failed: *string*

Cause: Parameters were invalid or privileges were insufficient.

Action: Check the error message to ensure that the parameters are valid and the user has sufficient privileges.

ORA-55160: MDSYS.SDO_XSD_TABLE does not exist or the specified XSD ID is incorrect.

Cause: The XML schema could not be found.

Action: Ensure that Oracle Spatial is installed properly, and check the XSD_ID column of the SDO_XSD_TABLE table and the USER_SDO_CSW_SERVICE_INFO view.

ORA-55161: CSW user table: *string*

Cause: Either the Catalog Services for the Web (CSW) user table, the SRID parameter, the metadata ID, or the XML schema definition (XSD) type was incorrect.

Action: Check the error message and take the appropriate action on the CSW user table name, SRID, metadata ID, XSD, or XML column.

ORA-55162: The XQFT index cannot be dropped or created for the CSW user table.

Cause: The XQuery Full Text (XQFT) index could not be dropped or created for the Catalog Services for the Web (CSW) user table.

Action: Ensure that the user table is ready for dropping or building an XQFT index.

ORA-55163: CSW server-side error: *string*

Cause: A Catalog Services for the Web (CSW) server-side error occurred.

Action: Ensure that the CSW metadata is correct and the CSW user table is properly defined.

ORA-55164: CSW client-side error: *string*

Cause: A Catalog Services for the Web (CSW) client-side error occurred.

Action: Ensure that the CSW record types are properly published, and that the sdots.ear file and WebLogic Server (WLS) are properly configured.

ORA-55200: Java exception from tag data translation java stack

Cause: Java exceptions.

Action: Turn on java output by calling `dbms_java.set_output(OUTPUT_SIZE)`; Set java logging level by calling `MGD_ID_UTL.setJavaLoggingLevel('INFO')`; Analyze java logging messages.

ORA-55201: Tag data translation category not found

Cause: No matching category ID could be found.

Action: Make sure the input category name, category version or category ID is correct.

ORA-55202: Tag data translation scheme not found

Cause: No matching scheme could be found for the input data format.

Action: Make sure the input data format is supported and correct.

ORA-55203: Tag data translation level not found

Cause: No matching level could be found for the input data format.

Action: Make sure the input data format is supported and correct.

ORA-55204: Tag data translation option not found

Cause: No matching option could be found for the input data format.

Action: Make sure the input data format is supported and correct.

ORA-55205: Tag data translation field validation failed

Cause: Invalid field value.

Action: Make sure the field value of the input data is within the range specified in the tag data translation XML.

ORA-55206: Tag data translation field not found

Cause: Invalid input field.

Action: Make sure the spellings of the input fields are correct.

ORA-55207: Tag data translation rule evaluation failure

Cause: Error occurred when idcode translator tried to evaluate the rule specified in the tag data translation XML.

Action: Java proxy must be set in order to evaluate manager look up rules. Call `MGD_ID_UTL.setProxy(PROXY_HOST, PROXY_PORT)` to enable java proxy.

ORA-55208: Too many matching levels were found for the input data

Cause: Necessary field values were missing.

Action: Add additional field value pairs that are necessary to determine a unique matching level.

ORA-55300: model *string* does not exist

Cause: The specified model could not be found.

Action: Make sure that the model has been created.

ORA-55301: rulebase *string* does not exist

Cause: The specified rulebase could not be found.

Action: Make sure that the rulebase has been created.

ORA-55302: insufficient privileges *string*

Cause: Sufficient privileges were not granted.

Action: Ask the database administrator to grant the appropriate privileges.

ORA-55303: SDO_RDF_TRIPLE_S constructor failed: *string*

Cause: SDO_RDF_TRIPLE_S constructor failed.

Action: Check the stack trace for additional information.

ORA-55304: specified reuse-bNode model-id *string* != target model-id *string*

Cause: The reuse-bNode model-id specified for the SDO_RDF_TRIPLE_S constructor was neither 0 nor the model-id of the target model.

Action: Make sure that the reuse-bNode model is either 0 or the model-id of the target model.

ORA-55305: reification constructor functions not supported

Cause: Unsupported reification constructor functions were used.

Action: Insert each triple in the reification quad individually. See documentation for more information.

ORA-55306: internal error: invalid *string*: value_name=*string* value_type=*string*

Cause: The value type of this component of the RDF triple was invalid.

Action: This is an internal error. Contact Oracle Support Services.

ORA-55307: invalid value type for lexical value: *string*

Cause: The value type of this lexical value was invalid.

Action: Make sure that the lexical value format is correct. If this error occurs during bulk load from a staging table, then this may be an internal error. Contact Oracle Support Services.

ORA-55308: invalid time zone *string* for lexical value *string*

Cause: The time zone of this lexical value was invalid.

Action: Make sure that the lexical value format is correct. If this error occurs during bulk load from a staging table then this may be an internal error. Contact Oracle Support Services.

ORA-55309: hash collision resolution failed for lexical value *string*

Cause: Attempts to resolve hash collision exceeded the maximum retry count.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55310: parse failed for the *string* lexical value: *string*

Cause: Attempts to insert the specified lexical value failed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55311: invalid value type *string* for long lexical value *string*

Cause: The value type of this long (length > 4000) lexical value was invalid.

Action: Make sure that the long value has a valid value type.

ORA-55312: parse failed for triple: id-form: *string string string*

Cause: Attempts to insert triple failed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55313: SDO_RDF_TRIPLE_S constructor failed to process triple containing bNode

Cause: The SDO_RDF_TRIPLE_S constructor without bNode reuse option was invalid for triple containing bNode.

Action: Use SDO_RDF_TRIPLE_S constructor that allows bNode reuse.

ORA-55314: invalid temporary table name (*string*) for use with batch load

Cause: Specified temporary table name was not valid.

Action: See documentation for rules for temporary table name validity.

ORA-55315: batch load attempt failed: *string*

Cause: The batch load operation failed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55316: model *string* does not match model *string* for table and column

Cause: This column of the table was not associated with the specified model.

Action: Make sure to use the correct target model.

ORA-55317: model *string* already exists

Cause: A model with the specified name was already present.

Action: Choose a different model name, or delete the existing model and create a new model with the specified name.

ORA-55318: column *string* in table *string* already contains data

Cause: At model creation time, the table column contained data.

Action: Ensure that the table column does not contain data before model creation.

ORA-55319: model *string* create attempt failed: *string*

Cause: The attempt to create the specified model did not succeed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55320: model *string* drop attempt failed: *string*

Cause: The attempt to drop the specified model did not succeed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55321: network already exists

Cause: Attempt to create the network failed because the network already existed.

Action: If necessary, drop the network before trying to recreate the network.

ORA-55322: model(s) exist

Cause: An attempt was made to drop a network that contained one or more models.

Action: Drop all the model(s) and then retry the operation.

ORA-55323: rulebase(s) exist

Cause: An attempt was made to drop a network that contained one or more rulebases.

Action: Drop all the rulebase(s) and then retry the operation.

ORA-55324: no rulebases specified

Cause: Rulebases for the operation were not specified.

Action: Specify at least one rulebase.

ORA-55325: rulebase or rules index *string* already exists *string*

Cause: A rulebase or rules index with the specified name already existed.

Action: Choose a different name, or delete the existing rulebase or rules index.

ORA-55326: rules index (*string*) create attempt failed: *string*

Cause: The attempt to create the specified rules index did not succeed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55327: rule *string* yields a triple with a literal subject or predicate

Cause: The specified rule created an invalid triple containing a literal in the subject or predicate position.

Action: Check and modify the rule to avoid creation of invalid triple.

ORA-55328: literal value *string* insert attempt failed

Cause: The attempt to create the specified literal value failed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55329: same model *string* specified more than once in the list of models

Cause: The specified model occurred more than once in the list of models.

Action: Eliminate duplicate occurrences of the model in the list of models.

ORA-55330: rulebase or rules index *string* is busy

Cause: The specified rulebase or rules index was busy and could not be used.

Action: Retry your operation later.

ORA-55331: user owns RDF objects

Cause: The user could not be dropped because it owns RDF objects.

Action: Drop the RDF objects and then retry.

ORA-55332: virtual model cannot be used in this context

Cause: A virtual model was used as input instead of a model.

Action: Use a model as input.

ORA-55333: virtual model *string* does not exist

Cause: The specified virtual model could not be found.

Action: Make sure that the virtual model has been created.

ORA-55334: virtual model name *string* is invalid

Cause: The specified virtual model name was not valid.

Action: Check Oracle documentation for valid virtual model names.

ORA-55335: at least one model must be specified

Cause: An empty list of models was specified as the set of models for a virtual model.

Action: Make sure at least one model appears in the set of models used to create a virtual model.

ORA-55336: insufficient privileges for using one or more of the models and rules indexes

Cause: An attempt was made to create a virtual model without the appropriate privileges.

Action: Ask the database administrator to perform the operation or to grant the required privileges.

ORA-55337: a virtual model or rules index with the name *string* already exists

Cause: A virtual model or rules index with the specified name was already present.

Action: Choose a different virtual model name.

ORA-55338: a model with the name *string* already exists

Cause: A model with the specified name was already present.

Action: Choose a different virtual model name.

ORA-55339: a virtual model already exists for the specified model-rulebase combination

Cause: A virtual model with identical components was already present.

Action: Choose a different set of components for the new virtual model.

ORA-55340: rules index does not exist for the specified model-rulebase combination

Cause: A rules index did not exist for the specified sets of models and rulebases.

Action: Make sure a rules index is created for the specified sets of models and rulebases.

ORA-55341: label index out-of-range

Cause: An attempt was made to use an out-of-range index for retrieving the label.

Action: Correct the input and try again.

ORA-55342: not a defined label in the policy

Cause: An attempt was made to use an undefined label.

Action: Correct the input and try again.

ORA-55343: invalid dependent component for custom label generator

Cause: An attempt was made to specify an invalid dependent component for the label generator.

Action: Correct the input and try again.

ORA-55344: invalid label generator implementation or use

Cause: An attempt was made to use an invalid label generator to generate labels for inferred data.

Action: Correct the input and try again.

ORA-55345: invalid use of label generator with no OLS policy

Cause: An attempt was made to use a label generator when Oracle Label Security (OLS) was not enabled for Resource Definition Framework (RDF) data.

Action: None

ORA-55346: invalid label generation option with user rules

Cause: An attempt was made to specify an invalid label generation option for entailment involving user rules.

Action: Correct the input and try again.

ORA-55347: missing proof for the specified label generation option

Cause: The chosen label generation option required proof, which was missing for the entailment.

Action: Correct the input and try again.

ORA-55348: label generator error: RDF data not enabled for *string*

Cause: An invalid label generator option was chosen for entailment.

Action: Correct the input and try again.

ORA-55349: OLS not installed or in an invalid state

Cause: Oracle Label Security (OLS) support for Resource Definition Framework (RDF) was not installed.

Action: Consult Oracle documentation to install the Oracle Label Security (OLS) support.

ORA-55350: RDF-OLS table option *string* not supported

Cause: An attempt was made to use an unsupported Oracle Label Security (OLS) option for Resource Definition Framework (RDF) data.

Action: Correct the input and try again.

ORA-55351: RDF secure access option not supported or is invalid

Cause: An attempt was made to use an unsupported secure access option for Resource Definition Framework (RDF).

Action: Correct the input and try again.

ORA-55352: insufficient privileges for policy administration

Cause: The necessary privileges needed to administer Oracle Label Security (OLS) or Oracle Virtual Private Database (VPD) policies for Resource Definition Framework (RDF) data were not specified.

Action: None

ORA-55353: invalid column name for label column *string*

Cause: An attempt was made to use an invalid column to maintain labels for Resource Definition Framework (RDF) data.

Action: Use CTXT2 as the label column.

ORA-55354: Policy *string* does not exist or is inaccessible

Cause: An attempt was made to use a nonexistent policy.

Action: Correct the input and try again.

ORA-55355: RDF network does not exist

Cause: An attempt was made to perform an operation that required Resource Definition Framework (RDF) network to be present.

Action: Create the Resource Definition Framework (RDF) network.

ORA-55356: OLS not enabled for RDF data

Cause: An attempt was made to perform an RDF-OLS-specific operation when Oracle Label Security (OLS) was not enabled for Resource Definition Framework (RDF) data.

Action: None

ORA-55357: insufficient privileges for the current operation

Cause: An attempt was made to perform a Resource Definition Framework (RDF) secure access operation with restricted privileges.

Action: See Oracle documentation.

ORA-55358: model "*string*" is not empty

Cause: An attempt was made to reset Oracle Label Security (OLS) labels for a model with some data.

Action: None

ORA-55359: unauthorized operation with policy *string* - *string*

Cause: An attempt was made to perform an unauthorized DML operation on OLS-enabled Resource Definition Framework (RDF) repository.

Action: None

ORA-55360: invalid value for resource position - *string*

Cause: An invalid value was specified for the resource position while setting labels.

Action: Correct the input and try again.

ORA-55361: duplicate specification for the namespace

Cause: An attempt was made to use a namespace map that contained duplicate specifications.

Action: Remove the duplicate specification of the namespace.

ORA-55362: RDF VPD policy may not be created in the SYS schema

Cause: An attempt was made to create an Oracle Virtual Private Database (VPD) policy in the SYS schema.

Action: None

ORA-55363: context *string* does not exist

Cause: An attempt was made to specify a nonexistent context for the Oracle Virtual Private Database (VPD) policy.

Action: Create the context using CREATE CONTEXT command.

ORA-55364: invalid operation type *string* for VPD policy

Cause: An attempt was made to specify an invalid operation for the application of Oracle Virtual Private Database (VPD) policy.

Action: Specify ALL, QUERY, or DML for operation type.

ORA-55365: invalid metadata for VPD policy

Cause: An attempt was made to define invalid metadata elements for the Oracle Virtual Private Database (VPD) policy.

Action: See Oracle documentation for valid set of metadata elements.

ORA-55366: unknown namespace prefix "*string*"

Cause: An attempt was made to make use of an undefined namespace prefix in Oracle Virtual Private Database (VPD) metadata.

Action: Correct the input and try again.

ORA-55367: invalid maintenance operation for VPD metadata

Cause: An attempt was made to perform an invalid maintenance operation on Oracle Virtual Private Database (VPD) metadata.

Action: Specify ADD or DELETE for VPD metadata maintenance.

ORA-55368: empty match or apply pattern not allowed in a VPD constraint

Cause: An attempt was made to specify an empty match or apply pattern for a Oracle Virtual Private Database (VPD) constraint.

Action: Correct the input and try again.

ORA-55369: invalid identifier specified for the constraint group

Cause: An invalid SQL identifier was specified for the constraint group.

Action: Correct the input and try again.

ORA-55370: input parameter not a zero or positive integer

Cause: The input parameter was not zero or a positive integer.

Action: Change the input parameter to zero or a positive integer.

ORA-55371: RDF rules index '*string*' exists for different model-rulebase combination

Cause: A rules index with the specified name has already been built for a different model-rulebase combination.

Action: Specify a different rules index name, or drop the existing rules index and then create a new rules index with that name.

ORA-55372: entailment (rules index) 'string' already exists

Cause: The entailed graph (rules index) already exists.

Action: Specify a different rules index name, or drop the existing rules index and then create a new rules index with that name.

ORA-55373: inference internal error: string

Cause: An unexpected internal error condition occurred.

Action: Check the error message and the stack trace.

ORA-55374: query constants not in the database; no rows selected

Cause: URIs or literals used in the query did not exist in the database.

Action: Check the query, and ensure that the URIs or literals do exist.

ORA-55375: cannot drop table 'string' because this table owns RDF objects

Cause: A table containing RDF data could not be dropped without first dropping its RDF model.

Action: Drop the corresponding RDF model or models, and then drop the table.

ORA-55376: cannot alter or drop column 'string' because this column owns RDF objects

Cause: A table column containing RDF data could not be altered or dropped without first dropping its RDF model.

Action: Drop the corresponding RDF model or models, and then alter or drop the column.

ORA-55377: number of triples less than 1 or null error indication marker

Cause: An internal error occurred during validation. The number of triples was less than 1 or the error indication marker was null.

Action: Check the input parameters, and ensure that the number of triples is 1 or greater and that the error indication marker is not null; or contact Oracle Support Services.

ORA-55378: invalid error code

Cause: An invalid error code was passed in during validation.

Action: Specify a valid error code.

ORA-55379: too many triples

Cause: An internal error occurred during validation. Too many triples were passed in.

Action: Specify a valid number of triples for the operation, or contact Oracle Support Services.

ORA-55430: query pattern is null

Cause: The query pattern specified in the SEM_MATCH query was null.

Action: Modify the query pattern to be non-null.

ORA-55441: insufficient privileges to drop virtual model string

Cause: An attempt was made to drop a virtual model without the appropriate privileges.

Action: Ask the database administrator to perform the operation or grant the required privileges.

ORA-55442: a virtual model cannot be used with other models in a SEM_MATCH query

Cause: The set of models used as input to a SEM_MATCH query contained a virtual model.

Action: Create a new virtual model with contents that are equivalent to the specified SEM_MATCH model set and query the new virtual model.

ORA-55443: a virtual model cannot be used with a rulebase in a SEM_MATCH query

Cause: A rulebase was specified in conjunction with a virtual model as input to a SEM_MATCH query.

Action: Create a new virtual model that expands the specified virtual model to include the specified rulebase and query the new virtual model.

ORA-55450: continually refreshed workspaces not supported with RDF

Cause: An attempt was made to use continually refreshed workspaces with Resource Definition Framework (RDF) data.

Action: None

ORA-55451: multi-parent workspaces not supported with RDF

Cause: An attempt was made to use multi-parent workspaces with Resource Definition Framework (RDF) data.

Action: None

ORA-55452: batch mode not allowed with version-enabled models

Cause: An attempt was made to batch load data into a version-enabled Resource Definition Framework (RDF) model. This is not supported.

Action: None

ORA-55453: OLS/VPD-enabled indexes must be created with CREATE_ENTAILMENT API

Cause: An attempt was made to create entailment for OLS/VPD-enabled models using unsupported API.

Action: Correct the input and try again.

ORA-55454: version-enabled indexes must be created with CREATE_ENTAILMENT API

Cause: An attempt was made to create entailment for version-enabled models using unsupported API.

Action: Correct the input and try again.

ORA-55455: rules index status not recognized (*string*)

Cause: The specified rules index status was not recognized.

Action: Ensure that the rules index status is VALID, INCOMPLETE, or INVALID, and retry the operation.

ORA-55456: no valid rules index for this model-rulebase combination

Cause: A valid rules index did not exist for specified combination of models and rulebases.

Action: Create a rules index for the specified models and rulebases combination, or use a combination of models and rulebases for which a rules index exists, and retry the operation. Also ensure that the rules index status matches the status for the rules index specified in the query.

ORA-55457: predicate not found in model

Cause: The predicate value passed in as an argument to the semantic operator did not exist in the model.

Action: In the query using semantic operators, use a predicate value that exists in the model and retry the operation.

ORA-55458: object not found in model

Cause: The object value passed in as an argument to the semantic operator did not exist in the model.

Action: In the query using semantic operators, use an object value that exists in the model and retry the operation.

ORA-55459: invalid parameter string

Cause: The parameter string used in the creation of an index of type SEM_INDEXTYPE had invalid or malformed parameters.

Action: See the documentation for information on how to write a valid parameter string.

ORA-55460: incorrect usage of semantic operators

Cause: There was a syntax error in the call to the SEM_RELATED operator

Action: See the documentation for information on how to use the SEM_RELATED operator. Check that the value returned by SEM_RELATED is compared to 1 or 0.

ORA-55461: no distance information available

Cause: Distance information was not generated during rules index creation.

Action: Retry query without the SEM_DISTANCE operator and/or without specifying bounds in the SEM_RELATED operator. See the documentation for information on when distance information is generated.

ORA-55462: internal error

Cause: An internal error occurred during a semantic operator query or during the creation of an index of type SEM_INDEXTYPE.

Action: Contact Oracle Support Services.

ORA-55463: missing privileges for MDSYS schema for OLS-enabled entailment

Cause: An attempt was made to run entailment with insufficient privileges for MDSYS schema.

Action: Grant EXEMPT ACCESS POLICY to MDSYS.

ORA-55464: model "*string*" does not exist

Cause: An attempt was made to use a nonexistent Resource Definition Framework (RDF) model.

Action: Correct the input and try again.

ORA-55465: resource position *string* not secured with OLS policy

Cause: An attempt was made to associate labels with resource positions that were not secured with Oracle Label Security (OLS).

Action: Correct the input and try again.

ORA-55466: one or more triples have incompatible sensitivity label

Cause: An attempt was made to reset a label for a resource that participated in triples with incompatible label.

Action: Correct the input and try again.

ORA-55467: model-specific label for the resource is incompatible

Cause: An attempt was made to set a global label for a resource when an incompatible model-specific label already existed.

Action: Correct the input and try again.

ORA-55468: rule base "*string*" does not exist or is not accessible

Cause: An attempt was made to specify a rule base that did not exist.

Action: Correct the input and try again.

ORA-55469: rule "*string*" does not exist or is not accessible

Cause: An attempt was made to set a label for a rule that did not exist.

Action: Correct the input and try again.

ORA-55470: OLS may not be applied with one or more models VPD-enabled

Cause: An attempt was made to OLS-enable Resource Definition Framework (RDF) repository when one or more models is VPD-enabled.

Action: Oracle Label Security (OLS) and Oracle Virtual Private Database (VPD) may not be used simultaneously.

ORA-55471: OLS may not be applied to version-enabled RDF repository

Cause: An attempt was made to OLS-enable Resource Definition Framework (RDF) repository when one or more models is version-enabled.

Action: Oracle Label Security (OLS) may not be enabled when one or more models is version-enabled.

ORA-55472: Secure access policy already assigned to RDF data

Cause: An attempt was made to assign an Oracle Label Security (OLS) policy to Resource Definition Framework (RDF) data when some other policy was already in effect.

Action: None

ORA-55473: RDF model participating in a virtual model may not be version-enabled

Cause: An attempt was made to version-enable a Resource Definition Framework (RDF) model which participated in a virtual model.

Action: None

ORA-55474: internal error: [string],[string],[string]

Cause: There was an internal error with Resource Definition Framework (RDF) OLS/VPS support.

Action: Contact Oracle Support Services.

ORA-55475: policy with a matching name already exists

Cause: An attempt was made to specify a duplicate Oracle Virtual Private Database (VPD) policy name.

Action: Correct the input and try again.

ORA-55476: policy "string" does not exist

Cause: An attempt was made to use a nonexistent Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55477: policy with dependent models may not be dropped

Cause: An attempt was made to drop an Oracle Virtual Private Database (VPD) policy with dependent models.

Action: Remove the VPD policy from the models and try again.

ORA-55478: application table with multiple RDF models not suitable for VPD

Cause: An attempt was made to VPD-enable a model which shared the application table with another model.

Action: None

ORA-55479: a policy already assigned to the RDF model

Cause: An attempt was made to assign Oracle Virtual Private Database (VPD) policy to a model with a VPD policy already in effect.

Action: None

ORA-55480: model participating in a virtual model may not be VPD-enabled

Cause: An attempt was made to VPD-enable a model that participated in a virtual model.

Action: None

ORA-55481: VPD policy may not be applied for OLS-enabled RDF repository

Cause: An attempt was made to VPD-enable a model with an Oracle Label Security (OLS) policy already in effect.

Action: OLS and VPD may not be used simultaneously.

ORA-55482: VPD may not be applied to version-enabled RDF repository

Cause: An attempt was made to VPD-enable a version-enabled Resource Definition Framework (RDF) repository. This is not supported.

Action: None

ORA-55483: policy "string" not assigned to the model

Cause: An attempt was made to remove an Oracle Virtual Private Database (VPD) policy that was never assigned to the model.

Action: None

ORA-55484: circular dependency not allowed in RDF metadata

Cause: An attempt was made to define metadata elements that had a circular dependency for the Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55485: metadata may not be directly assigned to an equivalent property

Cause: An attempt was made to assign metadata directly to a property that was declared to be an equivalent of another.

Action: None

ORA-55486: metadata exists for the equivalent property

Cause: An attempt was made to make a property equivalent of another when some metadata already existed for this property.

Action: None

ORA-55487: VPD constraints exist for the equivalent property

Cause: An attempt was made to make a property equivalent of another when some Oracle Virtual Private Database (VPD) constraints already existed for this property.

Action: Correct the input and try again.

ORA-55488: metadata definition already exists for the policy

Cause: An attempt was made to add a duplicate metadata definition for an Oracle Virtual Private Database (VPD) policy.

Action: None

ORA-55489: conflicting metadata definition exists for the policy

Cause: An attempt was made to define conflicting metadata definitions for an Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55490: VPD constraint may not be assigned to an equivalent property

Cause: An attempt was made to assign an Oracle Virtual Private Database (VPD) constraint to a property declared to be an equivalent of another.

Action: Assign the VPD constraint to the property that is the target of the equivalent property.

ORA-55491: VPD policy constraint with matching name already exists

Cause: An attempt was made to specify a duplicate name for the Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55492: error creating VPD policy constraint: *string*

Cause: The Oracle Virtual Private Database (VPD) constraint had errors.

Action: See Oracle documentation.

ORA-55493: specified VPD policy constraint does not exist

Cause: An attempt was made to operate on an Oracle Virtual Private Database (VPD) constraint that did not exist.

Action: None

ORA-55494: input model set may only have a unique VPD policy

Cause: An attempt was made to execute a multi-model query where the models, as a set, did not have a unique Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55495: application table with multiple models may not be version-enabled

Cause: An attempt was made to version-enable an application table associated with multiple Resource Definition Framework (RDF) models.

Action: Correct the input and try again.

ORA-55496: unsupported versioning configuration (History/Valid time) for RDF data

Cause: An attempt was made to use an unsupported configuration for Resource Definition Framework (RDF) versioning.

Action: Correct the input and try again.

ORA-55497: RDF repository with an OLS policy may not be version-enabled

Cause: An attempt was made to version-enable a model with Oracle Label Security (OLS) policy.

Action: Versioning is not supported for OLS-enabled Resource Definition Framework (RDF) repository.

ORA-55498: VPD-enabled RDF model may not be version-enabled

Cause: An attempt was made to version-enable a model with an Oracle Virtual Private Database (VPD) policy in effect.

Action: Versioning of VPD-enabled Resource Definition Framework (RDF) models is not supported.

ORA-55500: Event to be used for different trace levels

Cause: None.

Action: Change level for desired tracing in Flashback Transaction Backout.

ORA-55501: Backing out live transaction

Cause: Flashback Transaction Backout was requested on a transaction that has not committed yet.

Action: Commit the transaction before using this feature.

ORA-55502: Specified input transaction by name has no SCN hint

Cause: The specified transaction names for Flashback Transaction Backout was missing an SCN hint.

Action: Provide an SCN hint, and guarantee that the named transactions start before the given SCN.

ORA-55503: Mining finished without seeing specified transactions

Cause: The SCN hit passed was not good. The SCN hit may have come after the start of any of the input transactions.

Action: Give a lesser and more conservative SCN hint, with greater probability of having seen the start of a transaction.

ORA-55504: Transaction conflicts in NOCASCADE mode

Cause: Transactions other than the ones specified conflicts with the specified transactions.

Action: Try using other options like NONCONFLICT_ONLY or CASCADE or NOCASCADE_FORCE.

ORA-55505: DDL done on an interesting object after mining start SCN

Cause: The Flashback Transaction Backout process encountered an interesting object which had its last DDL operation done on it after the mining start time. An interesting object is one that has been modified by either the specified transactions or any of their dependents.

Action: Specify transactions that have committed after the last DDL done on all the objects they touched.

ORA-55506: Transaction performed unsupported change

Cause: A transaction in the dependency DAG performed some action that cannot be backed out. You can back out a transaction, only if undo has been logged for all of its operations. Note some operations do not log undo, such as Insert Direct Load and LOB changes. If you encounter a transaction that has performed any of these operations, you cannot back it out.

Action: The specified transaction cannot be backed out.

**ORA-55507: Encountered mining error during Flashback Transaction Backout.
function:*string***

Cause: Mining error.

Action: None

ORA-55508: Invalid input to Flashback Transaction Backout

Cause: Null varrays passed or invalid input specified

Action: Specify properly formed varrays and valid options

ORA-55509: Creation of dependencies could not finish

Cause: One or more input transaction or any of its dependents are not committed or have been aborted after more than 1 minute of calling the backout function.

Action: Commit all the active transactions associated with this table and try again.

ORA-55510: Mining could not start

Cause: Mining could not start for the following reasons. 1. A logminer session was processing 2. The database was not mounted or not opened for read and write 3. Minimum supplemental logging was not enabled 4. Archiving was not enabled

Action: Fix the mentioned problems and try again. Note that if you enable supplemental logging now, you will not be able to remove a transaction that has committed without supplemental logging.

ORA-55511: Flashback Transaction experienced error in executing undo SQL

Cause: There was a constraint violation exception when executing in NOCASCADE_FORCE mode. Users could also get this error if appropriate supplemental logging is not enabled causing constraint dependencies to go unnoticed.

Action: Either use CASCADE or NONCONFLICT_ONLY options or add appropriate level for supplemental logging.

ORA-55512: Backing out PDML or XA-RAC transaction

Cause: One of the transactions in the dependency graph was a PDML transaction or a local transaction which is a branch of a global XA transaction, spanning multiple RAC instances. Currently flashback transaction does not support this type of transaction.

Action: None

ORA-55513: Backing out an AQ transaction

Cause: One of the transactions in the dependency graph touched an AQ table. As AQ externalizes database information, these transactions are not backed out, as the entire effects of the transaction cannot be seen from inside the database.

Action: None

ORA-55514: Backing out a DDL transaction

Cause: One of the transactions in the dependency graph is a DDL transaction and could not be backed out.

Action: None

ORA-55515: Mining sees input transaction changes without seeing transaction start

Cause: The start SCN provided was higher than the transaction start but below the transaction commit. The result was only partial changes for the given transaction.

Action: Please provide a lower scn hint to flashback transaction.

ORA-55516: Event to dump the LCR's seen by flashback transaction backout to trace file

Cause: None.

Action: Set it to 0 for real flashback transaction. If this is set, flashback transaction will not proceed.

ORA-55517: Internal use

Cause: None.

Action: None

ORA-55518: Mining across reset logs

Cause: Flashback Transaction Backout cannot work with missing changes. This error is thrown if we walk across a reset-logs branch, where we might have missed changes.

Action: If the user knows that the transaction happened in the current reset logs branch, then the SCN-hint is possibly incorrect. Provide an SCN in the current reset log branch.

ORA-55519: Supplemental logging not available for mining SCN range

Cause: Flashback Transaction cannot work if there are regions in the mining range where supplemental logging is not enabled.

Action: If you have provided a SCN/time hint which is approximate and far beyond the specified transaction start time, then readjust the SCN hint and try again. If the system has figured out the transaction start time or you are sure of the range, then the specified transaction cannot be backed out.

ORA-55520: Log record in compatibility lower than 11.0

Cause: The logical change record shows that the compatibility of the mined redo is lower than version 11.0. Flashback transaction works only on redo versions 11.0 and above.

Action: Advance the compatibility and try to back out transactions that have occurred after the compatibility increase.

ORA-55521: Transaction layer temp undo- miscellaneous debug event**ORA-55522: failed to extend temporary undo segment number *string***

Cause: A failure occurred when trying to extend the temporary undo segment.

Action: This is normally followed by another error message that caused the failure. Check the size of default the temporary tablespace.

ORA-55523: Transaction layer parallel transaction- miscellaneous debug event**ORA-55524: Too many recursive autonomous transactions for temporary undo**

Cause: An attempt was made to issue too many recursive autonomous transactions causing the temporary undo segment to be out of slots.

Action: Reconnect to establish a new session and do not use deep nesting of autonomous transactions.

ORA-55525: cannot generate temporary undo in a distributed transaction

Cause: An attempt was made to generate temporary undo in a distributed transaction.

Action: Do not change temporary objects in a distributed transaction.

ORA-55526: temporary tablespace to store temporary undo not available

Cause: An attempt was made to generate temporary undo without adding temporary tablespace in the database.

Action: Add temporary tablespace prior to enabling temporary undo.

ORA-55527: Diagnostic event for external SCN-comparing errors**ORA-55528: maximum number of RECO sessions reached**

Cause: To mitigate a potential denial-of-service (DoS) attack via the recoverer process (RECO), the creation of a new RECO session has been prevented, because the maximum number of RECO sessions has been reached.

Action: If there is a legitimate requirement for additional concurrent RECO sessions, adjust the values for the RECO parameters to allow more RECO sessions.

ORA-55529: value *string* of *string* is outside the valid range of 2 to 32765

Cause: An attempt was made to set the parameter to an invalid value.

Action: Specify a value between 2 and 32765, inclusive.

ORA-55550: Event to be used for testing ktubu extensions

Cause: None.

Action: None

ORA-55551: Trigger 4136 corruption**ORA-55552: Trigger 4137 corruption****ORA-55553: Trigger 4139 corruption****ORA-55554: Trigger 4140 corruption****ORA-55555: Trigger 4152 corruption****ORA-55556: Trigger 4143 corruption****ORA-55557: Trigger 4144 corruption**

Cause: Above events used for testing corruption path

Action: None

ORA-55558: *string* is not a corrupted transaction

Cause: the given transaction is not in the corrupt list v\$corrupt_xid_list

Action: check v\$corrupt_xid_list

ORA-55559: Test proactive txn health check**ORA-55560: Test reactive txn health check****ORA-55561: Test 25027 corruption****ORA-55562: Not able to get TX enqueue, cannot force commit *string*****ORA-55563: *number* is not a valid undo segment number**

Cause: the given usn is not a valid one

Action: check undo\$

ORA-55564: *string* is not a valid transaction id

Cause: the given txn is not a valid one

Action: check txn id

ORA-55565: *string* is not a valid undo segment number

Cause: the given usn is not a valid one

Action: check undo\$

ORA-55566: SQL statement issued when the database was not open for queries

Cause: Tried to access SMON time zone information when database was not open for queries.

Action: Reissue the SQL statement after the database is open for queries.

ORA-55567: The `_highthreshold_undoretention` value should be at least *string* based on the current undo retention settings.

Cause: The `_highthreshold_undoretention` value was not greater than or equal to the `UNDO_RETENTION` setting and the low threshold value used for tuning undo retention.

Action: Reissue the SQL statement with a higher value.

ORA-55568: The maximum query length (mql) value should be at most *string* based on the current `_highthreshold_undoretention` setting.

Cause: The maximum query length (mql in minutes) was not less than or equal to half the `_highthreshold_undoretention` parameter setting.

Action: Reissue the SQL statement with a lower value for mql or increase the value of `_highthreshold_undoretention` parameter.

ORA-55569: The `UNDO_RETENTION` parameter value should be at most *string*, the `_highthreshold_undoretention` setting.

Cause: The `UNDO_RETENTION` parameter value was not less than or equal to the `_highthreshold_undoretention` parameter setting.

Action: Reissue the SQL statement with a lower value for `UNDO_RETENTION` parameter or increase the value of `_highthreshold_undoretention` parameter.

ORA-55570: transaction layer debug trace event

ORA-55571: Oracle Flashback Transaction Query is not supported in a consolidated Oracle database running in shared undo mode.

Cause: The consolidated database was in shared undo mode and Oracle Flashback Transaction Query could not mine undo records across pluggable databases.

Action: The consolidated database must be switched to local undo mode.

ORA-55600: The table "*string*"."*string*" is already enabled for Flashback Archive

Cause: The specified table is already enabled for Flashback Archive.

Action: No action required.

ORA-55601: The table "*string*"."*string*" cannot be enabled for Flashback Archive

Cause: An attempt is made to enable Flashback Archive for a table which should never be enabled for Flashback Archive.

Action: Check the table name.

ORA-55602: The table "*string*"."*string*" is not enabled for Flashback Archive

Cause: An attempt was made to perform Flashback Archive operation on a table on which Flashback Archive is not enabled.

Action: Check the table name.

ORA-55603: invalid flashback archive or valid time period command

Cause: An invalid flashback archive or valid time period command was specified.

Action: Check the SQL statement.

ORA-55604: Incorrect tablespace is specified

Cause: An incorrect tablespace is specified for the Flashback Archive.

Action: Check the SQL statement and verify the possible causes, 1, the tablespace that was already used by the Flashback Archive. 2, the tablespace was not used by the Flashback Archive. 3, the tablespace block size is less than 8K. 4, the tablespace is a lost write tablespace

ORA-55605: Incorrect Flashback Archive is specified

Cause: An attempt was made to operate on a Flashback Archive that does not exist, or to create a Flashback Archive that already exists.

Action: Check the SQL statement.

ORA-55606: Event to modify archiver sleep time in seconds

Cause: 30 seconds is recommended as the archiver sleep time for tests.

Action: The default archiver sleep time is 300 seconds

ORA-55607: Event to enable debugging of archiver

Cause: The purpose of this event is for debugging.

Action: Attach to process specified.

ORA-55608: Default Flashback Archive does not exist

Cause: The default Flashback Archive did not exist.

Action: Create the default Flashback Archive first.

ORA-55609: Attempt to create duplicate default Flashback Archive

Cause: An attempt was made to create a default Flashback Archive while one already exists.

Action: No action required.

ORA-55610: Invalid DDL statement on history-tracked table

Cause: An attempt was made to perform certain DDL statement that is disallowed on tables that are enabled for Flashback Archive.

Action: No action required.

ORA-55611: No privilege to manage default Flashback Archive

Cause: An attempt was made to create, alter, or drop the default Flashback Archive.

Action: No action required.

ORA-55612: No privilege to manage Flashback Archive

Cause: An attempt was made to create, alter, or drop a Flashback Archive.

Action: No action required.

ORA-55613: Invalid Flashback Archive quota size

Cause: An attempt was made to specify invalid Flashback Archive quota size.

Action: Specify size in MB, GB, TB, PB, or EB.

ORA-55614: AUM needed for transactions on tracked tables

Cause: An attempt was made to execute DML on a tracked table without enabling Auto Undo Management.

Action: Disable tracking on the table or enable Auto Undo Management.

ORA-55615: Event to test archiver scheduled internal tasks

Cause: The purpose of this event is for testing.

Action: No action required.

ORA-55616: Transaction table needs Flashback Archiver processing

Cause: Too many transaction table slots were being taken by transactions on tracked tables.

Action: Wait for some amount of time before doing tracked transactions.

ORA-55617: Flashback Archive "*string*" runs out of space and tracking on "*string*" is suspended

Cause: Flashback archive tablespace quota is running out.

Action: Add tablespace or increase tablespace quota for the flashback archive.

ORA-55618: Insufficient privilege to grant Flashback Archive privilege

Cause: An attempt was made to grant Flashback Archive privilege.

Action: No action required.

ORA-55619: Invalid privilege to grant on Flashback Archive

Cause: An attempt was made to grant invalid privilege on a Flashback Archive object.

Action: Specify valid privilege.

ORA-55620: No privilege to use Flashback Archive

Cause: An attempt was made to enable Flashback Archive on a table without such privileges.

Action: No action required.

ORA-55621: User quota on tablespace "*string*" is not enough for Flashback Archive

Cause: An attempt was made to create or alter a Flashback Archive quota which is larger than the user's quota.

Action: No action required.

ORA-55622: DML, ALTER and CREATE UNIQUE INDEX operations are not allowed on table "*string*".*string*"

Cause: An attempt was made to write to or alter or create unique index on a Flashback Archive internal table.

Action: No action required. Only Oracle is allowed to perform such operations on Flashback Archive internal tables.

ORA-55623: Flashback Archive "*string*" is blocking and tracking on all tables is suspended

Cause: Flashback archive tablespace has run out of space.

Action: Add tablespace or increase tablespace quota for the flashback archive.

ORA-55624: The table "*string*". "*string*" cannot be enabled for Flashback Archive at this point

Cause: An attempt was made to enable Flashback Archive again on a table which was just disabled.

Action: Try again later.

ORA-55625: Cannot grant Flashback Archive privilege to a role

Cause: An attempt was made to grant or revoke Flashback Archive privilege to a role.

Action: No action required.

ORA-55626: Cannot remove the Flashback Archive's primary tablespace

Cause: An attempt was made to remove the primary tablespace of the Flashback Archive.

Action: No action required.

ORA-55627: flashback archive tablespace must be automatic segment space management tablespace

Cause: An attempt was made to add a tablespace that was not an automatic segment space management tablespace.

Action: Add tablespace that is created with automatic segment space management.

ORA-55628: Flashback Archive supports Oracle 11g or higher

Cause: An attempt was made to create a Flashback Archive with incorrect compatible mode or without auto undo management.

Action: Use compatible mode equal to 11.0 or higher, and use auto undo management.

ORA-55629: Event to test Flashback Archiver internal management tasks

Cause: The purpose of this event is for testing.

Action: No action required.

ORA-55630: Flashback data archive cannot be enabled on a nested table, temporary table, external table, hybrid-partitioned table, materialized view, advanced queuing table, clustered table, analytic workspace table, or non-table object.

Cause: An attempt was made to enable flashback data archive on an object which is not supported by flashback data archive.

Action: Do not use the FLASHBACK ARCHIVE clause for this object.

ORA-55631: Table has columns with data types that are not supported by Flashback Data Archive

Cause: An attempt was made to add a column of data type that is not supported by Flashback Data Archive. Or, the table on which Flashback Data Archive is being enabled contains column(s) with data types not supported by Flashback Data Archive.

Action: Do not use FLASHBACK ARCHIVE clause for this object. If adding column, do not use LONG or Nested Table column data type.

ORA-55632: Tablespace has Flashback Archive tables

Cause: An attempt was made to remove a tablespace that has Flashback Archive tables.

Action: No action required.

ORA-55633: Cannot do DDL on Flashback Data Archive enabled table

Cause: An attempt was made to do DDL on tracked tables while one DDL is running.

Action: Retry the DDL at a later time.

ORA-55634: Unable to disassociate or re-associate Flashback Data Archive table "*string*"."*string*"

Cause: Either an incorrect table name was used or an exclusive lock on the table could not be acquired.

Action: Check the table name and release locks on the table.

ORA-55635: Flashback Data Archive enabled table "*string*"."*string*" is disassociated

Cause: An attempt was made to perform operation on a Flashback Data Archive enabled table that is currently disassociated for DDL.

Action: Retry the operation at a later time.

ORA-55636: Flashback Data Archive enabled table "*string*"."*string*" has different definition from its history table

Cause: The Flashback Data Archive enabled table has different table definition from its history table.

Action: Fix the table definition.

ORA-55637: Flashback Data Archive enabled table "*string*"."*string*" is not in the correct compliance mode for this operation

Cause: An attempt was made to perform disassociation operation on a Flashback Data Archive enabled table that is in compliance mode. Or, DDL are not supported on tables in noncompliance mode.

Action: Disable compliance mode before retrying the disassociation operation.

ORA-55638: DDL operations on Flashback Data Archive-enabled table are not allowed at this point

Cause: Flashback Data Archive could not acquire resources to complete the operation on Oracle RAC.

Action: Retry the DDL at a later time.

ORA-55639: Flashback Data Archive internal SQL error

Cause: Flashback Data Archive encountered internal SQL error.

Action: No action required.

ORA-55640: Insufficient privilege to perform the Flashback Data Archive operation

Cause: An attempt was made to disassociate tables enabled for Flashback Data Archive without the required privilege.

Action: No action required.

ORA-55641: Cannot drop tablespace used by Flashback Data Archive

Cause: An attempt was made to drop a Flashback Data Archive tablespace.

Action: Remove the tablespace from Flashback Data Archive before retrying the operation.

ORA-55642: Table has column names that are reserved by Flashback Data Archive

Cause: The table on which Flashback Data Archive is being enabled contains column(s) with names that are reserved by Flashback Data Archive.

Action: Rename column name before retry.

ORA-55643: cannot combine Flashback Data Archive operation with other operations

Cause: An attempt was made to combine the Flashback Data Archive operation with other ALTER TABLE operations.

Action: Ensure that Flashback Data Archive is the sole operation specified in ALTER TABLE statement.

ORA-55644: event to enable system column ORA_XID testing

Cause: The purpose of this event was for testing.

Action: No action required.

ORA-55645: Valid time period cannot be enabled on a nested table, temporary table, external table, materialized view, AQ table, clustered table, or non-table object.

Cause: An attempt was made to enable a valid time period on an object which is not supported by valid time period.

Action: Do not use a valid time period for this object.

ORA-55646: application already enabled for flashback archive

Cause: An attempt was made to enable flashback archive on an application for a second time.

Action: No need to enable flashback archive on this application.

ORA-55647: application not previously enabled for flashback archive

Cause: An attempt was made to disable flashback archive on an application that has not been enabled for flashback archive.

Action: No need to disable flashback archive on this application.

ORA-55648: table already added to application

Cause: An attempt was made to add a table to an application for a second time.

Action: Do not add a table to an application more than once.

ORA-55649: table not previously added to application

Cause: An attempt was made to remove a table that has not been added to an application.

Action: No need to remove table from application.

ORA-55650: application not registered for flashback archive

Cause: An attempt was made to access an application that has not been registered for flashback archive.

Action: Register the application before accessing it.

ORA-55651: application already registered for flashback archive

Cause: An attempt was made to register an application for flashback archive for a second time.

Action: No need to register this application for flashback archive.

ORA-55652: application already locked down

Cause: An attempt was made to lock down an application for a second time.

Action: No need to lock down this application.

ORA-55653: application not previously locked down

Cause: An attempt was made to unlock an application that was not previously locked down.

Action: No need to unlock this application.

ORA-55654: too many columns in the base table

Cause: An attempt was made to enable flashback archive on a base table with so many columns that the history table has no room for metadata columns.

Action: Have fewer columns in the base table.

ORA-55655: Flashback archive is being used by an application.

Cause: An attempt was made to drop the flashback archive, however, it was still being used by an application.

Action: Check the SYS_FBA_APP table to see which application is using the flashback archive. Drop the application before dropping the flashback archive.

ORA-55710: Unable to alter system parameter GLOBAL_TXN_PROCESSES at this time

Cause: The system was in the process of adjusting the number of global transaction background processes.

Action: Retry the operation at a later time.

ORA-55711: Unable to bind clusterwide global transactions to compatible undo

Cause: Undo tablespace was not onlined for automatic undo management.

Action: Create undo tablespace if it has not been created.

ORA-55712: XA transactions on RAC are not supported with GLOBAL_TXN_PROCESSES set to 0

Cause: The initialization parameter GLOBAL_TXN_PROCESSES was set to 0.

Action: Set the initialization parameter GLOBAL_TXN_PROCESSES to a value greater than 0.

ORA-55713: GLOBAL_TXN_PROCESSES cannot be set to 0 at runtime

Cause: An attempt was made to set initialization parameter GLOBAL_TXN_PROCESSES to 0 at runtime.

Action: Set the initialization parameter GLOBAL_TXN_PROCESSES to 0 before starting RAC instance to disable GTX background processes. Note that XA transactions are not supported on RAC database when GTX background processes are disabled.

ORA-55714: savepoint '*string*' disabled with interleaved changes across Oracle RAC instances

Cause: After the savepoints were established, interleaved changes were made across Oracle RAC instances within the clusterwide global transaction.

Action: Do not make interleaved changes across Oracle RAC instances after savepoints are established.

ORA-55715: The current transaction cannot become distributed.

Cause: The current local transaction was already bound to an undo segment that was not compatible with clusterwide global transactions.

Action: Ensure that you set UNDO_MANAGEMENT to AUTO and that an undo tablespace is created and configured for the instance.

ORA-55726: Invalid escrow column operation, expected a create table or alter table statement.

Cause: An invalid escrow column operation was specified.

Action: Check the SQL statement.

ORA-55727: DML, ALTER, RENAME, and CREATE UNIQUE INDEX operations are not allowed on the Oracle internal table "*string*".*string*".

Cause: An attempt was made to write to, or alter, or rename, or create unique index on an Oracle internal table.

Action: No action required. Only Oracle is allowed to perform such operations on Oracle internal tables.

ORA-55728: Escrow columns can only be specified on tables with a primary key.

Cause: The referenced table did not have a primary key.

Action: Add a primary key to the table in order to add an escrow column.

ORA-55729: Internal event with level 3 used in escrow read.

Cause: Internal event

Action: Internal event

ORA-55730: Internal event with level 5 used in escrow update.

Cause: Internal event

Action: Internal event

ORA-55731: Escrow update is not supported in a distributed transaction

Cause: Escrow update was issued as part of a distributed transaction or was part of a transaction that is being promoted to a distributed transaction.

Action: Do not perform escrow column updates in a distributed transaction or in a transaction that may be promoted to a distributed transaction. Update the escrow columns in a local transaction.

ORA-55732: Escrow update should specify all the primary key columns

Cause: The escrow update statement did not have a where clause with all the primary key(s).

Action: Add a where clause with all the primary key(s) to the escrow update statement.

ORA-55733: Internal event with level to specify sagaID as input for testing

Cause: Internal event

Action: Internal event

ORA-55734: Escrow column SET clause requires a single expression value to be added or subtracted from the given escrow column. Use parenthesis as appropriate. The SET clause should be of the form $e = e + (\text{expression})$ or $e = e - (\text{expression})$, where e is the escrow column name.

Cause: The amount to be added or subtracted from an escrow column was not provided as a single expression.

Action: Change the update statement by adding parenthesis to specify a single expression that should be added or subtracted from the escrow column.

ORA-55735: Escrow and non-escrow columns cannot be updated in same statement.

Cause: An attempt was made to update both escrow and non-escrow columns in the same update statement.

Action: Update the escrow columns in one update statement and the non-escrow columns in another update statement.

ORA-55736: escrow reservation in "string" failed for the update statement.

Cause: An error occurred when attempting to make the reservation for the escrow update statement.

Action: Please contact Oracle Support with error information.

ORA-55737: Escrow column update statement does not support any hints.

Cause: An attempt was made to specify hints in an escrow column update statement

Action: Remove hints from the update statement.

ORA-55738: Escrow column update statement supports only SET clauses.

Cause: Clauses other than SET were specified in escrow column update statement.

Action: Remove the clauses other than SET clause from the update statement.

ORA-55739: Escrow column update statement does not support PL/SQL row variables.

Cause: An attempt was made to specify a PL/SQL row variable in an escrow column update statement.

Action: Remove the PL/SQL row variable from the escrow update statement.

ORA-55740: Escrow column update statement does not support a list of escrow columns in a single SET clause of the update statement.

Cause: An attempt was made to specify a list of columns to be updated within a SET clause of the escrow column update statement.

Action: Remove the list of columns from the SET clause, instead use a single escrow column in the SET clause.

ORA-55741: Escrow column cannot be a Primary Key.

Cause: An attempt was made to specify an escrow column as a Primary Key.

Action: n/a

ORA-55742: Escrow column update statement does not support explicit default clause.

Cause: An attempt was made to specify a default keyword in an escrow column update statement.

Action: Remove the default keyword from the escrow column update statement.

ORA-55743: Escrow column update statement does not support the RETURNING or RETURN clause.

Cause: An attempt was made to specify a RETURNING or RETURN clause in an escrow column update statement.

Action: Remove the RETURNING or RETURN clause from the update statement.

ORA-55744: Escrow column update statement does not support error logging clause.

Cause: An attempt was made to specify an error logging clause in an escrow column update statement.

Action: Remove the error logging clause from the update statement.

ORA-55745: Escrow column update statement does not support index maintenance clause.

Cause: An attempt was made to specify an index maintenance clause in an escrow column update statement.

Action: Remove the index maintenance clause from the update statement.

ORA-55746: Escrow column update statement supports only + or - operations, not discrete/blind writes.

Cause: An attempt was made to update an escrow column with a blind write. An amount should be added or subtracted from the escrow column.

Action: Change the update statement to be of the form $e = e + (\textit{expression})$ or $e = e - (\textit{expression})$, where the expression in parenthesis evaluates to the amount to be added or subtracted from the given escrow column.

ORA-55747: The SET clause requires the amount to be added or subtracted from the given escrow column in an escrow column update statement.

Cause: An amount was not added or subtracted from the same escrow column.

Action: Change the update statement to add or subtract from the same escrow column. The set clause should be of the form $e = e + (\textit{expression})$ or $e = e - (\textit{expression})$, where the expression in parenthesis evaluates to the amount to be added or subtracted from the given escrow column.

ORA-55748: Escrow column is supported only on columns of types Oracle NUMBER, INTEGER, and FLOAT.

Cause: An attempt was made to specify an escrow column with a datatype other than Oracle NUMBER, INTEGER, or FLOAT.

Action: Use Oracle NUMBER, INTEGER, or FLOAT datatypes for escrow columns.

ORA-55749: Escrow column supports only NOT NULL and CHECK constraints

Cause: An attempt was made to specify a constraint on an escrow column that is not a NOT NULL or CHECK constraint.

Action: Use only NOT NULL and CHECK constraints for escrow columns.

ORA-55750: Cannot specify invisible or visible for escrow columns

Cause: INVISIBLE or VISIBLE was specified for an escrow column.

Action: Remove the INVISIBLE or VISIBLE keyword.

ORA-55751: Escrow column modifications to enable or disable escrow column property cannot be combined with any other modify column Data Definition Language (DDL) option.

Cause: An attempt was made to combine the modification of the escrow or not escrow column property with other modification changes.

Action: Separate escrow column property modifications into a standalone DDL.

ORA-55752: Escrow feature requires PRIMARY KEY constraint on the table.

Cause: An attempt was made to drop the Primary Key constraint of an escrow table.

Action: None

ORA-55754: A concurrent delete or DDL operation is affecting the same row as the escrow update statement, hence the resource busy error was detected.

Cause: A concurrent transaction was issued against row(s) on which an escrow update is pending.

Action: Try the operation after the escrow transaction commits.

ORA-55755: Escrow column is only supported on user tables.

Cause: Escrow column was specified on a non user table.

Action: n/a

ORA-55756: Escrow column is not supported on system tables.

Cause: Escrow column was specified on a system table.

Action: n/a

ORA-55757: Escrow column is not supported in system partitioned and reference partitioned tables.

Cause: Escrow column was specified on a system partitioned or a reference partitioned table.

Action: n/a

ORA-55758: Escrow column is not supported in remote tables.

Cause: Escrow column was specified on a remote table.

Action: n/a

ORA-55759: Escrow column is not supported in fixed tables, external tables and hybrid partitioned tables.

Cause: Escrow column was specified on a fixed table, external table, or a hybrid partitioned table.

Action: n/a

ORA-55760: Escrow column is not supported in temporary tables.

Cause: Escrow column was specified on a temporary table.

Action: n/a

ORA-55761: Escrow column is not supported in materialized views or snapshot logs.

Cause: Escrow column was specified on a materialized view or a snapshot log.

Action: n/a

ORA-55762: Escrow column is not supported in views.

Cause: Escrow column was specified on a view.

Action: n/a

ORA-55763: Escrow column is not supported in Advanced Queue tables.

Cause: Escrow column was specified on an Advanced Queue table.

Action: n/a

ORA-55764: Cannot drop/move an escrow table. First run alter table <table_name> modify (<escrow_column_name> NOT ESCROW) and then drop/move the escrow table

Cause: An attempt was made to drop or move an escrow table.

Action: Run alter table <table_name> modify(<escrow_column_name> NOT ESCROW) before dropping/moving the escrow table.

ORA-55765: Escrow column is not supported in nested tables and object tables.

Cause: Escrow column was specified on a nested table or an object table.

Action: n/a

ORA-55766: Escrow column is not supported in sharded or duplicated tables.

Cause: Escrow column was specified on a sharded or duplicated table.

Action: n/a

ORA-55767: Escrow column is not supported in OLAP tables.

Cause: Escrow column was specified on an OLAP table.

Action: n/a

ORA-55768: Escrow column is not supported in Blockchain or Immutable tables.

Cause: Escrow column was specified on a Blockchain or Immutable table.

Action: n/a

ORA-55769: Escrow column is not supported in Editioning Views.

Cause: Escrow column was specified on an Editioning View.

Action: n/a

ORA-55770: Column is already an escrow column.

Cause: An attempt was made to specify the escrow column property on a column that was already an escrow column.

Action: n/a

ORA-55771: Column to be made non-escrow is not an escrow column.

Cause: An attempt was made to remove the escrow column property on a column that was not an escrow column.

Action: n/a

ORA-55772: Escrow column is not supported on a virtual column.

Cause: Escrow column was specified on a virtual column.

Action: n/a

ORA-55773: Table has columns with datatypes that are not supported by Escrow feature

Cause: An attempt was made to add an escrow column to a table with data type not supported by the Escrow feature.

Action: Do not use the escrow keyword for this column.

ORA-55774: Rename of an escrow column is not supported.

Cause: An attempt was made to rename an escrow column.

Action: To rename an escrow column perform the following steps: 1. alter table modify column (<escrow_column_name> not escrow) and then 2. rename the column. 3. alter table modify column (<renamed_column_name> escrow).

ORA-55775: Escrow update cannot have a non-primary key column in the where clause.

Cause: Escrow column was updated with a where clause that included a column name other than the Primary Key column(s).

Action: Remove the columns other than the Primary Key columns from the where clause of the update statement.

ORA-55776: Index is not supported on an escrow column or a column being made escrow, column "*string*".

Cause: Escrow column was specified in an index creation statement, or an attempt was made to enable the escrow column property on a column that had an index on it.

Action: None. Indexes are not supported on escrow columns.

ORA-55777: A reserved name cannot be used for naming a user table.

Cause: An attempt was made to create a user table with a name starting with 'SYS_ESCROWJRNL_'

Action: Create the table with a different name, names starting with SYS_ESCROWJRNL_ are reserved names.

ORA-55778: Partition key is not supported on an escrow column.

Cause: Escrow column was specified as a partition key column.

Action: Choose a non-escrow column as the partition key column.

ORA-55779: To alter an escrow column into a non-escrow column, use NOT ESCROW instead of NO ESCROW.

Cause: An attempt was made to modify an escrow column with keywords NO ESCROW.

Action: To alter an escrow column to a non-escrow column use keywords NOT ESCROW.

ORA-55780: Escrow column cannot be made invisible.

Cause: An attempt was made to make an escrow column invisible.

Action: n/a

ORA-55781: Inmemory and no inmemory clauses are not supported on escrow tables and escrow columns.

Cause: An attempt was made to specify the inmemory or no inmemory clause on an escrow column or an escrow table.

Action: Remove the inmemory and no inmemory clause.

ORA-55782: Operation is not supported on escrow columns.

Cause: An attempt was made to use an unsupported operation on an escrow column.

Action: n/a

ORA-55783: Escrow column is not supported in an index-organized table.

Cause: An attempt was made to specify the escrow column property in an index-organized table.

Action: Remove the escrow keyword from the CREATE TABLE or ALTER TABLE DDL statement.

ORA-55800: NLS errors while processing Oracle number

Cause: Error occurred when trying to convert Oracle number to an integer.

Action: Check the input parameters.

ORA-55801: Event to control CR activity

Cause: The bit values that we consider. 0x1: Remove fix for bug 3514835 which could potentially throw more 8177 errors We have conservatively blocked some serializability errors, where there could potentially be a dependency between a service transaction in an index and forward going transaction.

Action: Set event 55801 to 1 to disable the bug fix, thereby reducing 8177 error, although it might cause some internal errors instead.

ORA-55804: Savepoint encountered internal error, abort transaction

Cause: Internal I/O error. The transaction is in unsafe state. any attempt to commit the transaction will abort the transaction.

Action: Moving forward in transaction is unsafe. Abort or rollback the transaction

ORA-55805: The transaction has been forcefully aborted

Cause: Either error ORA-55804 or ORA-55806 caused this transaction to abort.

Action: None, redo the transaction.

ORA-55806: SecureFile LOBs direct write internal error, abort transaction

Cause: This was an internal asynchronous I/O error. The transaction was in an unsafe state. An attempt to commit the transaction aborted the transaction.

Action: Moving forward with this transaction is unsafe. Abort or rollback the transaction. Contact Oracle Support Services.

ORA-55903: Secure file log feature unimplemented: *string*

Cause: This feature has not been implemented yet.

Action: None

ORA-55904: Secure file log name too big

Cause: The specified log name was bigger than the maximum identifier supported in Oracle.

Action: Use a smaller log name.

ORA-55905: Secure file log *string* exists with same name

Cause: Create operation was attempted on an existing secure file log.

Action: Destroy the log with the specified name and retry.

ORA-55906: Secure file log [id: *string* name: *string*] does not exist

Cause: An open operation for read or write was attempted on a nonexistent log.

Action: Create the log and retry.

ORA-55907: Tablespace *string* does not exist for secure file log

Cause: The specified tablespace to keep the swap space for the secure file log does not exist.

Action: Retry with a different tablespace or create one with the specified name.

ORA-55908: Tablespace *string* does not support secure files

Cause: Specified tablespace to keep secure file logs did not support secure files.

Action: Provide a tablespace that supports secure files, or remove secure file options in the create statement.

ORA-55909: Create mode invalid: *string*

Cause: The mode to create the log was not supported, or there was a discrepancy between the in-memory log creation and the persistent definition already present.

Action: Retry by correcting the problem.

ORA-55910: Swap table *string* does not exist

Cause: The dictionary-provided swap name did not exist. This could be caused by an external dropping of the swap table without going through the secure file log API's. This means that all of the persistent part of the log was lost.

Action: Destroy the specified log and recreate from start.

ORA-55911: Log with id: *string* is being destroyed

Cause: A write, read or open operation was being tried on a log that was in the process of being destroyed.

Action: None

ORA-55912: Invalid thread Id provided to write to a threaded log

Cause: A valid thread Id was not provided in order to write to a threaded log. Thread Ids are used to partially order messages to the log from different writing processes.

Action: Provide a logical thread Id or use a nonthreaded log.

ORA-55913: Valid thread Id provided to a nonthreaded log

Cause: A valid logical thread Id was provided for a nonthreaded log. A partial order will not be maintained in a nonthreaded log and messages could be output in random order.

Action: Provide a null thread-id for a non-threaded log, or create a threaded log to do what is required.

ORA-55914: An invalid descriptor was passed to a log operation. Reason: *string*

Cause: An invalid or uninitialized descriptor was found while doing a secure file log read or write.

Action: Provide a properly initialized descriptor created by log open.

ORA-55915: Invalid option: *string*

Cause: An invalid option was passed for a log operation.

Action: Check the cause and retry.

ORA-55916: Message too long

Cause: The log is opened with split messages across buffers set to false. However, the message size is bigger than what can be fit in one buffer.

Action: Write the message in smaller segments or allow split messages while creating the log.

ORA-55917: Table flush I/O failed for log ID: *string* bucket ID: *string*

Cause: Table flush I/O failed. The most common cause for this could be out-of-space errors in the tablespace.

Action: Resolve the underlying problem and retry.

ORA-55918: Required buffer size too big

Cause: The buffer size was greater than 16K. Secure file logging supports buffer sizes of 4K, 8K and 16K. The only reason a large buffer size is required is if split message is set to false, and the potential message is large.

Action: Request a smaller buffer size, or try to use smaller message segments.

ORA-55919: destroying, purging or partitioning log while writers or readers have open descriptors

Cause: The method to destroy, purge or partition log was called and requested to wait for open descriptors. After waiting for 5 minutes, an error is returned if writers or readers still exist.

Action: Close all open descriptors or call destroylog, purgelog or createpartition with the option of not waiting for open descriptors.

ORA-55920: Buffer sequence is too low

Cause: The buffer sequence was too low or rows were removed from the swap table.

Action: Try to read from a higher sequence. Note, that the data in buffer with this sequence has been lost.

ORA-55921: Start point provided is incorrect.

Cause: The provided start point, from which to begin reading, was incorrect.

Action: Provide a minimum SCN, timestamp or sequence or specify that reading should begin with the oldest data available.

ORA-55922: PL/SQL API error: *string*

Cause: PL/SQL callbacks had a problem

Action: Consider the problem string and act appropriately

ORA-55923: PL/SQL maximum number of array elements exceeded

Cause: Number of elements in an array write exceeded the maximum limit 100 message segments in one write.

Action: Try a write buffered with multi-segment write or reduce the element count in the array write.

ORA-55924: PL/SQL encountered a NULL element in the array

Cause: A null element was encountered during an array write.

Action: Provide non-null VARCHAR2 or RAW elements as an array element.

ORA-55925: write end called without proper write start

Cause: An attempt was made to end write without a corresponding start write.

Action: Write starts and ends must be called in the right order for writing piecewise or use a write whole option which does not need an explicit start or end.

ORA-55926: Closing log descriptor before calling write end

Cause: An attempt was made to close the log descriptor before the corresponding write end.

Action: Write end should be called before closing the log write descriptor

ORA-55927: No tablespace found for the log

Cause: No suitable tablespace was found for the log.

Action: Provide a tablespace and retry log creation.

ORA-55928: Duplicate tablespace being added

Cause: The tablespace being added for the named log already existed in the list of tablespaces available for this log.

Action: The user should provide a different tablespace for addition to the list of available tablespaces for the named log.

ORA-55929: Creating new partition when current partition is empty

Cause: An attempt was made to create a new partition for the named log when the current partition is empty.

Action: Do not attempt to create a new partition when the current partition is still empty.

ORA-55930: Version of log, identified by (logname, instanceid), does not exist

Cause: Version of log, identified by (logname, instanceid), did not exist.

Action: Provide the correct (logname, instanceid) input.

ORA-55931: The highest partition of log, identified by (logname, instanceid), does not exist

Cause: The highest partition of log, identified by (logname, instanceid), did not exist.

Action: Provide the correct (logname, instanceid) input.

ORA-55932: No SGA memory available for buffers

Cause: An attempt was made to create a secure file log with no available memory for buffers.

Action: Set SECUREFILE_LOG_SHARED_POOL_SIZE to allocate adequate memory.

ORA-55933: invalid log owner provided

Cause: The user provided did not own the secure file log under consideration.

Action: Provide the correct owner of the secure file log.

ORA-55934: invalid user ID provided

Cause: The specified user ID did not exist in the database.

Action: Provide a valid database user ID.

ORA-55935: invalid user name provided

Cause: The specified user name did not exist in the database.

Action: Provide a valid database user name.

ORA-55936: user ID mismatch

Cause: The user ID provided did not own the secure file log under consideration.

Action: Provide the correct owner of the secure file log.

ORA-55937: storage already associated with the secure file log

Cause: An attempt was made to associate storage with a secure file log which already has storage.

Action: Do not attempt to associate storage with a secure file log which already has associated storage.

ORA-55938: no flush callback associated with the secure file log

Cause: Flush callback was not associated with the secure file log under consideration.

Action: The secure file log needs to be re-created with valid flush callback.

ORA-55939: database is not open for attempted operation

Cause: The attempted operation failed because the database is not yet open.

Action: Resubmit the operation when the database opens.

ORA-55940: An error occurred during execution of ktliIngestExternData.

Cause: An error occurred during execution of ktliIngestExternData.

Action: See the message associated with the error for remedial action.

ORA-55941: DML and DDL operations are not allowed on table "string"."string"

Cause: A DML or DDL operation was attempted on a Common Logging Infrastructure internal table.

Action: No action required. Only Oracle is allowed to perform such operations on Common Logging Infrastructure internal tables.

ORA-55942: read not started for read descriptor of the secure file log

Cause: An attempt was made to get a readsavpoint before ktliRead successfully returned a message, using the secure file log descriptor under consideration.

Action: Execute a ktliRead, which returns a message using the secure file log descriptor, before attempting to get a readsavpoint.

ORA-55943: unsupported verison in readsavpoint of the secure file log

Cause: An attempt was made to open a secure file log with a readsavpoint which had unsupported version.

Action: Contact Oracle Support Services.

ORA-55944: External flush I/O failed for log ID: *string* bucket ID: *string*

Cause: External flush I/O failed.

Action: Resolve the underlying problem and retry.

ORA-55945: tablespace name not specified

Cause: The tablespace needed to keep the swap space for the secure file log has not been provided by the user.

Action: Retry the operation with the appropriate tablespace name.

ORA-55946: operation failed due to CrossInstanceCall failure - *string string*

Cause: The operation failed due to a CrossInstanceCall failure. Check the trace files on remote instances for the underlying problem.

Action: Resolve the underlying problem and retry.

ORA-55947: message too long

Cause: The message length was greater than what the Secure file log supports.

Action: Provide the message with a length that the Secure file log supports and retry the operation.

ORA-55948: flush threshold is invalid

Cause: The flush threshold specified for the secure file log is invalid.

Action: The flush threshold for secure file log must be an integer greater than or equal to 1 and less than or equal to 100.

ORA-55949: swap table of secure file log (*string*, *string*) does not exist

Cause: The swap table of secure file log did not exist. This could be caused by an external dropping of the swap table without going through the secure file log API's. This means that all of the persistent parts of the log were lost.

Action: Destroy the specified log and re-create it from the start.

ORA-55950: storage not associated with the secure file log [name: *string*]

Cause: An attempt was made to import data from an external source into a secure file log which is not associated with tablespace storage.

Action: Associate tablespace storage with a secure file log before importing data from an external source.

ORA-55951: previous async I/O on this LOB had an error

Cause: A previous buffered operation had an I/O error.

Action: The following error in the stack describes the problem.

ORA-56381: session cache value (*string*) cannot be more than or equal to the maximum session count for dynamic sessions (*string*)

Cause: An invalid value was specified for the session cache size. The value was more than, or equal to, the maximum session count for dynamic sessions.

Action: Ensure that the session cache size is less than the maximum session count for dynamic sessions.

ORA-56500: DRCP: Pool not found

Cause: The pool name passed was either null or an invalid pool name.

Action: Input a valid pool name.

ORA-56501: DRCP: Pool startup failed

Cause: The connection pool failed to start up.

Action: Check logs for details.

ORA-56502: DRCP: Pool is inactive

Cause: The operation is only supported on an active pool.

Action: Start the pool.

ORA-56503: DRCP: Pool is active

Cause: The operation is only supported on an inactive pool.

Action: Shutdown the pool.

ORA-56504: DRCP: Invalid pool configuration parameter name

Cause: The configuration parameter name is null or invalid input.

Action: Input a valid configuration parameter name.

ORA-56505: DRCP: Invalid pool configuration parameter value

Cause: The configuration parameter value is null or invalid input.

Action: Input a valid configuration parameter value.

ORA-56506: DRCP: Pool shutdown failed

Cause: Connection pool failed to shutdown.

Action: Check logs for details.

ORA-56507: DRCP: Pool alter configuration failed

Cause: Connection pool failed to configure pool.

Action: Check logs for details.

ORA-56508: DRCP: Pool startup failed

Cause: Connection Broker failed to startup the pool.

Action: Check logs for details.

ORA-56509: DRCP: Pool shutdown failed

Cause: Connection Broker failed to shutdown the pool.

Action: Check logs for details.

ORA-56510: DRCP: Pool alter configuration failed

Cause: Connection Broker failed to configure the pool.

Action: Check logs for details. For the NUM_CBROK and MAXCONN_CBROK values, if the initialization parameter CONNECTION_BROKERS contains a (TYPE=POOLED) entry, then use the parameter instead to update these values.

ORA-56511: DRCP: Cross instance synchronization failed

Cause: Publish message to all RAC instances failed.

Action: Check logs for details.

ORA-56512: DRCP: Failed to synchronize RAC instances [*string*]

Cause: Some of the RAC instances were not synchronized.

Action: Perform the same operations on all the failed instances.

ORA-56513: DRCP: Cannot perform requested operation using pooled connection

Cause: This operation was not supported using connections from a pool.

Action: Use a regular connection to perform this operation.

ORA-56514: DRCP: invalid value for maximum number of connections to Connection broker

Cause: The value passed exceeded the maximum allowed.

Action: No action required. The maximum number of connections was automatically set to the maximum allowed value.

ORA-56515: DRCP: Operation not allowed from a Pluggable Database

Cause: The operation was not allowed in Database Resident Connection Pooling when connected to a Pluggable Database.

Action: Connect to the root database and retry the same operation.

ORA-56516: invalid combination specified for authentication pool minimum and maximum

Cause: An invalid minimum or maximum was specified for the authentication pool.

Action: Ensure that the authentication pool maximum is greater than or equal to the minimum and attempt again.

ORA-56600: DRCP: Illegal call [*string*]

Cause: An illegal OCI function call was issued.

Action: Check the documentation for Database Resident Connection Pool (DRCP) usage.

ORA-56601: DRCP: Illegal connection class

Cause: Wrong value for connection class was given.

Action: Check the documentation for Database Resident connection pool usage.

ORA-56602: DRCP: Illegal purity

Cause: Wrong value for purity was provided.

Action: Check the documentation for Database Resident connection pool usage.

ORA-56603: DRCP: Internal error

Cause: Malformed input values.

Action: Input well-formed values.

ORA-56604: DRCP: Length[*string*] for *string* exceeded the MAX allowed

Cause: Length exceeded MAX for the value.

Action: Use a value within the MAX allowed.

ORA-56605: DRCP: Session switching and migration not allowed

Cause: Application tried to switch or migrate session across connections.

Action: This usage is irrelevant in the Database Resident connection pooling context and is not supported. Release existing session.

ORA-56606: DRCP: Client version does not support the feature

Cause: The client version is lower than 11g.

Action: Upgrade to a higher client version or turn off (SERVER=POOLED) in the connect string.

ORA-56607: DRCP: Connection is already authenticated

Cause: Attempt to reauthenticate the connection which is authenticated.

Action: Logoff the connection before reauthenticating.

ORA-56608: DRCP: Server Group feature is not supported

Cause: Server Group attribute was set on the server handle, connected to a Database Resident connection pool.

Action: Do not set Server Group attribute on server handles while using Database Resident connection pool.

ORA-56609: Usage not supported with DRCP

Cause: This usage was not supported on a DRCP connection.

Action: Use a dedicated connection to perform this task.

ORA-56610: Multi-property fix up callback error

Cause: The multi-property fix up callback encountered an error or was not able to fix up all the properties.

Action: Correct the multi-property fix up callback.

ORA-56611: DRCP: Timeout while waiting for a server

Cause: The value of SERVER_WAIT_TIMEOUT was reached while waiting for a server.

Action: Check the Database Resident Connection Pool (DRCP) to see why servers are not being freed in a timely manner.

ORA-56612: PL/SQL fix up callback only supported with multi-property tagging

Cause: PL/SQL fix up callback was specified without multi-property tagging.

Action: Either remove the PL/SQL fix up callback or use multi-property tagging.

ORA-56613: DRCP: invalid length of attribute passed

Cause: The length of one or more of the following attributes passed was not correct when using Database Resident Connection Pooling (DRCP): user name, proxy user name, connection class, edition, and tag.

Action: Check the length of each of the attributes.

ORA-56614: DRCP: connection limit reached

Cause: The Database Resident Connection Pool (DRCP) connection limit was reached. The limit is set by parameter DRCP_CONNECTION_LIMIT.

Action: Disconnect some of the other DRCP connections or increase the connection limit.

ORA-56615: DRCP: Operation not allowed from the ROOT

Cause: The operation was not allowed in Database Resident Connection Pooling when connected to the ROOT and per PDB DRCP feature enabled.

Action: Connect to a Pluggable Database and retry the same operation.

ORA-56616: DRCP: Invalid combination specified for authentication pool minimum and processes

Cause: Authentication pool minimum can not be greater than the processes

Action: Ensure that the authentication pool minimum is less than or equal to the processes and attempt again.

ORA-56617: Database Resident Connection Pool (DRCP) alter configuration failed.

Cause: The operation was not allowed in DRCP when per PDB DRCP feature was enabled.

Action: Use the initialization parameter CONNECTION_BROKERS to alter the values of NUM_CBROK and MAXCONN_CBROK.

ORA-56700: plan *string* is a subplan and SUB_PLAN attribute cannot be modified

Cause: An attempt was made to modify the SUB_PLAN attribute of the specified plan.

Action: Do not attempt to modify the SUB_PLAN attribute.

ORA-56701: INTERNAL_USE attribute of consumer group *string* cannot be modified

Cause: An attempt was made to modify the INTERNAL_USE attribute of the specified consumer group.

Action: Do not attempt to modify the INTERNAL_USE attribute.

ORA-56702: consumer group *string* is for internal use only and cannot be a switch target

Cause: An attempt was made to specify an INTERNAL_USE consumer group as a switch target.

Action: Do not attempt to switch to INTERNAL_USE consumer groups.

ORA-56703: VKTM process died unexpectedly

Cause: An explicit kill or internal error caused the death of VKTM background process.

Action: Restart the instance.

ORA-56704: EXPLICIT consumer group mapping priority must be set to 1

Cause: An attempt was made to set the EXPLICIT mapping priority to a value other than 1.

Action: Set the mapping priorities to unique integers within the documented range with the EXPLICIT priority set to 1.

ORA-56705: I/O calibration already in progress

Cause: An attempt was made to run a second instance of I/O Calibration

Action: Wait until the first I/O calibration run is complete; then, retry the operation.

ORA-56706: The specified Resource Manager plan is a subplan and cannot be set as a top-level plan

Cause: An attempt was made to set a subplan as a top-level plan.

Action: Do not attempt to set subplans as top-level plans.

ORA-56707: INTERNAL QUIESCE plan cannot be specified as a top-level Resource Manager plan

Cause: An attempt was made to specify INTERNAL QUIESCE as a top-level Resource Manager plan.

Action: Do not attempt to set INTERNAL QUIESCE as a Resource Manager plan.

ORA-56708: Could not find any datafiles with asynchronous i/o capability

Cause: There are no datafiles which are asynchronous I/O capable.

Action: Make sure asynchronous i/o is permitted to datafiles.

ORA-56709: timed_statistics set to FALSE

Cause: timed_statistics parameter in database is set to FALSE. Needs to be enabled for calibration.

Action: set timed_statistics=TRUE in init.ora or "alter system set timed_statistics=TRUE"

ORA-56710: DBRM process died unexpectedly

Cause: An explicit kill or internal error caused the death of the DBRM background process.

Action: Restart the instance.

ORA-56711: *string* is an invalid *string* argument

Cause: The named argument is invalid.

Action: Specify a valid argument for this procedure.

ORA-56713: insufficient Resource Manager privileges

Cause: An attempt was made to execute administration procedures from the DBMS_RESOURCE_MANAGER package without the appropriate privilege. The procedure requires the Resource Manager system privilege.

Action: Ask the database administrator to grant the Resource Manager system privilege to the user.

ORA-56714: Plan name *string* exceeds the maximum length allowed

Cause: Plan name is greater than 30 characters long.

Action: Do not exceed 30 characters when naming a resource plan.

ORA-56715: *string* resource plan contains a reserved word

Cause: The specified plan name is prefixed with a reserved prefix such as FORCE or SCHED.

Action: Do not prefix resource plan name with FORCE or SCHED.

ORA-56716: Category *string* does not exist

Cause: A non-existent category was specified as an argument to a procedure in the package, DBMS_RESOURCE_MANAGER.

Action: Specify an existing category name or create a new category with this name.

ORA-56717: switch directives are set without a corresponding SWITCH_GROUP

Cause: The plan directive contained a switch directive (SWITCH_TIME, SWITCH_IO_REQS, or SWITCH_IO_MEGABYTES) without a SWITCH_GROUP.

Action: Specify a SWITCH_GROUP parameter in the plan directive.

ORA-56718: Timeout occurred while setting resource plan

Cause: A timeout occurred while waiting for one or more RAC instances to set the resource plan.

Action: Since the resource plan may have actually been set successfully, first check the current resource plan for each instance by querying gv\$src_plan. If the resource plan was not successfully set on all instances, then retry the operation.

ORA-56719: Error spawning or communicating with calibration slave

Cause: An error occurred in calibration slave process - Calibration process aborted.

Action: Review trace files for errors.

ORA-56720: I/O data limit exceeded - call aborted

Cause: The Resource Manager SWITCH_IO_MEGABYTES limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56721: I/O data limit exceeded - session terminated

Cause: The Resource Manager SWITCH_IO_MEGABYTES limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56722: I/O request limit exceeded - call aborted

Cause: The Resource Manager SWITCH_IO_REQS limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56723: I/O request limit exceeded - session terminated

Cause: The Resource Manager SWITCH_IO_REQS limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56724: ksfd calibration tracing**ORA-56725: Could not spawn additional calibration slaves**

Cause: An error occurred when spawning calibration slave process - Calibration process aborted.

Action: Check OS resources required for spawning processes

ORA-56726: Category *string* is referred to by a consumer group and cannot be deleted

Cause: An attempt was made to delete a category that is referred to by a consumer group.

Action: Modify or remove all consumer groups that use this category and then retry.

ORA-56727: Orion (*string*) must be invoked using its full, absolute path

Cause: Orion is spawning a child process and cannot determine the location of the executable.

Action: Use the full, absolute path for Orion.

ORA-56728: SQL blocks cannot be nested

Cause: An attempt was made to start an SQL block using DBMS_RESOURCE_MANAGER.BEGIN_SQL_BLOCK() while already inside an SQL block.

Action: Close the existing SQL block using DBMS_RESOURCE_MANAGER.BEGIN_SQL_BLOCK() or remove this call.

ORA-56729: Failed to bind the database instance to processor group *string*

Cause: Binding the database instance to the processor group specified by the PROCESSOR_GROUP_NAME parameter failed.

Action: Set the PROCESSOR_GROUP_NAME to a valid, configured processor group and restart the database instance.

ORA-56730: pluggable database plan *string* may not specify parameter *string*

Cause: Resource plans inside a pluggable database attempted to use the following parameters: MGMT_P2, MGMT_P3, MGMT_P4, MGMT_P5, MGMT_P6, MGMT_P7, MGMT_P8

Action: Remove these parameters and try again.

ORA-56731: pluggable database plan *string* may not use subplans

Cause: An attempt was made to set a resource plan that contains subplans. Subplans are not supported in pluggable databases (PDBs).

Action: Specify a valid PDB resource plan or modify the specified plan to remove the subplan directives.

ORA-56732: value *string* for *string* is outside valid range of 0 to 4294967295

Cause: An invalid value was specified for a plan directive parameter.

Action: Specify a value between 0 and 4294967295, inclusive.

ORA-56733: logical I/O limit exceeded - call aborted

Cause: The Resource Manager SWITCH_IO_LOGICAL limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56734: logical I/O limit exceeded - session terminated

Cause: The Resource Manager SWITCH_IO_LOGICAL limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56735: elapsed time limit exceeded - call aborted

Cause: The Resource Manager SWITCH_ELAPSED_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56736: elapsed time limit exceeded - session terminated

Cause: The Resource Manager SWITCH_ELAPSED_TIME limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56737: SWITCH_GROUP is set without a corresponding switch directive

Cause: The plan directive specified a value for SWITCH_GROUP without specifying one of the following switch directives: - SWITCH_TIME - SWITCH_IO_REQS - SWITCH_IO_MEGABYTES - SWITCH_ELAPSED_TIME - SWITCH_IO_LOGICAL

Action: Specify a switch directive or remove SWITCH_GROUP directive.

ORA-56738: CDB resource plan *string* has more than *string* profile directives.

Cause: An attempt was made to create or update the specified multitenant container database (CDB) resource plan to use more than the supported number of profile directives.

Action: Remove the directives for profiles that are not active on this database.

ORA-56739: cannot modify max_iops or max_mbps parameter

Cause: An attempt was made to alter the Resource Manager max_iops or max_mbps parameter in a non-consolidated database.

Action: max_iops and max_mbps are pluggable database (PDB) only parameters and cannot be altered in non-consolidated databases. The max_iops and max_mbps parameters can only be altered from a PDB.

ORA-56740: Resource plan *string* does not contain mandatory group *string*.

Cause: An attempt was made to create or set a resource manager plan that does not contain a consumer group mandated by the administrator. The specified plan has too many plan directives for the system to automatically add the mandatory consumer group.

Action: Modify the plan to contain the mandatory consumer group, or reduce the number of plan directives so that the system can automatically add the mandatory consumer group.

ORA-56741: The specified plan uses multilevel management directives and cannot be set in a pluggable database.

Cause: An attempt was made to set a resource plan that contains multilevel management directives: MGMT_P2, MGMT_P3, MGMT_P4, MGMT_5, MGMT_P6, MGMT_P7, or MGMT_P8. Multilevel management directives are not supported in pluggable databases (PDBs).

Action: Specify a valid PDB resource plan or modify the specified plan to be a single level plan, using only the MGMT_P1 or SHARES directives.

ORA-56742: cannot modify max_iops or max_mbps parameter on Oracle Exadata

Cause: An attempt was made to alter the Resource Manager max_iops or max_mbps parameter on an Oracle Exadata system.

Action: The max_iops and max_mbps parameters cannot be altered on Oracle Exadata systems. Use Oracle Exadata I/O Resource Manager to manage I/Os on Oracle Exadata.

ORA-56743: memory_min (*string*) cannot exceed memory_limit (*string*) in the CDB plan '*string*' for the pluggable database '*string*'

Cause: An attempt was made to create a multitenant container database (CDB) plan directive where memory_min was greater than memory_limit.

Action: Change the CDB plan directive so that memory_min is less than memory_limit.

ORA-56744: memory_min (*string*) cannot exceed memory_limit (*string*) in the CDB plan '*string*' for the profile '*string*'

Cause: An attempt was made to create a multitenant container database (CDB) plan directive where memory_min was greater than memory_limit.

Action: Change the CDB plan directive so that memory_min is less than memory_limit.

ORA-56745: invalid value *string* for parameter *string*; must be smaller than parameter *string*

Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

ORA-56746: invalid value *string* for parameter *string*; must be smaller than *string*%% of parameter *string*

Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

ORA-56747: invalid value *string* for parameter *string*; must be smaller than parameter *string* of the root container

Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

ORA-56748: invalid value *string* for parameter *string*; must be smaller than *string*%% of parameter *string* of the root container

Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

ORA-56749: invalid value *string* for parameter *string*; must be larger than parameter *string*

Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

ORA-56750: invalid value *string* for parameter *string*; must be larger than *string*%% of parameter *string*

Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

ORA-56751: PQ_TIMEOUT_ACTION is set without a corresponding PARALLEL_QUEUE_TIMEOUT directive

Cause: The plan directive specified a value for PQ_TIMEOUT_ACTION without specifying a PARALLEL_QUEUE_TIMEOUT directive.

Action: Specify a PARALLEL_QUEUE_TIMEOUT directive or remove the PQ_TIMEOUT_ACTION directive.

ORA-56752: Oracle Database Express Edition (XE) memory parameter invalid or not specified

Cause: An invalid parameter or a value more than the maximum memory allowed was specified

Action: Use the allowed parameter or reduce the memory size, upgrade to the Standard or Enterprise edition.

ORA-56753: Calibration failed because Exadata files are not sufficiently populated.

Cause: On Oracle Exadata, the calibration run was terminated because the data files did not have a sufficient percentage of populated blocks.

Action: Re-run calibration after data is loaded in the data files.

ORA-56754: invalid value %0!s for parameter %1!s; must be larger than the current resource usage %2!s

Cause: This parameter cannot be set to a value that is lower than the current resource usage.

Action: Choose a value as indicated by the message.

ORA-56800: DSKM process died unexpectedly

Cause: An explicit kill or internal error caused the death of the DSKM background process.

Action: Restart the instance.

ORA-56840: LIBCELL API error in Master Diskmon

Cause: A LIBCELL operation in Master Diskmon failed.

Action: Look in the \$ORA_CRS_HOME/log/*hostname*/diskmon/diskmon.log file for additional error information.

ORA-56841: Master Diskmon cannot connect to a CELL

Cause: A LIBCELL operation from Master Diskmon failed to create a network connection to the target CELL.

Action: Look in the \$ORA_CRS_HOME/log/*hostname*/diskmon/diskmon.log file for additional error information.

ORA-56842: LIBCELL operation network error in Master Diskmon

Cause: A LIBCELL operation in Master Diskmon failed because of a network error.

Action: Look in the \$ORA_CRS_HOME/log/*hostname*/diskmon/diskmon.log file for additional error information.

ORA-56843: LIBCELL SKGXP error in Master Diskmon

Cause: A LIBCELL operation from Master Diskmon failed because of an SKGXP network layer error.

Action: Look in the \$ORA_CRS_HOME/log/*hostname*/diskmon/diskmon.log file for additional error information.

ORA-56864: Master Diskmon "stringstring" operation cannot complete because of a LIBCELL network error

Cause: A LIBCELL operation between Master Diskmon and a CELL failed because of a network error.

Action: Look in the \$ORA_CRS_HOME/log/*hostname*/diskmon/diskmon.log file for additional error information.

ORA-56865: Invalid IP address in CELLINIT.ORA

Cause: One or more of the specified IP addresses in CELLINIT.ORA is not valid.

Action: Check that all IP addresses in CELLINIT.ORA are valid.

ORA-56866: No IP parameter

Cause: No IP address is set in CELLINIT.ORA.

Action: Check that one or more valid IP addresses are set in CELLINIT.ORA.

ORA-56867: Cannot connect to Master Diskmon on pipe "string"

Cause: Master Diskmon was not running or the listening pipe was deleted.

Action: Look at the \$ORA_CRS_HOME/log/*hostname*/diskmon/diskmon.log, \$ORA_CRS_HOME/log/*hostname*/hasmsgs.log and \$ORA_CRS_HOME/log/*hostname*/alerthostname.log for additional error information.

ORA-56868: Duplicate IP address in CELLINIT.ORA

Cause: One or more of the specified IP addresses in CELLINIT.ORA was repeated.

Action: Check that all IP addresses in CELLINIT.ORA are unique.

ORA-56870: Attempt to register dead cell with Master Diskmon

Cause: An attempt was made by a process to register a cell that is known to be down.

Action: None

ORA-56900: The bind variable is not supported inside a pivot or unpivot operation.

Cause: An attempt was made to use bind variables inside a pivot or unpivot operation.

Action: Replace the bind variable with a constant and retry the query.

ORA-56901: non-constant expression in pivot or unpivot values clause

Cause: An attempt was made to use a non-constant expression for a pivot or unpivot values clause.

Action: Use constants for the pivot or unpivot values.

ORA-56902: expect aggregate function inside pivot operation

Cause: Attempted to use non-aggregate expression inside pivot operation.

Action: Use aggregate function.

ORA-56905: Pivot or unpivot operations are not supported on lateral views.

Cause: An attempt was made to do a pivot or unpivot operation on a lateral view.

Action: Remove the pivot or unpivot operation or the lateral view and then retry the query.

ORA-56906: pivot column or pivot value is too large

Cause: Either the combined column size for multicolumn pivot was too large or a multicolumn pivot value was too large.

Action: This is not supported.

ORA-56920: a prepare or upgrade window or an on-demand or datapump-job loading of a secondary time zone data file is in an active state

Cause: A prepare or upgrade window was started or an on-demand or datapump-job loading of a secondary time zone data file was done.

Action: Make sure there is no active prepare or upgrade window and no active on-demand or datapump-job loading of a secondary time zone data file.

ORA-56921: invalid time zone version

Cause: Invalid time zone version passed.

Action: Check and correct the time zone version.

ORA-56922: Starting a prepare window failed

Cause: Error(s) occurred when starting a prepare window.

Action: Check alert or trace file for error(s).

ORA-56923: database properties related to time zone version are not set up properly

Cause: There were no database properties related to time zone version in dictionary table sys.props\$.

Action: Contact Oracle Support Services.

ORA-56924: prepare window does not exist

Cause: There was no active prepare window.

Action: None

ORA-56925: Ending a prepare window failed

Cause: Error(s) occurred when ending a prepare window.

Action: Check alert or trace file for error(s).

ORA-56926: database must be in UPGRADE mode in order to start an upgrade window

Cause: Database was not in UPGRADE mode.

Action: Restart database in UPGRADE mode.

ORA-56927: Starting an upgrade window failed

Cause: Error(s) occurred when starting an upgrade window.

Action: Check alert or trace file for error(s).

ORA-56928: upgrade window does not exist

Cause: There was no active upgrade window.

Action: None

ORA-56929: Ending an upgrade window failed

Cause: Ending an upgrade window failed or there were tables containing TSTZ data which have not been upgraded.

Action: Check alert or trace file for error(s) or complete upgrading of tables containing TSTZ data.

ORA-56930: database must be restarted before performing upgrade of user tables

Cause: Database was not restarted after starting an upgrade window.

Action: Restart database.

ORA-56931: inconsistent DST patching state found

Cause: DST patching was in an inconsistent state.

Action: Contact Oracle Support Services.

ORA-56932: "string"."string" does not exist

Cause: Specified table name was invalid.

Action: Check the existence of the specified table name.

ORA-56933: Table creation failed

Cause: Error(s) occurred when creating the table.

Action: Check the error.

ORA-56934: database property DST_UPGRADE_STATE for datapump job is in an inconsistent state

Cause: Database property DST_UPGRADE_STATE was not recorded correctly.

Action: Check the alert file.

ORA-56935: existing datapump jobs are using a different version of time zone data file

Cause: An attempt was made from a datapump job to request a different version of time zone data file from the one used by existing datapump jobs.

Action: Wait until existing datapump jobs unload the secondary time zone data file.

ORA-56936: datapump jobs are utilizing secondary time zone data file

Cause: An on-demand loading of secondary time zone data file was requested when there was a secondary time zone data file already loaded in the database utilized by existing datapump jobs.

Action: Wait until existing datapump jobs unload the secondary time zone data file.

ORA-56937: failed to load the secondary time zone data file

Cause: Attempt to load the secondary timezone data file failed.

Action: Check alert or trace files for error(s).

ORA-56938: no secondary time zone data file being loaded by on-demand or a datapump job

Cause: There was no secondary timezone data file being loaded by on-demand or a datapump job.

Action: None

ORA-56939: failed to unload the secondary time zone data file

Cause: Attempt to unload the secondary timezone data file failed.

Action: Check alert or trace files for error(s).

ORA-56940: database must be restarted before ending DST upgrade window

Cause: Attempt to end DST upgrade window before database is restarted.

Action: Restart database.

ORA-56941: DST upgrade of dictionary tables failed

Cause: Attempt to perform DST upgrade of dictionary tables failed

Action: Contact Oracle Support Services.

ORA-56942: Read-only tables or tablespaces prevented Daylight Saving Time upgrade

Cause: An attempt was made to start a DST upgrade window when there were tables with TIMESTAMP WITH TIME ZONE data that were in read-only mode or stored in read-only tablespaces.

Action: Alter read-only tables with TIMESTAMP WITH TIME ZONE data to allow write operations or alter read-only tablespaces to allow write operations.

ORA-56943: Table with TIMESTAMP WITH TIME ZONE data has invalid dependent triggers.

Cause: An attempt was made to start a Daylight Saving Time (DST) upgrade window when table with TIMESTAMP WITH TIME ZONE data had invalid dependent triggers.

Action: Remove invalid dependent triggers for the table.

ORA-56950: Invalid value for incident identifier

Cause: Invalid incident identifier argument passed.

Action: Check and correct the identifier

ORA-56951: value of *string* is null in *string* constructor

Cause: The attribute value was null.

Action: Specify a non-null value.

ORA-56952: reference plan resolves to *string* plans

Cause: The reference plan resolved to multiple plans.

Action: Specify a unique reference plan.

ORA-56953: statement_id and plan_id cannot both be null in PLAN_TABLE_OBJECT

Cause: Both statement_id and plan_id attributes were null in PLAN_TABLE_OBJECT.

Action: Specify a non-null value for statement_id or plan_id or both.

ORA-56955: quarantined plan used

Cause: A quarantined plan was used for this statement.

Action: Increase the Oracle Database Resource Manager limits or use a new plan.

ORA-56971: Invalid set of export options

Cause: The options specified are inconsistent

Action: Check and a consistent set of option parameters

ORA-56972: referenced file not found

Cause: One of the file specified in the test case package is missing

Action: rebuild the SQL test case or make sure that all the referenced files are readable and located in the same directory as the SQL test case manifest.

ORA-56973: import options do not match export options

Cause: The import options specified do not match the export options

Action: Check that import is being invoked with the same values for options like export environment, export data and export metadata

ORA-56974: Invalid set of import options

Cause: The import options specified are inconsistent

Action: Check that import options are consistent and have valid values

ORA-56975: invalid SQL_ID

Cause: The SQL_ID specified was incorrect.

Action: Cross check SYS.V\$SQL for the existence of SQL_ID.

ORA-56976: invalid export options: *string*

Cause: One or more export options were inconsistent.

Action: Check that export options are consistent and have valid values.

ORA-56977: invalid import options: *string*

Cause: One or more import options were inconsistent.

Action: Check that import options are consistent and have valid values.

ORA-56978: TCB root directory does not exist

Cause: The root directory for Test Case Builder (TCB) does not exist.

Action: Create the TCB root directory or specify any other directory during export of SQL Test Case.

ORA-57000 to ORA-59850

ORA-57000: TimesTen IMDB error: *string*

Cause: An error occurred during a TimesTen operation.

Action: Look up the error code in the TimesTen error documentation to diagnose.

ORA-57005: TimesTen Grid transient transaction failure: *string*

Cause: A transaction failed because a TimesTen Grid element was temporarily unreachable.

Action: Roll back the transaction and immediately retry.

ORA-57006: TimesTen Grid transaction failure: *string*

Cause: A transaction failed because a TimesTen Grid element was temporarily unreachable.

Action: Roll back the transaction, wait for the element to recover, and retry the transaction. Element recovery may require administrator action.

ORA-57007: TimesTen Grid transient statement failure: *string*

Cause: A statement failed because a TimesTen Grid element was temporarily unreachable.

Action: Immediately retry the current statement.

ORA-57008: TimesTen Grid statement failure: *string*

Cause: A TimesTen Grid element is temporarily unavailable.

Action: Wait for the element to recover and retry the current statement. Element recovery may require administrator action.

ORA-58001: *string*

Cause: The operation had an error in the Exadata Storage Server.

Action: This is a supporting error message. Consult the other reported errors and proceed with the required action.

ORA-58002: *string*

Cause: The operation had an error in the Exadata Storage Server.

Action: This is a supporting error message. Consult the other reported errors and proceed with the required action.

ORA-58003: *string*

Cause: The operation had an error in the Exadata Storage Server.

Action: This is a supporting error message. Consult the other reported errors and proceed with the required action.

ORA-58004: cannot get logical block size for file '*string*'. Location=*string*.

Cause: There were problems in trying to get logical block size of named file.

Action: Consult the other reported errors to best proceed with the required action.

ORA-58005: cannot create file '*string*'

Cause: There were problems in trying to create the named file.

Action: Consult the other reported errors to best proceed with the required action.

ORA-58006: cannot open file '*string*'

Cause: There were problems in trying to open the named file.

Action: Consult the other reported errors to best proceed with the required action.

ORA-58007: cannot resize file '*string*'

Cause: There were problems in trying to resize the named file.

Action: Consult the other reported errors to best proceed with the required action.

ORA-58008: cannot resize file '*string*'

Cause: There were problems in trying to resize the named file.

Action: There is difficulty in writing the header block. Consult the other reported errors and proceed with the required action.

ORA-58009: cannot share file '*string*'

Cause: There were problems in trying to share the named file.

Action: There is difficulty in opening the file to be shared. Consult the other reported errors and proceed with the required action.

ORA-58010: cannot get attributes for file '*string*'

Cause: There were problems in trying to get attributes of the named file.

Action: Consult the other reported errors and proceed with the required action.

ORA-58011: cannot commit the creation of file '*string*'

Cause: There were problems in trying commit the creation of the named file.

Action: Consult the other reported errors and proceed with the required action.

ORA-58012: cannot delete file '*string*'

Cause: There were problems in trying delete the named file.

Action: Consult the other reported errors and proceed with the required action.

ORA-58013: cannot close file '*string*'

Cause: There were problems in trying close the named file.

Action: Consult the other reported errors and proceed with the required action.

ORA-58017: File name '*string*' contains non-permitted character '*string*' in vault name

Cause: A file name was specified that contains a non-permitted character in the vault name. The vault name consists of up to 30 characters which are alphabetic, numeric, or the characters '_', ':', '-', and '#'.

Action: Correct the file name specification.

ORA-58018: file name '*string*' contains empty vault name

Cause: A file name was specified that did not contain a vault name. A vault name must follow the initial "@" character and consist of one or more characters which are alphabetic, numeric, or the characters '_', ':', '-', and '#'.

Action: Correct the file name specification.

ORA-58019: file name '*string*' contains vault name greater than 30 characters - '*string*'

Cause: A file name was specified that contained a vault name longer than 30 characters.

Action: Correct the file name specification.

ORA-58020: file name '*string*' contains nonpermitted character '*string*' in template name

Cause: A file name was specified that contained a nonpermitted character in the template name. The template name consists of up to 30 characters which are alphabetic, numeric, or the characters '_', ':', '-', and '#'.

Action: Correct the file name specification.

ORA-58021: file name '*string*' contains empty template name

Cause: A file name was specified that did not contain a template name. Once a template name is indicated with an "(", one or more characters which are alphabetic, numeric, or the characters '_', ':', '-', and '#' must follow.

Action: Correct the file name specification.

ORA-58022: File name '*string*' starts a template name but does not finish one.

Cause: A file name was specified that started a template with the "(" character but no corresponding ")" was found.

Action: Correct the file name specification.

ORA-58023: File name '*string*' does not follow a template name with a legal character. '*string*'

Cause: A file name was specified that followed a template with a legal character. After the ")" is found, the file name must immediately end or continue with a file name starting with "/".

Action: Correct the file name specification.

ORA-58024: File name '*string*' contains an illegal character. '*string*'

Cause: A file name was specified that contained an illegal character. Permitted characters are alphabetic, numeric, or the characters '_', ':', '-', and '#'.

Action: Correct the file name specification.

ORA-58025: File name '*string*' contains a template name greater than 30 characters. '*string*'

Cause: A file name was specified that contained a template name longer than 30 characters.

Action: Correct the file name specification.

ORA-58026: file name '*string*' with vault name '*string*' not equal to default '*string*'

Cause: A file name was specified that contained a vault name that was not equal to the default vault name provided.

Action: Correct the file name specification.

ORA-58027: Cannot access ASM disk groups (path='string') when Exascale is in use.

Cause: Oracle Automatic Storage Management (Oracle ASM) disk group was accessed in a database instance that was using Exascale storage.

Action: Correct the path specification to Exascale storage and retry.

ORA-58028: Cannot access ASM disk groups when Exascale is in use.

Cause: Oracle Automatic Storage Management (Oracle ASM) disk group was accessed in a database instance that was using Exascale storage.

Action: Correct the path specification to Exascale storage and retry.

ORA-58029: Cannot access Exascale (path='string') when ASM disk groups are in use.

Cause: Oracle Exascale was accessed in a database instance that was using Oracle Automatic Storage Management (Oracle ASM) disk groups.

Action: Correct the path specification to Oracle ASM storage and retry.

ORA-58030: Cannot access Exascale when ASM disk groups are in use.

Cause: Oracle Exascale was accessed in a database instance that was using Oracle Automatic Storage Management (Oracle ASM) disk groups.

Action: Correct the path specification to Oracle ASM storage and retry.

ORA-58031: string

Cause: The operation had an error in the Exadata Storage Server.

Action: This is a supporting error message. Consult the other reported errors and proceed with the required action.

ORA-58032: process terminated due to fenced I/O

Cause: A process was terminated because it was fenced from doing any more I/Os.

Action: Reconnect to the database. If the process termination resulted in instance termination, restart the instance.

ORA-59000: not all rebalance phases were run

Cause: The previous rebalance for the group did not run all of the phases.

Action: See GV\$ASM_OPERATION for more details. Run all rebalance phases using the ALTER DISKGROUP REBALANCE command.

ORA-59001: Disk 'string' must be online before disk 'string'.

Cause: An attempt was made to online a disk that contains old copies of the data present in another offline disk.

Action: Online the disks in the correct order. FORCE option may be used to override this check.

ORA-59002: Disk revalidation failed for ASM disk group 'string' on instance string due to ORA-string.

Cause: The disk revalidation failure could be due to various reasons. Signaling ORA-15020 during discovery was a probable one. See the alert log for more details.

Action: Ensure that the disks in operation are visible to all the nodes in the cluster before issuing a retry.

ORA-59003: database is not prepared for split.

Cause: Split was issued on a database which is either not prepared or did not complete the last time.

Action: Prepare the database before issuing split on it or drop the existing mirror copy and then retry the split mirror operations.

ORA-59004: No rebalance is running for group *string*.

Cause: An attempt was made to modify the property of a rebalance that was not running.

Action: Issue the ALTER DISKGROUP REBALANCE command without the MODIFY keyword to schedule another rebalance.

ORA-59005: Oracle ASM IO Server functionality is not supported on this platform.

Cause: This platform did not support ASM IO Server functionality.

Action: Refer to the documentation for the list of platforms that support Oracle ASM IO Server functionality and consider moving to one of those platforms.

ORA-59006: connection request from stale database instance is rejected.

Cause: The database instance was attempting to fail over from a stale IO Server cluster.

Action: Restart the database instance to initiate a new connection.

ORA-59007: cannot find a usable network from the client

Cause: The database instance was not using any of the configured ASM networks.

Action: Check the ASM network configuration in the database instance.

ORA-59008: All configured ASM networks are unusable.

Cause: All configured ASM networks encountered an error. ASM IO Server was unable to proceed.

Action: Check the status of the configured ASM network interfaces. Restart the ASM IO Server instance after the interfaces become operational.

ORA-59009: ASM IO Server instance is not ready to accept clients.

Cause: ASM IO Server instance was not ready to accept clients.

Action: Execute 'alter system enable client access' for ASM IO Server instance to accept clients.

ORA-59010: cannot SHUTDOWN ASM IO Server instance with connected client *string*.

Cause: A SHUTDOWN command was issued to an ASM IO Server instance that had one or more connected clients.

Action: Stop all clients that are using this ASM IO Server instance and retry the SHUTDOWN command. Alternatively, use the SHUTDOWN ABORT command to force disconnection with all the clients.

ORA-59011: operation failure for group *string* because too many disks are offline

Cause: Too many disks were offline in the disk group.

Action: Ensure that the disks are online and retry the operation.

ORA-59012: Disk %0!s uses an invalid physical sector size (%1!s).

Cause: The disk used a physical sector size value that is not standard or is not currently supported.

Action: The disk cannot be used for an ASM disk group.

ORA-59013: Disk %0!s uses an invalid logical sector size (%1!s).

Cause: The disk used a logical sector size value that is not standard or is not currently supported.

Action: The disk cannot be used for an ASM disk group.

ORA-59014: file %0!s in disk group %1!s was not prepared for split

Cause: The specified file was not prepared for split.

Action: Check the accompanying error messages for more information about the reason for the failure.

ORA-59015: Oracle ASM scrubbing is disabled.

Cause: An attempt was made to perform Oracle ASM scrubbing but it was disabled.

Action: Enable Oracle ASM scrubbing.

ORA-59016: Disk group *string* cannot be mounted due to invalid symbols

Cause: A mount operation was attempted for a disk group that contains invalid characters in its name. Starting in version 12.2.0.2.0, disk group names should only contain alphanumeric characters and the underscore character.

Action: Use the 'renamedg' tool to change the disk group name to a valid name. Afterwards, change the names of the disks by mounting the disk group in restricted mode and using the ASM SQL command 'ALTER DISKGROUP name RENAME DISKS ALL'.

ORA-59017: Oracle ASM scrubbing is stopping a previous operation.

Cause: The system cannot accept new scrubbing operations if a previous one is being stopped.

Action: Wait until the previous Oracle ASM scrubbing operation stops completely before initiating a new one.

ORA-59018: Oracle ASM scrubbing requires an Allocation Unit size of at least 1 MB.

Cause: The operation was not executed because the Allocation Unit was less than 1 MB.

Action: Run the operation on a disk group with an Allocation Unit of at least 1 MB.

ORA-59019: cannot start SCRIB process

Cause: The ASM Scrubbing Master (SCRIB) process failed during startup.

Action: Review the alert log to find out the reason behind the process startup failure.

ORA-59020: Dropping mirror copy '%0!s' in disk group '%1!s' already in progress.

Cause: The drop mirror copy was already issued on the specified file group.

Action: Wait for the previous drop mirror copy to complete. Check the Oracle Automatic Storage Management (Oracle ASM) alert log or check that the corresponding file group is deleted using the V\$ASM_FILEGROUP view.

ORA-59021: drop of child file '%0!s' in disk group '%1!s' is not allowed

Cause: The operation failed because child file deletion was attempted.

Action: Child files can be deleted collectively only as part of drop mirror copy operation.

ORA-59022: dropping mirror copy '%0!s' in disk group '%1!s' failed as prepare is not complete

Cause: Prepare of mirror copy has not completed

Action: Wait for the prepare mirror copy to complete. Check the ASM alert log or check that the split status of the file group using the V\$ASM_FILEGROUP view.

ORA-59023: command requires attribute '%0!s' to be set to '%1!s'

Cause: The disk group was still running the necessary background operations preventing the attribute *name* from setting to value *value*, which is a prerequisite for the command.

Action: Confirm that all disks in the disk group are online, and wait until the attribute is set to the proper value. The attribute may not get set to the proper value if any of the disks in the disk group are offline. This may take a while.

ORA-59024: dropping mirror copy '%0!s' in disk group '%1!s' failed as the file split is complete

Cause: Split of mirror copy has completed.

Action: None

ORA-59025: creation of mirror copy for database '%0!s' failed

Cause: Another mirror copy for the database existed when the operation was attempted or failure occurred when communicating with ASM instance.

Action: If a mirror copy exists with PREPARED state, then either create another database using the existing mirror copy or drop the existing mirror copy. If a mirror copy exists in FAILED state, then drop the mirror copy. Thereafter, retry the operation.

ORA-59026: Dropping file group '%0!s' in disk group '%1!s' failed as the file group has prepared mirror copies.

Cause: An attempt was made to drop a file group that had prepared mirror copies. This is not allowed.

Action: Drop all prepared mirror copies and retry the drop file group operation.

ORA-59027: file group redundancy cannot be modified when there is a mirror copy

Cause: A mirror copy for the database existed or the disk group was still running the necessary background operations preventing the file group redundancy change.

Action: Create another database using the existing mirror copy or drop the existing mirror copy and wait for the rebalance operations to complete. Then retry the operation.

ORA-59028: rebalance did not complete after the last mirror split operation on database '%0!s'

Cause: Rebalance after the last mirror split operation was either still running or not scheduled yet.

Action: If a rebalance is already running allow it to complete, otherwise issue a new one.

ORA-59029: All ASM disks in %0!s are already online or being brought online.

Cause: An attempt was made to bring disks online that were either already online or were being brought online.

Action: Check the status of the disks before changing the ONLINE statement to exclude the disks in the failure group or disk group.

ORA-59030: disk group %0!s' containing file group %1!s' has too many offline disks

Cause: A mirror split operation failed because the disk group containing the files had insufficient number of online disks. This could prevent some files in the target database from being opened. The operation failed early to give the administrator a chance to fix the errors.

Action: Ensure that the disk group has the required number of disks online and then retry the command.

ORA-59031: operation cannot be run concurrently with other mirror split operations on mirror copy %0!s' in disk group %1!s'

Cause: Another conflicting Mirror Split operation was already running.

Action: Retry after the conflicting Mirror Split operation has finished.

ORA-59032: rebalance did not complete after the last mirror split or change redundancy operation

Cause: The rebalance operation after the last mirror split operation or change redundancy was either still running or not scheduled yet.

Action: If a rebalance is already running, then allow it to complete; otherwise, issue the rebalance operation.

ORA-59033: failed to start Oracle ASM instance because it was unable to open SPFILE %0!s'

Cause: An attempt to start the Oracle ASM instance failed because the ASM server parameter file (SPFILE) could not be opened. The SPFILE was configured in the indicated disk group. One or more of the disks in the disk group were inaccessible. This was likely due to the remote node or nodes being inactive.

Action: Issue the 'olsnodes' command to retrieve the list of nodes in the cluster. Start up all the remote nodes in the cluster that were previously inactive. Issue the 'crsctl start cluster' command on this node and verify that the Oracle ASM instance is active.

ORA-59035: HARDCHECK error during I/O

Cause: A Hardware Assisted Resilient Data (HARD) check error was encountered by ASM Rebalance (ARB) process during I/O operations; Oracle ASM cannot disable HARD check automatically due to offline disks.

Action: Look for the corresponding ORA-59051 error in the alert log that shows the file number that has HARD check error. Evaluate if those files were unused or abandoned. If unused or abandoned, delete them. Bring all disks in the disk group online to allow Oracle ASM to disable HARD check automatically so that ARB process will not be interrupted.

ORA-59036: Offline disks prevent data reconstruction from parity redundancy.

Cause: An attempt to reconstruct data from parity redundancy failed because some disks in the disk group were offline.

Action: Bring all disks in the disk group online to make data reconstruction from parity redundancy feasible.

ORA-59037: Dropping mirror copy '%0!s' in disk group '%1!s' failed.

Cause: An attempt was made to drop a mirror copy that did not exist.

Action: Check the dynamic performance view V\$ASM_DBCLONE_INFO for a list of valid mirrors. Ensure that the specified mirror copy exists and retry the operation.

ORA-59038: Too many mirror copies found

Cause: An attempt was made to create a mirror copy of the database that already has the maximum number of mirror copies.

Action: Drop or split an existing mirror copy and retry operation.

ORA-59039: Oracle ASM scrubbing is already running.

Cause: An attempt was made to issue an ASM scrubbing operation when there was another scrubbing operation still running.

Action: Wait for the running operation to finish and try again. Or, stop the running operation with ALTER DISKGROUP DG SCRUB STOP.

ORA-59040: ASM file property has changed.

Cause: An attempt was made to issue an ASM scrubbing operation and there was a file that changed one property.

Action: Wait for the ASM scrubbing operation to retry the operation automatically.

ORA-59041: database '%0!s' has data files in multiple disk groups

Cause: A mirror split operation was issued on a database whose data files were located in multiple disk groups.

Action: Ensure that all the data files are located on the same disk group either by moving all the data files to a single disk group or by dropping the data files of other disk groups. And, then retry the operation.

ORA-59042: creation of database from '%0!s' using mirror copy '%1!s' in disk group '%2!s' failed

Cause: An attempt was made to create a database from a mirror copy that did not exist.

Action: Connect to the database and check V\$ASM_DBCLONE_INFO for list of valid mirrors. Ensure that the specified mirror copy is created and then retry the operation.

ORA-59044: Single parity redundancy files in group '%0!s' could not be relocated.

Cause: An attempt was made to relocate single parity redundancy files for balance or to restore redundancy in the presence of dropping or forcing disks.

Action: Add back all the disks in DROPPING or FORCING state and retry the operation. If this is an Oracle appliance, also add back all the missing disks and retry the operation.

ORA-59045: Double parity redundancy files in group '%0!s' could not be relocated.

Cause: An attempt was made to relocate double parity redundancy files for balance or to restore redundancy in the presence of dropping or forcing disks.

Action: Add back all the disks in DROPPING or FORCING state and retry the operation. If this is an Oracle appliance, also add back all the missing disks and retry the operation.

ORA-59046: Allocation or relocation of a parity redundancy file in group '%0!s' failed.

Cause: An attempt was made to allocate or relocate a parity redundancy file in the presence of dropping or forcing disks.

Action: Add back all the disks in DROPPING or FORCING state and retry the operation. If this is an Oracle appliance, also add back all the missing disks and retry the operation.

ORA-59047: Allocation or relocation of a mirrored file in group '%0!s' failed.

Cause: An attempt was made to allocate or relocate a mirrored file in the presence of dropping or forcing disks.

Action: Add back all the disks in DROPPING or FORCING state and retry the operation. If this is an Oracle appliance, also add back all the missing disks and retry the operation.

ORA-59048: Redundancy could not be restored in group '%0!s'.

Cause: An attempt to restore redundancy during rebalance failed for some user data or ASM metadata due to the presence of dropping or forcing disks.

Action: Add back all the disks in DROPPING or FORCING state. If this is an Oracle appliance, also add back all the missing disks.

ORA-59049: Copy of OCR backup file *string* failed.

Cause: The specified method for copying the Oracle Cluster Registry (OCR) backup file failed. The specified method for copying is supported only from disk group to file system.

Action: Use the ocrconfig -copy command to copy from file system to disk group, disk group to file system or disk group to disk group.

ORA-59050: ASM disk expel failed during rebalance of group '%0!s'.

Cause: Some or all ASM disks in the DROPPING or FORCING state were not expelled from the disk group during rebalance.

Action: Rebalance has restarted to address this issue, so no immediate action is needed. See the alert log for more information on the reason for the failure. If rebalance keeps hitting this error, check the status of the configured ASM network interfaces. Add back all the disks in the DROPPING or FORCING state and retry the rebalance operation.

ORA-59051: HARD check error in file '+%0!s.%1!s.%2!s' in disk group '%3!s'

Cause: A Hardware Assisted Resilient Data (HARD) check error was encountered by ASM Rebalance (ARB) process during I/O operations.

Action: The error point to a file that has encountered HARD check errors. Check the alert log and evaluate if these files were unused or abandoned. If unused or abandoned, delete them. Otherwise, use Oracle ASM scrubbing to repair them.

ORA-59052: Slot allocation failed because maximum slots from Program Global Area (PGA) are used up.

Cause: An attempt to acquire a slot by the process was denied because all slots in Program Global Area (PGA) were used up.

Action: Check the alert log to identify the underlying reason.

ORA-59053: synchronous I/O operation failed to %0!s file block %1!s of file number %2!s located at allocation unit %3!s of disk %4!s in disk group %5!s

Cause: A synchronous I/O operation invoked on a disk has failed.

Action: Ensure that all of the disks are operational.

ORA-59054: mismatch of logical block size for file '%0!s' - expected %1!s got %2!s

Cause: An attempt to create a password file in an Oracle ASM disk group found an existing file with the same name and different block size. Modifying the block size of a password file stored in Oracle ASM was not supported.

Action: Specify the correct logical block size to reuse the existing file. Alternatively, delete the existing file and retry.

ORA-59055: failed to read attribute directory for entry number %0!s

Cause: An error occurred while reading the attribute directory.

Action: Check the alert log for accompanying errors.

ORA-59056: Insufficient number of Oracle Automatic Storage Management (Oracle ASM) instances. Required '%0!s'

Cause: An attempt to run Oracle ASM scrubbing was denied because there were too few Oracle ASM instances running.

Action: Start more Oracle ASM instances and retry the 'alter diskgroup *dg* scrub' command, or run 'alter diskgroup *dg* scrub stop' to stop it and finish the current operation.

ORA-59057: Oracle Automatic Storage Management (Oracle ASM) scrubbing is paused.

Cause: An attempt to run Oracle ASM scrubbing was denied because it was in a paused state.

Action: Run the 'alter diskgroup *dg* scrub' command to resume scrubbing, or run 'alter diskgroup *dg* scrub stop' to stop it and finish the current operation.

ORA-59058: Uninitialized or abandoned file '*string*' encountered during I/O operation.

Cause: A Hardware Assisted Resilient Data (HARD) check error was encountered by the Oracle ASM Rebalance (ARB) process during I/O operations because of the extent sets in uninitialized or abandoned files.

Action: Check the reported file. If it is no longer in use, remove the file. If it is uninitialized or being initialized, wait until the file is fully initialized. Otherwise, use DBVerify to check the integrity of the file.

ORA-59059: Both TO version and FROM version are needed.

Cause: Either the TO version or the FROM version or both were missing in the command.

Action: Specify both the TO version and the FROM version.

ORA-59060: TO version or FROM version are not needed.

Cause: Either the TO version or the FROM version or both were specified in the command.

Action: Remove both the TO version and the FROM version from the command.

ORA-59061: Rolling migration from version '%0!s' to '%1!s' started before finishing the disk group mount operation.

Cause: An attempt to mount a disk group failed because rolling migration started before finishing the mount operation.

Action: Retry the diskgroup mount operation

ORA-59062: ASM discovered an insufficient number of sites in disk group "%0!s".

Cause: ASM was unable to find a sufficient number of sites belonging to the disk group to continue the operation.

Action: Check that the sites in the disk group are present and functioning, that the owner of the ORACLE binary has read/write permission to the disks, and that the ASM_DISKSTRING initialization parameter has been set correctly. Verify that ASM discovers the appropriate disks by querying V\$ASM_DISK from the ASM instance.

ORA-59063: Copy of XML file string failed.

Cause: The specified XML file to be copied into the Oracle Automatic Storage Management (Oracle ASM) disk group was not correctly validated.

Action: Verify the sanity of the XML file and retry the operation, or use a different XML file.

ORA-59064: Oracle ASM disk %0!s in disk group %1!s is being offlined.

Cause: The Oracle Automatic Storage Management (Oracle ASM) disk was marked to be taken offline or was being offlined and therefore it could not be accessed.

Action: Retry the operation after the disk is dropped or brought online.

ORA-59065: Oracle ASM disk is still onlining.

Cause: A write request failed because all redundant copies of a block were either unavailable or on an Oracle Automatic Storage Management (Oracle ASM) disk that was being onlined.

Action: Wait for the disk online to complete. Then, retry the operation.

ORA-59066: Multiple disk paths (%0!s) are discovering disk with identical disk header contents.

Cause: The Oracle Automatic Storage Management (Oracle ASM) disk discovery string had multiple paths configured for disks with an identical disk header. Oracle ASM could not distinguish whether these were separate disks with an identical disk header content or the same disk with different paths. The wrong Oracle ASM disk discovery string configuration may be responsible.

Action: Remove all except one of the valid paths to the disk from the disk discovery string and retry the disk operation.

ORA-59067: invalid label name

Cause: Oracle ASM label name was invalid or exceeded the maximum length.

Action: Specify a label name that is a valid SQL identifier and is no more than 23 bytes after any wild cards are processed.

ORA-59101: Cluster is not homogeneous

Cause: Either when ENABLE_ALL patch was done, or during startup, it was detected that some instances in the cluster had a different set of Phased RAC rolling fixes as compared to other nodes. If Phased RAC rolling fixes are enabled, all cluster nodes need to have the same set of Phased RAC rolling fixes; otherwise, unexpected behavior could happen.

Action: Ensure that all nodes in the cluster have the same set of Phased RAC rolling fixes. Run the 'ORACLE_HOME/bin/rrputil -l' command on all nodes and confirm that all nodes have the same set of Phased RAC rolling fixes. Optionally, query V\$RAC_PHASED_ROLLING_PATCH to see what fixes are enabled on a node and what fixes could be enabled. Fixes with ENABLED='Y' are enabled and fixes with ENABLED='N' could be enabled in the Oracle binary. All nodes in the cluster should have the same set of rows with the same value for the RRP_BUG and the ENABLED column in V\$RAC_PHASED_ROLLING_PATCH.

ORA-59102: operation requires server parameter file (SPFILE) to be in use

Cause: The server parameter file (SPFILE) was not in use. ENABLE_ALL requires an SPFILE.

Action: Create a server parameter file for the database, restart all instances of the database to use the server parameter file, and then retry the command.

ORA-59103: Either *string* Phased RAC rolling fixes are enabled but not present in Oracle binary, or *string* Phased RAC rolling fixes are present in Oracle binary but not enabled.

Cause: This error could occur if a Phased RAC rolling fix was being rolled back while another Phased RAC rolling fix was being applied in the same session without restarting the cluster. Another reason for this error was that a completely unrelated node was trying to join the cluster but was incompatible with the enabled Phased RAC rolling fixes in this cluster.

Action: Check if there are Phased RAC rolling fixes that are enabled and present in the Oracle binary are being rolled back and if there are Phased RAC rolling fixes present in the Oracle binary but are not enabled. If yes, rollback the Phased RAC rolling fixes that are present in the Oracle binary but not enabled and restart the cluster. Once the rollback completes after restarting the cluster, the new Phased RAC rolling fixes can be applied. If a completely unrelated node is trying to join the cluster, find out why that node was started in this cluster.

ORA-59104: Phased RAC rolling fixes in inconsistent state

Cause: The Phased RAC rolling fixes are not in consistent state. This could happen if last run of "alter system enable_all patch" failed due to some reason and that failure was not addressed.

Action: Please mount database in exclusive mode and start instance. After starting instance, run ALTER SYSTEM ENABLE_ALL PATCH and ensure that it is processed successfully.

ORA-59105: expecting keyword ABORT

Cause: After running the ALTER SYSTEM ROLLBACK PATCH statement, the only keyword allowed is ABORT.

Action: If you did not intend to rollback the Phased RAC rolling patch and if you have already processed the ALTER SYSTEM ROLLBACK PATCH statement, then process the ALTER SYSTEM ROLLBACK PATCH ABORT statement to stop the rollback."

ORA-59300: missing or invalid site name

Cause: The command did not specify a valid site name.

Action: Specify a valid site name.

ORA-59301: incorrect SITE token usage

Cause: Site names were provided for some disks in the SQL statement and missing for others.

Action: Either specify site names for all of the disks or none in the SQL statement and retry the operation.

ORA-59302: The attribute *string* must be *string* or higher.

Cause: An attempt was made to set an attribute to a version that was lower than the minimum supported.

Action: Set the attribute to at least the minimum supported version. Alternatively lower the minimum supported version and try again.

ORA-59303: The attribute *string* (*string*) of the diskgroup being mounted should be *string* or higher.

Cause: An attempt was made to mount a diskgroup whose compatibility was lower than the minimum supported.

Action: Advance the diskgroup compatibility by mounting it in restricted mode OR lower the minimum supported compatibility and try again.

ORA-59304: external and global users are not supported for ASM

Cause: A user type not supported by ASM was supplied.

Action: Check the Oracle ASM documentation that external and global users are not supported for ASM.

ORA-59305: The disk group being mounted is incompatible with this software version.

Cause: An attempt was made to mount a disk group using a software version that is incompatible with the disk group.

Action: Contact Oracle Support Services.

ORA-59306: The parameter '*string*' is invalid.

Cause: The value of the parameter was invalid.

Action: Provide a valid value of the parameter.

ORA-59307: The disk group redundancy is not external.

Cause: An attempt was made to rename the disk fail group in a disk group whose redundancy type was not external.

Action: Specify a disk group whose redundancy type is external.

ORA-59308: The disk '*string*' cannot be assigned to a site because the disk group '*string*' contains Cluster Synchronization Services voting files.

Cause: An attempt to assign a site to a disk failed because the disk group contained Cluster Synchronization Services (CSS) voting files.

Action: Move the CSS voting files to a different disk group using the command 'crsctl replace votedisk' and retry the operation.

ORA-59309: Failure group name '*string*' is already used by an existing ASM disk.

Cause: The specified failure group name was already used in this diskgroup.

Action: Specify a different failure group name.

ORA-59311: Cannot connect to Oracle Automatic Storage Management (ASM) instance '*string*'.

Cause: The instance failed to relocate to the specified ASM instance because it could not connect to it.

Action: Check that the specified ASM instance SID is valid, that the ASM instance is up and running, and the network configuration is valid.

ORA-59312: Disk '*string*' cannot be assigned to a site because it is an Oracle Exadata disk.

Cause: An attempt to assign a site to an Oracle Exadata disk failed because the operation is not allowed in Oracle Exadata.

Action: Run the command 'cellcli -e alter cell siteName' to update the cell site information.

ORA-59313: All mirrors of the block are lost, likely due to multiple storage failures.

Cause: There were multiple failures in the storage subsystem. All redundant copies of the block were lost and Oracle wrote the hexadecimal value BADFDA7A into the block location of the lost block to signify that the block data could not be recovered from a redundant copy.

Action: Check the system logs and storage logs to identify the failure that led to the lost block.

ORA-59314: file type not supported for the operation

Cause: The operation did not support files of the given type.

Action: Retry the operation with a file of supported type.

ORA-59315: Parity is not supported for file '*%0!s*' with type '*%1!s*'.

Cause: The given file type did not support the creation of parity files.

Action: Retry creating the parity files with a supported file type.

ORA-59316: ASM software is incompatible with disk group *string* due to missing patch *string*

Cause: The ASM software was not compatible with the disk group.

Action: Action: Apply the missing patch and retry the operation.

ORA-59317: client *%0!s* software is incompatible with disk group *%1!s* due to missing patch *%2!s*

Cause: The client software was not compatible with the disk group.

Action: Apply the missing patch on corresponding client software and retry the operation.

ORA-59318: ASM software is incompatible with disk group *string* COMPATIBLE.ASM *string*

Cause: The ASM software did not support the attribute value for COMPATIBLE.ASM.

Action: Check alert log to identify the missing patches, apply the patches, and retry the operation. Or, advance COMPATIBLE.ASM to a version that is supported by this software.

ORA-59319: database software is incompatible with disk group *string* COMPATIBLE.RDBMS *string*

Cause: The specified value for COMPATIBLE.RDBMS was not compatible with one or more clients.

Action: Check the ASM alert log for information about the clients and missing patches, apply the patches on the corresponding database software, and retry the operation.

ORA-59320: client %0!s software is incompatible with disk group %1!s patch %2!s

Cause: The client software was not compatible with the specified patch.

Action: Apply the missing patch on corresponding client software and retry the operation.

ORA-59321: ASM software is incompatible with disk group *string* patch *string*

Cause: The ASM software did not support enabling the specified patch.

Action: Apply the missing patch and retry the operation.

ORA-59322: database software is incompatible with disk group *string* patch *string*

Cause: The specified patch was not compatible with one or more clients.

Action: Check the ASM alert log for information about the clients and missing patches, apply the patches on corresponding database software, and retry the operation.

ORA-59323: cannot alter exclusive instance mode with more than once instance running

Cause: There was at least one other running ASM instance.

Action: Ensure that there is only one ASM instance when running the command.

ORA-59324: cannot alter exclusive instance mode outside of rolling migration or rolling patch

Cause: ASM cluster was not in rolling migration or rolling patch.

Action: ASM cluster needs to be in rolling migration or rolling patch.

ORA-59325: cannot start multiple ASM instances under exclusive mode

Cause: There was at least one other running ASM instance, and the ASM cluster was in exclusive mode.

Action: Ensure that the ASM cluster is not in exclusive mode when trying to bring up another ASM instance.

ORA-59326: Rolling mode exit prevented by *string*.

Cause: One or more instances were blocking the rolling mode exit.

Action: Terminate the operation or wait until the reported operation is complete before attempting to take the cluster out of rolling mode.

ORA-59327: Dropping more fail groups is not allowed with disk group redundancy.

Cause: There was an attempt to drop at least one fail group, resulting in a fail group count below the recommended number.

Action: Use the FORCE option when trying to drop fail groups. Check the trace files of the Oracle ASM instance for more information.

ORA-59328: Offlining more failure groups is not allowed with disk group redundancy.

Cause: There was an attempt to offline at least one failure group resulting in a reduced number of online failure groups which is required to maintain the quorum consensus.

Action: Increase the number of online failure groups by onlining any offline failure groups or add enough quorum or regular failure groups.

ORA-59329: parity requires at least %0!s failure groups; found only %1!s

Cause: An attempt to set the redundancy specification of a file group to a parity protection scheme failed because of insufficient failure groups.

Action: Add enough failure groups to the disk group and then retry setting the file group redundancy.

ORA-59330: Disk zones are deprecated for disk groups that use virtually allocated allocation metadata.

Cause: Disk zones are no longer supported for disk groups that use virtually allocated allocation metadata.

Action: Do not attempt to create or modify a file with file attributes that are related to disk zones.

ORA-59331: slow or hung relocations during rebalance of group *number*

Cause: The I/O devices were slow or were not responsive.

Action: Rebalance has restarted to address this issue, so no immediate action is needed. If rebalance keeps hitting this error, check the conditions of storage devices.

ORA-59332: Number of disks that can be added to a disk group is limited to %0!s disks if disk group is nearly full.

Cause: Disk group did not have enough space for the metadata needed to accommodate the number of disks being added at once.

Action: Reduce the number of disks that is being added with the initial ADD DISK or ADD FAILGROUP command. After the initial ADD DISK or ADD FAILGROUP command successfully executes, more disks may be added once the disk group has the space to do so with the new space it has acquired.

ORA-59333: EXTENT and BLOCK clauses are mutually exclusive in single files

Cause: EXTENT and BLOCK clauses were mixed in the same file to scrub.

Action: Ensure that all scrub file clauses are of the same type; either all EXTENT or all BLOCK. EXTENT and BLOCK clauses must not be mixed within the same file in a scrub command.

ORA-59334: maximum EXTENT or BLOCK ranges exceeded

Cause: The number of EXTENT or BLOCK ranges (10) were exceeded.

Action: Use 10 or less EXTENT or BLOCK ranges within a scrubbing command. If more than 10 ranges want to be scrubbed, either consider scrubbing the complete file or submit multiple scrubbing commands.

ORA-59335: the value specified for COUNT must not be zero

Cause: A value of zero was specified in COUNT clause.

Action: Provide a value for COUNT greater than zero.

ORA-59500: unable to create member cluster '*string*' in the absence of at least one disk group with the ACCESS_CONTROL.ENABLED attribute set to TRUE

Cause: An attempt was made to configure a member cluster when there was no mounted disk group with the ACCESS_CONTROL.ENABLED attribute set to TRUE.

Action: Set the ACCESS_CONTROL.ENABLED attribute to TRUE on an existing mounted disk group, mount a disk group that already has the ACCESS_CONTROL.ENABLED attribute set to TRUE, or create a disk group with the ACCESS_CONTROL.ENABLED attribute set to TRUE. Retry the operation.

ORA-59501: failed to register database with IOServer instance

Cause: The database instance failed to register with a valid IOServer instance.

Action: Check the alert log to identify the underlying reason for the failure and take the suggested corrective action.

ORA-59502: relocate client to *string* is already in progress

Cause: Another relocate client command was in progress.

Action: Retry the command after the initial relocate client command completes.

ORA-59503: Client '*string*' not allowed to reconnect.

Cause: The client in Oracle Flex Automatic Storage Management (ASM) mode tried to reconnect to an ASM instance that does not support Flex ASM mode.

Action: Check that the remote mode configured on the ASM instance matches the one in the client instance. Oracle Flex ASM must be enabled in the ASM cluster. check the status with the ASMCMD SHOWCLUSTER command.

ORA-59504: rejecting a request originating from site '*string*' to OFFLINE a disk '*string*' configured in site '*string*'

Cause: The request to OFFLINE a disk was rejected by the ASM instance because the request was issued from a site that was different from the site in which the disk was configured.

Action: Retry the request from the site in which the disk is configured.

ORA-59505: instance '*string*' shutting down on site '*string*' due to rejected OFFLINE request

Cause: The instance terminated because the storage was inaccessible from the site requesting the disk OFFLINE.

Action: Issue the command 'crsctl query cluster sites <site_name>' to retrieve the status of the indicated site. Address the storage accessibility issues if the indicated

site is in a QUARANTINED state. Issue the command 'crsctl modify cluster site <site_name> -s rejuvenate' to set the status to ONLINE after the storage access has been restored.

ORA-59506: database process interrupted due to SQL*Net read timeout

Cause: A process on the client instance connected to an Oracle ASM instance was in an SQL*Net read for too long. Possible reasons include failure of the node on which the Oracle ASM instance was running or a communication channel disruption. The interrupt was detected by the Fence Monitor (FENC) process or the ASM Background (ASMB) process, and the call was interrupted.

Action: Usually none, as the client instance fails over to another available Oracle ASM instance. If the problem keeps recurring, contact Oracle Support Services.

ORA-59507: mismatch of parameter '%0!s' between database and ASM instance '%1!s'

Cause: The value for the parameter was different in the database instance and in the ASM instance to which it was connected.

Action: Set the parameter to the same value in both the instances.

ORA-59508: invalid GUID '*string*' specified

Cause: The operation was rejected because the supplied Globally Unique Identifier (GUID) was syntactically invalid.

Action: Retry the command specifying the Globally Unique Identifier (GUID) as a text string of 32 hexadecimal digits (0-f) without a hyphen (-) character or the hexadecimal literal prefix (0x). Refer to the command inline help or product documentation for more information.

ORA-59509: failed to create member cluster '%0!s' because the specified GUID '%1!s' is already configured

Cause: An attempt to add the indicated member cluster with the indicated Globally Unique Identifier (GUID) was rejected because a member cluster with that GUID was already defined.

Action: Execute the command 'asmcmd lscc' to list the existing member clusters and cluster GUIDs. Retry the original command with a cluster GUID that has not already been configured.

ORA-59510: unable to modify member cluster '*string*'

Cause: An attempt to modify the member cluster failed.

Action: Check the alert logs and trace files of the Oracle ASM instance for more information about the reason for the failure, as well as check the accompanying error messages.

ORA-59511: member cluster '%0!s' already configured with disk access mode '%1!s'

Cause: An attempt to modify the member cluster failed because it was already configured with the specified disk access mode.

Action: No action is required.

ORA-59512: The specified Oracle IOServer instance '%0!s' does not exist.

Cause: The specified Oracle IOServer instance did not exist or was terminated.

Action: Issue the 'srvctl status ioserver' command to list the active Oracle IOServer instances. Specify a valid Oracle IOServer instance name and retry the command.

ORA-59513: Rejected a request to relocate the client to Oracle Automatic Storage Management (ASM) instance *string*.

Cause: The request to relocate the client was rejected because either the client or the ASM instance with the client connection was not running in Flex Mode.

Action: Check the configuration of both instances.

ORA-59514: The command is not supported on a storage server.

Cause: An attempt was made to run a command that was not supported on a storage server.

Action: Rerun the command on a member cluster.

ORA-59515: The service name was missing from the command for relocation.

Cause: The command for relocation was specified without the service name which is an invalid format.

Action: Specify a valid Oracle service name and instance name and retry the command: ALTER SYSTEM RELOCATE CLIENT TO <service_name/target_id>

ORA-59516: Could not connect to an IOS instance.

Cause: The instance failed to perform the specified operation because it could not locate a required IOS instance.

Action: Start the required IOS instance before starting the database instance.

ORA-59517: The command is not supported on an ACC.

Cause: An attempt was made to run a command that was not supported on ACC (ASM Client Cluster).

Action: No action is required.

ORA-59518: Client instance %0!s is already connected to this Oracle Automatic Storage Management (Oracle ASM) instance.

Cause: A connection already existed from an ASM Background (ASMB) process to this Oracle ASM instance and was still active.

Action: No action is needed unless the problem keeps recurring. The connection information may not yet be shared between ASMB processes attempting to connect to this Oracle ASM instance. The connection information is automatically shared. If the issue persists, contact Oracle Support Services.

ORA-59519: Deletion of the last set of credentials is not allowed.

Cause: An attempt was made to delete the last set of credentials.

Action: Add new credentials and then retry the operation.

ORA-59521: Existing client instance %0!s is connected to this Oracle ASM instance.

Cause: A connection already existed from the same client instance to this Oracle Automatic Storage Management (Oracle ASM) instance, but with a different version.

Action: Ensure that no other client instances with the same instance, database, and cluster name exist in the cluster.

ORA-59522: cannot open control file %0!s in diskgroup %1!s

Cause: The control file was already opened by another client in the cluster.

Action: Ensure that the control file is not shared between two databases.

ORA-59523: Instance name '%0!s' is too long.

Cause: The specified instance name was more than 30 characters.

Action: Ensure that the INSTANCE_NAME parameter has a maximum length of 30 characters.

ORA-59600: file *string* has too many mirror copies; *string* needed, *string* allowed

Cause: The specified file had too many mirror copies when the requested change was applied.

Action: Retry the command using a lower redundancy scheme, or reduce the existing redundancy level (if preparing a mirror split), or wait for the BALANCE phase of the rebalance operation to complete.

ORA-59601: file group redundancy cannot be modified when associated with a volume

Cause: An attempt was made to modify the redundancy of a file group which was associated with an ASM volume and contained at least one file.

Action: Drop the ASM volume associated with the file group and retry the operation.

ORA-59602: moving Oracle ASM internal files to a file group is not allowed

Cause: An attempt was made to issue an ALTER DISKGROUP MOVE FILE TO FILEGROUP statement on a metadata file used by Oracle Automatic Storage Management (Oracle ASM) to manage the disk group.

Action: Do not attempt to move Oracle ASM internal files to a file group because it is not allowed.

ORA-59603: operation requires all disks in disk group *string* to be online

Cause: An attempt was made to modify the redundancy of a file group when some disks were offline.

Action: Drop the offline disks and wait for the rebalance operations to complete, or online the offline disks and wait for the online to complete. Then retry the operation.

ORA-59604: offline disks encountered during rebalance of disk group '*string*'

Cause: Rebalance was run in the presence of offline disks.

Action: Bring the offline disks online.

ORA-59605: file '*string*' not available; file group '*string*' has too many disks offline

Cause: A file identify operation failed because the file group specified was no longer available.

Action: Verify that all disks in this disk group are online or dropped and retry the command.

ORA-59606: Cannot change redundancy of individual file types in file groups associated with a volume.

Cause: Attempted to modify the redundancy of one or more file types in a file group associated with an Oracle Automatic Storage Management (Oracle ASM) volume.

Action: Change the redundancy of the entire file group and not just the redundancy of the individual file types.

ORA-59607: COMPATIBLE.CLIENT property requires FORCE option for modifications

Cause: An attempt was made to modify the COMPATIBLE.CLIENT property of a file group without the FORCE option.

Action: Be aware that the COMPATIBLE.CLIENT property cannot be downgraded under any circumstances. Caution should be exercised when manually modifying this property. If the change is still required, use the FORCE option to override this check and then retry the operation.

ORA-59608: FORCE option cannot be used for file group property '*string*'

Cause: An attempt was made to use the FORCE option on a property that does not allow it.

Action: Remove the FORCE option and try again.

ORA-59609: cannot move a file that has prepared mirror copies

Cause: An attempt was made to move a file that has a prepared mirror copy.

Action: Create another database using the existing mirror copy or drop the existing mirror copy and wait for the rebalance operations to complete. Then, retry the operation.

ORA-59610: The database version %0!s is incompatible with file group '%1!s'.

Cause: The COMPATIBLE parameter for the Oracle Database instance was lower than the value of the COMPATIBLE.CLIENT property for the file group.

Action: Update the COMPATIBLE parameter for the client instance to a version greater than or equal to the COMPATIBLE.CLIENT version.

ORA-59611: PARITY requires COMPATIBLE.RDBMS parameter of %0!s or higher for the ASM disk group

Cause: An attempt was made to create, open, or modify a file(group) using a redundancy setting of PARITY while the COMPATIBLE.RDBMS parameter of the ASM disk group was set to a version that did not support PARITY protection.

Action: Change the COMPATIBLE.RDBMS parameter to match the minimum required version that supports PARITY protection (if the database version is similar or higher), or specify a redundancy setting other than PARITY in the statement.

ORA-59612: File group '%0!s' is not a template file group.

Cause: The file group specified in the 'FROM TEMPLATE' clause was not of TEMPLATE client type.

Action: Use a file group of template client type to inherit its properties to a new file group.

ORA-59613: file group requires rebalance completion

Cause: An attempt was made to modify the redundancy of a file group. ASM could not perform the operation because of the current state of the disk group.

Action: Allow the rebalance to run to completion. After the rebalance has completed, retry the operation.

ORA-59614: Oracle ASM file group of pluggable database '%0!s' was not dropped.

Cause: Oracle Automatic Storage Management (Oracle ASM) did not drop the file group associated with a pluggable database that was dropped, either because an error was encountered or because the file group contained other files.

Action: Check the Oracle ASM alert log for any errors encountered while dropping the file group. Fix the underlying problem and drop the file group using the ALTER DISKGROUP DROP FILEGROUP command from the Oracle ASM instance. Alternatively, query V\$ASM_FILEGROUP_FILE to determine which files, if any, remain in the file group. Delete the files or move them to another file group using the ALTER DISKGROUP MOVE FILE command from the Oracle ASM instance.

ORA-59700: Failgroup *string* already belongs to site *string*

Cause: An attempt was made to add the specified failgroup to more than one site.

Action: Retry the operation providing the correct failgroup name and the site name while specifying the disk.

ORA-59701: Incorrect number of data sites *string* specified. Maximum allowed: *string*.

Cause: An attempt was made to create an extended redundancy disk group with an invalid number of sites.

Action: Retry the operation specifying valid number of sites in the disk group.

ORA-59702: Incorrect number of quorum sites *string* specified. Maximum allowed: *string*.

Cause: An attempt was made to create an extended redundancy disk group with an invalid number of sites.

Action: Retry the operation specifying valid number of sites in the disk group.

ORA-59703: Inconsistent site information in disk '*string*'

Cause: The site information stored in the disk header did not match disk group information.

Action: Drop the disk from the disk group or provide a site name that matches the site stored in the disk header.

ORA-59704: command requires at least *string* data sites and *string* quorum sites, discovered *string* data sites and *string* quorum sites

Cause: An insufficient number of sites were specified and discovered when creating an extended redundancy disk group.

Action: Check that the command specifies the required number of data sites and quorum sites, and that all of the specified disks are discovered by ASM. A query of the V\$ASM_DISK fixed view shows the disks discovered by ASM.

ORA-59705: Dropping a site is not allowed.

Cause: An attempt was made to drop a site.

Action: Set the disks of the given site offline with 'ALTER DISKGROUP *dg* OFFLINE DISK *disk*' command.

ORA-59706: The specified allocation unit size '*string*' is less than the minimum required for extended disk groups.

Cause: Extended disk groups required the allocation unit size to be at least 4M.

Action: Change the allocation unit size to at least 4M and retry.

ORA-59707: Site "*string*" does not exist in disk group "*string*".

Cause: The specified name did not match the site of any disks in the disk group. This usually indicates that the site name was specified incorrectly.

Action: Check the site name.

ORA-59708: Cluster site operation failed with error *string*.\n*string*

Cause: This is an internal error.

Action: Check the accompanying error messages. Contact Oracle Support Services.

ORA-59709: No site identified for the disk *string*

Cause: The disk did not belong to any site.

Action: Specify the site information in the SQL command. In the case of an ASM appliance, cellcli command can also be used to record the site information for the disk. For non-appliance, asmcmd can be used.

ORA-59710: site information mismatch between disk group *string* and disk *string*

Cause: The site information of the specified disk did not match with the existing disks in the disk group.

Action: If the site information is associated with the existing disks in the disk group, then specify the site information for the new disk. If the site information is not associated with the existing disks in the disk group, then do not specify the site information for the new disk.

ORA-59711: The site identified by GUID '*string*' does not exist.

Cause: An attempt to retrieve a site failed because there wasn't a configured site using the indicated Globally Unique Identifier.

Action: Add the indicated site using the command 'crsctl add cluster site *site* -guid *guid*'. Retry the original command. If retrying does not work, contact Oracle Support Services.

ORA-59712: The site identified by site name '*string*' does not exist.

Cause: An attempt to retrieve a site failed because there wasn't a configured site using the indicated site name.

Action: Add the indicated site using the command 'crsctl add cluster site *site*'. Retry the original command. If retrying does not work, contact Oracle Support Services.

ORA-59713: The site name '*string*' does not exist in the disk group '*string*'.

Cause: An attempt was made to add a disk with a new site name to a disk group, which is not allowed.

Action: Change the site name to an existing one in the disk group and retry.

ORA-59714: invalid site name '*string*' specified.

Cause: An invalid site name was supplied.

Action: Specify a site name which is at least one character but no more than 15 characters in length. The cluster name must be alphanumeric, it cannot begin with a

numeric character, and it may contain hyphen (-) characters. However, it cannot end with a hyphen (-) character.

ORA-59715: missing site information in disk group '*string*'

Cause: The site information was not present in all the disks of the disk group.

Action: Specify sites for the disks using the 'asmcmd rename' command or using SQLPLUS and retry the operation.

ORA-59716: dropping all disks of the quorum site is not allowed

Cause: Dropping of the specified disks resulted in the loss of the quorum site. If only a subset of disks in the quorum site are specified, then check the state of other disks in the V\$ASM_DISK view.

Action: Modify the command to retain at least one disk in the quorum site and retry the operation.

ORA-59717: rebalance could not complete due to an unavailable site in disk group '*string*'

Cause: At least one of the sites had each disk in either dropping or forcing state.

Action: Undrop the dropping disks or add disks to the site.

ORA-59718: One or more disks are identified with a foreign site GUID '*string*'.

Cause: The indicated site GUID was not associated with any of the configured sites.

Action: Execute the command 'crsctl query cluster site -all' to list the existing sites. Associate the indicated site GUID with a site using 'crsctl modify cluster site *site* -addguid *guid*' and retry the operation.

ORA-59719: disk group '*string*' mounted but contains foreign site GUIDs

Cause: An attempt was made to mount a disk group with foreign site GUIDs.

Action: This is a warning. Examine the accompanying error messages for details.

ORA-59720: data sites in disk group *string* have a different number of fail groups.

Cause: An attempt was made to create a disk group with a different number of fail groups at each data site.

Action: Ensure that the data sites have an equal number of fail groups and try again.

ORA-59800: active use of disk '*string*' precludes its label clear

Cause: A LABEL CLEAR command specified a disk that was in use.

Action: Dismount the disk group that is using this disk and retry the LABEL CLEAR command. Query the V\$ASM_CLIENT fixed view in an ASM instance or use ASMCMD LSOFF to list active clients.

ORA-59801: ASM Filter Driver is not configured in the system.

Cause: An ASM Filter Driver command was run without either an ASM Filter Driver library present or kernel driver loaded.

Action: Execute the command ASMCMD AFD_STATE to find the status of an ASM Filter Driver.

ORA-59850: all disks in disk group '*string*' need to be online

Cause: One or more disks in the disk group were offline.

Action: Online the disks that are offline.

ORA-60001 to ORA-65535

ORA-60001: adding (*string*) blocks to save undo segment in tablespace *string* with MAXSIZE (*string*)

Cause: Save undo for the offline tablespace at segment MAXSIZE.

Action: Check the storage parameters for the system tablespace. The tablespace needs to be brought back online so the undo can be applied.

ORA-60002: adding (*string*) blocks to temporary segment in tablespace *string* with MAXSIZE (*string*)

Cause: Extending a temporary segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60003: adding (*string*) blocks to table *string.string* partition *string* with MAXSIZE (*string*)

Cause: Extending a table partition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60004: adding (*string*) blocks to table *string.string* with MAXSIZE (*string*)

Cause: Extending a table violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60005: adding (*string*) blocks to cluster *string.string* with MAXSIZE (*string*)

Cause: Extending a cluster violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60006: adding (*string*) blocks to index *string.string* partition *string* with MAXSIZE (*string*)

Cause: Extending an index partition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60007: adding (*string*) blocks to index *string.string* subpartition *string* with MAXSIZE (*string*)

Cause: Extending an index subpartition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60008: adding (*string*) blocks to index *string.string* with MAXSIZE (*string*)

Cause: Extending an index violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60009: adding (*string*) blocks to LOB segment *string.string* partition *string* with MAXSIZE (*string*)

Cause: Extending a LOB segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60010: adding (*string*) blocks to LOB segment *string.string* with MAXSIZE (*string*)

Cause: Extending a LOB segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60011: adding (*string*) blocks to lob segment *string.string* subpartition *string* with MAXSIZE (*string*)

Cause: Extending a LOB segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60012: adding (*string*) blocks to table *string.string* subpartition *string* with MAXSIZE (*string*)

Cause: Extending a table subpartition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60013: invalid MAXSIZE storage option value

Cause: Invalid value was specified for MAXSIZE storage clause.

Action: Correct the value and retry command.

ORA-60014: invalid MAXSIZE storage option value

Cause: Minimum of 1M should have been specified against the MAXSIZE storage clause.

Action: Correct the value and retry command.

ORA-60015: invalid RETENTION storage option value

Cause: Value of MIN retention should have been nonzero.

Action: Correct the value and retry command.

ORA-60016: Operation not supported on SECUREFILE segment

Cause: The operation to ALTER FREELIST/RETENTION was not supported on SECUREFILE segment.

Action: Check the LOB type and reissue the statement.

ORA-60018: adding *string* blocks to rollback segment *string* with MAXSIZE (*string*)

Cause: Extending a rollback segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60019: Creating initial extent of size *string* in tablespace of extent size *string*

Cause: Creation of SECUREFILE segment failed due to small tablespace extent size.

Action: Create tablespace with larger extent size and reissue command.

ORA-60025: Event for temp segment cleanup used for temp lobs

Cause: Temp LOB segments used for temporary LOBs are deleted only on session exit which may lead to large amounts of memory being held across multiple sessions.

Action: Setting this event will cause temporary LOB segments to be freed when there are no active temporary LOBs in the session. Setting this event will have a significant performance impact as it can cause temporary lob segments to be allocated and deleted many times during a session rather than once per session. Use this event only when temporary LOB segment memory use is an issue.

ORA-60072: adding (*string*) blocks to heat map segment with MAXSIZE (*string*)

Cause: Extending the heat map segment violated the MAXSIZE limit.

Action: Increase the MAXSIZE limit.

ORA-60073: Heat map segment cannot be created

Cause: SYSAUX tablespace has uniform extent allocation and the extent size is not a multiple of megabyte.

Action: Re-create SYSAUX tablespace with autoallocate extent management policy or use the uniform extent size which is a multiple of megabyte.

ORA-60082: incorrect tablespace specified

Cause: Clear free space operation was used on the temporary, undo, or SYSTEM tablespace, which is not supported.

Action: None

ORA-60084: inmemory_xmem_size specified is less than a minimum of (*string*) bytes

Cause: inmemory_xmem_size was less than the minimum expected by the system.

Action: Issue the command after changing the value for the inmemory_xmem_size parameter.

ORA-60085: invalid combination of parameters passed to the DBMS_SPACE_ADMIN function

Cause: Object ID could not be specified for undo or save undo segments.

Action: Issue the command after changing the value for the parameters.

ORA-60100: dropping temporary tablespace with tablespace ID number (*tsn*) *string* is blocked due to sort segments

Cause: The temporary tablespace had sort segments in use.

Action: Wait for sort segments to complete or terminate sort session and then retry dropping the temporary tablespace.

ORA-60209: invalid value *string* for parameter *string*; must be smaller than *string*%% of available SYSTEM temporary space

Cause: The value for this parameter was invalid.

Action: Choose a value as indicated by the message.

ORA-60210: specified data file or temporary file size exceeded the maximum allowed size

Cause: An attempt was made to resize the data file or temporary file with a value beyond the maximum allowed file size (MAXSIZE).

Action: Try with a value smaller than the maximum allowed file size (MAXSIZE).

ORA-60300: cannot use virtual column as ORDER BY or FILTER BY column of domain index

Cause: An attempt was made to create a composite domain index by specifying a virtual column as an ORDER BY or FILTER BY column.

Action: Remove the virtual column from the CREATE INDEX statement.

ORA-60301: cannot create sharded local domain index with indextype *string.string*

Cause: An attempt was made to create local domain indexes on sharded tables that were only allowed for a subset of native indextypes.

Action: Do not create a local domain index on sharded table with this indextype.

ORA-60302: partition maintenance operation cannot affect more than *string* partitions in presence of local domain indexes

Cause: An invalid number of partitions were specified for a partition maintenance operation. A partition maintenance operation can only affect a maximum number of partitions when there was a local domain index on the table: - One partition or subpartition for ADD PARTITION or ADD SUBPARTITION. - One partition or subpartition for DROP PARTITION or DROP SUBPARTITION. - One partition or subpartition for TRUNCATE PARTITION or TRUNCATE SUBPARTITION. - Two source partitions or subpartitions for MERGE PARTITION or MERGE SUBPARTITION. - Two target partitions or subpartitions for SPLIT PARTITION or SPLIT SUBPARTITION.

Action: Modify the partition maintenance operation to affect only the allowed number of partitions or subpartitions and then retry the statement.

ORA-60303: unsupported partitioning scheme for local domain indexes

Cause: Creation of local domain index was not supported for the partitioning scheme of the base table. For referenced partitioned base tables, the parent table was using an unsupported partitioning scheme for local domain indexes.

Action: Either modify the partitioning scheme of your table to a supported partitioning scheme for local domain indexes, attempt to create a global non-partitioned domain index on this table, or do not create a local domain index on this table.

ORA-60304: cannot modify partitioning scheme of local domain index *string.string*

Cause: An attempt was made to modify the partitioning scheme of a table with a local domain index to an unsupported configuration.

Action: Do not modify the partitioning scheme of the base table.

ORA-60305: cannot modify local domain index *string.string* into non-partitioned table

Cause: An attempt was made to modify a partitioned table with local domain indexes into a non-partitioned table.

Action: Do not modify the table into a non-partitioned table or drop any domain indexes before attempting the operation.

ORA-60306: ARRAY DML type of indextype must be a VARRAY

Cause: An attempt was made to use a type that was not a VARRAY inside the ARRAY DML clause of the CREATE INDEXTYPE or ALTER INDEXTYPE statement.

Action: Specify a VARRAY type as the collection type of the ARRAY DML clause of the CREATE INDEXTYPE or ALTER INDEXTYPE statement.

ORA-60307: could not validate return type of generic pipelined table function

Cause: The ANYTYPE description of the generic pipelined table function was not found or did not describe a collection type.

Action: Verify that the ODCITABLEDESCRIBE method of the generic pipelined table function is correct and describes a valid collection type.

ORA-60308: Mismatched data type descriptor from opaque object instance.

Cause: The data type descriptor returned by the ODCITABLEFETCH interface inside an ANYDATA or ANYDATASET instance did not match the output data type described by the ODCITABLEDESCRIBE interface.

Action: Verify the implementation of the ODCITABLEFETCH and ODCITABLEDESCRIBE interfaces and ensure the output data type is consistent during the describe phase and the fetch phase.

ORA-60400: Had error executing RMAN. Error code: *string*

Cause: Had error either when spawning a process to execute RMAN commands or getting RMAN process exit status.

Action: Check the error code and RDBMS logs.

ORA-60401: RMAN exited with status: *string*, more details are available in the RMAN output file: *string*

Cause: RMAN process exited with non-zero status.

Action: Check RMAN output log.

ORA-60402: Failed to read RMAN output from scheduler backup job. Log file: *string*

Cause: An error occurred when reading a RMAN output file.

Action: Check RDBMS logs.

ORA-60403: Internal error: database connection should be to the shard PDB when PDB name is not provided

Cause: An error occurred when updating a sharded database backup wallet.

Action: Check RDBMS logs.

ORA-60404: Internal error: database connection should be to the CDB when the shard PDB name is provided

Cause: An error occurred when updating a sharded database backup wallet.

Action: Check RDBMS logs.

ORA-60405: Internal error: Failed to update backup wallet

Cause: An error occurred when updating a sharded database backup wallet.

Action: Check RDBMS logs.

ORA-60406: HOST command is not supported when the RMAN command is submitted from GDSCTL command interface.

Cause: RMAN command HOST was submitted from GDSCTL.

Action: Remove the HOST command from the RMAN commands to submit.

ORA-60450: transaction ID specified is not quarantined

Cause: The transaction ID (*usnslotsqn*) specified in the command was not quarantined.

Action: Provide the correct transaction ID. Quarantined transaction details can be found in V\$QUARANTINED_TRANSACTIONS.

ORA-60451: unable to recover a quarantined transaction (*string.string.string*) holding a transaction lock required by this transaction

Cause: A quarantined transaction holding a conflicting transaction lock failed to recover.

Action: Resolve the transaction quarantine by following the recommended steps in the Oracle documentation and drop it using the DDL command ALTER DATABASE DROP TRANSACTION QUARANTINE.

ORA-60500: invalid refresh SCN *string* specified

Cause: An attempt was made to refresh the pluggable database to a system change number (SCN) that was less than or equal to the last refresh SCN.

Action: Reissue the statement with a valid SCN number.

ORA-60501: insufficient disk space

Cause: There was insufficient disk space at the specified location.

Action: Free some disk space.

ORA-60502: *string* is the wrong type of pluggable database

Cause: A list of pluggable databases was given to a command but the named one is not of the same type as the earlier ones in the list. The different types are Data Guard pluggable databases and non Data Guard pluggable databases.

Action: Resubmit the command naming only pluggable databases that are of one type or the other.

ORA-60503: remote site *string* not found

Cause: An attempt was made to create a standby pluggable database before the remote site had been defined.

Action: Check the known remote databases and use Data Guard Broker to add any missing site.

ORA-60504: Missing credential for remote site *string*

Cause: The credential required to access the remote site could not be found.

Action: Use Data Guard Broker to confirm the validity of the remote site.

ORA-60505: unable to refresh the pluggable database

Cause: An attempt was made to refresh a pluggable database (PDB) using a catalog without specifying the source database link name.

Action: Retry the operation with the USING *dblink* clause.

ORA-60506: operation not allowed for standby pluggable database *string*

Cause: An attempt was made to perform an operation on a standby pluggable database (PDB) that was not appropriate for such a PDB.

Action: Perform the operation against a normal pluggable database or do not perform the operation at all.

ORA-60507: invalid refresh time *string* specified

Cause: An attempt was made to refresh the pluggable database to a time that was less than or equal to the last refresh time.

Action: Reissue the statement with a valid time.

ORA-60508: invalid refresh SCN *string* specified. Max possible refresh SCN *string*

Cause: An attempt was made to refresh the pluggable database to a system change number (SCN) that was greater than the source Container Database's (CDB) current SCN or the maximum SCN of the archive logs available in the refresh catalog or in the `remote_recovery_file_dest`

Action: Reissue the statement with a valid SCN number or refresh without the UNTIL SCN clause.

ORA-60509: invalid refresh time *string* specified. Max possible refresh time *string*

Cause: An attempt was made to refresh the pluggable database to a time that was greater than the source Container Database's (CDB) current time or the maximum time of the archive logs available in the refresh catalog or in the `remote_recovery_file_dest`

Action: Reissue the statement with a valid time or refresh without the UNTIL TIME clause.

ORA-60510: encountered an error during Replay Upgrade

Cause: An error was encountered during Replay Upgrade of a pluggable database (PDB).

Action: Open the PDB in upgrade mode and query the `DBA_REPLAY_UPGRADE_ERRORS` view to find the statement text and error explanation.

ORA-60511: missing or invalid application name

Cause: A valid application name was not present where required.

Action: Reissue the statement with a valid application name.

ORA-60512: invalid source for a standby pluggable database

Cause: An attempt was made to create a standby pluggable database from an inappropriate source pluggable database, such as an existing standby pluggable database.

Action: Retry the command using an appropriate pluggable database for the source pluggable database.

ORA-60513: cannot synchronize an application version or patch that is blocked

Cause: An attempt was made to synchronize an application version or patch that was blocked.

Action: Unblock the application version or patch. Query `DBA_APP_VERSIONS` or `DBA_APP_PATCHES` to find the version or patch that is blocked.

ORA-60514: implicit application common user cannot own common objects

Cause: An attempt was made to set the sharing status to metadata, data, or extended data on an object owned by an implicit user.

Action: Do not attempt to set the sharing status to metadata, data, or extended data on an object owned by an implicit user.

ORA-60515: standby pluggable database *string* requires more recovery

Cause: An attempt was made to open a standby pluggable database (PDB) before recovery had applied sufficient redo from the primary to make the PDB consistent.

Action: Open the primary pluggable database, ensure redo shipping is enabled to the standby, and start managed recovery for the standby PDB. Allow recovery to catch up. Then cancel it and attempt the open operation again.

ORA-60516: Pluggable database (PDB) *string* has a per PDB physical standby

Cause: An attempt was made to drop a pluggable database (PDB) that was protected by one or more per PDB physical standbys.

Action: If the operation is really required then either drop the per PDB physical standby databases first, or perform a role transition to switch the PDB into a per PDB physical standby and then drop it.

ORA-60517: Unimplemented operation for pluggable database *string*

Cause: An attempt was made to perform an operation on the pluggable database (PDB) that had not yet been implemented.

Action: If the operation is unplug for a PDB that has one or more per PDB physical standbys then drop the standby PDBs first and then try operation again.

ORA-60518: cannot enable per PDB supplemental logging without local undo enabled

Cause: Local undo mode was disabled.

Action: Enable local undo mode before enabling per pluggable database (PDB) supplemental logging.

ORA-60519: encountered an error during application sync

Cause: An error was encountered during application sync.

Action: Query the DBA_APP_ERRORS view to find the statement text and error explanation.

ORA-60520: unable to switchover when a TDE SEPS wallet is not configured

Cause: This operation could not be completed because Transparent Data Encryption (TDE) Secure External Password Store (SEPS) wallet was not configured.

Action: Configure the TDE SEPS wallet before attempting this operation again.

ORA-60521: operation not allowed due to lockdown

Cause: Lockdown is enforced to disallow the operation, as configured by the administrator.

Action: For cloud services please consult the list of allowed operations in the documentation. For non-cloud systems please consult with your database administrator.

ORA-60522: unable to create pluggable database using XML

Cause: An attempt was made to create a pluggable database using XML with a fuzzy data file.

Action: Create a refresh clone using XML.

ORA-60523: invalid pluggable database name specified for root clone

Cause: The pluggable database specified for USING ROOT CLONE was either nonexistent or not a root clone.

Action: Reissue the statement with a valid pluggable database name.

ORA-60524: too many database links in use

Cause: The pluggable database exceeded the maximum open links.

Action: Free up some open links by committing or rolling back the transaction and canceling open cursors that reference remote databases.

ORA-60526: cannot switch to shared undo mode when perPDB supplemental logging is enabled

Cause: Supplemental logging is disabled at CDB\$ROOT container but enabled at pluggable databases (PDBs). Switching to shared undo mode would cause PDB-level supplemental logging to be lost.

Action: Enable supplemental logging at CDB\$ROOT or drop supplemental logging at all pluggable databases (PDBs).

ORA-60527: cannot externally modify partition containing dblink

Cause: An attempt was made to external modify a partition containing a dblink.

Action: External Modify is not allowed for a partition containing a dblink.

ORA-60528: operation not supported for a PET having all dblink partition

Cause: An attempt was made to perform an operation on a Partition External Table (PET) having all dblink partition.

Action: Do not perform the unsupported operation.

ORA-60529: more than one database link specified

Cause: Only one value of database link is allowed for database link location.

Action: Specify single database link.

ORA-60530: cannot exchange partition containing dblink

Cause: An attempt was made to exchange a partition containing a dblink

Action: Exchange is not allowed for a partition containing a dblink.

ORA-60600: maximum number of columns in a table or view is 1000

Cause: An attempt was made to create a table or view with more than 1000 columns, or to add more columns to a table or view which pushes it over the maximum allowable limit of 1000. Note that unused columns in the table are counted toward the 1000 column limit.

Action: If the error is a result of a CREATE command, then reduce the number of columns in the command and resubmit. If the error is a result of an ALTER TABLE command, then there are three options: 1) If the table contained unused columns, remove them by executing

ALTER TABLE DROP UNUSED COLUMNS before adding new columns; 2) Reduce the number of columns in the command and resubmit. 3) Increase compatibility to 23.1

ORA-61800: invalid boolean literal: *string*

Cause: The specified boolean literal was invalid.

Action: Specify a valid boolean literal.

ORA-61801: only boolean column can be used as a predicate

Cause: The specified column was not a boolean column and could not be used as a predicate.

Action: Specify a valid boolean column as a predicate.

ORA-61803: argument of *string* must be a column or an expression of boolean data type

Cause: The specified argument of the IS [NOT] {TRUE|FALSE} clause was not a boolean column or a boolean expression.

Action: Specify a boolean column or a boolean expression as an argument.

ORA-61804: boolean data type is invalid for an arithmetic function or operation

Cause: Boolean data type is not valid arithmetic functions or operations

Action: Specify valid data types for arithmetic functions or operations

ORA-61805: invalid boolean value: *string*

Cause: The specified boolean value was invalid.

Action: Specify a valid boolean value

ORA-61850: Oracle version mismatch between primary database and active data cache.

Cause: Oracle primary database received an unsupported message format from active data cache, or vice versa.

Action: Please check and ensure the binary version matches between primary database and active data cache instances.

ORA-61851: Active data cache instance does not allow *string* operation.

Cause: The specified operation was invalid on active data cache instance.

Action: Do not attempt the specified operation on active data cache instance.

ORA-61852: CREATE ACTIVE DATA CACHE failed.

Cause: An error occurred during the creation of the active data cache

Action: See accompanying errors.

ORA-61853: Cannot start active data cache.

Cause: An error occurred during database open on active data cache

Action: See accompanying errors.

ORA-61854: Cannot start active data cache with non active data cache control file.

Cause: There was an error when the database or control file was created or you are using the wrong control file

Action: Check what error was signaled when the database was first created or when the control file was recreated. Take appropriate actions to recreate the active data cache.

ORA-61855: Invalid ACTIVE_DATA_CACHE_CONFIG.

Cause: Invalid attributes for ACTIVE_DATA_CACHE_CONFIG.

Action: Check the documentation regarding the correct specification of the ACTIVE_DATA_CACHE_CONFIG parameter.

ORA-61856: Failed to boot or create active data cache because the parameter *string* is not set.

Cause: Active data cache requires a minimum set of parameters to be set.

Action: Set the missing parameter in the initialization file.

ORA-61857: Communication with the primary failed.

Cause: The process lost connection with the primary.

Action: Check if the primary instance is still alive.

ORA-61858: Unable to translate FAL_SERVER initialisation parameter string.

Cause: Invalid connect string specified in fal_server.

Action: Check and correct the specification for FAL_SERVER parameter.

ORA-61859: There was an error when executing a remote procedure call at primary server *string*.

Cause: The primary server failed to return the requested information.

Action: Check the alert log file for more descriptive messages.

ORA-62001: value for parameter cannot contain a comma

Cause: Parameter value contained a comma.

Action: Remove the comma from the parameter value.

ORA-62002: circular dependency error while evaluating expression *string* for parameter *string*

Cause: One or more of the parameters used in the expression value was dependent on the parameter being set.

Action: Identify the parameter dependency or provide an absolute value for the parameter.

ORA-62003: parameter set completed with errors in (*string*) pluggable database(s)

Cause: Parameter value was invalid or illegal for one or more pluggable databases.

Action: Check alert log for error(s).

ORA-62007: Encountered a value of unsupported type or size for XPath (*string*)

Cause: Encountered a value of unsupported type in a SQL/XML DML operator. SQL/XML operators, such as UPDATEXML, expect value operands of type VARCHAR2 and XMLTYPE. XML DML replication is not supported for SQL/XML DML operators with values of unsupported types or very large values of supported types.

Action: Rewrite the UPDATE statement using XQuery update or set event 19027 level 1 to dump XML Document as against XMLDiff in redo log.

ORA-62008: Cannot rewrite a newer version of XML redo diff (encountered: *string*, supported: *string*)

Cause: Encountered a newer version of XML redo diff that is not supported.

Action: Use RDBMS version that supports rewrite of given version of XML redo diff.

ORA-62009: cannot encode an invalid XML character 0xstring in supplemental log

Cause: An attribute was being populated or updated with characters which are not valid for XML and therefore could not be supplementally logged.

Action: Store the desired value in a RAW or BLOB attribute.

ORA-62035: KEY VECTOR duplication failed

Cause: Parallel query failed to duplicate KEY VECTOR across Oracle RAC instances.

Action: Increase the size of the System Global Area (SGA) memory.

ORA-62036: out of memory for KEY VECTOR

Cause: A query undergoing vector transform ran out of memory in an unrecoverable way. This may indicate that poor statistics caused vector transform to be used for an unsuitable query.

Action: Gather statistics for the pertinent tables. If the problem persists, vector transform can be disabled using hint or parameter.

ORA-62037: KEY VECTOR with repeated values require join keys to match

Cause: A KEY VECTOR with repeated join key values required the JOIN KEYS of SYS_OP_KEY_VECTOR_PAYLOAD to match the JOIN KEYS of the related SYS_OP_KEY_VECTOR_USE.

Action: Ensure the join key values of SYS_OP_KEY_VECTOR_CREATE are unique or ensure the JOIN KEYS of SYS_OP_KEY_VECTOR_PAYLOAD match the JOIN KEYS of SYS_OP_KEY_VECTOR_USE.

ORA-62038: missing GROUP BY clause in statement containing KEY VECTOR function

Cause: A statement containing a KEY VECTOR function did not have a GROUP BY clause.

Action: Add a GROUP BY clause to the statement containing the KEY VECTOR function, or remove the KEY VECTOR function from the statement.

ORA-62039: KEY VECTOR function not allowed in WHERE clause

Cause: The WHERE clause contained one of the following KEY VECTOR functions, which are not allowed in the WHERE clause: SYS_OP_KEY_VECTOR_CREATE, SYS_OP_KEY_VECTOR_USE, SYS_OP_KEY_VECTOR_SUCCEEDED, SYS_OP_KEY_VECTOR_PAYLOAD.

Action: Remove the KEY VECTOR function from the WHERE clause.

ORA-62040: KEY VECTOR ID *string* is used in more than one SYS_OP_KEY_VECTOR_CREATE

Cause: More than one SYS_OP_KEY_VECTOR_CREATE had the same ID.

Action: Ensure each SYS_OP_KEY_VECTOR_CREATE ID is unique in a query.

ORA-62041: SYS_OP_KEY_VECTOR_USE does not have a corresponding SYS_OP_KEY_VECTOR_CREATE

Cause: A SYS_OP_KEY_VECTOR_USE function did not have a corresponding SYS_OP_KEY_VECTOR_CREATE.

Action: Ensure for each SYS_OP_KEY_VECTOR_USE there is exactly one corresponding SYS_OP_KEY_VECTOR_CREATE.

ORA-62042: The load key defined in SYS_OP_KEY_VECTOR_CREATE is missing a corresponding SYS_OP_KEY_VECTOR_PAYLOAD function

Cause: A load key defined in a SYS_OP_KEY_VECTOR_CREATE function had no corresponding SYS_OP_KEY_VECTOR_PAYLOAD function.

Action: Ensure each load key has at least one corresponding SYS_OP_KEY_VECTOR_PAYLOAD function.

ORA-62043: The SYS_OP_KEY_VECTOR function is missing a corresponding SYS_OP_KEY_VECTOR_CREATE or SYS_OP_KEY_VECTOR_USE

Cause: A SYS_OP_KEY_VECTOR_PAYLOAD or SYS_OP_KEY_VECTOR_SUCCEEDED function had no corresponding SYS_OP_KEY_VECTOR_CREATE or SYS_OP_KEY_VECTOR_USE function.

Action: Ensure each SYS_OP_KEY_VECTOR_PAYLOAD and SYS_OP_KEY_VECTOR_SUCCEEDED has a corresponding SYS_OP_KEY_VECTOR_CREATE and SYS_OP_KEY_VECTOR_USE functions.

ORA-62044: The SYS_OP_KEY_VECTOR_PAYLOAD load key does not exist.

Cause: The load index specified in a SYS_OP_KEY_VECTOR_PAYLOAD function did not exist.

Action: Ensure the load key specified matches a load key defined in the corresponding SYS_OP_KEY_VECTOR_CREATE.

ORA-62045: KEY VECTOR could not be loaded from disk

Cause: The process ran out of memory (PGA) while loading a paged KEY VECTOR from disk.

Action: Increase the PGA_AGGREGATE_TARGET value.

ORA-62081: duplicate or conflicting VECTOR ENCODE or NO VECTOR ENCODE specifications

Cause: The specifications were either a duplicate of each other or were conflicting.

Action: Remove the duplicate specification.

ORA-62082: VECTOR ENCODE only valid for Oracle number column

Cause: VECTOR ENCODE was specified on a column that is not an Oracle number.

Action: Remove the VECTOR ENCODE clause.

ORA-62083: operation not allowed for system hidden virtual column

Cause: The system hidden virtual columns could not be dropped or modified directly.

Action: Avoid dropping or modifying system hidden virtual columns.

ORA-62085: invalid value while deserializing

Cause: The value being deserialized was invalid.

Action: Avoid deserializing such values.

ORA-62131: MEMOPTIMIZE FOR WRITE feature cannot be enabled on IOTs.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on index-organized tables (IOT).

Action: None

ORA-62132: MEMOPTIMIZE FOR WRITE feature cannot be enabled on TEMPORARY TABLE.

Cause: An attempt was made to CREATE TEMPORARY TABLE with MEMOPTIMIZE FOR WRITE feature.

Action: None

ORA-62133: MEMOPTIMIZE FOR READ feature is not supported on ADG.

Cause: An attempt was made to populate data into hash index when in Active Data Guard mode.

Action: None

ORA-62134: MEMOPTIMIZE FOR READ feature cannot be used on table with ROW MOVEMENT enabled.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with row movement enabled.

Action: None

ORA-62135: Specified schema name is invalid.

Cause: An attempt was made to use the DBMS_MEMOPTIMIZE.POPULATE procedure with an invalid schema name.

Action: Use a valid schema name for the table.

ORA-62136: Specified table name is invalid.

Cause: An attempt was made to use the DBMS_MEMOPTIMIZE.POPULATE procedure with an invalid table name.

Action: Use a valid table name.

ORA-62137: Specified schema and table names are either non-existent or MEMOPTIMIZE FOR READ is not enabled on the table.

Cause: An attempt was made to use the DBMS_MEMOPTIMIZE.POPULATE procedure with invalid information. Either the specified schema and table names are non-existent or MEMOPTIMIZE FOR READ feature is not enabled on the table.

Action: Enable MEMOPTIMIZE FOR READ feature on the table and invoke the procedure with correct schema and table names.

ORA-62138: MEMOPTIMIZE memory area does not exist.

Cause: An attempt was made to use the DBMS_MEMOPTIMIZE package without creating the MEMOPTIMIZE memory area.

Action: Restart the instance with appropriate value for MEMOPTIMIZE memory area parameter.

ORA-62139: MEMOPTIMIZE_WRITE hint disallowed for this operation

Cause: MEMOPTIMIZE_WRITE hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-62141: MEMOPTIMIZE FOR READ feature cannot be used with COMPRESS option

Cause: An attempt was made to use the COMPRESS option with MEMOPTIMIZE FOR READ feature.

Action: None

ORA-62142: MEMOPTIMIZE FOR READ feature requires NOT DEFERRABLE PRIMARY KEY constraint on the table

Cause: An attempt was made to use MEMOPTIMIZE FOR READ on a table that did not have the PRIMARY KEY constraint or the PRIMARY KEY constraint is DEFERRABLE.

Action: None

ORA-62143: MEMOPTIMIZE FOR WRITE feature not allowed on table with trigger.

Cause: An attempt was made to set the MEMOPTIMIZE FOR WRITE attribute on a table with trigger.

Action: None

ORA-62144: MEMOPTIMIZE FOR WRITE feature not allowed on table with foreign key constraint.

Cause: An attempt was made to set the MEMOPTIMIZE FOR WRITE attribute on a table with foreign key constraint.

Action: None

ORA-62145: MEMOPTIMIZE FOR WRITE feature not allowed on segment with deferred storage.

Cause: An attempt was made to set the MEMOPTIMIZE FOR WRITE attribute on a table with deferred storage.

Action: None

ORA-62146: MEMOPTIMIZE FOR WRITE feature cannot be used with COMPRESS option.

Cause: An attempt was made to use the COMPRESS option with MEMOPTIMIZE FOR WRITE feature.

Action: None

ORA-62147: MEMOPTIMIZE FOR READ operations are not allowed at PARTITION or SUBPARTITION levels.

Cause: An attempt was made to use MEMOPTIMIZE FOR READ option on a PARTITION table or SUBPARTITION table level.

Action: None

ORA-62148: MEMOPTIMIZE FOR READ feature cannot be enabled on IOTs.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on index-organized tables (IOT).

Action: None

ORA-62149: MEMOPTIMIZE FOR READ feature cannot be enabled on table with VIRTUAL COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with VIRTUAL COLUMNS.

Action: None

ORA-62150: MEMOPTIMIZE FOR READ feature cannot be enabled on table with INVISIBLE COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with INVISIBLE COLUMNS.

Action: None

ORA-62151: The MEMOPTIMIZE FOR READ feature cannot be enabled on a table with specified partitioning type.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with an unsupported partitioning type.

Action: None

ORA-62152: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with LOBs.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with LOB columns.

Action: None

ORA-62153: BLOCK SIZE is not equal to DB_BLOCK_SIZE setting.

Cause: An attempt was made to use the DBMS_MEMOPTIMIZE.POPULATE procedure on a tablespace whose BLOCK SIZE was not equal to DB_BLOCK_SIZE.

Action: Use a default BLOCK SIZE.

ORA-62154: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with VIRTUAL COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with VIRTUAL COLUMNS.

Action: None

ORA-62155: MEMOPTIMIZE FOR READ feature cannot be enabled on table with LOBs.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with LOB columns.

Action: None

ORA-62156: MEMOPTIMIZE FOR READ feature not allowed on segment with deferred storage

Cause: An attempt was made to set the MEMOPTIMIZE FOR READ attribute on a table with deferred storage.

Action: None

ORA-62157: MEMOPTIMIZE FOR READ clause needs to be specified only once.

Cause: An attempt was made to use MEMOPTIMIZE FOR READ clause more than once.

Action: None

ORA-62158: MEMOPTIMIZE FOR WRITE clause needs to be specified only once.

Cause: An attempt was made to use MEMOPTIMIZE FOR WRITE clause more than once.

Action: None

ORA-62159: MEMOPTIMIZE FOR READ cannot be enabled by CREATE PARTITIONED TABLE.

Cause: An attempt was made to CREATE PARTITIONED table with MEMOPTIMIZE FOR READ enabled.

Action: Use ALTER TABLE to enable MEMOPTIMIZE FOR READ for a partitioned table.

ORA-62160: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with INVISIBLE COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with INVISIBLE COLUMNS.

Action: None

ORA-62161: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with default valued COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with COLUMNS with default values.

Action: None

ORA-62162: MEMOPTIMIZE FOR WRITE operations are not allowed at PARTITION or SUBPARTITION levels.

Cause: An attempt was made to use MEMOPTIMIZE FOR WRITE option on a PARTITION table or SUBPARTITION table level.

Action: None

ORA-62164: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with ENCRYPTED COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with ENCRYPTED COLUMNS.

Action: None

ORA-62165: MEMOPTIMIZE FOR WRITE cannot be enabled on table with specified partitioning type.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with an unsupported partitioning type.

Action: None

ORA-62166: MEMOPTIMIZE FOR WRITE cannot be enabled by CREATE PARTITIONED TABLE.

Cause: An attempt was made to CREATE PARTITIONED table with MEMOPTIMIZE FOR WRITE enabled.

Action: Use ALTER TABLE to enable MEMOPTIMIZE FOR WRITE for a partitioned table.

ORA-62167: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with COLLATED COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with COLLATED COLUMNS.

Action: None

ORA-62168: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with UNUSED COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with UNUSED COLUMNS.

Action: None

ORA-62169: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with OID COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with OID COLUMNS.

Action: None

ORA-62170: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with unsupported COLUMN type.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with unsupported COLUMN type.

Action: None

ORA-62171: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table with XML COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table with XML COLUMNS.

Action: None

ORA-62172: MEMOPTIMIZE FOR WRITE feature cannot be enabled on table in encrypted tablespace.

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a table in encrypted tablespace.

Action: None

ORA-62173: MEMOPTIMIZE FOR WRITE feature cannot be enabled on materialized view log

Cause: An attempt was made to use the MEMOPTIMIZE FOR WRITE attribute on a materialized view log.

Action: None

ORA-62174: MEMOPTIMIZE FOR READ feature cannot be enabled on table with ENCRYPT COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with encrypted columns.

Action: None

ORA-62175: MEMOPTIMIZE FOR READ feature cannot be enabled on table with XML COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with XML COLUMNS.

Action: None

ORA-62176: MEMOPTIMIZE FOR READ feature cannot be enabled on table with UNUSED COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with UNUSED COLUMNS.

Action: None

ORA-62177: MEMOPTIMIZE FOR READ feature cannot be enabled on table with unsupported COLUMN type.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with unsupported COLUMN type.

Action: None

ORA-62178: MEMOPTIMIZE FOR READ feature cannot be enabled on table with COLLATED COLUMNS.

Cause: An attempt was made to use the MEMOPTIMIZE FOR READ attribute on a table with COLLATED COLUMNS.

Action: None

ORA-62179: MEMOPTIMIZE FOR READ feature cannot be enabled on TEMPORARY TABLE.

Cause: An attempt was made to CREATE TEMPORARY TABLE with MEMOPTIMIZE FOR READ feature.

Action: None

ORA-62180: MEMOPTIMIZE FOR WRITE unsupported DDL.

Cause: Unsupported DDL on MEMOPTIMIZE FOR WRITE table.

Action: None

ORA-62181: The MEMOPTIMIZE FOR READ feature is not supported on this table.

Cause: An attempt was made to enable the MEMOPTIMIZE FOR READ feature on an unsupported table.

Action: None

ORA-62182: external partitions not supported with MEMOPTIMIZE FOR WRITE

Cause: An attempt was made to use external partition with a MEMOPTIMIZE FOR WRITE table.

Action: None

ORA-62183: out of memory for MEMOPTIMIZE area

Cause: MEMOPTIMIZE memory area was full and did not have any free buffers.

Action: Restart the instance with an appropriate value for MEMOPTIMIZE memory area parameter.

ORA-62184: bitmap index not supported with MEMOPTIMIZE FOR WRITE

Cause: An attempt was made to use a bitmap index with a MEMOPTIMIZE FOR WRITE table.

Action: None

ORA-62185: materialized view log cannot be created on a MEMOPTIMIZE FOR WRITE table

Cause: An attempt was made to create a materialized view log on a MEMOPTIMIZE FOR WRITE table.

Action: None

ORA-62186: online index build or rebuild not supported with MEMOPTIMIZE FOR WRITE

Cause: An attempt was made to build an index online with a MEMOPTIMIZE FOR WRITE table.

Action: None

ORA-62187: timeout occurred while waiting for lock to flush object *string* data object *string*

Cause: While waiting to lock a memoptimize flush object, a timeout occurred .

Action: Retry the operation later.

ORA-62231: DESC is missing in ORDER BY clause within APPROX_RANK.

Cause: The DESC keyword was not specified in the ORDER BY clause within the APPROX_RANK function.

Action: Add the DESC keyword.

ORA-62232: Invalid expression used in ORDER BY clause within APPROX_RANK.

Cause: An invalid expression was used in the ORDER BY clause within the APPROX_RANK function.

Action: Use the supported approximate aggregate function in the ORDER BY clause.

ORA-62233: Multiple expressions were used in the ORDER BY clause within the APPROX_RANK function.

Cause: Multiple expressions are used in ORDER BY clause within APPROX_RANK.

Action: Order by a single expression within APPROX_RANK function.

ORA-62234: The APPROX_RANK functions used different PARTITION BY keys.

Cause: APPROX_RANK functions use different PARTITION BY keys.

Action: Use the same PARTITION BY keys across APPROX_RANK functions.

ORA-62235: PARTITION BY key in APPROX_RANK is not a subset of GROUP BY key.

Cause: The PARTITION BY key in the APPROX_RANK function was not a subset of the key in the GROUP BY clause.

Action: Use a subset of the key in the GROUP BY clause in the PARTITION BY key within the APPROX_RANK function.

ORA-62236: Missing GROUP BY clause when approximate top functions are used.

Cause: The GROUP BY clause was missing when the approximate top functions were used.

Action: Add the GROUP BY clause.

ORA-62237: Missing HAVING clause when approximate top functions are used.

Cause: The HAVING clause was missing when the approximate top functions were used.

Action: Add the HAVING clause.

ORA-62238: Mixed approximate top functions with window functions or non approximate top functions.

Cause: An attempt was made to use window functions or aggregates that were not approximate top functions along with approximate top functions.

Action: Remove the window functions or non approximate top functions.

ORA-62239: More than one expression appears in GROUP BY clause but not in PARTITION BY clause.

Cause: An attempt was made to involve more than one columns as the top N key.

Action: Remove the extra expression(s) from GROUP BY clause, or add extra expression(s) to PARTITION BY part in HAVING clause

ORA-62240: Missing one or more corresponding APPROX_RANK clause in HAVING list when approximate top functions are used.

Cause: One or more corresponding APPROX_RANK clauses were missing when approximate top functions were used.

Action: Add the APPROX_RANK clause in HAVING list for each approximate top N function that appears in SELECT or ORDER BY clause

ORA-62242: HAVING clause can only contain AND predicates when approximate top functions are used.

Cause: the HAVING clause contained predicates other than AND when approximate top functions were used.

Action: Only use the AND predicate with the HAVING clause.

ORA-62243: Each predicate in HAVING clause must be in the format of 'APPROX_RANK(PARTITION BY ... ORDER BY ... DESC) <(=) n' when approximate top functions are used.

Cause: Illegal predicates were used in the HAVING clause when approximate top functions were used.

Action: Correct the format to 'APPROX_RANK (PARTITION BY ? ORDER BY ? DESC) <(=) n'.

ORA-62244: GROUPING SETS, CUBE and ROLLUP cannot be applied to approximate functions.

Cause: An attempt was made to use GROUPING SETS, CUBE or ROLLUP over the approximate functions.

Action: Remove any GROUPING SETS, CUBE or ROLLUP when using approximate functions.

ORA-62245: A negative value has been passed to APPROX_SUM function.

Cause: An attempt was made to pass a negative value to the APPROX_SUM function.

Action: Only pass expressions that have a non-negative value to the APPROX_SUM function.

ORA-62246: The subqueries that contain approximate top functions must be unnested.

Cause: An attempt was made to execute subqueries that contain approximate top functions without unnesting.

Action: Remove the hint or the parameters that are preventing subquery unnesting.

ORA-62251: The Nest handle is invalid.

Cause: The Nest handle was not valid.

Action: None

ORA-62252: The Nest open failed.

Cause: The Nest open failed.

Action: None

ORA-62253: The Nest is already opened.

Cause: An attempt was made to open a Nest that was already opened.

Action: None

ORA-62254: The Nest lookup failed.

Cause: The Nest lookup for a given pluggable database (PDB) failed.

Action: None

ORA-62255: A Child Nest is present.

Cause: An attempt to delete a Nest that had a dependent child Nest failed.

Action: None

ORA-62256: failure to delete a Nest that is not created

Cause: An attempt to delete a Nest that was not created failed.

Action: None

ORA-62257: The Nest is already created.

Cause: An attempt was made to create a Nest that was already created.

Action: None

ORA-62258: The Nest creation failed.

Cause: The Nest creation failed with an operating system operation.

Action: None

ORA-62259: failure to open a Nest that was not created

Cause: An attempt to open the Nest before it was created failed.

Action: None

ORA-62260: The Nest open failed.

Cause: The Nest open failed with an operating system operation.

Action: None

ORA-62261: failure to update a Nest that is not opened

Cause: An attempt to update a Nest that was not opened failed.

Action: None

ORA-62262: The Nest update failed.

Cause: The Nest update failed with an operating system operation.

Action: None

ORA-62263: failure to close a Nest that is not opened

Cause: An attempt to close a Nest that was not open failed.

Action: None

ORA-62264: The Nest close failed.

Cause: The Nest close failed with an operating system operation.

Action: None

ORA-62265: The Nest delete failed.

Cause: The Nest delete failed with an operating system operation.

Action: None

ORA-62266: dedicated broker not enabled

Cause: Nest connections require an enabled dedicated broker. The dedicated broker was not enabled in the current instance.

Action: Enable the dedicated broker.

ORA-62267: invalid Nest parameter

Cause: An invalid value or length for the Nest parameter was specified.

Action: None

ORA-62268: The Nest creation failed due to reaching the maximum depth.

Cause: The child Nest could not be created due to reaching the maximum depth.

Action: None

ORA-62269: no PDB nest found for specified PDB

Cause: A pluggable database (PDB) nest was not found for the specified PDB.

Action: Check the connection broker and listener settings.

ORA-62270: connection outside PDB nest

Cause: The current pluggable database (PDB) connection was outside of the PDB nest.

Action: Check the connection broker and listener settings.

ORA-62271: connection outside CDB or PDB nests

Cause: The current connection was outside of the multitenant container database (CDB) or pluggable database (PDB) nests.

Action: Check the connection broker and listener settings.

ORA-62301: invalid statistic group handle

Cause: The statistic group handle was invalid.

Action: None

ORA-62302: invalid statistic group identifier

Cause: The statistic group identifier doesn't match the handle.

Action: None

ORA-62303: statistic group handle mismatch

Cause: Specified statistic group handle is wrong.

Action: None

ORA-62304: statistic group invalid *string*

Cause: An invalid parameter was passed to statistic group layer.

Action: None

ORA-62346: Extent allocation failed

Cause: PGA extent allocation in unified memory failed

Action: None

ORA-62350: invalid extent ownership

Cause: The current process did not own the extent.

Action: None

ORA-62351: invalid MEMORY_SIZE

Cause: The specified value of MEMORY_SIZE was more than maximum allowable size.

Action: Reduce the specified value to be less than the maximum allowable size.

ORA-62352: cannot dynamically set MEMORY_SIZE if not set at startup

Cause: MEMORY_SIZE was not set at instance startup.

Action: Set MEMORY_SIZE at startup.

ORA-62353: cannot shrink MEMORY_SIZE

Cause: The new value of MEMORY_SIZE was less than its current value.

Action: Set a new value higher than the current value.

ORA-62354: cannot set MEMORY_SIZE to zero

Cause: The new value of MEMORY_SIZE was not valid and will dynamically disable Unified Memory.

Action: Set a non-zero value.

ORA-62355: MEMORY_SIZE is invalid due to insufficient large pages

Cause: Not enough large pages were available for the new system global area (SGA) size.

Action: Set to a higher value.

ORA-62400: invalid options were specified for FUZZY_MATCH operator

Cause: The options specified for FUZZY_MATCH() were invalid. For instance, RELATE_TO_SHORTER and UNSCALED options were mutually exclusive. EDIT_TOLERANCE option could only be applied to WHOLE_WORD_MATCH.

Action: Pass in valid options to FUZZY_MATCH.

ORA-62401: invalid numeric argument was specified for FUZZY_MATCH operator

Cause: The numeric argument passed into FUZZY_MATCH() was either not a constant or was outside the acceptable range. EDIT_TOLERANCE percentage should be between 0-99.

Action: Pass in a valid numeric argument to FUZZY_MATCH.

ORA-62402: invalid numeric argument is specified for PHONIC_ENCODE operator

Cause: The numeric argument passed into PHONIC_ENCODE() was either not a constant or was outside the acceptable range. Maximum output code length is 12.

Action: Pass in an acceptable numeric argument to PHONIC_ENCODE.

ORA-62403: string argument specified for FUZZY_MATCH operator was too long

Cause: The string argument passed into FUZZY_MATCH() was longer than 4000 bytes. Maximum input length is 4000 bytes.

Action: Pass in string arguments no longer than 4000 bytes to FUZZY_MATCH.

ORA-62404: options for FUZZY_MATCH were specified in the wrong order

Cause: EDIT_TOLERANCE option passed into FUZZY_MATCH() has to appear before options such as RELATE_TO_SHORTER and UNSCALED.

Action: Pass in EDIT_TOLERANCE option to FUZZY_MATCH before other options.

ORA-62500: function is not allowed outside of MATCH_RECOGNIZE clause

Cause: The function was specified outside of the MATCH_RECOGNIZE clause. This function is only allowed in the MATCH_RECOGNIZE clause.

Action: Rewrite the SQL statement.

ORA-62501: invalid value specified for bounded quantifier in MATCH_RECOGNIZE clause

Cause: The specified lower bound or upper bound value was greater than UB4MAXVAL. The lower bound value must be non-negative. The upper bound value must be strictly positive. The upper bound value must be greater than or equal to the lower bound value.

Action: Choose an appropriate value and retry the operation.

ORA-62502: invalid variable name

Cause: The specified variable name was invalid. Variable names are not allowed to be "^", "\$", or "*".

Action: Choose an appropriate variable name and retry the operation.

ORA-62503: illegal variable definition

Cause: The specified variable definition was invalid. Variables defined in the DEFINE clause must be in the PATTERN clause. Variables defined in the SUBSET clause cannot be in the PATTERN clause. Variables cannot be defined twice either in the SUBSET clause or the DEFINE clause.

Action: Choose an appropriate variable and retry the operation.

ORA-62504: illegal variable reference

Cause: The referenced variable was invalid. Variables referenced in the SUBSET clause must be in the PATTERN clause. Variables referenced in the DEFINE clause, the MEASURES clause, and the AFTER MATCH SKIP TO must be in the PATTERN clause or defined in the SUBSET clause.

Action: Choose an appropriate variable and retry the operation.

ORA-62505: expression needs to be aliased

Cause: The expression was not aliased. MEASURES clause items have to be aliased.

Action: Choose an appropriate variable and retry the operation.

ORA-62506: illegal nesting of operators in MATCH_RECOGNIZE clause

Cause: An attempt was made to nest aggregates/FIRST/LAST/PREV/NEXT. Aggregates/FIRST/LAST/PREV/NEXT cannot be nested. The only exception allowed is PREV/NEXT(FIRST/LAST()).

Action: Modify the query and retry the operation.

ORA-62507: illegal use of MATCH_NUMBER or CLASSIFIER in MATCH_RECOGNIZE clause

Cause: An attempt was made to use MATCH_NUMBER or CLASSIFIER in the MATCH_RECOGNIZE clause. CLASSIFIER and MATCH_NUMBER can only be used in the MEASURES clause. CLASSIFIER and MATCH_NUMBER cannot be used inside aggregates/FIRST/LAST/PREV/NEXT.

Action: Modify the query and retry the operation.

ORA-62508: illegal use of aggregates or navigation operators in MATCH_RECOGNIZE clause

Cause: An attempt was made to define aggregates/FIRST/LAST/PREV/NEXT over multiple variables. Aggregates/FIRST/LAST/PREV/NEXT cannot be defined over multiple variables.

Action: Modify the query and retry the operation.

ORA-62509: illegal use of RUNNING or FINAL in MATCH_RECOGNIZE clause

Cause: An attempt was made to use RUNNING or FINAL in MATCH_RECOGNIZE. RUNNING or FINAL can only be used on aggregate/FIRST/LAST. FINAL aggregate/FIRST/LAST is not allowed in the DEFINE clause.

Action: Modify the query and retry the operation.

ORA-62510: Correlated subqueries are not allowed in MATCH_RECOGNIZE clause.

Cause: An attempt was made to use correlated subqueries in the MATCH_RECOGNIZE clause. Correlated subqueries are currently not allowed in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

ORA-62511: Correlation variables are not allowed in MATCH_RECOGNIZE clause.

Cause: An attempt was made to use correlation variables in the MATCH_RECOGNIZE clause. Correlation variables are currently not allowed in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

ORA-62512: This aggregate is not yet supported in MATCH_RECOGNIZE clause.

Cause: An unsupported aggregate was specified in the MATCH_RECOGNIZE clause. Only COUNT, SUM, AVG, MIN, and MAX are currently supported in the MATCH_RECOGNIZE clause. Distinct aggregates are currently not supported in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

ORA-62513: Quantified subpatterns that can have empty matches are not yet supported.

Cause: There were empty matches for the quantified subpattern in the PATTERN clause. Quantified subpatterns are currently required to match one or more rows.

Action: Modify the query and retry the operation.

ORA-62514: AFTER MATCH SKIP TO variable is not bounded in the match found.

Cause: AFTER MATCH SKIP TO variable was not bound in the match found due to pattern operators such as |, *, ?, and so on.

Action: Modify the query and retry the operation.

ORA-62515: Exclusion syntax cannot be used with WITH UNMATCHED ROWS.

Cause: An attempt was made to use exclusion syntax with WITH UNMATCHED ROWS. Exclusion syntax {-} cannot be used with WITH UNMATCHED ROWS.

Action: Modify the query and retry the operation.

ORA-62516: The PARTITION BY, ORDER BY, or MEASURES clause is too large for MATCH_RECOGNIZE.

Cause: The number of items in PARTITION BY, ORDER BY, or MEASURES clause exceeded the maximum allowed. There cannot be more than UB2MAXVAL elements in PARTITION BY, ORDER BY, or MEASURES clause.

Action: Modify the query and retry the operation.

ORA-62517: Next match starts at the same point last match started.

Cause: AFTER MATCH SKIP TO option repositioned the next match at the start of the previous one resulting in an infinite loop.

Action: Modify the query and retry the operation.

ORA-62518: MATCH_RECOGNIZE pattern is too large.

Cause: MATCH_RECOGNIZE pattern was too large. More than UB2MAXVAL elements in alternation, concatenation, or permute, or more than UB4MAXVAL states in the state machine are currently not supported. Permute with more than 7 elements or bounded quantifier bound greater than 200 are also currently not supported.

Action: Modify the query and retry the operation.

ORA-62519: Subquery inside MATCH_RECOGNIZE cannot contain MATCH_RECOGNIZE.

Cause: An attempt was made to use a subquery containing a MATCH_RECOGNIZE clause inside a MATCH_RECOGNIZE clause. Subqueries containing MATCH_RECOGNIZE clauses are currently not allowed in the MATCH_RECOGNIZE clause.

Action: Modify the query and retry the operation.

ORA-62520: illegal offset for MATCH_RECOGNIZE navigation operators

Cause: An attempt was made to use something other than a constant or a bind variable as the offset for MATCH_RECOGNIZE navigation operators FIRST, LAST, PREV, or NEXT. Offset for MATCH_RECOGNIZE navigation operators have to be constants or bind variables.

Action: Modify the query and retry the operation.

ORA-62521: MATCH_RECOGNIZE is not supported on lateral views

Cause: An attempt was made to use MATCH_RECOGNIZE on a lateral view, which is not supported.

Action: Modify the query and retry the operation.

ORA-62550: Invalid SQL ROW LIMITING expression was specified.

Cause: The SQL ROW LIMITING expression contained components other than literals, binds, correlation variables, or subqueries.

Action: Modify the SQL ROW LIMITING expression and retry the operation.

ORA-62555: Invalid use of PARTITION BY or ORDER BY clause.

Cause: Either the PARTITION BY or ORDER BY was specified on more than one argument of a POLYMORPHIC TABLE FUNCTION.

Action: Check the SQL statement and rewrite if necessary.

ORA-62556: Incorrect use of COLUMNS operator.

Cause: COLUMNS function was used outside a POLYMORPHIC TABLE FUNCTION.

Action: Check the SQL statement and rewrite if necessary.

ORA-62557: Invalid use of POLYMORPHIC TABLE FUNCTION.

Cause: POLYMORPHIC TABLE FUNCTION was specified inside RECURSIVE WITH clause.

Action: Check the SQL statement and rewrite if necessary.

ORA-62558: Unsupported data types (*string*) for polymorphic table function

Cause: Non-scalar data types were used in polymorphic table function. Only scalar data types are supported.

Action: Use only scalar data types in polymorphic table function.

ORA-62559: Data types mismatch (*string*<==>*string*) for polymorphic table function

Cause: Data types for the source and target did not match for polymorphic table function. In Get_Col and Put_Col APIs, both the type of the collection element and the type of the polymorphic table function column must match.

Action: Ensure the collection element type matches the column type of the polymorphic table function

ORA-62560: Duplicate column name (*string*)

Cause: The new column name already existed as a passthrough column in the polymorphic table function.

Action: Use a different column name that is unambiguous.

ORA-62561: Invalid column ID (*string*) in Get_Col or Put_Col

Cause: The column number specified in the Get_Col or Put_Col API for polymorphic table functions was incorrect.

Action: Use a column ID that is valid for this polymorphic table function.

ORA-62562: The API *string* can be called only during execution time of a polymorphic table function.

Cause: This API was called in a context other than the execution time context of a polymorphic table function. This API is not supported in this context.

Action: Use this call only during the execution context of a polymorphic table function.

ORA-62563: typecode not set for a new column in the polymorphic table function

Cause: The type of this new column was not set.

Action: Set the typecode and other needed metadata during the describe phase of the polymorphic table function.

ORA-62564: This new column name (*string*) already exists.

Cause: This new column name was already created during the describe phase and therefore it is a duplicate column name.

Action: Ensure that the new column names are unique for this polymorphic table function.

ORA-62565: The *string* method failed with error(s). *string*

Cause: This method of polymorphic table function had error(s) during SQL compilation.

Action: Look at the errors and resolve them.

ORA-62566: One of the new column names is a zero-length identifier.

Cause: A zero-length identifier was used as a new column name that was created during the describe phase.

Action: Specify valid identifiers for new column names.

ORA-62567: One of the new column names is too long.

Cause: An identifier with more than 128 bytes was used for one of the new column names that was created during the describe phase.

Action: Specify at most 128 bytes for new column names.

ORA-62568: invalid use of PARTITION BY or ORDER BY clause

Cause: Either the PARTITION BY or the ORDER BY clause was specified on an argument of a non-table semantic POLYMORPHIC TABLE FUNCTION.

Action: Remove the PARTITION BY or the ORDER BY clause.

ORA-62569: nested polymorphic table function is disallowed

Cause: A polymorphic table function was specified as an argument of a table function.

Action: Modify the query so that there is no nested polymorphic table function.

ORA-62570: new column name (*string*) is invalid

Cause: The new column name was invalid. It should be valid Oracle identifier and should not be an Oracle reserved word.

Action: Use a different column name that is a valid Oracle identifier and that is not an Oracle reserved word.

ORA-62571: new column (*string*) has length (*string*) that is greater than the maximum allowed length (*string*)

Cause: The length specified for a new column for the polymorphic table function was greater than the maximum allowed length.

Action: Specify a new column length that is less than or equal to the maximum allowed length.

ORA-62572: object views are not supported with polymorphic table functions

Cause: An object view was being created with polymorphic table function in the select query.

Action: Do not use object views with polymorphic table function.

ORA-62573: new column (*string*) is not allowed with describe only polymorphic table function

Cause: The new column name was created in describe only polymorphic table function.

Action: Do not create a new column when no execution methods like OPEN, FETCH_ROWS or CLOSE are specified.

ORA-62574: row replication flag was not set

Cause: A row replication API was called, but the Describe method set ROW_REPLICATION to FALSE (default).

Action: Change the value of ROW_REPLICATION to TRUE in the Describe method.

ORA-62575: more than one parameter of TABLE type is not allowed

Cause: An attempt was made to use more than one argument with TABLE or DBMS_TF.TABLE_T as the type specification.

Action: Do not specify more than one TABLE as the type specification

ORA-62576: target size(*string*) is smaller than source size(*string*) for column(*string*) in *string*

Cause: When reading a column from database or writing a column to the database, destination buffer should not be smaller than the source.

Action: Change the size of destination buffer.

ORA-62577: character set IDs do no match *string*

Cause: When reading a column from the database or writing a column to the database, character set did not match.

Action: Ensure that the collection and table column character sets are identical.

ORA-62578: cursor expressions are not allowed with polymorphic table functions

Cause: A cursor expression was used as an argument to polymorphic table function.

Action: Instead of using the CURSOR expression, use the REF CURSOR bind parameter.

ORA-62600: Invalid value is passed to a bitmap operator.

Cause: An attempt was made to pass an invalid value to a bitmap operator.

Action: Pass only expressions that have integer values to BITMAP_BUCKET_NUMBER and BITMAP_BIT_POSITION and provide only positive integer values for BITMAP_CONSTRUCT_AGG.

ORA-62601: invalid size value for BITMAP_BUCKET_NUMBER or BITMAP_BIT_POSITION operator

Cause: An attempt was made to pass an invalid size value for a BITMAP_BUCKET_NUMBER or BITMAP_BIT_POSITION operator.

Action: Pass only positive values that are less than 32 GB for the size argument of BITMAP_BUCKET_NUMBER and BITMAP_BIT_POSITION operators.

ORA-62602: The bitmap size exceeds maximum size of its SQL data type.

Cause: An attempt was made to construct a bitmap larger than its maximum SQL type size.

Action: Call BITMAP_CONSTRUCT_AGG with input BITMAP_BIT_POSITION and a smaller or the default bucket size argument.

ORA-62603: The input is not a valid bitmap produced by BITMAP COUNT DISTINCT operators.

Cause: An attempt was made to pass a bitmap that was not produced by one of the BITMAP COUNT DISTINCT operators.

Action: Pass only bitmaps constructed by using BITMAP_CONSTRUCT_AGG or BITMAP_OR_AGG to the BITMAP COUNT DISTINCT related operators.

ORA-62611: operation disallowed; cluster cannot be created in Oracle Autonomous Database Cloud

Cause: Cluster feature is not supported in Oracle Autonomous Database Cloud.

Action: Use heap-organized tables to store data in Oracle Autonomous Database Cloud.

ORA-62612: operation disallowed; column with ROWID type cannot be created in Oracle Autonomous Database Cloud

Cause: An attempt was made to create a table with ROWID column type. By default, Oracle Autonomous Database Cloud runs with ROW MOVEMENT enabled. Hence, ROWIDs stored in ROWID column may not be valid if rows are moved by automated maintenance operations, such as table shrink.

Action: Set `ATP_ALLOW_ROWID_COLUMN_TYPE=TRUE` and disable row movement of the tables that are referenced by the ROWID column.

ORA-62700: A DBMS_KAFKA application does not exist for cluster %0!s and application %1!s.

Cause: The procedure call was provided values for a nonexistent cluster and application pair.

Action: Pass in names for an existing cluster and application pair.

ORA-62701: DBMS_KAFKA cluster ID cannot be a NULL value.

Cause: A cluster ID was specified as NULL.

Action: This is an internal error; contact Oracle Support Services.

ORA-62702: DBMS_KAFKA generated cluster ID '%0!s' is greater than 40 characters.

Cause: The generated cluster ID was too long.

Action: This is an internal error; contact Oracle Support Services.

ORA-62703: DBMS_KAFKA cluster not found. Cluster ID is %0!s.

Cause: A DBMS_KAFKA cluster was not found with the specified cluster ID.

Action: This is an internal error; contact Oracle Support Services.

ORA-62704: An attempt to create a connection to Kafka cluster %0!s failed with status %1!s and secondary status %2!s.

Cause: An attempt to connect to a Kafka cluster failed.

Action: Check the availability of the Kafka cluster and the security credentials required for connecting.

ORA-62705: Property %0!s is not allowed because it would obscure a 'librdkafka' property with the same name.

Cause: An Oracle SQL Access to Kafka (OSAK) property was specified with a property name that was also used by 'librdkafka'.

Action: Rename or remove the OSAK property.

ORA-62706: Property %0!s cannot be NULL.

Cause: The property was specified without a value.

Action: Update the property and specify a value.

ORA-62707: OSAK Cluster configuration directory is not specified.

Cause: The cluster configuration directory was specified as NULL.

Action: Provide a cluster configuration directory name. The directory must be readable to an Oracle SQL Access to Kafka (OSAK) administrator.

ORA-62708: The OSAK properties file '%0!s' could not be read.

Cause: An Oracle SQL Access to Kafka (OSAK) 'osakafka.properties' file could not be read.

Action: Check that the OSAK properties file exists in the cluster configuration directory and is readable.

ORA-62709: OSAK SASL/SSL credential name is NULL.

Cause: An attempt to configure an Oracle SQL Access to Kafka (OSAK) cluster failed because the SASL/SSL credential name was NULL.

Action: The password for SASL/SSL must be stored as a database credential using the DBMS_CREDENTIAL.CREATE_CREDENTIAL() procedure. Supply the database credential name for the credential_name parameter in the DBMS_KAFKA_ADM.REGISTER_CLUSTER procedure call.

ORA-62710: The %0!s parameter is required.

Cause: The specified parameter was specified as NULL.

Action: Specify a valid value for the parameter.

ORA-62711: The %0!s value is NULL. The value must be an existing file name.

Cause: A value was specified as NULL instead of a file name.

Action: Specify an existing file name for the value.

ORA-62712: The directory path is not an absolute path for directory %0!s.

Cause: The directory path retrieved for the directory object was not specified as an absolute directory path.

Action: Update the directory object to contain an absolute directory path.

ORA-62713: File '%0!s' that was specified for property %1!s does not exist.

Cause: The file name provided for the property listed in the Oracle SQL Access to Kafka properties file did not exist.

Action: Update the property in the properties file to refer to an existing file in the cluster configuration directory.

ORA-62714: error loading global temporary table %0!s from %1!s

Cause: Inserting data from the Oracle SQL Access to Kafka view into an associated global temporary table failed.

Action: This is an internal error; contact Oracle Support Services.

ORA-62715: unsupported call, call %0!s instead

Cause: An undocumented API was called instead of the documented API.

Action: Call the publicly documented API listed in the error message.

ORA-62716: Application %0!s already exists for cluster %1!s.

Cause: An attempt to create an application failed because an application of that name already exists.

Action: Provide a different name for the application or drop the existing application.

ORA-62717: The VIEW_COUNT parameter must be between 0 and the number of 'partitions' for the 'topic'. The supplied value is %0!s and the number of 'partitions' is %1!s.

Cause: View count was specified outside the valid range.

Action: Pass the view count parameter as a number between 0 and the number of 'partitions' for the Kafka 'topic'.

ORA-62718: VIEW_COUNT must be equal to or less than the SESSIONS_PER_USER quota. View count is %0!s and SESSIONS_PER_USER is %1!s.

Cause: The specified value for the VIEW_COUNT parameter was larger than the user's session limit.

Action: Specify a value for the VIEW_COUNT parameter equal to or lower than the user's session limit.

ORA-62719: The specified time zone [%0!s] is longer than 64 bytes.

Cause: The specified value was larger than 64 bytes".

Action: Specify a valid time zone.

ORA-62720: Invalid time zone [%0!s] is specified.

Cause: The specified value was not a valid time zone.

Action: Specify a valid time zone.

ORA-62721: The specified parallel hint [%0!s] exceeds the granule count {%1!s}.

Cause: The specified value was greater than the maximum possible parallelism, which is determine by the granule count.

Action: Specify a value less than or equal to the granule count. The granule count can be determined by calling the DBMS_KAFKA.GET_GRANULE_COUNT function.

ORA-62722: The parameter %0!s must be greater than or equal to 0. The specified value is %1!s.

Cause: The specified value was less than 0.

Action: Specify a value greater than or equal to 0 for the parameter.

ORA-62723: The WATER_MARK parameter must be DBMS_KAFKA.WATER_MARK_HIGH {%0!s} or DBMS_KAFKA.WATER_MARK_LOW {%1!s}. The specified value is %2!s.

Cause: The specified value was not in the valid list for water marks.

Action: Specify either DBMS_KAFKA.WATER_MARK_HIGH or DBMS_KAFKA.WATER_MARK_LOW.

ORA-62724: The calculated time stamp [%0!s = %1!sms] must be greater than or equal to the UNIX epoch.

Cause: The specified value was converted to a number of milliseconds that represents a time before the UNIX epoch. Kafka time stamps are restricted to time stamps since the UNIX epoch.

Action: Specify a time stamp that represents a time since the UNIX epoch.

ORA-62725: The end time stamp {%0!s} must be greater than start time stamp {%1!s}.

Cause: The end time stamp was equal to or less than the start time stamp.

Action: Adjust the time stamps so that the end time stamp is greater than the start time stamp.

ORA-62726: error preparing %0!s for seeking data using time stamps

Cause: Updating the metadata failed while processing the DBMS_KAFKA.SEEK_OFFSET_TS procedure.

Action: See the full stack trace for the cause of the failure.

ORA-62727: No offset data is recorded for view %0!s. A successful load involving the view is required.

Cause: The offset information was not recorded for the specified view name.

Action: Ensure that either a DBMS_KAFKA.LOAD_TEMP_TABLE or DBMS_KAFKA.EXECUTE_LOAD_APP completes successfully for the associated view.

ORA-62728: error while processing offset data for view %0!s

Cause: There was an unexpected problem processing the offset information associated with the specified view name.

Action: See the full stack trace for the cause of the failure. This could be an internal error; contact Oracle Support Services.

ORA-62729: The length of the %0!s parameter exceeds the allowed value {%1!s}.

Cause: The specified value for the argument exceeded the allowed length.

Action: Specify a value of the proper length.

ORA-62730: The DBMS_KAFKA cluster {%0!s} does not exist.

Cause: The specified cluster name was not a known Kafka cluster.

Action: Specify the name of an existing Kafka cluster.

ORA-62731: Required credential is not specified for a cluster associated with an Oracle Streaming Service 'stream'.

Cause: The specified credential name was NULL for a cluster whose provider is the Oracle Streaming Service (OSS).

Action: The password required for Oracle Streaming Service must be stored as a database credential using the SYS.DBMS_CREDENTIAL.CREATE_CREDENTIAL() procedure or an equivalent procedure. Specify the database credential name that was registered for the cluster associated with Oracle Streaming Service.

ORA-62732: The options specified contain duplicate keys.

Cause: The JavaScript Object Notation (JSON) document contained duplicate keys.

Action: Remove the duplicate keys from the JSON document and retry the procedure call.

ORA-62733: The specified options are not a properly formatted JSON document.

Cause: The JavaScript Object Notation (JSON) document contained errors and could not be converted to a JSON_OBJECT_T structure.

Action: Update the JSON document and retry the procedure call.

ORA-62734: Invalid option specified. Option {%0!s} is not supported. %1!s

Cause: The JavaScript Object Notation (JSON) document contained a key that was not one of the valid options. Invalid options generate / a suggested option in the error message.

Action: Check the suggested option specified in the error message or check the documentation for the procedure called and update the JSON document to contain only supported options.

ORA-62735: Option names are case sensitive. Name specified is {%0!s}; name expected is {%1!s}.

Cause: The JavaScript Object Notation (JSON) document contained a key that failed to match the option name due to case sensitivity.

Action: Update the JSON document to contain the option name using the proper case.

ORA-62736: The %0!s option must be one of {%1!s|%2!s}. The specified value is %3!s.

Cause: The specified value was not in the valid list for the option.

Action: Specify one of the allowed values for the option.

ORA-62737: The DBMS_KAFKA cluster %0!s already exists.

Cause: Registering a Kafka cluster failed because a cluster of that name already exists.

Action: Specify a unique name for the new Kafka cluster.

ORA-62738: The DBMS_KAFKA cluster %0!s is still in use by some number {%1!s} of applications.

Cause: Deregistering a cluster failed because the cluster still had DBMS_KAFKA applications associated with it.

Action: The owners of the remaining applications must drop the applications before deregistration can be performed.

ORA-62739: The DBMS_KAFKA cluster %0!s is already disabled.

Cause: The DBMS_KAFKA cluster was already disabled or deregistered.

Action: None

ORA-62740: The DBMS_KAFKA cluster %0!s cannot be enabled.

Cause: The DBMS_KAFKA cluster was already enabled or deregistered.

Action: None. If the cluster is marked as deregistered, the cluster cannot be enabled.

ORA-62741: failed to add 'partitions' to DBMS_KAFKA application

Cause: There was a failure in the processing of the DBMS_KAFKA.ADD_PARTITIONS logic.

Action: See the full stack trace for the cause of the failure. This could be an internal error; contact Oracle Support Services.

ORA-62742: failed to ALTER TABLE %0!s while processing DBMS_KAFKA.ADD_PARTITIONS

Cause: There was a failure in the processing of the ALTER TABLE statement in the DBMS_KAFKA.ADD_PARTITIONS logic.

Action: See the full stack trace for the cause of the failure. This could be an internal error; contact Oracle Support Services.

ORA-62743: Application name for a DBMS_KAFKA application cannot be PARTITIONS.

Cause: The application name was specified as PARTITIONS. This name is reserved and cannot be used as an application name.

Action: Specify a name other than PARTITIONS for the application name.

ORA-62744: Application type for a DBMS_KAFKA application must be one of the following values [%0!s|%1!s|%2!s].

Cause: The specified application type was not a supported type.

Action: Specify an application type for the application from the list of acceptable types.

ORA-62745: application associated with the view name %0!s not found

Cause: The specified view name was not associated with a known DBMS_KAFKA application.

Action: This is an internal error; contact Oracle Support Services.

ORA-62746: The procedure only supports application types in this list: {%0!s}. Current application is of type %1!s.

Cause: The procedure called was not appropriate for the type of application associated with the specified view name.

Action: Call the appropriate procedure for the type of application.

ORA-62747: The BOOTSTRAP_SERVERS parameter is a comma-separated list of 'host:port' values. Value {%0!s} in {%1!s} needs to be a 'host:port' value.

Cause: The bootstrap server list contained a value that was not a 'host:port' pair.

Action: Update the bootstrap server list to contain a comma-separated list of 'host:port' pairs.

ORA-62748: The BOOTSTRAP_SERVERS parameter is a comma-separated list of 'host:port' values. The supplied value {%0!s} does not contain a 'host:port' pair.

Cause: The bootstrap server list did not contain a 'host:port' pair.

Action: Update the bootstrap server list to contain a 'host:port' pair or a comma-separated list of 'host:port' pairs.

ORA-62749: The %0!s parameter [%1!s] is not a known directory object.

Cause: The directory object did not exist.

Action: Either create the directory object with the name specified or specify the correct name of the directory object.

ORA-62750: The DBMS_KAFKA cluster %0!s is not enabled. Current state is %1!s.

Cause: The cluster was not in the enabled state. The procedure required an enabled cluster.

Action: Either enable the cluster or specify a different cluster for the DBMS_KAFKA application.

ORA-62751: The %0!s parameter {%1!s} is not a SQL name.

Cause: The credential name was not a valid SQL name.

Action: Specify a credential name that was created using the DBMS_CREDENTIAL.CREATE_CREDENTIAL() procedure or an equivalent procedure. The specified credential name may be schema qualified.

ORA-62752: The '%0!s' parameter {%1!s} does not exist.

Cause: The credential name was not an existing credential.

Action: Specify the correct name for the credential or create a credential with the specified name.

ORA-62753: The KAFKA_PROVIDER parameter {%0!s} must be one of the following {%1!s}|{%2!s}.

Cause: The specified KAFKA_PROVIDER was not one of the known providers.

Action: Specify one of the documented KAFKA_PROVIDER values.

ORA-62754: The 'format' {%0!s} requires a '%1!s' option to be defined.

Cause: The required option was missing for the format specified.

Action: Specify all required options for the 'format' option.

ORA-62755: The 'format' option is missing from the specified options.

Cause: The 'format' option was missing in the specified options. The 'format' option is required.

Action: Specify the 'format' option in the specified options.

ORA-62756: The '%0!s' option is currently an unsupported option.

Cause: An unsupported option was present in the specified options.

Action: Remove the unsupported option from the specified options.

ORA-62757: The '%0!s' option must be a single printable character. The specified value is [%1!s].

Cause: A single character option was specified with more than one character.

Action: Specify the option value as a single printable, Unicode or allowed escape character.

ORA-62758: The '%0!s' option cannot be a digit. The specified value is [%1!s].

Cause: A single character option was specified as a digit character, which is not allowed.

Action: Specify the option value as a single printable, Unicode or allowed escape character, that is not a digit.

ORA-62759: The '%0!s' option is not specified as an allowed escaped character {n|t|r|\}. The specified value is [%1!s].

Cause: An unsupported escape character was specified for an option requiring a single character.

Action: Specify an option value that is in the acceptable escape character list: {n|t|r|\}.

ORA-62760: The '%0!s' option is not allowed for the 'format' specified.

Cause: A known option was specified, but the option was not appropriate for the 'format' specified.

Action: Remove the option from the specified options.

ORA-62761: The %0!s option must be one of {%1!s|%2!s|%3!s|%4!s}. The specified value is %5!s.

Cause: The specified value was not in the valid list for the option.

Action: Specify one of the allowed values for the option.

ORA-62762: The %0!s option must between %1!s and %2!s. The specified value is %3!s.

Cause: The specified value was not within the range of the valid values for the option.

Action: Specify a value within the valid range for the option.

ORA-62763: The %0!s option cannot be NULL.

Cause: A NULL value was specified that was not allowed for the option.

Action: Specify a value for the option.

ORA-62764: The %0!s option must be either the value UNLIMITED or a number equal to or greater than 0. The specified value is %1!s.

Cause: The specified value was not UNLIMITED or a number greater than or equal to 0.

Action: Specify a valid value for the option.

ORA-62765: The %0!s option is not a valid date format. The specified value is %1!s.

Cause: The specified value was not a valid date format.

Action: Specify a valid date format for the option.

ORA-62766: The %0!s option is not a valid time stamp format. The specified value is %1!s.

Cause: The specified value was not a valid time stamp format.

Action: Specify a valid time stamp format for the option.

ORA-62767: The %0!s option must be one of {%1!s|%2!s|%3!s|%4!s|%5!s}. The specified value is %6!s.

Cause: The specified value was not in the valid list for the option.

Action: Specify one of the allowed values for the option.

ORA-62768: The %0!s option is not an existing table name. The specified value is %1!s.

Cause: The specified value was not the name of an existing table.

Action: Specify the name of an existing table.

ORA-62769: The %0!s option is not a valid JSON formatted Avro schema.

Cause: The specified value failed to be converted to a JSON_OBJECT_T data type.

Action: Specify a valid Avro schema in JavaScript Object Notation (JSON) format.

ORA-62770: The %0!s option lacks required validation logic.

Cause: The specified option was not allowed because it lacked validation support.

Action: Remove the option from the specified options. This is an internal error; contact Oracle Support Services.

ORA-62771: The %0!s parameter is restricted to the following characters {%1!s}. The specified value is [%2!s].

Cause: The specified value included a character that was not in the valid range.

Action: Specify an appropriate value for the parameter.

ORA-62772: The %0!s parameter must be a simple SQL name. The specified value is %1!s.

Cause: The specified value could not be used in the name of a SQL object.

Action: Specify an appropriate value for the parameter.

ORA-62773: The %0!s parameter must be the name of an existing SQL object. The specified value is %1!s.

Cause: The specified value was not the name of an existing SQL object.

Action: Specify an appropriate value for the parameter.

ORA-62774: The %0!s option must be one of the following {%1!s|%2!s|%3!s}. The specified value is %4!s.

Cause: The specified value was not in the valid list for the option.

Action: Specify one of the allowed values for the option.

ORA-62775: The generated %0!s name [%1!s] is too long.

Cause: The object name generated was longer than the acceptable SQL object name length maximum.

Action: This is an internal error; contact Oracle Support Services.

ORA-62776: The %0!s name must be the name of an existing SQL object. The specified value is %1!s.

Cause: The specified value was not the name of an existing SQL object.

Action: This is an internal error; contact Oracle Support Services.

ORA-62777: The type of object [%0!s] to rollback is not a supported type.

Cause: The specified type was not one of the expected types.

Action: This is an internal error; contact Oracle Support Services.

ORA-62778: The data type of the column [%0!s] for the reference table [%1!s] is currently not supported.

Cause: The data type of the column was not one of the supported data types.

Action: Specify a reference table comprising of column data types that are supported.

ORA-62779: An unexpected 'topic' format value [%0!s] is provided.

Cause: The format value for a 'topic' was an unrecognized value.

Action: This is an internal error; contact Oracle Support Services.

ORA-62780: The number of '%0!s' must be greater than 0. Retrieved value is %1!s.

Cause: The value stored in the database was invalid. This was because of data corruption or an attempt at SQL injection.

Action: This is an internal error; contact Oracle Support Services.

ORA-62781: The value of '%0!s' is invalid. Retrieved value is %1!s.

Cause: The value stored in the database was invalid. This was because of data corruption or an attempt at SQL injection.

Action: This is an internal error; contact Oracle Support Services.

ORA-62782: Error getting 'partition' count for 'topic' %0!s from the Kafka cluster. Check the status of the Kafka cluster: %1!s.

Cause: There was a failure to fetch the 'partition' count from the Kafka cluster. This could be caused by access errors to the Kafka cluster.

Action: Check that the Kafka cluster is running and reachable from the database host.

ORA-62783: Error getting 'partition' count for 'topic' %0!s from the Kafka cluster. Check that the topic exists in the Kafka cluster %1!s.

Cause: There was a failure to fetch the 'partition' count from the Kafka cluster. This occurred usually when the 'topic' specified did not exist. This could also be caused by access errors to the Kafka cluster.

Action: Check that the 'topic' exists on the Kafka cluster and that the Kafka cluster is running and reachable from the database host.

ORA-62784: An attempt to manually rollback a change to an external table [%0!s] failed.

Cause: Altering an external table to its original configuration during a rollback failed.

Action: This is an internal error; contact Oracle Support Services.

ORA-62785: An attempt to manually rollback an unknown type [%0!s] was made.

Cause: The type of object to rollback was not one of the known types.

Action: This is an internal error; contact Oracle Support Services.

ORA-62786: The specified object name [%0!s] could not be parsed into SQL object tokens.

Cause: The specified object name failed to be parsed into schema and object names.

Action: Specify a value that can be parsed as a SQL object name. The value can be a schema-qualified SQL object name.

ORA-62787: The specified object name [%0!s] parsed into more tokens than expected. Expected name is either an object name or a schema-qualified object name.

Cause: The specified object name parsed into more than just schema and object names.

Action: Specify a value that can be parsed as a SQL object name. The value can be a schema-qualified SQL object name.

ORA-62788: The directory [%0!s] either does not exist or does not have read/write privileges granted to the user.

Cause: Either the directory did not exist or did not have read or write privilege granted to the user.

Action: Specify a directory name that exists. Ensure that the current user has read or write privileges for this directory.

ORA-62789: The user cannot have EXECUTE access to the directory [%0!s].

Cause: EXECUTE access to the directory was granted to the user. This was not allowed.

Action: Either revoke the EXECUTE privilege for the user for this directory or provide a directory name that exists and for which the user has only read or write privileges.

ORA-62790: The OSAK view [%0!s] does not exist.

Cause: The specified view name was not a known Oracle SQL Access to Kafka (OSAK) view.

Action: Specify the name of an existing OSAK view.

ORA-62791: The OSAK temporary table [%0!s] does not exist.

Cause: The specified temporary table name was not a known Oracle SQL Access to Kafka (OSAK) temporary table.

Action: Specify the name of an existing OSAK temporary table.

ORA-62792: The Avro name is NULL.

Cause: The specified Avro name was NULL.

Action: Specify a value for the Avro name.

ORA-62793: The Avro name starts with an invalid character. The specified value is %0!s.

Cause: The Avro name did not begin with an underscore or an alphabetic character.

Action: Specify a value for the Avro name with a valid starting character.

ORA-62794: The Avro name contains an invalid character. The specified value is %0!s.

Cause: The Avro name contained a character that was not an underscore or an alphanumeric character.

Action: Specify a value for the Avro name with valid characters.

ORA-62795: The Avro type [%0!s] already exists and cannot be redefined.

Cause: The specified Avro type was already defined and could not be redefined.

Action: Specify a different name for the Avro type.

ORA-62796: The Avro %0!s %1!s is NULL.

Cause: The schema was not specified.

Action: This is an internal error; contact Oracle Support Services.

ORA-62797: The attribute [%0!s] is not present in schema [%1!s].

Cause: The specified attribute was not defined in the schema.

Action: Specify the attribute in the schema or use a valid attribute already defined in the schema.

ORA-62798: The attribute [%0!s] is not a string in the schema [%1!s].

Cause: The specified attribute was not defined as a string.

Action: Specify the attribute as a string.

ORA-62799: The attribute [%0!s] is not an integer in the schema [%1!s].

Cause: The specified attribute was not defined as an integer.

Action: Specify the attribute as an integer.

ORA-62800: The attribute 'aliases' is not an array in the schema [%0!s].

Cause: The specified attribute was not defined as an array.

Action: Specify the attribute as an array.

ORA-62801: The attribute array element 'aliases[%0!s]' is not a string in the schema [%1!s].

Cause: The specified attribute array element was not defined as a string.

Action: Specify the attribute array element as a string.

ORA-62802: Schema name [%0!s] cannot be a primitive name in the schema [%1!s].

Cause: The specified named schema was a primitive name. This was not an allowed value.

Action: Specify a different name for the schema name.

ORA-62803: A fixed type size must be between 0 and 2147483647 in the schema [%0!s].

Cause: The specified size was not within the range of acceptable values.

Action: Specify a size within the acceptable range.

ORA-62804: The 'symbols' attribute is missing for the enum in the schema [%0!s].

Cause: The required 'symbols' attribute was not provided for the enum.

Action: Specify the missing attribute for the enum.

ORA-62805: The 'symbols' attribute is not an array for the enum in the schema [%0!s].

Cause: The 'symbols' attribute was not an array.

Action: Specify an array for the 'symbols' attribute for the enum.

ORA-62806: The element [%0!s] in the enum 'symbols' attribute array is not a string in the schema [%1!s].

Cause: The 'symbols' attribute array contained a non string value.

Action: Specify an array of strings for the 'symbols' attribute for the enum.

ORA-62807: The element [%0!s] in the enum 'symbols' attribute array is a duplicate in the schema [%1!s].

Cause: The 'symbols' attribute array contained a duplicate string value.

Action: Specify an array of unique strings for the 'symbols' attribute for the enum.

ORA-62808: The default value [%0!s] is not in the array [%1!s] for the enum 'symbols' attribute in the schema [%2!s].

Cause: The 'symbols' attribute default value did not exist in the array.

Action: Specify an existing value from the array for the default value for the 'symbols' attribute. Alternatively, add the specified default value to the array.

ORA-62809: The type [%0!s] is not defined in the schema [%1!s].

Cause: The type did not exist in the schema.

Action: Specify the type in the schema.

ORA-62810: An illegal value for 'order' [%0!s] is specified for the field [%1!s].

Cause: The value for 'order' was not from the list of supported values.

Action: Specify a valid value for 'order' for the field.

ORA-62811: The record has an empty or missing 'fields' array [%0!s].

Cause: The 'fields' array was missing or empty in the record.

Action: Specify a valid 'fields' array for the record.

ORA-62812: The element [%0!s] in the 'fields' array for the record is not an object [%1!s].

Cause: An element in the 'fields' array was not an object.

Action: Specify only objects in the 'fields' array for the record.

ORA-62813: Union [%0!s] is not allowed to be nested within union [%1!s].

Cause: A union was nested within a union. This is not allowed.

Action: Remove the nested union from the union.

ORA-62814: A duplicate type [%0!s] is present within union [%1!s].

Cause: A duplicate type was specified within a union. This was not allowed.

Action: Remove the duplicate type from the union.

ORA-62815: The Avro schema is NULL.

Cause: The Avro schema was specified as NULL. This was not allowed.

Action: This is an internal error; contact Oracle Support Services.

ORA-62816: Undefined name [%0!s] in the current type map.

Cause: The specified name was not in the type map.

Action: Define the name before using it in the Avro schema.

ORA-62817: The 'items' attribute is not defined for the array [%0!s].

Cause: The array was defined without an 'items' attribute.

Action: Specify an 'items' attribute for the array.

ORA-62818: The 'values' attribute is not defined for the map [%0!s].

Cause: The map was defined without a 'values' attribute.

Action: Specify a 'values' attribute for the map.

ORA-62819: The type [%0!s] is not supported in the current type map.

Cause: The current map did not contain a valid type.

Action: Specify a different type or define the type before using it.

ORA-62820: Schema [%0!s] is not supported.

Cause: The schema contained an unrecognized element.

Action: See the Oracle documentation for the supported Avro schema elements.

ORA-62821: Schema type [%0!s] is not supported.

Cause: The schema contained an unsupported type.

Action: Remove the type from the schema.

ORA-62822: Avro schema is not a JSON object. Schema is [%0!s].

Cause: The Avro schema was not a JavaScript Object Notation (JSON) object.

Action: Specify an Avro schema as a JSON object.

ORA-62823: Avro schema is not a 'record' type. Schema is [%0!s].

Cause: The Avro schema was not a 'record' type.

Action: Specify an Avro schema that is a 'record' type.

ORA-62824: The maximum allowed number of 'fields' in an Avro record is 997. The number of 'fields' is %0!s.

Cause: The specified number of fields was more than the allowed limit.

Action: Specify an Avro schema that contains fewer 'fields'.

ORA-62825: The 'field' name [%0!s] exceeds the maximum column name length [%1!s] in the schema [%2!s].

Cause: The name of the field was more than the allowed number of characters for a column name.

Action: Specify a 'field' name that is shorter.

ORA-62826: The 'field' [%0!s] maps to the same column name as field [%1!s] in the schema [%2!s].

Cause: The 'field' name was a duplicate of another column name.

Action: Specify a different 'field' name that is unique.

ORA-62827: failed to ALTER TABLE %0!s while updating the access parameters.

Cause: There was a failure in the processing of the ALTER TABLE statement in the DBMS_KAFKA.SET_TRACING logic.

Action: See the full stack trace for the cause of the failure. This could be an internal error; contact Oracle Support Services.

ORA-62828: The target table contains one or more column names that do not exist in the provided OSAK view %0!s.

Cause: There were one or more columns names in the target table that did not match column names for the Oracle SQL Access to Kafka (OSAK) view.

Action: Provide a different name for the target table that contains only a subset of the OSAK view's column names or all of the columns of the view's column names.

ORA-62829: The 'size' attribute must be greater than 0 in the schema [%0!s].

Cause: The specified 'size' was not within the range of acceptable values.

Action: Specify a 'size' within the acceptable range.

ORA-62830: The 'precision' must be greater than 0 in the schema [%0!s].

Cause: The specified 'precision' was not within the range of acceptable values.

Action: Specify a 'precision' within the acceptable range.

ORA-62831: The 'precision' must be less than or equal to %0!s in the schema [%1!s].

Cause: The specified 'precision' was not within the range of acceptable values.

Action: Specify a 'precision' within the acceptable range.

ORA-62832: The 'scale' must be between 0 and %0!s in the schema [%1!s].

Cause: The specified 'scale' was not within the range of acceptable values.

Action: Specify a 'scale' within the acceptable range.

ORA-62833: An empty union definition [%0!s] is not allowed.

Cause: The union schema was empty.

Action: Define a union schema that is not empty.

ORA-62834: The record must define at least one supported field type.

Cause: The schema did not define any supported field types;

Action: See the Oracle documentation for the supported Avro schema elements.

ORA-62835: The application %0!s is still being used by %1!s and cannot be dropped. Stop all programs that are using this application and retry the drop procedure.

Cause: There were one or more programs still using the application with either an uncommitted DBMS_KAFKA.UPDATE_OFFSET call or a global temporary table with pending inserts.

Action: Commit or roll back the pending transactions. Alternatively, shut down the programs that are accessing the application.

ORA-63000: operation disallowed: data file *string* is being moved

Cause: The specified data file was being moved.

Action: Wait for the move operation to complete and retry the command.

ORA-63001: file error during move operation

Cause: The move operation encountered an error for the moved data file. The error might be caused by file going offline or by an I/O error. See alert or trace files in all instances for further information.

Action: Retry the move command.

ORA-63002: a data file copy that is not current

Cause: An obsolete copy of a data file left from a data file move operation was used for the CREATE CONTROLFILE command or file header read.

Action: Pass a valid file or perform a media recovery on the file.

ORA-63003: a half-done data file copy

Cause: A half-done copy of a data file created from a previous data file move operation was used for the CREATE CONTROLFILE command or file header read.

Action: Check file headers and pass only valid files.

ORA-63004: Database names in file headers are inconsistent: *string* and *string*.

Cause: Differing database names were found in database file headers.

Action: Check that correct and valid data files are used.

ORA-63005: Header validation failed for *string* File ('*string*').

Cause: Oracle server failed to read or write to the specified file because the file has an SCN value which is too high for this release.

Action: Contact Oracle Support Services.

ORA-63006: only PDB files can be moved to or from the object store

Cause: Either the root CDB or the non-CDB file could not be moved to or from the object store.

Action: Check the source and destination of the move operation.

ORA-63007: only read-only files can be moved to or from the object store

Cause: The read/write file could not be moved to or from the object store.

Action: Check the source and destination of the move operation.

ORA-63008: cannot move file to or from the object store on ADG

Cause: The data file move operation to or from object store was not supported on Active Data Guard (ADG).

Action: Switch ADG to a primary database to perform this operation.

ORA-63009: cannot make object store files read/write

Cause: Tablespaces with object store files could not be read/write.

Action: Move the files out of object store to make the tablespace read/write.

ORA-63010: trace event for recovery data file pre-creation**ORA-63011: created file '*string*' is located in object store**

Cause: Files could not be created in the object store.

Action: Create the files outside of the object store and then move them to the object store.

ORA-63012: no DEFAULT_CREDENTIAL in PDB *string* available for data file move

Cause: When moving a data file to the object store, the DEFAULT_CREDENTIAL was not found.

Action: Set a valid DEFAULT_CREDENTIAL in the specified PDB that can authorize access to the object store URI specified for the data file move.

ORA-63013: no DEFAULT_CREDENTIAL in PDB *string* available for data file drop

Cause: When dropping a data file in the object store, the DEFAULT_CREDENTIAL was not found.

Action: Set a valid DEFAULT_CREDENTIAL in the specified PDB that can authorize access to the object store URI specified for the data file drop.

ORA-63014: cannot make object store data file read/write during recovery

Cause: Object store data files cannot be made read/write during recovery.

Action: Move the data file out of the object store to continue recovery.

ORA-63600: failure to detach from a persistent memory region

Cause: An attempt to detach a persistent memory region failed because one or more processes were still attached to it.

Action: Retry the operation later.

ORA-63702: event for slave mapping skew handling test

Cause: This is an internal event to test slave mapping skew handling and is for internal use only.

Action: None

ORA-63800: maximum number of elements in a tuple exceeded for a Table Value Constructor

Cause: An attempt was made to specify more than allowed number of elements in a tuple of Table Value Constructor.

Action: Do not specify more than allowed number of elements in a tuple of a Table Value Constructor.

ORA-63801: each tuple should have same number of elements in a Table Value Constructor

Cause: An attempt was made to specify different number of elements in a tuple of Table Value Constructor.

Action: Each tuple of a Table Value Constructor should have same number of elements.

ORA-63802: tuple in a Table Value Constructor cannot be empty

Cause: An attempt was made to specify a tuple of Table Value Constructor that had no elements.

Action: Each tuple of a Table Value Constructor should have at least one element.

ORA-63803: columns must be specified with *string*

Cause: Column names must be specified when Table Value Constructor is used in this context.

Action: When a Table Value Constructor is used in contexts like INSERT or WITH, column name must be specified.

ORA-63804: Number of Columns must be same as number of elements

Cause: Number of columns aliases is not same as number of elements of each tuple of Table Value Constructor.

Action: Specify the same number of columns in a Table Value Constructor as the number of elements in each tuple.

ORA-63805: Maximum number of tuples in Table Value Constructor exceeded

Cause: Number of tuples in the values clause of Table Value Constructor is more than the allowed limit.

Action: Specify less than the allowed number of tuples in the values clause of a Table Value Constructor.

ORA-63806: Duplicate name in column alias list for Table Value Constructor

Cause: Column aliases specified for Table Value Constructor had one or more names specified more than once.

Action: Specify a column alias only once in column alias list of a Table Value Constructor.

ORA-63807: Materialized Views can not contain a Table Value Constructor

Cause: Materialized views can not be created when it referenced a Table Value Constructor in its query.

Action: Remove Table Value Constructor reference from the query that is used to define a Materialized View.

ORA-63995: fractured block detected in control file: (block string, # blocks string)

Cause: A fractured block or checksum error was detected on reading the control file under no-enqueue control file transaction. The reason could be a stalled concurrent block update.

Action: Retry the operation later.

ORA-63996: A local temporary file remote call failed

Cause: An operating system error or network error occurred when making a remote call to another instance during a local temporary space DDL operation.

Action: Remedy the operating system or network errors mentioned in the error stack and then retry the operation.

ORA-63997: file size refresh failed

Cause: An operating system error or device error occurred when retrieving the file's size.

Action: Remedy the operating system or device errors mentioned in the error stack and then perform crash recovery.

ORA-63998: undo tablespace file suffered media failure

Cause: An undo tablespace file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

ORA-63999: data file suffered media failure

Cause: A data file was detected as inaccessible due to media failure.

Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

ORA-64000: specified path already exists

Cause: The pathname of a new item specified in a DBFS API operation already exists.

Action: Specify a valid, new pathname for the operation.

ORA-64001: invalid parent directory in specified path

Cause: The pathname of an item specified in a DBFS API operation has one or more invalid parent components.

Action: Specify a valid pathname with valid parent components for the operation.

ORA-64002: specified path is invalid

Cause: The pathname of an item specified in a DBFS API operation is invalid.

Action: Specify a valid pathname for the operation.

ORA-64003: An unsupported operation was invoked.

Cause: The current Database File System (DBFS) API operation was unsupported by a provider.

Action: Use the provider feature set to invoke only supported operations.

ORA-64004: an invalid combination of arguments was specified

Cause: The current DBFS API operation specifies an invalid combination of arguments for the specified pathname(s) and operation.

Action: Specify a valid combination of pathname(s) and arguments.

ORA-64005: access control checks failed

Cause: The current DBFS API operation failed access control checks for the pathname(s) being accessed.

Action: Specify valid pathname(s) and principal for the operation, or take store-specific actions to enable access.

ORA-64006: lock conflict in current operation

Cause: A DBFS API locking operation could not be completed due to conflicts in the locking protocol.

Action: Follow the proper lock/unlock protocol according to the provider feature set.

ORA-64007: invalid store specified

Cause: The current operation specifies an invalid store name.

Action: Specify a valid store name for the operation.

ORA-64008: invalid mount-point specified

Cause: The current operation specifies an invalid mount-point.

Action: Specify a valid mount-point for the operation.

ORA-64009: invalid provider specified

Cause: The current operation refers to an invalid or incomplete or non-conformant store provider package.

Action: Specify a valid, complete, and conformant (per "dbms_dbfs_content_spi") store provider package.

ORA-64010: cannot modify store via read-only mount

Cause: The current operation attempts to modify a store via a read-only mount (or specifies a read-only store).

Action: Specify a valid modifiable store/mount for the operation.

ORA-64011: cross store operation

Cause: The current operation attempts to span 2 or more different stores and cannot be implemented entirely by the DBFS API.

Action: Split the operation, at the application-level, into multiple sub-operations to implement the same overall functionality.

ORA-64012: specified path is a directory

Cause: The current operation specifies a path that is a directory element, when a non-directory element is expected.

Action: Specify a path of the proper type for the operation.

ORA-64013: specified path is not a directory

Cause: The current operation specifies a path that is not a directory element, when a directory element is expected.

Action: Specify a path of the proper type for the operation.

ORA-64014: directory not empty

Cause: The current operation specifies a directory element that is not empty as required.

Action: Specify an empty directory element.

ORA-64015: cannot drop tablespace used by Database File System (DBFS)

Cause: An attempt was made to drop a tablespace containing DBFS metadata tables.

Action: Use `dbfs_drop_filesystem.sql` to drop the Database File System and try dropping the tablespace again.

ORA-64016: *string* is not a valid compression option. Use LOW, MEDIUM or HIGH

Cause: An invalid value was specified for compression option

Action: Specify any of 'LOW', 'MEDIUM' or 'HIGH' as the compression option.

ORA-64017: *string* is not a valid encryption option

Cause: An invalid value was specified for encryption option

Action: Specify any of '3DES168', 'AES128', 'AES192', 'AES256' as the encryption option

ORA-64101: Cannot alter both a structured and an unstructured component of an XMLIndex in the same ALTER INDEX statement.

Cause: An attempt was made to alter the unstructured component and structured component of an XMLIndex at the same time.

Action: Use separate ALTER INDEX statements to change an unstructured component and a structured component of an XMLIndex.

ORA-64102: Cannot create an XMLIndex with a structured component on a CLOB column within the object-relational storage model.

Cause: An attempt was made to create an XMLIndex with a structured component on a CLOB column within the object-relational storage model.

Action: Only unstructured XML indexes can be created on a CLOB column within the object-relational storage model.

ORA-64103: Cannot create an XMLIndex on an object-relational XML type table or column.

Cause: An attempt was made to create an XMLIndex on an XML type table or column that uses the object-relational storage model.

Action: The object-relational storage model does not support an XMLIndex.

ORA-64104: Column name already used by internal column of the structured component of the XMLIndex.

Cause: An attempt was made to use a column name already in use by an internal column of the structured component of the XMLIndex.

Action: Chose another column name.

ORA-64105: Cannot create domain index on XMLIndex internal tables.

Cause: An attempt was made to create a domain index on an internal table of an XMLIndex.

Action: Create the domain index on the base table.

ORA-64106: Incorrect use of comma(,) punctuation in COLUMN definitions.

Cause: An attempt was made to define COLUMNS with incorrect use of comma punctuation.

Action: Properly separate COLUMN definitions with comma punctuation.

ORA-64107: The XMLIndex has been successfully altered but the metadata could not be updated.

Cause: An internal error occurred when updating the index metadata. The `dbms_metadata.get_ddl` function may return improper metadata.

Action: contact Oracle Support Services.

ORA-64108: Cannot truncate a table that has an XMLIndex whose internal table has been indexed using Oracle Text.

Cause: An attempt was made to truncate a table that has an XMLIndex whose internal table has been indexed using Oracle Text.

Action: Drop the Oracle Text index on the XMLIndex internal table.

ORA-64109: XMLIndex: problems encountered during the dropping of statistics

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64110: XMLIndex: problems encountered during the gathering of statistics

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64111: XMLIndex: problems encountered during EXPORT

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64112: XMLIndex: problems encountered during IMPORT

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64113: XMLIndex: XDB.XDB\$XIDX_IMP_T still has bad data for "string"."string"

Cause: See associated error message.

Action: Ask the DBA to delete all the rows that belong to the given schema_name.index_name from the system table XDB.XDB\$XIDX_IMP_T."

ORA-64114: XMLIndex: reserved for EXPORT or IMPORT

ORA-64115: XMLIndex Exchange Partition: the table has no XMLIndex

Cause: The non-partitioned table had no XMLIndex.

Action: None

ORA-64116: XMLIndex Exchange Partition: incompatible XPath subsets

Cause: The XMLIndexes on the two tables had different path subsets.

Action: Correct the error and retry the command.

ORA-64117: XMLIndex Exchange Partition: incompatible modes for asynchronous DML

Cause: The XMLIndexes on the two tables had different deferred DML modes.

Action: Correct the error and retry the command.

ORA-64118: XMLIndex Exchange Partition: incompatible unstructured components

Cause: One of the XMLIndexes had no unstructured component.

Action: Correct the error and retry the command.

ORA-64119: XMLIndex Exchange Partition: incompatible structured components

Cause: One of the XMLIndexes had no structured component.

Action: Correct the error and retry the command.

ORA-64120: XMLIndex Exchange Partition: incompatible structured components

Cause: The XMLIndexes had different structured components.

Action: Correct the error and retry the command.

ORA-64121: XMLIndex DDL: failure of the internal "string"

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64122: XMLIndex DDL: failure of the recursive "string"

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64123: A recursive DDL failed during the XMLIndex DDL processing.

Cause: A recursive DDL (Data Definition Language) command failed during an XMLIndex DDL processing.

Action: The error message is followed by a second message with details about the error. Check the second error message for more information and take the appropriate action.

ORA-64124: XMLIndex: failure during the setting of an event

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64125: XMLIndex: failure during the resetting of an event

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64126: XMLIndex Table Function: failure at the start of the function

Cause: See associated error message.

Action: Examine the error messages and take appropriate action.

ORA-64127: A problem occurred at the beginning of the XMLIndex Table function.

Cause: A problem occurred at the beginning of an XMLIndex table function. This message will be followed by a second message giving more details about the error.

Action: Check the second error message for more information and take the appropriate action.

ORA-64128: A problem occurred during the evaluation of an XML index table function.

Cause: A problem occurred when evaluating an XML Index Table function.

Action: This message will be followed by a second message giving more details about the error. Check the second error message for more information. Contact Oracle Support Services if the error persists.

ORA-64129: XMLIndex Table Function: failure at the end of the function

Cause: See associated error message.

Action: Examine the error messages and take appropriate action.

ORA-64130: XMLIndex: invalid namespace mapping "*string*"

Cause: Namespace mapping was invalid. The syntax is XMLNS="*string*".

Action: Check the namespace string, correct the error and retry command.

ORA-64131: XMLIndex Metadata: failure during the looking up of the dictionary

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64132: A problem occurred updating the metadata of the XML Index.

Cause: A problem occurred when updating the metadata of an XML Index.

Action: Check the secondary error message for more details.

ORA-64133: XMLIndex DML: failure of the internal "*string*"

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64134: XMLIndex DML: failure of the recursive "*string*"

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64135: A problem occurred while updating an XMLIndex.

Cause: A problem occurred while updating an XMLIndex.

Action: This message is followed by a second message giving more details about the error. Check the second error message for more information.

ORA-64136: XMLIndex Asynchronous DML: synchronization failure

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64137: Cannot drop an XMLIndex whose internal table has been indexed using Oracle Text.

Cause: An attempt was made to drop an XMLIndex whose internal table has been indexed using Oracle Text.

Action: Drop the Oracle Text index on the XMLIndex internal table.

ORA-64138: Cannot drop groups from an XMLIndex whose internal table has been indexed using Oracle Text.

Cause: An attempt was made to drop groups from an XMLIndex whose internal table has been indexed using Oracle Text.

Action: Drop the Oracle Text index on the XMLIndex internal table.

ORA-64139: The type of VIRTUAL column is not XMLTYPE

Cause: An attempt was made to create an XML index with VIRTUAL column not of XMLTYPE.

Action: Specify the type of VIRTUAL column to be XMLTYPE.

ORA-64140: missing chaining XMLTABLE for VIRTUAL column in the index

Cause: An attempt was made to create an XML index with VIRTUAL column but without required chaining XMLTABLE.

Action: Specify a chaining XMLTABLE after VIRTUAL column.

ORA-64141: Can only have a single XMLType column when a table is shared.

Cause: An attempt was made to create a shared table with more than one columns.

Action: Specify a correct shared table definition with only one XMLType column.

ORA-64142: Shared tables must have same semantics for truncation.

Cause: An attempt was made to create shared tables with inconsistent semantics for truncation. Either all shared tables should have or should not have (TRUNCATE) keyword.

Action: Be consistent with (TRUNCATE) keyword while defining shared tables.

ORA-64143: Can only share an existing XMLIndex table with an XMLTYPE column.

Cause: An attempt was made to share a table without an XMLTYPE column.

Action: Drop the group containing the XMLIndex table without an XMLTYPE column and re-create the group with new definition.

ORA-64144: Shared tables must have equivalent paths.

Cause: An attempt was made to share a table with different paths.

Action: Specify a correct shared table definition with appropriate paths.

ORA-64145: This XMLIndex rewrite failed

Cause: One of the rewrites being tried by XMLIndex engine failed.

Action: None. This error is for understanding the trace file of XMLIndex rewrite.

ORA-64146: Nonblocking alter XMLIndex error

Cause: Internal error.

Action: None

ORA-64147: Invalid use of NONBLOCKING COMPLETE or ABORT.

Cause: NONBLOCKING COMPLETE or ABORT is only allowed for XMLIndex that is being modified using NONBLOCKING ADD_GROUP or ADD_COLUMN.

Action: None

ORA-64148: Cannot complete nonblocking alter index operation.

Cause: NONBLOCKING COMPLETE is only allowed for XMLIndex that is being modified using NONBLOCKING ADD_GROUP or ADD_COLUMN and there are no pending rows left.

Action: Call DBMS_XMLINDEX.PROCESS_PENDING to finish pending work.

ORA-64149: Invalid alter XMLIndex operation.

Cause: An attempt was made to alter an XMLIndex that is already being modified using NONBLOCKING ADD_GROUP or ADD_COLUMN. Only NONBLOCKING COMPLETE or ABORT alter index operations are allowed. Also, NONBLOCKING operation is not allowed with alter index rebuild.

Action: Call DBMS_XMLINDEX.PROCESS_PENDING to finish pending work and then execute NONBLOCKING COMPLETE to successfully finish existing NONBLOCKING operation. Execute NONBLOCKING ABORT to cancel existing NONBLOCKING operation.

ORA-64151: Invalid use of DBMS_XMLINDEX.PROCESS_PENDING.

Cause: DBMS_XMLINDEX.PROCESS_PENDING was called on an index that was not modified using NONBLOCKING ADD_GROUP or ADD_COLUMN.

Action: None

ORA-64152: There are no pending rows to process.

Cause: DBMS_XMLINDEX.PROCESS_PENDING was called on an index that does not have any pending rows to process.

Action: Execute NONBLOCKING COMPLETE operation to complete the nonblocking alter index.

ORA-64153: Cannot create XMLIndex for data stored in a CLOB column within the object-relational storage model.

Cause: An attempt was made to create an XMLIndex on an XML CLOB column stored with object-relational storage.

Action: Change the XML column storage to binary XML.

ORA-64154: XMLIndex cannot be created on an autolist partitioned table.

Cause: An attempt was made to create an XMLIndex on a table that had an autolist partition.

Action: None

ORA-64155: XMLIndex with unstructured component cannot be created on an interval partitioned table.

Cause: There was an attempt to create an Unstructured XMLIndex (UXI) component on a table with interval partitioning.

Action: Create an XMLIndex with a structured component.

ORA-64201: unregistered LOB value encountered

Cause: The LOB value associated with the input locator did not exist in client-side reference tables.

Action: This is an internal error. Contact Oracle Support Services.

ORA-64202: remote temporary or abstract LOB locator is encountered

Cause: Local database encountered a temporary or abstract LOB created on a remote database. Remote access to temporary or abstract LOB is not supported.

Action: Avoid remote queries that return a temporary or abstract LOB.

ORA-64203: Destination buffer too small to hold CLOB data after character set conversion.

Cause: An attempt was made to convert CLOB to CHAR, where the LOB size was bigger than the buffer limit for CHAR types or the CHAR buffer was not big enough to hold all data after character set conversion.

Action: Do one of the following: * Make the LOB smaller before performing the conversion. for example, by using SUBSTR on CLOB * Use DBMS_LOB.SUBSTR to convert CLOB to CHAR.

ORA-64204: encountered partial multibyte character

Cause: The requested operation could not complete because a partial multibyte character was found at the end of the input.

Action: Ensure that the input buffer ends with a complete multibyte character and retry the operation.

ORA-64205: Cannot use other triggering events along with LOGICAL LOB UPDATE event

Cause: An attempt was made to use other triggering events (such as INSERT, DELETE and UPDATE) with the LOGICAL LOB UPDATE event.

Action: Create multiple triggers instead of sharing a trigger for multiple events.

ORA-64206: Cannot create INSTEAD OF LOGICAL LOB UPDATE trigger

Cause: INSTEAD OF LOGICAL LOB UPDATE trigger was not allowed.

Action: None

ORA-64207: Invalid LOGICAL LOB UPDATE trigger definition

Cause: The LOGICAL LOB UPDATE trigger could not be created on a non-LOB column of a table. The column name has to be specified while creating the trigger. Only one column name can be specified while creating the trigger.

Action: Specify LOGICAL LOB UPDATE trigger with a valid definition.

ORA-64208: FOR EACH ROW clause is required for before or after LOGICAL LOB UPDATE triggers

Cause: An attempt was made to create a before or after LOGICAL LOB UPDATE trigger without a FOR EACH ROW clause.

Action: Specify a FOR EACH ROW clause for a before/after LOGICAL LOB UPDATE trigger.

ORA-64209: WHEN clause is not allowed for LOGICAL LOB UPDATE triggers

Cause: WHEN clause was specified for a LOGICAL LOB UPDATE trigger.

Action: Remove the WHEN clause when creating a LOGICAL LOB UPDATE trigger.

ORA-64210: Cannot reference a trigger of a different type

Cause: The LOGICAL LOB UPDATE trigger did not follow other LOGICAL LOB UPDATE triggers. Non-LOGICAL LOB UPDATE triggers cannot follow LOGICAL LOB UPDATE triggers.

Action: None

ORA-64211: Cannot access other columns within a LOGICAL LOB UPDATE trigger body

Cause: An attempt was made to access an invalid column. A LOGICAL LOB UPDATE trigger can only access ROWID column and the column for which it was specified. Access to other columns is not allowed.

Action: Remove references to other columns within a LOGICAL LOB UPDATE trigger body.

ORA-64212: Cannot create a LOGICAL LOB UPDATE trigger on a view

Cause: A LOGICAL LOB UPDATE trigger could not be created on view.

Action: None

ORA-64213: Cannot create a compound LOGICAL LOB UPDATE trigger with statement level actions

Cause: A compound LOGICAL LOB UPDATE trigger could not contain statement level actions.

Action: None

ORA-64214: Cannot create a crossedition LOGICAL LOB UPDATE trigger

Cause: Crossedition LOGICAL LOB UPDATE triggers were not supported.

Action: None

ORA-64215: PL/SQL subprogram '*string*' for internal use only

Cause: An attempt was made to use a subprogram that is for internal Oracle development use only.

Action: Do not use this unsupported subprogram. Refer to Oracle documentation for available subprograms.

ORA-64219: invalid LOB locator encountered

Cause: The LOB locator sent from client to server was invalid.

Action: Pass a valid LOB locator that was either returned by the database or initialized as an empty locator.

ORA-64220: LOB signature is not supported for clients on Oracle Database Release 19c or earlier.

Cause: The buffer size allocated for the locator at the client side was not big enough to hold the locator with a signature. Large Object (LOB) signature is not supported for clients earlier than Oracle Database Release 19c.

Action: Upgrade the client version to Oracle Database Release 19c or later. For more information or other solutions, contact Oracle Support Services.

ORA-64221: cannot use BFILE locators selected from remote tables or shards

Cause: A remote BFILE column cannot be referenced.

Action: Remove references to BFILE in remote tables or shards.

ORA-64300: Invalid compression level specified.

Cause: The archive compression level must be LOW or HIGH.

Action: Use a valid archive compression level and retry.

ORA-64307: Exadata Hybrid Columnar Compression is not supported for tablespaces on this storage type

Cause: An attempt was made to use Exadata Hybrid Columnar Compression on unsupported storage.

Action: Create this table in a tablespace residing on Oracle Exadata, Oracle's Sun ZFS or Pillar Axiom storage or use a different compression type.

ORA-64308: hybrid columnar compressed table cannot have column with LONG data type

Cause: One of the following was attempted: - Create a hybrid columnar compressed table with a LONG data type. - Alter an existing table with a LONG data type to be hybrid columnar compressed. - Add a LONG data type column to a hybrid columnar compressed table.

Action: LONG data types are not supported with hybrid columnar compressed tables. Create table without LONG column or change table to not be hybrid columnar compressed. If adding a column, do not use LONG data type. If modifying attributes of a column to change data type to LONG, the table cannot be hybrid columnar compressed.

ORA-64309: Hybrid Columnar Compression with row-level locking is not supported for tablespaces on this storage type.

Cause: An attempt was made to use Hybrid Columnar Compression with row-level locking on an unsupported storage type.

Action: Create this table in a tablespace residing on Oracle Exadata storage or use a different compression type.

ORA-64310: could not get compression analysis lock

Cause: An operation could not obtain the compression analysis lock in a reasonable amount of time.

Action: Retry the operation.

ORA-64350: only one INMEMORY clause may be specified

Cause: INMEMORY was specified more than once.

Action: Specify each desired INMEMORY clause option only once.

ORA-64356: The in-memory area is out of space.

Cause: The in-memory area did not have any free space.

Action: Add free space either by removing the in-memory attribute on tables, partitions or sub-partitions which do not require it, or by increasing the size of the in-memory area.

ORA-64357: In-Memory area is out of space for the current container.

Cause: There was no free space in the In-Memory area for the current container.

Action: Disable In-Memory from existing objects in the current container to make space or increase the maximum size limit by changing the INMEMORY_SIZE initialization parameter.

ORA-64364: In-memory column store on Oracle RAC is only supported on Oracle-engineered systems.

Cause: An attempt was made to use the in-memory column store feature with Oracle RAC on an unsupported system.

Action: Disable Oracle RAC before attempting to use the in-memory column store in this environment or use an Oracle-engineered system.

ORA-64367: In-memory column store FastStart tablespace is offline.

Cause: The FastStart feature was enabled but its tablespace was offline.

Action: Disable FastStart or bring the FastStart tablespace online.

ORA-64368: In-memory FastStart is only supported on Oracle-engineered systems.

Cause: An attempt was made to use the in-memory column store FastStart feature on an unsupported system.

Action: Use FastStart on an Oracle-engineered system.

ORA-64369: In-memory FastStart Oracle Call Interface (OCI) error string

Cause: An OCI error occurred when enabling or disabling FastStart.

Action: Manually correct the problem.

ORA-64370: INMEMORY clause with DISTRIBUTE BY PARTITION specified for a table that is not partitioned.

Cause: DISTRIBUTE BY PARTITION was specified for a table that is not partitioned.

Action: None

ORA-64371: INMEMORY clause with DISTRIBUTE BY SUBPARTITION specified for a table that is not composite.

Cause: DISTRIBUTE BY SUBPARTITION was specified for a table that is not composite.

Action: None

ORA-64372: INMEMORY clause with DISTRIBUTE BY SUBPARTITION specified for a table that is not partitioned.

Cause: DISTRIBUTE BY SUBPARTITION was specified for a table that is not partitioned.

Action: None

ORA-64373: Unable to get FastStart Admin Enqueue in mode *string*

Cause: An attempt was made to do FastStart administrative tasks while FastStart is in use.

Action: Temporarily disable faststart.

ORA-64374: This action cannot be performed when FastStart is not enabled.

Cause: An attempt was made to perform a FastStart-related action when FastStart was not enabled.

Action: Enable FastStart and retry.

ORA-64375: FastStart is already enabled.

Cause: Attempting to enable FastStart when it was already enabled.

Action: FastStart is already enabled, and thus, there is no need to enable it // again.

ORA-64376: FastStart is already enabled on this tablespace

Cause: This tablespace is already assigned to FastStart or some FastStart internal objects already exists on this tablespace.

Action: Rerun DBMS_INMEMORY.ENABLE_FASTSTART after running DBMS_INMEMORY.DISABLE_FASTSTART

ORA-64377: Action cannot be performed when database is in read-only mode

Cause: An attempt make changes to FastStart objects on a read-only database.

Action: Mount the the database in writable mode and retry.

ORA-64378: Action cannot be performed on the tablespace assigned to FastStart while FastStart is enabled.

Cause: Attempted to take the FastStart tablespace offline while the feature was enabled.

Action: Disable FastStart and retry.

ORA-64379: Action cannot be performed on the tablespace assigned to FastStart while the feature is enabled

Cause: An attempt drop FastStart tablespace when the feature is enabled.

Action: Disable the feature and retry.

ORA-64380: IM FastStart cannot be enabled or migrated to a non-automatic segment space management tablespace (*string*).

Cause: An attempt was made to enable or migrate In-Memory FastStart (IM FastStart) to a non-automatic segment space management tablespace.

Action: Enable or migrate IM FastStart to an automatic segment space management tablespace.

ORA-64381: Unable to acquire the tablespace enqueue for the given FastStart operation.

Cause: The given tablespace was locked by another operation.

Action: Try again later.

ORA-64382: FastStart checkpoint has already started.

Cause: An attempt was made to initiate a checkpoint when one was already started.

Action: Wait for the previous checkpoint to finish.

ORA-64383: FastStart *string* was incomplete.

Cause: The previous FastStart administrative procedure was incomplete.

Action: Run the procedure again or disable the feature.

ORA-64384: invalid FastStart catalog version detected

Cause: The version number of the FastStart catalog was invalid or too old.

Action: Rebuild the FastStart catalog.

ORA-64386: *string* not supported for proxy PDB

Cause: An attempt was made to use FastStart in the case of a proxy pluggable database (PDB).

Action: None

ORA-64387: *inmemory_size* cannot be modified

Cause: An attempt was made to modify *inmemory_size* parameter when database was not opened, was read-only, or was being migrated.

Action: Issue the command after opening the database in read/write mode.

ORA-64388: *inmemory_size* specified is less than a minimum of (*string*) bytes

Cause: *inmemory_size* was less than the minimum expected by the system.

Action: Issue the command after changing the value for the *inmemory_size* parameter.

ORA-64389: The tablespace *string* where FastStart is being migrated has insufficient space.

Cause: An attempt was made to migrate FastStart to a tablespace having insufficient space.

Action: Add space to the tablespace where FastStart is migrated to, and try again.

ORA-64390: FastStart not supported for *string*

Cause: An attempt was made to use FastStart along with the feature that is not supported.

Action: None

ORA-64393: In-Memory Expressions capture window is already OPEN

Cause: An attempt was made to open an In-Memory Expressions capture window with another capture window already in the OPEN state.

Action: Close the In-Memory Expressions capture window that is currently in the OPEN state.

ORA-64394: In-Memory Expressions capture window is not OPEN

Cause: An attempt was made to CLOSE an In-Memory Expressions capture window before opening it first.

Action: Open an In-Memory Expressions capture window before attempting a CLOSE operation.

ORA-64395: error encountered while changing the state of In-Memory Expressions capture window

Cause: An internal error was encountered in the In-Memory Expressions procedure.

Action: Contact Oracle Support Services.

ORA-64396: Resize of In-Memory Xmem area is not supported.

Cause: Resize of In-Memory Xmem area was not supported on non multitenant container database (CDB) and root pluggable database (PDB).

Action: None

ORA-64397: The new Xmem area size %0!s M is larger than configured Xmem area size %1!s M.

Cause: The specified In-Memory area size was larger than the configured In-Memory XMem area size.

Action: Check the new Xmem area size and reissue the command.

ORA-64398: invalid INMEMORY_SIZE value for cloud configuration, it must be zero

Cause: A nonzero value was specified for the INMEMORY_SIZE initialization parameter for a non-Oracle cloud.

Action: Remove the INMEMORY_SIZE initialization parameter or set the value to zero.

ORA-64399: In-Memory population or repopulation cannot be run for this segment.

Cause: Either the segment requested for In-Memory did not exist, or a population or repopulation task was already in progress for this segment, or this segment was not In-Memory enabled.

Action: Ensure that the segment exists, and it is In-Memory enabled, and no population or repopulation tasks are active for the segment.

ORA-64401: This manageability package is only supported on Oracle RDBMS versions 10.2, 11.1, and 11.2.

Cause: Package installation invoked on database version that was not 10.2, 11.1 or 11.2..

Action: Use Oracle databaseversion 10.2, 11.1, or 11.2.

ORA-64402: Invalid input. XMLSchema is null.

Cause: XMLSchema was not provided to the procedure or function call..

Action: Provide an XMLSchema.

ORA-64403: Input cannot be null

Cause: An input parameter was null.

Action: Provide input parameter.

ORA-64404: Input string exceeds the maximum size

Cause: An input string was provided whose length exceeded the maximum size allowed. This size is 30 bytes for clients prior to Oracle Database 12c Release 2 (12.2) and 128 bytes otherwise.

Action: Provide a shorter input string.

ORA-64405: No matching elements found. Zero annotations were applied.

Cause: The parameters provided to annotate the XMLSchema did not match any entities in the XMLSchema.

Action: Correct the parameters.

ORA-64406: No matching elements found. Zero annotations were removed.

Cause: The parameters provided to annotate the XMLSchema did not match any entities in the XMLSchema.

Action: Correct the parameters.

ORA-64407: Annotation maps to multiple elements.

Cause: The parameters provided to annotate the XMLSchema matched to multiple entities in the XMLSchema.

Action: .

ORA-64408: Name for collection table too long.

Cause: The name for the collection table exceeded 25 characters.

Action: Reduce the length of the name of the collection table.

ORA-64409: XPath could not be mapped to exactly one table.

Cause: XPath could not be mapped to existing table.

Action: Check input parameters.

ORA-64410: Invalid XPath.

Cause: The XPath string provided to the procedure was not valid.

Action: Check XPath string.

ORA-64411: Invalid collection table specified by XPath.

Cause: An invalid collection table was specified by the XPath string.

Action: Check XPath string.

ORA-64412: Procedure called on XML table with BINARY storage model.

Cause: The procedure renameCollectionTable did not work on binary storage model.

Action: .

ORA-64413: Cannot disable constraints/indexes for non-global schemas owned by other users or a non schema based table/column.

Cause: An attempt was made to disable constraints or indexes for non-global schemas owned by other users or a non schema based table/column.

Action: Use an OR schema based table/column or change users to disable constraints or indexes.

ORA-64414: Cannot enable constraints/indexes for non-global schemas owned by other users or a non schema based table/column.

Cause: An attempt was made to enable constraints or indexes for schemas owned by other users or for a non schema based table/column.

Action: Use an OR schema based table/column or change users to enable constraints or indexes.

ORA-64415: Error in namespace declaration.

Cause: The namespace declaration was invalid.

Action: Correct namespace declaration.

ORA-64416: Table does not exist.

Cause: The tab_name parameter provided the name of a table that did not exist..

Action: Correct the tab_name parameter.

ORA-64417: Column does not exist in table.

Cause: The col_name parameter provided the name of a column that did not exist in the given table.

Action: Correct the col_name parameter.

ORA-64418: Column not of XMLType.

Cause: The col_name parameter provided the name of a column that was not an XMLType column.

Action: Correct the col_name parameter.

ORA-64419: Name for collection table already exists.

Cause: The name for the collection table could not be used because it already exists.

Action: Use another name for collection table.

ORA-64420: Table not of XMLType.

Cause: The table_name parameter provided the name of a table that was not an XMLType table.

Action: Correct the table_name parameter or provide the name of an XMLType column in the table.

ORA-64477: Multiple token tables are not supported.

Cause: An attempt was made to create a new token table. If encountered during an import, a critical patch was possibly missing on the export database.

Action: Use the default token table. If encountered during an import, apply the appropriate patch on the export database and try the export and import again.

ORA-64479: element '*string*' is missing '*string*' annotation; schema cannot be registered by common users

Cause: A common user tried to register a schema with missing type name annotations. All type names from the schema and its dependencies should be annotated.

Action: Ensure that the schema being registered and its dependencies have all the element type names annotated.

ORA-64480: element '*string*' is missing default table name annotation; schema cannot be registered by common users

Cause: A common user tried to register a schema with missing default table name annotations. All table names from the schema and its dependencies should be annotated.

Action: Make sure the schema being registered and its dependencies have all the default table names annotated.

ORA-64481: invalid tablespace name

Cause: The tablespace name did not have a closing double quotation mark.

Action: Ensure that the last character is also a double quotation mark.

ORA-64482: Moving XDB to *string* is not allowed.

Cause: An attempt was made to move XDB to a system tablespace.

Action: Ensure that the target tablespace is not a system tablespace.

ORA-64483: New tablespace *string* is smaller than the current tablespace *string*.

Cause: The new tablespace was smaller than the current tablespace.

Action: Ensure that the new tablespace is larger than the current tablespace.

ORA-64484: New tablespace *string* is not automatic segment space management.

Cause: The new tablespace was not automatic segment space management.

Action: Ensure that the new tablespace is automatic segment space management.

ORA-64485: Invalid resource handle or path name passed.

Cause: An invalid resource handle or path name was passed.

Action: Correct the resource handle or path name and retry.

ORA-64486: The internal table is empty.

Cause: The internal input table containing the schemas was empty.

Action: Insert schemas to be moved into the internal table and invoke procedure.

ORA-64487: XML schema *string* exists for user *string*

Cause: The XML schema existed for the user.

Action: Ensure that the XML schema is a new one.

ORA-64488: cannot migrate inherited type *string*

Cause: The inherited type could not be migrated.

Action: Ensure that it is not inherited by any other type.

ORA-64489: cannot migrate XML schema *string*

Cause: The XML schema could not be migrated.

Action: Ensure that the XML schema can be migrated.

ORA-64490: cannot migrate owner from *string* to *string* for XML schema *string*

Cause: The owner could not be migrated for the XML schema.

Action: Ensure that the XML schema can be migrated.

ORA-64491: cannot grant XML schemas to public

Cause: The XML schema could not be granted to public.

Action: Ensure that the XML schema can be granted to public.

ORA-64492: The level up the hierarchy must be greater than 0.

Cause: The level up the hierarchy was less than 1.

Action: Ensure that the level up the hierarchy is greater than 0.

ORA-64493: The resource type is unknown.

Cause: The resource type was not recognized.

Action: Ensure that the resource is valid.

ORA-64494: Substitution group is not supported when maintainDOM is not set.

Cause: maintainDOM was not set to TRUE.

Action: Ensure that maintainDOM is set to TRUE.

ORA-64495: XQuery data model has to be allowed.

Cause: XQuery data model is not allowed.

Action: Ensure that XQuery data model is allowed.

ORA-64496: Position predicate on out-of-line table is not supported when maintainDOM is set to FALSE.

Cause: An attempt was made to use position predicate on an out-of-line table when maintainDOM was set to FALSE.

Action: Ensure that maintainDOM is set to TRUE.

ORA-64497: File access not over XDB repository is not allowed on server side.

Cause: For security reasons, ftp and http access over XDB repository is not allowed on server side.

Action: Have file access over XDB repository only or do not specify file access.

ORA-64498: FTP and HTTP access over XDB repository is not allowed on server side

Cause: For security reasons, ftp and http access over XDB repository is not allowed on server side.

Action: Do not specify FTP or HTTP access over XDB repository.

ORA-64499: ORADB operations not allowed on client-side.

Cause: ORADB client access was a security issue.

Action: Do not specify ORADB operation on client-side.

ORA-64500: invalid PL/SQL XML parser handle

Cause: The PL/SQL XML parser handle was invalid.

Action: Ensure that the PL/SQL XML parser handle is valid.

ORA-64501: invalid PL/SQL XSL processor handle

Cause: The PL/SQL XSL processor handle was invalid.

Action: Ensure that the PL/SQL XSL processor handle is valid.

ORA-64502: invalid PL/SQL XSL stylesheet handle

Cause: The PL/SQL XSL stylesheet handle was invalid.

Action: Ensure that the PL/SQL XSL stylesheet handle is valid.

ORA-64503: invalid PL/SQL DOM handle

Cause: The PL/SQL DOM handle was invalid.

Action: Ensure that the PL/SQL DOM handle is valid.

ORA-64504: invalid PL/SQL DOM *string* handle

Cause: The named PL/SQL DOM handle was invalid.

Action: Ensure that the named PL/SQL DOM handle is valid.

ORA-64505: NULL or invalid *string* argument specified

Cause: The named argument was either invalid or was specified as a NULL.

Action: Specify a non-null, valid argument.

ORA-64506: procedure or function not supported

Cause: The PL/SQL procedure or function was not supported.

Action: Modify the code to avoid usage of the PL/SQL procedure or function.

ORA-64507: ACL path is not valid.

Cause: ACL path was not valid.

Action: Ensure the ACL path is valid.

ORA-64508: XSLT parameter is not valid.

Cause: XSLT parameter was not valid.

Action: Ensure the XSLT parameter is valid.

ORA-64509: Mismatch between complexType and SQLType "*string*".

Cause: The attributes referenced in schema definition differ from the attributes referenced by SQLType.

Action: Ensure that the SQLName annotation references all the existing attributes in SQLType.

ORA-64510: Attribute "*string*" from type "*string*" is not referenced in schema definition.

Cause: At least one attribute, from an existing type, was not referenced in the schema definition.

Action: Ensure that all attributes are referenced in the schema definition.

ORA-64511: Type "*string*" is not defined in schema namespace "*string*".

Cause: The specified type was not defined for the given schema component.

Action: Specify a valid type name.

ORA-64512: Storage type "*string*" in schema is not supported for the packed XML memory object.

Cause: The storage type was not supported for the packed XML memory object. The expected type is either RAW or VARCHAR2.

Action: None

ORA-64513: invalid use of VIRTUAL COLUMNS clause of XMLType table

Cause: There was an invalid use of the VIRTUAL COLUMNS. VIRTUAL COLUMNS clause is only available during XMLType table creation.

Action: Refer to Oracle documentation for correct virtual columns creation on relational tables.

ORA-64514: registration of port failed

Cause: The registration of the port failed.

Action: Check for conflict with other ports used on your system.

ORA-64600: duplicate or conflicting SCALE or EXTEND specifications

Cause: The specifications were either a duplicate of each other or were conflicting.

Action: Remove the duplicate or conflicting specification.

ORA-64601: duplicate RESTART specified

Cause: The specified RESTART was a duplicate.

Action: Remove the duplicate specification.

ORA-64602: CREATE SEQUENCE cannot have a RESTART clause

Cause: The RESTART clause was specified in the CREATE SEQUENCE statement.

Action: Remove the RESTART clause.

ORA-64603: NEXTVAL cannot be instantiated for *string*. Widen the sequence by *string* digits or alter sequence with SCALE EXTEND.

Cause: The NOEXTEND constraint was specified for the scalable sequence and the generated value was wider than the sequence maximum value.

Action: Widen the sequence maximum value or remove the NOEXTEND constraint.

ORA-64604: One or more Sharded Sequence objects exist that cannot be downgraded.

Cause: There were Sharded Sequence objects in the database that were created in a release later than the selected release for downgrade.

Action: Prior to downgrade, drop the Sharded Sequence objects that cannot be downgraded to the selected release.

ORA-64620: duplicate user tablespace specification

Cause: An attempt was made to create more than one user tablespace during database creation.

Action: Modify the command to contain only one user tablespace.

ORA-64621: SQL statement length (*string*) exceeds maximum allowed length (*string*)

Cause: An attempt was made to issue a SQL statement that exceeded the maximum allowed length of a statement.

Action: Modify the SQL statement or the views to which it refers to fit within the maximum length or split the SQL statement.

ORA-64625: bind variables not allowed in the string returned from SQL macro

Cause: The string returned from SQL macro contained bind variables.

Action: Modify the SQL macro definition, so that it does not return a string containing bind variables. Instead, use bind variables as parameters to SQL macro.

ORA-64626: invalid SQL text returned from SQL macro: *string*

Cause: The string returned from the SQL macro was invalid.

Action: Modify the SQL macro definition.

ORA-64627: cycle detected in SQL macro expansion

Cause: A SQL macro expansion had a reference to an earlier SQL macro.

Action: Modify the SQL macro definition.

ORA-64628: scalar SQL macro cannot appear in FROM clause of a SQL statement

Cause: The scalar SQL macro was called in the FROM clause of a SQL query.

Action: Use scalar SQL macro in places where scalar expressions can appear in a SQL statement.

ORA-64629: table SQL macro can only appear in FROM clause of a SQL statement

Cause: The table SQL macro was called from outside of a FROM clause of a SQL query.

Action: Use the table SQL macro only in the FROM clause of a SQL query.

ORA-64630: unsupported use of SQL macro: *string***ORA-64632: SQL macro is not supported with *string***

Cause: The SQL macro was not supported with this feature.

Action: Do not use SQL macro with this feature.

ORA-64633: SQL macro cannot be used remotely

Cause: A SQL macro was referenced remotely (for example, through a database link).

Action: Use a SQL macro locally in the database in which it is defined.

ORA-64634: SQL macro length(*string*) was too big

Cause: SQL Macro created was too big for current memory configuration. Note: Length comprise of user returned string and internally generated SQL fragment.

Action: Create a SQL Macro that can fit in memory.

ORA-64650: database character set conversion finished with errors.

Cause: Conversion of blockchain tables failed while converting the database to Unicode.

Action: Address the blockchain table conversion errors, then execute the command again.

ORA-64651: database not ready for conversion to Unicode

Cause: The repository of Database Migration Assistant for Unicode (DMU) indicated that the database was not ready for conversion to Unicode. Or, the repository of DMU was not found in the database.

Action: Address all of the possible migration issues reported by DMU.

ORA-64652: operation not allowed while converting database character set

Cause: The requested operation was not allowed while converting the database character set.

Action: No action required.

ORA-64653: connection restricted to SYSDBA users while converting database character set

Cause: The database was available only to SYSDBA users while converting the database character set.

Action: Connect to the database as SYSDBA.

ORA-64670: failure to create persistent memory region

Cause: An attempt to create a persistent memory region failed.

Action: Check the alert file for more information.

ORA-64671: failure to delete persistent memory region

Cause: An attempt to delete a persistent memory region failed.

Action: Check the alert file for more information.

ORA-64672: failure to attach to a persistent memory region

Cause: A process failed to attach to a persistent memory region.

Action: Check the alert file for more information.

ORA-64673: failure to detach from a persistent memory region

Cause: A process failed to detach from a persistent memory region.

Action: Check the alert file for more information.

ORA-64674: failure to allocate persistent memory region

Cause: System did not have %llu bytes of available persistent memory.

Action: Allocate the required amount of persistent memory on the system.

ORA-64675: failure to open a persistent memory region

Cause: An attempt to open a persistent memory region failed.

Action: Check the alert file for more information.

ORA-64677: failure to query system state

Cause: An attempt to query the system state failed.

Action: Check the subsequent errors in the incident file that describe the operating system error that caused the failure to query system state. If possible, fix the problem. Otherwise, contact Oracle Support.

ORA-64678: enables XGA tracing

Cause: Tracing was enabled while doing an operation on XGA memory.

Action: Set this event only under the supervision of Oracle Support Services.

ORA-64679: failure to read from the persistent memory region backup file

Cause: An attempt to read from the persistent memory region backup file failed.

Action: Check the alert file for more information.

ORA-64680: failure to write to the persistent memory region backup file

Cause: An attempt to write to the persistent memory region backup file failed.

Action: Check the alert file for more information.

ORA-64681: The persistent memory region header is corrupt.

Cause: An attempt to attach a persistent memory region failed because the region header was corrupt.

Action: Check the alert file for more information.

ORA-64682: failed to identify the root object of the persistent memory region

Cause: An attempt to attach a persistent memory region failed because the root object could not be identified.

Action: Check the alert file for more information.

ORA-64683: out of persistent memory region descriptor slots

Cause: Assigning a region descriptor to a persistent memory region failed.

Action: Check the alert file for more information.

ORA-64692: too many open files

Cause: The system-wide limit on number of open files has been reached.

Action: Increase the system open file descriptors limit.

ORA-64693: invalid file system for persistent memory region backup file

Cause: An attempt to create or open a persistent memory region failed because an invalid file system was specified for the persistent memory region backup file.

Action: Specify a valid file system for the persistent memory region backup file.

ORA-64700: Recovery Appliance is shutting down

Cause: The Recovery Appliance was in the process of shutting down. This message is recorded in the incident log for the Recovery Appliance. When the shutdown completes, the incident is marked as FIXED.

Action: Wait for the Recovery Appliance to complete its shutdown.

ORA-64701: storage location *string* can no longer honor its reservations.

Cause: The specified storage location did not contain enough space to fulfill the reservations of all of the databases assigned to it. This error will be seen if a storage location lost part of its disk space and was in the process of being repaired.

Action: Either shrink the reservations for the databases contained within the storage location or add additional disk space to the storage location.

ORA-64702: error repairing container files for storage location *string*:\n*string*

Cause: An error was returned while trying to rebuild or repair the container files used to store data from protected databases.

Action: The subsequent error will identify the error that needs to be addressed before the Recovery Appliance can be repaired.

ORA-64703: resource error detected

Cause: A task needed to be interrupted because it detected a resource limitation such as insufficient temporary table space or a snapshot being too old. It will be retried once the contention for the resource decreases. The secondary messages will identify the resource that has been exhausted.

Action: If this error occurs rarely, no user action is required. If the condition becomes persistent, the Recovery Appliance administrator should increase the resource that is exhausted.

ORA-64705: no destination in "*string*" at column *string*

Cause: The storage destination contained a syntax error.

Action: Correct the syntax error and retry the operation.

ORA-64708: more than one polling_location in "*string*" at column *string*

Cause: More than one polling_location was specified. Only one polling_location is allowed.

Action: Specify only one polling destination directory and retry the operation.

ORA-64709: ASM polling_location is not supported in "*string*" at column *string*

Cause: The polling_location specified an ASM-based location. Only non-ASM-based polling_locations are supported.

Action: Specify one non-ASM polling destination and retry the operation.

ORA-64711: storage destination do not reference an ASM diskgroup

Cause: The storage destination referenced a non-ASM storage location. Only ASM-based storage destinations are allowed. The operation has been rolled back.

Action: Correct the syntax error and retry the operation.

ORA-64713: requested size *string* for *string* was too small; already using *string*

Cause: The size requested for the storage destination was smaller than its current size.

Action: Increase the requested size and retry the operation.

ORA-64714: requested size *string* for *string* was larger than total available space *string*

Cause: The size requested for the storage destination was larger than its current used space plus its current free space.

Action: Decrease the requested size and retry the operation.

ORA-64715: instance *string* is not available to Recovery Appliance

Cause: The Recovery Appliance could not utilize the specified instance due to its absence from Oracle RAC.

Action: Restart the specified instance or repair any connectivity issues with the specified instance.

ORA-64716: storage location *string* allocation size *string* does not equal diskgroup *string* allocation size *string*

Cause: The minimum allocation size of the specified storage location was not the same as the specified diskgroup allocation unit size.

Action: Specify a different diskgroup or a different storage location and retry the operation.

ORA-64717: network chunk size *string* is not a multiple of diskgroup *string* allocation size *string*

Cause: The configured network chunk size was not a multiple of the specified diskgroup allocation unit size.

Action: Specify a different diskgroup or reconfigure the network chunk size and retry the operation.

ORA-64718: diskgroup *string* allocation size *string* is not a power of two

Cause: The diskgroup allocation unit size was not a power of two.

Action: Specify a different diskgroup and retry the operation.

ORA-64719: diskgroup *string* allocation size *string* is less than two megabytes *string*

Cause: The diskgroup allocation unit size was less than two megabytes.

Action: Specify a different diskgroup and retry the operation.

ORA-64720: no containers were created for storage location *string*

Cause: No storage was allocated and initialized for the specified storage location.

Action: Specify a different diskgroup for the storage location, increase the size of the diskgroup, or reduce the size of the storage location and retry the operation.

ORA-64721: reserved space *string* is less than the minimum reservation *string*

Cause: No storage was allocated and initialized for the specified storage location.

Action: Specify a different diskgroup for the storage location, increase the size of the diskgroup, or reduce the size of the storage location and retry the operation.

ORA-64722: number of drives must be greater than zero

Cause: The specified number of tape drives was NULL or was less than or equal to zero.

Action: Specify a number of tape drives greater than 0 and retry the operation.

ORA-64723: number of drives reserved for restore operations must be greater than or equal to zero

Cause: The number of tape drives reserved for restore operations was NULL or was less than zero.

Action: Specify a number of tape drives reserved for restore operations greater than or equal to zero and retry the operation.

ORA-64724: number of restore drives *string* too large; must be less than *string*

Cause: The number of tape drives reserved for restore operations was at least as large as the total number of drives available. The number of tape drives reserved for restore operations must be at least one less than the total number of drives available.

Action: Specify a number of tape drives reserved for restore operations less than the total number of drives available and retry the operation.

ORA-64725: number of streams must be greater than zero

Cause: The number of streams was less than or equal to zero.

Action: Specify a number of streams greater than zero and retry the operation.

ORA-64726: number of streams *string* too large; must be no larger than *string*

Cause: The number of streams was larger than the total number of drives available. The number of streams must be no larger than the total number of drives available.

Action: Reduce the number of available streams and retry the operation.

ORA-64727: number of copies *string* not in the range 1 through 4

Cause: The number of copies was either NULL or not in the range 1 through 4 inclusive.

Action: Specify a number of copies in the range 1 through 4 and retry the operation.

ORA-64728: replication server name length *string* is too long

Cause: The replication server name was longer than 128 characters.

Action: Specify a replication server name shorter than 128 characters and retry the operation.

ORA-64729: replication server proxy port *string* must be greater than zero

Cause: The replication server proxy port number was less than or equal to zero.

Action: Specify a replication server proxy port number greater than zero and retry the operation.

ORA-64730: replication server proxy URL provided but proxy port is NULL

Cause: A replication server proxy URL was provided but a proxy port number was not. If either a proxy URL or a proxy port are specified, both must be specified.

Action: Specify both a replication server URL and a replication server proxy port number and retry the operation.

ORA-64731: replication server proxy port provided but proxy URL is NULL

Cause: A replication server proxy port number was provided but a proxy URL was not. If either a proxy URL or a proxy port are specified, both must be specified.

Action: Specify both a replication server URL and a replication server proxy port number and retry the operation.

ORA-64732: HTTP server not configured at replication host

Cause: The HTTP server at the replication host site has not been configured.

Action: Configure the HTTP server at the replication host site and retry the operation.

ORA-64733: unable to move individual backup piece with BP_KEY string; not a KEEP backup

Cause: An attempt was made to move an individual backup piece, but the backup set of which this backup piece was a member was not a KEEP backup.

Action: Specify a backup piece key that is a member of a KEEP backup set and retry the operation.

ORA-64735: unknown incarnation detected at Recovery Appliance, need catalog resync

Cause: A new archived log or backup set belonging to the new incarnation was received at Recovery Appliance.

Action: Using RMAN, connect to the Recovery Appliance as a recovery catalog, primary database as target database and perform the resynchronization operation using the RESYNC CATALOG RMAN command. If this error occurred at downstream of the Recovery Appliance (in a replicated Recovery Appliance setup), the reconcile operation fixes this error automatically when the same error is fixed at the upstream Recovery Appliance.

ORA-64736: Task ID string of type string has been interrupted string times.

Cause: The specified task was restarted an unexpected number of times. Tasks get interrupted when there is competition for resources. This is only a warning. It does not necessarily indicate a problem with the Recovery Appliance.

Action: If these problems persist for long periods, contact Oracle Support Services.

ORA-64737: unable to copy a full backup of database string to tape or replicated Recovery Appliance

Cause: While creating a full database backup to tape or to a replicated recovery appliance, level 0 backups of one or more data files were missing.

Action: Query the RA_SBT_TEMPLATE_MDF view to determine the data files for which backups are missing. If using the "incremental forever" backup strategy, perform a level-0 incremental backup for the given database and retry the operation.

ORA-64738: guaranteed copy suspended for database string

Cause: One of the following operations was performed resulting in the database using more than its allotted disk space: - UPDATE_DB lowering the DISK_SPACE_RESERVE value. - UPDATE_PROTECTION_POLICY setting the guaranteed_copy parameter to YES - DELETE_SBT_LIBRARY where backup data for the given database existed. New backup requests may be stalled until the system can recompute the safety of allowing additional backup data or backup data may be lost.

Action: This event can be avoided by ensuring backups are written to tape in a timely manner. Conversely, one should avoid the activities listed in the Cause statement when backups are not being written to tape in a timely manner.

ORA-64740: Redo and backups from database *string* have not been seen for more than UNPROTECTED_WINDOW period.

Cause: An UNPROTECTED_WINDOW parameter in a protection policy was specified and the Recovery Appliance could not receive sufficient online redo, archive log backups, or data file backups from the specified target database for at least that period.

Action: Ensure that backups are being performed in a timely manner and that, if set up, redo logs or backups are being sent to the Recovery Appliance.

ORA-64741: Scheduler *string* running task *string* of type *string* did not stop after *string* requests.

Cause: The specified Recovery Appliance scheduler process could not be stopped.

Action: If these problems persist for long periods, contact Oracle Support Services.

ORA-64742: database *string* is being deleted

Cause: The current command failed because the database was in the process of being deleted.

Action: No action is necessary.

ORA-64743: database *string* failed to purge all data files during a delete_db operation

Cause: Attempts to remove all data from the database failed.

Action: Retry the operation. If further attempts fail, then contact Oracle Support Services.

ORA-64744: Argument *string* is null, invalid, or out of range.

Cause: The argument was expecting a non-null, valid value but the argument value passed in was null, invalid, or out of range.

Action: Check your program and correct the caller of the routine to not pass a null, invalid or out-of-range argument value.

ORA-64745: Name length is *string* characters; maximum length is *string* characters.

Cause: The length of the name exceeded the limit.

Action: Specify a shorter name and retry the operation.

ORA-64746: Name contains invalid characters.

Cause: The name incorrectly started with "_", "-", ":", "#" or digits or contained non-alphanumeric characters. Verify that all other double quotation marks, if any, in the string are adjacent pairs of double quotation marks. Double quotation marks must not be used in the middle of the name.

Action: Change the name and exclude the invalid characters.

ORA-64747: Name contains invalid character "*string*" at the position [*string*].

Cause: The name incorrectly started with "_", "-", ":", "#" or digits or contained non-alphanumeric characters. Verify that all other double quotation marks, if any, in the string are adjacent pairs of double quotation marks. Double quotation marks must not be used in the middle of the name.

Action: Change the name and exclude the invalid characters.

ORA-64748: trace file writing initiated using *string*

Cause: The configuration of the Recovery Appliance was modified to enable the production of trace files. Trace files have the capacity to exhaust disk space on the Recovery Appliance.

Action: Turn off the tracing when it is no longer required.

ORA-64750: Instance *string* is unable to access *string*.

Cause: The Recovery Appliance was unable to find a file that is required for its operation.

Action: Ensure that the file system of the specified file is available on the specified instance.

ORA-64751: replication setup error during *string*; replication server: *string* database: *string*

Cause: The Recovery Appliance was unable to complete the configuration and setup of replication for the database specified.

Action: Validate that the downstream replication server is properly configured and all network communication paths are valid.

ORA-64752: storage unavailable for new redo or backups for database *string*

Cause: There was a failure while backing up redo or copying backups from a polling location. This condition may be due to one of the following reasons: * An individual backup piece exceeded the database protection policy DISK_RESERVE_SPACE value. * Guaranteed_copy is enabled but not enough data has been spooled to tape. * Misconfiguration of the storage location size.

Action: Check for the value of DISK_RESERVED_SPACE and storage location uses.

ORA-64753: Incorrect object type specified; specified *string*, expected *string*

Cause: An incorrect object type was given to an API command.

Action: Use the object-specific API. For example, use 'resume_replication_server' instead of 'resume_sbt_library'.

ORA-64754: unable to perform operation with associated tape or replication objects

Cause: An attempt to execute 'update_db' or 'update_protection_policy' and change storage locations with a replication server or tape job associated with the protection policy failed.

Action: Create a temporary protection policy that has the same storage location as the current protection policy with the tape and replication attributes of the target protection policy, update to the temporary protection policy, and then finally update to the target protection policy.

ORA-64755: failed to delete database *string*; the Recovery Appliance is not running

Cause: An attempt was made to delete a database, but the Recovery Appliance has been deactivated by the administrator.

Action: Have the Recovery Appliance administrator execute DBMS_RA.STARTUP_RECOVERY_APPLIANCE and retry the delete_db() operation.

ORA-64757: unable to restore backup piece with BP_KEY string

Cause: An attempt was made to restore the specified backup piece which resulted in an error. An explanation of the error appears in the following messages.

Action: Verify the correctness of the backup piece. If it is corrupt, either delete it or replace it.

ORA-64758: unable to grow delta store metadata in tablespace string

Cause: Additional extents could not be allocated for the tables used to implement the delta store.

Action: Add additional storage to the indicated tablespace.

ORA-64759: Recovery Appliance is leaving restricted resources state

Cause: The Recovery Appliance ended its restrictions on task execution. The restricted resources state was entered when tasks could not run due to insufficient temporary table space or insufficient undo space. At that time, resource intensive tasks were put into RESOURCE_WAIT state.

Action: None. This is only an informational message entered in the alert log.

ORA-64760: Database string has had tasks in ordering wait state for over string days.

Cause: The specified database had an INDEX_BACKUP task that could not be run because the task did not tile against the delta store. An incremental backup piece could not tile into the delta store because the necessary control file information was missing or because the backup that it depended upon was not found in the delta store.

Action: Resolve the warnings for the database. A new full backup for the database should also clear this condition.

ORA-64761: disk group string is not usable by the Recovery Appliance

Cause: A disk group was supplied to either the create_storage_location or update_storage_location APIs that was not previously prepared by the installation software for the Recovery Appliance.

Action: Run the ra_update procedure to process the disk group and retry the API.

ORA-64762: Task string of type string has been running for string.

Cause: The specified task did not complete its execution after a reasonable period. This is only a warning message.

Action: If these errors persist, contact Oracle Support Services.

ORA-64763: Task string of type string was terminated after running for string.

Cause: The specified task did not complete and was presumed hung. Its process was stopped and restarted.

Action: If these errors persist, contact Oracle Support Services.

ORA-64766: backup deletion using RMAN prevented by protection policy

Cause: Recovery Manager was prevented from deleting a backup piece because the 'allow_backup_deletion' parameter of the applicable Recovery Appliance protection policy was 'NO'.

Action: Modify the 'allow_backup_deletion' parameter of the applicable protection policy to 'YES' to allow for deletion of backups.

ORA-64767: restore timed out

Cause: The Recovery Appliance terminated the restore operation due to unresponsiveness of the client database.

Action: Verify the network between the client database and the Recovery Appliance. Also verify the client database I/O performance. If the error persists, contact Oracle Support Services.

ORA-64768: KEEP file size *string* cannot exceed available DISK_RESERVED_SPACE *string*.

Cause: There was no more space for a KEEP backup piece. The total DISK_RESERVED_SPACE minus the space currently consumed by KEEP backups was less than the size of the current KEEP backup piece. The piece that caused the error was deleted.

Action: Use DBMS_RA.UPDATE_DB to increase the DISK_RESERVED_SPACE value of the database or move KEEP (archival) backups to other storage using the DBMS_RA.MOVE_BACKUP function.

ORA-64771: reconcile error during *string*; replication server: *string*; database: *string*

Cause: The specified database was unable to reconcile with the specified replication server. This is typically due to either a network communication failure, missing or incorrect credentials, incorrect wallet credentials, missing or incorrectly ordered add_db and grant_db_access calls.

Action: Check the incident log for active failures with a component type of REPLICATION_RECONCILE. Resolve the reconcile issues and resume_replication_server or wait until the next reconcile time period. After a successful reconcile all stalled replication tasks will continue and the incident is marked as FIXED.

ORA-64772: downstream replication server: *string* is not accessible

Cause: The specified downstream replication server was not running, was not accessible, had incorrect credentials for the replication user in the upstream wallet, or was in the process of starting up or shutting down.

Action: If the credentials are incorrect, correct the credentials. Otherwise, the incident is marked as FIXED once the downstream replication server comes back online or is accessible over the network.

ORA-64773: Note: *string* generated during execution of API command: *string*

Cause: The specified command was entered correctly but an unexpected event occurred during its processing.

Action: Check the message for further information.

ORA-64774: database *string* has replication tasks in reconcile wait state for over *string* days

Cause: The specified database had a BACKUP_SBT task that could not be run because the task was waiting for a successful reconcile.

Action: Check the incident log for active failures with a component type of REPLICATION_RECONCILE. Resolve the reconcile issues and execute a manual reconcile, execute a resume_replication_server, or wait until the next reconcile time

period. After a successful reconcile, all stalled replication tasks continue and the incident is marked as FIXED.

ORA-64775: unable to execute required code on the downstream replication server for the specified database

Cause: The specified database could not execute the required code on the downstream replication server. This is typically due to a missing `add_db` or `grant_db_access` on the downstream or the commands were issued in the incorrect order.

Action: Ensure that you execute `add_db` followed by `grant_db_access` on the downstream replication server. Then reissue the command, execute a manual reconcile, execute a `resume_replication_server`, or wait until the next reconcile time period. After a successful reconcile, all stalled replication tasks continue and this error is cleared.

ORA-64776: message from downstream replication server during *string*: *string*

Cause: An unexpected event occurred at the downstream replication server.

Action: The message includes additional information for further examination on the downstream replication server.

ORA-64777: deletion of polled file failed

Cause: The Recovery Appliance could not delete the file that was backed up from the polling location.

Action: Check if the directory specified in the polling location grants the necessary permission to allow for deletion of files.

ORA-64778: privilege not granted to *string* for database: *string*

Cause: The privilege that was revoked was not granted to the user for this protected database, the revoke was not required.

Action: Do not issue the revoke for this privilege for the protected database, it is not granted to the user.

ORA-64779: The catalog is missing necessary control file information for database *string*.

Cause: A backup arrived before the Recovery Appliance could receive all the necessary control file information. `INDEX_BACKUP` tasks for these data files remain in `ORDERING_WAIT` state until the catalog receives all the information.

Action: Use the `RMAN` command `RESYNC CATALOG` to fix this issue. If the problem persists, contact Oracle Support Services.

ORA-64780: Section 1 of multi-section backup set *string* of data file *string* has not reached this Recovery Appliance.

Cause: Section 1 of the multi-section backup did not reach the Recovery Appliance. Without the section, `INDEX_BACKUP` tasks of other sections of the backup set remain in `ORDERING_WAIT` state.

Action: This could be temporary because sections of a multi-section backup do not reach the Recovery Appliance in order. If the problem persists, check the status of the incoming backup, as well as status of `INDEX_BACKUP` tasks for this database.

ORA-64781: Section *string* of the prior multi-section backup set *string* of data file *string* is missing.

Cause: A section of the previous multi-section backup prior to the current backup was missing. Without the section, INDEX_BACKUP tasks for processing the current backup set remain in ORDERING_WAIT state.

Action: An INCREMENTAL LEVEL 1 CUMULATIVE or INCREMENTAL LEVEL 0 backup of the data file should clear this condition.

ORA-64782: Missing backups between SCNs *string* and *string* for data file *string*.

Cause: There was a gap in backups provided to the Recovery Appliance. Without the backup, the current backup could not be processed, and the INDEX_BACKUP task remained in ORDERING_WAIT state.

Action: An INCREMENTAL LEVEL 1 CUMULATIVE or INCREMENTAL LEVEL 0 backup of the data file should clear this condition.

ORA-64783: The backup of data file *string* is tiling with a backup written to different media.

Cause: The backup on which the current backup piece depends was written to different media and no longer resides on this Recovery Appliance.

Action: The incremental forever mechanism of the Recovery Appliance does not support backups written to disk or other media. Provide an INCREMENTAL LEVEL 0 backup of the data file.

ORA-64784: Corruption found in backup *string* of data file *string* in Recovery Appliance. New backup cannot be processed.

Cause: A new backup could not be processed because the most recent backup piece of the data file residing in the Recovery Appliance was corrupt.

Action: An INCREMENTAL LEVEL 0 backup of the data file should clear this condition.

ORA-64785: Online redo shipping for DBID *string* cannot be performed because the Recovery Appliance is not available.

Cause: The Recovery Appliance was unable to automatically receive archive logs from the indicated database because the Recovery Appliance was not running.

Action: Execute the startup API on the Recovery Appliance before sending archive logs to it.

ORA-64786: Online redo shipping for DBID *string* cannot be performed because the delta store is under repair.

Cause: The Recovery Appliance was unable to automatically receive archive logs from the indicated database because the delta store was under repair.

Action: The archive logs are accepted once the repair completes. If the message persists, contact Oracle Support Services.

ORA-64787: Online redo shipping for DBID *string* cannot be performed because it is removed from the Recovery Appliance

Cause: The Recovery Appliance was unable to automatically receive archive logs from the indicated database because the database was removed.

Action: Remove the Oracle Data Guard log destination corresponding to the Recovery Appliance from the indicated database.

ORA-64788: Online redo shipping for DBID *string* cannot be performed because its platform is unknown.

Cause: The Recovery Appliance was unable to automatically receive archive logs from the indicated database because an initial backup from the database was not supplied. The initial backup provides the platform identification to the Recovery Appliance.

Action: An initial backup must be sent from the indicated database to the Recovery Appliance using the recovery manager (RMAN).

ORA-64789: Online redo shipping for DBID *string* cannot be performed because its storage location needs repair.

Cause: The database for the Recovery Appliance was opened by specifying resetlogs.

Action: Contact Oracle Support Services.

ORA-64790: Online redo shipping for DBID *string* cannot be performed because it is not known by the Recovery Appliance.

Cause: The database was not identified in the catalog of the Recovery Appliance.

Action: Execute the ADD_DB API for the specified database.

ORA-64792: incorrect catalog_user_name parameter specified in create_replication_server

Cause: An incorrect catalog_user_name parameter was specified in the create_replication_server or update_replication_server API.

Action: The catalog_user_name parameter must be the owner of the Recovery Appliance schema.

ORA-64793: unexpected scheduler exit

Cause: The task scheduler failed with an unexpected error code in the Recovery Appliance.

Action: Contact Oracle Support Services.

ORA-64794: unable to access the encryption HSM wallet or the encryption wallet is not open on the current instance

Cause: Encryption required a Hardware Security Module (HSM) wallet that was open across all instances.

Action: Ensure the following: - That there is a valid connection to the HSM keystore. - That the HSM credentials are correct. - That the wallet is open across all Oracle RAC instances in GV\$ENCRYPTION_WALLET.

ORA-64795: unable to access or create the encryption key

Cause: Encryption could not create or obtain the required access to a valid backup encryption key during the copy to tape operation.

Action: This could be due to a network connection issue, missing or incorrect credentials, or a misconfigured key store. Inspect the ERROR_TEXT in the RA_INCIDENT_LOG for additional information.

ORA-64796: unable to create encrypted backup during copy to tape

Cause: During the copy to tape operation, backup encryption could not create or obtain the required access to a valid encryption key.

Action: Check the ERROR_TEXT in the RA_INCIDENT_LOG for additional information.

ORA-64797: waiting for recall of backup piece *string* from cloud storage

Cause: Restore was waiting for a recall of the backup piece from cloud storage.

Action: None. This is only an informational message. The incident status is changed to FIXED once the backup piece is recalled.

ORA-64798: encryption key does not exist in wallet of executing instance

Cause: The protected databases current encryption key did not exist in the wallet of the Oracle RAC instance or the instance that was executing the copy to tape operation.

Action: Rekey the current database and verify that the RA_DATABASE.ENCRYPTION_KEYID for the protected database exists across all instances in GV\$ENCRYPTION_KEYS.KEY_ID.

ORA-64799: System Backup to Tape (SBT) job template requires encryption for the specified library.

Cause: Encryption was not specified for a library that requires encryption.

Action: Use the DBMS_RA.UPDATE_SBT_JOB_TEMPLATE procedure and specify an encryption algorithm for all job templates associated with the specified library.

ORA-64800: unable to create encrypted backup for big endian platform

Cause: Copy to tape operation could not create encrypted backup for big endian platform.

Action: Contact Oracle Support Services.

ORA-64801: Altering RASYS password in SQL is not allowed.

Cause: RASYS Password modification attempted via SQL.

Action: Use racli alter rasys_user --password;

ORA-64803: failure to get ingest name for archivelog grouping

Cause: The Oracle backup process was unable to get the ingest name needed to connect to the Oracle restore process.

Action: Set the ingest name for the local node in the configuration variable.

ORA-64804: cannot reinsert deleted backup into delta store

Cause: The specified backup could not be reinserted into the delta store, because it either was previously deleted or contained a corresponding virtual backup in the same backup set that was removed from the catalog.

Action: Take a new backup of the data file.

ORA-64805: cannot reinsert virtual full backup into delta store

Cause: Virtual full backups or copies of virtual full backups could not be reinserted into the delta store because it could corrupt existing backups of the database.

Action: Use a virtual incremental backup of the data file.

ORA-64806: incorrect or all NULL input parameters specified for reset_error API

Cause: Some or all of the input parameters specified for reset_error API were incorrect or they were all NULL input parameters.

Action: Provide at least one valid input parameter.

ORA-64807: datafile encryption information for database *string* does not match

Cause: A datafile was encrypted or rekeyed on the protected database and now the encryption key for the current INCREMENTAL LEVEL 1 backup does not match the prior encryption key.

Action: An explicit INCREMENTAL LEVEL 0 backup is needed for the encrypted datafiles to maintain recoverability.

ORA-64808: Initialization parameter *string* has more than one SID value specified

Cause: There were multiple instance settings for one initialization parameter.

Action: Use "racli update parameter -type=db" to update the initialization parameter.

ORA-64809: Initialization parameter *string* does not match the recommended value

Cause: Initialization parameter did not match the recommended value.

Action: Use "racli update parameter -type=db" to update the initialization parameter.

ORA-64810: Initialization parameter *string* is not set with the proper value

Cause: Initialization parameter was not set with the proper value.

Action: Set the proper initialization parameter value.

ORA-64811: Initialization parameter *string* has a non-default value.

Cause: Initialization parameter had a non-default value.

Action: Use "racli update parameter -type=db -restart_db" to update the initialization parameter.

ORA-64812: -force option is required to ignore checking *string* initialization parameter

Cause: An attempt was made to ignore checking the initialization parameter value without specifying the -force option.

Action: Add the -force option when attempting to ignore checking the initialization parameter.

ORA-64813: Task *string* is being suspended.

Cause: A Recovery Appliance task failed 10 times and is now going into SUSPENDED state. A suspended task will be retried every few days until it successfully completes.

Action: Contact Oracle Support Services if the task remains in SUSPENDED state for more than two weeks.

ORA-64816: cannot create a replication server to an old version downstream Recovery Appliance

Cause: The downstream Recovery Appliance was an older version.

Action: Contact Oracle Support Services.

ORA-64817: error interacting with downstream Recovery Appliance during *string*; replication server: *string*; database: *string*

Cause: An error was encountered during communication or conversation with a downstream Recovery Appliance for the specified database with the specified replication server. This was typically due to a network communication failure, missing or incorrect wallet credentials, or missing or incorrectly ordered ADD_DB and GRANT_DB_ACCESS calls. The error could also indicate an issue during the conversation with the remote Recovery Appliance.

Action: Check the incident log for active failures with a component type of REPLICATION_REMOTERA. Resolve the connection issues and execute the RESUME_REPLICATION_SERVER command or wait until the next reconcile time period. After a successful reconcile, all stalled replication tasks will continue and the incident is marked as FIXED.

ORA-64818: The polling feature is not supported for multiple tenants.

Cause: The polling feature did not work on multiple tenants.

Action: None

ORA-64819: Database *string* (*string*), *string* (*string*) does not exist.

Cause: The database did not exist.

Action: Specify an existing database.

ORA-64820: DB_KEY *string* does not exist.

Cause: The database associated with the specified DB_KEY was not found in the Recovery Appliance.

Action: Specify an existing db_key.

ORA-64821: DF_KEY *string* does not exist.

Cause: The data file associated with the specified DF_KEY was not found in the Recovery Appliance.

Action: Specify an existing DF_KEY.

ORA-64822: Log file cannot be accepted from DBID *string* on Tkey *string*.

Cause: While performing redo shipping for the specified database, an error was detected that prevented the creation of the log file.

Action: Refer to the other errors in the error stack to determine the cause of the problem.

ORA-64823: unable to move individual backup piece with BP_KEY *string*; backup piece is not ready to move

Cause: An attempt was made to move an individual backup piece, but the move backup operation encountered the resource busy issue for this backup piece. The backup piece still needed to replicate.

Action: Retry the move command.

ORA-64830: Incremental backup for database *string* is not up-to-date.

Cause: This could be caused by an undersized appliance or it indicates that there was a problem with the backup for a particular database.

Action: Run a capacity planning report and review the sizing of the storage location as well as CPU, memory, and disk utilization of the components to see if the application is using more than 80% of the resources for an extended period of time. Also, check for other incidents that may help describe the problem. If the cause is still not clear, open a service request for Oracle Support Services.

ORA-64831: There are no outstanding backups to request for the specified group.

Cause: The backup request group was either empty or had requested all of the backups.

Action: No action is necessary. This is an informational message only.

ORA-64832: error interacting with remote Recovery Appliance: *string*; replication server: *string*; database: *string*

Cause: An error was encountered during communication or conversation with a remote Recovery Appliance for the specified database with the specified replication server. This is typically due to a network communication failure, missing or incorrect wallet credentials, or missing ADD_DB and GRANT_DB_ACCESS calls. The error could also indicate an issue during the conversation with the remote Recovery Appliance.

Action: Check the incident log for active failures with a component type of REMOTERA. Resolve the issue and rerun the command.

ORA-64901: INMEMORY_SIZE may not exceed 16 GB with Database In-Memory Base Level

Cause: INMEMORY_SIZE cannot be greater than 16 GB because the Database In-Memory Base Level was enabled.

Action: Set inmemory_size to less than 16 GB or disable Database In-Memory Base Level with INMEMORY_FORCE parameter.

ORA-64902: Database In-Memory Base Level can only be modified in the initialization parameter file

Cause: The Database In-Memory Base Level could not be enabled or disabled dynamically.

Action: Set INMEMORY_FORCE in the initialization parameter file.

ORA-64903: Database Cell Memory Level can only be modified in the initialization parameter file

Cause: The Database Cell Memory Level could not be enabled or disabled dynamically.

Action: Set INMEMORY_FORCE in the initialization parameter file.

ORA-64904: In-Memory not supported on HDFS tablespace

Cause: An attempt was made to enable In-Memory on a table or fragment with data in Hadoop Distributed File System (HDFS) tablespace.

Action: Ensure that In-Memory is not enabled on a table or fragment in HDFS tablespace.

ORA-64905: score operator not supported for INMEMORY TEXT

Cause: An attempt was made to use the score operator on an In-Memory Oracle Text query.

Action: Remove the score operator from the query.

ORA-64906: DBMS_INMEMORY_ADMIN package invalid option specification.

Cause: The value of one of the option parameters was incorrect.

Action: Fix the option value.

ORA-64907: DBMS_INMEMORY_ADMIN required parameter is NULL or missing.

Cause: Some of the procedures were called with missing or NULL parameters.

Action: Specify the missing parameter.

ORA-64908: The Database In-Memory size cannot be increased.

Cause: Oracle Database In-Memory (Database In-Memory) could not be enabled because an invalid value was specified for the initial Database In-Memory size.

Action: Specify a non-zero Database In-Memory size in the initialization `inmemory_size` parameter.

ORA-64909: The Database In-Memory size must be increased by a minimum of *string* MB.

Cause: Oracle Database In-Memory (Database In-Memory) size did not increase by the minimum required value.

Action: Specify a Database In-Memory size that increases by the minimum required value.

ORA-64910: A reduction in the Database In-Memory size cannot be completed.

Cause: The parameter was set to disable any reduction of the Oracle Database In-Memory size (Database In-Memory).

Action: Enable Database In-Memory shrink.

ORA-64911: The Database In-Memory size must be at least the initial value *string* MB.

Cause: The attempt to reduce the Oracle Database In-Memory (Database In-Memory) size was less than the initialized size.

Action: Specify the Database In-Memory size to at least the initialized value.

ORA-64912: The Database In-Memory size must be less than *string* MB.

Cause: The Oracle Database In-Memory (Database In-Memory) size was larger than 70% of the system global area (SGA) target.

Action: Specify a Database In-Memory size of no more than 70% of the total capacity, or increase the SGA target.

ORA-64913: The Database In-Memory size cannot be increased more than *string* MB for PDB ID *string*.

Cause: The Oracle Database In-Memory (Database In-Memory) size for the pluggable database (PDB) exceeded the total Database In-Memory size for the container.

Action: Specify a Database In-Memory size of no larger than the container Database In-Memory size.

ORA-64914: The Database In-Memory size cannot be increased more than *string* MB for PDB ID *string*.

Cause: The Oracle Database In-Memory (Database In-Memory) size of the pluggable database (PDB) exceeded the PDB system global area (SGA) target size.

Action: Specify a Database In-Memory size of no larger than the PDB SGA target, or increase the PDB SGA target size.

ORA-64915: A Database In-Memory resize is already in progress

Cause: Changing the Oracle Database In-Memory (Database In-Memory) size could not be performed until the current resize completed.

Action: Recheck the Database In-Memory size and retry if required.

ORA-64916: The Database In-Memory resize cannot be completed.

Cause: Changing the Oracle Database In-Memory (Database In-Memory) size could not be performed due to insufficient space for the resize.

Action: Recheck the Database In-Memory size and retry if required.

ORA-65000: missing or invalid pluggable database name

Cause: A valid pluggable database name was not present where required.

Action: Reissue the statement with a valid pluggable database name.

ORA-65001: missing or invalid administrative user name

Cause: A valid administrative user name was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid administrative user name.

ORA-65002: missing or invalid administrative user password

Cause: A valid administrative user password was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid administrative user password.

ORA-65003: missing or invalid XML file name

Cause: A valid XML file name was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid XML file name.

ORA-65004: missing or invalid database link name

Cause: A valid database link name was not present where required by the syntax of CREATE PLUGGABLE DATABASE statement.

Action: Reissue the CREATE PLUGGABLE DATABASE statement with a valid database link name.

ORA-65005: missing or invalid file name pattern for file - *string*

Cause: Either source or replacement file name pattern was missing or invalid in a SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause.

Action: Correct the SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause and reissue the statement.

ORA-65006: missing or invalid ENABLE PLUGGABLE DATABASE clause

Cause: An ENABLE PLUGGABLE DATABASE clause was not present where required by the syntax of CREATE DATABASE statement.

Action: Reissue the CREATE DATABASE statement with a valid ENABLE PLUGGABLE DATABASE clause.

ORA-65007: duplicate ENABLE PLUGGABLE DATABASE clause

Cause: A duplicate ENABLE PLUGGABLE DATABASE clause was specified in a CREATE DATABASE statement.

Action: Reissue the CREATE DATABASE statement with a valid ENABLE PLUGGABLE DATABASE clause.

ORA-65008: missing or invalid SEED clause

Cause: A SEED clause was not present where required by the syntax of CREATE DATABASE statement.

Action: Reissue the CREATE DATABASE statement with a valid SEED clause.

ORA-65009: cannot open pluggable database in read-write mode

Cause: The datafiles belonging to the pluggable database were read-only.

Action: Open the pluggable database in read-only mode.

ORA-65010: maximum number of pluggable databases created

Cause: The number of pluggable databases exceeded either the MAX_PDBS property value or the maximum supported number of pluggable databases.

Action: Drop the existing pluggable databases and retry the operation.

ORA-65011: Pluggable database *string* does not exist.

Cause: User attempted to specify a pluggable database that does not exist.

Action: Check DBA_PDBS to see if it exists.

ORA-65012: Pluggable database *string* already exists.

Cause: User attempted to create a pluggable database with a name that already exists.

Action: Check DBA_PDBS to see if the name exists.

ORA-65013: invalid CONTAINER clause

Cause: An invalid CONTAINER clause was encountered.

Action: Reissue the DDL statement with a valid CONTAINER clause.

ORA-65014: invalid SHARING clause

Cause: An invalid SHARING clause was encountered.

Action: Reissue the DDL statement with a valid SHARING clause.

ORA-65015: missing or invalid container name

Cause: A valid container name was not present where required by the syntax of ALTER SESSION SET CONTAINER or ALTER USER ... SET|ADD|REMOVE CONTAINER_DATA statement.

Action: Reissue the statement with a valid container name.

ORA-65016: FILE_NAME_CONVERT must be specified

Cause: Data files, and possibly other files, needed to be copied as a part of creating a pluggable database. However, Oracle Managed Files (OMF) was not enabled, PDB_FILE_NAME_CONVERT was not defined, and there was a failure to specify the FILE_NAME_CONVERT clause.

Action: Enable OMF or define PDB_FILE_NAME_CONVERT system parameter before issuing CREATE PLUGGABLE DATABASE statement, or specify FILE_NAME_CONVERT clause as a part of the statement.

ORA-65017: seed pluggable database may not be dropped or altered

Cause: User attempted to drop or alter the Seed pluggable database which is not allowed.

Action: Specify a legal pluggable database name.

ORA-65018: FILE_NAME_CONVERT or NOCOPY must be specified

Cause: Oracle Managed Files (OMF) was not enabled and PDB_FILE_NAME_CONVERT was not defined. The FILE_NAME_CONVERT or the NOCOPY clause was not specified as a part of creating a pluggable database using data files.

Action: Enable OMF or define PDB_FILE_NAME_CONVERT system parameter before issuing CREATE PLUGGABLE DATABASE statement, or specify FILE_NAME_CONVERT clause or NOCOPY as a part of the statement.

ORA-65019: pluggable database *string* already open

Cause: An attempt was made to open a pluggable database that was already opened.

Action: Check the OPEN_MODE column in V\$PDBS view.

ORA-65020: pluggable database *string* already closed

Cause: An attempt was made to close a pluggable database that was already closed.

Action: Check the OPEN_MODE column in V\$PDBS view.

ORA-65021: illegal use of SHARING clause

Cause: A SHARING clause was encountered in unexpected context.

Action: Do not use SHARING clause outside of Oracle-supplied scripts.

ORA-65022: CONTAINER clause already specified

Cause: A statement contained multiple CONTAINER clauses.

Action: Eliminate redundant CONTAINER clauses.

ORA-65023: active transaction exists in container *string*

Cause: A statement attempted to create a new transaction in the current container while there was an active transaction in another container.

Action: Switch to the container with the active transaction and commit, rollback or detach the active transaction before attempting to issue any statement that will attempt to create a new transaction in another container.

ORA-65024: Pluggable database *string* is not open.

Cause: An operation was attempted on a pluggable database that was not open.

Action: Open the pluggable database using appropriate open mode.

ORA-65025: Pluggable database *string* is not closed on all instances.

Cause: An operation was attempted on a pluggable database that was not closed on all Oracle RAC instances.

Action: Close the pluggable database on all instances and retry the operation.

ORA-65026: XML metadata file error : *string*

Cause: An error occurred while trying to parse or write to the XML metadata file.

Action: Check that the XML metadata file exists and is readable.

ORA-65027: XML metadata file error while getting node or value for (*string* - *string*)

Cause: An error occurred while trying to parse the XML metadata file.

Action: Check and correct the XML metadata file.

ORA-65028: Unable to open plugin data file at path *string*

Cause: Error occurred while trying to open the data file.

Action: Check that the data file exists at the path.

ORA-65029: a Local User may not grant or revoke a Common Privilege or Role

Cause: A Local User issued a GRANT or REVOKE statement specifying CONTAINER=ALL, which is illegal.

Action: Remove CONTAINER=ALL from the statement.

ORA-65030: cannot grant a privilege commonly to a local user or role

Cause: A GRANT statement was issued specifying CONTAINER=ALL and naming a local user or role as a grantee, which is illegal.

Action: If trying to grant a privilege locally, remove CONTAINER=ALL from the GRANT statement. If trying to grant a privilege commonly, remove local users and roles from the list of grantees.

ORA-65031: cannot revoke a privilege commonly from a local user or role

Cause: A REVOKE statement was issued specifying CONTAINER=ALL and naming a local user or role as a revokee, which is illegal.

Action: If trying to revoke a privilege locally, remove CONTAINER=ALL from the REVOKE statement. If trying to revoke a privilege commonly, remove local users and roles from the list of revokees.

ORA-65032: A local role may only be granted or revoked within the current container.

Cause: A GRANT or REVOKE statement was issued specifying CONTAINER=ALL and listing a local role among the roles to be granted or revoked, which is illegal.

Action: If trying to grant or revoke a local role, remove CONTAINER=ALL from the REVOKE statement. If trying to grant or revoke roles commonly, remove local roles from the list of roles being granted or revoked.

ORA-65033: a common privilege may not be granted or revoked on a local object

Cause: A GRANT or REVOKE statement was issued specifying CONTAINER=ALL and naming a local object on which privileges are to be granted or revoked, which is illegal.

Action: Remove CONTAINER=ALL from the statement.

ORA-65034: PDB describe output file not specified

Cause: User attempted to describe a pluggable database without specifying an output XML file location.

Action: Specify an output file location for describe

ORA-65035: unable to create pluggable database from *string*

Cause: An attempt was made to clone a pluggable database that did not have local undo enabled.

Action: Enable local undo for the PDB and and retry the operation.

ORA-65036: pluggable database *string* not open in required mode

Cause: Attempted to perform an operation on a pluggable database in incorrect open mode.

Action: Open the pluggable database in the mode required for this operation

ORA-65037: A privilege on a local user may not be granted or revoked commonly.

Cause: A GRANT or REVOKE statement was issued specifying CONTAINER=ALL and naming a local user on which privileges are to be granted or revoked, which is illegal.

Action: Remove CONTAINER=ALL from the GRANT or REVOKE statement.

ORA-65039: container identifier column missing or is of unexpected type in a definition of a CONTAINER_DATA object

Cause: Table or view whose definition contained a CONTAINER_DATA clause lacked a column used to identify a container to which data belongs or the column was of unexpected type.

Action: Correct the statement and reenter.

ORA-65040: operation not allowed from within a pluggable database

Cause: An operation was attempted that can only be performed in the root or application root container.

Action: Switch to the root or application root container to perform the operation.

ORA-65041: CONTAINER_DATA attribute for this user cannot be modified

Cause: An attempt was made to modify CONTAINER_DATA attribute for user SYS or SYSBACKUP which is disallowed.

Action: Do not attempt to modify CONTAINER_DATA attribute for users SYS or SYSBACKUP.

ORA-65042: name is already used by an existing container

Cause: The name was already used by another container.

Action: Specify a valid name.

ORA-65043: TABLESPACE keyword expected

Cause: TABLESPACE keyword was missing.

Action: Specify a TABLESPACE keyword.

ORA-65044: missing or invalid option following STORAGE keyword

Cause: An option other than MAXSIZE or MAX_SHARED_TEMP_SIZE was specified.

Action: Specify only legal options.

ORA-65045: pluggable database not in a restricted mode

Cause: An operation was attempted on a pluggable database that was not in restricted mode.

Action: Open the pluggable database in a restricted mode.

ORA-65046: operation not allowed from outside a pluggable database

Cause: An operation was attempted that can only be performed from within a pluggable database.

Action: Switch to a pluggable database to perform the operation.

ORA-65047: Object *string.string* is invalid or compiled with errors in root.

Cause: An attempt was made to issue a metadata link DDL for an object that was invalid or compiled with errors in a CDB\$ROOT or an application root.

Action: Check the validity of the object in CDB\$ROOT or application root.

ORA-65048: error encountered when processing the current DDL statement in pluggable database *string*

Cause: An error was encountered when executing a statement in one of the pluggable databases.

Action: Examine the cause of failure in the pluggable database.

ORA-65049: Creation of local user or role is not allowed in this container.

Cause: An attempt was made to create a local user or role in CDB\$ROOT or an application root.

Action: If trying to create a common user or role, specify CONTAINER=ALL.

ORA-65050: Common DDLs only allowed in root.

Cause: An attempt was made to issue a common DDL in a pluggable database.

Action: Switch to CDB\$ROOT or application root and issue the common DDL.

ORA-65051: missing valid container identifier

Cause: A valid container identifier was not specified.

Action: Specify a valid container identifier.

ORA-65052: statement involves operations with different container scope

Cause: An attempt was made to combine one operation that applies to all containers with another that only applies to the local container into one statement.

Action: Execute the operations in separate statements.

ORA-65053: A global user cannot change the container in the session.

Cause: An attempt was made by a global user to change the container using the ALTER SESSION SET CONTAINER statement.

Action: This operation is not allowed for global users.

ORA-65054: Cannot open a pluggable database in the desired mode. PDB opening in *string*, CDB opened in *string*.

Cause: An attempt was made to open a pluggable database (PDB) in a mode incompatible with the multitenant container database (CDB) or, if the PDB belonged to an application container, in a mode incompatible with the application root.

Action: Open the CDB or the application root in a compatible mode first and retry the operation.

ORA-65056: CONTAINER_DATA attribute is not used in a pluggable database.

Cause: User connected to a pluggable database attempted to modify a CONTAINER_DATA attribute, which is illegal.

Action: A user connected to a pluggable database (PDB) may only see rows of CONTAINER_DATA objects on which the appropriate privilege has been granted and which pertain to that PDB or to the multitenant container database (CDB) as a whole. The ability to see this data is not controlled by the CONTAINER_DATA attribute, which is only used to control the ability to see rows pertaining to certain containers while connected to CDB\$ROOT or to an application root in a CDB.

ORA-65057: CONTAINER_DATA attribute must always include the current container

Cause: User issuing ALTER USER ... SET|REMOVE CONTAINER_DATA = ... statement attempted to exclude the current container from a CONTAINER_DATA attribute.

Action: Ensure that a CONTAINER_DATA attribute always includes the current container.

ORA-65058: object-specific CONTAINER_DATA attribute may only be specified for a CONTAINER_DATA object

Cause: Object referenced in an ALTER USER statement modifying an object-specific CONTAINER_DATA attribute is not a CONTAINER_DATA table or view.

Action: Ensure that an object referenced in the statement is a CONTAINER_DATA table or view.

ORA-65059: duplicate container name in CONTAINER_DATA clause

Cause: Duplicate references to a name of some container was encountered in a CONTAINER_DATA clause.

Action: Ensure that no container name appears more than once.

ORA-65060: CONTAINER_DATA attribute is not set

Cause: User attempted to add container(s) to an object-specific CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT or remove containers from a CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT.

Action: Avoid adding containers to object-specific CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT or removing containers from a CONTAINER_DATA attribute which has not been explicitly set or has been set to DEFAULT.

ORA-65061: some of specified containers do not belong to the CONTAINER_DATA attribute

Cause: User attempted to remove from a CONTAINER_DATA attribute container(s) which do not belong to it.

Action: Do not attempt to remove from a CONTAINER_DATA attribute container(s) which do not belong to it.

ORA-65062: CONTAINER_DATA attribute is set to ALL

Cause: User attempted to add or remove containers to or from a CONTAINER_DATA attribute whose current value is ALL, which is not supported.

Action: Do not attempt to add or remove containers to or from a CONTAINER_DATA attribute whose current value is ALL.

ORA-65063: CONTAINER_DATA clause has already been specified

Cause: The CONTAINER_DATA clause was specified twice.

Action: Specify only one CONTAINER_DATA clause.

ORA-65064: incorrect contents of XML metadata file

Cause: The contents of the XML metadata file were different from the actual file properties.

Action: Check and correct the XML metadata file.

ORA-65065: A local user or role can only be altered within the current container

Cause: The ALTER USER or ALTER ROLE statement was issued specifying CONTAINER=ALL and listing a local user or role among the users or roles to be altered, which is illegal.

Action: If trying to alter a local user or role, specify CONTAINER=CURRENT. If trying to alter common users or roles, remove local users or roles from the list of roles being altered.

ORA-65066: The specified changes must apply to all containers

Cause: An attempt was made to apply the specified changes to the current container.

Action: Specify CONTAINER=ALL.

ORA-65067: DEFAULT ROLE clause referencing a local role can only apply to the current container

Cause: An attempt was made to reference a local role across all containers using the DEFAULT ROLE clause.

Action: If you are trying to set a local role as the default role, specify CONTAINER=CURRENT. If trying to set common roles as the default roles, remove local roles from the list of roles referenced in the DEFAULT ROLE clause.

ORA-65068: cannot define a trigger that fires after a pluggable database is unplugged

Cause: An attempt was made to create a trigger that fires after a pluggable database has been unplugged. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires after a pluggable database has been unplugged.

ORA-65069: AFTER DB_ROLE_CHANGE triggers cannot be defined on a pluggable database

Cause: An attempt was made to create a pluggable database trigger that fires after a role change occurs from a standby database to primary or vice versa. This type of trigger is not supported.

Action: Do not specify AFTER DB_ROLE_CHANGE when creating a trigger on a pluggable database.

ORA-65070: AFTER CLONE trigger can only be created on a pluggable database

Cause: An attempt was made to create an AFTER CLONE trigger on a schema or a database. This type of trigger is not supported.

Action: Do not specify AFTER CLONE when creating a trigger on a schema or a database.

ORA-65071: BEFORE UNPLUG trigger can only be created on a pluggable database

Cause: An attempt was made to create a BEFORE UNPLUG trigger on a schema or a database. This type of triggers is not supported.

Action: Do not specify BEFORE UNPLUG when creating a trigger on a schema or a database.

ORA-65072: user must be connected to a pluggable database on which a trigger is being created

Cause: An attempt was made to create a database event trigger on a pluggable database while not connected to a pluggable database. This is not supported.

Action: Connect to the pluggable database on which a database event trigger needs to be created before attempting to create such a trigger.

ORA-65073: cannot define a trigger that fires before a pluggable database is cloned

Cause: An attempt was made to create a trigger that fires before a pluggable database has been cloned. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before a pluggable database has been cloned.

ORA-65074: editions not supported for common users

Cause: An attempt was made to support editions for common users.

Action: Do not attempt to enable editions for common users.

ORA-65075: cannot recover the pluggable database

Cause: The pluggable database has been dropped.

Action: None

ORA-65076: incompatible SYSTEM tablespace in database being plugged in

Cause: An attempt was made to plug in a database that had a SYSTEM tablespace whose relative file number was not one. The most common cause of this error is when the database has been created using Oracle Database release 7 or earlier and then upgraded using the migrate utility.

Action: Migrate the database to a pluggable database using the Oracle Data Pump utility.

ORA-65080: cannot determine pluggable database name

Cause: An attempt was made to map the database ID to the pluggable database name.

Action: Contact Oracle Support Services.

ORA-65081: database or pluggable database is not open in read only mode

Cause: An operation was attempted on a database or pluggable database that is not open in read only mode

Action: Open the database or pluggable database in read only mode and then retry the operation.

ORA-65082: cannot add any more pluggable databases: limit of *string* exceeded

Cause: There was no more room in the control file for adding pluggable databases.

Action: Recreate the control file.

ORA-65083: pluggable database *string* shutdown in progress

Cause: The pluggable database is in the middle of shutdown abort

Action: Retry the operation later.

ORA-65084: object *string.string* does not exist in root

Cause: An attempt was made to create a common object that does not exist in root.

Action: Invoke the script using catcon.pl to create the object in all containers.

ORA-65085: cannot open pluggable database in read-only mode

Cause: The pluggable database has either been created and not opened or has not been opened in read/write mode after the undo mode has been changed for the multitenant container database (CDB).

Action: Open the pluggable database in the read/write or the restricted mode first.

ORA-65086: cannot open/close the pluggable database

Cause: The pluggable database has been unplugged.

Action: The pluggable database can only be dropped.

ORA-65087: Oracle-supplied operation not allowed from within a pluggable database

Cause: An operation in an Oracle-supplied script was attempted that can only be performed in the root container.

Action: Confirm that the operation is needed in the root container, and switch to the root container to perform the operation.

ORA-65088: database open should be retried

Cause: An inconsistency between the control file and the data dictionary was found and fixed during the database open. The database open needs to be executed again.

Action: Retry the database open.

ORA-65089: pluggable database is not clean

Cause: The pluggable database was not open anywhere but was not marked as clean yet.

Action: Wait until the cleanup is done and retry.

ORA-65090: operation only allowed in a container database

Cause: User attempted an operation that is only allowed in a CDB

Action: Connect to a CDB to perform this operation

ORA-65091: operation on *string* not allowed in a pluggable database

Cause: An undo tablespace or rollback segment operation was attempted that can only be performed in the root container.

Action: Switch to the root container to perform the undo tablespace or rollback segment operation.

ORA-65092: system privilege granted with a different scope to '*string*'

Cause: An attempt was made to revoke a system privilege that was granted with a different scope.

Action: Specify the correct value for the CONTAINER clause.

ORA-65093: multitenant container database not set up properly

Cause: An attempt was made to open a multitenant container database without the correct parameter set for a multitenant container database in the initialization parameter file.

Action: Set the 'enable_pluggable_database=true' parameter for the multitenant container database in the initialization parameter file and restart the database.

ORA-65094: invalid local user or role name

Cause: An attempt was made to create a local user or role with a name that was not valid for local users or roles. In addition to the usual rules for user and role names, local user and role names cannot start with C## or c##. When connected to a locked down Pluggable Database (PDB) with LOCAL_OBJECT_RESERVED_NAME feature disabled, PDB local user or role can't have the same name as that of an Oracle reserved user or role name like MDSYS, WMSYS etc.

Action: Specify a valid local user or role name.

ORA-65095: invalid common object name

Cause: An attempt was made to create a common object with a name that was not valid for common objects. In addition to the usual rules for object names, common object names must consist only of ASCII characters.

Action: Specify a valid common object name.

ORA-65096: invalid common user or role name

Cause: An attempt was made to create a common user or role with a name that was not valid for common users or roles. In addition to the usual rules for user and role names, common user and role names must consist only of ASCII characters, and must contain the prefix specified in common_user_prefix parameter.

Action: Specify a valid common user or role name.

ORA-65097: DML into a data link table is outside an application action

Cause: DML into a data link table was attempted outside an application action.

Action: Begin the application action before the DML.

ORA-65098: DML into an extended data link table is outside an application action

Cause: DML into an extended data link table was attempted in an application root outside an application action.

Action: Begin the application action before the DML.

ORA-65099: operation cannot be performed when the CDB is not open

Cause: An operation was attempted inside a pluggable database that required the container database (CDB) to be open.

Action: Open the CDB and then rerun the operation.

ORA-65100: missing or invalid path prefix - *string*

Cause: The path prefix was missing or invalid. This can also happen if any of the following are true: - The directory path specified by PATH_PREFIX clause contains the string '.' or an invalid path separator like // or exceeds the maximum length supported on host operating system. - The target path already exists as a file in operating system. - The ROOT container (CDB\$ROOT, when connected to a pluggable database or application root, when connected to an application container) has a PATH_PREFIX set and either NONE or a directory location outside ROOT containers' PATH_PREFIX was specified.

Action: Correct the PATH_PREFIX clause and reissue the statement.

ORA-65101: container database set up incorrectly

Cause: An attempt was made to use a non container database control file to startup a container database (CDB).

Action: Create a new control file for the CDB.

ORA-65102: missing or invalid instance name

Cause: A valid instance name was not present where required by the syntax of a ALTER PLUGGABLE DATABASE statement.

Action: Reissue the statement with a valid instance name.

ORA-65103: UPGRADE cannot be specified for PDBs being open in READ ONLY mode

Cause: ALTER PLUGGABLE DATABASE ... OPEN UPGRADE was specified, but the root is open READ ONLY, so the specified PDBs will also be opened READ ONLY, and UPGRADE cannot be specified for PDBs being opened READ ONLY.

Action: Reissue the statement without specifying UPGRADE or reopen the root in READ WRITE mode and then reissue the statement.

ORA-65104: operation not allowed on an inactive pluggable database

Cause: The pluggable database status was INACTIVE. It was still being created or there was an error during the create operation.

Action: Wait until the status is changed to CREATED or, in case of errors, drop the pluggable database and re-create it.

ORA-65105: SYSTEM data file for pluggable database #*string* not found

Cause: Data files were not specified in a CREATE CONTROLFILE statement in the SYSTEM tablespace of a pluggable database.

Action: Locate the data files and resubmit the CREATE CONTROLFILE statement.

ORA-65106: Pluggable database #string (string) is in an invalid state.

Cause: Data files were not specified in a CREATE CONTROLFILE statement of a pluggable database.

Action: Drop the pluggable database or locate the data files and resubmit the CREATE CONTROLFILE statement.

ORA-65107: Error encountered when processing the current task on instance:string

Cause: An error was encountered when executing a pluggable database task on one of the Oracle RAC instances.

Action: Examine the cause of failure on the instance.

ORA-65108: invalid use of a cursor belonging to another container

Cause: An attempt was made to use a cursor that was parsed or executed in a different container.

Action: Check if there are any incorrect uses of the SET CONTAINER statement. Parse, execute, fetch, and close a cursor only all in the same container.

ORA-65109: operation not allowed in CDB\$ROOT

Cause: An operation was attempted that is not supported in the Container Database root.

Action: Switch to a pluggable database to perform the operation.

ORA-65110: Invalid instance name specified

Cause: An attempt was made to use an invalid or inactive instance name in the INSTANCES clause.

Action: Specify a valid and active instance name.

ORA-65111: Cannot relocate to the same instance

Cause: An attempt was made to relocate a pluggable database to the current instance.

Action: Specify an instance which is different then the current instance.

ORA-65112: pluggable database string not closed on all instances of the standby database

Cause: Media recovery stopped because the pluggable database was either unplugged, dropped or renamed on the primary database.

Action: Close the pluggable database on all instances and restart the recovery.

ORA-65113: value of MAX_PDB_STORAGE property for the PDB is too low

Cause: The value of MAX_PDB_STORAGE specified in the ALTER or CREATE PLUGGABLE DATABASE statement is less than the current space usage of data files and temporary files of the container.

Action: Specify a higher value for MAX_PDB_STORAGE.

ORA-65114: space usage in container is too high

Cause: Space usage in the current container exceeded the value of MAX_PDB_STORAGE for the container.

Action: Specify a higher value for MAX_PDB_STORAGE using the ALTER PLUGGABLE DATABASE statement.

ORA-65115: CDB resource plan *string* has more than *string* PDB directives.

Cause: An attempt was made to create or update the specified multitenant container database (CDB) resource plan to use more than the supported number of directives.

Action: Remove the directives for pluggable databases (PDBs) that are not active on this database.

ORA-65116: incompatible database character set

Cause: The database character set of the container database was not a superset of the database character set of the pluggable database being plugged in.

Action: Plug the pluggable database into a container database having a compatible database character set.

ORA-65117: CONTAINER clause may only be specified when connected to a container database

Cause: The CONTAINER clause was specified when not connected to a container database (CDB).

Action: Reenter the statement without the CONTAINER clause.

ORA-65118: operation affecting a pluggable database cannot be performed from another pluggable database

Cause: An attempt was made to perform an operation affecting a pluggable database while connected to a different pluggable database.

Action: Connect to the desired pluggable database and perform the operation.

ORA-65119: incompatible national character set

Cause: The national character set of the container database was not the same as the national character set of the pluggable database being plugged in.

Action: Plug the pluggable database into a container database having the same national character set.

ORA-65120: illegal character set ID in XML metadata file

Cause: The XML metadata file for the pluggable database being plugged in contained a database or national character set ID that was not valid for the container database. This can happen if the XML file is manually modified, if it is corrupted on disk, or if the set of supported character sets differs between the container database and the source database of the pluggable database because a user-defined character set has not been installed in the Oracle Home directory of the container database.

Action: If you have manually modified the XML metadata file of the pluggable database, restore the original file or re-create the pluggable database from its source database. Manual modifications of the XML file are not supported. If the pluggable database uses a user-defined character set, make sure the character set is installed in the Oracle Home directory of the container database. Otherwise, contact Oracle Support Services.

ORA-65121: ALTER SESSION SET CONTAINER not allowed from this client

Cause: Clients earlier than Oracle Database 12c Release 1 do not support this feature.

Action: Upgrade the client to Oracle Database 12c Release 1 or later.

ORA-65122: Pluggable database GUID conflicts with the GUID of an existing container.

Cause: While creating a pluggable database, the GUID conflicted with the GUID of an existing container in the container database.

Action: Retry creating the pluggable database or consider using the AS CLONE clause for CREATE PLUGGABLE DATABASE if plugging in a copy of another pluggable database.

ORA-65123: cannot perform a SET CONTAINER operation in this context

Cause: An attempt was made to set the container inside a context where such an operation is prohibited.

Action: Do not set the container from inside a system trigger or a DML context.

ORA-65125: valid XML or PDB archive file name is required

Cause: An attempt was made to provide a file name that did not have an XML or a PDB extension.

Action: Specify a valid XML or PDB archive file.

ORA-65126: pluggable database *string* cannot be unplugged.

Cause: The pluggable database was not closed cleanly and there are active transactions that need to be recovered.

Action: Open the pluggable database in read/write mode before unplugging again so that transaction recovery can be performed.

ORA-65127: PDB recover output file not specified

Cause: An attempt was made to recover a pluggable database (PDB) without specifying an output XML file location.

Action: Specify an output file location for recovery.

ORA-65128: missing or nonexistent data file or directory name *string*

Cause: An attempt was made to invoke DBMS_PDB.RECOVER() by either not specifying a data file or directory location, or by specifying a nonexistent data file or directory location.

Action: Specify a valid data file or directory location and retry the operation.

ORA-65129: Pluggable database *string* cannot be relocated.

Cause: The pluggable database was already opened on all instances.

Action: Close the pluggable database without RELOCATE clause or close the pluggable database on another instance.

ORA-65130: cannot relocate more than one pluggable database.

Cause: An attempt was made to relocate more than one pluggable database.

Action: RELOCATE pluggable database one at a time.

ORA-65131: The feature *string* is not supported in a pluggable database.

Cause: An attempt was made to use a feature that is not supported in a pluggable database.

Action: Do not use this feature in a pluggable database.

ORA-65134: endian mismatch

Cause: The endian of the container database was not the same as the endian of the pluggable database being plugged in.

Action: Plug the pluggable database into a container database having the same endian.

ORA-65135: cannot perform ALTER SESSION SET CONTAINER operation in this context

Cause: An ALTER SESSION SET CONTAINER operation was attempted in a context where such an operation is prohibited.

Action: Do not perform the ALTER SESSION SET CONTAINER operation from a session that can be migrated or a session from an OCI connection pool.

ORA-65136: SPFILE name cannot be specified for a pluggable database

Cause: An attempt was made to specify an SPFILE name for a pluggable database.

Action: Remove the SPFILE name and retry the operation in the pluggable database.

ORA-65137: Pluggable database *string* is in the middle of Pluggable Database RESETLOGS operation.

Cause: The pluggable database is in the middle of a Pluggable Database (PDB) RESETLOGS operation.

Action: If possible, recover the Container Database further so that this Pluggable database is not in the middle of a PDB RESETLOGS operation. Another alternative is to perform PDB point-in-time recovery. A message is logged in the alert log indicating SCN and time until which the pluggable database can be point-in-time recovered.

ORA-65138: Data file *string* of pluggable database *string* belongs to an orphan PDB incarnation.

Cause: Either the specified data file was restored from a backup that was taken during a period of time that was discarded by a RESETLOGS operation, or Oracle could not identify which pluggable database incarnation the file belongs to. One would also encounter this error if a pluggable database (PDB) flashback or restore was performed to an orphan PDB incarnation followed by complete recovery of the PDB. The alert log contains more information.

Action: Restore a backup of this file that belonged to either the current or a prior incarnation of the pluggable database. If you are using RMAN to restore, RMAN will automatically select a correct backup. If you are using Flashback, then perform flashback to a point prior to the start of the orphan incarnation.

ORA-65139: Mismatch between XML metadata file and data file *string* for value of *string* (*string*)

Cause: Either the XML metadata file or the data file was corrupt.

Action: Verify that the XML metadata file and the data file are consistent as of the point when the unplug was done and retry the operation.

ORA-65140: invalid common profile name

Cause: An attempt was made to create a common profile with a name that is not valid for common profiles. Common profile names must consist only of ASCII characters, and must contain the prefix specified in `common_user_prefix` parameter.

Action: Specify a valid common profile name.

ORA-65141: invalid local profile name

Cause: An attempt was made to create a local profile with a name that is not valid for local profiles. Local profile names cannot start with C## or c##. When connected to a locked down Pluggable Database (PDB) with LOCAL_OBJECT_RESERVED_NAME feature disabled, PDB local profile can't have the same name as that of an Oracle reserved profile name like ORA_STIG_PROFILE, ORA_CIS_PROFILE etc.

Action: Specify a valid local profile name.

ORA-65142: A local profile can be altered only within the current container

Cause: An attempt was made to alter a local profile using an ALTER PROFILE statement with the CONTAINER=ALL clause.

Action: If attempting to alter a local profile, ensure that you are connected to the correct container and optionally specify CONTAINER=CURRENT.

ORA-65143: Creation of local profiles is not allowed in this container.

Cause: An attempt was made to create a local profile in CDB\$ROOT or an application root. Except for DEFAULT and ORA_STIG_PROFILE, which are out-of-the-box Oracle supplied local profiles, no customer created local profiles are allowed in this container.

Action: If attempting to create a common profile, do not specify CONTAINER=CURRENT.

ORA-65144: ALTER SYSTEM DISABLE RESTRICTED SESSION is not permitted

Cause: An attempt was made to disable a restricted session while an unresolved error existed in PDB_PLUG_IN_VIOLATIONS.

Action: Resolve all of the errors before trying to disable a restricted session.

ORA-65145: FORCE open of multiple pluggable databases is not supported

Cause: An attempt was made to FORCE open multiple pluggable databases at the same time.

Action: Retry the FORCE open of one pluggable database at a time.

ORA-65146: account cannot be unlocked in a PDB while it is locked in the root

Cause: An attempt was made to unlock a common user account in a pluggable database (PDB) which was locked in the root of the container database.

Action: Ensure that a common user account is not locked in the root before attempting to unlock it in a PDB.

ORA-65147: DB_UNIQUE_NAME specified without SPFILE scope

Cause: An attempt was made to specify a DB_UNIQUE_NAME in an ALTER SYSTEM statement without SCOPE=SPFILE.

Action: Use DB_UNIQUE_NAME only with SCOPE=SPFILE.

ORA-65148: cannot FORCE open a pluggable database to or from upgrade mode

Cause: An attempt was made to FORCE open a pluggable database to or from upgrade mode.

Action: Close the pluggable database first and retry the operation.

ORA-65149: PDB name conflicts with existing service name in the CDB or the PDB

Cause: An attempt was made to create a pluggable database (PDB) whose name conflicts with the existing service name in the container database (CDB) or the PDB.

Action: Choose a different name for the PDB.

ORA-65150: unable to start the instance

Cause: An attempt was made to start an instance as a container or a non-container database when at least one of the other instances was started in a different mode.

Action: Start the instance in the same mode as all the other instances.

ORA-65151: invalid tablespace name specified

Cause: An attempt was made to use an invalid tablespace name or a mandatory tablespace name (SYSTEM or SYSAUX) in the USER_TABLESPACES clause when creating a pluggable database.

Action: Specify a valid tablespace name.

ORA-65152: cannot bring datafile online

Cause: An attempt was made to bring online one or more datafiles belonging to a pluggable database that is disabled for recovery.

Action: Issue the ALTER PLUGGABLE DATABASE ENABLE RECOVERY statement first and retry the operation.

ORA-65153: cannot bring tablespace online

Cause: An attempt was made to bring online a tablespace that was either missing in the plug XML file or excluded when the pluggable database was created.

Action: Drop and recreate the tablespace to bring it online.

ORA-65154: specified logging attribute for the pluggable database is same as the current attribute value

Cause: An attempt was made to change the default logging attribute to be the same as the current attribute value for the pluggable database.

Action: Change the logging attribute to a different value.

ORA-65155: missing or invalid source file directory *string*

Cause: Source file directory was missing or invalid.

Action: Correct the SOURCE_FILE_DIRECTORY clause and reissue the statement.

ORA-65156: pluggable database version *string* not allowed

Cause: An attempt was made to plug in a pluggable database with an incompatible version of the multitenant container database or the application root.

Action: Plug in a pluggable database with a compatible version of the multitenant container database or the application root.

ORA-65157: SOURCE_FILE_NAME_CONVERT and SOURCE_FILE_DIRECTORY cannot be specified together

Cause: SOURCE_FILE_NAME_CONVERT and SOURCE_FILE_DIRECTORY clauses were both specified.

Action: Use either the SOURCE_FILE_NAME_CONVERT or the SOURCE_FILE_DIRECTORY clause and reissue the statement.

ORA-65158: could not find a matching file for - *string*

Cause: A matching file was not found in the directory specified with the SOURCE_FILE_DIRECTORY clause.

Action: Correct the SOURCE_FILE_DIRECTORY clause or check that the file exists in the directory and reissue the statement.

ORA-65159: invalid service name specified

Cause: An attempt was made to use an invalid service name in the services clause.

Action: Specify a valid service name.

ORA-65160: invalid cleanup task ID

Cause: An attempt was made to pass an invalid cleanup task ID to the DBMS_PDB.CLEANUP_TASK function.

Action: Specify a valid cleanup task ID.

ORA-65162: The password of the common user has expired

Cause: The password of the common user account has expired and needs to be changed. Connect to the CDB\$ROOT or Application Root of the multitenant container database to change the password of the common user.

Action: Change the password of the common user or contact the DBA.

ORA-65164: PDB instance recovery cannot open a required archived redo log

Cause: The system could not access a required archived redo log file.

Action: Ensure that the offline log exists, the storage device is online, and the archived redo log file is in the correct location.

ORA-65165: missing or invalid path for file creation *string*

Cause: The path specified in CREATE_FILE_DEST clause was missing or invalid.

Action: Correct the CREATE_FILE_DEST clause and reissue the statement.

ORA-65166: cannot run noncdb_to_pdb.sql if PDB's version differs from CDB's

Cause: An attempt was made to run noncdb_to_pdb.sql when the version of the pluggable database (PDB) was different from the version of the multitenant container database (CDB).

Action: Upgrade the PDB before running noncdb_to_pdb.sql

ORA-65167: cannot run noncdb_to_pdb.sql if container database is in upgrade mode

Cause: An attempt was made to run noncdb_to_pdb.sql when the multitenant container database (CDB) was in upgrade mode.

Action: Open the CDB in non-upgrade mode.

ORA-65168: missing PFILE name

Cause: An operation involving PFILE was issued in a pluggable database without specifying the PFILE name

Action: Specify a valid PFILE name and retry the operation in the pluggable database.

ORA-65169: error encountered while attempting to copy file *string*

Cause: An error was encountered while attempting to copy the file while creating a pluggable database.

Action: Check additional error messages for the cause of the failure to copy the file, and resolve the issue accordingly.

ORA-65170: XML file *string* already exists

Cause: An attempt to create an XML file failed because a file with that name already exists.

Action: Use a different XML file name.

ORA-65171: invalid value for DB_BLOCK_CHECKING parameter

Cause: An attempt was made to specify a value of FALSE or OFF for the DB_BLOCK_CHECKING parameter in a pluggable database (PDB), when the value of DB_BLOCK_CHECKING parameter in the multitenant container database (CDB) is neither FALSE nor OFF. If the CDB has enabled the DB_BLOCK_CHECKING parameter, then the PDB cannot disable the DB_BLOCK_CHECKING parameter.

Action: Specify a value other than FALSE or OFF for the DB_BLOCK_CHECKING parameter in the PDB.

ORA-65172: cannot run noncdb_to_pdb.sql unless pluggable database is an unconverted non-container database

Cause: An attempt was made to run 'noncdb_to_pdb.sql' on a pluggable database (PDB) that was not an unconverted non-container database.

Action: 'noncdb_to_pdb.sql' is not necessary for this PDB.

ORA-65174: invalid or conflicting name in service *string* found in the pluggable database

Cause: The service name or network name in the specified service is invalid or it conflicts with an existing service name or network name in the container database.

Action: Use an appropriate SERVICE_NAME_CONVERT clause and reissue the statement.

ORA-65175: cannot grant SYSDBA privilege locally in the root

Cause: An attempt was made to grant SYSDBA privilege locally in the root of a multitenant container database (CDB).

Action: While connected to the root, SYSDBA privilege can only be granted commonly.

ORA-65176: system tablespace block size (*string*) does not match configured block sizes

Cause: The block size of the system tablespace of the pluggable database to be plugged in did not match the block sizes configured in the container database.

Action: Configure the appropriate cache for the block size of the system tablespace using the DB_nK_CACHE_SIZE parameter (where *n* is 2, 4, 8, 16, or 32).

ORA-65177: cannot create non-local user, role or profile with the same name as local user, role or profile

Cause: An attempt was made to create a common user, role or profile with the same name as an existing local user, role or profile.

Action: Specify a different user, role or profile name.

ORA-65178: invalid logging mode specified for the pluggable database

Cause: An attempt was made to either enable a conflicting logging mode or to disable a logging mode when it was not enabled.

Action: Check the current logging modes in DBA_PDBS for the pluggable database and specify a valid mode.

ORA-65179: cannot keep datafiles for a pluggable database that is not unplugged

Cause: An attempt was made to drop a pluggable database without specifying the INCLUDING DATAFILES clause, and the pluggable database has not been unplugged.

Action: Unplug the pluggable database before dropping the pluggable database or use the INCLUDING DATAFILES clause in the DROP PLUGGABLE DATABASE statement.

ORA-65180: duplicate file name encountered - *string*

Cause: An attempt was made to issue a CREATE PLUGGABLE DATABASE statement with a duplicate source or target file name for the source file name mentioned in the message. This could be caused by incorrect SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause.

Action: Use an appropriate SOURCE_FILE_NAME_CONVERT or FILE_NAME_CONVERT clause to ensure that there are no duplicate source or target file names and then reissue the statement.

ORA-65181: invalid argument supplied to CONTAINERS function

Cause: An attempt was made to create a multitenant container database (CDB) view with an invalid table or view name.

Action: Specify a valid table or view name of the form *owner*.<table_name | view_name>.

ORA-65182: unable to modify the state of pluggable database *string*

Cause: An attempt was made to modify the state of a pluggable database which is currently in the middle of a state transition.

Action: Retry the operation later.

ORA-65183: FORCE open of a PDB on only a few instances where its open on is not allowed

Cause: An attempt was made to FORCE open a pluggable database on only a few Oracle RAC instances where it is currently open.

Action: Retry the FORCE open and include all Oracle instances where the PDB is open

ORA-65184: encountered data files belonging to different PDBs

Cause: An attempt was made to invoke DBMS_PDB.RECOVER() by specifying data files or a directory name containing data files belonging to different PDBs.

Action: Check the paths provided to DBMS_PDB.RECOVER() and retry the operation.

ORA-65185: could not find data file belonging to SYSTEM and SYSAUX tablespaces

Cause: An attempt was made to invoke DBMS_PDB.RECOVER() by specifying data files or a directory name containing data files where no data files belonging to SYSTEM and SYSAUX tablespaces were found. SYSTEM and SYSAUX tablespaces are critical to recover a pluggable database (PDB).

Action: Check the paths specified for DBMS_PDB.RECOVER() and ensure that they at least contain data files belonging to SYSTEM and SYSAUX tablespaces.

ORA-65186: The user, role or profile *string* has sync errors.

Cause: There were pending SQL statements involving this user, role or profile which need to be resolved in order for the pluggable database (PDB) to be synced with ROOT.

Action: Resolve the pending SQL statement in the PDB and retry the operation.

ORA-65187: duplicate file found *string*

Cause: An attempt was made to invoke DBMS_PDB.RECOVER() by specifying data files or a directory name containing data files which are duplicate copies of the same file.

Action: Check the paths specified for DBMS_PDB.RECOVER() and ensure that they contain unique data files.

ORA-65188: cannot relocate a PDB opened with warnings

Cause: An attempt was made to relocate a pluggable database (PDB) which was opened with warnings or there were warnings encountered after relocating the PDB.

Action: Resolve the warnings in the PDB before attempting to relocate it or try relocating the PDB to a different multitenant container database (CDB).

ORA-65189: cannot clone a PDB from PDB\$SEED as the source PDB

Cause: An attempt was made to clone a pluggable database (PDB) from PDB\$SEED as the source PDB.

Action: Consider using the "create_pdb_from_seed" clause in CREATE PLUGGABLE DATABASE statement or clone the PDB from a different source PDB.

ORA-65190: operation allowed only from within an application root

Cause: An operation (such as creation of an application seed) that can only be performed in an application root was attempted by a user not connected to an application root.

Action: Connect to an application root container to perform the operation.

ORA-65191: operation allowed only from within a CDB root

Cause: An operation (such as creation of an application root) that can only be performed in a multitenant container database (CDB) root container was attempted by a user not connected to the CDB root.

Action: Connect to the CDB root container to perform the operation.

ORA-65192: database must be in UPGRADE mode for this operation

Cause: An attempt is made to issue ALTER DATABASE LOCAL UNDO [ON | OFF] when the database is not open in UPGRADE mode.

Action: Open the database in UPGRADE mode.

ORA-65194: Pluggable database *string* does not belong to the application container.

Cause: The user connected to an application root attempted to specify a pluggable database (PDB) that does not belong to the application container in a statement which can only affect PDBs belonging to the application container.

Action: Check DBA_PDBS to determine which PDBs belong to the application container.

ORA-65196: operation allowed only from within a View Pluggable Database

Cause: An operation (such as ALTER PLUGGABLE DATABASE VIEW LOCAL) that can only be performed in a View Pluggable Database was attempted by a user not connected to a View Pluggable Database.

Action: Connect to a View Pluggable Database to perform the operation.

ORA-65197: cannot clone from the PDB - file *string* has online backup set or is being moved

Cause: An attempt to clone from a pluggable database (PDB) which had one or more data files that are currently part of an online move or a hot backup operation.

Action: Retry the operation after the backup or move of the data files is complete.

ORA-65198: operation not allowed on a PDB when it is being cloned

Cause: An attempt was made to perform an operation which is not allowed when the pluggable database (PDB) is being cloned concurrently.

Action: Retry the operation after the clone from the pluggable database is complete.

ORA-65199: database busy. operation not allowed now

Cause: An attempt was made to perform an operation while a conflicting database wide operation or a read write pluggable database (PDB) clone is in progress.

Action: Retry the operation after the conflicting operation is complete.

ORA-65200: unable to create pluggable database with no data

Cause: An attempt was made to clone a pluggable database that contains some clustered tables or advanced queue tables.

Action: Retry the clone operation after dropping all clustered tables and advanced queue tables from the source pluggable database.

ORA-65201: DML on CONTAINERS() includes only the CON_ID column

Cause: A DML on CONTAINERS() included the CON_ID column but did not include a non-CON_ID column. A DML on CONTAINERS() including the CON_ID column can be performed only if a column other than the CON_ID column is also specified.

Action: Specify a non-CON_ID column in the DML statement together with the CON_ID column.

ORA-65202: DML on CONTAINERS() specifies an invalid CON_ID column value

Cause: A DML on CONTAINERS() specified an invalid value for the CON_ID column.

Action: If the current container is an application root, then specify the pluggable database (PDB) ID of the current container or the PDB ID of a member of the application container as the value of the CON_ID column. If the current container is CDB\$ROOT, then specify a valid container ID as the value of the CON_ID column.

ORA-65203: invalid pluggable database name pattern

Cause: An attempt was made to assign an invalid pluggable database pattern for this initialization parameter.

Action: Specify a valid pluggable database name pattern.

ORA-65204: STANDBYS clause is too long

Cause: The specified STANDBYS clause was too long in CREATE PLUGGABLE DATABASE statement.

Action: Use an appropriate length of STANDBYS clause and reissue the statement.

ORA-65205: missing or invalid lockdown profile name

Cause: A valid lockdown profile name was not present where required.

Action: Reissue the statement with a valid lockdown profile name.

ORA-65206: invalid value specified

Cause: An attempt was made to use an invalid value in the VALUE clause.

Action: Specify a valid value.

ORA-65207: invalid statement or feature or option specified

Cause: An attempt was made to use an invalid statement or option or feature in ENABLE or DISABLE clause.

Action: Specify a valid statement or option or feature.

ORA-65208: Lockdown profile *string* does not exist.

Cause: An attempt was made to specify a lockdown profile that did not exist.

Action: Check DBA_LOCKDOWN_PROFILES to see if a lockdown profile exists.

ORA-65209: Lockdown profile *string* already exists.

Cause: An attempt was made to create a lockdown profile with a name that already existed.

Action: Check DBA_LOCKDOWN_PROFILES to see if the lockdown profile name exists.

ORA-65210: invalid value for UPGRADE PRIORITY

Cause: The specified value for UPGRADE PRIORITY was outside of the legal range.

Action: Choose an appropriate value for the option.

ORA-65211: UPGRADE PRIORITY may only be specified for user PDBs

Cause: An attempt was made to specify UPGRADE PRIORITY for CDB\$ROOT or PDB\$SEED, which is illegal.

Action: Avoid explicitly specifying CDB\$ROOT or PDB\$SEED when changing UPGRADE PRIORITY.

ORA-65212: operation not allowed from outside an application root

Cause: An operation was attempted that can only be performed in an application root.

Action: Switch to the application root container to perform the operation.

ORA-65213: existing application action in progress

Cause: An attempt was made to 'purge' or 'begin' an application action (install, uninstall, upgrade, or patch) while another action was already in progress.

Action: Attempt operation after the ongoing application action is complete.

ORA-65214: application action has not begun

Cause: An attempt was made to end an application action (install, uninstall, upgrade, or patch) without a prior 'begin' call.

Action: Begin the action first.

ORA-65215: starting version does not match current version

Cause: The starting version of the application upgrade did not match the current version of the application.

Action: Attempt operation with the correct starting version.

ORA-65216: invalid minimum version

Cause: The minimum version for the application patch did not exist.

Action: Retry the operation with the correct minimum version.

ORA-65217: application *string* does not exist

Cause: An action was attempted on an application that did not exist.

Action: Install the application.

ORA-65218: patch *string* for application *string* already installed

Cause: An attempt was made to start an application patch that was already installed.

Action: Attempt installation of a different application patch.

ORA-65219: patch *string* for application *string* is not in progress

Cause: An attempt was made to end an application patch that was not in progress.

Action: Begin the application patch.

ORA-65220: object *string.string* does not exist or is not of supported common type

Cause: An attempt was made to change the sharing status of an object that either did not exist, or was of a type that could not be made common.

Action: Attempt the operation on a different object.

ORA-65221: application *string* exists already

Cause: An action was attempted on an application that already exists.

Action: Use a different application name.

ORA-65222: *string* parameter is only supported in a CDB

Cause: An attempt was made to enable a parameter only supported in a multitenant container database (CDB), and the current database is not a CDB.

Action: Remove the parameter before starting the instance.

ORA-65223: tablespace *string* does not exist

Cause: The default tablespace specified in the CREATE PLUGGABLE DATABASE statement either did not exist in the source pluggable database (PDB) or is not included in the USER_TABLESPACES clause.

Action: Specify an existing tablespace to be set as the default.

ORA-65224: SQL statement not allowed according to lock down profile *string*

Cause: An attempt was made to execute a SQL statement, in a pluggable database (PDB), which was disabled according to the corresponding lock down profile.

Action: Enable the SQL statement in the lock down profile and then try to execute the statement.

ORA-65225: cannot run apex_to_common.sql or pdb_to_apppdb.sql on an unconverted non-multitenant container database

Cause: An attempt was made to run 'apex_to_common.sql' or 'pdb_to_apppdb.sql' on a pluggable database (PDB) that is an unconverted non-multitenant container database.

Action: Run 'noncdb_to_pdb.sql' in the PDB first.

ORA-65226: incompatible client version for the current database

Cause: An attempt was made to use an incompatible client version. Clients prior to Oracle Database 12c Release 2 (12.2) do not support long identifiers.

Action: Either upgrade the Oracle client to 12.2 (or higher) or do not use long identifiers in the database.

ORA-65227: unable to open pdb archive file *string*

Cause: An attempt was made to provide an invalid file name which could not be opened for generating the unplug archive.

Action: Check that the file name is valid and the file path is accessible.

ORA-65228: invalid host name specified

Cause: An attempt was made to use an invalid host name in the HOST clause.

Action: Specify a valid host name.

ORA-65229: invalid application version specified

Cause: An attempt was made to use an invalid application version.

Action: Specify a valid application version.

ORA-65230: internal database link cannot be altered or dropped

Cause: An attempt was made to directly alter or drop an internal database link. An internal database link can be altered or dropped only through an ALTER or DROP PLUGGABLE DATABASE statement.

Action: Specify the correct ALTER or DROP PLUGGABLE DATABASE statement.

ORA-65231: The referenced pluggable database does not exist or it is closed.

Cause: An attempt was made to create or access a proxy pluggable database that referenced a non-existent or closed pluggable database.

Action: Create or open the referenced pluggable database.

ORA-65232: unable to support PDB isolation mode in a non-PDB domain instance

Cause: An attempt to support pluggable database (PDB) isolation mode in a database without per-PDB recovery domains failed. PDB isolation mode is supported only on a per-PDB domain enabled instance.

Action: Enable the per-PDB recovery domains to use PDB isolation.

ORA-65233: unable to support PDB isolation mode in a global undo instance

Cause: An attempt to support pluggable database (PDB) isolation mode in a global undo enabled pluggable database failed. PDB isolation mode is supported only on a local undo enabled CDB instance.

Action: All PDBs should use local undo before starting in PDB isolation mode.

ORA-65234: DATA_LINK_DML should be supported only for data link tables.

Cause: An attempt was made to enable DATA_LINK_DML on a non-data link table.

Action: Avoid enabling DATA_LINK_DML on a non-data link table.

ORA-65235: cannot create common user, role or profile with the same name as existing common user, role or profile

Cause: An attempt was made to create a common user, role or profile with the same name as an existing common user, role or profile.

Action: Specify a different user, role or profile name.

ORA-65236: CON_ID column cannot be dropped or renamed

Cause: An attempt was made to drop or rename a CON_ID column of a CONTAINER_DATA table which is illegal.

Action: Avoid dropping or renaming CON_ID column of a CONTAINER_DATA table.

ORA-65237: CON_ID column must have a numeric data type

Cause: An attempt was made to change the data type of a CON_ID column of a CONTAINER_DATA table to a non-numeric data type, which is illegal.

Action: Avoid assigning a non-numeric data type to a CON_ID column of a CONTAINER_DATA table.

ORA-65238: operation cannot be performed when the application root is not open

Cause: An operation was attempted inside an application root that requires the application root to be open.

Action: Open the application root and then reissue the statement.

ORA-65239: missing or invalid service name

Cause: A valid service name was not present where required by the syntax of ALTER SESSION SET CONTAINER= SERVICE=.

Action: Reissue the statement with a valid service name.

ORA-65240: not connected to an application root

Cause: An attempt was made to create a pluggable database (PDB) by cloning or plugging in an application PDB while connected to the root of a multitenant container database (CDB).

Action: Make sure that you are connected to an application root before attempting this operation.

ORA-65241: statement can only be executed when administering an application

Cause: An attempt was made to issue a statement affecting a user, role, or object used by an application installed in an application container while not installing, upgrading, patching, or uninstalling such application.

Action: Make sure that an application installed in an application container is being installed, upgraded, patched, or uninstalled when issuing a statement affecting a user, role, or object.

ORA-65242: CONTAINER_DATA attribute disabled

Cause: An attempt was made to disable a CONTAINER_DATA attribute of a table for which it was not enabled.

Action: Make sure that the table whose CONTAINER_DATA attribute you are trying to disable has it enabled.

ORA-65243: CONTAINER_DATA attribute already enabled

Cause: An attempt was made to enable a CONTAINER_DATA attribute of a table for which it is already enabled.

Action: Make sure that the table whose CONTAINER_DATA attribute you are trying to enable does not already have it enabled.

ORA-65244: application action has begun

Cause: An attempt was made to execute an unsupported statement after an application action (install, uninstall, upgrade, or patch) was started.

Action: End the action first.

ORA-65245: application *string* has been uninstalled

Cause: An attempt was made to operate on an application after it was uninstalled.

Action: Use a different application name.

ORA-65246: invalid user name specified

Cause: An attempt was made to use an invalid user name in the USER clause.

Action: Specify a valid user name.

ORA-65247: tablespaces for subset clone or no data clone are not self-contained

Cause: One or more tablespaces listed in the USER_TABLESPACES clause or metadata tablespaces were not self-contained.

Action: Check the violating tablespaces and objects in the PDB_PLUG_IN_VIOLATIONS view to fix and reissue the statement.

ORA-65248: invalid clause

Cause: An attempt was made to alter a lockdown profile with an invalid clause.

Action: Specify a valid clause while altering the lockdown profile.

ORA-65249: invalid option

Cause: An attempt was made to alter a lockdown profile with an invalid option.

Action: Specify a valid option while altering the lockdown profile.

ORA-65250: invalid path specified for file - *string*

Cause: An attempt was made to use a file name that does not start with CREATE_FILE_DEST for the pluggable database.

Action: Specify a file name pattern so that the resulting file name has CREATE_FILE_DEST value as a prefix.

ORA-65251: ending version already exists

Cause: The ending version of the application upgrade matched a previous version of the application.

Action: Attempt operation with the correct ending version.

ORA-65252: cannot connect or ALTER SESSION SET CONTAINER to an application root clone

Cause: An attempt was made to connect or ALTER SESSION SET CONTAINER to an application root clone.

Action: Connect or ALTER SESSION SET CONTAINER to a different pluggable database.

ORA-65253: operation not allowed within a proxy pluggable database as SYSDBA or SYSOPER

Cause: An attempt was made to access a proxy pluggable database as SYSDBA or SYSOPER.

Action: Access a proxy pluggable database with any privilege other than SYSDBA or SYSOPER.

ORA-65254: invalid path specified for the directory

Cause: An absolute path was used in the CREATE DIRECTORY statement. Since the PDB has set the PATH_PREFIX property, only relative path is allowed for directories.

Action: Specify a relative path and reissue the statement.

ORA-65255: invalid tablespace number

Cause: An attempt was made to create a pluggable database where one or more tablespaces has an invalid tablespace number.

Action: Contact Oracle Support Services.

ORA-65256: maximum number of application root clones created for application container

Cause: An attempt was made to create an application root clone for an application container that has already reached the maximum permitted number of application root clones.

Action: Avoid creating too many application root clones.

ORA-65257: target is a non-CDB instance

Cause: An attempt was made to create a proxy pluggable database to a non-multitenant container database (non-CDB) instance.

Action: Create a proxy pluggable database to a pluggable database.

ORA-65258: referenced pluggable database is an application root clone

Cause: An attempt was made to create a proxy pluggable database that references an application root clone.

Action: Create a proxy pluggable database that references a different pluggable database.

ORA-65259: partial synchronization of application is disallowed

Cause: An attempt was made to synchronize an application that has not ended its install, patch, upgrade, or uninstall.

Action: End the application install, patch, upgrade, or uninstall.

ORA-65260: unable to create a refreshable clone

Cause: An attempt was made to either create a refreshable clone of a proxy pluggable database or to create a proxy pluggable database which is also enabled for refresh.

Action: Create a refresh clone of a regular pluggable database.

ORA-65261: pluggable database *string* not enabled for refresh

Cause: An attempt was made to refresh a pluggable database (PDB) which was either not created as a refreshable PDB or the final refresh was already complete.

Action: Attempt the operation only on a PDB that is enabled for refresh.

ORA-65262: Dismount operation is not allowed.

Cause: An attempt was made to dismount a pluggable database with parameter `enable_pdb_isolation` set to `FALSE`.

Action: None

ORA-65263: internal error

Cause: This is an internally stimulated error.

Action: Contact Oracle Support Services.

ORA-65264: Dismount operation is not allowed.

Cause: An attempt was made to dismount a pluggable database on a standby instance.

Action: None

ORA-65265: PDB cannot be dropped or unplugged.

Cause: An attempt was made to drop or unplug the root of an application container to which one or more application pluggable databases (PDBs) belong.

Action: Drop the application PDBs belonging to the application container before attempting to drop or unplug the application root.

ORA-65266: application root clone may not be dropped, unplugged or altered

Cause: An attempt was made to drop, unplug, or alter an application root clone pluggable database which is not allowed.

Action: Specify a legal pluggable database name.

ORA-65267: Application PDB *string* is open in an incompatible mode.

Cause: An attempt was made to reopen an application root in a mode incompatible with that of an application PDB belonging to the same application container.

Action: Reopen the application PDB in a compatible mode and then retry the operation.

ORA-65268: PDB cannot be created

Cause: An attempt was made to either relocate a pluggable database (PDB) which was created as a refreshable PDB or to create a refreshable PDB from a PDB that was already created as refreshable PDB or was marked for relocation.

Action: None

ORA-65269: PDB cannot be refreshed

Cause: An attempt was made to refresh a pluggable database (PDB) with no refresh mode.

Action: Specify a manual or automatic refresh mode for the PDB.

ORA-65270: operation is not allowed in an application patch

Cause: An attempt was made to perform an operation that is not allowed in an application patch.

Action: Use application upgrade instead of application patch.

ORA-65271: internal application may not be altered

Cause: An attempt was made to alter an application that was created internally.

Action: Specify a non-internal application.

ORA-65272: operation not allowed from outside an application PDB

Cause: An operation was attempted that can only be performed in an application PDB.

Action: Switch to the application PDB to perform the operation.

ORA-65273: The specified changes must be restricted to the current container.

Cause: An attempt was made to apply the specified changes to all containers.

Action: Specify CONTAINER=CURRENT.

ORA-65274: operation not allowed from outside an application action

Cause: An operation was attempted that can only be performed in an application action (install, uninstall, upgrade, or patch).

Action: Begin an application action.

ORA-65275: invalid operation on a container database (CDB)

Cause: An operation was attempted that can only be performed from within a non-container database.

Action: Switch to a non-container database to perform the operation.

ORA-65276: rule already exists in the lockdown profile

Cause: An attempt was made to add a rule that already exists in the lockdown profile.

Action: Specify a rule that does not exist in the lockdown profile.

ORA-65277: Unable to support PDB isolation mode with MEMORY_TARGET or MEMORY_MAX_TARGET.

Cause: An attempt was made to support pluggable database (PDB) isolation mode with the MEMORY_TARGET or MEMORY_MAX_TARGET configuration parameters. PDB isolation mode is not supported with the MEMORY_TARGET or MEMORY_MAX_TARGET configuration parameters.

Action: Disable PDB isolation mode before starting the instance.

ORA-65278: The PDB SGA size is larger than or equal to the CDB SGA size.

Cause: An attempt was made to start a pluggable database (PDB) with a system global area (SGA) size larger than or equal to the multitenant container.

Action: Specify a PDB SGA size which is less than the CDB SGA size in the PDB SPFILE.

ORA-65279: The PDB SGA_MAX_SIZE is larger than or equal to the maximum CDB SGA size.

Cause: An attempt was made to start a pluggable database (PDB) with SGA_MAX_SIZE configuration parameter size larger than or equal to the multitenant container database (CDB).

Action: Specify a PDB SGA_MAX_SIZE configuration parameter which is less than the maximum CDB SGA size in the PDB SPFILE.

ORA-65280: The referenced pluggable database is a proxy pluggable database.

Cause: An attempt was made to create a proxy pluggable database that referenced a proxy pluggable database.

Action: Create a proxy pluggable database that references a different pluggable database.

ORA-65281: application *string* does not exist in application root

Cause: An attempt was made to create a pluggable database (PDB) by cloning or plugging in an application PDB or application root having an application that does not exist in the application root where the statement was issued.

Action: Install the application in the application root where the statement is issued.

ORA-65282: Aborting PDB *string*'s instance recovery due to the progress of its SHUTDOWN ABORT operation

Cause: The instance recovery could not proceed as the pluggable database (PDB) was in the middle of the SHUTDOWN ABORT operation.

Action: None

ORA-65283: pluggable database *string* does not belong to the current container database

Cause: An attempt was made to perform an operation on a pluggable database that did not belong to the current multitenant container database (CDB) in the CDB fleet.

Action: Connect to the container database where the pluggable database was created to perform the operation.

ORA-65284: Version *string* for application *string* does not exist in application root

Cause: An attempt was made to create a pluggable database (PDB) by cloning or plugging in an application PDB or application root having an application that has a higher version than the application root where the statement was issued.

Action: Upgrade the application in the application root where the statement is issued.

ORA-65285: Status mismatch for application *string*

Cause: An attempt was made to create a pluggable database (PDB) by cloning or plugging in an application PDB or application root having an application that has a mismatch status between application PDB and the application root where the statement was issued.

Action: Uninstall the application in the application root where the statement is issued.

ORA-65286: object *string.string* cannot be made an extended data link

Cause: An attempt was made to change the sharing status of an object to extended data link when the object was of a type for which extended data links are not supported.

Action: Ensure that the object whose sharing status is to be changed to extended data link is of appropriate type.

ORA-65287: cannot set a common application context using a local package

Cause: An attempt was made to set a common application context using a local package.

Action: Associate the common application context with a common package.

ORA-65288: PDB archive file *string* already exists.

Cause: An attempt to create a pluggable database (PDB) archive file failed because a file with that name already exists.

Action: Use a different PDB archive file name.

ORA-65289: Application root cannot be relocated to another container database.

Cause: An attempt was made to relocate the root of an application container.

Action: None

ORA-65290: Application may not be altered.

Cause: An attempt was made to alter an application when the application pluggable database was not open.

Action: Open the application pluggable database and retry.

ORA-65291: invalid container map object

Cause: An attempt was made to assign an invalid container map object to `container_map` property of the database.

Action: Create the container map object with partition names corresponding to the multitenant container database (CDB) ROOT or application container ROOT and their pluggable databases. And the partition key for the container map object must be single column.

ORA-65292: invalid common data map object

Cause: An attempt was made to assign an invalid common data map object to `common_data_map` property of the database.

Action: Create the common data map object with partition names corresponding to the pluggable database (PDB) or application PDB and its multitenant container database ROOT or application container ROOT, respectively.

ORA-65293: Implicit users cannot own common objects.

Cause: An attempt was made to create a common object to be owned by an implicit user.

Action: Create a local object.

ORA-65294: PDB's compatible parameter value (*string*) is higher than CDB's compatible parameter value (*string*).

Cause: An attempt was made to plug in or clone from a pluggable database with a higher compatible parameter value than the compatible parameter value of the multitenant container database (CDB).

Action: Create a pluggable database with the same or lower compatible parameter value of the multitenant container database.

ORA-65295: service name or module name mismatch

Cause: An attempt was made to end an application action using a service name or module name that does not match the service name or module name that was in use when the application action was started.

Action: Use the right service name or module name before ending the application action.

ORA-65296: unable to create pluggable database

Cause: An attempt was made to create a proxy pluggable database with relocate clause specified.

Action: Create a proxy pluggable database without the relocate clause.

ORA-65297: operation not allowed inside an application action

Cause: An operation was attempted that can only be performed outside an application action (install, uninstall, upgrade, or patch).

Action: Perform the operation outside an application action.

ORA-65298: cannot create an application PDB in an application root which is an unconverted non-CDB

Cause: An attempt was made to create an application pluggable database (PDB) in an application root which was created by plugging in a non-multitenant container database (non-CDB) without first running noncdb_to_pdb.sql script.

Action: Run the noncdb_to_pdb.sql script in the application root first.

ORA-65299: cannot grant or revoke a privilege to or from multiple grantees

Cause: A GRANT or REVOKE statement was issued specifying more than one grantee on an application pluggable database (PDB).

Action: If trying to grant or revoke a privilege on a PDB, specify only one grantee at a time in the GRANT or REVOKE statement.

ORA-65300: PDB common_user_prefix conflicts with common_user_prefix in CDB.

Cause: An attempt was made to set the 'common_user_prefix' parameter in a pluggable database (PDB) that conflicts with the value of the same parameter in the multitenant container database (CDB.)

Action: Choose a different 'common_user_prefix' for PDB.

ORA-65301: cannot set a deprecated property when the new property value is set

Cause: An attempt was made to run an ALTER DATABASE PROPERTY SET command on an older property that was deleted after setting the new property value.

Action: Do not set the deprecated property if the new property is set.

ORA-65310: blocked by COMMON_SCHEMA_ACCESS lockdown

Cause: An attempt was made to run an AUTHID CURRENT_USER function or procedure, or to reference a BEQUEATH CURRENT_USER view, that is not safe under the COMMON_SCHEMA_ACCESS lockdown.

Action: Either do not call the function or procedure or reference the view, or adjust the definition of the function, procedure, or view to satisfy the requirements of COMMON_SCHEMA_ACCESS lockdown.

ORA-65311: cannot modify the common object of another application

Cause: An attempt was made to modify a common object that was created by another application.

Action: Modify the object using the same application as the one that created the object.

ORA-65312: The password of the application common user has expired and cannot be changed.

Cause: The password of the application common user had expired and needed to be changed in order to successfully log in to application containers. But the application ROOT container's application status did not allow this operation to succeed either because: - An implicit application common user was attempting to change the password from within an explicit application action. - A non-implicit application common user was attempting to change the password from within an implicit application action. - A non-implicit application common user was attempting to change the password from within an explicit application action, but the application, which created the application common user, was being upgraded or uninstalled.

Action: Either begin an explicit application action for changing the password of a non-implicit application common user or try changing the implicit application common user's password inside an implicit application action, or wait for application upgrade or uninstall to be completed, and then try logging in or contact the database administrator.

ORA-65313: cannot synchronize application in a proxy pluggable database without being in a SYSDBA session

Cause: An attempt was made to synchronize an application containing statements executed from a privileged session.

Action: Synchronize the application as SYSDBA.

ORA-65314: cannot use NOCOPY when plugging in a PDB using an archive file

Cause: An attempt was made to create a pluggable database (PDB) using an archive file using the NOCOPY clause.

Action: Specify COPY or MOVE and retry the plugin operation.

ORA-65315: invalid path specified for file - *string*

Cause: An attempt was made to use a file name that did not start with PATH_PREFIX for the pluggable database.

Action: Specify a file name that is under the PATH_PREFIX directory for the pluggable database.

ORA-65316: bad file name specified

Cause: An attempt was made to use an invalid file name as an argument.

Action: Specify a valid file name and retry the operation.

ORA-65317: cannot modify the user or role created by another application

Cause: An attempt was made to modify a user or a role that was created by another application. This can also happen when connected to an Application container and DBMS_PDB.SET_USER_EXPLICIT or DBMS_PDB.SET_ROLE_EXPLICIT procedure was invoked with the following type of users and roles: - Pluggable Database (PDB) Administrative user, that is, a user who has been granted PDB_DBA role inside the PDB. - The out-of-box Oracle supplied common users or roles. - Container Database (CDB) Common Users and roles, that is, users and roles created at CDB\$ROOT container.

Action: Modify the user or role using the same application as the one that created the user or role. Do not try invoking SET_USER_EXPLICIT or SET_ROLE_EXPLICIT procedures in DBMS_PDB package against CDB common users or roles and PDB Administrative users.

ORA-65318: query to cross-container fixed tables not allowed

Cause: An attempt was made to query the cross-container fixed tables.

Action: Avoid querying the cross-container fixed tables.

ORA-65319: DML on CONTAINERS() specified an unsupported CON_ID predicate

Cause: A DML on CONTAINERS() included the CON_ID predicate in an OR chain or in an in-list.

Action: Specify the CON_ID predicate within an AND chain and without an in-list.

ORA-65320: value of CON_ID is not known for DML on CONTAINERS()

Cause: A DML on CONTAINERS() included multiple CON_ID predicates, or the single CON_ID predicate specified a value that is not a constant or a bind.

Action: Specify a single CON_ID predicate as a constant or a bind.

ORA-65321: CON_ID column cannot be updated for CONTAINERS()

Cause: A DML on CONTAINERS() attempted to set a value for the CON_ID column.

Action: Do not set a value for the CON_ID column for CONTAINERS().

ORA-65322: invalid application patch specified

Cause: An attempt was made to use an invalid application patch.

Action: Specify a valid application patch.

ORA-65323: cannot create or set an object table or object view as a data link or extended data link

Cause: An attempt was made to create or set an object table or an object view as a data link or an extended data link.

Action: Create or set the object table or object view as a metadata link.

ORA-65324: An invalid value is specified in an ALTER PLUGGABLE DATABASE CONTAINERS DEFAULT TARGET or ALTER DATABASE CONTAINERS DEFAULT TARGET statement.

Cause: An invalid value is specified in an ALTER PLUGGABLE DATABASE CONTAINERS DEFAULT TARGET or ALTER DATABASE CONTAINERS DEFAULT TARGET statement.

Action: Specify a valid pluggable database (PDB) name or NONE in the ALTER PLUGGABLE DATABASE CONTAINERS DEFAULT TARGET or ALTER DATABASE CONTAINERS DEFAULT TARGET statement.

ORA-65325: DML on CONTAINERS() cannot be performed outside the CDB root or application root.

Cause: An attempt was made to perform DML on CONTAINERS() outside the multitenant container database (CDB) root or an application root.

Action: Perform DML on CONTAINERS() in the CDB root or in an application root.

ORA-65326: cannot query an object table or object view using CONTAINERS()

Cause: An attempt was made to query an object table or object view using CONTAINERS().

Action: Query the object table or object view without using CONTAINERS().

ORA-65327: cannot modify the sharing property of an object outside an application action

Cause: An attempt was made to modify the sharing property of an object outside an application action.

Action: Begin the application action.

ORA-65328: cannot end an application action in the current session

Cause: An attempt was made to end an application action in a manner that is inconsistent with the order in which sessions will be replayed during application SYNC.

Action: Start a new session to end the application action.

ORA-65329: cannot run pdb_to_apppdb.sql unless pluggable database is an unconverted application pluggable database

Cause: An attempt was made to run 'pdb_to_apppdb.sql' on a pluggable database (PDB) that was not an unconverted application PDB.

Action: 'pdb_to_apppdb.sql' is not necessary for this PDB.

ORA-65330: cannot synchronize an application before pdb_to_apppdb.sql is executed

Cause: An attempt was made to synchronize an application in an unconverted application PDB before running 'pdb_to_apppdb.sql'.

Action: Run 'pdb_to_apppdb.sql' in the unconverted application PDB.

ORA-65331: DDL on a data link table is outside an application action.

Cause: DDL on a data link table was attempted outside an application action.

Action: Begin the application action before the DDL.

ORA-65332: DDL on an extended data link table is outside an application action.

Cause: DDL on an extended data link table was attempted in an application root outside an application action.

Action: Begin the application action before the DDL.

ORA-65333: cannot purge an application that is installed on application PDB

Cause: An attempt was made to purge an application that was installed in one or more application pluggable databases (PDBs).

Action: Drop the installed application PDB before purging.

ORA-65334: invalid number of PDBs specified

Cause: An attempt was made to either set the MAX_PDBS database property to an invalid number or the number of current pluggable databases (PDBs) exceeds the number specified.

Action: Specify a valid value which is greater than the current number of existing PDBs.

ORA-65335: application action for application *string* has not started

Cause: An attempt was made to end an application action using an incorrect application name.

Action: Use the correct application name.

ORA-65336: incorrect application patch number specified

Cause: An attempt was made to end an application action using an incorrect application patch number.

Action: Use the correct application patch number.

ORA-65337: cannot modify the profile created by another application

Cause: An attempt was made to modify a profile that was created by another application. This can also happen when connected to an application container and the DBMS_PDB.SET_PROFILE_EXPLICIT procedure was invoked and the input profile type was one of the following: - The out-of-the-box Oracle supplied local profiles (DEFAULT, ORA_STIG_PROFILE and ORA_CIS_PROFILE). - Multitenant container database (CDB) common profiles created at CDB\$ROOT container. - Protected local profiles created by CDB common users inside the pluggable database (PDB).

Action: Modify the profile using the same application as the one that created the profile. Do not try invoking DBMS_PDB.SET_PROFILE_EXPLICIT procedure against Oracle supplied local profiles or CDB common profiles or protected local profiles.

ORA-65338: unable to create pluggable database

Cause: An attempt was made to relocate a pluggable database using a database link to the source pluggable database.

Action: Use a database link that points to the source multitenant container database root and retry the operation.

ORA-65339: unsupported operation on the source PDB

Cause: An unsupported operation was performed on the source pluggable database, which rendered the target PDB invalid.

Action: Re-create the target PDB.

ORA-65340: invalid application compatibility version

Cause: An attempt was made to set the compatibility version of an application to a version higher than that of one of the PDBs.

Action: Set a higher compatibility version.

ORA-65341: cannot open pluggable database in read/write mode

Cause: An attempt was made to open a refreshable pluggable database in read/write mode.

Action: Open the refreshable clone in read-only mode or modify the refresh mode to NONE and retry the operation.

ORA-65342: source pluggable database *string* has unrecovered transaction

Cause: The source pluggable database had an active transaction when it was closed.

Action: Open the pluggable database in read/write mode so that transaction recovery can be performed. End XA transaction.

ORA-65343: cannot unplug pluggable database *string*

Cause: An attempt was made to unplug a pluggable database that was previously unplugged.

Action: Drop the pluggable database to finish the unplug operation.

ORA-65344: cannot uninstall or purge an application that has objects, users, roles, and profiles

Cause: An attempt was made to uninstall or purge an application that had objects, users, roles, and profiles.

Action: Drop all objects, users, roles, and profiles that belong to the application.

ORA-65345: cannot refresh pluggable database, archive log not found for SCN *string*

Cause: The foreign archive log required for refreshing the pluggable database was not found.

Action: Re-create the refresh pluggable database and ensure that archive logging is enabled for the source multitenant container database (CDB).

ORA-65346: The PDB version is lower and components (*string*) are missing in CDB.

Cause: An attempt was made to plug in a pluggable database (PDB) that has a lower version and has more components than the multitenant container database (CDB) or the application root.

Action: Install the missing components in CDB or the application root before plugging in the PDB.

ORA-65347: cannot downgrade database that has proxy pluggable databases or application containers

Cause: There were proxy pluggable databases or application containers in the database.

Action: Prior to downgrade, drop the proxy pluggable databases and application containers.

ORA-65348: unable to create pluggable database

Cause: An attempt was made to relocate a pluggable database with availability max clause using a target pluggable database name which is different from source pluggable database name.

Action: Use source pluggable database name as the target pluggable database name.

ORA-65349: unable to create pluggable database

Cause: An attempt was made to relocate a pluggable database with availability max and service_name_convert clauses together.

Action: Do not use service_name_convert clause when relocating with the availability max clause.

ORA-65350: cannot run aproot_to_pdb.sql

Cause: An attempt was made to run 'aproot_to_pdb.sql' on a pluggable database (PDB) that was already converted to a regular PDB.

Action: 'aproot_to_pdb.sql' is not necessary for this PDB.

ORA-65351: invalid partition (%0!s) access with partition map size %1!s

Cause: An attempt was made to access an invalid partition using the CONTAINERS() clause.

Action: Contact Oracle Support Services.

ORA-65352: Query across containers cannot have an ancillary operator.

Cause: An ancillary operator was used with a data link, extended data link, or CONTAINERS() clause.

Action: Remove the ancillary operator in the query.

ORA-65353: The *string* tablespace is missing from the XML metadata file.

Cause: An attempt was made to plug in a pluggable database (PDB) using an XML file that does not contain the SYSTEM, SYSAUX or undo tablespace specifications.

Action: Check and correct the XML metadata file. If the XML metadata file is missing undo tablespaces, you may need to regenerate the XML using a more recent patchset.

ORA-65355: cannot allocate PDB SGA memory

Cause: The multitenant container database (CDB) did not have sufficient system global area (SGA) memory available to open the pluggable database (PDB). *Result: Increase the CDB SGA size or dismount a PDB to free CDB SGA memory.

Action: n/a

ORA-65356: missing or invalid value for lead_cdb_uri

Cause: An attempt was made to specify an incorrect value for lead_cdb_uri. The lead_cdb_uri value can either specify the host name, port number and service name for the lead multitenant container database (CDB), or the value can specify a database link object name in the current CDB which connects to the lead CDB in the fleet.

Action: Specify a valid value for lead_cdb_uri.

ORA-65357: lead_cdb_uri and lead_cdb cannot be specified in the same CDB

Cause: An attempt was made to specify the lead_cdb_uri property in the multitenant container database (CDB) where the lead_cdb property is set to TRUE or vice versa.

Action: Specify lead_cdb or lead_cdb_uri property in the CDB.

ORA-65358: PDB string is not a template PDB

Cause: The PDB specified was not a template pluggable database (PDB) and thus pdb_template cannot be set to this PDB.

Action: Set pdb_template to a template PDB.

ORA-65359: unable to create pluggable database with no data

Cause: An attempt was made to clone a pluggable database that was opened in read/write mode.

Action: Retry the clone operation after the source pluggable database is in read-only mode.

ORA-65360: unable to switchover

Cause: An attempt was made to switchover a pluggable database (PDB) using a database link that pointed to the source pluggable database.

Action: Use a database link that points to the source multitenant container database root and retry the operation.

ORA-65361: pluggable database string is not a refresh copy

Cause: An attempt was made to switchover to a pluggable database (PDB) which was not marked as a refresh copy.

Action: Switchover operation is allowed only with a target refreshable clone PDB.

ORA-65362: pluggable database string is not a refresh copy of the source pluggable database

Cause: An attempt was made to switchover to a pluggable database (PDB) which was not marked as a refresh copy of the source pluggable database (PDB).

Action: Switchover operation is allowed only between a refreshable clone and its primary PDB.

ORA-65363: pluggable database string not enabled for snapshots

Cause: An attempt was made to snapshot a pluggable database (PDB) which was created with snapshots disabled.

Action: Retry the operation after changing the snapshot mode of the PDB.

ORA-65364: snapshot not found

Cause: An attempt was made to create a pluggable database (PDB) using a snapshot or to drop a snapshot that could not be found.

Action: Check DBA_PDB_SNAPSHOTS for all existing PDB snapshots and retry the operation.

ORA-65365: unable to create pluggable database

Cause: An attempt was made to create a pluggable database (PDB) using a snapshot when Oracle Managed Files (OMF) was not enabled or if the CREATE_FILE_DEST clause was not specified.

Action: Enable OMF or specify CREATE_FILE_DEST clause and retry creating the pluggable database.

ORA-65366: snapshot already exists

Cause: An attempt was made to create a snapshot of a pluggable database (PDB) using a name that already existed.

Action: Specify a different name and retry the operation.

ORA-65367: unable to switchover

Cause: An attempt was made to switch over a pluggable database (PDB) that was not a normal pluggable database that could be opened in read/write mode.

Action: Switchover operation is allowed only with a source PDB in NORMAL status.

ORA-65368: unable to open the pluggable database due to errors during recovery

Cause: Recovery was required prior to opening the pluggable database, but an error during recovery was determined to be fatal enough to end both the recovery and the open operation.

Action: More specific messages accompany this message. Refer to the accompanying messages for the appropriate action.

ORA-65369: The key column for the container map object has multiple values for each partition.

Cause: An attempt was made to generate logical partitioning key values using a container map object that had multiple values for each partition.

Action: Specify a container map object that has a single value for each partition and retry the operation.

ORA-65370: *string* initialization parameter cannot be specified in a lockdown profile

Cause: An attempt was made to specify an illegal initialization parameter in a lockdown profile.

Action: Do not specify this initialization parameter in a lockdown profile.

ORA-65371: *string* initialization parameter cannot be modified in a template pluggable database

Cause: An attempt was made to modify an illegal initialization parameter inside a template pluggable database (PDB).

Action: Do not modify this initialization parameter inside a template PDB.

ORA-65372: Initialization parameter %0!s cannot be modified when initialization parameter %1!s is already set.

Cause: An attempt was made to set the PDB_LOCKDOWN initialization parameter along with the PDB_TEMPLATE initialization parameter.

Action: Reset the PDB_LOCKDOWN initialization parameter before setting the PDB_TEMPLATE initialization parameter or RESET the PDB_TEMPLATE initialization parameter before setting the PDB_LOCKDOWN initialization parameter.

ORA-65373: operation not allowed in a template PDB

Cause: The specified operation was not allowed in a template pluggable database (PDB).

Action: Do not perform this operation in a template PDB.

ORA-65374: cannot set PDB_LOCKDOWN initialization parameter to an application lockdown profile

Cause: An attempt was made to set the PDB_LOCKDOWN initialization parameter to an application lockdown profile when the PDB_LOCKDOWN initialization parameter was already set to a container database (CDB) lockdown profile.

Action: If PDB_LOCKDOWN initialization parameter is being set in an application pluggable database (PDB), contact the CDB administrator. If PDB_LOCKDOWN initialization parameter is being set in an application ROOT, set the PDB_LOCKDOWN initialization parameter in the required application PDBs.

ORA-65375: cannot set PDB_TEMPLATE initialization parameter to an application template *string*

Cause: An attempt was made to set the PDB_TEMPLATE initialization parameter to an application template when the PDB_TEMPLATE initialization parameter was already set to a multitenant container database (CDB) template.

Action: If the PDB_TEMPLATE initialization parameter is being set in an application pluggable database (PDB), contact the CDB administrator. If the PDB_TEMPLATE initialization parameter is being set in an application ROOT, set the PDB_TEMPLATE initialization parameter in the required application PDBs.

ORA-65376: unable to refresh the PDB

Cause: A conflicting operation was in progress in the source pluggable database (PDB) for the refresh clone.

Action: Retry the operation later.

ORA-65377: parameter cannot be modified

Cause: An attempt was made to modify an in-memory value for the SGA_TARGET parameter with pluggable database isolation mode enabled.

Action: Do not modify an in-memory value for the SGA_TARGET parameter in PDB isolation mode.

ORA-65378: illegal use of ALTER SYSTEM clause '*string*' in the template pluggable database(PDB)

Cause: An invalid clause was used in an ALTER SYSTEM operation.

Action: Choose a valid clause and retry the operation.

ORA-65379: application *string* is in transient state

Cause: An attempt was made to unplug an application pluggable database (PDB), which had unfinished application action.

Action: Fix the application state in the application pluggable database (PDB) before unplugging the database.

ORA-65380: unable to materialize

Cause: An attempt was made to materialize a pluggable database (PDB) that was not created as a snapshot copy.

Action: Retry the operation on a PDB created as a snapshot copy.

ORA-65381: unable to rename application root

Cause: An attempt was made to rename an application root that has one or more open application PDBs.

Action: Close all application PDBs and retry the operation.

ORA-65382: operation cannot be performed when subscribed template PDB is not open

Cause: The template pluggable database (PDB) to which the current PDB was subscribed was not open.

Action: Open the template PDB that the current PDB was subscribed to before opening the current PDB.

ORA-65383: unable to set MAX_PDB_SNAPSHOTS property to greater than string

Cause: An attempt was made to set the MAX_PDB_SNAPSHOTS property to a higher value than the allowed maximum.

Action: Retry the operation with a lower value.

ORA-65384: missing or invalid property

Cause: The issued operation had a missing property name or the property specified was invalid or not found in the database.

Action: Retry the operation with a valid property name.

ORA-65385: missing or invalid value for property

Cause: The issued operation had a missing property value or the property value specified was invalid.

Action: Retry the operation with a valid property value.

ORA-65386: unable to alter property

Cause: An attempt was made to specify a property that could not be altered using ALTER DATABASE PROPERTY or ALTER PLUGGABLE DATABASE PROPERTY statement.

Action: Retry the operation with a different property name.

ORA-65387: unable to create pluggable database with the specified USER_TABLESPACES clause

Cause: An attempt was made to create a pluggable database using an XML file that was generate with DBMS_PDB.RECOVER and all tablespaces were not included.

Action: Retry the operation with all tablespaces and regenerate the XML using unplg and then redo the subset clone.

ORA-65388: PARTITION_CONTAINED only supported in subset cloning

Cause: An attempt was made to use PARTITION_CONTAINED clause outside subset cloning.

Action: Either specify the USER_TABLESPACES clause or remove the PARTITION_CONTAINED clause.

ORA-65389: unable to clone pluggable database

Cause: An attempt was made to create a refreshable clone of a pluggable database (PDB) or relocate a PDB from a standby database.

Action: Retry the operation using a source PDB that is part of a primary database.

ORA-65390: unable to mark the application object as specific Link

Cause: An attempt was made to use SET_SHARING_NONE, SET_METADATA_LINKED, SET_DATA_LINKED, or SET_EXT_DATA_LINKED on an object of an incompatible sharing mode.

Action: Do not mark a metadata, data, or extended data-linked object with an incompatible sharing mode.

ORA-65391: violation of container map partitions

Cause: An attempt was made to insert or update a row in a container map enabled table that violated the partitions of the container map.

Action: Insert or update a row that does not violate the partitions of the container map.

ORA-65392: object column is accessed in a fleet proxy pluggable database

Cause: An attempt was made to access an object column in a fleet proxy Pluggable Database (PDB).

Action: Remove the object column from the query.

ORA-65393: Media recovery to SCN *string* must be performed in mount mode.

Cause: One or more pluggable databases could not be recovered by the RESETLOGS operation because the Oracle Active Data Guard standby database was still open.

Action: Close Oracle Active Data Guard standby database and restart media recovery.

ORA-65394: LIBRARY does not use a DIRECTORY object

Cause: The LIBRARY objects did not use a DIRECTORY object for the pluggable database (PDB) with a defined PATH_PREFIX.

Action: Re-create LIBRARY objects in the database to use a DIRECTORY object.

ORA-65395: constraint cannot be added

Cause: An attempt was made to add a referential integrity constraint from a table to a data-linked or an extended data-linked table.

Action: Add the referential integrity constraint in NOVALIDATE mode.

ORA-65396: A linked tablespace cannot be altered to READ WRITE status.

Cause: An attempt was made to alter a linked tablespace to READ WRITE status.

Action: None

ORA-65397: cannot open pluggable database in read/write mode

Cause: An attempt was made to open a pluggable database with files in object store in read/write mode.

Action: Open the pluggable database with files in object store in read-only mode and retry the operation.

ORA-65398: cannot change password during application upgrade or uninstall

Cause: An attempt was made to change password for an application common user while the application, which created the application common user, was being upgraded or uninstalled.

Action: Wait for application upgrade or uninstall to be completed before retrying the operation or contact the database administrator.

ORA-65399: cannot set object table, external table, hybrid partitioned table or object view with CONTAINER_DATA clause

Cause: An attempt was made to create or alter an object table, an external table, a hybrid partitioned table, or an object view with a CONTAINER_DATA clause.

Action: Do not use the CONTAINER_DATA clause when creating or altering an object table, external table, hybrid partitioned table, or an object view.

ORA-65400: Table does not have CLUSTERING clause associated with it

Cause: User attempts to modify clustering clause on a table that does not have one.

Action: Create CLUSTERING clause on the table first.

ORA-65402: invalid option on CLUSTERING clause

Cause: Invalid option on CLUSTERING clause. Only [YES | NO] ON LOAD or [YES | NO] ON DATA MOVEMENT are valid.

Action: Correct the option on the CLUSTERING clause.

ORA-65403: invalid usage of CLUSTERING clause

Cause: Invalid usage of CLUSTERING clause. The clause can be specified only for [CREATE | ALTER] [TABLE | SNAPSHOT | MATERIALIZED VIEW]

Action: Do not use the CLUSTERING clause in this statement.

ORA-65404: a table or materialized view can only have one CLUSTERING clause, remove the redundant clause(s)

Cause: The CLUSTERING clause was specified multiple times for the table or the materialized view yet a table or materialized view can only be clustered by a single order.

Action: Determine by which CLUSTERING clause you would like to cluster the table or the materialized view. Remove the other CLUSTERING clauses from the statement and re-execute the statement.

ORA-65405: CLUSTERING clause cannot be used with existing table options

Cause: The CLUSTERING clause conflicted with other clauses on the table. The CLUSTERING clause cannot be used with IOT, CLUSTERED, GLOBAL TEMPORARY TABLE, or the EXTERNAL TABLE clause.

Action: Correct the statement so the CLUSTERING clause does not conflict with other clauses.

ORA-65406: invalid option on CLUSTERING clause

Cause: The CLUSTERING clause was not followed by the BY [LINEAR | INTERLEAVED] ORDER option.

Action: Correct the option on the CLUSTERING clause.

ORA-65407: CLUSTERING clause already exists on the table

Cause: The ADD CLUSTERING clause was specified on a table with an existing CLUSTERING clause.

Action: If the table has a CLUSTERING clause, you can only change the ON LOAD or ON DATA MOVEMENT options. To change other options, you must first drop the clause.

ORA-65408: CLUSTERING clause has too many columns in the BY ORDER subclause

Cause: More than 10 columns were specified in the BY ORDER subclause. You can have at most 10 columns in the BY ORDER subclause.

Action: Lower the number of columns in the BY ORDER subclause to a value of 10 or less.

ORA-65409: CLUSTERING clause has too many INTERLEAVED columns or groups

Cause: More than 40 columns or more than 4 groups were specified in the BY INTERLEAVED ORDER subclause. You can have at most 40 columns and at most 4 groups in the INTERLEAVED ORDER subclause.

Action: Lower the number of columns to 40 or less, and lower the number of groups to 4 or less in the BY INTERLEAVED ORDER subclause.

ORA-65410: CLUSTERING clause can have only scalar columns

Cause: A non-scalar column was specified in the BY [LINEAR | INTERLEAVED] ORDER subclause. Also, virtual or hidden columns are not allowed.

Action: Specify only scalar columns in the BY [LINEAR | INTERLEAVED] ORDER subclause.

ORA-65411: CLUSTERING clause does not exist

Cause: An attempt was made to modify or drop a CLUSTERING clause in a table that had no CLUSTERING clause associated with it.

Action: Do not attempt to modify a nonexistent CLUSTERING clause.

ORA-65412: invalid option on ALTER TABLE .. CLUSTERING ..

Cause: You specified an invalid option on ALTER TABLE...CLUSTERING. For example, you specified DROP and ADD CLUSTERING in one statement.

Action: Correct the statement.

ORA-65413: cannot resolve referenced object in the CLUSTERING clause

Cause: An object was referenced in the CLUSTERING clause that could not be resolved to a base table reference.

Action: The CLUSTERING clause can refer to base tables only.

ORA-65414: column resolves to multiple tables in the CLUSTERING clause

Cause: A column resolved to multiple tables in the CLUSTERING clause.

Action: Correct the statement. The column should resolve to only one table. The table name should be qualified with its owner name.

ORA-65415: wrong join condition in the CLUSTERING clause

Cause: The CLUSTERING clause had an OR condition and the individual join condition on the base table columns was not an equijoin.

Action: Correct the statement. Ensure that join conditions are equijoins and there are no OR conditions, or no expressions in the join.

ORA-65416: multiple dimension tables in the CLUSTERING clause

Cause: Joins in the CLUSTERING clause referenced a dimension table more than once.

Action: Correct the statement. Remove one of the references.

ORA-65417: illegal dimension table in the CLUSTERING clause

Cause: The dimension table in the CLUSTERING clause was illegal. Dimension table cannot be GLOBAL TEMPORARY TABLE or EXTERNAL TABLE.

Action: Rewrite the statement so it does not use an illegal option on the dimension table.

ORA-65418: primary or unique key constraint missing in CLUSTERING join

Cause: The join between the fact and dimension tables in the CLUSTERING clause did not have a primary or unique key constraint on the dimension table join column(s).

Action: Add a primary or unique key constraint to the join column(s) on the dimension table.

ORA-65419: columns in a clustering group come from different tables

Cause: Columns in the clustering group did not come from the same table. For example: .. CLUSTERING BY ..(t1.c1, t2.c2), (t2.c1, t2.c2)). Clustering group (t1.c1, t2.c2) must contain references to only one table.

Action: Restructure the clustering group so it contains only references to a single table.

ORA-65420: columns in a join condition in the CLUSTERING clause are not compatible

Cause: The data type of columns in the join condition of CLUSTERING clause were not compatible. They must be of the same type.

Action: Select a compatible data type for the join conditions in the CLUSTERING clause.

ORA-65421: The CLUSTERING clause is defined on columns that are to be modified

Cause: An ALTER TABLE MODIFY COLUMN command was issued on a column on which a CLUSTERING clause exists.

Action: Drop the CLUSTERING clause before attempting to modify the column.

ORA-65422: The CLUSTERING clause already has a zonemap defined on it

Cause: An ALTER TABLE MODIFY CLUSTERING command was issued with the WITH MATERIALIZED ZONEMAP option but the table already had zonemap define on it.

Action: Drop the zonemap associated with the base table before attempting to add zonemap using the CLUSTERING clause.

ORA-65423: The CLUSTERING clause does not have a zonemap associated with it

Cause: An ALTER TABLE MODIFY CLUSTERING command was issued with the WITHOUT MATERIALIZED ZONEMAP option but the table did not have zonemap associated with the CLUSTERING clause.

Action: Do not use the ALTER TABLE MODIFY CLUSTERING WITHOUT ZONEMAP.

ORA-65424: CLUSTERING clause has too many joins

Cause: More than 4 joins were specified in the CLUSTERING clause. You can have at most 4 joins to the dimension tables.

Action: Reduce the number of joins to 4 or less.

ORA-65425: CLUSTERING clause not supported for table stored in tablespace of this storage type

Cause: An attempt was made to define clustering on a table stored in non-Oracle Exadata storage.

Action: Create this table in a tablespace residing on Oracle Exadata storage or remove the CLUSTERING clause.

ORA-65426: Non-scalar data type is used for a clustering column

Cause: Oracle cannot perform data clustering because an attempt was made to populate a clustering column with non-scalar data values, or a clustering column defaulted to non-scalar values was omitted.

Action: Use only scalar data type for the clustering columns, or disable data clustering with NO_CLUSTERING hint.

ORA-65427: A system-generated column or unused column is used in a join condition in the CLUSTERING clause.

Cause: An attempt was made to use a system-generated or unused column in a join condition in the CLUSTERING clause.

Action: Remove the system-generated or unused column in the join condition in the CLUSTERING clause.

ORA-65428: unable to create pluggable database with temporary tablespace files in object store

Cause: An attempt was made to create a pluggable database with temporary tablespace files in the object store.

Action: Create the pluggable database with local temporary tablespace files and retry the operation.

ORA-65429: PDB cannot be created

Cause: An attempt was made to clone a source pluggable database (PDB) stored in an object store using a database link.

Action: Specify the object store credential and retry the operation.

ORA-65430: Pluggable database *string* cannot be unplugged.

Cause: An attempt was made to unplug a pluggable database (PDB) stored in an object store using an invalid credential.

Action: Specify the same credential used for the PDB in object store and retry the operation.

ORA-65431: Pluggable database *string* cannot be unplugged.

Cause: An attempt was made to unplug a pluggable database (PDB) to object store without a credential.

Action: Specify the object store credential retry the operation.

ORA-65432: unable to read/write XML file in object store

Cause: An internal error occurred when reading or writing to XML file in object store.

Action: Contact Oracle Support Services.

ORA-65433: incomplete copy of source file - *string* (blocks *number* - *number*)

Cause: An attempt to copy a source file failed for the block ranges specified in the error message. The failure could be due to inability to access the source file.

Action: Verify the source file and retry the operation.

ORA-65434: unable to cancel relocate of pluggable database *string*

Cause: An attempt was made to cancel the relocate of a pluggable database that was not in relocate unplugged state.

Action: Ensure the pluggable database is in relocate unplugged state and retry the operation.

ORA-65435: unable to refresh pluggable database *string*

Cause: An attempt was made to refresh a pluggable database beyond the end of life span of the current source pdb.

Action: Transition the refreshable pluggable database to follow the new source pdb or change the refresh mode to none.

ORA-65436: unable to find new life span information for pluggable database *string*

Cause: An attempt was made to transition a pluggable database to follow a new lifespan that did not match the current state of the pluggable database's datafiles.

Action: Issue the transition after the new lifespan information is available in the pdb refresh catalog database.

ORA-65437: mismatch between new life span and data file *string* for value of SCN (*string*)

Cause: Either the data file or life span table was corrupt.

Action: Verify that the data file and `pdb_life_span_catalog$` are consistent as of the point when the new life span was registered and retry the operation.

ORA-65438: until SCN or until time clause not specified

Cause: An attempt was made to refresh the pluggable database without specifying a system change number (SCN) or a time to refresh.

Action: Reissue the statement with a valid until SCN number or time.

ORA-65439: general event for automatic clustering module

Cause: N/A

Action: This internal event is used to enable various switches associated with automatic clustering module.

ORA-65440: PDB creation clauses mismatch when resuming a PDB clone

Cause: An attempt was made to resume a PDB clone with mismatched clauses.

Action: Compare the creation statement with the initial statement. Ensure clauses such as the source PDB and the encryption algorithm remain the same.

ORA-65451: Advanced index compression is not supported for tablespaces on this storage type.

Cause: An attempt was made to use advanced index compression on an unsupported storage type.

Action: Drop and re-create the index with a compression option that is supported on the current storage type.

ORA-65452: could not clone read/write PDB to object store

Cause: An attempt was made to clone a pluggable database (PDB) that was open read/write to a location on the object store.

Action: Close and re-open the source PDB as read-only and retry the clone operation.

ORA-65455: family *string* is invalid

Cause: An invalid family was used to specify a parameter value.

Action: Use a valid family.

ORA-65456: family *string* is not valid in *string* instance

Cause: The specified family could not be used in the current instance type.

Action: Remove the family from the environment variable ORACLE_FAMILY.

ORA-65457: family *string* is not valid in *string* instance

Cause: The specified family could not be used in the current instance type.

Action: Use a family that is valid for this instance to set the initialization parameter.

ORA-65458: maximum length of parameter qualifier exceeded

Cause: Too many characters were specified in the parameter qualifier in the initialization parameter file.

Action: Change the parameter qualifier to a valid SID or family.

ORA-65459: family used with a specific system identifier (SID)

Cause: A SID was used with FAMILY.

Action: Use FAMILY without a SID.

ORA-65460: family *string* is invalid

Cause: An invalid family was specified for this instance in ORACLE_FAMILY.

Action: Use a valid family in ORACLE_FAMILY.

ORA-65461: invalid parameter name specified with CONTAINER clause set to ALL

Cause: The CONTAINER clause was set to ALL in the ALTER SYSTEM SET statement for a non-PDB modifiable or non-inheritable PDB parameter.

Action: Retry the ALTER SYSTEM SET statement without the CONTAINER clause.

ORA-65462: error while updating a dependent parameter 'string'

Cause: An internal error was encountered while trying to update dependent parameter value.

Action: Contact Oracle Support Services.

ORA-65466: family 'string' contains an illegal character or is too long

Cause: The specified family contained an illegal character or the family specified was too long, which cannot occur in an SPFILE setting. Illegal characters include *,#"=() and whitespace.

Action: Use a family that does not contain a special character or whitespace. Check platform-specific documentation for the maximum length of family.

ORA-65470: Lost write already in requested state.

Cause: Lost write was already in the requested state. If enable or disable lost write was specified, then lost write was already in the requested state.

Action: No action needed.

ORA-65471: LOST WRITE PROTECTION cannot be enabled on this type of tablespace.

Cause: LOST WRITE PROTECTION could not be enabled for lost write tablespaces or temporary tablespaces.

Action: Do not attempt to enable LOST WRITE PROTECTION for these types.

ORA-65472: invalid option for ALTER lost write TABLESPACE

Cause: An invalid option was specified while altering a LOST WRITE PROTECTION tablespace.

Action: Lost write tablespaces cannot be altered with clauses LOGGING, ENCRYPTION, REKEY, FLASHBACK, TEMPORARY, DEFAULT, or COMPRESS options.

ORA-65473: invalid option for FLASHBACK

Cause: An invalid option was specified while creating or altering a flashback tablespace.

Action: Lost write tablespaces cannot be used for flashback.

ORA-65474: lost write tablespace does not exist or has insufficient space or lost write is off

Cause: Enabling lost write protection could not succeed because the lost write tablespaces did not exist or had insufficient space. It is possible that shadow lost write was not enabled for the database.

Action: Create a lost write tablespace or add space to an existing lost write tablespace. Also, ensure that the shadow lost write protection is turned on for the database.

ORA-65476: could not get data file space header

Cause: There was an internal error code.

Action: Make sure the data file is online and the database is open.

ORA-65477: lost write protection - invalid state transition

Cause: The object that was manipulated could not be set to the requested state.

Action: Ensure that the state transition is valid.

ORA-65478: shadow lost write protection - found lost write

Cause: A lost write was found in a data block protected by lost write.

Action: The data block can be recovered to fix lost write.

ORA-65479: operation affecting a pluggable database cannot be performed from another pluggable database [*string*]

Cause: An attempt was made to perform an operation affecting a pluggable database while connected to a different pluggable database.

Action: Connect to the desired pluggable database and perform the operation.

ORA-65480: invalid option for CREATE TABLESPACE

Cause: An invalid option was specified while creating LOST WRITE PROTECTION tablespace.

Action: LOST WRITE PROTECTION cannot be specified with the DEFAULT, EXTENT MANAGEMENT, SEGMENT SPACE MANAGEMENT, FORCE, MINIMUM EXTENT, LOGGING, ENCRYPTION, TEMPORARY, UNDO, or FLASHBACK options.

ORA-65481: LOST WRITE PROTECTION option already specified

Cause: In CREATE TABLESPACE, the LOST WRITE PROTECTION option was specified more than once.

Action: Remove all but one of the LOST WRITE PROTECTION specifications.

ORA-65482: invalid option for CREATE TABLESPACE

Cause: An invalid option was specified while creating a tablespace.

Action: Review the syntax and reissue the command.

ORA-65483: invalid option for creation of LOST WRITE PROTECTION tablespace

Cause: The BIGFILE keyword was not specified while creating a LOST WRITE PROTECTION tablespace.

Action: Specify the BIGFILE keyword while creating a LOST WRITE PROTECTION tablespace.

ORA-65484: cannot specify LOST WRITE PROTECTION tablespace as default tablespace

Cause: An attempt was made to assign a LOST WRITE PROTECTION tablespace to be a user's default tablespace.

Action: Assign a permanent tablespace to be the default tablespace.

ORA-65485: cannot create user objects in LOST WRITE PROTECTION tablespace

Cause: An attempt was made to create user objects in a LOST WRITE PROTECTION tablespace. Other system objects such as rollback segments are also illegal.

Action: Create the object in a permanent tablespace.

ORA-65486: cannot specify a LOST WRITE PROTECTION tablespace as default tablespace

Cause: An attempt was made to assign a LOST WRITE PROTECTION tablespace to be a default tablespace.

Action: Assign a permanent tablespace to be the database default tablespace.

ORA-65487: Lost write tablespaces must all have the same block size.

Cause: A different block size was specified when a SHADOW LOST WRITE tablespace was created.

Action: Retry creating the lost write tablespace using the same block size as the other lost write tablespaces. If a duplicate tablespace name error is encountered then you may have to drop this tablespace using the SQL DROP TABLESPACE <tablespace_name> command.

ORA-65488: SHADOW LOST WRITE cannot be enabled on a standby database.

Cause: An attempt was made to enable SHADOW LOST WRITE on a standby database.

Action: SHADOW LOST WRITE can only be enabled on a primary database.

ORA-65489: Lost write tablespace cannot be enabled or created

Cause: An attempt was made to enable lost write when the database was not open or an access error occurred when attempting to access the new_lost_write_shadows\$ dictionary table

Action: Enable SHADOW LOST WRITE or create a shadow tablespace when the database is open.

ORA-65490: invalid parameters for LOST WRITE PROTECTION tablespace

Cause: Invalid parameters were specified for a LOST WRITE PROTECTION tablespace. Only BIGFILE TABLESPACE, SIZE and BLOCKSIZE for a LOST WRITE PROTECTION tablespace can be specified upon creation. ALTER cannot be used to make a LOST WRITE PROTECTION tablespace read-only.

Action: Create the tablespace using the CREATE BIGFILE TABLESPACE *tablespace name* ... DATAFILE '<data_file_name>' SIZE *size* BLOCKSIZE <block_size> LOST WRITE PROTECTION statement.

ORA-65491: A lost write bigfile tablespace must exist before attempting to enable lost write

Cause: The lost write tablespace does not exist.

Action: Create the tablespace using the CREATE BIGFILE TABLESPACE <tablespace_name> ... DATAFILE '<datafile_name>' SIZE *size* BLOCKSIZE *size* LOST WRITE PROTECTION statement;

ORA-65492: Cannot get data file space header

Cause: An internal error occurred.

Action: Try disabling the lost write protection and then create the lost write tablespace again using the CREATE BIGFILE TABLESPACE *tablespace name* DATAFILE '<datafile_name>' SIZE *size* BLOCKSIZE *size* LOST WRITE PROTECTION. You may have to drop the lost write tablespace first on which this command failed.

ORA-65493: cannot shrink a lost write tablespace

Cause: An attempt was made to shrink a lost write tablespace.

Action: Lost write tablespaces cannot be shrunk. The drop can either drop all tracking data or move it to another lost write tablespace.

ORA-65494: LOST WRITE PROTECTION could not write to or read dictionary tables or inconsistent dictionary tables.

Cause: There was an internal error in lost write subsystem. The SYSAUX tablespace may be inaccessible or full.

Action: Check the SYSAUX tablespace first. If the SYSAUX tablespace is OK then this is an internal error.

ORA-65495: LOST WRITE PROTECTION could not create shadow tablespace.

Cause: There was an internal error in the lost write protection subsystem.

Action: Drop the lost write protection shadow tablespace just created using the SQL DROP TABLESPACE <tablespace_name> statement.

ORA-65496: Lost write tables are inconsistent. Delete may have occurred.

Cause: One of the lost write tracking tables was inconsistent. A parallel operation may have caused this problem.

Action: If lost write tracking is working properly, then this error can be ignored.

ORA-65498: SHADOW LOST WRITE tablespace could not be dropped.

Cause: An internal error occurred when performing drop side effects

Action: The lost write tablespace should still be operational. Contact Oracle Support Services.

ORA-65499: Illegal SHADOW LOST WRITE operation on a read-only database

Cause: The attempted lost write operation is prohibited on a read-only database.

Action: Set the database to read/write before performing this command.

ORA-65500: could not modify DB_UNIQUE_NAME, resource exists

Cause: DB_UNIQUE_NAME could not be modified, because a database resource identified by DB_UNIQUE_NAME existed in the cluster. To modify DB_UNIQUE_NAME, any resource it identifies must first be removed.

Action: Remove the database resource identified by DB_UNIQUE_NAME before modifying DB_UNIQUE_NAME.

ORA-65501: locator from *string* container cannot be used in container *string* for this operation

Cause: In a pluggable database environment, an attempt was made to modify a LOB using a locator which belongs to a different container.

Action: Switch back to the original container.

ORA-65502: cannot access temporary LOB data

Cause: The database did not open.

Action: Open the database before accessing LOB data.

ORA-65503: cannot send or receive temporary LOB locators over a database link

Cause: An attempt was made to send or receive a temporary LOB locator over a database link.

Action: Do not send or receive a temporary LOB locator over a database link.

ORA-65504: cannot send or receive LOB locators from an index-organized table over a database link

Cause: An attempt was made to send or receive a temporary LOB locator from an index-organized table over a database link.

Action: Do not send or receive a LOB locator from an index-organized table over a database link.

ORA-65505: cannot pass a remote LOB locator as parameter to this operation

Cause: An attempt was made to pass a remote LOB locator as a parameter to a LOB operation which does not accept a remote LOB locator.

Action: Do not pass a remote LOB locator as a parameter to this operation.

ORA-65506: cannot pass LOB locators belonging to different databases

Cause: An attempt was made to pass Large Object (LOB) locators belonging to a different database as a parameter to a Large Object (LOB) operation.

Action: Ensure that all Large Object (LOB) locators that are parameters belong to the same database.

ORA-65507: cannot select a LOB locator across multiple database links

Cause: An attempt was made to select a Large Objects (LOB) locator from a remote database that was obtained by the remote from another remote database.

Action: Ensure that the locator that is selected from a remote database belongs to that remote database.

ORA-65508: cannot send or receive an invalid LOB locator over database link

Cause: An attempt was made to send or receive an invalid LOB locator over a database link.

Action: Ensure that the locator which is sent to a remote database or received from a remote database is a valid locator.

ORA-65509: Cannot use remote LOBs in INSERT AS SELECT DMLs with INSTEAD OF triggers.

Cause: An attempt was made to perform an operation INSERT AS SELECT on a view with INSTEAD OF trigger on it and a remote LOB column in the select list.

Action: Do not use remote LOB locators in INSERT AS SELECT DMLs with INSTEAD OF triggers.

ORA-65510: Distributed LOB operations are not supported on pre-12.2 databases.

Cause: An attempt was made to send or receive a LOB locator over a database link to a pre-12.2 database.

Action: Ensure that the remote database for a distributed LOB operation is Oracle Database version 12.2 or higher.

ORA-65511: SQL statement executed on a remote database over a database link cannot access a LOB on the local database with parallel execution enabled on the remote side

Cause: This is likely the result of passing a local LOB locator as a bind value to a SQL statement that is executed on a remote database over a database link. For example, running the statement "INSERT INTO tabl1@@dblink VALUES (:1)" where the bind value is a local persistent LOB locator and parallel execution is enabled on the remote side.

Action: Disable parallel execution for the SQL statement on the remote database.

ORA-65512: cannot access temporary LOB from old incarnation of pluggable database *string*

Cause: When the pluggable database was closed, any temporary LOBs in it were freed. An attempt was made to access a freed LOB.

Action: Reinitialize the temporary LOB in the current incarnation of the pluggable database.

ORA-65513: value LOB operand mismatch for SQL operator

Cause: The LOB locator operands that were passed to the SQL operator did not have the value-based property set uniformly.

Action: All of the LOB locator operands for a SQL operator should either be value-based or reference-based. There cannot be a mix of value-based and reference-based operands.

ORA-65514: invalid LOB ENABLE STORAGE IN ROW value

Cause: An invalid value was specified for LOB ENABLE STORAGE IN ROW. The specified value for LOB ENABLE STORAGE IN ROW should be null, 4000, 8000, 16000 or 32000 for SECUREFILE LOBS in heap tables, and null in all other cases.

Action: Choose an appropriate integer value and retry the operation.

ORA-65515: LOB inline size is greater than tablespace block size

Cause: The inline size specified for the ENABLE STORAGE IN ROW clause of either the CREATE or ALTER TABLE was greater than the block size of the tablespace of the table.

Action: Ensure that the inline size is less than or equal to the block size of the tablespace associated with the table.

ORA-65516: incorrect usage of increased LOB inlining

Cause: An inline size greater than 4000 bytes in the LOB storage clause was specified for a case other than the top level LOB column. Increased LOB inlining is not supported in LOB usage cases like abstract data types (ADTs), nested tables and varrays.

Action: Ensure that the inline size greater than 4000 bytes is specified only for top level LOB columns.

ORA-65531: maximum level reached in index segment with object id *string*

Cause: The attempted operation resulted in the number of index levels exceeding the maximum allowed.

Action: Reduce the size of the relevant index, for example, by using compression or partitioning.

ORA-65532: cannot alter or drop automatically created indexes

Cause: An attempt was made to alter or drop an automatically created index.

Action: Do not perform the action on an automatically created index.

ORA-65533: index coalesce on object *string* could not complete

Cause: An alter index coalesce command could not fully complete. Further coalescing may still be possible.

Action: Retry the coalesce in a quieter period when there is less DML activity against the table indexed.

ORA-65535: Oracle Database client cannot handle error code exceeding 65535. Actual error code and message follow:\n

Cause: Oracle Database clients earlier than release 12.1 could not handle error codes larger than 65535.

Action: Upgrade Oracle Database client library to release 12.1 or later.

ORADNFS-65000 to ORADNFS-65072

ORADNFS-65000: Permission denied. You are not a member of ORA_DBA group.

Cause: The ORADNFS utility was invoked by a user who was not in the ORA_DBA group.

Action: Add user of this utility to ORA_DBA group and retry, or log on as a different user (who is in the ORA_DBA group) and retry.

ORADNFS-65001: Currently this option is supported only on Windows.

Cause: The ORADNFS command was issued on an operating system other than Windows.

Action: Run this command only on Windows.

ORADNFS-65002: NFS initialization failed, error code: *number*.

Cause: NFS initialization failed. error code is zero if successful, a negative error code if a software bug is encountered, or a positive error code if a hardware or user error is encountered. NEGATIVE ERROR EXAMPLES: - An impossible instance id. - context not initialized to zero. POSITIVE ERROR EXAMPLES: - Execution thread does not have privilege needed to access ODM. - Insufficient memory to allocate context

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65003: failed to query user's local groups in the system, error code: *number*

Cause: failed to query user's local groups in the system Error code Description- 0005 : The user does not have access rights to the requested information. This error is also returned if the servername parameter has a trailing blank. 0124 : The system call level is not correct. This error is returned if the level parameter was not specified as 0. 0087 : A parameter is incorrect. This error is returned if the flags parameter contains a value other than LG_INCLUDE_INDIRECT. 0234 : More entries are available. Specify a large enough buffer to receive all entries. 0008 : Insufficient memory was available to complete the operation. 2453 : The domain controller could not be found. 2221 : The user could not be found. This error is returned if the username could not be found. 1722 : The RPC server is unavailable. This error is returned if the servername parameter could not be found. access denied, not enough memory, no dc controller or many more

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65004: NFS registration failed, error code: *number*.

Cause: NFS registration failed, error code - 4 in case of error

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65005: Invalid value for parameter *string*.

Cause: Invalid input value entered for SEEK or SKIP.

Action: Enter only numeric values.

ORADNFS-65006: Invalid use. Refer to Help for valid use.

Cause: Invalid usage of command, either some argument may be missing or some invalid value might be entered for an input flag.

Action: Check the usage in help and pass correct arguments.

ORADNFS-65007: No oranfsodm19.dll in ORACLE_HOME\rdbms\lib\odm

Cause: oranfsodm19.dll missing in ORACLE_HOME\rdbms\lib\odm

Action: Run ORADNFS DNFSENABLE command to copy the DLL.

ORADNFS-65008: No oranfstab in ORACLE_HOME\db, file: *string*.

Cause: oranfstab file missing in ORACLE_HOME\db

Action: Run ORADNFS DNFSENABLE & ORADNFS MOUNT to create oranfstab.

ORADNFS-65009: DNFS is enabled.

Cause: DNFS is in enabled status for given ORACLE_HOME
1. oranfstab file present in ORACLE_HOME\db
2. oranfsodm19.dll present in ORACLE_HOME\rdbms\lib\odm
3. size of oranfstab is non zero

Action: None

ORADNFS-65010: DNFS is not enabled.

Cause: DNFS is not in enabled status for given ORACLE_HOME

Action: Confirm that -
1. oranfstab file present in ORACLE_HOME\db
2. oranfsodm19.dll present in ORACLE_HOME\rdbms\lib\odm
3. size of oranfstab is non zero

ORADNFS-65011: No entries found in oranfstab.

Cause: size of oranfstab is zero

Action: Use the ORADNFS MOUNT command to add appropriate entries to the oranfstab file.

ORADNFS-65012: failed to discover NFS path. error code: *number*

Cause: failed to discover NFS path, error code-
1 no common version found
2 file system not installed
3 permission to access ODM denied
4 some other error occurred

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65013: failed to get statistics of file *string* on local file system

Cause: failed to get statistics of file on local file system

Action: Ensure that you have read access to the file and retry.

ORADNFS-65014: Filer *string* may not be defined in this system.

Cause: Filer may not be defined in this system

Action: None

ORADNFS-65015: failed to set attributes of file *string* on local file system

Cause: failed to change attributes of file on local file system

Action: Ensure that you have required access to change parameters of file and retry.

ORADNFS-65016: source file not specified

Cause: source file not specified in command line arguments

Action: Specify source file in command line and retry.

ORADNFS-65017: destination file not specified

Cause: destination file not specified in command line arguments

Action: Specify destination file in command line and retry.

ORADNFS-65018: warning: file *string* already exists

Cause: It's a warning message to user saying that destination already exists.

Action: None

ORADNFS-65019: No value specified for option -IF

Cause: Input filename not specified.

Action: Specify input filename and retry.

ORADNFS-65020: Invalid value:*number* entered for IBS.

Cause: Invalid value entered for IBS.

Action: Value of IBS must be less than COUNT,enter a valid value and retry.

ORADNFS-65021: Invalid value: *number* entered for SKIP parameter.

Cause: Invalid value entered for SKIP parameter.

Action: Enter a valid value for SKIP parameter and retry. Value of SKIP should be less than file size.

ORADNFS-65022: Operation failed.

Cause: this is a generic message which tells that the given command failed

Action: Examine the preceding error messages to determine the problem.

ORADNFS-65023: Operation completed successfully.

Cause: this is a generic message which tells that the given command succeeded

Action: None

ORADNFS-65024: invalid ORADNFS command verb

Cause: An unrecognized command verb or option was specified.

Action: Issue 'oradnfs' for information on command verbs.

ORADNFS-65025: Error in seeking file: *string*

Cause: Error in seeking file

Action: None

ORADNFS-65026: Could not open log file: *string* errno: *number*.

Cause: failed to open log file to write traces

Action: Ensure that a writable file system path is provided.

ORADNFS-65027: NFS I/O completion failed, errno: *number*

Cause: NFS I/O completion failed 2 timeout 4 waitlist complete 8 completion list full 16 no more active I/O

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65028: Not a directory: *string*.

Cause: given file is not a directory

Action: None

ORADNFS-65029: NFS file creation failed. file: *string* error code: *number*.

Cause: NFS file creation failed error code is zero if successful, a negative error code if a software bug is encountered, or a positive error code if a hardware or user error is encountered.

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65030: NFS file deletion failed, file: *string* error code: *number*.

Cause: NFS file deletion failed, error code- 1 file is not an ODM file 2 file is identified so it is still in use 3 file has already been deleted

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65031: failed to read directory: *string*

Cause: failed to read directory

Action: review the system configuration and retry

ORADNFS-65032: failed to open directory on local file system: *string*

Cause: failed to open directory on local file system

Action: Ensure that you have read access to path provided and retry.

ORADNFS-65033: no value specified for option -OF

Cause: Output filename not specified.

Action: specify output filename and retry

ORADNFS-65034: failed to remove directory on local file system: *string*

Cause: failed to remove directory on local file system

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65035: failed to re-identify NFS file: error code: *number*

Cause: failed to re-identify NFS file error code is zero if successful, a negative error code if a software bug is encountered, or a positive error code if a hardware or user error is encountered.

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65036: failed to identify NFS file: *string* error code: *number*

Cause: failed to identify NFS file, error code- 1 successfully identified the file 2 cannot be identified by ODM 3 no file exists with this path name

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65037: ORACLE_HOME not defined in environment

Cause: ORACLE_HOME not defined in environment

Action: Define ORACLE_HOME in environment and retry.

ORADNFS-65038: failed to delete file on local file system: *string*.

Cause: failed to delete file on local file system

Action: Ensure that you have write access to the path provided and retry.

ORADNFS-65039: missing required value for parameter *string*

Cause: value missing for -BS, -IBS, -OBS, -COUNT, -SEEK or -SKIP parameter BS means block size, it specifies the size of read and write I/O IBS means input block size, it specifies the size of read I/O OBS means output block size, it specifies the size of write I/O SEEK specifies the offset of destination file from where we should start writing SKIP specifies the offset from start of source file from where we should begin reading the file

Action: Specify the missing value of parameter and retry.

ORADNFS-65040: failed to get fully qualified user name

Cause: failed to get fully qualified user name for current user 0234 : The lpNameBuffer buffer is too small. The lpnSize parameter contains the number of bytes required to receive the name. 1355 : The domain controller is not available to perform the lookup 1332 : The user name is not available in the specified format.

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65041: no value specified for option -P (parallel)

Cause: value missing for -P command line argument -p specifies the degree of parallelism done

Action: specify whether to use parallel I/O or not

ORADNFS-65042: failed to read nfs link, file: *string* error code: *number*

Cause: failed to read nfs link, error code- 1 symbolic link is not an ODM file 2 server error 3 symbolic link does not exist

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65043: failed to read NFS directory, error code: *number*

Cause: failed to read NFS directory, error code- 1 directory is not an ODM file 2 server error 3 directory does not exist

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65044: invalid trace level for component *string*

Cause: invalid trace level entered for kgodm, kgnfs, skgnfs or oradnfs

Action: Enter a value between 0-4 and retry

ORADNFS-65045: failed to resize NFS file: error code: *number*

Cause: failed to resize NFS file. error code is zero if successful, a negative error code if a software bug is encountered, or a positive error code if a hardware or user error is encountered.

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65046: failed to commit NFS file. error code: *number*

Cause: failed to Commit NFS file error code is zero if successful, a negative error code if a software bug is encountered, or a positive error code if a hardware or user error is encountered.

Action: None

ORADNFS-65047: invalid size suffix multiplier

Cause: Invalid unit size entered for BS, IBS or OBS

Action: unit size must be one of w, B, k, KB, M, MB, G or GB. w - BS* 2 b, B - BS* 512 KB, kb - BS* 1000 K, k - BS* 1024 MB, mb - BS* 1000*1000 M, m - BS* 1024*1024 GB, gb - BS* 1000*1000*1000 G, g - BS* 1024*1024*1024 Eg: -BS 1M means 1*1024*1024 bytes is the block size for read and write I/O

ORADNFS-65048: failed to get statistics of NFS file, file: *string* error code: *number*

Cause: failed to get statistics of NFS file, error code- 1 file is not an ODM file 2 server error 3 file does not exist

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65049: File *string* does not exist on local file system.

Cause: File does not exist on local file system.

Action: None

ORADNFS-65050: failed to un-identify NFS file: *string* error code: *number*

Cause: failed to un-identify NFS file error code is zero if successful, a negative error code if a software bug is encountered, or a positive error code if a hardware or user error is encountered.

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65059: error during validation of file specification *string*

Cause: Checks if input filename is of valid format or not. For example, if user is running the utility in Windows and if he gives Linux style '/' in file path, it will be converted to Windows style \" and processed. In this case it will be considered positive validation and no error is returned. Likewise there are negative cases as well where error will be returned saying that validation failed

Action: Ensure that input filename is of valid format.

ORADNFS-65060: Failed to allocate requested amount of memory: *number* bytes.

Cause: Failed to allocate required memory.

Action: None

ORADNFS-65061: failed to open file *string* on local file system

Cause: failed to open file on local file system

Action: Ensure that you have write access to the path specified and retry.

ORADNFS-65062: failed to make directory on local file system, file: *string* errno: *number*.

Cause: failed to make directory on local file system

Action: Ensure that you have write access to the path specified and retry.

ORADNFS-65063: failed to make NFS directory: *string* errno: *number*

Cause: failed to make NFS directory, error code- 1 directory is not an ODM dir 2 server error 3 directory already exists

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65064: failed to copy oranfsodm19.dll to \$OH\rdbms\lib\odm

Cause: failed to copy oranfsodm19.dll to \$OH\rdbms\lib\odm

Action: Ensure that we have write access to \$OH\rdbms\lib\odm.

ORADNFS-65065: failed to reap NFS I/O, errno: *number*

Cause: failed to reap NFS I/O 2 timeout 4 waitlist complete 8 completion list full 16 no more active I/O

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65066: failed to get information of NFS file, file: *string* errno: *number*

Cause: failed to get information of NFS file, errno- 1 file is not an ODM file 2 server error 3 file does not exist

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65067: failed to get attributes of NFS file: *string* errno: *number*

Cause: failed to get attributes of NFS file, errno- 1 file is not an ODM file 2 server error 3 nonexistant or stale file handle

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65068: failed to set attributes of NFS file: *string* errno: *number*

Cause: failed to set attributes of NFS file, errno - 1 file is not an ODM file 2 file server error 3 nonexistant or stale file handle

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65069: failed to remove NFS directory, file: *string* errno: *number*

Cause: failed to remove NFS directory, errno - 1 directory is not an ODM file 2 server error 3 directory has already been deleted 4 directory is still in use

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65070: failed to submit NFS I/O, errno: *number*

Cause: failed to submit NFS I/O, errno - 2 timeout 4 waitlist complete 8 completion list full 16 no more active I/O

Action: Review the system configuration and correct the relevant issue.

ORADNFS-65071: Input path is DNFS enabled.

Cause: The NFS mount listed in oranfstab was a part of or matched the input path.

Action: None

ORADNFS-65072: Input path is not DNFS enabled.

Cause: The NFS mount listed in oranfstab was not a part of or did not match the input path.

Action: Ensure that the input path is specified in the mount location present in the orafstab file.

PCC-02010 to PCC-02474

PCC-02010: found end-of-file while scanning string literal

Cause: A string in a SQL statement, which should be delimited by single quotation marks, was not terminated properly.

Action: Check that all strings are delimited.

PCC-02011: found identifier greater than 128 characters (truncated)

Cause: The precompiler found an identifier that was too long.

Action: Shorten the identifier. SQL identifiers should be limited to 128 characters.

PCC-02012: did not find matching quote for char constant

Cause: A character constant with a single quotation mark was not terminated.

Action: Terminate the character constant.

PCC-02013: unknown escape sequence

Cause: The precompiler found an escape sequence that it could not process inside a string literal. This error can arise when multibyte character strings that can contain shift-in or shift-out escape sequences are used.

Action: Correct the string representation.

PCC-02014: Syntax error at line *number*, column *number*, file *string*:*n*

Cause: The precompiler detected an error in C or embedded SQL syntax. This message is followed by a more specific error message.

Action: Correct the syntax error.

PCC-02015: unable to open include file

Cause: The precompiler could not open a header file that was specified using the #include preprocessor directive or the EXEC SQL INCLUDE statement. This can happen if the file specification is inaccurate or if read permission or read access rights on the file or on one or more of the directories in the path were not granted.

Action: Recheck that the file specification is correct, that the file exists, and that read permission has been granted so that the file can be read.

PCC-02016: Absolute path to included file, "*string*" exceeds the limit of *number* characters

Cause: The file name length specified exceeded the maximum length. Some operating systems have a maximum file name length.

Action: Use a file name of length less than or equal to the maximum platform specific file name length.

PCC-02017: unable to open output file

Cause: The precompiler could not open an output file. This could be a generated code output file (.c file) or a listing file. This message can result from many causes. For example:

o) A pathname for a specified output file contains a non-existent directory. o) An operating-system error occurred because the file system or disk is full. o) Write permission on the specified directory or directories in the path do not exist.

Action: Track down the cause of the error, as suggested above, and correct it.

PCC-02018: found end-of-file while scanning comment

Cause: A C comment either in C code or in an embedded SQL statement, was not terminated.

Action: Find the unterminated comment and terminate it with `*/`.

PCC-02019: Preprocessor warning at line *number*, column *number*, file *string*:`\n`

Cause: This message indicates that a warning condition occurred as the precompiler was doing the preprocessor pass. A more specific warning message will follow this message.

Action: Correct the condition according to the action specified for the message that follows.

PCC-02020: Preprocessor error at line *number*, column *number*, file *string*:`\n`

Cause: This message indicates that an error condition occurred as the precompiler was in the preprocessing phase. A more specific error message will follow this message.

Action: Correct the error according to the action specified for the message that follows.

PCC-02021: Found newline while scanning string literal

Cause: A string constant contains a newline character, For example `char x[] = "Hello world"`;

Action: Remove the newline character.

PCC-02022: Found end of file while scanning a SQL statement

Cause: The precompiler encountered an end of file while parsing an EXEC SQL statement.

Action: Add statement terminator(`;`) or complete the EXEC SQL statement.

PCC-02023: Found end of file while scanning a PL/SQL statement

Cause: The precompiler encountered an end of file while parsing a PL/SQL statement (EXEC SQL EXECUTE ...).

Action: Complete the PL/SQL statement.

PCC-02035: CMD-LINE: CONFIG= option is invalid in a config file

Cause: A user configuration file inside a user configuration file cannot be specified. That is, nested configuration files cannot be nested.

Action: If there are nested configuration files, move the options from the nested files to the top levels.

PCC-02040: CMD-LINE: Option selected, but no value provided

Cause: An option on the command line was specified, but a value for it was not included. For example, the offending code might look like: `proc iname=sample1.pc oname=`

Action: Provide a value for the option.

PCC-02041: CMD-LINE: Option does not exist:

Cause: A non-existent option on the command line was specified.

Action: See the Programmer's Guide to the Oracle Precompilers, Release 2.2 for a list of the valid command line options and their possible values.

PCC-02043: CMD-LINE: Option syntax is incorrect

Cause: A value for a command line option was incorrectly specified.

Action: See the Programmer's Guide to the Oracle Precompilers, Release 2.2 for the correct syntax for specifying command line option values.

PCC-02044: CMD-LINE: Illegal or out of range value for option:

Cause: A value specified for a command line option was not within the accepted range. For example,, the range for the MAXOPENCURSORS option is 5 to 256. If a value outside the range is specified, the message is triggered.

Action: See the Programmer's Guide to the Oracle Precompilers for the ranges that option values can take.

PCC-02045: CMD-LINE: Option is not unique:

Cause: An option name was partially specified on the command line that made it non-unique. For example, `% proc in=t.pc` the "in" option can imply either the INAME or INCLUDE option.

Action: Provide sufficient characters on the command line to make the option name unique.

PCC-02046: CMD-LINE: Unable to open config file:

Cause: A non-existent user configuration file was specified on the command line with the config option.

Action: Provide a valid filename for the configuration file.

PCC-02047: CMD-LINE: Option is not allowed inline:

Cause: An option was entered inline that can only be entered on the command line or in a configuration file. For example, the offending code might look like `EXEC ORACLE OPTION (NLS_CHAR=name)`; The NLS_CHAR option can only be entered on the command line or in a configuration file.

Action: Remove the option from the source file, and specify it on the command line.

PCC-02066: CMD-LINE: Could not find or could not open system config file

Cause: The system configuration file has a standard name (`pmscfg.h`) and a location that is operating system dependent. On UNIX systems, it is located in the `ORACLE_HOME/proc` directory. If a file named `pmscfg.h` is not found in the standard location, this warning message is issued.

Action: Create a system configuration file in the standard location. The file can be empty. See also the operating system specific Oracle documentation.

PCC-02081: CMD-LINE: Unterminated option value list or value list was truncated.

Cause: An option that takes a list of values was entered. The value list did not have a closing parenthesis. This error may also occur if the list of values entered on a single line was too long and Pro*C truncated it.

Action: Ensure that all value lists are terminated with a closing parenthesis. Split long value lists into individual entries.

PCC-02100: Unable to initialize PL/SQL

Cause: The precompiler connected to Oracle but could not invoke the PL/SQL engine. This error can result if an earlier release of Oracle7 is used without the Procedural Option.

Action: To use PL/SQL, upgrade to a more recent release of Oracle7.

PCC-02101: Unable to open input file

Cause: The precompiler could not open the input file. This is the .pc file specified in the INAME=option. This means that the file does not exist, that a directory was incorrectly specified in the pathname, or that the person running the precompiler does not have read permission for the file. This message could also result from operating-system errors. For example, an unmounted file system or disk I/O errors, could trigger this error.

Action: Check that permission to read the file exists and that the full pathname has been specified correctly. Check for operating- system problems. See also the operating system-specific Oracle documentation.

PCC-02102: Fatal error while doing C preprocessing

Cause: The precompiler issues this message after a more specific message.

Action: Correct the problem specified in the previous message or messages.

PCC-02103: Password:

Cause: The username was specified on the command line without a password. For example, `proc sqlcheck=full iname=sample1.pc userid=scott`

Action: Re-enter the command line, and include the password or specify the password when prompted.

PCC-02104: Unable to connect to Oracle

Cause: The precompiler could not connect to Oracle with the username, password, and, if applicable, database link that was supplied. Note that this is a precompiler message, not a runtime message. This means that the USERID option value, either on the command line or in a configuration file, was incorrect.

Action: Check that the username and password are current and correct. Run `SQL*DBA` or `SQL*PLUS` and verify that connection can be made using that username and password.

PCC-02105: Unable to open list file

Cause: The precompiler could not open the listing file. This message can result from many causes. For example, o) A pathname for a specified listing file contains a non-existent directory. o) An operating-system error occurred because the file system or disk is full. o) Write permission on the specified directory has not been granted.

Action: Track down the cause of the error, as suggested above, and correct it.

PCC-02106: Userid only used when SQLCHECK = FULL, userid ignored.

Cause: The USERID option was specified on the command line, but SQLCHECK was not equal to FULL or SEMANTICS. The USERID has no effect, unless SQLCHECK=FULL or SQLCHECK=SEMANTICS.

Action: This is a warning message only.

PCC-02107: You may not specify PARSE = FULL when CODE = CPP

Cause: The PARSE=FULL and CODE=CPP options were both specified on the command line. The PARSE=FULL option invokes the C parser which does not understand any C++ constructs generated by the precompiler with CODE=CPP option.

Action: Set the PARSE option to either NONE or PARTIAL if the CODE=CPP option is specified.

PCC-02108: UNSAFE_NULL=YES allowed if MODE=ORACLE and DBMS=V7 or V8

Cause: UNSAFE_NULL=YES was specified on the command line, but either the MODE was not ORACLE or the DBMS was not V7 or V8.

Action: Specify MODE=ORACLE and DBMS=V7 or V8 when using UNSAFE_NULL=YES.

PCC-02109: SQLCHECK=NONE is no longer supported.. using SYNTAX

Cause: SQLCHECK=NONE was specified on the command line but is no longer a supported option. SQLCHECK=SYNTAX was used instead.

Action: This is a warning message only. To avoid this warning, specify SQLCHECK=SYNTAX or SQLCHECK=SEMANTICS.

PCC-02110: DBMS=V6_CHAR is deprecated. Use CHAR_MAP=VARCHAR2, DBMS=V7 instead

Cause: DBMS=V6_CHAR was specified on the command line but is no longer a supported option. The options CHAR_MAP=VARCHAR2 and DBMS=V7 were used instead.

Action: This is a warning message only. To avoid this warning, specify CHAR_MAP=VARCHAR2 and, if required, DBMS=V7.

PCC-02111: CHAR_MAP option ignored. Only CHAR_MAP=VARCHAR2 allowed for DBMS=V6

Cause: DBMS=V6 was specified, and CHAR_MAP was specified with a value other than VARCHAR2. The CHAR_MAP value is ignored.

Action: This is a warning message only. To avoid this warning, specify a DBMS value other than DBMS=V6 or use CHAR_MAP=VARCHAR2.

PCC-02112: OBJECTS option ignored. OBJECTS=YES is not allowed for DBMS=V6 or V7.

Cause: OBJECTS=YES was specified on the Pro*C command line, but the DBMS option value was not valid.

Action: This is a warning message only. To avoid this warning for OBJECTS=YES, use DBMS=V8 or DBMS=NATIVE with a V8 database.

PCC-02113: DBMS=V6 no longer supported; using DBMS=NATIVE, CHAR_MAP=VARCHAR2.

Cause: DBMS=V6 was specified on the command line, but is no longer a supported option value. The options DBMS=NATIVE and CHAR_MAP=VARCHAR2 were used instead.

Action: Check your program to verify that you are not depending on any V6 behavior. Please refer to the Programmer's Guide to the Pro*C/C++ Precompiler for effects of specifying DBMS=V6.

PCC-02114: Command line argument MODE=ANSI may not be used with DBMS=V6

Cause: The semantics of certain operations (such as character comparison) in Oracle version ^ are not 100% compliant with the ANSI/ISO SQL standards. When V6 semantics are requested, using the DBMS=V6 or DBMS=V6_CHAR option, precompilation with MODE=ANSI is not permitted.

Action: Do not use ANSI mode with V6 options.

PCC-02115: Unable to open output file for writing

Cause: An attempt was made to precompile a header file where the output data file could not be opened (or created) for writing.

Action: Check for appropriate permissions on the directory and possibly file objects (if a data file already exists) to make sure that write permissions have been granted.

PCC-02116: You must specify a file extension using the HEADER option

Cause: An attempt was made to precompile a header file without specifying the name of the extension to use when creating the generated data file.

Action: Use the HEADER option to specify the name of a file extension to use when creating a data file for a precompiled header.

PCC-02117: Semantic checking disabled by TimesTen.

Cause: Semantic checking is not supported by TimesTen

Action: This is a warning message only.

PCC-02129: CMD-LINE: Client supplied static options table is invalid

Cause: This is an internal error message not usually issued.

Action: Call Oracle customer support.

PCC-02132: CMD-LINE: Could not allocate memory

Cause: This is an internal error message not usually issued.

Action: Call Oracle customer support.

PCC-02133: CMD-LINE: Error in string processing function

Cause: This is an internal error message not usually issued. It indicates that a C string function, such as strcpy or strlen, returned an error.

Action: Call Oracle customer support.

PCC-02134: CMD-LINE: Null option supplied

Cause: A zero length option was specified on the command line.

Action: Re-enter the command line with a valid option.

PCC-02135: CMD-LINE: User asked for help

Cause: This is a final message that the precompiler issues when information about the command line options has been requested. For example, if the command `proc ?` is issued to get a list of current default values for the command line options, this message appears at the end of the list.

Action: No action required.

PCC-02138: CMD-LINE: Internal consistency error

Cause: This is an internal message for program exceptions. An unexpected condition was encountered by the command-line processor and a consistency check failed. Some possible causes of this message include: --invalid command-line options --memory corruption

Action: Report this error to Worldwide Support after gathering the following information: --the events that led to the error --the attempted operations that led to the error --any unusual circumstances prior to this error

PCC-02144: CMD-LINE: Blank characters are not allowed on either side of an equal sign (=)

Cause: An equal sign (=) was either immediately preceded or followed by a blank character.

Action: Precompile your program again without blank characters on either side of any equal sign (=) on the command line.

PCC-02146: CMD-LINE: value of option too long

Cause: The length of the user option exceeded 1023 bytes

Action: Reduce the length of the user option

PCC-02150: Error at line *number*, column *number* in file *string*

Cause: An error was encountered at the given location.

Action: Check the named source file and correct the error using the additional information which follows this error message.

PCC-02151: Line *number* column *number* file *string*:

Cause: An error was encountered at the given location.

Action: Check the listed source file and correct the error using the additional information which follows this error message.

PCC-02152: Unable to open file *string* to display or list the source line *number*

Cause: The file contains an error, but could not be reopened to list or display the incorrect line.

Action: Check that the file is intact and it has read permission. Then rerun the operation.

PCC-02153: Open file: *string*

Cause: A new source file was opened while producing the list file.

Action: No action required; this is an informational message.

PCC-02154: Close file: *string*

Cause: A source file was closed while producing the list file.

Action: No action required; this is an informational message.

PCC-02200: found unrecognized punctuation sequence

Cause: The error indicates that the precompiler parser encountered a badly-formed identifier or keyword.

Action: Correct the syntax.

PCC-02201: Found syntax error

Cause: This general message precedes one or more specific messages that detail the nature of the error.

Action: No action required. Correct the errors diagnosed in the following message(s).

PCC-02202: No typedef name was given

Cause: The precompiler parser encountered a typedef statement that had no name after the type specification. For example, typedef int;

Action: Correct the syntax

PCC-02203: found end of file when not expected

Cause: The parser can emit this message when a general syntax error occurs, for example, an unmatched '{' or '('.

Action: Correct the syntax.

PCC-02204: EXEC SQL INCLUDE not permitted from within an included file

Cause: EXEC SQL INCLUDE statements cannot be nested. Also, EXEC SQL INCLUDE statement cannot be put inside a file that is included using the #include preprocessor command.

Action: Recode the program so that the nested include statement is not required.

**PCC-02205: Parser error at line *number*, column *number*, file *string*:
:\n**

Cause: The precompiler parser encountered a syntax error, either in C code or in SQL code. A more specific message should follow.

Action: No action required for this message. Take the appropriate action for any following messages.

PCC-02206: Host variables are not permitted within a DDL statement

Cause: A Data Definition Language statement cannot use host variables. For example, the statement CREATE TABLE :table_name (c1 char(10)); is illegal, because the name of the table in a CREATE TABLE statement cannot be represented using host variable.

Action: Use dynamic SQL to create the names of database objects (tables, views, columns, etc.) at runtime. See the Programmer's Guide to the Oracle Precompilers, Release 2.2 for information about dynamic SQL.

PCC-02207: Invalid macro name

Cause: The precompiler parser encountered a #define directive that had no macro name associated with it. For example, #define

Action: Correct the syntax.

PCC-02208: No filename specified in #include statement

Cause: The precompiler parser encountered a #include directive that had no filename associated with it. For example, #include

Action: Specify appropriate filename with the #include directive, or correct the syntax.

PCC-02209: Macro invocation has incorrect number of arguments

Cause: A macro invocation in the source does not have the same number of arguments as the macro definition in the #define line.

Action: Correct the macro reference or the macro definition.

PCC-02210: C++ punctuation sequences are not permitted

Cause: C++ punctuation sequences are not supported by the ProC/C++ precompiler.

Action: Rewrite your C++ code without using punctuation sequences and precompile it again.

PCC-02301: cannot reopen input file for reading

Cause: The semantic analysis phase of the precompiler could not reopen the input file to generate the output code.

Action: Check that the input file and its directory protection and privileges do not change during precompilation.

PCC-02302: cannot open code generation output file "string"

Cause: Pro*C was unable to open one or both temporary files required for code generation. The user executing the precompiler must have write permission (and/or the appropriate privileges) on the current directory.

Action: Check that permission exists to create files in the the directory where you precompile.

PCC-02303: cannot open include file

Cause: The precompiler was not able to open a header file specified using the #INCLUDE preprocessor directive or the EXEC SQL INCLUDE statement. This can happen if the file specification is inaccurate or if read permission or read-access rights on the file or on one or more of the directories in the path have not been granted.

Action: Recheck that the file specification is correct, that the file exists, and that read permission has been granted so that the file can be read.

PCC-02304: invalid declaration of C function

Cause: A C function using invalid syntax was declared.

Action: Consult a C programming manual and correct the declaration.

PCC-02305: illegal mixing of new and old style C function declarations

Cause: All C functions using either the traditional style (K&R style) function declarations or the new (ANSI) style must be declared; the two styles cannot be mixed.

Action: Adopt a consist declaration style for functions.

PCC-02306: illegal name of C function

Cause: A C function was declared with a name that is not a legal C identifier.

Action: Use legal C identifiers for all function names.

PCC-02307: void can only be used when single parameter

Cause: A function can be declared or defined using the following syntax: `int func1(void)` to indicate that the function has no parameters. `void` can be used only once in this case.

Action: Remove the extra voids in the function definition or declaration.

PCC-02308: identifier required in this function declaration

Cause: A function definition written in ANSI C must have both the name and the type for all parameters.

Action: Rewrite the function definition so that it contains the name of each parameter.

PCC-02309: illegal formal parameter declaration

Cause: A formal parameter to a function was specified without giving its type.

Action: Rewrite the function declaration and include types of all parameters in function declarations.

PCC-02310: formal parameter VARCHARs should be declared as pointers

Cause: Many C compilers allow structures to be passed to and returned from functions. Although a VARCHAR is implemented as a C struct, VARCHARs must be passed to a function as pointers.

Action: Take the address of a VARCHAR when it is passed to a function. See the example in the section "Referencing VARCHAR Variables" in the Programmer's Guide to the Oracle Precompilers.

PCC-02311: cannot have VARCHAR bit fields

Cause: Host variables cannot contain bit fields.

Action: Recode the application to remove the bit fields.

PCC-02312: arrays of VARCHAR greater than 2 dimensions not allowed

Cause: A VARCHAR variable having more than 2 dimensions was declared. Multidimensional arrays are not supported as host variables.

Action: Recode the application to remove multidimensional array usage.

PCC-02313: malformed VARCHAR declaration - missing length

Cause: When a VARCHAR is declared, a length specification is mandatory. For example, the following VARCHAR declaration is meaningless, hence illegal:
`VARCHAR v1[];`

Action: Specify the length for each declared VARCHAR.

PCC-02314: cannot evaluate constant sizeof expression

Cause: A SIZEOF operator was used where a precompiler expression was expected. For example, as the length of a varchar.

Action: Eliminate the SIZEOF operator in this instance.

PCC-02315: cannot evaluate expression as constant

Cause: The specified expression does not evaluate to a constant. Such expressions are required, for example, as the length of a VARCHAR.

Action: Replace the expression with one that does evaluate to a constant integer.

PCC-02316: illegal operator in constant expression

Cause: A non-arithmetic operator was present in a constant expression.

Action: Rewrite the expression to eliminate the non-arithmetic operator.

PCC-02317: illegal cast type expression

Cause: An illegal cast is present in the expression.

Action: Remove the illegal cast.

PCC-02318: missing type expression

Cause: The specified expression is missing the declaration of a type.

Action: Specify a type for the expression.

PCC-02319: expression type does not match usage

Cause: The type of a variable does not match its usage. For example, in dynamic SQL, a host variable containing the text of a SQL statement must be declared as a C character type or be equivalenced to the SQL type STRING.

Action: Remove the declaration.

PCC-02320: arithmetic expression does not have correct operand types

Cause: The arithmetic expression must be specified with integral types.

Action: Rewrite the expression using integral types.

PCC-02321: only subtraction between two pointers is permitted

Cause: Pointer values cannot be added, multiplied, or divided. The only arithmetic operation permitted with pointers is subtraction.

Action: Recode to avoid this error message.

PCC-02322: found undefined identifier

Cause: An identifier used in a SQL statement was not defined. For example, a cursor name was referenced that had not been declared, or in a DECLARE CURSOR statement, a statement name was used that had not been PREPARED.

Action: Check that all SQL identifiers, such as cursor names and statement names, have been defined before use. Provide a declaration for the variable and/or its type identifier.

PCC-02323: found typedef name used in an expression (expecting a value)

Cause: The name of a typedef was found where a variable was expected.

Action: Rewrite the expression and remove the reference to the typedef.

PCC-02324: found variable name used as a typedef name

Cause: The name of a variable was found where a typedef was expected.

Action: Rewrite the expression and specify the correct typedef reference.

PCC-02325: illegal indirection operation

Cause: An attempt was made to use a non-pointer type as a pointer.

Action: Rewrite the expression.

PCC-02326: illegal structure reference operation

Cause: A structure component using invalid syntax was referenced. For example, a `->` operator was used instead of a required ``.'` operator.

Action: Correct the invalid reference.

PCC-02327: struct or struct pointer required

Cause: A scalar host variable was used in a context where a structure (or its pointer) is required.

Action: Make the host variable a structure or add more scalar host variables to satisfy the SQL syntax requirements.

PCC-02328: undefined struct member

Cause: A structure component was referenced that was not declared as part of the structure.

Action: Redefine the structure member.

PCC-02329: found reference to undeclared function

Cause: A function was referenced that was not declared. All function references must be declared.

Action: Declare the function.

PCC-02330: expecting an expression of integer type

Cause: The expression does not evaluate to an integer. For example, a SQL FOR expression must evaluate to an integral type.

Action: Rewrite the expression.

PCC-02331: undefined SQL identifier

Cause: All SQL identifiers must be declared before they are used. This message can result when a CURSOR or STATEMENT is not declared (defined) before being referenced.

Action: Define the SQL identifier before it is used.

PCC-02332: attempted to redefine SQL identifier

Cause: A SQL identifier (such as a cursor name) can be defined only once.

Action: Do not redefine the SQL identifier. Use a different name.

PCC-02333: SQL identifier was not declared as a statement

Cause: A SQL statement identifier was referenced in a DECLARE... CURSOR statement that was not PREPARED.

Action: Check that all SQL statement names have been declared. Remember that SQL statement names are identifiers, not variables, and that they are local to the precompilation unit.

PCC-02334: SQL identifier was not declared as a cursor

Cause: A cursor name was used in an OPEN, FETCH, or CLOSE statement that had not been DECLARED.

Action: Check that all SQL cursor names have been declared. Remember that cursors are identifiers, not variables, and that they are local to the precompilation unit.

PCC-02335: body of cursor must name statement identifier

Cause: In a Dynamic SQL Method 4 application, the DECLARE... CURSOR statement must name a statement identifier that has been PREPARED in a preceding statement. The PREPARE statement must physically (not logically) precede the DECLARE command.

Action: This error message is followed by another message that gives the line and column of the reference to the statement. Recode the application.

PCC-02336: host variable expression has invalid type

Cause: The host variable was declared using a C type that is not permitted as a host variable. See the Programmer's Guide to the Oracle Precompilers for a list of the permissible C types for host variables.

Action: Use a permissible host variable type.

PCC-02337: cannot declare multi-dimensioned array for this type

Cause: Host variable arrays of scalars with more than 1 dimension cannot be declared. The only host variables allowed to be multi-dimensioned are CHAR and VARCHAR.

Action: Rewrite the variable declaration.

PCC-02338: structure contains a nested struct or union

Cause: A structure used as a host variable may not have structures or unions nested within it.

Action: Rewrite the variable declaration.

PCC-02339: host variables cannot be of union types

Cause: A C union as a host variable cannot be used.

Action: This error message is followed by another message that gives the line and column of the reference to the illegal union. Recode, using a struct or individual scalar host variables.

PCC-02340: structure contains a bit field

Cause: Bit fields are not allowed in host variables because they are meaningless for database DML operations.

Action: This error message is followed by another message that gives the line and column of the reference to the offending host variable. Recode the application.

PCC-02341: host variable has illegal type

Cause: A host variable has an unpermitted type (i.e.; enum, void, etc).

Action: Rewrite the host variable declaration, using a permissible host variable type.

PCC-02342: using WHERE CURRENT OF on cursor defined without FOR UPDATE clause

Cause: When MODE=Oracle, a cursor defined with a WHERE CURRENT OF clause must also have a FOR UPDATE clause.

Action: Rewrite the cursor definition.

PCC-02343: body of cursor must be a query expression

Cause: A cursor definition must be a SELECT statement.

Action: Rewrite the cursor definition.

PCC-02344: Host variable array size mismatch. Using minimum: *number*

Cause: Host variable arrays in a single statement should all be of equal size.

Action: Redefine the bind variable array lengths to all be the same size.

PCC-02345: SQLCHECK=SEMANTICS must be given when embedded PL/SQL blocks are used

Cause: Embedded PL/SQL blocks require that the command-line flag SQLCHECK=SEMANTICS is used.

Action: Use the SQLCHECK=SEMANTICS option. This also requires that the USERID connect option be given.

PCC-02346: PL/SQL found semantic errors

Cause: A database entity, such as a table or column name, was referenced, that does not exist. This is a compile time error, not a runtime error.

Action: Check that all referenced objects in PL/SQL statements actually exist and that the necessary access permission on them have been granted.

PCC-02347: PL/SQL found syntax errors

Cause: A PL/SQL statement was used illegally.

Action: Check the PL/SQL User's Guide and Reference for the correct syntax.

PCC-02348: indicators are not allowed in EXEC IAF statements

Cause: Indicator variables associated with host variables cannot be used in EXECIAF statements such as GET and PUT in a user exit.

Action: Eliminate the indicator variables. If feasible (for example with Forms V4), use EXEC TOOLS statements, which do allow indicator variables. See the Programmer's Guide to the Oracle Precompilers for more information of EXECIAF and EXEC TOOLS statements.

PCC-02349: precision must be specified for this type

Cause: In a VAR or TYPE statement, certain Oracle types require that the precision be specified. For example, VARCHAR2 or CHAR.

Action: Indicate the precision.

PCC-02350: cannot equivalence this SQL type

Cause: Datatype or variable equivalencing to the datatypes NUMBER or DECIMAL cannot be used. See the "Datatype Equivalencing" section in the Programmer's Guide to the Oracle Precompilers for more information.

Action: Use the appropriate datatype for the application.

PCC-02351: illegal datatype equivalencing operation

Cause: The datatype specified could not be equivalenced, or the syntax was incorrect in the VAR or TYPE statement.

Action: See the Programmer's Guide to the Oracle Precompilers for a list of the datatypes that can be equivalenced and the correct syntax of the VAR or TYPE statement.

PCC-02352: out of bounds bind position from PL/SQL

Cause: PL/SQL requested a bind position that does not exist.

Action: Contact ORACLE customer support.

PCC-02353: Semantic error at line *number*, column *number*, file *string*:*n*

Cause: This error message precedes a more specific error message.

Action: No action required. Correct the error(s) reported in the following message(s).

PCC-02354: A file included with #include may not contain SQL statements

Cause: The Pro*C Precompiler reads header files referenced in #INCLUDE directives and uses the values defined in them. But the precompiler never generates code using statements in header files, so use of SQL statements in these files is illegal.

Action: Move the SQL statement(s) into the main body of the application or use EXEC SQL INCLUDE to check that the included file is precompiled.

PCC-02355: Invalid or obsolete option, ignored

Cause: A command-line option that is not used in Pro*C Release 2.0 was specified. For example, the option AREASIZE is no longer valid with precompilers used with the Oracle7 Server.

Action: No action required. This is an informational message.

PCC-02356: Warning at line *number*, column *number*, file *string*:*n*

Cause: This is a generic warning message. It precedes a more specific warning.

Action: No action required. Correct the error(s) indicated in the following message(s).

PCC-02357: Function calls may not be used as host variable expressions

Cause: Only objects that are lvalues (that resolve to an address) can be host variables. Because a function call is not an lvalue, one cannot be used in place of a host variable.

Action: Recode the application.

PCC-02358: Identifier following ARRAYLEN must be the name of an array

Cause: A declared array must be specified as the argument for an ARRAYLEN statement. Declare the array textually before the ARRAYLEN statement. See the Programmer's Guide to the Oracle Precompilers for the syntax of the ARRAYLEN statement.

Action: Correct the statement, specifying a host array as the argument.

PCC-02359: Identifier specifying ARRAYLEN must be a 4-byte integer

Cause: The expression that specifies the ARRAYLEN dimension must evaluate to an integer. For example, the statement EXEC SQL ARRAYLEN my_array(1,3) cannot be parsed.

Action: Correct the statement, using an integral dimension.

PCC-02360: This array type is invalid for use with ARRAYLEN statement

Cause: Arrays of some host variables types are not allowed and hence also cannot be used in ARRAYLEN statements. VARCHAR and DATE are examples.

Action: Specify an array with a datatype that can be used in host arrays.

PCC-02361: Use of ARRAYLEN with SQL bind arrays is ignored

Cause: ARRAYLEN is only valid with arrays that can be bound in PL/SQL blocks.

Action: Use an appropriate array type.

PCC-02362: Host variable not declared within SQL DECLARE section

Cause: When MODE=ANSI is specified at precompile time, all host variables must be declared inside Declare Sections. Remember that MODE=ANSI refers to ANSI SQL, not ANSI C.

Action: Add the EXEC SQL BEGIN DECLARE SECTION... EXEC SQL END DECLARE SECTION statements around all host variable declarations.

PCC-02363: Indicator variable must be a structure

Cause: If a host variable is a structure, the associated indicator variable must also be a structure.

Action: Recode the application to create an indicator variable as a structure.

PCC-02364: Host struct and its indicator must have the same number of fields

Cause: When a structure containing indicator variables is declared and associated with a host structure, the indicator structure must contain the same number of fields as the host structure. This is so even when some of the indicators will not be used or even when it would not make sense to do so (for fields constrained as NON NULL, for example).

Action: Redeclare the indicator variable with the correct number of fields.

PCC-02365: Indicator array size cannot be smaller than host array size

Cause: An indicator array must have dimension greater than or equal to the corresponding host variable array dimension.

Action: Change the dimension of the indicator array.

PCC-02366: Command line argument MODE=ANSI may not be used with DBMS=V6

Cause: The semantics of certain operations (such as character comparison) in Oracle version ^ are not 100% compliant with the ANSI/ISO SQL standards. When V6 semantics are requested, using the DBMS=V6 or DBMS=V6_CHAR option, precompilation with MODE=ANSI is not permitted.

Action: Do not use ANSI mode with V6 options.

PCC-02367: This indicator variable must be declared as type short

Cause: An indicator for a host variable of this type must have the C type short. An array of such indicators must be an array of shorts.

Action: Declare the indicator variable or indicator array as type short.

PCC-02368: An EXEC TOOLS host variable context name is not type char

Cause: If a host variable is used to define a context name in an EXEC TOOLS GET CONTEXT or EXEC TOOLS SET CONTEXT statement, that host variable must be of a character type.

Action: Redeclare the context name to a host variable of a char type.

PCC-02369: An EXEC TOOLS host pointer variable is not a pointer

Cause: The host variable specifying an EXEC TOOLS context must be a pointer type.

Action: Redeclare the variable, making sure that it is a pointer.

PCC-02370: An EXEC TOOLS MESSAGE host variable is not type char

Cause: If a host variable is used to define a context name in an EXEC TOOLS GET CONTEXT or EXEC TOOLS SET CONTEXT statement, that host variable must be of a character type.

Action: Declare the message to a host variable of a char type.

PCC-02371: Illegal FOR clause

Cause: The argument of a FOR clause must be specified as an integer or as an identifier containing an integer.

Action: Rewrite the FOR clause.

PCC-02372: FOR clause not allowed in SELECT statement

Cause: A SQL statement containing a SELECT command cannot contain a FOR clause. The meaning of such a statement would be unclear.

Action: Rephrase the SELECT statement, removing the FOR clause.

PCC-02373: Invalid declaration in EXEC SQL DECLARE section

Cause: An improper declaration was placed in a Declare Section. This message is usually caused by including an EXEC SQL TYPE or EXEC SQL VAR declaration in a Declare Section.

Action: Move the declaration outside of the SQL DECLARE section.

PCC-02374: SQLCHECK value exceeds command line value

Cause: The value given to the SQLCHECK option in an EXEC ORACLE statement in a program was greater than the value given either on the command line or greater than the default value if no SQLCHECK option was given on the command line. The order of the option values is SEMANTICS>SYNTAX>NONE. When this warning message is issued, the original value of SQLCHECK (the default or the command-line value) stays in effect.

Action: Remove or recode the EXEC Oracle option(s) in the .pc source file to avoid this warning message.

PCC-02375: SQL statement found outside the body of a function

Cause: A SQL statement other than a declarative, datatype equivalence or WHENEVER statement was found outside the body of a function when PARSE=FULL.

Action: Move the SQL statement inside the body of a function.

PCC-02376: You may not declare SQLCODE when DEF_SQLCODE = TRUE

Cause: The DEF_SQLCODE option may not be specified if a SQLCODE declaration already explicitly appears in the program.

Action: Remove the SQLCODE declaration from the program or specify DEF_SQLCODE=NO (the default).

PCC-02377: Arrays of implicit varchars are not permitted

Cause: An array of implicit VARCHARS was declared when HOST_VARCHAR=TRUE.

Action: Rewrite the implicit VARCHAR declaration without using arrays.

PCC-02378: Invalid type for National Language character variable

Cause: A variable declared as a National Language character using the NLS_CHAR option was not declared as a char or implicit VARCHAR.

Action: Declare the variable as a char or implicit VARCHAR or do not specify using the NLS_CHAR option.

PCC-02379: Cannot equivalence National Language character variables

Cause: A National Language character variable (specified using the NLS_CHAR option) has undergone datatype equivalencing using either the EXEC SQL VAR or TYPE statements.

Action: Do not equivalence National Language character variables.

PCC-02380: Cannot specify a connect mode when altering a user password

Cause: An attempt was made to connect in either SYSOPER or SYSDBA mode while at the same time trying to change passwords using the ALTER AUTHORIZATION clause in the same CONNECT statement.

Action: Changing passwords while connecting in SYSOPER or SYSDBA mode is prohibited. Rewrite the connect statement by either removing the ALTER AUTHORIZATION clause or the CONNECT MODE clause.

PCC-02382: You must specify MODE=ANSI when using NLS_LOCAL=YES

Cause: NLS_CHAR was used to specify NLS multi-byte character variables without specifying MODE=ANSI.

Action: Specify MODE=ANSI on the command line when using NLS_LOCAL=TRUE.

PCC-02383: Expecting an expression of type OCIExtProcContext

Cause: The type of the bind variable given in a REGISTER CONNECT USING statement was not (pointer to) OCIExtProcContext.

Action: Declare a variable having type (pointer to) OCIExtProcContext and use it in the REGISTER CONNECT USING statement.

PCC-02384: Missing array length specifier

Cause: An array declaration was given without an array length specifier.

Action: Provide the length for the array declaration.

PCC-02385: CHAR_MAP disallowed when using NLS_CHAR and NLS_LOCAL=TRUE

Cause: The CHAR_MAP option was specified while indicating which host variables are to be treated by the precompiler as NLS multi-byte character variables. This mapping cannot be performed with the option NLS_LOCAL=TRUE. This error also occurs when DBMS=V6 is used in conjunction with NLS_CHAR and NLS_LOCAL=TRUE.

Action: Remove either the CHAR_MAP option or set NLS_LOCAL=FALSE. Ensure that DBMS is not set to V6.

PCC-02386: Use of the AT clause is not permitted here

Cause: An explicit AT clause was used with an ALLOCATE statement or a FETCH/CLOSE statement also using a SQL_CURSOR declaration.

Action: Remove the AT clause.

PCC-02387: Expecting an expression of type sql_cursor

Cause: A host bind variable was used in an ALLOCATE, FETCH or CLOSE statement that was not declared as a result set SQL_CURSOR.

Action: Declare the variable to be of type sql_cursor.

PCC-02388: Arrays not allowed in FROM/WHERE clause of SELECT statement

Cause: A host array was used in the WHERE clause of a SELECT-INTO statement.

Action: Rewrite the SELECT statement without using arrays or use a cursor.

PCC-02389: Arrays not allowed as input bind variables in SELECT list

Cause: A host array was used in the SELECT list of a SELECT-INTO statement.

Action: Rewrite the SELECT statement without using arrays in SELECT list.

PCC-02390: No EXEC SQL CONTEXT USE statement encountered

Cause: No EXEC SQL CONTEXT USE statement was encountered and the option threads=yes was requested.

Action: Ensure that the necessary context variable (of type sql_context) has been declared and that has been ALLOCATED and USED prior to any executable SQL statements.

PCC-02391: Runtime context variable not of correct type

Cause: The host variable in a EXEC SQL CONTEXT USE statement or in the RETURNING clause of a REGISTER CONNECT statement was not declared to be of type SQL_CONTEXT.

Action: Declare the runtime context variable to be of type SQL_CONTEXT.

PCC-02392: You are already in an EXEC SQL DECLARE SECTION

Cause: A SQL DECLARE SECTION appears nested inside another one.

Action: Do not nest DECLARE SECTIONS. Remove any nested inner ones.

PCC-02393: SQL statement found inside an EXEC SQL DECLARE SECTION

Cause: An executable SQL statement appears inside a DECLARE SECTION.

Action: Move the SQL statement into the body of a function.

PCC-02394: Input file name and output filename are identical

Cause: The values of INAME and ONAME are the same or the default output filename is the same as that specified by ONAME.

Action: Use ONAME to specify a different filename for the output file.

PCC-02395: Using arrays of structs requires that the struct be named

Cause: An array of some unnamed struct was used as a host variable. When using arrays of structs, the struct requires a name or tag.

Action: Provide a name for the struct.

PCC-02396: Illegal use of arrays inside an array of structs

Cause: An array of a struct that contained arrays of scalars or two-dimensional char or VARCHAR fields was used as a host variable.

Action: Rewrite the struct so that there are no scalar arrays or two-dimensional char or VARCHAR fields.

PCC-02397: VARCHAR declarations not permitted in #include file

Cause: A VARCHAR declaration was found in a file included using a #include form.

Action: Use the EXEC SQL INCLUDE form to include files with VARCHAR declarations instead.

PCC-02398: Indicator ignored in this statement for this type

Cause: An indicator variable was used in a host/indicator variable pair for some type in a statement that did not require or need one. Typically, indicator variables are not used in ALLOCATE and FREE statements for types other than object or collection types. They are also not used in OBJECT CREATE/DEREF statements for REF types.

Action: Remove the use of the indicator for the type in the specified statement. It will be ignored otherwise.

PCC-02399: Illegal CHAR_MAP option value for DBMS=V6. Option ignored.

Cause: A CHAR_MAP option other than CHAR_MAP=VARCHAR2 was specified inline. Since DBMS=V6, this option is ignored for a character or string variable in the offending statement.

Action: Either set DBMS to something other than V6, or specify CHAR_MAP=VARCHAR2.

PCC-02400: This host variable must be declared as a pointer type

Cause: The specified host variable was not declared as a pointer type.

Action: Declare the host variable to be a pointer type.

PCC-02401: Host variable arrays of this type are currently not supported

Cause: Host variable arrays of the specified type are not supported.

Action: Rewrite your program so that there are no arrays of this type.

PCC-02402: Pro*C option OBJECTS=YES is required when using the object cache

Cause: The object cache will be used for this host variable, but OBJECTS=NO was specified on the Pro*C command line.

Action: Specify OBJECTS=YES on the Pro*C command line when using the object cache.

PCC-02403: Invalid indicator variable type for this host variable

Cause: The type of the indicator variable is not appropriate for the specified host variable.

Action: Change the type of the indicator variable to a valid type. Refer to the "Programmer's Guide to the ORACLE Pro*C/C++ Precompiler" for a discussion of appropriate indicator variable declarations.

PCC-02404: This indicator variable must be declared as a pointer type

Cause: The specified indicator variable was not declared as pointer type.

Action: Declare the indicator variable to be a pointer type.

PCC-02405: Variable is of undefined type

Cause: No declaration was found for the type identifier of the variable.

Action: Provide a valid declaration for the type of the host variable. If using objects in your program, check that the OTT-generated header for the object type was #included and that the typefile was specified in the INTYPE option on the Pro*C command line.

PCC-02406: Expecting the form 'RETURN[ING] REF INTO :ref' only

Cause: When using the RETURNING clause in an OBJECT CREATE statement, only a single 'REF INTO :host variable' is expected. This error occurs if the expression list to which REF belongs is greater than one or if there are more than one host variables supplied in the into list.

Action: Rewrite the RETURNING clause as per the given specification.

PCC-02407: Object and REF types do not match

Cause: In an OBJECT CREATE or Deref statement, the types of the given Object and its associated REF do not match.

Action: Make sure that the Object and its REF have the same type. The type information is generated by OTT and should appear in the header file which OTT creates.

PCC-02408: Expecting an expression of some Object type

Cause: The expression is not an Object type. For example, many host variable expressions in the Navigational statements require that the variable be declared of some Object type.

Action: Rewrite the expression or declare the variable to be an Object.

PCC-02409: Expecting an expression of some REF type

Cause: The expression is not a REF type. For example, some host variables in the Navigational CREATE and Deref statements are required to be declared of some REF type.

Action: Rewrite the expression or declare the variable to be a REF.

PCC-02410: Expecting an expression of some Collection type.

Cause: The expression is not a Collection type. A VARRAY or Nested Table object was expected, but the given host variable did not resolve to a valid Collection type.

Action: Check that the OTT-generated header for the Collection type was properly #included in the Pro*C/C++ program and that the typefile was specified in the INTYPE option on the Pro*C/C++ command line.

PCC-02411: Invalid type for INDICATOR descriptor item host variable

Cause: The type of the host variable paired with the INDICATOR descriptor item was invalid. The only permissible types for the INDICATOR item are a signed 2 byte numeric type or an indicator struct generated by the Object Type Translator for a user defined object type.

Action: Either replace the INDICATOR host variable with a valid one having an acceptable type or redeclare the existing host variable to be of a valid type.

PCC-02412: FOR clause not permitted in OBJECT GET or SET statement

Cause: An explicit FOR clause was used in an OBJECT GET or OBJECT SET statement. Use of the FOR clause is illegal for these statements.

Action: Remove the FOR clause.

PCC-02413: Number of attributes does not match number of host variables

Cause: The number of attributes supplied in the attribute list of an OBJECT SET of GET statement does not match the total number of host variables also supplied in that statement.

Action: Either remove some attributes or remove some host variables from the statement in order to make the total count for each the same.

PCC-02414: This attribute does not exist in the specified Object

Cause: An attribute given in the attribute list of an OBJECT SET or GET statement is not a member of the specified object in that statement.

Action: Remove the attribute from the list.

PCC-02415: Cannot manipulate Object attributes in an OBJECT GET or SET

Cause: An attempt was made to either GET or SET an attribute of an Object that itself was an Object or REF type.

Action: Remove the attribute from the attribute list in the statement.

PCC-02416: The Object in an OBJECT GET or SET must not be an array

Cause: The Object specified in an OBJECT GET or SET statement is an array which is illegal.

Action: Redefine the Object so that it is not an array or subscript the Object so that only a single element of the Object array is specified.

PCC-02417: Illegal type conversion between attribute and host variable

Cause: An illegal type conversion was attempted in a Navigational GET or SET statement between the type of the Attribute and the type of the Host Variable.

Action: Change the type of either the Attribute or the Host Variable.

PCC-02418: Array size mismatch between Object and REF host variables

Cause: The array sizes of the Object and REF variables in an OBJECT CREATE or DEREf do not match.

Action: Adjust the array dimensions of the two host variables so that they are equal to one another.

PCC-02419: Host variable arrays not allowed in an OBJECT SET or GET

Cause: An array was found in the host variable list of an OBJECT SET or GET statement.

Action: Only scalars are allowed (except for single dimensioned char or varchar variables) in the host variable list of an OBJECT SET or GET. Make sure to use only scalars in these statements.

PCC-02420: Incomplete (or missing) type specification

Cause: An incomplete or perhaps missing type specification was given when declaring a host variable used in some SQL statement.

Action: Provide a complete type definition when declaring host variables intended for use inside any SQL statements.

PCC-02421: This host variable requires the use of an indicator variable

Cause: No indicator variable was provided (or matched) with a specific host variable where one was explicitly required.

Action: Provide an indicator variable for use with the specified host variable in the given SQL statement.

PCC-02422: Invalid value specified for the given context option

Cause: An illegal value was given for the specified runtime context option in the CONTEXT *option* OPTION SET (or GET) statement.

Action: Use a valid option value in the statement for the specified option being manipulated by the statement.

PCC-02423: Host variable has an invalid type for this option value

Cause: The type of the host variable corresponding to a specific option value in a CONTEXT *option* OPTION SET (or GET) statement is invalid for that particular value.

Action: Use a type suitable for the specific value being manipulated.

PCC-02424: The number of values and host variables does not match

Cause: There is a mismatch between the number of values specified and the number of valid host variables given in a CONTEXT *option* OPTION SET (or GET) statement.

Action: Use the same number of host variables as there are values given in that particular statement.

PCC-02425: An indicator variable is not required with this attribute

Cause: In a LOB or Collection DESCRIBE, an Indicator Variable was used with a Host Variable when retrieving a LOB attribute that doesn't require one.

Action: Remove the Indicator Variable.

PCC-02426: Incompatible LOB types

Cause: A LOB operation was attempted between LOBs whose types were not compatible. For example, When ASSIGNing one LOB to another, both LOBs must be of the same type. If they are not, this error results.

Action: Correct the LOB operation by having it function between LOBs of the same type. This may require a redeclaration of one of the LOBs used in the LOB statement performing the specified operation.

PCC-02427: Expression is not of the correct character string type

Cause: The given host variable expression was not declared to be of the required character type. In this case, one of several possible character types would have been accepted. However, the host variable type did not match any of them.

Action: Redeclare the problematic host variable, using one of the permitted character types.

PCC-02428: Buffer type is incompatible with LOB type

Cause: This error can occur in either of the following situations 1. An attempt to READ from a LOB into a buffer whose type was not compatible with the LOB type. 2. An attempt to WRITE a buffer into a LOB whose type was not compatible with the buffer type.

Action: Either the LOB type or the buffer type needs to be changed so that the LOB and buffer types become compatible for the specified operation.

PCC-02429: Expecting an expression of some internal LOB type

Cause: The given host variable was not declared to be an Internal LOB. BLOB, CLOB or NCLOB would have been accepted, however, the type of the host variable did not match any of these.

Action: Redeclare the host variable using one of the Internal LOB types.

PCC-02430: Expecting an expression of some arbitrary LOB type

Cause: The given host variable was not declared to be any type of LOB, Internal or External. In addition to any Internal LOB type, BFILE would also have been accepted, however, the type of the host variable did not match any of these.

Action: Redeclare the host variable using any of the LOB types, Internal or External.

PCC-02431: Expecting an expression of type external LOB (BFILE)

Cause: The given host variable was not declared to be an External LOB. Only BFILE would have been accepted in this case.

Action: Redeclare the host variable using an External LOB type (BFILE).

PCC-02432: Cannot open an external LOB (BFILE) in READ WRITE mode

Cause: An attempt was made to OPEN a BFILE in READ WRITE mode. Writable BFILES are currently not supported so this operation is considered erroneous.

Action: Do not open BFILES using READ WRITE mode. BFILES can only be OPENed in READ ONLY mode.

PCC-02433: Invalid host variable and attribute pairing

Cause: The host variable and attribute pairing in a LOB or Collection DESCRIBE is invalid. Most likely, this was due to some problem with the host variable. For example, this error could occur if the host variable was not declared or is otherwise not provided.

Action: Usually, other, more specific, errors will accompany this one. Correcting some or all of those problems should resolve this error.

PCC-02434: FOR clause not permitted in any LOB statement

Cause: An explicit FOR clause was used in some LOB statement. The use of the FOR clause in LOB statements is erroneous.

Action: Remove the FOR clause.

PCC-02435: This attribute is only valid for internal LOB types

Cause: A request for a LOB attribute was made in a LOB DESCRIBE statement in which the given LOB was not of some Internal LOB type.

Action: Replace the LOB host variable in the LOB DESCRIBE with one that was declared to be an Internal LOB.

PCC-02436: This attribute is only valid for external LOB types (BFILEs)

Cause: A request for a LOB attribute was made in a LOB DESCRIBE statement in which the given LOB was not an External LOB type (BFILE).

Action: Use an External LOB (BFILE) host variable in the LOB DESCRIBE statement.

PCC-02437: Expecting an expression having binary integral type

Cause: A host variable was given that was not declared to be of some acceptable binary numeric integral type. Generally, when this error occurs, a signed or unsigned integral type was expected. Floating point or otherwise imprecise numeric types are considered erroneous.

Action: Replace the problematic host variable with one that was declared using a proper exact numeric integral type.

PCC-02438: Arrays of collection objects are not allowed

Cause: An array of collections was given in a COLLECTION statement. Only scalar (non-array) collection objects are allowed in any of the COLLECTION statements.

Action: Change the declaration of the Collection host variable so that it is not an array.

PCC-02439: FOR clause not allowed in this COLLECTION statement

Cause: An illegal FOR clause was used in a COLLECTION statement that did not allow one, particularly, one of either the TRIM or DESCRIBE COLLECTION statements.

Action: Remove the FOR clause from the statement.

PCC-02440: This attribute is valid for either internal or external LOBs

Cause: A request for a LOB attribute was made in a LOB DESCRIBE statement in which the given LOB host variable was neither an Internal an External LOB (BFILE) type.

Action: Use either an Internal or External LOB host variable in the LOB DESCRIBE statement.

PCC-02441: Number of attributes does not match number of host variables

Cause: There is a mismatch between the number of attributes and the number of valid host variables in the LOB or Collection DESCRIBE.

Action: Make sure that for each attribute being requested there is at most a single valid host variable given to hold its value.

PCC-02442: Expecting a value between 1 and 65535 inclusive

Cause: The value specified in the WITH MAX clause of an ALLOCATE DESCRIPTOR statement or the VALUE clause of a GET/SET DESCRIPTOR statement was either less than 1 or greater than 65535.

Action: Specify a value between 1 and 65535 inclusive.

PCC-02443: This usage is only valid when DYNAMIC=ANSI is specified

Cause: One of the following statements was used without specifying a DYNAMIC=ANSI command line option setting o EXEC SQL ALLOCATE/ DEALLOCATE/GET/SET DESCRIPTOR o EXEC SQL DESCRIBE OUTPUT/ INPUT ... USING ... *descriptor* o EXEC SQL EXECUTE ... INTO ... o EXEC SQL EXECUTE ... USING ... *descriptor* o EXEC SQL OPEN ... INTO ... o EXEC SQL OPEN ... USING ... *descriptor*

Action: Specify DYNAMIC=ANSI or remove statements like those above from the program.

PCC-02444: Invalid combination of descriptor and non-descriptor clauses

Cause: There was a mixing of descriptor and non-descriptor clauses in an ANSI Dynamic SQL statement.

Action: Do not mix descriptors and non-descriptors in the ANSI statement in question.

PCC-02445: USING clause valid only on a PREPARED dynamic statement

Cause: The USING clause was used with an OPEN cursor statement where the cursor declaration was not for a PREPARED statement. The correct sequence of statements should be as follows EXEC SQL PREPARE s FROM :stmt; EXEC SQL DECLARE c CURSOR FOR s; EXEC SQL OPEN c USING ...;

Action: Use the PREPARE statement for the SQL statement and use that in the DECLARE CURSOR statement.

PCC-02446: FOR clause not allowed in a DEALLOCATE statement

Cause: An explicit FOR clause was used in a DEALLOCATE DESCRIPTOR statement.

Action: Remove the FOR clause from the statement.

PCC-02447: Cannot specify destination offset in a LOB WRITE APPEND

Cause: A destination offset was specified in a LOB WRITE APPEND statement. The destination offset is assumed to be the end of the LOB so specifying an explicit destination offset is erroneous.

Action: Remove the destination offset from the LOB WRITE APPEND statement.

PCC-02448: Cannot specify a UCS2 variable in the NLS_NCHAR option

Cause: A variable declared as utext, uvarchar, or longuvarchar was specified in the NLS_NCHAR command line option.

Action: Re-compile without specifying the variable in an NLS_NCHAR command line option.

PCC-02449: Cannot type equivalence a UCS2 type

Cause: A UCS2 type has been type equivalenced in an EXEC SQL TYPE statement or a variable of UCS2 type has been type equivalenced in an EXEC SQL VAR statement.

Action: Remove the EXEC SQL TYPE or EXEC SQL VAR statement.

PCC-02450: Cursor was not declared in scrollable mode

Cause: A cursor which was not DECLARED in SCROLL mode was used in scrollable mode in the FETCH statement.

Action: Declare the cursor in scroll mode using the SCROLL keyword.

PCC-02451: Value of offset cannot be negative in ABSOLUTE orientation mode

Cause: The offset for the FETCH ABSOLUTE statement is negative.

Action: Value of offset should be positive.

PCC-02452: Common SQL Front End found semantic error

Cause: A database entity, such as a table or column name, was referenced, that does not exist. This is a compile time error, not a runtime error.

Action: Check that all referenced objects in the SQL statements actually exist and that the necessary access permission on them have been granted.

PCC-02453: Must use option SQLCHECK=SEMANTICS(FULL) when option OUTLINE is used

Cause: The precompiler option OUTLINE was used without specifying SQLCHECK=SEMANTICS(FULL).

Action: Set the precompiler option SQLCHECK=SEMANTICS(FULL).

PCC-02454: Must use option OUTLINE when option OUTLINPREFIX is used

Cause: The precompiler option OUTLINEPREFIX was used without specifying OUTLINE=YES|OUTLINENAME. The precompiler option OUTLINE must be specified if OUTLINPREFIX is used.

Action: Set the precompiler option OUTLINE=YES|OUTLINENAME.

PCC-02455: Must use option OUTLINE when option RUNOUTLINE is used

Cause: The precompiler option RUNOUTLINE was used without specifying OUTLINE=YES|OUTLINENAME. The precompiler option OUTLINE must be specified if RUNOUTLINE is used.

Action: Set the precompiler option OUTLINE=YES|OUTLINENAME.

PCC-02456: Unable to open Outline SQL file

Cause: Pro*C was unable to open the OUTLINE SQL file. The user executing the precompiler must have write permission (and/or the appropriate privileges) on the current directory.

Action: Check that permission exists to create files.

PCC-02457: Unable to open Outline LOG file

Cause: Pro*C was unable to open the OUTLINE LOG file. The user executing the precompiler must have write permission (and/or the appropriate privileges) on the current directory.

Action: Check that permission exists to create files.

PCC-02458: Outline name length exceeds the allowed limit

Cause: Outline name *value of outline option_filename_filetype_seqno* has exceeded the allowed limit.

Action: Use OUTLINPREFIX option to specify the outline name which will be well in the permitted limit.

PCC-02459: Number of outlines has exceeded the limit

Cause: Number of outlines that can be created has exceeded the file limit. Allowed outlines per file is 10000.

Action: Split the file so that each file can have not more than 10000 outlines.

PCC-02460: Outline cannot be created

Cause: Outline cannot be created as there is syntax error; or outlines are not supported on that statement.

Action: Correct the syntax error in the actual SQL used in the file or refer to "Performance Tuning Guide" for the list of supported statements.

PCC-02461: Must specify SQLCHECK=FULL along with option PLAN_BASELINE

Cause: The precompiler option PLAN_BASELINE was used without specifying SQLCHECK=FULL.

Action: Set the precompiler option SQLCHECK=FULL.

PCC-02462: Must use option PLAN_BASELINE along with option PLAN_PREFIX

Cause: The precompiler option PLAN_PREFIX was used without specifying PLAN_BASELINE=[<module_name>/yes].

Action: Specify the option PLAN_BASELINE=[<module_name>/yes].

PCC-02463: Must use option PLAN_BASELINE along with option PLAN_RUN

Cause: The precompiler option PLAN_RUN was used without specifying PLAN_BASELINE=[<module_name>/yes].

Action: Specify the option PLAN_BASELINE=[<module_name>/yes].

PCC-02464: Unable to open Plan Baseline SQL file

Cause: Pro*C was unable to open the Plan Baseline SQL file. The user executing the precompiler must have write permission (or the appropriate privileges) on the current directory.

Action: Check that permission is granted to create files.

PCC-02465: Unable to open Plan Baseline LOG file

Cause: Pro*C was unable to open the Plan Baseline LOG file. The user executing the precompiler must have write permission (and/or the appropriate privileges) on the current directory.

Action: Check that permission exists to create files.

PCC-02466: Length of Plan Baseline name exceeds the allowed limit

Cause: Plan Baseline name <module_name>_filename_filetype_seqno exceeded the allowed limit.

Action: Use PLAN_PREFIX option to specify the Plan Baseline prefix-name.

PCC-02467: Number of Plan Baselines has exceeded the limit per file

Cause: Number of Plan Baselines that can be created has exceeded the file limit. Allowed Plan Baselines per file is 10000.

Action: Split the file so that each file can have no more than 10000 Baselines.

PCC-02468: Plan Baseline cannot be created

Cause: Plan Baseline cannot be created, as there is a syntax error or Baselines are not supported on that statement.

Action: Correct the syntax error in the actual SQL used in the file or refer to the Oracle Database Performance Tuning Guide for the list of supported statements.

PCC-02469: Must use option PLAN_BASELINE along with option PLAN_ENABLED

Cause: Parameter required for Plan Baseline creation (PLAN_ENABLED) was used without specifying the option PLAN_BASELINE=[<module_name>/yes].

Action: Specify the option PLAN_BASELINE=[<module_name>/yes].

PCC-02470: Must use option PLAN_BASELINE along with option PLAN_FIXED

Cause: Parameter required for Plan Baseline creation (PLAN_FIXED) was used without specifying PLAN_BASELINE=[<module_name>/yes].

Action: Specify the option PLAN_BASELINE=[<module_name>/yes].

PCC-02471: Cannot use both PLAN_BASELINE and OUTLINE simultaneously

Cause: Both PLAN_BASELINE and OUTLINE options were specified. These options are not supported simultaneously.

Action: Specify either the PLAN_BASELINE option or the OUTLINE option, but not both.

PCC-02472: Module name exceeds 30 bytes, will be truncated in database

Cause: SQL Plan Management (SPM) does not support module names greater than 30 bytes and the specified module name exceeded this limit.

Action: Shorten the module name to stay within this limit.

PCC-02473: program has EXEC SQL DECLARE TABLE, therefore PLAN_RUN option is ignored

Cause: PLAN_RUN was ignored because DECLARE TABLE was found. Baseline plans were not created during precompilation.

Action: Run the generated SQL manually.

PCC-02474: invalid numeric value

Cause: The numeric value was invalid.

Action: Specify a proper numeric value.

PGA-20900 to PGA-22014

PGA-20900: unable to obtain *number* bytes of storage for *string*

Cause: Memory shortage in the gateway server process.

Action: Ensure your system has enough available memory to support the number of concurrent users you are running.

PGA-20901: internal gateway error: *string*

Cause: Internal error in the gateway server process.

Action: Reproduce the error with debugging enabled to produce a log file. Supported customers should contact Oracle Worldwide Support for assistance.

PGA-20905: invalid conversation id: no active conversations were found

Cause: There were no APPC conversations active for the user.

Action: Check that the application is not calling the PL/SQL TIP routines out of sequence.

PGA-20906: invalid conversation id: no matching conversation was found

Cause: The conversation id received from the caller is not a valid active conversation id.

Action: Check that the application is not calling the PL/SQL TIP routines out of sequence.

PGA-20907: preceding error occurred during gateway *string* processing

Cause: An error occurred processing the Oracle function *func*. This message is preceded by additional messages providing more detailed information about the error.

Action: Refer to the messages preceding this one to determine the course of action to take.

PGA-20910: communication error: CPI-C *string* failed, rc = *number*, errno = *number*

Cause: An unexpected communication error occurred while executing the specified CPI-C function *func*. The CPI-C function return code *rc* and system error number *errno* are provided in the message text. The CPI-C function return codes and system error numbers are described in the vendor documentation.

Action: Determine the cause of the communications error, correct it, and rerun the transaction.

PGA-20911: update transaction is already active with TP *string* at LU *string*

Cause: Transaction *tpname* has already been started at LU *luname* by a PGAINIT call with synclevel set to 1 or 2. Only one transaction at synclevel 1 or 2 is allowed at any given time.

Action: The new transaction is not started. Change your application to start the second update transaction after the first one has completed, or to use a different gateway database link for the second update transaction.

PGA-20912: send and receive buffer lengths cannot both be zero

Cause: Both the send and receive buffer lengths passed to PGAXFER were zero. This is invalid.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20914: send buffer length of *number* exceeds actual send buffer size of *number*

Cause: The send buffer length *len* passed to PGAXFER was larger than the actual size *size* of the send buffer passed to PGAXFER.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20915: receive buffer length of *number* exceeds the maximum of *number*

Cause: The receive buffer length *len* passed to PGAXFER was larger than the maximum allowed length *max*.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20916: send count is *number* but only *number* send lengths were specified

Cause: The first value *count* in the send lengths array passed to PGAXFER specified more elements than the send lengths array contained. Only *num* elements were found in the array.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20917: receive count is *number* but only *number* receive lengths were specified

Cause: The first value *count* in the receive lengths array passed to PGAXFER specified more elements than the receive lengths array contained. Only *num* elements were found in the array.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20918: send length number *number* is *number* but only *number* bytes are left in the buffer

Cause: The length *len* specified in send lengths array element number *num* exceeded the number of bytes *bytes* of data remaining in the send buffer.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20919: receive length number *number* is *number* but only *number* bytes are left in the buffer

Cause: The length *len* specified in receive lengths array element number *num* exceeded the number of bytes *bytes* of space remaining in the receive buffer.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20920: unexpected request-to-send received

Cause: The remote transaction program requested to send data when the gateway was still sending data.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20921: buffer overflow on receive: requested *number* bytes, received *number* bytes

Cause: The remote transaction program sent *len* bytes of data when the gateway was expecting to receive only *num* bytes.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20922: no data available to receive: *number* bytes were requested

Cause: The remote transaction program has either requested to receive or deallocated the conversation, but the gateway is still expecting to receive more data.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGA-20923: unexpected status, *number* (*string*), received after *string*

Cause: An unexpected status code *stat* was received from the remote transaction program following the CPI-C *func* call. The descriptive name of the status code is *desc*. *func* is the CPI-C function receiving the status.

Action: This is usually a problem with the remote transaction program or a network problem. The status codes for each CPI-C function call are documented in the platform-specific SNA software documentation for your system. Refer to the "System Requirements" chapter of the Oracle Database Gateway for APPC Installation and Configuration Guide for your platform for titles of SNA software documentation.

PGA-20924: unable to enter send state for deallocate, state = *number* (*string*)

Cause: The gateway was unable to enter send state to perform a normal deallocation. The conversation state is *state*, and its descriptive name is *desc*. The conversation states are documented in the `/usr/include/cmc.h` header file.

Action: This is usually a problem with the remote transaction program or a problem with the network. Check the remote system for diagnostic information. The gateway will perform an abnormal deallocation after this error has been encountered.

PGA-20925: missing LU/TP/MODE name parameter and no side info profile specified

Cause: PGAINIT was called with no Side Information profile name specified but the LU name, TP name, and MODE name parameters were not all filled in with non-blank values.

Action: Check the PGDL used to define the transaction program to PGAU to ensure that either a valid Side Information profile name is specified (SIDEPROFILE keyword), or that the LU name, TP name, and Mode name (LUNAME, TPNAME, LOGMODE keywords) are all specified with valid values. If no Side Information profile is specified, the LU name, TP name, and Mode name parameters are all required.

PGA-20926: userid *string* length of *number* is invalid; maximum length is *number*

Cause: The userid *uid* is too long (*len*) to be used with APPC conversation security. The maximum allowable length for the userid is *max* characters. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to either SAME or PROGRAM.

Action: The userid must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. This restriction is imposed by SNA and APPC, not by the gateway.

PGA-20927: password length of *number* is invalid; maximum length is *number*

Cause: The password is too long (*len*) to be used with APPC conversation security. The maximum allowable length for the password is *max* characters. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to PROGRAM.

Action: The password must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. This restriction is imposed by SNA and APPC, not by the gateway.

PGA-20928: cannot open parameter file *string*

Cause: The gateway cannot locate or open the file specified.

Action: Make sure that the file exists in a location expected by the gateway and can be opened.

PGA-20930: invalid SYNCLEVEL, *number*, specified; valid range is *number:number*

Cause: The synclevel, *sync*, passed to PGAINIT is not a valid value. This value is specified by the SYNCLEVEL keyword in the DEFINE TRANSACTION statement used to define the transaction to PGAU.

Action: The value for SYNCLEVEL must fall within the range *min:max*. Correct the value specified in the DEFINE TRANSACTION statement for the SYNCLEVEL keyword, and regenerate the PL/SQL TIP using PGAU.

PGA-20931: send buffer length of *number* exceeds the maximum of *number*

Cause: The send buffer length, *len*, passed to PGAXFER was larger than the maximum allowed, *max*.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU do not define any data items larger than the maximum size allowed by APPC. Correct the data item(s) in error and regenerate the PL/SQL TIP using PGAU.

PGA-20932: invalid function code, *string*, passed to *pgatctl*

Cause: The function code, *func*, passed to the PGATCTL function was invalid.

Action: Correct the function code in the PL/SQL procedure, recompile it, and retry the operation.

PGA-20933: invalid value specified by initialization parameter *string=string*

Cause: The keyword parameter *keyword=value* specifies an invalid value.

Action: Refer to the Oracle Database Gateway for APPC, Installation and Configuration Guide, documenting gateway initialization parameters for the keyword and correct the error.

PGA-20934: side information profile *string* not defined; cannot establish conversation

Cause: The Side Information profile *profile* is not defined to the SNA software. Either the profile name was misspelled, or no profile has been defined.

Action: Correct the profile name if it was misspelled, or have the profile defined to the SNA software if it was not already defined.

PGA-20936: send buffer length is *number* but no send lengths were specified

Cause: The send buffer length passed to PGAXFER was *len*, but the send lengths array was either null or contained a send count of zero.

Action: Check that the PGDL or COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions.

PGA-20937: receive buffer length is *number* but no receive lengths were specified

Cause: The receive buffer length passed to PGAXFER was *len*, but the receive lengths array was either null or contained a receive count of zero.

Action: Check that the PGDL or COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL TIP was generated by PGAU using the correct definitions.

PGA-20938: send lengths array too small (*number*) to contain a valid send count

Cause: The send lengths array passed to PGAXFER was too small to contain a valid send item count. The actual length of the send lengths array was *len*. The minimum length of the send lengths array is 4 bytes.

Action: If the TIP was generated by PGAU, ensure that it was not modified incorrectly. If the TIP was not modified, supported customers should contact Oracle Worldwide Support for assistance. If the TIP was modified or was not generated by PGAU, correct the send lengths array passed to PGAXFER.

PGA-20939: receive lengths array too small (*number*) to contain a valid receive count

Cause: The receive lengths array passed to PGAXFER was too small to contain a valid receive item count. The actual length of the receive lengths array was *len*. The minimum length of the receive lengths array is 4 bytes.

Action: If the TIP was generated by PGAU, ensure that it was not modified incorrectly. If the TIP was not modified, supported customers should contact Oracle Worldwide Support for

assistance. If the TIP was modified or was not generated by PGAU, correct the receive lengths array passed to PGAXFER.

PGA-20945: unable to log on to Oracle for transaction logging

Cause: The gateway server was unable to connect to the Oracle server where the transaction log table is stored. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. If the protocol is SNA: also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. If the protocol is TCP/IP: also check the PGA_TCP_DB, PGA_TCP_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20947: unable to bind variable *string* for transaction logging

Cause: The gateway server was unable to bind variable *var* for use in performing transaction logging functions. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20948: unable to prepare the statement for transaction logging

Cause: The gateway server was unable to prepare the statement to be used to call the transaction logging PL/SQL stored procedure. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Verify that the transaction logging PL/SQL procedure has been properly installed into the Oracle server under the userid and password specified by PGA_LOG_USER and PGA_LOG_PASS and that it is executable. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20949: unable to define variable *string* for transaction recovery

Cause: The gateway server was unable to define variable *var* to be used in accessing the transaction log table during recovery processing. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Refer to the Oracle Server Messages and Codes Manual for information on the Oracle server message.

PGA-20950: unable to perform *string* on transaction log

Cause: The gateway server was unable to insert, update, or delete a pending transaction row in the transaction log table. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the PGA_LOG_DB, PGA_LOG_USER, and PGA_LOG_PASS parameters in the gateway init file and ensure that they specify the correct database string, userid, and password, respectively. Verify that the transaction logging PL/SQL stored procedure and the transaction log table have been properly installed into the Oracle server under the userid and password specified by PGA_LOG_USER and PGA_LOG_PASS. Refer to the Oracle Server Message and Codes Manual for information on the Oracle server message.

PGA-20960: missing *string* parameter, required when PGA_CAPABILITY=*string*

Cause: The PGA_CAPABILITY parameter specified *cap*, but another required parameter, *parm*, was omitted.

Action: Add the missing parameter to the gateway initialization file. Refer to Appendix A, 'Gateway Initialization Parameters', in the Oracle Database Gateway for APPC Installation and Configuration Guide for information on required parameters.

PGA-20961: synclevel 1 conversations not allowed when PGA_CAPABILITY=2_PHASE

Cause: A conversation was requested at synclevel 1. The gateway init file specified PGA_CAPABILITY=2_PHASE. When 2-phase commit is enabled, synclevel 1 conversations are not supported, since they are not protected by 2-phase processing.

Action: Either use synclevel 2 for the conversation (if the remote transaction program supports it) or use a different gateway SID for this conversation.

PGA-20962: synclevel 2 conversations not currently allowed

Cause: A conversation was requested at synclevel 2, but the SNA software allocated the conversation at synclevel 0 or 1. This means that the SNA software is not configured to support synclevel 2, or has no RRM enabled.

Action: Correct the SNA software configuration to support synclevel 2 and to enable RRN processing.

PGA-20963: side profile *string* specifies the wrong local LU name (*string*)

Cause: The Side Information profile *profile* specified for this conversation has a local LU name *lu* that is different from the local LU name specified by the PGA_LOCAL_LU gateway initialization parameter.

Action: This message will be accompanied by message PGA-20984, which provides the local LU name that was specified by the PGA_LOCAL_LU gateway initialization parameter. The Side Information profile must be changed to use the same local LU name.

PGA-20964: local LU name specified by PGA_LOCAL_LU is *string*

Cause: Message PGA-20963 was issued. This message always follows.

Action: See message PGA-20963.

PGA-20965: syncpoint error: expecting *string* PS header, received *string*

Cause: During the processing of a 2-phase commit, an incorrect response was received from the remote transaction program following a syncpoint control command. The response received was *rcv* and not a *pstype* PS header as expected.

Action: This is an error in the remote transaction program or the remote OLTP. Check the remote system for error messages from the OLTP. Contact the system administrator for the remote system to assist in problem determination.

PGA-20966: syncpoint error: sent *string*, expecting *string*, received *string*

Cause: During the processing of a 2-phase commit, an incorrect response *resp* was received from the remote transaction program following a syncpoint control command *psh*. The expected response was *exp*.

Action: This is an error in the remote transaction program or the remote OLTP. Check the remote system for error messages from the OLTP. Contact the system administrator for the remote system to assist in problem determination.

PGA-20967: 2-phase commit recovery attempted, DBA action required

Cause: The recovery process of the Oracle integrating server has connected to the gateway to perform recovery. However, the gateway cannot perform automatic recovery for this transaction due to unknown heuristic action taken by the target OLTP.

Action: The DBA must attempt to manually resolve the in-doubt transaction. Detailed information on how to proceed is contained in Chapter 8 of the Oracle Database Gateway for APPC Installation and Configuration Guide, in the section titled "Manual Recovery of In-Doubt Transactions".

PGA-20995: communication error: '*string*' failed, rc = *number*, errno = *number*

Cause: An unexpected communications error occurred while executing the AIX SNA Server API *func* function. The function return code is *rc* and the system error number is *errno*. The AIX SNA Server LU6.2 API function return codes and system error numbers are described in the vendor documentation. The SNA system error numbers can also be found in the `/usr/include/luxsna.h` header file on AIX systems.

Action: Determine the cause of the communications error, correct it, and rerun the transaction. If you need assistance, contact your system administrator.

PGA-20999: SIGDANGER received from system - all conversations deallocated

Cause: The system sent a SIGDANGER signal to the server, indicating that there is a shortage of paging space. All currently active conversations are deallocated abnormally.

Action: Contact your system administrator.

PGA-21001: internal error: *string*

Cause: Internal error in the gateway RRM process.

Action: Reproduce the error with tracing enabled to produce a trace file. Supported customers should contact Oracle Worldwide Support for assistance.

PGA-21002: unable to obtain *number* bytes of memory for *string*

Cause: Memory shortage in the gateway RRM process. A request failed to allocate *bytes* of memory for the *usage* area.

Action: Ensure your system has enough available memory to support the RRM.

PGA-21003: memory allocation error in *lxinit*

Cause: Memory shortage in the gateway RRM process.

Action: Ensure your system has enough available memory to support the RRM.

PGA-21004: invalid *string* specified by NLS_LANG

Cause: The *comp* component of the NLS_LANG environment variable was not valid. The component can be the language, territory, or character set.

Action: Correct the invalid component and restart the RRM process.

PGA-21005: no message file found for language '*string*'

Cause: There was no message file available for the language *lang* specified by the NLS_LANG environment variable.

Action: Refer to Appendix J, National Language Support, for a list of message file languages supported by the RRM. If the language required is supported, ensure that the ORACLE_HOME environment variable specifies the gateway's home directory and that the message files are properly installed.

PGA-21006: RRM initialization failed

Cause: The initialization of the gateway RRM process failed.

Action: This message is sent to the system log as an ALERT message when the initialization of the RRM failed before it could initialize the message facility or before it could determine the local LU name for which it was started.

PGA-21010: missing fully-qualified local LU name argument

Cause: The fully-qualified local LU name was not passed as the first argument to the pg4arrm program on the command line.

Action: The fully-qualified local LU name must be specified as the first argument to the pg4arrm program. Reenter the command line with the fully-qualified local LU name specified.

PGA-21011: invalid network name length (*number*), valid range is *number:number*

Cause: The network name portion of the fully-qualified local LU name specified as the first argument to the pg4arrm program is the wrong length (*len*).

Action: The valid range of lengths for the network name is given in the message text by *min:max*. Reenter the command line with a valid network name specified in the fully-qualified local LU name.

PGA-21012: invalid LU name length (*number*), valid range is *number:number*

Cause: The LU name portion of the fully-qualified local LU name specified as the first argument to the pg4arrm program is the wrong length (*len*).

Action: The valid range of lengths for the LU name is given in the message text by *min:max*. Reenter the command line with a valid LU name specified in the fully-qualified local LU name.

PGA-21013: missing period(.) in fully-qualified local LU name

Cause: There is no period (.) in the fully-qualified local LU name specified as the first argument to the pg4arrm program.

Action: A fully-qualified local LU name must contain a network name and an LU name, separated by a period (.). Reenter the command line with a valid fully-qualified local LU name specified.

PGA-21014: invalid character(s) found in network name '*string*'

Cause: One or more invalid characters were found in the network name portion *net* of the fully-qualified local LU name.

Action: The network name must begin with an upper-case alphabetic character or one of the national characters \$, #, or @. Subsequent characters can be upper-case alphabetic,

national, or numeric. Reenter the command line with a valid network name specified in the fully-qualified local LU name.

PGA-21015: invalid character(s) found in LU name '*string*'

Cause: One or more invalid characters were found in the LU name portion *lu* of the fully-qualified local LU name.

Action: The LU name must begin with an upper-case alphabetic character or one of the national characters \$, #, or @. Subsequent characters can be upper-case alphabetic, national, or numeric. Reenter the command line with a valid network name specified in the fully-qualified local LU name.

PGA-21016: RRM initialization failed for LU *string*

Cause: The initialization of the gateway RRM process for local LU *lu* failed.

Action: This message is sent to the system log as an ALERT message when the initialization of the RRM failed for the local LU.

PGA-21017: RRM already active for LU *string*

Cause: The RRM has already been started for the local LU *lu*. A second RRM cannot be started for the same local LU.

Action: Determine whether the RRM is still active and functioning. If it is not, then it may have terminated without cleaning up. On AIX systems, the */tmp/oluname* file may still exist. This will prevent a new RRM from being started. If you have verified that the original RRM is no longer running, you can delete the file to allow a new copy of the RRM to be started.

PGA-21020: error creating path object for init file

Cause: A memory shortage occurred while creating an internal control block for accessing the init file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21021: error creating name object for init file

Cause: A memory shortage occurred while creating an internal control block for accessing the init file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21022: error creating file object for init file

Cause: A memory shortage occurred while creating an internal control block for accessing the init file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21023: error opening init file *string*

Cause: An error occurred opening the init file *ifn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21024: error reading init file *string*

Cause: An error occurred reading the init file *ifn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21025: error closing init file *string*

Cause: An error occurred opening the init file *ifn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21030: invalid keyword in line *number*

Cause: An invalid keyword was encountered in the init file in line number *line*.

Action: Correct the invalid line in the init file and restart the RRM process.

PGA-21031: length of *string* value (*number*) not within valid range (*number:number*)

Cause: The length *len* of the value specified in the init file by the keyword *key* is not within the valid range *min:max*.

Action: Correct the invalid keyword value in the init file and restart the RRM process.

PGA-21032: invalid value specified by *stringstring*

Cause: The value *val* specified in the init file by the keyword *key* is invalid.

Action: Correct the invalid keyword value in the init file and restart the RRM process.

PGA-21033: error(s) found in init file

Cause: One or more errors were found in the init file during RRM initialization. The RRM process has terminated.

Action: Correct all init file errors and restart the RRM process.

PGA-21034: too many errors in init file, cannot continue

Cause: The init file contained more errors than the RRM initialization code could process.

Action: Correct all errors that have been processed so far, and restart the RRM process. Any additional errors will then be processed. This error is received only when the init file contains a very large number of invalid lines.

PGA-21035: value of *string* (*number*) not within valid range (*number:number*)

Cause: The value *val* specified in the init file by the keyword *key* is not within the valid range *min:max*.

Action: Correct the invalid keyword value in the init file and restart the RRM process.

PGA-21040: error creating path object for log file

Cause: A memory shortage occurred while creating an internal control block for accessing the log file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21041: error creating name object for log file

Cause: A memory shortage occurred while creating an internal control block for accessing the log file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21042: error creating file object for log file

Cause: A memory shortage occurred while creating an internal control block for accessing the log file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21043: error opening log file *string*

Cause: An error occurred opening the log file *lfn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21044: error writing to log file *string*

Cause: An error occurred writing to the log file *lfn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21045: error closing log file *string*

Cause: An error occurred closing the log file *lfn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21046: logging switched to system log due to error on log file

Cause: An error occurred writing to the log file, and logging as been switched to the system log facility for the remainder of this RRM execution.

Action: Correct the problem that caused the error on the log file, so that the next restart of the RRM will be able to write to the log file. A common cause for this message is unavailable disk space for the file.

PGA-21050: error creating path object for trace file

Cause: A memory shortage occurred while creating an internal control block for accessing the trace file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21051: error creating name object for trace file

Cause: A memory shortage occurred while creating an internal control block for accessing the trace file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21052: error creating file object for trace file

Cause: A memory shortage occurred while creating an internal control block for accessing the trace file.

Action: Ensure that sufficient memory is available to the RRM process. If the problem persists, supported customers should contact Oracle Worldwide Support for assistance.

PGA-21053: error opening trace file *string*

Cause: An error occurred opening the trace file *tfn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21054: error writing to trace file *string*

Cause: An error occurred writing to the trace file *tfn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21055: error closing trace file *string*

Cause: An error occurred closing the trace file *tfn*.

Action: This message will be followed by an OS-specific message displaying the error information. Use that information to determine the cause of the error and correct it. Then restart the RRM process.

PGA-21056: tracing suspended due to error on trace file

Cause: An error occurred writing to the trace file, and tracing has been suspended for the remainder of this RRM execution.

Action: Correct the problem that caused the error on the trace file, so that the next restart of the RRM will be able to write to the trace file. A common cause for this message is unavailable disk space for the file.

PGA-21060: system errno = *number*

Cause: The system error number was *errno* following a failure in a file operation.

Action: The system error codes are documented in the header file `/usr/include/errno.h`. Determine the cause of the file error and correct it.

PGA-21100: RRM initializing for local LU *string*

Cause: The RRM is initializing for the local LU *llu*.

Action: Informational message.

PGA-21101: initialization parameters read from *string*

Cause: Init parameters were read from the file *ifn*.

Action: Informational message.

PGA-21102: log messages written to *string*

Cause: Log messages will be written to the file *lfn*.

Action: Informational message.

PGA-21103: trace information written to *string*

Cause: Trace information will be written to the file *tfn*.

Action: Informational message.

PGA-21104: trace level currently set to *number*

Cause: The trace level specified by the TRACE_LEVEL parameter is *trc*.

Action: Informational message.

PGA-21105: startup for local LU *string* is warm

Cause: The RRM is warm-starting for the local LU *llu*. The RRM will attempt to restore all LU6.2 log states from the RRM LU6.2 log as it existed at the last RRM shutdown.

Action: Informational message.

PGA-21106: warm start complete for local LU *string*

Cause: The RRM has warm-started for the local LU *llu*. This means that all state information for the local LU and partner LUs with which the RRM has previously communicated was restored from the RRM LU6.2 log as it existed at the last RRM shutdown.

Action: Informational message.

PGA-21107: startup for local LU *string* is cold

Cause: The RRM is cold-starting for the local LU *llu*. The RRM will not retain any LU6.2 log states from the previous execution.

Action: Informational message.

PGA-21108: cold start complete for local LU *string*

Cause: The RRM has cold-started for the local LU *llu*. The RRM has a new local LU6.2 log name and all LU6.2 log names for partner LUs have been erased.

Action: Informational message.

PGA-21109: local log name is x'*string*'

Cause: The local LU's LU6.2 log name is *llog*. Since the log name is not necessarily a printable string, it is listed as a hexadecimal string.

Action: Informational message.

PGA-21110: XLN received from partner LU *string*

Cause: An Exchange Log Names (XLN) GDS variable has been received from the RRM at the partner LU *plu*. This is the first thing that occurs when communication is established with a partner LU for the first time since either the local RRM or the partner RRM was last started.

Action: Informational message.

PGA-21111: partner log name is x'string'

Cause: The partner LU's LU6.2 log name is *plog*. Since the log name is not necessarily a printable string, it is listed as a hexadecimal string.

Action: Informational message.

PGA-21112: creating new log entry for partner LU string

Cause: The RRM is creating an entry in its LU6.2 log for the partner LU *plu*. This happens only the first time that the partner LU's RRM contacts the local RRM since the last cold start of the local RRM.

Action: Informational message.

PGA-21113: warm starting for partner LU string

Cause: The RRM is warm starting for the partner LU *plu*. This happens when the partner LU's RRM is warm starting and is contacting the local RRM for the first time since the local RRM was started.

Action: Informational message.

PGA-21114: cold starting for partner LU string

Cause: The RRM is cold starting for the partner LU *plu*. This happens when the partner LU's RRM is cold starting and is contacting the local RRM for the first time since the local RRM was started.

Action: Informational message.

PGA-21115: shutdown request received

Cause: A shutdown request has been received by the RRM.

Action: Informational message.

PGA-21116: RRM termination complete for local LU string

Cause: The RRM has terminated for the local LU *llu*.

Action: Informational message.

PGA-21200: connect to Oracle Server as string failed

Cause: The RRM was unable to connect as user *user* to the Oracle server where its LU6.2 log information is stored. An Oracle server message will follow this message.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also check the LOG_DB, LOG_USER, and LOG_PASS parameters in the RRM init file and ensure that they specify the correct database string, userid, and password, respectively.

PGA-21201: error selecting PGA_2PC_LUS row for local LU string

Cause: The RRM was unable to read its local LU6.2 log entry. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21202: error updating PGA_2PC_LUS row for local LU string

Cause: The RRM was unable to update its local LU6.2 log entry during warm start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21203: error inserting PGA_2PC_LUS rows for local LU string

Cause: The RRM was unable to create its local LU6.2 log entry during cold start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started again.

PGA-21204: error deleting PGA_2PC_PENDING rows for local LU string

Cause: The RRM was unable to delete the pending transaction entries from its local LU6.2 log during cold start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_PENDING table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started again.

PGA-21205: error deleting PGA_2PC_LUS rows for partner LUs

Cause: The RRM was unable to delete the partner LU entries from its local LU6.2 log during cold start processing. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started again.

PGA-21206: error selecting PGA_2PC_LUS row for partner LU string

Cause: The RRM was unable to read its local LU6.2 log entry for the partner LU. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21207: error inserting PGA_2PC_LUS row for partner LU string

Cause: The RRM was unable to create a local LU6.2 log entry for the partner LU. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21208: error updating PGA_2PC_LUS row for partner LU *string*

Cause: The RRM was unable to update its local LU6.2 log entry for the partner LU. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21209: error selecting PGA_2PC_PENDING rows for partner LU *string*

Cause: The RRM was unable to read the pending transaction entries from its LU6.2 log for the partner LU *plu*. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_PENDING table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21210: unable to open connection with SNA services

Cause: The RRM was unable to initialize its connection with the SNA software for LU6.2 communications. An OS-specific error message precedes this message.

Action: Check the error information in the OS-specific error message to determine the cause of the problem, and take corrective action. Once the problem has been corrected, restart the RRM.

PGA-21211: unable to allocate LU6.2 listen for RRM TP

Cause: The RRM was unable to allocate an LU6.2 listen with the SNA software for LU6.2 communications. An OS-specific error message precedes this message.

Action: Check the error information in the OS-specific error message to determine the cause of the problem, and take corrective action. Once the problem has been corrected, restart the RRM.

PGA-21212: incorrect data received from partner LU *string*

Cause: A partner LU has sent incorrect data in its initial communication with the local RRM. The first data received should be an Exchange Log Names (XLN) GDS variable, but was not.

Action: This error indicates that there is a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21213: received x'*string*'

Cause: This message follows message PGA-00208, and dumps out the first 32 bytes of the data received from the partner LU.

Action: If the data in this message is not sufficient for determination of the problem at the partner LU, use SNA traces on either side of the connection to gather more detailed information, or use the TRACE_LEVEL parameter in the RRM init file to enable SNA data tracing to the trace file.

PGA-21214: incorrect service flag in XLN

Cause: The service flag in the Exchange Log Names (XLN) GDS variable received from the partner LU's RRM is not correct. The XLN is expected to have the REQUEST flag set.

Action: This error indicates that there is a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21215: partner log name mismatch on warm start

Cause: The Exchange Log Names (XLN) GDS variable received from the partner LU's RRM contains an LU6.2 log name that is different from that known by the local LU's RRM.

Action: This can happen if the partner LU was cold started and later warm started, all between the times the local LU's RRM was last shut down and warm started. The local LU's RRM is not aware that the partner LU was cold started, and therefore assumes that the partner LU's RRM is using the wrong LU6.2 log name. Verify that this is what happened, and if so, the local LU's RRM can be forced to accept the new LU6.2 log name from the partner LU's RRM by deleting the local RRM's LU6.2 log entry for the partner LU, and then forcing the partner LU to reinitiate the connection to the local LU. For further information on recovery from this error, refer to "RRM Recovery" in Chapter 12, "2-Phase Commit".

PGA-21216: last stored log name x'*string*'

Cause: This message always follows message PGA-00213, and lists the last partner LU LU6.2 log name *plog* saved by the local LU's RRM.

Action: The log name in the message may be of use to the system administrator for the partner LU in determining the cause for the log name mismatch.

PGA-21217: partner sent log name x'*string*'

Cause: This message always follows message PGA-00214, and lists the LU6.2 log name *plog* sent by the partner LU's RRM in the warm start Exchange Log Names (XLN) GDS variable.

Action: The log name in the message may be of use to the system administrator for the partner LU in determining the cause for the log name mismatch.

PGA-21218: cold start for partner LU *string* rejected, *number* pending transactions exist

Cause: A cold start was requested by the partner LU's RRM, but the local RRM determined that there are still unresolved pending transactions for that LU in the local RRM's LU6.2 log.

Action: If the pending transactions have been resolved, then they must be manually deleted from the local RRM's LU6.2 log before the partner LU's cold start request will be accepted. If the pending transactions have not been resolved, then they must be resolved and then manually deleted from the local RRM's LU6.2 log before the partner LU's cold start request will be accepted.

PGA-21219: recovery action by DBA required for local LU *string*

Cause: A condition has occurred which requires action by the DBA. This message is also sent to the system log as an alert message.

Action: The DBA should examine the RRM log file to determine what action to take. The messages in the log file show what event has occurred that makes DBA action

necessary, and their descriptions in this appendix provide the DBA with a course of action. For further information on recovery, refer to "RRM Recovery" in Chapter 8, "Implementing Two-Phase Commit", of the Oracle Database Gateway for APPC Installation and Configuration Guide.

PGA-21220: logging error limit (*number*) exceeded, RRM shutting down for LU *string*

Cause: The limit of *lim* Oracle errors while accessing the RRM's local LU6.2 log tables has exceeded. The RRM for the local LU *lu* is shutting down.

Action: The DBA should examine the RRM log file to determine what action to take. The messages in the log file will show what Oracle errors have occurred, and the DBA should take whatever corrective action is required.

PGA-21221: commit failed during cold start of local LU *string*

Cause: The RRM was unable to commit updates to its local log during a cold start of local LU *lu*. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21222: commit failed during warm start of local LU *string*

Cause: The RRM was unable to commit updates to its local log during a warm start of local LU *lu*. An Oracle server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21223: commit failed during first-time processing for partner LU *string*

Cause: The RRM was unable to commit updates to its local log during a first-time processing for partner LU *plu*. An Oracle Server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21224: commit failed during cold start of partner LU *string*

Cause: The RRM was unable to commit updates to its local log during a cold start of partner LU *plu*. An Oracle Server message will follow this message, and contains information on the Oracle error.

Action: Ensure that the Oracle server and its TNS listener are both operational. Also ensure that the PGA_2PC_LUS table exists and has not been altered or updated manually. If the table has been tampered with, it may need to be reinitialized and the RRM cold started.

PGA-21300: received no data when expecting data

Cause: The RRM was expecting to receive data from a partner RRM, but received none.

Action: This error indicates that there may be a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21301: invalid control received: *string*

Cause: The RRM received an invalid control flag *control* from a partner RRM.

Action: This error indicates that there may be a problem on the partner LU side of the connection. Corrective action must be taken by the system administrator for that LU.

PGA-21400: ORACLE_HOME environment variable not set

Cause: The ORACLE_HOME environment variable was not set before the RRM was started.

Action: The ORACLE_HOME environment variable must be set to the gateway's ORACLE_HOME directory before the RRM is started.

PGA-21401: ORACLE_HOME environment variable set to null string

Cause: The ORACLE_HOME environment variable was set to a null value.

Action: The ORACLE_HOME environment variable must be set to the gateway's ORACLE_HOME directory before the RRM is started.

PGA-21402: error opening file *string*, fopen errno = *number*

Cause: An error occurred opening the RRM enqueue file *fn* for writing. The error number from fopen is *errno*.

Action: Use the *errno* value to determine the cause of the problem and correct it before restarting the RRM.

PGA-21403: error writing to file *string*, fputs errno = *number*

Cause: An error occurred writing to the RRM enqueue file *fn*. The error number from fputs is *errno*.

Action: Use the *errno* value to determine the cause of the problem and correct it before restarting the RRM.

PGA-21404: error closing file *string*, fclose errno = *number*

Cause: An error occurred closing the RRM enqueue file *fn*. The error number from fclose is *errno*.

Action: Use the *errno* value to determine the cause of the problem and correct it before restarting the RRM.

PGA-21405: error deleting file *string*, remove errno = *number*

Cause: An error occurred deleting the RRM enqueue file *fn* during shutdown. The error number from remove is *errno*.

Action: Use the *errno* value to determine the cause of the problem and correct it before restarting the RRM. The file *fn* must be manually deleted before attempting to start the RRM.

PGA-21450: communication error: '*string*' failed, errno = *number*

Cause: The AIX SNA function *func* failed with a system error number of *errno*.

Action: The AIX SNA error codes are documented in the IBM manual AIX SNA Server: Diagnosis Guide and Messages. Use this manual to determine the cause of the problem and correct it. AIX SNA system error numbers are also documented in the `/usr/include/luxsna.h` header file on AIX systems.

PGA-21451: SNA Server is shutting down

Cause: SNA Server is being shut down and sent a SIGUSR1 to the RRM.

Action: The RRM must terminate when this occurs. Contact the system administrator to determine the cause of the SNA Server shutdown. Restart the RRM after SNA Server has been restarted.

PGA-22001: remote host name is null.

Cause: TCP/IP protocol has returned "null" for the remote host name.

Action: Verify the remote host name via the pg4tcpmap tool and re-execute your PL/SQL statement. If the problem cannot be resolved, supported customers should contact Oracle Support Services.

PGA-22002: communication error: TCP/IP string failed, rc = number

Cause: The function *func* has failed with the return code of *rc*.

Action: If the problem cannot be resolved, the supported customers should contact Oracle Support Services for assistance.

PGA-22003: communication error: TCP/IP string failed, rc = number, for, string

Cause: An unexpected communications error occurred while executing the specified TCP/IP function *func*. The TCP/IP function return code is *rc* and the function *func* parameter is *parm*.

Action: If the problem cannot be resolved, the supported customers should contact Oracle Support Services for assistance.

PGA-22004: length of the total message value (number) not within valid range (number:number)

Cause: The length *len* for the value is not within the valid range *min:max*.

Action: If the problem cannot be resolved, the supported customers should contact Oracle Support Services for assistance.

PGA-22005: invalid socket file descriptor: no active conversations were found

Cause: There were no TCP/IP conversations active for the user.

Action: Check that the application is not calling the PL/SQL TIP routines out of sequence.

PGA-22006: Parameter string is not specified.

Cause: Parameter *parm* is missing from the gateway initialization file.

Action: Add the missing parameter to the gateway initialization file. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required initialization parameters for gateways using TCP/IP.

PGA-22007: user ID string length of number is invalid; maximum length is number

Cause: The user id *uid* is too long *len* to be used. The maximum allowable length for the user ID is *max* characters.

Action: The user id must be changed to a shorter value for OCI logon to the table PGA_TCP_IMSC. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required gateway initialization parameters for gateways using TCP/IP.

PGA-22008: password length of *number* is invalid; maximum length is *number*

Cause: The password is too long (*len*) to be used. The maximum allowable length for the password is *max* characters.

Action: The password must be changed to a shorter value for OCI logon to the table PGA_TCP_IMSC. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required gateway initialization parameters for gateways using TCP/IP.

PGA-22009: database name *string* length of *number* is invalid; maximum length is *number*

Cause: The database name *db name* is too long (*len*) to be used. The maximum allowable length for the database name is *max* characters.

Action: The database name must be changed to a shorter value for OCI logon to the table PGA_TCP_IMSC. Refer to the Oracle Database Gateway Installation and Configuration Guide for the required gateway initialization parameters for gateways using TCP/IP.

PGA-22010: userid *string* length of *number* is invalid; maximum length is *number*

Cause: The userid *uid* is too long (*len*) to be used with TCP/IP RACF conversation security. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to either SAME or PROGRAM.

Action: The userid must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. The maximum allowable length for the userid is *max* characters. This restriction is imposed by RACF, not by the gateway.

PGA-22011: password length of *number* is invalid; maximum length is *number*

Cause: The password is too long (*len*) to be used with TCP/IP RACF conversation security. This can occur only when the gateway initialization parameter PGA_SECURITY_TYPE is set to PROGRAM.

Action: The password must be changed to a shorter value on both the client system and the system where the remote transaction program is being executed. The maximum allowable length for the password is *max* characters. This restriction is imposed by RACF, not by the gateway.

PGA-22012: IMS Connect error: return code = *string*, reason code = *string*

Cause: An unexpected IMS Connect error occurred while executing the 'recv' function. The return code *rc* and reason code *rsc* are provided in the message text. For more information, look at the OLTP SDSF log and IMS Connect error message which starts with HWS. The messages are documented in the IBM IMS Connect Guide and Reference manual.

Action: Determine the cause of the error, correct it, and rerun the transaction.

PGA-22014: Transaction code length of *number* exceeds the maximum of *number*

Cause: The transaction code length *len* passed to PGAINIT or PGAINIT_SEC was larger than the maximum allowed length *max*.

Action: Check that the PGDL and COBOL record descriptions used to define the transaction to PGAU are in sync with the transaction program and that the PL/SQL

TIP was generated by PGAU using the correct definitions. If modifications have been made to the generated PL/SQL code, check that they are correct.

PGU-00100 to PGU-50101

PGU-00100: invalid SPOOL file name

Cause: When using the SPOOL command, you specified the name of a file that already exists.

Action: Specify a valid name for a file that does not currently exist.

PGU-00101: extraneous text at end of command

Cause: There were unrecognized commands or other text on the command line.

Action: Check the syntax of the command, then issue the command again.

PGU-00106: invalid ECHO switch

Cause: An invalid option for the SET ECHO command was specified.

Action: Use either ON or OFF as an option for the SET ECHO command.

PGU-00107: invalid TERMOUT switch

Cause: An invalid option for the SET TERMOUT command was specified.

Action: Use either ON or OFF as an option for the SET TERMOUT command.

PGU-00108: invalid TIMING switch

Cause: An invalid option for the SET TIMING command was specified.

Action: Use either ON or OFF as an option for the SET TIMING command.

PGU-00110: illegal SET option

Cause: An invalid option for the SET command was specified.

Action: Check the syntax of the SET command and issue the command again.

PGU-00111: illegal SHOW option

Cause: An invalid option for the SHOW command was specified.

Action: Check the syntax of the SHOW command and issue the command again.

PGU-00115: unexpected end of command

Cause: An option was specified without the required arguments.

Action: Check the syntax of the command and enter the command again with the appropriate arguments for options that require values.

PGU-00120: invalid STOPONERROR switch

Cause: An invalid options switch was specified for the SET STOPONERROR command.

Action: Use either ON or OFF as an option for the SET STOPONERROR command.

PGU-00122: invalid SET numeric parameter

Cause: A character or an invalid value was specified when a number was expected as a value for a SET command option.

Action: Check the syntax of the command, use an appropriate number for the option, and enter the command again.

PGU-00125: integer value overflow

Cause: A numeric value was specified that was too large.

Action: Use a smaller number.

PGU-00129: value out of range (1 - number)

Cause: The specified value was out of range. The valid range is given by the error message.

Action: Use a number within the range specified by this message.

PGU-00132: null hostname/password specified

Cause: The hostname/password was not specified.

Action: Specify the correct hostname/password.

PGU-00136: bad variable specification

Cause: A variable was incorrectly specified using the VARIABLE command.

Action: Check the syntax of the command, then issue the command again.

PGU-00137: syntax error in PL/SQL Block

Cause: The PL/SQL block contains a syntax error.

Action: Correct the syntax error.

PGU-00142: cannot recognize object type, owner or name

Cause: The specified object type, owner, or name was not recognized.

Action: Specify a legal object type, owner, or name.

PGU-00143: variable has not been defined

Cause: The specified variable was not recognized.

Action: Specify an existing variable.

PGU-00144: invalid object type for DESCRIBE

Cause: The specified object type was not TABLE, VIEW, or PROCEDURE.

Action: Check that the object is a table, view, or procedure. If so, check that you specified the correct name and try again. If not, you describe the object.

PGU-00145: invalid object name for DESCRIBE

Cause: The specified table, view, stored procedure, or function was not recognized.

Action: Check the spelling and be sure to specify an existing table, view, stored procedure, or function.

PGU-00149: invalid SERVEROUTPUT switch

Cause: An invalid option was specified for the SET SERVEROUTPUT command.

Action: Check the syntax of the command, then issue the command again.

PGU-00300: internal error code; arguments: [number], [string]

Cause: You have encountered an internal error.

Action: Supported customers should contact Oracle Worldwide Support and provide the circumstances leading to the error and the complete set of messages.

PGU-00302: not connected to a database

Cause: You must be connected to the database for the requested operation.

Action: CONNECT to the database using a valid username and password before retrying the operation.

PGU-00304: input file I/O error [number] - input aborted

Cause: A command file used as input to PGAU is corrupt or invalid.

Action: Check the file before retrying the operation.

PGU-00305: command size exceeds internal buffer size (number)

Cause: The SQL statement size exceeds PGAU's buffer size.

Action: Shorten the SQL statement by removing extra blanks or by using intermediate statements as views, if necessary.

PGU-00306: monitor cycle interval time out of range (1 - number)

Cause: You entered an invalid number for the cycle interval.

Action: Enter a number between 1 and 3600 for the cycle interval. The number indicates seconds.

PGU-00307: cannot open spool file string

Cause: PGAU tried to open a spool file after you entered SPOOL filename, but could not open the file. Possible causes are not enough disk space or inadequate privileges to create a file.

Action: Determine why PGAU could not create a new file and retry.

PGU-00308: no spool file opened

Cause: You entered SPOOL OFF, but you were not spooling currently so there was no file to close.

Action: If you wish to capture session output, first use the SPOOL command to open a file, and then enter your commands before closing the file with SPOOL OFF.

PGU-00309: cannot close spool file string

Cause: SPOOL OFF could not close the currently open spool file.

Action: Check for an operating system reason that the spool file could not be closed.

PGU-00310: cannot open parameter file string

Cause: PGAU cannot locate or open the file specified by the PFILE option, either because the file does not exist or because PGAU has insufficient privilege to open the file.

Action: Make sure that the file exists in a location expected by PGAU and can be opened.

PGU-00311: data exceeds internal buffer size

Cause: The results returned by a SQL query exceed the internal PGAU buffer.

Action: Use the SET command to increase MAXDATA or decrease ARRAYSIZE.

PGU-00314: invalid parameter given on PGAU command line

Cause: An unrecognized parameter was given on the PGAU command line.

Action: Check the parameters given on the PGAU command line.

PGU-00315: cannot open command file *string*

Cause: PGAU cannot locate the specified command file.

Action: Verify the file's name and PGAU's access to it before retrying.

PGU-00317: version of tool conflicts with version [*string*] of DATA

Cause: This version of the PGAU tool cannot process the DATA in the database.

Action: You are attempting to use a tool that might cause damage to the current database. If the version of DATA is greater than the version of the tool, then you are using the wrong version of the tool. If the version of the tool is greater than the version of the DATA, check to see if there is an ORACLE-supplied SQL script to update the DATA to the correct version level.

PGU-00318: PGAU command line error [*number*]

Cause: You made a syntax or typing error while entering a PGAU command line.

Action: Check the syntax and try again.

PGU-00319: cannot locate pgau configuration file, *string*

Cause: File mentioned cannot be located.

Action: Make sure that the specified file exists before re-running PGAU.

PGU-00320: cannot open pgau configuration file, *string*

Cause: File mentioned cannot be opened.

Action: Make sure that the specified file is available for use by PGAU.

PGU-00322: total size of command line parameters exceeds buffer size

Cause: You entered too many command line arguments and the PGAU buffer was exceeded.

Action: Reduce the number of command line arguments.

PGU-00325: pfile too large

Cause: The file you specified using PFILE is too large (exceeds 8K).

Action: Reduce the size of the parameter file before specifying it again with PFILE.

PGU-00327: command not available in this mode

Cause: You have specified a command that is not available in this mode.

Action: Do not specify the command.

PGU-00328: insufficient privilege for this display

Cause: You attempted to display a MONITOR display without sufficient privileges.

Action: Contact the DBA to obtain the required privileges.

PGU-00331: cannot allocate enough memory for SQL Buffer

Cause: There is not enough memory for the current SQL buffer.

Action: Use the SET command to reduce MAXDATA.

PGU-00337: missing instance name

Cause: The instance name was not specified in the connect statement.

Action: Use 'connect username/password@instance' or 'connect username/password'.

PGU-00341: 'string' is an undefined bind variable

Cause: The SQL statement refers to an undefined bind variable.

Action: Use the VARIABLE statement to define the bind variable and re-execute the query.

PGU-00347: no offline tablespaces exist

Cause: The list box of set tablespace online contained 0 elements.

Action: No action is required.

PGU-00359: monitor already active

Cause: An instantiation of this monitor is already active.

Action: Cycle through windows until this monitor becomes visible.

PGU-00360: object to be described does not exist

Cause: The object in a DESCRIBE FUNCTION/PROCEDURE/PACKAGE statement does not exist.

Action: check that the object name and owner are correct and that the object exists.

PGU-00361: error during describe

Cause: An unexpected error occurred during a describe.

Action: Check the following error and correct the problem.

PGU-00362: object *string* is a package; use 'DESCRIBE *package.procedure*'

Cause: The named object is a package. DESCRIBE does not currently describe an entire package specification.

Action: Describe the package specification, as indicated in the message text.

PGU-00363: procedure or function *string* not found in the package

Cause: The named package does not contain the procedure or function specified.

Action: Specify a procedure or function within the package.

PGU-00364: object *string* is a remote object, cannot further describe

Cause: The specified object name contains a database link, or is a synonym that resolves to a name with a database link. Such objects cannot currently be described.

Action: Specify a local object.

PGU-00365: object *string* is invalid, it may not be described

Cause: The object must have been successfully compiled.

Action: Fix any errors in the object and recompile.

PGU-00366: name *string* is malformed, it must be of form [[a.]b.]c@dblink

Cause: The name may have at most 3 parts and a dblink.

Action: Use a well-formed object name.

PGU-00370: mandatory field/list needs to be filled in

Cause: You tried to execute the dialog before filling in all required items.

Action: Fill in all required items and retry.

PGU-00371: cannot open/locate input help file, *string*

Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: Put the help file in the location specified.

PGU-00372: cannot open/locate input index file, *string*

Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: Put the index help file in the location specified.

PGU-00373: cannot allocate memory of size *number* from toolkit

Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: Exit PGAU and re-enter and try again.

PGU-00374: could not set file position in *string* directly

Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: The fseek() routine failed. Alternate chosen - no action is necessary.

PGU-00375: unexpected end of file, *string*

Cause: You pressed the Help Key or chose an item from the Help Menu.

Action: Exit PGAU and install the correct help file.

PGU-00376: mandatory field has to be filled in before navigation is possible

Cause: Attempted to navigate to the next/previous item.

Action: Fill in current field and then go to the next/previous item.

PGU-00377: mandatory list item has to be selected before navigation is possible

Cause: Attempted to navigate to the next/previous item.

Action: Select an item and then go to the next/previous item.

PGU-00378: an item has to be selected before help can be sought for it

Cause: Attempted to obtain help before selecting an item.

Action: Select an item first and re-execute.

PGU-00379: variable(s) not defined

Cause: Attempted SHOW VAR[IABLES] [var-name] and the variable was not defined, or no variables were specified or defined.

Action: Ensure the variables are correctly defined.

PGU-00380: procedural option required for this statement

Cause: Attempt to execute a statement that requires the Procedural option was made, but the Procedural option is not installed.

Action: This statement cannot be issued without the Procedural option. Install the Procedural option to execute this statement.

PGU-00381: error in the SERVEROUTPUT option

Cause: Most likely the package DBMS_OUTPUT not installed. Check the accompanying messages for more information.

Action: Check accompanying messages and take appropriate action.

PGU-00382: value *string* is not a recognizable file name for *string*

Cause: The value for the PGAU initialization variable (which points to the initialization file) is not a recognizable file name.

Action: Specify a valid file name or do not define the variable to avoid running the initialization file.

PGU-00383: file name *string* pointed to by *string* could not be opened

Cause: The file name pointed to by the PGAU initialization variable could not be opened.

Action: Specify an available file or do not define the variable to avoid running the initialization file.

PGU-00384: could not open pgau resource file, *string*

Cause: The specified file could not be opened.

Action: Make the file available to PGAU.

PGU-00385: could not locate pgau resource file, *string*

Cause: The specified file could not be located.

Action: Make sure file exists before rerunning PGAU.

PGU-00386: could not open toolkit resource file, *string*

Cause: The specified file could not be opened.

Action: Make the file available to PGAU.

PGU-00387: could not locate toolkit resource file, *string*

Cause: The specified file could not be located.

Action: Make sure file exists before rerunning PGAU.

PGU-00388: cannot start PGAU in screen mode; check if values are legal:

Cause: A variable was not properly set.

Action: Check the values listed by PGAU to see if they are correct.

PGU-00389: toolkit resource file name is defined to *string*

Cause: The specified file could not be located.

Action: Ensure the file specified exists and can be accessed.

PGU-00390: terminal type *string* is defined by *string*

Cause: Terminal type specified by *variable* may not be valid.

Action: Ensure the terminal specification is correct.

PGU-00391: value *string* is defined to *string*; legal values: *string* or *string*

Cause: The PGAU mode has been incorrectly defined.

Action: Define the value of the variable as one of the legal values.

PGU-20000: *string* of *string* statement failed for table *string*, *rc=number*

Cause: PGAU encountered a syntax error during parse operation *oper* of the statement *statement* for the table *table* with the indicated return code *rc*.

Action: Check the PGAU statement identifier names for proper spelling and punctuation, or other syntax errors.

PGU-20001: *string* of *string* variable of *string* statement failed for table *string*, *rc=number*

Cause: The operation *oper* on the variable *varname* for the statement *statement* against the PG DD table *table* failed with return code *rc*.

Action: A semantic error has occurred. Check all the identifier names in the PGAU script.

PGU-20002: unable to login to Oracle

Cause: An error occurred attempting to logon to the Oracle server. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational.

PGU-20003: unable to open the cursor

Cause: Internal PGAU logic error - should not occur. An error occurred opening an SQL statement cursor. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20004: unable to close the cursor

Cause: Internal PGAU logic error - should not occur. An error occurred closing an SQL statement cursor. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20005: unable to commit PG DD changes

Cause: Internal PGAU logic error - should not occur. An error occurred attempting to commit changes to the PG DD. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20006: unable to logout from Oracle

Cause: Internal PGAU logic error - should not occur. An error occurred during logoff from the Oracle server. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-20007: unable to rollback PG DD changes

Cause: Internal PGAU logic error - should not occur. An error occurred attempting to rollback changes from the PG DD. Syntax checking only continues with the next statement.

Action: Ensure that the Oracle server containing the PG DD is operational. Otherwise, reproduce the error with symptom documentation. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-30000: transaction *string*, version *string* specification generated to file *string*

Cause: PGAU successfully completed generation of the TIP specification for transaction *trancode* and version *version* into file *fileid*.

Action: None required. This is an informational message.

PGU-30001: PGAU internal error - *string*

Cause: An internal PGAU operation error has occurred.

Action: Supported Customers should contact Oracle World Wide Support for assistance.

PGU-30002: >>> Initialization of *string* File Header <<<

Cause: This record is written to the Trace or Log file upon initialization.

Action: This is an informational message only.

PGU-30003: transaction *string*, version *string* body generated to file *string*

Cause: PGAU successfully completed generation of the TIP body for transaction *trancode* and version *version* into file *fileid*.

Action: None required. This is an informational message.

PGU-30008: failure to open file *string*

Cause: Before complete initialization of LMS functions, PGAU tracing or logging to disks was requested, but PGAU failed to open the indicated trace or log file. *fileid*.

Action: Ensure that write access exists to the file and that space for file growth is available.

PGU-30009: failure to close file *string*

Cause: After termination of LMS functions,PGAU tracing or or logging to disks had been requested, but PGAU failed to close the indicated trace or log file. *fileid*.

Action: Ensure that write access exists to the file and that space for file growth is available.

PGU-30010: failure to obtain *string* bytes of storage for *string*

Cause: Before complete initialization of LMS functions, PGAU failed to obtain *bytes* of storage for *use*, commensurate with LMS initialization.

Action: Increase the total amount of private storage available to PGAU during operation.

PGU-30012: invalid language environment (*string*), default used

Cause: Before complete initialization of LMS functions, the environment variable LANGUAGE specified an invalid Oracle NLS language *lang*. The language environment variable SSTDLANG setting was used as the default.

Action: Correct the LANGUAGE environment variable to specify a valid Oracle NLS Language.

PGU-30014: pgau message file *string* not found

Cause: Before complete initialization of LMS functions, the PGAU message file *fileid* could not be located.

Action: Ensure that the Oracle message file resides in \$ORACLE_HOME/pg4appc/mesg directory and is not damaged. Valid fileid's are of the form pguxx.msb where xx is the country code.

PGU-30024: memory allocate failure: *string* for *string* bytes

Cause: Insufficient memory available. Storage failed to be allocated for the reason *purpose* of the size *len* specified.

Action: Increase the total amount of private storage available to PGAU during GENERATE operation.

PGU-30026: open failure: file *string* in *string* mode

Cause: Error during fopen processing *file* for *mode* access.

Action: Ensure PGAU has access to the file specified, and write access if file is used for output.

PGU-30028: file *string* failure: *string* rc *string*

Cause: An error occurred during *oper* processing for the file *fileid* with return code *rc*. File operations include: 'fclose' to close input or output files 'remove' to erase, delete, or remove output files

Action: Ensure PGAU has access to the file specified, and write access if file is used for output.

PGU-30030: read failure: *string* from *string* after offset *string*

Cause: Error during fgets *oper* processing for *file* at *offset* bytes into the file.

Action: Ensure PGAU has access to the file specified.

PGU-30031: write failure: *string* to *string* at *number* for *string* bytes

Cause: Error during fputs *oper* processing for *file* from buffer at *addr* for *len* bytes of data.

Action: Ensure PGAU has access to the file specified, and that disk space is available for file growth.

PGU-30032: write log failure: rc %4li, message no was *string*

Cause: fprintf returned the error code *rc* attempting to print PGAU error message number *msgno*. The indicated event message was being written when the error occurred.

Action: Check to insure that PGAU has write access to the pgau.log file and that disk space is available for file growth.

PGU-30033: write trace failure: rc %4li, message no was *string*

Cause: fprintf returned the error code *rc* attempting to print PGAU trace message number *msgno*. The indicated trace message was being written when the error occurred.

Action: Check to insure that PGAU has write access to the pgau.trc file and that disk space is available for file growth.

PGU-30035: file control failure: *string* for *string*, rc *string*

Cause: Error during control function *oper* processing for *file* with error code *rc* returned.

Action: Ensure PGAU has access to the file specified, and that disk space is available for file growth.

PGU-30036: no ORACLE_HOME environment variable available

Cause: The ORACLE_HOME environment variable setting is missing or invalid.

Action: Correct the ORACLE_HOME environment variable to specify the current Oracle home directory.

PGU-30120: missing *string* attribute for parm *string*, field *string* f#*string*

Cause: The parameter *parm* specifies an aggregate data record for which field *field* with PG DD field id number <f#> was being processed, but the field had no relative level attribute *attr*. Typical relative level attributes are: nn ... COBOL-clauses for IBMVSCOBOLII 'LEVEL' attribute Each attribute is stored as a separate row in the PG DD, and the missing attribute's row may have been deleted from the PG DD.

Action: Check the PG DD to ensure that the failing field has a level attribute assigned.

PGU-30122: level limit: field f#=*string* nest level *string* exceeds *string* of *string*

Cause: PGAU was processing nested records when the next field <f#> for nest level *lev* exceeded the product defined minimum or maximum nest level *limit*.

Action: Simplify the data record definition to reduce nest levels.

PGU-30123: level limit: level *string* field *string* can't follow level *string*

Cause: PGAU was processing nested records when the next field at level *levN*, identified by <fld#>, occurred after fields at current level *levC*. Additional fields at intermediate levels should have preceded this field. This error happens when special fields such as COBOL RENAMES (at LEVEL 66) appear next after the level 01 definition.

Action: Correct the data record definition to place the special fields in their proper sequence, and/or insert fields being modified ahead of the special modifying field.

PGU-30220: allocate failure: *string* storage of *string* bytes

Cause: Insufficient memory available for the specified purpose. Requestor attempted to allocate a *type* control block of *len* size specified.

Action: Increase the total amount of private storage available to PGAU during GENERATE operation.

PGU-30233: control block load failure: *string* block from PG DD

Cause: Control block of the specified *type* was being loaded with a row from the PG Data Dictionary when an error occurred. A preceding message issued specifies the cause.

Action: Refer to the Action for the preceding message.

PGU-30234: attribute array for *string* exceeded by PG DD rows > *string*

Cause: A control block of the specified *type* was being loaded with attribute rows from the PG Data Dictionary when the *limit* was exceeded.

Action: Reproduce the error with tracing enabled and attempt to determine what PG DD rows are exceeding the attribute limit and delete any possible duplicates. Supported Customers should contact Oracle World Wide Support for assistance.

PGU-30300: work file output error writing *string*

Cause: PGAU encountered an error writing a PL/SQL code segment to the indicated work file *fileid*.

Action: Ensure PGAU has access to the file specified, and that disk space is available for file growth.

PGU-30301: TIP output error appending *string* to *string*

Cause: PGAU encountered an error appending the work file *infile* to the TIP output file *outfile*.

Action: Ensure PGAU has access to both files specified, and that disk space is available for TIP output file growth.

PGU-30302: TIP output error writing function *string* to file *string*

Cause: PGAU encountered an error appending the TIP function definition *func* to the work output file *file*. Error occurred during generation of the TIP Package Specification.

Action: Ensure PGAU has write access to the file specified, and that disk space is available for TIP output work file growth.

PGU-30303: TIP generation error writing variable *string* to file *string*

Cause: PGAU encountered an error appending the TIP variable definition *var* to the work output file *file*. Error occurred during generation of the TIP Package Specification.

Action: Ensure PGAU has write access to the file specified, and that disk space is available for TIP output work file growth.

PGU-30304: TIP generation warning: *string* name truncated to *string* characters

Cause: This is a warning of possible non-unique PL/SQL names. PGAU encountered record field names which combined exceed the maximum PL/SQL name length, and the last field name specified *field* was truncated to the length *len*. The condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Revise the PG DD entries for the defined parameters and either reduce the number of nested record levels or shorten the record field names.

PGU-30305: TIP generation error defining record type *string* for *string*

Cause: An occurred during generation of a nested record type *type* for the indicated field name *name*. This message should be preceded by the specific error. Condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Follow recommended action for the first error message issued.

PGU-30306: TIP generation: invalid PL/SQL parameter mode *string* for *string*

Cause: The parameter call mode *mode* specified for the parameter *parm*. Valid parameter modes are IN, OUT or IN OUT. Probable PG DD content error.

Action: Revise the PG DD entries for the indicated parameter and correct the PL/SQL parameter call mode for the indicated parameter.

PGU-30307: TIP generation: invalid PL/SQL variable type *string* for *string*

Cause: An invalid PL/SQL record type *type* was encountered while generating conversion statements for the data field *field*. The indicated *type* is neither valid PL/SQL nor a nested record type, for the indicated record field *field*. Probable PG DD content error.

Action: Revise the PG DD entries for the indicated parameter and either correct the PL/SQL variable type for the field, or define a corresponding nested record for the field.

PGU-30308: TIP generation: name *string.string* exceeds max length of *string* characters

Cause: The number of nested groups and lengths of their field names in the input data, when concatenated to form a fully qualified PL/SQL record field variable name <recname.varname>, exceeded the maximum length allowed by PL/SQL *maxlen*. Condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Revise the PG DD entries for the defined parameters and either reduce the number of nested record levels or shorten the record field names.

PGU-30309: TIP generation: call *string* parm *string* exceeds PGAXFER *string* limit (*string*)

Cause: The TIP function call *cname* at parm *pname* exchanges too many parameters for the *type* buffers on a PGAXFER RPC. The PGAXFER parameter limit is *limit*. The indicated *type* is either 'SEND' or RECEIVE'. Probable PGAU DEFINE CALL error, coding too many parameters. Note also that IN OUT mode parameters are present in both send and receive buffers and may be causing the excess.

Action: Revise the transaction and call to specify the excessive parameters on an additional function call and include that added call in the transaction definition.

PGU-30314: TIP generation: failure converting record type *string* for *string*

Cause: An occurred during generation of PL/SQL statements for conversion of a nested record type *type* for the indicated field name *name*. This message should be preceded by the specific error. Condition occurred during generation of the TIP Package Specification for parameter variables.

Action: Follow recommended action for the first error message issued.

PGU-30315: TIP generation: parameter conversion error for *string*, *string*

Cause: Failure to generate PL/SQL conversion statements for the indicated parameter data *dname* for function *call*. This message may be preceded by specific messages describing the error. Possible errors include disk access, invalid datatype, and/or missing nested record or field datatype definitions.

Action: Follow recommended action for the first error message issued, and ensure the PG DD entries for the indicated parameter are correct and that disk access is allowed to output work files.

PGU-30316: TIP generation: PL/SQL *string* control logic for *string string*

Cause: Failure to generate PL/SQL statement *stmt* used to control TIP processing of the field *fname* for compiler clause *clause*. Typical IBMVSCOBOLII clauses are: OCCURS (requires FOR/LOOP logic) OCCURS DEPENDING ON (requires FOR/LOOP logic) REDEFINES (requires IF/END IF logic) This message may be preceded by specific messages describing the error. Possible errors include disk access, invalid datatype, and/or missing nested record or field datatype definitions.

Action: Follow recommended action for the first error message issued, and ensure the PG DD entries for the indicated parameter are correct and that disk access is allowed to output work files.

PGU-30317: TIP generation: PL/SQL *string* statements for *string string*

Cause: Failure to generate PL/SQL control logic *stmt* to process TIP parameter *dataname* in function *callname*. This message may be preceded by specific messages describing the error. Possible errors include disk access, invalid datatype, and/or missing nested record or field datatype definitions.

Action: Follow recommended action for the first error message issued, and ensure the PG DD entries for the indicated parameter are correct and that disk access is allowed to output work files.

PGU-30318: TIP generation: *string string*, PL/SQL *string* for *string*

Cause: Data field *d-field* <f#> was referenced by other fields which required PL/SQL statements *stmt* be generated for the value *num*, but an error occurred during the generation of the statements. This message may be preceded by specific messages describing the error. Possible errors include disk access and memory exceeded.

Action: Follow recommended action for the first error message issued, and ensure that disk access is allowed to output work files.

PGU-30319: TIP generation: *string string*

Cause: TIP execution diagnostics for PG Data Dictionary References PKGEX(DR) was requested on the PGAU GENERATE statement, but the PG DD reference for *type* <id#> couldn't be generated. This message may be preceded by specific messages describing the error. Possible errors include disk access and memory exceeded.

Action: Follow recommended action for the first error message issued, and ensure that disk access is allowed to output work files.

PGU-30600: TIP generation: invalid COBOL syntax in *string*:

Cause: The COBOL data field *field* specifies conflicting or invalid PIC *mask* and USAGE *maskopts* clauses. The invalid PIC and USAGE definitions were selected from the PG DD to identify field conversion function calls. PGAU also issues messages 30601 for *mask* and 30602 for *maskopts* .

Action: Use the pgddsf.sql script to reproduce the selected rows and then correct the mask and maskopts columns for the stated field in the PG DD.

PGU-30601: COBOL mask: *string*

Cause: Issued to identify *mask* for the preceding message.

Action: See preceding message.

PGU-30602: COBOL maskopts: string

Cause: Issued to identify *maskopts* for the preceding message.

Action: See preceding message.

PGU-30604: missing string attribute for string

Cause: A COBOL field *field* containing a clause of the form *syntax* required a missing attribute *attr* corresponding to *token*. PGAU issues messages 30603 and 30604 consecutively for *field*, *syntax*, *attr*, and *token*. Typical IBMVSCOBOLII required token attributes are: field OCCURS int-1 TIMES where 'int-1' is the token for attribute 'repgrpff' field OCCURS int-1 TO int-2 TIMES DEPENDING ON name-1 where 'int-1' is the token for attribute 'repgrpvf' 'int-2' is the token for attribute 'repgrpvl' 'name-1' is the token for attribute 'repgrpvm' field RENAMES name-1 THRU name-2 where 'name-1' is the token for attribute 'renamemf' 'name-2' is the token for attribute 'renameml' field REDEFINES name-1 WHEN name-2 = value where 'name-1' is the token for attribute 'remapsmf' 'name-2' is the token for attribute 'remapsmf' 'value' is the token for attribute 'remapswc' or for attribute 'remapswn' field LENGTH IS name-1 where 'name-1' is the token for attribute 'length' Each attribute is stored as a separate row in the PG DD, and the missing attribute's row may have been deleted from the PG DD.

Action: In the PG DD, redefine the referencing data item to restore the missing attribute row.

PGU-30605: TIP generation: invalid COBOL syntax in unknown field:

Cause: An unidentified COBOL field specifies conflicting or invalid PIC *mask* and USAGE *maskopts* clauses. The invalid PIC and USAGE definitions were selected from the PG DD to identify global TIP conversion variables. PGAU also issues messages 30601 for *mask* and 30602 for *maskopts* .

Action: Use the pgddsxf.sql script to reproduce the selected rows and then correct the mask and maskopts columns for the invalid row in the PG DD.

PGU-30606: TIP generation: missing multi-byte NLS name for string:

Cause: The COBOL data field *field* specifies character data in the the PIC *mask* and USAGE *maskopts* clauses which require translation with a multi-byte character set (MBCS), but no Oracle MBCS NLS name was specified. The MBCS-oriented PIC and USAGE definitions were selected from the PG DD to identify field conversion function calls. PGAU also issues messages 30601 for *mask* and 30602 for *maskopts* .

Action: Use the pgddsxa.sql script to reproduce the selected rows and then either correct the mask and maskopts columns for the stated field in the PG DD to not require MBCS translation, or use the PGAU REDEFINE DATA FIELD NLS_LANGUAGE(nlsname) parameter to specify an Oracle MBCS NLS name for the field, or specify the NLS_MBCS(nlsname) parameter on the PGAU DEFINE TRANSACTION statement.

PGU-30611: references missing field string specified for string

Cause: The data field *d-field* containing a clause of the form *syntax* references a missing field *r-field* specified by the clause word *token*. PGAU issues messages 30610 and 30611 consecutively for *d-field syntax r-field* and *token*. Typical IBMVSCOBOLII clause syntax for this error includes: d-field OCCURS int-1 TIMES d-field OCCURS int-1 TO int-2 TIMES DEPENDING ON name-1 d-field RENAMES name-1 THRU name-2 d-field REDEFINES name-1 WHEN name-2 = value d-field LENGTH IS name-1 The clause references a field *r-field* specified by the word *token*. PGAU GENERATE searched previous fields within the current parameter but failed to find the named field *r-field*. The word *token* may be misspelled in the defining clause or the referenced field whose name should match *token* may be missing from, or misspelled in the PG DD.

Action: In the PG DD, redefine the entry for *d-field* to change its clause *token* to specify the correct name of the intended field *r-field*, or redefine the data name of the intended field *r-field* to match the subsequent clause's *token* reference. Also ensure the data field *d-field* containing the clause follows the intended field *r-field* in the data definition.

PGU-30622: unable to insert *string* value for field *string*

Cause: During TIP generation, an attempt to insert a new attribute value for the *attr* attribute for the named field *fname* failed.

Action: Check for an Oracle error message preceding this message to determine the cause of the problem.

PGU-30631: no alignment for environment *string string*, datatype *string string*

Cause: The data field *d-field* <f#> specified an attribute which specifies remote host boundary alignment. The PG DD environment tables were searched for alignment information for environment *ename* compiler *compno* datatype *dtype* datatype alignment group *dagno*, but no entries were found matching these characteristics. PGAU issues messages 30630 and 30631 consecutively for *d-field* <f#> and *ename compno dtype dagno*. PGAU requires the alignment information to properly align the remote host data in the TIP transfer buffers. Supported: environment and compilers are; IBM370 for compiler IBMVSCOBOLII alignment attributes are; *d-field* ... PIC S9(n) *dtype* SYNC *d-field* ... PIC S9(n) *dtype* SYNCHRONIZE datatype values *dtype* may be; COMP COMPUTATIONAL COMP-4 COMPUTATIONAL-4 datatypes grouped under *dagno* by length/alignment: *dagno* = 1 for 2-byte length aligned on 2-byte boundary *dagno* = 2 for 4-byte length aligned on 4-byte boundary Possible causes are: - The TRANSACTION entry in the PG DD for the TIP being generated may have specified an invalid ENVIRONMENT. - The DATA entry in the PG DD being referenced in the TIP function call being generated may have specified an invalid LANGUAGE. - The field datatype and/or length within the DATA entry may be invalid or unsupported. - The PG DD may be unavailable, in which case previous error messages will indicate problems accessing the PG DD.

Action: In the PG DD, redefine the TRANSACTION or DATA entries to correct the specification of ENVIRONMENT, LANGUAGE or the field datatype and attributes. Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-30632: TIP generation: *string string*, *string* ignored for *string*

Cause: The data field *d-field* <f#> specified a modifying clause *clause* which is ignored for datatype *dtype* by the compiler in the remote host environment. For supported: environment and compilers; IBM370 for compiler IBMVSCOBOLII *clause* is ignored when *dtype* is; SYNC | SYNCHRONIZE COMP-3 | COMPUTATIONAL-3 SYNC | SYNCHRONIZE DISP | DISPLAY

Action: This is a warning message, PGAU execution continues. No action is necessary. The user may wish to ensure the resulting TIP data conversion is consistent with the remote host data format.

PGU-30635: TIP generation: *string string*, nested repeating group for *string*

Cause: The data field *d-field* <f#> specified a repeating group clause *clause* while a previous repeating group is active. The repeating group in *d-field* cannot be nested within a previous repeating group. TIP's use PL/SQL tables to implement repeating

groups, and PL/SQL tables are limited to a single key or subscript which cannot support nested repeating groups (a table of tables).

Action: Redefine the data such that the previous repeating group is ended before beginning another repeating group.

PGU-30636: TIP generation: *string string, string* attribute value (*string*) ignored

Cause: The data field *d-field* <f#> specified an attribute *attr* whose value *attrval* is being ignored. Attribute values are ignored for supported: environment and compilers; IBM370 for compiler IBMVSCOBOLII when *attr* is the *attrval* is ignored: SYNC | SYNCHRONIZE LEFT JUST | JUSTIFY LEFT

Action: This is a warning message, PGAU execution continues. No action is necessary. The user may wish to ensure the resulting TIP data conversion is consistent with the remote host data format.

PGU-30637: TIP generation: *string string, string* attribute value (*string*) invalid

Cause: The data field *d-field* <f#> specified an attribute *attr* whose value *attrval* is invalid or unsupported.

Action: In the PG DD, redefine the FIELD entry to correct the attribute clause to specify a supported value.

PGU-35002: failure to open cursor for statement *string*: rc *string*

Cause: Open of an Oracle cursor for the PGAU SQL statement *stmtname* failed with Oracle error *rc*. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35003: failure to parse SQL statement *string* for cursor *string*: rc *string*

Cause: Parsing of the PGAU SQL statement *stmtname* for Oracle cursor *curno* failed with Oracle error *rc*. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35004: failure to bind *string* for cursor *string* statement *string*: rc *string*

Cause: Binding input variable *invar* for Oracle cursor *curno* to the PGAU SQL statement *stmtname* failed with Oracle error *rc*. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35005: failure to define *string* for cursor *string* statement *string*: rc *string*

Cause: Defining output variable *outvar* for Oracle cursor *curno* to the PGAU SQL statement *stmtname* failed with Oracle error *rc*. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35006: failure to execute for cursor *string* statement *string*: *rc string*

Cause: Executing Oracle cursor *curno* PGAU SQL statement *stmtname* failed with Oracle error *rc*. Possible error in PGAU GENERATE statement transaction or version parameters, or possible missing rows or misspelled in the PG DD for the requested transaction. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Check that all call, data, and attribute definitions associated with the requested transaction and version are properly defined in the PG DD. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35007: failure to fetch for cursor *string* statement *string*: *rc string*

Cause: Fetch using Oracle cursor *curno* PGAU SQL statement *stmtname* failed with Oracle error *rc*. Possible error in PGAU GENERATE statement transaction or version parameters, or possible missing rows or misspelled in the PG DD for the requested transaction. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. Check that all call, data, and attribute definitions associated with the requested transaction and version are properly defined in the PG DD. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35008: failure to close cursor *string* for statement *string*: *rc string*

Cause: Close of Oracle cursor *curno* for PGAU SQL statement *stmtname* failed with *rc rc*. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting the PG DD is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35009: no transaction rows for statement *string*, *string string*: *rc string*

Cause: No Transaction rows were fetched from the PG DD for PGAU SQL statement *stmt* with transaction name *tname* and transaction version *tver*. The Oracle error code is *rc*. Either the transaction name and version supplied on the GENERATE statement were invalid or the transaction entry is missing from the PG DD. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the requested transaction and version are properly defined in the PG DD or correct the GENERATE statement.

PGU-35010: no *string* rows for statement *string*, *id no string*: *rc string*

Cause: No *type* rows were fetched from the PG DD for PGAU SQL statement *stmt* with id number *idno*. The Oracle error code is *rc*. Either the parent PG DD entry references an invalid subordinate entry or the entry is missing from the PG DD. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the requested transaction and version are properly defined in the PG DD or correct the GENERATE statement.

PGU-35011: no environment rows for statement *string*, *string string*: *rc string*

Cause: No Environment rows were fetched from the PG DD for PGAU SQL statement *stmt* with environment name *ename* and compiler number *compno*. The Oracle error code is *rc*. Either the environment specified for the transaction or the compiler specified for the data entry in the transaction were invalid, or the entries are missing from the PG DD. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the requested transaction and version are properly defined in the PG DD or correct the GENERATE statement.

PGU-35012: missing transaction entry *string string*

Cause: The transaction *tname tver* was not found in the PG DD. Either the transaction name and version requested in the GENERATE statement were invalid or the transaction specified in a previous DEFINE TRANSACTION *tname* may have been deleted from or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and version definitions in the PG DD or correct the GENERATE statement.

PGU-35013: missing call entry for transaction *string string (string)*

Cause: A call entry under transaction definition *tname tver (tin)* was not found in the PG DD. The call entry associated with the transaction (as specified in a previous DEFINE TRANSACTION ... CALL(*cname*)) may have been deleted from or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and/or call definitions in the PG DD or correct the GENERATE statement to request a different transaction.

PGU-35014: missing parm entry for transaction *string string (string)* call *string string (string)*

Cause: A parameter or data entry for transaction *tname tver (tin)*, call *cname cver (cin)* was not found in the PG DD. The parm or data entry associated with the call (as specified in a previous DEFINE CALL *cname* ... PARS(*dname*)) may have been deleted from or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and/or call definitions in the PG DD or correct the GENERATE statement to request a different transaction.

PGU-35015: missing field entry for transaction *string string (string)* call *string string (string)* parm *string data string string (string)*

Cause: A data field entry for transaction *tname tver (tin)*, call *cname cver (cin)*, parm *relno data dname dver (din)* was not found in the PG DD. The field entry associated with this data (as specified in the input file field position or FIELD(*fname*) of a previous DEFINE or REDEFINE DATA statement) may have been deleted from or altered in the PG DD. This message may be preceded by specific messages describing the error.

Action: Correct the requested transaction and/or call definitions in the PG DD or correct the GENERATE statement to request a different transaction.

PGU-35016: missing formatted conversion entry for transaction *string string*

Cause: For transaction *tname tver*, the data field usage, mask, and maskopts entries were not found in the PG DD. PG DD field entries are selected with usage='PASS' and not null mask and maskopts columns, to identify which data fields will use UTL_RAW

MAKE_..._FORMAT conversions. Possible invalid entries in pga_fields(usage,mask,maskopts) columns. This message may be preceded by specific messages describing the error.

Action: Correct the data definitions for the requested transaction in the PG DD.

PGU-35017: missing environment *string string* for *t# string d# string*

Cause: The combined environment *ename compno* was not found in the PG DD for transaction id# *tin* and data id# *din*. The environment name stored in the transaction entry and the compiler no stored in a call parameter data entry have no environment rows stored in the PG DD environment tables. This message may be preceded by specific messages describing the error.

Action: Ensure the Oracle server supporting the PG DD is active, and that the TRANSACTION ENVIRONMENT name and the DATA LANGUAGE name are defined in the PG DD with supported values. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-35018: failed select for statement *string, string string: rc string*

Cause: No information was fetched from Oracle dual for SQL statement *stmt* with date format *dfmt* and time format *tfmt*. The Oracle error code is *rc*. Either the date and time formats specified are invalid or some other Oracle server error occurred. This message is preceded by an Oracle Server message for the specific error encountered.

Action: Ensure the Oracle server supporting PGAU is active. If the error persists, reproduce the error with tracing enabled. Supported customers should contact Oracle Worldwide Support for assistance.

Cause: Oracle Call Tracing Active. Successful BIND variable operation

Action: None

PGU-39512: OC %7ls %12ls cursor %2li %3ls, rc *string*

Cause: Oracle Call Tracing Active. Successful DEFINE operation

Action: None

PGU-39513: OC %7ls cursor %2li %3ls, rc *string*

Cause: Oracle Call Tracing Active. Successful EXECUTE operation

Action: None

PGU-39514: OC %7ls cursor %2li %3ls, rows *string*, rc *string*

Cause: Oracle Call Tracing Active. Successful FETCH operation

Action: None

PGU-39600: TG TIP *string*, SFD *string*

Cause: TIP package generation tracing active. Successful generation of TIP specification function definition.

Action: None

PGU-39601: TG TIP *string*, SVD *string*

Cause: TIP package generation tracing active. Successful generation of TIP specification variable definition.

Action: None

PGU-39602: TG *string* for *string=string string*, *string l=string o=string*

Cause: TIP package generation tracing active. Successful generation of TIP data conversion logic. This trace entry is written at the completion of generation for every data parameter of a TIP call and field of a data parameter. There should be one trace for every parameter exchanged by the TIP and one trace for every data field of each parameter.

Action: None

PGU-39603: TG DBlink *string*, rpc *string*

Cause: TIP package generation tracing active. Successful generation of specified PGA gateway server RPC.

Action: None

PGU-39604: TG edit var *string* PLS *string*

Cause: TIP package generation tracing active. Successful generation of specified PL/SQL variable conversion.

Action: None

PGU-39605: TG F-chk *string string f#string fl=string stringstring pl=string*

Cause: TIP package generation tracing active. Successful syntax check of cobol field.

Action: None

PGU-39606: TG %8ls=> *string*

Cause: TIP package generation tracing active. Successful syntax check of cobol field. This trace entry is supplemental to 39605.

Action: None

PGU-39607: TG %8ls=> *a#string string string*

Cause: TIP package generation tracing active. Successful syntax check of cobol field numeric attribute This trace entry is supplemental to 39605.

Action: None

PGU-39608: TG %8ls=> *a#string string string*

Cause: TIP package generation tracing active. Successful syntax check of cobol field numeric attribute This trace entry is supplemental to 39605.

Action: None

PGU-39609: TG %8ls=> *a#string string string*

Cause: TIP package generation tracing active. Successful syntax check of cobol field date attribute This trace entry is supplemental to 39605.

Action: None

PGU-39610: TG *string for string #string string, string*

Cause: TIP package generation tracing active. Successful generation of TIP Function. This trace entry is written at the completion of generation for every TIP public function. There should be one trace of this type for every Call defined in the Transaction.

Action: None

PGU-39620: TG rc %4li, *string*

Cause: TIP package generation tracing active. Successful alignment/offset computation

Action: None

PGU-41000: invalid field definition syntax

Cause: An field definition is invalid. There may be invalid punctuation or an invalid keyword present.

Action: Delete invalid punctuation; replace invalid keyword.

PGU-41001: unexpected end of input

Cause: An unexpected end-of-file condition has occurred in the PGAU command stream.

Action: Check the PGAU statement for proper syntax and premature ending on the last line.

PGU-41002: improper REPORT statement

Cause: There is a syntax error in the REPORT statement.

Action: Check for misspelled items or unbalanced parentheses within the REPORT statement.

PGU-41003: invalid data field definition name

Cause: A DEFINE or REDEFINE DATA statement has specified an invalid field name for a field definition. The field name may be missing. A field name must begin with an alphabetic character and contain only alphanumeric characters or an underscore ('_'). Syntax checking only continues with the next statement.

Action: Correct the specification of the field name or its delimiters. Supply the field name if it is missing.

PGU-41004: invalid delimiter

Cause: An invalid delimiter has been found (such as a parenthesis or comma in the wrong place).

Action: The delimiter may have to be deleted. Or there may be tokens missing before the delimiter.

PGU-41005: invalid PGAU statement syntax

Cause: A token has been found which is not a valid PGAU keyword, delimiter, or identifier name. Syntax checking only continues with the next statement.

Action: Correct the PGAU statement.

PGU-41006: value for parameter '*string*' missing

Cause: The parameter keyword *keyword* was properly specified but parameter value was not found. Syntax checking only continues with the next statement.

Action: Supply the missing parameter value or remove the keyword from the PGAU statement. PGAU parameter values should be enclosed in parentheses immediately following the keyword with no intervening space. statement.

PGU-41007: parameter '*string*' was previously specified

Cause: The parameter *dupparm* has been specified earlier in a PGAU statement and is only allowed once. Syntax checking only continues with the next statement.

Action: Remove one of the duplicated specifications from the statement.

PGU-41008: invalid DATA definition dname specified

Cause: An invalid token has been specified for the data name for a DEFINE DATA or REDEFINE DATA statement. A DATA identifier dname must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the DATA dname identifier in the statement.

PGU-41012: invalid PLSDNAME parameter

Cause: The parameter specified in the PLSDNAME clause of a DEFINE or REDEFINE DATA statement does not comply with PL/SQL syntax for PL/SQL variable names. Syntax checking only continues with the next statement.

Action: Correct the PLSDNAME parameter to use a name which complies with PL/SQL syntax for data variables.

PGU-41013: invalid LANGUAGE parameter

Cause: The LANGUAGE parameter in a DEFINE or REDEFINE DATA statement is not a valid PGA Compiler Language. Syntax checking only continues with the next statement.

Action: Correct the LANGUAGE parameter to specify a valid PGA Compiler language. Valid languages are: "IBMVSCOBOLII"

PGU-41014: invalid USAGE parameter

Cause: The USAGE parameter in a DEFINE or REDEFINE DATA statement is not a valid PGAU usage. Syntax checking only continues with the next statement.

Action: Correct the USAGE parameter to specify a valid use. Valid use choices are SKIP, ASIS, PASS, and NULL.

PGU-41015: USAGE parameter was previously specified

Cause: The USAGE parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of USAGE from the PGAU statement.

PGU-41016: LANGUAGE parameter was previously specified

Cause: The LANGUAGE parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of LANGUAGE from the PGAU statement.

PGU-41017: PLSDNAME parameter was previously specified

Cause: The PLSDNAME parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of PLSDNAME from the statement.

PGU-41018: invalid COMPOPTS parameter

Cause: The COMPOPTS parameter in a DEFINE or REDEFINE DATA statement is not a valid compiler option string recognized by PGAU. Syntax checking only continues with the next statement.

Action: Correct the COMPOPTS parameter to specify valid options. The only valid option is 'TRUNC(BIN)'.

PGU-41019: COMPOPTS parameter was previously specified

Cause: The COMPOPTS parameter has already been specified in a DEFINE or REDEFINE DATA statement and is only allowed once per data definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of COMPOPTS from the PGAU statement.

PGU-41020: invalid CALL definition cname specified

Cause: The token is not a valid call identifier name for a DEFINE CALL statement. A CALL identifier cname must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the CALL cname identifier in the statement.

PGU-41021: PKGCALL parameter was previously specified

Cause: The PKGCALL parameter has already been specified in a DEFINE CALL statement and is only allowed once per call definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of PKGCALL from the statement.

PGU-41022: invalid PKGCALL parameter

Cause: The function name specified in the PKGCALL parameter of a DEFINE CALL statement does not comply with PL/SQL syntax for PL/SQL function names. Syntax checking only continues with the next statement.

Action: Correct the PKGCALL parameter to use a name which complies with PL/SQL syntax for function calls.

PGU-41025: invalid VERSION number specified

Cause: The token is not a valid version number in a PGAU DEFINE or UNDEFINE CALL or TRANSACTION statement, or in a GENERATE statement. Valid version numbers are all numeric and must match the Oracle sequence object value reported by a previous DEFINE statement. Syntax checking only continues with the next statement.

Action: Correct the VERSION number in the statement.

PGU-41026: PARMS parameter was previously specified

Cause: The PARMS parameter has already been specified in a DEFINE CALL statement and is only allowed once per call definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of PARMS from the statement.

PGU-41029: invalid TRANSACTION CALL cname specified

Cause: The token is not a valid call identifier name for specifying CALLs in a DEFINE TRANSACTION statement. A CALL identifier cname must begin with an alphabetic character and contain only alphanumeric characters, and must have originated in a previous DEFINE CALL statement. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION CALL cname parameter in the statement.

PGU-41030: NLS_LANGUAGE parameter was previously specified

Cause: The NLS_LANGUAGE parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of NLS_LANGUAGE from the statement.

PGU-41031: parameter 'string' specifies undefined Oracle NLS name 'string'

Cause: The PGAU parameter *parm* specifies an Oracle NLS language name *nlsname* which is not defined on the Oracle server to re PGAU executes. which PGAU is connected. The language *nlsname* is not defined possibly because it was not selected when Oracle was installed, or the GENERATE'd TIPS are intended to execute on another Oracle, or it is not a valid Oracle NLS Language, i.e. misspelled or unsupported. Syntax checking only continues with the next statement.

Action: Correct the parameter value to specify a valid Oracle NLS Language, or install the language, or ensure the TIPS execute on a server which has the NLS language installed, (in which case this message may be considered a warning). Valid languages must begin with an alphabetic character, contain only alphanumeric characters, not exceed 40 characters in length. Supported customers may contact Oracle Worldwide Support for assistance with installing or determining NLS language support for your platform.

PGU-41032: ENVIRONMENT parameter was previously specified

Cause: The ENVIRONMENT parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of ENVIRONMENT from the statement.

PGU-41033: invalid ENVIRONMENT parameter

Cause: The ENVIRONMENT parameter in a DEFINE TRANSACTION statement is not a valid PGA ENVIRONMENT. Syntax checking only continues with the next statement.

Action: Correct the ENVIRONMENT parameter to specify a valid PGA ENVIRONMENT. Valid environments are: "IBM370"

PGU-41034: SIDPROFILE parameter was previously specified

Cause: The SIDPROFILE parameter as already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of SIDPROFILE from the statement.

PGU-41035: invalid SIDPROFILE name specified

Cause: The token is not a valid name for specifying an SNA Side Profile in a DEFINE TRANSACTION statement. A Side Profile name must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION SIDPROFILE parameter in the statement.

PGU-41036: LUNAME parameter was previously specified

Cause: The LUNAME parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of LUNAME from the statement.

PGU-41037: invalid LUNAME name specified

Cause: The token is not a valid name for specifying an SNA LU name in a DEFINE TRANSACTION statement. An LU name must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION LUNAME parameter in the statement.

PGU-41038: TPNAME parameter was previously specified

Cause: The TPNAME parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of TPNAME from the statement.

PGU-41039: invalid TPNAME name specified

Cause: The token is not a valid name for specifying an SNA TP name in a DEFINE TRANSACTION statement. A TP name must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION TPNAME parameter in the statement.

PGU-41040: LOGMODE parameter was previously specified

Cause: The LOGMODE parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of LOGMODE from the statement.

PGU-41041: invalid LOGMODE name specified

Cause: The token is not a valid name for specifying an SNA logmode in a DEFINE TRANSACTION statement. A logmode must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION LOGMODE parameter in the statement.

PGU-41042: SYNCLEVEL parameter was previously specified

Cause: The SYNCLEVEL parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of SYNCLEVEL from the statement.

PGU-41043: invalid SYNCLEVEL value specified

Cause: The token is not a valid value for specifying an APPC SYNC level in a DEFINE TRANSACTION statement. The only values allowed for SYNC level are 0 and 1. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION SYNCLEVEL parameter in the statement.

PGU-41044: invalid TRANSACTION name

Cause: The token is not a valid transaction identifier name in a DEFINE TRANSACTION statement. A transaction name must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the TRANSACTION name parameter in the statement.

PGU-41045: missing call name in DEFINE TRANSACTION

Cause: PGAU DEFINE TRANSACTION syntax requires a call name which was not found. Syntax checking only continues with the next statement.

Action: Correct the DEFINE TRANSACTION statement to specify a call name.

PGU-41046: SIDEPROFILE omitted: all of LUNAME, TPNAME, and LOGMODE required

Cause: If the SNA SIDEPROFILE parameter is not specified, then all three of the LUNAME, TPNAME and LOGMODE parameters must be specified in a DEFINE TRANSACTION statement. Syntax checking only continues with the next statement.

Action: Correct the DEFINE TRANSACTION statement to specify either (1) the SIDEPROFILE parameter, (2) all three of the LUNAME, TPNAME and LOGMODE parameters, or (3) the SIDEPROFILE parameter and any combination of the LUNAME, TPNAME, and LOGMODE parameters.

PGU-41048: CALL parameter was previously specified

Cause: The CALL parameter has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of CALL parameter from the statement.

PGU-41049: DEFINE TRANSACTION parameter *string* previously specified

Cause: The parameter *parm* has already been specified in a DEFINE TRANSACTION statement and is only allowed once per transaction definition. Syntax checking only continues with the next statement.

Action: Remove the second specification of the parameter *parm* from the DEFINE TRANSACTION statement.

PGU-41053: VERSION parameter was previously specified

Cause: The VERSION parameter has already been specified, and is only allowed once in a GENERATE or REDEFINE statement. Syntax checking only continues with the next statement.

Action: Remove the second specification of VERSION from the statement.

PGU-41054: invalid version number in VERSION parameter

Cause: The version number must follow the VERSION keyword enclosed in parenthesis in a GENERATE or REDEFINE statement. Syntax checking only continues with the next statement.

Action: Correct the version number specification in the VERSION parameter.

PGU-41055: invalid FIELD or PLSFNAME name for indicated language

Cause: The token is not a valid field identifier name in the specified language for specifying a FIELD or PLSFNAME parameter in a REDEFINE DATA statement. A field identifier name must obey the naming conventions of the specified language. In COBOL, only alphamerics may be used in addition to the hyphen character and the first character must be alphabetic. Syntax checking only continues with the next statement.

Action: Correct the FIELD or PLSFNAME identifier name in the statement.

PGU-41058: invalid transaction name specified

Cause: The token is not a valid transaction identifier name for a GENERATE statement. A transaction identifier name must begin with an alphabetic character and contain only alphanumeric characters, and must have originated in a previous DEFINE TRANSACTION statement. Syntax checking only continues with the next statement.

Action: Correct the transaction identifier name in the statement.

PGU-41059: PKGNAME parameter was previously specified

Cause: The PKGNAME parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of PKGNAME from the statement.

PGU-41060: invalid PKGNAME name specified

Cause: The token is not a valid identifier name for specifying the PL/SQL TIP package name in a GENERATE statement. A package name identifier must begin with an alphabetic character and contain only alphanumeric characters. Syntax checking only continues with the next statement.

Action: Correct the GENERATE PKGNAME parameter in the statement.

PGU-41061: OUTFILE parameter was previously specified

Cause: The OUTFILE parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of OUTFILE from the statement.

PGU-41063: DIAGNOSE parameter was previously specified

Cause: The DIAGNOSE parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of DIAGNOSE from the statement.

PGU-41064: PGANODE parameter was previously specified

Cause: The PGANODE parameter *keyword* has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of PGANODE from the statement.

PGU-41065: invalid PGANODE name specified

Cause: The token is not a valid PGA node identifier name in a GENERATE statement. A PGA node identifier name must begin with an alphabetic character and contain only alphanumeric characters, and be a valid Oracle DB link name. Syntax checking only continues with the next statement.

Action: Correct the PGANODE parameter in the statement.

PGU-41068: unable to open the input definition file

Cause: An error occurred opening the input definition file specified with the INFILE parameter in a DEFINE or REDEFINE DATA statement. Syntax checking only continues with the next statement.

Action: Ensure that the input definition file exists and read access is allowed to the input definition file.

PGU-41070: COBOL inline definition must start with left-paren at line end

Cause: A COBOL inline definition starts with a left parenthesis. The left parenthesis must be the last character on the line preceding any COBOL data definition statements.

Action: Make sure an inline COBOL data definition starts on a line following a left parenthesis

PGU-41071: missing LANGUAGE parameter

Cause: PGAU DEFINE or REDEFINE DATA syntax requires a LANGUAGE parameter which was not found. Syntax checking only continues with the next statement.

Action: Correct the DEFINE or REDEFINE DATA statement to specify a LANGUAGE parameter.

PGU-41072: OPTIONS parameter was previously specified

Cause: The OPTIONS parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of OPTIONS from the statement.

PGU-41073: repeated OPTIONS subparameter

Cause: The indicated subparameter was previously specified in an OPTIONS parameter. The only valid OPTIONS subparameter is UDF. It may be specified only once per GENERATE statement. Syntax checking only continues with the next statement.

Action: Remove the duplicate subparameter from the OPTIONS specification.

PGU-41075: TRACE parameter was previously specified

Cause: The TRACE parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request. Syntax checking only continues with the next statement.

Action: Remove the second specification of TRACE from the statement.

PGU-41076: repeated TRACE or PKGEX parameter

Cause: The indicated parameter was previously specified in a DIAGNOSE TRACE or PKGEX parameter. The valid TRACE parameters are SE, IT, QM, IO, OC, DD, and TG. The valid PKGEX parameters are DC and DR. Each may be specified only once per GENERATE statement. Syntax checking only continues with the next statement.

Action: Remove the duplicate parameter from the TRACE/PKGEX specification.

PGU-41077: PKGEX parameter was previously specified

Cause: The PKGEX parameter has already been specified in a GENERATE statement and is only allowed once per GENERATE request.

Action: Remove the second specification of PKGEX from the statement.

PGU-41079: data definition *string* version *number* inserted into PG DD

Cause: PGAU inserted the data definition *dname* with version number *dver* as the result of processing a DEFINE DATA statement.

Action: Note the VERSION number of the data definition for future reference.

PGU-41080: call definition *string* version *number* inserted into PG DD

Cause: PGAU inserted the call definition *cname* with version number *cver* as the result of processing a DEFINE CALL statement.

Action: Note the VERSION number of the call definition for future reference.

PGU-41081: transaction definition *string* version *number* inserted into PG DD

Cause: PGAU inserted the transaction definition *tname* with version number *tver* as the result of processing a DEFINE TRANSACTION statement.

Action: Note the VERSION number of the transaction definition for future reference.

PGU-41082: data definition *string* version *number* updated in PG DD

Cause: PGAU updated the data definition *dname* with version number *dver* as the result of processing a REDEFINE DATA statement.

Action: None required. This is an informational message.

PGU-41083: data definition *string* version *number* deleted from PG DD

Cause: PGAU deleted the data definition *dname* with version number *dver* as the result of processing an UNDEFINE DATA statement.

Action: None required. This is an informational message.

PGU-41084: call definition *string* version *number* deleted from PG DD

Cause: PGAU deleted the call definition *cname* with version number *cver* as the result of processing an UNDEFINE CALL statement.

Action: None required. This is an informational message.

PGU-41085: transaction definition *string* version *number* deleted from PG DD

Cause: PGAU deleted the transaction definition *tname* with version number *tver* as the result of processing an UNDEFINE TRANSACTION statement.

Action: None required. This is an informational message.

PGU-41086: length of *string* token exceeds maximum allowed length of *number*

Cause: The object name of type *var* is longer than the maximum length *len* allowed by PGAU. Only syntax checking continues with the next statement.

Action: Reduce the length of the indicated name.

PGU-41087: data name *string* does not exist

Cause: A DEFINE CALL references a data definition name *dname* that does not exist.

Action: Use only previously defined data definitions in a DEFINE CALL statement.

PGU-41088: data name *string* or specified version (*number*) of data name *string* does not exist

Cause: A DEFINE CALL references a data definition name *dname* that does not exist, or specified a non-existent version *dver* of the data definition *dname*.

Action: Use only previously defined data definitions in a DEFINE CALL statement.

PGU-41089: call name *string* does not exist

Cause: A DEFINE TRANSACTION references a call definition name *cname* that does not exist.

Action: Use only previously defined call definitions in a DEFINE TRANSACTION statement.

PGU-41090: call name *string* or specified version (*number*) of call name *string* does not exist

Cause: A DEFINE TRANSACTION references a call definition name *cname* that does not exist, or specified a non-existent version *cver* of the call definition *cname*.

Action: Use only previously defined data definitions in a DEFINE TRANSACTION statement.

PGU-41091: data name *string* does not exist

Cause: An UNDEFINE DATA references a data definition name *dname* that does not exist.

Action: Use only previously defined data definitions in an UNDEFINE DATA statement.

PGU-41092: data name *string* or specified version (*number*) of data name *string* does not exist

Cause: An UNDEFINE DATA references a data definition name *dname* that does not exist, or specified a non-existent version *dver* of the data definition *dname*.

Action: Use only previously defined data definitions in an UNDEFINE DATA statement.

PGU-41093: call name *string* does not exist

Cause: An UNDEFINE CALL references a call definition name *cname* that does not exist.

Action: Use only previously defined call definitions in an UNDEFINE CALL statement.

PGU-41094: call name *string* or specified version (*number*) of call name *string* does not exist

Cause: An UNDEFINE CALL references a call definition name *cname* that does not exist, or specified a non-existent version *cver* of the call definition *cname*.

Action: Use only previously defined call definitions in an UNDEFINE CALL statement.

PGU-41095: transaction name *string* does not exist

Cause: An UNDEFINE TRANSACTION references a transaction definition name *tname* that does not exist.

Action: Use only previously defined transaction definitions in an UNDEFINE TRANSACTION statement.

PGU-41096: transaction name *string* or specified version (*number*) of transaction name *string* does not exist

Cause: An UNDEFINE TRANSACTION references a transaction definition name *tname* that does not exist, or specified a non-existent version *tver* of the transaction definition *tname*.

Action: Use only previously defined transaction definitions in an UNDEFINE TRANSACTION statement.

PGU-41097: language parameter given in REDEFINE DATA conflicts with DEFINE DATA

Cause: The LANGUAGE parameter in a REDEFINE DATA statement for a given dataname specifies a language different than the language originally specified in the DEFINE DATA statement for the given dataname.

Action: Change the LANGUAGE parameter in the REDEFINE DATA statement to that of the original DEFINE DATA statement. The associated language-dependent field definitions must also be changed.

PGU-41100: FIELD parameter on REDEFINE specifies unknown field name (*string*)

Cause: A REDEFINE with the FIELD parameter specifies a field name *fname* that does not currently exist in the data object being REDEFINED.

Action: Specify the correct field name on the FIELD parameter. Use the REPORT DATA statement to list current field names.

PGU-41101: INFILE parameter given on DEFINE DATA with inline data

Cause: An INFILE parameter was found on a DEFINE DATA statement, but an inline data definition was also found. Only one of the two forms is allowed in a single DEFINE DATA statement.

Action: Remove the INFILE specification or the inline data definition.

PGU-41102: data definition missing on *string* DATA

Cause: Neither an inline data definition nor an INFILE parameter was found in a DEFINE DATA or REDEFINE DATA statement. One of these is required in a DEFINE DATA. One of these may be required in a REDEFINE DATA depending on other parameters given.

Action: Specify either an INFILE parameter or an inline data definition.

PGU-41103: INFILE parameter was previously specified

Cause: The INFILE parameter has already been specified in a DEFINE DATA or REDEFINE DATA statement and is only allowed once per data definition or redefinition. Syntax checking only continues with the next statement.

Action: Remove the second specification of INFILE from the statement.

PGU-41105: memory exhausted

Cause: An attempt to allocated memory failed.

Action: Supported customers should contact Oracle Worldwide Support for assistance.

PGU-41106: missing left parenthesis in a GROUP

Cause: Left parenthesis must immediately follow a GROUP verb

Action: Examine source for missing left parenthesis.

PGU-41107: GROUP within a GROUP not allowed

Cause: A GROUP was found within a GROUP.

Action: There is no need to have a recursive GROUP. Delete the inner GROUP along with its enclosing parentheses.

PGU-41108: data definition string does not exist

Cause: A data name, *name*, was specified but does not exist.

Action: Check *name* for a misspelling or, if an explicit version was specified, recheck for a misnumbering. Use the REPORT verb to find out what really exists.

PGU-41109: field name string does not exist in data definition string

Cause: The field name *fld* does not exist in the data definition named *dnm*.

Action: Check the data definition named *dnm* for the existence of a field named *fld*. Use the REPORT verb to find out what really exists in the data definition named *dnm*.

PGU-41110: field name string appears multiple times in data definition string

Cause: A REDEFINE specifies the field name *fld*; this field name is multiply defined in the data definition *dnm*. The field name must be sufficiently qualified to remove the ambiguity so that a unique field may be referenced.

Action: Replace the ambiguous field name *fld* with a sufficiently qualified field name. An example of a qualified field name is SUBFIELD2 OF FIELD1 (or the generic equivalent, FIELD1.SUBFIELD2). It may be easier to just spool the output for a REPORT of the DATA definition for *dnm* into an output file, edit the output file, and DEFINE the DATA object named *dnm* anew.

PGU-41111: missing string name

Cause: A DEFINE or REDEFINE statement is missing the name of a transaction object, a call object, or a data object. *token* is the type of object.

Action: Supply the missing name (as well as any other parameters that are surely needed).

PGU-41112: invalid name for UNDEFINE string

Cause: The identifier name in an UNDEFINE statement is invalid. An identifier name must begin with an alphabetic character and contain only alphanumeric characters. *token* is the type of object.

Action: Check the name for illegal characters in the identifier name.

PGU-41113: invalid WITH operand

Cause: The token is not a valid operand in a WITH phrase. Only DATA and CALLS are valid.

Action: WITH must be followed by DATA or CALLS.

PGU-41114: duplicate WITH operand

Cause: An identical WITH phrase has been previously found in this statement.

Action: Delete one of the identical phrases.

PGU-41115: invalid WITH operand in this context

Cause: A WITH phrase has been found in an invalid context. The phrase WITH CALLS can appear only in an UNDEFINE TRANSACTION; the phrase WITH DATA cannot appear in an UNDEFINE DATA.

Action: Delete the offending WITH phrase

PGU-41119: expecting one of DATA, CALL, or TRANSACTION in a DEFINE

Cause: One of DATA, CALL, or TRANSACTION must be given to specify what type of object is to be defined.

Action: Insert one of DATA, CALL, or TRANSACTION into the command.

PGU-41120: VERSION parameter conflicts with UNDEFINE ALL

Cause: A VERSION parameter was found in an UNDEFINE ALL.

Action: Either delete the ALL (in UNDEFINE ALL) or delete the VERSION parameter.

PGU-41121: invalid DIAGNOSE parameter

Cause: An invalid sub-parameter was found within a DIAGNOSE parameter.

Action: Check the sub-parameter for misspelling.

PGU-41122: no transaction name given in a GENERATE statement

Cause: The transaction name is missing.

Action: Provide a transaction name.

PGU-41123: expecting DATA (type of object)

Cause: DATA was expected to be found at this point in the REDEFINE.

Action: Examine the REDEFINE statement for the missing DATA token and insert if necessary.

PGU-41124: expecting one of DATA, CALL, or TRANSACTION in an UNDEFINE

Cause: One of DATA, CALL, or TRANSACTION must be given to specify what type of object is to be deleted.

Action: Insert one of DATA, CALL, or TRANSACTION into the command.

PGU-41125: expecting the name of a *string* object

Cause: The type of object (DATA, CALL, or TRANSACTION) must be followed by a name for the object.

Action: Insert the name of a DATA, CALL, or TRANSACTION object.

PGU-41126: WITH token immediately followed by another WITH token

Cause: There are two successive WITH tokens in the command input stream.

Action: Insert DATA or CALLS after the WITH token depending on which type of referenced objects should also be UNDEFINED or REPORTed.

PGU-41127: a DATA or CALLS token was found but not preceded by a WITH token

Cause: There is a missing WITH token before DATA or CALLS

Action: Insert the WITH token in the proper place.

PGU-41128: a WITH token ends *string*

Cause: A WITH token was found as the last token in an UNDEFINE or REPORT command.

Action: The WITH token must be followed either by DATA or CALLS to delete or REPORT all referenced DATA or CALLS.

PGU-41129: parameter *string* invalid without FIELD parameter

Cause: The FIELD parameter is a pre-requisite to specify the *parm* parameter because *parm* applies to FIELDS within a DATA redefinition. PGAU REDEFINE parameters which require FIELD are: - PLSFNAME - CODEPAGE

Action: Include the FIELD parameter in the REDEFINE statement to indicate to which FIELD the redefinition of *parm* applies, or remove the *parm* specification.

PGU-41131: FIELD specified, but USAGE, PLSFNAME, or language input absent

Cause: The FIELD keyword must be accompanied by at least one of the following keywords: USAGE, PLSFNAME, INFILE.

Action: Make sure at least one of the above keywords is specified.

PGU-41132: language input defines more than one field

Cause: A REDEFINE DATA with the FIELD option indicates that a single field is being redefined. The language input contained definitions for more than one field.

Action: Delete the extra field definitions.

PGU-41133: language input defines no data field for REDEFINE ... FIELD(...)

Cause: A REDEFINE DATA with the FIELD option indicates that a single field is being redefined. However, the language input contained no field definitions.

Action: Supply the (single) field definition in the language input.

PGU-41134: no *string* PGAU objects satisfied the REPORT request

Cause: A REPORT command requested information about a group of unnamed PGAU data objects with a type specified by *token*. But there were no objects of that type.

Action: This is an informational message.

PGU-41135: no PGAU *string* objects named *string* satisfied the REPORT request

Cause: A REPORT command requested information about a PGAU data object with a type specified by *type* and a name of *name*. But there were no objects of that *type* with the given *name*.

Action: This is an informational message.

PGU-41136: no *string* PGAU object named *string* at version *number* satisfied the REPORT request

Cause: A REPORT command requested information about a specific PGAU data object with a type specified by *type*, a name of *name*, and a version of *vsn*. But there is no object with that name and version.

Action: This is an informational message.

PGU-41137: too many version requests; maximum of *number* allowed

Cause: The VERSION parameter of a REPORT request has too many sub-parameters; the *maximum* is specified in the message.

Action: split the request into multiple REPORTS.

PGU-41138: missing *string* name

Cause: The *object* name is missing in a REPORT statement.

Action: supply the missing name.

PGU-41139: use of VERSION parameter conflicts with ALL parameter

Cause: A VERSION parameter has been found. But an ALL parameter has also been found (denoting all versions)

Action: Delete the ALL parameter or the VERSION parameter.

PGU-41140: version number expected

Cause: A version number was expected at this point.

Action: supply a version number or delete the entire VERSION parameter.

PGU-41141: an invalid version number was found

Cause: A non-numeric string was found when scanning for a version number.

Action: Inspect statement for missing delimiters.

PGU-41142: version parameter has already been specified

Cause: The VERSION parameter has already been found.

Action: Delete a VERSION parameter so there is only one left.

PGU-41143: this type of WITH operand invalid with a string object

Cause: The WITH phrase is invalid with respect to an object of type *type*. For example, REPORT DATA ... WITH DATA is invalid,

Action: Delete the offending WITH phrase.

PGU-41144: default PKGCALL parameter truncated to string

Cause: The PKGCALL parameter was defaulted in a DEFINE CALL statement and normally takes the value of the CALL object name. However, the length of the CALL object name is greater than the maximum length allowed for the PKGCALL parameter (which is 30). The default value actually used is *value*.

Action: None. This is an informational message.

PGU-41145: default PLSDDNAME parameter truncated to string

Cause: The PLSDDNAME parameter was defaulted in a DEFINE DATA statement and normally takes the value of the DATA object name. However, the length of the DATA object name is greater than the maximum length allowed for the PLSDDNAME parameter (which is 30). The default value actually used is *value*.

Action: None. This is an informational message.

PGU-41146: invalid INFILE parameter

Cause: The INFILE parameter in a DEFINE or REDEFINE DATA statement does not designate a valid filename. Syntax checking only continues with the next statement.

Action: Correct the INFILE parameter to specify a valid filename.

PGU-42001: ALL not valid in VALUE(S) clause at level 88

Cause: ALL cannot be specified in a level 88 (condition-names) entry

Action: Delete the reserved word ALL

PGU-42002: COPY statement: ended prematurely

Cause: There are missing operands in the COPY clause

Action: Supply missing operands

PGU-42003: COPY reserved word found within a COPY clause

Cause: COPY clause found embedded within another COPY clause

Action: Examine COPY clauses. Statement terminator may be missing.

PGU-42004: COPY not allowed as operand-1 or operand-2 in COPY REPLACING

Cause: COPY reserved word not allowed as operand-1 or operand-2 in the REPLACING clause of a COPY statement.

Action: If operand-1 replace COPY by some other word here and in the copied source file. If operand-2, examine offending COPY clause for missing terminator or reserved words.

PGU-42005: COPY statement: nothing to copy

Cause: No filename operand given in COPY clause

Action: Supply filename operand in COPY clause

PGU-42006: invalid token *string*

Cause: An unrecognized token *token* was found when checking for a COBOL reserved word

Action: Check source around the unrecognized token for other missing reserved words or for a missing statement terminator.

PGU-42007: invalid EJECT statement

Cause: An EJECT statement cannot be given with operands

Action: Delete the extraneous text after EJECT up to the statement terminator

PGU-42008: invalid SKIPn statement

Cause: A SKIP1, SKIP2, or SKIP3 statement cannot have operands

Action: Delete the extraneous text after the SKIPn up to the statement terminator.

PGU-42009: *string*

Cause: This is an echo of the offending source line, *sourceline*.

Action: Peruse this line with respect to a previous error message

PGU-42010: level-number with *number* digits exceeds maximum of two

Cause: A level-number was found with *number* digits. Level-numbers are restricted to a maximum of two digits

Action: Make sure level number is in range 01-49, 66, 77, or 88

PGU-42011: invalid level number of *number* found

Cause: Level numbers are restricted to 01-49, 66, 77, or 88; *number* was found.

Action: Change level number.

PGU-42012: level 01 or 77 has yet to be found

Cause: Record definition must start at level 01 or 77; a level other than 01 or 77 has been found.

Action: Examine source for missing level 01 or 77 definition; if offending definition is a top-level for a record, then renumber it to level 01 or 77.

PGU-42013: level 01 or 77 not yet found or begun between columns *number* and *number*

Cause: Missing level 01 or 77 in source file or the 01 or 77 did not start within the column limits specified by *margin-A* and *margin-B*.

Action: If level 01 or 77 appears, make sure it starts before *margin-B* and after *margin-A*. If level 01 or 77 does not appear, a renumbering of levels may be appropriate.

PGU-42014: RENAME clause must be at level 66

Cause: The RENAME reserved word may be used ONLY at level 66.

Action: Renumber the level to 66.

PGU-42015: multiple *string* clauses found

Cause: Multiple instances of a clause of type *type* were found.

Action: Make sure there is only one instance of the type of clause given.

PGU-42016: invalid *figurative_type* value passed

Cause: This is an internal error.

Action: Supported customers should contact Oracle Worldwide Support.

PGU-42017: VALUES can be used only at level 88

Cause: The VALUES keyword can only be specified in a data definition describing a condition and only at level 88.

Action: If the definition describes a condition, make sure it is at level 88; if the definition does not describe a condition, then use VALUE IS rather than VALUES ARE.

PGU-42018: could not open input file *string*

Cause: The specified input file *file* could not be opened for reading.

Action: Make sure the file exists and allows read access.

PGU-42019: REDEFINES clause should be first clause

Cause: A REDEFINES clause must appear before any other clause in a data definition.

Action: Move the REDEFINES clause to the beginning of the data definition immediately after the data definition name.

PGU-42020: RENAME dn-1 (THROUGH) dn-2 must stand alone

Cause: If a RENAME clause appears in a data definition, it must be the ONLY clause.

Action: Delete other clauses.

PGU-42021: unterminated record definition found

Cause: An end-of-file was found before the ending statement terminator. This also results from COBOL definitions which extend beyond column 72.

Action: Check last records in input file for a missing statement terminator. Also check to ensure that the data definitions reside within their proper starting and ending columns.

PGU-42022: VALUES clause must be the only clause at level 88

Cause: The only clause allowed at level 88 is a VALUE or VALUES clause.

Action: Delete any clauses other than a VALUE or VALUES clause at level 88.

PGU-42024: missing period-separator in TITLE statement

Cause: A TITLE statement is not ended by a period separator.

Action: Check for missing period separator.

PGU-42025: invalid TITLE statement

Cause: Invalid format for TITLE statement.

Action: Check format of TITLE statement.

PGU-42026: COPY copies a COPY REPLACING or vice versa

Cause: The source file copied by a COPY statement cannot contain a COPY ... REPLACING statement; or the source file copied by a COPY ... REPLACING statement cannot have a COPY statement.

Action: Correct the file in error.

PGU-42027: in line *number* of file *string* as follows

Cause: This message follows another message that describes the actual error. The line following this message echoes the input COBOL source line. The source line was found in line *line* of file *filename*.

Action: Peruse messages immediately before and after this message.

PGU-42028: invalid USAGE token: *string*

Cause: An invalid word, *token* follows USAGE in a USAGE clause. *token* may be valid in some COBOL dialects.

Action: Replace *token* in the USAGE clause with a valid USAGE operand for the IBMVSCOBOLII COBOL dialect.

PGU-42029: reserved word *string* is invalid as a PICTURE

Cause: A reserved word, *token*, was used as a PICTURE operand.

Action: Check PICTURE clause for missing PICTURE operand.

PGU-42030: a *string* clause has been prematurely terminated

Cause: A clause of type *type* has ended but there are missing operands.

Action: Check the clause for missing operands.

PGU-42031: *string* phrase is misplaced after *string* phrase

Cause: A phrase introduced by *key-word-1* cannot come after a phrase introduced by *key-word-2*. Certain phrases must precede other phrases in a data definition. For instance, an ASCENDING [KEY] phrase must appear before an INDEXED phrase.

Action: Reverse the placement of the phrases.

PGU-42032: state value *string* is *string*

Cause: An internal error has occurred in the PGAU COBOL parser. State *state* is either valid or invalid according to *validity*.

Action: Reproduce the error with full diagnostics enabled and save all related input and output files and listings. Supported customers should contact Oracle Worldwide Support for assistance.

PGU-42033: extraneous text at column *string*

Cause: Extraneous text has been found at the end of a record definition. It starts in column *column* of the source input record.

Action: The only source text that can follow the terminating '.' of a record definition is a COPY, EJECT, or SKIPn statement. Check to see if the terminating '.' has been misplaced.

PGU-42034: COPY for file *string* is recursive

Cause: A COPY statement for file *filename* has been found while processing a previous occurrence of a COPY specifying the same file.

Action: Check the COBOL source for recursive COPY. A single COPY file may need to be replaced with multiple, uniquely-named COPY files to achieve the desired results.

PGU-42035: invalid null operand in pseudo-text in a COPY REPLACING clause

Cause: The first operand in a REPLACING clause of a COPY statement is pseudo-text but the pseudo-text is null.

Action: Replace the null pseudo-text string with a non-null string.

PGU-42036: invalid input in *string* clause or paragraph

Cause: Invalid syntax in a *special* clause or paragraph.

Action: Check the indicated source line(s) for syntactical errors.

PGU-42037: missing END-EXEC token

Cause: An END-EXEC was not found while processing an EXEC clause.

Action: Insert an END-EXEC where appropriate. If the COBOL source input was generated by another product, regenerate the source using that product.

PGU-42038: invalid use of reserved word *string*

Cause: A reserved word, *reserved*, was found in an illegal context.

Action: Check to see if a reserved word is perhaps being used where a user dataname would normally appear.

PGU-42039: in line as follows

Cause: This message follows another message that describes the actual error. The line following this message echos the input COBOL source line.

Action: Refer to messages immediately before and after this message.

PGU-42040: DEPENDING ON phrase missing in OCCURS clause

Cause: An OCCURS clause describes a variable length table. One needs a DEPENDING ON phrase to tell how large is the current instance of the table. The

DEPENDING ON clause is missing. DEPENDING ON phrase that tells how large the current instance

Action: Supply the DEPENDING ON clause or make the table a fixed length table.

PGU-42041: missing or invalid USAGE clause for DBCS PIC clause

Cause: A PICTURE clause specifies a DBCS datatype, but the required USAGE IS DISPLAY-1 clause is missing or invalid.

Action: Supply the USAGE clause or revise the PIC datatype to noth required DBCS.

PGU-42042: LENGTH IS clause not allowed for numeric or edited data

Cause: A LENGTH IS clause was specified for a data item that is not non-edited character data.

Action: Remove the LENGTH IS clause or change the PICTURE clause for the data item to specify a non-edited, character data mask.

PGU-50001: error reading the log file.

Cause: An error occurred reading the log file.

Action: Determine the cause of the problem and correct it before restarting PG4TCPMAP.

PGU-50002: no data found.

Cause: The predicate that was chosen to delete the row from the PGA_TCP_IMSC table is not found.

Action: Determine the cause of the problem and correct it before restarting PG4TCPMAP.

PGU-50003: string length of number exceeds the maximum of number.

Cause: The parameter, *parm* length, *len*, passed to PG4TCPMAP tool was larger than the maximum allowed, *max*.

Action: Correct the parameter in error and recall PG4TCPMAP tool. For more information, refer to Oracle Database Gateway for APPC, User's Guide.

PGU-50004: PG4TCPMAP has ended with a failure.

Cause: An error occurred processing pg4tcpmap tool. This message is preceded by additional messages providing more information about the error.

Action: Refer to the messages preceding this one to determine the course of action.

PGU-50101: You have entered an invalid value.

Cause: This is a warning that you have entered an invalid value.

Action: The question will be asked again. Enter a valid value.

PLS-00001 to PLS-01919

PLS-00001: *string*

PLS-00022: out of memory

PLS-00027: redeclared SQL Identifier '*string*' at line *number* in file *string*

PLS-00028: option '*string*' not legal as EXEC ORACLE OPTION

PLS-00029: ambiguous option '*string*'

PLS-00030: invalid label range specified

PLS-00031: invalid operand '*string*' for option '*string*'

PLS-00032: invalid option '*string*'

PLS-00033: missing operand for option '*string*'

PLS-00035: no host language specified

PLS-00036: no input file name specified

PLS-00037: ?? unable to log on to ORACLE with '*string*'

PLS-00038: ?? unable to open a cursor

PLS-00039: unable to open input file '*string*'

PLS-00040: unable to open listing file '*string*'

PLS-00041: unable to open output file '*string*'

PLS-00042: unable to close output file '*string*'

PLS-00049: bad bind variable '*string*'

Cause: The client (caller) of PL/SQL has parsed a bind variable that it has informed to be 'bad'.

Action: n/a

PLS-00102: parser stack overflow because nesting is too deep

Cause: The parser, which checks the syntax of PL/SQL statements, uses a data structure called a stack; the number of levels of nesting in the PL/SQL block exceeded the stack capacity.

Action: Reorganize the block structure to avoid nesting at too deep a level. For example, move the lowest-level sub-block to a higher level.

PLS-00103: *string*

Cause: This error message is from the parser. It found a token (language element) that is inappropriate in this context.

Action: Check previous tokens as well as the one given in the error message. The line and column numbers given in the error message refer to the end of the faulty language construct.

PLS-00104: empty argument list in call of procedure '*string*' must be omitted

Cause: In a subprogram call, the name of the subprogram was followed by an empty parameter list. For example, procedure P was called as P(). This is not allowed.

Action: Remove the empty parameter list. In the example, change the procedure call to P.

PLS-00105: at most one forward declaration of type '*string*' is permitted

Cause: More than one forward declaration of a type is redundant.

Action: Remove all but one forward declaration.

PLS-00106: double quote disallowed in a quoted identifier**PLS-00108: declarative units must be a single variable declaration**

Cause: While checking a declarative unit (a top-level declare block without the BEGIN...END), PL/SQL found that there was more than one item declared or that the item was not a variable declaration. A table is a common variable declaration at the unit level. To define a TABLE, compile a DECLARE compilation unit, but only one at a time is allowed.

Action: Declare variables in separate declarative units.

PLS-00109: unknown exception name '*string*' in PRAGMA EXCEPTION_INIT

Cause: No declaration for the exception name referenced in an EXCEPTION_INIT pragma was found within the scope of the pragma.

Action: Make sure the pragma follows the exception declaration and is within the same scope.

PLS-00110: bind variable '*string*' not allowed in this context

Cause: A bind variable, that is, an identifier prefixed with a colon, was found in an inappropriate context.

Action: Remove the colon or replace the bind variable with the appropriate object.

PLS-00111: end-of-file in comment

Cause: A Comment had a comment initiator (/*), but before the

Action: Remove the Comment initiator or add a comment terminator. The line and column numbers accompanying the error message refer to the beginning of the last legal token before the Comment initiator.

PLS-00112: end-of-line in quoted identifier

Cause: A quoted identifier had a beginning quote ("), but before the ending quote (") was found, an end-of-line marker was encountered.

Action: Remove the beginning quote or add the ending quote. The line and column numbers accompanying the error message refer to the beginning of the quoted identifier.

PLS-00113: END identifier '*string*' must match '*string*' at line *string*, column *string*

Cause: Following the keyword END, which terminates some language constructs (such as loops, blocks, functions, and procedures), you can optionally place the name of that construct. For example, at the end of the definition of loop L you might write END L. This error occurs when the optional name does not match the name given to the language construct. It is usually caused by a misspelled identifier or by faulty block structure.

Action: Make sure the spelling of the END identifier matches the name given to the language construct and that the block structure is correct.

PLS-00114: identifier '*string*' too long

Cause: The name of a PL/SQL variable is longer than 30 characters. Legal identifiers (including quoted identifiers) have a maximum length of 30 characters. A string literal might have been mistakenly enclosed in double quotes instead of single quotes, in which case PL/SQL considers it a quoted identifier.

Action: Shorten the identifier.

PLS-00115: this PRAGMA must follow the declaration of '*string*'

Cause: The pragma refers to a PL/SQL object that was not declared or is not within the scope of the reference. Identifiers must be declared before they are used in a pragma; forward references are not allowed.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00116: Duplicate where-clause in table expression

Cause: Two or more WHERE clauses were found in a DELETE, SELECT, or UPDATE statement. The WHERE clause specifies a condition under which rows in a table are processed. The condition can contain several logical expressions connected by AND or OR, but a statement can contain only one WHERE clause.

Action: Remove one of the WHERE clauses and, if necessary, connect logical expressions by AND or OR

PLS-00117: Duplicate connect-by clause in table expression

Cause: Two or more CONNECT BY clauses were found in a SELECT statement. The CONNECT BY clause defines a relationship used to return rows in a hierarchical order. The relationship can contain two expressions separated by a relational operator (such as = or !=), but a statement can contain only one CONNECT BY clause.

Action: Remove one of the CONNECT BY clauses and, if necessary, separate expressions by a relational operator.

PLS-00118: Duplicate group-by clause in table expression

Cause: Two or more GROUP BY clauses were found in a SELECT statement. The GROUP BY clause lists column expressions used to form a summary row for each group of selected rows. The list can contain several column expressions separated by commas, but a statement can contain only one GROUP BY clause.

Action: Remove one of the GROUP BY clauses and, if necessary, separate column expressions by commas.

PLS-00119: Duplicate having-clause in table expression

Cause: Two or more HAVING clauses were found in a SELECT statement. The HAVING clause specifies a condition under which groups of rows (formed by the GROUP BY clause) are included in the result. The condition can include several logical expressions connected by AND or OR, but a statement can contain only one HAVING clause.

Action: Remove one of the HAVING clauses and, if necessary, connect logical expressions by AND or OR.

PLS-00120: inappropriate argument in OPEN statement

Cause: The asterisk (*) option was used in the argument list of a SQL group function other than COUNT. For example, the code might look like `SELECT SUM(*) INTO emp_count FROM emp; --` should be `COUNT(*)` Only COUNT permits the use of the asterisk option, which returns the number of rows in a table.

Action: Remove the asterisk option from the argument list and replace it with an expression that refers to one or more database columns.

PLS-00123: program too large (*string*)

Cause: The PL/SQL compiler has exceeded one of its capacity limits. The compiler cannot proceed.

Action: Revise the PL/SQL program so that it no longer exceeds the reported limit. The specific revision depends on the limit that was exceeded. However, usually a simple reduction in the size of the unit being compiled will fix the problem. Consider splitting the library unit into two or more library units, or shrinking repetitious or patterned code (possibly by creating helper routines).

PLS-00124: name of exception expected for first arg in exception_init pragma

Cause: The first argument passed to the EXCEPTION_INIT pragma was something other than an exception name. The first argument must be the name of a legally declared exception.

Action: Replace the first argument with the name of a legally declared exception.

PLS-00125: type name expected

Cause: When a constant or variable was declared, its datatype was not specified. For example, the code might look like `pi CONSTANT := 3.14159; --` should be `CONSTANT REAL := 3.14159` Every constant and variable must have a datatype, which specifies a storage format, constraints, and valid range of values.

Action: Supply the type name

PLS-00126: selector ALL is not allowed

Cause: The ALL shortcut for specifying system privileges or statement options was used in a SQL statement. PL/SQL does not support the ALL shortcut.

Action: Remove the ALL shortcut from the SQL statement.

PLS-00127: Pragma *string* is not a supported pragma

Cause: The named pragma (compiler directive) is not among those supported by PL/SQL. The pragma name might be misspelled, or the pragma syntax might be faulty.

Action: Check the spelling of the pragma name, and make sure the proper syntax was used.

PLS-00128: Illegal number of arguments for pragma *string*

Cause: The number of arguments (actual parameters) passed to the named pragma (compiler directive) is incorrect. A required argument was omitted from the argument list, or the pragma syntax is faulty (for example, a comma might be missing between two parameters).

Action: Supply the missing argument, or correct the faulty syntax.

PLS-00129: Pragma *INTERFACE* only supports C as its first argument

Cause: The first parameter passed to pragma *INTERFACE* specified a host language other than C. Currently, C is the only host language supported. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the first parameter, which should be C, and make sure the proper syntax was used.

PLS-00130: Pragma *string* expects 1st argument to be a procedure/function/package/cursor

Cause: The first argument (actual parameter) passed to the named pragma (compiler directive) was not the name of a subprogram, package, or cursor, as required. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the first parameter, and make sure the proper syntax was used.

PLS-00131: Pragma *string* expects 2nd argument to be a procedure/function

Cause: The second argument (actual parameter) passed to the named pragma (compiler directive) was not the name of a procedure or function, as required. The parameter cannot be a non-static method. The parameter might be misspelled or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the second parameter and make sure the proper syntax was used.

PLS-00132: Pragma *string* does not support *string*

Cause: One of the parameters passed to this pragma was not among the list of allowed values. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of all the parameters and make sure the proper syntax was used.

PLS-00133: Pragma *string* expects 1st argument to be an identifier or string-literal

Cause: The first argument (actual parameter) passed to the named pragma (compiler directive) was not an identifier or string literal, as required. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the first parameter, and make sure the proper syntax was used.

PLS-00134: Pragma *string* expects 2nd argument to be an identifier or string-literal

Cause: The second argument (actual parameter) passed to the named pragma (compiler directive) was not an identifier or string literal, as required. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the second parameter, and make sure the proper syntax was used.

PLS-00135: Pragma *string* expects 3rd argument to be an identifier, string or numeric literal

Cause: The fourth argument (actual parameter) passed to the named pragma (compiler directive) was not a numeric literal, as required. The parameter might be miscoded, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the coding of the fourth parameter, and make sure the proper syntax was used.

PLS-00138: Precision for a binary type must be one of 8, 16, or 32

Cause: Invalid precision was specified for a signed or unsigned binary type.

Action: Specify precision as one of 8, 16, or 32.

PLS-00139: duplicate external NAME specification in subprogram expression

Cause: The subprogram was found to have two external NAME specifications.

Action: Remove one of the external NAME specifications.

PLS-00140: duplicate external LIBRARY specification in subprogram expression

Cause: The subprogram was found to have two external LIBRARY specifications.

Action: Remove one of the external LIBRARY specifications.

PLS-00141: duplicate external PARAMETER STYLE specification in subprogram expression

Cause: The subprogram was found to have two external PARAMETER STYLE specifications.

Action: Remove one of the external PARAMETER STYLE specifications.

PLS-00142: duplicate external PARAMETER list specification in subprogram expression

Cause: The subprogram was found to have two external PARAMETER STYLE specifications.

Action: Remove one of the external PARAMETER STYLE specifications.

PLS-00143: duplicate external LANGUAGE specification in subprogram expression

Cause: The subprogram was found to have two external LANGUAGE specifications.

Action: Remove one of the external LANGUAGE specifications.

PLS-00144: duplicate external CALLING STANDARD specification in subprogram expression

Cause: The subprogram was found to have two external CALLING STANDARD specifications.

Action: Remove one of the external CALLING STANDARD specifications.

PLS-00145: duplicate external WITH CONTEXT specification in subprogram expression

Cause: The subprogram was found to have two external WITH CONTEXT specifications.

Action: Remove one of the external WITH CONTEXT specifications.

PLS-00146: duplicate external TRUSTED/UNTRUSTED specification in subprogram expression

Cause: The subprogram was found to have two external TRUSTED/UNTRUSTED specifications.

Action: Remove one of the external external TRUSTED/UNTRUSTED specifications.

PLS-00147: LIBRARY or ASSEMBLY file specification string is empty

Cause: A zero-length string was found for the LIBRARY or ASSEMBLY file specification.

Action: Specify a non-zero length string for the LIBRARY or ASSEMBLY file specification.

PLS-00148: Only 1 pragma of this type is allowed per subprogram

Cause: The subprogram was found to have two PRAGMA RESTRICT_REFERENCES.

Action: Remove one of the PRAGMA RESTRICT_REFERENCES.

PLS-00150: found: *string* but expected : INTEGER

Cause: This error happens in the creation of a pl/sql external type: [SIGNED | UNSIGNED] BINARY INTEGER (*precision*). It may be referenced only in a create type statement. Such types are non-queryable. Something other than 'INTEGER' was supplied.

Action: n/a

PLS-00151: Expression or Variable is an illegal type to PLS/QL: *string*

Cause: A type was used which does not belong PL/SQL. This type can only be referenced in CREATE TYPE statements, and is a non-queryable data type.

Action: n/a

PLS-00152: POINTER type may only reference an object type.

Cause: A POINTER type which does not belong to PL/SQL can only refer to an object type. This type can only be referenced in CREATE TYPE statements, and is a non-queryable data type.

Action: n/a

PLS-00153: A *string* type may only be used as an object type attribute.

Cause: A POINTER or [SIGNED/UNSIGNED] BINARY INTEGER can only be used as attributes of object types. These types can only be referenced in CREATE TYPE statements, and are non-queryable data types. One of these external PL/SQL types outside of an object type.

Action: n/a

PLS-00154: An object type may have only 1 MAP or 1 ORDER method.

Cause: More than one map or order function was declared. An object type can have only one map function or one order function, but not both.

Action: n/a

PLS-00155: Only a function may be a MAP, ORDER or CONSTRUCTOR method.

Cause: A procedure was declared as a MAP, ORDER or CONSTRUCTOR method. Only functions can be MAP, ORDER or CONSTRUCTOR methods.

Action: n/a

PLS-00156: Null constraints not supported for object attributes.

Cause: A null constraint was specified for an attribute in an object. This is not supported.

Action: Remove the constraint.

PLS-00157: Only schema-level programs allow *string*

Cause: An AUTHID or DEFAULT COLLATION clause was specified for a subprogram inside a package or type. These clauses are only supported for top-level stored procedures, packages, and types.

Action: Remove the clause.

PLS-00160: AUTHID must specify CURRENT_USER or DEFINER

Cause: The only two allowed options for AUTHID are CURRENT_USER and DEFINER.

Action: Fix the AUTHID clause to specify CURRENT_USER or DEFINER

PLS-00161: Pragma *string* expects 3rd argument to be an identifier or a string literal

Cause: The third argument (actual parameter) passed to the named pragma (compiler directive) was not an identifier or a string literal when there is a fourth argument to the pragma. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the third parameter, and make sure the proper syntax was used.

PLS-00162: Pragma *string* expects 4th argument to be a positive integer literal

Cause: The fourth argument (actual parameter) passed to the named pragma (compiler directive) was not a numeric literal, as required. The parameter might be misspelled, or the pragma syntax might be faulty (for example, a comma might be missing between two parameters).

Action: Check the spelling of the fourth parameter, and make sure the proper syntax was used.

PLS-00164: cursor subqueries are not supported in this release

Cause: This feature is not yet implemented.

Action: n/a

PLS-00165: call statement is not supported in PL/SQL

Cause: A CALL statement was found in PL/SQL source.

Action: Use an ordinary PL/SQL function or procedure call.

PLS-00166: bad format for date, time, timestamp or interval literal

Cause: The contents of the date, time, timestamp or interval literal did not match the expected format.

Action: Correct the format for the date, datetime, or interval literal.

PLS-00167: keyword BULK is used in a wrong context

Cause: keyword BULK is used illegally. For example, BULK is used without INTO clause

Action: remove the keyword BULK.

PLS-00168: duplicate modifier specification '*string*'

Cause: A method or object type modifier was specified more than once.

Action: Remove all but one occurrence of the duplicate modifier.

PLS-00169: modifier '*string*' conflicts with prior '*string*' specification

Cause: The method or object type modifier specified conflicts with an earlier modifier. For example, a FINAL modifier cannot be combined with a NOT FINAL modifier.

Action: Remove one of the conflicting modifiers.

PLS-00170: the SQL statement in an OPEN statement or FOR loop must be a SELECT

Cause: An OPEN cursor statement or cursor FOR loop can only invoke a SELECT statement, not an UPDATE, INSERT or DELETE.

Action: Use only SELECT statements in OPEN or cursor FOR loops

PLS-00171: duplicate dedicated AGENT specification in subprogram expression

Cause: The subprogram was found to have two dedicated AGENT specifications.

Action: Remove one of the dedicated AGENT specifications.

PLS-00172: string literal too long

Cause: The string literal was longer than 32767 bytes.

Action: Use a string literal of at most 32767 bytes.

PLS-00173: SPACE, TAB or RETURN are disallowed as alternative quote delimiters

Cause: SPACE, TAB or RETURN was used as alternative quote delimiter.

Action: Use a character other than SPACE, TAB or RETURN as the alternative quote delimiter.

PLS-00174: a static boolean expression must be used

Cause: The expression contained a syntax or semantic error, or it did not have a boolean type or its evaluation raised an exception.

Action: Write correct static boolean expression.

PLS-00176: unexpected preprocessor token '*\$string*'

Cause: A preprocessor token was used inappropriately.

Action: Remove the preprocessor token that is inappropriately used.

PLS-00177: '*\$string*' preprocessor directive does not end properly

Cause: A preprocessor directive was not ended properly.

Action: Use \$end to end the preprocessor directive properly.

PLS-00178: a static character expression must be used

Cause: The expression contained a syntax or semantic error, or it did not have a character type or its evaluation raised an exception.

Action: Write correct static character expression.

PLS-00179: \$ERROR: *string*

Cause: \$ERROR directive was used. This is an expected error message.

Action: NA

PLS-00180: preprocessor directives are not supported in this context

Cause: A preprocessor directive was used in a compilation unit for which conditional compilation is not supported.

Action: Do not use any preprocessor directives in this compilation unit.

PLS-00181: unsupported preprocessor directive '*string*'

Cause: An unsupported preprocessor directive was used.

Action: Use a supported preprocessor directive.

PLS-00182: Identifier cannot be an empty string

Cause: Identifier was declared using an empty string,

Action: rename the identifier to a non empty string.

PLS-00183: too many bind variables

Cause: The library unit used more bind variables than permitted. (The current limit is 65535 bind variables in one library unit.)

Action: Reduce the number of bind variables in the library unit. Consider splitting the library unit into two or more library units, or shrinking repetitious or patterned code (possibly by creating helper routines.)

PLS-00184: misplaced START WITH clause

Cause: A table expression specified a START WITH clause without the corresponding CONNECT BY clause.

Action: Specify a CONNECT BY clause with the START WITH clause.

PLS-00185: invalid arguments for JSON call

Cause: A JSON function was specified with arguments that were either invalid or not supported.

Action: Specify the correct arguments for the called JSON function.

PLS-00186: Attribute '*string*' is not allowed in this context.

Cause: An attribute was used in a context that required a procedure call or statement.

Action: Do not use an attribute in a context where a procedure call or statement is required.

PLS-00201: identifier 'string' must be declared

Cause: You tried to reference either an undeclared variable, exception, procedure, or other item, or an item to which no privilege was granted or an item to which privilege was granted only through a role.

Action: 1) Check your spelling and declaration of the referenced name. 2) Verify that the declaration for the referenced item is placed correctly in the block structure. 3) If the referenced item is indeed declared but you don't have privileges to refer to that item, for security reasons, you will be notified only that the item is not declared. 4) If the referenced item is indeed declared and you believe that you have privileges to refer to that item, check the privileges; if the privileges were granted only via a role, then this is expected and documented behavior. Stored objects (packages, procedures, functions, triggers, views) run in the security domain of the object owner with no roles enabled except PUBLIC. Again, you will be notified only that the item was not declared.

PLS-00202: type 'string' must be declared

Cause: An attempt was made to reference an undefined type. Either the type specifier was not declared or it is not within the scope of the reference.

Action: Check the spelling and declaration of the type specifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00203: function DECODE must be called with at least 3 non-boolean arguments

Cause: Less than three arguments were passed to the built-in function DECODE. Though DECODE takes a variable number of (non-Boolean) arguments, at least three arguments must be passed.

Action: Call DECODE with three or more arguments

PLS-00204: function or pseudo-column 'string' may be used inside a SQL statement only

Cause: A pseudocolumn or proscribed function was used in a procedural statement. The SQL pseudocolumns (LEVEL, ROWID, ROWNUM) can be used only in SQL statements. Likewise, certain functions such as DECODE, DUMP, and VSIZE and the SQL group functions (AVG, MIN, MAX, COUNT, SUM, STDDEV, VARIANCE) can be used only in SQL statements.

Action: Remove the pseudocolumn reference or function call from the procedural statement. Or, replace the procedural statement with a SELECT INTO statement; for example, replace `bonus := DECODE(rating, 1, 5000, 2, 2500, ...);` with the following statement: `SELECT DECODE(rating, 1, 5000, 2, 2500, ...) INTO bonus FROM dual;`

PLS-00205: Aggregate not allowed here

Cause: An aggregate, that is, a parenthesized list of values such as (7788, 'SCOTT', 20), was found in an inappropriate context.

Action: Remove or relocate the aggregate.

PLS-00206: %%TYPE must be applied to a variable, column, field or attribute, not to "string"

Cause: The program object declared using the %TYPE datatype attribute is not of the appropriate class. It must be a variable, column, record component, subprogram formal parameter, or other object to which values can be assigned.

Action: Declare an object of the appropriate class or define the datatype in another way (for example, use %ROWTYPE).

PLS-00207: identifier '*string*', applied to implicit cursor SQL, is not a legal cursor attribute

Cause: An identifier that is not a cursor attribute was applied to the identifier SQL. For example, this error occurs if the cursor attribute is misspelled.

Action: Check the spelling of the cursor attribute name. Make sure the attribute is one of these: %NOTFOUND, %FOUND, %ROWCOUNT, %ISOPEN.

PLS-00208: identifier '*string*' is not a legal cursor attribute

Cause: An identifier not declared as a cursor attribute was applied to an identifier declared as a cursor. For example, this error occurs if the cursor attribute is misspelled.

Action: Check the spelling of the cursor attribute name. Make sure the attribute is one of these: %NOTFOUND, %FOUND, %ROWCOUNT, %ISOPEN.

PLS-00209: table '*string*' is not in FROM clause

Cause: In a query, a table referenced by the select list is not named in the FROM clause.

Action: Check the spelling of the table names, make sure each column in the select list refers to a table in the FROM clause, then re-execute the query.

PLS-00210: an OTHERS clause is required in this CASE statement

Cause: Unless the clauses of a CASE statement mention all values of the type of the selecting expression, an OTHERS clause must be provided as the last clause of the CASE statement. It is impossible to cover all values of type INTEGER (or NUMBER), so an OTHERS clause is always required when the expression following the keyword CASE is of type INTEGER (or NUMBER).

Action: n/a

PLS-00211: CASE labels or ranges must not be duplicated in different WHEN clauses

Cause: In this CASE statement, a value appears in more than one WHEN clause. A value may appear in at most one WHEN clause of a CASE statement.

Action: n/a

PLS-00212: could not obtain enough memory to compile CASE statement

Cause: The CASE statement is too big. The compiler did not have enough storage to process it.

Action: n/a

PLS-00213: package STANDARD not accessible

Cause: The PL/SQL compiler could not find package STANDARD in the current Oracle database. To compile a program, PL/SQL needs package STANDARD.

Action: Make sure that package STANDARD is available in the current Oracle database, then retry the operation.

PLS-00214: BEGIN...END block nesting is too deep

Cause: The number of levels of nesting in the PL/SQL block is too large. Blocks can be nested up to 255 levels deep, depending on the availability of system resources such as memory.

Action: Reorganize the block structure to avoid nesting at too deep a level. For example, move the lowest-level sub-block to a higher level.

PLS-00215: String length constraints must be in range (1 .. 32767)

Cause: When a character variable was declared, a length outside the legal range was specified. For example, the following declarations are illegal: flag CHAR(0); -- illegal; zero length name VARCHAR2(-10); -- illegal; negative length

Action: Change the length constraint, making sure that it lies in the range 1 .. 32767.

PLS-00216: NUMBER precision constraint must be in range (1 .. 38)

Cause: A NUMBER variable was declared with a precision that is outside the legal range. Declarations such as N NUMBER(800) or N NUMBER(123,10) are not supported.

Action: Change the illegal NUMBER precision constraint, making sure that it lies in the range 1 .. 38.

PLS-00217: NUMBER scale constraint must be in range (-84 .. 127)

Cause: A NUMBER variable was declared with a scale that is outside the legal range. Declarations such as N NUMBER(10,345) or N NUMBER(10,-100) are not supported.

Action: Change the illegal NUMBER scale constraint, making sure that it lies in the range -84 .. 127.

PLS-00218: a variable declared NOT NULL must have an initialization assignment

Cause: In general, variables that have no initialization clause in their declaration are automatically initialized to NULL. This is illogical for NOT NULL variables; therefore, an initialization clause is required.

Action: Add an initialization clause to the variable declaration. If the initialization is too complicated for the syntax, one can add a function call (in a later release).

PLS-00219: label '*string*' reference is out of scope

Cause: A block or loop label was used to qualify a variable (as in outer_block.date) that was not declared or is not within the scope of the label. The variable name might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the variable name. Also confirm that the declaration is placed correctly in the block structure.

PLS-00220: simple name required in this context

Cause: A qualified name such as A.B or A.B.C is not permitted here.

Action: Use a simple name such as A instead.

PLS-00221: '*string*' is not a procedure or is undefined

Cause: An identifier being referenced as a procedure was not declared or actually represents another object (for example, it might have been declared as a function).

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00222: no function with name '*string*' exists in this scope

Cause: An identifier being referenced as a function was not declared or actually represents another object (for example, it might have been declared as a procedure).

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00223: parameterless procedure '*string*' used as function

Cause: An identifier being referenced as a parameterless function actually represents a procedure.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure. If necessary, change the declaration of the identifier or change the reference so that it does not require a return value.

PLS-00224: object '*string*' must be of type function or array to be used this way

Cause: An identifier being referenced as a function or an array actually represents an object (a number or date, for example) that cannot be referenced in this way.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00225: subprogram or cursor '*string*' reference is out of scope

Cause: The prefix in a qualified name was a subprogram or cursor which was not in an enclosing scope; i.e., a subprogram or cursor name is being used as a scope qualifier for a reference to an entity (within that subprogram or cursor) that is not in scope. Example: declare x number; type t1 is record (a number); function f return t1 is a number; begin x := f.a; -- legal use of function "f" as a scope qualifier; -- resolves to local variable "a" in function "f". x := f().a; -- legal reference to component "a" of returned record end; begin x := f.a; -- illegal use of function "f" as a scope qualifier x := f().a; -- legal reference to component "a" of returned record end;

Action: a) if the intention was to refer to a local variable of a non-enclosing function, this is not allowed; remove the reference b) if this is a parameterless function, and the the intention was to access a field of the result of a call to this function, then use empty parentheses in the call.

PLS-00226: package '*string*' used as variable reference

Cause: A package was referenced in an expression as if it were a variable or function. Either the name of the variable or function is misspelled or the reference is not fully qualified. For example, to call the function my_function, which is stored in package my_package, dot notation must be used, as follows: ... my_package.my_function ...

Action: Correct the spelling of the variable or function name or use dot notation to reference the packaged variable or function.

PLS-00227: subprogram 'in' formal *string* is not yet denotable

Cause: When the formal parameters of a subprogram were declared, one parameter was used to initialize another, as in PROCEDURE my_proc (j NUMBER, k NUMBER := j) IS ... The first parameter has no value until run time, so it cannot be used to initialize another parameter.

Action: Remove the illegal formal parameter reference.

PLS-00228: Illegal declaration of variable of type LONG

Cause: An attempt was made to declare a variables to be of type LONG. Only columns can be of type LONG. CAUSE: The identifier is a formal parameter which is being used in the context of a default expression value for a formal parameter in the same formal parameter list. E.g.: procedure p(j number, k number := j).

Action: Remove the offending variable definition

PLS-00229: Attribute expression within SQL expression

Cause: An attribute expression, such as SQL%NOTFOUND, was used in a SQL statement, but attribute expressions are allowed only in procedural statements.

Action: To workaround this limitation, assign the value of the attribute expression to a variable, then use the variable in the SQL statement. For example, replace the statement `INSERT INTO audits VALUES (c1%ROWCOUNT, ...)`; with the following statements:
`row_count := c1%ROWCOUNT; INSERT INTO audits VALUES (row_count, ...);`

PLS-00230: OUT and IN OUT formal parameters may not have default expressions

Cause: When the formal parameters of a procedure were declared, an OUT or IN OUT parameter was initialized to a default value, as in `PROCEDURE calc_bonus (bonus OUT REAL := 0, ...) IS ...`. However, only IN parameters can be initialized to default values.

Action: Remove the illegal default expression.

PLS-00231: function 'string' may not be used in SQL

Cause: A proscribed function was used in a SQL statement. Certain functions such as `SQLCODE` and `SQLERRM` can be used only in procedural statements.

Action: Remove the function call from the SQL statement. Or, replace the function call with a local variable. For example, the following statement is illegal: `INSERT INTO errors VALUES (SQLCODE, SQLERRM)`; However, you can assign the values of `SQLCODE` and `SQLERRM` to local variables, then use the variables in the SQL statement, as follows: `err_num := SQLCODE; err_msg := SQLERRM; INSERT INTO errors VALUES (err_num, err_msg);`

PLS-00232: nested packages not permitted

Cause: A package was declared inside another package, but package declarations are allowed only at the top level. In other words, packages cannot be nested.

Action: Move the package declaration outside the enclosing package.

PLS-00233: function name used as an exception name in when clause

Cause: The WHEN clause in an exception handler contains a function call instead of an exception name. A valid exception handler consists of a WHEN clause, which must specify an exception, followed by a sequence of statements to be executed when that exception is raised.

Action: Check the spelling of the identifier in the WHEN clause, then replace the function call with an exception name.

PLS-00234: PARAMETER STYLE SQL may not be specified with a PARAMATERS list

Cause: A subprogram cannot specify both `PARAMETER STYLE SQL` and an explicit `PARAMETERS` list. Use `PARAMETER STYLE GENERAL` to supply default `PARAMETERS` list types.

Action: Change the subprogram specification.

PLS-00235: the external type is not appropriate for the parameter

Cause: An unsuccessful attempt was made to convert a parameter to the specified external parameter type.

Action: Specify a different external type or parameter type.

PLS-00236: Invalid external type specification for *string*.

Cause: The external type specified is not valid for one of the following: INDICATOR, LENGTH, MAXLEN, TDO, DURATION, CHARSETID, or CHARSETFORM.

Action: Check the manual and specify an appropriate external type.

PLS-00237: invalid BY VALUE indicator or length specification

Cause: BY VALUE was specified with an indicator or length parameter that is being passed in OUT or IN OUT mode. Only IN mode parameters may be passed by value.

Action: Remove the BY VALUE specification or change it to IN mode.

PLS-00238: external parameter name *string* not found in formal parameter list

Cause: An external parameter name was specified that does not match one in the formal parameter list.

Action: Correct the external parameter name.

PLS-00239: invalid external type specification for SQLCODE

Cause: An inappropriate external parameter type was specified for the SQLCODE parameter.

Action: Correct the SQLCODE parameter specification.

PLS-00240: Invalid type specification for RETURN indicator, length, tdo, duration

Cause: An inappropriate external parameter type was specified for the RETURN indicator, LENGTH, TDO, or DURATION.

Action: Correct the RETURN parameter specification.

PLS-00241: invalid external type specification for SQLSTATE

Cause: An inappropriate external parameter type was specified for the SQLSTATE parameter.

Action: Correct the SQLSTATE parameter specification.

PLS-00242: invalid external type specification for CONTEXT

Cause: An inappropriate external parameter type was specified for the CONTEXT parameter.

Action: Correct the CONTEXT parameter specification.

PLS-00243: invalid external type specification for SQLNAME

Cause: An inappropriate external parameter type was specified for the SQLNAME parameter.

Action: Correct the SQLNAME parameter specification.

PLS-00244: Multiple declarations in foreign function formal parameter list

Cause: There are multiple declarations of at least one the following FORMAL, INDICATOR, LENGTH, MAXLENGTH, or CONTEXT. PL/SQL allows only one declaration of the above for each formal parameter in the PARAMETERS clause.

Action: Correct the PARAMETERS clause.

PLS-00245: Formals used in the 'parameters' clause must appear exactly once

Cause: There are multiple declarations of the formal parameter in the PARAMETERS clause. PL/SQL allows only one declaration of the formal parameter in the PARAMETERS clause.

Action: Correct the PARAMETERS clause.

PLS-00246: PARAMETER STYLE is unsupported

Cause: A PARAMETER STYLE clause was placed in the external subprogram body.

Action: Remove the PARAMETER STYLE clause.

PLS-00247: LIBRARY or ASSEMBLY name must be specified

Cause: The LIBRARY or ASSEMBLY name is missing from the external subprogram body.

Action: The LIBRARY or ASSEMBLY name was not specified in the external subprogram body.

PLS-00248: Invalid Library Syntax

Cause: The LIBRARY syntax was entered incorrectly.

Action: Correct the LIBRARY syntax and recompile.

PLS-00249: Invalid WITH CONTEXT Syntax

Cause: CONTEXT was used in a WITH CONTEXT or a PARAMETERS clause. This is invalid.

Action: Check if WITH CONTEXT is used without specifying CONTEXT in the PARAMETERS clause or vice versa. The PARAMETERS clause must be complete. Thus if WITH CONTEXT is specified, then CONTEXT must be referenced in the PARAMETERS clause (if there is one).

PLS-00250: Incorrect Usage of *string* in parameters clause.

Cause: The usage of Keywords such as MAXLEN, LENGTH, CHARSETID, CHARSETFORM RETURN in the parameters clause was incorrect

Action: This error occurs if keywords like MAXLEN, LENGTH, TDO, DURATION, CHARSETID, or CHARSETFORM cannot be used with PL/SQL formal parameters or the mode of the formal parameter. For example, MAXLEN can only be declared for a CHAR or VARCHAR2 PL/SQL variable and its use is allowed only for OUT or INOUT PL/SQL variables. Also, RETURN was specified in the parameters clause for a PL/SQL PROCEDURE. E.g. CREATE PROCEDURE proc IS EXTERNAL NAME ... LIBRARY ... PARAMETERS(RETURN INDICATOR SHORT, RETURN);

PLS-00251: RETURN, for actual function return, must be last in the parameters clause

Cause: RETURN specification for the actual function return, used within the parameters clause must hold the very last position. Example : The following will give this error since the RETURN specification for the actual function return in the parameters clause is not the last. FUNCTION myexternalfunc (var1 BINARY_INTEGER, var2 BINARY_INTEGER) RETURN BINARY_INTEGER IS EXTERNAL NAME "myexternalfunc" LIBRARY somelib PARAMETERS (var1 LONG, var2 SHORT, RETURN INT, RETURN INDICATOR SHORT); The correct syntax is the following. Note that RETURN for actual function return is the last specification in the parameters clause. FUNCTION myexternalfunc (var1 BINARY_INTEGER, var2 BINARY_INTEGER) RETURN BINARY_INTEGER IS EXTERNAL NAME "myexternalfunc" LIBRARY somelib PARAMETERS (var1 LONG, var2 SHORT, RETURN INDICATOR SHORT, RETURN INT);

Action: Correct the syntax of the RETURN specification in the parameters clause

PLS-00252: reference to the wrong copy of package STANDARD

Cause: A reference is made to the fixed package version of STANDARD when the database is open, or to the on-disk version when the database is closed. Explicit use of a SYS.X\$ package name can lead to this. One might also see this from a compilation that begins while the db is closed but has the bad luck to have another session open the db before compilation is complete. Another possible cause is having 'set serveroutput on' through svrmgrl when doing an 'alter database close'.

Action: Make use of on-disk versions of packages when the database is open and fixed (preloaded) versions when the database is closed. Do not attempt to use the wrong set. It should be quite hard to reference the wrong set, except by using SYS.X\$ package names explicitly. Also, be sure to 'set serveroutput off' before doing an 'alter database close'.

PLS-00253: Formal parameter *string* missing in the parameters clause

Cause: The parameter clause does not have a matching parameter for a parameter specified in the formal parameter list.

Action: Provide a matching parameter in parameters clause for every formal parameter.

PLS-00254: OUT and IN/OUT modes cannot be used in this context

Cause: actual parameter mode (OUT, or IN/OUT) is not used properly in USING clause. For USING clause in an OPEN statement, only IN mode is allowed.

Action: change the parameter mode in the USING clause to an appropriate mode.

PLS-00255: CALL Specification parameters cannot have default values

Cause: CALL Specification formal parameters default values are disallowed.

Action: Remove the default values in the formal parameter list (spec or body) and compile again.

PLS-00256: *string* is not a valid external library or assembly

Cause: The supplied external library or assembly name in the external clause is not a valid alias library or assembly.

Action: Provide the name of a valid alias library or assembly which is previously declared.

PLS-00257: illegal use of EXTERNAL clause in a TYPE or PACKAGE specification

Cause: An EXTERNAL Clause was detected in a TYPE Specification or a PACKAGE specification.

Action: Remove the EXTERNAL Clause and use the new CALL Specification syntax.

PLS-00258: constrained datatypes disallowed in CALL Specifications

Cause: A call specification for C or Java cannot have constraints on the PL/SQL formal parameter types. PL/SQL types which have have constraints are NATURAL, NATURALN, POSITIVE, POSITIVEN, SIGNTYPE, INTEGER, INT, SMALLINT, DECIMAL, NUMERIC, DEC This includes NOT NULL constraints from POSITIVEN, NATURALN

Action: Use the unconstrained type for that PL/SQL formal declaration i.e NUMBER, BINARY_INTEGER or PLS_INTEGER

PLS-00259: rights model (AUTHID) must be specified

Cause: It is mandatory to specify the rights model if a PL/SQL PROCEDURE, FUNCTION, PACKAGE OR TYPE HAS CALL-Specifications

Action: Add the AUTHID clause indicating the rights model.

PLS-00260: Datetime/Interval constraints must be in range (0 .. 9)

Cause: A Datetime/Interval variable or attribute was declared with a constraint outside the legal range.

Action: Change the illegal constraint.

PLS-00261: Java CALL Specification not yet allowed as a method in an object type

Cause: A call specification declaring that an implementation is in Java has been found for a method of an object or opaque type. This usage is not yet supported.

Action: Implement the method using a language other than Java. A PL/SQL method implementation is permitted to call to Java through a call specification provided as a schema-level procedure or in a package; such a call specification can only target a static Java method, however.

PLS-00262: incorrect placement of *string* clause

Cause: An ACCESSIBLE BY clause was specified in the wrong place. This clause may be specified on top-level stored procedures, packages, and types, and also on subprograms which are directly contained in a package. This clause may not be specified on methods.

Action: Remove the clause.

PLS-00263: mismatch between *string* on a subprogram specification and body

Cause: An ACCESSIBLE BY clause was specified in a package body for an item which did not have an equivalent clause in the package specification. In a package body, this clause can only be specified on externally visible subprograms, and the subprogram specification and body must have equivalent clauses. This clause cannot be specified on package-local or nested subprograms.

Action: Modify the clause on the subprogram body to agree with the specification ***** errors until 300 are reserved for External Procedures ***** PH2 errors *****

PLS-00301: Invalid GOTO to non-label '*string*'

Cause: A GOTO was attempted to something which is not a label (for example, a variable).

Action: Specify a valid label name.

PLS-00302: component '*string*' must be declared

Cause: In a reference to a component (for example, in the name "A.B", "B" is a component of "A"), the component has not been declared. The component might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the component. Also confirm that the declaration is placed correctly in the block structure.

PLS-00303: qualifier '*string*' must be declared

Cause: In a name such as "A.B", "A" is the qualifier, and "B" is a component of the qualifier. This error occurs when no declaration for the qualifier is found. The qualifier might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the qualifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00304: cannot compile body of '*string*' without its specification

Cause: The compiled package specification required to compile a package body could not be found. Some possible causes follow: --the package name is misspelled --the package specification was never compiled --the compiled package specification is not accessible The package specification must be compiled before compiling the package body, and the compiler must have access to the compiled specification.

Action: Check the spelling of the package name. Compile the package specification before compiling the package body. Also, make sure the compiler has access to the compiled specification.

PLS-00305: previous use of '*string*' (at line *string*) conflicts with this use

Cause: While looking for prior declarations of a cursor, procedure, function, or package, the compiler found another object with the same name in the same scope. Or, the headers of subprogram in a package specification and body do not match word for word.

Action: Check the spelling of the cursor, procedure, function, or package name. Also check the names of all constants, variables, parameters, and exceptions declared in the same scope. Then, remove or rename the object with the duplicate name. Or, change the headers of the packaged subprogram so that they match word for word.

PLS-00306: wrong number or types of arguments in call to '*string*'

Cause: This error occurs when the named subprogram call cannot be matched to any declaration for that subprogram name. The subprogram name might be misspelled, a parameter might have the wrong datatype, the declaration might be faulty, or the declaration might be placed incorrectly in the block structure. For example, this error occurs if the built-in square root function SQRT is called with a misspelled name or with a parameter of the wrong datatype.

Action: Check the spelling and declaration of the subprogram name. Also confirm that its call is correct, its parameters are of the right datatype, and, if it is not a built-in function, that its declaration is placed correctly in the block structure.

PLS-00307: too many declarations of '*string*' match this call

Cause: The declaration of a subprogram or cursor name is ambiguous because there was no exact match between the declaration and the call and more than one declaration matched the call when implicit conversions of the parameter datatypes were used. The subprogram or cursor name might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the subprogram or cursor name. Also confirm that its call is correct, its parameters are of the right datatype, and, if it is not a built-in function, that its declaration is placed correctly in the block structure.

PLS-00308: this construct is not allowed as the origin of an assignment

Cause: The construct or expression does not designate a value that can be assigned to a variable. For example, the datatype name NUMBER cannot appear on the right hand side of an assignment statement as in X := NUMBER.

Action: Correct the illegal assignment statement.

PLS-00309: with %%LAST attribute, 'string' must be a variable of an enumerated type

Cause: The "%LAST" attribute must be applied to an identifier that has been declared as a variable of an enumerated type (or subtype of an enumerated type). This error occurs when "%LAST" follows some identifier that has not been so declared.

Action: n/a

PLS-00310: with %%ROWTYPE attribute, 'string' must name a table, cursor or cursor-variable

Cause: The %ROWTYPE attribute must be applied to an identifier declared as a cursor, cursor variable, or database table. This error occurs when %ROWTYPE follows some identifier that has not been so declared.

Action: Change the declaration or do not apply the %ROWTYPE attribute to the identifier.

PLS-00311: the declaration of "string" is incomplete or malformed

Cause: This occurrence of the identifier cannot be compiled because its type has not been properly defined.

Action: Correct the faulty datatype declaration.

PLS-00312: a positional parameter association may not follow a named association

Cause: When a list of parameters is passed to a subprogram or cursor, if both positional and named associations are used, all positional associations must be placed in their declared order and before all named associations, which can be in any order.

Action: Reorder the parameter list to meet the requirements or use named association only.

PLS-00313: 'string' not declared in this scope

Cause: There is no declaration for the given identifier within the scope of reference. The identifier might be misspelled, its declaration might be faulty, or the declaration might be placed incorrectly in the block structure.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00314: TABLE declarations are not allowed as PL/SQL local variables

Cause: In a precompiled program, the DECLARE TABLE statement was mistakenly used inside an embedded PL/SQL block. If an embedded PL/SQL block refers to a database table that does not yet exist, use the DECLARE TABLE statement to tell the precompiler what the table will look like. However, DECLARE TABLE statements are allowed only in the host program.

Action: Move the DECLARE TABLE statement outside the embedded PL/SQL block. If you want a variable that can store an entire row of data selected from a database table or fetched from a cursor or cursor variable, use the %ROWTYPE attribute.

PLS-00315: Implementation restriction: unsupported table index type

Cause: In the INDEX BY clause of a PL/SQL table declaration, a datatype other than BINARY_INTEGER, PLS_INTEGER, or VARCHAR2 was specified. PL/SQL tables can have one column and a primary key. The column can have any scalar type, but the primary key must be either a binary integer type or VARCHAR2.

Action: Use one of the supported key types in the INDEX BY clause.

PLS-00316: PL/SQL TABLEs must use a single index

Cause: In the INDEX BY clause of a PL/SQL table declaration, a composite primary key was specified. PL/SQL tables must have a simple, unnamed primary key of a binary integer or VARCHAR2 type.

Action: Use one of the supported key types in the INDEX BY clause.

PLS-00317: incomplete type "string" was not completed in its declarative region

Cause: An incomplete type declaration was not completed in the declarative region where it was declared.

Action: Complete the type appropriately, then retry the operation.

PLS-00318: type "string" is malformed because it is a non-REF mutually recursive type

Cause: A type-declaration such as: -- a non-REF recursive type, for example: type t is record (a t); or -- non-REF mutually dependent types, for example: type t1; type t2 is record (a t1); type t1 is record (a t2); was performed. In these examples, the type is malformed because it participates in a mutually recursive non-REF relationship with itself and possibly other types.

Action: Use another type to remove the recursion.

PLS-00319: subquery in an IN or NOT IN clause must contain exactly one column

Cause: An invalid expression such as X IN (SELECT A,B ...) was used. When a [NOT]IN clause is used with a subquery, it does not test for set membership. The number of expressions in the [NOT]IN clause and the subquery select list must match. So, in the example above, the subquery must specify at most one column.

Action: Change the subquery to select only one column.

PLS-00320: the declaration of the type of this expression is incomplete or malformed

Cause: In a declaration, the name of a variable or cursor is misspelled or the declaration makes a forward reference. Forward references are not allowed in PL/SQL. A variable or cursor must be declared before it is referenced in other statements, including other declarative statements. For example, the following declaration of dept_rec raises this exception because it refers to a cursor not yet declared: DECLARE dept_rec dept_cur%ROWTYPE; CURSOR dept_cur IS SELECT

Action: Check the spelling of all identifiers in the declaration. If necessary, move the declaration so that it makes no forward references.

PLS-00321: expression '*string*' is inappropriate as the left hand side of an assignment statement

Cause: The expression does not designate a variable that can have a value assigned to it. For example, the function SYSDATE cannot appear on the left hand side of an assignment statement such as SYSDATE := '01-JAN-1990';

Action: Correct the illegal assignment statement.

PLS-00322: declaration of a constant '*string*' must contain an initialization assignment

Cause: A constant declaration lacks the assignment of an initial value. For example, in the following declaration " := 3.14159" is the initialization clause: "pi constant number := 3.14159;"

Action: Correct the constant declaration by supplying the missing initialization assignment.

PLS-00323: subprogram or cursor '*string*' is declared in a package specification and must be defined in the package body

Cause: A subprogram specification was placed in a package specification, but the corresponding subprogram body was not placed in the package body. The package body implements the package specification. So, the package body must contain the definition of every subprogram declared in the package specification.

Action: Check the spelling of the subprogram name. If necessary, add the missing subprogram body to the package body.

PLS-00324: cursor attribute may not be applied to non-cursor '*string*'

Cause: This error occurs when a cursor-attribute ("%FOUND", "%NOTFOUND", "%ROWS", "%IS_OPEN", etc.) appears following an identifier that is not declared as a cursor or cursor variable. It occurs, for example, if the variable name my_cur in my_cur%FOUND was not properly declared as a cursor or if the variable declaration was placed incorrectly in the block structure.

Action: Check the spelling and declaration of the identifier. Also confirm that the declaration is placed correctly in the block structure.

PLS-00325: non-integral numeric literal *string* is inappropriate in this context

Cause: A non-integral numeric literal was used in a context that requires an integer (a number with no digits to the right of its decimal point).

Action: Replace the inappropriate literal with an integer literal.

PLS-00326: IN clause must contain same number of expressions as subquery

Cause: The number of expressions in an IN clause did not equal the number of expressions in a corresponding subquery select list. For example, the following statement is invalid because the IN clause contains two expressions, but the subquery select list contains just one: ... WHERE (ename, sal) IN (SELECT sal FROM emp);

Action: Check the number of expressions in each set, then revise the statement to make the numbers equal.

PLS-00327: "*string*" is not in SQL scope here

Cause: In a SQL statement, a reference was made to an out-of-scope database object. The referenced object might be misspelled, or the reference might be mixed, as in the following example: CURSOR c1 IS SELECT dept.dname FROM emp;

Action: Check the spelling of all database objects in the SQL statement, and make sure all references are to objects within the current scope.

PLS-00328: A subprogram body must be defined for the forward declaration of *string*.

Cause: A subprogram specification was declared, but the corresponding subprogram body was not defined. Write the subprogram specification and body as a unit. An alternative solution is to separate the specification from its body, which is necessary when you want to define mutually recursive subprograms or you want to group subprograms in a package.

Action: Check the spelling of the subprogram name. If necessary, supply the missing subprogram body.

PLS-00329: schema-level type has illegal reference to *string*

Cause: An attempt was made to make a reference from a schema-level type to something other than a schema-level type.

Action: Replace the illegal reference and retry the operation.

PLS-00330: invalid use of type name or subtype name

Cause: A datatype or subtype specifier was mistakenly used in place of a constant, variable, or expression. For example, the code might look like `IF emp_count > number THEN ... -- illegal; NUMBER is a datatype specifier`

Action: Replace the datatype or subtype specifier with a valid constant, variable, or expression.

PLS-00331: illegal reference to *string*

Cause: You had an EITHER 1. an illegal reference to some object in user SYS. to use one of them in an illegal way OR 2. an illegal reference to a remote object type.

Action: Remove the reference.

PLS-00332: "*string*" is not a valid prefix for a qualified name

Cause: You have a malformed qualified name because the prefix is not valid.

Action: Remove or change the reference.

PLS-00333: "*string*" must match an object-table alias in this context

Cause: The name, appearing in the context of a REF or VALUE, did not resolve to an object-table alias.

Action: 1) If there is no object table in the scope, then remove the REF or VALUE; or provide the missing object table reference. 2) If there is an object table in the scope, but you're not referring to it, add the reference.

PLS-00334: "*string*" matches table or view without an alias

Cause: You have a reference to a table or view name without an alias.

Action: Replace the reference with a reference to an object-table alias.

PLS-00335: a package name conflicts with an existing object

Cause: In a CREATE PACKAGE statement, a package (which is a database object that groups logically related PL/SQL types, objects, and subprograms) was given the same name as an existing database object.

Action: Give the package a unique name.

PLS-00336: non-object-table "string" illegal in this context

Cause: You have a REF or VALUE modifier for a non-object-table

Action: Replace the reference with a reference to an object-table alias.

PLS-00337: "string" matches too many object table aliases

Cause: You have an ambiguous reference to an object-table alias; there are at least two object-table aliases in the same scope.

Action: Remove all but one of the references or change the alias names of the remaining.

PLS-00338: unable to resolve "string" as a column or row expression

Cause: You have a reference to a name that could not be resolved as a column or row expression. This occurred in an update or insert statement involving an object-table.

Action: If this is an update statement and you intended to code this as a column reference, fix it as such. If you intended to code this as a row expression, change this to refer to an alias of an object-table.

PLS-00339: "string" matches object-table without a REF or VALUE modifier

Cause: You have an object-table name appearing without a REF or VALUE modifier.

Action: If you intended to code this with a REF or VALUE modifier, add the modifier; if you intended to code this as a column reference, change the reference appropriately; otherwise, remove the reference.

PLS-00341: declaration of cursor 'string' is incomplete or malformed

Cause: A cursor declaration is improper or an identifier referenced in the cursor declaration was not properly declared. A return type that does not refer to an existing database table or a previously declared cursor or cursor variable might have been specified. For example, the following cursor declaration is illegal because c1 is not yet fully defined: `CURSOR c1 RETURN c1%ROWTYPE IS SELECT ... -- illegal` In this case, a return type does not have to be specified because it is implicit.

Action: Check the spelling and declaration of the cursor name and any identifiers referenced in the cursor declaration. Also confirm that the declaration is placed correctly in the block structure. If a return type was specified, make sure that it refers to an existing database table or a previously declared cursor or cursor variable.

PLS-00351: Not logged onto database 'string'

Cause: An attempt was made to access an Oracle database without being logged on. Probably, an invalid username or password was entered.

Action: Log on to Oracle with a correctly spelled username and password before trying to access the database.

PLS-00352: Unable to access another database 'string'

Cause: An attempt was made to reference an object in a database other than the current local or remote Oracle database.

Action: Correct the reference and make sure the object is in the current Oracle database.

PLS-00353: 'string' must name a user in the database

Cause: This error occurs when the username was misspelled or when the user does not exist in the database.

Action: Check the spelling of the username and make sure the user exists.

PLS-00354: username must be a simple identifier

Cause: A qualified username such as scott.accts is not permitted in this context.

Action: Specify a simple username such as scott instead.

PLS-00355: use of pl/sql table not allowed in this context

Cause: A PL/SQL table was referenced in the wrong context (for example, with a remote link).

Action: Remove the PL/SQL table reference or change the context.

PLS-00356: 'string' must name a table to which the user has access

Cause: The named table is not accessible to the user. This error occurs when the table name or username was misspelled, the table and/or user does not exist in the database, the user was not granted the necessary privileges, or the table name duplicates the name of a local variable or loop counter.

Action: Check the spelling of the table name and username. Also confirm that the table and user exist, the user has the necessary privileges, and the table name does not duplicate the name of a local variable or loop counter.

PLS-00357: Table,View Or Sequence reference 'string' not allowed in this context

Cause: A reference to database table, view, or sequence was found in an inappropriate context. Such references can appear only in SQL statements or (excluding sequences) in %TYPE and %ROWTYPE declarations. Some valid examples follow: `SELECT ename, emp.deptno, dname INTO my_ename, my_deptno, my_dept .FROM emp, dept WHERE emp.deptno = dept.deptno;` `DECLARE last_name emp.ename%TYPE; dept_rec dept%ROWTYPE;`

Action: Remove or relocate the illegal reference.

PLS-00358: column 'string' exists in more than one table; use qualifier

Cause: The statement is ambiguous because it specifies two or more tables having the same column name. For example, the following statement is ambiguous because deptno is a column in both tables: `SELECT deptno, loc INTO my_deptno, my_loc FROM emp, dept;`

Action: Precede the column name with the table name (as in emp.deptno) so that the column reference is unambiguous.

PLS-00359: assignment target in 'string' must have components

Cause: An assignment target was declared that lacks the components needed to store the assigned values. For example, this error occurs if you try to assign a row of column values to a variable instead of a record, as follows: `DECLARE dept_rec dept%ROWTYPE; my_deptno dept.deptno%TYPE; ... BEGIN SELECT deptno, dname, loc INTO my_deptno -- invalid FROM dept WHERE ...`

Action: Check the spelling of the names of the assignment target and all its components. Make sure the assignment target is declared with the required components and that the declaration is placed correctly in the block structure.

PLS-00360: cursor declaration without body needs return type

Cause: A cursor declaration lacks either a body (SELECT statement) or a return type. If you want to separate a cursor specification from its body, a return type must be supplied, as in `CURSOR c1 RETURN emp%ROWTYPE;`

Action: Add a SELECT statement or return type to the cursor declaration.

PLS-00361: IN cursor 'string' cannot be OPEN'ed

Cause: A cursor parameter with mode IN cannot be modified, and therefore cannot be opened.

Action: Change the cursor parameter to be IN OUT or OUT

PLS-00362: invalid cursor return type; 'string' must be a record type

Cause: In a cursor specification or REF CURSOR type definition, a non- record type such as NUMBER or TABLE was specified as the return type. This is not allowed. Only the following return types are allowed: `<record_type_name> <record_name>%TYPE`
`<table_name>%ROWTYPE` `<cursor_name>%ROWTYPE`
`<cursor_variable_name>%ROWTYPE`

Action: Revise the cursor specification or REF CURSOR type definition so that it specifies one of the above return types.

PLS-00363: expression 'string' cannot be used as an assignment target

Cause: A literal, constant, IN parameter, loop counter, or function call was mistakenly used as the target of an assignment. For example, the following statement is illegal because the assignment target, 30, is a literal: `SELECT deptno INTO 30 FROM dept WHERE ... -- illegal`

Action: Correct the statement by using a valid assignment target.

PLS-00364: loop index variable 'string' use is invalid

Cause: An attempt was made to assign the value of an OUT parameter to

Action: Use an IN OUT parameter instead of the OUT parameter. Inside a

PLS-00366: subtype of a NOT NULL type must also be NOT NULL

Cause: After a subtype was defined as NOT NULL, it was used as the base type for another subtype defined as NULL. That is not allowed. For example, the code might look like `DECLARE SUBTYPE Weekday IS INTEGER NOT NULL; SUBTYPE Weekend IS Weekday NULL; -- illegal` instead of `DECLARE SUBTYPE Weekday IS INTEGER NOT NULL; SUBTYPE Weekend IS Weekday;`

Action: Revise the subtype definitions to eliminate the conflict.

PLS-00367: a RAISE statement with no exception name must be inside an exception handler

Cause: A RAISE statement not followed by an exception name was found outside an exception handler

Action: Delete the RAISE statement, relocate it to an exception handler, or supply the missing exception name.

PLS-00368: in RAISE statement, 'string' must be an exception name

Cause: The identifier in a RAISE statement is not a valid exception name.

Action: Make sure the identifier in the RAISE statement was declared as an exception and is correctly placed in the block structure. If you are using the name of a PL/SQL predefined exception, check its spelling.

PLS-00369: no choices may appear with choice OTHERS in an exception handler

Cause: A construct of the form WHEN excep1 OR OTHERS => was encountered in the definition of an exception handler. The OTHERS handler must appear by itself as the last exception handler in a block.

Action: Remove the identifier that appears with OTHERS or write a separate exception handler for that identifier.

PLS-00370: OTHERS handler must be last among the exception handlers of a block

Cause: One or more exception handlers appear after an OTHERS handler. However, the OTHERS handler must be the last handler in a block or subprogram because it acts as the handler for all exceptions not named specifically.

Action: Move the OTHERS handler so that it follows all specific exception handlers.

PLS-00371: at most one declaration for 'string' is permitted

Cause: A reference to an identifier was ambiguous because there were multiple declarations for the identifier. At most one local variable with a given identifier is permitted in the declarative part of a block, procedure, or function. At most one label with a given identifier may appear in a block.

Action: Check the spelling of the identifier. If necessary, remove all but one declaration of the identifier.

PLS-00372: In a procedure, RETURN statement cannot contain an expression

Cause: In a procedure, a RETURN statement contains an expression, which is not allowed. In functions, a RETURN statement must contain an expression because its value is assigned to the function identifier. However, in procedures, a RETURN statement simply lets you exit before the normal end of the procedure is reached.

Action: Remove the expression from the RETURN statement, or redefine the procedure as a function.

PLS-00373: EXIT/CONTINUE label 'string' must label a LOOP statement

Cause: The label in the EXIT or CONTINUE statement did not refer to a LOOP statement. An EXIT or CONTINUE statement need not specify a label. However, if a label is specified (as in EXIT my_label or CONTINUE my_label), it must refer to a LOOP statement.

Action: Make sure the label name is spelled correctly and that it refers to a LOOP statement.

PLS-00374: illegal EXIT/CONTINUE statement; must appear inside the loop labeled 'string'

Cause: The label in the EXIT or CONTINUE statement did not refer to a loop statement. An EXIT or CONTINUE statement need not specify a label. However, if a

label is specified (as in EXIT my_label or CONTINUE my_label), the EXIT or CONTINUE statement must be inside the LOOP statement designated by that label.

Action: Make sure the label name is spelled correctly; if necessary, move the EXIT or CONTINUE statement inside the LOOP statement to which the label refers.

PLS-00375: illegal GOTO statement; this GOTO cannot branch to label 'string'

Cause: The line and column numbers accompanying the error message refer to a GOTO that branches from outside a construct (a loop or exception handler, for example) that contains a sequence of statements to a label inside that sequence of statements. Such a branch is not allowed.

Action: Either move the GOTO statement inside the sequence of statements or move the labeled statement outside the sequence of statements.

PLS-00376: illegal EXIT/CONTINUE statement; it must appear inside a loop

Cause: An EXIT or CONTINUE statement was found outside of a loop construct. The EXIT statement is used to exit prematurely from a loop and the CONTINUE statement is used to begin the next iteration of a loop; each must always appear within a loop.

Action: Either remove the EXIT or CONTINUE statement or place it inside a loop.

PLS-00377: internal type PLS_INTEGER is not included in this release of PL/SQL

Cause: The type-name INTEGER was used in a declaration.

Action: n/a

PLS-00378: invalid compilation unit for this release of PL/SQL

Cause: A compilation unit is a file containing PL/SQL source code that is passed to the compiler. Only compilation units containing blocks, declarations, statements, and subprograms are allowed. This error occurs when some other language construct is passed to the compiler.

Action: Make sure the compilation unit contains only blocks, declarations, statements, and subprograms.

PLS-00379: CASE statements are not included in this release of PL/SQL

Cause: The unit being compiled contains a CASE statement. However, the current release of PL/SQL does not support CASE statements.

Action: Remove the CASE statement from the compilation unit.

PLS-00380: functions and procedures are not included in this release of PL/SQL

Cause: The program being compiled contains a declaration of a FUNCTION or PROCEDURE.

Action: n/a

PLS-00381: type mismatch found at 'string' between column and variable in subquery or INSERT

Cause: The datatypes of a column and a variable do not match. The variable was encountered in a subquery or INSERT statement.

Action: Change the variable datatype to match that of the column.

PLS-00382: expression is of wrong type

Cause: An expression has the wrong datatype for the context in which it was found.

Action: Change the datatype of the expression. You might want to use datatype conversion functions.

PLS-00383: type mismatch found at 'string' inside an IN or NOT IN clause

Cause: In a test for set membership such as X NOT IN (SELECT Y ...), the expressions X and Y do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions in the select list.

PLS-00384: type mismatch found at 'string' in UPDATE's SET clause

Cause: The column to the left of the equal sign in the SET clause of an UPDATE statement does not match in datatype with the column, expression, or subquery to the right of the equal sign, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions in the SET clause.

PLS-00385: type mismatch found at 'string' in SELECT...INTO statement

Cause: The expressions to the left and right of the INTO clause in a SELECT...INTO statement do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions in the select list.

PLS-00386: type mismatch found at 'string' between FETCH cursor and INTO variables

Cause: An assignment target in the INTO list of a FETCH statement does not match in datatype with the corresponding column in the select list of the cursor declaration, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the cursor declaration or change the datatype of the assignment target. You might want to use datatype conversion functions in the select list of the query associated with the cursor.

PLS-00387: INTO variable cannot be a database object

Cause: An item in the INTO list of a FETCH or SELECT statement was found to be a database object. INTO introduces a list of user-defined variables to which output values are assigned. Therefore, database objects cannot appear in the INTO list.

Action: Check the spelling of the INTO list item. If necessary, remove the item from the INTO list or replace it with a user-defined output variable.

PLS-00388: undefined column 'string' in subquery

Cause: A subquery contains a column name that was not defined in the specified table.

Action: Change the expression to specify a column that was defined.

PLS-00389: table, view or alias name "string" not allowed in this context

Cause: A table, view or alias name *name* corresponding to a regular (non-object) table appeared in an inappropriate context.

Action: Remove the reference, or, if you intended to code this as a column reference, fix it as such.

PLS-00390: undefined column 'string' in INSERT statement

Cause: Check the spelling of the column name, then change the expression so that it refers only to defined columns.

Action: Check the spelling of the column name, then change the expression so that it refers only to defined columns.

PLS-00391: undefined column 'string' in UPDATE statement

Cause: An UPDATE statement refers to a column not defined for the table or view being updated.

Action: Check the spelling of the column name, then revise the statement so that it refers only to defined columns.

PLS-00392: Type mismatch in arguments to BETWEEN

Cause: In a comparison such as X BETWEEN Y AND Z, the expressions X, Y, and Z do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions.

PLS-00393: wrong number of columns in SELECT...INTO statement

Cause: The number of columns selected by a SELECT...INTO statement does not match the number of variables in the INTO clause.

Action: Change the number of columns in the select list or the number of variables in the INTO clause so that the numbers match.

PLS-00394: wrong number of values in the INTO list of a FETCH statement

Cause: The number of variables in the INTO clause of a FETCH statement does not match the number of columns in the cursor declaration.

Action: Change the number of variables in the INTO clause or the number of columns in the cursor declaration so that the numbers match.

PLS-00395: wrong number of values in VALUES clause of INSERT statement

Cause: The number of columns in an INSERT statement does not match the number of values in the VALUES clause. For example, the following statement is faulty because no column is specified for the value 20: INSERT INTO emp (empno, ename) VALUES (7788, 'SCOTT', 20);

Action: Change the number of items in the column list or the number of items in the VALUES list so that the numbers match.

PLS-00396: INSERT statement's subquery yields wrong number of columns

Cause: The number of columns in an INSERT statement does not match the number of columns in a subquery select list. For example, the following statement is faulty because no

corresponding column is specified for col3: INSERT INTO emp (ename, empno)
SELECT col1, col2, col3 FROM ...

Action: Change the column list of the INSERT or subquery so they are the same length. ACTION: Change the number of items in the column list of the INSERT statement or the number of items in the select list so that the numbers match.

PLS-00397: Type mismatch in arguments to IN

Cause: In a test for set membership such as X IN (Y, Z), the expressions X, Y, and Z do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the expressions so that their datatypes match. You might want to use datatype conversion functions.

PLS-00398: wrong number of columns in UNION, INTERSECT, or MINUS expression

Cause: The SELECT clauses to the left and right of a UNION, INTERSECT, or MINUS expression do not select the same number of columns. For example, the following statement is faulty because the select lists do not contain the same number of items: CURSOR my_cur IS SELECT ename FROM emp INTERSECT SELECT ename, empno FROM emp;

Action: Change the select lists so that they contain the same number of items.

PLS-00399: different types of columns in UNION, INTERSECT, or MINUS expression

Cause: The select lists to the left and right of a UNION, INTERSECT, or MINUS expression select at least one column that is mismatched in datatype. For example, the following statement is faulty because the constant 3 has datatype NUMBER, whereas SYSDATE has datatype DATE: CURSOR my_cur IS SELECT 3 FROM emp INTERSECT SELECT SYSDATE FROM emp;

Action: Change the select lists so that they match in datatype. You might want to use datatype conversion functions in the select list of one or more queries.

PLS-00400: different number of columns between cursor SELECT statement and return value

Cause: In a cursor declaration, a return type (such as RETURN emp%ROWTYPE) was specified, but the number of returned column values does not match the number of select-list items.

Action: Change the cursor return type or the select list so that the number of returned column values matches the number of select-list items.

PLS-00401: different column types between cursor SELECT statement and return value found at 'string'

Cause: In a cursor declaration, a return type (such as RETURN emp%ROWTYPE) was specified, but a returned column value and its corresponding select-list item have different datatypes.

Action: Change the cursor return type or the select list so that each returned column value and its corresponding select-list item have the same datatype.

PLS-00402: alias required in SELECT list of cursor to avoid duplicate column names

Cause: A cursor was declared with a SELECT statement that contains duplicate column names. Such references are ambiguous.

Action: Replace the duplicate column name in the select list with an alias.

PLS-00403: expression 'string' cannot be used as an INTO-target of a SELECT/FETCH statement

Cause: A FETCH statement was unable to assign a value to an assignment target in its INTO list because the target is not a legally formed and declared variable. For example, the following assignment is illegal because 'Jones' is a character string, not a variable: `FETCH my_cur INTO 'Jones';`

Action: Check the spelling and declaration of the assignment target. Make sure that the rules for forming variable names are followed.

PLS-00404: cursor 'string' must be declared with FOR UPDATE to use with CURRENT OF

Cause: The use of the CURRENT OF cursor_name clause is legal only if cursor_name was declared with a FOR UPDATE clause.

Action: Add a FOR UPDATE clause to the definition of the cursor or do not use the CURRENT OF cursor_name clause.

PLS-00405: subquery not allowed in this context

Cause: A subquery was used in an inappropriate context, such as: `if (SELECT deptno FROM emp WHERE ...) = 20 then ...` Subqueries are allowed only in SQL statements.

Action: The same result can be obtained by using a temporary variable, as in: `SELECT deptno INTO temp_var FROM emp WHERE ...; IF temp_var = 20 THEN ...`

PLS-00406: length of SELECT list in subquery must match number of assignment targets

Cause: A query select list is not the same length as the list of targets that will receive the returned values. For example, the following statement is faulty because the subquery returns two values for one target: `UPDATE emp SET ename = (SELECT ename, empno FROM emp WHERE ename = 'SMITH') ...`

Action: Change one of the lists so that they contain the same number of items.

PLS-00407: '*' not allowed here; a list of columns is required

Cause: An asterisk (*) was used as an abbreviation for a list of column names. However, in this context the column names must be written out explicitly.

Action: Replace the asterisk with a list of column names.

PLS-00408: duplicate column 'string' not permitted in INSERT or UPDATE

Cause: An UPDATE or INSERT statement has a column list that contains duplicate column names.

Action: Check the spelling of the column names, then eliminate the duplication.

PLS-00409: duplicate variable 'string' in INTO list is not permitted

Cause: The same variable appears twice in the INTO list of a SELECT or FETCH statement.

Action: Remove one of the variables from the INTO list.

PLS-00410: duplicate fields in RECORD, TABLE or argument list are not permitted

Cause: When a user-defined record was declared, the same name was given to two fields. Like column names in a database table, field names in a user-defined record must be unique.

Action: Check the spelling of the field names, then remove the duplicate.

PLS-00411: Number of values in aggregate and in subquery don't match

Cause: In a statement of the form aggregate = subquery, the numbers of values in the aggregate and subquery are unequal. For example, the code might look like ...
WHERE (10,20,30) = (SELECT empno,deptno FROM emp WHERE...);

Action: Revise the aggregate or subquery so that the numbers of values match.

PLS-00412: list of values not allowed as argument to this function or procedure

Cause: A parenthesized list of values separated by commas (that is, an aggregate) was used in the wrong context. For example, the following usage is invalid: WHERE (col1, col2) > (SELECT col3, col4 FROM my_table ...) However, an equal sign can take a list of values and a subquery as left- and right-hand-side arguments, respectively. So, the following usage is valid: WHERE (col1, col2) = (SELECT col3, col4 FROM my_table ...)

Action: Rewrite the expression. For example, the clause WHERE (col1, col2) > (SELECT col3, col4 FROM my_table ...) can be rewritten as WHERE col1 > (SELECT col3 FROM my_table ...) AND col2 > (SELECT col4 FROM my_table ...)

PLS-00413: identifier in CURRENT OF clause is not a cursor name

Cause: The identifier in a CURRENT OF clause names an object other than a cursor.

Action: Check the spelling of the identifier. Make sure that it names the cursor in the DELETE or UPDATE statement and that it names the cursor itself, not a FOR-loop variable.

PLS-00414: no column 'string' in table

Cause: A table name or alias was used to qualify a column reference, but the column was not found in that table. Either the column was never defined or the column name is misspelled.

Action: Confirm that the column was defined and check the spelling of the column name.

PLS-00415: 'string' is an OUT parameter and cannot appear in a function

Cause: An OUT or IN OUT formal parameter was used in a function specification.

Action: n/a

PLS-00416: The third argument of DECODE cannot be NULL

Cause: The third argument of DECODE is NULL.

Action: Enter an argument with a proper type and value.

PLS-00417: unable to resolve "string" as a column

Cause: A database table, view, or column was specified in a SQL statement that does not exist, or the privileges required to access the table or view were not granted.

Action: Check the spelling of the table (or view) and column names; make sure the table and columns exist. If necessary, ask the DBA to grant the privileges required to access the table.

PLS-00418: array bind type must match PL/SQL table row type

Cause: A host array was passed (by an Oracle Precompiler program, for example) to a PL/SQL subprogram for binding to a PL/SQL table parameter. However, the datatypes of the array elements and PL/SQL table rows are incompatible. So, the binding failed.

Action: Change the datatype of the array elements or PL/SQL table rows to make the datatypes compatible.

PLS-00419: reference to remote attribute not permitted

Cause: An attempt was made to reference a remote cursor attribute, which is not allowed. For example, the code might look like `IF SQL%NOTFOUND@newyork THEN ...`

Action: Do not try to reference a remote cursor attribute.

PLS-00420: can't call builtin routines remotely

Cause: An attempt was made to call a built-in PL/SQL function remotely, which is not allowed. For example, the code might look like `my_sqlerrm := SQLERRM@newyork;` or `INSERT INTO emp VALUES (my_empno, STANDARD.RTRIM@newyork(my_ename), ...);`

Action: Always call built-in functions locally; never specify a database link.

PLS-00421: circular synonym 'string'

Cause: Directly or indirectly, a synonym was defined in terms of itself, creating a circular definition.

Action: Redefine the synonyms to eliminate the circular definition.

PLS-00422: no PL/SQL translation for the bindtype given for this bind variable

Cause: A host variable was passed (by an Oracle Precompiler program, for example) to PL/SQL for binding. However, its datatype is not compatible with any PL/SQL datatype. So, the binding failed.

Action: Change the datatype of the host variable to make it compatible with a PL/SQL datatype.

PLS-00423: ORDER BY item must be the number of a SELECT-list expression

Cause: A column alias was used in the ORDER BY clause of a SELECT statement that uses a UNION, INTERSECT, or MINUS set operator. This is not allowed. In such cases, expressions in the ORDER BY clause must be unsigned integers that designate the ordinal positions of select-list items.

Action: Change the alias in the ORDER BY clause to an unsigned integer that designates the ordinal position of the select item in question.

PLS-00424: RPC defaults cannot include Package State

Cause: An attempt was made to call a remote subprogram whose defaulted parameters depend on package state, which is not allowed. When calling remote subprograms, the actual parameters must be passed explicitly if the corresponding formal parameters depend on package state.

Action: Call the remote subprogram by passing each actual parameter explicitly.

PLS-00425: in SQL, function argument and return types must be SQL type

Cause: When a cursor variable was declared as the formal parameter of a

Action: Change the parameter mode from OUT to IN or IN OUT.

PLS-00427: RPC defaults cannot use builtins when versions of STANDARD differ

Cause: An attempt was made to call a remote subprogram whose defaulted parameter value is calculated using a builtin operation. If the calling system uses a different version of package STANDARD than does the called system, a defaulted expression must be either a simple numeric or string literal, NULL, or a direct call to a user-written function.

Action: Call the remote subprogram by passing each actual parameter value explicitly.

PLS-00428: an INTO clause is expected in this SELECT statement

Cause: The INTO clause of a SELECT INTO statement was omitted. For example, the code might look like SELECT deptno, dname, loc FROM dept WHERE ... instead of SELECT deptno, dname, loc INTO dept_rec FROM dept WHERE ... In PL/SQL, only a subquery is written without an INTO clause.

Action: Add the required INTO clause.

PLS-00429: unsupported feature with RETURNING clause

Cause: - INTO clause and RETURNING clause cannot be use in the same statement
- RETURNING clause is currently not supported for object type columns, LONG columns, records, %rowtypes, remote tables and INSERT with subquery. This is as ORA-28815.

Action: Use separate select statement to get the values.

PLS-00430: FORALL iteration variable *string* is not allowed in this context

Cause: FORALL iteration variable can only be used as a subscript. It cannot be used directly or as a part of an expression.

Action: Use FORALL variable only as a collection subscript.

PLS-00431: bulk SQL attributes must use a single index

Cause: More than one index specified to access SQL bulk attribute.

Action: Use a single index of integer datatype.

PLS-00432: implementation restriction: cannot use FORALL and BULK COLLECT INTO together in SELECT statements

Cause: SELECT statement contains both the FORALL and BULK COLLECT INTO phrases.

Action: Dn not use FORALL and BULK COLLECT INTO together in SELECT statements.

PLS-00433: inconsistent package STANDARD

Cause: PL/SQL compiler could not find the entries (such as type declarations) that should exist in the package STANDARD.

Action: Make sure that the correct version of package STANDARD is available in the current Oracle database, then retry compilation.

PLS-00434: record field has unsupported type: "string"

Cause: An attempt was made to use an unsupported type for a record field. In this release, the use of the SQL92 datetime types (time, timestamp, time with time zone, timestamp with time zone, interval year to month, interval day to second) are not supported in record fields.

Action: Use only supported types for record fields.

PLS-00435: DML statement without BULK In-BIND cannot be used inside FORALL

Cause: The DML (SELECT/INSERT/DELETE/UPDATE) statement inside the FORALL statement does not contain BULK IN-BIND variables.

Action: The DML (SELECT/INSERT/DELETE/UPDATE) statement inside the FORALL statement must contain BULK IN-BIND variables.

PLS-00436: implementation restriction: cannot reference fields of BULK In-BIND table of records or objects

Cause: table(bulk_index).field is not supported at run-time.

Action: Use FOR loop with instead of the FORALL DML statement (MERGE/INSERT/DELETE/UPDATE).

PLS-00437: FORALL bulk index cannot be used in string clause

Cause: RETURNING table(bulk_index) is not supported.

Action: Use RETURNING BULK COLLECT instead

PLS-00438: value in LIMIT clause: 'string' use is invalid

Cause: The evaluation value in the LIMIT clause of a bulk fetch was found in an inappropriate context. For example, the following statement is illegal because the LIMIT clause in a bulk fetch expects a numeric value. `FETCH c1 BULK COLLECT INTO var_tab LIMIT '22333';` -- illegal

Action: Change the expression of the LIMIT clause so that the evaluation result is compatible to a numeric value.

PLS-00439: A LIMIT clause must be used within a BULK FETCH

Cause: A LIMIT clause is used within a non-bulk fetch

Action: Do not use a LIMIT clause when a non-bulk fetch is used.

PLS-00440: FORALL bulk IN-bind variables cannot be used here

Cause: A reference to a FORALL statement's bulk IN-bind variable was found in a context in which it is not permitted. For example, such variables are not permitted in expressions in the USING clause of a dynamic SQL statement: `forall j in 1..Users.Count() execute immediate 'insert into System_Users(Username) values :U' using Upper(Users(j));`

Action: In the case described above, move the expression from the USING clause into the SQL statement: `forall j in 1..Users.Count() execute immediate 'insert into System_Users(Username) values Upper(:U)' using Users(j);`

PLS-00441: EXIT/CONTINUE statement may have a label here; 'string' is not a label

Cause: The specified name was not a label. An EXIT or CONTINUE statement does not require a label, but when the optional name appears, it must be a label.

Action: Check the spelling of the name. Make sure that the name is the label of a loop in which the EXIT or CONTINUE statement is nested. If a label is not needed for this statement, delete the name.

PLS-00442: CONTINUE statement may not have the prefix STANDARD

Cause: The procedure CONTINUE appears in STANDARD but that procedure may not be called either with its name alone or with the prefix STANDARD. It exists only to help in analysis of the CONTINUE statement.

Action: If a CONTINUE statement is intended, remove the prefix. If some other procedure was intended, check the spelling of the prefix and of the procedure name.

PLS-00450: a variable of this private type cannot be declared here

Cause: A variable declaration uses a type that is declared PRIVATE in some other compilation unit.

Action: Do not use this type in a PRIVATE variable declaration.

PLS-00452: Subprogram 'string' violates its associated pragma

Cause: A packaged function cannot be called from SQL statements unless its purity level is asserted by coding a RESTRICT_REFERENCES pragma in the package specification. The pragma, which is used to control side effects, tells the PL/SQL compiler to deny the packaged function read/write access to database tables, public packaged variables, or both. A SQL statement that violates the pragma will cause a compilation error.

Action: Raise the purity level of the function, or relax the pragma restrictions.

PLS-00453: remote operations not permitted on object tables or user-defined type columns

Cause: A reference to a remote object tables or user-defined type column was found.

Action: Do not refer to it.

PLS-00454: with a returning into clause, the table expression cannot be remote or a subquery

Cause: A reference to a remote table or subquery was found in a sql statement with a returning into clause.

Action: Do not refer to it, or do use a subsequent select statement.

PLS-00455: cursor 'string' cannot be used in dynamic SQL OPEN statement

Cause: dynamically OPEN a REF CURSOR that has RETURN type. However, only REF CURSOR without RETURN type can be OPEN'ed by an embedded dynamic OPEN statement.

Action: define a REF CURSOR without return type, and use it in the statement.

PLS-00456: item 'string' is not a cursor

Cause: the given variable is not a cursor and therefore cannot be OPEN'ed or FETCH'ed from.

Action: check the spelling and declaration for the given variable.

PLS-00457: expressions have to be of SQL types

Cause: an expression of wrong type is in USING or dynamic RETURNING clause. In USING or dynamic RETURNING clause, an expression cannot be of non-SQL types such as BOOLEAN, INDEX TABLE, and record.

Action: change the expression type to a SQL type.

PLS-00458: subprogram '*string*' cannot be called from a REPEATABLE subprogram

Cause: The subprogram is not REPEATABLE and cannot be called from a REPEATABLE subprogram.

Action: delete the call or delete REPEATABLE.

PLS-00459: this feature is not allowed in REPEATABLE subprogram

Cause: Having one of the followings feature in the REPEATABLE subprogram: dynamic SQL statements or autonomous transaction.

Action: delete the statements or delete REPEATABLE.

PLS-00460: REPEATABLE subprogram '*string*' has to be RNDS, WNDS, RNPS, and WNPS

Cause: Repeatable subprogram can neither read database state (RNDS), write database state (WNDS), read package state (RNPS), nor write package state (WNPS).

Action: make the subprogram to be RNDS, WNDS, RNPS, and WNPS or delete REPEATABLE

PLS-00461: mismatch REPEATABLE information between specification and body of '*string*'

Cause: REPEATABLE is declared at the subprogram's specification, but not at its body, or vice versa.

Action: make sure both specification and body are declared as REPEATABLE

PLS-00462: nested subprogram '*string*' has to be REPEATABLE

Cause: the nested subprogram of a REPEATABLE subprogram is not declared as REPEATABLE. If a subprogram is REPEATABLE, all of its nested subprograms has to be declared as REPEATABLE.

Action: declared the nested subprogram as REPEATABLE

PLS-00483: exception '*string*' may appear in at most one exception handler in this block

Cause: An exception appears in two different WHEN clauses (that is, two different exception handlers) in the exception-handling part of a PL/SQL block or subprogram.

Action: Remove one of the references to the exception.

PLS-00484: redundant exceptions '*string*' and '*string*' must appear in same exception handler

Cause: Using the EXCEPTION_INIT pragma, different exceptions were initialized to the same Oracle error number; then, they were referenced in different exception handlers within the same exception-handling part. Such references conflict.

Action: Remove one of the exceptions or initialize it to a different Oracle error number.

PLS-00485: in exception handler, 'string' must be an exception name

Cause: An identifier not declared as an exception appears in an exception handler WHEN clause. Only the name of an exception is valid in a WHEN clause.

Action: Check the spelling of the exception name and make sure the exception was declared properly.

PLS-00486: select list cannot be enclosed in parentheses

Cause: In a SELECT statement, the select list was enclosed in parentheses, as in: SELECT (deptno, dname, loc) FROM dept INTO ... This breaks the rules of SQL syntax. Parentheses are not required because the keywords SELECT and FROM delimit the select list.

Action: Remove the parentheses enclosing the select list.

PLS-00487: Invalid reference to variable 'string'

Cause: A variable was referenced in a way that is inconsistent with its datatype. For example, a scalar variable might have been mistakenly referenced as a record, as follows: DECLARE CURSOR emp_cur IS SELECT empno, ename, sal FROM emp; emp_rec emp_cur%ROWTYPE; my_sal NUMBER(7,2); BEGIN ... total_sal := total_sal + my_sal.sal; -- invalid ...

Action: Check the spelling of the variable name. Make sure the variable was declared properly and that the declaration and reference are consistent regarding datatype.

PLS-00488: 'string' must be a type

Cause: The datatype specifier in a declaration or expression does not designate a legal type. For example, the %TYPE attribute might not have been added to a declaration, as in DECLARE my_sal emp.sal%TYPE; my_ename emp.ename; -- missing %TYPE ... When declaring a constant or variable, to provide the datatype of a column automatically, use the %TYPE attribute. Likewise, when declaring a record, to provide the datatypes of a row automatically, use the %ROWTYPE attribute.

Action: Make sure the datatype specifier designates a legal type. Remember to use the %TYPE and %ROWTYPE attributes when necessary.

PLS-00489: invalid table reference: 'string' must be a column in this expression

Cause: In a query, a select-list item refers to a table in the FROM clause but not to a database column.

Action: Check the spelling of the column names, make sure each column in the select list refers to a table in the FROM clause, then re-execute the query.

PLS-00490: illegal statement

Cause: A constant, variable, function call, or incomplete statement was used where a statement was expected. For example, instead of calling a function from an expression, it might have been called as a statement (as if it were a procedure).

Action: Check the statement, making sure that its commands, identifiers, operators, delimiters, and terminator form a complete and valid PL/SQL statement.

PLS-00491: numeric literal required

Cause: A constant or variable was used where a numeric literal is required. For example, the code might look like my_ename VARCHAR2(max_len); instead of my_ename VARCHAR2(15); When specifying the maximum length of a VARCHAR2 variable, an integer literal must be used.

Action: Replace the identifier with a numeric literal.

PLS-00492: variable or constant initialization may not refer to functions declared in the same package

Cause: If a package spec *p* declares a function *f*, that function may not be used in any variable declarations in that same package spec. This is because of a circular instantiation problem: in order to fully instantiate the package spec, the variable must be initialized. To initialize the variable, the function body code in the package body must be executed. That requires that the package body be instantiated. However, the package body cannot be instantiated until the package spec is fully instantiated.

Action: Remove the reference to the function from the variable initialization. A technique which often works is to move the variable initialization from the variable declaration (in the package spec) to the package body initialization block.

PLS-00493: invalid reference to a server-side object or function in a local context

Cause: A reference to a server-side object (e.g. a table column) or function (a group function such as SUM, AVG, MIN, MAX, ...) was found in a context where only PL/SQL objects may be present (such as within the parameter list of a local function or as the index of a (local) PL/SQL table.)

Action: Rewrite the offending statement; or (if a local function call is the problem context), make the function non-local (either packaged or top- level.)

PLS-00494: coercion into multiple record targets not supported

Cause: The INTO list of a SELECT or FETCH specified more than a single record- type target and the column types required coercion into a record to match the INTO list. This is type checked as correct, but not yet supported.

Action: Create a new record type to hold all of the column types or code the SELECT with an INTO target for every source column.

PLS-00495: too many columns in SELECT...INTO statement after bursting record targets

Cause: Type checking indicated the columns in a SELECT or FETCH were being collected into a record in the INTO list. The record was burst into its fields. There were not enough fields in the record for each of the columns.

Action: Change the number of columns or the record variable(s) in the INTO clause so that they match.

PLS-00496: too few columns in SELECT...INTO statement after bursting record targets

Cause: Type checking indicated the columns in a SELECT or FETCH were being collected into a record in the INTO list. The record was burst into its fields. There were not enough columns to fill all of the fields in the record.

Action: Change the number of columns or the record variable(s) in the INTO clause so that they match.

PLS-00497: cannot mix between single row and multi-row (BULK) in INTO list

Cause: - When BULK syntax (e.g. BULK COLLECT INTO) is used to retrieve data, every variable in the INTO list has to be of type that is a collection of the type of the corresponding column. - When BULK is NOT used, every variable in the INTO list has to be of compatible type with the corresponding column.

Action: Change the INTO list so that all variables have correct data types

PLS-00498: illegal use of a type before its declaration

Cause: A variable or constant was declared to be of a type whose declaration appears later in the compilation unit; or, a type or subtype was declared in terms of another type whose declaration appears later in the compilation unit.

Action: Ensure that the type declaration precedes its use in the variable/ constant/type declaration.

PLS-00499: coercion into collection of records not supported

Cause: A SELECT or FETCH may specify a column list to be coerced into a variable which is a collection of records. This is type checked as correct, but not yet supported because of the implicit layout change required.

Action: Express the SELECT with an object constructor around the columns and use a collection of objects as an INTO variable. Or, build the collection one row at a time coercing each row into a record which happens to be an element. Or, use a record of collections.

PLS-00500: invalid operator binding

Cause: An operator binding function cannot be found in the specified scope.

Action: Provide the correct number and types of parameters for the operator binding function. Or, specify the correct names for schema, package, or type containing the operator binding function.

PLS-00503: RETURN *value* statement required for this return from function

Cause: In a function body, a RETURN statement was used that contains no expression. In procedures, a RETURN statement contains no expression because the statement simply returns control to the caller. However, in functions, a RETURN statement must contain an expression because its value is assigned to the function identifier.

Action: Add an expression to the RETURN statement.

PLS-00504: type *string_BASE* may not be used outside of package STANDARD

Cause: In a declaration, the datatype NUMBER_BASE (for example) was mistakenly specified. The datatypes CHAR_BASE, DATE_BASE, MLSLABEL_BASE, and NUMBER_BASE are for internal use only.

Action: Specify (for example) the datatype NUMBER instead of NUMBER_BASE.

PLS-00505: User Defined Types may only be defined as PLSQL Tables or Records

Cause: An attempt was made to define a type other than TABLE or RECORD, but these are the only user- defined types allowed in this release of PL/SQL. For example, the following type definition is illegal: TYPE Byte IS INTEGER(2); -- illegal

Action: Remove the type definition, or revise it to specify a TABLE or RECORD type.

PLS-00506: User Defined Constrained Subtypes are disallowed

Cause: An attempt was made to define a constrained subtype, but only unconstrained subtypes are allowed in this release of PL/SQL. For example, the following type definition is illegal: SUBTYPE Acronym IS VARCHAR2(5); -- illegal

Action: Remove the illegal type constraint.

PLS-00507: a PLSQL Table may not contain a table or a record with composite fields

Cause: In a TABLE type definition, a nested record type was specified as the element type. This is not allowed. All fields in the record must be scalars.

Action: Remove the TABLE type definition, or replace the nested record type with a simple record type.

PLS-00508: The expression in a RETURN statement cannot be a type

Cause: A datatype specifier was used instead of an expression in the RETURN statement of a user-defined function, as shown in the example below. Do not confuse the RETURN statement, which sets the function identifier to the result value, with the RETURN clause, which specifies the datatype of the result value. FUNCTION credit-rating (acct_no NUMBER) RETURN BOOLEAN IS BEGIN ... RETURN NUMBER; -- should be an expression END;

Action: Replace the datatype specifier in the RETURN statement with an appropriate expression.

PLS-00509: Implementation Restriction : Pass a returned record to a temporary identifier before selecting a field

Cause: Illegal syntax was used to call a parameter-less function that returns a record or a PLSQL table of records. When calling a function that takes parameters and returns a record, you use the following syntax to reference fields in the record:

function_name(parameters).field_name However, you cannot use the syntax above to call a parameter-less function because PL/SQL does not allow empty parameter lists. That is, the following syntax is illegal: function_name().field_name -- illegal; empty parameter list You cannot just drop the empty parameter list because the following syntax is also illegal: function_name.field_name -- illegal; no parameter list.

Action: Declare a local record or PL/SQL table of records to which you can assign the function result, then reference its fields directly.

PLS-00510: Float cannot have scale

Cause: When a FLOAT variable was declared, its precision and scale were specified, as shown in the following example: DECLARE Salary FLOAT(7,2); However, a scale for FLOAT variables cannot be specified; only a precision can be specified, as in salary FLOAT(7);

Action: Remove the scale specifier from the declaration, or declare a NUMBER variable instead.

PLS-00511: a record may not contain a PL/SQL table of records

Cause: In a RECORD definition, one of the fields was declared as a PL/SQL table of records. This is not allowed. A record can be the component of another record (that is, records can be nested), but a PL/SQL table of records cannot be the component of a record.

Action: Remove the field declaration, or revise it to specify a simple record type.

PLS-00512: Implementation Restriction: 'string': Cannot directly access remote package variable or cursor

Cause: An attempt was made to reference a remote packaged variable or cursor. This is not allowed. Instead, add to the remote package a function that returns the value of the variable or cursor.

Action: Remove the illegal reference.

PLS-00513: PL/SQL function called from SQL must return value of legal SQL type

Cause: In a SQL statement, do not call a PL/SQL function having a return type that can not be handled by SQL. For example, type BOOLEAN, records and indexed-tables are not supported by SQL and functions returning such values can not be called from SQL.

Action: n/a

PLS-00514: INSERT statement with REF INTO clause requires a typed table

Cause: This INSERT statement provides REF INTO clause, which is only legal when the table specified in the INTO clause is an object table.

Action: n/a

PLS-00515: The type of the REF INTO variable '*string*' must be REF to the table's type

Cause: In INSERT statement with REF INTO clause, the type of the data item must be REF to the type of the table used in INTO clause.

Action: n/a

PLS-00516: Type mismatch between object table and value '*string*' in INSERT statement.

Cause: In the INSERT statement operating on typed tables (tables of objects), the type of a non-aggregate value did not match the object type of the table.

Action: n/a

PLS-00517: Type mismatch between a select list element '*string*' and corresponding table column in INSERT statement with a subquery

Cause: In an INSERT statement with subquery, at least one of the elements of the select list was not type-compatible with the corresponding column of the table in the INTO clause. This error indicates that the subquery should be rewritten to match the structure of the target table.

Action: n/a

PLS-00518: This INSERT statement requires VALUES clause containing a parenthesised list of values

Cause: A VALUES clause was entered without a list of SQL data items in parentheses. In all INSERT statements with an explicit column list, the VALUES clause must contain a list of SQL data items in parentheses. For example: INSERT INTO my_tab (a,b,c) VALUES (1,2,my_variable);

Action: Rewrite the statement to include a list of SQL data items in parentheses.

PLS-00519: This INSERT statement requires a VALUES clause containing an object type expression, not a list of values

Cause: In an INSERT statement with typed tables, an aggregate was used when an object type item was expected.

Action: Replace the aggregate with an object constructor or other object type expression.

PLS-00520: MAP methods must be declared without any parameters other than (optional) SELF.

Cause: A MAP member function was declared with a parameter. Map member functions can have only one parameter: the default SELF parameter. Map methods must be declared without any parameters. The compiler adds the SELF parameter.

Action: Remove the parameter from the map member function.

PLS-00521: ORDER methods must be declared with 1 (one) parameter in addition to (optional) SELF.

Cause: An order member function was declared without the user-specified parameter. Order member functions have two parameters, one is the default SELF parameter which is added by the compiler. the second parameter is added by the user and must declare an order method which must be the same type as the containing object type.

Action: Check and correct the way the parameter is specified.

PLS-00522: MAP methods must return a scalar type.

Cause: The MAP member function was written such that it returns something other than a scalar type.

Action: Rewrite the MAP function such that it returns a scalar type.

PLS-00523: ORDER methods must return an INTEGER.

Cause: An order member function was written such that it returns something other than an integer type.

Action: Rewrite the ORDER method such that it returns an integer type.

PLS-00524: The parameter type in an ORDER method must be the containing object type.

Cause: An order member function was declared without the user- specified parameter. Order member functions have two parameters, one is the default SELF parameter which is added by the compiler. the second parameter is added by the user and must declare an order method which must be the same type as the containing object type.

Action: Check and correct the way the parameter is specified.

PLS-00525: Within SQL statements, only equality comparisons of objects are allowed without a map or order function.

Cause: A map or order function was not provided for a relational comparison. Only equality comparisons may be used when a map or order function is not supplied.

Action: Supply either a map or order function for the object. Otherwise change the program to use only equality comparisons.

PLS-00526: A MAP or ORDER function is required for comparing objects in PL/SQL.

Cause: Within stand alone PL/SQL, an attempt was made to compare objects without a map or order function.

Action: Provide a map or order function and retry the operation.

PLS-00527: MAP or ORDER functions require a PRAGMA RESTRICT_REFERENCES specifying :WNDS,WNPS,RNPS,RNDS.

Cause: Either a PRAGMA RESTRICT_REFERENCES was not specified or it was specified without one of the following: WNDS, WNPS, RNPS, or RNDS.

Action: Add or correct the PRAGMA and retry the operation.

PLS-00528: The parameters to an ORDER function must have IN mode

Cause: You declared parameter to an ORDER function to have OUT or IN OUT mode.

Action: Correct the parameter to use IN mode only.

PLS-00529: Bad column name *string* in INSERT statement (must be an identifier)

Cause: In an INSERT statement, an attempt was made to use a column name that is not an identifier. In any INSERT statement with explicit column list a column name must be a simple identifier.

Action: Rewrite the INSERT statement, using a simple identifier for the column name.

PLS-00530: Illegal type used for object type attribute: '*string*'.

Cause: An attempt was made to use an invalid type for an object type attribute.

Action: Use only supported types for the object type attribute.

PLS-00531: Unsupported type in a VARRAY or TABLE type: '*string*'.

Cause: An attempt was made to use an unsupported type in a VARRAY or TABLE type.

Action: Use only supported types in a VARRAY or TABLE type.

PLS-00532: Target of REF must be a complete or incomplete object type.

Cause: The target of a REF can only be a complete or an incomplete object type.

Action: If a REF is to be used, change the type; otherwise, remove the REF.

PLS-00533: Tables of non_queryable types are not supported.

Cause: An attempt was made to create a table of a type which cannot be queried. Tables of such types are not supported.

Action: Create an object type containing the non-queryable type. Then create a table of the object type.

PLS-00534: A Table type may not contain a nested table type or VARRAY.

Cause: An attempt was made to do one of the following: define a table type which contained nested collection types. or define an object table that has (perhaps nested) another table type or VARRAY type.

Action: Check the table definitions to be sure that they do not contain nested tables or VARRAYs.

PLS-00535: A VARRAY type may not contain a NESTED TABLE, VARRAY or LOB

Cause: An attempt was made to do one of the following: define a VARRAY type containing a nested collection type or LOB or define a VARRAY type of an object type that has a nested attribute which is one of NESTED TABLE, VARRAY or LOB type.

Action: Check the VARRAY definitions to be sure that they do not contain nested collection types, LOBs or nested attributes.

PLS-00536: Navigation through REF variables is not supported in PL/SQL.

Cause: The expression of the form `refvar.field` was entered. This is not supported in PL/SQL, ver 8.0.

Action: n/a

PLS-00537: A VARRAY must have a positive limit

Cause: A VARRAY type was declared with a non-positive limit, for example `VARRAY(0)`.

Action: Declare the VARRAY with a positive limit and retry the operation.

PLS-00538: subprogram or cursor 'string' is declared in an object type specification and must be defined in the object type body

Cause: The specified subprogram is declared in an object type's specification, but is not defined in the object type body.

Action: Define the subprogram in the object type body, or remove the declaration from the specification.

PLS-00539: subprogram 'string' is declared in an object type body and must be defined in the object type specification

Cause: The specified subprogram is declared in an object type's body, but is not defined in the object type's specification. Notice cursor bodies can exist without a specification.

Action: Define the subprogram in the object type's specification, or remove the declaration from the body.

PLS-00540: object not supported in this context.

Cause: An object was declared inside a local scope (Function, Procedure, or anonymous block), or in a package scope which is not supported.

Action: Declare the type in a global or data base scope.

PLS-00541: size or length specified is too large.

Cause: A length or size that is too large was specified for a data item.

Action: Specify a smaller value and retry the operation.

PLS-00542: CLOB and NCLOB cannot use varying-width character sets in the server

Cause: A server type is being created with an embedded CLOB or NCLOB attribute which uses a varying-width character set.

Action: Use `VARCHAR2` instead of CLOB, or use a fixed-width character set.

PLS-00543: a PLSQL Table may not contain a nested table type or VARRAY.

Cause: An attempt was made to define a PLSQL table that contained a (possibly deeply) nested table type or VARRAY. Nested collection types are not supported.

Action: Remove the nested table type or VARRAY from the table. Then retry the operation.

PLS-00546: SELF may not be declared as a REF parameter.

Cause: SELF was declared as a ref parameter to a member function or procedure. SELF is not supported as a REF.

Action: Redefine SELF as a value parameter.

PLS-00548: invalid use of operator.

Cause: A name of an operator is used as a qualifier or appears outside from sql context.

Action: Eliminate the use of operator name as a qualifier or place it in a sql clause.

PLS-00550: character set specification is not allowed for this type

Cause: A character set specification was made on a type that does not require one.

Action: Remove the character set specification, or change the type.

PLS-00551: character set ANY_CS is only allowed on a subprogram parameter

Cause: The character set ANY_CS was specified when it is not allowed.

Action: Change or remove the character set specification.

PLS-00552: flexible character set is not allowed on component element

Cause: ANY_CS or %CHARSET was used to reference an ANY_CS parameter which is not a CHAR, VARCHAR2, or CLOB type. ANY_CS or %CHARSET is not allowed for fields of a record , object, elements of a collection, etc.

Action: Change or remove the character set specification.

PLS-00553: character set name is not recognized

Cause: An unrecognized name appears in a character set specification.

Action: Change or remove the character set specification.

PLS-00554: character set has already been determined

Cause: A redundant or conflicting character set was specified.

Action: Remove the CHARACTER SET specification, or change the character set specified.

PLS-00555: default expressions are not allowed for SQL operators

Cause: A default expression has been specified for a SQL operator.

Action: Eliminate the default expression from the operator.

PLS-00560: character set mismatch

Cause: An expression was used that has the wrong character set for this context.

Action: Adjust the expression, using TRANSLATE(... USING ...) or by rethinking the logic.

PLS-00561: character set mismatch on value for parameter '*string*'

Cause: An expression was used that contains an incorrect character set. The actual argument has a character set conflict. If a default argument value is being used, it might be in conflict with some actual argument that must have the same character set.

Action: Adjust the expression, using TRANSLATE(... USING ...) or change the character set.

PLS-00562: a function must return a type.

Cause: The current function was defined to return something other than a data type.

Action: Make sure the function is returning a data type.

PLS-00563: illegal use of CAST expression

Cause: CAST (in PLSQL) was used outside of a DML scope.

Action: Do not use CAST outside DML statements.

PLS-00564: lob arguments are not permitted in calls to remote server

Cause: use of lob argument in call to remote server

Action: Do not use LOBs in call to remote server

PLS-00565: string must be completed as a potential REF target (object type)

Cause: Incomplete library units that are potential targets of REF dependencies must be completed so that they continue to remain potential targets of REF dependencies (since there might be library units with REF dependencies on this library unit). Potential REF targets include complete and incomplete object types. This error happened because an attempt was made to complete a potential REF target as something other than a potential REF target.

Action: Use another name for this library unit, or drop the original incomplete library unit.

PLS-00566: type name "string" cannot be constrained

Cause: A lob, date, boolean, rowid, or mlslabtype was constrained with a length specification. For example: X BLOB(5);

Action: Remove the constraint.

PLS-00567: cannot pass NULL to a NOT NULL constrained formal parameter

Cause: You attempted to pass NULL to a NOT NULL constrained parameter.

Action: Pass a NOT NULL expression instead.

PLS-00568: cannot access rows from a non-nested table item

Cause: You attempted to use TABLE expression, from a non-nested table

Action: pass the correct parameter

PLS-00569: numeric overflow or underflow

Cause: A constant literal is either too large or too small to fit in an Oracle number

Action: Change the value of the literal

PLS-00570: different number of columns in the multiset and cast expressions

Cause: Number of columns in the collection returned by MULTISSET and the number of columns for the CAST type don't match. For example: create type tab_obj as object (n number); create type tab1 as table of tab_obj; create table tab2 (col1 number, col2 number); select CAST(MULTISSET(select col1, col2 from tab2) as tab1) from tab2;

Action: n/a

PLS-00571: method access through data base link not yet supported on client side

Cause: Remote link is used with on client side

Action: Create a dummy function to call symbolic link on server side or wait till it is implemented

PLS-00572: improper constraint form used

Cause: "number" types cannot have a range. user-defined aggregate types and integer types cannot have scale or precision specified. Example: "x number(5,3)" is acceptable but "x number range 1..10" is not.

Action: Remove the constraint

PLS-00573: cannot constrain scale, precision, or range of an anchored type declaration

Cause: A variable declared with %TYPE or %ROWTYPE cannot have a scale, precision, or range constraint. Example: x y%TYPE(10) is not acceptable. It is legal to add "NOT NULL" or non-conflicting CHARACTER SET constraints to anchored type declarations.

Action: Remove the constraint or use a type name instead of an anchored type.

PLS-00580: supertype must be an object type

Cause: An attempt was made to declare an object type to have a supertype, but the specified supertype was not itself an object type. Object types can inherit only from other object types.

Action: Remove the supertype specification, or change it to refer to an object type. If the declaration appears correct, make sure the supertype has compiled correctly.

PLS-00581: inheritance is not supported for opaque types

Cause: An attempt was made to declare an opaque type with a supertype.

Action: Remove the supertype specification.

PLS-00582: attribute declarations are not allowed in opaque types

Cause: An attempt was made to declare an attribute in an opaque type.

Action: Remove the attribute declaration.

PLS-00583: size must be specified if opaque type is fixed-length

Cause: An attempt was made to declare a fixed-length opaque type without specifying an explicit size.

Action: Specify an explicit size, or change the declaration to be varying-length.

PLS-00584: size of an opaque type must be between 1 and 4000 bytes

Cause: An attempt was made to specify an explicit size for an opaque type, but the specified size was out of the valid range.

Action: Change the explicit size to be between 1 and 4000 bytes, or change the declaration to be varying-length without an explicit size.

PLS-00585: declared support library for opaque type is not a library

Cause: An attempt was made to name a support library for an opaque type, but the name refers to an object that is not a library.

Action: Change the declaration to name a valid library.

PLS-00586: a static method cannot declare a parameter named SELF

Cause: An attempt was made to name a parameter SELF when declaring a static method. SELF is reserved as a parameter name in methods, to hold the object

instance on which the method is applied. A parameter named SELF is not allowed in static methods because static methods do not apply to a particular object instance.

Action: Change the name of the parameter in the declaration.

PLS-00587: a static method cannot be invoked on an instance value

Cause: An attempt was made to use an object instance value, not a typename, as the qualifier of the name of a method invocation, but only a typename can be used as the qualifier when calling a static method.

Action: Use the typename, not an object instance value, to qualify the name of a method if the method is static.

PLS-00588: unqualified instance attribute references allowed only in member methods

Cause: An attempt was made to use the name of an object instance attribute in the body of a static method, or in an initialization default value on another attribute. If the instance attribute is not qualified with a particular object instance that supplies a value, the instance attribute can be named only when it is inside a member method.

Action: Qualify the attribute reference with the name of an object value, or change the containing method to a member method rather than a static method.

PLS-00589: no attributes found in object type "string"

Cause: Table of non adt type is defined.

Action: Table of type should be of ADT type only

PLS-00590: attempting to create a subtype UNDER a FINAL type

Cause: An attempt was made to create a subtype UNDER a FINAL type.

Action: Avoid deriving a subtype from this FINAL type.

PLS-00591: this feature is not supported in client-side programs

Cause: One of the following features was used in a wrong context: pragma AUTONOMOUS_TRANSACTION, dynamic SQL statements, (e.g. EXECUTE IMMEDIATE), and bulk binds. These listed features can only be used in server-side programs but not client-side programs.

Action: Remove it or define a server-side subprogram to do the work and call the subprogram from the client.

PLS-00592: the type of a object table must be an object type

Cause: You have defined a typed-table of a non-object type.

Action: Replace the non-object type with an object-type.

PLS-00593: default value of parameter "string" in body must match that of spec

Cause: The default value initialization of a parameter in a subprogram body contained in a package body did not match that of the corresponding subprogram specification in the corresponding package specification.

Action: Change the default initialization of the parameter in body to match that of spec.

PLS-00594: the SELF parameter can be declared only as IN or as IN OUT

Cause: The SELF parameter was declared as an OUT parameter.

Action: Declare the SELF parameter as either an IN or an IN OUT parameter.

PLS-00595: the TABLE operator is not allowed in this context

Cause: This feature is not yet implemented.

Action: Don't use weak ref cursors with bulk binds.

PLS-00597: expression 'string' in the INTO list is of wrong type

Cause: This exception is raised for the following errors: - the expression in INTO clause of OPEN or RETURNING statement is neither of legal SQL datatypes nor of PL/SQL RECORD datatype - a collection of records is used in INTO clause of OPEN or RETURNING statement. - a record or a collection of records is used in BULK COLLECT INTO

Action: Use expression with correct datatype in the INTO clause

PLS-00598: comparison of object with NULL using "string" is not allowed

Cause: An object is compared with NULL using a relational operator.

Action: Use IS NULL comparison operator.

PLS-00599: SAMPLE percentage must be in the range [0.000001,100)

Cause: The percentage number is not in the range [0.000001,100)

Action: Use a percentage number in the range [0.000001,100)

PLS-00600: SAMPLE cannot be applied to a remote object

Cause: SAMPLE applying to a remote object is not supported

Action: Do not use SAMPLE with a remote object

PLS-00601: partition extended object names may only be used with tables

Cause: User attempted to use a partition-extended object name with an object which is not a table.

Action: Avoid using partition-extended name syntax with objects which are not tables

PLS-00602: CUBE and ROLLUP may appear only in a GROUP BY clause

Cause: User attempted to use the keywords CUBE or ROLLUP outside a GROUP BY clause

Action: Avoid using the keywords CUBE and ROLLUP outside the GROUP BY clause

PLS-00603: GROUPING function supported only with GROUP BY CUBE or ROLLUP

Cause: User attempted to use the GROUPING function without GROUP BY CUBE or GROUP BY ROLLUP

Action: Avoid using the GROUPING function without GROUP BY CUBE or ROLLUP

PLS-00604: aggregate function is not allowed here

Cause: One of the functions, such as AVG, COUNT, MAX, MIN, SUM, STDDEV or VARIANCE, was used in a WHERE or GROUP BY clause

Action: Remove the group function from the WHERE or GROUP BY clause. The desired result may be achieved by including the function in a subquery or HAVING clause.

PLS-00605: set operators are not yet supported as an argument to a MULTISSET operator

Cause: A set operator was used in a subquery that was the argument to a MULTISSET operator.

Action: Rewrite your SQL statement so that it does not use a set operator in the subquery that is the argument to the MULTISSET operator.

PLS-00606: cursor subquery is not supported on client side in this release

Cause: A query that contains a cursor subquery is being used from client side.

Action: Use this feature from server side only.

PLS-00607: SQLJ Object Types can have only SQLJ Types as its supertype or subtype

Cause: You were trying to create a SQLJ Object Type under a non-SQLJ Object Type.

Action: Recreate the type as a SQLJ Object Type.

PLS-00608: the value of the USING clause must match that of the supertype

Cause: You were trying to create a SQLJ Object Type with a different value of the USING clause from the USING clause specified in its supertype.

Action: Change the value of the USING clause to match the USING clause in its supertype.

PLS-00609: the OVERRIDING clause is not valid for SQLJ Object Types

Cause: You were trying to a SQLJ Object Type method that override an inherited method.

Action: Change the SQLJ Object Type definition by removing the OVERRIDING method.

PLS-00610: ROW can be used only once in SET clause of UPDATE statement

Cause: You were trying to use ROW more than once in UPDATE statement.

Action: Remove all the additional ROW in set clause of UPDATE statement.

PLS-00611: right hand side can be only the variables of record type

Cause: with ROW on LHS, only PL/SQL records or %ROWTYPE variables are allowed on right hand side..

Action: Make appropriate changes, so that right hand side should only have variables of record or %ROWTYPE.

PLS-00612: Number of attributes do not match in SET clause

Cause: Number of columns do not match with number of attributes on record type on rhs.

Action: Make sure that number of columns match with the number of attributes in record on rhs.

PLS-00613: only one item is allowed, when using variables of record type

Cause: You are trying to use more than one values in VALUES clause or RETURNING INTO clause, when one of the value is of record type..

Action: Specify only one variable of record type, or don't use variables of record type.

PLS-00614: creating a FINAL NOT INSTANTIABLE type

Cause: An attempt was made to create a FINAL NOT INSTANTIABLE type. No useful operation can be performed with this type.

Action: Avoid using the keywords FINAL and NOT INSTANTIABLE together when creating types.

PLS-00615: type mismatch found at 'string' between CASE operand and WHEN operands

Cause: In a simple CASE statement or expression, the CASE operand and WHEN operands do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the CASE operand and WHEN operands so that their datatypes match. Consider using datatype conversion functions in the CASE operand and/or WHEN operands.

PLS-00616: type mismatch found at 'string' among result expressions in a CASE expression

Cause: In a CASE expression, the result expressions do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the result expressions so that their datatypes match. Consider using datatype conversion functions in the result expressions.

PLS-00617: at least one result in the CASE expression must not be NULL

Cause: All the results in the CASE expression are the literal NULL.

Action: Change at least one result in the CASE expression to be non-NULL.

PLS-00618: type mismatch found at 'string' between operands in a NULLIF expression

Cause: In a NULLIF expression, the two operands do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the operands so that their datatypes match. Consider using datatype conversion functions in the operands.

PLS-00619: the first operand in the NULLIF expression must not be NULL

Cause: The first operand in the NULLIF expression is the literal NULL.

Action: Change the first operand in the NULLIF expression to be non-NULL.

PLS-00620: type mismatch found at 'string' among operands in a COALESCE expression

Cause: In a COALESCE expression, the operands do not match in datatype, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the operands so that their datatypes match. Consider using datatype conversion functions in the operands.

PLS-00621: at least one operand in the COALESCE expression must not be NULL

Cause: All the operands in the COALESCE expression are the literal NULL.

Action: Change at least one operand in the COALESCE expression to be non-NULL.

PLS-00622: range constraints must be between -2147483647 and 2147483647

Cause: The range constraints specified for a pls_integer or binary_integer declaration did not fall between -2147483647 and 2147483647.

Action: Use range constraints between -2147483647 and 2147483647.

PLS-00623: FLOAT precision constraint must be between 1 and 126

Cause: The precision specified for a FLOAT, REAL or DOUBLE PRECISION did not fall between 1 and 126.

Action: Use precision constraints between 1 and 126.

PLS-00624: USING clause must be used with either aggregate or pipelined functions

Cause: USING clause cannot be used with functions that are not declared with AGGREGATE or PIPELINED properties.

Action: Define function body in PL/SQL or some other language (using external callout call specification).

PLS-00625: PARTITION/CLUSTER/ORDER-BY clause can only be used with IN parameters

Cause: A PARTITION/CLUSTER/ORDER-BY clause was used with an OUT or IN OUT ref-cursor parameter.

Action: Change the parameter mode to IN or use some other parameter with the PARTITION/CLUSTER/ORDER-BY clause.

PLS-00626: partitioned/clustered/ordered parameter must be a function argument

Cause: A partitioning or clustering/ordering specification specified on an argument that is not one of the function arguments.

Action: Specify partitioning/clustering/ordering based on the function ref-cursor formal argument.

PLS-00627: 'string' must be a strongly typed ref cursor

Cause: A partitioning or clustering/ordering specification specified on an argument that is not a strongly typed ref cursor.

Action: Specify partitioning/clustering/ordering based on the function ref-cursor formal argument.

PLS-00628: 'string' must be a valid record attribute

Cause: A partitioning or clustering/ordering specification must use only valid record attributes.

Action: Specify partitioning/clustering/ordering based on valid record attributes.

PLS-00629: PIPE statement cannot be used in non-pipelined functions

Cause: A PIPE statement was used in a non-pipelined function.

Action: Use PIPE statement only in pipelined functions.

PLS-00630: pipelined functions must have a supported collection return type

Cause: A pipelined function was specified with an unsupported return type. The following are not supported as return types of pipelined functions: - non-collections, - PL/SQL tables, - associative arrays, - collections of PL/SQL types: rowid, mlslab, long, long raw, boolean, binary_integer, pls_integer, string and urowid The following restrictions apply: - If the return type is a collection of records, then each of the attributes of the record must be a supported type. - A collection of records must not contain a record type as one of its attributes.

Action: Specify a supported collection type as the pipelined function return type.

PLS-00631: PARTITION-BY and CLUSTER/ORDER-BY clauses must be used with the same function argument

Cause: PARTITION-BY and CLUSTER/ORDER-BY clauses are specified on different function arguments.

Action: Use the same argument in both PARTITION-BY and CLUSTER/ORDER-BY clauses.

PLS-00632: NOT INSTANTIABLE method cannot have a body

Cause: An attempt was made to provide an implementation for a NOT INSTANTIABLE method.

Action: Remove the implementation for the NOT INSTANTIABLE method.

PLS-00633: RETURN statement in a pipelined function cannot contain an expression

Cause: A RETURN statement in a pipelined function contains an expression, which is not allowed. Pipelined functions must send back values to the caller by using the PIPE statement.

Action: Remove the expression from the RETURN statement and use a PIPE statement to return values. Else, convert the function into a non-pipelined function.

PLS-00634: type with NOT INSTANTIABLE methods must be declared NOT INSTANTIABLE

Cause: The type being created contains NOT INSTANTIABLE methods, either declared or inherited. The type must be explicitly declared NOT INSTANTIABLE

Action: Explicitly specify the NOT INSTANTIABLE keyword or provide implementations for all the NOT INSTANTIABLE methods.

PLS-00635: method does not override

Cause: The method specification contains the OVERRIDING keyword but the method does not override a method in the ancestor types.

Action: Check the method specification.

PLS-00636: overriding method requires OVERRIDING keyword

Cause: An attempt was made to provide an overriding method specification, but the OVERRIDING keyword was not specified.

Action: Modify the method specification and specify the OVERRIDING keyword.

PLS-00637: FINAL method cannot be overridden or hidden

Cause: An attempt was made to override a FINAL MEMBER method or hide a FINAL STATIC method.

Action: Avoid overriding FINAL MEMBER methods or hiding FINAL STATIC methods

PLS-00638: cannot overload MAP method

Cause: The MAP method does not override the inherited one.

Action: Make the specifications match.

PLS-00639: NCHAR/NVARCHAR2 cannot be byte length semantics

Cause: NCHAR/NVARCHAR can only be codepoint length semantics. BYTE qualifiers used with NCHAR is illegal: nc NCHAR(7 BYTE); name NVARCHAR2(10 byte);

Action: Remove BYTE qualifier to make it as codepoint length semantics

PLS-00640: a pipelined function cannot be called from PL/SQL context

Cause: A pipelined function was invoked from a PL/SQL expression.

Action: Use the pipelined function in the FROM clause of a SQL query.

PLS-00641: INTO clause not allowed for this SELECT statement

Cause: A SELECT statement in a cursor definition, an OPEN statement or a cursor FOR loop has an erroneous INTO clause.

Action: Remove the INTO clause.

PLS-00642: local collection types not allowed in SQL statements

Cause: A locally-defined (i.e. not schema level) collection type was used in a SQL statement. The type must be defined in a schema to be accepted in a SQL statement.

Action: Define the collection type in your schema, not inside a PL/SQL subprogram.

PLS-00643: booleans, index tables, records and cursors not allowed in SQL statements

Cause: Items of type boolean, table of foo index by binary_integer, record and static cursors cannot be used in SQL statements.

Action: Remove expressions of these types from the SQL statement.

PLS-00644: character set mismatch found at 'string' among result expressions in a CASE expression

Cause: In a CASE expression, the result expressions do not match in character set, and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the result expressions so that their character sets match.

PLS-00645: character set mismatch found at 'string' among operands in a COALESCE expression

Cause: In a COALESCE expression, the operands do not match in character set and it is unclear which implicit conversion is required to correct the mismatch.

Action: Change the operands so that their character sets match.

PLS-00646: MAP or ORDER method must be defined in the root of the subtype hierarchy

Cause: An attempt was made to define a MAP or ORDER method in a subtype.

Action: Define the MAP or ORDER method in the root of the subtype hierarchy. You can override MAP methods in subtypes.

PLS-00647: attribute by name "string" conflicts with method by same name

Cause: While creating a subtype some attribute name conflicted with a method name.

Action: Use a different name for attribute or method in the type being created.

PLS-00648: type of supertype attribute "string" can not be a subtype or reference to a subtype in this release

Cause: User tried to complete a type, Tsub as a subtype of another type, Tsuper where Tsuper contained an attribute of type Tsub or of type REF to Tsub. This is an implementation restriction.

Action: Change the design of code to not use any type with attribute whose type is of subtype or REF to subtype.

PLS-00649: method "string" can be overridden only once per object type

Cause: User tried to override the method more than once in the same subtype.

Action: Either make this an extra overload by removing the OVERRIDING keyword where the method signature is different. The argument types should be reconsidered otherwise.

PLS-00650: invalid type for PARTITION/CLUSTER/ORDER BY clause

Cause: User tried to use invalid type for PARTITION/CLUSTER?ORDER BY clause.

Action: Use legal allowed types.

PLS-00651: implementation type in Aggregate/Table function should be a valid type

Cause: User tried to use some other database object like a package to define implementation type of an aggregate/table function.

Action: Use a valid user defined type as implementation type.

PLS-00652: incorrect number of arguments for aggregate function

Cause: An attempt was made to create an aggregate function with either 0 arguments or more than 999 arguments.

Action: Do not create aggregate functions with zero arguments or more than 999 arguments.

PLS-00653: aggregate/table functions are not allowed in PL/SQL scope

Cause: User tried to use a table/aggregate function in PL/SQL scope.

Action: Do not use table/aggregate function in PL/SQL scope.

PLS-00654: PARTITION/ORDER/CLUSTER BY are allowed for only with PARALLEL_ENABLE

Cause: User tried partition by order by cluster by without parallel enable clause in table function.

Action: specify parallel enable also when using partition by, cluster by order by clause.

PLS-00655: only functions can be declared as PIPELINED

Cause: user is trying to declare a procedure to be pipelined function

Action: declare a function instead of a procedure to be a pipelined function

PLS-00656: field 'string' not available in input argument

Cause: An EXTRACT operation specified a field that was not present. For example, you tried to extract the YEAR field from a TIME variable.

Action: Specify a legal field in the call to EXTRACT.

PLS-00657: Implementation restriction: bulk SQL with associative arrays with VARCHAR2 key is not supported.

Cause: Variable or expression of associative array type was used as bulk SQL bind or define.

Action: Use collection types supported by bulk SQL.

PLS-00658: constructor method name must match type name

Cause: The name of the object type constructor does not match the type name.

Action: Change the name of the constructor method to match the type name.

PLS-00659: constructor method must return SELF AS RESULT

Cause: The return clause of the constructor method did not specify SELF AS RESULT.

Action: Change the return clause to include RETURN SELF AS RESULT.

PLS-00660: SELF parameter of constructor method must be IN OUT

Cause: The mode of the SELF parameter of the constructor was not IN OUT.

Action: Change the mode of the SELF parameter to be IN OUT.

PLS-00661: RETURN statement in a CONSTRUCTOR cannot include an expression

Cause: An attempt was made to include an expression in the RETURN statement of a CONSTRUCTOR body.

Action: Remove the expression from the RETURN statement.

PLS-00662: Non-external object types containing external mapped attributes are not allowed

Cause: An attempt was made to create a non-external object, whose attributes are mapped externally.

Action: Create the object as an external object.

PLS-00663: the NEW keyword is not allowed in this context

Cause: The NEW keyword is not followed by an call to a constructor method.

Action: Remove the NEW keyword, or make sure the expression following it is a constructor call.

PLS-00664: Both ORDER BY and CLUSTER BY can not be specified for the same table function

Cause: An attempt was made to specify both ORDER BY and CLUSTER BY for the same table function.

Action: specify either ORDER BY or CLUSTER BY for a table function, but not both.

PLS-00665: ORDER BY and CLUSTER BY clauses require a PARTITION BY clause

Cause: An attempt was made to specify an ORDER BY or CLUSTER BY clause without also specifying a PARTITION BY clause.

Action: Add a PARTITION BY clause, or remove the ORDER BY or CLUSTER BY clause.

PLS-00666: Only index by binary_integer/pls_integer associative arrays allowed here

Cause: An attempt was made to specify index collection that was not indexed by binary_integer or pls_integer.

Action: Change the index collection variable type to associative array that is indexed by `binary_integer` or `pls_integer`.

PLS-00667: Element type of associative array should be `pls_integer` or `binary_integer`

Cause: An attempt was made to specify index collection whose element type was not one of `pls_integer` or `binary_integer`.

Action: Change the index collection variable type to associative array whose element type is `pls_integer` or `binary_integer`.

PLS-00668: Type of expression should be a collection type

Cause: An attempt was made to specify expression after `INDICES OF` or `VALUES OF` clause whose type is not a collection type.

Action: Change the index collection expression type to a valid collection type.

PLS-00669: Type of expression should be a valid collection variable

Cause: An attempt was made to specify expression after `INDICES OF` or `VALUES OF` clause that is not a collection variable.

Action: Change the index collection expression type to a valid collection variable.

PLS-00670: sort columns must be simple column names

Cause: An attempt was made to specify an expression as a sort column in a `PARTITION BY`, `CLUSTER BY` or `ORDER BY` clause. Only simple column names are permitted.

Action: Specify a simple column name.

PLS-00671: this expression is allowed only with instance methods

Cause: The generalized invocation syntax was used in instance method context.

Action: The generalized invocation syntax can only be used in an instance method that is not a constructor.

PLS-00672: The expression *string* should be a subtype of the type *string*

Cause: The expression in the generalized expression should be a subtype of the type.

Action: The type of expression should be a subtype of the type name.

PLS-00673: Generalized expression is not allowed in this context

Cause: The generalized expression is used in a wrong context.

Action: Fix the expression and remove the generalized expression syntax.

PLS-00674: references to fields of BULK In-BIND table of records or objects must have the form `A(I).F`

Cause: The form `table(bulk_index).field` is the only field selection supported at runtime.

Action: Use a `FOR` loop instead of the `FORALL` DML statement (`MERGE/INSERT/DELETE/UPDATE`) or revise reference to fit the form allowed.

PLS-00675: invalid section for this type of Compound Trigger

Cause: Before and After row sections are not allowed for Compound triggers defined on the Table and instead of row section is not allowed for Compound Triggers defined on a view.

Action: Remove the invalid sections for this context.

PLS-00676: duplicate Compound Triggers section

Cause: Each Compound Trigger Section can appear at most once in a body of the compound trigger

Action: Remove the offending sections.

PLS-00677: Compound Triggers cannot be autonomous transactions

Cause: The Compound Triggers hsd pragma autonomous transaction.

Action: Call autonomous function or procedure, if autonomous transaction behavior is desired from Compound Triggers.

PLS-00678: RETURN statement not allowed inside Compound Triggers

Cause: A return Statement was seen inside a compound trigger

Action: Remove Return statement and use other PL/SQL constructs to transfer flow of control.

PLS-00679: trigger binds not allowed in before/after statement section

Cause: :new or :old were used in this section.

Action: Do not use trigger binds in this section

PLS-00680: BEFORE/AFTER ROW sections were used in a view trigger

Cause: BEFORE/AFTER ROW sections are not allowed with instead of row triggers.

Action: Remove the offending sections.

PLS-00681: named association syntax is required

Cause: Named association syntax was not used for element values in an associative array aggregate.

Action: Use named association syntax in the form of "index => value" to specify element values.

PLS-00682: REVERSE not allowed in a cursor FOR loop

Cause: The REVERSE keyword was specified in a loop over a cursor.

Action: To get a different order of rows in the result, specify ORDER BY in the SQL statement instead.

PLS-00683: pipelined functions return type of remote object types are not supported

Cause: A collection return type referencing a remote object was specified.

Action: Use a local collection as the return type of the pipelined function.

PLS-00684: invalid data type for the JSON return value

Cause: A JSON function was specified with an unsupported return type. The following are supported as return types of each JSON function: -JSON_OBJECT, JSON_ARRAY:

varchar2 -JSON_VALUE varchar2, raw, number, boolean, sdo_geometry, blob, clob
date, timestamp, timestamp_with_time_zone -JSON_QUERY varchar2, raw, blob,
clob

Action: Specify a supported data type as the JSON function return type.

PLS-00685: invalid default value provided

Cause: A JSON function was specified with an incompatible default literal according to the return data type.

Action: Specify a default literal that matches the return data type of the JSON function.

PLS-00686: default value not a literal

Cause: The default value for the JSON function is not a literal.

Action: Specify a literal as the default value.

PLS-00687: unsupported data type of argument for JSON function

Cause: An argument of the JSON call has an unsupported datatype. found.

Action: Change the datatype of the argument.

PLS-00688: incompatible types 'string' and 'string' in NVL2 expression

Cause: In an NVL2 expression, the operands data types did not match, and there was no possible implicit conversion among them.

Action: Change the operands so that the data types match, or ensure that it is possible to implicitly cast one to the other. Check the NVL2 documentation for further details regarding the conversion rules.

PLS-00700: PRAGMA EXCEPTION_INIT of string must follow declaration of its exception in the same declarative part

Cause: An EXCEPTION_INIT pragma was not declared in the same block as its exception. They must be declared in the proper order in the same block, with the pragma declaration following the exception declaration.

Action: Place the EXCEPTION_INIT pragma directly after the exception declaration referenced by the pragma.

PLS-00701: illegal ORACLE error number string for PRAGMA EXCEPTION_INIT

Cause: The error number passed to an EXCEPTION_INIT pragma was out of range. The error number must be in the range -9999 .. -1 (excluding -100) for Oracle errors or in the range -20000 .. -20999 for user-defined errors.

Action: Use a valid error number.

PLS-00702: second argument to PRAGMA EXCEPTION_INIT must be a numeric literal

Cause: The second argument passed to an EXCEPTION_INIT pragma was something other than a numeric literal (a variable, for example). The second argument must be a numeric literal in the range -9999 .. -1 (excluding -100) for Oracle errors or in the range -20000 .. -20999 for user-defined errors.

Action: Replace the second argument with a valid error number.

PLS-00703: multiple instances of named argument in list

Cause: Two or more actual parameters in a subprogram call refer to the same formal parameter.

Action: Remove the duplicate actual parameter.

PLS-00704: 'string' must be declared as an exception

Cause: The exception_name parameter passed to an EXCEPTION_INIT pragma is misspelled or does not refer to a legally declared exception. Or, the pragma is misplaced; it must appear in the same declarative section, somewhere after the exception declaration.

Action: Check the spelling of the exception_name parameter. Then, check the exception declaration, making sure the exception name and the keyword EXCEPTION are spelled correctly. Also make sure the pragma appears in the same declarative section somewhere after the exception declaration.

PLS-00705: exception 'string' used in expression requiring return type

Cause: An exception was referred to in an expression. Exceptions have names but not values and therefore cannot contribute values to an expression. For example, the following RETURN statement is illegal: `FUNCTION credit_limit (cust_no INTEGER) RETURN NUMBER IS limit NUMBER; over_limit EXCEPTION; ... BEGIN ... RETURN over_limit; -- illegal END;`

Action: Check the spelling of the identifiers in the expression, then rewrite the expression so that it does not refer to an exception.

PLS-00706: Exception string cannot be used as prefix of a selected component

Cause: An exception name was mistakenly used to qualify a reference to a component. For example, when dot notation was used to specify fields within a record, an exception name might have been coded instead of the record name.

Action: Rewrite the component reference using a valid prefix (for example, the name of a package, record, or schema).

PLS-00707: unsupported construct or internal error [string]

Cause: At run time, this is an internal error. At compile time, it indicates one of the following problems: -- A call was made to a remote subprogram that has a parameter type or default expression not supported at the calling site. -- An incomplete upgrade or downgrade was done to a database that has stored procedures. Perhaps incorrect versions of system packages such as STANDARD.SQL were installed. -- A compiler bug was encountered. In such cases, legal PL/SQL syntax will fail to compile.

Action: Either report the internal error to your Customer Support representative or, depending on the problem, take one of the following actions: -- Revise the logic of the application to use parameter types and default expressions that are supported at both the local and remote sites. -- Complete the upgrade or downgrade properly, making sure to install correct versions of all system packages. -- Report the legal-syntax error to your Customer Support representative. If there are line and column numbers displayed with the error message, they might help you find a workaround. For example, try recoding the offending line to avoid the bug.

PLS-00708: Pragma string must be declared in a package specification

Cause: The named pragma was not declared in a package specification, as required. For example, the pragma RESTRICT_REFERENCES must be declared in a package specification.

Action: Remove or relocate the misplaced pragma.

PLS-00709: pragma *string* must be declared in package specification and body

Cause: The named pragma was declared in a package specification but not in the corresponding package body or vice-versa, as well as the package body.

Action: Add the pragma to that part of the package declaration that does not have the pragma.

PLS-00710: Pragma *string* cannot be specified here

Cause: The pragma was specified in an inappropriate context.

Action: Remove or relocate the misplaced pragma. Check the documentation to determine the correct context for this pragma.

PLS-00711: PRAGMA *string* cannot be declared twice

Cause: The PRAGMA was declared twice in the same block.

Action: remove the duplicate declaration of the PRAGMA

PLS-00712: illegal option for subprogram *string*

Cause: Only top level subprograms or subprogram declarations in PACKAGE or TYPE specifications are allowed to have the options DETERMINISTIC or PARALLEL_ENABLE. For example, this error would be raised if the options are used in PACKAGE or TYPE body.

Action: remove the option.

PLS-00713: attempting to instantiate a type that is NOT INSTANTIABLE

Cause: An attempt was made to instantiate a type that is defined as NOT INSTANTIABLE.

Action: Avoid instantiating variables of this NOT INSTANTIABLE type, instead derive an INSTANTIABLE subtype from it and instantiate variables of the subtype.

PLS-00714: supertypes's AUTHID is DEFINER but supertype and subtype are not in same schema

Cause: The supertype's AUTHID is DEFINER, but the supertype and subtype are defined in different schemas. SQL statements executed in dynamically dispatched methods can potentially pick up different values from database tables in the two schemas.

Action: Create the subtype in the same schema as the supertype.

PLS-00715: attribute or method by name '*string*' does not exist

Cause: An attempt was made to drop a nonexistent method or attribute from the type being altered.

Action: Check the spelling of the attribute or method name. Make sure it is locally defined in the type and not inherited.

PLS-00716: Attribute/method '*string*' can occur only once in an ALTER TYPE statement

Cause: User attempted more than one of ADD, DROP or MODIFY on an attribute in single ALTER TYPE statement. User attempted more than one of ADD or DROP on a method in single ALTER TYPE statement.

Action: Do only one ADD, DROP or MODIFY for an attribute in single ALTER TYPE statement. Do only one ADD or DROP for a method in single ALTER TYPE statement.

PLS-00717: method '*string*' does not have matching signature among existing methods

Cause: The method to be dropped matches the name of some existing method but does not match it in signature.

Action: Make sure that a matching method signature is provided for dropping a method.

PLS-00718: type of attribute '*string*' does not allow modifications to the attribute

Cause: The type of the attribute to modify is not one of VARCHAR2, NUMBER, or RAW.

Action: Only VARCHAR2, NUMBER and RAW type attributes are allowed to be modified.

PLS-00719: only widening of attribute '*string*' constraints is allowed

Cause: Modification to the attribute did not widen its constraints or attempted to change the type of the attribute. For NUMBER type attributes, scale and precision can be changed to allow increase in number of digits after and before the decimal point. For VARCHAR2 and RAW type attributes the size can be increased. Other type attributes are not allowed to be modified. Change of type of attribute is also not allowed.

Action: Change the constraint specification so as to widen the existing constraints. To narrow the constraints or to change the type of the attribute, you must drop the attribute and add it with new constraints or new type. In that case you must also take appropriate steps to preserve your existing data based on the type (if you want to preserve it). Typically this will involve backing up the data and restoring it after the ALTER TYPE.

PLS-00720: type '*string*' has evolved

Cause: The type has evolved. The version of the type used by the compiled code is not the same as the latest version of the type.

Action: Recompile the code to use the latest version of the type.

PLS-00721: '*string*' formed a non-REF mutually-dependent cycle with '*string*'

Cause: This compilation was aborted because the library unit that was compiled would have formed a non-REF mutually-dependent cycle with some other library units. This happens when an attempt is made to compile types that have attributes of other types that may participate in a cycle with this type. Example: create type t1; create type t2 (a t1); create type t1 (a t2);

Action: Break the cycle (possibly by adding a REF or by using another type).

PLS-00722: supertypes's AUTHID is different than subtype's AUTHID

Cause: The subtype's AUTHID must be same as the supertype's AUTHID.

Action: Create the subtype with AUTHID of its supertype or do not specify AUTHID for subtype.

PLS-00723: pragma parameter *string* of incorrect type or mode

Cause: The pragma requires parameters to be of a specific type or mode.

Action: remove the incorrect parameter.

PLS-00724: Pragma *string* parameter *string* cannot be specified twice

Cause: A parameter was specified twice in the same pragma.

Action: remove the redundant parameter of the PRAGMA

PLS-00725: type 'string' must be a supertype or subtype of the TREAT expression

Cause: In TREAT(*expr* AS *type*), *type* must be a supertype or subtype of *expr*.

Action: n/a

PLS-00726: MODIFY ELEMENT is supported only on schema-level varray and nested tables

Cause: An attempt was made to modify the limit of a type that was not a schema-level varray and nested table type.

Action: This is not a legal ALTER TYPE command for this type.

PLS-00727: MODIFY LIMIT is supported only on schema-level varray types

Cause: An attempt was made to modify the limit of a type that was not a schema-level varray type.

Action: This is not a legal ALTER TYPE command for this type.

PLS-00728: the limit of a VARRAY can only be increased and to a maximum 2147483647

Cause: An attempt was made to decrease the limit or raise it past 2147483647.

Action: This is not a legal limit for this type, change it.

PLS-00729: only widening of the collection element type is allowed

Cause: Modification to the collection element type did not widen its constraints or attempted to change the type of the element. For NUMBER types, scale and precision can be changed to allow increase in number of digits after and before the decimal point. For VARCHAR2 and RAW type attributes the size can be increased.

Action: Change the constraint specification so as to widen the existing constraints.

PLS-00730: collection element type does not allow modifications

Cause: The element type to modify is not one of VARCHAR2, NUMBER, or RAW.

Action: Only VARCHAR2, NUMBER and RAW collection elements can be modified.

PLS-00731: ALTER TYPE is supported only on schema-level types

Cause: An attempt was made to alter a type that was not schema-level.

Action: ALTER TYPE is not legal for this type.

PLS-00732: Illegal overload of ellipsis in formal parameter list

Cause: An ellipsis and a non-ellipsis type appeared at the same position in separate overload candidates. Currently, if ellipsis types are used they must appear in ALL overload candidates with the same name (regardless of the number or types of their formal parameters) at the same position in the formal parameter list.

Action: Make sure that ellipsis types appear at the same position in all overload candidates.

PLS-00733: RPCs to variable argument functions are not allowed

Cause: Attempted to call a vararg function (a function which contains ellipsis in the formal parameter list) as an RPC.

Action: Do not call vararg functions as an RPC.

PLS-00734: Illegal use of an associational parameter with a formal ellipsis

Cause: Attempted to use an associational actual argument for a formal ellipsis type argument.

Action: Remove associational parameters which correspond to formal ellipsis types.

PLS-00735: Attempted to declare more than one formal ellipsis parameter

Cause: More than one ellipsis ('...') was found in a formal parameter specification for a function or procedure

Action: Make sure only one ellipsis appears in a formal parameter specification for any given function or procedure

PLS-00736: user-declared operators are not allowed

Cause: An attempt was made by the user to declare an operator (a function whose name is enclosed in single quotes ('')). Operators may only be declared in package STANDARD.

Action: Remove the single quotes from around the function name, replacing them with double quotes (""") only if needed.

PLS-00737: LIBRARY or ASSEMBLY file specification exceeds the maximum allowed length

Cause: A string of more than expected number of characters was found for the LIBRARY or ASSEMBLY file specification.

Action: Limit the LIBRARY or ASSEMBLY file specification to the appropriate size for the platform.

PLS-00738: REF target *string* changed during compilation

Cause: The current unit contains a REF to a target object. During compilation, the REF's target object was simultaneously changed by a different session. The current unit is therefore invalid and needs to be recompiled to pick up the latest definition of the REF target.

Action: Recompile the unit that has this error.

PLS-00739: FORALL INSERT, UPDATE, DELETE, or MERGE not supported on remote tables

Cause: The current statement referred to insert, update, delete, or merge for a remote object.

Action: Use a FOR loop instead of a FORALL loop or call a remote function or procedure that includes the FORALL INSERT, UPDATE, DELETE, or MERGE statement.

PLS-00740: ASSEMBLY identity specification exceeds the maximum allowed length

Cause: A string of more than expected number of characters was found for the ASSEMBLY identity specification.

Action: Limit the ASSEMBLY identity specification to the appropriate size.

PLS-00741: *string* must be specified on subprogram *string*'s declaration and definition

Cause: A property was specified on a subprogram's declaration but not on its definition or vice-versa.

Action: Certain subprogram properties (e.g., RESULT_CACHE) must be specified as part of the subprogram declaration and definition. For example, if the property RESULT_CACHE is

specified on a subprogram declared in a package specification, then it must also be specified on the subprogram's definition in the package body (and vice-versa).

PLS-00742: field *string* is not yet denotable

Cause: When the fields of a record were declared, one field was used to initialize another, as in: `TYPE my_rec IS RECORD (f1 varchar2(10), f2 varchar2(10) := f1);` The first field has no value until run time, so it cannot be used to initialize another field.

Action: Remove the illegal field reference.

PLS-00743: ASSEMBLY IDENTITY string is null

Cause: The string provided for the identity clause of an ASSEMBLY was null.

Action: Provide a valid identity string for the ASSEMBLY.

PLS-00744: DOTNET call specification methodname is null

Cause: The string provided for the METHODNAME clause of a DOTNET call specification was null.

Action: Provide a valid METHODNAME for the ASSEMBLY.

PLS-00745: ASSEMBLY CONTEXT string is null

Cause: The string provided for the CONTEXT clause of an ASSEMBLY was null.

Action: Provide a valid CONTEXT string for the ASSEMBLY.

PLS-00746: ASSEMBLY AGENT string is null

Cause: The string provided for the AGENT clause of an ASSEMBLY was null.

Action: Provide a valid AGENT string for the ASSEMBLY.

PLS-00747: .NET assemblies are not supported on this platform

Cause: .NET assemblies were not supported on this platform. .NET assemblies are only supported on 32-bit and 64-bit Windows.

Action: Only attempt to create assemblies on 32-bit or 64-bit Windows.

PLS-00748: compilation terminated due to other errors

Cause: Compilation of the library unit was terminated because of other reported errors.

Action: Fix the other reported errors.

PLS-00749: Alternative form for named arguments is only allowed in aggregate constructors.

Cause: A call used alternative form for a named association in the argument list.

Action: Use a separate named association for each argument in the argument list.

PLS-00750: 'others' choice is not allowed in a constructor for type *string*

Cause: A constructor for an associative array type or nested table type used an 'others' choice.

Action: Do not specify an 'others' choice for this type.

PLS-00751: cannot find PACKAGE SYS_STUB_FOR_PURITY_ANALYSIS

Cause: A top level subprogram (function or procedure) cannot be created if the system package SYS_STUB_FOR_PURITY_ANALYSIS is missing in the Oracle database.

Action: Make sure the package is in the database, and retry the creation

PLS-00752: Table function *string* is in an inconsistent state.

Cause: Some of the internally generated types prefixed with SYS_ have been dropped. These should never be dropped by the user.

Action: Recompile the table function or the package or type that contains the table function.

PLS-00753: malformed or corrupted wrapped unit

Cause: The format of the wrapped unit being compiled is not understood by the compiler. This may be because the unit was edited or modified after it was wrapped.

Action: Rewrap the unit.

PLS-00754: illegal reference to editioned object *string*

Cause: An attempt was made to violate the rule "A noneditioned object may not depend on an editioned object."

Action: Either make this object editioned; or do not make the illegal reference.

PLS-00755: SYSAUX tablespace offline while saving identifier data

Cause: The SYSAUX tablespace was offline while attempting to save identifier data. Any identifier data previously collected and saved for the libunit will be invalid.

Action: Bring the SYSAUX tablespace back online and recompile the object.

PLS-00756: PL/SQL does not support feature "*string*" "*string*" in this environment

Cause: Some host environments of the PL/SQL compiler do not support the full range of PL/SQL features. A construct in the program violated one of the current host's restrictions.

Action: Modify the program to avoid using features that are not supported by this host environment. Check the host environment documentation for specific changes and limitations in PL/SQL features.

PLS-00757: only one column allowed for PARTITION BY VALUE clause

Cause: More than one column was specified for the PARTITION BY VALUE clause.

Action: Remove the additional columns.

PLS-00758: only a NUMBER column is allowed in this context

Cause: The partitioning column of the PARTITION BY VALUE clause was not a NUMBER column.

Action: Change the partitioning column to be a NUMBER column.

PLS-00759: USING clause of a polymorphic table function must specify a package name

Cause: The type of the object named in the USING clause of a polymorphic table function was not a package

Action: Specify a package name.

PLS-00760: PARTITION BY, ORDER BY, CLUSTER BY, or PARALLEL_ENABLE are not allowed for polymorphic table functions

Cause: An attempt was made to use the PARTITION BY, ORDER BY, CLUSTER BY, DETERMINISTIC, AUTHID, or PARALLEL_ENABLE clause in a polymorphic table function.

Action: Do not specify PARTITION BY, CLUSTER BY, ORDER BY, DETERMINISTIC, AUTHID or PARALLEL_ENABLE clause with polymorphic table functions.

PLS-00761: Program unit collation may only be USING_NLS_COMP

Cause: The specified collation for the unit was not USING_NLS_COMP.

Action: Specify the USING_NLS_COMP collation as the collation clause, or default schema or session collation.

PLS-00762: %%TYPE or %%ROWTYPE must have the USING_NLS_COMP collation

Cause: The columns referenced with %TYPE or %ROWTYPE did not have the USING_NLS_COMP collation.

Action: The USING_NLS_COMP collation must be used in the table columns.

PLS-00763: bind variables must have the USING_NLS_COMP collation

Cause: Bind variables did not have the USING_NLS_COMP collation.

Action: The USING_NLS_COMP collation must be used in bind variables.

PLS-00764: COLUMNS is not allowed as return type of polymorphic table functions

Cause: An attempt was made to use COLUMNS as a return type for polymorphic table function.

Action: Do not specify COLUMNS as return type for polymorphic table functions.

PLS-00765: COLUMNS or TABLE is not allowed in this context

Cause: An attempt was made to use COLUMNS or TABLE as a type specification.

Action: Do not specify COLUMNS or TABLE as a type specification in in a context other than polymorphic table functions.

PLS-00766: more than one parameter of TABLE type is not allowed

Cause: An attempt was made to use more than one argument with TABLE as the type specification.

Action: Do not specify more than one TABLE as the type specification for arguments of polymorphic table functions.

PLS-00767: polymorphic table function can only return TABLE type

Cause: An attempt was made to specify a type other than TABLE type as the return type specification.

Action: Specify TABLE as return type specification for polymorphic table functions.

PLS-00768: Formal parameters of type TABLE may not have default value.

Cause: A default value was specified for a formal parameter of type TABLE in a polymorphic table function specification.

Action: Remove the default value from the parameter of type TABLE in the polymorphic table function specification.

PLS-00769: Formal parameters of type COLUMNS may only have a NULL default value.

Cause: A non-NULL default value was specified for a formal parameter of type COLUMNS in a polymorphic table function.

Action: Change the default value for the parameter of type COLUMNS to have a NULL default value in the polymorphic table function specification.

PLS-00770: Library unit is marked as being of unsupported version *string* (piece *string*).

Cause: A library unit was read with an unsupported version.

Action: Use a version of the library unit with a supported version.

PLS-00771: PERSISTABLE or NOT PERSISTABLE not permitted in methods

Cause: PERSISTABLE or NOT PERSISTABLE is only used for program unit. It can not be used for methods.

Action: Remove PERSISTABLE or NOT PERSISTABLE for methods.

PLS-00772: PERSISTABLE or NOT PERSISTABLE not permitted with UNDER clause

Cause: Subtypes can not have PERSISTABLE or NOT PERSISTABLE. The subtypes inherit [NOT] PERSISTABLE from supertypes.

Action: Remove PERSISTABLE or NOT PERSISTABLE for subtypes.

PLS-00773: Table function must have at least one argument of TABLE type.

Cause: Row or table polymorphic table functions did not have at least one argument of TABLE type.

Action: Amend the function declaration to include at least one argument of type TABLE.

PLS-00774: Table function may not have argument of TABLE type.

Cause: Leaf polymorphic table functions had an argument of TABLE type.

Action: Amend the function declaration and remove arguments of type TABLE.

PLS-00775: cursors cannot reference types defined in the same package

Cause: A cursor declared in a package specification was referencing a record or a collection type defined in the same package.

Action: Do not declare a cursor in the same package specification where collection or record type is also declared.

PLS-00776: SQL macro can only return character return types

Cause: A SQL macro function returned a type that was not a character type like VARCHAR2.

Action: Change the return type to one of the character types.

PLS-00777: scalar SQL macro cannot have argument of type DBMS_TF.TABLE_T

Cause: DBMS_TF.TABLE_T argument was used for scalar macros.

Action: Change the type of the argument to a type other than DBMS_TF.TABLE_T.

PLS-00778: PARTITION BY, ORDER BY, CLUSTER BY, or PARALLEL_ENABLE are not allowed for SQL macros

Cause: An attempt was made to use the PARTITION BY, ORDER BY, CLUSTER BY, DETERMINISTIC, AUTHID, or PARALLEL_ENABLE clause in a SQL macro.

Action: Do not specify PARTITION BY, CLUSTER BY, ORDER BY, DETERMINISTIC, AUTHID, or PARALLEL_ENABLE clause with a SQL macro.

PLS-00779: Formal parameters of type TABLE cannot have default value.

Cause: A default value was specified for a formal parameter of type TABLE in a SQL macro declaration.

Action: Remove the default value from the parameter of type TABLE in the SQL macro declaration.

PLS-00780: Formal parameters of type COLUMNS may only have a NULL default value.

Cause: A non-NULL default value was specified for a formal parameter of type COLUMNS in a polymorphic table function.

Action: Change the default value for the parameter of type COLUMNS to have a NULL default value in the polymorphic table function specification.

PLS-00781: SQL macro cannot be a type method

Cause: The SQL macro could not be declared as a method in a type specification.

Action: Use the SQL macro as a package function or a top level function.

PLS-00782: A package containing SQL macro cannot be an invoker's right package.

Cause: A package could not be declared as AUTHID CURRENT_USER if it had a SQL macro function declared inside.

Action: Declare the package as AUTHID DEFINER if it contains one or more SQL macro functions.

PLS-00783: Trigger binds not allowed outside before or after row section.

Cause: :new or :old were used outside row section.

Action: Do not use trigger binds row outside sections.

PLS-00784: The right operand of operator MEMBER OF cannot be a list of values.

Cause: A list of values was passed as the right operand to the operator MEMBER OF. The MEMBER OF right operand must be a nested table.

Action: Create a nested table with the list of values and pass it as right operand.

PLS-00785: A function was used instead of a cursor variable.

Cause: A function was used instead of a cursor variable.

Action: Replace the function with cursor variable.

PLS-00786: The comma operator is not allowed in searched CASE.

Cause: A comma ',' was used to separate conditions in a searched CASE.

Action: Replace the comma with an OR operator.

PLS-00787: The predicate is missing the left operand.

Cause: The predicate in the searched CASE was missing the left operand.

Action: Add the missing left operand.

PLS-00801: internal error [*string*]

Cause: This is a generic internal error that might occur during compilation or execution. The first parameter is the internal error number.

Action: Report this error as a bug to your Customer Support representative.

PLS-00851: 'others' choice is not the last named argument in this type constructor

Cause: An 'others' choice in an aggregate constructor is not the final named argument.

Action: Move the 'others' choice to the end of the argument list.

PLS-00852: Iteration form arguments are not allowed in a constructor for type *string* because it has a VARCHAR2 index type.

Cause: Iteration form arguments were used in a constructor for an associative array type that has a VARCHAR2 index type.

Action: Do not specify an iteration form argument for this constructor.

PLS-00853: REPEAT not allowed in a cursor FOR loop.

Cause: The REPEAT keyword was specified in a loop over a cursor.

Action: Remove the REPEAT keyword.

PLS-00854: MUTABLE is not allowed for the PAIRS OF index iterand.

Cause: The MUTABLE keyword was specified for a PAIRS OF index iterand.

Action: Remove the MUTABLE keyword.

PLS-00855: Only one iterand specified for a PAIRS OF iteration control.

Cause: Only one iterand was specified in an iterator with a PAIRS OF iteration control.

Action: Specify a second iterand in the iterator.

PLS-00856: Two iterands specified for a non PAIRS OF iteration control.

Cause: Two iterands were specified in an iterator that used a non PAIRS OF iteration control.

Action: Remove the second iterand from the iterator.

PLS-00857: REVERSE not allowed in a single expression iteration control.

Cause: The REVERSE keyword was specified in a single expression iteration control.

Action: Remove the REVERSE keyword.

PLS-00858: No iterand type was specified for an EXECUTE IMMEDIATE iteration control.

Cause: No type was specified for the iterand in an iterator that used an EXECUTE IMMEDIATE iteration control.

Action: Add an explicit type for the iterand in the iterator.

PLS-00859: No iterand type was specified for a weak Cursor Variable iteration control.

Cause: No type was specified for the iterand in an iterator that used a weak Cursor Variable iteration control.

Action: Add an explicit type for the iterand in the iterator.

PLS-00860: The expression used in a VALUES OF, PAIRS OF, or INDICES OF iteration control does not have a collection type.

Cause: An expression whose type is not a collection type was specified in a VALUES OF, PAIRS OF, or INDICES OF iteration control.

Action: Use an expression with a collection type in the iteration control.

PLS-00861: MUTABLE is not allowed for the iterand when INDICES OF iteration control is used.

Cause: The MUTABLE keyword was specified for the iterand in an iterator that used an INDICES OF iteration control.

Action: Remove the MUTABLE keyword.

PLS-00862: The type of the iterand is not compatible with an iteration control.

Cause: The iterand was given a type that was not compatible with one of the iteration controls.

Action: Fix the type incompatibility.

PLS-00863: The iterand must have a numeric type.

Cause: The iterand was given a non-numeric type when one of the iteration controls was a stepped range iteration control.

Action: Provide a numeric type iterand.

PLS-00864: PAIRS OF iteration control is not allowed in a basic iterator association, use INDEX, or SEQUENCE iterator association instead.

Cause: A PAIRS OF iteration control was specified in an iterator used in a basic iterator association in a qualified expression.

Action: Use an INDEX or SEQUENCE iterator association instead.

PLS-00865: This expression is not supported in default expressions.

Cause: An unsupported expression was used in a default expression.

Action: Remove the unsupported expression from the default expression.

PLS-00866: The name of a function call cannot be a function call or array element.

Cause: A function call or array element was used as the name of a function call, possibly by adding an extra parentheses pair after the call.

Action: Remove the extra parentheses pair.

PLS-00867: The field names for all iteration controls must match.

Cause: The field names for an iteration control did not match the field names for another iteration control.

Action: Use column aliases to make the field names match, or use an explicit type for the iterand.

PLS-00868: The iterand type for an iteration control is not compatible with the collection index type, use SEQUENCE, or INDEX iterator association instead of a basic iterator association.

Cause: The type of the iterand for an iteration control used in a qualified expression was not compatible with the index type for the collection.

Action: Use an INDEX or SEQUENCE iterator association instead of a basic iterator association.

PLS-00869: ASCII or PRETTY not supported for non-textual return data type

Cause: An attempt was made to PRETTY print or escape non-ASCII characters for a non-textual output of a JSON operation.

Action: Change the return data type to VARCHAR2 or CLOB, or remove the PRETTY or ASCII serialization output.

PLS-00870: The index expression type for an INDEX iteration association is not compatible with the collection index type.

Cause: The type of the index expression used in an INDEX iteration association was not compatible with the index type for the collection.

Action: Use an index expression with an appropriate type in INDEX iterator associations.

PLS-00871: cursor attribute may not be applied to cursor 'string' with cursor parameters

Cause: A cursor attribute was specified for a cursor reference which contained cursor parameters.

Action: Specify the cursor attribute with a simple cursor name.

PLS-00872: Module *string* does not exist.

Cause: The specified Multilingual Engine (MLE) module could not be found, or it was not a module object.

Action: Specify a valid module identifier.

PLS-00873: Environment *string* does not exist.

Cause: The specified Multilingual Engine (MLE) environment could not be found, or it was not an environment object.

Action: Specify a valid environment identifier.

PLS-00874: Module *string* is invalid.

Cause: The specified Multilingual Engine (MLE) module was invalid.

Action: Specify a valid module identifier.

PLS-00875: Environment *string* is invalid.

Cause: The specified Multilingual Engine (MLE) environment was invalid.

Action: Specify a valid environment identifier.

PLS-00876: JSON cannot return NULL when returning a record.

Cause: A returning record clause was specified in a JSON call. The NULL ON clause (for example NULL ON ERROR or NULL ON MISMATCH) cannot be specified within the JSON call.

Action: Remove or change the NULL ON clause.

PLS-00900: can't find body of unit '*string*'

Cause: At run time, the body of a program unit could not be found. This can happen for one of two reasons. -- First, there may be a unit 'a' which calls a module 'b', where the spec for 'b' exists but not the body. In this case, since the spec is present, there will be no compile-time errors. -- Secondly, this can occur if there is a reference to a sequence outside of the proper context such as a SQL statement. In this case, the "spec" of the sequence reference can be found, but it is invalid to actually run code which references the sequence outside a SQL statement, as in: `i := seq.nextval;`

Action: If caused by the first reason, create a body for the object that is being referenced. If caused by the second reason, move the sequence into a SQL statement. For example, `i := seq.nextval;` can be replaced by: `select seq.nextval into temp from dual; i := temp;`

PLS-00901: the data type of column '*string*' of table '*string*' is not supported

Cause: A column in a database table belongs to a datatype that is not supported by the current release of PL/SQL.

Action: Remove the offending column from the table or copy the desired columns to another table.

PLS-00902: A READ-ONLY bind variable used in OUT or IN-OUT context

Cause: A host variable that is protected from update was used in a context that allows an update.

Action: Check the context and change the use of the host variable, or assign the value of the host variable to a PL/SQL local variable, then use the local variable instead.

PLS-00904: insufficient privilege to access object *string*

Cause: An attempt was made to operate on a database object without the required privilege. For example, this error occurs if an attempt was made to UPDATE a table for which only SELECT privileges were granted, or the database object's ACCESSIBLE BY clause prohibits the attempted compilation.

Action: Ask the DBA to perform the operation or to grant you the required privilege.

PLS-00905: object *string* is invalid

Cause: An invalid package specification or stored subprogram was referenced. A package specification or stored subprogram is invalid if its source code or any database object it references has been DROPPed, REPLACed, or ALTERed since it was last compiled.

Action: Find out what invalidated the package specification or stored subprogram, then make sure that Oracle can recompile it without errors.

PLS-00906: Compilation is not possible

Cause: The PL/SQL compiler cannot run properly because its operating environment is corrupted. For example, its error message file might be inaccessible.

Action: Check the PL/SQL operating environment, making sure that all files required by the compiler are accessible.

PLS-00907: cannot load library unit *string* (referenced by *string*)

Cause: PL/SQL is unable to find and load a library unit that was previously available. This typically happens when you try to load a unit which references another library unit that is non-existent or invalid.

Action: Provide the needed library unit.

PLS-00908: The stored format of *string* is not supported by this release

Cause: PL/SQL cannot understand the stored format of a library unit. It has been compiled or shrink-wrapped with a version of PL/SQL either too new or too old for this version to understand it.

Action: Recompile the library unit for this version of PL/SQL.

PLS-00909: object *string* is not declared or insufficient privileges to access object *string*

Cause: An object from the operator declaration is not declared, or it is declared but there is no sufficient privileges to access that object.

Action: Declare the object, or ask the DBA to grant the privileges required to access the object.

PLS-00910: insufficient privilege to inherit from type *string*

Cause: An attempt was made to inherit from a type without the required UNDER privilege.

Action: n/a

PLS-00920: parameter `plsql_native_library_dir` is not set

Cause: A PL/SQL program is being compiled natively, but the compiler parameter `plsql_native_library_dir`, which denotes the directory to store the native shared objects (DLL), is not set.

Action: The DBA should set this parameter.

PLS-00923: native compilation failed: *string:string*

Cause: The native compilation of PL/SQL program has failed because the native shared object (DLL) could not be created successfully.

Action: The DBA should ensure that the commands specified in `spnc_commands` file are correct.

PLS-00924: native compilation is not supported on this platform

Cause: Native compilation of PL/SQL programs is not supported on this platform.

Action: Compile the PL/SQL program to bytecode by setting the parameter `plsql_compiler_flags` to INTERPRETED.

PLS-00925: native compilation failed: Unable to create file (*string string*)

Cause: Native compilation of a PL/SQL program failed because a file could not be created. It is likely that the system parameter `plsql_native_library_dir` does not reference a writable, existing directory

Action: Ensure that the system parameter `plsql_native_library_dir` references a directory which exists, and is writable.

PLS-00950: In this version, PL/SQL tables can not be used in this SQL statement.

Cause: In a SQL statement, a PL/SQL table was referenced incorrectly. For example, the following reference might have been made, but PL/SQL table attributes can only be used in procedural statements: `SELECT ename_tab.COUNT INTO name_count WHERE ...`

Action: Remove the incorrect reference from the SQL statement.

PLS-00951: *string* Feature is not supported by this release

Cause: PL/SQL cannot understand something in an imported library unit. It uses some feature either too new or too old for this version to understand it.

Action: Recompile the imported library unit with this version of PL/SQL, to discover more precisely what feature is not supported.

PLS-00960: RPCs cannot use parameters with schema-level object types in this release

Cause: Schema-level object types, or types which recursively use such types, were used in an RPC, which is not permitted. For example: `create type foo as object (...)`
`create package my_pack is type my_rec is record(v foo);` -- on a remote server: `x my_pack.my_rec@rpc;` -- illegal attempt to use type `my_rec`

Action: Use only PL/SQL-defined types in RPC calls. It may be necessary to add extra code to element-wise copy schema-level types into local types in order to move such data through an RPC.

PLS-00970: The class name of a method must match that of EXTERNAL NAME clause in the type header

Cause: The class name defined as part of the method signature does not match the one defined in the type header in the EXTERNAL NAME clause. `create type foo as object EXTERNAL NAME 'foo' LANGUAGE JAVA (... MEMBER FUNCTION my (number) return number EXTERNAL NAME 'bar.func(oracle.sql.NUMBER) return oracle.sql.NUMBER', ..);`

Action: Either omit the class name from the method signature or use the one defined in the type header.

PLS-00989: Cursor Variable in record, object, or collection is not supported by this release

Cause: 3.0 Implementation Restriction for Ref Cursors

Action: n/a

PLS-00990: Index Tables of Cursor Variables are disallowed

Cause: 2.2 Implementation Restriction for Ref Cursors

Action: n/a

PLS-00992: Cursor Variables cannot be FETCH'ed from

Cause: 2.2 Implementation Restriction for Ref Cursors

Action: n/a

PLS-00993: Cursor variables cannot be passed as forwarded RPC arguments or results

Cause: An attempt was made to pass a cursor variable to or from a remote subprogram by way of a forwarded RPC, which is not allowed. For example, from a client-side tool, a procedure on a remote database cannot be used to open a cursor variable because remote subprograms cannot return the values of cursor variables.

Action: Change the subprogram call to reference the local database.

PLS-00994: Cursor Variables cannot be declared as part of a package

Cause: An attempt was made to declare a cursor variable in a package specification, which is not allowed. Although REF CURSOR types can be defined in a PL/SQL block, subprogram, or package, cursor variables can be declared only in a block or subprogram.

Action: Move the cursor variable declaration into a PL/SQL block or subprogram.

PLS-00995: unhandled exception # *string*

Cause: An exception was raised for which no handler was found. If it cannot find a handler for a raised exception, PL/SQL returns an unhandled exception to the host environment. The number embedded in the message is an Oracle error code listed in this manual.

Action: Fix the condition that raised the exception, write an appropriate exception handler, or use the OTHERS handler. If there is an appropriate handler in the current block, the exception was raised in a declaration or exception handler, and therefore propagated immediately to the enclosing block.

PLS-00996: out of memory

Cause: A request from PL/SQL for more memory failed.

Action: Make sure that you are not referencing the wrong row in a PL/SQL table and that the program is not recursing too deeply.

PLS-00997: no cursor return types allowed in this beta version

Cause: Cursor return types have bugs, and it is best to disable them for now.

Action: n/a

PLS-00998: implementation restriction (may be temporary)**PLS-00999: implementation restriction (may be temporary) *string*****PLS-01400: Use of '||' token**

Cause: Use of '||' token in expressions is not in ANSI's grammar. This corresponds to the "binary_add_op"'s reduction to a "CAT_" in plsql.y

Action: n/a

PLS-01401: Identifier over 18 characters long

Cause: Identifiers over 18 characters long are not allowed under the ANSI grammar.

Action: n/a

PLS-01402: Use of quoted identifier

Cause: The use of quoted identifiers is a PL/SQL extension and is not allowed under the ANSI grammar.

Action: n/a

PLS-01403: Comment delimiters /* */

Cause: C-style comments (introduced with the '/' and '*' characters) are not part of the ANSI grammar. To conform with ANSI, comments must be preceded by the ANSI comment introducer, '--', and must not contain a newline. If someone can figure out a way to make this message look less cheesy without ending up with nested comments, be my guest.

Action: n/a

PLS-01404: ANSI Identifiers can only consist of letters, digits, and the underscore character

Cause: ANSI identifiers can only consist of letters, digits, and the underscore character. PL/SQL allows "#" and "\$" in identifiers, but these are not ANSI.

Action: n/a

PLS-01405: Under ANSI's grammar, numeric data represented in exponent notation must use an uppercase E

Cause: Under ANSI's grammar, numeric data represented in exponent notation must use an uppercase "E". Example: 3.45E-6 is ANSI, but 3.45e-6 is not.

Action: n/a

PLS-01406: An identifier has been found that is considered a keyword in ANSI's grammar but not in PL/SQL's

Cause: An identifier has been found that is considered a keyword in ANSI's grammar but not in PL/SQL's.

Action: n/a

PLS-01407: One of the identifiers CHAR, CHARACTER, or INTEGER has been redefined by the programmer

Cause: One of the identifiers "CHAR", "CHARACTER", or "INTEGER" (all ansi keywords) has been redefined by the programmer.(special case of 1406, above).

Action: n/a

PLS-01408: Use of '&' token

Cause: Use of '&' token in expressions is not in ANSI's grammar.

Action: n/a

PLS-01409: Use of 'PRIOR_' token

Cause: Use of 'PRIOR_' token in expressions is not in ANSI's grammar.

Action: n/a

PLS-01410: Use of 'MOD' token

Cause: Use of 'MOD' token in expressions is not in ANSI's grammar.

Action: n/a

PLS-01411: Use of 'REM' token

Cause: Use of 'REM' token in expressions is not in ANSI's grammar.

Action: n/a

PLS-01412: Use of 'EXP' token

Cause: Use of 'EXP' token in expressions is not in ANSI's grammar.

Action: n/a

PLS-01413: Use of NULL an expression

Cause: Use of NULL an expression not in ANSI's grammar.

Action: n/a

PLS-01414: Use of qualified expression here

Cause: Use of qualified expression here is not in ANSI's grammar.

Action: n/a

PLS-01415: Use of aggregate value here

Cause: Use of aggregate value here is not in ANSI's grammar.

Action: n/a

PLS-01416: Use of *id (value...)* here

Cause: Use of *id (value...)* here is not in ANSI's grammar.

Action: n/a

PLS-01417: Use of %%attribute

Cause: Use of %%attribute value here is not in ANSI's grammar.

Action: n/a

PLS-01418: Subquery cannot include set operators in ANSI's grammar

Cause: Subquery cannot include set operators in ANSI's grammar.

Action: n/a

PLS-01419: Subquery must have either '*' or exactly one column in its select list

Cause: Subquery must have either '*' or exactly one column in its select list according to ANSI's grammar.

Action: n/a

PLS-01420: INTERSECT and MINUS set operators are not ANSI

Cause: INTERSECT and MINUS set operators are not ANSI

Action: n/a

PLS-01421: FOR UPDATE clause

Cause: FOR UPDATE clause is not in ANSI's grammar.

Action: n/a

PLS-01422: Aliases

Cause: Aliases are not in ANSI's grammar.

Action: n/a

PLS-01423: Subquery on right-hand-side in set clause

Cause: Subquery on right-hand-side in set clause is not in ANSI's grammar.

Action: n/a

PLS-01424: Non-ANSI order of clauses

Cause: ANSI specifies an ordering to clauses in a table-expression which PL/SQL doesn't. The ordering according to ANSI must be: (1) from clause (2) where clause (3) group-by clause (4) having clause In PL/SQL, the from clause must come first, and the clauses after it can appear in any order (with the addition of the non-ansi connect-by clause).

Action: n/a

PLS-01425: Connect-by clause

Cause: ANSI doesn't allow connect-by clauses.

Action: n/a

PLS-01450: This *value expression* contains a nonconforming data type

Cause: This *value expression* contains a nonconforming data type. Section 4.2 of X3H2, "Data types" states that: "A nonnull value is either a character string or a number." Many builtin functions in STANDARD will be flagged with this warning by means of a pragma.

Action: n/a

PLS-01451: The data types of these *value expressions* must be comparable

Cause: The data types of these *value expressions* must be comparable. Section 4.2 of X3H2, "Data types", states that: "A character string and a number are not comparable values." Many builtin functions in STANDARD will be flagged with this warning by means of a pragma. This warning will be place on data-type coercion functions, for example, TO_CHAR(*number*), that are inserted in OracleSQL to allow non-conforming data type combinations.

Action: n/a

PLS-01452: This function is not part of the ANSI standard

Cause: This function is not part of the ANSI standard. This warning is used to flag such functions as "POWER" that are not mentioned in the ANSI specifications.

Action: n/a

PLS-01453: This procedure is not part of the ANSI standard

Cause: This procedure is not part of the ANSI standard. This warning is used to flag such procedures as "STOP" that are not mentioned in the ANSI specifications.

Action: n/a

PLS-01454: No operator may be used with values of data type CHAR

Cause: No operator may be used with values of data type "character string". Section 5.9, "*value expression*", syntax rule 3, of X3H2 states: "If the data type of a *primary* is character string, then the *value expression* shall not include any operators." This warning is placed on many functions in STDBASE that take CHAR args.

Action: n/a

PLS-01455: The predicates IS NULL and IS NOT NULL are defined only for column specifications

Cause: The predicates "IS NULL" and "IS NOT NULL" are defined only for column specifications, not for any other expressions. Section 5.15, "*null predicate*", indicates that in the predicate "x IS NULL", x must be a column, and may not be any other kind of expression.

Action: n/a

PLS-01456: Name length cannot exceed 3.**PLS-01458: The set clause in an UPDATE statement requires a column name of length 1**

Cause: The set clause in an UPDATE statement requires a column name of length 1. Sect. 8.11, 8.12

Action: n/a

PLS-01460: Cannot access object on a remote host

Cause: Cannot access object on a remote host.

Action: n/a

PLS-01463: STDDEV is not a standard set function

Cause: STDDEV is not a standard set function.

Action: n/a

PLS-01464: VARIANCE is not a standard set function

Cause: VARIANCE is not a standard set function.

Action: n/a

PLS-01466: Null strings are not allowed

Cause: Null strings are not allowed.

Action: n/a

PLS-01467: The value list of the IN predicate, if not a subquery, must contain only value_specifications

Cause: The value list of the IN predicate, if not a subquery, must contain only value_specifications (i.e. literals and PL/SQL or embedded variables).

Action: n/a

PLS-01468: The first argument of the like-predicate must be a column of type character string

Cause: The first argument of the like-predicate must be a column of type character string.

Action: n/a

PLS-01469: ANSI standard does not permit records

Cause: ANSI standard does not permit records.

Action: n/a

PLS-01470: The escape character in the like-predicate must be a literal or a variable of type CHAR

Cause: The escape character in the like-predicate must be a literal or a variable of type character.

Action: n/a

PLS-01471: The keyword DISTINCT must be present in a COUNT(DISTINCT sim_expr)

Cause: The keyword DISTINCT must be present in a COUNT(DISTINCT sim_expr). Sect 5.8

Action: n/a

PLS-01472: In a set_function_specification, if DISTINCT is present, the expression must be a column_specification

Cause: In a set_function_specification, if DISTINCT is present, the expression must be a column_specification.

Action: n/a

PLS-01473: Use instead of != or ~=

Cause: Use instead of != or ~=. Sect 5.11.

Action: n/a

PLS-01474: Use of ANY is non_ANSI

Cause: Due to the combining of comparison_predicate and quantified_predicate, we may have something like sim_expr = ANY_ sim_expr, which is nonetheless accepted by kernel.

Action: n/a

PLS-01500: Unions are not allowed in the definition of a view

Cause: Unions are not allowed in the definition of a view. Sect. 6.9

Action: n/a

PLS-01501: Options in CREATE TABLE statement is non-ANSI.

Cause: CREATE TABLE allows only the definition of the structure of a table. None of the .SPACE__name. .PCTFREE__numeric_literal. .cluster. is ANSI. Sect. 6.2

Action: n/a

PLS-01502: Constraint name and constraint status are non-ANSI.

Cause: Constraint name and constraint status are non-ANSI. Sect. 6.3

Action: n/a

PLS-01503: The expression in a SET clause must not include a set function

Cause: The expression in a SET clause must not include a set function. Sect. 8.12.

Action: n/a

PLS-01504: Use of AS phase in CREATE TABLE statement is non_ANSI

Cause: CREATE TABLE allows only the definition of the structure of a table. Use of AS phase in CREATE TABLE statement is non-ANSI.

Action: n/a

PLS-01505: ALTER is non-ANSI

Cause: ALTER is non-ANSI

Action: n/a

PLS-01506: CREATE INDEX is non-ANSI

Cause: CREATE INDEX is non-ANSI

Action: n/a

PLS-01507: DROP is non-ANSI

Cause: DROP is non-ANSI

Action: Sect. 6.2

PLS-01701: Illegal syntax in ROLLBACK WORK statement

Cause: Illegal syntax in ROLLBACK WORK statement.

Action: n/a

PLS-01702: Illegal syntax in COMMIT WORK statement

Cause: Illegal syntax in COMMIT WORK statement.

Action: n/a

PLS-01703: Cursor name in CLOSE statement must be of length 1

Cause: Cursor name in CLOSE statment must be of length 1.

Action: n/a

PLS-01704: The expressions in a sort clause must be column specs or unsigned integers, with optional ASC or DESC

Cause: The expressions in a sort clause may only be column specifications or unsigned integers, followed by optional ASC or DESC.

Action: n/a

PLS-01705: table specified by a cursor not updatable if cursor specification has a UNION or ORDER_BY

Cause: Missing keyword FROM.

Action: n/a

PLS-01707: In positioned DELETE or UPDATE statement, table must be identified in specification of cursor

Cause: In a positioned DELETE or UPDATE statement, the table deleted from or updated must be identified in the specification of the cursor.

Action: n/a

PLS-01708: In searched DELETE, UPDATE or INSERT, table must not appear in FROM clause of subqueries in search condition

Cause: In a searched DELETE, UPDATE or INSERT statement, the table affected must not appear in a FROM clause in any of the subqueries in the search condition.

Action: n/a

PLS-01709: value list of INSERT statement, if specified with value list rather than subquery, must be value specification

Cause: In an INSERT statement, the insert value list, if specified with a value list rather than a subquery, must be value specifications, i.e. no compound expressions or column references. Sect 8.7.

Action: n/a

PLS-01710: In a positioned DELETE or UPDATE statement, the cursor name must be of length 1

Cause: In a positioned DELETE or UPDATE statement, the cursor name must be of length 1.

Action: n/a

PLS-01711: A SELECT statement may not contain ORDER_BY, HAVING, or GROUP_BY clause

Cause: A SELECT statement may not contain ORDER_BY, HAVING, or GROUP_BY clause. Sect. 8.10.

Action: n/a

PLS-01712: ANSI does not allow bind variables as INDICATORS

Cause: ANSI does not allow bind variables as INDICATORS

Action: n/a

PLS-01713: The constraints on these types do not match

Cause: The constraints on these types do not match

Action: n/a

PLS-01714: ANSI expects a column name not a literal value here

Cause: ANSI expects a column name not a literal value here

Action: n/a

PLS-01715: ANSI does not accept SAVEPOINTS

PLS-01900: : character to number conversion error

Cause: There was a failure while converting a character string into a numeric value.

Action: Verify that all character strings assigned to number variables have valid numeric value interpretations.

PLS-01901: : host bind array too small

Cause: PL/SQL was unable to transfer data into a host array because the array is too small.

Action: Increase the size of the host array.

PLS-01902: : hex to raw conversion error

Cause: There was a failure while converting a hexadecimal string to a raw.

Action: Verify that the hexadecimal variable to be converted contains a valid hexadecimal value.

PLS-01903: : non-integer error number

Cause: SQLERRM() was called with a non-integer value.

Action: Make sure SQLERRM() is called with an integer value.

PLS-01904: : NULL index table key value

Cause: An attempt was made to index into an index table with a NULL key value.

Action: Make sure key values used to index into index tables are non-NULL.

PLS-01905: : character string buffer too small

Cause: An error was encountered while moving a character string from a source to a destination. This error occurs if, for example, an attempt is made to move a character string of 10 characters into a 1 character buffer. The cause of this error may not always be obvious. For example, the following will result in this error: a varchar2(1); b number; b := 10; a := b; An error results because an implicit conversion causes the number 10 to become the character string '10', which does not fit in the character buffer of 1 allocated for the variable a.

Action: First, look for character string assignment statements where the buffer size is mismatched. If there are none found, then consider the implicit conversion case illustrated in the example above.

PLS-01906: : raw variable length too long

Cause: The length of a raw variable being copied or assigned was too long to fit into its destination.

Action: Make sure the raw variable length is correct.

PLS-01907: : number precision too large

Cause: The number being copied or assigned had too many digits to the left of the decimal and did not fit into its destination. In other words, there is a number precision mismatch. This error may also occur if, for example, an attempt is made to assign a character string to a number, as demonstrated below. a varchar2(4); b number(1,1); a := '10.1'; b := a;

Action: First, check explicit number precision value mismatches. If none are found, then consider implicit conversions of other types to numbers, including conversions performed during binds.

PLS-01908: : RETURNING INTO buffer too small

Cause: PL/SQL determined that a server side DML with a RETURNING INTO clause does not use a buffer that is large enough to hold the data being returned.

Action: Increase the size of the RETURNING INTO clause buffer.

PLS-01909: : cannot assign supertype instance to subtype

Cause: An attempt was made to assign or copy a supertype instance to a container (destination) that can only hold a subtype instance.

Action: Make sure the runtime type of the source of the assignment or copy is the same type as the destination or is a subtype of the destination type

PLS-01910: : associative array shape is not consistent with session parameters

Cause: NLS parameters affecting comparison of keys have been altered dynamically. The associative array's index is invalid.

Action: Avoid using associative arrays with string keys in applications which require frequent changes of NLS_COMP and/or NLS_SORT.

PLS-01911: : associative array key violates its type constraints

Cause: The key value of an element being inserted into an associative array violates the the key type constraints.

Action: Relax the constraints if the key value is meant to be acceptable. Otherwise, apply a valid key value when inserting an element.

PLS-01912: : instance must of be of type 'string'

Cause: The run-time type of the instance is not the declared type. e.g. If the return value of a user defined constructor is wrong.

Action: Return the correct type.

PLS-01913: : instance must of be of type 'string' or one of its subtypes

Cause: The run-time type of the instance is the not declared type or one of its subtypes. e.g. TREAT(supertype AS subtype) fails.

Action: Catch the exception.

PLS-01914: duplicate SECURITY specification in subprogram expression

Cause: The subprogram was found to have two SECURITY specifications.

Action: Remove one of the SECURITY specifications.

PLS-01915: duplicate ASSEMBLY specification in subprogram expression

Cause: The subprogram was found to have two ASSEMBLY specifications.

Action: Remove one of the ASSEMBLY specifications.

PLS-01916: SECURITY level specification exceeds ASSEMBLY SECURITY specification

Cause: The security level specified in the callspec exceeds the maximum security level allowed by the assembly.

Action: Lower the security level specified in the callspec to match the maximum security level specified in the assembly.

PLS-01917: illegal reference to package STANDARD item 'string'

Cause: The item is intended for internal use and must not be referred to in user code.

Action: Remove the reference and use syntax that provides the necessary functionality.

PLS-01918: 9.2 and earlier wrap formats are not permitted

Cause: An attempt was made to compile a unit that was wrapped using 9.2 or earlier version of the wrap utility. Wrapped source created by 9.2 and earlier versions of wrap is not permitted on this database.

Action: Wrap the source using 10g or later versions of the wrap utility. Alternately, set the initialization parameter PERMIT_92_WRAP_FORMAT parameter to TRUE.

PLS-01919: LIBRARY object does not use a DIRECTORY object

Cause: The LIBRARY objects did not use a DIRECTORY object for the pluggable database (PDB) with a defined PATH_PREFIX.

Action: Re-create LIBRARY objects in the database to use a DIRECTORY object.

PLW-05000 to PLW-07207

PLW-05000: mismatch in NOCOPY qualification between specification and body

Cause: The indicated parameter was declared with the NOCOPY hint in the subprogram specification but not in the body, or it was declared with the NOCOPY hint in the body but not in the specification.

Action: Ensure that the specification and the body agree in their use of NOCOPY. If this mismatch is not corrected, the program will obey the declaration given in the specification, ignoring that in the body.

PLW-05001: previous use of 'string' (at line *string*) conflicts with this use

Cause: While looking for prior declarations of a variable, constant, or label, the compiler found another declaration with the same name in the same scope. Or, the headers of subprogram in a package specification and body were not identical.

Action: Check the spelling of the variable, constant, or label name. Also check the names of all parameters and exceptions declared in the same scope. Then, remove or rename the object with the duplicate name. Or, change the headers of the packaged subprogram in the package specification or body so that they are identical.

PLW-05003: same actual parameter(*string* and *string*) at IN and NOCOPY may have side effects

Cause: The indicated parameter was declared with the NOCOPY hint in the subprogram specification but not in the body, or it was declared with the NOCOPY hint in the body but not in the specification.

Action: Ensure that the specification and the body agree in their use of NOCOPY. If this mismatch is not corrected, the program will obey the declaration given in the specification, ignoring that in the body.

PLW-05004: identifier *string* is also declared in STANDARD or is a SQL builtin

Cause: The indicated identifier was also either: o) declared in package STANDARD, or o) a SQL builtin function, or o) a pseudo-column. This situation can result in name resolution issues since the STANDARD/builtin declaration will be chosen over the local declaration in SQL statements; however the local declaration will be chosen over the STANDARD/builtin declaration outside SQL scope. (See the documentation on PL/SQL name resolution.)

Action: Either: o) rename the given identifier, o) qualify any references to the identifier with the containing scope's name, or o) make sure the intended resolution occurs if using the identifier in SQL scope.

PLW-05005: subprogram *string* returns without value at line *string*

Cause: A function terminated without a return value. RETURN statements with values are required for all PL/SQL functions.

Action: Inspect function source code to ensure that every RETURN statement returns a value and that a function does not terminate by executing its END statement. Notice that this message may appear at the call site for a function if the function call was inlined and if the called function did not terminate properly.

PLW-05006: shadow type generation resulted in warning: *string*

Cause: Compilation of a table function causes the creation of internally-generated types. A problem occurred during creation of these types which was not severe enough to prevent the creation of the types, but which may impact the usage of the table function. See the accompanying error message for more information.

Action: Fix the issue reported in the accompanying error message.

PLW-05007: first parameter to pragma INLINE must be an identifier

Cause: The first parameter to the pragma INLINE must be an identifier denoting a procedure or function.

Action: Use a procedure or function name

PLW-05008: illegal number of arguments for pragma *string*

Cause: The number of arguments (actual parameters) passed to the named pragma (compiler directive) is incorrect. A required argument was omitted from the argument list, or the pragma syntax is faulty (for example, a comma might be missing between two parameters).

Action: Supply the missing argument or correct the faulty syntax.

PLW-05009: pragma INLINE may not appear in a declaration list

Cause: Pragma INLINE applies only to the following statement, and can not appear immediately prior to a declaration

Action: Remove the pragma.

PLW-05010: duplicate pragma INLINE on procedure '*string*'

Cause: Pragma INLINE was applied twice to the same procedure in the same statement. The procedure will be inlined only if all duplicates specify a control value of 'YES'

Action: Remove the duplicate pragma.

PLW-05011: pragma INLINE for procedure '*string*' does not apply to any calls

Cause: A pragma INLINE was provided, but there was no call to the mentioned procedure in the next statement.

Action: Remove the unnecessary pragma.

PLW-05012: pragma INLINE for procedure '*string*' could not be applied

Cause: A pragma INLINE(*name*, 'yes') was used, but the named procedure could not be inlined.

Action: Eliminate the reasons which are blocking the inlining. See the documentation for possible problems.

PLW-05013: second parameter to pragma INLINE '*string*' is not 'YES' or 'NO'

Cause: The second parameter to the pragma INLINE governs whether or not a procedure call can be inlined. The only legal values are 'YES', meaning that the compiler should attempt to inline the call, and 'NO', meaning that the compiler must not inline the call.

Action: Use 'YES' or 'NO' as appropriate.

PLW-05014: Pragma *string* cannot be specified here

Cause: The pragma was specified in an inappropriate context.

Action: Remove or relocate the misplaced pragma. Check the documentation to determine the correct context for this pragma.

PLW-05015: implementation restriction - too many debug records

Cause: The program is so large that it overflowed a compiler limit on the size of the debug symbol table. The module was compiled with partial debugging information.

Action: Compile the module with `PLSQL_DEBUG=FALSE`, or split it into multiple modules

PLW-05016: INTO clause should not be specified here

Cause: The INTO clause was incorrectly specified on a cursor declaration. It should have been specified on the FETCH statement.

Action: Relocate the misplaced clause.

PLW-05017: prefix of the expression will be ignored

Cause: Generalized invocation with explicit SELF and a dotted name was used to call the type method causing the prefix of the dotted name to be ignored.

Action: Do not use a dotted name to invoked type method in this context.

PLW-05018: unit *string* omitted optional AUTHID clause; default value DEFINER used

Cause: The AUTHID clause is missing. The unit is allowed to have an AUTHID clause. If the clause is missing, DEFINER's rights are used by default. Good practice suggests that an explicit AUTHID clause should always be used.

Action: Write an explicit AUTHID clause for the unit.

PLW-05019: the language element near keyword *string* is deprecated beginning with version *string*

Cause: A deprecated language element was used. The particular language element is deprecated in PL/SQL versions greater than or equal to the version number given in the message text.

Action: The deprecated language element should be deleted or rewritten. Deprecated PL/SQL language elements become obsolete one version after they are deprecated. An obsolete language element will no longer be supported and use of the element will result in an error.

PLW-05020: parameter name must be an identifier

Cause: A string literal was used as the parameter name in a call that used named notation.

Action: Change the code to use an identifier for the parameter name.

PLW-05021: exception *string* does not have a pragma EXCEPTION_INIT

Cause: A user-defined exception was declared but it was not given an exception number by the pragma EXCEPTION_INIT. Good practice suggests that all user-defined exceptions should be explicitly numbered.

Action: Add a pragma EXCEPTION_INIT to give the exception a number.

PLW-05022: argument 'string' is not comparable

Cause: An argument to either IN, BETWEEN or MEMBER OF was not of a comparable type. Or, if the argument was of an object type, no MAP or ORDER method was specified for the type.

Action: Use appropriate arguments, or specify a MAP or ORDER method.

PLW-05023: PL/Scope is disabled because SYSAUX is offline.

Cause: PL/Scope was disabled for the current PL/SQL unit compilation because the SYSAUX tablespace is or was offline at the time of compilation. Note that PL/Scope stores identified metadata in the SYSAUX tablespace, and thus cannot function when SYSAUX is offline.

Action: Verify SYSAUX is online and recompile the PL/SQL unit.

PLW-05024: Do not use BULK COLLECT clause in a cursor declaration

Cause: A BULK COLLECT clause was specified in a cursor declaration.

Action: Remove the BULK COLLECT clause from the cursor declaration, moving it to the FETCH statement or statements, if appropriate.

PLW-05025: Do not refer to formal parameter *string* from this same subprogram declaration.

Cause: The default expression of a formal parameter referred to another formal parameter from the same subprogram declaration. This is only permitted in a *formal*/%CHARSET expression.

Action: Remove the reference.

PLW-05026: Identifier '*string*' should not be specified on the END statement for an unlabeled construct.

Cause: There was either a missing semicolon on the END statement or no label was specified on the construct. The END statements which terminate some language constructs (such as loop, block, if and case) may optionally be qualified with the label of that construct. For example, the loop construct <L> LOOP loop-body may be completed with END LOOP L.

Action: Ensure that the statement has a label or that the END statement is properly terminated by a semicolon.

PLW-05027: END statement identifier '*string*' should match label '*string*' at line *string*, column *string*.

Cause: There was either a missing semicolon on the END statement or the name following the END statement was misspelled. The END statements which terminate some language constructs (such as loop, block, if and case) may optionally be qualified with the label of that construct. For example, the loop construct <L> LOOP loop-body may be completed with END LOOP L.

Action: Ensure that the spelling of the END statement identifier matches the label specified for the language construct or that the END statement is properly terminated with a semicolon.

PLW-05028: END statement identifier '*string*' should match the name of TRIGGER '*string*'.

Cause: The name on the END statement completing a TRIGGER definition was misspelled.

Action: Ensure that the spelling of the END statement identifier matches the name specified for the TRIGGER definition.

PLW-05029: This statement has more than one label specified for it.

Cause: More than one label was specified for a statement. This can lead to confusion when reading or updating code.

Action: Remove the additional labels.

PLW-05999: implementation restriction (may be temporary) *string*

PLW-06002: Unreachable code

Cause: Static program analysis determined that some code on the specified line would never be reached during execution. This may have been caused by expression evaluation at compile time.

Action: Inspect program logic for possible defects. Disable the warning if much code is made unreachable intentionally and the warning message is more annoying than helpful.

PLW-06003: unknown inquiry directive '*string*'

Cause: An unknown inquiry directive was used. The inquiry directive is neither predefined nor user-defined.

Action: Use a predefined inquiry directive or define the inquiry directive.

PLW-06004: inlining of call of procedure '*string*' requested

Cause: A pragma INLINE(, 'YES') referring to the named procedure was found. The compiler will, if possible, inline this call.

Action: n/a

PLW-06005: inlining of call of procedure '*string*' was done

Cause: A call to the procedure was inlined.

Action: n/a

PLW-06006: uncalled procedure "*string*" is removed.

Cause: Static program analysis determined that the procedure can never be called or executed. Therefore, it has been removed to save time during compilation and space during execution.

Action: Inspect program logic for possible defects. Disable the warning if the procedure is useful but simply not being used right now and the warning message is more annoying than helpful.

PLW-06007: procedure "*string*" is removed because optimization removed calls

Cause: Static program analysis determined that the procedure can never be called or executed. Therefore, it has been removed to save time during compilation and space during execution.

Action: Inspect program logic for possible defects. Disable the warning if the procedure is useful but simply not being used right now and the warning message is more annoying than helpful.

PLW-06008: call of procedure 'string' will not be inlined

Cause: A pragma INLINE(, 'NO') referring to the named procedure was found. The compiler is prevented from inlining this call.

Action: n/a

PLW-06009: procedure "string" OTHERS handler does not end in RAISE

Cause: The OTHERS handler exited without executing a RAISE or a call to a procedure that was marked with pragma SUPPRESSES_WARNING_6009.

Action: Good programming practice suggest that OTHERS handlers must always pass an exception upward. Inspect the program logic to determine if the handler code needs revision.

PLW-06010: keyword "string" used as a defined name

Cause: A PL/SQL or SQL keyword was used as defined name. Although legal, this is not recommended.

Action: Choose another name for the defined item.

PLW-06011: detailed dependency information discarded due to size limitations

Cause: The compiled unit was so large that the compiler could not store detailed dependency information that could be used to quickly recompile the unit if it was invalidated.

Action: Break up the unit into smaller units.

PLW-06012: SQL statement cannot be inlined. string

Cause: The SQL statement could not be inlined.

Action: n/a

PLW-06013: deprecated parameter PLSQL_DEBUG forces PLSQL_OPTIMIZE_LEVEL <= 1

Cause: The PLSQL_DEBUG parameter was set to TRUE forcing the optimization level to 1 (or 0 if the user selected 0) regardless of the setting of the PLSQL_OPTIMIZE_LEVEL parameter to a higher level

Action: Do not use the PLSQL_DEBUG parameter; it is deprecated. Instead, set the PLSQL_OPTIMIZE_LEVEL parameter to 1.

PLW-06014: PLSQL_OPTIMIZE_LEVEL <= 1 turns off native code generation

Cause: Native code generation was not done because the optimization was set to 1 or less.

Action: The goal of native code generation is high performance and a low optimization level defeats that purpose. Either request a higher optimization level or remove the request for native code generation. Note that using the deprecated parameter PLSQL_DEBUG also forces the optimization level to 1; do not use this parameter when native code generation is desired.

PLW-06015: parameter PLSQL_DEBUG is deprecated; use PLSQL_OPTIMIZE_LEVEL = 1

Cause: The PLSQL_DEBUG parameter was specified.

Action: The parameter `PLSQL_DEBUG` no longer controls the generation of debugging information by the PL/SQL compiler; debugging information is always generated and no special parameter is needed.

PLW-06016: unit *string* is too large; native code generation turned off

Cause: Because the program was extremely large, analysis took an excessive amount of time or space to complete causing native compilation to be turned off.

Action: The goal of native code generation is high performance and the compiler does extensive analysis of the program. If possible, reduce the size of the largest procedure, or split the program unit into multiple units.

PLW-06017: an operation will raise an exception

Cause: An operation near this location is certain to raise an exception during execution; it may be a programming error because it is not an explicit `RAISE`.

Action: The compiler has determined that some operation near this location is certain to raise an exception during execution. This may be a programming error; consider rewriting the code. If the intention is to raise an exception, use an explicit `RAISE` statement.

PLW-06018: an infinity or NaN value is computed or used

Cause: An operation near this location computes or uses an infinite `NUMBER`, `BINARY_FLOAT`, or `BINARY_DOUBLE` value or a NaN `BINARY_FLOAT` or `BINARY_DOUBLE` value.

Action: The compiler has determined that an operation near this location computes or uses either an infinity or a not-a-number (NaN) value. This may indicate a programming error; consider rewriting the code. If the intention is to use a `BINARY_FLOAT` or a `BINARY_DOUBLE` non-numeric value, use the appropriate constant from `STANDARD` rather than computing the value. Some valid uses exist for these values; the warning will still appear in those cases. The use of infinite `NUMBER` values is not well-defined and should be avoided.

PLW-06019: entity *string* is deprecated

Cause: The entity was deprecated and could be removed in a future release.

Action: Do not use the deprecated entity.

PLW-06020: reference to a deprecated entity: *string* declared in unit *string*

Cause: The referenced entity was deprecated and could be removed in a future release.

Action: Do not use the deprecated entity. Follow the specific instructions in the warning if any are given.

PLW-06021: PRAGMA DEPRECATE on *string* is misplaced

Cause: Misplaced pragma. The pragma `deprecate` should follow immediately after the declaration of the entity that is being deprecated.

Action: Place the pragma immediately after the declaration of the entity that is being deprecated.

PLW-06022: cannot use PRAGMA DEPRECATE on this entity

Cause: This entity cannot be deprecated. Deprecation only applies to entities that may be declared in a package or type specification as well as to top-level procedure and function definitions.

Action: Remove the pragma.

PLW-06023: invocation of *string* computes trivial value

Cause: An IS NULL, IS NOT NULL or NVL operator was used on an object that is either never null or always null. The code may be made more efficient by eliding the call.

Action: Rewrite the code to remove the call.

PLW-06024: incorrect use of PRAGMA COVERAGE

Cause: PRAGMA COVERAGE was encountered in a location in which it did not belong.

Action: Rewrite the code so that occurrences of NOT_FEASIBLE_START match occurrences of NOT_FEASIBLE_END. Pragmas may not be nested.

PLW-06025: implicit use of NLS session parameters may be a security risk

Cause: A conversion to a CHAR or VARCHAR type without the explicit specification of National Language Support (NLS) conversion parameters may introduce certain security risks. This often arises when the conversion happens implicitly, as when non-character types are concatenated. See the Oracle Database SQL Language Reference manual for more information about security considerations for data conversion.

Action: Rewrite implicit conversions to explicitly specify the format model to use in the conversion.

PLW-06026: package specification exposes global variable *string*

Cause: A global variable was directly declared in a package specification.

Action: Rewrite the code to avoid exposing a global variable directly in the package specification. For example, move the global variable to the package body and provide a function to access and return its value. If this is not feasible, then add an "ACCESSIBLE BY" clause (white-list) to the containing package specification, restricting access to a set of known-safe units.

PLW-06027: procedure "*string*" is removed after inlining

Cause: After inlining, static program analysis determined that all calls to a procedure were inlined or removed. Therefore, it was removed to save time during compilation and save space during execution.

Action: Inspect the program logic for possible defects. Disable the warning if the procedure is useful and inlining of all calls is expected.

PLW-06028: incorrect argument to COVERAGE pragma

Cause: COVERAGE pragma was supplied an illegal argument.

Action: Supply a valid string argument to the pragma which includes 'NOT_FEASIBLE', 'NOT_FEASIBLE_START', or 'NOT_FEASIBLE_END'.

PLW-06029: PRAGMA SUPPRESSES_WARNING_6009 on *string* is misplaced

Cause: Misplaced pragma. The pragma SUPPRESSES_WARNING_6009 should follow immediately after the declaration or the definition of the entity specified as argument.

Action: Place the pragma immediately after the declaration or the definition of the entity that is specified as an argument.

PLW-07203: parameter '*string*' may benefit from use of the NOCOPY compiler hint

Cause: The mode of the specified parameter was IN OUT or OUT. Use of the NOCOPY compiler hint may speed up calls to this subprogram.

Action: Change the mode of the parameter to explicitly use the NOCOPY compiler hint. For example, if your subprogram declaration is: PROCEDURE proc(p1 IN OUT CLOB); you can change it to: PROCEDURE proc(p1 IN OUT NOCOPY clob); to get the benefit of the NOCOPY hint. For member procedures or functions in object types, you may have to explicitly declare the SELF parameter as illustrated in the following: MEMBER PROCEDURE proc(SELF IN OUT NOCOPY MY_TYPE);

PLW-07204: conversion away from column type may result in sub-optimal query plan

Cause: The evaluation of the WHERE clause in this SQL statement will convert this column value to a different data type. This may prevent the SQL optimizer from using an index that includes this column and slow down the execution of the statement.

Action: Modify the operands in the expression that includes this column to avoid the data type conversion.

PLW-07205: SIMPLE_INTEGER is mixed with BINARY_INTEGER or PLS_INTEGER

Cause: Using SIMPLE_INTEGER and BINARY_INTEGER or PLS_INTEGER arguments in the same arithmetic expression may inhibit certain optimizations.

Action: Try using SIMPLE_INTEGER values only if the expression is computed on a performance critical path.

PLW-07206: analysis suggests that the assignment to '*string*' may be unnecessary

Cause: This assignment may be unnecessary; the PL/SQL optimizer could not find any further use of the variable which was being set. If the assignment was being done for some side-effect such as raising a specific exception, the compiler may not have been able to understand the side-effect and this warning may be inappropriate.

Action: If the assignment sets a variable whose value will not be used again and there are no side-effects (exceptions or calls) to consider, remove the assignment for better performance. If the assignment was in place to raise a specific known exception, replace the assignment with a RAISE statement.

PLW-07207: BULK COLLECT used without the LIMIT clause

Cause: This FETCH statement used BULK COLLECT without an accompanying LIMIT clause. The result set of the FETCH can be large, potentially causing memory shortage at run time.

Action: Keep memory consumption under control by using the LIMIT clause.

PRCA-01000 to PRCA-01168

PRCA-01000: ASM Disk Group {0} does not exist

Cause: An attempt failed to retrieve an ASM disk group that was not configured.

Action: Create the diskgroup using sqlplus if the specified diskgroup does not exist. Mount the diskgroup in ASM which registers the diskgroup with CRS.

PRCA-01001: ASM Disk Group resource does not exist

Cause: There was no disk group resource registered with CRS.

Action: Create the diskgroup using sqlplus and mount the diskgroup in ASM which registers the diskgroup with CRS.

PRCA-01002: Failed to remove CRS resource {0} for ASM Disk Group {1}

Cause: An attempt to remove the CRS resource for the specified ASM Disk Group failed.

Action: Examine the accompanying error messages for details.

PRCA-01003: Failed to create ASM {0} resource {1}

Cause: An attempt to add the CRS resource for ASM failed.

Action: Ensure that the CRS stack is running, the user running svrctl add asm is also the owner of the CRS home, and examine the accompanying error message for details.

PRCA-01005: Failed to retrieve server parameter file of ASM {0}

Cause: Cannot retrieve ASM server parameter file.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has read permission on the ASM resource.

PRCA-01006: Failed to update server parameter file {0} of ASM {1}

Cause: Unable to update the ASM server parameter file.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has update permission on the ASM resource.

PRCA-01007: ASM {0} is not using initialization parameters: {1}

Cause: The specified ASM instance does not use the initialization parameters shown.

Action: Examine the accompanying error messages for details.

PRCA-01016: Failed to remove ASM resource {0} for ASM instance {1}

Cause: An attempt to remove the specified ASM configuration failed.

Action: Examine the accompanying error message for details.

PRCA-01017: ASM {0} does not exist

Cause: ASM is not configured yet.

Action: Configure ASM and then retry.

PRCA-01018: Failed to retrieve ASM instance list for ASM {0}

Cause: Failed to retrieve the list of ASM instances.

Action: Make sure that the crs stack is up and the ASM resource has been configured.

PRCA-01019: ASM {0} is not running

Cause: The ASM resource does not have any running instances.

Action: Use 'srvctl start asm' command to start the asm resource.

PRCA-01020: Unable to create ACFS file system resource {0} for the volume device {1}

Cause: The ACFS file system resource for the specified volume device path could not be created. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc) 4) Was unable to identify the mount point that the user requested the resource to use.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. (srvctl status asm) 3) Verify that the user is running with administrative access. 4) Verify that the mount point given to the create resource command exists.

PRCA-01021: Unable to retrieve ACFS file system for the volume device {0}

Cause: The ACFS file system resource for the specified volume device path could not be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc) 4) Was unable to identify the mount point that the user requested the resource to use.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. (srvctl status asm) 3) Verify that the user is running with administrative access. 4) Verify that the mount point given to the create resource command exists.

PRCA-01022: ACFS file system resource already exists for disk group {0} and volume {1}

Cause: The ACFS file system resource had already been created for the specified disk group and volume names.

Action: Take one of the following actions: 1) Supply a different volume device path to the 'srvctl add filesystem' command to create a different ACFS file system resource. - or- 2) Delete the previous resource ('srvctl remove filesystem -device <volume_device>') and run the command again.

PRCA-01023: Unable to add ACFS file system resource {0} for disk group {1} and volume {2}

Cause: The ACFS file system resource for the specified volume device path could not be added. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc) 4) Was unable to identify the mount point that the user requested the resource to use.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with

administrative access. 4) Verify that the mount point given to the create resource command exists.

PRCA-01024: Unable to retrieve the volume for disk group {0} and volume {1}

Cause: The ACFS file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01025: Unable to retrieve the mountpoint path for disk group {0} and volume {1}

Cause: The ACFS file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01026: Unable to set the user of the ACFS file system for disk group {0} and volume {1}

Cause: The user of the ACFS file system resource for the specified disk group and volume was unable to be modified. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01027: Failed to remove ACFS file system configuration for disk group {0} and volume {1}

Cause: Cannot remove the ACFS file system configuration for the specified disk group and volume.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01028: Failed to retrieve listener associated with ASM {0}

Cause: Failed to retrieve listener associated with ASM.

Action: Ensure that user has read permissions on ASM resource and then retry. Also, ensure that listener specified in ASM resource's start dependencies exists.

PRCA-01029: Failed to associate listener {0} with ASM {1}

Cause: Failed to associate given listener with ASM.

Action: Ensure that user has update permissions on ASM resource and then retry.

PRCA-01030: Failed to retrieve the diskgroup associated with the volume device {0}

Cause: Unable to retrieve the diskgroup associated with the given volume device using "asmcmd volinfo -g <volume_name>" command.

Action: Make sure that the asm instance is running; the asmcmd utility exists and the underlying ofs devices are accessible.

PRCA-01031: Unable to retrieve the diskgroup {0} associated with the volume device {1}

Cause: The ACFS file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc) 4) Disk group is not mounted.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access. 4) Verify that the disk group is mounted.

PRCA-01032: ASM listener {0} does not exist

Cause: The ASM listener was not registered with Oracle Clusterware.

Action: Add the listener with the 'srvctl add listener -listener <lsnr_name> -asmlistener' command or specify a listener name that is already registered.

PRCA-01033: ACFS file system resource does not exist for volume device {0}

Cause: The ACFS file system resource with the specified volume device was not registered with Oracle Clusterware.

Action: Use the command 'srvctl add filesystem' to create an ACFS file system resource.

PRCA-01034: ACFS file system resource does not exist in Oracle Clusterware

Cause: No ACFS file system resource was registered with Oracle Clusterware.

Action: Use the command 'srvctl add filesystem' to create an ACFS file system resource.

PRCA-01035: Unable to determine the databases that use the disk group {0}

Cause: Unable to retrieve databases that have dependencies on the disk group.

Action: Make sure that the crs stack is up; the user has read permissions on database CRS resources and then retry.

PRCA-01036: An Oracle Restart environment-specific API was invoked in an Oracle Clusterware environment.

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCA-01037: Failed to retrieve the diskgroup discovery string of ASM {0}

Cause: An attempt to retrieve the diskgroup discovery string for ASM failed.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has read permission on ASM resource.

PRCA-01038: Failed to update the diskgroup discovery string {0} of ASM {1}

Cause: An attempt to update the diskgroup discovery string for ASM failed.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has update permission on ASM resource.

PRCA-01039: Volume device {0} does not exist

Cause: The supplied volume device does not exist.

Action: Use `asmca` to create the volume device and then run `'srvctl add filesystem'` command again.

PRCA-01040: Failed to check the existence of volume device {0}

Cause: Failed to execute `acfsutil` command to check for the existence of the supplied volume device.

Action: Review the underlying error messages that provide the details of why `acfsutil` execution failed. Resolve the reported problem and retry the command.

PRCA-01041: Failed to validate disk group {0} of volume device {1}

Cause: Failed to execute `acfsutil` command to validate the disk group of the volume device.

Action: Review the underlying error messages that provide the details of why `acfsutil` execution failed. Resolve the reported problem and retry `'srvctl add filesystem'` command.

PRCA-01042: Diskgroup {0} is not valid for volume device {1}

Cause: The supplied diskgroup does not match the underlying diskgroup created for the supplied volume device.

Action: Execute `'srvctl add filesystem'` command with the correct disk group value.

PRCA-01043: Failed to validate volume {0} of volume device {1}

Cause: Failed to execute `acfsutil` command to validate the volume of the volume device.

Action: Review the underlying error messages that provide the details of why `acfsutil` execution failed. Resolve the reported problem and retry `'srvctl add filesystem'` command.

PRCA-01044: Volume {0} is not valid for volume device {1}

Cause: The supplied volume does not match the underlying volume created for the supplied volume device.

Action: Execute `'srvctl add filesystem'` command with the correct volume value.

PRCA-01045: ACFS is not supported on this platform

Cause: A filesystem operation was requested on an unsupported platform.

Action: Run `srvctl filesystem` command on a supported platform.

PRCA-01046: File system for volume device {0} exists in the ACFS registry

Cause: File system for the specified volume device was registered in the ACFS registry. File system can either be in the ACFS registry or registered as a CRS resource, but not both.

Action: Either run the command `'acfsutil registry -d'` to delete the volume device from the ACFS registry or run the command `'srvctl add filesystem'` with a different volume device.

PRCA-01047: Unable to find ACFS file system resource for volume device {0} because of inability to get the canonical form of the volume device

Cause: An internally-issued `'advmutil canonical'` command failed and the volume device recorded in the ACFS file system resource did not match the specified volume device.

Action: Review the underlying error messages that provide the details of why `advmutil` execution failed. Resolve the reported problem and retry.

PRCA-01048: Invalid mount point path {0} because specified mount point path was a remote path

Cause: The specified mount point path was a remote path.

Action: Make sure that the mount point path was not a remote path.

PRCA-01049: The user "{0}" could not be found on the cluster

Cause: The user specified as the file system owner/user could not be found.

Action: Enter the name of an existing user or the owner of the specified file system.

PRCA-01050: Unable to retrieve the canonical form of the volume device for disk group {0} and volume {1}

Cause: The ACFS file system resource for the specified canonical form of the volume device path was not retrieved.

Action: 1) Make sure that the CRS stack is available. ('crsctl check crs') 2) Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCA-01051: No volume resource registered with CRS for specified diskgroup or volume name or volume device

Cause: There was no volume resource registered with CRS for specified diskgroup and volume name.

Action: Create the volume using sqlplus which registers the volumes with CRS.

PRCA-01052: When attempting to create a volume resource in CRS, volume resource already exists for disk group {0} and volume {1}

Cause: The volume resource was already created for the specified disk group and volume names.

Action: Supply different volume name or diskgroup name to create a different volume resource.

PRCA-01053: Failed to add volume resource {0} for disk group {1} and volume {2}

Cause: The volume resource for the specified volume device path could not be added. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01054: Failed to remove volume configuration for disk group {0} and volume {1}

Cause: Cannot remove the volume configuration for the specified disk group and volume.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01055: Failed to retrieve the volume file system type for disk group {0} and volume {1}

Cause: The usage of the specified volume was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01056: Unable to upgrade ACFS from version {0} to version {1}

Cause: Failed to upgrade ACFS from one version to another version.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCA-01057: Failed to retrieve the password file location used by ASM {0}

Cause: An attempt to retrieve the password file attribute of the specified ASM failed.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has read permission on the ASM resource.

PRCA-01058: Failed to update password file location {0} used by ASM {1}

Cause: An attempt to update the password file attribute of the specified ASM failed.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has update permission on the ASM resource.

PRCA-01059: Invalid ASM type {0}

Cause: The ASM type supplied is not valid.

Action: Supply a valid ASM type.

PRCA-01060: Invalid ASM presence {0}

Cause: The ASM presence supplied is not valid.

Action: Supply a valid ASM presence (legacy or remote).

PRCA-01061: Failed to create ASM I/O Server resource {0}

Cause: An attempt to add the CRS resource for ASM I/O Server failed.

Action: Ensure that the CRS stack is running, the user running 'srvctl add asm' is also the owner of the CRS home, and examine the accompanying error message for details.

PRCA-01062: Failed to create cluster ASM resource {0}

Cause: An attempt to add the CRS resource for cluster ASM failed.

Action: Ensure that the CRS stack is running, the user running 'srvctl add asm' is also the owner of the CRS home, and examine the accompanying error message for details.

PRCA-01063: Failed to create ADVN proxy resource {0}

Cause: An attempt to add the CRS resource for ADVN proxy failed.

Action: Ensure that the CRS stack is running, the user running 'srvctl add asm' is also the owner of the CRS home, and examine the accompanying error message for details.

PRCA-01064: Failed to create leaf ASM resource {0}

Cause: An attempt to add the CRS resource for leaf ASM failed.

Action: Ensure that the CRS stack is running, the user running command 'srvctl add asm' is also the owner of the CRS home, and examine the accompanying error message for details.

PRCA-01065: No file system resource found in Oracle Clusterware

Cause: No ACFS or non-ACFS file system resource was registered with Oracle Clusterware.

Action: Use the command 'srvctl add filesystem' to create a file system resource.

PRCA-01066: File system resource already exists for disk group {0} and volume {1}

Cause: The file system resource was already created for the specified disk group and volume names.

Action: Take one of the following actions: 1) Supply a different volume device path to the 'srvctl add filesystem' command to create a different file system resource. -or- 2) Delete the existing resource ('srvctl remove filesystem -device <volume_device>') and run the command again.

PRCA-01067: Unable to add file system resource {0} for disk group {1} and volume {2}

Cause: The file system resource for the specified volume device path could not be added. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc) 4) Was unable to resolve the mount point path that the user requested the resource to use.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access. 4) Verify that the mount point path given to the create resource command exists.

PRCA-01068: Failed to remove file system resource for disk group {0} and volume {1}

Cause: Failed to remove the file system resource for the specified disk group and volume.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01069: Unable to set the user of the file system configuration for disk group {0} and volume {1}

Cause: The user of the FS file system resource for the specified disk group and volume was unable to be modified. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01070: File system resource does not exist for volume device "{0}"

Cause: The file system resource with the specified volume device was not registered with Oracle Clusterware.

Action: Use the command 'srvctl add filesystem' to create a file system resource.

PRCA-01071: Multiple file system resources found for volume device "{0}"

Cause: More than one file system resources with the specified volume device were found.

Action: Internal error. Contact Oracle Support Services.

PRCA-01072: Either zero or multiple volume resources found for diskgroup "{0}" and volume "{1}"

Cause: A single volume was expected to be found for the specified parameters.

Action: Internal error. Contact Oracle Support Services.

PRCA-01073: A resource for application with ID "{0}" that uses a different file system than "{1}" already exists

Cause: A resource with the same application ID was registered for a different file system type.

Action: Make sure that the file system being added uses the same type as the existing resource for the given application ID.

PRCA-01074: Unable to modify the file system resource {0} for disk group {1} and volume {2}

Cause: The ACFS file system resource for the specified volume device path could not be modified. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01075: The file system resource is running on nodes (e.g. node "{0}") which are not included in the node list

Cause: The attempt to modify the node list failed as the file system resource was running on one or more nodes of the existing node list that were not included in the new node list.

Action: Either stop the resource that is running and retry or add the node where the resource is running to the new node list.

PRCA-01076: The file system resource is running on server pools (e.g. server pool "{0}") which are not included in the server pool list

Cause: The attempt to modify the node list failed as the file system resource was running on one or more server pools of the existing server pool list that were not included in the new server pool list.

Action: Either stop the resource that is running and retry.

PRCA-01077: Unable to retrieve the file system type for disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01078: Unable to retrieve the file system mount options for disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01079: Unable to retrieve the file system node names for disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01080: Unable to retrieve the file system server pools for disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01081: Unable to retrieve the application ID for disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01082: Unable to retrieve the value for attribute 'TYPE' for the file system resource with disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running. 3) User was not running with an account with administrative access. (root, Administrator, etc)

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm') 3) Verify that the user is running with administrative access.

PRCA-01083: Invalid ASM mode {0}

Cause: The specified ASM mode was not valid.

Action: Specify a valid ASM mode LEGACY, REMOTE or CLIENT.

PRCA-01084: Failed to retrieve ASM Mode

Cause: An attempt to retrieve the configured ASM mode from the ASM resource failed.

Action: Retry the request after ensuring that the CRS stack is running, the ASM resource has been configured, and the user has read permission on the ASM resource.

PRCA-01085: Failed to check if OCR is on ASM, when attempting to create resource {0}

Cause: An attempt to retrieve the OCR locations and check if any of the locations is on ASM failed.

Action: Ensure that the CRS stack is running, the user running command 'srvctl add asm' is also the owner of the CRS home, and examine the accompanying error message for details.

PRCA-01086: Unable to retrieve the file system description for disk group {0} and volume {1}

Cause: The file system resource for the specified volume device path was unable to be retrieved. Possible cause: The CRS stack was not available.

Action: Verify that the CRS stack is available. ('crsctl check crs')

PRCA-01087: Server pool "{0}" does not exist

Cause: No serverpool was found for the specified server pool name.

Action: Make sure that the serverpool exists and retry.

PRCA-01088: Unable to retrieve information about server pool "{0}"

Cause: An error occurred while trying to retrieve information about the specified server pool.

Action: Examine the accompanying error messages for details.

PRCA-01089: Unable to retrieve volume and disk group for volume device path {0}

Cause: The volume and disk group resources for the specified volume device path could not be retrieved. Possible causes: 1) The CRS stack was not available. 2) The volume device path does not exist.

Action: 1) Verify that the CRS stack is running. ('crsctl check crs') 2) Verify that the volume device path was previously created.

PRCA-01090: Unable to retrieve information about the server category for server pool "{0}"

Cause: An error occurred while trying to retrieve information about the server category for the specified server pool.

Action: Examine the accompanying error messages for details.

PRCA-01091: The server category for server pool "{0}" is not "{1}"

Cause: The server category for the specified server pool had not the indicated expected value.

Action: Execute the command 'srvctl modify srvpool' to set the server category for the specified server pool to the indicated value and retry.

PRCA-01092: Cannot retrieve ASM resource information on an ASM client cluster

Cause: An attempt was made to get reference to an ASM resource on an ASM client cluster, which is not allowed.

Action: Perform this action only on an ASM cluster in either the Standard mode or in the Remote mode.

PRCA-01093: ASM I/O Server {0} is not running

Cause: The ASM I/O Server resource did not have any running instances.

Action: Use the command 'srvctl start iosever' to start the ASM I/O Server resource.

PRCA-01094: Failed to retrieve ASM I/O Server instance list for ASM I/O Server {0}

Cause: Failed to retrieve the list of ASM I/O Server instances.

Action: Make sure that the Clusterware stack is up and the ASM I/O Server resource has been configured.

PRCA-01095: Unable to create ASM resource because it already exists.

Cause: An attempt was made to add the ASM resource but the resource already exists.

Action: Either remove the ASM resource and then add it, or avoid adding an already existing resource.

PRCA-01096: failed to create the Network Attached Storage (NAS) resource {0} for mount point path {1}

Cause: An attempt to create a Network Attached Storage (NAS) resource failed for the specified mount point path.

Action: Examine the accompanying error messages for details.

PRCA-01097: failed to retrieve the Network Attached Storage (NAS) resource for the mount point path {0}

Cause: An attempt to retrieve the Network Attached Storage (NAS) resource failed for the specified mount point path.

Action: Examine the accompanying error messages for details.

PRCA-01098: A Network Attached Storage (NAS) resource already exists for mount point path {0}.

Cause: An attempt to create a Network Attached Storage (NAS) resource failed because a NAS resource already exists for the specified mount point path.

Action: Do one of the following: - Supply a different mount point path. - Delete the previous resource.

PRCA-01099: failed to set the user of the Network Attached Storage (NAS) for mount point path {0}

Cause: An attempt to modify the user for the Network Attached Storage (NAS) failed for the specified mount point path.

Action: Examine the accompanying error messages for details.

PRCA-01100: The Network Attached Storage (NAS) resource does not exist for mount point path {0}.

Cause: The Network Attached Storage (NAS) resource with the specified mount point path was not registered with Oracle Clusterware.

Action: Create a Network Attached Storage (NAS) resource with the specified mount point path.

PRCA-01101: failed to modify the Network Attached Storage (NAS) resource for mount point path {0}

Cause: An attempt to modify the Network Attached Storage (NAS) resource failed for the specified mount point path.

Action: Examine the accompanying error messages for details.

PRCA-01102: Mount point path {0} is in use by another file system resource.

Cause: The supplied mount point path was already used by an existing file system resource.

Action: Specify a mount point path not in use by ACFS and not in use by Network Attached Storage (NAS) resources.

PRCA-01103: Failed to validate export server {0}

Cause: An attempt to resolve the export server name failed because the specified server name does not exist in DNS.

Action: Specify a valid IP address or hostname.

PRCA-01104: failed to remove Network Attached Storage (NAS) resource for mount point path {0}

Cause: An attempt to remove the Network Attached Storage (NAS) resource failed for the specified mount point path.

Action: Examine the accompanying error messages for details.

PRCA-01105: The mount point path must be specified when adding a Network Attached Storage (NAS) resource.

Cause: An attempt to create a Network Attached Storage (NAS) resource failed because a value was not specified for the mount point path.

Action: Specify a valid mount point path.

PRCA-01106: Mount point path {0} is in use by another file system resource

Cause: The supplied mount point path was already used by an existing file system resource.

Action: Specify a mount point path that is not in use by a file system resource.

PRCA-01107: A Network Attached Storage (NAS) resource already exists with the name {0}.

Cause: The Network Attached Storage (NAS) resource was already created for the specified name.

Action: Supply a different name or delete the previous resource.

PRCA-01108: The file system resource is not node local.

Cause: The attempt to relocate the specified file system failed because the resource is not node local.

Action: Specify a node local file system resource.

PRCA-01109: The volume for the specified disk group {0} and volume name {1} is not registered with CRS.

Cause: There was no volume resource registered with CRS for the specified disk group and volume name.

Action: Create the volume for the specified disk group and volume name using SQL*Plus which registers the volumes with CRS.

PRCA-01110: The volume for the specified device path {0} is not registered with CRS.

Cause: There was no volume resource registered with CRS for the specified device path.

Action: Create the volume for the specified device path using SQL*Plus which registers the volumes with CRS.

PRCA-01111: Multiple volume resources were found for volume device "{0}".

Cause: This is an internal error. More than one volume resource with the specified volume device were found.

Action: Contact Oracle Support Services.

PRCA-01112: Mount point path {0} is in use by another file system resource on node {1}

Cause: An attempt to add a file system resource was rejected because the specified mount point path was already used by an existing file system resource on one of the specified nodes.

Action: Specify a mount point path not in use by a file system resource on any of the supplied nodes.

PRCA-01113: Unable to upgrade volume resources from version {0} to version {1}

Cause: An attempt to upgrade volume resources from one version to another version failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCA-01114: Unable to upgrade export file system resources from version {0} to version {1}

Cause: An attempt to upgrade export file system resources from one version to another version failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCA-01115: Volume device {0} is specified as both a primary and an accelerator volume

Cause: An attempt to add a file system resource was rejected because the specified accelerator volume devices included a volume device specified as a primary volume.

Action: Specify accelerator volume devices that are not also specified as a primary volume device.

PRCA-01116: Unable to define accelerator volumes for non-ACFS file systems

Cause: An attempt to add a file system resource was rejected because accelerator volume devices were specified for a non-ACFS file system resource.

Action: Specify accelerator volumes for an ACFS file system.

PRCA-01117: Unable to retrieve the accelerator volumes for file system resource {0}

Cause: An attempt to retrieve the accelerator volumes for the specified file system resource failed. Possible causes: 1) CRS stack was not available. 2) ASM instance was not running.

Action: 1) Verify that the CRS stack is available. ('crsctl check crs') 2) Verify that ASM is running. ('srvctl status asm')

PRCA-01118: Multiple accelerator volumes are not supported.

Cause: An attempt to add a file system resource was rejected because multiple accelerator volume devices were specified for a file system resource.

Action: Specify only one accelerator volume.

PRCA-01119: Unable to get the users of the file system configuration for disk group {0} and volume {1}

Cause: 1) CRS stack was not running. 2) User was not running with an account with administrative access. (root or administrator)

Action: 1) Verify that the CRS stack is running. ('crsctl check crs') 2) Verify that the user is running with administrative access.

PRCA-01120: Unable to use add (/+) or remove (-) prefix with a list of operating system users for the file system.

Cause: The modify operation failed because a list of operating system users was specified using the add or remove prefix.

Action: Specify a single operating system user with the add or remove prefix, or specify a list of operating system users without any prefix to replace it entirely.

PRCA-01121: The file system type {0} is not supported for the current operating system platform.

Cause: An attempt to add a file system resource was rejected because the specified file system type is not supported for the current operating system platform.

Action: Specify a valid file system type for the operating system platform in use.

PRCA-01122: unable to modify the mount point path of a running file system resource

Cause: An attempt to modify the mount point path of the specified file system was rejected because the file system was mounted.

Action: Stop the file system resource and retry the operation.

PRCA-01123: The specified ASM cardinality {0} is less than the minimum cardinality of 2.

Cause: An attempt to set ASM cardinality was rejected because the specified cardinality was less than 2.

Action: Specify a number that is equal to or larger than 2 for the '-count' option.

PRCA-01124: The specified ASM cardinality {0} is larger than the maximum cardinality of 1024.

Cause: An attempt to set ASM cardinality was rejected because the specified cardinality was larger than 1024.

Action: Specify a number that is equal to or less than 1024 for the '-count' option.

PRCA-01125: The accelerator volumes are not supported on this operating system.

Cause: An attempt to add a file system resource was rejected because accelerator volumes are not supported for the current operating system.

Action: Do not specify accelerator volumes.

PRCA-01126: failed to retrieve information about server category "{0}"

Cause: An error occurred while trying to retrieve information about the specified server category.

Action: Examine the accompanying error messages for details.

PRCA-01127: failed to find instances for database {0} that were running on nodes {1}

Cause: There were no running database instances on the specified nodes when the request to update the target instance was issued.

Action: Specify the nodes where database instances are running.

PRCA-01128: failed to create Oracle ACFS client cluster node membership and barrier resource {0}

Cause: An attempt to add the Cluster Ready Services (CRS) resource for an Oracle Automatic Storage Management Cluster File System (Oracle ACFS) client cluster node membership and barrier failed, possibly because the CRS stack was not running or the user running 'srvctl add ccmb' was not the owner of the CRS home.

Action: Examine the accompanying error messages for details and retry the command making sure that the CRS stack is running and the user running 'srvctl add ccmb' is the owner of the CRS home.

PRCA-01129: unable to create a non-ACFS file system in an ACFS-Remote environment

Cause: An attempt to create a file system in an ACFS-Remote environment was rejected because the requested file system was not Oracle Automatic Storage Management Cluster File System (Oracle ACFS). Only Oracle ACFS file systems are supported in clusters using ACFS-Remote.

Action: Retry specifying Oracle ACFS as the file system type.

PRCA-01130: volume name specification not permitted when creating a file system in a client cluster environment

Cause: An attempt to create a file system was rejected because it specified a volume name, which is not supported in a client cluster environment.

Action: Create an Oracle ACFS file system without specifying a volume name.

PRCA-01131: disk group name specification not permitted when creating a file system in a client cluster environment

Cause: An attempt to create a file system was rejected because it specified a disk group name, which is not supported in a client cluster environment.

Action: Create an Oracle ACFS file system without specifying a disk group name.

PRCA-01132: Instance names {0} are not active instances of database {1}.

Cause: A request to update database instances specified one or more that were not running.

Action: Specify instances of the database that are running.

PRCA-01133: Error updating the target instance for database {0}. Error: \n{1}

Cause: A request to update target instance for the list of database instances failed with the error shown.

Action: Review the accompanying error messages for more details.

PRCA-01134: Error updating the target instance for IOserver instances. Error: \n{0}

Cause: A request to update target instance for the list of IOserver instances failed with the error shown.

Action: Review the accompanying error messages for more details.

PRCA-01135: Instance names {0} are not active instances of IOserver.

Cause: A request to update IOserver instances specified one or more that were not running.

Action: Specify instances of the IOserver that are running.

PRCA-01136: failed to find instances for IOserver that were running on nodes {0}

Cause: There were no running IOserver instances on the specified nodes when the request to update the target instance was issued.

Action: Specify nodes where IOserver instances are running.

PRCA-01137: Oracle ACFS is not configured for mount point path {0}.

Cause: An attempt to query an Oracle Automatic Storage Management Cluster File System (Oracle ACFS) information attribute failed because Oracle ACFS was not configured for the specified mount point path (shown in the message).

Action: Retry, specifying a valid mount point path.

PRCA-01138: failed to start one or more file system resources:\n{0}

Cause: An attempt to start one or more file system resources failed because one or more file system resources were already running or disabled.

Action: Review accompanying messages and make sure that the file system resources are enabled and not running before starting them.

PRCA-01139: number of volume names and disk group names unequal

Cause: An attempt to start a list of file system resources failed because the number of volume names and disk group names differed.

Action: Retry 'srvctl start filesystem' specifying the same number of volume and disk group names.

PRCA-01140: Mount point path owner {0} is contained in the mount point user list.

Cause: An attempt to configure or modify the list of mount point users was rejected because the indicated mount point path owner was contained in the specified mount point users list.

Action: Remove the mount point path owner from the mount point users list.

PRCA-01141: User {0} is the mount point path owner.

Cause: An attempt to add or remove a user from the list of mount point users failed because the specified user was configured as the mount point path owner.

Action: Specify the new mount point path owner in the '-mountowner' option in the command 'srvctl modify filesystem'.

PRCA-01142: Volume device {0} is already configured as a primary volume device.

Cause: An attempt to add a file system resource was rejected because one or more of the specified volume devices were already configured as a primary volume device.

Action: Specify accelerator volume devices that are not configured as primary volume devices.

PRCA-01143: Volume device {0} is not formatted as an accelerator volume device for primary volume device {1}.

Cause: An attempt to add a file system resource was rejected because one or more of the specified volume devices were not formatted as accelerator volume devices for the specified primary volume device.

Action: Format the specified accelerator volume devices using the 'mkfs' command and retry the operation.

PRCA-01144: Mount point path {0} is not mounted.

Cause: An attempt to query file system information from the specified mount point path was rejected because the mentioned mount point path was not mounted in any node in the cluster.

Action: Specify a mount point path that is mounted or start the file system resource using the 'srvctl start filesystem' command.

PRCA-01145: error getting the client connection list for the ASM instances \n{0}

Cause: A request to get the client connection list for the ASM instances failed with the error shown.

Action: Review the accompanying error messages for more details. Address issues raised and retry.

PRCA-01146: error getting the client connection list for the I/O Server instances \n{0}

Cause: A request to get the client connection list for the I/O Server instances failed with the error shown.

Action: Review the accompanying error messages for more details. Address issues raised and retry.

PRCA-01147: CCMB is not supported on a cluster where an ASM instance is configured.

Cause: An attempt to create an Oracle ACFS Client Cluster Node Membership and Barrier (CCMB) resource was rejected because it is not supported for a cluster with configured ASM instances.

Action: Use the currently configured ASM instances and disk groups for this cluster.

PRCA-01148: unable to upgrade HAVIP resources from version {0} to version {1}

Cause: An attempt to upgrade high availability virtual IP resources from one version to another version failed. The accompanying error messages provide detailed information about the failure.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCA-01149: failure to create the Oracle Automatic Storage Management Cluster File System

Cause: An attempt to create an Oracle Automatic Storage Management Cluster File System (Oracle ACFS) failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues raised, and retry.

PRCA-01150: failure to set ASM cardinality to a value other than ALL because the password file "{0}" is not on an ASM disk group

Cause: An attempt to update the ASM cardinality to a value other than ALL was rejected because the password file was not on an ASM disk group.

Action: Retry the request after moving the password file to an ASM disk group.

PRCA-01151: failed to retrieve the backup password file location used by ASM {0}

Cause: An attempt to retrieve the backup password file attribute of the specified ASM instance failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages and resolve the issues identified. Ensure that the CRS stack is running, the ASM resource has been configured, that the user has permission to read the ASM resource, and then retry the operation.

PRCA-01152: failed to create ASM resource group {0}

Cause: An attempt to add the Cluster Ready Services (CRS) resource group for an ASM Group failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages and resolve any issues indicated there. Ensure that the CRS stack is running, and then retry the command 'srvctl add asm' as the user that owns the CRS home.

PRCA-01153: The specified ASM Group cardinality {0} is less than the minimum cardinality of 2.

Cause: An attempt to set ASM Group cardinality was rejected because the specified cardinality was less than 2.

Action: Retry the operation, specifying a number that is equal to or larger than 2 for the '-count' option.

PRCA-01154: The specified ASM Group cardinality {0} is larger than the maximum cardinality of 1024.

Cause: An attempt to set ASM Group cardinality was rejected because the specified cardinality was larger than 1024.

Action: Retry the operation, specifying a number that is equal to or less than 1024 for the '-count' option.

PRCA-01155: Unable to create ASM resource group because it already exists.

Cause: An attempt to add an ASM resource group was rejected because the resource group already existed.

Action: None

PRCA-01156: failed to update backup password file location {0} used by ASM

Cause: An attempt to update the backup password file attribute of ASM failed, possibly because the Cluster Ready Services (CRS) stack was not running, the ASM resource was not configured, or the user does not have update permission on the ASM resource. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages and resolve the issues identified. Retry the request after ensuring that the Cluster Ready Services (CRS) stack is running, the ASM resource has been configured, and the user has update permission on the ASM resource.

PRCA-01157: The specified mount permissions value "{0}" is not valid.

Cause: An attempt to set mount permissions was rejected because the indicated value was not a valid permission specification.

Action: Retry the operation, specifying a valid permission specification.

PRCA-01158: The specified mount group "{0}" is not valid.

Cause: An attempt to set a mount group was rejected because the indicated group did not exist.

Action: Retry the operation, specifying a valid mount group.

PRCA-01159: The size of the specified volume "{0}" is less than the minimum size required of {1} MB to create the Oracle ACFS.

Cause: An attempt to add an Oracle Automatic Storage Management Cluster File System (Oracle ACFS) was rejected because the size of the specified volume was less than the minimum required value.

Action: Retry the operation, specifying a volume with a minimum size of (162 MB * number of cluster nodes) + (144 MB * number of cluster).

PRCA-01160: The size of the specified volume "{0}" does not support more than two nodes.

Cause: An attempt to add an Oracle Automatic Storage Management Cluster File System (Oracle ACFS) was rejected because the size of the indicated volume did not support more than two nodes.

Action: Retry the operation, specifying a volume with a minimum size of 312 MB multiplied by the number of nodes in the cluster. For 512 MB volume size, retry the operation in a two-node cluster.

PRCA-01161: failed to relocate I/O Server in ASM resource group

Cause: An error occurred while attempting to relocate the I/O Server because the I/O Server is a part of the ASM resource group.

Action: Use the 'srvctl relocate asm' command to relocate all resources in the ASM resource group including I/O Server.

PRCA-01162: ACFS file system resource does not exist for mountpoint {0}

Cause: The ACFS file system resource with the mountpoint was not registered with Oracle Clusterware.

Action: Use the command 'srvctl add filesystem' to create an ACFS file system resource.

PRCA-01163: failed to retrieve the acfsapps mode for current system

Cause: An attempt to retrieve the acfsapps mode was rejected because acfsapps is not supported in current system.

Action: Retry the operation in an acfsapps supported cluster.

PRCA-01164: failed to upgrade because VM resources are registered for Oracle Virtual Machine {0}

Cause: There are Oracle Virtual Machine resources registered which are no longer supported.

Action: Remove the Oracle Virtual Machine resources identified and retry the operation.

PRCA-01165: Oracle ACFS file system resource already exists for volume device {0}

Cause: The Oracle Automatic Storage Management Cluster File System (Oracle ACFS) resource had already been created for the specified volume device.

Action: Take one of the following actions: - Supply a different volume device path to the 'srvctl add filesystem' command to create a different Oracle ACFS file system resource. - Delete the previous resource ('srvctl remove filesystem -device <volume_device>') and run the command again.

PRCA-01166: Unable to use add (/+) or remove (-) prefix with a list of Oracle ACFS paths.

Cause: The modify operation was rejected because a list of Oracle Automatic Storage Management Cluster File System (Oracle ACFS) paths was specified using the add or remove prefix.

Action: Specify a single Oracle ACFS path with the add or remove prefix, or specify a list of Oracle ACFS paths without any prefix to replace it entirely.

PRCA-01167: Oracle ACFS path {0} already exists in the dependencies of database {1}.

Cause: An attempt to add an Oracle Automatic Storage Management Cluster File System (Oracle ACFS) path to the database dependencies was rejected because the path was already in the dependencies.

Action: Supply a different Oracle ACFS path and retry the operation.

PRCA-01168: Oracle ACFS path {0} does not exist in the dependencies of database {1}.

Cause: An attempt to remove an Oracle Automatic Storage Management Cluster File System (Oracle ACFS) path from the database dependencies was rejected because the path was already in the dependencies.

Action: Supply a different Oracle ACFS path and retry the operation.

PRCC-01000 to PRCC-01158

PRCC-01000: Parameter {0} value is not valid

Cause: This is an internal error. The value for the specified parameter is null or empty string.

Action: Contact Oracle Support Services.

PRCC-01001: Failed to retrieve install group: {0}

Cause: An attempt to retrieve the install group failed.

Action: Examine the accompanying error messages for details.

PRCC-01002: Failed to update install group: {0}

Cause: An attempt to set the install group failed.

Action: Examine the accompanying error messages for details.

PRCC-01003: Version for module {0} is not available

Cause: An attempt to retrieve the version information for specified module failed.

Action: Examine the accompanying error messages for details.

PRCC-01004: Unknown identifier {0} specified for checking result of operation

Cause: Failed to retrieve the result from the exception data using the specified identifier because the exception did not have the specified identifier.

Action: This is an internal error. Contact Oracle Support Services.

PRCC-01005: Parameter {0} is not an absolute path

Cause: The specified parameter is not an absolute directory path.

Action: Provide an absolute directory path.

PRCC-01006: Path {0} is not a directory

Cause: The specified path is not a directory.

Action: Provide a directory path.

PRCC-01007: Path {0} does not exist

Cause: The specified path did not exist.

Action: Provide an existing directory path.

PRCC-01008: Enumerated type {0} does not have a member with corresponding value of {1}

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCC-01009: Parameter {0} cannot have null as a value

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCC-01010: {0} was already enabled

Cause: Given entity was already enabled.

Action: No action needed. To re-enable the entity, first disable it and then retry.

PRCC-01011: {0} was already enabled on {1}

Cause: Given entity was already enabled on given nodes.

Action: No action needed. To re-enable the entity on given nodes, first disable it on these nodes and then retry.

PRCC-01012: {0} was already disabled

Cause: Given entity was already disabled.

Action: No action needed. To re-disable the entity, first enable it and then retry.

PRCC-01013: {0} was already disabled on {1}

Cause: Given entity was already disabled on given nodes.

Action: No action needed.

PRCC-01014: {0} was already running

Cause: Given entity is already running.

Action: No action needed. To re-start the entity, first stop it and then retry.

PRCC-01015: {0} was already running on {1}

Cause: Given entity was already running on given nodes.

Action: No action needed. To re-start the entity on given nodes, first stop it on these nodes and then retry.

PRCC-01016: {0} was already stopped

Cause: Given entity was already stopped.

Action: No action needed. To re-stop the entity, first start it and then retry.

PRCC-01017: {0} was already stopped on {1}

Cause: Given entity was already stopped on given nodes.

Action: No action needed. To re-stop the entity on given nodes, first start it on these nodes and then retry.

PRCC-01018: A request to retrieve private network addresses for node {0} found no addresses

Cause: A request to retrieve private network addresses by executing the command 'olsnodes -p' returned no private IP addresses.

Action: Check the command 'oifcfg getif' for cluster_interconnect networks and ensure this node has an IP address on the cluster_interconnect networks.

PRCC-01019: Parameter "{0}" value is not valid

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCC-01020: Version {0} cannot be used to administer resource configuration of version {1} or later

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCC-01021: One or more of the submitted commands did not execute successfully.

Cause: Either a node failed in the middle of a manageability operation, or the communication between nodes was disrupted.

Action: Examine the accompanying error messages for details.

PRCC-01022: The file system type must be ACFS and not {0}

Cause: Expected ACFS file system while the file system provided in the argument list was non-ACFS.

Action: Make sure that the file system type provided in the argument list is ACFS.

PRCC-01023: The file system type must be non-ACFS

Cause: Expected non-ACFS file system while the file system provided in the argument list was ACFS.

Action: Make sure that the file system type provided in the argument list is non-ACFS.

PRCC-01024: Creation of non-ACFS file system local resource is not supported

Cause: Attempted to create a file system local resource while the file system type was non-ACFS.

Action: Either specify a node or serverpool list to create a cluster resource for the file system or make sure that the file system type is ACFS to create a local resource.

PRCC-01025: Command submitted on node {0} timed out after {1} seconds.

Cause: A command submitted on the node specified did not finish within the specified interval.

Action: Ensure that the node specified is reachable and not overloaded. Contact Oracle Support Services.

PRCC-01026: Command "{0}" submitted on node {1} timed out after {2} seconds.

Cause: The command submitted on the node specified did not finish within the specified interval.

Action: Ensure that the node specified is reachable and not overloaded. Contact Oracle Support Services.

PRCC-01100: Failed to create administrator helper resource "{0}" configuration

Cause: An attempt to create configuration for the administrator helper resource failed. Either the request was not issued by an account with administrative access (root, Administrator and so on) or a problem was detected inside Oracle Clusterware.

Action: Examine the accompanying error messages for details. Make sure that the user has administrative privileges.

PRCC-01101: The database type cannot be MGMTDB.

Cause: An attempt to create the database of the wrong database type has failed.

Action: Contact Oracle Support Services.

PRCC-01102: Mount point path "{0}" is not an absolute path

Cause: The mount point path value was not an absolute path.

Action: Specify an absolute path in the '-mountpoint' argument.

PRCC-01103: Failed to verify node membership

Cause: An error occurred while querying the clusterware to obtain information about the cluster membership.

Action: Examine the accompanying error messages for details.

PRCC-01104: Specified node {0} is not a configured cluster node

Cause: Found a node in the node list that was not configured in the cluster.

Action: Make sure that all the nodes in the specified node list are configured cluster nodes. Check the cluster membership with 'olsnodes'.

PRCC-01105: Server pool or node list cannot be modified because the file system for volume device {0} is a cluster-wide cluster file system

Cause: An attempt to modify the server pool or node list attributes of a cluster file system was rejected because the filesystem resource was a local resource. Placement attributes like server pools or node names apply only to cluster resources.

Action: Do not specify node names and server pools, or remove the local resource and add a cluster resource with the command 'srvctl add filesystem {-serverpools <serverpool_list>|-nodes <node_list>}'.

PRCC-01106: Parameter {0} value {1} is not valid

Cause: This is an internal error. The value for the specified parameter is not valid.

Action: Contact Oracle Support Services.

PRCC-01107: Failed to set the OHASD resource dependencies for ASM

Cause: An attempt to set the OHASD dependencies on all nodes failed.

Action: Examine the accompanying error messages for details.

PRCC-01108: Invalid VIP address {0} because the specified IP address is reachable

Cause: The submitted command was rejected because the Virtual Internet Protocol (VIP) address was reachable.

Action: Configure VIPs to use IP addresses that are not active on any host system and cannot be reached using 'ping'.

PRCC-01109: User {0} is not present on the Access Control List.

Cause: A request to remove a user from an Access Control List specified a user name not in the Access Control List.

Action: Specify a user who is on the Access Control List.

PRCC-01110: User {0} is already added to the Access Control List.

Cause: A request to add a user to an Access Control List specified a user name already on the Access Control List.

Action: Specify a user who is not on the Access Control List.

PRCC-01111: missing ASM properties {0}

Cause: An attempt to get ASM properties from the ASM client data file failed because the required ASM property attributes do not exist.

Action: Ensure that a valid ASM client data file is supplied.

PRCC-01112: The export type {0} is invalid.

Cause: An attempt to set an export file system type failed because the specified export type was invalid.

Action: Specify a valid export type (NFS or SMB).

PRCC-01113: Export type {0} is not supported on this operating system.

Cause: An attempt to add an export file system failed because the specified export type is not supported on this system.

Action: Specify a supported export type.

PRCC-01114: Export clients option is not supported for export type SMB.

Cause: The submitted command failed because export clients were specified for an export file system of type SMB.

Action: Specify the clients in the export -options argument instead of -clients.

PRCC-01115: Platform {0} is invalid.

Cause: An attempt to retrieve the supported export types for a platform failed because the specified platform was invalid.

Action: Specify a valid platform (UNIX or WINDOWS).

PRCC-01116: failed to clone snapshot {0} from source mount point {1} to destination mount point {2}

Cause: An attempt to clone a snapshot from an Oracle ACFS file system to another Oracle ACFS file system failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages for details and retry after resolving the problems.

PRCC-01117: failed to create a clone listener

Cause: An attempt to create a clone listener failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages for details and retry after resolving the problems.

PRCC-01118: failed to close the clone listener

Cause: An attempt to close the clone listener failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages for details and retry after resolving the problems.

PRCC-01119: Command "{0}" did not complete.

Cause: An attempt to execute the indicated command failed because command execution stalled and was forcibly terminated.

Action: Retry the operation and contact Oracle Support Services if problem persists.

PRCC-01120: Connection between client and clone listener ended abnormally.

Cause: An attempt by the clone listener to execute the client's requests failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages for details and retry after resolving the problems.

PRCC-01121: snapshot {0} does not exist at mount point {1}

Cause: The clone operation failed because the Oracle ACFS file system at the indicated mount point did not contain the indicated snapshot.

Action: Specify a valid snapshot and retry.

PRCC-01122: Mount point {0} does not exist.

Cause: The 'acfsutil' command failed to execute because the specified mount point did not exist.

Action: Specify a valid mount point and retry.

PRCC-01123: Clone listener failed to execute the client's request. Details: {0}

Cause: An attempt by the clone listener to execute the client's requests failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages for details and retry after resolving the problems.

PRCC-01124: Snapshot {0} already exists on the destination Oracle ACFS file system at mount point {1}.

Cause: An attempt to create a clone with the indicated name failed because the destination Oracle ACFS file system already contained a snapshot with that name.

Action: Specify a different name for the clone to be created.

PRCC-01125: failed to authenticate the email address with the specified details

Cause: An attempt to authenticate the email account failed during validation of email particulars.

Action: Reissue the command with valid email account information.

PRCC-01126: failed to create a connection to the specified email server address

Cause: An attempt to connect to an email server failed with the specified details.

Action: Make sure the data entered is correct and the email server is available.

PRCC-01127: The GIMR component {0} is unknown.

Cause: An attempt to query an Grid Infrastructure Management Repository (GIMR) component was rejected because the specified GIMR component was unknown.

Action: Contact Oracle Support Services.

PRCC-01128: The GIMR component {0} has no credentials for cluster {1}.

Cause: An attempt to query an Grid Infrastructure Management Repository (GIMR) component was rejected because the specified GIMR component was not found in the specified client or server cluster.

Action: Contact Oracle Support Services.

PRCC-01129: GIMR client cluster name {0} is not the current cluster.

Cause: An attempt to query a Grid Infrastructure Management Repository (GIMR) component was rejected because the specified client cluster name did not match the current GIMR client cluster name.

Action: In a GIMR client cluster environment, specify the same cluster name as the current client cluster.

PRCC-01130: The network storage service type {0} is invalid. Valid types are {1}

Cause: An attempt to set a network storage service type failed because the specified type was invalid.

Action: Specify a valid network storage service type.

PRCC-01131: failed to create the Virtual IP (VIP) resource on node {0} because network {1} is not extended to work on Leaf Nodes

Cause: An attempt to create a VIP resource on the indicated Leaf Node failed because the indicated network resource was not extended to Leaf Nodes.

Action: Extend the network resource using the command 'srvctl modify network'.

PRCC-01146: error getting the client connection list for resource {0} \n{1}

Cause: A request to get the client connection list for the specified resource failed.

Action: Review the accompanying error messages for more details. Address the issues raised and retry.

PRCC-01147: Either the specified node "{0}" is not part of a cluster, or the provided password is incorrect.

Cause: An attempt to obtain the Cluster Ready Services (CRS) home of an Oracle Grid Infrastructure cluster failed because either the indicated node was not part of the cluster or the password was incorrect.

Action: Reissue the command specifying a node that is part of an Oracle Grid Infrastructure cluster and ensuring that the password is

PRCC-01148: Command option {0} is not supported on GNS client clusters.

Cause: The specified command option was not valid for a GNS client cluster.

Action: Re-issue the command using only supported options.

PRCC-01149: Failed to create RHP progress listener resource "{0}" configuration.

Cause: An attempt to create a configuration for the Rapid Home Provisioning (RHP) progress listener resource failed. Either the request was not issued by an account with administrative access (root, Administrator, and so on) or a problem was detected inside Oracle Clusterware.

Action: Examine the accompanying error messages for details, resolve issues raised, and retry, ensuring that the user has administrative privileges.

PRCC-01150: invalid VIP address {0} because the specified IP address is not reachable

Cause: The submitted command was rejected because the Virtual Internet Protocol (VIP) address was not reachable.

Action: Configure VIPs using the host address, and then retry the operation.

PRCC-01151: Cluster name {0} contains these invalid characters "{1}".

Cause: The indicated cluster name contained the indicated invalid characters.

Action: Retry the operation, supplying a valid cluster name. A cluster name may include only characters from the set "(a-z, A-Z, 0-9, -)".

PRCC-01152: The cluster is not of class member cluster.

Cause: An attempt to execute a command was rejected because the cluster was not a member cluster.

Action: Retry the operation on a member cluster.

PRCC-01153: The cluster is not of class domain cluster.

Cause: An attempt to execute a command was rejected because the cluster was not a domain cluster.

Action: Retry the operation on a domain cluster.

PRCC-01154: Request to retrieve a private IP address needed for rhpctl progress communication failed with error "{0}".

Cause: An attempt to execute an rhpctl command failed because the indicated error occurred in retrieving a private IP address needed for rhpctl progress communication configured on the local node. Accompanying messages provide failure details.

Action: Examine the accompanying error messages, resolve the reported problems and retry the command.

PRCC-01155: failed to get ODA type \n{0}

Cause: An error occurred while attempting to retrieve the Oracle Database Appliance (ODA) type possibly because of a missing Oracle Appliance Kit (OAK) library.

Action: Examine the accompanying error messages, resolve the reported problems and retry the command.

PRCC-01156: failed to get the state of cluster upgrade \n{0}

Cause: An error occurred while attempting to retrieve the state of the cluster upgrade.

Action: Examine the accompanying error messages, resolve the reported problems and retry the command.

PRCC-01157: Failed to determine whether RDS over TCP/IP should be enabled for instance to instance communication. Assuming FALSE \n{0}.

Cause: An error occurred while attempting to discover whether Reliable Datagram Socket (RDS) over TCP/IP can be enabled.

Action: Examine the accompanying error messages, resolve the reported problems, and retry the command.

PRCC-01158: The Oracle Home value "{0}" corresponds to a path name that matches the path used for the GIMR

Cause: An attempt to add a database to the Oracle Clusterware configuration was rejected because the Oracle Home contained a Grid Infrastructure Management Repository (GIMR).

Action: Ensure that the Oracle Home value corresponds to an existing directory path name and is not the path name used for the GIMR.

PRCD-01000 to PRCD-02112

PRCD-01000: Database {0} already exists

Cause: The specified database resource was already registered in Oracle Clusterware.

Action: No action is needed.

PRCD-01001: Database {0} does not exist

Cause: The specified database resource was not registered in Oracle Clusterware.

Action: Register the database resource using the command 'srvctl add database'.

PRCD-01002: Database {0} is dependent upon server pool {1}

Cause: An attempt to remove the specified server pool failed because the server pool is in use.

Action: Remove the specified database before removing the server pool.

PRCD-01003: Service {0} already exists

Cause: The specified service was already created and registered in Oracle Clusterware.

Action: No action is needed.

PRCD-01004: Service {0} is dependent upon server pool {1}

Cause: An attempt to remove the specified server pool failed because the server pool is in use.

Action: Remove the specified service before removing the server pool.

PRCD-01005: Server pool {0} for the database {1} does not exist

Cause: The specified server pool used by the database was removed by force.

Action: Create the server pool using the command 'srvctl add srvpool'.

PRCD-01007: Failed to retrieve the database name

Cause: Failed in retrieving the DB_NAME resource attribute.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01008: Server parameter file does not exist for database {0}

Cause: Failed in retrieving the SPFILE resource attribute.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01009: Failed to retrieve server parameter file of database {0}

Cause: Cannot retrieve the server parameter file for the specified database.

Action: Retry the request after ensuring that the CRS stack is running, the database resource has been configured, and the user has read permission on the database resource.

PRCD-01010: Failed to update server parameter file {0} of database {1}

Cause: Unable to update the server parameter file for the specified database.

Action: Retry the request after ensuring that the CRS stack is running, the database resource has been configured, and the user has update permission on the database resource.

PRCD-01011: Failed to identify whether this database {0} is a multi-instance database

Cause: Failed in retrieving the CLUSTER_DATABASE resource attribute.

Action: Examine the accompanying error messages for details.

PRCD-01012: Failed to retrieve disk group list for database {0}.

Cause: Failed to retrieve the diskgroups from the start dependencies of the specified database.

Action: Examine the accompanying error messages for details. Create the diskgroup using sqlplus if the specified diskgroup does not exist. Mount the diskgroup in database which registers the diskgroup with Oracle Clusterware.

PRCD-01014: Failed to retrieve database domain of database {0}

Cause: Failed to get the domain of the specified database from its USR_ORA_DOMAIN attribute.

Action: Examine the accompanying error messages for details.

PRCD-01015: Combination of service cardinality {0} and TAF {1} is not allowed for service {2}

Cause: The specified service cardinality can not be used with the specified TAF policy.

Action: Change the cardinality or find a matching TAF policy. PRECONNECT can only be used with SINGLETON cardinality.

PRCD-01016: Failure encountered while accessing server pool {0} for database {1}

Cause: An attempt to look up the server pools referenced by the database SERVER_POOLS attribute failed.

Action: Examine the accompanying error messages for details.

PRCD-01019: Failed to retrieve Oracle home of database {0}

Cause: An attempt to retrieve the ORACLE_HOME attribute of the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01020: Failed to retrieve TAF policy for service {0}

Cause: An attempt to retrieve the TAF_POLICY attribute of the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01021: Failed to update TAF policy {0} for service {1}

Cause: An attempt to set the TAF_POLICY attribute of the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01022: Cannot add a second instance to a single instance database

Cause: Unable to add an instance to a single instance database.

Action: Multiple instances are not supported for a single instance database. Convert to a Oracle RAC database if multiple instances are desired.

PRCD-01023: An instance has already been added to node {0} for database {1}

Cause: Unable to add an instance to the database on the specified node because another instance has already been added to the node.

Action: Use the command 'srvctl modify instance' to change the instance name on the specified node.

PRCD-01024: Failed to retrieve instance list for database {0}

Cause: An attempt to get the list of the instances for the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01025: Failed to create database {0}

Cause: An attempt to create Clusterware resources for the specified database failed. Either the request was issued by the wrong OS userid or a problem was detected inside Oracle Clusterware.

Action: Examine the accompanying error messages for details. Login in as the user of the Oracle Home to issue the command 'srvctl add database'.

PRCD-01026: failed to create service {0} for database {1}

Cause: An attempt to create the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01027: Failed to retrieve database {0}

Cause: An attempt to get the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01028: Failed to retrieve service resource {0} for database {1}

Cause: An attempt to get the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01029: Disk group {0} for database {1} does not exist

Cause: The disk group for the specified database does not exist.

Action: Use the command 'srvctl add diskgroup' to add the specified disk group.

PRCD-01030: Failed to determine whether the database {0} has cardinality

Cause: Failed to determine whether the specified database is cardinality based or not based on its VERSION attribute.

Action: Examine the accompanying error messages for details.

PRCD-01031: Failed to determine whether the service {0} has cardinality

Cause: Failed to check whether the specified service is cardinality based or not.

Action: Examine the accompanying error messages for details.

PRCD-01032: Failed to remove database resource {0}

Cause: Failed to remove the specified database.

Action: Examine the accompanying error messages for details.

PRCD-01033: The server pool of service {0} is different from the server pool of database {1}

Cause: The specified server pool is not the child of the database's server pool.

Action: Use a server pool which is the child of the database's server pool.

PRCD-01034: Database {0} is not a single instance database. It is a cluster database

Cause: The specified database is not a single instance database.

Action: Provide database name for a single instance database.

PRCD-01035: Database {0} is not a cluster database

Cause: The specified database is not a cluster database.

Action: Provide database name for an Oracle RAC database.

PRCD-01036: Failed to set Oracle home {0} for database {1}

Cause: An attempt to update Oracle home for the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01037: Failed to set Oracle home {0} for database {1} on node {2}

Cause: An attempt to update Oracle home for the specified database on the specified node failed.

Action: Examine the accompanying error messages for details.

PRCD-01038: Cannot create a RAC database {0} in a non cluster environment

Cause: Failed to create the specified Oracle RAC database because Oracle Clusterware is not installed and configured.

Action: Install and configure Oracle Clusterware before creating the Oracle RAC database.

PRCD-01039: Failed to retrieve database for service {0}

Cause: An attempt to get the database that the specified service depended on failed. This is an internal error.

Action: Contact Oracle Support Services.

PRCD-01040: Specified server pool {0} for {1} is already hosting an administrator-managed configuration for databases {2} and services {3}

Cause: Server pool is hosting administrator-managed databases and service.

Action: Specify a server pool that is not hosting an administrator-managed database and service.

PRCD-01041: The administrator-managed database {0} can have only one server pool {1}

Cause: Multiple server pools cannot be configured for an administrator-managed database

Action: Contact Oracle Support.

PRCD-01042: The database {1} is administrator-managed and a policy-managed service {0} cannot be created on it.

Cause: The specified database does not support policy-managed services.

Action: Provide a database which supports policy-managed services.

PRCD-01043: The service {0} is not a uniform or a singleton service and therefore it cannot be created as policy-managed service. This service can only be created as administrator-managed service using preferred, and optionally available instance lists.

Cause: The service to be created was an administrator-managed service and the database that the service depended on was a policy-managed database.

Action: Use preferred and available instance lists to create an administrator-managed service for an administrator-managed database.

PRCD-01044: Failed to retrieve the list of nodes where instances have been configured for database {0}

Cause: An attempt failed to get the list of nodes where the instances of the specified database were configured.

Action: Examine the accompanying error messages for details.

PRCD-01045: Database {0} is policy managed and does not support add instance option

Cause: The specified database did not support add instance option

Action: Take one of the following actions: 1) Provide an administrator-managed database. - or- 2) For a policy-managed database, add a server to a server pool which manages the database using the 'srvctl modify srvpool' or 'srvctl relocate server' command.

PRCD-01046: Database {0} is policy managed and does not support the remove instance option

Cause: The specified database did not support the remove instance option.

Action: Take one of the following actions: 1) Provide an administrator-managed database. - or- 2) For a policy-managed database, stop the database on a server and then remove that server from the server pool which manages the database using the 'srvctl modify srvpool' or 'srvctl relocate server' command.

PRCD-01047: Failed to retrieve list of services for database {0}

Cause: An attempt to get the list of services for the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01048: Cannot remove instance from the single instance database {0}

Cause: An attempt to remove the instance from the single instance database failed.

Action: Remove the database using the command 'srvctl remove database'.

PRCD-01049: Failed to update server pool {0} for database {1}

Cause: An attempt to update the specified server pool failed.

Action: Examine the accompanying error messages for details.

PRCD-01050: Failed to update auto start value of service {0}

Cause: An attempt to update the auto start value for the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01051: Failed to add instance to database {0}

Cause: An attempt to add an instance to the specified database failed because the node of the instance is not a node of the cluster or other errors.

Action: Examine the accompanying error messages for details.

PRCD-01052: Failed to remove instance from database {0}

Cause: An attempt to remove the specified instance failed because the services depended on the instance or other errors.

Action: Examine the accompanying error messages for details.

PRCD-01053: Failed to retrieve the database instances providing service {0}

Cause: An attempt to get the database instances that provide the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01054: Database name is null

Cause: The database name given by the user is null.

Action: Provide a valid database name that is not a null string.

PRCD-01055: Instance name is null

Cause: The instance name given by the user is null.

Action: Provide a valid instance name that is not a null string.

PRCD-01056: Database name {0} contains invalid characters.

Cause: The supplied database name contained invalid characters.

Action: Supply a valid database name. A database name must start with an alphabetic character and may include only characters from "(a-z, A-Z, 0-9, \$, #, _)".

PRCD-01057: Instance name {0} is not valid

Cause: The supplied instance name is not of the correct format.

Action: Supplied a valid instance name. The valid character set for instance name is [a-zA-Z0-9_-].

PRCD-01058: Invalid server pool list {0} supplied for single instance database {1}

Cause: The server pool size was not one when creating a single instance database on a cluster.

Action: Use one server pool with only one server when creating the single instance database.

PRCD-01059: Instance name prefix {0} contains illegal characters

Cause: The supplied instance name prefix contained non-alphanumeric characters.

Action: Supply an instance name prefix that consists of alphanumeric characters a-z, A-Z, and 0-9.

PRCD-01060: Server pool has not been supplied for creating cluster service {0} for database {1}

Cause: No server pool argument has been supplied when configuring a cluster database.

Action: Supply an existing server pool when configuring a cluster database.

PRCD-01061: No database exists

Cause: No database has been configured.

Action: Configured database and retry.

PRCD-01062: Invalid service cardinality {0}

Cause: The service cardinality supplied is not valid.

Action: Supply a valid service cardinality.

PRCD-01063: Invalid service taf policy {0}

Cause: The service taf policy supplied is not valid.

Action: Supply a valid service taf policy.

PRCD-01064: Invalid database role {0}

Cause: The database role supplied is not valid.

Action: Supply a valid database role.

PRCD-01065: Invalid management policy {0}

Cause: The management policy supplied is not valid.

Action: Supply a valid management policy. The management policy should be automatic or manual.

PRCD-01066: Invalid start option {0}

Cause: The start option supplied is not valid.

Action: Supply a valid start option.

PRCD-01067: Invalid stop option {0}

Cause: The stop option supplied is not valid.

Action: Supply a valid stop option.

PRCD-01068: Failed to modify instance {0} on node {1} for database {2}

Cause: The instance for the specified node does not exist on the database.

Action: Use `srvctl add instance` to add the per-X instance.

PRCD-01069: Failed to modify instance {0} on node {1} for database {2}

Cause: The instance for the specified node cannot not be updated.

Action: Make sure that the crs stack is up and running; the oracle user has the permission to modify the instance; and then retry.

PRCD-01070: Failed to retrieve startup options for database {0}

Cause: Unable to retrieve the startup options for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01071: Failed to update startup options for database {0}

Cause: Unable to update the startup options for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01072: Failed to retrieve stop options for database {0}

Cause: Unable to retrieve the stop options for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01073: Failed to update stop options for database {0}

Cause: Unable to update the stop options for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01074: Failed to retrieve the database role for database {0}

Cause: Unable to retrieve the database role for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01075: Failed to set the database role {1} for database {0}

Cause: Unable to update the database role for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01076: Failed to retrieve the management policy for database {0}

Cause: Unable to retrieve the management policy for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01077: Failed to update the management policy for database {0}

Cause: Unable to update the management policy for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01078: Failed to update the db name {0} of database {1}

Cause: Unable to update the db name for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01079: Failed to update pullup for service {0}: {1}

Cause: Failed to update pullup modifier for the service.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01080: Failed to get attributes for service {0}

Cause: Failed to get attributes for the service.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01081: Failed to set attributes for service {0}

Cause: Failed to set attributes for the service.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01082: Failed to modify service {0}: Unsupported attribute {1}

Cause: Operation doesn't support modification of attribute.

Action: Fix your application.

PRCD-01083: Failed to modify service {0}

Cause: Failed to modify service.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01084: Failed to start service {0}

Cause: Failed to start the service.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01085: Failed to stop service {0}

Cause: Failed to stop the service.

Action: Make sure that the crs stack is up, the service is running and then retry.

PRCD-01086: Invalid rlb goal {0}

Cause: The rlb goal supplied is not valid.

Action: Supply a valid rlb goal.

PRCD-01087: Invalid failover type {0}

Cause: The failover type supplied is not valid.

Action: Supply a valid failover type.

PRCD-01088: Invalid connection load balancing goal {0}

Cause: The clb goal supplied is not valid.

Action: Supply a valid clb goal.

PRCD-01089: Invalid failover method {0}

Cause: The failover method supplied is not valid.

Action: Supply a valid failover method.

PRCD-01090: Failed to retrieve Oracle home of database {0} on node {1}

Cause: No Oracle home of the database has been set on the specified node.

Action: Set the Oracle home of the database on the specified node.

PRCD-01091: Failed to create database instance {0} for database {1}

Cause: Unable to create database instance for the specified instance name.

Action: Make sure that the local node can be used for creating a database instance; the instance name provided is valid. The valid character set for instance name is [a-zA-Z0-9_-].

PRCD-01092: Failed to create database instance {0} for database {1} on node {2}

Cause: Unable to create database instance for the specified instance name and node name.

Action: Make sure that the specified node can be used to create a database; the instance name provided is valid. The valid character set for instance name is [a-zA-Z0-9_].

PRCD-01093: Failed to update the domain {0} of database {1}

Cause: Unable to update the domain for the database.

Action: Make sure that the crs stack is up and running and then retry.

PRCD-01094: Failed to create start dependency for database {0} on the ASM cluster filesystem where ACFS path {1} resides

Cause: Unable to modify the database resource to include a start dependency on the ASM cluster filesystem for the ACFS path.

Action: Make sure that the ASM instance is running, the OFS driver exists in the driver directory, and the underlying ofs devices are accessible.

PRCD-01095: Failed to retrieve databases for version 11.1 and earlier

Cause: Unable to read OCR configuration to get databases for version 11.1 and earlier

Action: Make sure that the Oracle clusterware is up and running and the primary group of the user running srvctl is the same as the primary group of the user who installed the Oracle clusterware home. Also, run 11.1 srvctl config to verify that the database configuration exists in OCR.

PRCD-01096: Failed to retrieve the database unique name

Cause: Unable to read the attribute value for database unique name.

Action: Make sure that the Oracle clusterware is up and running and then retry.

PRCD-01097: Failed to retrieve the active servers of server pool {0} for database {1}

Cause: Unable to read the active servers attribute value for the database underlying server pools.

Action: Make sure that the Oracle clusterware is up and running; the database underlying server pools exist; the user has the permission to access the database underlying server pools and then retry.

PRCD-01098: Failed to retrieve the configured servers of server pool {0} for database {1}

Cause: Unable to read the servers attribute value for the database underlying server pool.

Action: Make sure that the Oracle clusterware is up and running; the database underlying server pool exists and then retry.

PRCD-01099: {0} enum member has a constant value that cannot be changed to given value {1}

Cause: An attempt was made to change value of read-only valued enum member.

Action: Contact Oracle Support Services.

PRCD-01100: Invalid relocate option {0}

Cause: Supplied relocate option is unknown.

Action: Contact Oracle Support Services.

PRCD-01101: Failed to remove running instance {0} for database {1}

Cause: Unable to remove the instance configuration for the database because the instance was still running.

Action: Stop the running instance using `srvctl stop instance` command and then retry.

PRCD-01102: Failed to create preconnect service for service {0}

Cause: An attempt to register service failed due to failure to register its corresponding preconnect service.

Action: Contact Oracle Support Services.

PRCD-01103: Failed to retrieve the maximum cardinality for database {0}

Cause: Unable to query the number of servers in the server pool used to manage the database.

Action: Make sure that the Oracle clusterware is up and running; the database underlying server pool exists and then retry.

PRCD-01104: A source server must be specified to relocate cluster database {0}

Cause: Cluster database cannot be relocated without specifying source server to relocate instance from.

Action: Supply source and target servers for database relocation.

PRCD-01105: A source server must be specified to relocate service {0}

Cause: Cluster database service cannot be relocated without specifying source server to relocate service member from.

Action: Supply source and target servers for service relocation.

PRCD-01106: Failed remove service {0}: could not get data for its underlying server pool

Cause: Server pool data is not found.

Action: Make sure that the Oracle clusterware is up and running; the service underlying server pool exists.

PRCD-01107: Removed service {0} but failed to remove its underlying server pool {1}

Cause: Failed to remove the server pool.

Action: Make sure that the Oracle clusterware is running and remove the server pool manually.

PRCD-01108: Failed to determine if database {0} is administrator-managed

Cause: An attempt to determine if a database is administrator-managed failed.

Action: Examine the accompanying error messages for details.

PRCD-01109: Failed to find administrator-managed service {0} of database {1} because the database is a policy-managed database.

Cause: The database does not support administrator-managed services.

Action: Provide an administrator-managed database and make sure that the service exists within that database.

PRCD-01110: Database {0} does not have instances {1}

Cause: The database does not have instances mentioned in the message.

Action: Make sure that database name is correct and the database has requested instances.

PRCD-01111: The type of service cardinality for this operation should be {1}, not {0}

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCD-01112: Failed to get preferred instances of service {0}

Cause: The service does not exist or the Oracle clusterware is down.

Action: Make sure that the Oracle clusterware is up and running and the service exists.

PRCD-01113: Failed to modify service {0}

Cause: The service does not exist or the Oracle clusterware is down.

Action: Make sure that the Oracle clusterware is up and running and the service exists.

PRCD-01114: Failed to enable service {0} on one or more instances

Cause: The service does not exist or enabled on all database instances. The Oracle clusterware is down.

Action: make sure that the Oracle clusterware is up and running; the service exists and disabled on at least one database instance.

PRCD-01115: Failed to disable service {0} on one or more instances

Cause: The service does not exist or disabled on all database instances. The Oracle clusterware is down.

Action: Make sure that the Oracle clusterware is up and running; the service exists and enabled on at least one database instance.

PRCD-01116: Failed to get available instances of service {0}

Cause: The service does not exist or the Oracle clusterware is down.

Action: Make sure that the Oracle clusterware is up and running and the service exists.

PRCD-01117: Failed to modify service {0}, the service should have at least one preferred instance

Cause: An attempt was made to remove all preferred instances of the service.

Action: Make sure that there is at least one instance provided in the service preferred instance list.

PRCD-01118: Failed to set service {0} to {1} because it runs on more than one node

Cause: The service was running on more than one node.

Action: Make sure that the service is not running or running on one node only.

PRCD-01119: Failed to create database {0} because the database unique name matches that of database {1} in the first 12 characters

Cause: The database unique name was not unique in the first 12 characters. It is a requirement because the name is used to generate ORACLE_SID.

Action: Ensure that the name supplied is unique in the first 12 characters, and retry the command.

PRCD-01120: The resource for database {0} could not be found.

Cause: The resource for the specified database name could not be found. Either the database name was misspelled or the database has not been created.

Action: Correct the database name spelling or use the 'srvctl add database' command to create the database configuration.

PRCD-01121: Specified server pool {0} for {1} is already hosting an administrator-managed configuration for database(s) {2}

Cause: Server pool is hosting administrator-managed databases.

Action: Specify a server pool that is not hosting an administrator-managed database.

PRCD-01122: Specified server pool {0} for {1} is already hosting an administrator-managed configuration for service(s) {2}

Cause: Server pool is hosting administrator-managed services.

Action: Specify a server pool that is not hosting an administrator-managed service.

PRCD-01124: Failed to stop database {0} and its services

Cause: Attempt to stop the database has failed.

Action: Ensure that user attempting to stop the database has execute privileges on the database resource. Also, review the accompanying error messages for details about failure to stop database. Retry after resolving those issues or contact Oracle Support Services.

PRCD-01125: Failed to create dependency from database {0} to its Oracle home {1} that is located on the ASM cluster filesystem

Cause: An attempt to modify the database resource to include a stop dependency on the ASM cluster filesystem for the database's Oracle home failed.

Action: Make sure that the asm instance is running; the ACFS driver exists in the driver directory and the underlying ACFS devices are accessible.

PRCD-01126: Instance {0} cannot be removed because it is the only preferred instance for service(s) {1} for database {2}

Cause: An attempt was made to remove the instance which is the only preferred instance for specified services.

Action: Make sure that specified services have more than one preferred instance or modify services to not have the instance as a preferred instance.

PRCD-01127: Failed to verify if instance {0} is the only preferred instance for any service

Cause: An attempt to verify if the instance is the only preferred instance for any service failed.

Action: Make sure that the Oracle clusterware is up and running. Also, review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01128: Failed to remove all services configured for database {0}

Cause: An attempt to remove all services configured for database.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01129: Failed to start instance {0} for database {1}

Cause: An attempt to start an instance with the specified name failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01130: Failed to convert administrator-managed database {0} into a policy-managed database to use server pool {1}

Cause: An attempt to convert the database from an administrator-managed configuration to a policy-managed configuration failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01131: Failed to stop database {0} and its services on nodes {1}

Cause: Attempt to stop the database on given nodes has failed.

Action: Ensure that user attempting to stop the database has execute privileges on the database resource. Also, review the accompanying error messages for details about failure to stop database. Retry after resolving those issues or contact Oracle Support Services.

PRCD-01132: Database {0} does not have defined services: {1}

Cause: An attempt to start or stop the indicated services on the given database failed.

Action: Retry, ensuring that every service to be started or stopped is configured for the given database.

PRCD-01133: failed to start services {0} for database {1}

Cause: An attempt to start the indicated services for the indicated database failed because those services were not configured for that database.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01134: Failed to find any listener defined for network {0}

Cause: An attempt to find listener(s) defined for specified network failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01135: There is no listener defined for network {0} to be used by service {1}

Cause: An attempt to create a service failed because provided network doesn't have listener to publish a service on that network.

Action: Make sure that the provided network has a listener.

PRCD-01136: Failed to retrieve type of the database {0}

Cause: An attempt to query the type of database has failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01137: Failed to retrieve online relocation timeout for RAC One Node database {0}

Cause: An attempt to query the current online relocation timeout for RAC One Node database has failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01138: Failed to set online relocation timeout to {0} for RAC One Node database {1}

Cause: An attempt to update the online relocation timeout for RAC One Node Database has failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01139: The current server {0} where RAC One Node database {1} is running is not in the given candidate server list {2}

Cause: An attempt to update the candidate servers of the server pool hosting RAC One Node Database has failed because current server where this database is running is not in the given candidate server list.

Action: Retry the operation after either including the current server where this database is running in the given candidate server list or stopping the database.

PRCD-01140: Failed to update candidate servers to {0} of the server pool hosting RAC One Node database {1}

Cause: An attempt to update the candidate servers of the server pool hosting RAC One Node Database has failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01141: The database {0} is not hosted by a server pool

Cause: An attempt to query the server pool for given database failed because this database is not hosted by a server pool. This is most likely due to a program calling cluster environment API in Oracle Restart environment.

Action: Examine the accompanying error messages for details and contact Oracle Support Services.

PRCD-01142: The {0} TAF policy is not valid for RAC One Node service {1}

Cause: A TAF policy other than BASIC or NONE was specified for RAC One Node service.

Action: Specify BASIC or NONE TAF policy and retry the operation.

PRCD-01143: The cardinality of {0} is not valid for RAC One Node database or service {1}

Cause: An invalid cardinality was specified for RAC One Node database or service.

Action: Specify a SINGLETON cardinality and retry the operation.

PRCD-01144: The {0} management policy is not valid for RAC One Node database {1}

Cause: A management policy other than AUTOMATIC was specified for RAC One Node database.

Action: Specify AUTOMATIC management policy and retry the operation.

PRCD-01145: {0} API is not supported on RAC One Node database environment

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCD-01146: Database {0} is not a RAC One Node database

Cause: The specified database is not a RAC One Node database.

Action: Provide database name for a RAC One Node database.

PRCD-01147: The server pool {0} of administrator-managed database {1} has no candidate servers

Cause: Either the instance had not been added to the database or this database's server pool was altered inappropriately.

Action: If an instance was not added to the database yet, try to add an instance to this database, for example by using the command 'srvctl add instance', and then retry. Otherwise, contact Oracle Support Services.

PRCD-01148: Failed to convert the configuration of RAC One Node database {0} into its equivalent configuration for RAC database

Cause: Internal error.

Action: Review the accompanying error messages and contact Oracle Support Services.

PRCD-01149: AUTOMATIC management policy cannot be used for the service {0} when the database {1} has {2} management policy

Cause: An attempt to create or modify a service failed because the management policy specified for the service was AUTOMATIC but the database's management policy was NORESTART or USERONLY.

Action: Make sure that the provided service's management policy is MANUAL when running 'srvctl add service' or 'srvctl modify service' command.

PRCD-01150: Failed to retrieve EDITION for service {0}

Cause: An attempt to retrieve the EDITION attribute of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01151: Failed to convert the configuration of RAC One Node database {0} into its equivalent RAC database configuration because RAC One Node database is running on a different server {1} than the given target server {2}

Cause: A target server was specified that was different from the server where the RAC One Node database is running.

Action: Either supply the server where RAC One Node Database is running now as target server or stop the database and retry.

PRCD-01152: Failed to update instance name {0} for database {1}

Cause: An attempt to update instance name for the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01153: Failed to convert the configuration of cluster database {0} into its equivalent RAC One Node database configuration

Cause: An attempt to convert the specified cluster database to RAC One Node database failed.

Action: Review the accompanying error messages and retry after resolving these errors or contact Oracle Support Services.

PRCD-01154: Failed to convert the configuration of cluster database {0} into its equivalent RAC One Node database configuration because cluster database is running on more than one server {1}

Cause: User attempted conversion of a cluster database to RAC One Node database that was running on more than one servers.

Action: Stop this database on all but one server and retry.

PRCD-01156: Failed to convert the configuration of cluster database {0} into its equivalent configuration for RAC One Node database due to its services {1} having {2} TAF policy

Cause: This database had services that have TAF policy (e.g. PRECONNECT) that is not supported by an Oracle RAC One Node database.

Action: Either modify the TAF policy of these services to either BASIC or NONE using the command 'srvctl modify service' or remove these services using the command 'srvctl remove service' and then retry.

PRCD-01157: Failed to convert the configuration of cluster database {0} into its equivalent configuration for RAC One Node database because none of its services have {1} management policy

Cause: An attempt to convert a cluster database configuration into its equivalent configuration for an Oracle RAC One Node database was rejected because all services of the given database have the MANUAL management policy.

Action: Modify the management policy of at least one of these services to AUTOMATIC using the command 'srvctl modify service ... -policy AUTOMATIC' and then retry.

PRCD-01158: Invalid database type {0}

Cause: The database type supplied is not valid.

Action: Supply a valid database type.

PRCD-01159: Target node must be specified when initiating an online relocation of administrator managed RAC One Node database {0}

Cause: The target node was not specified when requesting online relocation on the administrator managed Oracle RAC One Node database.

Action: Include the '-node' option with the 'srvctl relocate database' command.

PRCD-01160: Online relocation request for RAC One Node database {0} was rejected because this database is not running

Cause: An Oracle RAC One Node database was not running.

Action: Start the database by issuing the command 'srvctl start database' and then retry.

PRCD-01161: Online relocation failed for RAC One Node database {0}

Cause: Online relocation of the given database was unsuccessful.

Action: Either run the command 'srvctl relocate database -a' to abort the online relocation or run the command 'srvctl relocate database -n' to perform online relocation of the database to the given target node.

PRCD-01162: Invalid online relocation status {0}

Cause: This is an internal error.

Action: Review the accompanying error messages and contact Oracle Support Services.

PRCD-01163: Failed to modify database {0}

Cause: Failed to modify database.

Action: Make sure that the CRS stack is up and running and then retry.

PRCD-01164: An online relocation request for RAC One Node database {0} is already active

Cause: The given database has an already active online relocation request.

Action: Either specify another database in the 'srvctl relocate database' command or abort the in-progress request with 'srvctl relocate database -a' command.

PRCD-01165: An online relocation request for RAC One Node database {0} has failed

Cause: An online relocation request for the database has failed and the supplied target node was not the same as that in the failed request.

Action: Use the command 'srvctl status database' to query the target node of the failed online relocation request. Either run the command 'srvctl relocate database -a' to abort the failed request or 'srvctl relocate database -n' command with with the correct target node.

PRCD-01166: The supplied node {0} is not available in the {1} server pool

Cause: Supplied node was not in the Free server pool.

Action: Supply node from the Free server pool.

PRCD-01175: Failed to determine the status of the online relocation request for RAC One Node database {0}

Cause: Unable to determine the status of the online relocation request for the given Oracle RAC One Node database.

Action: Examine the accompanying error messages for details.

PRCD-01176: Invalid online relocation state {0}

Cause: This is an internal error.

Action: Review the accompanying error messages and contact Oracle Support Services.

PRCD-01177: Failed to abort the online relocation request for RAC One Node database {0}

Cause: Failed to abort the online relocation of the Oracle RAC One Node database.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01178: A failed online relocation request for RAC One Node database {0} does not exist

Cause: The supplied Oracle RAC One Node database does not have a failed online relocation request.

Action: Supply an Oracle RAC One Node database that has a failed online relocation request.

PRCD-01179: The online relocation timeout value {0} is not within the range of between {1} and {2}

Cause: The specified online relocation timeout value was not within the required range.

Action: Supply a value within the required range.

PRCD-01180: Configuration of database {0} has already been upgraded to version {1}

Cause: The supplied database was already upgraded.

Action: Supply a database of a lower version.

PRCD-01181: Failed to upgrade configuration of services {0} to version {1}

Cause: Failed to upgrade the service configuration.

Action: Review the accompanying error messages. If you are unable to resolve the problem, contact Oracle Support Services.

PRCD-01182: Failed to upgrade configuration of database {0} to version {1}

Cause: Failed to upgrade the database configuration.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01183: Failed to upgrade configuration of service type to version {0}

Cause: Failed to upgrade the service type configuration.

Action: Review the accompanying error messages and contact Oracle Support Services.

PRCD-01184: Failed to upgrade configuration of database type to version {0}

Cause: Failed to upgrade the database type configuration.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01185: Failed to retrieve service resource {0} for non cluster database {1}

Cause: An attempt to get the specified service failed because the database provided is a single instance and not a cluster database.

Action: Make sure that Oracle Clusterware is configured, specify a service defined for cluster database, and then retry.

PRCD-01186: TAF policy 'PRECONNECT' cannot be used to add a service for single instance database {0}

Cause: Failed to create a service because provided TAF specification can not be used with a single instance database.

Action: Retry after removing 'PRECONNECT' TAF policy.

PRCD-01187: Failed to enable or disable service {0} on particular nodes for non-cluster single instance database {1}

Cause: An attempt to enable or disable the service on particular nodes for single instance database failed. Such enable or disable operations are not applicable to services defined for single instance databases in Oracle Restart.

Action: Specify a service defined for database which is running on cluster or do not specify nodes.

PRCD-01188: Failed to detect whether the standby database {0} supports the Data Guard protection mode

Cause: An attempt has failed to determine whether the standby database supports the configured Data Guard protection mode.

Action: Review the accompanying error messages for details about the failure and retry the command after resolving those issues.

PRCD-01189: Cannot update server pool to {0} for RAC One Node database service {1}

Cause: An attempt to update the server pool of an Oracle RAC One Node database service was rejected because placement of this service is controlled by the server pool hosting the underlying database.

Action: Try updating the server pool controlling the placement of the database via 'srvctl modify database' command or its equivalent.

PRCD-01190: Cannot update server pool to {0} for single instance database service {1}

Cause: An attempt to update the server pool of a single instance (non-RAC) database service was rejected because placement of this service is controlled by the server pool hosting the underlying database.

Action: Try updating the server pool controlling the placement of the database using the 'srvctl modify database' command or its equivalent.

PRCD-01191: Cannot update server pool to {0} for database service {1}

Cause: An attempt to update server pool of database service was rejected because a subpool server pool was specified.

Action: Supply a first-level server pool that is not a subpool of any other server pool and retry the operation.

PRCD-01192: The cardinality {0} is not valid for single instance database service {1}

Cause: An invalid cardinality was specified for single instance (non-RAC) database.

Action: Retry after specifying a SINGLETON cardinality in 'srvctl modify service' command or its equivalent.

PRCD-01193: Service {0} defined for RAC One Node database {1} cannot be started on more than one node

Cause: An attempt to start the specified service failed because RAC One Node service cannot be started on more than one node.

Action: Retry after specifying one node to start the service on.

PRCD-01194: Failed to retrieve the version of database {0}

Cause: An attempt to retrieve the VERSION resource attribute has failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01195: Option to remove the target node was not allowed for aborting online relocation of policy-managed RAC One Node database {0}

Cause: The '-revert' option was specified on a request to abort online relocation of the policy-managed Oracle RAC One Node database.

Action: Use the command 'srvctl relocate database -abort' without the '-revert' option.

PRCD-01196: 'PRECONNECT' TAF policy cannot be used to create service {0} on policy managed database {1}

Cause: Failed to create a service because a policy managed database cannot have service with PRECONNECT TAF policy.

Action: Retry after supplying 'BASIC' or 'NONE' TAF policy.

PRCD-01197: The database {0} is policy-managed and an administrator-managed service {1} cannot be created on it

Cause: The specified database does not support administrator-managed services.

Action: Provide a database which supports administrator-managed services.

PRCD-01198: Failed to add service {0} to database {1} because database is already at maximum services limit of {2}

Cause: Attempt to add a new service to database was rejected because database has already reached the maximum services limit.

Action: Retry after removing a service from this database using the command 'srvctl remove service', or contact Oracle Support Services.

PRCD-01199: The stop request on instance {0} of standby database {1} was rejected to prevent termination of the primary database

Cause: The attempt to stop this instance of the standby database was rejected because the configured Data Guard protection mode required this instance to be running to prevent termination of the primary database.

Action: Retry the stop request after stopping the primary database or downgrading the protection mode.

PRCD-01200: Configuration of database {0} has already been downgraded to version {1} for database {2}

Cause: The supplied database was already downgraded.

Action: Supply a database of a higher version.

PRCD-01201: Downgrade from current version {0} to version {1} is not supported for database {2}

Cause: An unsupported version was specified for downgrading the database.

Action: Check that the versions provided are correct.

PRCD-01202: Failed to downgrade configuration of services {0} to version {1}

Cause: A request to downgrade the service configuration failed.

Action: Review the accompanying error messages. If you are unable to resolve the problem, contact Oracle Support Services.

PRCD-01203: Failed to downgrade configuration of database {0} to version {1}

Cause: A request to downgrade the database configuration failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01204: Failed to update administrator-managed database {0} to use server pool {1}

Cause: Attempt to update administrator-managed database was rejected because administrator-managed database cannot be moved to another subpool.

Action: Retry after supplying a first-level server pool in 'srvctl modify database' command to convert administrator-managed database to policy-managed database.

PRCD-01205: Failed to update policy-managed database {0} to use server pools {1} because it excludes the server pools {2} of the service {3}

Cause: An attempt to update policy-managed database was rejected because specified server pools do not include all server pools hosting services of this database.

Action: Include all server pools hosting services of this database in the supplied server pool list.

PRCD-01206: Failed to retrieve preferred instance of service {0} of RAC One Node database {1}

Cause: Attempt to retrieve preferred instance of service belonging to RAC One Node database failed because database is either in failed online relocation state or undergoing online relocation.

Action: Check the status of online relocation via 'srvctl status database' command. If online relocation status is reported as active, then retry after online relocation completes. If online relocation status is reported as failed, then repair the configuration via 'srvctl relocate database ... -a' command and then retry.

PRCD-01207: The start options {2} can not be used while starting service {0} and its database {1}

Cause: An attempt to start the service was rejected because the specified start options can not be used with service when the database is not running.

Action: Remove the specified start options and then retry.

PRCD-01208: The start options {1} can not be used while starting services for database {0}

Cause: An attempt to start the services was rejected because the specified start options can not be used with services when the database is not running.

Action: Remove the specified start options and then retry.

PRCD-01209: RAC One Node database {0} does not have enough servers in its server pool {1} to initiate an online relocation

Cause: Online relocation request was rejected because there were less than two servers in the server pool of the specified RAC One Node database.

Action: Make sure that the minimum and maximum size of the server pool are set properly.

PRCD-01210: The service name {0} cannot be same as the database default service name {1}

Cause: An attempt to create the service was rejected because the given service name is same as the database default service name.

Action: Retry after supplying a service name that is different than the database default service name.

PRCD-01211: Cannot start RAC One Node database {0} because a failure has occurred while trying to clean up an earlier failed online relocation

Cause: An attempt to start an Oracle RAC One Node database was rejected because a failure occurred while trying to clean up an earlier failed online relocation.

Action: Use the command 'srvctl status database' to query the target node of the failed online relocation process. Either run the command 'srvctl relocate database' with the '-abort' option or with the '-node' option with the target node thus discovered.

PRCD-01212: An instance with name "{0}" already exists on node {1}

Cause: An instance could not be added to the database on the specified node because an instance with the same name was found on another node.

Action: Use the command 'srvctl modify instance' to change the name of the existing instance, or use a different instance name in the 'srvctl add instance -instance <inst_name>' command.

PRCD-01213: Service {0} of database {1} is still running

Cause: An attempt to remove RAC One Node service failed because the given service was still running.

Action: Stop the service and then retry the command.

PRCD-01214: Administrator-managed RAC database {0} has more than one instance

Cause: An attempt to convert an Oracle RAC database to an Oracle RAC One Node database failed because there was more than one instance.

Action: Use the command 'srvctl remove instance' to remove all but one instance and then run the 'srvctl convert database -dbtype RACONENODE' command.

PRCD-01215: Unable to downgrade RAC One Node database {0}

Cause: Failed to downgrade RAC One Node database to an earlier version because there was no RAC One Node specific configuration in the earlier version.

Action: None

PRCD-01222: Online relocation of database "{0}" failed but database was restored to its original state

Cause: Online relocation of the given database was unsuccessful, therefore the database was restored to its original state.

Action: See accompanying messages for online relocation failure.

PRCD-01223: The service name {0} contains illegal characters {1}.

Cause: An attempt to create the service was rejected because the given service name contained illegal characters.

Action: Retry after supplying a service name that contains the following: - uppercase or lowercase letter as the first character and the remainder includes characters only from the character set {a-z, A-Z, 0-9, _, -}. - domain name (if provided) only includes characters from the character set {a-z, A-Z, 0-9, _, \$, #, -}.

PRCD-01224: The {0} management policy is not valid for RAC One Node database service {1}

Cause: A management policy other than AUTOMATIC was specified for RAC One Node database service.

Action: Either specify AUTOMATIC management policy for this service or modify management policy of another service of this database to AUTOMATIC, such as via 'srvctl modify service' command, and then retry the current operation.

PRCD-01225: An attempt to remove service {0} of database {1} was rejected because this is the last service with {2} management policy. A RAC One Node database must have at least one service with {2} management policy.

Cause: An attempt was made to remove the last service of an Oracle RAC One Node database having the AUTOMATIC management policy.

Action: Add another service with the AUTOMATIC management policy, for example by using the command 'srvctl add service ... -policy AUTOMATIC' or modify the management policy of an existing service to AUTOMATIC using the command 'srvctl modify service', before removing the given service.

PRCD-01226: Failed to retrieve ASM Cluster Filesystem resource {0} for database {1}.

Cause: The ASM Cluster Filesystem resource was not registered in Oracle Clusterware.

Action: Create the ASM Cluster Filesystem resource using the command 'srvctl add filesystem' and then retry.

PRCD-01227: Failed to retrieve ASM Cluster Filesystem list for database {0}.

Cause: Failed to retrieve the ASM Cluster Filesystems of the specified database.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01228: Failed to convert administrator-managed RAC database {0} to RAC One Node database because the database had no instance added

Cause: An attempt to convert an Oracle RAC database to an Oracle RAC One Node database was rejected because the database did not have an instance added.

Action: Use the command 'srvctl add instance' to add an instance and then run the command 'srvctl convert database -dbtype RACONENODE'.

PRCD-01229: An attempt to access configuration of database {0} was rejected because its version {1} differs from the program version {2}. Instead run the program from {3}.

Cause: An attempt was made to access configuration of database that is of different version than that of the program.

Action: Make sure that database configuration version and the program version are same and then retry. For example, try the operation using `svrctl` from the `ORACLE_HOME` mentioned in the error message.

PRCD-01230: Failed to modify database {0} to use server pool {1}

Cause: An attempt to modify the database to use the given server pool has failed.

Action: Review the accompanying error messages for details about the failure. For example, a failure could happen if the database owner does not have execute permissions on the given server pool. In this case, use the command `'svrctl config database -db <db_unique_name>'` to find out the database owner's user name, create a server pool as that user, and then supply that server pool as an argument when retrying the command.

PRCD-01231: Failed to upgrade configuration of database {0} to version {1} in new Oracle home {2}

Cause: Failed to upgrade the database configuration.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01232: Failed to upgrade configuration of database {0} because database version {1} is an unsupported version for upgrade

Cause: Version of the database was not supported for upgrade.

Action: None

PRCD-01233: Failed to downgrade configuration of database {0} to version {1} in new Oracle home {2}

Cause: Failed to downgrade the database configuration.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01234: Failed to downgrade configuration of database {0} to version {1} because the specified version is unsupported for downgrade

Cause: Specified version was not supported for downgrade.

Action: Specify a version that is 10.1 or later.

PRCD-01235: Unable to downgrade configuration of single instance database {0} to version {1}

Cause: Single instance database was specified.

Action: Remove the single instance database configuration. 11.2 Clusterware cannot manage pre-11.2 single instance databases.

PRCD-01236: Unable to downgrade configuration of RAC One Node database {0} to version {1}

Cause: An Oracle RAC One Node database was specified.

Action: Convert the administrator-managed Oracle RAC One Node database to an administrator-managed Oracle RAC database using the command 'srvctl convert database' and then retry.

PRCD-01237: Unable to downgrade configuration of policy-managed RAC database {0} to version {1}

Cause: A policy-managed Oracle RAC database was specified.

Action: Remove the 11.2 database configuration and use pre-11.2 srvctl to re-create the configuration.

PRCD-01238: Failed to get attributes for database {0}

Cause: Failed to get attributes for the database.

Action: Make sure that the CRS stack is up and running and then retry.

PRCD-01239: Failed to downgrade configuration of database {0} to version {1} because the database has dependency on ASM Cluster File System

Cause: Specified database was dependent on ASM Cluster File System.

Action: None

PRCD-01240: Unable to downgrade configuration of database {0} because its database role of {1} is not supported in version {2}

Cause: Database role of specified database was not supported in the specified version.

Action: Modify the database role using the 'srvctl modify database' command and then retry this command.

PRCD-01241: Failed to upgrade configuration of database {0} to version {1} in new Oracle home {2}. Also failed to remove the internal server pool configuration.

Cause: Failed to upgrade the database configuration.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCD-01242: Unable to convert RAC database {0} to RAC One Node database because the database had no service added

Cause: An attempt to convert an Oracle RAC database to an Oracle RAC One Node database was rejected because the database did not have any service configured. An Oracle RAC One Node database must always have one service.

Action: Use the command 'srvctl add service' to add a service and then run 'srvctl convert database -dbtype RACONENODE'.

PRCD-01243: Failed to start instance {0} of database {1} because an instance having same name was already running on node {2}

Cause: An attempt to start an instance with the given name was rejected because another instance with same name was already running on another node.

Action: Either supply a different instance name or stop the running instance with the same name and then retry.

PRCD-01244: Failed to start service {0} of RAC One Node database {1} on the given node {2} because the database was running on node {3}

Cause: An attempt to start the specified service on the given node was rejected because RAC One Node database is running on a node different than the given node.

Action: Either omit the node option or supply the node where the database is running.

PRCD-01246: Online relocation of RAC One Node Data Guard standby database "{0}" was rejected because the database is in Data Guard maximum protection mode

Cause: An online relocation request was rejected because the specified database is operating in Data Guard maximum protection mode.

Action: Downgrade the protection mode to maximum availability and retry the online relocation.

PRCD-01247: Failed to retrieve pluggable database for service {0}

Cause: An attempt to retrieve the pluggable database attribute of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01248: Failed to retrieve the maximum value of replication lag available for the service {0}

Cause: An attempt to retrieve the maximum value of replication lag for the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01249: Failed to determine whether the service {0} is global or not

Cause: Failed to check whether the specified service is global or not.

Action: Examine the accompanying error messages for details.

PRCD-01250: Modification of the global service attribute {0} not allowed

Cause: An attempt was made to change a global service attribute managed by Global Data Services for just one database.

Action: The attribute must be changed for all databases at the same time through GDS's 'GDSCTL' command (or specify '-global_override').

PRCD-01251: The specified operation on global service {0} is not allowed

Cause: An attempt was rejected to operate on a global service managed by Global Data Services for just one database.

Action: Operate on the service using Global Data Services' 'GDSCTL' command, or specify '-global_override'.

PRCD-01252: Failed to retrieve the password file location of database {0}

Cause: An attempt to retrieve the password file attribute of the specified database failed.

Action: Retry the request after ensuring that the CRS stack is running, the database resource has been configured, and the user has read permission on the database resource.

PRCD-01253: Failed to update password file location {0} of database {1}

Cause: An attempt to update the password file attribute of the specified database failed.

Action: Retry the request after ensuring that the CRS stack is running, the database resource has been configured, and the user has update permission on the database resource.

PRCD-01254: Password file attribute does not exist for database {0}

Cause: An attempt to retrieve the PWFIL resource attribute failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01255: Failed to retrieve SQL translation profile for service {0}

Cause: An attempt to retrieve the translation profile attribute of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01256: Failed to retrieve commit outcome for service {0}

Cause: An attempt to retrieve the commit outcome attribute of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01257: Invalid session state consistency {0}

Cause: The session state consistency supplied is not valid.

Action: Supply a valid session state consistency either STATIC or DYNAMIC.

PRCD-01258: Addition or modification of retention is not allowed when commit outcome is set to FALSE

Cause: An attempt to add or modify retention value was rejected because the commit outcome is not set to TRUE.

Action: Set the option '-commit_outcome' to TRUE and then modify the retention value.

PRCD-01259: Addition or modification of failover type to TRANSACTION is not allowed when commit outcome is set to FALSE

Cause: An attempt to add or modify failover type value to TRANSACTION was rejected because the commit outcome is not set to TRUE.

Action: Set the option '-commit_outcome' to TRUE and then modify the failover type value.

PRCD-01260: Failed to retrieve failover type for service {0}

Cause: An attempt to retrieve the failover type attribute of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01261: Failed to add or modify replay initiation time because the failover type is not set to TRANSACTION

Cause: An attempt to modify the replay initiation time attribute of the specified service failed.

Action: Set the failovertime to TRANSACTION and retry the command.

PRCD-01262: failed to add or modify session state consistency because the - failovertime option is not specified as TRANSACTION

Cause: An attempt to modify the session state consistency attribute of the specified service was rejected because the -failovertime option was not specified as TRANSACTION.

Action: Retry the command, specifying the TRANSACTION value for the -failovertime option.

PRCD-01263: Invalid retention time {0} seconds greater than the maximum {1} seconds

Cause: The specified value exceeds the maximum permissible retention time.

Action: Supply a valid retention time value less than 2592000.

PRCD-01264: Invalid replay initiation time {0} seconds greater than the maximum {1} seconds

Cause: The specified value exceeds the maximum permissible replay initiation time.

Action: Supply a valid replay initiation time value less than 86400.

PRCD-01265: Failed to retrieve parallel query helper service for service {0}

Cause: An attempt to retrieve the parallel query helper service of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01266: Failed to set parallel query helper service {0} for service {1}

Cause: An attempt to set the parallel query helper service for the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01267: Failed to retrieve the server pools of the parallel query helper service for service {0}

Cause: An attempt to retrieve the server pools of the parallel query helper service of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01268: Failed to set parallel query helper service {0} for service {1}

Cause: An attempt to set the parallel query helper service for the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01269: Failed to set parallel query helper service {0} for database {1}

Cause: An attempt to set the parallel query helper service for the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01270: {0} API is not supported on management database environment

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRCD-01271: Failed to unset commit outcome because the failover type is set to TRANSACTION

Cause: An attempt to unset the commit outcome attribute of the specified service failed.

Action: Modify the value of failovertime and retry the command.

PRCD-01272: Failed to remove the management database resource

Cause: An attempt to remove the management database failed.

Action: Examine the accompanying error messages for details.

PRCD-01273: Failed to retrieve the service type for service {0}

Cause: An attempt to retrieve the service type of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01274: Failed to set service type {0} for service {1}

Cause: An attempt to set the service type for the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01275: Failed to retrieve the server pools of the parallel query helper service for database {0}

Cause: An attempt to retrieve the server pools of the parallel query helper service of the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01276: Service {0} of database {1} does not have parallel query helper service

Cause: The specified service did not have parallel query helper service configured.

Action: None

PRCD-01277: The specified operation on global service {0} is not allowed

Cause: An attempt was rejected to operate on a global service managed by Global Data Services for just one database.

Action: Operate on the service using Global Data Services' 'GDSCTL' command, or specify '-global_override'.

PRCD-01278: The service name {0} cannot be same as the pluggable database default service name {1}

Cause: An attempt to create or modify the service was rejected because the given service name is same as the pluggable database default service name.

Action: Make sure that the service name is different from the pluggable database default service name and retry the command.

PRCD-01280: The pluggable database name {0} contains invalid characters.

Cause: The supplied pluggable database name contained invalid characters.

Action: Valid characters in a pluggable database name are a-z, A-Z, 0-9, and _ (underscore) and the name should start with an alphabetic character.

PRCD-01281: The database {0} in an ASM Client Cluster cannot have dependency on diskgroup {1}

Cause: Diskgroups were supplied for creating a database in an ASM Client Cluster.

Action: Do not specify diskgroups when creating a database in an ASM Client Cluster.

PRCD-01282: Cannot add instance {0} for database "{1}" because node {2} has active role {3}.

Cause: An attempt to add an instance for a database specified a node with an active node role other than hub.

Action: Specify the node with hub active node role when adding the instance for database.

PRCD-01283: Password file pathname {0} cannot contain only the diskgroup name

Cause: An attempt to add a password file resource attribute was rejected because the supplied pathname consisted only of a diskgroup name.

Action: Specify a valid password file path and retry the command.

PRCD-01284: Failed to create start dependency for database {0} on the ASM cluster file system because path {1} is not on an ASM cluster file system

Cause: An attempt to create a start dependency for the database resource on the ASM cluster file system failed because the specified path was not on an ASM cluster file system.

Action: Specify a path on an ASM cluster file system.

PRCD-01285: Cannot disable session replay because session disconnect is not requested

Cause: An attempt to stop or relocate services was rejected because the session noreplay option was specified without the session disconnect option.

Action: Specify the '-force' option for session disconnect or omit the '-noreplay' option. For example: 'srvctl stop service -db hr -service hrl -force -noreplay'

PRCD-01286: Failed to create the management database

Cause: An attempt to create the management database failed because the request was issued by the wrong user.

Action: Login in as the owner of the Oracle Home to issue the command 'srvctl add mgmtldb'.

PRCD-01287: User is not authorized to remove service {0} for database {1}

Cause: An attempt to remove the specified service was rejected because the command was not issued by the Oracle home owner.

Action: Examine the accompanying error messages for details. Log in as the user of the Oracle home to issue the command.

PRCD-01288: User is not authorized to create service {0} for database {1}

Cause: An attempt to create the specified service failed because the command was not issued by the Oracle home owner.

Action: Examine the accompanying error messages for details. Log in as the user of the Oracle home to issue the command.

PRCD-01289: Invalid stop option {0} for the online relocation of database {1}

Cause: An attempt to relocate the specified database failed because an invalid stop option was specified. Only NORMAL shutdown of the running instance may be specified for relocation of an Oracle RAC One Node database.

Action: Specify NORMAL to override the default stop option for the running instance or issue the request without any stop option.

PRCD-01290: NORMAL shutdown is not allowed for physical standby databases

Cause: An attempt to relocate the specified database was rejected because an invalid stop option was specified.

Action: Issue the request without any stop option.

PRCD-01291: The specified server pool {0} has maximum size {1} greater than one, which is invalid for a single instance database {2}.

Cause: An attempt to create a single instance database failed because a server pool with maximum size greater than one server was specified.

Action: Specify a different server pool with maximum size of one, or modify the specified server pool using the command 'srvctl modify srvpool' with '-max 1' option to have at most one server.

PRCD-01292: specified server pool {0} has no candidate server for single instance database {1}

Cause: An attempt to create a single instance database failed because the specified server pool had no configured candidate server.

Action: Specify a different server pool with a maximum of one server, or modify the specified server pool using the command 'srvctl modify srvpool' with '-servers' option to configure exactly one candidate server.

PRCD-01293: specified server pool {0} has more than one candidate server

Cause: An attempt to create a single instance database failed because a server pool with more than one candidate server was specified.

Action: Specify a different server pool with a maximum of one server, or modify the specified server pool using the command 'srvctl modify srvpool' with '-servers' option to configure exactly one candidate server.

PRCD-01294: Invalid option GSM flags for the specified non-global service {0}

Cause: An attempt to add or modify the specified option was rejected because an option that is only valid for global services was specified.

Action: Reissue the request without the invalid option.

PRCD-01295: Cannot downgrade configuration of database {0} from version {1} to newer version {2}

Cause: An attempt was made to downgrade the database to a version newer than the current one.

Action: Specify a target version older than the current one.

PRCD-01296: An error occurred while loading Oracle JDBC driver

Cause: An attempt to load Oracle JDBC driver failed.

Action: This is an internal error. Contact Oracle Support Services.

PRCD-01297: An error occurred while establishing connection to database with user name "{0}" and connect descriptor:\n{1}

Cause: An attempt to connect to database failed.

Action: Examine the accompanying error message for details.

PRCD-01298: Version {0} of database or service resource is different from the srvctl version {1}

Cause: The version of srvctl used did not match the version of the database or service to be added or modified.

Action: Run srvctl from the Oracle Home where the database or service is configured.

PRCD-01299: Database {0} is policy-managed

Cause: An attempt to retrieve the configured nodes of an administrator-managed database failed because the database is policy-managed.

Action: Specify an administrator-managed database.

PRCD-01300: Failed to retrieve nodes on which database {0} is configured

Cause: An attempt to retrieve the configured nodes of an administrator-managed database failed.

Action: Examine the accompanying error messages for details.

PRCD-01301: Current owner {0} of the database {1} is different from the owner {2} of the specified Oracle home {3}

Cause: An attempt to modify the Oracle home of the database failed because the owner of the Oracle home was not the current owner of the database. Changing to use an Oracle home with a different owner changes the ownership of the database.

Action: To modify the Oracle home of a database to a new home whose owner is not the current owner of this database, specify the new user also as a modification parameter.

PRCD-01302: failed to retrieve the node hosting this single-instance database

Cause: An attempt to retrieve the HOSTING_MEMBERS resource attribute of the database failed. Details are provided by the accompanying messages.

Action: Examine the accompanying error messages for details and take the corrective action indicated.

PRCD-01303: cannot retrieve the node hosting a policy-managed, single-instance database

Cause: An attempt to retrieve the node hosting a single-instance database was rejected because the database is policy-managed.

Action: Specify an administrator-managed single-instance database or a fixed single-instance database.

PRCD-01304: failed to set or modify the server pool for fixed single-instance database {0}

Cause: An attempt to set or modify the server pools for this database failed because it is a fixed single-instance database which is not hosted by a server pool.

Action: Provide a database which is not a fixed-single-instance database.

PRCD-01305: Modification of the database role from or to FAR_SYNC_STANDBY for database {0} is not allowed.

Cause: An attempt to modify the database role of a database failed because a FAR_SYNC_STANDBY role can be specified only during the database creation.

Action: Reissue the request without attempting to modify the role of a database created with the role FAR_SYNC_STANDBY or attempting to change the current role to FAR_SYNC_STANDBY.

PRCD-01306: Services cannot be created for the far sync database {0}.

Cause: An attempt to create a service for the database was rejected because the database role was FAR_SYNC_STANDBY.

Action: If the request was issued with the wrong database name, reissue with the correct database name.

PRCD-01307: Invalid start option OPEN specified for database {0} with the role FAR_SYNC_STANDBY.

Cause: An attempt to add, modify or start the database with start option OPEN was rejected because its role was FAR_SYNC_STANDBY.

Action: Reissue the request with a different start option.

PRCD-01308: Database {0} is not permitted to have the role FAR_SYNC_STANDBY in an Oracle RAC One Node configuration.

Cause: An attempt to add or convert the database failed because a database with role FAR_SYNC_STANDBY cannot be used in an Oracle RAC One Node configuration.

Action: Reissue the request with a different database type or database role.

PRCD-01309: Database {0} cannot be configured on parallel query server pools {1}.

Cause: An attempt to add or modify the database was rejected because a database with role FAR_SYNC_STANDBY cannot run on Leaf nodes.

Action: Reissue the request without specifying the parallel query server pools.

PRCD-01310: Failed to update the open mode of database {0}.

Cause: An attempt to modify the open mode of the database failed.

Action: Examine the accompanying error message for details.

PRCD-01311: Failed to update the open mode of database {0}. \nDetails: \n{1}

Cause: An attempt to modify the open mode of the database failed.

Action: Examine the accompanying error message for details.

PRCD-01312: The targeted database instance or instances are already running in the specified open mode. \nDetails: \n{0}

Cause: An attempt to update the open mode of the database was rejected because the targeted database instance or instances were already running as desired.

Action: Reissue the command with a different start option.

PRCD-01313: The specified start option is incompatible with the current running state of at least one database instance. \nDetails: \n{0}

Cause: An attempt to update the open mode of the database was rejected because it was not one of the following legal transitions: - NOMOUNT to MOUNT, OPEN, or READONLY - MOUNT to OPEN or READONLY

Action: Reissue the command with a different start option and only if the database's current mode is NOMOUNT or MOUNT.

PRCD-01314: failed to retrieve the list of databases configured on the cluster

Cause: An attempt to retrieve the list of databases configured on the cluster failed.

Action: Examine the accompanying error messages for details.

PRCD-01315: failed to stop instances for database {0}

Cause: An attempt to stop the database on the specified nodes has failed.

Action: Ensure that the user attempting to stop the database has execute privileges on the database resource. Also, review the accompanying error messages for details about failure to stop the database. Retry after resolving those issues.

PRCD-01316: failed to stop services {0} for database {1}

Cause: An attempt to stop the specified services for the indicated database failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01317: modification of user for database is not supported on Windows

Cause: An attempt to modify the database failed because a new user was specified.

Action: Ensure that there is no attempt to modify the Oracle user of the database and reissue the request.

PRCD-01318: failed to create database {0} because the length of the database unique name is greater than 30 characters

Cause: The length of the database unique name was greater than 30 characters.

Action: Ensure that the length of the database name supplied is less than or equal to 30 characters, and retry the command.

PRCD-01319: failed to move databases from Oracle home {0} to new Oracle home {1}

Cause: An attempt to move databases between the specified Oracle homes has failed.

Action: Examine the accompanying error messages for details.

PRCD-01320: failed to move database {0} to new Oracle home {1}

Cause: An attempt to move the database to a new Oracle home has failed.

Action: Examine the accompanying error messages for details.

PRCD-01321: Version {0} of Oracle home {1} is different from version {2} of Oracle home {3}.

Cause: An attempt to change the Oracle home of a database failed because the version of the new Oracle home is different from the version of the current Oracle home.

Action: Specify Oracle homes that are of the same version.

PRCD-01322: operation not supported for Oracle home {0} of version {1}

Cause: An attempt to change the Oracle home of a database failed because the version of the Oracle home is less than 11.2.

Action: Specify an Oracle home whose version is greater than 11.2.

PRCD-01323: Installation of patch 18697602 is not supported for Oracle Grid Infrastructure of version {0}.

Cause: An attempt to install patch 18697602 failed because the version of Oracle Grid Infrastructure is not 12.1.0.1.0.

Action: Install the patch from 12.1.0.1.0 Oracle Grid Infrastructure.

PRCD-01324: Neither the previous Oracle home {0} nor the new Oracle home {1} has a built-in user account.

Cause: An attempt to modify the Oracle home of the database failed because a database cannot be moved between homes that have different domain users.

Action: Move the database to an Oracle home that has either the same domain user or one that uses built-in account.

PRCD-01325: There are no database instances running on node {0}.

Cause: An attempt to retrieve the database instances running on the indicated node found that no instances were running.

Action: None

PRCD-01326: failed to retrieve instances running on node {0}

Cause: An attempt to retrieve the database instances running on the indicated node has failed.

Action: Examine the accompanying error messages for details.

PRCD-01327: no matching database instances found

Cause: An attempt to retrieve database instances using a filter found no matching instances.

Action: None

PRCD-01328: failed to retrieve database instances using the filter {0}

Cause: Errors occurred while attempting to retrieve the database instances matching the indicated filter.

Action: Examine the accompanying error messages, rectify the reported issues, and retry the operation.

PRCD-01329: failed to retrieve database instances in Oracle home {0}

Cause: An attempt to retrieve the database instances in the indicated Oracle home was unsuccessful either because there were no matching instances or the query execution failed.

Action: Examine the accompanying error messages for details.

PRCD-01330: failed to retrieve database instances of version {0}

Cause: An attempt to retrieve the database instances of the specified version was unsuccessful either because there were no matching instances or the query execution failed.

Action: Examine the accompanying error messages for details.

PRCD-01331: server pool {0} has no active servers

Cause: An attempt to start, stop, or update a database on the specified server pool failed because there are no active servers in the server pool.

Action: Specify a server pool with active servers and retry.

PRCD-01332: failed to start database {0}

Cause: An attempt to start the specified database has failed.

Action: Examine the accompanying error messages for details.

PRCD-01333: operation not supported for administrator-managed database {0}

Cause: An attempt to start, stop, or change the start mode of the database on the specified server pools was rejected because the database is not a policy-managed database.

Action: Specify a policy-managed database and retry.

PRCD-01334: failed to stop database {0}

Cause: An attempt to stop the specified database has failed.

Action: Examine the accompanying error messages for details.

PRCD-01335: operation not supported for PQ server pools {0} when there are no running hub instances

Cause: An attempt to start, stop, or change the start mode of the database on the specified server pools was rejected because these operations are not supported if all of the specified server pools are PQ pools and there is no hub instance running.

Action: Retry after ensuring that at least one hub instance is running.

PRCD-01336: no databases to move from source Oracle home {0}

Cause: An attempt to move databases from the specified Oracle home failed either because no databases had been configured in the Oracle home or because the specified databases had already been moved.

Action: Retry the command specifying the correct source Oracle home and after verifying that it contains the databases to be moved.

PRCD-01337: failed to start database {0} on node {1}

Cause: This is an informational message only.

Action: None

PRCD-01338: failed to stop database {0} on node {1}

Cause: This is an informational message only.

Action: None

PRCD-01339: failed to retrieve database instances running from source Oracle home {0}

Cause: An attempt to retrieve the database instances running from the indicated Oracle home was unsuccessful either because there were no matching instances or because the query execution failed.

Action: Examine the accompanying error messages for details, fix the problems, and retry.

PRCD-01340: Databases "{0}" do not belong to source Oracle home {1}.

Cause: An attempt to move the specified databases failed because they did not belong to the specified source Oracle home.

Action: Specify the correct databases and retry.

PRCD-01341: Not all the specified databases belong to the same source Oracle home.

Cause: An attempt to move the specified databases failed because not all of them belonged to the same source Oracle home.

Action: Specify databases that all belong to the same source Oracle home and retry.

PRCD-01342: no databases to move

Cause: An attempt to move databases failed because no databases had been configured.

Action: Retry the command specifying only existing databases.

PRCD-01343: Oracle home value for database {0} is invalid.

Cause: An attempt to move the specified database failed because its current Oracle home could not be verified.

Action: Retry the command after verifying the configuration of the specified database.

PRCD-01344: Databases "{0}" have already been moved to Oracle home {1}.

Cause: An attempt to move the specified databases failed because they had already moved to the specified destination Oracle home.

Action: None

PRCD-01345: Invalid value {0} specified for the resource attribute option {1}.

Cause: An attempt to add or modify the resource failed because the integer value specified was not compatible with the resource configuration.

Action: Retry after consulting the documentation.

PRCD-01346: failed to relocate services of database {0}

Cause: An attempt to relocate the services of the specified database failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01347: Conflicting options '{0}' and '{1}' specified.

Cause: An attempt to stop the services failed because conflicting options were supplied for database.

Action: Retry by specifying only one of the parameters.

PRCD-01348: failed to stop services of database {0} configured on the pluggable database {1}

Cause: An attempt to stop the intended services for the specified database failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01349: failed to get the status of draining the services {0} of database {1}

Cause: An attempt to find the status of service draining failed. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, address issues reported and retry.

PRCD-01350: invalid result obtained from database agent after the completion of drain action

Cause: An attempt to check the status of service draining completed improperly. The result obtained from the database agent was invalid.

Action: Contact Oracle Support Services.

PRCD-01351: failed to modify Oracle home of the database {0} as user 'root'

Cause: An attempt to modify the Oracle home of the indicated database was rejected because the attempting user was 'root'.

Action: Retry as a different user or specify a non-root user explicitly.

PRCD-01352: Session disconnect is not supported for Oracle home {0} of version {1}.

Cause: The requested operation was rejected because it specified the '-disconnect' option, which is supported for Oracle homes of version 11.2 and higher.

Action: Retry the command without the '-disconnect' option.

PRCD-01353: Resource draining is not supported for Oracle home {0} of version {1}.

Cause: The requested operation was rejected because it specified the '-drain_timeout' option. The '-drain_timeout' option is supported for Oracle homes of version 12.2 and higher.

Action: Retry the command without the '-drain_timeout' option.

PRCD-01354: Databases "{0}" have already been moved to Oracle home {1} on nodes "{2}".

Cause: An attempt to move the indicated databases failed because they had already moved to the indicated destination Oracle home on the indicated nodes.

Action: None

PRCD-01355: failed to start some or all of services: "{0}"

Cause: An attempt to start one or more of the indicated services has failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01356: failed to stop some or all of services: "{0}"

Cause: An attempt to stop one or more of the indicated services has failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01357: failed to relocate some or all of services: "{0}"

Cause: An attempt to relocate one or more of the indicated services has failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01358: Drain in progress on node {0} for services {1}. {2} sessions yet to be drained.

Cause: Status message

Action: None

PRCD-01359: drain complete on node {0} for services {1}

Cause: Status message

Action: None

PRCD-01360: failed to activate the generation of monitoring data for database {0}

Cause: An attempt to start the generation of monitoring data failed. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, address issues reported and retry.

PRCD-01361: failed to deactivate the generation of monitoring data for database {0}

Cause: An attempt to stop the generation of monitoring data failed. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, address issues reported and retry.

PRCD-01362: invalid value {0} for TAF FAILOVER_RESTORE parameter

Cause: The Transparent Application Failover (TAF) FAILOVER_RESTORE parameter value supplied was not valid.

Action: Supply a valid parameter value like NONE or LEVEL1.

PRCD-01363: failed to determine if resource "{0}" is CSS critical

Cause: An attempt to retrieve the value of the CSS_CRITICAL resource attribute failed.

Action: Review the accompanying error messages for details about the failure. Retry the operation after resolving those issues.

PRCD-01364: invalid attempt to define policy-managed database "{0}" as CSS critical

Cause: An attempt to set or unset the CSS_CRITICAL attribute for the indicated database was rejected because it was a policy-managed database.

Action: None

PRCD-01365: failed to define resource "{0}" as CSS critical

Cause: An attempt to change the value of the CSS_CRITICAL attribute of the indicated resource failed.

Action: Review the accompanying error messages for details about the failure. Retry the operation after resolving those issues.

PRCD-01366: invalid attempt to define service "{0}" that belongs to policy-managed database "{1}" as CSS critical

Cause: An attempt to change the value of the CSS_CRITICAL attribute of the indicated service was rejected because it was configured on a policy-managed database.

Action: None

PRCD-01367: failed to stop all services running on nodes: "{0}"

Cause: An attempt to stop all services running on the indicated nodes failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01368: failed to stop all database instances running on nodes: "{0}"

Cause: An attempt to stop some or all database instances running on the indicated nodes failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01371: Service "{0}" belongs to single-instance database "{1}".

Cause: An attempt to relocate the indicated service was rejected because it belongs to a single-instance database.

Action: None

PRCD-01372: Service "{0}" is already running on all servers on which it is configured to run.

Cause: An attempt to relocate the indicated service was rejected because all possible servers are occupied by the resource.

Action: None

PRCD-01373: failed to start database instances on nodes: "{0}"

Cause: An attempt to start database instances on the indicated nodes failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01374: failed to get the status of draining services "{0}"

Cause: An attempt to find the status of draining services failed. Accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, address issues reported, and retry.

PRCD-01375: failed to stop all instances of databases "{0}" running on nodes "{1}"

Cause: An attempt to stop all instances of the indicated databases on the indicated nodes failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01376: failed to stop all instances of databases "{0}"

Cause: An attempt to stop all instances of the indicated databases failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01377: failed to stop services "{0}" on nodes "{1}"

Cause: An attempt to stop the indicated services on the indicated nodes failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01378: failed to stop services of databases "{0}" on nodes "{1}"

Cause: An attempt to stop services of the indicated databases on the indicated nodes failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01379: failed to stop services of databases "{0}"

Cause: An attempt to stop services of the indicated databases failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01380: failed to relocate services of all databases from nodes: "{0}"

Cause: An attempt to relocate all services running on the indicated nodes failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01381: failed to relocate services "{0}" from nodes "{1}"

Cause: An attempt to relocate the indicated services from the indicated nodes failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01382: failed to relocate services of databases "{0}" from nodes "{1}"

Cause: An attempt to relocate services of the indicated databases from the indicated nodes failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01383: failed to relocate services of databases "{0}"

Cause: An attempt to relocate services of the indicated databases failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01384: failed to start services of all databases on nodes: "{0}"

Cause: An attempt to start services of all databases on the indicated nodes failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01385: failed to start services "{0}" on nodes "{1}"

Cause: An attempt to start the indicated services on the indicated nodes failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01386: failed to start services of databases "{0}" on nodes "{1}"

Cause: An attempt to start services of the indicated databases on the indicated nodes failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01387: failed to start services of databases "{0}"

Cause: An attempt to start services of the indicated databases failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01388: failed to start instances of databases "{0}" on nodes "{1}"

Cause: An attempt to start instances of the indicated databases on the indicated nodes failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01389: failed to start all instances of databases "{0}"

Cause: An attempt to start instances of the indicated databases failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01390: Query action for Java service connections failed for service {0} of database {1}.ln{2}

Cause: An attempt to check whether the indicated service had connected Java sessions failed. The appended messages provide additional detail.

Action: Examine the accompanying error messages for details, resolve reported issues and retry the operation.

PRCD-01391: failed to run Java service query action on service {0}

Cause: An attempt to run the Java service query action to check whether the indicated service had connected Java sessions resulted in an unexpected error.

Action: Examine the accompanying error messages for details, resolve reported issues and retry the operation.

PRCD-01392: invalid result obtained from the database agent after the completion of action "{0}"

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRCD-01394: Operation on parallel query services "{0}" rejected.

Cause: An attempt was made to operate on database services using their parallel query helper service names instead of their primary service names.

Action: Retry the operation using the primary service names.

PRCD-01395: Services {0} do not exist.

Cause: An attempt to query services specified one or more that were not defined for

Action: Specify services that are defined for the database, or create the service if appropriate.

PRCD-01396: invalid drain timeout value {0} specified with TRANSACTIONAL stop option during the service resource operation

Cause: An attempt to add, modify or stop the service was rejected because the TRANSACTIONAL stop option mandates drain timeout to be a positive integer.

Action: Modify the drain timeout to a positive integer and retry the request or specify a different stop option.

PRCD-01397: failed to retrieve the CPU count for resource "{0}"

Cause: An attempt to retrieve the value of the WORKLOAD_CPU resource attribute failed.

Action: Review the accompanying error messages for details about the failure. Retry the operation after resolving those issues.

PRCD-01398: failed to set the CPU count for resource "{0}"

Cause: An attempt to change the value of the WORKLOAD_CPU attribute of the indicated resource failed.

Action: Review the accompanying error messages for details about the failure. Retry the operation after resolving those issues.

PRCD-01399: failed to retrieve the percentage indicating the maximum utilization of workload CPUs for resource "{0}"

Cause: An attempt to retrieve the value of the WORKLOAD_CPU_CAP resource attribute failed.

Action: Review the accompanying error messages for details about the failure. Retry the operation after resolving those issues.

PRCD-01400: failed to set the percentage indicating the maximum utilization of workload CPUs for resource "{0}"

Cause: An attempt to change the value of the WORKLOAD_CPU_CAP attribute of the indicated resource failed.

Action: Review the accompanying error messages for details about the failure. Retry the operation after resolving those issues.

PRCD-01401: failed to retrieve the target memory size for resource "{0}"

Cause: An attempt to retrieve the value of the WORKLOAD_MEMORY_TARGET resource attribute failed.

Action: Review the accompanying error messages for details about the failure. Retry the operation after resolving those issues.

PRCD-01402: failed to set the target memory size for resource "{0}"

Cause: An attempt to change the value of the WORKLOAD_MEMORY_TARGET attribute of the indicated resource failed.

Action: Review the accompanying error messages for details about the failure. Retry the operation after resolving those issues.

PRCD-01403: failed to retrieve the maximum memory size for resource "{0}"

Cause: An attempt to retrieve the value of the WORKLOAD_MEMORY_MAX resource attribute failed.

Action: Review the accompanying error messages for details about the failure. Retry the operation after resolving those issues.

PRCD-01404: failed to set the maximum memory size for resource "{0}"

Cause: An attempt to change the value of the WORKLOAD_MEMORY_MAX attribute of the indicated resource failed.

Action: Review the accompanying error messages for details about the failure. Retry the operation after resolving those issues.

PRCD-01405: Disabling session replay is not supported for Oracle home {0} of version {1}.

Cause: The requested operation was rejected because it specified the '-noreplay' option, which is supported for Oracle homes of version 12.1.0.1 and higher.

Action: Retry the command without the '-noreplay' option.

PRCD-01406: failed to retrieve the reader farm server pools for database {0}

Cause: An attempt to retrieve the reader farm server pools of the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01407: failed to set the reader farm pools for database {0}

Cause: An attempt to set the reader farm pools for the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-01408: failed to retrieve the default network number for database services of database "{0}"

Cause: An attempt to retrieve the value of the default network number for creating database services failed.

Action: Review the accompanying error messages for details about the failure. Retry the operation after resolving those issues.

PRCD-01409: failed to set the default network number for database services of database "{0}"

Cause: An attempt to update the value of the default network number for creating database services failed.

Action: Review the accompanying error messages for details about the failure. Retry the operation after resolving those issues.

PRCD-01410: invalid 'cpucount' option value "{0}"

Cause: An attempt to update the CPU count was rejected because the requested value (as displayed) was not greater than zero.

Action: Retry the request specifying a value greater than zero for the 'cpucount' option.

PRCD-01411: failed to enable some or all of services: "{0}"

Cause: An attempt to enable one or more of the indicated services failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01412: failed to enable services of all databases on nodes: "{0}"

Cause: An attempt to enable services of all databases on the indicated nodes failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01413: failed to enable services "{0}" on nodes "{1}"

Cause: An attempt to enable the indicated services on the indicated nodes failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01414: failed to enable services of databases "{0}" on nodes "{1}"

Cause: An attempt to enable services of the indicated databases on the indicated nodes failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01415: failed to enable services of databases "{0}"

Cause: An attempt to enable services of the indicated databases failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01416: failed to disable some or all of services: "{0}"

Cause: An attempt to disable one or more of the indicated services failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01417: failed to disable services of all databases on nodes: "{0}"

Cause: An attempt to disable services of all databases on the indicated nodes failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01418: failed to disable services "{0}" on nodes "{1}"

Cause: An attempt to disable the indicated services on the indicated nodes failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01419: failed to disable services of databases "{0}" on nodes "{1}"

Cause: An attempt to disable services of the indicated databases on the indicated nodes failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01420: failed to disable services of databases "{0}"

Cause: An attempt to disable services of the indicated databases failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01421: failed to perform out-of-place patching for database "{0}" that has services with Java sessions

Cause: An attempt to perform out-of-place patching for the indicated database, which has services with Java sessions, in a rolling fashion failed. The accompanying error messages provide detailed failure information.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-01428: Instance name {0} is already associated with node {1} for Oracle RAC One Node database {2}.

Cause: An attempt to associate the specified instance name to a node was rejected because the specified instance name was already associated with the indicated node.

Action: Retry, specifying a different instance name, or after unsetting the current association using the command 'srvctl modify instance'.

PRCD-01429: failure to get the PDB name for resource {0}

Cause: An attempt to determine the pluggable database (PDB) name for the cluster resource failed.

Action: Ensure that the resource you are querying has been configured. Review the accompanying error messages for details about the failure.

PRCD-01430: failure to get the PDB service name for resource {0}

Cause: An attempt to determine the pluggable database (PDB) service name for the cluster resource failed.

Action: Ensure that the resource you are querying has been configured. Review the accompanying error messages for details about the failure.

PRCD-01431: failure to get the reader farm hub service name for resource {0}

Cause: An attempt to determine the hub service name for the reader farm resource failed.

Action: Ensure that the resource you are querying has been configured. Review the accompanying error messages for details about the failure.

PRCD-01432: failure to set reader farm hub service name {0} for service {1}

Cause: An attempt to set the reader farm hub service for the specified service failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the issues identified there, and then retry the operation.

PRCD-01433: RAC One Node database {0} does not have enough servers in its server pools to initiate an online relocation

Cause: None of the server pools where the indicated RAC One Node database was configured contained an active server other than the one where the indicated database was running.

Action: Ensure that the indicated RAC One Node database's current server pool contains at least two servers, or that another server pool where the indicated RAC One Node database is configured contains at least one server, and then retry the operation.

PRCD-01435: failed to run Java service query action on database {0}

Cause: An attempt to run the Java service query action to check whether the services had connected Java sessions resulted in an unexpected error.

Action: Examine the accompanying error messages for details, resolve reported issues and retry the operation.

PRCD-01436: Addition or modification of failover type to TRANSACTION is not allowed when failover restore is set to AUTO.

Cause: An attempt to add or modify the failover type value to TRANSACTION was rejected because failover restore was set to AUTO.

Action: Retry the operation, specifying the failover type value, and ensuring that the '-failover_restore' option is not specified.

PRCD-01437: failure checking for completion of the 'Prepare Update of Java System' action on database {0}

Cause: An attempt to check for completion of a Prepare Update of Java System action resulted in an unexpected error. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages for details, resolve reported issues, and retry the operation.

PRCD-01438: failed to retrieve the disable reason for database resource "{0}"

Cause: An attempt to retrieve the value of the DISABLED_REASON attribute failed for the resource.

Action: Review the accompanying error messages for details about the failure. Retry the operation after resolving those issues.

PRCD-01439: failure checking for completion of the 'Early Update of Java System' action on database {0}

Cause: An attempt to check for completion of an Early Update of Java System action resulted in an unexpected error. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages for details, resolve reported issues, and retry the operation.

PRCD-01440: failed to run list database services action on database {0}

Cause: An attempt to run the query action to retrieve the list of database instances resulted in an unexpected error.

Action: Examine the accompanying error messages for details, resolve reported issues and retry the operation.

PRCD-01441: failed to retrieve child service list for service {0}

Cause: An attempt to retrieve the GEN_CHILD_SERVICES attribute of the specified service failed.

Action: Examine the accompanying error messages for details.

PRCD-01442: Service {0} has child services, so RLB goal cannot be set to {1}.

Cause: An attempt to modify the Runtime Load Balancing (RLB) goal was rejected because the specified value is not allowed when the service has child services.

Action: Retry the operation specifying NONE or SMART_CONN for '-rlbgoal'.

PRCD-02031: Cause of problem is not available.

Cause: The documentation for the root error message accompanied by this message did not include an explanation as to the likely cause of the root problem.

Action: Contact Oracle Support Services.

PRCD-02032: User action is not available.

Cause: The documentation for the root error message accompanied by this message did not include a recommended solution action for the root problem.

Action: Contact Oracle Support Services.

PRCD-02079: failed to upgrade configuration of management database {0} to version {1}

Cause: An attempt to upgrade the management database configuration failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCD-02080: failed to unset commit outcome because the failover type is set to AUTO

Cause: An attempt to unset the commit outcome attribute of the specified service failed because the failover type was set to AUTO.

Action: Modify the value of failover type and retry the command.

PRCD-02081: The Oracle home path "{0}" does not exist on all the nodes where the database {1} is configured.

Cause: An attempt to convert the database from an administrator-managed configuration to a policy-managed configuration was rejected because the Oracle home path did not exist on all the nodes where the database was configured.

Action: Ensure that the home path exists on all nodes, and then retry the operation.

PRCD-02083: invalid option table family id for the specified non-global service {0}

Cause: An attempt to add or modify the specified option was rejected because an option that is only valid for global services was specified.

Action: Reissue the request without the invalid option.

PRCD-02084: failed to connect to database "{0}" because no instance is running on local node "{1}"

Cause: None of the instances of the indicated database were running on the local node.

Action: Ensure that an instance of the database is running on the local node, and then retry the operation.

PRCD-02085: There are no database instances running on nodes: {0}.

Cause: An attempt to retrieve the database instances running on the indicated nodes found that no instances were running.

Action: None

PRCD-02086: failed to retrieve instances running on nodes: {0}

Cause: An attempt to retrieve the database instances running on the indicated nodes has failed.

Action: Examine the accompanying error messages for details.

PRCD-02087: failed to stop pluggable database {0} and its services on nodes {1}

Cause: An attempt to stop the pluggable database on the specified nodes failed.

Action: Ensure that the user attempting to stop the pluggable database has execute privileges on the pluggable database resource. Also, review the accompanying error messages for details about the failure to stop the pluggable database. Retry after resolving those issues or contact Oracle Support Services.

PRCD-02088: failed to stop pluggable database {0} and its services

Cause: An attempt to stop the pluggable database failed.

Action: Ensure that the user attempting to stop the pluggable database has execute privileges on the pluggable database resource. Also, review the accompanying error messages for details about the failure to stop the pluggable database. Retry after resolving those issues or contact Oracle Support Services.

PRCD-02089: failed to stop pluggable database {0}

Cause: An attempt to stop the specified pluggable database failed.

Action: Examine the accompanying error messages for details.

PRCD-02090: failed to start pluggable database {0}

Cause: An attempt to start the specified pluggable database failed.

Action: Examine the accompanying error messages for details.

PRCD-02091: failed to retrieve list of pluggable databases for database {0}

Cause: An attempt to get the list of pluggable databases for the specified database failed.

Action: Examine the accompanying error messages for details.

PRCD-02092: failed to configure the single instance database {0} with multiple nodes because it is not a Standard Edition database

Cause: An attempt to add a single instance database with multiple nodes was rejected because the database was not a Standard Edition database.

Action: Ensure that the database is either: 1) Standard Edition database 2) Enterprise Edition on ExaCC, ExaCS or ODA Then retry the operation.

PRCD-02093: invalid reset session state {0}

Cause: The reset state value supplied was not valid.

Action: Supply a valid reset state.

PRCD-02094: failed to configure the single instance database {0} with multiple nodes because it is not a Standard Edition database

Cause: An attempt to configure a single instance database with multiple nodes was rejected because the database was not a Standard Edition database.

Action: Ensure that the database is either: 1) Standard Edition database 2) Enterprise Edition on ExaCC, ExaCS or ODA Then retry the operation.

PRCD-02095: failed to remove pluggable database {0}

Cause: An attempt to remove the pluggable database failed.

Action: Examine the accompanying error messages for details.

PRCD-02096: failed to remove pluggable database {0} because the following services are configured for it: "{1}"

Cause: An attempt to remove the specified pluggable database failed because services depended on it.

Action: Ensure there are no services configured for the pluggable database and retry the operation.

PRCD-02097: failed to add or modify service using instance {0} because it is specified multiple times

Cause: The specified instance was specified multiple times.

Action: Remove duplicates and retry.

PRCD-02098: Oracle Clusterware resource does not exist for Oracle ACFS file system of mountpoint {0}. A resource is required for the file system containing Oracle ACFS path {1}.

Cause: The resource for the file system did not exist for the database which had its dependency on the Oracle ASM Cluster File System (Oracle ACFS) path. A resource was required for path used by the database on Oracle ACFS file systems so that Oracle Clusterware can track the database's dependency on the file system.

Action: Add the resource with 'srvctl add filesystem'.

PRCD-02099: failed to add or modify session state consistency because the - failovertype option is not specified as AUTO

Cause: An attempt to modify the session state consistency attribute of the specified service was rejected because the -failovertype option was not specified as AUTO.

Action: Retry the command, specifying the AUTO value for the -failovertype option.

PRCD-02100: failed to set service {0} of the pluggable database {1} to have cardinality {2}

Cause: The service with SINGLETON cardinality could not be modified to have DUPLEX or UNIFORM cardinality. The service with DUPLEX or UNIFORM cardinality could not be modified to have SINGLETON cardinality. The service created using '-preferred' option could not be modified using '-cardinality' option.

Action: Remove the service resource using 'srvctl remove service' command and add the service resource using 'srvctl add service' with the intended cardinality.

PRCD-02101: failed to set the restart attempts for {0}

Cause: An attempt to change the value of the RESTART_ATTEMPTS attribute of the indicated resource failed.

Action: Review the accompanying error messages for details about the failure. Retry the operation after resolving those issues.

PRCD-02102: failed to create or modify service {0} to have cardinality DUPLEX for pluggable database {1} with cardinality {2}

Cause: An attempt to create or modify the specified service with cardinality DUPLEX was rejected because its pluggable database had cardinality 1 or the database was configured on one server.

Action: Create or modify the service to have cardinality SINGLETON or UNIFORM for the pluggable database with cardinality 1 or add more instances to the database and increase the pluggable database's cardinality to 2 or ALL.

PRCD-02103: failed to create or modify pluggable database {0} to have cardinality {1} for database {2} configured with {3} servers

Cause: An attempt to create or modify the pluggable database to have specified cardinality was rejected because its database had fewer instances configured.

Action: Issue 'srvctl add instance' command to add more instances to the database.

PRCD-02104: failed to configure the single instance database {0} with multiple nodes because it is not configured on an Exadata Cloud at Customer, Exadata Cloud Service environment or Oracle Database Appliance

Cause: An attempt to configure a single instance Enterprise database with multiple nodes was rejected because the environment was not ExaCC, ExaCS or ODA.

Action: Ensure that the database is either: 1) Standard Edition database 2) Enterprise Edition on ExaCC, ExaCS or ODA Then retry the operation.

PRCD-02105: failed to create service {0} because the option -commit_outcome_fastpath was missing mandatory option -commit_outcome

Cause: An attempt to add a service was rejected because the use of -commit_outcome_fastpath requires -commit_outcome to be specified.

Action: Retry the operation, specifying a value for -commit_outcome option.

PRCD-02106: failed to create or modify service {0} because -commit_outcome_fastpath cannot be TRUE when -commit_outcome is set to FALSE

Cause: An attempt to add a service was rejected because the value of -commit_outcome_fastpath could not be TRUE if the value of -commit_outcome was FALSE.

Action: Retry the operation, specifying TRUE for -commit_outcome.

PRCD-02107: Addition or modification of failover restore to LEVEL2 is not allowed when failover type is set to AUTO.

Cause: An attempt to add or modify the failover restore value to LEVEL2 was rejected because failover type was set to AUTO.

Action: Take one of the following actions: - Modify the value of failover restore. - Set the failover type to TRANSACTION.

PRCD-02108: failed to create or modify service {0} with state consistency as HYBRID because the -failovertype option is not specified as AUTO

Cause: An attempt to create or modify a service with the value of session state consistency attribute as HYBRID was rejected because the -failovertype option was not specified as AUTO.

Action: Retry the command, specifying the AUTO value for the -failovertype option.

PRCD-02109: failed to submit a check on database {0}

Cause: After the resource was enabled, an attempt to submit a check on the indicated database resource failed.

Action: Review the accompanying error messages for details about the failure. Retry the operation after resolving those issues.

PRCD-02110: There was no instance of the database {0} running from the old home {1}.

Cause: Either all instances of the database were already transferred from the old home to the new home or instances running from the old home were stopped.

Action: If all instances were transferred to the new database home, no action is required. If some instances were stopped from the old database home, execute 'srvctl start instance' command to start instances from the new home.

PRCD-02111: failed to modify database {0} using configured Oracle home {1}

Cause: An attempt to modify the Oracle home of the indicated database was rejected because the database was already configured with the home specified.

Action: Retry using a different database home.

PRCD-02112: Invalid dual instance transfer state {0}

Cause: An invalid dual instance transfer state was supplied.

Action: Supply a valid dual instance transfer state either TRANSFER or REVERT.

PRCF-01001 to PRCF-02087

PRCF-01001: The directory "{0}" does not exist

Cause: A directory that did not exist was chosen for the top-level directory of the directory map.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01002: Source directory "{0}" is not a directory

Cause: An existing file which was not a directory was provided as top-level directory.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01003: The file "{0}" does not exist

Cause: The file was not found in the file system.

Action: Make sure that the file exists in the file system.

PRCF-01004: The link destination "{0}" does not exist

Cause: The link destination was not found in the file system.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01005: "{0}" conflicts with the exclude-list

Cause: The pathname (directory, file or symbolic link pathname) to add to the directory map could not be added as it conflicted with the exclude list.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01006: The directory "{0}" exists already in the directory map

Cause: The directory existed already in the directory map.

Action: No action. This is just to let the user know that no action is taken as the task is already complete.

PRCF-01007: The file "{0}" exists already in the directory map

Cause: The file existed already in the directory map.

Action: No action. This is just to let the user know that no action is taken as the task is already complete.

PRCF-01008: The link "{0}" exists already in the directory map

Cause: The link existed already in the directory map.

Action: No action. This is just to let the user know that no action is taken as the task is already complete.

PRCF-01009: The parent of "{0}" does not exist

Cause: The parent directory of the content (directory, file or symbolic link) that was being processed did not exist.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01010: "{0}" is not a directory

Cause: The indicated object was expected to be a directory, but it was not.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01011: Cannot remove "{0}" as the directory map does not contain it

Cause: The content (i.e., directory, file or symbolic link) could not be removed from the directory map as it did not exist there.

Action: No action. This is just to let the user know that no action is taken as the task is already complete.

PRCF-01012: The following contents (directories, files or symbolic links) cannot be included to to the list of contents to add to the directory map: {0}

Cause: The contents that could not be included to the add-list were those which conflicted with the exclude-list (see the accompanying PRCF-1005 message).

Action: No action. This is just to let the user know about the conflicts with the exclude-list.

PRCF-01013: The directory map has no entry

Cause: The user tried to acquire information about an empty directory map.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01014: Cannot add "{0}" as there is no directory map

Cause: The user tried to add a content (i.e., directory, file or symbolic link) to an empty directory map. This operation is allowed only if there is a directory map.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01015: Cannot add "{0}" to the directory map as "{0}" does not exist

Cause: The content to add to the directory map was not found in the file system.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01016: Cannot remove "{0}" as there is no directory map

Cause: The user tried to remove a content (i.e., directory, file or symbolic link) from an empty directory map. This operation is allowed only if there is a directory map.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01017: Cannot remove "{0}" from the directory map as "{0}" does not exist

Cause: The content to remove from the directory map was not found in the file system.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01018: Exception encountered. Details: {0}

Cause: An unexpected error condition was detected during reading the exclude-list or include-list file.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01019: The API supports only Unix OS

Cause: The user was running on Windows OS.

Action: Make sure that the OS is Unix or Linux.

PRCF-01020: "{0}" is not a file

Cause: The content that was expected to be a file which turned out not to be a file.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01021: "{0}" is not a valid pathname

Cause: The content that was expected to be a valid pathname which turned out to be an invalid one.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01022: "{0}" does not exist

Cause: The specified pathname does not exist in the file system.

Action: Make sure that the pathname exists in the file system.

PRCF-01023: Symbolic link "{0}" points to "{1}" which does not exist

Cause: An existing symbolic link that resolves to a pathname that does not exist.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01024: Symbolic link "{0}" points to "{1}" which is is not a directory

Cause: An existing symbolic link that resolves to a non-directory pathname was provided as top-level directory.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-01025: Error while trying to open file "{0}" for reading. Details: {1}

Cause: An I/O error occurred while trying to open the file for reading.

Action: Make sure that the file exists, is a regular file rather than a directory and that the user has read permissions on the file. Also, look at the accompanying error messages for additional details.

PRCF-01026: Error while reading file "{0}". Details: {1}

Cause: An I/O error occurred while reading or closing the file.

Action: Look at the accompanying error messages for additional details.

PRCF-01027: Error while trying to create file "{0}" for writing. Details: {1}

Cause: An I/O error occurred while trying to create the file for writing.

Action: Make sure that if the file exists it is a regular file rather than a directory, if it does not exist it can be created and that the user has write permissions on the file. Also, look at the accompanying error messages for additional details.

PRCF-01028: Error while writing file "{0}". Details: {1}

Cause: An I/O error occurred while writing or closing the file.

Action: Look at the accompanying error messages for additional details.

PRCF-01029: Cannot create directory "{0}"

Cause: An error occurred while trying to create the directory.

Action: Ensure that the user has write permissions on the parent directories in the directory path.

PRCF-01030: Input argument "{0}" value is not valid.

Cause: This is an internal error. The value for the specified parameter was null.

Action: Contact Oracle Support Services.

PRCF-01031: Input array element "{0}" is not valid.

Cause: This is an internal error. The value for the specified array element was null.

Action: Contact Oracle Support Services.

PRCF-01032: Input list element "{0}" is not valid.

Cause: This is an internal error. The value for the specified list element was null.

Action: Contact Oracle Support Services.

PRCF-01033: The node "{0}" is duplicated in the input list.

Cause: A node name appeared more than once in the input list.

Action: Ensure that each node name is specified once.

PRCF-01034: The file "{0}" does not contain a JSON object.

Cause: The file did not start with a JSON object.

Action: Ensure that the file contains a JSON object.

PRCF-01035: unable to find the "srvmlogger" tag

Cause: The file did not contain the srvmlogger tag required to configure the logger.

Action: Ensure that the file contains the srvmlogger tag.

PRCF-01036: The archive policy "{0}" is invalid.

Cause: The archive policy provided was not valid.

Action: Supply a valid archive policy.

PRCF-02001: Connection to host/IP address: {0} -- port: {1} refused

Cause: Could not establish connection to the provided host/IP address using the port number reported.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02002: Connection to node "{0}" is lost

Cause: The connection to the remote node with the specific node ID was lost.

Action: Verify that the remote node (which acts as server) is still up and running. Then do the same for the local node (which acts as client). Also, examine the accompanying error messages for additional details, address issues reported, and retry.

PRCF-02003: Expected "{0}" but received "{1}"

Cause: The command was not executed successfully. The local node received a reply from the remote node that was different from the expected one.

Action: No action. The program should take care of it (i.e., catch the exception and handle it).

PRCF-02004: Problem encountered while saving the directory listing to file "{0}". Details : {1}

Cause: While trying to save the directory listing to a file, the operation could not be completed successfully.

Action: If you can correct the problem indicated in the accompanying details, do so and then retry the request. Otherwise, contact Oracle Support Services.

PRCF-02005: File transfer cannot proceed because the remote node names do not match the remote node ports

Cause: An internal error caused a mismatch between the number of remote nodes and the number of remote node ports.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02006: File transfer cannot proceed because the list of remote nodes is empty

Cause: An empty list of remote nodes was passed as argument.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02007: Invalid selection for the remote node port. "{0}" is not an integer number as expected.

Cause: The port number for the remote node was either not a number at all or not an integer number.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02008: The remote node port number "{0}" is out of the expected range [1024, 65535]

Cause: The port number for the remote node was an integer number but either less than 1024 or greater than 65535.

Action: Retry the transfer after setting valid port. If the problem still exists, contact Oracle Support Services.

PRCF-02009: Cannot proceed with the file transfer. There has to be at least one remote node to send the installer files!

Cause: The user either provided an empty list of remote nodes or each remote node of the list had invalid format.

Action: Make sure that the list of remote nodes is not empty and the remote nodes have valid format.

PRCF-02010: All connections to the remote nodes got refused. Cannot proceed with the file transfer. There has to be at least one remote node to send the installer files!

Cause: All the attempts to connect to the remote nodes that had valid format failed.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02011: The file "{0}" cannot be read successfully

Cause: The file existed in the file system but could not be read successfully.

Action: Make sure that the file is not corrupted. To verify that try to open the file manually and read its contents.

PRCF-02012: The top-level directory "{0}" does not exist

Cause: The top-level directory was not found in the file system.

Action: Make sure that the top-level directory exists in the file system.

PRCF-02013: Cannot find the CRS Home

Cause: The CRS Home did not exist or 'oui' was not a directory under the CRS Home.

Action: Make sure that 'oui' is a directory under the CRS Home. Refer to your platform-specific documentation for information about locating the Oracle software inventory.

PRCF-02014: Executing command "{0}" on "{1}" failed on node "{2}".ln{3}

Cause: The command ('mkdir', 'mkfile', 'mklink' or 'wrfail') failed while executing on the remote node.

Action: Try to fix the problem based on the error message. If the problem still exists, contact Oracle Support Services.

PRCF-02015: One or more commands were not executed successfully on one or more nodes

Cause: At least one of the commands 'mkdir', 'mkfile', 'mklink' or 'wrfail' failed while executing on one or more remote nodes.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02016: Required binary file "{0}" not found

Cause: The binary file was not found under the expected location.

Action: Contact Oracle Support Services.

PRCF-02017: Node "{0}": The transfer binary was not executed successfully as it returned a wrong port number

Cause: Misbehavior of the transfer binary on the provided node.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02018: Node "{0}": The transfer binary was not executed successfully. Details:ln{1}

Cause: Unsuccessful execution of the transfer binary.

Action: Examine the accompanying error message for additional details, address issues reported, and retry. If the problem persists, contact Oracle Support Services.

PRCF-02019: Cannot retrieve the name for the local node

Cause: No IP address for the local host could be found.

Action: Use the ping command manually to check whether you get a reply from the host or not.

PRCF-02020: Cannot retrieve the host for node "{0}"

Cause: No IP address for the node host could be found.

Action: Use the ping command manually to check whether you get a reply from the host or not.

PRCF-02021: There is a mismatch between the number of node names ({0}) and the number of node destination directories ({1})

Cause: An internal error caused a mismatch between the number of remote nodes and the number of remote destination directories.

Action: Retry the transfer. If the problem still exists, contact Oracle Support Services.

PRCF-02022: The file "{0}" became smaller while being transferred

Cause: The indicated source file was smaller following the transfer than when it was initiated. As a result, the resulting file includes contents no longer present in the source.

Action: None

**PRCF-02023: The following contents cannot be transferred as they are non-readable.
lnDirectories:\n {0} lnFiles:\n {1}**

Cause: The file permissions for the listed contents did not allow the requested operation.

Action: Ensure that the user has read permissions on the specified files and directories.

PRCF-02024: The directory "{0}" is not transferred as it is non-readable

Cause: The file permissions of the listed directory did not allow the requested operation.

Action: None

PRCF-02025: Internal error: {0}

Cause: An internal error occurred. The included value is an internal identifier.

Action: Contact Oracle Support Services.

PRCF-02026: File name is too long: {0}

Cause: An internal error occurred.

Action: Ensure that the copy doesn't result in pathnames that are too long, by making sure that the destination directory name is not too long.

PRCF-02027: Link path is too long: {0}

Cause: An internal error occurred.

Action: Ensure that the copy doesn't result in pathnames that are too long, by making sure that the destination directory name is not too long.

PRCF-02028: Failed to get system information for {0}: {1}

Cause: An attempt to get system information failed

Action: Make sure that the specified file, directory or symbolic link exists. To verify that execute 'ls -l file' manually.

PRCF-02029: The transfer operation completed with partial failures.

Cause: The operation failed to transfer all of the contents to one or more nodes.

Action: Look at the accompanying error messages for details.

PRCF-02030: The source and destination directories ({0}) on node {1} are the same.

Cause: The source and destination directory on the node where Java is installed were the same.

Action: Ensure that the destination directory is different than the source directory.

PRCF-02031: Parallel transfer workload distribution error.

Cause: An error occurred while distributing the transfer workload to multiple threads.

Action: Look at the accompanying error messages for details.

PRCF-02035: The copy operation failed on the following nodes: {0}.

Cause: The copy operation failed to copy the file or directory to the remote nodes due to an error in the supplied credentials for the remote node connection or because the user did not have sufficient privileges.

Action: Correct the user credentials for the remote node connection and retry the copy operation.

PRCF-02036: The copy operation failed.

Cause: The copy operation failed to copy the file or directory to the remote nodes.

Action: Examine the accompanying error messages for details.

PRCF-02040: Error while opening socket. Details:\n{0}

Cause: An I/O error occurred while opening the socket.

Action: Examine the accompanying error message for additional details.

PRCF-02041: The transfer failed for all nodes. Details:\n{0}

Cause: All nodes failed to receive the data due to critical errors.

Action: Examine the accompanying error message for additional details.

PRCF-02042: invalid command line syntax, correct syntax:"{0}"

Cause: An attempt to execute a command was rejected because the command syntax was invalid.

Action: Examine the usage provided for this command and use the correct syntax.

PRCF-02043: failed to allocate memory.

Cause: The attempted operation was unable to complete because insufficient system memory was available.

Action: Correct the system memory resources problem and retry.

PRCF-02044: Failed to parse node plan details. Internal error occurred: {0}

Cause: An internal error occurred. The value displayed is an internal identifier.

Action: Contact Oracle Support Services.

PRCF-02045: Error while binding socket for node "{0}" and port {1}. OS error string: {2}

Cause: The requested operation could not be completed because an I/O error occurred while attempting to bind the socket to establish the necessary communication channel.

Action: Examine the accompanying error message for additional details, address issues reported, and retry.

PRCF-02046: Listen socket could not be created for node "{0}" and port {1}. OS error string: {0}

Cause: The requested operation could not be completed because an I/O error occurred while attempting to perform a 'listen' the socket to establish the necessary communication channel.

Action: Examine the accompanying error message for additional details, address issues reported, and retry.

PRCF-02047: Failed to accept socket connection. OS error string: {0}

Cause: The requested operation could not be completed because an I/O error occurred while attempting to accept the socket connection to establish the necessary communication channel.

Action: Examine the accompanying error message for additional details, address issues reported, and retry.

PRCF-02048: Invalid command identified. Details: {0}

Cause: An internal error occurred. The included value is an internal identifier.

Action: Contact Oracle Support Services.

PRCF-02049: Error while trying to create directory "{0}" on node {1}. Details: {2}

Cause: The requested operation could not be completed because an error occurred while attempting to create the indicated destination directory. Either there was already a file or symbolic link with the indicated path that was not a directory, or the directory could not be created. Specific failure data is displayed following the message.

Action: If the destination path exists, make sure it is a writable directory rather than a regular file or symbolic link. Otherwise, make sure the user has permissions to create the desired directory. Examine the additional details provided, address issues reported, and retry.

PRCF-02050: Error while trying to modify permissions for "{0}" on node {1}. Details: {2}

Cause: The requested operation could not be completed because an error occurred while trying to modify permissions.

Action: Make sure that user has appropriate permissions to modify the directory or regular file or symbolic link, Also, examine the accompanying error messages for additional details, address issues reported, and retry.

PRCF-02051: Failed to create link from source path "{0}" to destination path "{1}" on node {2}. Details: {3}

Cause: The requested operation could not be completed because an error occurred while trying to create a link from the indicated source path to the indicated destination.

Action: Examine the accompanying error messages for additional details, address issues reported, and retry.

PRCF-02052: Failed to unlink path "{0}" on node {1}. Details: {2}

Cause: The requested operation could not be completed because an error occurred while trying to unlink the indicated path.

Action: Examine the accompanying error messages for additional details, address issues reported, and retry.

PRCF-02053: Failed to read data from socket while writing to file "{0}" on node {1}. Details: {2}

Cause: The requested operation could not be completed because an error occurred while reading data from the socket.

Action: Examine the accompanying error message for additional details, address issues reported, and retry.

PRCF-02054: The source file "{0}" became larger during the transfer.

Cause: The indicated source file continued to grow after the transfer was initiated. Because the transfer size was determined at the start of the operation, the resulting file was not a complete copy of the source.

Action: None

PRCF-02055: The transferred binary was not executed successfully on node: "{0}". Details: {1}

Cause: The requested operation could not be completed because an error occurred while executing the transferred binary on the indicated node. Specific failure data is displayed following the message.

Action: Examine the accompanying error message for additional details, address issues reported, and retry. If the problem persists, contact Oracle Support Services.

PRCF-02056: The copy operation failed on node: "{0}". Details:\n{1}

Cause: The requested operation could not be completed because an error occurred while copying the file or directory to the indicated node. Either the user did not have credentials for connecting to the node or the user did not have sufficient privileges. Specific failure data is displayed following the message.

Action: Examine the accompanying error message for additional details, address issues reported, and retry. If the problem persists, contact Oracle Support Services.

PRCF-02057: failed to copy file "{0}" to "{1}"

Cause: An error occurred while copying the file from the specified path to the indicated destination path.

Action: Make sure that the source path exists and that the file has read access permissions and that the target directory has write access permissions. If the problem persists, contact Oracle Support Services.

PRCF-02058: Timeout occurred while executing transferred binary on node: "{0}". Details: {1}

Cause: The requested operation could not be completed within the time limit while executing the transferred binary on the indicated node. Specific failure data is displayed following the message.

Action: Examine the accompanying error message for additional details, address issues reported, and retry. If the problem persists, contact Oracle Support Services.

PRCF-02059: Timeout occurred during copy operation on node: "{0}". Details: {1}

Cause: The requested operation could not be completed within the time limit. Specific failure data is displayed following the message.

Action: Examine the accompanying error message for additional details, address issues reported, and retry. If the problem persists, contact Oracle Support Services.

PRCF-02060: Error executing the transfer binary. Details: {0}

Cause: An error occurred while executing the transfer binary. Specific failure data is displayed following the message.

Action: Examine the accompanying error message for additional details, address issues reported, and retry. If the problem persists, contact Oracle Support Services.

PRCF-02061: Invalid request for user authenticated transfer to multiple nodes.

Cause: A user authenticated transfer was attempted between the local and more than one remote node.

Action: Retry the transfer after establishing passwordless communication or use a single remote node.

PRCF-02062: remote command execution error on node "{0}":\n{1}

Cause: A user authenticated remote execution attempt failed.

Action: Examine the accompanying error messages for details.

PRCF-02063: Connection to node "{0}" was lost while receiving data.

Cause: An attempted file transfer operation failed because the connection to the indicated remote node was lost.

Action: Verify that the remote node (which acts as server) is still up and running.

PRCF-02064: Connection to node "{0}" was lost while sending data.

Cause: An attempted file transfer operation failed because the connection to the indicated remote node was lost.

Action: Verify that the remote node (which acts as server) is still up and running. Then do the same for the local node (which acts as client) and retry the file transfer operation.

PRCF-02065: Error sending command "{0}". Details:\n{1}

Cause: An attempted file transfer operation failed because an error occurred while sending the indicated command.

Action: Examine the accompanying error message for additional details, address the issues raised and retry the command.

PRCF-02066: Error sending file "{0}". Details:\n{1}

Cause: An attempted file transfer operation failed because an error occurred while sending the indicated file.

Action: Examine the accompanying error message for additional details, address the issues raised and retry the command.

PRCF-02067: Reply mismatch: Expected "{0}", but received "{1}" from node "{2}"

Cause: An attempted file transfer operation failed because an error occurred on the indicated node while creating a directory or symbolic links or writing to a file.

Action: Examine the accompanying error message for additional details, address the issues raised and retry the command.

PRCF-02071: The command "{0}" failed on the following nodes: {1}.

Cause: An attempt to run the specified command failed on the indicated nodes.

Action: Examine the accompanying error message for additional details, address the issues raised and retry the command.

PRCF-02072: The command "{0}" failed.

Cause: An attempt to run the specified command failed.

Action: Examine the accompanying error messages for additional details, address the issues raised and retry the command.

PRCF-02073: Invoking copy method failed. Details:\n{0}

Cause: An attempt to invoke the copy method failed.

Action: Ensure that the remote node is up and retry the command.

PRCF-02074: failed to copy file {0} to remote nodes {1}

Cause: An attempt to copy the file failed.

Action: Ensure that the remote nodes are up and retry the command.

PRCF-02075: File transfer error from node {0} to node {1}. Unable to retrieve error details.

Cause: An error occurred during a file transfer between the indicated nodes, but due to an unexpected protocol error, the error details could not be retrieved.

Action: Retry the operation and if the problem persists, contact Oracle Support Services.

PRCF-02076: Copy operation failed on node "{0}" because the connection is lost.

Cause: The copy operation could not be completed because the connection was lost.

Action: Retry the copy after making sure that the node is up and running.

PRCF-02077: Copy operation failed on node "{0}" with the following errors:\n{1}

Cause: The copy operation could not be completed because it encountered the indicated errors.

Action: Examine the accompanying error message for additional details, address the issues raised and retry the command.

PRCF-02078: Copy operation failed on node "{0}" with too many errors such as the following:\n

Cause: The copy operation could not be completed because it encountered too many errors.

Action: Examine the indicated errors, resolve the problems, and then retry the operation.

PRCF-02079: Source directory "{0}" is the same as the destination directory in the copy operation.

Cause: The source directory for the copy operation on the local node was the same as the destination directory.

Action: Ensure that the source and destination directories are different.

PRCF-02080: The copy operation on the local node failed with the following errors: {0}

Cause: The copy operation could not be completed because it encountered the indicated errors.

Action: Examine the indicated errors, resolve the problems, and then retry the operation.

PRCF-02081: unable to detect whether the user can write to directory '{0}' on the following nodes: {1}

Cause: An attempt to copy the files under the indicated directory failed because an error occurred while determining whether the directory was writable by the user on all nodes.

Action: Ensure that the directory exists, and that the user has write permissions on all nodes. Also, refer to the accompanying error messages for additional details, correct the errors, and retry.

PRCF-02082: Directory '{0}' is not writable on the following nodes: {1}

Cause: An attempt to copy the files under the indicated directory failed, because write permissions were not granted to its path on the specified nodes.

Action: Ensure that the directory exists, write permissions to its path are granted on all nodes, and retry.

PRCF-02083: No response received from transfer binary running on node {0} for {1} seconds.

Cause: The transfer binary running on the specified node did not send a signal that it was alive on time.

Action: Retry the operation. If the problem persists, contact Oracle Support Services.

PRCF-02084: remote command "{0}" execution failed even after retrying "{1}" times with error \n"{2}"

Cause: Remote execution of the command failed.

Action: Examine the accompanying error messages for details.

PRCF-02085: remote command "{0}" failed as the command output received was empty

Cause: Remote execution of the command failed.

Action: Examine the accompanying error messages for details.

PRCF-02086: No response received from node "{0}"

Cause: The specified node did not send a signal indicating that it was connected to the local node.

Action: Verify that the remote node (which acts as server) is still up and running. Then do the same for the local node (which acts as client) and verify passwordless communication. Also, examine the accompanying error messages for additional details, address issues reported, and retry.

PRCF-02087: Connection to the remote nodes {0} refused. Cannot proceed with the file transfer. Details:\n{1}

Cause: All attempts to connect to the indicated remote nodes failed.

Action: Examine the accompanying error message for additional details, address issues reported, and retry. If the problem persists, contact Oracle Support.

PRCG-01000 to PRCG-01333

PRCG-01000: Failed to create Rapid Home Provisioning Server configuration

Cause: An attempt to create configuration for the Rapid Home Provisioning Server failed. Either the request was not issued by an account with administrative access (root, Administrator, etc.) or a problem was detected inside Oracle Clusterware.

Action: Examine the accompanying error messages for details. Ensure that the user is running with administrative access.

PRCG-01001: Failed to create Rapid Home Provisioning Server configuration because there is an existing Rapid Home Provisioning Client configured on the cluster

Cause: An attempt to create configuration for the Rapid Home Provisioning Server failed because there was a Rapid Home Provisioning Client configured on the cluster.

Action: Either configure the Rapid Home Provisioning Server on another cluster or remove the existing Rapid Home Provisioning Client configuration.

PRCG-01002: Failed to find the management database resource

Cause: An attempt to find the management database resource used for the Rapid Home Provisioning Server failed because the clusterware stack encountered errors.

Action: Examine the accompanying error messages for details.

PRCG-01003: Failed to create the Rapid Home Provisioning Client configuration

Cause: An attempt to create the configuration for the Rapid Home Provisioning Client failed. Either the request was not issued by an account with administrative access (root, Administrator, etc.) or a problem was detected inside Oracle Clusterware.

Action: Examine the accompanying error messages for details. Ensure that the user is running with administrative access.

PRCG-01004: Failed to retrieve storage base path attribute for Rapid Home Provisioning Server

Cause: An attempt to retrieve the STORAGE_BASE_PATH attribute of the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01005: Failed to update the storage base path to {0} for Rapid Home Provisioning Server

Cause: An attempt to update the STORAGE_BASE_PATH attribute of the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01006: Failed to retrieve disk group list for Rapid Home Provisioning Server

Cause: An attempt to retrieve the disk groups from the start dependencies of the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01007: Client data file {0} does not exist for Rapid Home Provisioning Client

Cause: An attempt to locate the specified client data file failed.

Action: Make sure that the path and name of the client data file were entered correctly and the absolute path of the client data file exists.

PRCG-01008: Client data file {0} is not a file

Cause: Specified client data file was a directory.

Action: Make sure that to specify the absolute file path of the client data file.

PRCG-01009: Failed to create Rapid Home Provisioning Client because there is an existing Rapid Home Provisioning Server configured on the cluster

Cause: An attempt to create clusterware resource for the Rapid Home Provisioning Client failed because there was a Rapid Home Provisioning Server configured on the cluster.

Action: Either configure the Rapid Home Provisioning Client on another cluster or remove the existing Rapid Home Provisioning Server configuration.

PRCG-01010: Failed to determine whether Oracle ACFS is configured on Rapid Home Provisioning Server

Cause: An attempt to verify that Oracle Automatic Storage Management Cluster File System (Oracle ACFS) was configured on Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01011: Failed to determine whether Oracle ACFS is configured on Rapid Home Provisioning Client

Cause: An attempt to verify that Oracle Automatic Storage Management Cluster File System (Oracle ACFS) was configured on Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01012: Oracle ACFS is not configured on Rapid Home Provisioning Server

Cause: Oracle Automatic Storage Management Cluster File System (Oracle ACFS) was not configured on Rapid Home Provisioning Server.

Action: Configure Oracle ACFS on Rapid Home Provisioning Server.

PRCG-01013: Oracle ACFS is not configured on Rapid Home Provisioning Client

Cause: Either storage base path or disk group was supplied, but Oracle Automatic Storage Management Cluster File System (Oracle ACFS) was not configured on Rapid Home Provisioning Client.

Action: Either configure ACFS on Rapid Home Provisioning Client or run the command 'srvctl add rhpclient' without the '-storage' and '-diskgroup' options.

PRCG-01014: Failed to retrieve storage base path for Rapid Home Provisioning Client

Cause: An attempt to retrieve the STORAGE_BASE_PATH attribute of the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01015: Failed to update the storage base path to {0} for Rapid Home Provisioning Client

Cause: An attempt to update the storage base path for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01016: Failed to retrieve disk group list for Rapid Home Provisioning Client

Cause: Failed to retrieve the disk groups from the start dependencies of the Rapid Home Provisioning Client.

Action: Examine the accompanying error messages for details.

PRCG-01017: Failed to check for existence of Rapid Home Provisioning Server

Cause: An attempt to find the Rapid Home Provisioning Server resource failed.

Action: Examine the accompanying error messages for details.

PRCG-01018: Failed to check for existence of Rapid Home Provisioning Client

Cause: An attempt to find the Rapid Home Provisioning Client resource failed.

Action: Examine the accompanying error messages for details.

PRCG-01019: Failed to retrieve database schema for Rapid Home Provisioning Server

Cause: An attempt to retrieve the DB_SCHEMA attribute of the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01020: Invalid option {0} for the Rapid Home Provisioning action

Cause: The option supplied was not a valid option name.

Action: Supply a valid option.

PRCG-01021: Invalid return status {0} for the Rapid Home Provisioning action

Cause: An unexpected return status occurred.

Action: Contact Oracle Support.

PRCG-01022: failed to connect to the Rapid Home Provisioning daemon for cluster {0}

Cause: Rapid Home Provisioning Server (RHPS) or Rapid Home Provisioning Client (RHPC) is not running.

Action: Examine the accompanying error messages for details and start RHPS or RHPC.

PRCG-01023: Failed to start Rapid Home Provisioning instance

Cause: An attempt to start the Rapid Home Provisioning instance failed.

Action: Examine the accompanying error messages for details.

PRCG-01024: Failed to destroy Rapid Home Provisioning instance

Cause: An attempt to destroy the Rapid Home Provisioning instance failed.

Action: Examine the accompanying error messages for details.

PRCG-01025: Failed to stop Rapid Home Provisioning instance

Cause: An attempt to stop the Rapid Home Provisioning instance failed.

Action: Examine the accompanying error messages for details.

PRCG-01026: Failed to retrieve the Rapid Home Provisioning version

Cause: An attempt to retrieve the version of the Rapid Home Provisioning instance failed.

Action: Examine the accompanying error messages for details.

PRCG-01027: Invalid command specified: {0}

Cause: The command keyword specified on the command line was not recognized.

Action: Valid commands are add|allow|query|delete|deleteimage|disallow| export| grant|import|insertimage|modify|promote|revoke. Inline help for rhpctl is printed with this error. Check the rhpctl usage printed along with this error and specify a valid command.

PRCG-01028: Invalid object specified: {0}

Cause: The object keyword specified on the command line was not recognized.

Action: Check the rhpctl inline help printed along with the error message and specify a valid object.

PRCG-01029: Invalid value {0} for command-line option **-{1}**

Cause: An invalid value was specified for the command-line option.

Action: Check the value printed and specify the correct value.

PRCG-01030: Missing mandatory option **-{0}**

Cause: An option required by the specified command was missing.

Action: Issue 'rhpctl *command object* -help' to display option details for the command and make sure that all the mandatory options are specified.

PRCG-01031: Invalid command-line options for command: {0} and object: {1}. {2} can not be specified with {3}.

Cause: A command was specified with conflicting or incomplete options, some options in one set are missing or the options from both sets were specified.

Action: Check the command-line options entered and make sure that all the options in one set are specified.

PRCG-01032: Command line option {0} must be followed by a value.

Cause: A command-line option that requires a value was specified without one.

Action: Look at the usage and of the command and specify an appropriate value.

PRCG-01033: Invalid command-line option: **-{0}**

Cause: An invalid command-line option was specified.

Action: Look at the usage of the command and specify the correct option.

PRCG-01034: No option was specified for command : {0} and object: {1} combination. {2} options should be specified.

Cause: Required options were omitted from a command.

Action: Look at the usage of the command and specify required options.

PRCG-01035: Invalid syntax or missing required option: {0} in the specified command.

Cause: A required option was not specified for the command or an invalid combination of options was specified.

Action: Specify required options or check the command-line options entered and make sure that all the options in one set are specified.

PRCG-01037: Failed to update the cluster name of Rapid Home Provisioning Server {0} for Rapid Home Provisioning Client

Cause: An attempt to update the GHS_CLUSTERNAME attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01038: Failed to retrieve the cluster name of Rapid Home Provisioning Server for Rapid Home Provisioning Client

Cause: An attempt to retrieve the GHS_CLUSTERNAME attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01039: Failed to update the GNS discovery string {0} for Rapid Home Provisioning Client

Cause: An attempt to update the GNS_DISCOVERY_STRING attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01040: Failed to retrieve the GNS discovery string for Rapid Home Provisioning Client

Cause: An attempt to retrieve the GNS_DISCOVERY_STRING attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01041: Invalid internal parameter {0}

Cause: The internal parameter supplied was not a valid parameter.

Action: Contact Oracle Support.

PRCG-01043: Failed to modify the listening port of Rapid Home Provisioning Server to {0}

Cause: An attempt to modify the listening port of Rapid Home Provisioning Server failed.

Action: Ensure that the Oracle Clusterware stack is up and that the specified IP port is not in use by another program.

PRCG-01044: Failed to modify the listening port of Rapid Home Provisioning Client to {0}

Cause: An attempt to modify the listening port of Rapid Home Provisioning Client failed.

Action: Ensure that the Oracle Clusterware stack is up and that the specified IP port is not in use by another program.

PRCG-01045: The specified '-toclientdata' path does not exist

Cause: The '-toclientdata *path*' option value was not an existing file system path.

Action: Ensure that the '-toclientdata *path*' option value corresponds to an existing file system path.

PRCG-01046: Missing mandatory options, either -role or -maproles required.

Cause: The command requires exactly one set of mandatory command-line options.

Action: Check the command-line options entered and make sure that all the mandatory options in one set are specified.

PRCG-01047: missing at least one of the mandatory command-line options: {0}

Cause: One or more of the mentioned options were required but not specified for the command.

Action: Review the command-line options and reissue the command specifying the mandatory options.

PRCG-01048: Failed to import client data from file {0} for Rapid Home Provisioning Client

Cause: An attempt to import client data for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01049: Storage base path "{0}" is not an absolute path

Cause: The storage base path value was not an absolute path.

Action: Specify an absolute path in the '-storage' argument.

PRCG-01050: Rapid Home Provisioning Server is not running.

Cause: The requested operation failed because the Rapid Home Provisioning Server was not started.

Action: Start the Rapid Home Provisioning Server using the command 'srvctl start rhpserver' and retry the operation.

PRCG-01051: Rapid Home Provisioning Client is not running.

Cause: The requested operation failed because the Rapid Home Provisioning Client was not started.

Action: Start the Rapid Home Provisioning Client using the command 'srvctl start rhpcient' and retry the operation.

PRCG-01052: The client data file {0} already exists in the specified '-toclientdata' path

Cause: While generating client data, the specified file was found.

Action: Delete the existing file and retry the command.

PRCG-01053: The specified path "{0}" does not exist on nodes {1}

Cause: The mountpath specified was not an existing directory on all cluster nodes.

Action: Ensure that the path corresponds to an existing directory on all cluster nodes.

PRCG-01054: The "-{0}" option requires the specification of {1} option.

Cause: Required options were omitted from a command.

Action: Look at the usage of the command and specify required options.

PRCG-01055: The options "-{0}" and "-{1}" can not be specified together.

Cause: An invalid combination of options was specified together.

Action: Specify only valid combination of options and retry the command.

PRCG-01056: Both "-{0}" and "-{1}" options can not be specified with the "-dbname" option.

Cause: An invalid combination of options was specified.

Action: Specify only one of the other possible options.

PRCG-01057: The specified path "{0}" does not exist

Cause: The path specified was not an existing directory.

Action: Ensure that the path corresponds to an existing directory.

PRCG-01058: The specified path {0} is not an Oracle Database Home

Cause: The specified home path does not contain the 'oracle' binary or it is an Oracle Grid Infrastructure home.

Action: Make sure that the home path is an Oracle database home path.

PRCG-01059: Attribute {0} does not exist in the credential file {1}

Cause: An attempt to add Rapid Home Provisioning Client failed because a required attribute did not exist in the credential file.

Action: Ensure that a valid credential file is supplied and retry the command.

PRCG-01060: The provided credential file {0} does not conform to XML standards

Cause: An attempt to add Rapid Home Provisioning Client failed because an invalid credential file was supplied.

Action: Generate a valid credential file using 'rhpctl export client' and retry the command.

PRCG-01061: Failed to retrieve the GNS_SUBDOMAIN_STRING attribute for Rapid Home Provisioning Client

Cause: An attempt to retrieve the GNS_SUBDOMAIN_STRING attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01062: Failed to update the GNS_SUBDOMAIN_STRING attribute {0} for Rapid Home Provisioning Client

Cause: An attempt to update the GNS_SUBDOMAIN_STRING attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01063: Invalid command-line option value for option -{0}

Cause: The value specified for a command-line option was an empty string.

Action: Specify a value for the option.

PRCG-01064: An attempt to remove the Rapid Home Provisioning Server configuration failed because the Rapid Home Provisioning Server is running

Cause: A request to remove the Rapid Home Provisioning Server configuration was rejected because such removal requires Rapid Home Provisioning Server to be stopped.

Action: Use the command 'srvctl stop rhpserver' or, if necessary, use the command 'srvctl stop rhpserver -force' to stop the Rapid Home Provisioning Server and then retry removing the Rapid Home Provisioning Server configuration.

PRCG-01065: Syntax error: expected an option keyword but found {0}

Cause: The command line parser found non-option text where an option with leading dash was expected.

Action: Review the command inline help and formulate the command with valid options.

PRCG-01066: Rapid Home Provisioning Server or Rapid Home Provisioning Client not configured on this cluster

Cause: The requested operation was rejected because the Rapid Home Provisioning Server or Rapid Home Provisioning Client was not configured.

Action: Add the Rapid Home Provisioning Server or Rapid Home Provisioning Client using the command 'srvctl add rhpserver' or 'srvctl add rhpclient' and retry the operation.

PRCG-01067: The requested operation cannot be executed by user "root"

Cause: The requested operation was rejected because it was attempted as a root user.

Action: Log on as a user other than 'root' to perform this operation.

PRCG-01068: Non-numeric value {0} specified for command-line option {1}

Cause: An invalid value was specified for a command-line option that requires a number.

Action: Check the value printed and specify a number.

PRCG-01069: An attempt to remove the Rapid Home Provisioning Client configuration failed because the Rapid Home Provisioning Client is running

Cause: A request to remove the Rapid Home Provisioning Client configuration was rejected because such removal requires Rapid Home Provisioning Client to be stopped.

Action: Use the command 'srvctl stop rhpclient' or, if necessary, use the command 'srvctl stop rhpclient -force' to stop the Rapid Home Provisioning Client and then retry removing the Rapid Home Provisioning Client configuration.

PRCG-01078: At least one of -{0}, -{1} or -{2} options required

Cause: An attempt to modify NFS home failed because a mandatory option was not specified.

Action: Specify at least one of the required options.

PRCG-01079: Internal error: {0}

Cause: An internal error occurred. The included value is an internal identifier.

Action: Contact Oracle Support.

PRCG-01080: Specified name "{0}" is not a valid node.

Cause: The specified node name was not resolved to a registered node in the cluster.

Action: Specify a valid node name.

PRCG-01081: Command "{0}" is not supported for object "{1}"

Cause: An unsupported command and object combination was specified.

Action: Use the command 'rhpctl -h' to identify valid combinations and re-issue the command.

PRCG-01082: No permission to write to the specified path, "{0}"

Cause: The user did not have permission to write to the specified path.

Action: Specify a path to which write permission is granted and retry the command.

PRCG-01083: The credentials file provided is for cluster {0}, not for this cluster {1}.

Cause: The credentials file provided did not correspond to the name of this cluster.

Action: Provide the credentials file generated for this cluster and retry. To generate the credentials file, run the command 'rhpctl export client' on the Rapid Home Provisioning Server cluster, specifying the name of this cluster in the '-client' option.

PRCG-01084: Failed to get hash code of given string

Cause: An internal error occurred.

Action: Contact Oracle Support.

PRCG-01085: Failed to encrypt the given string

Cause: An internal error occurred.

Action: Contact Oracle Support.

PRCG-01086: Failed to decrypt the given string

Cause: An internal error occurred.

Action: Contact Oracle Support.

PRCG-01087: Failed to retrieve security algorithm used for Rapid Home Provisioning Server

Cause: An attempt to retrieve the CRYPTO_ALGORITHM attribute of the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01088: Failed to update the security algorithm to {0} for Rapid Home Provisioning Server

Cause: An attempt to update the CRYPTO_ALGORITHM of the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01089: Failed to retrieve security algorithm used for Rapid Home Provisioning Client

Cause: An attempt to retrieve the CRYPTO_ALGORITHM attribute of the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01090: Failed to update the security algorithm to {0} for Rapid Home Provisioning Client

Cause: An attempt to update the CRYPTO_ALGORITHM attribute of the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01091: The -user option value can not contain "@"

Cause: The requested operation failed because the user name contained a "@" character.

Action: Specify the user name without a "@" character and retry the command.

PRCG-01092: Invalid value list for option -{0}

Cause: A comma-separated list of values was supplied for an option that takes a single value.

Action: Specify single value without commas and retry the command.

PRCG-01093: Failed to get Rapid Home Provisioning Client (RHPC) credential from credential storage for cluster: {0}

Cause: The requested operation failed because an error occurred while accessing the credential storage.

Action: Examine the accompanying error messages for details.

PRCG-01094: The -clientdata option value {0} is a directory, not a file

Cause: A 'rhpctl export client' operation failed because the '-clientdata' option specified a directory.

Action: Ensure that the '-clientdata path' option value corresponds to a file path.

PRCG-01095: The client data file {0} already exists in the specified '-clientdata' path

Cause: A request to export client data found the specified output file already exists.

Action: Delete or rename the existing file or choose a different file name.

PRCG-01096: The specified owner {0} is not a valid OS user

Cause: The specified owner was not a valid OS user.

Action: Ensure that the '-pathowner username' option value corresponds to the name of an existing OS user.

PRCG-01097: Option '-pathowner' cannot be specified for image type ORACLEDBSOFTWARE

Cause: A request to import an image was rejected because the '-pathowner' option was specified for importing the Oracle Database home.

Action: Omit the '-pathowner' option.

PRCG-01098: Failed to create administrator credentials for Rapid Home Provisioning Server

Cause: An attempt to create administrator credentials for Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01099: Failed to create administrator credentials for Rapid Home Provisioning Client

Cause: An attempt to create administrator credentials for Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01100: The connection to the Rapid Home Provisioning daemon process was lost.

Cause: The requested operation failed because the connection to the Rapid Home Provisioning daemon process for this cluster was lost.

Action: Examine the accompanying error messages for details and take appropriate corrective action.

PRCG-01101: Grid Infrastructure Management Repository resource has not been configured

Cause: A Rapid Home Provisioning Server add request failed because the Grid Infrastructure Management Repository resource was not configured.

Action: If the Grid Infrastructure Management Repository was not configured while installing Grid Infrastructure, then reinstall Grid Infrastructure selecting the option to configure the Grid Infrastructure Management Repository.

PRCG-01102: Specified file name "{0}" is not valid for a template.

Cause: The specified template name did not end with a valid file extension.

Action: Specify a template file name which ends with .dbt or .dbc.

PRCG-01103: The Oracle ASM Dynamic Volume Manager compatibility attribute ({0}) is less than 12.1.0.0.0 for disk group {1}.

Cause: The Oracle ADVM compatibility attribute for the specified disk group was not set to version 12.1.0.0.0 or higher.

Action: Use the Oracle ASM Configuration Assistant (ASMCA) tool or the SQL statement ALTER DISKGROUP to upgrade the 'compatible.advm' attribute.

PRCG-01104: User terminated the command. The command operation is not cancelled by this interruption, and may continue to be processed on the server.

Cause: An 'rhpctl' command execution was interrupted by typing Control-C or by other means.

Action: Verify the completion of this command by executing a 'config' or some other command that would display the results of this interrupted command.

PRCG-01106: failed to determine whether GNS is configured on Rapid Home Provisioning Server

Cause: An attempt to verify the GNS configuration on the Rapid Home Provisioning Server failed. The accompanying messages provide details.

Action: Examine the accompanying error messages for details. Address issues reported and retry the command.

PRCG-01107: failed to delete Rapid Home Provisioning Client (RHPC) credential from credential storage for cluster {0}

Cause: The requested operation failed because an error occurred while accessing the credential storage.

Action: Examine the accompanying error messages for details. Address issues reported and retry the command.

PRCG-01108: Rapid Home Provisioning Server or Client is not configured

Cause: An attempt was made to operate on a resource that does not exist.

Action: Check for the configured resource using 'srvctl config rhpsrv' or 'srvctl config rhpclient'. If neither Rapid Home Provisioning resource exists, create the appropriate one using the command 'srvctl add {rhpsrv|rhpclient}'.

PRCG-01109: Repetition of command-line option: -{0}

Cause: Execution of the command was rejected because the command-line option displayed with the error message was repeated.

Action: Retry the command specifying the command-line option only once.

PRCG-01110: failed to modify Rapid Home Provisioning Client with disk group {0}

Cause: An attempt to configure the Rapid Home Provisioning Client with the cited disk group failed because there was already a disk group configured for the Rapid Home Provisioning.

Action: Remove the Rapid Home Provisioning Client configuration and run 'srvctl add rhpclient' command.

PRCG-01111: failed to update the storage base path to {0} for Rapid Home Provisioning Client

Cause: An attempt to update the storage base path for the Rapid Home Provisioning Client

Action: Remove the Rapid Home Provisioning Client configuration and run 'srvctl add rhpclient' command.

PRCG-01112: failed to retrieve storage base path attribute for Rapid Home Provisioning Client

Cause: An attempt to retrieve the STORAGE_BASE_PATH attribute of the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details. Address issues reported and retry the command.

PRCG-01113: failed to update the storage base path to {0} for Rapid Home Provisioning Client

Cause: An attempt to update the STORAGE_BASE_PATH attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01114: failed to update the storage base path to {0} for Rapid Home Provisioning Client because a disk group was not configured

Cause: An attempt to update the storage base path for the Rapid Home Provisioning Client failed because the disk group was not configured for the Rapid Home Provisioning Client.

Action: Run 'srvctl modify rhpclient -diskgroup' to configure the disk group and then rety the command.

PRCG-01115: Disk group is not configured on Rapid Home Provisioning Client.

Cause: An attempt to retrieve disk group information for the Rapid Home Provisioning Client failed because a disk group was not configured for it.

Action: Run 'srvctl modify rhpclient' command to configure the disk group.

PRCG-01116: Unable to create mount path because the generated mount path name already exists

Cause: An attempt to create a mount path failed because the number of tries attempted for generating the mount path was exhausted.

Action: Retry the command.

PRCG-01117: Working copy name "{0}" is too long or contains characters other than alphanumeric and underscore.

Cause: An attempt to create or patch a working copy was rejected because the specified name (shown in the message) was not valid. Working copy names must be 128 characters or less and contain only alphanumeric characters and underscores.

Action: Reissue the command specifying a valid working copy name.

PRCG-01118: Specified image name "{0}" contains invalid characters or is too long.

Cause: An attempt to create or import an image was rejected because the indicated image name was not valid. Image names must not contain the characters \$@">(),*? and must be no longer than 128 characters.

Action: Specify a valid image name.

PRCG-01119: The -path option is not allowed when the storage type is RHP_MANAGED.

Cause: An attempt to add a working copy was rejected because the '-path' option was specified when the storage type was RHP_MANAGED. If the storage type was not specified for the Rapid Home Provisioning Server (RHPS), the default value was RHP_MANAGED.

Action: Omit the '-path' option or specify another storage type. Rapid Home Provisioning Server (RHPS) supports LOCAL, while Rapid Home Provisioning Client (RHPC) supports both LOCAL and NFS.

PRCG-01120: The value {0} exceeds the maximum value of {1} for command line option '-numberOfPDBs'.

Cause: The supplied value exceeded the maximum value for command line option '-numberOfPDBs'.

Action: Specify an integer value within the range given in the error message.

PRCG-01121: The PDB prefix "{0}" contains invalid characters.

Cause: The supplied pluggable database (PDB) prefix contained invalid characters.

Action: Supply a valid PDB prefix. A PDB prefix must start with an alphabetic character and may include only characters from a-z, A-Z, 0-9, \$, # and _.

PRCG-01122: The '-datafileDestination' option was not specified when '-dbtype' was not SINGLE.

Cause: A request to create a Oracle RAC or Oracle RAC One Node database was rejected because the data file location was not specified using the '-datafileDestination' option.

Action: Reissue the command specifying the '-datafileDestination' option.

PRCG-01123: Failed to create Rapid Home Provisioning Client (RHPC) credential in credential storage for cluster {0}

Cause: The requested operation failed because an error occurred while creating the credential in the credential storage.

Action: Examine the accompanying error messages for details. Address the issues reported and retry the command.

PRCG-01124: Failed to export Rapid Home Provisioning Client (RHPC) credential from credential storage for cluster {0} to file {1}

Cause: The requested operation failed because an error occurred while exporting the credential from the credential storage.

Action: Examine the accompanying error messages for details. Address the issues reported and retry the command.

PRCG-01125: Failed to import Rapid Home Provisioning Client (RHPC) credential from file {0} into credential storage for cluster {1}

Cause: The requested operation failed because an error occurred while importing the credential from the specified file into the credential storage.

Action: Examine the accompanying error messages for details. Address the issues reported and retry the command.

PRCG-01126: Failed to export Rapid Home Provisioning Client (RHPC) credential from credential storage for cluster {0}

Cause: The requested operation failed because an error occurred while exporting the credential from the credential storage.

Action: Examine the accompanying error messages for details. Address the issues reported and retry the command.

PRCG-01127: failed to update Rapid Home Provisioning Client registration in Rapid Home Provisioning Server

Cause: An attempt to update the Rapid Home Provisioning Client registration with the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01128: failed to determine whether this Rapid Home Provisioning Server has any Rapid Home Provisioning Clients registered

Cause: An attempt to determine whether this Rapid Home Provisioning Server has any registered Rapid Home Provisioning Clients failed.

Action: Examine the accompanying error messages for details.

PRCG-01129: unable to delete Rapid Home Provisioning Server because it contains one or more registered Rapid Home Provisioning Clients

Cause: An attempt to delete the Rapid Home Provisioning Server was rejected because one or more Rapid Home Provisioning Clients registered with it.

Action: "Either reissue the command with the '-force' option, or first delete all the registered Rapid Home Provisioning Clients using the command 'rhpctl delete client'."

PRCG-01130: Server pool cannot be specified for single instance database.

Cause: An attempt to add a single instance database was rejected because a server pool was specified.

Action: Use the '-node' option instead of the '-serverpool' or '-newpool' options when specifying SINGLE for the '-dbtype' option.

PRCG-01131: Improper '-version' option specified for image type SOFTWARE.

Cause: An attempt to query images was rejected because the '-version' option was specified together with a value of SOFTWARE for '-imagetype'.

Action: Either remove the '-version' option or specify ORACLEDBSOFTWARE for '-imagetype' and retry the command.

PRCG-01132: The specified version "{0}" is invalid.

Cause: The requested operation failed because the specified version either did not exist or was unsupported.

Action: Retry the command specifying a valid version.

PRCG-01133: Storage type NFS is not allowed on Rapid Home Provisioning Server.

Cause: An attempt to add a workingcopy on the Rapid Home Provisioning Server with NFS storage type was rejected because NFS is not a supported storage type on the server.

Action: Specify either RHP_MANAGED or LOCAL for the storage type.

PRCG-01134: communication failure while connecting to the Rapid Home Provisioning daemon

Cause: An attempt to connect to the Rapid Home Provisioning daemon failed.

Action: Start the Rapid Home Provisioning daemon and retry the command.

PRCG-01150: The specified path {0} is not an Oracle Grid Infrastructure Home

Cause: The specified home path for the import image operation does not contain the 'crsd' binary.

Action: Make sure that the home path is an Oracle Grid Infrastructure home path.

PRCG-01151: failed to update the WORKINGCOPY_EXISTS status for Rapid Home Provisioning Client

Cause: An attempt to update the WORKINGCOPY_EXISTS attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01152: failed to retrieve the WORKINGCOPY_EXISTS status for Rapid Home Provisioning Client

Cause: An attempt to retrieve the WORKINGCOPY_EXISTS attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details.

PRCG-01153: failed to remove the Rapid Home Provisioning Client configuration because working copies exist

Cause: A request to remove the Rapid Home Provisioning Client (RHPC) configuration was rejected because such removal requires that there are no working copies on RHPC.

Action: Delete all working copies on RHPC before removing the Rapid Home Provisioning Client configuration.

PRCG-01154: failed to create Rapid Home Provisioning Server (RHPS) because this is a Leaf Node

Cause: An attempt to create Rapid Home Provisioning Server (RHPS) was rejected because this is a Leaf Node.

Action: Retry the command on a Hub Node.

PRCG-01155: failed to retrieve email address for Rapid Home Provisioning instance

Cause: An attempt to retrieve the email address of the Rapid Home Provisioning instance from CRS failed.

Action: Examine the accompanying error messages for details.

PRCG-01156: failed to update the email address to {0} for Rapid Home Provisioning instance

Cause: An attempt to update the email address of the Rapid Home Provisioning instance failed.

Action: Examine the accompanying error messages for details.

PRCG-01157: failed to retrieve mail server address for Rapid Home Provisioning instance

Cause: An attempt to retrieve the mail server address of the Rapid Home Provisioning instance from CRS failed.

Action: Examine the accompanying error messages for details.

PRCG-01158: failed to update the mail server address to {0} for Rapid Home Provisioning instance

Cause: An attempt to update the mail server address of the Rapid Home Provisioning instance failed.

Action: Examine the accompanying error messages for details.

PRCG-01159: failed to retrieve mail server port for Rapid Home Provisioning instance

Cause: An attempt to retrieve the mail server port of the Rapid Home Provisioning instance from CRS failed.

Action: Examine the accompanying error messages for details.

PRCG-01160: failed to update the mail server port to {0} for Rapid Home Provisioning instance

Cause: An attempt to update the mail server port of the Rapid Home Provisioning instance failed.

Action: Examine the accompanying error messages for details.

PRCG-01161: Mail server address {0} is not reachable.

Cause: The command was rejected because the mail server address was not reachable.

Action: Configure a mail server address that is active and can be reached on the network.

PRCG-01162: The supplied email address {0} is an invalid format.

Cause: The specified email address was an invalid format.

Action: Specify an email address that conforms to RFC 822.

PRCG-01163: The supplied mail server address "{0}" is invalid or specifies an unknown host name.

Cause: The command was rejected because the provided mail server address could not be resolved to a known host name.

Action: Make sure that the provided mail server address resolves to a known host name.

PRCG-01164: Invalid selection for the mail server port. The input "{0}" is not a positive decimal integer.

Cause: The port number for the mail server was not a positive integer number.

Action: Specify a positive decimal integer number in the range 1 to 65535 for mail server port and retry.

PRCG-01165: Node type "{0}" specified for node "{1}" is invalid.

Cause: The specified node type was invalid.

Action: Specify a valid node type, HUB or LEAF.

PRCG-01167: Oracle Grid Infrastructure response file {0} does not exist.

Cause: An attempt to locate the specified Oracle Grid Infrastructure response file failed.

Action: Make sure that the path and name of the response file were entered correctly and that the file exists.

PRCG-01168: Oracle Grid Infrastructure response file {0} is not a file.

Cause: The specified Oracle Grid Infrastructure response file was a directory.

Action: Make sure to specify the absolute file path of the Oracle Grid Infrastructure response file.

PRCG-01169: Parameter "{0}" is empty.

Cause: No value was specified for the specified parameter in the response file or command line.

Action: Supply a usable value for the specified parameter and retry.

PRCG-01170: Invalid parameter "{0}" specified in the Oracle Grid Infrastructure response file.

Cause: An invalid parameter was specified in the response file.

Action: Specify valid parameters in the response file and retry.

PRCG-01171: Parameter "{0}" value is null or empty.

Cause: This is an internal error.

Action: Contact Oracle Support.

PRCG-01172: The value supplied for node "{0}" is invalid.

Cause: The previously submitted command was rejected because the indicated value supplied as a node specification was invalid.

Action: Retry the previously submitted command providing a node specification in the form "<node_name>:<node_vip>[:<node_role>]".

PRCG-01173: missing required node list, client or Oracle home

Cause: One or more of the following was not supplied when a response file was not provided: - Node list - Client - Oracle home

Action: Supply a valid value for client, node list and Oracle home and retry.

PRCG-01174: response file generate path not supplied

Cause: This is an internal error.

Action: Contact Oracle Support.

PRCG-01180: failed to retrieve list of batches

Cause: The requested 'move database' operation was rejected because the user input was not specified in the correct format.

Action: Retry the command specifying the list of batches in the correct format.

PRCG-01181: The value specified for '-drain_timeout' is invalid.

Cause: The requested 'move database' operation was rejected because the specified '-drain_timeout' value was negative or was not parseable.

Action: Retry by specifying a valid value for '-drain_timeout'.

PRCG-01182: -sudouser option is missing for remote machine access.

Cause: An attempt to access a remote machine without sudo user was rejected.

Action: Retry the command with the "-sudouser" argument specified.

PRCG-01183: RHP_MANAGED storage type is not supported for standalone provisioning.

Cause: Storage type RHP_MANAGED was specified for standalone single instance database provisioning.

Action: Reissue the command with storage type LOCAL.

PRCG-01184: invalid database type "{0}" with -hometype SINGLE

Cause: The database type was not SINGLE for standalone single instance database provisioning.

Action: Do one of the following: 1. Omit the "-hometype" option. 2. Specify -hometype option as RAC. 3. Omit the -dbtype option. 4. Specify -dbtype option as SINGLE.

PRCG-01185: More than one node was specified for standalone provisioning.

Cause: The number of nodes specified for single instance database provisioning was not one.

Action: Specify only one node for the -node option.

PRCG-01186: missing "-user" option for standalone provisioning

Cause: The "-user" option was missing for standalone provisioning.

Action: Include the "-user" option.

PRCG-01187: missing "-dbname" option

Cause: The rapid home provisioning request specified -node but omitted -dbname.

Action: Reissue the command by either: 1. Including the -dbname option. 2. Omitting the -node option and specifying the credentials for standalone provisioning.

PRCG-01188: Target cannot be "RHP" for standalone provisioning.

Cause: The -target option was either not specified or specified as "RHP" for standalone provisioning.

Action: Reissue the command with -target value as STANDALONE.

PRCG-01189: missing "-node" option for standalone provisioning

Cause: The "-node" option was missing for standalone provisioning.

Action: Include the "-node" option.

PRCG-01190: The "-node" option was specified for standalone single instance database provisioning.

Cause: The "-node" option which was specified for standalone single instance database provisioning.

Action: Reissue the command without the "-node" option.

PRCG-01191: missing "{0}", "{1}" or "{2}" option for rapid home provisioning

Cause: The requested operation was rejected because either "-dbname" or "-datafileDestination" was specified without "-node", "-serverpool" or "-newpool".

Action: Reissue the command with one of "-node", "-serverpool", or "-newpool"; or specify "-target" as STANDALONE.

PRCG-01192: The user "{0}" performing the operation and the -user option values "{1}" do not match.

Cause: The command was rejected because the user performing the operation and the specified user option values are not the same.

Action: Perform the operation as a user ID that was specified in '-user' option.

PRCG-01193: failed to update the Rapid Home Provisioning instance email notification details

Cause: An attempt to update the Rapid Home Provisioning instance email notification details was rejected because one or more notification details was unset.

Action: Perform the operation by setting all the notification details or unsetting all the details.

PRCG-01197: failed to register email credentials of user "{0}" with domain "{1}" and sub-domain "{2}"

Cause: An attempt to register email notification credentials failed.

Action: Examine the accompanying error messages for details.

PRCG-01198: invalid specification of option "-{0}" with the '-targetnode' option.

Cause: The requested operation was rejected because an option which was incompatible with option '-targetnode' was specified.

Action: Do one of the following: 1. Omit the option which was incompatible with "-targetnode". 2. Omit the -targetnode option.

PRCG-01199: The file specified for the '-actionsript' option "{0}" does not exist.

Cause: An attempt to add a 'useraction' failed because the file specified for the '-actionsript' option was not found.

Action: Retry the command after making sure the specified file exists.

PRCG-01200: The file specified for the '-actionfile' option "{0}" does not exist.

Cause: An attempt to add a 'useraction' failed because the file specified for the '-actionfile' option was not found.

Action: Retry the command after making sure the specified file exists.

PRCG-01201: Specified user action name "{0}" contains invalid characters.

Cause: The user action name was not valid. User action names must not contain the following characters: \$@">()*;*? .

Action: Specify a valid user action name.

PRCG-01202: Specified image type name "{0}" contains invalid characters.

Cause: The image type name was not valid. Image type names must not contain the following characters: \$@">()*;*? .

Action: Specify a valid image type name.

PRCG-01203: illegal use of built-in image type name "{0}"

Cause: The image type name specified was a reserved name of a built-in image type in Rapid Home Provisioning.

Action: Specify a different image type name and retry the command.

PRCG-01204: The value specified for '-saf' is invalid.

Cause: The requested 'move database' operation was rejected because the specified '-saf' value was not a whole number in the range 0-99.

Action: Retry the operation specifying a valid value for '-saf'.

PRCG-01205: Multiple batches contain node {0}.

Cause: The requested patching operation was rejected because the indicated node was included in multiple batches.

Action: Retry the command ensuring that the indicated node is included in only one batch.

PRCG-01206: failed to update patch-in-progress status in Rapid Home Provisioning daemon

Cause: An attempt to update the patch-in-progress status with the Rapid Home Provisioning daemon failed. The accompanying error messages provide details of the failure.

Action: Retry the command after examining the accompanying error messages and addressing the same.

PRCG-01207: failed to determine patch-in-progress status for the Rapid Home Provisioning daemon

Cause: Failed to determine whether the Oracle Grid Infrastructure home for the Rapid Home Provisioning daemon was being patched. The accompanying error messages provide details of the failure.

Action: Retry the command after examining the accompanying error messages and addressing the same.

PRCG-01208: timed out waiting for Oracle Grid Infrastructure stack to be up

Cause: An attempt to move the Oracle Grid Infrastructure home failed because the Oracle Grid Infrastructure stack was not running. The accompanying error messages provide details of the error.

Action: Examine the accompanying error messages that provide the details of why and where the command execution failed. Resolve the reported problem and retry.

PRCG-01209: timed out waiting for Rapid Home Provisioning daemon to be up

Cause: An attempt to move the Oracle Grid Infrastructure home failed because the Rapid Home Provisioning daemon was not running. The accompanying error messages provide details of the error.

Action: Examine the accompanying error messages that provide the details of why and where the command execution failed. Resolve the reported problem and retry.

PRCG-01210: failed to connect to QoS Management Server for cluster {0}

Cause: An attempt to connect to the QoS Management Server for this cluster failed.

Action: Examine the accompanying error messages for details.

PRCG-01211: The connection to the Rapid Home Provisioning daemon was lost.

Cause: The requested operation failed because the connection to the Rapid Home Provisioning daemon process for this cluster was lost.

Action: Start the Rapid Home Provisioning daemon and retry the command.

PRCG-01212: conflicting provisioning options "{0}" and "{1}"

Cause: The command was specified with conflicting options for Rapid Home Provisioning.

Action: Specify one option or the other but not both.

PRCG-01213: Response file destination path "{0}" does not exist.

Cause: An attempt to locate the specified response file generate path failed.

Action: Make sure that the specified response file generate path exists.

PRCG-01214: Response file destination path "{0}" is not a directory.

Cause: The specified response file generate path was not a directory.

Action: Make sure that the specified response file generate path is a directory.

PRCG-01215: Oracle Grid Infrastructure response file "{0}" is empty.

Cause: An attempt to read the specified Oracle Grid Infrastructure response file failed.

Action: Ensure that the Oracle Grid Infrastructure response file is correctly specified and is not empty.

PRCG-01216: insufficient permissions to create file in the path where the generated response file will be copied "{0}"

Cause: An attempt to create a file in the specified response file generate path failed.

Action: Ensure that the user issuing the command has authority to create files in the specified response file generate path.

PRCG-01217: Node specification "{0}" is invalid.

Cause: The value supplied for a node specification was invalid.

Action: Supply a node specification in the form of "`<node_name>:<node_vip>[:<node_role>]`" and retry.

PRCG-01218: Node specification "{0}" is inconsistent with that of previous nodes.

Cause: The number of elements specified for a node did not match that of other nodes specified.

Action: Supply a node specification in the same form for each node and retry. For Flex clusters, use "`<node_name>:<node_vip>:<node_role>`". For non-Flex clusters, use "`<node_name>:<node_vip>`".

PRCG-01219: The date supplied for argument "{0}" is invalid.

Cause: The value specified for a date was invalid.

Action: Supply a date numeric value in the format "YYYY-MM-DD" and retry.

PRCG-01220: The credentials required for remote node connection are missing.

Cause: The requested operation was rejected because the credentials required for the remote node connection were not provided.

Action: Retry providing either the credentials needed for the remote connection or a working copy with Rapid Home Provisioning target.

PRCG-01221: The file specified for the '-actionsript' option "{0}" is not executable.

Cause: An attempt to add a 'useraction' failed because the file specified for the '-actionsript' option was not marked as executable in the filesystem.

Action: Retry the command after making sure the specified file is an executable script.

PRCG-01222: Specified image type name "{0}" begins with reserved text.

Cause: The image type name was not valid. Image type names must not begin with "ORACLE" or "RHP_".

Action: Specify a valid image type name and retry the command.

PRCG-01223: More than one node was specified for software-only provisioning.

Cause: A request for software-only provisioning was rejected because it specified multiple target nodes with the '-node' option. With the '-node' option, only a single node may be specified, while for software-only provisioning on all nodes of the cluster, the '-node' option should not be specified.

Action: Retry the 'add workingcopy' command without the '-node' option or specify only one node for the '-node' option.

PRCG-01224: missing "-node" option

Cause: The rapid home provisioning request specified -dbtype SINGLE but omitted -node.

Action: Reissue the command by including the -node option.

PRCG-01225: More than one node was specified for provisioning a single instance database home.

Cause: The number of nodes specified for single instance database home provisioning was not one.

Action: Specify only one node for the -node option.

PRCG-01226: An unsupported 'rhpctl' command was issued on Rapid Home Provisioning Client.

Cause: A 'rhpctl' command was submitted on Rapid Home Provisioning Client.

Action: Run the 'rhpctl' command on Rapid Home Provisioning Server.

PRCG-01227: invalid storage type 'NFS' specified for standalone provisioning

Cause: Storage type NFS was specified for standalone provisioning.

Action: Reissue the command with storage type LOCAL.

PRCG-01228: invalid storage type '{0}' for single instance database home provisioning

Cause: An unsupported storage type was specified for single instance database home provisioning.

Action: Reissue the command with storage type LOCAL.

PRCG-01229: A node that was not part of the cluster was specified for single node provisioning.

Cause: An rhpctl command for single node provisioning was rejected because the specified node was not a member of the cluster on which the command was executed.

Action: Either specify a node that is a member of a cluster, or specify '-target STANDALONE' and supply the required connection credentials.

PRCG-01230: unable to delete Rapid Home Provisioning Server because it contains one or more images

Cause: An attempt to delete the Rapid Home Provisioning Server was rejected because it was configured with one or more images.

Action: Either reissue the command with the '-force' option, or delete all the images.

PRCG-01231: failed to update image registration in Rapid Home Provisioning Server

Cause: An attempt to update the image registration with the Rapid Home Provisioning Server failed.

Action: Examine the accompanying error messages for details.

PRCG-01232: failed to determine whether this Rapid Home Provisioning Server has any images

Cause: An attempt to determine whether this Rapid Home Provisioning Server has any images failed.

Action: Examine the accompanying error messages for details.

PRCG-01233: Invalid specification of target node within Rapid Home Provisioning Server cluster.

Cause: An attempt to add a working copy on the target node was rejected because the target node is a member of the Rapid Home Provisioning Server cluster.

Action: Reissue the 'add workingcopy' command specifying a targetnode that is not a member of the Rapid Home Provisioning Server cluster.

PRCG-01234: invalid '-from' and '-to' date range

Cause: On a srvctl query audit request, a '-to' date was supplied that was not later than the '-from' date supplied.

Action: Retry the command with a '-to' date later than the '-from' date.

PRCG-01235: invalid specification of option "-{0}" for a single instance database home provisioning.

Cause: The requested operation was rejected because an option which was not supported for single instance database home provisioning was specified.

Action: Reissue the command by omitting the specified option.

PRCG-01236: More than one node was specified for provisioning oracle database home on a non Rapid Home Provisioning cluster.

Cause: The number of nodes specified for Oracle database home on a non Rapid Home Provisioning clusters was not one.

Action: Specify only one node for the -targetnode option.

PRCG-01237: User {0} does not exist.

Cause: An internal error occurred.

Action: Contact Oracle Support.

PRCG-01238: failed to execute the Rapid Home Provisioning action for command '{0} {1}'

Cause: An attempt to execute an RHP action failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, address issues reported, and retry.

PRCG-01239: failed to close a proxy connection

Cause: An attempt to close a connection created by a proxy failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, address issues reported, and retry.

PRCG-01240: failed to move the Grid Infrastructure to cluster '{0}'

Cause: An attempt to move the GI to the specified cluster failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, address issues reported, and retry.

PRCG-01241: failed to execute a remote operation on the Rapid Home Provisioning Server

Cause: An attempt to execute a remote operation on the RHPS failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, address issues reported, and retry.

PRCG-01242: failed to execute a remote operation on the Rapid Home Provisioning Client

Cause: An attempt to execute a remote operation on the RHPC failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, address issues reported, and retry.

PRCG-01243: failed to remove the notification credentials

Cause: An attempt to remove notification credentials from the Rapid Home Provisioning instance failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, address issues reported and retry.

PRCG-01244: The specified version "{0}" is invalid.

Cause: The requested operation failed because the specified version either does not exist or is not supported. The supported versions are 12.1.0.2.0 or higher.

Action: Retry the command, specifying a version of 12.1.0.2.0 or higher.

PRCG-01245: illegal syntax for '-groups' option in 'add workingcopy' command

Cause: An 'add workingcopy' command specified a '-groups' argument which could not be parsed.

Action: Reissue the command with the correct syntax. Refer to the command inline help or product documentation for details on the correct syntax.

PRCG-01246: unknown groups "{0}" specified in '-groups' option in 'add workingcopy' command

Cause: An 'add workingcopy' command specified an unknown group in the '-groups' argument.

Action: Reissue the command with valid groups. Refer to the product documentation for details.

PRCG-01247: invalid value "{0}" provided for groups in the '-groups' option in 'add workingcopy' command

Cause: An 'add workingcopy' command specified an invalid value for the groups in the '-groups' argument.

Action: Reissue the command with valid groups values. Refer to the product documentation for details.

PRCG-01248: group "{0}" specified more than once in '-groups' option in 'add workingcopy' command

Cause: An 'add workingcopy' command specified a group keyword multiple times in the '-groups' argument.

Action: Reissue the command with each group keyword specified only once.

PRCG-01249: CVU fixup operation "{0}" successful.

Cause: The indicated Configuration Verification Utility (CVU) fixup operation succeeded.

Action: None

PRCG-01250: CVU fixup failed to correct "{0}" on nodes: "{1}".

Cause: The indicated Configuration Verification Utility (CVU) fixup operation encountered an error.

Action: Examine the accompanying error messages, fix the problems indicated, and retry the operation.

PRCG-01251: CVU fixup task "{0}" status is unknown.

Cause: An attempt to fetch the results of the indicated Configuration Verification Utility (CVU) fixup operation failed.

Action: Retry the operation. Contact Oracle Support if the problem persists.

PRCG-01252: same path provided for both '-aupath' and '-agpath' option

Cause: An 'add workingcopy' command was rejected because it specified the same value for both the '-aupath' and '-agpath' options.

Action: Reissue the command specifying different paths for the '-aupath' and '-agpath' options. Refer to the product documentation for details.

PRCG-01253: 'addnode' and 'deletenode' for an Oracle Grid Infrastructure home are not supported by the Rapid Home Provisioning Client.

Cause: The attempted 'addnode' or 'deletenode' operation for an Oracle Grid Infrastructure home was rejected because it was not supported by the Rapid Home Provisioning Client.

Action: Retry the command from the Rapid Home Provisioning Server.

PRCG-01254: Node "{0}" specified using both '-firstnode' and '-batches' options.

Cause: The attempted patching operation was rejected because the indicated node was specified using the '-firstnode' option and was also included in a batch specified for the '-batches' option.

Action: Retry the command, either removing the indicated node from the values specified for the '-batches' option or specifying a different node as the first node.

PRCG-01255: failed to retrieve the cluster certificate of the Rapid Home Provisioning Server for Rapid Home Provisioning Client

Cause: An attempt to import client data failed because the RHPS_CERTIFICATE attribute for the Rapid Home Provisioning Client could not be retrieved.

Action: Examine the accompanying error messages for details, address issues reported, and retry.

PRCG-01256: failed to retrieve the cluster GUID of Rapid Home Provisioning Server for Rapid Home Provisioning Client

Cause: An attempt to import client data failed because the RHPS_GUID attribute for the Rapid Home Provisioning Client could not be retrieved.

Action: Examine the accompanying error messages for details, address issues reported, and retry.

PRCG-01257: failed to update the RHPS_CERTIFICATE attribute {0} for Rapid Home Provisioning Client

Cause: An attempt to update the indicated RHPS_CERTIFICATE attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details, , address issues reported, and retry.

PRCG-01258: failed to update the RHPS_GUID attribute {0} for Rapid Home Provisioning Client

Cause: An attempt to update the indicated RHPS_GUID attribute for the Rapid Home Provisioning Client failed.

Action: Examine the accompanying error messages for details, address issues reported, and retry.

PRCG-01259: The option '-groups' is not valid for software-only Grid Home Provisioning without the '-local' option.

Cause: The requested operation was rejected because the '-groups' option was not supported for software-only Grid Home Provisioning unless the '-local' option was also specified.

Action: Reissue the command, either omitting the '-groups' option, or adding the '-local' option.

PRCG-01260: Option '-targetnode' cannot be specified when creating an Oracle single-instance database.

Cause: An attempt to create an Oracle single-instance database was rejected because the '-targetnode' option was specified.

Action: Use the '-node' option instead of the '-targetnode' option to create an Oracle single-instance database.

PRCG-01261: Neither the '-serverpool' option nor the '-newpool' option was specified along with '-targetnode'.

Cause: An attempt to create a policy-managed Oracle RAC database was rejected because neither the '-serverpool' nor the '-newpool' option was specified along with the '-targetnode' option.

Action: Reissue the command specifying either the '-serverpool' option or the '-newpool' option.

PRCG-01262: invalid specification of Leaf Nodes for an Oracle Application Cluster configuration

Cause: An attempt to configure Leaf Nodes was rejected because Oracle Grid Infrastructure does not support Leaf Nodes on an Oracle Application Cluster.

Action: Reissue the command, specifying only Hub Nodes.

PRCG-01263: invalid specification of Leaf Nodes for an Oracle Extended Cluster configuration

Cause: An attempt to configure Leaf Nodes was rejected because Oracle Grid Infrastructure does not support Leaf Nodes on an Oracle Extended Cluster.

Action: Reissue the command, specifying only Hub Nodes.

PRCG-01264: invalid specification of Leaf Nodes for an Oracle Domain Services Cluster configuration

Cause: An attempt to configure Leaf Nodes was rejected because Oracle Grid Infrastructure does not support Leaf Nodes on an Oracle Domain Services Cluster.

Action: Reissue the command, specifying only Hub Nodes.

PRCG-01265: invalid specification of Leaf Nodes for an Oracle Member Cluster configuration

Cause: An attempt to configure Leaf Nodes was rejected because Oracle Grid Infrastructure does not support Leaf Nodes on an Oracle Member Cluster.

Action: Reissue the command, specifying only Hub Nodes.

PRCG-01266: invalid specification of Leaf Nodes for an Oracle Cluster without a GNS server

Cause: An attempt to configure Leaf Nodes was rejected because Oracle Grid Infrastructure does not support Leaf Nodes without a Grid Naming Service (GNS) server.

Action: Either configure a GNS server or reissue the command, specifying only Hub Nodes.

PRCG-01267: failed to transfer contents of directory "{0}" to directory "{1}" on cluster "{2}"

Cause: An attempt to transfer contents of the indicated directory to the indicated directory on the indicated cluster failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, resolve the issues reported, and retry the operation.

PRCG-01268: failure executing command "{0}" on cluster "{1}"

Cause: An attempt to execute the indicated command on the indicated cluster failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, resolve the issues reported, and retry the operation.

PRCG-01269: The value {0} exceeds the maximum value of {1} for command line option {2}.

Cause: The supplied value exceeded the maximum value for the specified command line option.

Action: Retry the operation specifying an integer value for the specified command line option that is within the range indicated in the error message.

PRCG-01270: invalid backup time {0} specified

Cause: The supplied value does not conform to HH:MM format.

Action: Retry the operation specifying a valid backup time in HH:MM (24-hour) format.

PRCG-01271: failed to enable Transport Level Security for Rapid Home Provisioning instance

Cause: An attempt to enable Transport Level Security of the Rapid Home Provisioning instance failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the problems identified there, and then retry the operation

PRCG-01272: failed to disable Transport Level Security for Rapid Home Provisioning instance

Cause: An attempt to disable Transport Level Security of the Rapid Home Provisioning instance failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the problems identified there, and then retry the operation

PRCG-01273: invalid value specified for '-dbhomes' option

Cause: The requested 'move gihome' operation was rejected because the user-specified value for the '-dbhomes' option was in an incorrect format or contained duplicate source working copy names.

Action: Retry the command specifying a valid value for the '-dbhomes' option.

PRCG-01274: The '-groups' option is mandatory when the '-skipcopy' option is specified.

Cause: The requested operation was rejected because the '-skipgroups' option was specified, but the required '-groups' option was missing.

Action: Reissue the command, adding the '-groups' option.

PRCG-01275: failed to retrieve the software copy method attribute for Rapid Home Provisioning Server

Cause: An attempt to retrieve the SWCOPY_METHOD attribute of the Rapid Home Provisioning Server failed. The accompanying error messages provide additional failure information.

Action: Examine the accompanying error messages, address issues raised, and

PRCG-01276: failed to update the status of Rapid Home Provisioning

Cause: An attempt to update the USERS_SUBSCRIBED attribute for the Rapid Home Provisioning Client failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the problems identified there, and then retry the operation.

PRCG-01277: failed to retrieve the USERS_SUBSCRIBED status for Rapid Home Provisioning Client

Cause: An attempt to retrieve the USERS_SUBSCRIBED attribute for the Rapid Home Provisioning Client failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the problems identified there, and then retry the operation.

PRCG-01278: failed to remove notification credentials because there are users subscribed to an image series

Cause: An attempt to remove the notification credentials for Rapid Home Provisioning was rejected because there were users subscribed to a series to receive notifications.

Action: Unsubscribe users from the series and reissue the command. To display the users subscribed to a series execute the command 'rhpctl query series -series <series_name>.'

PRCG-01279: cannot import remote image on the Rapid Home Provisioning Client

Cause: An attempt to import an image from a remote node was rejected because the "-targetnode" option was not supported by the Rapid Home Provisioning Client.

Action: Retry the command from the Rapid Home Provisioning Server.

PRCG-01280: invalid file "{0}" specified for the compressed source home

Cause: An attempt to import an image specifying the indicated source file was rejected because the specified file was not a valid ZIP or TAR file.

Action: Reissue the command with the absolute path of an existing ZIP or TAR file.

PRCG-01281: The specified time "{0}" for option "{1}" is in the past.

Cause: An attempt to run an rhpctl command was rejected because the indicated timer value specified for the indicated option was earlier than the current time.

Action: Retry the command by supplying a timer value in the future.

PRCG-01282: The specified time "{0}" for option "{1}" is not in the expected ISO-8601 format.

Cause: An attempt to run an rhpctl command was rejected because the indicated timer value specified for the indicated option was not in the expected format.

Action: Retry the command, supplying a timer value in the ISO-8601 'complete date plus hours, minutes and seconds' format as described here: <https://www.w3.org/TR/1998/NOTE-datetime-19980827>.

PRCG-01283: The specified value "{0}" for -jobid is less than zero.

Cause: An attempt to run an rhpctl command was rejected because the value specified for the jobid option was a negative number.

Action: Retry the command supplying a valid non-negative integer value for jobid.

PRCG-01284: The specified value "{0}" for -jobid is not an integer value.

Cause: An attempt to run an rhpctl command was rejected because the value specified for the jobid option was not an integer value.

Action: Retry the command supplying a valid integer value for jobid.

PRCG-01285: operation "{0}" not allowed on the Rapid Home Provisioning Client (RHPC)

Cause: An attempt to initiate an operation was rejected because the specified operation was not allowed on the Rapid Home Provisioning Client (RHPC).

Action: Retry the operation on the Rapid Home Provisioning Server (RHPS).

PRCG-01286: Option "{0}" not allowed on the Rapid Home Provisioning Client (RHPC).

Cause: An attempt to run an rhpctl command was rejected because the specified option was not allowed on the Rapid Home Provisioning Client (RHPC).

Action: Retry the operation on the Rapid Home Provisioning Server (RHPS).

PRCG-01287: Invalid specification for the RHP progress listener port. The specified value "{0}" is not a positive decimal integer.

Cause: The indicated value specified as the port number for the Rapid Home Provisioning (RHP) progress listener was not a positive integer number.

Action: Specify a positive decimal integer number in the range 1 to 65535 for the RHP progress listener port and retry.

PRCG-01288: invalid osconfig identifier {0} specified

Cause: An attempt to compare osconfig was rejected because the indicated osconfig identifier was not valid.

Action: Retry the operation specifying a valid osconfig identifier as listed by the command 'rhpctl query osconfig'.

PRCG-01289: GIAAS server hosted on node "{0}" is not reachable.

Cause: An attempt to reach the Gold Image As Service (GIAAS) server failed because the indicated server was not running or there was a network connectivity issue.

Action: Ensure that the host specified in the command is reachable using the 'ping' command. Otherwise, contact Oracle Support.

PRCG-01290: The supplied number "{0}" is not a valid port number.

Cause: An attempt to reach the Gold Image As Service (GIAAS) server using the specified port number was rejected because the indicated value supplied as a port number was either empty or not in the range of 1024-65535.

Action: Reissue the command with a port number within the specified range.

PRCG-01291: Empty value for group "{0}" specified in '-groups' option in 'add workingcopy' command is not valid.

Cause: An attempt to add a working copy was rejected because an empty value was specified for the indicated group in the 'add workingcopy' command.

Action: Reissue the command providing valid values for the groups specified using the -groups option. Refer to the product documentation for details.

PRCG-01292: The remote authentication plugin Java archive {0} was not found.

Cause: An attempt to execute the 'rhpctl' command with the '-auth' option failed because the indicated Java archive (jar) file was not found.

Action: Ensure that the indicated jar file is present and retry the command.

PRCG-01293: Invalid remote authentication plugin jar file.

Cause: An attempt to execute the 'rhpctl' command with the -auth option was rejected because the indicated Java archive (jar) file was invalid. This is an internal error.

Action: Contact Oracle Support.

PRCG-01294:

Cause: Message no longer in use.

Action: Message no longer in use.

PRCG-01295: Failed to determine if the remote authentication plugin Java archive {0} exists on all nodes.

Cause: While executing the 'rhpctl' command with '-auth' option the existence of the remote authentication plugin implementation Java archive (jar) file could not be determined on all nodes of the cluster. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages for details. Address the issues reported and retry the command.

PRCG-01296: The value specified for the '-dbsinparallel' option is invalid.

Cause: An attempt to move a database was rejected because the integer specified for '-dbsinparallel' was not greater than 0.

Action: Retry the operation specifying a positive integer for option '-dbsinparallel'.

PRCG-01297: '-path' option not allowed for provisioning a software-only working copy based on an Oracle Layered File System

Cause: An 'add workingcopy' command was rejected because it specified the '-path' option for provisioning a software-only working copy based on an Oracle Layered File System.

Action: Reissue the command without the '-path' option.

PRCG-01298: The specified time "{0}" for option "{1}" is not in the past.

Cause: An attempt to run a rhpctl command was rejected because the indicated time value specified for the indicated option was not earlier than the current time.

Action: Retry the command supplying a time in the past.

PRCG-01299: illegal '-aupath' or '-agpath' option while provisioning the working copy on a Rapid Home Provisioning Server

Cause: An attempt to provision an Oracle home based on an Oracle Layered File System failed because the provisioning was attempted on a Rapid Home Provisioning Server.

Action: Execute one of the following: - Reissue the command 'add workingcopy' specifying the '-client' option. - Run the command on a Rapid Home Provisioning Client. - Reissue the command 'add workingcopy' without the '-agpath' and '-aupath' options.

PRCG-01300: failed to obtain the port range for the file transfer

Cause: An attempt to obtain the port range for the file transfer failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCG-01301: failed to update the port range for the file transfer in RHP Server

Cause: An attempt to update the port range for the file transfer in the Rapid Home Provisioning Server (RHP) failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCG-01302: Invalid port range: {0}

Cause: A port range was provided for the transfer which had an invalid format.

Action: Retry the operation, ensuring that the range contains both a lower value and an upper value, the values are both integers, and the lower value comes first.

PRCG-01303: Series name "{0}" is too long or contains invalid characters.

Cause: An attempt to add a series was rejected because the indicated name was not valid. Series names must not contain the following characters: \$@">()*;*? and must be 255 characters or less.

Action: Reissue the command specifying a valid series name.

PRCG-01304: Role name "{0}" is too long or contains invalid characters.

Cause: An attempt to add a role was rejected because the indicated name was not valid. Role names must not contain the following characters: \$@">()*;*? and must be 255 characters or less.

Action: Reissue the command specifying a valid role name.

PRCG-01305: failed to enable HTTP Transport Layer Security for Rapid Home Provisioning instance

Cause: An attempt to enable HTTP Transport Layer Security for the Rapid Home Provisioning instance failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCG-01306: failed to disable HTTP Transport Layer Security for Rapid Home Provisioning instance

Cause: An attempt to disable HTTP Transport Layer Security for the Rapid Home Provisioning instance failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCG-01307: Oracle ASM Dynamic Volume Manager compatibility check failed.

Cause: An attempt to add a Rapid Home Provisioning server failed because an error occurred while checking Oracle ASM Dynamic Volume Manager compatibility. Accompanying messages provide additional failure information.

Action: Examine the accompanying error messages for details. Use the Oracle ASM Configuration Assistant (ASMCA) tool or the SQL statement ALTER DISKGROUP to upgrade the 'compatible.advm' attribute to version 12.1.0.0.0 or higher and retry the command.

PRCG-01308: password for user {0} is missing

Cause: An attempt to perform a remote operation failed because the password for the indicated user was not provided.

Action: Retry the operation, providing the password for the indicated user.

PRCG-01309: failed to retrieve connect descriptor attribute for Rapid Home Provisioning Server

Cause: An attempted operation on the Rapid Home Provisioning (RHP) service failed because an error occurred while retrieving the CONN_DESC attribute of the server.

Action: Examine the accompanying error messages, address the issues raised,

PRCG-01310: Invalid specification for the RHP copy listener port. The specified value "{0}" is not a positive decimal integer.

Cause: An attempt to configure the port number for the Rapid Home Provisioning (RHP) copy listener was rejected because the indicated value specified was not a positive decimal integer.

Action: Retry the command specifying a decimal integer in the range of 1025 to 65535.

PRCG-01311: The ORAchk utility in Oracle home {0} failed to execute completely.

Cause: An attempt to move a database failed because the ORAchk utility could not check the database status.

Action: Ensure that the file orachk.zip exists in the srvm/admin directory in the current Oracle Grid Infrastructure home and that the destination home is complete and writable by the database owner. Retry the command after fixing the issues.

PRCG-01312: The ORAchk utility (version {0}) is obsolete.

Cause: An attempt to move a database failed because the installed ORAchk utility was obsolete and could not determine the database status.

Action: Refer to My Oracle Support Notes and obtain the latest ORAchk utility. Retry the command after fixing the issues.

PRCG-01313: The ORAchk report {0} at node {1} revealed failures.

Cause: An attempt to move databases in rolling mode was rejected because Oracle JavaVM may be in use. The ORAchk report provides additional details.

Action: 1. For databases of version 12.1.0.2 or earlier, either retry the operation specifying the 'forcerolling' option, or refer to Doc ID 2217053.1 for 'Conditional Rolling Install'; 2. For databases versions later than 12.1.0.2, retry the operation specifying the 'forcerolling' option.

PRCG-01314: Option "{0}" allowed only for provisioning and patching.

Cause: An attempt to run an rhpctl command was rejected because the indicated option was not allowed.

Action: Retry the operation specifying valid options.

PRCG-01315: The supplied number "{0}" is not a valid port number.

Cause: An attempt to start Rapid Home Provisioning server (RHPS) using the specified port number was rejected because the indicated value supplied as a port number was either empty or not in the range of 1024 through 65535.

Action: Ensure that the port number is within the specified range and restart RHPS.

PRCG-01316: failed to read file "{0}"

Cause: An attempt to read the specified properties file failed because the specified file was not found or was not readable.

Action: Ensure that the specified file exists in the current Rapid Home Provisioning Server (RHPS) deployment and that the file is readable. Restart RHPS.

PRCG-01317: Empty value for property "{0}" in file "{1}".

Cause: An attempt to read the indicated property from the indicated file failed because the indicated property was empty.

Action: Ensure that the indicated property value exists in the indicated file and restart Rapid Home Provisioning Server (RHPS).

PRCG-01318: Invalid value {0} for preference file option {1}

Cause: An invalid value was specified for the preference file option.

Action: Check the value printed and specify the correct value.

PRCG-01319: The cluster type is '{0}'. Only standalone cluster is supported.

Cause: The cluster type that was detected was not supported for the Zero-Downtime Oracle GI Patching (ZDOGIP) patch operation.

Action: Do not use ZDOGIP to patch this cluster.

PRCG-01320: Invalid command option specified: {0}

Cause: The indicated option specified on the command line was not recognized.

Action: Specify a valid command option for the 'srvmhelper zdogipPrecheck' command.

PRCG-01321: Missing required command option: {0}

Cause: The indicated command option was not specified on the command line.

Action: Specify the indicated command option.

PRCG-01322: Zero-Downtime Oracle GI Patching not supported on operating system {1}

Cause: The indicated command was not supported on the indicated OS.

Action: Use either Linux or retry patching this cluster patching without using Zero-Downtime Oracle GI Patching (ZDOGIP).

PRCG-01323: Zero-Downtime Oracle GI Patching not supported in Oracle Restart

Cause: Zero-Downtime Oracle GI Patching (ZDOGIP) was not supported in Oracle Restart.

Action: Do not use ZDOGIP to patch in Oracle Restart or retry patching this cluster without using ZDOGIP.

PRCG-01324: Zero-Downtime Oracle GI Patching supported only in out-of-place patching

Cause: The indicated command was supported only in out-of-place patching.

Action: Use Zero-Downtime Oracle GI Patching (ZDOGIP) only in out-of-place patching or retry patching this cluster without using ZDOGIP.

PRCG-01325: CRS home version {0} is less than the minimum version of 19.6

Cause: The CRS home version was less than 19.6.

Action: Do not use Zero-Downtime Oracle GI Patching (ZDOGIP) to patch this cluster.

PRCG-01326: Found {0} active nodes which is less than the minimum of two.

Cause: The number of active nodes was less than the indicated minimum value.

Action: Make sure that there are at least two active nodes or do not use Zero-Downtime Oracle GI Patching (ZDOGIP) to patch this cluster.

PRCG-01327: CSS misscount ({0}) is less than 30 seconds.

Cause: The CSS misscount was less than the 30 seconds.

Action: Make sure that the CSS misscount is at least 30 seconds or retry patching this cluster without using ZDOGIP.

PRCG-01328: Difference in Universal Storage Management (USM) patches in {0} and {1}

Cause: The patches for the usm components that were installed were not the same in the indicated CRS homes.

Action: Make sure that the same patches have been applied in both homes or try again with '-noDriverUpdate'

PRCG-01329: invalid Grid Infrastructure Management Repository (GIMR) mode: "{0}"

Cause: An attempt to add a Rapid Home Provisioning Server resource was rejected because the GIMR mode detected was not LOCAL.

Action: Install a local GIMR and retry the operation.

PRCG-01330: failed to connect to the management database because it is not running

Cause: An attempt to connect to the management database failed because it was not running.

Action: Use the 'srvctl start mgmtdb' command to start the management database.

PRCG-01331: An attempt to use GNS VIP for Rapid Home Provisioning Server configuration failed because the Rapid Home Provisioning Server is running

Cause: A request to use Grid Naming Service virtual IP address (GNS VIP) for the Rapid Home Provisioning Server configuration was rejected because the Rapid Home Provisioning Server was running.

Action: Use the command 'srvctl stop rhpserver' and then retry the operation.

PRCG-01332: failed to update GNS VIP for Rapid Home Provisioning Server configuration

Cause: An attempt to update Grid Naming Service virtual IP address (GNS VIP) for Rapid Home Provisioning Server configuration failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCG-01333: failed to modify the HTTP port of Rapid Home Provisioning Server to {0}

Cause: An attempt to modify the HTTP port of Rapid Home Provisioning Server failed.

Action: Ensure that the Oracle Clusterware stack is up and that the specified IP port is not in use by another program.

PRCH-01000 to PRCH-01079

PRCH-01000: Failed to stop resources running from Oracle home {0}

Cause: An attempt to stop one or more resources in the specified Oracle home failed.

Action: Review the underlying error messages that provide the details of which resources failed to stop, check the cause and action for the individual resource stop failure and perform the steps for each resource that failed to stop.

PRCH-01001: Failed to start resources in Oracle home {0}

Cause: An attempt to start one or more resources in the specified Oracle home failed.

Action: Review the underlying error messages that provide the details of which resources failed to start, check the cause and action for the individual resource start failure and perform the steps for each resource that failed to start.

PRCH-01002: Failed to stop resources running from CRS home {0}

Cause: An attempt to stop one or more resources in the specified CRS home failed.

Action: Review the underlying error messages that provide the details of which resources failed to stop, check the cause and action for the individual resource stop failure, and perform the steps for each resource that failed to stop.

PRCH-01003: Failed to start resources in CRS home {0}

Cause: An attempt to start one or more resources in the specified CRS home failed.

Action: Review the underlying error messages that provide the details of which resources failed to start, check the cause and action for the individual resource start failure and perform the steps for each resource that failed to start.

PRCH-01004: Failed to stop service

Cause: An attempt to stop a service resource failed.

Action: Review the accompanying error messages for possible reasons and if needed, use the command 'srvctl stop service -db <db_unique_name>' to stop the service.

PRCH-01005: Failed to stop database

Cause: An attempt to stop the database resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop database -db <db_unique_name>' to stop the database.

PRCH-01006: Failed to stop Listener

Cause: An attempt to stop the listener resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop listener' to stop the listener.

PRCH-01007: Failed to stop Listener

Cause: An attempt to stop the listener resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop listener' to stop the listener.

PRCH-01008: Failed to start service

Cause: An attempt to start a service resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start service -db <db_unique_name>' to start the service.

PRCH-01009: Failed to start database

Cause: An attempt to start the database resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start database -db <db_unique_name>' to start the database.

PRCH-01010: Failed to start Listener

Cause: An attempt to start the listener resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start listener' to start the listener.

PRCH-01011: Failed to start Listener

Cause: An attempt to start the listener resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start listener' to start the listener.

PRCH-01012: Failed to stop EONS

Cause: An attempt to stop the EONS resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop nodeapps' to stop the EONS resource.

PRCH-01013: Failed to start EONS

Cause: An attempt to start the EONS resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start nodeapps' to start the EONS resource.

PRCH-01014: Failed to stop ONS

Cause: An attempt to stop the ONS resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop nodeapps' to stop the ONS resource.

PRCH-01015: Failed to start ONS

Cause: An attempt to start the ONS resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start nodeapps' to start the ONS resource.

PRCH-01016: Failed to stop GSD resource

Cause: An attempt to stop the GSD resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop nodeapps' to stop the GSD resource.

PRCH-01017: Failed to start GSD resource

Cause: An attempt to start the GSD resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start nodeapps' to start the GSD resource.

PRCH-01018: Failed to stop VIP resource

Cause: An attempt to stop the VIP resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop vip -node <node_name>' to stop the VIP resource.

PRCH-01019: Failed to start VIP resource

Cause: An attempt to start the VIP resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start vip -node <node_name>' to start the VIP resource.

PRCH-01020: Failed to stop Network resource

Cause: An attempt to stop the Network resource failed.

Action: Review the error messages for possible reasons, correct the error and use the command 'srvctl stop nodeapps' to stop the Network resource.

PRCH-01021: Failed to start Network resource

Cause: An attempt to start the Network resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start nodeapps' to start the Network resource.

PRCH-01022: Failed to stop SCAN VIP resource

Cause: An attempt to stop the SCAN VIP resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop scan' to stop the SCAN VIP resource.

PRCH-01023: Failed to start SCAN VIP resource

Cause: An attempt to start the SCAN VIP resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start scan' to start the SCAN VIP resource.

PRCH-01024: Failed to stop SCAN Listener resource

Cause: An attempt to stop the SCAN listener resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop scan_listener' to stop the SCAN listener resource.

PRCH-01025: Failed to start SCAN Listener

Cause: An attempt to start the SCAN listener resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start scan_listener' to start the SCAN listener resource.

PRCH-01026: Failed to stop ASM

Cause: An attempt to stop the ASM resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop asm' to stop the ASM resource.

PRCH-01027: Failed to start ASM

Cause: An attempt to start the ASM resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start asm' to start the ASM resource.

PRCH-01028: One or more resources failed to start: {0}

Cause: An attempt to start one or more resources failed.

Action: Review the underlying error messages that provide the details of which resources failed to start, check the cause and action for the individual resource start failure and perform the steps for each resource that failed to start.

PRCH-01029: One or more resources failed to stop: {0}

Cause: An attempt to stop one or more resources failed.

Action: Review the underlying error messages that provide the details of which resources failed to stop, check the cause and action for the individual resource stop failure and perform the steps for each resource that failed to stop.

PRCH-01030: One or more resources failed to stop: {0}

Cause: An attempt to stop one or more resources failed.

Action: Review the accompanying resource error messages and their documentation, and correct the problems indicated.

PRCH-01031: One or more resources failed to start: {0}

Cause: An attempt to start one or more resources failed.

Action: Review the underlying error messages that provide the details of which resources failed to start, check the cause and action for the individual resource start failure and perform the steps for each resource that failed to start.

PRCH-01032: Failed to stop GNS resource

Cause: An attempt to stop the GNS resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop gns' to stop the GNS resource.

PRCH-01033: Failed to start GNS resource

Cause: An attempt to start the GNS resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start gns' to start the GNS resource.

PRCH-01034: Failed to stop diskgroup resource

Cause: An attempt to stop the diskgroup resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop diskgroup -diskgroup <dg_name>' to stop the diskgroup resource.

PRCH-01035: Failed to start diskgroup resource

Cause: An attempt to start the diskgroup resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start diskgroup -diskgroup <dg_name>' to start the diskgroup resource.

PRCH-01036: The state file "{0}" does not exist

Cause: The state file required for the current operation was not found.

Action: Make sure the named file exists in the file system.

PRCH-01037: The filesystem object "{0}" is not a file

Cause: The content that was expected to be a file which turned out not to be a file.

Action: Retry the 'srvctl stop home' to generate this file. If the problem still exists, contact Oracle Support Services.

PRCH-01038: "{0}" is a non-readable file

Cause: The user does not have read permissions to open the file.

Action: Modify the file permissions so that the file becomes readable or execute the command from an OS userid with the required privileges.

PRCH-01039: Failed to stop CVU resource

Cause: An attempt to stop the CVU resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl stop cvu' to stop the CVU resource.

PRCH-01040: Failed to start CVU resource

Cause: An attempt to start the CVU resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and use the command 'srvctl start cvu' to start the CVU resource.

PRCH-01041: Failed while checking status of service "{0}"

Cause: An attempt to check the status of the listed service failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01042: Failed while checking status of database "{0}"

Cause: An attempt to check the status of the listed database failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01043: Failed while checking status of database instance "{0}"

Cause: An attempt to check the status of the listed database instance failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01044: Failed while checking status of listener "{0}"

Cause: An attempt to check the status of the listed listener failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01045: Failed while checking status of VIP "{0}"

Cause: An attempt to check the status of the listed VIP failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01046: Failed while checking status of SCAN VIP "{0}"

Cause: An attempt to check the status of the listed SCAN VIP failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01047: Failed while checking status of SCAN Listener "{0}"

Cause: An attempt to check the status of the listed SCAN listener failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01048: Failed while checking status of CVU resource "{0}"

Cause: An attempt to check the status of the listed CVU resource failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01049: Failed while checking status of disk group "{0}"

Cause: An attempt to check the status of the listed disk group failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01050: Failed while checking status of ASM "{0}"

Cause: An attempt to check the status of the listed ASM failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01051: Failed while checking status of GNS "{0}"

Cause: An attempt to check the status of the listed GNS failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01052: Failed while checking status of GSD "{0}"

Cause: An attempt to check the status of the listed GSD failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01053: Failed while checking status of Network "{0}"

Cause: An attempt to check the status of the listed network failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01054: Failed while checking status of ONS "{0}"

Cause: An attempt to check the status of the listed ONS failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01055: Failed to create or open file "{0}"

Cause: State file processing failed because: the file specified is a directory rather than a file, the file did not exist but could not be created, or the file exists but could not be opened.

Action: Enable state file processing by: not specifying a directory name, ensuring the directory is writable, or ensuring that an existing state file can be overwritten.

PRCH-01056: Failed to write to file "{0}"

Cause: An attempt to write to the given file failed.

Action: If the state file already exists, then make sure that it is writable. Otherwise, make sure that parent directory of the state file path is writable.

PRCH-01057: The Clusterware resource for database "{0}" does not exist.

Cause: The Oracle Clusterware resource for the database with the given name did not exist.

Action: Make sure that Oracle Clusterware resource for the database with the given name exists.

PRCH-01058: Failed while checking status of CRS home {0}

Cause: An attempt to check the status of the CRS home failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01059: Failed while checking status of Oracle home {0}

Cause: An attempt to check the status of the Oracle home failed.

Action: Review the accompanying error messages for possible reasons, correct the error and retry.

PRCH-01060: Status check for one or more resources failed: {0}

Cause: An attempt to check the status for one or more resources failed.

Action: Review the underlying error messages that provide the details of which resources failed to query their status, check the cause and action for the individual resource start failure and perform the steps for each resource that failed to start.

PRCH-01061: The following resources specified in the state file do not exist: {0}

Cause: An attempt to start one or more resources in the specified state file failed because they do not exist.

Action: Ensure that the correct state file was supplied. If necessary, regenerate the file, or edit it to remove obsolete resources.

PRCH-01062: unable to identify the version of Oracle home {0}

Cause: An attempt to retrieve the version of the specified Oracle home was unsuccessful either because the command 'srvctl -V' failed to execute or the version of the Oracle home is greater than the current software version.

Action: Examine the accompanying error messages for details. If applicable, specify an Oracle home whose version is less than or equal to the current software version and retry the operation.

PRCH-01063: The home type {0} is invalid.

Cause: An attempt to set an Oracle home type failed because the specified home type was invalid.

Action: Specify a valid home type (ADMIN or POLICY).

PRCH-01064: unable to set or modify the node list for a POLICY type Oracle home resource

Cause: An attempt to set or modify the node list where the Oracle home will be available failed because setting or modifying the node list operation is not supported for POLICY type Oracle home resources.

Action: Specify an Oracle home resource of ADMIN type.

PRCH-01065: An Oracle home resource already exists with the name {0}.

Cause: The Oracle home resource was already created for the specified name.

Action: Supply a different name or delete the previous resource.

PRCH-01066: invalid Leaf Node {0}

Cause: An attempt to set or modify the node list where the Oracle home will be available failed because one or more of the specified nodes were Leaf Nodes, which is not supported for ADMIN type Oracle homes.

Action: Specify a node list without Leaf Nodes.

PRCH-01067: invalid empty node list for ADMIN type Oracle home

Cause: An attempt to set or modify the node list where the Oracle home will be available failed because a node list was not specified, which is required for ADMIN type Oracle homes.

Action: Specify a node list.

PRCH-01068: invalid node list for POLICY type Oracle home

Cause: An attempt to create or modify a POLICY type Oracle home failed because a node list was specified, which is not supported for POLICY type Oracle homes.

Action: Repeat the operation without specifying a node list.

PRCH-01069: failed to modify the Oracle home resource because it is running

Cause: An attempt to modify the configuration of the specified Oracle home resource failed because the resource was running.

Action: Stop the specified Oracle home resource and retry the operation.

PRCH-01070: invalid node operation option for Oracle Restart environment

Cause: An attempt to create or modify an Oracle home failed because one or more optional node inputs (node list, -addnode or -deletenode) was specified, which is not supported for an Oracle Restart environment.

Action: Repeat the operation without specifying a node list, -addnode or -deletenode option.

PRCH-01071: invalid Oracle home type for Oracle Restart environment

Cause: An attempt to create or modify an Oracle home failed because a home type was specified.

Action: Repeat the operation without specifying a home type.

PRCH-01072: Node {0} is already registered in the Oracle home node list.

Cause: An attempt to add a node to the node list where the Oracle home will be available failed because the specified node was already registered in the list.

Action: Repeat the operation specifying a different node.

PRCH-01073: Node list is empty.

Cause: An attempt to remove a node from the node list where the Oracle home will be available failed because the node list was empty.

Action: None

PRCH-01074: Node {0} is not registered in the node list.

Cause: An attempt to remove a node from the node list where the Oracle home will be available failed because the specified node was not registered in the node list.

Action: Repeat the operation specifying a node registered in the node list.

PRCH-01075: Oracle home path conflict in node {0}

Cause: An attempt to create a server category for the Oracle home failed because one or more Oracle Automatic Storage Management Cluster File System (Oracle ACFS) file systems share the specified Oracle home path mount point across one or more nodes.

Action: Verify Oracle ACFS file system configurations to avoid redundant nodes.

PRCH-01076: Oracle home resources are not registered in Oracle Clusterware.

Cause: Oracle home resources were not registered with Oracle Clusterware.

Action: Use the command 'srvctl add oraclehome' to create an Oracle home resource.

PRCH-01077: multiple Oracle home resources found for path "{0}"

Cause: An attempt to add a new Oracle home resource failed because the indicated path contained an Oracle home resource.

Action: Retry the operation specifying the correct Oracle home path.

PRCH-01078: Oracle home resource does not exist for path "{0}".

Cause: The Oracle home resource with the specified path was not registered with Oracle Clusterware.

Action: Use the command 'srvctl add oraclehome' to create an Oracle home resource.

PRCH-01079: invalid operation to delete last node from nodelist

Cause: An attempt to modify an Oracle home failed because the node specified is the last remaining node.

Action: Do not modify the last node from the Oracle home resource.

PRCI-01000 to PRCI-01198

PRCI-01000: Failed to retrieve install information on local node using OUI location {0}

Cause: An attempt to retrieve install information on the local node from the specified location failed.

Action: Examine the accompanying error messages for details.

PRCI-01001: Failed to retrieve install information on remote node {0} using OUI location {1}

Cause: An attempt to retrieve install information on a remote node from the specified location failed.

Action: Examine the accompanying error messages for details.

PRCI-01100: Failed to get Vendor Cluster for CRS home {0}

Cause: Unable to locate vendor cluster library or execute lsnodes.

Action: Install Vendor Clusterware. Then try to run lsnodes again.

PRCI-01101: Failed to get Vendor Cluster for CRS home {0} on node {1}

Cause: Unable to locate vendor cluster library or execute lsnodes on the specified node.

Action: Install Vendor Clusterware on the specified node. Then try to run lsnodes again.

PRCI-01102: Failed to get OracleCM Cluster for CRS home {0}

Cause: Failed to get OracleCM Cluster for the local node using CRS home provided.

Action: Install Oracle 9i and make sure that /etc/ORCLcluster exists.

PRCI-01103: Failed to get OracleCM Cluster for CRS home {0} on node {1}

Cause: Failed to get OracleCM Cluster for the specified node using CRS home provided.

Action: Examine the accompanying error messages for details.

PRCI-01104: Failed to check Oracle Restart running state for Oracle Restart home {0}

Cause: Failed to check whether Oracle Restart is running from the specified home on the local node.

Action: Examine the accompanying error messages for details.

PRCI-01105: Failed to check Oracle Restart running state for Oracle Restart home {0} on node {1}

Cause: Failed to check whether Oracle Restart is running from the specified home on the specified node.

Action: Examine the accompanying error messages for details.

PRCI-01106: Failed to check Oracle Restart configuration state for Oracle Restart home {0} on node {1}

Cause: Failed to check whether Oracle Restart is configured for the specified home on the specified node.

Action: Examine the accompanying error messages for details.

PRCI-01107: Failed to check CRS running state for CRS home {0}

Cause: Failed to check whether Oracle Clusterware is running from the specified home on the local node.

Action: Examine the accompanying error messages for details.

PRCI-01108: Failed to check CRS running state for CRS home {0} on node {1}

Cause: Failed to check whether Oracle Clusterware is running from the specified home on the specified node.

Action: Examine the accompanying error messages for details.

PRCI-01109: Failed to check CRS configuration state for CRS home {0}

Cause: Failed to check whether Oracle Clusterware is configured for the specified home on the specified node.

Action: Examine the accompanying error messages for details.

PRCI-01110: Failed to check CRS configuration state for CRS home {0} on node {1}

Cause: Failed to check whether Oracle Clusterware is configured for the specified home on the local node.

Action: Examine the accompanying error messages for details.

PRCI-01111: File path is null

Cause: The specified file is null or an empty string.

Action: Provide a valid file path that is not null.

PRCI-01112: Directory name passed was null

Cause: The specified directory name is null or an empty string.

Action: Provide a valid directory name that is not null.

PRCI-01113: Directory {0} does not exist

Cause: Could not find the specified directory or it was a file instead of a directory.

Action: Provide an existing directory name.

PRCI-01114: Node name is null

Cause: The specified node name is null or an empty string.

Action: This is an internal error. Contact Oracle Support Services.

PRCI-01115: argument passed is null

Cause: The specified database name is null or an empty string.

Action: This is an internal error. Contact Oracle Support Services.

PRCI-01116: Failed to check if a database named {0} exists

Cause: Failed to execute the command 'crsctl stat resource <database_resource_name>' to decide whether the specified database exists or not.

Action: Examine the accompanying error messages for details.

PRCI-01117: Failed to retrieve list of databases under high availability management

Cause: Failed to execute the command 'crsctl stat resource -w TYPE=ora.database.type *filter*' in order to get the list of databases managed by Oracle Restart.

Action: Examine the accompanying error messages for details.

PRCI-01118: Failed to determine if database {0} depends on Automatic Storage Management

Cause: Failed to execute crsctl command to decide whether the specified database depended on Automatic Storage Management (ASM).

Action: Examine the accompanying error messages for details.

PRCI-01119: Failed to determine if database {0} is configured on node {1}

Cause: An attempt to determine the nodes on which a database is configured failed. Either the specified node name is invalid or an internal request failed.

Action: Examine the accompanying error messages for details.

PRCI-01120: Failed to retrieve list of databases under high availability management for node {0}

Cause: Failed to get the list of database managed by Oracle Restart on the specified node because the specified node is null or an invalid node or crsctl command execution failed.

Action: Examine the accompanying error messages for details.

PRCI-01121: Failed to determine if database {0} depends on Automatic Storage Management on node {1}

Cause: Failed to execute crsctl command to decide whether the specified database depended on Automatic Storage Management (ASM) on the specified node because the specified node is null or an invalid node or crsctl command execution failed.

Action: Examine the accompanying error messages for details.

PRCI-01122: Failed to determine if the public network is using dynamic address assignment (DHCP)

Cause: An attempt to determine whether the public network is using dynamic address assignment (DHCP) failed.

Action: Examine the accompanying error messages for details.

PRCI-01123: CRS home does not exist on the local node

Cause: CRS home is not installed on the local node.

Action: Install a CRS home using the Oracle Universal Installer.

PRCI-01124: Oracle Restart home does not exist on the local node

Cause: Oracle Restart home is not installed.

Action: Install an Oracle Restart home using the Oracle Universal Installer.

PRCI-01125: CRS home does not exist on node {0}

Cause: CRS home is not installed on the specified node.

Action: Install a CRS home using the Oracle Universal Installer.

PRCI-01126: Oracle Restart home does not exist on node {0}

Cause: Oracle Restart home is not installed on the specified node.

Action: Install an Oracle Restart home using the Oracle Universal Installer.

PRCI-01127: CRS active version cannot be queried in a non-cluster environment

Cause: Clusterware is not configured.

Action: Ensure that Clusterware is configured.

PRCI-01128: Failed to check Oracle Restart configuration state for Oracle Restart home {0}

Cause: Oracle Restart may not be configured

Action: Ensure that Oracle Restart is installed and configured

PRCI-01129: Failed to check Oracle Restart configuration state on node {1}

Cause: Oracle Restart may not be configured

Action: Ensure that Oracle Restart is installed and configured

PRCI-01130: Failed to check CRS configuration state

Cause: Clusterware CRS may not be configured

Action: Ensure that Clusterware CRS is installed and configured

PRCI-01131: Failed to check CRS configuration state on node {1}

Cause: Clusterware CRS may not be configured

Action: Ensure that Clusterware CRS is installed and configured

PRCI-01132: Failed to get clustername for CRS home {0} and version {1}

Cause: Clusterware is not configured and CRS stack is not up

Action: Ensure that Clusterware CRS is installed and configured and the stack is up.

PRCI-01133: The IP address {0} does not have the same number of fields with the subnet mask {1}

Cause: IP address is in IPv4 address format while the subnet mask is in IPv6 address format or the other way around.

Action: Ensure that both the IP address and the subnet mask use the same representation (the longer required among IPv4 and IPv6).

PRCI-01134: Applying subnet mask {0} to IP address {1} resulted in an invalid IP address format

Cause: This won't ever happen. Message added just in case.

Action: None

PRCI-01135: Failed to check if path {0} on node {1} is on ACFS

Cause: An attempt to determine if the specified path is on ACFS failed. This can occur because: 1. The Clusterware stack is down on the specified node. 2. ASM is down on the specified node. 3. A diskgroup associated with the path is not online. 4. The path is not mounted.

Action: Perform checks corresponding to the above causes: 1. Ensure the Clusterware stack is running on the specified node. 2. Ensure that ASM is running on the specified node. 3. Ensure that the diskgroup associated with the path is online. 4. Ensure that the file system is mounted on the node.

PRCI-01136: The specified path {0} is not on Oracle Automatic Storage Manager Cluster File System (ACFS)

Cause: The specified path is not on ACFS.

Action: Specify a path that is on ACFS. This check will only accept paths on ACFS.

PRCI-01137: Failed to check if path {0} is on ACFS

Cause: An attempt to determine if the specified path is on ACFS failed. This can occur because: 1. The Clusterware stack is down on the specified node. 2. ASM is down on the specified node. 3. A diskgroup associated with the path is not online. 4. The path is not mounted.

Action: Perform checks corresponding to the above causes: 1. Ensure the Clusterware stack is running on the specified node. 2. Ensure that ASM is running on the specified node. 3. Ensure that the diskgroup associated with the path is online. 4. Ensure that the file system is mounted on the node.

PRCI-01138: Failed to check Oracle Restart configuration state

Cause: Oracle Restart was not configured.

Action: Ensure that Oracle Restart is installed and configured.

PRCI-01140: Error occurred while reading input from console

Cause: An attempt to read input from console failed

Action: Make sure that the process running this program has a valid standard input (stdin).

PRCI-01141: Failed to get volume device for path {0}

Cause: An attempt to retrieve the volume device for the given ACFS path failed. This can occur because: 1. The Clusterware stack is down on the node. 2. ASM is down on the node. 3. A diskgroup associated with the path is not online. 4. The path is not mounted.

Action: Perform checks corresponding to the above causes: 1. Ensure the Clusterware stack is running on the node. 2. Ensure that ASM is running on the node. 3. Ensure that the diskgroup associated with the path is mounted. 4. Ensure that the file system is mounted on the node.

PRCI-01142: Failed to get volume device for path {0} on node {1}

Cause: An attempt to retrieve the volume device for the given ACFS path failed. This can occur because: 1. The Clusterware stack is down on the specified node. 2. ASM is down on the specified node. 3. A diskgroup associated with the path is not online. 4. The path is not mounted.

Action: Perform checks corresponding to the above causes: 1. Ensure the Clusterware stack is running on the specified node. 2. Ensure that ASM is running on the specified node. 3.

Ensure that the diskgroup associated with the path is mounted. 4. Ensure that the file system is mounted on the specified node.

PRCI-01143: Error executing the script {0} on nodes {1}

Cause: An error occurred in executing the script on the list of nodes mentioned. This message is accompanied by others providing details of the error.

Action: Correct the problem indicated by the accompanying messages and retry.

PRCI-01144: Failed to retrieve Oracle Grid Infrastructure home path

Cause: An attempt to read Grid Infrastructure home path from OLR configuration file or registry entry failed.

Action: Examine the accompanying error messages for details. 1. Make sure Grid Infrastructure is configured as either Oracle Clusterware or Oracle Restart, and that the invoking user is able to read the configuration. 2. Issue the command '*GI home/*svrm/admin/getcrshome' and examine the resulting output.

PRCI-01145: Failed to retrieve Oracle Grid Infrastructure home path on node {0}

Cause: An attempt to read Grid Infrastructure home path from OLR configuration file or registry entry on specified node failed.

Action: Examine the accompanying error messages for details. 1. Make sure Grid Infrastructure is configured as either Oracle Clusterware or Oracle Restart, and that the invoking user is able to read the configuration. 2. Issue the command '*GI home/*svrm/admin/getcrshome' and examine the resulting output.

PRCI-01146: invalid {0} argument passed

Cause: The argument provided was null.

Action: This is an internal error. Contact Oracle Support Services.

PRCI-01147: root script operation failed on the first node {0}

Cause: The root configuration or upgrade failed on the first node. This message is accompanied by other messages providing details of the error.

Action: Correct the problem indicated by the accompanying messages and retry.

PRCI-01148: root script operation failed on the last node {0}

Cause: The root configuration or upgrade failed on the last node. This message is accompanied by other messages providing details of the error.

Action: Correct the problem indicated by the accompanying messages and retry.

PRCI-01149: olsnodes utility failed to get the cluster node active roles

Cause: An attempt to execute `olsnodes -a` has failed.

Action: This is an internal error. Contact Oracle Support Services.

PRCI-01150: failed to retrieve the active node role of the node {0}

Cause: An attempt to retrieve the active node role of an invalid node of the cluster has failed.

Action: Enter a valid node of the cluster.

PRCI-01151: crsctl utility failed to get the cluster node configured roles

Cause: The argument provided was null.

Action: This is an internal error. Contact Oracle Support Services.

PRCI-01152: failed to retrieve the configured node role of the node {0}

Cause: An attempt to retrieve the configured node role of an invalid node of the cluster has failed.

Action: Enter a valid node of the cluster.

PRCI-01156: The GNS VIP {0} does not match any of the available subnets {1}.

Cause: The provided Grid Naming Service (GNS) virtual internet protocol (VIP) did not belong to an available subnet.

Action: Ensure that GNS VIP belongs to one of subnets connected to the node.

PRCI-01157: Failed to retrieve the node name on which the management database is running.

Cause: An attempt to retrieve the management database node was made when the management database was not running.

Action: Use the 'srvctl start mgmtdb' command to start the management database and retry.

PRCI-01158: Failed to retrieve the size of management database

Cause: An attempt to retrieve the management database size failed because of underlying errors.

Action: Examine the accompanying error messages for details.

PRCI-01159: Path {0} is not on an ACFS file system

Cause: The supplied path was not on an ACFS filesystem.

Action: Supply a path that is on ACFS.

PRCI-01160: Failed to determine if database {0} is administrator-managed

Cause: An internal command to determine management status of the specified database failed.

Action: Examine the accompanying error message for details.

PRCI-01161: Failed to retrieve nodes on which database {0} is configured

Cause: An internal command to determine the nodes configured for the specified database failed.

Action: Examine the accompanying error message for details.

PRCI-01162: The specified subnets {0} do not match with any of the subnets {1} present in the node {2}.

Cause: An attempt to check whether the specified subnets were present in the current node failed.

Action: Ensure that the provided subnets match with the subnets present in the current node.

PRCI-01163: The public subnets {0} do not match with any of subnets {1} present in the node {2}.

Cause: An attempt to check whether the VIP belongs to a public subnet failed.

Action: Ensure that the VIP address belongs to a public subnet. The public subnets are displayed by the command 'oifcfg getif'.

PRCI-01164: File "{0}" does not exist.

Cause: The specified file could not be found.

Action: Reissue the command specifying the name of an existing file.

PRCI-01165: XSD resource "{0}" could not be located.

Cause: The XML Schema Definition file was not found at the designated location. This is an internal error.

Action: Contact Oracle Support Services.

PRCI-01166: Credential file "{0}" is invalid.

Cause: The provided credentials file was invalid.

Action: Reissue the command specifying a valid credentials file.

PRCI-01167: failed to extract attributes from the specified file "{0}"

Cause: An attempt to extract attributes for the specified credentials file failed. This is an internal error.

Action: Contact Oracle Support Services.

PRCI-01168: The OCRDUMP utility failed to get all cluster nodes.

Cause: An attempt to execute "ocrdump -noheader -stdout -keyname SYSTEM.version.hostnames" failed. This is an internal error.

Action: Contact Oracle Support Services.

PRCI-01169: failed to retrieve the mount point for path {0}

Cause: An internal command to retrieve the mount point for the specified path failed.

Action: Examine the accompanying error messages for details.

PRCI-01170: check whether cluster is an Oracle Database Appliance Lite environment failed

Cause: An attempt to check whether the cluster was configured in Oracle Public Cloud failed.

Action: Examine the accompanying error messages for details, resolve issues and retry the original request.

PRCI-01171: olsnodes utility failed to get the cluster node roles

Cause: An attempt to execute olsnodes -a has failed.

Action: Examine the accompanying error messages for details, address the issues raised, and retry.

PRCI-01172: The specified XML file {0} does not conform to XML standards.

Cause: The indicated XML file was invalid.

Action: Reissue the command specifying a valid XML file.

PRCI-01173: The specified network number {0} is invalid.

Cause: An attempt to query a network resource was rejected because the specified network number was not a positive integer.

Action: Reissue the command specifying a valid network number.

PRCI-01174: failure to get the cluster Single Client Access Name

Cause: An attempt to query the Single Client Access Name (SCAN) failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues raised, and retry.

PRCI-01175: check whether cluster is an Oracle Database Appliance Lite environment failed

Cause: An attempt to check whether the cluster was configured as Oracle Database Appliance Lite failed.

Action: Examine the accompanying error messages for details, resolve issues and retry the original request.

PRCI-01176: check whether cluster is an Oracle Database Appliance Single IP environment failed

Cause: An attempt to check whether the cluster was configured as Oracle Database Appliance Single IP failed.

Action: Examine the accompanying error messages for details, resolve issues and retry the original request.

PRCI-01177: invalid parameter value "{0}" for number of member clusters

Cause: An attempt to retrieve the disk group size was rejected because the specified number of member clusters was not greater than zero.

Action: Retry the operation specifying a value greater than zero for the number of member clusters.

PRCI-01178: failed to retrieve the minimum disk space requirement for Grid Infrastructure Management Repository

Cause: An attempt to retrieve the disk space for Grid Infrastructure Management Repository failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the problems identified, and retry the operation.

PRCI-01179: failed to retrieve the minimum disk space required for adding a new repository for a member cluster

Cause: An attempt to retrieve the minimum disk space required to add a new repository for a member cluster failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the problems identified, and retry the operation.

PRCI-01180: failure to verify that a VIP can be configured for network {0}

Cause: An attempt to query an attribute for the indicated network to determine whether a virtual IP address can be configured failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues, and retry.

PRCI-01181: failed to retrieve the memory allocated because the local node is not a container

Cause: An attempt to retrieve the allocated memory for the local node failed because the operation is only supported on Linux Containers.

Action: Retry the operation in a Linux Container.

PRCI-01183: invalid disk group specified for creating Grid Infrastructure Management Repository

Cause: An attempt to create Grid Infrastructure Management Repository was rejected because the disk group was used by Oracle Cluster Registry.

Action: Retry the operation specifying a different disk group.

PRCI-01184: specified disk group does not exist for creating Grid Infrastructure Management Repository

Cause: An attempt to create Grid Infrastructure Management Repository was rejected because the specified disk group did not exist.

Action: Retry the operation specifying a different disk group.

PRCI-01185: invalid disk group specified for creating Grid Infrastructure Management Repository because OCR is not in an ASM disk group

Cause: An attempt to create Grid Infrastructure Management Repository was rejected because Oracle Cluster Registry is not in ASM and a disk group was specified for creation of GIMR.

Action: Retry the operation without specifying disk group.

PRCI-01186: failed to get additional required space for upgrade {0}

Cause: An attempt to get the additional required space for upgrade failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues, and retry.

PRCI-01187: failed to get the status of the GIMR service

Cause: An attempt to get the status of the Grid Infrastructure Management Repository (GIMR) service failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues, and retry.

PRCI-01188: specified disk group {0} does not exist for creating Grid Infrastructure Management Repository

Cause: An attempt to create Grid Infrastructure Management Repository was rejected because the specified disk group did not exist.

Action: Retry the operation specifying a different disk group.

PRCI-01189: invalid path {0} specified for creating GIMR because the OCR storage type is {1}

Cause: An attempt to create the Grid Infrastructure Management Repository (GIMR) was rejected because the specified path did not match with the storage type of Oracle Cluster Registry (OCR).

Action: Retry the operation specifying a different location.

PRCI-01190: invalid path {0} specified for creating GIMR because the specified shared path does not exist

Cause: An attempt to create the Grid Infrastructure Management Repository (GIMR) was rejected because the specified path did not exist or the indicated path mentioned is not a directory.

Action: Retry the operation specifying a valid location by creating the non existing directory.

PRCI-01191: the key to get the status of the GIMR service does not exist in the OCR

Cause: An attempt to get the status of the Grid Infrastructure Management Repository (GIMR) service failed because the key did not exist in the Oracle Cluster Registry (OCR).

Action: Add the GIMR and try again.

PRCI-01192: invalid path {0} specified for creating GIMR because the specified shared path is not accessible from these cluster nodes {1}

Cause: An attempt to create the Grid Infrastructure Management Repository (GIMR) was rejected because the specified path was not accessible from all the cluster nodes.

Action: Retry the operation specifying a valid location that is accessible from all the cluster nodes.

PRCI-01194: failed to validate the specified path {0} for creating GIMR

Cause: An attempt to validate the path to create the Grid Infrastructure Management Repository (GIMR) failed.

Action: Examine the accompanying error messages, address the issues, and retry.

PRCI-01195: failed to validate if this environment is a DBCS single IP

Cause: An attempt to validate if the cluster was configured for a Database Cloud Service (DBCS) single IP failed.

Action: Examine the accompanying error messages for details, resolve the issues, and retry the original request.

PRCI-01196: failed to check if PMEM is configured on the system. Detailed error:\n{0}

Cause: An attempt to determine if a persistent memory configured on the system failed.

Action: Examine the accompanying error messages for details, resolve the issues, and retry the operation.

PRCI-01197: failed to validate if path {0} is on a PMEM file system. Detailed error:\n{1}

Cause: An attempt to validate if the specified path on a persistent memory file system failed.

Action: Examine the accompanying error messages for details, resolve the issues, and retry the operation.

PRCI-01198: failed to get the PMEM file systems configured on the system. Detailed error:\n{1}

Cause: An attempt to retrieve the persistent memory file systems configured on the system failed.

Action: Examine the accompanying error messages for details, resolve the issues, and retry the operation.

PRCN-02018 to PRCN-03125

PRCN-02018: Current user {0} is not a privileged user

Cause: Current user did not have sufficient privileges to perform this operation.

Action: Make sure that the user has root privileges on Linux/Unix's and Administrator on Windows.

PRCN-02030: Subnet does not exist for resource {0}

Cause: An attempt was made to query subnet for a network resource configured with Oracle clusterware and it was not found.

Action: Internal error. Contact Oracle Support.

PRCN-02031: Unknown DHCP server name {0} found for resource {1}

Cause: The DHCP server type obtained for the network resource is not a valid server type.

Action: Internal error. Contact Oracle Support.

PRCN-02032: Failed to retrieve DHCP server type {0}

Cause: An attempt to query the DHCP server type for the network resource failed because its value could not be retrieved from the Oracle clusterware resource attributes.

Action: make sure Oracle clusterware is up and running. and also look at the help for the accompanying CRS error message.

PRCN-02033: Failed to update DHCP server type to {0} \n{1}

Cause: An attempt to update the DHCP server type for the network resource failed because its value could not be updated in the Oracle Clusterware resource attribute.

Action: Make sure that the Clusterware stack is up. Make sure that the user has enough permission to modify node applications. Examine the accompanying message for additional details.

PRCN-02034: Could not find dependent resource {0} for resource {1}: {2}

Cause: Could not get the resource associated with a given resource. Could not get the ASM resource associated with a given ASM disk group resource.

Action: Make sure that clusterware stack is up. Make sure that the network resource associated with this resource has not been removed. Make sure that the user has permission to perform this operation.

PRCN-02035: Port {0} is not available on node(s) or virtual host(s): {1}

Cause: The port specified is already being used by some other applications on the nodes or virtual hosts given.

Action: Stop the applications that are using these ports or specify a different port and try the command again.

PRCN-02036: Failed to retrieve port number(s) for {0}

Cause: An attempt to retrieve the port number(s) for the cluster resource failed.

Action: Make sure that the clusterware stack is up. Make sure that the resource you are querying has been configured. Also take a look at the help for the accompanying error message(s).

PRCN-02037: Failed to retrieve Oracle home for {0}

Cause: An attempt to retrieve Oracle home value for the listener resource failed.

Action: Make sure that the clusterware stack is up. Make sure that listener is configured. If node name is being specified in the command line make sure that the node name is a valid node name. Also look at help for the accompanying error message(s).

PRCN-02038: Failed to update Oracle home {0} for listener {1}

Cause: An attempt to update the Oracle home value for the listener resource failed.

Action: Make sure that the clusterware stack is up. Make sure that the listener is configured. If node name is being specified in the command line make sure that the node name is a valid node name. Make sure that user is a owner or has write permissions to modify the listener resource. Also look at the help for other errors listed in error stack.

PRCN-02039: Failed to retrieve Oracle home for {0} on node {1}

Cause: An attempt to retrieve Oracle home value for the listener resource on a the specified node failed.

Action: Make sure that the clusterware stack is up. Make sure that the listener is configured on the node. Make sure that the node name being passed in the command line is a valid node name. Also look at the help for the accompanying error message(s).

PRCN-02040: Failed to update Oracle home {0} for {1} on node {2}

Cause: Attempt to update value of attribute Oracle home for listener resource on the specified node failed.

Action: Make sure that the clusterware stack is up. Make sure that the listener is configured on the node. Make sure that the user has enough permission to modify the listener. Make sure that the node name being passed in the command line is a valid node name. Also look at the help for other errors listed in error stack.

PRCN-02041: Failed to retrieve properties of {0}

Cause: Failed to retrieve properties of the given entity.

Action: Make sure that user has permission to read resource attribute.

PRCN-02042: Failed to set properties {0} of {1}

Cause: Failed to update properties of the given entity.

Action: Make sure that user has permission to update resource attribute.

PRCN-02043: Multiple network resources {0} exist on the cluster

Cause: More than one network resource has been configured and the one to be used for creating this resource has not been specified.

Action: Use the '-netnum <net_num>' option to specify the network to be used and retry the command again.

PRCN-02044: No listener exists

Cause: No listener has been configured.

Action: Use netca or srvctl to add/configure a listener.

PRCN-02045: No network exists

Cause: No network has been configured.

Action: Use 'srvctl add nodeapps' to add/configure network resource.

PRCN-02046: Netmask does not exist for resource {0}

Cause: An attempt to retrieve the subnet information for the network resource resulted in not finding subnet mask.

Action: Internal error. Contact Oracle Support.

PRCN-02047: VIP {0} exists

Cause: The VIP with specified name has been registered in CRS.

Action: Remove the existing VIP before registering it again.

PRCN-02048: The network number {0} is already registered for subnet "{3}" and adapters "{4}". Can not add network number {0} for the specified subnet "{1}" and adapters "{2}".

Cause: The network number is taken by a registered network resource.

Action: Use a different network number to add a new network resource with the specified subnet and adapters, or modify existing network using the command 'srvctl modify nodeapps'.

PRCN-02049: The network attributes specified (network number: {0}, subnet: {1}, adapters: {2}) conflict with an already registered network (network number: {3}, subnet: {4}, adapters: {5})

Cause: The network resource is registered with different network number

Action: Use the registered network resource with the registered network number or provide different subnet or adapters.

PRCN-02050: The requested VIP (nodename: {0}, VIP name: {1}, network number: {2}) has the same VIP name but different network number or preferred node than the registered VIP (nodename: {3}, VIP name: {4}, network number: {5}).

Cause: One VIP name (and IP address) can only be used by one VIP with the same network number on the same node.

Action: Use a different VIP name or IP address.

PRCN-02051: The requested VIP (nodename: {0}, VIP name: {1}, network number: {2}) has the same network number and the same preferred node but different VIP name with the registered VIP (nodename: {3}, VIP name: {4}, network number: {5}).

Cause: One network resource on one preferred node can have only one cluster VIP.

Action: Use different network number or preferred node to register different VIP.

PRCN-02052: Failed to modify network number {0} to use subnet "{1}" with subnet mask "{2}", adapters "{3}" and address type "{4}"

Cause: CRS was unable to modify the network resource to use new subnet/netmask/interface/address type.

Action: Check accompanying error message(s) for details, then ensure that: - The clusterware stack is up. - The subnet, netmask, address type and adapters values are correct. - The network interface referred to is running. - The user trying to modify the network resource has root privileges.

PRCN-02053: Failed to modify ONS listening port for local client connections to {0}

Cause: CRS unable to modify the ONS listening port for local connections

Action: Make sure that clusterware stack is up. If the port is in use by another application, try using a different port.

PRCN-02054: Failed to modify ONS listening port for remote client connections to {0}

Cause: CRS unable to modify the ONS listening port for remote client connections

Action: Make sure that clusterware stack is up. If the port is in use by another application, try using a different port.

PRCN-02055: Failed to update port number(s) to {0} for {1}

Cause: An attempt to update the listener port failed for the nodes of the cluster.

Action: The port could be in use. Try using different port. If node name was specified in the command line make sure that the node name is a valid node name. Also look at the help for the accompanying error message(s).

PRCN-02056: Invalid listener protocol type {0}

Cause: The specified listener protocol type is invalid.

Action: Provide a valid listener protocol type. It can be TCP, TCPS, IPC, NMP, or SDP.

PRCN-02057: Invalid listener protocol value {0}

Cause: The specified listener protocol value is invalid.

Action: Provide a valid listener protocol value. It cannot contain special characters ':/'

PRCN-02058: Invalid listener protocol ENDPOINTS {0}. Delimiter is "{1}", invalid part is "{2}".

Cause: The specified listener ENDPOINTS are invalid.

Action: Provide valid listener protocol ENDPOINTS. It cannot contain invalid part.

PRCN-02059: Invalid listener port number {0}

Cause: The specified listener port number is invalid.

Action: Provide a valid listener port number.

PRCN-02060: Duplicated listener protocol value {0}

Cause: The specified listener protocol value is a duplication of another one.

Action: Remove duplicated listener protocol value.

PRCN-02061: Failed to add listener {0}

Cause: An attempt to add listener failed because endpoints were not specified correctly or other reasons.

Action: Review the underlying error messages that provide the details of which resources failed to create. Check the cause and action for the individual resource creation failure. If the endpoints were not specified correctly, correct endpoints.

PRCN-02062: The specified hostname or address {0} cannot be resolved.

Cause: An invalid IP address or unresolvable hostname was specified.

Action: If IP address is specified then make sure that it is of legal length. If a host name is specified then make sure that the host name resolves to an IP address.

PRCN-02063: Failed to modify OC4J listening port to {0}

Cause: CRS unable to modify the OC4J instances listening port.

Action: Make sure that clusterware stack is up. If the port is in use by another application, try using a different port.

PRCN-02064: Found {0} VIPs for {1}

Cause: A conflict was found in VIP resource definition: either more than one VIP is using the same name or address, or a VIP is using the same name or address as a real host.

Action: Ensure that each VIP is defined with a distinct name and address relative to other VIPs and hosts in the network.

PRCN-02065: Ports {0} are not available on the nodes given

Cause: The ports specified are already being used by some other applications in one or more of the specified nodes.

Action: Stop the applications that are using these ports or specify different ports.

PRCN-02066: Failed to retrieve cluster listener for {0} because it has the type of Single Client Access Name Listener

Cause: Failed to use cluster listener APIs or `srvctl` commands for specified listener.

Action: Use Single Client Access Name Listener (SCAN listener) APIs or `srvctl` commands (`srvctl verb scan_listener`) for specified listener name.

PRCN-02067: Port {0} is not available on nodes: {1}

Cause: The port specified is already being used by other application.

Action: Stop the application that is using this port or specify a different port.

PRCN-02068: Failed to check the port availability

Cause: This is an internal error.

Action: Contact Oracle Support.

PRCN-02069: Unable to retrieve the list of nodes

Cause: This is an internal error.

Action: Contact Oracle Support.

PRCN-02070: Failed to validate network. No interface matches required network (subnet: {0}, netmask: {1} adapters: {2}).

Cause: No interfaces were found that match the specified network.

Action: Specify a subnet that exists on all nodes, or reconfigure the nodes to ensure that the specified subnet exists on all nodes.

PRCN-02071: Failed to update attribute USE_EVM to {0}

Cause: An attempt to update the attribute value of USE_EVM for ONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-02072: Failed to get multicast port for events from EONS

Cause: An attempt to get multicast port for events from EONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-02073: Failed to remove EONS

Cause: An attempt to remove EONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-02074: Specified check interval of {0} minutes is below the minimum check interval {1} minutes

Cause: The CVU resource check interval specified was less than the minimum check interval.

Action: Retry the operation with a interval greater than or equal to the minimum check interval.

PRCN-02075: Failed to modify the CVU RUN_INTERVAL attribute to {0}

Cause: CRS was unable to modify the CVU RUN_INTERVAL attribute.

Action: Make sure that the Clusterware stack is up. Make sure that the user is an owner or has write permissions to modify the CVU resource. Check for and respond to any accompanying error messages.

PRCN-02076: failed to retrieve the CVU RUN_INTERVAL attribute for resource "{0}"

Cause: An attempt to retrieve the RUN_INTERVAL attribute for the Configuration Verification Utility cluster resource failed.

Action: Make sure that the Clusterware stack is up. Make sure that the CVU resource has been configured. Check for and respond to any accompanying error messages.

PRCN-02077: Failed to modify the CVU CHECK_RESULTS attribute to "{0}"

Cause: CRS was unable to modify the CVU CHECK_RESULTS attribute.

Action: Make sure that Clusterware stack is up. Make sure that the CVU resource has been configured. Check for and respond to any accompanying error messages.

PRCN-02078: Failed to retrieve the CVU CHECK_RESULTS for "{0}"

Cause: An attempt to retrieve the CHECK_RESULTS attribute for the CVU cluster resource failed.

Action: Make sure that the Clusterware stack is up. Make sure that the CVU resource has been configured. Check for and respond to any accompanying error messages.

PRCN-02079: Port {0} is out of the valid range, between 1 and 65535 and cannot be used on any of the nodes given

Cause: The port number that was provided was either less than 1 or greater than 65535.

Action: Make sure the port provided has a value between 1 and 65535.

PRCN-02080: Address type does not exist for resource {0}

Cause: An attempt was made to query address type for a network resource configured with Oracle clusterware and it was not found.

Action: Contact Oracle Support.

PRCN-02081: Failed to modify network number {0} to use subnet "{1}" with prefix length "{2}", adapters "{3}" and address type "{4}"

Cause: CRS was unable to modify the network resource to use new subnet/prefix length/interface/address type.

Action: Check accompanying error message(s) for details, then ensure that: - The clusterware stack is up. - The subnet, prefix length, address type and adapters values are correct. - The network interface referred to is running. - The user trying to modify the network resource has root privileges.

PRCN-02082: Setting the server type to "{0}" is not allowed for an {1} network

Cause: An attempt was made to set the IPv4 network server type to 'autoconfig' or to set the IPv6 network server type to 'static' .

Action: Make sure that the network is IPv4 or IPv6 when trying to set the server type to 'dhcp' or 'autoconfig' respectively.

PRCN-02083: Modifying the server type from "{0}" to "{1}" directly is not allowed

Cause: An attempt was made to change the network server type from 'static' to a dynamic type (or the reverse) without the required intermediate setting of 'mixed'.

Action: First change the server type to 'mixed', then retry the command.

PRCN-02084: Failed to update the {0} server type to "{1}" \n{2}

Cause: An attempt to update the server type for the network resource failed because its value could not be updated in the Oracle Clusterware resource attribute.

Action: Make sure that the Clusterware stack is up. Make sure that the user has enough permission to modify node applications. Examine the accompanying message for additional details.

PRCN-02085: There exists already another network ("{0}") with the same IPv6 link-local subnet

Cause: Already registered another network with the same IPv6 link-local subnet.

Action: Make sure that the IPv6 link-local subnet is unique among the existing networks.

PRCN-02086: Failed to modify the CRSHOME_SPACE_ALERT_MODE attribute of the CVU resource to "{0}"

Cause: Cluster Ready Service (CRS) was unable to modify the CRSHOME_SPACE_ALERT_MODE attribute of the Configuration Verification Utility (CVU) CRS resource.

Action: Make sure that the Oracle Clusterware stack is up. Make sure that the CVU resource has been configured. Examine and respond to any accompanying error messages.

PRCN-02087: Failed to retrieve the CRSHOME_SPACE_ALERT_MODE attribute of the CVU resource

Cause: An attempt to retrieve the CRSHOME_SPACE_ALERT_MODE attribute of the Configuration Verification Utility (CVU) cluster resource failed.

Action: Make sure that the Oracle Clusterware stack is up. Make sure that the CVU resource has been configured. Examine and respond to any accompanying error messages.

PRCN-02088: The value specified "{0}" for command line option "{1}" is not an absolute directory path.

Cause: The specified value for command line option '-destloc' was not an absolute directory path.

Action: Make sure that the path specified is an absolute directory path that either exists or can be created.

PRCN-02089: The value specified "{0}" for command line option "{1}" is not a directory.

Cause: The specified value for command line option '-destloc' was not a directory.

Action: Make sure that the path specified is an absolute directory path that either exists or can be created.

PRCN-02090: Directory "{0}" could not be created on nodes "{1}".

Cause: The specified directory could not be created on the nodes specified.

Action: Examine the accompanying error message for details.

PRCN-02091: failed to modify the CV_DESTLOC attribute of the CVU resource to "{0}"

Cause: Cluster Ready Services (CRS) was unable to modify the CV_DESTLOC attribute of the Configuration Verification Utility (CVU) CRS resource.

Action: Make sure that the Oracle Clusterware stack is up. Make sure that the CVU resource has been configured using the command 'srvctl config cvu'. Examine and respond to any accompanying error messages.

PRCN-02092: failed to retrieve the CV_DESTLOC attribute of the CVU resource

Cause: An attempt to retrieve the CV_DESTLOC attribute of the Cluster Verification Utility (CVU) cluster resource failed.

Action: Make sure that the Oracle Clusterware stack is up. Make sure that the CVU resource has been configured using the command 'srvctl config cvu'. Examine and respond to any accompanying error messages.

PRCN-02093: Directory "{0}" specified for command line option "{1}" is on a shared file system path.

Cause: The directory specified for command line option '-destloc' was on a shared file system path.

Action: Make sure that the path specified is not on a shared file system path.

PRCN-02094: Directory "{0}" specified for command line option "{1}" is not writable.

Cause: The directory specified for command line option '-destloc' was not writable.

Action: Make sure that the path specified is writable by the current user.

PRCN-03000: The IPMI configuration failed on all nodes

Cause: The node names were invalid or were valid but had no IPMI device present.

Action: Make sure that all nodes are reachable and the IPMI device exists on those nodes.

PRCN-03001: The IPMI configuration failed on one or more nodes

Cause: There was at least one node with invalid name or with no IPMI device.

Action: Make sure that all nodes are reachable and the IPMI device exists on those nodes.

PRCN-03002: There is no network resource configured for the cluster

Cause: A request to add a listener was rejected due to the lack of a network resource.

Action: Use the command 'srvctl add network' to configure the network first, then retry the command.

PRCN-03003: Failed to unregister EONS resource type

Cause: A request to unregister the EONS resource type failed because of the reason provided by an accompanying exception message.

Action: Examine the accompanying error message for details.

PRCN-03004: Listener {0} already exists

Cause: The specified listener was already created.

Action: Use the command 'srvctl modify listener' to modify attributes if needed.

PRCN-03005: Failed to add or use registered network {0} with network interfaces "{1}" because the network was already registered for network interfaces "{2}"

Cause: The network resource was already registered with different interfaces.

Action: Use the same network interfaces as the one registered with network resource.

PRCN-03006: Failed to add or use registered network {0} with network interfaces "{1}" because the network was already registered with no interface specified

Cause: The network resource was already registered with no user specified interface.

Action: Do not specify network interface as the system decides the network interface.

PRCN-03007: Failed to add or use registered network {0} with network mask "{1}" because the network was already registered for network mask "{2}"

Cause: The network resource was already registered with a different network mask.

Action: Use the same network mask as the one registered with network resource.

PRCN-03008: Failed to add or use registered network {0} with network subnet "{1}" because the network was already registered for network subnet "{2}"

Cause: The network resource was already registered with a different network subnet.

Action: Use the same network subnet as the one registered with network resource.

PRCN-03009: Failed to retrieve log file attribute for {0} resource

Cause: An attempt to retrieve the log file attribute for the cluster resource failed.

Action: Make sure that the clusterware stack is up. Make sure that the resource you are querying has been configured. Refer also to any accompanying error messages for details.

PRCN-03010: Failed to retrieve log component attribute for {0} resource

Cause: An attempt to retrieve the log component attribute for the cluster resource failed.

Action: Make sure that the clusterware stack is up. Make sure that the resource you are querying has been configured. Refer also to any accompanying error messages for details.

PRCN-03011: Failed to retrieve debug file attribute for {0} resource

Cause: An attempt to retrieve the debug file attribute for the cluster resource failed.

Action: Make sure that the clusterware stack is up. Make sure that the resource you are querying has been configured. Refer also to any accompanying error messages for details.

PRCN-03012: Failed to retrieve debug component attribute for {0} resource

Cause: An attempt to retrieve the debug component attribute for the cluster resource failed.

Action: Make sure that the clusterware stack is up. Make sure that the resource you are querying has been configured. Refer also to any accompanying error messages for details.

PRCN-03013: Failed to update log file attribute of {0} resource

Cause: An attempt to update the attribute value of LOG_FILE for ONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-03014: Failed to update log component attribute of {0} resource

Cause: An attempt to update the attribute value of LOG_COMP for ONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-03015: Failed to update debug file attribute of {0} resource

Cause: An attempt to update the attribute value of DEBUG_FILE for ONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-03016: Failed to update debug component attribute of {0} resource

Cause: An attempt to update the attribute value of DEBUG_COMP for ONS failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCN-03017: Specified check interval of {0} minutes exceeds the maximum check interval {1} minutes

Cause: The CVU resource check interval specified was more than the maximum check interval.

Action: Retry the operation with an interval smaller than or equal to the maximum check interval.

PRCN-03018: Addition of listener version {0} is not allowed using srvctl version {1}

Cause: The versions of srvctl used and listener to be created did not match.

Action: Use the same version of srvctl as listener.

PRCN-03019: Not allowed to modify the network address type from {0} to {1}

Cause: An attempt was made to change the network address type directly from "IPv4" to "IPv6" or vice versa.

Action: Ensure that transitions between IPv4 and IPv6 first set an intermediate address type of 'both'.

PRCN-03020: Invalid LISTENER type {0}

Cause: The LISTENER type supplied is not valid.

Action: This is an internal error; contact Oracle Support.

PRCN-03021: No ASM listener exists

Cause: No ASM listener was configured for cluster ASM.

Action: Use the command 'srvctl add listener -asm' to configure an ASM listener.

PRCN-03022: Leaf ASM listener does not exist

Cause: Leaf ASM listener was not configured for leaf ASM.

Action: Use the command 'srvctl add listener -leaf' to configure an ASM listener.

PRCN-03023: Unable to retrieve information about the network subnet mask

Cause: An error occurred while obtaining information about the network subnet mask.

Action: Examine the accompanying error messages for details.

PRCN-03024: Mismatch between the subnet mask of the VIP ({0}) and that of the associated network ({1})

Cause: The subnet mask of the VIP address did not match the one of the associated network resource.

Action: Make sure the VIP address has the same subnet mask as the network it belongs to.

PRCN-03025: Mismatch between the prefix length of the VIP ({0}) and that of the associated network ({1})

Cause: The prefix length of VIP address did not match the one of the associated network resource.

Action: Make sure the VIP address has the same prefix length as the network it belongs to.

PRCN-03026: "{0}" is not a valid IPv4 network mask or IPv6 prefix length

Cause: The provided string was neither a valid IPv4 network mask nor a valid IPv6 prefix length.

Action: Contact Oracle Support.

PRCN-03027: Unable to determine the network type

Cause: An error occurred while retrieving the USR_ORA_AUTO network attribute value.

Action: Examine the accompanying error messages for details.

PRCN-03028: VIP {0} address modification is not allowed because the network type is "{1}"

Cause: An attempt was made to change the USR_ORA_VIP value for a VIP on an IPv4 network with 'dhcp' network type or on an IPv6 network with 'autoconfig' network type.

Action: Make sure that the network type is either 'static' or 'mixed' for the IPv4 or IPv6 type of the VIP address that you try to modify.

PRCN-03029: Transition for a network that contains both IPv4 and IPv6 addresses to an {0} network of network type 'mixed' is not allowed

Cause: An attempt was made to transition from a network with both IPv4 and IPv6 addresses to a network that has only one type of addresses and is of network type 'mixed'.

Action: Finish the transition from 'DHCP' or 'autoconfig' to 'static' or vice versa and retry.

PRCN-03030: Unable to retrieve the list of VIPs for network with number {0}

Cause: An error occurred while obtaining information about the VIPs that depend on the given network.

Action: Examine the accompanying error messages for details.

PRCN-03031: Unable to retrieve information about the address of VIP resource "{0}"

Cause: An error occurred while obtaining information about the address of the given VIP resource.

Action: Examine the accompanying error messages for details.

PRCN-03032: The VIP for hosting node "{0}" on network number {1} does not contain an {2} address or a VIP name that resolves to an {2} address

Cause: The given VIP did not contain an IP address or a VIP name that resolved to an IP address of the displayed address type.

Action: Make sure that the VIP contains an IP address or a VIP name that resolves to an IP address of the displayed address type.

PRCN-03033: Unable to retrieve the SCAN name for network {0}

Cause: An error occurred while obtaining the Single Client Access Name (SCAN) name for the specified network.

Action: Examine the accompanying error messages for details.

PRCN-03034: SCAN name "{0}" resolves to one or more {1} addresses

Cause: The given SCAN name resolved to the given type (IPv4 or IPv6) of addresses.

Action: Make sure that the SCAN name does not resolve to addresses of the given address type.

PRCN-03035: SCAN name "{0}" resolves to {1} addresses instead of {2}

Cause: The given SCAN name resolved to a wrong number of addresses.

Action: Make sure that the SCAN name resolves to the same number of addresses as the existing SCAN VIPs by using the 'srvctl modify scan -scanname <scan_name>' command.

PRCN-03036: Unable to retrieve the list of SCAN VIPs that depend on network with network number {0}

Cause: An error occurred while obtaining information about the SCAN VIPs that depend on the given network.

Action: Examine the accompanying error messages for details.

PRCN-03037: Unable to retrieve information about the address of SCAN VIP resource "{0}"

Cause: An error occurred while obtaining information about the address of the given SCAN VIP resource.

Action: Examine the accompanying error messages for details.

PRCN-03038: SCAN name "{0}" resolves to different addresses than those of the existing SCAN VIPs

Cause: While attempting to change the network address type, it was found that the given SCAN name resolved to a set of addresses that are different from the ones of the existing SCAN VIPs.

Action: Make sure that the SCAN name resolves to the same addresses as those of the existing SCAN VIPs by using the command 'srvctl modify scan -scanname <scan_name>'.

PRCN-03039: Unable to remove the {0} address from the VIP resource "{1}"

Cause: An error occurred while trying to remove either the IPv4 or the IPv6 address from all the VIPs on the network.

Action: Examine the accompanying error messages for details.

PRCN-03040: Unable to remove the {0} address from the SCAN VIP resource "{1}"

Cause: An error occurred while trying to remove either the IPv4 or the IPv6 address from all the SCAN VIPs on the network.

Action: Examine the accompanying error messages for details.

PRCN-03041: Failed to modify the network address type

Cause: An error occurred while trying to modify the network address type.

Action: Examine the accompanying error messages for details.

PRCN-03042: Subnet "{0}" is already in use by a network on the cluster

Cause: The specified subnet was already registered with another network on the cluster.

Action: Use a unique subnet and retry the operation.

PRCN-03043: Failed to verify the uniqueness of subnet "{0}" among the networks of the cluster

Cause: An error occurred while trying to verify the uniqueness of the subnet.

Action: Examine the accompanying error messages for details.

PRCN-03044: There is no {0} subnet for network with number {1}

Cause: No subnet of the given address type was found for the specified network.

Action: Modify the network to include a subnet of the specified address type and retry.

PRCN-03045: Management listener is not running in the cluster

Cause: An attempt to retrieve the IP address failed because the management listener was not running.

Action: Start the management listener using the command 'srvctl start mgmtlsnr'.

PRCN-03046: Failed to retrieve the IP address of the management listener

Cause: An attempt to retrieve the IP address of the management listener failed in querying the management listener resource.

Action: Stop and restart the management listener using the commands 'srvctl stop mgmtlsnr' and 'srvctl start mgmtlsnr', then retry the command. If the problem persists, contact Oracle Support.

PRCN-03047: Failed to set or get the subnet of the listener resource

Cause: An attempt to set or retrieve the subnet of the listener failed because the operation is not allowed for this resource.

Action: Use the 'srvctl' commands on the underlying network resource to set or get the subnet value or create a different listener.

PRCN-03048: Listener subnet "{0}" is not a subnet classified {1}

Cause: While adding a management listener, the specified subnet was not classified as a subnet of the required type.

Action: Specify a subnet that is classified as required as reported by using the command 'oifcfg getif', or change the subnet classification to the required type using the command 'oifcfg setif'.

PRCN-03049: Cannot change the network subnet address type to 'both' because it has only an {0} subnet address

Cause: An attempt to modify the network address type failed because the network had only one type of subnet address instead of both IPv4 and IPv6 subnet addresses.

Action: Make sure that the network has been configured with both IPv4 and IPv6 subnets using the command 'srvctl modify network -subnet'.

PRCN-03050: SCAN name "{0}" resolves to different number of IPv4 ({1}) and IPv6 ({2}) addresses

Cause: An attempt to change subnet address type to 'both' was rejected because the given SCAN name resolved to a different number of IPv4 and IPv6 addresses.

Action: Make sure that the SCAN name resolves to the same number of IPv4 and IPv6 addresses.

PRCN-03051: Unable to retrieve a list of the hub nodes

Cause: While attempting to change the subnet address type, an error occurred while retrieving a list of the hub nodes.

Action: Examine the accompanying message for details.

PRCN-03052: The following nodes do not have VIPs configured for network: {0}

Cause: While attempting to change the subnet, some nodes were found to be missing VIP addresses.

Action: Configure VIP addresses for the given nodes using the command 'srvctl add VIP'.

PRCN-03053: The following nodes do not have configured VIPs with IPv4 addresses on network {0}: {1}

Cause: A request to change the subnet address type was rejected because the specified nodes had VIPs which did not have any configured IPv4 address or a name that resolved to an IPv4 address.

Action: Make sure that the given nodes have configured VIPs with IPv4 address or name that resolved to an IPv4 address.

PRCN-03054: The following nodes do not have configured VIPs with IPv6 addresses on network {0}: {1}

Cause: A request to change the subnet address type was rejected because the specified nodes had VIPs which did not have any configured IPv6 address or a name that resolved to an IPv6 address.

Action: Make sure that the given nodes have configured VIPs with IPv6 address or name that resolved to an IPv6 address.

PRCN-03055: Cannot change the network subnet address type to 'both' for the following VIP related issues: {0}

Cause: An attempt to modify the network address type was rejected because the network either had no VIPs on one or more nodes or the VIPs did not have the expected address type.

Action: Examine the accompanying message for details.

PRCN-03056: The VIP address "{0}" is an {1} address, while network {2} has no {3} subnet

Cause: The VIP with the given address had a different address type than the network subnet address type.

Action: Either modify the network via the command 'srvctl modify network -subnet' to include the missing type or make sure that the VIP address type matches the address type of the network subnet.

PRCN-03057: The VIP name "{0}" resolves to one or more {1} addresses (" {2}"), while network {3} has no {1} subnet

Cause: The VIP name mapped to an address with different address type than the network subnet address type.

Action: Either modify the network via the command 'srvctl modify network -subnet' to include the missing type or make sure that the VIP name resolves to addresses that match the address type of the network subnet.

PRCN-03058: Cannot update listener that is not an ASM listener

Cause: An attempt was made to update a non-ASM listener.

Action: Specify the name of an ASM listener on the command line. Use the command 'srvctl config listener -asmlistener' to display ASM listener names.

PRCN-03059: Unable to retrieve the network number

Cause: An error occurred while attempting to retrieve the network number.

Action: Examine the accompanying error messages for details.

PRCN-03060: Unable to retrieve the list of configured networks on the cluster

Cause: An error occurred while attempting to retrieve the set of configured network resources 'ora.net*.network'.

Action: Examine the accompanying error messages for details.

PRCN-03061: The specified network server type "{0}" is invalid for an "IPv4" network.

Cause: The network server type was specified as 'autoconfig' which is not valid for an IPv4 network.

Action: The network server type must be 'static' or 'dhcp' or 'mixed'.

PRCN-03062: The specified network server type "{0}" is invalid for an "IPv6" network.

Cause: The network server type was specified as 'dhcp' which is not valid for an IPv6 network.

Action: The network server type must be 'static' or 'autoconfig' or 'mixed'.

PRCN-03063: Failed to find an available port in the default TCP port range {0} - {1} among nodes: {2}

Cause: An attempt to find an available default TCP port failed because all default TCP ports were used by some other applications in at least one node in the cluster.

Action: Specify a port to be used outside the default TCP port range using 'srvctl add listener -endpoints'

PRCN-03064: The user "{0}" could not be found on the cluster

Cause: The user specified as the listener owner was not a known OS user name.

Action: Enter the name of an existing OS user as the owner of the specified listener.

PRCN-03065: Cannot configure the default network as leaf.

Cause: An attempt was made to configure the default network with the leaf category.

Action: Provide a non-default network when using SRVCTL to add a network resource with the '-leaf' flag.

PRCN-03066: Cannot configure network resource as leaf because cluster is not configured as Flex Cluster.

Cause: An attempt was made to add a network resource with the leaf category in a cluster not configured as Flex Cluster.

Action: Use SRVCTL without the '-leaf' flag when adding a network resource in a non-Flex Cluster system. Or, convert the cluster to a Flex Cluster before doing this operation.

PRCN-03067: Unable to modify the owner for an ASM or leaf listener.

Cause: An attempt was made to modify the owner of a ASM or leaf listener resource.

Action: Repeat the operation specifying a node listener.

PRCN-03068: Unable to determine whether the VIP address "{0}" belongs to network with number {1}

Cause: An error occurred while trying to determine whether the VIP address matches the network subnet.

Action: Examine the accompanying error messages for details.

PRCN-03069: Unable to determine whether the VIP address "{0}" belongs to network with number {1} and subnet number {2}

Cause: An error occurred while trying to determine whether the VIP address matches the network subnet.

Action: Examine the accompanying error messages for details.

PRCN-03070: The VIP address "{0}" does not belong to network with number {1} and subnet number {2}

Cause: The VIP address did not match the subnet of the specified network.

Action: Make sure that the VIP address or the address the VIP name resolves to matches the network subnet.

PRCN-03071: Invalid address or unknown host "{0}"

Cause: An attempt was made to configure a network resource with an invalid address or host name.

Action: Specify a resolvable host name or an IP address of legal length.

PRCN-03072: Unable to modify the home node of the HAVIP.

Cause: An attempt to modify the home node of the HAVIP failed because there was an export file system registered with the same path, export options and HAVIP home node.

Action: Provide a different home node or examine the accompanying error messages for details.

PRCN-03073: Invalid node name: {0}

Cause: The home node name was invalid. The home node name must contain alphanumeric characters and hyphens only. It cannot be a fully qualified domain name.

Action: Check the home node name and try again.

PRCN-03074: The specified ping target list contains duplicate addresses.

Cause: The specified ping target list was invalid. It contained duplicate IP addresses or host names that resolve to duplicate IP addresses.

Action: Reissue the command without elements that are or resolve to the same

PRCN-03075: The specified TCP ports ({0}) are configured for another ASM or management listener.

Cause: An attempt to add an ASM or management listener failed because one or more of the specified ports were already configured for another ASM or management listener.

Action: Retry the command specifying a port not in use by another ASM or management listener.

PRCN-03076: Unable to find an available port in the default TCP port range {0} - {1}

Cause: An attempt to find an available default TCP port failed because all default TCP ports were configured for other ASM or management listeners.

Action: Retry the command specifying a port outside the default TCP port range.

PRCN-03077: The specified ports {0} are in the privileged ports range.

Cause: The specified ports were in the privileged ports range (0-1023) which can only be used by daemons running as user 'root'.

Action: Specify port numbers greater than 1023.

PRCN-03078: Setting the address type to "ipv4" is not allowed because the existing network address type is "ipv6".

Cause: An attempt to change the address type from 'ipv6' to 'ipv4' directly was rejected because the address type must first be changed to 'both' then to 'ipv4'.

Action: Use the command 'srvctl modify network' to change the network type to 'both' by adding an IPv4 subnet and retry the command.

PRCN-03079: Setting the address type to "ipv6" is not allowed because the existing network address type is "ipv4".

Cause: An attempt to change the address type from 'ipv4' to 'ipv6' directly was rejected because the address type must first be changed to 'both' then to 'ipv6'.

Action: Use the command 'srvctl modify network' to change the network type to 'both' by adding an IPv6 subnet and then retry the command.

PRCN-03080: The network configuration cannot be modified when the network type is 'mixed'.

Cause: An attempt to modify a network configuration was rejected because either the IPv4 or IPv6 subnet is configured with 'mixed' network type.

Action: Change the network type to 'static' or 'dhcp' or 'autoconfig' before proceeding with the configuration change.

PRCN-03081: The specified subnet ({0}) is already configured for ASM listener "{1}".

Cause: An attempt to add or modify an ASM listener was rejected because the specified subnet was already used for another ASM listener.

Action: Retry the command specifying a subnet that is not in use by another ASM listener.

PRCN-03082: An attempt to modify the OC4J port failed because OC4J is running. Use -force to force stop and restart of OC4J.

Cause: A request to modify the port number of OC4J was rejected because such modification requires OC4J to be stopped and restarted.

Action: Use '-force' option to force restart of OC4J.

PRCN-03083: failed to modify OC4J when trying to set the HTTP port and Remote Method Invocation (RMI) port to the same number {0}

Cause: A request to modify the OC4J port numbers was rejected because the HTTP port number was the same as the Remote Method Invocation (RMI) port number.

Action: Choose a different port that is not in use.

PRCN-03084: failed to modify RMI port for OC4J to use the port number {0} that is used by the listener {1}

Cause: A request to modify the OC4J Remote Method Invocation (RMI) port number was rejected because the specified port was already used by a node listener.

Action: Choose a different port number that is not used as an HTTP port or a node listener port.

PRCN-03085: failed to modify HTTP port for OC4J to use the port number {0} that is used by the listener {1}

Cause: A request to modify the OC4J HTTP port number was rejected because the specified port was already used by a node listener.

Action: Choose a different port number that is not used as an RMI port or a node listener port.

PRCN-03086: failed to merge files "{0}" and "{1}"

Cause: An attempt to merge the two indicated network configuration files failed.

Action: Examine the accompanying error messages for details, resolve issues and retry.

PRCN-03087: An attempt to extract the DNS name server IP address from file "{0}" failed.

Cause: No DNS name server IP address was specified in the specified file.

Action: Make sure that there is a line in the specified file that starts with 'nameserver' followed by the GNS name server IP address.

PRCN-03088: failed to modify the listening port of the QoS Management Server to {0}

Cause: An attempt to modify the listening port of the QoS Management Server failed.

Action: Review the accompanying error messages and retry after resolving the underlying errors.

PRCN-03089: An attempt to modify the QoS Management Server port failed because the QoS Management Server is running. Use '-force' to force stop and restart of the QoS Management Server.

Cause: A request to modify the port number of the QoS Management Server was rejected because such modification requires the QoS Management Server to be stopped and restarted.

Action: Use '-force' option to force restart of the QoS Management Server.

PRCN-03090: failed to modify the QoS Management Server when trying to set the HTTP port and Remote Method Invocation (RMI) port to the same number {0}

Cause: A request to modify the QoS Management Server port numbers was rejected because the HTTP port number was the same as the Remote Method Invocation (RMI) port number.

Action: Choose a different port that is not in use.

PRCN-03091: failed to modify RMI port for the QoS Management Server to use port number {0} that is used by listener {1}

Cause: A request to modify the QoS Management Server Remote Method Invocation (RMI) port number was rejected because the specified port was already used by a node listener.

Action: Choose a different port number that is not used as an HTTP port or a node listener port.

PRCN-03092: failed to modify HTTP port for the QoS Management Server to use port number {0} that is used by listener {1}

Cause: A request to modify the QoS Management Server HTTP port number was rejected because the specified port was already used by a node listener.

Action: Choose a different port number that is not used as a Remote Method Invocation (RMI) port or a node listener port.

PRCN-03093: failed to remove the {0} address from the GNS VIP resource

Cause: An error occurred while trying to remove either the IPv4 or the IPv6 address from the Grid Naming Service (GNS) virtual IP (VIP) resource.

Action: Examine the accompanying error messages for details.

PRCN-03094: The FIREWALL endpoint parameter cannot be set for protocol {0}.

Cause: The FIREWALL parameter was specified for a listener endpoint protocol that does not support it.

Action: Specify the FIREWALL parameter only with TCP, TCPS, SDP, or EXADIRECT protocols.

PRCN-03095: The FIREWALL endpoint parameter cannot be set for listener {0}.

Cause: The FIREWALL parameter was specified for a listener type that does not support it.

Action: Specify the FIREWALL parameter only for a node listener.

PRCN-03096: The value "{0}" is invalid for the FIREWALL endpoint parameter.

Cause: The specified FIREWALL parameter value is invalid.

Action: Specify the FIREWALL parameter with the values ON or OFF only.

PRCN-03097: invalid specification of group for an endpoint without the FIREWALL parameter specified

Cause: A request to set the group for the LISTENER resource was rejected because the endpoint provided did not contain the FIREWALL parameter.

Action: Specify the FIREWALL parameter with the values ON or OFF on TCP, TCPS, SDP or EXADIRECT protocols.

PRCN-03098: failed to modify network type to 'mixed' because GNS is not configured

Cause: An attempt to modify the network type to 'mixed' failed because Grid Naming Service (GNS) was not configured.

Action: Configure Grid Naming Service (GNS) and retry the 'srvctl modify network' command.

PRCN-03099: failed to modify network type to 'mixed' because GNS resource does not have a subdomain configured

Cause: An attempt to modify the network type to 'mixed' failed because Grid Naming Service (GNS) did not have a subdomain configured.

Action: Add a Grid Naming Service (GNS) with a subdomain and retry the command 'srvctl modify network'.

PRCN-03100: failed to remove network {0} because it is registered as the default network for database services of database {1}

Cause: An attempt to remove the indicated network resource failed because it was registered as the default network for database services of the indicated database.

Action: Specify a new default network for the database services in the database before removing the network resource using 'srvctl modify database -db <database_name> -defaultnetnum *netnum*'.

PRCN-03101: ASM listener "{0}" can not be removed with the -force option

Cause: A request to remove the ASM listener with the -force option was rejected because ASM listeners cannot be removed by the command 'srvctl remove listener -listener <lsnr_name> -force'.

Action: Use the command 'srvctl update listener -listener <lsnr_name> -asm -remove' instead.

PRCN-03102: Command 'srvctl add oc4j' is not supported

Cause: An unsupported command was specified.

Action: Use the 'srvctl add qosmserver' command instead.

PRCN-03103: failed to determine whether security is enabled for resource {0}

Cause: An attempt to determine whether security was enabled for the cluster resource failed.

Action: Ensure that the resource you are querying has been configured. Also, consult the help for the accompanying error messages.

PRCN-03104: The GNS VIP does not have an address of type {0}.

Cause: The given GNS virtual IP address did not have an IP address of the displayed address type (IPv4 or IPv6).

Action: Ensure that the GNS virtual ip address has an IP address of the displayed address type (IPv4 or IPv6).

PRCN-03105: Failed to add the VIP resource

Cause: An error occurred while trying to add the VIP resource.

Action: Examine the accompanying error messages for details.

PRCN-03106: Failed to obtain the network resource

Cause: An error occurred while trying to obtain the network resource

Action: Examine the accompanying error messages for details.

PRCN-03107: Failed to modify the Rapid Home Provisioning progress listener port to {0}.

Cause: An attempt to modify the listening port of the Rapid Home Provisioning listener to the indicated value failed.

Action: Ensure that the Oracle Clusterware stack is up and that the specified listener port is not in use by another program and retry.

PRCN-03108: Failed to modify the Rapid Home Provisioning progress listener host to {0}.

Cause: An attempt to modify the host of the Rapid Home Provisioning listener to the indicated host name failed.

Action: Ensure that the Oracle Clusterware stack is up and that the specified listener host is valid and retry.

PRCN-03109: Failed to retrieve host for {0}.

Cause: An attempt to retrieve the host for the indicated cluster resource failed.

Action: Ensure that the clusterware stack is up and that the resource being queried is configured and retry.

PRCN-03110: failed to determine whether local attribute is enabled for resource {0}

Cause: An attempt to determine whether the local attribute was enabled for the indicated cluster resource failed.

Action: Ensure that the Oracle Clusterware stack is up and that the queried resource is configured, and then retry the operation.

PRCN-03111: failed to determine whether HTTP security is enabled for resource {0}

Cause: An attempt to determine whether HTTP security was enabled for the cluster resource failed. The accompanying messages provide detailed failure information.

Action: Ensure that the indicated resource has been configured. Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCN-03112: failed to modify SCAN because it is registered on a SCAN client cluster

Cause: An attempt to modify a Single Client Access Name (SCAN) resource was rejected because it was configured on a client cluster.

Action: SCAN client resources cannot be modified. Remove and add the resource again with the updated client data configuration.

PRCN-03113: Port {0} is not available for addresses: {1}

Cause: An attempt to check that the indicated port could be reached failed because the port was already in use by another application.

Action: Retry the operation, specifying a port that is not in use by another application.

PRCN-03114: no port available for use in specified port range {0} to {1} on node {2}

Cause: An attempt to obtain a free port in the indicated port range failed because all ports in the range were already in use.

Action: Set the transfer port range on a Rapid Home Provisioning (RHP) Server to a range that has additional ports available for use, and then retry the operation.

PRCN-03115: invalid ASM Network dependency type {0}

Cause: An attempt to modify or add an ASM network was rejected because the specified network dependency type was neither 'optional' nor 'mandatory'.

Action: Retry the add or modify operation specifying a valid ASM network dependency type of either 'optional' or 'mandatory'.

PRCN-03116: There is no ASM network resource configured for ASM listener {0} on subnet {1}.

Cause: An attempt to retrieve the ASM network configuration or to add an ASM listener for the indicated subnet was rejected because there was no ASM network resource configured for the indicated subnet.

Action: Use the commands 'srvctl add asmnetwork -netnum <network_number> -subnet *subnet*' and 'srvctl modify listener -l *asmlistener* -netnum <network_number>' to configure the ASM network and ASM listener, then retry the command.

PRCN-03117: failed to create listener resource because current user is root

Cause: An attempt to create a listener resource was rejected because the current user was the root user.

Action: Ensure that the user does not have root privileges and retry the operation.

PRCN-03118: failed to create listener resource because the specified user "{0}" is root

Cause: An attempt to create a listener resource was rejected because the specified user was the root user.

Action: Ensure that the user does not have root privileges and retry the operation.

PRCN-03119: failed to determine whether REST is enabled for resource {0}

Cause: An attempt to determine whether REpresentational State Transfer (REST) was enabled for the cluster resource failed. The accompanying messages provide detailed failure information.

Action: Ensure that the indicated resource has been configured. Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCN-03120: failed to determine whether JMX connector is enabled for resource {0}

Cause: An attempt to determine whether Java Management Extensions (JMX) connector was enabled for the cluster resource failed. The accompanying messages provide detailed failure information.

Action: Ensure that the indicated resource has been configured. Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCN-03121: failed to get the value of the parameter "{0}" in the configuration file "{1}"

Cause: An attempt to get the value of the parameter from the configuration file failed because either the parameter did not exist or it was empty.

Action: Ensure that the indicated file has parameter information, and then retry the operation.

PRCN-03122: failed to create network resource because the specified file "{0}" does not contain the correct "{1}" subnet information

Cause: An attempt to create a network resource using a configuration file failed because the file did not contain the proper network information.

Action: Ensure that the indicated file has the network information in the format "*interface*"/*subnet-address:type*, and then retry the operation.

PRCN-03123: failed to create VIP resource because the specified file "{0}" does not contain the correct IP information

Cause: An attempt to create a Virtual IP (VIP) resource using a configuration file because the file did not contain valid IP information.

Action: Ensure that the indicated file has the IP information in the format *vip-name/netmask[/interface1[/interface2]...]*, and then retry the operation.

PRCN-03124: failed to retrieve cluster name alias of the Rapid Home Provisioning Client.

Cause: An attempt to retrieve cluster name alias of the Rapid Home Provisioning Client failed, accompanying messages provide detailed failure information.

Action: Ensure that the Rapid Home Provisioning Client has been configured. Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCN-03125: failed to create CVU admin resource on Microsoft Windows

Cause: An attempt to configure a Configuration Verification Utility (CVU) admin resource was rejected because this feature was not supported on Microsoft Windows.

Action: None

PRCO-00001 to PRCO-00112

PRCO-00001: Failed to initialize olsnodes

Cause: Unable to initialize and start olsnodes

Action: Ensure that the clusterware is running.

PRCO-00002: Unable to communicate with the clusterware

Cause: Unable to communicate with the clusterware

Action: Ensure that the clusterware is running.

PRCO-00003: OCR operation failed \nstring\n

Cause: OCR operation failed

Action: Refer to the OCR error message

PRCO-00004: OCR initialization failed \nstring\n

Cause: OCR initialization failed

Action: Refer to the OCR error message

PRCO-00008: Unable to retrieve local node number

Cause: Unable to retrieve local node number from clusterware

Action: Ensure that the clusterware is running.

PRCO-00009: Unable to retrieve local node name

Cause: Unable to retrieve local node name from clusterware

Action: Ensure that the clusterware is running.

PRCO-00010: Unable to retrieve max number of nodes

Cause: Unable to retrieve maximum number of nodes from clusterware

Action: Ensure that the clusterware is running.

PRCO-00011: Unable to retrieve node name

Cause: Unable to retrieve node name from clusterware

Action: Ensure that the clusterware is running.

PRCO-00012: Unable to retrieve node number

Cause: Unable to retrieve node number from clusterware

Action: Ensure that the clusterware is running.

PRCO-00013: Unable to retrieve private interconnect name

Cause: Unable to retrieve private interconnect name from clusterware

Action: Ensure that the clusterware is running.

PRCO-00014: Unable to retrieve node virtual IP

Cause: Unable to retrieve node virtual IP from clusterware

Action: Ensure that the clusterware is running.

PRCO-00015: Not a cluster member

Cause: Specified node is not a cluster member

Action: Specify a cluster member node.

PRCO-00016: Cluster node membership interface for retrieving nodes list returned error code *number*

Cause: Call to the CSS nodelist service failed with the specified error as return value

Action: Ensure that the clusterware is running and look at the Clusterware log files

PRCO-00017: Cluster attribute retrieval interface to retrieve max node length failed

Cause: Call to the CSS attribute fetch service failed for attribute max node length

Action: Ensure that the clusterware is running, and look at the Clusterware log files

PRCO-00018: Unable to retrieve cluster name

Cause: Unable to retrieve cluster name from clusterware

Action: Ensure that the clusterware is running.

PRCO-00019: Failure retrieving list of nodes in the cluster

Cause: The list of cluster nodes could not be determined. Additional details on the problem are in accompanying message(s).

Action: Take action based on the accompanying message(s).

PRCO-00034: unable to retrieve historical Leaf Nodes (active and recent) configured in the cluster

Cause: An attempt to include historical Leaf Nodes with the command 'olsnodes -f' failed because the historical Leaf Nodes could not be retrieved from Oracle Clusterware.

Action: Ensure that the Oracle Clusterware is running.

PRCO-00101: failed to get the current user id

Cause: An attempt to retrieve the current user id failed.

Action: Ensure that the command '/usr/bin/id' exists and has required privileges to retrieve the current user id.

PRCO-00103: failed to verify the current status of the Configuration Verification Utility (CVU) automated fix up feature

Cause: An attempt to get the status of Configuration Verification Utility (CVU) automated fix up feature failed.

Action: Ensure that the script is running from valid CRS configured home.

PRCO-00106: failed to run the script '*string*' as non root user to enable or disable the Configuration Verification Utility (CVU) automated fix up feature

Cause: The indicated script was not allowed to run as non root user.

Action: Run the indicated script as root user to enable or disable the Configuration Verification Utility (CVU) automated fix up feature.

PRCO-00108: Failed to enable the Configuration Verification Utility (CVU) automated fix up feature. \n 'string'

Cause: An attempt to enable the Configuration Verification Utility (CVU) automated fix up feature failed.

Action: Examine the accompanying messages, resolve the issues, and retry the operation.

PRCO-00109: Configuration Verification Utility (CVU) automated fix up feature is already enabled.

Cause: The Configuration Verification Utility (CVU) automated fix up feature could not be enabled because it was already enabled.

Action: None required.

PRCO-00111: Failed to disable the Configuration Verification Utility (CVU) automated fix up feature. \n 'string'

Cause: An attempt to disable the Configuration Verification Utility (CVU) automated fix up feature failed.

Action: Examine the accompanying messages, resolve the issues, and retry the operation.

PRCO-00112: Configuration Verification Utility (CVU) automated fix up feature is already disabled.

Cause: The Configuration Verification Utility (CVU) automated fix up feature could not be disabled because it was already disabled.

Action: None required.

PRCR-01000 to PRCR-01224

PRCR-01000: Resource {0} already exists

Cause: An attempt was made to create a resource that already exists.

Action: Check the resource using the command 'srvctl config *object*' and if the resource should not exist then remove it using the command 'srvctl remove *object*'.

PRCR-01001: Resource {0} does not exist

Cause: An attempt was made to operate on a resource that does not exist.

Action: Check the resource using the command 'srvctl config *object*' and if the resource does not exist, then create it using the command 'srvctl add *object*'.

PRCR-01002: Resource {0} is already enabled

Cause: An attempt was made to enable a resource that is already enabled.

Action: If the resource is already enabled then no action is needed. Use the command 'srvctl status *object*' to determine whether it is enabled.

PRCR-01003: Resource {0} is already disabled

Cause: An attempt was made to disable a resource that is already disabled.

Action: If the resource is already disabled then no action is needed. Use the command 'srvctl status *object*' to determine whether it is disabled.

PRCR-01004: Resource {0} is already running

Cause: An attempt was made to start a resource that is already running.

Action: If the resource is already running then no action is needed. Use the command 'srvctl status *object*' to determine whether it is running.

PRCR-01005: Resource {0} is already stopped

Cause: An attempt was made to stop a resource that is already stopped.

Action: If the resource is already stopped then no action is needed. Use the command 'srvctl status *object*' to determine whether it is stopped.

PRCR-01006: Failed to add resource {0} for {1}

Cause: An attempt to add the specified resource failed.

Action: Examine the accompanying error messages for details.

PRCR-01007: Failed to check status of resource {0}

Cause: An attempt to check status of specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01008: Failed to retrieve version of resource {0}

Cause: An attempt to retrieve version of the specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01009: Failed to retrieve permissions of resource {0}, ACL {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01010: Failed to update permissions of resource {0}

Cause: An attempt to update permissions of specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01011: Failed to enable resource {0}

Cause: An attempt to enable specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01012: Failed to disable resource {0}

Cause: An attempt to disable specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01013: Failed to start resource {0}

Cause: An attempt to start specified resource on several nodes failed.

Action: Check the help for the underlying exception.

PRCR-01014: Failed to stop resource {0}

Cause: An attempt to stop specified resource on several nodes failed.

Action: Check the help for the underlying exception.

PRCR-01015: Failed to relocate resource {0}

Cause: An attempt to relocate specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01016: Failed to modify resource {0}

Cause: An attempt to modify specified resource has failed.

Action: Check the help for the underlying exception.

PRCR-01024: Failed to remove resource {0} on nodes {1}

Cause: An attempt to remove the resource on the specified nodes failed.

Action: Check the accompanying error messages for details.

PRCR-01025: Resource {0} is still running

Cause: The specified resource is not stopped.

Action: Check the accompanying error messages to decide whether to stop the specified resource.

PRCR-01026: Resource {0} is not running

Cause: The specified resource is not started.

Action: Check the accompanying error messages to decide whether to start the specified resource.

PRCR-01028: Failed to remove resource {0}

Cause: An attempt to remove specified resource failed.

Action: Check the help for the underlying CRSEException.

PRCR-01029: Attribute {0} does not exist in resource {1} definition

Cause: An attempt was made to get an attribute which is not defined for that resource type.

Action: Make sure that the attribute exists in the resource definition.

PRCR-01030: Resource attribute name {0} is not valid

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01031: Resource attribute {0} value {1} is not valid

Cause: Specified resource attribute value is not valid.

Action: Try recreating the resource attribute value using srvn APIs or recreating the resource using srvctl commands.

PRCR-01032: Current state of resource {0} is not valid

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01033: Resource type {0} does not exist

Cause: An attempt to retrieve the type has failed.

Action: Make sure that the type exists.

PRCR-01035: Failed to look up CRS resource {0} for {1}

Cause: An attempt to access the specified resource failed because it did not exist.

Action: Check that the specified name and resource type are correct.

PRCR-01036: Failed to retrieve cardinality of the resource {0}

Cause: An attempt to retrieve cardinality of resource has failed.

Action: Examine the accompanying error messages to determine how to respond.

PRCR-01037: Failed to update cardinality of the resource {0} to {1}

Cause: An attempt to set cardinality of the resource has failed.

Action: Examine the accompanying error messages to determine how to respond.

PRCR-01039: Server pool {0} does not exist

Cause: An attempt was made to retrieve the server pool which does not exist.

Action: Make sure that requested server pool exists.

PRCR-01040: Resource {0} is already enabled on node(s) {1}

Cause: An attempt was made to enable a resource that is already enabled on nodes.

Action: The status of a resource can be checked by using the command 'srvctl status *object*'.

PRCR-01041: Resource {0} is already disabled on node(s) {1}

Cause: An attempt was made to disable a resource that is already disabled on nodes.

Action: The status of a resource can be checked by using the command 'srvctl status *object*'.

PRCR-01042: Failed to get dependent resources {0} of resource {1}: {2}

Cause: Failed to retrieve dependent resources of the given resource.

Action: Examine the accompanying error messages to determine how to respond.

PRCR-01043: Failed to update dependent resources {0} of resource {1} to resource {2}

Cause: Failed to update dependent resources of the given resource.

Action: Examine the accompanying error messages to determine how to respond.

PRCR-01050: Resource {0} is not configured in Oracle cluster environment

Cause: The environment for the specified resource is not Oracle Clusterware.

Action: The specified commands or APIs can only be used when Oracle Clusterware is running. If the environment is configured as Oracle Restart, use the correspond commands and APIs for Oracle Restart.

PRCR-01051: OracleCM Cluster is not found on node {0}

Cause: The OracleCM Cluster was not found on the specified node because the library for OracleCM Cluster was not found.

Action: Install OracleCM Cluster on the specified node.

PRCR-01052: Failed to find OracleCM Cluster library on node {0}

Cause: Failed to check OracleCM Cluster because of the error in executing the command to find the file /etc/ORCLcluster/oracm/lib/libskgxn2.so.

Action: Make sure that the caller has the read and execute permission for the library file.

PRCR-01053: Vendor Cluster is not found on node {0}

Cause: The Vendor Cluster was not installed and configured on the specified node.

Action: Install and configure the Vendor Cluster on the specified node.

PRCR-01054: Failed to find Vendor Cluster library on node {0}

Cause: Failed to check OracleCM Cluster because of the error in executing the command to find the file /etc/ORCLcluster/lib/libskgxn2.so.

Action: Make sure that the caller has the read and execute permission for the library file.

PRCR-01055: Cluster membership check failed for node {0}

Cause: The specified node does not belong to the cluster.

Action: Check whether the node name is correct.

PRCR-01061: User permissions are insufficient

Cause: User permissions are insufficient to register resource/type.

Action: Make sure the user is crs-user or root.

PRCR-01062: Failed to retrieve attributes of resource {0} on node {1}

Cause: An attempt to retrieve attributes of the resource has failed.

Action: Make sure that resource exists.

PRCR-01063: Failed to create context

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01064: Failed to start resource {0} on node {1}

Cause: An attempt to start the resource has failed.

Action: Make sure that resource is ready to start on the node before starting it.

PRCR-01065: Failed to stop resource {0}

Cause: An attempt to stop the resource failed because the resource wasn't running or the running resource had dependent resources also running.

Action: Check the accompanying messages to identify dependent resources and stop them. Make sure that resource is running before stopping it.

PRCR-01067: Failed to create a filter

Cause: An attempt to create a filter has failed.

Action: Check the help for the underlying exception.

PRCR-01068: Failed to query resources

Cause: An attempt to query the resource failed.

Action: Check the help for the underlying exception.

PRCR-01069: Attribute {0} of {1} {2} not found

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01070: Failed to check if {0} {1} is registered

Cause: Failed to check if resource is registered.

Action: Check the help for the underlying exception.

PRCR-01071: Failed to register or update {0} {1}

Cause: An attempt to register or update the resource failed.

Action: Check the help for the underlying exception.

PRCR-01072: Failed to unregister {0} {1}

Cause: An attempt to unregister specified Oracle clusterware entity failed.

Action: Check the help for the underlying exception.

PRCR-01074: Failed to retrieve attributes for {0} {1}

Cause: Failed to retrieve attributes for specified resource.

Action: Check the help for the underlying exception.

PRCR-01075: Failed to retrieve status for resource {0}

Cause: Failed to retrieve status for specified resource.

Action: Check the help for the underlying exception.

PRCR-01076: Failed to retrieve status for resource {0}: {1} is missed

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01077: Failed to calculate status for resource {0}: {1}/{2}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01078: Failed to retrieve attributes of resource {0}

Cause: An attempt to retrieve attributes of the resource has failed.

Action: Make sure that resource exists.

PRCR-01079: Failed to start resource {0}

Cause: An attempt to start the resource has failed.

Action: Make sure that resource is ready to start before starting it.

PRCR-01085: Unknown typeAsString: {0}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01086: {0} {1} is already registered

Cause: An attempt to register specified resource failed.

Action: Make sure that a resource is not registered before register it.

PRCR-01087: Failed to retrieve resource {0} instances

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01088: Failed to stop resource {0}: it was not started on node {1}

Cause: The resource was not started on the node..

Action: Make sure that resource was started before stopping it.

PRCR-01089: Failed to relocate resource {0}.

Cause: An attempt to relocate specified resource failed.

Action: Check the help for the underlying exception.

PRCR-01090: Failed to relocate resource {0}. It is not running.

Cause: The resource was not started.

Action: Make sure that resource was started before relocating it.

PRCR-01091: Failed to relocate resource {0}. It is not running on node {1}.

Cause: The resource was not started on the node.

Action: Make sure that resource was started before relocating it.

PRCR-01092: Failed to relocate resource {0}. It is running on more than one node

Cause: The resource was started on more than one node.

Action: Make sure that resource is running on one node only before relocating it.

PRCR-01093: Failed to relocate resource {0}. It is already running on node {1}

Cause: The resource is running that node.

Action: Make sure that resource is not running on a node before relocating it.

PRCR-01094: Failed to start resources on node {0}: {1}

Cause: Resources defined by filter cannot be started on the node.

Action: Make sure that resources are not running and ready to run before starting them.
Make sure that the node is online.

PRCR-01095: Failed to start resources using filter {0}

Cause: Resources defined by filter cannot be started.

Action: Make sure that resources are not running and ready to run before starting them.

PRCR-01096: Filter cannot be null

Cause: An attempt to use filter has failed.

Action: Make sure that a filter is provided.

PRCR-01097: Resource attribute not found: {0}

Cause: Requested resource attribute not found.

Action: Make sure that resource has requested attribute.

PRCR-01098: Could not set rolling upgrade mode {0}

Cause: An attempt to start the resource in rolling upgrade mode has failed.

Action: Make sure that the correct LD_LIBRARY_PATH is set and all shared libraries are present.

PRCR-01099: Cannot start resource {0} on {1} additional nodes because it would exceed the resource cardinality {2}. Resource is already running on {3} nodes

Cause: Resource cannot be started because of its cardinality restriction.

Action: Make sure that number of additional nodes does not exceed the resource cardinality.

PRCR-01100: Cannot start resource {0} on {1} nodes because it would exceed the resource cardinality {2}

Cause: Resource cannot be started because of its cardinality restriction.

Action: Make sure that number of nodes does not exceed the resource cardinality.

PRCR-01101: Cannot stop resource {0} on {1} nodes, it is running on {2} nodes.

Cause: The resource does not have enough running instances to stop.

Action: Make sure that resource has enough running instances to stop.

PRCR-01102: Failed to verify if user {0} has CRS administrator role

Cause: Failed to verify if the user has CRS administrator role.

Action: Resolve the reported error message and retry.

PRCR-01104: Unsupported relocate option {0}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01105: Failed to relocate resource {0} to node {1}

Cause: An attempt to relocate the resource to the specified node has failed.

Action: Examine accompanying message(s) that provide details of the error, and respond accordingly.

PRCR-01106: Failed to relocate resource {0} from node {1} to node {2}

Cause: An attempt to relocate the resource from the specified node to another has failed.

Action: Check the help for the underlying exception.

PRCR-01107: Error while trying to set default network as dependent resource for {0}

Cause: An attempt to set default network dependency for the specified resource failed.

Action: Examine the accompanying error message(s) for details.

PRCR-01108: ONS cannot be created because default network is not configured.

Cause: An attempt was made to create ONS resource with out creating the dependent default network resource.

Action: Network resource can be created using the command 'srvctl add nodeapps'. Create the network resource and try this command again.

PRCR-01109: Failed to remove attributes "{1}" from resource {0}

Cause: Possible reasons: Oracle Clusterware stack might not be active, CRS resource may not exist, or the CRS resource may not have given attributes set.

Action: Make sure that Oracle Clusterware is active, the CRS resource exists and has given attributes set.

PRCR-01110: Failed to retrieve processed attributes of resource {0} for node {1}

Cause: Oracle Clusterware stack was not active or CRS resource did not exist.

Action: Make sure that Oracle Clusterware is active, the CRS resource exists.

PRCR-01111: Failed to retrieve processed attributes of resource {0} for node {1}

Cause: requested CRS resource did not exist.

Action: Make sure that the CRS resource exists.

PRCR-01112: Failed to retrieve current event sequence number

Cause: Oracle Clusterware stack was not active.

Action: Make sure that Oracle Clusterware is active.

PRCR-01113: Failed to create detailed error message, rc = {0}

Cause: Internal error

Action: Contact Oracle Support Services.

PRCR-01114: Failed to relocate servers {0} into server pool {1}

Cause: Failed to relocate servers into the given server pool. This message may be accompanied by others providing additional details. A likely cause is violation of defined configuration attributes such as pool MIN_SIZE, SERVER_NAMES etc.

Action: If the problem stems from violating configuration attributes, either modify the attributes or reformulate the request. Otherwise, contact Oracle Support Services.

PRCR-01115: Failed to find entities of type {0} that match filters {1} and contain attributes {2}

Cause: Failed to look up entities of given type that match given filters. This message may be accompanied by others providing additional details. A likely cause is that current user does not have permissions to read attributes of entities of given type.

Action: If lack of permissions is the cause of this failure, then use the command 'srvctl config object -a' to find the current owner of the entity and retry the query as that owner user. Otherwise, contact Oracle Support Services.

PRCR-01116: {0} {1} cannot be created and registered now

Cause: Oracle Clusterware stack could not create and register an object.

Action: Check the help for the underlying exception.

PRCR-01117: Failed to stop resources using filter {0}

Cause: An attempt to stop resources using specified filter failed.

Action: Respond based on the accompanying exception message.

PRCR-01118: Failed to generate resource permissions for the resource

Cause: Creation of the Access Control List (permission) structures for the resource failed. This message is accompanied by others providing details of the error.

Action: Respond based on the accompanying exception message(s).

PRCR-01119: Failed to look up CRS resources of {0} type

Cause: An attempt to find the resource for the specified resource type failed because it did not exist.

Action: Create a resource of the type.

PRCR-01120: Resources are already running. {0}

Cause: An attempt to start resources failed because they are already running. For detailed information about resources review the accompanying error messages.

Action: None

PRCR-01121: Value of parameter "{0}" cannot be null or empty

Cause: An attempt to construct ACFS resource name failed due to null or empty value for the indicated parameter.

Action: This is an internal error. Contact Oracle Support Services.

PRCR-01122: Resource type {0} is not registered with Oracle Clusterware

Cause: Given resource type was not registered.

Action: Make sure that required resource type is registered.

PRCR-01123: Failed to rename resource type {0}

Cause: An attempt was made to change name of the given resource type. Resource types cannot be renamed.

Action: None

PRCR-01124: Failed to check resource {0}

Cause: An attempt to check the resource failed.

Action: Correct any problems reported in accompanying messages. Make sure that resource is registered with Oracle Clusterware.

PRCR-01125: Failed to check resource {0} on node {1}

Cause: An attempt to check the resource on specified node failed.

Action: Correct any problems reported in accompanying messages. Make sure that resource is registered with Oracle Clusterware.

PRCR-01126: Failed to relocate resource {0} from node {1}

Cause: An attempt to relocate the resource from the specified node has failed.

Action: Examine the accompanying error messages and respond accordingly.

PRCR-01127: Resource {0} does not have attributes {1} on per node basis

Cause: An attempt to remove given attributes failed because these attributes do not exist on per node basis.

Action: Retry after supplying attributes that exist on per node basis.

PRCR-01128: Resource {0} does not have attributes {1} on node {2}

Cause: An attempt to remove given attributes failed because these attributes do not exist on the given node.

Action: Retry after supplying attributes that exist on the node.

PRCR-01129: Failed to upgrade resource type {0}

Cause: An attempt to upgrade specified resource type failed.

Action: Examine the accompanying error message(s) and respond accordingly.

PRCR-01130: Failed to get the name for resource type {0} from resource type enum class

Cause: An attempt to get the name of the resource type for the given resource type enum class.

Action: Ensure that the resource type enum class contains the proper resource type name.

PRCR-01131: CVU resource cannot be created because default network is not configured.

Cause: An attempt was made to create CVU resource without creating the dependent default network resource.

Action: Network resource can be created using the command 'srvctl add nodeapps'. Create the network resource and try this command again.

PRCR-01132: Failed to stop resources using a filter

Cause: An attempt to stop resources failed because resources were not running or running resources had dependent resources also running.

Action: Check the accompanying messages to identify dependent resources and stop them. Make sure that resources are running before stopping them.

PRCR-01133: Failed to stop database {0} and its running services

Cause: An attempt to stop given database and its running services failed.

Action: Correct any problems reported in accompanying messages.

PRCR-01134: Failed to stop database {0} and its running services on nodes {1}

Cause: An attempt to stop the given database and its running services failed on the specified nodes.

Action: Correct any problems reported in accompanying messages.

PRCR-01135: Failed to check if node with node number 0 exists

Cause: An attempt failed to determine whether a node numbered 0 exists.

Action: Follow action specified for accompanying message.

PRCR-01136: Action {0} is not allowed for snapshot entities

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01137: Action {0} is not allowed for CRS local entities

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01138: Failed to get cached attributes for entity {0} on node {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01139: Cache is not ready to generate a snapshot

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01140: Wrong sequence number {0}, expected {1} or more

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01141: Attribute {0} is not set for local entity {1}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01142: Failed to build a snapshot

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01143: Snapshot does not have information about database {0}

Cause: Internal Error: An attempt was made to operate on a database that does not exist in a snapshot.

Action: Contact Oracle Support Services.

PRCR-01144: failed to evaluate the effects of the proposed request on the following entities: {0}

Cause: An error occurred during processing of the proposed request.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCR-01145: The proposed operation being evaluated would result in an error ln{0}

Cause: The effect of the proposed WhatIf request resulted in an error.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCR-01146: The cluster active version doesn't allow the requested action

Cause: CRS failed to perform a request because the cluster upgrade is not completed.

Action: Complete the cluster upgrade and retry the request.

PRCR-01147: Snapshot support was interrupted

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01149: Failed to initialize snapshot subsystem

Cause: An attempt to initialize snapshot subsystem failed.

Action: Check the accompanying messages. Make sure that Oracle Clusterware is active.

PRCR-01150: Snapshot subsystem was not initialized

Cause: An attempt was made to create a snapshot but snapshot subsystem is not initialized.

Action: Check the accompanying messages. Make sure that Oracle Clusterware is active.

PRCR-01151: Snapshot does not have information about server {0}

Cause: An attempt was made to operate on a server that does not exist in a snapshot. Either the server name was misspelled or the server has not been registered at the time of snapshot creation.

Action: Make sure that the server name spelling is correct. Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCR-01152: Invalid CRS cache mode: {0}

Cause: CRS cache does not support requested mode.

Action: Retry after supplying correct value for CRS Cache mode.

PRCR-01153: Snapshot internal error: {0}

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01154: failed to create file output stream file name with {0} due to an I/O exception ({1})

Cause: An attempt to create file output failed because of the indicated problem in the underlying I/O system. This is an internal error.

Action: Contact Oracle Support Services.

PRCR-01155: Failed to create file output stream with file name: {0} due to security manager does not allowed to permit the operation

Cause: An attempt to create file output failed due to security manager does not allowed to permit the operation.

Action: Run as different user or modify the security permissions or controls.

PRCR-01156: Failed to create file output stream with file name: {0} because 'count' or 'limit' is invalid

Cause: An attempt to create file output failed because of illegal arguments 'count' < 1 or 'limit' < 0.

Action: Retry with proper arguments 'limit' >= 0 or 'count' >= 1.

PRCR-01157: Failed to close the file output stream with file name: {0} due to security manager does not allow to close

Cause: An attempt to create file output failed due to security manager does not permit the operation.

Action: Run as different user or modify the security permissions or controls.

PRCR-01158: Directory {0} in file path does not exist

Cause: An attempt was made to operate on a directory that does not exist.

Action: Retry with valid directory.

PRCR-01159: Failed to create file output stream because of empty file name

Cause: An attempt to create file output stream failed because of empty file name.

Action: Specify valid file name.

PRCR-01160: Output stream does not exist

Cause: An attempt was made to operate on an output stream that does not exist.

Action: Contact Oracle Support Services.

PRCR-01161: Failed to write to output stream

Cause: An attempt to write to an output stream failed.

Action: Check if file system runs out of space otherwise contact Oracle Support Services.

PRCR-01162: Failed to format a message

Cause: An attempt to format a log message failed.

Action: Contact Oracle Support Services.

PRCR-01163: Failed to open or create the output stream with file name: {0}

Cause: An attempt to open or create an output file failed.

Action: Check if file system runs out of space otherwise contact Oracle Support Services.

PRCR-01164: Failed to flush an output stream

Cause: An attempt to flush a log output stream failed.

Action: Contact Oracle Support Services.

PRCR-01165: Failed to close the output stream

Cause: An attempt to close a log file failed.

Action: Contact Oracle Support Services.

PRCR-01166: An operation on output stream failed

Cause: An operation on output stream failed.

Action: Contact Oracle Support Services.

PRCR-01169: Mismatch between the number of attribute names ({0}) and the number of the corresponding attribute values ({1})

Cause: Internal error.

Action: Contact Oracle Support Services.

PRCR-01170: Failed to add resource {0}

Cause: An attempt to add the specified resource failed.

Action: Examine the accompanying error messages for details.

PRCR-01171: Insufficient number of arguments while executing "{0}"

Cause: An attempt was made to execute the specified script with insufficient number of arguments.

Action: This is an internal error. Contact Oracle Support Services.

PRCR-01172: Failed to execute "srvmhelper" for {0}

Cause: Failed to execute srvmhelper for the specified API.

Action: This is an internal error. Contact Oracle Support Services.

PRCR-01173: Failed to look up CRS resource for type {0}

Cause: An attempt to search for resource of the specified type failed.

Action: Check that at least one of the specified type exists. Examine the accompanying error messages for details.

PRCR-01174: Resource {0} is not running on nodes: {1}.

Cause: The specified resource was not started or not running on the specified nodes.

Action: Specify nodes on which the resource is running.

PRCR-01175: Failed to add ASM Listener "{0}" because a dependent resource does not exist.

Cause: During creation of an ASM listener resource, internal updates to associated ASM or IOserver resources could not be made because the resource(s) did not exist.

Action: Review the accompanying messages for more details.

PRCR-01176: A software exception has occurred.

Cause: An internal exception occurred while attempting to update resource dependencies during creation of an ASM Listener configuration.

Action: Contact Oracle Support Services.

PRCR-01177: Failed to update dependency on related resources when adding ASM listener "{0}"

Cause: During creation of an ASM listener resource, updates to associated ASM or IOserver resources failed.

Action: Review the accompanying messages for more details.

PRCR-01178: Execution of command failed on one or more nodes

Cause: Execution of a command through the administrator helper resource failed.

Action: Examine the accompanying error messages that provide the details of why and where command execution failed. Resolve the reported problem and retry.

PRCR-01179: Failed to retrieve nodes suitable for configuring an administrator-managed database

Cause: An attempt to execute the command 'olsnodes -a' has failed.

Action: Ensure that the clusterware stack is up. If it is, and the errors reported by olsnodes cannot be resolved, contact Oracle Support Services.

PRCR-01180: No response received

Cause: A response was not received while executing the command through the administrator helper resource.

Action: Ensure that the node specified is reachable and responsive. If the problem persists, Contact Oracle Support Services.

PRCR-01181: Failed to request action {0} on resource {1}

Cause: An attempt to request the action on the resource failed.

Action: Make sure that the resource is running.

PRCR-01182: Failed to request action {0} on resource {1} on nodes {2}

Cause: An attempt to request the action on the resource failed on the specified nodes.

Action: Make sure that the resource is running on the specified nodes.

PRCR-01183: Failed to request action {0} on multiple resources

Cause: An attempt to request the action on multiple resources failed.

Action: Make sure that the resources are running.

PRCR-01184: Response from the resource on which the action was requested was not in the correct format

Cause: An internal error occurred. The callback message for the requested action was not in the correct format during an attempt to request the action.

Action: Contact Oracle Support Services.

PRCR-01185: failed to execute "srvmhelper" for command "{0}" with the following errors:\n{1}

Cause: An attempt to execute the command has failed.

Action: Examine the accompanying error messages that provide the details of why and where command execution failed. Resolve the reported problem and retry.

PRCR-01186: Multiple final messages for the requested action were received for node {0}

Cause: An internal error occurred. Multiple final messages for the requested action were received during an attempt to request the action.

Action: Contact Oracle Support Services.

PRCR-01187: No final message for the requested action was received.

Cause: An internal error occurred. No final message for the requested action was received during an attempt to request the action.

Action: Contact Oracle Support Services.

PRCR-01188: The requested action cannot be executed because there is no resource instance.

Cause: The resource has no instance on the specified nodes or, if nodes were not specified, in the cluster.

Action: Make sure that at least one resource instance exists on the specified nodes or, if nodes were not specified, in the cluster.

PRCR-01189: The user {1} does not have read and execute permissions for the ACFS file system resource associated with path {0}.

Cause: A check on the permissions for the ACFS file system resource associated with the indicated path failed because the user indicated in the message did not have read and execute permissions for the resource.

Action: Verify that the specified user has read and execute permissions on the ACFS file system resource using 'srvctl config filesystem'. To change permissions use 'srvctl modify filesystem'.

PRCR-01190: The specified VIP name {0} resolves to multiple {1} addresses.

Cause: The specified VIP name did not resolve to a single IPv4 or IPv6 address.

Action: Specify a numeric GNS VIP address or ensure that the specified VIP name resolves to a single IPv4 or IPv6 address. Use 'nslookup *vipname*' to display the addresses to which the VIP name resolves.

PRCR-01191: The stop request failed because the resource is not running on nodes {0}.

Cause: A request to stop a resource was rejected because the resource did not have a running instance on the specified nodes.

Action: Specify nodes where the resource is running.

PRCR-01192: Resource {0} is not hosted by server pool {1}.

Cause: An attempt to start or stop the specified resource on the specified server pool failed because the resource is not hosted by the server pool.

Action: Specify a server pool on which the resource is hosted and retry.

PRCR-01193: The specified instance on cardinality ID {0} of resource {1} is already enabled.

Cause: An attempt to enable the specified resource instance was rejected because the resource instance was already enabled.

Action: None

PRCR-01194: The specified instance on cardinality ID {0} of resource {1} is already disabled.

Cause: An attempt to disable the specified resource instance was rejected because the resource instance was already disabled.

Action: No action is needed.

PRCR-01195: Resource {0} does not have attributes {1} on cardinality ID {2}.

Cause: An attempt to remove the specified attributes failed because these attributes did not exist on the specified cardinality.

Action: Retry after specifying attributes that exist on the cardinality ID.

PRCR-01196: The specified instances of resource {0} are already enabled.

Cause: An attempt to enable the resource instances was rejected because the resource instances were already enabled.

Action: No action is needed.

PRCR-01197: The specified instances of resource {0} are already disabled.

Cause: An attempt to disable the resource instances was rejected because the resource instances were already disabled.

Action: No action is needed.

PRCR-01198: failed to relocate resources using a filter

Cause: An attempt to relocate resources using the filter shown in the message failed.

Action: Respond based on the accompanying exception message.

PRCR-01199: timed out waiting for the spawned process to complete

Cause: An attempt to move the Oracle Grid Infrastructure home failed because the detached process timed out. The accompanying error messages provide details of the error.

Action: Examine the accompanying error messages that provide the details of why and where the command execution failed. Resolve the reported problem and retry.

PRCR-01200: failed to execute the detached process

Cause: An attempt to move the Oracle Grid Infrastructure home failed because the detached process failed with an error. The accompanying error messages provide details of the error.

Action: Examine the accompanying error messages that provide the details of why and where the command execution failed. Resolve the reported problem and retry.

PRCR-01201: The specified node "{0}" is not part of a cluster.

Cause: An attempt to obtain the Oracle Grid Infrastructure home was rejected because the specified node was not part of the cluster.

Action: Reissue the command by specifying a node that is part of a version 11.2.0.4 Oracle Grid Infrastructure cluster.

PRCR-01202: Value "{0}" is invalid for the CSS_CRITICAL resource attribute.

Cause: An attempt was made to set a value other than 'yes' or 'no' for the CSS_CRITICAL resource attribute. The indicated resource attribute can be set to either 'yes' or 'no' only.

Action: Specify a valid value and retry.

PRCR-01203: failed to copy the directory contents for directory "{0}"

Cause: An attempt to copy the directory contents for the specified directory failed.

Action: Examine the accompanying error messages and address the issues as described.

PRCR-01204: Failed to execute "srvmhelper" binary on node "{0}". Detailed error:\n{1}

Cause: An attempt to execute srvmhelper failed on the specified node.

Action: Examine the accompanying error details and address the issues as described.

PRCR-01205: failed to execute "srvmhelper" binary on node "{0}"

Cause: An attempt to execute srvmhelper failed on the specified node.

Action: Examine the accompanying error messages and address the issues as described.

PRCR-01206: failed to copy the directory contents for directory "{0}" because it is the same as the destination directory and the local node "{1}" was included in the list of nodes where the copy has to occur

Cause: An attempt to copy the directory contents was rejected because the destination directory path and source directory path were the same and the local node was part of the list of nodes where the copy had to occur.

Action: Retry the operation after removing the local node from the list of remote nodes where the copy has to occur.

PRCR-01207: There are no running resources to stop.

Cause: An attempt to stop the resources failed because they were already stopped. For detailed information about the resources, review the accompanying error messages.

Action: None

PRCR-01208: File "{0}" on node "{1}" was empty.

Cause: The indicated file, which was expected to contain information about the Cluster Ready Services (CRS) configuration, was empty. This is an internal error.

Action: Contact Oracle Support Services.

PRCR-01209: failed to upgrade the dependencies for resource {0}

Cause: An attempt to upgrade the dependencies for the specified resource failed. Accompanying error messages provide detailed error information.

Action: Examine the accompanying error messages and respond accordingly.

PRCR-01213: Resource group {0} does not exist.

Cause: An attempt was made to operate on a resource group that did not exist.

Action: Check the resource group using the command 'srvctl config *object*' and if the resource group does not exist, then create it using the command 'srvctl add *object*'.

PRCR-01214: failed to stop resource group {0}

Cause: An attempt to stop the indicated resource group failed because the resource group was not running or the resource group was running and had dependent resource groups also running.

Action: Check the accompanying messages to identify dependent resource groups and stop them before retrying or retry using the '-force' option. Ensure that the resource group is running before attempting to stop it.

PRCR-01215: The resource group was not running.

Cause: An attempt to stop a resource group was rejected because the group was not running. For detailed information about the resource group, review the accompanying error messages.

Action: None

PRCR-01216: The stop request failed because the resource group is not running on nodes {0}.

Cause: A request to stop a resource group was rejected because the resource group did not have a running instance on the specified nodes.

Action: Specify nodes where the resource group is running.

PRCR-01217: Failed to relocate resource group {0}

Cause: An attempt to relocate the specified resource group failed.

Action: Examine the accompanying error messages, resolve the reported problems and retry the command.

PRCR-01218: Failed to relocate resource group {0} from node {1}

Cause: An attempt to relocate the resource group from the specified node failed.

Action: Examine the accompanying error messages, resolve the reported problems and respond accordingly.

PRCR-01219: Failed to relocate resource group {0} from node {1} to node {2}

Cause: An attempt to relocate the resource group from the specified node to another failed.

Action: Examine the accompanying error messages, resolve the reported problems and respond accordingly.

PRCR-01220: Failed to relocate resource group {0} to node {1}

Cause: An attempt to relocate the resource group to the specified node failed.

Action: Examine the accompanying error messages, resolve the reported problems and respond accordingly.

PRCR-01221: failed to start resource group {0} on node {1}

Cause: An attempt to start the indicated resource group on the specified node failed.

Action: Examine the accompanying error messages, resolve the reported problems and retry the command.

PRCR-01222: failed to start resource group {0}

Cause: An attempt to start the indicated resource group failed.

Action: Examine the accompanying error messages, resolve the reported problems and retry the command.

PRCR-01223: failed to start resource group {0} on nodes {1}

Cause: An attempt to start the indicated resource group on the specified nodes failed.

Action: Examine the accompanying error messages, resolve the reported problems and retry the command.

PRCR-01224: Resource group {0} is already running.

Cause: An attempt to start the indicated resource group failed because it was already running.

Action: None

PRCS-01000 to PRCS-01182

PRCS-01000: Failed to get enabled status of {0}

Cause: An attempt to check whether a server is enabled failed.

Action: Examine the accompanying error messages for details.

PRCS-01001: Failed to enable {0}

Cause: An attempt to enable the specified server failed.

Action: Examine the accompanying error messages for details.

PRCS-01002: Failed to disable {0}

Cause: An attempt to disable the specified server failed.

Action: Examine the accompanying error messages for details.

PRCS-01005: Failed to create server {0}

Cause: An attempt to create the specified server failed.

Action: Examine the accompanying error messages for details.

PRCS-01006: Failed to get server for node {0}

Cause: An attempt to get server for the specified node failed.

Action: Examine the accompanying error messages for details.

PRCS-01007: Server pool {0} already exists

Cause: The specified server pool already exists.

Action: Examine the accompanying error messages for details.

PRCS-01008: Server pool {0} does not exist

Cause: The specified server pool does not exist.

Action: Use the `srvctl` command to create server pool.

PRCS-01009: Failed to create server pool {0}

Cause: An attempt to create specified server pool failed.

Action: Examine the accompanying error messages for details.

PRCS-01010: Failed to get {0} of server pool {1}

Cause: An attempt to get the attribute value of the specified server pool failed.

Action: Examine the accompanying error messages for details.

PRCS-01011: Failed to modify server pool {0}

Cause: An attempt to modify the specified server pool failed.

Action: Examine the accompanying error messages for details.

PRCS-01012: Failed to remove server pool {0}

Cause: Failed to unregister server pool. This message is followed by the reason for failure.

Action: Retry after resolving the issue reported in the failure message.

PRCS-01013: Failed to look up server pool {0}

Cause: An attempt to get the specified server pool failed.

Action: Examine the accompanying error messages for details.

PRCS-01014: Server {0} is already part of server pool {1}

Cause: An attempt to add the server as a candidate for the specified server pool failed because the server is already in the pool's SERVER_NAME attribute.

Action: No action is needed.

PRCS-01015: Server {0} is not part of server pool {1}

Cause: An attempt to remove the server from the SERVER_NAMES attribute of the server pool failed because the specified server is not in the pool's SERVER_NAME attribute.

Action: Add the server to the server pool.

PRCS-01016: Failed to resolve Single Client Access Name {0}

Cause: An attempt to resolve specified Single Client Access Name to a list of IP addresses failed because Single Client Access Name could not be resolved in DNS using nslookup or using other lookup methods.

Action: Check whether the specified Single Client Access Name is correct. Review the underlying error messages that provide the details of which resource failed to resolve. Check the cause and action for the individual error. If Single Client Access Name should be resolved in DNS, check the configuration of Single Client Access Name in DNS.

PRCS-01017: Failed to configure Single Client Access Name {0}

Cause: An attempt to add cluster configuration for Single Client Access Name failed.

Action: Review the underlying error messages that provide the details of which resources failed to create. Check the cause and action for the individual resource creation failure.

PRCS-01018: Failed to add cluster configuration for Single Client Access Name listener {0}

Cause: An attempt to configure Single Client Access Name listener failed because endpoints were not specified correctly or other reasons.

Action: Review the underlying error messages that provide the details of which resources failed to create. Check the cause and action for the individual resource creation failure. If the endpoints were not specified correctly, correct endpoints.

PRCS-01019: Failed to remove the configuration for Single Client Access Name listener {0}

Cause: An attempt to remove the configuration of Single Client Access Name listener failed because other resources depended on it or other reasons.

Action: Review the underlying error messages that provide the details of which resources failed to remove. Stop Single Client Access Name listener resource before removing it. Can consider using force flag to remove Single Client Access Name listener resources if no other resources depend on it.

PRCS-01020: Failed to enable Single Client Access Name resources {0}

Cause: An attempt to enable Single Client Access Name resources failed.

Action: Review the underlying error messages that provide the details of which resources failed to enable. Check the cause and action for the individual resource creation failure.

PRCS-01021: Failed to disable Single Client Access Name resources {0}

Cause: An attempt to disable Single Client Access Name resources failed because current user did not have sufficient privileges to perform this operation or other reasons.

Action: Review the underlying error messages that provide the details of which resources failed to disable. Check the cause and action for the individual resource failure. Make sure that the user has root privileges on Linux/Unix's and Administrator on Windows.

PRCS-01022: Failed to start Single Client Access Name resources {0}

Cause: An attempt to start Single Client Access Name resources failed.

Action: Review the underlying error messages that provides the details of which resources failed to start.

PRCS-01023: Failed to stop Single Client Access Name resources {0}

Cause: An attempt to stop Single Client Access Name resources failed because Single Client Access Name listeners were not stopped/relocated or other reasons.

Action: Review the underlying error messages that provides the details of which resources failed to stop. Check the cause and action for the individual resource creation failure. Stop Single Client Access Name listeners first or use force flag to stop Single Client Access Name Virtual Internet Protocol(VIP) resources if no other resources depend on them.

PRCS-01024: Failed to remove Single Client Access Name Virtual Internet Protocol(VIP) resources {0}

Cause: Could not remove Single Client Access Name Virtual Internet Protocol(VIP) resources because the resources are running or Single Client Access Name listeners depend on or other reasons.

Action: Review the underlying error messages that provides the details of which resources failed to remove. Stop the Single Client Access Name VIPs and Single Client Access Name listeners, then remove Single Client Access Name listeners. Or use force flag to remove Single Client Access Name Virtual Internet Protocol(VIP) resources if no other resources depend on them.

PRCS-01025: Could not find any Single Client Access Name (SCAN) Virtual Internet Protocol (VIP) resources using filter {0}

Cause: An attempt to retrieve the SCAN VIP resources failed.

Action: Ensure that the resource name supplied is correct. Examine the accompanying error messages for additional details.

PRCS-01026: Could not find any Single Client Access Name (SCAN) listener resources using filter {0}

Cause: An attempt to retrieve the SCAN listener resources failed.

Action: Ensure that the resource name supplied is correct. Examine the accompanying error messages for additional details.

PRCS-01027: Could not find any Single Client Access Name listener with ordinal number {0}

Cause: Could not find the Single Client Access Name listener for specified ordinal number.

Action: Use the command 'srvctl config scan_listener' to check available ordinal number.

PRCS-01028: Single Client Access Name (SCAN) listener resources already exist on network {0}

Cause: Single Client Access Name listeners were already created on the specified network.

Action: Use the command 'srvctl modify scan_listener' to modify attributes if needed.

PRCS-01031: Failed to modify Single Client Access Name listeners using endpoints {0}

Cause: An attempt to modify Single Client Access Name listeners failed.

Action: Check if the endpoints specified are valid.

PRCS-01032: No server pool was found that matches the query {0}

Cause: An attempt to find server pools that match the given query found no matching server pool.

Action: Either configure a server pool via the command 'srvctl add srvpool' or modify existing a server pool via the command 'srvctl modify srvpool' to match the query and retry the request.

PRCS-01034: Failed to modify Single Client Access Name {0}

Cause: Failed to modify the configuration of Single Client Access Name because the endpoints were not specified correctly or extra Single Client Access Name VIPs could not be removed or other reasons.

Action: Review the underlying error messages that provides the details of which resources failed to modify. Resolve the reported problem and retry. If to modify the endpoints, specify correct endpoints. If to update the number of Single Client Access Name VIPs, stop the Single Client Access Name listeners that depend on.

PRCS-01035: Invalid number of TCP ports ({0}) for SCAN Listener

Cause: Either no port was specified, or more than one port was specified.

Action: Specify only one port number for TCP protocol for SCAN listener.

PRCS-01037: Single Client Access Name (SCAN) Virtual Internet Protocol (VIP) resources already exist on network {0}

Cause: An attempt was made to add SCAN VIPs when SCAN VIPs were already configured. Only one SCAN per cluster network can be configured.

Action: Remove the existing SCAN on the given network and add a new SCAN. Or, modify the SCAN to use a new SCAN name or have the existing SCAN name map to different SCAN VIPs.

PRCS-01038: Failed to find Single Client Access Name Virtual Internet Protocol(VIP) associated with listener {0}

Cause: Cannot find Single Client Access Name Virtual Internet Protocol(VIP) associated with the given listener.

Action: Examine the accompanying error messages to determine how to respond.

PRCS-01039: Failed to find Single Client Access Name listener associated with the given Virtual Internet Protocol(VIP) {0}

Cause: Cannot find Single Client Access Name listener associated with the given Virtual Internet Protocol(VIP).

Action: Examine the accompanying error messages to determine how to respond.

PRCS-01040: User {0} does not have CRS administrator role

Cause: The specified user did not have CRS administrator role.

Action: Grant CRS administrator role to the user by using the command 'crsctl add crs administrator -u <user_name>' and retry.

PRCS-01041: Invalid builtin server pool name {0}

Cause: The specified builtin server pool name is invalid.

Action: Provide a valid builtin server pool name. It can be Generic or Free.

PRCS-01042: Server pool {0} is not hosting any database currently

Cause: A database could not be found referencing the given server pool.

Action: Create the database configuration using the command 'srvctl add database ... -serverpool <server_pool>' and retry.

PRCS-01043: Server pool {0} is not hosting any database service currently

Cause: A service could not be found referencing the given server pool.

Action: Create the service configuration using the command 'srvctl add service ... -serverpool <server_pool>' and retry.

PRCS-01046: Name {0} is not valid

Cause: Specified name was not valid.

Action: Specify a valid string name, and retry.

PRCS-01047: Minimum size of {0} is not valid

Cause: Specified minimum size was not valid.

Action: Specify minimum size to be an integer equal to or greater than zero and less than the maximum size (other than -1), and retry.

PRCS-01048: Maximum size of {0} is not valid

Cause: Specified maximum size was not valid.

Action: Specify maximum size to be an integer greater than or equal to -1 and retry.

PRCS-01049: Importance of {0} is not valid

Cause: Specified importance was not valid.

Action: Specify importance value to be an integer greater than or equal to 0 and retry.

PRCS-01050: Could not add GNS VIP {0} because another one with name {1} already exists

Cause: The name of the GNS VIP to be added matches one that already existed.

Action: Specify another name.

PRCS-01051: Could not add GNS VIP using network {0} because registered another one using network {1} already exists

Cause: The network specified for the GNS VIP to be added matches one that already existed.

Action: Specify another network.

PRCS-01053: failed to resolve address for Grid Naming Service VIP {0};\n{1}

Cause: The address specified for the GNS VIP could not be resolved.

Action: Specify a valid address.

PRCS-01054: Failed to configure VIP for Grid Naming Service VIP {0}

Cause: The creation of the GNS VIP failed.

Action: Examine the accompanying error message for details.

PRCS-01055: Failed to modify Grid Naming Service VIP {0}

Cause: The modification of the GNS VIP failed.

Action: Examine the accompanying error message for details.

PRCS-01056: Could not find resources for Grid Naming Service Virtual Internet Protocol(VIP) {0}

Cause: The specified GNS VIP did not exist.

Action: Specify a valid GNS VIP name.

PRCS-01057: INTERNAL ERROR: no attributes specified.

Cause: No attributes to modify GNS with were passed to a method.

Action: This is an internal error. Please contact Oracle Customer Support.

PRCS-01058: INTERNAL ERROR: unsupported query type: "\${0}"

Cause: The type of query to be made to GNS is unrecognized.

Action: This is an internal error and should not be visible. Please contact Oracle Customer Support.

PRCS-01059: Failed to get sub-server pools of server pool {0}

Cause: Failed to look up PARENT_POOLS attribute of server pools containing the given server pool name. Ensure that current user has read permissions on the given server pool and its sub-server pools.

Action: Grant read permissions on the given server pool and its sub-server pools.

PRCS-01060: Failed to relocate servers {0} into server pool {1}

Cause: Failed to relocate servers into the given server pool. This message may be accompanied by others providing additional details. A likely cause is violation of defined configuration attributes such as pool MIN_SIZE, SERVER_NAMES etc.

Action: If the problem stems from violating configuration attributes, either modify the attributes or reformulate the request. Otherwise, contact Oracle Support Services.

PRCS-01061: Failed to find running database instances hosted by server pool {0}

Cause: Failed to find running database instances hosted by the servers in the given server pool. This message is accompanied by others providing additional details. A likely cause is that current user may not have permissions to query profiles of databases hosted by the given server pool.

Action: If lack of permissions is the cause of this failure, then use the command 'srvctl config object -a' to find the current owner of entity and retry the query as that owner user. Otherwise, contact Oracle Support Services.

PRCS-01062: Failed to determine whether server pool {0} has any parents or children

Cause: Failed to find parents or children of the given server pool. A likely cause is that current user may not have permissions to query profile of given server pool or profiles of other server pools whose PARENT_POOLS attribute contains this server pool name.

Action: If lack of permissions is the cause of this failure, then use the command 'srvctl config serverpool serverpool -a' to find the current owner of the server pool and retry the query as that owner user. Otherwise, contact Oracle Support Services.

PRCS-01063: Server pool {0} with minimum size {1}, maximum size {2}, importance {3} and server list ({4}) can not be created

Cause: Specified server pool cannot be created because of the reason provided by an accompanying exception message.

Action: Respond based on the accompanying exception message.

PRCS-01064: Failed to find server pools using filter {0}

Cause: Attempt to look up server pool entities using given filter failed. A likely cause is that current user does not have permissions to query server pool entities

Action: If lack of permissions is the cause of this failure, then use the command 'srvctl config serverpool -a' to find the current owner of the server pools and retry the query as that owner user. Otherwise, contact Oracle Support Services.

PRCS-01065: GNS server is not configured in this cluster.

Cause: A command that applies only to a GNS server cluster was rejected because this cluster has not been configured as a GNS server.

Action: If GNS server is to run in this cluster, use the 'srvctl add gns' command to configure it.

PRCS-01066: Server group {0} with server list ({1}) can not be created

Cause: Specified server group cannot be created because of the reason provided by an accompanying exception message.

Action: Respond based on the accompanying exception message.

PRCS-01067: Failed to find online database instances hosted by server pool {0}

Cause: Failed to find online database instances hosted by the servers in the given server pool. This message is accompanied by others providing additional details. A likely cause is that current user may not have permissions to query profiles of databases hosted by the given server pool.

Action: If lack of permissions is the cause of this failure, then use the command 'srvctl config *object* -a' to find the current owner of the entity and retry the query as that owner user. Otherwise, contact Oracle Support Services.

PRCS-01068: Oracle Clusterware server entity for node {0} does not exist

Cause: The server entity for the specified node does not exist.

Action: Start Oracle Clusterware on the given node and retry.

PRCS-01069: Label {0} in GNS domain name {1} does not follow RFC-1035 convention

Cause: The specified portion of the GNS domain name does not follow RFC-1035 label conventions.

Action: Specify a domain name that follows RFC-1035 conventions. According to RFC-1035 conventions, the domain name consists of a set of labels separated by ".". A label must begin with an alphabetic character and can contain only alphanumeric characters and "-" (dash or minus character), end with an alphanumeric, and be no more than 63 characters long.

PRCS-01070: Label {0} part of GNS domain name {1} is too long

Cause: The specified portion of the GNS domain name does not follow RFC-1035 label conventions, as it is longer than 63 characters.

Action: Specify a domain name that follows RFC-1035 conventions. The domain name consists of a set of labels separated by ".". Label must begin with an alphabetic character and can contain only alphanumeric characters and "-" (dash or minus character), end with an alphanumeric and be no more than 63 characters long.

PRCS-01071: An error occurred while trying to look up IP address for "{0}".

Cause: A requested operation failed because an error occurred when it attempted to resolve the indicated fully qualified domain name (FQDN) for the GNS server.

Action: Ensure that the local node has name servers properly configured. If the domain in the FQDN is a GNS domain name, ensure that DNS has been set up to forward requests to GNS and that the GNS resource is online. Ensure that there are no firewalls between the local node and the name servers.

PRCS-01072: Failed to create server pool with reserved name {0}

Cause: Request to create the specified server pool was rejected because specified server pool name is the name of builtin server pool of Oracle Clusterware.

Action: Supply a server pool name other than the builtin server pool name (Generic or Free) of Oracle Clusterware and retry.

PRCS-01073: The specified GNS logging level {0} was outside the expected range of {1} to {2}

Cause: The 'log_level' value in the 'srvctl start gns -loglevel <log_level>' command was less than the minimum limit.

Action: Ensure that the 'log_level' value is within the valid range.

PRCS-01074: The specified GNS logging level {0} was outside the expected range of {1} to {2}

Cause: The 'log_level' value in the 'srvctl start gns -loglevel <log_level>' command was greater than the maximum limit.

Action: Ensure that the 'log_level' value is within the valid range.

PRCS-01075: GNS Domain name {0} ends with invalid character {1}

Cause: The specified GNS domain name ends with an invalid character and does not follow RFC-1035 label conventions.

Action: Specify a domain name that follows RFC-1035 conventions. According to RFC-1035 conventions, the domain name consists of a set of labels separated by ".". A label must begin with an alphabetic character and can contain only alphanumeric characters or "-" (dash or minus character), end with an alphanumeric, and be no more than 63 characters long.

PRCS-01076: Invalid Single Client Access Name {0}. The subnet {1} of SCAN VIP {2} differs from the subnet {3} of network {4}

Cause: The SCAN VIPs resolved from the specified Single Client Access Name are in a subnet that differs from the network's subnet.

Action: Use the SCAN name that can be resolved to the SCAN VIPs in the same subnet of network resource.

PRCS-01077: The specified trace level {0} was outside the expected range of {1} to {2}

Cause: The trace level value was less than the minimum limit or greater than the maximum limit.

Action: Ensure that the trace level value is within the valid range.

PRCS-01078: Failed to update the invited nodes {0} for service registration with Scan Listener {1}

Cause: An attempt to update the invited nodes attribute failed.

Action: Retry the request after ensuring that the CRS stack is running, the SCAN listener resource has been configured, and the user has update permission on the SCAN listener resource.

PRCS-01079: Failed to retrieve the invited nodes for service registration with Scan Listener {0}

Cause: An attempt to retrieve the invited nodes attribute value of scan listener failed.

Action: Retry the request after ensuring that the CRS stack is running, the SCAN listener resource has been configured, and the user has update permission on the SCAN listener resource.

PRCS-01080: Failed to update the invited subnets {0} for service registration with Scan Listener {1}

Cause: An attempt to update the invited subnets attribute of scan listener failed.

Action: Retry the request after ensuring that the CRS stack is running, the SCAN listener resource has been configured, and the user has update permission on the SCAN listener resource.

PRCS-01081: Failed to retrieve the invited subnets for service registration with Scan Listener {0}

Cause: An attempt to retrieve the invited subnets attribute of scan listener failed.

Action: Retry the request after ensuring that the CRS stack is running, the SCAN listener resource has been configured, and the user has update permission on the SCAN listener resource.

PRCS-01082: Invalid built-in server category name {0}

Cause: The specified category name was invalid.

Action: Provide a valid category name. It can be ora.hub.category or ora.leaf.category.

PRCS-01083: There is no server category {0} registered in CRS

Cause: The server category did not exist.

Action: Add the server category using the command 'crsctl add category <category_name>' or use the command 'crsctl status category' to get a list of server categories already registered in CRS.

PRCS-01084: Failed to find server categories using filter {0}

Cause: An attempt to look up server category entities using the given filter failed.

Action: See the accompanying error messages for further details.

PRCS-01085: Server category {0} already exists

Cause: A server category that already exists was specified.

Action: Examine the accompanying error messages for details.

PRCS-01086: Failed to create category {0}

Cause: An attempt to create the specified server category failed.

Action: Examine the accompanying error messages for details.

PRCS-01087: SCAN name "{0}" does not resolve to an IPv4 or IPv6 address

Cause: The SCAN name did not resolve to an IP address (either IPv4 or IPv6).

Action: Ensure that the SCAN name resolves to an IP address.

PRCS-01088: SCAN name "{0}" resolves to a different number of IPv4 ({1}) and IPv6 ({2}) addresses

Cause: The number of IPv4 and IPv6 addresses that the SCAN name resolved to were not equal.

Action: Ensure that the SCAN name resolves to an equal number of IPv4 and IPv6 addresses.

PRCS-01089: Domain must be supplied because network "{0}" has type "{1}".

Cause: An attempt to add GNS on a non-static network was rejected because a domain was not supplied.

Action: Ensure that a domain is forwarded from DNS, and supply the domain using the command 'srvctl add gns -vip address -domain domain'.

PRCS-01090: Failed to retrieve the sub-domain configured for GNS

Cause: An attempt to retrieve the sub-domain attribute of the specified Grid Naming Service (GNS) failed.

Action: Retry the request after ensuring that the CRS stack is running, the GNS resource has been configured, and the user has read permission on the GNS resource.

PRCS-01091: The scan name "{0}" resolves to {1} addresses such as "{2}", while network {3} has only {4} subnet

Cause: The given scan name resolved to a type of addresses that the network did not have.

Action: Either modify the network via the command 'srvctl modify network -subnet' to include the missing type or make sure that the scan name resolves only to the addresses of the same type as the network.

PRCS-01092: Failed to get the value for the attribute {0} of server category {1}

Cause: An attempt to get the attribute value of the specified server category failed.

Action: Examine the accompanying error messages for details.

PRCS-01093: Server pool {0} does not have a server category defined

Cause: The server pool did not have the server category defined as required for policy-managed databases in an Oracle Flex Cluster.

Action: Modify the server pool using the command 'srvctl modify srvpool -serverpool *serverpool* -category *category* -servers ""'.

PRCS-01094: Server category {0} of server pool {1} has the following non-hub active CSS role: {2}

Cause: The server category of the server pool did not have ACTIVE_CSS_ROLE=HUB as required for policy-managed databases in a Flex Cluster.

Action: Modify the server pool to use a server category that has the hub active CSS role or modify the server category to use ACTIVE_CSS_ROLE=HUB.

PRCS-01095: Conflicting specification of 'servers' and 'category' arguments for the serverpool {0}

Cause: Both 'servers' and 'category' arguments were specified on the command.

Action: Retry the request with either 'servers' or 'category' argument.

PRCS-01096: The serverpool {0} already contains the server names

Cause: The command 'srvctl modify srvpool' specified 'category' option, but the server pool already has a server names attribute.

Action: Remove the server names attribute by issuing the command 'srvctl modify srvpool -serverpool <pool_name> -servers ""'

PRCS-01097: The serverpool {0} already contains the server category

Cause: A 'srvctl modify srvpool' command specified 'servers' but the server pool already has a server category attribute.

Action: Remove the server category attribute by issuing the command 'srvctl modify srvpool -serverpool <pool_name> -category ""'

PRCS-01098: Active CSS role of the server category {0} of PQ server pool {1} is not set

Cause: The server category of the server pool did not specify ACTIVE_CSS_ROLE.

Action: Modify the PQ server pool to use a server category that has a valid active CSS role or modify the server category to set ACTIVE_CSS_ROLE.

PRCS-01099: Nodes {0} of the server pool {1} do not have HUB active CSS roles

Cause: The server pool did not have nodes with ACTIVE_CSS_ROLE=HUB as required for policy-managed databases in a Flex Cluster.

Action: Modify the server pool to use nodes that have HUB active CSS roles.

PRCS-01100: Nodes {0} of the PQ server pool {1} do not have LEAF active CSS roles

Cause: The server pool did not have nodes with ACTIVE_CSS_ROLE=LEAF as required for policy-managed databases in a Flex Cluster.

Action: Modify the server pool to use nodes that have LEAF active CSS roles.

PRCS-01101: Unable to create GNS resource because it already exists.

Cause: An attempt was made to add the GNS resource but the resource already exists.

Action: Either remove the GNS resource and then add it, or avoid adding an already existing resource.

PRCS-01102: Could not find any Single Client Access Name (SCAN) Virtual Internet Protocol (VIP) resources using filter {0} on network {1}

Cause: An attempt to retrieve the SCAN VIP resources on the indicated network failed.

Action: Ensure that the resource name supplied is correct. Examine the accompanying error messages for additional details.

PRCS-01103: Could not find any Single Client Access Name (SCAN) listener resources using filter {0} on network {1}

Cause: An attempt to retrieve the SCAN listener resources on the indicated network failed.

Action: Ensure that the resource name supplied is correct. Examine the accompanying error messages for additional details.

PRCS-01104: Could not find the Single Client Access Name (SCAN) listener with ordinal number {0} on network {1}

Cause: An attempt to find the SCAN listener for the specified ordinal number and network failed.

Action: Use the command 'srvctl config scan_listener -netnum' to check the available ordinal numbers on the given network.

PRCS-01105: Server category {0} of Parallel Query server pool {1} has the following non-leaf active CSS role: {2}

Cause: The server category of the server pool did not have ACTIVE_CSS_ROLE=LEAF as required for the parallel query helper service of the policy-managed databases in a Flex Cluster.

Action: Modify the Parallel Query server pool to use a server category that has the leaf active CSS role or modify the server category to use ACTIVE_CSS_ROLE=LEAF.

PRCS-01106: Nodes {0} of the Parallel Query server pool {1} do not have the leaf active CSS role

Cause: The server pool did not have nodes with ACTIVE_CSS_ROLE=LEAF as required for policy-managed databases in a Flex Cluster.

Action: Modify the server pool to use nodes that have the leaf active CSS role.

PRCS-01107: Cannot add resource on network {0}, which is configured as leaf.

Cause: An attempt to add a resource using a network configured as 'leaf' was made.

Action: Add the resource on a network not configured as 'leaf'.

PRCS-01108: Cannot modify resource to use network {0}, which is configured as leaf.

Cause: An attempt to modify a resource using a network configured as 'leaf' was made.

Action: Provide a network not configured as 'leaf'.

PRCS-01110: Single Client Access Name (SCAN) {0} does not resolve to {1} addresses although it should resolve to both IPv4 and IPv6 addresses

Cause: An attempt to modify the SCAN name while the network type was 'BOTH' was rejected because the specified SCAN name did not resolve to both IPv4 and IPv6 addresses required by the network.

Action: Make sure that the specified SCAN name resolves to both IPv4 and IPv6 addresses.

PRCS-01111: Could not modify GNS VIP because registered type and IP address type are different

Cause: The IP address type specified for the GNS VIP to be added differed from the registered network type.

Action: Specify an IP address of the type that is registered.

PRCS-01112: Server {0} is not assigned to any server pool.

Cause: The given server was not yet recognized by Oracle Clusterware and therefore was not active in any server pool.

Action: Check the state of the server using the command 'crsctl status server server -f'.

PRCS-01113: The Single Client Access Name (SCAN) VIP address "{0}" does not belong to network {1} which has only an {2} subnet.

Cause: The network modification failed because the type of the specified SCAN VIP address was incompatible with the subnet of the specified network.

Action: Either modify the network via the command 'srvctl modify network -subnet' to include the missing type or make sure that the SCAN VIP is an address of the same type as the network.

PRCS-01115: An attempt to retrieve the Rapid Home Provisioning Server host name and port number failed with the following error:\n{0}

Cause: While looking up Rapid Home Provisioning Server (RHPS) connection details in Grid Naming Service (GNS), an attempt to retrieve the host name and port number failed.

Action: Examine the accompanying error message. Make sure that both the GNS and the Rapid Home Provisioning Server are running on the RHPS cluster.

PRCS-01116: no SRV record for service {0} found in the Grid Naming Service (GNS)

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCS-01117: invalid format for SRV record {0} returned from the Grid Naming Service (GNS)

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCS-01118: The supplied GNS VIP name "{0}" resolves to multiple IP addresses "{1}".

Cause: Install prerequisite checking determined that the indicated GNS VIP name entered was resolved to the multiple IP addresses shown.

Action: Repeat the install interview supplying a GNS VIP name that resolves to exactly one address, or a numeric GNS VIP address. Alternatively, modify the name service address mapping to associate only one address with the name and rerun the prerequisite check.

PRCS-01119: illegal attempt to modify the Grid Naming Service instance role to client

Cause: An attempt to modify the Grid Naming Service (GNS) role to client was made.

Action: Valid GNS roles are PRIMARY and SECONDARY. Specify one of them and reissue the command.

PRCS-01120: The supplied GNS VIP name "{0}" resolves to multiple addresses "{1}" of types IPv4 or IPv6.

Cause: More than one IP address of either type IPv4 or type IPv6 were found when resolving the specified Grid Naming Service (GNS) VIP name.

Action: Supply a GNS VIP name that resolves to exactly two addresses, one of type IPv4 and one of type IPv6.

PRCS-01121: The supplied GNS VIP name "{0}" resolves to multiple addresses "{1}" of type IPv4.

Cause: More than one IP address of type IPv4 was found when resolving the specified Grid Naming Service (GNS) VIP name.

Action: Supply a GNS VIP name that resolves to exactly one IPv4 address, or supply a numeric GNS VIP address.

PRCS-01122: The supplied GNS VIP name "{0}" resolves to multiple addresses "{1}" of type IPv6.

Cause: More than one IP address of type IPv6 was found when resolving the specified Grid Naming Service (GNS) VIP name.

Action: Supply a GNS VIP name that resolves to exactly one IPv6 address, or supply a numeric GNS VIP address.

PRCS-01123: failed to get the extended cluster configuration information

Cause: An attempt to get the extended cluster configuration information failed.

Action: Examine the accompanying error messages for details and retry the command, making sure that the CRS stack is running.

PRCS-01124: failed to get Oracle Clusterware sites

Cause: An attempt to get Oracle Clusterware sites failed.

Action: Examine the accompanying error messages for details and retry the command, making sure that the CRS stack is running.

PRCS-01125: failed to get Oracle Clusterware site for node {0}

Cause: An attempt to retrieve Oracle Clusterware site for specified node failed.

Action: Examine the accompanying error messages for details and retry the command, making sure that the CRS stack is running.

PRCS-01126: SCAN {0} has no static IPv4 addresses configured for Single Client Access Name (SCAN) Virtual IPs (VIP).

Cause: An attempt to modify the network type of the indicated SCAN to 'static' was rejected because the SCAN did not have SCAN VIPs configured with static IPv4 addresses.

Action: Use the command 'srvctl modify scan' to configure the indicated SCAN with SCAN VIPs whose addresses resolve to static IPv4 addresses.

PRCS-01127: SCAN {0} has no static IPv6 addresses configured for Single Client Access Name (SCAN) Virtual IPs (VIP).

Cause: An attempt to modify the network type of the indicated SCAN to 'static' was rejected because the SCAN did not have SCAN VIPs configured with static IPv6 addresses.

Action: Use the command 'srvctl modify scan' to configure the indicated SCAN with SCAN VIPs whose addresses resolve to static IPv6 addresses.

PRCS-01128: SCAN {0} does not have static IP addresses of both types IPv4 and IPv6 configured for Single Client Access Name (SCAN) Virtual IPs (VIP).

Cause: An attempt to modify the network type of the indicated SCAN to 'static' was rejected because the SCAN did not have SCAN VIPs configured with static addresses of each of the types IPv4 and IPv6.

Action: Use the command 'srvctl modify scan' to configure the indicated SCAN with SCAN VIPs whose addresses resolve to static IPv4 and IPv6 addresses.

PRCS-01129: nodes {0} of the reader farm server pool {1} do not have LEAF active CSS roles

Cause: An attempt to add or modify a service was rejected because the specified server pool did not have nodes with ACTIVE_CSS_ROLE=LEAF as required for the policy-managed databases using reader farm services.

Action: Modify the server pool to use nodes that have LEAF active Oracle Cluster Synchronization Services (CSS) roles using 'srvctl modify serverpool -category' and retry the operation.

PRCS-01130: failed to add reader farm service because network {0} is not extended to work on Leaf Nodes

Cause: An attempt to add a reader farm service was rejected because the provided network was not extended to Leaf Nodes.

Action: Specify a network that is extended to work on Leaf Nodes, or run 'srvctl modify network -extendtoleaf' and repeat the operation.

PRCS-01131: unable to convert a reader farm service to another service type

Cause: An attempt to modify a reader farm service configuration was rejected because service type conversion is not supported.

Action: Create a new service of the required service type.

PRCS-01132: Database {0} is configured to use parallel query services.

Cause: An attempt to add a reader farm service configuration was rejected because the specified database was already configured to use parallel query services.

Action: Specify a different database or remove the parallel query services using the command 'srvctl remove service' and add the reader farm service using the command 'srvctl add service'.

PRCS-01133: Database {0} is configured to use reader farm services.

Cause: An attempt to add a parallel query service configuration was rejected because the specified database was already configured to use reader farm services.

Action: Specify a different database or remove the reader farm services using the command 'srvctl remove service' and add the parallel query service using the command 'srvctl add service'.

PRCS-01134: Server category {0} of server pool {1} has the following non-LEAF CSS role: {2}

Cause: An attempt to add or modify a reader farm service was rejected because the server category of the specified server pool did not have ACTIVE_CSS_ROLE=LEAF as required for reader farm services.

Action: Modify the server pool to use a server category that has the LEAF active CSS role or modify the server category to use ACTIVE_CSS_ROLE=LEAF and retry the operation.

PRCS-01135: unable to convert non-reader farm service {0} to reader farm service type

Cause: An attempt to modify a non-reader farm service configuration was rejected because service type conversion is not supported.

Action: Create a new reader farm service using the command 'srvctl add service - rfpool'.

PRCS-01136: unable to set the candidate server list for a server pool to a list of servers with mixed CSS roles.

Cause: An attempt to set the candidate server list for a server pool was rejected because the specified servers were not all Hub Nodes or all Leaf Nodes.

Action: Retry the operation specifying a list of servers that all have ACTIVE_CSS_ROLE set to 'hub' or that all have ACTIVE_CSS_ROLE set to 'leaf'.

PRCS-01137: The release specified must be 12.1.0.2 or later.

Cause: An attempt to export the Grid Naming Service (GNS) credentials with the -version option failed because the specified release was earlier than 12.1.0.2

Action: Reissue the command, specifying release 12.1.0.2 or later.

PRCS-01138: invalid VIP addresses "{0}" because the specified IP addresses are reachable

Cause: The specified command was rejected because the Virtual Internet Protocol (VIP) address was reachable.

Action: Configure VIPs to use IP addresses that are not active on any host system and cannot be reached using 'ping'.

PRCS-01139: failed to add reader farm service

Cause: An attempt to add a reader farm service was rejected because the hub service was either not provided or was invalid.

Action: Specify a hub service that exists and services the pluggable database to which the reader farm service can connect.

PRCS-01140: invalid GNS VIP address {0} because the specified IP address is not in the subnet {1} of the network resource {2}

Cause: The subnet of the Grid Naming Service Virtual Internet Protocol (GNS VIP) did not match the subnet of the network resource.

Action: Retry SRVCTL command with a combination of GNS VIP address and network whose subnet matches.

PRCS-01141: invalid GNS VIP address {0} because the specified IP address is not of type {1} of the network resource {2}

Cause: The IP address type specified for the GNS VIP to be added differed from the registered network type.

Action: Specify an IP address of the type that is registered.

PRCS-01142: Unable to create CDP resource because it already exists.

Cause: An attempt to add the Cross-cluster Dependency Proxies (CDP) resource was rejected because the resource already existed.

Action: None

PRCS-01143: failure to configure Cross-cluster Dependency Proxies resource

Cause: An attempt to add a cluster configuration for a Cross-cluster Dependency Proxies (CDP) resource failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying error messages that provide the details of which resources failed to be created. Check the Cause and Action for the individual resource creation failures.

PRCS-01144: Error executing the config script for CDP. Details: {0}

Cause: An error occurred while executing the configuration script for the Cross-cluster Dependency Proxies (CDP) resource. Specific failure data is displayed following the message.

Action: Examine the accompanying messages, resolve the identified problems, and then retry the operation.

PRCS-01145: Single Client Access Name (SCAN) listener resources not found for client cluster {0}.

Cause: An attempt to retrieve the SCAN listener resources for the indicated client failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, resolve the indicated issues, and then retry the operation, ensuring that the supplied cluster name is correct.

PRCS-01146: Single Client Access Name (SCAN) listener resources already exist for client cluster {0}.

Cause: An attempt to create Single Client Access Name (SCAN) listeners was rejected because resources were already created for the specified client cluster.

Action: Retry the operation, specifying a different client cluster name.

PRCS-01147: unable to find any Oracle Notification Service (ONS) resources for client cluster {0}

Cause: An attempt to retrieve the ONS resources for the indicated client failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, resolve the indicated issues, and then retry the operation, ensuring that the supplied resource name is correct.

PRCS-01148: An ONS resource already exists for client cluster {0}.

Cause: An attempt to create an Oracle Notification Service (ONS) resource was rejected because a resource already existed for the indicated client cluster.

Action: Retry the operation, specifying a different cluster name.

PRCS-01149: unable to find resource for ONS {0}

Cause: An attempt to query resources failed because the indicated Oracle Notification Service (ONS) resource did not exist.

Action: Retry the operation, specifying a valid ONS name.

PRCS-01150: The ONS resource already exists.

Cause: An attempt to create a resource was rejected because the Oracle Notification Service (ONS) resource already existed.

Action: None

PRCS-01151: The specified ONS resource is not configured for a client cluster.

Cause: An attempt to export client data for an Oracle Notification Service (ONS) resource was rejected because the specified ONS resource was not configured to serve a client cluster.

Action: Retry the operation, specifying an ONS resource that is configured to serve a client cluster.

PRCS-01152: The invited nodes cannot be modified for a SCAN listener on a client cluster.

Cause: An attempt to modify the invited nodes for a SCAN listener was rejected because the resource was configured for a client cluster.

Action: Retry the operation, specifying a SCAN listener on a server cluster.

PRCS-01153: The invited subnet cannot be modified for a SCAN listener on a client cluster.

Cause: An attempt to modify the invited subnet for a SCAN listener was rejected because the resource was configured for a client cluster.

Action: Retry the operation, specifying a SCAN listener on a server cluster.

PRCS-01154: The specified SCAN listener resource is not configured for a client cluster.

Cause: An attempt to export client data for a SCAN listener resource was rejected because the specified SCAN listener resource was not configured to serve a client cluster.

Action: Retry the operation, specifying a SCAN listener resource that serves a client cluster.

PRCS-01155: missing properties {0}

Cause: An attempt to get XML properties from the indicated data file failed because the required XML property attributes did not exist.

Action: Retry the operation, supplying a valid client data file.

PRCS-01156: Service {0} is already configured in server pool {1}.

Cause: An attempt to modify the reader farm service pool for the specified server pool failed because the service is already part of the server pool.

Action: No action is needed.

PRCS-01157: The CDP resource does not exist.

Cause: An attempt to retrieve the Cross-cluster Dependency Proxies (CDP) resource failed because the resource could not be found.

Action: Create the CDP resource using the command 'srvctl add cdp', then retry the operation.

PRCS-01158: The TFA resource does not exist.

Cause: An attempt to retrieve the Trace File Analyzer (TFA) failed because the resource could not be found.

Action: Create the TFA resource using the command 'srvctl add tfa', then retry the operation.

PRCS-01159: Unable to create the TFA resource because it already exists.

Cause: An attempt to add the Trace File Analyzer (TFA) resource was rejected because the resource already existed.

Action: None

PRCS-01160: The CDP proxy resource does not exist.

Cause: An attempt was made to retrieve the Cross-cluster Dependency Proxies (CDP) proxy resource but the CDP proxy resource was not found.

Action: Create the CDP proxy resource using the command 'srvctl add cdpproxy', then retry the operation.

PRCS-01161: Unable to create CDP proxy resource because it already exists.

Cause: An attempt was made to add the Cross-cluster Dependency Proxies (CDP) proxy resource but the resource already existed.

Action: None

PRCS-01162: Cannot create CDP proxy using unsupported type "{0}".

Cause: An attempt was made to add the Cross-cluster Dependency Proxies (CDP) proxy resource using an unknown, or unsupported, proxy type.

Action: Retry the operation, supplying a valid supported proxy type.

PRCS-01163: failed to remove the CDP resource {0}

Cause: An attempt to remove the Cross-cluster Dependency Proxies (CDP) resource failed because the resource was running or other resources depended on it.

Action: Check status for the identified CDP resource and stop the CDP resource before removing it. The force flag could be used to remove the CDP resource if CDP proxies depend on it.

PRCS-01164: could not modify CDP resources because the following CDP resources were running: {0}

Cause: An attempt to modify one or more Cross-cluster Dependency Proxies (CDP) resources was rejected because the indicated resources were running.

Action: Ensure that the indicated CDP resources are stopped and then retry the operation.

PRCS-01165: cluster {0} not registered with GNS

Cause: An attempt to retrieve information about the indicated cluster from the Grid Naming Service (GNS) found that the cluster was not registered.

Action: Ensure that the indicated cluster name is registered with GNS, and then retry the operation.

PRCS-01166: cluster GUID {0} not registered with GNS

Cause: An attempt to retrieve information about the indicated cluster from the Grid Naming Service (GNS) found that the cluster was not registered.

Action: Ensure that the indicated cluster GUID is registered with GNS, and then retry the operation.

PRCS-01167: no clusters registered with GNS

Cause: An attempt to retrieve the list of registered clusters from the Grid Naming Service (GNS) detected that no clusters were registered.

Action: Ensure that there is at least one cluster registered with GNS, and then retry the operation.

PRCS-01168: The cluster name "{0}" stored in the client data file is not the same as the configured cluster name "{1}"

Cause: An attempt to configure a Single Client Access Name (SCAN) resource on a client cluster was rejected because the client data file contained information for a different cluster name.

Action: Ensure that the client data file was exported for this cluster name and retry the operation.

PRCS-01169: invalid invited subnets value {0}

Cause: An attempt to change the invited subnets value was rejected because the invited subnets value was specified using incorrect syntax.

Action: Ensure that the invited subnets value is using either Classless Inter-Domain Routing (CIDR) syntax (e.g. 192.196.16.0/24) or wild cards (e.g. 192.196.16.*).

PRCS-01170: invalid node names value {0}

Cause: An attempt to add a Single Client Access Name (SCAN) was rejected because the node names value contained invalid active nodes.

Action: Ensure that the node names are active and unique, then retry the operation.

PRCS-01171: failed to delete category {0}

Cause: An attempt to delete the specified server category failed.

Action: Examine the accompanying messages, resolve the identified problems, and then retry the operation.

PRCS-01172: failed to update category {0}

Cause: An attempt to update the specified server category failed.

Action: Examine the accompanying messages, resolve the identified problems, and then retry the operation.

PRCS-01173: invalid CIDR option value "{0}"

Cause: An invalid value was specified for the command option 'allow'.

Action: Retry the operation, specifying a valid Classless Inter-Domain Routing (CIDR) value for the *IP/network* pair.

PRCS-01174: unable to create HTTP daemon resource because it already exists

Cause: An attempt to add the HyperText Transfer Protocol (HTTP) daemon resource was rejected because the resource already existed.

Action: None

PRCS-01175: The supplied GNS VIP name "{0}" is same as the local host name "{1}" of node "{2}".

Cause: Installation prerequisite checking determined that the indicated Grid Naming Service (GNS) virtual IP (VIP) name entered was same as the local host name of the identified node.

Action: Repeat the installation interview supplying a GNS VIP name that is different than the cluster node names and resolves to exactly one address, or a numeric GNS VIP address that is not an IP address of any of the cluster nodes and rerun the prerequisite check.

PRCS-01176: failed to create SCAN listeners for client cluster "{0}" on Microsoft Windows

Cause: An attempt to configure a Single Client Access Name (SCAN) listener resource for a client cluster was rejected because this feature was not supported on Microsoft Windows.

Action: None

PRCS-01177: failed to create SCAN "{0}" with node names on an environment that requires virtual IPs

Cause: An attempt to configure a Single Client Access Name (SCAN) with node names was rejected because node names can only be specified for Oracle Database Appliance (ODA), or Oracle Public Cloud (OPC), or Kubernetes container.

Action: Retry the operation without node names.

PRCS-01178: failed to create SCAN "{0}" without node names on a Single-IP environment

Cause: An attempt to configure a Single Client Access Name (SCAN) without node names was rejected because node names are required on Oracle Database Appliance (ODA), Oracle Public Cloud (OPC), and Kubernetes container.

Action: Retry the operation, specifying node names.

PRCS-01179: The HTTP daemon resource does not exist.

Cause: An attempt to retrieve the HyperText Transfer Protocol (HTTP) daemon resource failed because the resource could not be found.

Action: Create the HTTP daemon resource using the command 'srvctl add httpd' and then retry the operation.

PRCS-01180: failed to remove the HTTP daemon resource {0}

Cause: An attempt to remove the HyperText Transfer Protocol (HTTP) daemon resource failed because either the resource was running or other resources depended on it.

Action: Check the status of the identified HTTP daemon resource and stop the HTTP daemon resource before removing it. The force flag could be used to remove the HTTP daemon resource if other resources depend on it.

PRCS-01181: failed to create HTTP daemon resource

Cause: An attempt to add a cluster configuration for the HyperText Transfer Protocol (HTTP) daemon resource failed. The accompanying messages provide details of the resources that could not be created.

Action: Review the accompanying error messages that provide the details of which resources failed to be created. Check the Cause and Action for the individual resource creation failures.

PRCS-01182: could not modify HTTP daemon resources because the following HTTP daemon resources were running: {0}

Cause: An attempt to modify one or more HyperText Transfer Protocol (HTTP) daemon resources was rejected because the indicated resources were running.

Action: Ensure that the indicated HTTP daemon resources are stopped and then retry the operation.

PRCT-01000 to PRCT-01570

PRCT-01000: File path is null

Cause: The supplied path is set to null.

Action: Oracle internal error. Contact Oracle Support Services..

PRCT-01001: Node name is null

Cause: The supplied node name is set to null.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01003: failed to run "{0}" on node "{1}"

Cause: An attempt to execute the specified command failed. The accompanying error messages provide more details.

Action: Examine the accompanying error messages for details and either retry or contact Oracle Support Services.

PRCT-01004: Directory name passed was null

Cause: The supplied directory name is set to null.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01005: Directory {0} does not exist

Cause: The supplied directory path does not exist.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01006: Failed to retrieve cluster name from node "{0}"

Cause: Failed to get the cluster name using the command 'olsnodes -c' from the specified node.

Action: Execute the command 'olsnodes -c' from the specified node and check the output of the command. Fix the problem according to the error message given in the command output.

PRCT-01007: Failed to retrieve local node name

Cause: Underlying call failed to get the local hostname.

Action: Please check the accompanying error message.

PRCT-01008: Failed to retrieve node names

Cause: Failed to get the node names using the command 'olsnodes'.

Action: Execute the command 'olsnodes' and check the output of the command. Fix the problem according to the error message given in the command output.

PRCT-01009: crsctl execution failed. Detailed error:\n{0}

Cause: Failed to execute crsctl command.

Action: Examine the accompanying error message for details.

PRCT-01010: crsctl execution failed on node {0}. Detailed error:\n{1}

Cause: Failed to execute crsctl command on the specified node.

Action: Examine the accompanying error message for details.

PRCT-01011: Failed to run "{0}". Detailed error: {1}

Cause: Failed to execute the specified command on the local node.

Action: Execute the specified command from the console and check the result. Fix the problem according to the error message given in the command output.

PRCT-01012: Invalid file path {0}

Cause: The supplied path does not exist.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01013: failed to start remote execution server on local node

Cause: An attempt to start the required remote execution server on the local node failed. Detailed failure information is supplied by the accompanying messages.

Action: Correct the problem indicated by the accompanying error messages. On Windows systems, ensure that the current user has the authority to remove and create directories and files in the 'C:\\Windows\\Temp' directory and to create and delete registry entries.

PRCT-01014: Internal error: {0}

Cause: An internal error occurred. The included value is an internal identifier.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01015: Version supplied is null

Cause: The supplied version was set to null.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01050: Failed to parse output returned by kfod when executing kfod at location {0}

Cause: Failed to parse the output returned by executing kfod because the output string is null or has fewer rows than expected

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01051: Failed to parse the output returned by kfod for node {0} when executing kfod at location {1}

Cause: Failed to parse the output returned by executing kfod on the specified node because the output string is null or has fewer rows than expected.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01052: Failed to parse output {0} returned by kfod when executing kfod at location {1}

Cause: Failed to parse the output returned by executing kfod because the output has fewer columns than expected.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01053: Failed to parse output {0} returned by kfod for node {1} when executing kfod at location {2}

Cause: Failed to parse the output returned by executing kfod on the specified node because the output has fewer columns than expected.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01054: Fail to retrieve ASM active version for local node

Cause: Failed to get the active version of ASM by executing 'kfod nohdr=true op=version hostlist=*hostlist*'.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01055: Fail to retrieve ASM active version for node {0}. kfod execution failed at location {1}. Detailed error:\n{2}

Cause: Failed to get the active version of ASM by executing 'kfod nohdr=true op=version hostlist=*hostlist*' on the specified node.

Action: Examine the accompanying error messages for details.

PRCT-01056: Fail to retrieve ASM instance type. kfod execution failed at location {0}. Detailed error:\n{1}

Cause: Failed to get the instance type for ASM instance by executing 'kfod nohdr=true op=version'.

Action: Examine the accompanying error messages for details.

PRCT-01057: The value of ASM instance type {0} is not correct

Cause: The value of ASM instance type is invalid.

Action: The instance type of ASM can only be YES or NO.

PRCT-01058: Fail to check if ASM is running on node {0}. kfod execution failed at location {1}. Detailed error:\n{2}

Cause: Failed to check whether ASM is running by executing 'kfod nohdr=true op=insts hostlist=*hostlist*'.

Action: Examine the accompanying error messages for details.

PRCT-01059: Fail to retrieve list of disk group names for node {0}. kfod execution failed at location {1}. Detailed error:\n{2}

Cause: Failed to get the diskgroup names by executing 'kfod nohdr=true op=groups hostlist=*hostlist*'.

Action: Examine the accompanying error messages for details.

PRCT-01060: Fail to check if ASM is in rolling migration. kfod execution failed at location {1}. Detailed error:\n{2}

Cause: Failed to check whether ASM is in rolling migration by executing 'kfod nohdr=true op=rm'.

Action: Examine the accompanying error messages for details.

PRCT-01061: Failed to verify ASM client credentials file "{0}"\n{1}

Cause: An attempt to verify that the ASM client credentials file specified is a valid credentials file failed.

Action: Examine the accompanying error messages for details.

PRCT-01062: Failed to verify ASM client credentials.\n{0}

Cause: An attempt to verify the ASM credentials for this client cluster failed.

Action: Examine the accompanying error messages for details.

PRCT-01063: Failed to get list of disks managed by ASM on node "{0}"\n{1}

Cause: An attempt to obtain the list of disks that are managed by ASM on the specified node failed.

Action: Examine the accompanying error messages for details.

PRCT-01064: Failed to get ASM default disk discovery string \n {0}

Cause: An attempt to obtain the ASM default disk string failed.

Action: Examine the accompanying error messages for details.

**PRCT-01065: Failed to verify the size consistency of ASM disks on node "{0}".
kfod execution failed at location "{1}". Detailed error:\n{2}**

Cause: An attempt to verify the consistency of ASM disk sizes failed on the identified node with the indicated error message.

Action: Examine the accompanying error messages for details.

PRCT-01100: Failed to retrieve ACFS active version for local node

Cause: Failed to execute acfsutil to retrieve the ACFS active version on the local node.

Action: Review the accompanying error messages that provides the details of why acfsutil execution failed. Resolve the reported problem and retry.

**PRCT-01101: Failed to retrieve ACFS active version for node {0}. acfsutil
execution failed at file location {1}. Detailed error:\n{2}**

Cause: Failed to execute acfsutil to retrieve the ACFS active version on the supplied node.

Action: Review the accompanying error messages that provides the details of why acfsutil execution failed. Resolve the reported problem and retry.

PRCT-01102: Failed to parse output when executing acfsutil at file location {0}

Cause: Unable to parse output returned by acfsutil.

Action: Oracle internal error. Contact Oracle Support Services.

**PRCT-01103: Failed to parse the output for node {0} when executing acfsutil at
file location {1}**

Cause: Unable to parse output returned by acfsutil on the supplied node.

Action: Oracle internal error. Contact Oracle Support Services.

**PRCT-01104: Failed to parse output {0} when executing acfsutil at file location
{1}**

Cause: Unable to parse output returned by acfsutil at specified location.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01105: Failed to parse output {0} for node {1} when executing acfsutil at file location {2}

Cause: Unable to parse output returned by acfsutil at specified location on the supplied node.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01109: Failed to get diskgroup names for node {0}

Cause: Unable to parse diskgroup names returned by acfsutil on the supplied node.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01111: Received empty result while getting ACFS Mount Points on node {1}

Cause: The output returned by acfsutil is empty.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01114: Execution of acfsutil command failed on node {0} for location {1}

Cause: Failed to execute acfsutil on the supplied node at the specified location.

Action: Review the accompanying error messages that provides the details of why acfsutil execution failed. Resolve the reported problem and retry.

PRCT-01115: Execution of acfsutil failed on node {0} with result {1}

Cause: Failed to execute acfsutil on the supplied node.

Action: Review the accompanying error messages that provides the details of why acfsutil execution failed. Resolve the reported problem and retry.

PRCT-01116: Invalid partition path {0} specified to acfsutil on node {1}

Cause: The supplied path did not exist.

Action: Supply a valid partition path and retry.

PRCT-01117: Received empty result while getting ACFS Disk Groups on node {1}

Cause: The output returned by acfsutil is empty.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01118: Received empty result while getting total space at file location {0} on node {1}

Cause: The output returned by acfsutil is empty.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01119: Received empty result while getting free space at file location {0} on node {1}

Cause: The output returned by acfsutil is empty.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01120: A NULL path has been specified for the location on node {0}

Cause: A null path was provided for the location.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01121: Execution of acfsutil failed on local node with result {0}

Cause: Execution of acfsutil failed on the local node.

Action: Review the accompanying error messages that provides the details of why acfsutil execution failed. Resolve the reported problem and retry.

PRCT-01122: Received empty result while getting mountpoint for path {0} on the local node

Cause: acfsutil returned an empty value when querying for the mountpoint of a specified path.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01123: The mountpoint is either set to null or empty

Cause: The supplied mountpoint is either an empty string or is set to null.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01124: Received empty result while getting volume device for mountpoint {0} on the local node

Cause: acfsutil returned an empty value when querying for the volume device of a specified mountpoint.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01125: The volume device is either set to null or empty

Cause: The supplied volume device is either an empty string or is set to null.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01126: Received empty result while getting mountpoint for volume device {0} on the local node

Cause: acfsutil returned an empty value when querying for the volume device of a specified mountpoint.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01127: Received empty result while getting all volume devices on the local node

Cause: No ACFS volume devices has been created.

Action: Use usmca to create ACFS volume devices.

PRCT-01128: ACFS is not supported on this operating system

Cause: ACFS is not supported on the accompanying operating system.

Action: Run `srvctl filesystem` command on a supported operating system.

PRCT-01129: Execution of ACFS driver state check failed on local node with result {0}

Cause: Execution of ACFS driver state check failed on the local node

Action: Review the accompanying error messages that provides the details of why ACFS driver state check execution failed. Resolve the reported problem and retry.

PRCT-01130: Execution of advmutil failed on local node with result {0}

Cause: Execution of advmutil failed on the local node

Action: Review the accompanying error messages that provides the details of why advmutil execution failed. Resolve the reported problem and retry.

PRCT-01131: Failed to retrieve mount point for volume device {0}

Cause: No ACFS filesystem was mounted for the specified volume device.

Action: Mount the filesystem and retry.

PRCT-01132: ACFS driver state check with "{0}" option on local node failed to display any output

Cause: No output was captured when executing ACFS driver state check with the specified option on the local node.

Action: Internal error. Contact Oracle Support Services.

PRCT-01133: ACFS driver state check with "{0}" option on node {1} failed to display any output

Cause: No output was captured when executing ACFS driver state check with the specified option on the specified node.

Action: Internal error. Contact Oracle Support Services.

PRCT-01134: Execution of ACFS driver state check failed on node {0} with result {1}

Cause: Execution of ACFS driver state check failed on the specified node.

Action: Review the accompanying error messages that provides the details of why ACFS driver state check execution failed. Resolve the reported problem and retry.

PRCT-01135: This platform does not support a default location for "{0}"

Cause: An attempt to run the 'acfsutil' command did not provide a location of this binary

Action: Internal error. Contact Oracle Support Services.

PRCT-01136: Invalid mount point

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRCT-01137: acfsutil command failed as the Snapshot {0} does not exist

Cause: The acfsutil command to delete the snapshot with the specified name failed as it does not exist.

Action: Create the snapshot with the specified name and retry the operation.

PRCT-01138: acfsutil command failed as the snapshot {0} already exists

Cause: The acfsutil command to create a snapshot failed because the snapshot with the specified name already existed.

Action: Retry the operation with a different snapshot name.

PRCT-01139: Execution of AFD driver state check failed on the local node with result {0}

Cause: Execution of ASM filter driver state check failed on the local node.

Action: Review the accompanying error messages that provides the details of why ASM filter driver state check execution failed. Resolve the reported problem and retry.

PRCT-01140: Execution of AFD driver state check failed on node {0} with result {1}

Cause: Execution of ASM filter driver state check failed on the specified node.

Action: Review the accompanying error messages that provides the details of why ASM filter driver state check execution failed. Resolve the reported problem and retry.

PRCT-01149: Failed to retrieve cluster name

Cause: The olsnodes command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01150: Failed to retrieve cluster name

Cause: Clusterware is not running.

Action: Make sure the clusterware is running.

PRCT-01151: Failed to retrieve cluster nodes status

Cause: Clusterware is not running.

Action: Make sure the clusterware is running.

PRCT-01152: Received empty result while getting cluster nodes Status Map

Cause: The olsnodes command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01153: Received empty result while getting a list of pinned and unpinned nodes in the cluster

Cause: The olsnodes command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01154: Failed to retrieve private host name for all cluster nodes. Detailed error:\n{0}

Cause: Clusterware is not running.

Action: Make sure the clusterware is running.

PRCT-01155: Received empty result while getting the private interconnect for nodes in the cluster

Cause: The olsnodes command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01200: Failed to retrieve disk group name for volume device {0}. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: Unable to retrieve the disk group name for the specified volume device

Action: Check that ASM instance is running on the local node.

PRCT-01201: Failed to retrieve volume name for volume device {0}. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: Unable to retrieve the volume name for the specified volume device

Action: Check that ASM instance is running on the local node.

PRCT-01202: Failed to parse output returned by asmcmd when executing asmcmd at location {0}

Cause: Unable to parse output returned by asmcmd.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01203: Failed to parse the output returned by asmcmd for node {0} when executing asmcmd at location {1}

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCT-01204: Failed to find volume device {0}. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: Volume device does not exist.

Action: Create the volume device using asm tools.

PRCT-01205: Failed to parse output {0} returned by asmcmd when executing asmcmd at location {1}

Cause: Unable to parse the specified output returned by asmcmd.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01206: Failed to parse output {0} returned by asmcmd for node {1} when executing asmcmd at location {2}

Cause: Unable to parse the specified output returned by asmcmd on specified node.

Action: Oracle internal error. Contact Oracle Support Services.

PRCT-01207: Failed to set the ORACLE_SID for running asmcmd from CRS home location {0}

Cause: Unable to retrieve the ASM instance name on the local node to generate the ORACLE_SID value.

Action: Use crsctl to make sure that the CRS stack is up; use the command 'srvctl status asm' to make sure that the ASM resource is running on the local node.

PRCT-01208: Failed to create volume {0}. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: An attempt to execute asmcmd to create the volume device for the specified volume name failed.

Action: Review the accompanying error messages that provide the details of why asmcmd execution failed. Resolve the reported problem and retry.

PRCT-01209: Diskgroup {0} does not have enough space. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: Failed to execute asmcmd because the diskgroup does not have enough space for the specified operation.

Action: Add more disks to the diskgroup and re-try the operation.

PRCT-01210: Disk group {0} does not exist. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: An attempt to execute asmcmd to perform an operation with the disk group failed.

Action: Review the accompanying error messages that provide the details of why asmcmd execution failed. Resolve the reported problem and retry.

PRCT-01211: Volume {0} is in use. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: An attempt to execute asmcmd to create a volume with the specified volume name failed because this name is already being used by another volume.

Action: Retry the operation with a different volume name.

PRCT-01212: Failed to delete volume device {0}.asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: An attempt to execute asmcmd to delete the volume device for the specified volume name failed.

Action: Review the accompanying error messages that provide the details of why asmcmd execution failed. Resolve the reported problem and retry.

PRCT-01213: Failed to get volume device for volume {0}.asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: An attempt to execute asmcmd to get the volume device for the specified volume name failed.

Action: Review the accompanying error messages that provide the details of why asmcmd execution failed. Resolve the reported problem and retry.

PRCT-01214: Command 'asmcmd' could not be executed from directory {1}. Failed to retrieve discovery string for ASM instance. Detailed error:\n{2}

Cause: An attempt to retrieve the discovery string used by ASM instance failed.

Action: Look at the accompanying messages and respond accordingly.

PRCT-01215: Command 'asmcmd' could not be executed from directory {1}. Failed to retrieve the list of disks from ASM instance. Detailed error:\n{2}

Cause: An attempt to retrieve the list of disks from ASM instance failed.

Action: Look at the accompanying messages and respond accordingly.

PRCT-01217: Command 'asmcmd' could not be executed from directory {0}. Failed to resize volume {1}. Detailed error:\n{2}

Cause: An attempt to resize the volume failed.

Action: Review the accompanying error messages that provide the details of the failure. Resolve the reported problem and retry.

PRCT-01218: Command 'asmcmd' could not be executed from directory {1}. Failed to retrieve information of disk groups from ASM instance. Detailed error:\n{2}

Cause: An attempt to retrieve the list of disk groups from ASM instance failed.

Action: Look at the accompanying messages and respond accordingly.

PRCT-01219: Command 'asmcmd spget' could not be executed from directory {0}. Failed to retrieve the ASM SPFILE location for ASM instance. Detailed error:\n{1}

Cause: An attempt to retrieve the SPFILE used by an ASM instance failed.

Action: Look at the accompanying messages and respond accordingly.

PRCT-01220: Received empty result while getting the ASM SPFILE location for ASM instances using command 'asmcmd spget' from directory {0}

Cause: The indicated ASMCMD command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01221: failed to retrieve the ASM password file location for an ASM instance using command 'asmcmd pwget --asm' \n{0}

Cause: An attempt to retrieve the password file location for an ASM instance failed.

Action: Examine the accompanying messages and respond accordingly.

PRCT-01222: Received empty result while getting the ASM password file location for an ASM instance using command 'asmcmd pwget --asm'

Cause: The asmcmd command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01223: failed to check whether the file "{0}" is on an ASM disk group \n{1}

Cause: An attempt to check whether the indicated file is on an ASM disk group failed.

Action: Examine the accompanying messages and respond accordingly.

PRCT-01224: failed to retrieve the cluster state because the command 'asmcmd showclusterstate' can not be executed from directory {0}. Detailed error:\n{1}

Cause: An attempt to retrieve the cluster state failed.

Action: Examine the accompanying error messages, resolve the indicated problems, and retry the operation

PRCT-01225: failed to verify Oracle Automatic Storage Management (Oracle ASM) user credentials using the command 'asmcmd credverify'. Detailed error:\n{0}

Cause: An attempt to verify Oracle ASM user credentials failed.

Action: Examine the accompanying error messages, resolve the indicated problems, and retry the operation.

PRCT-01300: oifcfg execution failed. Detailed error:\n{0}

Cause: Failed to execute the oifcfg command for the local node. See the accompanying error message for further details.

Action: Try to execute the oifcfg command manually.

PRCT-01301: oifcfg execution failed on node {0}. Detailed error:\n{1}

Cause: Failed to execute the oifcfg command for the remote node. See the accompanying error message for further details.

Action: Try to execute the oifcfg command manually.

PRCT-01302: The specified address "{0}" has an invalid IP address format

Cause: The format of the subnet number and/or the subnet mask was an invalid IP address format.

Action: Make sure that both the subnet number and the subnet mask have a valid IP address format.

PRCT-01303: The oifcfg command returned as result the line "{0}" that has less than 4 fields

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRCT-01304: The specified IPv6 prefix length "{0}" is not between 0 and 128

Cause: The IPv6 prefix length was either not an integer or was out of the allowed range.

Action: Make sure that the IPv6 prefix length is an integer from 0 to 128.

PRCT-01305: The specified interface name "{0}" does not match the existing network interface name "{1}"

Cause: The interface name did not match the existing network interface name.

Action: Either omit the interface name or make sure it is the same as the existing one for this network.

PRCT-01306: Setting the address type to "ipv4" is an not allowed because the existing network address type is "ipv6"

Cause: An attempt to change the address type from 'ipv6' to 'ipv4' directly was rejected, because the address type must first be changed to 'both', then to 'ipv4'.

Action: Use the command 'srvctl modify network' to change the network type to 'both' by adding an IPv4 subnet, then retry the command.

PRCT-01307: Setting the address type to "ipv6" is an not allowed because the existing network address type is "ipv4"

Cause: An attempt to change the address type from 'ipv4' to 'ipv6' directly was rejected, because the address type must first be changed to 'both', then to 'ipv6'.

Action: Use the command 'srvctl modify network' to change the network type to 'both' by adding an IPv6 subnet, then retry the command.

PRCT-01308: Modifying the VIP is not allowed because the VIP name "{0}" resolved to both IPv4 and IPv6 addresses

Cause: The existing VIP name maps to both IPv4 and IPv6 addresses and the user tried to modify one of them.

Action: Remove the VIP resource, issue the command 'srvctl add vip' providing either the IPv4 or IPv6 address the VIP name resolves to and then rerun the 'srvctl modify vip' command.

PRCT-01309: The USR_ORA_AUTO_VALUE attribute value "{0}" does not include both an IPv4 and an IPv6 value

Cause: Expected both an IPv4 value and an IPv6 value to coexist.

Action: Internal error. Contact Oracle Support Services.

PRCT-01400: getcrshome execution failed. Detailed error:\n{0}

Cause: Failed to execute the getcrshome command. See the accompanying error message for further details.

Action: Try to execute the getcrshome command manually.

PRCT-01401: getcrshome execution failed on node {0}. Detailed error:\n{1}

Cause: Failed to execute the getcrshome command. See the accompanying error message for further details.

Action: Try to execute the getcrshome command manually.

PRCT-01402: Attempt to retrieve version of SRVCTL from Oracle Home {0} failed.\n{1}

Cause: Failed to execute the 'srvctl -V' command. See the accompanying error message for further details.

Action: Verify that the 'bin' directory under the indicated oracle home contains the 'srvctl' binary, and verify execution of the command 'srvctl -V' manually on that oracle home.

PRCT-01403: Failed to parse output returned by srvctl -V when executing command at Oracle home {0}

Cause: Failed to parse the output returned by executing the command 'srvctl -V' because the output string is null or has unexpected result

Action: Verify execution of the command 'srvctl -V' manually at oracle home or Contact Oracle Support Services.

PRCT-01404: Attempt to retrieve version of SRVCTL on node {0} from Oracle Home {1} failed. Detailed error: \n {2}

Cause: Failed to execute the command 'srvctl -V' command. See the accompanying error message for further details.

Action: Verify that the 'bin' directory in specified node under the indicated oracle home contains the 'srvctl' binary, and verify execution of the command 'srvctl -V' manually on that oracle home.

PRCT-01405: Failed to parse output returned by srvctl -V when executing command at node {0} and Oracle home {1}

Cause: Failed to parse the output returned by executing the command 'srvctl -V' at specified node and because the output string is null or has unexpected result

Action: Verify execution of the command 'srvctl -V' manually at given node and oracle home or Contact Oracle Support Services.

PRCT-01406: Oracle Home location: {0} does not contain {1}

Cause: The current Oracle Home directory does not contain the specified utility.

Action: Provide the correct Oracle Home directory.

PRCT-01407: failed to execute the olsnodes command to retrieve active node roles. Detailed error:\n{0}

Cause: An attempt to execute the command 'olsnodes -a' failed.

Action: Check the accompanying error messages.

PRCT-01408: Encountered unexpected output during the olsnodes command execution to retrieve active node roles

Cause: An attempt to execute olsnodes -a command failed.

Action: Check the accompanying error messages.

PRCT-01409: Received empty result while getting the active node roles for nodes in the cluster

Cause: The olsnodes command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01410: Failed to execute the crsctl command to retrieve configured node roles. Detailed error:\n{0}

Cause: An attempt to execute crsctl get node role config -all command failed.

Action: Check the accompanying error messages.

PRCT-01411: Encountered unexpected output during the crsctl command execution to retrieve configured node roles

Cause: An attempt to execute crsctl get node role config -all command failed.

Action: Check the accompanying error messages.

PRCT-01412: Received empty result while getting the configured node roles for nodes in the cluster

Cause: The crsctl command executed successfully, but there was no output.

Action: This is an internal error. Contact Oracle Support Services.

PRCT-01413: Failed to retrieve the configured node role of the node {0}

Cause: An attempt to execute crsctl get node role config -node command failed.

Action: Check the accompanying error messages.

PRCT-01414: Execution of the command {0} on the local node failed

Cause: An attempt to clone an Oracle Home using the given command failed.

Action: Check the accompanying error messages.

PRCT-01415: More than one ACFS resource was found for the mount point path {0}

Cause: When looking up the ACFS resource for a mount point, more than one resource was found.

Action: Remove all but one of the ACFS resources that contains the duplicate mount point path.

PRCT-01416: Unable to validate the interface type for subnet "{0}"

Cause: An attempt to validate the interface type for the given subnet failed.

Action: Check the accompanying error messages.

PRCT-01417: Failed to retrieve administrator groups. 'osdbagr' execution failed at location {0}. Detailed error:\n{1}

Cause: During retrieval of administrator group, execution of the 'osdbagr' command to retrieve administrator OS group names failed.

Action: Examine the accompanying error messages for details.

PRCT-01418: Failed to modify the VIP for node {0} because the specified VIP name "{1}" does not resolve to both an IPv4 and IPv6 address, which is required by the network, because it has both IPv4 and IPv6 subnets

Cause: Both IPv4 and IPv6 configured VIP addresses existed, but the specified VIP name did not resolve to both IPv4 and IPv6 addresses.

Action: Ensure that the specified VIP name resolves to both IPv4 and IPv6 addresses.

PRCT-01419: Failed to modify the VIP for node {0} as the specified VIP name "{1}" does not resolved to an IPv4 address

Cause: An IPv4 configured VIP address existed, but the specified VIP name did not resolve to an IPv4 address.

Action: Make sure that the specified VIP name resolves to an IPv4 address.

PRCT-01420: Failed to modify the VIP for node {0} as the specified VIP name "{1}" does not resolved to an IPv6 address

Cause: An IPv6 configured VIP address existed, but the specified VIP name did not resolve to an IPv6 address.

Action: Make sure that the specified VIP name resolves to an IPv6 address.

PRCT-01421: Failed to modify the VIP for node {0} because the specified VIP name or address "{1}" does not resolve to an IPv4 address

Cause: The configured VIP name resolved to an IPv4 address, but the specified VIP name or IP address did not resolve to an IPv4 address.

Action: Make sure that the specified VIP name or address resolves to an IPv4 address.

PRCT-01422: Failed to modify the VIP for node {0} because the specified VIP name or address "{1}" does not resolve to an IPv6 address

Cause: The configured VIP name resolved to an IPv6 address, but the specified VIP name or IP address did not resolve to an IPv6 address.

Action: Make sure that the specified VIP name or address resolves to an IPv6 address.

PRCT-01423: Failed to copy the directory contents from {0} to {1} on node {2}. Detailed error:\n{2}

Cause: An attempt to execute srmhelper to copy the directory contents failed.

Action: Examine the accompanying error messages.

PRCT-01424: Rapid Home Provisioning credentials creation failed while executing the Management Database configuration assistant on node {0}.

Cause: An attempt to execute the Management Database configuration assistant to create the Rapid Home Provisioning credentials failed.

Action: Examine the accompanying error messages for details.

PRCT-01425: The specified VIP name "{0}" does not resolve to an IPv4 address

Cause: The configured VIP name resolved to an IPv4 address, but the specified VIP name did not resolve to a single IPv4 address.

Action: Specify a VIP name that resolves to a single IPv4 address. Use 'nslookup vipname' to display the addresses to which the VIP name resolves.

PRCT-01426: The specified VIP name "{0}" resolves to multiple addresses

Cause: The specified VIP name resolved to more than one IPv4 or IPv6 address.

Action: Specify a VIP name that resolves to one address. Use 'nslookup *vipname*' to display the addresses to which the VIP name resolves.

PRCT-01427: Failed to create the NFS resource on mount path "{0}". Detailed error:\n{1}

Cause: An attempt to create the NFS resource failed.

Action: Examine the accompanying error messages.

PRCT-01428: Failed to execute Management Database configuration assistant for user "{0}" on node "{1}". Detailed error:\n{2}

Cause: An attempt to run Management Database configuration assistant failed.

Action: Examine the accompanying error messages.

PRCT-01429: Failed to create wallet for Rapid Home Provisioning for user "{0}". Detailed error:\n{1}

Cause: An attempt to create the wallet for Rapid Home Provisioning failed.

Action: Examine the accompanying error messages.

PRCT-01430: Failed to retrieve the Oracle ASM Dynamic Volume Manager compatibility attribute for disk group {0}. asmcmd execution failed at location {1}. Detailed error:\n{2}

Cause: An attempt to retrieve the 'compatible.advm' attribute for the specified disk group failed.

Action: Examine the accompanying error messages for details and take appropriate corrective action.

PRCT-01431: The Oracle ASM Dynamic Volume Manager compatibility attribute is not set for disk group {0}.

Cause: An attempt to execute 'asmcmd' against the specified disk group failed because the command requires the retrieval of the 'compatible.advm' attribute which has not been set for that disk group.

Action: Set the 'compatible.advm' attribute for the specified disk group to a version above 11.2.0.3 with the ASM Configuration Assistant (ASMCA) and retry adding a Rapid Home Provisioning Server using the 'srvctl add rhpserver' command.

PRCT-01432: Failed to modify the VIP for node {0} because the specified VIP address "{1}" is not an IPv4 address

Cause: An attempt to modify a node VIP failed because the specified address was not of type IPv4 as required by the configured VIP.

Action: Retry the command making sure that the specified VIP address is an IPv4 address.

PRCT-01433: Failed to modify the VIP for node {0} because the specified VIP address "{1}" is not an IPv6 address

Cause: An attempt to modify a node VIP failed because the specified address was not of type IPv6 as required by the configured VIP.

Action: Retry the command making sure that the specified VIP address is an IPv6 address.

PRCT-01434: Failed to modify the VIP because the specified VIP name "{0}" does not resolve to an IPv4 address as required by network {1}

Cause: The configured network had an IPv4 subnet, but the specified VIP name or IP address did not resolve to an IPv4 address.

Action: Make sure that the specified VIP name or address resolves to an IPv4 address.

PRCT-01435: Failed to modify the VIP because the specified VIP name "{0}" does not resolve to an IPv6 address as required by network {1}

Cause: The configured network had an IPv6 subnet, but the specified VIP name or IP address did not resolve to an IPv6 address.

Action: Make sure that the specified VIP name or address resolves to an IPv6 address.

PRCT-01436: Volume {0} does not exist for disk group {1}. Detailed error:\n{2}

Cause: An attempt to execute 'asmcmd' to delete the volume for the disk group failed.

Action: Review the accompanying error messages that provide the details of why ASMCMD execution failed. Resolve the reported problem and retry.

PRCT-01437: Execution of the 'opatch lspatches -oh' command failed on local node with result {0}

Cause: Execution of the 'opatch lspatches -oh' failed on the local node.

Action: Review the accompanying error messages that provide the details of why the 'opatch lspatches -oh' execution failed. Resolve the reported problem and retry.

PRCT-01438: Failed to get the difference between the patches installed in {0} and {1} Oracle homes. Detailed error:\n{2}

Cause: An attempt to get the difference between the patches installed in the Oracle homes failed.

Action: Examine the accompanying error messages.

PRCT-01439: Failed to create the directory {0} in nodes {1}. Detailed error:\n{2}

Cause: An attempt to execute srvmhlp to create the directory failed. Specifics of failure shown in appended error message.

Action: Examine the accompanying error messages for details. Resolve the problems reported and retry.

PRCT-01440: Failed to determine if database is administrator-managed\n{1}

Cause: An attempt to execute an internal command to determine if the database is administrator-managed failed. Specifics of the failure are shown in the appended error message.

Action: Examine the accompanying error messages for details. Resolve the problems reported and retry.

PRCT-01441: Failed to retrieve configured nodes for an administrator-managed database\n{1}

Cause: An attempt to execute an internal command to retrieve configured nodes for an administrator-managed database failed. Specifics of the failure are shown in the appended error message.

Action: Examine the accompanying error messages for details. Resolve the problems reported and retry.

PRCT-01442: Failed to execute srvmls command because command {0} does not exist

Cause: The srvmls script did not exist or was not accessible to the invoking user.

Action: Check whether the specified srvmls script exists. Also, check whether the user has execute permission on the srvmls script.

PRCT-01443: Setting of password for the Rapid Home Provisioning (RHP) user failed while executing the Management Database configuration assistant on node {0}.ln{1}

Cause: An attempt to execute the Management Database configuration assistant to set the RHP user's password failed.

Action: Correct the problem indicated by the accompanying error messages and then retry.

PRCT-01444: Attempt to retrieve version of SQL*Plus from Oracle home {0} failed. Detailed error: ln {1}

Cause: An attempt to execute the 'sqlplus -V' command failed. See the accompanying error message for further details.

Action: Verify that the 'bin' directory under the indicated Oracle home contains the 'sqlplus' binary, and verify execution of the command 'sqlplus -V' manually on that Oracle home.

PRCT-01445: Failed to parse output returned by sqlplus -V when executing command at Oracle home {0}. Detailed error: ln {1}

Cause: An attempt to parse the output returned by executing the command 'sqlplus -V' failed because the output string is null or has unexpected results.

Action: Verify execution of the command 'sqlplus -V' manually at the Oracle home or contact Oracle Support Services.

PRCT-01446: Attempt to retrieve version of SQL*Plus on node {0} from Oracle home {1} failed. Detailed error: ln {2}

Cause: An attempt to execute the 'sqlplus -V' command failed. See the accompanying error message for further details.

Action: Verify that the 'bin' directory in the specified node under the indicated Oracle home contains the 'sqlplus' binary, and verify execution of the command 'sqlplus -V' manually on that Oracle home.

PRCT-01447: Failed to parse output returned by sqlplus -V when executing command at node {0} and Oracle home {1}. Detailed error: ln {2}

Cause: An attempt to parse the output returned by executing the command 'sqlplus -V' at specified node failed because the output string is null or has unexpected results.

Action: Verify execution of the command 'sqlplus -V' manually at the given node and Oracle home or contact Oracle Support Services.

PRCT-01448: Oracle home location: {0} does not contain {1}

Cause: The current Oracle home directory did not contain the specified utility.

Action: Provide the correct Oracle home directory.

PRCT-01449: Execution of command 'orabase' failed. Detailed error:\n{0}

Cause: Execution of the 'orabase' command failed. See the accompanying error message for further details.

Action: Correct the problem indicated by the accompanying message.

PRCT-01450: The ORACLE_BASE registry key {0} has an empty value on node {1}.

Cause: The ORACLE_BASE registry key did not exist or its value was null.

Action: Clone the existing ORACLE_HOME to re-create the registry entries using the command 'clone.pl'.

PRCT-01451: Error accessing file 'oracle.key'

Cause: An attempt to access the 'oracle.key' file to determine the location of registry containing ORACLE_BASE failed.

Action: Clone the existing ORACLE_HOME to re-create the 'oracle.key' file using the command 'clone.pl'.

PRCT-01452: Execution of the command 'opatch lsinventory -patch -oh' failed on local node with result {0}.

Cause: Execution of the command 'opatch lsinventory -patch -oh' failed on the local node. Details reported in accompanying messages.

Action: Review the accompanying error messages that provide the details of why the 'opatch lsinventory -patch -oh' execution failed. Resolve the reported problem and retry executing the command.

PRCT-01453: failed to get ASM properties from ASM client data file {0} \n{1}

Cause: An attempt to execute 'kfod op=credverify wrap=ASM client data file' to obtain the ASM properties failed.

Action: Examine the accompanying error messages for details.

PRCT-01454: Resetting of the Rapid Home Provisioning repository failed while executing the Management Database configuration assistant on node {0}.\n{1}

Cause: An attempt to execute the Management Database configuration assistant to delete the repository contents failed.

Action: Correct the problem indicated by the accompanying error messages and then retry.

PRCT-01456: failed to execute 'asmcmd' command to obtain the client clusters

Cause: An attempt to execute the command 'asmcmd lsc --suppressheader' to obtain the client clusters failed.

Action: Examine the accompanying error messages for details.

PRCT-01457: failed to retrieve cluster GUID for this cluster

Cause: An attempt to execute the command 'crsctl get css cluster guid' to obtain the GUID of this cluster failed.

Action: Examine the accompanying error messages for details. Retry after restarting the clusterware stack.

PRCT-01458: failed to get the disk group of management database ln{0}

Cause: An attempt to retrieve the disk group failed because execution of 'crsctl stat res ora.mgmtldb -p' completed with errors.

Action: Examine the accompanying error messages for details, resolve reported issues and retry.

PRCT-01459: Request is unsupported for version {0}.

Cause: An attempt to retrieve disk group failed because the version is earlier than 12.1.

Action: Issue the request when the CRS version is higher than 12.1.

PRCT-01460: failed to execute command 'oradnfs isdnfsenabled' on the local node, detailed error:\n{0}

Cause: An attempt to verify that DNFS is enabled failed on the local node. See the accompanying error messages for further details.

Action: Review the accompanying error messages that provide the details of why oradnfs execution failed. Resolve the reported problem and retry.

PRCT-01461: Failed to retrieve the value of attribute {1} for ASM disk group {0}. Execution of command '{2}' failed. Detailed error:\n{3}

Cause: An attempt to retrieve the value of the indicated attribute for the specified disk group failed.

Action: Examine the accompanying error messages for details.

PRCT-01462: Failed to retrieve the attribute values for ASM disk group {0}. Execution of command '{1}' failed. Detailed error:\n{2}

Cause: An attempt to retrieve the attribute values for the specified disk group failed.

Action: Examine the accompanying error messages for details.

PRCT-01463: Failed to execute command {0} to obtain the volume information. Detailed error: \n{1}

Cause: A requested operation that required obtaining volume information failed in the execution of the command 'asmcmd --nocp volinfo --all'. The accompanying message provides further details.

Action: Examine the accompanying error messages for details, resolve reported issues and retry.

PRCT-01464: No volume device information retrieved by executing command {0}.

Cause: A requested operation attempted to obtain volume information using the command 'asmcmd --nocp volinfo --all' and found no existing volumes.

Action: Volume devices can be created using the ASM tools.

PRCT-01465: There are no Oracle ACFS file systems mounted.

Cause: An attempt to retrieve the Oracle Automatic Storage Management Cluster File System (Oracle ACFS) information for a specific mount point failed because there were no Oracle ACFS file systems mounted in the current cluster environment.

Action: If an Oracle ACFS file system is desired at the specified mount point, create it with the command 'srvctl add filesystem'.

PRCT-01466: Failed to determine if the cluster is configured to support leaf nodes. Detailed error:\n{0}

Cause: An attempt to run an internal command to determine if the cluster was configured to support leaf nodes failed. Specifics of the failure are shown in the following error message.

Action: Examine the accompanying error messages for details. Resolve the reported problems and retry.

PRCT-01467: failed to retrieve the attribute values for server pools\n{0}

Cause: An attempt to retrieve the attribute values for the server pools failed.

Action: Examine the accompanying error messages for details, resolve reported issues and retry.

PRCT-01468: invalid request for Oracle Grid Infrastructure Management Repository (GIMR) server

Cause: An attempt to retrieve GIMR client properties failed because it was executed on a GIMR server.

Action: Try the request again on a GIMR client.

PRCT-01469: Execution of command {0} completed successfully with warnings.

Cause: The indicated command completed with warnings. The accompanying messages provide more details.

Action: Examine the accompanying messages for details, resolve the reported issues as necessary, and retry if desired.

PRCT-01470: failed to reset the Rapid Home Provisioning (RHP) repository\n{0}

Cause: An attempt to reset the RHP repository failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, address issues reported, and retry.

PRCT-01471: failed to identify administrator-managed databases running on node "{0}"

Cause: An attempt to execute an internal command to identify administrator-managed databases running on the indicated node failed. The accompanying error messages provide more details.

Action: Examine the accompanying error messages for details. Resolve the problems reported and retry.

PRCT-01472: Volume device {0} does not exist.

Cause: An attempt to check if the specified volume device path was configured as an accelerator volume failed because the specified volume device path did not exist.

Action: Specify a valid volume device path and retry the operation.

PRCT-01473: Volume device {0} is not formatted as an Oracle ACFS.

Cause: An attempt to check if the specified volume device path was configured as an accelerator volume was rejected because the specified volume device was not formatted as Oracle Automatic Storage Management Cluster File Systems (Oracle ACFS).

Action: Format the specified volume device using the 'mkfs' command and retry the operation.

PRCT-01474: failed to run '{0}' on node {1}.ln{2}

Cause: An attempt to execute the specified command failed. The accompanying error messages provide more details.

Action: Examine the accompanying error messages for details, address issues reported, and retry.

PRCT-01475: utility {1} not found in Oracle home path {0}

Cause: The install operation could not complete because it could not invoke the indicated utility in the Oracle home displayed in the message.

Action: Ensure that the utility is located in the specified home path and retry the install operation.

PRCT-01476: Oracle ASM Filter Driver (ASMFd) driver state check with '{0}' option on the local node failed to display any output.

Cause: No output was captured when executing the Oracle ASM Filter Driver (ASMFd) driver state check with the indicated option on the local node. This is an internal error.

Action: Contact Oracle Support Services.

PRCT-01477: Oracle ASM Filter Driver (ASMFd) driver state check with option '{0}' on node {1} failed to display any output.

Cause: No output was captured when executing an Oracle ASM Filter Driver (ASMFd) driver state check with the indicated option on the specified node. This is an internal error.

Action: Contact Oracle Support Services.

PRCT-01478: failed to retrieve the active servers in server pool {0}\n{1}

Cause: An attempt to retrieve the active servers from the specified server pool failed. Accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues reported, and retry.

PRCT-01479: failed to retrieve administrator groups on node "{0}"\n{1}

Cause: The execution of the 'osdbagr' command to retrieve the administrator operating system group names failed. Accompanying messages provide detailed failure information.

Action: Correct the problem indicated by the accompanying error messages and then retry.

PRCT-01480: failed to retrieve list of disk group names by executing 'kfod' on host {0}\n{1}

Cause: An attempt to retrieve the list of disk group names by executing 'kfod disks=all op=disks dscvgroup=TRUE asm_diskstring=<discovery_string>' failed. Accompanying error messages provide failure details.

Action: Examine the accompanying error messages for details. Resolve the problems reported and retry.

PRCT-01481: failed to retrieve the running nodes for the ACFS associated to disk group {0} and volume name {1}

Cause: An attempt to execute an internal command to retrieve the running nodes for an ACFS associated to the specified disk group and volume name failed. The accompanying error messages provide more details.

Action: Examine the accompanying error messages for details. Resolve the problems reported and retry.

PRCT-01482: failed to retrieve the running nodes for the ACFS associated to volume device {0}

Cause: An attempt to execute an internal command to retrieve the running nodes for an ACFS associated to the specified volume device failed. The accompanying error messages provide more details.

Action: Examine the accompanying error messages for details. Resolve the problems reported and retry.

PRCT-01483: failed to check if the ACFS associated to volume device {0} is node-local configured

Cause: An attempt to execute an internal command to check if the ACFS associated to the specified volume device was node-local configured failed. The accompanying error messages provide more details.

Action: Examine the accompanying error messages for details. Resolve the problems reported and retry.

PRCT-01484: failed to start remote execution server on node {0}

Cause: An attempt to start the required remote execution server on the indicated node failed. Detailed failure information is supplied by the accompanying messages.

Action: Correct the problem indicated by the accompanying error messages. On Windows systems, ensure that the current user has the authority to remove and create directories and files in the 'C:\\Windows\\Temp' directory and to create and delete registry entries.

PRCT-01485: Execution of a Data Pump tool failed.\n{0}

Cause: An attempt to execute the 'expdp' or 'impdp' tool to export or import a schema failed. Accompanying messages provide detailed failure information.

Action: Correct the problem indicated by the accompanying error messages and then retry.

PRCT-01486: Execution of command '{0}' from Oracle Home {1} failed.\n{2}

Cause: An attempt to execute the specified SRVCTL command failed. Accompanying messages provide detailed failure information.

Action: Correct the problem indicated by the accompanying error messages and then retry.

PRCT-01487: failed to retrieve historical node list from Oracle Clusterware

Cause: An attempt to include historical Leaf Nodes with the command 'olsnodes -f' failed because the historical Leaf Nodes could not be retrieved from Oracle Clusterware.

Action: Ensure that Oracle Clusterware is running and retry the command.

PRCT-01488: failed to create directory {0}\n{1}

Cause: An attempt to create the specified directory failed. Accompanying messages provide detailed failure information.

Action: Correct the problem indicated by the accompanying error messages and then retry.

PRCT-01489: failure to retrieve the cluster Single Client Access Name for network {0}\n{1}

Cause: An attempt to execute an internal command to retrieve the cluster Single Client Access Name failed. Specifics of the failure are shown in the appended error message.

Action: Correct the problem indicated by the accompanying error messages and then retry.

PRCT-01490: check that Rapid Home Provisioning (RHP) was configured failed

Cause: An attempt to execute an internal command to check whether RHP was configured failed. The accompanying error messages provide more details.

Action: Examine the accompanying error messages for details. Resolve the problems reported and retry.

PRCT-01491: Unable to retrieve list of disk group names. Execution failure in kfod at location {1}.\n{2}

Cause: An attempt to retrieve the disk group names by executing 'kfod nohdr=true op=groups' failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages, correct the problem indicated and retry.

PRCT-01492: error signal "{0}" received, indicating segmentation fault (core dumped)

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRCT-01493: Execution of 'opatch query -is_rolling_patch' command failed.\n{0}

Cause: An attempt to determine if a patch was a rolling patch by executing 'opatch query -is_rolling_patch' failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the problems identified, and then retry the operation.

PRCT-01494: failed to remove {0}\n{1}

Cause: An attempt to remove the specified file or directory failed. Accompanying messages provide detailed failure information.

Action: Correct the problem indicated by the accompanying error messages and then retry.

PRCT-01495: failed to add cluster certificate to the trust store

Cause: An attempt to add an rhpcient failed because an error occurred while adding the cluster certificate to the trust store. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the identified problems, and then retry the operation.

PRCT-01496: failed to retrieve the cluster upgrade state

Cause: An attempt to retrieve the cluster upgrade state failed on the local node. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the identified issues, and then retry the operation.

PRCT-01497: failed to retrieve the cluster active patch level

Cause: An attempt to retrieve the cluster active patch level failed on the local node. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the identified issues, and then retry the operation.

PRCT-01498: failed to retrieve the cluster software patch level on node "{0}"

Cause: An attempt to retrieve the cluster software patch level of the indicated node failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the identified issues, and then retry the operation.

PRCT-01499: failed to create a DHCP proxy server resource

Cause: An attempt to configure the cluster to add a DHCP proxy server failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the identified issues, and then retry the operation.

PRCT-01500: There are no Oracle ACFS file systems on mount point {0}.

Cause: An attempt to retrieve the Oracle Automatic Storage Management Cluster File System (Oracle ACFS) information for the specified mount point failed because there was no Oracle ACFS file system mounted on the specified mount point.

Action: Verify that an Oracle ACFS is mounted at the specified mount point or create the file system using the command 'srvctl add filesystem'.

PRCT-01501: There are no Oracle ACFS file systems on mount point {0} in node {1}.

Cause: An attempt to retrieve the Oracle Automatic Storage Management Cluster File System (Oracle ACFS) information for the specified mount point on the specified node failed because there was no Oracle ACFS file system mounted there.

Action: Verify that an Oracle ACFS is mounted at the specified mount point or create the file system using the command 'srvctl add filesystem'.

PRCT-01502: Failed to retrieve the volume device for mountpoint {0}

Cause: An attempt to execute an internal command to retrieve the volume device for a mountpoint failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCT-01503: failed to verify that a VIP can be configured for network {0}\n{1}

Cause: An attempt to execute an internal command to validate whether a virtual IP address can be configured for the specified network resource failed. Specifics of the failure are shown in the accompanying error messages.

Action: Correct the problem indicated by the accompanying error messages and then retry.

PRCT-01504: invalid file path {0}

Cause: A requested operation was rejected because the indicated path did not exist.

Action: Retry the command supplying a valid file path.

PRCT-01505: Failed to start resource after GIMR upgrade. Details:\n{0}

Cause: An attempt to execute an internal command to start the indicated resource failed after a Grid Infrastructure Management Repository (GIMR) upgrade. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCT-01506: Failed to create a wallet for user "{0}" on path "{1}". Details:\n{2}

Cause: An attempt to execute an internal command to create a wallet file failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCT-01507: Failed to add a certificate for a wallet using user "{0}" on path "{1}". Details:\n{2}

Cause: An attempt to execute an internal command to add a certificate in a wallet failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCT-01508: Check whether group "{0}" exists failed.

Cause: An attempted operation failed because it required a check on the existence of the indicated group, and the internal command to perform the check failed. The accompanying error messages provide more details.

Action: Examine the accompanying error messages for details. Resolve the problems reported and retry.

PRCT-01509: failed to get the path of directory {0} from pluggable database {2} of container database {1}\n{3}

Cause: An attempted operation failed because it required retrieving the indicated directory's path, and the internal command to retrieve the path failed. The accompanying error messages provide more details.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCT-01510: failed to parse the output returned by sqlplus to get the path of directory {0} from pluggable database {2} of container database {1}\n{3}

Cause: An attempted operation failed because it required retrieving the indicated directory's path, and the internal command to retrieve the path failed while parsing the output because it was null or had unexpected results. The accompanying error messages provide more details.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCT-01511: failed to copy file {0} to destination {1}\n{2}

Cause: An attempted operation failed because it required copying the indicated file to the indicated destination, and the internal command to copy the file failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCT-01512: failed to retrieve composite version from node "{0}"

Cause: An attempt to retrieve the composite version using the command 'oraversion - compositeVersion' failed. The accompanying messages provide detailed failure information.

Action: Execute the command 'oraversion -compositeVersion' from the indicated node and check the output of the command. Resolve the problems indicated in the command output, and then retry the operation.

PRCT-01513: Execution of command {0} to obtain disk usage information failed. \n{1}

Cause: An attempt to retrieve the disk usage for a resource failed. The accompanying error messages provide more details.

Action: Examine the accompanying error messages for details. Resolve the reported problems and retry.

PRCT-01514: Disk group {0} does not have enough space to resize the volume to {1}GB. Execution of asmcmd at location {2} failed. Detailed error:\n{3}

Cause: An attempt to resize the specified volume was rejected because the indicated disk group was too small.

Action: Add more disks to the disk group and then retry the operation.

PRCT-01515: failed to execute the command 'oradnfs mkdir' on the local node

Cause: An attempt to create an Oracle Direct NFS (dNFS) directory on the local node failed. The accompanying message provides detailed failure information.

Action: Review the accompanying message, resolve the indicated problems, and then retry the operation.

PRCT-01516: The dNFS operation '{0}' is not supported on this platform.

Cause: An attempt to execute an Oracle Direct NFS (dNFS) operation was rejected because the indicated command was not supported for the current operating system platform.

Action: None

PRCT-01517: failed to create a network resource for the SCAN "{0}" because the node name "{1}" does not resolve to any addresses of type {2}

Cause: The indicated node name address did not match the IP address type of the Single Client Access Name (SCAN) contained in the credentials file.

Action: Configure an IP address for the indicated node name with the same address type as the SCAN in the credentials file and retry.

PRCT-01518: failed to retrieve base version from node "{0}"

Cause: An attempt to retrieve the base version using the command 'oraversion -baseVersion' failed. The accompanying messages provide detailed failure information.

Action: Execute the command 'oraversion -baseVersion' from the indicated node and check the output of the command. Resolve the problems indicated in the command output, and then retry the operation.

PRCT-01519: failed to retrieve an Oracle Clusterware release patch version

Cause: An attempt to retrieve an Oracle Clusterware release patch version failed on the local node. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the identified issues, and then retry the operation.

PRCT-01520: ASM volume device {0} does not exist.

Cause: An operation that required obtaining volume information failed because the specified volume device path did not exist.

Action: Specify a valid volume device path and retry the operation.

PRCT-01525: Execution of command '{0}' from Oracle home {1} failed.\n{2}

Cause: An attempt to execute the specified CLUVFY command failed. Accompanying messages provide detailed failure information.

Action: Correct the problem indicated by the accompanying error messages and then retry executing the command.

PRCT-01532: failed to remove an Oracle Direct NFS (dNFS) file or directory "{0}".\n{1}

Cause: The command 'oradnfs rm' failed to remove the indicated Oracle Direct NFS (dNFS) path. The accompanying message provides detailed failure information.

Action: Review the accompanying message, resolve the indicated problems, and then retry the operation.

PRCT-01534: Execution of command '{0}' from home '{1}' failed.\n{2}

Cause: An attempt to execute the specified command failed. Accompanying messages provide detailed failure information.

Action: Correct the problem indicated by the accompanying error messages and then retry executing the command.

PRCT-01535: failed to retrieve CSS misscount\n{0}

Cause: An attempt to retrieve the CSS misscount using the command 'crsctl get css misscount' failed. The accompanying messages provide detailed failure information.

Action: Execute the command 'crsctl get css misscount' and check the output of the command. Resolve the problems indicated in the command output, and then retry the operation. Examine the accompanying error message for details.

PRCT-01536: Directory '{0}' is not writable

Cause: Write permissions were not granted to the specified directory on the local node.

Action: Ensure that the directory exists, write permissions to its path are granted on the local node, and retry.

PRCT-01537: Execution of the command 'opatch lsinventory -oh -xml' failed on local node: {0}

Cause: Execution of the command 'opatch lsinventory -oh -xml' failed on the local node. Details reported in accompanying messages.

Action: Review the accompanying error messages that provide the details of why the 'opatch lsinventory -oh -xml' execution failed. Resolve the reported problem and retry executing the command.

PRCT-01538: Creation of the Grid Infrastructure Management Repository failed while executing the Management Database configuration assistant on node {0}.\n{1}

Cause: An attempt to execute the Management Database configuration assistant to create the GIMR failed.

Action: Correct the problem indicated by the accompanying error messages and then retry.

PRCT-01539: failed to create the diskgroup for this cluster

Cause: An attempt to create the diskgroup for the clusterware configuration failed.

Action: Correct the problem indicated by the accompanying error messages and then retry.

PRCT-01543: volume "{0}" is already attached

Cause: An attempt to attach a volume failed because the indicated volume is already attached.

Action: Supply different volume name and retry.

PRCT-01544: volume "{0}" is not attached

Cause: An attempt to detach a volume failed because the indicated volume is not attached.

Action: Supply different volume name and retry.

PRCT-01546: volume "{0}" is still attached

Cause: An attempt to remove a volume failed because the indicated volume is still attached.

Action: Detach the volume before attempting to remove it.

PRCT-01551: The volume for the specified device "{0}" does not exist

Cause: There was no volume attached for the specified device.

Action: Create and attach the volume for the specified device path and then retry the operation.

PRCT-01557: failed to get the tablespace name of table {0} from schema {1} in pluggable database {2} of container database {3}\n{4}

Cause: An attempted operation failed because it required retrieving the tablespace of the specified table and the internal command to retrieve the name failed. The accompanying error messages provide more details.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCT-01558: failed to get the size of tablespace {0} from pluggable database {1} of container database {2}\n{3}

Cause: An attempted operation failed because it required retrieving the specified tablespace size and the internal command to retrieve the size failed. The accompanying error messages provide more details.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCT-01559: failed to get the free space in tablespace {0} from pluggable database {1} of container database {2}\n{3}

Cause: An attempted operation failed because it required retrieving the free space in the specified tablespace and the internal command to retrieve the free space failed. The accompanying error messages provide more details.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCT-01560: Application of the datapatch on the GIMR failed while executing the Management Database Configuration Assistant on node {0}.\n{1}

Cause: An attempt to execute the Management Database Configuration Assistant to apply datapatch on the Grid Infrastructure Management Repository (GIMR) failed.

Action: Correct the problem indicated by the accompanying error messages and then retry.

PRCT-01561: failed to retrieve configured sites in cluster\n{0}

Cause: An attempt to retrieve the configured sites in cluster failed. The accompanying messages provide detailed failure information.

Action: Correct the problem indicated by the accompanying error messages and then retry executing the command.

PRCT-01562: The startup of instances "{0}" for database "{1}" are still in progress

Cause: The startup of specified database is not completed yet because one or more instances are still starting and the timeout has been reached.

Action: Wait for the instances to start up.

PRCT-01564: attached volume "{0}" does not exist

Cause: An attempt to retrieve the information of the indicated volume failed because there was no volume attached for the specified name.

Action: Retry the operation using a different volume name.

PRCT-01566: failed to recreate credentials XML file {0}\n{1}

Cause: Failed to generate credentials XML file by executing 'kfod op=credstoxml wrap=<credential_xml_file>'.
'kfod op=credstoxml wrap=<credential_xml_file>'

Action: Examine the accompanying error messages for details.

PRCT-01567: Execution of "opatch version" command failed.\n{0}

Cause: An attempt to determine the version of OPatch failed. The accompanying messages provide detailed failure information.

Action: Review the accompanying messages, resolve the problems identified, and then retry the operation.

PRCT-01568: failed to retrieve the volume information of the device "{0}"

Cause: An attempt to retrieve the volume information of the specified device path using the command 'edvutil volinfo' failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRCT-01569: copied file "{0}" is empty

Cause: An attempt to copy the specified file failed.

Action: Retry the operation and contact Oracle Support Services if the problem persists.

PRCV-01000 to PRCV-01549

PRCV-01000: failed to create VM resource because a resource with the same name already exists

Cause: An attempt to add a VM resource failed because a resource with the same name already existed.

Action: Supply a different name to create a different VM resource.

PRCV-01001: failed to create VM resource "{0}"

Cause: An attempt to create a VM resource failed.

Action: Examine the accompanying error messages for details.

PRCV-01002: failed to retrieve the list of virtual machine names or IDs supplied during VM resource creation for VM resource "{0}"

Cause: The virtual machine names or IDs supplied during VM resource creation could not be retrieved. Details are provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01003: failed to retrieve the stop timeout attribute of VM resource "{0}"

Cause: The stop timeout attribute of the specified VM resource could not be retrieved. Details are provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01004: failed to retrieve the check interval attribute of VM resource "{0}"

Cause: The interval between checks for the specified VM resource could not be retrieved. Details are provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01005: failed to retrieve the name of the server pool on which VM resource "{0}" was configured to run

Cause: The server pool on which the specified VM resource was configured to run could not be retrieved. Details are provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01006: failed to retrieve the server category on which VM resource "{0}" was configured to run

Cause: The server category on which the specified VM resource was configured to run could not be retrieved. Details are provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01007: failed to retrieve the nodes on which VM resource "{0}" was configured to run

Cause: The list of nodes on which the specified VM resource was configured to run could not be retrieved. Details are provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01008: failed to set the list of virtual machine names or IDs for VM resource "{0}"

Cause: The virtual machine names or IDs of the specified VM resource could not be set. Details are provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01009: failed to set the stop timeout for VM resource "{0}"

Cause: The stop timeout of the specified VM resource could not be set. Details are provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01010: failed to set the check interval for VM resource "{0}"

Cause: The interval between checks for the specified VM resource could not be set. Details are provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01011: failed to set the server pool for VM resource "{0}"

Cause: The server pool on which the specified VM resource was to run could not be set. Details are provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01012: failed to set the server category for VM resource "{0}"

Cause: The server category on which the specified VM resource was to run could not be set. Details are provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01013: failed to set the nodes for VM resource "{0}"

Cause: The nodes on which the specified VM resource was to run could not be set. Details are provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01014: failed to retrieve the virtual machine name or ID for the specified instance at cardinality {0} of VM resource "{1}"

Cause: An attempt to retrieve the virtual machine name or ID for the specified instance of the VM resource failed because it did not exist for the specified instance.

Action: Contact Oracle Support Services.

PRCV-01015: failed to add the virtual machines to the VM resource "{0}"

Cause: An attempt to add the virtual machines to the specified VM resource failed. This could have occurred because the Cluster Ready Services (CRS) stack was unavailable or the resource had not been created.

Action: Verify that the CRS stack is available and that the resource exists and retry the operation.

PRCV-01016: failed to remove the virtual machines from the VM resource "{0}"

Cause: An attempt to remove the virtual machines from the specified VM resource failed. This could have occurred because the Cluster Ready Services (CRS) stack was unavailable or the resource had not been created.

Action: Verify that the CRS stack is available and that the resource exists and retry the operation.

PRCV-01017: unable to configure VM resource because the number of nodes specified {0} was less than the number of virtual machine instances {1}

Cause: An attempt to create or modify a VM resource failed because fewer hosting members were specified than the number of virtual machine instances to be run.

Action: Retry the configuration specifying the requisite number of hosting members for the VM resource.

PRCV-01018: unable to create or modify VM resource because duplicate virtual machine instances "{0}" were specified

Cause: An attempt to create or modify the configuration of the VM resource failed because duplicate virtual machine instances were specified.

Action: Retry the operation being careful to specify distinct instances.

PRCV-01019: Removal of virtual machines failed because the virtual machine "{0}" is not in VM resource "{1}".

Cause: An attempt to remove the specified virtual machines from the specified VM resource was rejected because at least one of the virtual machines specified was not part of the resource.

Action: Retry the operation specifying only virtual machines that are in the VM resource.

PRCV-01020: unable to add virtual machines because virtual machine "{0}" is already in VM resource "{1}"

Cause: An attempt to add the specified virtual machines to the specified VM resource was rejected because at least one of the virtual machines specified was already part of the resource.

Action: Retry the operation specifying virtual machines that are not already in the VM resource.

PRCV-01021: The operation failed because the virtual machine name or ID specified was not found in VM resource "{0}".

Cause: The operation failed because the virtual machine name or ID was not found. The virtual machine name or ID was specified incorrectly or was never added to the VM resource.

Action: Correct the virtual machine name or ID specified or add the virtual machine to the VM resource and retry the operation.

PRCV-01022: The operation failed because the value {0} specified for stop timeout is invalid.

Cause: The operation was rejected because the value specified for stop timeout was not a positive integer.

Action: Change the value of stop timeout to a positive integer and retry the same operation.

PRCV-01023: The operation failed because the value {0} specified for check interval is invalid.

Cause: The operation was rejected because the value specified for check interval was not a positive integer.

Action: Change the value of check interval to a positive integer and retry the same operation.

PRCV-01024: failed to start VM resource "{0}"

Cause: The attempt to start the VM resource failed for the reasons provided in the accompanying error messages.

Action: See the accompanying error messages, address the issues described, and then try to start the VM resource.

PRCV-01025: failed to stop VM resource "{0}"

Cause: The attempt to stop the VM resource failed for the reasons provided in the accompanying error messages.

Action: See the accompanying error messages, address the issues described, and then try to stop the VM resource.

PRCV-01026: error querying for VM resources

Cause: The query for VM resources in Oracle Clusterware failed.

Action: See the accompanying error messages, address the issues described, and retry the operation.

PRCV-01027: Warning: insufficient servers in server pool to run all virtual machine instances

Cause: During resource creation or modification, there were fewer servers in the server pool for the VM resource than virtual machine instances to be run.

Action: Add additional servers to the server pool to match the number of servers to the number of virtual machines.

PRCV-01028: VM resource "{0}" could not be found.

Cause: The VM resource with the specified name could not be found. Either the VM resource name was misspelled or the VM resource had not been created.

Action: Correct the spelling of the VM resource name or specify an existing VM resource.

PRCV-01029: failed to remove virtual machine instances because the VM resource "{0}" was running

Cause: The operation was rejected because virtual machine instances cannot be removed from the VM resource while the VM resource is still running.

Action: Stop the VM resource before attempting to remove virtual machine instances.

PRCV-01030: Virtual machine "{0}" of VM resource "{1}" is already enabled.

Cause: An attempt to enable the specified virtual machine was rejected because the virtual machine was already enabled.

Action: No action is needed.

PRCV-01031: Virtual machine "{0}" of VM resource "{1}" is already disabled.

Cause: An attempt to disable the specified virtual machine was rejected because the virtual machine was already disabled.

Action: No action is needed.

PRCV-01032: unable to add or modify VM resource because some of the virtual machines specified to be added are already configured in another VM resource

Cause: The VM resource could not be added or modified because some of the virtual machine names or IDs specified to be added were already registered in a VM resource. See the accompanying error messages for more details.

Action: Retry the 'add' or 'modify' operation specifying virtual machine names or IDs to be added that are not already registered.

PRCV-01033: VM resource "{0}" already contains the following virtual machines: {1}.

Cause: The operation was rejected because the specified virtual machine instances were already registered in the specified VM resource.

Action: Retry the operation specifying virtual machine names or IDs to be added that are not already registered.

PRCV-01034: The removal of virtual machine instances of VM resource "{0}" failed because at least one virtual machine instance has to be configured on the VM resource.

Cause: The removal of virtual machine instances was rejected because the number of virtual machines specified was more than the number of virtual machine instances configured on the VM resource.

Action: Retry the operation, making sure that at least one virtual machine is configured on the VM resource.

PRCV-01035: unable to relocate VM resource "{0}" because the VM resource is not running on node {1}

Cause: The relocate operation was rejected because the VM resource was not running on the specified node.

Action: If the resource is running on a different node, then retry the relocate specifying the correct source, otherwise start the VM resource on the intended destination node.

PRCV-01036: unable to create VM resource "{0}" because the Oracle Virtual Machine Manager (OVMM) was not configured

Cause: The creation of the specified VM resource failed because the OVMM was not configured.

Action: Retry the operation after adding the OVMM using the 'srvctl add ovmm' command.

PRCV-01037: Warning: The following virtual machines do not exist: {0}.

Cause: The operation discovered a problem with the listed virtual machine names or IDs because there was no matching name or ID in the VM resource.

Action: Either add the missing virtual machines to the Oracle VM Manager or remove them from the configuration of the VM resource.

PRCV-01038: Warning: The following virtual machines are already configured on the VM resource: {0}.

Cause: The attempt to add virtual machines found that the listed virtual machines were already configured on the specified VM resource.

Action: No action is needed.

PRCV-01039: Warning: The following virtual machines are not present in the VM resource: {0}.

Cause: The attempt to remove virtual machines found that the listed virtual machines were not present in the VM resource.

Action: No action is needed.

PRCV-01040: failed to create VM resource {0} because the list of virtual machines to be added was not specified

Cause: The attempt to create the VM resource failed because the list of virtual machines, which is a mandatory parameter required for resource creation, was not specified.

Action: Retry the operation making sure to specify a list of virtual machines.

PRCV-01041: Virtual machines "{0}" of VM resource "{1}" are already enabled.

Cause: An attempt to enable the specified virtual machines failed because the virtual machines were already enabled.

Action: No action is needed.

PRCV-01042: Virtual machines "{0}" of VM resource "{1}" are already disabled.

Cause: An attempt to disable the specified virtual machines failed because the virtual machines were already disabled.

Action: No action is needed.

PRCV-01043: unable to retrieve the server pool because VM resource "{0}" was not configured with a server pool

Cause: The request to retrieve the server pool failed because the VM resource was not configured with the server pool option.

Action: Retry the operation after modifying the configuration of the VM resource to include the server pool placement option.

PRCV-01044: unable to retrieve the server category because VM resource "{0}" was not configured with a server category

Cause: The request to retrieve the server category failed because the VM resource was not configured with the server category option.

Action: Retry the operation after modifying the configuration of the VM resource to include the server category placement option.

PRCV-01045: unable to retrieve the nodes because VM resource "{0}" was not configured with the node option

Cause: The request to retrieve the nodes failed because the VM resource was not configured with the node option.

Action: Retry the operation after modifying the configuration of the VM resource to include the node placement option.

PRCV-01046: Warning: The user-provided virtual machine identity "{0}" does not match the configured virtual machine name "{1}" nor virtual machine ID "{2}".

Cause: A check of the VM resource configurations found that the user-provided virtual machine identity did not match the configured virtual machine name nor the virtual machine ID.

Action: Remove and re-add the virtual machine to the VM resource.

PRCV-01047: Warning: The virtual machines {0} have the same virtual machine ID "{1}".

Cause: A check of the VM resource configuration found that the virtual machines corresponding to the specified virtual machine name or IDs are duplicates and have the same virtual machine ID.

Action: Reconfigure the VM resource without duplicate virtual machines.

PRCV-01048: failed to create VM resource because the name supplied was empty

Cause: An attempt to create a VM resource failed because the name specified for the VM resource was empty.

Action: Retry the operation making sure to provide a nonempty name for the VM resource.

PRCV-01049: unable to relocate virtual machine "{0}" of VM resource "{1}" because the virtual machine is not running

Cause: The relocate operation was rejected because the specified virtual machine was not running.

Action: Start the virtual machine on the desired destination node.

PRCV-01500: failed to create KVM resource because a resource with the same name already exists

Cause: An attempt to add a Kernel Virtual Machine (KVM) resource failed because a resource with the same name already existed.

Action: Supply a different name to create a different KVM resource.

PRCV-01501: failed to create KVM resource "{0}"

Cause: An attempt to create a Kernel Virtual Machine (KVM) resource failed.

Action: Examine the accompanying error messages for details and resolve any reported problems and retry.

PRCV-01502: failed to retrieve the list of KVM names or IDs supplied during KVM resource creation for KVM resource "{0}"

Cause: The Kernel Virtual Machine (KVM) names or IDs supplied during KVM resource creation could not be retrieved. Details were provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01503: failed to retrieve the stop timeout attribute of KVM resource "{0}"

Cause: The stop timeout attribute of the specified Kernel Virtual Machine (KVM) resource could not be retrieved. Details were provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01504: failed to retrieve the check interval attribute of KVM resource "{0}"

Cause: The interval between checks for the specified Kernel Virtual Machine (KVM) resource could not be retrieved. Details were provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01505: failed to retrieve the name of the server pool on which KVM resource "{0}" was configured to run

Cause: The server pool on which the specified Kernel Virtual Machine (KVM) resource was configured to run could not be retrieved. Details were provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01506: failed to retrieve the server category on which KVM resource "{0}" was configured to run

Cause: The server category on which the specified Kernel Virtual Machine (KVM) resource was configured to run could not be retrieved. Details were provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01507: failed to retrieve the nodes on which KVM resource "{0}" was configured to run

Cause: The list of nodes on which the specified Kernel Virtual Machine (KVM) resource was configured to run could not be retrieved. Details were provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01508: failed to set the list of KVM names or IDs for KVM resource "{0}"

Cause: The Kernel Virtual Machine (KVM) names or IDs of the specified KVM resource could not be set. Details were provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01509: failed to set the stop timeout for KVM resource "{0}"

Cause: The stop timeout of the specified Kernel Virtual Machine (KVM) resource could not be set. Details were provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01510: failed to set the check interval for KVM resource "{0}"

Cause: The interval between checks for the specified Kernel Virtual Machine (KVM) resource could not be set. Details were provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01511: failed to set the server pool for KVM resource "{0}"

Cause: The server pool on which the specified Kernel Virtual Machine (KVM) resource was to run could not be set. Details were provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01512: failed to set the server category for KVM resource "{0}"

Cause: The server category on which the specified Kernel Virtual Machine (KVM) resource was to run could not be set. Details were provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01513: failed to set the nodes for KVM resource "{0}"

Cause: The nodes on which the specified Kernel Virtual Machine (KVM) resource was to run could not be set. Details were provided in the accompanying error messages.

Action: Examine the accompanying error messages and resolve the problems reported.

PRCV-01514: failed to retrieve the KVM name or ID for the specified instance at cardinality {0} of KVM resource "{1}"

Cause: An attempt to retrieve the Kernel Virtual Machine (KVM) name or ID for the specified instance of the KVM resource failed because it did not exist for the specified instance.

Action: Contact Oracle Support Services.

PRCV-01515: failed to add the KVM to the KVM resource "{0}"

Cause: An attempt to add the Kernel Virtual Machine (KVM) to the specified KVM resource failed. This could have occurred because the Cluster Ready Services (CRS) stack was unavailable or the resource had not been created.

Action: Verify that the CRS stack is available and that the resource exists and retry the operation.

PRCV-01516: failed to remove the KVM from the KVM resource "{0}"

Cause: An attempt to remove the Kernel Virtual Machine (KVM) from the specified KVM resource failed. This could have occurred because the Cluster Ready Services (CRS) stack was unavailable or the resource had not been created.

Action: Verify that the CRS stack is available and that the resource exists and retry the operation.

PRCV-01517: unable to configure KVM resource because the number of nodes specified {0} was less than the number of KVM instances {1}

Cause: An attempt to create or modify a Kernel Virtual Machine (KVM) resource was rejected because fewer nodes were specified than the number of KVM instances to be run.

Action: Retry the configuration specifying the requisite number of hosting members for the KVM resource.

PRCV-01518: cannot create or modify KVM resource because duplicate KVM instances "{0}" were specified

Cause: An attempt to create or modify the configuration of the Kernel Virtual Machine (KVM) resource failed because duplicate KVM instances were specified.

Action: Retry the operation being careful to specify distinct instances.

PRCV-01519: Removal of KVM failed because the KVM "{0}" is not in KVM resource "{1}".

Cause: An attempt to remove the specified Kernel Virtual Machine (KVM) from the specified KVM resource was rejected because at least one of the KVM specified was not part of the resource.

Action: Retry the operation specifying only KVM that are in the KVM resource.

PRCV-01520: unable to add KVM because the KVM "{0}" is already in KVM resource "{1}"

Cause: An attempt to add the specified Kernel Virtual Machine (KVM) to the specified KVM resource was rejected because at least one of the KVM specified was already part of the resource.

Action: Retry the operation specifying KVM that are not already in the KVM resource.

PRCV-01521: The operation failed because the KVM name or ID specified was not found in KVM resource "{0}".

Cause: The operation failed because the Kernel Virtual Machine (KVM) name or ID was not found. The KVM name or ID was specified incorrectly or was never added to the KVM resource.

Action: Correct the KVM name or ID specified or add the KVM to the KVMi resource and retry the operation.

PRCV-01522: The specified stop timeout value {0} is invalid.

Cause: The operation was rejected because the value specified for stop timeout was not a positive integer.

Action: Change the value of stop timeout to a positive integer and retry the same operation.

PRCV-01523: The operation failed because the value {0} specified for check interval is invalid.

Cause: The operation was rejected because the value specified for check interval was not a positive integer.

Action: Change the value of check interval to a positive integer and retry the same operation.

PRCV-01524: failed to start KVM resource "{0}"

Cause: The attempt to start the Kernel Virtual Machine (KVM) resource failed for the reasons provided in the accompanying error messages.

Action: See the accompanying error messages, address the issues described, and then try to start the KVM resource.

PRCV-01525: failed to stop KVM resource "{0}"

Cause: The attempt to stop the Kernel Virtual Machine (KVM) resource failed for the reasons provided in the accompanying error messages.

Action: See the accompanying error messages, address the issues described, and then try to stop the KVM resource.

PRCV-01526: error querying for KVM resources

Cause: The query for Kernel Virtual Machine (KVM) resources in Oracle Clusterware failed.

Action: See the accompanying error messages, address the issues described, and retry the operation.

PRCV-01527: Warning: insufficient servers in server pool to run all KVM instances

Cause: During resource creation or modification, there were fewer servers in the server pool for the Kernel Virtual Machine (KVM) resource than KVM instances to be run.

Action: Add additional servers to the server pool to match the number of servers to the number of KVM.

PRCV-01528: KVM resource "{0}" could not be found.

Cause: The Kernel Virtual Machine (KVM) resource with the specified name could not be found. Either the KVM resource name was misspelled or the KVM resource had not been created.

Action: Correct the spelling of the KVM resource name or specify an existing KVM resource.

PRCV-01529: failed to remove KVM instances because the KVM resource "{0}" was running

Cause: The operation was rejected because Kernel Virtual Machine (KVM) instances could not be removed from the KVM resource while the KVM resource was still running.

Action: Stop the KVM resource before attempting to remove KVM instances.

PRCV-01530: KVM "{0}" of KVM resource "{1}" is already enabled.

Cause: An attempt to enable the specified Kernel Virtual Machine (KVM) was rejected because the KVM was already enabled.

Action: No action is needed.

PRCV-01531: KVM "{0}" of KVM resource "{1}" is already disabled.

Cause: An attempt to disable the specified Kernel Virtual Machine (KVM) was rejected because the KVM was already disabled.

Action: No action is needed.

PRCV-01532: unable to add or modify KVM resource because some of the KVM specified to be added are already configured in another KVM resource

Cause: The Kernel Virtual Machine (KVM) resource could not be added or modified because some of the KVM names or IDs specified to be added were already registered in a KVM resource. See the accompanying error messages for more details.

Action: Retry the 'add' or 'modify' operation specifying KVM names or IDs to be added that are not already registered.

PRCV-01533: KVM resource "{0}" already contains the following KVMs: {1}.

Cause: The operation was rejected because the specified Kernel Virtual Machine (KVM) instances were already registered in the specified KVM resource.

Action: Retry the operation specifying KVM names or IDs to be added that are not already registered.

PRCV-01534: The removal of KVM instances of KVM resource "{0}" failed because at least one KVM instance has to be configured on the KVM resource.

Cause: The removal of Kernel Virtual Machine (KVM) instances was rejected because the number of KVM specified was more than the number of KVM instances configured on the KVM resource.

Action: Retry the operation, making sure that at least one KVM is configured on the KVM resource.

PRCV-01535: unable to relocate KVM resource "{0}" because the KVM resource is not running on node {1}

Cause: The relocate operation was rejected because the Kernel Virtual Machine (KVM) resource was not running on the specified node.

Action: If the resource is running on a different node, then retry the relocate specifying the correct source, otherwise start the KVM resource on the intended destination node.

PRCV-01537: Warning: The following KVM do not exist: {0}.

Cause: The operation discovered a problem with the listed Kernel Virtual Machine (KVM) names or IDs because there was no matching name or ID in the KVM resource.

Action: Either add the missing KVM to the KVM resource or remove them from the configuration of the KVM resource.

PRCV-01538: Warning: The following KVM are already configured on the KVM resource: {0}.

Cause: The attempt to add Kernel Virtual Machine (KVM) found that the listed KVM were already configured on the specified KVM resource.

Action: No action is needed.

PRCV-01539: Warning: The following KVM are not present in the KVM resource: {0}.

Cause: The attempt to remove Kernel Virtual Machine (KVM) found that the listed KVM were not present in the KVM resource.

Action: No action is needed.

PRCV-01540: failed to create KVM resource {0} because the list of KVM to be added was not specified

Cause: The attempt to create the Kernel Virtual Machine (KVM) resource failed because the list of KVM, which was a mandatory parameter required for resource creation, was not specified.

Action: Retry the operation making sure to specify a list of KVMs.

PRCV-01541: KVMs "{0}" of KVM resource "{1}" are already enabled.

Cause: An attempt to enable the specified Kernel Virtual Machine (KVM) failed because the KVM were already enabled.

Action: No action is needed.

PRCV-01542: KVMs "{0}" of KVM resource "{1}" are already disabled.

Cause: An attempt to disable the specified Kernel Virtual Machine (KVM) failed because the KVM were already disabled.

Action: No action is needed.

PRCV-01543: unable to retrieve the server pool because KVM resource "{0}" was not configured with a server pool

Cause: The request to retrieve the server pool failed because the Kernel Virtual Machine (KVM) resource was not configured with the server pool option.

Action: Retry the operation after modifying the configuration of the KVM resource to include the server pool placement option.

PRCV-01544: unable to retrieve the server category because KVM resource "{0}" was not configured with a server category

Cause: The request to retrieve the server category failed because the Kernel Virtual Machine (KVM) resource was not configured with the server category option.

Action: Retry the operation after modifying the configuration of the KVM resource to include the server category placement option.

PRCV-01545: unable to retrieve the nodes because KVM resource "{0}" was not configured with the node option

Cause: The request to retrieve the nodes failed because the Kernel Virtual Machine (KVM) resource was not configured with the node option.

Action: Retry the operation after modifying the configuration of the KVM resource to include the node placement option.

PRCV-01546: Warning: The user-provided KVM identity "{0}" does not match the configured KVM name "{1}" nor KVM ID "{2}".

Cause: A check of the Kernel Virtual Machine (KVM) resource configurations found that the user-provided KVM identity did not match the configured KVM name nor the KVM ID.

Action: Remove and re-add the KVM to the KVM resource.

PRCV-01547: Warning: The KVM {0} have the same KVM ID "{1}".

Cause: A check of the Kernel Virtual Machine (KVM) resource configuration found that the KVM corresponding to the specified KVM name or IDs are duplicates and have the same KVM ID.

Action: Reconfigure the KVM resource without duplicate KVMs.

PRCV-01548: failed to create KVM resource because the name supplied was empty

Cause: An attempt to create a Kernel Virtual Machine (KVM) resource failed because the name specified for the KVM resource was empty.

Action: Retry the operation making sure to provide a nonempty name for the KVM resource.

PRCV-01549: unable to relocate KVM "{0}" of KVM resource "{1}" because the KVM is not running

Cause: The relocate operation was rejected because the specified Kernel Virtual Machine (KVM) was not running.

Action: Start the KVM on the desired destination node.

PRCW-01001 to PRCW-01020

PRCW-01001: Could not allocate new memory

Cause: Could not allocation any new memory.

Action: Retry after make more memory available.

PRCW-01002: Network Security error code {0}

Cause: Failed to perform the network security operation.

Action: Look at the network security error for the appropriate action.

PRCW-01003: Failed to do the cluster wallet operation {0}

Cause: Failed to perform the cluster wallet operation.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01004: Could not open the wallet {0} due to error {1} : {2}

Cause: Failed to open the cluster wallet.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01005: Wallet {1} did not exist due to error code {1}

Cause: The cluster wallet did not exist.

Action: Need to create the cluster wallet.

PRCW-01006: Alias {0} in Wallet {1} did not exist

Cause: The alias within the cluster wallet did not exist.

Action: Need to create the alias within the cluster wallet.

PRCW-01007: Alias {0} in Wallet {1} could not be read due to error {2}

Cause: Could not read the alias within the cluster wallet.

Action: Look at the network security error for the appropriate action.

PRCW-01008: Alias {0} in Wallet {1} could not be written due to error code {2}

Cause: Could not write the secret of the alias to the cluster wallet.

Action: Look at the network security error for the appropriate action.

PRCW-01009: Wallet {0} could not be saved due to error code {1}

Cause: Could not save the cluster wallet.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01010: Wallet {0} could not be created due to error {1}: {2}

Cause: Could not create the cluster wallet.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01011: Wallet {0} could not be accessed due to error code {1}

Cause: Could not access the cluster wallet.

Action: Use the correct cluster wallet password.

PRCW-01012: Wallet {0} could not be deleted due to error code {1}

Cause: Could not delete the cluster wallet.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01013: Failed to initialize cluster wallet context due to error code {0}

Cause: Could not initialize the cluster wallet context.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01014: Failed to terminate cluster wallet context due to error code {0}

Cause: Could not terminate the cluster wallet context.

Action: Look at the cluster wallet error for the appropriate action.

PRCW-01015: Wallet {0} does not exist. {1}

Cause: An attempted wallet operation could not find the specified wallet.

Action: Ensure that the correct wallet type was supplied, or create the wallet if appropriate.

PRCW-01016: Wallet name is missing for wallet type {0}

Cause: An attempted wallet operation failed as wallet name was not specified.

Action: This is an internal error. Contact Oracle Support Services.

PRCW-01017: Cluster wallet context to be terminated does not exist

Cause: An attempt to terminate the cluster wallet context failed as it has not been initialized.

Action: This is an internal error. Contact Oracle Support Services.

PRCW-01018: Failed executing command '{0}'. Details:\n{1}

Cause: The indicated command failed.

Action: Examine the accompanying error messages for details, resolve the indicated problems, and then retry the operation.

PRCW-01019: Wallet creation failed: {0}.

Cause: The operation failed to create the wallets.

Action: Examine the accompanying error messages for details, resolve the indicated problems, and then retry the operation.

PRCW-01020: Error reading wallet in directory {0}.

Cause: The operation failed to read the wallet in the specified directory.

Action: Examine the accompanying error messages for details, resolve the indicated problems, and then retry the operation.

PRCZ-01000 to PRCZ-04074

PRCZ-01000: User name cannot be null or empty

Cause: An invalid value was supplied as user name.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01001: Password cannot be null

Cause: A null value was supplied as password parameter to this API.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01002: Local node name cannot be null or empty

Cause: An invalid value was supplied as local node name parameter to this API.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01003: Remote node name cannot be null

Cause: An invalid value was supplied as remote node names parameter to this API.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01004: User name "{0}" does not contain a domain name

Cause: User name that was supplied was not in DOMAINNAME\USERNAME format.

Action: User name needs to be supplied in DOMAINNAME\USERNAME format.

PRCZ-01005: Remote node name list contains null or empty node names

Cause: An invalid value was contained in remote node names list.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01006: Parameter {0} value is not valid

Cause: This is an internal error. The value for the specified parameter is null or empty string.

Action: Contact Oracle Support Services.

PRCZ-01007: Unable to determine if user "{0}" has Windows administrator authority.

Cause: An attempt to determine if user specified has Windows administrator authority failed.

Action: Examine the accompanying error messages for details.

PRCZ-01008: Unable to determine if user "{0}" has Windows administrator authority on nodes "{1}"

Cause: An attempt to determine if user specified has Windows administrator authority on specified nodes failed.

Action: Examine the accompanying error messages for details.

PRCZ-01010: Cannot create an instance of Windows Security Services on this platform

Cause: An attempt was made to create an instance of Windows Security Services on a non-Microsoft Windows platform.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01011: Unable to determine if user "{0}" is a Windows domain user

Cause: An attempt to determine if user specified is a Windows domain user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01012: Unable to determine if user "{0}" is a valid Windows user

Cause: An attempt to determine if user name and password for user specified are valid failed.

Action: Examine the accompanying error messages for details.

PRCZ-01013: Unable to determine if user "{0}" is a Windows managed service account user

Cause: An attempt to determine if user name specified is a Windows managed service account user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01014: Windows user "{0}" could not be created

Cause: An attempt to create the specified Windows user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01015: Could not create Windows user "{0}" because user name is a domain user

Cause: The user name was in DOMAINNAME\USERNAME format.

Action: If a domain user should own the Oracle home make sure that the domain administrator has created the user. If a new user should be created specify the user name without the domain name.

PRCZ-01016: Windows user "{0}" could not be deleted

Cause: An attempt to delete the specified Windows user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01017: Could not delete Windows user "{0}" because user name is a domain user

Cause: The user name was in DOMAINNAME\USERNAME format.

Action: Only the domain administrator can delete a domain user. Specify a user name without the domain name and the user will be deleted from the local machine.

PRCZ-01018: Failed to set user "{0}" as Oracle home service user for home "{1}"

Cause: An attempt to set specified user as the Oracle home service user for specified home failed.

Action: Examine the accompanying error messages for details.

PRCZ-01019: Failed to set user "{0}" as Oracle home service user for home "{1}" on nodes "{2}"

Cause: An attempt to set specified user as the Oracle home service user for specified home on the specified nodes failed.

Action: Examine the accompanying error messages for details.

PRCZ-01020: Failed to get the Oracle home service user

Cause: An attempt to get the Oracle home service user for current Oracle home failed.

Action: Examine the accompanying error messages for details.

PRCZ-01021: Failed to get the Oracle home service user for Oracle home "{0}"

Cause: An attempt to get the Oracle home service user for Oracle home at the path specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01022: Failed to get the Oracle home service user for Oracle home "{0}" on nodes "{1}"

Cause: An attempt to get the Oracle home service user for Oracle home at the path specified on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01023: The Oracle home path "{0}" is invalid

Cause: An invalid value was supplied as Oracle home path.

Action: The path of Oracle home must be between 0 and 260 characters long and the directory must exist. The path must not contain wild card characters.

PRCZ-01024: Failed to determine if the Oracle home service user for Oracle home "{0}" is a Windows managed service account user

Cause: An attempt to determine if the Oracle home service user for the Oracle home specified is a Windows managed service account user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01025: Failed to determine if the Oracle home service user for Oracle home "{0}" is the built in LocalSystem account

Cause: An attempt to determine if the Oracle home service user for the Oracle home specified is the built in LocalSystem account failed.

Action: Examine the accompanying error messages for details.

PRCZ-01026: Failed to determine if the Oracle home service user for Oracle home "{0}" is the built in LocalService account

Cause: An attempt to determine if the Oracle home service user for the Oracle home specified is the built in LocalService account failed.

Action: Examine the accompanying error messages for details.

PRCZ-01027: Unable to determine if the Oracle home service user for Oracle home "{0}" is a Windows built in user or managed service account user

Cause: An attempt to determine if user specified is a Windows built in user or managed service account user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01028: Unable to determine if the Oracle home service user for Oracle home "{0}" is a Windows built in user or managed service account user on nodes "{1}"

Cause: An attempt to determine if user specified is a Windows built in user or managed service account user on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01029: Failed to set the Oracle home type as "{0}" for Oracle home "{1}"

Cause: An attempt to set specified type as the Oracle home type for specified Oracle home failed.

Action: Examine the accompanying error messages for details.

PRCZ-01030: Failed to set the Oracle home type as "{0}" for home "{1}" on nodes "{2}"

Cause: An attempt to set specified type as the Oracle home type for specified home on the specified nodes failed.

Action: Examine the accompanying error messages for details.

PRCZ-01031: Failed to get the Oracle home type for Oracle home "{0}"

Cause: An attempt to get the Oracle home type for Oracle home at the path specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01032: Failed to get the Oracle home type for Oracle home "{0}" on nodes "{1}"

Cause: An attempt to get the Oracle home type for Oracle home at the path specified on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01033: Failed to get the Oracle home service user on node "{0}"

Cause: An attempt to get the Oracle home service user for current Oracle home on the node specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01034: Failed to determine if Oracle home service user for Oracle home "{0}" is the built in LocalSystem account on node "{1}"

Cause: An attempt to determine if the Oracle home service user for the Oracle home specified on the nodes specified is the built in LocalSystem account failed.

Action: Examine the accompanying error messages for details.

PRCZ-01035: Failed to locate Oracle home

Cause: An error occurred while attempting to retrieve value of environment variable ORACLE_HOME.

Action: Set ORACLE_HOME environment variable to point to current Oracle home path.

PRCZ-01036: Failed to determine the operating system privileges granted to Windows user "{0}"

Cause: An attempt to determine the operating system privileges granted to Windows user specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01037: Failed to determine the operating system privileges granted to Windows user "{0}" on nodes "{1}"

Cause: An attempt to determine the operating system privileges granted to Windows user specified on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01038: Failed to grant Windows user "{0}" operating system privileges required for Oracle home type "{1}"

Cause: An attempt to grant the required operating system privileges for specified Oracle home type to specified Windows user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01039: Failed to grant Windows user "{0}" operating system privileges required for Oracle home type "{1}" on nodes "{2}"

Cause: An attempt to grant the required operating system privileges for specified Oracle home type to specified Windows user on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01040: Failed to revoke operating system privileges from Windows user "{0}" granted for owning Oracle home type "{1}"

Cause: An attempt to revoke operating system privileges granted to specified Windows user for owning specified Oracle home type failed.

Action: Examine the accompanying error messages for details.

PRCZ-01041: Failed to revoke operating system privileges from Windows user "{0}" granted for Oracle home type "{1}" on nodes "{2}"

Cause: An attempt to revoke operating system privileges granted to specified Windows user for owning specified Oracle home type on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01042: Failed to add Windows access control list (ACL) entry for user "{0}" for path "{1}"

Cause: An attempt to add Windows access control list entry for user specified to the path specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01043: Failed to add Windows access control list (ACL) entry for user "{0}" for path "{1}" on nodes "{2}"

Cause: An attempt to add Windows access control list entry for user specified to the path specified failed on nodes specified.

Action: Examine the accompanying error messages for details.

PRCZ-01044: Failed to remove Windows access control list (ACL) entry for user "{0}" for path "{1}"

Cause: An attempt to remove Windows access control list entry for user specified from the path specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01045: Failed to remove Windows access control list (ACL) entry for user "{0}" for path "{1}" on nodes "{2}"

Cause: An attempt to remove Windows access control list entry for user specified from the path specified failed on nodes specified.

Action: Examine the accompanying error messages for details.

PRCZ-01046: Failed to verify if Windows access control list (ACL) entry exists for user "{0}" for path "{1}"

Cause: An attempt to verify if Windows access control list entry exists for user specified for the path specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01047: Failed to verify Windows access control list (ACL) entry for user "{0}" for path "{1}" on nodes "{2}"

Cause: An attempt to verify if Windows access control list entry exists for user specified for the path specified failed on nodes specified.

Action: Examine the accompanying error messages for details.

PRCZ-01048: Windows user "{0}" does not have privileges "{1}" required for owning Oracle home "{2}"

Cause: An attempt to verify if the specified Windows user has all privileges required for owning Oracle home type specified found that user did not have some of the privileges required.

Action: Grant the privileges specified to the user.

PRCZ-01049: Windows user "{0}" does not have privileges "{1}" required for owning Oracle home "{2}" on node "{3}"

Cause: An attempt to verify if the specified Windows user has all privileges required for owning Oracle home type specified on node specified found that user did not have some of the privileges required.

Action: Grant the privileges specified to the user.

PRCZ-01050: The path "{0}" specified as Windows service executable file for Windows service "{1}" is invalid

Cause: An invalid value was supplied as Windows service executable file for the specified Windows service.

Action: Specify the full file system path to a valid executable file, without wild card characters and not exceeding 260 characters long.

PRCZ-01051: Failed to update executable file to "{1}" for the Windows service "{0}"

Cause: An attempt to update the file from which specified Windows service runs to specified file failed.

Action: Examine the accompanying error messages for details.

PRCZ-01052: Failed to update executable file to "{1}" for the Windows service "{0}" on nodes "{2}"

Cause: An attempt to update the file from which specified Windows service runs to specified file on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01053: Failed to update the Windows service "{0}" user password for Windows user "{1}"

Cause: An attempt to update the password for specified Windows user in the specified Windows service failed.

Action: Examine the accompanying error messages for details.

PRCZ-01054: Failed to update the Windows service "{0}" user password for Windows user "{1}" on nodes "{2}"

Cause: An attempt to update the password for specified Windows user in the specified Windows service on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01055: Failed to update executable file to "{2}" and username and password for Windows user "{1}" for the Windows service "{0}"

Cause: An attempt to update the executable file, username and password to specified values for specified Windows service failed.

Action: Examine the accompanying error messages for details.

PRCZ-01056: Failed to update executable file to "{2}" and username and password for Windows user "{1}" for the Windows service "{0}" on nodes "{3}"

Cause: An attempt to update the executable file, username and password to specified values for specified Windows service on specified nodes failed.

Action: Examine the accompanying error messages for details.

PRCZ-01057: Invalid value {0} specified for Windows service access type parameter while creating the service "{1}"

Cause: An invalid value was supplied for Windows service access type parameter while creating specified Windows service.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01058: Service dependency list contains null or empty Windows service names while creating Windows service "{0}"

Cause: An invalid value was contained in service dependency list supplied while creating the specified Windows service.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01059: Failed to create Windows service "{0}"

Cause: An attempt to create specified Windows service failed.

Action: Examine the accompanying error messages for details.

PRCZ-01060: Failed to create Windows service "{0}" on nodes "{1}"

Cause: An attempt to create specified Windows service on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01061: Failed to delete Windows service "{0}"

Cause: An attempt to delete specified Windows service failed.

Action: Examine the accompanying error messages for details.

PRCZ-01062: Failed to delete Windows service "{0}" on nodes "{1}"

Cause: An attempt to delete specified Windows service on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01063: Failed to determine if the Windows service "{0}" will run as the built in LocalSystem account

Cause: An attempt to determine if the specified Windows service will run as the built in LocalSystem account failed.

Action: Examine the accompanying error messages for details.

PRCZ-01064: Failed to determine if the Windows service "{0}" will run as the built in LocalSystem account on nodes "{1}"

Cause: An attempt to determine if the specified Windows service on the nodes specified will run as the built in LocalSystem account failed.

Action: Examine the accompanying error messages for details.

PRCZ-01065: Failed to get the user account for the Windows service "{0}"

Cause: An attempt to get the user account the specified Windows service runs as failed.

Action: Examine the accompanying error messages for details.

PRCZ-01066: Failed to get the user account for the Windows service "{0}" on nodes "{1}"

Cause: An attempt to get the user account the specified Windows service runs as on specified nodes failed.

Action: Examine the accompanying error messages for details.

PRCZ-01067: Failed to retrieve a list of all Windows services that run as Windows user "{0}" from Oracle home "{1}"

Cause: An attempt to get a list of all Windows services that run as specified Windows user from specified Oracle home failed.

Action: Examine the accompanying error messages for details.

PRCZ-01068: Failed to obtain a list of all Windows services that run as Windows user "{0}" from Oracle home "{1}" on nodes "{2}"

Cause: An attempt to get a list of all Windows services that run as specified Windows user from specified Oracle home on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01069: Failed to update Windows user's password of all Windows services that run as Windows user "{0}" from Oracle home "{1}"

Cause: An attempt to update Windows user's password of all Windows services that run as specified Windows user from specified Oracle home failed.

Action: Examine the accompanying error messages for details.

PRCZ-01070: Failed to update Windows user's password of all Windows services that run as Windows user "{0}" from Oracle home "{1}" on nodes "{2}"

Cause: An attempt to update Windows user's password of all Windows services that run as specified Windows user from specified Oracle home on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01071: Failed to update Windows service "{0}" username to "{1}" because it differs from Oracle home user "{2}"

Cause: An attempt to update the Windows service execution user account failed because the specified user is not the Oracle home service user.

Action: All services from a home will run as the Oracle home service user.

PRCZ-01072: Failed to obtain a list of all Windows services that run as Windows user "{0}"

Cause: An attempt to obtain a list of all Windows services that run as specified Windows user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01073: Failed to obtain a list of all Windows services that run as Windows user "{0}" on nodes "{1}"

Cause: An attempt to get a list of all Windows services that run as specified Windows user on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01074: Failed to update Windows user's password for all Windows services that run as Windows user "{0}"

Cause: An attempt to update Windows user's password for all Windows services that run as specified Windows user from specified Oracle home failed.

Action: Examine the accompanying error messages for details.

PRCZ-01075: Failed to update Windows user's password for all Windows services that run as Windows user "{0}" on nodes "{1}"

Cause: An attempt to update Windows user's password for all Windows services that run as specified Windows user from specified Oracle home on nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01076: Windows group "{0}" could not be created

Cause: An attempt to create the specified Windows group failed.

Action: Examine the accompanying error messages for details.

PRCZ-01077: Windows user "{0}" could not be created on nodes "{1}"

Cause: An attempt to create the specified Windows group on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01078: Windows group "{0}" could not be removed

Cause: An attempt to remove the specified Windows group failed.

Action: Examine the accompanying error messages for details.

PRCZ-01079: Windows group "{0}" could not be removed on nodes "{1}"

Cause: An attempt to remove the specified Windows group on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01080: Unable to determine if Windows group "{0}" exists

Cause: An attempt to determine if the specified Windows group exists failed.

Action: Examine the accompanying error messages for details.

PRCZ-01081: Unable to determine if Windows group "{0}" exists on nodes "{1}"

Cause: An attempt to determine if the specified Windows group exists on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01082: Failed to add Windows user or Windows group "{1}" to Windows group "{0}"

Cause: An attempt to add the specified Windows user or Windows group as member of the specified Windows group failed.

Action: Examine the accompanying error messages for details.

PRCZ-01083: Failed to add Windows user or Windows group "{1}" to Windows group "{0}" on nodes "{2}"

Cause: An attempt to add the specified Windows user or Windows group as a member of the specified Windows group on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01084: Failed to remove Windows user or Windows group "{1}" from Windows group "{0}"

Cause: An attempt to remove the specified Windows user or Windows group from the specified Windows group failed.

Action: Examine the accompanying error messages for details.

PRCZ-01085: Failed to remove Windows user or Windows group "{1}" from Windows group "{0}" on nodes "{2}"

Cause: An attempt to remove the specified Windows user or Windows group from the specified Windows group on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01086: Unable to determine if Windows user or Windows group "{1}" is a member of Windows group "{0}"

Cause: An attempt to determine if the specified Windows user or Windows group is a member of the specified Windows group failed.

Action: Examine the accompanying error messages for details.

PRCZ-01087: Unable to determine if Windows user or Windows group "{1}" is a member of Windows group "{0}" on nodes "{1}"

Cause: An attempt to determine if the specified Windows user or Windows group is a member of the specified Windows group on the nodes specified failed.

Action: Examine the accompanying error messages for details.

PRCZ-01088: The Windows group name "{0}" is invalid

Cause: An invalid value was supplied as Windows group name.

Action: The Windows group name must be between 0 and 256 characters long.

PRCZ-01089: The description text "{0}" for Windows group "{1}" is invalid

Cause: An invalid value was supplied as description text for specified Windows group name.

Action: The description text supplied must be between 0 and 256 characters long.

PRCZ-01090: {0} Element in remote node name list contains null or empty node name

Cause: An invalid value was contained in remote node names list.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-01091: Failed to verify that user name "{0}" is a valid Windows user

Cause: An attempt to verify if the specified user name is a valid Windows user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01092: The user name "{0}" does not exist as a Windows user

Cause: The specified user name was not a valid Windows user name.

Action: Specify a valid Windows user name.

PRCZ-01093: Failed to convert Windows security identifier "{0}" to a Windows user name

Cause: An attempt to convert the specified Windows security identifier to a Windows user name failed.

Action: Examine the accompanying error messages for details.

PRCZ-01094: Failed to add a Windows access control entry for user "{0}" to Windows access control list for path "{1}"

Cause: An attempt to add Windows access control list entry the specified user and path failed.

Action: Examine the accompanying error messages for details.

PRCZ-01095: Failed to add a Windows access control entry for user "{0}" to Windows access control list for path "{1}" on nodes "{2}"

Cause: An attempt to add Windows access control list entry for the specified user and path failed on nodes specified.

Action: Examine the accompanying error messages for details.

PRCZ-01096: Unable to determine if the password meets the requirements of the password policy

Cause: An attempt to determine if password meets the policy has failed.

Action: Examine the accompanying error messages for details.

PRCZ-01097: Unable to determine if a local account for user "{0}" exists on node "{1}"

Cause: An attempt to determine if the indicated local user account exists on the identified node has failed.

Action: Examine the accompanying error messages for details.

PRCZ-01098: Unable to determine the Windows domain name for user "{0}"

Cause: An attempt to determine the Windows domain name of indicated user account has failed.

Action: Examine the accompanying error messages for details.

PRCZ-01099: failed to migrate database services from Windows group "ORA_ASMDBA" to Windows group "ORA_ASMADMIN"

Cause: During the Oracle Clusterware upgrade, an attempt to migrate database services from Windows group 'ORA_ASMDBA' to Windows group 'ORA_ASMADMIN' failed.

Action: Examine the accompanying error messages for details.

PRCZ-01100: failed to migrate database services from Windows group "ORA_ASMADMIN" to Windows group "ORA_ASMDBA"

Cause: During the Oracle Clusterware downgrade, an attempt to migrate database services from Windows group 'ORA_ASMADMIN' to Windows group 'ORA_ASMDBA' failed.

Action: Examine the accompanying error messages for details.

PRCZ-01101: failed to determine if user "{0}" is a Windows Group Managed Service Account (GMSA) user

Cause: An attempt to determine if the user specified is a Windows Group Managed Service Account (GMSA) user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01102: failed to determine if user "{0}" is a Windows Group Managed Service Account (GMSA) user on nodes "{1}"

Cause: An attempt to determine if the user specified is a Windows Group Managed Service Account (GMSA) user on specified nodes failed.

Action: Examine the accompanying error messages for details.

PRCZ-01103: failed to determine if the Oracle home service user for Oracle home "{0}" is a Windows Group Managed Service Account (GMSA) user

Cause: An attempt to determine if the Oracle home service user for the Oracle home specified was a Windows Group Managed Service Account (GMSA) user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01104: failed to determine if Oracle home service user for Oracle home "{0}" is a Windows Group Managed Service Account (GMSA) user on nodes "{1}"

Cause: An attempt to determine if the Oracle home service user for the Oracle home specified on the nodes specified was a Windows Group Managed Service Account (GMSA) user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01105: failed to determine if the Oracle home service user for Oracle home "{0}" is a Windows virtual account user

Cause: An attempt to determine if the Oracle home service user for the Oracle home specified was a Windows virtual account user failed.

Action: Examine the accompanying error messages for details.

PRCZ-01106: failed to retrieve the Windows service Security Identifier (SID) for Windows service "{0}"

Cause: An attempt to get the Windows service Security Identifier (SID) for for the specified Windows service failed.

Action: Examine the accompanying error messages for details.

PRCZ-01107: failed to determine if the local node is a Windows domain controller

Cause: During pre-requisite verification for installation an attempt to determine if the local node is a Windows domain controller failed.

Action: Examine the accompanying error messages for details.

PRCZ-01108: failed to determine if any of the nodes "{0}" are Windows domain controllers

Cause: During pre-requisite verification for installation an attempt to determine if any of the specified nodes are Windows domain controllers failed.

Action: Examine the accompanying error messages for details, resolve issues reported and retry the install.

PRCZ-01109: failed to determine the Windows operating system version

Cause: During pre-requisite verification for installation an attempt to determine the Windows operating system version failed.

Action: Examine the accompanying error messages for details, resolve issues reported and retry the install.

PRCZ-02000: Failed to verify the password for user "{0}" on nodes "{1}"

Cause: An attempt to verify the specified user's password on nodes specified failed.

Action: Make sure that the password specified is correct and is same across all nodes of the cluster. Examine the accompanying error messages for details.

PRCZ-02001: File "{0}" was not found on nodes "{1}"

Cause: An attempt to verify that the specified file exists failed on the nodes specified.

Action: Make sure that the path to the specified file exists on all nodes. Make sure that the currently logged in user has read and execute permission on the file specified on nodes specified. Also look at the accompanying error messages for details.

PRCZ-02002: Failed to execute command "{0}" using 'sudo' from path "{1}" as user "{2}" on nodes "{3}"

Cause: An attempt to run the specified command as using 'sudo' from directory specified using the specified username and password on specified nodes failed.

Action: Make sure that the path specified for the sudo command exists on all nodes. Make sure that the specified user has permission to run the sudo command on all nodes. Make sure that the command specified exists on all nodes. Make sure that the correct password was specified for the specified user. Make sure that the specified user has sudo privileges granted on all nodes. Also look at the accompanying error messages for details.

PRCZ-02003: Failed to verify the password for user "{0}"

Cause: An attempt to verify specified user's password failed.

Action: Make sure that the password specified is correct and is same across all nodes of the cluster. Examine the accompanying error messages for details.

PRCZ-02004: File "{0}" was not found

Cause: An attempt to verify that the specified file exists failed.

Action: Make sure that the path to the specified file exists. Make sure that the currently logged in user has read and execute permissions on the file specified. Also look at the accompanying error messages for details.

PRCZ-02005: Failed to execute command "{0}" using 'sudo' from path "{1}" as user "{2}"

Cause: An attempt to run the specified command as using 'sudo' from the path specified using the specified username failed.

Action: Make sure that the path specified for the sudo command exists. Make sure that the specified user has permission to run the sudo command. Make sure that the command specified exists. Make sure that the correct password was specified for the specified user. Also look at the accompanying error messages for details.

PRCZ-02006: Unable to establish SSH connection to node "{0}" to execute command "{1}"

Cause: An attempt to connect to specified node to execute specified command using SSH failed.

Action: Make sure that the specified node is reachable. Make sure that SSH daemon on the specified node is alive. Also look at the accompanying error messages for details.

PRCZ-02007: Failed to execute the command "{0}"

Cause: An attempt to execute the specified command failed.

Action: Make sure that the path to the specified command exists. Make sure that the currently logged in user has read and execute permissions on the file specified on nodes specified. Also look at the accompanying error messages for details.

PRCZ-02008: Failed to execute the command "{0}" on nodes "{1}"

Cause: An attempt to execute the specified command failed on the nodes specified.

Action: Make sure that the path to the specified command exists on all nodes. Make sure that the currently logged in user has read and execute permissions on the file

specified on nodes specified. Also look at the accompanying error messages for details.

PRCZ-02009: Failed to execute command "{0}" as root within {1} seconds on nodes "{2}"

Cause: An attempt to run the specified command within the specified time on the nodes specified failed.

Action: Make sure that the specified command exists on all nodes. Make sure that the specified command has execute permission on all nodes. Make sure that the root user password specified is correct. Also look at the accompanying error messages for details.

PRCZ-02010: Failed to execute command "{0}" using 'sudo' from location "{1}" as user "{2}" within {3} seconds on nodes "{4}"

Cause: An attempt to run the specified command using 'sudo' from location specified as specified user within the specified time on the nodes specified failed.

Action: Make sure that the specified command exists on all nodes. Make sure that the specified command has execute permission on all nodes. Make sure that the location specified for sudo is correct. Make sure that the user specified has sudo privileges. Make sure that the correct password was specified for the user. Also look at the accompanying error messages for details.

PRCZ-02011: Failed to execute command "{0}" using 'pbrun' from location "{1}" as user "{2}" within {3} seconds on nodes "{4}"

Cause: An attempt to run the specified command using 'pbrun' from location specified as specified user within the specified time on the nodes specified failed.

Action: Make sure that the specified command exists on all nodes. Make sure that the specified command has execute permission on all nodes. Make sure that the location specified for pbrun is correct. Make sure that the user specified has pbrun privileges. Make sure that the correct password was specified for the user. Also look at the accompanying error messages for details.

PRCZ-02014: Failed to execute command "{0}" on nodes "{1}"

Cause: An attempt to run the specified command on the nodes specified failed.

Action: Examine the accompanying error messages for details. Ensure that the command exists and is executable on the indicated nodes.

PRCZ-02015: Upgrade pending on following active nodes "{0}"

Cause: An attempt to forcibly complete the upgrade was rejected because the indicated nodes are active and have not yet been upgraded.

Action: Upgrade the active nodes to complete the upgrade of the cluster. If the nodes cannot be upgraded, shut down the nodes and retry the upgrade.

PRCZ-02016: could not navigate to domain {0}, error details: \n{1}

Cause: An error was encountered when looking for the specified domain of a credentials set.

Action: Ensure that an existing domain is being specified.

PRCZ-02017: could not obtain root credentials domain, CLS credentials return string: {0}, error details: {1}

Cause: An error was encountered when initializing credentials root domain. The root domain is part of the OCR within which all credentials domains are stored. A domain is part of the OCR tree used to store credentials.

Action: Check the included error details.

PRCZ-02018: The deletion of credentials set failed. Error details: \n{0}

Cause: An error was encountered when deleting a credentials set.

Action: Check the included error details.

PRCZ-02019: Credential set was not found in domain {0}. Error details: \n{1}

Cause: Could not find the credentials set within the specified domain.

Action: Ensure that an existing domain is being specified, or insert appropriate credentials into the specified domain.

PRCZ-02020: the creation of domain {0} failed, CLS credentials return string: {1}, error details: {2}

Cause: An error occurred while creating the credentials domain.

Action: Check the included error details.

PRCZ-02021: The creation of the credentials set failed. Error details: \n{0}

Cause: An error occurred while creating the credentials set.

Action: Check the included error details.

PRCZ-02022: could not import wallet in file {0}, CLS credentials return string: {1}, error details: {2}

Cause: An error occurred while importing the wallet. The wallet must be stored in an auto-login wallet file.

Action: Check the wallet specified exists and that it is an auto-login wallet file with read permission on the file system.

PRCZ-02023: initialization of OCR context failed, error details: {0}

Cause: An error occurred when initializing the OCR context

Action: Check the included error details.

PRCZ-02024: deletion of credentials set member in domain {0} failed, CLS credentials return string: {1}, error details: {2}

Cause: An error occurred while deleting a credentials set member.

Action: Ensure the domain being specified exists and that the credentials set member was previously imported into the OCR.

PRCZ-02025: The 'sudo' credentials cache could not be invalidated using the command "{0}".

Cause: An attempt to invalidate the 'sudo' credentials cache using the specified command failed.

Action: Make sure that the path to the specified command exists. Make sure that the user currently logged in has read and execute permissions on the file specified. Also, look at the accompanying error messages for details.

PRCZ-02026: The 'sudo' credentials cache could not be invalidated using the command "{0}" on nodes "{1}"

Cause: An attempt to invalidate the 'sudo' credentials cache using the specified command failed on the nodes specified.

Action: Make sure that the path to the specified command exists. Make sure that the currently logged in user has read and execute permissions on the file specified on the nodes specified. Also, look at the accompanying error messages for details.

PRCZ-02027: failed to get the connection information

Cause: An error occurred while retrieving the connection information.

Action: This is an internal error. Contact Oracle Support Services.

PRCZ-02028: There is no connection information.

Cause: An error occurred while retrieving the connection information because the connection information does not exist.

Action: Use 'crsctl check crs' to make sure that the CRS stack is up; use the command 'srvctl status asm' to make sure that the ASM resource is running.

PRCZ-02029: failed to get the connection information because the connection information fetch would exceed buffer

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRCZ-02030: unable to determine the existence of operating system user account "{0}"

Cause: An attempt to determine existence of the indicated operating system user account failed.

Action: Examine the accompanying error messages for details.

PRCZ-02031: unable to determine if operating system user account "{0}" exist on nodes "{1}"

Cause: An attempt to determine if the indicated operating system user account exist on the identified nodes failed.

Action: Examine the accompanying error messages for details.

PRCZ-02032: The deletion of credentials domain {0} failed. Error details:\n{1}

Cause: An error occurred while deleting the credentials domain.

Action: Examine the accompanying error messages for details.

PRCZ-02033: Failed to set attributes of credentials domain {0}. Error details:\n{1}

Cause: An error occurred while setting attributes of the credentials domain.

Action: Examine the accompanying error messages for details.

PRCZ-02034: Failed to get attributes of credentials domain {0}. Error details:\n{1}

Cause: An error occurred while getting attributes of the credentials domain.

Action: Examine the accompanying error messages for details.

PRCZ-02035: Failed to set user name and password credentials for user {0}. Error details:\n{1}

Cause: An error occurred while setting user name and password credentials.

Action: Examine the accompanying error messages for details.

PRCZ-02036: Failed to import credentials from wallet path {0}. Error details:\n{1}

Cause: An error occurred while importing credentials from the specified wallet path.

Action: Examine the accompanying error messages for details.

PRCZ-02037: Failed to set user {0} as the owner of credentials domain {1}. Error details:\n{2}

Cause: An error occurred while setting the specified user as the owner of the credentials domain.

Action: Examine the accompanying error messages for details.

PRCZ-02038: Failed to find credentials domain {0} under parent domain {1}. Error details:\n{2}

Cause: The specified domain did not exist under the specified parent domain.

Action: Ensure that an existing domain is specified.

PRCZ-02039: Credentials domain {0} already exists under parent domain {1} when the domain is not expected to exist. Error details:\n{2}

Cause: The specified domain was already in existence under the specified parent domain.

Action: Ensure that a new domain is specified.

PRCZ-02040: failed to retrieve Oracle VM Manager information because Oracle VM Manager is not configured

Cause: An attempt to retrieve Oracle VM Manager information failed because it was not configured.

Action: Configure Oracle VM Manager in the cluster.

PRCZ-02041: failed to remove Oracle VM Manager because Oracle VM Manager is not configured

Cause: An attempt to remove Oracle VM Manager failed because it was not configured.

Action: Configure Oracle VM Manager in the cluster.

PRCZ-02042: Failed to remove Oracle VM Manager because one or more VM resources are configured. Names of the configured VM resources: {0}.

Cause: An attempt to remove Oracle VM Manager failed because one or more VM resources were still configured.

Action: Ensure that all VM resources are removed before issuing this command.

PRCZ-02043: Failed to find credentials domain {0} under the root domain. Error details:\n{1}

Cause: The specified domain did not exist under the root domain.

Action: Ensure that an existing domain is specified.

PRCZ-02044: failed to create Oracle VM Manager because a credentials error occurred

Cause: An attempt to create Oracle VM Manager failed because an error related to the credentials occurred.

Action: Examine the accompanying error messages for details.

PRCZ-02045: failed to create Oracle VM Manager because the Oracle Grid Infrastructure user could not be identified

Cause: An attempt to create Oracle VM Manager failed because an error occurred while retrieving the Grid Infrastructure user.

Action: Examine the accompanying error messages for details.

PRCZ-02046: failed to modify Oracle VM Manager information because a credentials error occurred

Cause: An attempt to modify Oracle VM Manager information failed because an error related to the credentials occurred.

Action: Examine the accompanying error messages for details.

PRCZ-02047: failed to modify Oracle VM Manager because the Oracle Grid Infrastructure user could not be identified

Cause: An attempt to modify Oracle VM Manager failed because an error occurred while retrieving the Grid Infrastructure user.

Action: Examine the accompanying error messages for details.

PRCZ-02048: failed to retrieve Oracle VM Manager information because a credentials error occurred

Cause: An attempt to retrieve Oracle VM Manager failed because an error related to the credentials occurred.

Action: Examine the accompanying error messages for details.

PRCZ-02049: failed to remove Oracle VM Manager because a credentials error occurred

Cause: An attempt to remove Oracle VM Manager failed because an error related to the credentials occurred.

Action: Examine the accompanying error messages for details.

PRCZ-02050: failed to remove Oracle VM Manager because the details on VM resources could not be retrieved

Cause: An attempt to remove Oracle VM Manager failed because an error occurred while retrieving the details on the configured VM resources.

Action: Examine the accompanying error messages for details.

PRCZ-02051: failed to import credentials because a wallet did not exist at the specified path {0}

Cause: An error occurred while importing credentials because the specified path did not contain a wallet.

Action: Retry the operation making sure to specify the path of an existing wallet file.

PRCZ-02052: failed to create wallet credentials on credentials domain {0}

Cause: An attempt to create wallet credentials failed.

Action: Examine the accompanying error messages for details.

PRCZ-02053: failed to create user name and password credentials on credentials domain {0}

Cause: An error occurred while creating user name and password credentials on the specified credentials domain.

Action: Examine the accompanying error messages for details.

PRCZ-02054: failed to create shared key credentials on credentials domain {0}

Cause: An error occurred while creating shared key credentials on the specified credentials domain.

Action: Examine the accompanying error messages for details.

PRCZ-02055: Failed to set attributes for credentials domain {0}. Error details:\n{1}

Cause: An error occurred while setting attributes for the specified credentials domain.

Action: Examine the accompanying error messages for details.

PRCZ-02056: Partially failed to modify Oracle VM Manager information. Wallet credentials were successfully modified.

Cause: An attempt to modify user name and password credentials failed while modifying Oracle VM Manager information. Wallet credentials were successfully modified with the specified wallet file, but user name and password credentials, Oracle VM Manager host, and Oracle VM Manager port were not modified.

Action: Examine the accompanying error messages for details.

PRCZ-02057: Partially failed to modify Oracle VM Manager information. Wallet credentials and user name and password credentials were successfully modified.

Cause: An attempt to modify Oracle VM Manager host and Oracle VM Manager port failed while modifying Oracle VM Manager information. Wallet credentials and user name and password credentials were successfully modified with the specified wallet file and the specified user name and password respectively, but Oracle VM Manager host and Oracle VM Manager port were not modified.

Action: Examine the accompanying error messages for details.

PRCZ-02058: Failed to set shared key credentials. Error details:\n{0}

Cause: An error occurred while setting shared key credentials.

Action: Examine the accompanying error messages for details.

PRCZ-02059: Failed to retrieve a user name and password credentials set in credentials domain {0}. Error details:\n{1}

Cause: The user name and password credentials set was not found in the specified credentials domain.

Action: Examine the accompanying error messages for details.

PRCZ-02060: Failed to retrieve a user name and password credentials set in credentials domain {0}. Error details:\n{1}

Cause: An attempt to retrieve the user name and password credentials set in the specified credentials failed because an error related to the credentials occurred.

Action: Examine the accompanying error messages for details.

PRCZ-02061: Failed to retrieve the user name for the credentials in credentials domain {0}. Error details:\n{1}

Cause: An attempt to retrieve the user name for the credentials in the specified credentials domain failed because an error related to the credentials occurred.

Action: Examine the accompanying error messages for details.

PRCZ-02062: failed to retrieve Oracle VM Manager user name because Oracle VM Manager is not configured

Cause: An attempt to retrieve the Oracle VM Manager user name failed because it was not configured.

Action: Configure Oracle VM Manager in the cluster using the command 'srvctl add ovmm'.

PRCZ-02063: failed to retrieve Oracle VM Manager user name because a credentials error occurred

Cause: An attempt to retrieve the Oracle VM Manager user name failed because an error related to the credentials occurred.

Action: Examine the accompanying error messages for details.

PRCZ-02064: Could not create target {0} for path {1}. Error details:\n{2}

Cause: An error was encountered when creating the target for the path specified.

Action: Examine the accompanying error messages for details. Address the issues reported and retry the command.

PRCZ-02065: The credential set with type "{0}" already exists for domain "{1}". Error details:\n{2}

Cause: An attempt to create a credential set failed because it already exists.

Action: Evaluate the need for the command. If necessary, remove the credential set and then add it.

PRCZ-02066: Failed to find credential set with type "{0}" under domain {1}. Error details:\n{2}

Cause: The requested operation failed because the credential set did not exist.

Action: Ensure that a domain with a credential set is specified.

PRCZ-02067: Credentials domain {0} already exists under root domain. Error details:\n{1}

Cause: The specified domain was already in existence under the root domain.

Action: Ensure that a new domain is specified.

PRCZ-02068: The deletion of credentials with ID "{0}" failed. Error details:\n{1}

Cause: An error occurred while deleting the credentials member.

Action: Examine the accompanying error messages for details.

PRCZ-02069: Failed to get a credential with ID "{0}". Error details:\n{1}

Cause: The requested operation failed because an error occurred while getting the credential member specified.

Action: Examine the accompanying error messages for details. Address the issues reported and retry the command.

PRCZ-02070: Failed to create key pair credentials. Error details:\n{0}

Cause: An error occurred while creating key pair credentials.

Action: Examine the accompanying error messages for details.

PRCZ-02071: Failed to set attributes of the credential set. Error details:\n{0}

Cause: An error occurred while setting attributes of the credential set.

Action: Examine the accompanying error messages for details.

PRCZ-02072: Failed to set attributes of credentials with ID "{0}". Error details:\n{1}

Cause: An error occurred while setting attributes of the credential member.

Action: Examine the accompanying error messages for details.

PRCZ-02073: Failed to get attributes of the credential set. Error details:\n{0}

Cause: An error occurred while getting attributes of the credential set.

Action: Examine the accompanying error messages for details.

PRCZ-02074: Failed to get attributes of credentials with ID "{0}". Error details:\n{1}

Cause: An error occurred while getting attributes of the credential member.

Action: Examine the accompanying error messages for details.

PRCZ-02075: Failed to create shared key credentials. Error details:\n{0}

Cause: An error occurred while creating shared key credentials.

Action: Examine the accompanying error messages for details.

PRCZ-02076: Failed to create wallet credentials. Error details:\n{0}

Cause: An error occurred while creating wallet credentials.

Action: Examine the accompanying error messages for details.

PRCZ-02077: Failed to import credentials from file {0}. Error details: \n{1}

Cause: An error occurred while importing the credentials from the file specified.

Action: Examine the accompanying error messages for details.

PRCZ-02079: Failed to import credentials from the content provided. Error details: \n{0}

Cause: An error occurred while importing the credentials from the content specified.

Action: Examine the accompanying error messages for details.

PRCZ-02080: Failed to export credentials to file {0}. Error details: \n{1}

Cause: An error occurred while exporting the credentials to the file specified.

Action: Examine the accompanying error messages for details.

PRCZ-02081: Failed to export credentials. Error details: \n{0}

Cause: An error occurred while exporting the credentials.

Action: Examine the accompanying error messages for details.

PRCZ-02082: The target "{0}" already exists for domain "{1}". Error details:\n{2}

Cause: An attempt to create a target failed because it already exists.

Action: Examine the accompanying error messages for details.

PRCZ-02083: Failed to count credentials in the credential set. Error details: \n{0}

Cause: An error occurred while counting the credentials in the credential set.

Action: Examine the accompanying error messages for details.

PRCZ-02084: failed to create "{0}" credentials in credential set with type "{1}"

Cause: An error occurred while creating the credentials because the credential set type is not valid.

Action: Use the correct credential set or create the credential according to the credential set type.

PRCZ-02085: failed to export credentials to the XML file "{0}" because it already exists

Cause: A request to export credentials to an XML file failed because it already exists.

Action: Delete or rename the existing file or choose a different file name.

PRCZ-02086: failed to get attributes of credentials domain "{0}" because the attribute name was not found

Cause: An error occurred while getting attributes of the credentials domain.

Action: Verify that the keys provided exists in the domain attributes.

PRCZ-02087: failed to get attributes of credentials with ID "{0}" because the attribute name was not found

Cause: An error occurred while getting attributes of the credential member.

Action: Verify that the keys provided exist in the credential attributes.

PRCZ-02088: failed to get attributes of the credential set because the attribute name was not found

Cause: An error occurred while getting attributes of the credential set.

Action: Verify that the keys provided exist in the credential set attributes.

PRCZ-02090: failed to create host key repository from file "{0}" to establish SSH connection to node "{1}"

Cause: Creation of a host key repository for an SSH connection to the indicated node failed.

Action: Make sure that the specified file path is accessible. Make sure that the host key entries in the file are not corrupted. Also look at the accompanying error messages for details.

PRCZ-02091: Failed to add an argument to a resource template argument list because an error occurred in the resource template engine. Error details:\n{0}

Cause: An attempt to add an argument to a resource template argument list failed. The additional error details included with the message provide further explanation.

Action: Examine the accompanying error messages for details, resolve issues raised and retry the command.

PRCZ-02092: Failed to add a list argument to a resource template argument list because an error occurred in the resource template engine. Error details:\n{0}

Cause: An attempt to add a list argument to a resource template argument list failed. The additional error details included with the message provide further explanation.

Action: Examine the accompanying error messages for details, resolve issues raised and retry the command.

PRCZ-02093: Failed to evaluate a resource template attribute value because an error occurred in the resource template engine. Error details:\n{0}

Cause: An attempt to retrieve a resource template attribute value failed. The additional error details included with the message provide further explanation.

Action: Examine the accompanying error messages for details, resolve issues raised and retry the command.

PRCZ-02094: Failed to get a resource template argument list because an error occurred in resource template engine. Error details:\n{0}

Cause: An attempt to retrieve a resource template argument list failed. The additional error details included with the message provide further explanation.

Action: Examine the accompanying error messages for details, resolve issues raised and retry the command.

PRCZ-02095: failed to evaluate a resource template attribute value for resource {0} with resource template arguments {1}

Cause: An attempt to evaluate a resource template attribute value for the specified resource with the specified resource template arguments failed. The additional error details included with the message provide further explanation.

Action: Examine the accompanying error messages for details, resolve issues raised and retry the command.

PRCZ-02096: failed to get a resource template argument list for resource {0} with resource template arguments {1}

Cause: An attempt to retrieve a resource template argument list for the specified resource with the specified resource template arguments failed. The additional error details included with the message provide further explanation.

Action: Examine the accompanying error messages for details, resolve issues raised and retry the command.

PRCZ-02097: Failed to get the targets from domain "{0}". Error details:\n{1}

Cause: The requested operation failed because an error occurred while getting the targets from the indicated domain.

Action: Examine the accompanying error messages for details, resolve issues raised and retry the command.

PRCZ-02098: Oracle VM Manager is already configured.

Cause: An attempt to create Oracle VM Manager was rejected because it was already configured.

Action: None

PRCZ-02099: failed to find credentials with credential ID {0}

Cause: The operation failed because credentials with the indicated credential ID did not exist.

Action: Reissue the command specifying a credential ID for which credentials exist.

PRCZ-02100: The specified Oracle VM Manager host "{0}" is not valid.

Cause: The creation or modification of Oracle VM Manager failed because the host specified was empty, invalid as a host name, or invalid as an IP address.

Action: Specify a valid Oracle VM Manager host name or IP address and retry the operation.

PRCZ-02101: The specified Oracle VM Manager user name "{0}" is not valid.

Cause: An empty value was provided for the Oracle VM Manager user name.

Action: Specify a valid Oracle VM Manager user name.

PRCZ-02102: Invalid negative value for credential ID.

Cause: An attempt to retrieve a credential was rejected because the specified value was less than 0.

Action: Retry the operation providing a valid credential ID.

PRCZ-02103: Failed to execute command "{0}" on node "{1}" as user "{2}". Detailed error:\n{3}

Cause: An attempt to run the specified command as the specified user failed on the specified node due to the accompanying error data.

Action: Examine the accompanying error data for details, resolve issues raised and retry the command.

PRCZ-02104: failed to find GIMR properties for client "{0}"

Cause: A request to get the Grid Infrastructure Management Repository (GIMR) properties specified a GIMR client that did not exist in the credential store.

Action: Ensure that an existing GIMR client is specified.

PRCZ-02105: failed to execute command "{0}" as user "{1}" using root credentials within {2} seconds on nodes "{3}"

Cause: An attempt to run the specified command within the specified time on the nodes specified failed.

Action: Ensure that the specified command exists on all nodes. Ensure that the specified command has execute permission on all nodes. Ensure that the root user password specified is correct. Examine the accompanying error messages for details, resolve issues raised and retry the command.

PRCZ-02106: failed to create Oracle VM Manager target for domain "{0}"

Cause: An attempt to create Oracle VM Manager credentials failed. The accompanying error messages provide failure details.

Action: Examine the accompanying error messages for details, resolve issues raised and retry the command.

PRCZ-02107: failed to find section "{0}" in the cluster manifest file "{1}"

Cause: The indicated section did not exist in the cluster manifest file provided.

Action: Ensure that an existing section is specified, or use the correct cluster manifest file.

PRCZ-02120: unable to establish SFTP connection to node "{0}"

Cause: An attempt to connect to the indicated node using SFTP failed.

Action: Ensure that the indicated node is reachable. Ensure that the SSH daemon on the indicated node is running. Examine the accompanying error messages, resolve the issues, and retry the operation.

PRCZ-02121: SFTP failure to change to directory "{0}" on node "{1}"

Cause: An attempt to change to the indicated directory on the indicated node using SFTP failed. The accompanying messages provide detailed information about the failure.

Action: Ensure that the indicated directory exists on the indicated node and that the connected user has read permission for that directory. Resolve the problems described in the accompanying messages and retry the operation.

PRCZ-02122: SFTP failure to change to the local directory "{0}"

Cause: An attempt to change to the indicated directory on the local node using SFTP failed. The accompanying messages provide detailed information about the failure.

Action: Ensure that the indicated directory exists on the local node and that the connected user has read permission for that directory. Resolve the problems described in the accompanying messages and retry the operation.

PRCZ-02123: SFTP failure to copy file "{0}" from local node to "{1}" on node "{2}"

Cause: An attempt to copy the indicated file from the local node to the indicated directory on the indicated node using SFTP failed. The accompanying messages provide detailed information about the failure.

Action: Ensure that the indicated path on the indicated node exists and is writable by the connected user. Resolve the problems described in the accompanying messages and retry the operation.

PRCZ-02124: SFTP failure to copy file "{0}" from node "{1}" to "{2}" on local node

Cause: An attempt to copy the indicated file from the indicated node to the indicated local directory using SFTP failed. The accompanying messages provide detailed information about the failure.

Action: Ensure that the indicated file exists with read permission on the indicated node and that the destination location exists with write permission on the local node. Resolve the problems described in the accompanying messages and retry the operation.

PRCZ-02125: SFTP failure to list the content of directory "{0}" on node "{1}"

Cause: An attempt to retrieve the list of files in the indicated directory on the indicated node using SFTP failed. The accompanying messages provide detailed information about the failure.

Action: Ensure that the indicated directory on the indicated node exists and the connected user has read permission. Resolve the problems described in the accompanying messages and retry the operation.

PRCZ-02126: SFTP failure to rename the file "{0}" to "{1}" on node "{2}"

Cause: An attempt to rename the indicated file on the indicated node using SFTP failed. The accompanying messages provide detailed information about the failure.

Action: Ensure that the connected user has write permission for the indicated file on the indicated node. Resolve the problems described in the accompanying messages and retry the operation.

PRCZ-02127: SFTP failure to remove file "{0}" from node "{1}"

Cause: An attempt to delete the indicated file on the indicated node using SFTP failed. The accompanying messages provide detailed information about the failure.

Action: Ensure that the connected user has write permission for the indicated file on the indicated node. Resolve the problems described in the accompanying messages and retry the operation.

PRCZ-02128: SFTP failure to change owner group for the file "{0}" to GID "{1}" on node "{2}"

Cause: An attempt to change the owner group of the indicated file to the indicated group ID on the indicated node using SFTP failed. The accompanying messages provide detailed information about the failure.

Action: Ensure that the connected user has write permission for the indicated file on the indicated node. Resolve the problems described in the accompanying messages and retry the operation.

PRCZ-02129: SFTP failure to change owning user of the file "{0}" to UID "{1}" on node "{2}"

Cause: An attempt to change the ownership of the indicated file to the indicated user ID on the indicated node using SFTP failed. The accompanying messages provide detailed information about the failure.

Action: Ensure that the connected user has write permission for the indicated file on the indicated node. Resolve the problems described in the accompanying messages and retry the operation.

PRCZ-02130: SFTP failure to change the permissions of the file "{0}" to "{1}" on node "{2}"

Cause: An attempt to change the permissions of the indicated file to the indicated permissions on the indicated node using SFTP failed. The accompanying messages provide detailed information about the failure.

Action: Ensure that the connected user has write permission for the indicated file on the indicated node. Resolve the problems described in the accompanying messages and retry the operation.

PRCZ-02131: SFTP failure to remove directory "{0}" from node "{1}"

Cause: An attempt to remove the indicated directory on the indicated node using SFTP failed. The accompanying messages provide detailed information about the failure.

Action: Ensure that the indicated directory exists on the indicated node and that the connected user has write permission for it. Resolve the problems described in the accompanying messages and retry the operation.

PRCZ-02132: SFTP failure to create directory "{0}" on node "{1}"

Cause: An attempt to create the indicated directory on the indicated node using SFTP failed. The accompanying messages provide detailed information about the failure.

Action: Ensure that the indicated directory does not already exist and also that the connected user has write permission for the path at which the directory is being created. Resolve the problems described in the accompanying messages and retry the operation.

PRCZ-02133: SFTP failure to retrieve the current working directory from node "{0}"

Cause: An attempt to retrieve the current working directory from the indicated node using SFTP failed. The accompanying messages provide detailed information about the failure.

Action: Resolve the problems described in the accompanying messages and retry the operation.

PRCZ-02134: SFTP failure to retrieve the home directory of the connected user from node "{0}"

Cause: An attempt to retrieve the connected user's home directory from the indicated node using SFTP failed. The accompanying messages provide detailed information about the failure.

Action: Resolve the problems described in the accompanying messages and retry the operation.

PRCZ-02135: SFTP failure to retrieve the file attributes for path "{0}" from node "{1}"

Cause: An attempt to retrieve the file attributes of the indicated file or directory path from the indicated node using SFTP failed. The accompanying messages provide detailed information about the failure.

Action: Ensure that the indicated file or directory path on the indicated node exists and that the connected user has read permission for it. Resolve the problems described in the accompanying messages and retry the operation.

PRCZ-02136: Failed to execute command "{0}" as user "{1}" within {2} seconds on nodes "{3}"

Cause: An attempt to run the specified command from the indicated location as the specified user within the specified time on the indicated nodes failed. The accompanying messages provide detailed information about the failure.

Action: Ensure that the specified command exists on all nodes. Ensure that the connected user has execute permission for the specified command on all nodes. Ensure that the correct password was specified for the user. Resolve the problems described in the accompanying messages and retry the operation.

PRCZ-02137: failed to create Oracle ACFS remote resource {0}

Cause: An attempt to add the Cluster Ready Services (CRS) resource for an Oracle Automatic Storage Management Cluster File System (Oracle ACFS) remote failed, possibly because the CRS stack was not running or the user running 'srvctl add acfsremote' was not the owner of the CRS home. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages and resolve any problems indicated. Then, retry the operation, ensuring that the CRS stack is running and the user running 'srvctl add acfsremote' is the owner of the CRS home.

PRCZ-02138: failed to create Oracle ACFS rolling migration resource {0}

Cause: An attempt to add the Cluster Ready Services (CRS) resource for an Oracle Automatic Storage Management Cluster File System (Oracle ACFS) Rolling Migration failed, possibly because the CRS stack was not running or the user running 'srvctl add acfsremote' was not the owner of the CRS home. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages and resolve any problems indicated. Then, retry the operation, ensuring that the CRS stack is running and the user running 'srvctl add acfsremote' is the owner of the CRS home.

PRCZ-02139: Oracle ACFS remote is not supported on a cluster where an ASM instance is configured.

Cause: An attempt to create an Oracle ACFS remote resource was rejected because it was not supported for a cluster with configured ASM instances.

Action: Use the currently configured ASM instances and disk groups for this cluster.

PRCZ-03000: invalid TFTP root directory path: '{0}'

Cause: An attempt to add or modify the TFTP resource was rejected because the format of the path for the root directory was invalid.

Action: Retry the operation specifying a valid root directory path.

PRCZ-03001: invalid TFTP server IP address: '{0}'

Cause: An attempt to add or modify the TFTP resource was rejected because the specified IP address for the TFTP server was invalid.

Action: Retry the operation specifying a valid TFTP server IP address.

PRCZ-03002: failed to locate Oracle base

Cause: A requested operation could not be completed because the ORACLE_BASE environment variable had not been set.

Action: Update Oracle base in 'orabasetab' using 'orabase' tool or finish uncompleted installation if any and retry the command.

PRCZ-04000: failed to instantiate the privileged execution plugin "{0}"

Cause: An attempt to execute a configuration operation using the indicated privilege execution plugin failed because the plugin encountered an internal error.

Action: Contact Oracle Support Services.

PRCZ-04001: failed to execute command "{0}" using the privileged execution plugin "{1}" on nodes "{2}" within {3} seconds

Cause: An attempt to execute the indicated command on the indicated nodes using the indicated remote authentication plugin failed to complete within the indicated time. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages and resolve any issues raised. Ensure that the indicated command exists and has execute permission on all nodes, the indicated

privileged execution plugin is correct, and that all arguments to it are correct, and retry the command.

PRCZ-04002: failed to execute command "{0}" using the privileged execution plugin "{1}" on nodes "{2}"

Cause: An attempt to execute the indicated command on the indicated nodes using the indicated remote authentication plugin failed. The accompanying error messages provide detailed failure information.

Action: Examine the accompanying error messages and resolve any issues raised. Ensure that the indicated command exists and has execute permission on all nodes, the indicated privileged execution plugin is correct, and that all arguments to it are correct, and retry the command.

PRCZ-04003: the privileged execution plugin "{0}" has not been initialized

Cause: An attempt was made to execute a command using the indicated privilege execution plugin before it was initialized. This is an internal error.

Action: Contact Oracle Support Services.

PRCZ-04004: invalid argument "{0}" was passed to the privilege execution plugin "{1}"

Cause: An attempt to execute a command using the indicated privilege execution plugin was made by passing the indicated invalid argument. This is an internal error.

Action: Contact Oracle Support Services.

PRCZ-04005: the file "{0}" required by privilege execution plugin "{1}" could not be created

Cause: An attempt to create the indicated file required by the indicated privilege execution plugin failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages for more information, address the reported issues, and then retry the operation.

PRCZ-04006: the string "{0}" could not be parsed to obtain the exit status of the command "{1}" executed using the privilege execution plugin "{2}"

Cause: An attempt to parse the indicated string to obtain the exit status of the indicated command executed using the indicated privilege execution plugin failed. This is an internal error.

Action: Contact Oracle Support Services.

PRCZ-04007: the file "{0}" generated by the privilege execution plugin "{1}" could not be deleted

Cause: An attempt to delete the indicated file which was generated by the indicated privilege execution plugin failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then delete the indicated file.

PRCZ-04008: the privilege execution plugin "{0}" could not read the file "{1}"

Cause: An attempt by the indicated privilege execution plugin to read the indicated file failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages for more information, address the reported issues, and then retry the operation.

PRCZ-04009: the executable file "{0}" specified for the privilege execution plugin "{1}" was not an executable

Cause: An attempt to initialize the indicated privilege execution plugin failed because the file specified as the executable for the plugin was not an executable.

Action: Reissue the command, specifying the correct path to the indicated file.

PRCZ-04010: the path "{0}" specified as the shared file system path for the privilege execution plugin "{1}" was not a directory

Cause: An attempt to initialize the indicated privilege execution plugin failed because the path specified as the shared file system path was not a directory.

Action: Reissue the 'rhpctl' command, specifying the correct shared file system path.

PRCZ-04011: Current user does not have write permission for the directory "{0}" that was specified as the shared file system path for privilege execution plugin "{1}".

Cause: An attempt to initialize the indicated privilege execution plugin failed because the path specified as the shared file system path did not have write permission for the current user.

Action: Reissue the 'rhpctl' command, specifying the correct shared file system path.

PRCZ-04012: The directory structure of the shared file system path "{0}" does not match the expected directory set up for the privilege execution plugin "{1}".

Cause: An attempt to initialize the indicated privilege execution plugin failed because the path specified as the shared file system path did not have the expected directory structure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error message for more information, address the reported issues and then retry the operation.

PRCZ-04013: Failed to copy file "{0}" to directory "{1}".

Cause: An attempt to copy the indicated file to from the indicated location to the indicated directory failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error message for more information, address the reported issues and then retry the operation.

PRCZ-04014: Failed to execute the command "{0}" on nodes "{1}" using the privilege execution plugin "{2}".

Cause: An attempt to execute the indicated command on the indicated nodes using the indicated privilege execution plugin failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error message for more information, address the reported issues and then retry the operation.

PRCZ-04015: failed to execute the command "{0}" within "{1}" seconds on nodes "{2}" using the privilege execution plugin "{3}"

Cause: An attempt to execute the indicated command on the indicated nodes using the indicated privilege execution plugin with in the indicated time limit failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error message for more information, address the reported issues and then retry the operation.

PRCZ-04016: the path "{0}" is not a file

Cause: An attempt to copy the indicated file failed because the indicated location was a directory, the file did not exist, or the file could not be opened.

Action: Ensure that the indicated location points to a file, and it is not a directory and the current user has read permission on the file, and then retry the operation.

PRCZ-04017: The path "{0}", specified as the location for configuration files for the privilege execution plugin "{1}", is not a directory.

Cause: An attempt to initialize the indicated privilege execution plugin failed because the indicated path specified as the location for writing configuration files did not point to a directory.

Action: Reissue the 'rhpctl' command, specifying a path indicating a writable directory.

PRCZ-04018: Current user does not have write permission for the directory "{0}" that was specified as the location of configuration files for privilege execution plugin "{1}".

Cause: An attempt to initialize the indicated privilege execution plugin failed because the path specified as the location of configuration files did not have write permission for the current user.

Action: Reissue the 'rhpctl' command, specifying a path indicating a writable directory.

PRCZ-04019: Unexpected output from the command "{0}" executed on node "{1}" using the privilege execution plugin "{2}". Thread id mismatch: Expected={3}, Actual={4}

Cause: An attempt to execute the indicated command on the indicated node using the indicated privilege execution plugin was not successful as indicated by the fact that its output displayed an unexpected thread ID. This was most likely due to the command picking up an incorrect or corrupted configuration file.

Action: Ensure that the correct configuration file is being picked up by the command execution script.

PRCZ-04022: Privileged user credentials for node "{0}" were not found while executing commands using privilege execution plugin "{1}".

Cause: An attempt to retrieve the privileged user credentials for the indicated node failed.

Action: Use the command '<GI_HOME>/rhp/auth/creds' to store the credentials of the privileged user on the indicated node and then retry this command.

PRCZ-04025: Unable to add CVU resource as a user other than {0}

Cause: An attempt to add the CVU resource was rejected because it was attempted by a user other than the Grid Infrastructure user.

Action: Retry the operation as the indicated Grid Infrastructure user.

PRCZ-04030: failed to create pluggable database {0} for database {1}

Cause: An attempt to create the specified pluggable database failed.

Action: Examine the accompanying error messages for details, resolve the reported issues, and retry the operation.

PRCZ-04031: User is not authorized to create pluggable database {0} for database {1}.

Cause: An attempt to create the specified pluggable database failed because the command was not issued by the Oracle home owner.

Action: Examine the accompanying error messages for details. Log in as the Oracle home user to issue the command.

PRCZ-04032: failed to create service {0} for pluggable database {1} with '-cardinality' option instead of '-preferred' option.

Cause: An attempt to create the specified service was rejected because '-cardinality' option was not specified for previously created services for this pluggable database.

Action: Reissue the command with '-preferred' option.

PRCZ-04033: failed to remove all pluggable databases configured for database {0}

Cause: An attempt to remove all pdba configured for database failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCZ-04034: failed to modify the cardinality of the pluggable database {0}

Cause: An attempt to modify the cardinality of the specified pluggable database failed because the '-cardinality' option was not used while adding the pluggable database.

Action: Retry the operation without specifying the '-cardinality' option

PRCZ-04035: failed to create pluggable database {0} for database {1} without '-cardinality' option

Cause: An attempt to create the specified pluggable database failed because the management policy of the database was RANK or the '-cardinality' was specified for previously created pluggable databases for this database.

Action: Retry the operation specifying the '-cardinality' option.

PRCZ-04036: failed to create pluggable database {0} with '-cardinality' option because this option was not specified for the previously created pluggable databases for database {1}

Cause: An attempt to create the specified pluggable database was rejected because the '-cardinality' option was not specified for the previously created pluggable databases.

Action: Retry the operation without specifying the '-cardinality' option.

PRCZ-04037: failed to modify service {0} with '-pdb' option for an administrator managed pluggable database {1}

Cause: An attempt to modify the specified service failed because the pluggable database name passed does not exist.

Action: Reissue the command with a pluggable database name that already exists.

PRCZ-04038: failed to relocate pluggable databases of database {0}

Cause: An attempt to relocate the pluggable databases of the specified database failed.

Action: Review the accompanying error messages for details about the failure. Retry after resolving those issues.

PRCZ-04039: failed to create a connection string for database {0}

Cause: An attempt to create a connection string for the specified database failed because the indicated database did not have an opened read/write instance configured.

Action: Use the command 'srvctl status database' to make sure that an opened read/write instance is running, then retry the operation.

PRCZ-04040: failed to create a connection string for database {0}

Cause: An attempt to create a connection string for the specified database failed.

Action: Examine the accompanying error messages for details, resolve the reported issues, and retry the operation.

PRCZ-04044: failed to create service {0} for database {1} without '-pdb' option

Cause: An attempt to create the specified service failed because the '-pdb' option was not specified along with the '-cardinality' option.

Action: Retry the operation specifying the '-pdb' option.

PRCZ-04045: The minimum CPU unit {0} is invalid.

Cause: An invalid value was supplied as the minimum CPU unit.

Action: The minimum CPU unit should be equal to or greater than 10. It should be entered in hundredths of CPU (1/100).

PRCZ-04050: management policy for database {0} is {1} which is not compatible with AUTOMATIC management policy for the pluggable database {2}

Cause: An attempt to create or modify a pluggable database (PDB) was rejected because the management policy specified was AUTOMATIC but the database's management policy was NORESTART or USERONLY.

Action: Ensure that the provided management policy of the PDB is MANUAL when running the 'srvctl add pdb', or 'srvctl modify pdb' command.

PRCZ-04051: management policy for database {1} is not RANK which is not compatible with RESTART management policy for the pluggable database {0}

Cause: An attempt to create or modify a pluggable database (PDB) was rejected because the management policy specified was RESTART but the database's management policy was not RANK.

Action: Retry the command after modifying the management policy of the database using the 'srvctl modify database' command.

PRCZ-04052: Management policy {0} for the pluggable database {1} is not RESTART, and is not compatible with RANK management policy for the database {2}.

Cause: An attempt to create or modify a pluggable database (PDB) was rejected because the management policy specified was not RESTART but the management policy of the database was RANK.

Action: Retry the command after modifying the database management policy using the 'srvctl modify database' command.

PRCZ-04053: Database {0} could not be removed because it was running

Cause: The command 'srvctl remove database' failed because the database was running.

Action: Stop the database by using the command 'srvctl stop database' and then attempt to remove it. You can also use the '-force' option to remove the running database.

PRCZ-04054: Resource {0} is already running on nodes {1}.

Cause: An attempt was made to start a resource that was already running on a node.

Action: If the resource is already running, then no action is needed. Use the command 'srvctl status *object*' to determine whether it is running.

PRCZ-04055: HTTP GET request "{0}" failed.

Cause: An attempt to request the specified resource failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRCZ-04056: received unexpected HTTP response with status code "{0}"

Cause: An HTTP request returned an unexpected response.

Action: Review the accompanying Oracle GoldenGate error messages, fix the problem, and retry.

PRCZ-04057: HTTP POST request "{0}" failed.

Cause: The specified HTTP POST request failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRCZ-04058: Failed to initialize Rapid Home Provisioning Client {0} in the privilege execution plugin {1}

Cause: An attempt to initialize the indicated Rapid Home Provisioning Client in the indicated privilege execution plugin failed.

Action: Examine the accompanying error message for more information, address the reported issues and then retry the operation.

PRCZ-04059: failed to create service {0} for pluggable database {1} with '-preferred' option instead of '-cardinality' option.

Cause: An attempt to create the specified service was rejected because '-cardinality' option was specified for a previously created pluggable database.

Action: Reissue the command with '-cardinality' option.

PRCZ-04060: Resources {0} are already enabled.

Cause: An attempt was made to enable resources that were already enabled.

Action: No action needed. To enable the resources, first disable them and then retry.

PRCZ-04061: Resources {0} are already disabled.

Cause: An attempt was made to disable resources that were already disabled.

Action: No action needed. To disable the resources, first enable them and then retry.

PRCZ-04062: Resources {0} are already enabled on node {1}.

Cause: An attempt was made to enable resources that are already enabled on a node.

Action: No action needed. To enable the resources, first disable them and then retry.

PRCZ-04063: Resources {0} are already disabled on node {1}.

Cause: An attempt was made to disable resources that are already disabled on a node.

Action: No action needed. To disable the resources, first enable them and then retry.

PRCZ-04064: pluggable database {0} was not created with cardinality

Cause: An attempt to modify the rank of the specified pluggable database was rejected because the -cardinality option was not used while adding the pluggable database.

Action: Retry the operation without specifying the '-rank' option.

PRCZ-04065: HTTP request failed with the response code "{0}" and response message "{1}"

Cause: The HTTP request failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRCZ-04066: The HTTP REST request failed with the error code "{0}" and error message "{1}"

Cause: The HTTP REST request failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRCZ-04067: failed to start pluggable databases for database {0}

Cause: An attempt to start pluggable databases for the indicated database failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCZ-04068: failed to stop pluggable databases for database {0}

Cause: An attempt to stop the pluggable databases for the indicated database failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCZ-04069: failed to stop pluggable databases for database {0} on nodes {1}

Cause: An attempt to stop the pluggable databases for the indicated database on specified nodes failed.

Action: Review the accompanying error messages for details about failure. Retry after resolving those issues.

PRCZ-04070: The specified key file path "{0}" is not a valid key file

Cause: Indicated key file path is not a valid key file.

Action: Specify a proper key file and retry the operation.

PRCZ-04071: The SSH Command "{0}" failed as it did not return any output upon execution on node "{1}"

Cause: The HTTP REST request failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRCZ-04072: Database "{0}" is not in transfer mode.

Cause: An attempt to revert the transfer mode was rejected because the transfer mode was not active in the specified database.

Action: No action needed. To revert a transfer, first start it and then retry.

PRCZ-04073: Database "{0}" is already in transfer mode.

Cause: An attempt to start a transfer process was rejected because the indicated database was already in transfer mode.

Action: No action needed. To start a transfer, finish the existing transfer process and then retry.

PRCZ-04074: failed to create the Memory Guard resource

Cause: An attempt to create the Memory Guard resource failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGC-01000 to PRGC-01047

PRGC-01000: Internal error [# {0} #].

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRGC-01001: OCI API "{0}" called by OCI user "{1}" failed for resource with OCID "{2}".

Cause: The indicated Oracle Cloud Infrastructure (OCI) API call made by the specified OCI user for the resource with the indicated Oracle Cloud Identifier (OCID) returned an unexpected response.

Action: Review the accompanying error messages. Ensure that the indicated resource OCID is valid, the specified OCI user has appropriate privileges to access the OCI resource, and then retry the operation.

PRGC-01002: The body of the response for OCI API "{0}" called by OCI user "{1}" for resource with OCID "{2}" does not contain property "{3}".

Cause: The body of the response for the indicated Oracle Cloud Infrastructure (OCI) API call made by the specified OCI user for the resource with the indicated Oracle Cloud Identifier (OCID) did not include the indicated property.

Action: Ensure that the indicated resource OCID is valid, the specified OCI user has appropriate privileges to access the OCI resource, and then retry the operation.

PRGC-01003: failed to unzip client credentials for Autonomous Database with OCID "{0}"

Cause: An attempt to unzip the client credentials downloaded for the Autonomous Database with the specified Oracle Cloud Identifier (OCID) failed.

Action: Review the accompanying error messages. Ensure that the specified OCID is valid, the Oracle Cloud Infrastructure API GenerateAutonomousDatabaseWallet returns a valid response for the specified OCID, and then retry the operation.

PRGC-01004: failed to parse OCI SDK configuration file "{0}"

Cause: The specified Oracle Cloud Infrastructure (OCI) Software Development Kit (SDK) configuration file could not be parsed.

Action: Review the Oracle Cloud Infrastructure documentation for information about SDK and CLI configuration files, ensure that the specified SDK configuration file exists and contains all required entries, and then retry the operation.

PRGC-01005: OCI SDK configuration file "{0}" is missing required entry "{1}".

Cause: The specified Oracle Cloud Infrastructure (OCI) Software Development Kit (SDK) configuration file was missing the indicated entry.

Action: Review the Oracle Cloud Infrastructure documentation for information about SDK and CLI configuration files, ensure that the specified SDK configuration file contains all required entries, and then retry the operation.

PRGC-01006: failed to upload object to OCI Object Store bucket "{0}" as OCI user "{1}"

Cause: An attempt to upload an object to the specified Oracle Cloud Infrastructure (OCI) Object Store bucket as the specified OCI user failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01007: failed to delete object "{0}" in OCI Object Store bucket "{1}" as OCI user "{2}"

Cause: An attempt to delete the indicated object in the specified Oracle Cloud Infrastructure (OCI) Object Store bucket as the specified OCI user failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01008: Private key generated with a passphrase is not supported.

Cause: The specified Oracle Cloud Infrastructure (OCI) Software Development Kit (SDK) configuration file contained an encrypted private key.

Action: Generate the private key without a passphrase, and then retry the operation.

PRGC-01009: failed to create an Auth Token for OCI user "{0}"

Cause: An attempt to create an Auth Token for the specified Oracle Cloud Infrastructure (OCI) user failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01010: failed to delete Auth Token with OCID "{0}" for OCI user "{1}"

Cause: An attempt to delete the Auth Token with the indicated Oracle Cloud Identifier (OCID) for the specified Oracle Cloud Infrastructure (OCI) user failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01011: failed to list Auth Tokens for OCI user "{0}"

Cause: An attempt to list Auth Tokens for the specified Oracle Cloud Infrastructure (OCI) user failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01012: failed to get details of OCI Stream "{0}"

Cause: An attempt to get details for the specified Oracle Cloud Infrastructure (OCI) Stream failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01013: failed to publish message to OCI Stream "{0}"

Cause: An attempt to publish a message to the specified Oracle Cloud Infrastructure (OCI) Stream failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01014: failed to consume messages from OCI Stream "{0}"

Cause: An attempt to consume messages from the specified Oracle Cloud Infrastructure (OCI) Stream failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01015: failed to create an OBO token

Cause: An attempt to create an On-Behalf-Of (OBO) token failed.

Action: Review the accompanying error messages, and contact Oracle Cloud Infrastructure (OCI) operations.

PRGC-01016: failed to deserialize user principal "{0}"

Cause: An attempt to deserialize the specified user principal failed.

Action: Review the accompanying error messages, and contact Oracle Cloud Infrastructure (OCI) operations.

PRGC-01017: failed to create a private endpoint in OCI subnet "{0}"

Cause: An attempt to create a private endpoint in the specified Oracle Cloud Infrastructure (OCI) subnet failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01018: timed out waiting for lifecycle state of private endpoint "{0}" to become AVAILABLE

Cause: An attempt to create a new private endpoint failed.

Action: Delete the indicated private endpoint, and create a new private endpoint.

PRGC-01019: failed to verify availability of private endpoint "{0}"

Cause: An attempt to verify whether the indicated private endpoint was available to use failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01020: failed to enable reverse connection for private endpoint "{0}"

Cause: An attempt to enable reverse connection for the indicated private endpoint failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01021: timed out waiting for reverse connection for private endpoint "{0}" to become AVAILABLE

Cause: An attempt to enable reverse connection for the indicated private endpoint failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01022: failed to verify availability of reverse connection for private endpoint "{0}"

Cause: An attempt to verify whether reverse connection was enabled for the indicated private endpoint failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01023: failed to disable reverse connection for private endpoint "{0}"

Cause: An attempt to disable reverse connection for the indicated private endpoint failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01024: failed to create a reverse connection NAT IP for private endpoint "{0}" and customer IP address "{1}"

Cause: An attempt to get a reverse connection Network Address Translated (NAT) IP for the specified private endpoint and customer IP address failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01025: timed out waiting for reverse connection NAT IP for private endpoint "{0}" and customer IP address "{1}" to become AVAILABLE

Cause: An attempt to create a reverse connection Network Address Translated (NAT) IP for the specified private endpoint and customer IP address failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01026: failed to verify availability of reverse connection for private endpoint "{0}"

Cause: An attempt to verify whether a reverse connection Network Address Translated (NAT) IP for the specified private endpoint and customer IP address was available failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01027: failed to delete a reverse connection NAT IP for private endpoint "{0}" and customer IP address "{1}"

Cause: An attempt to delete a reverse connection Network Address Translated (NAT) IP for the specified private endpoint and customer IP address failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01028: failed to delete private endpoint "{0}"

Cause: An attempt to delete the specified private endpoint failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01029: timed out waiting for lifecycle state of private endpoint "{0}" to become TERMINATED

Cause: An attempt to delete the specified private endpoint failed.

Action: Review the accompanying error messages, and contact ZDM cloud service operations.

PRGC-01030: failed to verify termination of private endpoint "{0}"

Cause: An attempt to verify whether the indicated private endpoint was terminated failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01031: reverse connection is enabled for private endpoint "{0}"

Cause: An attempt to delete the specified private endpoint was rejected because reverse connection was enabled for the private endpoint.

Action: Terminate reverse connection for the private endpoint, and then retry the operation.

PRGC-01032: reverse connection NAT IPs exist for private endpoint "{0}"

Cause: An attempt to delete the specified private endpoint was rejected because reverse connection Network Address Translated (NAT) IPs are currently associated with the private endpoint.

Action: Delete the reverse connection NAT IPs for the private endpoint, and then retry the operation.

PRGC-01033: failed to get details of private endpoint "{0}"

Cause: An attempt to get details of the indicated private endpoint failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01034: failed to list private endpoints in OCI compartment "{0}"

Cause: An attempt to list all private endpoints in the specified Oracle Cloud Infrastructure (OCI) compartment failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01035: timed out waiting for lifecycle state of reverse connection configuration for private endpoint "{0}" to become TERMINATED

Cause: An attempt to terminate reverse connection configuration for the specified private endpoint failed.

Action: Review the accompanying error messages, and contact Oracle Cloud Infrastructure (OCI) operations.

PRGC-01036: failed to verify termination of reverse connection configuration for private endpoint "{0}"

Cause: An attempt to verify whether reverse connection configuration was terminated for the specified private endpoint failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01037: timed out waiting for lifecycle state of reverse connection NAT IP for private endpoint "{0}" and customer IP "{1}" to become TERMINATED

Cause: An attempt to terminate the reverse connection Network Address Translated (NAT) IP for the specified private endpoint and customer IP failed.

Action: Review the accompanying error messages, and contact Oracle Cloud Infrastructure (OCI) operations.

PRGC-01038: failed to verify termination of reverse connection NAT IP for private endpoint "{0}" and customer IP "{1}"

Cause: An attempt to verify whether the reverse connection Network Address Translated (NAT) IP for the specified private endpoint and customer IP was terminated failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01039: Zero Downtime Migration Cloud Service (ZDMCS) property file {0} does not exist

Cause: An attempt to locate the specified ZDMCS property file failed.

Action: Ensure that the path and name of the ZDMCS property file are entered correctly and that the file exists and is readable.

PRGC-01040: failed to initialize metrics framework "{0}"

Cause: An attempt to initialize the metrics framework to push Telemetry System metrics failed.

Action: Ensure that the Telemetry System configuration parameters specified are valid and correct and then retry the operation.

PRGC-01041: no public domain name for "{0}" available

Cause: An attempt to retrieve a public domain based on region failed because there is no public domain available.

Action: Ensure that the public domain exists for the region provided.

PRGC-01042: invalid T2_JOB_INTERVAL parameter "{0}"

Cause: An invalid T2_JOB_INTERVAL parameter was specified.

Action: Ensure that a valid T2_JOB_INTERVAL is specified in the Zero Downtime Migration Cloud Service property file.

PRGC-01043: Private endpoint "{0}" is not available.

Cause: An attempt to enable reverse connection for the specified private endpoint was rejected because the lifecycle state of the private endpoint was not available.

Action: Retry the operation either after restoring the private endpoint to an available state or by specifying a different private endpoint.

PRGC-01044: failed to get private IP address of Autonomous Database "{0}"

Cause: An attempt to create a reverse connection enabled private endpoint failed because the private IP address of the specified Autonomous Database could not be obtained.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01045: Private IP address was not specified to create a reverse connection enabled private endpoint.

Cause: An attempt to create a reverse connection enabled private endpoint was rejected because of missing private IP address.

Action: Retry the operation specifying a private IP address.

PRGC-01046: failed to retrieve contents of secret "{0}"

Cause: An attempt to retrieve the contents of the specified Oracle Cloud Infrastructure (OCI) secret failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGC-01047: failed to create a pre-authenticated URL for OCI Object Store bucket "{0}"

Cause: An attempt to create a pre-authenticated URL for the specified Oracle Cloud Infrastructure (OCI) Object Store bucket failed.

Action: Review the accompanying error messages, resolve the issues, and then retry the operation.

PRGD-01000 to PRGD-01050

PRGD-01000: internal error [# {0} #]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRGD-01001: failed to connect to Oracle database using URL "{0}"

Cause: An attempt to establish a connection to an Oracle database using the specified URL failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01002: SELECT statement "{0}" execution as user "{1}" failed for database with Java Database Connectivity (JDBC) URL "{2}"

Cause: An attempt to execute the specified query for the specified database as the specified user failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01003: query to retrieve information from V\$DATABASE failed

Cause: An attempt to query V\$DATABASE failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01004: failed to retrieve the major version number of database "{0}" as user "{1}"

Cause: An attempt to retrieve the major version number of the specified database as the specified user failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01005: query to retrieve value of ENABLE_GOLDENGATE_REPLICATION parameter failed

Cause: An attempt to query the database parameter failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01006: query to retrieve information from DBA_GOLDENGATE_SUPPORT_MODE failed

Cause: An attempt to query the DBA_GOLDENGATE_SUPPORT_MODE static data dictionary view failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01007: query to retrieve information from DBA_GOLDENGATE_PRIVILEGES failed

Cause: An attempt to query the DBA_GOLDENGATE_PRIVILEGES static data dictionary view failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01008: query to retrieve information from CDB_GOLDENGATE_PRIVILEGES failed

Cause: An attempt to query the CDB_GOLDENGATE_PRIVILEGES static data dictionary view failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01009: query to retrieve information from DBA_OBJECTS failed

Cause: An attempt to query the DBA_OBJECTS static data dictionary view failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01010: query to retrieve information from DBA_PDBS failed

Cause: An attempt to query the DBA_PDBS static data dictionary view failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01011: query to retrieve value of STREAMS_POOL_SIZE parameter failed

Cause: An attempt to query the database parameter failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01012: failed to execute SQL statement as user "{0}" for database with Java Database Connectivity (JDBC) URL "{1}"

Cause: An attempt to execute a SQL statement for the specified database as the specified user failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01013: query to retrieve information from GLOBAL_NAME failed

Cause: An attempt to query the GLOBAL_NAME data dictionary view failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01014: creation of database link "{0}" failed

Cause: An attempt to create the specified database link failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01015: removal of database link "{0}" failed

Cause: An attempt to remove the specified database link failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01016: stored procedure "{0}" execution as user "{1}" failed for database with Java Database Connectivity (JDBC) URL "{2}"

Cause: An attempt to execute the specified stored procedure for the specified database as the specified user failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01017: query to identify the Oracle home failed

Cause: An attempt to query the Oracle home of the database failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01018: failed to set parameter GLOBAL_NAMES to "{0}"

Cause: An attempt to set the value of Oracle database parameter GLOBAL_NAMES to the specified value failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01019: creation of Data Pump job "{0}" with operation type "{1}" failed

Cause: An attempt to declare the specified Data Pump job using the DBMS_DATAPUMP.OPEN procedure failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01020: failed to add dump files to the dump file set for Data Pump job "{0}"

Cause: An attempt to add dump files to the dump file set for the indicated Data Pump job using the DBMS_DATAPUMP.ADD_FILE procedure failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01021: failed to get status of Data Pump job "{0}"

Cause: An attempt to get the status of the indicated Data Pump job using the DBMS_DATAPUMP.GET_STATUS procedure failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01022: failed to set filters for Data Pump job "{0}" to restrict objects being migrated

Cause: An attempt to set filters for the indicated Data Pump job using the DBMS_DATAPUMP.METADATA_FILTER procedure failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01023: failed to set parameter "{0}" for Data Pump job "{1}"

Cause: An attempt to set the indicated parameter for the indicated Data Pump job using the DBMS_DATAPUMP.SET_PARAMETER procedure failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01024: failed to start Data Pump job "{0}"

Cause: An attempt to start the indicated Data Pump job using the DBMS_DATAPUMP.START_JOB procedure failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01025: failed to store credentials in Autonomous Database

Cause: An attempt to store credentials in an Autonomous Database using the DBMS_CLOUD.CREATE_CREDENTIAL procedure failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01026: failed to remove an existing credential from Autonomous Database

Cause: An attempt to remove an existing credential from an Autonomous Database using the DBMS_CLOUD.DROP_CREDENTIAL procedure failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01027: failed to read an object from OCI Object Storage and copy it to Autonomous Database

Cause: An attempt to copy an object from Oracle Cloud Infrastructure (OCI) Object Storage to Autonomous Database using the DBMS_CLOUD.GET_OBJECT procedure failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01028: failed to create database link "{0}" from Autonomous Database to on-premise database

Cause: An attempt to create the indicated database link from an Autonomous Database to an on-premise database using the DBMS_CLOUD_ADMIN.CREATE_DATABASE_LINK procedure failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01029: failed to drop database link "{0}" from Autonomous Database to on-premise database

Cause: An attempt to drop the indicated database link from an Autonomous Database to an on-premise database using the DBMS_CLOUD_ADMIN.DROP_DATABASE_LINK procedure failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01030: query to retrieve information from DBA_DIRECTORIES failed

Cause: An attempt to query the DBA_DIRECTORIES static data dictionary view failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01031: query to retrieve information from DBA_DB_LINKS failed

Cause: An attempt to query the DBA_DB_LINKS static data dictionary view failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01032: creation of directory object "{0}" failed

Cause: An attempt to create the specified directory object failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01033: removal of directory object "{0}" failed

Cause: An attempt to remove the specified directory object failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01034: failed to store credentials in database

Cause: An attempt to store credentials in an Oracle database using the DBMS_CREDENTIAL.CREATE_CREDENTIAL procedure failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01035: failed to remove an existing credential object from database

Cause: An attempt to remove an existing credential object from an Oracle database using the DBMS_CREDENTIAL.DROP_CREDENTIAL procedure failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01036: query to retrieve value of DB_UNIQUE_NAME failed

Cause: An attempt to query the database unique name failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01037: query to retrieve invalid objects from DBA_OBJECTS failed

Cause: An attempt to query the invalid objects failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01038: failed to fix invalid schema objects

Cause: An attempt to fix the invalid objects failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01039: failed to execute SQL file {0}

Cause: An attempt to execute SQL file failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01040: failed to execute SQL file {0} line {1}

Cause: An attempt to execute SQL file failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01041: invalid parameter {0} specified for procedure {1}

Cause: An attempt to migrate the database failed as the specified procedure parameter was invalid.

Action: Refer to the product documentation for supported values, resolve the underlying errors, and retry.

PRGD-01042: query to retrieve information from database view {0} failed

Cause: An attempt to query the indicated database view failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01043: failed to stop Data Pump job "{0}"

Cause: An attempt to stop the specified Data Pump job using the DBMS_DATAPUMP.STOP procedure failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01044: query to retrieve tablespace information from database view {0} failed

Cause: An attempt to query the indicated database view failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01045: query to retrieve value of DB SID failed

Cause: An attempt to query the database sid failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01046: failed to create file "{0}" in directory "{1}"

Cause: An attempt to create a file in the specified directory failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01047: failed to remove file "{0}" from directory "{1}"

Cause: An attempt to remove a file from the specified directory failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01048: failed to suspend Data Pump job "{0}"

Cause: An attempt to suspend the specified Data Pump job using the DBMS_DATAPUMP.STOP procedure failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01049: failed to analyze Data Pump job log file {0}.log

Cause: An attempt to analyze the specified Data Pump log failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGD-01050: failed to read the object "{0}" from Amazon S3 bucket and copy it to Oracle Autonomous Database

Cause: An attempt to copy an object from Amazon S3 bucket to Oracle Autonomous Database using the DBMS_CLOUD.GET_OBJECT procedure failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01000 to PRGG-01049

PRGG-01000: internal error [# {0} #]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRGG-01001: HTTP GET request "{0}" failed.

Cause: An attempt to request the indicated resource failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01002: received unexpected HTTP response with status code "{0}"

Cause: An HTTP request returned the unexpected response.

Action: Review the accompanying Oracle GoldenGate error messages, fix the problem, and retry.

PRGG-01003: failed to list the Oracle GoldenGate Microservices deployments on Oracle GoldenGate hub "{0}"

Cause: An attempt to list the Oracle GoldenGate Microservices deployments on the specified Oracle GoldenGate hub failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01004: failed to retrieve details of Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}"

Cause: An attempt to retrieve details of the specified Oracle GoldenGate Microservices deployment on the specified Oracle GoldenGate hub failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01005: failed to list the Oracle GoldenGate services in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}"

Cause: An attempt to list the Oracle GoldenGate services in the specified Oracle GoldenGate Microservices deployment on the specified Oracle GoldenGate hub failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01006: failed to retrieve details of Oracle GoldenGate service "{0}" in Oracle GoldenGate Microservices deployment "{1}" on Oracle GoldenGate hub "{2}"

Cause: An attempt to retrieve details of the indicated Oracle GoldenGate service in the specified Oracle GoldenGate Microservices deployment on the specified Oracle GoldenGate hub failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01007: failed to retrieve detailed information for the health of Oracle GoldenGate service "{0}" in Oracle GoldenGate Microservices deployment "{1}" on Oracle GoldenGate hub "{2}"

Cause: An attempt to retrieve detailed information for the health of the indicated Oracle GoldenGate service in the specified Oracle GoldenGate Microservices deployment on the specified Oracle GoldenGate hub failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01008: failed to retrieve detailed information for the health of the Service Manager on Oracle GoldenGate hub "{0}"

Cause: An attempt to retrieve detailed information for the health of the Service Manager on the specified Oracle GoldenGate hub failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01009: HTTP POST request "{0}" failed.

Cause: An attempt to make the indicated HTTP POST request failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01010: failed to create alias "{0}" for user "{1}" in credential store domain "{2}" in Oracle GoldenGate Microservices deployment "{3}" on Oracle GoldenGate hub "{4}"

Cause: An attempt to create the indicated alias in the indicated credential store domain in the specified Oracle GoldenGate Microservices deployment on the specified Oracle GoldenGate hub failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01011: failed to retrieve the list of domains in the credential store in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}"

Cause: An attempt to retrieve the list of domains in the credential store in the specified Oracle GoldenGate Microservices deployment on the specified Oracle GoldenGate hub failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01012: failed to retrieve the list of aliases for credential store domain "{0}" in Oracle GoldenGate Microservices deployment "{1}" on Oracle GoldenGate hub "{2}"

Cause: An attempt to retrieve the list of aliases for the indicated domain in the credential store in the specified Oracle GoldenGate Microservices deployment on the specified Oracle GoldenGate hub failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01013: failed to retrieve information for alias "{0}" in credential store domain "{1}" in Oracle GoldenGate Microservices deployment "{2}" on Oracle GoldenGate hub "{3}"

Cause: An attempt to retrieve information for the indicated alias in the indicated credential store domain in the specified Oracle GoldenGate Microservices deployment on the specified Oracle GoldenGate hub failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01014: HTTP DELETE request "{0}" failed.

Cause: An attempt to make the indicated HTTP DELETE request failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01015: failed to delete alias "{0}" in credential store domain "{1}" in Oracle GoldenGate Microservices deployment "{2}" on Oracle GoldenGate hub "{3}"

Cause: An attempt to delete the indicated alias in the indicated credential store domain in the specified Oracle GoldenGate Microservices deployment on the specified Oracle GoldenGate hub failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01016: The user name and password associated with alias "{0}" in credential store domain "{1}" in Oracle GoldenGate Microservices deployment "{2}" on Oracle GoldenGate hub "{3}" are not valid.

Cause: The user name and password associated with the indicated alias in the indicated credential store domain in the specified Oracle GoldenGate Microservices deployment on the specified Oracle GoldenGate hub were not valid.

Action: Specify the correct user name and password, and retry.

PRGG-01017: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to enable schema-level supplemental logging for database schema "{2}" using database connection "{3}".

Cause: An attempt to enable schema-level supplemental logging for the specified database schema failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01018: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to remove schema-level supplemental logging for database schema "{2}" using database connection "{3}".

Cause: An attempt to remove schema-level supplemental logging for the specified database schema failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01019: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to determine whether schema-level supplemental logging is enabled for database schema "{2}" using database connection "{3}".

Cause: An attempt to determine whether schema-level supplemental logging was enabled for the specified database schema failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01020: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to create the heartbeat table for database connection "{2}".

Cause: An attempt to create the heartbeat table for the specified database failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01021: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to remove the heartbeat table for database connection "{2}".

Cause: An attempt to remove the heartbeat table for the specified database failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01022: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to retrieve details about the heartbeat table for database connection "{2}".

Cause: An attempt to retrieve details about the heartbeat table for the specified database failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01023: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to create Oracle GoldenGate extract process "{2}" for database "{3}".

Cause: An attempt to create the specified Oracle GoldenGate extract process for the specified database failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01024: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to retrieve current status of Oracle GoldenGate extract process "{2}".

Cause: An attempt to retrieve the current status of the specified Oracle GoldenGate extract process failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01025: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to delete Oracle GoldenGate extract process "{2}".

Cause: An attempt to delete the specified Oracle GoldenGate extract process failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01026: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to start process "{2}" of type "{3}".

Cause: An attempt to start the specified Oracle GoldenGate process failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01027: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to stop process "{2}" of type "{3}".

Cause: An attempt to stop the specified Oracle GoldenGate process failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01028: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to manage Oracle GoldenGate checkpoint table for database connection "{2}".

Cause: An attempt to manage Oracle GoldenGate checkpoint table for the specified database failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01029: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to create Oracle GoldenGate Replicat process "{2}" for database "{3}".

Cause: An attempt to create the specified Oracle GoldenGate Replicat process for the indicated database failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01030: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to retrieve current status of Oracle GoldenGate Replicat process "{2}".

Cause: An attempt to retrieve the current status of the specified Oracle GoldenGate Replicat process failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01031: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to delete Oracle GoldenGate replicat process "{2}".

Cause: An attempt to delete the specified GoldenGate replicat process failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01032: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to retrieve heartbeat table entries for Oracle GoldenGate process "{2}" using database connection "{3}".

Cause: An attempt to retrieve heartbeat table entries for the specified Oracle GoldenGate process failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01033: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to purge trail files.

Cause: An attempt to purge trail files failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01034: HTTP PATCH request "{0}" failed.

Cause: An attempt to perform the indicated HTTP PATCH request failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01035: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to modify the heartbeat table parameters for database connection "{2}".

Cause: An attempt to modify the heartbeat table parameters for the specified database failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01036: failed to create configuration file "{0}" for Oracle GoldenGate Microservices deployment "{1}" on Oracle GoldenGate hub "{2}"

Cause: An attempt to create the indicated configuration file for the specified Oracle GoldenGate Microservices deployment on the specified Oracle GoldenGate hub failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01037: failed to list configuration files for Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}"

Cause: An attempt to list all configuration files for the specified Oracle GoldenGate Microservices deployment on the specified Oracle GoldenGate hub failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01038: failed to retrieve configuration file "{0}" for Oracle GoldenGate Microservices deployment "{1}" on Oracle GoldenGate hub "{2}"

Cause: An attempt to retrieve the indicated configuration file for the specified Oracle GoldenGate Microservices deployment on the specified Oracle GoldenGate hub failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01039: failed to replace configuration file "{0}" for Oracle GoldenGate Microservices deployment "{1}" on Oracle GoldenGate hub "{2}"

Cause: An attempt to replace the indicated configuration file for the specified Oracle GoldenGate Microservices deployment on the specified Oracle GoldenGate hub failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01040: User name "{0}" is not valid for non-multitenant database "{1}".

Cause: An attempt to connect to the specified non-multitenant database was rejected because the specified database user name began with C## or c##.

Action: Specify the correct database user name, and retry.

PRGG-01041: failed to retrieve output trail file statistics for Oracle GoldenGate Extract process "{0}" using Oracle GoldenGate Microservices deployment "{1}" on Oracle GoldenGate hub "{2}"

Cause: An attempt to retrieve output trail statistics for the indicated Oracle GoldenGate Extract process using the specified Oracle GoldenGate Microservices deployment on the specified Oracle GoldenGate hub failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01042: failed to retrieve input trail file statistics for Oracle GoldenGate Replicat process "{0}" using Oracle GoldenGate Microservices deployment "{1}" on Oracle GoldenGate hub "{2}"

Cause: An attempt to retrieve input trail statistics for the indicated Oracle GoldenGate Replicat process using the specified Oracle GoldenGate Microservices deployment on the specified Oracle GoldenGate hub failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01043: No heartbeat table entries were found for Oracle GoldenGate Replicat process "{0}".

Cause: An attempt to measure Oracle GoldenGate replication lag failed because heartbeat table entries could not be found for the indicated Oracle GoldenGate Replicat process.

Action: Ensure the source and target database server clocks are correctly synced. Contact Oracle Support Services.

PRGG-01044: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to update Oracle GoldenGate Extract process "{2}".

Cause: An attempt to update the indicated Oracle GoldenGate Extract process failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01045: Administrative server in Oracle GoldenGate Microservices deployment "{0}" on Oracle GoldenGate hub "{1}" failed to update Oracle GoldenGate Replicat process "{2}".

Cause: An attempt to update the indicated Oracle GoldenGate Replicat process failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01046: URL address for Oracle GoldenGate Microservices was not specified.

Cause: An attempt to connect to Oracle GoldenGate Microservices failed because a URL address was not specified.

Action: Specify a valid URL address Oracle GoldenGate Microservices, and retry.

PRGG-01047: failed to list report files for Oracle GoldenGate process "{0}"

Cause: An attempt to list all report files for the indicated Oracle GoldenGate process failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01048: failed to retrieve content of report file "{0}" for Oracle GoldenGate process "{1}"

Cause: An attempt to retrieve the content of the indicated report file for the indicated Oracle GoldenGate process failed.

Action: Review the accompanying error messages, resolve the underlying errors, and retry.

PRGG-01049: Oracle GoldenGate process "{0}" has "{1}".

Cause: The indicated Oracle GoldenGate process is not running due to a replication error.

Action: Review Oracle GoldenGate logs and reports for the indicated Oracle GoldenGate process, resolve the underlying errors, and retry.

PRGH-1000 to PRGH-1165

PRGH-1000: Invalid Oracle home type {0}

Cause: An unrecognized Oracle home type was specified.

Action: Ensure that a valid Oracle home type is entered. Supported home types are ORACLEDB and SOFTWARE.

PRGH-1001: Failed to get the name of the local node

Cause: An attempt to retrieve local host name failed.

Action: Examine the accompanying error messages.

PRGH-1002: Failed to copy files from {0} to {1}

Cause: An attempt to copy the files failed.

Action: Examine the accompanying error messages.

PRGH-1003: Provisioning of Oracle home at location {0} failed

Cause: One or more steps in provisioning the Oracle home failed.

Action: Examine the accompanying error messages.

PRGH-1004: Cloning operation for the Oracle home at location {0} failed

Cause: An attempt to clone an Oracle Database home directory created from a Rapid Home Provisioning image failed.

Action: Examine the accompanying error messages.

PRGH-1005: Creation of database {0} at Oracle home location {1} failed

Cause: An attempt to create database failed.

Action: Examine the accompanying error messages.

PRGH-1006: Changing the ownership for the software home at location {0} failed.

Cause: An attempt to change the ownership of software home failed.

Action: Take one of the following actions: 1) Examine the accompanying error messages. - or- 2) Make sure that any required Operating System patches are installed. To identify required patches, run 'cluvfy comp sys -p crs' command.

PRGH-1007: Changing the group ownership for the software home at location {0} failed

Cause: An attempt to change the group of software home failed.

Action: Examine the accompanying error messages.

PRGH-1008: Deletion of database {0} at Oracle home location {1} failed

Cause: An attempt to delete the database failed.

Action: Correct the problem indicated by the accompanying messages and retry the failed command

PRGH-1009: Deletion of Oracle home location {0} from inventory failed

Cause: An attempt to detach the Oracle home failed

Action: Correct the problem indicated by the accompanying messages and retry the failed command

PRGH-1010: Removal of Oracle home {0} failed

Cause: An attempt to remove the Oracle home failed

Action: Correct the problem indicated by the accompanying messages and retry the failed command.

PRGH-1011: Move of database {0} to Oracle home location {1} failed

Cause: An attempt to move the database to the new Oracle home failed.

Action: Examine the accompanying error messages.

PRGH-1012: Failed to execute sqlpatch for database {0} from Oracle home {1} on node {2}

Cause: An attempt to execute sqlpatch on the database failed.

Action: Examine the accompanying error messages.

PRGH-1013: The destination working copy at {0} on cluster {1} has the following Oracle patches installed: {2}. Execute the post-patch SQL scripts for these databases: {3}.

Cause: The post-patch SQL scripts were not executed because auto execution of the SQL script was not supported for this database version. Auto execution of the SQL script is not supported for Oracle Database versions prior to 12c.

Action: Execute the 'postinstall.sql' script for these patches if they are located under the SQL patch directory in the Oracle home. Also refer to the patch documentation for these patches and perform any applicable post-patch steps manually.

PRGH-1014: Creation of database {0} at Oracle home location {1} failed because the nodes {2} specified in "-nodes" option are not active

Cause: An attempt to create a database was rejected because the nodes specified in the "-nodes" option were not active.

Action: Specify nodes in the "-nodes" option that are active.

PRGH-1015: Database {0} does not exist

Cause: An attempt to operate on a database failed because the specified database did not exist.

Action: Specify a database name of a database that exists within the working copy.

PRGH-1016: Creation of database {0} at Oracle home location {1} succeeded with warnings.\n{2}

Cause: During Database Configuration Assistant (DBCA) database creation processing, one or more warning conditions occurred.

Action: Examine the logs generated by the Database Configuration Assistant (DBCA) for more information.

PRGH-1017: failed to retrieve the platform information from the specified Oracle home path "{0}"

Cause: An error occurred while attempting to retrieve the platform information.

Action: Examine the accompanying errors for more information.

PRGH-1018: The creation of database "{0}" at Oracle home location "{1}" failed because the patches for bugs {2} have not been applied.

Cause: An attempt to create a database was rejected because the required patches were not applied to the Oracle home.

Action: Apply the required patches and retry the command.

PRGH-1019: Removal of working copy directory {0} failed.

Cause: An attempt to remove the working copy directory failed.

Action: Correct the problem indicated by the accompanying error messages and retry the command.

PRGH-1020: Upgrade of database {0} at Oracle home location {1} failed.

Cause: An attempt to upgrade a database failed.

Action: Examine the accompanying error messages.

PRGH-1021: Upgrade of database {0} at Oracle home location {1} succeeded with warnings.ln{2}

Cause: During DBUA database upgrade processing, one or more warning conditions occurred.

Action: Examine the logs generated by the Database Upgrade Assistant (DBUA) for more information.

PRGH-1022: failed to get patch details from node "{0}" at Oracle home location "{1}" owned by user "{2}"

Cause: An attempt to query working copy information failed because the patch details could not be retrieved from the indicated node, possibly because the Oracle home did not exist.

Action: Ensure that the Oracle home exists. Examine the accompanying error messages for more information, address reported issues, and retry.

PRGH-1023: invalid image type {0}

Cause: An unrecognized image type was specified.

Action: Ensure that a valid image type is entered. Supported image types can be found by using the 'rhpctl query imagetype' command.

PRGH-1024: The operation failed because the user action "{0}" did not execute successfully.

Cause: The operation failed because the indicated user action configured for the image did not execute successfully.

Action: Specify a different image or modify the user action to set the force flag and retry the command.

PRGH-1025: failed to attach Oracle home {0} on nodes "{1}"

Cause: An attempt to attach the indicated Oracle home failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address issues described and retry.

PRGH-1026: failed to update the node list for Oracle home {0} in the inventory

Cause: An attempt to run "runInstaller -updateNodeList" for the indicated Oracle home failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address issues described and retry.

PRGH-1027: failed to stop listeners in Oracle home {0}

Cause: An attempt to stop listeners in the indicated Oracle home failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address issues described and retry.

PRGH-1028: failed to execute "addnode.sh" to extend Oracle RAC home {0} to nodes "{1}"

Cause: An attempt to extend the indicated Oracle RAC home to the indicated nodes failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address issues described and retry.

PRGH-1029: An I/O error occurred during installer exclude file creation.

Cause: An unexpected I/O error occurred. As a result, the appropriate exclude file could not be created.

Action: Examine the accompanying error messages for more information, address the reported issues, and retry.

PRGH-1030: The environments on nodes '{0}' do not satisfy some of the prerequisite checks.\n{1}

Cause: An attempt to add the specified working copy was rejected because the target environment did not meet some of the prerequisites. The accompanying messages provide detailed information about the prerequisites that were not met.

Action: Resolve the issues described in the accompanying messages, and then retry the provisioning operation.

PRGH-1031: The group keyword "{0}" specified in '-groups' option in 'add workingcopy' command is not valid for this image type and image version.

Cause: A group keyword was specified in the '-groups' option in the 'add workingcopy' command which was not valid based on the type and version of the image.

Action: Reissue the command with valid group keywords for this image type and version. Valid group keywords for Grid Infrastructure Provisioning: Versions 11.2,12.1,12.2: OSDBA,OSOPER,OSASM Valid group keywords for Database Provisioning: Version 11.2: OSDBA,OSOPER Version 12.1: OSDBA,OSOPER,OSBACKUP,OSDG,OSKM Version 12.2: OSDBA,OSOPER,OSBACKUP,OSDG,OSKM,OSRAC

PRGH-1032: failed to get user ID of operating system user {0}

Cause: An attempt to get the user ID for an operating system user name failed during the 'add workingcopy' operation.

Action: Correct the problem indicated by the accompanying messages and retry the failed command.

PRGH-1033: failed to get primary group ID of operating system user {0}

Cause: An attempt to get the primary group ID for an operating system user name failed during the 'add workingcopy' operation.

Action: Correct the problem indicated by the accompanying messages and retry the failed command.

PRGH-1034: required '-inventory' option missing

Cause: An attempt to create a working copy was rejected because the oraInst.loc file was not found in the default location and the '-inventory' option was not specified.

Action: Specify the inventory location using the '-inventory' option.

PRGH-1035: failed to run the deinstallation tool with error:\n{0}

Cause: An attempt to run the deinstallation tool failed during the cleanup of Oracle Grid Infrastructure. The accompanying messages provide detailed failure information. The 'delete workingcopy' operation completed, but additional action might be needed to complete the cleanup.

Action: Examine the accompanying error messages and address the issues as described to complete the Oracle Grid Infrastructure cleanup.

PRGH-1036: Oracle Grid Infrastructure configuration tool failed with error '{0}' because one or more mandatory checks failed

Cause: An attempt to add the specified working copy failed because one or more mandatory checks failed in the target environment .

Action: Examine the accompanying messages and retry the command after resolving the reported failures.

PRGH-1037: failed to add instance of database {0} on node {1}

Cause: An attempt to add an instance to the indicated database on the indicated node failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described and retry.

PRGH-1038: An error occurred while copying the installer exclude file.

Cause: The remote copy operation failed. As a result, the installer exclude file could not be copied to the node on which the 'import image' command was issued.

Action: Examine the accompanying error messages for more information, address the reported issues, and retry the operation.

PRGH-1039: Deletion of database {0} at Oracle home location {1} succeeded with warnings.\n{2}

Cause: During Database Configuration Assistant (DBCA) database deletion processing, one or more warning conditions occurred.

Action: Examine the accompanying warning messages for more information.

PRGH-1040: Upgrade of Oracle Grid Infrastructure home failed because the patches for bugs {0} have not been applied.

Cause: An attempt to upgrade the Oracle Grid Infrastructure home was rejected because the required patches were not applied to the Oracle home.

Action: Apply the required patches and retry the command.

PRGH-1041: failed to remove instance of database "{0}" on node "{1}"

Cause: An attempt to delete an instance of the specified database that is running on the specified node failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described and retry.

PRGH-1042: failure to remove an Oracle Layered File System driver

Cause: An attempt to remove an Oracle Layered File System driver encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1043: failure to install an Oracle Layered File System driver

Cause: An attempt to install an Oracle Layered File System driver encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1044: failure to retrieve the names of the Oracle Grid Infrastructure cluster nodes

Cause: An attempt to retrieve the names of the Oracle Grid Infrastructure cluster nodes encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1045: failure while checking if "{0}" is on Oracle ACFS

Cause: An attempt to check if the specified Oracle home path was on Oracle

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1046: failure while getting the required bug numbers for the given Oracle Database home "{0}"

Cause: An attempt to get the required bug numbers for the specified Oracle Database home encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1047: failure while checking if the patch "{0}" could be applied in rolling mode

Cause: An attempt to check if the specified patch could be applied in the rolling mode encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1048: failure to read or write to the file "{0}"

Cause: An attempt to read or write to the specified file encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1049: failure to copy file "{0}" to node "{1}"

Cause: An attempt to copy the specified file to the given node encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1050: failure to create directory "{0}"

Cause: An attempt to create the specified directory encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1051: failure while getting the patch delta between Oracle home "{0}" and "{1}"

Cause: An attempt to get the patch delta between the specified Oracle homes encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1052: failure while getting Oracle Grid Infrastructure cluster name

Cause: An attempt to get the Oracle Grid Infrastructure cluster name encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1053: failure while deconfiguring the Oracle Grid Infrastructure

Cause: An attempt to deconfigure the Oracle Grid Infrastructure encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1054: failure while instantiating parameter file for addition of a node to an Oracle Grid Infrastructure cluster

Cause: An attempt to instantiate the parameter file for addition of a node to an Oracle Grid Infrastructure cluster encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1055: failure while copying Grid Infrastructure configuration files

Cause: An attempt to copy Grid Infrastructure configuration files during an Oracle Grid Infrastructure home move operation encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1056: failure during upgrade of an Oracle Grid Infrastructure home

Cause: An attempt to execute root scripts during an Oracle Grid Infrastructure home upgrade operation encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1057: failure during move of an Oracle Grid Infrastructure home

Cause: An attempt to execute root scripts during an Oracle Grid Infrastructure home move operation encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1058: failure to start the Rapid Home Provisioning Client

Cause: An attempt to start the Rapid Home Provisioning Client encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1059: failure to add the Rapid Home Provisioning Client

Cause: An attempt to add the Rapid Home Provisioning Client encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1060: failure while deleting node "{0}"

Cause: An attempt to delete the specified node from an Oracle Grid Infrastructure cluster encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1061: failure to unpin the node "{0}"

Cause: An attempt to unpin the specified node in an Oracle Grid Infrastructure cluster encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1062: failure while executing the Oracle Grid Infrastructure configuration tool

Cause: An attempt to execute the Oracle Grid Infrastructure configuration tool encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1063: failure while executing the scripts for Oracle Grid Infrastructure configuration

Cause: An attempt to execute scripts for Oracle Grid Infrastructure configuration encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1064: failure to retrieve the location of the Oracle Grid Infrastructure home

Cause: An attempt to retrieve the location of the Oracle Grid Infrastructure home encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1065: failure to retrieve the status of database "{0}"

Cause: An attempt to retrieve the status of the specified database encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1066: failure to retrieve the configuration of database "{0}"

Cause: An attempt to retrieve the configuration of the specified database encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1067: failure to retrieve the name of the node on which database "{0}" is running

Cause: An attempt to retrieve the name of the node on which the specified database was running failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1068: failure to retrieve the patch details from Oracle home "{0}" owned by user "{1}"

Cause: An attempt to to retrieve the patch details from the specified Oracle home encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1069: failure while checking the required bug numbers for database "{0}"

Cause: An attempt to check the required bug numbers for the specified database encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1070: failure while checking if database "{0}" is running from Oracle home "{1}"

Cause: An attempt to check if the specified database was running from the specified Oracle home encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1071: failure to retrieve the names of the databases running from Oracle home "{0}"

Cause: An attempt to retrieve the names of the databases running from the specified Oracle home encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1072: failure to retrieve the location of the Oracle home from which database "{0}" is running

Cause: An attempt to retrieve the location of the Oracle home from which the specified database was running encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1073: failure to retrieve the type of database "{0}"

Cause: An attempt to retrieve the type of the specified database encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1074: failure to retrieve the names of the nodes on which database "{0}" is running

Cause: An attempt to retrieve the names of the nodes on which the specified database was running encountered a failure. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1075: failed to stop instance "{0}" of database "{1}" on node "{2}"

Cause: An attempt to stop the indicated database instance failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described and retry.

PRGH-1076: Operation to extend Oracle RAC home "{0}" to nodes "{1}" succeeded with warnings.ln{2}

Cause: While extending the specified Oracle RAC home to the specified nodes, one or more warning conditions occurred. The accompanying messages provide more information.

Action: Examine the accompanying warning messages for more information.

PRGH-1077: failed to add candidate servers to Oracle RAC One Node database {0}

Cause: An attempt to add candidate servers to the specified database failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1078: failed to remove candidate servers for Oracle RAC One Node database {0}

Cause: An attempt to remove candidate servers for the specified database failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described, and retry the operation.

PRGH-1079: failed to execute script 'rootpre.sh' to perform preinstallation operating system preparations on nodes "{0}"

Cause: An attempt to perform preinstallation operating system preparations on the indicated nodes failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address the issues described and retry.

PRGH-1100:

Cause: Message no longer in use.

Action: Message no longer in use.

PRGH-1101:

Cause: Message no longer in use.

Action: Message no longer in use.

PRGH-1102: The ORAchk utility in Oracle home {0} failed to execute completely.

Cause: An attempt to move a database failed because the ORAchk utility could not check the database status.

Action: Ensure that the file orachk.zip exists in the srvm/admin directory in the current Oracle Grid Infrastructure home and that the destination home is complete and writable by the database owner. Retry the command after fixing the issues.

PRGH-1103: The ORAchk utility (version {0}) is obsolete.

Cause: An attempt to move a database failed because the installed ORAchk utility was obsolete and could not determine the database status.

Action: Refer to My Oracle Support Notes and Obtain the latest ORAchk utility. Retry the command after fixing the issues.

PRGH-1104: The ORAchk report {0} at node {1} revealed failures. Move database operation cannot be done in rolling mode.

Cause: An attempt to move databases in rolling mode was rejected because some of the databases could only be moved in non-rolling mode. The ORAchk report provides additional details.

Action: Retry the command specifying non-rolling mode.

PRGH-1105: could not open file or directory.\n{0}

Cause: An attempt to move a database failed because the indicated file or directory could not be accessed.

Action: Ensure that the indicated file or directory exists and is accessible to the database owner.

PRGH-1106: could not connect to database.\n{0}

Cause: An attempt to move a database failed because it was not possible to connect to the indicated database.

Action: Ensure that it is possible to connect to the database and retry the command.

PRGH-1107: Creation of pluggable database {0} for the given multitenant container database {1} failed.

Cause: An attempt to create the indicated pluggable database failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGH-1108: Creation of pluggable database {0} for the given multitenant container database {1} succeeded with warnings.\n{2}

Cause: During Database Configuration Assistant (DBCA) pluggable database creation processing, one or more warning conditions occurred.

Action: Examine the logs generated by the DBCA for more information.

PRGH-1109: Deletion of pluggable database {0} from the given multitenant container database {1} failed.

Cause: An attempt to delete the indicated pluggable database failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGH-1110: Deletion of pluggable database {0} from the given multitenant container database {1} succeeded with warnings.\n{2}

Cause: During Database Configuration Assistant (DBCA) pluggable database deletion processing, one or more warning conditions occurred.

Action: Examine the logs generated by the DBCA for more information.

PRGH-1111: Changing the permissions of path {0} failed.

Cause: An attempt to change the permissions of the indicated path failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGH-1112: Pre-upgrade checks on database {0} at Oracle home location {1} succeeded with warnings.\n{2}

Cause: During Pre-Upgrade Information Tool pre-upgrade checks on the indicated database, one or more warning conditions occurred.

Action: Examine the logs generated by the Pre-Upgrade Information Tool (preupgrade.jar) for more information.

PRGH-1113: Pre-upgrade checks of database {0} at Oracle home location {1} failed.

Cause: An attempt to perform pre-upgrade checks failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGH-1114: Move pluggable database {0} from source multitenant container database {1} to destination multitenant container database {2} failed.

Cause: An attempt to move the indicated pluggable database failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying messages, resolve the indicated problems, and then retry the operation.

PRGH-1115: Move pluggable database {0} from source multitenant container database {1} to destination multitenant container database {2} succeeded with warnings.\n{3}

Cause: During the Oracle Database Configuration Assistant (DBCA) pluggable database move process, one or more warning conditions occurred.

Action: Examine the logs generated by the DBCA for more information.

PRGH-1116: The PDB move operation is not supported because the source CDB is on node {0} and the destination CDB is on node {1}.

Cause: The pluggable database (PDB) move operation was not supported because the source multitenant container database (CDB) and the destination CDB were on different nodes or the data file of the source CDB location was not shared.

Action: Retry the PDB move operation with the source CDB and destination CDB on the same node or the data file of the source CDB location is shared.

PRGH-1117: The PDB move operation is not supported because the source CDB is version {0} and the destination CDB is version {1}.

Cause: The pluggable database (PDB) move operation was not supported because the versions of the source multitenant container database (CDB) and the destination CDB were not the same.

Action: Retry the PDB move operation with versions of the source CDB and destination CDB that are the same.

PRGH-1118: unsupported option '-ignoreprereq' specified during creation of database {0} at Oracle home location {1}

Cause: An attempt to add the specified database was rejected because the '-ignoreprereq' option was supplied and this option is permitted only when adding a database of release 12.1 or later.

Action: Retry the operation without specifying the '-ignoreprereq' option.

PRGH-1119: The specified source database {0} is not a multitenant container database.

Cause: The pluggable database (PDB) move operation was rejected because the specified source database using the -sourcecdb option was not a multitenant container database (CDB).

Action: Ensure that the source database is a CDB database.

PRGH-1120: The specified destination database {0} is not a multitenant container database.

Cause: The pluggable database (PDB) move operation was rejected because the specified destination database using the `-destcdb` option was not a multitenant container database (CDB).

Action: Ensure that the destination database is a CDB database.

PRGH-1121: Pluggable database "{0}" specified in the exclude list does not exist in the source multitenant container database.

Cause: The pluggable database (PDB) move operation was rejected because the specified PDB using the `-excludepdblist` option did not exist in the source multitenant container database (CDB).

Action: Ensure that all the PDB's, specified in the exclude list exists in the source CDB.

PRGH-1125: invalid value found {0} for the remote authentication plugin argument {1}

Cause: An attempt to execute the `'rhpctl'` command with the `'-auth'` option failed because the specified argument value was invalid.

Action: Ensure that the specified argument has a valid value with format `key:value` and retry the command.

PRGH-1126: failed to add read-only database working copy because the version of the image specified is earlier than release 18c

Cause: An attempt to add a read-only database working copy was rejected because the version of the image was earlier than release 18c and was not supported.

Action: Retry the operation by specifying the database image with release 18c or later.

PRGH-1127: failed to move the database because the source working copy specified "{0}" is not a read-only home

Cause: An attempt to move the database from a source working copy to a patched working copy failed because the source working copy specified by the option `-sourcewc` was not a read-only home while the patched working copy was a read-only home.

Action: Retry the operation by specifying a read-only source working copy for the option `-sourcewc`.

PRGH-1128: failed to move the database because the patched working copy specified "{0}" is not a read-only home

Cause: An attempt to move the database from a source working copy to a patched working copy failed because the patched working copy specified by the option `-patchedwc` was not a read-only home while the source working copy was a read-only home.

Action: Retry the operation by specifying a read-only patched working copy for the option `-patchedwc`.

PRGH-1129: The specified destination home {0} is not a RAC enabled home.

Cause: An attempt to upgrade or move the Oracle Grid Infrastructure (GI) was rejected because the destination home was not configured as a RAC enabled home.

Action: Retry the move or upgrade command specifying a different destination home that is RAC enabled.

PRGH-1130: CRS stack is running on more than one node.

Cause: An attempt to upgrade or move the Oracle Grid Infrastructure (GI) was rejected because CRS stack was running on two or more nodes. For self-patching in non-rolling mode, CRS stack should be running only on local node.

Action: Manually shut down the CRS stack on other nodes and retry the move or upgrade command.

PRGH-1131: The location on target "{0}" did not match with the image.

Cause: An attempt to provision a working copy was rejected because the checksum validation for the indicated file failed. If this file is not specified by the "-location" option, it points to the default location file of the image on the target.

Action: Ensure that the specified or the default location file on the target is the same file that is associated with the image.

PRGH-1132: The specified storage type "{0}" is incompatible with the local mount option.

Cause: An attempt to provision a working copy was rejected because only the LOCAL storage type was supported in the local mount mode when the "-localmount" option was specified.

Action: Retry the command with the LOCAL storage type.

PRGH-1133: The specified image "{0}" is incompatible with the local mount option.

Cause: An attempt to provision a working copy was rejected because the specified image did not support provisioning in the local mount mode. The compatible images should be imported with -location option.

Action: Either specify the same image without the option -localmount, or specify an image that is imported with -location option.

PRGH-1135: There are no servers matching the specified regular expression "{0}".

Cause: An attempt to run an operation on Rapid Home Provisioning (RHP) servers failed because neither the name of the local RHP server nor of any of its peer servers matched the specified expression.

Action: Verify the regular expression specified and retry the operation.

PRGH-1136: database by name {0} and {1} exist in target cluster

Cause: The specified database could not be migrated because a database with the same name already exists.

Action: Ensure that the database by name of source database does not exist in the target and retry.

PRGH-1137: The specified Oracle home path {0} is a symbolic link path on nodes {1}.

Cause: An attempt to add the specified working copy was rejected because the the specified path is a symbolic link.

Action: Retry the command specifying the path for an Oracle home that is not symbolic path.

PRGH-1138: Creation of database {0} at Oracle home location {1} using DBCA failed on the indicated node {2} of cluster {3}. Error details: "{4}"

Cause: During Database Configuration Assistant (DBCA) database creation processing, one or more error conditions occurred due to incorrect input to DBCA.

Action: Examine the the accompanying messages for more information.

PRGH-1139: Creation of database {0} at Oracle home location {1} using DBCA failed on the indicated node {2}. Error details: "{3}"

Cause: During Database Configuration Assistant (DBCA) database creation processing, one or more error conditions occurred due to incorrect input to DBCA.

Action: Examine the the accompanying messages for more information.

PRGH-1140: The specified bug numbers "{0}" are not present in the working copy.

Cause: An attempt to remove the bug numbers from the working copy bug list failed because the specified bug numbers were not associated with the existing workingcopy.

Action: Verify the argument value and retry the operation.

PRGH-1143: Cloning operation for the Oracle home at location {0} failed on the nodes {1}.

Cause: An attempt to clone an Oracle Database home directory created from a Rapid Home Provisioning image failed.

Action: Examine the accompanying error messages.

PRGH-1144: User "{0}" lacks the authority to perform the 'replicate image' operation.

Cause: The user running the 'rhpctl replicate image' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGH-1145: User "{0}" lacks the authority to perform the 'instantiate image' operation.

Cause: The user running the 'rhpctl instantiate image' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGH-1146: Command execution not allowed because the user lacks the authority.

Cause: Command execution was rejected because the user was not authorized to perform the operation.

Action: Run the command as the user who installed and configured the server.

PRGH-1147: User "{0}" does not have permission to perform the 'allow client' operation.

Cause: An attempt to execute the command 'rhpctl allow client' was rejected because the indicated user did not have permission.

Action: Request authorization from an administrator and retry the command or perform the operation from a user ID that has the required authorization.

PRGH-1148: User "{0}" does not have permission to perform the 'disallow client' operation.

Cause: An attempt to execute the command 'rhpctl disallow client' was rejected because the indicated user did not have permission.

Action: Request authorization from an administrator and retry the command or perform the operation from a user ID that has the required authorization.

PRGH-1149: User "{0}" for cluster "{1}" was already allowed access to client {2}.

Cause: An attempt to allow access privilege to the user was rejected because the user had already been granted access privilege to the client using the 'rhpctl allow client' command.

Action: Ensure the correct user was specified.

PRGH-1150: Role "{0}" was already allowed access to client "{1}".

Cause: An attempt to allow access privilege to the role was rejected because the role had already been granted access privilege to the client using the 'rhpctl allow client' command.

Action: Ensure the correct role was specified.

PRGH-1151: User "{0}" for cluster "{1}" has never been granted access to client {2}.

Cause: An attempt to disallow the user from access privilege to the client failed because the user had never been granted access privilege to the client using the 'rhpctl allow client' command.

Action: Use the 'rhpctl disallow client' command to disallow access privilege from another user.

PRGH-1152: Role "{0}" has never been granted access to client "{1}".

Cause: An attempt to disallow the role from access privilege to the client failed because the role had never been granted access privilege to the client using the 'rhpctl allow client' command.

Action: Use the 'rhpctl disallow client' command to disallow access privilege from another role.

PRGH-1153: RHPHelper call to get running nodes failed for DB: "{0}".

Cause: An attempt to get Running Nodes failed during the ssh call.

Action: Go through rhp helper logs in the target nodes and find the detailed reason for the failure.

PRGH-1154: Invalid option '-{0}' specified when adding a client.

Cause: An invalid option to map roles was specified while adding a client.

Action: Add the client without the option to map roles and then grant the roles individually.

PRGH-1161: The fast recovery area parameter is already set for database "{0}" and is different from the value passed in the -fra argument.

Cause: An attempt to setup autoupgrade tool to perform the upgrade of the database failed because there is already a fast recovery area set for the database and the argument -fra was used to set a different value.

Action: Verify the argument value and retry the operation.

PRGH-1162: The version of the software at the specified path "{0}" is incompatible with the image version "{1}".

Cause: An attempt to provision a working copy was rejected because the version of the image associated with the path specified was not the same as the version of the image specified.

Action: Retry the command with a different path.

PRGH-1163: The integrity check failed for the zip file "{0}".

Cause: An attempt to import an image was rejected because the specified zip file and the 'location on target' file had different checksums.

Action: Ensure that the zip file to be imported is identical to the 'location on target' file.

PRGH-1164: Failed to verify the integrity of the file "{0}".

Cause: An attempt to provision a working copy was rejected because the checksum validation for the 'location on target' file failed. If this file is not specified by the "-locationontarget" option, it points to the default 'location on target' file of the image.

Action: Ensure that the specified or the default 'location on target' file is readable from the target node for the intended user.

PRGH-1165: Failed to update the configuration files {0} on node {1}.ln"{2}"

Cause: An error occurred while updating the configuration files.

Action: Examine the accompanying error messages, address the issues described and retry the operation.

PRGO-01003 to PRGO-17731

PRGO-01003: Invalid option specified when granting a role to a client user or another role

Cause: The '-role' option was specified but neither '-user' nor '-grantee' was specified.

Action: Supply the '-user' option or the '-grantee' option when running 'rhpctl grant role' with '-role' option.

PRGO-01004: Invalid option specified when revoking a role from client user or another role

Cause: The '-role' option was specified but neither '-user' nor '-grantee' was specified.

Action: Supply the '-user' option or '-grantee' option when running 'rhpctl revoke role' with '-role' option.

PRGO-01005: Invalid container type "{0}"

Cause: Internal error.

Action: Contact Oracle Support Services.

PRGO-01006: An unsupported 'rhpctl' command was issued on Rapid Home Provisioning Client.

Cause: A 'rhpctl' command was submitted on Rapid Home Provisioning Client.

Action: Run the 'rhpctl' command on Rapid Home Provisioning Server.

PRGO-01007: Unable to retrieve Rapid Home Provisioning Server host name

Cause: While accessing GNS, an attempt to retrieve the host name failed.

Action: Make sure that both the GNS and the Rapid Home Provisioning Server are running.

PRGO-01019: Invalid option specified when adding visibility to an image for either client user or role

Cause: Neither the '-identity' option nor the '-role' option was specified

Action: Supply the '-identity' option or the '-role' option when running 'rhpctl allow image'.

PRGO-01020: Invalid option specified when removing visibility from an image for either client user or role

Cause: Neither the '-identity' option nor the '-role' option was specified

Action: Supply the '-identity' option or the '-role' option when running 'rhpctl disallow image'.

PRGO-01021: Invalid option specified when retrieving information for image series

Cause: An invalid combination of the '-series', '-image' and '-client' options was specified.

Action: Supply the correct combination of the '-series', '-image' and '-client' options when running 'rhpctl query series'. Only the following combinations are allowed: 1) no option 2) -client option only 3) -image option only 4) -series option only 5) -series and -client options only

PRGO-01022: Working copy "{0}" already exists.

Cause: An existing working copy of the same name was found when adding a new working copy.

Action: Supply another working copy name or delete the working copy and retry.

PRGO-01028: Disk group "{0}" already exists.

Cause: An existing disk group of the same name was found when adding a new disk group.

Action: Supply another disk group name and retry the operation.

PRGO-01029: Disk group "{0}" does not exist.

Cause: Removal of a disk group failed because the specified disk group was not configured for Rapid Home Provisioning Server.

Action: Supply the name of a disk group that is configured for Rapid Home Provisioning Server.

PRGO-01030: Disk group "{0}" is in use.

Cause: Removal of the disk group failed because the specified disk group was in use for data storage by the Rapid Home Provisioning Server.

Action: Supply another disk group and retry the operation.

PRGO-01031: User "{0}" lacks the authority to perform the 'add role' operation.

Cause: The user running the 'rhpctl add role' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01032: User "{0}" lacks the authority to perform the 'query role' operation.

Cause: The user running the 'rhpctl query role' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01033: User "{0}" lacks the authority to perform the 'delete role' operation.

Cause: The user running the 'rhpctl delete role' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01034: User "{0}" lacks the authority to perform the 'grant role' operation.

Cause: The user running the 'rhpctl grant role' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01035: User "{0}" lacks the authority to perform the 'revoke role' operation.

Cause: The user running the 'rhctl revoke role' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01036: User "{0}" lacks the authority to perform the 'add image' operation.

Cause: The user running the 'rhctl add image' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01037: User "{0}" lacks the authority to perform operation '{1}'.

Cause: The user running the operation on the image did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01038: User "{0}" lacks the authority to perform the 'delete image' operation.

Cause: The user running the 'rhctl delete image' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01039: User "{0}" lacks the authority to perform the 'query image' operation.

Cause: The user running the 'rhctl query image' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01040: User "{0}" lacks the authority to grant viewing access to image "{1}".

Cause: The user running the 'rhctl allow image' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01041: User "{0}" lacks the authority to disallow viewing access to image "{1}".

Cause: The user running the 'rhctl disallow image' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01042: User "{0}" lacks the authority to add a new series.

Cause: The user running the 'rhctl add series' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01043: User "{0}" lacks the authority to add an image to a series.

Cause: The user running the 'rhctl insertimage series' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01044: User "{0}" lacks the authority to delete a series.

Cause: The user running the 'rhctl delete series' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01045: User "{0}" lacks the authority to delete an image from a series.

Cause: The user running the 'rhctl deleteimage series' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01046: User "{0}" lacks the authority to view series.

Cause: The user running the 'rhctl query series' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01047: User "{0}" lacks the authority to perform the 'delete workingcopy' operation.

Cause: The user running the 'rhctl delete workingcopy' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01048: User "{0}" lacks the authority to perform the 'query workingcopy' operation.

Cause: The user running the 'rhctl query workingcopy' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01049: Rapid Home Provisioning operations cannot be registered with the managed object server.

Cause: Operations for the Rapid Home Provisioning application were not registered with the managed object server.

Action: Ensure that the management database is up and running and either the Rapid Home Provisioning Server or the Rapid Home Provisioning Client resource is registered with CRSD.

PRGO-01058: The client name "{0}" supplied is a Rapid Home Provisioning Server (RHPS).

Cause: A RHPS name was received when a Rapid Home Provisioning Client (RHPC) name was expected.

Action: Provide only RHPC names to the command.

PRGO-01059: Image "{0}" already exists.

Cause: An existing image of the same name was found when adding a new image.

Action: Supply another image name or delete the existing image and retry.

PRGO-01060: Role "{0}" already exists.

Cause: An existing role of the same name was found when adding a new role.

Action: Supply another role name or delete the existing role and retry.

PRGO-01062: Unable to remove image series "{0}" because it contains images and the '-force' option was not specified.

Cause: An attempt to delete an image series was rejected because the image series contained images.

Action: Either specify the '-force' flag, or delete all images in the image series before attempting to delete the image series.

PRGO-01067: No disk group has been configured for Rapid Home Provisioning Server.

Cause: An attempt to retrieve the disk group resources failed because no disk group was configured.

Action: Use the 'rhpctl add diskgroup' command to add a disk group and retry the command.

PRGO-01068: Failed to connect to Rapid Home Provisioning Server (RHPS)

Cause: An attempt to connect to Rapid Home Provisioning Server (RHPS) failed, possibly because it was not running.

Action: Start Rapid Home Provisioning Server (RHPS) using 'srvctl start rhpserver' and retry the command.

PRGO-01069: Internal error [# {0} #].

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRGO-01070: Working copy "{0}" cannot be deleted from Rapid Home Provisioning Client cluster "{1}".

Cause: An attempt to delete a working copy failed because the specified working copy had not been created by this Rapid Home Provisioning Client.

Action: Execute the command from the cluster that created this working copy or specify a working copy that was created on this client cluster.

PRGO-01071: Image "{0}" already exists in the series "{1}".

Cause: An attempt to add an image to a series failed because the image was already added to the series.

Action: Supply another image name or delete the existing image and retry.

PRGO-01072: Image "{0}" does not exist in the series "{1}".

Cause: An attempt to delete an image from a series failed because the image was not found in the series.

Action: Supply an existing image name and retry.

PRGO-01073: Rapid Home Provisioning Client "{0}" is disabled.

Cause: The client was disabled and could not run RHPCTL commands.

Action: Contact the Rapid Home Provisioning Server site administrator to enable the client.

PRGO-01074: failed while checking if cluster "{0}" is enabled to run RHPCTL commands

Cause: An error occurred while checking if the cluster was enabled.

Action: Examine the accompanying errors for more information.

PRGO-01076: Incorrect syntax in the '-maproles' option: "{0}"

Cause: The syntax of the '-maproles' option supplied was incorrect.

Action: Modify the '-maproles' argument to use the following syntax and retry the command: `'role=username[+username...][,role=username[+username...]....]`.

PRGO-01077: Failed to retrieve Rapid Home Provisioning Client host name and port number

Cause: While looking up Rapid Home Provisioning Client connection details in GNS, an attempt to retrieve the host name and port number failed.

Action: Ensure that both the GNS and the Rapid Home Provisioning Client are running.

PRGO-01078: Failed to retrieve Rapid Home Provisioning Server host name and port number

Cause: While looking up Rapid Home Provisioning Server connection details in Grid Naming Service (GNS), an attempt to retrieve the host name and port number failed.

Action: Ensure that both the GNS and the Rapid Home Provisioning Server are running on the RHPS cluster.

PRGO-01079: Failed to remove image "{0}" because working copies "{1}" have been configured for this image.

Cause: An attempt to delete an image failed because there were working copies configured for the image.

Action: Use the 'rhctl remove workingcopy' command to remove associated working copies and retry the command.

PRGO-01081: User "{0}" does not have the role "{1}". The list of roles that the user has is:\n{2}

Cause: An attempt to remove a role from a user failed because the user does not have that role.

Action: Check the arguments supplied and retry the command.

PRGO-01082: User "{0}" for cluster "{1}" was already allowed access to image {2}.

Cause: An attempt to allow access privilege to the user was rejected because the user had already been granted access privilege to the image using the 'rhctl allow image' command.

Action: Ensure the correct user was specified.

PRGO-01083: Role "{0}" was already allowed access to image "{1}".

Cause: An attempt to allow access privilege to the role was rejected because the role had already been granted access privilege to the image using the 'rhpctl allow image' command.

Action: Ensure the correct role was specified.

PRGO-01084: User "{0}" for cluster "{1}" has never been granted access to image {2}.

Cause: An attempt to disallow the user from access privilege to the image failed because the user had never been granted access privilege to the image using the 'rhpctl allow image' command.

Action: Use the 'rhpctl disallow image' command to disallow access privilege from another user.

PRGO-01085: Role "{0}" has never been granted access to image "{1}".

Cause: An attempt to disallow the role from access privilege to the image failed because the role had never been granted access privilege to the image using the 'rhpctl allow image' command.

Action: Use the 'rhpctl disallow image' command to disallow access privilege from another role.

PRGO-01087: READ privilege cannot be granted for image "{0}" because the image state is NEW.

Cause: An attempt to grant READ privilege for the specified image failed because the image state is NEW."

Action: Use the 'rhpctl promote image' command to promote the image to TESTABLE, RESTRICTED or PUBLISHED state before retrying.

PRGO-01088: READ privilege cannot be removed for image "{0}" because the image state is NEW.

Cause: An attempt to remove READ privilege for the specified image failed because the image state is NEW."

Action: Use the 'rhpctl promote image' command to promote the image to TESTABLE, RESTRICTED or PUBLISHED state before retrying.

PRGO-01090: failed to retrieve the owner of the image "{0}"

Cause: An attempt to retrieve the owner of the image failed.

Action: Examine the accompanying error messages for more information.

PRGO-01091: failed to retrieve the owner of the working copy "{0}"

Cause: An attempt to retrieve the owner of the working copy failed.

Action: Examine the accompanying error messages for more information.

PRGO-01092: Failed to update the GNS information of the Rapid Home Provisioning Client.

Cause: An error occurred while updating the Rapid Home Provisioning Client's GNS information.

Action: Examine the accompanying error messages for more information.

PRGO-01097: Grant operation failed because role "{0}" is already granted to user "{1}".

Cause: An attempt to grant a role to a given user failed because the role was already granted to that user.

Action: Confirm that the role and the user supplied are correct and retry if either is not.

PRGO-01098: Revoke operation failed because role "{0}" is not granted to user "{1}".

Cause: An attempt to revoke a role from a given user failed because the role was not granted to that user.

Action: Confirm that the role and the user supplied are correct and retry if either is not.

PRGO-01099: root user is not allowed to add working copy "{0}"

Cause: An attempt was made to create a working copy owned by the root user.

Action: Either run 'rhpcctl add workingcopy' command as a non-root user or specify the '-user' option with a non-root user.

PRGO-01100: Failed to connect to the management database because it is not running

Cause: An attempt to connect to the management database failed because it was not running.

Action: Use 'srvctl start mgmtldb' command to start the management database.

PRGO-01101: Missing Oracle base for working copy "{0}" for image "{1}" because image type is {2}.

Cause: The '-oraclebase' option was omitted for an image type that requires it.

Action: Supply the '-oraclebase' option with the 'rhpcctl add workingcopy' command.

PRGO-01103: add image "{0}" failed

Cause: An attempt was made to perform an add image operation with the same image name during a rerun of the failed import image operation.

Action: Rerun the failed import image command to complete the image creation.

PRGO-01104: import image "{0}" failed

Cause: An attempt was made to perform an import image operation with the same image name during a rerun of the failed add image operation.

Action: Rerun the failed add image command to complete the image creation.

PRGO-01105: The specified '-oraclebase' option value "{0}" is a non-writable directory or cannot be created on nodes "{1}".

Cause: The specified '-oraclebase' option value was a non-writable path to the Grid user or cannot be created by the Grid user.

Action: Ensure that the Oracle base path directory or its parent directory is writable by the Grid user or the directory path can be created by the Grid user.

PRGO-01106: failure while checking for the existence of specified path "{0}" on nodes "{1}"

Cause: The check for the existence of the specified path failed on the indicated nodes.

Action: Examine the accompanying error messages for details and proceed as indicated by those messages.

PRGO-01107: Database "{0}" already exists.

Cause: The specified database resource was already registered in Oracle Clusterware.

Action: Specify another database name and retry the command.

PRGO-01108: The specified disk group "{0}" does not exist.

Cause: The resource for the specified disk group could not be found. Either the disk group name was misspelled or the disk group has not been mounted.

Action: Correct the disk group spelling or use SQL*Plus to create the disk group.

PRGO-01109: The specified path "{0}" is not a shared path.

Cause: An attempt to add a working copy failed because the specified storage path was not shared among the cluster nodes.

Action: Specify a path that is shared by all cluster nodes.

PRGO-01110: The specified nodes "{0}" do not exist on the cluster.

Cause: The requested operation was rejected because the indicated nodes did not exist in the cluster.

Action: 1) If the specified node names were incorrect, then reissue the command with the correct node list; 2) If the specified node is on another cluster and expected database type is Oracle RAC, then supply the client cluster name and required credentials; 3) If the specified node is on another cluster and expected database type is SINGLE, then supply the database type and required credentials.

PRGO-01111: An administrator-managed database cannot be created on specified Leaf Nodes "{0}".

Cause: An attempt to create a working copy failed because some or all of the specified nodes are Leaf Nodes.

Action: Specify only Hub Nodes for an administrator-managed database and retry the command.

PRGO-01112: The specified server pool "{0}" does not exist.

Cause: The specified server pool was not found.

Action: Specify another server pool name or create a server pool with the given name and retry the command.

PRGO-01113: server pool "{0}" category of 'leaf' not supported for policy-managed database

Cause: An attempt to create a working copy was rejected because the specified server pool has a category with CSS_ACTIVE_ROLE=LEAF.

Action: Specify a server pool that can only contain Hub servers for a policy-managed database.

PRGO-01114: invalid use of -pqpool option for provisioning database on cluster "{0}"

Cause: The '-pqpool' option was specified for provisioning a database on a target cluster that was not an Oracle Flex Cluster.

Action: Omit the '-pqpool' option if the cluster where the database needs to be provisioned is not an Oracle Flex Cluster, or choose a target cluster for database provisioning that is an Oracle Flex Cluster and would, therefore, accept the '-pqpool' option.

PRGO-01115: '-newpqpool' and '-pqcardinality' options cannot be specified for provisioning database on Rapid Home Provisioning Server (RHPS).

Cause: An attempt to create a working copy failed because RHPS does not support the '-newpqpool' and '-pqcardinality' options.

Action: Omit the '-newpqpool' and '-pqcardinality' options when provisioning databases on RHPS.

PRGO-01116: User equivalence does not exist on nodes "{0}".

Cause: User equivalence did not exist among the nodes indicated.

Action: Ensure that user equivalence exists on all cluster nodes.

PRGO-01117: The specified user name "{0}" does not exist in the operating system.

Cause: An attempt to create a working copy failed because the user did not exist.

Action: Ensure that the user exists and retry.

PRGO-01118: The specified storage path "{0}" is not a directory.

Cause: An attempt to create a working copy failed because the specified storage path is not a directory.

Action: Ensure that the specified storage option value is an absolute directory path or a disk group name and retry.

PRGO-01119: The specified storage path "{0}" does not exist.

Cause: An attempt to create a working copy failed because the specified storage path did not exist.

Action: Ensure that the specified storage path exists or specify an existing disk group name and retry.

PRGO-01125: Delete operation failed because role "{0}" has the following roles: "{1}".

Cause: An attempt to delete a role failed because the role has been granted one or more roles.

Action: Revoke or delete the roles granted to this role and retry.

PRGO-01126: Delete operation failed because role "{0}" has been granted to the following users: "{1}".

Cause: An attempt to delete a role failed because the role has been granted to one or more users.

Action: Revoke this role from the users and retry.

PRGO-01128: An unsupported 'rhpctl' command was issued on Rapid Home Provisioning Server

Cause: A Rapid Home Provisioning Client 'rhpctl' command was submitted on the Rapid Home Provisioning Server.

Action: Run the 'rhpctl' command on a Rapid Home Provisioning Client.

PRGO-01129: failed to connect to Rapid Home Provisioning Client (RHPC)

Cause: An attempt to connect to Rapid Home Provisioning Client (RHPC) failed, possibly because it was not running on the remote cluster.

Action: Start Rapid Home Provisioning Client (RHPC) using 'srvctl start rhpcclient' on the remote cluster and retry the command.

PRGO-01130: Database name "{0}" contains invalid characters.

Cause: The supplied database name contained invalid characters.

Action: Supply a valid database name. The valid character set for database names is [a-z, A-Z, 0-9, \$, #, _].

PRGO-01131: Delete operation failed, client "{0}" has the following working copies: "{1}".

Cause: A delete client operation failed because one or more working copies exist on the specified client.

Action: Delete the specified working copies and retry the operation.

PRGO-01132: Rapid Home Provisioning Server (RHPS) user "{0}" does not exist in the repository.

Cause: A repository query failed unexpectedly. This is an internal error.

Action: Contact Oracle Support Services.

PRGO-01133: User "{0}" lacks the authority to perform the 'promote image' operation.

Cause: The user running the 'rhpctl promote image' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01134: built-in role "{0}" cannot be deleted

Cause: A request was made to delete a built-in role.

Action: Refer to the product documentation.

PRGO-01135: User "{0}" lacks the authority to perform the 'add client' operation.

Cause: The user running the 'rhpctl add client' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01136: User "{0}" lacks the authority to perform the 'add workingcopy' operation.

Cause: The user running the 'rhpctl add workingcopy' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01137: User "{0}" lacks the authority to perform the 'query client' operation.

Cause: The user running the 'rhctl query client' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01138: User "{0}" lacks the authority to perform the 'delete client' operation.

Cause: The user running the 'rhctl delete client' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01139: User "{0}" lacks the authority to perform the 'delete workingcopy' operation.

Cause: The user running the 'rhctl delete workingcopy' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01140: User "{0}" lacks the authority to perform the 'modify client' operation.

Cause: The user running the 'rhctl modify client' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01141: built-in GH_SA role cannot be revoked from Oracle Grid Infrastructure user "{0}"

Cause: An attempt was made to revoke the built-in GH_SA role from the user of the Oracle Grid Infrastructure home.

Action: Specify another user name or role name in the 'rhctl revoke role' command.

PRGO-01142: built-in GH_CA role cannot be revoked from Oracle Grid Infrastructure user "{0}" of cluster "{1}"

Cause: An attempt was made to revoke the built-in GH_CA role from the user of the Oracle Grid Infrastructure home.

Action: Specify another user name or role name in the 'rhctl revoke role' command.

PRGO-01143: built-in GH_SA role cannot be revoked from role "{0}" by user "{1}" at cluster {2}

Cause: The user running 'rhctl revoke role' command did not have the privilege to revoke the built-in GH_SA role from the specified role.

Action: Grant the GH_SA role to the user running the 'rhctl revoke role' command.

PRGO-01144: built-in GH_CA role cannot be revoked from role "{0}" by user "{1}" at cluster {2}

Cause: The user running 'rhctl revoke role' command did not have the privilege to revoke the built-in GH_CA role from the specified role.

Action: Grant the GH_CA and GH_ROLE_ADMIN roles, or the GH_SA role, to the user running the 'rhpctl revoke role' command.

PRGO-01145: User "{0}" on cluster "{1}" cannot grant the built-in GH_SA role to another user.

Cause: The user running 'rhpctl grant role' command did not have the privilege to grant the built-in GH_SA role to another user.

Action: Grant the GH_SA role to the user running 'rhpctl grant role' command.

PRGO-01146: User "{0}" on cluster "{1}" cannot grant the built-in GH_CA role to another user.

Cause: The user running 'rhpctl grant role' command did not have the privilege to grant the built-in GH_CA role to another user.

Action: Grant the GH_CA and GH_ROLE_ADMIN roles, or the GH_SA role, to the user running the 'rhpctl grant role' command.

PRGO-01147: User "{0}" on cluster "{1}" cannot grant the built-in GH_SA role to another role.

Cause: The user running 'rhpctl grant role' command did not have the privilege to grant the built-in GH_SA role to another role.

Action: Grant the GH_SA role to the user running 'rhpctl grant role' command.

PRGO-01148: User "{0}" on cluster "{1}" cannot grant the built-in GH_CA role to another role.

Cause: The user running 'rhpctl grant role' command did not have the privilege to grant the built-in GH_CA role to another role.

Action: Grant the GH_CA and GH_ROLE_ADMIN roles, or the GH_SA role, to the user running the 'rhpctl grant role' command.

PRGO-01149: The source working copy version and the patched working copy version are different.

Cause: An attempt to move the database failed because the source and patched working copy versions are different.

Action: Ensure that the source and patched working copy versions are the same for the move database operation.

PRGO-01150: The source working copy owner and the patched working copy owner are different.

Cause: An attempt to move the database failed because the source and patched working copy owners are different.

Action: Ensure that the source and patched working copy owners are the same for the move database operation.

PRGO-01151: The database 'move' for the specified working copy cannot be performed from Rapid Home Provisioning Client (RHPC) "{0}".

Cause: The working copy was not created by this Rapid Home Provisioning Client.

Action: Execute the command from the cluster that created this working copy.

PRGO-01152: operation not allowed because client authentication failed

Cause: A 'rhpctl' request was not processed because client authentication failed at the server.

Action: Run the 'rhpctl' command from a valid Rapid Home Provisioning Client.

PRGO-01153: failed to validate the client authentication

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

PRGO-01158: User "{0}" on cluster "{1}" cannot revoke the built-in GH_SA role from another user.

Cause: The user issuing a 'rhpctl revoke role' command did not have the privilege to revoke the built-in GH_SA role from another user.

Action: To enable the revocation, grant the GH_SA role to the user.

PRGO-01159: User "{0}" on cluster "{1}" cannot revoke the built-in GH_CA role from another user.

Cause: The user issuing a 'rhpctl revoke role' command did not have the privilege to revoke the built-in GH_CA role from another user.

Action: Grant the GH_CA and GH_ROLE_ADMIN roles, or the GH_SA role, to the user running the 'rhpctl revoke role' command.

PRGO-01160: User "{0}" lacks the authority to perform the 'export client' operation.

Cause: The user running the 'rhpctl export client' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01161: The source working copy and the patched working copy cannot be the same.

Cause: An attempt to move the database was rejected because the specified source and patched working copies are the same.

Action: Ensure that the source and patched working copy are different for the move database operation.

PRGO-01162: operation not allowed because user authentication failed for user "{0}"

Cause: A rhpctl request was not processed because user authentication failed at the server.

Action: Run the 'rhpctl' command as a user whose primary group is the 'oinstall' group.

PRGO-01163: Failed to create working copy "{0}" because maximum number of snapshots has been reached for image "{1}"

Cause: An attempt to create a working copy failed because the maximum number of snapshots has been reached for the image.

Action: Import a copy of the same image by running 'rhpctl import image' command and then retry the operation.

PRGO-01164: Failed to create a volume for import image because the configured disk group "{0}" does not have enough available space. Detailed error:\n{1}

Cause: An attempt to create a volume for an import image failed because the configured disk group did not have enough available space.

Action: Add more disks to the configured disk group.

PRGO-01165: Failed to create volume because the generated volume name already exists

Cause: An attempt to create a volume failed because the number of tries attempted for generating the volume name was exhausted.

Action: Retry the command.

PRGO-01166: Failed to create image "{0}" from working copy "{1}" because maximum number of snapshots has been reached

Cause: An attempt to create an image from the working copy failed because the maximum number of snapshots has been reached.

Action: Issue 'rhpctl import image' specifying the working copy path for '-path' to create a new image.

PRGO-01167: HAVIP resource does not exist in Oracle Clusterware.

Cause: An attempt to add Rapid Home Provisioning Client failed because the HAVIP resource was not registered with Oracle Clusterware.

Action: Use the command 'srvctl add havip' on the Rapid Home Provisioning Server cluster to create a HAVIP resource.

PRGO-01170: The default templates directory "{0}" does not exist in the image specified.

Cause: The image created on the Rapid Home Provisioning Server did not contain the templates directory.

Action: Specify an image that includes the templates directory as shown in the message.

PRGO-01188: failed to add client on Rapid Home Provisioning Server (RHPS) because neither GNS server nor GNS client are configured on this cluster

Cause: A 'rhpctl add client' command failed because neither GNS server nor GNS client was configured on this cluster.

Action: Configure either GNS server or GNS client using the command 'srvctl add gns' in this cluster and retry the command.

PRGO-01189: provisioning of databases not supported on working copy of image type "{0}"

Cause: An attempt to create or delete a database was rejected because the working copy was not created from an image of type ORACLEDBSOFTWARE.

Action: Specify a working copy that was created from an image of type ORACLEDBSOFTWARE.

PRGO-01190: The database "{0}" was not created using working copy "{1}".

Cause: An attempt to delete, move, or upgrade the specified database was rejected because the working copy specified was not the one used to create the database.

Action: Specify a working copy with which the database was created.

PRGO-01191: The specified working copy "{0}" is not provisioned on the cluster "{1}".

Cause: An attempt to add a database was rejected because the specified working copy was not provisioned on this cluster.

Action: Specify a working copy that is provisioned on the cluster on which the 'rhpcctl add database' is issued.

PRGO-01192: failed to create database "{0}" because the specified working copy was not created properly

Cause: An attempt to add a database was rejected because the specified working copy was not created properly.

Action: Specify the command 'rhpcctl add workingcopy' to properly create the working copy and retry the command.

PRGO-01195: The '-path' option required for creating working copy on the client cluster is not specified.

Cause: The attempt to move database using 'rhpcctl move database' was rejected because

Action: Retry the 'rhpcctl move database' command specifying the '-path' option.

PRGO-01196: The '-image' option required for creating the working copy is not specified.

Cause: The attempt to move the database using 'rhpcctl move database' failed because the '-image' option was not specified. The '-image' option is required to create a new working copy to specify the image from which to create the working copy.

Action: Either request a new working copy using both -image and -patchedwc or specify an existing working copy using the -patchedwc option.

PRGO-01197: The patched working copy was not created from an image of type ORACLEDBSOFTWARE.

Cause: An attempt to move the database failed because the patched working copy was not created from an image of type ORACLEDBSOFTWARE.

Action: Ensure that the patched working copy is created from an image of type ORACLEDBSOFTWARE.

PRGO-01198: The source working copy is incomplete.

Cause: The source working copy was in a partially completed state.

Action: Retry the 'rhpcctl move database' command after ensuring that the source working copy has been created successfully.

PRGO-01201: cannot add image from working copy "{0}" because creation of this working copy was not complete.

Cause: An attempt to add an image from a working copy was rejected because creation of the specified working copy was not complete.

Action: Specify a complete working copy from which add the image.

PRGO-01202: Nothing to modify.

Cause: No options were specified to modify.

Action: Specify at least one option to modify. See the command usage for available options.

PRGO-01203: cannot add working copy from image "{0}" because creation of this image was not complete

Cause: An attempt to add a working copy from an image was rejected because creation of the specified image was not complete.

Action: Specify a complete image from which to add the working copy.

PRGO-01204: The specified working copy has no databases to move.

Cause: An attempt to move a database from a working copy failed because the specified working copy did not have a database configured.

Action: Specify a working copy that has at least one database.

PRGO-01205: The source working copy was not created from an image of type ORACLEDBSOFTWARE.

Cause: An attempt to move a database failed because the source working copy was not created from an image of type ORACLEDBSOFTWARE.

Action: Ensure that the source working copy was created from an image of type ORACLEDBSOFTWARE for the move database operation.

PRGO-01206: The '-oraclebase' option is not allowed when creating working copy "{0}" for image "{1}" because the image type of this working copy is not ORACLEDBSOFTWARE.

Cause: An attempt to add a working copy was rejected because the '-oraclebase' option was specified to create a working copy from an image with the type SOFTWARE. The '-oraclebase' option is valid only for images of type ORACLEDBSOFTWARE.

Action: Retry the command 'rhpctl add workingcopy' without the '-oraclebase' option or specify a working copy that was created from an image of type ORACLEDBSOFTWARE.

PRGO-01207: failed to delete database "{0}" because the specified working copy {0} is not provisioned on this cluster

Cause: An attempt to delete a database was rejected because the specified working copy was not provisioned on this cluster.

Action: Specify a working copy that is provisioned on the cluster on which the 'rhpctl delete database' is issued.

PRGO-01208: Shared storage verification failed for path "{0}". Detailed error: "{1}"

Cause: An invalid value was specified for the '-storage' option. Either the storage does not exist, or it is not shared.

Action: Ensure that the location specified with the '-storage' option exists, is shared and is writable, and rerun the command.

PRGO-01209: unable to delete working copy "{0}" because it contains databases and the force option was not specified

Cause: An attempt to delete the working copy was rejected because databases were configured to run from the working copy and the '-force' option was not specified.

Action: Stop any running databases in the working copy and either specify the '-force' option or delete all databases in the working copy before attempting to delete the working copy.

PRGO-01210: unable to delete working copy "{0}" because it contains one or more running databases

Cause: An attempt to delete the working copy was rejected because the working copy contained one or more running databases.

Action: Either stop the running databases using 'srvctl stop database' or delete all databases configured to run from the working copy and retry the 'delete' command.

PRGO-01211: User "{0}" lacks the authority to perform the operation.

Cause: The user did not have the required authorization to run the command.

Action: Request the authorization from the administrator or perform the operation as a user ID that has the required authorization.

PRGO-01212: unable to delete user "{0}" because working copies "{1}" are owned by this user

Cause: An attempt to delete a given user failed because the user owned one or more working copies in the repository.

Action: Delete the working copies owned by the user supplied and then delete the user.

PRGO-01213: option "{0}" is not allowed from a Rapid Home Provisioning Client

Cause: An option was supplied which can only be used from a Rapid Home Provisioning Server.

Action: Either execute the command with the option from a Rapid Home Provisioning Server or avoid the use of the option from a Rapid Home Provisioning Client.

PRGO-01217: Invalid value "{0}" specified for database template option.

Cause: The '-dbtemplate' option value specified is neither an absolute path nor of the form '<image_name>:<relative_path_of_template>'.

Action: Supply a valid dbtemplate path and retry.

PRGO-01218: failed to export the image file system specified by the database template option value "{0}"

Cause: An error occurred while attempting to export the database template image file system.

Action: Examine the accompanying errors for more information.

PRGO-01219: failed to remove the export file system for the image specified by the database template option

Cause: An error occurred while attempting to remove the export file system for the database template image.

Action: Examine the accompanying errors for more information.

PRGO-01220: failed to export the database template image file system because creation of the image "{0}" was not complete

Cause: An attempt to export a database template image file system was rejected because creation of the specified image was not complete.

Action: Specify a complete image and retry the operation.

PRGO-01222: The specified database template path "{0}" does not exist

Cause: An attempt to create a database failed because the specified database template path does not exist.

Action: Ensure that the specified database template path exists and retry.

PRGO-01223: The specified template file "{0}" does not exist on nodes {1}.

Cause: The specified database template file did not exist either on all of the specified nodes for administration managed database, or on all of the cluster nodes for policy managed database.

Action: Ensure that the database template file specified with the '-dbtemplate' option exists either on all of the specified nodes for administration managed database, or on all of the cluster nodes for policy managed database.

PRGO-01224: cannot create a single instance database on multiple nodes "{0}"

Cause: The value specified for the '-node' option contained multiple nodes.

Action: Specify a single node that is part of the cluster for the '-node' option and retry.

PRGO-01225: failed to add a working copy from image {0} because file system {1} contained within volume device {2} is offline

Cause: An attempt to add a working copy failed because the file system resource of the image supplied was offline.

Action: Use the 'srvctl start filesystem' command with corresponding volume device to start the file system resource for the image; then retry the command.

PRGO-01226: The source working copy is configured in a different cluster from the patched working copy

Cause: An attempt to move the database failed because the source and patched working copies are configured in different clusters.

Action: Ensure that the source and patched working copies are configured in the same cluster.

PRGO-01227: The '-path' option is not allowed when moving a database on Rapid Home Provisioning Server (RHPS).

Cause: An attempt to move a database on a Rapid Home Provisioning Server failed because the '-path' option was specified without remote provisioning.

Action: Retry the command 'rhpctl move database' without the '-path' option.

PRGO-01228: failed to write a checkpoint for the operation because the checkpoint file system "{0}" is not mounted

Cause: Writing the checkpoint for the previous operation failed because the checkpoint file system was offline.

Action: Use the 'srvctl start filesystem' command to start the file system resource for checkpoints and retry the command.

PRGO-01229: A disk group has not been configured for Rapid Home Provisioning Client.

Cause: An attempt to create a local file system failed because a disk group was not configured.

Action: Use 'srvctl modify rhpclient' command to add a disk group and retry the command.

PRGO-01233: The specified '-path' option value "{0}" is on ACFS

Cause: The working copy could not be added because '-path' option value was on ACFS.

Action: Ensure that the '-path' option value is a shared path that is not on ACFS.

PRGO-01234: failed to add image "{0}" from working copy "{1}" using local storage or Rapid Home Provisioning Client ACFS storage

Cause: An attempt to add the indicated image to local storage failed because the source working copy was on local storage or on Rapid Home Provisioning Client ACFS storage.

Action: Use 'rhpctl import image' to add the image.

PRGO-01235: Path "{0}" is not writable by "{1}".

Cause: The specified path for local storage on the Rapid Home Provisioning Client did not have write access by the user.

Action: Ensure that the '-path' option value has writable permission for the user.

PRGO-01236: Path "{0}" does not have "{1}" KB of free space on nodes {2}.

Cause: There was insufficient free space on the nodes to copy the working copy.

Action: Ensure that the specified path has sufficient free space on all nodes of the cluster.

PRGO-01237: cannot delete built-in user "{0}"

Cause: An attempt to delete a given user failed because the specified user was a built-in user.

Action: Do not try to delete a built-in user.

PRGO-01238: specified server pool "{0}" has no candidate server for single instance database "{1}"

Cause: An attempt to create a single instance database failed because the specified server pool did not have a configured candidate server.

Action: Specify a different server pool with a maximum of one server, or modify the specified server pool using the command 'srvctl modify srvpool' with '-servers' option to configure exactly one candidate server.

PRGO-01239: specified server pool "{0}" has a maximum size "{1}" too large for single instance database {2}

Cause: An attempt to create a single instance database failed because a server pool with maximum size greater than one server was specified.

Action: Specify a different server pool with maximum size of one, or modify the specified server pool using the command 'srvctl modify srvpool' with '-max 1' option to have at most one server.

PRGO-01240: specified server pool "{0}" has more than one candidate server

Cause: An attempt to create a single instance database failed because a server pool with more than one candidate server was specified.

Action: Specify a different server pool with a maximum of one server, or modify the specified server pool using the command 'srvctl modify srvpool' with '-servers' option to configure exactly one candidate server.

PRGO-01241: The path "{0}" specified for the working copy duplicates the internal path used to mount working copy.

Cause: An attempt to add a working copy was rejected because the specified path duplicates the internal path used to mount the working copy.

Action: Specify a different path and retry.

PRGO-01242: failed to add a working copy with local storage type because the path option was not specified and disk group was not configured for the Rapid Home Provisioning Client cluster

Cause: A command to add a working copy with local storage type was issued without the path option and for a Rapid Home Provisioning Client cluster that did not have a configured disk group.

Action: Specify the '-path' option or configure a disk group for the Rapid Home Provisioning Client with 'srvctl modify rhpclient' and retry the command.

PRGO-01243: An attempt to create a working copy from image "{0}" failed because it is for the "{1}" platform, whereas the detected platform is {2}.

Cause: The image supplied was for a different platform than the one for which the working copy was requested.

Action: Retry the command specifying an image created for the target platform.

PRGO-01244: Cannot grant any role to a root user

Cause: An attempt was made to grant a role to a root user.

Action: Specify a different user and retry.

PRGO-01245: User "{0}" for cluster "{1}" is the owner of image "{2}".

Cause: An attempt to disallow the user access from the image failed because the user owned the image.

Action: Specify a different user and retry.

PRGO-01246: Role "{0}" cannot be disallowed from image "{1}".

Cause: An attempt to disallow the role access from the image failed because the role was a built-in role associated with the image and was not granted access using the 'rhpctl allow image' command.

Action: Specify a different role and retry the command.

PRGO-01247: Role "{0}" cannot be allowed for image "{1}".

Cause: An attempt to allow the role access to the image failed because the role was a built-in role associated with the image.

Action: Specify a different role and retry.

PRGO-01248: cannot grant role "{0}" to a built-in role "{1}"

Cause: An attempt was made to grant a role to a built-in role.

Action: Specify a non built-in role for the '-grantee' option and retry.

PRGO-01249: cannot revoke role "{0}" from a built-in role "{1}"

Cause: An attempt was made to revoke a role from a built-in role.

Action: Specify a non built-in role for the '-grantee' option and retry.

PRGO-01250: cannot revoke role "{0}" from role "{1}" because role "{1}" has only one associated role

Cause: An attempt to revoke a role from another role with only one associated role failed because that role was a user defined role.

Action: Specify a user defined role with more than one associated roles for the '-grantee' option and retry.

PRGO-01251: Role "{0}" cannot start with "GH_".

Cause: An attempt to add a role starting with "GH_" failed because "GH_" is a prefix reserved by Oracle for built-in roles.

Action: Specify another role name and retry.

PRGO-01257: failed to import image "{0}"

Cause: An error occurred while attempting to import the indicated image.

Action: Examine the accompanying error messages for more information.

PRGO-01258: The specified patched working copy is incomplete.

Cause: The patched working copy was in a partially completed state.

Action: Use the 'rhpctl add workingcopy' command to create a complete patched working copy. Ensure that options such as '-oraclebase', '-user', and '-client' are set the same as in the source working copy. Then retry 'rhpctl move database' command.

PRGO-01260: Cluster Verification checks for database home provisioning failed for the specified working copy {0}.

Cause: One or more Cluster Verification checks for database home provisioning failed.

Action: Review the underlying error messages and take appropriate action.

PRGO-01261: unable to add database {0} because the specified working copy {1} already exists

Cause: An attempt to add the specified database using 'rhpctl add workingcopy' was rejected because the working copy specified was already in existence.

Action: Use 'rhpctl add database' command to create the database on an existing working copy or use 'rhpctl add workingcopy' specifying a different working copy.

PRGO-01262: unable to verify the existence of the specified file {0} on nodes {1}

Cause: An error occurred while attempting to access the specified database template file.

Action: Examine the accompanying errors for more information.

PRGO-01263: The option '-storagetype LOCAL' is required for provisioning a pre-11.2 version database home.

Cause: An attempt to provision a pre-11.2 version database home was rejected because it can only be provisioned on local, non-ACFS storage.

Action: Retry the operation with the option '-storagetype LOCAL'.

PRGO-01264: The options {0} are not allowed and the '-nodes' option is required for pre 11.2 version database because they cannot be policy-managed.

Cause: An attempt to create a policy-managed database failed because only administrator-managed databases are supported in pre 11.2 version.

Action: Retry the operation with '-nodes' option to create an administrator-managed database.

PRGO-01265: The version of the specified home is {0} and is not 10.2.0.5.

Cause: An attempt to import a version 10.2 image was rejected because the specified Oracle home was not version 10.2.0.5.

Action: Retry the operation with a version 10.2.0.5 Oracle home specified for the '-path' option.

PRGO-01266: The version of the specified home is {0} and is not supported.

Cause: An attempt to import a version 11.1 image was rejected because this version is not supported.

Action: Retry the operation specifying a valid version (10.2.0.5 or 11.2 and above) of Oracle home for the '-path' option.

PRGO-01267: failed to add a database {0} using working copy {1} because the image file system {2} using the volume device {3} is offline

Cause: An attempt to add a database failed because the file system resource of the image containing the working copy supplied was offline.

Action: Use the 'srvctl start filesystem' command with the corresponding volume device to start the file system resource for the image containing the working copy; then retry the command.

PRGO-01268: failed to add a database {0} using working copy {1} because the file system {2} using volume device {3} is offline in the Rapid Home Provisioning Client cluster

Cause: An attempt to add a database failed because the file system resource in the Rapid Home Provisioning Client containing the working copy supplied was offline.

Action: Use the 'srvctl start filesystem' command in the Rapid Home Provisioning Client cluster with the corresponding volume device to start the indicated file system resource. Then retry the command.

PRGO-01269: failed to delete a working copy {0} because the image file system {1} using the volume device {2} is offline

Cause: An attempt to delete a working copy failed because the file system resource of the image containing the working copy supplied was offline.

Action: Use the 'srvctl start filesystem' command with the corresponding volume device to start the file system resource for the image containing the working copy. Then retry the command.

PRGO-01270: failed to delete a working copy {0} because the file system {1} using volume device {2} is offline in the Rapid Home Provisioning Client cluster

Cause: An attempt to delete a working copy failed because the file system resource in the Rapid Home Provisioning Client containing the working copy supplied was offline.

Action: Use the 'srvctl start filesystem' command in the Rapid Home Provisioning Client cluster with the corresponding volume device to start the indicated file system resource. Then retry the command.

PRGO-01271: failed to move database using working copy {0} because the image file system {1} using the volume device {2} is offline

Cause: An attempt to move database failed because the file system resource of the image containing the working copy supplied was offline.

Action: Use the 'srvctl start filesystem' command with the corresponding volume device to start the file system resource for the image containing the working copy; then retry the command.

PRGO-01272: failed to move database using working copy {0} because the file system {1} using volume device {2} is offline in the Rapid Home Provisioning Client cluster

Cause: An attempt to move database failed because the file system resource in the Rapid Home Provisioning Client containing the working copy supplied was offline.

Action: Use the 'srvctl start filesystem' command in the Rapid Home Provisioning Client cluster with the corresponding volume device to start the indicated file system resource. Then retry the command.

PRGO-01273: The specified Oracle home path {0} is already in use by working copy {1} on site {2}.

Cause: An attempt to add the specified working copy was rejected because the specified Oracle home path was already in use.

Action: Retry the command specifying the path for an Oracle home that is not already in use.

PRGO-01274: The directory indicated by the specified NFS Oracle home path {0} was not empty on nodes {1}.

Cause: An attempt to add the specified working copy was rejected because the working copy will be NFS mounted on the directory specified by the path, making the existing files inaccessible.

Action: Retry the command specifying the path for an Oracle home that is empty.

PRGO-01275: failed to verify the emptiness of the specified directory {0} on nodes {1}

Cause: An error occurred while attempting to access the specified directory.

Action: Examine the accompanying errors for more information.

PRGO-01276: failed to delete Rapid Home Provisioning Client (RHPC) because it was running

Cause: An attempt to delete a Rapid Home Provisioning Client (RHPC) failed because it was running on the client cluster.

Action: Either specify the '-force' option on the delete command, or first issue 'srvctl stop rhpcclient' on the client cluster.

PRGO-01277: The directory indicated by the specified local Oracle home path {0} was not empty on nodes {1}.

Cause: An attempt to add the specified working copy was rejected because a non-empty directory may contain files that belong to other Oracle software homes when the storage type is LOCAL.

Action: Retry the command specifying the path for an Oracle home that is empty.

PRGO-01280: The revoke operation failed because role "{0}" is not granted to role "{1}".

Cause: An attempt to revoke a role from the grantee role failed because the role had not been granted to the grantee role.

Action: Specify a role that is part of the associated roles of the grantee role.

PRGO-01281: failed to add a working copy because the database version is not compatible with ASM client

Cause: An attempt to add a working copy on an ASM client cluster was rejected because the database version was 12.1.0.1 or lower. ASM client access is supported only for database versions 12.1.0.2 or higher.

Action: Retry the command with a database version of 12.1.0.2 or higher, or on a cluster including the ASM server.

PRGO-01282: The '-path' option required for creating a working copy using local storage on an ASM client cluster is not specified.

Cause: The attempt to create a working copy using local storage on an ASM client cluster was rejected because the '-path' option was not specified.

Action: Retry the 'rhpctl add workingcopy' command specifying the '-path' option.

PRGO-01283: Authentication failure while connecting to Rapid Home Provisioning Client (RHPC)

Cause: An attempt to connect to the Rapid Home Provisioning Client failed because the connection could not be authenticated.

Action: Execute the following steps and retry the command: 1) Generate the credentials file at Rapid Home Provisioning Server using the 'rhpctl export client' command. 2) Securely transfer the credentials file from Rapid Home Provisioning Server to Rapid Home Provisioning Client. 3) Modify the Rapid Home Provisioning Client credentials with the credentials file using the 'srvctl modify rhpcclient' command on the client cluster.

PRGO-01284: Rapid Home Provisioning Client "{0}" was never started.

Cause: The Rapid Home Provisioning Client daemon did not register its endpoint with the Rapid Home Provisioning Server.

Action: Add and start Rapid Home Provisioning Client on the remote cluster.

PRGO-01285: failed to create database "{0}" because the database version {1} does not support the options '-cdb', '-numberOfPDBs' and '-pdbName'

Cause: An attempt to add a database was rejected because the database version was 12.1.0.0 or lower. The options '-cdb', '-numberOfPDBs' and '-pdbName' are supported only for database versions 12.1.0.1 or higher.

Action: Retry the command with a database version of 12.1.0.1 or higher, or do not use the options '-cdb', '-numberOfPDBs' and '-pdbName'.

PRGO-01286: Option '-datafileDestination' does not specify the absolute path to create a database of a version before 11.2.

Cause: An attempt to create a database of a version before 11.2 failed because the '-datafileDestination' argument was not an absolute path.

Action: Supply an absolute path for the '-datafileDestination' option and retry the command.

PRGO-01287: failed to move database because the software home path for working copy {0} is shared and the one for working copy {1} is not

Cause: An attempt to move a database between Oracle homes was rejected because one Oracle home was shared and the other was not.

Action: Either specify source and destination Oracle homes that are both shared, or specify source and destination Oracle homes that are both non-shared.

PRGO-01289: failed to move database because the path was not provided for the patched working copy

Cause: An attempt to move a database between Oracle homes was rejected because the source working copy is not shared and the path was not provided for the patched working copy.

Action: Either specify source and destination Oracle homes that are both shared, or specify a valid path for the patched working copy.

PRGO-01290: unable to create snapshot for the database template because maximum number of snapshots has been reached for image "{0}"

Cause: An attempt to create a database failed because the maximum number of snapshots had been reached for the image.

Action: Import a copy of the same image by running the command 'rhpctl import image' and retry the operation specifying the new image.

PRGO-01293: Rerun of 'add workingcopy' rejected because -{0} option differs from the one originally specified: {1}.

Cause: A rerun of an 'add workingcopy' request failed because one of the options specified did not match the one used originally.

Action: Retry the command with the same option entered on the first run of the command.

PRGO-01294: The '-nonrolling' option is required for moving a release 11.1 or earlier database.

Cause: The attempt to move a release 11.1 or earlier database was rejected because the '-nonrolling' option was not specified.

Action: Retry the command with a release 11.2 or higher database, or specify the '-nonrolling' option.

PRGO-01298: Database "{0}" is not configured in working copy "{1}".

Cause: The specified database did not exist in the supplied working copy.

Action: Specify a database which is configured in the supplied working copy.

PRGO-01299: The '-pqpool' option is not supported in a non-Exadata environment.

Cause: The '-pqpool' option was specified in a non-Exadata environment.

Action: Reissue the command without the '-pqpool' option or with the '-pqpool' option in an Exadata environment.

PRGO-01300: The '-newpqpool' option is not supported in a non-Exadata environment.
Cause: The '-newpqpool' option was specified in a non-Exadata environment.

Action: Reissue the command without the '-newpqpool' option or with the '-newpqpool' option in an Exadata environment.

PRGO-01301: Invalid use of '-pqpool' option in standard cluster {0}.

Cause: The attempted operation was rejected because the '-pqpool' option, which is supported only in Oracle Flex Cluster, was specified in the indicated cluster, which was a standard cluster.

Action: Reissue the command without the '-pqpool' option or choose an Oracle Flex Cluster as the target cluster.

PRGO-01302: Invalid use of '-newpqpool' option in standard cluster {0}.

Cause: An attempt to create a new parallel query server pool was rejected because the '-newpqpool' option, which is supported only in Oracle Flex Cluster, was specified in the indicated cluster, which was a standard cluster.

Action: Reissue the command without the '-newpqpool' option or choose an Oracle Flex Cluster as the target cluster.

PRGO-01303: ACFS is not available on PQ nodes.

Cause: The ACFS storage type is not available on PQ nodes.

Action: Use '-pqpool' or '-newpqpool' option with non-ACFS storage types.

PRGO-01304: missing '-oraclebase' option for creating the non-existing patched working copy: {0}

Cause: An attempt to create a patched working copy was rejected because the '-oraclebase' option required for creating a new working copy was not specified.

Action: Reissue the command and supply the '-oraclebase' option.

PRGO-01305: Improper '-oraclebase' option specified for existing working copy: {0}.

Cause: An attempt to move the databases was rejected because the '-oraclebase' option was specified for an existing patched working copy that does not require it.

Action: Rerun the 'rhpctl move database' command without the '-oraclebase' option.

PRGO-01306: failed to move database because the software home path {0} is shared and the one for working copy {1} is not

Cause: An attempt to move a database between Oracle homes was rejected because the source Oracle home was shared while the destination was not.

Action: To move databases between Oracle homes, specify source and destination Oracle homes that are either both shared or both not shared, or where the source Oracle home is not shared and the destination is shared.

PRGO-01307: failed to move database because the user specified '-path' or '-image' option for an existing patched working copy

Cause: An attempt to move database was rejected because the '-path' or '-image' option was specified. The '-path' or '-image' option should not be entered if the patched working copy has been created.

Action: Retry the command without the '-path' or '-image' option.

PRGO-01309: An attempt to import image "{0}" failed because the software home specified is for the "{1}" platform, whereas the cluster platform is "{2}".

Cause: The software home supplied was for a different platform than the one on cluster.

Action: Retry the command specifying a software home that matches the cluster platform.

PRGO-01310: Database type RacOneNode is not supported in pre-11.2 versions.

Cause: An attempt to create a database of type 'RacOneNode' was rejected because database type RacOneNode is not supported in pre-11.2 versions.

Action: Retry the operation specifying a supported database type.

PRGO-01311: failed to get the directory size of path "{0}" during import image of "{1}"

Cause: An attempt to determine the directory size during import image failed because either the current user or the owner specified did not have read and execute permissions for the specified directory.

Action: Ensure that either the current user or the owner specified with '-pathowner' has read and execute permissions for the specified directory. Examine the accompanying error messages for more information.

PRGO-01312: failed to move database because the path was not provided for the patched working copy

Cause: An attempt to move a database between Oracle homes was rejected because the source working copy is shared and a shared path was not provided for the patched working copy.

Action: Either specify source and destination Oracle homes that are both local non-shared, or specify a valid shared path for the patched working copy.

PRGO-01313: Rapid Home Provisioning Client (RHPC) is not reachable.

Cause: An error occurred while attempting to connect to the Rapid Home Provisioning Client (RHPC).

Action: Examine the accompanying errors for more information.

PRGO-01314: Rapid Home Provisioning Client cluster "{0}" GUID {1} does not match the value stored in repository {2}.

Cause: An attempt to connect to the Rapid Home Provisioning Server failed because the cluster GUID of the Rapid Home Provisioning Client did not match the cluster GUID stored in the Rapid Home Provisioning Server repository.

Action: Contact the Rapid Home Provisioning Server site administrator to enable the client.

PRGO-01315: Invalid value "{0}" specified for the platform option. The valid values are:\n{1}

Cause: The command was rejected because the value specified for the '-platform' option was not a valid OS platform.

Action: Supply a valid platform and retry the command.

PRGO-01317: The owner "{0}" of the source home does not match the owner "{1}" of the patched working copy "{2}".

Cause: An attempt to move the database failed because the source software home path and patched working copy ownerships are different.

Action: Create or specify a patched working copy with the same owner as the source home and retry the move database operation.

PRGO-01318: The database "{0}" was not created using software home path "{1}".

Cause: An attempt to delete or move the specified database was rejected because the software home path was not the one used to create the database.

Action: Specify the software home path with which the database was created.

PRGO-01319: The specified software home path has no databases to move.

Cause: An attempt to move a database from a software home path failed because the specified software home path did not have any databases configured.

Action: Specify a software home path that has at least one database.

PRGO-01320: failed to validate that home {0} in cluster {1} is of platform {2}

Cause: An error occurred while validating the platform of the home to be imported.

Action: Examine the accompanying error messages.

PRGO-01321: invalid storage type "RHP_MANAGED" specified for a client without a disk group

Cause: An attempt to add a working copy failed because the storage type was specified as RHP_MANAGED for a client without disk groups.

Action: Add disk groups to the client or specify another storage type.

PRGO-01322: failed to find available servers for pool "{0}"

Cause: 1) If "{0}" is an existing pool, it does not have any active servers to host the new database instance. 2) If "{0}" is a new pool to be added, there are no free servers that can be assigned to the new pool.

Action: Either specify an existing pool with active servers, or create a new pool and make sure that: 1) for a new server pool in an Oracle Flex Cluster, there is at least one free Hub Node server; 2) for a new server pool in a Regular Cluster, there is at least one free server; 3) for a new PQ pool, there is at least one free Leaf Node server in an Oracle Flex Cluster.

PRGO-01323: Pool {0} already exists.

Cause: The specified pool already exists.

Action: Use the existing pool or specify another name for the new pool.

PRGO-01324: The Grid Infrastructure software version of the specified home path {0} is invalid for import operation.

Cause: The command was rejected because the Grid Infrastructure software version is not a valid version for this operation.

Action: Supply a home path with the Grid Infrastructure software version 11.2.0.3 and above.

PRGO-01327: The Grid Infrastructure software cannot be provisioned from Rapid Home Provisioning Client.

Cause: The command was rejected because the Grid Infrastructure could not be provisioned from Rapid Home Provisioning Client.

Action: Issue the provisioning command from the Rapid Home Provisioning Server.

PRGO-01331: failed to execute the command because it was not issued from Rapid Home Provisioning Server (RHPS)

Cause: The command was rejected because it can only be issued from Rapid Home Provisioning Server (RHPS).

Action: Retry the command from Rapid Home Provisioning Server (RHPS).

PRGO-01332: Image type of the image "{0}" is not ORACLEGISOFTWARE.

Cause: An incorrect image type was specified for Oracle Grid Infrastructure provisioning.

Action: Specify an image with image type ORACLEGISOFTWARE.

PRGO-01333: Databases are currently being moved from or to working copy {0}.

Cause: An attempt to start moving databases from or to the indicated working copy was rejected because of an ongoing move operation.

Action: Retry after completing or aborting the ongoing move operation.

PRGO-01334: No databases are being moved to working copy {0}.

Cause: An attempt to resume or abort moving databases from the indicated working copy was rejected because a move operation had not been initiated for the indicated working copy.

Action: None

PRGO-01335: Unexpected option '{0}' specified for Oracle home {1} of version {2}.

Cause: The attempted operation was rejected because the indicated option was not supported for the indicated version of Oracle home.

Action: Retry the command without the indicated option.

PRGO-01338: Databases are currently being moved from or to the Oracle home at {0}.

Cause: An attempt to start moving databases from or to the indicated Oracle home was rejected because of an ongoing move operation.

Action: Retry after completing or aborting the ongoing move operation.

PRGO-01340: Re-execution of 'add workingcopy' rejected because node list specified does not contain the local node {0} originally specified.

Cause: An attempt to re-execute 'add workingcopy' was rejected because the specified node list did not contain the indicated local node originally specified. Some operations had already been performed on the local node during the earlier execution, so that node must be included when re-running the command.

Action: Reissue the failed command ensuring that the local node is part of the node list specified.

PRGO-01341: Re-execution of 'add workingcopy' rejected because the value '{1}' supplied for the response file parameter '{0}' differs from the value originally specified: '{2}'.

Cause: Re-execution of the 'add workingcopy' command failed because the response file contents did not match the one used for the original execution.

Action: Retry the command with the same response file contents used for the first execution of the command.

PRGO-01342: identical source and destination working copies

Cause: An attempt to upgrade the database was rejected because the specified source and destination working copies were the same.

Action: Ensure that the source and destination working copies are different for the upgrade database operation.

PRGO-01343: The source working copy was not created from an image of type ORACLEDBSOFTWARE.

Cause: An attempt to upgrade a database failed because the source working copy was not created from an image of type ORACLEDBSOFTWARE.

Action: Ensure that the source working copy was created from an image of type ORACLEDBSOFTWARE for the upgrade database operation.

PRGO-01344: The database upgrade operation for the specified working copy cannot be performed from Rapid Home Provisioning Client (RHPC) "{0}".

Cause: The working copy was not created by this Rapid Home Provisioning Client.

Action: Execute the command from the cluster that created this working copy.

PRGO-01345: failed to upgrade database because the user specified '-image' option for an existing destination working copy

Cause: An attempt to upgrade a database was rejected because the '-image' option was specified. The '-image' option must not be entered if the destination working copy has been created.

Action: Retry the command without the '-image' option.

PRGO-01346: The destination working copy was not created from an image of type ORACLEDBSOFTWARE.

Cause: An attempt to upgrade the database failed because the destination working copy was not created from an image of type ORACLEDBSOFTWARE.

Action: Ensure that the destination working copy is created from an image of type ORACLEDBSOFTWARE.

PRGO-01347: The source working copy version {0} and the destination working copy version {1} are incorrect.

Cause: An attempt to upgrade the database failed because the source and destination working copy versions were incorrect.

Action: Ensure that the source working copy version is equal to Oracle Database 10g Release 5 (10.2.0.5), or later than Oracle Database 11g Release 2 (11.2.0.2) but earlier than Oracle Database 12c Release 2 (12.2). Also, ensure that the destination working copy version is equal to or later than Oracle Database 12c Release 1 (12.1.0.1).

PRGO-01348: The source working copy and destination working copy version {0} is the same.

Cause: An attempt to upgrade the database failed because the source working copy and destination working copy version were the same.

Action: Ensure that the source working copy version is equal to Oracle Database 10g Release 5 (10.2.0.5), or later than Oracle Database 11g Release 2 (11.2.0.2) but earlier than Oracle Database 12c Release 2 (12.2). Also, ensure that the destination working copy version is equal to or later than Oracle Database 12c Release 1 (12.1.0.1).

PRGO-01349: The destination working copy version {0} is lower than the source working copy version {1}.

Cause: An attempt to upgrade the database failed because the destination working copy version was lower than the source working copy version.

Action: Ensure that the source working copy version is equal to Oracle Database 10g Release 5 (10.2.0.5), or later than Oracle Database 11g Release 2 (11.2.0.2) but earlier than Oracle Database 12c Release 2 (12.2). Also, ensure that the destination working copy version is equal to or later than Oracle Database 12c Release 1 (12.1.0.1).

PRGO-01350: The source working copy owner and the destination working copy owner are different.

Cause: An attempt to upgrade the database failed because the source and destination working copy owners were different.

Action: Ensure that the source and destination working copy owners are the same for the upgrade database operation.

PRGO-01351: The source working copy is configured in a different cluster from the destination working copy.

Cause: An attempt to upgrade the database failed because the source and destination working copies were configured in different clusters.

Action: Ensure that the source and destination working copies are configured in the same cluster.

PRGO-01352: The '-image' option required for creating the working copy is not specified.

Cause: The attempt to upgrade the database using 'rhpctl upgrade database' failed because the '-image' option was not specified. The '-image' option is required to create a new working copy to specify the image from which to create the working copy.

Action: Either request a new working copy using both '-image' and '-dstwc' or specify an existing working copy using the '-dstwc' option.

PRGO-01353: failed to upgrade database using working copy {0} because the image file system {1} using the volume device {2} is offline

Cause: An attempt to upgrade a database failed because the file system resource of the image containing the supplied working copy was offline.

Action: Use the 'srvctl start filesystem' command with the corresponding volume device to start the file system resource for the image containing the working copy. Retry the command.

PRGO-01354: failed to upgrade database using working copy {0} because the file system {1} using volume device {2} is offline in the Rapid Home Provisioning Client cluster

Cause: An attempt to upgrade a database failed because the file system resource in the Rapid Home Provisioning Client containing the supplied working copy was offline.

Action: Use the 'srvctl start filesystem' command in the Rapid Home Provisioning Client cluster with the corresponding volume device to start the indicated file system resource. Retry the command.

PRGO-01357: The source working copy is incomplete.

Cause: The source working copy was in a partially completed state.

Action: Retry the 'rhpctl upgrade database' command after ensuring that the source working copy has been created successfully.

PRGO-01358: The specified destination working copy is incomplete.

Cause: The destination working copy was in a partially completed state.

Action: Use the 'rhpctl add workingcopy' command to create a complete destination working copy. Ensure that options such as '-oraclebase', '-user', and '-client' are set the same as in the source working copy. Retry the 'rhpctl upgrade database' command.

PRGO-01361: failed to upgrade database because the path was not provided for the destination working copy

Cause: An attempt to upgrade a database between Oracle homes was rejected because the source working copy was shared and a shared path was not provided for the destination working copy.

Action: Either specify source and destination Oracle homes that are both local non-shared, or specify a valid shared path for the destination working copy.

PRGO-01362: failed to upgrade database because the software home path for source working copy {0} is shared and the one for destination working copy {1} is not shared

Cause: An attempt to upgrade a database between Oracle homes was rejected because the source Oracle home was shared and the destination Oracle home was not shared.

Action: Specify a pair of working copies where if the source working copy is shared the destination is also shared.

PRGO-01364: failed to retrieve patch information from the working copy "{0}"

Cause: An attempt to query working copy information failed because the patch information could not be retrieved from the indicated working copy.

Action: Examine the accompanying error messages for more information, address reported issues, and retry.

PRGO-01365: The image type "{0}" is inappropriate for single instance database provisioning.

Cause: Image of type SOFTWARE was used for standalone provisioning.

Action: Reissue the command with image of type either ORACLEDBSOFTWARE or ORACLEGISoftware.

PRGO-01366: The specified path "{0}" for provisioning software home is not empty.

Cause: An attempt to provision software home was rejected because a non-empty directory might have contained files that belonged to other Oracle software homes.

Action: Retry the command ensuring that the specified directory for an Oracle home is empty.

PRGO-01367: The specified value "{0}" for "-datafileDestination" did not exist.
Cause: The specified datafileDestination did not exist.

Action: Reissue the command specifying a valid database storage location.

PRGO-01368: The specified location "{0}" for "-datafileDestination" is not writable.

Cause: A supplied database storage location was not writable by the user.

Action: Either specify a location writable by the user or reissue the command as a user with write authorization to the location.

PRGO-01369: The specified working copy "{0}" is not provisioned on node "{1}".

Cause: An attempt to add a database was rejected because the specified working copy was not provisioned on the specified node.

Action: Specify a working copy that is provisioned on the specified node.

PRGO-01370: The specified working copy "{0}" is not provisioned on a standalone node.

Cause: An attempt to add a database was rejected because the specified working copy was not provisioned on any standalone node.

Action: Specify a working copy that is provisioned on the standalone node.

PRGO-01371: The specified Oracle home path {0} is already in use by working copy {1} on node {2}.

Cause: An attempt to add the specified working copy was rejected because the specified Oracle home path was already in use.

Action: Retry the command specifying the path for an Oracle home that is not already in use.

PRGO-01372: Node "{0}" does not exist.

Cause: The provided node does not exist.

Action: Reissue the command with existing node.

PRGO-01373: The credentials required for remote node connection are missing.

Cause: The requested standalone provisioning was rejected because credentials required for remote node connection were not provided.

Action: Provide either the credentials needed for remote connection or a working copy with RHP target.

PRGO-01374: The credentials are not needed for Rapid Home Provisioning.

Cause: Credentials were provided for Rapid Home Provisioning.

Action: Reissue the command either without the credentials for remote connection, but including the -client option, or with the working copy existing on a standalone node. To determine whether the working copy exists on a standalone node, issue the command 'rhpctl query workingcopy -workingcopy <workingcopy_name>'.

PRGO-01375: Option '-datafileDestination' does not specify the absolute path to create a single instance database on a standalone node.

Cause: An attempt to provision a single instance database on standalone node was rejected because the '-datafileDestination' argument was not an absolute path.

Action: Supply an absolute path for the '-datafileDestination' option and retry the command.

PRGO-01376: User does not exist on nodes "{0}".

Cause: The user did not exist on one or more nodes as indicated.

Action: Ensure that user exists on all the specified nodes.

PRGO-01378: The version of the specified image is "{0}" and is not supported.

Cause: An image with an unsupported version was specified for Oracle Grid Infrastructure provisioning.

Action: Specify an image with version 11.2.0.3.0, 11.2.0.4.0, 12.1.0.2.0, or higher and retry.

PRGO-01379: Oracle Grid Infrastructure response file {0} does not exist.

Cause: An attempt to locate the specified Oracle Grid Infrastructure response file failed.

Action: Ensure that the full path of the Oracle Grid Infrastructure response file is correctly specified.

PRGO-01380: Oracle Grid Infrastructure response file {0} is not a file.

Cause: The specified Oracle Grid Infrastructure response file was a directory.

Action: Ensure that the full path of the Oracle Grid Infrastructure response file is correctly specified.

PRGO-01381: Parameter "{0}" is empty.

Cause: A value was not specified for the parameter in the response file or command line.

Action: Specify a usable value for the parameter and retry.

PRGO-01382: Invalid parameter "{0}" specified in the Oracle Grid Infrastructure response file.

Cause: An invalid parameter was specified in the response file.

Action: Specify valid parameters in the response file and retry.

PRGO-01383: response file generate path not supplied

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRGO-01384: Input parameter is null or empty.

Cause: This is an internal error.

Action: Contact Oracle Support Services.

PRGO-01385: User "{0}" lacks the authority to perform the 'subscribe series' operation.

Cause: The user running the 'rhpctl subscribe series' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01386: User "{0}" lacks the authority to perform the 'unsubscribe series' operation.

Cause: The user running the 'rhpctl unsubscribe series' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01387: User "{0}" is not registered with an email address.

Cause: An attempt to unregister the email address of the user was rejected because the user was not registered with an email address.

Action: Supply a user with registered email address and retry.

PRGO-01388: User "{0}" is already subscribed to the series "{1}".

Cause: An attempt to subscribe a user to a series failed because the user was already subscribed to the series.

Action: Supply another user name or series name and retry.

PRGO-01390: User "{0}" is not subscribed to the series "{1}".

Cause: An attempt to unsubscribe a user from a series failed because the user was not subscribed to the series.

Action: Supply a subscribed user name and retry.

PRGO-01391: User "{0}" is already registered with an email address "{1}".

Cause: An attempt to register an email address for a user failed because the user was already registered with an email address.

Action: Use the 'rhpctl modify user' command to modify the email address of the user or unregister the email address using 'rhpctl unregister user' command and retry.

PRGO-01392: failed to send the email notification to the registered users, but the issued command completed successfully

Cause: Rapid Home Provisioning (RHP) failed to send user notifications via the registered email account. Either the account credentials were incorrect or the email server was not reachable.

Action: Ensure that the registered email for Rapid Home Provisioning (RHP) is correct and that the email server is reachable.

PRGO-01402: The specified user "{0}" is not registered with an email address to receive email notifications.

Cause: The command was rejected because the user did not have a registered email address.

Action: Specify the '-notify' option with a user for whom an email address is registered.

PRGO-01410: User "{0}" lacks the authority to perform the 'add useraction' operation.

Cause: The user running the 'rhpctl add useraction' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01411: User action "{0}" already exists.

Cause: An existing user action with the same name was found when adding a new user action.

Action: Supply another user action name or delete the existing user action name and retry.

PRGO-01412: User "{0}" lacks the authority to perform the 'query useraction' operation.

Cause: The user running the 'rhctl query useraction' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01423: User "{0}" lacks the authority to perform the 'delete useraction' operation.

Cause: The user running the 'rhctl delete useraction' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01424: Delete operation failed because user action "{0}" is being used by the following image types: "{1}".

Cause: An attempt to delete a user action failed because the user action is being used by one or more image types.

Action: Remove the user action for the following image types and retry.

PRGO-01425: User "{0}" lacks the authority to perform the 'add imagetype' operation for image type "{1}".

Cause: The user running the 'rhctl add imagetype' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01426: Image type "{0}" already exists.

Cause: An existing image type with the same name was found when adding a new image type.

Action: Supply another image type name or delete the existing image type name and retry.

PRGO-01427: Invalid user actions: {0}

Cause: One or more of the supplied user actions did not exist in the repository.

Action: Supply valid user actions and retry.

PRGO-01428: User "{0}" lacks the authority to perform the 'delete imagetype' operation for image type "{1}".

Cause: The user running the 'rhctl delete imagetype' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01429: Delete operation failed because image type "{0}" is being used by the following images: "{1}".

Cause: An attempt to delete an image type failed because the image type was being used by one or more images.

Action: Remove the specified images from the repository or make sure that they have different image types before attempting to delete the image type.

PRGO-01435: User "{0}" lacks the authority to perform the 'modify imagetype' operation for image type "{1}".

Cause: The user running the 'rhctl modify imagetype' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01436: User "{0}" lacks the authority to perform the 'allow imagetype' operation for image type "{1}".

Cause: The user running the 'rhctl allow imagetype' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01437: User "{0}" lacks the authority to perform the 'disallow imagetype' operation for image type "{1}".

Cause: The user running the 'rhctl disallow imagetype' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01438: User "{0}" for cluster "{1}" was already allowed access to image type {2}.

Cause: An attempt to allow access privilege to the user was rejected because the user had already been granted access privilege to the image type using the 'rhctl allow imagetype' command.

Action: Ensure the correct user was specified.

PRGO-01439: Role "{0}" cannot be allowed for image type "{1}".

Cause: An attempt to allow the role access to the image type failed because the role was a built-in role associated with the imagetype.

Action: Specify a different role and retry.

PRGO-01440: Role "{0}" was already allowed access to image type "{1}".

Cause: An attempt to allow access privilege to the role was rejected because the role had already been granted access privilege to the image type using the 'rhctl allow imagetype' command.

Action: Ensure the correct role was specified.

PRGO-01441: User "{0}" for cluster "{1}" has never been granted access to image type {2}.

Cause: An attempt to revoke access privilege to the image type failed because the user had never been granted access to the image type using the 'rhpcctl allow imagetype' command.

Action: Use the 'rhpcctl disallow imagetype' command to revoke access privilege from another user.

PRGO-01442: Role "{0}" has never been granted access to image type "{1}".

Cause: An attempt to revoke access privilege to the image type failed because the role had never been granted access to the image type using the 'rhpcctl allow imagetype' command.

Action: Use the 'rhpcctl disallow imagetype' command to disallow access privilege from another role.

PRGO-01443: Role "{0}" cannot be disallowed from image type "{1}".

Cause: An attempt to revoke access to the image type failed because the role was a built-in role associated with the image type and was not granted access using the 'rhpcctl allow imagetype' command.

Action: Specify a different role and retry the command.

PRGO-01444: User "{0}" lacks the authority to perform the 'query imagetype' operation for image type "{1}".

Cause: The user running the 'rhpcctl query imagetype' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01445: User "{0}" lacks the authority to perform the 'modify image' operation.

Cause: The user running the 'rhpcctl modify image' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01446: The base type of the image type "{0}" does not match the base type or built-in image type of the image.

Cause: An attempt to modify the image type of the image failed because the base type of the target image type did not match the base type or built-in image type of the image.

Action: Retry the command with a target image type that has the same base type or built in image type of the image.

PRGO-01447: Failed to retrieve image type information

Cause: Internal error.

Action: Contact Oracle Support Services.

PRGO-01448: Delete operation failed because image type "{0}" is a built-in image type.

Cause: An attempt to delete an image type was rejected because the image type was a built-in image type and was not added using the 'rhpcctl add imagetype' command.

Action: Specify a different image type and retry the command.

PRGO-01449: The specified path {0} is not an Oracle Database Home

Cause: The specified home path does not contain the 'oracle' binary or it is an Oracle Grid Infrastructure home.

Action: Make sure that the home path is an Oracle database home path.

PRGO-01450: The specified path {0} is not an Oracle Grid Infrastructure Home

Cause: The specified home path for the import image operation does not contain the 'crsd' binary.

Action: Make sure that the home path is an Oracle Grid Infrastructure home path.

PRGO-01451: Option '-pathowner' cannot be specified for image type which has base type ORACLEDBSOFTWARE

Cause: A request to import an image was rejected because the '-pathowner' option was specified for importing the Oracle Database home.

Action: Omit the '-pathowner' option.

PRGO-01452: Improper '-version' option (or obsolete '-dbversion' option) specified with image type with base type SOFTWARE.

Cause: An attempt to query images was rejected because the '-version' option (or obsolete '-dbversion' option) was specified together with an image type with base type SOFTWARE.

Action: Either remove the '-version' option (or obsolete '-dbversion' option) or specify an image type with base type other than SOFTWARE and retry the command.

PRGO-01453: The base type of the image type "{0}" does not match the base type of the image type of the working copy image.

Cause: An attempt to add the image failed because the base type of the target image type did not match the base type of the image type of the working copy image.

Action: Retry the command with a target image type that has the same base type as the base type of the image type of the working copy image.

PRGO-01454: Delete operation failed because image type "{0}" does not exist.

Cause: An attempt to delete an image type failed because the image type did not exist.

Action: Specify a different image type and retry the command.

PRGO-01455: User "{0}" lacks the authority to perform the 'query imagetype' operation.

Cause: The user running the 'rhctl query imagetype' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01456: Query operation failed because image type "{0}" does not exist.

Cause: An attempt to get the image type configuration failed because the image type did not exist.

Action: Specify a different image type and retry the command.

PRGO-01457: Delete operation failed because user action "{0}" does not exist.

Cause: An attempt to delete a user action failed because the user action did not exist.

Action: Specify a different user action and retry the command.

PRGO-01458: Service availability factor (SAF) of {0}% is not feasible for service {1}.

Cause: An attempted 'move database' operation was rejected because the indicated service availability could not have been maintained for the indicated service because it was not running on a sufficient number of instances.

Action: Retry the command by specifying an appropriate service availability factor.

PRGO-01462: failed to move the Oracle Grid Infrastructure home because the source and the destination working copy cannot be the same

Cause: An attempt to move the Oracle Grid Infrastructure home was rejected because the specified source and destination working copies are the same.

Action: Specify different source and destination working copies and retry the operation.

PRGO-01463: could not perform Oracle Grid Infrastructure home 'move' for the specified working copy from Rapid Home Provisioning Client (RHPC) "{0}"

Cause: The Oracle Grid Infrastructure home could not be moved because the working copy was not created by this Rapid Home Provisioning Client.

Action: Execute the command from the cluster that created this working copy.

PRGO-01464: failed to move the Oracle Grid Infrastructure home because the source working copy "{0}" is incomplete

Cause: The source working copy was in a partially completed state.

Action: Retry the 'rhpctl move gihome' command after ensuring that the source working copy has been created successfully.

PRGO-01465: invalid '-path', '-image', or '-aupath' option specified for the move of Oracle Grid Infrastructure home and that was an existing destination working copy

Cause: An attempt to move the Oracle Grid Infrastructure home was rejected because the '-path', '-image', or '-aupath' option was specified when there was an existing destination working copy."

Action: Retry the command without the '-path', '-image', or '-aupath' option.

PRGO-01472: failure to move or upgrade Oracle Grid Infrastructure home to destination working copy whose base image type is not ORACLEGISOFTWARE

Cause: An attempt to move or upgrade the Oracle Grid Infrastructure home failed because the destination working copy (to be created) was not of base image type ORACLEGISOFTWARE.

Action: Retry the command with a destination working copy created from an image of base image type ORACLEGISOFTWARE.

PRGO-01473: The source working copy is not created from an image of base image type ORACLEGISOFTWARE.

Cause: An attempt to move the Oracle Grid Infrastructure home failed because the source working copy was not created from an image of base image type ORACLEGISOFTWARE.

Action: Retry the command with a source working copy created from an image of base image type ORACLEGISOFTWARE.

PRGO-01474: failed to move the Oracle Grid Infrastructure home because source and the destination working copy version were different

Cause: An attempt to move the Oracle Grid Infrastructure home failed because the source and destination working copy versions were different.

Action: Retry the command with the same version of source and destination working copy.

PRGO-01475: failed to move the Oracle Grid Infrastructure home because the source working copy owner and the destination working copy owner were different

Cause: An attempt to move the Oracle Grid Infrastructure home failed because the source and destination working copy owners were different.

Action: Ensure that the source and destination working copy owners are the same for the move gihome operation.

PRGO-01476: failed to move the Oracle Grid Infrastructure home because the owner "{0}" of the source home does not match the owner "{1}" of the destination working copy "{2}"

Cause: An attempt to move the Oracle Grid Infrastructure home failed because the owner of the source software home path and the destination working copy were different.

Action: Create or specify a destination working copy with the same owner as the source home and retry the move gihome operation.

PRGO-01477: failed to move the Oracle Grid Infrastructure home because the source working copy was configured in a different cluster from the destination working copy

Cause: An attempt to move the Oracle Grid Infrastructure home failed because the source and destination working copies were configured in different clusters.

Action: Retry the command with the source and destination working copies configured in the same cluster.

PRGO-01478: failed to move the Oracle Grid Infrastructure home because the '-image' option required for creating the destination working copy was not specified

Cause: An attempt to move the Oracle Grid Infrastructure failed because the '-image' option from which to create the new working copy was not specified.

Action: Either request a new working copy using both -image and -destwc or specify an existing working copy using the -destwc option.

PRGO-01479: failed to move the Oracle Grid Infrastructure home on the Rapid Home Provisioning client "{0}"

Cause: An attempt to move the Oracle Grid Infrastructure home on the node where Rapid Home Provisioning client was running failed because the last node 'move gihome' actions either failed with an error or timed out.

Action: Examine the accompanying error messages and retry the command after addressing the cause for the error.

PRGO-01480: illegal option "{0}" specified for standalone provisioning on cluster version other than 11.2.0.4

Cause: The specified option was invalid for a standalone provisioning on cluster version other than 11.2.0.4.

Action: Reissue the command without the forbidden option.

PRGO-01481: Disk group "{0}" does not exist.

Cause: An attempt to provision a database was rejected because the specified disk group was not configured on the standalone target.

Action: Supply the name of a disk group that is configured for the standalone target.

PRGO-01482: The specified node "{0}" is not one on which the working copy is provisioned.

Cause: The requested operation was rejected because the specified node was not part of the nodes on which the working copy was provisioned.

Action: Reissue the command with a node on which the working copy was provisioned or specify the working copy that exists on the specified node.

PRGO-01483: missing "-node" option for creating an administrator-managed database on a cluster whose release is earlier than 12.2

Cause: An attempt to create an administrator-managed database on a cluster whose release is earlier than 12.2 was rejected because the '-node' option was not specified.

Action: Reissue the command specifying the '-node' option.

PRGO-01484: More than one node was specified for standalone single instance database provisioning.

Cause: The number of nodes specified for single instance database provisioning was not one.

Action: Specify only one node for the -node option.

PRGO-01485: Specified target node "{0}" is part of cluster "{1}" not managed by Rapid Home Provisioning Server.

Cause: The specified target node was part of a cluster that is not managed by Rapid Home Provisioning Server.

Action: Use 'rhpctl move gihome' command to make this cluster managed by Rapid Home Provisioning Server and retry."

PRGO-01486: Unexpected option '{0}' specified for moving a database between Oracle single-instance database homes which are on a node that does not belong to a cluster.

Cause: The attempted 'move database' operation was rejected because the indicated option was not supported.

Action: Retry the command without the indicated option.

PRGO-01487: Option '{0}' was not specified for moving a single-instance database.

Cause: The attempted 'move database' operation was rejected because the indicated option was not specified.

Action: Specify the indicated option and retry the command.

PRGO-01488: Working copy "{0}" is not an Oracle RAC home.

Cause: An attempt to move or upgrade a database failed because both the source and patched working copies were not Oracle RAC homes.

Action: Specify an Oracle RAC home as the patched working copy and retry the command.

PRGO-01489: The patched working copy is not on the same node as the source working copy or Oracle home.

Cause: An attempt to move or upgrade a single-instance database failed because the source working copy or Oracle home and the patched working copy are on different nodes.

Action: Ensure that the source working copy or Oracle home and the patched working copy are on the same node.

PRGO-01491: Unexpected option '{0}' specified for moving databases on a cluster whose version is at least {1}.

Cause: The attempted 'move database' operation was rejected because the indicated option was not needed.

Action: Retry the command without the indicated option.

PRGO-01492: Unexpected option '{0}' specified for moving a database between Oracle single-instance database homes which are on a node that belongs to a cluster of version {1}.

Cause: The attempted 'move database' operation was rejected because the indicated option was not supported.

Action: Retry the command without the indicated option.

PRGO-01493: Unexpected option '{0}' specified for moving a single-instance database between Oracle homes.

Cause: The attempted 'move database' operation was rejected because the indicated option was not supported.

Action: Retry the command without the indicated option.

PRGO-01494: operation not allowed because an existing operation is currently in progress on entity "{0}" previously submitted by user "{1}" on node "{2}" in cluster "{3}"

Cause: An attempt to initiate an operation was rejected because an existing operation was currently in progress on the target entity. Only one operation can be in progress at a time on any entity.

Action: Wait until the existing active operation finishes, then retry the command.

PRGO-01495: The '-newnodes' option contains node roles for a cluster that is not an Oracle Flex Cluster.

Cause: An attempt to add nodes with node roles specified in the '-newnodes' option was rejected because the target cluster was not an Oracle Flex Cluster.

Action: Specify the value for the '-newnodes' option in the form of "<node_name>:<node_vip>" or specify an Oracle Flex Cluster as the target cluster.

PRGO-01496: missing required option '-targetnode' for performing 'add nodes' operation on a cluster that has no RHP client

Cause: An attempt to add nodes to a database home or a cluster failed because the '-targetnode' option was not specified for cluster that has no Rapid Home Provisioning (RHP) client

Action: Retry specifying the '-targetnode' option.

PRGO-01497: The base image type "{1}" of working copy "{0}" is incompatible with the requested operation.

Cause: The attempted 'addnodes' or 'deletenodes' operation was rejected because the base image type of the specified working copy was not ORACLEGISOFTWARE.

Action: None

PRGO-01498: Working copy "{0}" is software-only.

Cause: An attempt to add or delete nodes from the indicated working copy failed because it was software-only.

Action: Retry specifying a working copy that is not software-only.

PRGO-01499: Working copy "{0}" is incomplete.

Cause: An attempt to run an operation on the indicated working copy failed because it was incomplete.

Action: Retry the command making sure that the working copy supplied is complete.

PRGO-01500: illegal attempt to to provision a working copy on ACFS for a cluster with Leaf nodes

Cause: An attempt to provision a working copy was rejected because the client cluster contains Leaf nodes which cannot access ACFS storage.

Action: Specify the storage type to be NFS or LOCAL with non-ACFS path.

PRGO-01501: failed to upgrade the Oracle Grid Infrastructure home because the specified source working copy version "{0}" is earlier than "{1}"

Cause: An attempt to upgrade the Oracle Grid Infrastructure home failed because the source working copy version is incorrect.

Action: Ensure that the source working copy version is later than Oracle Database 11g Release 2 (11.2.0.2.0).

PRGO-01502: failed to upgrade the Oracle Grid Infrastructure home because the specified destination working copy version "{0}" must be later than "{1}"

Cause: An attempt to upgrade the Oracle Grid Infrastructure home failed because the destination working copy version is incorrect.

Action: Ensure that the destination working copy version is later than Oracle Database 12c Release 1 (12.1.0.1.0).

PRGO-01503: failed to upgrade the Oracle Grid Infrastructure home because the source and the destination working copy are the same

Cause: An attempt to upgrade the Oracle Grid Infrastructure home was rejected because the specified source and destination working copies are the same.

Action: Specify different source and destination working copies and retry the operation.

PRGO-01504: could not perform Oracle Grid Infrastructure home 'upgrade' for the specified working copy from Rapid Home Provisioning Client (RHPC) "{0}"

Cause: The Oracle Grid Infrastructure home could not be upgraded because the working copy was not created by this Rapid Home Provisioning Client.

Action: Execute the command from the cluster that created this working copy or specify a different working copy.

PRGO-01505: failed to upgrade the Oracle Grid Infrastructure home because the source working copy "{0}" is incomplete

Cause: The source working copy was in a partially completed state.

Action: Retry the 'rhpcctl upgrade gihome' command after ensuring that the source working copy has been created successfully or specify a different source working copy that is complete.

PRGO-01506: The specified destination working copy is incomplete.

Cause: The destination working copy was in a partially completed state.

Action: Retry the move or upgrade command after ensuring that the destination working copy has been created successfully or specify a different destination working copy that is complete.

PRGO-01507: invalid '-path' or '-image' option specified for upgrade of Oracle Grid Infrastructure home that was an existing destination working copy

Cause: An attempt to upgrade the Oracle Grid Infrastructure home was rejected because the '-path' or '-image' option was specified when there was an existing destination working copy.

Action: Retry the command without the '-path' and '-image' option.

PRGO-01522: User "{0}" lacks the authority to perform the 'query audit' operation.

Cause: The user running the 'rhpcctl query audit' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01523: User "{0}" lacks the authority to perform the 'modify audit' operation.

Cause: The user running the 'rhpcctl modify audit' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01524: User "{0}" lacks the authority to perform the 'delete audit' operation.

Cause: The user running the 'rhpcctl delete audit' command did not have the required authorization.

Action: Request the authorization from the administrator or perform the operation from a user ID that has the required authorization.

PRGO-01525: no target node specified

Cause: An attempt to delete an active working copy of type ORACLEGISOFTWARE was rejected because no target node was specified.

Action: Retry specifying the target node.

PRGO-01526: The specified node role "{0}" is not HUB or LEAF.

Cause: The previously submitted command was rejected because the specified node role was invalid.

Action: Retry the previously submitted command providing a valid node role, HUB or LEAF.

PRGO-01527: The value supplied for node "{0}" is invalid.

Cause: The command was rejected because the indicated value supplied as a node specification was invalid.

Action: Retry the command providing a node specification in the form "<node_name>" for an Application cluster, in the form "<node_name>:<node_vip>[:<node_role>]" for a Flex cluster, and in the form "<node_name>:<node_vip>" for a non-Flex cluster.

PRGO-01528: Modify operation failed because user action "{0}" does not exist.

Cause: An attempt to modify a user action failed because the user action did not exist.

Action: Specify the correct name of a user action that exists and retry the command.

PRGO-01529: The operation failed because the user action "{0}" did not execute successfully.

Cause: The operation failed because the indicated user action configured for the image did not execute successfully.

Action: Specify a different image or modify the user action to be non-fatal and retry the command.

PRGO-01530: Modify operation failed because image type "{0}" does not exist.

Cause: An attempt to modify an image type failed because the image type did not exist.

Action: Specify the correct name of an image type that exists and retry the command.

PRGO-01531: Failed to copy file "{0}" between Rapid Home Provisioning server and client. Detailed error:\n{1}

Cause: The copy operation failed either because the file system was full or the destination directory did not have write permissions for the specified user.

Action: Retry the command making sure that the file system is not full and the destination directory has requisite permissions.

PRGO-01534: failed to upgrade database "{0}" because the database does not exist on cluster "{1}"

Cause: An attempt to upgrade a database failed because the indicated database was not registered with the Oracle Clusterware.

Action: Ensure the database is configured in the current cluster or provide the correct cluster name.

PRGO-01535: Working copy "{0}" is not an Oracle RAC home.

Cause: The attempted 'addnodes' or 'deletenodes' operation was rejected because the indicated working copy was an Oracle single-instance database home.

Action: None

PRGO-01536: Working copy "{0}" was not created by Rapid Home Provisioning Client "{1}".

Cause: The attempted operation was rejected because the indicated working copy was not created by the indicated Rapid Home Provisioning Client.

Action: Retry the command from the cluster that created this working copy.

PRGO-01537: cannot delete all nodes from working copy "{0}"

Cause: An attempt to remove the indicated Oracle home software from a set of nodes using the command 'rhpctl deletenodes dbhome' was rejected because the 'deletenodes' operation cannot be used to delete a working copy.

Action: Use 'rhpctl delete workingcopy' to delete the indicated working copy.

PRGO-01538: Databases belonging to working copy "{0}" have instances running on nodes: "{1}".

Cause: An attempt to remove the indicated Oracle home software from the indicated nodes failed because databases belonging to the Oracle home have instances running on those nodes.

Action: Retry after removing database instances running on the indicated nodes.

PRGO-01539: The base image type "{1}" of working copy "{0}" is incompatible with the requested operation.

Cause: An attempted 'addnodes' or 'deletenodes' operation was rejected because the base image type of the specified working copy was not ORACLEDBSOFTWARE.

Action: None

PRGO-01540: failed to extend working copy "{0}" to nodes "{1}"

Cause: An attempt to extend the indicated Oracle RAC home to the indicated nodes failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address issues described and retry.

PRGO-01541: failed to remove working copy "{0}" from nodes "{1}"

Cause: An attempt to remove the indicated Oracle RAC home from the indicated nodes failed. The accompanying messages provide detailed failure information.

Action: Examine the accompanying error messages, address issues described and retry.

PRGO-01542: missing '{0}', '{1}' or '{2}' option for rapid home provisioning

Cause: The requested operation was rejected because either '-dbname' or '-datafileDestination' was specified without '-node', '-serverpool' or '-newpool'.

Action: Reissue the command with one of '-node', '-serverpool', or '-newpool'; or specify '-target' as STANDALONE.

PRGO-01543: illegal option '{0}' specified for single instance database provisioning

Cause: The specified option was invalid for single instance database provisioning.

Action: Reissue the command without the forbidden option.

PRGO-01544: Invalid -dbtemplate option specified for an image of base type other than ORACLEDBSOFTWARE

Cause: The query image command was rejected because -dbtemplate option was only supported for ORACLEDBSOFTWARE images.

Action: Retry the command without the -dbtemplate option.

PRGO-01545: invalid image type for working copy "{0}" deletion request from Rapid Home Provisioning Client

Cause: An attempt to delete a working copy of image type ORACLEGISOFTWARE from Rapid Home Provisioning Client was rejected.

Action: Run the 'delete workingcopy' command on Rapid Home Provisioning Server.

PRGO-01546: failed to delete Oracle Home\n{0}

Cause: An attempt to delete the Oracle Home directory failed during the cleanup of Oracle Grid Infrastructure. The accompanying messages provide detailed failure information. The 'delete workingcopy' operation completed, but additional action may be needed to complete the cleanup.

Action: Examine the accompanying error messages and address the issues as described to complete the Oracle Grid Infrastructure cleanup.

PRGO-01547: failed to detach Oracle Home\n{0}

Cause: An attempt to detach Oracle Home failed during the cleanup of Oracle Grid Infrastructure. The accompanying messages provide detailed failure information. The 'delete workingcopy' operation completed, but additional action may be needed to complete the cleanup.

Action: Examine the accompanying error messages and address the issues as described to complete the Oracle Grid Infrastructure cleanup.

PRGO-01548: failed to delete snapshot of the image "{0}"\n{1}

Cause: An attempt to delete the snapshot of the image failed during the cleanup of Oracle Grid Infrastructure. The accompanying messages provide detailed failure information. The 'delete workingcopy' operation completed, but additional action may be needed to complete the cleanup.

Action: Examine the accompanying error messages and address the issues as described to complete the Oracle Grid Infrastructure cleanup.

PRGO-01549: failed to unmount the NFS file system with error:\n{0}

Cause: An attempt to unmount failed during the cleanup of Oracle Grid Infrastructure. The accompanying messages provide detailed failure information. The 'delete workingcopy' operation completed, but additional action may be needed to complete the cleanup.

Action: Examine the accompanying error messages and address the issues as described to complete the Oracle Grid Infrastructure cleanup.

PRGO-01550: User "{0}" is not authorized to perform the 'register user' operation for a different user.

Cause: An attempt to execute the command 'rhpctl register user' on behalf of another user failed because the indicated user did not have the required authorization.

Action: Contact your system administrator for the GH_USER_ADMIN role or perform the operation with a user ID having the GH_USER_ADMIN_ROLE.

PRGO-01551: User "{0}" is not authorized to perform the 'modify user' operation for a different user.

Cause: An attempt to execute the command 'rhpctl modify user' on behalf of another user failed because the indicated user did not have the required authorization.

Action: Contact your system administrator for the GH_USER_ADMIN role or perform the operation with a user ID having the GH_USER_ADMIN_ROLE.

PRGO-01552: User "{0}" is not authorized to perform the 'unregister user' operation for a different user.

Cause: An attempt to execute the command 'rhpctl unregister user' on behalf of another user failed because the indicated user did not have the required authorization.

Action: Contact your system administrator for the GH_USER_ADMIN role or perform the operation with a user ID having the GH_USER_ADMIN_ROLE.

PRGO-01554: missing '-targetnode' option to move the source working copy of version "{0}"

Cause: An attempt to move a working copy was rejected because the working copy version was earlier than release 12.2 and the '-targetnode' option was not provided.

Action: Reissue the command specifying the '-targetnode' option.

PRGO-01555: Maximum wait time reached to advertise Rapid Home Provisioning Server with GNS

Cause: While looking up Rapid Home Provisioning Server connection details, an attempt to query Grid Naming Service (GNS) failed.

Action: Make sure that both the GNS and the Rapid Home Provisioning Server are running.

PRGO-01556: cannot retrieve the Oracle release version of the image from image path "{0}" while adding or importing a new image on node {1}.

Cause: An attempt to retrieve the Oracle release version of the image from an image path using SRVCTL and SQLPLUS failed.

Action: Examine the accompanying error messages, address the described issues, and retry.

PRGO-01557: cannot retrieve the Oracle release version of the image from image path "{0}" while adding or importing a new image on node {1}.

Cause: An attempt to retrieve the Oracle release version of the image from an image path using SQLPLUS failed.

Action: Examine the accompanying error messages, address the described issues, and retry.

PRGO-01558: Rapid Home Provisioning Server (RHPS) is not reachable.

Cause: An error occurred while attempting to connect to the Rapid Home Provisioning Server (RHPS), possibly because the RHPS was not running.

Action: Examine the accompanying errors for more information. Make sure the RHPS is running before retrying the command.

PRGO-01559: Inappropriate image type {0} of working copy {1} specified for 'rhpctl query working copy' on a cluster version earlier than 12.2

Cause: The requested operation was rejected because clients of versions earlier than 12.2 cannot query working copies based on image type ORACLEGISOFTWARE.

Action: Retry the command from a cluster of version 12.2 or higher

PRGO-01560: no target node specified

Cause: An attempt to add a software-only working copy was rejected because the client had no Rapid Home Provisioning (RHP) client and no target node was provided. A target node must be specified when adding a software-only working copy on a client that has no RHP client.

Action: Rerun the 'add workingcopy' command specifying the target node.

PRGO-01561: target node not required

Cause: An attempt to add a software-only working copy was rejected because the target node was provided for provisioning on a cluster with an RHP client. The target node must not be specified when adding a software-only working copy on a client that has Rapid Home Provisioning (RHP) client.

Action: Rerun the 'add workingcopy' command without specifying the target node.

PRGO-01562: Cluster already exists on node "{0}" with Oracle home at path "{1}".

Cause: The requested operation was rejected because the indicated node was already a member of an existing Oracle Grid Infrastructure cluster.

Action: Retry the command specifying nodes that are not members of an existing Oracle Grid Infrastructure cluster.

PRGO-01565: failed to create gold image path: {0}

Cause: An attempt to provision an Oracle home based on an Oracle Layered File System failed because the directory to store the gold image contents could not be created.

Action: Examine the accompanying error messages, address the issues described, and then retry.

PRGO-01566: failed to create the read/write path: {0}

Cause: An attempt to provision an Oracle home based on an Oracle Layered File System failed because the read/write path could not be created.

Action: Examine the accompanying error messages, address issues described and retry.

PRGO-01567: The supplied path "{0}" is on ACFS resource "{1}", which is managed by the Rapid Home Provisioning application.

Cause: A request to add a working copy was rejected because the supplied path was on an ACFS file system managed by the Rapid Home Provisioning application.

Action: Specify a working copy path that is not on an ACFS file system managed by the Rapid Home Provisioning application or retry, omitting the '-path' option to let the RHP choose the path on the RHP-managed ACFS file system.

PRGO-01568: unexpected option '-targetnode' specified for provisioning Oracle home on a Rapid Home Provisioning Client (RHPC) cluster

Cause: An attempt to provision an Oracle home on an RHPC cluster of version 12.2.0.1 or above was rejected because the '-targetnode' option was specified.

Action: Reissue the command specifying the '-client' option instead of the '-targetnode' option.

PRGO-01569: missing '-user' option for provisioning a workingcopy on a standalone target.

Cause: The '-user' option was missing for standalone provisioning.

Action: Reissue the command specifying the '-user' option.

PRGO-01571: The move operation was rejected because the patched working copy "{0}" is missing the patches for bug numbers "{1}" which are present in the source working copy "{2}".

Cause: Some patches were present in the source working copy that were missing in the patched working copy.

Action: Rerun the move command with the '-ignorewcpatches' option or specify a patched working copy with at least the same patches applied as the source working copy.

PRGO-01572: no target node specified

Cause: An attempt to move the Oracle Grid Infrastructure home was rejected because the client had no Rapid Home Provisioning (RHP) client and no target node was provided. A target node must be specified when moving an Oracle Grid Infrastructure home in a cluster that has no RHP client.

Action: Retry the move operation specifying the '-targetnode' option.
