ORA-08118: Deferred FK constraints cannot be enforced, index too big (string)

Cause: Deferred Foreign Key constraints cannot be enforced due to the index key being too big and built on a non-default DB_BLOCK_SIZE.

Action: First try to drop the Foreign Key and then the primary key.

ORA-08119: The new initrans will make the index too big

Cause: Specifying the initrans need additional space to hold the index key which might make the index too big

Action: Try giving a smaller initrans value

ORA-08120: Need to create SYS.IND_ONLINE\$ table in order to (re)build index

Cause: Alter index Build/Rebuild online require existing of SYS.IND_ONLINE\$ table.

Action: User/DBA needs to create sys.ind_online\$ before alter the index /rdbms/admin/catcio.sql contains script to create ind_online\$.

ORA-08121: Number of indexes need to be maintained offline exceeds limit for DML

Cause: Too many indexes needed to be maintained. The limit is 2^16 indexes for each DML statement

Action: Make sure the index maintainance is online. If indexes need to be maintained offline, drop some indexes.

ORA-08122: Online (re)build of index rolled back due to DML conflict

Cause: The online (re)build journal is inconsistent with ongoing DML and cannot be used successfully to complete the online index (re)build.

Action: Reissue the online (re)build operation, after performing any cleanup, if needed.

ORA-08175: discrete transaction restriction violated (*string*)

Cause: An attempt was made to perform an action that is not currently supported in a discrete transaction.

Action: Rollback the transaction, and retry it as a normal transaction.

ORA-08176: consistent read failure; rollback data not available

Cause: Encountered data changed by an operation that does not generate rollback data : create index, direct load or discrete transaction.

Action: In read/write transactions, retry the intended operation. Read only transactions must be restarted.

ORA-08177: can't serialize access for this transaction

Cause: Encountered data changed by an operation that occurred after the start of this serializable transaction.

Action: In read/write transactions, retry the intended operation or transaction.

ORA-08178: illegal SERIALIZABLE clause specified for user INTERNAL

Cause: Serializable mode is not supported for user INTERNAL.

Action: Reconnect as another user and retry the SET TRANSACTION command.

ORA-08179: concurrency check failed

Cause: Encountered data changed by an operation that occurred after a specific snapshot. This is usually used to indicate that a particular cached copy of a datablock is stale. This is used for internal use for now.

Action: refresh the cached copy of the datablock and retry operation.

ORA-08180: no snapshot found based on specified time

Cause: Could not match the time to an SCN from the mapping table.

Action: try using a larger time.

ORA-08181: specified number is not a valid system change number

Cause: supplied scn was beyond the bounds of a valid scn.

Action: use a valid scn.

ORA-08182: operation not supported while in Flashback mode

Cause: user tried to do dml or ddl while in Flashback mode

Action: disable Flashback and re-attempt the operation

ORA-08183: Flashback cannot be enabled in the middle of a transaction

Cause: user tried to do Flashback in the middle of a transaction

Action: do a commit

ORA-08184: attempting to re-enable Flashback while in Flashback mode

Cause: as stated above

Action: disable first before re-enabling

ORA-08185: Flashback not supported for user SYS

Cause: user logged on as SYS

Action: logon as a different (non SYS) user.

ORA-08186: invalid timestamp specified

Cause: as stated above

Action: enter a valid timestamp

ORA-08187: snapshot expression not allowed here

Cause: A snapshot expression using AS OF was specified when not allowed.

Action: Do not use the AS OF clause

ORA-08189: cannot flashback the table because row movement is not enabled

Cause: An attempt was made to perform Flashback Table operation on a table for which row movement has not been enabled. Because the Flashback Table does not preserve the rowids, it is necessary that row movement be enabled on the table.

Action: Enable row movement on the table

ORA-08190: restore point *string* is from a different incarnation of the database

Cause: An attempt was made to perform Flashback Table operation using a restore point from a different incarnation of the database

Action: Provide a restore point from the current database incarnation

ORA-08191: Flashback Table operation is not supported on remote tables.

Cause: An attempt was made to perform Flashback Table operation on a remote table. This was not supported.

Action: Do not perform a Flashback Table operation on remote tables.

ORA-08192: Flashback Table operation is not allowed on fixed tables, external tables, and hybrid partitioned tables.

Cause: An attempt was made to perform Flashback Table operation on a fixed table, external table, or a hybrid partitioned table. This was not supported.

Action: Do not perform a Flashback Table operation on fixed tables, external tables, or hybrid partitioned tables.

ORA-08193: Flashback Table operation is not allowed on temporary tables.

Cause: An attempt was made to perform Flashback Table operation on a temporary table. This was not supported.

Action: Do not perform a Flashback Table operation on temporary tables.

ORA-08194: Flashback Table operation is not allowed on materialized views.

Cause: An attempt was made to perform Flashback Table operation on a materialized view. This was not supported.

Action: Do not perform a Flashback Table operation on materialized views or snapshot logs.

ORA-08195: Flashback Table operation is not supported on partitions.

Cause: An attempt was made to perform Flashback Table operation on a partition. This was not supported.

Action: Do not perform a Flashback Table operation on partitions.

ORA-08196: Flashback Table operation is not allowed on Advanced Queue tables.

Cause: An attempt was made to perform Flashback Table operation on Advanced Queue tables. This was not supported.

Action: Do not perform a Flashback Table operation on Advanced Queue tables.

ORA-08197: Flashback Table operation is not supported on clustered tables.

Cause: An attempt was made to perform Flashback Table operation on a clustered table. This was not supported.

Action: Do not perform a Flashback Table operation on clustered tables.

ORA-08198: Flashback Table is not supported on object tables, nested tables.

Cause: An attempt was made to perform Flashback Table operation on a object table or a nested table or a table with nested table column. This was not supported.

Action: Do not perform a Flashback Table operation on such tables.

ORA-08199: Flashback Table operation is not supported on this object.

Cause: An attempt was made to perform Flashback Table operation on an object on which the operation was not supported.

Action: Do not perform a Flashback Table operation on such objects.

ORA-08205: ora_addr: \$ORACLE_SID not set in environment

Cause: The environment variable ORACLE_SID is not set.

Action: Set the ORACLE_SID environment variable.

ORA-08206: ora_addr: cannot translate address file name

Cause: Cannot translate \$ORACLE_HOME/dbs/sgadef\$ORACLE_SID.dbf.

Action: Ensure that ORACLE_HOME and ORACLE_SID are properly set.

ORA-08207: ora_addr: cannot open address file

Cause: The address file could not be opened.

Action: Check that ORACLE is up. Check that the file \$(ORACLE_HOME)/dbs/sgadef\$(ORACLE_SID).dbf exists and has correct permissions.

ORA-08208: ora_addr: cannot read from address file

Cause: The address file could not be read.

Action: Check that the file \$(ORACLE_HOME)/dbs/sgadef\$(ORACLE_SID).dbf exists and contains a single line of text.

ORA-08209: scngrs: SCN not yet initialized

Cause: The System Commit Number has not yet been initialized.

Action: Contact your customer support representative.

ORA-08210: Requested I/O error

Cause: Oracle requested that an I/O error be returned for this operation.

Action: This should not occur in normal Oracle operation. Contact support.

ORA-08230: smscre: failed to allocate SGA

Cause: The `n_core` system call failed, maybe due to insufficient memory.

Action: Specify a smaller number of buffers. Check `INIT.ORA` parameters.

ORA-08231: smscre: unable to attach to SGA

Cause: The process cannot attach to the SGA. This can happen if either the listener can't attach, or the process cannot communicate with the listener.

Action: Verify that the instance is up and running. Contact your customer support representative.

ORA-08232: smsdes: cannot detach from SGA

Cause: Probably, the listener process has died.

Action: Contact your customer support representative.

ORA-08233: smsdes: cannot unmap SGA

Cause: The `n_core` system call failed while detaching from the SGA.

Action: Note `nCX` error returned; contact your customer support representative.

ORA-08234: smsget: cannot get instance listener address

Cause: The instance listener address cannot be read from the `sgadef` file.

Action: Verify `$(ORACLE_HOME)` and `$(ORACLE_SID)` are set correctly. Additional information gives error return from `ora_addr`.

ORA-08235: smsget: listener not on this node

Cause: A process wishing to attach to the SGA is on a different node from its instance's listener.

Action: Verify `$(ORACLE_HOME)` and `$(ORACLE_SID)` are set correctly. Contact your customer support representative.

ORA-08236: smsget: cannot share subcube with listener

Cause: The `n_share` call failed, probably because the listener has died.

Action: Check if the listener is running, and contact your customer support representative.

ORA-08237: smsget: SGA region not yet created

Cause: Attempting to attach to an SGA which has not yet been created.

Action: Verify that the instance is running. Contact your customer support representative.

ORA-08238: smsfre: cannot detach from SGA

Cause: The `n_core` system call failed while detaching from the SGA.

Action: Check `nCX` error, and contact your customer support representative.

ORA-08243: recursive audit operation attempted

Cause: A recursive operation requiring audit was attempted in the middle of an auditing operation or an audit table movement operation. The most likely reason is that space management operations needed to free up space in the audit tablespace or a SQL operation on dictionary tables directly or using database triggers which produced more audit records.

Action: Check space in the tablespace for SYS.AUD\$ or SYS.FGA_LOG\$ and correct the problem. Or, if the problem was recursively auditing SQL operations, remove the audit configuration on such objects or statements.

ORA-08260: ora_addr: cannot open nameserver

Cause: A process could not connect to the nameserver.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

ORA-08261: ora_addr: cannot find name in nameserver

Cause: The listener nameserver entry for an instance could not be found.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

ORA-08263: ora_addr: cannot free listener address

Cause: The listener nameserver entry could not be freed

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

ORA-08264: ora_addr: cannot close nameserver

Cause: The connection to the nameserver could not be closed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

ORA-08265: create_ora_addr: cannot open nameserver

Cause: A process could not connect to the nameserver.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

ORA-08266: create_ora_addr: cannot register name in nameserver

Cause: The listener's addressing information could not be registered.

Action: Make sure the nameserver is up and running. Additional information gives nameserver's returned status.

ORA-08267: destroy_ora_addr: cannot close nameserver

Cause: The connection to the nameserver could not be closed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

ORA-08268: create_ora_addr: cannot close nameserver

Cause: The connection to the nameserver could not be closed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

ORA-08269: destroy_ora_addr: cannot destroy name

Cause: The listener's addressing information could not be removed.

Action: Additional information gives nameserver's returned status. Contact your customer support representative.

ORA-08270: sksachk: Illegal archival control string

Cause: Archive files cannot be created with the given archival control string.

Action: Check that the volume exists

ORA-08271: sksabl: Buffer size not large enough for archive control string

Cause: The given archival control string expands into too many characters.

Action: Reduce archive control string length.

ORA-08274: Out of memory for environment variable

Cause: There is insufficient memory to return the requested value

Action: Reduce memory usage and retry.

ORA-08275: Environment variable unset

Cause: The requested environment variable is not set

Action: Ensure that the variable name requested is correct.

ORA-08276: No room in nameserver for pid

Cause: There is no room to record the pid for a background process

Action: Shutdown abort and restart the database.

ORA-08277: Cannot set environment variable

Cause: There is insufficient memory to expand the environment.

Action: Reduce memory usage and retry.

ORA-08278: Cannot get CPU statistics

Cause: Could not retrieve CPU times because n_stat failed.

Action: Contact customer support.

ORA-08308: slfop: Cannot open file

Cause: Oracle could not open a file.

Action: Check the Unix errno returned as additional information.

ORA-08309: slfop: Cannot fstat file

Cause: Oracle could not obtain information about an open file.

Action: Check the Unix errno returned as additional information.

ORA-08310: slfop: Bad value for recsize

Cause: An illegal value for the record size was specified.

Action: Specify a value for the recsize option that is greater than 0.

ORA-08311: slfop: bad value for maxrecsize

Cause: An illegal value for the maximum record size was specified.

Action: Specify a value for the maxrecsize option that is greater than 0.

ORA-08312: slfop: unrecognized processing option

Cause: An unrecognized processing option was specified.

Action: Check the Oracle for nCUBE 2 User's Guide for valid options.

ORA-08313: slfop: could not allocate buffers

Cause: Memory for the load buffers could not be allocated.

Action: Reduce the maximum record size. Eliminate any unnecessary processes on your current node before running SQL*Loader again.

ORA-08314: slfcf: Error closing file

Cause: An error occurred trying to close a file.

Action: Check the Unix errno returned as additional information.

ORA-08315: slfrb: Error reading file

Cause: An error occurred trying to read from a file.

Action: Check the Unix errno returned as additional information.

ORA-08316: slfsk: Error seeking in file.

Cause: The lseek system call returned an error.

Action: Check the Unix errno returned as additional information.

ORA-08317: slfsk: Error seeking in file.

Cause: The lseek system call returned an error.

Action: Check the Unix errno returned as additional information.

ORA-08318: slfsk: Error reading file

Cause: An error occurred trying to read from a file.

Action: Check the Unix errno returned as additional information.

ORA-08319: slfsk: Error reading file

Cause: An error occurred trying to read from a file.

Action: Check the Unix errno returned as additional information.

ORA-08320: scnget: Call to scnget before scnset or scnfd.

Cause: An internal error

Action: Contact your customer support representative.

ORA-08321: scnmin: NOT IMPLEMENTED YET

Cause: An internal error

Action: Contact your customer support representative.

ORA-08322: scnmin: open/convert of bias lock failed

Cause: A call to the lkmgr failed to open and convert the bias lock

Action: Check to make sure the lkmgr is up.

ORA-08323: scnmin: close of bias lock failed

Cause: A call to the lkmgr failed to close the bias lock

Action: Check to make sure the lkmgr is up.

ORA-08330: Printing not supported

Cause: An attempt was made to automatically spool a file to the printer

Action: None

ORA-08331: Wait operation timed out

Cause: Oracle timed out waiting for an event

Action: Contact your Oracle support representative

ORA-08332: rollback segment #string specified not available

Cause: (same as 1545)

Action: (same as 1545). Also, make sure you have created enough rollback segments for the number of instances you are trying to start.

ORA-08340: This command not allowed on nCUBE, only one thread is ever used.

Cause: An illegal command was executed for the nCUBE platform.

Action: There is no need to issue this command.

ORA-08341: On nCUBE, this command can only be executed from instance 1.

Cause: A command that can only be issued on instance 1 was issued elsewhere.

Action: Log on to instance 1 and repeat the command.

ORA-08342: sropen: failed to open a redo server connection

Cause: An error occurred trying to connect to the redo server.

Action: The OS specific error message should tell you what to do.

ORA-08343: srclose: failed to close a redo server connection

Cause: An error occurred trying to close the redo server connection.

Action: The OS specific error message should tell you what to do.

ORA-08344: srapp: failed to send redo data to the redo server

Cause: An error occurred trying to send redo to the redo server.

Action: The OS specific error message should tell you what to do.

ORA-08401: invalid compiler name: string

Cause: An invalid compiler name *compname* was passed to a UTL_PG conversion routine.

Action: Correct the compiler name parameter in the PL/SQL code that called the conversion routine.

ORA-08402: error executing PL/SQL code coverage

Cause: An error occurred during execution of a PL/SQL code coverage procedure.

Action: Check the error stack for more details.

ORA-08412: error encountered in WMSGBSIZ, size for WMSGBLK is not big enough for warning message

Cause: The WMSGBSIZ is the maximum size for warning message block, it is recommended to be 1024 bytes to 8 kbytes.

Action: Defined WMSGBLK of size between 1k to 8k bytes and update the WMSGBSIZ to the sizeof(WMSGBLK).

ORA-08413: invalid compiler type in FORMAT parameter at *string*

Cause: An invalid compiler type is defined in format control block. The format control block is invalid.

Action: Check to be sure that the format parameter was built by MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT, and that it was not accidentally overwritten or modified by the PL/SQL procedure.

ORA-08414: error encountered in *string*

Cause: The function *routine* returned an error. Where *routine* may be: RAW_TO_NUMBER NUMBER_TO_RAW RAW_TO_NUMBER_FORMAT NUMBER_TO_RAW_FORMAT MAKE_NUMBER_TO_RAW_FORMAT MAKE_RAW_TO_NUMBER_FORMAT

Action: This message will be preceded by messages providing details about the error. Check those messages to determine what action to take.

ORA-08429: raw data has invalid digit in display type data

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine contained invalid data. The picture mask parameter specified a digit, but the corresponding input from the raw data did not contain a valid digit.

Action: Either the input data is incorrect, or the picture mask is incorrect. Correct the appropriate item.

ORA-08430: raw data missing leading sign

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine had no leading sign, but the mask options parameter specified a leading sign.

Action: Correct the input raw data or the mask options so that they match.

ORA-08431: raw data missing zero as defined in picture

Cause: The picture mask parameter passed to a UTL_PG RAW_TO_NUMBER conversion routine contained a zero, but the corresponding input from the raw data was not a zero.

Action: Either the input data is incorrect, or the picture mask is incorrect. Correct the appropriate item.

ORA-08432: raw data has invalid floating point data

Cause: The input raw data passed to a UTL_PG RAW_TO_NUMBER conversion routine contained invalid floating point data.

Action: Correct the input raw data.

ORA-08433: invalid picture type in convert raw to number

Cause: The picture mask parameter passed to a UTL_PG RAW_TO_NUMBER conversion routine contained non-numeric characters, but the conversion was to a numeric data type.

Action: Correct the picture mask parameter.

ORA-08434: raw data has invalid trailing sign

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine had no trailing sign, but the mask options parameter specified a trailing sign.

Action: Correct the input raw data or the mask options so that they match.

ORA-08435: PICTURE MASK missing the leading sign when SIGN IS LEADING specified

Cause: The input MASK passed to a UTL_PG RAW_TO_NUMBER conversion routine had no leading sign, but the mask options parameter specified a leading sign.

Action: Correct the input raw data or the mask options so that they match.

ORA-08436: raw data has invalid sign digit

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine had an invalid sign digit in the position where the picture mask specified a sign.

Action: Correct the input raw data or the picture mask so that they match.

ORA-08437: invalid picture type in picture mask

Cause: The picture mask parameter passed to a UTL_PG NUMBER_TO_RAW conversion routine contained non-numeric characters, but the conversion was to a numeric data type.

Action: Correct the picture mask parameter.

ORA-08440: raw buffer is too short to hold converted data

Cause: The output raw buffer passed to a UTL_PG NUMBER_TO_RAW conversion routine was not large enough to contain the results of the conversion based on the picture mask.

Action: Increase the raw buffer size to the size necessary to hold the entire result of the conversion.

ORA-08441: closed parenthesis missing in picture mask

Cause: A closed parenthesis was missing from the picture mask passed to a UTL_PG conversion routine.

Action: Correct the picture mask.

ORA-08443: syntax error in BLANK WHEN ZERO clause in mask options

Cause: A syntax error was found in the BLANK WHEN ZERO clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: BLANK ZERO BLANK ZEROS BLANK ZEROES BLANK WHEN ZERO BLANK WHEN ZEROS BLANK WHEN ZEROES

Action: Correct the mask options parameter.

ORA-08444: syntax error in JUSTIFIED clause in mask options

Cause: A syntax error was found in the JUSTIFIED clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: JUST JUST RIGHT JUSTIFIED JUSTIFIED RIGHT

Action: Correct the mask options parameter.

ORA-08445: syntax error in SIGN clause in mask options

Cause: A syntax error was found in the SIGN clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: SIGN LEADING SIGN LEADING SEPARATE SIGN LEADING SEPARATE CHARACTER SIGN TRAILING SIGN TRAILING SEPARATE SIGN TRAILING SEPARATE CHARACTER SIGN IS LEADING SIGN IS LEADING SEPARATE SIGN IS LEADING SEPARATE CHARACTER SIGN IS TRAILING SIGN IS TRAILING SEPARATE SIGN IS TRAILING SEPARATE CHARACTER

Action: Correct the mask options parameter.

ORA-08446: syntax error in SYNCHRONIZED clause in mask options

Cause: A syntax error was found in the SYNCHRONIZED clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: SYNC SYNC LEFT SYNC RIGHT SYNCHRONIZED SYNCHRONIZED LEFT SYNCHRONIZED RIGHT

Action: Correct the mask options parameter.

ORA-08447: syntax error in USAGE clause in mask options

Cause: A syntax error was found in the USAGE clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: USAGE DISPLAY USAGE COMP USAGE COMP-3 USAGE COMP-4 USAGE COMPUTATIONAL USAGE COMPUTATIONAL-3 USAGE COMPUTATIONAL-4 USAGE IS DISPLAY USAGE IS COMP USAGE IS COMP-3 USAGE IS COMP-4 USAGE IS COMPUTATIONAL USAGE IS COMPUTATIONAL-3 USAGE IS COMPUTATIONAL-4

Action: Correct the mask options parameter.

ORA-08448: syntax error in DECIMAL-POINT environment clause

Cause: A syntax error was found in the DECIMAL-POINT environment clause parameter passed to a UTL_PG conversion routine. Valid specifications are: DECIMAL-POINT IS COMMA

Action: Correct the environment clause parameter.

ORA-08449: invalid numeric symbol found in picture mask

Cause: An invalid numeric symbol was found in the picture mask parameter passed to a UTL_PG conversion routine.

Action: Correct the picture mask parameter.

ORA-08450: invalid specification of CR in picture mask

Cause: The CR suffix was incorrectly specified in the picture mask parameter passed to a UTL_PG conversion routine. The CR suffix can only appear at the end of a picture mask.

Action: Correct the picture mask parameter.

ORA-08451: invalid specification of DB in picture mask

Cause: The DB suffix was incorrectly specified in the picture mask parameter passed to a UTL_PG conversion routine. The DB suffix can only appear at the end of a picture mask.

Action: Correct the picture mask parameter.

ORA-08452: specification of E in picture mask is unsupported

Cause: The floating point exponent symbol 'E' was specified in the picture mask parameter passed to a UTL_PG conversion routine. The floating point data type is currently not supported by the UTL_PG conversion routines.

Action: Correct the picture mask parameter, and the data, if necessary.

ORA-08453: more than one V symbol specified in picture mask

Cause: The picture mask passed to a UTL_PG conversion routine contained more than one decimal point indicator ('V'). Only one decimal point indicator is allowed in the picture mask.

Action: Correct the picture mask parameter.

ORA-08454: more than one S symbol specified in picture mask

Cause: The picture mask passed to a UTL_PG conversion routine contained more than one operational sign indicator ('S'). Only one operational sign indicator is allowed in the picture mask.

Action: Correct the picture mask parameter.

ORA-08455: syntax error in CURRENCY SIGN environment clause

Cause: A syntax error was found in the CURRENCY SIGN environment clause parameter passed to a UTL_PG conversion routine. Valid specifications are: CURRENCY SIGN IS x where x is a valid currency sign

Action: Correct the environment clause parameter.

ORA-08456: no sign in picture mask but SIGN clause in mask options

Cause: The picture mask parameter passed to a UTL_PG conversion routine contained no sign symbol ('S', '+', or '-'), but the mask options parameter contained a SIGN clause. A sign symbol is required in the picture mask parameter when the mask options parameter contains a SIGN clause.

Action: Correct the picture mask parameter or the mask options parameter.

ORA-08457: syntax error in SEPARATE CHARACTER option of SIGN clause

Cause: A syntax error was found in the SEPARATE CHARACTER option of the SIGN clause in the mask options parameter passed to a UTL_PG conversion routine. Valid specifications are: SEPARATE SEPARATE CHARACTER

Action: Correct the mask options parameter.

ORA-08458: invalid format parameter

Cause: The format parameter passed to a UTL_PG conversion routine was invalid. The format parameter should have been built by a prior call to either MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT.

Action: Check to be sure that the format parameter was built by MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT, and that it was not accidentally overwritten or modified by the PL/SQL procedure.

ORA-08459: invalid format parameter length

Cause: The format parameter passed to a UTL_PG conversion routine was not the correct length. Format parameters must be 2048 bytes in length.

Action: Check to be sure that the format parameter was built by MAKE_RAW_TO_NUMBER_FORMAT or MAKE_NUMBER_TO_RAW_FORMAT, and that it was not accidentally overwritten or modified by the PL/SQL procedure.

ORA-08460: invalid environment clause in environment parameter

Cause: The environment parameter passed to a UTL_PG conversion routine contained an unsupported or invalid environment clause. Only the CURRENCY SIGN and the DECIMAL-POINT IS COMMA environment clauses are supported.

Action: Correct the environment parameter.

ORA-08462: raw buffer contains invalid decimal data

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine contains invalid decimal data.

Action: Correct the input data.

ORA-08463: overflow converting decimal number to Oracle number

Cause: The output variable passed to a UTL_PG RAW_TO_NUMBER was not large enough to hold the Oracle number resulting from the input decimal number.

Action: Be sure that the input decimal number is valid, and be sure that the output variable is large enough to hold the Oracle number value.

ORA-08464: input raw decimal data contains more than 42 digits

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine contained more than 42 digits. This exceeds the maximum size of an Oracle number.

Action: Correct the raw input buffer.

ORA-08465: input mask contains more than 32 characters

Cause: The input mask passed to UTL_PG numeric conversion routine contained more than 32 characters.

Action: Correct the mask input buffer.

ORA-08466: raw buffer length *string* is too short for *string*

Cause: The input raw buffer passed to a UTL_PG RAW_TO_NUMBER conversion routine was less than %s bytes long, but the picture mask parameter specified that %s bytes of input data were to be converted.

Action: Either the input data is incorrect, or the picture mask is incorrect. Correct the appropriate item.

ORA-08467: error converting Oracle number to *string*

Cause: An error occurred when converting an Oracle number to a COBOL *type* of: DISPLAY COMP-3 or character variable. The Oracle number was not in the correct format.

Action: Correct the call to the conversion routine. The input must be a valid Oracle number variable.

ORA-08468: mask option *string* is not supported

Cause: The mask option *clause* was passed to a UTL_PG conversion routine, but is not supported by UTL_PG. The *clause* can be: USAGE IS POINTER USAGE IS INDEX USAGE IS COMP-1 USAGE IS COMP-2 POINTER

Action: Remove the *clause* from the mask options parameter in the PL/SQL call to UTL_PG.

ORA-08469: must use the SIGN IS SEPARATE clause in mask options

Cause: A signed numeric entry with DISPLAY usage was converted using a non-defaulted character set and its PICTURE character-string contains an S. In these circumstances, a SIGN IS SEPARATE clause must be specified in the mask options.

Action: Either specify a valid SIGN IS SEPARATE clause in the mask options, use the defaulted character set, or don't specify an S in the PICTURE character-string.

ORA-08498: Warning: picture mask '*string*' overrides picture mask option 'USAGE IS *string*' to 'USAGE IS DISPLAY'

Cause: Picture mask USAGE option was overridden by the picture mask.

Action: This is an informational message only. The message may be eliminated by changing the USAGE option to match the picture mask.

ORA-08499: Warning: picture mask options '*string*' ignored by UTL_PG

Cause: Picture mask options such as OCCUR, SYNC and others are not processed by the UTL_PG numeric conversion routines.

Action: This is an informational message only. The message may be eliminated by removing the unnecessary picture mask options from the parameter list passed to the UTL_PG routine.

ORA-08500: session tag does not exist

Cause: There was no tagged session with the specified session tag.

Action: Check the specified session tag and resubmit the BEIRUT action.

ORA-08501: session tag is already used

Cause: The session tag was already used by another tagged session.

Action: Use another session tag.

ORA-08502: current session is already tagged

Cause: The current session was already tagged. A session could only be tagged once.

Action: To change a session tag, untag the session, then tag it again with the new tag.

ORA-08503: current session is not tagged

Cause: The current session was not tagged before the BEIRUT action.

Action: Tag the current session using the BEIRUT_TAG action before executing your action.

ORA-08504: session tag string is too long: greater than *string* character(s)

Cause: The specified session tag was too long.

Action: Use a shorter session tag string.

ORA-08505: session tag string is too short: less than *string* character(s)

Cause: The specified session tag was too short.

Action: Use a longer session tag string.

ORA-08506: invalid BEIRUT action.

Cause: The specified action to the BEIRUT event was invalid

Action: Ensure that the specified BEIRUT action is valid.

ORA-08507: A session cannot terminate itself.

Cause: Tried to make a tagged session kill itself.

Action: Try to terminate the tagged session using another session.

ORA-08508: An attempt to terminate a critical background process *string* failed.

Cause: Tried to terminate a critical background process.

Action: Try to terminate the critical background process using the operating system KILL command.

ORA-08509: background process name does not exist

Cause: An attempt to tag a named background process failed because there was no background process name matching the specified tag.

Action: Check the background process name and resubmit the tag action.

ORA-08510: background process does not have a session state object

Cause: An attempt to tag a named background process failed because the background process did not have a session state object.

Action: Ensure that the background process has a session state object and resubmit the tag action.

ORA-08511: session tag is reserved for background process name.

Cause: An attempt was made to tag a database session with a reserved background process name.

Action: Use another session tag that differs from the reserved names of background processes.

ORA-08512: breakpoint is not enabled

Cause: An attempt was made to process a BEIRUT action assuming a breakpoint is enabled but it is not.

Action: Enable the breakpoint before processing the BEIRUT action.

ORA-08513: breakpoint is explicitly disabled

Cause: An attempted was made to process a BEIRUT action assuming a breakpoint was enabled but it was explicitly disabled.

Action: Enable the breakpoint again before processing the BEIRUT action.

ORA-08514: breakpoint name is too long: greater than *string* character(s)

Cause: The specified breakpoint name was too long.

Action: Check the breakpoint length upper limit in the error message and update the breakpoint name accordingly.

ORA-08515: breakpoint list length is too long: greater than *string* character(s)

Cause: The specified breakpoint list was too long.

Action: Check the the breakpoint list length upper limit in the error message and update the breakpoint list accordingly.

ORA-08516: deadlock detected: current session waits on breakpoint *string* while test session waits on breakpoint *string*.

Cause: Faulty test scenarios led to a deadlock. The current session waited on a breakpoint while test session waited for current session on another breakpoint.

Action: Check your test script to ensure that the test session WAIT_FOR is on the same breakpoint that the current session hits first.

ORA-08517: current session waiting on breakpoint *string* timed out after waiting for *string* seconds

Cause: The current session waited on a breakpoint until timeout.

Action: Fix the test script to post the database session out of its waiting using the BEIRUT_CONTINUE action.

ORA-08518: test session timed out waiting for database session *string* on breakpoint *string* after *string* seconds

Cause: The database session did not hit the breakpoint that the test session is waiting on.

Action: Fix the code to hit the specified breakpoint or the test script to wait on the correct breakpoint name.

ORA-09200: sfccf: error creating file

Cause: Could be out of disk space

Action: See OSD error accompanying this message

ORA-09201: sfcopy: error copying file

Cause: Block sizes may not match

Action: See OSD error accompanying this message

ORA-09202: sfifi: error identifying file

Cause: db_block_size specified in init.ora could be incorrect

Action: See OSD error accompanying this message

ORA-09203: sfofi: error opening file

Cause: File attributes may have changed

Action: See OSD error accompanying this message

ORA-09204: sfoff: error opening temporary file

Cause: Incorrect path may have been specified for the file

Action: See OSD error accompanying this message

ORA-09205: sfqio: error reading or writing to disk

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09206: sfrfb: error reading from file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09207: sfsrd: error reading from file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09208: sftcls: error closing file

Cause: File may have been corrupted

Action: See OSD error accompanying this message

ORA-09209: sftget: error reading from file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09210: sftopn: error opening file

Cause: Incorrect path may have been specified for the file

Action: See OSD error accompanying this message

ORA-09211: sfwfb: error writing to file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09212: sfwfbmt: error writing to file

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09213: slgfn: error fabricating file name

Cause: Filename may be too long

Action: See OSD error accompanying this message

ORA-09214: sfdone: I/O error detected

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09215: sfqio: error detected in IOCompletionRoutine

Cause: File may have been truncated or corrupted

Action: See OSD error accompanying this message

ORA-09216: sdnfy: bad value 'string' for parameter string

Cause: The directory specified as the value for the stated parameter could not be used.

Action: Make sure the directory you have specified is a valid directory/file specification.

ORA-09217: sfsfs: failed to resize file

Cause: Could be out of disk space

Action: See OSD error accompanying this message

ORA-09218: sfrfs: failed to refresh file size

Cause: File may be corrupted or truncated

Action: See OSD error accompanying this message

ORA-09240: smpalo: error allocating PGA memory

Cause: Could be out of memory

Action: See OSD error accompanying this message

ORA-09241: smsalo: error allocating SGA memory

Cause: Could be out of memory

Action: See OSD error accompanying this message

ORA-09242: smscre: error creating SGA

Cause: An error occurred while creating SGA.

Action: See OSD error accompanying this message

ORA-09243: smsget: error attaching to SGA

Cause: SGA may not have been created (database not started)

Action: See OSD error accompanying this message

ORA-09244: smpreset: error setting memory protections

Cause: An error occurred while setting memory protections.

Action: See OSD error accompanying this message

ORA-09245: smcstk: error switching stacks

Cause: An error occurred while switching stacks.

Action: See OSD error accompanying this message

ORA-09246: sfsmap: unable to map SGA

Cause: Unable to map SGA.

Action: See OSD error accompanying this message

ORA-09247: smsdes: error destroying the SGA

Cause: An error occurred while destroying the SGA.

Action: See OSD error accompanying this message

ORA-09260: sigpidu: error obtaining process id

Cause: May be out of resources

Action: See OSD error accompanying this message

ORA-09261: spdcr: error creating detached (background) process

Cause: Could be out of resources

Action: See OSD error accompanying this message

ORA-09262: spdde: error terminating detached (background) process

Cause: Could be out of resources

Action: See OSD error accompanying this message

ORA-09263: spini: error initializing process

Cause: Could be out of memory

Action: See OSD error accompanying this message

ORA-09264: sptpa: error flagging process

Cause: Could be out of resources

Action: See OSD error accompanying this message

ORA-09265: spwat: error temporarily suspending process

Cause: Could be out of resources

Action: See OSD error accompanying this message

ORA-09266: spawn: error starting an Oracle process

Cause: Could be out memory

Action: See OSD error accompanying this message

ORA-09270: szalloc: error allocating memory for security

Cause: Could be out of memory

Action: See OSD error accompanying this message

ORA-09271: szlon: error verifying user name

Cause: Username may be too long

Action: See OSD error accompanying this message

ORA-09272: remote os logon is not allowed

Cause: Remote os login attempted when not allowed.

Action: See OSD error accompanying this message

ORA-09273: szrhc: error verifying role name

Cause: An OS error was returned when verifying the role name.

Action: See OSD error accompanying this message

ORA-09274: szrfc: insufficient role name buffer space

Cause: An OS role name was too long.

Action: See OSD error accompanying this message

ORA-09275: CONNECT INTERNAL is not a valid DBA connection

Cause: CONNECT INTERNAL is no longer supported for DBA connections.

Action: Please try to connect AS SYSDBA or AS SYSOPER.

ORA-09276: All bequeath database links must be loopback database links

Cause: A non-loopback bequeath connect string was supplied for a database link.

Action: Please use a connect string with a different transport protocol, or specify a loopback connect string (one that points to the instance for the current session) using "(PROGRAM=<this instance's ORACLE_HOME>/bin/oracle)" and, optionally, "(ENVS="ORACLE_SID=<this instance's ORACLE_SID>")".

ORA-09280: slfcf: error closing file

Cause: File may be corrupted

Action: See OSD error accompanying this message

ORA-09281: slfop: error opening file

Cause: Possibly incorrect path specified to the file

Action: See OSD error accompanying this message

ORA-09282: slfrb: error reading records

Cause: File could be corrupted

Action: See OSD error accompanying this message

ORA-09283: slfsk: error skipping records

Cause: File could be corrupted

Action: See OSD error accompanying this message

ORA-09284: slfop: cannot allocate read buffer

Cause: malloc() system call returned an error. The system might have run out of heap space

Action: Check additional information for the OS error.

ORA-09285: slfop: unrecognizable processing option, incorrect format

Cause: Processing option passed is of incorrect format

Action: Consult your IUG for permissible formats

ORA-09290: sksaalo: error allocating memory for archival

Cause: Could be out of memory

Action: See OSD error accompanying this message

ORA-09291: sksachk: invalid device specified for archive destination

Cause: Unable to access directory

Action: Specify a valid device in ARCHIVE control string

ORA-09292: sksabl: unable to build archive file name

Cause: Bad directory or format specified

Action: Specify a valid directory in 'log_archive_format' and a valid format string in 'log_archive_format' in init.ora

ORA-09293: sksasm: unable to send message to console

Cause: An error was returned while attempting to send a message to the console operator

Action: See OSD error accompanying this message

ORA-09300: osncon: unable to connect, DPML not available

Cause: Unable to detect the presence of DPML

Action: Restart Windows and retry

ORA-09301: osncon: local kernel only supported in standard mode

Cause: An attempt was made to connect to S: while in enhanced mode

Action: Restart Windows in standard mode

ORA-09310: sclgt: error freeing latch

Cause: Internal error

Action: See OSD error accompanying this message

ORA-09311: slsleep: error temporarily suspending process

Cause: May be out of resources

Action: See OSD error accompanying this message

ORA-09312: slspool: error spooling file to printer

Cause: Could be out of resources

Action: See OSD error accompanying this message

ORA-09313: slsprom: error prompting user

Cause: May be out of resources

Action: See OSD error accompanying this message

ORA-09314: sltln: error translating logical name

Cause: Internal buffer may have overflowed

Action: See OSD error accompanying this message

ORA-09315: sql2tt: two-task error translating ORACLE_EXECUTABLE

Cause: Internal error

Action: See OSD error accompanying this message

ORA-09316: szrpc: unable to verify password for role

Cause: OS roles may not be supported for this platform

Action: See OSD error accompanying this message

ORA-09317: szprv: insufficient privileges

Cause: The password specified is invalid

Action: See OSD error accompanying this message

ORA-09318: slkhst: unable to host out to operating system

Cause: There might not be enough memory for the command or hosting out may not be supported on this platform

Action: See OSD error accompanying this message

ORA-09319: slgtd: unable to obtain the current date and time

Cause: The system time might be set incorrectly

Action: See OSD error accompanying this message

ORA-09320: szrfc: unable to obtain the list of valid OS roles

Cause: OS roles may not be supported on this platform

Action: See OSD error accompanying this message

ORA-09321: slzdtb: unable to convert zoned decimal to binary

Cause: internal error

Action: See OSD error accompanying this message

ORA-09322: slpdtb: unable to convert packed decimal to binary

Cause: internal error

Action: See OSD error accompanying this message

ORA-09330: Session terminated internally by Oracle or by an Oracle DBA

Cause: A client workstation that is abnormally disconnected would cause Oracle to terminate that session after about a minute. This message also appears in the trace file if a shutdown abort is performed.

Action: No action required.

ORA-09340: Specified ORACLE_SID is either invalid or too long

Cause: ORACLE_SID must be at the most 4 alphanumeric characters.

Action: Specify an ORACLE_SID with the correct format.

ORA-09341: scumnt: unable to mount database

Cause: Another instance is currently mounting the database

Action: Try again later.

ORA-09342: Detached process terminated by Oracle during shutdown abort

Cause: The user performed a shutdown abort.

Action: No action required.

ORA-09344: spsig: error signalling thread

Cause: This function may not be implemented.

Action: No action required.

ORA-09350: Windows 32-bit Two-Task driver unable to allocate context area

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09351: Windows 32-bit Two-Task driver unable to allocate shared memory

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09352: Windows 32-bit Two-Task driver unable to spawn new ORACLE task

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09353: Windows 32-bit Two-Task driver unable to open event semaphore

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09354: Windows 32-bit Two-Task driver: ORACLE task unexpectedly died

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09360: Windows 3.1 Two-Task driver unable to allocate context area

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09361: Windows 3.1 Two-Task driver unable to lock context area

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09362: Windows 3.1 Two-Task driver unable to deallocate context area

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09363: Windows 3.1 Two-Task driver invalid context area

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09364: Windows 3.1 Two-Task driver unable to create hidden window

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09365: Windows 3.1 Two-Task driver unable to destroy hidden window

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09366: Windows 3.1 Two-Task driver unable to allocate shared memory

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09367: Windows 3.1 Two-Task driver unable to deallocate shared memory

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09368: Windows 3.1 Two-Task driver unable to spawn ORACLE

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09369: Windows 3.1 Two-Task driver bad instance handle

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09370: Windows 3.1 Two-Task driver ORACLE task timed out

Cause: See OSD error accompanying this message

Action: See OSD error accompanying this message.

ORA-09700: sclin: maximum number of latches exceeded

Cause: ORACLE wants to use more latches than available.

Action: increase INIT.ORA parameter latch_pages or decrease the amount of shared memory you are using.

ORA-09701: scnfy: maximum number of processes exceeded

Cause: PROCESSES INIT.ORA parameter exceeded.

Action: Decrease the PROCESSES parameter and restart.

ORA-09702: sem_acquire: cannot acquire latch semaphore

Cause: The semaphore used for accessing latches could not be seized

Action: Send trace file to your customer support representative, along with information on reproducing the error.

ORA-09703: sem_release: cannot release latch semaphore

Cause: The semaphore used for accessing latches could not be released

Action: Send trace file to your customer support representative, along with information on reproducing the error.

ORA-09704: sstascre: ftok error in creating test and set pages.

Cause: the ftok() library call failed in sstascre().

Action: Verify that tasdef@.dbf file exists. If it does then this is a possible system failure. Perhaps System V compatibility is not enabled.

ORA-09705: spcre: cannot initialize latch semaphore

Cause: The semaphore used for accessing latches could not be initialized

Action: Send trace file to your customer support representative, along with information on reproducing the error.

ORA-09706: slsget: get_process_stats error.

Cause: get_process_stats system call returned an error. Possible OS error.

Action: Check additional information returned. Look for information in OS reference. Contact customer support.

ORA-09708: soacon: failed to bind socket to port.

Cause: The bind system call failed on the socket.

Action: Check additional information for OS error. Try connecting again.

ORA-09709: soacon: failed to accept a connection.

Cause: The accept system call failed on the socket.

Action: Check additional information for OS error. Try connecting again.

ORA-09710: soarcv: buffer overflow.

Cause: The internal buffer is not big enough to hold the message read.

Action: Internal error. Contact customer support representative.

ORA-09711: orasrv: archmon already connected.

Cause: An existing connection has already been made from archmon to orasrv.

Action: Stop trying to connect.

ORA-09712: orasrv: log archiver already connected.

Cause: An existing connection has already been made from log archiver to orasrv.

Action: Stop trying to connect.

ORA-09714: Two Task interface: cannot obtain puname

Cause: The TXIPC driver cannot obtain the name of the PU. (Possible OS error)

Action: Check if the PUs are named (consistend).

ORA-09715: orasrv: cannot obtain puname

Cause: Orasrv cannot obtain the name of the PU. (Possible OS error)

Action: Check if the PUs are named (consistend).

ORA-09716: kslcll: Unable to fix in-flux lamport latch.

Cause: One Oracle process died while still holding a lamport latch.

Action: Exit (kill) all Oracle user processes. Shutdown (abort) and restart Oracle RDBMS kernel.

ORA-09717: osnsui: maximum number of user interrupt handlers exceeded.

Cause: The internal limit on the number of user interrupt handlers has been exceeded.

Action: Reduce the number of simulataneous logons or reduce the number of user interrupt handlers.

ORA-09718: osnsui: cannot set up user interrupt handler.

Cause: Malloc() failed to allocate space to hold user interrupt handler.

Action: Possible memory resource shortage.

ORA-09719: osncui: invalid handle.

Cause: The handle passed to osncui is out of the valid range.

Action: Use a valid handle.

ORA-09740: slsget: cannot get virtual memory region statistics.

Cause: The vm_region system call failed to get virtual memory region statistics.

Action: Check return code in sercerno. Possible operating system failure.

ORA-09741: spwat: error waiting for a post.

Cause: Msg_receive system call returned an error. Internal error.

Action: Check return code in sercerno. Port name is returned in sercose[0].

ORA-09742: sppst: error during a post.

Cause: Msg_send system call returned an error. Internal error.

Action: Check return code in sercerno. Port name is returned in sercose[0].

ORA-09743: smscre: could not attach shared memory.

Cause: The mmap or write system call returned an error. Internal error.

Action: Contact Oracle support.

ORA-09744: smsget: mmap returned an error.

Cause: The mmap system call returned an error. Internal error.

Action: Contact Oracle support.

ORA-09745: smscre: vm_allocate error, unable to create shared memory.

Cause: Error in system call vm_allocate. Failed to create SGA as a single shared memory segment.

Action: Check result code returned in sercerno. Verify that the SGA attach address is valid.

ORA-09746: smscre: shared memory attach address incorrect.

Cause: The vm_allocate system call attached the SGA at an incorrect location.

Action: Verify that the SGA attach address is valid.

ORA-09747: pw_detachPorts: server call pws_detach failed.

Cause: The call pws_detach to (Oracle helper) failed.

Action: Make sure the server is still active. Check the error code returned in sercerno, and look for error messages in the server log file.

ORA-09748: pws_look_up: fork failed

Cause: The pws_look_up call could not fork the (Oracle helper) process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-09749: pws_look_up: port lookup failure

Cause: The pws_look_up could not find a port to (Oracle helper).

Action: Make sure the (Oracle helper) server has been started correctly by `pws_look_up`, and that the network name server is still running.

ORA-09750: pw_attachPorts: port_rename failed.

Cause: The `port_rename` system call failed; possible internal error.

Action: Check return code in `sercerno`, report to Oracle customer support.

ORA-09751: pw_attachPorts: server call pws_attach failed.

Cause: The call `pws_attach` to (Oracle helper) failed.

Action: Make sure the server is still active. Check the error code returned in `sercerno`, and look for error messages in the server log file.

ORA-09752: pw_attachPorts: port_allocate failed.

Cause: The `port_allocate` system call failed; possible resource exhaustion.

Action: Check return code in `sercerno`, report to Oracle customer support.

ORA-09753: spwat: invalid process number.

Cause: Function was passed an invalid oracle process id.

Action: Internal error. Additional information indicates the invalid process id.

ORA-09754: sppst: invalid process number passed to sppst.

Cause: Function was passed an invalid oracle process id.

Action: Internal error. Contact Oracle support.

ORA-09755: osngpn: port allocation failure.

Cause: The `port_allocate` system call failed.

Action: Possible system resource shortage; check the error code in `sercerno`.

ORA-09756: osnpns: no port in the name server.

Cause: `osnpns` could not find the given named port in the name server.

Action: Check the error code in `sercerno`. Make sure the shadow process and network name server are still running.

ORA-09757: osnipn: port allocation failure.

Cause: The `port_allocate` system call failed.

Action: Possible system resource shortage; check the error code in `sercerno`.

ORA-09758: osnipn: could not check port in name server.

Cause: The `netname_check_in` call failed.

Action: Check the error code in `sercerno`. Make sure the network name server is running.

ORA-09759: osnsbt: bad message received.

Cause: The `msg_receive` system call failed, or received a bad message.

Action: Internal error. Report the error code returned in `sercerno`.

ORA-09760: osnpui: cannot send break message

Cause: The Pipe driver could not send a break message to the ORACLE shadow process break thread.

Action: Contact your customer support representative.

ORA-09761: pw_destroyPorts: server call pws_stop_instance failed.

Cause: The call pws_stop_instance to (Oracle helper) failed.

Action: Make sure the server is still active. Check the error code returned in sercerno, and look for error messages in the server log file.

ORA-09762: sNeXT_instanceName: translation error.

Cause: A failure was detected while translating the value of ORACLE_SID.

Action: Make sure ORACLE_SID is defined, and that it is of legal length.

ORA-09763: osnmpx: send/receive error exchanging Mach ports.

Cause: The Mach driver failed to exchange port information with the other side of the connection. Either msg_send (sercose[0] == 1) or msg_receive (sercose[0] == 2) failed.

Action: Check return code in sercerno. Make sure both sides of the connection are still running.

ORA-09764: osnmop: access error on oracle executable

Cause: The Mach driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

ORA-09765: osnmop: fork failed

Cause: The Mach driver could not fork the oracle shadow process.

Action: Verify that there are enough system resources to support another process. The user or system process limit may have been exceeded, or the amount of free memory or swap space may be temporarily insufficient.

ORA-09766: osnmop: buffer allocation failure.

Cause: The Mach driver failed to allocate enough vm space for its I/O buffers.

Action: Decrease the value of buffer_size parameter in the Two-Task driver hoststring.

ORA-09767: osnmfs: bad return code from msg_send.

Cause: The msg_send system call failed while flushing the Mach driver's send buffer.

Action: Internal error. Contact your customer support representative.

ORA-09768: osnmgetmsg: could not read a message

Cause: The msg_receive system call returned a failure code while waiting for a message in the Mach driver.

Action: Internal error. Contact your customer support representative.

ORA-09769: osnubr: cannot send break message

Cause: The Mach driver could not send a break message to the ORACLE shadow process break thread.

Action: Internal error. Contact your customer support representative.

ORA-09770: pws_look_up: translation failure.

Cause: The pws_look_up routine failed to translate the name of the (Oracle helper) executable.

Action: Make sure ORACLE_SID and ORACLE_HOME are set and correct. Additional information gives the translation error code.

ORA-09771: osnmwrtbrkmsg: bad return code from msg_send.

Cause: The msg_send system call failed while sending a Mach driver break.

Action: Internal error. Contact your customer support representative.

ORA-09772: osnmetbrkmsg: message from host had incorrect message type

Cause: The Mach driver received a message having an unrecognizable message type.

Action: Internal error. Contact your customer support representative.

ORA-09773: osnmgetdatmsg: message from host had incorrect message type

Cause: The Mach driver received a message having an unrecognizable message type.

Action: Internal error. Contact your customer support representative.

ORA-09774: osnmui: cannot send break message

Cause: The Mach driver could not send a break message to the ORACLE shadow process break thread.

Action: Internal error. Contact your customer support representative.

ORA-09775: osnmrs: reset protocol error

Cause: The Mach two-task driver could not reset the connection.

Action: Internal error. Contact your customer support representative.

ORA-09776: pws_look_up: access error on (Oracle helper) executable

Cause: The pws_look_up call could not access the (Oracle helper) executable.

Action: Check the permissions on the (Oracle helper) executable and each component of the ORACLE_HOME/bin path.

ORA-09777: osnpbr: cannot send break message

Cause: The pipe driver could not send a break message to the ORACLE shadow process break thread.

Action: Internal error. Contact your customer support representative.

ORA-09778: snyfyport: failure allocating the notify port.

Cause: The routine failed to allocate or set the task's notify port.

Action: Possible operating system error. Contact Oracle support.

ORA-09779: snyGetPort: failure to allocate a port.

Cause: The port_allocate system call failed; system resources might be exhausted.

Action: Possible operating system error. Contact Oracle support.

ORA-09786: slfop: open error, unable to open file.

Cause: Open system call returned an error.

Action: Check errno.

ORA-09787: slfop: unrecognizable processing option, incorrect format.

Cause: Processing option passed is of incorrect format.

Action: Consult your IUG for permissible formats.

ORA-09788: slfrb: unable to read file.

Cause: Read system call returned an error.

Action: Check errno. Verify file exists.

ORA-09789: slfsk: unable to read file.

Cause: Read system call returned an error.

Action: Check errno. Verify file exists.

ORA-09790: slfcf: unable to close file.

Cause: Close system call returned an error.

Action: Check errno.

ORA-09791: slembdf: translation error, unable to translate error file name.

Cause: Additional information indicates error returned from sltln.

Action: Check additional information.

ORA-09792: slfop: cannot allocate read buffer.

Cause: Malloc system call returned an error. The system might have run out of heap space.

Action: Check additional information for the OS error.

ORA-09793: szguns: length of user name is greater than buffer.

Cause: The length of the name of the user being looked up is longer than size of the buffer provided by the calling routine.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09794: Length of role name is greater than the provided memory buffer.

Cause: The name of the role being looked up was longer than the size of the buffer provided by the calling routine.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09795: allocation of memory for role object failed

Cause: The allocation of memory for an internal object that is used to hold a role descriptor failed.

Action: Check the UNIX error number for a possible operating system failure.

ORA-09796: Memory allocation of role name object failed.

Cause: The allocation of memory for an internal buffer used to hold the name of a role failed.

Action: Check the UNIX error number for a possible operating system failure.

ORA-09797: Failed to get O/S MAC privileges.

Cause: The operating system would not allow the retrieval of this process' privileges.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09798: Label comparison failed.

Cause: The comparison of two binary labels failed.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09799: File label retrieval failed.

Cause: ORACLE was unable to get a label attached to a file.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09800: Process sensitivity label retrieval failed.

Cause: ORACLE was unable to get the sensitivity label for a process.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09801: Unable to get user ID from connection

Cause: ORACLE was unable to retrieve the user's ID number from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

ORA-09802: Conversion of binary label to string failed.

Cause: ORACLE was unable to convert a binary label to a string.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09803: Allocation of string buffer failed.

Cause: a buffer used to hold the name of the file for which a label was to be obtained could not be allocated.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services. The number of bytes that ORACLE attempted to allocate is in the "Additional Information" field.

ORA-09804: Class conversion from binary to ORACLE failed.

Cause: ORACLE was unable to convert a class component from binary format to ORACLE format.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09805: conversion of category number to string failed.

Cause: ORACLE was unable to translate a category number to its corresponding string representation failed.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services. The category number is contained in the "Additional information" field.

ORA-09806: Allocation of label string buffer failed.

Cause: a temporary buffer used to hold a label could not be allocated.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services. The number of bytes that ORACLE attempted to allocate is in the "Additional Information" field.

ORA-09807: Conversion of label from string to binary failed.

Cause: ORACLE was unable to convert the string representation of a label to binary format.

Action: Re-enter a valid label.

ORA-09808: Could not obtain user clearance.

Cause: ORACLE was unable to get a user's clearance level.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact Oracle Support Services.

ORA-09809: Unable to get user's group ID from connection

Cause: ORACLE was unable to retrieve the user's group ID number from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

ORA-09810: Unable to get process ID from connection

Cause: ORACLE was unable to retrieve the user's process ID number from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

ORA-09811: Unable to initialize package.

Cause: ORACLE was unable to initialize the library used to obtain security information.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09812: Unable to get user clearance from connection

Cause: ORACLE was unable to retrieve the user's operating system session clearance from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact Oracle Support Services.

ORA-09813: Unable to get directory status

Cause: ORACLE was unable to determine if a directory is multilevel.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-09814: Unable to expand file name

Cause: ORACLE was unable to expand the name of a file that resides in multilevel directory.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-09815: File name buffer overflow

Cause: The buffer that ORACLE uses to hold the expanded name of a too small.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09816: Unable to set effective privileges

Cause: This is an internal error.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09817: Write to audit file failed.

Cause: ORACLE was unable to write an entry to the file used as the audit trail.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-09818: Number is too large

Cause: ORACLE was unable to convert a component string to a number because the number is larger than the largest possible value for an integer. The additional information field specifies the maximum.

Action: Correct the string and repeat the conversion.

ORA-09819: Number exceeds maximum legal value

Cause: the number specified for a component was greater than the maximum value allowed for that component.

Action: Change the component to a value less than the maximum and repeat the conversion. The maximum component number is contained in the "Additional information" field.

ORA-09820: Conversion of class string to numeric representation failed.

Cause: ORACLE was unable to convert a class string to a number because all of the characters in the string were not numeric.

Action: Change the string to be either all numbers or all non-numeric characters and repeat the conversion.

ORA-09821: Numeric label is not valid

Cause: A label specified in ORACLE numeric format was found not to be valid.

Action: Re-enter a valid label. Consult your system's encodings for valid numeric component values.

ORA-09822: Translation of audit file name failed.

Cause: Oracle was unable to translate the value of the AUDIT_FILE_DEST initialization parameter.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-09823: device name is too long

Cause: The name of a device was too long to fit into an internal buffer. The additional information field contains the length of the device name.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09824: Unable to enable allowmacaccess privilege.

Cause: ORACLE was not able to turn on allowmacaccess privilege so that it could do a label comparison.

Action: Check the UNIX error number. If it indicates that ORACLE does not have the allowmacaccess privilege, add the allowmacaccess privilege to the potential privilege set of \$ORACLE_HOME/bin/oracle using chpriv (1M). If the executable already has the allowmacaccess privilege, contact Oracle Support Services.

ORA-09825: Unable to disable allowmacaccess privilege.

Cause: ORACLE was not able to turn off the allowmacaccess privilege after doing a label comparison.

Action: This is an internal error. Contact Oracle Support Services.

ORA-09826: SCLIN: cannot initialize atomic latch.

Cause: System call atomic_op() return error.

Action: Check additional information in the trace file.

ORA-09827: SCLGT: atomic latch return unknown error.

Cause: System call atomic_op() return unexpected error.

Action: Check additional information in the trace file.

ORA-09828: SCLFR: atomic latch return error.

Cause: System call atomic_op() return unexpected error.

Action: Check additional information in the trace file.

ORA-09829: pw_createPorts: server call pws_start_instance failed.

Cause: The call pws_start_instance to (Oracle helper) failed; system resources might be exhausted.

Action: Make sure the server is still active. Check the error code returned in sercerrno, and look for error messages in the server log file.

ORA-09830: snyAddPort: failed to perform a remote procedure call.

Cause: The msg_rpc system call returned an error.

Action: Internal error. Contact Oracle support.

ORA-09831: snyStartThread: failed to build the server port set.

Cause: The routine failed to build a port set on which to listen for requests.

Action: Possible operating system failure. Contact Oracle support.

ORA-09832: infoCallback: bad message format.

Cause: The routine received an incorrectly formatted request.

Action: Internal error. Contact Oracle support.

ORA-09833: addCallback: bad message format.

Cause: The routine received an incorrectly formatted request.

Action: Internal error. Contact Oracle support.

ORA-09834: snyGetPortSet: failed to collect info on a port.

Cause: The port_status system called failed.

Action: Possible operating system error. Contact Oracle support.

ORA-09835: addCallback: callback port is already in a set.

Cause: The port to be added to the callback list is already in a port set.

Action: Internal error. Contact Oracle support.

ORA-09836: addCallback: could not add a port to the callback set.

Cause: The port_set_add system called failed.

Action: Possible operating system error. Contact Oracle support.

ORA-09837: addCallback: could not add allocate a callback link.

Cause: The malloc library call failed to allocate space for a callback link.

Action: Possible operating system error. Contact Oracle support.

ORA-09838: removeCallback: failure removing the callback port.

Cause: The port port_set_remove system call failed.

Action: Possible operating system error. Contact Oracle support.

ORA-09839: removeCallback: callback port is not in the callback set.

Cause: The port to be removed to the callback list is not in the callback port set.

Action: Internal error. Contact Oracle support.

ORA-09840: soacon: Name translation failure.

Cause: sltln() could not translate the named pipe ?/dbs/mon2arch_@.

Action: Make sure that the ORACLE_HOME specified for this ORACLE_SID in oratab is correct.

ORA-09841: soacon: Name translation failure.

Cause: sltln() could not translate the named pipe ?/dbs/arch2mon_@.

Action: Make sure that the ORACLE_HOME specified for this ORACLE_SID in oratab is correct.

ORA-09842: soacon: Archmon unable to create named pipe.

Cause: mknod() failed to create named pipe ?/dbs/mon2arch_@.

Action: Your current OS login may lack write permission for the ORACLE_HOME/dbs directory. Only usersids in the dba group of a given instance can run archmon for that ORACLE_SID. Make sure that the ORACLE_HOME directory is correct in oratab.

ORA-09843: soacon: Archmon unable to create named pipe.

Cause: mknod() failed to create named pipe ?/dbs/arch2mon_@.

Action: Your current OS login may lack write permission for the ORACLE_HOME/dbs directory. Only usersids in the dba group of a given instance can run archmon for that ORACLE_SID. Make sure that the ORACLE_HOME directory is correct in oratab.

ORA-09844: soacon: Archmon unable to open named pipe.

Cause: open() failed to open named pipe ?/dbs/mon2arch_@.

Action: Only the oracle dba can run archmon. Make sure that your current OS login has owner or group search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

ORA-09845: soacon: Archmon unable to open named pipe.

Cause: open() failed to open named pipe ?/dbs/arch2mon_@.

Action: Only the oracle dba can run archmon. Make sure that your current OS login has owner or group search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

ORA-09846: soacon: ARCH unable to open named pipe.

Cause: open() failed to open named pipe ?/dbs/mon2arch_@.

Action: Make sure that the OS userid of the currently running database has search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

ORA-09847: soacon: ARCH unable to open named pipe.

Cause: open() failed to open named pipe ?/dbs/arch2mon_@.

Action: Make sure that the OS userid of the currently running database has search permission for the ORACLE_HOME/dbs directory. The max number of open files may have been exceeded.

ORA-09848: soawrt: Unable to write to named pipe.

ORA-09849: soarcv: Unable to read from named pipe.

ORA-09850: soacon: Archmon unable to lock named pipe.

Cause: fcntl() failed to set write lock on named pipe ?/dbs/arch2mon_@.

Action: Make sure that archmon is not already active on another terminal for this ORACLE_SID. Only one archmon session is allowed at a time for a given instance.

ORA-09851: soacon: Archmon unable to lock named pipe.

Cause: fcntl() failed to set read lock on named pipe ?/dbs/mon2arch_@.

Action: Make sure that archmon is not already active on another terminal for this ORACLE_SID. Only one archmon session is allowed at a time for a given instance.

ORA-09853: snyRemovePort: bad return code from request.

Cause: The request to remove a port from the callback set returned a failure code.

Action: Possible operating system error. Contact Oracle support.

ORA-09854: snyPortInfo: bad return code from request.

Cause: The request to collect info on a port in the callback set returned a failure code.

Action: Possible operating system error. Contact Oracle support.

ORA-09855: removeCallback: bad message format.

Cause: The routine received an incorrectly formatted request.

Action: Internal error. Contact Oracle support.

ORA-09856: smpalo: vm_allocate error while allocating pga.

Cause: The vm_allocate system call returned an error.

Action: Check returned error. Possibly out of system resources.

ORA-09857: smprset: vm_protect error while protecting pga.

Cause: The vm_protect system call returned an error.

Action: Internal error. Contact Oracle support.

ORA-09858 to ORA-12101

ORA-09858: sfngat: the input file name is not in the OMF format

Cause: The function sfngat() received a filename which is not an OMF file name.

Action: Further diagnostic information should be in the error stack.

ORA-09859: sfngat: the input file name is not in the autobackup OMF format

Cause: The function sfngat() received a filename which is not an autobackup OMF file name.

Action: Further diagnostic information should be in the error stack.

ORA-09870: spini: failure initializing maximum number of open files.

Cause: ulimit system call returned an error.

Action: Check errno.

ORA-09871: TASDEF_NAME: translation error while expanding ?/dbs/tasdef@.dbf.

Cause: Failure of stln(?/tasdef@.dbf) while creating test and set pages.

Action: Check additional return error for more information.

ORA-09872: TASDEF_CREATE: create failure in creating ?/dbs/tasdef@.dbf.

Cause: Create() failed when trying to create the tasdef file.

Action: Verify permissions on \$(ORACLE_HOME)/dbs directory.

ORA-09873: TASDEF_OPEN: open error when opening tasdef@.dbf file.

Cause: Unable to open tasdef@.dbf file.

Action: Check errno. Possible permission problem. Verify that tasdef@.dbf file exists.

ORA-09874: TASDEF_READ: read error, unable to read tasdef@.dbf file.

Cause: Read system call returned an error when attempting to read ?/dbs/tasdef@.dbf.

Action: Check errno returned. Sgadf file may be corrupted or incompatible with oracle version.

ORA-09875: TASDEF_WRITE: write error when writing ?/dbs/tasdef@.dbf file.

Cause: Write call failed.

Action: Check errno returned. Possibly out of space on device.

ORA-09876: TASDEF_CLOSE: unable to close ?/dbs/tasdef@.dbf file.

Cause: Close system call returned an error.

Action: Check errno returned. Possible operating system failure.

ORA-09877: sstascre: shmget error, unable to get a shared memory segment.

Cause: Error in shmget.

Action: Check errno returned. Verify that enough shared memory is available on the system.

ORA-09878: sstascre/sstasat: shmat error, unable to attach tas write page

Cause: Error in shmat.

Action: Check errno returned. Verify that enough shared memory is available on the system.

ORA-09879: sstascre/sstasat: shmat error, unable to attach tas read page

Cause: Error in shmat.

Action: Check errno returned. Verify that enough shared memory is available on the system.

ORA-09880: sstasfre/sstasdel: shmdt error, unable to detach tas write page

Cause: Error in shmdt.

Action: Check errno returned.

ORA-09881: sstasfre/sstasdel: shmdt error, unable to detach tas read page

Cause: Error in shmdt.

Action: Check errno returned.

ORA-09882: sstasfre/sstasdel: shmctl error, unable to remove tas shm page

Cause: Error in shmctl.

Action: Check errno returned.

ORA-09883: Two Task interface: oratab file does not exist

Cause: The oratab file does not exist.

Action: Install oracle before you use it or recreate the oratab file.

ORA-09884: Two Task interface: SID doesn't match current PU

Cause: You are trying to start oracle on another PU than you configured oracle on or there is no entry for this SID in oratab file.

Action: Start oracle with this SID on its designated PU (see oratab file). Or install the new database with SID.

ORA-09885: osnTXtt: cannot create TXIPC channel

Cause: The TXIPC driver failed to create pipes for two-task communications with the oracle shadow process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table is full. Note the operating system error code and contact your system administrator.

ORA-09886: osnTXtt: translation error while expanding txipc@.trc.

Cause: Failure of sltln(txipc@.trc) while creating debug channel.

Action: Check additional return error for more information.

ORA-09887: osnTXtt: Failed to create/open debug channel.

ORA-09888: osnTXtt: txipc channel creation failed

Cause: The txipc driver failed to create channels for two-task communications with the oracle shadow process.

Action: You have probably exceeded the maximum number of open file descriptors per user or the system file table operating system error code and contact your system administrator.

ORA-09889: osnTXtt: access error on oracle executable

Cause: The txipc driver could not access the oracle executable.

Action: Check the permissions on the ORACLE executable and each component of the ORACLE_HOME/bin path.

ORA-09890: osnTXtt: malloc failed

Cause: The txipx driver failed to allocate enough heap space for its context area buffers.

Action: Contact your customer support representative.

ORA-09908: slkmm: gethostname returned error code.

Cause: The system call gethostname returned an error.

Action: This is most likely an internal error. Make sure gethostname is successful in other contexts, and if so contact Oracle support.

ORA-09909: Malloc of scratch buffer failed.

Cause: Memory needed for a temporary buffer could not be allocated. The additional information field contains the number of bytes that ORACLE attempted to allocate.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE support.

ORA-09910: Unable to find ORACLE password file entry for user.

Cause: No entry exists for the user in the ORACLE password file.

Action: Have the database administrator install a password entry by running orapasswd.

ORA-09911: Incorrect user password.

Cause: The password entered by the user was incorrect.

Action: Enter the correct password.

ORA-09912: Malloc of name buffer(s) failed.

Cause: ORACLE was unable to allocate memory for one or both of the buffers that are used to hold the name of DBA and the operator users.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE support.

ORA-09913: Malloc of dummy name failed.

Cause: ORACLE was unable to allocate memory for the user name that is to be used in the encryption of the user's password.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE support.

ORA-09914: Unable to open the ORACLE password file.

Cause: ORACLE could not open the password file for reading.

Action: Check the UNIX error number. If the error number indicates that the file does not exist, have the database administrator create the file by running orapasswd. If the error number indicates insufficient permissions, ask the database administrator to change the permissions. Otherwise, contact ORACLE customer support.

ORA-09915: Password encryption failed.

Cause: ORACLE was unable to encrypt a password.

Action: This is an internal error - contact ORACLE customer support.

ORA-09916: Required password was not specified.

Cause: A user attempted to connect as "internal," but did not specify a password.

Action: Connect as internal again and specify a password.

ORA-09918: Unable to get user privileges from SQL*Net

Cause: ORACLE was unable to retrieve the user's privilege set from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact ORACLE support.

ORA-09919: Unable to set label of dedicated server

Cause: ORACLE was unable to set the label of the dedicated to server to the required value.

Action: Check the UNIX error number for a possible operating system error. Also, check the privileges on the oracle executable. It should have at least "allowmacaccess" privilege.

ORA-09920: Unable to get sensitivity label from connection

Cause: ORACLE was unable to retrieve the user's sensitivity label from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact ORACLE support.

ORA-09921: Unable to get information label from connection

Cause: ORACLE was unable to retrieve the user's information label from the SQL*Net connection.

Action: Check the UNIX error number for a possible operating system error. Also check the "additional information" field for the SQL*Net error. If there is no error, contact ORACLE support.

ORA-09922: Can't spawn process - background log directory not created properly

Cause: ORACLE was unable to spawn a background process because the directory that will hold trace files of the background processes was not created properly.

Action: Examine the directory pointed to by the initialization parameter "background_dump_dest". Make sure that all of the following is true: 1. The directory exists. 2. The name indeed points to a directory, and is not a file. 3. The directory is accessible and writable to the ORACLE user.

ORA-09923: Can't spawn process - user log directory not created properly

Cause: ORACLE was unable to spawn a background process because the directory that holds the trace files of the dedicated server processes was not created properly.

Action: Examine the directory pointed to by the initialization parameter "user_dump_dest". Make sure that all of the following is true: 1. The directory exists. 2. The name indeed points to a directory, and is not a file. 3. The directory is accessible and writable to the ORACLE user.

ORA-09924: Can't spawn process - core dump directory not created properly

Cause: ORACLE was unable to spawn a background process because the directory that holds the core dumps produced by ORACLE processes in the event of exceptions was not created properly.

Action: Examine the directory pointed to by the initialization parameter "core_dump_dest". Make sure that all of the following is true: 1. The directory exists. 2. The name indeed points to a directory, and is not a file. 3. The directory is accessible and writable to the ORACLE user.

ORA-09925: Unable to create audit trail file

Cause: ORACLE was not able to create the file being used to hold audit trail records.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact ORACLE customer support.

ORA-09926: Unable to set effective privilege set of the server

Cause: A dedicated server was unable to set its own privilege set.

Action: Check the privileges granted to the ORACLE executable. It must have at least "allowmacaccess" privilege.

ORA-09927: Unable to set label of server

Cause: ORACLE was not able to set the label of a server to a new value.

Action: Check the privileges on \$ORACLE_HOME/bin/oracle. Make sure that it has "allowmacaccess" privilege.

ORA-09928: Unable to restore the label of server

Cause: ORACLE was unable to restore the label of the server to the value that it had before raising it to database high.

Action: This is an internal error - contact ORACLE support.

ORA-09929: GLB of two labels is invalid

Cause: The result of a greatest lower bound operation on two labels was not valid.

Action: Repeat the operation with two different labels. Consult the system encoding file for the values of valid labels.

ORA-09930: LUB of two labels is invalid

Cause: The result of a least upper bound operation on two labels was not valid.

Action: Repeat the operation with two different labels. Consult the system encoding file for the values of valid labels.

ORA-09931: Unable to open ORACLE password file for reading

Cause: An attempt to open a password file for reading failed.

Action: Make sure that the permissions on the file have not been changed so that the ORACLE user cannot open it.

ORA-09932: Close of ORACLE password file failed.

Cause: An attempt to close a password file failed.

Action: Check the UNIX error number for the specific reason.

ORA-09933: Deletion of old password file failed.

Cause: The removal of the old password file failed.

Action: Check the UNIX error number for the specific reason.

ORA-09934: Link of current password file to old failed.

Cause: ORACLE was unable to create a link so that the old password file could be saved.

Action: Check the UNIX error number for the specific reason.

ORA-09935: Unlink of current password file failed.

Cause: ORACLE was unable to complete the saving of the current password file.

Action: Check the UNIX error number for the specific reason.

ORA-09936: Open of ORACLE password file for write failed.

Cause: ORACLE was unable to create a password file.

Action: Check the UNIX error number for the specific reason.

ORA-09937: Chmod of ORACLE password file failed.

Cause: ORACLE was unable to change a password file to be readonly.

Action: Check the UNIX error number for the specific reason.

ORA-09938: Save of signal handlers failed.

Cause: ORACLE was unable to save the previous values of selected signal handlers.

Action: This is an internal error. Contact ORACLE support.

ORA-09939: Restoration of signal handlers failed.

Cause: ORACLE was unable to restore the previous values of selected signal handlers.

Action: This is an internal error. Contact ORACLE support.

ORA-09940: ORACLE password file header is corrupt

Cause: The header of one of the password files was not in the format that ORACLE expected.

Action: Check the headers of both files. The header should be in the format "FILE VERSION: N.N.N.N.N EXECUTABLE VERSION: N.N.N.N.N" where N is a number. Remove the corrupt file(s) and re-run "orapasswd".

ORA-09941: Version of orapasswd or installer is older than file.

Cause: The version of orapasswd or installer that is being run is older than that of the ORACLE password file. Since the file version is only changed when the format is changed, this error means that the executable is using a different format than that with which the file was created.

Action: Run a version of the installer or orapasswd whose version is the same or later than that of the file.

ORA-09942: Write of ORACLE password file header failed.

Cause: The attempt to write out the header of the ORACLE password file failed.

Action: Check the operating system error number. It is possible that the file system became full.

ORA-09943: Allocation of memory for password list component failed.

Cause: When it is building a list of password file entries, ORACLE allocates memory for various components. One of the allocations failed.

Action: Check the operating system error number. The system has probably run out of memory.

ORA-09944: Password entry is corrupt.

Cause: An entry in an ORACLE password file was not in the format that ORACLE expected.

Action: Removed the corrupt file(s) and re-run "orapasswd."

ORA-09945: Unable to initialize the audit trail file

Cause: ORACLE unable to write header information to the file being used as the audit trail.

Action: Check the UNIX error number for a possible operating system error. If there is no error, contact ORACLE customer support.

ORA-09946: File name too long for buffer

Cause: The buffer that was to be used to hold a file name was determined to be too short for the generated name. This will happen if the translated name for either a trace file or an audit file is longer than the maximum allowed, which on many ports is 256 characters.

Action: Use a shorter file name.

ORA-09947: Unable to allocate connection attributes structure

Cause: ORACLE was not able to allocate the memory needed to hold the attributes of the SQL*Net connection. The "Additional Information" field holds the number of bytes that ORACLE attempted to allocate.

Action: Check the UNIX error number. It is probable that the system has run out of memory. If there is no error, contact ORACLE customer support.

ORA-09948: Process information label retrieval failed.

Cause: ORACLE was unable to get the information label for a process.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact ORACLE support.

ORA-09949: Unable to get client operating system privileges

Cause: ORACLE was unable to get the operating system privileges for the client process.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact ORACLE support.

ORA-09950: Unable to get server operating system privileges

Cause: ORACLE was unable to get its privileges from the operating system.

Action: This is an error that should never happen. Contact ORACLE customer support.

ORA-09951: Unable to create file

Cause: ORACLE was unable to create a file.

Action: Check the UNIX error number for a possible operating system failure. If there is no error, contact ORACLE support.

ORA-09952: scgcmn: lk_open_convert unexpected return: open failed

Cause: The distributed lock manager returned an unexpected value

Action: Check for system error message and refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09953: scggc: unexpected return of a lock convert

Cause: The distributed lock manager returned an unexpected value

Action: Check for lock manager error message and refer to DLM documentation refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09954: scgcc: unexpected return status to callback of lock close

Cause: The distributed lock manager returned an unexpected value

Action: Check for lock manager error message and refer to DLM documentation refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09955: scgcan: unexpected return status when canceling a lock

Cause: DLM system service x returned an unexpected value

Action: Check for system error message and refer to DLM documentation refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09956: scgcm: unexpected lock status condition

Cause: A global locking system service returned an unexpected value.

Action: Check for system error message (if any) and refer to refer to the distributed lock manager documentation or contact your customer support representative.

ORA-09957: Unable to send termination request to IMON

Cause: The attempt to send a termination signal to IMON failed.

Action: This is an internal error, contact ORACLE support.

ORA-09958: IMON: two processes with the same ORACLE pid are active

Cause: The IMON process was unable to add an entry for a server process because another active process occupies the slot.

Action: This is an internal error, contact ORACLE support.

ORA-09959: IMON: deletion of a process failed.

Cause: The IMON process was unable to delete a server process from its process ID array because no entry for the process could be found.

Action: This is an internal error, contact ORACLE support.

ORA-09960: Unable to establish signal handler for termination signal

Cause: ORACLE was unable to set up a handler for the signal used to notify it that the instance was shutting down.

Action: This is an internal error, contact ORACLE support.

ORA-09961: Unable to restore termination signal handler

Cause: ORACLE failed to set the handler for the termination signal to its previous value.

Action: This is an internal error, contact ORACLE support.

ORA-09962: lk_group_create error in scggrc**ORA-09963: lk_group_attach error in scggra****ORA-09964: lk_group_detach error in scggrd****ORA-09966: failure in translation while expanding ?/dbs/lk for lock file**

Cause: Oracle failed to translate ?/dbs/lk, when creating a file name for the database mount lock or the instance startup/shutdown lock.

Action: Check additional return errors for more information.

ORA-09967: unable to create or open lock file

Cause: Oracle failed, when making an open system call, in order to acquire a file lock used by the database mount lock or the instance startup/shutdown lock.

Action: Check errno for more information.

ORA-09968: unable to lock file

Cause: The system call for locking a file returned an error when trying to acquire a database mount lock or the instance startup/shutdown lock.

Action: Check errno for more information.

ORA-09969: unable to close or remove lock file

Cause: The close system call or unlink system call returned an error.

Action: Check errno for more information.

ORA-09974: skxfidini: Error Initializing SDI Channel

Cause: The process was unable to initialize the SDI channel properly.

Action: Correct the operating system error and retry the operation.

ORA-09975: kxfspini: Error Initializing SDI Process

Cause: The process was unable to attach to the SDI channel.

Action: Verify that the SDI process specific limits correctly configured. Correct the operating system error and retry the operation.

ORA-09976: skxfqadini: Error Creating Port

Cause: The process was unable to create a communications endpoint.

Action: Verify that the SDI port specific limits correctly configured. Correct the operating system error and retry the operation.

ORA-09977: skxfqhini: Error Connecting

Cause: The process was unable to connect to another endpoint.

Action: Verify that the SDI port specific limits correctly configured. Check that the other node(s) is part of the cluster and operating properly. Correct the operating system error and retry the operation.

ORA-09978: skxfqhdel: Error Disconnecting from another endpoint.

Cause: The process was unable to disconnect cleanly from another endpoint.

Action: Check that the other node(s) are part of the cluster and operating properly. Check the instance and processes on the other node(s). Correct the operating system error and retry the operation.

ORA-09979: skxfqhsnd: Error Sending a message to another endpoint

Cause: The process was unable to send a message to an existing endpoint.

Action: Check that the other node(s) are part of the cluster and operating properly. Check the instance and processes on the other node(s). Correct the operating system error and retry the operation.

ORA-09980: skxfqdrvc: Error Receiving a message from another endpoint

Cause: The process encountered an error while trying to receive a message.

Action: Check that the other node(s) are part of the cluster and operating properly. Check the instance and processes on the other node(s). Correct the operating system error and retry the operation.

ORA-09981: skxfqgreg: Error Adding a page to the SDI buffer pool

Cause: The process was unable to add a page to the SDI buffer pool.

Action: Correct the operating system error and retry the operation.

ORA-09982: skxfqddrg: Error Removing a page from the SDI buffer pool

Cause: The process was unable to remove a page to the SDI buffer pool.

Action: Correct the operating system error and retry the operation.

ORA-09983: skxfidsht: Error shutting down SDI channel

Cause: The process was unable shut down the SDI channel

Action: Check the SDI persistent resources using SDI tools. Verify that all processes exited cleanly and the instance is safely shut down. Delete any remaining SDI channel IDs associated with the current instance.

ORA-09984: SGA file \$ORACLE_HOME/dbs/sgadef\$ORACLE_SID.dbf does not exist

Cause: file does not exist or is not accessible

Action: Restart the instance to create the SGA definition file.

ORA-09985: SGA definition file could not be read

Cause: UNIX read() operation failed

Action: check errno and take appropriate action.

ORA-09986: wrong number of bytes read from SGA definition file

Cause: Struct skgmsdef size differs from no. of bytes read from SGA file

Action: Compare the two struct definitions and ensure that they are identical in size and structure.

ORA-09987: unable to attach to SGA in READ-ONLY mode

Cause: The instance is not up, or SGA segments are not read-accessible

Action: Verify that the instance is up and read permissions for the SGA segments are set.

ORA-09988: error while detaching SGA

Cause: skgmsdef struct is corrupted and/or segment addresses are modified

Action: Safely shut down instance and mount SGA segments again.

ORA-09989: attempt to use invalid skgmsdef struct pointer

Cause: Pointer to skgmsdef struct used without validating it

Action: Assign a valid address to the skgmsdef struct pointer before using it.

ORA-10887: An Oracle Active Data Guard license is required to open a pluggable database while standby recovery is applying changes.

Cause: An attempt was made to open a pluggable database without the Oracle Active Data Guard license.

Action: Do not open a pluggable database or acquire the Oracle Active Data Guard license.

ORA-10889: minimum number of instances needed for redo apply unavailable

Cause: An attempt was made to start multi-instance redo apply with less than two instances in either a mounted or open state.

Action: Mount or open at least two instances.

ORA-10892: multi-instance redo apply encountered nonlogged operation

Cause: Multi-instance Redo Apply did not support applying invalidation redo. Invalidation redo is created as part of performing a nonlogged operation. Details of the first data block affected by the nonlogged operation can be found in the alert log.

Action: Restart recovery using single instance Redo Apply. Do not specify the INSTANCE keyword in the command to start recovery.

ORA-11400: Control file has changed between fetches

Cause: The pseudo control file used by a per-Pluggable Database Data Guard (DGPDB) changed while a SQL query was fetching rows from it and those rows needed to correctly reflect the state of the data files.

Action: Execute the query again.

ORA-11401: Cached Control file data is not available

Cause: The instance wide cache for the pseudo control file used by a per-Pluggable Database Data Guard (DGPDB) was found to be invalid when an attempt was made to read from it.

Action: Retry the operation.

ORA-11402: Data Guard site entry not found

Cause: The SYS.DATA_GUARD_SITE\$ table in ROOT did not contain the requested site details.

Action: If it is not obvious from the context of the error then the site name or database ID used to lookup up the site can be found in the trace file of the process originally reporting the error. Data Guard Broker is the preferred method to maintain the site configuration data. Try removing and adding the site again.

ORA-11403: Data Guard site data invalid or incomplete

Cause: The SYS.DATA_GUARD_SITE\$ row contained incorrect or incomplete details used to form a connection to the site. The previous error on the error stack should give more insight into what is incorrect or incomplete. For example, an ORA-27476 indicates the defined or defaulted credential could not be accessed.

Action: If it is not obvious from the context of the error which site site entry is causing the problem or which piece of data from the entry is incorrect or incomplete then more details can be found in the trace file of the process that originally reported the error. Data Guard Broker is the preferred method to maintain the site configuration data. Try removing and adding the site again.

ORA-11404: User has no privilege to create a standby from the source

Cause: The Oracle user used to connect to the source CDB was not granted SYSDG privilege in the source PDB.

Action: Either grant the user the privilege, use a different user by modifying the Data Guard site configuration data, or modify the command being used to create the standby.

ORA-11405: Remote Data Guard site is not ready

Cause: Contact was made with the remote Data Guard site, but the following error was raised when an attempt was made to use the site.

Action: Examine the error following this one and attempt to rectify the issue. For example, ORA-03150 likely means the remote site is mounted but not open, and therefore attempt the operation again once the site open.

ORA-11406: The standby pluggable database "*string*" cannot be a source.

Cause: The SQL statement named a source pluggable database that was a per-Pluggable Database Data Guard (DGPDB). A DGPDB cannot be used in this context.

Action: Do not use a DGPDB as the source for this statement.

ORA-11407: Other Oracle RAC instances are not ready for the role change.

Cause: An attempt to change Oracle RAC instances to a primary role of the per-Pluggable Database Data Guard (DGPDB) failed.

Action: See the following error for more details, resolve the issue, and try again.

ORA-11408: Other Oracle RAC instances are not ready for the drop operation.

Cause: An attempt to change Oracle RAC instances to drop the per-Pluggable Database Data Guard (DGPDB) failed.

Action: See the following error for more details, resolve the issue, and try again.

ORA-11409: Instance *string* failed to respond within *string* centiseconds.

Cause: One or more Oracle RAC instances failed to respond to the per-Pluggable Database Data Guard (DGPDB) request as indicated in the previous error.

Action: The GEN2 process, on the specified Oracle RAC instance, is busy with a long running task. Try again later.

ORA-11410: Instance *string* returned error status *string*.

Cause: The per-Pluggable Database Data Guard (DGPDB) request failed on the specified Oracle RAC instance.

Action: The Oracle RAC instance was either shutting down or starting up or the GEN2 process was not ready. Try again later.

ORA-11411: This operation is not allowed in a standby container database.

Cause: The use of a per-Pluggable Database Data Guard (DGPDB) was not allowed in a standby container database.

Action: Do not use or change a DGPDB in a standby container database.

ORA-11412: Operation not allowed while the root container is open for upgrade or downgrade.

Cause: The attempted operation could not start because it needed to use dictionary tables in the root container, but the root container was being upgraded or downgraded.

Action: Try the operation again after the upgrade or downgrade task is complete.

ORA-11414: An active per PDB Data Guard is running on another instance.

Cause: The PDB could not be opened because another instance in the Oracle RAC has the same PDB open with recovery running. Only one Oracle RAC instance may have a standby PDB open with managed recovery running.

Action: If managed recovery needs to be running and the PDB needs to be open on this instance then cancel managed recovery, close the PDB on the other instance and then open it on this instance and start managed recovery. If the PDB needs to be open on more than one instance then cancel managed recovery and open it.

ORA-11415: A per PDB Data Guard standby is open on more than one instance.

Cause: Media recovery could not be started because another instance in the Oracle RAC has the same PDB open. Only one Oracle RAC instance may have a standby PDB open when managed recovery is running.

Action: Close the PDB on all other instances.

ORA-11416: System too busy. Try again later

Cause: The request to open, close, start recovery or cancel recovery for the standby PDB failed because the background process DBW0 was too busy. This is never expected to happen and an incident report has been created to capture why the DBW0 process failed to process the request in time.

Action: Try the action again later or use a different instance in the Oracle RAC.

ORA-11417: cannot run more than *string* active per PDB Data Guard

Cause: The operation could not start because it exceeded the resources available for per PDB Data Guard.

Action: Either cancel recovery for a running active per PDB Data Guard, start recovery for the active per PDB Data Guard from a different instance, or close the per PDB Data Guard before starting recovery.

ORA-11500: A domain constraint cannot be modified or dropped.

Cause: An attempt was made to modify or drop a constraint on a table that is inherited from a SQL domain.

Action: Do not attempt to modify or drop a constraint inherited from a domain. Alter the table and drop the domain from the columns as an alternative.

ORA-11501: The column default does not match the domain default of the column.

Cause: A default was specified for a column that was different than the default of the domain with which the column was associated.

Action: Correct the default to match the domain default of the column or disassociate the column from the domain.

ORA-11502: The domain to be dropped has dependent objects.

Cause: An attempt was made to drop a domain with dependent objects.

Action: Drop the domain using the FORCE mode.

ORA-11503: The column collation does not match the domain collation of the column.

Cause: The specified or default column collation was different than the domain collation with which the column was associated.

Action: The column collation associated with the domain cannot be modified. Set the domain collation on a column associated with the domain only.

ORA-11504: The domain specified does not exist or the user does not have privileges on the domain for the operation.

Cause: A domain was specified that did not exist or for which the user had no required privileges.

Action: Specify a valid domain or grant the required privileges on the domain.

ORA-11505: The domain already has an expression.

Cause: The specified ALTER DOMAIN statement attempted to add an expression that the domain already had.

Action: Use the ALTER DOMAIN MODIFY statement instead.

ORA-11506: The domain expression does not exist.

Cause: The ALTER DOMAIN statement tried to drop or modify an expression that the domain did not have.

Action: Use the ALTER DOMAIN ADD statement instead.

ORA-11507: The argument to DOMAIN_DISPLAY or DOMAIN_ORDER is not associated with a domain.

Cause: DOMAIN_DISPLAY or DOMAIN_ORDER was called with an argument that was not associated with a domain.

Action: Associate the argument with a domain or do not use DOMAIN operators.

ORA-11508: Casting to a domain using the MULTISET keyword is not allowed.

Cause: An attempt was made to cast to a domain using the MULTISET keyword.

Action: The DOMAIN and MULTISET keywords are mutually exclusive. Use either the DOMAIN or the MULTISET keyword but not both.

ORA-11509: Casting to a multi-column domain is not allowed.

Cause: A multi-column domain was specified with a CAST operator.

Action: Use a single column domain with the CAST operator.

ORA-11510: Casting to a polymorphic or multi-column domain as specified is not allowed.

Cause: Either a polymorphic or a multi-cast domain was specified with the CAST operator; or the data type or collation for the CAST operator did not match the domain attributes.

Action: Use a non-polymorphic single column domain and match the data type and collation with those of the domain.

ORA-11511: Alter table modify drop domain cannot be combined with other options.

Cause: An attempt was made to modify column properties in addition to disassociating the column from the domain.

Action: Use separate ALTER TABLE statements; one to modify the column properties and one to disassociate the column from the domain.

ORA-11512: The column already has an associated domain.

Cause: An attempt was made to associate a domain to a column that was already associated with a domain, which is not allowed.

Action: Disassociate the column from the current domain and try the operation again.

ORA-11513: CAST AS DOMAIN has failed due to domain constraints.

Cause: The expression to be casted as domain did not satisfy one of the constraints of the domain.

Action: Ensure that the expression satisfies all of the enabled domain constraints.

ORA-11514: Creating a domain with the same name as an Oracle supplied type, or user defined data type, package or function is not allowed.

Cause: An attempt was made to create a domain with the same name as an Oracle supplied data type, or user defined data type, package, or function in the same schema.

Action: Ensure that the domain name does not coincide with that an Oracle supplied data type or a user defined type, package or function in the same schema.

ORA-11515: incorrect number of columns in domain association list

Cause: The number of columns associated with a domain did not match the domain column count.

Action: Associate a column with each domain column.

ORA-11517: the column data type does not match the domain column

Cause: The column data type did not match the domain column with which it was associated.

Action: Do not associate the column with the domain if the data types do not match.

ORA-11518: cannot drop domain from only a subset of the columns

Cause: The number of columns disassociated from a domain did not match the domain column count.

Action: Specify the full list of columns associated with the domain, one for each domain column.

ORA-11519: column is associated with a multi-column domain

Cause: An attempt was made to drop a column associated with a multi-column domain, without dropping all other columns.

Action: Drop all columns associated with a multi-column domain or drop domain from all such columns.

ORA-11520: sub-domain *string* not found

Cause: The specified sub-domain was missing.

Action: Ensure that the sub-domain exists and is accessible.

ORA-11521: sub-domain *string* is a flexible domain

Cause: The specified sub-domain was a flexible domain.

Action: Ensure that the sub-domain is a regular domain.

ORA-11522: domain column *string* data type is not the same in all sub-domains

Cause: The data type of the sub-domains was inconsistent.

Action: Ensure that the sub-domain column data types are the same.

ORA-11523: domain column *string* not referenced

Cause: Some domain column was not passed to a sub-domain.

Action: Ensure that all domain columns are referenced.

ORA-11524: sub-domain or its argument is an expression

Cause: The sub-domain or its argument was an expression.

Action: Ensure that all sub-domain arguments are domain columns.

ORA-11525: column *string* used in selector-expression is not a discriminant column

Cause: Some column was not in the discriminant column list.

Action: Ensure that only discriminant columns are used in the selector-expression.

ORA-11526: number of columns in sub-domain *string* do not match

Cause: The number of columns passed to the sub-domain do not match definition.

Action: Ensure that actual columns match the defined columns.

ORA-11527: duplicate domain or discriminant column

Cause: The specified column names were not unique.

Action: Ensure that there are no duplicate column names.

ORA-11528: missing discriminant column

Cause: A discriminant column was not specified.

Action: Specify discriminant columns when associating columns to a flexible domain.

ORA-11529: cannot modify the display or order of a domain used by a flexible domain

Cause: An attempt was made to add, drop or modify the display or order expression of a domain with flexible domain dependents.

Action: Drop all flexible domains depending on a domain before adding, dropping or modifying the domain display or order expression.

ORA-11530: cannot alter the display or order of a flexible domain

Cause: An attempt was made to alter a domain affecting its display or order expression.

Action: Drop the flexible domain, alter the domains it depended on and recreate the flexible domain.

ORA-12000: a materialized view log already exists on table '*string*'

Cause: An attempt was made to create a materialized view log on a table that already had a materialized view log. Each master table had only one materialized view log.

Action: All materialized views on a table can use the same materialized view log for that table. To make changes to the existing log, use the ALTER MATERIALIZED VIEW LOG command or drop the materialized view log and create it again.

ORA-12001: cannot create log: table '*string*' already has a trigger

Cause: Materialized view logs are filled by a trigger on the master table. That trigger cannot be created.

Action: To create a materialized view log, drop the current trigger on the master.

ORA-12002: there is no materialized view log on table "*string*". "*string*"

Cause: There was no materialized view log on the master table.

Action: Create a materialized view log on the master table.

ORA-12003: materialized view or zonemap "string"."string" does not exist

Cause: The database object with the given owner and name was not found.

Action: Verify input and retry.

ORA-12004: REFRESH FAST cannot be used for materialized view "string"."string"

Cause: The materialized view log does not exist or cannot be used. PCT refresh is also not enabled on the materialized view

Action: Use just REFRESH, which will reinitialize the entire table. If a materialized view log exists and the form of the materialized view allows the use of a materialized view log or PCT refresh is possible after a given set of changes, REFRESH FAST will be available starting the next time the materialized view is refreshed.

ORA-12005: may not schedule automatic refresh for times in the past

Cause: An attempt was made to schedule an automated materialized view refresh for a time in the past.

Action: Choose a time in the future instead.

ORA-12007: materialized view reuse parameters are inconsistent

Cause: The CREATE MATERIALIZED VIEW .. or CREATE MATERIALIZED VIEW LOG .. REUSE command was given inconsistent parameters immediately after the REUSE.

Action: Examine the other messages on the stack to find the problem.

ORA-12008: error in materialized view or zonemap refresh path

Cause: Table SNAP\$_<mview_name> reads rows from the view MVIEW\$_<mview_name>, which is a view on the master table (the master may be at a remote site). Any error in this path will cause this error at refresh time. For fast refreshes, the table <master_owner>.MLOG\$_master is also referenced.

Action: Examine the other messages on the stack to find the problem. See if the objects SNAP\$_<mview_name>, MVIEW\$_<mview_name>, *mowner.master@dblink*, *mowner.MLOG\$_master@dblink* still exist.

ORA-12009: materialized views may not contain long columns

Cause: An attempt was made to create a materialized view with a long column.

Action: Do not attempt to create materialized view logs with long columns.

ORA-12010: cannot create materialized view log on table owned by SYS

Cause: An attempt was made to create a materialized view log on the table owned by SYS. CREATE MATERIALIZED VIEW LOG attempts to create a trigger on the table, but triggers can not be created on SYS tables.

Action: Do not create a materialized view log on SYS tables.

ORA-12011: execution of string jobs failed

Cause: An error was caught in dbms_ijob.run from one or more jobs which were due to be run.

Action: Look at the alert log for details on which jobs failed and why.

ORA-12012: error on auto execute of job *string*

Cause: An error was caught while doing an automatic execution of a job.

Action: Look at the accompanying errors for details on why the execute failed.

ORA-12013: updatable materialized view must be simple enough and have a materialized view log on its master table to do fast refresh

Cause: The updatable materialized view query contained a JOIN, SUBQUERY, UNION, CONNECT BY, ORDER BY, or GROUP BY clause, or the master table did not have a materialized view log.

Action: Make the materialized view simpler. If a join is really needed, make multiple simple materialized views then put a view on top of them. Make sure a materialized view log is created for the master table.

ORA-12014: table '*string*' does not contain a primary key constraint

Cause: The CREATE MATERIALIZED VIEW LOG command was issued with the WITH PRIMARY KEY option and the master table did not contain a primary key constraint or the constraint was disabled.

Action: Reissue the command using only the WITH ROWID option, create a primary key constraint on the master table, or enable an existing primary key constraint.

ORA-12015: cannot create a fast refresh materialized view from a complex query

Cause: Neither ROWIDs and nor primary key constraints are supported for complex queries.

Action: Reissue the command with the REFRESH FORCE or REFRESH COMPLETE option or create a simple materialized view.

ORA-12016: materialized view does not include all primary key columns

Cause: The query that instantiates the materialized view did not include all of the columns in the master's primary key constraint.

Action: Include all of the master's primary key columns in the materialized view query or create a ROWID materialized view.

ORA-12017: cannot alter primary key mview '*string*' to a rowid mview

Cause: An attempt was made to convert the primary key of a materialized view to a ROWID materialized view.

Action: Conversion of a primary key materialized view to a ROWID materialized view is not supported. Create a new materialized view with ROWIDs or drop and recreate the materialized view with ROWIDs.

ORA-12018: following error encountered during code generation for "*string*". "*string*"

Cause: The refresh operations for the indicated materialized view could not be regenerated due to errors.

Action: Correct the problem indicated in the following error messages and repeat the operation.

ORA-12019: master table is a synonym to a remote object

Cause: An attempt was made to create a materialized view or a materialized view log on a remote synonym which is unsupported.

Action: Do not create a materialized view or materialized view log on a remote synonym.

ORA-12020: materialized view *string* is not registered

Cause: An attempt was made to unregister a materialized view that is not registered.

Action: No action required.

ORA-12021: materialized view "*string*"."*string*" is corrupt

Cause: The materialized view indicated is no longer valid.

Action: Contact Oracle Customer Support.

ORA-12022: materialized view log on "*string*"."*string*" already has rowid

Cause: Materialized view log on the indicated table already has ROWID information.

Action: No action required.

ORA-12023: missing index on materialized view "*string*"."*string*"

Cause: The specified ROWID materialized view did not have the required index on the ROWID column of its underlying table.

Action: Drop and recreate the materialized view.

ORA-12024: materialized view log on "*string*"."*string*" does not have primary key columns

Cause: Materialized view log on the indicated table does not have primary key information.

Action: Add primary keys to the materialized view log using the ALTER MATERIALIZED VIEW command.

ORA-12025: materialized view log on "*string*"."*string*" already has primary keys

Cause: Materialized view log on the indicated table already has primary key columns.

Action: No action required.

ORA-12026: invalid filter column detected

Cause: One or more of the specified filter columns did not exist or was a primary key column or a primary key based object identifier.

Action: Ensure that all specified filter columns exist in the master table and ensure that primary key columns or primary key based object identifiers are not included in the list of filter columns.

ORA-12027: duplicate filter column

Cause: One or more of the specified filter columns were already being recorded in the materialized view log.

Action: Describe the materialized view log table and reissue the SQL command with the filter columns that are already being recorded in the materialized view log.

ORA-12028: materialized view type is not supported by master site *string*

Cause: Pre-Oracle8 master sites are not able to support primary key or subquery materialized views that are able to perform a fast refresh.

Action: Create a ROWID materialized view or use a master table from an Oracle8 site.

ORA-12029: LOB columns may not be used as filter columns

Cause: An attempt was made to use LOB columns as filter columns.

Action: Remove LOB columns from the filter columns list and retry command.

ORA-12030: cannot create a fast refresh materialized view

Cause: The materialized view log did not exist or did not log the information needed by the materialized view to perform a fast refresh.

Action: Ensure that the materialized view log exists and logs the necessary information. - For ROWID materialized views, the master table's ROWID must be logged. - For primary key materialized views, the master table's primary key columns must be logged. - For subquery materialized views, the filter columns, primary key, and ROWID values must be logged. - For object materialized views, object id must be logged.

ORA-12031: cannot use primary key columns from materialized view log on "string"."string"

Cause: The materialized view log either did not have primary key columns logged, or the timestamp associated with the primary key columns was more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add primary key columns to the materialized view log, if required.

ORA-12032: cannot use rowid column from materialized view log on "string"."string"

Cause: The materialized view log either does not have ROWID columns logged, or the timestamp associated with the ROWID columns is more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add ROWID columns to the materialized view log, if required.

ORA-12033: cannot use filter columns from materialized view log on "string"."string"

Cause: The materialized view log either did not have filter columns logged, or the timestamp associated with the filter columns was more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add filter columns to the materialized view log, if required.

ORA-12034: materialized view log on "string"."string" younger than last refresh

Cause: The materialized view log was younger than the last refresh.

Action: A complete refresh is required before the next fast refresh.

ORA-12035: could not use materialized view log on "string"."string"

Cause: The materialized view log did not exist or could not be used.

Action: Use just REFRESH, which will reinitialize the entire table. If a materialized view log exists and the form of the materialized view allows the use of a materialized view log, REFRESH FAST will be available starting the next time the materialized view is refreshed.

ORA-12036: updatable materialized view log is not empty, refresh materialized view

Cause: The updatable materialized view log was not empty. The updatable materialized view log must be empty before an updatable rowid materialized view can be altered to a primary key materialized view.

Action: Ensure that updatable materialized view log is empty by refreshing the materialized view before converting the updatable ROWID materialized view to a primary key materialized view.

ORA-12037: unknown export format

Cause: An attempt was made to import a materialized view exported by an unknown export version (e.g., from a newer release than the importing site)

Action: Re-export the file using a version of export known by the importing site.

ORA-12038: string literal has unexpected length**ORA-12039: unable to use local rollback segment "string"**

Cause: A local rollback segment was specified in the CREATE MATERIALIZED VIEW command, but automatic refresh parameters were not specified. Therefore a refresh group was not created to automatically refresh the materialized view and the local rollback segment can't be registered for future use.

Action: Either supply the automatic refresh parameters so that a refresh group will be created or do not specify a local rollback segment.

ORA-12040: master rollback segment option not support by master site string

Cause: An attempt was made to specify master rollback segment in the current operation. The master site of the current materialized view does not allow users to specify a rollback segment to be used for materialized view operations. This feature is only supported by Oracle8 or later master sites.

Action: Do not specify a master rollback segment in the current operation or choose a new master site.

ORA-12041: cannot record ROWIDs for index-organized table "string"."string"

Cause: Index-organized tables do not have ROWIDs. Therefore a materialized view log that records the ROWIDs of an index-organized table could not be created.

Action: Do not include the WITH ROWID option when using the CREATE MATERIALIZED VIEW command and do not include the ADD ROWID option when using the ALTER MATERIALIZED VIEW command if the master table is index-organized.

ORA-12042: cannot alter job_queue_processes in single process mode

Cause: An attempt was made to alter job_queue_processes in single process mode.

Action: Do not attempt to set job_queue_processes in single process mode.

ORA-12043: invalid CREATE MATERIALIZED VIEW option

Cause: An invalid option was used in a CREATE MATERIALIZED VIEW statement.

Action: Specify only valid options.

ORA-12044: invalid CREATE MATERIALIZED VIEW LOG option

Cause: An invalid option was used in a CREATE MATERIALIZED VIEW LOG statement.

Action: Specify only valid options.

ORA-12045: invalid ALTER MATERIALIZED VIEW LOG option

Cause: An invalid option was used in an ALTER MATERIALIZED VIEW LOG statement.

Action: Specify only valid options.

ORA-12046: cannot use trusted constraints for refreshing remote MV

Cause: REFRESH USING TRUSTED CONSTRAINTS specified in ALTER MATERIALIZED VIEW or CREATE MATERIALIZED VIEW of a remote materialized view

Action: remove this attribute from ALTER/ CREATE MATERIALIZED VIEW DDL

ORA-12047: PCT FAST REFRESH cannot be used for materialized view "string"."string"

Cause: PCT refresh is either not enabled on this materialized view or not possible after set of the base table changes since last refresh.

Action: Use just REFRESH FORCE, which will reinitialize the entire table and try to pick the best refresh method on the materialized view Do explain_mvview to look at the cause why PCT refresh is not possible on this materialized view

ORA-12048: error encountered while refreshing materialized view "string"."string"

Cause: Some problem occurs during refresh of multiple materialized views in atomic mode. The materialized view whose refresh failed has raised this error.

Action: Examine the other messages on the stack to find the refresh problem.

ORA-12051: ON COMMIT attribute is incompatible with other options

Cause: ON COMMIT refresh attribute, incompatible with other refresh options such as automatic periodic refresh, was specified.

Action: Specify only valid options.

ORA-12052: cannot fast refresh materialized view string.string

Cause: Either ROWIDs of certain tables were missing in the definition or the inner table of an outer join did not have UNIQUE constraints on join columns.

Action: Specify the FORCE or COMPLETE option. If this error is got during creation, the materialized view definition may have be changed. Refer to the documentation on materialized views.

ORA-12053: this is not a valid nested materialized view

Cause: The list of objects in the FROM clause of the definition of this materialized view had some dependencies upon each other.

Action: Refer to the documentation to see which types of nesting are valid.

ORA-12054: cannot set the ON COMMIT refresh attribute for the materialized view

Cause: The materialized view did not satisfy conditions for refresh at commit time.

Action: Specify only valid options.

ORA-12055: materialized view definition contains cyclic dependencies with existing materialized views

Cause: The materialized view query definition introduced a cyclic dependency with existing materialized view.

Action: Modify the materialized view query definition.

ORA-12056: invalid REFRESH method

Cause: The NEVER REFRESH option may not be used under the following conditions: * The materialized view is updatable * The materialized view refreshes ON COMMIT * Automatic refresh options are specified

Action: For updatable materialized views, reissue the SQL command using REFRESH FORCE, REFRESH FAST, or REFRESH COMPLETE. For read-only materialized views, reissue the SQL command using ON DEMAND.

ORA-12057: materialized view or zonemap "*string*"."*string*" is invalid and must use complete refresh

Cause: The status of the materialized view or zonemap was invalid and an attempt was made to fast refresh it.

Action: Perform a complete refresh of the materialized view or zonemap.

ORA-12058: materialized view cannot use prebuilt table

Cause: An attempt was made to use the prebuilt tables.

Action: Reissue the SQL command using BUILD IMMEDIATE or BUILD DEFERRED.

ORA-12059: prebuilt table "*string*"."*string*" does not exist

Cause: The specified prebuilt table did not exist.

Action: Reissue the SQL command using BUILD IMMEDIATE, BUILD DEFERRED, or ensure that the prebuilt table exists.

ORA-12060: shape of prebuilt table does not match definition query

Cause: The number of columns or the type or the length semantics of a column in the prebuilt table did not match the materialized view definition query.

Action: Reissue the SQL command using BUILD IMMEDIATE, BUILD DEFERRED, or ensure that the prebuilt table matches the materialized view definition query.

ORA-12061: invalid ALTER MATERIALIZED VIEW option

Cause: An invalid option was used in an ALTER MATERIALIZED VIEW statement.

Action: Specify only valid options.

ORA-12062: transaction *string* received out of sequence from site *string*

Cause: A transaction from the client site was received out of sequence. This implies that one or more transactions were missing.

Action: Ensure that the transaction queue at the client site is valid and has not been corrupted.

ORA-12063: unable to apply transaction from site *string*

Cause: The current transaction from the client site could not be applied to the master site.

Action: Ensure that the client site is still valid and that it has not been dropped from the master site.

ORA-12064: invalid refresh sequence number: *string*

Cause: The client site was attempting to perform a refresh with an invalid refresh sequence.

Action: Perform a complete refresh to synchronize the refresh sequence number.

ORA-12065: unknown refresh group identifier *string*

Cause: The specified refresh group did not exist at the master site.

Action: Ensure that the client site is still valid and that it has not been dropped from the master site.

ORA-12066: invalid CREATE MATERIALIZED VIEW command

Cause: The Replication API does not support the following options and types of materialized view: o ROWID materialized views o REFRESH ON COMMIT o ON PREBUILT TABLE o BUILD DEFERRED o NEVER REFRESH o ENABLE QUERY REWRITE

Action: Create a PRIMARY KEY materialized view using REFRESH WITH PRIMARY KEY and/or remove the invalid options.

ORA-12067: empty refresh groups are not allowed

Cause: The refresh group being instantiated did not contain any materialized views.

Action: Modify the template to include at least one materialized view.

ORA-12068: updatable mview log for mview "*string*"."*string*" does not exist

Cause: The updatable materialized view was missing the updatable materialized view log required to track updates made to the materialized view.

Action: Create the updatable materialized view log.

ORA-12069: invalid object for offline instantiation

Cause: Only materialized views can be offline instantiated. The object being offline instantiated was not a valid materialized view.

Action: Remove the object from the template or replace the object with a valid materialized view.

ORA-12070: cannot offline instantiate materialized view "*string*"."*string*"

Cause: Offline instantiation does not support materialized views using the following options: o ON PREBUILT TABLE o BUILD DEFERRED

Action: Remove the invalid options.

ORA-12071: definition query of "*string*"."*string*" is invalid for offline instantiation

Cause: Offline instantiation requires materialized view definition queries to observe the following constraints: o The database link that will be used by the materialized view site to connect to the master site must be included with each master table referenced in the query. o All master tables referenced must be located at the local site. References to other sites are not allowed.

Action: Modify the materialized view definition query.

ORA-12072: updatable materialized view log data for "*string*"."*string*" cannot be created

Cause: The updatable materialized view was missing the updatable materialized view log required to track updates made to the materialized view.

Action: Create an updatable materialized view log.

ORA-12073: request cannot be processed

Cause: An out-of-sequence request was made and it cannot be processed.

Action: Try again with a valid request.

ORA-12074: invalid memory address

Cause: An attempt was made to access an invalid memory region.

Action: Reconnect and try the command again.

ORA-12075: invalid object or field

Cause: An attempt was made to access an invalid field or object in the Java Virtual Memory.

Action: Retry the request.

ORA-12076: invalid threshold value

Cause: The result set threshold or LOB threshold value is not supported.

Action: Specify a threshold value below 64K.

ORA-12077: temporary updatable materialized view log does not exist

Cause: Temporary updatable materialized view log was not created or was dropped.

Action: Re-create the temporary updatable materialized view log. Warning: This will cause a complete refresh of the materialized view.

ORA-12078: fast refresh of refresh group ID *string* failed

Cause: Refresh result set sent through client method REFRESH_REQ_RESULT returned an unknown value.

Action: Re-issue the refresh request.

ORA-12079: do not invalidate result cache created during materialized view refresh

Cause: Result cache created during materialized view refresh was not invalidated at end.

Action: Do not set this as an event.

ORA-12080: Buffer cache miss for IOQ batching**ORA-12081: update operation not allowed on table "*string*".*string*"**

Cause: An attempt was made to update a read-only materialized view.

Action: No action required. Only Oracle is allowed to update a read-only materialized view.

ORA-12082: "*string*".*string*" cannot be index organized

Cause: An attempt was made to create an index-organized materialized aggregate view or an index-organized updatable ROWID materialized view. This is not supported.

Action: Try to create the materialized view without the index organization clause.

ORA-12083: must use DROP MATERIALIZED VIEW to drop "string"."string"

Cause: An attempt was made to drop a materialized view using a command other than DROP MATERIALIZED VIEW.

Action: Use the DROP MATERIALIZED VIEW command.

ORA-12084: must use ALTER MATERIALIZED VIEW to alter "string"."string"

Cause: An attempt was made to alter a materialized view using a command other than ALTER MATERIALIZED VIEW.

Action: Use the ALTER MATERIALIZED VIEW command.

ORA-12085: materialized view log on "string"."string" already has object id

Cause: Materialized view log on the indicated table already has object id information.

Action: No action required.

ORA-12086: table "string"."string" is not an object table

Cause: The CREATE MATERIALIZED VIEW LOG command was issued with the WITH OBJECT ID option and the master table is not an object table.

Action: Either specify the name of an object table, or remove the WITH OBJECT ID clause.

ORA-12087: online redefinition not allowed on tables owned by "string"

Cause: An attempt was made to online redefine a table owned by SYS or SYSTEM.

Action: Do not attempt to online redefine a table owned by SYS or SYSTEM.

ORA-12088: cannot online redefine table "string"."string" with unsupported datatype

Cause: An attempt was made to online redefine a table containing a LONG column, an ADT column, or a FILE column.

Action: Do not attempt to online redefine a table containing a LONG column, an ADT column, or a FILE column.

ORA-12089: cannot online redefine table "string"."string" with no primary key

Cause: An attempt was made to online redefine a table that does not have a primary key defined on it.

Action: Do not attempt to online redefine a table that does not have a primary key defined on it.

ORA-12090: cannot online redefine table "string"."string"

Cause: An attempt was made to online redefine a table that is either a temporary table, an IOT overflow table, a table with fine-grained access control or row-level security enabled, a CDC change table, or a table with a CDC change table defined on it.

Action: Do not attempt to online redefine a table that is not supported by online redefinition.

ORA-12091: cannot online redefine table "string"."string" with materialized views

Cause: An attempt was made to online redefine a table that had materialized views defined on it or had a materialized view log defined on it or is a master.

Action: Drop all materialized views and materialized view logs before attempting to online redefine the table.

ORA-12092: cannot online redefine replicated table "*string*"."*string*"

Cause: An attempt was made to online redefine a table that is either a materialized view or a replicated table.

Action: Do not attempt to online redefine a table that is either a materialized view or a replicated table.

ORA-12093: invalid interim table "*string*"."*string*"

Cause: The table is not the interim table of the corresponding table to be online redefined.

Action: Pass in the valid interim table.

ORA-12094: error during online redefinition

Cause: There was an error during the online redefinition process.

Action: Abort the online redefinition process.

ORA-12096: error in materialized view log on "*string*"."*string*"

Cause: There was an error originating from this materialized view log. One possible cause is that schema redefinition has occurred on the master table and one or more columns in the log is now a different type than corresponding master column(s). Another possible cause is that there is a problem accessing the underlying materialized view log table.

Action: Check further error messages in stack for more detail about the cause. If there has been schema redefinition, drop the materialized view log and recreate it.

ORA-12097: changes in the master tables during refresh, try refresh again

Cause: There are some changes (i.e., conventional DML, direct load, partition maintenance operation) in the master tables during materialized view refresh.

Action: Refresh the affected materialized views again.

ORA-12098: cannot comment on the materialized view

Cause: An attempt was made to issue a COMMENT ON TABLE statement on a materialized view.

Action: Issue a COMMENT ON MATERIALIZED VIEW statement instead.

ORA-12099: Don't go into fast table scan (kdst) mode**ORA-12100: materialized view log on "*string*"."*string*" already has sequence**

Cause: Materialized view log on the indicated table already has sequence information.

Action: No action required.

ORA-12101: shape of materialized view does not match the base table

Cause: The number of columns or the type or the length semantics of a column in the materialized view did not match the materialized view base table.

Action: Ensure that the materialized view column list matches with the base table.

ORA-12150 to ORA-12270

ORA-12150: TNS:unable to send data

Cause: Unable to send data. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

ORA-12151: TNS:received bad packet type from network layer

Cause: Internal error.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12152: TNS:unable to send break message

Cause: Unable to send break message. Connection probably disconnected.

Action: Reestablish connection. If the error is persistent, turn on tracing and reexecute the operation.

ORA-12153: TNS:not connected

Cause: Not currently connected to a remote host.

Action: Reestablish connection.

ORA-12154: TNS:could not resolve the connect identifier specified

Cause: A connection to a database or other service was requested using a connect identifier, and the connect identifier specified could not be resolved into a connect descriptor using one of the naming methods configured. For example, if the type of connect identifier used was a net service name then the net service name could not be found in a naming method repository, or the repository could not be located or reached.

Action: - If you are using local naming (TNSNAMES.ORA file): - Make sure that "TNSNAMES" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA) - Verify that a TNSNAMES.ORA file exists and is in the proper directory and is accessible. - Check that the net service name used as the connect identifier exists in the TNSNAMES.ORA file. - Make sure there are no syntax errors anywhere in the TNSNAMES.ORA file. Look for unmatched parentheses or stray characters. Errors in a TNSNAMES.ORA file may make it unusable. - If you are using directory naming: - Verify that "LDAP" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Verify that the LDAP directory server is up and that it is accessible. - Verify that the net service name or database name used as the connect identifier is configured in the directory. - Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier - If you are using easy connect naming: - Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Make sure the host, port and service name specified are correct. - Try enclosing the connect identifier in quote marks. See the Oracle Net Services Administrators Guide or the Oracle operating system specific guide for more information on naming.

ORA-12155: TNS:received bad datatype in NSWMARKER packet

Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12156: TNS:tried to reset line from incorrect state

Cause: Internal error during break handling.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12157: TNS:internal network communication error

Cause: Internal error during network communication.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12158: TNS:could not initialize parameter subsystem

Cause: Unable to locate parameter file.

Action: Verify that a valid parameter file exists, is readable and contains valid values.

ORA-12159: TNS:trace file not writeable

Cause: The trace file to be generated is not writeable by this user.

Action: If the user does not have write permissions in the directory to which the trace file will be written, contact an administrator to get the proper permissions or set the TRACE_DIRECTORY_CLIENT parameter in the net profile (SQLNET.ORA file) to a directory the user can write to.

ORA-12160: TNS:internal error: Bad error number

Cause: Corrupt error reporting subsystem.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12161: TNS:internal error: partial data received

Cause: The connection may be terminated.

Action: Reconnect and try again. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12162: TNS:net service name is incorrectly specified

Cause: The connect descriptor corresponding to the net service name in TNSNAMES.ORA or in the directory server (Oracle Internet Directory) is incorrectly specified.

Action: If using local naming make sure there are no syntax errors in the corresponding connect descriptor in the TNSNAMES.ORA file. If using directory naming check the information provided through the administration used for directory naming. If using ORACLE_SID, please check if ORACLE_SID is set.

ORA-12163: TNS:connect descriptor is too long

Cause: The connect descriptor corresponding to the net service name specified as the connect identifier is too long. The maximum length for a connect descriptor is 512 bytes and this limit has been exceeded.

Action: Check the net service name's connect descriptor in the local naming file (TNSNAMES.ORA) or in the directory server (Oracle Internet Directory). Use a smaller connect descriptor. If this is not possible, contact Worldwide Customer Support.

ORA-12164: TNS:Sqlnet.fdf file not present

Cause: The sqlnet.fdf file doesn't exist in \$ORACLE_HOME/network/admin.

Action: The sqlnet.fdf file is required for Oracle Tracing to occur. Either install the sqlnet.fdf file in \$ORACLE_HOME/network/admin or turn off tracing in your ORA file.

ORA-12165: TNS:Trying to write trace file into swap space.

Cause: Oracle Trace doesn't allow writing trace information into your swap space.

Action: Oracle Trace cannot write trace information into swap space so either disable tracing or redirect trace files to be written to another area of your disk.

ORA-12166: TNS:Client can not connect to HO agent.

Cause: NVstring contained DESCRIPTION/HO.

Action: Call HO agent from integrating server.

ORA-12168: TNS:Unable to contact LDAP Directory Server

Cause: Cannot contact LDAP directory server to get Oracle Net configuration.

Action: Verify that the directory server is up and accessible from the network. Verify that directory access configuration is correct. For more information see the Oracle Internet Directory Administrators Guide or the Oracle Net Administrators Guide.

ORA-12169: TNS:Net service name given as connect identifier is too long

Cause: The net service name you are attempting to resolve is too long.

Action: The maximum length of a net service name is 255 bytes; this limit has been exceeded. Use a smaller net service name. If this is not possible, contact Worldwide Customer Support.

ORA-12170: TNS:Connect timeout occurred

Cause: The server shut down because connection establishment or communication with a client failed to complete within the allotted time interval. This may be a result of network or system delays; or this may indicate that a malicious client is trying to cause a Denial of Service attack on the server.

Action: If the error occurred because of a slow network or system, reconfigure one or all of the parameters SQLNET.INBOUND_CONNECT_TIMEOUT, SQLNET.SEND_TIMEOUT, SQLNET.RECV_TIMEOUT in sqlnet.ora to larger values. If a malicious client is suspected, use the address in sqlnet.log to identify the source and restrict access. Note that logged addresses may not be reliable as they can be forged (e.g. in TCP/IP).

ORA-12171: TNS:could not resolve connect identifier: *string*

Cause: A connection to a database or other service was requested using a connect identifier, and the connect identifier specified could not be resolved into a connect descriptor using one of the naming methods configured. For example, if the type of connect identifier used was a

net service name then the net service name could not be found in a naming method repository, or the repository could not be located or reached.

Action: - If you are using local naming (TNSNAMES.ORA file): - Make sure that "TNSNAMES" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA) - Verify that a TNSNAMES.ORA file exists and is in the proper directory and is accessible. - Check that the net service name used as the connect identifier exists in the TNSNAMES.ORA file. - Make sure there are no syntax errors anywhere in the TNSNAMES.ORA file. Look for unmatched parentheses or stray characters. Errors in a TNSNAMES.ORA file may make it unusable. - If you are using directory naming: - Verify that "LDAP" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Verify that the LDAP directory server is up and that it is accessible. - Verify that the net service name or database name used as the connect identifier is configured in the directory. - Verify that the default context being used is correct by specifying a fully qualified net service name or a full LDAP DN as the connect identifier - If you are using easy connect naming: - Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Make sure the host, port and service name specified are correct. - Try enclosing the connect identifier in quote marks. See the Oracle Net Services Administrators Guide or the Oracle operating system specific guide for more information on naming.

ORA-12196: TNS:received an error from TNS

Cause: The navigation layer received an error from TNS.

Action: See the error log file for the specific TNS error.

ORA-12197: TNS:keyword-value resolution error

Cause: The navigation layer received an error while trying to look up a value for a keyword.

Action: Check the syntax of the connect descriptor.

ORA-12198: TNS:could not find path to destination

Cause: Could not navigate a path through Interchanges to the destination. This error occurs if an invalid community is in the address string, or the address includes a protocol that is not available or the TNSNAV.ORA file does not have a correct CMANAGER address specified or the Interchange is down.

Action: Assure that Interchanges necessary to get to the desired destination are up and have available capacity for an additional connection. Also check that the correct community and protocol have been specified in the CMANAGER address used.

ORA-12200: TNS:could not allocate memory

Cause: Out of memory on machine.

Action: Reconfigure machine to have more storage or run fewer applications while the Interchange is running.

ORA-12201: TNS:encountered too small a connection buffer

Cause: TNS connection buffer supplied by the application was too small to retrieve the data sent back.

Action: Supply a larger connection buffer. If problem persists, call Worldwide Customer Support.

ORA-12202: TNS:internal navigation error

Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

ORA-12203: TNS:unable to connect to destination

Cause: Invalid address specified or destination is not listening. This error can also occur because of underlying network or network transport problems.

Action: Verify that the net service name you entered was correct. Verify that the ADDRESS portion of the connect descriptor which corresponds to the net service name is correct. Ensure that the destination process (for example the listener) is running at the remote node.

ORA-12204: TNS:received data refused from an application

Cause: The application using Connection Manager refused the connection at the listener.

Action: Make sure that the application listener at the destination is functioning correctly. If it is and the problem persists, contact Worldwide Customer Support.

ORA-12205: TNS:could not get failed addresses

Cause: Internal navigation error.

Action: Not normally visible to the user. For further details contact Worldwide Customer Support.

ORA-12206: TNS:received a TNS error during navigation

Cause: Internal navigation error because of an unexpected TNS error.

Action: Look at the log file to find the TNS error. If necessary, turn on tracing and repeat the operation.

ORA-12207: TNS:unable to perform navigation

Cause: Improperly configured navigation file TNSNAV.ORA.

Action: Check the syntax of the TNSNAV.ORA file on the application's machine, and verify that it lists the correct communities.

ORA-12208: TNS:could not find the TNSNAV.ORA file

Cause: Either the ORACLE environment is not set up correctly, or the TNSNAV.ORA file is not present.

Action: Ensure that the ORACLE environment is set up appropriately on your platform and that a TNSNAV.ORA file is present.

ORA-12209: TNS:encountered uninitialized global

Cause: Application calling navigation routine has not properly configured the global variables. There are no TNSNAV.ORA files available, or they are defective.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Worldwide Customer Support.

ORA-12210: TNS:error in finding Navigator data

Cause: Application calling navigation routine has not properly configured the TNSNAV.ORA file.

Action: Check the syntax of the TNSNAV.ORA file.

ORA-12211: TNS:needs PREFERRED_CMANGERS entry in TNSNAV.ORA

Cause: TNSNAV.ORA does not have a PREFERRED_CMANGERS defined.

Action: Add a PREFERRED_CMANGERS entry to the TNSNAV.ORA file.

ORA-12212: TNS:incomplete PREFERRED_CMANGERS binding in TNSNAV.ORA

Cause: The PREFERRED_CMANGERS binding in the client's TNSNAV.ORA file does not have a CMANGER_NAME specified.

Action: Define the CMANGER_NAME as part of the PREFERRED_CMANGERS binding. Use of the Oracle Network Manager should eliminate this error.

ORA-12213: TNS:incomplete PREFERRED_CMANGERS binding in TNSNAV.ORA

Cause: The PREFERRED_CMANGERS binding in the client's TNSNAV.ORA file does not have an ADDRESS specified.

Action: Define the ADDRESS as part of the PREFERRED_CMANGERS binding.

ORA-12214: TNS:missing local communities entry in TNSNAV.ORA

Cause: There is no LOCAL_COMMUNITIES entry in TNSNAV.ORA.

Action: Define the LOCAL_COMMUNITIES for this node in the TNSNAV.ORA file.

ORA-12215: TNS:poorly formed PREFERRED_NAVIGATORS Addresses in TNSNAV.ORA

Cause: Address binding for PREFERRED_NAVIGATORS entry is improperly entered.

Action: Check your PREFERRED_NAVIGATORS entry and fix it in TNSNAV.ORA

ORA-12216: TNS:poorly formed PREFERRED_CMANGERS addresses in TNSNAV.ORA

Cause: Address binding for the PREFERRED_CMANGERS entry in the client's TNSNAV.ORA file is improperly entered.

Action: Define the ADDRESS as part of the PREFERRED_CMANGERS binding.

ORA-12217: TNS:could not contact PREFERRED_CMANGERS in TNSNAV.ORA

Cause: There is a syntax error in the PREFERRED_CMANGERS entry, or addresses specified are wrong, or the intended Connection Managers are unavailable.

Action: Check the PREFERRED_CMANGERS entries in the client's TNSNAV.ORA file and correct them or talk with your network administrator to determine if the specified Connection Managers are available. Verify that the Interchanges are active by using the INTCTL STATUS command.

ORA-12218: TNS:unacceptable network configuration data

Cause: Poorly formed network configuration data. For example, a PREFERRED_CMANGERS entry may have an incorrect CMANAGER_NAME in the client's TNSNAV.ORA file. Or an Interchange downtime parameter (TIMEOUT_INTERVAL) on the Navigator may be set to zero in INTCHG.ORA.

Action: Check the entries in TNSNAV.ORA and the Interchange configuration files and correct them. If necessary, talk with your network administrator to determine if the specified Interchanges (Connection Managers) are available and properly configured. Use the Oracle Network Manager to generate the configuration files if necessary.

ORA-12219: TNS:missing community name from address in ADDRESS_LIST

Cause: This error occurs when an ADDRESS_LIST has some ADDRESSES in it that have no COMMUNITY component and others that do have a COMMUNITY component.

Action: Check that in the connect descriptors you are using either all the ADDRESSES have a COMMUNITY component or all do not.

ORA-12221: TNS:illegal ADDRESS parameters

Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA or in the directory. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation or the Oracle Net Administrator's Guide. Protocols that resolve names at the transport layer are vulnerable to this error if not properly configured or names are misspelled.

ORA-12222: TNS:no support is available for the protocol indicated

Cause: The protocol requested in the ADDRESS portion of the connect descriptor identified through the net service name is not available. If the supplied ADDRESS is typographically correct then support for that protocol is not installed.

Action: Install support for the protocol or correct typographical error, as appropriate. Note: if the supplied address was derived from resolving the net service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA) or in the directory server.

ORA-12223: TNS:internal limit restriction exceeded

Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

ORA-12224: TNS:no listener

Cause: The connection request could not be completed because the listener is not running.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with the appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange). Start the listener on the remote machine.

ORA-12225: TNS:destination host unreachable

Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

ORA-12226: TNS:operating system resource quota exceeded

Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

ORA-12227: TNS:syntax error

Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

ORA-12228: TNS:protocol adapter not loadable

Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

ORA-12229: TNS:Interchange has no more free connections

Cause: One or more Interchanges along the path to the destination desired has no more free connections available to be used for this call.

Action: Try again later when the Interchanges are less busy, or contact your network administrator to have him determine which interchange it is, and increase the number of connections available on that interchange.

ORA-12230: TNS:Severe Network error occurred in making this connection

Cause: This error is reported by an interchange which fails to make contact with the destination due to a physical network error while calling a destination.

Action: Try again later when the network service may have been fixed or report the problem to your Network Administrator so that he may fix the problem.

ORA-12231: TNS:No connection possible to destination

Cause: This error is reported by an interchange which fails to find a possible connection along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

ORA-12232: TNS:No path available to destination

Cause: This error is reported by an interchange which fails to find a possible path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

ORA-12233: TNS:Failure to accept a connection

Cause: This error is reported by an interchange which fails to accept a connection due to a redirect failure.

Action: Report the problem to your Network Administrator so that he may isolate the interchange problem.

ORA-12234: TNS:Redirect to destination

Cause: This error is reported by an interchange which determines that this interchange is not the right gateway and needs to redirect the connection to another gateway along the path to the destination.

Action: None

ORA-12235: TNS:Failure to redirect to destination

Cause: This error is reported by an interchange which fails to redirect a connection to another interchange along the path to the destination.

Action: Report the problem to your Network Administrator so that he may fix the problem.

ORA-12236: TNS:protocol support not loaded

Cause: On some platforms (such as Windows) protocol support is loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

ORA-12238: TNS: NT Operaion is aborted

Cause: The NT operation is aborted because it is interrupted by upper layer to cleanup the database session.

Action: None

ORA-12241: TNS: Windows service not running

Cause: The operation could not be completed because requested service is not available or running.

Action: Create and start the windows service before the operation to be performed. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12261: Cannot connect to database. Syntax error in Easy Connect connection string *string*

Cause: A connection to a database or other service was requested using an incorrect Easy Connect connection string.

Action: - Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Make sure the host, port and service name specified are correct. - Try enclosing the connect identifier in quote marks.

ORA-12262: Cannot connect to database. Could not resolve hostname *string* in Easy Connect connection string *string*

Cause: A connection to a database or other service was requested using a hostname or Easy Connect connection string but the hostname is invalid and could not be resolved.

Action: - Verify that "EZCONNECT" is listed as one of the values of the NAMES.DIRECTORY_PATH parameter in the Oracle Net profile (SQLNET.ORA). - Make sure the hostname specified is correct. - Try enclosing the connect identifier in quote marks.

ORA-12268: server uses weak encryption/crypto-checksumming version

Cause: Encryption/crypto-checksumming version used by server is not supported by client configuration.

Action: Upgrade the server to use strong version of the encryption and crypto-checksumming adapter. If support for weaker version is needed, add the following to sqlnet.ora file to allow connections to weak servers: `sqlnet.allow_weak_crypto = true`
CAUTION: This parameter allows insecure network connections between a client and server. Hence, it must not be used unless the server cannot be updated to run stronger version of the encryption and crypto-checksumming adapter. User is strongly advised to consider the implications of this parameter before configuring it to allow weak connections.

ORA-12269: client uses weak encryption/crypto-checksumming version

Cause: Encryption/crypto-checksumming version used by client is not supported by server configuration.

Action: Upgrade the client to use stronger version of the encryption and crypto-checksumming adapter. If support for weaker version is needed, add the following to sqlnet.ora file to allow connections to weak clients: `sqlnet.allow_weak_crypto_clients = true`
CAUTION: This parameter allows insecure network connections between a client and server. Hence, it must not be used unless the client cannot be updated to run stronger version of the encryption and crypto-checksumming adapter. User is strongly advised to consider the implications of this parameter before configuring it to allow weak connections.

ORA-12270: Client NOT using TCPS protocol to connect to server

Cause: This error is specific to RADIUS authentication. Any connection other than TCPS between DB Client and DB Server cannot use RADIUS authentication.

Action: Use TCPS between DB Client and DB Server to use RADIUS authentication.

ORA-12315 to ORA-12354

ORA-12315: database link type is invalid for the ALTER DATABASE statement

Cause: The database link name you specified on the ALTER DATABASE statement is not an ROM: link. You must specify an ROM: link when using the ALTER DATABASE statement to mount or open a secondary database.

Action: Re-issue the ALTER DATABASE statement using a valid ROM: link to the database you want to mount or open. If a valid ROM: link does not exist, create one using the CREATE DATABASE LINK command. See the Trusted ORACLE RDBMS Guide to Security Features for more information about creating database links using the ROM: link type.

ORA-12316: syntax error in database link's connect string

Cause: The connect string in the CREATE DATABASE LINK statement has a syntactical error.

Action: Drop the database link and recreate it using valid syntax. See the SQL Language Reference Manual for more information about the connect string portion of the CREATE DATABASE LINK statement.

ORA-12317: logon to database (link name string) denied

Cause: There are several possible causes for this error. First, you can get this error if your username (and password, if you are using database instead of operating system authentication) in the secondary database are not identical to your username (and password) in the primary database. Second, you can get this error if your username in the secondary database is invalid (has not been created). Third, you can get this error if the username/password combination specified in the connect string of the database link definition is invalid (either not created or has an invalid password).

Action: In the first case, ensure that the secondary database contains a username (and password, if you are using database authentication) identical to the one you are using in the primary database. In general, you should always use operating system authentication in Trusted ORACLE (see the Trusted ORACLE RDBMS Guide to Security Features for more information about the advantages of OS authentication). In the second case, ensure that your username in the secondary database has been created. In the third case, ensure that the username specified in the connect string has been created in the secondary database.

ORA-12318: database (link name string) is already mounted

Cause: You are attempting to mount a secondary database that has already been mounted by your instance.

Action: The database is already mounted, so you need not take additional action to mount it. To establish access, use the ALTER DATABASE *linkname* OPEN command to open the database.

ORA-12319: database (link name string) is already open

Cause: You are attempting to open a secondary database that is already open.

Action: The database is open and you need not take additional action to establish access.

ORA-12321: database (link name *string*) is not open and AUTO_MOUNTING=FALSE

Cause: The secondary database that your instance is attempting to mount is not open and automatic mounting has not been enabled.

Action: Manually mount and open the secondary database using ALTER DATABASE *linkname* with the OPEN and MOUNT options. Alternately, to allow your instance to automatically mount and open secondary databases, set the AUTO_MOUNTING parameter in the parameter file to TRUE.

ORA-12322: unable to mount database (link name *string*)

Cause: This message should be accompanied by additional error messages that indicate the cause of the problem.

Action: Follow the steps outlined in the accompanying error messages to resolve the problem.

ORA-12323: unable to open database (link name *string*)

Cause: This message should be accompanied by additional error messages that indicate the cause of the problem.

Action: Follow the steps outlined in the accompanying error messages to resolve the problem.

ORA-12324: cannot use the ROM: link type on a private database link

Cause: You can only specify the ROM: link type on a public, not a private, database link.

Action: Determine if there is an existing public database link to the secondary database. If not, and if you wish to establish public access to the secondary database, create a public database link to the secondary database using the CREATE DATABASE LINK command.

ORA-12326: database *string* is closing immediately; no operations are permitted

Cause: The database you attempted to access is closing, so your operation has been terminated.

Action: Wait until the database has been reopened, or contact the database administrator.

ORA-12329: database *string* is closed; no operations are permitted

Cause: The database you attempted to access is closed, so your operation has been terminated.

Action: Wait until the database is reopened, or contact the database administrator.

ORA-12333: database (link name *string*) is not mounted

Cause: You attempted to open a database that has not been mounted.

Action: Mount the database with the ALTER DATABASE *linkname* MOUNT command, then re-attempt to open the database.

ORA-12334: database (link name *string*) is still open

Cause: You attempted to dismount a database that is still open.

Action: Close the database with the ALTER DATABASE *linkname* CLOSE command, then re-attempt to dismount the database.

ORA-12335: database (link name *string*) is not open

Cause: You attempted to close a database that is not open.

Action: The database is closed; you can proceed with dismounting it.

ORA-12336: cannot login to database (link name *string*)

Cause: You are trying to login while another user is mounting or dismounting the same database.

Action: Check to see if the database is in the middle of being mounted or opened and try your login again once the database is accessible.

ORA-12341: maximum number of open mounts exceeded

Cause: The number specified on the OPEN_MOUNTS parameter in the parameter file exceeds the maximum allowed (255).

Action: Change the value of this parameter so that it reflects the actual number of possible open mounts to secondary databases. This must be less than 255.

ORA-12342: open mounts exceeds limit set on the OPEN_MOUNTS parameter

Cause: The number of currently open mounts exceeds the value you specified on the OPEN_MOUNTS parameter.

Action: Increase the value of the OPEN_MOUNTS parameter so that it accommodates the maximum possible number of open mounts to secondary databases.

ORA-12345: user *string* lacks CREATE SESSION privilege in database link (linkname *string*)

Cause: There are several possible causes for this message: First, you will get this message if your username in the second database specified was not granted the CREATE SESSION system privilege. Second, you will get this message if the username specified in the connect string of the database link definition was not granted the CREATE SESSION system privilege.

Action: The action you take depends upon the cause of the message: In the first case, ensure that your username in the secondary database was granted the CREATE SESSION system privilege. In the second case, ensure the username specified in the connect string of the database link definition was granted the CREATE SESSION system privilege in the secondary database.

ORA-12350: database link being dropped is still mounted

Cause: An attempt was made to drop a ROM: database link that was still mounted and/or opened.

Action: Close and dismount the database and then re-issue the drop statement.

ORA-12351: cannot create view using a remote object which has a remote object reference

Cause: You tried to create a view which references a remote object which, in turn, references an object on another database. Since the view that you tried to create references a remote object, that object cannot reference an object on another database.

Action: Choose a different object to reference in your view or change the remote object so that it does not reference another database.

ORA-12352: object *string.string@string* is invalid

Cause: An attempt was made to reference (compile against) an object of a secondary database but the object is invalid and the system cannot validate or recompile it because it is in a secondary database.

Action: Manually recompile the invalid object in the secondary database.

ORA-12353: secondary stored object cannot reference remote object

Cause: You tried to either select from a remote view or execute a remote procedure which references an object on another database. Since the remote view or procedure is on a secondary database, an additional reference to another database cannot be done.

Action: Choose a different object to reference or change the remote view or procedure so that it does not reference another database.

ORA-12354: secondary object being dropped

Cause: You tried to access a object (for example, a table or view) on a secondary database that was in the process of being dropped.

Action: Repeat the operation. If you receive this message again, try to access the object from the secondary database. If you receive an internal error or a trace file, contact Oracle WorldWide Technical Support.

ORA-12400 to ORA-12497

ORA-12400: invalid argument to facility error handling

Cause: An argument to a facility error handling function exceeded a maximum limit or referred to an invalid product/facility.

Action: Specify a valid facility error handling parameter value.

ORA-12401: invalid label string: *string*

Cause: The policy could not convert the label string to a valid internal label.

Action: Correct the syntax of the label string.

ORA-12402: invalid format string: *string*

Cause: The format string is not supported by the policy.

Action: Correct the syntax of the format string.

ORA-12403: invalid internal label

Cause: An internal label could not be converted to a valid label for the policy.

Action: Analyze any additional messages on the error stack and consult the policy documentation.

ORA-12404: invalid privilege string: *string*

Cause: The policy could not interpret the privilege string.

Action: Specify a privilege string that is supported by the policy.

ORA-12405: invalid label list

Cause: The policy determined that the label list was invalid for its intended use.

Action: Check the policy constraints on the specific list of labels.

ORA-12406: unauthorized SQL statement for policy *string*

Cause: The policy did not authorize the database session to perform the requested SQL statement.

Action: Grant the user or program unit the necessary policy privilege or additional authorizations.

ORA-12407: unauthorized operation for policy *string*

Cause: The policy did not authorize the database session to perform the requested operation.

Action: Grant the user or program unit the necessary policy privilege or additional authorizations.

ORA-12408: unsupported operation: *string*

Cause: The specified policy did not support the requested operation.

Action: Read the policy documentation to determine the supported access mediation operations.

ORA-12409: policy startup failure for *string* policy

Cause: The policy encountered an error during startup processing; access to the data protected by the policy is prohibited.

Action: Check the alert log for additional information, correct the policy error, and restart the instance.

ORA-12410: internal policy error for policy: *string*\n Error: *string*

Cause: The policy enforcement encountered an internal error.

Action: Consult the policy documentation for details.

ORA-12411: invalid label value

Cause: The specified label value does not exist.

Action: Check the data dictionary views for the policy to identify valid labels.

ORA-12412: policy package *string* is not installed

Cause: The policy package does not exist in the database.

Action: Check that the policy package name is correct or install the required policy package.

ORA-12413: labels do not belong to the same policy

Cause: The labels being compared belong to different policies.

Action: Only compare labels that belong to the same policy.

ORA-12414: internal LBAC error: *string*\n Error: *string*

Cause: An internal label policy framework error occurred.

Action: Contact Oracle Customer Support.

ORA-12415: A column of another data type exists on the specified table

Cause: The data type of the column present in the table was different from the data type set for the policy column.

Action: Drop the column on the table or change the data type for policy column.

ORA-12416: policy *string* not found

Cause: The specified policy does not exist in the database.

Action: Enter the correct policy name or create the policy.

ORA-12417: database object "*string*" not found

Cause: The specified object was not in the database.

Action: Enter the correct name for the database object.

ORA-12418: user *string* not found

Cause: The specified user does not exist in the database.

Action: Correct the user name or create the user.

ORA-12419: null binary label value

Cause: A null value was provided for a binary label operation.

Action: Provide a valid binary label for the operation.

ORA-12420: required procedures and functions not in policy package "*string*"

Cause: The policy package did not contain all of the procedures and functions necessary to enforce the policy.

Action: Consult the label framework documentation for a list of required procedures and functions for a policy package.

ORA-12421: different size binary labels

Cause: The label sizes for the binary label operation were not equal.

Action: Provide binary labels with the same lengths for the operation.

ORA-12422: max policies exceeded

Cause: You tried to create a new policy, but the maximum number of policies for the instance had already been created.

Action: Increase the size of the MAX_LABEL_POLICIES initialization parameter and restart the server.

ORA-12423: invalid position specified

Cause: The position specified for a binary label operation was invalid.

Action: Provide a position that is within the label size limits.

ORA-12424: length exceeds binary label size

Cause: The length specified for a binary label operation exceeded the size of the binary label.

Action: Provide a bit or byte length that is within the label size limits.

ORA-12425: cannot apply policies or set authorizations for system schemas

Cause: You tried to either apply a policy to the SYS, SYSTEM, or LBACSYS schema or to set user labels/privileges for the SYS, SYSTEM, or LBACSYS user.

Action: Apply policies and set authorizations only for non-system users.

ORA-12426: invalid audit option

Cause: The option specified was not a valid audit option for the specified policy.

Action: Enter a correct audit option.

ORA-12427: invalid input value for *string* parameter

Cause: An input parameter was specified incorrectly.

Action: Correct the parameter value.

ORA-12428:**ORA-12429: label list range exceeded**

Cause: The specified index value was not between 1 and 6.

Action: Correct the index value for the label list operation.

ORA-12430: invalid privilege number

Cause: The specified privilege number was not between 1 and 32.

Action: Correct the privilege number.

ORA-12431: invalid audit action

Cause: The specified audit action was not a valid audit action.

Action: Correct the audit action number.

ORA-12432: LBAC error: *string*

Cause: LBAC enforcement resulted in an error.

Action: Correct the problem identified in the error message.

ORA-12433: create trigger failed, policy not applied

Cause: The policy could not be applied due to errors during the creation of a DML trigger.

Action: Correct the SQL syntax of the label function specification.

ORA-12434: invalid audit type: *string*

Cause: The audit type must be BY ACCESS or BY SESSION.

Action: Correct the audit type value.

ORA-12435: invalid audit success: *string*

Cause: The audit success parameter must be SUCCESSFUL or NOT SUCCESSFUL.

Action: Correct the audit success value.

ORA-12436: no policy options specified

Cause: A NULL option string was specified, but no default schema or policy option string was found.

Action: Enter a valid option string, or alter the schema or policy to have a valid default option string.

ORA-12437: invalid policy option: *string*

Cause: A value that was not a valid policy option was entered.

Action: Correct the policy option value.

ORA-12438: repeated policy option: *string*

Cause: A policy option was entered more than once in the option string.

Action: Remove the duplicate policy option value.

ORA-12439: invalid combination of policy options

Cause: A set of contradictory policy options was entered.

Action: Provide a set of compatible policy options.

ORA-12440: insufficient authorization for the SYSDBA package

Cause: The use of the SYSDBA package requires the LBAC_DBA role.

Action: Grant the LBAC_DBA role to the database user.

ORA-12441: policy *string* already exists

Cause: You tried to create a policy with the same name as an existing one.

Action: Use a different name or drop the existing policy.

ORA-12442: policy column "*string*" already used by an existing policy

Cause: You tried to create a policy with the same policy column name as an existing policy.

Action: Use a different name for the policy column or drop the existing policy.

ORA-12443: policy not applied to some tables in schema

Cause: You applied a policy to a schema, and some of the tables in the schema already had the policy applied.

Action: No action necessary; the policy was applied to the remaining tables.

ORA-12444: policy already applied to table

Cause: You tried to apply a policy to a table that was already protected by the policy.

Action: To change the policy options, predicate, or label function, remove the policy from the table and re-apply it.

ORA-12445: cannot change HIDDEN property of column

Cause: You tried to specify a different HIDE option for a table with an existing policy column.

Action: Drop the column from the table and reapply the policy with the new HIDE option.

ORA-12446: Insufficient authorization for administration of policy *string*

Cause: You tried to perform an administrative function for a policy, but you have not been granted the *policy_DBA* role.

Action: Grant the user the *policy_DBA* role for the specified policy.

ORA-12447: policy role already exists for policy *string*

Cause: The role named *policy_DBA* already exists.

Action: Correct the policy name or delete the existing policy.

ORA-12448: policy *string* not applied to schema or table *string*

Cause: An attempt was made to alter, enable or disable a schema or table policy that was not applied.

Action: Correct the policy or schema or table name.

ORA-12449: Labels specified for user must be of type USER

Cause: You tried to set labels for a user, but the labels in the list were not all designated as USER labels.

Action: Alter the labels to be USER labels.

ORA-12450: LOB data type disabled in LBAC initialization file

Cause: An attempt was made to specify a LOB data type for a column or attribute, but the use of the LOB data type has been disabled.

Action: Change the location-based access control (LBAC) initialization file to allow the creation of LOB columns and attributes.

ORA-12451: label not designated as USER or DATA

Cause: A label is either a DATA label, a USER label, or both DATA and USER.

Action: Enter TRUE for at least DATA or USER.

ORA-12452: label tag *string* already exists

Cause: The label tag value you entered is already in use for another label.

Action: Enter a different value for the label tag.

ORA-12453: label *string* already exists

Cause: The label value you entered already exists.

Action: No action necessary; alter the label to change its tag or type.

ORA-12454: label *string* does not exist for policy *string*

Cause: The label tag or value you entered did not identify a label for the policy.

Action: Enter a label value or tag that is in use by the policy.

ORA-12455: internal error in Label Security MMON cleanup task

Cause: An internal error occurred in the Label Security MMON cleanup task.

Action: Contact Oracle Customer Support.

ORA-12456: label security startup in progress

Cause: You attempted to connect to the database before the Oracle Label Security component was fully initialized.

Action: Wait until the database is fully open before attempting to connect.

ORA-12457: security label exceeded maximum allowable length

Cause: An operation attempted to materialize a security label greater than 4000 bytes in length.

Action: Consult the Oracle Label Security documentation for information on how the length of a security label is calculated. Re-submit the operation once the problem has been corrected.

ORA-12458: Oracle Label Security not enabled

Cause: A Label Security operation was attempted without enabling Oracle Label Security.

Action: Consult the Oracle Label Security documentation for information on how to enable Oracle Label Security.

ORA-12459: Oracle Label Security not configured

Cause: An administrative operation was attempted without configuring Oracle Label Security.

Action: Consult the Oracle Label Security documentation for information on how to configure Oracle Label Security.

ORA-12460: cannot disable Oracle Label Security when Database Vault is enabled

Cause: An attempt was made to disable Oracle Label Security when Database Vault was enabled.

Action: Disable Database Vault and bounce the database before attempting to disable Oracle Label Security.

ORA-12461: undefined level *string* for policy *string*

Cause: The specified level is not defined for the policy.

Action: Correct the level identifier value.

ORA-12462: undefined compartment *string* for policy *string*

Cause: The specified compartment is not defined for the policy.

Action: Correct the compartment identifier value.

ORA-12463: undefined group *string* for policy *string*

Cause: The specified group is not defined for the policy.

Action: Correct the group identifier value.

ORA-12464: invalid characters in label component *string*

Cause: Label components can contain only alphanumeric characters, blanks, and underscores.

Action: Correct syntax of the label component.

ORA-12465: not authorized for read or write on specified groups or compartments

Cause: Groups or compartments were included that were not in the user's list of groups and compartments authorized for read or write access.

Action: Include groups or compartments authorized for read or write access in the user's list of groups and compartments.

ORA-12466: default level is greater than the user's maximum

Cause: The default level cannot be greater than the user's maximum.

Action: Enter an authorized level.

ORA-12467: minimum label can contain a level only

Cause: You included compartments or groups in the minimum label.

Action: Enter only an authorized minimum level as the label.

ORA-12468: max write level does not equal max read level

Cause: The level in the max write label must equal the level in the max read label.

Action: Enter max read and max write labels with the same level component.

ORA-12469: no user levels found for user *string* and policy *string*

Cause: No levels have been specified for the user.

Action: Enter the maximum and minimum labels for the user.

ORA-12470: NULL or invalid user label: *string*

Cause: The label entered is NULL or not within the user's authorizations.

Action: Enter the authorized labels for the user.

ORA-12471: Specified compartment or group is not authorized for user

Cause: The specified compartment or group is not in user's authorizations or the user does not have read on compartment or group specified for write.

Action: Enter an authorized compartment or group.

ORA-12472: policy *string* is being used

Cause: The policy which was being dropped due to event propagation from OID was applied to some table or schema.

Action: Drop a policy in OID only if it is not used in any of the databases using the policy.

ORA-12473: The procedure is disabled when Label Security is used with OID.

Cause: Using Label Security with OID disabled this procedure.

Action: Do not use OID with Label Security if this procedure is required to function.

ORA-12474: cannot change column name for a policy in use

Cause: An attempt was made to change a column name for a policy that was applied on user schemas or tables.

Action: Disable the policy for all user schemas and tables before changing the column name.

ORA-12475: incompatible Oracle Label Security configuration

Cause: An attempt was made to configure Oracle Label Security with OID in a pluggable database when Oracle Label Security without OID is configured in another pluggable database or vice-versa.

Action: Use similar configurations of Oracle Label Security in all pluggable databases.

ORA-12476: least upper bound resulted in an invalid OS label

Cause: You tried to do an operation that generated a least upper bound (LUB) label which is not a valid label on your operating system.

Action: Consult your OS label management documentation for information on invalid label generation.

ORA-12477: greatest lower bound resulted in an invalid OS label

Cause: You tried to do an operation that generated a greatest lower bound (GLB) label which is not a valid label on your operating system.

Action: Consult your OS label management documentation for information on invalid label generation.

ORA-12479: file label *string* must equal DBHIGH *string*

Cause: A database file had an OS label that did not match DBHIGH. Either DBHIGH was altered or the OS file was relabeled.

Action: Relabel the file so that its label matches DBHIGH, or alter DBHIGH so that it matches the label on the file.

ORA-12480: specified clearance labels not within the effective clearance

Cause: You specified a clearance range that was not within your authorized clearance; you can only specify clearance ranges that are within your clearance.

Action: Specify clearance labels that are within your own clearance range.

ORA-12481: effective label not within program unit clearance range

Cause: The effective label when the program unit was invoked was not within the range authorized for the program unit.

Action: Modify the program unit clearance range or invoke the program unit from a session with an authorized effective clearance.

ORA-12482: internal MLS error: *string*\n Error: *string*

Cause: An internal MLS policy error occurred.

Action: Contact Oracle Customer Support.

ORA-12483: label not in OS system accreditation range

Cause: The specified label is above the OS maximum label or below the OS minimum label.

Action: Use a label that is within the accreditation range for the host OS.

ORA-12484: invalid OS label

Cause: The specified label does not exist in the OS host's label definition file.

Action: Use the OS label management tools to define the label.

ORA-12485: new effective label not within effective clearance

Cause: You attempted to enter a value for an effective label that did not dominate the effective min label or was not dominated by the effective max label.

Action: Enter a value between the min and the max labels.

ORA-12486: effective max labels and min labels cannot be changed

Cause: You attempted to enter a value for an effective min label or effective max label, but these labels cannot be changed.

Action: Enter NULL values for the effective minimum and maximum labels.

ORA-12487: clearance labels not between DBHIGH and DBLOW

Cause: You attempted to enter a value for a clearance label that was not dominated by DBHIGH or did not dominate DBLOW.

Action: Enter clearance label values between DBHIGH and DBLOW.

ORA-12488: maximum label does not dominate minimum label

Cause: You attempted to enter a value for a clearance label that did not preserve the dominance relationship between the minimum and maximum labels.

Action: Enter label values that preserves the dominance relationship between the minimum and maximum.

ORA-12489: default label not within clearance range

Cause: You attempted to enter a value for a default label that did not dominate the minimum clearance or was not dominated by the maximum clearance.

Action: Enter a default label value within the clearance range.

ORA-12490: DBHIGH cannot be lowered

Cause: You attempted to enter a value for DBHIGH that did not dominate the existing value of DBHIGH.

Action: Enter a value for DBHIGH that dominates the old value.

ORA-12491: DBHIGH value does not dominate DBLOW

Cause: You attempted to enter a value for DBHIGH that did not dominate DBLOW.

Action: Enter a value for DBHIGH that dominates DBLOW.

ORA-12492: DBLOW cannot be changed

Cause: You attempted to change the value of DBLOW after it had been set to any initial value. DBLOW can only be set once after initial database creation.

Action: To change DBLOW, you have to create a new database, set DBLOW to the new value, and import your data into the new database.

ORA-12493: invalid MLS binary label

Cause: The MLS binary label contained an invalid value, was not the correct size, or contained a level, category, or release category that was not enabled.

Action: Check the DBA_MLS_LABELS view for the valid MLS labels.

ORA-12494: cannot insert or delete a level, category, or release category

Cause: You attempted to insert or delete a level, category, or release category definition.

Action: If the label definition is no longer valid, change its name to one that identifies it as invalid. When any labels are converted to character strings, the new label definition will be used.

ORA-12495: cannot disable an enabled level, category, or release category

Cause: You attempted to disable a level, category, or release category that had previously been enabled. An enabled label definition may exist in some database label, so cannot be disabled.

Action: If the label definition is no longer valid, change its name to one that identifies it as invalid. When any labels are converted to character strings, the new label definition will be used.

ORA-12496: cannot change existing level, category, or release numbers

Cause: You attempted to change the number assigned to level, category or releasability category.

Action: Change the character string representations, not the numbers.

ORA-12497: maximum combined categories exceeds *string*

Cause: The maximum number of descriptive categories plus release categories supported by the MLS policy was exceeded.

Action: Enter numbers that do not add up to more than the maximum.

ORA-12500 to ORA-12699

ORA-12500: TNS:listener failed to start a dedicated server process

Cause: The process of starting up a dedicated server process failed. The executable could not be found or the environment may be set up incorrectly.

Action: Turn on tracing at the ADMIN level and reexecute the operation. Verify that the ORACLE Server executable is present and has execute permissions enabled. Ensure that the ORACLE environment is specified correctly in LISTENER.ORA. The Oracle Protocol Adapter that is being called may not be installed on the local hard drive. Please check that the correct Protocol Adapter are successfully linked. If error persists, contact Oracle Customer Support.

ORA-12502: TNS:listener received no CONNECT_DATA from client

Cause: No CONNECT_DATA was passed to the listener.

Action: Check that the service name resolved from TNSNAMES.ORA has the CONNECT_DATA component of the connect descriptor.

ORA-12503: TNS:listener received an invalid REGION from client

Cause: Invalid REGION was passed to the listener.

Action: Check the REGION name specified in the CONNECT_DATA component of the connect descriptor.

ORA-12504: TNS:listener was not given the SERVICE_NAME in CONNECT_DATA

Cause: The listener was not configured with a default service and SERVICE_NAME was missing from the CONNECT_DATA received by the listener.

Action: Possible solutions are: - Configure DEFAULT_SERVICE parameter in LISTENER.ORA with a valid service name. Reload the listener parameter file using reload [<listener_name>]. This should be done by the LISTENER administrator. - If using a service name, Check that the connect descriptor corresponding to the service name in TNSNAMES.ORA has a SERVICE_NAME or SID component in the CONNECT_DATA.

ORA-12505: Cannot connect to database. SID string is not registered with the listener at string. (CONNECTION_ID=string)

Cause: A listener process initially handles all connections to Oracle Database. The connection request received by the listener specified a system identifier (SID) for an instance (usually a database instance) that either has not yet dynamically registered with the listener or has not been statically configured in the listener's listener.ora configuration file. This error may be a temporary condition that occurs after the listener has started but before the database instance registers with the listener.

Action: Do the following: - Check for mistakes in the specified connection string. - Check that the SID parameter in the connection string or that the tnsnames.ora file connect descriptor specifies an instance known by the listener. - Wait a moment and try to connect again. The database instance registration may not yet be complete. - Use the CONNECTION_ID value to track this connection attempt in trace files for further diagnosis. To find which instances are currently known by the listener, you can: - Ask the Database Administrator. - Review the

connection string shown in the cloud service console. - Or, if you have access to the machine where the listener is running, you can run one of the following: * Isnrctl services * Or, when a listener is named in the listener.ora file, run: Isnrctl services <listener_name> * Or, if a Oracle Connection Manager (Oracle CMAN) proxy listener is named in the cman.ora file, run: cmctl show services -c <cman_name>

ORA-12506: TNS:listener rejected connection based on service ACL filtering

Cause: The client is not present in Service Access Control List.

Action: Add the client's address in Service ACL.

ORA-12508: TNS:listener could not resolve the COMMAND given

Cause: The COMMAND given to listener is not supported.

Action: This is not seen in normal use of Oracle Net.

ORA-12509: TNS:listener failed to redirect client to service handler

Cause: The dispatcher terminated unexpectedly

Action: Attempt to connect again and if the same error occurs, contact the DBA to check the state of the dispatchers for this SID. If the problem persists, turn on tracing in the listener to determine the TNS error caused by the redirect.

ORA-12510: TNS:database temporarily lacks resources to handle the request

Cause: The dispatchers appear to be busy handling other requests.

Action: Attempt the connection again. If error persists, ask the DBA to increase the number of dispatchers and/or dispatchers' limit on number of connections/sessions that they can accept.

ORA-12511: TNS:service handler found but it is not accepting connections

Cause: The dispatchers notified the listener that they temporarily do not accept new connections.

Action: Attempt the connection again. If error persists, contact the DBA to check the state of the dispatchers and/or ask him to increase the number of dispatchers.

ORA-12513: TNS:service handler found but it has registered for a different protocol

Cause: The dispatchers registered for this service are connected to the listener by way of a different network protocol than that of the client.

Action: Contact the DBA to register a dispatcher on your protocol.

ORA-12514: TNS:listener does not currently know of service requested in connect descriptor

Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified a service name for a service (usually a database service) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action: - Wait a moment and try to connect a second time. - Check which services are currently known by the listener by executing: Isnrctl services *listener name* - Check that the SERVICE_NAME parameter in the connect descriptor of the net service

name used specifies a service known by the listener. - If an easy connect naming connect identifier was used, check that the service name specified is a service known by the listener. - Check for an event in the listener.log file.

ORA-12515: TNS:listener could not find a handler for this presentation

Cause: None of the listener's known service handlers are registered as supporting the presentation protocol required by the connecting client.

Action: Check that the destination service is configured to accept the presentation protocol.

ORA-12516: TNS:listener could not find available handler with matching protocol stack

Cause: None of the known and available service handlers for the given SERVICE_NAME support the client's protocol stack: transport, session, and presentation protocols.

Action: Check to make sure that the service handlers (e.g. dispatchers) for the given SERVICE_NAME are registered with the listener, are accepting connections, and that they are properly configured to support the desired protocols.

ORA-12518: TNS:listener could not hand off client connection

Cause: The process of handing off a client connection to another process failed.

Action: Turn on listener tracing and re-execute the operation. Verify that the listener and database instance are properly configured for direct handoff. If problem persists, call Oracle Support.

ORA-12519: TNS:no appropriate service handler found

Cause: The listener could not find any available service handlers that are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) have registered with the listener, and are accepting connections.

ORA-12520: TNS:listener could not find available handler for requested type of server

Cause: None of the known and available service handlers for requested type of server (dedicated or shared) are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) have registered with the listener and that the appropriate handlers are accepting connections.

ORA-12521: TNS:listener does not currently know of instance requested in connect descriptor

Cause: The listener received a request to establish a connection to a database or other service. The connect descriptor received by the listener specified in addition to the service name an instance name for an instance (usually a database instance) that either has not yet dynamically registered with the listener or has not been statically configured for the listener. This may be a temporary condition such as after the listener has started, but before the database instance has registered with the listener.

Action: - Wait a moment and try to connect a second time. - Check which instances are currently known by the listener by executing: lsnrctl services *listener name* - Check that the INSTANCE_NAME parameter in the connect descriptor specifies an instance name known by the listener. - Check for an event in the listener.log file.

ORA-12522: TNS:listener could not find available instance with given INSTANCE_ROLE

Cause: There are not any available and appropriate database instances registered with the listener, that are part of the service identified by SERVICE_NAME given in the connect descriptor and that have the specified INSTANCE_ROLE (and INSTANCE_NAME, if specified).

Action: Check to make sure that the INSTANCE_ROLE specified is correct. Run "lsnrctl services" to ensure that the instance(s) have registered with the listener and that they are ready to accept connections.

ORA-12523: TNS:listener could not find instance appropriate for the client connection

Cause: The listener could not find any available (database) instances, that are appropriate for the client connection.

Action: Run "lsnrctl services" to ensure that the instance(s) are registered with the listener, and have status READY.

ORA-12524: TNS:listener could not resolve HANDLER_NAME given in connect descriptor

Cause: The HANDLER_NAME in the CONNECT_DATA was not found in the listener's tables for the specified SERVICE_NAME and INSTANCE_NAME.

Action: Check to make sure that the HANDLER_NAME specified is correct.

ORA-12525: TNS:listener has not received client's request in time allowed

Cause: The listener disconnected the client because the client failed to provide the necessary connect information within the allowed time interval. This may be a result of network or system delays; or this may indicate that a malicious client is trying to cause a Denial of Service attack on the listener.

Action: If the error occurred because of a slow network or system, reconfigure INBOUND_CONNECT_TIMEOUT to a larger value. If a malicious client is suspected, use the address in listener.log to identify the source and restrict access. Turn on tracing for more information.

ORA-12526: TNS:listener: all appropriate instances are in restricted mode

Cause: Database instances supporting the service requested by the client were in restricted mode. The Listener does not allow connections to instances in restricted mode. This condition may be temporary, such as during periods when database administration is performed.

Action: Attempt the connection again. If error persists, then contact the database administrator to change the mode of the instance, if appropriate.

ORA-12527: TNS:listener: all instances are in restricted mode or blocking new connections

Cause: All appropriate database instances supporting the service requested by the client reported that they either were in restricted mode or were blocking the new connections. The Listener does not allow connections to such instances. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the database administrator to check the status of the instances.

ORA-12528: TNS:listener: all appropriate instances are blocking new connections

Cause: All instances supporting the service requested by the client reported that they were blocking the new connections. This condition may be temporary, such as at instance startup.

Action: Attempt the connection again. If error persists, then contact the administrator to check the status of the instances.

ORA-12529: TNS:connect request rejected based on current filtering rules

Cause: Connection Manager and its listener were configured with filtering rules specifying that the connect request be rejected.

Action: If this connect request should be allowed, then contact the administrator to modify the filtering rules.

ORA-12530: TNS:listener: rate limit reached

Cause: Listener has reached connection or service rate limit and hence rejected the connection.

Action: Attempt the connection again. If the error occurs frequently, contact the database administrator to increase connection or service rate limit.

ORA-12531: TNS:cannot allocate memory

Cause: Sufficient memory could not be allocated to perform the desired activity.

Action: Either free some resource for TNS, or add more memory to the machine. For further details, turn on tracing and reexecute the operation.

ORA-12532: TNS:invalid argument

Cause: An internal function received an invalid parameter.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12533: TNS:illegal ADDRESS parameters

Cause: An illegal set of protocol adapter parameters was specified. In some cases, this error is returned when a connection cannot be made to the protocol transport.

Action: Verify that the destination can be reached using the specified protocol. Check the parameters within the ADDRESS section of TNSNAMES.ORA. Legal ADDRESS parameter formats may be found in the Oracle operating system specific documentation for your platform. Protocols that resolve names at the transport layer (such as DECnet object names) are vulnerable to this error if not properly configured or names are misspelled.

ORA-12534: TNS:operation not supported

Cause: An internal function received a request to perform an operation that is not supported (on this machine).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12535: TNS:operation timed out

Cause: The requested operation could not be completed within the time out period.

Action: Look at the documentation on the secondary errors for possible remedy. See SQLNET.LOG to find secondary error if not provided explicitly. Turn on tracing to gather more information.

ORA-12536: TNS:operation would block

Cause: An internal operation did not commence because to do so would block the current process and the user has requested that operations be non-blocking.

Action: None needed; this is an information message.

ORA-12537: TNS:connection closed

Cause: "End of file" condition has been reached; partner has disconnected.

Action: None needed; this is an information message.

ORA-12538: TNS:no such protocol adapter

Cause: The protocol adapter requested (by way of the "(PROTOCOL=..)" keyword-value pair in a TNS address) is unknown. If the supplied address is typographically correct then the protocol adapter is not installed.

Action: Install the protocol adapter or correct typographically error, as appropriate.

Note: if the supplied address was derived from resolving the service name, check the address in the appropriate file (TNSNAMES.ORA, LISTENER.ORA or SQLNET.ORA).

ORA-12539: TNS:buffer over- or under-flow

Cause: Buffer too small for incoming data or too large for outgoing data.

Action: This restriction (which is associated with CONNECT DATA) is not normally visible to the user. For further details, turn on tracing and reexecute the operation; contact Oracle Customer Support.

ORA-12540: TNS:internal limit restriction exceeded

Cause: Too many TNS connections open simultaneously.

Action: Wait for connections to close and re-try.

ORA-12541: TNS:no listener

Cause: The connection request could not be completed because the listener is not running.

Action: Ensure that the supplied destination address matches one of the addresses used by the listener - compare the TNSNAMES.ORA entry with the appropriate LISTENER.ORA file (or TNSNAV.ORA if the connection is to go by way of an Interchange). Start the listener on the remote machine.

ORA-12542: TNS:address already in use

Cause: Specified listener address is already being used.

Action: Start your listener with a unique address.

ORA-12543: TNS:destination host unreachable

Cause: Contact can not be made with remote party.

Action: Make sure the network driver is functioning and the network is up.

ORA-12544: TNS:contexts have different wait/test functions

Cause: Two protocol adapters have conflicting wait/test functions.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12545: Connect failed because target host or object does not exist

Cause: The address specified is not valid, or the program being connected to does not exist.

Action: Ensure the ADDRESS parameters have been entered correctly; the most likely incorrect parameter is the node name. Ensure that the executable for the server exists (perhaps "oracle" is missing.) If the protocol is TCP/IP, edit the TNSNAMES.ORA file to change the host name to a numeric IP address and try again.

ORA-12546: TNS:permission denied

Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

ORA-12547: TNS:lost contact

Cause: Partner has unexpectedly gone away, usually during process startup.

Action: Investigate partner application for abnormal termination. On an Interchange, this can happen if the machine is overloaded.

ORA-12548: TNS:incomplete read or write

Cause: A data send or receive failed.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12549: TNS:operating system resource quota exceeded

Cause: The current user has exceeded the allotted resource assigned in the operating system.

Action: Acquire more operating system resource, or perform a different function.

ORA-12550: TNS:syntax error

Cause: The supplied connect descriptor contains illegal syntax.

Action: Check the syntax of the connect descriptor in TNSNAMES.ORA.

ORA-12551: TNS:missing keyword

Cause: The supplied connect descriptor is missing one or more TNS keywords.

Action: Check the syntax, and ensure all required keywords are present.

ORA-12552: TNS:operation was interrupted

Cause: An internal operation was interrupted and could not complete.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12554: TNS:current operation is still in progress

Cause: An internal operation is still in progress.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12555: TNS:permission denied

Cause: User has insufficient privileges to perform the requested operation.

Action: Acquire necessary privileges and try again.

ORA-12556: TNS:no caller

Cause: TNS detected an incoming connect request but there was no caller.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12557: TNS:protocol adapter not loadable

Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter is missing or one of its supporting libraries is missing then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will include the name of the shared library (or DLL) that could not be loaded.

ORA-12558: TNS:protocol adapter not loaded

Cause: On some platforms (such as OS/2) protocol adapters are loaded at run-time. If the shared library (or DLL) for the protocol adapter has not been loaded, then this error is returned.

Action: For further details, turn on tracing and reexecute the operation. The trace file will have the name of the shared library (or DLL) that has not been loaded.

ORA-12560: TNS:protocol adapter error

Cause: A generic protocol adapter error occurred.

Action: Check addresses used for proper protocol specification. Before reporting this error, look at the error stack and check for lower level transport errors. For further details, turn on tracing and reexecute the operation. Turn off tracing when the operation is complete.

ORA-12561: TNS:unknown error

Cause: A generic protocol error occurred.

Action: For further details, turn on tracing and reexecute the operation.

ORA-12562: TNS:bad global handle

Cause: Internal error - bad 'gbh' argument passed to TNS from caller. System may have been linked with old libraries.

Action: Not normally visible to the user, contact Oracle Customer Support.

ORA-12563: TNS:operation was aborted

Cause: NT operation was interrupted by the upper layer.

Action: None

ORA-12564: TNS:connection refused

Cause: The connect request was denied by the remote user (or TNS software).

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation.

ORA-12566: TNS:protocol error

Cause: An unexpected TNS protocol error has occurred.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12569: TNS:packet checksum failure

Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If the error is persistent, turn on tracing and reexecute the operation.

ORA-12570: TNS:packet reader failure

Cause: An error occurred during a data receive.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12571: TNS:packet writer failure

Cause: An error occurred during a data send.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12574: TNS:Application generated error

Cause: This error was generated by peer application. Please see secondary errors for the actual cause.

Action: Action should be taken on secondary error.

ORA-12575: TNS:dhctx busy

Cause: The handoff over a dhctx failed as dhctx was already busy with an ongoing handoff.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12576: TNS:handoff not supported for this session

Cause: Handoff of a established session was attempted which either had tcps as its transport or NA options were enabled for this session.

Action: Check the transport setting as well as NA options. If error persists, contact Oracle Customer Support.

ORA-12578: TNS:wallet open failed

Cause: An error was encountered while trying to open the specified wallet.

Action: For further details, turn on tracing and re-execute the operation.

ORA-12579: TNS:transport connection failed

Cause: An error was encountered while trying to create transport connection.

Action: Likely reasons include host may be down, outbound transport connection may be blocked by network or any other transport connectivity issue. If error persists, contact Oracle Customer Support.

ORA-12582: TNS:invalid operation

Cause: An internal function received an invalid request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12583: TNS:no reader

Cause: A send operation has been requested but partner has already disconnected.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12585: TNS:data truncation

Cause: A receive operation has completed with insufficient data to satisfy the user's request.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12589: TNS:connection not bequeathable

Cause: An attempt to hand-off a connection from one process to another has failed because the protocol provider does not support it.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12590: TNS:no I/O buffer

Cause: An attempt to perform an I/O operation failed because no buffer was available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12591: TNS:event signal failure

Cause: The TNS software is unable to signal an event occurrence.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12592: TNS:bad packet

Cause: An ill-formed packet has been detected by the TNS software.

Action: For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12593: TNS:no registered connection

Cause: An attempt to solicit network event activity has failed because no connections are registered for event notification.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12595: TNS:no confirmation

Cause: TNS is unable to get requested confirmation acknowledgment from remote partner.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12596: TNS:internal inconsistency

Cause: TNS has detected an internal inconsistency.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12597: TNS:connect descriptor already in use

Cause: Internal error - illegal use of connect descriptor.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12598: TNS:banner registration failed

Cause: The registration of a product banner with the Oracle server failed.

Action: This is an error which is not normally visible externally. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

ORA-12599: TNS:cryptographic checksum mismatch

Cause: The data received is not the same as the data sent.

Action: Attempt the transaction again. If error persists, check (and correct) the integrity of your physical connection.

ORA-12600: TNS: string open failed

Cause: The creation of a string in ORACLE NLS format failed.

Action: This is an internal error, enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

ORA-12601: TNS:information flags check failed

Cause: The TNS information flags set by the process prior to connection negotiation were not present after the negotiation was finished.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

ORA-12602: TNS: Connection Pooling limit reached

Cause: The operation failed because maximum active current connections has been reached. It may not be a real error when the Connection Pooling feature is enabled. It is possible that the application later reissues the operation and successfully grabs the connection pool slot and proceeds.

Action: This is an internal error. Enable tracing and attempt to repeat the error. If it occurs again, contact Oracle Customer Support.

ORA-12606: TNS: Application timeout occurred

Cause: A network session did not reach an application-defined stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

ORA-12607: TNS: Connect timeout occurred

Cause: A network session did not reach a predefined connect stage within the allowed time interval.

Action: This is an error which does not normally appear at the high level. The action to take is application specific, and is detailed in the higher level error description.

ORA-12608: TNS: Send timeout occurred

Cause: The send or write operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the send timeout value if necessary.

ORA-12609: TNS: Receive timeout occurred

Cause: The receive or read operation did not complete within the allowed time interval.

Action: Check if the peer host is available. Increase the receive timeout value if necessary.

ORA-12611: TNS:operation is not portable

Cause: Attempted operation is not portable.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12612: TNS:connection is busy

Cause: Attempted operation failed because it conflicts with an ongoing action or status of the connection.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12615: TNS:preempt error

Cause: A request to service an event failed because no event notification has yet been posted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12616: TNS:no event signals

Cause: The operation failed because the type of data specified is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12618: TNS:versions are incompatible

Cause: The two machines are running incompatible versions of TNS.

Action: Check the version numbers, and upgrade the machine with the smaller one.

ORA-12619: TNS:unable to grant requested service

Cause: The connect request failed because requested service could not be provided by the local TNS software.

Action: If appropriate, reexecute with reduced service requirements.

ORA-12620: TNS:requested characteristic not available

Cause: The connect request failed because a requested transport characteristic could not be supported by the remote TNS software.

Action: If appropriate, reexecute with reduced requirements.

ORA-12622: TNS:event notifications are not homogeneous

Cause: An attempt to register a connection for event notification failed because the event notification type conflicts with existing registrations.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12623: TNS:operation is illegal in this state

Cause: Connection is half-duplex and a full-duplex operation was attempted.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation. If error persists, contact Oracle Customer Support.

ORA-12624: TNS:connection is already registered

Cause: An attempt to register a connection for event notification failed because the connection is already registered.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12625: TNS:missing argument

Cause: An operation failed because an argument was missing"

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12626: TNS:bad event type

Cause: An attempt to register a connection for event notification failed because the event type is unknown.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12628: TNS:no event callbacks

Cause: An attempt to register a connection for event notification failed because asynchronous callbacks are not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12629: TNS:no event test

Cause: An attempt to register a connection for event notification failed because the ability to test for events is not available.

Action: Not normally visible to the user. For further details, turn on tracing and reexecute the operation and contact Oracle Customer Support.

ORA-12630: Native service operation not supported

Cause: An operation requested by a user is not supported by the native services component.

Action: This may be an internal error if the operation should have been supported.

ORA-12631: Username retrieval failed

Cause: The authentication service failed to retrieve the name of a user.

Action: Enable tracing to determine which routine is failing.

ORA-12632: Role fetch failed

Cause: The authentication service failed to retrieve one of the user's roles.

Action: Enable tracing to determine which routine is failing.

ORA-12633: No shared authentication services

Cause: The list of authentication services specified by the user does not match those supported by the process.

Action: Either specify another list or relink the executable with the desired services.

ORA-12634: Memory allocation failed

Cause: Process was unable to allocate memory.

Action: Terminate other processes in order to reclaim needed memory.

ORA-12635: No authentication adapters available

Cause: The executable was not linked with any authentication service adapters but the sqlnet.ora parameter that determines whether or not authentication is required was set to true.

Action: Either disable the parameter or relink the executable with service adapters.

ORA-12636: Packet send failed

Cause: A process was unable to send a packet to another process. Possible causes are: 1. The other process was terminated. 2. The machine on which the other process is running went down. 3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

ORA-12637: Packet receive failed

Cause: A process was unable to receive a packet from another process. Possible causes are: 1. The other process was terminated. 2. The machine on which the other process is running went down. 3. Some other communications error occurred.

Action: If the cause is not obvious, contact Oracle Customer Support.

ORA-12638: Credential retrieval failed

Cause: The authentication service failed to retrieve the credentials of a user.

Action: Enable tracing to determine the exact error.

ORA-12639: Authentication service negotiation failed

Cause: No match was found between the types of authentication services that the client supports and those that the server is using.

Action: Possible solutions: 1. Change the entry in sqlnet.ora that determines which services are to be used. 2. Relink the client with at least one of the authentication service adapters that the server supports. 3. Relink the server with at least one of the authentication service adapters that the client supports. 4. Disable authentication on both the client and server.

ORA-12640: Authentication adapter initialization failed

Cause: The function specified in the authentication table entry for the service failed.

Action: Enable tracing to determine the exact error.

ORA-12641: Authentication service failed to initialize

Cause: The authentication service failed during initialization.

Action: Enable tracing to determine the exact error.

ORA-12642: No session key

Cause: A process has no session key associated with it because the authentication service being used does not use one.

Action: If a session key is required, use another authentication service.

ORA-12643: Client received internal error from server

Cause: The client process received an error from the server that indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If successful in recreating the problem, contact Oracle Customer Support.

ORA-12644: Kerberos ticket has expired.

Cause: An expired Kerberos ticket was used in an authentication attempt.

Action: Run "okinit" to renew the ticket.

ORA-12645: Parameter does not exist.

Cause: A sqlnet.ora parameter from which a value was needed does not exist.

Action: Set the parameter in the parameter file.

ORA-12646: Invalid value specified for boolean parameter

Cause: The value specified for a parameter was set to a value other than true/false or on/off.

Action: Correct the value of the parameter.

ORA-12647: Authentication required

Cause: The parameter that controls whether authentication is required was set to true, but the executable does not have an authentication service linked in.

Action: Either re-link the executable with an authentication service adapter or disable the parameter.

ORA-12648: Encryption or data integrity algorithm list empty

Cause: A list-of-algorithms parameter was empty, e.g. "()".

Action: Change the list to contain the name of at least one installed algorithm, or remove the list entirely if every installed algorithm is acceptable.

ORA-12649: Unknown encryption or data integrity algorithm

Cause: A list-of-algorithms parameter included an algorithm name that was not recognized.

Action: Either remove that algorithm name, correct it if it was misspelled, or install the driver for the missing algorithm.

ORA-12650: No common encryption or data integrity algorithm

Cause: The client and server have no algorithm in common for either encryption or data integrity or both.

Action: Choose sets of algorithms that overlap. In other words, add one of the client's algorithm choices to the server's list or vice versa.

ORA-12651: Encryption or data integrity algorithm unacceptable

Cause: The algorithm the server chose to use for encryption or data integrity was not one of the choices acceptable to the client. This is either the result of an internal error, of a network data transmission error, or of deliberate tampering with the transmitted data.

Action: For further details, turn on tracing, re-execute the operation, and contact Oracle Customer Support.

ORA-12652: String truncated

Cause: Not enough memory was allocated for a string so it had to be truncated

Action: If it is OK that the string is truncated, then it is not an error. Otherwise, call the routine that reported the error again with a larger string buffer.

ORA-12653: Authentication control function failed

Cause: The control function utilized by the authentication service driver failed.

Action: Enable tracing to determine the exact error.

ORA-12654: Authentication conversion failed

Cause: The authentication service was unable to convert the credentials of a user from the format specific to the format into the ORACLE format.

Action: Enable tracing to determine the exact error.

ORA-12655: Password check failed

Cause: The authentication service being used was unable to verify the provided password.

Action: Enable tracing to determine the exact error.

ORA-12656: Cryptographic checksum mismatch

Cause: The cryptographic checksum received with a packet of incoming data didn't match the checksum computed by the receiving end. This indicates that the packet was tampered with or otherwise corrupted in transit.

Action: Look for sources of data corruption, perhaps including deliberate tampering.

ORA-12657: No algorithms installed

Cause: The near side of the connection required the use of a service (either encryption or checksumming) when no algorithms for that service were installed.

Action: Remove the "ON" requirement for that service.

ORA-12658: ANO service required but TNS version is incompatible

Cause: A client process that is running an earlier version of TNS attempted to connect but the connection failed because the server process required that an ANO service (authentication, encryption, etc.) be used.

Action: Relink the calling executable and retry the connection or eliminate the requirement that the service be used on the server side.

ORA-12659: Error received from other process

Cause: An error was received by one or more services from the process on the other side of the connection.

Action: Enable tracing to determine the exact error(s). The error(s) is (are) not returned directly because an error generated by a server may not make sense on the client side and vice-versa.

ORA-12660: Encryption or crypto-checksumming parameters incompatible

Cause: One side of the connection specified "REQUIRED" for encryption or crypto-checksumming, while the other side specified "REJECTED".

Action: Change the "REQUIRED" side to "REQUESTED" if the you want encryption or crypto-checksumming to be optional, or change the "REJECTED" side to "ACCEPTED" if you do not want the service to be optional.

ORA-12661: Protocol authentication to be used

Cause: The authentication service has determined that the Oracle Net transport protocol in use is to be utilized to authenticate a user's identity.

Action: This error is used solely to communicate information between the authentication service and the Oracle Net session layer and should not normally be visible. If the error is seen, contact Oracle Worldwide Support.

ORA-12662: proxy ticket retrieval failed

Cause: The authentication adapter used by Oracle Net failed to retrieve the credentials needed to authenticate a database link.

Action: Enable tracing to determine the exact error.

ORA-12663: Services required by client not available on the server

Cause: Service(s) that was (were) required by the client process were not available on the server process.

Action: Configure the server with the services required by the client (best solution) or delete the requirement from the configuration file of the client (least secure).

ORA-12664: Services required by server not available on the client

Cause: Service(s) that was (were) required by the server process were not available on the client process.

Action: Configure the client with the services required by the server (best solution) or delete the requirement from the configuration file of the server (least secure).

ORA-12665: NLS string open failed

Cause: A native service was unable to make a string available for use by the National Language Support component.

Action: Make sure the National Language Support component has been properly. If it has, enable tracing and report the problem to Customer Support.

ORA-12666: Dedicated server: outbound transport protocol different from inbound

Cause: The protocol specified for an externally-identified outbound connection from a dedicated server (database link) was not the same as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the dedicated server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection.

ORA-12667: Shared server: outbound transport protocol different from inbound

Cause: The protocol specified for an externally-identified outbound connection from a shared server (database link) was not the same as that used for the inbound connection. It is not possible for Oracle Net to authenticate a proxy connection that uses a protocol that is different from that which was used for the connection to the shared server.

Action: Specify the same protocol in the Oracle Net connect descriptor for the outbound connection as that used for the inbound connection

ORA-12668: Dedicated server: outbound protocol does not support proxies

Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a dedicated server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in Oracle Net, the protocol used for the proxy connection must be the same as that used for the connection from the client to the server.

ORA-12669: Shared server: outbound protocol does not support proxies

Cause: The protocol specified to perform an externally-identified proxy connection (database link) from a shared server does not support proxy connections.

Action: Specify a protocol in the Oracle Net connect descriptor used for the connection that does support externally-authenticated proxy connections. NOTE: Because of a limitation in Oracle Net, the protocol used for the proxy connection must be the same as that used for the connection from the client to the server.

ORA-12670: Incorrect role password

Cause: A password supplied for a role could not be validated by the authentication service.

Action: Supply the correct password.

ORA-12671: Shared server: adapter failed to save context

Cause: The adapter for the authentication service failed when it tried to save the data needed for proxy connections (database links) through the shared server.

Action: Enable tracing to determine the exact error. Contact Oracle Customer Support if the reason is not obvious.

ORA-12672: Database logon failure

Cause: The authentication service adapter in use encountered an error it attempted to validate the logon attempt of a user.

Action: Enable tracing to determine the exact error encountered by the adapter.

ORA-12673: Dedicated server: context not saved

Cause: A connection was marked as being a proxy connection (database link) from a dedicated server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

ORA-12674: Shared server: proxy context not saved

Cause: A connection was marked as being a proxy connection (database link) from a shared server but no inbound context was present.

Action: This error should not normally be visible to the user. Contact Oracle Customer Support.

ORA-12675: External user name not available yet

Cause: The authentication service in use was not able to return the external name of a user of the ORACLE server because it is not available to the service yet.

Action: This is just an informational message and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

ORA-12676: Server received internal error from client

Cause: The server process received an error from the client which indicated that an internal Oracle Net native services error had occurred.

Action: Enable tracing on both processes and attempt to recreate the problem. If the problem recurs, contact Oracle Customer Support.

ORA-12677: Authentication service not supported by database link

Cause: The authentication service used by the proxy process (database link) was unable to find the adapter being used by the client in its list of authentication mechanisms.

Action: Specify an authentication adapter that is shared by the client and the server being used for the database link.

ORA-12678: Authentication disabled but required

Cause: The configuration parameters that control whether authentication is disabled or required were both set to TRUE.

Action: Set one or both of the parameters to FALSE.

ORA-12679: Native services disabled by other process but required

Cause: The remote process has disabled native services but the local process requires them.

Action: Enable native services on the remote process or disable them locally.

ORA-12680: Native services disabled but required

Cause: The process has disabled native services but at least one service is required.

Action: Enable native services or change the configuration file so that none of the available services are required.

ORA-12681: Login failed: the SecurID card does not have a pincode yet

Cause: The SecurID card that is used to logon to Oracle, does not have a pincode assigned to it.

Action: Use one of the programs supplied by Security Dynamics to assign a pincode to the card.

ORA-12682: Login failed: the SecurID card is in next PRN mode

Cause: The SecurID card and the SecurID server are out of sync and the server requires the next cardcode to resynchronize the card.

Action: Use one of the programs supplied by Security Dynamics to resynchronize the SecurID card.

ORA-12683: encryption/crypto-checksumming: no Diffie-Hellman seed

Cause: The "sqlnet.crypto_seed" parameter is missing from the SQLNET.ORA parameters file.

Action: Add this line to SQLNET.ORA: sqlnet.crypto_seed = "randomly-chosen text"

ORA-12684: unsupported encryption/crypto-checksumming version

Cause: Encryption/crypto-checksumming version used by remote is not supported by this configuration.

Action: Upgrade the remote client/server to use higher version of encryption/crypto-checksumming adapter. If the support for lower version is needed, add the following to sqlnet.ora file: CLIENT: (to allow connections to weak servers)
sqlnet.allow_weak_crypto = true SERVER: (to allow connections from weak clients)
sqlnet.allow_weak_crypto_clients = true CAUTION: This parameter allows insecure network connections between a client and server. Hence, it must not be used unless the remote endpoint cannot be updated to run the higher version of the encryption adapter. User is strongly advised to carefully consider the implications of this parameter before configuring it to allow weak connections.

ORA-12685: Native service required remotely but disabled locally

Cause: A native service is required by the remote process but native services have been disabled locally.

Action: Enable native services locally or change the configuration parameters on the remote host so that no native services are required.

ORA-12686: Invalid command specified for a service

Cause: An operation which does not exist was specified for a native service.

Action: This is a programming error and should not normally be visible to the user. If the error does appear, contact Oracle Customer Support.

ORA-12687: Credentials expired.

Cause: The credentials that are used to authenticate the user for the requested connection have expired.

Action: Renew your credentials. Refer to the documentation specific for your Network Authentication Adapter on how to do this.

ORA-12688: Login failed: the SecurID server rejected the new pincode

Cause: There are a number of reasons why the SecurID server would refuse a pincode: - The user might not have permission to make up his own pincode. - The pincode was either too short or too long. Valid pincodes consist of minimal four, but no more than eight characters. - The pincode contains any non alphanumeric characters.

Action: Reexecute the operation and make sure to use a pincode that satisfies the above requirements. If the problem persists, turn on tracing at the Oracle Server side of the connection and examine the trace file for the exact error.

ORA-12689: Server Authentication required, but not supported

Cause: Server Authentication is required for this connection, but not supported by both sides of the connection.

Action: Make sure both sides of the connection have the correct version of Advanced Networking Option, and that the Authentication Adapter supports Server Authentication.

ORA-12690: Server Authentication failed, login cancelled

Cause: Server Authentication is required, but the server's credentials were found invalid by the client.

Action: Make sure that the server has a valid set of credentials. Refer to your authentication adapter specific documentation on how to do this.

ORA-12691: TTC RPC (*string*) not supported by Oracle Connection Manager in Traffic Director mode

Cause: Oracle Connection Manager in Traffic Director mode does not support the specified Two-Task Common (TTC) Remote Procedure Call(RPC).

Action: Do not use functionality that issues the specified TTC RPC which was disallowed by Oracle Connection Manager in Traffic Director mode

ORA-12692: functionality (*string*) not supported by Oracle Connection Manager in Traffic Director mode

Cause: Oracle Connection Manager in Traffic Director mode does not support the specified functionality.

Action: Do not use functionality that is not supported by Oracle Connection // Manager in Traffic Director mode.

ORA-12693: PRCP is not configured in Oracle Connection Manager in Traffic Director mode

Cause: The client was attempting to connect using Proxy Resident Connection Pool (PRCP) while PRCP is not configured in Oracle Connection Manager in Traffic Director mode.

Action: The client should use PRCP connections only when PRCP is configured in Oracle Connection Manager in Traffic Director mode.

ORA-12694: non-PRCP connection requested when PRCP is configured in Oracle Connection Manager in Traffic Director mode

Cause: The client was attempting a non Proxy Resident Connection Pool (PRCP) connection while PRCP was configured in Oracle Connection Manager in Traffic Director mode.

Action: The client should only use PRCP connections when PRCP is configured in Oracle Connection Manager in Traffic Director mode.

ORA-12695: This statement cannot be executed with Oracle Connection Manager in Traffic Director mode with PRCP enabled

Cause: The client did not send enough information to execute the statement with Oracle Connection Manager in Traffic Director mode with Proxy Resident Connection Pooling (PRCP) enabled.

Action: This client needs a patch that will fix the issue. Alternatively, it needs to be upgraded to Oracle Database Release 18.1 or later. Contact Oracle Customer Support for the patch.

ORA-12696: Double Encryption Turned On, login disallowed

Cause: The user is using a Secure Protocol Adapter that has Encryption turned ON as well as ANO Encryption.

Action: Take one of the following actions: - Turn off ANO encryption. - Set the SQLNET.IGNORE_ANO_ENCRYPTION_FOR_TCPS parameter to TRUE. - Set

IGNORE_ANO_ENCRYPTION_FOR_TCPS to TRUE in the SECURITY clause of the client's TNS connect string. Refer to the Database Net Services Reference for more details.

ORA-12697: Internal error occurred in Oracle Connection Manager in Traffic Director Mode. Reason code: *string*\n

Cause: Internal error occurred in Oracle Connection Manager in Traffic Director Mode processing

Action: Enable tracing for Oracle Connection Manager in Traffic Director Mode to get more information.

ORA-12699: Native service internal error occurred.

Cause: An internal error occurred in the native services component.

Action: Enable tracing to determine the exact error. Contact Oracle Support.

ORA-12700 to ORA-19400

ORA-12700: invalid NLS parameter value (*string*)

Cause: An invalid or unknown NLS configuration parameter was specified.

Action: Check the syntax and spelling of the parameter. Enter the correct parameter into the initialization parameter file.

ORA-12701: CREATE DATABASE character set is not known

Cause: The character set specified when creating the database is unknown.

Action: Refer to your Oracle operating system-specific documentation for more information about character sets on the system. Use a valid character set in the CREATE DATABASE command.

ORA-12702: invalid NLS parameter string used in SQL function

Cause: An unknown parameter name or invalid value is specified in a NLS parameter string.

Action: Check the syntax of the function and the parameters. Enter the command again using the correct syntax and valid values.

ORA-12703: this character set conversion is not supported

Cause: The requested conversion between two character sets in the CONVERT function is not implemented

Action: Use character sets available on the system in the CONVERT function.

ORA-12704: character set mismatch

Cause: One of the following: - The string operands (other than an nlsparms argument) to an operator or built-in function do not have the same character set. - An nlsparms operand is not in the database character set. - String data with character set other than the database character set is passed to a built-in function not expecting it. - The second argument to CHR() or CSCONVERT() is not CHAR_CS or NCHAR_CS. - A string expression in the VALUES clause of an INSERT statement, or the SET clause of an UPDATE statement, does not have the same character set as the column into which the value would be inserted. - A value provided in a DEFAULT clause when creating a table does not have the same character set as declared for the column. - An argument to a PL/SQL function does not conform to the character set requirements of the corresponding parameter.

Action: Strings declared with NCHAR or NCHAR VARYING do not interoperate with strings declared with CHAR or VARCHAR2. Use TRANSLATE() function to explicitly convert one to the other.

ORA-12705: Cannot access NLS data files or invalid environment specified

Cause: Either an attempt was made to issue an ALTER SESSION command with an invalid NLS parameter or value; or the environment variable(s) NLS_LANG, ORA_NLSxx, or ORACLE_HOME was incorrectly specified, therefore the NLS data files cannot be located.

Action: Check the syntax of the ALTER SESSION command and the NLS parameter, correct the syntax and retry the statement, or specify the correct directory path/values in the environment variables.

ORA-12706: this CREATE DATABASE character set is not allowed

Cause: It is not allowed to create a database on a native ASCII-based machine using an EBCDIC-based character set, and vice versa.

Action: Create the database using either ASCII-based or EBCDIC-based character sets, depending on what is supported by the hardware. Refer to your Oracle operating system-specific documentation for more information about the type of character set supported.

ORA-12707: error while getting create database NLS parameter *string*

Cause: Internal error

Action: Contact Oracle Support Services.

ORA-12708: error while loading create database NLS parameter *string*

Cause: Internal error

Action: Contact Oracle Support Services.

ORA-12709: error while loading create database character set

Cause: Internal error

Action: Contact Oracle Support Services.

ORA-12710: CREATE CONTROLFILE character set is not known

Cause: The character set specified when creating the control file is unknown.

Action: Specify a known character set.

ORA-12711: this CREATE CONTROLFILE character set is not allowed

Cause: It is not allowed to create a control file on a native ASCII-based machine using an EBCDIC-based character set, and vice versa.

Action: Create the correct control file for machine and character set.

ORA-12712: new character set must be a superset of old character set

Cause: When you ALTER DATABASE ... CHARACTER SET, the new character set must be a superset of the old character set. For example, WE8ISO8859P1 is not a superset of the WE8DEC.

Action: Specify a superset character set.

ORA-12713: Character data loss in NCHAR/CHAR conversion

Cause: When character set conversion happened between CHAR and NCHAR either implicitly or explicitly, some characters were lost due to no mapping characters in the destination character set.

Action: Ensure that all the characters can be mapped to characters in the destination character set or set NLS_NCHAR_CONV_EXCP to be FALSE.

ORA-12714: invalid national character set specified

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set

Action: Ensure that the specified national character set is valid

ORA-12715: invalid character set specified

Cause: The character set specified is not allowed for this operation or is invalid

Action: Ensure that the specified character set is valid

ORA-12716: Cannot ALTER DATABASE CHARACTER SET when CLOB data exists

Cause: CLOB data changes representation to Unicode when converting to a multibyte character set and must be migrated

Action: Remove CLOB data as listed in the alert file. CLOB data can be migrated by methods such as import/export

ORA-12717: Cannot issue ALTER DATABASE NATIONAL CHARACTER SET when NCLOB, NCHAR or NVARCHAR2 data exists

Cause: NCLOB, NCHAR or NVARCHAR2 data changed the representation to Unicode when converting to a multibyte character set and must be migrated.

Action: Remove NCLOB, NCHAR or NVARCHAR2 data as listed in the alert file. The above type data can be migrated by methods such as import/export.

ORA-12718: operation requires connection as SYS

Cause: This command can only be run when connecting as SYS

Action: Connect as SYS to run this command

ORA-12719: operation requires database is in RESTRICTED mode

Cause: This command can only be run when the database is in RESTRICTED mode

Action: Ensure that the system is in RESTRICTED mode

ORA-12720: operation requires database is in EXCLUSIVE mode

Cause: This command can only be run when the database is in EXCLUSIVE mode

Action: Ensure that the system is in EXCLUSIVE mode

ORA-12721: operation cannot execute when other sessions are active

Cause: This command can only be run when there are no other sessions active

Action: Ensure there are no other connections to the database

ORA-12722: regular expression internal error

Cause: A regular expression internal error occurred.

Action: This is an internal error. Contact Oracle Support Services.

ORA-12723: regular expression too complex

Cause: The regular expression was too complex and could not be parsed.

Action: This is an internal error. Contact Oracle Support Services.

ORA-12724: regular expression corrupt

Cause: The regular expression contained an incorrect sequence of metacharacters.

Action: Ensure the metacharacters are correctly positioned.

ORA-12725: unmatched parentheses in regular expression

Cause: The regular expression did not have balanced parentheses.

Action: Ensure the parentheses are correctly balanced.

ORA-12726: unmatched bracket in regular expression

Cause: The regular expression did not have balanced brackets.

Action: Ensure the brackets are correctly balanced.

ORA-12727: invalid back reference in regular expression

Cause: A back references was found before a sub-expression.

Action: Ensure a valid sub-expression is being referenced.

ORA-12728: invalid range in regular expression

Cause: An invalid range was found in the regular expression.

Action: Ensure a valid range is being used.

ORA-12729: invalid character class in regular expression

Cause: An unknown character class was found in the regular expression.

Action: Ensure a valid characters class is being used.

ORA-12730: invalid equivalence class in regular expression

Cause: An unknown equivalence class was found in the regular expression.

Action: Ensure a valid equivalence class is being used.

ORA-12731: invalid collation class in regular expression

Cause: An unknown collation class was found in the regular expression.

Action: Ensure a valid collation class is being used.

ORA-12732: invalid interval value in regular expression

Cause: An invalid interval value was found in the regular expression.

Action: Ensure a valid interval value is being used.

ORA-12733: regular expression too long

Cause: The operation failed because the regular expression it used exceeds the maximum supported size.

Action: Use a shorter regular expression.

ORA-12734: Instant Client Light: unsupported client national character set *string*

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

ORA-12735: Instant Client Light: unsupported client character set *string*

Cause: The character set specified is not allowed for this operation or is invalid. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

ORA-12736: Instant Client Light: unsupported server national character set *string*

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

ORA-12737: Instant Client Light: unsupported server character set *string*

Cause: The character set specified is not allowed for this operation or is invalid. Instant Client Light has only minimal character sets.

Action: Do not use Instant Client Light for this character set

ORA-12738: Express Instant Client: unsupported client national character set *string*

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client has only minimal character sets.

Action: Do not use Express Instant Client for this character set

ORA-12739: Express Instant Client: unsupported client character set *string*

Cause: The character set specified is not allowed for this operation or is invalid. Express Instant Client has only minimal character sets.

Action: Do not use Express Instant Client for this character set

ORA-12740: Express Instant Client: unsupported server national character set *string*

Cause: Only UTF8 and AL16UTF16 are allowed to be used as the national character set. Instant Client has only minimal character sets.

Action: Do not use Express Instant Client for this character set

ORA-12741: Express Instant Client: unsupported server character set *string*

Cause: The character set specified is not allowed for this operation or is invalid. Express Instant Client has only minimal character sets.

Action: Do not use Express Instant Light for this character set

ORA-12742: Collation key creation failed.

Cause: The character argument of the collation-sensitive operator was too long or had too many decomposable characters to create a collation key in the available buffer space.

Action: Shorten the argument value if it was too long. The maximum allowed argument length depends on the collation, character set, and particular characters comprising the value but is at least 1500 bytes. To avoid the error due to decomposable characters, do not use collations based on UCA 6.2 (with a name starting with UCA0620) nor UCA collations DUCET or ROOT. Use collations based on a higher UCA version. Use ORADUCET in place of DUCET and ORAROOT in place of ROOT.

ORA-12743: An internal error occurred with the arguments *string*, *string*, and *string*.

Cause: An internal error in a globalization support function occurred.

Action: Contact Oracle Support Services.

ORA-12744: Character set *string* is not allowed as a database character set.

Cause: An attempt was made to create or alter a database using a client-only or conversion-only character set.

Action: Specify a supported database character set.

ORA-12746: unrecognized collation name "*string*"

Cause: The name of the collation that you specified was not recognized by the Oracle Database, because the name was misspelled, or the collation was user-defined but not installed in the Oracle Home of the database instance, or because the directory specified in the ORA_NLS10 environment setting, either explicitly or defaulting to \$ORACLE_HOME/nls/data (%ORACLE_HOME%\nls\data on Microsoft Windows), did not contain valid NLS data files.

Action: Specify a valid collation name or fix your database software configuration.

ORA-12747: unrecognized collation ID (*string*)

Cause: The ID of the collation that you specified was not recognized by the Oracle Database, because it was incorrect, or the collation was user-defined but not installed in the Oracle Home of the database instance, or because the directory specified in the ORA_NLS10 environment setting, either explicitly or defaulting to \$ORACLE_HOME/nls/data(%ORACLE_HOME%\nls\data on Microsoft Windows), did not contain valid NLS data files.

Action: Specify a valid collation ID or fix your database software configuration.

ORA-12752: An instance-critical process has terminated.

Cause: An unexpected error was encountered by an instance-critical process.

Action: Contact Oracle Support Services.

ORA-12753: The Oracle home user ID does not match the effective user ID of the local client which connected to the Oracle instance.

Cause: The user ID that is the owner of the Oracle home directory was not the same as the effective user ID of the local client that connected to the Oracle instance.

Action: Run the local client that connects to Oracle instance with the same user ID as the owner of the Oracle home.

ORA-12757: instance does not currently know of requested service

Cause: The instance received a request to create a session. The request specified a service not currently associated with the instance. If an existing connection to the instance used this service, the service may have relocated to a different instance or may no longer exist.

Action: Ensure that the specified service is valid and reconnect.

ORA-12758: invalid options specified with ALTER SYSTEM KILL or ALTER SYSTEM DISCONNECT

Cause: DRAIN and POST_TRANSACTION were incompatible options.

Action: Use either DRAIN or POST_TRANSACTION or refer to the user manual for more options.

ORA-12774: error entering CDB sandbox *string*: *string*

Cause: An attempt to enter the sandbox for a multitenant container database (CDB) failed.

Action: Check the definition of the sandbox for the CDB.

ORA-12775: error entering PDB sandbox *string*: *string*

Cause: An attempt to enter the sandbox for a pluggable database (PDB) failed.

Action: Check the definition of the sandbox for the PDB.

ORA-12776: error exiting PDB sandbox *string*: *string*

Cause: An attempt to exit the sandbox for a pluggable database (PDB) failed.

Action: Resolve the problem indicated by the particular error.

ORA-12777: A non-continuable error encountered. Check the error stack for additional information [*string*], [*string*], [*string*], [*string*].

Cause: The error recorded before this error should not be cleared and should be re-signaled to the top-level error handler.

Action: See the previously recorded error. Contact DBA.

ORA-12778: path mismatch for *string* expected '*string*' but found '*string*'

Cause: The path recorded in the SGA did not match the current value.

Action: Clear the SGA by shutting down the instance and then restart.

ORA-12781: Oracle Scheduler group private handle is not valid.

Cause: The Oracle Scheduler group private handle was not valid.

Action: This is an internal error.

ORA-12782: Oracle Scheduler group thread spawn failed.

Cause: The Oracle Scheduler group could not spawn new threads.

Action: This is an internal error.

ORA-12783: Oracle Scheduler group post for action (*string*) in (*string*) failed.

Cause: The Oracle Scheduler group could not post an action to a process.

Action: This is an internal error.

ORA-12784: Oracle Scheduler group post for action (*string*) failed due to invalid action group.

Cause: The specified action post failed as there is no action group instance.

Action: This is an internal error.

ORA-12785: Oracle Scheduler group start for action group (*string*) failed during (*string*) operation.

Cause: The specified action group start failed during the specified operation.

Action: This is an internal error.

ORA-12791: The oradism utility does not have proper permissions.

Cause: The oradism utility was not root owned and did not have proper permissions.

Action: Change oradism to root owned binary with permission 4750.

ORA-12792: Network transfer operation aborted due to TTC error string.

Cause: A Two-Task Common (TTC) error occurred during the network transfer operation.

Action: Check connectivity to the remote database and check the alert log for problems reported by TTC.

ORA-12800: system appears too busy for parallel query execution

Cause: load on system is too high to perform parallel queries.

Action: re-execute serially or wait until system load is reduced.

ORA-12801: error signaled in parallel query server string

Cause: A parallel query server reached an exception condition.

Action: Check the following error message for the cause, and consult your error manual for the appropriate action.

ORA-12802: parallel query server lost contact with coordinator

Cause: A parallel query server lost contact with the foreground (coordinator) process/thread.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services.

ORA-12803: parallel query server lost contact with another server

Cause: A parallel query server lost contact with another server.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services.

ORA-12804: parallel query server appears to have died

Cause: Cannot find process information for a parallel query server thread.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services.

ORA-12805: parallel query server died unexpectedly

Cause: A parallel query server died unexpectedly, PMON cleaning up the process.

Action: Check your system for anomalies and reissue the statement. If this error persists, contact Oracle Support Services. See trace file for more details.

ORA-12806: could not get background process to hold enqueue

Cause: Internal error.

Action: This error should not normally occur. If it persists, contact Oracle Support Services.

ORA-12807: process queue could not receive parallel query message

Cause: Internal error.

Action: This error should not normally occur. If it persists, contact Oracle Support Services.

ORA-12808: cannot set *string* INSTANCES greater than number of instances *string*

Cause: An attempt was made to set SCAN_INSTANCES or CACHE_INSTANCES using the ALTER SYSTEM command to a value larger than the number of available instances.

Action: See the accompanying message for the current allowable maximum value, or set SCAN_INSTANCES / CACHE_INSTANCES to ALL.

ORA-12809: cannot set *string* INSTANCES when mounted in exclusive mode

Cause: An attempt was made to set SCAN_INSTANCES or CACHE_INSTANCES using the ALTER SYSTEM command while the database was mounted in exclusive mode.

Action: SCAN_INSTANCES / CACHE_INSTANCES may not be set unless running Oracle Real Application Clusters mounted in CLUSTER_DATABASE mode.

ORA-12810: PARALLEL_MAX_SERVERS must be less than or equal to *string*

Cause: An attempt was made to set the PARALLEL_MAX_SERVERS parameter to a value higher than the maximum allowed by the system.

Action: Set PARALLEL_MAX_SERVERS to a value less than or equal to the maximum specified in the accompanying message and retry.

ORA-12811: PARALLEL_MIN_SERVERS must be less than or equal to PARALLEL_MAX_SERVERS, *string*

Cause: An attempt was made to set the PARALLEL_MIN_SERVERS parameter to a value higher than PARALLEL_MAX_SERVERS.

Action: Set PARALLEL_MIN_SERVERS to a value less than or equal to PARALLEL_MAX_SERVERS (indicated in the accompanying message) and retry.

ORA-12812: only one PARALLEL or NOPARALLEL clause may be specified

Cause: PARALLEL was specified more than once, NOPARALLEL was specified more than once, or both PARALLEL and NOPARALLEL were specified in a CREATE TABLE, CLUSTER, or INDEX or in an ALTER TABLE or CLUSTER statement, or in a RECOVER command.

Action: Remove all but one of the PARALLEL or NOPARALLEL clauses and reissue the statement.

ORA-12813: value for PARALLEL or DEGREE must be greater than 0

Cause: PARALLEL 0 or DEGREE 0 was specified in a CREATE TABLE, CLUSTER, or INDEX or in an ALTER TABLE or CLUSTER statement.

Action: Specify a degree of parallelism greater than 0 or specify default parallelism using PARALLEL with no degree or using DEGREE DEFAULT within a PARALLEL clause.

ORA-12814: only one CACHE or NOCACHE clause may be specified

Cause: CACHE was specified more than once, NOCACHE was specified more than once, or both CACHE and NOCACHE were specified in a CREATE TABLE or CLUSTER, or in an ALTER TABLE or CLUSTER statement.

Action: Remove all but one of the CACHE or NOCACHE clauses and reissue the statement.

ORA-12815: value for INSTANCES must be greater than 0

Cause: PARALLEL parameter specifying number of instances must be a positive integer or DEFAULT

Action: specify a positive integer or DEFAULT for INSTANCES if parallelism across instances is desired.

ORA-12816: parallel create index fastpath operation

Cause: The parallel create index fastpath operation event has been set.

Action: set this event only under the supervision Oracle development

ORA-12817: parallel query option must be enabled

Cause: A parallel query option feature has been invoked but this option has not been enabled.

Action: Enable the parallel query option.

ORA-12818: invalid option in PARALLEL clause

Cause: an unrecognized option was used within a PARALLEL clause.

Action: specify any combination of DEGREE { *n* | DEFAULT } and INSTANCES { *n* | DEFAULT } within the PARALLEL clause.

ORA-12819: missing options in PARALLEL clause

Cause: PARALLEL clause cannot be empty.

Action: specify any combination of DEGREE { *n* | DEFAULT } and INSTANCES { *n* | DEFAULT } within the PARALLEL clause.

ORA-12820: invalid value for DEGREE

Cause: invalid value for DEGREE was specified within a PARALLEL clause.

Action: specify a positive integer or DEFAULT for the DEGREE option within a PARALLEL clause.

ORA-12821: invalid value for INSTANCES

Cause: invalid value for INSTANCES was specified within a PARALLEL clause.

Action: specify a positive integer or DEFAULT for the INSTANCES option within a PARALLEL clause.

ORA-12822: duplicate option in PARALLEL clause

Cause: DEGREE or INSTANCES was specified more than once within a PARALLEL clause.

Action: specify each desired PARALLEL clause option only once.

ORA-12823: default degree of parallelism may not be specified here

Cause: the PARALLEL keyword was used alone or DEGREE DEFAULT was specified in the PARALLEL clause of an ALTER DATABASE RECOVER command.

Action: respecify with an explicit degree of parallelism.

ORA-12824: INSTANCES DEFAULT may not be specified here

Cause: INSTANCES DEFAULT was specified in the PARALLEL clause of an ALTER DATABASE RECOVER command

Action: respecify with an explicit value for INSTANCES or omit the INSTANCES option if single instance recovery is desired.

ORA-12825: explicit degree of parallelism must be specified here

Cause: the DEGREE option was omitted from an ALTER DATABASE RECOVER command.

Action: respecify with an explicit degree of parallelism.

ORA-12826: hung parallel query server was killed

Cause: parallel query server was hung and subsequently killed.

Action: re-execute query and report suspicious events in trace file to Oracle Support Services if error persists.

ORA-12827: insufficient parallel query slaves (requested *string*, available *string*, parallel_min_percent *string*)

Cause: PARALLEL_MIN_PERCENT parameter was specified and fewer than the minimum number of slaves were acquired

Action: Either reexecute the query with a lower PARALLEL_MIN_PERCENT or wait until some running queries are completed, thus freeing up slaves

ORA-12828: Can't start parallel transaction at a remote site

Cause: PDML transaction cannot be started because we are not in the coordinator site of the distributed transaction.

Action: Do not use PDML at remote sites.

ORA-12829: Deadlock - its occupied by siblings at block *string* of file *string*

Cause: parallel statement failed because all its in the current block are occupied by siblings of the same transaction.

Action: increase MAXTRANS of the block or reduce the degree of parallelism for the statement. Reexecute the statement. Report suspicious events in trace file to Oracle Support Services if error persists.

ORA-12830: Must COMMIT or ROLLBACK after executing parallel INSERT/UPDATE/DELETE

Cause: After executing a parallel INSERT/UPDATE/DELETE statement, a command other than COMMIT or ROLLBACK was issued.

Action: Execute COMMIT or ROLLBACK before issuing another SQL command.

ORA-12831: Must COMMIT or ROLLBACK after executing INSERT with APPEND hint

Cause: After executing an INSERT statement with an APPEND hint, a command other than COMMIT or ROLLBACK was issued.

Action: Execute COMMIT or ROLLBACK before issuing another SQL command.

ORA-12832: Could not allocate slaves on all specified instances

Cause: After executing a query on a global v\$ fixed view, one or more instances failed to allocate a slave to process query

Action: To allow results to be returned by successfully allocated slaves, execute ALTER SESSION SET ALLOW_PARTIAL_SN_RESULTS=TRUE statement, or check parameters of instances

ORA-12833: Coordinator's instance not a member of parallel_instance_group

Cause: The coordinator's instance must be a member of the parallel_instance_group in which this operation will be run.

Action: Either add the coordinator's instance to the current parallel_instance_group or change parallel_instance_group.

ORA-12834: Instance group name, 'string', too long, must be less than string characters

Cause: The instance group name is too long.

Action: Either shorten the name or get rid of the instance group.

ORA-12835: No instances are active in the GLOBAL_VIEW_ADMIN_GROUP

Cause: There must be at least one instance in the GLOBAL_VIEW_ADMIN_GROUP in order to execute a query on global views

Action: Change the value of GLOBAL_VIEW_ADMIN_GROUP

ORA-12838: cannot read/modify an object after modifying it in parallel

Cause: Within the same transaction, an attempt was made to add read or modification statements on a table after it had been modified in parallel or with direct load. This is not permitted.

Action: Rewrite the transaction, or break it up into two transactions: one containing the initial modification and the second containing the parallel modification operation.

ORA-12839: cannot modify an object in parallel after modifying it

Cause: Within the same transaction, an attempt was made to perform parallel modification operations on a table after it had been modified. This is not permitted.

Action: Rewrite the transaction or break it up into two transactions: one containing the parallel modification and the second containing the initial modification operation.

ORA-12840: cannot access a remote table after parallel/insert direct load txn

Cause: Within a transaction, an attempt was made to perform distributed access after a PDML or insert direct statement had been issued.

Action: Commit/rollback the PDML transaction first, and then perform the distributed access, or perform the distributed access before the first PDML statement in the transaction.

ORA-12841: Cannot alter the session parallel DML state within a transaction

Cause: Transaction in progress

Action: Commit or rollback transaction and then re-execute

ORA-12842: Cursor invalidated during parallel execution

Cause: The cursor was invalidated during the parse phase of deferred parallel processing, e.g. when set operands are parallelized.

Action: Depends on why the cursor was invalidated. Possible causes include DDL on a schema object and shared pool being flushed.

ORA-12843: pdml lock not held properly on the table

Cause: The coordinator crashed or released the lock on the partition which the slave is trying to acquire currently.

Action: Check if the coordinator or some of the other slaves died. Also check that the lock has not been corrupted. Issue the pdml again.

ORA-12845: failed to receive interinstance parallel execution message

Cause: OS or interconnect problem receiving interinstance message

Action: Check OS specific diagnostics

ORA-12850: Could not allocate slaves on all specified instances: *string* needed, *string* allocated

Cause: When executing a query on a gv\$ fixed view, one or more instances failed to allocate a slave to process query.

Action: Check trace output for instances on which slaves failed to start. GV\$ query can only proceed if slaves can be allocated on all instances.

ORA-12851: PARALLEL_MAX_SERVERS must be greater than or equal to PARALLEL_MIN_SERVERS, *string*

Cause: An attempt was made to set the PARALLEL_MAX_SERVERS parameter to a value less than PARALLEL_MIN_SERVERS.

Action: Set PARALLEL_MAX_SERVERS to a value greater than or equal to PARALLEL_MIN_SERVERS value specified in the accompanying message and retry.

ORA-12852: PARALLEL_MIN_SERVERS must be less than PROCESSES minus the number of reserved processes, *string*

Cause: An attempt was made to set the PARALLEL_MIN_SERVERS parameter to a value higher than PROCESSES minus the number of reserved processes.

Action: Set PARALLEL_MIN_SERVERS to a value less than PROCESSES minus the number of reserved processes specified in the accompanying message and retry.

ORA-12853: insufficient memory for PX buffers: current *string*K, max needed *string*K

Cause: Insufficient SGA memory for PX buffers

Action: Reconfigure sga to include at least (max - current) bytes of additional memory

ORA-12854: Parallel query is not supported on temporary LOBs

Cause: The parallel query statement produced a temporary LOB.

Action: Turn off parallelism for the query or underlying table

ORA-12855: cannot run parallel or insert direct load in a loopback

Cause: A loopback was created in the transaction before this operation.

Action: Do not use loopback when using pdml or insert direct load.

ORA-12856: cannot run parallel query on a loopback connection

Cause: A table or index in a parallel query is referenced via a loopback connection.

Action: Do not use loopback connection when running a query in parallel.

ORA-12872: First slave parse gave different plan

Cause: First hard parse on slave given QC-supplied environment and parameters gave different plan from QC. Try again with outline.

Action: No external action. Internally used for outline-based reparse.

ORA-12874: parallel execution monitor terminated with error

Cause: The parallel execution monitor process died.

Action: Wait for the process to restart.

ORA-12875: PARALLEL_MAX_SERVERS cannot be set to 0 in CDB system

Cause: An attempt was made to set the PARALLEL_MAX_SERVERS parameter to 0 in the multitenant container database (CDB) system.

Action: Set the PARALLEL_MAX_SERVERS parameter to non-zero value to ensure CDB system performance.

ORA-12894: source should be a sparse file

Cause: The 'setspareparent' command specified a source file that was not sparse.

Action: Use a sparse file as the source file.

ORA-12895: destination should be sparse

Cause: The 'setspareparent' command specified a destination that was not backed by a sparse disk group.

Action: Use a destination backed by a sparse disk group.

ORA-12896: child *string* should be a sparse file

Cause: The 'setspareparent' command specified a child file that was not sparse.

Action: Use a sparse file as the child file.

ORA-12897: failure to set parent to '%0!s' for a sparse file '%1!s'

Cause: The 'setspareparent' command was not successful.

Action: Examine the accompanying error messages for details.

ORA-12898: failure to set parent for the destination file

Cause: The parent information was not copied to the destination file.

Action: The 'setspareparent' command can be used to set the parent.

ORA-12899: value too large for column *string* (actual: *string*, maximum: *string*)

Cause: An attempt was made to insert or update a column with a value which is too wide for the width of the destination column. The name of the column is given, along with the actual width of the value, and the maximum allowed width of the column.

Note that widths are reported in characters if character length semantics are in effect for the column, otherwise widths are reported in bytes.

Action: Examine the SQL statement for correctness. Check source and destination column data types. Either make the destination column wider, or use a subset of the source column (i.e. use substring).

ORA-12900: must specify a default temporary tablespace for a locally managed database

Cause: a locally managed database must have a temporary tablespace other than SYSTEM tablespace

Action: specify the default temporary tablespace when creating a locally managed database

ORA-12901: default temporary tablespace must be of TEMPORARY type

Cause: in a locally managed database, default temporary tablespace must be TEMPORARY type

Action: n/a

ORA-12902: default temporary tablespace must be SYSTEM or of TEMPORARY type

Cause: in a dictionary managed database, default temporary tablespace must be SYSTEM or TEMPORARY type

Action: n/a

ORA-12903: default temporary tablespace must be an ONLINE tablespace**ORA-12904: default temporary tablespace cannot be altered to PERMANENT type****ORA-12905: default temporary tablespace cannot be brought OFFLINE****ORA-12906: cannot drop default temporary tablespace****ORA-12907: tablespace *string* is already the default temporary tablespace****ORA-12908: cannot specify SYSTEM as default temporary tablespace when creating database****ORA-12909: TEMPORARY keyword expected****ORA-12910: cannot specify temporary tablespace as default tablespace**

Cause: attempt to assign a temporary tablespace to be a user's default tablespace

Action: assign a permanent tablespace to be the default tablespace

ORA-12911: permanent tablespace cannot be temporary tablespace

Cause: attempt to assign a permanent tablespace to be a user's temporary tablespace

Action: assign a temporary tablespace to be user's temporary tablespace

ORA-12912: Dictionary managed tablespace specified as temporary tablespace

Cause: attempt to assign a dictionary managed tablespace to be a user's temporary tablespace

Action: Assign a locally managed temporary tablespace to be user's temporary tablespace

ORA-12913: Cannot create dictionary managed tablespace

Cause: Attempt to create dictionary managed tablespace in database which has system tablespace as locally managed

Action: Create a locally managed tablespace.

ORA-12914: Cannot migrate tablespace to dictionary managed type

Cause: Attempt to migrate locally managed tablespace to dictionary managed type when the database has locally managed system tablespace.

Action: Command cannot be issued.

ORA-12915: Cannot alter dictionary managed tablespace to read write

Cause: Attempt to alter dictionary managed tablespace to read write in database which has system tablespace as locally managed. This tablespace can only be dropped.

Action: Command cannot be issued.

ORA-12916: cannot shrink permanent or dictionary managed tablespace

Cause: An attempt was made to shrink a permanent tablespace or a dictionary managed tablespace.

Action: Check the tablespace type and issue the statement only on locally managed temporary tablespaces.

ORA-12917: Invalid option specified for default permanent tablespace**ORA-12918: Invalid tablespace type for default permanent tablespace**

Cause: The tablespace is either dropped, temporary or undo

Action: Check the tablespace type and reissue the statement

ORA-12919: Can not drop the default permanent tablespace

Cause: An attempt was made to drop the default permanent tablespace

Action: Make a different tablespace as the default permanent tablespace and reissue the drop

ORA-12920: database is already in force logging mode

Cause: ALTER DATABASE FORCE LOGGING command failed because the database is already in force logging mode.

Action: No action required.

ORA-12921: database is not in force logging mode

Cause: ALTER DATABASE NO FORCE LOGGING command failed because the database is not in force logging mode.

Action: No action required.

ORA-12922: concurrent ALTER DATABASE [NO] FORCE LOGGING command is running

Cause: There is a concurrent ALTER DATABASE FORCE LOGGING or ALTER DATABASE NO FORCE LOGGING command running in the system.

Action: Contact the database administrator who is responsible for the concurrent command.

ORA-12923: tablespace *string* is in force logging mode

Cause: An attempt to alter the specified tablespace temporary failed because the tablespace is in force logging mode.

Action: Put the tablespace out of force logging mode by ALTER TABLESPACE NO FORCE LOGGING command.

ORA-12924: tablespace *string* is already in force logging mode

Cause: An attempt to alter the specified tablespace into force logging mode failed because it is already in force logging mode.

Action: No action required.

ORA-12925: tablespace *string* is not in force logging mode

Cause: An attempt to alter the specified tablespace out of force logging mode failed because it is not in force logging mode.

Action: No action required.

ORA-12926: FORCE LOGGING option already specified

Cause: In CREATE TABLESPACE, the FORCE LOGGING option was specified more than once.

Action: Remove all but one of the FORCE LOGGING options.

ORA-12927: RETENTION option already specified

Cause: In CREATE TABLESPACE, the RETENTION option was specified more than once.

Action: Remove all but one of the RETENTION options.

ORA-12928: ENCRYPTION option already specified

Cause: In CREATE TABLESPACE, the ENCRYPTION option was specified more than once.

Action: Remove all but one of the ENCRYPTION options.

ORA-12931: FORCE LOGGING or SET STANDBY NOLOGGING already specified

Cause: FORCE LOGGING or SET STANDBY NOLOGGING options were specified more than once.

Action: Remove all but one of the FORCE LOGGING or SET STANDBY NOLOGGING options.

ORA-12932: sending data for a nonlogged block fetch request failed

Cause: A request from a remote database in the same Oracle Data Guard configuration to send data blocks to avoid or replace soft corrupt blocks due to nonlogged operations failed. This error is accompanied by additional errors that indicate the reason for the failure.

Action: Use any additional errors reported to identify and rectify the the underlying issue.

ORA-12933: failed to connect while serving a nonlogged block fetch request

Cause: A request from a remote database in the same Oracle Data Guard configuration to send data blocks to avoid or replace soft corrupt blocks due to nonlogged operations could not connect to the requesting database. This error is accompanied by additional errors that indicate the reason for the failure.

Action: Use any additional errors reported to identify and rectify the the underlying issue.

ORA-12934: replace of nonlogged blocks in file *string* failed

Cause: The process performing replacement of nonlogged blocks failed to replace one or more blocks of the file indicated due to unexpected reasons such as a write failure reported by the operating system.

Action: Inspect any additional error messages and check the alert log for any messages related to Nonlogged Block Replacement (NBR).

ORA-12935: operation [*string*] to database (service '*string*') failed (error *string*)

Cause: The process performing replacement of nonlogged blocks received an error when attempting to connect (CONNECT) or make a fetch request (REQUEST) against the database identified by the given service. The database was expected to act as a source of replacement blocks.

Action: Use the reported error to identify the issue or inspect any additional error messages and check the alert log for any messages related to Nonlogged Block Replacement (NBR).

ORA-12936: timeout waiting for data blocks from database (service '*string*')

Cause: The process performing replacement of nonlogged blocks waited too long for a request sent to the remote database for a range of blocks to be completed.

Action: Check connectivity to the remote database or check the alert log at the remote database for problems reported by a transport task process (TTnn).

ORA-12937: data blocks received for earlier recovery session (RCVID *string*)

Cause: A database received data blocks requested by a recovery session that has now terminated. This error signals to the sending database that no more transfer requests should be made for the same RCVID.

Action: None required.

ORA-12938: out of memory for the data transfer cache

Cause: A request to use space in the data transfer cache was rejected because there was no free space left in the cache and space could not be freed up.

Action: Ensure that automatic SGA tuning is enabled using either MEMORY_TARGET or SGA_TARGET system parameters or specify a larger size for the system parameter DATA_TRANSFER_CACHE_SIZE.

ORA-12939: The Data Guard environment is incomplete.

Cause: A request to perform Nonlogged Block Replacement (NBR) recovery could not identify any other database in the Data Guard environment from which to request replacement blocks.

Action: Ensure there is a LOG_ARCHIVE_DEST_n parameter configured that identifies the primary or standby database from which requests for replacement blocks can be made.

ORA-12940: Not enough space in DBVerify text buffer

Cause: DBVerify ran out of text buffer. The error was trapped internally by the system. DBVerify would return the result in text buffer and then resume checking.

Action: None

ORA-12941: DBVerify exception

Cause: DBVerify encountered run-time error. The error signal was trapped internally by the system.

Action: None

ORA-12942: database incarnation at source does not match

Cause: A request to send data blocks to a recovery process failed because the source of the blocks is not on the same database incarnation as the site where the recovery is being performed.

Action: Use standard Oracle Data Guard procedures to synchronize the primary and standby databases. Standby media recovery automatically tries to resolve many of the remaining nonlogged blocks on the standby database. To resolve any remaining nonlogged blocks, use the RMAN RECOVER ... NONLOGGED BLOCK command.

ORA-12950: SYSTEM tablespace specified as default permanent tablespace

Cause: SYSTEM tablespace was specified as the default permanent during database creation.

Action: If default permanent tablespace is not specified, then SYSTEM will implicitly become the default permanent tablespace. Specify an alternate tablespace or omit the default tablespace clause and reissue the CREATE DATABASE statement

ORA-12951: Attempt to change default permanent tablespace to temporary

Cause: It is incorrect to alter the default permanent tablespace of a database to temporary type

Action: n/a

ORA-12952: Control space growth in automatic segment space management segment under concurrency**ORA-12953: enable space scan optimization for clusters****ORA-12954: The request exceeds the maximum allowed database size of 12 GB.**

Cause: The 12 GB space limit of Oracle Database Express Edition was reached.

Action: Delete some files to create space or upgrade the database to the full edition.

ORA-12955: unable to acquire *string* extents from other instances of the cluster for temporary tablespace *string*

Cause: The current instance was out of space in the temporary segment belonging to the specified temporary tablespace and was unable to acquire unused extents from other instances of the cluster. This might happen when the system monitor process (SMON) on an instance was busy and was unable to cleanup unused extents from the temporary tablespace.

Action: 1) Check if the system monitor process (SMON) is busy or in a hung state on other instances of the cluster. 2) Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated.

ORA-12961: cannot open database in read/write mode on a read-only instance

Cause: An attempt was made to open the database on a read-only instance under the following two cases: 1) User explicitly specified read/write option in the SQL command. 2)

User forgot to explicitly specify read-only in which case, read/write mode was assumed by default.

Action: Specify the open mode as read-only.

ORA-12962: cannot create database on a read-only instance

Cause: An attempt was made to create a database on a read-only instance.

Action: Create database should only be attempted from a read/write instance.

ORA-12963: A read-only instance cannot be the first instance to open a database.

Cause: A read-only instance was the first instance to try to open a database.

Action: A database must have been opened by at least one read/write instance for a read-only instance to be able to open it.

ORA-12964: All existing read/write instances have closed the database.

Cause: The last read/write instance holding the database open closed it.

Action: There has to be at least one read/write instance holding the database open for a read-only instance to hold it open.

ORA-12965: cannot mount an enabled thread on a read-only instance

Cause: An attempt was made to mount an enabled redo thread obtained as a user specified parameter.

Action: The parameter value should be changed to the thread number of a disabled thread.

ORA-12966: could not find a disabled redo thread to mount

Cause: There were no available disabled redo threads which could be used to mount on the current read-only instance.

Action: None

ORA-12967: read-only instance cannot mount a standby database

Cause: An attempt was made to mount a standby database on a read-only instance.

Action: This action is not allowed.

ORA-12968: delayed log flush should not be enabled in a read-only instance

Cause: The system parameter for ping with no log force feature was set to true.

Action: The parameter should be set to false on a read-only instance.

ORA-12969: invalid alter database option for read-only instance

Cause: An attempt was made to execute a disallowed ALTER DATABASE statement on a read-only instance.

Action: Only OPEN, CLOSE and CREATE TEMPFILE options are allowed for ALTER DATABASE statement on a read-only instance.

ORA-12970: cannot close PDB on all read/write instances while read-only instances exist

Cause: An attempt was made to close a pluggable database (PDB) on the last read/write instance while a read-only instance was holding it open.

Action: A PDB should be closed on all of the read-only instances before it can be closed on the last read/write instance.

ORA-12971: PDB is already online and enabled for ADG recovery.

Cause: An attempt was made to recover an online pluggable database (PDB) on an Active Data Guard (ADG).

Action: None

ORA-12972: cannot start PDB recovery on ADG

Cause: An attempt was made to recover a pluggable database (PDB) on an Active Data Guard (ADG) before the PDB creation was complete on the ADG, or while PDB side recovery was being canceled.

Action: Please try later.

ORA-12973: PDB recovery in progress on ADG instance *string*

Cause: An attempt was made to recover a pluggable database (PDB) which is being recovered.

Action: None

ORA-12974: PDB recovery not detected on ADG instance *string*

Cause: An attempt was made to cancel the recovery of a pluggable database (PDB) on an Active Data Guard (ADG) which did not have any recovery session in progress. There is nothing to cancel.

Action: None

ORA-12975: cannot start recovery while pluggable database (PDB) recovery in progress

Cause: An attempt was made to start an Active Data Guard (ADG) recovery while PDB recovery session in progress.

Action: Try again when PDB recovery session is finished.

ORA-12976: incorrect pluggable database name

Cause: A pluggable database name is incorrectly specified. There are two cases that this may occur: - Multiple pluggable database names were specified. - None or wrong pluggable database name was specified.

Action: Specify only one and correct pluggable database name.

ORA-12977: pluggable database (PDB) recovery was not active

Cause: An attempt was made to cancel a pluggable database level managed recovery but it was not active at the time. The pluggable database was online and was part of CDB-level Active Data Guard (ADG) recovery.

Action: None

ORA-12980: checkpoint option not allowed with SET UNUSED

Cause: An attempt was made to specify checkpoint option with SET UNUSED.

Action: Remove checkpoint option.

ORA-12981: cannot drop column from an object type table

Cause: An attempt was made to drop a column from an object type table.

Action: This action is not allowed.

ORA-12982: cannot drop column from a nested table

Cause: An attempt was made to drop a column from a nested table.

Action: This action is not allowed.

ORA-12983: cannot drop all columns in a table

Cause: An attempt was made to drop all columns in a table. A table must have at least one column. If you want to remove the entire table, use the DROP TABLE command instead.

Action: Ensure that at least one column remains in the table after the DROP COLUMN operation.

ORA-12984: cannot drop partitioning column

Cause: An attempt was made to drop a column used as the partitioning key.

Action: This action is not allowed.

ORA-12985: tablespace '*string*' is read only, cannot drop column

Cause: An attempt was made to drop column from a partition/subpartition on a read only tablespace.

Action: Set the tablespace to read write and resubmit statement.

ORA-12986: columns in partially dropped state. Submit ALTER TABLE DROP COLUMNS CONTINUE

Cause: An attempt was made to access a table with columns in partially dropped state (i.e., drop column operation was interrupted).

Action: Submit ALTER TABLE DROP COLUMNS CONTINUE to complete the drop column operation before accessing the table.

ORA-12987: cannot combine drop column with other operations

Cause: An attempt was made to combine drop column with other ALTER TABLE operations.

Action: Ensure that drop column is the sole operation specified in ALTER TABLE.

ORA-12988: cannot drop column from table owned by SYS

Cause: An attempt was made to drop a column from a system table.

Action: This action is not allowed

ORA-12989: invalid value for checkpoint interval

Cause: An invalid checkpoint interval specified in statement. Checkpoint interval must be between 0 and $(2^{31}-1)$.

Action: Correct checkpoint interval and resubmit statement

ORA-12990: duplicate option specified

Cause: Duplicate option specified in statement.

Action: Remove the duplicate option and resubmit statement.

ORA-12991: column is referenced in a multi-column constraint

Cause: An attempt was made to drop a column referenced by some constraints.

Action: Drop all constraints referencing the dropped column or specify CASCADE CONSTRAINTS in statement.

ORA-12992: cannot drop parent key column

Cause: An attempt was made to drop a parent key column.

Action: Drop all constraints referencing the parent key column, or specify CASCADE CONSTRAINTS in statement.

ORA-12993: tablespace '*string*' is offline, cannot drop column

Cause: An attempt was made to drop a column from a partition/subpartition on an offline tablespace.

Action: Bring the tablespace online and resubmit statement.

ORA-12994: drop column option only allowed once in statement

Cause: An attempt was made to repeat the drop column option in a single statement.

Action: Separate drop column options into different statements and resubmit statements.

ORA-12995: no columns in partially dropped state

Cause: An attempt was made to submit DROP COLUMNS CONTINUE statement while there are no partially dropped columns.

Action: Cannot submit this statement.

ORA-12996: cannot drop system-generated virtual column

Cause: An attempt was made to drop a virtual column generated by the system.

Action: This action is not allowed.

ORA-12997: cannot drop primary key column from an index-organized table

Cause: An attempt was made to drop a primary key column from an index-organized table.

Action: This action is not allowed.

ORA-12998: Ignore errors during drop column from atb.c

ORA-12999: cannot DROP or SET UNUSED a column that has been set unused

Cause: An attempt was made to DROP or SET UNUSED a column that has already been 'set unused'.

Action: Use the DROP UNUSED COLUMNS option to remove the column.

ORA-13000: dimension number is out of range

Cause: The specified dimension was either smaller than 1 or greater than the number of dimensions encoded in the HHCODE.

Action: Ensure that the dimension number is between 1 and the maximum number of dimensions encoded in the HHCODE.

ORA-13001: dimensions mismatch error

Cause: The number of dimensions in two HHCODEs involved in a binary HHCODE operation did not match.

Action: Ensure that the number of dimensions in the HHCODEs match.

ORA-13002: specified level is out of range

Cause: The specified level is either smaller than 1 or greater than the maximum level encoded in an HHCODE.

Action: Verify that all levels are between 1 and the maximum number of levels encoded in the HHCODE.

ORA-13003: the specified range for a dimension is invalid

Cause: The specified range for a dimension was invalid.

Action: Ensure that the lower bound (lb) is less than the upper bound (ub).

ORA-13004: The specified buffer size is invalid.

Cause: The specified buffer size for a function was invalid.

Action: This is an internal error. Contact Oracle Support.

ORA-13005: recursive HHCODE function error

Cause: An error occurred in a recursively called HHCODE function.

Action: This is an internal error. Contact Oracle Support Services.

ORA-13006: the specified cell number is invalid

Cause: The cell identifier was either less than 0 or greater than $(2^{\text{ndim}} - 1)$.

Action: Ensure that the cell identifier is between 0 and $(2^{\text{ndim}} - 1)$.

ORA-13007: an invalid HEX character was detected

Cause: A character that is not in the range [0-9] or [A-F a-f] was detected.

Action: Verify that all characters in a string are in [0-9] or [A-F a-f].

ORA-13008: the specified date format has an invalid component

Cause: Part of specified date format is invalid.

Action: Verify that the date format is valid.

ORA-13009: the specified date string is invalid

Cause: The specified date string had a bad component or did not match the specified format string.

Action: Ensure that the components of the date string are valid and that the date and format strings match.

ORA-13010: an invalid number of arguments has been specified

Cause: An invalid number of arguments was specified for an SDO function.

Action: Verify the syntax of the function call.

ORA-13011: value is out of range

Cause: A specified dimension value was outside the range defined for that dimension.

Action: Ensure that all values to be encoded are within the defined dimension range.

ORA-13012: an invalid window type was specified

Cause: An invalid window type was specified.

Action: Valid window types are RANGE, PROXIMITY, POLYGON.

ORA-13013: the specified topology was not INTERIOR or BOUNDARY

Cause: A topology was specified that was not INTERIOR or BOUNDARY.

Action: Ensure that INTERIOR or BOUNDARY is used to describe the topology of the HHCODE.

ORA-13014: a topology identifier outside the range of 1 to 8 was specified

Cause: A topology identifier outside the range of 1 to 8 was specified.

Action: Specify a topology in the range of 1 to 8.

ORA-13015: the window definition is not valid

Cause: The number of values used to define the window does not correspond to the window type.

Action: Verify that the number of values used to defined the window is correct for the window type and number of dimensions.

ORA-13016: specified topology [*string*] is invalid

Cause: The specified topology did not exist in the database, or some components of the topology were missing from the database.

Action: Check the specified topology by executing the SDO_TOPO.validate_topology function.

ORA-13017: unrecognized line partition shape

Cause: The shape of a 2-D line partition could not be determined.

Action: This is an internal error. Contact Oracle Support Services.

ORA-13018: bad distance type

Cause: The specified distance type is invalid.

Action: The only supported distance functions are EUCLID and MANHATTAN.

ORA-13019: coordinates out of bounds

Cause: Vertex coordinates lie outside the valid range for specified dimension.

Action: Redefine vertex coordinates within specified boundaries.

ORA-13020: coordinate is NULL

Cause: A vertex coordinate has a NULL value.

Action: Redefine vertex coordinate to have non-NULL value.

ORA-13021: element not continuous

Cause: The coordinates defining a geometric element are not connected.

Action: Redefine coordinates for the geometric element.

ORA-13022: polygon crosses itself

Cause: The coordinates defining a polygonal geometric element represent crossing segments.

Action: Redefine coordinates for the polygon.

ORA-13023: interior element interacts with exterior element

Cause: An interior element of a geometric object interacts with the exterior element of that object.

Action: Redefine coordinates for the geometric elements.

ORA-13024: polygon has less than three segments

Cause: The coordinates defining a polygonal geometric element represent less than three segments.

Action: Redefine the coordinates for the polygon.

ORA-13025: polygon does not close

Cause: The coordinates defining a polygonal geometric element represent an open polygon.

Action: Redefine the coordinates of the polygon.

ORA-13026: unknown element type for element *string.string.string*

Cause: The SDO_ETYPE column in the *layer_SDOGEOM* table contains an invalid geometric element type value.

Action: Redefine the geometric element type in the *layer_SDOGEOM* table for the specified geometric element using one of the supported SDO_ETYPE values. See the Oracle Spatial documentation for an explanation of SDO_ETYPE and its possible values.

ORA-13027: unable to read dimension definition from *string*

Cause: There was a problem reading the dimension definition from the *layer_SDODIM* table.

Action: Verify that the *layer_SDODIM* table exists and that the appropriate privileges exist on the table. Address any other errors that might appear with the message.

ORA-13028: Invalid Gtype in the SDO_GEOMETRY object

Cause: There is an invalid SDO_GTYPE in the SDO_GEOMETRY object.

Action: Verify that the geometries have valid gtypes.

ORA-13029: Invalid SRID in the SDO_GEOMETRY object

Cause: There is an invalid SDO_SRID in the SDO_GEOMETRY object. The specified SRID may be outside the valid SRID range.

Action: Verify that the geometries have valid SRIDs.

ORA-13030: Invalid dimension for the SDO_GEOMETRY object

Cause: There is a mismatch between the dimension in the SDO_GTYPE and dimension in the SDO_GEOM_METADATA for the SDO_GEOMETRY object.

Action: Verify that the geometries have valid dimensionality.

ORA-13031: Invalid Gtype in the SDO_GEOMETRY object for point object

Cause: There is an invalid SDO_GTYPE in the SDO_GEOMETRY object where the VARRAYs are NULL but the SDO_GTYPE is not of type POINT.

Action: Verify that the geometries have valid gtypes.

ORA-13032: Invalid NULL SDO_GEOMETRY object

Cause: There are invalid SDO_POINT_TYPE or SDO_ELEM_INFO_ARRAY or SDO_ORDINATE_ARRAY fields in the SDO_GEOMETRY object.

Action: Verify that the geometries have valid fields. To specify a NULL geometry, specify the whole SDO_GEOMETRY as NULL instead of setting each field to NULL.

ORA-13033: Invalid data in the SDO_ELEM_INFO_ARRAY in SDO_GEOMETRY object

Cause: There is invalid data in the SDO_ELEM_INFO_ARRAY field of the SDO_GEOMETRY object. The triplets in this field do not make up a valid geometry.

Action: Verify that the geometries have valid data.

ORA-13034: Invalid data in the SDO_ORDINATE_ARRAY in SDO_GEOMETRY object

Cause: There is invalid data in the SDO_ORDINATE_ARRAY field of the SDO_GEOMETRY object. The coordinates in this field do not make up a valid geometry. There may be NULL values for X or Y or both.

Action: Verify that the geometries have valid data.

ORA-13035: Invalid data (arcs in geodetic data) in the SDO_GEOMETRY object

Cause: There is invalid data in the SDO_ELEM_INFO_ARRAY field of the SDO_GEOMETRY object. There are arcs in a geometry that has geodetic coordinates.

Action: Verify that the geometries have valid data.

ORA-13036: Operation [*string*] not supported for Point Data

Cause: The specified geometry function was not supported for point data.

Action: Ensure that the specified geometry function is not called on point data.

ORA-13037: SRIDs do not match for the two geometries

Cause: A spatial operation was invoked with two geometries where one geometry had an SRID and the other geometry did not have an SRID.

Action: Ensure that the spatial operations are invoked between two geometries with compatible SRIDs.

ORA-13039: failed to update spatial index for element *string.string.string*

Cause: Another error will accompany this message that will indicate the problem.

Action: Correct any accompanying errors. If no accompanying error message appears, contact Oracle Support Services.

ORA-13040: failed to subdivide tile

Cause: This is an internal error.

Action: Note any accompanying errors and contact Oracle Support Services.

ORA-13041: failed to compare tile with element *string.string.string*

Cause: The spatial relationship between a generated tile and the specified element could not be determined.

Action: This is an internal error. Verify the geometry using the `VALIDATE_GEOMETRY_WITH_CONTEXT` procedure. If the procedure does not return any errors, note any errors that accompany ORA-13041 and contact Oracle Support Services.

ORA-13042: invalid SDO_LEVEL and SDO_NUMTILES combination

Cause: An invalid combination of `SDO_LEVEL` and `SDO_NUMTILES` values was read from the `layer_SDOLAYER` table. The most likely cause is that the columns are NULL.

Action: Verify that the `SDO_LEVEL` and `SDO_NUMTILES` columns contain valid integer values as described in the Oracle Spatial documentation. Then retry the operation.

ORA-13043: failed to read metadata from the *layer_SDOLAYER* table

Cause: An error was encountered reading the layer metadata from the `layer_SDOLAYER` table.

Action: This error is usually the result of an earlier error which should also have been reported. Address this accompanying error and retry the current operation. If no accompanying error was reported, contact Oracle Support Services.

ORA-13044: the specified tile size is smaller than the tolerance

Cause: The tile size specified for fixed size tessellation is smaller than the tolerance as specified in the layer metadata.

Action: See the Oracle Spatial documentation for an explanation of tiling levels, tile size, and tiling resolution. Ensure that the tiling parameters are set such that any generated tile is always larger than or equal to a tile at the maximum level of resolution. This can be achieved by using a fewer number of tiles per geometric object or specifying a smaller tile size value than the current one.

ORA-13046: invalid number of arguments

Cause: An invalid number of arguments were specified for an `SDO_GEOM` function.

Action: See the Oracle Spatial documentation for a description of the syntax and semantics of the relevant `SDO_GEOM` function.

ORA-13047: unable to determine ordinate count from table *layer_SDOLAYER*

Cause: An `SDO_GEOM` function was unable to determine the number of ordinates for the SDO layer `layer`.

Action: Verify that the `layer_SDOLAYER` table has a valid value for the column `SDO_ORDCNT`. Then retry the operation.

ORA-13048: recursive SQL fetch error

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13049: unable to determine tolerance value from table *layer_SDO*DIM

Cause: An SDO_GEOM function was unable to determine the tolerance value for the SDO layer *layer*.

Action: Verify that the *layer_SDO*DIM table has a valid value for the column SDO_TOLERANCE.

ORA-13050: unable to construct spatial object

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13051: failed to initialize spatial object

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13052: unsupported geometric type for geometry *string.string*

Cause: The geometry type for a specific instance in a *layer_SDO*GEOM table is not among the set of geometry types supported by Oracle Spatial.

Action: Check the Oracle Spatial documentation for the list of supported geometry types and workarounds that permit the storage and retrieval of non-supported geometric types with the SDO schema.

ORA-13053: maximum number of geometric elements in argument list exceeded

Cause: The maximum number of geometric elements that can be specified in the argument list for an SDO_GEOM function was exceeded.

Action: Check the Oracle Spatial documentation for the syntax of the SDO_GEOM function and use fewer arguments to describe the geometry, or check the description of the SDO_WINDOW package for a workaround that permits storing the object in a table and then using it in as an argument in a call to the SDO_GEOM function.

ORA-13054: recursive SQL parse error

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13055: Oracle object *string* does not exist in specified table

Cause: The requested object is not present in the specified table.

Action: Verify the syntax of the function or procedure that reported this error and verify that the object does indeed exist in the specified table. Then retry the operation.

ORA-13056: Spatial Reference ID (SRID) does not exist: NULL.

Cause: The operation required a valid SRID but none was specified.

Action: Contact Oracle Support Services.

ORA-13057: Spatial Reference ID (SRID) *number* does not exist.

Cause: The specified SRID is not known.

Action: Ensure that the specified SRID was valid.

ORA-13058: Spatial Reference ID (SRID) does not exist.

Cause: The SRID for the operation could not be determined.

Action: Ensure that the SRID for the operation is valid.

ORA-13059: invalid WRK_TBLSPC parameter

Cause: An invalid "WRK_TBLSPC" parameter value was specified.

Action: Ensure that the specified "WRK_TBLSPC" exists and is accessible to the current user.

ORA-13060: topology with the name *string* already exists

Cause: The specified topology name was not unique in the database.

Action: Verify that the CREATE_TOPOLOGY call specifies the correct topology name and that the procedure is invoked from the correct schema.

ORA-13061: topology with the name *string* does not exist

Cause: The specified topology did not exist in the database.

Action: Verify that the current procedure/function call specifies the correct schema and topology name.

ORA-13062: topology IDs do not match in the feature table and the topology

Cause: The specified topology ID in the feature table did not match the topology ID stored in the topology metadata.

Action: Verify that the specified topology ID matches the topology ID stored in the topology metadata.

ORA-13063: relationship information table is missing data for feature table [*string*]

Cause: The topology relationship information table (xxx_RELATION\$) did not have the matching partition corresponding to the feature table.

Action: Ensure the correct topology IDs and names are specified in the call to register the feature table with the topology.

ORA-13064: relationship information table has inconsistent data for feature table [*string*]

Cause: The topology_id and tg_layer_id values stored in the feature table did not match the values stored in the topology relationship information table (xxx_RELATION\$).

Action: Ensure that the correct feature tables are specified in the call to register the feature table with the topology.

ORA-13065: cannot delete a child layer with a parent layer

Cause: A call was made to delete a feature layer which has a dependent layer defined on it.

Action: Ensure that all dependent feature layers are deleted before deleting the current feature layer.

ORA-13066: wrong feature geometry or element type

Cause: The SDO_TOPO_GEOMETRY object had the wrong geometry and/or element type.

Action: Correct the geometry and/or element type in the SDO_TOPO_GEOMETRY object.

ORA-13067: operator requires both parameters from the same topology

Cause: Both SDO_TOPO_GEOMETRY parameters did not come from the same topology.

Action: Ensure that both of the parameters to the operator are from the same topology. If this is not possible, consider using a signature of the operator that does not use two SDO_TOPO_GEOMETRY parameters.

ORA-13068: wrong table or column name in SDO_TOPO_GEOMETRY constructor

Cause: An SDO_TOPO_GEOMETRY constructor was invoked with incorrect parameters for table name and/or column name.

Action: Fix the parameters in the call and try again.

ORA-13069: incorrect degree value for SDO_GEOMETRY object

Cause: An incorrect degree value ≤ 1 was passed for a Non-Uniform Rational B-Spline curve.

Action: Correct the degree value for the Non-Uniform Rational B-Spline curve.

ORA-13070: incorrect number of control points for SDO_GEOMETRY object

Cause: An incorrect number of control points was passed for a Non-Uniform Rational B-Spline curve.

Action: Correct the number of control points for the Non-Uniform Rational B-Spline curve.

ORA-13071: incorrect control points, degree for SDO_GEOMETRY object

Cause: An incorrect number of control points and degree was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure that the number of control points is greater than the degree for a Non-Uniform Rational B-Spline curve.

ORA-13072: incorrect number of knots for SDO_GEOMETRY object

Cause: An incorrect number of knot values was passed for a Non-Uniform Rational B-Spline curve.

Action: Correct the number of knot values passed for the Non-Uniform Rational B-Spline curve.

ORA-13073: incorrect control point weight value for a SDO_GEOMETRY object

Cause: An incorrect value was passed for the weight of a control point of a Non-Uniform Rational B-Spline curve.

Action: Ensure all weight values for control points are positive.

ORA-13074: incorrect knot value for SDO_GEOMETRY object

Cause: An incorrect knot value was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure the knot values passed for the Non-Uniform Rational B-Spline curve are in non-decreasing order.

ORA-13075: incorrect knot value sequence for SDO_GEOMETRY object

Cause: An incorrect knot value sequence was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure the knot values passed for the Non-Uniform Rational B-Spline curve have no more than a sequence of 'k' consecutive identical values or no more than 'k + 1' consecutive same values at the beginning or end of Non-Uniform Rational B-Spline curve.

ORA-13076: incorrect knot value sequence for SDO_GEOMETRY object

Cause: An incorrect knot value sequence was passed for a Non-Uniform Rational B-Spline curve.

Action: Ensure the knot value sequence passed for the Non-Uniform Rational B-Spline curve is a normalized vector beginning at zero and ending at one.

ORA-13077: incorrect start or end point for subelement of a compound curve

Cause: The end point of a subelement for a compound curve was not equal to the start point of the next subelement, or the start point of a subelement was not equal to the end point of the previous subelement and one of the subelements was a NURBS curve.

Action: Ensure that the end point of each subelement is equal to the start point of the next subelement and that the start point of each subelement is equal to the end point of the previous subelement when one of the subelements is a NURBS curve.

ORA-13078: cannot commit a distributed transaction involving spatial index

Cause: An attempt was made to commit changes to a spatial table in a distributed transaction, but spatial indexes are not supported in distributed transactions.

Action: Perform all transactional changes to spatial tables (tables containing spatial geometry columns) in a local non-distributed transaction. For more information about this restriction, refer to the Oracle Spatial Data and Graph documentation.

ORA-13079: invalid schema name

Cause: The specified schema name was invalid.

Action: Check the ALL_SDO_INDEX_METADATA view to ensure that the schema name is valid.

ORA-13080: invalid index name

Cause: The specified spatial index name was invalid.

Action: Check the ALL_SDO_INDEX_METADATA view to ensure that the spatial index name is valid.

ORA-13081: invalid index table name

Cause: The specified index table name was invalid.

Action: Check the ALL_SDO_INDEX_METADATA view to ensure that the index table name is valid. The index table name typically starts with "MDRT_" prefix.

ORA-13082: invalid index partition name

Cause: The specified index partition name was invalid.

Action: Check the ALL_SDO_INDEX_METADATA view to ensure that the index partition name was valid.

ORA-13083: invalid index parameters

Cause: The specified index parameter or parameter combination was invalid.

Action: Check the list of index parameters to ensure that they are correctly specified and valid for the corresponding index operation.

ORA-13084: invalid table type: index organization not supported

Cause: An attempt was made to create the spatial index on an index-organized table (IOT).

Action: Spatial indexes cannot be created on index-organized tables.

ORA-13085: invalid column name

Cause: The specified column name was invalid.

Action: Check the ALL_SDO_INDEX_METADATA view to ensure that the index column name is valid. If the column name is a function, ensure the function name is properly spelled and case-sensitive.

ORA-13086: geometry cannot be an optimized geodetic MBR

Cause: An attempt was made to use optimized geodetic minimum bounding rectangles (MBR).

Action: The object tracker cannot be used on objects that are composed of optimized MBRs.

ORA-13087: incorrect number of query columns

Cause: The number of table columns specified for the PointInPolygon() function was incorrect.

Action: Ensure that there are at least two columns specified, and that the first two columns are of the NUMBER type, representing the X and Y coordinates.

ORA-13088: SQL cursor rows have been pre-fetched

Cause: It has been detected that 1 or more rows have been pre-fetched from the specified query cursor.

Action: One or more rows were pre-fetched from the specified query cursor.

ORA-13089: invalid tolerance

Cause: The specified tolerance value was invalid.

Action: The tolerance value must be greater than 0.0.

ORA-13090: geometry must be 2D

Cause: The specified geometry is not two-dimensional.

Action: Ensure the geometry is two-dimensional.

ORA-13091: unable to process query on geodetic MBR

Cause: The operation is not valid using geodetic MBRs.

Action: Ensure the geometry is not using geodetic MBRs.

ORA-13092: unable to process query

Cause: The operation failed.

Action: Contact Oracle Support Services.

ORA-13093: polygon Rings exceeded half the area of earth

Cause: The polygon ring size exceeded half the area of the earth.

Action: Contact Oracle Support Services.

ORA-13094: invalid cursor

Cause: The specified query cursor was invalid.

Action: Contact Oracle Support Services.

ORA-13095: Element number is wrong

Cause: The specified element number is incorrect.

Action: Ensure the specified element number is valid for the geometry.

ORA-13096: Wrong geometry type

Cause: The specified geometry type is incorrect.

Action: Ensure the specified geometry type (GTYPE) is valid for the geometry.

ORA-13097: wrong element type

Cause: The specified element type is incorrect.

Action: Ensure the specified element type (GTYPE) is valid for the geometry.

ORA-13098: more elements than specified

Cause: There are more elements than were specified.

Action: Ensure the specified number of elements is valid for the geometry.

ORA-13099: wrong RING topology

Cause: The geometry ring topology (inner or outer) is wrong.

Action: Contact Oracle Support Services.

ORA-13100: feature does not exist

Cause: The feature does not exist.

Action: Contact Oracle Support Services.

ORA-13101: invalid ptn_type parameter

Cause: An incorrect ptn_type parameter was specified.

Action: Ensure the ptn_type parameter value is correct.

ORA-13102: invalid ptn_capacity parameter

Cause: An incorrect ptn_capacity parameter was specified.

Action: Ensure the ptn_capacity parameter value is correct.

ORA-13103: invalid numdim parameter

Cause: An incorrect numdim parameter was specified.

Action: Ensure the numdim parameter value is correct.

ORA-13104: null values not allowed in input data

Cause: Null values cannot be specified in the supplied input data.

Action: Ensure that all null-values have been removed from the data.

ORA-13105: invalid Parameters for Partition_Table

Cause: One or more parameters for the Partition_Table() function are invalid.

Action: Ensure that the identified parameters are correctly specified.

ORA-13106: invalid MASK parameter

Cause: The specified MASK parameter was invalid.

Action: Ensure that the MASK parameter values are correctly specified.

ORA-13107: operation not supported for Non-Uniform Rational B-Spline type

Cause: This operation cannot be executed for Non-Uniform Rational B-Spline curves.

Action: Specify a geometry that does not contain a Non-Uniform Rational B-Spline curve type.

ORA-13108: spatial table *string* not found

Cause: The specified spatial table did not exist.

Action: Check the spatial data dictionary to ensure that the table is registered.

ORA-13109: spatial table *string* exists

Cause: The specified spatial table is registered in the Spatial data dictionary.

Action: Remove the existing table from the Spatial data dictionary or use a different name.

ORA-13110: cannot drop topology with associated topo_geometry tables

Cause: The drop_topology procedure was invoked for a topology that has associated topo_geometry layers with it.

Action: Delete the topo_geometry layers from the topology before dropping the topology. Use SDO_TOPO.delete_topo_geometry_layer to delete topo_geometry layers from the topology.

ORA-13111: cannot add topo_geometry layer [*string*] to topology

Cause: It was not possible to add the specified TOPO_GEOMETRY layer to the topology.

Action: Ensure that the TOPO_GEOMETRY layer table exists in the database.

ORA-13112: cannot delete topo_geometry layer [*string*] from topology

Cause: It was not possible to delete the specified topo_geometry layer from the topology.

Action: Check USER_SDO_TOPO_METADATA to see if the specified topo_geometry layer is part of the topology. Only those topo_geometry layers which are part of the topology can be deleted from it.

ORA-13113: invalid tg_layer_id in sdo_topo_geometry constructor

Cause: An invalid layer_id was passed to the SDO_TOPO_GEOMETRY constructor.

Action: Valid layer_ids are obtained by adding a topo_geometry layer to the topology. Check USER_SDO_TOPO_METADATA to find out the layer_id for an existing topo_geometry layer.

ORA-13114: [*string*]_{NODE}\$ table does not exist

Cause: The NODE\$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

ORA-13115: [*string*]_{EDGE}\$ table does not exist

Cause: The EDGE\$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

ORA-13116: [*string*]_{FACE}\$ table does not exist

Cause: The FACE\$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

ORA-13117: [*string*]_{RELATION}\$ table does not exist

Cause: The RELATION\$ table for the topology did not exist in the database.

Action: There is a severe corruption of the topology. Call Oracle Support Services with the error number.

ORA-13118: invalid node_id [*string*]

Cause: A topology node operation was invoked with an invalid node_id.

Action: Check the topology node\$ table to see if the specified node_id exists in the topology.

ORA-13119: invalid edge_id [*string*]

Cause: A topology edge operation was invoked with an invalid edge_id.

Action: Check the topology edge\$ table to see if the specified edge_id exists in the topology.

ORA-13120: invalid face_id [*string*]

Cause: A topology face operation was invoked with an invalid face_id.

Action: Check the topology face\$ table to see if the specified face_id exists in the topology.

ORA-13121: layer type mismatch with topo_geometry layer type

Cause: The tg_type in SDO_TOPO_GEOMETRY constructor did not match the type specified for the layer.

Action: Check the USER_SDO_TOPO_METADATA view to see the layer type for the layer and use it in the constructor.

ORA-13122: invalid topo_geometry specified

Cause: The SDO_TOPO_GEOMETRY object passed into the function/operator was not valid.

Action: Check the SDO_TOPO_GEOMETRY object and verify that it is a valid topo_geometry object.

ORA-13123: invalid *TOPOLOGY* name specified

Cause: The create_topo operation requires a unique TOPOLOGY name, that already does not exist in the database.

Action: Check to see if there is already an entry in the USER_SDO_TOPO_METADATA (or the MDSYS.SDO_TOPO_METADATA_TABLE) with this topology name.

ORA-13124: unable to determine column id for column *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13125: partition key is already set

Cause: A partition key is already set for the spatial table.

Action: Only one partition key can be specified per spatial table.

ORA-13126: unable to determine class for spatial table *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13127: failed to generate target partition

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13128: current tiling level exceeds user specified tiling level

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13129: HHCODE column *string* not found

Cause: The specified spatial column does not exist.

Action: Verify that the specified column is a spatial column by checking the Spatial data dictionary.

ORA-13135: failed to alter spatial table

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13136: null common code generated

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13137: failed to generate tablespace sequence number

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13138: could not determine name of object *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13139: could not obtain column definition for *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13140: invalid target type

Cause: The specified target type is not valid.

Action: Substitute a valid target type. Valid target types are TABLE and VIEW.

ORA-13141: invalid RANGE window definition

Cause: The RANGE window specified is not correctly defined.

Action: A RANGE window is defined by specifying the lower and upper boundary of each dimension as a pair of values (e.g.: lower_bound1,upper_bound1,lower_bound2,upper_bound2,...). There should be an even number of values.

ORA-13142: invalid PROXIMITY window definition

Cause: The PROXIMITY window specified is not correctly defined.

Action: A PROXIMITY window is defined by specifying a center point and a radius. The center point is defined by ND values. There should be ND+1 values.

ORA-13143: invalid POLYGON window definition

Cause: The POLYGON window specified is not correctly defined.

Action: A POLYGON window is defined by specifying N pairs of values that represent the vertices of the polygon. There should be an even number of values.

ORA-13144: target table *string* not found

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13145: failed to generate range list

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13146: could not find table substitution variable *string*

Cause: The partition name substitution variable %s was not found in the SQL filter.

Action: The substitution variable %s must be in the SQL filter to indicate where that partition name should be placed.

ORA-13147: failed to generate MBR

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13148: failed to generate SQL filter

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13149: failed to generate next sequence number for spatial table *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13150: failed to insert exception record

Cause: Operation failed to insert a record into the exception table.

Action: Fix any other errors reported.

ORA-13151: failed to remove exception record

Cause: Operation failed to remove a record from the exception table.

Action: Fix any other errors reported.

ORA-13152: invalid HHCODE type

Cause: Specified HHCODE type is not valid.

Action: Substitute a valid HHCODE type. Valid HHCODE types are POINT and LINE.

ORA-13153: invalid high water mark specified

Cause: The high water mark was not greater than or equal to zero.

Action: Ensure that the high water mark is an integer greater than or equal to zero.

ORA-13154: invalid precision specified

Cause: The precision specified is out of range.

Action: The precision must be an integer greater than or equal to zero.

ORA-13155: invalid number of dimensions specified

Cause: The number of dimensions specified is out of range.

Action: The number of dimension must be between 1 and 32.

ORA-13156: table to be registered *string.string* is not empty

Cause: The specified table contained rows.

Action: Ensure that the table to be registered is empty.

ORA-13157: Oracle error *ORAstring* encountered while *string*

Cause: The specified Oracle error was encountered.

Action: Correct the Oracle error.

ORA-13158: Oracle object *string* does not exist.

Cause: The specified object did not exist.

Action: Verify that the specified object exists.

ORA-13159: Oracle table *string* already exists

Cause: The specified table already exists.

Action: Drop the specified table.

**ORA-13181: unable to determine length of column
*string*_SDOINDEX.SDO_CODE**

Cause: The length of the SDO_CODE column in the *layer*_SDOINDEX table could not be determined.

Action: Ensure that the *layer*_SDOINDEX table exists with the SDO_CODE column. Verify that the appropriate privileges exist on the table. Then retry the operation.

ORA-13182: failed to read element *string.string.string*

Cause: The specified element could not be read from the *layer*_SDOGEOM table.

Action: Verify that the specified element exists in the table. Then retry the operation.

ORA-13183: unsupported geometric type for geometry *string.string*

Cause: The geometry type in the *layer*_SDOGEOM table is unsupported.

Action: Modify the geometry type to be one of the supported types.

ORA-13184: failed to initialize tessellation package

Cause: Initialization of the tessellation package failed.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13185: failed to generate initial HHCODE

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13186: fixed tile size tessellation failed

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13187: subdivision failed

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13188: cell decode failed

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13189: recursive SQL parse failed

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13190: recursive SQL fetch failed

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13191: failed to read SDO_ORDCNT value

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13192: failed to read number of element rows

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13193: failed to allocate space for geometry

Cause: There was insufficient memory to read the geometry from the database.

Action: Validate the geometry. Record the error messages that are returned and contact Oracle Support Services.

ORA-13194: failed to decode supercell

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13195: failed to generate maximum tile value

Cause: This is an internal error.

Action: Record the error messages that are returned and contact Oracle Support Services.

ORA-13196: failed to compute supercell for element *string.string.string*

Cause: The system was unable to compute the minimum bounding HHCODE or supercell for the geometry.

Action: Another error might accompany this error. Correct the accompanying error. Also, validate the geometry for correctness.

ORA-13197: element *string.string.string* is out of range

Cause: Tessellation did not generate any tiles for this element. This error could be caused if the geometry definition puts the geometry outside the domain defined in the *layer_SDODIM* table.

Action: Verify that the geometry is valid and within the defined domain.

ORA-13198: Spatial error: *string*

Cause: Internal error in some Oracle Spatial stored procedure.

Action: Record the sequence of procedure calls or events that preceded this error, and contact Oracle Support Services if the error message text does not clearly specify the cause of the error.

ORA-13199: *string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-13200: internal error [*string*] in spatial indexing.

Cause: This is an internal error.

Action: Contact Oracle Support Services with the exact error text.

ORA-13201: invalid parameters supplied in CREATE INDEX statement

Cause: An error was encountered while trying to parse the parameters clause for the spatial CREATE INDEX statement.

Action: Check the Oracle Spatial documentation for the number, syntax, and semantics of expected parameters for spatial index creation.

ORA-13202: failed to create or insert into the SDO_INDEX_METADATA table

Cause: An error was encountered while trying to create the SDO_INDEX_METADATA table or insert data into it.

Action: Verify that the current user has CREATE TABLE privilege and that the user has sufficient quota in the default or specified tablespace.

ORA-13203: failed to read USER_SDO_GEOM_METADATA view

Cause: An error encountered while trying to read the USER_SDO_GEOM_METADATA view.

Action: Check that USER_SDO_GEOM_METADATA has an entry for the current geometry table.

ORA-13204: failed to create spatial index table

Cause: An error was encountered while trying to create the index table.

Action: Check that user has CREATE TABLE privilege in the current schema and that the user has sufficient quota in the default or specified tablespace.

ORA-13205: internal error while parsing spatial parameters

Cause: An internal error was encountered while parsing the spatial parameters.

Action: Check that the parameters passed in the parameter string are all valid.

ORA-13206: internal error [*string*] while creating the spatial index

Cause: An internal error was encountered while creating the spatial index.

Action: Contact Oracle Support Services with the exact error text.

ORA-13207: incorrect use of the [*string*] operator

Cause: An error was encountered while evaluating the specified operator.

Action: Check the parameters and the return type of the specified operator.

ORA-13208: internal error while evaluating [*string*] operator

Cause: An internal error was encountered.

Action: Contact Oracle Support Services with the exact error text.

ORA-13209: internal error while reading SDO_INDEX_METADATA table

Cause: An internal error was encountered while trying to read the SDO_INDEX_METADATA table.

Action: Contact Oracle Support Services. Note this and accompanying error numbers.

ORA-13210: error inserting data into the index table

Cause: An error was encountered while trying to insert data into the index table. Likely causes are: - Insufficient quota in the current tablespace - User does not appropriate privileges

Action: Check the accompanying error messages.

ORA-13211: failed to tessellate the window object

Cause: An internal error was encountered while trying to tessellate the window object.

Action: Verify the geometric integrity of the window object using the `VALIDATE_GEOMETRY_WITH_CONTEXT` procedure.

ORA-13212: failed to compare tile with the window object

Cause: The spatial relationship between a generated tile and the specified window object could not be determined.

Action: This is an internal error. Verify the geometry using the `VALIDATE_GEOMETRY_WITH_CONTEXT` procedure. If the procedure does not return any errors, note any accompanying errors and contact Oracle Support Services.

ORA-13213: failed to generate spatial index for window object

Cause: Another error, indicating the real cause of the problem, should accompany this error.

Action: Correct any accompanying errors. If no accompanying error message appears, contact Oracle Support Services.

ORA-13214: failed to compute supercell for window object

Cause: The system was unable to compute the minimum bounding tile or supercell for the geometry.

Action: Another error might accompany this error. Correct the accompanying error. Also, validate the geometry for correctness.

ORA-13215: window object is out of range

Cause: Tessellation did not generate any tiles for this geometry. This error could be caused if the geometry definition puts the geometry outside the domain defined in the `USER_SDO_GEOM_METADATA` view.

Action: Verify that the geometry is valid and within the defined domain.

ORA-13216: failed to update spatial index

Cause: Another error will accompany this message that will indicate the problem.

Action: Correct any accompanying errors. If no accompanying error message appears, contact Oracle Support Services.

ORA-13217: invalid parameters supplied in ALTER INDEX statement

Cause: An error was encountered while trying to parse the parameters clause for the spatial `ALTER INDEX` statement.

Action: Check the Oracle Spatial documentation for the number, syntax, and semantics of expected parameters for the spatial `ALTER INDEX` statement.

ORA-13218: max number of supported index tables reached for [string] index

Cause: An add_index parameter was passed to ALTER INDEX when the number of existing index tables is already at maximum.

Action: Delete one of the index tables before adding another index table.

ORA-13219: failed to create spatial index table [string]

Cause: An error was encountered while trying to create the index table.

Action: There is a table in the index's schema with the specified name. The CREATE INDEX statement will try to create an index table with this name. Either rename this table or change the name of the index.

ORA-13220: failed to compare tile with the geometry

Cause: The spatial relationship between a generated tile and the specified geometry could not be determined.

Action: This is an internal error. Validate the geometry using the VALIDATE_GEOMETRY_WITH_CONTEXT procedure. If the procedure does not return any errors, note any errors that accompany ORA-13220 and contact Oracle Support Services.

ORA-13221: unknown geometry type in the geometry object

Cause: The SDO_GTYPE attribute in the geometry object contains an invalid value

Action: Redefine the geometric type in the geometry table using one of the supported SDO_GTYPE values. See the Oracle Spatial documentation for an explanation of SDO_GTYPE and its possible values.

ORA-13222: failed to compute supercell for geometry in string

Cause: The system was unable to compute the minimum bounding tile or supercell for a geometry in the specified table.

Action: Another error might accompany this error. Correct the accompanying error. Also, validate the geometry for correctness.

ORA-13223: duplicate entry for string in SDO_GEOM_METADATA

Cause: There are duplicate entries for the given table and column value pair in the USER_SDO_GEOM_METADATA view.

Action: Check that the specified table and geometry column names are correct. There should be only one entry per table, geometry column pair in the USER_SDO_GEOM_METADATA view.

ORA-13224: zero tolerance specified for layer in USER_SDO_GEOM_METADATA

Cause: A tolerance of zero or NULL was supplied for a layer in the USER_SDO_GEOM_METADATA view.

Action: Check the tolerance specified to ensure that it is a positive value.

ORA-13225: specified index table name is too long for a spatial index

Cause: An index table name is specified which is longer than the supported length of the spatial index table name.

Action: Check the supported size of the index table name and reduce the size of the index name.

ORA-13226: interface not supported without a spatial index

Cause: The geometry table does not have a spatial index.

Action: Verify that the geometry table referenced in the spatial operator has a spatial index on it.

ORA-13227: SDO_LEVEL values for the two index tables do not match

Cause: The SDO_LEVEL values for the two index tables used in the spatial join operator do not match.

Action: Verify that two compatible indexes are used for the spatial join operator. Quadtree indexes are compatible if they have the same SDO_LEVEL and SDO_NUMTILES values

ORA-13228: spatial index create failed due to invalid type

Cause: An attempt was made to create a spatial index on a column of type other than SDO_GEOMETRY.

Action: Ensure that the index is created on a column of type SDO_GEOMETRY.

ORA-13230: failed to create temporary table [*string*] during R-tree creation

Cause: The specified temporary table either already exists or there is not enough tablespace.

Action: Delete the table if it already exists and verify if the current user has CREATE TABLE privileges and has sufficient space in the default or specified tablespace.

ORA-13231: failed to create index table [*string*] during R-tree creation

Cause: The specified index table either already exists or there is not enough tablespace.

Action: Delete the table if it already exists and verify if the current user has CREATE TABLE privileges and has sufficient space in the default or specified tablespace. If that fails to correct the problem, contact Oracle Support Services.

ORA-13232: failed to allocate memory during R-tree creation

Cause: This feature assumes a minimum of 64K memory for bulk creation.

Action: Create the index for a small subset of the data. Then, use transactional insert operations for the rest of the data.

ORA-13233: failed to create sequence number [*string*] for R-tree

Cause: The specified sequence number exists.

Action: Delete the sequence object, or contact Oracle Support Services.

ORA-13234: failed to access R-tree-index table [*string*]

Cause: The index table is either deleted or corrupted.

Action: Rebuild the index or contact Oracle Support Services with accompanying error messages.

ORA-13236: internal error in R-tree processing: [*string*]

Cause: An internal error occurred in R-tree processing.

Action: Contact Oracle Support Services with the message text.

ORA-13237: internal error during R-tree concurrent updates: [string]

Cause: An inconsistency is encountered during concurrent updates, possibly due to the use of serializable isolation level.

Action: Change the isolation level to "read committed" using the ALTER SESSION statement, or contact Oracle Support Services with the message text.

ORA-13238: spatial journal cache enabled; query requires transaction commit

Cause: The spatial transaction journal cache was enabled. When enabled, spatial functions that require use of the spatial index could not be used when uncommitted transaction data existed.

Action: Commit or roll back the current transaction, or flush the spatial transaction journal cache using the PL/SQL "SDO_UTIL.INVALIDATE_GTT_CACHE" procedure.

ORA-13239: sdo_dimensionality not specified during n-d R-tree creation

Cause: An error occurred in reading the dimensionality parameter

Action: Check the documentation for a valid range, and specify the dimensionality as a parameter.

ORA-13240: specified dimensionality greater than that of the query mbr

Cause: An error occurred because of too few values in the query minimum bounding rectangle (MBR).

Action: Omit the dimensionality, or use the dimensionality of the query.

ORA-13241: specified dimensionality does not match that of the data

Cause: An error occurred because the dimensionality specified in the CREATE INDEX statement does not match that of the data.

Action: Change the statement to reflect the data dimensionality.

ORA-13243: specified operator is not supported for 3- or higher-dimensional R-tree

Cause: Currently, an R-tree index with three or more index dimensions can be used only with the SDO_FILTER operator.

Action: Use the SDO_FILTER operator, and check the documentation for the querytype parameter for SDO_FILTER; or contact Oracle Support Services.

ORA-13249: string

Cause: An internal error was encountered in the extensible spatial index component. The text of the message is obtained from some other server component.

Action: Contact Oracle Support Services with the exact error text.

ORA-13250: insufficient privileges to modify metadata table entries

Cause: The user requesting the operation does not have the appropriate privileges on the referenced tables.

Action: Check that the specified feature and geometry table names are correct, and then verify that the current user has at least SELECT privilege on those tables.

ORA-13251: duplicate entry string in metadata table

Cause: The specified entry already exists in the metadata table.

Action: Check that the specified feature and geometry table names are correct. A feature-geometry table association should be registered only once.

ORA-13260: layer table *string* does not exist

Cause: Data migration source table *layer_SDOGEOM* does not exist.

Action: Ensure that the specified layer name is correct and that the corresponding spatial layer tables exist in the current schema.

ORA-13261: geometry table *string* does not exist

Cause: The specified geometry table does not exist in the current schema.

Action: Create a table containing a column of type SDO_GEOMETRY and a column of type NUMBER for the GID values.

ORA-13262: geometry column *string* does not exist in table *string*

Cause: The specified table does not have a column of type SDO_GEOMETRY.

Action: Alter or re-create the table such that it includes a column of type SDO_GEOMETRY and a column of type NUMBER.

ORA-13263: column *string* in table *string* is not of type SDO_GEOMETRY

Cause: The column intended for storing the geometry is not of type SDO_GEOMETRY.

Action: Alter the column definition to be of type SDO_GEOMETRY.

ORA-13264: geometry identifier column *string* does not exist in table *string*

Cause: The specified table does not contain a GID column.

Action: Confirm that the GID column name was correctly specified and that it exists in the specified table.

ORA-13265: geometry identifier column *string* in table *string* is not of type NUMBER

Cause: GID column is not of type NUMBER.

Action: Alter the table definition such that the column containing the geometry identifier (GID) is of type NUMBER.

ORA-13266: error inserting data into table *string*

Cause: An OCI error occurred, or the user has insufficient quota in the active tablespace, or the rollback segments are too small.

Action: There should be an accompanying error message that indicates the cause of the problem. Take appropriate action to correct the indicated problem.

ORA-13267: error reading data from layer table *string*

Cause: There was an error reading the geometry data from the *layer_SDOGEOM* table.

Action: Verify that *layer_SDOGEOM* and *layer_SDODIM* exist. If they do exist, run VALIDATE_LAYER_WITH_CONTEXT on the specified layer.

ORA-13268: error obtaining dimension from USER_SDO_GEOM_METADATA

Cause: There is no entry in the USER_SDO_GEOM_METADATA view for the specified geometry table.

Action: Insert an entry for the destination geometry table with the correct dimension information.

ORA-13269: internal error [*string*] encountered when processing geometry table
Cause: An internal error occurred.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13270: OCI error *lnstring*

Cause: An OCI error occurred while processing the layer or geometry tables.

Action: Take the appropriate steps to correct the OCI-specific error.

ORA-13271: error allocating memory for geometry object

Cause: Insufficient memory.

Action: Make more memory available to the current session/process.

ORA-13272: geometric object *string* in table *string* is invalid

Cause: The specified object failed the geometric integrity checks performed by the validation function.

Action: Check the Oracle Spatial documentation for information about the geometric integrity checks performed by `VALIDATE_GEOMETRY_WITH_CONTEXT` and correct the geometry definition if required.

ORA-13273: dimension metadata table *string* does not exist

Cause: The *layer_SDODIM* table does not exist.

Action: Verify that the specified layer name is correct and that the *layer_SDODIM* table exists in the current schema.

ORA-13274: operator invoked with non-compatible SRIDs

Cause: A spatial operator was invoked with a window geometry with an SRID but the layer has no SRID; or the window has no SRID but the layer has an SRID.

Action: Ensure that the layer and window both have an SRID or that they both do not have an SRID.

ORA-13275: spatial index creation failure on unsupported type

Cause: An attempt was made to create a spatial index on a column that was not of type `SDO_GEOMETRY`.

Action: A spatial index can only be created on a column of type `SDO_GEOMETRY`. Ensure that the indexed column is of type `SDO_GEOMETRY`.

ORA-13276: internal error [*string*] in coordinate transformation

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13278: failure to convert SRID to native format

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13281: failure in execution of SQL statement to retrieve WKT

Cause: OCI internal error, or SRID does not match a table entry.

Action: Check that a valid SRID is being used.

ORA-13282: failure on initialization of coordinate transformation

Cause: Parsing error on source or destination coordinate system WKT, or incompatible coordinate systems.

Action: Check the validity of the WKT for table entries, and check if the requested transformation is valid.

ORA-13283: failure to get new geometry object for conversion in place

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13284: failure to copy geometry object for conversion in place

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13285: Geometry coordinate transformation error

Cause: A coordinate pair was out of valid range for a conversion/projection.

Action: Check that data to be transformed is consistent with the desired conversion/projection.

ORA-13287: can't transform unknown gtype

Cause: A geometry with a gtype of ≤ 0 was specified for transformation. Only a gtype ≥ 1 is allowed.

Action: Check the Oracle Spatial documentation for SDO_GTYPE values, and specify a value whose last digit is 1 or higher.

ORA-13288: point coordinate transformation error

Cause: An internal error occurred while transforming points.

Action: Check the accompanying error messages.

ORA-13290: the specified unit is not supported

Cause: An Oracle Spatial function was called with an unknown UNIT value.

Action: Check Spatial documentation for the supported units, and call the function with the correct UNIT parameter.

ORA-13291: conversion error between the specified unit and standard unit

Cause: Cannot convert the specified unit from/to standard unit for linear distance, angle, or area.

Action: Check the unit specification and respecify it.

ORA-13292: incorrect ARC_TOLERANCE specification

Cause: When a SDO_BUFFER or SDO_AGGR_BUFFER function is called on a geodetic geometry, or SDO_ARC_DENSIFY is called, ARC_TOLERANCE must be specified, and it should not be less than the tolerance specified for the geometry.

Action: Check the ARC_TOLERANCE specification and ensure that it is correct.

ORA-13293: cannot specify unit for geometry without a georeferenced SRID

Cause: An Oracle Spatial function with a UNIT parameter was called on a geometry without a georeferenced SRID.

Action: Ensure that spatial functions with UNIT parameters are only called on geometries with georeferenced SRIDs.

ORA-13294: cannot transform geometry containing circular arcs

Cause: An attempt was made to transform a 3-point representation of a circular arc without distortion.

Action: Ensure that a geometry does not contain circular arcs.

ORA-13295: geometry objects are in different coordinate systems

Cause: An Oracle Spatial function was called with two geometries that have different SRIDs.

Action: Transform geometry objects to be in the same coordinate system and call the spatial function.

ORA-13296: incorrect coordinate system specification

Cause: Wrong numbers in WKT for Earth radius or flattening for the current SRID.

Action: Check WKT in the MDSYS.CS_SRS table for Earth radius and inverse flattening.

ORA-13300: single point transform error

Cause: Low-level coordinate transformation error trap.

Action: Check the accompanying error messages.

ORA-13303: failure to retrieve a geometry object from a table

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13304: failure to insert a transformed geometry object in a table

Cause: OCI internal error.

Action: Contact Oracle Support Services with the exact error message text.

ORA-13330: invalid MASK

Cause: The MASK passed to the RELATE function is not valid.

Action: Verify that the mask is not NULL. See the Oracle Spatial documentation for a list of supported masks.

ORA-13331: invalid LRS segment

Cause: The given LRS segment was not a valid line string.

Action: A valid LRS geometric segment is a line string geometry in Oracle Spatial. It could be a simple or compound line string (made of lines or arcs, or both). The dimension information must include the measure dimension as the last element in the

Oracle Spatial metadata. Currently, the number of dimensions for an LRS segment must be greater than 2 (x/y or longitude/latitude, plus measure)

ORA-13332: invalid LRS point

Cause: The specified LRS point was not a point geometry with measure information.

Action: Check the given point geometry. A valid LRS point is a point geometry in Oracle Spatial with an additional dimension for measure.

ORA-13333: invalid LRS measure

Cause: The given measure for linear referencing was out of range.

Action: Redefine the measure.

ORA-13334: LRS segments not connected

Cause: The specified geometric segments are not connected.

Action: Check the start/end points of the given geometric segments.

ORA-13335: LRS measure information not defined

Cause: The measure information of a geometric segment was not assigned (IS NULL).

Action: Assign/define the measure information. An LRS geometric segment is defined if its start and end measure are assigned (non-null).

ORA-13336: failure in converting standard diminfo/geometry to LRS dim/geom

Cause: There is no room for the measure dimension in the given diminfo, or the specified standard geometry is not a point a line string.

Action: Check if the diminfo dimensions are less than 3 or if the geometry type is point or line string.

ORA-13337: failure in concatenating LRS polygons

Cause: Referencing system (LRS) concatenation involving LRS polygons is not supported.

Action: Check the geometry and element types to ensure that the concatenate operation is not called with a polygon type.

ORA-13338: failure in reversing LRS polygon/collection geometry

Cause: Reversing a referencing system (LRS) polygon or collection geometry produced an invalid geometry.

Action: Check the geometry type to ensure that this operation is called on non-polygon geometries.

ORA-13339: LRS polygon clipping across multiple rings

Cause: Clipping (dynseg) a polygon across multiple rings is not allowed.

Action: Polygon clipping is allowed only for a single ring.

ORA-13340: a point geometry has more than one coordinate

Cause: A geometry, specified as being a point, has more than one coordinate in its definition.

Action: A point has only one coordinate. If this geometry is intended to represent a point cluster, line, or polygon, set the appropriate SDO_GTYPE or SDO_ETYPE value. If this is a single point object, remove the extraneous coordinates from its definition.

ORA-13341: a line geometry has fewer than two coordinates

Cause: A geometry, specified as being a line, has fewer than two coordinates in its definition.

Action: A line must consist of at least two distinct coordinates. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13342: an arc geometry has fewer than three coordinates

Cause: A geometry, specified as being an arc, has fewer than three coordinates in its definition.

Action: An arc must consist of at least three distinct coordinates. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13343: a polygon geometry has fewer than four coordinates

Cause: A geometry, specified as being a polygon, has fewer than four coordinates in its definition.

Action: A polygon must consist of at least four distinct coordinates. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13344: an arcpolygon geometry has fewer than five coordinates

Cause: A geometry, specified as being an arcpolygon, has fewer than five coordinates in its definition.

Action: An arcpolygon must consist of at least five coordinates. An arcpolygon consists of an ordered sequence of arcs, each of which must be described using three coordinates. Since arcs are connected the end-point of the first is the start of the second and does not have to be repeated. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13345: a compound polygon geometry has fewer than five coordinates

Cause: A geometry, specified as being a compound polygon, has fewer than five coordinates in its definition.

Action: A compound polygon must contain at least five coordinates. A compound polygon consists of at least one arc and one line, each of which must be described using three and at least two distinct coordinates respectively. Correct the geometric definition, or set the appropriate SDO_GTYPE or SDO_ETYPE attribute for this geometry.

ORA-13346: the coordinates defining an arc are collinear

Cause: Invalid definition of an arc. An arc is defined using three non-collinear coordinates.

Action: Alter the definition of the arc, or set the SDO_ETYPE or SDO_GTYPE to the line type.

ORA-13347: the coordinates defining an arc are not distinct

Cause: Two or more of the three points defining an arc are the same.

Action: Alter the definition of the arc to ensure that three distinct coordinate values are used.

ORA-13348: polygon boundary is not closed

Cause: The boundary of a polygon does not close.

Action: Alter the coordinate values or the definition of the SDO_GTYPE or SDO_ETYPE attribute of the geometry.

ORA-13349: polygon boundary crosses itself

Cause: The boundary of a polygon intersects itself.

Action: Correct the geometric definition of the object.

ORA-13350: two or more rings of a complex polygon touch

Cause: The inner or outer rings of a complex polygon touch.

Action: All rings of a complex polygon must be disjoint. Correct the geometric definition of the object.

ORA-13351: two or more rings of a complex polygon overlap

Cause: The inner or outer rings of a complex polygon overlap.

Action: All rings of a complex polygon must be disjoint. Correct the geometric definition of the object.

ORA-13352: the coordinates do not describe a circle

Cause: The set of coordinates used to describe a circle are incorrect.

Action: Confirm that the set of coordinates actually represent points on the circumference of a circle.

ORA-13353: ELEM_INFO_ARRAY not grouped in threes

Cause: The ELEM_INFO_ARRAY in an SDO_GEOMETRY definition has more or fewer elements than expected.

Action: Confirm that the number of elements in ELEM_INFO_ARRAY is divisible by 3.

ORA-13354: incorrect offset in ELEM_INFO_ARRAY

Cause: The offset field in ELEM_INFO_ARRAY of an SDO_GEOMETRY definition references an invalid array subscript in SDO_ORDINATE_ARRAY.

Action: Confirm that the offset is a valid array subscript in SDO_ORDINATE_ARRAY.

ORA-13355: SDO_ORDINATE_ARRAY not grouped by number of dimensions specified

Cause: The number of elements in SDO_ORDINATE_ARRAY is not a multiple of the number of dimensions supplied by the user.

Action: Confirm that the number of dimensions is consistent with data representation in SDO_ORDINATE_ARRAY.

ORA-13356: adjacent points in a geometry are redundant

Cause: There are repeated points in the sequence of coordinates.

Action: Remove the redundant point.

ORA-13357: extent type does not contain 2 points

Cause: Extent type should be represented by two points: lower left and upper right.

Action: Confirm that there are only two points for an extent type.

ORA-13358: circle type does not contain 3 points

Cause: Circle type should be represented by three distinct points on the circumference.

Action: Confirm that there are only three points for a circle type.

ORA-13359: extent does not have an area

Cause: The two points representing the extent are identical.

Action: Confirm that the two points describing the extent type are distinct.

ORA-13360: invalid subtype in a compound type

Cause: This subtype is not allowed within the ETYPE specified.

Action: Check the Oracle Spatial documentation for type definitions.

ORA-13361: not enough sub-elements within a compound ETYPE

Cause: The compound type declare more sub-elements than actually defined.

Action: Confirm that the number of sub-elements is consistent with the compound type declaration.

ORA-13362: disjoint sub-element in a compound polygon

Cause: Compound polygon must describe an enclosed area.

Action: Confirm that all sub-elements are connected.

ORA-13363: no valid ETYPE in the geometry

Cause: None of the ETYPES within the geometry is supported.

Action: Confirm that there is at least one valid ETYPE.

ORA-13364: layer dimensionality does not match geometry dimensions

Cause: The spatial layer had a geometry with a different dimensions than the dimensions specified for the layer.

Action: Ensure that all geometries in a layer have the same dimensions and that they match the dimensions in the SDO_DIM_ARRAY object for the layer in the USER_SDO_GEOM_METADATA view.

ORA-13365: layer SRID does not match geometry SRID

Cause: The spatial layer had a geometry with a different SRID than the SRID specified for the layer.

Action: Ensure that all geometries in a layer have the same SRID and that the SRIDs match the SRID for the layer in the USER_SDO_GEOM_METADATA view.

ORA-13366: invalid combination of interior exterior rings

Cause: In an Oracle Spatial geometry, interior and exterior rings were not used consistently.

Action: Ensure that the interior rings corresponding to an exterior ring follow the exterior ring in the ordinate array.

ORA-13367: wrong orientation for interior/exterior rings

Cause: In an Oracle Spatial geometry, the exterior and/or interior rings are not oriented correctly.

Action: Be sure that the exterior rings are oriented counterclockwise and the interior rings are oriented clockwise.

ORA-13368: simple polygon type has more than one exterior ring

Cause: In a polygon geometry there is more than one exterior ring.

Action: Set the type to be multipolygon if more than one exterior ring is present in the geometry.

ORA-13369: invalid value for etype in the 4-digit format

Cause: A 4-digit etype for a non-polygon type element is used, or the orientation is not a valid orientation for interior/exterior rings of the polygon.

Action: Correct the geometry definition.

ORA-13370: failure in applying 3D LRS functions

Cause: Only non-geodetic 3D line string geometries (made of line segments) are supported for 3D LRS functions.

Action: Check the geometry and element types and the SRID values.

ORA-13371: invalid position of measure dimension

Cause: LRS measure dimension has to be after spatial dimensions. The position has to be either 3rd or 4th in the dim_info_array.

Action: Check the geometry's gtype and its position in the dim_info_array.

ORA-13372: failure in modifying metadata for a table with spatial index

Cause: Modifying the metadata after the index is created will cause an inconsistency between the geometry's gtype and diminfo.

Action: Modify (or Prepare) metadata before creating an index on the SDO_GEOMETRY column.

ORA-13373: invalid line segment in geodetic data

Cause: A geodetic line segment was not less than half of a great circle.

Action: Densify the line by adding points.

ORA-13374: SDO_MBR not supported for geodetic data

Cause: The SDO_MBR functionality is not supported for geodetic data.

Action: Find an alternative function that can be used in this context.

ORA-13375: the layer is of type [string] while geometry inserted has type [string]

Cause: The layer has a type that is different or inconsistent with the type of the current geometry.

Action: Change the geometry type to agree with the layer type, or change the layer type to agree with the geometry type.

ORA-13376: invalid type name specified for layer_gtype parameter

Cause: An invalid type name is specified for the layer_gtype constraint.

Action: See the Spatial documentation for of valid keywords that can be used in defining a layer_gtype constraint.

ORA-13377: invalid combination of elements with orientation

Cause: An element of the geometry had orientation specified while some other element had no orientation specified (4-digit etype).

Action: Ensure that all of the polygon elements have orientation specified using the 4-digit etype notation.

ORA-13378: invalid index for element to be extracted

Cause: An invalid (or out of bounds) index was specified for extracting an element from a geometry.

Action: Ensure that the parameters to the extract function are in the valid range for the geometry.

ORA-13379: invalid index for sub-element to be extracted

Cause: An invalid (or out of bounds) index was specified for extracting a sub-element from a geometry.

Action: Ensure that the parameters to the extract function are in the valid range for the geometry.

ORA-13380: network not found

Cause: The specified network was not found in the network metadata.

Action: Insert the network information in the USER_SDO_NETWORK_METADATA view.

ORA-13381: table:string not found in network:string

Cause: The specified table was not found in the network metadata.

Action: Insert the table information in the USER_SDO_NETWORK_METADATA view.

ORA-13382: geometry metadata (table:string column:string) not found in spatial network:string

Cause: The specified geometry metadata was not found in the spatial network metadata.

Action: Insert the spatial metadata information in the USER_SDO_NETWORK_METADATA view.

ORA-13383: inconsistent network metadata: string

Cause: There was an inconsistency between the network metadata and the node/link information.

Action: Check the network metadata and the node/link information.

ORA-13384: error in network schema: string

Cause: The network table(s) did not have required column(s)

Action: Check the network schema.

ORA-13385: error in network manager: [string]

Cause: There was an internal error in network manager.

Action: Contact Oracle Customer Support for more help.

ORA-13386: commit/rollback operation error: [string]

Cause: The index-level changes were not fully incorporated as part of the commit or rollback operation.

Action: Correct the specified error and use the following statement: ALTER INDEX *index-name* PARAMETERS ('index_status=synchronize');

ORA-13387: sdo_batch_size for array inserts should be in the range [number,number]

Cause: The specified value for sdo_batch_size was too high or too low.

Action: Change the value to be in the specified range.

ORA-13388: invalid value for dst_spec parameter

Cause: The dst_spec parameter was specified in the wrong format.

Action: Check the documentation for this parameter.

ORA-13389: unable to compute buffers or intersections in analysis function

Cause: There was an internal error in computing the buffers or intersections in the specified spatial analysis function.

Action: Modify the tolerance value in the USER_SDO_GEOM_METADATA view before invoking the spatial analysis function.

ORA-13390: error in spatial analysis and mining function: [string]

Cause: There was an internal error in the specified analysis function.

Action: Contact Oracle Customer Support for more help.

ORA-13391: string

Cause: An attempt was made to violate GeoRaster management restrictions.

Action: Check the documentation for more detailed information.

ORA-13392: status report error: string

Cause: There was an error on status report related operation.

Action: Check the error message for details.

ORA-13393: invalid %0!s parameter%1!s

Cause: The operation failed because the input parameter was invalid.

Action: Correct the parameter and try again.

ORA-13394: Parameter string is NULL or empty.

Cause: The operation failed because the input parameter was NULL or was an empty array.

Action: Correct the parameter and try again.

ORA-13395: Parameter %0!s has NULL or empty element at index %1!s.

Cause: The operation failed because one of the array elements was NULL or was an empty string.

Action: Correct the parameter and try again.

ORA-13396: Parameter %0!s has invalid element at index %1!s.

Cause: The operation failed because one of the array elements was invalid.

Action: Correct the parameter and try again.

ORA-13397: inconsistent dimension sizes in the input GeoRaster objects

Cause: The input GeoRaster objects had different spatial or band dimension sizes.

Action: Check the dimension sizes of the input GeoRaster objects and ensure that they have the same dimension size.

ORA-13398: invalid expression parameter: *string*

Cause: The expression parameter did not conform to the raster algebra expression definition.

Action: Check the raster algebra language definition in the documentation and ensure that the expression parameter conforms to the definition.

ORA-13399: invalid condition parameter: *string*

Cause: The condition parameter did not conform to the raster algebra boolean expression definition.

Action: Check the raster algebra language definition in the documentation and ensure that the condition parameter conforms to the definition.

ORA-13400: invalid elevationParam parameter: *string*

Cause: The elevationParam parameter had an invalid specification.

Action: Check the documentation and ensure that the elevationParam parameter is correct.

ORA-13401: GeoRaster object (RDT=%0!s, RID=%1!s) already exists.

Cause: There were duplicate entries of RASTER_DATA_TABLE (RDT) and RASTER_ID (RID) columns in the USER_SDO_GEOG_SYSDATA view, or the operation was inserting a duplicate entry of (RASTER_DATA_TABLE, RASTER_ID) into USER_SDO_GEOG_SYSDATA view.

Action: Ensure that the RASTER_DATA_TABLE and RASTER_ID pairs are unique in the USER_SDO_GEOG_SYSDATA view, or insert a GeoRaster object with a unique (RASTER_DATA_TABLE, RASTER_ID) value.

ORA-13402: The rasterType is NULL or not supported.

Cause: The specified rasterType was NULL or not supported.

Action: Check the documentation for the rasterType number and the rasterType formats supported by GeoRaster.

ORA-13403: invalid rasterDataTable specification: *string*

Cause: The raster data table (RDT) name specified for a GeoRaster object was invalid because of one of the following reasons: - RDT name was not a simple SQL name or was longer than 128 bytes. - RDT name was not unique among RDT names in the database. - RDT did not exist or was not visible from the current schema. - RDT was not defined in the same schema as the GeoRaster object table. - RDT was not an

object table of SDO_RASTER type or a relational table with the same columns as the attributes of the SDO_RASTER type.

Action: Check the rasterDataTable specification and ensure that all relevant raster data table requirements are met.

ORA-13404: invalid ultCoord parameter specification

Cause: The specified array for the ultCoord parameter had the wrong length or had an invalid value.

Action: Check the documentation and ensure that the ultCoord parameter is correct.

ORA-13405: invalid string parameter

Cause: The input array for the dimension size had NULL or invalid value, or the array length was not equal to the number of dimensions of the GeoRaster object.

Action: Check the documentation and ensure that the parameter is correct.

ORA-13406: NULL or invalid GeoRaster object for output

Cause: The GeoRaster object for output was NULL or had NULL rasterDataTable or rasterID attribute.

Action: Ensure that the GeoRaster object for output has been initialized properly.

ORA-13407: invalid storage parameter: string

Cause: The storage parameter contained an invalid keyword or value.

Action: Check the documentation and ensure that the storage parameter is correct.

ORA-13408: invalid blockSize storage parameter

Cause: The blockSize storage parameter had the wrong length or contained an invalid value.

Action: Check the documentation and ensure that the blockSize storage parameter is correct.

ORA-13409: invalid pyramidLevel parameter

Cause: The specified pyramidLevel parameter value was either less than 0 or greater than the maximum pyramid level of the corresponding GeoRaster object.

Action: Ensure that the pyramidLevel parameter specifies a valid pyramid level value for the GeoRaster object.

ORA-13410: invalid layerNumbers or bandNumbers: string

Cause: The layerNumbers or bandNumbers parameter was in the wrong format or had the wrong values.

Action: Check the documentation and ensure that the layerNumbers or bandNumbers parameter is valid.

ORA-13411: The specified string is outside the source GeoRaster object.

Cause: The minimal bounding rectangle (MBR) of the specified area had no intersection with the MBR of the source GeoRaster object.

Action: Check the coordinates of the specified area to ensure that it overlaps with the source GeoRaster object.

ORA-13412: invalid scale parameter: *string*

Cause: The scale parameter contained an invalid specification.

Action: Check the documentation and ensure that the scale parameter is correct.

ORA-13413: invalid resampling parameter

Cause: The specified resampling method or the NODATA option was invalid.

Action: Check the documentation for the correct resampling parameter options.

ORA-13414: invalid pyramid parameter: *string*

Cause: The specified pyramid parameter was invalid.

Action: Check the documentation and ensure that the pyramid parameter is correct.

ORA-13415: invalid or out of scope point specification *string*

Cause: The point position specified by the ptGeom or <rowNumber, colNumber> parameter combination was invalid or out of scope.

Action: Ensure that the parameters specify a valid point that is or can be translated into a cell position inside the cell space of the GeoRaster object.

ORA-13416: invalid single-point geometry parameter

Cause: The geometry parameter did not specify a valid single-point geometry.

Action: Specify a valid single-point geometry.

ORA-13417: invalid layerNumber or bandNumber parameter

Cause: The layerNumber or the bandNumber parameter was either less than 0 or greater than the number of bands in the GeoRaster object.

Action: Specify a valid layerNumber or bandNumber parameter.

ORA-13418: cannot set GeoRaster metadata *string*

Cause: A parameter for set metadata operations had an invalid value.

Action: Check the documentation for information about the parameters.

ORA-13419: cannot perform mosaic or append operation: *string*

Cause: An attempt to perform a mosaic or append operation failed due to one of the following reasons: - The input GeoRaster object had no spatial extent. - The cropArea or outResolutions was out of scope. - The mosaicParam parameter had invalid keyword or value. - The table and column specification did not match or was invalid.

Action: Check the error message for details.

ORA-13420: The SRID of the geometry parameter is not NULL.

Cause: The input geometry was not in the GeoRaster cell space, which required a NULL Spatial Reference ID (SRID) value.

Action: Ensure that the geometry parameter has a NULL SRID.

ORA-13421: invalid cell value: *string*

Cause: The cell value was out of range.

Action: Ensure that the cell value is in the range as designated by the cellDepth definition of the specified GeoRaster object.

ORA-13422: invalid cursor string

Cause: The GeoRaster cursor did not return GeoRaster object, or was empty, or returned a NULL GeoRaster object.

Action: Ensure that the GeoRaster cursor returns non-NULL GeoRaster objects.

ORA-13423: invalid cell coordinate parameter

Cause: The cell coordinate array parameter had the wrong length or had NULL ordinate elements.

Action: Ensure that the cell coordinate parameter is valid.

ORA-13424: The GeoRaster object is not spatially referenced.

Cause: The GeoRaster object was not spatially referenced, or the model space Spatial Reference ID (SRID) was NULL.

Action: Check the GeoRaster object metadata to ensure it is spatially referenced and its model space SRID is set. Refer to the documentation for more details on Georeferencing.

ORA-13425: invalid background filling value parameter

Cause: The background filling value parameter was invalid either because the array had the wrong size or because some of the element values were invalid.

Action: Ensure that the parameter that specifies the background filling value is valid. The size of the array must equal either 1 (the value is for all bands) or the exact band dimension size in the output GeoRaster object. The element values must be valid cell values as determined by the cell depth.

ORA-13426: invalid window or cropArea parameter

Cause: The specified cell space coordinate array length was not 4, or had NULL or an invalid element.

Action: Specify the parameter using the cell space coordinate of the two corners of the window. Check the documentation for details.

ORA-13427: invalid bitmap mask

Cause: The bitmap mask was invalid due to one of the following reasons: - The bitmap mask cell depth was not 1-bit. - The bitmap mask had more than one band. - The bitmap mask was a blank GeoRaster object.

Action: Check the documentation and ensure that the bitmap mask is valid.

ORA-13428: invalid modelCoordinateLocation

Cause: The program [or user] specified a modelCoordinateLocation that is not supported, or the modelCoordinateLocation of the GeoRaster object was wrong.

Action: Set or specify the modelCoordinateLocation to be CENTER (0) or UPPERLEFT (1).

ORA-13429: invalid xCoefficients or yCoefficients parameter(s)

Cause: An attempt to perform a georeference operation failed. Possible reasons include xCoefficients or yCoefficients having the wrong number of coefficients or invalid coefficients.

Action: Check the documentation for supported coefficient specifications.

ORA-13430: The input or output GeoRaster object has NULL attribute.

Cause: The metadata, rasterType, or rasterID attribute of the GeoRaster object was NULL.

Action: Ensure that the GeoRaster object has non-NULL attributes.

ORA-13431: GeoRaster metadata error: invalid rasterType

Cause: The rasterType metadata of the GeoRaster object was inconsistent with the rasterType attribute of the GeoRaster object.

Action: Ensure that the rasterType metadata and the rasterType attribute of the GeoRaster object have the same value.

ORA-13432: GeoRaster metadata error: NULL or invalid blankCellValue

Cause: The blankCellValue element could not be found in the metadata of a blank GeoRaster object, or the specified blankCellValue element value was NULL or invalid in the GeoRaster metadata.

Action: Call SDO_GEOR.setBlankCellValue to add blankCellValue to the metadata whenever the isBlank element value is TRUE. Also, ensure that the specified blankCellValue element value is not NULL and is in the range as designated by the cellDepth definition of the GeoRaster object.

ORA-13433: GeoRaster metadata error: invalid defaultRed, defaultGreen or defaultBlue value

Cause: At least one of the defaultRed, defaultGreen, and defaultBlue values (logical layer numbers) was zero, negative, or out of range.

Action: Check the documentation for details.

ORA-13434: GeoRaster metadata error: invalid cellRepresentation

Cause: The cellRepresentation type was not supported.

Action: Check the documentation for supported cellRepresentation types.

ORA-13435: GeoRaster metadata error: invalid defaultPyramidLevel

Cause: The defaultPyramidLevel in the GeoRaster object metadata was either less than 0 or greater than the maximum pyramid level.

Action: Use SDO_GEOR.setDefaultPyramidLevel function to set the proper default pyramid level.

ORA-13436: GeoRaster metadata error: invalid dimensionSize

Cause: The dimensionSize in the GeoRaster object metadata was missing or had more values than required.

Action: Ensure that the dimensionSize is set in the GeoRaster metadata and has a value for each dimension.

ORA-13437: GeoRaster metadata error: invalid blocking metadata

Cause: One of the elements in the blocking metadata was missing or had an invalid value.

Action: Check the documentation for details.

ORA-13438: GeoRaster metadata error: invalid pyramidType value

Cause: The specified pyramid type was not supported.

Action: Check the documentation for supported pyramid types.

ORA-13439: GeoRaster metadata error: invalid pyramid maxLevel

Cause: The specified maxLevel was 0 or exceeded the maximum level allowed by the specified pyramid type.

Action: Check the documentation for supported pyramid types and their total level limitations.

ORA-13440: GeoRaster metadata error: invalid compressionType

Cause: The specified compression type was not supported.

Action: Check the documentation for supported compression types.

ORA-13441: GeoRaster metadata SRS error: *string*

Cause: There were NULL or invalid values in the polynomialModel element in the spatial reference system (SRS) metadata.

Action: Check the documentation and ensure that a valid polynomialModel element is specified.

ORA-13442: GeoRaster object not registered: *string*

Cause: There was no entry for the specified GeoRaster object in the ALL_SDO_GEOG_SYSDATA view.

Action: Check if the GeoRaster object has been inserted into a GeoRaster table: 1. If not inserted, insert it into the GeoRaster table and try again. 2. If inserted, check if the GeoRaster DML trigger has been created on the GeoRaster table: a. If not created, use SDO_GEOG_UTL.createDMLTrigger to create the DML trigger, then register the GeoRaster object using SDO_GEOG_ADMIN.registerGeoRasterObjects. b. If created, register the GeoRaster object using SDO_GEOG_ADMIN.registerGeoRasterObjects.

ORA-13443: GeoRaster metadata error: NULL or invalid values in layerInfo

Cause: There were NULL or invalid component values in the statisticsDataset, histogram, colorMap, or grayScale metadata.

Action: Check the documentation and ensure that all of the component values are valid.

ORA-13444: cannot perform mergeLayers operation: *string*

Cause: The two GeoRaster objects whose layers are to be combined together either had different row or column dimension sizes, or their georeferencing information did not match.

Action: Ensure that the objects have the same row and column dimension sizes. If neither is georeferenced, their ULTCordinate values must be the same. Otherwise, they must be both georeferenced and cover the same area in the model space.

ORA-13445: GeoRaster metadata error: NULL or invalid NODATA value

Cause: There was an invalid NODATA value or value range in the metadata.

Action: Ensure that the NODATA value or value range is not NULL and is completely contained in the range as designated by the cellDepth definition of the specified GeoRaster object.

ORA-13446: GeoRaster metadata error: invalid TRS

Cause: The GeoRaster Temporal Reference System (TRS) was not supported.

Action: Set isReferenced to FALSE.

ORA-13447: GeoRaster metadata error: invalid BRS

Cause: The GeoRaster Band Reference System (BRS) was not supported.

Action: Set isReferenced to FALSE.

ORA-13448: GeoRaster metadata error: invalid spectralExtent

Cause: The GeoRaster spectral extent specification was incorrect.

Action: The MIN value must be less than the MAX value in the spectralExtent element.

ORA-13449: GeoRaster metadata error: invalid ULTCordinate value

Cause: The GeoRaster metadata ULTCordinate on band dimension was not 0.

Action: Check the documentation for restrictions.

ORA-13450: GeoRaster metadata error: invalid layerInfo

Cause: The GeoRaster metadata had more than one layerInfo element, or the layerDimension value was not supported.

Action: The current release only supports one layerInfo element; layer can only be defined along one dimension, and this dimension must be BAND.

ORA-13451: GeoRaster metadata error: invalid scaling function

Cause: The scaling function had a zero denominator.

Action: Ensure that the scaling function denominator is not zero.

ORA-13452: GeoRaster metadata error: invalid bin function

Cause: The bin function data did not match its type.

Action: For EXPLICIT type, provide a binTableName element; otherwise, provide a binFunctionData element.

ORA-13453: GeoRaster metadata error: invalid number of layers or invalid layerNumber

Cause: Too many subLayers were defined for the GeoRaster object, or layerNumber or layerDimensionOrdinate was not assigned correctly.

Action: The total number of logical layers cannot exceed the total number of physical layers, and each logical layer must be assigned a valid physical layer number following the same order. Check the documentation for more details.

ORA-13454: GeoRaster metadata string is invalid against its XML schema.

Cause: The GeoRaster metadata was invalid against its XML schema.

Action: Run the schemaValidate routine to find the errors.

ORA-13455: GeoRaster metadata error: invalid beginDateTime or endDateTime

Cause: The beginDateTime value was later than the endDateTime value in the GeoRaster metadata.

Action: Ensure that the beginDateTime value is not later than the endDateTime value.

ORA-13456: GeoRaster cell data error: *string*

Cause: There was an error in the original GeoRaster cell data or in the cell data of the pyramids.

Action: If the error is related to the original GeoRaster cell data, the GeoRaster object is invalid and has to be deleted or manually repaired. If the error is related to pyramids, delete the pyramids and regenerate them.

ORA-13457: bitmap mask cell data error at *string*

Cause: There was an error in the cell data of an original bitmap mask or in the cell data of the pyramids of a bitmap mask.

Action: If the error is related to an original bitmap mask, remove the bitmap mask. If the error is related to the pyramids of a bitmap mask, delete the pyramids and regenerate them.

ORA-13458: GeoRaster metadata SRS error: not rectified

Cause: The polynomial model specified by the Spatial Reference System (SRS) did not match the requirements of a rectified GeoRaster object.

Action: Check the documentation for the requirements of the polynomial model for a rectified GeoRaster object, or set isRectified to be FALSE.

ORA-13459: GeoRaster metadata SRS error: not affine transform

Cause: The polynomial model specified by the Spatial Reference System (SRS) was not a six-parameter transformation, or the six-parameter transformation was not valid.

Action: Check the documentation and ensure that the polynomial model is a valid six-parameter affine transformation.

ORA-13460: GeoRaster metadata SRS error: SRID=0

Cause: The referenced GeoRaster object had a zero model space Spatial Reference ID (SRID).

Action: Set or specify the model space SRID to be a nonzero number.

ORA-13461: GeoRaster metadata SRS error: invalid rational polynomial model

Cause: One of the polynomial definitions in the Spatial Reference System (SRS) of the GeoRaster object had invalid pType, nVars, or order.

Action: Check the documentation and ensure the polynomial definition is correct.

ORA-13462: invalid GeoRaster object (RDT=%0!s, RID=%1!s): %2!s

Cause: The GeoRaster object with the specified rasterDataTable (RDT) and rasterID (RID) attributes had invalid band dimension size.

Action: Check the documentation for the requirements of the band dimension size in the input GeoRaster object.

ORA-13463: error exporting GeoRaster data: *string*

Cause: An error occurred while exporting GeoRaster data from the database.

Action: Check the error message for details.

ORA-13464: error loading GeoRaster data: *string*

Cause: An error occurred while loading GeoRaster data into the database.

Action: Check the error message for details.

ORA-13465: NULL or invalid table or column specification: *string*

Cause: The specified table or column did not exist, or the column was not a GeoRaster column.

Action: Ensure that the specified table exists and the specified column is a GeoRaster column.

ORA-13466: compression or decompression error: *string*

Cause: The operation could not be completed because an error occurred during compression or decompression. Check the error message for details.

Action: For compression, ensure that the GeoRaster object is valid, and also its metadata is valid for the specified compression format. Use `SDO_GEOR.changeFormatCopy` to transform the GeoRaster object to an appropriate format, or apply another compression method.

ORA-13467: GeoRaster metadata error: unsupported cellDepth *string*

Cause: The cellDepth specified in the GeoRaster metadata was not supported.

Action: Check the documentation for the supported cellDepth in the GeoRaster object.

ORA-13468: invalid blockMBR

Cause: Invalid blockMBR geometries were stored in the raster data table.

Action: Ensure that the blockMBR geometries stored in the raster data table are valid, or call the `SDO_GEOR.generateBlockMBR()` package to regenerate the blockMBR geometries.

ORA-13469: cannot perform updateRaster operation: *string*

Cause: The data of the source GeoRaster object had different cell depth, or different spatial reference system, or different number of bands from that of the target GeoRaster object.

Action: Ensure that the source and the target GeoRaster objects have the same cell depth, same number of bands and that both objects are either georeferenced or not georeferenced at all. If both are georeferenced, they should be in the same coordinate system and have the same spatial resolutions.

ORA-13470: parameter %0!s not in format of %1!s

Cause: The specified parameter was not in the proper format.

Action: Check the documentation for the proper format of the parameter.

ORA-13471: *string* not coordinate referenced

Cause: The GeoRaster object was not georeferenced or had NULL Spatial Reference ID (SRID).

Action: Ensure that the GeoRaster object is georeferenced.

ORA-13472: invalid geometry parameter *string*

Cause: The geometry parameter did not specify a valid geometry.

Action: Specify a valid 2D or 3D geometry. If the model Spatial Reference ID (SRID) is NULL or indicates a 2D coordinate system, the geometry must be 2D. If the model SRID indicates a 3D coordinate system, the geometry must either be a 3D geometry or a 2D geometry that can be converted to 3D with the specified vertical axis (or vertical SRID) and ellipsoidal parameters.

ORA-13473: invalid rasterSpec parameter: *string*

Cause: The specified rasterSpec parameter was missing or contained an invalid value.

Action: Check the documentation and ensure that the rasterSpec parameter contains only valid keywords and values.

ORA-13474: invalid rasterDataTable attribute: *string*

Cause: The rasterDataTable attribute of the GeoRaster object was not valid due to one of the following reasons: - It contained a period separator. - Some of the alphanumeric characters were not uppercase.

Action: Ensure that the rasterDataTable attribute meets the above requirements.

ORA-13475: invalid GeoRaster object for output

Cause: The output GeoRaster object had the same RASTER_DATA_TABLE and RASTER_ID combination as that of an input GeoRaster object.

Action: Ensure that the output GeoRaster object is different from any of the input GeoRaster objects.

ORA-13476: Parameter %0!s and %1!s did not match.

Cause: The lengths of the two arrays were not the same or did not meet the length requirement.

Action: Check the documentation and ensure the two parameters meet the length requirement.

ORA-13477: invalid GCP georeferencing specification: *string*

Cause: The Ground Control Point (GCP) georeferencing failed due to one of the following reasons: - The specified functional fitting method was not supported. - The number of GCPs was insufficient. - Some GCPs were invalid. - The distribution of the GCPs led to no solution or an unstable solution.

Action: Check the GeoRaster documentation for the supported functional fitting methods and the requirements of GCPs.

ORA-13479: reprojection infeasible

Cause: Reprojection from source to destination projection produced a large distortion.

Action: Check the destination projection and ensure that it is suitable for the area covered by the source GeoRaster object. Check the GeoRaster documentation for more information about reprojection.

ORA-13480: invalid bitmap mask parameter

Cause: The input bitmap mask parameter did not meet the requirements for the operation due to one of the following reasons: - The bitmap mask had invalid pyramid type or max pyramid level. - The spatial dimension sizes of the bitmap mask was different from that of the input GeoRaster object. - The spatial resolution of the bitmap mask was different from that of the input GeoRaster object. - The model coordinate location of the bitmap mask was different from that of the input GeoRaster object.

Action: Check the documentation for the requirements on bitmap mask.

ORA-13483: insufficient memory for the specified GeoRaster data

Cause: There was insufficient memory to hold the specified GeoRaster data for this operation.

Action: Use SDO_GEOR.subset to isolate a subset of the GeoRaster data, or reblock the GeoRaster data into smaller sized blocks. Check the documentation for details.

ORA-13485: invalid compressParam parameter: *string*

Cause: The compressParam parameter contained an invalid keyword or value.

Action: Check the documentation and ensure that the compressParam parameter is correct.

ORA-13486: invalid or insufficient GeoTIFF metadata to georeference the GeoRaster object: *string*

Cause: The GeoTIFF metadata of the specified input image contained invalid or insufficient information to georeference the GeoRaster object.

Action: Check the error message for details.

ORA-13487: SRID *string* not defined in the database

Cause: The specified Spatial Reference ID (SRID) was not found in the Oracle Spatial CS_SRS table.

Action: Add a user-defined coordinate reference system for this coordinate system, as explained in the Oracle Spatial documentation.

ORA-13488: cannot perform transformation: *string*

Cause: An attempt to perform a transformation operation failed.

Action: Check the error message for details.

ORA-13489: cannot process the image: *string*

Cause: There was an error when processing the image in the GeoRaster object.

Action: Check the error message and take the appropriate action or contact Oracle Support Services for further assistance.

ORA-13490: cannot enable GeoRaster: *string*

Cause: The session user did not have the CREATE TRIGGER privilege or did not own the current schema.

Action: Ensure that the current session user has the required privileges and the session user name is the same as the current schema name.

ORA-13497: *string*

Cause: This is an internal GeoRaster error.

Action: Contact Oracle Support Services. You may want to ensure that the GeoRaster object is valid before you do so.

ORA-13498: *string*

Cause: An error related to an external plugin was encountered in the GeoRaster component.

Action: Check the documentation for the external plugin, or contact the plugin provider and supply the exact error text.

ORA-13499: *string*

Cause: This is an internal Oracle Spatial error.

Action: Contact Oracle Support Services.

ORA-13500: SYSAUX DATAFILE clause specified more than once

Cause: The CREATE DATABASE command contains more than one SYSAUX DATAFILE clause.

Action: Specify at most one SYSAUX DATAFILE clause.

ORA-13501: Cannot drop SYSAUX tablespace

Cause: Tried to drop SYSAUX tablespace

Action: None

ORA-13502: Cannot rename SYSAUX tablespace

Cause: An attempt to rename the SYSAUX tablespace failed.

Action: No action required.

ORA-13503: Creating SYSAUX tablespace with invalid attributes

Cause: An attempt to create the SYSAUX tablespace with invalid attributes.

Action: Create SYSAUX tablespace with ONLINE, PERMANENT, EXTENT MANAGEMENT LOCAL, SEGMENT SPACE MANAGEMENT AUTO attributes.

ORA-13504: The SYSAUX DATAFILE clause is not specified.

Cause: If the DATAFILE clause was specified, then a data file for SYSAUX must be specified, unless using Oracle Managed Files (OMF).

Action: Specify the SYSAUX DATAFILE clause.

ORA-13505: SYSAUX tablespace can not be made read only

Cause: Attempting to set the SYSAUX tablespace to read only. The SYSAUX tablespace must remain read write for database operation.

Action: Leave SYSAUX tablespace read write.

ORA-13506: operation failed due to invalid snapshot range (*string*, *string*)

Cause: An attempt was made to perform an operation with an invalid start and end snapshot pair.

Action: Choose a valid start and end snapshot pair: - Ensure end snapshot is greater than start snapshot. - Ensure start and end snapshots exist.

ORA-13509: error encountered during processing an AWR table

Cause: Error occurred when processing an AWR table due to an underlying error.

Action: Check the full error stack for root cause. Correct problem and retry the operation.

ORA-13510: Retention number *string* is outside valid range of *string* to *string*.

Cause: The specified RETENTION setting was outside supported range.

Action: Specify a valid RETENTION value and retry the operation.

ORA-13511: invalid INTERVAL *string*, must be in the range (*string*, *string*)

Cause: The user has specified a INTERVAL setting that is not in the supported range of (MIN, MAX).

Action: Choose a valid INTERVAL setting and retry the operation.

ORA-13514: Metric Capture too close to last capture, group *string*

Cause: The metric capture cannot be executed because it is too close to the last capture (within 1 centi-second).

Action: add some delay and reissue command to retry.

ORA-13515: Error encountered during Database Usage Statistics capture

Cause: Error occurred during OCI operation due to underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

ORA-13516: AWR Operation failed: *string*

Cause: The operation failed because AWR is not available. The possible causes are: AWR schema not yet created; AWR not enabled; AWR schema not initialized; or database not open or is running in READONLY or STANDBY mode.

Action: check the above conditions and retry the operation.

ORA-13517: Baseline (id = *string*) does not exist

Cause: The operation failed because the specified baseline ID does not exist in the Workload Repository.

Action: check the baseline id and retry the operation.

ORA-13518: database ID *string* does not exist in AWR

Cause: The operation failed because the specified database ID did not exist in the Automatic Workload Repository (AWR).

Action: Specify a valid database ID and retry the operation.

ORA-13519: Database ID (*string*) exists in the workload repository.

Cause: The operation failed because the specified database ID already existed in the Automatic Workload Repository.

Action: Check the database ID and retry the operation.

ORA-13520: Database id (*string*) not registered, Status = *string*

Cause: The operation failed because the specified database ID was not registered in the Workload Repository properly.

Action: check the status of database id and retry the operation.

ORA-13521: Unregister operation on local Database id (*string*) not allowed

Cause: The operation failed because the local database ID cannot be unregistered from the Workload Repository.

Action: check the database id and retry the operation.

ORA-13523: unable to allocate required space for return type

Cause: Out of memory to allocate the space for the return variable for an external procedure.

Action: Try operation again.

ORA-13524: error encountered while retrieving baseline information

Cause: A read error occurred during the OCI operation to retrieve the baseline information

Action: Check associated error. Correct problem and retry the operation.

ORA-13525: error with computing space usage for sysaux occupant

Cause: Error occurred during OCI operation due to underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

ORA-13526: Baseline *string* does not exist.

Cause: The operation failed because the specified baseline name does not exist in the Automatic Workload Repository.

Action: Check the baseline name and retry the operation.

ORA-13527: invalid baseline name

Cause: The operation failed because the specified baseline name is invalid.

Action: check the baseline name and retry the operation.

ORA-13528: name (*string*) is already used by an existing baseline

Cause: The operation failed because the specified baseline name already exists in the Workload Repository.

Action: check the baseline name and retry the operation.

ORA-13529: Error occurred when flushing AWR table group

Cause: An error occurred during the flushing of a table group. Because of the error in the group, we are unable to flush this table.

Action: Check the error associated with the table group.

ORA-13530: invalid TOPNSQL *string*, must be in the range (*string*, *string*)

Cause: The user has specified a TOPNSQL setting that is not in the supported range of (MIN, MAX).

Action: Choose a valid TOPNSQL setting and retry the operation.

ORA-13531: SQL Text was purged from AWR before the operation completed

Cause: A SQL was purged from AWR before the operation completed.

Action: Retry the operation.

ORA-13532: SQL ID [*string*] already exists

Cause: The operation failed because the specified SQL ID already existed in the repository.

Action: Check the SQL ID and retry the operation.

ORA-13533: invalid SQL ID

Cause: The operation failed because the specified SQL ID was invalid.

Action: Check the SQL ID and retry the operation.

ORA-13534: Current SQL count(*string*) reached maximum allowed (*string*)

Cause: The operation failed because the maximum allowed colored SQL was exceeded.

Action: Check the count for colored SQL.

ORA-13535: name (*string*) is already used by an existing baseline template

Cause: The operation failed because the specified baseline template name already existed in the Workload Repository.

Action: Check the baseline template name and retry the operation.

ORA-13536: baseline template (*string*) does not exist

Cause: The operation failed because the specified baseline template name did not exist in the Workload Repository.

Action: Check the baseline template name and retry the operation.

ORA-13537: invalid input for create baseline template (*string*, *string*)

Cause: Invalid input was specified for the create baseline template routine.

Action: Check the argument displayed in the error message text.

ORA-13538: invalid value for baseline expiration (*string*)

Cause: An invalid value was specified for the expiration of a baseline. The expiration is specified in number of days, and the expiration must be at least one day.

Action: Check the value for expiration.

ORA-13539: invalid input specified to modify baseline window size (*string*, *string*)

Cause: Invalid input was specified to the routine modifying the the baseline window size.

Action: Check the arguments displayed in the error message text.

ORA-13540: operation not allowed on system moving window baseline (*string*)

Cause: The requested operation was not allowed on the system moving window baseline.

Action: Retry the operation with another baseline name.

ORA-13541: system moving window baseline size (*string*) greater than retention (*string*)

Cause: The system moving window baseline size must be less than the retention setting. The specified window size or retention violate this.

Action: Check the moving window baseline size or retention.

ORA-13542: baseline ID (*string*) does not exist

Cause: The operation failed because the specified baseline ID did not exist in the Automatic Workload Repository.

Action: Check the baseline ID and retry the operation.

ORA-13543: error encountered while retrieving baseline template information

Cause: A read error occurred during the OCI operation to retrieve the baseline template information.

Action: Check associated error. Correct problem and retry the operation.

ORA-13544: error encountered while automatically generating a baseline

Cause: An error occurred while automatically generating a baseline based on the template information.

Action: Look in the trace file for more error information.

ORA-13545: invalid baseline template name

Cause: The operation failed because the specified baseline template name was an invalid identifier.

Action: Check the baseline template name and retry the operation.

ORA-13546: Error encountered during maintenance of Adaptive Thresholds

Cause: Error occurred during OCI operation due to underlying error.

Action: Check associated OCI error. Correct problem and retry the operation.

ORA-13547: Unable to drop baseline since it is in use by *string*

Cause: The system is not able to drop the baseline since the baseline is in use by a functionality that depends on its existence.

Action: Note the name of the functionality using the baseline, and check if the functionality still needs the baseline.

ORA-13548: Unable to find valid snapshot IDs for the inputted baseline time range

Cause: The system is not able to find valid snapshot IDs for the inputted time range while attempting to create a baseline.

Action: Check that the inputted time range has at least two valid snapshots. The `dba_hist_snapshot` displays the snapshot id and time information.

ORA-13549: invalid input for create baseline with time range (*string*)

Cause: Invalid time input was specified for the create baseline routine.

Action: Check the argument displayed in the error message text.

ORA-13550: value "*string*" of length (*string*) exceeded maximum length (*string*) for parameter [*string*]

Cause: An invalid parameter was specified for the Automatic Workload Repository (AWR) registration routine.

Action: Check the argument displayed in the error message text.

ORA-13551: source database name [*string*] not found in AWR

Cause: An invalid parameter was specified for the Automatic Workload Repository (AWR) operation.

Action: Check the argument displayed in the error message text.

ORA-13552: parameter [*string*] of value [*string*] mismatched with AWR registered value [*string*]

Cause: An invalid parameter was specified for the Automatic Workload Repository (AWR) operation.

Action: Check the argument displayed in the error message text.

ORA-13553: operation failed - missing parameter [*string*]

Cause: The required parameter was missing for the Automatic Workload Repository (AWR) operation.

Action: Check the parameter name displayed in the error message text.

ORA-13554: baseline template (*string*) is a directory

Cause: The operation failed because the specified baseline template name was a directory.

Action: Check the baseline template name and retry the operation.

ORA-13555: purge operation failed - [*string*]

Cause: The purge operation failed due to the reason described in the error message.

Action: Correct the stated problem and retry the operation.

ORA-13556: snapshot on remote sources not enabled

Cause: The current database was not set up for snapshots on remote databases. See the description in the error message.

Action: Correct the system settings and retry the operation.

ORA-13557: reset operation failed - [*string*]

Cause: The Automatic Workload Repository (AWR) reset operation failed due to the reason described in the error message.

Action: Correct the stated problem and retry the operation.

ORA-13558: remote database registration mismatch; database ID (*string*)

Cause: The remote Automatic Workload Repository (AWR) operation failed because the remote database did not match the local registration data. The operation was aborted because it was meant for another database ID. Either the database or the remote database ID changed and needs to be updated or registered in the repository.

Action: Ensure that the database links for the affected database are still valid and point to the registered database. Use any additional errors reported to identify and rectify the underlying issue. Correct the mismatch or unregister and register the affected database ID.

ORA-13559: CPU time or run time policy violation - *string*

Cause: The operation ran longer than the expected time.

Action: If this error persists, contact Oracle Support Services.

ORA-13560: SYSAUX tablespace cannot be brought offline; shut down if necessary

Cause: An attempt was made to bring a SYSAUX tablespace offline.

Action: Shut down the database if necessary and do a recovery.

ORA-13561: cannot drop SYSAUX tablespace

Cause: An attempt was made to drop a SYSAUX tablespace.

Action: None

ORA-13562: AWR operation failed because tablespace (*string*) is invalid.

Cause: The operation failed because the tablespace was invalid for the Automatic Workload Repository (AWR) or was not available.

Action: Provide a valid tablespace, ensure that the tablespace is available and retry the operation.

ORA-13563: AWRHub functionality is disabled.

Cause: The operation failed because the Automatic Workload Repository (AWR) Hub feature was disabled.

Action: Enable AWRHub functionality and retry the operation.

ORA-13564: The database is already registered as a *string*.

Cause: The operation failed because the database was already registered as a hub server or a source database.

Action: Reconfigure the existing Automatic Workload Repository Hub (AWRHub) setting and retry the operation.

ORA-13565: The database is not registered as a *string*.

Cause: The operation failed because the database was not registered as a hub server or a source database.

Action: Configure the database as a hub server or source database and retry the operation.

ORA-13566: failure to create a subdirectory under directory [*string*]

Cause: The operation failed because the system could not create a subdirectory under the specified mailbox directory.

Action: Check the operating system privileges to allow the database system to create subdirectories under the specified mailbox directory.

ORA-13567: DBID (%0!s) of source (%1!s) or the server DBID (%2!s) were already registered in AWRHub.

Cause: The operation failed because either the DBID of the specified source or the specified server DBID was already registered in Automatic Workload Repository Hub (AWRHub).

Action: Unregister the existing DBID and retry the operation.

ORA-13568: DBID (%0!s) of source (%1!s) is not registered in AWRHub

Cause: The database identifier (DBID) of the source was not registered in the Automatic Workload Repository Hub (AWRHub).

Action: Register the source and retry the operation.

ORA-13570: unable to read label file (%0!s) in the directory (%1!s)

Cause: The operation failed because the database could not read the label file in the specified directory.

Action: Check the operating system privileges or the presence of the file or both.

ORA-13571: AWR import or export operation failed: *string*

Cause: The Automatic Workload Repository (AWR) import or export operation failed due to some errors. The possible causes were: - The specified database directory object was invalid. - The specified dump file existed in the specified directory. - The specified dump file did not exist in the specified directory. - Data Pump job encountered some errors. - The operation exceeded the maximum number of retries.

Action: In the log file, check the conditions and errors mentioned in the Cause, correct the problem, and retry the command.

ORA-13572: input parameters to AWRHub operation are invalid: *string*

Cause: The input parameters to the Automatic Workload Repository (AWR) Hub were invalid.

Action: Correct the input parameters and retry the operation.

ORA-13573: Package (*string*) is being processed by AWRHub.

Cause: The specified package was reported to Automatic Workload Repository Hub (AWRHub) previously. It was already being processed by AWRHub.

Action: None

ORA-13574: Input parameters to AWR operation are invalid: *string*

Cause: The input parameters to the Automatic Workload Repository (AWR) operation were invalid.

Action: Correct the input parameters and retry the operation.

ORA-13575: Import operation failed. Version *string* is outside the supported range [*string*, *string*].

Cause: The Automatic Workload Repository (AWR) version that exported the data was out of the range of the supported versions that could be imported in the local AWR.

Action: None

ORA-13576: The AWRHub creation operation failed: The specified mailbox is not dedicated for AWRHub

Cause: The Automatic Workload Repository Hub (AWRHub) creation operation failed because the specified mailbox is not empty.

Action: Cleanup the specified mailbox and retry the command.

ORA-13577: The operation at the AWRHub source database failed because the registration is not active

Cause: The registration of the Automatic Workload Repository Hub (AWRHub) source database was not active.

Action: Wait until the registration is active and retry the command.

ORA-13578: parameter [*string*] does not allow NULL values

Cause: A NULL value was provided for the specified parameter but the parameter only allows non-NULL values.

Action: Provide a non-NULL value for the specified parameter.

ORA-13579: Source database registration failed: *string*

Cause: The Automatic Workload Repository Hub (AWRHub) source registration failed due to some errors. A possible cause was that the specified mailbox was not associated with an existing AWRHub Server.

Action: Create a AWRHub server using specified directory as a mailbox before source registration

ORA-13580: Source database unregistration failed: *string*

Cause: The Automatic Workload Repository Hub (AWRHub) source unregistration failed due to some errors. A possible cause was that a registration request for this source was still pending.

Action: Retry the operation when AWRHub server has no pending registration requests from this source.

ORA-13581: Request timed out: AWRHub Server did not respond after *number* seconds

Cause: The request failed due to a timeout error. A possible cause was that Automatic Workload Repository Hub (AWRHub) server was not available to complete the request at this time.

Action: Retry the operation after the AWRHub server is available.

ORA-13582: Unregistration failed: AWR snapshots exist for this DBID

Cause: The unregistration failed due to the existence of Automatic Workload Repository (AWR) snapshots for this database identifier (DBID).

Action: Take one of the following actions: - Check if the DBID is correct and retry the operation. - Ensure that this DBID has no remaining snapshots and retry the operation. - Use the FORCE parameter to remove existing snapshots.

ORA-13600: error encountered in Advisor\n*string*

Cause: An error occurred in the Advisor. This message will be followed by a second message giving more details about the nature of the error.

Action: See the Advisor documentation for an explanation of the second error message.

ORA-13601: The specified Advisor *string* does not exist.

Cause: The user specified an advisor name that has not be defined in the advisor repository.

Action: Correct the advisor name and retry the operation.

ORA-13602: The specified parameter *string* is not valid for task or object *string*.

Cause: The user attempted to access a task parameter that does not exist for the specified advisor object. The parameter may be misspelled or the user has selected a parameter that is not supported by the particular advisor.

Action: Validate the parameter name and retry the operation.

ORA-13603: The specified parameter *string* cannot be fetched as a numeric value for task or object *string*.

Cause: The user attempted to retrieve a string parameter as a numeric value.

Action: Check the datatype for the task parameter and retry the operation.

ORA-13604: The specified parameter *string* cannot be fetched as a SQL table.

Cause: The user attempted to retrieve a non-table parameter as a table name.

Action: Check the datatype for the task parameter and retry the operation.

ORA-13605: The specified task or object *string* does not exist for the current user.

Cause: The user attempted to reference an advisor task or object using a name that does not exist in the Advisor repository.

Action: Adjust the name and retry the operation.

ORA-13606: the specified task parameter element *string* is out of range for parameter *string*.

Cause: The user attempted to reference an invalid parameter element.

Action: Adjust the element offset and retry the operation.

ORA-13607: The specified task or object *string* already exists

Cause: The user attempted to create the specified task or object using a name that already exists in the Advisor repository. Task names must be unique to the database user.

Action: Adjust the name and retry the operation.

ORA-13608: The specified name *string* is invalid.

Cause: An attempt was made to specify a name for a task, object, execution or directive instance, which contained invalid characters or an invalid wildcard specifier.

Action: Adjust the name and retry the operation.

ORA-13609: The specified task *string* must be executing to be cancelled or interrupted.

Cause: The user attempted to cancel or interrupt a task that is not currently executing.

Action: Check the status of the task and retry the operation.

ORA-13610: The directive *string* does not exist for task *string*.

Cause: The user attempted to access a task directive that does not exist.

Action: Validate the directive and retry the operation.

ORA-13611: The command *string* is not a valid advisor command.

Cause: The user attempted to specify a command that does not exist.

Action: Validate the command and retry the operation.

ORA-13612: The recommendation action *string, string* is not valid for task *string*.

Cause: The user attempted to access a recommendation action that does not exist in the task.

Action: Validate the recommendation-action and retry the operation.

ORA-13613: The requested operation is not supported for this advisor object.

Cause: The user attempted to perform an operation that is not supported for the particular advisor or task type.

Action: Validate the task or object and retry the operation.

ORA-13614: The template *string* is not compatible with the current advisor.

Cause: The user attempted to create a new task or object using an existing task or object that was not created by the same advisor.

Action: Validate the template and retry the operation.

ORA-13615: The task or object *string* is greater than the maximum allowable length of 30 characters.

Cause: The user attempted to create a new task or object using a name that is too long.

Action: Shorten the name and retry the operation.

ORA-13616: The current user *string* has not been granted the ADVISOR privilege.

Cause: The user attempted an advisor operation that requires privilege.

Action: Adjust the user's privileges and retry the operation.

ORA-13617: The specified task *string* already executing

Cause: The user attempted to execute a task that is currently executing.

Action: Wait for the task to finish before attempting any further task activities.

ORA-13618: The specified value is not a valid value for procedure argument *string*.

Cause: The user executed a procedure but failed to provide correct values for the argument.

Action: Correct the procedure arguments and retry the operation.

ORA-13619: The procedure argument *string* is greater than the maximum allowable length of *string* characters.

Cause: The user attempted to pass a character argument that is too long.

Action: Shorten the specified character argument and retry the operation.

ORA-13620: The task or object *string* is read-only and cannot be deleted or modified.

Cause: The user attempted to perform an operation that will update or delete a read-only task or object.

Action: Adjust the READ_ONLY property for the object and retry the operation.

ORA-13621: The task_or object *string* is marked as a template and cannot perform the requested operation.

Cause: The user attempted perform an unsupported operation on a task or object that is identified as a template.

Action: Choose a different object and retry the operation.

ORA-13622: invalid recommendation annotation

Cause: The user attempted to mark a recommendation using an invalid annotation. Valid annotation actions are ACCEPT, REJECT and IGNORE.

Action: Correct the action and retry the operation.

ORA-13623: The recommendation *string* is not valid for task *string*.

Cause: The user attempted to access a recommendation that does not exist in the task.

Action: Validate the recommendation and retry the operation.

ORA-13624: The task *string* is executing and cannot be deleted or modified.

Cause: The user attempted to access a task that currently executing.

Action: Wait for the task to complete and retry the operation.

ORA-13625: *string* is an invalid advisor object type.

Cause: The user has specified an invalid object type.

Action: Refer to `dba_advisor_object_types` for all valid object types

ORA-13626: The specified object *string* is not valid for task *string*.

Cause: The user specified a non-existent object for the task

Action: Choose a different object and retry the operation.

ORA-13627: Setting of parameter *string* is disallowed until the task is reset.

Cause: The user attempted to set the value of a parameter before the task was reset. This parameter cannot be changed until the task is reset.

Action: Reset the task and retry the operation.

ORA-13628: Insufficient privileges to access the task belonging to the specified user

Cause: The user could not access `dba_*` views.

Action: Retry operation as owner of the task or after granting new privileges.

ORA-13629: The task or object *string* is being used by another operation.

Cause: The user attempted to access a task or object that is locked by another session.

Action: Wait for the task or object activity to complete and retry the operation.

ORA-13630: The task *string* contains execution results and cannot be executed.

Cause: The user attempted to execute a task that already contains execution results.

Action: Reset the task to its initial state and retry the operation.

ORA-13631: The most recent execution of task *string* contains no results.

Cause: The user attempted to create a report or script from a task that has not successfully completed an execution.

Action: Execute the task and then retry the operation

ORA-13632: The user cancelled the current operation.

Cause: The user signaled a cancel during a task or object operation.

Action: None

ORA-13633: The task *string* was interrupted and needs to be resumed.

Cause: The user attempted to execute a task that was interrupted.

Action: Resume the execution of the task via the `RESUME_TASK` API.

ORA-13634: The task *string* needs to be reset before being re-executed.

Cause: The task must be in an initial state to be executed.

Action: Reset the task to its initial state and retry the operation.

ORA-13635: The value provided for parameter *string* cannot be converted to a number.

Cause: A numeric parameter was incorrectly supplied in string form.

Action: Retry by supplying valid numeric value.

ORA-13636: The specified value provided for parameter *string* is not valid for this advisor.

Cause: The user supplied an invalid parameter value.

Action: Retry by supplying valid value.

ORA-13637: Executing or modifying task *string* is disallowed until the task is reset to its initial state.

Cause: The user attempted to execute or modify the task that is not in its INITIAL state.

Action: Reset the task and retry the operation.

ORA-13638: The user interrupted the current operation.

Cause: The user signaled an interrupt during a task or object operation.

Action: None

ORA-13639: The current operation was interrupted because it timed out.

Cause: The task or object operation timed out.

Action: None

ORA-13640: The current operation was cancelled because it timed out, and was not in interruptible mode.

Cause: The task or object operation timed out.

Action: None

ORA-13641: Task cannot be interrupted yet. You may cancel it instead.

Cause: The user attempted to interrupt a task that has not reached interruptible mode.

Action: Wait until the task reaches interruptible mode, or cancel the task execution.

ORA-13642: The specified string *string* provided for *string* cannot be converted to a date. The acceptable date format is *string*.

Cause: The user supplied a date value in an incorrect format.

Action: Retry by supplying valid value.

ORA-13643: The task can not be interrupted or cancelled.

Cause: Request to interrupt or cancel task execution can not be granted because the task has not reached the appropriate mode.

Action: User should wait for a few seconds and try again.

ORA-13644: The user "*string*" is invalid.

Cause: Invalid user name specified to advisor framework

Action: User should specify a correct, case-sensitive, name

ORA-13645: The specified execution *string* does not exist for this task.

Cause: You attempted to reference an advisor task execution using a name that did not exist.

Action: Adjust the name and retry the operation.

ORA-13646: The specified execution *string* already exists

Cause: You attempted to perform a new execution using a name that already exists for the specified task. Execution names must be unique within the same task.

Action: Adjust the name and retry the operation.

ORA-13647: Setting of parameter *string* is disallowed during task execution.

Cause: You attempted to set the value of a parameter while the task was being executed. This parameter cannot be changed until the task finishes its execution.

Action: Verify the status of the task and retry the operation.

ORA-13648: The specified execution type does not exist for this advisor.

Cause: You attempted to use an advisor task execution type using a name that did not exist.

Action: Adjust the name and retry the operation.

ORA-13649: The type of execution is not specified for this advisor or task.

Cause: You attempted to execute a task for a multi-execution task advisor without specifying the type of execution to perform.

Action: Set the execution type and retry the operation.

ORA-13650: The specified object does not exist for this execution.

Cause: You attempted to associate an object to a task execution that id not contain the object.

Action: Adjust the execution name and object ID, and then retry the operation.

ORA-13651: The specified list of execution parameters is invalid.

Cause: The list did not include pairs of (parameter_name, parameter_value) where every parameter is a valide task parameter. Duplicates are not allowed.

Action: Adjust the content of the list, and then retry the operation.

ORA-13652: Cannot set execution parameters for this advisor

Cause: You attempted to set execution parameters for an advisor that did not support multiple executions of its tasks.

Action: Adjust the property of the advisor, and then retry the operation.

ORA-13653: The directive with definition id *string* was not found.

Cause: An invalid directive identifier was specified to advisor framework.

Action: User should specify a correct identifier number and retry the operation.

ORA-13654: The directive with instance id of *string* was not found.

Cause: An invalid instance identifier was specified to advisor framework.

Action: User should specify a correct instance identifier number and retry the operation.

ORA-13655: The directive document contains a syntax error and cannot be loaded.

Cause: An attempt was made to load an XML-based directive that does not conform to the documented DTD.

Action: Reformat the directive according the documented DTD.

ORA-13656: The parameter was not found in directive *string*.

Cause: The specified parameter name could not be located within the directive XML document.

Action: Verify the existence of the parameter in the specified directive.

ORA-13657: The filter Xpath specification has invalid syntax.

Cause: The specified filter could not be compiled within the directive XML document.

Action: Verify the syntax of the filter and retry the operation.

ORA-13658: The specified directive already has an instance

Cause: An attempt was made to create multiple instances of a directive when not permitted

Action: Verify the parent directive identifier and the instance name.

ORA-13659: A directive with domain "*string*" and name "*string*" already exists for advisor *string*.

Cause: The specified directive is not unique among the directives.

Action: Choose a directive name and domain that is distinct for the associated advisor.

ORA-13660: A directive instance with the name "*string*" already exists.

Cause: The specified directive instance is not unique among instances for this directive.

Action: Choose an instance name that is distinct for the associated directive.

ORA-13661: A directive instance with the name "*string*" was not found.

Cause: An attempt was made to update or delete a non-existent directive instance.

Action: Verify the parent directive identifier and the instance name.

ORA-13662: The specified value provided for parameter *string* is not valid for this task.

Cause: The supplied parameter value was not valid for the current task configuration.

Action: Retry by supplying valid value. Check the current task configuration.

ORA-13663: The task *string* contains no results for execution *string*.

Cause: An attempt was made to create a report or script from an execution that had not been successfully completed.

Action: Run a new execution and then retry the operation.

ORA-13664: A task-managed "SQL Tuning Set" already exists for task "*string*".

Cause: An attempt was made to create a task-managed SQL Tuning Set for a task that already had one.

Action: Create a new task to use a different SQL Tuning Set.

ORA-13665: Execution names are not correctly ordered.

Cause: The supplied execution names were not properly ordered by execution start date.

Action: Retry by supplying a valid order.

ORA-13666: Task ID *string* does not exist.

Cause: The supplied task ID was invalid.

Action: Check the task ID and try again.

ORA-13667: Execution ID *string* does not exist.

Cause: The supplied execution ID was invalid.

Action: Check the execution ID and try again.

ORA-13668: The current operation was aborted because it was blocking another session.

Cause: The task or object operation interrupted itself when it detected that it was blocking some other session.

Action: Retry the operation when the conflicting operations are not running.

ORA-13669: Execution provided has type "*string*", expected "*string*".

Cause: An execution was provided whose type did not match the one expected by the API.

Action: Check the execution name, and try again.

ORA-13670: No execution of type *string* exists for task provided.

Cause: No execution of the required type existed for the given advisor task.

Action: Check the task, and try again.

ORA-13699: Advisor feature is not currently implemented.

Cause: An attempt was made to execute an unsupported advisor operation.

Action: Verify the availability of the operation.

ORA-13701: Snapshot pair [*string*, *string*] seems to be specified in reverse order.

Cause: The start snapshot id was greater than the end snapshot id.

Action: Swap the start and end snapshot ids.

ORA-13702: Snapshot IDs specified by the range [*string*, *string*] are equal.

Cause: The start snapshot id and end snapshot id were identical.

Action: Provide different start and end snapshot ids.

ORA-13703: The snapshot pair [*string*, *string*] for database_id *string* and instance_id *string* are not found in the current repository.

Cause: The snapshot ids or the database id or the instance id was invalid or the specified snapshots have already been purged.

Action: Set valid snapshot ids and retry.

ORA-13704: Invalid value "*string*" specified for parameter "*string*".

Cause: The parameter was not set before executing the ADDM.

Action: Set the parameter to a valid value and retry.

ORA-13705: There was a instance shutdown/startup between the snapshots in the range [*string*, *string*].

Cause: Instance was shut down and restarted between the two specified snapshots.

Action: Specify start and end snapshot ids that does not have a shutdown/startup in between them.

ORA-13706: Invalid value "*string*" specified for parameter "*string*" in "*string*" analysis mode.

Cause: The parameter was not set to an acceptable value for this particular mode of analysis.

Action: Set the parameter to a valid value and retry.

ORA-13707: Either the start snapshot *string* or the end snapshot *string* is incomplete or missing key statistics.

Cause: Either the start or the end snapshots was missing or purged or had encountered errors while creating them.

Action: Verify that AWR is done taking these two snapshots, or Look in DBA_HIST_SNAP_ERROR to find what tables are missing in the start/end snapshots. Use the ERROR_NUMBER column in that view together with the alert log to identify the reason for failure and take necessary action to prevent such failures in the future. Try running ADDM on a different snapshot range that has valid start and end snapshots.

ORA-13708: Some snapshots in the range [*string*, *string*] were purged before the analysis was complete.

Cause: One or both of the snapshots have been purged from AWR.

Action: Verify that the AWR auto purging is not trying to purge these snapshots and re-run ADDM.

ORA-13709: Required parameter "*string*" must be set before execution.

Cause: The parameter needs to be set before running the ADDM

Action: Set the parameter to a valid value and retry.

ORA-13710: Parameter "*string*" must have a higher value than parameter "*string*". The values supplied were "*string*" and "*string*" respectively.

Cause: Invalid interaction between two parameter values.

Action: Set at least one of the values so the value of the first parameter is higher than the value of the second parameter.

ORA-13711: Some snapshots in the range [*string*, *string*] are missing key statistics.

Cause: Some AWR tables encountered errors while creating one or more snapshots in the given range. The data present in one or more of these missing tables is necessary to perform an ADDM analysis.

Action: Look in DBA_HIST_SNAP_ERROR to find what tables are missing in the given snapshot range. Use the ERROR_NUMBER column in that view together with the alert log to identify the reason for failure and take necessary action to prevent such failures in the future. Try running ADDM on a different snapshot range that does not include any incomplete snapshots.

ORA-13712: Cannot perform ADDM analysis on AWR snapshots from previous releases. Snapshot version "*string*" do not match the database version "*string*".

Cause: ADDM analysis can only be performed on AWR snapshots taken in the current release.

Action: One can still generate AWR and ASH reports using `?/rdbms/admin/awrrpt` and `?/rdbms/admin/ashrpt` on these snapshots to analyze the data in them.

ORA-13713: Finding name "*string*" does not exist. Look in DBA_ADVISOR_FINDING_NAMES for all valid values

Cause: Attempt to refer to an advisor's finding name that does not exist.

Action: Specify a valid value. The list of all valid values is in DBA_ADVISOR_FINDING_NAMES

ORA-13714: "*string*" is not a valid SQL_ID value

Cause: The specified value of SQL_ID was not properly formatted.

Action: Specify a valid value consisting of a 13 character string with characters from '0' to '9' and from 'a' to 'z'.

ORA-13715: "*string*" is not recognized by ADDM as a parameter name

Cause: The specified value for a system parameter was not recognized by ADDM.

Action: Specify a value that appears in the NAME column of V\$PARAMETER.

ORA-13716: Diagnostic Package License is needed for using this feature.

Cause: The specified value for system parameter CONTROL_MANAGEMENT_PACK_ACCESS indicated that the Diagnostic Package was disabled.

Action: Modify the parameter value if the Diagnostic Package License was purchased.

ORA-13717: Tuning Package License is needed for using this feature.

Cause: The specified value for system parameter CONTROL_MANAGEMENT_PACK_ACCESS indicated that the Tuning Package was disabled.

Action: Modify the parameter value if the Tuning Package License was purchased.

ORA-13718: Tuning Package License or Real Application Testing Option is needed for using this feature.

Cause: The specified package license and option were not installed.

Action: Consider purchasing and installing either the missing package licence or option. If the tuning package license was purchased, then check the value of system parameter CONTROL_MANAGEMENT_PACK_ACCESS.

ORA-13719: Imported AWR snapshots are from a database with an incompatible character set.

Cause: ADDM analysis was attempted on imported Automatic Workload Repository (AWR) snapshots with incompatible character set.

Action: Perform ADDM analysis using a database with the same version and character set as the original database.

ORA-13720: dimension name provided is too long

Cause: Active Session History (ASH) dimension name provided was longer than the limit of 30 characters.

Action: Correct the dimension name and retry the operation.

ORA-13721: dimension name provided is invalid

Cause: Active Session History (ASH) dimension name provided was invalid.

Action: Correct the dimension name and retry the operation.

ORA-13722: invalid input value for procedure argument *string*

Cause: An invalid value was passed an input for a procedure argument.

Action: Pass a valid value to the procedure.

ORA-13723: input value for procedure argument *string* exceeds maximum allowed length of *string*

Cause: The string input value was too long for the specific procedure argument.

Action: Pass a valid value to the procedure.

ORA-13750: User "*string*" has not been granted the "ADMINISTER SQL TUNING SET" privilege.

Cause: The user attempted an SQL Tuning Set operation that requires a specific privilege.

Action: Adjust the user's privileges and retry the operation.

ORA-13751: "SQL Tuning Set" "*string*" does not exist for owner "*string*" or user "*string*" does not have permission to access the "SQL Tuning Set".

Cause: The user attempted to access a SQL Tuning Set that does not exist or the user does not have permission to access the SQL Tuning Set

Action: Check the existence of the "SQL Tuning Set" or adjust the user's privileges and retry the operation.

ORA-13752: User "*string*" must be SYS or must have the "ADMINISTER ANY SQL TUNING SET" privilege.

Cause: The attempted to create a SQL Tuning Set in another schema without having the right privilege.

Action: Connect as SYS or adjust the user's privilege and retry the operation.

ORA-13753: "SQL Tuning Set" "*string*" already exists for user "*string*".

Cause: The user attempted to create a "\SQL Tuning\" Set using a name that already exists for that owner.

Action: Change the name of the SQL Tuning Set and retry the operation.

ORA-13754: "SQL Tuning Set" "*string*" does not exist for user "*string*".

Cause: The user attempted to access a SQL Tuning Set that does not exist.

Action: Check the spelling of the SQL Tuning Set name and retry the operation.

ORA-13755: invalid "SQL Tuning Set" name

Cause: The user attempted to specify a SQL Tuning Set name that is invalid. A name must not contain wildcards and its length must be less than 30 characters.

Action: Adjust the name and retry the operation.

ORA-13756: Cannot update attribute "*string*".

Cause: The user attempted to update an attribute element that cannot be modified. The only string attributes that can be updated are MODULE, ACTION, PARSING_SCHEMA_NAME, PRIORITY, and OTHER.

Action: Adjust the attribute name and retry the operation.

ORA-13757: "SQL Tuning Set" "*string*" owned by user "*string*" is active.

Cause: The user attempted to update an active SQL Tuning Set.

Action: Remove all reference to the SQL Tuning Set and retry the operation.

ORA-13758: "SQL Tuning Set" "*string*" owned by user "*string*" is in use.

Cause: The user attempted to modify a SQL Tuning Set or to add a reference to a SQL Tuning Set which is in use.

Action: Wait until the end of the previous operation and retry.

ORA-13759: User "*string*" cannot remove reference "*string*".

Cause: The user attempted to remove a SQL Tuning Set reference that does not exist. The user might not own the reference.

Action: Check the reference ID and the reference owner and retry the operation.

ORA-13760: This operation is not supported from a physical standby database.

Cause: An attempt was made to run an operation that is not supported from a physical standby database.

Action: Run this operation from a primary database.

ORA-13761: invalid filter

Cause: The user attempted to select data from a data source using an invalid filter. A filter is a WHERE clause on data source content.

Action: Correct the filter and retry the operation.

ORA-13762: The *string* ranking measure is invalid.

Cause: The user attempted to select data from a data source using an invalid ranking measure. A ranking measure must represent a valid numerical expression.

Action: Correct the ranking measure and retry the operation.

ORA-13763: illegal ranking attribute "string"

Cause: The user attempted to use an attribute element that is not allowed in a ranking measure.

Action: Check the attribute in the ranking measure and retry the operation.

ORA-13764: Value "string" is illegal as a result percentage.

Cause: The user attempted to select data from a SQL Tuning Set using an invalid result percentage. The result percentage must be between 0 and 1.

Action: Correct the result percentage value and retry the operation.

ORA-13765: Value "string" is illegal for a result limit.

Cause: The user attempted to select data from a SQL Tuning Set using an invalid result limit. A result limit must be a positive interger.

Action: Correct the result limit value and retry the operation.

ORA-13766: A ranking measure is required.

Cause: The user attempted to select data from a SQL Tuning Set using a percentage argument without specifying a ranking measure.

Action: Add a ranking measure or remove the percentage argument and retry the operation.

ORA-13767: End snapshot ID must be greater than begin snapshot ID.

Cause: The user attempted to select data from the workload repository using an invalid snapshot ID range.

Action: Adjust the snapshot ID range and retry the operation.

ORA-13768: Snapshot ID must be between *string* and *string*.

Cause: The user attempted to select data from the workload repository using a snapshot ID which does not exist.

Action: Adjust the snapshot ID and retry the operation.

ORA-13769: Snapshots *string* and *string* do not exist.

Cause: The user attempted to select data from the workload repository using snapshots that do not exist.

Action: Check the snapshot identifiers and retry the operation.

ORA-13770: Baseline "string" does not exist.

Cause: The user attempted to access a baseline that does not exist.

Action: Check the spelling of the baseline name and retry the operation.

ORA-13771: cannot obtain exclusive lock *string* on "SQL Tuning Set" "string" owned by user "string"

Cause: Unexpected error from DBMS_LOCK.REQUEST.

Action: This error should not normally occur. Check your system for anomalies and retry the operation. If this error persists, contact Oracle Support Services.

ORA-13772: unexpected deadlock on "SQL Tuning Set" "*string*" owned by user "*string*"

Cause: Unexpected error from DBMS_LOCK.REQUEST

Action: This error should not normally occur. Check your system for anomalies and retry the operation. If this error persists, contact Oracle Support Services.

ORA-13773: insufficient privileges to select data from the cursor cache

Cause: The user attempted to perform an operation without having the appropriate privileges on V\$SQL and V\$SQL_BIND_CAPTURE.

Action: Adjust the user's privileges and retry the operation.

ORA-13774: insufficient privileges to select data from the workload repository

Cause: The user attempted to perform an operation without having the appropriate privileges on views DBA_HIST_BASELINE, DBA_HIST_SQLTEXT, DBA_HIST_SQLSTAT, DBA_HIST_SQLBIND, DBA_HIST_OPTIMIZER_ENV, and DBA_HIST_SNAPSHOT.

Action: Adjust the user's privileges and retry the operation.

ORA-13775: inconsistent datatype in input cursor

Cause: The user attempted to load a SQL Tuning Set using an invalid input cursor. All rows in the cursor must match type SQLSET_ROW.

Action: Check the rows type in the cursor and retry the operation.

ORA-13776: User "*string*" has not been granted the "SELECT" privilege on the "SQL tuning set" DBA views.

Cause: The user attempted to read a SQL tuning set belonging to someone else without having SELECT privilege on the DBA views

Action: User should be granted the privilege or only access his own STS

ORA-13777: invalid list of attribute names

Cause: The user specified an attribute element that is not valid. The only attributes that can be selected are NULL, BASIC, TYPICAL, ALL or a comma separated list of the names including EXECUTION_STATISTICS, OBJECT_LIST, BIND_LIST and SQL_PLAN.

Action: Adjust the attribute list and retry the operation.

ORA-13778: no new name or owner specified for "SQL Tuning Set"

Cause: The user attempted to call remap_stgtab_sqlset without specifying either a new SQL tuning set name or a new SQL tuning set owner

Action: Specify at least one or the other argument as non-NULL

ORA-13779: invalid load option

Cause: The user attempted to call load_sqlset with a load option that is different than INSERT, UPDATE and MERGE.

Action: Adjust the load option and retry the operation.

ORA-13780: SQL statement does not exist.

Cause: The user attempted to tune a SQL statement that does not exist.

Action: Verify the `sql_id` and the plan hash value of the statement and retry the operation.

ORA-13781: cannot perform test-execute and explain plan operations on the automatic SQL tuning task

Cause: The user attempted to test-execute or generate explain plans for a SQL workload using the automatic SQL tuning task.

Action: Verify the name of the tuning task and retry the operation.

ORA-13782: The argument *string* to this API is only allowed for tasks created in a physical standby database.

Cause: "An attempt was made to pass an argument that is valid only for a physical standby database. "

Action: Remove the invalid argument and re-run the API.

ORA-13783: invalid tuning scope

Cause: The user attempted to specify a tuning task scope that is invalid. The possible values are LIMITED or COMPREHENSIVE.

Action: Check the scope value and retry the operation.

ORA-13784: cannot accept SQL profiles for all statements in the "*string*"

Cause: An attempt was made to accept SQL profiles for all statements in the input workload.

Action: Provide the object identifier corresponding to a statement in the workload and retry the operation.

ORA-13785: missing target object for tuning task "*string*"

Cause: The user attempted to perform an operation on a task without specifying a target object or by using an invalid object identifier.

Action: Check the identifier of the object and retry the operation.

ORA-13786: missing SQL text of statement object "*string*" for tuning task "*string*"

Cause: The user attempted to accept SQL profile for an object that has not a SQL text associated to it.

Action: Check the identifier of the object and retry the operation.

ORA-13787: missing SQL profile for statement object "*string*" for tuning task "*string*"

Cause: The user attempted to accept a SQL profile for an object that has not a SQL profile associated to it.

Action: Check the identifier of the object and retry the operation.

ORA-13788: invalid recommendation type

Cause: The user passed an invalid recommendation type in the `rec_type` argument to `script_tuning_task`. Possible values are ALL or any subset of a comma-separated list of PROFILES, STATISTICS and INDEXES.

Action: Check the `rec_type` arg and retry the operation.

ORA-13789: invalid process action

Cause: The user passed an invalid action to process a SQL statement. Possible value is any subset of a comma-separated list of EXECUTE and EXPLAIN_PLAN.

Action: Check the action argument and retry the operation.

ORA-13790: invalid value for time limit

Cause: The user passed an invalid value for the time limit argument.

Action: Check the argument specified value and retry the operation.

ORA-13791: cannot resume a task created to process a single statement

Cause: An attempt was made to resume a task that was created for a single SQL statement. A task can be resumed only if it is used for a SQL Tuning Set.

Action: No action required.

ORA-13792: This operation requires a database link.

Cause: An attempt was made to execute an operation from a physical standby database that requires a valid database link to access a primary database.

Action: Provide a valid database link to access a primary database.

ORA-13793: invalid comparison metric

Cause: An invalid metric to compare SQL performance was specified.

Action: Use execution statistics to compare the result of two executions and optimizer_cost to analyze performance of two explain plan actions.

ORA-13794: execution type mismatch

Cause: An attempt was made to analyze the performance of a SQL workload using two executions that were generated using two different actions.

Action: check the name and type of task executions to analyze and retry the operation.

ORA-13795: missing task execution

Cause: An insufficient number of valid task executions to analyze the performance of a SQL workload were specified.

Action: run the task to generate two executions of the same type and retry the operation.

ORA-13796: invalid value *string* specified for problem type

Cause: An invalid problem type was specified to the SQL diagnosis advisor. Problem type should be one of the PROBLEM_TYPE_* defined in 'admin/dbmsdiag.sql'.

Action: Specify valid problem type.

ORA-13797: invalid SQL Id specified, *string*

Cause: Invalid SQL Id specified for conversion.

Action: Specify valid SQL Id.

ORA-13798: Parameter *string* cannot be NULL.

Cause: A call to GET_THRESHOLD procedure was made without a required parameter.

Action: Specify a valid value for this parameter.

ORA-13799: threshold not found

Cause: No threshold was found with the specified threshold key.

Action: No action required.

ORA-13800: concurrent DDL failure on SQL repository objects

Cause: A SQL repository object was the target of two concurrent DDL operations.

Action: Check the current state of the object and retry the operation that failed.

ORA-13801: invalid value for SQLTUNE_CATEGORY parameter

Cause: An invalid Oracle identifier was used as the value of the parameter.

Action: Specify the parameter conforming to the rules for Oracle identifiers.

ORA-13802: failed to purge SQL Tuning Base entry from sql\$

Cause: An error occurred while try to delete a SQL Tuning Base object.

Action: Look at the underlying error(s) on the error stack.

ORA-13803: invalid SQL workload snapshot short interval

Cause: An invalid value was passed for the parameter.

Action: Short snapshot interval should be less than the long snapshot interval.

ORA-13804: invalid SQL workload snapshot long interval

Cause: An invalid value was passed for the parameter.

Action: Snapshot long interval should be greater than the snapshot short interval.

ORA-13810: The FORCED_TRACKING parameter can only have values of N or Y.

Cause: An invalid value was passed for the parameter.

Action: Check the value and input the correct value.

ORA-13811: A database operation is already monitoring this session.

Cause: An attempt was made to start a database operation in a session that was already being monitored.

Action: No action required.

ORA-13812: current session does not have database operation monitored

Cause: An attempt was made to end a database operation that did not exist.

Action: Check if the database operation is being monitored.

ORA-13813: database operation name or execution ID does not match

Cause: The database operation name or execution ID did not match.

Action: Call the interface with the right database operation name and execution ID.

ORA-13814: database operation name is invalid

Cause: The database operation name provided was invalid.

Action: Supply a database operation name not exceeding 30 characters.

ORA-13815: database operation execution ID is invalid

Cause: The database operation execution ID provided was invalid.

Action: Supply a database operation execution ID greater than 0.

ORA-13825: missing SQL statement text

Cause: No SQL text was provided to the create SQL profile or patch operation.

Action: Retry with properly specified SQL text.

ORA-13826: empty SQL profile or patch not allowed

Cause: No attributes were specified to the create SQL profile or patch operation.

Action: Retry with at least one hint specified.

ORA-13827: null or zero length attribute not allowed

Cause: One of the attributes within the SQL profile or patch was not properly specified.

Action: Retry with a fully specified SQL profile or patch.

ORA-13828: generated SQL profile or patch name *string* already exists

Cause: A SQL profile or patch already exists with the name generated by the system.

Action: Retry the operation as the generated name is time sensitive.

ORA-13829: SQL profile or patch named *string* already exists

Cause: A SQL profile or patch already exists with the name specified.

Action: Specify a different name or drop the existing SQL profile or patch.

ORA-13830: SQL profile or patch with category *string* already exists for this SQL statement

Cause: A SQL profile or patch already exists for the given SQL statement and category.

Action: Drop or update the existing SQL profile or patch.

ORA-13831: SQL profile or patch name specified is invalid

Cause: An invalid SQL profile or patch name was specified.

Action: Supply a name not exceeding 30 characters or look for the underlying error on the error message stack.

ORA-13832: category name specified is invalid

Cause: An invalid category name was specified.

Action: Supply a category name not exceeding 30 characters or look for the underlying error on the error message stack.

ORA-13833: SQL profile or patch named *string* doesn't exist

Cause: A SQL profile or patch name was specified that doesn't exist.

Action: Verify the name of the SQL profile or patch.

ORA-13834: name of SQL profile or patch to be cloned must be provided

Cause: A SQL profile or patch name was not provided as the from target of a clone SQL profile or patch operation.

Action: Provide the name of the SQL profile or patch being cloned.

ORA-13835: invalid attribute name specified

Cause: An invalid attribute name was specified for an alter SQL profile or patch operation.

Action: Verify the name of the attribute.

ORA-13836: invalid attribute value specified

Cause: An invalid attribute value was specified for an alter SQL profile or patch operation.

Action: Verify the attribute value.

ORA-13837: invalid HASH_VALUE

Cause: An invalid HASH_VALUE was passed to a create SQL profile operation

Action: Verify the HASH_VALUE.

ORA-13838: invalid ADDRESS value

Cause: An invalid ADDRESS value was passed to a create SQL profile operation.

Action: Verify the ADDRESS value.

ORA-13839: V\$SQL row doesn't exist with given HASH_VALUE and ADDRESS.

Cause: A HASH_VALUE and ADDRESS combination passed to the create SQL profile operation doesn't correspond to an existing V\$SQL entry.

Action: Verify the HASH_VALUE and ADDRESS in V\$SQL.

ORA-13840: Concurrent DDL Error in create SQL profile operation.

Cause: A concurrent DDL operation was performed during a create or replace sql profile operation.

Action: Try operation again

ORA-13841: SQL profile named *string* already exists for a different signature/category pair

Cause: A SQL profile already exists with the name specified under a different signature/category pair so it cannot be replaced, even with FORCE specified.

Action: Specify a different name or drop the existing SQL profile.

ORA-13842: no SELECT privilege on DBA_SQL_PROFILES

Cause: A user has tried to perform an operation that requires SELECT privileges on the DBA_SQL_PROFILES view.

Action: Either perform the operation as another user or get the privilege

ORA-13843: no SQL profile with name like "*string*" exists for category like "*string*"

Cause: A user tried to perform an operation by specifying a profile name/ category filter that did not target any profiles

Action: Try a different filter after checking the profile name/category

ORA-13844: no new SQL profile name or category specified.

Cause: A user called `remap_stgtab_sqlprof` without specifying new values for the sql profile name or category. At least one is required.

Action: Specify either a new profile name, or a new category, or both

ORA-13845: invalid SQL profile XML specification provided

Cause: The supplied XML specification for the SQL profile did not adhere to the proper schema.

Action: Check the syntax and try again.

ORA-13846: Cannot create SQL plan baseline on the given plan

Cause: There are either multiple plans exist for the given value or the plan is not reproducible.

Action: Call Oracle Support.

ORA-13847: The plan with plan hash value *string* does not exist

Cause: The give plan does not exist.

Action: Check the available plans.

ORA-13848: Database link provided for the task operation was different than the one used with task creation API.

Cause: All SQL tuning advisor APIs executed from a physical standby database are required to use the same database link.

Action: Retry the operation by providing the database link used for task creation.

ORA-13850: Tracing for client identifier *string* is not enabled

Cause: Attempt to disable a client identifier tracing which was never enabled

Action: Supply correct client identifier

ORA-13851: Tracing for client identifier *string* is already enabled

Cause: Attempt to enable a client identifier tracing which has been already enabled

Action: Supply correct client identifier, or disable and re-enable tracing with different bind/wait options

ORA-13852: Tracing for service(module/action) *string* is not enabled

Cause: Attempt to disable a service-level tracing which was never enabled

Action: Supply correct service(module/action) name

ORA-13853: Tracing for service (module/action) *string* is already enabled

Cause: Attempt to enable a service-level tracing which has been already enabled

Action: Supply correct service(module/action), or disable and re-enable tracing with different bind/wait options

ORA-13854: Tracing for service(module/action) *string* on instance *string* is not enabled

Cause: Attempt to disable a service-level tracing which was never explicitly enabled on a specific instance

Action: Supply correct service(module/action) name

ORA-13855: Tracing for service (module/action) *string* on instance *string* is already enabled

Cause: Attempt to enable a service-level tracing which has been already enabled on a specific instance

Action: Supply correct service(module/action), or disable and re-enable tracing with different bind/wait options

ORA-13856: Service name must be specified

Cause: Omitting service name while enabling/disabling tracing or aggregation

Action: Supply the service name

ORA-13857: Invalid module name

Cause: Module name is too long (exceeding 48 characters)

Action: Supply correct name

ORA-13858: Invalid action name

Cause: Action name is too long (exceeding 32 characters)

Action: Supply correct name

ORA-13859: Action cannot be specified without the module specification

Cause: Action name is specified, but the module name is not

Action: Supply the module name

ORA-13860: Invalid service name

Cause: Service name is too long (exceeding 64 characters)

Action: Supply correct name

ORA-13861: Statistics aggregation for client identifier *string* is already enabled

Cause: Attempt to enable a client identifier aggregation which has been already enabled

Action: Supply correct client identifier

ORA-13862: Statistics aggregation for client identifier *string* is not enabled

Cause: Attempt to disable a client identifier statistics aggregation which was never enabled

Action: Supply correct client identifier

ORA-13863: Statistics aggregation for service(module/action) *string* is not enabled

Cause: Attempt to disable a service-level statistics aggregation which was never enabled

Action: Supply correct service(module/action) name

ORA-13864: Statistics aggregation for service (module/action) *string* is already enabled

Cause: Attempt to enable a service-level statistics aggregation which has been already enabled

Action: Supply correct service(module/action)

ORA-13865: Module name must be specified

Cause: Attempt to enable/disable a service-level statistics aggregation without a module specification

Action: Supply module name

ORA-13866: Client identifier must be specified

Cause: Omitting client identifier while enabling/disabling tracing or aggregation

Action: Supply the client identifier

ORA-13867: Database-wide SQL tracing is already enabled

Cause: Attempt to enable a database-level tracing which has been already enabled

Action: Disable and re-enable tracing with different bind/wait options

ORA-13868: Instance-wide SQL tracing on instance *string* is not enabled

Cause: Attempt to disable a service-level tracing which was never explicitly enabled on a specific instance

Action: No action required

ORA-13869: Instance-wide SQL tracing on instance *string* is already enabled

Cause: Attempt to enable an instance-level tracing which has been already enabled on a specific instance

Action: Disable and re-enable tracing with different bind/wait options

ORA-13870: Database-wide SQL tracing is not enabled

Cause: Attempt to disable a database-level tracing which was never enabled

Action: No action required

ORA-13871: Invalid instance name

Cause: Instance name is too long (exceeding 16 characters)

Action: Supply correct name

ORA-13900: missing or invalid parameter *string*

Cause: A call to SET_THRESHOLD procedure was either missing a parameter, or the parameter was invalid.

Action: Specify a valid value for this parameter.

ORA-13901: Object *string* was not found.

Cause: An object name was passed to SET_THRESHOLD procedure that did not map to a valid object.

Action: Specify a valid object name.

ORA-13902: The specified file *string* is not a data file.

Cause: The object name was passed to a SET_THRESHOLD procedure that did not map to a valid data file.

Action: Specify a valid data file name.

ORA-13903: Invalid combination of *string* threshold value and operator.

Cause: A non-positive number was used for "Blocked User Session Count" metrics while operator contains equal.

Action: Use a positive number for the threshold value or use "greater than" operator.

ORA-13904: The file has been dropped and recreated during the procedure call.

Cause: The file on which threshold is specified was dropped and recreated during the procedure call.

Action: Retry this operation.

ORA-13905: Critical or warning threshold have incorrect values

Cause: The tablespace threshold values can be in the range 0 to 100 only.

Action: Check the threshold values

ORA-13906: The tablespace is not of the right type.

Cause: An attempt was made to set a threshold on dictionary-managed tablespaces.

Action: Check the tablespace type and reissue the command.

ORA-13907: Threshold value is invalid.

Cause: An attempt was made to specify an invalid value for critical or warning thresholds.

Action: Use non-negative integers only for threshold values.

ORA-13908: Invalid combination of metrics id and object type parameters.

Cause: An attempt was made to specify an invalid combination of metrics id // and object type parameters.

Action: Specify a valid combination of metrics id and object type parameters.

ORA-13909: Invalid combination of threshold value and operator.

Cause: An attempt was made to specify an invalid combination of threshold value and operator.

Action: Check the operator and threshold values and reissue statement.

ORA-13910: Parameter *string* cannot be NULL.

Cause: An attempt was made to call GET_THRESHOLD procedure without a required parameter.

Action: Specify a valid value for this parameter.

ORA-13911: Threshold not found

Cause: The threshold did not exist with the specified threshold key.

Action: No action required.

ORA-13912: Critical threshold value is less than warning threshold value.

Cause: An attempt was made to call SET_THRESHOLD procedure with the critical threshold value less than the warning threshold value.

Action: Check the threshold values and reissue the statement.

ORA-13913: The threshold cannot be set when SYSAUX is offline.

Cause: SET_THRESHOLD procedure was called when SYSAUX tablespace was offline.

Action: Call SET_THRESHOLD procedure when SYSAUX is online.

ORA-13914: Threshold notification failed.

Cause: An error occurred when sending notification for this threshold.

Action: Ensure that you have enough space on SYSAUX tablespace and retry this operation.

ORA-13915: Critical byte based free space threshold value is greater than warning threshold value.

Cause: An attempt was made to call SET_THRESHOLD procedure with the bytes based critical threshold value greater than the warning threshold value.

Action: Check the threshold values and reissue the statement.

ORA-13916: Invalid value "%0!s" specified for parameter "%1!s".

Cause: An invalid value was specified for the given parameter.

Action: Correct the value specified for the parameter and retry.

ORA-13917: Posting system alert with reason_id string failed with code [string] [string]

Cause: Connection to the database is dead, or invalid parameter to alert routine.

Action: If this condition repeats, please contact Oracle Support.

ORA-13918: Updating system alert with reason_id string failed; previous alert not found

Cause: System Error: An attempt to update a system alert failed. The alert was improperly cleared from WRI\$_ALERT_OUTSTANDING.

Action: Do not delete from WRI\$_ALERT_OUTSTANDING. If this condition repeats, please contact Oracle Support.

ORA-13919: Cannot specify values for parameter "string" and for parameter "string"

Cause: Can only specify a value for one or the other.

Action: Pass just one of the parameters.

ORA-13920: Threshold cannot be set when database is in read-only mode.

Cause: SET_THRESHOLD procedure was called when database was open in read-only mode.

Action: Call SET_THRESHOLD procedure when database is open in read/write mode.

ORA-13951: MMON sub-action time limit exceeded

Cause: MMON sub-action did not complete within the system specified time frame.

Action: None

ORA-13970: Invalid name of "string" given

Cause: Passed an invalid component, report, or transformation name to the framework. Names must be alphanumeric and can contain the underscore (`_`) character.

Action: Try again with a valid name

ORA-13971: Unknown string

Cause: Passed an unknown component, report, or transformation to the framework.

Action: Give a different name

ORA-13972: Unknown string for this string

Cause: An object with the first name is unknown within the naming scope of the second name

Action: Change the parameters passed in or register the proper object

ORA-13973: Unknown string for this string

Cause: An object is unknown within the given naming scope

Action: Change the parameters passed in or register the proper object

ORA-13974: string with name "string" already exists

Cause: An object with the given name already exists

Action: Give a different name

ORA-13975: string with name "string" already exists for string "string"

Cause: An object with the first name already exists within the naming scope of the second name

Action: Give a different name

ORA-13976: Improperly-formed report tag

Cause: The top-level report tag was not built properly.

Action: Ensure that the report tag is built using the common tag library function.

ORA-13977: Invalid content type

Cause: An invalid content type was passed to the register format API

Action: Correct your code to use the values in `dbmsrep.sql`

ORA-13978: Invalid reference string parameter or value

Cause: An invalid parameter/value was passed to a `dbms_report` API

Action: Ensure that the parameter names and values are alphanumeric.

ORA-13979: Filename too long

Cause: An invalid file name was passed to `STORE_FILE`

Action: Ensure that the filename is less than 500 bytes

ORA-13980: Invalid file URL

Cause: A URL with invalid syntax was provided, either directly to the function or via an `XML_IMPORT` or `INCLUDE`.

Action: Check the URL.

ORA-13981: Invalid file URL or path prefix

Cause: Either a URL or path prefix with invalid syntax was provided.

Action: Check the URL

ORA-13982: Could not find file at URL provided

Cause: The file requested could not be found in the given location.

Action: Check the URL provided.

ORA-13983: Missing *body* tag from HTML

Cause: An HTML document was passed to the function missing its *body* tag.

Action: Check the HTML source.

ORA-13984: Invalid reference string

Cause: The given reference string could not be parsed.

Action: Check the reference string syntax.

ORA-13985: Invalid URL provided to servlet

Cause: An invalid URL was provided to the servlet.

Action: Check the URL.

ORA-13986: Error *string* received from XPath engine

Cause: An error was received from the xpath library during an xpath operation.

Action: Check xmlerr.h to understand the cause of the error.

ORA-13987: Invalid input to build common *<string>* tag

Cause: Invalid input was given when attempting to build a common tag.

Action: Check the function input to ensure that all necessary information is given.

ORA-13988: Invalid input given to variable argument list report function.

Cause: An invalid parameter was provided to one of the report framework variable argument list functions.

Action: Check the function input and try again.

ORA-13989: Invalid input given to structured argument list report function.

Cause: An invalid parameter was provided to one of the report framework structured argument list functions.

Action: Check the function input and try again.

ORA-13990: Invalid tag name given to common tag callout function.

Cause: An invalid tag name was provided to the report framework common tag callout function.

Action: Check the function input and try again.

ORA-13991: failed to stop report capture on all instances

Cause: This is an internal Server Manageability Error

Action: Contact Oracle Support Services

ORA-14000: only one LOCAL clause may be specified

Cause: CREATE INDEX statement contained more than one LOCAL clause

Action: Specify LOCAL option at most once

ORA-14001: LOCAL clause contradicts previously specified GLOBAL clause

Cause: CREATE INDEX statement contained a GLOBAL clause and a LOCAL clause

Action: Specify LOCAL or GLOBAL clause, but not both

ORA-14002: only one GLOBAL clause may be specified

Cause: CREATE INDEX statement contained more than one GLOBAL clause

Action: Specify GLOBAL option at most once

ORA-14003: GLOBAL clause contradicts previously specified LOCAL clause

Cause: CREATE INDEX statement contained a LOCAL clause and a GLOBAL clause

Action: Specify GLOBAL or LOCAL clause, but not both

ORA-14004: missing PARTITION keyword

Cause: keyword PARTITION missing

Action: supply missing keyword

ORA-14005: missing RANGE keyword

Cause: keyword RANGE missing

Action: supply missing keyword

ORA-14006: invalid partition name

Cause: a partition name of the form *identifier* is expected but not present.

Action: enter an appropriate partition name.

ORA-14007: missing LESS keyword

Cause: keyword LESS missing

Action: supply missing keyword

ORA-14008: missing THAN keyword

Cause: keyword THAN missing

Action: supply missing keyword

ORA-14009: partition bound may not be specified for a LOCAL index partition

Cause: while parsing a CREATE INDEX statement to create a LOCAL partitioned index, *partition-description* of one of partitions was found to contain VALUES LESS THAN clause which is illegal since a LOCAL index inherits partition bounds from its base table

Action: remove all VALUES LESS THAN clauses from descriptions of LOCAL index partitions

ORA-14010: this physical attribute may not be specified for an index partition

Cause: unexpected option was encountered while parsing physical attributes of an index partition; valid options for Range or Composite Range partitions are INITRANS, MAXTRANS, TABLESPACE, STORAGE, PCTFREE; only TABLESPACE may be specified for Hash partitions

Action: remove invalid option(s) from the list of physical attributes of an index partition

ORA-14011: names assigned to resulting partitions must be distinct

Cause: Names of partitions resulting from splitting of an existing table or index partition are not distinct

Action: rename resulting partition(s) to ensure that their names are distinct and different from those of any other partition of the table or index

ORA-14012: resulting partition name conflicts with that of an existing partition

Cause: Name of a partition resulting from splitting of an existing table or index partition is identical to that of some other existing partition of that table or index

Action: rename resulting partition(s) to ensure that their names are distinct and different from those of any other partition of the table or index

ORA-14013: duplicate partition name

Cause: Name of a partition of a table or index being created is not unique

Action: rename partition(s) to ensure that their names are unique among partitions of the table or index being created

ORA-14014: maximum number of partitioning columns is 16

Cause: number of columns in a partitioning column list exceeded the legal limit of 16

Action: modify partitioning column list so that it consists of at most 16 columns

ORA-14015: too many partition descriptions

Cause: CREATE TABLE or CREATE INDEX contained too many partition descriptions; maximum number of partitions is 1048575 (1024K-1).

Action: Reduce number of partitions to not exceed 1048575 (1024K -1).

ORA-14016: underlying table of a LOCAL partitioned index must be partitioned

Cause: User attempted to create a LOCAL partitioned index on a non-partitioned table which is illegal. Only GLOBAL indices (partitioned or otherwise) may be created on a non-partitioned table.

Action: Correct the statement and reenter

ORA-14017: partition bound list contains too many elements

Cause: Partition bound list contained more elements than there are partitioning columns

Action: Ensure that the number of elements in partition bound list is equal to the number of partitioning columns of the table or index

ORA-14018: partition bound list contains too few elements

Cause: Partition bound list contained fewer elements than there are partitioning columns

Action: Ensure that the number of elements in partition bound list is equal to the number of partitioning columns of the table or index

ORA-14019: partition bound element must be one of: string, datetime or interval literal, number, or MAXVALUE

Cause: Partition bound list contained an element of invalid type (i.e. not a number, non-empty string, datetime or interval literal, or MAXVALUE)

Action: Ensure that all elements of partition bound list are of valid type

ORA-14020: this physical attribute may not be specified for a table partition

Cause: unexpected option was encountered while parsing physical attributes of a table partition; valid options for Range or Composite Range partitions are INITRANS, MAXTRANS, TABLESPACE, STORAGE, PCTFREE, and PCTUSED; only TABLESPACE may be specified for Hash partitions

Action: remove invalid option(s) from the list of physical attributes of a table partition

ORA-14021: MAXVALUE must be specified for all columns

Cause: In the VALUES LESS THAN clause for the highest (last) partition of a GLOBAL index, MAXVALUE must be specified for all columns

Action: Ensure that VALUES LESS THAN clause for the last partition of a GLOBAL index has MAXVALUE specified for all columns

ORA-14022: creation of LOCAL partitioned cluster indices is not supported

Cause: An attempt was made to create a LOCAL partitioned cluster index, which is currently illegal

Action: Remove LOCAL along with *partition descriptions*, if any, from the CREATE INDEX statement.

ORA-14023: creation of GLOBAL partitioned cluster indices is not supported

Cause: An attempt was made to create a GLOBAL partitioned cluster index, which is currently illegal

Action: Remove PARTITION BY RANGE clause along with *partition descriptions* from the CREATE INDEX statement.

ORA-14024: number of partitions of LOCAL index must equal that of the underlying table

Cause: User attempted to create a LOCAL partitioned index with a number of partitions which is different from that of the underlying table.

Action: Correct the CREATE INDEX statement to specify a correct number of partitions

ORA-14025: PARTITION may not be specified for a materialized view or a materialized view log

Cause: PARTITION option was encountered while parsing a definition of a materialized view or a materialized view log

Action: Ensure that a definition of a MATERIALIZED VIEW does not include invalid options

ORA-14026: PARTITION and CLUSTER clauses are mutually exclusive

Cause: definition of a table contained both PARTITION and CLUSTER clauses which is illegal

Action: Remove one of the conflicting clauses

ORA-14027: only one PARTITION clause may be specified

Cause: CREATE TABLE statement contained more than one PARTITION clause

Action: Specify PARTITION option at most once

ORA-14028: missing AT or VALUES keyword

Cause: keyword AT or VALUES missing

Action: supply missing keyword

ORA-14029: GLOBAL partitioned index must be prefixed

Cause: partitioning columns of a global partitioned index must form a prefix of the index' key columns

Action: Ensure that the GLOBAL partitioned index being created is prefixed

ORA-14030: non-existent partitioning column in CREATE TABLE statement

Cause: Partitioning column specified in CREATE TABLE statement is not one of columns of the table being created.

Action: Ensure that all columns in the partitioning column list are columns of the table being created.

ORA-14031: partitioning column may not be of type LONG or LONG RAW

Cause: Partitioning column specified by the user was of type LONG or LONG RAW, which is illegal.

Action: Ensure that no partitioning column is of type LONG or LONG RAW.

ORA-14032: partition bound of partition number *string* is too high

Cause: High bound of the partition whose number (partitions are numbered starting with 1) is displayed in this message did not collate lower than that of the following partition, which is illegal.

Action: Ensure that high bound of every partition (except for the last one) collates lower than that of a following partition.

ORA-14036: partition bound value too large for column

Cause: Length of partition bound value is longer than that of the corresponding partitioning column.

Action: Ensure that lengths of high bound values do not exceed those of corresponding partitioning columns

ORA-14037: partition bound of partition "*string*" is too high

Cause: High bound of the partition whose name (explicitly specified by the user) is displayed in this message did not collate lower than that of the following partition, which is illegal.

Action: Ensure that high bound of every partition (except for the last one) collates lower than that of a following partition.

ORA-14038: GLOBAL partitioned index must be prefixed

Cause: User attempted to create a GLOBAL non-prefixed partitioned index which is illegal

Action: If the user, indeed, desired to create a non-prefixed index, it must be created as LOCAL; otherwise, correct the list of key and/or partitioning columns to ensure that the index is prefixed

ORA-14039: partitioning columns must form a subset of key columns of a UNIQUE index

Cause: User attempted to create a UNIQUE partitioned index whose partitioning columns do not form a subset of its key columns which is illegal

Action: If the user, indeed, desired to create an index whose partitioning columns do not form a subset of its key columns, it must be created as non-UNIQUE; otherwise, correct the list of key and/or partitioning columns to ensure that the index' partitioning columns form a subset of its key columns

ORA-14041: partition bound may not be specified for resulting partitions

Cause: while parsing an ALTER {TABLE|INDEX} SPLIT PARTITION statement, *partition-description* of a resulting partition was found to contain VALUES LESS THAN clause which is illegal

Action: remove VALUES LESS THAN clause from the description(s) of partitions resulting from splitting an existing table or index partition

ORA-14042: partition bound may not be specified for a partition being moved, modified or rebuilt

Cause: while parsing an ALTER {TABLE|INDEX} MODIFY PARTITION, ALTER TABLE MOVE PARTITION, or ALTER INDEX REBUILD PARTITION statement, description of new physical attributes of the partition being moved, modified, or rebuilt was found to contain VALUES LESS THAN clause which is illegal

Action: remove VALUES LESS THAN clause from the description of new attributes of the partition being moved, modified, or rebuilt

ORA-14043: only one partition may be added

Cause: ALTER TABLE ADD PARTITION contained descriptions of more than one partition to be added

Action: Ensure that the statement contains exactly one partition definition and that it does not contain any commas

ORA-14044: only one partition may be moved

Cause: ALTER TABLE MOVE PARTITION contained descriptions of more than one partition to be moved

Action: Ensure that the statement describes exactly one partition to be moved and that it does not contain any commas

ORA-14045: only one partition may be modified

Cause: ALTER TABLE|INDEX MODIFY PARTITION contained descriptions of more than one partition to be modified

Action: Ensure that the statement describes exactly one partition to be modified and that it does not contain any commas

ORA-14046: a partition may be split into exactly two new partitions

Cause: ALTER TABLE|INDEX SPLIT PARTITION did not contain descriptions of exactly two new partitions into which an existing table or index partition was to be split

Action: Ensure that the statement describes exactly two partition into which an existing partition is to be split

ORA-14047: ALTER TABLE|INDEX RENAME may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine a RENAME operation with some other operation which is illegal

Action: Ensure that RENAME operation is the sole operation specified in ALTER TABLE or ALTER INDEX statement;

ORA-14048: a partition maintenance operation may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine a partition maintenance operation (e.g. MOVE PARTITION) with some other operation (e.g. ADD PARTITION or PCTFREE which is illegal

Action: Ensure that a partition maintenance operation is the sole operation specified in ALTER TABLE or ALTER INDEX statement; operations other than those dealing with partitions, default attributes of partitioned tables/indices or specifying that a table be renamed (ALTER TABLE RENAME) may be combined at will

ORA-14049: invalid ALTER TABLE MODIFY PARTITION option

Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, BACKUP, ALLOCATE EXTENT, or DEALLOCATE UNUSED was specified in an ALTER TABLE MODIFY PARTITION statement for a Range or Composite Range partition.

Action: Specify only legal options.

ORA-14050: invalid ALTER INDEX MODIFY PARTITION option

Cause: An option other than INITRANS, MAXTRANS, STORAGE, or DEALLOCATE UNUSED was specified in an ALTER INDEX MODIFY PARTITION statement.

Action: Specify only legal options.

ORA-14051: invalid ALTER MATERIALIZED VIEW option

Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, or BACKUP was specified in an ALTER MATERIALIZED VIEW statement.

Action: Specify only legal options.

ORA-14052: partition-extended table name syntax is disallowed in this context

Cause: User attempted to use partition-extended table name syntax in illegal context (i.e. not in FROM-clause or INSERT, DELETE, or UPDATE statement)

Action: Avoid use of partition-extended table name in contexts other those mentioned above.

ORA-14053: illegal attempt to modify *string* in *string* statement

Cause: Certain attributes of objects (e.g. tables) may be specified at creation time, but may not be modified using ALTER statement. Unfortunately, user specified one of such attributes.

Action: Ensure that ALTER statement specifies new values only for attributes which may be changed once an object has been created

ORA-14054: invalid ALTER TABLE TRUNCATE PARTITION option

Cause: Name of the partition to be truncated may be followed by DROP STORAGE or REUSE STORAGE

Action: Ensure that no options besides DROP STORAGE or REUSE STORAGE are specified with ALTER TABLE TRUNCATE PARTITION

ORA-14055: keyword REBUILD in ALTER INDEX REBUILD must immediately follow *index name*

Cause: ALTER INDEX statement contained REBUILD keyword following some index attributes (e.g. INITRANS.)

Action: Ensure that keyword REBUILD immediately follows the name of the index being altered

ORA-14056: partition number *string*: sum of PCTUSED and PCTFREE may not exceed 100

Cause: the sum of PCTUSED and PCTFREE for a partition whose number (partitions are numbered starting with 1) is displayed in this message exceeds 100. Note that if PCTUSED and/or PCTFREE values for this partition were not specified explicitly, default values for the partitioned table or index would be used. If, in turn, default PCTUSED and/or PCTFREE values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that a sum of PCTUSED and PCTFREE for the partition does not exceed 100

ORA-14057: partition "*string*": sum of PCTUSED and PCTFREE may not exceed 100

Cause: the sum of PCTUSED and PCTFREE for a partition whose name (explicitly specified by the user) is displayed in this message exceeds 100. Note that if PCTUSED and/or PCTFREE values for this partition were not specified explicitly, default values for the partitioned table or index would be used. If, in turn, default PCTUSED and/or PCTFREE values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that a sum of PCTUSED and PCTFREE for the partition does not exceed 100

ORA-14058: partition number *string*: INITRANS value must be less than MAXTRANS value

Cause: Value of INITRANS was found to be greater than that of MAXTRANS for a partition whose number (partitions are numbered starting with 1) is displayed in this message. Note that if INITRANS and/or MAXTRANS values for this partition were not specified explicitly, default values for the partitioned table or index would be used. If, in turn, default INITRANS and/or MAXTRANS values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that value of INITRANS (whether specified explicitly or derived from the default value for the partitioned table or index) is no greater than that of MAXTRANS

ORA-14059: partition "*string*": INITRANS value must be less than MAXTRANS value

Cause: Value of INITRANS was found to be greater than that of MAXTRANS for a partition whose name (explicitly specified by the user) is displayed in this message. Note that if

INITRANS and/or MAXTRANS values for this partition were not specified explicitly, default values for the partitioned table or index would be used. If, in turn, default INITRANS and/or MAXTRANS values for the partitioned table or index were not specified, system defaults would be used.

Action: ensure that value of INITRANS (whether specified explicitly or derived from the default value for the partitioned table or index) is no greater than that of MAXTRANS

ORA-14060: data type or length of a table partitioning column may not be changed

Cause: User issued ALTER TABLE statement attempting to modify data type and/or length of a column used to partition the table named in ALTER TABLE statement, which is illegal

Action: Avoid modifying data type and/or length of table partitioning column(s)

ORA-14061: data type or length of an index partitioning column may not be changed

Cause: User issued ALTER TABLE statement attempting to modify data type and/or length of a column used to partition some index defined on the table named in ALTER TABLE statement, which is illegal

Action: Avoid modifying data type and/or length of index partitioning column(s)

ORA-14062: one or more of table's partitions reside in a read-only tablespace

Cause: User issued ALTER TABLE statement attempting to modify an existing VARCHAR2 (or VARCHAR) column to be of type CHAR (or CHARACTER), increase length of an existing CHAR (or CHARACTER) column, or add a column with user-specified default for a table one or more partitions of which reside in read-only tablespaces, which is illegal

Action: Avoid performing aforementioned operations on a partitioned table one or more partitions of which reside in read-only tablespaces

ORA-14063: Unusable index exists on unique/primary constraint key

Cause: User attempted to add or enable a primary key/unique constraint on column(s) of a table on which there exists an index marked Index Unusable.

Action: Drop the existing index or rebuild it using ALTER INDEX REBUILD

ORA-14064: Index with Unusable partition exists on unique/primary constraint key

Cause: User attempted to add or enable a primary key/unique constraint on column(s) of a table on which there exists an index one or more partitions of which are marked Index Unusable.

Action: Drop the existing index or rebuild unusable partitions it using ALTER INDEX REBUILD PARTITION

ORA-14065: ALLOCATE STORAGE may not be specified for a partitioned table

Cause: User specified ALLOCATE STORAGE clause in ALTER TABLE statement issued against a partitioned table which is illegal.

Action: Remove the illegal option. If it is desired to add storage to individual partitions, ALLOCATE STORAGE clause may be specified with ALTER TABLE MODIFY PARTITION statement.

ORA-14066: illegal option for a non-partitioned index-organized table

Cause: An attempt was made to issue a CREATE or ALTER TABLE command on a non-partitioned IOT, but the command contains an option that is legal only for partitioned index-organized tables. Such options are: ENABLE ROW MOVEMENT and DISABLE ROW MOVEMENT.

Action: Remove the illegal option(s) from the command.

ORA-14067: duplicate TABLESPACE_NUMBER specification

Cause: TABLESPACE_NUMBER clause was specified more than once for an table, index or an index partition

Action: Correct the code generating text of CREATE INDEX statement sent to the slaves

ORA-14068: TABLESPACE and TABLESPACE_NUMBER may not be both specified

Cause: Both TABLESPACE and TABLESPACE_NUMBER clauses were specified for a table, index or an index partition

Action: Correct the code generating text of CREATE INDEX statement sent to the slaves

ORA-14069: invalid TABLESPACE_NUMBER value

Cause: The TABLESPACE_NUMBER value is not an integer between 0 and 0x7FFFFFFF

Action: Correct the code generating text of CREATE INDEX statement sent to the slaves

ORA-14070: option may be specified only for partitioned indices or with REBUILD

Cause: User issued ALTER INDEX statement containing an option which is legal only for partitioned indices or in conjunction with REBUILD against a non-partitioned index. Such options are: PCTFREE, TABLESPACE, [NO]PARALLEL and INITIAL, FREELISTS, and FREELIST GROUPS inside STORAGE clause

Action: Remove illegal option(s).

ORA-14071: invalid option for an index used to enforce a constraint

Cause: An option other than COMPRESS, NOCOMPRESS, PCTFREE, INITRANS, MAXTRANS, STORAGE, TABLESPACE, PARALLEL, NOPARALLEL, RECOVERABLE, UNRECOVERABLE, LOGGING, NOLOGGING, LOCAL, or GLOBAL was specified for an index used to enforce a constraint.

Action: Choose one of the valid index options.

ORA-14072: fixed table may not be truncated

Cause: User attempted to truncate a fixed table which is illegal.

Action: Ensure that the table being truncated is not a fixed table.

ORA-14073: bootstrap table or cluster may not be truncated

Cause: User attempted to truncate a bootstrap table or cluster which is illegal

Action: Ensure that the table (or cluster) being truncated is not a bootstrap table (or cluster)

ORA-14074: partition bound must collate higher than that of the last partition

Cause: Partition bound specified in ALTER TABLE ADD PARTITION statement did not collate higher than that of the table's last partition, which is illegal.

Action: Ensure that the partition bound of the partition to be added collates higher than that of the table's last partition.

ORA-14075: partition maintenance operations may only be performed on partitioned indices

Cause: Index named in ALTER INDEX partition maintenance operation is not partitioned, making a partition maintenance operation, at best, meaningless

Action: Ensure that the index named in ALTER INDEX statement specifying a partition maintenance operation is, indeed, partitioned

ORA-14076: submitted alter index partition/subpartition operation is not valid for local partitioned index

Cause: User attempted to either drop, split, add or coalesce a partition or a subpartition of a local index which is illegal.

Action: Ensure that the index named in such statement is a global partitioned index.

ORA-14078: you may not drop the highest partition of a GLOBAL index

Cause: User attempted to drop highest partition of a GLOBAL index, which is illegal.

Action: Ensure that the partition specified in ALTER INDEX DROP PARTITION statement is not the highest partition of the index.

ORA-14079: illegal option for a partition marked Index Unusable

Cause: ALTER INDEX MODIFY PARTITION statement against an index partition marked Index Unusable contained STORAGE and/or DEALLOCATE SPACE clauses which is illegal

Action: Ensure that only valid options are specified

ORA-14080: partition cannot be split along the specified high bound

Cause: User attempted to split a partition along a bound which either collates higher than that of the partition to be split or lower than that of a partition immediately preceding the one to be split

Action: Ensure that the bound along which a partition is to be split collates lower than that of the partition to be split and higher than that of a partition immediately preceding the one to be split

ORA-14081: new partition name must differ from the old partition name

Cause: User entered ALTER TABLE/INDEX RENAME PARTITION specifying *new-partition-name* which is identical to the name of the partition being renamed

Action: Ensure that the new partition name is different from the name of any (including the one being renamed) existing partition of a given table or index

ORA-14082: New partition name must differ from that of any other partition or subpartition of the object.

Cause: ALTER TABLE RENAME PARTITION or ALTER INDEX RENAME PARTITION specifying a *new-partition-name* which is identical to the name of an existing partition or subpartition of the object was specified.

Action: Ensure that the new partition name is different from the name of any (including the one being renamed) existing partition or subpartition of a given table or index.

ORA-14083: cannot drop the only partition of a partitioned table

Cause: A drop partition command is being executed when there is only one partition in the table

Action: Ensure that there is at least one partition. Drop table to remove all partitions

ORA-14084: you may specify TABLESPACE DEFAULT only for a LOCAL index

Cause: User attempted to specify TABLESPACE DEFAULT for an object other than a LOCAL index, which is illegal.

Action: Reenter the statement without TABLESPACE DEFAULT clause.

ORA-14085: partitioned table cannot have column with LONG datatype

Cause: User tried to create a partitioned table with a LONG datatype or tried to add a LONG datatype column to a partitioned table.

Action: LONG data types are not supported with partitioned tables. Create table without LONG column or change table to not partitioned. If adding column, do not use LONG datatype. If modifying attributes of a column to change data type to LONG, it has to be a non partitioned table.

ORA-14086: a partitioned index may not be rebuilt as a whole

Cause: User attempted to rebuild a partitioned index using ALTER INDEX REBUILD statement, which is illegal

Action: Rebuild the index a partition at a time (using ALTER INDEX REBUILD PARTITION) or drop and recreate the entire index

ORA-14094: invalid ALTER TABLE EXCHANGE PARTITION option

Cause: Name of the table to be EXCHANGED has to be followed by [{INCLUDING| EXCLUDING} INDEX][{WITH|WITHOUT} VALIDATION]

Action: Ensure that no options besides INCLUDING INDEX or EXCLUDING INDEX are specified with ALTER TABLE EXCHANGE PARTITION

ORA-14095: ALTER TABLE EXCHANGE requires a non-partitioned, non-clustered table

Cause: The table in the EXCHANGE operation is either clustered or partitioned

Action: Ensure that the table with which the partition is being exchanged for is not partitioned or clustered.

ORA-14096: tables in ALTER TABLE EXCHANGE PARTITION must have the same number of columns

Cause: The two tables specified in the EXCHANGE have different number of columns

Action: Ensure that the two tables have the same number of columns with the same type and size.

ORA-14097: column type or size mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE PARTITION are of different type or size

Action: Ensure that the two tables have the same number of columns with the same type and size.

ORA-14098: index mismatch for tables in ALTER TABLE EXCHANGE PARTITION

Cause: The two tables specified in the EXCHANGE have indexes which are not equivalent

Action: Ensure that the indexes for the two tables have indexes which follow this rule. For every non partitioned index for the non partitioned table, there has to be an identical LOCAL index on the partitioned table and vice versa. By identical, the column position, type and size have to be the same.

ORA-14099: all rows in table do not qualify for specified partition

Cause: There is at least one row in the non partitioned table which does not qualify for the partition specified in the ALTER TABLE EXCHANGE PARTITION

Action: Ensure that all the rows in the segment qualify for the partition. Perform the alter table operation with the NO CHECKING option. Run ANALYZE table VALIDATE on that partition to find out the invalid rows and delete them.

ORA-14100: partition extended table name cannot refer to a remote object

Cause: User attempted to use partition-extended table name syntax in conjunction with remote object name which is illegal

Action: Correct the statement and reenter

ORA-14101: partition extended table name cannot refer to a synonym

Cause: User attempted to use partition-extended table name syntax in conjunction with synonym name which is illegal

Action: Correct the statement and reenter

ORA-14102: only one LOGGING or NOLOGGING clause may be specified

Cause: LOGGING was specified more than once, NOLOGGING was specified more than once, or both LOGGING and NOLOGGING were specified.

Action: Remove all but one of the LOGGING or NOLOGGING clauses and reissue the statement.

ORA-14103: LOGGING/NOLOGGING may not be combined with RECOVERABLE/UNRECOVERABLE

Cause: A statement contained both [NO]LOGGING and [UN]RECOVERABLE clauses which is disallowed.

Action: Remove one of the offending clauses. [UN]RECOVERABLE is being deprecated in V8 and will be obsoleted in V9. To duplicate semantics of UNRECOVERABLE clause, create an object with NOLOGGING option and then ALTER it specifying LOGGING. To duplicate semantics of RECOVERABLE clause, create an object with LOGGING option.

ORA-14104: RECOVERABLE/UNRECOVERABLE may not be specified for partitioned tables/indices

Cause: CREATE TABLE/INDEX statement used to create a partitioned table/index contained RECOVERABLE or UNRECOVERABLE clause which is illegal

Action: Remove offending clause. [UN]RECOVERABLE is being deprecated in V8 and will be obsoleted in V9. To duplicate semantics of UNRECOVERABLE clause, create an object with NOLOGGING option and then ALTER it specifying LOGGING.

To duplicate semantics of RECOVERABLE clause, create an object with LOGGING option.

ORA-14105: RECOVERABLE/UNRECOVERABLE may not be specified in this context

Cause: RECOVERABLE/UNRECOVERABLE clause is not allowed in this context.

Action: Remove offending clause. RECOVERABLE/UNRECOVERABLE may only be specified in CREATE TABLE/INDEX statement describing a non-partitioned table or index and ALTER INDEX REBUILD statement. [UN]RECOVERABLE is being deprecated in V8 and will be obsoleted in V9. To duplicate semantics of UNRECOVERABLE clause, create an object with NOLOGGING option and then ALTER it specifying LOGGING. To duplicate semantics of RECOVERABLE clause, create an object with LOGGING option.

ORA-14106: LOGGING/NOLOGGING may not be specified for a clustered table

Cause: User attempted to specify LOGGING or NOLOGGING clause in CREATE TABLE or ALTER TABLE statement involving a clustered table

Action: Remove offending clause.

ORA-14107: partition specification is required for a partitioned object

Cause: parameter which supplies partition name is missing. This parameter is optional for non-partitioned objects, but is required for partitioned objects.

Action: supply missing parameter

ORA-14108: illegal partition-extended table name syntax

Cause: Partition to be accessed may only be specified using its name. User attempted to use a partition number or a bind variable.

Action: Modify statement to refer to a partition using its name

ORA-14109: partition-extended object names may only be used with tables and editioning views

Cause: An attempt was made to use a partition-extended object name with an object which was not a table or an editioning view.

Action: Avoid using partition-extended name syntax with objects which are not tables or editioning views

ORA-14110: partitioning column may not be of type ROWID

Cause: Partitioning column specified by the user was of type ROWID, which is illegal.

Action: Ensure that no partitioning column is of type ROWID.

ORA-14111: creation of a GLOBAL partitioned index on clustered tables is not supported

Cause: An attempt was made to create a GLOBAL partitioned index on a clustered table which is currently illegal.

Action: Remove PARTITION BY RANGE/HASH clause along with any partition descriptions to create a GLOBAL non-partitioned index on a clustered table

ORA-14112: RECOVERABLE/UNRECOVERABLE may not be specified for a partition or subpartition

Cause: Description of a partition or subpartition found in CREATE TABLE/INDEX statement contained RECOVERABLE or UNRECOVERABLE clause which is illegal

Action: Remove offending clause. Use LOGGING or NOLOGGING instead.

ORA-14113: partitioned table cannot have column with LOB datatype

Cause: User tried to create a partitioned table with a LOB datatype or tried to add a LOB datatype column to a partitioned table.

Action: LOB data types are not supported with partitioned tables. Create table without LOB column or change table to not partitioned. If adding column, do not use LOB datatype. If modifying attributes of a column to change data type to LOB, it has to be a non partitioned table.

ORA-14114: partitioned table cannot have column with object, REF, nested table, array datatype

Cause: User tried to create a partitioned table with a object datatype (object, REF, nested table, array) or tried to add a object datatype column to a partitioned table.

Action: object data types are not supported with partitioned tables. Create table without object column or change table to not partitioned. If adding column, do not use object datatypes. If modifying attributes of a column to change data type to object, it has to be a non partitioned table.

ORA-14115: partition bound of partition number *string* is too long

Cause: Length of linear key representation of a high bound of the partition whose number (partitions are numbered starting with 1) is displayed in this message exceeded the legal limit (4K).

Action: Change representation of a partition high bound to bring its length within legal limit.

ORA-14116: partition bound of partition "*string*" is too long

Cause: Length of linear key representation of a high bound of the partition whose name (explicitly specified by the user) is displayed in this message exceeded the legal limit (4K).

Action: Change representation of a partition high bound to bring its length within legal limit.

ORA-14117: partition resides in offlined tablespace

Cause: User attempted an operation requiring that we access data in a partition which resides in a tablespace which was taken offline. Such operations include trying to drop a tablespace of a table which has indices defined on it or is referenced by a constraint.

Action: Bring tablespace online before attempting the operation.

ORA-14118: CHECK constraint mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE PARTITION statement have CHECK constraint defined on them.

Action: Ensure that the two tables do not have CHECK constraint defined on any column

ORA-14119: specified partition bound is too long

Cause: Length of a linear key representation of a high bound of a table partition being added or along which an existing table or index partition is being split exceeded the legal limit (4K).

Action: Change representation of a partition high bound to bring its length within legal limit.

ORA-14120: incompletely specified partition bound for a DATE column

Cause: An attempt was made to use a date expression whose format does not fully (i.e. day, month, and year (including century)) specify a date as a partition bound for a DATE column. The format may have been specified explicitly (using TO_DATE() function) or implicitly (NLS_DATE_FORMAT).

Action: Ensure that date format used in a partition bound for a DATE column supports complete specification of a date (i.e. day, month, and year (including century)). If NLS_DATE_FORMAT does not support complete (i.e. including the century) specification of the year, use TO_DATE() (e.g. TO_DATE('01-01-1999', 'MM-DD-YYYY') to fully express the desired date.

ORA-14121: MODIFY DEFAULT ATTRIBUTES may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine MODIFY DEFAULT ATTRIBUTES with some other operation (e.g. ADD PARTITION or PCTFREE) which is illegal

Action: Ensure that MODIFY DEFAULT ATTRIBUTES is the sole operation specified in ALTER TABLE or ALTER INDEX statement; operations other than those dealing with partitions, default attributes of partitioned tables/indices or specifying that a table be renamed (ALTER TABLE RENAME) may be combined at will

ORA-14122: only one REVERSE or NOREVERSE clause may be specified

Cause: Both REVERSE and NOREVERSE were specified in CREATE INDEX statement.

Action: Remove all but one of the REVERSE or NOREVERSE clauses and reissue the statement.

ORA-14123: duplicate NOREVERSE clause

Cause: NOREVERSE was specified more than once in ALTER INDEX statement.

Action: Remove all but one of the NOREVERSE clauses and reissue the statement.

ORA-14124: duplicate REVERSE clause

Cause: REVERSE was specified more than once in ALTER INDEX or CREATE INDEX statements.

Action: Remove all but one of the REVERSE clauses and reissue the statement.

ORA-14125: REVERSE/NOREVERSE may not be specified in this context

Cause: REVERSE/NOREVERSE clause is not allowed in this context.

Action: Remove offending clause. REVERSE may be specified as an attribute of an index (not of an individual partition, if creating a partitioned index) in CREATE INDEX statement and ALTER INDEX REBUILD statement. NOREVERSE may be specified only in ALTER INDEX REBUILD statement.

ORA-14126: only a *parallel* clause may follow description(s) of resulting partitions

Cause: Descriptions of partition(s) resulting from splitting of a table or index partition may be followed by an optional *parallel* clause which applies to the entire statement and which, in turn, may not be followed by any other clause.

Action: Ensure that all partition attributes appear within the parenthesized list of descriptions of resulting partitions in ALTER TABLE/INDEX SPLIT PARTITION statement.

ORA-14128: FOREIGN KEY constraint mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE PARTITION statement have different FOREIGN KEY constraints.

Action: Ensure that the two tables do not have FOREIGN KEY constraints defined on any column or disable all FOREIGN KEY constraints on both tables. Then retry the operation.

ORA-14129: INCLUDING INDEXES must be specified as tables have enabled UNIQUE constraints

Cause: Matching UNIQUE constraints in both table are enabled and validated but INCLUDING INDEXES is not specified in ALTER TABLE EXCHANGE PARTITION| SUBPARTITION command.

Action: Disable currently enabled matching UNIQUE constraints on both tables or ensure that INCLUDING INDEXES option is used.

ORA-14130: UNIQUE constraints mismatch in ALTER TABLE EXCHANGE PARTITION

Cause: One of the tables named in the ALTER TABLE EXCHANGE PARTITION command has a UNIQUE constraint for which no matching (vis-a-vis key columns) constraint is defined on the other table or a matching constraint is defined on the other table, but it differs from that defined on the first table vis-a-vis being enabled and/or validated.

Action: Ensure that for every UNIQUE constraint defined on one of the tables named in the ALTER TABLE EXCHANGE PARTITION statement there is a matching (vis-a-vis key columns and being enabled and/or validated) UNIQUE constraint defined on the other table. If UNIQUE constraints are enabled, UNIQUE constraints on the partitioned table should be enforced using local indexes.

ORA-14131: enabled UNIQUE constraint exists on one of the tables

Cause: One of the tables referenced in the ALTER TABLE EXCHANGE PARTITION| SUBPARTITION statement has enabled UNIQUE constraint(s) defined on it, which prevents EXCHANGE from proceeding.

Action: Disable constraints defined on tables referenced in the ALTER TABLE EXCHANGE PARTITION|SUBPARTITION statement and retry the statement.

ORA-14132: table cannot be used in EXCHANGE

Cause: An attempt was made to issue an ALTER TABLE EXCHANGE PARTITION | SUBPARTITION statement, but the non-partitioned table cannot be used in the EXCHANGE because one or more of the following apply: - it is a typed table - it is a temporary table - it contains ADT columns - it contains nested-table columns - it contains REF columns - it contains array columns - it is an index-organized table - it contains LOB columns - it is a nested table - it is created with row dependency and the partitioned table is not - it is created without row dependency and the partitioned table is

Action: Ensure that the non-partitioned table does not violate any of the above restrictions for the ALTER TABLE EXCHANGE PARTITION | SUBPARTITION statement.

ORA-14133: ALTER TABLE MOVE cannot be combined with other operations

Cause: An attempt was made to combine an ALTER TABLE MOVE statement with another operation, such as MODIFY.

Action: Ensure that MOVE is the only operation specified in ALTER TABLE statement.

ORA-14134: indexes cannot use both DESC and REVERSE

Cause: An attempt was made to make a reverse index with some index columns marked DESC.

Action: Do not use DESC in reverse indexes. The rule-based optimizer can scan indexes backwards, which allows a normal reverse index to simulate a reverse index with columns marked DESC.

ORA-14135: a LOB column cannot serve as a partitioning column

Cause: An attempt was made to specify a column of type BLOB or CLOB as a partitioning or subpartitioning column.

Action: Ensure that no partitioning or subpartitioning column is of type BLOB or CLOB.

ORA-14136: ALTER TABLE EXCHANGE restricted by fine-grained security

Cause: User doing exchange does not have full table access due to VPD policies.

Action: Grant exempt privileges to this user.

ORA-14137: Table in partially dropped state, submit DROP TABLE PURGE

Cause: An attempt was made to access a partitioned table in a partially dropped state.

Action: Submit DROP TABLE *table* PURGE to drop the table.

ORA-14138: An unexpected error encountered during drop table operation

Cause: Drop table encountered an unexpected error.

Action: a. Submit drop table *table* purge, or b. If the situation described in the next error on the stack can be corrected, do so. c. Contact Oracle Support.

ORA-14139: table *string.string* is already in read-only mode

Cause: an attempt was made to set a read-only table in read-only mode

Action: this DDL can only be executed on a read/write table

ORA-14140: table *string.string* is already in read/write mode

Cause: an attempt was made to set a read/write table in read/write mode

Action: this DDL can only be executed on a read-only table

ORA-14141: ALTER INDEX VISIBLE|INVISIBLE may not be combined with other operations

Cause: ALTER INDEX statement attempted to combine a VISIBLE|INVISIBLE operation with some other operation which is illegal

Action: Ensure that VISIBLE|INVISIBLE operation is the sole operation specified in ALTER INDEX statement

ORA-14142: ALTER INDEX VISIBLE|INVISIBLE may not be used with certain types of index

Cause: Using the ALTER INDEX VISIBLE|INVISIBLE statement on certain types of indexes (IOT-TOP, Cluster indexes) is illegal.

Action: Remove the option VISIBLE|INVISIBLE.

ORA-14143: CREATE INDEX INVISIBLE may not be used with this type of index

Cause: Certain types of indexes (IOT-TOP, Cluster indexes) cannot be created invisible.

Action: Remove the option INVISIBLE

ORA-14145: only one UNUSABLE clause may be specified

Cause: UNUSABLE was specified more than once.

Action: Remove all but one of the UNUSABLE clauses and reissue the statement.

ORA-14146: Old CONNECT BY does not support partitioned tables

Cause: The query used the old CONNECT BY clause on a partitioned object.

Action: Disable old CONNECT BY by disabling the `_old_connect_by_enabled` parameter.

ORA-14147: There is an existing VISIBLE index defined on the same set of columns.

Cause: An attempt was made to define more than one VISIBLE index on the same set of columns. There can be only one VISIBLE index on the same set of columns. Hence ALTER INDEX VISIBLE was not supported on this index.

Action: Make all the indexes defined on the same set of columns as INVISIBLE and then reexecute this DDL.

ORA-14148: DML and DDL operations are not directly allowed on the guard-column.

Cause: An attempt was made to execute a DML or a DDL directly on the guard-column.

Action: This is not supported.

ORA-14150: missing SUBPARTITION keyword

Cause: keyword SUBPARTITION missing

Action: supply missing keyword

ORA-14151: invalid table partitioning method

Cause: Invalid partitioning method was specified in CREATE TABLE statement. A table may be partitioned by RANGE, HASH, LIST, SYSTEM, or Composite Range-Hash/List/Range (R+H/L/R).

Action: Specify one of valid partitioning methods

ORA-14152: invalid number of partitions specified in PARTITIONS clause

Cause: number-of-partitions clause contained in CREATE TABLE or CREATE INDEX statement specified a number of partitions outside of legal range (1-1048575)

Action: Specify a number between 1 and 1024K-1 in the number-of-partitions clause

ORA-14153: only one of STORE IN or *partition-description* clause may be specified

Cause: both STORE IN and *partition-description* clauses were specified in a CREATE TABLE|INDEX command

Action: Remove one of offending clauses

ORA-14154: only one of STORE IN or *subpartition-description* clause may be specified

Cause: both STORE IN and *subpartition-description* clauses were specified in a CREATE TABLE|INDEX, or ALTER TABLE ADD|SPLIT PARTITION or ALTER TABLE MERGE PARTITIONS command for a Composite Range partitioned object

Action: Remove one of offending clauses

ORA-14155: missing PARTITION, PARTITIONS, SUBPARTITION, or SUBPARTITIONS keyword

Cause: The keyword PARTITION,PARTITIONS, SUBPARTITION, or SUBPARTITIONS was expected but none were supplied.

Action: Supply the missing keyword.

ORA-14156: invalid number of subpartitions specified in [SUBPARTITIONS | SUBPARTITION TEMPLATE] clause

Cause: number-of-subpartitions clause contained in CREATE TABLE or CREATE INDEX statement specified a number of subpartitions outside of legal range (1-1048575)

Action: Specify a number between 1 and 1024K-1 in the number-of-subpartitions clause

ORA-14157: invalid subpartition name

Cause: a subpartition name of the form *identifier* is expected but not present.

Action: enter an appropriate subpartition name.

ORA-14158: too many subpartition descriptions

Cause: CREATE TABLE or CREATE INDEX contained too many subpartition descriptions; maximum number of subpartitions is 1048575.

Action: Reduce number of subpartitions to not exceed 1024K-1.

ORA-14159: duplicate subpartition name

Cause: Name of a subpartition of a table or index being created is not unique

Action: rename subpartition(s) to ensure that their names are unique among subpartitions of the table or index being created

ORA-14160: this physical attribute may not be specified for a table subpartition

Cause: unexpected option was encountered while parsing physical attributes of a table subpartition; TABLESPACE is the only valid option

Action: remove invalid option(s)

ORA-14161: subpartition number *string*: sum of PCTUSED and PCTFREE may not exceed 100

Cause: the sum of PCTUSED and PCTFREE for a subpartition whose number (subpartitions are numbered starting with 1) is displayed in this message exceeds 100. Note that if PCTUSED and/or PCTFREE values for this subpartition were not specified explicitly, default values at partition-level would be used. If, in turn, default PCTUSED and/or PCTFREE values at partition-level were not specified, default values for the partitioned table or index

would be used. If those values were also not specified explicitly, system defaults would be used.

Action: ensure that a sum of PCTUSED and PCTFREE for the subpartition does not exceed 100

ORA-14162: subpartition "*string*": sum of PCTUSED and PCTFREE may not exceed 100

Cause: the sum of PCTUSED and PCTFREE for a subpartition whose name (explicitly specified by the user) is displayed in this message exceeds 100. Note that if PCTUSED and/or PCTFREE values for this subpartition were not specified explicitly, default values at partition-level would be used. If, in turn, default PCTUSED and/or PCTFREE values at partition-level were not specified, default values for the partitioned table or index would be used. If those values were also not specified explicitly, system defaults would be used.

Action: ensure that a sum of PCTUSED and PCTFREE for the subpartition does not exceed 100

ORA-14163: subpartition number *string*: INITRANS value must be less than MAXTRANS value

Cause: Value of INITRANS was found to be greater than that of MAXTRANS for a subpartition whose number (subpartitions are numbered starting with 1) is displayed in this message. Note that if INITRANS and/or MAXTRANS values for this subpartition were not specified explicitly, default values at partition-level would be used. If, in turn, default INITRANS and/or MAXTRANS values at partition-level were not specified, default values for the partitioned table or index would be used. If those values were also not specified explicitly, system defaults would be used.

Action: ensure that value of INITRANS (whether specified explicitly or derived from the default value at partition-level, table-level or index-level) is no greater than that of MAXTRANS

ORA-14164: subpartition "*string*": INITRANS value must be less than MAXTRANS value

Cause: Value of INITRANS was found to be greater than that of MAXTRANS for a subpartition whose name (explicitly specified by the user) is displayed in this message. Note that if INITRANS and/or MAXTRANS values for this subpartition were not specified explicitly, default values at partition-level would be used. If, in turn, default INITRANS and/or MAXTRANS values at partition-level were not specified, default values for the partitioned table or index would be used. If those values were also not specified explicitly, system defaults would be used.

Action: ensure that value of INITRANS (whether specified explicitly or derived from the default value at partition-level, table-level or index-level) is no greater than that of MAXTRANS

ORA-14165: MODIFY DEFAULT ATTRIBUTES FOR PARTITION may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine MODIFY DEFAULT ATTRIBUTES OF PARTITION with some other operation (e.g. ADD PARTITION or PCTFREE) which is illegal

Action: Ensure that MODIFY DEFAULT ATTRIBUTES is the sole operation specified in ALTER TABLE or ALTER INDEX statement; operations other than those dealing

with partitions, default attributes of partitioned tables/indices or specifying that a table be renamed (ALTER TABLE RENAME) may be combined at will

ORA-14166: missing INTO keyword

Cause: keyword INTO missing

Action: supply missing keyword

ORA-14167: only one subpartition may be moved

Cause: ALTER TABLE MOVE SUBPARTITION contained descriptions of more than one subpartition to be moved

Action: Ensure that the statement describes exactly one subpartition to be moved and that it does not contain any commas

ORA-14168: only one subpartition may be modified

Cause: ALTER TABLE|INDEX MODIFY SUBPARTITION contained descriptions of more than one subpartition to be modified

Action: Ensure that the statement describes exactly one subpartition to be modified and that it does not contain any commas

ORA-14169: invalid ALTER TABLE MODIFY SUBPARTITION option

Cause: An option other than PCTFREE, PCTUSED, INITRANS, MAXTRANS, STORAGE, was specified in an ALTER TABLE MODIFY SUBPARTITION statement.

Action: Specify only legal options.

ORA-14170: cannot specify <(sub)partition-description> clause in CREATE TABLE or CREATE INDEX

Cause: A request was made to generate default partition description(s) (possibly via PARTITIONS *number-of-partitions*) while at the same time specified <(sub)partition-description> clause which is illegal.

Action: Remove one of offending clauses.

ORA-14171: cannot specify *subpartition-description* clause in CREATE|ALTER TABLE

Cause: User requested to generate default subpartition description(s) (possibly via SUBPARTITIONS) while at the same time specified *subpartition-description* clause which is illegal

Action: Remove one of offending clauses.

ORA-14172: invalid ALTER TABLE EXCHANGE SUBPARTITION option

Cause: Name of the table to be EXCHANGED has to be followed by [{INCLUDING| EXCLUDING} INDEX][{WITH|WITHOUT} VALIDATION]

Action: Ensure that no options besides INCLUDING INDEX or EXCLUDING INDEX are specified with ALTER TABLE EXCHANGE SUBPARTITION

ORA-14173: illegal subpartition-extended table name syntax

Cause: Subpartition to be accessed may only be specified using its name. User attempted to use a subpartition number or a bind variable.

Action: Modify statement to refer to a subpartition using its name

ORA-14174: only a *parallel clause* may follow COALESCE PARTITION|SUBPARTITION

Cause: ALTER TABLE COALESCE PARTITION|SUBPARTITION may be followed by an optional *parallel clause*. No partition/subpartition attributes may be specified

Action: Ensure that no partition/subpartition attribute was specified.

ORA-14175: a subpartition maintenance operation may not be combined with other operations

Cause: ALTER TABLE or ALTER INDEX statement attempted to combine a subpartition maintenance operation (e.g. MOVE SUBPARTITION) with some other operation (e.g. MODIFY PARTITION ADD SUBPARTITION or PCTFREE) which is illegal

Action: Ensure that a subpartition maintenance operation is the sole operation specified in ALTER TABLE or ALTER INDEX statement; operations other than those dealing with subpartitions, default attributes of partitioned tables/indices or specifying that a table be renamed (ALTER TABLE RENAME) may be combined at will

ORA-14176: this attribute may not be specified for a hash partition

Cause: An invalid option was encountered while parsing physical attributes of a partition of an object partitioned using the HASH method. The TABLESPACE option is the only valid option for such partitions.

Action: Remove the invalid option(s).

ORA-14177: STORE-IN (Tablespace list) can only be specified for a LOCAL index on a Hash or Composite Range Hash table

Cause: STORE-IN (Tablespace list) clause was used while creating a local index on a range/list/composite range list partitioned table

Action: Do not use the STORE_IN (Tablespace list) clause while creating a local index on range/list/composite range list partitioned table

ORA-14178: STORE IN (DEFAULT) clause is not supported for hash partitioned global indexes

Cause: STORE IN (DEFAULT) is valid only for local indexes.

Action: a) Specify a tablespace list in place of DEFAULT, or b) Remove STORE IN clause and specify tablespaces individually for each index partition.

ORA-14179: An unsupported partitioning method was specified in this context.

Cause: An attempt was made to specify an unsupported partitioning method in this context.

Action: Remove the invalid option.

ORA-14183: TABLESPACE DEFAULT can be specified only for Composite LOCAL index

Cause: User attempted to specify TABLESPACE DEFAULT for a partition of a Range/System/Hash partitioned LOCAL index object, which is illegal.

Action: Replace TABLESPACE DEFAULT with TABLESPACE <ts_name> or remove it.

ORA-14185: incorrect physical attribute specified for this index partition

Cause: An unexpected option was encountered while parsing physical attributes of a local index partition; valid options for Range or Composite Range partitions are INITRANS, MAXTRANS, TABLESPACE, STORAGE, PCTFREE, PCTUSED, LOGGING and TABLESPACE; but only TABLESPACE may be specified for Hash partitions STORE IN () is also disallowed for all but Hash, Interval, Autolist, Composite Range Hash, Composite Interval, Composite Autolist partition.

Action: Remove the invalid options from the list of physical attributes of an index partition.

ORA-14186: number of sub-partitions of LOCAL index must equal that of the underlying table

Cause: User attempted to create a LOCAL partitioned index with a number of sub-partitions which is different from that of the underlying table.

Action: Correct the CREATE INDEX statement to specify a correct number of sub-partitions

ORA-14187: partitioning method for LOCAL index is inconsistent with that of the underlying table

Cause: User attempted to create a LOCAL partitioned index that is not equi-partitioned with the underlying table. The partitioning types are mismatched.

Action: Correct the CREATE INDEX statement to ensure that the index partitioning method is consistent with that of the base table

ORA-14188: sub-partitioning columns must form a subset of key columns of a UNIQUE index

Cause: User attempted to create a UNIQUE partitioned index whose sub-partitioning columns do not form a subset of its key columns which is illegal

Action: If the user, indeed, desired to create an index whose subpartitioning columns do not form a subset of its key columns, it must be created as non-UNIQUE; otherwise, correct the list of key and/or subpartitioning columns to ensure that the index' subpartitioning columns form a subset of its key columns

ORA-14189: this physical attribute may not be specified for an index subpartition

Cause: unexpected option was encountered while parsing physical attributes of an index subpartition; TABLESPACE is the only valid option

Action: remove invalid option(s)

ORA-14190: only one ENABLE/DISABLE ROW MOVEMENT clause can be specified

Cause: One of three possible actions caused the error: 1) ENABLE ROW MOVEMENT was specified more than once. 2) DISABLE ROW MOVEMENT was specified more than once. 3) Both ENABLE ROW MOVEMENT and DISABLE ROW MOVEMENT were specified.

Action: Remove all but one of the ENABLE ROW MOVEMENT or DISABLE ROW MOVEMENT clauses; then, reissue the command.

ORA-14191: ALLOCATE EXTENT may not be specified for composite partitioned object

Cause: User specified ALLOCATE STORAGE clause in ALTER TABLE/ALTER INDEX statement issued against a composite partitioned index which is illegal.

Action: Remove the illegal option. If you want to add storage to individual [sub]partitions, the ALLOCATE EXTENT clause may be specified with ALTER TABLE OR INDEX MODIFY [SUB]PARTITION statement.

ORA-14192: cannot modify physical index attributes of a Hash index partition

Cause: User attempted to modify one of INITRANS/MAXTRANS/LOGGING/STORAGE clause for an index partition of a Hash partitioned index

Action: Remove the physical attributes one is trying to modify

ORA-14193: invalid ALTER INDEX MODIFY SUBPARTITION option

Cause: An option other than UNUSABLE, ALLOCATE EXTENT, DEALLOCATE UNUSED was specified in an ALTER INDEX MODIFY SUBPARTITION statement.

Action: Specify only legal options.

ORA-14194: only one subpartition may be rebuilt

Cause: ALTER INDEX REBUILD SUBPARTITION contained descriptions of more than one subpartition to be rebuilt

Action: Ensure that the statement describes exactly one subpartition to be rebuilt and that it does not contain any commas

ORA-14195: ALLOCATE STORAGE may not be specified for RANGE or LIST partitioned object

Cause: User specified ALLOCATE STORAGE clause in ALTER TABLE/ALTER INDEX statement issued against a range-partitioned index which is illegal.

Action: Remove the illegal option. If it is desired to add storage to individual partitions, ALLOCATE STORAGE clause may be specified with ALTER TABLE/INDEX MODIFY PARTITION statement.

ORA-14196: Specified index cannot be used to enforce the constraint.

Cause: The index specified to enforce the constraint is unsuitable for the purpose.

Action: Specify a suitable index or allow one to be built automatically.

ORA-14201: specified subpartition bound is too long

Cause: Length of a linear key representation of a high bound of a table subpartition being added or along which an existing table or index subpartition is being split exceeded the legal limit (4K).

Action: Change the representation of a subpartition high bound to bring its length within legal limit.

ORA-14202: subpartition bound of subpartition "string" is too high

Cause: High bound of the specified subpartition displayed in this message did not collate lower than that of the subsequent subpartition.

Action: Ensure that high bound of every subpartition (except for the last one) collates lower than that of a subsequent subpartition.

ORA-14203: subpartition bound of subpartition "string" is too long

Cause: Length of linear key representation of a high bound of the specified subpartition displayed in this message exceeded the legal limit (4K).

Action: Change the representation of a subpartition high bound to bring its length within legal limit.

ORA-14204: subpartition bound of subpartition number *string* is too high

Cause: High bound of the specified subpartition displayed in this message did not collate lower than that of the subsequent subpartition.

Action: Ensure that high bound of every subpartition (except for the last one) collates lower than that of a subsequent subpartition.

ORA-14205: subpartition bound of subpartition number *string* is too long

Cause: Length of linear key representation of a high bound of the specified subpartition displayed in this message exceeded the legal limit (4K).

Action: Change the representation of a subpartition high bound to bring its length within legal limit.

ORA-14206: table is not subpartitioned by List or Range methods

Cause: A subpartition maintenance operation such as ALTER TABLE DROP|SPLIT|MERGE SUBPARTITION can only be performed on List or Range subpartitioned objects

Action: Issue the command only against a List or Range subpartitioned object.

ORA-14207: maximum number of subpartitioning columns is 16

Cause: number of columns in a subpartitioning column list exceeded the legal limit of 16

Action: modify subpartitioning column list so that it consists of at most 16 columns

ORA-14208: lower-bound subpartition must be specified first

Cause: A higher-bound subpartition was specified before the lower-bound subpartition in ALTER TABLE MERGE SUBPARTITIONS statement.

Action: Specify lower-bound subpartition first and then higher-bound subpartition

ORA-14209: subpartitions being merged are not adjacent

Cause: Attempted to merge two subpartitions that are not adjacent to each other.

Action: Specify two subpartitions that are adjacent

ORA-14210: cannot reuse lower-bound subpartition as resulting subpartition

Cause: Attempted to reuse the lower-bound subpartition of the subpartitions being merged.

Action: Specify new resulting subpartition name or reuse the higher-bound subpartition only

ORA-14211: subpartition bound must collate higher than that of the last subpartition

Cause: Subpartition bound specified in ALTER TABLE MODIFY PARTITION ADD SUBPARTITION statement did not collate higher than that of the partition's last subpartition.

Action: Ensure that the subpartition bound of the subpartition to be added collates higher than that of the table partition's last subpartition.

ORA-14212: subpartition cannot be split along the specified high bound

Cause: Attempted to split a subpartition along a bound which either collates higher than that of the subpartition to be split or lower than that of a subpartition immediately preceding the one to be split

Action: Ensure that the bound along which a subpartition is to be split collates lower than that of the subpartition to be split and higher than that of a subpartition immediately preceding the one to be split

ORA-14213: VALUES LESS THAN or AT clause cannot be used for List subpartitioned tables

Cause: VALUES LESS THAN or AT clause was used for List subpartitioned tables

Action: Use VALUES (*value list*) clause for List subpartitioned tables

ORA-14214: VALUES (*value list*) cannot be used for Range subpartitioned tables

Cause: VALUES (*value list*) clause was used for Range subpartitioned tables

Action: Use VALUES LESS THAN or AT clause with Range subpartitioned tables

ORA-14215: subpartition bound list contains too many elements

Cause: Subpartition bound list contained more elements than there are subpartitioning columns

Action: Ensure that the number of elements in subpartition bound list is equal to the number of subpartitioning columns of the table or index

ORA-14216: subpartition bound list contains too few elements

Cause: Subpartition bound list contained fewer elements than there are subpartitioning columns

Action: Ensure that the number of elements in partition bound list is equal to the number of partitioning columns of the table or index

ORA-14217: VALUES (*value list*) clause expected

Cause: VALUES (*value list*) clause was not specified for the list subpartition being added

Action: Specify a VALUES (*value list*) clause

ORA-14218: Invalid operation for object without a segment

Cause: The object (table or index or lob) did not have a segment.

Action: Create segments for the object with the ALTER TABLE ALLOCATE EXTENT command.

ORA-14220: Invalid operation for object without a segment

Cause: Attempted to modify storage or allocate an extent for an object (table or LOB or index) without a segment.

Action: Create segments for the object with the ALTER TABLE ALLOCATE EXTENT command.

ORA-14221: Dictionary managed tablespace cannot be used for this operation

Cause: Attempted to create an index or add a LOB column in a dictionary managed tablespace to a table without a segment.

Action: Specify a locally managed tablespace OR create segments for the table with the ALTER TABLE ALLOCATE EXTENT command.

ORA-14223: Deferred segment creation is not supported for this table

Cause: The SEGMENT CREATION DEFERRED clause was specified in the CREATE TABLE statement.

Action: Remove the SEGMENT CREATION DEFERRED clause.

ORA-14224: Deferred segment creation is not supported for this schema

Cause: The SEGMENT CREATION DEFERRED clause was specified in the CREATE TABLE statement.

Action: Remove the SEGMENT CREATION DEFERRED clause.

ORA-14225: The INDEXING clause is not supported for this table.

Cause: The INDEXING clause was specified for an unsupported table type.

Action: Remove the INDEXING clause from the statement.

ORA-14226: unique index may not be PARTIAL

Cause: INDEXING PARTIAL was specified during creation or modification of a unique index.

Action: Remove the INDEXING PARTIAL clause from the statement.

ORA-14227: INDEXING may be specified only when the underlying table is partitioned

Cause: INDEXING FULL or INDEXING PARTIAL was specified during CREATE INDEX or ALTER INDEX when the base table was not partitioned.

Action: Remove the INDEXING clause from the statement.

ORA-14228: INDEXING may not be specified for this index

Cause: INDEXING FULL or INDEXING PARTIAL was specified during CREATE INDEX or ALTER INDEX for an unsupported index type.

Action: Remove the INDEXING clause from the statement.

ORA-14229: cannot modify the indexing attribute of a composite partition

Cause: An attempt was made to perform ALTER TABLE MODIFY PARTITION INDEXING [ON|OFF] on a composite table partition.

Action: Run ALTER TABLE MODIFY SUBPARTITION INDEXING [ON|OFF] on each subpartition individually.

ORA-14251: Specified subpartition does not exist

Cause: Subpartition not found for the object.

Action: Retry with correct subpartition name.

ORA-14252: invalid ALTER TABLE MODIFY PARTITION option for a Hash partition

Cause: Only ALLOCATE EXTENT and DEALLOCATE UNUSED may be specified in ALTER TABLE MODIFY PARTITION for a Hash partition.

Action: Specify only legal options.

ORA-14253: table is not partitioned by composite partition method

Cause: One of the following occurred: - The table in a subpartition maintenance operation (ALTER TABLE [EXCHANGE | MODIFY | MOVE | TRUNCATE] SUBPARTITION or ALTER TABLE MODIFY PARTITION [ADD | COALESCE] SUBPARTITION) was not partitioned by

the composite partition method. - The table in the MODIFY DEFAULT ATTRIBUTES FOR PARTITION operation was partitioned by a method other than the composite method. - The table in the ALTER TABLE MODIFY SUBPARTITION [UNUSABLE LOCAL INDEXES | REBUILD UNUSABLE LOCAL INDEXES] statement was not partitioned by the composite partition method which is illegal.

Action: Ensure that the table is partitioned by composite partition method.

ORA-14254: cannot specify ALLOCATE STORAGE for a (Composite) Range or List partitioned table

Cause: User specified ALLOCATE STORAGE clause in ALTER TABLE statement issued against a Range or Composite Range partitioned table which is illegal.

Action: Remove the illegal option. If it is desired to add storage to individual partitions/subpartitions, ALLOCATE STORAGE clause may be specified with ALTER TABLE MODIFY PARTITION/SUBPARTITION statement. If it is desired to add storage to all subpartitions of a Composite partition, ALLOCATE STORAGE clause may be specified with ALTER TABLE MODIFY PARTITION.

ORA-14255: table is not partitioned by range, list, composite range, or composite list method

Cause: The table was not partitioned by the range, list, composite range, or composite list method.

Action: The ALTER TABLE [SPLIT | DROP] PARTITION or ALTER TABLE MERGE PARTITIONS command is only valid for a table partitioned by range, list, composite range, or composite list methods. Ensure that the table is partitioned appropriately.

ORA-14256: invalid resulting partition description(s)

Cause: User specified STORE-IN clause, SUBPARTITIONS clause, and/or *subpartition-description* clause in partition description(s) in ALTER TABLE SPLIT PARTITION or ALTER TABLE MERGE PARTITIONS statement but the table in the maintenance operation is not a Composite Range partitioned table which is illegal

Action: Remove invalid clause(s), or ensure that the table is partitioned by Composite Range method

ORA-14257: cannot move a partition which is a composite partition

Cause: An attempt was made to move a partition that was a composite partition.

Action: Move the subpartitions one-by-one to move the composite partition.

ORA-14258: invalid partition description

Cause: User specified STORE-IN clause, SUBPARTITIONS clause, and/or *subpartition-description* clause in ALTER TABLE ADD PARTITION statement but the table in the maintenance operation is not a Composite Range/Hash partitioned table which is illegal

Action: Remove invalid clause(s), or ensure that the table is partitioned by Composite Range/Hash method

ORA-14259: table is not partitioned by Hash method

Cause: ALTER TABLE COALESCE PARTITION is only valid for table partitioned by Hash method

Action: Specify valid ALTER TABLE option for the table, or ensure that the table is partitioned by Hash method

ORA-14260: incorrect physical attribute specified for this partition

Cause: User specified INITTRANS, MAXTRANS, STORAGE, PCTFREE, PCTUSED, and/or [NO]LOGGING option to a Hash partition via ALTER TABLE ADD/MOVE PARTITION command which is illegal. Only TABLESPACE may be specified.

Action: Remove invalid option(s)

ORA-14261: partition bound may not be specified when adding this Hash partition

Cause: User specified VALUES LESS THAN clause when adding a partition (via ALTER TABLE ADD PARTITION) to a Hash partitioned table which is illegal

Action: Remove VALUES LESS THAN clause from the description of partition being added

ORA-14262: new subpartition name must differ from the old subpartition name

Cause: User entered ALTER TABLE/INDEX RENAME SUBPARTITION specifying *new-subpartition-name* which is identical to the name of the subpartition being renamed

Action: Ensure that the new subpartition name is different from the name of any (including the one being renamed) existing subpartition of a given table or index

ORA-14263: New subpartition name must differ from that of any other partition or subpartition of the object.

Cause: ALTER TABLE RENAME SUBPARTITION or ALTER INDEX RENAME SUBPARTITION specifying *new-subpartition-name* which is identical to the name of an existing partition or subpartition of the object was specified.

Action: Ensure that the new subpartition name is different from the name of any (including the one being renamed) existing partition or subpartition of a given table or index.

ORA-14265: data type or length of a table subpartitioning column may not be changed

Cause: User issued ALTER TABLE statement attempting to modify data type and/or length of a column used to subpartition the table named in ALTER TABLE statement, which is illegal

Action: Avoid modifying data type and/or length of table subpartitioning column(s)

ORA-14266: data type or length of an index subpartitioning column may not be changed

Cause: User issued ALTER TABLE statement attempting to modify data type and/or length of a column used to subpartition some index defined on the table named in ALTER TABLE statement, which is illegal

Action: Avoid modifying data type and/or length of index subpartitioning column(s)

ORA-14267: cannot specify PARALLEL clause when adding a (composite) partition

Cause: The ALTER TABLE ADD PARTITION statement with PARALLEL clause for a partition or composite partition method other than HASH was issued.

Action: Remove the PARALLEL clause.

ORA-14268: subpartition '*string*' of the partition resides in offlined tablespace

Cause: User attempted an operation requiring that we access data in a subpartition which resides in a tablespace which was taken offline. Such operations include trying to drop a tablespace of a table which has indices defined on it or is referenced by a constraint.

Action: Bring tablespace online before attempting the operation.

ORA-14269: cannot exchange partition other than a Range,List,System, or Hash partition

Cause: User attempt to exchange a partition with a non-partitioned table but the specified partition is not a Range,List,System, or Hash partition which is illegal

Action: Specify EXCHANGE PARTITION for a Range,List,System, or Hash partition only

ORA-14270: table is not partitioned by Range, System, Hash or List method

Cause: The table in ALTER TABLE MODIFY PARTITION { UNUSABLE LOCAL INDEXES | REBUILD UNUSABLE LOCAL INDEXES } statement is not partitioned by Range,List,System, or Hash method which is illegal.

Action: Ensure that the table is partitioned by Range,List,System, or Hash method 14271, 00000, "free error number"

ORA-14272: only a partition with higher bound can be reused

Cause: User attempt to reuse a lower-bound partition in ALTER TABLE MERGE PARTITIONS statement as the resulting partition which is illegal.

Action: Use the higher-bound partition to be the resulting partition or specify a new partition name

ORA-14273: lower-bound partition must be specified first

Cause: User specified higher-bound partition before lower-bound partition in ALTER TABLE MERGE PARTITIONS statement which is illegal

Action: Specify lower-bound partition then higher-bound partition

ORA-14274: partitions being merged are not adjacent

Cause: User attempt to merge two partitions that are not adjacent to each other which is illegal

Action: Specify two partitions that are adjacent

ORA-14275: cannot reuse lower-bound partition as resulting partition

Cause: User attempt to reuse lower-bound partition of the partitions being merged which is illegal

Action: Specify new resulting partition name or reuse the higher-bound partition only

ORA-14276: EXCHANGE SUBPARTITION requires a non-partitioned, non-clustered table

Cause: The table in the ALTER TABLE EXCHANGE SUBPARTITION operation is either clustered or partitioned

Action: Ensure that the table with which the subpartition is being exchanged for is not partitioned or clustered.

ORA-14277: tables in EXCHANGE SUBPARTITION must have the same number of columns

Cause: The two tables specified in the ALTER TABLE EXCHANGE SUBPARTITION have different number of columns

Action: Ensure that the two tables have the same number of columns with the same type and size.

ORA-14278: column type or size mismatch in EXCHANGE SUBPARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE SUBPARTITION are of different type or size

Action: Ensure that the two tables have the same number of columns with the same type and size.

ORA-14279: index mismatch for tables in ALTER TABLE EXCHANGE SUBPARTITION

Cause: The two tables specified in the ALTER TABLE EXCHANGE SUBPARTITION have indexes which are not equivalent

Action: Ensure that the indexes for the two tables have indexes which follow this rule For every non partitioned index for the non partitioned table, there has to be an identical LOCAL index on the partitioned table and vice versa. By identical, the column position, type and size have to be the same.

ORA-14280: all rows in table do not qualify for specified subpartition

Cause: There is at least one row in the non partitioned table which does not qualify for the subpartition specified in the ALTER TABLE EXCHANGE SUBPARTITION

Action: Ensure that all the rows in the segment qualify for the subpartition. Perform the alter table operation with the NO CHECKING option. Run ANALYZE table VALIDATE on that subpartition to find out the invalid rows and delete them.

ORA-14281: CHECK constraint mismatch in ALTER TABLE EXCHANGE SUBPARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE SUBPARTITION statement have CHECK constraint defined on them.

Action: Ensure that the two tables do not have CHECK constraint defined on any column

ORA-14282: FOREIGN KEY constraint mismatch in ALTER TABLE EXCHANGE SUBPARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE SUBPARTITION statement have different FOREIGN KEY constraints.

Action: Ensure that the two tables do not have FOREIGN KEY constraints defined on any column or disable all FOREIGN KEY constraints on both tables. Then retry the operation.

ORA-14283: UNIQUE constraints mismatch in ALTER TABLE EXCHANGE SUBPARTITION

Cause: One of the tables named in the ALTER TABLE EXCHANGE SUBPARTITION command has a UNIQUE constraint for which no matching (vis-a-vis key columns) constraint is defined on the other table or a matching constraint is defined on the other table, but it differs from that defined on the first table vis-a-vis being enabled and/or validated.

Action: Ensure that for every UNIQUE constraint defined on one of the tables named in the ALTER TABLE EXCHANGE SUBPARTITION statement there is a matching (vis-a-vis key columns and being enabled and/or validated) UNIQUE constraint defined on the other table. If UNIQUE constraints are enabled, UNIQUE constraints on the partitioned table should be enforced using local indexes.

ORA-14284: one or more of table's subpartitions reside in a read-only tablespace

Cause: User issued ALTER TABLE statement attempting to modify an existing VARCHAR2 (or VARCHAR) column to be of type CHAR (or CHARACTER), increase length of an existing CHAR (or CHARACTER) column, or add a column with user-specified default for a table one or more subpartitions of which reside in read-only tablespaces, which is illegal

Action: Avoid performing aforementioned operations on a partitioned table one or more subpartitions of which reside in read-only tablespaces

ORA-14285: cannot COALESCE the only partition of this hash partitioned table or index

Cause: A COALESCE PARTITION command was issued when there is only one partition in the table or index, which is illegal

Action: Ensure that there is at least one partition. Drop the table or index to remove all partitions.

ORA-14286: cannot COALESCE the only subpartition of this table partition

Cause: A COALESCE SUBPARTITION command was issued when there is only one subpartition in the partition which is illegal

Action: Ensure that there is at least one subpartition. Drop partition to remove all subpartitions.

ORA-14287: cannot REBUILD a partition of a composite partitioned index

Cause: An attempt was made to rebuild a partition of a composite partitioned index which is illegal.

Action: REBUILD the index partition one subpartition at a time.

ORA-14288: index is not partitioned by composite partition method

Cause: The index in a partition or subpartition maintenance operation (ALTER INDEX MODIFY [SUBPARTITION]DEFAULT ATTRIBUTES FOR PARTITION] or ALTER INDEX REBUILD SUBPARTITION command was not partitioned by the composite partition method.

Action: REBUILD the index partition one at a time.

ORA-14289: cannot make local index partition of composite partitioned table unusable

Cause: An attempt was made to rebuild a partition of a composite partitioned index which is illegal.

Action: REBUILD the index partition one subpartition at a time.

ORA-14290: PRIMARY KEY constraint mismatch in ALTER TABLE EXCHANGE [SUB]PARTITION

Cause: The corresponding columns in the tables specified in the ALTER TABLE EXCHANGE [SUB]PARTITION statement have different PRIMARY KEY constraints.

Action: Ensure that the two tables do not have PRIMARY KEY constraints defined on any column or disable all PRIMARY KEY constraints on both tables. Then retry the operation.

ORA-14291: cannot EXCHANGE a composite partition with a non-partitioned table

Cause: A composite partition can only be exchanged with a partitioned table.

Action: Ensure that the table being exchanged is partitioned or that the partition being exchanged is non-composite.

ORA-14292: Partitioning type of table must match subpartitioning type of composite partition

Cause: When exchanging a partitioned table with a composite partition the partitioning type of the table must match the subpartitioning type of the composite partition.

Action: Ensure that the partitioning type of partitioned table is the same as the subpartitioning type of the composite partition.

ORA-14293: Number of partitioning columns does not match number of subpartitioning columns

Cause: When exchanging a partitioned table with a composite partition the number of partitioning columns of the table must match the number of subpartitioning columns of the composite partition.

Action: Ensure that the number of partitioning columns in the partitioned table is the same as the number of subpartitioning columns in the composite partition.

ORA-14294: Number of partitions does not match number of subpartitions

Cause: When exchanging a partitioned table with a composite partition the number of partitions of the table must match the number of subpartitions of the composite partition.

Action: Ensure that the number of partitions in the partitioned table is the same as the number of subpartitions in the composite partition.

ORA-14295: column type or size mismatch between partitioning columns and subpartitioning columns

Cause: When exchanging a partitioned table with a composite partition the type and size of the partitioning columns of the table must match the type and size of the subpartitioning columns of the composite partition.

Action: Ensure that the type and size of the partitioning columns of the partitioned is the same as the type and size of the subpartitioning columns of the composite partition.

ORA-14296: Table block size mismatch in ALTER TABLE EXCHANGE [SUB]PARTITION

Cause: The block sizes of the two tables specified in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are different. For index organized tables, either the block sizes of the index or the overflow (or both) do not match.

Action: Ensure that the block sizes of the tables involved in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are the same. For index organized tables, ensure that the block sizes of both the index and the overflow of the two tables match.

ORA-14297: Index block size mismatch in ALTER TABLE EXCHANGE [SUB]PARTITION

Cause: The block sizes of a pair of indexes being exchanged in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are different.

Action: Ensure that the block sizes of the corresponding pairs of indexes that need to be exchanged in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are the same.

ORA-14298: LOB column block size mismatch in ALTER TABLE EXCHANGE [SUB]PARTITION

Cause: The block sizes of a pair of corresponding LOB columns of the two tables specified in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are different.

Action: Ensure that the block sizes of corresponding pairs of LOB columns of the tables involved in the ALTER TABLE EXCHANGE [SUB]PARTITION statement are the same.

ORA-14299: total number of partitions/subpartitions exceeds the maximum limit

Cause: The total number of combined fragments specified in partitions /subpartitions exceeds 1048575.

Action: Reissue the statement with fewer number of fragments

ORA-14300: partitioning key maps to a partition outside maximum permitted number of partitions

Cause: The row inserted had a partitioning key that maps to a partition number greater than 1048575

Action: Ensure that the partitioning key falls within 1048575 partitions or subpartitions.

ORA-14301: table-level attributes must be specified before partition-level attributes

Cause: While processing an ALTER TABLE ADD COLUMN statement, table-level attributes of LOB columns were encountered after processing partition-level attributes of LOB columns or while processing CREATE TABLE statement, table-level attributes of LOB columns were encountered after processing partition descriptions.

Action: Modify the SQL statement to specify table-level attributes prior to partition-level attributes or partition descriptions; then retry the statement.

ORA-14302: only one list of added-LOB-storage-clauses can be specified in a statement

Cause: While parsing an ALTER TABLE ADD COLUMN statement, one list of added-LOB-storage-clauses was parsed when another list of added-LOB-storage-clauses was encountered. There cannot be more than one list of added-LOB-storage-clauses in a statement; all added-LOB-storage-clauses must be combined into one list.

Action: Combine all of the lists of added-LOB-storage-clauses into one list and retry the statement.

ORA-14303: partitions or subpartitions are not in the right order

Cause: User attempted to rebuild a partition of a Composite Range partitioned index which is illegal

Action: Re-order the partitions or subpartitions in the added LOB storage clause by partition or subpartition DDL order, and retry the statement.

ORA-14304: List partitioning method expects a single partitioning column

Cause: number of columns in a partitioning column list exceeded the legal limit of 1 for List partitioned objects

Action: modify partitioning column list so that it consists of at most 1 column

ORA-14305: List value 'string' specified twice in partition 'string'

Cause: A list value cannot be specified more than once

Action: Remove one of the specifications of the value

ORA-14306: List value 'string' specified twice in partitions 'string', 'string'

Cause: A list value cannot be specified more than once

Action: Remove one of the specifications of the value

ORA-14307: partition contains too many list values

Cause: Partition list contains more than 524288 list values

Action: Reduce the number of values to not exceed 524288 values

ORA-14308: partition bound element must be one of: string, datetime or interval literal, number, or NULL

Cause: Partition bound list contained an element of invalid type (i.e. not a number, non-empty string, datetime or interval literal, or NULL)

Action: Ensure that all elements of partition bound list are of valid type

ORA-14309: Total count of list values exceeds maximum allowed

Cause: Partitioned object contains more than 524288 list values

Action: Reduce number of values to less than 524288.

ORA-14310: VALUES LESS THAN or AT clause cannot be used with List partitioned tables

Cause: VALUES LESS THAN or AT clause can be used only with Range partitioned tables

Action: Use VALUES (*value list*) clause with List partitioned tables

ORA-14311: Expecting VALUES LESS THAN or AT clause

Cause: VALUES (*value list*) clause can be used only with List partitioned tables

Action: Use VALUES LESS THAN clause with Range partitioned tables

ORA-14312: Value *string* already exists in partition *string*

Cause: One of the list values in the ADD PARTITION or ADD VALUES statement already exists in another partition

Action: Remove the duplicate value from the statement and try again

ORA-14313: Value *string* does not exist in partition *string*

Cause: One of the list values in the SPLIT PARTITION or DROP VALUES statement does not exist in the partition

Action: Remove the value from the statement and try again

ORA-14314: resulting List partition(s) must contain at least 1 value

Cause: After a SPLIT/DROP VALUE of a list partition, each resulting partition(as applicable) must contain at least 1 value

Action: Ensure that each of the resulting partitions contains at least 1 value

ORA-14315: cannot merge a partition with itself

Cause: The same partition name was specified twice for the merge operation

Action: Re-submit operation with 2 distinct partition names

ORA-14316: table is not partitioned by List method

Cause: ALTER TABLE ADD|DROP VALUES can only be performed on List partitioned objects

Action: Re-issue the command against a List partitioned object.

ORA-14317: cannot drop the last value of partition

Cause: ALTER TABLE DROP VALUES tried to drop the last value of the partition

Action: Cannot execute the command, unless two or more values exist for partition

ORA-14318: DEFAULT partition must be last partition specified

Cause: A partition description follows the one describing the default partition

Action: Ensure that the DEFAULT partition is the last partition description

ORA-14319: DEFAULT cannot be specified with other values

Cause: DEFAULT keyword has been specified along with other values when specifying the values for a list partition

Action: Ensure that if DEFAULT is specified, it is the only value specified

ORA-14320: DEFAULT cannot be specified for ADD/DROP VALUES or SPLIT

Cause: DEFAULT keyword has been specified when doing a ADD VALUES or DROP VALUES or SPLIT partition or subpartition.

Action: Ensure that DEFAULT is not specified for ADD/DROP VALUES or SPLIT partition/subpartition operation.

ORA-14321: cannot add/drop values to DEFAULT partition

Cause: A ADD/DROP VALUES operation is being done on the default partition

Action: Ensure that ADD/DROP VALUES is not done on the DEFAULT partition

ORA-14322: DEFAULT partition already exists

Cause: A partition already exists with DEFAULT value

Action: n/a

ORA-14323: cannot add partition when DEFAULT partition exists

Cause: An ADD PARTITION operation cannot be executed when a partition with DEFAULT values exists

Action: Issue a SPLIT of the DEFAULT partition instead

ORA-14324: values being added already exist in DEFAULT partition

Cause: An ADD VALUE operation cannot be executed because the values being added exist in the DEFAULT partition

Action: Issue a SPLIT of the DEFAULT partition and then MERGE the split partition into the partition to which values need to be added

ORA-14325: only LOCAL indexes may be specified in this clause

Cause: A global index has been specified in the UPDATE INDEXES (..) clause

Action: Only specify local indexes when using this clause

ORA-14326: Primary index on an IOT, DOMAIN and LOB indexes may not be specified in the UPDATE INDEXES clause

Cause: A Primary index on an IOT, DOMAIN or LOB index has been specified in the UPDATE INDEXES (..) clause

Action: Do not specify any of these indexes when using this clause

ORA-14327: Some index [sub]partitions could not be rebuilt

Cause: The first phase (partition DDL and index [sub]partition placement) completed successfully. During the second phase, some of the index [sub]partitions could not be rebuilt.

Action: Search the alert log for the string DBMS_INDEX_UTL. Check the error associated with each of the [sub]partitions that could not be rebuilt and take the appropriate corrective action.

ORA-14329: domain index [sub]partitions cannot be renamed in this clause

Cause: The user tried to rename a domain index [sub]partition in the UPDATE INDEXES clause of a ALTER TABLE MOVE [SUB]PARTITION operation. This is not allowed.

Action: Leave the name blank or use the same name.

ORA-14330: Cannot drop a partition of a global hash-partitioned index

Cause: An attempt was made to drop a partition of a hash-partitioned global index.

Action: Try COALESCE PARTITION instead.

ORA-14331: cannot drop all [sub]partitions of a partitioned table

Cause: An attempt was made to drop all partitions of a partitioned table.

Action: Try DROP TABLE instead.

ORA-14332: duplicate partition or subpartition names specified

Cause: The list of partitions contained duplicate partition or subpartition names.

Action: Ensure that list of partition or subpartition names are distinct.

ORA-14333: subpartition names specified are across multiple partitions

Cause: The specified subpartitions did not belong to the same partition.

Action: Ensure that all subpartitions specified belong to the same partition.

ORA-14334: guard column expected

Cause: There was no guard column or the NOT NULL constraint was not specified for this column.

Action: Add a guard column or NOT NULL constraint for column.

ORA-14335: number of new fragments for adding partitions or creating partitioned table exceeds the maximum limit

Cause: The total number of new fragments for adding partitions or for creating a partitioned table exceeded 125000.

Action: Reissue the statement with a fewer number of new fragments.

ORA-14337: index is not partitioned by range, list, composite range, or composite list method

Cause: The index was not partitioned by the range, list, composite range, or composite list method.

Action: The ALTER INDEX [SPLIT | DROP] PARTITION or ALTER INDEX MERGE PARTITIONS command is only valid for an index partitioned by range, list, composite range, or composite list methods. Ensure that the index is partitioned appropriately.

ORA-14339: JavaScript Object Notation (JSON) LOB column can only be used to partition a table with JSON_VALUE operator

Cause: An attempt was made to create a partitioned table using a virtual column as a partitioning key column that references a JavaScript Object Notation (JSON) LOB column but does not contain a JSON_VALUE operator.

Action: Ensure that the virtual column used as a partition key column contains a JSON_VALUE operator if it references a JSON LOB column.

ORA-14340: online DDL rolled back due to DML conflict

Cause: The online build journal became inconsistent with ongoing DML and could not be used successfully to complete the online DDL.

Action: Reissue the online DDL.

ORA-14341: cannot exchange a composite partition with a composite partitioned table

Cause: A composite partition can only be exchanged with a single-level partitioned table.

Action: Ensure that the table that is exchanged is a single-level partitioned table.

ORA-14342: JavaScript Object Notation (JSON) type column can only be used to partition a table with JSON_VALUE operator

Cause: An attempt was made to create a partitioned table using a virtual column as a partitioning key column that references a JavaScript Object Notation (JSON) type column but does not contain a JSON_VALUE operator.

Action: Ensure that the virtual column used as a partition key column contains a JSON_VALUE operator if it references a JSON type column.

ORA-14350: check constraint condition has an invalid reference

Cause: An attempt was made to construct a check constraint condition with an invalid reference, such as a hidden column created for a virtual column, or a guard column.

Action: Remove the invalid reference from the check constraint condition.

ORA-14351: expression edition column is not supported for a hybrid table

Cause: An attempt was made to create or alter a hybrid table with an edition expression column.

Action: Do not specify an edition expression column in the statement.

ORA-14352: must contain at least one internal partition

Cause: An attempt was made to create a hybrid table containing external partitions only.

Action: Ensure that there is at least one internal partition in the statement.

ORA-14353: operation not supported for an external partition in a hybrid-partitioned table

Cause: An attempt was made to perform an operation on an external partition in a hybrid-partitioned table, that was not supported.

Action: Do not perform the unsupported operation.

ORA-14354: operation not supported for a hybrid-partitioned table

Cause: An attempt was made to perform an operation on a hybrid-partitioned table that was not supported.

Action: Do not perform the unsupported operation.

ORA-14355: cannot use bind variables in the access parameters clause

Cause: An attempt was made to use a bind variable in the access parameters clause of an inline external table query.

Action: Remove the bind variable or surround the access parameters clause in single quotes.

ORA-14356: cannot update a join view using UPDATE FROM clause

Cause: An UPDATE statement with a FROM clause was specified, where the update target was a join view.

Action: Provide an update target that is a table, single-table view, or a materialized view.

ORA-14357: updated column must come from the target table

Cause: An UPDATE statement with a FROM clause was specified where a column on the left side of the SET clause was not a column of the table to be updated.

Action: Specify a column from the table to be updated.

ORA-14358: cannot delete a join view using DELETE FROM clause

Cause: A DELETE statement with a FROM clause was specified, where the delete target was a join view.

Action: Provide a delete target that is a table, single-table view, or a materialized view.

ORA-14359: The operation was unable to obtain a consistent set of rows that needed to be modified.

Cause: A consistent set of rows needing modifications could not be obtained as the WHERE clause was non-deterministic and also, large concurrent DML possibly modified WHERE clause columns. The WHERE clause was non-deterministic because it contained an operand that, when given the same input parameters, did not always return the same output value.

Action: Remove any non-deterministic operand in the WHERE clause and reissue the DML.

ORA-14400: inserted partition key does not map to any partition

Cause: An attempt was made to insert a record into, a Range or Composite Range object, with a concatenated partition key that is beyond the concatenated partition bound list of the last partition -OR- An attempt was made to insert a record into a List object with a partition key that did not match the literal values specified for any of the partitions.

Action: Do not insert the key. Or, add a partition capable of accepting the key, Or add values matching the key to a partition specification

ORA-14401: inserted partition key is outside specified partition

Cause: the concatenated partition key of an inserted record is outside the ranges of the two concatenated partition bound lists that delimit the partition named in the INSERT statement

Action: do not insert the key or insert it in another partition

ORA-14402: updating partition key column would cause a partition change

Cause: An UPDATE statement attempted to change the value of a partition key column causing migration of the row to another partition.

Action: Do not attempt to update a partition key column or ensure that the new partition key is within the range containing the old partition key.

ORA-14404: partitioned table contains partitions in a different tablespace

Cause: An attempt was made to drop a tablespace which contains tables whose partitions are not completely contained in this tablespace

Action: find tables with partitions which span the tablespace being dropped and some other tablespace(s). Drop these tables or move partitions to a different tablespace

ORA-14405: partitioned index contains partitions in a different tablespace

Cause: An attempt was made to drop a tablespace which contains indexes whose partitions are not completely contained in this tablespace, and which are defined on the tables which are completely contained in this tablespace.

Action: find indexes with partitions which span the tablespace being dropped and some other tablespace(s). Drop these indexes, or move the index partitions to a different tablespace, or find the tables on which the indexes are defined, and drop (or move) them.

ORA-14406: updated partition key is beyond highest legal partition key

Cause: An attempt was made to update a record with a concatenated partition key that is beyond the concatenated partition bound list of the last partition.

Action: Do not update the key. Or, add a partition capable of accepting the key.

ORA-14407: partitioned table contains subpartitions in a different tablespace

Cause: An attempt was made to drop a tablespace which contains tables whose subpartitions are not completely contained in this tablespace

Action: find tables with subpartitions which span the tablespace being dropped and some other tablespace(s). Drop these tables or move subpartitions to a different tablespace

ORA-14408: partitioned index contains subpartitions in a different tablespace

Cause: An attempt was made to drop a tablespace which contains indexes whose subpartitions are not completely contained in this tablespace, and which are defined on the tables which are completely contained in this tablespace.

Action: find indexes with subpartitions which span the tablespace being dropped and some other tablespace(s). Drop these indexes, or move the index partitions to a different tablespace, or find the tables on which the indexes are defined, and drop (or move) them.

ORA-14409: inserted partition key is outside specified subpartition

Cause: the concatenated partition key of an inserted record is outside the ranges of the two concatenated subpartition bound lists that delimit the subpartition named in the INSERT statement

Action: do not insert the key or insert it in another subpartition

ORA-14411: The DDL cannot be run concurrently with other DDLs

Cause: Another conflicting DDL was already running.

Action: Retry after the conflicting DDL has finished.

ORA-14413: ALTER INDEX UNUSABLE ONLINE cannot be used with certain types of indexes.

Cause: An attempt was made to use the ALTER INDEX UNUSABLE ONLINE statement on an index type (for example, indexed-organized table (IOT), cluster, LOB, domain indexes) that was not allowed.

Action: Using the ALTER INDEX UNUSABLE ONLINE statement on certain types of indexes (for example, indexed-organized table (IOT), cluster, LOB, domain indexes) is illegal. Remove the ONLINE keyword from the statement.

ORA-14414: DROP INDEX ONLINE cannot be used with certain types of indexes.

Cause: An attempt was made to use the DROP INDEX ONLINE statement on an index type (for example, indexed-organized table (IOT), cluster, LOB, domain indexes) that was not allowed.

Action: Using the DROP INDEX ONLINE statement on certain types of indexes (for example, indexed-organized table (IOT), cluster, LOB, domain indexes) is illegal. Remove the ONLINE keyword from the statement.

ORA-14415: index in partially dropped state, submit DROP INDEX

Cause: An attempt was made to access an index in a partially dropped state.

Action: Submit the DROP INDEX *index* statement to drop the index.

ORA-14416: Online DDL's cannot be used *string*

Cause: An attempt was made to use the DROP INDEX ONLINE, ALTER TABLE DROP CONSTRAINT ONLINE, or ALTER TABLE SET UNUSED COLUMN ONLINE statement on an table type (for example, cluster, temporary, index-organized table (IOT), external tables) that was not allowed.

Action: Using online DDL's like DROP INDEX ONLINE, ALTER TABLE DROP CONSTRAINT ONLINE, or ALTER TABLE SET UNUSED COLUMN ONLINE statement on certain types of tables (for example, cluster, temporary, indexed-organized table (IOT), external tables) is illegal. Remove the ONLINE keyword from the statement.

ORA-14417: Online DDL's cannot be used with deferrable constraints.

Cause: An attempt was made to use the DROP CONSTRAINT ONLINE or SET UNUSED COLUMN ONLINE statement on constraint states (for example, deferrable, deferred) that was not allowed.

Action: Using DROP CONSTRAINT ONLINE or SET UNUSED COLUMN ONLINE statement on constraints that are deferrable or deferred is illegal. Remove the ONLINE keyword from the statement.

ORA-14418: Online DDL's cannot be used with this constraint type.

Cause: An attempt was made to use the DROP CONSTRAINT ONLINE or SET UNUSED COLUMN ONLINE statement on a constraint type other than check, primary key, unique, referential, or not null constraint.

Action: Using DROP CONSTRAINT ONLINE or SET UNUSED COLUMN ONLINE statement on any other constraint types excluding check, primary key, unique, referential, or not null constraints is illegal. Remove the ONLINE keyword from the DDL.

ORA-14419: DROP CONSTRAINT ONLINE does not support the CASCADE option.

Cause: An attempt was made to use the CASCADE option with DROP CONSTRAINT ONLINE statement.

Action: Using the CASCADE option with the DROP CONSTRAINT ONLINE statement is illegal. Remove the CASCADE keyword from the statement. Drop the child key constraint in a separate DROP CONSTRAINT ONLINE statement on the child table.

ORA-14424: CREATE TABLE FOR EXCHANGE cannot be used with certain types of tables.

Cause: An attempt was made to use the CREATE TABLE FOR EXCHANGE statement on a table type (for example, cluster, temporary, index-organized table (IOT), external tables) that was not allowed.

Action: Do not specify the FOR EXCHANGE clause with certain types of tables (for example, cluster, temporary, indexed-organized table (IOT), external tables).

ORA-14425: CREATE TABLE AS SELECT disallowed along with the CREATE TABLE FOR EXCHANGE clause.

Cause: An attempt was made to combine the CREATE TABLE FOR EXCHANGE clause with a CREATE TABLE AS SELECT.

Action: Execute a CREATE TABLE FOR EXCHANGE followed by an INSERT AS SELECT into the table.

ORA-14426: Online DDL's cannot be used inside an autonomous transaction.

Cause: An attempt was made to use online DDL's inside an autonomous transaction.

Action: Using online DDL's inside an autonomous transaction is not allowed. Remove the ONLINE keyword from the statement.

ORA-14427: table does not support modification to a partitioned state DDL string

Cause: An alter table modification to a partitioned state DDL was issued on a table that was either not a heap table or had an object type, domain index or bitmap join index defined on it. This DDL is only supported for heap tables that are non-partitioned.

Action: Do not use the modification to a partitioned state DDL on a partitioned table.

ORA-14428: TBL\$OR\$IDX\$PART\$NUM query on remote object not supported

Cause: A TBL\$OR\$IDX\$PART\$NUM query on a remote object was attempted.

Action: Do not use TBL\$OR\$IDX\$PART\$NUM query on remote objects.

ORA-14429: System partitioning is not allowed in modification to a partitioned state DDL.

Cause: An attempt was made to convert a non-partitioned table to system partitioned table, which is illegal.

Action: Specify a different partitioning method in the modification to a partitioned state DDL.

ORA-14430: An alter table modification to a partitioned state DDL cannot be combined with other operations.

Cause: An attempt was made to combine an alter table modification to partitioned state DDL with another operation, which is illegal.

Action: Ensure that the modification to partitioned state operation is the only one specified in the alter table DDL.

ORA-14431: A system-generated column is not allowed as a partitioning column.

Cause: The partitioning column specified by the user was a system-generated column, which is illegal.

Action: Ensure that the partitioning column is not a system-generated column.

ORA-14432: System partitioning is not allowed in the CREATE TABLE FOR EXCHANGE DDL statement.

Cause: An attempt was made to create a system partitioned table using the CREATE TABLE FOR EXCHANGE DDL statement, which is illegal.

Action: Specify a different partitioning method in the CREATE TABLE FOR EXCHANGE DDL statement.

ORA-14433: Reference partitioning is not allowed in the online version of modification to a partitioned state DDL.

Cause: An attempt was made to convert a non-partitioned table to a reference partitioned table using the online version of the DDL, which is not allowed.

Action: Remove the ONLINE keyword from the statement.

ORA-14434: non-existent partitioning column in ALTER TABLE statement

Cause: The partitioning column specified in the ALTER TABLE statement was not one of the columns of the table being altered.

Action: Ensure that all columns in the partitioning column list are columns of the table being altered.

ORA-14435: partition bound specified when adding this system partition

Cause: The user specified either a VALUES LESS THAN clause or a VALUES (<values_list>) clause when adding a partition to a system partitioned table, which is not allowed.

Action: Remove the VALUES LESS THAN clause and VALUES (<values_list>) clause from the partition being added.

ORA-14436: During the modification to a partitioned state DDL, it is illegal to specify SUBPARTITIONS or STORE IN clause once a SUBPARTITION TEMPLATE has been specified.

Cause: The user specified either a SUBPARTITIONS or a STORE IN clause along with a subpartition template when modifying a table to partitioned state, which is not allowed.

Action: Remove either the SUBPARTITIONS | STORE IN clause or remove the SUBPARTITION TEMPLATE clause.

ORA-14437: Multiple DEFAULT partitions are not allowed in a system partitioned table.

Cause: The SET DEFAULT clause was specified for multiple partitions in a system partitioned table, which is not allowed.

Action: Remove all but one of the SET DEFAULT clauses.

ORA-14450: attempt to access a transactional temp table already in use

Cause: An attempt was made to access a transactional temporary table that has been already populated by a concurrent transaction of the same session.

Action: do not attempt to access the temporary table until the concurrent transaction has committed or aborted.

ORA-14451: unsupported feature with temporary table

Cause: An attempt was made to create an IOT, specify physical attributes, specify partition or parallel clause.

Action: do not do that.

ORA-14452: attempt to create, alter or drop an index on temporary table already in use

Cause: An attempt was made to create, alter or drop an index on temporary table which is already in use.

Action: All the sessions using the session-specific temporary table have to truncate table and all the transactions using transaction specific temporary table have to end their transactions.

ORA-14453: cannot use LOB from purged temporary table

Cause: An attempt was made to use a LOB from a temporary table whose data has been purged because: 1.The table was transaction-specific and the transaction was COMMITTED or ABORTED. 2.The table was truncated or the session that created the LOB ended.

Action: Select a LOB locator with valid data.

ORA-14454: attempt to reference temporary table in a referential integrity constraint

Cause: An attempt was made to reference temporary table in a referential integrity constraint. This is not supported.

Action: Use triggers.

ORA-14455: attempt to create referential integrity constraint on temporary table

Cause: An attempt was made to create a referential integrity constraint on a temporary table. This is not supported.

Action: Use triggers.

ORA-14456: cannot rebuild index on a temporary table

Cause: An attempt was made to rebuild an index on a temp table.

Action: The index data is anyway lost at end of session/transaction.

ORA-14457: disallowed Nested Table column in a Temporary table

Cause: An attempt made to create a Nested Table column in a temporary table. This is not supported.

Action: Do not specify these datatypes for temporary tables.

ORA-14458: attempt was made to create a temporary table with INDEX organization

Cause: An attempt was made to create an Index Organized Temporary table. This is not supported.

Action: Create the table with HEAP organization and the primary key.

ORA-14459: missing GLOBAL keyword

Cause: keyword GLOBAL is missing while creating temporary table.

Action: supply keyword.

ORA-14460: only one COMPRESS or NOCOMPRESS clause may be specified

Cause: COMPRESS was specified more than once, NOCOMPRESS was specified more than once, or both COMPRESS and NOCOMPRESS were specified.

Action: specify each desired COMPRESS or NOCOMPRESS clause option only once.

ORA-14461: cannot REUSE STORAGE on a temporary table TRUNCATE

Cause: REUSE STORAGE was specified with TRUNCATE on a temporary table. This is unsupported as it is meaningless.

Action: Specify DROP STORAGE instead (which is the default).

ORA-14462: cannot TRUNCATE temporary table in an autonomous transaction which is already in use by the parent transaction

Cause: An attempt was made to TRUNCATE a temporary table in an autonomous transaction which was already in use by the parent transaction.

Action: Ensure that the temporary table is not being used by the parent transaction before trying to TRUNCATE in an autonomous transaction.

ORA-14463: OPERATIONS keyword not specified

Cause: OPERATIONS keyword was not specified in the Compression Clause.

Action: specify OPERATIONS in the Compression Clause.

ORA-14464: Compression Type not specified

Cause: Compression Type was not specified in the Compression Clause.

Action: specify Compression Type in the Compression Clause.

ORA-14465: Fast-Split is not possible on these partitions

Cause: The Fast-Split event was forced in this session.

Action: Disable the event that forces Fast-Split.

ORA-14466: Data in a read-only partition or subpartition cannot be modified.

Cause: An attempt was made to modify data residing in a read-only partition or subpartition.

Action: Modify this partition or subpartition to read/write or do not make the modification.

ORA-14467: This option cannot be issued with the READ ONLY or READ WRITE clause.

Cause: An attempt was made to issue a READ ONLY or READ WRITE clause combined with the ONLINE or the INCLUDING ROWS clause.

Action: Issue the READ ONLY or READ WRITE clause with the ONLINE or the INCLUDING ROWS clause in separate statements.

ORA-14468: invalid INCLUDING ROWS WHERE ... clause

Cause: An invalid INCLUDING ROWS WHERE ... clause was specified. The INCLUDING ROWS WHERE ... clause has the following restrictions: - It can only refer to the target table of the DDL. - It cannot have subselect queries. - It cannot refer to the SYSDATE function. - It cannot refer to the ROWNUM pseudo column or the ROWID column.

Action: Rewrite the WHERE clause so that it does not have the restrictions previously listed.

ORA-14469: ALTER TABLE MOVE INCLUDING ALL LOBS cannot be used with certain types of tables.

Cause: An attempt was made to use the ALTER TABLE MOVE INCLUDING ALL LOBS statement on a table type (for example, cluster, temporary, index-organized table (IOT) or external tables) that was not allowed.

Action: Do not specify the INCLUDING ALL LOBS clause with certain types of tables (for example, cluster, temporary, indexed-organized table (IOT) or external tables).

ORA-14470: Invalid usage of the fast modification to nonpartitioned state DDL.

Cause: An attempt was made to use the fast modification to nonpartitioned state DDL with an unsupported condition. The ALTER TABLE MODIFY NONPARTITIONED FAST DDL has the following restrictions: - Only heap tables are supported. - Partitioned tables can have only one fragment. - Tables cannot be reference partitioned or have any reference partitioned children.

Action: Ensure that all of the conditions for the fast modification to nonpartitioned state DDL are satisfied.

ORA-14471: Invalid usage of the fast modification to partitioned state DDL.

Cause: An attempt was made to use the fast modification to partitioned state DDL with an unsupported condition. The ALTER TABLE MODIFY PARTITION BY FAST DDL has the following restrictions: - Only heap tables are supported. - Partition definition can have only one fragment. - Storage parameters of any segment cannot be changed. - Including ROWS clause is not supported. - Online version of this DDL is not supported.

Action: Ensure that all of the conditions for the fast modification to partitioned state DDL are satisfied.

ORA-14472: Non-prefixed indexes need to be unusable for fast modification to partitioned state DDL.

Cause: An attempt was made to use the fast modification to partitioned state DDL with a usable non-prefixed index.

Action: All non-prefixed indexes need to be made unusable before the fast modification to partitioned state DDL can be executed.

ORA-14473: Mapping table cannot be dropped while there are failed online partition maintenance operations that must be cleaned up.

Cause: An attempt was made to directly drop the mapping table while there were failed online partition maintenance operations for cleanup.

Action: Clean up failed online partition maintenance operations using the PL/SQL package CLEANUP_ONLINE_OP. Clean up procedure will internally take care of dropping the mapping table.

ORA-14474: invalid usage of the modification to nonpartitioned state DDL

Cause: An attempt was made to use the modification to nonpartitioned state DDL with an unsupported condition. The ALTER TABLE MODIFY NONPARTITIONED DDL has the following restrictions: - A table must be partitioned. - Only heap tables are supported. - Tables cannot be reference partitioned or have any reference partitioned children. - A table cannot have any domain indexes or bitmap join indexes.

Action: Ensure that all of the conditions for the modification to nonpartitioned state DDL are satisfied.

ORA-14500: LOCAL option not valid without partition name

Cause: Incorrect syntax specified

Action: Retry the command

ORA-14501: object is not partitioned

Cause: Table or index is not partitioned. Invalid syntax.

Action: Retry the command with correct syntax.

ORA-14503: only one partition name can be specified

Cause: More than one partition name has been specified for analyze

Action: Specify one partition name.

ORA-14504: syntax not supported for analyze

Cause: A partition/subpartition number or bind variable has been used

Action: Specify a valid partition/subpartition name.

ORA-14505: LOCAL option valid only for partitioned indexes

Cause: Incorrect syntax specified

Action: Retry the command

ORA-14506: LOCAL option required for partitioned indexes

Cause: Incorrect syntax specified

Action: Retry the command

ORA-14507: The table partition is corrupt. All rows do not fall within the partition bounds.

Cause: The partition contained some rows that should belong to some other partition. This could occur because an EXCHANGE PARTITION operation was done without validation.

Action: Delete the rows that do not qualify being in this partition.

ORA-14508: specified VALIDATE INTO table not found

Cause: The specified table either does not exist or user does not have the proper privileges.

Action: Specify the correct table to use.

ORA-14509: specified VALIDATE INTO table form incorrect

Cause: The specified table does not have the proper field definitions.

Action: Specify the correct table to use. See utlvalid.sql for more information.

ORA-14510: can specify VALIDATE INTO clause only for partitioned tables

Cause: The VALIDATE INTO has been specified for a non partitioned table or cluster or index.

Action: Use syntax correctly

ORA-14511: cannot perform operation on a partitioned object

Cause: An attempt was made to perform an operation that is not allowed on partitioned tables or indexes.

Action: Retry the command with correct syntax.

ORA-14512: cannot perform operation on a clustered object

Cause: An attempt was made to perform an operation that is not allowed on clustered tables or indexes.

Action: Retry the command with correct syntax.

ORA-14513: partitioning column may not be of object datatype

Cause: Partitioning column specified by the user was an object datatype (object, REF, nested table, array) which is illegal.

Action: Ensure that no partitioning column is an object datatype.

ORA-14514: LOCAL option not valid without subpartition name

Cause: Incorrect syntax specified

Action: Retry the command

ORA-14515: only one subpartition name can be specified

Cause: More than one subpartition name has been specified for analyze

Action: Specify one subpartition name.

ORA-14516: subpartition corrupt. all rows do not fall within subpartition bounds

Cause: The subpartition contains rows which should really be in some other subpartition. Possibly due to an exchange subpartition without validation

Action: Delete rows in subpartition which do not qualify

ORA-14517: subpartition of index 'string.string' is in unusable state

Cause: An attempt has been made to access an index subpartition that has been marked unusable by a direct load or by a DDL operation

Action: REBUILD the unusable index subpartition

ORA-14518: partition contains rows corresponding to values being dropped

Cause: table partition contains rows for the values being dropped.

Action: DELETE all rows for the values being dropped and reissue statement

ORA-14519: Conflicting tablespace block sizes for *string string*: Tablespace *string* block size *string* [*string*] conflicts with previously specified/implied tablespace *string* block size *string* [*string*]

Cause: An attempt has been made to create a partitioned object in a manner that would require the partitioned object to span tablespaces of more than one block size.

Action: Ensure that all tablespaces specified in the DDL command for the given object as well as any tablespaces implicitly assigned to partitions or subpartitions of the object being created are all of the same block size.

ORA-14520: Tablespace *string* block size [*string*] does not match existing object block size [*string*]

Cause: A DDL statement was issued that would require a tablespace of a block size different from the block size of the specified partitioned object to be assigned either: (1) As the object's default tablespace (or one of the object's partition-level default tablespaces, if composite partitioning is being used) OR (2) To one of the object's partitions/subpartitions.

Action: Specify a tablespace of the same block size as the partitioned object.

ORA-14521: Default tablespace *string* block size [*string*] for *string string* does not match existing *string* block size [*string*]

Cause: A DDL statement was issued that would require creation of a new partition/subpartition in the object-level default tablespace of an existing partitioned object. However, the object-level default tablespace block size does not match the block size of the partitioned object.

Action: Either (1) Modify the default tablespace of the partitioned object to a tablespace of the same block size as the object and then retry the DDL command, OR (2) Ensure that tablespaces of the correct block size are specified for all new partitions/subpartitions being created.

ORA-14522: Partition-level default tablespace *string* block size [*string*] for *string string* does not match existing *string* block size [*string*]

Cause: A DDL statement was issued that would require creation of a new subpartition in one of the partition-level default tablespaces of an existing composite partitioned object. However, the partition-level default tablespace block size does not match the block size of the partitioned object.

Action: Either (1) Modify the partition-level default tablespace of the appropriate partition of the partitioned object to a tablespace of the same block size as the object and then retry the DDL command, OR (2) Ensure that tablespaces of the correct block size are specified for all new subpartitions being created.

ORA-14523: Cannot co-locate [sub]partition of *string string* with table [sub]partition because *string* block size [*string*] does not match table block size [*string*]

Cause: A DDL statement was issued that would require a partition/subpartition of a local index/LOB column to be co-located with the corresponding partition/subpartition of the base table. However, this is not possible because the block sizes of the table and the LOB column/local index are different.

Action: Either (1) Specify an object-level default tablespace (or partition-level default tablespace for the appropriate partition, if composite partitioning is used) for the partitioned local index/LOB column and then retry the DDL command, OR (2) Ensure that tablespaces of the correct block size are specified for all new partitions/subpartitions being created. Also ensure that neither of TABLESPACE DEFAULT and STORE IN (DEFAULT) is specified for a local index whose block size does not match that of the base table.

ORA-14530: row mismatches found in table *string.string* and index *string.string*

Cause: rows in table and index inconsistent

Action: run complete analyze to determine corrupt rows

ORA-14540: An Online DDL or a DDL with the UPDATE INDEXES clause cannot be used with auto-commit turned off for the DDL.

Cause: An attempt was made to use an online DDL or a DDL with the UPDATE INDEXES clause when auto-commit was turned off for the DDL.

Action: Enable auto-commit and then retry the DDL.

ORA-14541: A JSON column cannot serve as a partitioning column.

Cause: An attempt was made to specify a column of JavaScript Object Notation (JSON) type partitioning or subpartitioning column.

Action: Ensure that no partitioning or subpartitioning column is of type JSON.

ORA-14551: cannot perform a DML operation inside a query

Cause: DML operation like insert, update, delete or select-for-update cannot be performed inside a query or under a PDML slave.

Action: Ensure that the offending DML operation is not performed or use an autonomous transaction to perform the DML operation within the query or PDML slave.

ORA-14552: cannot perform a DDL, commit or rollback inside a query or DML

Cause: DDL operations like creation tables, views etc. and transaction control statements such as commit/rollback cannot be performed inside a query or a DML statement.

Action: Ensure that the offending operation is not performed or use autonomous transactions to perform the operation within the query/DML operation.

ORA-14553: cannot perform a lob write operation inside a query

Cause: A lob write operation cannot be performed inside a query or a PDML slave.

Action: Ensure that the offending lob write operation is not performed or use an autonomous transaction to perform the operation within the query or PDML slave.

ORA-14554: cannot perform requested operation during database startup

Cause: Requested operation requires the Cost Based Optimizer(CBO) which is not available during database startup. Features like partitioning, IOTs, grouping sets, and flashback cursor require the CBO.

Action: Retry the query after the database is open.

ORA-14570: unable to extend the log for use on persistent memory storage

Cause: A log that was stored on disk and moved to persistent memory storage must be increased in size by a block. The attempt to extend the file has failed.

Action: Migrate the log by recreating the log on persistent memory and not by copying it from disk to persistent memory.

ORA-14571: The control file cache must either be enabled on all instances or disabled on all instances.

Cause: The control file cache must be either enabled or disabled in all instances.

Action: Contact Oracle Customer Support.

ORA-14601: Illegal to specify SUBPARTITIONS or STORE-IN while specifying a subpartition template

Cause: Cannot specify these clauses while specifying a template

Action: Correct the subpartition template clause.

ORA-14602: SUBPARTITION TEMPLATE is legal only for a composite partitioned table

Cause: SUBPARTITION TEMPLATE can be specified only for composite partitioned tables

Action: Do not use SUBPARTITION TEMPLATE on non-partitioned or non-composite partitioned tables.

ORA-14603: [SUBPARTITIONS | SUBPARTITION TEMPLATE] subpartition_count syntax is valid only for range-hash tables

Cause: This syntax is valid only if subpartitioning dimension is hash

Action: n/a

ORA-14604: During CREATE TABLE time it is illegal to specify SUBPARTITIONS or STORE IN once a SUBPARTITION TEMPLATE has been specified

Cause: Once a subpartition template has been specified during a CREATE TABLE it is illegal to specify SUBPARTITIONS or STORE IN anywhere else

Action: Remove either the SUBPARTITIONS | STORE IN or remove the SUBPARTITION TEMPLATE clause

ORA-14605: Name missing for subpartition / lob segment in template

Cause: A subpartition / lob segment was not specified a name in the template descriptions

Action: All subpartitions / lob segments must have names specified in the template

ORA-14607: Tablespace was not specified for previous subpartitions in template but is specified for *string*

Cause: Tablespaces may either be specified for all subpartitions or must not be specified for any subpartitions

Action: Either specify tablespaces for all or for none of the subpartitions

ORA-14610: Lob attributes not specified for lob column *string* for subpartition *string*

Cause: Lob attributes of a column must be specified for all subpartitions or must not be specified at all

Action: Ensure lob attributes of a column are specified for all subpartitions or not specified at all

ORA-14611: Duplicate subpartition name *string* in template

Cause: A subpartition name cannot be duplicated within the template

Action: Rename one of the subpartitions.

ORA-14612: Duplicate lob segment name *string* for lob column *string* in template

Cause: Two lob segments of the same column were given the same name in the template

Action: Rename one of the lob segments

ORA-14613: Attempt to generate name from parent name *string* and template name *string* failed as the combine named would have been longer than allowed

Cause: Any name generated from a partition name and template name must be less than the maximum permissible name for an identifier

Action: Shorten either partition or template name.

ORA-14614: List value '*string*' specified twice in subpartition '*string*'

Cause: A list value cannot be specified more than once

Action: Remove one of the specifications of the value

ORA-14615: List value '*string*' specified twice in subpartitions '*string*', '*string*'

Cause: A list value cannot be specified more than once

Action: Remove one of the specifications of the value

ORA-14616: table is not subpartitioned by List method

Cause: A subpartition maintenance operation, such as ALTER TABLE MODIFY SUBPARTITION ADD|DROP VALUES, was performed on a non-List subpartitioned object.

Action: Reissue the command against a List subpartitioned object.

ORA-14617: cannot add/drop values to DEFAULT subpartition

Cause: A ADD/DROP VALUES operation is being done on the default subpartition

Action: Ensure that ADD/DROP VALUES is not done on the DEFAULT subpartition

ORA-14618: cannot drop the last value of subpartition

Cause: ALTER TABLE DROP VALUES tried to drop the last value of the subpartition

Action: Cannot execute the command, unless two or more values exist for subpartition

ORA-14619: resulting List subpartition(s) must contain at least 1 value

Cause: After a SPLIT/DROP VALUE of a list subpartition, each resulting subpartition(as applicable) must contain at least 1 value

Action: Ensure that each of the resulting subpartitions contains at least 1 value

ORA-14620: DEFAULT subpartition already exists

Cause: A subpartition already exists with DEFAULT value

Action: Remove the DEFAULT value from the list specified

ORA-14621: cannot add subpartition when DEFAULT subpartition exists

Cause: An ADD SUBPARTITION operation cannot be executed when a subpartition with DEFAULT values exists

Action: Issue a SPLIT of the DEFAULT subpartition instead

ORA-14622: Value *string* already exists in subpartition *string*

Cause: One of the list values in the ADD SUBPARTITION or ADD VALUES statement already exists in another subpartition

Action: Remove the duplicate value from the statement and try again

ORA-14623: Value *string* does not exist in subpartition *string*

Cause: One of the list values in the SPLIT PARTITION or DROP VALUES statement does not exist in the subpartition

Action: Remove the value from the statement and try again

ORA-14624: DEFAULT subpartition must be last subpartition specified

Cause: A subpartition description follows the one describing the default subpartition

Action: Ensure that the DEFAULT subpartition is the last subpartition description

ORA-14625: subpartition contains rows corresponding to values being dropped

Cause: table subpartition contains rows for the values being dropped.

Action: DELETE all rows for the values being dropped and reissue statement

ORA-14626: values being added already exist in DEFAULT subpartition

Cause: An ADD VALUE operation cannot be executed because the values being added exist in the DEFAULT subpartition

Action: Issue a SPLIT of the DEFAULT subpartition and then MERGE the split subpartition into the subpartition to which values need to be added

ORA-14627: Invalid operation was specified on a GLOBAL partitioned index

Cause: An invalid operation such as ALTER INDEX DROP|SPLIT SUBPARTITION was specified on the global index

Action: Ensure that subpartition level operations are not specified on a GLOBAL index, since these are only RANGE partitioned

ORA-14628: specification of bounds is inconsistent with LIST method

Cause: An operation such as ALTER TABLE SPLIT|ADD SUBPARTITION specified bounds that were inconsistent with List subpartitioning method

Action: Specify VALUES/subpartition descriptions correctly for SPLIT/ADD of List subpartitions

ORA-14629: cannot drop the only subpartition of a partition

Cause: A drop subpartition command is being executed when there is only one subpartition in the partition

Action: n/a

ORA-14630: subpartition resides in offlined tablespace

Cause: User attempted an operation requiring that we access data in a subpartition which resides in a tablespace which was taken offline. Such operations include trying to drop a tablespace of a table which has indices defined on it or is referenced by a constraint.

Action: Bring tablespace online before attempting the operation.

ORA-14631: the partition bounds do not match the subpartition bounds of the partition

Cause: When exchanging a partitioned table with a composite partition the bounds that describe the partitions of the table must match the bounds that describe the subpartitions of the composite partition.

Action: Ensure that the bounds describing partitions in the partitioned table is the same as the bounds of the subpartitions in the the composite partition.

ORA-14632: cannot specify PARALLEL clause when adding a List subpartition

Cause: User issued ALTER TABLE ADD SUBPARTITION statement with PARALLEL clause for a List subpartition of a Range/List partitioned object which is illegal

Action: Remove the PARALLEL clause.

ORA-14633: Index maintenance clause not allowed for ADD list subpartition to a Composite partitioned table

Cause: The clause INVALIDATE or UPDATE GLOBAL INDEXES is allowed only for ADD hash subpartition to a composite partitioned table.

Action: Remove clause and reissue operation

ORA-14634: Subpartition descriptions cannot be specified during the SPLIT/MERGE of a partition of a Range-List partitioned table

Cause: During a split or a merge of a partition of a range list partitioned table you cannot specify any subpartitioning information for the resulting partition (s)

Action: Remove all subpartitioning information from the DDL.

ORA-14635: only one resulting subpartition can be specified for MERGE SUBPARTITIONS

Cause: ALTER TABLE MERGE SUBPARTITIONS contained more than one resulting subpartition for the MERGE

Action: Ensure that the statement describes exactly one subpartition as the target that need to be MERGED

ORA-14636: only 2 resulting subpartition can be specified for SPLIT SUBPARTITION

Cause: ALTER TABLE SPLIT SUBPARTITION contained more than 2 resulting subpartition for the SPLIT

Action: Ensure that the statement describes exactly 2 subpartitions as the target of the SPLIT operation

ORA-14637: cannot merge a subpartition with itself

Cause: The same subpartition name was specified twice for the merge operation

Action: Re-submit operation with 2 distinct subpartition names within the same composite partition

ORA-14638: cannot MERGE subpartitions in different Range Composite partitions

Cause: Attempted to MERGE subpartitions in different Range Composite partitions

Action: Reissue the command after ensuring that the 2 subpartitions being merged lie in the same composite partition

ORA-14639: SUBPARTITIONS clause can be specified only for Hash, Composite Range Hash table/partition

Cause: Attempted to specify SUBPARTITIONS clause on table that is not partitioned by the Composite Range-Hash method

Action: Reissue the command after ensuring that the SUBPARTITIONS clause is not specified, to specify a template for a Composite Range List object use the SUBPARTITION TEMPLATE clause

ORA-14640: add/coalesce index partition operation is valid only for hash partitioned global indexes

Cause: User attempted to add or coalesce an index partition of a global index not partitioned by hash method.

Action: Issue the statement on a global index partitioned by hash method. or if the index is partitioned by range method consider using split/drop instead of add/coalesce.

ORA-14641: STORE-IN clause can be specified only for a Hash, Interval, Autolist, Composite Range Hash, Composite Interval, Composite Autolist table or partition

Cause: Specifying a STORE-IN clause during creation or altering of a Range, Composite Range List partitioned table was not allowed.

Action: Re-issue the statement after removing the STORE-IN clause.

ORA-14642: Bitmap index mismatch for tables in ALTER TABLE EXCHANGE PARTITION

Cause: The two tables in the EXCHANGE have usable bitmap indexes, and the INCLUDING INDEXES option has been specified and the tables have different hakan factors.

Action: Perform the exchange with the EXCLUDING INDEXES option or alter the bitmap indexes to be unusable.

ORA-14643: Hakan factor mismatch for tables in ALTER TABLE EXCHANGE PARTITION

Cause: Either records_per_block has been minimized for one of the tables to be exchanged, but not the other, or the hakan factors for the tables to be exchanged are not equal.

Action: If records_per_block has been minimized for one of the tables, but not the other, either perform alter table with the NOMINIMIZE RECORDS_PER_BLOCK option for both tables, or perform alter table with the MINIMIZE RECORDS_PER_BLOCK for both tables. If the hakan factors do not match perform alter table with the NOMINIMIZE RECORDS_PER_BLOCK option for both tables.

ORA-14644: table is not subpartitioned by Hash method

Cause: A subpartition maintenance operation such as ALTER TABLE MODIFY PARTITION COALESCE SUBPARTITION can only be performed on Hash subpartitioned objects

Action: Re-issue the command against a Hash subpartitioned object.

ORA-14645: STORE IN clause cannot be specified for Range List objects

Cause: A STORE IN clause was specified for Range List partitioned object

Action: Re-issue the command after removing the STORE IN clause

ORA-14646: Specified alter table operation involving compression cannot be performed in the presence of usable bitmap indexes

Cause: The first time a table is altered to include compression, it cannot have a usable bitmap index (partition). Subsequent alter table statements involving compression do not have this same restriction.

Action: A) Drop any bitmap indexes defined on the table, and re-create them once the operation is complete or, B) Mark all index fragments of all bitmap indexes defined on the table UNUSABLE and rebuild them once the operation is complete.

ORA-14647: cannot MERGE subpartitions in different list composite partitions

Cause: An attempt was made to MERGE subpartitions in different list composite partitions.

Action: Reissue the command after ensuring that the two subpartitions being merged lie in the same composite partition.

ORA-14650: operation not supported for reference-partitioned tables

Cause: Attempted to perform an operation on a reference-partitioned table that was not supported.

Action: Do not perform the unsupported operation.

ORA-14651: reference partitioning constraint is not supported

Cause: The specified partitioning constraint was not supported for reference-partitioned tables. The partitioning constraint must be enabled, validated, and not deferrable. The partitioning constraint must not have ON DELETE SET NULL semantics.

Action: Correct the statement to specify a supported partitioning constraint.

ORA-14652: reference partitioning foreign key is not supported

Cause: The specified partitioning foreign key was not supported for reference-partitioned tables. All columns of the partitioning foreign key must be constrained NOT NULL with enabled, validated, and not deferrable constraints. Furthermore, a virtual column cannot be part of the partitioning foreign key.

Action: Correct the statement to specify a supported partitioning foreign key.

ORA-14653: parent table of a reference-partitioned table must be partitioned

Cause: Attempted to create a reference-partitioned table with a non-partitioned parent table.

Action: Correct the statement and reenter.

ORA-14654: number of partitions of reference-partitioned table must equal that of the parent table

Cause: Attempted to create a reference-partitioned table with a number of partitions which was different from that of the parent table.

Action: Correct the CREATE TABLE statement to specify a correct number of partitions.

ORA-14655: reference partitioning constraint not found

Cause: Partitioning constraint specified in CREATE TABLE ... PARTITION BY REFERENCE was not one of the referential constraints on the table being created.

Action: Ensure that the specified partitioning constraint is one of the referential constraints on the table being created.

ORA-14656: cannot drop the parent of a reference-partitioned table

Cause: Attempted to drop the parent of a reference-partitioned table.

Action: Drop all reference-partitioned child tables before dropping the parent table.

ORA-14657: cannot cascade row migration to reference-partitioned child table

Cause: Update of a parent key may require migration of rows in reference-partitioned child tables, however this is not supported because the parent key was not suitably indexed.

Action: Replace the existing index on the parent key with a unique index that does not contain any columns in addition to the parent key.

ORA-14658: specified dependent table is not affected by this operation

Cause: A table has been specified in the DEPENDENT TABLES clause that is not a reference-partitioned table affected by the operation.

Action: Correct the statement and reenter.

ORA-14659: Partitioning method of the parent table is not supported

Cause: An attempt was made to create a reference-partitioned table with an interval partitioned parent table.

Action: Do not create a reference-partitioned table with an interval partitioned parent table.

ORA-14660: parent table of a reference-partitioned table cannot be index-organized

Cause: Attempted to create a reference-partitioned table with a index-organized parent table.

Action: Correct the statement and reenter.

ORA-14661: row movement must be enabled

Cause: Attempted to disable row movement for a reference-partitioned table, although row movement was enabled for its parent table.

Action: Disable row movement for parent table before disabling row movement for the reference-partitioned table.

ORA-14662: row movement cannot be enabled

Cause: Attempted to enable row movement for a partitioned table, although row movement was disabled for a reference-partitioned child table.

Action: Enable row movement for reference-partitioned child tables before enabling row movement for the parent table.

ORA-14663: reference partitioning parent key is not supported

Cause: Parent key of the reference-partitioned table's partitioning constraint contained virtual columns.

Action: Correct the statement to specify a partitioning constraint with supported parent key and reenter.

ORA-14664: Cannot use PL/SQL expressions in reference partitioning parent key

Cause: Parent key of the reference partitioned table's partitioning constraint contained a virtual column that referenced a PL/SQL expression.

Action: Correct the statement to specify a partitioning constraint with supported parent key and reenter.

ORA-14665: Cannot use expressions involving ROWID data type in reference partitioning parent key

Cause: Parent key of the reference partitioned table's partitioning constraint contained a virtual column that involved the ROWID data type.

Action: Correct the statement to specify a partitioning constraint with supported parent key and reenter.

ORA-14666: Cannot use expressions involving BLOB or CLOB data types in reference partitioning parent key

Cause: Parent key of the reference partitioned table's partitioning constraint contained a virtual column that involved a BLOB or CLOB data type.

Action: Correct the statement to specify a partitioning constraint with supported parent key and reenter.

ORA-14667: Cannot use expressions involving object data types in reference partitioning parent key

Cause: Parent key of the reference partitioned table's partitioning constraint contained a virtual column that involved an object data type (object, REF, nested table, array).

Action: Correct the statement to specify a partitioning constraint with supported parent key and reenter.

ORA-14668: Cannot drop a unique or primary key referenced by the partitioning constraint of a reference-partitioned table.

Cause: An attempt was made to drop a unique or primary key referenced by the partitioning constraint of a reference-partitioned table.

Action: Drop all reference-partitioned child tables before dropping the unique or primary key of the parent table.

ORA-14669: interval partition of reference-partitioned table must correspond to interval partition of the parent table

Cause: An attempt was made to create a reference-partitioned table with an interval partition that does not pair with an interval partition in the parent table.

Action: Correct the CREATE TABLE statement to specify a correct number of partitions.

ORA-14670: there is no usable index on the reference partitioning parent key

Cause: An attempt was made to run an operation on a reference partitioned table that requires a usable index on the reference partitioning parent key, but no such index exists.

Action: Create a usable index on the reference partitioning parent key, or rebuild the existing unusable index on the reference partitioning parent key.

ORA-14690: value too long for *string* aggregate

Cause: An attempt was made to use the aggregate with a value that was too long.

Action: Limit the size of the aggregate inputs to 32763 bytes.

ORA-14691: Extended character types are not allowed in this table.

Cause: An attempt was made to create VARCHAR2 or NVARCHAR2 columns larger than 4000 bytes, or a RAW column larger than 2000 bytes, in a cluster, clustered table or index-organized table.

Action: Correct the statement and reenter.

ORA-14692: STORE AS clause is not allowed for extended character type column

Cause: An attempt was made to use the STORE AS clause to specify storage attributes for an extended character type column.

Action: Correct the statement and reenter.

ORA-14693: The MAX_STRING_SIZE parameter must be EXTENDED.

Cause: An attempt was made to set the MAX_STRING_SIZE parameter to STANDARD in a database that has been created with, or migrated to, the EXTENDED setting.

Action: Set MAX_STRING_SIZE to EXTENDED and retry.

ORA-14694: database must in UPGRADE mode to begin MAX_STRING_SIZE migration

Cause: An attempt was made to update the MAX_STRING_SIZE parameter to EXTENDED when the database was not in UPGRADE mode.

Action: Restart the database in UPGRADE mode, modify the parameter, run the utl32k.sql script in \$ORACLE_HOME/rdbms/admin, and restart the database in normal mode.

ORA-14695: MAX_STRING_SIZE migration is incomplete

Cause: An attempt was made to open the database in normal mode before the MAX_STRING_SIZE migration process completed.

Action: Restart the database in UPGRADE mode, run the utl32k.sql script in \$ORACLE_HOME/rdbms/admin, and restart the database in normal mode.

ORA-14696: MAX_STRING_SIZE migration is incomplete for pluggable database *string*

Cause: An attempt was made to open the database in normal mode before the MAX_STRING_SIZE migration process completed for the specified pluggable database.

Action: Restart the database in UPGRADE mode, run the utl32k.sql script in \$ORACLE_HOME/rdbms/admin in the specified pluggable database, and restart the database in normal mode.

ORA-14697: This connection does not support bind variables larger than 4000 bytes for SQL statements.

Cause: An attempt was made to use a bind variable larger than 4000 bytes for a SQL statement when the client initially connected to a container with STANDARD MAX_STRING_SIZE, and then within the same session switched to a container with EXTENDED MAX_STRING_SIZE.

Action: Initialize a new connection for the container with EXTENDED MAX_STRING_SIZE and retry.

ORA-14698: MAX_STRING_SIZE migration to STANDARD is not allowed due to column string in object string.string.

Cause: An attempt was made to use a bind variable larger than 4000 bytes for a SQL statement when the client initially connected to a container with STANDARD MAX_STRING_SIZE, and then within the same session switched to a container with EXTENDED MAX_STRING_SIZE.

Action: Initialize a new connection for the container with EXTENDED MAX_STRING_SIZE and retry.

ORA-14699: long bind value is too large for column

Cause: An attempt was made to bind a value larger than 4000 bytes for insert or update of a VARCHAR2, NVARCHAR2, or RAW column, and the value was too large for the destination column.

Action: Either make the destination column larger, or reduce the size of the bind value.

ORA-14700: Object(s) owned by SYS cannot be locked by non-SYS user

Cause: Attempt to issue a LOCK TABLE statement on SYS owned object(s) by a non-SYS user, user should minimally have DML privileges

Action: Re-issue LOCK TABLE statement for non-SYS user after granting DML privileges on object, or non-SYS user should connect as SYS

ORA-14701: partition-extended name or bind variable must be used for DMLs on tables partitioned by the System method

Cause: User attempted not to use partition-extended syntax for a table partitioned by the System method

Action: Must use of partition-extended syntax in contexts mentioned above.

ORA-14702: The partition number is invalid or out-of-range

Cause: Attempted to use nonnumerical value or the number was out of range of the partitions.

Action: Use a valid partition number.

ORA-14703: The AFTER clause can be used to ADD PARTITION only to a System Partitioned table.

Cause: The table is not partitioned by the System method

Action: Skip the AFTER clause.

ORA-14704: Create table as select disallowed for SYSTEM patitioned tables

Cause: User attempted to create a SYSTEM partitioned table by doing a create table as select.

Action: Do a create table followed by an insert as select into each partition.

ORA-14705: unique or primary keys referenced by enabled foreign keys in table "string"."string"

Cause: An attempt was made to truncate a table with unique or primary keys referenced by enabled foreign keys in another table.

Action: Before performing the TRUNCATE operation on the table, disable the foreign key constraints in other tables. You can see what constraints exist in a table by issuing the following command: `SELECT * FROM USER_CONSTRAINTS WHERE TABLE_NAME = :1;`

ORA-14706: multiple child tables reference constraint "*string*" in table "*string*". "*string*"

Cause: An ALTER TABLE EXCHANGE [SUB]PARTITION CASCADE command found that the specified parent key in the specified table was referenced by partitioning constraints in multiple reference partitioned child tables.

Action: Perform EXCHANGE [SUB]PARTITION without the CASCADE option. The CASCADE option is not supported if a parent key in the reference partitioned table hierarchy is referenced by multiple partitioning constraints.

ORA-14707: no match found for table "*string*". "*string*" for EXCHANGE CASCADE

Cause: There was no table matching the specified table in the ALTER TABLE EXCHANGE [SUB]PARTITION CASCADE command.

Action: Perform EXCHANGE [SUB]PARTITION without the CASCADE option or ensure that exactly one table matches the specified table.

ORA-14708: multiple matches found for table "*string*". "*string*" for EXCHANGE CASCADE

Cause: There were multiple tables matching the specified table in the ALTER TABLE EXCHANGE [SUB]PARTITION CASCADE command.

Action: Perform EXCHANGE [SUB]PARTITION without the CASCADE option or ensure that exactly one table matches the specified table.

ORA-14709: index mismatch for table "*string*". "*string*" in ALTER TABLE EXCHANGE [SUB]PARTITION

Cause: An ALTER TABLE EXCHANGE [SUB]PARTITION command was attempted for the specified table, however, the exchange table did not have equivalent indexes.

Action: Ensure that the indexes for the two tables have indexes which follow this rule: For every nonpartitioned index for the nonpartitioned table, there has to be an identical LOCAL index on the partitioned table and vice versa. To be identical, the column position type and size have to be the same.

ORA-14710: domain index "*string*" found for table "*string*". "*string*" for EXCHANGE CASCADE

Cause: An ALTER TABLE EXCHANGE [SUB]PARTITION CASCADE command was attempted for the specified table. However, there was a domain index on the specified table.

Action: Perform EXCHANGE [SUB]PARTITION without the CASCADE option or ensure that there is no domain index on the specified table.

ORA-14750: Range partitioned table with INTERVAL clause has more than one column

Cause: You attempted to create an interval partitioned table with more than one partitioning column.

Action: Use a single partitioning column.

ORA-14751: Invalid data type for partitioning column of an interval partitioned table

Cause: You attempted to use interval partitioning on a table partitioned on a column of data type other than number or date/time.

Action: Use only number or date/time columns as partitioning columns for interval partitioned tables.

ORA-14752: Interval expression is not a constant of the correct type

Cause: You attempted to use either a nonconstant interval or an interval whose data type does not correspond to the partitioning column

Action: Use only constant expressions for the interval. If the data type of partitioning column is numeric, the interval must be a numeric constant. If the data type is of type date/time, the interval must be a constant of interval type

ORA-14753: Interval cannot be zero

Cause: The interval mapped to zero.

Action: You must use a nonzero interval.

ORA-14754: Interval string is too long

Cause: The interval string was too long

Action: Specify interval using a shorter string

ORA-14755: Invalid partition specification for FOR VALUES clause.

Cause: The [SUB]PARTITION FOR VALUES (...) clause can only take constants. In addition it takes as many arguments as there are partitioning columns and the values must be coercible to the partitioning columns.

Action: Specify a valid FOR VALUES clause.

ORA-14756: Table is not partitioned by the interval or by the autolist method.

Cause: The table was not partitioned by the interval or by the autolist method.

Action: ALTER TABLE SET STORE IN is only valid for interval or autolist partitioned tables. Ensure that the table is partitioned by an interval or by an autolist method.

ORA-14757: Table is already a range partitioned table

Cause: SET INTERVAL () is used to convert an interval partitioned table to a range partitioned table. It is not legal on a range partitioned table

Action: Use SET INTERVAL () only on an interval partitioned table.

ORA-14758: Last partition in the range section cannot be dropped

Cause: An attempt was made to drop the last range partition of an interval partitioned table.

Action: Do not attempt to drop this partition.

ORA-14759: SET INTERVAL is not legal on this table.

Cause: SET INTERVAL clause was specified. ALTER TABLE SET INTERVAL is only legal on a range partitioned table with a single partitioning column. Additionally, this table cannot have a MAXVALUE partition.

Action: Use SET INTERVAL only on a valid table.

ORA-14760: ADD PARTITION is not permitted on Interval partitioned objects

Cause: ALTER TABLE ADD PARTITION was attempted on an Interval partitioned object.

Action: Do not perform the operation on an Interval partitioned object. Insert a row to create the new partition.

ORA-14761: MAXVALUE [sub]partition cannot be specified for INTERVAL [sub]partitioned objects.

Cause: An attempt was made to create a [sub]partition with a MAXVALUE highbound on an INTERVAL [sub]partitioned object.

Action: Do not create a [sub]partition with a MAXVALUE highbound.

ORA-14762: Domain index creation on interval partitioned tables is not permitted

Cause: An attempt was made to create a domain index on an interval partitioned table.

Action: Do not create a domain index on an interval partitioned table.

ORA-14763: Unable to resolve FOR VALUES clause to a partition number

Cause: Could not determine the partition corresponding to the FOR VALUES clause.

Action: Remove bind variables and dependencies on session parameters from the values specified in the FOR VALUES clause.

ORA-14764: Partitions cannot be truncated, dropped or merged with mixed syntax.

Cause: An attempt was made to truncate, drop or merge partitions with mixed syntax.

Action: Do not use mixed syntax to truncate, drop or merge partitions.

ORA-14765: Cannot create a partition while doing a create index

Cause: An attempt was made to create a partition concurrently with index creation.

Action: Retry the statement after the index build is finished.

ORA-14766: Unable to obtain a stable metadata snapshot

Cause: This operation was not able to obtain a stable snapshot of the interval partitioning metadata.

Action: Retry the statement.

ORA-14767: Cannot specify this interval with existing high bounds

Cause: The interval specified conflicts with the existing high bound for the last partition. The combination might lead to invalid dates for high bounds in the future.

Action: If this is a CREATE TABLE, try specifying a different high bound value for the last partition, or a different interval. If this is an ALTER TABLE SET INTERVAL, please choose either a different interval, or, modify the table to change the high bound for the last partition.

ORA-14769: cannot interval [sub]partition or autolist [sub]partition nested table or XMLType with object-relational storage

Cause: Interval [sub] partition or autolist [sub]partition was not supported for nested table and XMLType with object-relational storage.

Action: Use a list or range partition instead.

ORA-14770: An XML virtual column whose expression includes EXTRACTVALUE operator cannot be used for the partitioning key during interval [sub]partition.

Cause: Interval [sub]partition was not supported with an XML virtual column whose expression includes the EXTRACTVALUE operator.

Action: Use XMLCAST and XMLQUERY operators to define the virtual column expression for the partitioning key during interval [sub]partition.

ORA-14801: Hash composite partitioning is not supported

Cause: An attempt was made to partition a table using a Hash composite method.

Action: Do not partition the table by a Hash composite method.

ORA-14802: Specified operation is not permitted on Hash composite partitioned objects

Cause: An unsupported operation was attempted on a Hash composite partitioned object.

Action: Do not perform the operation on a Hash composite partitioned object.

ORA-14803: partition bound may not be specified for hash subpartitioned tables

Cause: A VALUES LESS THAN or VALUES clause was specified with a subpartition description.

Action: Remove the VALUES LESS THAN or VALUES clause from the subpartition description.

ORA-14804: A partition must be split into two or more partitions

Cause: An ALTER TABLE SPLIT PARTITION contained a description for only one resulting partition.

Action: Specify at least 2 resulting partitions.

ORA-14805: last resulting partition cannot contain bounds

Cause: An ALTER TABLE SPLIT PARTITION contained a description for the last partition which included the bounds.

Action: Do not specify bounds for the last resulting partition.

ORA-14806: merging more than two partitions or subpartitions is only supported for heap tables

Cause: An ALTER TABLE MERGE PARTITIONS or MERGE SUBPARTITIONS with more than two source partitions or subpartitions was issued. Merging more than two partitions or subpartitions is only supported for heap tables.

Action: Specify exactly two partitions or subpartitions to merge.

ORA-14807: merging partitions or subpartitions using *name TO name* syntax is only supported for range partitioned tables

Cause: An ALTER TABLE MERGE PARTITIONS *pname TO pname* or an ALTER TABLE MERGE SUBPARTITIONS *subpname TO subpname* was issued. This is only supported for range partitions or subpartitions.

Action: Specify all the partitions or subpartitions to be merged.

ORA-14808: table does not support *string string*

Cause: An ALTER TABLE MOVE PARTITION ONLINE or ALTER TABLE MODIFY PARTITION INDEXING or ALTER TABLE SPLIT PARTITION ONLINE statement was issued on a table that was either not a heap-organized table or had an object type, domain index or bitmap join index defined on it. Or, the source table of the split online has reference partitioned child tables. This operation is only supported for heap-organized tables.

Action: Do not use the ONLINE keyword or the INDEXING clause.

ORA-14809: schema does not support *string*

Cause: An ALTER TABLE MOVE PARTITION ONLINE or an ALTER TABLE MODIFY PARTITION INDEXING statement was issued on a table owned by SYS, SYSTEM, PUBLIC, OUTLN, or XDB.

Action: Do not use the ONLINE keyword or the INDEXING clause.

ORA-14810: ONLINE MOVE PARTITION not supported while database is not open or in migrate mode

Cause: An ALTER TABLE MOVE PARTITION ONLINE statement was issued on a table while the database was not open or was in migrate mode.

Action: Do not use the ONLINE keyword.

ORA-14811: Online DDL with the INCLUDING ROWS clause is not supported under supplemental logging.

Cause: An online DDL with an INCLUDING ROWS clause was issued on a table while supplemental logging was enabled.

Action: Do not use the ONLINE keyword.

ORA-14812: Operations on partitions through DBMS_LOB package are not permitted during a concurrent online move of the partition.

Cause: A DBMS_LOB operation was issued on a Large Object (LOB) while an ALTER TABLE MOVE PARTITION ONLINE was executing concurrently on the partition containing the LOB.

Action: Reissue the DBMS_LOB operation after MOVE PARTITION ONLINE has completed.

ORA-14813: ONLINE MOVE OR SPLIT PARTITION not supported while there are too many table segments and index segments

Cause: An ALTER TABLE MOVE or SPLIT PARTITION ONLINE command was issued on a table while the number of table segments multiplied by the number of index segments exceeded the maximum allowed.

Action: Do not use the ONLINE keyword.

ORA-14850: Adding a partition with DEFAULT high value is not permitted on Autolist partitioned objects.

Cause: An attempt was made to add a DEFAULT partition to an Autolist partitioned object.

Action: Do not perform the operation on an Autolist partitioned object. Insert a row to create the new partition.

ORA-14851: DEFAULT [sub]partition cannot be specified for AUTOLIST [sub]partitioned objects.

Cause: An attempt was made to create a [sub]partition with a DEFAULT high value on an AUTOLIST [sub]partitioned object.

Action: Do not create a [sub]partition with a DEFAULT high value.

ORA-14852: SET [SUB]PARTITIONING AUTOMATIC is not legal on this table.

Cause: SET [SUB]PARTITIONING AUTOMATIC clause was specified. ALTER TABLE SET [SUB]PARTITIONING AUTOMATIC is only legal on a list partitioned table. Additionally, this table cannot have a DEFAULT partition.

Action: Use SET [SUB]PARTITIONING AUTOMATIC only on a valid table.

ORA-14853: An invalid option was specified for the SET [SUB]PARTITIONING clause.

Cause: SET [SUB]PARTITIONING clause was used with an invalid option. The only valid options are AUTOMATIC and MANUAL.

Action: Use valid options.

ORA-14854: SET [SUB]PARTITIONING MANUAL is not legal on this table.

Cause: SET [SUB]PARTITIONING MANUAL clause was specified. ALTER TABLE SET [SUB]PARTITIONING MANUAL is only legal on a list partitioned table. Additionally, this table cannot have a DEFAULT partition.

Action: Use SET [SUB]PARTITIONING MANUAL only on a valid table.

ORA-14855: Table is already a list partitioned table.

Cause: An attempt to specify SET [SUB]PARTITIONING MANUAL on a list (sub)partitioned table failed. SET [SUB]PARTITIONING MANUAL is used to convert an autolist (sub)partitioned table to a list (sub)partitioned table.

Action: Use SET [SUB]PARTITIONING MANUAL on an autolist (sub)partitioned table.

ORA-14856: Table is already an autolist partitioned table.

Cause: An attempt to specify SET [SUB]PARTITIONING AUTOLIST on an autolist (sub)partitioned table failed. SET [SUB]PARTITIONING AUTOLIST is used to convert a list (sub)partitioned table to an autolist (sub)partitioned table.

Action: Use SET [SUB]PARTITIONING AUTOLIST on an autolist (sub)partitioned table.

ORA-14857: Subpartition template is expected when creating an autolist subpartitioned table.

Cause: An attempt was made to create an autolist subpartitioned table without a subpartition template.

Action: Use a subpartition template when creating an autolist subpartitioned table.

ORA-14858: Set empty template is not legal on an autolist subpartitioned table.

Cause: An attempt was made to set an empty subpartition template for an autolist subpartitioned table.

Action: Convert this table to a list subpartitioned table before set empty template.

ORA-14870: Range subpartitioned table with INTERVAL clause has more than one column.

Cause: An attempt was made to create an interval subpartitioned table with more than one subpartitioning column.

Action: Use a single subpartitioning column.

ORA-14871: Subpartition template is expected when creating an interval subpartitioned table.

Cause: An attempt was made to create an interval subpartitioned table without a subpartition template.

Action: Use a subpartition template when creating an interval subpartitioned table.

ORA-14872: ADD SUBPARTITION is not permitted on interval subpartitioned objects.

Cause: ALTER TABLE ADD SUBPARTITION was attempted on an interval subpartitioned object.

Action: Do not add a subpartition on an interval subpartitioned object. Insert a row to create the new subpartition.

ORA-14873: Set empty template is not legal on an interval subpartitioned table.

Cause: An attempt was made to set an empty subpartition template for an interval subpartitioned table.

Action: Convert this table to a range subpartitioned table before set empty template.

ORA-14900: The logical transaction ID is no longer valid.

Cause: The logical transaction ID has been purged and the commit failed.

Action: Reconnect and re-run the transaction.

ORA-14901: Commits during replay are not permitted.

Cause: The transaction tried to commit during replay.

Action: Contact Oracle Support Services.

ORA-14902: Instance has not been configured for Transaction Guard.

Cause: The partition of the transaction history table had not been created.

Action: Contact Oracle Support Services.

ORA-14903: Corrupt logical transaction detected.

Cause: The logical transaction was corrupt. The size was incorrect.

Action: Verify your network configuration.

ORA-14904: Corrupt logical transaction ID detected.

Cause: The logical transaction was corrupt. The database ID was incorrect.

Action: Verify your network configuration.

ORA-14905: Serializable transactions cannot be replayed.

Cause: The transaction tried to replay a serializable transaction.

Action: This is not supported.

ORA-14906: Get LTXID outcome operation is not permitted on the current session.

Cause: The transaction tried to execute get LTXID outcome on the current session.

Action: Check the parameters used to invoke get LTXID outcome.

ORA-14907: Cannot execute get LTXID outcome for the transaction of another user.

Cause: The transaction tried to execute get LTXID outcome for a different user session.

Action: Check the parameters used to invoke get LTXID outcome.

ORA-14908: Cannot invoke get LTXID outcome while a transaction is open.

Cause: Get LTXID outcome could not be executed because a transaction was open.

Action: Invoke get LTXID outcome after the transaction has been completed.

ORA-14909: Current session has been blocked by another user with the same user name using GET_LTXID_OUTCOME.

Cause: Could not commit after GET_LTXID_OUTCOME was invoked.

Action: Contact Oracle Support Services.

ORA-14910: Sessions with SYSDBA privilege are not allowed to connect to a service that has commit outcome enabled.

Cause: A session with SYSDBA privilege tried to connect to a service that has commit outcome enabled.

Action: Connect without the SYSDBA privilege.

ORA-14913: Invalid logical transaction ID detected.

Cause: The logical transaction was marked invalid.

Action: Verify your configuration. Transaction Guard does not support XA transactions that use the two-phase commit protocol.

ORA-14914: cannot invoke set failpoint

Cause: An invalid parameter was specified.

Action: Specify a valid parameter.

ORA-14915: cannot invoke set failpoint

Cause: An invalid database session was specified.

Action: Specify a valid database session.

ORA-14916: Switch service by DRCP clients is not supported by Transaction Guard.

Cause: The Database Resident Connection Pooling (DRCP) client tried to switch services while Transaction Guard was enabled.

Action: None

ORA-14950: Force outcome failed. Client transaction is too old.

Cause: The client transaction had been committed or forced earlier.

Action: None

ORA-14951: Force outcome failed. Client transaction is ahead of server logical transaction ID.

Cause: The client transaction had not been seen by the server and could not be forced. This can happen if the server is restored or a flashback operation has been executed.

Action: None

ORA-14952: Force outcome failed. General error occurred.

Cause: The force outcome operation failed. See previous error for the reason.

Action: None

ORA-14953: Invalid partition ID specified.

Cause: The partition IDs of the transaction history table were not consecutive.

Action: Specify the next higher partition ID.

ORA-14954: Invalid tablespace name specified.

Cause: The tablespace did not exist.

Action: Specify an existing tablespace.

ORA-14955: Transaction Guard has detected that committed transactions are lost.

Cause: Committed transactions could be lost if: i) COMMIT options were changed from the default to non-durable settings: NOLOGGING was in use, COMMIT_WAIT=nowait or COMMIT_LOGGING=batch. ii) Accessing an Oracle Data Guard secondary site before redo apply completed. iii) Flashback of the database. iv) Incomplete media recovery.

Action: i) If committed transactions cannot be lost, do not change the settings COMMIT_WAIT, or COMMIT_LOGGING from their defaults (these parameters have no default values but behave as FORCE_WAIT and IMMEDIATE, respectively, if not set). ii) Allow media recovery or redo apply to complete before opening a database to users. iii) Do not use NOLOGGING in high availability environments. Media recovery is not possible through the NOLOGGING operation. Data could be lost unless recovered from other sources. iv) Ensure media recovery runs to completion.

ORA-15000: command disallowed by current instance type

Cause: The user has issued a command to a conventional RDBMS instance that is only appropriate for an ASM instance. Alternatively, the user has issued a command to an ASM instance that is only appropriate for an RDBMS instance.

Action: Connect to the correct instance type and re-issue the command.

ORA-15001: disk group "*string*" does not exist or is not mounted

Cause: An operation failed because the specified disk group did not exist or was not mounted by the current Oracle ASM instance.

Action: Verify the following: * That the disk group name used is valid * That the disk group exists, and * That the disk group is mounted by the current Oracle ASM instance.

ORA-15002: parameter LOCK_NAME_SPACE exceeds limit of *string* characters

Cause: The LOCK_NAME_SPACE initialization parameter contained a value that is too long.

Action: Correct the LOCK_NAME_SPACE initialization parameter.

ORA-15003: diskgroup "*string*" already mounted in another lock name space

Cause: The diskgroup could not be mounted by the ASM instance because it was operating in a lockspace different than another existing ASM instance which had already mounted the diskgroup.

Action: Check the LOCK_NAME_SPACE initialization parameter value, or dismount the diskgroup from the other ASM instances.

ORA-15004: alias "*string*" does not exist

Cause: The specified alias did not exist within the diskgroup.

Action: Check the alias name and diskgroup name.

ORA-15005: name "*string*" is already used by an existing alias

Cause: An existing alias in the diskgroup used the same name.

Action: Select another alias name, or drop the existing alias.

ORA-15006: template "*string*" does not exist

Cause: The specified template did not exist within the disk group.

Action: Check the template name and disk group name.

ORA-15007: name is already used by an existing template

Cause: A template with the same name already exists.

Action: Select another template name, or drop the existing template.

ORA-15008: system template cannot be dropped

Cause: An attempt was made to drop the system template.

Action: Ensure that the template to be dropped is not the system template because it is required for proper operation. Select a non-system template and retry the operation.

ORA-15009: ASM disk "*string*" does not exist

Cause: The specified ASM disk was not found.

Action: Check the ASM disk name.

ORA-15010: name '*string*' is already used by an existing ASM disk

Cause: The specified name was already used in this diskgroup.

Action: Specify a different ASM disk name.

ORA-15011: failure group "*string*" does not exist in diskgroup "*string*"

Cause: The specified name did not match the failure group of any disks in the diskgroup. This usually indicates that the failure group name was specified incorrectly.

Action: Check the failure group name.

ORA-15012: ASM file *string* cannot be found.

Cause: The Oracle ASM instance could not locate the specified file.

Action: Check that the file name is correct, the file exists in the specified location, and proper privileges are granted to the user. Retry the operation.

ORA-15013: diskgroup "*string*" is already mounted

Cause: An ALTER DISKGROUP MOUNT command specified the name of a diskgroup which is already mounted by the current ASM instance.

Action: Check the name of the diskgroup.

ORA-15014: path '*string*' is not in the discovery set

Cause: The operating system path specified was outside the set of disks that are discovered by the instance.

Action: Specify a operating system path within the set of disks that are discovered based upon the ASM_DISKSTRING parameter. Alternatively, check the setting of the ASM_DISKSTRING parameter.

ORA-15015: Specified path '*string*' conflicts with path '*string*'

Cause: The ASM instance previously discovered specified disk with an ASM library using a different path.

Action: Use the discovery string of the ASM library to add the disk.

ORA-15016: inconsistent respecification of path '*string*'

Cause: The specified path was provided more than once with different properties.

Action: Do not provide a path more than once. Alternatively, provide consistent properties.

ORA-15017: Disk group *string* cannot be mounted.

Cause: The disk group could not be mounted by the ASM instance because of an IO error or due to other reasons explained in alert log or trace files.

Action: Check for additional errors reported. Correct the error and retry the operation.

ORA-15018: Disk group cannot be created.

Cause: The disk group could not be created.

Action: Check the Oracle Automatic Storage Management (ASM) alert log and additional reported errors.

ORA-15019: discovered duplicate path '*string*' for '*string*'

Cause: The discovery encountered multiple paths to the same disk.

Action: Check that the ASM_DISKSTRING parameter specifies only a single path for each disk.

ORA-15020: discovered duplicate ASM disk "*string*"

Cause: The discovery encountered two disks claiming to be the same named ASM disk.

Action: Check that the ASM_DISKSTRING parameter specifies only a single path for each disk.

ORA-15021: parameter "*string*" is not valid in *string* instance

Cause: The specified parameter was not supported when starting an instance of this type.

Action: Delete the specified parameter from the INIT.ORA file.

ORA-15022: unable to load an Oracle ASM library

Cause: An Oracle instance attempted to load an Oracle ASM library which could not be discovered.

Action: Check other error messages to determine why Oracle is unable to retrieve the library path from the Oracle ASM instance.

ORA-15023: reached maximum allowable number of disks *string*

Cause: An attempt was made to add another disk to a diskgroup which already contains the maximum number of disks allowed.

Action: Consider dropping existing disks from the diskgroup before adding additional ones, or create a new diskgroup.

ORA-15024: discovered duplicately numbered ASM disk *string*

Cause: ASM discovered two disks claiming to have the same ASM disk number in the same disk group.

Action: Check that the ASM_DISKSTRING parameter specifies only a single path for each disk.

ORA-15025: could not open disk "*string*"

Cause: The specified disk could not be opened. If the database instance is running as an Operating System (OS) user different from that of the ASM instance, then the permissions on the database oracle binary may be incorrect.

Action: Check the additional error messages, if any. If the database instance is running as an OS user different from that of the ASM instance, use the "srvctl" command to stop and restart the database to fix the permissions.

ORA-15026: disk '*string*' is not an ASM disk

Cause: The disk did not contain a valid ASM disk header.

Action: Check to see if the data on the disk has been changed by some system administrator action.

ORA-15027: active use of diskgroup "*string*" precludes its dismount

Cause: An ALTER DISKGROUP ... DISMOUNT command specified a diskgroup which had clients with open files in the diskgroup. Diskgroups cannot be dismounted until all open files in the diskgroup are closed.

Action: Stop all clients that are using this diskgroup and retry the ALTER DISKGROUP ... DISMOUNT command. Query the V\$ASM_CLIENT fixed view in an ASM instance or use ASMCMD LSOFF to list active clients.

ORA-15028: ASM file '*string*' not dropped; currently being accessed

Cause: An attempt was made to drop an ASM file, but the file was being accessed by one or more clients and therefore could not be dropped.

Action: Stop all clients that are using this file and retry the drop command. Query the V\$ASM_CLIENT fixed view in an ASM instance or use ASMCMD LSOFF to list active clients.

ORA-15029: disk '*string*' is already mounted by this instance

Cause: An attempt was made to add to a diskgroup a disk that was already mounted by the current instance as part of some (possibly other) diskgroup.

Action: Specify a different disk in the command. Note that not even the FORCE option can be used to correct the situation until the diskgroup containing the disk becomes dismounted by this instance.

ORA-15030: diskgroup name "*string*" is in use by another diskgroup

Cause: A CREATE DISKGROUP command specified a diskgroup name that was already assigned to another diskgroup.

Action: Select a different name for the diskgroup.

ORA-15031: The disk specification '*string*' matches no disks.

Cause: The instance was unable to discover any disks in the mentioned device specification path.

Action: Ensure that the disk specification string matches a disk on the system.

ORA-15032: not all alterations performed

Cause: At least one ALTER DISKGROUP action failed.

Action: Check the other messages issued along with this summary error as well as the alert log.

ORA-15033: disk '*string*' belongs to diskgroup "*string*"

Cause: An attempt was made to ADD to a diskgroup (or REPLACE with) a disk that was already part of another diskgroup, or an attempt was made to DROP / OFFLINE / ONLINE / CHECK a disk that was not part of the specified diskgroup.

Action: For ADD and REPLACE, check the path specifier for the disk. If it is certain that the disk is not in use by another diskgroup, the FORCE option may be used to override this check. For the other commands, check the name of the specified disk.

ORA-15034: disk '*string*' does not require the FORCE option

Cause: An attempt was made to add the disk to the diskgroup using the FORCE option. The disk was not found to be in use at the present time, so the FORCE option was not permitted.

Action: Avoid gratuitous use of the FORCE option.

ORA-15035: no disks belong to diskgroup "*string*"

Cause: An attempt was made to mount a diskgroup for which no member disks were discovered.

Action: Specify a valid diskgroup name that contains disks.

ORA-15036: Disk '*string*' is truncated to *string* MB from *string* MB.

Cause: The size of the disk, as reported by the operating system, was smaller than the size of the disk as recorded in the disk header block on the disk.

Action: Check if the system configuration has changed.

ORA-15037: disk '*string*' size *string* MB is smaller than minimum of *string* MB

Cause: The size of the disk, as reported by the operating system, was too small to allow the disk to become part of the diskgroup.

Action: Check if the system configuration is correct.

ORA-15038: disk '*string*' mismatch on '*string*' with target disk group [*string*] [*string*]

Cause: An attempt was made to mount into a disk group a disk whose recorded allocation unit size, metadata block size, physical sector size, logical sector size or creation time stamp was inconsistent with the other disk group members.

Action: Check if the system configuration has changed. Verify disk discovery string.

ORA-15039: diskgroup not dropped

Cause: An attempt to drop a diskgroup failed.

Action: See the associated messages for details about why the drop was not successful.

ORA-15040: diskgroup is incomplete

Cause: Some of the disks comprising a diskgroup were not present.

Action: Check the hardware to ensure that all disks are functional. Also check that the setting of the ASM_DISKSTRING initialization parameter has not changed. Alternatively, for normal or high redundancy diskgroups, use MOUNT FORCE to offline missing disks as part of mounting the diskgroup.

ORA-15041: diskgroup "*string*" space exhausted

Cause: At least one disk in the diskgroup is out of space.

Action: If all disks are evenly balanced, add more disks to the diskgroup,

ORA-15042: ASM disk *string* is missing from group number *string*

Cause: The specified disk, which is a necessary part of a disk group, could not be found on the system.

Action: Check the hardware configuration.

ORA-15043: ASM disk "*string*" is not a diskgroup member

Cause: The specified disk has been removed from the diskgroup, but a disk matching its name was found.

Action: Check the hardware configuration.

ORA-15044: ASM disk '*string*' is incorrectly named

Cause: Either the specified disk had its contents changed such that it no longer contained an ASM disk name in its header that matches the diskgroup information or its FAILGROUP information may have become inconsistent.

Action: Drop the disk from the diskgroup.

ORA-15045: ASM file name '*string*' is not in reference form

Cause: The ASM file name was not in a form that can be used to reference an existing file because a file/incarnation number or an alias name was not present or a template name was included.

Action: Correct the specified ASM file name.

ORA-15046: ASM file name '*string*' is not in single-file creation form

Cause: The ASM file name was not in a form that can be used to create a single file because a file/incarnation number was present.

Action: Correct the specified ASM file name.

ORA-15047: Oracle ASM file name '*string*' is not in multiple file creation form

Cause: The Oracle Automatic Storage Management (Oracle ASM) file name was not in a form that could be used to create multiple files because either a fully qualified file name or an alias name was specified.

Action: Correct the specified Oracle ASM file name.

ORA-15048: Oracle ASM internal files cannot be deleted.

Cause: An attempt was made to delete a metadata file used by Oracle ASM to manage the disk group.

Action: Check the specified Oracle ASM file name.

ORA-15049: diskgroup "*string*" contains *string* error(s)

Cause: Errors were discovered by the ALTER DISKGROUP CHECK command.

Action: See the alert log for details of the errors.

ORA-15050: disk "*string*" contains *string* error(s)

Cause: Errors were discovered by the ALTER DISKGROUP CHECK DISK command.

Action: See the alert log for details of the errors.

ORA-15051: file '*string*' contains *string* error(s)

Cause: Errors were discovered by the ALTER DISKGROUP CHECK FILE command.

Action: See the alert log for details of the errors.

ORA-15052: Oracle ASM file name *string* is not in disk group *string*.

Cause: The Oracle Automatic Storage Management (Oracle ASM) file name did not contain a disk group name that specified the correct disk group as implied by the other arguments to the command.

Action: Correct the specified Oracle ASM file name or disk group name.

ORA-15053: diskgroup "*string*" contains existing files

Cause: An attempt was made to drop a diskgroup that still contains existing files.

Action: Specify the INCLUDING CONTENTS option to drop the diskgroup and all of its existing files.

ORA-15054: disk "*string*" does not exist in diskgroup "*string*"

Cause: An attempt was made to alter a disk that is not part of the specified diskgroup.

Action: Check the name of the specified disk and the specified diskgroup.

ORA-15055: unable to connect to ASM instance

Cause: The relational database management system (RDBMS) instance was unable to connect to the required ASM instance when accessing a disk group.

Action: Check the additional error messages. Configure the correct ASM system identifier (SID) or ensure that the RDBMS instance has operating system privileges for ASM SYSDBA.

ORA-15056: additional error message

Cause: An operating system error occurred.

Action: Correct the operating system error and retry the operation.

ORA-15057: specified size of *string* MB is larger than actual size of *string* MB

Cause: A disk size expression exceeded the amount of storage actually available, as reported by the operating system.

Action: Specify a valid size.

ORA-15058: disk '*string*' belongs to an incompatible diskgroup

Cause: An attempt was made to ADD to a diskgroup a disk which was already part of another diskgroup. The other diskgroup was written by a more recent software release.

Action: Check the path specifier for the disk. If it is certain that the disk is not in use by another diskgroup, the FORCE option may be used to override this check.

ORA-15059: invalid device type for ASM disk

Cause: The device type of the discovered disk was not valid for use as an ASM disk.

Action: Check the file path and retry or exclude it from the discovery set. See the accompanying operating system error for additional information.

ORA-15060: template "*string*" does not exist

Cause: A command specified a template name, either directly or as part of an ASM file name, which did not exist.

Action: Check the template specifier in the command.

ORA-15061: ASM operation not supported [*string*]

Cause: An ASM operation was attempted that is invalid or not supported by this version of the ASM instance.

Action: This is an internal error code that is used for maintaining compatibility between software versions and should never be visible to the user; contact Oracle support Services.

ORA-15062: ASM disk is globally closed

Cause: The disk to which the I/O request was issued has gone offline or has been globally closed by the background process. Check other messages in the trace files for more information.

Action: Bring the disk online for I/Os to get through.

ORA-15063: ASM discovered an insufficient number of disks for diskgroup "*string*"

Cause: ASM was unable to find a sufficient number of disks belonging to the diskgroup to continue the operation.

Action: Check that the disks in the diskgroup are present and functioning, that the owner of the ORACLE binary has read/write permission to the disks, and that the ASM_DISKSTRING initialization parameter has been set correctly. Verify that ASM discovers the appropriate disks by querying V\$ASM_DISK from the ASM instance.

ORA-15064: communication failure with ASM instance

Cause: There was a failure to communicate with the Oracle ASM instance. This occurred because the connection between the database instance and the Oracle ASM instance was lost.

Action: Check the accompanying error messages for more information on the failure. Note that database instances will always return this error when the ASM instance is terminated.

ORA-15065: hash collision for diskgroup names '*string*' and '*string*'

Cause: There was a collision in the group name used for the diskgroup. The diskgroup(s) cannot be mounted using colliding names.

Action: Use a different diskgroup name and also report to Oracle Support Services the two diskgroup names which collided.

ORA-15066: offlining disk "*string*" in group "*string*" may result in a data loss

Cause: Following I/O failures, the disks holding all copies of a data block were attempted to be taken offline.

Action: Check the accompanying error messages for more information on the reason for the disk I/O failures.

ORA-15067: command or option incompatible with diskgroup redundancy

Cause: An attempt was made to use a feature which is not permitted by the disk group's redundancy policy. Common examples are forcibly dropping a disk from an EXTERNAL REDUNDANCY disk group, using the FAILGROUP clause with an EXTERNAL REDUNDANCY disk group, using invalid template attributes, or mounting a HIGH or EXTERNAL redundancy disk group for recovery. An attempt (without force option) was made to drop disks or fail groups that leads to fewer number fail groups than the minimal requirement (3 for NORMAL and FLEX and 5 for HIGH redundancy disk group).

Action: Omit the option from the command. Check if the disk group has minimum number of fail groups including quorum fail group after the successful execution of the SQL.

ORA-15068: maximum number of diskgroups *string* already mounted

Cause: An attempt was made to mount more diskgroups than the instance is capable of mounting at one time.

Action: Dismount a mounted diskgroup and retry the command.

ORA-15069: Time-out waiting for lock on ASM file '*string*'

Cause: An attempt was made to access an Oracle ASM file. But the file could not be accessed because the file was either being created, resized, or deleted.

Action: No action required. Try accessing the file after the create or resize has completed.

ORA-15070: maximum number of files *string* exceeded in diskgroup "*string*"

Cause: The diskgroup ran out of space.

Action: Delete some existing ASM files or create files in a new diskgroup.

ORA-15071: ASM disk "*string*" is already being dropped

Cause: An attempt was made to drop or replace a disk that was already in the process of being dropped from the diskgroup. Alternatively, an attempt was made to forcibly drop a disk from a diskgroup using the FORCE option that was already being forcibly dropped from the diskgroup.

Action: Check the ASM disk name and FORCE option as specified in the command.

ORA-15072: command requires at least *string* regular failure groups, discovered only *string*

Cause: An attempt was made to create either a normal redundancy diskgroup for which fewer than two regular failure groups were both specified and discovered, or a high redundancy diskgroup for which fewer than three regular failure groups were both specified and discovered, or an external redundancy diskgroup for which only quorum disks were both specified and discovered.

Action: Check that the command does specify the required number of failure groups, and that all of the specified disks are discovered by ASM. A query of the V\$ASM_DISK fixed view will show which disks are discovered by ASM. Note that a quorum failure group will not be used as a regular failure group. An external redundancy diskgroup requires at least one regular disk.

ORA-15073: diskgroup *string* is mounted by another ASM instance

Cause: An attempt was made to drop a diskgroup that is still mounted somewhere in the cluster by another instance.

Action: dismount the diskgroup from all nodes except the one performing the drop diskgroup command.

ORA-15074: diskgroup *string* requires rebalance completion

Cause: An attempt was made to repeatedly add or drop disks from a diskgroup. ASM could not perform the operation given the current state of the diskgroup.

Action: Manually invoke the ALTER DISKGROUP REBALANCE command and allow the rebalance to run to completion. Alternatively, invoke the ALTER DISKGROUP UNDROP DISKS command and allow the rebalance to run to completion. After the rebalance has completed, retry the operation.

ORA-15075: disk *string* is not visible on instance number *string*

Cause: An ALTER DISKGROUP ADD DISK command specified a disk that could not be discovered.

Action: Check operating system permissions for the device and the storage subsystem configuration on the specified node.

ORA-15076: Emulating I/O errors on the OSM disk

Cause: The disk to which the I/O request was issued is in an error emulation mode.

Action: Bring the disk online for I/Os to get through.

ORA-15077: could not locate ASM instance serving a required diskgroup

Cause: The instance failed to perform the specified operation because it could not locate a required ASM instance.

Action: If you want to start a database instance, start an ASM instance and mount the required disk group. To start an ASM instance, relink the ORACLE binary with ASM_ON or explicitly set the INSTANCE_TYPE initialization parameter to ASM. Ensure that there is a local ASM instance available, or a remote ASM instance accessible through the Oracle ASM listeners. Examine any accompanying errors in the stack to understand the possible reasons for this failure. Fix them and retry starting the database instance.

ORA-15078: Oracle ASM disk group was forcibly dismounted

Cause: The Oracle Automatic Storage Management (Oracle ASM) disk group was dismounted (with the ALTER DISKGROUP DISMOUNT FORCE statement), and therefore it could not be accessed.

Action: Mount the disk group using the ALTER DISKGROUP MOUNT statement to allow access to the disk group again.

ORA-15079: Oracle ASM file is closed

Cause: The Oracle Automatic Storage Management (Oracle ASM) file, to which the I/O request was issued, was closed. This could have been a consequence of the disk group being dismounted.

Action: Ensure that the disk group that contains the file is mounted.

ORA-15080: synchronous I/O operation failed to *string* block *string* of disk *string* in disk group *string*

Cause: A synchronous I/O operation invoked on a disk has failed.

Action: Ensure that all of the disks are operational.

ORA-15081: failed to submit an I/O operation to a disk

Cause: Submission of an I/O operation to a disk has failed.

Action: Ensure that all of the disks are operational.

ORA-15082: ASM failed to communicate with client

Cause: There was a failure or time out when ASM tried to communicate with a connected RDBMS or Oracle ASM Dynamic Volume Manager (Oracle ADVM) client.

Action: Check the accompanying error messages and alert logs for more information on the reason for the failure. Check system specific logs (/var/log/messages on Linux, Event Log on Windows) for Oracle ADVM messages.

ORA-15083: Time-out during communication with ASMB background process

Cause: The database instance failed to communicate with the ASMB background process.

Action: Check the alert log and trace files for more information on a possible reason for the failure. If assistance is needed, contact Oracle Support Services.

ORA-15084: Oracle ASM disk "*string*" is offline and cannot be dropped.

Cause: An attempt was made to drop a disk that was offline.

Action: Check the Oracle Automatic Storage Management (Oracle ASM) disk name as specified in the command. Or, if needed, use the DROP DISK FORCE option.

ORA-15085: disk "*string*" has inconsistent sector size (expected *string*, actual *string*) with disk group "*string*"

Cause: An attempt to mount a disk group failed because a disk reported an inconsistent sector size value.

Action: Use disks with a sector size consistent with disk group sector size, or ensure that the operating system can accurately report the disk sector size.

ORA-15086: Diskgroup sector size must be specified.

Cause: The `_disk_sector_size_override` parameter was used but the sector disk value was not specified in the command.

Action: Specify the sector size value, or do not set (or do not set to TRUE) the `_disk_sector_size_override` parameter.

ORA-15087: disk '*string*' is formatted as an ext2/ext3 or OCFS2 file system.

Cause: A signature was found on the specified disk indicating that it is in use by an existing ext2/ext3 or OCFS2 file system.

Action: Adjust discovery string and device permissions to exclude previously formatted disks from discovery.

ORA-15088: diskgroup creation incomplete

Cause: A previous failure during diskgroup creation left the diskgroup in an inconsistent state.

Action: Issue DROP DISKGROUP ... FORCE INCLUDING CONTENTS to clean up the failed creation, then re-create the diskgroup.

ORA-15090: handle *string* is not a valid descriptor

Cause: The file handle was not valid in this session.

Action: Submit a handle obtained from a successful call to DBMS_DISKGROUP.OPEN().

ORA-15091: operation incompatible with open handle in this session

Cause: The current session contained an open handle from the DBMS_DISKGROUP PL/SQL package which precluded performing the command.

Action: Execute the command in a different session.

ORA-15092: I/O request size *string* is not a multiple of logical block size *string*

Cause: The length of the request was not a multiple of logical block size.

Action: Correct the error and retry the operation.

ORA-15093: buffer only contains *string* bytes, I/O requested is *string* bytes

Cause: The buffer supplied for write was too small to satisfy the request.

Action: Correct the error and retry the operation.

ORA-15094: attempted to write to file opened in read only mode

Cause: The file handle passed to DBMS_DISKGROUP.WRITE() did not have write privileges.

Action: Obtain a file handle in read-write mode and retry the write operation.

ORA-15095: reached maximum ASM file size (*string* GB) for this disk group\n

Cause: An ASM file creation or file resize operation exceeded the maximum file size permitted by ASM for this disk group.

Action: Use smaller files. Alternatively, set the disk group attribute compatible.rdbms >= 11.1 if not set already.

ORA-15096: lost disk write detected

Cause: A failure either by disk hardware or disk software caused a disk write to be lost, even though ASM received acknowledgement that the write completed. Alternatively, a clustering hardware failure or a clustering software failure resulted in an ASM instance believing that another ASM instance had crashed, when in fact it was still active.

Action: The disk group is corrupt and cannot be recovered. The disk group must be recreated, and its contents restored from backups.

ORA-15097: cannot SHUTDOWN ASM instance with connected client (process *string*)

Cause: A SHUTDOWN command was issued to an ASM instance that had one or more connected clients.

Action: Stop all clients that are using this ASM instance and retry the SHUTDOWN command. Alternatively, use the SHUTDOWN ABORT command. Note that issuing the SHUTDOWN ABORT command to an ASM instance results in abnormal termination of all RDBMS instances connected to that ASM instance. One of the active clients has been listed in the error message. Query the V\$ASM_CLIENT fixed view in an ASM instance or use ASMCMD LSCT to list all active clients.

ORA-15098: file type not recognized by ASM instance

Cause: An attempt was made by DB instance to create a file for a file type that is not recognized by current version of ASM instance.

Action: Upgrade ASM to higher version that recognizes this file type.

ORA-15099: disk '*string*' is larger than maximum size of *string* MBs

Cause: The specified size of the disk was too big to allow the disk to become part of the diskgroup.

Action: Specify a smaller disk size than the maximum allowed size. Alternatively, set the compatible.rdbms attribute of the disk group to a value greater than or equal to 12.1 to allow for larger disk sizes.

ORA-15100: invalid or missing disk group name

Cause: The command did not specify a valid disk group name. Disk group names should start with a letter, and can only contain alphanumeric characters and the underscore character.

Action: Specify a valid disk group name.

ORA-15101: no action specified

Cause: The ALTER DISKGROUP command did not specify any alterations.

Action: Specify at least one operation clause.

ORA-15102: invalid POWER expression

Cause: The syntax of the POWER expression was invalid.

Action: Specify a valid POWER expression.

ORA-15103: conflicting or duplicate REPAIR options

Cause: The command specified conflicting or duplicate REPAIR keywords.

Action: Specify only one REPAIR action.

ORA-15104: conflicting CONTENTS options

Cause: The command specified conflicting or duplicate INCLUDING CONTENTS or EXCLUDING CONTENTS options.

Action: Specify only one option.

ORA-15105: missing or invalid FAILGROUP name

Cause: The command did not specify a valid failure group name.

Action: Specify a valid failure group name.

ORA-15106: missing or invalid operating system disk locator string

Cause: The command did not specify a valid operating system path for the device as a string.

Action: Specify a valid operating system path for the device.

ORA-15107: missing or invalid ASM disk name

Cause: The command did not specify a valid ASM disk name identifier.

Action: Specify a valid ASM disk name identifier.

ORA-15108: missing or invalid template name

Cause: The command did not specify a valid template name identifier.

Action: Specify a valid template name identifier.

ORA-15109: conflicting protection attributes specified

Cause: The command contained an invalid combination of the UNPROTECTED, MIRROR, or PARITY keywords.

Action: Specify only one keyword.

ORA-15110: no diskgroups mounted

Cause: No diskgroups were specified in the ASM_DISKGROUPS parameter, so instance startup or the ALTER DISKGROUP ALL MOUNT command did not mount any diskgroups.

Action: Specify valid diskgroups in the ASM_DISKGROUPS parameter or ignore the error.

ORA-15111: conflicting or duplicate STRIPE options

Cause: The command contained both a FINE and COARSE keyword, or contained the FINE keyword more than once, or contained the COARSE keyword more than once.

Action: Specify only one keyword.

ORA-15112: no diskgroups currently mounted

Cause: An ALTER DISKGROUP ALL command did not find any mounted diskgroups upon which to operate. Either instance shutdown or an ALTER DISKGROUP ALL DISMOUNT command did not dismount any diskgroups, or an ALTER DISKGROUP ALL UNDROP DISKS command did not undrop any disks.

Action: Mount the diskgroups on which you wish to operate or ignore the error.

ORA-15113: alias name '*string*' refers to a directory

Cause: The name specified referred to a directory in the alias directory and not a valid alias entry.

Action: Check the alias name and retry.

ORA-15114: missing or invalid ASM file name

Cause: The command did not specify a valid ASM file name identifier.

Action: Specify a valid ASM file name identifier.

ORA-15115: missing or invalid ASM disk size specifier

Cause: The command did not specify a valid ASM disk size.

Action: Specify a valid ASM disk size.

ORA-15116: invalid combination of ALTER DISKGROUP options

Cause: The ALTER DISKGROUP options may not be combined in this manner.

Action: Issue separate ALTER DISKGROUP commands to accomplish the desired action.

ORA-15117: command only operates on one diskgroup

Cause: An ALTER DISKGROUP, CREATE DISKGROUP, or DROP DISKGROUP command specified a list of diskgroups or the keyword ALL in a context where only a single diskgroup was permitted.

Action: Issue separate ALTER DISKGROUP, CREATE DISKGROUP, or DROP DISKGROUP commands to accomplish the desired action.

ORA-15118: Oracle ASM disk group *string* was forcibly dismounted.

Cause: The Oracle Automatic Storage Management (Oracle ASM) disk group to which the I/O request was issued was forcibly dismounted (with the ALTER DISKGROUP DISMOUNT FORCE statement) so that it could not be accessed.

Action: Mount the disk group using the ALTER DISKGROUP MOUNT statement to allow access to the disk group again.

ORA-15119: too many disk groups (*string*); maximum allowed *string*

Cause: An attempt was made to mount more than the maximum allowed number of disk groups.

Action: Do not attempt to mount more than the maximum allowed number of disk groups. Check ASM instance parameters.

ORA-15120: Oracle ASM file name '*string*' does not begin with the Oracle ASM prefix character

Cause: An Oracle Automatic Storage Management (Oracle ASM) file name was specified that did not begin with the Oracle ASM prefix character (currently '+'). Oracle ASM uses the prefix to determine that a file specification is in fact an Oracle ASM file.

Action: Correct the file name specification.

ORA-15121: Oracle ASM file name '*string*' contains an invalid disk group name.

Cause: A file name was specified that did not contain a valid disk group name. The disk group name follows immediately after the Oracle Automatic Storage Management (Oracle ASM) prefix character. It must start with an alphabetic character and consist of up to 30 characters which are alphabetic, numeric, or the characters '\$' and '_'.

Action: Correct the file name specification.

ORA-15122: Oracle ASM file name '*string*' contains an invalid file number

Cause: A numeric file name was specified that did not contain a valid Oracle Automatic Storage Management (Oracle ASM) file number. The Oracle ASM file number followed immediately after the disk group name. It must be preceded by a '.' character and contain only numeric characters.

Action: Correct the file name specification.

ORA-15123: Oracle ASM file name '*string*' contains an invalid incarnation number

Cause: A numeric file name was specified that did not contain a valid Oracle Automatic Storage Management (Oracle ASM) incarnation number. The Oracle ASM incarnation number followed immediately after the Oracle ASM file number. It must be preceded by a '.' character and contain only numeric characters.

Action: Correct the file name specification.

ORA-15124: ASM file name '*string*' contains an invalid alias name

Cause: A file name was specified which did not contain a valid ASM alias name. The ASM alias name, if present, follows immediately after the diskgroup name, in place of the ASM file number. It must be preceded by a slash, start with an alphabetic character, and consist of up to 48 characters which are alphabetic, numeric, or the characters '\$', '_', '-', or '#'. A space can separate two parts of an alias name.

Action: Correct the file name specification.

ORA-15125: Oracle ASM file name '*string*' contains an invalid template name

Cause: A file name was specified to Oracle Automatic Storage Management (Oracle ASM) that did not contain a valid template name. The template name, if present, follows immediately after the Oracle ASM incarnation number or the Oracle ASM alias name, if such is used in place of the Oracle ASM file number. It must be enclosed in parenthesis, start with an alphabetic character, and consist of up to 30 characters that are alphabetic, numeric, or the characters '\$' and '_'.

Action: Correct the file name specification.

ORA-15126: component in Oracle ASM file name '*string*' exceeds maximum length

Cause: The disk group name, template name, or alias name fields in the Oracle Automatic Storage Management (Oracle ASM) file name exceeded the maximum identifier length of 48 characters.

Action: Correct the file name specification.

ORA-15127: Oracle ASM file name '*string*' cannot use templates.

Cause: A fully qualified Oracle Automatic Storage Management (Oracle ASM) file name was specified. This specification did not permit the inclusion of a template name in the Oracle ASM file name.

Action: Correct the file name specification.

ORA-15128: Oracle ASM file name '*string*' exceeds maximum length *string*.

Cause: The maximum Oracle Automatic Storage Management (Oracle ASM) file name length of 256 characters was exceeded for the combination of disk group name, file number, template name, alias name, plus punctuation within the Oracle ASM file name.

Action: Correct the file name specification.

ORA-15129: entry '*string*' does not refer to a valid directory

Cause: The entry indicated did not refer to a directory. Attempt was made to access the contents of this directory.

Action: Correct the error and try again.

ORA-15130: diskgroup "*string*" is being dismantled

Cause: The diskgroup is being dismantled by request or because an I/O error was encountered that could not be handled by taking the disks offline. A disk cannot be offlined whenever doing so could result in all copies of a redundant extent being unavailable.

Action: Repair the hardware problem and re-mount the diskgroup. Refer to the alert log to determine which disks have failed.

ORA-15131: block *string* of file *string* in diskgroup *string* could not be read

Cause: A block could not be read because the disk containing the block is either offline or an I/O error occurred while reading the block. If this is mirrored file, then all disks that contain a copy of the block are either offline or received errors.

Action: Repair the affected disk and bring it back online. Refer to accompanying error messages to determine which disk has failed.

ORA-15132: block *string* of file *string* in diskgroup *string* could not be written

Cause: A block could not be written because the disk containing the block is either offline or an I/O error occurred while writing the block. If this is mirrored file, then insufficient disks which contain a copy of the block are either offline or received errors.

Action: Repair the affected disk and bring it back online. Refer to accompanying error messages to determine which disk has failed.

ORA-15133: instance recovery required for diskgroup *string*

Cause: An instance in the cluster crashed making instance recovery necessary.

Action: None. This error should not normally be seen by an ASM client. ASM will trap this error and retry the operation after doing instance recovery automatically.

ORA-15134: mirror resilvering not supported for *string*

Cause: The specified device requires oracle to take mirror resilvering responsibility. ASM does not resilver logical volume manager (lvm) based mirrors.

Action: Disable lvm-based mirroring or set the parameter `_asm_allow_lvm_resilvering` to TRUE. One might experience performance degradation when lvm-based resilvering is enabled with ASM.

ORA-15135: The *string* cluster is not in rolling patch state. The patch level [*string*] of instance *string* is not the same as the current cluster patch level [*string*].

Cause: During startup, this instance found one or more other instances running at a different patch level, and the cluster was not in rolling patch state. Startup of this instance failed.

Action: The patch level of this instance differs from the cluster patch level. If the intention is to patch the cluster using the rolling option, then set the cluster in rolling patch state using the 'crsctl start rollingpatch' command from an active node, and restart Oracle Clusterware on this node. If the intention is to patch the cluster in a non-rolling manner, and the patch has been applied on the local node, then stop all of the active nodes in the cluster that have a patch level that does not match the patch level of the current node. Use the 'crsctl query crs softwarepatch *host*' command to retrieve the configured patch level of a node. If the intention is to patch the cluster in a non-rolling manner, and the patch has not been applied on the local node, then apply the requisite patch, and restart Oracle Clusterware on this node. Patches applied on a node can be obtained by issuing the the 'crsctl query crs releasepatch' command.

ORA-15136: cluster in rolling patch from patch level [*string*] to [*string*]

Cause: The current patch level of the instance was incompatible with the rolling patch operation of the cluster.

Action: The patch level of the new member instance must be one of the two patch levels involved in the rolling patch operation.

ORA-15137: The *string* cluster is in rolling patch state.

Cause: The cluster was already in the middle of rolling patch.

Action: Rolling patch needs to be stopped before attempting to start again.

ORA-15138: cluster rolling patch incomplete

Cause: The cluster was still performing rolling patch.

Action: Ensure that all of the instances in the cluster are patched before retrying the command.

ORA-15139: patch level of *string* instances differ in cluster

Cause: Not all of the instances in the cluster had the same set of patches.

Action: Ensure that all of the instances in the cluster have the same patches before retrying the command. Find the configured patch level on a node using the 'crsctl query crs softwarepatch' command.

ORA-15140: rolling patch prevented by *string*

Cause: One or more instances were blocking the rolling patch.

Action: Terminate or wait until the reported operation is complete before attempting the rolling patch to the cluster.

ORA-15141: The *string* cluster is not in either rolling upgrade or rolling patch state.

Cause: The ALTER SYSTEM STOP ROLLING MIGRATION or ALTER SYSTEM STOP ROLLING PATCH command was executed when the cluster was not in either the rolling upgrade or rolling patch state.

Action: The system has to be set to rolling upgrade or rolling patch state before attempting to execute the command.

ORA-15142: either MIGRATION or PATCH keyword expected

Cause: The keyword was missing.

Action: Supply the missing keyword.

ORA-15143: either APPLY or ROLLBACK keyword expected

Cause: The keyword was missing.

Action: Supply the missing keyword.

ORA-15144: disk '*string*' is about to fail

Cause: An attempt was made to ADD (or REPLACE) a failing disk to a disk group.

Action: Specify a different disk in the command. Note that not even the FORCE option can be used to add the disk to the disk group.

ORA-15145: ASM disk '*string*' is online and cannot be replaced.

Cause: The REPLACE DISK operation specified a disk which is online.

Action: Check to confirm that the ASM disk is offline. Online disks can be replaced while maintaining redundancy by issuing ADD and DROP disk commands in a single SQL statement.

ORA-15146: Rolling migration or patching operation failed

Cause: Operation failed due to temporary issue.

Action: Retry the command.

ORA-15147: failed to start the instance

Cause: The instance could not be started during rolling upgrade from ASM instance versions prior to 12.1.0.0.0

Action: Complete the rolling upgrade process and start the instance.

ORA-15148: Too many CRS users are created.

Cause: The number of CRS users has reached its limit of 999. The situation is unexpected.

Action: Check to see why so many CRS users are created.

ORA-15149: another ASM instance found running on the host

Cause: Another ASM instance found on the host. Only one ASM instance is supported on a host.

Action: Shut down the other instance before starting this ASM instance.

ORA-15150: instance lock mode '*string*' conflicts with other ASM instance(s)

Cause: Some other ASM instance used the lock name space in a conflicting mode.

Action: Shut down the other instance or start up in compatible mode. Alternatively, set the DB_UNIQUE_NAME initialization parameter to avoid the conflict.

ORA-15151: missing or invalid version number for rolling migration

Cause: The command did not specify a valid version number.

Action: Correct the version number in the command. It should be of the form v#.#.#.# or other forms with fewer numbers delimited by a period. The version number must be different from the current software version of the instance.

ORA-15152: The *string* cluster is in rolling upgrade state.

Cause: The cluster was already in the middle of rolling upgrade.

Action: Rolling upgrade needs to be stopped before attempting to start again.

ORA-15153: The *string* cluster is not in rolling upgrade state. The version [*string*] of instance *string* is not the same as the current cluster version [*string*].

Cause: During startup, this instance found one or more other instances running at a different version, and the cluster was not in rolling upgrade state. Startup of this instance failed.

Action: The version of this instance differs from the cluster version. If the intention is to upgrade the cluster using the rolling option, then set the cluster in rolling upgrade state using the 'crsctl start rollingupgrade' command from an active node, and restart Oracle Clusterware on this node. If the intention is to upgrade the cluster in a non-rolling manner, and the local node has already been upgraded, then stop all of the active nodes in the cluster that have an older version than the current node. Use the 'crsctl query crs softwareversion *host*' command to retrieve the configured version of a node. If the intention is to upgrade the cluster in a non-rolling manner, and the local node has not been upgraded yet, then upgrade the node by running the rootupgrade.sh script.

ORA-15154: cluster rolling upgrade incomplete

Cause: The cluster was still performing rolling upgrade.

Action: Ensure that all the instances in the cluster are upgraded before retrying the command.

ORA-15155: version incompatible with the cluster

Cause: The current software version of the instance was incompatible with the other members of the cluster.

Action: Ensure that all of the members of the cluster are at the same version. If you are attempting to perform a rolling upgrade, execute the ALTER SYSTEM START ROLLING statement. Ensure that the version being upgraded to is compatible with the existing version of the cluster.

ORA-15156: cluster in rolling upgrade from version [string] to [string]

Cause: The current software version of the instance was incompatible with the rolling upgrade operation of the cluster.

Action: The version number of new member instance must be one of the two versions involved in the rolling upgrade.

ORA-15157: rolling migration is not allowed

Cause: The cluster was not capable of handling ASM rolling migration.

Action: The Oracle Cluster Services is using vendor clusterware. Oracle cannot perform rolling upgrade or downgrade using vendor cluster ware. Restart ASM instances using Oracle cluster ware and retry the operation.

ORA-15158: rolling upgrade prevented by string

Cause: One or more instances were blocking the rolling upgrade.

Action: Terminate or wait until the reported operation is complete before attempting the rolling upgrade to the cluster.

ORA-15160: rolling migration internal fatal error in module string,string

Cause: Rolling migration experienced a fatal error.

Action: Please contact Oracle support services.

ORA-15161: invalid SYS_CLUSTER_PROPERTIES parameter

Cause: The parameter passed in for SYS_CLUSTER_PROPERTIES is invalid

Action: Pass in the correct parameter, refer to user documentation for a list of allowed parameter values.

ORA-15162: cluster in rolling downgrade

Cause: The cluster was already in the middle of rolling downgrade.

Action: Rolling downgrade needs to be stopped before attempting to start again.

ORA-15163: cluster is not in the rolling downgrade to string

Cause: The cluster was not in the rolling downgrade.

Action: Start the rolling downgrade using the ALTER SYSTEM START ROLLING MIGRATION command from another ASM instance and restart this instance.

ORA-15164: cluster rolling downgrade incomplete

Cause: The cluster was still performing rolling downgrade.

Action: Ensure that all the instances in the cluster are downgraded before retrying the command.

ORA-15165: rolling migration not allowed with the versions specified

Cause: One of the following requirements were not met: - The From version is not compatible. - The To version is less than or equal to the From version. - Neither the From nor the To version matches the current version. - The From version is less than 12.1.0.2.0.

Action: Ensure that the From and the To versions specified are legitimate.

ORA-15166: cluster in rolling downgrade from version [string] to [string]

Cause: The current software version of the instance was incompatible with the rolling downgrade operation of the cluster.

Action: The version number of new member instance must be one of the two versions involved in the rolling downgrade.

ORA-15167: command requires at least string failure groups; found only string

Cause: An attempt to convert disk group redundancy failed because of insufficient failure groups.

Action: Add enough failure groups to the disk group and then retry converting the disk group redundancy to flex.

ORA-15168: rolling downgrade prevented by string

Cause: One or more instances were blocking the rolling downgrade.

Action: Terminate or wait until the reported operation is complete before attempting the rolling downgrade to the cluster.

ORA-15169: destination 'string' is a subdirectory of 'string'

Cause: Attempt to rename directory failed because the new directory name was a subdirectory of the original directory.

Action: Correct the path of the destination and try again.

ORA-15170: cannot add entry 'string' in directory 'string'

Cause: Other errors prevented directory/alias creation.

Action: Correct the errors and try again.

ORA-15171: invalid syntax in the alias path after 'string'

Cause: An invalid alias/directory name syntax was specified.

Action: Correct the alias path and try again.

ORA-15173: entry 'string' does not exist in directory 'string'

Cause: The specified alias did not exist in the given directory.

Action: Correct the alias path and try again.

ORA-15174: unable to create alias name

Cause: An attempt to create an alias name for an ASM file failed.

Action: Check the alert logs and trace files of the Oracle ASM instance for more information on the failure, as well as checking the accompanying error messages.

ORA-15175: cannot create alias for diskgroup metadata file 'string'

Cause: An attempt was made to create an alias for a diskgroup metadata file.

Action: Correct the alias path and try again.

ORA-15176: file '*string*' already has an alias associated with it

Cause: An attempt was made to create an alias for a file that already had an existing alias.

Action: Correct the file name and try again or drop existing alias.

ORA-15177: cannot operate on system aliases

Cause: An attempt was made to modify a system alias.

Action: Correct the alias name and try again.

ORA-15178: directory '*string*' is not empty; cannot drop this directory

Cause: An attempt was made to drop a directory that contained valid entries.

Action: Correct the directory path or specify the FORCE option to drop a directory that is not empty.

ORA-15179: missing or invalid alias name

Cause: The command did not specify a valid alias identifier.

Action: Specify a valid alias identifier.

ORA-15180: could not open dynamic library *string*, error [*string*]

Cause: The library was not accessible

Action: Correct the permissions of the library and try again.

ORA-15181: symbol [*string*] not found in library *string*, error [*string*]

Cause: An error was encountered while loading the specified ASMLIB symbol.

Action: Correct the error reported and try again.

ORA-15182: ASMLIB [*string*] version mismatch, ORACLE version [*string*]

Cause: The ASMLIB version reported is not supported by the ORACLE binary.

Action: Install the correct library and try again.

ORA-15183: ASMLIB initialization error [*string*]

Cause: Unable to initialize the ASMLIB in ORACLE.

Action: Check the configuration of ASMLIB or deinstall ASMLIB if not used.

ORA-15184: ASMLIB error could not be determined [*string*] [*string*]

Cause: An error was encountered which cannot be diagnosed further.

Action: Contact ASMLIB library vendor for support.

ORA-15185: could not close dynamic library *string*, error [*string*]

Cause: Could not close the dynamic library.

Action: Contact ASMLIB library vendor for support.

ORA-15186: ASMLIB error function = [*string*], error = [*string*], mesg = [*string*]

Cause: An error occurred during a call to function listed in the error.

Action: The detailed message associated with the error is listed along with the error. Correct the error and try again or contact ASMLIB library vendor for support.

ORA-15187: Incompatible RDBMS operation [*string*] pushed to storage

Cause: RDBMS to storage version mismatched with incompatibility operation.

Action: Upgrade RDBMS to match storage version.

ORA-15188: process terminated due to an ASMLIB error

Cause: A process was terminated as a result of an ASMLIB error.

Action: See the alert log for more information. Reconnect to the database or the ASM instance. If the process termination resulted in instance termination, restart the instance.

ORA-15192: invalid ASM disk header [*string*] [*string*] [*string*] [*string*] [*string*]

Cause: ASM encountered an invalid disk header.

Action: Contact Oracle Support Services.

ORA-15196: invalid ASM block header [*string:string*] [*string*] [*string*] [*string*] [*string != string*]

Cause: ASM encountered an invalid metadata block.

Action: Contact Oracle Support Services.

ORA-15197: suppressing *string* additional ASM messages

Cause: The ASM command generated so many errors that this summary message was reported in place of many individual messages.

Action: If the command contained multiple actions, try separating each action into its own command and executing each command by itself. Otherwise, try not to generate so many errors.

ORA-15198: operation *string* not yet available in this version

Cause: An unimplemented operation was attempted.

Action: If this operation is required, then upgrade to a release where the operation is supported.

ORA-15200: initialization parameter *string* (*string*) is not a power of two

Cause: The value specified for this initialization parameter was not a power of two.

Action: Correct the initialization parameter value and restart the instance.

ORA-15201: disk *string* contains a valid RDBMS file or foreign volume

Cause: A disk specified in a CREATE DISKGROUP or ALTER DISKGROUP ... ADD DISK command appeared to contain a file from an existing database or a foreign volume. By default, as a safeguard against damaging an existing database or foreign volume, ASM does not allow a disk group to be created using this disk.

Action: Check that the ASM disk specification is correct. Otherwise, when storage from a defunct database or unmounted foreign volume is reused as part of an ASM disk group, specify the FORCE option to the ASM SQL command. See the alert log for more information.

ORA-15202: cannot create additional ASM internal change segment

Cause: The mount of a diskgroup by an additional instance in a RAC cluster required more space for internal use by ASM than was available in the diskgroup.

Action: Delete unused files from the diskgroup or add additional disks to the diskgroup and retry the operation.

ORA-15203: diskgroup *string* contains disks from an incompatible version of ASM

Cause: Diskgroup was created by an ASM instance with a higher compatibility setting.

Action: Use an ASM instance with the appropriate software version to mount the diskgroup.

ORA-15204: database version *string* is incompatible with diskgroup *string*

Cause: The COMPATIBLE parameter for the RDBMS instance is less than the value of the compatible.rdbms attribute for the disk group.

Action: Update the COMPATIBLE parameter for RDBMS instance to a version greater than or equal to compatible.rdbms version. The compatible attributes for diskgroups cannot be lowered.

ORA-15205: requested mirror side unavailable

Cause: The requested mirror side of a block is either unallocated or allocated on a disk that has been dropped from the diskgroup.

Action: Resubmit the request or try another mirror side.

ORA-15206: duplicate diskgroup *string* specified

Cause: A command specified the same diskgroup twice.

Action: Specify each diskgroup only once.

ORA-15210: conflicting or duplicate PERMISSION options

Cause: The PERMISSION clause contained the USER, GROUP, or OTHER keyword more than once.

Action: Specify each keyword, at most, once.

ORA-15211: conflicting or duplicate OWNERSHIP options

Cause: The OWNERSHIP clause contained either the OWNER or the GROUP keyword more than once.

Action: Specify each keyword, at most, once.

ORA-15212: missing or invalid OWNER or GROUP name

Cause: The command did not specify a valid name for either the OWNER or the GROUP keyword.

Action: Specify a valid name for either the OWNER or the GROUP keyword.

ORA-15213: command operates on only one attribute

Cause: More than one disk group attribute was specified in the ALTER DISKGROUP statement.

Action: Specify only one disk group attribute per ALTER DISKGROUP statement.

ORA-15214: missing or invalid attribute specification

Cause: The command did not specify a valid attribute name or a valid attribute value.

Action: Specify a valid attribute name and value pair.

ORA-15215: missing or invalid user name

Cause: The command did not specify a valid user name.

Action: Specify a valid user name.

ORA-15216: missing or invalid user group name

Cause: The command did not specify a valid user group name.

Action: Specify a valid user group name.

ORA-15217: missing or invalid timeout value after DROP AFTER

Cause: The command did not specify a valid timeout value after the DROP AFTER clause.

Action: Specify a valid timeout value after the DROP AFTER clause.

ORA-15218: timeout value exceeded range

Cause: The OFFLINE timeout value exceeded the range of 0-136 years, inclusive. 136 years are 49674 days, 1192176 hours, and 71530560 minutes.

Action: Specify a timeout value within the range of 0-136 years, inclusive.

ORA-15219: conflicting or duplicate disk region options

Cause: The command contained one or more of the following: - both the HOT and the COLD keywords - both the MIRRORHOT and the MIRRORCOLD keywords - the HOT keyword more than once - the COLD keyword more than once - the MIRRORHOT keyword more than once - the MIRRORCOLD keyword more than once

Action: Specify either the HOT or the COLD keyword and either the MIRRORHOT or the MIRRORCOLD keyword, at most, once.

ORA-15220: invalid file attribute specification

Cause: The keyword UNPROTECTED, MIRROR, HIGH, FINE, or COARSE was specified in a MODIFY FILE clause. These file attributes are immutable once a file is created.

Action: Specify a disk region keyword; for example, HOT, COLD, MIRRORHOT, or MIRRORCOLD.

ORA-15221: ASM operation requires compatible.asm of *string* or higher

Cause: The ASM operation specified requires a higher disk group attribute value for compatible.asm.

Action: Set the disk group attribute compatible.asm to or above the requested version.

ORA-15222: ASM disk "*string*" is offline and cannot be renamed.

Cause: An attempt was made to rename a disk that is offline.

Action: Check the ASM disk name as specified in the command.

ORA-15223: conflicting disk operations for *string*

Cause: An attempt was made to ADD and DROP the specified ASM disk in the same statement.

Action: Revise the statement to specify distinct ASM disks in the ADD disk and DROP disk clauses.

ORA-15224: disk "*string*" is already provisioned for ASM

Cause: An attempt was made to label a disk that is already provisioned for ASM.

Action: Check the ASM disk name as specified in the command.

ORA-15225: label name '*string*' is already in use

Cause: A LABEL SET command specified a label name that was already used by another ASM disk.

Action: Select a different name for the label.

ORA-15226: label name '*string*' is not used by ASM

Cause: A LABEL CLEAR command specified a label name that was not used by ASM.

Action: Select a different name for the label.

ORA-15227: could not perform label set/clear operation

Cause: An error occurred while setting/clearing the ASM label.

Action: Look at the underlying error(s) on the error stack. Check other messages in the trace files for more information.

ORA-15230: diskgroup '*string*' does not require the FORCE option

Cause: An attempt was made to MOUNT or DROP a disk group with the FORCE option.

Action: MOUNT and DROP diskgroup with the FORCE option are only permitted if the diskgroup cannot be mounted normally.

ORA-15231: Advancing disk group compatibility would exclude connected clients.

Cause: Disk group compatibility could not be advanced because connected clients were at a lower compatibility than the target value.

Action: Ensure that all connected clients are at the target compatibility level or higher.

ORA-15232: command requires all disks in diskgroup *string* to be online

Cause: Disk group compatibility could not be advanced because some disks are offline.

Action: Retry the command after offline disks are dropped.

ORA-15233: Cannot advance disk group compatibility due to [*string*].

Cause: Disk group compatibility could not be advanced because of errors.

Action: Check the alert log for more information on the reason for the error.

ORA-15234: Diskgroup COMPATIBLE.RDBMS parameter value (*string*) exceeds COMPATIBLE.ASM parameter value (*string*).

Cause: Attempted to advance the COMPATIBLE.RDBMS parameter value for the diskgroup beyond the COMPATIBLE.ASM parameter.

Action: Make sure the COMPATIBLE.ASM parameter setting is at the same or higher compared to the COMPATIBLE.RDBMS parameter for the diskgroup.

ORA-15235: diskgroup *string* mount mode conflicts with existing mount

Cause: The mode specified in the diskgroup mount command conflicted with the mode in which it was mounted on some other instance.

Action: Specify a compatible mode in the diskgroup mount command.

ORA-15236: diskgroup *string* mounted in restricted mode

Cause: The specified diskgroup was mounted in restricted mode prohibiting client access.

Action: Dismount the diskgroup and remount it in appropriate mode.

ORA-15237: invalid attribute *string* to CREATE DISKGROUP command

Cause: An invalid attribute was specified with the CREATE DISKGROUP command.

Action: Check the valid attributes for CREATE DISKGROUP command and specify a valid one.

ORA-15238: *string* is not a valid value for attribute *string*

Cause: The specified value was not valid for the attribute.

Action: Check the attribute name and value.

ORA-15239: allocation unit size higher than *string* requires RDBMS compatibility *string*

Cause: The allocation unit size requested exceeded the limit imposed by the RDBMS compatibility setting.

Action: Use a smaller allocation unit size or specify a higher RDBMS compatibility setting.

ORA-15240: attribute name *string* is invalid

Cause: The attribute name was not valid or was not recognized.

Action: Check the attribute name.

ORA-15241: attribute *string* is read only

Cause: The attribute value is read-only and cannot be changed.

Action: None. The attribute value cannot be changed.

ORA-15242: Could not set attribute *string*.

Cause: Attempts to set the specified attribute failed with an error.

Action: Examine the underlying error(s) on the error stack. If necessary, contact Oracle Support Services.

ORA-15243: *string* is not a valid version number

Cause: The given version number was invalid, or not valid in this context.

Action: Verify that the version number is valid and is appropriate for this command. Check for additional errors reported.

ORA-15244: new compatibility setting less than current [*string*]

Cause: The compatibility setting was invalid. The compatibility setting can only be advanced.

Action: Check the version number.

ORA-15245: ASM disk *string* is already online or being brought online.

Cause: An attempt was made to bring a disk online that was either already online or was being brought online.

Action: Change the ONLINE statement to exclude the disk.

ORA-15246: cannot bring ASM disk *string* both online and then offline in the same statement

Cause: An attempt was made to bring the specified disk both online and offline in the same statement.

Action: Revise the statement to either bring the disk online or take the disk offline.

ORA-15247: cannot specify both WAIT and NOWAIT options in the same statement

Cause: An attempt was made to specify both WAIT and NOWAIT options in the same statement.

Action: Revise the statement and include at most one option.

ORA-15248: ASM attributes feature not enabled

Cause: The ASM attributes feature was not enabled.

Action: Advance disk group ASM compatibility to version 11.1.0 or newer.

ORA-15249: could not locate ASM attribute *string*

Cause: The specified attribute could not be accessed.

Action: Check the attribute name and examine underlying error(s) on the error stack.

ORA-15250: insufficient diskgroup space for rebalance completion

Cause: The command attempted to reduce the available diskgroup space below the current space used.

Action: Consult V\$ASM_DISK to determine the space requirements for the diskgroup contents, and repeat the command after making the required storage available.

ORA-15251: only restricted mount is allowed in the ASM instance

Cause: The ASM instance was started in restricted mode, and an attempt was made to mount a diskgroup in non-restricted mode.

Action: Start the ASM instance in non-restricted mode and mount the diskgroup again, or mount the diskgroup in restricted mode.

ORA-15252: user name '*string*' does not exist in OS user dictionary

Cause: The specified user name was not a valid operating system user.

Action: Specify a valid operating system user.

ORA-15253: user group name '*string*' exceeds limit of *string* characters

Cause: The length of the specified user group name exceeded the maximum limit.

Action: Reduce the length of the user group name to a value within the limit.

ORA-15254: user group '*string*' already exists in disk group

Cause: The specified user group name was already defined in the disk group.

Action: Specify a different user group name.

ORA-15255: user group '*string*' does not exist in disk group '*string*'

Cause: The specified user group name did not exist in the disk group.

Action: Specify a valid user group name.

ORA-15256: user '*string*' is already a member of user group '*string*'

Cause: The user that was provided was already a member of the specified user group.

Action: Specify either an alternate user or an alternate user group.

ORA-15257: exceeded *string* number of members per user group

Cause: The maximum number of members per user group was exceeded.

Action: Delete existing members of the user group to create space.

ORA-15258: user group entry number must be between *string* and *string*, inclusive

Cause: The specified user group entry number was beyond the acceptable range.

Action: Specify a valid value for the user group entry number.

ORA-15259: user '*string*' is not a member of user group '*string*'

Cause: The specified user was not a member of the specified user group.

Action: Specify either an alternate user or an alternate user group.

ORA-15260: permission denied on ASM disk group

Cause: An attempt was made to perform an operation on an ASM disk group without the appropriate privileges.

Action: Ask the ASM administrator to perform the operation or grant the required privileges.

ORA-15261: user '*string*' already exists in disk group '*string*'

Cause: The specified UID already existed in the disk group.

Action: Specify a different UID.

ORA-15262: user '*string*' does not exist in disk group '*string*'

Cause: The specified UID did not exist in the disk group.

Action: Specify a user with a valid UID.

ORA-15263: user name '*string*' exceeds limit of *string* characters

Cause: The length of the specified user name exceeded the maximum limit.

Action: Reduce the length of the user name to a value within the limit.

ORA-15264: Operating system function returned error *string*

Cause: An operating system error occurred.

Action: Correct the operating system error and retry the operation.

ORA-15265: user identification number not in range of [*string*,*string*]

Cause: The operating system user identification number exceeded the maximum value.

Action: Change the user identification number to a value within the accepted range.

ORA-15266: user identification number '*string*' already in use

Cause: This user identification number was already in use internally by Oracle Automatic Storage Management (Oracle ASM).

Action: Choose a different user identification number and retry the operation.

ORA-15268: internal Oracle file *string* already exists.

Cause: File was already in existence.

Action: This is an internal error. Contact Oracle Support Services.

ORA-15269: group identification number not in range of [*string*,*string*]

Cause: The operating system group identification number exceeded the maximum value.

Action: Change the group identification number to a value within the accepted range.

ORA-15270: disk *string* is not a quorum disk

Cause: The specified disk was not a quorum disk.

Action: Retry the operation without the quorum attribute for the disk.

ORA-15271: failgroup *string* is a quorum failgroup

Cause: The specified failgroup was a quorum failgroup.

Action: Retry the operation with the quorum attribute for the failgroup.

ORA-15272: failgroup *string* is not a quorum failgroup

Cause: The specified failgroup was not a quorum failgroup.

Action: Retry the operation without the quorum attribute for the failgroup.

ORA-15273: Could not create the required number of voting files.

Cause: The required number of voting files could not be created. See accompanying messages for possible causes.

Action: See accompanying messages for possible actions.

ORA-15274: Not enough failgroups (*string*) to create voting files

Cause: The number of failgroups required for this redundancy were not present in the diskgroup to create voting files.

Action: Retry the operation after creating new failgroup(s).

ORA-15275: Not enough contiguous space (*string* AUs) in disk *string* to allocate a voting file

Cause: The specified disk did not have enough space to allocate a voting file on it.

Action: Ensure that there is at least 1 disk with the required space in atleast the required number of failgroups for the diskgroup.

ORA-15276: ASM diskgroup *string* has cluster voting files

Cause: An attempt was made to drop a diskgroup that contained cluster voting files.

Action: Move the cluster voting files out of the diskgroup and retry the operation.

ORA-15277: disk *string* is a quorum disk

Cause: The specified disk was a quorum disk.

Action: Retry the operation with the quorum attribute for the disk.

ORA-15278: External redundancy disk group requires at least one regular disk.

Cause: Attempted to create an external redundancy disk group with only quorum disks.

Action: Specify at least one regular disk to create an external redundancy disk group.

ORA-15279: user '*string*' is currently being deleted

Cause: The specified user was in the process of being deleted and could not be used.

Action: Either abandon this operation or specify a different user.

ORA-15280: user '*string*' owns existing files

Cause: An attempt was made to drop a user that still owns existing files.

Action: Specify the CASCADE option to drop the user and all of the owned files.

ORA-15281: not all specified disks were brought ONLINE

Cause: Some of the disks specified either experienced I/O errors while being brought ONLINE, or were simultaneously brought OFFLINE or dropped in another session, or were full.

Action: Query V\$ASM_DISK or use ASMCMD LSDSK to determine which disks were not brought ONLINE. Inspect any additional error messages and the alert log to determine the exact cause. If some of the disks failed, either fix the cause of the failures or drop the disks. If some of the disks are full, either free space in the disk group or add new disks to the diskgroup.

ORA-15282: Cluster Synchronization Services operation '*string*' failed with error '*string*'.

Cause: This is an internal error.

Action: Check the accompanying error messages. Contact Oracle Support Services.

ORA-15283: ASM operation requires compatible.rdbms of *string* or higher

Cause: The ASM operation specified requires a higher disk group attribute value for compatible.rdbms.

Action: Set the disk group attribute compatible.rdbms to or above the requested version.

ORA-15284: ASM terminated ALTER DISKGROUP ONLINE

Cause: None of the disks specified by ALTER DISKGROUP ONLINE could be brought ONLINE.

Action: Inspect additional error messages and the alert log to determine why the specified disks cannot be brought ONLINE.

ORA-15285: disk '*string*' violates disk group attribute *string*

Cause: Including the specified disk would violate a restriction imposed by the specified disk group attribute.

Action: Retry the operation while omitting the offending disk or change the attribute.

ORA-15286: could not set disk group attribute *string* due to offline disks

Cause: The specified disk group attribute could not be set because the disk group includes offline disks.

Action: Retry the operation after the offline disks in this disk group are dropped or brought online.

ORA-15287: could not set disk group attribute *string* due to incompatible disks

Cause: The specified disk group attribute could not be set because the disk group includes disks that conflict with the new value.

Action: Retry the operation after dropping the conflicting disks in this disk group.

ORA-15288: disk(s) require disk group attribute *string* clause

Cause: Some of the disks specified by the command also require the specified disk group attribute to be stated.

Action: Retry the command including an ATTRIBUTE clause for the required disk group attribute. Alternatively, omit the disks that require setting the disk group attribute. See the alert log for additional information on the disks that require setting the disk group attribute.

ORA-15289: disk *string* is limited to *string* MB on instance *string*

Cause: An ALTER DISKGROUP ADD DISK or RESIZE DISK command specified a disk with a size greater than the specified instance could use.

Action: Check the storage subsystem configuration on the specified node.

ORA-15290: operation not permitted on offline disk *string*

Cause: An attempt was made to specify an operation that is only permitted on disks that are online. The specified disk was not online.

Action: Online the disk or wait for online to complete before retrying the operation.

ORA-15291: ASM could not add disk "*string*" to disk group "*string*"

Cause: An attempt was made to add a disk to a disk group while the distribution of disks in failure groups was too uneven.

Action: Add or drop disks to or from failure groups to balance their distribution in all failure groups and retry the operation.

ORA-15292: Disk name *string* is being used by another disk

Cause: The specified disk name could not be reused because an 11.1.0.6.0 or earlier database instance had it cached in memory.

Action: Do one of the following - Specify a different name for the disk. - Wait for the rebalance to complete successfully. - Identify the database instance with the problem and shut it down before retrying the command.

ORA-15293: operation disallowed by ASM_POWER_LIMIT

Cause: This operation required data movement in order to complete successfully. However, ASM_POWER_LIMIT was set to zero, thereby preventing this operation.

Action: Repeat the operation after setting ASM_POWER_LIMIT to a non-zero value.

ORA-15294: SYSASM privilege not allowed on database instance

Cause: The SYSASM privilege was not allowed on this database instance; it is allowed only on an ASM instance.

Action: Use either the SYSDBA or the SYSOPER privilege.

ORA-15295: Oracle ASM instance software version *string* less than client version *string*

Cause: The Oracle ASM instance software version was less than the client version.

Action: Upgrade the Oracle ASM instance software or use a client version that matches the Oracle ASM version. Check the alert log for more information regarding the failure.

ORA-15298: possible lost disk write detected during crash recovery

Cause: ASM crash recovery read a block whose version was older than expected.

Action: None. End users will not see this error. ASM automatically traps this error and attempts a fallback recovery.

ORA-15299: FINE striping not allowed for the Staleness Registry

Cause: An SQL command attempted to set the striping attribute of the ASM_STALE template to FINE striping.

Action: Do not modify the striping attribute of the ASM_STALE template.

ORA-15300: File *string* is incompatible with this operation

Cause: The file type was incompatible with the operation.

Action: Use another file of the correct type.

ORA-15301: cannot change %0!s of the open file '%1!s'

Cause: A SET OWNERSHIP or SET PERMISSION command was attempted on an open file. These commands require the file to be closed.

Action: Close the file and then retry the operation.

ORA-15302: active use of files owned by user '*string*' precludes its drop

Cause: A DROP USER command specified a user owning files that were in use.

Action: Close all files owned by this user.

ORA-15303: Voting files could not be created in diskgroup *string* due to small Allocation Unit size

Cause: An attempt was made to create voting files in a diskgroup with a small Allocation Unit size.

Action: Create voting files in a different diskgroup whose Allocation Unit size is at least 1 mega byte.

ORA-15304: operation requires ACCESS_CONTROL.ENABLED attribute to be TRUE

Cause: An attempt was made to run an operation that required the ACCESS_CONTROL.ENABLED attribute to be set to TRUE, but its existing state was FALSE.

Action: Set the ACCESS_CONTROL.ENABLED attribute to TRUE and retry the operation.

ORA-15305: cannot update Oracle ASM internal files

Cause: An attempt was made to change Oracle Automatic Storage Management (Oracle ASM) metadata used to manage the disk group. This was not allowed.

Action: Check the specified Oracle ASM file name to ensure a file name with a file number greater than or equal to 256 is selected.

ORA-15306: ASM password file update failed on node *string*

Cause: A CREATE USER, ALTER USER, DROP USER, GRANT, or REVOKE command failed on the specified node of the Automatic Storage Management (ASM) cluster.

Action: Check the ASM alert logs for more information.

ORA-15307: disk *string* not discoverable by CSS; diskgroup *string* has CSS voting files

Cause: An attempt was made to add a disk which cannot be discovered by Cluster Synchronization Services (CSS). CSS has voting files in the disk group and will not be able to use the new disk if CSS cannot discover the disks.

Action: Update the Automatic Storage Management (ASM) disk string in the Grid Plug and Play (GPnP) profile to include the specified disk and retry the operation. Alternatively, migrate the CSS voting files out of the diskgroup and retry the operation

ORA-15308: could not access ASM SPFILE in RDBMS instance

Cause: A relational database management system (RDBMS) instance attempted to access an Automatic Storage Management (ASM) SPFILE.

Action: Connect to an ASM instance and reissue the command. Alternatively, specify an RDBMS SPFILE.

ORA-15309: could not access database SPFILE in ASM instance

Cause: An Automatic Storage Management (ASM) instance attempted to access a relational database management system (RDBMS) SPFILE.

Action: Connect to an RDBMS instance and reissue the command. Alternatively, specify an ASM SPFILE.

ORA-15310: process terminated due to signal

Cause: A process was terminated as a result of a signal in the I/O path.

Action: Reconnect to the database or the ASM instance. If the process termination resulted in instance termination, restart the instance.

ORA-15311: process terminated due to fenced I/O

Cause: A process was terminated because it was fenced from doing any more I/Os.

Action: Reconnect to the database or the ASM instance. If the process termination resulted in instance termination, restart the instance.

ORA-15312: invalid file type

Cause: Automatic Storage Management (ASM) could not determine the type of file.

Action: The file specified is not supported with Automatic Storage Management (ASM). Specify a supported file type for the operation.

ORA-15313: Oracle ASM disk *string* cannot be resized under *string M*

Cause: An Oracle ASM disk resize command specified a size that was less than the size required to support the voting file present on the disk.

Action: Increase the size specified for the disk.

ORA-15315: Write errors in disk group *string* could lead to inconsistent ASM metadata.

Cause: One or more failures occurred while writing ASM metadata to disk.

Action: Repair the hardware problem and remount the disk group. Check the accompanying errors and alert log for the disks which reported the error.

ORA-15316: Previous client instance *string* has not fully exited.

Cause: A process from a prior instantiation of this client was not fenced.

Action: Ensure that all processes belonging to the client instance have exited. Check the client alert log and the trace file of the process that terminated the instance.

ORA-15317: user identification number '*string*' does not exist in operating system user dictionary

Cause: The specified user identification number did not belong to a valid operating system user.

Action: Specify a valid operating system user.

ORA-15318: disks in disk group *string* cannot be resized

Cause: Execution of ASM Storage Reclamation Utility script was incomplete on the specified disk group.

Action: Execute ASM Storage Reclamation utility on the disk group to complete the operation.

ORA-15319: ownership assignment of files to user '*string*' precludes its drop

Cause: A DROP USER command specified a user currently being assigned as the owner of one or more files with a SET OWNERSHIP command.

Action: Wait for the SET OWNERSHIP command to complete and then retry the DROP USER command

ORA-15320: cannot drop user '*string*' that has been assigned as the owner of one or more open files

Cause: A SET OWNERSHIP command assigned this user as the owner of one or more files which were open at the time of assignment, and hence this user cannot be dropped due to possible inconsistencies in file ownerships.

Action: Restart all ASM client instances of the cluster in a rolling manner.

ORA-15321: cannot set attribute with connected clients

Cause: The disk group attribute could not be set because there were connected clients.

Action: Shut down connected clients and retry the command. Query the V\$ASM_CLIENT fixed view in an ASM instance or use ASMCMD LSOFF to list active clients.

ORA-15322: cannot drop the owner '*string*' of user group '*string*' in disk group '*string*'

Cause: An attempt was made to drop the owner of a user group from the group's member list.

Action: Specify a user group member who is not the owner of the user group.

ORA-15323: ASM password update has failed on local node

Cause: A CREATE USER, ALTER USER, DROP USER, GRANT, or REVOKE command failed on the local node of the Automatic Storage Management (ASM) cluster.

Action: Check the ASM alert logs for more information.

ORA-15324: Requested operation is not allowed on password file *string*.

Cause: Attempted to run an unsupported operation on password files.

Action: Specify a new file name or a file with the correct file type, and retry the operation.

ORA-15325: File *string* is not a valid password file.

Cause: An attempt was made to open a file that had a type different from the password file.

Action: Specify a valid password file name and retry the operation.

ORA-15326: specified input *string* is not an ASM file

Cause: The attributes could not be obtained because the specified input was either a disk group or a directory.

Action: Specify a valid Automatic Storage Management (ASM) file name.

ORA-15327: remote ASM is not enabled

Cause: An operation was requested that requires remote ASM to be enabled.

Action: Enable remote ASM.

ORA-15328: user identification string '*string*' exceeds limit of *string* characters

Cause: The user identification string provided for this operation exceeded the maximum number of characters allowed.

Action: Provide a user identification string of shorter length.

ORA-15329: cluster identification string '*string*' exceeds limit of *string* characters

Cause: The cluster identification string provided for this operation exceeded the maximum number of characters allowed.

Action: Provide a cluster identification string of shorter length.

ORA-15330: ASM user name format requires COMPATIBLE.ASM of *string* or higher

Cause: The ASM user name format specified requires a higher disk group attribute value for COMPATIBLE.ASM.

Action: Set the disk group attribute COMPATIBLE.ASM to or above the requested version.

ORA-15331: Oracle ASM proxy instance ORACLE_SID *string* does not start with *string*.

Cause: The Oracle ASM proxy instance was started with an invalid ORACLE_SID prefix.

Action: Start the Oracle ASM proxy instance with an ORACLE_SID that begins with the correct prefix.

ORA-15332: ASM proxy instance cannot connect to an ASM server

Cause: The ASM proxy instance could not find an ASM server to connect to during startup.

Action: Verify that an ASM server instance is running and accessible in the cluster and restart the proxy instance.

ORA-15333: disk is not available on all client instances

Cause: An ALTER DISKGROUP ADD DISK statement specified a disk that could not be discovered by all client instances.

Action: Check the Oracle ASM and client alert logs for more information. Check operating system permissions for the device and the storage subsystem configuration on all instances.

ORA-15334: volume background process terminated with error

Cause: A volume background process terminated with an error.

Action: Restart the Oracle Automatic Storage Management (Oracle ASM) instance where the issue occurred. If the issue persists, contact Oracle Support Services.

ORA-15335: ASM metadata corruption detected in disk group '*string*'

Cause: A corruption was detected reading a block. It may be recoverable.

Action: The corruption could be the result of a storage problem, a configuration issue, or a software bug. Check the alert log for the result of the recovery attempt. If unsuccessful, contact Oracle Support Services with the incident information.

ORA-15336: STRIPE_WIDTH cannot be set when STRIPE_COLUMNS equals 1

Cause: An ADD VOLUME command specified a value of 1 in STRIPE_COLUMNS and specified the STRIPE_WIDTH argument.

Action: If striping is required, then set STRIPE_COLUMNS to a value greater than 1. If striping is not required, then do not set STRIPE_WIDTH.

ORA-15337: invalid or missing database name

Cause: You did not specify a valid database name for this command.

Action: Specify a valid database name.

ORA-15338: Oracle ASM client instance *string* reconnection refused

Cause: The client was not an orphaned client and is not a legitimate candidate to reconnect to Oracle ASM.

Action: Shut down and restart the remote client so that it is considered a new client in the cluster.

ORA-15339: client instance *string* has been fenced by Oracle ASM

Cause: Oracle ASM had already fenced this client.

Action: Shutdown and restart the remote client instance to be registered as a new client in the cluster.

ORA-15340: unable to create member cluster '*string*'

Cause: Creation of the member cluster failed.

Action: Check the alert logs and trace files of the Oracle ASM instance for more information on the reason for the failure, as well as checking the accompanying error messages.

ORA-15341: unable to delete member cluster '*string*'

Cause: Deletion of the member cluster failed.

Action: Check the alert logs and trace files of the Oracle ASM instance for more information on the reason for the failure, as well as checking the accompanying error messages.

ORA-15343: Feature *string* ASM is not enabled

Cause: An operation was requested that requires Oracle Flex ASM to be enabled.

Action: Enable Oracle Flex ASM.

ORA-15344: client *string* not found

Cause: The specified Oracle Automatic Storage Management (ASM) client was not registered with this instance.

Action: Check the Oracle ASM instance alert log, the client alert log and trace files, and any accompanying error messages for more information on the reason for the failure.

ORA-15345: disconnected client instance(s) detected

Cause: One or more ASM client instances were not connected to an ASM instance.

Action: Check that all of the ASM client instances are connected to an ASM instance and retry the operation.

ORA-15346: Process attempting to identify or create the Automatic Storage Management (ASM) file *string* was aborted.

Cause: The client process attempting to create or open the ASM file was terminated or interrupted.

Action: Use the alert log to identify any issues encountered. Correct the cause of the issue and retry. If the issue persists, contact Oracle Support.

ORA-15347: The logical block size %0!s of Automatic Storage Management (ASM) file '%1!s' is too small for disk group sector size %2!s.

Cause: Attempted to create a file on Oracle ASM whose logical block size was less than the sector size of the disk group.

Action: Check if the system configuration has changed. Correct the error and retry.

ORA-15348: ASMLIB misconfiguration error [*string*]

Cause: ASMLIB was found in more than one location.

Action: Check the configuration of ASMLIB and ensure that only one library is configured.

ORA-15349: failed to set or get AFD_DISKSTRING parameter

Cause: The operation failed because either Oracle Local Repository (OLR) was not available or AFD disk string attribute did not exist.

Action: Check that Oracle Clusterware is properly configured using 'ocrcheck -local' command.

ORA-15350: invalid SYS_ASMFD_PROPERTIES parameter

Cause: The parameter passed in for SYS_ASMFD_PROPERTIES was invalid.

Action: Pass in the correct parameter. Refer to the product documentation for a list of allowed parameter values.

ORA-15351: I/O request issued to a sparse grid disk failed because the disk was out of space.

Cause: The sparse grid disk was out of space.

Action: Add more space to the disk group by adding more disks or add more space to existing disks by resizing them.

ORA-15352: invalid client name *string* specified

Cause: The client name passed in was invalid.

Action: Pass in a valid client name. The valid client name is of format *instance name:dbunique name:cluster name* or *instance name:dbunique name*

ORA-15353: disk '*string*' cannot be added to disk group '*string*'

Cause: The disk type did not match the disk group sparse type.

Action: Ensure that the disk type matches the disk group sparse type.

ORA-15354: failed to format grid disk "*string*"

Cause: The grid disk format command failed.

Action: Check the grid disk logs and take corrective actions.

ORA-15357: File "*string*" can not be created on a sparse disk group.

Cause: An attempt was made to create a fine-grained striping file on a sparse disk group. Fine-grained striping files cannot be created on sparse disk groups.

Action: Create the file on a regular disk group, or create a coarse-grained striping file on a sparse disk group.

ORA-15358: query for materialized space to sparse grid disk "*string*" of disk group "*string*" has failed

Cause: The query for materialized space to the cell server has failed.

Action: Check the ASM and cell alert logs and take corrective actions.

ORA-15359: could not perform label scan operation

Cause: An error occurred while scanning for ASM label.

Action: Look at the underlying errors on the error stack. Check other messages in the trace files for more information.

ORA-15360: could not perform label filter operation

Cause: An error occurred while setting AFD filter status.

Action: Look at the underlying errors on the error stack. Check other messages in the trace files for more information.

ORA-15361: unable to find member cluster '*string*'

Cause: Looking up of the member cluster failed.

Action: Execute the 'asmcmd lsc' command to list all of the configured member clusters. If the member cluster listed in the message is not present, it might have been forcibly deleted. Refer to the product documentation for more information. If the member cluster listed in the message was present, contact Oracle Support Services.

ORA-15362: invalid cluster name '*string*' specified

Cause: An invalid cluster name was supplied.

Action: Specify a cluster name which is at least one character but no more than 15 characters in length. The cluster name must be alphanumeric, it cannot begin with a numeric character, and it may contain hyphen (-) characters. However, it cannot end with a hyphen (-) character.

ORA-15363: invalid version number '*string*' specified

Cause: The command did not specify a valid version number.

Action: Correct the version number in the command. It should be of the form *###.###* or other forms with fewer numbers delimited by a period.

ORA-15364: member cluster version *string* is incompatible with storage server version *string*

Cause: The specified member cluster version was not supported by the Storage Server.

Action: Upgrade or downgrade the storage server to a version that is compatible with member cluster and retry the operation. Install a member cluster using a supported version. Refer to product documentation for a complete list of supported releases.

ORA-15365: member cluster '*string*' already configured

Cause: The specified member cluster was already configured.

Action: Execute the 'asmcmd lsc' command to list all of the configured member clusters. Reexecute the command with a member cluster name that has not already been configured.

ORA-15366: unable to delete configuration for member cluster '*string*' because the directory '*string*' was not empty

Cause: Deleting the member cluster configuration failed because some files were present.

Action: Deinstall the member cluster and rerun the command. If the command fails again, execute the 'asmcmd rmcc <member_cluster_name> -f' command to force deletion of the configuration for the member cluster.

ORA-15367: member cluster '*string*' not configured

Cause: The specified member cluster was not configured.

Action: Execute the 'asmcmd lsc' command to list all of the configured member clusters. Reexecute the command with a member cluster name that is configured.

ORA-15368: Oracle Cluster Registry operation failed with error *string*.\n*string*

Cause: This is an internal error.

Action: Contact Oracle Support Services.

ORA-15369: Oracle Call Interface (OCI) call returned invalid handle *string*.

Cause: An Oracle Call Interface (OCI) call returned the OCI_INVALID_HANDLE return code and did not store the error on the stack.

Action: Check the alert log and trace file for more information on this failure. Solve any issues and retry the operation. If the issue persists, contact Oracle Support Services.

ORA-15370: database version needs to be 12.1 or higher to access a disk group number higher than 63

Cause: An attempt was made to access a disk group number greater than 63 with a database version lower than 12.1.

Action: Upgrade the database to version 12.1 or higher and retry the operation.

ORA-15371: The command is not supported on a member cluster.

Cause: An attempt was made to run a command that is not supported on a member cluster.

Action: Rerun the command on the storage server.

ORA-15372: Client version *string* not supported by the Oracle ASM instance.

Cause: The software version of the client instance was not supported by the release of the Oracle ASM instance.

Action: Upgrade the client instance to a later release that is compatible with the Oracle ASM instance and retry the operation. Refer to product documentation for a complete list of supported releases.

ORA-15373: SYSDBG, SYSKM, SYSRAC, and SYSBACKUP administrative privileges cannot be granted on an ASM instance.

Cause: An attempt was made to grant or revoke SYSDBG, SYSKM, SYSRAC, or SYSBACKUP administrative privileges to a user on an ASM instance.

Action: Do not attempt to grant SYSDBG, SYSKM, SYSRAC, or SYSBACKUP administrative privileges on an ASM instance.

ORA-15374: invalid cluster configuration

Cause: The client instance detected an invalid configuration.

Action: Install and configure Oracle Grid Infrastructure and retry the operation. Refer to product documentation for more information.

ORA-15375: Physical sector size (*string*) cannot be smaller than the logical sector size (*string*).

Cause: An attempt was made to create or modify a disk group with a physical sector size value smaller than its logical sector size value.

Action: Review the SQL statement and fix any discrepancies.

ORA-15376: The existence of native disk '*string*' does not allow disk group *string* from changing sector sizes. Sector size of native disk is *string*.

Cause: An attempt was made to change the physical or logical sector size value. Changing the sector size value is not allowed when there are native disks (physical sector equal to logical sector size) in the disk group, because this could cause invalid I/O operations.

Action: Drop the native disks or replace them for disks that support sector size emulation.

ORA-15377: Block size (*string*) for file '*string*' is incompatible with the selected sector size (*string*).

Cause: The operation could not be completed because the sector size was incompatible for the specified file.

Action: Re-create or migrate the file to a block size that is compatible with the desired sector size, and redo the operation.

ORA-15378: Grid Naming Service operation failed with error *string*.\n*string*

Cause: This is an internal error.

Action: Check the accompanying error messages. Contact Oracle Support Services.

ORA-15379: Cluster Credentials operation failed with error *string*.\n*string*

Cause: This is an internal error.

Action: Check the accompanying error messages. Contact Oracle Support Services.

ORA-15380: invalid file group name specifier

Cause: The file group name specified was invalid.

Action: Specify a valid file group name.

ORA-15381: missing or invalid file group client specifier

Cause: The command did not specify a valid file group client string.

Action: Specify a valid file group client string with alphanumeric characters.

ORA-15382: invalid file group client name specifier

Cause: The file group name specified was invalid.

Action: Specify a valid file group name.

ORA-15383: invalid file group property '*string*'

Cause: An invalid property was specified for the Oracle Automatic Storage Management (Oracle ASM) file group.

Action: Check the Oracle documentation for valid Oracle ASM file group properties. The correct format of a valid Oracle ASM file group property is either file '*type.property_name*' or '*property_name*'.

ORA-15384: invalid file type '*string*'

Cause: An invalid file type was specified for the Oracle Automatic Storage Management (Oracle ASM) file group property.

Action: Check the documentation for valid Oracle ASM file types.

ORA-15385: file group '*string*' does not exist

Cause: The specified file group did not exist within the disk group.

Action: Specify a file group that exists within the disk group.

ORA-15386: file group '*string*' already exists in disk group '*string*'

Cause: A file group with the same name already exists.

Action: Select another file group name, or drop the existing file group. While creating non-CDB, multitenant container database (CDB), or pluggable database (PDB), manually create a file group for this non-CDB, multitenant container database (CDB), or pluggable database (PDB).

ORA-15387: existing files are associated with file group '*string*'

Cause: An attempt was made to drop a file group that contained existing files.

Action: Specify the CASCADE option to drop the file group and all of the associated files.

ORA-15388: A file type cannot be specified for file group property '*string*'.

Cause: The specified file group property affects the file group itself or all files in the file group. It is not specific to a type of file.

Action: Remove the file type from the property name.

ORA-15389: missing or invalid file group property specification

Cause: The command did not specify a valid file group property name or a valid file group property value.

Action: Specify a valid file group property name and value pair.

ORA-15390: invalid value for file group property '*string*'

Cause: An invalid value was specified for the Oracle Automatic Storage Management (Oracle ASM) file group property.

Action: Check the documentation for acceptable values for this Oracle ASM file group property.

ORA-15391: cannot drop the default file group

Cause: The specified file group was created by the system and must always exist for proper operation.

Action: Specify another file group name.

ORA-15392: cannot alter the default file group

Cause: The specified file group was created by the system and must remain set to the default values for proper operation.

Action: Specify another file group name.

ORA-15393: File number '*number*' does not exist in file group '*string*'.

Cause: The specified file did not exist within the file group.

Action: Check the file number and the file group number.

ORA-15394: duplicate file group property '*string*' specified

Cause: A command specified the same file group property more than once for the same file type.

Action: Specify only one file group property for each file type.

ORA-15395: file group redundancy incompatible with file type

Cause: An attempt was made to move a file to a file group with an incompatible redundancy specification, or to change the redundancy specification of a file group in a way that was incompatible with existing files in that file group.

Action: Specify a valid redundancy property for the file group. Only write-once files, such as the offline archive log and backup set, support parity protection. Other types of files must be configured with as unprotected, mirror or high redundancy. The file group redundancy can be changed from a parity protection scheme to unprotected, mirror, or high, and conversely, as long as the file group does not contain any files.

ORA-15396: command operates on only one file group property

Cause: More than one file group property was specified in the ADD FILEGROUP or MODIFY FILEGROUP statement.

Action: Specify only one file group property per statement.

ORA-15397: command requires all disks in disk group *string* to be online

Cause: The file group redundancy could not be changed to UNPROTECTED because some disks were offline.

Action: Retry the command after the offline disks are dropped.

ORA-15398: file group property '*string*' is read-only

Cause: The specified file group property could not be changed.

Action: Retry the command providing a nonread-only file group property.

ORA-15399: New RDBMS compatibility '%0!s' exceeds client COMPATIBLE setting '%1!s'.

Cause: The specified value for the COMPATIBLE.RDBMS attribute exceeded the database COMPATIBLE setting for one or more clients.

Action: Verify the COMPATIBLE setting for each client of this disk group.

ORA-15400: not running on supported Oracle Automatic Storage Management (Oracle ASM) appliance

Cause: An attempt was made to initialize the server code as an appliance when it was not running a supported appliance configuration.

Action: Check the appliance configuration and retry the operation.

ORA-15401: command not supported on ASM appliance '*string*'

Cause: An attempt was made to run an operation that is not supported by the specified appliance.

Action: Check the documentation to see which operations are allowed or disallowed for the specified appliance.

ORA-15402: insufficient number of disks to support ASM appliance '*string*'

Cause: An attempt was made to do an operation that resulted in insufficient number of disks required for the specified appliance.

Action: Check the appliance configuration and retry the operation after inserting disks in the appropriate slots.

ORA-15403: unable to read an ASM appliance configuration file

Cause: Oracle ASM was unable to read an appliance configuration file.

Action: Check the operating system error messages to determine the identity of the configuration file. Then, fix the configuration file.

ORA-15404: Oracle ASM could not add disk "*string*" to disk group "*string*" on appliance *string*

Cause: There were too many dropping or offline disks in the specified disk group.

Action: Wait for the drop and rebalance operations to complete, or online the offline disks and wait for the online to complete. Then, retry the operation.

ORA-15405: Slot *string* partition *string* in Oracle ASM appliance '*string*' contains more than one disk.

Cause: An attempt was made to add a disk to a slot and a partition number in the Oracle ASM appliance that already had a disk (possibly OFFLINE) associated with it.

Action: Use FORCE to drop the disk that exists in the specified slot and the partition number. Then, retry the operation.

ORA-15406: ASM disk *string* is being replaced.

Cause: An attempt was made to either online or replace a disk that was already being replaced, probably by another instance.

Action: Change the ONLINE statement to exclude the disk.

ORA-15407: Disk specification '*string*' matches multiple disks.

Cause: More than one disk is discovered matching the specified disk string.

Action: Change the disk string to specify one and only one disk.

ORA-15408: Replacement disk '*string*' for '*string*' must be at least *string* MB.

Cause: The replacement disk must be at least of the same size of the old disk.

Action: Use a larger physical disk to replace.

ORA-15409: All disks in disk group *string* are not of the same type.

Cause: An attempt was made to add disks of a different type to the disk group under appliance mode.

Action: Check if all the disks in the disk group are of the same type. Do not add flash and hard disks to the same disk group.

ORA-15410: Disks in disk group *string* do not have equal size.

Cause: The disks in the disk group were not of equal size.

Action: Ensure that all disks in the disk group are of equal size. If adding new disks to the disk group, their size must be equal to the size of the existing disks in the disk group. If resizing, all disks in the disk group must be resized to the same size.

ORA-15411: Failure groups in disk group *string* have different number of disks.

Cause: An attempt was made to enable appliance mode with a different number of disks in each failure group.

Action: Check if all failure groups have an equal number of disks and try again.

ORA-15412: Operation on disk group *string* is incompatible under appliance mode.

Cause: An attempt was made to do an operation that resulted in dropping all disks in a failure group or creating a new failure group.

Action: Disable appliance mode, perform the operation and reenable appliance mode.

WARNING: To reenable appliance mode, ensure the following constraints are met: * There are a sufficient number of disks in each failure group. * All failure groups have an equal number of disks. * There are no offline disks in the disk group. * Every disk in the disk group is of the same type (flash or hard disk). * All disks in the disk group have an equal size.

ORA-15413: Appliance mode is disabled.

Cause: Appliance mode could not be set because it was explicitly disabled.

Action: Enable appliance mode and appliance partnering parameters.

ORA-15414: Appliance mode requires at least *string* failure groups and either *string* or *string* disks in all failure groups.

Cause: Appliance mode could not be enabled because it did not meet the minimum requirements.

Action: Check if there are sufficient failure groups and a sufficient number of disks in each failure group.

ORA-15415: could not retrieve appliance properties for disk group *string*

Cause: Some of the appliance properties were invalid. This could be due to a cell software downgrade after setting the 'appliance.mode' attribute.

Action: Check the cell software on all of the cells or disable appliance mode.

ORA-15416: ASM disk *string* in disk group *string* is offline.

Cause: An offline disk prevented the current ADD or DROP operation.

Action: Drop the offline disk or online the offline disk or disable appliance mode.

ORA-15418: Appliance mode is not supported for compatible.asm *string*.

Cause: Appliance mode could not be enabled for the current value of the compatible.asm attribute.

Action: Disable appliance mode if it is enabled or advance compatible.asm to a version that supports appliance mode.

ORA-15419: disk group *string* is not mounted in restricted mode

Cause: The specified disk group was not mounted in restricted mode prohibiting the requested operation.

Action: Dismount the disk group, remount it in restricted mode and retry the operation.

ORA-15420: Operation on disk group *string* is disabled.

Cause: The current operation could not be completed because the disk group is in the middle of an appliance migration.

Action: Wait for the migration to complete and then retry the command.

ORA-15421: *string* is not supported when the disk group is mounted for recovery.

Cause: The disk group was mounted for recovery preventing the requested operation.

Action: Dismount the disk group, remount it in normal mode and retry the operation.

ORA-15422: Disks '*string*' and '*string*', in failure group '*string*' of disk group '*string*', do not belong to the same cell

Cause: It was detected that disks from different cells belong to the same failure group.

Action: Make the necessary disk swaps so only disks from the same cell belong to the same failure group.

ORA-15423: Disk '*string*' in failure group '*string*' and disk '*string*' in failure group '*string*' of disk group '*string*' belong to the same cell

Cause: It was detected that disks from the same cell belong to different failure groups.

Action: Make the necessary disk swaps so disks from the same cell are not shared between different failure groups.

ORA-15425: DB_UNIQUE_NAME conflict across clusters

Cause: The DB_UNIQUE_NAME parameter was specified with duplicate, conflicting or invalid attributes.

Action: Specify a different DB_UNIQUE_NAME.

ORA-15426: Slot *string* partition *string* in Oracle ASM appliance '*string*' contains more than one disk.

Cause: An attempt was made to add a disk to a slot and a partition number in the Oracle ASM appliance that already had a disk (possibly OFFLINE) associated with it.

Action: Check the appliance configuration and retry the operation after inserting disks in the appropriate slots. If the disk that exists in the specified slot and the partition is dropping, then wait for the rebalance operation to finish before retrying the operation, or use FORCE to drop the existing disk and then retry the operation. Note that with FORCE drop, the redundancy of the diskgroup may be compromised until the rebalance operation completes. If the disk that exists in the specified slot and the partition is OFFLINE, then use REPLACE disk to replace the disk.

ORA-15430: missing or invalid quota group name

Cause: The command did not specify a valid quota group name.

Action: Specify a valid quota group name.

ORA-15431: missing or invalid quota group property

Cause: The command did not specify a valid quota group property.

Action: Specify a valid quota group property.

ORA-15432: missing or invalid quota

Cause: The command did not specify a valid quota limit for the quota group.

Action: Specify a valid quota limit.

ORA-15433: missing or invalid file group name

Cause: The command did not specify a valid file group name.

Action: Specify a valid file group name.

ORA-15434: quota group *string* already exists in disk group *string*

Cause: The specified quota group already existed in the disk group.

Action: Specify a different quota group name.

ORA-15435: quota group *string* does not exist in disk group *string*

Cause: The specified quota group did not exist in the disk group.

Action: Specify a valid quota group name.

ORA-15436: invalid operation on quota group *string*

Cause: The specified operation was not permitted on the quota group.

Action: Check the quota group specified in the command.

ORA-15437: insufficient quota available in quota group *string*

Cause: The specified quota group did not have sufficient quota available to permit the operation.

Action: Specify a quota group with enough available quota or increase the quota limit of the specified quota group.

ORA-15438: Quota group *string* has one or more file groups associated.

Cause: One or more file groups were associated with the specified quota group and, therefore, the operation was not permitted.

Action: Drop the file groups or move the file groups to a different quota group.

ORA-15440: Volume I/O background process (VIO0) terminated with an error

Cause: A volume I/O background process terminated with an error.

Action: The process will restart automatically, no action is needed. If the issue persists, check the log files for the cause. Contact Oracle Support Services if additional assistance is needed.

ORA-15442: The ASM rebalance phase *string* does not exist.

Cause: The specified ASM rebalance phase did not exist.

Action: Specify a valid rebalance phase.

ORA-15443: The ASM rebalance phase *string* cannot be skipped.

Cause: The specified ASM rebalance phase cannot be skipped.

Action: Specify a valid rebalance phase to skip.

ORA-15444: Volume *string* must be online and mounted to complete the operation.

Cause: The operation could not be completed with the volume offline or dismounted.

Action: Ensure that the volume is online or mounted, and retry the operation.

ORA-15445: Volume *string* does not allow sector size migration.

Cause: Sector size migration was not allowed because either of the following existed in the disk group: * Oracle ACFS accelerator volumes, or * Volumes associated with an Oracle ACFS accelerator, or * Non-Oracle ACFS volumes

Action: Move the volume to a different disk group, and retry the operation.

ORA-15450: invalid volume name specifier

Cause: The volume name specified was invalid

Action: Specify a valid volume name.

ORA-15451: missing or invalid volume size specifier

Cause: The volume size specified was invalid.

Action: Specify a valid volume size.

ORA-15452: missing or invalid stripe width specifier

Cause: The volume stripe width specified was invalid.

Action: Specify a valid volume stripe width.

ORA-15453: invalid STRIPE_COLUMNS specifier

Cause: An ADD VOLUME command did not specify a valid number of stripe columns.

Action: Specify a valid number of stripe columns.

ORA-15454: ALTER DISKGROUP ALL cannot use single volume names

Cause: An ALTER DISKGROUP ALL command specified a single volume or a list of volumes

Action: Use the ALL keyword when specifying volumes on multiple diskgroups.

ORA-15455: FORCE option cannot be used when specifying ALL volumes

Cause: The FORCE option was used to disable ALL volumes.

Action: Use FORCE option to disable one volume at a time.

ORA-15456: missing or invalid volume usage specifier

Cause: The command did not specify a valid volume usage string.

Action: Specify a valid volume usage string with alphanumeric characters.

ORA-15457: first letter of the volume name is not an alphabet

Cause: The first letter of the volume name was not an alphabetic character.

Action: Specify an alphabetic character as the first letter of the volume name.

ORA-15458: invalid character in volume name

Cause: A volume name was specified with an invalid character.

Action: Use a volume name with only alphanumeric characters.

ORA-15459: STRIPE_WIDTH of *string* is not a power of two.

Cause: An ADD VOLUME command specified a STRIPE_WIDTH that was not a power of two.

Action: Select a STRIPE_WIDTH that is a power of two; for example, 4K and 8K.

ORA-15460: volume name '*string*' is already in use

Cause: An ADD VOLUME command specified a volume name that was already used by another volume.

Action: Select a different name for the volume.

ORA-15461: STRIPE_WIDTH of *string* bytes is less than the minimum of *string* bytes.

Cause: An ADD VOLUME command specified a STRIPE_WIDTH that was too small.

Action: Select a larger STRIPE_WIDTH value and retry the operation.

ORA-15462: STRIPE_WIDTH of *string* bytes is greater than the maximum of *string* bytes

Cause: An ADD VOLUME command specified a STRIPE_WIDTH that was too large.

Action: Specify a smaller STRIPE_WIDTH.

ORA-15463: volume size of *string*K is less than the minimum of *string*M

Cause: The volume size specified was too small.

Action: Specify a larger volume size.

ORA-15464: STRIPE_COLUMNS of *string* is greater than the maximum of *string*

Cause: An ADD VOLUME command specified a STRIPE_COLUMNS that was that was too large.

Action: Select a smaller STRIPE_COLUMNS value.

ORA-15465: STRIPE_COLUMNS of *string* is less than the minimum of *string*

Cause: An ADD VOLUME command specified a STRIPE_COLUMNS that was too small.

Action: Select a larger STRIPE_COLUMNS value.

ORA-15466: volume '*string*' in disk group '*string*' does not exist

Cause: The command specified a volume name that does not exist.

Action: Ensure a valid volume name is used.

ORA-15467: volume operation is already in progress

Cause: Another command was currently operating on a volume.

Action: Wait a short time before retrying the command.

ORA-15468: Volume *string* in disk group *string* is currently being accessed.

Cause: An attempt was made to change a volume that was being accessed by another application and therefore could not be changed.

Action: Shut down all applications that might be accessing this volume and then retry the command.

ORA-15469: VBG process terminated with error

Cause: A volume background process terminated with error.

Action: Wait for process to restart.

ORA-15470: VDBG process terminated with error

Cause: The volume driver background process terminated with error.

Action: Warm start instance.

ORA-15471: volume redundancy incompatible with disk group redundancy

Cause: An ADD VOLUME command specified a volume redundancy that was incompatible with the redundancy of the disk group.

Action: Specify a valid volume redundancy. The following restrictions apply: - An unprotected redundancy volume cannot be added to a normal or high redundancy disk group. - A mirror or high redundancy volume cannot be added to an external redundancy disk group. - A mirror volume cannot be added to a high redundancy disk group.

ORA-15472: volume library cannot be loaded. Platform may not support volume creation.

Cause: The volume library could not be loaded. Either the platform does not support volume operations, or there is a problem with the library.

Action: Ensure that the platform supports volumes. If the platform does support volumes, check the alert log for library loading failure information.

ORA-15473: access to a volume's storage through an unsupported interface

Cause: An attempt was made to access or modify a volume's storage through an unsupported interface.

Action: Use supported interfaces for access to volume devices.

ORA-15474: volume name is greater than *string* characters

Cause: An ADD VOLUME command specified a volume name that was too long.

Action: Select a smaller volume name.

ORA-15475: USAGESTRING is greater than *string* characters

Cause: The optional attribute --USAGESTRING specified while updating Oracle ADVM attributes was too long.

Action: Select a smaller value for the --USAGESTRING attribute and retry the operation.

ORA-15476: Oracle ACFS volumes must be resized with the 'acfsutil size' operating system command.

Cause: An attempt was made to resize an Oracle ASM Dynamic Volume Manager (Oracle ADVM) volume that contained an Oracle Automatic Storage Management Cluster File System (Oracle ACFS) file system using SQL statements.

Action: Use the 'acfsutil size' operating system command to resize the volume.

ORA-15477: cannot communicate with the volume driver

Cause: An attempt was made to communicate with the volume driver.

Action: Verify if the Oracle Automatic Storage Management (ASM) volume driver is loaded. If the Oracle ASM volume driver is loaded, then check the alert log to identify the reason for failure and perform the necessary action to prevent such failures in the future.

ORA-15478: The Oracle Automatic Storage Management Cluster File System (ACFS) background process terminated with an error.

Cause: The Oracle ACFS background process terminated with an error.

Action: Wait for process restart. If the error persists, contact Oracle Support Services.

ORA-15479: Oracle Automatic Storage Management (Oracle ASM) disk group does not support volumes.

Cause: Volumes were not supported. A typical example was having disks, such as Network File System (NFS) in the disk group that was not supported by volumes.

Action: Remove unsupported disks in the disk group.

ORA-15480: Error reported by the Oracle Automatic Storage Management (ASM) volume driver.

Cause: An error was reported by the Oracle ASM volume driver.

Action: Check the operating system log files to identify the reason for the error. Perform the action or actions to prevent future errors.

ORA-15481: missing or invalid volume mountpath specifier

Cause: A invalid volume mountpath string was specified.

Action: Specify a valid volume mountpath string with alphanumeric characters.

ORA-15482: failed to create or remove device file for volume *string* on diskgroup *string*

Cause: The driver was improperly installed.

Action: Check the alert log for information on the failure of device file creation. Reload the driver using the supported installation method.

ORA-15483: volume driver version is not compatible with the ASM instance

Cause: The version of the ASM volume driver was not supported by ASM.

Action: Update the volume driver or the ASM instance.

ORA-15484: volume '*string*' contains *string* error(s)

Cause: Errors were returned by the ALTER DISKGROUP CHECK VOLUME command.

Action: See the alert log for details of the errors.

ORA-15485: number of volumes in disk group exceeds the maximum of *string*

Cause: A volume was added on a disk group that already contained the maximum number allowed.

Action: Remove one or more volumes from the disk group.

ORA-15486: internal error while altering volume

Cause: An internal Oracle Automatic Storage Management (Oracle ASM) error occurred while altering a volume.

Action: See the alert log for details of the error.

ORA-15487: cannot shutdown the ASM instance with an open ASM volume

Cause: One or more ASM volumes were found to be open during shutdown.

Action: Close the ASM volume and retry the shutdown.

ORA-15488: Oracle Automatic Storage Management (ASM) volume *string* is open on node *string*.

Cause: The ASM volume was not closed prior to instance termination on the specified node.

Action: Close the ASM volume either via unmount or node restart and retry.

ORA-15489: conflicting volume already open on this node

Cause: An Oracle Automatic Storage Management (Oracle ASM) volume was not closed prior to an instance shutdown on the specified node. It conflicted with the volume that was to be enabled.

Action: Close the Oracle ASM volume either using UNMOUNT or node restart and retry the operation.

ORA-15490: not all instances could add or drop the volume

Cause: The Oracle Automatic Storage Management (Oracle ASM) volume could not be added or dropped on all instances.

Action: See the alert log for the reason the volume could not be added or dropped.

ORA-15491: volume redundancy conflicts with disk region options

Cause: Non-mirrored volumes erroneously contained the MIRRORHOT or MIRRORCOLD keyword.

Action: Remove the MIRRORHOT or MIRRORCOLD keywords from non-mirrored volumes.

ORA-15492: command or option incompatible with ASM volumes

Cause: An attempt was made to use a feature which is not compatible with existing ASM volumes. A common example is adding a disk to the diskgroup that is unsupported by ASM volumes.

Action: Omit the option from the command.

ORA-15493: target ADVM compatibility (*string*) exceeds ASM compatibility (*string*)

Cause: An attempt was made to advance ADVM compatibility beyond the disk group's ASM compatibility.

Action: Advance ASM compatibility before advancing ADVM compatibility.

ORA-15494: compatible.advm must be *string* or higher

Cause: An attempt was made to set the ADVM compatibility to a version that was lower than the minimum supported.

Action: Set ADVM compatibility to at least the minimum supported version.

ORA-15495: ASM operation requires compatible.advm of *string* or higher

Cause: The ASM operation specified required a higher disk group attribute value for compatible.advm.

Action: Set the disk group attribute compatible.advm to or above the requested version.

ORA-15496: volume size is greater than the maximum of *stringT*

Cause: The volume size specified was too large.

Action: Specify a smaller volume size and retry the operation.

ORA-15497: Volume *string* uses a metadata block size (*string*) smaller than the specified sector size (*string*).

Cause: The Oracle ACFS volume had a metadata block size incompatible with the specified sector size.

Action: Migrate Oracle ACFS to a larger metadata block size before changing the sector size.

ORA-15498: Volume name *string* collides with existing volume(s) *string string*.

Cause: The operation attempted to create a block device and a raw device with the volume name <vol_name>-<dg_num>, which conflicted with an existing volume name.

Action: Choose another name for the volume (no leading 'r' is recommended).

ORA-15499: VMB process terminated with error

Cause: The volume membership (VMB) process terminated with an error.

Action: Warm start the instance.

ORA-15501: cannot start workload capture on instance *string*

Cause: Given instance encountered unexpected errors while trying to start the workload capture.

Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

ORA-15502: cannot stop workload capture on instance *string*

Cause: Given instance encountered unexpected errors while trying to stop the workload capture.

Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

ORA-15503: cannot startup instance when procedures in "DBMS_WORKLOAD_CAPTURE" or "DBMS_WORKLOAD_REPLAY" are in the middle of their execution

Cause: The new instance could not be started because the database was executing a procedure in either the DBMS_WORKLOAD_CAPTURE or DBMS_WORKLOAD_REPLAY package.

Action: Start the new instance after such procedures in the given packages have finished execution.

ORA-15504: cannot start workload capture because instance *string* not present in RESTRICTED SESSION mode

Cause: The NO_RESTART_MODE option in DBMS_WORKLOAD_CAPTURE.START_CAPTURE was FALSE, therefore all the active instances were expected to be in the RESTRICTED SESSION mode.

Action: Start all instances using STARTUP RESTRICT or execute ALTER SYSTEM ENABLE RESTRICTED SESSION on all active instances before issuing DBMS_WORKLOAD_CAPTURE.START_CAPTURE.

ORA-15505: cannot start workload capture because instance *string* encountered errors while accessing directory "*string*"

Cause: Given instance could not access the specified CAPTURE directory or the specified CAPTURE directory already had a workload capture in it.

Action: Provide a directory object that is valid, empty and accessible from all the instances in the database cluster.

ORA-15506: cannot prepare instance *string* for replay

Cause: Given instance encountered unexpected errors while trying to prepare for a workload replay.

Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

ORA-15507: cannot start workload replay on instance *string*

Cause: Given instance encountered unexpected errors while trying to start a workload replay.

Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

ORA-15508: cannot cancel workload replay on instance *string*

Cause: Given instance encountered unexpected errors while trying to cancel a workload replay.

Action: Check the alert log and other diagnostics in the given instance to diagnose the problem.

ORA-15509: workload replay has been cancelled

Cause: Workload replay was cancelled.

Action: Restart the workload replay.

ORA-15510: cannot perform operation when "STATISTICS_LEVEL" is "BASIC"

Cause: The STATISTICS_LEVEL initialization parameter was set to BASIC.

Action: Change the STATISTICS_LEVEL initialization parameter setting to either TYPICAL or ALL.

ORA-15511: cannot process workload capture because no user sessions were recorded

Cause: No user sessions were recorded in the given workload capture. Processing this capture failed because no user workload was captured.

Action: Capture a workload in which at least one user session connects and performs some operations.

ORA-15512: directory "*string*" does not contain a valid processed workload capture

Cause: One or more files created by DBMS_WORKLOAD_REPLAY.PROCESS_CAPTURE were missing.

Action: Process the workload capture using DBMS_WORKLOAD_REPLAY.PROCESS_CAPTURE and then retry the command.

ORA-15513: cannot access the input directory

Cause: Given input directory is either invalid or inaccessible.

Action: Verify that the input directory is valid and accessible and then retry the command.

ORA-15514: cannot find a match for the remote procedure call during replay

Cause: The corresponding PL/SQL program was either dropped or modified.

Action: Verify that the corresponding PL/SQL program is defined the same way during replay as it was defined during workload capture.

ORA-15515: error while replaying remote procedure call: "*string.string.string*"

Cause: Error encountered during the replay of a remote procedure call.

Action: Correct the cause of the preceding error and restart workload replay.

ORA-15516: Parallel preprocessing worker encountered ORA-*string* error.

Cause: One of the parallel preprocessing workers ended unexpectedly while processing the workload.

Action: Find the root cause or preprocess the workload using a single process.

ORA-15517: cannot start parallel preprocessing worker

Cause: One of the parallel preprocessing workers could not be started.

Action: Find the root cause or simply preprocess the workload using only one process.

ORA-15518: Parallel preprocessing encountered an error.

Cause: An error occurred during parallel preprocessing.

Action: Find the root cause or preprocess the workload using a single process.

ORA-15519: cannot access database link "*string*" because it is disabled

Cause: For security considerations, access to external databases via database links were disabled during workload replay.

Action: Use advanced parameter for Database Replay to enable database links during workload replay.

ORA-15520: Directory is corrupted. Two WMD files are found at "*string*" and "*string*"

Cause: Two WMD files were found in the directory.

Action: Check that the WMD files in capture directory were not modified, moved, duplicated or deleted.

ORA-15521: failed to create file "*string*" during workload processing

Cause: An attempt was made to create a file during workload processing without the proper file permissions.

Action: Correct the file permissions and try again.

ORA-15522: failed to generate a workload capture subset: "*string*"

Cause: An attempt to generate a workload capture subset failed. Possible reasons are included in the error message.

Action: Correct the issue and try again.

ORA-15523: Failed to create subpath *string* under path *string*.

Cause: Either the path does not exist, is inaccessible, or the subpath specification is invalid.

Action: Verify that the path exists and is accessible, the subpath specification is valid, and retry the command.

ORA-15525: a user call cannot be replayed because not enough information was captured; extra details: *string*

Cause: An attempt to replay a user call failed because the workload was captured with an old version of Oracle. The information needed for replay was not recorded.

Action: Capture the workload using a newer version of Oracle or use the replay filters to skip the user call.

ORA-15526: failed to validate user password for capture

Cause: One of the following occurred: 1- The password was not specified for the encrypted capture. 2- The password did not match the one used for the encrypted capture. 3- The specified password was for an unencrypted capture.

Action: For scenario 1 or 2 stated in the Cause, provide the correct password for the encrypted capture. For scenario 3, do not specify the client single sign-on (SSO) wallet path.

ORA-15527: failed to retrieve password for Database Replay from Oracle Wallet

Cause: Either the Database Replay identifier was not found in the Oracle Wallet or the password was not set.

Action: Set the password for the Database Replay identifier in the Oracle Wallet.

ORA-15528: failed to encrypt a workload capture: "*string*"

Cause: An attempt to encrypt a workload capture failed. Possible reasons are included in the error message.

Action: Fix the issue and retry.

ORA-15529: failed to decrypt a workload capture: "*string*"

Cause: An attempt to decrypt a workload capture failed. Possible reasons are included in the error message.

Action: Fix the issue and retry.

ORA-15530: Directory contains a capture recorded with a newer Oracle release.

Cause: The capture was recorded with a newer Oracle release.

Action: Retry with a newer release of Oracle.

ORA-15531: workload capture encountered unexpected error: *string*

Cause: Workload capture encountered an unexpected error.

Action: Check the server trace files to address the reported error.

ORA-15532: workload replay encountered unexpected error: *string*

Cause: Workload replay encountered an unexpected error.

Action: Check the server trace files to address the reported error.

ORA-15551: workload replay client cannot connect to database server

Cause: The server connection identifier was invalid.

Action: Restart the client with correct server connection identifier.

ORA-15552: workload replay client cannot login to database server

Cause: 1) the replay client used an invalid username or password; 2) the replay user does not have the privilege to switch user; 3) the recorded username does not exist in the replay database.

Action: 1) restart replay client with correct username and password 2) grant user switching privilege to the replay user 3) verify whether the replay database was restored properly

ORA-15553: workload replay client cannot execute the DBMS_WORKLOAD_REPLAY package

Cause: Workload Replay Client's replay user did not have EXECUTE permission on the DBMS_WORKLOAD_REPLAY package.

Action: Grant execute permission on the DBMS_WORKLOAD_REPLAY package to replay user and restart the Workload Replay Client.

ORA-15554: cannot start workload replay client because the database server is not in PREPARE mode

Cause: The Workload Replay Client could not connect to the database server because the database server was not in the PREPARE mode.

Action: Put the database in PREPARE mode by using DBMS_WORKLOAD_REPLAY.PREPARE_REPLAY, and restart the Workload Replay Client.

ORA-15555: workload replay client encountered unexpected error: "string"

Cause: Workload Replay Client encountered an unexpected error.

Action: Check the Workload Replay Client's log files and the database server alert log to diagnose the problem.

ORA-15556: invalid input specified to the workload replay client; type 'wrc HELP=Y' for help

Cause: Invalid input was specified.

Action: Use the Workload Replay Client's HELP=Y option to know more about valid input options.

ORA-15557: workload replay client cannot access the replay directory or the database version do not match the preprocessing one

Cause: The Workload Replay Client could not access the directory that contained the workload to be replayed, or the workload was preprocessed by a different version of the database.

Action: Restart the workload replay after specifying the correct replay directory, or preprocess it with the correct database.

ORA-15558: replay thread encountered unexpected error

Cause: A single replay thread got disconnected from the server due to an unexpected error.

Action: Check the Workload Replay Client's log files and the database server alert log to diagnose the problem.

ORA-15559: workload replay client cannot open workload capture file

Cause: The Workload Replay Client could not access one or more workload capture files from the replay directory.

Action: Restart the workload replay after copying all the workload capture files to the replay directory.

ORA-15560: Workload replay client cannot access the work directory.

Cause: The workload replay client could not access the work directory to write log files for debug information.

Action: Restart the workload replay client after specifying an existing work directory, or ensure that the user has access privileges.

ORA-15561: workload replay client cannot connect to the remapped connection with conn_id : *string*

Cause: The specified connection is invalid or the specified host is inaccessible.

Action: Test the specified connection using other methods and redefine the connection remapping, if necessary. Consult the view DBA_WORKLOAD_CONNECTION_MAP to inspect connection remappings.

ORA-15562: workload replay client cannot read the DBA_WORKLOAD_CONNECTION_MAP view

Cause: The DBA_WORKLOAD_CONNECTION_MAP view did not exist or was not accessible.

Action: Re-create the workload capture and replay views. For additional information, see the documentation.

ORA-15563: workload replay client cannot spawn new threads

Cause: The Workload Replay Client does not have enough resource (CPU or memory) to spawn new threads.

Action: Restart the workload replay after allocating more resource (CPU and memory) to the Workload Replay Client or use more hosts as replay clients to drive the workload.

ORA-15564: contents of the replay directory provided to the workload replay client do not match with the replay directory provided to the database server

Cause: The processed workload capture files given to the workload replay client directory did not match the contents of the replay directory given as input to DBMS_WORKLOAD_REPLAY.INITIALIZE_REPLAY.

Action: Provide the same processed workload capture files to both the database server and all the workload replay clients and restart the replay. If the same workload capture files were processed more than once, provide a copy of the latest processed workload capture files to all the workload replay clients and the database server.

ORA-15566: workload replay client cannot replay user call in the current version

Cause: The workload replay client encountered a user call in the captured workload that was not supported for replay in the current version.

Action: Look in the DBA_WORKLOAD_REPLAY_DIVERGENCE view for details about the call that encountered this error. Refer to the documentation for more details on the types of workload that are not supported in the current version.

ORA-15567: replay user *string* encountered an error during a sanity check

Cause: The replay user encountered an error when accessing internal objects for Database Replay or switching user.

Action: Set up the replay user appropriately at the replay database. Ensure that the replay user can access SYS-owned objects and has been granted the BECOME USER privilege.

ORA-15568: login of user *string* during workload replay failed with ORA-*string*

Cause: The recorded user did not exist in the replay database or encountered other problems during log in.

Action: Check the returned error number and set up the recorded user appropriately at the replay database.

ORA-15569: timeout encountered during the replay of a recorded user call

Cause: The replay of a recorded user call was terminated since it was significantly slower than the workload capture.

Action: Find the root cause for the performance issue. Or, use DBMS_WORKLOAD_REPLAY API to disable the timeout check if the replay is expected to be slower.

ORA-15570: Directory object "*string*" does not exist.

Cause: The directory object did not exist.

Action: Ensure that the specified directory object exists.

ORA-15590: encountered incomplete workload capture files

Cause: The captured workload contained one or more incomplete recording files. This can happen when the original workload capture's FINISH_CAPTURE command timed out while waiting for all the active sessions to close their workload capture files.

Action: Incomplete capture files will not interfere with the processing and replaying of the captured workload. This is simply a warning message to point out that some database calls might not have been recorded due to FINISH_CAPTURE command timing out. For a list of the incomplete files, check the alert log for lines containing DBMS_WORKLOAD_REPLAY.PROCESS_CAPTURE after capture processing.

ORA-15591: corrupt workload capture files

Cause: The captured workload contained one or more corrupt recording files.

Action: Check the alert log for lines containing DBMS_WORKLOAD_REPLAY.PROCESS_CAPTURE after capture processing. The files will be replayed up to the point of the corruption. You could also remove the corrupt files and run DBMS_WORKLOAD_REPLAY.PROCESS_CAPTURE again. In this case, no workload from the corrupt files is replayed.

ORA-15601: Invalid value specified for parameter "*string*"

Cause: An invalid value was specified for the given parameter.

Action: Correct the value being specified for the parameter.

ORA-15602: Parameter "*string*" cannot be NULL.

Cause: An attempt was made to call a procedure without a required parameter.

Action: Specify a valid value for this parameter.

ORA-15603: Action cannot be performed when database is in read-only mode.

Cause: A procedure in DBMS_AUTO_TASK_ADMIN package was invoked when database was open in read-only mode.

Action: Retry when database is open in read/write mode.

ORA-15604: Initialization parameters prevent client from being enabled.

Cause: An attempt was made to enable a client that was disabled for automatic execution by an initialization parameter.

Action: Check the related client parameters and try again.

ORA-15605: "*string*" is not a Maintenance Window

Cause: Window name passed to DBMS_AUTO_TASK_ADMIN.ENABLE procedure must be a member of the MAINTENANCE_WINDOW_GROUP.

Action: Make the window a member of the MAINTENANCE_WINDOW_GROUP and retry the call.

ORA-15606: Reserved autotask operations only allowed in root.

Cause: An attempt was made to issue a reserved autotask operation in a pluggable database.

Action: Switch to CDB\$ROOT and issue the operation.

ORA-15607: Autonomous task could not be scheduled. Reason: "*string*".

Cause: An attempt was made to schedule a manual Autonomous task but the operation failed. The possible causes were: - The task was disabled. - The task was currently running in another process. - The number of concurrently running autonomous tasks exceeded max limit.

Action: Check the task status in adb_task views. Ensure that: - The task is enabled. - The task is not currently running in another process. - The number of concurrently running autonomous tasks is within max limit. Then, retry the operation.

ORA-15700: SQL limit already reached by prior task execution

Cause: An attempt was made to resume the execution of a task when the prior execution already reached the SQL limit.

Action: Task execution is complete. Examine the report to review Advisor's recommendations.

ORA-15701: All "SQL Tuning Set(s)" with name like "*string*" and owner like "*string*" are empty

Cause: An attempt was made to pack one or more SQL Tuning Sets, none * of which contained any statements.

Action: Check the input and try again.

ORA-15702: duplicate values for plan line ID in input collection

Cause: An invalid input was provided containing duplicate values for plan line IDs causing the load of the statement to fail.

Action: Check the input and try again.

ORA-15703: invalid version number "*number*" for SQL tuning set staging table

Cause: An invalid version number was provided for a staging table used to pack a SQL tuning set.

Action: Check the input and try again.

ORA-15704: This operation is not supported for Oracle RAS users.

Cause: An attempt was made to execute an unsupported operation. This operation is not supported for Oracle Real Application Security (Oracle RAS) users.

Action: Retry the operation as a non-Oracle RAS user.

ORA-15705: staging table does not exist

Cause: An attempt was made to use a staging table that did not exist.

Action: Verify the name of the staging table and retry the operation.

ORA-15706: concurrent execution of the task terminated unexpectedly

Cause: Parallel slaves have died unexpectedly.

Action: Check your system for anomalies and resume the executing task.

ORA-15738: Default parameters for SPA Quick Check are not set.

Cause: The required default parameters for SQL Performance Analyzer Quick Check (SPA Quick Check) were not set.

Action: Set default values for all of the required SPA Quick Check parameters and try again.

ORA-15739: invalid name "*string*" for SQL Performance Analyzer task

Cause: An invalid SQL Performance Analyzer task name was used.

Action: Check the name of the SQL Performance Analyzer task to ensure that it is correct.

ORA-15740: parameter "*string*" not set for SQL Performance Analyzer task "*string*"

Cause: Could not find the specified parameter name for the SQL Performance Analyzer task.

Action: Check that the specified parameter exists for the SQL Performance Analyzer task so that the parameter is set.

ORA-15741: no COMPARE_PERFORMANCE execution exists for SQL Performance Analyzer task "*string*"

Cause: Could not find an execution of type COMPARE_PERFORMANCE for specified SQL Performance Analyzer task.

Action: Ensure that the given SQL Performance Analyzer task has at least one execution of type COMPARE_PERFORMANCE.

ORA-15742: specified execution name "*string*" is not a valid COMPARE_PERFORMANCE execution for SQL Performance Analyzer task "*string*".

Cause: The specified execution name was not a valid execution of type COMPARE_PERFORMANCE for the SQL Performance Analyzer task.

Action: Ensure that a valid COMPARE_PERFORMANCE execution name is used for the SQL Performance Analyzer task.

ORA-15743: need to specify the object ID if the tuning task is on a SQL set.

Cause: There could be multiple objects in the SQL tuning task. Specify which one.

Action: Add object ID to the interface.

ORA-15744: The directory name is null.

Cause: The directory name for finding the SQL traces was null.

Action: Create the directory.

ORA-15745: The plan type is not valid.

Cause: The specified plan type was not valid

Action: Check the existing plan types and specify the right one.

ORA-15746: Missing EXECUTE privilege on DBMS_AUTO_SQLTUNE.

Cause: The current user was missing the necessary privileges to execute the API.

Action: Grant the privilege and try again.

ORA-15747: The previous Oracle Data Masking job is unfinished. "*string*" table is not empty.

Cause: The previously executed Oracle Data masking job was not successfully completed.

Action: Execute Oracle Data masking cleanup.

ORA-15748: invalid container name specified

Cause: The container name specified for this API was invalid. When this API is run at the multitenant container database (CDB) root, the acceptable container names are any valid containers in that CDB. When it is run in a pluggable database, the only acceptable container name is its own name.

Action: Specify a valid container name.

ORA-15750: current node is not configured for remote operations

Cause: An attempt to perform a Remote Management Framework (RMF) operation failed because the node performing the operation was not yet configured for remote operations.

Action: Configure the node and retry the operation.

ORA-15751: The RMF operation failed.

Cause: An attempt to perform a Remote Management Framework (RMF) operation failed because an unexpected error condition happened.

Action: Retry the operation and contact Oracle Support Services if the condition persists.

ORA-15755: current node is already configured for remote operations

Cause: An attempt to configure a node failed because the node was already configured for Remote Management Framework (RMF) operations.

Action: Unconfigure the node and retry the operation.

ORA-15761: not registered in an RMF topology

Cause: An attempt to perform a Remote Management Framework (RMF) operation failed because the node performing the operation was not registered in a topology.

Action: Register the node in a topology or create a new topology and retry the operation.

ORA-15764: concurrent RMF operation is in progress

Cause: An attempt to perform a Remote Management Framework (RMF) operation failed because another conflicting operation was already running.

Action: Retry after the conflicting operation has finished.

ORA-15766: already registered in an RMF topology

Cause: An attempt to register the specified node failed because the node was already registered in a Remote Management Framework (RMF) topology.

Action: Ensure that the specified node name matches the node to be registered and that the database link connects to the intended node. Unregister the specified node before registering it into another topology.

ORA-15767: RMF topology [*string*] does not exist.

Cause: A topology with the specified topology name was not created in the Remote Management Framework (RMF).

Action: Verify that the topology name is valid and retry the operation.

ORA-15768: RMF topology [*string*] already exists.

Cause: A topology with the specified topology name was already created in the Remote Management Framework (RMF).

Action: Verify that the topology name is valid and retry the operation. Specify a different topology name that has not been used yet.

ORA-15769: node [*string*] is not registered in RMF topology [*string*]

Cause: A node with the specified node name was not registered in the specified Remote Management Framework (RMF) topology.

Action: Ensure that the specified node name and topology name is correct, and that the specified node is currently registered in the specified topology.

ORA-15770: node [*string*] is already registered in RMF topology [*string*]

Cause: A node with the specified node name was already registered in the specified Remote Management Framework (RMF) topology.

Action: Ensure that the specified node is not currently registered in the specified topology and that the node to be registered in the specified topology is configured with a unique name.

ORA-15771: parameter [*string*] is invalid: *string*

Cause: The value for the specified parameter was invalid.

Action: Provide a value that fulfills the requirements specified in the error message.

ORA-15772: parameter [*string*] exceeds *string* characters

Cause: The value for the specified string parameter was too long.

Action: Provide a value for the specified parameter that has a length below the character limit specified in the error message.

ORA-15773: parameter [*string*] does not allow NULL values

Cause: A NULL value was provided for the specified parameter but the parameter only allows non-NULL values.

Action: Provide a non-NULL value for the specified parameter.

ORA-15774: parameter [*string*] conflicts with the value in the remote node [*string*]

Cause: An attempt to perform a Remote Management Framework (RMF) operation failed because the specified parameter was different from the actual value stored in the node performing the operation.

Action: Ensure that the database link connects to the intended node and that the specified parameter matches the value configured in the node that will perform the operation.

ORA-15775: database not open in read/write mode

Cause: An attempt to perform a Remote Management Framework (RMF) operation failed because the node was not open in read/write mode.

Action: Ensure that the node performing the operation is open in the correct mode and retry the operation.

ORA-15776: candidate target missing links to source nodes

Cause: An attempt to perform a Remote Management Framework (RMF) destination switch failed because the candidate target couldn't find a link to one or more nodes in the topology.

Action: Ensure the candidate target has an RMF link to every node participating in the topology and retry the operation. If the current RMF destination node is no longer available or the missing links cannot be created at this moment, retry the operation with `FORCE_SWITCH` to bypass this check.

ORA-15777: remote node registration could not be completed

Cause: An attempt to register a node in a Remote Management Framework (RMF) topology failed because the remote node could not obtain the registration information from the RMF destination node.

Action: Ensure that the provided database links are valid and correspond to the intended nodes. Check for additional error messages, if any, to determine the exact cause of the problem and correct the error. Unregister the node from the topology and retry the operation.

ORA-15900: AWR Analytics operation failed: *string*

Cause: An attempt to perform an Automated Workload Repository (AWR) Analytics Framework operation failed because an unexpected error condition happened.

Action: Correct the indicated problem and retry the operation. Contact Oracle Support Services if the condition persists.

ORA-15901: error encountered during SQL execution

Cause: An error occurred when performing an Automated Workload Repository (AWR) Application Framework operation due to an underlying SQL execution error.

Action: Retry the operation and contact Oracle Support Services if the condition persists.

ORA-15902: parameter [*string*] is invalid: *string*

Cause: The value for the specified parameter was invalid.

Action: Provide a value that fulfills the requirements specified in the error message.

ORA-16000: database or pluggable database open for read-only access

Cause: The database or pluggable database was opened for read-only access. Attempts to modify the database using DML or DDL statements generate this error.

Action: In order to modify the database or pluggable database, it must first be shut down and reopened for read/write access.

ORA-16001: database already open for read-only access by another instance

Cause: The database has been opened for read-only access by another instance, and cannot be opened for read/write access by this instance.

Action: This instance must be opened for read/write access, or all other instances must first be shut down and reopened for read-only access.

ORA-16002: database or pluggable database already open for read/write access by another instance

Cause: The database or pluggable database has been opened for read/write access by another instance, and cannot be opened for read-only access by this instance.

Action: This instance must be opened for read-only access, or all other instances must first be shut down and reopened for read/write access.

ORA-16003: standby database is restricted to read-only access

Cause: An attempt was made to open a physical standby database in read/write mode.

Action: Reissue the ALTER DATABASE OPEN specifying READ ONLY.

ORA-16004: backup database required recovery

Cause: The database could not be opened for read-only access by this instance because it requires recovery.

Action: Perform the necessary recovery and reopen for read-only access.

ORA-16005: database requires recovery

Cause: The database required recovery, and therefore could not be opened for read-only access by this instance.

Action: If the database was terminated abnormally (possibly using a shutdown abort), the database first needs to be opened in read/write mode. Otherwise, perform the necessary recovery and reopen for read-only access.

ORA-16006: A remote archival request was aborted due to database shutdown.

Cause: When opening or closing a database instance, the database may wait for pending remote archival requests to complete before proceeding with the operation. This error was reported because a shutdown was detected.

Action: This is an informational message so no action is required.

ORA-16007: invalid backup control file checkpoint

Cause: The database could not be opened for read-only access because its control file did not contain a valid control file checkpoint.

Action: Open the database for read/write access to create a valid control file checkpoint. The database can then be opened for read-only access.

ORA-16008: indeterminate control file checkpoint

Cause: The control file for the database being opened for read-only access was created using the CREATE CONTROLFILE statement. Therefore, a control file checkpoint could not be calculated and the database could not be opened for read-only access.

Action: First, open the database for read/write access. This creates a valid control file checkpoint. Then, reopen the database for read-only access.

ORA-16009: invalid redo transport destination

Cause: Either the redo transport destination could not accept redo data because it was not a valid redo transport destination type, or the connection was SYNC for Zero Data Loss Recovery Appliance (ZDLRA) destination.

Action: Verify that all redo transport destinations are either standby databases or downstream capture databases, or change the ZDLRA destination to not use SYNC.

ORA-16011: Remote File Server process is in Error state.

Cause: The Remote File Server (RFS) process at the specified redo transport destination experienced an unrecoverable error and was unable to receive further redo data.

Action: Correct the problem at the redo transport destination.

ORA-16012: database identifier mismatch

Cause: The database identifier of a target physical standby, snapshot standby, or far sync did not match that of the primary database. See the alert log file for additional information.

Action: Ensure that the database identifier of each physical standby, snapshot standby, and far sync matches that of the primary database.

ORA-16013: log *string* sequence# *string* does not need archiving

Cause: An attempt was made to archive the named file manually, but the file did not require archiving. The file had previously been successfully archived.

Action: No action is required.

ORA-16014: log *string* sequence# *string* not archived, no available destinations

Cause: An attempt was made to archive the named log, but the archive was unsuccessful. The archival failed because there were no archive log destinations specified, or all destinations are in an error state.

Action: Verify that archive log destinations are specified or take the necessary step to correct any errors that may have occurred.

ORA-16015: Log *string* sequence# *string* was not archived.

Cause: An attempt was made to archive the named log to a destination, but the operation did not succeed because the destination was not in ARCHIVELOG mode.

Action: Enable ARCHIVELOG mode at all destinations and retry.

ORA-16016: archived log for thread *string* sequence# *string* unavailable

Cause: Redo apply timed out waiting for the requested archived log file.

Action: Verify that the primary database is still archiving redo data to the standby database and reissue the RECOVER STANDBY DATABASE command.

ORA-16017: cannot use LOG_ARCHIVE_DUPLEX_DEST without a primary archive destination

Cause: The parameter LOG_ARCHIVE_DUPLEX_DEST was set to a non-NULL value when the primary archive destination was set to NULL explicitly.

Action: Set the primary archive destination to a valid non-NULL value.

ORA-16018: cannot use *string* with LOG_ARCHIVE_DEST_n or DB_RECOVERY_FILE_DEST

Cause: One of the following events caused an incompatibility: 1) Parameter LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST was in use when a LOG_ARCHIVE_DEST_n (n = 1...31) parameter was encountered while fetching initialization parameters. 2) An ALTER SYSTEM ARCHIVE LOG START TO command was in effect when a LOG_ARCHIVE_DEST_n parameter was encountered while fetching initialization parameters. 3) A LOG_ARCHIVE_DEST_n parameter was in use when an ALTER SYSTEM command was used to define a value for either the LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST parameter. 4) Parameter DB_RECOVERY_FILE_DEST was in use when an attempt was made to use an ALTER SYSTEM or ALTER SESSION command to define a value for LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST.

Action: Eliminate any incompatible parameter definitions.

ORA-16019: cannot use *string* with LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST

Cause: One of the following events caused an incompatibility: 1) Parameter LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST was in use when the specified LOG_ARCHIVE_DEST_n (n = 1...31) or DB_RECOVERY_FILE_DEST parameter was encountered while fetching initialization parameters. 2) Parameter LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST was in use when an attempt was made to use an ALTER SYSTEM or ALTER SESSION command to define a value for the specified LOG_ARCHIVE_DEST_n or DB_RECOVERY_FILE_DEST parameter. 3) An ALTER SYSTEM ARCHIVE LOG START TO command was in effect when the specified LOG_ARCHIVE_DEST_n parameter was encountered while fetching initialization parameters. 4) An ALTER SYSTEM ARCHIVE LOG START TO command was in effect when an attempt was made to use an ALTER SYSTEM or ALTER SESSION command to define a value for the specified LOG_ARCHIVE_DEST_n parameter.

Action: Eliminate any incompatible parameter definitions.

ORA-16020: fewer destinations available than specified by LOG_ARCHIVE_MIN_SUCCEED_DEST

Cause: The number of archive log destinations that could be used was less than the LOG_ARCHIVE_MIN_SUCCEED_DEST parameter value.

Action: Either adjust the log archive destination parameters, or lower the value of LOG_ARCHIVE_MIN_SUCCEED_DEST.

ORA-16021: session *string* destination cannot be the same as session *string* destination

Cause: An attempt was made to change the first specified archive log parameter using ALTER SESSION to have a destination value that duplicates the session-level destination value of the second specified archive log parameter.

Action: Specify a different session destination value for one of the LOG_ARCHIVE_DEST_n parameters.

ORA-16022: LOG_ARCHIVE_DEST cannot be NULL because LOG_ARCHIVE_DUPLEX_DEST is non-NULL

Cause: An attempt was made to change parameter LOG_ARCHIVE_DEST to NULL when parameter LOG_ARCHIVE_DUPLEX_DEST is non-NULL.

Action: Either set parameter LOG_ARCHIVE_DEST to a non-NULL value, or set parameter LOG_ARCHIVE_DUPLEX_DEST to a NULL value.

ORA-16023: system *string* destination cannot be the same as session *string* destination

Cause: An attempt to change the first specified LOG_ARCHIVE_DEST_n (n = 1...31) parameter produced a destination that duplicates the session destination value of the second specified LOG_ARCHIVE_DEST_n parameter. This error can occur when setting a non-NULL value with the ALTER SYSTEM command. Or, this error can occur when setting a NULL value with ALTER SESSION command, because then the associated system destination value may appear as a duplicate.

Action: Specify a different destination value for the first specified LOG_ARCHIVE_DEST_n parameter.

ORA-16024: parameter *string* cannot be parsed

Cause: The value for the indicated LOG_ARCHIVE_DEST_n (n = 1...31) parameter could not be parsed. Common causes for this error are a misplaced equal sign, an unrecognized attribute, or an attribute that is missing a required value.

Action: Correct the value for the indicated LOG_ARCHIVE_DEST_n parameter.

ORA-16025: parameter *string* contains repeated or conflicting attributes

Cause: The value for the specified LOG_ARCHIVE_DEST_n (n = 1...31) parameter contained either repeated attributes or attributes that conflicted with each other.

Action: Correct the value for the indicated LOG_ARCHIVE_DEST_n parameter.

ORA-16026: parameter *string* contains an invalid attribute value

Cause: The value for the specified LOG_ARCHIVE_DEST_n (n = 1...31) parameter contained an attribute with an invalid value.

Action: Correct the value for the indicated LOG_ARCHIVE_DEST_n parameter.

ORA-16027: parameter *string* is missing a destination option

Cause: The value for the indicated LOG_ARCHIVE_DEST_n (n = 1...31) parameter failed to include a destination option. A destination option is specified using either the LOCATION or SERVICE attribute.

Action: Correct the value for the indicated LOG_ARCHIVE_DEST_n parameter.

ORA-16028: new *string* causes less destinations than LOG_ARCHIVE_MIN_SUCCEED_DEST requires

Cause: An attempt was made to change the indicated LOG_ARCHIVE_DEST_n or LOG_ARCHIVE_DEST_STATE_n parameter (n = 1...31) to a value that reduces the number of archive log destinations to less than the specified LOG_ARCHIVE_MIN_SUCCEED_DEST value.

Action: Either select different options for the LOG_ARCHIVE_DEST_n or LOG_ARCHIVE_DEST_STATE_n parameters, or reduce the value for parameter LOG_ARCHIVE_MIN_SUCCEED_DEST.

ORA-16029: cannot change LOG_ARCHIVE_MIN_SUCCEED_DEST, no archive log destinations

Cause: An attempt was made to change the LOG_ARCHIVE_MIN_SUCCEED_DEST parameter when there are no archive log destinations.

Action: Define one or more log archive destinations using parameters LOG_ARCHIVE_DEST, LOG_ARCHIVE_DUPLEX_DEST, or LOG_ARCHIVE_DEST_n (n = 1...31). Then, change the value of parameter LOG_ARCHIVE_MIN_SUCCEED_DEST.

ORA-16030: session specific change to the LOG_ARCHIVE_MIN_SUCCEED_DEST parameter requires a LOG_ARCHIVE_DEST_n destination

Cause: The following event caused an incompatibility: Parameter LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST was in use when an attempt was made to change the LOG_ARCHIVE_MIN_SUCCEED_DEST parameter with an ALTER SESSION command.

Action: Replace any LOG_ARCHIVE_DEST and LOG_ARCHIVE_DUPLEX_DEST parameters with LOG_ARCHIVE_DEST_n (n = 1...31) parameters.

ORA-16031: parameter *string* destination string exceeds *string* character limit

Cause: The value for the specified parameter contained a destination string that is too long.

Action: Replace the destination value for the specified parameter with a character string that has a length below the limit specified in the error message.

ORA-16032: parameter *string* destination string cannot be translated

Cause: The value for the specified parameter contained a destination string that could not be translated.

Action: Use a valid destination string in the specified parameter.

ORA-16033: parameter *string* destination cannot be the same as parameter *string* destination

Cause: An attempt was made to change the first specified archive log parameter to have a destination value that duplicates the system-level destination value of the second specified archive log parameter.

Action: Specify a different value for one of the archive log parameters.

ORA-16034: Recovery could not be started.

Cause: Database recovery could not be started because the FROM and MANAGED STANDBY DATABASE clauses were both specified when attempting to start recovery.

Action: Retry the command with either the FROM or MANAGED STANDBY DATABASE clause, but not both.

ORA-16035: missing required keyword *string*

Cause: The indicated keyword is required but was not specified.

Action: Correct the syntax and retry the command.

ORA-16036: invalid CANCEL option

Cause: A mode other than IMMEDIATE followed the CANCEL keyword in RECOVER MANAGED STANDBY DATABASE statement.

Action: Specify either nothing or IMMEDIATE following CANCEL.

ORA-16037: user requested cancel of managed recovery operation

Cause: The managed standby database recovery operation has been canceled per user request.

Action: No action is required.

ORA-16038: log *string* sequence# *string* cannot be archived

Cause: An attempt was made to archive the named file, but the file could not be archived. Examine the secondary error messages to determine the cause of the error.

Action: No action is required.

ORA-16039: RFS request version mismatch

Cause: A request to archive a redo log to a redo transport destination failed because of an Oracle software version mismatch at the destination.

Action: Verify that a compatible version of Oracle software is running at the redo transport destination.

ORA-16040: Destination archive log file is locked.

Cause: The target archive log file was locked. This indicates that the file is being archived to another Remote File Server (RFS) process.

Action: Ensure that each remote redo transport destination uses a unique network service name.

ORA-16041: Remote File Server fatal error

Cause: The Remote File Server (RFS) process at a redo transport destination encountered a fatal error and was no longer available. Further redo transmission to this destination may not be possible.

Action: Refer to the appropriate RFS trace file located at the redo transport destination for details regarding the error encountered and take corrective action.

ORA-16042: user requested cancel immediate of redo apply

Cause: Redo apply was canceled immediately per user request. Processing of the current archive log file has been interrupted and, therefore, the database is in an inconsistent state.

Action: No action is required.

ORA-16043: Redo apply has been canceled.

Cause: Redo apply was canceled per user request or operation timeout.

Action: More specific messages will accompany this message.

ORA-16044: Destination *string* attribute cannot be specified at session level.

Cause: An attempt was made to modify a redo transport destination attribute using the ALTER SESSION command.

Action: Use the ALTER SYSTEM command to modify the destination attribute.

ORA-16045: circular redo transport destination dependency chain

Cause: An attempt was made to make a redo transport destination dependent on a redo transport destination that was already dependent on it.

Action: Ensure that no redo transport destination is dependent on any destination that is already dependent on it.

ORA-16046: Redo transport destination failed due to failed dependent destination.

Cause: The redo transport destination was dependent upon another destination, which failed. Therefore, this destination failed.

Action: No action required.

ORA-16047: DGID mismatch between destination setting and target database

Cause: The DB_UNIQUE_NAME specified for the destination did not match the DB_UNIQUE_NAME at the target database.

Action: Ensure that the DB_UNIQUE_NAME specified in the LOG_ARCHIVE_DEST_n parameter matches the DB_UNIQUE_NAME parameter defined at the destination.

ORA-16050: destination exceeded specified quota size

Cause: An archive log was attempted to be created in a destination with a specified maximum quota size. The creation of the archive log exceeded the specified quota size. Therefore, the destination has been made inaccessible to future archival operations.

Action: No action is required.

ORA-16051: parameter *string* contains an invalid delay time

Cause: The value for the specified LOG_ARCHIVE_DEST_n (n = 1...31) parameter contained a DELAY attribute with an invalid numeric value. The valid range is 0-5760 (in minutes).

Action: Correct the value for the indicated LOG_ARCHIVE_DEST_n parameter.

ORA-16052: DB_UNIQUE_NAME attribute is required.

Cause: DB_UNIQUE_NAME attribute was not specified. The value of the LOG_ARCHIVE_DEST_n parameter for each remote redo transport destination must contain the DB_UNIQUE_NAME attribute if the LOG_ARCHIVE_CONFIG parameter value contains the DG_CONFIG attribute.

Action: Use the DB_UNIQUE_NAME attribute to specify the DB_UNIQUE_NAME for the destination.

ORA-16053: DB_UNIQUE_NAME *string* is not in the Data Guard Configuration

Cause: The specified DB_UNIQUE_NAME is not in the Data Guard Configuration.

Action: If the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter is enabled, you must specify a valid DB_UNIQUE_NAME. The list of valid DB_UNIQUE_NAMES can be seen with the V\$DATAGUARD_CONFIG view. This problem can also occur when specifying a non-standby destination with an DB_UNIQUE_NAME attribute that does not match the DB_UNIQUE_NAME initialization parameter for the current instance.

ORA-16055: FAL request rejected

Cause: Fetch archive log (FAL) server rejected a redo gap fetch request from the client. This may have various causes.

Action: Check the alert log on the primary database. Take the appropriate action to solve the problem.

ORA-16056: Backup control file archival requires proper syntax.

Cause: An attempt was made to perform an online log file archival using a backup control file. However, the USING BACKUP CONTROLFILE syntax was not specified.

Action: Use the USING BACKUP CONTROLFILE clause to perform an online log file archival using a backup control file.

ORA-16057: server not in Data Guard configuration

Cause: The primary database or fetch archive log (FAL) server was not found in the Data Guard configuration of the standby database.

Action: Add the database unique name of the primary database or FAL server to the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG database initialization parameter.

ORA-16058: standby database instance is not mounted

Cause: The Remote File Server (RFS) process on the standby database received an internal error.

Action: Check the standby alert log and RFS trace files for more information.

ORA-16059: Cannot archive an empty or invalid log file.

Cause: Attempted to archive an empty or invalid log file. See trace file or alert log file for additional information.

Action: No action needed.

ORA-16060: Log file is current.

Cause: An attempt was made to archive current log file.

Action: No action is required.

ORA-16061: Log file status has changed.

Cause: The online log file was reclaimed as a new log file either before archival started or during the archival operation.

Action: No action is required.

ORA-16062: standby database not in Data Guard configuration

Cause: The standby database was not found in the Data Guard configuration of the server.

Action: Add the database unique name of the standby database to the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG database initialization parameter.

ORA-16064: Data Guard network decompression failed.

Cause: The incoming network buffer containing compressed redo could not be decompressed. See the alert log for additional information.

Action: As a workaround, disable compression on the database that is sending this redo, then call Oracle Support Services.

ORA-16065: remote archival disabled at standby destination

Cause: Receipt of remote archived REDO log files has been disabled at the associated standby destination host database.

Action: If appropriate change the associated archive log parameter to specify a local destination with the LOCATION keyword or defer the associated archive log destination. Or, if possible, set the standby REMOTE_ARCHIVE_ENABLE parameter to TRUE, or enable the RECEIVE attribute of the LOG_ARCHIVE_CONFIG parameter and restart the standby database instance before further REDO log file archivals occur.

ORA-16066: remote archival disabled

Cause: An archive log destination parameter has specified a remote destination with the SERVICE keyword. Remote archival of REDO log files has been disabled for this database. The associated archive log destination has been disabled.

Action: If appropriate change the archive log parameter to specify a local destination with the LOCATION keyword or (if appropriate) set the REMOTE_ARCHIVE_ENABLE parameter to TRUE, or enable the SEND attribute of the LOG_ARCHIVE_CONFIG parameter and restart the database instance before further REDO log file archivals occur.

ORA-16067: activation identifier mismatch in archive log *string*

Cause: The activation identifier contained in the archive log file header does not match the activation identifier of the database being recovered. The indicated archive log cannot be applied to the database.

Action: Locate the appropriate archive log for the database.

ORA-16068: redo log file activation identifier mismatch

Cause: The activation identifier of the indicated redo log file does not match the activation identifier of the database.

Action: n/a

ORA-16069: activation identifier mismatch

Cause: Redo transport failed because the activation identifier of the primary and physical standby databases did not match. This can happen if the physical standby database was not created from a backup of the primary database.

Action: Create a valid configuration and re-try the failed operation.

ORA-16070: parameter *string* contains an invalid REGISTER attribute value

Cause: The value for the specified LOG_ARCHIVE_DEST_n (n = 1...31) parameter contained a REGISTER attribute that specified an invalid file name template string. If specified, the REGISTER file name template string must indicate an O/S-specific file path name including thread and log sequence number substitution directives (%t, %T, %s, %S).

Action: Correct the value for the LOG_ARCHIVE_DEST_n parameter.

ORA-16071: Archived log file *string* was not found at dependency destination.

Cause: The specified archived log file was not found at a redo transport destination on which other destinations are dependent.

Action: Verify that all redo transport destinations that are dependent upon another destination or upon which other destinations are dependent are configured correctly.

ORA-16072: a minimum of one standby database destination is required

Cause: No standby database archive log destinations were specified.

Action: Specify a standby archive log destination in the initialization parameter file.

ORA-16073: archiving must be enabled

Cause: Online log file archiving is disabled.

Action: Enable log file archiving.

ORA-16074: No ARCH processes are active.

Cause: All ARCH processes have stopped.

Action: Restart the instance.

ORA-16075: standby database destination mismatch

Cause: Another instance had access to a standby database destination that this instance did not. If the initialization parameter LOG_ARCHIVE_CONFIG does not define a DG_CONFIG, this may be due to a standby database becoming unavailable recently.

Action: Ensure that at each instance the set of standby databases referred to by LOG_ARCHIVE_DEST_n initialization parameters is the same and define a DG_CONFIG at each instance to identify those databases explicitly.

ORA-16076: unknown standby database destination

Cause: A standby database destination was specified that was not accessed by another instance. If the initialization parameter LOG_ARCHIVE_CONFIG does not define a DG_CONFIG, this mismatch may be due to a standby database having been restarted recently.

Action: Ensure that at each instance the set of standby databases referred to by LOG_ARCHIVE_DEST_n initialization parameters is the same and define a DG_CONFIG at each instance to identify those databases explicitly.

ORA-16078: media recovery disabled

Cause: The database is not in ARCHIVELOG mode.

Action: Place the database in ARCHIVELOG mode.

ORA-16079: standby archival not enabled

Cause: The standby database did not have archival enabled.

Action: In order to allow the standby database to access the standby log files, the standby database must be in ARCHIVELOG mode.

ORA-16080: invalid LogMiner session *string* for APPLY

Cause: Logical standby apply engine was started with an invalid LogMiner session identifier.

Action: Fix the problem with the LogMiner session or create a new session.

ORA-16081: insufficient number of processes for APPLY

Cause: Logical standby apply engine was started with fewer processes available than needed.

Action: Increase the values of the initialization parameters PROCESSES and or the MAX_SERVERS parameter seen in the DBA_LOGSTDBY_PARAMETERS view.

ORA-16082: logical standby is not initialized correctly

Cause: Logical standby apply engine was started but it found inconsistencies in its metadata.

Action: Look in the trace file for more information.

ORA-16083: LogMiner session has not been created

Cause: Logical standby apply engine was started without creating a LogMiner session.

Action: Create a LogMiner session and restart the apply engine.

ORA-16084: an apply engine is already running

Cause: A logical standby apply engine was running when another was created.

Action: Shut down the previous apply engine before starting a new one.

ORA-16086: Redo data cannot be written to the standby redo log

Cause: The primary database was in MAXIMUM PROTECTION or MAXIMUM AVAILABILITY mode, but redo data could not be written to the standby redo log at the standby database(s).

Action: Check the Remote File Server (RFS) trace file for specific errors and reconfigure the standby redo log as appropriate.

ORA-16087: Switchover requires standby or current control file.

Cause: An attempt was made to perform a switchover operation using a backup or clone control file.

Action: Convert the backup control file into a current control file prior to attempting a switchover operation. A clone control file cannot be used for a switchover operation.

ORA-16088: archive log has not been completely archived

Cause: An attempt was made to register an archive log that has not been completely archived. The specified archive log may be a "current" log file.

Action: Specify a completed archive log.

ORA-16089: Archive log was already registered.

Cause: Attempted to register an archive log that matched a branch, thread, and sequence entry in the control file.

Action: Use V\$ARCHIVED_LOG fixed view to verify the archive log information.

ORA-16090: archive log to be replaced not created by managed standby process

Cause: An attempt was made to replace an archive log entry that was not originally created by the managed standby process.

Action: No user action required.

ORA-16091: dependent archive log destination already archived

Cause: An archive log destination contains a dependency to another archive log destination that has previously been archived.

Action: The parent archive log destination cannot be dependent on another archive log destination. Use the ALTER SYSTEM command to remove one of the dependency attributes.

ORA-16092: dependent archive log destination is not active

Cause: An archive log destination contains a dependency to another archive log destination that is not active"

Action: The child archive log destination cannot be dependent on another invalid archive log destination. Use the ALTER SYSTEM command to remove one of the dependency attributes.

ORA-16093: dependent archive log destination is not LGWR-enabled

Cause: An archive log destination contains a dependency to another archive log destination that is not enabled for the LGWR process"

Action: The child archive log destination cannot be dependent on another archive log destination not archived by the LGWR. Use the ALTER SYSTEM command to change the parent archive log to specify the LGWR process.

ORA-16094: Database shut down during archival operation.

Cause: The database was shut down while an online log file archival was active.

Action: None required.

ORA-16095: Dependent destination removal for inactivation

Cause: A dependent archive log destination was inactivated due to the parent archive log destination becoming inelligible for archival. This may be due to the parent destination being manually deferred by an application user.

Action: None required.

ORA-16096: ALTER DATABASE COMMIT TO SWITCHOVER TO PHYSICAL STANDBY

Cause: None

Action: Specify this command to switch the primary database to the physical standby role.

ORA-16097: ALTER DATABASE COMMIT TO SWITCHOVER TO PRIMARY

Cause: None

Action: Specify this command to switch the physical standby database to the primary role.

ORA-16098: Primary database has been shut down to prevent data loss.

Cause: The primary database was shut down because it was operating in maximum protection mode and no suitable standby databases were available to protect the primary database from data loss.

Action: Diagnose and correct whatever errors exist in the configuration or configure the primary database for maximum availability or maximum performance mode.

ORA-16099: internal error ORA-00600 occurred at standby database

Cause: The RFS process on the standby database received an internal error.

Action: Check the standby alert log and RFS trace files for more information.

ORA-16100: not a valid Logical Standby database

Cause: This database has not been completely configured as a Logical Standby database.

Action: Verify that the database is the intended Logical Standby database. Ensure that you already started logical standby apply with the ALTER DATABASE START LOGICAL APPLY INITIAL statement. See the Oracle8i SQL Reference manual for the statement syntax.

ORA-16101: a valid start SCN could not be found

Cause: An SCN from which to start could not be found.

Action: Register the first log file following the backup from which this database was generated. Using the ALTER DATABASE REGISTER LOGFILE statement to register the database is recommended. Alternatively, you can provide a starting SCN value with this statement.

ORA-16102: remote information is not available on the specified primary

Cause: The new primary has not completed generating the necessary information for the standby to begin consuming its log stream.

Action: Verify that the database link provided references a system that is about to become a new primary. Wait a short time before retrying the command to allow the primary some time to generate the necessary information.

ORA-16103: Logical Standby apply must be stopped to allow this operation

Cause: Logical Standby is currently applying changes. The apply must complete or be stopped to allow the requested operation.

Action: Execute the ALTER DATABASE STOP LOGICAL STANDBY APPLY statement, then re-enter or respecify the operation.

ORA-16104: Invalid Logical Standby parameter

Cause: The specified parameter is not valid.

Action: Check spelling or refer to the DBMS_LOGSTDBY PL/SQL package documentation for the correct statement syntax.

ORA-16105: Logical Standby is already running in background

Cause: A Logical Standby apply operation is already running.

Action: None

ORA-16106: loading previously applied transaction information

Cause: Logical Standby coordinator was performing a scan to identify previously applied transactions.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16107: all log data from primary has been processed

Cause: On the primary system, the log stream has been ended by the ALTER DATABASE COMMIT TO SWITCHOVER TO LOGICAL STANDBY command.

Action: Issue one of the following commands to make this standby a primary or resume applying changes from a new primary. ALTER DATABASE COMMIT TO SWITCHOVER TO LOGICAL PRIMARY; ALTER DATABASE START LOGICAL STANDBY APPLY NEW PRIMARY dblink;

ORA-16108: database is no longer a standby database

Cause: The current database has already been made a primary database.

Action: Issue the following commands to make this primary a standby. ALTER DATABASE COMMIT TO SWITCHOVER TO LOGICAL STANDBY; ALTER DATABASE START LOGICAL STANDBY APPLY NEW PRIMARY dblink;

ORA-16109: failed to apply log data from previous primary

Cause: Log data from previous primary could not be completely applied.

Action: Check DBA_LOGSTDBY_EVENTS for failures and take corrective action. Then, reissue command.

ORA-16110: user procedure processing of logical standby apply DDL

Cause: A user provided stored procedure has been called to inspect a DDL statement prior to it being processed.

Action: No action necessary, this informational statement is provided to record user involvement in the processing of a statement. Additional information can be found in the DBA_LOGSTDBY_EVENTS and the DBA_LOGSTDBY_SKIP views.

ORA-16111: log mining and apply setting up

Cause: This logical standby process is setting up to begin processing changes.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16112: log mining and apply stopping

Cause: This logical standby process is cleaning up and stopping Logical Standby apply.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16113: applying change to table or sequence *string*

Cause: The process is applying changes to a specific schema object.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16114: applying DDL transaction with commit SCN *string*

Cause: The process is applying a DDL change that's committed at the given SCN.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16115: *string*% of LogMiner dictionary loading is done

Cause: The process is loading dictionary information from the redo stream. This activity may take a few minutes.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16116: no work available

Cause: The process is idle waiting for additional changes to be made available.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16117: processing

Cause: The process is performing its primary function and is not waiting on any significant event.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16119: building transaction at SCN *string*

Cause: The transaction being committed at the given SCN is being prepared for apply.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16120: dependencies being computed for transaction at SCN *string*

Cause: The transaction committed at the given SCN is being analyzed for dependencies.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16121: applying transaction with commit SCN *string*

Cause: The transaction committed at the given SCN is being applied.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16122: applying large dml transaction at SCN *string*

Cause: A large transaction is being applied before the commit has been seen. The current redo being applied ends as the given SCN.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16123: transaction *string string string* is waiting for commit approval

Cause: The apply process is waiting for approval to commit a transaction. This transaction may depend on another or other synchronization activity may delay the committing of a transaction.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16124: transaction *string string string* is waiting on another transaction

Cause: The apply process is waiting to apply additional changes. This transaction likely depends on another.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16125: large transaction *string string string* is waiting for more data

Cause: The apply process is waiting until additional changes for a large transaction are retrieved from the log stream.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16126: loading table or sequence *string*

Cause: Information on the given table or sequence is being loaded into an in memory cache for future use.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16127: stalled waiting for additional transactions to be applied

Cause: This process is waiting for additional memory before continuing. Additional log information cannot be read into memory until more transactions have been applied to the database, thus freeing up additional memory.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes. If this message occurs often and changes are not being applied quickly, increase available SGA or the number of apply processes.

ORA-16128: User initiated stop apply successfully completed

Cause: Logical standby was shutdown in an orderly fashion.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16129: unsupported DML encountered

Cause: One or more DMLs to an unsupported table were encountered and skipped.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes. Optionally, check the DBA_LOGSTDBY_EVENTS view for more information including the impacted table owner and name.

ORA-16130: supplemental log information is missing from log stream

Cause: Supplemental logging is not enabled at the primary database.

Action: Issue the following command to enable supplemental logging. ALTER DATABASE ADD SUPPLEMENTAL LOG DATA (PRIMARY KEY, UNIQUE INDEX) COLUMNS;

ORA-16131: An error occurred during a Terminal Recovery of the standby.

Cause: An error occurred during a Terminal Recovery of the standby.

Action: Check the standby alert log additional information.

ORA-16132: An error occurred during activation of the standby.

Cause: An error occurred during activation of the standby database following a Terminal Recovery.

Action: Check the standby alert log additional information.

ORA-16133: Datafile *string* has incorrect terminal recovery stamp.

Cause: After activation of a standby database following a terminal recovery (recovery of standby using current logs), recovery of a datafile from before the activation must have completed the same terminal recovery to avoid corruption.

Action: A backup of the datafile taken after the terminal recovery and before activating the standby must be used for recovery.

ORA-16134: invalid MANAGED recovery FINISH option

Cause: A mode other than NOWAIT follows the FINISH keyword in RECOVER MANAGED STANDBY DATABASE statement.

Action: Specify either nothing or NOWAIT following FINISH.

ORA-16135: Invalid LOG_ARCHIVE_CONFIG modification while in protected mode

Cause: The LOG_ARCHIVE_CONFIG parameter can not be modified while any RAC instance is open in either maximum protection or maximum availability mode. Also, the parameter can not be modified in such way that would cause all destinations to fail while in maximum protection mode.

Action: Make the modification before the database is opened by any instance.

ORA-16136: Managed recovery is not active.

Cause: Attempted to cancel a managed recovery session but no managed recovery session was active.

Action: No action needed.

ORA-16137: invalid state change to a managed alternate destination

Cause: An attempt was made to explicitly change the state of a destination participating in an internally managed set of alternate destinations. For example, a destination in the ALTERNATE state was explicitly ENABLED. Doing so will thwart the internal mechanisms to manage these cooperating destinations.

Action: The destination must be reset before making this state change.

ORA-16138: end of log stream not received from primary

Cause: The standby system has not received notification that the primary system log stream has been terminated. A graceful switchover is not possible.

Action: Verify that the primary log stream has been terminated. Ensure that the standby has applied all necessary redo from the primary system and, if appropriate, reissue the graceful switchover command.

ORA-16139: media recovery required

Cause: An error has occurred while performing a switchover.

Action: If you were switching a primary database to the standby role, the conversion was successful, but one or more errors occurred after the conversion completed. See

the alert log for more information. You can proceed with switching the target standby database to the primary role, but you must address the errors reported at the old primary database before it can protect the new primary database. If you encountered this error while switching a physical standby database to the primary role, the switchover did not succeed because additional redo must be applied. Verify that redo apply is active and wait until the SWITCHOVER_STATUS column of the V\$DATABASE dynamic performance view reports TO_PRIMARY or SESSIONS_ACTIVE before retrying the switchover.

ORA-16140: standby online logs have not been recovered

Cause: The standby database has online logs containing redo that has not been recovered. Activating the standby would lose redo contained in the online logs.

Action: To recover the standby online logs issue the following command: ALTER DATABASE RECOVER MANAGED STANDBY DATABASE FINISH. Then reissue the ALTER DATABASE ACTIVATE STANDBY DATABASE command. To activate the standby without recovering the online logs, issue the following command: ALTER DATABASE ACTIVATE STANDBY DATABASE SKIP STANDBY LOGFILE.

ORA-16143: RFS connections not allowed during or after terminal recovery

Cause: An attempt was made, by an RFS process, to access a standby online log file during or after a terminal recovery.

Action: The primary must not attempt to archive to the standby after a terminal recovery.

ORA-16145: archival for thread# *string* sequence# *string* in progress

Cause: The indicated archived log file is not available for recovery due to the fact that it is still being archived.

Action: Verify that archival of the indicated log file has completed and reissue the RECOVER STANDBY DATABASE command.

ORA-16146: *string* control file enqueue unavailable

Cause: The control file enqueue was currently unavailable.

Action: No Action is required. The operation will be attempted at a later time.

ORA-16147: standby database referenced by multiple archive log destinations

Cause: Multiple archive log destinations reference the same standby database, using different service names. This is not allowed.

Action: Remove one of the duplicate archive log destinations.

ORA-16148: user requested expiration of managed recovery operation

Cause: The managed standby database recovery operation has been canceled per user specified EXPIRE option of the RECOVER MANAGED STANDBY DATABASE statement.

Action: No action is required.

ORA-16150: FINISH recovery performed on another, older standby database

Cause: An archive log containing a FINISH recovery indicator was received by a standby database that has received archive logs in the future of the received archive log. Because of the possibility that these future archive logs have been applied to this standby database, the received archive log must be rejected.

Action: No action is required.

ORA-16151: Managed Standby Recovery not available

Cause: The attempted operation failed because of a pending CANCEL of the managed standby recovery operation.

Action: Wait for the managed standby recovery session to end. Then retry the operation.

ORA-16152: standby database is in 'no-data-loss' protected mode

Cause: The attempted database operation is not allowed while the standby database is in 'no-data-loss' protected mode.

Action: Verify that the attempted database operation is warranted, ALTER DATABASE SET STANDBY DATABASE UNPROTECTED and reissue the statement.

ORA-16154: suspect attribute: *string*

Cause: Use of the indicated attribute is illegal in the given context.

Action: Make the appropriate changes and reissue the statement.

ORA-16156: LGWR archive log dependency not allowed if database is standby protected

Cause: The use of a LGWR archive log dependency is not allowed when the primary is protected by a standby database, as this requires use of the standby redo log files.

Action: Remove the LGWR archive log dependency and use normal LGWR archival instead.

ORA-16157: media recovery not allowed following successful FINISH recovery

Cause: A RECOVER MANAGED STANDBY DATABASE FINISH command has previously completed successfully. Another media recovery is not allowed.

Action: Issue one of these operations following a FINISH recovery: ALTER DATABASE OPEN READ ONLY or ALTER DATABASE COMMIT TO SWITCHOVER TO PRIMARY.

ORA-16159: Cannot change protected standby destination attributes

Cause: An attempt was made to change the LGWR/ARCH or SYNC/ASYNC attributes for a destination that is participating in the standby protection mode of the database.

Action: No action is required.

ORA-16160: Cannot change protected standby database configuration

Cause: An attempt was made to change the standby database configuration when the primary database is in standby protected mode.

Action: The standby database must be added to the configuration before the primary database is opened.

ORA-16161: Cannot mix standby and online redo log file members for group *string*

Cause: An attempt was made to add a log file member that did not match the other member types. This problem typically occurs when adding a standby log file member to an online redo log file group, or adding an online redo log file member to a standby redo log file group.

Action: Verify the log file group type using the TYPE column of the V\$LOG fixed view.

ORA-16162: Cannot add new standby databases to protected configuration

Cause: An attempt was made to enable a new standby database destination when the primary database is in standby protected mode.

Action: The standby database must be added to the configuration before the primary database is opened.

ORA-16163: LGWR network server host attach error

Cause: The LGWR network server could not attach to remote host

Action: The alert log contains more problem-specific information

ORA-16164: LGWR network server host detach error

Cause: The LGWR network server could not detach from remote host

Action: The alert log contains more problem-specific information

ORA-16165: LGWR failed to hear from network server

Cause: The LGWR lost its connection to the network server

Action: The alert log contains more problem-specific information

ORA-16166: LGWR network server failed to send remote message

Cause: The LGWR network server could not communicate with the remote host

Action: The alert log contains more problem-specific information

ORA-16167: LGWR network server could not switch to non-blocking mode

Cause: The LGWR network server could not switch to non-blocking mode

Action: The alert log contains more problem-specific information

ORA-16168: LGWR network server could not switch to blocking mode

Cause: The LGWR network server could not switch to blocking mode

Action: The alert log contains more problem-specific information

ORA-16169: LGWR network server invalid parameters

Cause: The LGWR network server could not switch to blocking mode

Action: The alert log contains more problem-specific information

ORA-16170: Terminal recovery may have left the database in an inconsistent state

Cause: When terminal recovery is invoked in a standby database without synchronous log shipping, in the rare case of the recovery session being in an unrecoverable state, terminal recovery cannot bring the standby database to a consistent SCN boundary if the primary database continues to have redo thread(s) open.

Action: Continue standby recovery with additional log shipping from primary.

ORA-16171: The RECOVER...FINISH request is not allowed due to gap in thread *string*, sequences *string-string*.

Cause: The specified RECOVER...FINISH request is not allowed due to a gap in redo. See the alert log for additional information.

Action: Copy missing archived logs from primary or another standby. Register the logs and reissue the RECOVER...FINISH command. If the logs are not available, issue the ALTER DATABASE RECOVER MANAGED STANDBY SKIP command to ignore the redo log files missing on the standby.

ORA-16172: archive logs detected beyond Terminal End-Of-Redo

Cause: An attempt to archive a Terminal End-Of-Redo archive log to a remote destination failed due the existence, at the remote site, of archive logs containing REDO in the future of the Terminal EOR.

Action: n/a

ORA-16173: incompatible archival network connections active

Cause: One of two situations can cause this error: 1) An attempt to start a Terminal Incomplete Recovery operation failed due to an active Remote File Server process detected. 2) An attempt to archive a Terminal End-Of-Redo archive log to a remote destination failed due to an active Remote File Server process at the remote site. An active Remote File Server (RFS) process implies connectivity with the primary database which may indicate that a Terminal Incomplete Recovery operation is not warranted.

Action: Verify the Managed Standby environment and re-evaluate the necessity of a Terminal Incomplete Recovery operation.

ORA-16174: user requested thread/sequence termination of managed recovery

Cause: The managed standby database recovery operation has been terminated per user specified THROUGH THREAD/SEQUENCE option of the RECOVER MANAGED STANDBY DATABASE statement.

Action: No action is required.

ORA-16175: cannot shut down database when media recovery is active

Cause: An attempt was made to shut down a standby database while media recovery was active.

Action: Cancel media recovery to proceed with the shutdown.

ORA-16176: background dictionary build cannot be running

Cause: The background process dedicated to dictionary build is active.

Action: wait and try it later.

ORA-16177: media recovery is not required

Cause: The THROUGH LAST SWITCHOVER clause of the ALTER DATABASE RECOVER MANAGED STANDBY DATABASE was specified and the database has been recovered to the most recent End-Of-Redo marker. All known archived logs have been applied. Managed recovery is not required.

Action: No action is necessary. The standby database may be activated as a new primary or may continue as a standby.

ORA-16178: Cannot specify remote destinations in manual archiving mode

Cause: The database is operating in manual archiving mode. Remote archive log destinations are not allowed in this mode.

Action: Use the ALTER DATABASE ARCHIVELOG command to place the database in automatic ARCHIVELOG mode, or defer the archivelog destinations that specify the SERVICE= attribute.

ORA-16179: incremental changes to "string" not allowed with SPFILE

Cause: Incremental changes to a log_archive_dest_n parameter cannot be made when using an SPFILE.

Action: Specify either LOCATION or SERVICE plus all other attributes to be set in one ALTER SYSTEM/SESSION SET command.

ORA-16180: number of processes specified is too large

Cause: The number of server processes available for Logical Standby is currently limited to 1024 LogMiner processes and 1024 apply processes or a total of 2048.

Action: Retry with a lower value.

ORA-16181: SGA specified for Logical Standby is too large

Cause: MAX_SGA is larger than 75% of the larger of initialization parameters SHARED_POOL_SIZE, MEMORY_TARGET, and SGA_TARGET.

Action: Specify the value of MAX_SGA to be less than 75% of the maximum of SHARED_POOL_SIZE, MEMORY_TARGET, and SGA_TARGET.

ORA-16182: Internal error on internal channel during remote archival

Cause: An internal error was encountered on the internal channel between LGWR and Network Server.

Action: No action is required, as an attempt will be made to re-archive the file that had this failure during archival.

ORA-16184: DB_UNIQUE_NAME string hashes to the same value as DB_UNIQUE_NAME string

Cause: The internal hash value generated for one DB_UNIQUE_NAME collided with the hash value of another DB_UNIQUE_NAME.

Action: Slightly modify one of the DB_UNIQUE_NAMES so it hashes to a different value.

ORA-16185: REMOTE_ARCHIVE_ENABLE and LOG_ARCHIVE_CONFIG mutually exclusive

Cause: Both the REMOTE_ARCHIVE_ENABLE and LOG_ARCHIVE_CONFIG parameters are defined in the initialization file and they are mutually exclusive.

Action: The REMOTE_ARCHIVE_ENABLE parameter has been made obsolete. Use only the LOG_ARCHIVE_CONFIG parameter.

ORA-16186: Modifying LOG_ARCHIVE_CONFIG requires SID='*' qualifier

Cause: The setting for the LOG_ARCHIVE_CONFIG parameter must be exactly the same on all RAC instances so the SID='*' qualifier is required.

Action: Re-enter the command using the SID='*' qualifier.

ORA-16187: LOG_ARCHIVE_CONFIG contains duplicate, conflicting or invalid attributes

Cause: The LOG_ARCHIVE_CONFIG parameter was specified with duplicate, conflicting or invalid attributes.

Action: Check the documentation regarding the correct specification of the LOG_ARCHIVE_CONFIG parameter.

ORA-16188: LOG_ARCHIVE_CONFIG settings inconsistent with previously started instance

Cause: The settings for the LOG_ARCHIVE_CONFIG parameter were inconsistent with the settings of a previously started instance. The settings for this parameter must be exactly the same for all instances.

Action: Ensure that all instances use the exact same LOG_ARCHIVE_CONFIG settings.

ORA-16191: Primary log shipping client not logged on standby

Cause: An attempt to ship redo to standby without logging on to standby or with invalid user credentials.

Action: Check that primary and standby are using password files and that both primary and standby have the same SYS password. Restart primary and/or standby after ensuring that password file is accessible and REMOTE_LOGIN_PASSWORDFILE initialization parameter is set to SHARED or EXCLUSIVE.

ORA-16192: Primary and standby network integrity mismatch

Cause: Standby wants sqlnet network integrity for redo shipment which is not configured properly at the primary.

Action: Check sqlnet.ora documentation regarding how to setup network integrity and set it up identically on both primary and standby. Restart primary and/or standby.

ORA-16193: Primary and standby network encryption mismatch

Cause: Standby wants sqlnet network encryption for redo shipment which is not configured properly at the primary.

Action: Check sqlnet.ora documentation regarding how to setup network encryption and set it up identically on both primary and standby. Restart primary and/or standby.

ORA-16194: Modifying DB_UNIQUE_NAME requires SID='*' qualifier

Cause: The setting for the DB_UNIQUE_NAME parameter must be exactly the same on all RAC instances so the SID='*' qualifier is required.

Action: Re-enter the command using the SID='*' qualifier.

ORA-16195: DG_CONFIG requires DB_UNIQUE_NAME be explicitly defined

Cause: The DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter can only be used if the DB_UNIQUE_NAME parameter has been explicitly defined.

Action: Explicitly define a valid DB_UNIQUE_NAME.

ORA-16196: database has been previously opened and closed

Cause: The instance has already opened and closed the database, which is allowed only once in its lifetime.

Action: Shut down the instance.

ORA-16197: Invalid DB_UNIQUE_NAME parameter specification

Cause: The DB_UNIQUE_NAME parameter has an invalid specification. The DB_UNIQUE_NAME parameter has a maximum length of 30 characters and the only characters allowed are alpha-numeric characters and "_", "\$" and "#".

Action: Check the documentation and re-enter the parameter.

ORA-16198: Timeout incurred on internal channel during remote archival

Cause: A timeout was incurred during remote archival.

Action: No action is required, as an attempt will be made to re-archive the file that had this failure during archival.

ORA-16199: Terminal recovery failed to recover to a consistent point

Cause: See alert log for more details

Action: Try to resolve the problem. Retry terminal recovery. If the problem occurs repeatedly and cannot be resolved, call Oracle support.

ORA-16200: Skip procedure requested to skip statement

Cause: Logical standby called a skip procedure that requested for a particular statement not to be applied.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16201: Skip procedure requested to apply statement

Cause: Logical standby called a skip procedure that requested for a particular statement to be applied.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16202: Skip procedure requested to replace statement

Cause: Logical standby called a skip procedure that requested for a particular statement to be replaced with a new statement.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16203: Unable to interpret skip procedure return values

Cause: The skip procedure returned conflicting or invalid values.

Action: Ensure that the new_statement output parameter is non-NULL when returning DBMS_LOGSTDBY.SKIP_ACTION_REPLACE and NULL otherwise. Also ensure SKIP_ACTION is specified correctly.

ORA-16204: DDL successfully applied

Cause: A DDL statement has successfully committed on the logical standby database.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16205: DDL skipped due to skip setting

Cause: A setting in the logical standby skip table indicates that this type of DDL should always be skipped.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16206: database already configured as Logical Standby database

Cause: This database has been previously configured as a Logical Standby database. A Logical Standby database is not capable of processing the requested operation.

Action: Ensure that you entered the command on the correct database as this database is a Logical Standby and is not capable of servicing the request.

ORA-16207: Logical standby dictionary build not permitted.

Cause: A dictionary build is currently in progress. Only one build can be active at a time.

Action: Wait for the active build to complete before invoking a new build.

ORA-16208: Logical standby dictionary build failed to start.

Cause: Failure to start the logical standby dictionary build process (LSP1)

Action: Check the accompanying messages, and the background process trace file. Correct the problem mentioned in the messages. Then shut down and restart the instance. If the trace file mentions any other background process messages, check the trace file for the mentioned process until the root message is found.

ORA-16209: Logical standby dictionary build failed to complete.

Cause: The logical standby dictionary build process terminated abnormally.

Action: Check the accompanying messages, and the background process trace file. Correct the problem mentioned in the messages. Then shut down and restart the instance. If the trace file mentions any other background process messages, check the trace file for the mentioned process until the root message is found.

ORA-16210: Logical standby coordinator process terminated with error

Cause: The logical standby coordinator process terminated abnormally.

Action: Check the accompanying messages, and the background process trace file. Correct the problem mentioned in the messages. Then shut down and restart the instance. If the trace file mentions any other background process messages, check the trace file for the mentioned process until the root message is found.

ORA-16211: unsupported record found in the archived redo log

Cause: Log apply services encountered a record in the archived redo log that could not be interpreted.

Action: 1. Use DBMS_LOGSTDBY.INSTANTIATE_TABLE to re-create the table on the standby database or simply drop the table if it's unimportant. 2. ALTER DATABASE START LOGICAL STANDBY APPLY; 3. Examine the current_scn column in the DBA_LOGSTDBY_EVENTS view to determine which log file contains the unsupported record. 4. Provide the log file to Oracle Support Services.

ORA-16212: number of processes specified for SQL Apply is too great

Cause: Logical standby apply engine was started with more processes requested than are available.

Action: Adjust the values of the initialization parameters PROCESSES or the MAX_SERVERS parameter seen in the DBA_LOGSTDBY_PARAMETERS view. If

you did not specify MAX_SERVERS, but instead specified PREPARE_SERVERS and APPLY_SERVERS through the dbms_logstdby.apply_set procedure, you will need to decrease either one or both of them.

ORA-16213: ddl encountered, stopping apply engine

Cause: stop_on_ddl callout specified and DDL was encountered.

Action: Either disable stop_on_ddl callout or remove DDL.

ORA-16214: apply stalled for apply delay

Cause: A delay has been specified on the primary database for this destination.

Action: Either turn off the delay on the primary or use DBMS_LOGSTDBY.APPLY_UNSET('APPLY_DELAY'); to override.

ORA-16215: history metadata inconsistency

Cause: internal error.

Action: This is an internal error. Contact Oracle support.

ORA-16216: Log stream sequence error

Cause: The log stream being processed did not follow the last processed stream.

Action: If the database is in an active configuration, issue an ALTER DATABASE START LOGICAL STANDBY APPLY NEW PRIMARY command to synchronize log stream data with the current primary database. If the database is not in an active configuration, manually add the next dictionary-begin log file that followed the previous log stream.

ORA-16217: prepare to switchover has not completed

Cause: An ALTER DATABASE PREPARE TO SWITCHOVER command was issued, but the prepare activity did not complete.

Action: Verify that the standby was prepared properly. You may cancel the prepare and perform an unprepared switchover which requires a database link to complete. Or reissue the prepare operation on the standby.

ORA-16218: This database is already preparing to switch over.

Cause: The database was already preparing to switch over and was not able to accommodate another prepare attempt.

Action: Cancel the current prepare attempt with the ALTER DATABASE PREPARE TO SWITCHOVER CANCEL command, then reissue the prepare request.

ORA-16219: This database is not preparing to switch over.

Cause: The database was not preparing to switch over. Therefore, it was not possible to cancel the SWITCHOVER command.

Action: Preparing for the SWITCHOVER command can be accomplished with the ALTER DATABASE PREPARE TO SWITCHOVER command.

ORA-16220: no failed transaction found

Cause: No failed transaction was found.

Action: Retry the ALTER DATABASE START LOGICAL STANDBY APPLY command without the SKIP FAILED TRANSACTION option.

ORA-16221: history table synchronization error

Cause: internal error.

Action: This is an internal error. Contact Oracle support.

ORA-16222: automatic Logical Standby retry of last action

Cause: A failure occurred while running Logical Standby apply. A new attempt is automatically being made by Logical Standby apply.

Action: No action is necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16223: DDL skipped, unsupported in current version

Cause: The given DDL statement was not supported in the current version of Logical Standby and was skipped.

Action: No action is necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16224: Database Guard is enabled

Cause: Operation could not be performed because database guard is enabled

Action: Verify operation is correct and disable database guard

ORA-16225: Missing LogMiner session name for Capture

Cause: An attempt was made to register the log file for Capture without a specified LogMiner session name.

Action: Specify a valid LogMiner session name to which the log file will be registered.

ORA-16226: DDL skipped due to lack of support

Cause: Logical Standby does not support this type of DDL in this version, so the DDL is skipped.

Action: The DBA may apply the DDL explicitly at a later time or a procedure to handle this type of DDL can be created. see DBMS_LOGSTDBY.SKIP procedure for details.

ORA-16227: DDL skipped due to missing object

Cause: A table or other database object upon which this DDL depended was not defined on the Logical Standby database.

Action: No action is necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16228: Insufficient recovery for logical standby

Cause: Insufficient amount of recovery was run for logical standby instantiation.

Action: Continue to recover the database using ALTER DATABASE RECOVER MANAGED STANDBY DATABASE.

ORA-16229: PDML child string string string for parent string string string cannot be skipped.

Cause: A request was made to skip a parallel DML child transaction id. This is not supported.

Action: Using the DBMS_LOGSTDBY.UNSKIP_TRANSACTION procedure, remove the child transaction id, then specify the parent transaction id using DBMS_LOGSTDBY.SKIP_TRANSACTION if appropriate.

ORA-16230: committing transaction *string string string*

Cause: Logical Standby apply was committing changes for the given transaction.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16231: Zero Data Loss Recovery Appliance (ZDLRA) is shutdown.

Cause: ZDLRA was shutdown, and is not accessible for 10 minutes.

Action: Automatic attempts to access the ZDLRA occurs every 10 minutes or the LOG_ARCHIVE_DEST_STATE_n parameter can be set to ENABLE to clear the error state.

ORA-16232: adding Logical Standby skip entry for table *string.string*

Cause: Table was previously unsupported due to datatype or storage attribute definitions. Table is now capable of being supported.

Action: To have Logical Standby maintain the table, import that table directly from the primary.

ORA-16233: The table *string.string* is unsupported now

Cause: Table was previously supported but now is unsupported due to altered datatype or storage attribute definitions.

Action: None

ORA-16234: restarting to reset Logical Standby apply

Cause: Logical Standby encountered a work load that required a restart to properly reschedule.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16235: DDL skipped because import has occurred

Cause: An object was exported from the primary database and imported into the Logical Standby database. This DDL occurred before the export.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16236: Logical Standby metadata operation in progress

Cause: The requested operation failed because an incompatible Logical Standby metadata operation such as DBMS_LOGSTDBY.SET_TABLESPACE, DBMS_LOGSTDBY.APPLY_SET or DBMS_LOGSTDBY.INSTANTIATE_TABLE was still running.

Action: Wait for the incompatible Logical Standby metadata operation to finish, then reenter or respecify the operation.

ORA-16237: SGA specified for Logical Standby is too small

Cause: MAX_SGA must be at least 10 Megabytes for proper functioning of Logical Standby.

Action: Specify the value of MAX_SGA to be greater than or equal to 10Mb. Alternatively, increase the shared_pool_size/sga_target so that 1/4 of it will amount to 10 Megabytes.

ORA-16238: attempt to use version 9 log

Cause: Version 9 log files are not supported.

Action: Use log files of a supported version.

ORA-16239: IMMEDIATE option not available without standby redo logs

Cause: The IMMEDIATE option cannot be used without standby redo logs.

Action: Do not specify the IMMEDIATE option unless standby redo logs are being used.

ORA-16240: Waiting for log file (thread# *string*, sequence# *string*)

Cause: Process is idle waiting for additional log file to be available.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16241: Waiting for gap log file (thread# *string*, sequence# *string*)

Cause: Reader process was idle waiting for the log file to fill the log sequence gap.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16242: Processing log file (thread# *string*, sequence# *string*)

Cause: Reader process was processing the log file.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16243: paging out *string* bytes of memory to disk

Cause: Builder process is paging out memory to free up space in lcr cache.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16245: change db_name to *string* in the server-side parameter file (SPFILE)

Cause: An ALTER DATABASE RECOVER TO LOGICAL STANDBY new-dbname command was successfully executed without a modifiable server parameter file (SPFILE).

Action: The server-side parameter file must be modified so that db_name is set to the given name before mounting the database again. You must do this by executing CREATE PFILE FROM SPFILE, editing the resulting text parameter file, and then executing CREATE SPFILE FROM PFILE.

ORA-16246: User initiated abort apply successfully completed

Cause: SQL Apply was stopped using the abort option.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16247: DDL skipped on internal schema

Cause: Logical Standby ignores DDLs on internal schemas such as SYS and SYSTEM. For a complete list of internal schemas ignored by Logical Standby perform the following query: `SELECT owner FROM dba_logstdby_skip WHERE statement_opt = 'INTERNAL SCHEMA'`.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16248: RFS connections not permitted during Terminal Apply

Cause: Writes by RFS are not permitted while Logical Standby is performing Terminal Apply.

Action: Permit any outstanding Logical Standby operations to complete.

ORA-16249: Terminal apply failed to complete during failover

Cause: The logical standby coordinator process terminated abnormally."

Action: Examine the `DBA_LOGSTDBY_EVENTS` view for the reason behind the abnormal shutdown, and resolve accordingly. Once the problem has been rectified, reissue the `ALTER DATABASE ACTIVATE LOGICAL STANDBY DATABASE` command to complete the failover.

ORA-16250: Failed to acquire starting scn of new log stream

Cause: The starting SCN for the new log stream could not be determined.

Action: Please reissue the `ACTIVATE LOGICAL STANDBY DATABASE` command.

ORA-16251: LSP1 Background Build not permitted

Cause: The LSP1 background process is not permitted to start because it had previously been attempted.

Action: This is an internal error. Contact Oracle support.

ORA-16252: Rebuild operation not permitted

Cause: The REBUILD operation is not permitted.

Action: Only on a primary database that has failed to complete the LogMiner dictionary build may the REBUILD operation take place. Reissue the `ACTIVATE LOGICAL STANDBY DATABASE` command if it previously failed to complete.

ORA-16253: Logical standby cannot start due to a prior, incomplete operation

Cause: A failure during a prior failover or configuration-related operation left the logical standby in an inconsistent state.

Action: Identify and reissue the operation before attempting to restart the logical standby apply engine.

ORA-16254: change db_name to *string* in the client-side parameter file (pfile)

Cause: An `ALTER DATABASE RECOVER TO LOGICAL STANDBY new-dbname` command was successfully executed without a server parameter file (spfile).

Action: The client-side parameter file must be edited so that `db_name` is set to the given name before mounting the database again.

ORA-16255: Log Auto Delete conflicts with another LogMiner session

Cause: Log Auto Delete cannot be on while another LogMiner session is running on the same database.

Action: Start Logical Standby without Log Auto Delete or destroy other LogMiner sessions first.

ORA-16256: Failure to complete standby redo log file archival after failover

Cause: The standby redo log files processed during the failover of a logical standby were not archived.

Action: Execute DBMS_LOGSTDBY.REBUILD to reattempt the archival.

ORA-16257: Switchover initiated stop apply successfully completed

Cause: SQL Apply was stopped because of a switchover.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16258: marking index unusable due to a constraint violation

Cause: A constraint violation occurred during the apply of a direct path load. The index will be marked unusable and the apply will be restarted.

Action: No action necessary. See alert log for index schema and name.

ORA-16259: Switchover to logical standby requires a log archive destination

Cause: A valid log archive destination was not found to which the local system could archive the end of redo (EOR) log file. A minimum of one destination is required.

Action: Ensure all log archive destinations are properly configured and, if applicable, have network connectivity before reissuing the ALTER DATABASE COMMIT TO SWITCHOVER TO LOGICAL STANDBY DDL operation.

ORA-16260: Waiting to replace partial or corrupt log file (thread# *string*, sequence# *string*)

Cause: LogMiner Reader process reached the end of a partial log file or encountered a corrupted block. It is now waiting for the log file to be recovered and reregistered.

Action: No action necessary. Once the fetch archive log (FAL) archiver replaces the log file, standby will automatically restart to process the replaced file.

ORA-16261: Identification key mismatch for table "*string*". "*string*".

Cause: Internal error in SQL Apply.

Action: Contact Oracle Support Services.

ORA-16262: Invalid value specified for Logical Standby parameter

Cause: The value specified in APPLY_SET is invalid for the parameter.

Action: Specify correct parameter value. Please refer to documentation on DBMS_LOGSTDBY PL/SQL package for details.

ORA-16263: Dynamic parameters can only be set on SQL apply instance

Cause: Attempt to set a Logical standby dynamic parameter on an instance other than where SQL apply coordinator is running.

Action: Connect to the instance where SQL apply coordinator is running and reissue the statement.

ORA-16264: invalid value for PREPARE_SERVERS parameter

Cause: attempt to set PREPARE_SERVERS parameter to zero or to a value which would require MAX_SERVERS to be increased.

Action: set PREPARE_SERVERS parameter to a non zero value and or increase MAX_SERVERS parameter accordingly.

ORA-16265: Unsupported PL/SQL procedure encountered

Cause: Apply encountered an unsupported procedure from an Oracle supplied PL/SQL package that is otherwise supported

Action: Either add a skip rule for this procedure or manually apply the procedure and restart apply skipping the failed transaction Please refer to documentation on the PL/SQL package for details.

ORA-16266: Cannot instantiate a Logical Standby from another Logical Standby

Cause: An instantiation of a Logical Standby has been attempted for another database with the Logical Standby role, which is not supported.

Action: Instantiate a Logical Standby database only from a Primary Database.

ORA-16267: Cannot instantiate a Logical Standby during a switchover

Cause: An instantiation of a Logical Standby has been attempted for a primary database that is in the middle of a switchover.

Action: Execute ALTER DATABASE PREPARE TO SWITCHOVER CANCEL to cancel the switchover, and attempt the instantiation again.

ORA-16268: user procedure processing of logical standby apply PL/SQL

Cause: A user-provided stored procedure was called to inspect a PL/SQL statement prior to the statement being processed.

Action: No action necessary, this informational statement is provided to record user involvement in the processing of a statement. Additional information can be found in the DBA_LOGSTDBY_EVENTS and the DBA_LOGSTDBY_SKIP views.

ORA-16269: PL/SQL procedure skipped due to failure on primary database

Cause: Because the PL/SQL procedure failed when executed on the primary database, it could not be executed on the standby database.

Action: This informational statement is provided to record the event for diagnostic purposes. The failed PL/SQL procedure needs to be investigated to ensure it did not commit interesting data before it failed.

ORA-16270: PL/SQL procedure skipped due to unmaintained standby objects

Cause: Because the PL/SQL procedure manipulated objects not being maintained by the standby database, it was skipped.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16271: PL/SQL successfully applied

Cause: A PL/SQL procedure was successfully applied on the logical standby database.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16272: PL/SQL procedure skipped due to skip setting

Cause: A setting in the logical standby skip table indicated that this PL/SQL procedure should always be skipped.

Action: No action necessary, this informational statement is provided to record the event for diagnostic purposes.

ORA-16273: invalid value for APPLY_SERVERS parameter

Cause: attempt to set APPLY_SERVERS parameter to zero or to a value which would require MAX_SERVERS to be increased.

Action: set APPLY_SERVERS parameter to a non zero value or increase MAX_SERVERS parameter accordingly.

ORA-16274: failure to perform operation on all Oracle RAC instances

Cause: One or more instances encountered an error while performing an operation.

Action: Ensure every instance in the Oracle RAC meets the requirements for the operation, and retry the operation.

ORA-16275: prior failed CTAS detected and pre-existing table dropped

Cause: During the processing of a CTAS operation, an existing empty table with the same name and attributes as the CTAS source table was found, and the table was dropped.

Action: No action is necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16276: specified database link does not correspond to primary database

Cause: The database link specified to DBMS_LOGSTDBY.INSTANTIATE_TABLE did not link to the primary database for this logical standby database.

Action: Specify a database link that corresponds to the primary database for this logical standby database. The link should have privileges to read and lock the table being instantiated, as well as the SELECT_CATALOG_ROLE.

ORA-16277: specified table is not supported by logical standby database

Cause: A call was made to DBMS_LOGSTDBY.INSTANTIATE_TABLE to instantiate an unsupported table on the logical standby database. Tables with unsupported data types cannot be replicated to a logical standby database.

Action: Specify a table which is not listed in the DBA_LOGSTDBY_UNSUPPORTED_TABLE view.

ORA-16278: specified table has a multi-object skip rule defined

Cause: A table that is instantiated via DBMS_LOGSTDBY.INSTANTIATE_TABLE must not have any skip rules defined with wildcard characters.

Action: Remove or rewrite any skip rules defined for the specified table so that they no longer contain wildcard characters, or no longer affect the specified table.

ORA-16279: supplied dblink does not have sufficient privileges

Cause: A dblink was specified that lacked one or more of the CONNECT, RESOURCE, or SELECT_CATALOG_ROLE roles or that connects to a user with insufficient privileges to lock the table.

Action: Grant the necessary privileges to the dblink and the user to which the dblink connects and retry the operation.

ORA-16280: cannot change master key on a logical standby database

Cause: An attempt was made to change the master key for transparent data encryption on a logical standby database.

Action: Set GUARD to NONE and reissue the command. This prevents you from replicating tables with encrypted columns from the primary database.

ORA-16281: missing identification key for table "*string*". "*string*".

Cause: No identification key was created for specified table.

Action: Create a primary key or unique index for specified table.

ORA-16282: operation not permitted during rolling upgrade

Cause: An operation was attempted that is not supported during a rolling upgrade.

Action: Retry the operation upon completion of the upgrade.

ORA-16283: operation not permitted on non-apply instance

Cause: An operation was attempted that is not supported since it requires a running logical apply on the local instance.

Action: Retry the operation on the instance on which the apply engine is running.

ORA-16284: timed out waiting for an in-progress operation to complete

Cause: An operation timed out waiting for another operation to complete.

Action: Retry the operation when the in-progress operation has completed.

ORA-16285: operation not permitted due to inconsistent role state

Cause: A prior attempt to change the role of this database has failed before the new role state could be fully committed.

Action: Retry the previously attempted role-related operation before attempting the current operation.

ORA-16286: operation not permitted due to lack of synchronized destination

Cause: A synchronized log archive destination was not found to which the end-of-redo log file could be archived.

Action: Before re-attempting the operation, wait at least one minute for the Remote File Server to automatically recover any missing log files or manually recover and register any missing log files with logical standby.

ORA-16287: operation not permitted due to active apply state

Cause: An operation was attempted that was not supported while the logical standby database had an active apply state.

Action: Confirm the procedures used to configure the logical standby database. Procedures which attempt to reconfigure a logical standby database for a new primary database may encounter this error if an error in a preliminary step was encountered.

ORA-16288: DDL skipped due to missing edition "*string*"

Cause: The edition in which the DDL was performed on the primary did not exist on the standby database.

Action: No action is necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16289: unable to access Pluggable Database "*string*"

Cause: Logical standby attempted to access a Pluggable Database that did not exist.

Action: Create or plug in the specified Pluggable Database or add an appropriate skip rule and then restart logical standby.

ORA-16290: cannot alter the session logical replication state within a transaction

Cause: A transaction was already in progress.

Action: Commit or rollback the transaction and then reexecute.

ORA-16291: operation not permitted due to incomplete setup

Cause: An operation was denied due to the logical standby being in a transitional state.

Action: Perform any multistep procedures such as instantiation, switchover, or failover to completion as written in the documentation.

ORA-16292: cannot replicate ALTER TABLE ADD COLUMN with sequence default value

Cause: The logical standby database attempted to replicate an unsupported DDL statement. The DDL added a column with a sequence as the default with compatibility set to a release earlier than 12.2.0.2.0.

Action: The table must be re-instantiated from the primary database using `DBMS_LOGSTDBY.INSTANTIATE_TABLE()`.

ORA-16293: cannot replicate a failed ALTER TABLE ADD COLUMN

Cause: The logical standby database attempted to replicate a failed ALTER TABLE ADD COLUMN for an identity column, but the operation could not be rolled back on the target.

Action: The added columns must be dropped from the table on the target before restarting apply, or the table must be reinstantiated.

ORA-16294: operation not allowed on a LogMiner table

Cause: An attempt was made to use the SQL command ALTER TABLE or DROP TABLE on a table used for LogMiner metadata.

Action: Connect as SYS to perform this operation.

ORA-16295: cannot create a synonym with same name as LogMiner table

Cause: An attempt was made to create a synonym with the same name as a table used by LogMiner.

Action: Choose a different name for the synonym.

ORA-16300: LSBY architected tracing event

ORA-16302: extended data type support is not supported for specified table

Cause: A call was made to DBMS_LOGSTDBY.EDS_ADD_TABLE for a table that was not supported for such an operation. The table either does not have a primary key or it has a data type not supported by this procedure.

Action: Specify a table for which support exists in EDS_ADD_TABLE.

ORA-16303: specified table already has extended data type support

Cause: A call was made to DBMS_LOGSTDBY.EDS_ADD_TABLE for a table that already had EDS added on the local database.

Action: None

ORA-16304: procedure must first be called on primary database

Cause: A call was made to DBMS_LOGSTDBY.EDS_ADD_TABLE on a logical standby database without having first called it on the primary database.

Action: Call DBMS_LOGSTDBY.EDS_ADD_TABLE on the primary database and then retry on the standby.

ORA-16305: procedure not supported on a logical standby

Cause: A call was made to DBMS_LOGSTDBY.EDS_EVOLVE_TABLE on a logical standby database which can only be called on a primary database

Action: Call DBMS_LOGSTDBY.EDS_EVOLVE_TABLE on the primary database

ORA-16306: specified table does not have a primary key

Cause: A call was made to DBMS_LOGSTDBY.EDS_ADD_TABLE for a table that did not have a primary key.

Action: Add a primary key and retry the operation.

ORA-16307: TSE key *string* successfully applied

Cause: An ALTER SYSTEM SET ENCRYPTION KEY statement was successfully committed on the logical standby database.

Action: No action necessary. This informational statement is provided to record the event for diagnostic purposes.

ORA-16308: specified table has extended data type support

Cause: A call was made to DBMS_LOGSTDBY.INSTANTIATE_TABLE for a table that is being maintained by extended data type support.

Action: Call DBMS_LOGSTDBY.EDS_REMOVE_TABLE followed by either DBMS_LOGSTDBY.EDS_ADD_TABLE or a retry of the operation.

ORA-16309: extended data type support evolve operation not yet started

Cause: A call was made to finish an extended data type support evolve operation without having first started the operation.

Action: Call DBMS_LOGSTDBY.EDS_EVOLVE_MANUAL with START option and then retry.

ORA-16310: extended data type support evolve operation in progress

Cause: An extended data type support evolve operation was started but not yet completed.

Action: Wait a few seconds and retry the command if automatic evolve has been enabled or call DBMS_LOGSTDBY.EDS_EVOLVE_MANUAL with the FINISH option and then retry.

ORA-16311: materialized view log already exists

Cause: A call was made to DBMS_LOGSTDBY.EDS_ADD_TABLE for a table with a LOB that requires the creation of a specifically-defined materialized view log but one already exists.

Action: Drop the existing materialized view log and retry the operation.

ORA-16330: error in container "*string*"

Cause: An operation was attempted on a container and an error occurred.

Action: Address the failure condition and then retry.

ORA-16331: container "*string*" is not open

Cause: An operation was attempted on a container. However, the container was not open.

Action: Open the container and then retry.

ORA-16332: logical standby encountered non-fatal error ORA-*string* during DDL execution

Cause: Logical standby apply encountered a non-fatal error during DDL execution and continued to process subsequent transactions.

Action: This error is informational only. No user action is required.

ORA-16333: _MAX_LOG_LOOKBACK parameter not sufficiently larger than MAX_SGA

Cause: _MAX_LOG_LOOKBACK or MAX_SGA parameter was set to a value that will lead to decreased performance.

Action: Reset parameters such that _MAX_LOG_LOOKBACK is at least 5 times the value of MAX_SGA.

ORA-16334: skip procedure does not exist

Cause: The specified skip procedure did not exist.

Action: Ensure that the specified skip procedure exists and is accessible by the calling user.

ORA-16393: Redo log management parameter setting is invalid.

Cause: The value specified for the redo log management parameter had invalid attributes or was not specified with SID=*" in a cluster configuration.

Action: Check the documentation regarding the correct specification for redo log management.

ORA-16395: ADG standby session terminated

Cause: ADG standby session was stopped because server detected that the primary database connection associated with redirected statement execution is lost.

Action: Reconnect to ADG standby database and re-run the statement.

ORA-16397: statement redirection from Oracle Active Data Guard standby database to primary database failed

Cause: The statement redirection failed because of one of the following reasons: 1. The primary database connect string was not established. 2. The primary database could not be reached. 3. The undo-mode or incarnation were not the same. 4. The current user and logged-in user were not the same. 5. Redirecting PL/SQL execution having bind variable was not supported.

Action: Run the statement after fixing the condition that caused the failure.

ORA-16398: online log has been reused and archived log cannot be found

Cause: ASYNC redo transport was unable to find either an online log or archived redo log that represents the current live redo sequence number.

Action: No action is required.

ORA-16399: current redo has moved to a new branch

Cause: A new branch was detected by ASYNC redo transport. No further redo will be transferred from the old branch. ASYNC redo transport will commence on the new branch.

Action: No action is required.

ORA-16400: quota attributes are not allowed with DB_RECOVERY_FILE_DEST

Cause: Quota attributes for the destination parameters are not allowed when the parameter DB_RECOVERY_FILE_DEST is defined.

Action: No action is required.

ORA-16401: archive log rejected by Remote File Server (RFS)

Cause: An attempt was made to re-archive an existing archive log.

Action: See alert log and trace file for more details. No action is necessary. This is an informational statement provided to record the event for diagnostic purposes.

ORA-16402: TRANSPORT=ONDEMAND is unsupported.

Cause: The ARCHIVELOG destination TRANSPORT=ONDEMAND attribute was specified on the primary database.

Action: Use of the TRANSPORT=ONDEMAND is no longer supported. Remove this attribute from the LOG_ARCHIVE_DEST_n initialization parameter.

ORA-16403: shut down in progress - remote connection is not permitted

Cause: A redo transport session could not be started because the database was shutting down.

Action: Wait for the remote instance to be restarted, or contact your DBA.

ORA-16406: primary and standby database software version mismatch

Cause: The primary and standby databases were not running compatible versions of Oracle server software.

Action: Install the correct Oracle server software and try again.

ORA-16407: An archive log from an earlier redo branch has been rejected

Cause: An archive log from a redo branch that is earlier than the one that the standby database is currently applying was rejected.

Action: No action is required.

ORA-16408: Archive log from an incompatible redo branch has been rejected.

Cause: An archive log from a redo branch was rejected. The redo branch was incompatible with the standby database where it was attempted to be applied.

Action: No action is required.

ORA-16409: archive log switchover reference number mismatch

Cause: The archive log switchover reference numbers of the primary and standby database did not match. Remote archival of redo log files is not allowed to incompatible standby database instances.

Action: No action is required.

ORA-16411: TRANSPORT=ONDEMAND is unsupported

Cause: The archivelog destination TRANSPORT=ONDEMAND attribute was specified on the primary database.

Action: Use of the TRANSPORT=ONDEMAND is no longer supported. Remove this attribute from the LOG_ARCHIVE_DEST_n initialization parameter.

ORA-16412: TRANSPORT=ONDEMAND is unsupported

Cause: The archivelog destination TRANSPORT=ONDEMAND attribute was specified on the primary database.

Action: Use of the TRANSPORT=ONDEMAND is no longer supported. Remove this attribute from the LOG_ARCHIVE_DEST_n initialization parameter.

ORA-16413: TRANSPORT=ONDEMAND is unsupported

Cause: The archivelog destination TRANSPORT=ONDEMAND attribute was specified on the primary database.

Action: Use of the TRANSPORT=ONDEMAND is no longer supported. Remove this attribute from the LOG_ARCHIVE_DEST_n initialization parameter.

ORA-16416: no viable *strings* switchover targets available

Cause: Switchover failed because standby databases of the appropriate type were not available.

Action: Check the alert log for errors, correct the problem, and retry the switchover.

ORA-16417: Activation occurred after recovery from standby redo log files; a full database backup is required

Cause: Activation occurred after recovery from standby redo log files.

Action: Take a full database backup.

ORA-16419: Snapshot standby must be converted to a physical standby database.

Cause: The database was not a physical standby database.

Action: Convert to physical standby database and retry the operation.

ORA-16420: fast-start failover target cannot be converted to snapshot standby

Cause: The database chosen for conversion to a snapshot standby was the fast-start failover target standby database.

Action: Choose another physical standby database and retry the operation.

ORA-16424: RECOVER FINISH cannot complete due to a redo gap.

Cause: RECOVER FINISH failed because there was a redo gap on the standby database.

Action: Resolve redo gap or issue ALTER DATABASE ACTIVATE STANDBY DATABASE to perform an immediate failover with some data loss.

ORA-16425: a RECOVER FINISH failed because recovery incarnation *string* is not the target incarnation *string*

Cause: RECOVER FINISH failed because a new incarnation existed on the physical standby database. This situation could happen if two failures occurred in a short time and the current failover target was still in the previous incarnation.

Action: Issue real-time apply recovery and see if recovery can proceed on the new branch by checking if logs on the new branch are applied by recovery. If so, issue another RECOVER FINISH. Otherwise, issue ALTER DATABASE ACTIVATE STANDBY DATABASE.

ORA-16426: recovery requested an incorrect log from which to recover redo

Cause: Media recovery selected an incorrect log. See the alert log file for additional information.

Action: Verify that the appropriate log has been properly registered and restart media recovery.

ORA-16427: Redo gap is too large to resolve.

Cause: The redo transport lag at this database was too large for automatic redo gap detection to take place.

Action: Re-create this standby database from a current backup copy of the primary database.

ORA-16431: cannot expand control file

Cause: Additional redo log threads were added on the primary database after the standby control file was created.

Action: Shut down the standby database and replace the control file with a new standby control file from the primary database or change the COMPATIBLE parameter to 10.2.0 or above and restart the standby database.

ORA-16432: inconsistent set of logs applied at a standby database

Cause: Redo apply stopped because it detected an inconsistency in the progression of the SCNs. If this database is a bystander standby database, this is most likely due to a failover operation in which incompatible logs were applied from the old and new primary databases.

Action: Determine the STANDBY_BECAME_PRIMARY_SCN by selecting it from V\$DATABASE on the new primary database. Then, flashback the target database to this SCN and use RMAN to delete all archive logs at or beyond this SCN. Finally, fetch all terminal end of redo (EOR) logs corresponding to the failover operation from the new primary and register all these logs at the target database. Restart redo apply.

ORA-16433: The database or pluggable database must be opened in read/write mode.

Cause: An attempt was made to open the database or pluggable database in read-only mode after an operation that requires the database or pluggable database be opened in read/write mode.

Action: Open the database in read/write mode. The database can then be opened in read-only mode.

ORA-16434: archive log for branch *string* thread *string* sequence *string* cannot be queued

Cause: An archive log needed by the standby database to resolve a redo gap was not found on the source database. This is a fatal situation during a switchover or far sync instance assisted failover because the source database waits for the target standby to be clear of all archive log gaps before allowing the operation to proceed. If a redo gap cannot be resolved during these operations, the operation cannot succeed so it must be failed.

Action: If the specified log is listed in V\$ARCHIVED_LOG for the DEST_ID of the local destination on the source database but no longer exists at that location on disk, the archived log can be copied back to that location to allow gap processing to automatically resolve the gap. If the specified log has been purged from V\$ARCHIVED_LOG, the archived log can be copied to disk on either the source or destination database and registered using the ALTER DATABASE REGISTER OR REPLACE LOGFILE command.

ORA-16436: an ALTER DATABASE...RECOVER FINISH request could not start

Cause: ALTER DATABASE...RECOVER FINISH failed to start because the standby database was missing redo changes below the checkpoint of data files or because there was no standby redo log file available to create an EOR log. See the trace file for additional information.

Action: Issue ALTER DATABASE ACTIVATE STANDBY DATABASE command instead or add one or more standby redo logs and retry command.

ORA-16437: No active coordinator RFS for current operation

Cause: The coordinator Remote File Server (RFS) for this parallel archival either abnormally terminated or ran down before this subordinate RFS could begin its leg of the operation.

Action: No explicit user action is required.

ORA-16438: Switchover to primary cannot be executed at this time

Cause: ALTER DATABASE COMMIT TO SWITCHOVER TO PRIMARY could not be executed because an incompatible operation such as RMAN restore or flashback was in progress. See the database alert log for details.

Action: Wait for the incompatible operation to complete. The files that have been flashed back or restored need recovery before you can reissue ALTER DATABASE COMMIT TO SWITCHOVER TO PRIMARY statement. Start redo apply and verify that the SWITCHOVER_STATUS column of the V\$DATABASE view reports TO_PRIMARY or SESSIONS_ACTIVE before retrying ALTER DATABASE COMMIT TO SWITCHOVER TO PRIMARY.

ORA-16439: Standby not ready to receive redo at this time

Cause: A logical standby or down stream capture database was not in a state where it could accept a request to receive redo from another database. This was likely due to the database not being open.

Action: See the database alert log at the receiving side of the transfer for details of why the database was not ready. If the database was mounted but not open, open it

to clear the problem. The initialization parameter LOG_ARCHIVE_DEST_STATE_n at the sending site may need to be set to ENABLE.

ORA-16440: Control file is corrupt.

Cause: ALTER SYSTEM FLUSH REDO TO STANDBY failed because the control file was corrupt.

Action: Restore the current control file at the primary database and then reissue ALTER SYSTEM FLUSH REDO TO STANDBY from a mounted primary instance.

ORA-16441: Current log *string* for thread *string* sequence *string* is invalid.

Cause: ALTER SYSTEM FLUSH REDO TO STANDBY failed because the current redo log file was corrupt.

Action: Restore the current log at the primary database, and then reissue ALTER SYSTEM FLUSH REDO TO STANDBY from a mounted primary instance.

ORA-16442: an ALTER SYSTEM FLUSH REDO TO STANDBY succeeded, but some redo has not been applied

Cause: The target standby database did not apply all received redo.

Action: Allow the target standby database to apply all redo and then reissue the ALTER SYSTEM FLUSH REDO TO STANDBY statement.

ORA-16443: could not switch out of log *string* thread *string*

Cause: ALTER SYSTEM FLUSH REDO TO STANDBY could not switch out of the current log.

Action: This can happen if there are one or more errors during archival of the current log at the primary database. Reissue ALTER SYSTEM FLUSH REDO TO STANDBY after resolving the archiving errors.

ORA-16444: ALTER SYSTEM FLUSH REDO TO STANDBY failed due to a corrupted control file or online log file.

Cause: A flush redo operation discovered SCNs greater than a previously failed flush redo operation.

Action: This can happen if there are one or more errors that have corrupted the control file or online redo logs. In these cases, flush redo operation is not possible.

ORA-16445: Database has to be mounted and cannot be open

Cause: ALTER SYSTEM FLUSH REDO TO STANDBY required that the database be mounted, but not opened.

Action: Mount the database and then reissue the operation.

ORA-16446: Target database was not a standby database

Cause: ALTER SYSTEM FLUSH REDO TO STANDBY failed because the target database is not a standby database.

Action: Reissue the ALTER SYSTEM FLUSH REDO TO STANDBY statement and specify a standby database as the target database.

ORA-16447: Redo apply was not active at the target standby database

Cause: ALTER SYSTEM FLUSH REDO TO STANDBY failed because redo apply is not active at the target database.

Action: Start redo apply at the standby database and reissue the ALTER SYSTEM FLUSH REDO TO STANDBY statement, or reissue the ALTER SYSTEM FLUSH REDO TO STANDBY statement with the NO CONFIRM APPLY clause.

ORA-16448: media recovery is still active after *string* seconds

Cause: The media recovery did not stop after the timeout.

Action: See the trace file for more information. Once the media recovery process is no longer active, retry the command.

ORA-16449: incomplete redo thread enable operation

Cause: The switchover operation could not continue because it failed to disable a thread that was left in an incomplete thread enable state.

Action: Check alert log for more details.

ORA-16451: A remote archival request has timed out.

Cause: When opening or closing a database instance, the database may wait for up to 1 minute for pending remote archival requests to be performed before proceeding with the operation. This error was reported because that time limit was exceeded.

Action: This is an informational message so no action is required.

ORA-16454: standby redo log could not be selected

Cause: Selection of SRL (standby redo log) failed. Possible causes: * insufficient SRL files, * the SRL size did not match the source database online redo log (ORL) size, * the SRL block size did not match the source database ORL block size.

Action: Examine the trace file for additional information and ensure that: * the SRL size and block size match the ORL size and block size at the source, and * there are sufficient SRL files for each thread at the source.

ORA-16455: switchover to standby failed

Cause: An attempt to switchover to a physical standby database failed.

Action: Check alert log for more details. Issue the SHUTDOWN ABORT command on the database before issuing another ALTER DATABASE COMMIT TO SWITCHOVER TO STANDBY command.

ORA-16456: switchover to standby in progress or completed

Cause: The requested operation was not allowed because a switchover to standby operation was either in progress or had completed.

Action: Issue the SHUTDOWN ABORT command on the database after switchover operation completes.

ORA-16459: recovery already beyond standby failover

Cause: Redo Apply stopped because it detected that it had proceeded beyond a standby failover operation.

Action: Determine the STANDBY_BECAME_PRIMARY_SCN by selecting it from V\$DATABASE on the new primary database. Then, flashback the target database to this SCN and use RMAN to delete all archive logs at or beyond this SCN. Finally, fetch all terminal end-of-redo (EOR) logs corresponding to the failover operation from the new primary database and register all these logs at the target database. Restart Redo Apply.

ORA-16461: database not flashed back or recovered to a consistent point

Cause: ALTER DATABASE CONVERT TO STANDBY command failed because either the database was not properly flashed back to STANDBY_BECAME_PRIMARY_SCN, or at least one of the online data files was not current.

Action: Flashback database to STANDBY_BECAME_PRIMARY_SCN and retry the ALTER DATABASE CONVERT TO STANDBY command.

ORA-16463: invalid target database name

Cause: ALTER DATABASE FAILOVER TO <target_db_name> or ALTER DATABASE SWITCHOVER TO <target_db_name> FORCE command failed because the target_db_name was invalid. The target_db_name must be the same as the name of the database on which the SQL command is issued.

Action: Change the target database name and reissue the command.

ORA-16464: operation must be initiated on a physical standby database

Cause: An attempt was made to issue the ALTER DATABASE FAILOVER TO <target_db_name> or the ALTER DATABASE SWITCHOVER TO <target_db_name> FORCE command on a database other than a physical standby database.

Action: Issue the command on a physical standby database.

ORA-16465: operation must be initiated on an open primary database

Cause: An attempt was made to issue the ALTER DATABASE SWITCHOVER TO <target_db_name> [VERIFY] or ALTER DATABASE COMMIT TO SWITCHOVER TO STANDBY command on a database other than an open primary database.

Action: Issue the command on an open primary database.

ORA-16466: invalid switchover target

Cause: The switchover target was not a valid, enabled, or active standby database.

Action: Fix the problem in the switchover target and reissue the command.

ORA-16467: switchover target is not synchronized

Cause: The switchover target was not synchronized with the primary database.

Action: Wait until the switchover target is synchronized with the primary database, then reissue the command.

ORA-16468: error connecting to switchover target *string*

Cause: The primary database could not connect to the switchover target.

Action: Check the alert log for detailed errors.

ORA-16469: switchover target version number is lower than 12

Cause: The switchover target version number was lower than 12.

Action: Upgrade the switchover target to a higher release.

ORA-16470: Redo Apply is not running on switchover target

Cause: The switchover target was not running Redo Apply.

Action: Start Redo Apply on the switchover target and reissue the command.

ORA-16471: cannot convert switchover target *string* to a primary database

Cause: Switchover failed because the switchover target could not convert to a primary database.

Action: Check the database role of the switchover target. If the switchover target database role is standby, do one of the following: - Fix the problem shown in the alert log. - Issue the remedial ALTER DATABASE SWITCHOVER TO <target_db_name> FORCE command to convert the switchover target to a primary database. - If the problem in the switchover target cannot be fixed, issue the remedial ALTER DATABASE SWITCHOVER TO <target_db_name> FORCE command on the old primary database to convert the old primary database back to a primary database. If the switchover target database role is primary, the switchover has completed. Open the switchover target and startup the old primary database to finish the switchover process.

ORA-16472: failover failed due to data loss

Cause: The database was in MaxAvailability or MaxProtection mode but terminal recovery finished with data loss.

Action: For a data loss failover, issue ALTER DATABASE ACTIVATE STANDBY DATABASE command.

ORA-16473: database is not in limbo

Cause: The ALTER DATABASE SWITCHOVER TO <target_db_name> FORCE statement could not proceed because the database was in an active state.

Action: Ensure that the SWITCHOVER_STATUS column in the V\$DATABASE view has the value TO PRIMARY or SESSIONS ACTIVE. If needed, start managed standby recovery and reissue the statement after the SWITCHOVER_STATUS column value changes to one of the above values.

ORA-16474: target_db_name not found in a LOG_ARCHIVE_DEST_n parameter

Cause: ALTER DATABASE SWITCHOVER TO <target_db_name> or ALTER SYSTEM FLUSH REDO TO <target_db_name> statement failed because the target_db_name was not defined in a LOG_ARCHIVE_DEST_n parameter.

Action: Ensure that the target_db_name is defined in a LOG_ARCHIVE_DEST_n parameter.

ORA-16475: succeeded with warnings, check alert log for more details

Cause: The ALTER DATABASE SWITCHOVER TO <target_db_name> VERIFY command succeeded but with warnings.

Action: Check alert log for more details.

ORA-16476: far sync instance does not allow *string* operation

Cause: The specified operation was invalid on a far sync instance.

Action: Do not attempt the specified operation on a far sync instance.

ORA-16477: destination is being serviced by another viable source

Cause: An attempt was made by a far sync to perform gap analysis with a remote destination that already had connectivity with a different viable source of redo.

Action: No action is required. This error is informational and is used by the far sync to remain idle with respect to this destination until it establishes connectivity with the primary database.

ORA-16478: cannot locate far sync connect string

Cause: The connect string for the far sync that was flagged as the source of redo for this database could not be located.

Action: Define a LOG_ARCHIVE_DEST_n parameter on the standby for the far sync using the SERVICE attribute to define the connect string for the far sync. This destination should be set to the DEFER state using the corresponding LOG_ARCHIVE_DEST_STATE_n parameter. Once the connect string is defined, retry the failover operation. Note that while using the FORCE option on the failover command allows the operation to proceed and bypass the far sync, this choice increases the potential for data loss.

ORA-16479: cannot connect to the far sync

Cause: An attempt was made to connect to the far sync to facilitate the failover operation; but the connection attempt failed.

Action: Ensure that the far sync is mounted. Check the alert log and trace files on both the current database and the far sync for further details. Retry the operation if a problem is identified and corrected. Using the FORCE option on the failover command allows the operation to proceed and bypass the far sync; but bypassing the far sync increases the potential for data loss.

ORA-16480: operational error during far sync assisted failover

Cause: After successfully connecting to the far sync instance, an error was encountered when polling the far sync for progress.

Action: Check the alert log and traces of both the current database and the far sync instance for further details. Retry the operation if a problem is identified and corrected. Using the FORCE option on the failover command allows the operation to proceed and bypass the far sync; but bypassing the far sync increases the potential for data loss.

ORA-16481: destination error during far sync assisted failover

Cause: After successfully connecting to the far sync, an error was encountered when managing the failover target destination on the far sync.

Action: Check the alert log and traces of both the current database and the far sync for further details. Retry the operation if a problem is identified and corrected. Using the FORCE option on the failover command allows the operation to proceed and bypass the far sync; but bypassing the far sync increases the potential for data loss.

ORA-16482: a role transition is in progress

Cause: The operation failed because a role transition was in progress.

Action: None

ORA-16483: unable to set a LOG_ARCHIVE_DEST_n parameter to the switchover target

Cause: An attempt was made to set a LOG_ARCHIVE_DEST_n parameter to the switchover target failed.

Action: Manually set a LOG_ARCHIVE_DEST_n parameter to the switchover target.

ORA-16484: compatibility setting is too low

Cause: The compatibility setting of the primary database was higher than the standby database. The transported redo log could not be applied.

Action: Check the compatibility setting on the primary and standby database, and increase the compatibility setting in the initialization parameter file on the standby database accordingly.

ORA-16485: protection mode modification not allowed at this time

Cause: This exception occurred because of one of the following circumstances: * If the DG_CONFIG attribute of the LOG_ARCHIVE_CONFIG parameter was not defined, the protection mode could not be modified if any instance of the database was open. See the Data Guard documentation for details on the DG_CONFIG attribute. * If the current instance was not open, the protection mode could not be modified if any other instance was open. * Once the database instance was opened, you could not upgrade the protection mode from MAXIMUM PERFORMANCE mode directly to MAXIMUM PROTECTION mode even if the DG_CONFIG attribute was defined. You must first upgrade to MAXIMUM AVAILABILITY mode and then wait until there was at least one synchronized destination before attempting to move to MAXIMUM PROTECTION mode. You cannot upgrade the protection mode from MAXIMUM AVAILABILITY mode to MAXIMUM PROTECTION mode unless there was at least one synchronized destination. See the Data Guard documentation on how to determine if there are any synchronized destinations.

Action: Retry the operation after any potential issues described in the Cause have been addressed.

ORA-16486: a redo log is rejected by the destination

Cause: The destination was not allowed to receive this redo log.

Action: Ensure the source database is registered at the destination, the destination is up and running, and storage is available. Examine the trace file of the Remote File Server (RFS) process and the database's alert log file for additional information.

ORA-16487: the destination database is not writable

Cause: The destination database was in read-only mode.

Action: Ensure the destination database is open for write.

ORA-16488: cannot create a bookkeeping entry in database

Cause: The destination database failed to create an entry in the table used to track the redo log file or the database.

Action: See the trace file of the Remote File Server (RFS) process. Ensure that table space is available in your database.

ORA-16489: cannot register the redo log at the destination database

Cause: Registering the redo log file to the destination database failed.

Action: Examine the trace file of the Remote File Server (RFS) process. Ensure that space is available in your database.

ORA-16491: operation not allowed due to insufficient online redo log files string

Cause: A minimum of two online redo log files per active thread were not supplied.

Action: Add the required redo log files and reissue the command.

ORA-16492: switchover target local destination has error

Cause: The switchover target local destination either exceeded quota size or had an error.

Action: Fix the problem in the switchover target and reissue the command.

ORA-16493: using SYSDBA, SYSOPER, SYSDG, or SYSBKUP user for redo shipping to Recovery Appliance is not supported

Cause: An attempt was made to use a SYSDBA, SYSOPER, SYSDG, or SYSBKUP user to ship redo logs to a Recovery Appliance.

Action: Use a user without the SYSDBA, SYSOPER, SYSDG, or SYSBKUP privilege to ship redo logs to a Recovery Appliance.

ORA-16494: process started from pluggable database (PDB)

Cause: The Remote File Server (RFS) process or the Remote Message Interface (RMI) process or the Fetch Archive Log (FAL) process was started from a Pluggable Database (PDB).

Action: Check the service name that the RFS or RMI or FAL client connected to and ensure the service is not from a PDB.

ORA-16495: using the Fast Recovery Area to receive redo log files on a Recovery Appliance is not supported

Cause: An attempt was made to use the Fast Recovery Area to store a redo log file on a Zero Data Loss Recovery Appliance.

Action: Do not configure the Fast Recovery Area as a destination for redo log files on the Zero Data Loss Recovery Appliance. Refer to the documentation for more details.

ORA-16496: corruption in network metadata packet

Cause: Invalid or corrupt metadata was encountered in a network packet.

Action: No user action is required.

ORA-16497: LOG_ARCHIVE_DEST_string DELAY attribute is not 0

Cause: The DELAY attribute was not 0 for the LOG_ARCHIVE_DEST_n parameter. Since the DELAY attribute delays standby database recovery, the switchover will be prolonged by that amount of time.

Action: Remove the DELAY attribute from the LOG_ARCHIVE_DEST_n parameter, then reissue the command.

ORA-16498: Cancellation of managed recovery operation cannot be performed

Cause: Cancellation of managed recovery was invoked when the Oracle Active Data Guard (Oracle ADG) instance recovery was running.

Action: None

ORA-16501: The Oracle Data Guard broker operation failed.

Cause: The Oracle Data Guard broker operation failed.

Action: See accompanying messages for details.

ORA-16502: The Oracle Data Guard broker operation succeeded with warnings.

Cause: The Oracle Data Guard broker operation succeeded with warnings.

Action: See accompanying messages for details.

ORA-16503: cannot exceed the maximum number of members in this configuration

Cause: The Oracle Data Guard broker configuration already contained the maximum number of members that could be configured and managed by the broker.

Action: Select and remove an existing member from the broker configuration, then reissue the command to add another member to the configuration. The maximum number of members permitted in a broker configuration is 253.

ORA-16504: The Oracle Data Guard broker configuration already exists.

Cause: A request to create or import an Oracle Data Guard broker configuration was made while connected to a database that was part of an existing configuration.

Action: To create or import a new configuration, the existing configuration must be deleted.

ORA-16506: out of memory

Cause: Process exceeded private or shared memory limits.

Action: Check for memory leaks, increase system parameters, and restart.

ORA-16509: request timed out

Cause: The Oracle Data Guard broker timed out the request.

Action: Check the Oracle Data Guard broker log file for more information. Ensure that the network connections between the databases are functioning properly and retry the request.

ORA-16513: maximum requests exceeded

Cause: The maximum number of requests that the broker can service on the database instance was exceeded.

Action: Wait for the broker to complete processing the requests before issuing more requests.

ORA-16516: current state is invalid for the attempted operation

Cause: The broker may have returned this error for either switchover operations or for database state change operations. If this error was returned for a switchover operation, the broker determined that either: - The databases changing roles were shut down. - The primary database was not shipping redo data. - The standby database that will become the primary database was not applying redo data. If this error was returned for database state change operations, the database state specified was invalid.

Action: If this error is returned when attempting a switchover operation, ensure that: - The databases changing roles are started. - The primary database is shipping redo data. - The standby database is applying redo data. If this error is returned when attempting a database state change operation, ensure that a valid database state is specified.

ORA-16521: Service name specified in connect identifier connects to a PDB.

Cause: The connect identifier that was specified resulted in a connection to a pluggable database (PDB) and not to the multitenant container database root.

Action: Check the connect identifier and confirm that it specifies a service name that results in a connection to the multitenant container database root.

ORA-16522: The configuration is part of the Global Data Services pool.

Cause: The attempted command was not allowed because the configuration was part of a Global Data Services pool.

Action: Remove the configuration from the Global Data Services pool using GDSCTL. Then, retry the broker command. If the command was attempting to repair a database, then disable or remove the individual database from the configuration and fix the issue. After the problem is resolved, re-enable the database, or add the database back to the configuration if it had been removed.

ORA-16523: operation requires the client to connect to instance "string"

Cause: The switchover or failover operation required the client to connect to the apply instance of the target database.

Action: Connect to the indicated instance and reissue the SWITCHOVER or FAILOVER command.

ORA-16524: unsupported command, option, or argument

Cause: A command, option, or fast-start failover condition argument was specified that is not supported in this release.

Action: If trying to enable or disable a fast-start failover condition, try a different Oracle error number. Otherwise, contact Oracle Support Services.

ORA-16525: The Oracle Data Guard broker is not yet available.

Cause: The Oracle Data Guard broker process was either not yet started, was initializing, or failed to start.

Action: If the broker has not been started, set the DG_BROKER_START initialization parameter to true and allow the broker to finish initializing before making the request. If the broker failed to start, check the Oracle Data Guard log for possible errors. Otherwise, retry the operation.

ORA-16526: Unable to allocate memory to process request.

Cause: Oracle Data Guard broker was unable to allocate memory for a request.

Action: Increase the size of the System Global Area (SGA).

ORA-16530: invalid buffer or length

Cause: A NULL buffer or a length of zero was specified.

Action: Correct the command parameters and retry the command.

ORA-16532: Oracle Data Guard broker configuration does not exist.

Cause: The broker operation could not be performed because the broker configuration did not exist.

Action: Create a Data Guard broker configuration prior to attempting the operation. If only one instance of an Oracle Real Application Cluster (RAC) database reports this error, verify that the DG_BROKER_CONFIG_FILE[1|2] initialization parameters are set to shared file locations accessible to all RAC instances.

ORA-16534: switchover, failover or convert operation in progress

Cause: The Oracle Data Guard broker returned this status because a switchover, failover or convert operation was in progress. The broker could not accept new commands until the operation finished.

Action: Wait until the operation is complete and reissue the command.

ORA-16535: Oracle Restart or Oracle Clusterware prevented completion of broker operation.

Cause: The broker could not complete the operation because Oracle Restart (for single instance databases) or Oracle Clusterware (for Oracle RAC databases) could not stop services or instances on this database.

Action: Check the Oracle Data Guard broker log file for more information and stop the appropriate services or instances using SRVCTL. Then retry the broker operation.

ORA-16538: no match on requested item

Cause: The Oracle Data Guard broker did not recognize the specified property or state name, or a fast-start failover condition was specified that is not enabled.

Action: Verify the command parameters and reissue the command.

ORA-16540: invalid argument

Cause: One of the arguments for the specified command was invalid.

Action: Verify the arguments and then reissue the command.

ORA-16541: member is not enabled

Cause: An attempt was made to modify or query a disabled member. This error is also returned when an attempt is made to enable, modify, or query a member that the broker has disabled because of a switchover or failover operation. The broker disables its management of a member when it detects that the database needs to be re-created because of a failover or switchover operation.

Action: If broker management of the member is disabled, re-create it if necessary, enable it and reissue the command.

ORA-16544: modifying DG_BROKER_START requires SID='*' qualifier

Cause: The setting for the DG_BROKER_START parameter must be exactly the same on all RAC database instances. The SID='*' qualifier was required in the command.

Action: Reenter the command using the SID='*' qualifier.

ORA-16547: Cannot disable or remove the primary database.

Cause: An attempt was made to disable broker management of the primary database or remove the primary database from the broker configuration while the configuration was enabled.

Action: To disable the primary database, disable the configuration. To remove the primary database, remove the configuration.

ORA-16549: invalid string

Cause: An invalid or NULL string value was specified.

Action: Correct the command parameters and retry.

ORA-16550: truncated result

Cause: A string property value was truncated due to insufficient buffer size.

Action: Specify a larger receive buffer.

ORA-16551: short string copied - information only - no action required

Cause: A string property value that did not fill the receive buffer was placed in the receive buffer.

Action: No action needed; this situation did not cause the software to stop. This is an informational message only.

ORA-16552: error occurred while generating directives for client

Cause: The client could not provide the required assistance to the broker because of the accompanying error.

Action: See the accompanying error message for more information and follow the directions provided in the Action of that message. Then, retry the operation.

ORA-16555: Member is not active.

Cause: Attempted an operation on an inactive member.

Action: Verify that the member is active and retry.

ORA-16556: observer version mismatch

Cause: This version of the observer was incompatible with the version of the specified Oracle database server to which the observer had been connected. This observer client cannot be used to observe the specified Oracle server.

Action: Use a version of the observer that is compatible with the Oracle database server to be observed.

ORA-16557: Member already exists in the configuration.

Cause: Attempted to create a duplicate member in the Oracle Data Guard broker configuration, or to add a duplicate instance (SID) for an existing member in the configuration.

Action: Check the configuration to avoid duplicate members.

ORA-16558: database specified for switchover is not a standby database

Cause: An attempt was made to switchover to a database that was not a standby database.

Action: Locate an enabled standby database and select that database as the target of the switchover.

ORA-16561: cannot remove an active instance

Cause: The instance to be removed was running.

Action: Shut down the instance and reissue the REMOVE command.

ORA-16568: cannot set property *string*

Cause: The specified property could not be modified because it was either a monitorable property or a property that did not exist.

Action: Retry the command with a valid configurable property.

ORA-16569: Oracle Data Guard configuration is not enabled

Cause: The requested operation required that broker management of the Data Guard configuration must be enabled.

Action: Enable the Oracle Data Guard configuration and reissue the command.

ORA-16570: database needs restart

Cause: The Oracle Data Guard broker operation required this database instance to be shut down and restarted.

Action: If DGMGRL or Enterprise Manager has not already done so, shut down the Oracle instance and then restart it.

ORA-16571: Oracle Data Guard configuration file creation failure

Cause: The Oracle Data Guard broker was unable to create the configuration file on permanent storage.

Action: Verify space, permissions and file name as indicated by the DG_BROKER_CONFIG_FILE[1|2] initialization parameters and retry the operation.

ORA-16572: Oracle Data Guard configuration file not found

Cause: The Oracle Data Guard broker configuration file was either unavailable or did not exist.

Action: Verify that the configuration file was successfully created. If the DG_BROKER_CONFIG_FILE[1|2] initialization parameters were changed, ensure the file name on disk and the parameter value match, there is space on the device, and the proper permissions are granted. For a RAC database, ensure that these initialization parameters are set to file locations that are shared by all instances of the RAC database.

ORA-16573: attempt to change or access configuration file for an enabled broker configuration

Cause: The operation was rejected because the Oracle Data Guard broker configuration file was in use. The attempted operation was unsafe while broker management of the configuration was enabled. For example: - An attempt was made to alter the DG_BROKER_CONFIG_FILE[1|2] initialization parameters while the broker was running. - Non-broker access (such as DBMS_FILE_TRANSFER) to the configuration files was attempted. See the alert log for additional information.

Action: Disable the broker configuration and shut down the Oracle Data Guard broker, then retry the operation. If the operation includes altering the DG_BROKER_CONFIG_FILE[1|2] initialization parameters, be sure that the new parameter values correctly specify the files at their expected location before reenabling broker management of the configuration.

ORA-16574: Switchover is disallowed when required databases are shut down.

Cause: Switchover failed because either the primary database or the designated standby database was shut down.

Action: Ensure that the primary and standby databases are running and that primary database is shipping redo data to the designated standby database. Also ensure that the designated standby database is applying the redo data received from the primary database.

ORA-16575: LOG_ARCHIVE_DEST_n parameter conflicts with the new member to be added

Cause: One or more LOG_ARCHIVE_DEST_n initialization parameters on existing members were already set for the new member to be added when attempting to add a standby database, far sync instance, Recovery Appliance, or external destination to the configuration.

Action: Clear the LOG_ARCHIVE_DEST_n initialization parameter that specifies the standby database, far sync instance, Recovery Appliance, or external destination to be added.

ORA-16576: Failed to update Data Guard broker configuration file.

Cause: The broker failed updating the Oracle Data Guard broker configuration file on permanent storage.

Action: Verify that sufficient space exists on the device containing the the configuration files and the files specified by the DG_BROKER_CONFIG_FILE[1|2] initialization parameters permit read and write access.

ORA-16577: corruption detected in Data Guard configuration file

Cause: The Oracle Data Guard broker detected errors while loading the configuration file.

Action: Verify space, permissions and file name as indicated by the DG_BROKER_CONFIG_FILE[1|2] initialization parameters. Contact Oracle Support Services.

ORA-16578: failed to read Oracle Data Guard configuration file

Cause: A failure was encountered while the broker was reading the configuration file on permanent storage.

Action: Verify that sufficient space exists on the device containing the the configuration files and the files specified by the DG_BROKER_CONFIG_FILE[1|2] initialization parameters permit read and write access.

ORA-16582: cannot change instance-specific property

Cause: An attempt was made to change an instance-specific property for a member that had more than one instance.

Action: Retry the command and identify a specific instance whose property value is to be changed.

ORA-16584: operation cannot be performed on a standby database

Cause: The database specified for the operation was a standby database, or the operation was attempted on a standby database.

Action: Check the database type and retry the operation. If the command must be executed on a primary database, connect to the primary database and retry the operation.

ORA-16585: This operation cannot be performed on a primary database.

Cause: The database specified for the operation was a primary database, or the operation was attempted on a primary database.

Action: Check the database type and retry the operation. If the command must be executed on a standby database, then connect to a standby database and retry the operation.

ORA-16586: Cannot change member property with EDIT INSTANCE command.

Cause: Attempted to change a member level property using an EDIT INSTANCE command instead of an EDIT DATABASE, EDIT FAR_SYNC, or EDIT RECOVERY_APPLIANCE command.

Action: Use the EDIT DATABASE, EDIT FAR_SYNC, or EDIT RECOVERY_APPLIANCE command to change member level properties.

ORA-16587: Ambiguous member specified to Oracle Data Guard broker.

Cause: A member was specified that the broker could not uniquely distinguish from other members in the configuration.

Action: Try to further distinguish the member specified for the operation and retry the command.

ORA-16589: Oracle Data Guard broker detected network transfer error

Cause: The Oracle Data Guard broker detected an error while transferring data from one member to another. This may happen when either: - The broker detects an inconsistency in the block count of the configuration file when the file is transmitted between members. - The broker encounters an error when writing the configuration file. - A broker member receives an incorrect message from another member.

Action: Contact Oracle Support Services.

ORA-16594: DMON background process is not running

Cause: The Oracle Data Guard broker background process, DMON, was not running.

Action: Check the Oracle Data Guard broker log file and DMON process trace file to determine why the DMON process is not running.

ORA-16595: process *string* failed to terminate

Cause: The specified process did not terminate at the request of the Data Guard broker.

Action: Contact Oracle Support Services.

ORA-16596: member not part of the Oracle Data Guard broker configuration

Cause: The specified member was not in the Oracle Data Guard broker configuration.

Action: Retry the command with a member that is in the broker configuration.

ORA-16597: Oracle Data Guard broker detects two or more primary databases

Cause: The Oracle Data Guard broker detected two or more primary databases in the broker configuration and could not continue.

Action: Contact Oracle Support Services.

ORA-16598: Oracle Data Guard broker detected a mismatch in configuration

Cause: The Oracle Data Guard broker detected a significant mismatch while performing configuration membership validation between two or more members in the broker configuration. This can occur when the primary database has stale broker configuration files.

Action: Contact Oracle Support Services.

ORA-16599: Oracle Data Guard broker detected a stale configuration

Cause: The Oracle Data Guard broker detected a stale configuration during initialization for this member.

Action: The broker will automatically resolve this situation once the primary database completes its initialization.

ORA-16600: not connected to target standby database

Cause: The switchover or failover command failed because the client was not connected to the target standby database of the failover or switchover command.

Action: Explicitly connect to the standby database that is to become the the new primary and retry the failover or switchover command.

ORA-16602: member must be disabled to perform this operation

Cause: An attempt was made to edit a member property while the member was enabled.

Action: Disable the member and retry the command.

ORA-16603: The member is part of another Oracle Data Guard broker configuration.

Cause: The member was part of another Oracle Data Guard broker configuration. This could occur if the original configuration was re-created while this member was disconnected from the network or the same member was added to two different Oracle Data Guard broker configurations.

Action: Ensure that the member belongs to only one broker configuration. Shut down the broker by setting the DG_BROKER_START initialization parameter to 'false'. Then, remove the Oracle Data Guard broker configuration files. Finally, restart the broker by setting the DG_BROKER_START initialization parameter to 'true'.

ORA-16604: Data Guard broker configuration file inaccessible

Cause: The Oracle Data Guard broker was unable to access the configuration file specified by the DG_BROKER_CONFIG_FILE[1|2] initialization parameters.

Action: Verify space, permissions and file name as indicated by the DG_BROKER_CONFIG_FILE[1|2] initialization parameters.

ORA-16606: unable to find property "*string*"

Cause: The specified property did not exist.

Action: Specify a valid property name and reissue the command.

ORA-16607: One or more members have failed.

Cause: A failure was detected for one or more members in the Oracle Data Guard broker configuration.

Action: Locate the member or members with a failure status and correct it.

ORA-16608: one or more members have warnings

Cause: A warning was detected for one or more members in the Data Guard broker configuration.

Action: Locate the member or members with a warning status and correct it.

ORA-16609: Database is being disabled.

Cause: Attempted a command on a database that was being disabled. For example, attempted to reinstate the old primary database, the database that was the primary database prior to the most recent failover, before it was ready to be reinstated.

Action: Wait for Oracle Data Guard broker to disable the database then retry the command.

ORA-16610: Oracle Data Guard broker command "string" in progress.

Cause: Specified Data Guard broker command was already running and could not be completed.

Action: Wait for the specified command to finish and then retry.

ORA-16611: command aborted at user request

Cause: The command was aborted at the user's request.

Action: No action required.

ORA-16612: string value too long for attribute "string"

Cause: The string value for the named attribute was too long.

Action: Specify a shorter string value.

ORA-16613: Oracle Data Guard broker initialization in progress for member.

Cause: A request was made that required access to the Oracle Data Guard broker configuration before it had completed initialization.

Action: Wait until the Oracle Data Guard broker has completed initialization, then reissue the command.

ORA-16614: Oracle Data Guard broker configuration is disabled

Cause: An attempt to enable a member failed because the Oracle Data Guard broker configuration was disabled.

Action: Enable the Oracle Data Guard broker configuration and issue the DGMGRL CLI SHOW CONFIGURATION command to see if there are any members that are still disabled. If the member you tried to enable is still disabled, issue the DGMGRL CLI SHOW command to check the status of the member. If the member is a database whose status indicates that the database needs to be reinstated, then issue the DGMGRL CLI REINSTATE DATABASE command to reinstate and enable the database. If the member does not require reinstatement, then issue the DGMGRL CLI ENABLE command to enable the member.

ORA-16617: unknown object identifier specified in request

Cause: Object identifier specified in the request was invalid or unknown.

Action: Verify that a valid object identifier is specified and reissue the command.

ORA-16619: condition for fast-start failover is already enabled

Cause: The condition specified for fast-start failover was already enabled.

Action: No action is required. Use the DGMGRL CLI SHOW FAST_START FAILOVER command to view the conditions that are enabled.

ORA-16620: one or more members could not be reached for a remove operation

Cause: One or more members could not be reached for either a DGMGRL CLI REMOVE DATABASE, REMOVE FAR_SYNC or a REMOVE CONFIGURATION command.

Action: This typically indicates a network problem where the member is unable to respond to the primary database. If this is the case, examine the primary database Data Guard broker log file to determine which members could not be reached. For each member not reached, connect to that member and shut down the broker by

setting the DG_BROKER_START initialization parameter to 'false'. After the broker has been shut down for the member, locate the Data Guard broker configuration files from the member's DG_BROKER_CONFIG_FILE[1|2] initialization parameter values and delete them. Then restart the broker by setting DG_BROKER_START to 'true'.

ORA-16621: member name for ADD command must be unique

Cause: An attempt was made to add a member to the broker configuration that already included a member with the specified name. The member names must be unique.

Action: Verify that a unique name is specified for the new member to be added. Also, the member name must match the DB_UNIQUE_NAME initialization parameter of the member.

ORA-16622: two or more broker member objects resolve to the same member

Cause: Multiple member objects referred to the same member.

Action: Examine the details of all members in the broker configuration and verify that two or more members are not referring to the same member. If two or more members in the broker configuration have the same value for the DGConnectIdentifier configurable property, either:

- Remove and re-add the incorrectly defined member or members to resolve the ambiguity.
- Ensure that the DGConnectIdentifier configurable property for each member allows the broker to properly connect to that member.

ORA-16623: member detected role change

Cause: A successful switchover or failover operation had been completed and was detected during member startup or broker health check. If this member was a database that was unavailable during a switchover or failover operation, it may not be a viable standby database for the new primary database and was disabled by the Oracle Data Guard broker.

Action: Connect to the new primary database and examine the broker configuration for databases that were disabled and that may require reinstatement or re-creation.

ORA-16624: broker protocol version mismatch detected

Cause: A network protocol version number mismatch was detected. This could happen if the members in the broker configuration were not running the same version of Oracle. The broker would disable members that were not running the same version of Oracle as the primary database if this situation was detected.

Action: Examine the version of Oracle installed on all members in the broker configuration to ensure they are identical. Once all of the members in the broker configuration are running the same version of Oracle, reenabling the members that were disabled.

ORA-16625: cannot reach member "*string*"

Cause: The command could not be executed because the member noted in the error text was not reachable.

Action: See accompanying messages for more information. Check the network connections to the specified member. After ensuring connectivity, retry the command.

ORA-16626: failed to enable specified member

Cause: This status was returned when attempting to enable a member that:

- Could not locate itself in the broker configuration file.
- Failed to distinguish itself from two or more members in the configuration file.
- Determined it missed a role change within the configuration.

Action: To correct the problem, try one of these actions:

- Confirm that the host and SID names for the member exactly match the values in the HOST_NAME and

INSTANCE_NAME columns of the V\$INSTANCE view. - Confirm that two or more members do not have the same connect identifier. That is, multiple members in the broker configuration should not reach the same member. - If a failover has been performed and the old primary database has been re-created (or a standby database has been re-created), then ensure that the Oracle Data Guard broker configuration files have been removed for that database. Do not remove the configuration files that are in use by the new primary database.

ORA-16627: No member available to support the protection mode.

Cause: Either there were no members in the configuration whose redo transport mode supported the desired protection mode, or an operation was attempted that resulted in no remaining members to support the protection mode.

Action: Ensure that at least one database supports the protection mode. For example, if the desired protection mode is maximum protection mode, ensure at least one enabled database has a redo transport mode set to SYNC mode.

ORA-16628: broker protection mode inconsistent with the database setting

Cause: The Oracle Data Guard broker protection mode saved in the broker configuration file was inconsistent with the actual database setting.

Action: Reset the protection mode through the Oracle Data Guard broker.

ORA-16629: database reports a different protection level from the protection mode

Cause: The current database protection level was different from the configured protection mode. This was typically caused if there were redo transport problems or if the primary database was not open.

Action: Ensure the following: - Check the database alert log files and Data Guard broker log files for more details. - Check the redo transport status. - That one standby database supports the configured protection mode - That the network to that standby database is working properly. - That the primary database is open.

ORA-16630: configurable property has been deprecated

Cause: The property that was specified in the command was deprecated.

Action: Check the broker documentation to identify a replacement property.

ORA-16631: operation requires shutdown of database or instance "*string*"

Cause: The Oracle Data Guard broker operation required a shutdown of the database or instance.

Action: If database or instance has not been shutdown by the DGMGRL CLI or Enterprise Manager, shutdown the database or instance manually.

ORA-16632: instance being added to member profile

Cause: The Oracle Data Guard broker determined that an instance successfully found its member profile within the broker configuration file, but lacked an instance-specific profile. The broker automatically created an instance-specific profile and associated the instance with its database profile.

Action: No user action is required. The broker will automatically associate the instance with its member profile and incorporate the instance into broker activity.

ORA-16633: The only instance of a member cannot be removed.

Cause: The instance to be removed was the only instance of the corresponding member that was known to the broker.

Action: Remove the corresponding member from the broker configuration instead of the individual instance of the member.

ORA-16635: Network connection failed during transmission.

Cause: The Oracle Data Guard broker detected a connection failure to a member in the broker configuration. This failure happened in the middle of a transmission session.

Action: In most cases, no action is required. The Oracle Data Guard broker tries to resend the data. The error indicates a problem in the network communication between broker managed members. If this persists, contact Oracle Support Services.

ORA-16636: Fast-start failover target standby in error state. Cannot stop observer.

Cause: A STOP OBSERVER operation could not be completed when fast-start failover was enabled because the target standby database could not participate in the STOP OBSERVER operation.

Action: Additional information about this failure is recorded in the Oracle Data Guard broker log file for the primary database. This information helps to identify the reason why the target standby database was unable to participate in the STOP OBSERVER operation. If the problem can be corrected by the information in the broker log file, retry the operation. Alternatively, fast-start failover may be forcibly disabled by connecting to the primary database and issuing the DISABLE FAST_START FAILOVER FORCE command from the DGMGRL CLI. Once fast-start failover has been forcibly disabled, the observer can be stopped regardless of the current state of the target standby database.

ORA-16637: maximum number of Oracle error numbers for fast-start failover already reached

Cause: The broker could not enable any more Oracle error numbers for initiating a fast-start failover.

Action: Use the DGMGRL CLI SHOW FAST_START FAILOVER command to help identify an Oracle error number that can be disabled before attempting to enable an additional error number for initiating a fast-start failover.

ORA-16638: Could not obtain instance status.

Cause: The broker could not determine whether the specified instance was running.

Action: See the next error message in the error stack for more detailed information. If the situation described in the next error in the stack can be corrected, do so. Otherwise, contact Oracle Support Services.

ORA-16639: specified instance inactive or currently unavailable

Cause: An attempt was made to perform an operation on an instance that was not running or was unavailable.

Action: Ensure that the instance specified in the operation is running and then retry the operation.

ORA-16642: DB_UNIQUE_NAME mismatch.

Cause: The DB_UNIQUE_NAME value did not match the actual DB_UNIQUE_NAME value for the member that the broker contacted using the connect identifier associated with that member.

Action: Verify that the connect identifier correctly connects to the intended member. Verify that the name of the member the broker expects to find by that connect identifier matches the actual DB_UNIQUE_NAME for that member.

ORA-16643: Unable to determine location of broker configuration files.

Cause: Oracle Data Guard broker was unable to determine the location of its configuration files from the DG_BROKER_CONFIG_FILE[1|2] initialization parameters.

Action: Retry the operation. If the error persists, contact Oracle Support Services.

ORA-16644: apply instance not available

Cause: The broker operation could not finish, because it requires a running apply instance for the standby database, and either there was no such instance designated for the standby database or the designated apply instance was not currently available.

Action: Start the designated apply instance or wait until the broker specifies an instance to be the apply instance and reissue the command.

ORA-16645: startup of an instance not part of the broker configuration interrupted current operation

Cause: The startup of an instance, that was not part of the broker configuration prevented the operation from completing.

Action: Restart the operation after the new instance has joined the Data Guard configuration.

ORA-16646: Fast-start failover is disabled.

Cause: This operation was not allowed because fast-start failover was disabled.

Action: Enable fast-start failover and retry the command.

ORA-16647: maximum number of observers has already been started

Cause: The attempt to start an observer failed because the maximum number of observers was already running. For Oracle Database releases earlier than 12.2, only a single observer can be started. For Oracle Database releases 12.2 and later, a maximum of three observers can be started.

Action: Stop one of the existing observers and retry the command.

ORA-16648: A new observer registered with identifier *string*.

Cause: An observer was registered with the Oracle Data Guard broker and will begin observing the Oracle Data Guard configuration for conditions that warrant doing a fast-start failover.

Action: No actions needed.

ORA-16649: Data Guard prevented this database from opening.

Cause: The primary database could not be opened because one of the following reasons. A fast-start failover has occurred, and there was another primary. Data Guard had detected a possible fast-start failover but could not contact the observer or target standby to verify. The database was configured for maximum protection and no standby database was available to support the protection mode.

Action: Check if a failover did occur. If it did, reinstate the database. If the failover did not occur and fast-start failover is enabled, ensure that connectivity exists between

the primary database and either the observer or the target standby database, then retry opening the database.

ORA-16650: unrecognized object specified

Cause: An unrecognized database or far sync instance was specified in the command.

Action: Try the command again using a valid object name. Use the SHOW CONFIGURATION command to identify the members in the configuration.

ORA-16651: upgrade to maximum protection mode not possible

Cause: An upgrade to maximum protection mode was attempted when the current protection mode was maximum performance mode.

Action: To upgrade the protection mode to maximum protection mode, first upgrade the protection mode to maximum availability mode, then upgrade the protection mode to maximum protection mode.

ORA-16652: fast-start failover target standby database is disabled

Cause: The command to enable or disable fast-start failover could not be run because the Data Guard broker management of the fast-start failover target standby database was disabled.

Action: Enable broker management of the target standby database and rerun the command. If an attempt was made to disable fast-start failover when this error was reported, then disable fast-start failover forcibly using the DGMGRL DISABLE FAST_START FAILOVER FORCE command. Refer to the documentation for more information.

ORA-16653: Oracle Data Guard broker failed to reinstate database.

Cause: The Data Guard broker failed to reinstate the database because the reinstatement could not be completed or the database was already reinstated.

Action: Additional information about the failure is recorded in the primary database or the specified database Data Guard broker log files. This information helps determine how to proceed.

ORA-16654: fast-start failover is enabled

Cause: The attempted command was not allowed while fast-start failover was enabled. This occurred because: - The FastStartFailoverTarget property may not be modified. - The LogXptMode property for either the primary database or the fast-start failover target standby database may not be modified. - The protection mode of the configuration may not be modified. - Neither the broker configuration nor the fast-start failover target standby database was disabled using the DGMGRL CLI DISABLE command. - Neither the broker configuration nor the fast-start failover target standby database was removed using the DGMGRL CLI REMOVE command. - The FAILOVER IMMEDIATE command was not allowed. - The DG_BROKER_START initialization parameter may not be set to FALSE.

Action: Disable fast-start failover, using the FORCE option if required. Then retry the attempted command.

ORA-16655: specified standby database not the current fast-start failover target standby

Cause: The attempted command was not allowed because fast-start failover was enabled for this Data Guard broker configuration and the standby database specified in the command was not the current fast-start failover target standby associated with the current primary database.

Action: Retry the attempted command by specifying the current fast-start failover target standby database. Alternatively, disable fast-start failover and retry the command using the originally specified target standby database.

ORA-16656: Oracle Data Guard broker detected role change.

Cause: The Oracle Data Guard broker detected a role change during database startup or health check.

Action: Additional information about this failure is recorded in the Oracle Data Guard broker log files, one for the primary database and one for each standby database in the Oracle Data Guard configuration. This information is helpful in determining how best to resolve this failure.

ORA-16657: Reinstatement of database in progress.

Cause: Reinstatement of this database was in progress.

Action: None

ORA-16658: unobserved fast-start failover configuration

Cause: The fast-start failover configuration was currently unobserved therefore failover was disallowed.

Action: Ensure that the observer is running and has connectivity to both the primary and the target standby databases. Otherwise, disable fast-start failover to perform a failover in the absence of the observer process.

ORA-16659: Failover operation is in progress.

Cause: A primary database that restarted contacted a standby database while the failover is active to that standby database.

Action: Shut down the primary database and wait for failover to complete on the standby database. Once failover is complete, restart the old primary database.

ORA-16660: Fast-start failover operation attempted in absence of a broker configuration.

Cause: Attempted to enable or disable fast-start failover when connected to a standby database for which broker configuration details are currently unavailable. For instance, the standby database may currently require re-creation (or flashback reinstatement) before it may respond to broker client commands.

Action: 1) Attempts to enable or disable (non-FORCE) fast-start failover at this standby database will be rejected until the broker configuration details are available to the standby database from the primary database. This typically occurs when the standby database is successfully recreated or flashed back, and then re-enabled on the primary database. 2) Use the FORCE option to override fast-start failover enabled on the standby database even when the broker configuration details are currently unavailable to the standby database. In this case, the status message is only a warning. Note that fast-start failover is not formally disabled in the broker configuration. The effect of this command issued under these circumstances may or may not be permanent, depending upon when the primary and standby databases regain full communication between each other and if the state of fast-start failover has been altered at the primary database in the meantime.

ORA-16661: the standby database needs to be reinstated

Cause: A role change has caused this database to require reinstatement.

Action: Use the DGMGRL REINSTATE DATABASE command or Enterprise Manager to reinstate the database. Reinstate the database as soon as possible, because the database will have to be re-created if another role change occurs while it is in this state.

ORA-16662: Network timeout when contacting a member.

Cause: Oracle Data Guard broker attempted to contact a member and failed because there was no response from the member within timeout specified by the CommunicationTimeout configuration property.

Action: Check the Oracle Data Guard broker log file for the details of the failure. Fix the problem and retry.

ORA-16664: unable to receive the result from a member

Cause: During execution of a command, a member in the Oracle Data Guard broker configuration failed to return a result.

Action: Check Oracle Data Guard broker log files for the details of the failure. Ensure network communication is working properly amongst the members of the configuration. Fix any possible network problems and reissue the command.

ORA-16665: time out waiting for the result from a member

Cause: The Oracle Data Guard broker was forced to time out a network connection to a remote member because: - The network call to the remote member did not complete in a timely manner. - The remote member was unable to execute the command due to an instance failure.

Action: Check Data Guard broker log files for the details of the failure. If the network call did not complete in a timely manner, increase the CommunicationTimeout configuration property value and reissue the command.

ORA-16666: Unable to initiate fast-start failover on a bystander standby database.

Cause: The request to initiate a fast-start failover using DBMS_DG.INITIATE_FS_FAILOVER was made on a bystander standby database.

Action: Call DBMS_DG.INITIATE_FS_FAILOVER on either the primary or fast-start failover target standby database.

ORA-16667: request Oracle Data Guard broker client to reissue command

Cause: The Oracle Data Guard broker operation required that the same command be issued again from the client.

Action: If DGMGRL or Enterprise Manager has not already done so, reissue the same command to the Oracle Data Guard broker manually.

ORA-16668: operation cannot be performed on the fast-start failover target standby database

Cause: The database specified for the operation was the fast-start failover target standby database.

Action: Retry the operation on a different database. Alternatively, disable fast-start failover, and retry the operation.

ORA-16671: instance-specific property must be set uniquely for instances of an Oracle RAC database

Cause: An attempt was made to set an instance-specific property to the same value for all instances of an Oracle RAC database for a property whose value must be unique for each instance.

Action: Use the EDIT INSTANCE command and specify the SID of each instance whose instance-specific property value is to be changed.

ORA-16672: switchover not permitted to standby database with non-zero DelayMins property value

Cause: Switchover was attempted to a standby database that had a non-zero value for its DelayMins configurable property.

Action: For switchover to a standby database, set the DelayMins configurable property to zero for the standby database, wait for its apply lag to become zero seconds, and then retry the switchover command.

ORA-16673: A member is running a different Oracle version from that of the primary database version.

Cause: The standby member was running a different version of Oracle than the primary database.

Action: Ensure that all members of the configuration are running the same versions of Oracle.

ORA-16674: standby database type has changed

Cause: An attempt to enable a database whose standby type changed from physical or snapshot to logical (or vice versa) was disallowed.

Action: If the intention is to retain the database conversion to the new type, the database must be removed and added back into the configuration in order to obtain the correct values for database properties specific to the new standby type.

ORA-16675: Database instance restart required for the property value modification to take effect.

Cause: One or more properties that correspond to static initialization parameters were modified, but the database instances were not restarted. Or, a static initialization parameter that corresponds to a broker property was modified using an ALTER SYSTEM SQL*Plus statement.

Action: Restart the database instances for the modified property values to take effect. If the error persists after having restarted the instance, use the DGMGRL CLI or Enterprise Manager to modify the property to which the static initialization parameter corresponds.

ORA-16676: RedoRoutes property for two or more members contains a circular route

Cause: The value of a RedoRoutes property for two or more members was set such that a member that sent redo also received redo data data in the same route. For example, A sends to B, B sends to C, and C sends to A.

Action: Correct the setting of the RedoRoutes property on one or more members to eliminate the circular route.

ORA-16677: Member has the same or higher priority than other members specified in the RedoRoutes group.

Cause: A standby database with the same or higher priority than other members in the group was specified in the RedoRoutes property.

Action: Check the Oracle Data Guard broker log file for the reason for the failure and reissue the command. Ensure that a standby database was not specified to have the same or higher priority than other members in the group for the RedoRoutes property.

ORA-16678: unrecognized or duplicate attribute specified

Cause: The specified value contained an unrecognized or duplicated attribute.

Action: Ensure the property string does not contain any undefined or duplicate attributes. See the Oracle Data Guard broker documentation for supported attributes.

ORA-16679: one or more disallowed keywords found

Cause: The specified value contained one or more disallowed keywords.

Action: See the Oracle Data Guard broker documentation for the supported keywords.

ORA-16680: value contains unbalanced set of parentheses

Cause: The specified value contained an unbalanced set of parentheses or a missing set of parentheses.

Action: Ensure the parentheses are correctly matched and specify parentheses when required. See the Oracle Data Guard broker documentation for more information.

ORA-16681: Value does not contain a colon.

Cause: The specified value did not contain a colon (:).

Action: Include the colon (:) in the value.

ORA-16682: value contains duplicate databases or far sync instances

Cause: The specified value contained the same database or far sync instance multiple times.

Action: Ensure that a database or far sync instance is specified only once.

ORA-16683: disallowed, empty substring specified in property value

Cause: The value specified contained a disallowed, empty string or substring, e.g. "()".

Action: Remove the disallowed empty strings and retry the command.

ORA-16684: maximum number of destinations exceeded

Cause: The value specified for the RedoRoutes property contained more than the maximum of 30 destinations.

Action: Ensure that no more than 30 destinations are specified.

ORA-16685: database does not receive redo data

Cause: The RedoRoutes property for all members of the configuration were set such that this database did not receive redo data. Or, the transport state of the database that sends redo data to this database was not valid.

Action: Check the setting of the RedoRoutes property for all members of the configuration. Ensure that at least one member's RedoRoutes property value is set to ship redo data to this

database. Also check the transport state of the database that sends redo data to this database.

ORA-16686: member may not receive redo data if redo source is an alternate destination

Cause: This member may not receive redo data if the redo source is an alternate destination that does not ship redo to this database.

Action: Ensure that any alternates for the redo source for this member includes this member in its redo destination list.

ORA-16687: member has multiple redo sources

Cause: Two or more members had their RedoRoutes property set to ship redo data to the same member.

Action: Examine the RedoRoutes property values for all members to see which members are shipping redo data to the same member. Change the value of the RedoRoutes property for those members so that only one of them sends redo to the member that had multiple redo sources.

ORA-16688: command cannot be issued on a disabled member

Cause: The command was issued on a member that was disabled.

Action: Connect to an enabled member of the configuration and retry the command.

ORA-16689: invalid sender specified for RedoRoutes property

Cause: A far sync instance or a recovery appliance was specified as the redo source in a RedoRoutes property rule.

Action: Check the setting of the RedoRoutes property and confirm that a far sync instance or a recovery appliance is not specified as the redo source in the RedoRoutes property rule.

ORA-16690: invalid destination specified for RedoRoutes

Cause: A destination specified in a RedoRoutes rule either appeared in the primary setting of the same rule or was the same member whose RedoRoutes property was being changed.

Action: Ensure that any destination specified in a RedoRoutes rule does not appear in the primary setting of the same rule and is not the member whose RedoRoutes property is being changed.

ORA-16691: cannot remove a configuration member that is specified in a RedoRoutes property

Cause: An attempt was made to remove a database or far sync instance that was specified in another configuration member's RedoRoutes property.

Action: First remove the database or far sync instance from all other member's RedoRoutes property values. Then retry the remove command.

ORA-16692: operation disallowed for a member that is currently shipping redo to another member

Cause: An attempt was made to remove, disable, or convert (physical standby database) a member that currently shipped redo data to another member.

Action: Modify the value of the RedoRoutes property for the member to be removed, disabled, or converted (physical standby database) to not ship redo data for the current primary database and then retry the operation.

ORA-16693: requirements not met for enabling fast-start failover

Cause: The attempt to enable fast-start failover could not be completed because one or more requirements were not met: - The effective redo transport mode for both the primary database and the fast-start failover target standby database must be set to either SYNC or FASTSYNC if the configuration protection mode was set to MaxAvailability mode. - The effective redo transport mode for both the primary database and the fast-start failover target standby database must be set to either SYNC if the configuration protection mode was set to MaxProtection mode. - The effective redo transport mode for both the primary database and the fast-start failover target standby database must be set to ASYNC if the configuration protection mode was set to MaxPerformance mode. - No valid target standby database was specified in the primary database FastStartFailoverTarget property prior to the attempt to enable fast-start failover, and more than one standby database existed in the Oracle Data Guard configuration. - fast-start failover target standby database did not receive redo data directly from the primary database when the protection mode was set to MaxPerformance. - The primary database has multiple routes to the fast-start failover target standby database. - Logical standby databases could not be the fast-start failover targets because the configuration protection mode was set to MaxProtection.

Action: Retry the command after correcting the issue: - Ensure that the effective redo transport mode for both the primary database and the fast-start failover target standby database are either SYNC or FASTSYNC if the configuration protection mode is set to MaxProtection or MaxAvailability. - Ensure that the LogXptMode property for both the primary database and the fast-start failover target standby database are set to ASYNC if the configuration protection mode is set to MaxPerformance. - Ensure the RedoRoutes property of the primary includes the name of the fast-start failover target standby database when the protection mode is set to MaxPerformance. - Ensure the RedoRoutes property of the primary database has only one route to the fast-start failover target standby database.

ORA-16694: one or more databases involved in switchover need to be restarted

Cause: An error occurred during the restart of either the old or new primary databases or both in a switchover operation.

Action: Manually restart both the old and new primary databases, including all their Oracle RAC instances if it is an Oracle RAC database.

ORA-16695: a RedoRoutes rule requires asynchronous redo transport mode

Cause: The member could not receive redo data from its source because the source was either a standby database or far sync instance, but the redo transport was not set to asynchronous mode. Standby databases and far sync instances cannot send redo data in synchronous mode. The asynchronous transport mode must be set in either the RedoRoutes parameter of the source member or in the LogXptMode configurable property of the receiving member.

Action: Set the LogXptMode configurable property for the receiving member to ASYNC before changing the RedoRoutes configurable property of the standby database or far sync instance that is to send redo data. Or, specify ASYNC in the RedoRoutes configurable property of either the sending standby database or far sync instance to override the value specified in the LogXptMode configurable property of the receiving member.

ORA-16696: cannot enable the member because its redo source is disabled

Cause: An attempt was made to enable a member, but its redo source was disabled.

Action: Check that the redo source configured for this member (primary, database, physical standby database, or far sync instance) is enabled. If the redo source is disabled, enable it first and then retry the command.

ORA-16697: current role of the member only allows a LOCAL rule in RedoRoutes property

Cause: A logical or snapshot standby database was specified as a redo data source in a RedoRoutes configurable property rule.

Action: Logical and snapshot standbys cannot be configured as a redo source. The only valid rules a logical or snapshot standby database can contain are those that specify LOCAL or its database unique name value in the redo source field of a redo routing rule. Check that the member for which you are setting the RedoRoutes configurable property is a primary database, physical standby database, or a far sync instance. Note that a Oracle Zero Data Loss Recovery Appliance cannot be a redo source.

ORA-16698: member has a LOG_ARCHIVE_DEST_n parameter with SERVICE attribute set

Cause: One or more LOG_ARCHIVE_DEST_n initialization parameters that contain a SERVICE attribute for another member in the configuration were set on the new member when attempting to add a standby database or far sync instance to the configuration.

Action: Clear all LOG_ARCHIVE_DEST_n initialization parameters that contain a SERVICE attribute for another member in the configuration on the new member to be added.

ORA-16699: Connect identifier was not specified.

Cause: The connect identifier was not specified for the member being added to the configuration.

Action: Retry the ADD command with a connect identifier for the member to be added.

ORA-16700: The standby database has diverged from the primary database.

Cause: The primary database may have been flashed back or restored from a backup set and then reopened with the RESETLOGS option. Or, a role change to a logical standby database was performed.

Action: Re-create the standby database from the primary database or flashback the standby database to the same point the primary database had been flashed back to. If the roles are switched back to the original primary database, then no action is necessary.

ORA-16701: Oracle Data Guard broker command failed.

Cause: The command to modify or query the member failed.

Action: Check the Oracle Data Guard broker log file for the reason for the failure and reissue the command.

ORA-16702: Oracle Data Guard broker command warning

Cause: The command to modify or query the member resulted in a warning.

Action: Check the Oracle Data Guard broker log file for the warning and, if necessary, reissue the command.

ORA-16703: cannot set property while the member is enabled

Cause: An attempt was made to change a member property while the member was enabled.

Action: Disable the member first, update the property, and then reenable the member.

ORA-16704: standby database not valid for primary database

Cause: The standby database was not added to the Oracle Data Guard broker configuration because it was not a valid standby database for the primary database.

Action: Add a database to the Oracle Data Guard broker configuration that is a valid standby database to the primary database.

ORA-16706: Oracle Data Guard broker worker process not available

Cause: The Oracle Data Guard broker worker process was not available to service the request.

Action: Contact Oracle Support Services.

ORA-16707: The value of property *string* is invalid. Valid values are *string*.

Cause: An invalid property value was specified while broker management of the member was disabled.

Action: Reset the property to a valid value.

ORA-16708: the state supplied to broker is invalid

Cause: The state name specified was invalid for the database.

Action: Check the state name and reissue the command.

ORA-16709: Standby archived log location settings conflict with database recovery area.

Cause: The StandbyArchiveLocation or AlternateLocation property was set to USE_DB_RECOVERY_FILE_DEST, but the initialization parameter DB_RECOVERY_FILE_DEST did not specify a valid destination.

Action: Use a value other than USE_DB_RECOVERY_FILE_DEST for StandbyArchiveLocation or AlternateLocation, or set up a valid database recovery area by setting DB_RECOVERY_FILE_DEST to a valid destination.

ORA-16710: snapshot standby database should be converted back to a physical standby database as soon as possible

Cause: A failover causes this snapshot standby database to enter a state that requires it to be re-created if another failover occurs before it is converted back to a physical standby database.

Action: Reenable the snapshot standby database if it is disabled and convert it back to a physical standby database as soon as possible because the snapshot standby database will have to be re-created if another failover occurs while it is in this state.

ORA-16713: The Oracle Data Guard broker command timed out.

Cause: The Oracle Data Guard broker timed out a health check, get property, or set property command because it took longer than the number of seconds specified by the OperationTimeout configuration property to complete.

Action: Enable support level tracing (the TraceLevel configuration property should be set to SUPPORT) and then examine the Data Guard broker log files for warnings or errors to see what may be causing the operation to be timed out.

ORA-16714: the value of property *string* is inconsistent with the member setting

Cause: The value of the specified configuration property was inconsistent with member's in-memory settings or server parameter file settings. This may be caused by changing an initialization parameter that corresponds to a configuration property.

Action: Query the InconsistentProperties property on the member to determine the which properties are set inconsistently and set the properties to make them consistent.

ORA-16715: redo transport-related property *string* of member "*string*" is inconsistent

Cause: The value of the specified redo transport-related configuration property of the given member was inconsistent with the primary database redo transport service setting. This may be caused by a change in an initialization parameter that corresponds to a configuration property.

Action: Query the InconsistentLogXptProps property on the primary database to determine which redo transport properties are set inconsistently. Reset the properties on the member to make them consistent with the primary database redo transport settings.

ORA-16716: Unable to clear the LOG_ARCHIVE_DEST_n initialization parameter.

Cause: An attempt to clear the LOG_ARCHIVE_DEST_n initialization parameter failed.

Action: Check the Oracle Data Guard broker log files and the Oracle Database alert log for more information. Resolve any errors and retry the operation. If the problem persists, contact Oracle Support.

ORA-16717: clearing parameter LOG_ARCHIVE_DUPLEX_DEST failed

Cause: An attempt to clear the LOG_ARCHIVE_DUPLEX_DEST parameter failed.

Action: Contact Oracle Support Services.

ORA-16718: Failed to locate member.

Cause: Oracle Data Guard broker was unable to locate the member in the broker configuration.

Action: Add the member to the broker configuration and retry the command.

ORA-16719: unable to query V\$ARCHIVE_DEST fixed view

Cause: The broker failed to query the V\$ARCHIVE_DEST fixed view."

Action: Test and clear the problem using SQL*Plus.

ORA-16720: No LOG_ARCHIVE_DEST_n initialization parameters are available.

Cause: All LOG_ARCHIVE_DEST_n initialization parameters were in use, or all initialization parameters from LOG_ARCHIVE_DEST_1 through LOG_ARCHIVE_DEST_10 that can support SYNC were in use.

Action: Clear one or more LOG_ARCHIVE_DEST_n initialization parameters so that Oracle Data Guard broker can use them to set up the primary database redo transport.

ORA-16721: unable to set LOG_ARCHIVE_DEST_n initialization parameters

Cause: The broker was unable to set one or more LOG_ARCHIVE_DEST_n initialization parameters.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16722: unable to set LOG_ARCHIVE_DEST_STATE_n initialization parameters

Cause: The broker was unable to set one or more LOG_ARCHIVE_DEST_STATE_n initialization parameters.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log files for more details.

ORA-16723: setting AlternateLocation property conflicts with the redo transport setting

Cause: The standby database was not using standby redo logs, and the redo transport service to the standby database is set to a nonzero value for the ReopenSecs property and a value of zero for the MaxFailure property. In this case, the redo transport service will attempt to send redo data to the standby database indefinitely and never switch to the alternate destination.

Action: Any one of the following actions will solve the problem: - add standby redo logs to the standby database. - set ReopenSecs property to zero. - set MaxFailure property to a nonzero value. After performing one of the above actions, reset the standby database AlternateLocation property.

ORA-16724: Cannot resolve gap for one or more members.

Cause: Primary database could not resolve a gap request from one or more members.

Action: To identify the member with the unresolvable gap, check the status of the primary database using either Enterprise Manager or the DGMGRL CLI SHOW DATABASE command. Copy the missing archived log files from backups or from another member in the configuration that has the files for the member with missing files.

ORA-16727: Cannot close database.

Cause: Oracle Data Guard broker could not close the database.

Action: Terminate all active sessions connected to the database and retry.

ORA-16728: Consistency check for property *string* found *string* error.

Cause: Consistency check for specified property caused the specified error.

Action: Check the error message, clear the error, and retry.

ORA-16729: Found error *string* when validating value for property *string*.

Cause: An error was encountered while validating the specified value for the configurable property.

Action: Check the error message, clear the error, and retry.

ORA-16730: SQL Apply was not started.

Cause: SQL Apply was not started because there were no pluggable databases opened in read/write mode.

Action: Open at least one pluggable database in read/write mode. Oracle Data Guard will automatically start SQL Apply.

ORA-16731: No pluggable databases are opened in read/write mode.

Cause: Operation failed because there were no pluggable databases opened in read/write mode.

Action: Open at least one pluggable database in read/write mode and retry.

ORA-16732: Oracle Clusterware is restarting the database instance

Cause: The Oracle Data Guard broker operation required this database instance to be shut down and restarted.

Action: If Oracle Clusterware has not already done so, shut down the Oracle instance and then restart it. No action is required if this error was returned from DBMS_DRS.SWITCHOVER and Oracle Clusterware has restarted the database. If this error was returned by DBMS_DRS.CONVERT_TO_PHYSICAL or DBMS_DRS.REINSTATE, wait for the database to start, and wait for the broker to complete initialization using DBMS_DRS.WAIT(WAIT_BOOT, *wait time in seconds*). Then, for reinstate and convert operations, retry the operation.

ORA-16734: An archive location property is empty while its alternate location property has a non-empty value.

Cause: The ArchiveLocation property value was empty while the AlternateLocation property had a non-empty value. Or, the StandbyArchiveLocation property value was empty while the StandbyAlternateLocation had a non-empty value.

Action: Ensure that the member's ArchiveLocation property is set to a valid directory location that is different than the value specified for the AlternateLocation property. Or, ensure that the StandbyArchiveLocation property is set to a valid directory location that is different than the value specified for the StandbyAlternateLocation property.

ORA-16735: primary redo generation suspended

Cause: Redo generation on the primary database was suspended because either the fast-start failover target was unavailable or the network connection between both databases was disrupted.

Action: Ensure that the fast-start failover target standby database is running and the network connection between both databases is restored.

ORA-16736: unable to find the destination entry of member "*string*" in V\$ARCHIVE_DEST

Cause: Either the destination was manually changed or deleted out of Oracle Data Guard broker, or no entry was available for the Oracle Data Guard broker to use.

Action: Clean up the destination setting, remove the unused settings, and reset the redo transport service.

ORA-16737: the redo transport service for member "*string*" has an error

Cause: A communication problem with the member caused the redo transport to fail.

Action: Query the LogXptStatus property to see the error message. Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16738: redo transport service for member "*string*" is not running

Cause: The redo transport service for the specified member was not running.

Action: Check the Oracle Data Guard broker log file or the Oracle alert log file for more details. If necessary, start the redo transport service for the member.

ORA-16739: Redo transport service for member "*string*" is unexpectedly running.

Cause: The redo transport service for the member was expected to be stopped but was found running.

Action: Check the Oracle Data Guard broker log file for more details. If necessary, stop the redo transport service for the member.

ORA-16740: Redo transport service for member "*string*" incorrectly set as alternate.

Cause: The redo transport service for a member was set as alternate when no other member was set as an alternate for this member.

Action: Re-enable the member or the entire configuration to allow the correct configuration property settings to be propagated to the initialization parameters.

ORA-16741: The LOG_ARCHIVE_DEST_N initialization parameter value for member "*string*" contains incorrect syntax.

Cause: The value of a LOG_ARCHIVE_DEST_N initialization parameter that was defined in the server parameter file of the primary database contained incorrect syntax. The Data Guard broker was unable to change its value when the redo transport services were enabled.

Action: Fix the syntax error in the primary database server parameter file or remove the entry from the server parameter file. Also, check the values of the redo transport-related properties for the specified member.

ORA-16742: The member "*string*" exceeded its archived log storage quota.

Cause: The member exceeded its quota for stored archived redo logs.

Action: Remove some archived redo logs from the member or increase its quota.

ORA-16743: cannot determine status of redo transport service for member "*string*"

Cause: The status of redo transport to the specified member could not be determined.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16744: The DG_CONFIG list of LOG_ARCHIVE_CONFIG parameter is full.

Cause: The DG_CONFIG list of the LOG_ARCHIVE_CONFIG attribute was full and the Oracle Data Guard broker was not able to add a new DB_UNIQUE_NAME to the list.

Action: Remove unused entries in the DG_CONFIG list, then re-enable the member.

ORA-16745: unable to add DB_UNIQUE_NAME "*string*" into the DG_CONFIG list because it is full

Cause: The DG_CONFIG list of the LOG_ARCHIVE_CONFIG attribute was full and the Oracle Data Guard broker was not able to add the specified DB_UNIQUE_NAME to the list.

Action: Remove some unused entries in the DG_CONFIG list then reenab the member.

ORA-16746: Oracle Data Guard broker cannot mount the database.

Cause: The Oracle Data Guard broker failed to mount the database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16747: logical standby database guard could not be turned on

Cause: The Oracle Data Guard broker could not turn on the logical standby database guard.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16748: Oracle Data Guard broker cannot open the primary database

Cause: The Oracle Data Guard broker failed to open the primary database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16749: The member is disabled manually.

Cause: The Oracle Data Guard broker configuration member was disabled manually.

Action: Enable the Oracle Data Guard broker configuration member.

ORA-16750: failed to activate logical standby database

Cause: The Oracle Data Guard broker failed to activate a logical standby database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16751: failed to enable supplemental logging

Cause: The Oracle Data Guard broker failed to enable supplemental logging during a switchover to a physical standby database in a configuration that also contained logical standby databases.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16753: Oracle Data Guard broker cannot open standby database

Cause: The Oracle Data Guard broker failed to open the standby database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16754: failed to activate physical standby database

Cause: The Oracle Data Guard broker failed to activate the physical standby database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16755: Failed setting an initialization parameter.

Cause: The Oracle Data Guard broker failed to set an initialization parameter using either the ALTER SYSTEM SET or ALTER SYSTEM RESET command.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16757: unable to get the value of this property

Cause: The Oracle Data Guard broker failed to get the value for the specified property because the value for the specified property is not available for the current database role.

Action: If the value of the specified property is not available for the current role of the database, specify this property for a database for which the value is available. Otherwise, check the Oracle Data Guard broker log file for more details.

ORA-16758: The specified apply instance is not running.

Cause: Oracle Data Guard broker could not start Apply services on the specified instance because the instance was not running.

Action: Start the instance and then retry the command.

ORA-16759: cannot start SQL Apply with initial SCN

Cause: The Oracle Data Guard broker failed to start SQL Apply with an initial system change number (SCN).

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16760: Cannot start SQL Apply.

Cause: Oracle Data Guard broker failed to start SQL Apply.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details. If needed, contact Oracle Support Services.

ORA-16761: cannot stop SQL Apply

Cause: The Oracle Data Guard broker failed to stop the SQL Apply service.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16762: invalid database state

Cause: Database was not in the intended state.

Action: Determine the reason why the database is not running in the intended state and reissue the command.

ORA-16763: redo transport service for a member is running

Cause: The redo transport service for a member was running.

Action: For more details, check the status of the primary database using either Oracle Enterprise Manager or the DGMGRL CLI SHOW DATABASE command. If necessary, stop the redo transport service to the member.

ORA-16764: redo transport service to a member is not running

Cause: The redo transport service to a member was not running.

Action: For more details, check the status of the primary database using either Oracle Enterprise Manager or the DGMGRL CLI SHOW DATABASE command. If necessary, start the redo transport service to the member.

ORA-16765: Redo Apply is running

Cause: Redo Apply was running when it should have been stopped.

Action: If necessary, stop Redo Apply.

ORA-16766: Redo Apply is stopped.

Cause: Redo Apply was stopped when it should have been running.

Action: Check the alert log to see why Redo Apply terminated, correct any problems that may exist, and restart Redo Apply by setting the physical standby database state to APPLY-ON.

ORA-16767: SQL Apply is running

Cause: The Oracle Data Guard broker expected SQL Apply to have been stopped but detected that SQL Apply was still running.

Action: This normally occurs because SQL Apply was stopped using the Oracle Data Guard broker but restarted again outside of the Oracle Data Guard broker, for example through SQL*Plus. Stop SQL Apply using SQL*Plus and retry the required action using the Oracle Data Guard broker.

ORA-16768: SQL Apply is stopped.

Cause: SQL Apply was stopped when it should have been running.

Action: Check the alert log to see why SQL Apply terminated, correct any problems that may exist, and restart SQL Apply by setting the logical standby database state to APPLY-ON.

ORA-16769: The physical standby database is open in read-only mode.

Cause: All instances of the physical standby database were put into a read-only state instead of APPLY-OFF.

Action: Use the EDIT DATABASE SET STATE command to set the database to the APPLY-OFF state. Retry the operation.

ORA-16770: Redo Apply not started since physical standby database is opening

Cause: Redo Apply services could not be started on the physical standby database because it was being opened. The Oracle Data Guard broker will start Redo Apply services once the physical standby database has been opened.

Action: No action required.

ORA-16771: failover to a physical standby database failed

Cause: The Oracle Data Guard broker encountered errors when converting a physical standby database to a primary database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16772: switchover to a standby database failed

Cause: The Oracle Data Guard broker encountered errors when switching over to the specified standby database.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16773: cannot start Redo Apply

Cause: The Oracle Data Guard broker failed to start Redo Apply.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details. If the database is already open, the broker will not start Redo Apply if the Oracle Active Data Guard option is not enabled.

ORA-16774: cannot stop Redo Apply

Cause: The Oracle Data Guard broker failed to stop the Redo Apply service.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16775: target standby database in broker operation has potential data loss

Cause: The target standby database specified for the broker operation did not have all the redo data from the primary database.

Action: Confirm that the redo transport service on the primary database is functioning correctly by checking its status using either Oracle Enterprise Manager or the DGMGRL CLI SHOW DATABASE command. Reissue the broker command once all redo data are available on the target standby database.

ORA-16776: Health check of the redo transport service failed.

Cause: The Oracle Data Guard broker could not complete the health check for the redo transport service.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details on why the health check detected errors. These logs should contain other error messages that indicate the cause of the problem.

ORA-16777: Unable to find the destination entry of a member in V\$ARCHIVE_DEST.

Cause: Either a destination (LOG_ARCHIVE_DEST_N initialization parameter) was manually deleted or no LOG_ARCHIVE_DEST_N initialization parameter was available to set up redo transport for the member.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details. If there are sufficient LOG_ARCHIVE_DEST_N initialization parameters available, re-enable the configuration using the DGMGRL CLI ENABLE CONFIGURATION command to ensure all members are receiving redo data. If there are an insufficient number of LOG_ARCHIVE_DEST_N initialization parameters available, consider using the RedoRoutes property to take advantage of available LOG_ARCHIVE_DEST_N initialization parameters on other members so that all members are receiving redo data.

ORA-16778: Redo transport error occurred for one or more members.

Cause: The redo transport service was unable to send redo data to one or more members.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details. These logs should contain other errors messages that indicate the cause of the problem. Also, query the LogXptStatus property to see the errors affecting the redo transport service.

ORA-16779: The LOG_ARCHIVE_DEST_n initialization parameter of a member is set incorrectly.

Cause: The LOG_ARCHIVE_DEST_n initialization parameter value in the server parameter file contained incorrect syntax. The Oracle Data Guard broker failed to update the destination when the redo transport service was enabled.

Action: Check the Oracle Data Guard broker log file to see which member has the problem. Fix the syntax error in the server parameter file or remove the entry from the server parameter file. Check if the syntax of the redo transport-related properties is correct.

ORA-16780: A member exceeded its archived redo log storage quota.

Cause: A member exceeded its archived redo log storage quota.

Action: Check the Oracle Data Guard broker log file to see which member has the problem. Remove older archived redo logs or increase the member's archived redo log storage quota.

ORA-16781: cannot determine status of redo transport service for member

Cause: The status of redo transport to the specified member could not be determined.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more details.

ORA-16782: instance not open for read/write access

Cause: The database was mounted on an instance but not opened for read/write access.

Action: For more details, check the status of the database using either Oracle Enterprise Manager or the DGMGRL CLI SHOW DATABASE command. If possible, open the instance manually.

ORA-16783: Cannot resolve gap for member *string*.

Cause: The primary database could not resolve a gap request from the specified members.

Action: Copy the missing archived redo log files either from a backup or from another member in the configuration that has the missing files for the members.

ORA-16784: member name specified by Dependency property is incorrect

Cause: The member name that should be the value of the DB_UNIQUE_NAME initialization parameter specified in the Dependency property was incorrect.

Action: Reset the Dependency property to the correct name of the member.

ORA-16785: The database is in NOARCHIVELOG mode.

Cause: The database was in NOARCHIVELOG mode when it was either a primary database or when it was a standby database that was being switched over to be a primary database.

Action: Set the database to ARCHIVELOG mode by issuing the ALTER DATABASE ARCHIVELOG command.

ORA-16786: unable to access Oracle Data Guard broker configuration files

Cause: The Oracle Data Guard broker configuration files did not exist or could not be accessed.

Action: Check the Oracle Data Guard broker log file for more details.

ORA-16788: unable to set one or more member configurable property values

Cause: This situation occurred when the broker attempted to set member configurable property values into the member by issuing ALTER SYSTEM or ALTER DATABASE commands. Typical causes of this error are: - The values of redo transport-related properties contain syntax syntax errors. - The value of the LogArchiveTrace property was out of range.

Action: Check the Oracle Data Guard broker log file to see which property has the problem and set the property to the correct value.

ORA-16789: Standby redo logs are configured incorrectly.

Cause: Standby redo logs were not configured, or were configured incorrectly for the member.

Action: Standby redo logs are required when the redo transport mode is set to SYNC or ASYNC. Check the Oracle Data Guard documentation for more information on the correct configuration of standby redo logs.

ORA-16790: The value of the configurable property is invalid.

Cause: Either an invalid property value was entered, or a reset was attempted for a property that had no broker default value.

Action: Set the property to a valid value.

ORA-16791: Unable to check the existence of the standby redo logs.

Cause: The standby redo logs were not found or did not exist.

Action: Ensure the member is mounted and query the V\$STANDBY_LOG fixed view to check if the problem is corrected. Retry the command.

ORA-16792: Configurable property value is inconsistent with member setting.

Cause: The value of one or more configurable properties were inconsistent with the in-memory settings or server parameter file settings. This may happen by directly altering initialization parameters instead of editing configurable property values using Oracle Data Guard broker.

Action: Query the InconsistentProperties property on the member or check the Oracle Data Guard broker log file to find which properties are set inconsistently. Reset these properties to make them consistent with the database settings. Alternatively, enable the member or the entire configuration to allow the configurable property settings to be propagated to the initialization parameters.

ORA-16793: Logical standby database guard is off.

Cause: The logical standby database was turned off.

Action: Issue the ALTER DATABASE GUARD ALL command to turn the guard on and verify that Oracle Data Guard health check error or warning has cleared.

ORA-16794: database guard is on for primary database

Cause: The database guard was turned on for the primary database.

Action: Issue the ALTER DATABASE GUARD NONE command to turn off the guard and verify that Data Guard health check error or warning is cleared.

ORA-16795: The standby database needs to be re-created.

Cause: A switchover or failover operation caused this database to require re-creation.

Action: Re-create (or flashback) the standby database. Connect to the primary database in the broker configuration and re-enable broker management of that database. Once enabled, connect to the standby database and manage it with the broker. Some client commands cannot be completed on the standby database when in this error state. These commands can be completed successfully on the primary database. Retry the command on the primary database.

ORA-16796: One or more properties could not be imported from the member.

Cause: The broker was unable to import property values for the member being added to the broker configuration. This error indicates: The Oracle Net service name specified in DGMGRL CREATE CONFIGURATION, ADD DATABASE, ADD FAR_SYNC, or ADD RECOVERY_APPLIANCE command was not one that provides access to the member being added. There were no instances running for the member being added.

Action: Remove the member from the configuration using the REMOVE CONFIGURATION, REMOVE DATABASE, REMOVE FAR_SYNC, or REMOVE RECOVERY_APPLIANCE command. Ensure that the member to be added has at least one instance running and that the Oracle Net service name provides access to the running instance. Also, check the broker log file for additional information. Then, reissue the CREATE CONFIGURATION, ADD DATABASE, ADD FAR_SYNC, or ADD RECOVERY_APPLIANCE command.

ORA-16797: member is not using a server parameter file

Cause: The member was not using a server parameter file or the broker was unable to access the server parameter file.

Action: Issue the CREATE SPFILE='.' FROM PFILE='...' command to create a server parameter file and then restart the member to use it.

ORA-16798: unable to complete recovery during failover

Cause: The physical standby database could not complete recovery during failover.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log files to see more details on the reason for the failure.

ORA-16799: Redo Apply is not running

Cause: Either the Oracle Data Guard broker configuration indicated that Redo Apply was turned off, or the MRP0 recovery process was not running. As a result, Redo Apply-related properties could not be set.

Action: Turn on Redo Apply through Oracle Data Guard broker and rerun the command to set the Redo Apply-related properties.

ORA-16800: Redo transport service for a standby database incorrectly set as alternate

Cause: The redo transport service for a member was set as an alternate destination when no other member is set as an alternate destination for this member.

Action: Re-enable the standby database or the entire configuration to allow the correct configuration property settings to be propagated to the initialization parameters.

ORA-16801: Redo transport-related property is inconsistent with member setting.

Cause: The values of one or more redo transport-related configuration properties were inconsistent with the in-memory settings or server parameter file settings. This may happen by directly altering initialization parameters instead of editing configurable property values using Oracle Data Guard broker.

Action: Query the InconsistentLogXptProps property on the primary database or check the Oracle Data Guard broker log file to find which properties are set inconsistently. Reset these properties to make them consistent. Alternatively, enable the member or the entire configuration to allow the configurable property settings to be propagated to the initialization parameters.

ORA-16802: Database role change operation permitted only by Data Guard broker when fast-start failover is enabled.

Cause: Fast-start failover was enabled and a role change was not initiated from a Data Guard broker interface.

Action: Use a Data Guard broker interface to perform a role change.

ORA-16803: Unable to query a database table or fixed view.

Cause: Querying a database table or fixed view failed. The database may not be opened or mounted.

Action: Check the Oracle Data Guard broker log file for more details.

ORA-16804: one or more configuration properties have invalid values

Cause: Oracle Data Guard broker health check detected that one or more configuration properties in the broker configuration had invalid values. The property values were changed while broker management of the member was disabled.

Action: Check Data Guard broker log file for more details on which properties have invalid values and reset them through the Oracle Data Guard broker.

ORA-16806: Supplemental logging is not turned on.

Cause: Supplemental logging was not turned on while there was a logical standby database in the configuration. This could happen either on the primary database or on the logical standby database that was being switched over to become the primary database.

Action: Check the Oracle Data Guard broker log file for more details. Issue the ALTER DATABASE ADD SUPPLEMENTAL LOG DATA (PRIMARY KEY, UNIQUE INDEX) COLUMNS statement to add supplemental logging.

ORA-16807: unable to change configuration protection mode

Cause: An attempt to issue the ALTER DATABASE SET STANDBY TO MAXIMIZE {PROTECTION | AVAILABILITY | PERFORMANCE} failed.

Action: Check the Oracle Data Guard broker log file and the Oracle alert log file for more information.

ORA-16808: primary database is not open

Cause: A prior attempt to open the primary database was disallowed because the primary had shut itself down earlier after being isolated from both the fast-start failover observer and the target standby database for more than FastStartFailoverThreshold seconds. It was assumed that a fast-start failover was underway. Since that time, re-contact with either the observer or the target standby database indicates that no such failover had actually occurred. The primary database can now be opened.

Action: Open the database by issuing the SQL*Plus ALTER DATABASE OPEN command.

ORA-16809: Multiple warnings detected for the member.

Cause: The broker detected multiple warnings for the member.

Action: Get a detailed status report by checking the status of the member specified using either Enterprise Manager or the DGMGRL CLI SHOW command.

ORA-16810: multiple errors or warnings detected for the member

Cause: The broker detected multiple errors or warnings for the member.

Action: To get a detailed status report, check the status of the database specified using either Enterprise Manager or the DGMGRL CLI SHOW command.

ORA-16811: Apply instance not recorded by the Oracle Data Guard broker.

Cause: The broker did not register an Apply instance for a standby database.

Action: Reenable the standby database to clear the error.

ORA-16812: log apply service not running on apply instance recorded by the broker

Cause: Log apply services were not running on the instance the Data Guard broker expected them to be running upon.

Action: Reenable the standby database to clear the error.

ORA-16813: log apply service not running on apply instance *string* recorded by the broker

Cause: Log apply services were not running on the instance the Data Guard broker expected them to be running upon.

Action: Reenable the standby database to clear the error.

ORA-16814: Duplicate name specified for observer.

Cause: The observer was not started because an observer with that name was already started.

Action: Use the DGMGRL CLI SHOW OBSERVER command to check the names of the observers that have already been started. Retry the START OBSERVER command with an unused observer name.

ORA-16815: member does not need to be reinstated

Cause: The member specified was either already reinstated or does not need to be reinstated.

Action: No action necessary. Any stale reinstate required status will be cleared after the next health check has completed.

ORA-16816: incorrect database role

Cause: The Oracle Data Guard broker detected that the specified database had a different database role from the one that was recorded in the Oracle Data Guard broker configuration. This could be the result of a failed switchover or failover operation, or a switchover or failover operation performed with SQL*Plus.

Action: Check the Oracle Data Guard broker documentation to see how to recover from failed role change operations, or from role changes that were performed using SQL*Plus for databases managed by Oracle Data Guard broker.

ORA-16817: unsynchronized fast-start failover configuration

Cause: The fast-start failover target standby database was not synchronized with the primary database. As a result, a fast-start failover could not happen automatically in case of a primary database failure.

Action: Ensure that the fast-start failover target standby database is running and that the primary database can ship redo data to it. When the standby database has received all of the redo data from the primary database, the primary and standby databases will then be synchronized. The Oracle Data Guard configuration may then failover automatically to the standby database in the event of loss of the primary database.

ORA-16818: fast-start failover suspended

Cause: The primary database was intentionally shut down. As a result, the fast-start failover could not take place automatically.

Action: Start the primary database. This effectively restores the ability to automatically perform a fast-start failover in the event of a failure of the primary database.

ORA-16819: fast-start failover observer not started

Cause: The observer for fast-start failover was not started. As a result, fast-start failover could not happen in the case of a primary database failure.

Action: Start the fast-start failover observer by using, for example, the DGMGRL START OBSERVER command.

ORA-16820: fast-start failover observer is no longer observing this database

Cause: A previously started observer was no longer actively observing this database. A significant amount of time elapsed since this database last heard from the observer. Possible reasons were: - The host where the observer was running was not available. - The network connection between the observer and this database was not available. - The observer process was terminated unexpectedly.

Action: Check the reason why the observer cannot contact this database. If the problem cannot be corrected, stop the current observer by connecting to the Oracle Data Guard configuration and issuing the DGMGRL STOP OBSERVER command, and then start a new observer on another host using the DGMGRL START OBSERVER command.

ORA-16821: Logical standby database dictionary not loaded.

Cause: The logical standby database did not load the dictionary. This status may be returned when attempting to switchover or failover to a logical standby database that did not load its dictionary.

Action: Start SQL Apply on the logical standby database, if it is not already running. Wait for it to reach the APPLYING state.

ORA-16822: New primary database not ready for standby database reinstatement.

Cause: The new primary database, as a result of a logical standby database failover operation, did not fully complete the failover operation.

Action: Wait until the failover operation has completed on the new primary database. Retry the reinstate operation.

ORA-16823: redo transport mode is incompatible for current operation

Cause: The redo transport mode of this member was incompatible for this broker operation.

Action: Reset the LogXptMode member property for this member and retry the broker operation.

ORA-16824: multiple warnings, including fast-start failover-related warnings, detected for the database

Cause: The broker detected multiple warnings for the database. At least one of these warnings may have prevented fast-start failover from occurring.

Action: To get a detailed status report, check the status of the database specified using either Enterprise Manager or the DGMGRL CLI SHOW DATABASE command.

ORA-16825: Multiple errors or warnings, including fast-start failover-related errors or warnings, detected for the database.

Cause: The broker detected multiple errors or warnings for the database. At least one of these errors or warnings may have prevented a fast-start failover from occurring.

Action: To get a detailed status report, check the status of the database specified using either Enterprise Manager or the DGMGRL CLI SHOW DATABASE command.

ORA-16826: apply service state is inconsistent with the DelayMins property

Cause: This warning was caused by one of the following reasons: - The apply service was started without specifying the real-time apply option or without the NODELAY option when the DelayMins property was set to zero. - The apply service was started with the real-time apply option or with the NODELAY option when the DelayMins property was set to a value greater than zero.

Action: Reenable the standby database to allow the broker to restart the apply service with the apply options that are consistent with the specified value of the DelayMins property.

ORA-16827: Flashback Database is disabled

Cause: The broker detected that the Flashback Database feature was disabled. With Flashback Database disabled, the broker would not be able to: - reinstate a database that required reinstatement. - convert a physical standby database to a snapshot standby database. - convert a snapshot standby database to a physical standby database. Flashback Database may be disabled manually with the ALTER DATABASE FLASHBACK DATABASE OFF command or automatically by the database in the event of an error.

Action: Check the database alert log to determine whether Flashback Database was disabled due to errors and then correct the problem. If Flashback Database had been manually disabled, reenable Flashback Database with the ALTER DATABASE FLASHBACK DATABASE ON command. If, after enabling Flashback Database, the database still cannot be reinstated or converted, you must re-create the database from a copy of the primary database.

ORA-16828: invalid value specified for REDO_TRANSPORT_USER initialization parameter

Cause: An invalid value was specified for the REDO_TRANSPORT_USER initialization parameter. The length of the user name exceeded 30 characters.

Action: Check the documentation and specify a new value for the REDO_TRANSPORT_USER initialization parameter.

ORA-16829: fast-start failover configuration is lagging

Cause: The fast-start failover target standby database was not within the lag limit specified by the FastStartFailoverLagLimit configuration property. As a result, a fast-start failover could not happen in the event of a primary database failure.

Action: Ensure that the fast-start failover target standby database is running and applying redo data and that the primary database is successfully transmitting redo data. If this condition persists consider raising the value of the FastStartFailoverLagLimit configuration property.

ORA-16830: primary isolated from fast-start failover partners longer than FastStartFailoverThreshold seconds: shutting down

Cause: The primary database was isolated from both the observer and target standby database for longer than the seconds specified by the FastStartFailoverThreshold property. A fast-start failover probably occurred. If the FastStartFailoverPmyShutdown configuration property was set to TRUE, the broker will shut down the primary database in this situation.

Action: Ensure one instance of this database is running and the database is mounted on that instance so that the broker may reinstate the old primary database.

ORA-16831: operation not allowed on this member

Cause: The Oracle Data Guard broker operation was not allowed for the specified member of the Oracle Data Guard broker configuration.

Action: Check the documentation for the Oracle Data Guard broker command and then reissue the command with the correct member.

ORA-16832: user-configurable fast-start failover initiated: shutting down

Cause: The broker initiated a fast-start failover to the target standby database because a user-configurable condition was detected on the primary database. In addition, the broker shut down the primary database.

Action: Correct the problem on the old primary database that caused the broker to initiate a fast-start failover, then reinstate the old primary database.

ORA-16833: No such pluggable database at this database

Cause: There was no pluggable database of the given name at the given container database.

Action: Provide the correct pluggable database name or container database name and reissue the command.

ORA-16834: Specified pluggable database is not a standby pluggable database.

Cause: The specified pluggable database name was not a standby pluggable database.

Action: Provide the correct pluggable database name or container database name and retry.

ORA-16835: Source pluggable database was dropped

Cause: The source pluggable database for this standby pluggable database was dropped.

Action: Consider immediate failover to make this a native pluggable database, or remove this standby pluggable database.

ORA-16836: Source pluggable database was unplugged.

Cause: The source pluggable database for this standby pluggable database was unplugged.

Action: Consider immediate failover to make this a native pluggable database, or remove this standby pluggable database.

ORA-16837: Standby pluggable database is not applying redo data.

Cause: Standby pluggable database was not applying redo data.

Action: Ensure recovery was started and is running. Use the `EDIT PLUGGABLE DATABASE SET STATE=APPLY-ON` to start Redo Apply. If this does not resolve the issue, switch logs at the source database.

ORA-16838: Source pluggable database is not opened in READ WRITE mode.

Cause: The source pluggable database was not opened in READ WRITE mode.

Action: Open the source pluggable database in READ WRITE mode and reissue the command.

ORA-16839: Pluggable database must be in mounted mode.

Cause: Cannot remove the pluggable database which was in open mode.

Action: Close the pluggable database and reissue the command.

ORA-16840: Target pluggable database is not recovering current redo data.

Cause: Target pluggable database was not recovering current redo data from source pluggable database.

Action: Start recovery at the target pluggable database using `EDIT PLUGGABLE DATABASE pluggable database name at CDB SET STATE=APPLY-ON;`

ORA-16841: Target pluggable database has not applied all redo.

Cause: The target pluggable database had not completed applying all the redo data.

Action: If the target pluggable database is still applying, allow it to apply all the redo and reissue the command. If apply has stopped, check why it has stopped and rectify the situation before proceeding.

ORA-16842: Multitenant container database name specified is incorrect.

Cause: A multitenant container database name was incorrectly specified.

Action: Specify the correct multitenant container database name.

ORA-16844: database does not have a valid fast-start failover target standby database

Cause: Fast-start failover was enabled and the current primary database did not have a value set for the `FastStartFailoverTarget` configurable property or the value specified for this property was not a valid fast-start failover target standby database.

Action: Disable fast-start failover or ensure that the primary database has a valid fast-start failover target standby database specified by setting the `FastStartFailoverTarget` configurable property value to a valid standby database.

ORA-16845: unsupported attribute specified for the local destination property

Cause: The value specified for a local destination property contained unsupported attributes.

Action: Ensure that the value specified for the ArchiveLocation, AlternateLocation, StandbyArchiveLocation, or StandbyAlternateLocation property does not contain the SERVICE, ALTERNATE, or VALID_FOR attribute.

ORA-16846: ArchiveLocation and StandbyArchiveLocation should specify different destinations.

Cause: An attempt was made to set the ArchiveLocation and StandbyArchiveLocation configurable properties to the same destination.

Action: Ensure that the ArchiveLocation and StandbyArchiveLocation configurable properties specify different destinations.

ORA-16847: A previous switchover from this database failed with error string.

Cause: A previous switchover operation from this database failed.

Action: Fix the underlying problem and reissue the switchover command again.

ORA-16848: A previous switchover to this database failed with error string.

Cause: A previous switchover operation to this database failed.

Action: Fix the underlying problem and reissue the switchover command again.

ORA-16849: A previous switchover from this database was interrupted and aborted.

Cause: A previous switchover operation from this database was interrupted. The interruption may have been caused by a stalled switchover.

Action: Check the Oracle Data Guard broker log file and the Oracle log file for more information, fix the underlying problem, and then reissue the switchover command.

ORA-16850: A previous switchover to this database was interrupted and aborted.

Cause: A previous switchover operation to this database was interrupted by the user. The interruption may be caused by a stalled switchover.

Action: Check the Oracle Data Guard broker log file and the Oracle log file for more information, fix the underlying problem, and then reissue the switchover command.

ORA-16851: A previous failover to this database failed with error string.

Cause: A previous failover operation to this database failed.

Action: Check the Oracle Data Guard broker log file and the Oracle log file for more information, fix the underlying problem and then reissue the failover command.

ORA-16852: A previous failover to this database was interrupted and aborted.

Cause: A previous failover operation to this database was interrupted because the operation may have stalled.

Action: Check the Oracle Data Guard broker log file and the Oracle log file for more information, fix the underlying problem, and then reissue the failover command.

ORA-16853: apply lag has exceeded specified threshold

Cause: The current apply lag exceeded the value specified by the ApplyLagThreshold configurable property. It may be caused either by a large transport lag or poor performance of apply services on the standby database.

Action: Check for gaps (missing archive log files) on the standby database. If no gap is present, tune the apply services following Maximum Availability Architecture best practice guidelines.

ORA-16854: apply lag could not be determined

Cause: Apply lag could not be determined because either apply services were not running or there was no connectivity between the redo source and standby database.

Action: Start apply services if they are not running. Also, ensure that there is network connectivity between the redo source and standby databases and the redo source is sending redo data to the standby.

ORA-16855: transport lag has exceeded specified threshold

Cause: The current transport lag exceeded the value specified by the TransportLagThreshold configurable property. This error is caused by either poor network performance between the redo source and the member or a network disconnection.

Action: Check the network connection between the redo source and the member. If they are connected, check the network performance between the redo source and the member and tune it according to the Maximum Availability Architecture best practice guidelines.

ORA-16856: transport lag could not be determined

Cause: Transport lag could not be determined because there was no connectivity between the redo source and the member.

Action: Ensure that there is network connectivity between the redo source and the members and that the redo source is working properly.

ORA-16857: member disconnected from redo source for longer than specified threshold

Cause: The amount of time the member was disconnected from the redo source exceeded the value specified by the TransportDisconnectedThreshold configurable database property. It is caused by a lack of network connectivity between the redo source and the member.

Action: Ensure that there is network connectivity between the redo source and the member and that the redo source is working properly.

ORA-16858: last communication time from redo source could not be determined

Cause: The member was never contacted by the redo source.

Action: Ensure that there is network connectivity between the redo source and the member and that the redo source is working properly.

ORA-16859: request terminated because delete, disable, or failover operation is in progress

Cause: The broker terminated a request because it was processing a delete, disable, or failover operation.

Action: Wait for the operation to complete and then retry the request.

ORA-16860: Cannot remove the local configuration when it references a remote configuration.

Cause: The local configuration could not be removed because it was associated with one or more remote configurations.

Action: First, remove all the remote configurations using the REMOVE CONFIGURATION <config_name> command. Then, retry the remove operation for the local configuration using the REMOVE CONFIGURATION command.

ORA-16861: ExternalDestination property requires DB_UNIQUE_NAME attribute

Cause: The value specified for the ExternalDestination property did not contain the DB_UNIQUE_NAME attribute.

Action: Ensure that DB_UNIQUE_NAME is specified as the value for the ExternalDestination property.

ORA-16862: unsupported attribute specified for the ExternalDestination property

Cause: The value specified for the ExternalDestination property contained unsupported attributes.

Action: Ensure that the value specified for the ExternalDestination property does not contain any of these attributes: LOCATION, ALTERNATE, MAX_FAILURE, SYNC, TEMPLATE, MANDATORY, DELAY, NET_TIMEOUT, and VALID_FOR.

ORA-16863: A member whose MaxFailure property is set to zero cannot be part of a RedoRoutes group.

Cause: A member was specified to be part of a RedoRoutes group when the MaxFailure configurable property was set to zero.

Action: Set the MaxFailure property to a nonzero value and retry the command.

ORA-16864: The MaxFailure property cannot be set to zero for a member that is part of a RedoRoutes group.

Cause: An attempt was made to set the MaxFailure configurable property to zero when it was part of a RedoRoutes group.

Action: Set the MaxFailure configurable property to a nonzero value.

ORA-16865: database is closing or is not mounted on the instance

Cause: The Data Guard broker health check was unable to complete because the database was closing or was not mounted on the instance.

Action: No action is required if the database is closing. Mount the database if it is not yet mounted on the instance.

ORA-16866: database converted to transient logical standby database for rolling database maintenance

Cause: This database was converted to a transient logical standby database because a rolling database maintenance operation was in progress.

Action: No action is required. The database will be converted to a primary database when the DBMS_ROLLING.SWITCHOVER procedure is executed or to a physical standby database when the DBMS_ROLLING.FINISH procedure is executed.

ORA-16867: cannot remove a database that is specified in a FastStartFailoverTarget configuration property

Cause: An attempt was made to remove a database that was specified in the FastStartFailoverTarget configuration property of another database.

Action: First, remove the database from all other database's FastStartFailoverTarget configuration property values. Then, retry the REMOVE command.

ORA-16868: Fast-start failover target standby database not viable.

Cause: The fast-start failover target standby database was not viable. As a result, a fast-start failover to this database could not happen automatically.

Action: After the standby database has been re-created from a copy of the new primary database, disable and then reenable the standby database.

ORA-16869: fast-start failover target not initialized

Cause: The standby database was not ready to be a fast-start failover target standby database. Consequently, fast-start failover could not be initiated to this database in the event of a primary database failure.

Action: Ensure that the network connection between the primary and the fast-start failover target standby is functioning properly.

ORA-16871: fast-start failover target switch is not supported

Cause: Automatic switch of the fast-start failover target was not possible because the release of the observer was earlier than 12.2. Consequently, the fast-start failover target switch will not occur even though the primary database has more than one fast-start failover target configured.

Action: Upgrade the Oracle client home to release 12.2 and then stop and restart the observer using the DGMGRL CLI in that Oracle home.

ORA-16872: AlternateLocation and StandbyAlternateLocation should specify different destinations.

Cause: An attempt was made to set the AlternateLocation and StandbyAlternateLocation configurable properties to the same destination.

Action: Ensure that the AlternateLocation and StandbyAlternateLocation configurable properties specify different destinations.

ORA-16873: The observer with the specified name is not started.

Cause: The operation was not allowed because the observer corresponding to the specified name was not started.

Action: Issue the command again after ensuring that the observer corresponding to the specified name is started.

ORA-16874: The specified observer host is invalid.

Cause: The operation was not allowed because there was no registered observer running on the specified host.

Action: Issue the command again after ensuring that there is a registered observer running on the specified host.

ORA-16875: master observer switch is in progress

Cause: The operation was not allowed because a master observer switch was already in progress.

Action: Wait for a few seconds and retry the operation.

ORA-16876: observer name not specified

Cause: The operation was not allowed because an observer name was not specified and there was more than one observer registered.

Action: Retry the command and be sure to specify the observer name or use the term ALL when more than one observer is registered.

ORA-16877: no registered observers

Cause: The operation was not allowed because there were no registered observers.

Action: None

ORA-16878: master observer cannot be stopped

Cause: The master observer cannot be stopped when another observer is registered.

Action: Use the SET MASTEROBSERVER command to establish another observer as the master observer. Then use the STOP OBSERVER command to stop the former master observer.

ORA-16879: fast-start failover cannot be initiated by a non-master observer

Cause: Fast-start failover was initiated by a non-master observer. This can occur if Data Guard Broker starts to switch master observer when fast-start failover is being initiated.

Action: Check the DRC log files of the primary database to see why a master observer switch occurred.

ORA-16880: fast-start failover target switch is in progress

Cause: The operation was not allowed because a fast-start failover target switch was already in progress.

Action: Wait for a few seconds and retry the operation.

ORA-16881: standby database is not protecting the current primary database during rolling database maintenance

Cause: This standby database was a member of the leading group standby databases protecting the future primary database, or was a member of the trailing group standby databases protecting the original primary database during the rolling database maintenance operation.

Action: This issue will be resolved once all the databases have completed the maintenance operation and the DBMS_ROLLING.FINISH procedure is executed.

ORA-16882: rolling database maintenance processing is managing apply services

Cause: Apply services were stopped because a rolling database maintenance operation was in progress.

Action: No action is required. Apply services will be restarted by Oracle.

ORA-16883: unable to translate the DGConnectIdentifier property to a valid connect identifier

Cause: One or more members in the Data Guard configuration could not resolve the connect identifier specified by the DGConnectIdentifier property. The connectivity between the members could not be established for this reason. This might be caused by a missing or invalid tnsnames.ora entry, or an invalid connect descriptor, a missing naming method in sqlnet.ora, or another naming issue.

Action: Use the command VALIDATE NETWORK CONFIGURATION FOR ALL in DGMGRL and verify which database or instance could not resolve the connect identifier. Fix the problem depending on the naming method used in your environment.

ORA-16884: The specified observer name is invalid.

Cause: A reserved keyword (ALL or NONAME) was specified for the observer name for the START OBSERVER command.

Action: Specify a name other than ALL or NONAME and retry the command.

ORA-16885: A member whose RedoCompression property is set to LZO cannot receive redo data in SYNC or FASTSYNC mode.

Cause: A member was specified to receive redo data in SYNC or FASTSYNC mode when the RedoCompression configurable property was set to LZO.

Action: Set the RedoCompression property to a value other than LZO and then retry the command.

ORA-16886: The RedoCompression property cannot be set to LZO for a member that receives redo data in SYNC or FASTSYNC mode.

Cause: An attempt was made to set the RedoCompression configurable property to LZO when it receives redo data in SYNC or FASTSYNC mode.

Action: Set the RedoCompression configurable property to a value other than LZO and then retry the command.

ORA-16887: failed to import Oracle Data Guard broker configuration file

Cause: Fast-start failover was not initiated, even though a condition warranting failover was discovered, because it was enabled in observe-only mode.

Action: In this mode, the observer will only indicate that a fast-start failover would have been initiated. If a fast-start failover is desired, disable fast-start failover to exit the observe-only mode and then re-enable it using the DGMGRL CLI DISABLE FAST_START FAILOVER and ENABLE FAST_START FAILOVER commands.

ORA-16889: Fast-start failover must be disabled before changing between standard and observe-only modes.

Cause: Either the ENABLE FAST_START FAILOVER command was issued when fast-start failover was enabled in observe-only mode, or the ENABLE FAST_START FAILOVER OBSERVE ONLY command was issued when fast-start failover was enabled in standard mode.

Action: Disable fast-start failover using the DISABLE FAST_START FAILOVER command in DGMGRL, and then reissue the command that failed.

ORA-16890: database does not have a valid fast-start failover target standby database in observe-only mode

Cause: Fast-start failover was enabled in observe-only mode and the current primary database did not have a value set for the FastStartFailoverTarget configurable property or the value specified for this property was not a valid fast-start failover target standby database.

Action: Disable fast-start failover or ensure that the primary database has a valid fast-start failover target standby database specified by setting the FastStartFailoverTarget configurable property value to a valid standby database.

ORA-16891: unsynchronized fast-start failover configuration in observe-only mode

Cause: The fast-start failover target standby database was not synchronized with the primary database in observe-only mode. However, manual failover is still allowed in observe-only mode.

Action: Ensure that the fast-start failover target standby database is running and that the primary database can ship redo data to it. When the standby database has received all of the redo data from the primary database, the primary and standby databases are synchronized.

ORA-16892: fast-start failover configuration is lagging in observe-only mode

Cause: The fast-start failover target standby database was not within the lag limit specified by the FastStartFailoverLagLimit configuration property in observe-only mode. However, manual failover is still allowed in observe-only mode.

Action: Ensure that the fast-start failover target standby database is running and applying redo data and that the primary database is successfully transmitting redo data. If this condition persists, consider raising the value of the FastStartFailoverLagLimit configuration property.

ORA-16893: Oracle Data Guard broker configuration does not exist in the remote database.

Cause: A broker operation was requested that required a broker configuration to be available at the remote database.

Action: Create an Oracle Data Guard broker configuration at the remote database prior to performing other broker operations for the remote database.

ORA-16894: invalid Oracle Data Guard broker configuration metadata

Cause: This was an internal error.

Action: Contact Oracle Support Services.

ORA-16895: Configuration could not be added because it contains one or more standby databases.

Cause: An attempt was made to add a configuration when one or more configurations already contain one or more standby members.

Action: Remove all members, except the primary database, from both configurations and retry the command.

ORA-16896: configuration name mismatch

Cause: The expected configuration name value did not match the actual configuration name that the broker contacted using the connect identifier that was associated with that configuration.

Action: Verify that the connect identifier correctly connects to the intended configuration. Verify that the name of the configuration the broker expects to find by that connect identifier matches the actual name of the configuration.

ORA-16897: start database to mount mode

Cause: This error was returned by DBMS_DRS.SWITCHOVER because the database must be started to the mount mode to complete the switchover operation. Or, the error was returned from DBMS_DRS.REINSTATE or DBMS_DRS.CONVERT_TO_PHYSICAL when the database must be started to the mount mode to perform the operation.

Action: Start the database to the mount mode, wait for the database to start, and wait for the broker to complete initialization using DBMS_DRS.WAIT(WAIT_BOOT, *wait time in seconds*). Then, for reinstate and convert operations, retry the operation.

ORA-16898: start database to open mode

Cause: This error was returned by DBMS_DRS.SWITCHOVER because the database must be started to the open mode to complete the switchover operation.

Action: Start the database to the open mode to complete the switchover operation.

ORA-16899: Operation requires a connection to the primary database.

Cause: The operation was rejected because it required a connection to the primary database.

Action: Connect to the primary database and retry the operation.

ORA-16900: change of LogXptMode or RedoRoutes property violates overall protection mode

Cause: The broker did not allow the attempt to change the LogXptMode or RedoRoutes configurable property for the standby database or far sync instance because, if allowed, the overall protection mode for the configuration would have been violated.

Action: If the LogXptMode or RedoRoutes configuration property must be changed for the specified standby database or far sync instance, first downgrade the overall protection mode for the broker configuration. After that operation has completed, the LogXptMode or RedoRoutes configuration property for the standby database can be changed.

ORA-16901: A rolling database maintenance operation is in progress.

Cause: The attempted operation was not allowed because a rolling database maintenance operation was in progress.

Action: Wait for the rolling database maintenance operation to complete. Then retry the operation.

ORA-16902: The specified standby database is not a valid fast-start failover target.

Cause: The attempted operation was not allowed because the specified database is not a valid fast-start failover target because of one of the following reasons: - The specified database was not a physical standby database or logical standby database. - The effective redo transport mode for the standby database was not set to SYNC or FASTSYNC if the protection mode was set to maximum availability mode. - The effective redo transport mode for the standby database was not set to SYNC if the protection mode was set to maximum protection mode. - The effective redo transport

mode for the standby database was not set to ASYNC if the protection mode was set to maximum performance mode. - The standby database was not configured to receive redo data directly from the primary database when the protection mode was set to maximum performance mode. - The primary database had one more than one rule in its RedoRoutes property to the standby database. - The specified standby database was a logical standby database when the protection mode was set to maximum protection mode. - The standby database was disabled. - Redo transport-related properties of the standby database were inconsistent with the database setting. - The specified standby database's FastStartFailoverTarget property did not specify the primary database when the standby is a logical standby database.

Action: Check that the specified standby database meets the requirements listed in the Cause section of this error message.

ORA-16903: change of FastStartFailoverLagLimit property violates configuration protection mode

Cause: The attempt to set the FastStartFailoverLagLimit property could not be completed. The new value for the FastStartFailoverLagLimit property did not meet one or more of the following requirements: - The property must be non-zero when the configuration protection mode is set to MaxPerformance mode. - The property must be zero when the configuration protection mode is set to MaxProtection mode.

Action: Check the above requirements and retry the operation.

ORA-16904: Member may be a primary database or is receiving redo data from another primary database.

Cause: A role change operation may have resulted in this member either becoming a primary database or was receiving redo data from a standby database that became a primary database.

Action: Evaluate all members' roles in the configuration and confirm which database should be the primary database before taking further action.

ORA-16905: The member was not enabled yet.

Cause: The Oracle Data Guard broker configuration member was added to the configuration, but not enabled yet.

Action: Enable the Oracle Data Guard broker configuration member.

ORA-16906: The member was shutdown.

Cause: The Oracle Data Guard broker configuration member was shutdown.

Action: This status will be changed when the member is restarted.

ORA-16907: syntax error for the PreferredObserverHosts property

Cause: The change to the PreferredObserverHosts property was disallowed because the new value contained syntax errors.

Action: Check the syntax of the PreferredObserverHosts property and retry the operation.

ORA-16908: The observer is not available for master observer.

Cause: The observer was not available to become the master observer.

Action: Check if the observer's host was specified in the PreferredObserverHosts property of the primary database.

ORA-16909: Operation not allowed when configuration contains a remote configuration.

Cause: Adding a remote configuration or a standby database was not allowed when configuration already contained a remote configuration.

Action: None

ORA-16910: inconsistency detected for one or more pluggable databases

Cause: There was an inconsistency in the Data Guard status for one or more Data Guard pluggable databases.

Action: Use the SHOW PLUGGABLE DATABASE command to determine which protected pluggable databases have an inconsistency. Also check the Oracle alert log files to see more details.

ORA-16911: Redo data from new source database has not been registered.

Cause: Redo data from the new source database was not registered for this standby pluggable database.

Action: Ensure the previous role change command completed successfully. If there had been any errors, address the issue and complete the role change. If this still does not address the issue, try restarting recovery. Use the EDIT PLUGGABLE DATABASE SET STATE=APPLY-ON to start Redo Apply and switch logs at the source database.

ORA-16912: Target pluggable database may have been removed or a role change may have occurred.

Cause: Either a pluggable database switchover or failover occurred, resulting in this pluggable database not having an active target standby pluggable database; or the target standby pluggable database was removed.

Action: If a role change has occurred, after determining which pluggable database is the current source and status of the previous source pluggable database, proceed as follows: - If it is already in the standby role and a switchover has occurred, address the issues that resulted in Redo Apply failing to start and then start Redo Apply. - If it is already in the standby role and a failover has occurred, verify that the issues that necessitated the failover have been addressed and then start Redo Apply services. - If the previous source pluggable database is still in the primary role, and a failover immediate has occurred, address the issues that necessitated the failover, drop the previous source pluggable database, and add it back as the target standby database using the ADD PLUGGABLE DATABASE command, and then start Redo Apply services. Note that Redo Apply can be started using the EDIT PLUGGABLE DATABASE SET STATE=APPLY-ON command.

ORA-16913: cannot remove a remote configuration that sends or receives redo data

Cause: An attempt was made to remove a remote configuration that sent or received redo data.

Action: First, clear redo transport using EDIT CONFIGURATION *config name* CLEAR AS SOURCE command. Then, retry REMOVE CONFIGURATION *config name* command.

ORA-16914: Redo Apply has not been started at the standby pluggable database.

Cause: Redo Apply was not started on the standby pluggable database.

Action: To start Redo Apply on all standby pluggable databases, use the ENABLE DATABASE command. To start Redo Apply on a single standby pluggable database, use the EDIT PLUGGABLE DATABASE SET STATE=APPLY-ON command.

ORA-16916: The specified fast-start failover condition is disabled.

Cause: The specified fast-start failover condition or Oracle error number was already disabled.

Action: This is an informational message, no additional action is required.

ORA-16917: Fast-start failover lag limit value is greater than fast-start failover threshold value.

Cause: The FastStartFailoverLagLimit configuration property was set to a value that is greater than the FastStartFailoverThreshold configuration property.

Action: No corrective action is required. Just be aware that this can result in situations where the original primary database may continue to commit transactions, up to the specified lag limit, even after failover has been initiated to the target standby database.

ORA-16950: Remote mapped cursors are not supported by this feature.

Cause: This cursor is a remote mapped cursor which could not be processed locally.

Action: Try to process this statement directly on the remote site.

ORA-16951: Too many bind variables supplied for this SQL statement.

Cause: Binding this SQL statement failed because too many bind variables were supplied.

Action: Pass the correct number of bind variables.

ORA-16952: Failed to bind this SQL statement.

Cause: Binding this SQL statement failed.

Action: Check if bind variables for that statement are properly specified.

ORA-16953: Type of SQL statement not supported.

Cause: This type of SQL statement could not be processed.

Action: n/a

ORA-16954: SQL parse error.

Cause: The specified SQL statement failed to be parsed.

Action: Check if syntax is correct and ensure that this statement can be parsed by the specified user name.

ORA-16955: Unknown error during SQL analyze.

Cause: The specified SQL statement failed to be analyzed.

Action: This is an internal error, please contact Oracle support.

ORA-16956: Only SELECT or DML statements are supported for test execute.

Cause: The specified SQL statement cannot be tested for execute.

Action: n/a

ORA-16957: SQL Analyze time limit interrupt

Cause: This is an internal error code used indicate that SQL analyze has reached its time limit.

Action: n/a

ORA-16958: DML statements running parallel are not supported for test execute.

Cause: The specified DML statement cannot be tested for execute because part of it is running parallel.

Action: n/a

ORA-16959: Statement type has been disabled for SQL Analyze

Cause: The system attempted to analyze a type of statement that was disabled by the current feature.

Action: Try a different feature capable of analyzing this statement type.

ORA-16960: SQL Analyze could not reproduce the desired plan.

Cause: SQL Analyze failed to reproduce a particular plan using an outline.

Action: Check the outline data.

ORA-16961: SQL statement with SQL patch is ignored

Cause: SQL statements with SQL patches are not supported by SQL tuning advisor.

Action: Check the SQL patch information. Rerun SQL repair advisor on that SQL statement for a potential better SQL patch.

ORA-16962: SQL statement attempted to begin an autonomous transaction

Cause: The SQL statement being analyzed attempted to begin an autonomous transaction, which is not supported.

Action: Analyze another statement or remove the autonomous transaction from the current statement.

ORA-16963: The given user or schema is not supported by this feature.

Cause: The SQL statement being analyzed had a parsing user or schema which is not currently supported for SQL Analyze.

Action: Analyze another statement.

ORA-17359: Object store file is too large *string string string*.

Cause: The operation encountered a file on the object store that exceeds the maximum size for Swift API Dynamic Large Object (DLO) file or files.

Action: Retry the write operation with a file smaller than the first argument in the error code. Split exports using DBMS_CLOUD or Data Pump into multiple smaller files to avoid the limitation.

ORA-17500: ODM err:*string*

Cause: An error returned by ODM library

Action: Look at error message and take appropriate action or contact Oracle Support Services for further assistance

ORA-17501: logical block size *string* is invalid

Cause: logical block size for oracle files must be a multiple of the physical block size, and less than the maximum

Action: check INIT.ORA file parameters

ORA-17502: ksfdcre:*string* Failed to create file *string*

Cause: file creation failed due to either insufficient OS permission or the file already exists

Action: check additional error messages

ORA-17503: ksfdopn:*string* Failed to open file *string*

Cause: file open failed due to either insufficient OS permission or the name of file exceeds maximum file name length.

Action: check additional error messages

ORA-17504: ksfdel:Failed to delete file *string*

Cause: The file that was being deleted is still in use or the process has insufficient permission to delete file.

Action: check additional error messages

ORA-17505: ksfdrsz:*string* Failed to resize file to size *string* blocks

Cause: There is insufficient space left on the device or the process has insufficient permission to resize file.

Action: check additional error messages

ORA-17506: I/O error simulation

Cause: The I/O request was marked with an error because the I/O error simulation event was turned on.

Action: n/a

ORA-17507: I/O request size *string* is not a multiple of logical block size.

Cause: I/O's were done in a multiple of the logical block size.

Action: Check additional error messages.

ORA-17508: I/O request buffer pointer is not aligned.

Cause: I/O request buffer was not aligned. Check additional information for a buffer pointer value.

Action: Contact Oracle Support Services.

ORA-17509: An attempt to do I/O beyond block1 offset.

Cause: When a file is identified with logical block size of 0, only I/O's to block1 is allowed.

Action: Check additional error messages and contact Oracle Support Services.

ORA-17510: Attempt to do I/O beyond file size *string*.

Cause: Attempted to do I/O beyond the end of the file.

Action: Check additional error messages, as well as the alert log and trace files to locate and solve the issue. If the error persists, contact Oracle Support.

ORA-17512: Block Verification Failed

Cause: Block Verification after a read operation on a database file failed since the block is media corrupt.

Action: check additional error messages in the trace file and call Oracle Support Services

ORA-17513: dNFS package call failed

Cause: An attempt was made to call a Direct NFS (dNFS) package in a non-dNFS environment.

Action: Ensure that dNFS is enabled and the file can be accessed using dNFS.

ORA-17514: Access to clonedb bitmap file failed

Cause: Accessing the bitmap block file in clonedb environment has encountered an error

Action: check additional error messages in the trace file and call Oracle Support Services

ORA-17515: Creation of clonedb failed using snapshot file *string*

Cause: Creating a data file in a CloneDB environment failed.

Action: Ensure that the snapshot file passed to CloneDB is not from another CloneDB instance and call Oracle Support Services for further assistance.

ORA-17516: dNFS asynchronous I/O failure

Cause: The asynchronous I/O request failed due to storage server reboot.

Action: Ensure that the storage server does not reboot repeatedly during database operations.

ORA-17517: Database cloning using storage snapshot failed on file *string:string*

Cause: An invocation of the storage clone command was returned with an error.

Action: Ensure that all necessary steps are performed for storage cloning and check the Oracle trace file for additional information.

ORA-17518: backup file *string* cannot be found

Cause: Access to the specified backup file was required for Instant Restore.

Action: Ensure that the path and file name are correct for the backup file and the path to the backup file can be accessed from the node of the instance.

ORA-17519: Reason(*string*): data file *string* cannot be prepared

Cause: The snapshot layer could not prepare the specified data file.

Action: Ensure that the file does not already exist, is already part of a clone setup, or is being repopulated by an Instant Restore background process. Ensure that the path specified is accessible and writable by the instance.

ORA-17520: data file *string* cannot be added to repopulation

Cause: Instant Restore could not add the file to the repopulation work queue.

Action: The repopulation process may be working on too many files for the system. Try waiting for some files to complete and try again.

ORA-17521: Instant Restore is not enabled

Cause: The initialization parameters for Instant Restore were not set.

Action: Ensure that Instant Restore initialization parameters are set as required for this feature.

ORA-17522: file *string* is already being repopulated

Cause: The file was already being repopulated from a previous restore.

Action: Ensure that the file completes restore before you start another restore.

ORA-17523: Instance *number* cannot spawn repopulation (RPOP) process

Cause: The instance had too many running processes.

Action: Ensure that the maximum number of processes initialization parameter is set properly for this feature.

ORA-17524: Repopulation cannot take place - no RPOP processes

Cause: The maximum processes initialization parameter was not set properly.

Action: Ensure that the maximum number of processes initialization parameter is set properly for this feature. Check the alert log for other related errors.

ORA-17525: Database clone using storage snapshot not supported on file *string*

Cause: Cloning a database using storage level snapshot is not supported on the underlying storage.

Action: Use storage product that has snapshot based cloning support for Oracle.

ORA-17526: Block size of file *string* is too small *string*. Must be \geq *string*.

Cause: Files with block sizes smaller than a minimum size cannot be used for clones backed by snapshot file.

Action: Use files with larger block size.

ORA-17527: Creation of a snapshot failed because the destination *string* was not a sparse disk group.

Cause: Creating a snapshot failed because the destination disk group was not a sparse disk group.

Action: Ensure that the CREATE_FILE_DEST clause passed to the snapshot copy is in a sparse disk group.

ORA-17528: A read-only file or a file opened read-only cannot be written to: *string*.

Cause: The file was read-only or was opened read-only and an attempt was made to write to the file, or there was an internal error.

Action: If the file is a parent of a snapshot, then you cannot open read/write, drop or unplug the database. Otherwise, look at the trace file and contact Oracle Support Services.

ORA-17529: creation of compressed file failed

Cause: An attempt was made to create a compressed file on an instance that was not a CloneDB instance.

Action: Set CLONEDB parameter to TRUE and retry the operation.

ORA-17530: snapshot (parent), *string*, modified after clone (child) created, *string*

Cause: The snapshot referred to by the clone was incompatible with what the clone was created.

Action: Locate the appropriate snapshot and place it in the named location.

ORA-17531: snapshot (parent)=*string* modification time *string* is different from snapshot creation time *string* recorded in file *string*

Cause: The clone (child) referred to a snapshot at a specific point in time. The snapshot (parent) currently in that place is at the wrong time.

Action: Locate the appropriate snapshot (parent) and place it in the named location.

ORA-17532: snapshot (parent)=*string* checkpoint SCN *string* is different from snapshot checkpoint SCN *string* recorded in file *string*

Cause: The clone (child) referred to an SCN at a specific point in time. The snapshot (parent) currently in that place is at the wrong SCN.

Action: Locate the appropriate snapshot (parent) and place it in the named location.

ORA-17533: sparse merge copy operation failure because *string* and *string* do not share a valid relationship

Cause: Files specified with the 'sparse_merge_begin' and 'sparse_merge_end' options did not share a valid relationship.

Action: Check additional error messages.

ORA-17534: sparse merge copy operation failure because request to change file access permissions for file *string* failed

Cause: File access permissions for the file could not be modified.

Action: Check additional error messages.

ORA-17535: sparse merge copy operation failure because it tried to merge to the base parent *string*

Cause: The sparse merge copy operation was not successful because it tried to merge to the base parent.

Action: Check additional error messages.

ORA-17536: error in creation of database snapshot at SCN *string*

Cause: There was an error in creating a snapshot of the database files.

Action: Check additional error messages.

ORA-17537: ksfdreopn:*string* Failed to reopen file *string* with logical sector size *string*

Cause: File reopen failed due to either an invalid logical sector size argument or the file size was not a multiple of the given logical sector size.

Action: Check for additional error messages.

ORA-17538: DBMS_DNFS.CLONEDB_RENAMEFILE src or dest is NULL

Cause: The string given as input for the src and/or destination filenames to the DBMS_DNFS.CLONEDB_RENAMEFILE procedure is/are NULL.

Action: Pass a non NULL input string for both src and dest filenames.

ORA-17539: DBMS_DNFS.CLONEDB_RENAMEFILE src or dest has zero length

Cause: The string given as input for the src and/or destination filenames to the DBMS_DNFS.CLONEDB_RENAMEFILE procedure is/are the empty string.

Action: Pass a non-empty input string for both src and dest filenames.

ORA-17610: file '*string*' does not exist and no size specified

Cause: An attempt to create a file found neither an existing file nor a size for creating the file.

Action: Specify a size for the file.

ORA-17611: ('*string*')file '*string*' cannot be accessed because it was closed by the background process

Cause: An attempt was made to access the file which went offline or was unidentified.

Action: Check for other errors in the stack.

ORA-17612: Failed to discover Oracle Disk Manager library, return value *string*

Cause: Discovery of the odm library by calling odm_discover() failed

Action: Contact your storage vendor who has provided the ODM library or call Oracle Support

ORA-17613: Failed to initialize Oracle Disk Manager library: *string*

Cause: Initialization of the Oracle Disk Manager (ODM) for the thread failed due to insufficient privilege or memory.

Action: Ensure that there is enough system resources available for the Oracle process and that it has access to the ODM library.

ORA-17618: Unable to update block 0 to version 10 format

Cause: An attempt was made to update block 0 to version 10 format.

Action: Check additional error messages and call Oracle Support Services

ORA-17619: max number of processes using I/O slaves in a instance reached

Cause: An attempt was made to start large number of processes requiring I/O slaves.

Action: There can be a maximum of 35 processes that can have I/O slaves at any given time in a instance.

ORA-17620: failed to register the network adapter with Oracle Disk Manager library: *string*

Cause: The Oracle Disk Manager (ODM) library returned an error while trying to register the network adapter.

Action: Ensure that the network adapter name specified in the FILEIO_NETWORK_ADAPTERS initialization parameter is a valid name, and that the Oracle user has the correct access privileges.

ORA-17621: failed to register the memory with Oracle Disk Manager library

Cause: The ODM library returned an error while trying to register the memory.

Action: Contact the Oracle Disk Manager Library provider.

ORA-17622: failed to deregister the memory with Oracle Disk Manager library

Cause: The ODM library returned an error while trying to deregister the memory.

Action: Contact the Oracle Disk Manager Library provider

ORA-17624: Failed to delete directory *string*

Cause: The directory that was being deleted is still in use or the process had insufficient permission to delete the directory.

Action: check additional error messages.

ORA-17626: ksfdcre: *string* file exists

Cause: trying to create a database file, but file by that name already exists

Action: verify that name is correct, specify REUSE if necessary

ORA-17627: *string*

Cause: An error returned by OCI while sending/receiving message from remote instance

Action: Look at error message and take appropriate action or contact Oracle Support Services for further assistance

ORA-17628: Oracle error *string* returned by remote Oracle server

Cause: Oracle server on the remote instance has returned an error.

Action: Look at remote instance alert log/trace file for more information and take appropriate action or contact Oracle Support Services for further assistance

ORA-17629: Cannot connect to the remote database server

Cause: Connecting to the remote server specified by database connect string for network file transfer failed.

Action: Check additional error messages

ORA-17630: Mismatch in the remote file protocol version client *string* server *string*

Cause: Cannot communicate with the remote database server as there is a mismatch in the Oracle file protocol version.

Action: Check additional error messages

ORA-17631: dbname '*string*' specified by remote server does not match the instance name '*string*'

Cause: The dbname specified by the remote server is not intended for this instance.

Action: Check the dbname specified in the command of the remote instance and look for further error messages.

ORA-17632: file '*string*' is a formatted ASM disk

Cause: An attempt to create a datafile on a device that was formatted for ASM disk failed.

Action: Check that the device specified is not an ASM disk. If you would like to use the disk for datafiles, please clear the disk before you retry the operation.

ORA-17633: Operation not supported as one of the servers involved is not capable of performing the requested operation

Cause: An attempt was made to perform an operation involving two Oracle servers where both servers did not have the capability required for carrying out the operation. It is likely that one of the servers needs a patch or an upgrade to successfully participate in the operation.

Action: Apply the required fix or update on the lower version server. Contact Oracle Support Services for further assistance.

ORA-17634: network file transfer operation aborted

Cause: An error occurred during network file transfer operation.

Action: Check additional error messages.

ORA-17635: failure in obtaining physical sector size for 'string'

Cause: An error occurred while determining the physical sector size from the underlying storage (ASM/ODM/OSD).

Action: Check additional error messages.

ORA-17636: Invalid sparse block format (string). Start block=string. Error=string. File=string

Cause: An error occurred while reading the block on sparse media.

Action: Contact Oracle Support Services.

ORA-17637: failed to change permission on file 'string'

Cause: An error occurred while changing permission on a database file.

Action: Verify that Oracle user has ownership on the database file.

ORA-17638: Error in accessing a compressed file string. 'string'.

Cause: An error occurred while accessing a compressed file.

Action: Verify that the Oracle user has permission to access the compressed file.

ORA-17639: Snapshot backing file not read-only 'string'.

Cause: An error occurred while opening the snapshot backing file.

Action: Verify that the backing file has not changed since the creation of the snapshot file and set the backing file permissions to read-only.

ORA-17640: SQL statement execution failed

Cause: The remote SQL statement execution failed on primary database.

Action: Check for the required privileges to run the SQL statement.

ORA-17641: event to release BCT enqueue on Oracle RAC environment with internal error

Cause: An attempt was made to release the enqueue after getting an internal error "krccfr_nohist". This happens if any bitmap is not keeping in with its oldest_low_krcfde on Oracle RAC environment with block change tracking (BCT) enabled.

Action: None

ORA-17642: failed to get permission on file 'string'

Cause: An error occurred while getting permission on a database file.

Action: Verify that the database file exists.

ORA-17643: error while creating or opening destination file '*string*'

Cause: The destination file or the path provided already existed or could not be accessed.

Action: If the destination file exists, delete the file and retry. Alternately, try with a different destination filename or provide a different path.

ORA-17644: clonedb_renamefile interface is not supported in a multitenant container database.

Cause: An attempt was made to clone a file using clonedb_renamefile interface in a multitenant container database (CDB).

Action: Use the snapshot copy option while creating the pluggable database.

ORA-17675: execution of OFS procedure failed with error:'*string*'

Cause: Either the procedure was called on a platform where Oracle File System (OFS) is not supported or an invalid file system type was provided.

Action: Check additional error messages in the trace file.

ORA-17676: Failed to mount '*string*' with error:'*string*'

Cause: Mounting database file system failed with an error.

Action: Check additional error messages in the trace file.

ORA-17677: failed to unmount '*string*' with error:'*string*'

Cause: Unmounting database file system failed with an error.

Action: Check additional error messages in the trace file.

ORA-17678: failed to mount '*string*' with error:'*string*'

Cause: Mounting of the database file system failed with an error.

Action: Check additional error messages in the trace file.

ORA-17679: failed to makeufs '*string*' with error:'*string*'

Cause: Either an invalid file system creation option was specified, the file system already existed, or a failure to create the tables occurred.

Action: Check additional error messages in the trace file.

ORA-17680: failed to destroy database file system '*string*' with error:'*string*'

Cause: Either the database file system was invalid, it was still busy, it did not exist, or some other error has occurred.

Action: Check additional error messages in the trace file.

ORA-17681: cannot connect to the remote database server

Cause: An attempt was made to connect to the remote server using a shared server connection. This is not supported.

Action: Verify the connect string and use a dedicated server to connect to remote database.

ORA-17682: invalid or missing object store credential: *string*

Cause: An I/O operation was attempted on a file located in the object store which requires credentials to perform. Valid credentials were not available to perform the operation.

Action: Retry the operation and specify a valid object store credential or set a default credential as a database property.

ORA-18000: invalid outline name

Cause: The parser detected a missing or invalid outline name

Action: reissue the command, specifying a valid outline name.

ORA-18001: no options specified for ALTER OUTLINE

Cause: The parser detected that no clause was specified on the command. Our performance tests, which are not typical as they exercise all branches of the code, have shown approximately a 30% performance increase for ALTER OUTLINE.

Action: Re-issue the command, specifying a valid ALTER OUTLINE clause.

ORA-18002: the specified outline does not exist

Cause: Either the outline did not exist to begin with, or a timing window allowed for another thread to drop or alter the outline midstream.

Action: Check for the existence of the outline and try again.

ORA-18003: an outline already exists with this signature

Cause: The signature generation algorithm generates signatures that are 16 bytes in length so it is highly unlikely that any 2 signatures will be identical. This message is raised in such a rare case.

Action: Either re-issue the statement that led to the outline being created with some whitespace added or force the outline to be created in a different category.

ORA-18004: outline already exists

Cause: An outline already exists, either with the specified name, or for the specified SQL text.

Action: Try again with another name.

ORA-18005: CREATE ANY OUTLINE privilege is required for this operation

Cause: CREATE ANY OUTLINE privilege was required for the attempted operation.

Action: Make sure you have CREATE ANY OUTLINE privilege and retry the operation.

ORA-18006: DROP ANY OUTLINE privilege is required for this operation

Cause: DROP ANY OUTLINE privilege was required for the attempted operation.

Action: Make sure you have DROP ANY OUTLINE privilege and retry the operation.

ORA-18007: ALTER ANY OUTLINE privilege is required for this operation

Cause: ALTER ANY OUTLINE privilege was required for the attempted operation.

Action: Make sure you have ALTER ANY OUTLINE privilege and retry the operation.

ORA-18008: cannot find OUTLN schema

Cause: The database creation script that creates this schema must not have been executed.

Action: Review the log files to see what happened when the database was created.

ORA-18009: one or more outline system tables do not exist

Cause: Either the database creation script that creates these tables was not executed or a user accidentally deleted the table

Action: Review the log files to see what happened when the database was created.

ORA-18010: command missing mandatory CATEGORY keyword

Cause: User failed to specify the CATEGORY keyword

Action: Re-issue the command with the CATEGORY keyword included

ORA-18011: the outline specified in the FROM clause does not exist

ORA-18012: select_catalog_role role is required for this operation

ORA-18013: timed out while waiting for resource *string*

ORA-18014: deadlock detected while waiting for resource *string*

ORA-18015: invalid source outline signature

Cause: User imported an 8i outline into a 9i database without updating signatures

Action: execute dbms_outln.update_signatures

ORA-18100: XUST0001 - Updating expression in a wrong position

Cause: An updating expression was used in a position other than one of the following:

- The topmost expression in the body of a query.
- The MODIFY clause of a TRANSFORM expression.
- The RETURN clause of a FLWOR expression.
- The RETURN clauses of a TYPESWITCH expression in which every RETURN clause contains an updating expression, an empty expression (), or a call to the fn:error function.
- The THEN and ELSE clauses of a conditional statement in which both the then and else clauses contain either an updating expression, an empty expression (), or a call to the fn:error function.
- An operand of a comma expression in which each operand is either an updating expression, an empty expression (), or a call to the fn:error function.
- The content of a parenthesized expression.
- The body of a function declaration in which the keyword UPDATING is specified.

Action: None

ORA-18101: XUST0002 - Non-updating expression in a wrong position

Cause: A non-updating expression other than an empty expression () or a call to the fn:error function was used in one of the following positions:

- The MODIFY clause of a TRANSFORM expression.
- The top-level expression in the body of a function declaration in which the keyword UPDATING is specified.

Action: None

ORA-18102: XUST0003 - Repeated revalidation declaration

Cause: Prolog contained more than one revalidation declaration.

Action: None

ORA-18103: XUTY0004 - Invalid attribute node in the insertion sequence

Cause: The insertion sequence of an INSERT expression contained an attribute following a node that was not an attribute node.

Action: None

ORA-18104: XUTY0005 - invalid target expression for INSERT

Cause: In an INSERT expression where INTO, AS FIRST INTO, or AS LAST INTO was specified, the target expression returned a nonempty result that did not consist of a single element or document node.

Action: Specify a valid target expression for INSERT.

ORA-18105: XUTY0006 - Invalid target expression is used for INSERT.

Cause: Attempted an INSERT expression where BEFORE or AFTER was specified, the target expression returned a nonempty result that did not consist of an element, text, comment, or processing instruction node.

Action: Specify a valid target expression for INSERT.

ORA-18106: XUTY0007 - Invalid target expression for DELETE

Cause: The target expression of a DELETE expression did not return a sequence of zero or more nodes.

Action: None

ORA-18107: XUTY0008 - Invalid target expression for REPLACE

Cause: In a REPLACE expression, the target expression returned a nonempty result that did not consist of a single element, attribute, text,

Action: None

ORA-18108: XUDY0009 - Invalid target expression for REPLACE

Cause: In a REPLACE expression where VALUE OF was not specified, the node returned by the target expression did not have a parent.

Action: None

ORA-18109: XUTY0010 - Invalid replacement sequence for REPLACE

Cause: In a REPLACE expression where VALUE OF was not specified and the target was an element, text, comment, or processing instruction node, the replacement sequence did not consist of zero or more element, text, comment, or processing instruction nodes.

Action: None

ORA-18110: XUTY0011 - Invalid replacement sequence for REPLACE

Cause: In a REPLACE expression where VALUE OF was not specified and the target is an attribute node, the replacement sequence did not consist of zero or more attribute nodes.

Action: None

ORA-18111: XUTY0012 - Invalid target expression for RENAME

Cause: In a RENAME expression, the target expression returned a nonempty result that did not consist of a single element, attribute, or processing instruction node.

Action: None

ORA-18112: XUTY0013 - Invalid COPY expression for TRANSFORM

Cause: In a TRANSFORM expression, a source expression in the copy clause did not return a single node.

Action: None

ORA-18113: XUDY0014 - Modified node was not created by the COPY clause

Cause: In a TRANSFORM expression, the MODIFY clause modified a node that was not created by the COPY clause.

Action: None

ORA-18114: XUDY0015 - Duplicate RENAME for the same target node

Cause: A node was the target of more than one RENAME expression within the same query.

Action: None

ORA-18115: XUDY0016 - Duplicate REPLACE for the same target node

Cause: A node was the target of more than one REPLACE expression (without VALUE OF being specified) within the same query.

Action: None

ORA-18116: XUDY0017 - Duplicate REPLACE for the same target node

Cause: A node was the target of more than one REPLACE VALUE OF expression within the same query.

Action: None

ORA-18117: XUDY0018 - External not updating function returns an updated value

Cause: A function that was declared to be external but not updating returned a nonempty pending update list.

Action: None

ORA-18118: XUDY0019 - External updating function returns an invalid value

Cause: A function that was declared to be both external and updating returned a nonempty data model instance.

Action: None

ORA-18119: XUDY0020 - Deleted node has no parent

Cause: Node was deleted that had no parent before execution of the query began.

Action: None

ORA-18120: XUDY0021 - The result XDM instance violates XDM constraints

Cause: XDM instance resulting from applying all the updates in a query violated constraint specified in [XQuery/XPath Data Model (XDM)]. In this case, none of the updates in the query were made effective.

Action: None

ORA-18121: XUTY0022 - Invalid attribute insertion into a document node

Cause: INSERT expression specified the insertion of an attribute node into a document node.

Action: None

ORA-18122: XUDY0023 - Updating expression introduces a namespace conflict.

Cause: An INSERT, REPLACE, or RENAME expression affected an element node by introducing a new namespace binding that conflicted with one of the existing namespace bindings.

Action: None

ORA-18123: XUDY0024 - Updating expression introduces a namespace conflict

Cause: Effect of a set of updating expressions introduced conflicting namespace bindings into an element node.

Action: None

ORA-18124: XUDY0025 - Invalid QName for processing instruction RENAME

Cause: Target of a RENAME expression was a processing instruction node, and the new name expression returned a QName with a nonempty namespace prefix.

Action: None

ORA-18125: XUST0026 Revalidation mode *string* is not supported

Cause: Revalidation declaration in a Prolog specified a revalidation mode that is not supported by the current implementation.

Action: None

ORA-18126: XUDY0027 - invalid target expression

Cause: The target expression of an INSERT, REPLACE, or RENAME expression was evaluated to an empty sequence.

Action: Specify a valid target expression.

ORA-18127: XUST0028 - Updating function should not have a return type

Cause: Function declaration specified both UPDATING and a return type.

Action: None

ORA-18128: XUDY0029 - INSERT expression target node doesn't have a parent

Cause: In an INSERT expression where BEFORE or AFTER was specified, a node returned by the target expression did not have a parent.

Action: None

ORA-18129: XUDY0030 - Invalid insertion of an attribute node

Cause: INSERT expression specified the insertion of an attribute node before or after a child of a document node.

Action: None

ORA-18130: FOUP0001 - Invalid 'fn:put' first operand

Cause: The first operand of fn:put was not a node of a supported kind.

Action: None

ORA-18131: FOUP0002 - Invalid 'fn:put' second operand

Cause: The second operand of fn:put was not a valid lexical representation of the xs:anyURI type.

Action: None

ORA-18150: SQL input value cannot be modified in updating expression

Cause: Updating expression was specified as top-level XMLQuery expression.

Action: Use XQuery TRANSFORM expression to copy input value and modify it.

ORA-18160: FTST0001 - FTMildNot operator not supported

Cause: An attempt was made to use the mild not option when the FTMildNot operator was not supported. An implementation that does not support the FTMildNot operator must raise a static error if a full-text query contains a mild not.

Action: Do not use the FTMildNot full-text query operator.

ORA-18161: FTST0002 - FTUnaryNot operator not supported

Cause: An implementation that enforces one of the restrictions on FTUnaryNot must raise a static error if a full-text query does not obey the restriction.

Action: Do not use the FTUnaryNot full-text query operator.

ORA-18162: FTST0003 - FTUnit and FTBigUnit not supported

Cause: An implementation that does not support one or more of the choices on FTUnit and FTBigUnit must raise a static error if a full-text query contains one of those choices.

Action: Do not use the FTUnit or FTBigUnit option.

ORA-18163: FTST0004 - FTScope not supported

Cause: An implementation that does not support the FTScope operator must raise a static error if a full-text query contains a scope.

Action: Do not use the FTScope full-text query operator.

ORA-18164: FTST0005 FTTimes not supported

Cause: An implementation that does not support the FTTimes operator must raise a static error if a full-text query contains a times.

Action: Do not use the FTTimes full-text query operator.

ORA-18165: FTST0006 FTStopwordOption not supported

Cause: An implementation that restricts the use of FTStopwordOption must raise a static error if a full-text query contains a stop word option that does not meet the restriction.

Action: Do not use the FTStopwordOption full-text query operator.

ORA-18166: FTST0007 FTIgnoreOption not supported

Cause: An implementation that restricts the use of FTIgnoreOption must raise a static error if a full-text query contains an ignore option that does not meet the restriction.

Action: Do not use the FTIgnoreOption full-text query operator.

ORA-18167: FTST0008 stop word list not found

Cause: It was a static error if, during the static analysis phase, the query was found to contain a stop word option that referred to a stop word list that was not found in the statically known stop word lists.

Action: Ensure that the stop word list exists.

ORA-18168: FTST0009 language option not supported

Cause: It may be a static error if, during the static analysis phase, the query is found to contain a language identifier in a language option that the implementation does not support. The implementation may choose not to raise this error and instead provide some other implementation-defined behavior.

Action: Do not use the language full-text query option.

ORA-18169: FTST0010 FTOrder not succeeding FTWindow or FTDistance operator

Cause: It is a static error if, during the static analysis phase, an expression is found to use an FTOrder operator that does not appear directly succeeding an FTWindow or an FTDistance operator and the implementation enforces this restriction.

Action: Do not use the FTOrder succeeding FTWindow or FTDistance full-text query operator.

ORA-18170: FTST0011 FTWindow and FTDistance restriction

Cause: An implementation may restrict the use of FTWindow and FTDistance to an FTOr that is either a single FTWords or a combination of FTWords involving only the operators && and ||. If it is a static error if, during the static analysis phase, an expression is found that violates this restriction and the implementation enforces this restriction.

Action: Follow FTWindow and FTDistance restriction.

ORA-18171: FTST0012 FTContent not supported

Cause: An implementation that does not support the FTContent operator must raise a static error if a full-text query contains one.

Action: Do not use FTContent full-text query operator.

ORA-18172: FTST0013 more than one language encountered

Cause: It is a static error if, during the static analysis phase, an implementation that restricts the use of FTLanguageOption to a single language, encounters more than one distinct language option.

Action: Do not use more than one language in FTLanguage full-text option.

ORA-18173: FTST0014 score computation restriction

Cause: An implementation may constrain the form of the expression used to compute scores. It is a static error if, during the static analysis phase, such an implementation encounters a scoring expression that does not meet the restriction.

Action: n/a

ORA-18174: FTST0015 FTCaseOption restriction

Cause: It is a static error if, during the static analysis phase, an implementation that restricts the choices of FTCaseOption encounters the "lowercase" or "uppercase" option.

Action: n/a

ORA-18175: FTDY0016 weights invalid

Cause: It is a dynamic error if an implementation that does not support negative weights encounters a weight expression that does not meet the restriction.

Action: Do not use invalid weights value.

ORA-18176: FTDY0017 mild not selection containings StringExclude

Cause: It is a dynamic error if an implementation encounters a mild not selection, one of whose operands evaluates to an AllMatches that contains a StringExclude

Action: n/a

ORA-18177: XQuery full text expression '*string*' cannot be evaluated using XML full-text index

Cause: There was no XML full-text index to evaluate the XQuery full text expression filtering XML documents that were stored in an XMLType table or column.

Action: Create an XML full-text index on the XML documents stored in an XMLType table or column and ensure that the XQuery full text expression can be evaluated by an XML full-text index.

ORA-18178: XMLTYPE input to XMLTABLE row expression must use PASSING BY REF clause.

Cause: The XMLTABLE column expression used the XMLTYPE(SEQUENCE) BY REF clause but the XMLType input to the XMLTABLE row expression was not using the PASSING BY REF clause.

Action: Specify the PASSING BY REF clause for XMLTYPE input to the XMLTABLE row expression.

ORA-18179: XMLTABLE column expression must be specified using XMLTYPE(SEQUENCE) BY REF clause.

Cause: The output of the XMLTABLE column expression was passed to an XMLTABLE row expression with PASSING BY REF clause.

Action: Specify the XMLTABLE column expression using the XMLTYPE(SEQUENCE) BY REF clause.

ORA-18180: wrong argument is passed to XMLTABLE row expression using PASSING BY REF clause

Cause: An XML document that was not stored in an XMLType table or column was passed to an XMLTABLE row expression using the PASSING BY REF clause.

Action: Ensure that only XML documents that are stored in an XMLType table or column can be passed in as input to XMLTABLE row expression using the PASSING BY REF clause.

ORA-18181: XQuery full text expression option '*string*' is not supported

Cause: An attempt was made to use an XQuery full text expression option that is not supported.

Action: Avoid using an XQuery full text expression option which is not supported.

ORA-18182: FTST0018 unknown thesaurus is used

Cause: During the static analysis phase, the query was found to contain a thesaurus option that referred to a thesaurus that was not found in the statically known thesauri. This is a static error.

Action: Avoid using unknown thesaurus.

ORA-18183: FTST0019 more than one match option of any given match option group is used within a single FTMatchOptions.

Cause: Within the single FTMatchOptions, there was more than one match option of any given match option group. This is a static error.

Action: Avoid using more than one match option of any given match option group is used within a single FTMatchOptions.

ORA-18184: FTDY0020 a query string violates wildcard syntax when wildcards is in effect

Cause: Because wildcards were in effect, the query string violated wildcard syntax. This is a dynamic error.

Action: Fix wildcard syntax when wildcards is in effect.

ORA-18185: query is not parsed correctly

Cause: The query string was not parsed correctly.

Action: Check the syntax of the query string.

ORA-18201: The input MDX string is empty.

Cause: The input MDX (MultiDimensional eXpression) string was empty.

Action: Correct the input MDX (MultiDimensional eXpression) string.

ORA-18202: MDX parser error at line *string*, column *string*: *string*.

Cause: The input MDX (MultiDimensional eXpression) query had invalid syntax.

Action: Correct the syntax error for the MDX (MultiDimensional eXpression) query.

ORA-18203: The MDX *string string* is not currently supported.

Cause: The input MDX (MultiDimensional eXpression) query contained an unsupported feature.

Action: Modify the MDX (MultiDimensional eXpression) query to use only supported features.

ORA-18204: The identifier at line *string*, column *string* has no closing right bracket (]) character.

Cause: The delimited identifier had no closing right bracket (]) character.

Action: Correct the syntax error for the MDX (MultiDimensional eXpression) query.

ORA-18205: Invalid arguments for function *string*.

Cause: The function had invalid arguments.

Action: Correct the syntax error for the MDX (MultiDimensional eXpression) query.

ORA-18220: The type of the expression in *string* is *string*. *string* is expected.

Cause: The MDX (MultiDimensional eXpression) query had the wrong expression type.

Action: Use an expression with a valid type.

ORA-18221: The argument *string* in *string* has different hierarchies.

Cause: An argument had different hierarchies.

Action: Use uniform hierarchies.

ORA-18222: hierarchy *string* already appears in *string*

Cause: A hierarchy was repeated.

Action: Use unique hierarchies.

ORA-18223: Invalid identifier for dimension "*string*".

Cause: More than one hierarchy existed for dimension.

Action: Specify the hierarchy with the dimension.

ORA-18224: invalid cube identifier "*string*"

Cause: The cube identifier was specified incorrectly.

Action: Specify a valid cube identifier.

ORA-18225: The type of argument *string* of *string* is *string*. *string* is expected.

Cause: An argument of the function had the wrong type.

Action: Use an argument with a valid type.

ORA-18226: argument *string* does not contain the hierarchy "*string*" in argument *string* in *string*

Cause: The hierarchy in one argument did not exist in the SET argument.

Action: Use an expression with the hierarchy from the set in the SET argument.

ORA-18227: The index is out of range in *string*.

Cause: The index was out of range.

Action: Use an index within the range.

ORA-18228: The set of argument *string* of *string* contains multiple hierarchies. Only one hierarchy is expected.

Cause: The set argument had more than one hierarchy.

Action: Use a SET argument that contains only one hierarchy.

ORA-18229: The hierarchy *string* is used more than once in arguments of *string*.

Cause: The hierarchy was used more than once.

Action: Use arguments that contain different hierarchies.

ORA-18230: The member identifier "*string*" cannot be resolved.

Cause: The member identifier could not be resolved.

Action: Use a valid member identifier.

ORA-18231: The StrToMember argument must be a member identifier when CONSTRAINED is specified.

Cause: The StrToMember argument was not a member identifier and the CONSTRAINED option was specified.

Action: Replace the argument with a member identifier or remove the CONSTRAINED option.

ORA-18232: A set with the name "string" has already been defined.

Cause: More than one set was defined with the same name.

Action: Rename the set so that it has a unique name within the WITH clause of the multidimensional expression (MDX) query.

ORA-18233: The set "string" has a cycle.

Cause: The set definition referenced itself either directly or indirectly using another referenced set.

Action: Change the definition of the set so that it does not directly or indirectly refer to itself.

ORA-18234: The calculated member "string" has the same name as an existing member.

Cause: The name specified for the calculated member was not unique, and matched with another identified member in the hierarchy.

Action: Change the name of the calculated member so that it is unique within the specified hierarchy.

ORA-18235: The calculated member "string" must be a member identifier qualified by hierarchy.

Cause: The calculated member identifier was not a valid member identifier or did not contain a hierarchy qualification.

Action: Change the calculated member identifier so that it is a valid member identifier qualifying the hierarchy.

ORA-18236: The calculated member "string" has a cycle.

Cause: The calculated member referenced itself either directly or indirectly using another referenced calculated member.

Action: Change the definition of the calculated member so that it does not directly or indirectly refer to itself.

ORA-18237: A calculated member with the name "string" has already been defined.

Cause: More than one calculated member was defined with the same name.

Action: Rename the calculated member so that it has a unique name in the WITH clause of the multidimensional expression (MDX) query.

ORA-18238: invalid index "string" for the specified axis

Cause: The index used for a specified axis was invalid (the index for the axis was either not distinct or followed a missing index value).

Action: Correct the semantic error for the MDX (Multidimensional Expression) query.

ORA-18239: There are no available hierarchies to initialize the empty set.

Cause: The empty set could not be initialized because there were no available hierarchies.

Action: Provide valid edges to extract the hierarchies to set the empty set.

ORA-18250: The input parameter to the MDX PL/SQL function is invalid.

Cause: The input parameter in the PL/SQL function was invalid.

Action: Correct the input parameter in the PL/SQL function.

ORA-18252: There are no active MDX queries.

Cause: Either an MDX (MultiDimensional eXpression) query was not executed or all executed queries were closed.

Action: Execute an MDX (MultiDimensional eXpression) query.

ORA-18253: invalid queryID: *string*

Cause: The MDX (MultiDimensional eXpression) query did not exist in the session with the given queryID.

Action: Specify a valid queryID obtained by calling dbms_mdx_odbo.execute.

ORA-18254: invalid cellRange size: *string* given, *string* expected

Cause: The size of the cellRange sequence was not 2 times the number of axes.

Action: Specify a cellRange that has the correct number of elements.

ORA-18255: Invalid cellRange: start (*string*) is greater than end (*string*) for axis *string*

Cause: The start was greater than end for a particular axis in the cellRange.

Action: Specify start less than or equal to end for each axis in the cellRange.

ORA-18256: Invalid axisIndex: *string*

Cause: The axisIndex was out of range.

Action: Specify an axisIndex greater than or equal to 0 and less than the number of axes.

ORA-18257: The classification value for "*string*" for measure "*string*" is invalid for MDX.

Cause: The classification value was invalid for MultiDimensional eXpression.

Action: Replace the Classification value.

ORA-18258: The MDX Slicer contains more than one row.

Cause: The set defining the Slicer resulted in more than one row.

Action: Correct the Slicer portion of the MultiDimensional eXpression query.

ORA-18259: The MDX Schema Rowset type request is invalid.

Cause: The MDX (MultiDimensional eXpression) Schema Rowset type was not a valid value.

Action: Valid MDX (MultiDimensional eXpression) schema Rowset types are between 1 and 10.

ORA-18260: The MDX Schema Rowset Restrictions array and Empty array are not the same size.

Cause: The MultiDimensional eXpression Schema Rowset Restrictions array and the Empty array were not the same size.

Action: Correct the sizes of the Restriction and Empty arrays.

ORA-18261: The TREE_OP restriction value is invalid.

Cause: The given TREE_OP restriction value was invalid.

Action: Provide a valid TREE_OP restriction value.

ORA-18262: invalid empty value

Cause: A value in the given empty list was invalid.

Action: Provide a valid empty value.

ORA-18263: invalid object name and log number combination

Cause: The object name and log number combination did not match the value returned by DBMS_HIERARCHY.VALIDATE_HIERARCHY or VALIDATE_CUBE.

Action: Provide a valid combination of object name and log number and reexecute.

ORA-18264: The 'queryProperties' sequence has an invalid length.

Cause: The 'queryProperties' sequence had an odd number of elements.

Action: Ensure that the 'queryProperties' sequence is either empty or contains an even number of elements.

ORA-18265: key column (%0!s) from table %1!s with value (%2!s) not in dimension (%3!s) star table key column

Cause: There was a row in the fact table with a key column value that was not in the corresponding dimension star table key column.

Action: Ensure that each fact table key column value has a corresponding row in the dimension star table key column.

ORA-18266: analytic view key (*string*) with value (*string*) does not determine attribute "*string*" in hierarchy lowest level key

Cause: The attribute reference found on the analytic view keys could not determine the level key column value of the lowest level in the hierarchy.

Action: Ensure that the attribute reference found on the analytic view key determines the level key column value of the lowest level in the hierarchy.

ORA-18267: key (*string*) with value (*string*) for level "*string*" does not determine attribute "*string*"

Cause: There were rows with the level key column value where the number of distinct values of the attribute column and alternate key attribute were not zero or one.

Action: Ensure that the number of distinct values of the attribute column and alternate key attribute is zero or one for each level key column value.

ORA-18268: alternate key (*string*) with value (*string*) for level "*string*" does not determine level key column "*string*" value

Cause: There were rows with the alternate key attribute that had non-unique level key values.

Action: Ensure that the alternate key attribute rows all have the same level key value.

ORA-18269: key or alternate key attribute "string" has string NULL values

Cause: A level key column value was defined as NULL when it should be NOT NULL.

Action: Do not define a level key column value to NULL when it should be the NOT NULL value.

ORA-18270: key or alternate key attributes "string" and "string" for level "string" have string mismatched NULL values

Cause: There was a mismatch in the number of NULL values for a SKIP WHEN NULL level.

Action: Ensure that for each SKIP WHEN NULL level, either all level key column values and alternate key attributes are NULL, or all of the level key column values and alternate key attributes are not NULL.

ORA-18271: invalid value for VisualMode query property

Cause: A non-integer value, a negative value, or a value greater than 2 was specified for the VisualMode query property.

Action: Specify an integer value of 0, 1, or 2 for the VisualMode query property.

ORA-18272: analytic view join key (string) with value (string) not unique in dimension star table

Cause: An analytic view join key did not determine all rows in the dimension star table.

Action: Ensure that the analytic view join key determines all rows in the dimension star table.

ORA-18273: analytic view does not contain cache

Cause: An attempt was made to create a materialized view SQL statement for an analytic view that did not contain a cache.

Action: Modify the analytic view to contain a cache or specify an analytic view with a cache.

ORA-18274: invalid analytic view cache index

Cause: The specified analytic view cache index was invalid.

Action: Specify a valid cache index.

ORA-18275: invalid log table format

Cause: The format of the table did not match the default log table.

Action: Ensure that the table provided has a correct definition.

ORA-18276: invalid log table version, upgrade is required

Cause: There was a mismatch in the log table format that corresponds with an older version of the table.

Action: Call DBMS_HIERARCHY.UPGRADE_VALIDATE_LOG_TABLE in order to upgrade to the latest format and retry the operation.

ORA-18277: analytic view key (*string*) with value (*string*) for measure *string* contains non-numeric data which cannot be implicitly converted to number

Cause: There was data for a measure with a non-numeric data type with an aggregation method that required implicit conversion to number.

Action: Either correct the data in the fact table column so that all rows are able to be implicitly converted to number, or change the data type or aggregation method.

ORA-18278: key (%0!s) with value (%1!s) for level "%2!s" has non-deterministic order by attribute values

Cause: The order by of the attribute dimension for the level did not result in a deterministic order.

Action: Ensure that the order by of the attribute dimension for the level results in a deterministic order.

ORA-18279: analytic view has been modified

Cause: The analytic view for the MDX query was modified.

Action: Reexecute the MDX query.

ORA-18280: The REFERENCES clause for analytic view dimension "*string*" is invalid.

Cause: The attributes in the REFERENCES clause must be comprised of either a key or alternate key of a level.

Action: Correct the REFERENCES clause for the analytic view dimension to include a key or alternate key of a level.

ORA-18281: cyclic reference detected for calculated measure "*string*"

Cause: A cyclic reference for a calculated measure was detected.

Action: Correct the cyclic reference for the calculated measure.

ORA-18282: invalid join condition detected on join path "*string*"

Cause: An invalid join condition was detected.

Action: Ensure that each side of the join condition comes from a different source.

ORA-18283: invalid join path reference "*string*" detected on hierarchy "*string*"

Cause: An invalid join path reference was detected.

Action: Ensure that the join path on the hierarchy refers to a join path on the attribute dimension.

ORA-18284: invalid join paths detected on attribute dimension "*string*"

Cause: Invalid join paths were detected on the attribute dimension.

Action: Ensure that every dimension source is reachable starting with any source and applying join paths of the visited sources.

ORA-18285: Cycle in join paths detected using join path "*string*" when visiting source "*string*".

Cause: The current join paths defined for the attribute dimension produced a cycle.

Action: Ensure that every join path contains a single unique path and includes every dimension source of every level in the hierarchy exactly once.

ORA-18286: invalid SKIP WHEN NULL specification on a calculation expression detected on hierarchy *string*

Cause: An invalid SKIP WHEN NULL specification was detected on the calculation expression.

Action: Ensure that SKIP WHEN NULL is only specified on skip level hierarchies.

ORA-18287: invalid level name "*string*" detected on a calculation expression

Cause: An invalid level name specification was detected on the calculation expression.

Action: Ensure the level exists on the hierarchy specified in the calculation expression.

ORA-18288: parent-child hierarchy "*string*" detected on a calculation expression level specification

Cause: A parent-child hierarchy was detected on the calculation expression level specification.

Action: Ensure that the level specification on the calculation expression does not reference a parent-child hierarchy.

ORA-18289: parent-child member literal expression detected for level-based hierarchy *string*

Cause: A parent-child member literal expression was detected for a level-based hierarchy.

Action: Ensure that the parent-child member literal expression is used with a parent-child hierarchy.

ORA-18290: positional member key mismatch detected between member literal expression and hierarchy level "*string*" on hierarchy "*string*"

Cause: The number of member keys on the member literal expression did not match with those on the corresponding level.

Action: Ensure that the number of member keys on the member literal expression match with those on the corresponding level.

ORA-18291: named member key mismatch detected between member literal expression and hierarchy level "*string*" on hierarchy "*string*"

Cause: The member keys on the member literal expression did not match those on the corresponding level.

Action: Ensure that the member keys on the member literal expression match those on the corresponding level.

ORA-18292: invoker's rights specified on object referenced within a derived analytic view

Cause: Invoker's rights were specified on an object referenced within a derived analytic view.

Action: Ensure that no object referenced within a derived analytic view has invoker's rights specified.

ORA-18293: aggregation function *string* used outside of a window expression

Cause: An aggregation function was specified outside of a window expression.

Action: Ensure that an aggregation function is always specified inside of a window expression.

ORA-18294: invalid data type detected on attribute "string"

Cause: An invalid data type was detected on an attribute.

Action: Ensure that the attributes are not of LOB, BFILE, or LONG data type.

ORA-18295: duplicate hierarchy string detected in a calculation expression

Cause: The same cube hierarchy was named more than once in the calculation expression.

Action: Specify each cube hierarchy only once in the calculation expression.

ORA-18296: ambiguously defined hierarchy string detected in a calculation expression

Cause: An ambiguously defined hierarchy was detected in a calculation expression.

Action: Qualify the hierarchy with the attribute dimension name.

ORA-18297: invalid data type detected on base measure "string" for use with aggregation operator "string"

Cause: An invalid data type was detected on a base measure for use with its specified aggregation operator.

Action: Ensure that the data type of the base measure is valid with the aggregation operator on the base measure.

ORA-18298: The REFERENCES clause for the analytic view dimension "string" does not determine the lowest level of every hierarchy.

Cause: The REFERENCES clause specified for the analytic view dimension was invalid.

Action: The REFERENCES clause must specify the fact key that joins to the attribute defined in the attribute dimension.

ORA-18299: level "string": data type of string expression is invalid

Cause: The specified hierarchical attribute of the specified level had an invalid data type.

Action: Ensure that all attributes of the specified type are character expressions using the same character set.

ORA-18300: level "string": character set of string expression does not match level "string"

Cause: The specified hierarchical attribute of the specified level used a character set that did not match the character set of other levels.

Action: Ensure that all attributes of the specified type are character expressions using the same character set. An explicit ALL clause may need to be specified if the default character set of the ALL attributes does not match the character set used in other levels.

ORA-18301: Attribute dimension "string"."string" does not exist.

Cause: The attribute dimension did not exist or the user did not have the required privileges.

Action: Check the spelling of the attribute dimension and ensure that the user has the required privileges.

ORA-18302: Hierarchy "string"."string" does not exist.

Cause: The hierarchy did not exist or the user did not have the required privileges.

Action: Check the spelling of the hierarchy and ensure that the required privileges are granted to the user.

ORA-18303: The REFERENCES clause for the analytic view dimension "*string*" refers to a level key where the level is marked as SKIP WHEN NULL.

Cause: The REFERENCES clause specified for the analytic view dimension was invalid.

Action: Correct the REFERENCES clause for the analytic view dimension or remove the SKIP WHEN NULL from the attribute dimension level.

ORA-18304: non-measure "*string*" reference in calculated measure "*string*"

Cause: A non-measure was referenced in a calculated measure.

Action: Ensure that only a measure is referenced in a calculated measure.

ORA-18305: non-aggregation user-defined function *string* detected in window calculated measure

Cause: A non-aggregation user-defined function was specified for a window calculated measure.

Action: Ensure that a valid user-defined aggregation function is specified for a window calculated measure.

ORA-18306: invalid depth expression specified in a calculated measure

Cause: An invalid depth expression was specified in a calculated measure.

Action: Ensure that the depth expression evaluates to a positive integer no greater than the number of levels in the hierarchy.

ORA-18307: analytic view "*string*". "*string*" does not exist

Cause: The analytic view did not exist or the user did not have the required privileges.

Action: Check the spelling of the analytic view and ensure that the required privileges are granted.

ORA-18308: Source "*string*" cannot be reached using all join paths.

Cause: A source could not be reached using the current join paths defined for the attribute dimension.

Action: Ensure that every join path includes every dim source of every level in the hierarchy exactly once.

ORA-18309: Hierarchy "*string*". "*string*" does not reference the attribute dimension "*string*". "*string*".

Cause: The hierarchy did not reference the attribute dimension specified.

Action: Ensure that the hierarchy specified is based on the attribute dimension.

ORA-18310: The attribute dimension has no level specification.

Cause: The attribute dimension did not have a level specification.

Action: Specify at least one level in the attribute dimension.

ORA-18312: Dynamic caching is not enabled.

Cause: Analytic View (AV) dynamic caching initialization parameter was not set.

Action: Enable Dynamic AV caching using the appropriate initialization parameter.

ORA-18313: member set expression is not allowed

Cause: A member set expression was specified when a single member expression was expected.

Action: Specify a single member expression.

ORA-18340: Attribute "*string*" referenced in a key on level "*string*" does not exist.

Cause: The level key did not reference a valid attribute in the dimension.

Action: Reference an existing attribute in the level key.

ORA-18341: Determined attribute "*string*" referenced on level "*string*" does not exist.

Cause: The determined attribute did not reference a valid attribute in the dimension.

Action: Reference an existing attribute in the level.

ORA-18342: Level "*string*" does not have a member name.

Cause: The level did not have a member name.

Action: Specify a member name for this multi-attribute key level.

ORA-18343: Default measure "*string*" does not exist.

Cause: The default measure did not reference a valid measure in the Analytic View.

Action: Modify the Analytic View to reference an existing measure.

ORA-18344: Attribute "*string*" cannot be named using an Oracle reserved word.

Cause: The attribute was named using an Oracle reserved word.

Action: Use a name for the attribute that is not an Oracle reserved word.

ORA-18345: Duplicate metadata object *string*.

Cause: A duplicate metadata object was specified.

Action: Remove or rename the duplicate metadata object specification.

ORA-18346: Cube hierarchy "*string*" cannot be set as the default.

Cause: Another default cube hierarchy was specified within the same cube dimension.

Action: Set only one default cube hierarchy within a cube dimension.

ORA-18347: Duplicate level key "*string*" was detected in level "*string*".

Cause: A duplicate level key was specified.

Action: Remove or replace the duplicate level key specification.

ORA-18348: invalid hierarchical attribute name "*string*" specified

Cause: The hierarchical attribute was not defined in the attribute dimension.

Action: Use a hierarchical attribute that is already defined in the attribute dimension.

ORA-18349: Invalid skip level specification on attribute dimension "*string*".

Cause: The attribute dimension was defined with an invalid skip level specification.

Action: At least one level on the attribute dimension must be NOT NULL.

ORA-18350: Attribute "*string*" referenced in the ORDER BY clause on level "*string*" does not exist.

Cause: The specified ORDER BY clause did not reference a valid attribute in the dimension.

Action: Reference an existing attribute in the dimension.

ORA-18351: Cyclic-determined attribute reference detected for level "*string*".

Cause: A cyclic-determined attribute reference for a level was detected.

Action: Correct the cyclic-determined attribute reference for the level.

ORA-18352: Invalid expression (*string*) detected on a measure.

Cause: An invalid expression was detected on a measure. A nested select could not be used in an analytic view base measure expression.

Action: An offset expression or member key expression cannot contain a column expression or be an analytic view SQL calculation expression. Ensure the expression does not contain a nested select.

ORA-18353: invalid ALL member name "*string*" detected on a hierarchy dimension "*string*".

Cause: An invalid ALL member name was detected on a hierarchy dimension.

Action: Ensure that the ALL member name is a constant expression.

ORA-18356: duplicate level name "*string*" found in Cache Level List

Cause: A duplicate level was found in the level list for an Analytic View Cache Level Group.

Action: Ensure that each Analytic View Cache Level Group contains a distinct list of levels.

ORA-18357: duplicate measure name in Cache Measure List "*string*".

Cause: A duplicate measure was found in the measure list for an Analytic View Cache Level Group.

Action: Ensure that each Analytic View Cache Level Group contains a distinct list of measures.

ORA-18358: Cache Level List hierarchy not found "*string*".

Cause: A hierarchy specified in the level list for an Analytic View Cache Level Group was not found.

Action: Ensure that each specified hierarchy in the Analytic View Cache Level Group is defined within the Analytic View.

ORA-18359: Cache Level List dimension not found "*string*".

Cause: A dimension specified in the level list for an Analytic View Cache Level Group was not found.

Action: Ensure that each specified dimension in the Analytic View Cache Level Group is defined within the Analytic View.

ORA-18360: duplicate hierarchy found in Cache Level List *string*

Cause: Multiple levels for the same hierarchy were found in the level list for an Analytic View Cache Level Group.

Action: Ensure that each Analytic View Cache Level Group contains only one level per hierarchy.

ORA-18361: duplicate Cache Object found in Analytic View Cache

Cause: A duplicate Analytic View Cache Level Group and Measure List combination was found in the Analytic View Cache.

Action: Ensure that for each Measure List the Analytic View Cache Level Group Lists are unique.

ORA-18362: The level type of level "*string*" is inconsistent with the dimension type.

Cause: The level type was inconsistent with the dimension type.

Action: Ensure the level type is consistent with the dimension type.

ORA-18363: Key "%0!s" is a subset of another key at level "%1!s".

Cause: One of the keys used was a subset of a key at the same level.

Action: An alternate key cannot be a subset of a key at the same level, and a key cannot be a subset of an alternate key at the same level.

ORA-18364: invalid calculated measure clause "*string*" detected in measure "*string*"

Cause: Invalid syntax was specified for a calculated measure.

Action: Ensure that the syntax is correct.

ORA-18365: invalid argument count on window function "%0!s" detected in calculated measure "%1!s"

Cause: An invalid argument count on a window function was specified for a calculated measure.

Action: Ensure that a valid argument count for a window function is specified for a calculated measure.

ORA-18366: The aggregation operator on measure "*string*" is not allowed in a dynamic level group cache.

Cause: An invalid aggregation operator was specified on a measure in a dynamic level grouping cache.

Action: Remove the measure from the dynamic level group cache or change the aggregation operator.

ORA-18367: The aggregation operator on measure "*string*" is not allowed in a dynamic across all levels cache.

Cause: An invalid aggregation operator on a measure was specified in a dynamic across all levels cache.

Action: Remove the measure from the dynamic across all levels cache or change the aggregation operator.

ORA-18368: The attribute "*string*" is not used in the attribute dimension.

Cause: The specified attribute was not used as either a KEY, ALTERNATE KEY, or in the DETERMINES clause of at least one level.

Action: Ensure that all attributes are used as either a KEY, ALTERNATE KEY, or in the DETERMINES clause of at least one level.

ORA-18369: level grouping cache not found or is ambiguous

Cause: The level grouping cache specified in the ALTER statement was not found because it did not exist or there was more than one level grouping cache that matched with the specified level grouping cache.

Action: Ensure that the specified level grouping cache in the ALTER statement is defined in the analytic view and is valid.

ORA-18370: The HIERARCHIES clause may only be specified for cubes.

Cause: A HIERARCHIES clause was used on a table or other non-cube object.

Action: Remove the HIERARCHIES clause.

ORA-18371: invalid cube hierarchy qualification

Cause: Cube hierarchies may only be qualified by dimension in the HIERARCHIES clause.

Action: Remove the additional qualification.

ORA-18372: syntax error in HIERARCHIES list

Cause: Illegal syntax was found in the HIERARCHIES clause.

Action: Ensure that the HIERARCHIES clause only contains a comma delimited list of cube hierarchies enclosed in parentheses.

ORA-18373: missing hierarchy name

Cause: No hierarchy was specified in the HIERARCHIES clause.

Action: Specify at least one hierarchy in the HIERARCHIES clause enclosed in parentheses.

ORA-18374: duplicate hierarchies in HIERARCHIES clause

Cause: The same cube hierarchy was named more than once in the HIERARCHIES clause.

Action: Specify each cube hierarchy only once in the HIERARCHIES clause.

ORA-18375: Cube columns cannot be directly or indirectly referenced in ANSI named column joins.

Cause: A cube column was referenced in an ANSI NATURAL JOIN or USING clause.

Action: Use the ANSI ON clause or Oracle join syntax.

ORA-18376: A hierarchy or analytic view is not allowed here.

Cause: A hierarchy or analytic view was specified in an incorrect location in a statement.

Action: Ensure that the name is correct or remove it.

ORA-18377: Comments on columns of analytic view objects are not supported.

Cause: A comment for a column of an analytic view object was specified.

Action: Do not define comments for columns of analytic views. Use classifications instead.

ORA-18378: calculated measure "string" in cache measure list

Cause: Calculated measures were specified in the cache measure list.

Action: Remove calculated measures from the cache measure list.

ORA-18379: The query hint must start with "/*+".

Cause: Invalid syntax was found in the query hint session parameter.

Action: Ensure that the hint syntax provided is a valid SQL hint syntax.

ORA-18380: the query hint must end with "*/

Cause: Invalid syntax was found in the query hint session parameter.

Action: Ensure that the hint session parameter provided is valid SQL hint syntax.

ORA-18381: the query hint cannot contain any occurrences of "*/" within the text

Cause: Illegal syntax was found in the query hint session parameter.

Action: Ensure that the hint syntax provided is a valid SQL hint syntax.

ORA-18382: analytic view cache "string" does not exist

Cause: Analytic view cache for avmdx_op read did not exist.

Action: Change avmdx_op to read_or_write.

ORA-18383: av_cache can only be specified for analytic views

Cause: The av_cache option was specified for an object that was not an analytic view.

Action: Remove the av_cache option.

ORA-18384: asymmetric condition is currently not supported for derived analytic view

Cause: An asymmetric condition was specified for derived analytic view.

Action: Remove the asymmetric condition.

ORA-18385: recursive WITH clause not allowed in a derived analytic view

Cause: Recursive WITH clause was used in a derived analytic view.

Action: Do not use recursive WITH clause in a derived analytic view.

ORA-18386: CONNECT BY cannot be used with an analytic view or hierarchy.

Cause: The CONNECT BY clause was used in a query from an analytic view or hierarchy.

Action: Enclose the analytic view or hierarchy within a SQL view and use CONNECT BY over the view.

ORA-18387: The FACT ROWS clause may only be specified for analytic views.

Cause: A FACT ROWS clause was specified for an object that was not an analytic view.

Action: Remove the FACT ROWS clause.

ORA-18388: Invalid usage of analytic view aggregation function.

Cause: An analytic view aggregation function was used in the wrong context.

Action: Remove the analytic view aggregation function.

ORA-18389: Aggregation table *string* is already used as a table in the object.

Cause: The aggregation table specified was already used in the object.

Action: Specify an aggregation table that is not used as a table in the object.

ORA-18390: The FACT ROWS clause cannot be specified for analytic views with any dense dimensions.

Cause: A FACT ROWS clause was specified for an analytic view with at least one dense dimension.

Action: Remove the FACT ROWS clause or change the dimension to be sparse.

ORA-18400: Snowflake table key (*string*) with value (*string*) cannot be found in joining table using join path ("*string*").

Cause: There was a row in a snow flake table with a key column value that was not in the corresponding joining table key column.

Action: Ensure that each snow flake key column value has a corresponding row in the table key column that you are trying to join.

ORA-18401: Many-to-many join caused by key (*string*) with value (*string*) using join path ("*string*").

Cause: There was a key value in the snow flake table that was causing a many-to-many relation between two tables.

Action: Ensure that for a given one-to-many relation the values of the keys are unique.

ORA-18402: Analytic view key (%0!s) with value (%1!s) for measure %2!s contains numeric data which cannot be used with COUNT DISTINCT operator.

Cause: There was non-integer numeric data or numeric data that is out of a valid range for a measure with the COUNT DISTINCT aggregation method

Action: Either correct the data in the fact table column so that all rows are integers and are in a valid range, or change the COUNT DISTINCT aggregation method.

ORA-18450: operation not supported in the middle of a transaction

Cause: The call was made in the middle of a transaction.

Action: Commit or rollback the transaction.

ORA-18451: operation not supported when flashback enabled

Cause: The call was made while flashback was enabled.

Action: Disable flashback.

ORA-18452: unable to retrieve materialized view SQL for dimension "*string*" because the cache star type is not MATERIALIZED

Cause: An attempt was made to retrieve materialized view SQL for a non-MATERIALIZED dimension.

Action: Alter the dimension so that the cache star type is MATERIALIZED or select a dimension with a MATERIALIZED cache star type.

ORA-18453: extra row for keys (*string*) with values (*string*) in aggregation table (*string*)

Cause: An aggregation table key value did not match the source data.

Action: Ensure that the aggregation table rows match the source data.

ORA-18454: missing row for keys (*string*) with values (*string*) in aggregation table (*string*)

Cause: An aggregation table key value did not match the source data.

Action: Ensure that the aggregation table rows match the source data.

ORA-18455: invalid action column value for keys (*string*) with values (*string*) in change tracking table (*string*)

Cause: A change tracking table key value did not have a valid value for the action column.

Action: Ensure that all action column values in the change tracking table are either I or D.

ORA-18456: invalid row for keys (*string*) with values (*string*) in change tracking table (*string*)

Cause: A change tracking table key value row was invalid because it had an I action row that did not match a row in the fact table or a D action row in the change tracking table.

Action: Ensure that all I action change tracking table rows have a corresponding row in the fact table or a corresponding D action change tracking row.

ORA-18500: table has missing or invalid column "*string*"

Cause: The table had a missing or invalid column.

Action: Ensure that the table has the correct columns.

ORA-18501: The query transform cannot be enabled because there is more than one source for the analytic view dimension "*string*".

Cause: An attempt was made to enable query transform on a snowflake schema.

Action: Limit the number of sources to one for analytic view dimensions when enabling an analytic view for query transform.

ORA-18502: cannot enable query transform because fact source is joined to distinct members of analytic view dimension "*string*"

Cause: An attempt was made to enable query transform with a REFERENCES DISTINCT clause in which the fact and dimension tables did not match.

Action: Match the source of the dimension to the source of the fact when enabling an analytic view for query transform.

ORA-18503: Cannot enable query transform because NORELY was specified and a remote source was detected on "*string*" in the analytic view.

Cause: An attempt was made to enable query transform NORELY with a remote source.

Action: Specify RELY or do not use remote sources when enabling an analytic view for query transform.

ORA-18504: invalid measure in filter fact clause

Cause: A base measure that was built over an expression that was not a single column was used in the filter fact clause of the derived analytic view.

Action: Ensure that the base measures used in the derived analytic view filter fact clause have a single column expression.

ORA-18505: invalid analytic view dimension "string"

Cause: The specified analytic view dimension did not exist in the base analytic view.

Action: Ensure that the specified analytic view dimension exists in the base analytic view.

ORA-18521: analytic view auto caching is not enabled.

Cause: Analytic View (AV) autonomous caching initialization parameter was not set.

Action: Enable AV autonomous caching using the appropriate initialization parameter.

ORA-18551: One or more editioned attribute dimension, hierarchy, or analytic view objects exist that cannot be downgraded.

Cause: There were editioned attribute dimension, hierarchy, or analytic view objects that are not supported in the selected release for downgrade.

Action: Prior to downgrade, drop the editioned attribute dimension, hierarchy, or analytic view objects that cannot be downgraded to the selected release.

ORA-18571: An analytic view dimension may not be specified as dense when the cache clause has been included.

Cause: A dimension has been specified as dense and the cache clause has been included.

Action: Mark all dimensions as sparse or remove the cache clause.

ORA-18572: Either all or none of the Analytic View Caches are required to have a change tracking table.

Cause: Either all or none of the analytic view caches were required to have a change tracking table.

Action: Ensure that either all or none of the analytic view caches have a change tracking table.

ORA-18573: analytic view which uses a change tracking table cannot have a cube source column named "ACTION\$"

Cause: An analytic view with a change tracking table could not have a cube source column named action\$.

Action: Rename the cube source column name or remove the change tracking table.

ORA-18574: analytic view which uses a change tracking table has a measure "string" based on an expression that is not a single column

Cause: An analytic view with a change tracking table could not have a non column expression measure.

Action: Either remove the non column measure from the cache or remove the change tracking table.

ORA-18575: analytic view which uses a change tracking table has a measure "string" with invalid aggregation operator "string"

Cause: An analytic view with a change tracking table used an invalid aggregation operator.

Action: Either change the aggregation operator or remove the change tracking table.

ORA-19000: missing RELATIONAL keyword

Cause: The keyword RELATIONAL in the work OBJECT RELATIONAL is missing in the XMLTYPE storage clause specification.

Action: Supply the RELATIONAL keyword in the storage clause

ORA-19001: Invalid storage option specified

Cause: An invalid storage option was specified for the XMLType.

Action: Supply a valid storage option.

ORA-19002: XML Schema URL is missing in storage option.

Cause: An XML Schema URL was not specified in the storage option.

Action: Specify a URL for the XML Schema.

ORA-19003: Missing XML root element name

Cause: A root element in the XMLSchema must be specified if the XML schema is given.

Action: Specify a root element in the XML schema.

ORA-19004: Duplicate XMLType OBJECT RELATIONAL storage option

Cause: A duplicate storage option for the XMLType column was specified

Action: Specify a single storage option for an XMLType column

ORA-19005: Duplicate XMLType LOB storage option

Cause: A duplicate storage option for the XMLType column was specified

Action: Specify a single storage option for an XMLType column

ORA-19006: XMLType TYPE storage option not appropriate for storage type

Cause: The TYPE option can only be used in case of OBJECT RELATIONAL storage option

Action: Remove the TYPE option or specify an OBJECT RELATIONAL storage for the XMLType column

ORA-19007: Schema *string* does not match expected *string*.

Cause: The given XML document conformed to a different schema than expected.

Action: Insert/Update only the XML documents that conform to that particular schema.

ORA-19008: invalid version of XMLTYPE instance

Cause: An invalid version of XMLTYPE instance was found.

Action: This is possibly due to data corruption, an internal error, or running an older client against a newer version of the database. Ensure that the version of the client can understand the XMLTYPE instance in the database. Contact Oracle Support Services if the error persists.

ORA-19009: Missing XMLSchema keyword

Cause: The XMLSchema keyword is missing

Action: Specify the XMLSchema URL and element name.

ORA-19010: Cannot insert XML fragments

Cause: XML fragments got from extractNode cannot be inserted into the database.

Action: Convert the fragment into a proper XML document before insertion.

ORA-19011: Character string buffer too small

Cause: The string result asked for is too big to return back

Action: Get the result as a lob instead

ORA-19012: Cannot convert XML fragment to the required datatype

Cause: A conversion to a datatype was requested which cannot be performed

Action: The XMLType may contain fragments and other elements which cannot be converted to the appropriate datatype.

ORA-19013: Cannot create VARRAY columns containing XMLType

Cause: An attempt was made to create a VARRAY column which contains a XMLType

Action: You cannot store VARRAYs containing XMLTypes in tables. Use nested tables instead

ORA-19015: Invalid XML tag identifier (*string*)

Cause: An invalid XML identifier was detected during XML generation

Action: Fix the offending tag to not contain characters or symbols that are not allowed by the XML specification

ORA-19016: Attributes cannot occur after element specifications.

Cause: Attributes specified using the "@" identifier can only occur before any other element definition when creating XML.

Action: Change the order of the types so that the attributes occur in the beginning.

ORA-19017: Attributes can only be simple scalars

Cause: Attribute values can only be simple scalar values

Action: Use only simple datatypes for attribute values

ORA-19018: Invalid character in XML tag '*string*'

Cause: A tag name was found to have an invalid XML character during XML generation.

Action: Rewrite the query so that the generated XML tag, corresponding to a column name or alias, contains only valid characters.

ORA-19019: Invalid context passed to DBMS_XMLGEN.GETXML

Cause: The value of context passed to GETXML was invalid.

Action: Rewrite the query so that the value of context passed to GETXML is valid.

ORA-19020: invalid dereference of XMLType columns

Cause: An attempt was made to dereference the attributes of an XMLType column which is not part of a base table

Action: You can only dereference the attributes of a base table XMLType column

ORA-19022: Unoptimized XML construct detected.

Cause: The XMLOptimizationCheck variable was enabled and an unrewritten XML construct was detected. This prevents execution of the XML construct.

Action: Ensure that the XML construct is being optimized. See the trace file for further information. Disable the XMLOptimizationCheck variable if you want the unoptimized XML operation to be executed.

ORA-19023: The first argument to UPDATEXML operator has to be an XMLTYPE

Cause: The first argument passed to the update value operator was not an XMLTYPE.

Action: Rewrite the query so that the first argument to the UPDATEXML operator is XMLTYPE.

ORA-19024: Cursor expression must be named

Cause: The value of context passed to GETXML was invalid.

Action: Rewrite the query so that the value of context passed to GETXML is valid.

ORA-19025: EXTRACTVALUE cannot extract values of multiple nodes

Cause: The specified XPATH expression pointed to more than one node.

Action: Correct the XPATH expression so that it points to exactly one node.

ORA-19026: EXTRACTVALUE can only retrieve value of leaf node

Cause: Given XPath does not point to a leaf node.

Action: Rewrite the query so that a leaf node is returned.

ORA-19028: Invalid ADT parameter passed to toObject() function

Cause: The object passed as ADT parameter to sys.XMLType.toObject() is not the same type, or a super-type, of the mapped type.

Action: Pass an object of the correct type to toObject().

ORA-19029: Cannot convert the given XMLType to the required type

Cause: The passed in XMLType could not be converted to the required type

Action: Binary XMLType instances or other objects cannot be converted to the required object or collection types.

ORA-19030: Method invalid for non-schema based XML Documents.

Cause: The method can be invoked on only schema based xmltype objects.

Action: Don't invoke the method for non schema based xmltype objects.

ORA-19031: XML element or attribute *string* does not match any in type *string.string*

Cause: The passed in XML tag does not match any in the object type

Action: Pass a valid canonical XML that can map to the given object type

ORA-19032: Expected XML tag, got no content.

Cause: During a conversion attempt of XML to object, there was a wrong tag name that was present.

Action: Pass a valid canonical XML that can map to the given object type.

ORA-19033: schema mismatch: schema specified in the XML document does not match the schema parameter

Cause: When creating schema-based XML, the schema specified in the XML document was different from the schema that was passed in the 'schema' parameter.

Action: Change the schema parameter to match the schema specified in the XML document.

ORA-19034: Type not supported during schema generation

Cause: The object type contained a type that is not supported for schema generation.

Action: Use a different type or do not generate a schema.

ORA-19035: Invalid select item of the query in newContextFromHierarchy()

Cause: The query did not have a number select item followed by an XMLType select item only.

Action: Ensure that the result set of the query used in the newContextFromHierarchy() function has only two selected items: the first item must be number type and the second item must be XMLType.

ORA-19036: Invalid query result set in newContextFromHierarchy()

Cause: The result set of the query used in the newContextFromHierarchy() function did not have the same property as the result set generated by a CONNECT BY query.

Action: Ensure that the query used in the newContextFromHierarchy() function is a CONNECT BY query or that the query returns a result set having the same property as the result set generated by a CONNECT BY query.

ORA-19037: XMLType result can not be a fragment

Cause: The select item of the query in the newContextFromHierarchy() function was an XML fragment.

Action: Ensure that the select item of the query in the newContextFromHierarchy() function is not an XML fragment.

ORA-19038: Invalid operations on query context

Cause: SetMaxRows, SetSkipRows, SetRowTagName operations are applied to a query context created from newContextFromHierarchy().

Action: SetMaxRows, SetSkipRows, SetRowTagName operations can not be applied to a query context created from newContextFromHierarchy().

ORA-19039: Keyword *string* reserved for future use

Cause: The keyword is reserved for future use as a builtin function.

Action: Change the name mentioned above to a different one.

ORA-19040: Element *string* does not match expected *string*.

Cause: The given XML document had a different root element than expected.

Action: Insert/Update only the XML documents that conform to that particular schema and element.

ORA-19041: Comment data cannot contain two consecutive '-'s

Cause: The given comment string expression has two consecutive '-'s.

Action: Modify comment string to eliminate one or both of the consecutive '-'s.

ORA-19042: Enclosing tag *string* cannot be xml in any case combination

Cause: The given enclosing tag matched 'xml' in some case combination

Action: Modify the enclosing tag so that it is not xml in any case combination.

ORA-19043: Multiply nested XMLROOT function disallowed

Cause: An XMLROOT function has an operand that is also an XMLROOT function.

Action: Modify the query so that there are no multiply nested XMLROOT functions.

ORA-19044: character length specified for XMLSerialize is too small.

Cause: An XMLSerialize function was called with a type of character type (e.g. VARCHAR2(27)), and the length specified (27 in the example) was too small.

Action: Modify the query so that the character length specified is larger.

ORA-19045: character set id specified for XMLSerialize not valid

Cause: An XMLSerialize function was called with an invalid value for the character set id.

Action: Modify the query so that the character set id is valid.

ORA-19046: Out-of-line tables cannot be shared by two top-level tables (table "*string*". "*string*" and the current table being created).

Cause: An attempt was made to share an out-of-line table between two top-level tables.

Action: Use the existing top-level XML table.

ORA-19047: Cannot specify storage for individual VARRAYS

Cause: An attempt was made to combine storage specification for a particular VARRAY with STORE ALL VARRAYS clause.

Action: Either specify storage for individual VARRAYS or use the STORE ALL VARRAYS clause.

ORA-19048: cannot specify VARRAY storage in tableProps

Cause: An attempt was made to store all VARRAYs as tables or LOBs in tableProps.

Action: Do not specify VARRAY store as tables or LOBs in tableProps.

ORA-19051: Cannot use fast path insert for XMLType tables.

Cause: Error while trying to insert into an XMLType table using fast path insert.

Action: Set event 19049 to disable fast path insert and try again.

ORA-19055: Unsupported use of DISABLE XML EXCHANGE

Cause: The option, DISABLE XML EXCHANGE, was specified in a CREATE TABLE statement.

Action: Do not specify DISABLE XML EXCHANGE in a CREATE TABLE statement.

ORA-19057: Internal error: binary XML [*string*]

Cause: The operation failed due to an internal error.

Action: This is an internal error. Contact Oracle Support Services.

ORA-19058: Enabling XML exchange may cause data corruption.

Cause: An attempt was made to enable XML exchange for a binary XML column or table with a conflicting binary XML column or table.

Action: Use the XML exchange option only if at least one of the two involved tables is empty.

ORA-19059: XML exchange has not been enabled.

Cause: An attempt was made to disable XML exchange on a table that does not have XML exchange enabled.

Action: Use the disable XML exchange option only if the table already has XML exchange enabled.

ORA-19060: operation disallowed on XML token set object

Cause: An attempt was made to perform a disallowed operation on a token set object for binary XML support.

Action: Do not perform the attempted operation on an XML token set object.

ORA-19061: Granular Token Set operations are not supported for tables.

Cause: An attempt was made to perform some Granular Token Set related operations on a non-binary XML table or on an older binary XML table.

Action: Do not perform the attempted operation unless tables support Granular Token Set options.

ORA-19062: XML exchange is already enabled.

Cause: An attempt was made to enable XML exchange on a table that had XML exchange already enabled.

Action: Use the disable XML exchange option only if the table has XML exchange disabled.

ORA-19063: Granular token table does not support schema-based storage.

Cause: An attempt was made to use granular token tables with schema-based storage.

Action: Use non-schema based storage for granular token tables.

ORA-19064: Tablespace has XML token set objects used in another tablespace.

Cause: The tablespace contained an XML token set object that was used by a binary XML table in a different tablespace and dropping it would cause some data to be lost.

Action: Move the XML token set object to a different tablespace.

ORA-19065: cannot drop tablespace with XML token set while XDB tablespace is offline

Cause: The tablespace contained an XML token set object but the metadata could not be read since the XDB default tablespace was offline. By dropping the tablespace, some data may be lost.

Action: Bring XDB default tablespace online.

ORA-19066: XML EXCHANGE is not enabled between the two tables.

Cause: The two tables specified in the EXCHANGE had different XML token sets. By exchanging partitions, some data might get corrupted.

Action: Enable XML EXCHANGE between the tables.

ORA-19067: Unable to create binary granular token on user default tablespace.

Cause: The user default tablespace was full.

Action: Increase the size of the user default tablespace.

ORA-19068: Disabling XML EXCHANGE creates token tables in the SYSTEM tablespace.

Cause: Either the table was in SYSTEM tablespace or it was partitioned and the default tablespace was SYSTEM. Granular token tables are forbidden on SYSTEM tablespace.

Action: Move the table to a different tablespace or change the default tablespace if the table is partitioned.

ORA-19069: Table is already exchanging XML with itself.

Cause: An XML exchange was performed with the same table.

Action: Do not enable XML exchange with the same table.

ORA-19070: cannot enable XML EXCHANGE in this type of table

Cause: XML EXCHANGE was not allowed in global temporary tables or external tables.

Action: Do not use a global temporary table or external table.

ORA-19071: Table does not have an XMLType stored as BINARY XML.

Cause: The table was not an XMLTable or did not have an XMLType column stored as BINARY XML.

Action: Use an XMLType or XMLTable stored as BINARY XML.

ORA-19072: Only STORE AS CLOB is supported with XMLType on the sharded table.

Cause: STORE AS CLOB was not specified with XMLType on the sharded table.

Action: Specify the STORE AS CLOB clause in the query.

ORA-19073: unsupported column type for granular token set enabled table

Cause: An attempt was made to add or modify a column with an unsupported type for a granular token set enabled table.

Action: Do not use user-defined Abstract Data Types (ADTs) or an ANYDATA column with granular token sets.

ORA-19074: Table does not have a granular token set.

Cause: The table was not used with a granular token set.

Action: Use an XMLType stored as BINARY XML with a granular token set.

ORA-19075: Failed to move the token table indexes. Run dbms_csx_admin.RebuildTokenTablesIndexes before using the table.

Cause: An attempt to move the indexes to the given tablespace failed.

Action: Run dbms_csx_admin.RebuildTokenTablesIndexes.

ORA-19076: cannot move the XML token set to tablespace where the table owner does not have privileges

Cause: The table owner did not have privileges in the given tablespace.

Action: Use a tablespace where the table owner has privileges.

ORA-19078: invalid binary XML document

Cause: The binary XML document was corrupt.

Action: Rebuild the binary XML document or contact Oracle Support Services.

ORA-19079: Only STORE AS TRANSPORTABLE BINARY XML is supported with XMLTYPE on a sharded table.

Cause: STORE AS TRANSPORTABLE BINARY XML was not specified with XMLTYPE on a sharded table.

Action: Specify STORE AS TRANSPORTABLE BINARY XML clause in the query.

ORA-19080: This sharding operation is not supported for XMLType.

Cause: XMLType support for a specific operation in sharding was not available.

Action: None

ORA-19081: internal error '*string*' received from XML processor

Cause: An internal error was received during an XML operation.

Action: This is an internal error. Contact Oracle Support Services.

ORA-19082: Operation supported only for transportable binary XML.

Cause: XMLType column was not a transportable binary XML.

Action: Use XMLType column stored as transportable binary XML.

ORA-19083: XML Search Index supported only for Transportable Binary XML.

Cause: An attempt was made to create an XML Search Index on an XMLType column that was not stored as transportable binary XML.

Action: Use XMLType column stored as transportable binary XML.

ORA-19100: PASSING or RETURNING keyword expected

Cause: The keyword PASSING or RETURNING was missing.

Action: Specify the PASSING or RETURNING keyword.

ORA-19101: CONTENT keyword expected

Cause: The keyword CONTENT was missing.

Action: Specify the CONTENT keyword.

ORA-19102: XQuery string literal expected

Cause: The string literal containing the XQuery expression was missing.

Action: Specify the XQuery expression as a string literal.

ORA-19103: VALUE keyword keyword

Cause: The keyword VALUE was missing.

Action: Specify the VALUE keyword.

ORA-19104: invalid XQueryX: missing attribute *string*

Cause: The XQueryX expression was not assigned the expected attribute.

Action: Specify a valid XQueryX.

ORA-19105: invalid XQueryX: expected text node - got *string*

Cause: The XQueryX expression did not contain a text node as expected.

Action: Specify a valid XQueryX.

ORA-19106: invalid XQueryX: expected *string* - got *string*

Cause: The XQueryX expression did not contain the node as expected.

Action: Specify a valid XQueryX.

ORA-19107: invalid XQueryX - unsupported construct - *string*

Cause: The given XQuery expression contains an unsupported construct.

Action: Specify a valid XQueryX.

ORA-19108: WHITESPACE keyword expected

Cause: The keyword WHITESPACE was missing.

Action: Specify the WHITESPACE keyword.

ORA-19109: RETURNING keyword expected

Cause: The keyword RETURNING was missing.

Action: Specify the RETURNING keyword.

ORA-19110: unsupported XQuery expression

Cause: The specified expression in the XQuery was not supported.

Action: Rewrite the XQuery using the supported expressions.

ORA-19111: error during evaluation of the XQuery expression

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19112: error raised during evaluation: *string*

Cause: The error function was called during evaluation of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19113: trace function called during evaluation: *string*

Cause: The trace function was called during evaluation of the XQuery expression.

Action: Check the log file for the trace message.

ORA-19114: XPST0003 - error during parsing the XQuery expression: *string*

Cause: An error occurred during the parsing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19115: too many context items specified

Cause: More than one context item was specified as input to the XMLQuery function.

Action: Specify a single context item for the XMLQuery function.

ORA-19116: too many xmlspace declarations

Cause: The query prolog contained multiple xmlspace declarations.

Action: Remove the duplicate xmlspace declarations.

ORA-19117: XQST0070 - invalid redefinition of predefined namespace prefix 'string'

Cause: The given predefined namespace was being redefined in a namespace declaration.

Action: Remove the namespace declaration that redefines the predefined namespace prefix.

ORA-19118: XQST0066 - duplicate default namespace definition - string

Cause: More than one default namespace declaration used the given namespace URI.

Action: Remove the duplicate default namespace definition.

ORA-19121: duplicate attribute definition - string

Cause: More than one attribute with the same name.

Action: Remove the duplicate attribute definition.

ORA-19122: unsupported XQuery declaration

Cause: The program specified an XQuery declaration that is not supported.

Action: Rewrite the XQuery with a declaration that is supported.

ORA-19123: FORG0003: fn:zero-or-one() called with a sequence containing more than one item

Cause: sequence with more than one item was passed into fn:zero-or-one() function

Action: correct input argument to fn:zero-or-one() function

ORA-19124: FORG0004: fn:one-or-more() called with a sequence containing no items

Cause: sequence containing no items was passed into fn:one-or-more() function

Action: correct input argument to fn:one-or-more() function

ORA-19125: FORG0005: fn:exactly-one() called with a sequence containing zero or more than one item

Cause: sequence containing zero or more than one item was passed into fn:exactly-one() function

Action: correct input argument to fn:exactly-one() function

ORA-19126: XQUERY extension expression contains neither a PRAGMA that is recognized by the implementation nor an expression enclosed in curly braces.

Cause: Either no expression was enclosed in curly braces for the extension expression or the PRAGMA content was not recognized.

Action: Correct the input for the extension expression.

ORA-19127: XQST0067: XQST0067: A static error is raised if a Prolog contains more than one construction declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19128: XQST0068: A static error is raised if a Prolog contains more than one boundary-space declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19129: XQST0069: A static error is raised if a Prolog contains more than one empty order declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19130: XQST0070: A static error is raised if the predefined namespace prefix xml or xmlns is redeclared by a namespace declaration or namespace declaration attribute

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19131: XQST0071: A static error is raised if the namespace declaration attributes of a direct element constructor do not have distinct names

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19132: XQDY0072: It is a dynamic error if the result of the content expression of a computed comment constructor contains two adjacent hyphens or ends with a hyphen

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19133: XQST0073: It is a static error if the graph of module imports contains a cycle (that is, if there exists a sequence of modules M1 ... Mn such that each Mi imports Mi+1 and Mn imports M1), unless all the modules in the cycle share a common namespace

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19134: XQDY0074: It is a dynamic error if the value of the name expression in a computed element constructor cannot be converted to an expanded QName (for example, because it contains a namespace prefix not found in statically known namespaces.)

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19135: XQST0075: An implementation that does not support the validation feature must raise a static error if it encounters a validate expression.

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes and act accordingly.

ORA-19136: XQST0076: It is a static error if a collation subclause in an order by clause of a FLWOR expression does not identify a collation that is present in statically known collations

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19137: XQST0079: It is a static error if an extension expression contains neither a pragma that is recognized by the implementation nor an expression enclosed in curly braces

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19138: invalid target type of cast or castable expression

Cause: A target type of a cast or castable expression was not a valid atomic type.

Action: Ensure that a cast or castable expression is an atomic type that is in the schema types in-scope and it is not `xs:NOTATION` or `xs:anyAtomicType`, optionally followed by the occurrence indicator "?".

ORA-19139: XPST0081: It is a static error if a QName used in a query contains a namespace prefix that cannot be expanded into a namespace URI by using the statically known namespaces.

Cause: An error occurred while processing the XQuery expression.

Action: Check the detailed error message for the possible causes and act accordingly.

ORA-19140: XPST0083: It is a static error if the target type of a cast expression or constructor function is xs:QName or a type derived from xs:QName or xs:NOTATION, and the argument of the cast expression or constructor function is not a string literal

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19141: XQDY0084: It is a dynamic error if the element validated by a validate statement does not have a top-level element declaration in the in-scope element declarations, if validation mode is strict

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19142: FONC0001 = FONC0001: undefined context item

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19143: XQTY0086: It is a type error if the typed value of a copied element or attribute node is namespace-sensitive when construction mode is preserve and copy-namespaces mode is no-preserve

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19145: XQST0087: It is a static error if the encoding specified in a Version Declaration does not conform to the definition of EncName specified in [XML 1.0]

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19146: XQST0088: It is a static error if the literal that specifies the target namespace in a module import or a module declaration is of zero length

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19147: XQST0089: It is a static error if a variable bound in a FOR clause of a FLWOR expression and its associated positional variable do not have distinct names (expanded QNames).

Cause: An error occurred while processing the XQuery expression.

Action: Check the detailed error message for the cause and act accordingly.

ORA-19148: XQST0090: It is a static error if a character reference does not identify a valid character in the version of XML that is in use

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19149: XQDY0091: An implementation may raise a dynamic error if an xml:id error, as defined in [XML ID], is encountered during construction of an attribute named xml:id

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19150: XQDY0092: An implementation may raise a dynamic error if a constructed attribute named xml:space has a value other than preserve or default

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19151: XQST0093: It is a static error to import a module M1 if there exists a sequence of modules M1 ... Mi ... M1 such that each module directly depends on the next module in the sequence (informally, if M1 depends on itself through some chain of module dependencies.)

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19152: FOCH0001 = FOCH0001: codepoint not valid

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19153: FOCH0002: unsupported collation

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19154: FOCH0003: unsupported normalization form

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19155: FOCH0004: collation does not support collation units

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19156: FODC0001: no context document

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19157: FODC0002: error retrieving resource

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19158: FODC0004: invalid argument to fn:collection()

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19159: FODC0005: invalid argument to fn:doc

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19160: XPST0003 - syntax error: invalid variable name *string*

Cause: The given XQuery variable does not begin with the '\$' sign

Action: Fix the variable name to start with the "\$" sign.

ORA-19161: XPTY0004 - XQuery type mismatch: invalid argument type '*string*' for function '*string*'

Cause: The type of the argument that was passed to the given function was not valid.

Action: Fix the argument to be of a type supported by the given function.

ORA-19162: XPTY0004 - XQuery type mismatch: invalid argument types '*string*', '*string*' for function '*string*'

Cause: The type of the arguments that were passed to the given function was not valid.

Action: Fix the arguments to be of a type appropriate for the given function.

ORA-19163: XPTY0004 - XQuery type mismatch: argument type mismatch: expected - '*string*' got - '*string*' for function '*string*'

Cause: The type of the arguments that were passed to the given function was not valid.

Action: Fix the arguments to be of a type appropriate for the given function.

ORA-19164: XQST0085 - It is a static error if the namespace URI in a namespace declaration attribute is a zero-length string, and the implementation does not support [XML Names 1.1].

Cause: There was a zero-length URI in namespace declaration.

Action: Fix the namespace declaration.

ORA-19165: FONS0003: no prefix defined for namespace

Cause: There was a zero-length URI in namespace declaration.

Action: Fix the namespace declaration.

ORA-19166: FONS0003: FONS0004: no namespace found for prefix

Cause: There was a zero-length URI in namespace declaration.

Action: Fix the namespace declaration.

ORA-19167: FONS0005: base uri not defined in the static context

Cause: There was a zero-length URI in namespace declaration.

Action: Fix the namespace declaration.

ORA-19168: FORG0002: invalid argument to fn:resolve-uri()

Cause: There was a zero-length URI in namespace declaration.

Action: Fix the namespace declaration.

ORA-19169: FORG0006: invalid argument type in 'string'

Cause: There was a zero-length URI in namespace declaration.

Action: Fix the namespace declaration.

ORA-19171: FORG0007: invalid argument to aggregate function

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19172: FORG0008: both arguments to fn:dateTime have a specified timezone

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19173: FORG0009: error in resolving a relative URI against a base URI in fn:resolve-uri

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19174: FORX0001: invalid regular expression flags

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19175: FORX0002: invalid regular expression

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19176: FORX0003: regular expression matches zero-length string

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19177: FORX0004: invalid replacement string

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19178: FOTY0001: type error

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19179: FOTY0011: Type error. Context item is not a node

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19180: FOTY0012: argument node does not have a typed value

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19181: FOTY0014: type exception

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19182: FORT0001: invalid number of parameters

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19183: FOTY0002: type definition not found

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19184: FOTY0021: invalid node type

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19185: FOAR0002: numeric operation overflow/unflow

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19186: FOCA0001: input value too large for decimal

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19187: FOCA0002: invalid lexical value

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19188: FOCA0003: input value too large for integer

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19189: FOCA0005: NaN supplied as float/double value

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19190: FOER0000: Unidentified error

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19191: FOAR0001: division by zero

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19192: XQST0047: It is a static error if multiple module imports in the same Prolog specify the same target namespace

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19193: XQST0045: It is a static error if the function name in a function declaration is in one of the following namespaces: <http://www.w3.org/XML/1998/namespace>, <http://www.w3.org/2001/XMLSchema>, <http://www.w3.org/2001/XMLSchema-instance>, <http://www.w3.org/2005/04/xpath-functions>, <http://www.w3.org/2005/04/xpath-datatypes>

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19194: XQDY0026: It is a dynamic error if the result of the content expression of a computed processing instruction constructor contains the string "?>"

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19195: invalid policy in function ora:contains

Cause: An invalid policy was specified in the ora:contains XQuery function.

Action: Either rename the policy name, policy schema name, or do not specify any policy to pick up the default policy.

ORA-19196: XMLType table or view is not allowed with this form of fn:collection

Cause: The table or view specified in fn:collection was of XMLType.

Action: XMLType table or view is not allowed in the form of fn:collection('oradb:/schema/table/ROW/column'). It has to be a relational table or view.

ORA-19197: Column not found or invalid column type with this form of fn:collection

Cause: The column to be retrieved was not found or was not of XMLType.

Action: The column to be retrieved in the form of fn:collection('oradb:/schema/table/ROW/column') or fn:collection('oradb:/schema/table/ROW[predicate]/column') has to be of XMLType.

ORA-19198: Column not found or invalid column specified in the predicate with this form of fn:collection

Cause: The column specified in the predicate was not found or was not allowed.

Action: The column specified in the predicate in the form of fn:collection('oradb:/schema/table/ROW[predicate]/column') cannot be of XMLType.

ORA-19199: too many levels of nesting

Cause: An XQuery expression contained too many levels of nesting parentheses.

Action: Reduce the level of nesting parentheses.

ORA-19200: invalid column specification

Cause: Not all input arguments were valid columns.

Action: Specify a valid list of columns.

ORA-19201: Datatype not supported

Cause: The particular datatype is not supported in the XMLGEN operator

Action: Specify only supported datatypes as arguments to the XMLGEN operator

ORA-19202: error occurred in XML processingstring

Cause: An error occurred when processing the XML function.

Action: Check the given error message and fix the underlying issue.

ORA-19203: Error occurred in DBMS_XMLGEN processingstring

Cause: An error occurred when processing the DBMS_XMLGEN functions

Action: Check the given error message and fix the appropriate problem

ORA-19204: Non-scalar value 'string' is marked as XML attribute

Cause: Only scalar values (i.e. values which are not of object or collection type) can be marked as XML attribute, i.e. is prefixed by '@'. In this case, a non-scalar value was prefixed with '@'

Action: Remove the '@' sign, or make the value a scalar.

ORA-19205: Attribute 'string' qualifies a non-scalar value in the select list

Cause: The attribute immediately follows a value of object or collection type in the select list or type definition.

Action: Remove the '@' sign, or make the previous value a scalar.

ORA-19206: invalid value for query or REF CURSOR parameter

Cause: The queryString argument passed to DBMS_XMLGEN.newContext was not a valid query or REF CURSOR.

Action: Rewrite the query so that the queryString argument is a valid query or REF CURSOR.

ORA-19207: The scalar parameter string to XMLELEMENT cannot have an alias.

Cause: The scalar parameter to XMLELEMENT was qualified with an alias.

Action: Remove the AS clause of the scalar element.

ORA-19208: Parameter string of function string must be aliased.

Cause: The indicated parameter of the XML generation function has not been aliased, although it is an expression.

Action: Specify an alias for the expression by using the AS clause.

ORA-19209: invalid or unsupported formatting argument

Cause: An invalid or unsupported formatting argument was supplied

Action: Change the formatting argument to legal supported values

ORA-19210: Column '*string*', specified to be a key or update column for DBMS_XMLSTORE, does not exist in table '*string*'.

Cause: The column specified using setKeyColumn() or setUpdateColumn() did not exist in the table.

Action: Specify a table column instead.

ORA-19211: column '*string*', specified as key using DBMS_XMLSTORE.setKeyColumn() , must be of scalar type

Cause: The column specified using setKeyColumn() was a non-scalar type column.

Action: Change the column specified to be a scalar column in the table

ORA-19212: no key columns specified before call to DBMS_XMLSTORE.updateXML()

Cause: No columns were specified as key columns before the call to DBMS_XMLSTORE.updateXML.

Action: Use DBMS_XMLSTORE.setKeyColumn() to specify key columns

ORA-19213: error occurred in XML processing at lines*string*

Cause: An error occurred when processing the specified lines in an XML function.

Action: Check the error message and fix the problem.

ORA-19214: XMLAGG expression not allowed with window functions or first and last expressions

Cause: An attempt was made to use an XMLAGG expression with window functions or first and last expressions.

Action: Do not use window functions or first and last expressions with the XMLAGG expression.

ORA-19221: XPST0001 - XQuery static context component *string* not initialized

Cause: An uninitialized static context component was encountered during the static analysis of the expression.

Action: initialize the given static context.

ORA-19222: XPDY0002 - XQuery dynamic context component *string* not initialized

Cause: An uninitialized dynamic context component was encountered during the evaluation of the expression.

Action: Initialize the particular dynamic context component.

ORA-19223: XPST0003 - syntax error in XQuery expression

Cause: The given XQuery expression contains syntax errors.

Action: Fix the syntax error in the XQuery expression.

ORA-19224: XPTY0004 - XQuery static type mismatch: expected - *string* got - *string*

Cause: The expression could not be used because its static type is not appropriate for the context in which it was used.

Action: Fix the expression to be of the required type or add appropriate cast functions around the expression.

ORA-19225: XPST0005 - XQuery static type error: expected non empty type got empty sequence

Cause: The static type assigned to an expression other than the () expression must not be the empty type.

Action: Fix the expression so it does not return empty sequences.

ORA-19226: XPTY0006 - XQuery dynamic type mismatch: expected *string* got *string*

Cause: The expression could not be used because its dynamic type did not match the required type as specified by XQuery sequencetype matching rules.

Action: Fix the expression to return the expected type or use appropriate cast functions.

ORA-19227: XPTY0007 - fn:data function is applied to a node (type (*string*)) whose type annotation denotes a complex type with non-mixed complex content.

Cause: The input node for atomization contained a type annotation that denoted a complex type with non-mixed complex content.

Action: Fix the input expression to fn:data to be a node that does not contain non-mixed complex content.

ORA-19228: XPST0008 - undeclared identifier: prefix '*string*' local-name '*string*'

Cause: The given identifier refers to either a type name, function name, namespace prefix, or variable name that is not defined in the static context.

Action: Fix the expression to remove the identifier, or declare the appropriate variable, type, function or namespace.

ORA-19229: XQST0009 - schema import not supported

Cause: A schema import was encountered in the query.

Action: remove the schema import.

ORA-19230: XPST0010 - unsupported axis *string*

Cause: An unsupported axis was encountered in the given expression.

Action: Remove the unsupported axis from the expression.

ORA-19231: XPST0011 -

ORA-19232: XQST0012 - imported schemas violate validity rules

Cause: The imported schemas did not satisfy the conditions for schema validity specified in the XMLSchema specification.

Action: Fix the imported schemas to satisfy the validity rules. In particular, the definitions must be valid, complete, and unique -- that is, the pool of definitions must not contain two or more schema components with the same name and target namespace.

ORA-19233: XQST0013 - invalid pragma

Cause: A pragma was specified whose contents are invalid.

Action: Specify the pragma with the correct contents.

ORA-19234: XQST0014 - invalid or unsupported must-understand extension

Cause: The must-understand extension specified was either invalid or unsupported.

Action: remove the unsupported must-understand extension or fix the error.

ORA-19235: XQST0015 - unsupported must-understand extension

Cause: The XQuery flagger was enabled and the query contained a must-understand extension.

Action: remove the unsupported must-understand extension.

ORA-19236: XQST0016 - module declaration or import not supported

Cause: The given query had a module declaration or module import.

Action: Remove the import module or module declaration.

ORA-19237: XPST0017 - unable to resolve call to function - *string:string*

Cause: The name and arity of the function call given could not be matched with any in-scope function in the static context.

Action: Fix the name of the function or the number of parameters to match the list of in-scope functions.

ORA-19238: XPTY0018 - It is a type error if the result of the last step in a path expression contains both nodes and atomic values

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19239: XPTY0019 - It is a type error if the result of an step (other than the last step) in a path expression contains an atomic value

Cause: The step expression returned a sequence containing an atomic value.

Action: Fix the path expression to return only nodes.

ORA-19240: XPTY0020 - context item must be node in an axis expression

Cause: The context item that was used in the axis expression is not a node.

Action: Change the context item to be a node.

ORA-19241: XPDY0021 - cast to type *string* failed

Cause: The value inside a cast expression could not be cast to the required type.

Action: Fix the input to the cast expression to be of a castable type.

ORA-19242: XQST0022 - namespace declaration attribute must be a literal

Cause: The namespace declaration attribute was not a literal string.

Action: Fix the namespace declaration to be a literal string.

ORA-19243: XQTY0023 - invalid document node content in element constructor

Cause: The content sequence in an element constructor contained a document node.

Action: Change the content of the element constructor so that it does not contain a document node.

ORA-19244: XQTY0024 - invalid attribute node in element constructor

Cause: The content sequence in an element constructor contained an attribute node following a node that was not an attribute node.

Action: Change the content sequence of the element constructor so that it does not contain the attribute node.

ORA-19245: XQDY0025 - duplicate attribute name *string*

Cause: The content sequence of the element constructor contained more than one attribute that had the same name.

Action: Remove the duplicate attributes.

ORA-19246: validation failed - element *string* not found in in-scope element declarations

Cause: The validation mode was strict and the element-constructor contained an element name that was not present in the in-scope element declarations.

Action: Fix the validation mode to be lax or import the schema definition that contains the required element declaration.

ORA-19247: XQDY0027 - validation error

Cause: An error was encountered during the validation of the expression.

Action: Fix the validation error.

ORA-19248: XQTY0028 - invalid node in document constructor

Cause: The content sequence in a document constructor contained either a document or an attribute node.

Action: Fix the content so it does not contain any of the above node types.

ORA-19249: XQDY0029 - value does not match facet of the target type

Cause: The input value to a cast expression did not satisfy the facets of the target type.

Action: Fix the value to conform to the facets of the target type.

ORA-19250: XQTY0030 - too many values to validate expression

Cause: The argument of a validate expression returned more than one element or document node.

Action: Fix the argument of the validate expression to return a single element or document node.

ORA-19251: XQST0031 - unsupported query version

Cause: The query version specified in the prolog was not supported.

Action: Supply the version of the query that is supported.

ORA-19252: XQST0032 - too many declarations for base URI

Cause: The query prolog contained multiple declarations for the base URI.

Action: Remove the duplicate definitions for the base URI.

ORA-19253: XQST0033 - too many declarations for namespace prefix *string*

Cause: The query prolog contained multiple declarations for the same namespace prefix.

Action: Remove the duplicate definitions for the namespace prefix.

ORA-19254: XQST0034 - too many declarations for function *string*

Cause: The query module contained more than one function, either declared or imported, which have the same expanded QName.

Action: Remove the duplicate function definitions.

ORA-19255: XQST0035 - too many declarations of *string* in imported schemas

Cause: Two schemas were imported that defined the same name in the same symbol space and in the same scope.

Action: Fix the schema imports to remove the name conflict.

ORA-19256: XQST0036 - missing type definitions in imported module

Cause: A module was imported, which contains references to type names that are not defined in the in-scope type definitions inside the module.

Action: Fix the module definition to include the in-scope type definition.

ORA-19257: XQST0037 - function or variable *string* in module already defined

Cause: A module being imported contained the function or variable that is already declared in the static context of the importing module.

Action: Remove the conflicting declarations.

ORA-19258: XQST0038 - unsupported or duplicate default collation specified

Cause: The query prolog either specified more than one default collation or the collation specified was not supported.

Action: Remove the duplicate definition or specify a supported collation.

ORA-19259: XQST0039 - duplicate parameter name *string* in function declaration

Cause: The function declaration contained more than one parameter with the same name.

Action: Fix the function declaration to remove the duplicate parameters.

ORA-19260: XQST0040 - invalid namespace node in element constructor

Cause: The content sequence in an element constructor contained a namespace node following a node that was not a namespace node.

Action: Remove the namespace node in the element constructor.

ORA-19261: XQDY0041 - non empty URI in QName

Cause: The name expression in a computed processing instruction or computed namespace constructor returned a QName whose URI part was not empty.

Action: Fix the processing instruction or computed namespace constructor to return the QName with an empty URI part.

ORA-19262: XQST0042 - namespace constructor not inside an element constructor

Cause: The enclosing expression of a computed namespace constructor was not a computed element constructor.

Action: Fix the namespace constructor to be inside an element constructor.

ORA-19263: XQST0043 - duplicate namespace prefix *string*

Cause: Two or more computed namespace constructors within the same computed element constructor attempted to bind the same namespace prefix.

Action: Remove the duplicate namespace definitions.

ORA-19264: XQDY0044 - invalid namespace in attribute constructors

Cause: A computed attribute constructor returned a QName that is in the pre-defined XML namespace (corresponding to namespace prefix xmlns).

Action: Change the namespace for the computed attribute constructor.

ORA-19265: XQST0045 - invalid or unknown prefix *string* in function declaration

Cause: The declared function name in a function declaration had no namespace prefix or had one of the predefined namespace prefixes other than local.

Action: Fix the function declaration to have the correct prefix.

ORA-19266: XQST0046 - invalid URI

Cause: The given URI contained a lexical form that was not valid according to the definition of xs:anyURI in XML Schema.

Action: Fix the URI.

ORA-19267: module *string* not found

Cause: The module with the given target URI could not be found.

Action: Fix the prolog to import only available modules.

ORA-19268: XQST0048 - namespace *string* does not match target namespace *string*

Cause: The module contained a function or variable whose namespace did not match the target namespace of the module.

Action: Fix the namespace of the function or variable to match the target namespace of the module.

ORA-19269: XQST0049 - variable *string* defined multiple times

Cause: The module defined or imported the same variable multiple times.

Action: Fix the import or the module definition to remove duplicate definitions.

ORA-19270: XPDY0050 - treat failed - expected *string* got *string*

Cause: The type of the operand to the treat expression did not match the required type.

Action: Fix the input operand to be of the correct type.

ORA-19271: XPST0051 - invalid atomic type definition

Cause: The QName used as an AtomicType in a SequenceType was not defined in the in-scope type definitions as an atomic type.

Action: Use the correct atomic type name.

ORA-19272: XQDY0052 - invalid atomic value in attribute or element constructor

Cause: The content of the element or attribute constructor included an atomic value that could not be cast into a string.

Action: Fix the content to contain atomic values that can be cast to a string.

ORA-19273: XQST0053 - empty string in namespace declaration

Cause: An empty string was used in a namespace declaration.

Action: Fix the namespace declaration to have a non-empty string.

ORA-19274: XQST0054 - variable initialization failed due to circularity

Cause: A circular definition was encountered when the variable was initialized.

Action: Remove the circularity in the initialization.

ORA-19275: XQST0055 - schema path *string* not found in list of in-scope schema definitions

Cause: The ElementTest specified a schema path that could not be found in the list of in-scope schema definitions.

Action: Include the appropriate schema that can be used to resolve the ElementTest.

ORA-19276: XPST0005 - XPATH step specified an invalid element/attribute name: (*string*).

Cause: The XPATH step specified an invalid element or attribute name that did not match any nodes according to the input XML schema or structure.

Action: Correct the element or attribute name, because the name may have been misspelled.

ORA-19277: XPath step specifies an item type matching no node: (*string*)

Cause: The XPath step specified an item type that did not match any nodes according to the input XML schema or structure.

Action: Correct the item type definition as node of such type does not exist in the input XML schema or structure.

ORA-19278: Invalid value: (*string*) for type: (*string*)

Cause: The value was invalid for the type.

Action: Correct the value or change the type.

ORA-19279: XPTY0004 - XQuery dynamic type mismatch: expected singleton sequence - got multi-item sequence

Cause: The XQuery sequence passed in had more than one item.

Action: Correct the XQuery expression to return a single item sequence.

ORA-19280: XQuery dynamic type mismatch: expected atomic value - got node

Cause: A node was passed in to the expression where an atomic value was expected.

Action: Correct the XQuery expression to return an atomic value.

ORA-19281: XQST0055 - It is a static error if a Prolog contains more than one copy-namespaces declaration

Cause: The query prolog contained multiple copy-namespaces declarations.

Action: Remove the duplicate copy-namespaces declarations.

ORA-19282: XQST0068 - It is a static error if a Prolog contains more than one xmlspace declaration

Cause: The query prolog contained multiple xmlspace declarations.

Action: Remove the duplicate xmlspace declarations.

ORA-19283: XQST0031 - It is a static error if the version number specified in a version declaration is not supported by the implementation.

Cause: The query contained a version declaration not supported by this implementation.

Action: Change the version declaration to 1.0 which is the version supported by this implementation.

ORA-19284: Encoding specification in version declaration not supported

Cause: The query contained an encoding specification.

Action: Remove the encoding specification.

ORA-19285: FODC0002 - error retrieving resource

Cause: The URI provided could not be resolved to a valid resource.

Action: Provide a valid URI for a resource.

ORA-19286: XPST0017 - unable to resolve call to function - *string*

Cause: The name and arity of the function call given could not be matched with any in-scope function in the static context.

Action: Fix the name of the function or the number of parameters to match the list of in-scope functions.

ORA-19287: XPST0017 - invalid number of arguments to function - *string:string*

Cause: The name and arity of the function call given could not be matched with any in-scope function in the static context.

Action: Fix the name of the function or the number of parameters to match the list of in-scope functions.

ORA-19288: XPST0017 - invalid number of arguments to function - *string*

Cause: The name and arity of the function call given could not be matched with any in-scope function in the static context.

Action: Fix the name of the function or the number of parameters to match the list of in-scope functions.

ORA-19289: XQST0034 - function *string:string* declared or defined multiple times

Cause: Multiple functions declared or imported by a module had the same expanded QName and the same number of arguments.

Action: Fix the function declaration or definition to remove duplicates.

ORA-19290: XQST0069 - more than one empty order declaration declared in the prolog

Cause: A prolog had more than one empty order declaration.

Action: Fix the prolog to have just one empty order declaration.

ORA-19291: XPST0081 - specified QName cannot be expanded into a namespace URI

Cause: The namespace prefix of the QName could not be expanded into a namespace URI by using the statically known namespaces.

Action: Use a namespace prefix that can be resolved into a namespace URI from the statically known namespaces.

ORA-19292: XQST0057: It is a static error if a schema import binds a namespace prefix but does not specify a target namespace other than a zero-length string

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19293: XQST0058: It is a static error if multiple schema imports specify the same target namespace

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19294: XQST0059: It is a static error if an implementation is unable to process a schema or module import by finding a schema or module with the specified target namespace

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19295: XQST0060: It is a static error if the name of a function in a function declaration is not in a namespace (expanded QName has a null namespace URI)

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19296: XQDY0061: It is a dynamic error if the operand of a validate expression is a document node whose children do not consist of exactly one element node and zero or more comment and processing instruction nodes, in any order

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19297: XQDY0064: It is a dynamic error if the value of the name expression in a computed processing instruction constructor is equal to "XML" (in any combination of upper and lower case)

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19298: XQST0065: A static error is raised if a Prolog contains more than one ordering mode declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19299: XQST0066: A static error is raised if a Prolog contains more than one default element/type namespace declaration, or more than one default function namespace declaration

Cause: An error occurred during the processing of the XQuery expression.

Action: Check the detailed error message for the possible causes.

ORA-19300: An error occurred in URI processing of *string*.

Cause: An error occurred when processing the Uniform Resource Identifier (URI).

Action: Check all error messages, fix the appropriate problem, and retry the operation. If the problem persists, contact Oracle Support.

ORA-19320: Host name not specified in HTTP URL

Cause: A host name was not specified in the HTTP url

Action: Specify a host name in the HTTP url when creating the URL string

ORA-19321: Could not open HTTP connection to host (*string*): port (*string*)

Cause: A HTTP connection could not be opened to the host

Action: Specify a valid host name and port to connect to

ORA-19322: An error occurred while reading from host (*string*): port (*string*)

Cause: An error occurred while reading from the HTTP host

Action: Specify a valid host name and port to read from

ORA-19323: Invalid url string

Cause: The URL must be a valid URL string

Action: Specify a valid url string

ORA-19330: Type '*string*'.*string*' not installed. Please install the type before using the CREATE_DBURI operator

Cause: The type required for the CREATE_DBURI operator has not been installed correctly.

Action: Read the installation notes to install the type correctly.

ORA-19331: Last argument to CREATE_DBURI operator must be a column

Cause: The final argument to the CREATE_DBURI operator must be a column to which the reference is being created.

Action: Specify a valid column name in the query.

ORA-19332: Invalid column in the CREATE_DBURI operator

Cause: The argument to the CREATE_DBURI operator can only be a column.

Action: Specify a valid column name for the operator

ORA-19333: invalid flags for CREATE_DBURI operator

Cause: An invalid flags argument was given to the CREATE_DBURI operator.

Action: Specify a valid flag value (TEXT) for the CREATE_DBURI operator.

ORA-19334: Invalid column specification for CREATE_DBURI operator

Cause: All columns must be valid and pointing to the same table or view

Action: Specify valid list of columns that are from the same table or view.

ORA-19335: Invalid format type object

Cause: An invalid format type object was specified for the XML function

Action: Specify a valid format type object

ORA-19336: Missing XML root element

Cause: The XML being generated does not have an enclosing root element.

Action: The XML generated must have a root element

ORA-19361: ONLINE option not allowed with this type of index

Cause: The ONLINE option was specified to validate the structure of a system-generated metadata index

Action: The ONLINE option can not be used with system-generated metadata indexes such as an LOB index, an IOT Top index, an Index on Clusters etc., Run query without using the ONLINE option.

ORA-19371: invalid update option

Cause: The user attempted to call load_sqlset with an update option that is different than REPLACE and ACCUMULATE.

Action: Adjust the update option and retry the operation.

ORA-19372: invalid update condition

Cause: The user attempted to call load_sqlset with an invalid update condition.

Action: Check the update condition (e.g., NEW.COL1_NAME >= OLD.COL2_NAME) and retry the operation.

ORA-19373: invalid staging table or tablespace

Cause: The user attempted to create a staging table and specified an invalid staging table (or one that already exists) or tablespace

Action: Check the arguments and try again.

ORA-19374: invalid staging table

Cause: The user specified an invalid staging table to one of the pack, unpack, or remap stgtab routines, or the user does not have the correct privileges on the staging table

Action: Provide a correct staging table or grant the appropriate privileges

ORA-19375: no CREATE TABLE privilege on schema "*string*"

Cause: The user tried to create a staging table when he is missing the CREATE TABLE privilege on the specified schema.

Action: Grant the privilege to the user and retry

ORA-19376: no privileges on tablespace provided or tablespace is offline

Cause: The user tried to create a staging table on a tablespace on which he does not have any space allocated, or it is offline

Action: Allocate space on the tablespace, bring it online, and retry

ORA-19377: no "SQL Tuning Set" with name like "string" exists for owner like "string"

Cause: The user specified a filter to a pack/unpack function for the SQL Tuning Set that targets no STS in the SYS schema or the staging table, respectively

Action: Provide a different filter after checking the state of the system

ORA-19378: invalid mode

Cause: The user specified an invalid mode argument to the capture function.

Action: Provide a mode argument that was defined in the dbmssqlt file

ORA-19379: invalid time_limit or repeat_interval

Cause: Either a NULL value was specified for the time_limit or the repeat_interval value, or the repeat_interval value was greater than the time_limit value.

Action: Provide a non-NULL value and ensure that time_limit value is greater than or equal to the repeat_interval value.

ORA-19380: invalid plan filter

Cause: The user specified an invalid filter for the plan when calling the select_sqlset table function.

Action: Adjust the the filter to be one of the following values and retry the operation: MAX_ELAPSED_TIME, MAX_CPU_TIME, MAX_DISK_READS, MAX_OPTIMIZER_COST, MAX_BUFFER_GETS, FIRST_LOADED LAST_LOADED, FIRST_GENERATED, or LAST_GENERATED.

ORA-19381: cannot create staging table in SYS schema

Cause: The user attempted to create a staging table in the sys schema

Action: Create the table in another schema.

ORA-19384: cannot pack into staging table from previous version

Cause: An attempt was made to perform a pack operation on a staging table from a previous version.

Action: Create a staging table in the current version and retry the operation.

ORA-19385: staging table is empty

Cause: An attempt was made to perform an operation on an empty staging table.

Action: Check the staging table to ensure that it has rows.

ORA-19386: target object already exists for tuning task "string"

Cause: An attempt was made to set a target object for a tuning task when one had already been set.

Action: Create a new task if another target object is needed.

ORA-19387: "SQL Tuning Set" "string" belongs to another tuning task

Cause: The user attempted to tune a task-managed SQL Tuning Set belonging to one task within the scope of another task.

Action: Check the SQL Tuning Set and retry the operation.

ORA-19388: operation not supported for "SQL Tuning Set" type

Cause: The attempted operation was unsupported for the type of the given SQL Tuning Set.

Action: Check the SQL Tuning Set and retry the operation.

ORA-19389: LOB types are not supported for SQL binds

Cause: A LOB type was provided in a SQL bind list.

Action: Replace the LOB binds with legal bind types or try another SQL.

ORA-19390: The profile type is not valid

Cause: The profile type is not valid.

Action: Check the available profile types.

ORA-19400: System type conflict with object SYS.string

Cause: The user had an object with the same name as one of the system types. The system types were not initialized properly.

Action: Remove the conflicting object and rerun migration.

ORA-19500 to ORA-19998

ORA-19500: device block size *string* is invalid

Cause: the device block size returned by sequential I/O OSD is invalid

Action: If the block size was set by using the PARSMS option of the Recovery Manager ALLOCATE CHANNEL command, then the specified block size must be changed. If no PARSMS option was specified on the ALLOCATE CHANNEL command, then this is an internal error that should be reported to Oracle.

ORA-19501: read error on file "*string*", block number *string* (block size=*string*)

Cause: read error on input file

Action: check the file

ORA-19502: write error on file "*string*", block number *string* (block size=*string*)

Cause: write error on output file

Action: check the file

ORA-19503: cannot obtain information on device, name="*string*", type="*string*", parms="*string*"

Cause: call to get device information returned an error

Action: check device name, type and parameters

ORA-19504: failed to create file "*string*"

Cause: call to create file returned an error

Action: check additional messages, check access permissions.

ORA-19505: failed to identify file "*string*"

Cause: call to identify the file returned an error

Action: check additional messages, and check if the file exists.

ORA-19506: failed to create sequential file, name="*string*", parms="*string*"

Cause: call to create the sequential file returned an error

Action: check additional messages, check access permissions.

ORA-19507: failed to retrieve sequential file, handle="*string*", parms="*string*"

Cause: call to retrieve the sequential file returned an error

Action: check additional messages, and check if the file exists.

ORA-19508: failed to delete file "*string*"

Cause: call to delete the file returned an error

Action: check additional messages.

ORA-19509: failed to delete sequential file, handle="string", parms="string"

Cause: call to delete the sequential file returned an error

Action: check additional messages.

ORA-19510: failed to set size of string blocks for file "string" (block size=string)

Cause: call to resize the file returned an error

Action: check additional messages.

ORA-19511: non RMAN, but media manager or vendor specific failure, error text:\n string

Cause: An error occurred in the media management software which is linked with the Oracle server to perform backup and restore in cooperation with Recovery Manager.

Action: If the text of message 19511 does not provide enough information to resolve the problem, then you should contact the vendor of the media management software.

ORA-19512: file search failed

Cause: Recovery manager or Oracle Server attempted to discover files that matched the specified pattern but failed.

Action: Check errors on the error stack for an explanation why the search for files could not be successfully executed.

ORA-19513: failed to identify sequential file

Cause: Unable to identify the sequential file.

Action: Check additional messages, and check if the file exists on media.

ORA-19515: removal of a pattern from string not allowed

Cause: An existing pattern could not be removed from the named initialization parameter because it was being used to map from the primary file name to the standby file name.

Action: New patterns can be added to the end of the existing set of patterns, or the setting can be reset in the SPFILE and the database restarted.

ORA-19525: tempfile for the clone database must be renamed

Cause: Opening a clone database failed because Oracle server forces the tempfile to be renamed, in order to avoid overwriting the primary tempfile.

Action: Rename the tempfiles manually or automatically by using the DB_FILE_NAME_CONVERT initialization parameter.

ORA-19526: only one location allowed for parameter string

Cause: A list of default locations was provided in an Oracle-managed files parameter.

Action: Edit the parameter to include a single location.

ORA-19527: physical standby redo log must be renamed

Cause: An attempt was made to clear redo log at a physical standby database. Clearing an OMF redo log will not work unless DB_CREATE_FILE_DEST, DB_CREATE_ONLINE_LOG_DEST_n or DB_RECOVERY_FILE_DEST parameter is specified. Clearing a non-OMF (or user-defined) redo log file will not work unless the LOG_FILE_NAME_CONVERT initialization parameter is set.

Action: Set DB_CREATE_FILE_DEST, DB_CREATE_ONLINE_LOG_DEST_n or DB_RECOVERY_FILE_DEST parameter for OMF redo log files and re-issue the operation that attempted to clear redo log. Set LOG_FILE_NAME_CONVERT parameter for non-OMF redo log files and re-issue the operation that attempted to clear redo log.

ORA-19528: redo logs being cleared may need access to files

Cause: The redo logs are being cleared. This procedure may need the files this operation is being applied to.

Action: Wait for the redo logs to be cleared.

ORA-19529: Pattern *string* in initialization parameter *string* has an Oracle Managed Files file name.

Cause: An attempt was made to convert a database file name to an Oracle Managed Files file name using DB_FILE_NAME_CONVERT, PDB_FILE_NAME_CONVERT or LOG_FILE_NAME_CONVERT initialization parameter. This was not a valid operation.

Action: Retry the operation with a pattern template instead of a full Oracle Managed Files file name.

ORA-19550: cannot use backup/restore functions while using dispatcher

Cause: Attempted to use backup/restore functions while connected to the dispatcher in a shared server. This is not allowed because the device that is used for backup and restore must remain allocated to a single process.

Action: Connect directly to the instance then re-execute the backup or restore function.

ORA-19551: device is busy, device type: *string*, device name: *string*

Cause: The indicated device could not be allocated because it is allocated to another session, or no device was named, or all devices of the requested type are busy.

Action: Either attempt to allocate another device or wait until the required device is no longer busy.

ORA-19552: device type *string* is invalid

Cause: The device type indicated is invalid.

Action: Supply a correct device type and retry the allocation.

ORA-19553: device name *string* is invalid

Cause: The device name indicated is invalid.

Action: Supply a correct device name and retry the allocation.

ORA-19554: error allocating device, device type: *string*, device name: *string*

Cause: The specified device could not be allocated.

Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error and retry the allocation.

ORA-19555: invalid LOG_ARCHIVE_MIN_SUCCEED_DEST parameter value

Cause: The value of parameter LOG_ARCHIVE_MIN_SUCCEED_DEST was not set within the valid range.

Action: Specify a correct value for parameter LOG_ARCHIVE_MIN_SUCCEED_DEST. If the archive log parameters LOG_ARCHIVE_DEST or LOG_ARCHIVE_DUPLEX_DEST are in use, set parameter LOG_ARCHIVE_MIN_SUCCEED_DEST to either 1 or 2.

ORA-19556: required destination LOG_ARCHIVE_DUPLEX_DEST currently is deferred

Cause: The destination for parameter LOG_ARCHIVE_DUPLEX_DEST was deferred when it was required to be enabled. The destination was deferred automatically when an ALTER SYSTEM command for parameter LOG_ARCHIVE_DEST defined a destination which duplicated an existing LOG_ARCHIVE_DUPLEX_DEST parameter destination.

Action: Change the destination value for the LOG_ARCHIVE_DUPLEX_DEST parameter.

ORA-19557: device error, device type: *string*, device name: *string*

Cause: An error occurred in the platform-specific device code

Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error and retry the allocation.

ORA-19558: error de-allocating device

Cause: The specified device could not be de-allocated.

Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error and retry the allocation.

ORA-19559: error sending device command: *string*

Cause: An error occurred while sending the indicated command to the session device.

Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error and retry the allocation.

ORA-19560: *string* is not a valid device limit name

Cause: An invalid name of device limit was specified in a call to DBMS_BACKUP_RESTORE.SETLIMIT.

Action: Use one of the device limit names described in dbmsbkrs.sql

ORA-19561: *string* requires a DISK channel

Cause: The attempted command requires that a DISK device channel be allocated to the session, but a non-DISK device was found.

Action: Deallocate the current device and allocate a DISK channel, then then retry the command.

ORA-19562: File *string* is empty.

Cause: The indicated file, which is an archived log, control, or data file, was found to be empty during a copy, backup, or scan operation.

Action: Ensure that the correct files are being specified for the copy or backup operation.

ORA-19563: *string* header validation failed for file *string*

Cause: When opening the file to be placed in a copy or backup set, to be inspected, or used as the target for an incremental restore, its header was not recognized as a valid file header for a file of the indicated type (datafile, archived log, or control file) belonging to the current database.

Action: Ensure that the correct files are being specified for the copy or backup operation.

ORA-19564: error occurred writing *string* bytes at block number *string*

Cause: An error occurred while writing to a file.

Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error if possible, then retry the copy, backup, or restore operation.

ORA-19565: BACKUP_TAPE_IO_SLAVES not enabled when duplexing to sequential devices

Cause: An attempt was made to specify duplexing to sequential devices, but the BACKUP_TAPE_IO_SLAVES initialization parameter was not enabled.

Action: Specify BACKUP_TAPE_IO_SLAVES=TRUE in the INIT.ORA file, or do not specify duplexing to sequential devices.

ORA-19566: exceeded limit of *string* corrupt blocks for file *string*

Cause: The user specified limit of allowable corrupt blocks was exceeded while reading the specified datafile for a datafile copy or backup.

Action: None. The copy or backup operation fails. The session trace file contains detailed information about which blocks were corrupt.

ORA-19567: cannot shrink file *string* because it is being backed up or copied

Cause: An ALTER statement attempted to reduce the size of the indicated file while the same file is being backed up or copied.

Action: Retry the resize after the backup or copy is complete.

ORA-19568: a device is already allocated to this session

Cause: A device cannot be allocated to a session if another device is already allocated.

Action: Deallocate the current device

ORA-19569: no device is allocated to this session

Cause: An operation was attempted which requires a device to be allocated to the current session, and there is no device allocated.

Action: Allocate a device then retry the operation.

ORA-19570: file number *string* is outside valid range of 1 through *string*

Cause: A file number used in a copy, backup, or restore operation is not valid for the current database.

Action: Specify a valid file number.

ORA-19571: *string* RECID *string* STAMP *string* not found in control file

Cause: The input file specified for a copy or backup operation could not be opened because the record describing the file is not found in the control file.

Action: Specify a correct RECID/STAMP and retry the copy or backup.

ORA-19572: cannot process file *string*, file is being being resized

Cause: The input file specified for a copy or backup operation could not be opened because the file is being resized.

Action: Wait for the resize to complete then retry the copy or backup.

ORA-19573: cannot obtain *string* enqueue for datafile *string*

Cause: The file access enqueue could not be obtained for a file specified in a backup, copy or restore operation. If the enqueue type shown is 'shared', then the file is the input file for a backup or copy. If the type is 'exclusive', then the file is the output file for a datafile copy or restore which is attempting to overwrite the currently active version of that file - in this case, the file must be offline or the database must be closed. If the type is 'read-only', then you are attempting to back up or copy this file while the database is in NOARCHIVELOG mode.

Action: Wait until the conflicting operation is complete, then retry the copy or backup. If the database is in NOARCHIVELOG mode, then all files being backed up must be closed cleanly.

ORA-19574: output file name must be specified

Cause: This type of copy or restore requires an output file name.

Action: Specify an output file name and retry the copy.

ORA-19575: expected *string* blocks in file *string*, found *string*

Cause: During a backup, restore, copy, or scan operation, the indicated file did not contain as many blocks as were indicated in the file header.

Action: The input copy or backup piece is probably corrupt. If another backup or copy exists of the file that is being restored, then the corrupt file can be deleted from the recovery catalog and the operation can be restarted.

ORA-19576: datafile *string* not defined in control file

Cause: The specified file number was not found in the control file.

Action: Specify a correct file number and retry the operation.

ORA-19577: file *string* is MISSING

Cause: A COPYDATAFILECOPY, RESTOREDATAFILETO or PROXYRESTOREDATAFILE function specified a file number but no output file name, indicating that the output file name should be taken from the control file. However, the control file entry for this file indicates that it was created for a file that was present in the data dictionary but not named during the last CREATE CONTROLFILE statement, so the name in the control file cannot be used for restoration.

Action: Either specify an output file name or issue a SQL RENAME command to enter a valid name for this file in the control file.

ORA-19578: end of volume while duplexing to sequential files, backup piece incomplete

Cause: An end of volume (EOV) condition was detected while duplexing to sequential files, and this condition cannot be handled currently.

Action: Before retrying the backup, make sure the backup pieces will fit in the volume, or disable duplexing.

ORA-19579: archived log record for *string* not found

Cause: No archived log record corresponding to input file could be found in the control file.

Action: Specify a valid archived log file name and retry the operation.

ORA-19580: *string* conversation not active

Cause: A backup or restore operation was attempted before a conversation was started.

Action: Start a conversation then retry the operation.

ORA-19581: no files have been named

Cause: An attempt was made to proceed from the file naming phase to the piece processing phase of a backup or restore conversation before any files have been specified for backup or restore.

Action: Specify some files then retry the operation.

ORA-19582: archived log file header validation for *string* failed

Cause: Archived log file header is corrupt and could not be validated.

Action: Provide a valid archived log file and retry the operation.

ORA-19583: conversation terminated due to error

Cause: An error occurred which forced the termination of the current backup or restore conversation.

Action: There should be other error messages to help identify the cause of the problem. Correct the error and begin another conversation.

ORA-19584: file *string* already in use

Cause: The indicated file, which was specified as the target for a copy, restore, or delete operation is already in use by the database.

Action: Specify a different name and retry the operation.

ORA-19585: premature end of volume on piece *string*

Cause: While creating the indicated backup piece, an end-of-volume condition was encountered before all of the backup set control data was written to the backup piece. This is most likely a media error, because the amount of backup set control data is very small in relation to the total amount of data in a backup set.

Action: Retry the piece with a larger piece of output media.

ORA-19586: *string* k-byte limit is too small to hold piece directory

Cause: The user-specified limit for MAXPIECESIZE for this channel is not enough to hold the backup set control data.

Action: Allocate a channel specifying a larger value for MAXPIECESIZE and retry the operation.

ORA-19587: error occurred reading *string* bytes at block number *string*

Cause: An error occurred while reading from a file.

Action: One or more other messages should be displayed to help pinpoint the cause of the error. Correct the error then retry the copy, backup, or restore operation.

ORA-19588: *string* RECID *string* STAMP *string* is no longer valid

Cause: The indicated record has been marked as deleted. This indicates that the corresponding file has either been overwritten by another copy or restore, or that the copy was 'consumed' by a SWITCHTOCOPY operation.

Action: If you know the name of the file you wish to copy, then inspect it and then retry the copy specifying the new RECID.

ORA-19589: *string* is not a snapshot or backup control file

Cause: The control file that is the source for a backup or copy operation is not a snapshot or backup control file.

Action: Specify the name of a snapshot or backup control file.

ORA-19590: conversation already active

Cause: You tried to begin a backup or restore conversation, but another conversation is already active in this session.

Action: Either continue the current conversation, or call BACKUPCANCEL or RESTORECANCEL to end the current conversation before starting a new one.

ORA-19591: backup aborted because job time exceeded duration time

Cause: You tried to backup with duration option and the time provided was not sufficient to complete the backup.

Action: Adjust the duration time and re-run the command. Or run the backup command without duration option.

ORA-19592: wrong *string* conversation type

Cause: You attempted to specify a type of file to be backed-up or restored, but the current conversation cannot process this type of file. For example, you specified an archived log to be included in a datafile backup set. The specified file will not be included in the backup or restore operation.

Action: No action required - the conversation is still active, and more files can be specified.

ORA-19593: datafile number *string* already included as *string*

Cause: This datafile is already specified for inclusion in this backup or restore conversation. A backup or restore conversation may process only a single instance of a datafile.

Action: No action required - the conversation is still active, and more files can be specified.

ORA-19594: control file already included as *string*

Cause: The control file is already specified for inclusion in this backup or restore conversation. A backup or restore conversation may process only a single instance of the control file.

Action: No action required - the conversation is still active, and more files can be specified.

ORA-19595: archived log *string* already included in backup conversation

Cause: The indicated archived log has already been specified for inclusion in this backup conversation.

Action: No action required - the conversation is still active, and more files can be specified.

ORA-19596: SPFILE already included

Cause: The SPFILE is already specified for inclusion in this backup or restore conversation. A backup or restore conversation may process only a single instance of the SPFILE.

Action: No action required - the conversation is still active, and more files can be specified.

ORA-19597: file *string* block size *string* does not match set block size of *string*

Cause: A file was specified for inclusion in a backup set but it has a logical block size different from the rest of the files in the backup set. All files in a backup set must have the same logical block size.

Action: Specify a file that has the same block size as the rest of the files in the backup set. The conversation is still active and more files can be specified.

ORA-19598: can not backup SPFILE because the instance was not started with SPFILE

Cause: A backup command requested a backup of the SPFILE, but no SPFILE was used to startup the instance.

Action: Create an SPFILE and re-start the instance using the SPFILE.

ORA-19599: block number *string* is corrupt in *string string*

Cause: A corrupt block was found in a control file, archived log, or backup piece that is being read for a backup or copy. Corruption shall not be tolerated in control files, archived logs, or backup pieces.

Action: None. The copy or backup operation fails. Note that in the case of a backup set, the conversation is still active and the piece may be retried.

ORA-19600: input file is *string string (string)*

Cause: This message identifies the input file for a failed copy operation. Both the file number and name (if the name has been determined) are shown. For a datafile, the file number refers to the datafile's absolute file number as shown in the DBA_DATA_FILES view. For a datafile copy, the file number refers to the copy's control file record number as shown in the RECID column of the V\$DATAFILE_COPY view. For an archived log, the file number refers to the log's control file record number as shown in the RECID column of the V\$ARCHIVED_LOG view.

Action: See other error message.

ORA-19601: output file is *string string (string)*

Cause: This message identifies the output file for a failed copy operation. The fields are as described in message 19600. When creating a new datafile copy, its control file record number may not have been determined when the message is printed. In that case, the record number shown is zero.

Action: See other error message.

ORA-19602: cannot backup or copy active file in NOARCHIVELOG mode

Cause: You tried to copy or backup a file that was not closed cleanly, and the database was in NOARCHIVELOG mode. This is not allowed because when restored, the file will require redo application before it is usable, and redo is not currently being saved beyond the contents of the online redo logs.

Action: Take the tablespace offline clean or close the database and retry the copy or backup.

ORA-19603: cannot backup or copy active file with KEEP .. UNRECOVERABLE option

Cause: The user tried to copy or backup a file that was not closed cleanly, with KEEP .. UNRECOVERABLE option. This is not allowed because when restored, the file will require redo application before it is usable, and redo will not be saved because of KEEP .. UNRECOVERABLE option.

Action: Take the tablespace offline cleanly, or close the database and retry the copy or backup.

ORA-19604: conversation file naming phase is over

Cause: A call was made to specify a file to be backed up or restored after the first backup piece has been processed.

Action: You cannot specify more files to be processed during a backup or restore conversation after the first backup piece has been processed. If more files must be specified, you must begin a new conversation.

ORA-19605: input file name must be specified

Cause: The input file name was not specified for a control file copy operation.

Action: Specify an input file name and retry the operation.

ORA-19606: Cannot copy or restore to snapshot control file

Cause: A control file copy or restore operation specified the name of the snapshot control file as the output file. It is not permitted to overwrite the snapshot control file in this manner. Other methods are available to create the snapshot control file.

Action: Specify a different file name and retry the operation. If this is a restore, then the restore conversation remains active and more files may be specified.

ORA-19607: *string* is an active control file

Cause: A control file copy, restore, or backup specified the name of a control file named in the INIT.ORA file as the input or output file.

Action: Specify a different file name and retry the operation. If this is a backup or restore conversation, then the conversation remains active and more files may be specified.

ORA-19608: *string* is not a backup piece

Cause: The specified file is not a backup piece produced by the DBMS_BACKUP_RESTORE package. Either the first block of the backup piece is corrupt or this file is not a backup piece.

Action: Specify a different file name and retry the operation.

ORA-19609: *string* is from different backup set: stamp *string* count *string*

Cause: The specified file is not from the backup set which is currently being processed. It is part of a different backup set. The identification of the set containing this piece is shown.

Action: Specify the correct backup piece and retry the operation.

ORA-19610: directory block *string* is corrupt

Cause: The indicated directory block failed checksum validation. This backup piece is unusable.

Action: Supply another copy of the same backup piece, or terminate the restore conversation.

ORA-19611: backup piece out of order. Expected *string* but found *string*

Cause: This backup piece is out of sequence.

Action: Supply the correct backup piece.

ORA-19612: datafile *string* not restored due to *string*

Cause: The indicated file could not be restored, because all of its data blocks were not found in the backup piece.

Action: The restore conversation remains active, and the current piece must be re-processed. If the failure cannot be resolved by re-processing the current piece, then the restore conversation must be cancelled.

ORA-19613: datafile *string* not found in backup set

Cause: The indicated file could not be restored, because it is not in this backup set. If the file number is zero, then this refers to the control file.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration were not found. The restore conversation is still active, but no data has been read and you must supply the first backup piece of a backup set that contains all of the requested files.

ORA-19614: archived log thread *string* sequence *string* not found in backup set

Cause: The indicated archived log file was named explicitly for restoration but is not contained in this backup set.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration were not found. The restore conversation is still active, but no data has been read and you must supply the first backup piece of a backup set that contains all of the requested files.

ORA-19615: some files not found in backup set

Cause: Some files that were specified for restoration were not found in the backup set directory. Message 19613 or 19614 is issued for each file that was not found.

Action: See the instructions for message 19613.

ORA-19616: output file name must be specified if database not mounted

Cause: A datafile restore specified no target file name, but the database is not mounted. The database must be mounted when no target file name is specified, so that the target file name can be obtained from the control file.

Action: The restore conversation remains active. If you wish to restore datafiles without their target file names, then mount the database before continuing. Otherwise, a target file name must be specified on all datafile restoration calls.

ORA-19617: file *string* contains different RESETLOGS data

Cause: The indicated file contains RESETLOGS data which is different from the archived log files which are already included in the backup set. All archived log files in a backup set must have the same RESETLOGS data.

Action: The restore conversation remains active, and you may continue to specify archived log files for inclusion in the backup set.

ORA-19618: cannot name files after RESTOREVALIDATE has been called

Cause: A call was made to specify a file to restore from a backup set, but a previous call to RESTOREVALIDATE has already been made.

Action: You must cancel and restart the conversation if you wish to specify files to restore.

ORA-19619: cannot call RESTOREVALIDATE after files have been named

Cause: RESTOREVALIDATE was called after some files had already been specified for restoration.

Action: You must cancel and restart the conversation if you wish to call RESTOREVALIDATE.

ORA-19620: *string* is not of *string* type

Cause: When opening the file to be placed in a copy or backup set, to be inspected, or used as the target for an incremental restore, its header was not recognized as a valid file header for a file of the indicated type (datafile, archived log, or control file) belonging to the current database.

Action: The indicated file cannot be processed. Ensure that the correct files are being specified for the copy or backup operation.

ORA-19621: archived log range has already been specified

Cause: A range of logs has already been specified. Only one SCN range may be specified per conversation.

Action: The restore conversation remains active and more logs may be specified by thread and sequence number, if desired.

ORA-19622: archived log thread *string* sequence *string* not restored due to *string*

Cause: The indicated file could not be restored, because all of its data blocks were not found in the backup piece.

Action: The restore conversation remains active, and the current piece must be re-processed. If the failure cannot be resolved by re-processing the current piece, then the restore conversation must be cancelled.

ORA-19623: file *string* is open

Cause: A SWITCHTOCOPY operation specified a datafile copy whose parent datafile is open.

Action: Take the owning tablespace offline or close the database, then retry the operation.

ORA-19624: operation failed, retry possible

Cause: A backup, restore or image copy operation failed with an I/O error. If the source of the I/O error can be corrected, then the operation may be retried.

Action: This message is used by recovery manager to decide whether or not to retry the operation.

ORA-19625: error identifying file *string*

Cause: A file specified as input to a copy or backup operation, or as the target for an incremental restore, could not be identified as an Oracle file. The file may have been deleted or moved so that it is no longer accessible to RMAN. An operating system-specific error accompanies this error to help pinpoint the problem.

Action: Specify a different file and retry the operation. If the problem file has simply been deleted or moved, you can run crosscheck to allow RMAN to update its metadata with the correct file status.

ORA-19626: backup set type is *string* - can not be processed by this conversation

Cause: The data in the backup set is not compatible with the current conversation.

Action: Either supply the first piece from a backup set that matches the current conversation or start a new restore conversation which can process this backup set.

ORA-19627: cannot read backup pieces during control file application

Cause: This is a control file restore conversation, which is using the offline range information from one or more control files to update datafile checkpoint data. Backup sets are not used during this type of conversation.

Action: The conversation is still active and more control files may be applied.

ORA-19628: invalid SCN range

Cause: The starting SCN for RESTOREREDOLOGRANGE was greater than the ending System Change Number (SCN).

Action: Specify a starting SCN which is less than or equal to the ending SCN.

ORA-19629: no files in specified archived log SCN range

Cause: This backup set contains no files in the specified range.

Action: Either supply a backup set that contains files in the correct range or start a new conversation and specify a range which will select some files from this backup set.

ORA-19630: end of volume encountered while copying backup piece

Cause: While copying a backup piece from the OS native file system to an output device, the output device encountered end-of-volume.

Action: The copy fails. This could happen if a tape was used which is not large enough to hold the entire backup piece.

ORA-19631: archived log record contains no file name

Cause: This archived log record represents a switch into an active log that took place without archiving its prior contents. The prior contents of the log file are lost.

Action: Specify the RECID of an archived log record that contains a file name. Fixed view v\$archived_log can be used to examine the archived logs.

ORA-19632: file name not found in control file

Cause: The name passed to GETFNO was not found in the control file.

Action: Supply a valid file name.

ORA-19633: control file record *string* is out of sync with recovery catalog

Cause: The control file record describing the file to be deleted in a call to DELETEBACKUPPIECE, DELETEDATAFILECOPY, PROXYDELETE or DELETEARCHIVEDLOG does not match the validation data supplied by recovery manager.

Action: contact Oracle support

ORA-19634: file name required for this function

Cause: The FNAME or HANDLE parameter was not specified for DELETEDPIECE, DELETEDATAFILECOPY, DELETEDEREDOLOG or PROXYDELETE.

Action: Specify the FNAME or HANDLE parameter when calling these functions.

ORA-19635: input and output file names are identical: *string*

Cause: Identical input and output file names were specified for a datafile copy operation.

Action: Specify an output file name which is different from the input file name.

ORA-19636: archived log thread *string* sequence *string* already included

Cause: The indicated archived log has already been specified for inclusion in this restore conversation. A restore conversation may process only one copy of any archived log.

Action: No action required - the conversation is still active, and more files can be specified.

ORA-19637: BACKUPPIECECREATE requires file name when using DISK device

Cause: The session device is currently allocated to disk, and so a file name is required.

Action: Supply a file name and retry the operation.

ORA-19638: file *string* is not current enough to apply this incremental backup

Cause: The checkpoint of the target for this incremental backup is less than the start of the incremental backup. If this backup were applied, then any changes made between the datafile checkpoint and the start of the incremental backup could be lost.

Action: Supply a backup set that can be applied and retry the operation.

ORA-19639: file *string* is more current than this incremental backup

Cause: The checkpoint of the target for this incremental backup is greater than or equal to the checkpoint of the file in the incremental backup set. This backup cannot advance the checkpoint of the target file, so there is no point in applying it.

Action: Supply a backup set that can be applied and retry the operation.

ORA-19640: datafile checkpoint is SCN *string* time *string*

Cause: This message identifies the datafile checkpoint for a datafile that was too old to take an incremental backup from, or the target of an incremental restore that could not be applied.

Action: See other error message.

ORA-19641: backup datafile checkpoint is SCN *string* time *string*

Cause: This message identifies the checkpoint of a datafile in an incremental backup set that could not be applied.

Action: See other error message.

ORA-19642: start SCN of incremental backup is *string*

Cause: This message identifies the starting SCN of an incremental backup that could not be applied.

Action: See other error message.

ORA-19643: datafile *string*: incremental-start SCN is too recent

Cause: The incremental-start SCN which was specified when starting an incremental datafile backup is greater than the datafile checkpoint SCN, which could cause some blocks to be missed.

Action: Specify a smaller incremental-start SCN.

ORA-19644: datafile *string*: incremental-start SCN is prior to RESETLOGS SCN *string*

Cause: The incremental-start SCN which was specified when starting an incremental datafile backup is less than the RESETLOGS SCN.

Action: Specify a larger incremental-start SCN.

ORA-19645: datafile *string*: incremental-start SCN is prior to creation SCN *string*

Cause: The incremental-start SCN which was specified when starting an incremental datafile backup is less than the datafile's creation SCN.

Action: Specify a larger incremental-start SCN.

ORA-19646: cannot change size of datafile *string* from *string* to *string*

Cause: Restore needs to adjust the size of the file as indicated, but the file size adjustment failed.

Action: Examine the other messages which should be present to indicate the cause of the failure.

ORA-19647: non-zero LEVEL cannot be specified when INCREMENTAL is FALSE

Cause: BACKUPSETDATAFILE was called with a non-zero backup_level and a FALSE incremental indication.

Action: Either set incremental to TRUE or change backup_level to zero.

ORA-19648: datafile *string*: incremental-start SCN equals checkpoint SCN

Cause: The incremental-start SCN which was specified when starting an incremental datafile backup is equal to the datafile's checkpoint SCN. Since an incremental backup can only be applied to a datafile whose checkpoint SCN is between the backup set incremental-start SCN (inclusive) and the backup set checkpoint SCN (exclusive), there is no datafile that this backup set could ever be applied to.

Action: Specify a smaller incremental-start SCN. NOTE that this message will usually only be encountered by the user while taking an incremental backup with Recovery Manager. Recovery Manager should intercept all usual cases of this error and simply ignore the incremental backup for this file. So, if you do encounter this error, please report it to Oracle Support.

ORA-19649: offline-range record RECID *string* STAMP *string* not found in file *string*

Cause: APPLYOFFLINERANGE was called with a RECID/STAMP which was not found in the indicated control file. This probably means that the specified control file is no longer the same control file that Recovery Manager thinks it is.

Action: Specify the RECID/STAMP of a record that exists in the control file copy.

ORA-19650: Offline-range record RECID *string* STAMP *string* in file *string* has SCN *string*

Cause: This messages identifies the offline-clean SCN from the indicated offline-range record in the indicated file.

Action: See other error message.

ORA-19651: cannot apply offline-range record to datafile *string*: SCN mismatch

Cause: APPLYOFFLINERANGE cannot apply an offline-range record to a target datafile unless the datafile's checkpoint SCN exactly matches the offline-clean SCN in the specified offline-range record.

Action: Specify an offline-range record whose offline-clean SCN matches the target datafile's checkpoint.

ORA-19652: cannot apply offline-range record to datafile *string*: file is fuzzy

Cause: The target datafile for an APPLYOFFLINERANGE call is fuzzy.

Action: Specify a target datafile that is closed cleanly.

ORA-19653: cannot switch to older file incarnation

Cause: SWITCHTOCOPY was called with a datafile copy for a datafile that was dropped prior to the time this control file was backed up.

Action: Restore and mount an earlier control file. It is acceptable to use a control file that was backed up prior to the creation of the specified datafile.

ORA-19654: must use backup control file to switch file incarnations

Cause: This SWITCHTOCOPY operation is attempting to switch incarnations of a datafile, but the currently mounted control file is not a backup control file.

Action: Restore and mount a backup control file.

ORA-19655: cannot switch to incarnation with different RESETLOGS data

Cause: This SWITCHTOCOPY operation is attempting to switch to a datafile which comes from a different RESETLOGS version of the database.

Action: Either restore a backup control file that was taken from the same database version as the target datafile copy, or switch to a different datafile copy.

ORA-19656: cannot backup, copy, or delete online log *string*

Cause: The indicated log file is an active log. You can only backup, copy, or delete archived logs.

Action: The indicated log file cannot be processed - select another file.

ORA-19657: cannot inspect current datafile *string*

Cause: The file being inspected is already part of the currently mounted database.

Action: None - the file is already part of the database.

ORA-19658: cannot inspect *string* - file is from different RESETLOGS

Cause: The RESETLOGS data in the log file being inspected does not match that in the currently mounted control file.

Action: The indicated file cannot be processed - inspect another file.

ORA-19659: incremental restore would advance file *string* past RESETLOGS

Cause: This incremental backup cannot be applied to the specified datafile, because the datafile is from an earlier incarnation of the database, and its checkpoint would be advanced too far to be recoverable in the current incarnation of the database.

Action: This incremental cannot be applied to this datafile. If you wish to recover the file to the RESETLOGS SCN so that the database can be opened with the RESETLOGS option, then you must use redo-log recovery, not incremental restore, to continue recovering this file.

ORA-19660: some files in the backup set could not be verified

Cause: A restore conversation was made to verify all the files in a backup set, and the files which were printed in messages 19661 or 19662 could not be verified because corrupt blocks for those files were found in the backup set.

Action: Unless the damage to the backup set can be repaired, the indicated files cannot be restored from this backup set.

ORA-19661: datafile *string* could not be verified

Cause: Some data blocks for the indicated datafile were corrupt in the backup set.

Action: Unless the damage to the backup set can be repaired, the indicated datafile cannot be restored from this backup set.

ORA-19662: archived log thread *string* sequence *string* could not be verified

Cause: Some data blocks for the indicated archived log were corrupt in the backup set.

Action: Unless the damage to the backup set can be repaired, the indicated archived log cannot be restored from this backup set.

ORA-19663: cannot apply current offline range to datafile *string*

Cause: An attempt was made to apply the current offline range to the specified datafile, but the datafile is either not current enough or is not at the correct SCN to apply the offline range.

Action: The datafile remains unchanged.

ORA-19664: file type: *string*, file name: *string*

Cause: This message is issued to identify the file which is the subject of an error.

Action: None - this is an informational message. There should be other Oracle messages explaining the cause of the error.

ORA-19665: size *string* in file header does not match actual file size of *string*

Cause: The size of the file as indicated in the file header does not match the true size of the file. The two differing sizes are shown in units of logical blocks.

Action: This file is not usable - it has most likely been truncated.

ORA-19666: cannot do incremental restore of the control file

Cause: The control file was included in an incremental restore conversation

Action: If you wish to restore the control file, you must do a full restore of the control file

ORA-19667: cannot do incremental restore of datafile *string*

Cause: The backup of the datafile is a full backup

Action: If you wish to restore the datafile, you must do a full restore of the datafile

ORA-19668: cannot do full restore of datafile *string*

Cause: The backup of the datafile is an incremental backup

Action: If you wish to restore the datafile, you must do an incremental restore of the datafile

ORA-19669: proxy copy functions cannot be run on DISK channel

Cause: A proxy copy procedure was called, but the device which is allocated to the current session has type DISK.

Action: Allocate a non-DISK channel and retry the operation. Note that proxy copy requires a 3rd-party media management software product that supports the this backup/restore feature.

ORA-19670: file *string* already being restored

Cause: A proxy restore function has already named this file as a restore destination.

Action: Use a different file name. If this message occurs during a recovery manager job, then this is an internal error in recovery manager, and you should contact Oracle support.

ORA-19671: media management software returned invalid proxy handle

Cause: During a proxy backup or restore, the media management software returned an invalid file handle.

Action: This is an internal error in the media management software which is linked with Oracle to provide backup/restore services. Contact the media management software vendor.

ORA-19672: media management software returned invalid file status

Cause: During a proxy backup or restore, the media management software returned an invalid file status.

Action: This is an internal error in the media management software which is linked with Oracle to provide backup/restore services. Contact the media management software vendor.

ORA-19673: error during proxy copy of file *string*

Cause: During a proxy backup or restore, an error occurred while copying this file, but other files may have been copied successfully.

Action: There should be other errors on the error stack which explain why the file could not be successfully copied.

ORA-19674: file *string* is already being backed up with proxy copy

Cause: Recovery manager attempted to back up the specified file with proxy copy, but the file is already being backed up by another recovery manager job.

Action: Wait until the other recovery manager backup of this file is complete, then retry the backup.

ORA-19675: file *string* was modified during proxy copy

Cause: A proxy backup of the specified file failed because the file was brought on-line or otherwise modified while the proxy backup was in progress. This file was off-line or read-only when the backup began, so the file was not put into hot-backup mode, therefore no modifications are permitted while the backup is in progress.

Action: Take another backup of this file.

ORA-19676: one or more files failed during proxy backup or restore

Cause: During a proxy backup or restore, errors were encountered while processing some files. The files for which no error messages are shown were processed successfully.

Action: Examine the messages regarding the specific files to determine the cause of the problems.

ORA-19677: RMAN configuration name exceeds maximum length of *string*

Cause: The configuration name string exceeds maximum length.

Action: Supply a correct configuration name and retry the function.

ORA-19678: RMAN configuration value exceeds maximum length of *string*

Cause: The configuration value string exceeds maximum length.

Action: Supply a correct configuration value and retry the operation.

ORA-19679: RMAN configuration number *string* is outside valid range of 1 through *string*

Cause: An invalid RMAN Configuration number was specified.

Action: Specify a correct datafile number and retry the operation.

ORA-19680: some blocks not recovered. See trace file for details

Cause: Some blocks are not recovered during block media recovery.

Action: See trace files for details of the problem.

ORA-19681: block media recovery on control file not possible

Cause: file number 0 specified in block media recovery

Action: check file number

ORA-19682: file *string* not in block media recovery context

Cause: Internal error

Action: n/a

ORA-19683: real and backup block size of file *string* are unequal

Cause: block size changed between backup & real file

Action: use right backup

ORA-19684: block media recovery failed because database is suspended

Cause: Database is suspended, probably by an ALTER SYSTEM SUSPEND statement

Action: Execute ALTER SYSTEM RESUME then retry block media recovery

ORA-19685: SPFILE could not be verified

Cause: Some data blocks for the SPFILE were corrupt in the backup set.

Action: Unless the damage to the backup set can be repaired, the SPFILE cannot be restored from this backup set.

ORA-19686: SPFILE not restored due to *string*

Cause: The indicated file could not be restored, because some of its data blocks were not found in the backup piece.

Action: Unless the damage to the backup set can be repaired, the SPFILE cannot be restored from this backup set.

ORA-19687: SPFILE not found in backup set

Cause: The SPFILE could not be restored, because it is not in this backup set.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration were not found in the piece. You must supply the first backup piece of a backup set that contains the requested file.

ORA-19688: control file AUTOBACKUP format(*string*) for *string* does not have %F

Cause: control file AUTOBACKUP format must contain %F for the device.

Action: Change control file format using RMAN command CONFIGURE CONTROLFILE BACKUP FORMAT FOR DEVICE TYPE *type* TO *format*.

ORA-19689: cannot have more than one %F in control file AUTOBACKUP format(%0!s) for %1!s

Cause: control file AUTOBACKUP format contains more than one %F for the device.

Action: Change control file format using RMAN command CONFIGURE CONTROLFILE BACKUP FORMAT FOR DEVICE TYPE *type* TO *format*.

ORA-19690: backup piece release *string* incompatible with Oracle release *string*

Cause: The backup piece was created by incompatible software.

Action: Either restart with a compatible software release or create another backup using the current release.

ORA-19691: *string* is from different database: id=*string*, name=*string*

Cause: The database name or database id in backup piece header does not match the one in control file.

Action: Supply the correct backup piece belonging to this database.

ORA-19692: missing creation stamp on piece *string*

Cause: The backup piece doesn't have information about creation stamp.

Action: Supply another backup piece which is created by oracle 9i or later version.

ORA-19693: backup piece *string* already included

Cause: This backup piece was already specified for inclusion in the restore conversation. A restore conversation may process only a single instance of a backup piece.

Action: Remove the specified duplicate backup piece in restore steps and restart the conversation.

ORA-19694: some changed blocks were not found in the change tracking file

Cause: A backup or copy found that some changed blocks had not been recorded in the change tracking file. The details of which files and blocks are affected will be in an Oracle trace file.

Action: This indicates that there is a problem with the change tracking feature. Disable change tracking and re-start the backup.

ORA-19695: fixed table X\$KRBMSFT has not been populated

Cause: This is an internal error. The fixed table X\$KRBMAFT was not populated using the function DBMS_BACKUP_RESTORE.SEARCHFILES.

Action: Internal error - contact Oracle Customer Support.

ORA-19696: control file not found in backup set

Cause: The control file could not be restored because it is not in this backup set.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration were not found in the piece. You must supply the first backup piece of a backup set that contains the requested file.

ORA-19697: standby control file not found in backup set

Cause: The standby control file could not be restored because it is not in this backup set.

Action: This message is issued when the directory from the first backup piece is read and one or more files named for restoration were not found in the piece. You must supply the first backup piece of a backup set that contains the requested file.

ORA-19698: *string* is from different database: id=*string*, db_name=*string*

Cause: Catalog failed because the database id in file header does not match the one in control file.

Action: Supply the correct file belonging to this database.

ORA-19699: cannot make copies with compression enabled

Cause: Image copies cannot be compressed.

Action: If the function DBMS_BACKUP_RESTORE.BACKUPPIECECREATE is called outside Recovery Manager (RMAN), then incompatible values are being passed for the parameters DOCOMPRESS and IMAGCP. If this message occurs during an RMAN job, then this is an internal error in RMAN, and you should contact Oracle support.

ORA-19700: device type exceeds maximum length of *string*

Cause: The device type indicated is invalid.

Action: Supply a correct device type and retry the allocation.

ORA-19701: device name exceeds maximum length of *string*

Cause: The device name indicated is invalid.

Action: Supply a correct device name and retry the allocation.

ORA-19702: device parameter exceeds maximum length of *string*

Cause: The device parameter exceeds the port-specific maximum length.

Action: Correct the parameter and retry the operation.

ORA-19703: device command string exceeds maximum length of *string*

Cause: The device command string exceeds maximum length.

Action: Correct the command and retry the operation.

ORA-19704: file name exceeds maximum length of *string*

Cause: The specified file name, which was a parameter to a copy, backup, or restore operation, exceeds the maximum file name length for this operating system.

Action: Retry the operation with a shorter file name.

ORA-19705: tag value exceeds maximum length of *string* characters

Cause: During a backup or copy operation, the user supplied a tag value too long to fit in the file header.

Action: Supply a shorter tag and retry the operation.

ORA-19706: invalid SCN

Cause: The input SCN is either not a positive integer or too large.

Action: Check the input SCN and make sure it is a valid SCN.

ORA-19707: invalid record block number - *string*

Cause: The input number is either negative or too large.

Action: Check the input record block number and make sure it is a valid number clauses in the create database statement.

ORA-19708: log destination exceeds maximum length of *string* characters

Cause: When starting a restore conversation, the user specified a log restore destination longer than the port-specific maximum.

Action: Supply a shorter destination and retry the operation.

ORA-19709: numeric parameter must be non-negative integer

Cause: A numeric parameter to an DBMS_BACKUP_RESTORE procedure is negative or contains a fractional portion.

Action: Supply a valid numeric parameter.

ORA-19710: unsupported character set *string*

Cause: When the target database is not mounted, RMAN sets the target database character set to the value specified in the users environment.

Action: Specify a valid character set in the environment. This is usually done via the NLS_LANG environment variable.

ORA-19711: cannot use RENORMALIZEALLFILENAMES while database is open

Cause: An attempt was made to re-normalize all the file names in the control file while the database is open.

Action: Close the database before using the RENORMALIZEALLFILENAMES procedure.

ORA-19712: table name exceeds maximum length of *string*

Cause: The table name string exceeds maximum length.

Action: Retry the operation with a shorter table name.

ORA-19713: invalid copy number: *string*

Cause: The copy number is not in a valid range or you have reached maximum limit.

Action: Report the error and other information to support.

ORA-19714: length for generated name longer than *string*

Cause: The specified format exceeds the maximum length for the piece name.

Action: Change the format to create shorter piece names.

ORA-19715: invalid format *string* for generated name

Cause: A restricted format or undefined format was used incorrectly.

Action: Change the format specified in the additional information by removing the restricted format.

ORA-19716: error processing format *string* to generate name for backup

Cause: There were errors while processing the format to generate name for backup.

Action: Change the format.

ORA-19717: for non-OMF search the pattern must be specified

Cause: The procedure DBMS_BACKUP_RESTORE.SEARCHFILES was called with an empty pattern while the parameter OMF was set to FALSE.

Action: Either specify the pattern or set the parameter OMF to TRUE.

ORA-19718: length for command id longer than *string*

Cause: The specified command id exceeds the maximum length for command id.

Action: Supply a shorter command id and retry the operation.

ORA-19719: length for operation name longer than *string*

Cause: The specified operation name exceeds the maximum length for operation name.

Action: Supply a shorter operation name and retry the operation.

ORA-19720: Error occurred when converting an OCI number into an SCN

Cause: This is most likely caused by an invalid SCN number that came from an external file, such as an export file.

Action: See other errors on the error stack to look for the source of the problem.

ORA-19721: Cannot find data file with absolute file number *string* in tablespace *string*

Cause: One of the data files that should have been in the pluggable set was not found. Alternatively, one of the data files in the pluggable set had already been plugged in from a previous import job and so was excluded from the pluggable set.

Action: Ensure that all of the data files are specified using the import command-line option or parameter files. Also, ensure that none of the data files have already been plugged into the database.

ORA-19722: datafile *string* is an incorrect version

Cause: The datafile is an incorrect version. It contains either less or more changes than the desired version.

Action: Make sure the right datafiles are transported. Make sure the datafile is copied while its tablespace is read only.

ORA-19723: cannot re-create plugged in data file *string*

Cause: The data file was plugged in read only or plugged in as part of pluggable database creation or pluggable database plug-in. It cannot be re-created.

Action: Use the ALTER DATABASE RENAME FILE statement instead.

ORA-19724: snapshot too old: snapshot time is before file *string* plug-in time

Cause: The snapshot SCN is before the SCN at which the referred datafile is plugged into the database.

Action: retry the query.

ORA-19725: can not acquire plug-in enqueue

Cause: There maybe another "ALTER DATABASE RESET COMPATIBILITY" command issued concurrently, preventing this process from acquiring the plug-in enqueue.

Action: retry the operation.

ORA-19726: cannot plug data [*string*] at level *string* into database running at compatibility level *string*

Cause: Some of the data in the pluggable set requires a compatibility level higher than what is currently allowed by the database. The string in square bracket is the name of the compatibility type associated with the data.

Action: Raise the "compatible" init.ora parameter and retry the operation.

ORA-19727: cannot plug data [*string*] at level *string* into database running Oracle *string*

Cause: Some of the data in the pluggable set requires a compatibility level higher than the release level of the Oracle executable. The string in square bracket is the name of the compatibility type associated with the data.

Action: Upgrade Oracle and retry the operation.

ORA-19728: data object number conflict between table *string* and partition *string* in table *string*

Cause: The non-partitioned table has the same data object number as one of the partitions in the partitioned table. One can not exchange the table with the partition in this case.

Action: Use "alter table move partition" command to move the offending partition, so that the partition will get a new data object number. Retry the operation then.

ORA-19729: File *string* is not the initial version of the plugged in datafile

Cause: The file is not the initial version of the plugged in datafile.

Action: Use the correct initial version of the plugged in datafile.

ORA-19730: can not convert offline plugged-in datafile *string*

Cause: As part of making a tablespace read-write, we need to convert datafiles that are plugged in read-only. The file must be online.

Action: Online the datafile and retry the operation.

ORA-19731: cannot apply change to unverified plugged-in datafile *string*

Cause: Recovery was not able to verify the referred datafile according to information in the control file. Before encountering this change vector for this file, somehow recovery did not encounter the file conversion redo that is supposed to verify the file. This may happen due to corrupted or incorrect control file used for media recovery.

Action: Use the correct control file and continue recovery.

ORA-19732: incorrect number of datafiles for tablespace *string*

Cause: The number of datafiles in the export file for the referred tablespace is not the same as expected. This is most likely caused by a user editing the export file.

Action: Use the correct export file and retry the operation.

ORA-19733: COMPATIBLE parameter needs to be *string* or greater

Cause: The COMPATIBLE initialization parameter is not high enough to allow the operation. Allowing the command would make the database incompatible with the release specified by the current COMPATIBLE parameter.

Action: Shutdown and startup with a higher compatibility setting.

ORA-19734: wrong creation SCN - control file expects converted plugged-in datafile

Cause: When a tablespace is plugged into a database, the tablespace is initially read-only. Oracle converts the header of the plugged-in datafiles (assign them a new creation SCN) when the tablespace is first made read-write. This error occurs when the creation SCN in the file header is different from the creation SCN in the control file, possibly because this is the initial version of plugged-in datafile.

Action: Either restore the converted datafile or continue recovering the datafile.

ORA-19735: wrong creation SCN - control file expects initial plugged-in datafile

Cause: When a tablespace is plugged into a database, the tablespace is initially read-only. Oracle converts the header of the plugged-in datafiles (assign them a new creation SCN) when the tablespace is first made read-write. This error occurs when the creation SCN in the

file header is different from the creation SCN in the control file, possibly because this is the converted datafile.

Action: Either restore the initial version of the plugged-in datafile, or continue database recovery, which will recover the control file.

ORA-19736: can not plug a tablespace into a database using a different national character set

Cause: Oracle does not support plugging a tablespace into a database using a different national character set.

Action: Use import/export or unload/load to move data instead.

ORA-19738: cannot find language information for character set: '*string*'

Cause: The compatibility check failed because a character set name that was provided is not valid.

Action: Correct the character set name and retry.

ORA-19740: text is longer than *string*

Cause: The specified text exceeds the maximum length for text.

Action: Supply a shorter text and retry the operation.

ORA-19741: *string* exceeds maximum allowable length of *string* for parameter '*string*'

Cause: The specified string exceeds the maximum allowable length for the parameter

Action: Supply a shorter string for the parameter and retry the operation.

ORA-19742: control file is not a backup control file

Cause: This parameter could not be set because the control file was not a backup control file.

Action: Do not use this call for this control file.

ORA-19743: could not unmount volume *string:string*

Cause: The specified server and volume combination was not found and could not be unmounted.

Action: Specify the server and volume name correctly to complete the operation successfully.

ORA-19744: Volume *string:string* is currently in use and cannot be unmounted.

Cause: The specified volume could not be unmounted because it was in use and had open files.

Action: Retry the unmount after all open files in the volume have been closed.

ORA-19745: Invalid call to DBMS_BACKUP_RESTORE API, Reason: *string*.

Cause: The call to the DBMS_BACKUP_RESTORE API was invalid. The DBMS_BACKUP_RESTORE API was either called with invalid arguments or called without required parameters set.

Action: Use the RMAN utility for backup and restore operations. Do not use DBMS_BACKUP_RESTORE APIs directly.

ORA-19750: change tracking file: '*string*'

Cause: This message reports the name of a file involved in other messages.

Action: See associated error messages for a description of the problem.

ORA-19751: could not create the change tracking file

Cause: It was not possible to create the change tracking file.

Action: Check that there is sufficient disk space and no conflicts in file names and try to enable block change tracking again.

ORA-19752: block change tracking is already enabled

Cause: The ALTER DATABASE ENABLE BLOCK CHANGE TRACKING command was issued, but block change tracking is already turned on for this database.

Action: None, this is an informative message only.

ORA-19753: error writing to change tracking file

Cause: An I/O error occurred while writing to the change tracking file.

Action: There will be other messages on the error stack that show details of the problem.

ORA-19754: error reading from change tracking file

Cause: An I/O error occurred while reading from the change tracking file.

Action: There will be other messages on the error stack that show details of the problem.

ORA-19755: could not open change tracking file

Cause: The change tracking file could not be opened.

Action: There will be other messages on the error stack that show details of the problem.

ORA-19756: corrupt block number *string* found in change tracking file

Cause: The specified block number is corrupt in the change tracking file.

Action: There will be other messages on the error stack that show details of the problem. There will also be a trace file that contains a complete dump of the corrupt block.

ORA-19757: could not resize change tracking file to *string* blocks

Cause: An error occurred while trying to change the size of the change tracking file.

Action: There will be other messages on the error stack that show details of the problem.

ORA-19758: failed to enable/disable block change tracking: out of SGA memory

Cause: out of SGA memory

Action: Increase SGA and restart the instance.

ORA-19759: block change tracking is not enabled

Cause: A command was entered that requires block change tracking to be enabled, but block change tracking is not enabled.

Action: None, this is an informative message only.

ORA-19760: error starting change tracking

Cause: Change tracking is enabled, but a problem was encountered while enabling the change tracking subsystem in this instance. The alert log and the trace file from the CTWR process will contain more information about the error.

Action: Examine the trace and alert files. Correct the error if possible, otherwise disable change tracking.

ORA-19761: block size *string* is not valid for change tracking file

Cause: While opening the specified change tracking file, it was found that the file header did not contain a valid logical block size. This probably means that the file is corrupt.

Action: If the file can be repaired, do so, otherwise disable and re-enable change tracking to re-initialize the file.

ORA-19762: invalid file type *string*

Cause: An invalid file type was found in the change tracking file. Some other file was put in place of the change tracking file, or the file is corrupt.

Action: Disable then re-enable change tracking.

ORA-19763: compatibility version *string* is higher than maximum allowed: *string*

Cause: The compatibility version in the change tracking file is greater than what can be used by the current release of Oracle. This can happen when you upgrade, use change tracking with a new release, then downgrade.

Action: Disable then re-enable change tracking.

ORA-19764: database id *string* does not match database id *string* in control file

Cause: The change tracking file is not the correct one for this database. This can happen when the database ID for this database has been changed.

Action: Disable then re-enable change tracking.

ORA-19765: mount id *string* does not match mount id *string* in control file

Cause: The change tracking file does not match the one that was present when this instance was opened. In RAC, this error is most likely caused by having a change tracking file that cannot be consistently updated by all instances.

Action: In RAC, ensure that the name specified for the change tracking file truly represents the same disk location for all nodes in the cluster. Disable then re-enable change tracking.

ORA-19766: missing CHANGE keyword

Cause: Syntax error.

Action: Use the correct syntax: ENABLE/DISABLE BLOCK CHANGE TRACKING

ORA-19767: missing TRACKING keyword

Cause: Syntax error.

Action: Use the correct syntax: ENABLE/DISABLE BLOCK CHANGE TRACKING

ORA-19768: USING clause only valid with ENABLE CHANGE TRACKING

Cause: The USING clause was specified with DISABLE CHANGE TRACKING

Action: Correct the statement.

ORA-19769: missing FILE keyword

Cause: Syntax error.

Action: Use the correct syntax: ENABLE/DISABLE BLOCK CHANGE TRACKING

ORA-19770: invalid change tracking file name

Cause: The USING clause was specified with ALTER DATABASE ENABLE BLOCK CHANGE TRACKING, but no file name was given.

Action: Specify the change tracking file name, or omit the USING clause to allow Oracle to create a default name for the change tracking file.

ORA-19771: cannot rename change tracking file while database is open

Cause: The ALTER DATABASE RENAME FILE command was used to rename the change tracking file, and the database is open by one or more instances. The database must be mounted, and not open, to rename the change tracking file.

Action: Close the database and reissue the command.

ORA-19772: change tracking file name exceeds limit of *string* characters

Cause: The name specified for the change tracking file is too long.

Action: Specify a shorter change tracking file name.

ORA-19773: must specify change tracking file name

Cause: No file name was specified with the ALTER DATABASE ENABLE CHANGE TRACKING command, and the DB_CREATE_FILE_DEST parameter was not set.

Action: Either specify a file name, or set the DB_CREATE_FILE_DEST parameter.

ORA-19776: PROXY restore to ASM disk group "*string*" is not supported.

Cause: An attempt was made to proxy restore a file to ASM disk group using RMAN command. This is not supported.

Action: Use a different file name and reissue RMAN command.

ORA-19777: ASM file *string* cannot be proxy backed up.

Cause: An attempt was made to proxy backup a ASM file. This is not supported.

Action: Use a different file name and reissue RMAN command.

ORA-19779: could not obtain resilvering status for change tracking file

Cause: An error occurred while obtaining the mirror resilvering status of the change tracking file.

Action: Refer to other error messages shown for additional details of the problem.

ORA-19780: Active Data Guard option not enabled

Cause: Change tracking at a standby database required the Active Data Guard option.

Action: Enable the Active Data Guard option.

ORA-19781: The PROXY option is not supported on sparse file *string*

Cause: The PROXY option was used with a sparse file. This is not supported.

Action: Do not use the PROXY option with sparse files.

ORA-19784: error enabling change tracking due to ORA-4031

Cause: The change tracking writer could not get requested memory for buffer allocation.

Action: Try again, if error recurs, increase the large pool size.

ORA-19800: Unable to initialize Oracle Managed Destination

Cause: The name given for an Oracle managed files destination cannot be initialized.

Action: Check previous error messages for the reason Oracle was unable to initialize destination. Take corrective action, if possible, and retry the command or use a different name for destination.

ORA-19801: initialization parameter DB_RECOVERY_FILE_DEST is not set

Cause: An attempt was made to create a file in DB_RECOVERY_FILE_DEST when DB_RECOVERY_FILE_DEST was not set. There are number of possible causes of this error, including: 1) A LOG_ARCHIVE_DEST_n parameter was specified using a LOCATION attribute whose value was DB_RECOVERY_FILE_DEST and an archived log file creation was attempted. 2) STANDBY_ARCHIVE_DEST parameter was specified using a LOCATION attribute whose value was DB_RECOVERY_FILE_DEST and an archived log file creation was attempted.

Action: Specify a valid destination for DB_RECOVERY_FILE_DEST in initialization parameter file or with the ALTER SYSTEM SET command.

ORA-19802: cannot use DB_RECOVERY_FILE_DEST without DB_RECOVERY_FILE_DEST_SIZE

Cause: There are two possible cause for this error: 1) The DB_RECOVERY_FILE_DEST parameter was in use when no DB_RECOVERY_FILE_DEST_SIZE parameter was encountered while fetching initialization parameter. 2) An attempt was made to set DB_RECOVERY_FILE_DEST with the ALTER SYSTEM command when no DB_RECOVERY_FILE_DEST_SIZE was in use.

Action: Correct the dependency parameter definitions and retry the command.

ORA-19803: Parameter DB_RECOVERY_FILE_DEST_SIZE is out of range (1 - *string*)

Cause: Parameter DB_RECOVERY_FILE_DEST_SIZE specified was not valid.

Action: Specify a valid number within the range.

ORA-19804: cannot reclaim *string* bytes disk space from *string* bytes limit

Cause: Disk space of specified bytes from the DB_RECOVERY_FILE_DEST location for DB_RECOVERY_FILE_DEST_SIZE limit could not be reclaimed.

Action: Do one or more of the following: 1) Take more frequent RMAN backups of the recovery area. 2) Consider changing the RMAN retention policy. 3) Consider changing the RMAN archived log deletion policy. 4) Add disk space and increase DB_RECOVERY_FILE_DEST_SIZE. 5) Delete files from recovery area using RMAN.

ORA-19805: RECID *string* of *string* was deleted to reclaim disk space

Cause: The file described by the record in control file was deleted in order to reclaim disk space from recovery area for other operations or deleted by another RMAN session.

Action: Wait and try again.

ORA-19806: cannot make duplex backups in recovery area

Cause: Duplex backup to recovery area is not supported.

Action: Remove duplex option and try again.

ORA-19807: duplex number *string* is out of range: expected between 0 and *string*

Cause: The duplex number specified is outside of the expected range.

Action: Specify a duplex number that is within the range and try again.

ORA-19808: recovery destination parameter mismatch

Cause: The value of parameters DB_RECOVERY_FILE_DEST and DB_RECOVERY_FILE_DEST_SIZE must be same in all instances. All databases must have same recovery destination parameters.

Action: Check DB_RECOVERY_FILE_DEST and DB_RECOVERY_FILE_DEST_SIZE values in all instances.

ORA-19809: limit exceeded for recovery files

Cause: The limit for recovery files specified by the DB_RECOVERY_FILE_DEST_SIZE was exceeded.

Action: There are five possible solutions: 1) Take frequent backup of recovery area using RMAN. 2) Consider changing RMAN retention policy. 3) Consider changing RMAN archived log deletion policy. 4) Add disk space and increase DB_RECOVERY_FILE_DEST_SIZE. 5) Delete files from recovery area using RMAN.

ORA-19810: Cannot create temporary control file *string* in DB_RECOVERY_FILE_DEST

Cause: An attempt was made to create a control file for a temporary purpose in DB_RECOVERY_FILE_DEST.

Action: Retry the operation with a new file name.

ORA-19811: cannot have files in DB_RECOVERY_FILE_DEST with keep attributes

Cause: An attempt was made to 1) Create a backup piece or image copy in the recovery area with KEEP option. 2) Update the KEEP attributes of an existing backup piece or image copy in the recovery area.

Action: Reissue RMAN command without KEEP options.

ORA-19812: cannot use *string* without DB_RECOVERY_FILE_DEST

Cause: There are three possible cause for this error: 1) The indicated parameter was in use when no DB_RECOVERY_FILE_DEST parameter was encountered while fetching the initialization parameter. 2) An attempt was made to set indicated the parameter with the ALTER SYSTEM command when no DB_RECOVERY_FILE_DEST was in use. 3) An attempt was made to clear DB_RECOVERY_FILE_DEST with the ALTER SYSTEM command when the indicated parameter was in use.

Action: Eliminate any incompatible parameter definitions.

ORA-19813: cannot have unavailable file *string* in DB_RECOVERY_FILE_DEST

Cause: An attempt was made to change a backup piece or image copy in recovery area to UNAVAILABLE.

Action: Correct and resubmit the RMAN command. Do not use messages 19814; it is used for simulating crash.

ORA-19815: WARNING: *string* of *string* bytes is *string*%% used, and has *string* remaining bytes available.

Cause: DB_RECOVERY_FILE_DEST is running out of disk space.

Action: One of the following: 1. Add disk space and increase DB_RECOVERY_FILE_DEST_SIZE. 2. Backup files to tertiary device using RMAN. 3. Consider changing RMAN retention policy. 4. Consider changing RMAN archived log deletion policy. 5. Delete files from recovery area using RMAN.

ORA-19816: WARNING: Files may exist in *string* that are not known to database.

Cause: One of the following events caused this: 1. A database crash happened during file creation. 2. A backup control file was restored. 3. The control file was re-created. 4. DB_RECOVERY_FILE_DEST has previously been enabled and then disabled.

Action: Use RMAN command CATALOG RECOVERY AREA to re-catalog any such files. If the file header is corrupted, then delete those files using an OS utility. Do not use messages 19817; it is used for simulating lock failure Do not use messages 19818; it is used for space reclamation before backup Do not use messages 19819; it is used to disable clearing file name

ORA-19820: database must be in NOARCHIVELOG mode to disable logging

Cause: Logging was disabled when ARCHIVELOG mode was used.

Action: Execute ALTER DATABASE NOARCHIVELOG in mount state.

ORA-19821: an intentionally corrupt log file was found

Cause: A log file that was intentionally corrupt for testing or benchmarking purposes was found and failed the operation.

Action: Remove such log files and retry or use the NOARCHIVELOG option if possible.

ORA-19827: Restoring preplugin files to a recovery area is not supported.

Cause: An attempt to restore a preplugin file in a recovery area failed. This is not supported.

Action: Use the SET ARCHIVELOG DESTINATION RMAN command to specify an archive log destination and retry the RESTORE or RECOVER command.

ORA-19830: error from target database: *lnstring*

Cause: This error should be followed by other errors indicating the cause of the problem.

Action: No action required.

ORA-19831: incompatible *string.string.string.string* DBMS_BACKUP_RESTORE package: *string.string.string.string* required

Cause: This version of database was incompatible with the the indicated DBMS_BACKUP_RESTORE package installed in the database.

Action: If the database has been upgraded from an earlier version, ensure that the catxxxx.sql script has been run successfully. Re-install dbmsbkrs.sql and prvtbkrs.plb if necessary.

ORA-19836: cannot use passphrase encryption for this backup

Cause: Passphrase encryption was attempted for a backup that contains encrypted tablespaces and uses compression.

Action: Do not use passphrase encryption for this backup. Use transparent wallet-based encryption instead.

ORA-19837: invalid blocksize *string* in backup piece header

Cause: The blocksize of the backup piece obtained from the header was invalid.

Action: The backup piece is corrupted, a different backup piece should be used for restore.

ORA-19838: cannot use this control file to mount or open database

Cause: This control file was restored by a DUPLICATE operation used only to restore and recover the data files of the new database. It is not meant to be used for mounting or opening the database, as allowing so might corrupt data files or online redo logs of the target database or both.

Action: Re-create the control file manually specifying all of the names of the data files and online redo logs. Do not forget to use NID to change the name or DBID or both of the new database.

ORA-19839: snapshot datafile checkpoint time is greater than snapshot time

Cause: The snapshot time which was specified when starting the recovery less than data file's checkpoint time. The snapshot recovery is only possible with data file's whose checkpoint time is less than snapshot time.

Action: Restore the data file's associated for the specified snapshot time or specify the correct snapshot time associated with the data file.

ORA-19840: SNAPSHOT TIME recovery is not enabled

Cause: An attempt was made to use SNAPSHOT TIME recovery. But, the feature was not enabled.

Action: Contact Oracle Support Services to enable snapshot time recovery and then retry the command.

ORA-19841: Cross-platform backups require COMPATIBLE *string* or greater

Cause: An attempt to create a cross-platform backup was made but the COMPATIBLE parameter was not set to a high enough value to allow this.

Action: Do not attempt to use this functionality or raise the compatibility level.

ORA-19842: The current database incarnation changed during backup.

Cause: The backup failed because the current database incarnation was changed during the backup. One of these events caused this incarnation change: - The database was opened using ALTER DATABASE OPEN RESETLOGS statement. - RMAN command RESET DATABASE TO INCARNATION was issued. - If this happened on physical standby database, then redo apply has applied redo data from a new database incarnation.

Action: Retry the backup command.

ORA-19843: Cannot obtain datafile name for datafile *string*

Cause: While trying to obtain the file enqueue for the datafile the datafile name could not be obtained.

Action: Examine the trace and alert files for possible causes. Fix underlying problem before attempting command again.

ORA-19844: Remote database ID *string* is different from local database ID *string*.

Cause: The database ID on the remote site did not match the ID of the target database. This was caused by an incorrect service name for the remote connection.

Action: Supply the correct service name and retry the command.

ORA-19845: error in *string* while communicating with remote database server

Cause: An error occurred while initiating backup on remote database server for network restore. Additional error messages will be issued to describe the failure.

Action: Check additional error messages.

ORA-19846: cannot read header of datafile *string* from remote site

Cause: Unable to read the file header from remote site.

Action: Make sure the data file is accessible on remote site and retry the command.

ORA-19847: cannot read header of control file from remote site

Cause: Could not read the control file header from the remote site.

Action: Make sure the database is mounted on the remote site and retry the command.

ORA-19848: cross-platform backup piece requires COMPATIBLE *string* or greater

Cause: An attempt was made to perform a cross-platform operation from a backup piece created with a higher compatibility than the current COMPATIBLE parameter.

Action: Raise the compatibility level or do not attempt a cross-platform restore from this backup piece.

ORA-19849: error while reading backup piece from service *string*

Cause: This error should be followed by other errors indicating the cause of the problem.

Action: See other errors actions.

ORA-19850: backup piece constructed from service *string* is corrupt

Cause: This error indicates that the backup piece that was constructed from the service is corrupt.

Action: See alert log for details of the corruption. Fix the corruption and retry the command.

ORA-19851: OS error while managing auxiliary database *string*

Cause: An OS error was received while managing the automatic auxiliary instance.

Action: Check the accompanying errors.

ORA-19852: error creating services for auxiliary instance *string* (error *string*)

Cause: An error was received while managing the services of the auxiliary instance.

Action: Check the accompanying errors.

ORA-19853: error preparing auxiliary instance *string* (error *string*)

Cause: An error was received while managing the automatic auxiliary instance.

Action: Check the accompanying errors.

ORA-19854: error obtaining connect string from target

Cause: Could not obtain the connect string from the target database

Action: Check the accompanying errors.

ORA-19855: cannot use clone mounted control file to drop database

Cause: The clone mounted control file could not be used to drop the database because the names of the data files and online logs were not fixed using the RMAN DUPLICATE command. This could cause the original database files to be lost.

Action: Manually drop the database.

ORA-19856: cannot use clone mounted control file to recover database

Cause: The clone mounted control file could not be used to recover the database because the names of the data files and online logs were not fixed using the Recovery Manager (RMAN) operation. This could result in the loss of original database files.

Action: Manually delete the files restored from the previous Recovery Manager (RMAN) operation by looking at the mounted control file and Recovery Manager (RMAN) output to clean up the partially incomplete operation. When deleting the files, be cautious to not delete production database files because some files in the control file may be pointing to those files.

ORA-19860: piece validation cannot be performed more than once

Cause: The user attempted to validate a list of backup pieces more than once. Validation may only be performed once for a given validation conversation.

Action: Do not attempt to validate the pieces more than once.

ORA-19861: additional backup pieces cannot be validated in this conversation

Cause: The user tried to add new pieces to the list of files being validated after the validation had already been performed. In a validation conversation, the list can only be validated once.

Action: Add all the backup pieces to the list before validating, or start a new validation conversation for the remaining pieces.

ORA-19862: backup pieces must be validated before accessing results

Cause: The user tried to get validation results for backup pieces before the pieces were actually validated.

Action: Validate the pieces before trying to access the results.

ORA-19863: device block size *string* is larger than max allowed: *string*

Cause: The user specified a device BLKSIZE that is larger than the device BLKSIZE specified during compressed backup.

Action: Change the device BLKSIZE to be smaller than the maximum allowed.

ORA-19864: *string***ORA-19865: Backup piece *string* has no data**

Cause: No data was returned for the specified backup piece.

Action: This normally indicates a problem with the media management software which is linked with Oracle to provide backup and restore services. Contact the media management software vendor.

ORA-19866: error writing file header for datafile *string*

Cause: During a block recovery, the header of the datafile could not be updated.

Action: Contact Oracle Support Services.

ORA-19867: backup piece *string* is from a different container identifier *string*; data file *string*

Cause: This backup piece container identifier did not match the supplied data file container identifier.

Action: Retry the command with the correct backup piece or the correct data file.

ORA-19868: cannot recover block *string* for file number *string*

Cause: The specified block could not be cleared.

Action: Retry the command with the correct block number for the recover operation.

ORA-19869: Input file name or destination is an empty string.

Cause: A valid string for the file name or destination was not provided.

Action: Provide a string which is nonempty and is valid for the file name or the destination.

ORA-19870: error while restoring backup piece *string*

Cause: This error should be followed by other errors indicating the cause of the problem.

Action: See other errors actions.

ORA-19872: Unexpected end of file at block *string* while decompressing backup piece *string*

Cause: While reading a compressed backup piece, RMAN received an end-of-file without finding the end-of-compression stream.

Action: This is most likely caused by a corrupted backup piece. Consider using a different backup piece for restore.

ORA-19873: cannot apply this backup section to file *string*

Cause: RMAN cannot restore a multi-section backup to the indicated file, because this section is not a backup of this file, or the file was not prepared correctly for this restore.

Action: If this error occurs while running RMAN, then it is an internal error and you should contact Oracle support.

ORA-19874: cannot finish multisection restore or copy to file *string*

Cause: During a multisection restore or copy, the file being restored was not a file in which a multisection restore or copy was in progress.

Action: If this error occurs while running RMAN, then it was an internal error and you should contact Oracle Support Services.

ORA-19875: multisection restore or copy not complete for file *string*

Cause: While completing a multisection restore or copy, it was found that all required sections for this file were not correctly applied.

Action: If this error occurs while running RMAN, then it is an internal error and you should contact Oracle Support Services.

ORA-19880: corrupted space header for data file *string* at block *string*

Cause: A space header block of a data file was used by the unused block optimization feature. The space header block of the reported data file had corrupted information.

Action: Fix the corrupted space header of this data file, or do not use the unused block optimization feature for this data file. If the corruption is not fixed then the availability of the data in the file will be impacted.

ORA-19881: Corrupted space bitmap for datafile *string*, block *string*

Cause: When reading a space bitmap block to use Unused Block Optimization for the backup of the datafile, the space bitmap block had corrupted information.

Action: The corrupt space bitmap must be fixed before Unused Block Optimization can be used for this file. Note that you should fix the corruption in any case because it will affect the availability of the data in the file, beyond just taking backups.

ORA-19882: datafile *string* checkpoint *string* is ahead of space bitmap datafile *string* checkpoint *string*

Cause: When checkpointing the datafile containing the space bitmaps for the datafile being backed up in order to use Unused Block Optimization, the checkpoint of the datafile containing the space bitmaps did not advance.

Action: Examine the trace and alert files for possible causes. Fix underlying problem to use Unused Block Optimization for datafile's backup.

ORA-19883: Unused Block Optimization stopped for data file *string*

Cause: Accompanying errors detail the problem that prevented Unused Block Optimization from being used.

Action: See accompanying errors for appropriate action.

ORA-19884: datafile *string* is unable to use Unused Block Optimization because tablespace has been dropped

Cause: When attempting to find information about datafile that holds bitmaps of migrated tablespace, the tablespace was found to have been dropped.

Action: None. This is an informational message.

ORA-19885: Unused Block Optimization is not implemented for shadow data file *string*

Cause: Unused Block Optimization is not implemented for shadow data files.

Action: This is an informational message.

ORA-19887: all participating data files in the backup session were dropped by the database

Cause: All data files added to the backup session were dropped from the database before the backup session could checkpoint these files.

Action: Retry the command.

ORA-19890: data file already in use

Cause: The file access enqueue could not be obtained for a file specified in restore operation. The file was an output file for a restore operation, which was attempting to overwrite the currently active version of that file. In this case, the file must be offline or the database must be closed.

Action: One of the following actions can be taken: - Remove the file in place and retry the operation. - Take the data file offline and retry the operation. - Open the database in mount mode and retry the operation.

ORA-19891: cannot open backup piece *string*

Cause: When attempting to open the specified backup piece, an error was received.

Action: Verify that the specified backup piece exists and is accessible.

ORA-19892: failed to allocate buffer while reading backup piece

Cause: Internal error

Action: None

ORA-19893: sparse information block *string* is corrupt

Cause: The indicated sparse information block failed checksum validation. This backup piece was unusable.

Action: Supply another copy of the same backup piece, or terminate the restore conversation.

ORA-19899: missing incarnation information

Cause: Media recovery stopped because information of one or more ancestor incarnations of recovery target incarnation was not available.

Action: Register logs from the missing incarnations and retry recovery.

ORA-19900: RESETLOGS must be specified after recovery to new incarnation

Cause: Recovery was done to an incarnation after changing the destination incarnation using RMAN's RESET DATABASE command.

Action: Open the database with the RESETLOGS option.

ORA-19901: database needs more recovery to create new incarnation

Cause: Recovery was done to an incarnation after changing the destination incarnation using RMAN's RESET DATABASE command, but one or more of the recovered datafiles still belongs to the parent incarnation. This usually happens when recovery is ended before any logs from the desired incarnation have been applied.

Action: Continue recovery.

ORA-19902: incarnation key *string* not found

Cause: The specified incarnation was not found in the control file.

Action: Resubmit request with known incarnation key. To see which incarnations are available for this target database or pluggable database, query V\$DATABASE_INCARNATION or V\$PDB_INCARNATION or use RMAN's LIST INCARNATION command.

ORA-19903: test recovery not allowed when recovering to new incarnation

Cause: Either a new incarnation was set using RMAN's RESET DATABASE command for a control file that was CURRENT, or the control file is from a prior incarnation. As recovery to a new incarnation requires changing the control file, test recovery is not allowed.

Action: Perform actual recovery or RESET DATABASE to incarnation that was last opened using the control file to do test recovery.

ORA-19904: test recovery not allowed for datafile *string*

Cause: The specified datafile has been restored from a backup that was taken before the last RESETLOGS. Recovering this datafile will require a file header update that is incompatible with test recovery.

Action: Perform actual recovery.

ORA-19905: LOG_ARCHIVE_FORMAT must contain sequence *%string*, thread *%string*, and resetlogs ID *%%r* for files to be unique

Cause: The LOG_ARCHIVE_FORMAT initialization parameter was missing a mandatory format element. Starting with Oracle 10g, archived log file names must contain each of the elements sequence, thread and resetlogs id to ensure that all archived log file names are unique.

Action: Add the missing format elements to the LOG_ARCHIVE_FORMAT parameter.

ORA-19906: recovery target incarnation changed during recovery

Cause: While a media recovery was active, a new incarnation was detected by the server due to inspection or cataloging of archived logs or backup files.

Action: If you want recovery to use the new incarnation, restart recovery. This is the most common action on a standby database when RESETLOGS is done in primary. If you do not want recovery to use the new incarnation, change the recovery destination using RMAN's RESET DATABASE TO INCARNATION <incarnation#> command. To see which incarnations are available for this target database, query V\$DATABASE_INCARNATION or use RMAN's LIST INCARNATION command.

ORA-19907: recovery time or SCN does not belong to recovered incarnation

Cause: A point-in-time recovery to an SCN or time stamp prior to the last RESETLOGS was requested.

Action: Either change the specified recovery time/SCN, or change the recovery destination using RMAN's RESET DATABASE command.

ORA-19908: datafile *string* has invalid checkpoint

Cause: The specified datafile has an invalid checkpoint.

Action: Restore the datafile from a backup.

ORA-19909: datafile *string* belongs to an orphan incarnation

Cause: Either the specified datafile was restored from a backup that was taken during a period of time that has already been discarded by a RESETLOGS operation, or Oracle cannot identify which database incarnation the file belongs to. The alert log contains more information.

Action: Restore a backup of this file that belongs to either the current or a prior incarnation of the database. If you are using RMAN to restore, RMAN will automatically select a correct backup.

ORA-19910: can not change recovery target incarnation in control file

Cause: The RESET DATABASE TO INCARNATION or RESET PLUGGABLE DATABASE TO INCARNATION command was used while the database or pluggable database was open. This is not allowed.

Action: Close the database or the pluggable database and then re-issue the command.

ORA-19911: datafile *string* contains future changes at the incarnation boundary

Cause: The file did not hit end backup marker redo during recovery at the incarnation boundary, hence may contain changes discarded by new incarnation.

Action: Use older backup of the file and then re-issue the command.

ORA-19912: cannot recover to target incarnation *string*

Cause: The control file is not in the recovery path of the target incarnation, and does not contain enough information as to how to recover to the target incarnation.

Action: Restore the latest control file from the target incarnation and retry.

ORA-19913: unable to decrypt backup

Cause: A backup piece could not be decrypted. This message is accompanied with another message that indicates the name of the encrypted backup that could not be restored. The reason could be either that an invalid password was entered, or that, when using transparent decryption, the database external security device is not open.

Action: If password-based restore was enabled for this backup, then supply the correct password using the RMAN SET DECRYPTION command. If transparent restore was enabled for this backup, then ensure that the database external security device is open.

ORA-19914: unable to encrypt backup

Cause: RMAN could not create an encrypted backup. This message will be accompanied by other messages that give more details about why the encrypted backup could not be created. The most common reason for this message is that you are trying to create a backup that can be transparently decrypted, and the database external security device is not open.

Action: If the external security device is not open, then open it. If the external security device is not configured, then the only type of encrypted backup that you can create is a password-based backup.

ORA-19915: Unable to encrypt files created prior to Oracle Database release 10.2.

Cause: An encrypted RMAN backup was requested that included one or more archived logs generated by an older Oracle release. These archived logs cannot be encrypted.

Action: Back up the older logs without encryption.

ORA-19919: encrypted backups to tertiary storage require Oracle Secure Backup

Cause: RMAN was configured to create encrypted backups, but the channel is neither a DISK channel nor an Oracle Secure Backup channel.

Action: Allocate a DISK channel or an Oracle Secure Backup channel to use backup encryption.

ORA-19920: RMAN does not support PKI-based master key for encryption.

Cause: An attempt was made to use Oracle public key infrastructure (PKI) based master key algorithm. RMAN only supports Advanced Encryption Standard (AES) based encryption.

Action: Use AES based encryption.

ORA-19921: maximum number of *string* rows exceeded

Cause: The maximum number of rows in the V\$RMAN_STATUS or V\$RMAN_OUTPUT table has been exceeded.

Action: Close some of existing and unused RMAN connections and sessions.

ORA-19922: there is no parent row with id *string* and level *string*

Cause: RMAN tried to add a new V\$RMAN_STATUS row, but the parent row did not exist.

Action: This is an internal error. Contact Oracle Support.

ORA-19923: the session for row with id *string* is not active

Cause: RMAN tried to update an V\$RMAN_STATUS row but the process which owns this row died.

Action: This is an internal error. Contact Oracle Support.

ORA-19924: there are no row with id *string*

Cause: RMAN tried to update an V\$RMAN_STATUS row, but the row don't exist.

Action: This is an internal error. Contact Oracle Support.

ORA-19925: Internal error while cleaning memory used by V\$RMAN_STATUS view

ORA-19926: Database cannot be converted at this time

Cause: Another CONVERT DATABASE operation is already in progress.

Action: Retry CONVERT DATABASE command later.

ORA-19927: CONVERT DATABASE operation cannot proceed

Cause: An error occurred earlier during CONVERT DATABASE operation.

Action: Retry CONVERT DATABASE command.

ORA-19928: CONVERT of data files with undo segments between different endian is not supported.

Cause: Conversion of data files with undo segments was not supported between endianness. The only time that data files with undo segments can be converted is between the same endianness as part of convert database. Convert database between different endian is not supported.

Action: Do not attempt to convert data files with undo segments between different endian.

ORA-19929: no archive log registered

Cause: An error occurred during ALTER DATABASE RECOVER with the FORCE START AT option because there were no archive logs registered in the control file covering the specified start SCN or time.

Action: Register archive logs covering the specified SCN or time.

ORA-19930: file *string* has invalid checkpoint SCN *string*

Cause: When opening the file to be placed in a copy or backup set, to be inspected, the file header was not recognized as a valid header because it contained a invalid checkpoint SCN. The indicated file cannot be processed.

Action: Ensure that the correct files are being specified for the catalog or backup operation.

ORA-19931: file *string* has invalid creation SCN *string*

Cause: When opening the file to be placed in a copy or backup set, to be inspected, the file header was not recognized as a valid header because it contained a invalid creation SCN. The indicated file cannot be processed.

Action: Ensure that the correct files are being specified for the catalog or backup operation.

ORA-19932: control file is not clone, standby or backup

Cause: The operation failed because the control file was not mounted as clone, standby or backup.

Action: Mount the database as clone, standby or backup and retry.

ORA-19933: catalog backup piece *string* of data pump dump file is not supported

Cause: This backup piece contained data pump dump file. Cataloging such a backup piece is not supported.

Action: Do not request to catalog data pump dump file backup piece.

ORA-19934: cannot validate block 0

Cause: An attempt was made to validate block 0 of a datafile.

Action: Do not specify block 0 for validation.

ORA-19935: During the back up, the data file *string* is deleted, or is moved or rekeyed to *string*.

Cause: The data file was deleted, moved, or rekeyed.

Action: Check the status of the data file and try this command again.

ORA-19936: some tablespaces were not found in backup set

Cause: Some tablespaces that were specified for restoration were not found in the backup set directory. Message 19937 is issued for each file that was not found.

Action: See the instructions for message 19937.

ORA-19937: tablespace *string* was not found in backup set

Cause: The indicated tablespace could not be restored because it was not in this backup set.

Action: This message is issued when the directory from the first backup piece is read and one or more tablespaces named for restoration are not found. The restore conversation is still active, but no data has been read and you must supply the first

backup piece of a backup set that contains all of the requested files or tablespaces or both.

ORA-19938: can not backup Data Pump dump or PDB unplug XML file, requires COMPATIBLE *string* or higher.

Cause: An attempt was made to perform a Data Pump dump file or PDB unplug XML file backup with a database compatibility that was not high enough.

Action: Raise the compatibility level and retry the operation.

ORA-19939: Data Pump dump file can only be included in a cross-platform backup

Cause: Data Pump dump file backup requested but the backup conversation is not a cross-platform conversation.

Action: Start a new cross-platform backup conversation or do not include a Data Pump dump file.

ORA-19940: cannot use cross-platform backups to convert whole database to different endianness

Cause: Cross-platform backups or restores of whole database between different endianness was requested but it is not supported.

Action: Revise the specified platforms for conversion before retrying the command.

ORA-19941: invalid blocksize in cross-platform datafile *string*

Cause: Blocksize in header of datafile copy being converted at target was invalid. Either datafile has not been made read/write with compatibility 10.0 or greater at source database or datafile copy is corrupted.

Action: Make a new datafile copy taken after tablespace has been made read/write with compatibility 10.0 at source database and retry conversion.

ORA-19942: datafile copy *string* not created with compatibility 10.0 or greater

Cause: The specified datafile copy to be converted at the target was not produced after making the tablespace in read/write mode with compatibility 10.0 or greater at the source database.

Action: Make a new datafile copy taken after tablespace has been made read/write with compatibility 10.0 at source database and retry conversion.

ORA-19943: Data Pump dump file not found in backup set

Cause: The Data Pump dump file could not be restored because it was not in this backup set.

Action: This message is issued when the directory from the first backup piece is read and the Data Pump dump file is not found in the piece. You must supply the first backup piece of a backup set that contains the requested file.

ORA-19944: Specified platform: '*string*' does not match piece header platform: '*string*'

Cause: The backup piece did not belong to the platform specified in FROM PLATFORM.

Action: Retry the restore using the correct FROM PLATFORM or without specifying FROM PLATFORM at all.

ORA-19945: file *string* already included to be restored to *string*

Cause: This file was already specified for inclusion in this restore conversation. The restore conversation may process only a single instance of a datafile.

Action: No action required. The conversation is still active and more files can be specified.

ORA-19946: Cannot determine block size of backup piece '*string*' (*string*)

Cause: It was not possible to determine the cross-platform transportable backup piece block size.

Action: Contact Oracle Support Services.

ORA-19947: Invalid block size *string* in backup piece '*string*' from specified platform '*string*'

Cause: The block size obtained from the backup piece using the specified platform was not valid. Either the piece is corrupted or the specified platform is incorrect.

Action: Retry the restore using the correct FROM PLATFORM clause.

ORA-19948: Backup piece does not contain a cross-platform datafile backup, reason=*string*

Cause: A cross-platform transportable restore was specified but the backup piece was not produced with the correct command.

Action: Produce a cross-platform transportable backup piece by using BACKUP ... TO PLATFORM and retry the restore.

ORA-19949: Specified platform: '*string*' has different endianness than piece '*string*', cannot read

Cause: The backup piece had a different endianness than the platform specified in FROM PLATFORM.

Action: Retry the restore using the correct FROM PLATFORM or without specifying FROM PLATFORM at all.

ORA-19950: tablespace *string* already included to be restored

Cause: This tablespace was already specified for inclusion in this restore conversation.

Action: No action required. The conversation is still active and more tablespaces or files or both can be specified. The restore conversation may process only a single instance of a tablespace.

ORA-19951: cannot modify control file until DBNEWID is completed

Cause: An operation requiring to modify the control file was attempted, but a NID change is in progress.

Action: Wait until NID completes before attempting the operation.

ORA-19952: database should be mounted exclusively

Cause: The database was started in parallel mode. To change the DBID, the database must be mounted exclusively.

Action: Shut down the database and start it in exclusive mode.

ORA-19953: database should not be open

Cause: The database was open. To change the DBID, the database must be mounted exclusively.

Action: Shut down the database and mount it in exclusive mode.

ORA-19954: control file is not current

Cause: The operation failed because a non-current, non-standby control file was mounted.

Action: Make the control file current and retry.

ORA-19955: only one open thread is allowed to change the DBID

Cause: The operation failed because there were active threads in the database. The most likely cause is that the database crashed the last time it was shut down.

Action: Ensure that all threads are closed before retrying the operation. Start and open the database to perform crash recovery, then shut down with the NORMAL or IMMEDIATE options to close it cleanly. Finally, try running the utility again.

ORA-19956: database should have no offline immediate datafiles

Cause: The operation failed because the database had one or more datafiles that were in OFFLINE IMMEDIATE mode.

Action: Drop the datafiles or recover them and bring them online.

ORA-19957: database should have no datafiles in unknown state

Cause: The operation failed because the database had one or more datafiles that were in an unknown state.

Action: Drop the datafiles or recover them and bring them online.

ORA-19958: potential deadlock involving DIAG process

Cause: DIAG requested a control file operation that may lead to a deadlock

Action: Try last operation later when the control file is released

ORA-19959: DBNEWID utility only allowed in CDB\$ROOT

Cause: An attempt was made to use the DBNEWID utility in a pluggable database.

Action: Connect to CDB\$ROOT and retry the command.

ORA-19960: Internal use only

Cause: NID usage

Action: None

ORA-19961: compression algorithm *string* requires advanced compression option to be enabled

Cause: Requested compression algorithm in initialization parameter or by RMAN configuration requires that the advanced compression option be enabled and it was not.

Action: Change initialization parameter advanced_compression_option_usable to true or change RMAN configurations and retry the operation.

ORA-19962: Compression algorithm *string* is not valid with release *string*.

Cause: The specified compression algorithm in the initialization parameter requires an older compatibility than the one currently set.

Action: Use an older compatibility, or change the compression algorithm in the initialization parameter file.

ORA-19963: error getting logical block size of file *string*

Cause: Error occurred when querying the logical block size of a file.

Action: None

ORA-19964: cannot set mirror side %0!s for file %1!s

Cause: An error occurred when trying to set the mirror side for a file. The specified mirror could be out of range.

Action: Use a different mirror side and retry the command.

ORA-19965: ALTER DATABASE RECOVER STANDBY TABLESPACE has been deprecated

Cause: The STANDBY TABLESPACE clause of the ALTER DATABASE RECOVER statement (partial_database_recovery clause) has been deprecated.

Action: If you want to recover the standby database to a consistent point, but no further, use the statement ALTER DATABASE RECOVER MANAGED STANDBY DATABASE UNTIL CONSISTENT.

ORA-19966: ALTER DATABASE RECOVER STANDBY DATAFILE has been deprecated

Cause: The STANDBY DATAFILE clause of the ALTER DATABASE RECOVER statement (partial_database_recovery clause) has been deprecated.

Action: If you want to recover the standby database to a consistent point, but no further, use the statement ALTER DATABASE RECOVER MANAGED STANDBY DATABASE UNTIL CONSISTENT.

ORA-19970: multi-instance standby role transition in progress

Cause: ALTER DATABASE MOUNT failed because a multi-instance standby role transition was in progress.

Action: Retry after the multi-instance standby role transition finishes.

ORA-19971: event 10875 or 10879 is set

Cause: Event 10875 or event 10879 was set which prevented the operation from completing with multiple instances running in Oracle RAC.

Action: Shutdown all but one instance, then retry the command.

ORA-19972: ALTER DATABASE RECOVER TO LOGICAL requires one instance left

Cause: ALTER DATABASE RECOVER TO LOGICAL required only one instance to be left running.

Action: Shutdown all but one instance, then retry the command.

ORA-19973: flashback database is not enabled

Cause: Physical standby transition to snapshot standby required only one instance left running if flashback database logging was not enabled.

Action: Shutdown all but one instance, then retry the command.

ORA-19974: database name has changed

Cause: Physical standby role transition required only one instance left running if database name was changed and flashback database logging was enabled.

Action: Shutdown all but one instance, then retry the command.

ORA-19975: database must not be started in any other instance

Cause: The physical standby role transition command failed because a certain condition required the database to be mounted in this instance and not started in any other instance.

Action: See associated error message for detailed explanation.

ORA-19976: a concurrent standby role transition in progress

Cause: The standby role transition operation failed because a concurrent standby role transition was already in progress.

Action: None

ORA-19980: cannot open Data Pump dump file *string*

Cause: When attempting to open the specified dump file, an error was received.

Action: Verify that the specified dump file exists and is accessible.

ORA-19981: cannot read header of Data Pump dump file *string*

Cause: When attempting to read the header of the specified dump file, an error was received.

Action: Verify that the specified dump file is complete.

ORA-19982: file *string* is not a Data Pump dump file

Cause: The specified dump file did not contain data created by Data Pump.

Action: Verify that the specified dump file is really a file created by Data Pump.

ORA-19983: Data Pump dump file could not be verified

Cause: Some data blocks for the Data Pump dump file were corrupt in the backup set.

Action: Unless the damage to the backup set can be repaired, the Data Pump dump file cannot be restored from this backup set.

ORA-19984: foreign data file copy filename does not exist for file number *string*

Cause: Data files could not be restored from this backup set. A full backup restore may not have been performed.

Action: Try a foreign data file restore from level 0 backup and retry the operation.

ORA-19985: Data Pump dump file can only be requested in a cross-platform restore

Cause: Data Pump dump file restore requested but the restore conversation is not a cross-platform conversation.

Action: Start a new cross-platform restore conversation or do not include a Data Pump dump file.

ORA-19986: archived log backup piece found for cross-platform backup

Cause: A cross-platform backup was requested for a backup piece that contained archived logs.

Action: Specify a datafile backup piece for cross-platform processing.

ORA-19987: unknown platform ID *string*

Cause: The platform ID obtained from a cross-platform backup was incorrect.

Action: Verify that the platform specified in the FROM PLATFORM clause is correct.

ORA-19988: must specify FROM PLATFORM for cross-platform restore of backup sets with pre-12.1 compatibility

Cause: A cross-platform restore was requested from a backup piece created with pre-12.1 compatibility without providing the platform name that created it.

Action: Reissue the command including the FROM PLATFORM clause.

ORA-19990: restore from cross-platform encrypted backup is not supported

Cause: A cross-platform restore was requested from an encrypted backup set.

Action: Specify a non-encrypted backup set from which to perform the restore.

ORA-19991: Cross-platform encrypted backups to a platform with a different endianness are not supported.

Cause: A cross-platform backup was requested for an encrypted backup to a platform with different endianness from the current platform.

Action: Do not include encrypted backups in the cross-platform backup, or specify a platform with the same endianness.

ORA-19992: cross-platform backup of encrypted backup piece with different endianness is not supported

Cause: A cross-platform backup was requested for an encrypted backup piece with different endianness from the current platform.

Action: Specify a backup piece without encryption to the backup.

ORA-19993: must specify FROM PLATFORM for cross-platform backup of backup pieces with compatibility set prior to 12.1

Cause: A cross-platform backup was requested for a backup piece created with compatibility prior to 12.1 without providing the platform name that created it.

Action: Reissue the command including the FROM PLATFORM clause.

ORA-19994: cross-platform backup of compressed backups to different endianness is not supported

Cause: A cross-platform backup was requested for a compressed backup to a different endianness from the current platform.

Action: Do not specify a compressed backup or specify the same endian platform.

ORA-19995: controlfile cannot be restored from a cross-platform backup with different endianness

Cause: A restore of the controlfile was requested from a cross-platform backup, but the backup did not have the same endianness and restore was not possible.

Action: Do not attempt to restore a controlfile from a cross-platform backup set.

ORA-19996: cross-platform backup of backup pieces with pre-10.2 compatibility is not supported

Cause: A cross-platform backup was requested for a backup created with pre-10.2 compatibility.

Action: Do not attempt to perform cross-platform backup of backups created with with pre-10.2 compatibility.

ORA-19997: backup pieces prior to 10.2 cannot be operated for cross-platform

Cause: A cross-platform operation was requested for a backup created with pre-10.2 compatibility.

Action: Do not attempt to perform the cross-platform operation of backups created with pre-10.2 compatibility.

ORA-19998: data file *string* already included to be plugged

Cause: This data file was already specified for inclusion in this restore conversation.

Action: No action required. The conversation is still active and more files can be specified.
19999 is used for event

ORA-19999 to ORA-24279

ORA-19999: skip_row procedure was called

Cause: The skip_row procedure was called which raises this error

Action: Skip_row should only be called within a trigger or a procedure called by a trigger.

ORA-20000: string

Cause: The stored procedure 'raise_application_error' was called which causes this error to be generated.

Action: Correct the problem as described in the error message or contact the application administrator or DBA for more information.

ORA-21000: error number argument to raise_application_error of stringstring is out of range**ORA-21001: error number argument to raise_system_error of stringstring is out of range****ORA-21300: objects option not installed**

Cause: The objects option is not installed at this site. object types and other object features are, therefore, unavailable.

Action: Install the objects option. The objects option is not part of the Oracle Server product and must be purchased separately. Contact an Oracle sales representative if the objects option needs to be purchased.

ORA-21301: not initialized in object mode

Cause: This function requires the OCI process to be initialized in object mode.

Action: Specify OCI_OBJECT mode when calling OCIInitialize().

ORA-21302: object snapshot error: string

Cause: The object snapshot operation failed. Additional details are provided in the error message.

Action: Contact Oracle Support Services.

ORA-21500: internal error code, arguments: [string], [string], [string], [string], [string], [string], [string], [string]

Cause: This is the generic error number for the OCI environment (client-side) internal errors. This indicates that the OCI environment has encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number.

ORA-21501: memory allocation failed

Cause: The operating system could not allocate the amount of memory that was requested.

Action: Ensure that sufficient memory is available to the program.

ORA-21503: program terminated by fatal error

Cause: A program is in an unrecoverable error state.

Action: Report as a bug.

ORA-21520: database server driver not installed

Cause: User attempted to access a database server through an object-mode OCI environment but the necessary driver for supporting such access to the database server is not installed or linked in.

Action: Check if the driver corresponding to the database server has been installed/linked in and entered in the server driver table.

ORA-21521: exceeded maximum number of connections in OCI (object mode only)

Cause: User exceeded the maximum number of connections (255) that can be supported by an OCI environment in object mode.

Action: Close some of existing and unused connections before opening more connections.

ORA-21522: attempted to use an invalid connection in OCI (object mode only)

Cause: User attempted to use an invalid connection or a connection that has been terminated in an OCI environment (object mode), or user attempted to dereference a REF obtained from a connection which has been terminated.

Action: Ensure that the connection exists and is still valid.

ORA-21523: functionality not supported by the server (object mode only)

Cause: User attempted to use a functionality that the server does not support.

Action: Upgrade the server

ORA-21524: object type mismatch

Cause: The object type of the object is different from what is specified.

Action: Check the type of the object and correct it.

ORA-21525: attribute number or (collection element at index) string violated its constraints

Cause: Attribute value or collection element value violated its constraint.

Action: Change the value of the attribute or collection element such that it meets its constraints. The constraints are specified as part of the attribute or collection element's schema information.

ORA-21526: initialization failed

Cause: The initialization sequence failed. This can happen, for example, if an environment variable such as NLS_DATE_FORMAT is set to an invalid value.

Action: Check that all NLS environment variables are well-formed.

ORA-21527: internal OMS driver error

Cause: A process has encountered an exceptional condition. This is the generic internal error number for Oracle object management services exceptions.

Action: Report this as a bug to Oracle Support Services.

ORA-21528: internal error, image could not be understood

Cause: The format of the image passed to the pickler is incorrect and cannot be understood.

Action: Contact Oracle Support Services.

ORA-21560: argument *string* is null, invalid, or out of range

Cause: The argument is expecting a non-null, valid value but the argument value passed in is null, invalid, or out of range. Examples include when the LOB/FILE positional or size argument has a value outside the range 1 through (4GB - 1), or when an invalid open mode is used to open a file, etc.

Action: Check your program and correct the caller of the routine to not pass a null, invalid or out-of-range argument value.

ORA-21561: OID generation failed

Cause: The handles passed in may not be valid

Action: Check the validity of the env, svc handles

ORA-21600: path expression too long

Cause: The path expression that is supplied by the user is too long. The path expression is used to specify the position of an attribute in an object. This error occurs when one of the intermediate elements in the path expression refers to an attribute of a built-in type. Thus, the OCI function cannot proceed on to process the rest of the elements in the path expression.

Action: User should pass in the correct path expression to locate the attribute.

ORA-21601: attribute is not an object

Cause: The user attempts to perform an operation (that is valid only for an object) to an attribute of a built-in type. An example of such an illegal operation is to dynamically set a null structure to an attribute of a built-in type.

Action: User should avoid performing such operation to an attribute of built-in type.

ORA-21602: operation does not support the specified typecode

Cause: The user attempts to perform an operation that does not support the specified typecode.

Action: User should use the range of valid typecodes that are supported by this operation.

ORA-21603: property id [*string*] is invalid

Cause: The specified property id is invalid.

Action: User should specify a valid property id. Valid property ids are enumerated by OCIObjectPropId.

ORA-21604: property [*string*] is not a property of transient or value instances

Cause: Trying to get a property which applies only to persistent objects.

Action: User should check the lifetime and only get this property for persistent objects.

ORA-21605: property [*string*] is not a property of value instances

Cause: Trying to get a property which applies only to persistent and transient objects.

Action: User should check the lifetime and only get this property for persistent and transient objects.

ORA-21606: can not free this object

Cause: Trying to free an object that is persistent and dirty and the OCI_OBJECTFREE_FORCE flag is not specified.

Action: Either flush the persistent object or set the flag to OCI_OBJECTFREE_FORCE

ORA-21607: memory cartridge service handle not initialized

Cause: Attempt to use the handle without initializing it.

Action: Initialize the memory cartridge service handle.

ORA-21608: duration is invalid for this function

Cause: Attempt to use a duration not valid for this function.

Action: Use a valid duration - a previously created user duration or OCI_DURATION_STATEMENT or OCI_DURATION_SESSION. For callout duration or external procedure duration, use OCIExtProcAllocCallMemory.

ORA-21609: memory being resized without being allocated first

Cause: Attempt to resize memory without allocating it first.

Action: Allocate the memory first before resizing it.

ORA-21610: size [*string*] is invalid

Cause: Attempt to resize memory with invalid size.

Action: Pass in a valid size (must be a positive integer).

ORA-21611: key length [*string*] is invalid

Cause: An attempt was made to use an invalid key length.

Action: Key length is invalid; a valid range is 0 to 254.

ORA-21612: key is already being used

Cause: Attempt to use a key that is already used.

Action: Use a new key that is not yet being used.

ORA-21613: key does not exist

Cause: Attempt to use a non-existent key

Action: Use a key that already exists.

ORA-21614: constraint violation for attribute number [*string*]

Cause: Constraints on the attribute were violated

Action: Correct the value (of the attribute) so that it satisfies constraints

ORA-21615: copy of an OTS (named or simple) instance failed

Cause: see following message

Action: Check that no attribute value violates constraints.

ORA-21700: object does not exist or is marked for delete

Cause: User attempted to perform an inappropriate operation to an object that is non-existent or marked for delete. Operations such as pinning, deleting and updating cannot be applied to an object that is non-existent or marked for delete.

Action: User needs to re-initialize the reference to reference an existent object or the user needs to unmark the object.

ORA-21701: attempt to flush objects to different servers

Cause: User attempted to flush objects to different servers in one function call. These objects are obtained by calling a callback functions provided by the program.

Action: User should avoid performing such operation.

ORA-21702: object is not instantiated or has been de-instantiated in cache

Cause: User attempted to perform an inappropriate operation to a transient object that is not instantiated in the object cache. Operations that cannot be applied to a not-instantiated transient object include deleting or pinning such an object.

Action: User should check their code to see if they are performing such an operation without instantiating the object first, or performing such an operation after the allocation duration of the object has expired.

ORA-21703: cannot flush an object that is not modified

Cause: See the error message.

Action: The object should not be flushed.

ORA-21704: cannot terminate cache or connection without flushing first

Cause: See the error message.

Action: The transaction should be aborted or committed before terminating the cache or connection.

ORA-21705: service context is invalid

Cause: The service context that is supplied by the user is not valid.

Action: User needs to establish the service context.

ORA-21706: duration does not exist or is invalid

Cause: The duration number that is supplied by the user is not valid.

Action: User needs to establish the duration or use a correct predefined duration.

ORA-21707: pin duration is longer than allocation duration

Cause: The pin duration supplied by the user is longer than the allocation duration. This affects operations such as pinning and setting default parameters.

Action: User should use a shorter pin duration or use the null duration.

ORA-21708: inappropriate operation on a transient object

Cause: User attempted to perform an inappropriate operation on a transient object. Operations that cannot be applied to a transient object include flushing and locking.

Action: User should avoid performing such operation on a transient object.

ORA-21709: cannot refresh an object that has been modified

Cause: User attempted to refresh an object that has been marked for delete, update or insert (new).

Action: User should unmark the object before refreshing it.

ORA-21710: argument is expecting a valid memory address of an object

Cause: The object memory address that is supplied by the user is invalid. The user may have passed in a bad memory address to a function that is expecting a valid memory address of an object.

Action: User should pass in a valid memory address of an object to the function.

ORA-21711: invalid cache reference

Cause: Cached reference (cref) supplied by the user did not exist or was NULL or with an invalid flag.

Action: User should pass a correct cache reference.

ORA-21712: invalid pin option

Cause: The pin option supplied by the user was not a valid value.

Action: User should pass a valid pin option value.

ORA-21713: invalid lock option

Cause: The lock option supplied by the user was not a valid value.

Action: User should pass a valid lock option value.

ORA-21779: duration not active

Cause: User is trying to use a duration that has been terminated.

Action: User should avoid performing such operation.

ORA-21780: Maximum number of object durations exceeded.

Cause: This typically happens if there is infinite recursion in the PL/SQL function that is being executed.

Action: User should alter the recursion condition in order to prevent infinite recursion.

ORA-22053: overflow error

Cause: This operation's result is above the range of Oracle number.

Action: Decrease the input value(s) so that the result is in the range of Oracle number.

ORA-22054: underflow error

Cause: This operation's result is below the range of Oracle number.

Action: Increase the input value(s) so that the result is in the range of Oracle number.

ORA-22055: unknown sign flag value [*string*]

Cause: Signed flag used is not OCI_NUMBER_SIGNED or OCI_NUMBER_UNSIGNED.

Action: Use either OCI_NUMBER_SIGNED or OCI_NUMBER_UNSIGNED as sign flag.

ORA-22056: value [*string*] is divided by zero

Cause: Given value is divided by zero.

Action: Modify divisor value to be non-zero.

ORA-22057: bad integer length [*string*]

Cause: The length of the integer (ie number of bytes) to be converted to or from an Oracle number is invalid.

Action: Use integer length 1, 2, 4 or 8 bytes only.

ORA-22059: buffer size [*string*] is too small - [*string*] is needed

Cause: The buffer to hold the resulting text string is too small.

Action: Provide a buffer of the required size.

ORA-22060: argument [*string*] is an invalid or uninitialized number

Cause: An invalid or uninitialized number is passed in.

Action: Use a valid number. To initialize number call `OCINumberSetZero()`.

ORA-22061: invalid format text [*string*]

Cause: The numeric format string for converting characters to or from an Oracle number is invalid.

Action: Use valid format string as documented in OCI Programmer's Guide.

ORA-22062: invalid input string [*string*]

Cause: The text string for converting to numbers is invalid.

Action: Use a valid input string as documented in OCI Programmer's Guide.

ORA-22063: reading negative value [*string*] as unsigned

Cause: Attempt to convert a negative number to an unsigned integer.

Action: Use the sign flag `ORLTSB` to convert a signed number.

ORA-22064: invalid NLS parameter string [*string*]

Cause: The NLS parameter string for converting characters to or from an Oracle number is invalid.

Action: Use valid format string as documented in OCI Programmer's Guide.

ORA-22065: number to text translation for the given format causes overflow

Cause: Rounding done due to the given string format causes overflow.

Action: Change the string format such that overflow does not occur.

ORA-22130: buffer size [*string*] is less than the required size [*string*]

Cause: The size of the buffer into which the hexadecimal REF string is to be written is too small.

Action: Provide a buffer of the required size.

ORA-22131: hexadecimal string length is zero

Cause: The given hexadecimal string length must be greater than zero.

Action: Specify a length greater than zero.

ORA-22132: hexadecimal string does not correspond to a valid REF

Cause: The given hexadecimal string is invalid.

Action: Provide a valid hexadecimal string which was previously returned by a call to OCIRefToHex().

ORA-22140: given size [*string*] must be in the range of 0 to [*string*]

Cause: The given resize size is invalid.

Action: Ensure that the given size is in the required range.

ORA-22141: given size [*string*] must be even in UTF-16 environment

Cause: The given resize size is odd. In a UTF-16 environment, all characters are 2 bytes in length.

Action: Ensure that the given size is even.

ORA-22150: variable-length array has not been initialized

Cause: An un-initialized variable-length array is being operated upon.

Action: Initialize the variable-length array prior to calling this function.

ORA-22151: cannot resize non-zero variable-length array to zero elements

Cause: Trying to resize a non-zero variable-length array to 0 elements.

Action: Specify a non-zero size.

ORA-22152: destination variable-length array is not initialized

Cause: The variable-length array on the right-hand-side of an assignment or the destination array of an append is not initialized.

Action: Initialize the destination variable-length array prior to calling this function.

ORA-22153: source variable-length array is not initialized

Cause: The variable-length array on the left-hand-side of an assignment or the source array of an append is not initialized.

Action: Initialize the destination variable-length array prior to calling this function.

ORA-22160: element at index [*string*] does not exist

Cause: Collection element at the given index does not exist.

Action: Specify the index of an element which exists.

ORA-22161: type code [*string*] is not valid

Cause: Given type code is not valid.

Action: Use one of the typecodes enumerated in OCITypeCode.

ORA-22162: element at index [*string*] has been previously deleted

Cause: Trying to delete a non-existent collection element.

Action: Check for the existence of the element prior to calling this function.

ORA-22163: left hand and right hand side collections are not of same type

Cause: Left hand and right side collections are not of same type.

Action: Ensure that the same collection type is passed for both left hand and right hand side of this function.

ORA-22164: delete element operation is not allowed for variable-length array

Cause: Trying to delete an element of a variable-length array.

Action: Ensure that the collection is not a variable-length array prior to calling this function.

ORA-22165: given index [*string*] must be in the range of [*string*] to [*string*]

Cause: Given index is not in the required range.

Action: Ensure that the given index is in the required range.

ORA-22166: collection is empty

Cause: Given collection is empty.

Action: Test if collection is empty prior to invoking this function.

ORA-22167: given trim size [*string*] must be less than or equal to [*string*]

Cause: Given trim size is greater than the current collection size.

Action: Ensure that the given size is less than or equal to the collection size prior to calling this function.

ORA-22275: invalid LOB locator specified

Cause: There are several causes: (1) the LOB locator was never initialized; (2) the locator is for a BFILE and the routine expects a BLOB/CLOB/NCLOB locator; (3) the locator is for a BLOB/CLOB/NCLOB and the routine expects a BFILE locator; (4) trying to update the LOB in a trigger body -- LOBs in trigger bodies are read only; (5) the locator is for a BFILE/BLOB and the routine expects a CLOB/NCLOB locator; (6) the locator is for a CLOB/NCLOB and the routine expects a BFILE/BLOB locator;

Action: For (1), initialize the LOB locator by selecting into the locator variable or by setting the LOB locator to empty. For (2),(3), (5) and (6) pass the correct type of locator into the routine. For (4), remove the trigger body code that updates the LOB value.

ORA-22276: invalid locator for LOB buffering

Cause: The error occurred due to one of the following reasons: 1. The locator was not enabled for buffering. 2. The locator was not updated but was used for a write or a flush operation.

Action: Choose the action corresponding to the cause as numbered: 1. Enable the locator for buffering. 2. Use only an updated locator for an LOB update operation.

ORA-22277: cannot use two different locators to modify the same LOB

Cause: LOB buffering is enabled and an attempt was made to modify the LOB using two different LOB locators.

Action: When using LOB buffering, modify the LOB through one LOB locator only.

ORA-22278: must update the LOB only through the LOB buffers

Cause: LOB buffering is enabled for this LOB and there are buffers for this LOB in the buffer pool. Thus, updating the LOB through means other than the LOB buffers is not allowed.

Action: Update the LOB through the LOB buffers using the locator that has LOB buffering enabled. If this operation is required, buffers associated with this LOB should either be flushed as necessary or buffering should be disabled. Once this is done, reissue the command.

ORA-22279: operation not allowed because LOB buffering is enabled

Cause: The attempted operation failed because LOB buffering was enabled.

Action: For this operation, LOB buffering cannot be used and must be disabled. Flush the buffers associated with the input LOB locator, disable the buffering on the input LOB locator, and run the command again.

ORA-22280: no more buffers available for operation

Cause: There are two causes: (1) All buffers in the buffer pool have been used up by previous operations (2) Attempt to flush a LOB without any previous buffered update operations.

Action: For (1), flush the LOB(s) through the locator that is being used to update the LOB. For (2), write to the LOB through a locator enabled for buffering before attempting to flush buffers.

ORA-22281: cannot perform operation with an updated locator

Cause: The input locator has buffering enabled and was used to update the LOB value through the LOB buffering subsystem. The modified buffer has not been flushed since the write that was performed by the the input locator; thus, the input locator is considered an updated locator. Updated locators cannot be the source of a copy operation. Only one locator per LOB may be used to modify the LOB value through the LOB buffering subsystem.

Action: Depending on whether the modifications made through the input locator to the LOB buffering subsystem should be written to the server, either flush the buffer to write the modifications, or, disable buffering on the locator to discard the modifications. Then, reissue the command.

ORA-22282: non-contiguous append to a buffering enabled LOB not allowed

Cause: The buffered write operation has an input offset value more than one byte or character past the end of the LOB.

Action: Specify an input offset value which is exactly one character or byte greater than the length of the LOB that you are attempting to update through a buffered write operation.

ORA-22283: filename contains characters that refer to parent directory

Cause: Filename contains a path "../" which references a parent directory

Action: Ensure that the filename does not contain characters which reference a parent directory.

ORA-22284: duplicate LONG binds are not supported

Cause: LOB access layer could not handle duplicate LONG binds.

Action: Provide distinct LONG or VARCHAR binds.

ORA-22285: non-existent directory or file for *string* operation

Cause: Attempted to access a directory that does not exist, or attempted to access a file in a directory that does not exist.

Action: Ensure that a system object corresponding to the specified directory exists in the database dictionary, or make sure the name is correct.

ORA-22286: insufficient privileges on file or directory to perform *string* operation

Cause: The user does not have the necessary access privileges on the directory alias and/or the file for the operation.

Action: Ask the database/system administrator to grant the required privileges on the directory alias and/or the file.

ORA-22287: invalid or modified directory occurred during *string* operation

Cause: The directory alias used for the current operation is not valid if being accessed for the first time, or has been modified by the DBA since the last access.

Action: If you are accessing this directory for the first time, provide a valid directory name. If you have been already successful in opening a file under this directory before this error occurred, then close the file and retry the operation with a valid directory alias as modified by your DBA. Oracle recommends that directories should be modified only during quiescent periods.

ORA-22288: file or LOB operation *string* failed\n*string*

Cause: The operation attempted on the file or LOB failed.

Action: For more information, see the next error message in the error stack. Also, verify that the file or LOB exists and that the necessary privileges are set for the specified operation. If the error still persists, then report the error to the Database Administrator.

ORA-22289: cannot perform *string* operation on an unopened file or LOB

Cause: The file or Large Object (LOB) was not open for the operation to be performed.

Action: Open the file or LOB.

ORA-22290: operation would exceed the maximum number of opened files or LOBs

Cause: The number of open files or LOBs has reached the maximum limit.

Action: Close some of the opened files or LOBs and retry the operation.

ORA-22291: Open LOBs exist at transaction commit time

Cause: An attempt was made to commit a transaction with open LOBs at transaction commit time.

Action: Close the LOBs before committing the transaction.

ORA-22292: cannot open a LOB in read/write mode without a transaction

Cause: An attempt was made to open a LOB in read/write mode before a transaction was started.

Action: Start a transaction before opening the LOB in read/write mode. One way to start a transaction includes issuing a SQL DML or SELECT FOR UPDATE command. Opening the LOB in read-only mode does not require a transaction.

ORA-22293: LOB already opened in the same transaction

Cause: An attempt was made to open a LOB that was already opened in this transaction.

Action: Close the LOB before attempting to reopen it.

ORA-22294: cannot update a LOB opened in read-only mode

Cause: An attempt was made to write to or update a LOB opened in read-only mode.

Action: Close the LOB and re-open it in read/write mode before attempting to write to or update the LOB.

ORA-22295: cannot bind more than 4000 bytes data to LOB and LONG columns in 1 statement

Cause: An attempt was made to bind data more than 4000 bytes of data to both LOB and LONG columns in the same insert or update statement. You can bind more than 4000 bytes of data to either a LONG column or one or more LOB columns but not both.

Action: Bind more than 4000 bytes of data to either the LONG column or one or more LOB columns but not both.

ORA-22296: invalid ALTER TABLE option for conversion of LONG datatype to LOB

Cause: An attempt was made to specify ALTER TABLE options which are disallowed during conversion of LONG datatype to LOB. The only ALTER TABLE options allowed during conversion of LONG datatype to LOB are the default clause and LOB storage clause for the column being converted to LOB.

Action: Remove the disallowed options.

ORA-22297: warning: Open LOBs exist at transaction commit time

Cause: An attempt was made to commit a transaction with open LOBs at transaction commit time.

Action: This is just a warning. The transaction was committed successfully, but any domain or functional indexes on the open LOBs were not updated. You may want to rebuild those indexes.

ORA-22298: length of directory alias name or file name too long

Cause: The length of directory alias name or file name given for a BFILE was too long.

Action: Use a shorter alias or file name.

ORA-22303: type "*string*". "*string*" not found

Cause: The user is trying to obtain information for a type that cannot be found.

Action: Check that the schema is correct and that the type has been created correctly.

ORA-22304: input type is not an object type

Cause: The user is trying to obtain the supertype information for a non-object type.

Action: Pass in only an object type.

ORA-22305: attribute, method, or parameter *string* not found

Cause: The type element with the specified name was not found in the type.

Action: Ensure that the type element exists.

ORA-22306: type "*string*". "*string*" already exists

Cause: The user is trying to create a type that already exists.

Action: Check to make sure that the type has not been created prior to this.

ORA-22307: operation must be on a user-defined type

Cause: attempt to perform an operation that is allowed only on a user-defined type, and the type is not a user-defined type.

Action: Check to make sure that only user-defined types are being operated on.

ORA-22308: operation not allowed on evolved type

Cause: An attempt was made to replace a type whose attribute definition been altered.

Action: Submit ALTER TYPE ADD/DROP statement instead of ALTER TYPE REPLACE.

ORA-22309: attribute with name *string* already exists

Cause: The creation or alteration of the object type failed because an attribute was specified more than once.

Action: Ensure that all attributes are specified only once and retry the operation.

ORA-22310: ALTER TYPE error. Refer to table "*string*". "*string*" for errors

Cause: An invalid alter type statement was submitted.

Action: Correct the errors listed in specified table and resubmit statement.

ORA-22311: type for attribute "*string*" does not exist

Cause: The type of the attribute does not exist.

Action: No types were created/modified for this DDL transaction. Redo the DDL transaction and add the creation of the attribute's type in the DDL transaction.

ORA-22312: must specify either CASCADE or INVALIDATE option

Cause: An attempt was made to alter a type which has a dependent type or table without specifying the CASCADE or INVALIDATE option.

Action: Resubmit the statement with either the CASCADE or INVALIDATE option. Specify CASCADE if you want to cascade the type change to dependent types and tables; otherwise, specify INVALIDATE to invalidate all dependents.

ORA-22313: cannot use two versions of the same type "*string*"

Cause: The version of this type conflicts with the version of this type used by another library that was linked in with the application. An application may only use one version of a type.

Action: Check that the libraries being linked with this application and use the same versions of the type.

ORA-22314: method information mismatch in ALTER TYPE

Cause: The number of methods or the method signature do not match that of the original type declaration. This is not supported.

Action: Make sure the method signature stay identical for the previously declared method. Do not drop existing methods.

ORA-22315: type "*string*" does not contain a map or order function

Cause: The input type does not contain a map or order function so one cannot be returned.

Action: Add a map or order function to the type or catch this error.

ORA-22316: input type is not a collection type

Cause: The user is trying to obtain information for collection types on a non-named collection type.

Action: Use a named collection type for the function.

ORA-22317: typecode *string* is not legal as a number type

Cause: The user is trying to use a number typecode that is not valid.

Action: Use only OCI_TYPECODE_SMALLINT, OCI_TYPECODE_INTEGER, OCI_TYPECODE_REAL, OCI_TYPECODE_DOUBLE, OCI_TYPECODE_FLOAT, OCI_TYPECODE_NUMBER, or OCI_TYPECODE_DECIMAL.

ORA-22318: input type is not an array type

Cause: The user is trying to obtain the number of elements for a non-array type.

Action: Pass in only a named collection type which is an array.

ORA-22319: type attribute information altered in ALTER TYPE

Cause: The type attribute information does not match that of the original type declaration when altering type. Attributes cannot be altered during ALTER TYPE. Only new methods can be added.

Action: Check that all type alterations are legal.

ORA-22320: missing user version string

Cause: The VERSION option is specified without a user version string.

Action: Resubmit the statement with the version string following the VERSION keyword.

ORA-22321: method does not return any result

Cause: OCITypeResult() was called on a method that does not return any results.

Action: Check that you are passing in the correct method descriptor, or that your method creation was done correctly.

ORA-22322: error table "*string*"."*string*" has incorrect structure

Cause: The specified error table does not have the expected table structure.

Action: Execute the DBMS_UTILITY.CREATE_ALTER_TYPE_ERROR_TABLE procedure to create an error table, then resubmit the statement using the new error table.

ORA-22323: error table "*string*"."*string*" does not exist

Cause: The error table does not exist.

Action: Resubmit the statement with a correct error table name.

ORA-22324: altered type has compilation errors

Cause: The use of the ALTER TYPE statement caused a compilation error.

Action: Correct the error reported and resubmit the statement.

ORA-22325: event for create type with user version string

ORA-22326: cannot change a type to FINAL if it has subtypes

Cause: An attempt was made to change a type with subtypes to FINAL.

Action: Drop all subtypes of the target type before changing it to FINAL.

ORA-22327: cannot change a type to NOT INSTANTIABLE if it has dependent tables

Cause: An attempt was made to change a type with dependent tables to NOT INSTANTIABLE.

Action: Drop all dependent tables of the target type and resubmit the statement.

ORA-22328: object "string"."string" has errors.\nstring

Cause: Altering the target type causes errors in its dependent object.

Action: Correct the problem in the dependent object and resubmit the statement.

ORA-22329: cannot alter a non-object type

Cause: An attempt was made to execute ALTER TYPE on a non-object type.

Action: Drop the non-object type first, then re-create it as an object type.

ORA-22330: cannot alter a type that is not valid

Cause: An attempt was made to perform ALTER TYPE on an invalid type.

Action: Use the CREATE OR REPLACE TYPE command to modify the type.

ORA-22331: cannot alter an incomplete type

Cause: An attempt was made to perform ALTER TYPE on an incomplete type.

Action: Use CREATE TYPE to completely define the original type before executing the ALTER TYPE.

ORA-22332: a dependent object in schema "string" has errors.\nstring

Cause: Altering the target type causes errors in its dependent object.

Action: Correct the problem in the dependent object and resubmit the statement.

ORA-22333: cannot reset type "string"."string" due to invalid dependent types and tables

Cause: An attempt was made to reset the type version with invalid dependent types and tables.

Action: Use the ALTER TYPE COMPILE statement to compile all invalid dependent types and use the ALTER TABLE UPGRADE INCLUDING DATA to upgrade all the dependent tables then resubmit the statement.

ORA-22334: cannot reset type "string"."string". Dependent tables must be upgraded to latest version

Cause: An attempt was made to reset the type version when the data in the dependent table has not been upgraded to the latest type version.

Action: Use the ALTER TABLE UPGRADE INCLUDING DATA statement to upgrade the data in the dependent tables then resubmit the statement.

ORA-22335: The client cannot work with an altered type

Cause: A pre 8.2 client has requested a type that has been altered on the server.

Action: Only 8.2 or higher clients could access altered types

ORA-22336: table contained 8.0 image format, must specify INCLUDING DATA

Cause: One of the following: 1) An attempt was made to alter a type with a dependent table in 8.0 image format and the NOT INCLUDING TABLE DATA option was specified. 2) An attempt was made to upgrade a table in 8.0 image format with the NOT INCLUDING DATA option specified.

Action: Resubmit the statement with INCLUDING DATA option.

ORA-22337: the type of accessed object has been evolved

Cause: The type of the accessed object has been altered and the client's object is based on an earlier type definition.

Action: The user needs to exit application and modify application to accommodate the type change. From SQL/PLUS, reconnect and resubmit statement.

ORA-22338: must specify CASCADE INCLUDING DATA when altering the final property

Cause: An attempt was made to alter the final property of a type with dependent table(s) without specifying the CASCADE INCLUDING DATA . option.

Action: Resubmit the statement with the CASCADE INCLUDING DATA option.

ORA-22339: cannot alter to NOT FINAL since its attribute column is SUBSTITUTABLE

Cause: An attempt was made to alter a type to not final when its embedded attribute is defined as substitutable in some tables. Note, this is a restriction in 9.0 version because when a type is altered to not final, column of that type is set to not substitutable at all levels; thus, it is an error if one of its embedded attribute column is already marked substitutable.

Action: Recreate the table and specify NOT SUBSTITUTABLE AT ALL LEVELS for all columns of non final type. Then resubmit the ALTER TYPE statement.

ORA-22340: cannot *string* type "*string*". "*string*". Dependent tables must be upgraded to latest version

Cause: An attempt was made to reset the version, drop or alter a type when the data in dependent table has not been upgraded to the latest version.

Action: Use the ALTER TABLE UPGRADE INCLUDING DATA statement to upgrade the data in the dependent tables then resubmit the statement.

ORA-22341: cannot assign supertype instance to subtype

Cause: An attempt was made to assign or copy a supertype instance to a container (destination) that can only hold a subtype instance.

Action: Make sure the runtime type of the source of the assignment or copy is the same type as the destination or is a subtype of the destination type

ORA-22342: dependent VARRAY column exceeds the maximum inline column size

Cause: An attempt was made to alter a type (add or modify attribute) which causes the size of its dependent VARRAY column to exceed the maximum inline column size. However, the VARRAY column was not specified to be stored as LOB at the table level when the table was created.

Action: Specify the VARRAY column to be stored as LOB at the table level when the table is created.

ORA-22343: Compilation error for type invalidated by ALTER TYPE

Cause: Compilation failed for a type which was invalidated by ALTER TYPE. We throw this error and rollback the compilation effort so that the user may be able to fix whatever is causing the compilation error and try again. It is important that we do not change status here and modify the dependency information as this will affect the creation of versions.

Action: Check what is causing the compilation error and correct it and try again.

ORA-22344: can not specify CONVERT TO SUBSTITUTABLE option for ALTER TYPE other than NOT FINAL change

Cause: An attempt was made to specify CONVERT TO SUBSTITUTABLE option for ALTER TYPE other than NOT FINAL change.

Action: Specify CONVERT TO SUBSTITUTABLE option only for ALTER TYPE NOT FINAL change.

ORA-22345: recompile type *string.string* before attempting this operation

Cause: An attempt was made to perform an operation which requires the specified datatype to be valid, but the datatype is invalid

Action: Recompile the specified type and retry the operation

ORA-22346: Type has cyclical dependency. Should use CASCADE option

Cause: An attempt was made to alter a type which has a cyclical dependency, with invalidate option.

Action: Give CASCADE option instead of INVALIDATE

ORA-22347: No changes to type specified for ALTER TYPE

Cause: The ALTER TYPE does not contain any changes to the type.

Action: If any change is required for the type, modify the ALTER TYPE to specify the change. Else no need for the ALTER.

ORA-22348: The object type DDL is not supported in Editioned schema

Cause: The object type DDL was not supported in an Editioned schema.

Action: Do not perform this DDL on an Editioned schema object.

ORA-22349: This version of the Oracle server does not support PL/SQL package type descriptions.

Cause: An attempt was made to get PL/SQL package type description information from a version of the Oracle server that does not support the description of PL/SQL package types.

Action: Do not attempt to describe package types on this Oracle server.

ORA-22350: Incomplete opaque type cannot be used here

Cause: An incomplete SYS.AnyType or SYS.AnyData or SYS.AnyDataSet is being used inappropriately.

Action: Check the documentation for correct usage.

ORA-22351: OCI API is not supported by this version of the Oracle server.

Cause: An attempt was made to call an Oracle Call Interface (OCI) API which is not supported by this version of the Oracle server.

Action: Do not call the unsupported OCI API when connected to this Oracle server.

ORA-22352: Type is unsupported or contains an unsupported attribute or element.

Cause: A PL/SQL package type was not supported on the client or contained an attribute or element that was not supported on the client. Unsupported types include index by VARCHAR2 collections, remote types and MLSLABELS.

Action: Do not attempt to use unsupported PL/SQL package types or types that contain unsupported attributes or elements on the client.

ORA-22369: invalid parameter encountered in method *string*

Cause: An invalid parameter is being passed to this method of SYS.AnyType, SYS.AnyData or SYS.AnyDataSet

Action: Check the parameters being passed to this method and make sure that the parameters are allowed.

ORA-22370: incorrect usage of method *string*

Cause: This method of SYS.AnyType or SYS.AnyData or SYS.AnyDataSet is being used inappropriately.

Action: Check the documentation for correct usage.

ORA-22371: Table contains data of type *string.string*, version *string*, which does not exist

Cause: Some of the older versions of the type may have got deleted because one or more of the types it were referencing was dropped.

Action: These data could not be read as the whole ADT. Read the data at individual scalar attribute level.

ORA-22372: Event for type dictionary upgrade

Cause: This is an internally used event for type dictionary upgrades from 8.0 to 8.1.

Action: None

ORA-22373: An older hashcode version was encountered.

Cause: An older hashcode version was encountered while creating a new one.

Action: No action needed. This is handled internally.

ORA-22374: cannot reset the version of a type with table dependents

Cause: The type for which reset version was requested has table dependents.

Action: None

ORA-22375: Event to check for subtypes in complete type tree

Cause: This event is used to check for subtypes in complete type tree without any restriction on depth in the fix for bug# 12430142.

Action: None

ORA-22376: Event to keep old behavior for type public synonyms

Cause: A public type synonym was qualified with a schema which may lead to incorrect name resolution. This issue has been resolved. However, this event allows you to use the old behavior if desired.

Action: None

ORA-22377: Unpacking of ANYDATA columns is not supported for attribute columns.

Cause: An attribute column has been referenced in the 'modify_opaque_type' clause.

Action: Do not use an attribute column in the 'modify_opaque_type' clause.

ORA-22378: cannot add, drop or modify attributes of a type with synonym dependents defined on FINAL types

Cause: An attempt to ALTER TYPE [ADD | DROP | MODIFY] ATTRIBUTE on a type with synonym dependents defined on a FINAL type, which has table dependents, failed.

Action: None

ORA-22380: event to skip updating the dependencies

Cause: This event is used to bypass regenerating dependencies during upgrade while running ALTER TABLE MOVE on type dictionary tables to enable storage in row. This happens on the upgrade path from 10.1.

Action: None

ORA-22381: type collation is not the same as default collation

Cause: An attempt was made to ALTER TYPE COMPILE when the type collation was different from the current active collation. This is not allowed.

Action: Set the active collation to be the same as the type collation or issue the REUSE SETTINGS clause.

ORA-22382: event to allow status 6 recompile to change settings

Cause: This event is used to allow types in status 6 to recompile with current environment settings. The standard behavior is to reuse the current compiled settings. This is made available so that users can change the hashcodes of types created under different NLS_LANGUAGE_SEMANTICS.

Action: None

ORA-22383: a persistable type cannot have non-persistable attributes

Cause: An attempt was made to create a persistable type with a non-persistable user-defined type (UDT) attribute.

Action: Ensure that all of the UDT attributes are persistable.

ORA-22384: cannot create a column or table of a non-persistable type

Cause: An attempt was made to create a column or table of a non-persistable type

Action: Ensure that the column or table type is persistable.

ORA-22385: event to optimize the abort of nested table column updates

Cause: This event is used to abort the unnecessary INSERT or DELETE of rows in the nested table storage table when the nested table column in the parent table does not qualify for update in the current row.

Action: None

ORA-22600: encountered 8.0.2 (Beta) VARRAY data that cannot be processed

Cause: Production Oracle8 (8.0.3 and beyond) encounters some VARRAY data which was created and stored by Oracle8 8.0.2 (Beta 2). Production Oracle8 cannot understand or process such VARRAY data.

Action: Delete the VARRAY data from the table by dropping the table, deleting the rows, or nulling out the VARRAY columns, and then re-insert the VARRAY data. There is no provided script or tool to help automate this conversion.

ORA-22601: pickler TDS context [*string*] is not initialized

Cause: Attempt to use the pickler TDS context without initializing it.

Action: Use OCIPicklerTdsCtxInit to initialize the context.

ORA-22602: pickler TDS handle [*string*] is not well-formed

Cause: Attempt to use the pickler TDS handle without initializing/ constructing it.

Action: Use OCIPicklerTdsInit to initialize the handle before it is constructed. Use OCIPicklerTdsGenerate to generate the TDS before its attributes can be accessed.

ORA-22603: cannot add an attribute to the already generated TDS handle

Cause: Attempt to add an attribute to the already constructed TDS.

Action: Use a TDS handle that is initialized but not yet constructed.

ORA-22604: TDS handle already generated

Cause: Attempt to generate TDS that is already generated.

Action: Use a TDS handle that is initialized but not yet generated.

ORA-22605: FDO handle [*string*] is not initialized

Cause: Attempt to use an uninitialized FDO handle.

Action: Use OCIPicklerFdoInit to initialize FDO handle".

ORA-22606: pickler image handle [*string*] is not well-formed

Cause: Attempt to use the image handle without initializing/ constructing it.

Action: Use OCIPicklerImageInit to initialize the handle before it is constructed. Use OCIPicklerImageGenerate to generate the image before its attributes can be accessed.

ORA-22607: image handle already generated

Cause: Attempt to generate image that is already generated.

Action: Use a image handle that is initialized but not yet generated.

ORA-22608: cannot add an attribute to the already generated image handle

Cause: Attempt to add an attribute to the already constructed image.

Action: Use a image handle that is initialized but not yet constructed.

ORA-22609: error *string* during initialization of FDO

Cause: Error during FDO initialization.

Action: Take an action based on the specified error.

ORA-22610: cannot add a scalar attribute to an abstract data type

Cause: An error occurred while adding a scalar attribute to the image representation of an abstract data type. The image handle or the scalar data was invalid.

Action: Initialize the image handle before adding a scalar.

ORA-22611: TDS version is not recognized

Cause: Incorrect TDS handle is passed

Action: Make sure image handle is initialized with the correct TDS

ORA-22612: TDS does not describe a collection TDS

Cause: collection construct/access routines are being on an image but the TDS does not describe that a collection TDS

Action: Make sure a collection TDS is used before invoking collection routines on the image handle

ORA-22613: buflen does not match the size of the scalar

Cause: buflen is incorrect

Action: Make sure buflen is correct and matches the size of the scalar

ORA-22614: error while construction the collection in the image

Cause: Error during the construction of collection

Action: Make sure image handle is initialized and OCIPicklerImageCollBegin is called to begin collection

ORA-22615: attribute is not a collection

Cause: collection routine is invoked upon a non-collection attribute

Action: Make sure attribute is a collection

ORA-22616: image is not of Oracle 8.1 format

Cause: The function or code path being invoked is applicable only for 8.1 images

Action: Make sure image is of 8.1 format and not corrupt

ORA-22617: error while accessing the image handle collection

Cause: Error while accessing collection in the image handle

Action: Make sure image is initialized correctly and the collection is constructed properly.

ORA-22618: attribute is a BAD NULL in the image handle

Cause: attribute in question is probably the attribute of a null embedded image

Action: Make sure attribute number is valid or it is NULL or NOT NULL.

ORA-22619: all collection elements have already been accessed

Cause: Accessing a collection element after all the collection elements are already accessed

Action: This function should not be invoked any more.

ORA-22620: buffer size too small to hold the value

Cause: Buffer size is not enough to hold the value. Most likely while doing the character set conversion, a bigger buffer is needed.

Action: Pass in a bigger buffer. If the client character set format differs from that of server, doing the conversion may result in 4X expansion.

ORA-22621: error transferring an object from the agent

Cause: Any error returned from pickler routines on the agent side.

Action: Contact Oracle Support.

ORA-22625: OCIAnyData is not well-formed

Cause: Attempt to use the OCIAnyData without initializing constructing it.

Action: Use OCIAnyDataBeginConstruct to initialize the handle before it is adding attributes. Use OCIAnyDataEndConstruct to complete the construction. Or use OCIAnyDataConvert to do the construction. Make sure it is properly constructed before accessing attributes.

ORA-22626: Type Mismatch while constructing or accessing OCIAnyData

Cause: Type supplied is not matching the type of the AnyData. If piece wise construction or access is being attempted, the type supplied is not matching the type of the current attribute.

Action: Make sure the type supplied matches the type of object to be constructed or accessed.

ORA-22627: tc [*string*] must be that of object/varray/nested table

Cause: Type code is not that of object/varray/nested table

Action: Make sure the type code is OCI_TYPECODE_OBJECT or OCI_TYPECODE_VARRAY or OCI_TYPECODE_TABLE

ORA-22628: OCIAnyData already constructed

Cause: Attempt to add attributes to OCIAnyData that is already constructed.

Action: Use the OCIAnyData that is initialized but not yet constructed.

ORA-22629: OCIAnyData is null

Cause: Attempting an operation that is not valid on null OCIAnyData

Action: Make sure OCIAnyData is not null.

ORA-22630: attribute [*string*] is null or it is not well-formed

Cause: Passing an attribute that is null or not well-formed

Action: Make sure the attribute is not null or is well-formed.

ORA-22631: attribute [*string*] is is not well-formed or does not match the type

Cause: Passing an attribute that is not well-formed or does not match the input type.

Action: Make sure the attribute is well-formed and matches the type specified.

ORA-22632: AnyDataSet parameter is not valid for the current operation

Cause: The AnyDataSet parameter is null or it is somehow invalid for the current operation.

Action: Check the documentation for the current operation.

ORA-22633: Error freeing AnyDataSet

Cause: AnyDataSet that is passed in may not be valid.

Action: Check all the AnyDataSet parameters.

ORA-22634: Error adding new instance to AnyDataSet

Cause: Current instance in the AnyDataSet has not been fully constructed.

Action: Make sure that the current instance is fully constructed before adding new instance.

ORA-22635: time stamp with time zone type not supported

Cause: OCIAnyData did not support conversion of time stamp with time zone when the version of time zone files differ.

Action: Use same version of time zone files.

ORA-22636: object or collection unpickling failed due to corrupt image

Cause: An attempt was made to convert a corrupted image.

Action: Ensure that the image is not corrupt.

ORA-22637: A transformed image cannot be inserted or updated.

Cause: An attempt was made to insert or update an object column with transformed data. Preventing unexpected data from being written to disk is an internal error.

Action: Contact Oracle Support Services.

ORA-22638: object or collection pickling failed due to corrupt object [*string*]

Cause: An attempt was made to convert a corrupted object.

Action: Ensure that the object is not corrupt.

ORA-22800: invalid user-defined type

Cause: An attempt was made to use an incomplete type as a constructor.

Action: Complete the type definition before using it in a query.

ORA-22801: invalid object row variable

Cause: The specified object row variable is not available in the scope of name resolution.

Action: Verify the specified object row variable is correct, or use an object row variable visible in scope.

ORA-22802: remote implementation type not supported

Cause: Remote type reference was not supported with user-defined aggregate function.

Action: Use local implementation type with user-defined aggregate function.

ORA-22803: object type contains zero attributes

Cause: An attempt was made to create or specify a column or constructor of an object type that has no attributes. Only object types that have at least one attribute are allowed in this context.

Action: specify a valid object type

ORA-22804: remote operations not permitted on object tables or user-defined type columns

Cause: An attempt was made to perform queries or DML operations on remote object tables or on remote table columns whose type is one of object, REF, nested table or VARRAY.

Action: n/a

ORA-22805: cannot insert NULL object into object tables or nested tables

Cause: An attempt was made to insert a NULL object into an object table or a Nested Table.

Action: Ensure that a non-NULL object is inserted into the table or, if necessary, insert an object with attributes whose values are NULL instead.

ORA-22806: not an object or REF

Cause: An attempt was made to extract an attribute from an item that is neither an object nor a REF.

Action: Use an object type or REF type item and retry the operation.

ORA-22807: cannot resolve to a scalar type or a collection type

Cause: Invalid use of a non-scalar (for example, object type) item.

Action: Change the item's data type and retry the operation.

ORA-22808: REF dereferencing not allowed

Cause: An attempt was made to access an object type's attributes by dereferencing a REF item.

Action: Make the item an object type instead of a REF to an object type.

ORA-22809: nonexistent attribute

Cause: An attempt was made to access a non-existent attribute of an object type.

Action: Check the attribute reference to see if it is valid. Then retry the operation.

ORA-22810: cannot modify object attributes with REF dereferencing

Cause: An attempt was made to modify the attributes an object by dereferencing a REF column in an UPDATE statement.

Action: Update the table containing the object that the REF points to, or change the REF column to an object type column.

ORA-22811: object cannot be marked or unmarked hot

Cause: Oracle maintained and fixed object could not be marked hot.

Action: This operation is not allowed.

ORA-22812: cannot reference nested table column's storage table

Cause: An attempt to access the nested table column's storage table is not allowed in the given context.

Action: Issue the statement against the parent table containing the nested table column.

ORA-22813: operand value exceeds system limits

Cause: Object or Collection value was too large. The size of the value might have exceeded 30k in a SORT context, or the size might be too big for available memory.

Action: Choose another value and retry the operation.

ORA-22814: attribute or element value is larger than specified in type

Cause: Value provided for the object type attribute or collection element exceeded the size specified in the type declaration.

Action: Choose another value and retry the operation.

ORA-22816: unsupported feature with RETURNING clause

Cause: RETURNING clause is currently not supported for object type columns, LONG columns, remote tables, INSERT with subquery, and INSTEAD OF Triggers.

Action: Use separate select statement to get the values.

ORA-22817: subquery not allowed in the default clause

Cause: An attempt was made to use a subquery in the column default clause expression.

Action: Remove the subquery from the default clause.

ORA-22818: subquery expressions not allowed here

Cause: An attempt was made to use a subquery expression where these are not supported.

Action: Rewrite the statement without the subquery expression.

ORA-22819: scope of input value does not correspond to the scope of the target

Cause: An attempt to operate on a REF value scoped to a different table than the expected one

Action: Use a ref which is scoped to the expected table and retry the operation

ORA-22826: cannot construct an instance of a non instantiable type

Cause: An attempt was made to use a non instantiable type as a constructor.

Action: None

ORA-22828: input pattern or replacement parameters exceed the 32K size limit of SQL function

Cause: The input string pattern or replacement string in the Large Object (LOB) SQL function exceeded the 32K size limit.

Action: Use a shorter string pattern, replacement string, or process long pattern strings in multiple passes.

ORA-22833: Must cast a transient type to a persistent type

Cause: An attempt was made to use the transient type in the query result.

Action: Cast the transient type to a structurally equivalent persistent type.

ORA-22835: Buffer too small for CLOB to CHAR or BLOB to RAW conversion (actual: *string*, maximum: *string*)

Cause: An attempt was made to convert CLOB to CHAR or BLOB to RAW, where the LOB size was bigger than the buffer limit for CHAR and RAW types. Note that widths are reported

in characters if character length semantics are in effect for the column, otherwise widths are reported in bytes.

Action: Do one of the following: 1. Make the LOB smaller before performing the conversion, for example, by using SUBSTR on CLOB 2. Use DBMS_LOB.SUBSTR to convert CLOB to CHAR or BLOB to RAW.

ORA-22837: Relational hint or keyword is disallowed for user-level DML

Cause: An attempt was made to use relational hint or keyword in user-level DML.

Action: Avoid using DML with relational hint or keyword.

ORA-22839: Direct updates on SYS_NC columns are disallowed

Cause: An attempt was made to update SYS_NC columns directly.

Action: Avoid direct updates on SYS_NC columns.

ORA-22847: Cannot generate ANYDATA with a BFILE or OPAQUE TYPE inside it.

Cause: When the XML was generated from an ANYDATA with a BFILE or OPAQUE TYPE in it, it could not be transformed back into a valid ANYDATA.

Action: Do not generate or use ANYDATA from such XML documents.

ORA-22848: cannot use *string* type as comparison key

Cause: An attempt was made to perform a comparison against a type without comparison support.

Action: Use only types with comparison support.

ORA-22849: Type *string* is not supported for this function or operator.

Cause: The argument or operand had an unsupported type value for the function or operator.

Action: Check the Oracle documentation for the supported types of the function or operator.

ORA-22850: duplicate LOB storage option specified

Cause: A LOB storage option (CHUNK, PCTVERSION, CACHE, NOCACHE, TABLESPACE, STORAGE, INDEX, SECUREFILE/BASICFILE, [A]SYNC) was specified more than once.

Action: Specify all LOB storage options only once.

ORA-22851: invalid CHUNK LOB storage option value

Cause: The specified CHUNK LOB storage option value must be an integer.

Action: Choose an appropriate integer value and retry the operation.

ORA-22852: invalid PCTVERSION LOB storage option value

Cause: The specified PCTVERSION LOB storage option value must be an integer.

Action: Choose an appropriate integer value and retry the operation.

ORA-22853: invalid LOB storage option specification

Cause: A LOB storage option was not specified

Action: Specify one of CHUNK, PCTVERSION, CACHE, NOCACHE, TABLESPACE, STORAGE, INDEX, [A]SYNC or DATA SYNC as part of the LOB storage clause.

ORA-22854: invalid option for LOB storage index

Cause: A valid LOB store index option was not specified.

Action: Specify one of (INITTRANS, MAXTRANS, TABLESPACE, STORAGE) as part of the LOB storage index.

ORA-22855: optional name for LOB storage segment incorrectly specified

Cause: The optional name for LOB storage segment was specified with multiple columns in the column list.

Action: Specify each column LOB storage only with optional name(s).

ORA-22856: cannot add columns to object tables

Cause: An attempt was made to add columns to an object table. Object tables cannot be altered to add columns since its definition is based on an object type.

Action: Create a new type with additional attributes, and use the new type to create an object table. The new object table will have the desired columns.

ORA-22857: cannot modify columns of object tables

Cause: An attempt was made to alter the object table by modifying existing columns. An object table cannot be altered to modify existing columns since it is based on an object type. The table definition must be in sync with the corresponding type.

Action: Create a new type with the desired attribute types and use it to create an object table. The new object table will have the desired columns.

ORA-22858: invalid alteration of datatype

Cause: An attempt was made to modify the column type to object, REF, nested table, VARRAY or LOB type.

Action: Create a new column of the desired type and copy the current column data to the new type using the appropriate type constructor.

ORA-22859: invalid modification of columns

Cause: An attempt was made to modify an object, REF, VARRAY, nested table, or LOB column type.

Action: Create a new column of the desired type and copy the current column data to the new type using the appropriate type constructor.

ORA-22860: object type expected

Cause: An attempt was made to create an object table using a non- object type, or to create a column that is a REF to a non-object type.

Action: Use a valid object type in the table or column definition.

ORA-22861: invalid user-defined type

Cause: An attempt was made to create a column or object table of a non- existent type.

Action: Specify a valid type in the table or column definition.

ORA-22862: specified object identifier doesn't match existing object identifier

Cause: An attempt was made to specify an object identifier for the type that does not match the existing identifier of the incomplete type of the same name.

Action: Specify the correct object identifier or leave it out of the statement.

ORA-22863: synonym for datatype *string.string* not allowed

Cause: A synonym specification for a datatype is not supported

Action: do not use the synonym for the datatype

ORA-22864: cannot ALTER or DROP LOB indexes

Cause: An attempt was made to ALTER or DROP a LOB index.

Action: Do not operate directly on the system-defined LOB index. Perform operations on the corresponding LOB column.

ORA-22865: more than one column specified

Cause: An attempt was made to specify multiple columns where only one is allowed.

Action: Specify a single column and retry the operation.

ORA-22866: cannot replace a type with table dependents

Cause: An attempt was made to replace a type that has table dependents.

Action: Drop all table(s) depending on the type, then retry the operation.

ORA-22868: table with LOBs contains segments in different tablespaces

Cause: An attempt was made to drop a tablespace which contains the segment(s) for the LOB columns of a table but does not contain the table segment.

Action: Find table(s) with LOB columns which have non-table segments in this tablespace. Drop these tables and reissue drop tablespace.

ORA-22869: depth of type dependency hierarchy exceeds maximum limit

Cause: The type dependency hierarchy was structured to have depth greater than 1024.

Action: Re-structure the type dependency hierarchy to a shorter depth.

ORA-22870: ALTER TYPE with REPLACE option a non-object type

Cause: attempt to perform ALTER TYPE with REPLACE option a non-object type

Action: drop the non-object type first, then re-create it as an object type

ORA-22871: ALTER TYPE with REPLACE is not allowed for pure incomplete types

Cause: An attempt to perform ALTER TYPE with REPLACE option for a pure incomplete type

Action: Completely define the original type, before using the ALTER TYPE with REPLACE option.

ORA-22872: OID INDEX clause not allowed on tables with primary key based object identifiers

Cause: An attempt to create an OID INDEX on a table with primary key based object identifiers.

Action: Remove the OID INDEX clause

ORA-22873: primary key not specified for primary key based object table

Cause: An attempt to create a primary key based object table without specifying a primary key

Action: Specify a primary key and retry the operation

ORA-22874: attribute "string" is not part of the type "string"

Cause: Attribute specified in the user_defined clause is not an attribute of the REF type

Action: Ensure that the name specified in the user_defined clause is the name of a valid attribute of the REF type

ORA-22875: cannot drop primary key of an object table whose object identifier is primary key based

Cause: An attempt to drop the primary key of an object table which has a primary key based object identifier

Action: Remove the drop primary key clause

ORA-22876: this user-defined type is not allowed or it cannot be used in this context

Cause: An attempt to create a kind of user-defined type which is not allowed, or an attempt to create table columns or use default constructor with a type on which these are not supported.

Action: Ensure that the type is permitted in this context.

ORA-22877: invalid option specified for a HASH partition or subpartition of a LOB column

Cause: One or more invalid options were encountered while parsing the physical attributes of a LOB partition or subpartition. Either the LOB partition is in a table partitioned using the HASH method, or the LOB subpartition is in a table subpartitioned using the HASH method. TABLESPACE is the only valid option for a HASH partition or subpartition.

Action: Remove the invalid option(s).

ORA-22878: duplicate LOB partition or subpartition specified

Cause: An attempt was made to specify a partition or subpartition that has already been specified for the LOB column.

Action: Remove the duplicate specification.

ORA-22879: cannot use the LOB INDEX clause for partitioned tables

Cause: An attempt was made to specify a LOB INDEX clause in a CREATE TABLE or ALTER TABLE statement for a partitioned table.

Action: Remove the LOB INDEX clause.

ORA-22880: invalid REF

Cause: The REF that was accessed was either invalid or did not exist.

Action: Verify the REF and retry the operation.

ORA-22881: dangling REF

Cause: The object corresponding to the REF that was accessed does not exist.

Action: Ensure that the REF value is pointing to an existing object.

ORA-22882: object creation failed

Cause: The object cannot be created in the database.

Action: Check to see if the object table exists and the object size is not too big. Then retry the operation.

ORA-22883: object deletion failed

Cause: The object could not be deleted from the database.

Action: Check to see if the object table exists. Then retry the operation.

ORA-22884: object modification failed

Cause: The object could not be modified in the database.

Action: Check to see if the object table exists and the object size is not too big. Then retry the operation.

ORA-22885: cannot get REF to a non-persistent object

Cause: An attempt was made to get a REF for something other than an object in an object table. REFs can only be taken for objects in object tables.

Action: Rewrite the query to obtain REF values from object tables.

ORA-22886: scoped table "*string*" in schema "*string*" is not an object table

Cause: The scoped table specified for a REF column is not an object table.

Action: Ensure that the scoped table is an object table. Then retry the operation.

ORA-22887: type of REF column is not the same as that of its scoped table

Cause: The type specified for the REF column and the type specified for the scope table are different.

Action: Ensure that the types of a REF column and its scoped table are the same.

ORA-22888: duplicate SCOPE clauses for a REF column

Cause: Multiple SCOPE clauses were specified for a single REF column.

Action: Remove the duplicate SCOPE clauses and retry the operation.

ORA-22889: REF value does not point to scoped table

Cause: An attempt was made to insert a REF value that does not point to the scoped table.

Action: Ensure that the REF values point to the scoped table.

ORA-22890: cannot specify name for REF column constraint

Cause: An attempt was made to specify a constraint name for a constraint on a REF column.

Action: Remove the constraint name and retry the operation.

ORA-22891: cannot have multiple columns in REF constraint

Cause: An attempt was made to specify multiple columns in a single REF constraint.

Action: Specify separate constraints for each column and retry the operation.

ORA-22892: scoped table "string" does not exist in schema "string"

Cause: The scoped table specified for a REF column does not exist.

Action: Ensure that the scoped table exists and retry the operation.

ORA-22893: constraint can be specified only for REF columns

Cause: The constraint specified does not apply to non-REF columns.

Action: Remove the constraint and retry the operation.

ORA-22894: cannot add constraint on existing unscoped REF columns of non-empty tables

Cause: An attempt was made to add a constraint to existing unscoped REF columns of a table which contains one or more rows.

Action: Remove the constraint specification or add the constraint after emptying the table.

ORA-22895: referenced table "string" in schema "string" is not an object table

Cause: The referenced table specified for a REF column is not an object table.

Action: Ensure that the referenced table is an object table. Then retry the operation.

ORA-22896: cannot have both scope and referential constraint on REF column "string"

Cause: REF column has both a referential and a scope constraint. A referential constraint implies a scope constraint.

Action: Remove either the referential or scope constraint and then retry the operation.

ORA-22897: no scope clause specified for user-defined REF column "string"

Cause: User-defined REF column does not have a scope constraint.

Action: Specify a scope constraint for the user-defined REF column and retry the operation.

ORA-22898: existing scope clause on "string" points to a table other than the one mentioned in the referential constraint

Cause: Table mentioned in the referential integrity constraint is different from the scope table of the REF column.

Action: Specify the scope table of the REF column in the referential integrity constraint and then retry the operation.

ORA-22899: cannot specify both scope and rowid constraint on ref column

Cause: An attempt was made to specify both a scope and a rowid constraint on a REF column.

Action: Remove either the rowid or scope constraint and then retry the operation.

ORA-22900: the SELECT list item of THE subquery is not a collection type

Cause: The THE subquery must SELECT a nested table or VARRAY item.

Action: change the subquery to SELECT a nested table or VARRAY item.

ORA-22901: cannot compare VARRAY or LOB attributes of an object type

Cause: Comparison of VARRAY or LOB attributes of an object type was attempted in the absence of a MAP or ORDER method.

Action: Define a MAP or ORDER method for the object type.

ORA-22902: CURSOR expression is not allowed in this context.

Cause: A CURSOR expression was specified outside the SELECT list of the top-level query block or as an argument to a PL/SQL function.

Action: Specify the CURSOR expression only inside the SELECT list of the top-level query block or as an argument to a PL/SQL function.

ORA-22903: MULTISSET expression not allowed

Cause: MULTISSET expressions are allowed only inside a CAST to a nested table or VARRAY type.

Action: put the MULTISSET(subquery) expression inside a CAST to a nested table or VARRAY type.

ORA-22904: invalid reference to a nested table column

Cause: invalid use of a nested table column

Action: remove invalid reference to the nested table column

ORA-22905: Cannot access rows from unsupported input to TABLE operator.

Cause: Attempted to access rows using the TABLE operator and either the input type was an invalid collection, or it was unknown at parse time.

Action: Use a valid collection type as input to the TABLE operator or use CAST to cast the input to a valid collection type.

ORA-22906: cannot perform DML on expression or on nested table view column

Cause: Attempted to perform a DML on an expression or on a nested table view column where a nested table column of a base table is expected.

Action: Only nested table column of a base table is allowed in the DML.

ORA-22907: invalid CAST to a type that is not a nested table or VARRAY

Cause: Attempted to CAST to a type that is not a nested table or VARRAY

Action: Re-specify CAST to a nested table or VARRAY type.

ORA-22908: reference to NULL table value

Cause: The evaluation of the THE subquery or nested table column resulted in a NULL value implying a NULL table instance. The THE subquery or nested table column must identify a single non-NULL table instance.

Action: Ensure that the evaluation of the THE subquery or nested table column results in a single non-null table instance. If happening in the context of an insert statement where the THE subquery is the target of an insert, then ensure that an empty nested table instance is created by updating the nested table column of the parent table's row specifying an empty nested table constructor.

ORA-22909: exceeded maximum VARRAY limit

Cause: The total number of elements used in VARRAY construction exceeds the specified VARRAY limit.

Action: Don't use the more than the specified limit of elements for VARRAY construction.

ORA-22910: cannot specify schema name for nested tables

Cause: Table name was qualified with schema name in the nested table column's (or attribute's) storage clause.

Action: Re-specify the nested table item's storage clause without the schema name qualification. By default, the storage table for the nested table item is created in the same schema as the containing table.

ORA-22911: duplicate storage specification for the nested table item

Cause: The storage clause is specified more than once for the NESTED TABLE column.

Action: Remove the duplicate storage specification.

ORA-22912: specified column or attribute is not a nested table type

Cause: The storage clause is specified for a column or attribute that is not a nested table column or attribute.

Action: Specify a valid nested table column or attribute.

ORA-22913: must specify table name for nested table column or attribute

Cause: The storage clause is not specified for a nested table column or attribute.

Action: Specify the nested table storage clause for the nested table column or attribute.

ORA-22914: DROP of nested tables not supported

Cause: Attempted to DROP a nested table.

Action: nested tables cannot be explicitly dropped. nested tables can only be dropped by dropping their containing parent table.

ORA-22915: cannot ALTER a nested table's storage table to ADD/MODIFY columns

Cause: An attempt was made to ADD or MODIFY columns of a nested table's storage table.

Action: Columns cannot be added or modified for a nested table's storage table. You must alter the parent table's nested table column to cause any such change.

ORA-22916: cannot do an exact FETCH on a query with Nested cursors

Cause: Exact FETCH on a query was specified which is not allowed if the query returns any cursors.

Action: Do not use an exact FETCH.

ORA-22917: use VARRAY to define the storage clause for this column or attribute

Cause: Not using VARRAY to define storage clause for VARRAY column or attribute.

Action: Specify VARRAY before the column storage clause and resubmit statement.

ORA-22918: specified column or attribute is not a VARRAY type

Cause: Attempt to define a VARRAY storage clause for a column or attribute which is not VARRAY type.

Action: Specify VARRAY storage clause for a VARRAY column or attribute.

ORA-22919: dangling REF or nowait lock request of referenced object failed

Cause: Either the object corresponding to the REF did not exist or the object was locked by another user and the lock with nowait request failed.

Action: Ensure that the REF value is pointing to an existing object or issue a lock request without the nowait option.

ORA-22920: row containing the LOB value is not locked prior to update

Cause: The row containing the Large Object (LOB) value was not locked before updating the LOB value.

Action: Lock the row containing the LOB value before updating the LOB value.

ORA-22921: length of input buffer is smaller than the amount requested

Cause: The buffer length was too small for the amount of data requested.

Action: Verify that the number of bytes or characters specified in the input amount parameter is not larger than the number of bytes specified in the input buffer length parameter. Allocate more space for the input buffer if necessary.

ORA-22922: LOB value does not exist

Cause: The large object (LOB) value associated with the input locator was not found. The information in the locator did not refer to an existing LOB.

Action: Refresh the locator using a select statement and retry the operation.

ORA-22923: amount of data specified in streaming LOB write is 0

Cause: Trying to write LOB value via the streaming mechanism (i.e. unlimited write) but the input amount of data to stream was specified as 0. Thus, the user is trying to write 0 bytes to the LOB value.

Action: Write more than 0 bytes to the LOB value.

ORA-22924: snapshot too old

Cause: The version of the LOB value needed for the consistent read was already overwritten by another writer.

Action: Use a larger version pool.

ORA-22925: operation would exceed maximum size allowed for a LOB value

Cause: An attempt was made to write too much data to the LOB value. LOB size is limited to $(4 \text{ gigabytes} - 1) * \text{DB_BLOCK_SIZE}$.

Action: Either start writing at a smaller LOB offset or write less data to the LOB value.

ORA-22926: specified trim length is greater than current LOB value's length

Cause: The input length for which to trim the LOB value to is greater than the current length of the LOB value.

Action: May not need to trim the LOB value because it's already smaller than the trim length specified. Or, if trimming the LOB value really is required, use a smaller trim length.

ORA-22927: Invalid large object (LOB) locator specified.

Cause: There are several causes: 1) The LOB locator was never initialized. 2) The locator was a BFILE locator and the routine expects a BLOB/CLOB/NCLOB locator. 3) The locator was a BLOB/CLOB/NCLOB locator and the routine expects a BFILE locator. 4) A LOB in a trigger body is read-only, and a trigger body attempted to update the LOB.

Action: For 1), initialize the LOB locator by selecting into the locator variable or by setting the LOB locator to empty. For 2) and 3), pass a locator of correct types to the routine. For 4), remove statements in the trigger body that update LOB values.

ORA-22928: invalid privilege on directories

Cause: An attempt was made to grant or revoke an invalid privilege on a directory.

Action: Only CREATE, DELETE, READ, WRITE and EXECUTE privileges can be granted or revoked on directories. Do not grant or revoke other privileges.

ORA-22929: invalid or missing directory name

Cause: The required directory name is invalid or missing.

Action: Specify a valid name.

ORA-22930: directory does not exist

Cause: Attempt to access a directory that does not exist.

Action: Make sure the name is correct.

ORA-22931: function protocol violation - *string*

Cause: Function argument(s) contain unexpected value.

Action: Review error message and accordingly pass appropriate arg value. Additionally, review process trace file for related diag data.

ORA-22933: cannot change object with type or table dependents

Cause: Attempt to replace, drop or rename an object with type or table dependents.

Action: Drop depending objects or use FORCE option if available.

ORA-22936: cannot replace a system predefined type

Cause: An attempt was made to replace a system predefined type.

Action: Use other names for newly created system types.

ORA-22937: cannot reinit lib-cache object (*string.string*) marked dirty

Cause: An attempt was made to reinit a lib-cache object that was marked dirty.

Action: Make sure there is no indirect dependency between this object and any PL/SQL object.

ORA-22950: cannot order objects without MAP or ORDER method

Cause: an object type must have a MAP or ORDER method defined for all comparisons other than equality and inequality comparisons.

Action: Define a MAP or ORDER method for the object type

ORA-22951: NULL returned by ORDER method

Cause: ORDER method used to compare two object values returned NULL which is not allowed.

Action: Redefine the ORDER method to not return a NULL.

ORA-22952: Nested Table equality requires a map method on the element ADT

Cause: Nested Table equality was tried where the element ADT did not have a map method defined on it.

Action: Define a map method on the element ADT..

ORA-22953: The cardinality of the input to POWERMULTISET exceeds the maximum allowed.

Cause: The cardinality of the input nested table to the POWERMULTISET function exceeded 32 elements.

Action: Reduce the number of elements of the input nested table.

ORA-22954: This multiset operation is not supported for this element type.

Cause: The multiset operation attempted was not supported for the nested table element type.

Action: Use a supported element type.

ORA-22955: The cardinality parameter is not within the allowed limits

Cause: The cardinality parameter has to be greater than 1 and less than or equal to the cardinality of the input.

Action: Give a valid cardinality value.

ORA-22956: Input to POWERMULTISET cannot be an empty set.

Cause: An empty set was specified as input to the POWERMULTISET function.

Action: Specify a non-empty set as input to the POWERMULTISET function.

ORA-22957: NULL is an invalid input to powermultiset and COLLECT functions

Cause: NULL was given as input to the powermultiset or COLLECT function.

Action: Give a non-null value as input

ORA-22958: This operation is not allowed in check constraints or triggers

Cause: An invalid operation is used in a check constraint or trigger

Action: Do not use the operation

ORA-22970: name does not correspond to an object view

Cause: Either the expression is not a view name or the name specified does not correspond to an object view.

Action: Replace the expression with the name of an object view.

ORA-22971: invalid datatype for PRIMARY KEY-based object identifier

Cause: When creating an object view, the datatype of an expression in the WITH OBJECT OID clause is not allowed for PRIMARY KEY-based OID.

Action: Replace the expression with one of appropriate scalar datatype.

ORA-22972: NULL value not allowed in PRIMARY KEY-based object identifier

Cause: A value constituting the PRIMARY KEY-based object identifier is NULL.

Action: Ensure the expressions in MAKE_REF system function or attributes in the WITH OBJECT OID clause of an object view do not evaluate to NULL.

ORA-22973: size of object identifier (*string*) exceeds maximum size allowed

Cause: Size of the PRIMARY KEY-based object identifier of an object view exceeds the maximum size of 4000 bytes.

Action: Specify fewer or smaller PRIMARY KEY attributes in the WITH object OID clause when creating the object view.

ORA-22974: missing WITH OBJECT OID clause

Cause: WITH OBJECT OID clause is not specified when creating an object view.

Action: Specify the WITH OBJECT OID clause.

ORA-22975: cannot create a PRIMARY KEY-based REF to this object view

Cause: The object view specified in the MAKE_REF function does not have a PRIMARY KEY-based object identifier. A PRIMARY KEY-based REF cannot be created for such a view.

Action: Specify an object view that has a PRIMARY KEY-based object identifier in the MAKE_REF function.

ORA-22976: incorrect number of arguments to MAKE_REF

Cause: Number of arguments for MAKE_REF is different from the number of PRIMARY KEY attributes of the object view.

Action: Specify all the necessary arguments for MAKE_REF.

ORA-22977: missing or invalid attribute

Cause: Either the attribute name is missing in the WITH OBJECT OID clause or it is invalid.

Action: Specify a valid attribute of the object type of the object view.

ORA-22978: only simple attribute name is allowed in the WITH OBJECT OID clause

Cause: Attempted to specify a Nested attribute in the WITH OBJECT OID clause.

Action: Specify a top-level attribute of the object type of the object view.

ORA-22979: cannot INSERT object view REF or user-defined REF

Cause: Attempt to insert an object view REF or user-defined REF in a REF column created to store system generated REF values"

Action: Make sure the REF to be inserted is not from an object view or from a user-defined REF column

ORA-22980: must specify a set of attributes for the WITH OBJECT OID clause

Cause: The WITH OBJECT OID DEFAULT clause was used, but the underlying view or table does not have a OID.

Action: Specify attributes for the WITH OBJECT OID clause to create a primary key based object identifier for the object view.

ORA-22981: must specify a table/view having system generated OID

Cause: The super-view is based on a table/view having the system generated OID and the sub-view must also be based on a similar table/view.

Action: Specify table/view having system generated OID and retry the the operation.

ORA-22982: cannot create sub-view under this view

Cause: The view derives its OID from a table/view having primary key based OID and sub-views cannot be created under such views.

Action: Specify view having system generated OID or a view created with the specification of attributes in the WITH OBJECT ID clause and retry the operation.

ORA-22983: not a user-defined REF

Cause: Attempt to use a system generated REF value where a user-defined REF value should be used.

Action: Make sure the REF value is user-defined.

ORA-22984: view query cannot contain references to a super view

Cause: The query defining the view contains references to a super-view of the view being created.

Action: Make sure that the view query does not reference a super-view.

ORA-22985: Invalid second argument to MAKE_REF. Expected value is a 16 byte OID.

Cause: The second argument to MAKE_REF on an object table/view with system generated key is not a 16 byte OID

Action: Provide a correct value for the second argument of MAKE_REF.

ORA-22990: LOB locators cannot span transactions.

Cause: An attempt was made to use a Large Object (LOB) locator selected in one transaction in a different transaction.

Action: Select the LOB locator again and retry the operation.

ORA-22991: insufficient space allocated for argument *string*

Cause: The data to be returned in the argument is greater than the amount of space allocated for the argument.

Action: Allocate more space for the argument.

ORA-22992: cannot use LOB locators selected from remote tables

Cause: A remote LOB column cannot be referenced.

Action: Remove references to LOBs in remote tables.

ORA-22993: specified input amount is greater than actual source amount

Cause: (1) For LOB write, the amount of data received is different from the amount that was indicated would be sent. (2) For LOB copy and loadfromfile, the end of the source LOB/FILE value was reached before the specified input amount was copied/loaded.

Action: (1) will happen when using OCI's piecewise mechanism with polling or with a callback function. Modify the code either to send the amount specified or to pass 0 as the input amount so that any amount of data can be sent. (2) will happen if the specified input amount is too large for the source LOB/FILE given the starting source offset. Either decrease the starting source offset, or decrease the amount to copy/load.

ORA-22994: source offset is beyond the end of the source LOB

Cause: The source offset for a LOB COPY or LOB LOADFROMFILE is beyond the end of the source LOB.

Action: Check the length of the LOB and then adjust the source offset.

ORA-22995: TABLESPACE DEFAULT option is invalid in this context

Cause: TABLESPACE DEFAULT option can be specified for LOB columns only in the following contexts: - at the table level for a partitioned table - at the partition level for a composite partition. An attempt was made to use the TABLESPACE DEFAULT option in a different context.

Action: Remove the TABLESPACE DEFAULT option.

ORA-22996: NEXT extent size is smaller than LOB chunksize

Cause: An attempt was made to create or alter a LOB segment so that its NEXT extent size was less than the LOB chunksize

Action: Specify a NEXT extent size that is greater than or equal to the LOB chunksize

ORA-22997: VARRAY | OPAQUE stored as LOB is not specified at the table level

Cause: An attempt was made to specify a VARRAY|OPAQUE column to be stored as LOB at the partition/subpartition/template level. However the VARRAY|OPAQUE column was not specified to be stored as LOB at the table level when the table was created.

Action: Specify the VARRAY | OPAQUE column to be stored as LOB at the table level when the table is created. Alternatively, do not specify the VARRAY | OPAQUE column to be stored as LOB at the partition/subpartition/template level if it is not specified at the table level when the table is created.

ORA-22998: CLOB or NCLOB in multibyte character set not supported

Cause: A SQL character function that does not support multibyte Large Object (LOB) data was passed a Character Large Object (CLOB) or National Character Large Object (NCLOB) in a multibyte character set of fixed-width or varying-width.

Action: Use DBMS_LOB functions such as DBMS_LOB.INSTR() and DBMS_LOB.SUBSTR(); or use PLSQL DBMS_LOB.READ and DBMS_LOB.WRITE to access LOB data.

ORA-22999: CLOB or NCLOB data may have been corrupted

Cause: CLOB or NCLOB contains invalid character data. One possible cause is that the wrong csid was specified for the external file when calling DBMS_LOB.LOADCLOBFROMFILE or DBMS_XSLPROCESSOR.READ2CLOB to load CLOB or NCLOB data from external files.

Action: Reload the CLOB/NCLOB data with the correct csid specified for the external file.

ORA-23290: This operation may not be combined with any other operation

Cause: ALTER TABLE RENAME COLUMN/CONSTRAINT operation was given in conjunction with another ALTER TABLE Operation. This is not allowed.

Action: Ensure that RENAME COLUMN/CONSTRAINT is the only operation specified in the ALTER TABLE.

ORA-23291: Only base table columns may be renamed

Cause: Tried to rename a column of a non-base table, like object table/ nested table/ materialized view table.

Action: None. This is not allowed.

ORA-23292: The constraint does not exist

Cause: The given constraint name does not exist.

Action: Give an existing constraint's name.

ORA-23293: Cannot rename a column which is part of a join index

Cause: The column participates in a join index.

Action: If you need to rename the column, you need to drop the join index.

ORA-23300: *string*

Cause: The stored procedure 'raise_system_error' was called which causes this error to be generated.

Action: Correct the problem as described in the error message or contact the application administrator or DBA for more information.

ORA-23301: mixed use of deferred rpc destination modes

Cause: Replication catalog determined deferred RPC destinations were mixed with destination determined by other mechanisms in the same transaction.

Action: Do not mix destination types in the same transaction.

ORA-23302: application raised communication failure during deferred RPC

Cause: An application declared a communication failure during a deferred RPC.

Action: Retry the application when communication is restored.

ORA-23303: application raised generic exception during deferred RPC

Cause: An application declared a generic failure during a deferred RPC.

Action: Determined by the application

ORA-23304: malformed deferred rpc at arg *string* of *string* in call *string*, in tid *string*

Cause: A deferred RPC call was issued without the correct number of arguments as determined by the count parameter to dbms_defer.call

Action: Be sure the number of actuals matches the count.

ORA-23305: internal deferred RPC error: *string*

Cause: An internal error occurred in deferred rpc.

Action: Report the error and other information to support.

ORA-23306: schema *string* does not exist

Cause: The schema name was null or misspelled, or the schema does not exist locally.

Action: Specify the schema correctly, or create it with CREATE USER.

ORA-23307: replicated schema *string* already exists

Cause: The given database already replicates the given schema.

Action: Choose a different schema or a different database.

ORA-23308: object *string.string* does not exist or is invalid

Cause: The given name was null or misspelled, the given type was wrong, the object does not exist as a valid database object, or the object does not exist as a replicated object with the appropriate status.

Action: Ensure the object is valid in the database, is visible to the user, and, if appropriate, is a valid object in all_reobject.

ORA-23309: object *string.string* of type *string* exists

Cause: An object in the same namespace exists, perhaps with a different type or shape, or the same object has already been registered as an reobject in another object group.

Action: Remove the offending object with the SQL DROP command, unregister the offending object with `dbms_repcat.drop_master_reobject()`, or reinvoke the request using TRUE for a boolean parameter such as `retry` or `use_existing_object`.

ORA-23310: object group "*string*"."*string*" is not quiesced

Cause: The requested operation requires the object group to be suspended.

Action: Invoke `suspend_master_activity` at the repgroup's masterdef, wait until the status has changed to quiesced, and then retry the original request.

ORA-23312: not the masterdef according to *string*

Cause: The group name is null, the group name is misspelled, the invocation or given database is not the masterdef, or one of the masters does not believe the invocation database is the masterdef.

Action: If the given group name and masterdef were both correct, connect to the masterdef and retry the request, or relocate the masterdef at the (errant) databases using `relocate_masterdef`.

ORA-23313: object group "*string*"."*string*" is not mastered at *string*

Cause: The group name is null, the group name is misspelled, the invocation database is not a master, or the invocation database does not believe the given database is a master.

Action: If the given group name was correct, connect to a current master and retry the request, make the invocation database a master with `add_master_database`, or use `switch_mview_master` if the invocation database is a materialized view site.

ORA-23314: database is not a materialized view site for "*string*"."*string*"

Cause: The invocation database is not a materialized view database for the given object group.

Action: Connect to the desired materialized view database and retry the request, or make the invocation database a materialized view site with `create_mview_repschema` or `create_mview_repgroup`.

ORA-23315: repcatlog version or request *string* is not supported by version *string*

Cause: Either incompatible repcat versions are used, or a repcatlog record has been corrupted.

Action: Convert the master to a compatible version of repcat or retry the request.

ORA-23316: the masterdef is *string*

Cause: The requested operation is not permitted on a masterdef site.

Action: Relocate the masterdef to another master and retry the operation.

ORA-23317: a communication failure has occurred

Cause: The remote database is inaccessible.

Action: Ensure the remote database is running, the communications network is functioning, and the appropriate database links are present.

ORA-23318: a ddl failure has occurred

Cause: User-supplied or system-generated ddl did not execute successfully.

Action: Examine ddl, database state, repcatlog, and all_errors to determine why the failure occurred.

ORA-23319: parameter value *string* is not appropriate

Cause: The given value of a parameter is either null, misspelled, or not supported.

Action: Refer to the documentation and use parameter values that are appropriate for the given situation.

ORA-23320: the request failed because of values *string* and *string*

Cause: A missing ddl record for a repcatlog record, or inconsistency in repcat views.

Action: Retry the request, or make the views consistent.

ORA-23321: Pipename may not be null

Cause: You called dbms_pipe with a null pipe name.

Action: Find out the name of the pipe and call function with non-null pipename.

ORA-23322: Privilege error accessing pipe

Cause: You either tried to create a pipe that already existed and belonged to someone else, or remove a pipe that you were not authorized to use, or put a message into a pipe that you were not authorized for, or get a message from a pipe that you were not authorized for.

Action: You may have to use a different pipename.

ORA-23323: parameter length exceeds deferred RPC limits

Cause: A deferred rpc parameter was longer than the deferred rpc limits of 4000 bytes for char/varchar2 parameters and 2000 bytes for raw parameters.

Action: Use smaller parameters.

ORA-23324: error *string*, while creating deferror entry at "*string*" with error *string*

Cause: The given error was encountered while attempting to create a deferror entry for the give error code and the give database.

Action: Correct the cause of the given error.

ORA-23325: parameter type is not *string*

Cause: A conflict resolution priority function was given a type different than the type assigned to the priority group; or the priority group has no type assigned or a function; or dbms_defer_sys_query was called to retrieve a deferred rpc parameter from the

deferred rpc queue, but the type of the parameter does not match the return type of the function.

Action: Use the function corresponding to the parameter type.

ORA-23326: object group "*string*"."*string*" is quiesced

Cause: Either `suspend_master_activity` has been called before the object group has resumed normal operation or a (deferred) rpc operation was attempted while the object group was quiesced.

Action: If `suspend_master_activity` has been called and a `resume_master_activity` request is pending, wait until it completes, and then reinvoke `suspend_master_activity`. Otherwise, resume database activity with the `resume_master_activity` call.

ORA-23327: imported deferred rpc data does not match *string* of importing db

Cause: Deferred rpc queues were imported from a database with a different global name or operating system than importing database.

Action: Deferred rpc data should only be imported into a database with the same global name and hardware and operating system.

ORA-23328: mview base table "*string*"."*string*" differs from master table "*string*"."*string*"

Cause: When creating a materialized view through `repcat`, the materialized view base table name did not match a replicated table name at the master.

Action: Change the materialized view ddl to use the same base table as the replicated table name at the master.

ORA-23329: successful user-provided ddl but no materialized view "*string*"."*string*"

Cause: The DDL provided by the user to create a materialized view was executed without error, but materialized view does not exist.

Action: Manually back-out the DDL, and reregister with matching ddl and materialized view.

ORA-23330: column group *string* already exists

Cause: The column group was already registered in the object group.

Action: Use a column group name not yet registered in the replicated object group.

ORA-23331: column group *string* does not exist

Cause: The given column group is either null, misspelled or not registered.

Action: Use a registered column group.

ORA-23332: group *string* is in use; cannot drop

Cause: The given column group or priority group is being used to resolve conflicts.

Action: Call `dbms_repcat` procedures `drop_update_resolution`, `drop_delete_resolution`, `drop_unique_resolution` so that the column group or priority group is no longer in use before dropping.

ORA-23333: column *string* is already part of a column group

Cause: Attempted to add a column to a column group when the column was already a member of a column group.

Action: Drop the column from its existing column group before trying to add it to another.

ORA-23334: column *string* does not exist in table or column group

Cause: The given column is either null, misspelled or is not part of the given table or column group.

Action: Use a column that is a member of the table or column group.

ORA-23335: priority group *string* already exists

Cause: The priority group was already registered in the object group.

Action: Use a column group name not yet registered in the object group.

ORA-23336: priority group *string* does not exist

Cause: The priority group was already registered in the object group.

Action: Use a priority group name not yet registered in the object group.

ORA-23337: priority or value not in priority group *string*

Cause: The specified value or priority has not been registered as part of the priority group.

Action: Either specify a different value or priority that is already part of the priority group, or add the value to the priority group.

ORA-23338: priority or value already in priority group *string*

Cause: The specified value or priority has already been registered as part of the priority group.

Action: Either specify a different value or priority that not already part of the priority group, or drop the value to the priority group.

ORA-23339: duplicate conflict resolution information

Cause: The specified combination of column group, sequence, conflict type and/or parameter table name, parameter column name, and parameter sequence number has already been registered.

Action: Verify that additional conflict resolution information needs to be added and provide a new sequence number. If modifying existing information, the existing information must be dropped first.

ORA-23340: incorrect resolution method *string*

Cause: User function is specified when conflict resolution method was not "USER FUNCTION" or specified resolution method is not one of the predefined methods.

Action: If user function is specified when conflict resolution method was not "USER FUNCTION", either reregister function with method as "USER FUNCTION" or specify a NULL user function. Otherwise Specify one of the documented supported conflict resolution methods.

ORA-23341: user function required

Cause: A NULL user function was specified for the "USER FUNCTION" method.

Action: Provide user function name (e.g., "schema"."package"."function") that conforms to the documented user function specifications or specify one of the documented supported conflict resolution methods.

ORA-23342: invalid parameter column *string*

Cause: The parameter column name is null or misspelled, the invocation database is not a master, or is of the wrong type for the specified conflict resolution method.

Action: Specify a parameter column from the specified column group that has a correct type for the conflict resolution method.

ORA-23343: no match for specified conflict resolution information

Cause: The specified combination of column group, sequence, conflict type has not been registered (e.g., for adding a comment).

Action: Specify a combination of column group, sequence, conflict type has been registered.

ORA-23344: constraint (*string.string*) does not exist

Cause: A null, misspelled or nonexistent constraint was specified when registering a uniqueness conflict.

Action: Register a named constraint for the specified table.

ORA-23345: table "*string*"."*string*" not registered to collect statistics

Cause: A procedure that deals with conflict resolution statistics-gathering was called for a table that was not registered to collect statistics.

Action: Call `dbms_repcat.register_statistics` to register the table.

ORA-23346: primary key or object ID is undefined for table or materialized view *string*

Cause: Trying to generate replication support for a table or materialized view without a primary key (as defined by a constraint or `dbms_repcat.set_columns`) or an object ID.

Action: For a table, add a primary key constraint or define a primary key using `dbms_repcat.set_columns` or use object tables. For a ROWID materialized view, set `min_communication` to false or use primary key or object ID materialized views.

ORA-23347: datatype *string* for column *string* table *string* not supported

Cause: The table has a column whose datatype is not supported by `repcat`.

Action: Remove the column from the table, or alter the column to have one of the supported datatypes.

ORA-23348: cannot replicate procedure *string*; only IN parameters supported

Cause: Trying to generate replication support for a package that has a procedure with OUT or IN OUT parameters.

Action: Remove the procedure from the package, or remove the OUT or IN OUT parameters from the procedure.

ORA-23349: cannot generate replication support for functions

Cause: Trying to generate replication support for a package that has a public function, or for a stand-alone function.

Action: Remove the public function from the package, or alter the function to be a procedure.

ORA-23350: maximum number of recursive calls exceeded

Cause: This usually occurs when trying to resolve conflicts in a table while concurrent updates to the same row create more conflicts.

Action: Re-execute the deferred transaction from DefError using `dbms_defer_sys.execute_error`

ORA-23351: parameter datatype *string* for procedure *string* not supported

Cause: The procedure has a parameter whose datatype is not supported by repcat.

Action: Remove the parameter from the procedure, or alter the parameter to have one of the supported datatypes.

ORA-23352: duplicate destination for deferred transaction

Cause: A duplicate destination was specified for a deferred transaction either in a `dbms_defer.call` call or an earlier `dbms_defer.transaction` call or a `dbms_defer_sys.add_default_dest` call.

Action: Remove the duplicate entry

ORA-23353: deferred RPC queue has entries for object group "*string*"."*string*"

Cause: The requested action cannot be performed until the queue is empty for the given object group

Action: Use `dbms_defer_sys.execute` or `dbms_defer_sys.delete_tran` to empty the queue.

ORA-23354: deferred RPC execution disabled for "*string*" with "*string*"

Cause: Deferred RPC can not be executed at the destination with the specified catchup value because their propagation has been disabled.

Action: Enable deferred RPC execution with the `dbms_defer_sys.set_disabled` call.

ORA-23355: object *string.string* does not exist or is invalid at master site

Cause: The given name was null or misspelled, the given type was wrong, the object does not exist as a valid database object at the master site, or the object does not exist as a replicated object with the appropriate status.

Action: Ensure the object is valid in the master database, and is visible to the user, and, if appropriate, is a valid object in `all_reobject`.

ORA-23356: masterdef recognizes a master which does not recognize the masterdef

Cause: Possibly `drop_master_repgroup` was run at a master site but `remove_master_databases` was not run at master definition site for that master.

Action: Run `remove_master_databases` from master definition site to remove the appropriate master (see associated error messages).

ORA-23357: the propagator does not exist

Cause: The propagator does not exist.

Action: Register a new propagator.

ORA-23358: invalid remote user

Cause: The local user does not match the remote user connected via a database link.

Action: Drop and recreate the identified database link with the connect-to user identical to the owner of the database link.

ORA-23359: error on creating a ddl record for a repcatlog record

Cause: The userid in the repcatlog record does not match the userid of the connected user.

Action: Retry the operation with a different user.

ORA-23360: only one materialized view for master table "*string*" can be created

Cause: Trying to create more than one materialized view on a given master table in the same rep group.

Action: Create these other materialized views in a different rep group at another site.

ORA-23361: materialized view "*string*" does not exist at master site

Cause: The materialized view does not exist at the master site for offline instantiation of the materialized view.

Action: The correct procedure is to create the materialized view in a different schema at the master site, and then follow the instructions for offline instantiation of materialized views.

ORA-23362: invalid user

Cause: The given user does not exist.

Action: n/a

ORA-23363: mismatch of mview base table "*string*" at master and mview site

Cause: The name of the base table of the materialized view at the master site is different from the base table at the materialized view site. This error may arise during offline instantiation of materialized views.

Action: Retry offline instantiation with a materialized view name less than 24 bytes

ORA-23364: Feature not enabled: Advanced replication

Cause: The Advanced Replication feature is not enabled at this site. Updatable materialized views, deferred RPCs, and other replication features are, therefore, unavailable.

Action: Do not attempt to use this feature. Contact an Oracle Customer Support representative if the Advanced Replication feature has been purchased but not enabled.

ORA-23365: site *string* does not exist

Cause: site specified in argument "reference_site" or argument "comparison_site" in call to "differences()" routine or "rectify()" routine does not name an existing site.

Action: Make sure that database sites specified really do exist, and re-run the routine.

ORA-23366: integer value *string* is less than 1

Cause: Value of argument "max_missing" to routine "differences()" cannot be less than 1. Value of argument "commit_rows" to routines "differences()" and "rectify()" cannot be less than 1.

Action: Choose an integer value for those arguments to be 1 or greater.

ORA-23367: table *string* is missing the primary key

Cause: Table specified in argument "oname1" or "oname2" in call to "differences()" routine does not contain either a primary key or a virtual primary key (defined through dbms_repcat package under symmetric replication).

Action: Make sure the tables specified have a primary key defined.

ORA-23368: name *string* cannot be null or the empty string

Cause: Argument "sname1," "sname2," "oname1," "oname2," "missing_rows_sname," "missing_rows_oname1," "missing_rows_oname2" to "differences()" or "rectify()" cannot be NULL or " (empty string).

Action: Change argument to non-null or non-empty string.

ORA-23369: value of "*string*" argument cannot be null

Cause: Argument "max_missing" to "differences()" routine cannot be NULL.

Action: Legal values for "max_missing" are integers 1 or greater.

ORA-23370: table *string* and table *string* are not shape equivalent (*string*)

Cause: The tables specified are not shape equivalent, which means intuitively that the number of columns, the names, their datatypes and lengths are not the same.

Specifically, problem is in the parentheses and is one of the following: the number of columns are not equal, datatypes of columns with same name in different tables are different, lengths of varchar2 and char columns are not equal, precision and scale of number datatypes are not equal.

Action: Make sure the two tables being compared have the same number of columns, same column names, and same datatypes.

ORA-23371: column *string* unknown in table *string*

Cause: Some column in "array_columns" argument (or "column_list" argument) to "differences()" routine does not correspond to a column in the specified table.

Action: Make sure that all the columns in either "array_columns" or "column_list" are present in the specified table.

ORA-23372: type *string* in table *string* is unsupported

Cause: Certain types in the table comparison utility are not supported.

Action: Make sure that the types of columns in the tables to be compared are the ones supported by symmetric replication.

ORA-23373: object group "*string*".*string* does not exist

Cause: The group name was null or misspelled, or the group does not exist locally.

Action: Specify the group correctly, or create it with dbms_repcat.create_master_repgroup().

ORA-23374: object group "*string*".*string* already exists

Cause: The given database already replicates the given object group. A materialized view repgroup cannot be created at a given site where a master repgroup with the same name already exists.

Action: Choose a different group or a different database.

ORA-23375: feature is incompatible with database version at *string*

Cause: A feature not compatible with the specified database was used

Action: Set or raise the value of the "compatible" INIT.ORA parameter to match the necessary compatibility level.

ORA-23376: node *string* is not compatible with replication version "*string*"

Cause: A feature not compatible with the remote database was used

Action: Upgrade the remote database and retry the operation

ORA-23377: bad name *string* for missing_rows_ophone1 argument

Cause: An attempt was made to use the name of the reference site table as the name of the missing_rows_ophone1 argument.

Action: Provide a separately created table with a different name for missing_rows_ophone1 argument. The separately created table will contain the differences between the tables being compared.

ORA-23378: connection qualifier "*string*" is not valid for object group "*string*".*string*"

Cause: The connection qualifier used in the database link for the specified object group does not match the qualifier specified for the group in create_master_repgroup.

Action: Use or create a database link which contains the correct connection qualifier.

ORA-23379: connection qualifier "*string*" is too long

Cause: The maximum length of a database link, including the connection qualifier, is 128 bytes.

Action: Use a shorter connection qualifier, or shorten the name of the database link

ORA-23380: propagation mode "*string*" is not valid

Cause: The specified propagation may be misspelled, or is not supported. For materialized view sites, all materialized view object groups at the same materialized view site with the same master object group must all have the same propagation method.

Action: Refer to the manual on replicated data for valid propagation modes. For materialized view sites, also ensure that the propagation modes of all materialized view object groups with the same master object group are the same.

ORA-23381: generated object for base object *string.string@string* does not exist

Cause: The system generated object(s) for the specified base object do not exist at the specified site. The current operation requires the base object to have generated replication support.

Action: Ensure that the generated replication object(s) for the base object exist and are valid at the specified site. If the generated object(s) do not exist, then the procedure dbms_repcat.generate_replication_support() needs to be called from the master definition site for the base object. missing_rows_ophone1 argument. The separately created table will contain the differences between the tables being compared.

ORA-23382: materialized view repgroup "*string*".*string*" is not registered at site *string*

Cause: The materialized view repgroup is not currently registered at the master and so cannot be unregistered.

Action: None

ORA-23383: registration for materialized view repgroup "*string*"."*string*" failed at site *string*

Cause: Insertion into local repschema table failed.

Action: None

ORA-23384: replication parallel push *string* argument out of range

Cause: Specified numeric argument to dbms_defer_sys.push is invalid.

Action: Fix the argument value and try again.

ORA-23385: replication parallel push *string* argument not valid

Cause: Specified string argument to dbms_defer_sys.push is invalid.

Action: Fix the argument value and try again.

ORA-23386: replication parallel push cannot create slave processes

Cause: An error was occurred while creating slave processes for parallel push.

Action: n/a

ORA-23387: replication parallel push dequeue error

Cause: An attempt to dequeue a deferred transaction failed while trying to assign a new queue batch number.

Action: n/a

ORA-23388: replication parallel push watermark error

Cause: An error occurred during parallel push while trying to update the high-watermark information in system.def\$_destination.

Action: n/a

ORA-23389: obsolete procedure; drop objects and recreate using new master

Cause: dbms_repcat.switch_mview_master is no longer supported.

Action: Drop the objects in the object group and recreate them using the new master.

ORA-23392: could not find materialized view to be associated with "*string*"."*string*"

Cause: Could not find materialized view associated with a trigger or index that is being pulled from the master site.

Action: Ensure that materialized view, master, and master index or trigger is registered as replicated objects.

ORA-23393: the user is already the propagator

Cause: The given user is already the current propagator.

Action: n/a

ORA-23394: duplicate propagator

Cause: More than one valid propagator exist.

Action: Unregister any duplicate propagator.

ORA-23395: object "*string*"."*string*" of type "*string*" does not exist or is invalid

Cause: The given name was null or misspelled, the given type was wrong, the object does not exist as a valid database object, or the object does not exist as a replicated object with the appropriate status.

Action: Ensure the object is valid in the database, is visible to the user, and, if appropriate, is a valid object in all_reobject.

ORA-23396: database link "*string*" does not exist or has not been scheduled

Cause: the database link does not exist in the schema of the replication propagator or has not been scheduled.

Action: Ensure that the database link exists in the database, is accessible and is scheduled for execution.

ORA-23397: global name "*string*" does not match database link name "*string*"

Cause: the database link name at the local node does not match the global name of the database that the link accesses.

Action: Ensure that global names is set to true and the link name matches the global name.

ORA-23398: user name "*string*" at database link "*string*" does not match local user name "*string*"

Cause: the user name of the replication administration user at the local node and the user name at the node corresponding to the database link are not the same. Symmetric replication expects the two users to be the same.

Action: Ensure that the user ID of the replication administration user at the local node and the user ID at the node corresponding to the database link are the same.

ORA-23399: generation of replication support for "*string*"."*string*" is not complete

Cause: Replication support for the specified object has not been generated or the generation process is not yet complete.

Action: Ensure that replication support has been generated for the object. Use DBMS_REPCAT.GENERATE_REPLICATION_SUPPORT() to generate replication support for the object.

ORA-23400: invalid materialized view name "*string*"

Cause: A null, misspelled, or badly formed materialized view name was given to dbms_mview.refresh.

Action: Provide a valid materialized view name to dbms_mview.refresh.

ORA-23401: materialized view "*string*"."*string*" does not exist

Cause: A materialized view name was given to dbms_mview.refresh that is not in sys.snap\$ or its associated views.

Action: Provide a materialized view name that is in sys.snap\$, all_mvviews or user_mvviews.

ORA-23402: refresh was aborted because of conflicts caused by deferred txns

Cause: There are outstanding conflicts logged in the DefError table at the materialized view's master.

Action: Resolve the conflicts in the master DefError table and refresh again after the table is empty. Alternatively, refresh with refresh_after_errors set to TRUE, which will proceed with

the refresh even if there are conflicts in the master's DefError table. Proceeding despite conflicts can result with an updatable materialized view's changes appearing to be temporarily lost (until a refresh succeeds after the conflicts are resolved).

ORA-23403: refresh group "*string*"."*string*" already exists

Cause: Making a new refresh group when there is already a group of the same name in sys.rgroup\$.

Action: Choose a different refresh group name.

ORA-23404: refresh group "*string*"."*string*" does not exist

Cause: A refresh group name was given that is not in sys.rgroup\$.

Action: Provide a refresh group name that is in sys.rgroup\$ or dbs_rgroup.

ORA-23405: refresh group number *string* does not exist

Cause: A refresh group number was given that is not in sys.rgroup\$.

Action: Provide a refresh group number that is in sys.rgroup\$ or dbs_rgroup.

ORA-23406: insufficient privileges on user "*string*"

Cause: The caller is not the owner of the materialized view and does not have ALTER ANY MATERIALIZED VIEW privileges.

Action: Perform the operation as the owner of the materialized view or as a user with ALTER ANY MATERIALIZED VIEW privileges.

ORA-23407: object name *string* must be shaped like "schema"."object" or "object"

Cause: The object name (e.g., the rollback segment, the materialized view name, the refresh group) was incorrectly specified.

Action: Retry the operation with the object name properly specified (like "schema"."object" or "object")

ORA-23408: this replication operation is not supported in a mixed configuration

Cause: operation is not supported if the object group is replicated at a pre-V8 node.

Action: Ensure that all nodes of the replicated object group are V8.

ORA-23409: could not find an unused refresh group number

Cause: 1000 consecutive refresh group numbers, as defined by the rgroupseq number, were already used by rows in sys.rgroup\$.

Action: Alter the sequence number to be within a legal unused range and destroy unneeded refresh groups.

ORA-23410: materialized view "*string*"."*string*" is already in a refresh group

Cause: A materialized view of the same name is already in a refresh group.

Action: Subtract the materialized view from the current refresh group and add it to its new refresh group, or combine the two refresh groups into a single refresh group.

ORA-23411: materialized view "*string*"."*string*" is not in refresh group "*string*"."*string*"

Cause: The specified materialized view is not in the specified refresh group.

Action: Try again with the proper materialized view and refresh group names.

ORA-23412: master table's primary key columns have changed

Cause: The master table's primary key constraint was modified after the primary key materialized view was created.

Action: Drop and recreate the primary key materialized view

ORA-23413: table "*string*". "*string*" does not have a materialized view log

Cause: The fast refresh can not be performed because the master table does not contain a materialized view log.

Action: Use the CREATE MATERIALIZED VIEW LOG command to create a materialized view log on the master table.

ORA-23414: materialized view log for "*string*". "*string*" does not record rowid values

Cause: A rowid materialized view is being fast refreshed, but the materialized view log does not record rowid information.

Action: Use the CREATE MATERIALIZED VIEW LOG...ADD ROWID command to begin recording rowid information in the materialized view log.

ORA-23415: materialized view log for "*string*". "*string*" does not record the primary key

Cause: A primary key materialized view is being fast refreshed, but the materialized view log does not record primary key information.

Action: Use the CREATE MATERIALIZED VIEW LOG...ADD PRIMARY KEY command to begin recording primary key information in the materialized view log.

ORA-23416: table "*string*". "*string*" does not contain a primary key constraint

Cause: The table did not contain a primary key constraint or the primary key constraint was disabled.

Action: Create a primary key constraint on the table or enable the existing constraint.

ORA-23417: unknown materialized view type: *string*

Cause: A fast refresh is being performed on a materialized view of an unknown or unsupported type.

Action: Check all_mvviews and ensure that the materialized view being refreshed a valid materialized view.

ORA-23418: cannot unregister the propagator who is currently in use

Cause: The propagator is currently used in propagating replication RPCs.

Action: Try again later when there is no transaction active in propagating replication RPCs.

ORA-23419: regenerate replication support before resuming master activity

Cause: There are tables in the object group that require regeneration of replication support.

Action: Check the generation_status column in the all_reobjects view. Regenerate replication support for any table in the object group with a 'NEEDSGEN' status. Resume master activity.

ORA-23420: interval must evaluate to a time in the future

Cause: The parameter "interval" evaluates to a time earlier than SYSDATE.

Action: Choose an expression that evaluates to a time later than SYSDATE.

ORA-23421: job number *string* is not a job in the job queue

Cause: There is no job visible to the caller with the given job number.

Action: Choose the number of a job visible to the caller.

ORA-23422: Oracle Server could not generate an unused job number

Cause: Oracle Server could not generate a job number that was not used to identify another job.

Action: Retry the operation.

ORA-23423: job number *string* is not positive

Cause: The given job number is less than 1.

Action: Choose a positive integer.

ORA-23424: materialized view "*string*"."*string*" at *string* not registered

Cause: The specified materialized view has not be successfully registered at this site.

Action: Register the materialized view manually at either the master site or the materialized view site.

ORA-23425: invalid materialized view identifier *string*

Cause: The argument provided to `dbms_mview.purge_mview_from_log` is an invalid materialized view identifier or it does not identify an Oracle 8 fast refreshable materialized view or the materialized view has been already purged.

Action: If the materialized view is an Oracle 8 fast refreshable materialized view then provide `purge_mview_from_log` with its valid materialized view identifier.

ORA-23426: deferred RPC queue has entries for *string*

Cause: The requested action cannot be performed until the queue is empty for the given site/dblink

Action: Use `dbms_defer_sys.push`, `dbms_defer_sys.purge_queue` or `dbms_defer_sys.delete_tran` to empty the queue.

ORA-23427: deferred purge queue argument *string* out of range

Cause: Specified numeric argument to `dbms_defer_sys.purge_queue` is invalid.

Action: Fix the argument value and try again.

ORA-23428: job associated instance number *string* is not valid

Cause: A job is associated with an instance that is not running.

Action: Choose a running instance for job affinity, or set force parameter to TRUE.

ORA-23430: argument "*string*" cannot be NULL or empty string

Cause: The caller has provided an argument whose value cannot be NULL or the empty string.

Action: Check that the varchar2 value provided is not NULL or the empty string, and retry the call.

ORA-23431: wrong state: *string*

Cause: The routine was executed against a replicated object group that was in the wrong state.

Action: Make sure that the replicated object group is in the state given in the error message.

ORA-23432: master site *string* already exists

Cause: An attempt was made to instantiate a replicated object group at a master site that was already a part of the object group.

Action: If you were trying to add this site, do nothing because it already exists; otherwise, pick the name of another site, and re-run the routine.

ORA-23433: executing against wrong master site *string*

Cause: An attempt was made to execute the routine at a site that is different from the site specified in the argument of the routine.

Action: Provide an argument to the routine that correctly indicates the site against which the routine should be executing.

ORA-23434: master site *string* not known for object group

Cause: The site name given as an argument to a routine was not already known to the replicated object group.

Action: Execute the `dbms_offline_og.begin_instantiation()` routine to add a new site to the replicated object group.

ORA-23435: cannot create an updatable ROWID materialized view with LOB columns

Cause: The propagation of LOB data from materialized view sites to the master site requires a primary key on the replicated table. Thus updatable ROWID materialized views that contain LOB columns are not supported.

Action: Create a primary key materialized view instead of a ROWID materialized view. If the materialized view already exists, it can be converted to a primary key materialized view using the ALTER MATERIALIZED VIEW DDL command.

ORA-23436: missing template authorization for user

Cause: The specified template authorization does not exist.

Action: Check the values for user name and refresh template name to ensure a valid row exists in the `DBA_REPCAT_USER_AUTHORIZATIONS` view.

ORA-23437: template authorization already exists for user

Cause: The specified user already has been authorized to use the specified refresh group template.

Action: Check the values for user name and refresh template name or query the `DBA_REPCAT_USER_AUTHORIZATIONS` view to ensure that the correct values were passed as parameters.

ORA-23438: missing refresh group template

Cause: The specified refresh group template does not exist.

Action: Verify that the refresh group template does not exist by querying the `DBA_REPCAT_REFRESH_TEMPLATES` view.

ORA-23439: refresh group template already exists

Cause: The specified refresh group template already exists.

Action: Verify that the refresh group template exists by querying the DBA_REPCAT_REFRESH_TEMPLATES view.

ORA-23440: incorrect public template value

Cause: The public template parameter is not 'Y', 'N' or NULL.

Action: Correct the value of the public template parameter. It must be 'Y','N' or NULL.

ORA-23441: object does not exist for refresh group template

Cause: The specified object does not exist in the refresh group template.

Action: Correct the object name and object type parameters. Check the DBA_REPCAT_TEMPLATE_OBJECTS view to verify the correct name and type of the object.

ORA-23442: object already exists for the refresh group template

Cause: The specified object already exists in the refresh group template.

Action: Change the object name and object type parameters. Query the DBA_REPCAT_REMPLATE_OBJECTS view to verify the correct name and type of the object.

ORA-23443: missing template parameter

Cause: The specified template parameter does not exist.

Action: Correct the template parameter value and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_PARAMS view to verify the name of the refresh group template and parameter name.

ORA-23444: duplicate template parameter

Cause: The template parameter already exists for the specified refresh group template.

Action: Correct the template parameter value and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_PARAMS view to verify the name of the refresh group template and parameter name.

ORA-23445: missing template site

Cause: The template site specified by the site name, user name and refresh group template name does not exist.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_SITES view to query the existing template sites.

ORA-23446: duplicate template site

Cause: The template site specified by the site name, user name and refresh group template name already exists.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_TEMPLATE_SITES view to query the existing template sites.

ORA-23447: missing user parameter value

Cause: The user parameter value specified by the user name, parameter name and refresh group template name does not exist.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_USER_PARAMS view to query the existing user parameters.

ORA-23448: duplicate user parameter value

Cause: The user parameter value specified by the user name, parameter name and refresh group template name already exists.

Action: Correct the invalid parameter and execute the procedure again. Use the DBA_REPCAT_USER_PARAMS view to query the existing user parameters.

ORA-23449: missing user name

Cause: The user specified by the user name parameter does not exist in the database.

Action: Correct an invalid user name or create the user in the master database. Use the DBA_USERS view to select the valid database users.

ORA-23450: flavor already contains object "*string*"."*string*"

Cause: The flavor already contains the specified object.

Action: Check that the specified object is correct. To add all columns of a table object, delete the object from the flavor and then add it again.

ORA-23451: flavor *string* already defined for object group "*string*"."*string*"

Cause: The given object group already contains a (possibly unpublished) definition of the specified flavor.

Action: Check the spelling of the flavor name. Check for an unpublished flavor of the desired name.

ORA-23452: flavor *string* of object group "*string*"."*string*" is already published

Cause: The given object group already contains a (published) definition of the specified flavor.

Action: Check the spelling of the flavor name.

ORA-23453: requested operation is not supported on top flavor

Cause: The TOP flavor has a NULL name and may not be directly defined or deleted.

Action: Supply the name of a flavor other than the TOP flavor or use dbms_repcat routines to implicitly change the TOP flavor.

ORA-23454: flavor *string* not defined for object group "*string*"."*string*"

Cause: The given object group does not contain a (published) definition of the specified flavor.

Action: Check the spelling of the flavor name. Ensure the flavor has been defined (and published) for the object group.

ORA-23455: flavor *string* contains object "*string*"

Cause: The given flavor contains the object to be dropped.

Action: Purge the flavor or choose another object to drop.

ORA-23456: flavor *string* does not contain "string"

Cause: The flavor does not contain the given object, column, or attribute.

Action: Either drop the flavor or choose a different object, column, or attribute.

ORA-23457: invalid flavor ID *string*

Cause: The given flavor ID is invalid.

Action: Make sure this flavor has been instantiated. If the flavor ID is outside the range (-2147483647, 2147483647), contact customer support.

ORA-23458: inappropriate flavor *string* at *string*

Cause: The given flavor at the given database prevents the operation from succeeding.

Action: Either change the database flavor or choose a different operation.

ORA-23459: flavor *string* must contain "string"

Cause: The flavor must contain the given object, column, or attribute.

Action: Either choose a different database flavor or ensure the object, column, or attribute is available.

ORA-23460: missing value for column *string* in resolution method "string" for "string"."string"."string"

Cause: before resolving conflicts, some values necessary resolving conflicts are not available, or after resolving conflicts, some values necessary for re-trying of the SQL are not available

Action: define appropriate flavors, provide necessary values through availability vector in USER FLAVOR FUNCTION for conflict resolution

ORA-23461: fail to resolve conflict for "string"."string"."string"**ORA-23462: flavor *string* in use at site *string***

Cause: The given flavor cannot be deleted because it is being used at the given site.

Action: Change the flavor of the site, or unregister it if it is a materialized view site.

ORA-23463: flavor incompatible with object "string"."string"

Cause: An existing flavor includes the specified object with an incompatible type.

Action: Change the type of the object, or delete the flavor if it is not in use.

ORA-23464: flavor lacks column *string* of "string"."string"

Cause: The flavor includes some columns of an object group but not all the required columns.

Action: Change the flavor definition to include all required columns.

ORA-23465: flavor already includes column *string* of "string"."string"

Cause: The flavor includes the specified column which is being added.

Action: Check that the specified column is correct.

ORA-23466: flavor requires missing object "string"."string"

Cause: The flavor includes the specified object which does not exist

Action: Check that the specified object name is correct, and create the object if appropriate.

ORA-23467: flavor lacks object "string"."string"

Cause: The flavor does not include the specified object which is being dropped.

Action: Check that the specified object is correct.

ORA-23468: missing string string

Cause: The template is missing the object with the specified key.

Action: Add the object to the template.

ORA-23469: string is different between templates

Cause: The values for the specified columns are different in each template for the same key values.

Action: Correct the column values to make the templates the same.

ORA-23470: invalid status

Cause: The status should be DELETED, INSTALLING or INSTALLED. Any other status is invalid.

Action: Check that the specified status value is correct.

ORA-23471: template not authorized for user

Cause: The refresh template is private and the user has not been authorized to instantiate the template.

Action: Authorize the user to use the template.

ORA-23472: materialized view "string"."string" must be atomically refreshed

Cause: Non-atomic refresh is not supported for the specified materialized view.

Action: Set the value of the ATOMIC parameter to FALSE in the refresh procedure being used or remove the specified materialized view from the set of materialized views being refreshed.

ORA-23473: replication RPC processing for "string"."string" is disabled

Cause: The processing of replication RPCs for the object group that contains this object is disabled. This includes RPCs in the error queue.

Action: Processing of replication RPCs is disabled when the object group is being offline instantiated. Wait until offline instantiation is finished.

ORA-23474: definition of "string"."string" has changed since generation of replication support

Cause: The current columns in the specified table and their column types do not match the columns and column types when replication support was last generated.

Action: Regenerate replication support for the affected table. All flavors that include the specified table should be checked for validity. Types for any UDT columns should also be checked for validity.

ORA-23475: key column string must be sent and compared

Cause: The specified column is a key column and must be sent and compared during replication propagation.

Action: Make sure every key column is sent and compared.

ORA-23476: cannot import from *string* to *string*

Cause: This object was imported from a database with a different global name than the importing database.

Action: Only import this object into a database with the same global name.

ORA-23477: unable to alter propagation mode for object group "*string*".*string*"

Cause: The propagation method of a materialized view object group can only be altered when no other object groups with the same master object group are sharing the materialized view site.

Action: Ensure that there are no other materialized view object groups at the local site with the same master object group.

ORA-23478: object group "*string*" is already mastered at *string*

Cause: There is at least one other materialized view repgroup at the local site with the same group name but a different master site.

Action: Ensure that all materialized view repgroups at the local site with the same group name have the same master.

ORA-23480: Column *string* is not a top-level column of "*string*".*string*".

Cause: The column is either not a top-level column or is not present in the table or materialized view.

Action: Ensure only valid top-level columns are used.

ORA-23481: unexpected name string "*string*"

ORA-23482: column *string* of "*string*".*string*": object types not allowed.

Cause: The column is of Object Type.

Action: Ensure that all the columns are not of Object Type.

ORA-23483: object "*string*".*string*" not allowed in this operation.

Cause: The specified operation does not support the given object.

Action: Do not invoke the operation for this object.

ORA-23484: internal internet Application Server error: *string*

Cause: An internal error occurred in internet Application Server.

Action: Report the error and other information to support.

ORA-23485: Column group "*string*" must consist of a single numeric column only

Cause: The column group doesn't contain only one numeric column.

Action: Use a column group containing a single numeric column.

ORA-23487: object groups "*string*".*string*" and "*string*".*string*" do not have the same connection qualifier

Cause: The specified two object groups do not have the same connection qualifier.

Action: Do not invoke the operation on the above object groups, or ensure they have the same connection qualifier.

ORA-23488: propagation mode "string" for "string" is not allowed for this operation

Cause: This operation does not support the specified dblink in the above propagation mode.

Action: Do not invoke the operation for this dblink, or change the propagation mode for this dblink.

ORA-23489: duplicate entry "string"

Cause: The specified value is duplicated in the parameter list.

Action: Remove duplicated entries in the parameter list.

ORA-23490: extension request "string" with status "string" not allowed in this operation

Cause: The specified operation is not allowed for the extension request with the specified status.

Action: Ensure the extension request has the appropriate status before retrying this operation.

ORA-23491: no valid extension request at "string"

Cause: The specified database does not have a valid extension request.

Action: Ensure there is a valid extension request in DBA_REPEXTENSIONS view before retrying this operation.

ORA-23492: no new sites for extension request "string"

Cause: There is no new site with the specified extension request.

Action: Ensure there is at least one new site in DBA_REPSITES_NEW view for this request before retrying this operation.

ORA-23493: "string" is not a new site for extension request "string"

Cause: The specified extension request does not include the specified site as a new site.

Action: Ensure the specified site is a new site for this extension request before retrying this operation.

ORA-23494: too many rows for destination "string"

Cause: The specified destination has too many rows in system.def\$_destination table.

Action: Ensure the specified destination has at most two valid rows before retrying this operation.

ORA-23495: serial propagation can not be used for "string"

Cause: The sites involved may be in the process of adding a new site without quiescing.

Action: Check the def\$_destination table for this destination and try parallel propagation.

ORA-23496: can not change disabled status for "string" and "string"

Cause: The disabled status for this site is set internally for synchronization during adding a new master without quiescing.

Action: Ensure adding a new master without quiescing finished before invoking this procedure.

ORA-23497: reppgroup name cannot be null

Cause: The array of Reppgroup names contains a null value.

Action: Ensure that the array of Reppgroup names is dense and is not null terminated.

ORA-23498: reppgroups specified must have the same masters

Cause: The Reppgroup names specified do not have the same masters.

Action: Ensure that the Reppgroup names specified have the same masters.

ORA-23500: cannot switch master for a multi-tier materialized view reppgroup "string"."string"

Cause: An attempt was made to switch master for a materialized view reppgroup when its parent reppgroup is also a materialized view reppgroup. This is not allowed.

Action: Drop and recreate the materialized view reppgroup based on a proper parent reppgroup.

ORA-23501: refresh template cannot be instantiated for database with compatibility equal to or less than 8.0

Cause: Instantiation of a refresh template is not supported for database compatibility 8.0 or less.

Action: Be sure the database compatibility is 8.1 or above.

ORA-23502: valid directory for offline instantiation is not specified

Cause: An attempt was made to offline instantiate to a directory which is not specified or null.

Action: There are two ways to specify the directory: o As a parm offline_dirpath to the API o As an init.ora parm named utl_file_dir Make sure you have specified an appropriate directory in which the offline file can be created.

ORA-23503: error occurred during IAS instantiation

Cause: An attempt was made to instantiate a IAS site. Error occurred during IAS instantiation.

Action: See other errors on the error stack to look for the source of the problem. If the error still persists, contact Oracle Support.

ORA-23504: columns added to table do not match list of columns to be added

Cause: The list of columns passed as a parameter does not match the columns to be added to the table.

Action: Correct the DDL string or list of columns and reexecute.

ORA-23505: Object "string"."string" is missing.

Cause: The specified object does not exist.

Action: Check that the specified object is correct.

ORA-23514: invalid or incorrect number of arguments

Cause: The arguments passed to the online redefinition API were invalid or missing.

Action: Call the online redefinition API with the right number of valid arguments.

ORA-23515: materialized views and/or their indices exist in the tablespace

Cause: An attempt was made to drop a tablespace which contains materialized views and/or their indices.

Action: Drop the materialized views in this tablespace. Also, find indices belonging to materialized views in this tablespace and drop them. Then try dropping the tablespace.

ORA-23531: site owner already exists in the template.

Cause: Site owner for the template already exists.

Action: Do not create multiple siteowners for this template.

ORA-23532: tables with different synchronization mechanisms are in the same group

Cause: Tables belonging to the same replication group were specified to be cached with different synchronization mechanisms.

Action: Do not specify different synchronization mechanisms while caching tables belonging to the same replication group.

ORA-23533: object "*string*"."*string*" can not be cached

Cause: An attempt was made to cache an object which is not supported.

Action: Do not cache an object which is not supported.

ORA-23534: missing column in materialized view container table "*string*"."*string*"

Cause: After import, the materialized view container table has missing columns.

Action: Check if materialized view container table was imported correctly.

ORA-23535: instantiating templates from multiple back ends is not allowed.

Cause: An attempt was made to set a new non-null back end database for an iAS site.

Action: Call `dbms_ias_configure.set_back_end_db` procedure with null dblink. Then, call the same procedure with the new non-null dblink.

ORA-23536: the object "*string*"."*string*" is not cached at the middle tier as expected.

Cause: The object may have been dropped or renamed at the back end after `dbms_ias_inst.start_ias_inst` was executed.

Action: Check the validity of the object at the back end and retry the instantiation.

ORA-23537: function or procedure *string* is not allowed to be invoked from this site.

Cause: This function or procedure is restricted to the backend or middle tier site

Action: Connect to the proper site before calling this function or procedure.

ORA-23538: cannot explicitly refresh a NEVER REFRESH materialized view ("*string*")

Cause: An attempt was made to explicitly refresh a NEVER REFRESH MV.

Action: Do not perform this refresh operation or remove the MV(s) from the list.

ORA-23539: table "*string*"."*string*" currently being redefined

Cause: An attempt was made to redefine a table which is currently involved in an ongoing redefinition.

Action: Do not perform this redefinition operation on this table or wait till the ongoing redefinition of the table is completed.

ORA-23540: Redefinition not defined or initiated

Cause: An attempt was made to continue or complete a redefinition which was not defined or initiated.

Action: Define or initiate the redefinition before performing this operation.

ORA-23541: tables do not match tables used while defining the redefinition

Cause: An attempt was made to continue or complete a redefinition by providing different tables than those used while defining or initiating the redefinition.

Action: Repeat this operation and specify the same tables as those that were specified while defining or initiating the redefinition.

ORA-23542: dependent object "*string*"."*string*" already registered

Cause: An attempt was made to register an already registered dependent object to an ongoing redefinition.

Action: Do not attempt to register an already registered dependent object to an ongoing redefinition.

ORA-23543: materialized view log on "*string*"."*string*" is in an inconsistent state

Cause: There was an error while creating the materialized view log and the log is currently in an inconsistent state. A possible cause could be that schema redefinition has occurred on the master table while the log was being created. Another possible cause could be that there were DMLs being applied on the master table concurrently in another session at the time the materialized view log creation started and those DML transactions haven't committed even after a very long period of time.

Action: Drop the materialized view log and recreate it.

ORA-23546: cannot create rowid mapping table *string.string*

Cause: The online partition mover could not create a rowid mapping table.

Action: Rename the conflicting table or rerun the SQL statement. * There may be a concurrent online operation on the same object.

ORA-23547: dml_lock_timeout value is out of the permitted range

Cause: The value for `dml_lock_timeout` was out of the permitted range of 0 to 1,000,000.

Action: Use a value within the range of 0 to 1,000,000 and reexecute the procedure

ORA-23549: table "*string*"."*string*" involved in reference partitioning

Cause: An attempt was made to redefine a table which is currently involved in reference partitioning.

Action: Do not perform this redefinition operation on this table or remove reference partitioning and retry the operation.

ORA-23550: cannot redefine a table with interim table having identity columns that appear in column mapping

Cause: An attempt was made to redefine a table where the interim table has identity columns that appear in column mapping.

Action: Do not perform this redefinition operation or avoid using identity columns of the interim table in column mapping.

ORA-23551: unsupported UPDATE statement on an index-organized table

Cause: An attempt was made to update primary key columns of an index-organized table.

Action: Do not perform this redefinition operation or avoid updating primary key columns.

ORA-23552: cannot redefine an interval partitioned table with ILM policy

Cause: An attempt was made to redefine a table that has interval partitioning with ILM policy defined on it.

Action: Do not perform this redefinition operation or avoid using interval partitions when ILM policy needs to be used.

ORA-23553: cannot import materialized view "*string*". "*string*" due to synonym mismatch

Cause: Synonym mismatch occurred during the import of materialized views when REMAP_SCHEMA option was specified.

Action: Do not use the REMAP_SCHEMA option for importing materialized views with synonyms.

ORA-23554: cannot modify the contents of a staging log table

Cause: An attempt was made to alter the contents of a staging log table.

Action: Do not use the ALTER TABLE statements on a staging log table.

ORA-23600: cannot create PROPAGATION, *string* already exists

Cause: The propagate_name already exists.

Action: Drop the propagate_name using DROP_PROPAGATE command or specify propagate_name.

ORA-23601: PROPAGATION_NAME *string* does not exist

Cause: Propagation does not exist.

Action: Query DBA_PROPAGATION view to find existing propagation_name

ORA-23602: Invalid *string* process type *string*

Cause: Specified GoldenGate, XStream or Streams process type is not valid.

Action: Specify either capture or apply.

ORA-23603: *string* enqueue aborted due to low SGA

Cause: An attempt to enqueue a GoldenGate, XStream or Streams message was aborted because ORACLE is running low on memory allotted.

Action: Either start consuming messages by enabling any GoldenGate, XStream or Streams propagation or apply which might be disabled. An alternative is to allot more memory to STREAMS, which can be done by increasing the streams_pool_size initialization parameter if one was defined or by increasing the shared_pool_size.

ORA-23604: cannot create or start an instance, maximum limit reached

Cause: The maximum limit for creating or starting Oracle GoldenGate Extract instances was reached.

Action: Either stop a running Oracle GoldenGate Extract instance or increase the maximum limit.

ORA-23605: invalid value "*string*" for *string* parameter *string*

Cause: An attempt was made to specify an invalid parameter value.

Action: Specify a valid value for the parameter. Check the documentation for valid parameter values.

ORA-23606: invalid object *string*

Cause: An attempt was made to specify an invalid object.

Action: Specify a valid object.

ORA-23607: invalid column "*string*"

Cause: An invalid column was specified in the column list.

Action: Check the columns in the object and specify the right column name.

ORA-23608: invalid resolution column "*string*"

Cause: An invalid column was specified as the resolution column. The resolution column must belong to the list of columns specified in the 'column_list' parameter.

Action: Check the columns in the column_list and specify the right resolution column name.

ORA-23609: unable to find directory object for directory *string*

Cause: There was no entry in ALL_DIRECTORIES corresponding to the specified directory.

Action: Grant to the current user appropriate privileges on either a new directory object or an existing directory object.

ORA-23610: internal dbms_streams_tablespaces error: [*string*] [*string*] [*string*] [*string*]

Cause: Streams detected an erroneous result.

Action: Look for information in the session trace file and contact customer support.

ORA-23611: tablespace "*string*" has more than one data file

Cause: The specified tablespace had more than one data file and hence did not qualify as a simple tablespace.

Action: Choose a self-contained tablespace with a single data file, or use a procedure that supports any tablespace.

ORA-23612: unable to find tablespace "*string*"

Cause: Either the tablespace did not exist, or the current user did not have sufficient privileges on the tablespace.

Action: Grant appropriate privileges on the tablespace to the current user or choose a different tablespace.

ORA-23613: Script *string* already exists

Cause: A script for the specified invoking package already existed.

Action: Complete the previous invocation or drop the previous invocation before proceeding with the current invocation.

ORA-23614: Script *string* does not exist

Cause: The named script did not exist.

Action: Create the script.

ORA-23615: Block number *string* does not exist for script *string*

Cause: The specified block number did not exist for the script.

Action: Add the block or check the block number and reexecute.

ORA-23616: Failure in executing block *string* for script *string* with *lnstring*

Cause: The execution of specified block failed.

Action: Check the error. Query DBA_RECOVERABLE_SCRIPT_BLOCKS to view the failed block. Rectify and rerun the block or script.

ORA-23617: Block *string* for script *string* has already been executed

Cause: The specified block was already executed.

Action: Check the block number and reissue the command.

ORA-23618: Generation of script *string* is not complete.

Cause: Script generation for the specified script was not completed in a prior invocation.

Action: Purge the specified script by calling the RECOVER_OPERATION API in the package DBMS_STREAMS_ADM and reattempt the entire operation.

ORA-23619: non-Oracle system error: *string*

Cause: A non-Oracle database has returned an error message to STREAMS when attempting to apply a DML statement. The non-Oracle system error message is a parameter to this Oracle error.

Action: Corrective action may or may not be possible (depending on the non-Oracle system error). If corrective action is possible, correct the problem and try applying the transaction again.

ORA-23620: bind value size too large for PL/SQL CALL operation

Cause: In a PL/SQL CALL to a stored procedure, the bind string size exceeded 4K.

Action: Either make the bind string size shorter (less than 4K) or use BEGIN-END to call the procedure instead of CALL.

ORA-23621: Operation corresponding to script *string* is in progress.

Cause: The script was already being run in a different session or was terminated before status for the script was updated to ERROR or EXECUTED.

Action: Make sure the script is not being run in a parallel session. Then call the RECOVER_OPERATION API in the DBMS_STREAMS_ADM package with the appropriate OPERATION_MODE argument.

ORA-23622: Operation *string.string.string* is in progress.

Cause: An attempt was made to execute a procedure which was being executed in a parallel session or failed execution.

Action: Query the DBA_RECOVERABLE_SCRIPT view to identify the operation that is currently in progress for the specified invoking procedure. Complete the operation before proceeding.

ORA-23623: internal DBMS_COMPARISON error: [string] [string] [string] [string]

Cause: DBMS_COMPARISON detected an erroneous result.

Action: Look for information in the session trace file and contact Oracle Support Services.

ORA-23624: A comparison operation is currently in progress for string.

Cause: Another session was already performing an operation on this object.

Action: Retry the operation once other sessions are done with the specific comparison object.

ORA-23625: Table shapes of string.string and string.string@string did not match.

Cause: Table shapes of local and remote tables to compare did not match.

Action: Retry by explicitly specifying columns that match in column_list or create views on the tables as appropriate.

ORA-23626: No eligible index on table string.string

Cause: Table did not have an eligible index to use for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index on a column of certain data types. Check the documentation for supported data types.

ORA-23627: Comparison object string already existed.

Cause: A comparison object by the specified name already exists.

Action: Retry with a different name.

ORA-23628: Comparison query too long (actual string, allowed string).

Cause: A generated query for comparison was too long.

Action: Comparison is unsupported for very large tables with long column names. Retry with a subset of columns or with shorter column names.

ORA-23629: string.string is not an eligible index on table string.string for comparison

Cause: The specified index was not an eligible index to use for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index. Please specify an eligible index for the table to be compared.

ORA-23630: Cannot switch to apply-state checkpoint mode (value "string", string parameter string), due to the following reason:

Cause: Could not switch to apply-state checkpoint mode, or already in apply-state checkpoint mode.

Action: Can switch to apply-state checkpoint mode only if the capture is new (it never ran), the capture wasn't cloned from a capture with checkpoints, the capture doesn't include any extra attributes, and combined capture and apply is enabled.

ORA-23631: apply-state checkpoint mode cannot change (value "string", string parameter string)

Cause: Could not switch to checkpoints because apply-state checkpoint mode was set.

Action: Drop the apply-state checkpoint capture and create a new one that will / take checkpoints.

ORA-23632: Cannot force checkpoints in apply-state checkpoint mode (value "string", string parameter string)

Cause: The capture process was in apply-state checkpoint mode.

Action: Cannot take checkpoints in apply-state checkpoint mode.

ORA-23633: Cannot turn off combined capture and apply mode in apply-state checkpoint mode (value "string", string parameter string)

Cause: The capture was running in apply-state checkpoint mode and had to run in combined capture and apply mode also.

Action: Ensure that this capture runs in combined capture and apply by dropping additional propagation or apply processes for the same queue.

ORA-23634: Cannot include extra attributes in apply-state checkpoint mode

Cause: The capture process was in apply-state checkpoint mode.

Action: Extra attributes are not supported in apply-state checkpoint mode.

ORA-23635: MAINTAIN_TTS: tablespace(s) already exist(s) in target database.

Cause: The tablespaces were already in existence in the target database when the streams MAINTAIN_TTS APIs were called."

Action: Check whether you can drop the tablespaces to be maintained in the target database. If not, don't use streams MAINTAIN_TTS APIs to setup streams. Check the Oracle documentation on how to setup streams.

ORA-23636: MAINTAIN_TTS: Invalid tablespace name, reason: string.

Cause: The tablespace name was either NULL or too long when the streams MAINTAIN_TTS APIs were called.

Action: Check that the specified tablespace names are not NULL and are spelled correctly. If there are too many tablespaces, group them together and call the streams MAINTAIN_TTS APIs for the group.

ORA-23637: Capture started in checkpoint mode**ORA-23638: Capture cloned from a capture with checkpoints****ORA-23639: Extra Attribute included****ORA-23640: Combined capture and apply disabled****ORA-23641: Capture started in apply-state checkpoint mode already****ORA-23642: Cannot switch to checkpoint mode (value "string", string parameter string)**

Cause: Capture was cloned from a capture in apply-state checkpoint mode.

Action: Clone from a capture with checkpoints.

ORA-23643: Capture cloned from a capture in apply-state checkpoint mode**ORA-23644: Cannot switch to apply-state checkpoint mode (Capture *string*)**

Cause: Switch to apply-state checkpoint mode was prevented by a previous error.

Action: See the previous error for the appropriate action.

ORA-23645: Cannot switch to checkpoints (Capture *string*)

Cause: Switch to checkpoints was prevented by a previous error.

Action: See the previous error for the appropriate action.

ORA-23646: *string string* process *string* does not exist

Cause: Capture or Apply did not exist.

Action: Create a Capture or Apply process, then try again.

ORA-23647: *string string* process *string* is not running

Cause: Capture or Apply were not running.

Action: Start Capture or Apply process, then try again

ORA-23648: Capture *string* is for Change Data Capture

Cause: Capture was for Change Data Capture, and checkpoints were required.

Action: None

ORA-23649: Capture *string* is for Audit Vault

Cause: Capture was for Audit Vault, and checkpoints were required.

Action: None

ORA-23650: No progress Capture *string*

Cause: Capture was not capturing changes.

Action: Make sure Capture is running and capturing changes.

ORA-23651: Capture *string* is already in *string* mode

Cause: Capture was already in the desired mode.

Action: None

ORA-23652: The oldest SCN could not be updated at Apply *string*

Cause: The oldest SCN was not updated before the switch was performed.

Action: Make sure Apply is running and the switch package version is the same at both databases.

ORA-23653: LogMiner session does not exist

Cause: LogMiner session did not exist.

Action: Make sure the Capture process exists.

ORA-23654: Attempting to set the oldest SCN to a greater value (*string*) than the current one (*string*) at Apply *string*

Cause: The new value for the oldest SCN was not computed correctly.

Action: Make sure Capture and Apply are running, and Capture is making progress.

ORA-23655: The SCN range cannot be smaller than 0, (SCN range = *string*)

Cause: The function was invoked with a negative SCN range.

Action: Use a positive SCN range.

ORA-23656: Timeout occurred while *string string process string*

Cause: The GoldenGate, XStream or Streams process could not be stopped or started.

Action: Call the switch procedure again.

ORA-23657: the converted file *string* already exists

Cause: The converted file was already in existence. CONVERT FILE call does not overwrite the existing file.

Action: Check whether the existing file can be deleted. If the existing file can be deleted, delete it. Otherwise, specify a different directory or file extension.

ORA-23658: Invalid character set specified when converting column '*string*' in '*string.string*'

Cause: The conversion between two character sets for the column in the given table is not supported.

Action: Check if the implicit conversion between source and destination column is supported.

ORA-23659: Destination buffer is not large enough when converting column '*string*' in '*string.string*' (actual length: *string*; maximum length: *string*)

Cause: The conversion between two character sets failed because a source column value is too large for the destination column.

Action: Check if size of the source and destination column matches.

ORA-23660: Unable to load NLS data object when converting column '*string*' in '*string.string*'

Cause: It may be caused by invalid NLS environment setting.

Action: Check your NLS environment setting.

ORA-23661: Canon capture name "*string*" not found

Cause: There's no such capture process

Action: Pass the right parameter to the function

ORA-23662: subset rule length exceeds maximum allowed value

Cause: The length of an insert, update, or delete subset rule computed from the DML condition input exceeded the maximum allowed length.

Action: Make the DML condition shorter.

ORA-23663: local object *string.string* is not a single table view

Cause: The view was based either on another view or multiple tables or views.

Action: For comparison, specify a view based on a single table.

ORA-23664: remote object *string.string* is not a single table view

Cause: The view was based either on another view or multiple tables or views.

Action: For comparison, specify a view based on a single table.

ORA-23665: DML conflict handler "*string*" not found

Cause: The DML conflict handler was not found for modification or removal.

Action: Make sure the name of the conflict handler is correct and that it exists.

ORA-23666: Default column group in use by DML conflict handler "*string*"

Cause: A default column group was found for the specified Apply name, operation name, and conflict type.

Action: Remove the existing default column group and retry.

ORA-23667: Column "*string*" already used by conflict handler "*string*"

Cause: The column was already in the column group of another conflict handler for the specified Apply name, operation name, and conflict type.

Action: Remove the column from the other conflict handler or specify a different column.

ORA-23668: Column "*string*" does not have a numeric data type.

Cause: The specified column did not have a numeric data type. Delta conflict resolution requires numeric columns.

Action: Check the data type of the column and specify only numeric columns.

ORA-23669: Duplicate conflict handler name

Cause: A DML conflict handler with the specified name was found.

Action: Remove the current DML conflict handler or specify a different name.

ORA-23670: Duplicate column name "*string*"

Cause: The specified value was duplicated in the column group list.

Action: Remove duplicated entries from the column group list.

ORA-23671: Default column group required

Cause: A default column group was not specified. The specified Apply name, operation name, and conflict type is only supported on default column groups.

Action: Specify a default column group.

ORA-23672: Column not specified in column group for DML conflict handling for table "*string*". "*string*"

Cause: The specified table contained a column that was not specified as part of a column group.

Action: Add the column to a column group.

ORA-23673: Invalid resolution column "*string*" for table "*string*". "*string*"

Cause: The specified resolution column was not valid.

Action: Set the resolution column to a valid column.

ORA-23674: Unable to handle delta conflict resolution for table "*string*". "*string*"

Cause: The specified table or the LCR contained a null value in one of the columns belonging to a delta conflict group.

Action: Correct each delta column in the table or the error LCR if it currently has a null value.

ORA-23675: Unsupported OPERATION_NAME, CONFLICT_TYPE, and METHOD_NAME

Cause: The specified OPERATION_NAME, CONFLICT_TYPE, and METHOD_NAME was not a valid set of parameters.

Action: Retry with a valid set of parameters.

ORA-23676: no eligible index on local table "*string*"."*string*"

Cause: The local table did not have an eligible index to use for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index on a column of certain data types. Check the documentation for supported data types.

ORA-23677: no eligible index on remote table "*string*"."*string*"

Cause: The remote table did not have an eligible index to use for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index on a column of certain data types. Check the documentation for supported data types.

ORA-23678: index "*string*"."*string*" on local table "*string*"."*string*" is not eligible for comparison

Cause: The specified index was not eligible for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index. Specify an eligible index for the table to be compared.

ORA-23679: index "*string*"."*string*" on remote table "*string*"."*string*" is not eligible for comparison

Cause: The specified index was not eligible for comparison.

Action: For a table to be compared using DBMS_COMPARISON, the table must have an appropriate index. Specify an eligible index for the table to be compared.

ORA-24000: invalid value *string*, *string* should be of the form [SCHEMA.]NAME

Cause: An invalid value was specified for the parameter.

Action: Specify a string of the form [SCHEMA.]NAME .

ORA-24001: cannot create QUEUE_TABLE, *string* already exists

Cause: The queue table already exists in the queueing system.

Action: Drop the table first using the DROP_QUEUE_TABLE() command or specify another table.

ORA-24002: QUEUE_TABLE *string* does not exist

Cause: Queue_table not exist.

Action: Query on the user view USER_QUEUE_TABLES to find out existing queue tables.

ORA-24003: Queue table index *string* inconsistent with queue table *string*

Cause: The queue table index has not yet been successfully imported.

Action: Import the queue table index before attempting to use the queue table. If the import failed, correct the problem and try to import the queue table index again.

ORA-24004: invalid column name *string* in SORT_LIST, should be ENQ_TIME or PRIORITY

Cause: Invalid column name was specified in the SORT_LIST.

Action: The valid column names are ENQ_TIME and PRIORITY.

ORA-24005: Inappropriate utilities used to perform DDL on AQ table *string.string*

Cause: An attempt was made to use the SQL command DROP TABLE or TRUNCATE TABLE or ALTER TABLE on queue metadata or tables.

Action: Use the DBMS_AQADM.DROP_QUEUE_TABLE to DROP TABLE, DBMS_AQADM.PURGE_QUEUE_TABLE to TRUNCATE TABLE. ALTER TABLE redefinition based on only ALTER_TABLE_PROPERTIES and ALTER_TABLE_PARTITIONING clauses are allowed.

ORA-24006: cannot create QUEUE, *string* already exists

Cause: The queue requested to be created already exists.

Action: Specify another queue name. Query USER_QUEUES for all the existing queues in the user's schema.

ORA-24007: invalid value *string*, MAX_RETRIES should be non-negative integer

Cause: An invalid value was specified for MAX_RETRIES.

Action: Specify a non-negative integer.

ORA-24008: queue table *string.string* must be dropped first

Cause: An error was detected when dropping a queue table in a cluster, tablespace, or schema.

Action: Use the DBMS_AQADM.DROP_QUEUE_TABLE procedure to drop the specified queue table first; then, retry the operation.

ORA-24009: invalid value *string*, QUEUE_TYPE should be NORMAL_QUEUE or EXCEPTION_QUEUE

Cause: Invalid queue type parameter

Action: Valid values are NORMAL_QUEUE for normal queue and EXCEPTION_QUEUE for exception queue.

ORA-24010: QUEUE *string* does not exist

Cause: The specified queue does not exist.

Action: Specify a valid queue. Query USER_QUEUES for all the valid queues.

ORA-24011: cannot drop QUEUE, *string* should be stopped first

Cause: The queue has not been stopped i.e. either enqueue or dequeue is still enabled.

Action: Stop the queue first using the STOP_QUEUE command and disable it from both enqueueing and dequeueing.

ORA-24012: cannot drop QUEUE_TABLE, some queues in *string* have not been dropped

Cause: A queue exists in the queue table which has not been dropped. All queues need to be dropped first.

Action: Drop all queues belonging to this queue table using the `drop_queue()` command. Be sure to stop the queues appropriately before dropping them. Alternately, use the force option in `drop_queue` table.

ORA-24013: invalid value *string*, RETRY_DELAY should be non-negative

Cause: A negative value was specified for `RETRY_DELAY`.

Action: Specify a non-negative value for `RETRY_DELAY`.

ORA-24014: invalid value *string*, RETENTION_TIME should be FOREVER or non-negative

Cause: Queue retention was specified, but the retention time was specified to be less than zero.

Action: Specify the retention time to be non-negative or `FOREVER`. Alternately don't specify retention.

ORA-24015: cannot create QUEUE_TABLE, QUEUE_PAYLOAD_TYPE *string.string* does not exist

Cause: An invalid `QUEUE_PAYLOAD_TYPE` specified during `create_queue_table`.

Action: The `QUEUE_PAYLOAD_TYPE` should be `RAW` or an object type that already exists in the database.

ORA-24016: cannot create QUEUE_TABLE, user *string* does not have execute privileges on QUEUE_PAYLOAD_TYPE *string.string*

Cause: An invalid object type specified for `QUEUE_PAYLOAD_TYPE` during `create_queue_table`.

Action: The user should have execute privileges on the object type specified for the queue.

ORA-24017: cannot enable enqueue on QUEUE, *string* is an exception queue

Cause: User tried to enable enqueueing to an exception queue.

Action: None

ORA-24018: STOP_QUEUE on *string* failed, outstanding transactions found

Cause: There were outstanding transactions on the queue, and `WAIT` was set to false, so `STOP_QUEUE` was unsuccessful in stopping the queue.

Action: Set `WAIT` to `TRUE` and try `STOP_QUEUE` again. It will hang till all outstanding transactions are completed.

ORA-24019: identifier for *string* too long, should not be greater than *string* characters

Cause: The identifier specified is too long.

Action: Try again with a shorter identifier.

ORA-24020: Internal error in DBMS_AQ_IMPORT_INTERNAL, *string*

Cause: Internal Error occurred in the package `DBMS_AQ_IMPORT_INTERNAL`.

Action: Internal error, call Oracle Support.

ORA-24021: queue table definition not imported for *string.string*

Cause: The queue definition is not updated because the queue table was not imported properly

Action: Import the queue table again.

ORA-24022: the specified parameters has no effect on the queue

Cause: The parameter combination will not cause the queue to be started or stopped.

Action: None. This is just a warning.

ORA-24023: Internal error in DBMS_AQ_EXP_INTERNAL.*string* [*string*] [*string*]

Cause: Internal Error occurred in the package DBMS_AQ_EXP_INTERNAL.

Action: Internal error, call Oracle Support.

ORA-24024: Internal error in DBMS_AQ_IMP_INTERNAL.*string* [*string*] [*string*]

Cause: Internal Error occurred in the package DBMS_AQ_IMP_INTERNAL.

Action: Internal error, call Oracle Support.

ORA-24025: invalid value *string*, QUEUE_PAYLOAD_TYPE should be RAW or an object type

Cause: Parameter queue_payload_type has invalid value.

Action: Specify a valid object type or RAW.

ORA-24026: operation failed, queue *string.string* has errors

Cause: An attempt was made to enqueue, dequeue or administer a queue which has errors.

Action: Drop the queue table setting the force option to true.

ORA-24027: AQ HTTP propagation encountered error, status-code *string*, *string*

Cause: AQ propagation's HTTP request to the propagation servlet at the specified address encountered an error

Action: Specify a valid address in the connect string of the propagation destination dblink, the dblink user has the correct permissions, check if the AQ propagation servlet was properly installed.

ORA-24028: cannot create a receiver non-repudiable single consumer queue

Cause: Tried to create a receiver non-repudiable single consumer queue

Action: This feature is not supported

ORA-24029: operation not allowed on a single-consumer queue

Cause: Tried an operation not allowed on a single-consumer queue.

Action: Specify the operation on a multi-consumer queue.

ORA-24030: Only one of rule or rule-set must be specified

Cause: Specified both a rule and rule-set for the operation.

Action: Specify only one of rule or rule-set.

ORA-24031: invalid value, *string* should be non-NULL

Cause: Parameter is NULL.

Action: Specify a non NULL value for the parameter.

ORA-24032: object *string* exists, index could not be created for queue table *string*

Cause: Oracle AQ tried to create an index with the name specified in the error message. The index could not be created for the specified queue table because a object exists with the same name.

Action: Drop the object specified in the error message and retry the command. You can also choose a different name for the queue table.

ORA-24033: no recipients for message

Cause: An enqueue was performed on a queue that has been set up for multiple dequeuers but there were neither explicit recipients specified in the call nor were any queue subscribers determined to be recipients for this message.

Action: Either pass a list of recipients in the enqueue call or add subscribers to the queue for receiving this message.

ORA-24034: application *string* is already a subscriber for queue *string*

Cause: An application name that was already a subscriber for the queue was specified in the `dbms_aq.subscribe` call.

Action: n/a

ORA-24035: AQ agent *string* is not a subscriber for queue *string*

Cause: An AQ agent that was not a subscriber for the queue was specified.

Action: Check the name and/or address of the agent and retry the call.

ORA-24036: invalid `SORT_ORDER` column *string* specified for queue table

Cause: The create queue table command was issued with `message_grouping` set to `TRANSACTIONAL` and a sort order column other than `priority`. Only the `priority` column can be specified in the sort order for queue tables with transactional grouping.

Action: Change the sort order list in the create queue table command and retry the call.

ORA-24037: schema *string* in `QUEUE_NAME` is not same as schema *string* in `QUEUE_TABLE`

Cause: The schema specified in the `QUEUE_NAME` parameter of `CREATE_QUEUE` is not the same as the schema specified in the `QUEUE_TABLE` parameter.

Action: Use the same schema name for both the `QUEUE_NAME` and `QUEUE_TABLE` parameters and retry the command.

ORA-24038: `RETRY_DELAY` and `MAX_RETRIES` cannot be used for a 8.0 compatible multiple consumer queue

Cause: The `CREATE_QUEUE` or `ALTER_QUEUE` command was issued with a non-zero `RETRY_DELAY` and a `QUEUE_TABLE` that was created for multiple consumers and with `COMPATIBLE` parameter set to '8.0'.

Action: Either set the `RETRY_DELAY` to zero or upgrade the queue table to 8.1 compatible using the `DBMS_AQADM.MIGRATE_QUEUE_TABLE` procedure.

ORA-24039: Queue *string* not created in queue table for multiple consumers

Cause: Either an `ADD_SUBSCRIBER`, `ALTER_SUBSCRIBER`, or `REMOVE_SUBSCRIBER` procedure, or an `ENQUEUE` with a non-empty recipient list, was issued on a queue that was not created for multiple consumers.

Action: Create the queue in a queue table that was created for multiple consumers and retry the call.

ORA-24041: propagation schedule exists for QUEUE *string* and DESTINATION *string*

Cause: A SCHEDULE_PROPAGATION was issued for a queue and destination pair which has an existing propagation schedule.

Action: Issue UNSCHEDULE_PROPAGATION to remove the existing schedule and then reissue the SCHEDULE_PROPAGATION call.

ORA-24042: no propagation schedule exists for QUEUE *string* and DESTINATION *string*

Cause: AN UNSCHEDULE_PROPAGATION was issued for a queue and destination pair which has no existing propagation schedule.

Action: Verify the spelling of the specified QUEUE and DESTINATION and then reissue the call with the correct spelling.

ORA-24043: destination *string* uses a reserved name, names with AQ\$_ prefix are not valid

Cause: An attempt was made to specify a reserved name for a destination.

Action: Enter a different value or NULL for the local destination. Then retry the operation.

ORA-24044: source *string* and destination *string* object types do not match

Cause: A message recipient's queue has a different object structure than the sender's queue. The message cannot be propagated.

Action: Either remove the recipient from the subscriber's list for the sender's queue or create the destination queue with an object type that matches the source queue's object type.

ORA-24045: invalid agent address *string*, agent address should be of the form [SCHEMA.]NAME[@DATABASE LINK]

Cause: An invalid value was specified for the agent address parameter.

Action: Specify a string of the form [SCHEMA.]NAME[@DATABASE LINK].

ORA-24046: protocol attribute reserved for future use

Cause: The protocol attribute of the AQ agent object type is reserved for future use.

Action: Do not specify the protocol attribute in the agent object type.

ORA-24047: invalid agent name *string*, agent name should be of the form NAME

Cause: An invalid value was specified for the agent name parameter.

Action: Specify a string of the form NAME. Then retry the operation.

ORA-24048: cannot create QUEUE_TABLE, user does not have access to AQ object types

Cause: An attempt was made to issue the CREATE_QUEUE_TABLE command, but the user who issued the command does not have access to internal AQ object types.

Action: Use the DBMS_AQADM.GRANT_TYPE_ACCESS procedure to grant the user access to the AQ object types.

ORA-24049: invalid agent name *string*, names with AQ\$_ prefix are not valid

Cause: An attempt was made to use a reserved prefix in the agent name.

Action: Enter a different value for the agent name. Then, retry the operation.

ORA-24050: subscribers are not supported for exception queue *string*

Cause: An ADD_SUBSCRIBER, ALTER_SUBSCRIBER, or REMOVE_SUBSCRIBER procedure was issued on a queue that was created as an EXCEPTION_QUEUE.

Action: Specify a NORMAL_QUEUE in the procedure.

ORA-24051: cannot propagate object type payloads that have a REF attribute

Cause: An ADD_SUBSCRIBER or ENQUEUE procedure with a non-NULL address field in the agent type was issued on a queue whose payload has a REF attribute. Propagation of object type payloads that have a REF attribute currently is not supported.

Action: Specify an agent with a NULL address field so that the agent can dequeue from the same queue. Or, change the object type definition to one that does not use REF attributes.

ORA-24052: cannot propagate object type payloads with LOB attributes to an 8.0 release

Cause: The recipient of a message with LOB attributes was using an Oracle 8.0 release. Propagation of LOB attributes is supported only in Oracle 8.1 and higher releases.

Action: Upgrade the target release to Oracle 8.1 and retry. Or, change the object type definition to one that does not use LOBs.

ORA-24053: PRIMARY_INSTANCE and SECONDARY_INSTANCE must be non-negative

Cause: One of PRIMARY_INSTANCE or SECONDARY_INSTANCE was negative.

Action: Specify non-negative integers for PRIMARY_INSTANCE and SECONDARY_INSTANCE.

ORA-24054: cannot propagate to an Oracle 8.0.3 release or lower release

Cause: The recipient of a message was using an Oracle 8.0.3 release or lower release. Propagation is supported only in Oracle 8.0.4 and higher releases.

Action: Upgrade the target release to Oracle 8.0.4 or higher and retry.

ORA-24055: cannot delete propagation status rows that are in prepared state

Cause: An attempt was made to use the internal administration procedure to delete status rows from the SYS.AQ\$_PROPAGATION_STATUS table that were in the prepared state.

Action: Wait for the propagation to complete successfully before retrying the operation.

ORA-24056: internal inconsistency for QUEUE *string* and destination *string*

Cause: The sequence numbers used in the SYS.AQ\$_PROPAGATION_STATUS table were inconsistent for the given queue and destination.

Action: Contact Oracle Worldwide Support.

ORA-24057: cannot define subscriber with rule for queue *string*

Cause: An ADD_SUBSCRIBER or ALTER_SUBSCRIBER procedure with a rule was issued on a queue for which rule based subscribers are not supported. Rule based subscribers currently are supported only for NORMAL (persistent) multi-consumer queues created using an Oracle release 8.1.0 or higher compatible queue table.

Action: Create a NORMAL multi-consumer queue in an Oracle release 8.1.0 or higher compatible queue table, and retry the call. Or, if the queue is a normal (persistent) multi-consumer queue, convert the queue table to Oracle 8.1.0 or higher compatibility and retry.

ORA-24058: cannot downgrade QUEUE_TABLE that has propagation in a prepared state

Cause: An attempt was made to downgrade the queue table when there were messages being propagated that were in the prepared state.

Action: Wait for the propagation to complete before retrying the operation.

ORA-24059: invalid COMPATIBLE parameter setting *string* specified in DBMS_AQADM.*string*

Cause: An invalid compatible parameter was specified in the DBMS_AQADM procedure. The parameter setting must be of the form '8.x.y' where x is the release number and y is the update number.

Action: Specify a valid COMPATIBLE parameter setting, and retry the operation.

ORA-24060: cannot convert QUEUE_TABLE, *string* already is compatible with release *string*

Cause: The source queue table in the DBMS_AQADM procedure is compatible with the specified COMPATIBLE parameter setting.

Action: Choose a different COMPATIBLE parameter setting to convert the queue table to the desired compatibility.

ORA-24061: cannot specify non-zero SECONDARY_INSTANCE if PRIMARY_INSTANCE was zero

Cause: A non-zero value was specified for SECONDARY_INSTANCE when PRIMARY_INSTANCE was zero.

Action: Specify a non-zero primary instance before you specify a non-zero secondary instance.

ORA-24062: Subscriber table *string* inconsistent with queue table *string*

Cause: The subscriber table has not yet been successfully imported.

Action: Import the subscriber table before attempting to use the queue table. If the import failed, correct the problem and try to import the subscriber table again.

ORA-24063: cannot downgrade QUEUE_TABLE that has queues with rule-based subscribers

Cause: An attempt was made to downgrade the queue table when there were queues on which rule based subscribers are defined.

Action: Remove the rule based subscribers for all queues in this queue table and retry.

ORA-24064: propagation for QUEUE *string* and DESTINATION *string* already enabled

Cause: An ENABLE_SCHEDULE_PROPAGATION command was issued for a queue and destination pair whose propagation schedule already was enabled.

Action: Make sure the QUEUE and DESTINATION are correct when you issue the ENABLE_SCHEDULE_PROPAGATION command.

ORA-24065: propagation for QUEUE *string* and DESTINATION *string* already disabled

Cause: A DISABLE_SCHEDULE_PROPAGATION command was issued for a queue and destination pair whose propagation schedule already was disabled.

Action: Make sure the QUEUE and DESTINATION are correct when you issue the DISABLE_SCHEDULE_PROPAGATION command.

ORA-24066: invalid privilege specified

Cause: An invalid privilege is specified for granting or revoking privilege

Action: Specify a valid privilege.

ORA-24067: exceeded maximum number of subscribers for queue *string*

Cause: An attempt was made to add new subscribers to the specified, but the number of subscribers for this queue has exceeded the maximum number (1024) of subscribers allowed per queue.

Action: Remove existing subscribers before trying to add new subscribers.

ORA-24068: cannot start queue *string*, queue table *string* is being migrated

Cause: An attempt was made to start a queue in a queue table that is being migrated.

Action: Complete the queue table migration, and retry the operation.

ORA-24069: cannot downgrade queue table *string* while it is being upgraded

Cause: An attempt was made to downgrade a queue table, but a previous command to upgrade the queue table has not yet completed successfully.

Action: Complete the upgrade of the queue table by re-executing the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure. Then, downgrade the queue table.

ORA-24070: cannot upgrade queue table *string* while it is being downgraded

Cause: An attempt was made to upgrade a queue table, but a previous command to downgrade the queue table has not yet completed successfully.

Action: Complete the downgrade of the queue table by re-executing the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure. Then, upgrade the queue table.

ORA-24071: cannot perform operation *string*, queue table *string* is being migrated

Cause: An attempt was made to perform an operation on a queue in a queue table that is being migrated.

Action: Complete the queue table migration, and retry the operation.

ORA-24072: cannot execute MIGRATE_QUEUE_TABLE procedure; must own queue table

Cause: An attempt was made to upgrade or downgrade a queue table using the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure, but the user who executed the procedure does not own the queue.

Action: Reconnect as the owner of the queue table, and then execute the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure.

ORA-24073: cannot specify RETENTION_TIME on exception queue *string.string*

Cause: An attempt was made to create or alter an exception queue by specifying a non-zero RETENTION_TIME.

Action: Use the default RETENTION_TIME parameter value for exception queues.

ORA-24074: RETRY_DELAY and MAX_RETRIES cannot be used for exception queue *%string*

Cause: The CREATE_QUEUE or ALTER_QUEUE command was issued with a non-zero RETRY_DELAY and an exception queue.

Action: Do not specify RETRY_DELAY or MAX_RETRIES for exception queues.

ORA-24075: cannot specify agent with NULL address and non-NULL protocol

Cause: An ADD_SUBSCRIBER or enqueue was attempted with an agent that had a NULL address and a non-NULL protocol.

Action: Either specify a non-NULL address or set the protocol to NULL.

ORA-24076: cannot perform operation *string* for NON_PERSISTENT queue *string.string*

Cause: One of the operations, SCHEDULE_PROPAGATION, ALTER_QUEUE, LISTEN, DEQUEUE was issued for a NON_PERSISTENT queue.

Action: Do not specify a NON_PERSISTENT queue for these operations.

ORA-24077: cannot create propagation schedule for EXCEPTION queue *string.string*

Cause: A SCHEDULE_PROPAGATION was issued for an EXCEPTION queue. Propagation schedules can be created only for NORMAL queues.

Action: To propagate messages from a queue specify the queue type as NORMAL.

ORA-24078: cannot specify a non-NULL SECONDARY_INSTANCE if PRIMARY_INSTANCE was NULL

Cause: A non-NULL value was specified for SECONDARY_INSTANCE when PRIMARY_INSTANCE was NULL.

Action: Specify a non-NULL primary instance before you specify a non-NULL secondary instance.

ORA-24079: invalid name *string*, names with AQ\$_ prefix are not valid for *string*

Cause: An attempt was made to use a reserved prefix for the object name.

Action: Enter a different name for this object. Then, retry the operation.

ORA-24080: unschedule_propagation pending for QUEUE *string* and DESTINATION *string*

Cause: A propagation administration command was issued for a queue and destination pair whose propagation is being unscheduled.

Action: Do not issue propagation administration commands for a propagation schedule on which there is a pending unschedule request.

ORA-24081: compatible parameter needs to be *string* or greater

Cause: The compatible parameter was not high enough to allow the operation.

Action: Shutdown and restart with a higher compatibility setting.

ORA-24082: propagation may still be happening for the schedule for QUEUE *string* and DESTINATION *string*

Cause: The snapshot process executing the propagation schedule did not respond to the disable propagation command.

Action: Make sure that the job for the propagation schedule has been ended.

ORA-24083: cannot specify remote subscribers for *string* QUEUE *string*

Cause: An add_subscriber call with a non-null address field was issued on a queue which does not support remote subscribers. Remote subscribers are not supported for NON_PERSISTENT QUEUES.

Action: Specify a null address field and retry the call.

ORA-24084: DBLINK name in address field of agent *string* is not unique within the first 24 bytes

Cause: Advanced Queuing requires that the agent's dblink name should be unique within the first 24 bytes (for 8.0 compatible queue tables)

Action: Specify a dblink name that is unique within the first 24 bytes or migrate to 8.1 compatible queue tables where this restriction is not there.

ORA-24085: operation failed, queue *string* is invalid

Cause: An attempt was made to enqueue, dequeue or administer a queue which is invalid. This could have occurred because the payload type of the queue's queue table was dropped or rules associated with queue subscribers got altered or dropped.

Action: Drop the queue table setting the force option to true.

ORA-24086: cannot create a 8.0 compatible *string* queue

Cause: An attempt was made to create a 8.0 compatible queue table and enable a feature that is supported only on 8.1 style queue tables

Action: This feature is not supported

ORA-24087: Invalid database user *string*

Cause: An invalid database username was specified

Action: Specify a valid database user

ORA-24088: AQ Agent *string* does not exist

Cause: This AQ Agent does not exist

Action: Specify a valid AQ agent. Check the DBA_AQ_AGENTS view for a list of valid aq agents

ORA-24089: AQ Agent *string* already exists

Cause: This AQ agent has already been created

Action: Specify another agent name or use the ALTER api to modify the agent information.

ORA-24090: at least one protocol must be enabled

Cause: No protocol was enabled for aq agent

Action: Enable one of the protocols by setting one of the enable parameters to true.

ORA-24091: Destination queue *string* is the same as the source queue

Cause: Propagation cannot be scheduled when the destination queue is the same as the source queue.

Action: Specify a different destination queue.

ORA-24092: invalid value *string* specified

Cause: A queue, queue table, rule, or ruleset name that requires double quotes was specified when the database compatibility was less than 10.0.

Action: Specify a value that does not require double quotes and retry the operation.

ORA-24093: AQ agent *string* not granted privileges of database user *string*

Cause: The specified AQ agent does not have privileges of the specified database user

Action: Specify a valid combination of AQ agent and database user. Check the DBA_AQ_AGENT_PRIVS or USER_AQ_AGENT_PRIVS view for user/agent mappings

ORA-24094: invalid transformation, target type does not match that of the queue

Cause: The target type of the transformation specified was different from the type of the queue.

Action: Provide a valid transformation whose target type is the same as the queue type.

ORA-24095: invalid transformation, source type does not match that of the queue

Cause: The source type of the transformation specified was different from the type of the queue.

Action: Provide valid transformation whose source type is the same as the queue type.

ORA-24096: invalid message state specified

Cause: Invalid value is specified for message state

Action: Provide a valid message state as specified in the documentation

ORA-24097: Invalid value *string*, *string* should be non-negative

Cause: A negative value or NULL was specified for the parameter.

Action: Specify a non negative integer.

ORA-24098: invalid value *string* for *string*

Cause: An Invalid value or NULL was specified for the parameter.

Action: Check the documentation for valid values.

ORA-24099: operation not allowed for 8.0 compatible queues

Cause: The specified operation is only supported for queues with compatibility 8.1 or greater

Action: Upgrade the 8.0 compatible queue to release 8.1 using DBMS_AQADM.MIGRATE_QUEUE_TABLE or specify a queue with compatibility 8.1

ORA-24100: error in ktz testing layer

Cause: There is an error in the Transaction layer test ICDs

Action: n/a

ORA-24101: stopped processing the argument list at: *string*

Cause: One of the arguments of the requested operation contained a list of scheduler objects. While processing this list an error was encountered with the specified item.

Action: Resolve the error for this element of the list and then re-issue the command with the remainder of the argument list. See the rest of the error stack to find out what the exact error is.

ORA-24102: invalid prefix for generate_job_name

Cause: generate_job_name was called with a prefix longer than 18 characters or a prefix ending in a digit.

Action: Re-issue the command using a prefix no longer than 18 characters and not ending in a digit.

ORA-24103: job "*string*"."*string*" failed to be enabled after creation

Cause: The job failed to be enabled after creation.

Action: Review the reason for the failure, correct it if possible and re-create the job.

ORA-24120: invalid *string* parameter passed to DBMS_REPAIR.*string* procedure

Cause: An invalid parameter was passed to the specified DBMS_REPAIR procedure.

Action: Specify a valid parameter value or use the parameter's default.

ORA-24121: both cascade and a block range passed to DBMS_REPAIR.CHECK_OBJECT procedure

Cause: Both cascade and a block range were specified in a call to DBMS_REPAIR.CHECK_OBJECT.

Action: Use either cascade or a block range, or do not use either one.

ORA-24122: invalid block range specification

Cause: An incorrect block range was specified.

Action: Specify correct values for the BLOCK_START and BLOCK_END parameters.

ORA-24123: feature *string* is not yet implemented

Cause: An attempt was made to use the specified feature, but the feature is not yet implemented.

Action: Do not attempt to use the feature.

ORA-24124: invalid ACTION parameter passed to DBMS_REPAIR.*string* procedure

Cause: An invalid ACTION parameter was specified.

Action: Specify CREATE_ACTION, PURGE_ACTION or DROP_ACTION for the ACTION parameter.

ORA-24125: Object *string.string* has changed

Cause: An attempt was made to fix corrupt blocks on an object that has been dropped or truncated since DBMS_REPAIR.CHECK_OBJECT was run.

Action: Use DBMS_REPAIR.ADMIN_TABLES to purge the repair table and run DBMS_REPAIR.CHECK_OBJECT to determine whether there are any corrupt blocks to be fixed.

ORA-24126: invalid CASCADE_FLAG passed to DBMS_REPAIR.string procedure

Cause: CASCADE_FLAG was specified for an object that is not a table.

Action: Use CASCADE_FLAG only for tables.

ORA-24127: TABLESPACE parameter specified with an ACTION other than CREATE_ACTION

Cause: The TABLESPACE parameter can only be used with CREATE_ACTION.

Action: Do not specify TABLESPACE when performing actions other than CREATE_ACTION.

ORA-24128: partition name specified for a non-partitioned object

Cause: A partition name was specified for an object that is not partitioned.

Action: Specify a partition name only if the object is partitioned.

ORA-24129: table name string does not start with string prefix

Cause: An attempt was made to pass a table name parameter without the specified prefix.

Action: Pass a valid table name parameter.

ORA-24130: table string does not exist

Cause: An attempt was made to specify a map, repair, or sync table that does not exist.

Action: Specify a valid table name parameter.

ORA-24131: table string has incorrect columns

Cause: An attempt was made to specify a map, repair, or sync table that does not have a correct definition.

Action: Specify a table name that refers to a properly created table.

ORA-24132: table name string is too long

Cause: An attempt was made to specify a table name is greater than 30 characters long"

Action: Specify a valid table name parameter.

ORA-24133: invalid usage of DBMS_REPAIR in case of GTT table

Cause: An attempt was made to specify a Global Temporary Table (GTT) table name while using DBMS_REPAIR.CHECK_OBJECT.

Action: Specify a non-GTT table name parameter.

ORA-24141: rule set string.string does not exist

Cause: An attempt to access or modify a ruleset was made, which failed because the ruleset does not exist.

Action: Only access or modify existing rulesets.

ORA-24142: invalid ruleset name

Cause: An attempt to create a ruleset with an invalid name was made. The ruleset name can not be NULL, and can not be more than 26 characters, unless a `rules_table_name` is also specified, in which case the ruleset name may be up to 30 characters.

Action: Retry the create with a valid ruleset name.

ORA-24143: invalid evaluation context name

Cause: An attempt to create a rule/ruleset on an invalid evaluation name was made. The `evaluation_context` can not be more than 30 characters. The evaluation context with the name specified must exist.

Action: Retry the create with a valid evaluation context name.

ORA-24144: rules engine internal error, arguments: [string], [string]

Cause: An internal error occurred in the rules engine. This indicates that the rules engine has encountered an exception condition.

Action: Please report this error as a bug. The first argument is the error and the second argument is the package.

ORA-24145: evaluation context *string.string* already exists

Cause: An evaluation context of the given name already exists

Action: Specify another name for the evaluation context being created

ORA-24146: rule *string.string* already exists

Cause: A rule of the given name already exists

Action: Specify another name for the rule being created.

ORA-24147: rule *string.string* does not exist

Cause: The rule of the given name does not exist

Action: create the rule or specify one that exists

ORA-24148: cannot drop rule *string.string* with dependents

Cause: The rule still belongs to some rulesets, cannot be dropped

Action: do not drop a rule that belongs to rulesets without force option

ORA-24149: invalid rule name

Cause: An attempt to create a rule with an invalid name was made. The rule name can not be NULL, and can not be more than 30 characters

Action: n/a

ORA-24150: evaluation context *string.string* does not exist

Cause: The evaluation context of the given name does not exist

Action: create the evaluation context or specify one that exists

ORA-24151: no evaluation context is associated with rule *string.string* or rule set *string.string*

Cause: When adding a rule to a rule set, either the rule or the rule set must have an evaluation context associated with it

Action: do not add a rule without an evaluation context to a ruleset that does not have a default evaluation context

ORA-24152: cannot drop evaluation context *string.string* with dependents

Cause: The evaluation context still belongs to some rules or rule sets, cannot be dropped

Action: do not drop an evaluation context with dependents without force option

ORA-24153: rule set *string.string* already exists

Cause: A rule set of the given name already exists

Action: Specify another name for the rule set being created.

ORA-24154: rule *string.string* already in rule set *string.string*

Cause: a rule can be added to a rule set only once

Action: do not add a rule to a rule set that already contains this rule

ORA-24155: rule *string.string* not in rule set *string.string*

Cause: the rule to be removed from the rule set is not in the rule set

Action: do not remove a rule from a rule set that does not contain the rule

ORA-24156: duplicate table alias *string*

Cause: there is a table alias of the same name in the evaluation context

Action: do not add two table aliases of the same name to an evaluation context

ORA-24157: duplicate variable name *string*

Cause: there is a variable of the same name in the evaluation context

Action: do not add two variables of the same name to an evaluation context

ORA-24158: invalid table alias

Cause: table alias name or base table name is not specified in the table alias definition

Action: specify both alias name and alias base table in the table alias structure

ORA-24159: invalid variable definition

Cause: variable name or variable type is not specified in the variable definition

Action: specify both variable name and variable type in the variable definition structure

ORA-24160: name *string* already exists in the name value pair list

Cause: there is already a name-value pair with the same name in the NVList

Action: try another name.

ORA-24161: name *string* does not exist in the name value pair list

Cause: there is not such a name-value pair in the NVList

Action: check the name-value pair exists in the NVList.

ORA-24162: name value pair list is full, cannot add another entry

Cause: The NVList is full (1024 elements) and cannot hold more elements

Action: do not add elements to a full list.

ORA-24163: dblink is not supported in rules engine DDLs

Cause: the object name has a database link in it, which is not supported

Action: Do not specify remote objects in rules engine DDLs.

ORA-24164: invalid rule engine system privilege: *string*

Cause: no such system privilege number for rule engine objects

Action: check specification of `dbms_rule_adm` for valid system privilege numbers

ORA-24165: invalid rule engine object privilege: *string*

Cause: no such object privilege number for rule engine objects

Action: check specification of `dbms_rule_adm` for valid object privilege numbers

ORA-24166: evaluation context *string.string* has errors

Cause: The table aliases and the variable types specified in the evaluation context could not be resolved.

Action: Make sure that all base tables exist and that all variable types are correct. Also, make sure that tables are not composite partitioned or clustered partitioned.

ORA-24167: incompatible rule engine objects, cannot downgrade

Cause: there are rule engine objects in the database that cannot be downgraded.

Action: check `utlincmp.sql` and remove all incompatible rules engine objects before downgrade.

ORA-24168: rule *string.string* cannot have default evaluation context

Cause: If a rule is added to a rule set with more than one evaluation contexts, it must not have an evaluation context itself.

Action: Do not set the evaluation context of such rules to a not-null value

ORA-24169: rule condition has unrecognized variables

Cause: The rule references variables not in the evaluation context.

Action: Modify the rule condition to remove illegal reference.

ORA-24170: *string.string* is created by AQ, cannot be dropped directly

Cause: This object is created by AQ, thus cannot be dropped directly

Action: use `dbms_aqadm.drop_subscriber` to drop the object

ORA-24171: creation properties are only for internal use

Cause: user specified not null creation properties when creating rules engine objects, which are not for external use

Action: do not set creation properties when creating rules engine objects

ORA-24172: rule set *string.string* has errors

Cause: The rule references variables not in the evaluation context.

Action: Modify the rule condition to remove illegal reference.

ORA-24173: nested query not supported for rule condition

Cause: user specified nested query in rule condition.

Action: do not use nested query in rule condition.

ORA-24174: The number of *string* per evaluation context is more than *string*

Cause: Number of tables or variables were more than the defined upper limit.

Action: Reduce the number of tables or variables per evaluation context.

ORA-24175: The number of *string* exceeds limit *string* as there exists at least one nonsimple rule condition

Cause: Upper limit of tables or variable per evaluation context exceeded as there exists at least one nonsimple rule condition.

Action: Reduce the number of tables or variables per evaluation context.

ORA-24180: invalid transformation expression, the transformation expression does not evaluate to the target type/attribute

Cause: The transformation expression does not evaluate to the target type or the target type's specified attribute.

Action: Provide valid transformation expression which evaluates to the target type or the target type's specified attribute.

ORA-24181: The type *string* does not exist

Cause: The source or destination type for the transformation does not exist

Action: Create the type or specify one that exists

ORA-24182: attribute number specified does not exist

Cause: The target type of the transformation does not have the attribute number specified in the ADD_ATTRIBUTE_TRANSFORMATION command

Action: check the target type definition and specify a valid attribute number

ORA-24183: invalid transformation

Cause: The transformation specified is invalid because the source or the target type have been dropped/modified.

Action: Drop and recreate the transformation

ORA-24184: transformation *string.string* already exists

Cause: The named transformation already exists.

Action: Specify another name for the transformation being created.

ORA-24185: transformation *string.string* does not exist

Cause: The specified transformation does not exist.

Action: Create the transformation before using it or specify an existing transformation.

ORA-24186: wrong object type, could not transform message

Cause: The object type of the message to be transformed does not match the source type of the specified transformation.

Action: Specify another transformation, or specify a message of the correct type.

ORA-24190: length of payload exceeds *string*

Cause: the length of payload being taken exceeds the limit of varchar2 or raw.

Action: use clob type or blob type to call get_text or get_bytes.

ORA-24191: the property name *string* has existed

Cause: the property name being set has existed.

Action: use another property name.

ORA-24192: the property name cannot be null

Cause: the property name cannot be null.

Action: make sure the property name not null.

ORA-24193: the property value exceeds the valid range *string*

Cause: the property value being set exceeds the valid range.

Action: make sure the property value is within the valid range.

ORA-24194: attempt to read data in a message as the wrong type

Cause: According to JMS specification, some type conversions were not allowed.

Action: Make sure to use the correct READ function to retrieve message data.

ORA-24195: attempt to retrieve the name list of a map message with size exceeding 1024

Cause: The GET_NAMES function returns the names in a varray with a size limit of 1024.

Action: Retrieve in several smaller steps using the GET_NAMES function with OFFSET and LENGTH parameters.

ORA-24196: access the message in a wrong access mode

Cause: StreamMessage and BytesMessage could not be read when they were in write only mode and vice versa.

Action: Change the access mode using PREPARE, CLEAR_BODY and RESET procedures.

ORA-24197: JAVA stored procedure throws JAVA exceptions

Cause: The JAVA stored procedure threw some exceptions that could not be categorized.

Action: Use GET_EXCEPTION procedure to see what the exception is about.

ORA-24198: attempt to use an invalid operation ID

Cause: An attempt was made to use an invalid operation ID to access messages.

Action: Use the correct operation ID returned by PREPARE or CLEAR_BODY procedure.

ORA-24199: message store is overflow

Cause: An attempt was made to access too many messages at the same time.

Action: Use the CLEAN procedure to clean up some of the messages.

ORA-24201: duplicate publisher, publisher already added to the queue

Cause: Attempted to add a publisher to the queue again.

Action: Specify another publisher or user DBMS_AQADM.ALTER_PUBLISHER to alter the publisher's properties.

ORA-24202: publisher does not exist for the queue

Cause: Attempted to alter or drop a non-existent publisher from a queue.

Action: Specify another publisher.

ORA-24203: operation failed, queue table *string.string* has errors

Cause: An operation attempt was made to a queue table which has errors.

Action: Drop the queue table setting the force option to true.

ORA-24204: existing *string* propagation schedules

Cause: A propagation administrative interface was called when the existing propagation schedules were running in different mode (10.2/11g).

Action: Set appropriate internal parameter and unschedule existing schedules if required.

ORA-24205: feature *string* not supported for sharded queues

Cause: An attempt was made to use a feature that is not supported for sharded queues.

Action: Specify only supported features and try again.

ORA-24206: maximum limit of *string* nondurable subscribers reached for queue *string.string*

Cause: An attempt to add a new nondurable subscriber to the queue failed because the number of nondurable subscribers has exceeded the maximum limit.

Action: Remove existing subscribers and then attempt to add a new subscriber.

ORA-24207: addition of a nondurable subscriber for queue *string.string* aborted due to low SGA

Cause: An attempt to add a new nondurable subscriber on the specified queue was aborted because of memory constraints.

Action: Increase the shared pool size by increasing the value of the SHARED_POOL_SIZE parameter.

ORA-24208: API not supported for classic queues

Cause: An attempt was made to use a non-classic queue API on a classic queue.

Action: Use classic queue APIs.

ORA-24209: nondurable subscriber rule has errors for queue *string*

Cause: An attempt was made to create a nondurable subscriber with a rule condition, but the condition had compilation errors.

Action: Correct the condition statement based on the error stack.

ORA-24210: attempt to *string string* on queue *string.string*, *string* already *string*

Cause: An attempt was made to start or stop a queue operation on a queue which is already enabled or disabled for that operation.

Action: Make only one attempt to start or stop the queue operation.

ORA-24211: invalid value for REPLICATION_MODE

Cause: There was an invalid setting of REPLICATION_MODE in the queue creation call.

Action: Specify a valid setting. DBMS_AQADM.REPLICATION_MODE or DBMS_AQADM.NONE are the valid options.

ORA-24212: user operation not permitted on replicated queue *string.string*

Cause: An attempt was made to run a user operation on a replicated queue.

Action: Disable replication on the queue before performing user operations.

ORA-24213: unable to replicate queue *string.string* for sub-shards *number, number*

Cause: An attempt to replicate enqueue failed.

Action: Look for information in the session trace file and contact Oracle Support Services.

ORA-24214: unable to replicate queue *string.string* sequence *number*, maximum sequence *number* failed

Cause: An attempt to replicate enqueue failed.

Action: Look for information in the session trace file and contact Oracle Support Services.

ORA-24215: unable to modify REPLICATION_MODE, queue has to be stopped

Cause: An attempt was made to modify REPLICATION_MODE on a queue open to user operations.

Action: Stop the queue first using the STOP_QUEUE command. Oracle Support Services.

ORA-24216: *string* not a supported payload type in sharded queue

Cause: An attempt was made to create a sharded queue with an ADT type which was not supported in the queue_payload_type.

Action: Use DBMS_AQADM.JMS_TYPE as the queue_payload_type.

ORA-24217: Operation fails with lower version JMS client

Cause: An Oracle Client application was linked with Oracle Java Message Service (JMS) libraries with version earlier than 19c.

Action: Upgrade the client libraries to version 19c or later.

ORA-24218: feature *string* not supported for transactional event queues

Cause: An attempt was made to use a feature that was not supported for transactional event queues.

Action: Specify only supported features and try again.

ORA-24219: *string* not a supported payload type in transactional event queue

Cause: An attempt was made to create a transactional event queue with an ADT type which was not supported in the queue_payload_type.

Action: Use DBMS_AQADM.JMS_TYPE as the queue_payload_type.

ORA-24220: Dequeue operation on transactional event queue is not possible.

Cause: Dequeue of a transactional event queue failed with OCIAQDeq().

Action: Use OCIAQDeq2() for Transactional Event queues

ORA-24221: cannot connect to event stream owner instance *string* of database *string*

Cause: An Oracle Advanced Queuing (AQ) operation was attempted at a non-owner instance of the event stream which could not establish an internal connection to it.

Action: Set the listener information in the REMOTE_LISTENERS or LOCAL_LISTENERS initialization parameter. If the REMOTE_LISTENERS or LOCAL_LISTENERS initialization parameter is already set, then retry the operation from the suggested owner instance.

ORA-24222: unable to replicate queue *string.string* for event stream partition *number, number*

Cause: An attempt to replicate enqueue failed.

Action: Look for information in the session trace file and contact Oracle Support Services.

ORA-24223: The seek requested by element *string* of input array can skip a message that is not dequeued in event stream *string*.

Cause: An attempt was made to skip a message that was not dequeued.

Action: Set the SKIP_OPTION in the seek call to NO_DISCARD_SKIPPED or DISCARD_SKIPPED and retry the seek operation.

ORA-24224: Error while doing reregistration for regid *string*. Error Message: *string*

Cause: Internal Error occurred while doing the reregistration of the registration id.

Action: Internal error, call Oracle Support.

ORA-24225: Transactional Event Queue (TEQ) consumer group leader for consumer: *string* is dead.

Cause: TEQ consumer group leader died during rebalancing. You have been made the new TEQ consumer group leader.

Action: Execute DBMS_TEQK.JOIN_GROUP followed by DBMS_TEQK.SYNC.

ORA-24226: The target tablespace *string* specified to move the queue table does not exist.

Cause: The tablespace name specified as a parameter to DBMS_AQADM.MOVE_QUEUE_TABLE did not exist.

Action: Ensure that the tablespace exists by querying the data dictionary and specifying the valid tablespace name.

ORA-24227: The input flags specified to move the queue table are invalid.

Cause: Invalid input flags were specified as a parameter to DBMS_AQADM.MOVE_QUEUE_TABLE.

Action: Either do not specify the flags or specify one of the following: - DBMS_AQADM.MOVEQT_OFFLINE - DBMS_AQADM.MOVEQT_ONLINE

ORA-24228: purge by condition not supported for sharded queues/transactional event queues.

Cause: purge by condition not supported for sharded queue/transactional event queues and hence purge_condition should be NULL.

Action: Call the procedure with `purge_condition` set to NULL.

ORA-24229: Specified purge_options not supported for sharded queues/transactional event queues.

Cause: Unsupported value specified for `purge_options` hence `purge_condition` should be NULL.

Action: Call the procedure with correct `purge_options`. For sharded queues/transactional event queues, `block` field in `purge_options` should be TRUE and `delivery_mode` should be DBMS_AQADM.PERSISTENT_OR_BUFFERED.

ORA-24230: input to DBMS_DDL.WRAP is not a legal PL/SQL unit

Cause: The input supplied to DBMS_DDL.WRAP or DBMS_DDL.CREATE_WRAPPED did not specify a legal PL/SQL package specification, package body, type specification, type body, function or procedure. This error can occur if you used incorrect syntax in the CREATE OR REPLACE statement or specified a unit that cannot be wrapped (e.g., a trigger or anonymous block).

Action: Provide a legal PL/SQL unit as input.

ORA-24231: database access descriptor (DAD) string not found

Cause: The specified Database Access Descriptor (DAD) did not exist.

Action: Make sure the name of the Database Access Descriptor (DAD) is correct and the DAD exists.

ORA-24232: unknown Embedded PL/SQL Gateway attribute string

Cause: The specified Embedded PL/SQL Gateway attribute was not known.

Action: Make sure the name of the Embedded PL/SQL Gateway attribute is correct.

ORA-24233: argument passed to DBMS_UTILITY.VALIDATE is not legal

Cause: One or more input arguments to the DBMS_UTILITY.VALIDATE routine was not legal. This error occurred because the object name or owner or namespace arguments (if specified) were NULL or illegal.

Action: Identify and correct the illegal argument.

ORA-24234: unable to get source of string "string"."string", insufficient privileges or does not exist

Cause: The specified PL/SQL object in a DBMS_PREPROCESSOR subprogram did not exist or you did not have the privileges necessary to view its source.

Action: Make sure the specified object exists and you have the privileges necessary to view its source.

ORA-24235: bad value for object type: string

Cause: The specified object type was not appropriate.

Action: Make sure the specified object type is one of the following: package, package body, procedure, function, trigger, type, and type body.

ORA-24236: source text is empty

Cause: The input source text supplied to a DBMS_PREPROCESSOR subprogram was empty.

Action: Pass a non-empty input source text as the input.

ORA-24237: object id argument passed to DBMS_UTILITY.INVALIDATE is not legal

Cause: This error occurred because the `p_object_id` argument passed to the `DBMS_UTILITY.INVALIDATE` routine was `NULL`, there was no object with the specified object id, or the user calling the routine did not have sufficient privileges to invalidate the object.

Action: Correct the illegal argument.

ORA-24238: object settings argument passed to DBMS_UTILITY.INVALIDATE is not legal

Cause: This error occurred because the `p_plsql_object_settings` argument passed to the `DBMS_UTILITY.INVALIDATE` routine was `NULL` or malformed.

Action: Correct the illegal argument.

ORA-24239: object could not be invalidated

Cause: A call to the `DBMS_UTILITY.INVALIDATE` routine failed. This error occurred because the object type of the object specified by the `p_object_id` argument is not one of the types that can be handled by this routine. Alternately, the object was an object type specification with table dependents, or the object was the specification of the `STANDARD`, `DBMS_STANDARD`, `DBMS_UTILITY` package, or the body of the `DBMS_UTILITY` package.

Action: Call `DBMS_UTILITY.INVALIDATE` only on supported object types.

ORA-24240: invalid database access descriptor (DAD) name

Cause: The specified Database Access Descriptor (DAD) name was invalid.

Action: Make sure the name of the Database Access Descriptor (DAD) is valid and its length does not exceed its limit.

ORA-24241: source text is in wrapped format

Cause: The input source text supplied to a `DBMS_PREPROCESSOR` subprogram was in wrapped format.

Action: Pass a nonwrapped source text as the input.

ORA-24242: anonymous access through a dynamically authenticated Database Access Descriptor (DAD) prohibited

Cause: An attempt to allow anonymous access through a dynamically authenticated Database Access Descriptor (DAD) was prohibited.

Action: Make sure the Database Access Descriptor (DAD) is not dynamically authenticated before allowing anonymous access through it.

ORA-24243: access control entry (ACE) already exists

Cause: An access control entry (ACE) for the principal with the same grant or deny attribute in the `IS_GRANT` argument already existed.

Action: Add the privilege to the existing access control entry (ACE) instead.

ORA-24244: invalid host or port for access control list (ACL) assignment

Cause: The host or port to which the access control list (ACL) was assigned was invalid.

Action: Ensure the host and port to which you are assigning the access control list (ACL) are valid.

ORA-24245: invalid network privilege

Cause: The network privilege being added to the access control list (ACL) was invalid.

Action: Ensure the network privilege that you are adding to the access control list (ACL) is valid.

ORA-24246: empty access control list (ACL) not allowed

Cause: An attempt was made to store an empty access control list (ACL).

Action: Ensure that the access control list (ACL) has at least one

ORA-24247: network access denied by access control list (ACL)

Cause: No access control list (ACL) has been assigned to the target host or the privilege necessary to access the target host has not been granted to the user in the access control list.

Action: Ensure that an access control list (ACL) has been assigned to the target host and the privilege necessary to access the target host has been granted to the user.

ORA-24248: XML DB extensible security not installed

Cause: XML DB extensible security necessary for this operation has not been installed.

Action: Ensure that XML DB has been installed.

ORA-24249: Authentication scheme "string" not supported

Cause: An unsupported authentication scheme was used.

Action: Retry with a supported authentication scheme.

ORA-24250: No supported authentication scheme found

Cause: A supported authentication scheme was not found.

Action: Retry with a supported authentication scheme.

ORA-24251: This statement is not supported by EXPAND_SQL_TEXT.

Cause: EXPAND_SQL_TEXT supports only SELECT statements.

Action: Submit only a SELECT statement.

ORA-24252: SQL translation profile does not exist

Cause: An attempt was made to access a SQL translation profile that either did not exist or for which the current user did not have privileges on.

Action: Check the SQL translation profile name and verify that the current user has appropriate privileges on the SQL translation profile.

ORA-24253: translation of SQL statement or error code not found

Cause: An attempt to translate a SQL statement or error code or to change a SQL or error code translation failed because the translation was not found.

Action: Verify that the SQL statement or error code is valid and either a custom translation is registered or the translator package in the SQL translation profile can translate it.

ORA-24254: appropriate SQL translation profile not set

Cause: An attempt to translate a SQL statement or error code failed because either a SQL translation profile was not set or the profile could not translate the given SQL syntax.

Action: Set an appropriate SQL translation profile before attempting to translate a SQL statement or error code.

ORA-24255: Implementation restriction: bind variables cannot change in the translated SQL statement

Cause: An attempt to register or use a translated SQL statement failed because the number or the order of bind variables were changed in the statement.

Action: Do not change the number or the order of bind variables in the translated SQL statement.

ORA-24256: EXPAND_SQL_TEXT failed with *string*

Cause: See the string parameter at the end of the message.

Action: See the string parameter at the end of the message and take corrective action.

ORA-24257: The database role should be a primary or physical standby database.

Cause: The database role was not a primary database or a physical standby database.

Action: Check the database role and try this command again.

ORA-24258: unable to create output file or file already exists

Cause: Either a file with the same name as the specified output file name already exists, or file creation failed.

Action: Fix the incorrect output file name and try this command again.

ORA-24259: Slave process or processes for this PL/SQL function terminated abnormally, or could not be created or initialized.

Cause: Slave process or processes failed to operate properly for one of the following reasons: - Inadequate SGA size. - Slave pool could not be initialized. - Slave process or processes were abnormally terminated.

Action: Ensure that the SGA size is sufficient to call this PL/SQL function.

ORA-24260: unable to communicate with remote databases

Cause: Remote database or databases were not available due to network connection failures.

Action: Check the status of the network and ensure that the database or databases are mounted or open.

ORA-24261: unable to read data file correctly on the remote database

Cause: The remote database was unable to read the data file.

Action: Check the status of the data file.

ORA-24262: unable to read data file correctly on the local database

Cause: The data file on the local database could not be accessed.

Action: Check the status of the data file.

ORA-24263: Certificate of the remote server does not match the target address.

Cause: The server address on the public key certificate of the remote server did not match the address used to access the target server.

Action: Verify the identity of the remote server against fraudulent servers. If the identity of the remote server is valid, access the server again while providing the expected address to be matched against the certificate of the remote server.

ORA-24264: The data file *string* is not in the current container.

Cause: An attempt was made to access the data file outside of the current container.

Action: Check the current container and change it to root or a specific container that is able to access this data file.

ORA-24265: Insufficient privileges for SQL profile operation

Cause: A DDL operation was attempted on a SQL profile by a session without the proper privileges.

Action: Grant the user the appropriate privilege.

ORA-24266: Inconsistent host access control list (ACL) resolution type: expected *string* got *string*

Cause: An API in DBMS_NETWORK_ACL_ADMIN PL/SQL package was invoked with a PRIVATE_TARGET argument value that was inconsistent with the host resolution type of the network host.

Action: If you were setting the access control list (ACL) or appending an access control entry (ACE) to the access control list (ACL) of a network host using an API in DBMS_NETWORK_ACL_ADMIN PL/SQL package, please query the DBA_HOST_ACLS dictionary view for the network host to confirm whether the host name is to be resolved privately. If PRIVATE_TARGET column field for the host is set to TRUE, the DBMS_NETWORK_ACL_ADMIN API call needs to be executed with PRIVATE_TARGET argument passed as TRUE. Otherwise avoid specifying PRIVATE_TARGET argument as TRUE, if PRIVATE_TARGET column field for the host is set to FALSE.

ORA-24270: a row already exists in the *string* table for these parameters

Cause: A call was made to create a new row in the specified table. A row already exists in the table with the specified values.

Action: Delete the existing row using the appropriate API or check the parameters used to create the row.

ORA-24271: translation type must be either T, S or M

Cause: The translation type parameter is not a T, S or an M. A value other than T, S or M was specified.

Action: Correct the translation type and reexecute the API call.

ORA-24272: initialization value must be either F or T

Cause: The initialization value must be either F or T. A value other than F or T was specified.

Action: Correct the initialization value and reexecute the API call.

ORA-24273: translation text is required if translation type is T or S

Cause: If a translation type of T or S is specified, translation text must be supplied.

Action: Provide translation text and reexecute the API call.

ORA-24274: no row exists in the *string* table for these parameters

Cause: A call was made to update a row that does not exist or a foreign key value supplied to create a table does not exist.

Action: Create the row using the appropriate API or check the parameters used to create the new row to ensure that all specified values exist.

ORA-24275: function '*string*' parameter '*string*' missing or invalid

Cause: The function <pkgname.funcname> was called with a parameter *parmname* that was null, 0 length, or had an invalid value.

Action: Correct the parameter to supply values that comply with its datatype and limits as specified in the documentation.

ORA-24276: function '*string*' output '*string*' maximum value exceeded

Cause: The function <pkgname.funcname> computed a value for the output *parmname* that exceeded the maximum allowed. This can occur when multiple input parameters, each valid separately, combine to specify an invalid result. For example, when a length parameter multiplied by a copies parameter yields a total length exceeding the maximum for the output datatype.

Action: Correct the input values to produce a result that will comply with the limits as specified in the documentation.

ORA-24277: invalid database link *string*

Cause: The database link did not exist.

Action: Make sure the database link name is correct.

ORA-24278: remote table *string* not found

Cause: The table did not exist in the remote database.

Action: Make sure the remote table name is correct.

ORA-24279: view *string* is not a parallel access view

Cause: The view was not created by CREATE_OR_REPLACE_VIEW API.

Action: Provide the correct view name that was created by CREATE_OR_REPLACE_VIEW API.

ORA-24280 to ORA-28727

ORA-24280: invalid input value for parameter *string*

Cause: The parameter has been provided a negative, out of range, or NULL input value.

Action: Correct the input value such that it is valid, and is within the range as specified in the documentation.

ORA-24281: invalid access past the maximum size of LOB parameter *string*

Cause: The value of positional or size parameters exceeded the maximum allowed LOB size of $(4 \text{ Gigabytes} - 1) * \text{DB_BLOCK_SIZE}$.

Action: Correct the input values for amount and offset such that their sum is less than or equal to $(4 \text{ Gigabytes} - 1) * \text{DB_BLOCK_SIZE}$. If an error occurs in a read or write loop, check the looping conditions and offset increments.

ORA-24291: Sort Hash Cluster error *string***ORA-24292: no more tables permitted in this sorted hash cluster**

Cause: A sorted hash cluster only supports a maximum of 2 tables

Action: n/a

ORA-24295: max key length (*string*) for sorted hash cluster exceeded

Cause: Sorted hash clusters have a maximum key size

Action: n/a

ORA-24296: error in processing the XML configuration file *string*

Cause: Parameters or their values were specified incorrectly in the configuration file.

Action: Check and correct the configuration parameters or their values.

ORA-24300: bad value for mode

Cause: An undefined mode value was specified.

Action: Check that the correct mode is selected and that an allowed value for that mode is specified.

ORA-24301: null host specified in thread-safe logon

Cause: An HDA was not specified in the logon call while running in a thread safe environment.

Action: Make sure that HDA is not NULL when calling the logon routine.

ORA-24302: host connection in use by another thread

Cause: An attempt was made to use the host connection while it was in use by another thread.

Action: Wait for another thread to finish before using this connection.

ORA-24303: call not supported in non-deferred linkage

Cause: One of the calls that is supported in deferred mode linkage exclusively was invoked when the client was linked non-deferred.

Action: Use this call in deferred mode of linkage.

ORA-24304: datatype not allowed for this call

Cause: Data of this datatype cannot be sent or fetched in pieces.

Action: Use other bind or define calls for this datatype.

ORA-24305: bad bind or define context

Cause: The call was executed on a cursor for which this is invalid.

Action: Verify that this call is valid for this cursor. For example, Get piece information and set piece information are valid on a cursor if appropriate binds and defines have been done on this cursor.

ORA-24306: bad buffer for piece

Cause: A zero length buffer or a null buffer pointer was provided.

Action: Verify that the buffer pointing to this piece or its length is non-zero. The buffer pointer for the next piece or its length can be zero if it is the last piece to be inserted and there are no more data for the column.

ORA-24307: Length provided in piecewise bind operation exceeded the maximum size.

Cause: The length of the piece exceeded the maximum size provided in an Oracle Call Interface (OCI) bind by position or bind by name call.

Action: Verify that the length of this piece plus the cumulative length of all the previous pieces is not more than the maximum size allowed by the application.

ORA-24308: illegal define position

Cause: Call to modify attributes was done for a non-existent position

Action: Verify that a define has been done for this position

ORA-24309: already connected to a server

Cause: This server handle is already attached to a server.

Action: Disconnect from the server and then retry the call to establish a connection.

ORA-24310: length specified for null connect string

Cause: The connect string is null, but a length was specified for it.

Action: Set length to zero if connect string is null.

ORA-24311: memory initialization failed

Cause: Cannot initialize user memory.

Action: Contact customer support.

ORA-24312: illegal parameters specified for allocating user memory

Cause: An illegal size or null pointer was specified for user memory.

Action: Specify a legal size and a valid pointer for user memory.

ORA-24313: user already authenticated

Cause: A user has already been authenticated on this service handle.

Action: Terminate the service context before using it for another user.

ORA-24314: service handle not initialized

Cause: The server context did not exist.

Action: Establish the server context in the service context.

ORA-24315: illegal attribute type

Cause: An illegal attribute type was specified for the handle.

Action: Consult user manual to specify an attribute valid for this handle.

ORA-24316: illegal handle type

Cause: An illegal handle type was specified.

Action: Consult user manual to specify a valid handle type.

ORA-24317: define handle used in a different position

Cause: A define was done with an existing handle on a different position.

Action: Specify the same position as before on a re-define.

ORA-24318: call not allowed for scalar data types

Cause: This call is valid only for object types.

Action: Verify that the data-type for this variable is an object type

ORA-24320: unable to initialize a mutex

Cause: An attempt to initialize a mutex failed.

Action: Contact customer support.

ORA-24321: inconsistent parameters passed

Cause: One of the three memory function pointers is null or non-null.

Action: Verify that either all the memory functions are null or non-null.

ORA-24322: unable to delete an initialized mutex

Cause: An attempt to delete an initialized mutex failed.

Action: Contact customer support.

ORA-24323: value not allowed

Cause: A null or invalid value was passed in for a mandatory parameter.

Action: Verify that all mandatory parameters are properly initialized.

ORA-24324: service handle not initialized

Cause: An attempt was made to use an improper service context handle.

Action: Verify that the service context handle has all the parameters initialized prior to this call.

ORA-24325: this OCI operation is not currently allowed

Cause: An attempt was made to use a context handle outside its scope.

Action: Verify that the context handle is set to a service context handle that has been converted to a logon data area for other OCI calls. The logon data area must be converted back to a service context before it can be used.

ORA-24326: handle passed in is already initialized

Cause: An attempt was made to pass an initialized handle.

Action: Verify that the parameter passed in to retrieve a handle does not already point to a handle.

ORA-24327: need explicit attach before authenticating a user

Cause: A server context must be initialized before creating a session.

Action: Create and initialize a server handle.

ORA-24328: illegal attribute value

Cause: The attribute value passed in is illegal.

Action: Consult the users manual and specify a legal attribute value for the handle.

ORA-24329: invalid character set identifier

Cause: The character set identifier specified was invalid.

Action: Specify a valid character set identifier in the OCI call.

ORA-24330: internal Oracle Call Interface error

Cause: An internal Oracle Call Interface (OCI) error has occurred.

Action: Contact Oracle Support.

ORA-24331: user buffer too small

Cause: The user buffer to contain the output data is too small.

Action: Specify a bigger buffer.

ORA-24332: invalid object type

Cause: An invalid object type is requested for the describe call.

Action: Specify a valid object type to the describe call.

ORA-24333: zero iteration count

Cause: An iteration count of zero was specified for the statement

Action: Specify the number of times this statement must be executed

ORA-24334: no descriptor for this position

Cause: The application is trying to get a descriptor from a handle for an illegal position.

Action: Check the position number.

ORA-24335: cannot support more than 1000 columns

Cause: The number of columns exceeds the maximum number supported.

Action: Specify a number of columns less than 1000.

ORA-24336: invalid result set descriptor

Cause: The result set descriptor should have valid data fetched into it before it can be converted to a statement handle

Action: Fetch valid data into the descriptor before attempting to convert it into a statement handle

ORA-24337: statement handle not prepared

Cause: A statement cannot be executed before making preparing a request.

Action: Prepare a statement before attempting to execute it.

ORA-24338: statement handle not executed

Cause: A fetch or describe was attempted before executing a statement handle.

Action: Execute a statement and then fetch or describe the data.

ORA-24339: cannot set server group name after connecting to server

Cause: An attempt was made to set the server group in a server handle after connecting to the server. However, once the connection is established to a server, the server group name cannot be set anymore.

Action: Attach to the server after setting the server group name in the server handle.

ORA-24340: cannot support more than 255 columns

Cause: The number of columns exceeds maximum supported by the server.

Action: Limit your operation to 255 columns.

ORA-24341: bad mode specified

Cause: OCI_ENV_NO_MUTEX mode was specified for a non-threaded client.

Action: OCI_ENV_NO_MUTEX may be specified when OCI_THREADED had been specified at process initialization.

ORA-24342: unable to destroy a mutex

Cause: An attempt to destroy a mutex failed.

Action: Contact Oracle Support Services.

ORA-24343: user defined callback error

Cause: The only valid return value for a user defined callback function is OCI_CONTINUE or OCI_ROWCBK_DONE. Any other value will cause this error.

Action: Ensure that OCI_CONTINUE or OCI_ROWCBK_DONE is returned from the user-defined callback function.

ORA-24344: success with compilation error

Cause: A sql/plsql compilation error occurred.

Action: Return OCI_SUCCESS_WITH_INFO along with the error code

ORA-24345: A Truncation or null fetch error occurred

Cause: A truncation or a null fetch error"

Action: Please ensure that the buffer size is long enough to store the returned data.

ORA-24347: Warning of a NULL column in an aggregate function

Cause: A null column was processed by an aggregate function

Action: An OCI_SUCCESS_WITH_INFO is returned.

ORA-24348: Update or Delete without Where

Cause: An update or delete was executed without where clause

Action: An OCI_SUCCESS_WITH_INFO is returned.

ORA-24349: Array DML row counts not available

Cause: One of the following occurred: -The attribute in OCIAttrGet was used incorrectly. -The version of the database used does not support this feature -There was an error in the array DML for all of the iterations.

Action: Ensure that the statement is an array DML and also ensure that the database version is Oracle 12 or higher and the correct mode is used.

ORA-24350: OCI call not allowed

Cause: OCI used is not permitted from external procedures.

Action: Refer to user manual for usage restrictions.

ORA-24351: invalid date passed into OCI call

Cause: A bad date was passed into one of the OCI calls.

Action: Check your date bind values and correct them.

ORA-24352: invalid COBOL display type passed into OCI call

Cause: A bad COBOL display type was passed into one of the OCI calls.

Action: Check your COBOL display type bind values and correct them.

ORA-24353: user buffer too small to accommodate COBOL display type

Cause: User supplied buffer for a COBOL display type was too small to accommodate fetched number.

Action: Increase the allocation for COBOL display type buffer.

ORA-24354: number fetched too large to fit in COBOL display type buffer.

Cause: The number fetched was beyond the range that can be displayed.

Action: Please check the number in the database.

ORA-24355: attempt to store a negative number in an Unsigned Display type.

Cause: An attempt was made to convert a negative number into an unsigned display type.

Action: Please check the number in the database or change the defined datatype.

ORA-24356: internal error while converting from to COBOL display type.

Cause: An internal error was encountered during conversion to COBOL display type.

Action: Contact customer support.

ORA-24357: internal error while converting from to OCIDate.

Cause: An internal error was encountered during conversion to OCIDate type.

Action: Contact customer support.

ORA-24358: OCIBindObject not invoked for a Object type or Reference

Cause: OCIBindObject was not invoked resulting in an incomplete bind specification for a Object Type or Reference.

Action: Please invoke the OCIBindObject call for all Object Types and References.

ORA-24359: OCIDefineObject not invoked for a Object type or Reference

Cause: OCIDefineObject was not invoked resulting in an incomplete bind specification for a Object Type or Reference.

Action: Please invoke the OCIDefineObject call for all Object Types and References.

ORA-24360: Type Descriptor Object not specified for Object Bind/Define

Cause: Type Descriptor Object is a mandatory parameter for Object Types Binds and Defines.

Action: Please invoke the OCIBindObject() or OCIDefineObject() call with a valid Type Descriptor Object.

ORA-24361: basic bind call not invoked before invoking advanced bind call

Cause: One of the basic bind calls was not invoked on this bind handle before performing an advanced bind call.

Action: Please invoke the advanced bind call on this bind handle only after performing a basic bind call.

ORA-24362: improper use of the character count flag

Cause: When the character count flag is set, then the maximum size of the buffer in the server should be specified as a non-zero value.

Action: Use a non-zero value for the maximum size of the buffer in the server.

ORA-24363: measurements in characters illegal here

Cause: Measurements in characters instead of bytes are illegal if either the server's or client's character set is varying width.

Action: If either the client's or server's character set is varying width then do not use the OCI_ATTR_CHAR_COUNT attribute for the bind handle. Use OCI_ATTR_MAXDATA_SIZE instead.

ORA-24364: internal error while padding blanks

Cause: An internal error has occurred while attempting to blank pad string data. This error should not occur normally.

Action: Contact customer support.

ORA-24365: error in character conversion

Cause: This usually occurs during conversion of a multibyte character data when the source data is abnormally terminated in the middle of a multibyte character.

Action: Make sure that all multibyte character data is properly terminated.

ORA-24366: migratable user handle is set in service handle

Cause: This occurs during user authentication, a migratable user handle has been set in the service handle.

Action: Service handle must not be set with migratable user handle when it is used to authenticate another user.

ORA-24367: user handle has not been set in service handle

Cause: This occurs during authentication of a migratable user. the service handle has not been set with non-migratable user handle.

Action: Service handle must be set with non-migratable user handle when it is used to authenticate a migratable user.

ORA-24368: OCI mutex counter non-zero when freeing a handle

Cause: This is an internal OCI error.

Action: Contact customer support.

ORA-24369: required callbacks not registered for one or more bind handles

Cause: No callbacks have been registered for one or more of the bind handles which are part of the RETURNING clause.

Action: The bind handles which are to receive data in a DML statement with a RETURNING clause must have their mode set as DATA_AT_EXEC and callback functions must be registered for these bind handles using OCIBindDynamic.

ORA-24370: illegal piecewise operation attempted

Cause: Data of a certain datatype that does not support piecewise operation is being sent or fetched in pieces.

Action: Always set the piece value to OCI_ONE_PIECE for datatypes that does not support piecewise operation.

ORA-24371: data would not fit in current prefetch buffer

Cause: An internal OCI error has occurred.

Action: Please contact Oracle customer support.

ORA-24372: invalid object for describe

Cause: The object to be described is not valid. It either has compilation or authorization errors.

Action: The object to be described must be valid.

ORA-24373: invalid length specified for statement

Cause: The length specified for the statement is either 0 or too large.

Action: Specify a valid length for the statement.

ORA-24374: define not done before fetch or execute and fetch

Cause: The application did not define output variables for data being fetched before issuing a fetch call or invoking a fetch by specifying a non-zero row count in an execute call.

Action: Issue OCI define calls for the columns to be fetched.

ORA-24375: Cannot use V6 syntax when talking to a V8 server

Cause: V6 syntax is no longer supported in V8 server.

Action: Change syntax to V7 syntax or higher.

ORA-24376: cannot register/get user callback for non-environment handle

Cause: A user callback registration or get was attempted on a handle which is not an environment handle.

Action: Pass the environment handle to register/get user callback.

ORA-24377: invalid OCI function code

Cause: An invalid Oracle Call Interface (OCI) function code was used.

Action: Use a valid OCI function code.

ORA-24378: user callbacks not allowed for this call

Cause: An attempt was made to register a user callback for an OCI call for which it not allowed to register user callbacks.

Action: Do not register user callback for this OCI call.

ORA-24379: invalid user callback type

Cause: An invalid type of user callback was specified.

Action: Specify a valid user callback type.

ORA-24380: invalid mode specification

Cause: The mode parameter in an OCI call is invalid

Action: Use only valid mode parameter

ORA-24381: error(s) in array DML

Cause: One or more rows failed in the DML.

Action: Refer to the error stack in the error handle.

ORA-24382: statement handled already executed or described

Cause: The Statement handle was already executed or described successfully.

Action: Perform an OCISstmtPrepare again before OCI_PARSE_ONLY.

ORA-24383: Overflow segment of an IOT cannot be described

Cause: The name specified in the OCIDescribeAny call referred to an IOT overflow segment.

Action: Use OCIDescribeAny to describe only documented objects.

ORA-24384: Application context size is not initialized

Cause: The size of the application context must be initialized before populating each context element.

Action: Issue OCIAttrSet with OCI_ATTR_CTX_SIZE to initialize context size

ORA-24385: Application context size or index is not valid

Cause: The size or index of the application context must be non-zero and non-negative.

Action: Use an appropriate value for the size.

ORA-24386: statement/server handle is in use when being freed

Cause: This is an internal OCI error.

Action: The user should reset in-use flag in statement handle before freeing the handle.

ORA-24387: Invalid attach driver

Cause: Trying to attach using the wrong driver

Action: Relink the application in the right mode

ORA-24388: Unsupported functionality in fast path mode

Cause: Feature not supported in fast path mode

Action: Avoid using the functionality in this mode

ORA-24389: Invalid scrollable fetch parameters

Cause: All the requested rows in this fetch could not be received.

Action: Check the fetch orientation, scroll offset, OCI_ATTR_CURRENT_POSITION and number of rows in OCISmtFetch2 call. If required, change some of above parameters and fetch again.

ORA-24390: Unsupported scrollable cursor operation

Cause: The scrollable cursor execute or fetch has failed.

Action: Check the documentation for supported types, and other restrictions while using scrollable cursors.

ORA-24391: invalid fetch operation

Cause: Scrollable cursor operation requested with non-scrollable cursor.

Action: Check if the statement was executed in the scrollable mode. Else the only acceptable orientation is OCI_FETCH_NEXT that ignores the scroll offset parameter.

ORA-24392: no connection pool to associate server handle

Cause: OCIServerAttach called in OCI_POOL mode but no connection pool found to associate the server handle.

Action: 1) Verify that OCIConnectionPoolCreate is called before calling OCIServerAttach. 2) Verify that the database link specified in OCIServerAttach matches with that of the connection pool database link.

ORA-24393: invalid mode for creating connection pool

Cause: Mode specified in OCIConnectionPoolCreate is invalid.

Action: Use a valid mode.

ORA-24394: invalid mode for destroying connection pool

Cause: Mode specified in OCIConnectionPoolDestroy is invalid.

Action: Use a valid mode.

ORA-24395: cannot reinitialize non-existent pool

Cause: OCIConnectionPoolCreate was not called in OCI_DEFAULT mode for this pool handle.

Action: Create a connection pool prior to reinitializing it.

ORA-24396: invalid attribute set in server handle

Cause: Attribute OCI_ATTR_NONBLOCKING_MODE has been set on the server handle and attached in OCI_POOL mode. Connection pooling does not support non blocking mode.

Action: Do not set the OCI_ATTR_NONBLOCKING_MODE attribute on the server handle while attaching in OCI_POOL mode.

ORA-24397: error occurred while trying to free connections

Cause: An internal error occurred while trying to free connections.

Action: Contact customer support.

ORA-24398: connection pool already exists

Cause: A connection pool has already been created for the specified pool handle.

Action: 1) Specify a different pool handle to create a new connection pool. 2) If you wish to modify the pool parameters, call OCIConnectionPoolCreate in OCI_CPOOL_REINITIALIZE mode.

ORA-24399: invalid number of connections specified

Cause: An invalid combination of minimum, maximum and increment number of connections was specified in the OCIConnectionPoolCreate call.

Action: Specify a valid combination of parameters.

ORA-24400: error occurred while creating connections in the pool

Cause: The database link specified in OCIConnectionPoolCreate might be an invalid one.

Action: Specify a valid database link.

ORA-24401: cannot open further connections

Cause: Sufficient number of connections are not present in the pool to execute the call. No new connections can be opened as the connMax parameter supplied in OCIConnectionPoolCreate has been reached.

Action: Call OCIConnectionPoolCreate in OCI_CPOOL_REINITIALIZE mode and increase the value of the connMax parameter.

ORA-24402: error occurred while creating connections in the pool

Cause: The username and password specified in OCIConnectionPoolCreate might be invalid.

Action: Specify a valid username and password.

ORA-24403: error occurred while trying to destroy the connection pool

Cause: Some connections in the pool were busy when an attempt to destroy the connection pool was made.

Action: Ensure no connections from the pool are being used.

ORA-24404: connection pool does not exist

Cause: An attempt was made to use the connection pool before creating it.

Action: Create the connection pool.

ORA-24405: error occurred while trying to create connections in the pool

Cause: An internal error occurred while creating connections in the pool.

Action: Contact customer support.

ORA-24406: API mode switch is disallowed when a call is in progress.

Cause: A mode switch from OCI8 to OCI7 was attempted in a callback.

Action: The user should perform the API mode switch either prior to initiating the top call or after the main call is done.

ORA-24407: connection pool already exists

Cause: A connection pool has already been created for the specified pool name.

Action: Specify a different pool name to create a new connection pool.

ORA-24408: could not generate unique server group name

Cause: An internal error occurred while generating unique server group name.

Action: Contact customer support.

ORA-24409: client cannot understand the object

Cause: The client cannot process all the new features in the object.

Action: Upgrade the client so that features like inheritance and SQLJ objects can be used.

ORA-24410: scrollable cursor max size exceeded

Cause: Result set size exceeded the max limits.

Action: Check the documentation for allowable maximum result set size for scrollable cursors. Re-execute with a smaller expected result set size or make the cursor non-scrollable.

ORA-24411: Session pool already exists.

Cause: A session pool has already been created for the specified pool handle.

Action: 1) Specify a different pool handle to create a new session pool. 2) If you wish to modify the pool parameters, call OCISessionPoolCreate in OCI_SPOOL_REINITIALIZE mode.

ORA-24412: Cannot reinitialize non-existent pool

Cause: OCISessionPoolCreate was not called in OCI_DEFAULT mode for this pool handle.

Action: Create a session pool prior to reinitializing it.

ORA-24413: Invalid number of sessions specified

Cause: An invalid combination of minimum, maximum, max per shard and increment number of sessions was specified in the OCISessionPoolCreate call.

Action: Specify a valid combination of parameters.

ORA-24414: Only *number* sessions could be started.

Cause: The number of sessions specified by the minSess parameter of OCISessionPoolCreate could not be started, possibly because the value supplied was larger than that supported by the server."

Action: This is a warning. Check the maximum number of sessions allowed on the server.

ORA-24415: Missing or null username.

Cause: Username and password must be specified when pool is created in this mode.

Action: Specify a valid username and password.

ORA-24416: Invalid session Poolname was specified.

Cause: An attempt was made to use a Session Pool that does not exist.

Action: Create a Session Pool before using it.

ORA-24417: Session pool size has exceeded the maximum limit

Cause: The number of sessions has exceeded the maximum size of the Session Pool.

Action: This is a warning. You can tune the session pool with appropriate minimum and maximum parameters.

ORA-24418: Token based authentication does not support heterogeneous session pool.

Cause: An attempt was made to authenticate a user from an external Identity Provider to Oracle Database using heterogenous session pool.

Action: Change the session pool mode used for connecting to Oracle Database to homogenous.

ORA-24419: Proxy sessions are not supported in this mode.

Cause: A proxy session was requested for from a Session Pool which does not support proxy sessions.

Action: Do not specify mode OCI_CRED_PROXY.

ORA-24420: OCISessionRelease must be used to release this session.

Cause: The session was retrieved using OCISessionGet, and an attempt has been made to release it using a call other than OCISessionRelease.

Action: Call OCISessionRelease.

ORA-24421: OCISessionRelease cannot be used to release this session.

Cause: The session was not retrieved using OCISessionGet, and an attempt has been made to release it using OCISessionRelease.

Action: Release the session using an appropriate call.

ORA-24422: error occurred while trying to destroy the Session Pool

Cause: An attempt was made to destroy the session pool while some sessions in the pool were busy.

Action: Ensure that no sessions from the pool are being used OR call OCISessionPoolDestroy with mode set to OCI_SPD_FORCE.

ORA-24423: Cannot set the ROWID attribute - OCI_ATTR_FETCH_ROWID

Cause: An attempt was made to set the implicit ROWID attribute.

Action: Use a SELECT ... FOR UPDATE statement that has not previously been described or executed before setting this ROWID attribute.

ORA-24424: Invalid attempt to define at position 0

Cause: An invalid attempt was made to call OCIDefineByPos for position 0.

Action: Ensure that the implicit ROWID attribute, OCI_ATTR_FETCH_ROWID, is set on the statement handle before doing the execute.

ORA-24425: Invalid mode passed when defining at position 0

Cause: An invalid mode was passed to OCIDefineByPos.

Action: Ensure a valid mode is passed to OCIDefineByPos when defining at position 0.

ORA-24427: Invalid attributes on user handle

Cause: Some of the attributes set on the user handle were not allowed in pooled mode.

Action: Unset the attributes on the user handle and call OCISessionGet or use sessions that are not pooled.

ORA-24428: Sessions with SYSDBA privileges are not supported in this mode.

Cause: A session with SYSDBA privileges was requested from a Session Pool which does not support sessions with SYSDBA privileges.

Action: Do not specify mode OCI_SESSGET_SYSDBA.

ORA-24429: External authentication is not supported in this mode.

Cause: An externally authenticated session was requested from a Session Pool which does not support external authentication.

Action: Do not specify mode OCI_SESSGET_CREDEXT.

ORA-24430: Null values for sqltext and key were specified.

Cause: An attempt was made to call OCIStmtPrepare2 and neither sqltext nor key were specified.

Action: Specify valid values for sqltext or key or both.

ORA-24431: Statement does not exist in the cache

Cause: The statement that was requested for does not exist in the statement cache.

Action: Please request for a valid statement.

ORA-24432: The statement that was returned is not tagged.

Cause: A tagged statement was requested for, but an untagged statement has been returned.

Action: This is a warning. Please modify and tag the statement as desired.

ORA-24433: This statement has already been prepared using OCISmtPrepare2.

Cause: A statement that was earlier prepared using OCISmtPrepare2 is now being reprepared using OCISmtPrepare.

Action: Please use a different statement handle.

ORA-24434: OCISmtRelease called before OCISmtPrepare2.

Cause: An attempt was made to release a statement without first preparing it using OCISmtPrepare2.

Action: Call OCISmtPrepare2 before OCISmtRelease.

ORA-24435: Invalid Service Context specified.

Cause: The statement was prepared using a service context that is different from the one specified in OCISmtExecute.

Action: Please specify the same service context that the statement was prepared with.

ORA-24436: Invalid statement Handle.

Cause: OCIHandleFree called on a statement that was prepared using OCISmtPrepare2.

Action: Release the statement using OCISmtRelease.

ORA-24437: OCISmtExecute called before OCISmtPrepare2.

Cause: An attempt was made to execute a statement without first preparing it using OCISmtPrepare2.

Action: Call OCISmtPrepare2 before OCISmtExecute.

ORA-24438: Invalid Authentication Handle specified.

Cause: The statement was prepared using an authentication handle that is different from the one specified in OCISmtExecute.

Action: n/a

ORA-24439: success with PLSQL compilation warning

Cause: A plsql compilation warning occurred.

Action: Return OCI_SUCCESS_WITH_INFO along with the error code.

ORA-24440: OCI Easy Install mode cannot be initialized

Cause: An internal OCI error has occurred.

Action: Please contact Oracle customer support.

ORA-24441: Invalid cookie, resend sql text

Cause: An internal OCI error has occurred.

Action: Please contact Oracle customer support.

ORA-24442: SCN exceeds the capability of the target OCI database or client

Cause: An attempt was made to transfer a system change number (SCN) to an Oracle database or client that is older than Release 12.2 and the SCN exceeds the maximum value that such a system can handle.

Action: If needed, update the target database or client to Release 12.2 or higher.

ORA-24443: error status from OCI call: *string*

Cause: Oracle Call Interface (OCI) returned status.

Action: Contact Oracle Support Services.

ORA-24444: TTC RPC (*string*) not allowed by the security policy configured on the database

Cause: The database security policy configuration did not allow the specified Two-Task Common (TTC) RPC.

Action: Do not use functionality that issues the specified TTC RPC which is disallowed by the database security policy.

ORA-24445: object type input parameter in TTC RPC not allowed by the security policy configured on the database

Cause: The database security policy configuration did not allow object types as input parameters (including IN bind variables) in Two-Task Common (TTC) RPCs.

Action: Do not use the functionality that relies on object type input parameter usage in a TTC RPC.

ORA-24446: OCI worker thread pool task queue is full.

Cause: The maximum number of tasks were scheduled in the Oracle Call Interface (OCI) worker thread pool.

Action: Submit this task at a later time.

ORA-24447: OCI worker thread pool failed to initialize

Cause: The Oracle Call Interface (OCI) worker thread pool creation failed internally.

Action: Contact Oracle Support Services for more information.

ORA-24448: Internal handle allocation for *string* Handle failed

Cause: Handle allocation failed internally.

Action: Contact Oracle Support Services.

ORA-24449: could not reexecute statement after server side metadata changes

Cause: Statement from statement cache executed after server side metadata changes.

Action: Restart the application after column metadata changes or call `OCIStmtRelease()` with `OCI_STRLS_CACHE_DELETE` mode and reattempt the database operation.

ORA-24450: Cannot pre-process OCI statement

Cause: An error occurred during statement pre-processing. E.g., SQL statement has invalid usage of N' or Q' literals.

Action: Correct the SQL statement.

ORA-24451: *string*, *string*, maximum call depth exceeded

Cause: The program had too many levels of recursion.

Action: Restructure the program to eliminate some levels of recursion.

ORA-24452: value_sz exceeding SB4MAXVAL is not supported

Cause: value_sz specified in OCIBindByPos2, OCIBindByName2 or OCIDefineByPos2 exceeds SB4MAXVAL and is not supported in this release.

Action: Specify a value less than or equal to SB4MAXVAL for value_sz in OCIBindByPos2, OCIBindByName2 or OCIDefineByPos2.

ORA-24453: number of application context settings supplied during authentication has exceeded the supported limit of number settings

Cause: The number of application context settings supplied during authentication exceeded the specified limit.

Action: Reduce the number of application context settings that are passed during authentication.

ORA-24454: client host name is not set

Cause: The network host name in files like /etc/hosts was not set.

Action: Set the host name and try again.

ORA-24456: invalid OCI function code

Cause: An invalid Oracle Call Interface (OCI) function code was used.

Action: Use a valid OCI function code.

ORA-24457: OCISessionGet() could not find a free session in the specified timeout period

Cause: The contention on OCI Session Pool is high.

Action: Increase the timeout for OCISessionGet() using the OCI_ATTR_SPOOL_WAIT_TIMEOUT setting or reduce the number of threads accessing the pool concurrently.

ORA-24458: OCISessionGet() timed out trying to find a free session to the desired shard and max connections per shard limit is reached

Cause: OCISessionGet() could not find a free session to the appropriate shard in the specified timeout period. No new sessions can be opened to the shard either as the number of connections open to the shard is already at the value specified by OCI_ATTR_SPOOL_MAX_PER_SHARD.

Action: Increase value of OCI_ATTR_SPOOL_MAX_PER_SHARD or increase the timeout specified by or use OCI_SPOOL_ATTRVAL_WAIT

ORA-24459: OCISessionGet() timed out waiting for pool to create new connections

Cause: The OCISessionGet() timeout expired waiting for OCI Session Pool to create new sessions

Action: Retry the request later. Use OCISessionGet() with OCI_SPOOL_ATTRVAL_TIMEDWAIT mode (with an appropriate OCI_ATTR_SPOOL_WAIT_TIMEOUT setting) or OCI_SPOOL_ATTRVAL_WAIT mode.

ORA-24460: Native Net Internal Error

Cause: Internal error.

Action: This error should not normally occur. If it persists, please contact your customer service representative.

ORA-24461: operation not permitted because OCISessionPoolDestroy() is in progress

Cause: One or more of the following was true: 1. OCISessionGet() was invoked while OCISessionPoolDestroy() was in progress. 2. OCISessionPoolDestroy() was invoked while another OCISessionPoolDestroy() was in progress.

Action: Do not invoke OCISessionGet() or OCISessionPoolDestroy() while another OCISessionPoolDestroy() is in progress.

ORA-24462: OCI Encountered internal error (*number*) from sharding library

Cause: OCI encountered an internal error when calling into the sharding library

Action: Contact Oracle Support Services

ORA-24463: invalid index passed into OCIPShardConnStrGet() call

Cause: Index passed to OCIPShardConnStrGet() exceeds shard count

Action: Check index value passed to OCIPShardConnStrGet() call

ORA-24464: OCI Session Pool does not support pooling sessions of different server types specified in the connect string *string*

Cause: Value for "SERVER=" clause of connect data for all descriptors in the description list of the connect string did not match.

Action: Set same value for "SERVER=" clause in connect data for all descriptors in the description list of the connect string mentioned in the error message.

ORA-24480: invalid OCI mode

Cause: An attempt was made to invoke OCI API with an invalid mode.

Action: Provide the OCI API with legitimate mode.

ORA-24481: Failed to initialize multithreaded environment

Cause: Operating system did not support multithreaded mode.

Action: Use single thread mode instead.

ORA-24482: Pool size was less than 1 in shared mode

Cause: Pool size must be positive in shared mode.

Action: Set a positive pool size.

ORA-24483: Invalid parameters were passed into environment creation call

Cause: Invalid parameters were passed into the environment creation call. Check the passed in parameters for the following conditions: -envp should not be NULL - xtrmem_sz should not be negative -Either both xtrmem_sz and usrmempp have to be provided. Or, neither should be provided.

Action: Pass in legitimate parameters.

ORA-24484: Setting authentication handle not allowed after pool create

Cause: An attempt was made to set the authentication handle on session pool handle after OCISessionPoolCreate.

Action: Set the authentication handle on session pool handle before calling OCISessionPoolCreate.

ORA-24485: Invalid attributes in session pool authentication handle

Cause: Some of the attributes set on the authentication handle being set on the session pool handle are invalid.

Action: Unset the illegal attributes on the authentication handle being set on session pool handle and then call OCIAttrSet. Refer to OCI documentation for details.

ORA-24486: Conflicting attributes in session pool authentication handle

Cause: Some attributes could not be set both on the authentication handle passed to OCISessionGet and the authentication handle set on session pool handle.

Action: Unset the conflicting attributes on the authentication handle and call OCISessionGet.

ORA-24487: Invalid properties or values provided for OCISessionGet

Cause: Some of the properties or their values provided during OCISessionGet with mode OCI_SESSGET_MULTIPROPERTY_TAG were invalid.

Action: Provide valid properties and values when calling OCISessionGet with mode OCI_SESSGET_MULTIPROPERTY_TAG. Refer to Oracle Call Interface documentation for details.

ORA-24488: Invalid properties or values provided for OCISessionRelease

Cause: Some of the properties or their values provided during OCISessionRelease with mode OCI_SESSRLS_MULTIPROPERTY_TAG were invalid.

Action: Provide valid properties and values when calling OCISessionRelease with mode OCI_SESSRLS_MULTIPROPERTY_TAG. Refer to Oracle Call Interface documentation for details.

ORA-24489: reserved OCI error

Cause: A reserved Oracle Call Interface (OCI) error has occurred.

Action: Contact Oracle Support Services.

ORA-24490: error while getting shard instances

Cause: There was a mismatch in the shard keys or group keys with the corresponding connect string.

Action: Check if the keys are properly specified along with the corresponding connection string.

ORA-24491: attempt to get sharding-related topology information failed

Cause: An unexpected error was encountered while building and processing sharding-related information.

Action: Contact Oracle Support Services.

ORA-24492: Shard library initialization failed

Cause: An attempt to initialize the shard library failed.

Action: Contact Oracle Support Services.

ORA-24493: general sharding error

Cause: An unexpected error was encountered while processing sharding-related information.

Action: Contact Oracle Support Services.

ORA-24494: error in constructing shard key or shard group key

Cause: An invalid column value was passed.

Action: Pass in a column value in the appropriate format specified by the data type.

ORA-24495: OCISessionGet() timed out waiting for a suitable writable chunk

Cause: There was no instance available with a writable chunk for the specified shard key at the time the OCISessionGet() request was issued. This may be a transient condition due to chunk migration.

Action: Retry the request later. If needed, increase the timeout specified in OCI_ATTR_SPOOL_WAIT_TIMEOUT to minimize or eliminate the chances of running into this error during chunk migrations.

ORA-24496: OCISessionGet() timed out waiting for a free connection

Cause: There was no free connection as the pool reached its maximum and all connections were in use at the time the request was issued.

Action: Retry the request later. Use OCISessionGet() with OCI_SPOOL_ATTRVAL_TIMEDWAIT mode (with an appropriate OCI_ATTR_SPOOL_WAIT_TIMEOUT setting) or OCI_SPOOL_ATTRVAL_WAIT mode. If needed, increase the maximum size of the OCI session pool.

ORA-24497: PL/SQL fix up callback name too long

Cause: The PL/SQL fix up callback name was too long.

Action: Use a shorter PL/SQL fix up callback name.

ORA-24498: OCIShardingKey usage is not supported with OCISessionBegin()

Cause: OCIShardingKey was set on user handle passed to OCISessionBegin().

Action: Use OCISessionGet() instead of OCISessionBegin().

ORA-24499: Setting session get mode not allowed after pool create

Cause: An attempt was made to set the OCI_ATTR_SPOOL_GETMODE attribute on session pool handle after OCISessionPoolCreate.

Action: Set the OCI_ATTR_SPOOL_GETMODE attribute on session pool handle before calling OCISessionPoolCreate.

ORA-24500: invalid UTF16 mode

Cause: UTF16 mode is allowed only at environment handle creation time.

Action: Remove UTF16 mode for functions other than OCIEnvCreate()

ORA-24501: invalid UTF16 string passed in

Cause: Non-UTF16 string is passed in while UTF16 string is expected

Action: Check the parameter which is actually a string

ORA-24502: codepoint length overflows

Cause: Returned buffer has more codepoints than allowed

Action: Set OCI_MAXCHAR_SIZE large enough to accommodate

ORA-24503: codepoint length overflows for piecewise operation

Cause: Accumulated codepoint length exceeds allowed codepoint length

Action: Set OCI_MAXCHAR_SIZE large enough to accommodate

ORA-24504: data length larger than expected

Cause: Incoming data larger than receiving buffer

Action: Set OCI_MAXDATA/MAXCHAR_SIZE appropriately or remove the setting

ORA-24505: cannot change character set id on the handle

Cause: Attempts to change character set id on non-environment handles

Action: Only try to change character set id on environment handles

ORA-24506: invalid attempt to change character set id on env handle

Cause: Attempts to change character set id after other handles have been allocated from the env handle

Action: Change character set id after creating environment handle but before allocating any handles from it.

ORA-24507: invalid combination of character set ids

Cause: Attempts to set one character set id as zero

Action: Set both charset and ncharset as zero or non-zero in OCIEnvNlsCreate()

ORA-24508: Buffer is not aligned correctly.

Cause: Alignment error occurred in buffer when converting between character sets.

Action: Align buffer appropriately. For UTF16 buffer, pass a ub2 pointer.

ORA-24509: OCI function currently not supported in UTF16 mode.

Cause: Attempt to call an OCI function that was not supported in OCI_UTF16ID mode.

Action: Remove the offending function or do not create an OCI environment with OCI_UTF16ID mode or OCI_UTF16ID character set ID.

ORA-24510: Invalid value of POOL_PURITY is specified in connect string

Cause: Invalid value of POOL_PURITY was specified in connect string. Valid value was either SELF or NEW.

Action: Check the value of POOL_PURITY in connect string.

ORA-24511: Invalid value of POOL_CONNECTION_CLASS is specified in connect string.

Cause: The specified value was either empty or exceeded MAX allowed.

Action: Use a non-empty value or within the MAX allowed.

ORA-24512: sharding key is not provided while connecting to a sharded database

Cause: OCIShardingKey was not set to the auth handle through OCIAttrSet.

Action: Set OCIShardingKey to the auth handle before checking sessions out from the pool.

ORA-24530: User not authorized to access column value.

Cause: Column security is enabled and column value is not authorized.

Action: The program needs to handle this error and take appropriate action.

ORA-24531: Column value authorization is unknown.

Cause: Column security is unknown for the column.

Action: Verify the fetched data. It may or may not contain a meaningful value because it is probably the result of an expression that operated on unauthorized values.

ORA-24536: Warning - column authorization unknown.

Cause: Column security is unknown for one or more columns.

Action: Verify the fetched data. It may or may not contain a meaningful value because it is probably the result of an expression that operated on unauthorized values.

ORA-24542: PRELIM mode logon not allowed to a pluggable database

Cause: PRELIM mode logon was attempted to a pluggable database.

Action: Create PRELIM mode connections to CDB\$ROOT only.

ORA-24543: instance startup or shutdown not allowed in pluggable database

Cause: An instance startup or shutdown operation was attempted when connected to a pluggable database.

Action: Perform instance startup or shutdown operations by connecting to CDB\$ROOT.

ORA-24544: Oracle RAC One Node instance is already running.

Cause: An instance startup failed because an instance of the Oracle RAC One Node database was already running on one of the cluster nodes.

Action: In Oracle RAC One Node, avoid any attempt to start a second instance by any means while the instance is already running.

ORA-24550: unhandled signal #*number* received. *string*

Cause: Serious error: signal received

Action: Refer to the platform-specific signal code, and see if the application code caused the error. Otherwise, record all error state and notify Oracle Support Services.

ORA-24557: error *string* encountered while handling error *string*; exiting server process

Cause: A second-level error occurred in an Oracle server process that required that process to exit.

Action: None. If an excessive number of incidents are dumped, contact Oracle Support Services.

ORA-24558: syntax error encountered in the input string

Cause: The string to be validated had a syntax error.

Action: Remove the syntax error and try again.

ORA-24559: The input string attempts to insert or substitute another substring.

Cause: The input string attempted to insert or substitute a Name Value Pair or SQL syntax.

Action: Validate the string.

ORA-24560: general input validation error

Cause: The input string had issues other than the syntax error.

Action: Check if the input string length or mode are passed accordingly and then try again.

ORA-24601: bind buffer not allocated by caller

Cause: A valid buffer was not provided for the bind call.

Action: Provide a non-NULL pointer for the bind call, and a valid length for the buffer.

ORA-24750: incorrect size of attribute

Cause: Transaction ID attribute size is incorrect.

Action: Verify that the size parameter is correct.

ORA-24752: OCI_TRANS_NEW flag must be specified for local transactions

Cause: Application attempted to start a local transaction without using OCI_TRANS_NEW.

Action: Use OCI_TRANS_NEW when starting local transactions.

ORA-24753: local transactions cannot be detached

Cause: An attempt to detach a local transaction was made.

Action: Local transactions may only be committed or rolled back.

ORA-24754: cannot start new transaction with an active transaction

Cause: An attempt to start a new transaction was made when there was an active transaction.

Action: Commit, rollback or detach the existing transaction before starting a new transaction.

ORA-24755: OCI_TRANS_NOMIGRATE, OCI_TRANS_JOIN options are not supported

Cause: These flags are currently not supported.

Action: No action required.

ORA-24756: transaction does not exist

Cause: An invalid transaction identifier or context was used or the transaction has completed.

Action: Supply a valid identifier if the transaction has not completed and retry the call.

ORA-24757: duplicate transaction identifier

Cause: An attempt was made to start a new transaction with an identifier already in use by an existing transaction.

Action: Verify that the identifier is not in use.

ORA-24758: not attached to the requested transaction

Cause: An attempt was made to detach or complete a transaction that is not the current transaction.

Action: Verify that the transaction context refers to the current transaction.

ORA-24759: invalid transaction start flags

Cause: An invalid transaction start flag was passed.

Action: Verify that only one of the following values is specified: OCI_TRANS_NEW, OCI_TRANS_JOIN, OCI_TRANS_RESUME, or OCI_TRANS_PROMOTE.

ORA-24760: invalid isolation level flags

Cause: An invalid isolation level flag was passed.

Action: Verify that only one of following values - OCI_TRANS_READONLY, OCI_TRANS_READWRITE, OCI_TRANS_SERIALIZABLE is used.

ORA-24761: transaction rolled back

Cause: The application tried to commit a transaction and the server rolled it back.

Action: No action required.

ORA-24762: server failed due to unspecified error

Cause: An internal error has occurred in the server commit protocol.

Action: Contact customer support.

ORA-24763: transaction operation cannot be completed now

Cause: The commit or rollback cannot be performed now because the session cannot switch to the specified transaction.

Action: Retry the operation later.

ORA-24764: transaction branch has been heuristically committed

Cause: This is an informational message.

Action: No action required.

ORA-24765: transaction branch has been heuristically rolled back

Cause: This is an informational message.

Action: No action required.

ORA-24766: transaction branch has been partly committed and aborted

Cause: This is an informational message.

Action: No action required.

ORA-24767: transaction branch prepare returns read-only

Cause: The transaction is read-only, or this is the outcome of an optimization for two-phase commit protocol.

Action: None. Informational only.

ORA-24768: commit protocol error occurred in the server

Cause: This is an internal error.

Action: Contact customer support

ORA-24769: cannot forget an active transaction

Cause: Transaction identifier refers to an active transaction.

Action: Verify that the identifier of an active transaction was not passed as an argument.

ORA-24770: cannot forget a prepared transaction

Cause: Transaction identifier refers to a prepared transaction.

Action: Verify that the identifier of a prepared transaction was not passed as an argument.

ORA-24771: cannot detach, prepare or forget a local transaction

Cause: Service handle contains a local transaction context.

Action: Verify that the transaction context does not refer to a local transaction.

ORA-24772: Cannot mix tightly-coupled and loosely-coupled branches

Cause: Application attempted to start a transaction with a global transaction identifier and a wrong option.

Action: Verify that all branches of a global transaction are started with either OCI_TRANS_TIGHT or OCI_TRANS_LOOSE option. If the application is correct and uses distributed updates, contact customer support.

ORA-24773: invalid transaction type flags

Cause: OCI_TRANS_TIGHT or OCI_TRANS_LOOSE mode was not specified.

Action: Verify that the right parameters are being used.

ORA-24774: cannot switch to specified transaction

Cause: The transaction specified in the call refers to a transaction created by a different user.

Action: Create transactions with the same authentication so that they can be switched.

ORA-24775: cannot prepare or commit transaction with non-zero lock value

Cause: An attempt was made to detach the transaction with a non-zero lock value.

Action: Detach the transaction with lock value set to zero and then try to prepare or commit the transaction.

ORA-24776: cannot start a new transaction

Cause: An attempt was made to start a new transaction when session was already attached to an existing transaction.

Action: End the current transaction before creating a new transaction.

ORA-24777: use of non-migratable database link not allowed

Cause: The transaction, which needs to be migratable between sessions, tried to access a remote database from a non-multi threaded server process.

Action: Perform the work in the local database or open a connection to the remote database from the client. If multi threaded server option is installed, connect to the Oracle instance through the dispatcher.

ORA-24778: cannot open connections

Cause: The migratable transaction tried to access a remote database when the session itself had opened connections to remote database(s).

Action: Close the connection(s) in the session and then try to access the remote database from the migratable transaction. If the error still occurs, contact Oracle customer support.

ORA-24779: detach not allowed with open remote cursor

Cause: The migratable transaction tried to detach from the current session while having an open remote cursor.

Action: Close any open remote cursor prior to detach.

ORA-24780: cannot recover a transaction while in an existing transaction

Cause: An attempt was made to commit or roll back a transaction while in a different transaction, and the transaction for which the action is requested is in a recovery state (this happens if it is idle too long).

Action: Detach from the current transaction and retry the operation.

ORA-24781: branches don't belong to the same global transaction

Cause: The list of xids passed into kpotxmp() don't have the same gtrid

Action: n/a

ORA-24782: Cannot detach from a non-migratable transaction

Cause: An attempt was made to detach from a non-migrateable transaction.

Action: Either commit or rollback the transaction.

ORA-24783: Cannot switch non-migratable transactions

Cause: An attempt was made to prepare/commit a txn different from current.

Action: n/a

ORA-24784: Transaction exists

Cause: An attempt was made to start a transaction, while attached to a non-migrateable transaction

Action: n/a

ORA-24785: Cannot resume a non-migratable transaction

Cause: An attempt was made to resume a non-migrateable transaction.

Action: n/a

ORA-24786: separated transaction has been completed

Cause: The current transaction has been completed by another process.

Action: Start a new transaction

ORA-24787: remote cursors must be closed before a call completes

Cause: The previous operation did not close all the remote cursors it opened. Since separated transactions are enabled, this is not allowed.

Action: Close all remote cursors in each call, or start a regular (non-separated) transaction.

ORA-24788: cannot switch to specified transaction (server type)

Cause: The transaction specified was created by a shared server and the requestor is a dedicated server, or the transaction was created by a dedicated server and the requestor is a shared server.

Action: All parts of this application should connect as dedicated or as shared.

ORA-24789: start not allowed in recursive call

Cause: Oracle RM will not start/resume a branch in a recursive call

Action: Reconsider your application stack design

ORA-24790: cannot mix OCI_TRANS_RESUME and transaction isolation flags

Cause: An attempt was made to change the isolation level of an existing transaction.

Action: No action required

ORA-24791: invalid transaction start flags

Cause: An invalid transaction start flag was passed.

Action: Verify that OCI_TRANS_LOOSE was not passed along with OCI_TRANS_JOIN, OCI_TRANS_RESUME. Also, verify that other flags (such as OCI_TRANS_SEPARABLE) passed by the client are supported by the version of the Oracle server.

ORA-24792: cannot mix services in a single global transaction

Cause: Oracle RM will not serve global (distributed) transaction requests if branches are created using different services

Action: Configure clients such that those participating in the same distributed transaction use the same service name.

ORA-24794: no active DTP service found

Cause: Oracle RM will not serve global (distributed) transaction requests until DTP services are configured in RAC. It is possible that a service was stopped while transactions were in-flight.

Action: Provision/Start DTP services first.

ORA-24795: Illegal *string* attempt made

Cause: An illegal attempt was made to commit/rollback current transaction

Action: Use appropriate commit/rollback mechanism

ORA-24796: operation completed; resume of original transaction rolled back

Cause: The commit, rollback, or prepare completed successfully, but the current transaction for this thread was rolled back.

Action: If desired, retry the current transaction. If the operation was prepare, then end transaction appropriately with a commit or rollback operation.

ORA-24797: cannot promote the current transaction to a distributed transaction

Cause: An illegal attempt was made to promote the current transaction.

Action: Verify that OCI_ATTR_XID, OCI_ATTR_INTERNAL_NAME, and OCI_ATTR_EXTERNAL_NAME attributes have been set properly, and verify that the current transaction has neither performed IDL or PDML operations, nor already been a distributed transaction. Also, verify that the local transaction is in the same isolation level if the isolation flag value is set.

ORA-24798: cannot resume the distributed transaction branch on another instance

Cause: An attempt was made to resume a distributed transaction branch that is physically located on another RAC instance.

Action: Get a connection to the instance where the transaction branch is located.

ORA-24801: illegal parameter value in OCI lob function

Cause: One of the parameter values in the OCI lob function is illegal.

Action: Check every parameter in the OCI Lob function call to make sure they are correct. Offsets should be greater than or equal to one.

ORA-24802: user defined lob read callback error

Cause: The only valid return value for a user defined lob read callback function is OCI_CONTINUE. Any other value will cause this error.

Action: Verify that OCI_CONTINUE is returned from the user defined lob read callback function.

ORA-24803: illegal parameter value in lob read function

Cause: Internal error .

Action: This error should not normally occur. If it persists, please contact your customer service representative.

ORA-24804: Lob read/write functions called while another OCI LOB read/write streaming is in progress

Cause: Internal error.

Action: Wait for the ongoing LOB streaming call to finish before issuing the next server call, or use OCIBreak() abort the current LOB streaming call.

ORA-24805: LOB type mismatch

Cause: When copying or appending LOB locators, both source and destination LOB locators should be of the same type.

Action: Pass the same type of LOB locators for copying or appending.

ORA-24806: LOB form mismatch

Cause: When reading from or writing into LOBs, the character set form of the user buffer should be same as that of the LOB.

Action: Make sure that the buffer you are using to read or write has the same form as that of the LOB.

ORA-24807: LOB form mismatch

Cause: When copying or appending LOBs, both source and destination LOB locators should have the same character set form.

Action: Pass locators of the same character set form for copying or appending LOBs.

ORA-24808: streaming of lob data is not allowed when using lob buffering

Cause: Attempted to stream lob data via the polling mode or a callback when lob buffering was enabled for the input lob locator.

Action: Lob buffering is useful when reading/writing small amounts of lob data so streaming should not be necessary. Rewrite the OCILobRead/OCILobWrite call so that it does not use streaming. If streaming of data is required, lob buffering should not be used. In this case, flush buffers associated with the input lob locator as necessary, disable buffering on the input lob locator and reissue the OCILobRead/OCILobWrite call.

ORA-24809: amount specified will not fit in the lob buffers

Cause: LOB buffering is enabled for the input lob locator so buffering will be used. However, the amount of lob data to read or write is larger than what the lob buffers can hold.

Action: Either disable buffering on the input lob locator and reissue the command or pass a smaller amount.

ORA-24810: attempting to write more data than indicated

Cause: While writing into a LOB, more data was supplied than indicated.

Action: If data is written in pieces, then make sure that you do not provide more data in the pieces (cumulatively), than you indicated.

ORA-24811: less data provided for writing than indicated

Cause: While writing into a LOB, less data was provided than indicated.

Action: If writing data in single pieces, then make sure that the buffer length specified is big enough to accommodate the data being provided. If data is written in pieces, then make sure that all the data has been provided before specifying OCI_LAST_PIECE.

ORA-24812: character set conversion to or from UCS2 failed

Cause: If the database character set is varying-width, the CLOB/NCLOB value is implicitly converted to or from UCS2. This implicit conversion failed.

Action: Contact Oracle Worldwide Support.

ORA-24813: cannot send or receive an unsupported LOB

Cause: An attempt was made to send a LOB across the network, but either the server does not support the LOB sent by the client, or the client does not support the LOB sent by the server. This error usually occurs when the client and server are running different versions of Oracle.

Action: Use a version of the Oracle that supports the LOB on both the client and the server.

ORA-24814: operation not allowed for temporary LOBs

Cause: Temporary LOB locators are not allowed in the operation. For example: OCILobAssign only takes persistent LOB locators as parameters, not temporary LOBs.

Action: Use OCILobLocatorAssign for temporary LOBs instead. Note that OCILobLocatorAssign can also be used for persistent LOBs, in which case it will behave the same as OCILobAssign.

ORA-24815: Invalid character set form

Cause: An invalid character set form was passed into an OCI LOB function. For example, the only valid cs form for OCILobCreateTemporary() is OCI_DEFAULT(0), SQLCS_IMPLICIT(1) or SQLCS_NCHAR(2).

Action: Specify a valid character set form.

ORA-24816: Expanded non LONG bind data supplied after actual LONG or LOB column

Cause: A Bind value of length potentially > 4000 bytes follows binding for LOB or LONG.

Action: Re-order the binds so that the LONG bind or LOB binds are all at the end of the bind list.

ORA-24817: Unable to allocate the given chunk for current lob operation

Cause: The given size is increased to accommodate the number of bytes from server due to varying width db char/nchar set.

Action: Use smaller chunk sizes when you have character set conversion between client/server or perform piece-wise read or write.

ORA-24818: Operation not permitted on Abstract LOBs

Cause: Abstract LOB locators were not allowed in the operation. For example, OCILobAssign only takes persistent LOB locators as parameters, not Abstract (i.e., client-side created) LOBs.

Action: Avoid the operation on Abstract LOBs.

ORA-24819: Illegal reference count encountered for a temporary LOB

Cause: Internal error.

Action: This error should not normally occur. If it persists, contact Oracle Support Services.

ORA-24820: different LOB function called while another OCI LOB call is in progress

Cause: An attempt was made to execute a new Oracle Call Interface (OCI) LOB call while another OCI LOB call was in progress.

Action: Wait for the ongoing LOB streaming call to finish before issuing the next server call, or use OCIBreak() to abort the current LOB streaming call.

ORA-24821: LOB prefetch size supplied is larger than the supported limit.

Cause: A very large LOB prefetch size was specified during a query.

Action: Reduce the prefetch size to an acceptable value.

ORA-24822: operation not allowed for value LOBs

Cause: An attempt was made to execute a disallowed large object (LOB) operation on a value LOB.

Action: Execute only allowed LOB operations on value LOBs. Only read operations are allowed on value LOBs.

ORA-24823: operation not allowed for read-only LOB

Cause: An attempt was made to execute a large object (LOB) write operation on a read-only LOB.

Action: Execute only read LOB operations on read-only LOBs.

ORA-24824: LOB QUERY property cannot be used at partition level.

Cause: An attempt was made to set LOB QUERY property at partition level.

Action: Use the 'query as' syntax at the table level instead.

ORA-24825: invalid use of LOB_VALUE operator

Cause: The LOB_VALUE operator could not be used in certain operations. For example, in DML-returning or select-for-update operations.

Action: Remove the LOB_VALUE operator.

ORA-24826: value LOB no longer available

Cause: An attempt was made to access a value LOB that was freed automatically.

Action: Finish reading from value LOBs before the next SQL fetch.

ORA-24827: illegal byte amount parameter value in LOB read function

Cause: Invalid byte amount value passed in the large object (LOB) read function.

Action: If character amount is 0 then byte amount must be greater than or equal to maximum client character width.

ORA-24828: server does not support LOB array read or write operation

Cause: Application used large object (LOB) array APIs while server did not support large object (LOB) array read or write operation.

Action: Use large object (LOB) OCI API to read or write.

ORA-24850: failed to startup shared subsystem

Cause: While attempting to initialize OCI in shared mode, a problem was encountered in starting up the shared subsystem.

Action: Contact Oracle Customer support.

ORA-24851: failed to connect to shared subsystem

Cause: While attempting to initialize OCI in shared mode, a problem was encountered in connecting the process to the shared subsystem.

Action: Contact Oracle Customer Support.

ORA-24852: protocol error during statement execution

Cause: An internal protocol error occurred while receiving describe data from the server during execution of a statement.

Action: Contact Oracle Customer Support.

ORA-24853: failed to connect thread to shared subsystem

Cause: While attempting to initialize OCI in shared mode, a problem was encountered in connecting the thread to the shared subsystem.

Action: Contact Oracle Customer Support.

ORA-24854: invalid pieceinfo provided

Cause: While making the first call to write LOB data, an invalid pieceinfo value provided.

Action: Correct the call to use OCI_ONE_PIECE or OCI_FIRST_PIECE. If using OCCI, make sure to call writeBuffer before calling writeLastBuffer.

ORA-24855: attempt to pass a LOB locator over an invalid database link

Cause: There was an attempt to send a LOB locator over a database link which was different from the one on which it was obtained.

Action: Ensure that remote LOB locators are passed back on the same database link from which they were obtained.

ORA-24900: invalid or unsupported mode parameter passed in call

Cause: The mode parameter passed into the OCI Client Notification call is incorrect.

Action: Please correct the mode parameter passed into OCI.

ORA-24901: handles belonging to different environments passed into an OCI call

Cause: All handles passed into an OCI call should belong to the same environment. In the call that returned this error, handles belonging to different environments were passed in.

Action: Please ensure that the handle parameters in the call to come from the same OCI Environment.

ORA-24902: invalid subscription name or name-length in subscription handle

Cause: The subscription handle passed into the OCI call does not have a proper name or name-length attribute.

Action: Please set the name and name-length attributes using the OCIAttrSet() call.

ORA-24903: invalid namespace attribute passed into OCI call

Cause: The subscription handle passed into the OCI call does not have a proper namespace attribute.

Action: Please set the namespace attribute using the OCIAttrSet() call.

ORA-24904: invalid callback attribute passed into OCI call

Cause: The subscription handle passed into the OCI call does not have a proper callback attribute.

Action: Please set the callback attribute using the OCIAttrSet() call.

ORA-24905: invalid recipient protocol attribute passed into OCI call

Cause: The subscription handle passed into the OCI call did not have a proper recipient protocol attribute.

Action: Please set the recipient protocol attribute using the OCIAttrSet() call.

ORA-24906: invalid recipient attribute passed into OCI call

Cause: The subscription handle passed into the OCI call did not have a proper recipient attribute.

Action: Please set the recipient attribute using the OCIAttrSet() call.

ORA-24907: invalid pair of callback and recipient protocol attributes

Cause: The subscription handle passed into the OCI call can't have both the callback defined and a recipient protocol other than OCI_SUBSCR_PROTO_OCI at the same time.

Action: Please set the appropriate callback and recipient protocol attributes using the OCIAttrSet() call.

ORA-24908: invalid recipient presentation attribute

Cause: The subscription handle passed into the OCI call does not have a valid recipient presentation attribute.

Action: Set the recipient presentation attribute using the OCIAttrSet() call

ORA-24909: call in progress. Current operation cancelled

Cause: The OCI call was invoked when another call on the connection was in progress.

Action: Check if the OCI call is supported when the call is in progress under special conditions; for example, if it is being used by a signal handler.

ORA-24911: Cannot start listener thread at specified port

Cause: Thread already running at a different port.

Action: Set the correct port in the environment handle or let the system choose the port.

ORA-24912: Listener thread failed. *string*

Cause: Thread listening for event notification exited because of an error. The error encountered is appended to the error message.

Action: The client needs to be restarted.

ORA-24913: Event to enable NLS validation

Cause: N/A

Action: Set this event in your environment to enable NLS character validation even when character sets are the same for client/server.

ORA-24915: Cannot start Listener at specified IP address

Cause: Thread was already listening at a different IP address.

Action: Set the correct IP address in the environment handle or let the system choose the correct IP address.

ORA-24916: cannot use IP address attribute before release 11.2 compatible notifications

Cause: An attempt was made to use OCI_ATTR_SUBSCR_IPADDR attribute before release 11.2 compatible notifications.

Action: Change the compatibility to 11.2.

ORA-24918: secure notification mode not supported

Cause: An attempt was made to use OCI_SECURE_NOTIFICATION before release 12.0 compatible notifications.

Action: Change the compatibility to 12.0.

ORA-24919: subscription to Fast Application Notification failed

Cause: An error occurred while subscribing to Fast Application Notification. This could be due to problems in the Oracle clusterware configuration.

Action: Look at the client trace files for additional information. Ensure that the Oracle clusterware is properly configured.

ORA-24920: column size too large for client

Cause: Client attempted to fetch a column whose size is larger than the maximum size that can be handled by the client.

Action: Upgrade the client stack to Oracle 12c or higher.

ORA-24922: cannot send or receive an SCN value which is too high for the current compatibility setting

Cause: An attempt was made to send or receive a high value system change number (SCN) over the network, but either the sever or client does not support such a high value SCN. This error usually occurs when either the server or client compatibility is lower than 12.2.

Action: Be sure the database compatibility is 12.2 or above on both the client and server.

ORA-24923: event notification not supported for *string*

Cause: An event notification operation was invoked on an unsupported object type or schema.

Action: Refer to the documentation for supported object types and schema.

ORA-24940: invalid combination of *string* namespace, *string* presentation and *string* receive protocol

Cause: An invalid combination of namespace, presentation and receive protocol was specified during notification registration. Currently, only AQ namespace is supported with XML presentation. Non-AQ namespace is not supported for e-mail and HTTP receive protocols.

Action: Please change the register call appropriately.

ORA-24941: invalid combination of notification grouping attributes

Cause: An invalid combination of notification grouping attributes was specified. Currently, only TIME notification grouping class is supported. If notification grouping class is zero, all other notification grouping attributes must be zero.

Action: Refer to documentation and change the attributes appropriately.

ORA-24942: cannot use ntfn grouping attributes on before release 11.0 compatible ntfns

Cause: An attempt was made to use notification grouping on before release 11.0 compatible notifications.

Action: Change the compatibility to 11.0.

ORA-24943: cannot use ntfn grouping with this receive protocol, presentation and/or QoS

Cause: An attempt was made to use notification grouping with e-mail or HTTP receive protocol or XML presentation or payload delivery or reliable QoS. Currently, only OCI and PLSQL receive protocols and default presentation are supported with notification grouping.

Action: Refer to documentation and change the call appropriately.

ORA-24944: cannot use timeout or grouping with ANONYMOUS namespace

Cause: An attempt was made to use timeout or grouping with ANONYMOUS namespace. Currently, timeout and grouping are supported only with AQ and DBCHANGE namespaces.

Action: Refer to documentation and change the call appropriately.

ORA-24945: cannot use context, QOS and timeout attributes of notification on lower than 10.2 compatible notifications

Cause: An attempt was made to use context, QOS and timeout attributes of notification on lower than 10.2 compatible notifications.

Action: Change the database compatibility to 10.2.

ORA-24946: invalid registration callback

Cause: An attempt was made to use a reserved callback for notification registration.

Action: Choose a different name for the notification callback and change the register call appropriately.

ORA-24947: Invalid namespace attribute specified for the subscription *string*

Cause: An attempt was made to register with invalid namespace attribute.

Action: Refer to documentation and change the namespace appropriately.

ORA-24948: number of registrations for this subscription exceeds the limit

Cause: The maximum number of registrations already existed for this subscription.

Action: Change the queue policy or close any existing registrations and try again.

ORA-24950: unregister failed, registration not found

Cause: The registration that was asked to be unregistered could not be found.

Action: Please check the callback function name and the subscription name in the unregister call.

ORA-24952: register, unregister or post has incorrect collection count

Cause: The register, unregister or post function was invoked with a collection that was smaller than the size specified by the parameter to the function.

Action: Please check the function's use and ensure that the size parameter is correct.

ORA-24960: the attribute *string* is greater than the maximum allowable length of *number*

Cause: The user attempted to pass an attribute that is too long

Action: Shorten the specified attribute and retry the operation.

ORA-24962: connect string could not be parsed, error = *string*

Cause: The address portion of the connect string could not be parsed. The client may be using a format of the connect string that the server does not understand.

Action: Correct the connect string.

ORA-24964: ALTER SESSION SET CONTAINER error

Cause: An attempt to switch to a PDB with different settings such as character set, time zone or time zone file version on an Oracle 12c Release 1 (12.1) or earlier client failed.

Action: Upgrade client to Oracle 12 Release 2 (or later) to support such operations.

ORA-24969: iteration count of *number* not supported for this statement

Cause: This statement was not supported with iteration count greater than one.

Action: Execute the statement with an iteration count of one.

ORA-24970: Oracle Database client cannot handle SQL function codes exceeding 255.

Cause: Oracle Database clients earlier than release 21c cannot handle SQL function codes larger than 255.

Action: Upgrade the Oracle Database client library to release 21c or later.

ORA-24981: deferred SGA thread spawn failed

Cause: This is an internal error.

Action: None

ORA-24982: deferred SGA segment allocation failed, index = *string* location = *string*

Cause: System-defined shared memory limits are inadequate for Oracle.

Action: Consult the alert file for details.

ORA-24983: Process (*string*) failed to attach to deferred SGA segments.

Cause: The process failed to attach to deferred SGA segments.

Action: Consult the alert file for details and contact Oracle Support Services.

ORA-24984: SGA allocation slaves termination failed

Cause: This is an internal error.

Action: None

ORA-25000: invalid use of bind variable in trigger WHEN clause

Cause: A bind variable was used in the when clause of a trigger.

Action: Remove the bind variable. To access the table columns use (new/old).column_name.

ORA-25001: cannot create this trigger type on this type of view

Cause: INSTEAD OF triggers can be created on any view which is not an Editioning View, while BEFORE and AFTER triggers may only be created on Editioning Views.

Action: Change the trigger type to INSTEAD OF or change the view on which you are attempting to create a DML trigger.

ORA-25002: cannot create INSTEAD OF triggers on tables

Cause: Only BEFORE or AFTER triggers can be created on a table.

Action: Change the trigger type to BEFORE or AFTER.

ORA-25003: cannot change NEW values for this column type in trigger

Cause: Attempt to change NEW trigger variables of datatype object, REF, nested table, VARRAY or LOB datatype which is not supported.

Action: Do not change the NEW trigger variables in the trigger body.

ORA-25004: WHEN clause is not allowed in INSTEAD OF triggers

Cause: WHEN clause is specified in an INSTEAD OF trigger.

Action: Remove the WHEN clause when creating an INSTEAD OF trigger.

ORA-25005: cannot CREATE INSTEAD OF trigger on a read-only view

Cause: attempt to create an INSTEAD OF trigger on a view created with read-only option. The view cannot be updated using INSTEAD OF triggers.

Action: Do not create the trigger.

ORA-25006: cannot specify this column in UPDATE OF clause

Cause: Attempt to create a trigger on update of a column whose datatype is disallowed in the clause, such as LOB and nested table.

Action: Remove the UPDATE OF clause.

ORA-25007: functions or methods not allowed in WHEN clause

Cause: PLSQL function call or method invocation is not allowed in the WHEN clause when creating a trigger.

Action: Remove the function call or method invocation from the WHEN clause.

ORA-25008: no implicit conversion to LOB datatype in instead-of trigger

Cause: When inserting or updating a view using instead-of trigger, the new value for a LOB view column is of a different datatype.

Action: Specified a LOB value as the new value for the LOB view column.

ORA-25009: Nested table clause allowed only for INSTEAD OF triggers

Cause: Triggers on nested tables can only be created on view columns using INSTEAD OF triggers.

Action: Use view nested table columns for defining nested table triggers.

ORA-25010: Invalid nested table column name in nested table clause

Cause: The column name specified in the nested table clause of an INSTEAD OF trigger does not correspond to a nested table column.

Action: Specify a nested table column on which the trigger is to be defined.

ORA-25011: cannot create trigger on internal AQ table

Cause: An attempt was made to try to create a trigger on a table that is used internally to support the Advanced Queueing (AQ) feature.

Action: Do not create the trigger.

ORA-25012: PARENT and NEW values cannot be identical

Cause: The referencing clause specifies identical values for PARENT and OLD.

Action: Re-specify either the PARENT or NEW referencing value.

ORA-25013: OLD and PARENT values cannot be identical

Cause: The referencing clause specifies identical values for OLD and PARENT.

Action: Re-specify either the OLD or PARENT referencing value.

ORA-25014: cannot change the value of a PARENT reference variable

Cause: Parent values can only be read and not changed.

Action: Do not attempt to change a Parent variable.

ORA-25015: cannot perform DML on this nested table view column

Cause: DML cannot be performed on a nested table view column except through an INSTEAD OF trigger

Action: Create an INSTEAD OF trigger over the nested table view column and then perform the DML.

ORA-25016: cannot specify column list for insert into nested table view column

Cause: A column list cannot be specified for inserts into the nested table view column.

Action: Specify all the columns for insert into the nested table.

ORA-25017: cannot reference NEW ROWID for movable rows in before triggers

Cause: NEW ROWID was referenced in a before row trigger which is defined on an index-organized table, or a partitioned table with enabled movement of rows. The ROWID cannot be computed in a before row update trigger because it depends on the actual values of the row

Action: Remove references to NEW ROWID from the trigger definition.

ORA-25018: conflicting trigger *string* already exists

Cause: Conflicting instead of DDL trigger on schema/database already exists.

Action: Remove the old trigger

ORA-25019: too much concurrency

Cause: cannot pin the database/schema because of too much concurrency

Action: try the operation later

ORA-25020: renaming system triggers is not allowed

Cause: renaming system triggers is not allowed

Action: Drop the trigger, and create a new one for the same

ORA-25021: cannot reference a trigger defined on another table

Cause: Referenced trigger in the FOLLOWS clause was defined on another table.

Action: Create the referenced trigger on the same table

ORA-25022: cannot reference a trigger of a different type

Cause: Referenced trigger in the FOLLOWS or PRECEDES clause was either a different type or not a compound trigger.

Action: Create the referenced trigger as the same type or a compound trigger.

ORA-25023: Cyclic trigger dependency is not allowed

Cause: A cycle of trigger dependency can be formed.

Action: Do not create a trigger that can formed a cyclic dependency.

ORA-25024: cannot specify FOLLOWS for a REVERSE CROSSEDITION trigger

Cause: The FOLLOWS clause was specified when creating the REVERSE CROSSEDITION trigger.

Action: Do not create a REVERSE CROSSEDITION trigger with a FOLLOWS clause.

ORA-25025: cannot specify PRECEDES clause

Cause: The PRECEDES clause was specified when creating a FORWARD CROSSEDITION trigger or a regular trigger.

Action: Do not create a FORWARD CROSSEDITION or a regular trigger with a PRECEDES clause.

ORA-25026: FOR EACH ROW was specified with compound triggers

Cause: FOR EACH ROW is not allowed with compound triggers.

Action: Remove the FOR EACH ROW clause.

ORA-25027: compound triggers cannot be used as system triggers

Cause: Compound trigger was defined as system trigger.

Action: Do not use compound trigger as system trigger.

ORA-25028: regular trigger body can not start with keyword COMPOUND

Cause: Regular triggers body should start with BEGIN/DECLARE etc .

Action: Fix the syntax and recompile.

ORA-25029: compound triggers should always start with keyword COMPOUND

Cause: Compound trigger body was started with incorrect keyword.

Action: Fix the syntax and recreate.

ORA-25030: crossedition trigger cannot be owned by a non-editioned user

Cause: An attempt was made to create a crossedition trigger in a schema where triggers were not editionable.

Action: Enable editions for the user for triggers and then create the crossedition trigger.

ORA-25031: only a crossedition trigger may be specified

Cause: The trigger specified was not a crossedition trigger.

Action: Specify a crossedition trigger.

ORA-25032: crossedition trigger cannot be created in ORA\$BASE

Cause: An attempt was made to create crossedition trigger in the ORA\$BASE edition.

Action: Do not create a crossedition trigger in the ORA\$BASE edition.

ORA-25033: triggers cannot be executed at this time

Cause: An attempt was made to execute a trigger when the session was almost finished.

Action: Do not attempt to DML with triggers that are expected to execute when session has almost ended.

ORA-25034: cannot bypass trigger owned by another user

Cause: An attempt was made to do DML from a crossedition trigger on an object that has a non-crossedition trigger owned by another user. DML from a crossedition trigger bypasses the running of non-crossedition triggers; this cannot be allowed for triggers owned by other users.

Action: Permit the non-crossedition trigger to be bypassed by attaching it to the editioning view rather than the table, moving one of the triggers to be in the same schema as the other, or explicitly disabling the non-crossedition trigger.

ORA-25035: cannot perform DML on remote object from a crossedition trigger

Cause: An attempt was made to do DML from a crossedition trigger that would modify data in a remote database. DML from a crossedition trigger has special rules applied regarding what triggers will fire as part of that DML; these special rules cannot be applied across database links and therefore the DML cannot be allowed.

Action: Perform the DML in a helper function separate from the crossedition trigger itself; the special rules are not applied when the DML is not issued from within the crossedition trigger itself.

ORA-25100: TABLESPACE option can only be used with ALTER INDEX REBUILD

Cause: The TABLESPACE option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD TABLESPACE tablespace name.

ORA-25101: duplicate REBUILD option specification

Cause: The REBUILD option to ALTER INDEX is specified more than once.

Action: Specify the option at most once.

ORA-25102: PARALLEL option can only be used with ALTER INDEX REBUILD

Cause: The PARALLEL option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25103: NOPARALLEL option can only be used with ALTER INDEX REBUILD

Cause: The NOPARALLEL option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25104: UNRECOVERABLE option can only be used with ALTER INDEX REBUILD

Cause: The UNRECOVERABLE option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25105: RECOVERABLE option can only be used with ALTER INDEX REBUILD

Cause: The RECOVERABLE option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25106: only one of PARALLEL or NOPARALLEL clause may be specified

Cause: PARALLEL was specified more than once, NOPARALLEL was specified more than once, or both PARALLEL and NOPARALLEL were specified in an ALTER INDEX REBUILD statement.

Action: Remove all but one of the PARALLEL or NOPARALLEL clauses.

ORA-25107: duplicate TABLESPACE option specification

Cause: the TABLESPACE was specified more than once in an ALTER INDEX REBUILD statement.

Action: Remove all but one of the TABLESPACE clauses.

ORA-25108: standby lock name space exceeds size limit of *string* characters

Cause: The lock name space for the standby database exceeded the maximum string length.

Action: Change initialization parameter `_STANDBY_LOCK_NAME_SPACE` to a character string of less than the specified characters.

ORA-25109: standby lock name space has illegal character '*string*'

Cause: An invalid lock name space was specified for the standby database. The lock name space for the standby database can only contain A-Z, 0-9, '_', '#', '\$', '.' and '@' characters.

Action: Change initialization parameter `_STANDBY_LOCK_NAME_SPACE` to a valid character string.

ORA-25110: NOSORT may not be used with a bitmap index

Cause: An attempt was made to create a bitmap index using the NOSORT option.

Action: Remove NOSORT from the CREATE BITMAP INDEX statement.

ORA-25111: creation of BITMAP cluster indices is not supported

Cause: An attempt was made to create a cluster index with the BITMAP attribute.

Action: Remove BITMAP from the CREATE INDEX statement.

ORA-25112: maximum number of BITMAP index columns is 30

Cause: Too many columns were specified for the index.

Action: Create an index on fewer columns.

ORA-25113: GLOBAL may not be used with a bitmap index

Cause: An attempt was made to create a bitmap index using the GLOBAL option.

Action: Remove GLOBAL from the CREATE BITMAP INDEX statement, and/or add a LOCAL partition descriptor if the table is partitioned.

ORA-25114: invalid file number specified in the DUMP DATAFILE/TEMPFILE command

Cause: An invalid file number was used in dumping a datafile or tempfile.

Action: Specify a valid file number.

ORA-25115: duplicate BLOCK option specification

Cause: BLOCK (MIN/MAX) was specified more than once in the DUMP DATAFILE/TEMPFILE command.

Action: Specify only one BLOCK option.

ORA-25116: invalid block number specified in the DUMP DATAFILE/TEMPFILE command

Cause: An invalid block number was used in dumping a datafile or tempfile.

Action: Specify a valid block number.

ORA-25117: MIN/MAX/Block Number expected

Cause: A value other than MIN/MAX, or a block number was entered in the DUMP DATAFILE/TEMPFILE command.

Action: Correct the syntax.

ORA-25118: invalid DUMP DATAFILE/TEMPFILE option

Cause: An invalid option was specified for the DUMP DATAFILE/TEMPFILE command.

Action: Correct the syntax.

ORA-25119: LOGGING/NOLOGGING option already specified

Cause: In CREATE TABLESPACE, the LOGGING and/or NOLOGGING options were specified more than once.

Action: Remove all but one of the logging specifications.

ORA-25120: MINIMUM EXTENT option already specified

Cause: In CREATE TABLESPACE, the MINIMUM EXTENT option was specified more than once.

Action: Remove all but one of the MINIMUM EXTENT specifications.

ORA-25121: MINIMUM EXTENT value greater than maximum extent size

Cause: In CREATE/ALTER TABLESPACE, the value specified for the MINIMUM EXTENT option was greater than the maximum extent size.

Action: Choose a lower value for the MINIMUM EXTENT option.

ORA-25122: Only LOCAL bitmap indexes are permitted on partitioned tables

Cause: An attempt was made to create a global bitmap index on a partitioned table.

Action: create a local bitmap index instead.

ORA-25123: Too many components specified in the name.

Cause: Specifying more components to a name than allowed.

Action: Check the name specified for the operation.

ORA-25124: Database link name not allowed.

Cause: Specifying a database link name when it is not permitted.

Action: Check the name specified for the operation.

ORA-25125: BUFFER_POOL/FLASH_CACHE/CELL_FLASH_CACHE storage option not allowed

Cause: An attempt was made to specify the BUFFER_POOL, FLASH_CACHE, or CELL_FLASH_CACHE storage option. This option may only be specified during - CREATE or ALTER TABLE - CREATE or ALTER CLUSTER - CREATE or ALTER INDEX

Action: Remove this option and retry the statement.

ORA-25126: Invalid name specified for BUFFER_POOL/FLASH_CACHE/CELL_FLASH_CACHE

Cause: The name of the cache hints specified by was invalid. The only valid names for BUFFER_POOL are KEEP, RECYCLE and DEFAULT. The only valid names for FLASH_CACHE and CELL_FLASH_CACHE are KEEP, NONE and DEFAULT.

Action: Use a valid name or remove the BUFFER_POOL, FLASH_CACHE, or CELL_FLASH_CACHE clause.

ORA-25127: RELY not allowed in NOT NULL constraint

Cause: An attempt to set RELY on for NOT NULL constraint.

Action: only NORELY may be specified for a NOT NULL constraint.

ORA-25128: No insert/update/delete on table with constraint (*string.string*) disabled and validated

Cause: Try to insert/update/delete on table with DISABLE VALIDATE constraint.

Action: Change the constraint's states.

ORA-25129: cannot modify constraint (*string*) - no such constraint

Cause: the named constraint does not exist for this table.

Action: Obvious

ORA-25130: cannot modify primary key - primary key not defined for table

Cause: An attempt was made to modify a primary key that was not defined for the table.

Action: None

ORA-25131: cannot modify unique(*string*) - unique key not defined for table

Cause: attempted to modify a unique key that is not defined for the table.

Action: None

ORA-25132: UNIQUE constraint (*string.string*) disabled and validated in ALTER TABLE EXCHANGE PARTITION

Cause: The ALTER TABLE EXCHANGE PARTITION statement could not be issued while the partition and the table had disabled and validated unique constraints and the unique keys in the partition were not mutually exclusive from the rest of the table.

Action: Change the constraint's status.

ORA-25133: duplicate SINGLE TABLE option specified

Cause: The SINGLE TABLE option was specified more than once.

Action: Specify the SINGLE TABLE option only once.

ORA-25134: keyword TABLE expected

Cause: The keyword TABLE is missing from the SINGLE TABLE option.

Action: Place the keyword TABLE after the keyword SINGLE in the command.

ORA-25135: cannot use the SINGLE TABLE option

Cause: The SINGLE TABLE option is only valid for hash clusters.

Action: Do not specify the SINGLE TABLE option.

ORA-25136: this cluster can contain only one table

Cause: An attempt was made to store more than one table in a cluster that was created with the SINGLE TABLE option.

Action: Do not attempt to store more than one table in the cluster.

ORA-25137: Data value out of range

Cause: Value from cast operand is larger than cast target size.

Action: Increase size of cast target.

ORA-25138: *string* initialization parameter has been made obsolete

Cause: An obsolete initialization parameter has been specified

Action: The system will come up, but parameters must be examined

ORA-25139: invalid option for CREATE TEMPORARY TABLESPACE

Cause: An invalid option appears.

Action: Specify one of the valid options: TEMPFILE, EXTENT MANAGEMENT LOCAL, UNIFORM

ORA-25140: *string* space policy cannot be specified for the *string* extent management

Cause: An invalid option appears.

Action: Make sure that for LOCAL extent management UNIFORM or AUTOALLOCATE is specified, and for DICTIONARY extent management UNIFORM or AUTOALLOCATE are not specified

ORA-25141: invalid EXTENT MANAGEMENT clause

Cause: An invalid option appears for EXTENT MANAGEMENT clause

Action: Specify one of the valid options: UNIFORM SIZE, AUTOALLOCATE

ORA-25142: default storage clause specified twice

Cause: default storage clause was specified twice for create tablespace

Action: Specify it once.

ORA-25143: default storage clause is not compatible with allocation policy

Cause: default storage clause was specified for a tablespace with AUTOALLOCATE or UNIFORM policy

Action: Omit the storage clause

ORA-25144: invalid option for CREATE TABLESPACE with TEMPORARY contents

Cause: An invalid option appears.

Action: Specify one of the valid options: EXTENT MANAGEMENT DICTIONARY, USER

ORA-25145: allocation policy already specified

Cause: In CREATE TABLESPACE, the allocation policy was specified more than once, for example, AUTOALLOCATE and UNIFORM.

Action: Remove all but one of the allocation policy specifications.

ORA-25146: EXTENT MANAGEMENT option already specified

Cause: In CREATE TABLESPACE, the EXTENT MANAGEMENT option was specified more than once.

Action: Remove all but one of the EXTENT MANAGEMENT specifications.

ORA-25147: UNIFORM SIZE value greater than maximum extent size

Cause: In CREATE/ALTER TABLESPACE, the value specified for the UNIFORM SIZE option was greater than the maximum extent size.

Action: Choose a lower value for the UNIFORM SIZE option.

ORA-25148: ONLINE option not permitted

Cause: An attempt was made to specify ONLINE for ALTER TABLE MOVE on a table that is not index-organized. The ONLINE option is currently supported only for index-organized tables.

Action: Remove the ONLINE option from the command.

ORA-25149: Columns of UROWID type may not be indexed

Cause: An attempt was made to create an index on a column of UROWID type

Action: Remove the column from the list of indexed columns

ORA-25150: ALTERING of extent parameters not permitted

Cause: An attempt was made to alter the extent parameters for a segment in a tablespace with autoallocate or uniform extent allocation policy.

Action: Remove the appropriate extent parameters from the command.

ORA-25151: Rollback Segment cannot be created in this tablespace

Cause: An attempt was made to create a rollback segment in a tablespace with autoallocate extent allocation policy.

Action: Specify a different tablespace for the rollback segment

ORA-25152: TEMPFILE cannot be dropped at this time

Cause: An attempt was made to drop a TEMPFILE being used by online users

Action: The TEMPFILE has been taken offline. Try again, later.

ORA-25153: Temporary Tablespace is Empty

Cause: An attempt was made to use space in a temporary tablespace with no files.

Action: Add files to the tablespace using ADD TEMPFILE command.

ORA-25154: column part of USING clause cannot have qualifier

Cause: Columns that are used for a named-join (either a NATURAL join or a join with a USING clause) cannot have an explicit qualifier.

Action: Remove the qualifier.

ORA-25155: column used in NATURAL join cannot have qualifier

Cause: Columns that are used for a named-join (either a NATURAL join or a join with a USING clause) cannot have an explicit qualifier.

Action: Remove the qualifier.

ORA-25156: old style outer join (+) cannot be used with ANSI joins

Cause: When a query block uses ANSI style joins, the old notation for specifying outer joins (+) cannot be used.

Action: Use ANSI style for specifying outer joins also.

ORA-25157: specified block size *string* is not valid

Cause: An attempt was made to create a tablespace with a block size that was not supported.

Action: Specify a valid block size that is either the standard block size or one of 2K, 4K, 8K, 16K, or 32K subject to the maximum and minimum block sizes supported by the platform.

ORA-25158: Cannot specify RELY for foreign key if the associated primary key is NORELY

Cause: RELY was specified for the foreign key constraint, when the associated primary key constraint was NORELY.

Action: Change the option of the primary key also to RELY.

ORA-25159: Must specify a valid tablespace number

Cause: A valid tablespace number was missing.

Action: Specify a valid tablespace number.

ORA-25160: Must specify a valid relative data block address

Cause: A valid relative data block address was missing.

Action: Specify a valid relative data block address.

ORA-25161: Cannot have both DBA and RDBA options

Cause: Both the DBA and RDBA options were passed to ALTER SYSTEM DUMP REDO.

Action: Use either the DBA option or the RDBA option but not both.

ORA-25162: Must specify both RDBA MIN and RDBA MAX options

Cause: Only one RDBA option was passed to ALTER SYSTEM DUMP REDO.

Action: Specify both RDBA MIN and RDBA MAX.

ORA-25163: Invalid tablespace number or relative data block address

Cause: The relative data block address was invalid for the given tablespace number or the table space number was invalid.

Action: Specify a valid tablespace number or relative data block address.

ORA-25164: The tag expression is too complex.

Cause: The statement tag value was not specified using a simple expression.

Action: Reduce the complexity of the statement tag expression. For example, assign the tag expression to a variable and reference the variable in the error logging clause.

ORA-25165: number of passwords in statement exceeds maximum limit of *string*

Cause: The SQL statement had more passwords than the maximum limit allowed.

Action: Reconstruct the SQL statement to have a number of passwords less than or equal to the maximum allowed.

ORA-25175: no PRIMARY KEY constraint found

Cause: A PRIMARY KEY constraint must be defined for a table with this organization

Action: Define a PRIMARY KEY

ORA-25176: storage specification not permitted for primary key

Cause: Storage parameters cannot be defined for a PRIMARY KEY constraint for a table with this organization

Action: Remove storage specification for primary key

ORA-25177: UNRECOVERABLE option not permitted

Cause: The UNRECOVERABLE option may not be specified for a primary key for a table with this organization

Action: Remove UNRECOVERABLE option for primary key

ORA-25178: duplicate PCTTHRESHOLD storage option specification

Cause: The storage option PCTTHRESHOLD is specified more than once.

Action: Specify storage options at most once.

ORA-25179: invalid PCTTHRESHOLD storage option value

Cause: The specified value must be a positive integer.

Action: Specify an appropriate value.

ORA-25180: PCTTHRESHOLD only valid for certain table organizations

Cause: PCTTHRESHOLD can only be specified for tables with certain organizations.

Action: Remove the PCTTHRESHOLD option.

ORA-25181: missing ON keyword for NESTED INDEX

Cause: ON keyword required to specify nested index column nest

Action: Add ON keyword

ORA-25182: feature not currently available for index-organized tables

Cause: An attempt was made to use one or more of the following feature(s) not currently supported for index-organized tables: CREATE TABLE with LOB/BFILE/VARRAY columns, partitioning/PARALLEL/CREATE TABLE AS SELECT options, ALTER TABLE with ADD/MODIFY column options, CREATE INDEX ALTER TABLE MOVE with LOB/PARALLEL

Action: Do not use the disallowed feature(s) in this release.

ORA-25183: index-organized table top index segment is in a different tablespace

Cause: An attempt was made to drop a tablespace which contains an index only table's overflow segment but not the top index segment"

Action: find index-organized tables which span the tablespace being dropped and some other tablespace(s). Drop these tables.

ORA-25184: column name expected

Cause: A column name is not present where required by the CREATE TABLE for specifying last column to be included in the index segment of the index-organized table

Action: Specify a column name where required by the syntax.

ORA-25185: index column other than last can not be specified for INCLUDE clause

Cause: An index column name other than the last is specified as including column

Action: Specify either a column name which is not part of index-organized table primary key index , or the last key column of the primary key for the INCLUDING clause.

ORA-25186: INCLUDING clause specified for index-organized table without OVERFLOW

Cause: INCLUDING clause of a CREATE TABLE is an valid option only for index-organized tables with OVERFLOW clause (at creation time) or if an OVERFLOW segment already exists (at ALTER time).

Action: Specify OVERFLOW clause for the index-organized table : For ALTER, perform ADD OVERFLOW first.

ORA-25187: specified exceptions table form incorrect

Cause: The specified table does not have the proper field definitions.

Action: Specify the correct table to use.

ORA-25188: cannot drop/disable/defer the primary key constraint for index-organized tables or sorted hash cluster

Cause: An attempt was made to DROP, DISABLE, or DEFER the primary key constraint for an index-only table. This is not allowed.

Action: Do not DROP, DISABLE, or DEFER the primary key constraint for an index-only table.

ORA-25189: illegal ALTER TABLE option for an index-organized table

Cause: While altering an index-organized table, an attempt was made to enter either the PCTFREE or PCTUSED value for IOT top index segment.

Action: Remove the illegal option(s).

ORA-25190: an index-organized table maintenance operation may not be combined with other operations

Cause: ALTER TABLE statement attempted to combine an index-organized table maintenance operation (e.g. changing physical attributes) with some other operation (e.g. ADD constraint) which is illegal

Action: Ensure that a index-organized table maintenance operation is the sole operation specified in ALTER TABLE statement;

ORA-25191: cannot reference overflow table of an index-organized table

Cause: An attempt to directly access the overflow table of an index-organized table

Action: Issue the statement against the parent index-organized table containing the specified overflow table.

ORA-25192: invalid option for an index-organized table

Cause: An attempt to specify one or more of the following options for an index-organized table: [NO]CACHE, NO LOGGING, CLUSTER

Action: Remove the illegal option(s)

ORA-25193: cannot use COMPRESS option for a single column key

Cause: An attempt to use COMPRESS option on single column key

Action: Remove the COMPRESS option.

ORA-25194: invalid COMPRESS prefix length value

Cause: The specified value must be a positive integer less than the number of key columns

Action: Specify an appropriate value.

ORA-25195: invalid option for index on an index-organized table

Cause: An attempt to specify one or more of the following options for index on an IOT: BITMAP, REVERSE, PCTUSED

Action: Specify an appropriate option.

ORA-25196: keyword MOVE in ALTER TABLE MOVE must immediately follow table name

Cause: MOVE specified after one/more other ALTER options

Action: Change order of options, MOVE should be first Remove the illegal option(s)

ORA-25197: an overflow segment already exists for the indexed-organized table

Cause: An attempt was made to ADD OVERFLOW segment on an index-organized table that already has an overflow segment

Action: No action required.

ORA-25198: partitioning method is not supported for index-organized table

Cause: An unsupported partitioning method was specified.

Action: Select a different partitioning scheme. Consult the documentation for supported partitioning methods.

ORA-25199: partitioning key of a index-organized table must be a subset of the primary key

Cause: An attempt to specify a partitioning key which is not a prefix of the primary key of the index-organized table

Action: Select a different partitioning key

ORA-25200: invalid value *string*, QUEUE_NAME should be [SCHEMA.]NAME

Cause: A NULL parameter was specified for QUEUE_NAME.

Action: Specify a non-NULL queue name.

ORA-25201: invalid value, VISIBILITY should be ON_COMMIT or IMMEDIATE

Cause: An invalid value specified for parameter VISIBILITY.

Action: Specify either ON_COMMIT or IMMEDIATE.

ORA-25202: invalid value NULL, *string* should be non-NULL

Cause: A NULL value was specified for the parameter.

Action: Specify a non-NULL value.

ORA-25203: invalid value *string*, DELAY should be non-negative

Cause: A negative value or NULL was specified for DELAY.

Action: Specify a non negative integer for DELAY.

ORA-25204: invalid value, SEQUENCE_DEVIATION should be BEFORE or TOP

Cause: An invalid SEQUENCE_DEVIATION was specified.

Action: Specify either the option 'BEFORE' or 'TOP'.

ORA-25205: the QUEUE *string.string* does not exist

Cause: The specified queue does not exist.

Action: Create the queue first before specifying it for enqueue or dequeue.

ORA-25206: enqueue failed, enqueue to exception queue *string.string* not permitted

Cause: An attempt was made to enqueue to an exception queue.

Action: Try enqueueing to another queue.

ORA-25207: enqueue failed, queue *string.string* is disabled from enqueueing

Cause: The queue has been stopped to prevent any further enqueueing.

Action: Enable the queue first by using an administrative operation.

ORA-25208: RELATIVE_MSGID must be specified if SEQUENCE_DEVIATION is BEFORE

Cause: A relative message identifier should be specified if sequence deviation is specified as BEFORE.

Action: Either specify an existing relative message identifier or don't specify sequence deviation as BEFORE.

ORA-25209: invalid value *string*, EXPIRATION should be non-negative or NEVER

Cause: The expiration is less than zero or NULL.

Action: Specify a valid value for `expire_after` which should be greater than or equal to zero or NEVER.

ORA-25210: invalid value for RELATIVE_MSGID, no message in queue with that msgid

Cause: No message in the queue with the message ID equal to the specified RELATIVE_MSGID.

Action: Try again with a valid RELATIVE_MSGID.

ORA-25211: invalid DELAY specified when using sequence deviation

Cause: The DELAY specified in the enqueue is greater than the delay of the message with the given relative message id.

Action: Set the DELAY to be less than or equal to the delay of the message with the given relative message id. If the TOP option is used the delay must be less than or equal to the delay of all the messages in the queue.

ORA-25212: invalid PRIORITY specified when using sequence deviation

Cause: The PRIORITY specified in the enqueue is less than the priority of the message with the given relative message id.

Action: Set the PRIORITY to be less than the delay of the message with the given relative message ID. If the TOP option is used, the priority must be greater than or equal to the priority of all the messages in the queue.

ORA-25213: message with specified RELATIVE_MSGID has been dequeued

Cause: The message specified by the RELATIVE_MSGID field in the sequence deviation BEFORE option has been dequeued.

Action: No action required. This is an informational message only.

ORA-25214: cannot specify delay or expiration for enqueue to exception queue

Cause: A message was enqueued to the exception queue with either delay or expiration specified.

Action: Enqueue a message without delay or expiration.

ORA-25215: user_data type and queue type do not match

Cause: A user tries to enqueue an object to a queue that was created for objects of different type.

Action: Try enqueue again with an object of the right type.

ORA-25216: invalid recipient, either NAME or ADDRESS must be specified

Cause: Both attributes, NAME and ADDRESS, were specified null for one of the recipients in the recipient list.

Action: Specify a non-null NAME or ADDRESS for the recipient.

ORA-25217: enqueue failed, visibility must be IMMEDIATE for queue *string.string*

Cause: An attempt was made to enqueue to a non-persistent queue without setting visibility to IMMEDIATE.

Action: Set visibility to IMMEDIATE.

ORA-25218: enqueue failed, delay must be zero for queue *string.string*

Cause: An attempt was made to enqueue to a non-persistent queue with delay greater than zero seconds.

Action: Set delay to zero.

ORA-25219: enqueue failed, sequence deviation not allowed for queue *string.string*

Cause: An attempt was made to enqueue to a non-persistent queue with sequence deviation specified.

Action: Do not specify sequence deviation.

ORA-25220: enqueue failed, signature not specified for a non-repudiable queue

Cause: An attempt was made to enqueue to a non-repudiable queue without specifying the signature

Action: Give the signature

ORA-25221: enqueue failed, signature specified queue not supporting non-repudiation

Cause: An attempt was made to enqueue to a queue specifying the signature for a queue not supporting non-repudiation

Action: Remove the signature

ORA-25222: enqueue failed, complete sender info. not provided for a queue supporting non-repudiation

Cause: An attempt was made to enqueue to a queue without giving the complete sender information (name) for a queue supporting non-repudiation

Action: Provide the sender information

ORA-25223: user_data type used is not supported

Cause: An attempt was made to enqueue data into a non persistent queue that is of a type other than the supported raw or object type.

Action: Enqueue the message again with data of raw or object type.

ORA-25224: sender name must be specified for enqueue into secure queues

Cause: An attempt was made to enqueue into a secure queue without specifying a sender name.

Action: Enqueue the message with sender name specified.

ORA-25225: invalid value *string*, DEQUEUE_MODE should be REMOVE or BROWSE or LOCKED

Cause: An invalid parameter has been specified for DEQUEUE_MODE.

Action: Specify either REMOVE, BROWSE or LOCKED.

ORA-25226: dequeue failed, queue *string.string* is not enabled for dequeue

Cause: The queue has not been enabled for dequeue.

Action: Enable the queue using START_QUEUE.

ORA-25227: Propagation job *string* doesn't exist

Cause: The job doesn't exist in AQ\$_SCHEDULES or cache.

Action: n/a

ORA-25228: timeout or end-of-fetch during message dequeue from *string.string*

Cause: One of the following happened: * The user-specified dequeue wait time passed. * The end of the queue was reached but no message was retrieved. * An external event was set to break the blocking dequeue.

Action: Try dequeue again with the appropriate WAIT_TIME or the FIRST_MESSAGE option.

ORA-25229: error on transformation of message *string string*

Cause: There was an error when transforming a message at enqueue, dequeue or propagation time.

Action: Correct the transformation function.

ORA-25230: invalid value *string*, WAIT should be non-negative

Cause: A negative value has been specified for WAIT.

Action: specify a non negative value or FOREVER.

ORA-25231: cannot dequeue because CONSUMER_NAME not specified

Cause: A user tried to dequeue from a queue that has been created for multiple consumers but a CONSUMER_NAME was not been specified in the dequeue options.

Action: Specify the CONSUMER_NAME in the dequeue options.

ORA-25232: duplicate recipients specified for message

Cause: An enqueue was performed with duplicate queue agents in the recipients parameter.

Action: Remove the duplicate queue agent and retry the call.

ORA-25233: invalid parameter specified for NAVIGATION

Cause: An invalid parameter has been specified for NAVIGATION.

Action: Choose one of FIRST_MESSAGE, NEXT_MESSAGE or NEXT_TRANSACTION. Use FIRST_MESSAGE for dequeuing the first message that satisfies the criterion, NEXT_MESSAGE for dequeuing the next message that satisfies the criterion, and NEXT_TRANSACTION for moving to a set of messages enqueued by another transaction.

ORA-25234: NEXT_TRANSACTION navigation option invalid for queue table *string.string*

Cause: The NEXT_TRANSACTION navigation option was used in a dequeue from a queue in a queue table that was not created for transactional grouping.

Action: Specify either FIRST_MESSAGE or NEXT_MESSAGE as the navigation option. If you want to dequeue messages using transactional grouping create the queue in a queue table that has transactional grouping enabled.

ORA-25235: fetched all messages in current transaction from *string.string*

Cause: The NEXT_TRANSACTION navigation option was used in a dequeue when there were no more messages that belong to the same transaction.

Action: Use the NEXT_TRANSACTION navigation option to move to the next also use the FIRST_MESSAGE option to start from the head of the queue again.

ORA-25236: buffer too small for user data

Cause: The variable or buffer used for the OUT parameter payload was too small for the user data to be dequeued.

Action: Increase the size of the buffer or the size of the variable. The maximum size allowed is 32K.

ORA-25237: navigation option used out of sequence

Cause: The NEXT_MESSAGE or NEXT_TRANSACTION option was specified after dequeuing all the messages.

Action: Reset the dequeuing position using the FIRST_MESSAGE navigation option and then specify the NEXT_MESSAGE or NEXT_TRANSACTION option.

ORA-25238: too many recipients specified for message destination *string*

Cause: An ENQUEUE was performed with more than 32 recipients for the given destination (address).

Action: Reduce the number of recipients to 32 or less, and retry the call.

ORA-25239: message ID not supplied when dequeuing from exception queue *string.string*

Cause: An attempt was made to dequeue from a release 8.0-compatible exception queue without including a message ID in the dequeue options.

Action: Check the application to ensure that the queue name has been specified correctly. If the queue name is correct supply a message ID when dequeuing from a release 8.0-compatible exception queue. Otherwise, upgrade the queue_table containing the queue to release 8.1-compatible using the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure.

ORA-25240: multiple dequeue criteria specified in dequeue options

Cause: An attempt was made to dequeue by specifying more than one dequeue criteria in the dequeue options. You are permitted to specify either message ID or dequeue condition or correlation ID, or neither.

Action: To dequeue a message, specify a message ID or a dequeue condition or a correlation ID in the dequeue options, but do not specify multiple of them together. If you want to dequeue in the queue's sort order, then do not specify either the message ID or dequeue condition or correlation ID in the dequeue options.

ORA-25241: cannot change correlation ID from *string* to *string* without FIRST_MESSAGE option

Cause: An attempt was made to change the correlation ID while using the NEXT_MESSAGE or NEXT_TRANSACTION option for dequeuing.

Action: To use a correlation ID that is different from the previous dequeue call, reset the dequeuing position by using the FIRST_MESSAGE navigation option.

ORA-25242: cannot change subscriber name from *string* to *string* without FIRST_MESSAGE option

Cause: An attempt was made to change the subscriber name while using the NEXT_MESSAGE or NEXT_TRANSACTION option for dequeuing.

Action: To use a subscriber name that is different from the previous dequeue call, reset the dequeuing position by using the `FIRST_MESSAGE` navigation option.

ORA-25243: CONSUMER_NAME cannot be specified when dequeuing from exception queue *string.string*

Cause: An attempt was made to dequeue from an exception queue by specifying the `CONSUMER_NAME` in the dequeue options. `CONSUMER_NAME` can only be specified when dequeuing from a normal queue created for multiple consumers.

Action: Specify only the message id in the dequeue options to dequeue a message from an exception queue.

ORA-25244: dequeue index key not found, QUEUE *string*, rowid *string*

Cause: An internal error was encountered. There may be an inconsistency in the queue table index.

Action: Contact your Oracle customer support representative. You may need to provide the trace file and information about reproducing the error.

ORA-25245: agent name cannot be specified if address is a single-consumer queue or an exception queue

Cause: The agent name for the agent in the `LISTEN` call was specified when the agent address was a single-consumer queue or an exception queue.

Action: Do not specify the agent name.

ORA-25246: listen failed, the address *string* is an 8.0 style exception queue

Cause: An 8.0 style exception queue was specified in the agent-list for the `LISTEN` call.

Action: Specify a normal 8.0 style queue or an 8.1 style queue in the agent-list.

ORA-25247: *string* is not a recipient of specified message

Cause: The consumer name specified in the dequeue options is not a recipient of the message specified by the message id.

Action: Ensure that the agent specified by the consumer name is a recipient of the message specified by the message id.

ORA-25248: duplicate agent specified in the agent list

Cause: An agent was specified more than once in the agent list of the `LISTEN` call.

Action: Remove the duplicate agent specification(s), and retry the call.

ORA-25249: dequeue failed, dequeue not allowed for queue *string.string*

Cause: An attempt was made to dequeue from a non-persistent queue.

Action: Dequeue from a different queue.

ORA-25250: Cannot specify a remote recipient for the message

Cause: A recipient for the message enqueued to a non-persistent queue had a non-local address.

Action: Do not specify the address field or specify the queue which is the target of the enqueue

ORA-25251: exceeded maximum number of recipients for message

Cause: An attempt was made to issue an ENQUEUE call that exceeded the maximum number (1024) of recipients per message.

Action: Reduce the number of recipients to 1024 or less, and retry the call.

ORA-25252: listen failed, the address *string* is a non-persistent queue

Cause: A non-persistent queue was specified as an address for an agent in the LISTEN call.

Action: Specify a normal queue as address for the agent, and retry the LISTEN call.

ORA-25253: listen failed, queue *string.string* is not enabled for dequeue

Cause: An attempt was made to specify a queue that is not enabled for dequeue in a LISTEN call.

Action: Enable the queue for dequeue using START_QUEUE, and retry the LISTEN call.

ORA-25254: time-out in LISTEN while waiting for a message

Cause: The specified wait time elapsed and there were no messages for any of the agents in the agent-list or an external event was set to break the blocking listen.

Action: Try the LISTEN call with an appropriate time-out.

ORA-25255: incorrect subscription string *string*

Cause: An incorrect subscription string was specified with OCIRegister.

Action: Specify a subscription string using the [CONSUMER:]SCHEMA.QUEUE form.

ORA-25256: consumer cannot be specified with a single-consumer queue or an exception queue

Cause: An attempt was made to specify a consumer in the subscription string when registering for notification on a single-consumer queue or an exception queue.

Action: Do not specify the consumer in the subscription string.

ORA-25257: consumer must be specified with a multi-consumer queue

Cause: An attempt was made to register on a multi-consumer queue without specifying a consumer in the subscription string.

Action: Specify a consumer in the subscription string.

ORA-25258: cannot register for notifications on an 8.0 style exception queue

Cause: An attempt was made to specify an 8.0 style exception queue in the subscription string of OCIRegister.

Action: Specify a normal queue or a non-persistent queue.

ORA-25259: cannot specify protocol for agent

Cause: The user specified the protocol attribute for an agent in the agent list.

Action: Do not specify the protocol attribute of the agent object type.

ORA-25260: AQ latch cleanup testing event

Cause: N/A.

Action: event used for AQ statistics latch cleanup testing.

ORA-25261: JOB_QUEUE_PROCESSES must be at least 2 for AQ propagation

Cause: AQ Propagator encountered a setting for JOB_QUEUE_PROCESSES that is insufficient for AQ propagation.

Action: Set the number of JOB_QUEUE_PROCESSES to at least 2 for AQ propagation.

ORA-25262: agent name cannot be NULL if address is a multi-consumer queue

Cause: The name for the agent in the LISTEN call was not specified when the agent address was a multi-consumer queue.

Action: Specify a non-NULL name for the agent.

ORA-25263: no message in queue *string.string* with message ID *string*

Cause: An attempt was made to dequeue a message with a specific message ID, but no such message exists in the queue.

Action: Try dequeue again with a valid message ID.

ORA-25264: cant get signature for this queue

Cause: An attempt was made to dequeue the signature from this queue, which is not receiver non-repudiable.

Action: Try dequeue again without the get signature option

ORA-25265: specified signature for a queue which does not support receiver non-repudiation

Cause: An attempt was made to dequeue the message from a queue which does not support receiver non-repudiation, but the signature was specified for verification.

Action: Try dequeue again without the signature.

ORA-25266: didnt try to dequeue by message id. with the signature

Cause: The signature was specified for a queue, but the dequeue was not done by message id.

Action: Try dequeue again by message id.

ORA-25267: did not specify the signature for a receiver non-repudiable queue

Cause: The signature was not specified for a receiver non-repudiable queue.

Action: Try dequeue again along with the signature.

ORA-25268: didnt dequeue in browse mode with get signature option

Cause: The dequeue was not performed in browse mode with get signature option

Action: Try dequeue again in browse mode

ORA-25269: cannot specify signature with get signature option

Cause: The signature was not required for the dequeue with the get signature option.

Action: Try dequeue again without the signature in dequeue options.

ORA-25270: sender info does not match with the actual sender of the message

Cause: The sender info. and the message id. do not match

Action: Provide the right sender info. Try dequeue again without the signature in dequeue options

ORA-25271: queue table not found for the given queue

Cause: The queue table does not exist for the given queue

Action: Provide the right queue name

ORA-25272: Signature does not exist for the given receiver and message id.

Cause: Signature does not exist for the given receiver and message id.

Action: Check the message id. and the receiver's information

ORA-25273: AQ QMN process alternate cleanup event

Cause: N/A.

Action: event used for AQ QMN alternate cleanup mode.

ORA-25274: AQ Buffered Queue event

Cause: N/A.

Action: event used for AQ Buffered Queue mode.

ORA-25276: table specified is not a queue table

Cause: An invalid queue table name is specified.

Action: Check the dictionary views to see if the table is a queue table.

ORA-25277: cannot grant or revoke object privilege on release 8.0 compatible queues

Cause: An attempt was made to grant or revoke object privilege on release 8.0 style queues.

Action: Convert the release 8.0 compatible queue table to release 8.1 compatible using DBMS_AQADM.MIGRATE_QUEUE_TABLE before granting or revoking object privilege.

ORA-25278: grantee name cannot be NULL

Cause: An attempt was made to specify NULL for the grantee parameter.

Action: Specify a valid grantee parameter.

ORA-25279: dequeue as select not supported before 8.2

Cause: Dequeue as select not supported before 8.2.

Action: Dont use select condition while dequeuing

ORA-25280: complete sender information not provided to non-repudiate sender

Cause: complete sender information not provided to non-repudiate sender

Action: Provide the complete sender information

ORA-25281: complete receiver information not provided to non-repudiate receiver

Cause: complete receiver information not provided to non-repudiate receiver

Action: Provide the complete receiver information

ORA-25282: message id. not provided for non-repudiation

Cause: message id. was not provided

Action: Provide the message id.

ORA-25283: either agent's name or address needed for non-repudiation

Cause: neither agent's name nor address provided for non-repudiation"

Action: Provide the agent info.

ORA-25284: Invalid value *string* for *string*

Cause: An Invalid value or NULL was specified for the parameter.

Action: Check the documentation for valid values.

ORA-25285: Invalid value *string* for *array_mode*

Cause: An Invalid value or NULL was specified for the *array_mode*.

Action: Check the documentation for valid values.

ORA-25286: Invalid number of elements in the message properties array

Cause: Number of elements in the message properties array do not match the number of elements in the payload array.

Action: Create a message property array with one element (that applies for all the elements in the payload array) or create a message property array with the same number of elements as there are in the payload array.

ORA-25287: Invalid value *string*, *string* should be non-negative

Cause: An Invalid value or NULL was specified for the parameter.

Action: Specify a non negative integer.

ORA-25288: AQ HTTP propagation encountered error, status-code *number*, *string*

Cause: AQ propagation's HTTP request to the propagation servlet at the specified address encountered an error

Action: Specify a valid address in the connect string of the propagation destination dblink, the dblink user has the correct permissions, check if the AQ propagation servlet was properly installed.

ORA-25289: Buffer Already Exists

Cause: Buffer already exists for the specified queue.

Action: None

ORA-25290: Cannot complete operation on queue *string* with existing messages

Cause: Queue already has messages. Cannot complete operation

Action: Truncate the queue before adding/dropping a buffer

ORA-25291: Buffer does not exist for the specified queue

Cause: Buffer does not exist for the specified queue

Action: Operation on the buffer cannot be performed. create the buffer

ORA-25292: Buffer operations are not supported on the queue

Cause: Buffer operations are not supported on the specified queue type

Action: Buffered operations are only supported on to 8.1 style queues, which do not have transaction grouping.

ORA-25293: Lob attributes must be null for buffered operations

Cause: Enqueue of a buffered message with a non-null lob attribute was attempted

Action: Set the lob attributes to null before enqueueing the buffered message

ORA-25294: Cannot propagate user buffered messages to a database with version lower than 10.2

Cause: Propagation of user buffered messages was attempted to a database with version lower than 10.2.

Action: Do not propagate buffered messages to the database.

ORA-25295: Subscriber is not allowed to dequeue buffered messages

Cause: Subscriber is only allowed to dequeue persistent messages

Action: Drop the subscriber and re-create it, or dequeue only persistent messages for the subscriber

ORA-25296: Queue Table *string* has a buffered queue *string*

Cause: Buffered message was enqueue by specifying delay or sequence deviation.

Action: Do not specify delay or sequence deviation when enqueueing buffered messages.

ORA-25298: Only immediate visibility mode supported for buffered message enqueue or dequeue

Cause: A visibility of `dbms_aq.ON_COMMIT` was supplied with the buffered message enqueue or dequeue

Action: Supply a visibility of `dbms_aq.IMMEDIATE`

ORA-25299: Invalid message delivery_mode

Cause: Invalid value was specified for delivery mode

Action: Specify `dbms_aq.BUFFERED` or `dbms_aq.PERSISTENT` during Enqueue or `dbms_aq.BUFFERED`, `dbms_aq.PERSISTENT` or `dbms_aq.PERSISTENT_OR_BUFFERED` during Dequeue and Listen.

ORA-25300: Cannot drop buffer for queue with buffered subscribers

Cause: Cannot drop buffer for queue with buffered subscribers

Action: Either drop buffered subscribers or forcibly drop the buffer

ORA-25301: Cannot enqueue or dequeue user buffered messages to a database with version lower than 10.2

Cause: Enqueue or dequeue of user buffered messages was attempted to queues in a database with version lower than 10.2.

Action: Do not attempt to enqueue or dequeue user buffered messages.

ORA-25302: Operation not possible for non-buffered queue *string*

Cause: Last enqd/ackd message is only supported for buffered queues

Action: The operation is not supported.

ORA-25303: Buffered operation allowed only on the owner instance

Cause: Operation was not performed on the owner instance.

Action: Perform operation on the owner instance.

ORA-25304: Cannot use priority order queues for capture LCRs

Cause: Capture LCRs can only use commit time or enqueue time ordered queues.

Action: Use the appropriate type of queue for captured LCRs.

ORA-25305: enqueue failed, expiration must be zero for queue *string.string*

Cause: An attempt was made to enqueue to a buffered queue with expiration greater than zero seconds.

Action: Set expiration to zero.

ORA-25306: Cannot connect to buffered queue's owner instance

Cause: cannot connect to the owner instance of the buffered queue

Action: set listener information in REMOTE_LISTENERS or LOCAL_LISTENERS initialization parameter.

ORA-25307: Enqueue rate too high, flow control enabled

Cause: Subscribers could not keep pace with the enqueue rate.

Action: Try enqueue after waiting for some time.

ORA-25310: Subscriber is Notification only; dequeue not supported

Cause: Notification only subscribers are not allowed to dequeue.

Action: Recreate subscriber if necessary.

ORA-25311: *string* not supported for non-persistent queue

Cause: Specified QOS is not supported for non-persistent queues.

Action: Specify the right QOS.

ORA-25312: Cannot specify nonzero sender protocol

Cause: Sender protocol was specified during an enqueue operation.

Action: Specify the enqueue sender protocol as null or zero.

ORA-25313: a queue may not subscribe to itself for propagation

Cause: The specified subscriber had a NULL name and an address equal to the queue name.

Action: Provide a valid subscriber and retry the operation.

ORA-25314: a commit-time queue table cannot be migrated to 8.0

Cause: An attempt was made to migrate a commit-time queue table to an unsupported compatibility level.

Action: Provide an appropriate compatibility level, and retry the operation.

ORA-25315: unsupported configuration for propagation of buffered messages

Cause: An attempt was made to propagate buffered messages with the database link pointing to an instance in the destination database which is not the owner instance of the destination queue.

Action: Use queue to queue propagation for buffered messages.

ORA-25316: Late in the current transaction to begin an Enqueue/Dequeue operation

Cause: Check if the Enqueue/Dequeue operation is performed via triggers on Materialized Views which isn't supported.

Action: Triggers on materialized views aren't supported. Workarounds are on-demand materialized views or execution of trigger code within an autonomous txn.

ORA-25317: Propagation stopped because of instance shutdown

Cause: A propagation job has stopped because the instance is shutting down.

Action: No user action is required.

ORA-25318: Propagation stopped because of instance affinity change

Cause: A propagation job has stopped because its instance affinity has changed.

Action: No user action is required. The job will restart on the appropriate instance.

ORA-25319: Queue table repartitioning aborted

Cause: During instance restart in an Oracle RAC environment, queue table repartitioning aborted due to errors.

Action: Look at the incident generated for this error and report the problem to Oracle Support Services.

ORA-25320: Failed to create, alter, or remove Subscriber

Cause: There is a pending enqueue or dequeue operation on this queue from the same session.

Action: Either COMMIT or ROLLBACK pending enqueue or dequeue operation before attempting to create, alter, or remove the subscriber.

ORA-25321: enqueue failed, user property specified but queue *string.string* is not an 8.1 style queue

Cause: user properties can only be specified when enqueueing into 8.1 style queues.

Action: Specify an 8.1 style queue or pass user property as NULL.

ORA-25322: message priority is out of range

Cause: The message priority range of 0 to 9 was exceeded.

Action: Set the message priority in the range of 0 to 9.

ORA-25323: incorrect input to the seek call - *string*

Cause: Some fields in one or more elements of the input array were incorrect.

Action: Correct the fields of the specified elements.

ORA-25324: The seek requested by element *string* of input array can skip a message that is not dequeued in shard *string*.

Cause: An attempt was made to skip a message that was not dequeued.

Action: Set the SKIP_OPTION in the seek call to NO_DISCARD_SKIPPED or DISCARD_SKIPPED and retry the seek operation.

ORA-25325: The *string* field of queue properties is incorrect.

Cause: Invalid input in the queue properties was specified.

Action: Correct the specified field in the queue properties.

ORA-25326: Array *string* operation failed for message at index *string*

Cause: Array operation fails for the message at specified index. Look at the remainder of the error stack to see what the problem was.

Action: Fix cause of error and retry array operation.

ORA-25327: Array size is invalid

Cause: Array size must be a positive, non-zero integer.

Action: Use corrected array size and retry array operation.

ORA-25328: *string* argument size *string* is smaller than array size

Cause: The size of the argument is smaller than the given array size.

Action: Lower array size or use a larger sized input argument.

ORA-25329: AQ array operations not allowed on 8.0 queues

Cause: An array enqueue/dequeue was attempted on an 8.0 queue.

Action: Use single enqueue/dequeue with this queue.

ORA-25330: PL/SQL associative arrays may not be used with AQ array operations

Cause: A PL/SQL associative array was provided for the payload parameter in an enqueue/dequeue array operation.

Action: Use VARRAY or NESTED TABLE types with AQ array operations.

ORA-25331: cannot downgrade because there are commit-time queue tables

Cause: An attempt was made to downgrade a database that has commit-time queue tables.

Action: Drop all commit-time queue tables before attempting the downgrade.

ORA-25332: Invalid release value *string* for queue table compatible parameter

Cause: The release level given for the queue table compatible parameter is invalid

Action: Specify a valid release value for the queue table compatible parameter

ORA-25333: Buffered Queue to Queue propagation did not connect to the correct instance

Cause: Queue to Queue propagation for buffered messages didn't connect to the correct instance, most likely because service was not started for the destination queue.

Action: No user action is required. Propagation will start the service for the destination queue and retry.

ORA-25334: Buffered propagation must restart as the destination queue was recreated/moved

Cause: Buffered propagation destination queue was recreated or its ownership was moved to another instance during propagation.

Action: No user action is required. Propagation will reinitialize its metadata and retry.

ORA-25335: AQ array operations not allowed for buffered messages

Cause: An array enqueue/dequeue was attempted for buffered messages

Action: Use single enqueue/dequeue for buffered messages or an array size of one.

ORA-25336: Cannot contact instance *string* during Streams AQ operation

Cause: The specified instance was not responding to AQ requests.

Action: Set parameter `aq_tm_processes` to a non-zero value. If the problem persists, contact Oracle Support Services.

ORA-25337: Cannot propagate in queue-to-queue mode to a database with version lower than 10.2

Cause: Remote subscriber with `queue_to_queue` mode set to TRUE was added. The remote subscriber is on a database version lower than 10.2. Propagation was scheduled to a destination database with version lower than 10.2.

Action: Remove the remote subscriber with `queue_to_queue` mode and add the subscriber back with `queue_to_queue` set to FALSE. Unschedule the queue-to-queue propagation and schedule propagation in queue-to-dblink mode.

ORA-25338: operation '*string*' is not allowed for sync_capture '*string*'

Cause: An attempt was made to execute the specified operation for a `sync_capture` process.

Action: Remove the offending call.

ORA-25339: STREAMS '*string*' must be sync_capture

Cause: The specified capture STREAMS did not exist or was not a `sync_capture` process.

Action: Remove the offending call.

ORA-25340: must use commit-time queue for sync_capture

Cause: An attempt was made to create a `sync_capture` without using a commit-time queue.

Action: Rerun statement with a commit-time queue.

ORA-25341: sync_capture does not support "*string*". "*string*" because of the following reason:

Cause: `sync_capture` encountered a table with an unsupported property. The most common reason is an unsupported column data type.

Action: Revise the Capture rules to skip over the table in question. One option is to remove the rule that captures changes from the unsupported table. Check `DBA_STREAMS_TABLE_RULES` to determine the rule on the table specified in the error. Also query the `DBA_STREAMS_UNSUPPORTED` view to determine which

tables are not supported by STREAMS and for what reason. For potential workarounds to certain unsupported properties, see Metalink.

ORA-25342: cannot downgrade because there are apply processes for user buffered messages

Cause: An attempt was made to downgrade a database that has apply process for user-buffered messages.

Action: Drop all the apply processes for user-buffered messages before attempting the downgrade.

ORA-25343: Streams error queue cannot be exported

Cause: An attempt was made to export a database that has apply errors.

Action: Delete or reexecute errors before attempting the export.

ORA-25344: statement has bind variables

Cause: Current API could not handle a statement with bind variables.

Action: Use alternative API which handles bind variables.

ORA-25345: requested AQ minimum Oracle Streams Pool size *string* greater than Oracle Streams Pool size *string*

Cause: The minimum value requested for the Oracle Streams Advanced Queuing (AQ) pool size was greater than the Oracle Streams pool size.

Action: Set the minimum value for the Oracle Streams AQ pool size to less than or equal to the Oracle Streams pool size.

ORA-25346: requested AQ maximum Oracle Streams Pool size *string* less than AQ minimum Oracle Streams Pool size *string*

Cause: The maximum value requested for the Oracle Streams Advanced Queuing (AQ) pool size was less than the minimum value of the Oracle Streams (AQ) pool size.

Action: Set the maximum value for the Oracle Streams AQ pool size to greater than or equal to the minimum value of the Oracle Streams AQ pool size.

ORA-25347: Dequeue operation on sharded queue is not possible.

Cause: Dequeue of a buffered subscriber or JMS sharded queue failed with OCIAQDeq().

Action: Use OCIAQDeq2() for buffered subscribers and JMS sharded queues.

ORA-25348: cannot connect to shard owner instance *string* of database *string*

Cause: An Oracle Advanced Queuing (AQ) operation was attempted at a non-owner instance of the shard which could not establish an internal connection to it.

Action: Set the listener information in the REMOTE_LISTENERS or LOCAL_LISTENERS initialization parameter. If the REMOTE_LISTENERS or LOCAL_LISTENERS initialization parameter is already set, then retry the operation from the suggested owner instance.

ORA-25349: A parallel *string* operation is in progress for *string*.

Cause: An Oracle Database Advanced Queuing (AQ) operation was attempted when another parallel operation seek, enqueue, or dequeue was already in progress.

Action: Retry the operation again after the parallel operation is over.

ORA-25350: maximum number of concurrent transaction branches exceeded

Cause: the limit on the number of concurrent transaction branches has been reached

Action: Increase the INIT.ORA parameter 'transactions' and restart the system.

ORA-25351: transaction is currently in use

Cause: The transaction is currently used by a different session.

Action: Do not switch to a transaction attached to some other session.

ORA-25352: no current transaction

Cause: The user session is not attached to any transaction.

Action: Do not attempt to detach when there is no current transaction.

ORA-25353: branch marked for deletion

Cause: The branch specified cannot be killed immediately because another session is using the branch, but it has been marked for kill. This means it will be deleted as soon as possible after the current uninterruptable operation is completed.

Action: No action is required for the branch to be deleted.

ORA-25401: can not continue fetches

Cause: A failure occurred since the last fetch on this statement. Failover was unable to bring the statement to its original state to allow continued fetches.

Action: Reexecute the statement and start fetching from the beginning

ORA-25402: transaction must roll back

Cause: A failure occurred while a transaction was active on this connection.

Action: The client must roll back.

ORA-25403: could not reconnect

Cause: The connection to the database has been lost, and attempts to reconnect have failed.

Action: Manually reconnect.

ORA-25405: transaction status unknown

Cause: A failure occurred while a transaction was attempting to commit. Failover could not automatically determine instance status.

Action: The user must determine the transaction's status manually.

ORA-25406: could not generate a connect address

Cause: Failover was unable to generate an address for a backup instance.

Action: Contact Oracle customer support.

ORA-25408: can not safely replay call

Cause: The connection was lost while doing this call. It may not be safe to replay it after failover.

Action: Check to see if the results of the call have taken place, and then replay it if desired.

ORA-25409: failover happened during the network operation,cannot continue

Cause: The connection was lost when fetching a LOB column.

Action: Failover happened when fetching LOB data directly or indirectly. Please replay the top level statement.

ORA-25410: Application requested failover retry

Cause: The application failover callback requested failover retry.

Action: None. Informational only.

ORA-25411: transaction replay was not successful

Cause: Replay was not able to restore the transaction state to match the pre-failover state.

Action: Manually determine if it is safe to resubmit the transaction.

ORA-25412: transaction replay disabled by call to *string*

Cause: The application called an Oracle Call Interface (OCI) function that is not supported with transactional failover.

Action: Manually recover the pending transaction.

ORA-25413: transaction replay disabled by user request

Cause: The application explicitly disabled transaction replay by setting attribute OCI_ATTR_TRANSACTIONAL_TAF=FALSE.

Action: This message is informational only.

ORA-25414: Uncommitted transaction detected after TAF callback.

Cause: The Transparent Application Failover (TAF) callback started a transaction and did not commit or rollback prior to exiting.

Action: End the transaction with a COMMIT or a ROLLBACK prior to exiting the TAF callback.

ORA-25415: Application Continuity replay initiation timeout exceeded.

Cause: Application Continuity replay was attempted after REPLAY_INITIATION_TIMEOUT expired. The value for REPLAY_INITIATION_TIMEOUT is configured for the service to which the application is connected.

Action: Manually recover the pending transaction.

ORA-25416: Retry current call

Cause: Failover successfully recovered an in-flight transaction.

Action: Re-execute the current call.

ORA-25417: replay disabled; call (*string*) too large to record

Cause: Oracle Call Interface (OCI) Application Continuity replay was attempted after a large call that could not be recorded due to excessive memory requirements.

Action: Break up the call into smaller pieces and retry failover, or manually retry the user operation.

ORA-25418: transaction replay disabled by the use of object type in function *string*

Cause: The application used an Oracle Call Interface (OCI) object type that is not supported with transactional failover.

Action: Manually recover the pending transaction.

ORA-25419: transaction replay disabled in function *string* by the use of unsupported type *string*

Cause: The application used an Oracle Call Interface (OCI) type that is not supported with transactional failover.

Action: Manually recover the pending transaction.

ORA-25420: more than *number* non-fetch calls in request; replay disabled

Cause: Application Continuity failover was attempted after executing a request with a large number of Oracle Call Interface (OCI) calls, so replay of the request was not possible.

Action: Resubmit and consider partitioning application work into more requests with fewer OCI calls in each request.

ORA-25421: more than *number* fetch calls in request; replay disabled

Cause: Application Continuity failover was attempted after executing a request with a large number of Oracle Call Interface (OCI) Fetch calls, so replay of the request was not possible.

Action: Resubmit and consider partitioning application work into more requests with fewer OCI calls in each request.

ORA-25422: more than *number* cursor calls in request; replay disabled

Cause: Application Continuity failover was attempted after executing a request with a large number of Oracle Call Interface (OCI) OCISstmtPrepare2 calls, so replay of the request was not possible.

Action: Resubmit and consider partitioning application work into more requests with fewer OCI calls in each request.

ORA-25425: connection lost during rollback

Cause: The connection was lost while issuing a rollback and the application failed over.

Action: The connection was lost and failover happened during rollback. If the transaction is not externally coordinated, then Oracle implicitly rolled back, so no action is required. Otherwise examine `pending_trans$` to determine if "rollback force" is required.

ORA-25426: remote instance does not support shared dblinks

Cause: A shared dblink is being used to connect to a remote instance that does not support this feature because it is an older version.

Action: Use a normal dblink if you need to connect to this instance.

ORA-25427: cannot downgrade database links after database link data dictionary has been upgraded

Cause: An attempt was made to downgrade after the upgrade of the database link data dictionary.

Action: Drop the database links before attempting the downgrade.

ORA-25428: authentication failure while connecting through database link

Cause: An attempt to connect using the database link failed.

Action: Ensure connection details for the database link are correct.

ORA-25429: Break request cannot be propagated over shared database link.

Cause: No call in progress over shared database link.

Action: No action required. This is an informational message only.

ORA-25430: connected user database links are not supported in proxy session

Cause: A connected user database link is being used to connect to a remote database from a proxy user session.

Action: No action required. This was an informational message only.

ORA-25431: Connection with protocol *string* is disallowed by the outbound_dblink_protocols parameter.

Cause: An attempt to connect using the database link failed because the network protocol used for the database link is disallowed.

Action: Either set the value of the `outbound_dblink_protocols` initialization parameter appropriately to include the required protocol or change the protocol used by the database link to conform to the protocols allowed by the `outbound_dblink_protocols` parameter.

ORA-25433: User *string* does not have INHERIT REMOTE PRIVILEGES privilege on connected user *string*.

Cause: An attempt was made to use a connected user database link inside a definer's rights function, procedure or view, and the owner of the function, procedure or view lacked INHERIT REMOTE PRIVILEGES privilege on the connected user.

Action: Either do not start the function, procedure or view, or grant the owner of the function, procedure or view INHERIT REMOTE PRIVILEGES privilege on the connected user.

ORA-25434: Connected user database link usage by the common user *string* is not allowed.

Cause: The `COMMON_SCHEMA_ACCESS` lockdown profile feature was disabled.

Action: Either do not use the database link as a common user or have the administrator enable `COMMON_SCHEMA_ACCESS` lockdown profile feature.

ORA-25435: Database link cannot be used after failing over with Transparent Application Continuity.

Cause: The use of database link was detected in the failed-over session while Transparent Application Continuity was in use.

Action: Consider whether the application can use Transaction mode of Application Continuity that supports failover with database links. (Use `FAILOVER_TYPE=TRANSACTION`). Use Fast Application Notification with Oracle connection pools for planned maintenance.

ORA-25436: invalid table alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the table values specified had an invalid alias.

Action: Check the valid table aliases in the evaluation context, and try again with a valid alias.

ORA-25437: duplicate table value for table alias: *string*

Cause: An attempt to evaluate was made, which failed because some of the table values specified had the same table alias.

Action: Check the table values specified, and try again with only one value per table.

ORA-25438: invalid variable name: *string*

Cause: An attempt to evaluate was made, which failed because one of the variable values specified had an invalid name.

Action: Check the valid variable names in the evaluation context, and try again with a valid name.

ORA-25439: duplicate variable value for variable: *string*

Cause: An attempt to evaluate was made, which failed because some of the variable values specified had the same variable name.

Action: Check the variable names specified, and try again with only one value per variable.

ORA-25440: invalid table alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the column values specified had an invalid table alias.

Action: Check the valid table aliases in the evaluation context, and try again with a valid name.

ORA-25441: duplicate column value for table alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the column values supplied a value for a table alias, which already had a table value supplied.

Action: Check the table and column values specified, and try again with either a table value or column values for each table alias.

ORA-25442: too many column values for table alias: *string*

Cause: An attempt to evaluate was made, which failed because too many column values were supplied for the specified table alias.

Action: Check the column values specified, and try again with the right number of column values.

ORA-25443: duplicate column value for table alias: *string*, column number: *string*

Cause: An attempt to evaluate was made, which failed because duplicate column values were supplied for the specified table alias and column number.

Action: Check the column values specified, and try again with only one column value for each table alias, and column number.

ORA-25444: invalid ROWID: *string* for table alias: *string*

Cause: An attempt to evaluate was made, which failed because an invalid ROWID was supplied for the specified table alias.

Action: Check the column values specified, and try again with only one column value for each table alias, and column number.

ORA-25445: invalid column number: *string* for table alias: *string*

Cause: An attempt to evaluate was made, which failed because an invalid column number was supplied for the specified table alias as a part of a column value.

Action: Check the column values specified, and try again with a valid column number.

ORA-25446: duplicate column value for table alias: *string*, column: *string*

Cause: An attempt to evaluate was made, which failed because duplicate column values were supplied for the specified table alias and column name.

Action: Check the column values specified, and try again with only one column value for each table alias, and column name.

ORA-25447: encountered errors during evaluation of rule *string.string*

Cause: An attempt to evaluate was made, which failed during the evaluation of the specified rule.

Action: Check the rule and the values passed to evaluate, and try again with valid values.

ORA-25448: The *string string.string* has errors.

Cause: An attempt to load the specified rule or expression failed due to errors in the rule or expression.

Action: Check the rule or expression and retry the operation.

ORA-25449: invalid variable name: *string*

Cause: An attempt to evaluate was made, which failed because one of the attribute values specified had an invalid variable name.

Action: Check the valid variable names in the evaluation context, and try again with a valid name.

ORA-25450: error *string* during evaluation of rule set *string.string*

Cause: The specified error occurred during evaluation of the rule set.

Action: Check the error and take appropriate action.

ORA-25451: too many attribute values for variable: *string*

Cause: An attempt to evaluate was made, which failed because too many attribute values were supplied for the specified variable.

Action: Check the attribute values specified, and try again with the right number of attribute values.

ORA-25452: duplicate attribute value for variable: *string*, attribute: *string*

Cause: An attempt to evaluate was made, which failed because duplicate attribute values were supplied for the specified variable and attribute name.

Action: Check the attribute values specified, and try again with only one attribute value for each variable, and attribute name.

ORA-25453: invalid iterator: *string*

Cause: An attempt to get rule hits or to close an iterator was made, which failed because an invalid iterator was passed in.

Action: Check the iterator, and try again with a valid iterator.

ORA-25454: error during evaluation of rule set: *string.string* for iterator: *string*

Cause: An attempt to get rule hits for an iterator was made, which failed because of an error in evaluation of the specified rule set.

Action: Check the validity of the rule set and try again.

ORA-25455: evaluation error for rule set: *string.string*, evaluation context: *string.string*

Cause: An attempt to evaluate the specified rule set using the evaluation context specified failed due to some errors.

Action: Check additional errors signalled to determine the problem.

ORA-25456: rule set was modified or evaluation terminated for iterator: *string*

Cause: An attempt to get rule hits was made, which failed because the underlying rule set was modified after the iterator was returned.

Action: Try again after re-evaluating the rule set.

ORA-25457: evaluation function *string* returns failure

Cause: The specified evaluation function returned a failure during evaluation, causing evaluation to terminate.

Action: Check arguments to evaluate and retry.

ORA-25458: Value not supplied for *string string*

Cause: Variable or table column values were not supplied for evaluation.

Action: Supply all the required variable and column data points for Independent Expression Evaluation.

ORA-25459: Data conversion for *string string* failed

Cause: The attempt to convert data to the data type of the variable or column failed.

Action: Supply the correct data for variable or column.

ORA-25461: rule set not specified

Cause: An attempt to evaluate was made, which failed because the ruleset name specified was null.

Action: Check the rule set name, and try again with a valid name.

ORA-25462: evaluation context not specified

Cause: An attempt to evaluate was made, which failed because the evaluation context specified was null.

Action: Check the evaluation context name, and try again with a valid name.

ORA-25463: table alias not specified

Cause: An attempt to evaluate was made, which failed because one of the table values specified had a NULL alias name.

Action: Check the list of table values, and try again with a valid alias name.

ORA-25464: ROWID not specified for table alias: *string*

Cause: An attempt to evaluate was made, which failed because the table value for the specified table alias had a NULL ROWID.

Action: Check the list of table values, and try again with a valid ROWID.

ORA-25465: variable name not specified

Cause: An attempt to evaluate was made, which failed because one of the variable values specified had a NULL variable name.

Action: Check the list of variable values, and try again with a valid variable name.

ORA-25466: data not specified for variable name: *string*

Cause: An attempt to evaluate was made, which failed because the variable value for the specified variable name had NULL data.

Action: Check the list of variable values, and try again with valid data.

ORA-25467: table alias not specified

Cause: An attempt to evaluate was made, which failed because one of the column values specified had a NULL alias name.

Action: Check the list of column values, and try again with a valid alias name.

ORA-25468: column name not specified for alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the column values for the specified alias name had a NULL column name.

Action: Check the list of column values, and try again with a valid column name.

ORA-25469: data not specified for alias: *string* column name: *string*

Cause: An attempt to evaluate was made, which failed because the column value for the specified alias and column name had NULL data.

Action: Check the list of column values, and try again with valid data.

ORA-25470: duplicate attribute value for variable: *string*

Cause: An attempt to evaluate was made, which failed because one of the attribute values supplied a value for a variable, which already had a variable value supplied.

Action: Check the variable and attribute values specified, and try again with either a variable value or attribute values for each variable.

ORA-25471: attribute name not specified for variable: *string*

Cause: An attempt to evaluate was made, which failed because one of the attribute values for the specified variable had a NULL attribute name.

Action: Check the list of attribute values, and try again with a valid attribute name.

ORA-25472: maximum open iterators exceeded

Cause: The open rule hit iterators in the session exceeded $2 * OPEN_CURSORS$.

Action: Close some rule hit iterators.

ORA-25473: cannot store *string* in rule action context

Cause: The user attempted to put unsupported data types, such as LOBs and evolved ADTs, into the rule action context.

Action: Use only supported data types in rule action context.

ORA-25476: use pre-5523578 behaviour when looking up enabled roles

Cause: N/A

Action: Derive the enabled roles under the rules engine using the old method that existed before the fix to bug 5523578.

ORA-25477: hot cursor limit reached: *string*

Cause: An attempt to mark a cursor as hot failed because maximum number of allowable cursors were marked hot.

Action: Unmark any other hot cursor using `dbms_shared_pool.unmarkhot` and retry operation.

ORA-25500: database is not open

Cause: Database must be open to perform ALTER SYSTEM QUIESCE RESTRICTED command.

Action: Open the database and retry this command.

ORA-25501: ALTER SYSTEM QUIESCE RESTRICTED command failed

Cause: Database resource manager failed to change plan.

Action: Look at the alert logs to see detailed description of the error.

ORA-25502: concurrent ALTER SYSTEM QUIESCE/UNQUIESCE command is running

Cause: There is a concurrent ALTER SYSTEM QUIESCE RESTRICTED or ALTER SYSTEM UNQUIESCE command running in the system.

Action: Contact the database administrator who is responsible for the concurrent command.

ORA-25503: cannot open database because the database is being quiesced

Cause: Database cannot be opened because the system is being or has been quiesced.

Action: Open the database after the system has been quiesced.

ORA-25504: the system is already in quiesced state

Cause: Cannot quiesce the system because the system is already quiesced.

Action: n/a

ORA-25505: the system is not in quiesced state

Cause: Cannot unquiesce the system because the system is not in quiesced state.

Action: n/a

ORA-25506: resource manager has not been continuously on in some instances

Cause: Cannot quiesce the system because resource manager has not been continuously on since startup in this or some other instances.

Action: n/a

ORA-25507: resource manager has not been continuously on

Cause: Cannot quiesce the system because resource manager has not been continuously on since startup.

Action: n/a

ORA-25508: database is not mounted

Cause: Database must be mounted to perform ALTER SYSTEM UNQUIESCE command.

Action: Mount the database and retry this command.

ORA-25509: operation on "*string*"."*string*".*string* not allowed

Cause: A column has been added to a replicated table, but replication support processing has not completed.

Action: Wait until replication support processing has completed before updating the column

ORA-25510: quiesce not supported for the root container

Cause: Could not quiesce the root container.

Action: This operation is not supported for the root container.

ORA-25511: quiesce not supported for pluggable databases

Cause: Could not quiesce the pluggable database.

Action: This operation is not supported for pluggable databases.

ORA-25526: bad format of _DB_MTTTR_SIM_TARGET: *string*

Cause: One value in _DB_MTTTR_SIM_TARGET is not a valid MTTTR.

Action: Alter the value of _DB_MTTTR_SIM_TARGET.

ORA-25527: bad format of _DB_MTTTR_SIM_TARGET

Cause: One value in _DB_MTTTR_SIM_TARGET is empty.

Action: Set the value of _DB_MTTTR_SIM_TARGET properly.

ORA-25528: too many candidate MTTTRs are specified in _DB_MTTTR_SIM_TARGET

Cause: Too many candidate MTTTRs are specified in _DB_MTTTR_SIM_TARGET.

Action: Alter the value of _DB_MTTTR_SIM_TARGET.

ORA-25530: FAST_START_MTTTR_TARGET is not specified

Cause: An attempt to start MTTTR advisory was made, which failed because FAST_START_MTTTR_TARGET was not specified.

Action: Set FAST_START_MTTTR_TARGET.

ORA-25531: MTTR specified is too small: *string*

Cause: The current FAST_START_MTTR_TARGET setting or a candidate MTTR setting is too small for MTTR advisory.

Action: Set a larger FAST_START_MTTR_TARGET or candidate MTTR.

ORA-25532: MTTR specified is too large: *string*

Cause: The current FAST_START_MTTR_TARGET setting or a candidate MTTR setting is too large for MTTR advisory.

Action: Set a smaller FAST_START_MTTR_TARGET or candidate MTTR.

ORA-25533: FAST_START_IO_TARGET or LOG_CHECKPOINT_INTERVAL is specified

Cause: An attempt to start MTTR advisory was made, which failed because either FAST_START_IO_TARGET or LOG_CHECKPOINT_INTERVAL was specified.

Action: Set FAST_START_IO_TARGET and LOG_CHECKPOINT_INTERVAL to 0.

ORA-25551: process not initialized in threaded mode

Cause: OCI process started without threaded mode.

Action: Specify OCI_THREADED mode when calling OCIEnvCreate()/OCIEnvNLSCreate().

ORA-25600: Invalid shard: *string*

Cause: An invalid shard ID was specified.

Action: Specify valid shard and retry the queueing operation.

ORA-25601: Maximum number of shards are already created for the queue *string.string*

Cause: Maximum number of shards were already created.

Action: Please review SHARD_NUM and SHARD_MAX parameters of the queue using GET_QUEUE_PARAMETER and SET_QUEUE_PARAMETER API.

ORA-25602: Migration is already running on the queue *string.string*.

Cause: INIT_MIGRATION is already executed on the queue.

Action: Do not call the API twice.

ORA-25603: Migration has not started on the queue *string.string*.

Cause: INIT_MIGRATION API was not called on the queue.

Action: Call INIT_MIGRATION API first to initiate the migration.

ORA-25604: Migration can only run on classic queue and queue *string.string* is not classic queue.

Cause: Migration API input parameter was not a classic queue.

Action: Insert a valid classic queue as an input parameter to the migration API.

ORA-25605: Migration cannot run because *string* feature is unsupported in Transactional Event Queues.

Cause: The migration API captured the unsupported feature.

Action: Review the unsupported feature details from the migration status table and call the API again.

ORA-25606: This operation is restricted because migration is ongoing.

Cause: This operation was restricted because the migration operation was running.

Action: Process this operation after migration is completed.

ORA-25607: cannot execute *string* migration because *string* is not empty. You can use PURGE_QUEUE_MESSAGES API

Cause: The queue was not empty.

Action: Either consume messages in the queue using dequeue API or use PURGE_QUEUE_MESSAGES API to drain the messages.

ORA-25608: wrong value entered for *string* input parameter

Cause: The input parameter was not in the valid range.

Action: Choose a valid input parameter value.

ORA-25609: switch queue code path for migration routing

Cause: JDBC layer managed the routing.

Action: No action is needed; used for internal switching.

ORA-25610: cannot assign same Transactional Event Queue name to multiple migration queues

Cause: Either CQNAME was not specified, or TEQNAME was specified in the INIT_MIGRATION API call.

Action: Either specify CQNAME or do not specify TEQNAME.

ORA-25700: Current configuration does not use Transport Layer Security (TLS). Token based authentication requires TLS with server authentication.

Cause: An attempt was made to authenticate a user from an external Identity Provider to Oracle Database using unsecured channel.

Action: Change the protocol used for connecting to Oracle Database to TLS.

ORA-25702: Role mapping for IAM_PRINCIPAL_NAME is not supported.

Cause: An attempt was made to map role to IAM_PRINCIPAL_NAME.

Action: Create shared role mapping to IAM_GROUP_NAME.

ORA-25704: Current configuration does not use SSL_SERVER_DN_MATCH=TRUE. Token based authentication requires SSL_SERVER_DN_MATCH=TRUE with server authentication.

Cause: An attempt was made to authenticate a user from an external Identity Provider to Oracle Database using SSL_SERVER_DN_MATCH=FALSE.

Action: Change SSL_SERVER_DN_MATCH used for connecting to Oracle Database to true.

ORA-25705: Schema *string* doesn't exist.

Cause: An attempt was made to grant schema privileges on a schema which did not exist.

Action: Ensure that the schema specified in ON SCHEMA exists.

ORA-25707: The token is invalid.

Cause: An attempt was made to authenticate a user from an external Identity Provider to Oracle Database using an invalid token.

Action: Request a new token and try again. If the new token also returns this error, check with your IT help desk for the correct process to request a database access token.

ORA-25708: The expiration time of the token has passed.

Cause: An attempt was made to authenticate a user from an external Identity Provider to Oracle Database using an expired token.

Action: Request a new authorization token used for connecting to Oracle Database.

ORA-25709: schema privileges not granted to 'string'

Cause: A schema privilege you tried to revoke was not granted to the user.

Action: Make sure the privileges you are trying to revoke are granted.

ORA-25710: schema privilege granted with a different scope to 'string'

Cause: An attempt was made to revoke a schema privilege that was granted with a different scope.

Action: Specify the correct value for the CONTAINER clause.

ORA-25711: The private key is missing or invalid.

Cause: An attempt was made to authenticate a user from an external Identity Provider to Oracle Database using an invalid or missing private key.

Action: Request a new token and try again. If the new private key also returns this error, check with your IT help desk for the correct process to request a database access token.

ORA-25712: could not lock object *string.string*

Cause: An attempt to lock the object failed.

Action: Retry the operation. If the operation continues to fail, contact Oracle Support Services.

ORA-25713: User could not be locked.

Cause: Timeout occurred while trying to take a lock on user.

Action: Retry the operation later.

ORA-25714: invalid value of PASSWORD_AUTH or TOKEN_AUTH in the client configuration

Cause: An attempt was made to authenticate a user from an external Identity Provider to Oracle Database using invalid PASSWORD_AUTH or TOKEN_AUTH value. This parameter can be found in SQLNET.ORA, TNSNAMES.ORA, or used as part of the connect string.

Action: Specify the correct PASSWORD_AUTH or TOKEN_AUTH value. Refer to the Oracle Database documentation for the allowed values.

ORA-25800: Maximum length of a saga entity cannot exceed 107

Cause: The length of the saga broker, coordinator or the participant being created exceeded the maximum allowable length.

Action: Retry the operation after reducing the length of the saga entity.

ORA-25801: Unsupported version '*string*'

Cause: An attempt was made to perform a saga operation with an unsupported version.

Action: Retry the operation after specifying the correct version or use the default version.

ORA-25802: Insufficient privileges to access schema *string*

Cause: An attempt was made to perform a saga operation with an invalid or inaccessible schema.

Action: Retry the operation after specifying the correct or accessible schema.

ORA-25803: Saga entity *string* already exists

Cause: The saga broker, coordinator or the participant being created already existed.

Action: Retry the operation after specifying a different name.

ORA-25804: Saga entity *string* does not exist

Cause: The saga broker, coordinator or the participant did not exist.

Action: Retry the operation after specifying a different name.

ORA-25805: Saga entity *string* cannot be dropped

Cause: An attempt was made to drop a saga broker or coordinator which still had saga participants attached to it.

Action: Retry the operation after dropping all the saga participants attached to this broker or coordinator.

ORA-25806: Missing package or execution rights for package '*string*'.*string*'

Cause: An attempt was made to register a saga package that did not exist or execution rights on the saga package were missing.

Action: Retry the operation after specifying the correct or accessible package.

ORA-25807: Callback package cannot be registered for a coordinator

Cause: An attempt was made to register a saga package for a coordinator.

Action: No action required.

ORA-25808: Participant or coordinator database link cannot be null

Cause: An attempt was made to add a participant or coordinator with a null database link when broker database link was non-null.

Action: Retry the operation after specifying the correct database link for the participant or specifying a null broker database link.

ORA-25809: Unable to make remote calls using database link '*string*'

Cause: An attempt was made to add or drop a participant with an invalid or inaccessible broker database link.

Action: Retry the operation after specifying the correct database link for the broker.

ORA-25810: Saga entity *string* already exists at broker

Cause: The saga coordinator or the participant being created was already managed by the specified broker.

Action: Retry the operation after specifying a different name.

ORA-25811: Saga entity *string* cannot be created

Cause: An attempt was made to create a saga participant or coordinator with an invalid broker name or schema.

Action: Retry the operation after specifying the correct broker name or schema.

ORA-25812: Cannot drop queue table '*string*'

Cause: An attempt to drop the saga entity failed because the queue table associated with the entity could not be dropped.

Action: Retry the operation or contact administrator to manually drop queue table associated with this entity.

ORA-25813: Cannot clear dictionary entry for entity '*string*'

Cause: An attempt to drop the saga entity failed because the dictionary table entry associated with this entity could not be cleared.

Action: Retry the operation or contact administrator to manually clear the dictionary table entry associated with this entity.

ORA-25814: Cannot unschedule propagation for queue '*string*'

Cause: An attempt to drop the saga entity failed because the propagation schedule associated with this entity could not be unscheduled.

Action: Retry the operation or contact administrator to manually unschedule the propagation schedule associated with this entity.

ORA-25815: Cannot unregister notification callback for queue '*string*'

Cause: An attempt to drop or update the saga entity failed because the notification callback associated with this entity could not be unregistered.

Action: Retry the operation or contact administrator to manually unregister the notification callback associated with this entity.

ORA-25816: Cannot update dictionary entry for entity '*string*'

Cause: An attempt to update the saga entity failed because the dictionary table entry associated with this entity or broker could not be updated.

Action: Retry the operation or contact administrator to manually update the dictionary table entry associated with this entity.

ORA-25817: Drop operation failed for entity '*string*'

Cause: An attempt to drop the saga entity failed either at broker database or locally.

Action: Retry the operation after verifying the broker still exists.

ORA-25818: Invalid coordinator name 'string'

Cause: An attempt was made to create a saga participant with an invalid coordinator name.

Action: Retry the operation after specifying the correct coordinator name.

ORA-25819: Unauthorized access

Cause: An attempt was made to perform a saga operation using a participant that the current user did not own.

Action: No action required.

ORA-25820: Invalid opcode string

Cause: An attempt was made to perform a saga operation using an invalid opcode.

Action: No action required.

ORA-25821: Invalid saga id string

Cause: An attempt was made to perform a saga operation using an invalid saga id.

Action: Retry the operation after specifying the correct saga id.

ORA-25822: Cannot drop subscriber for queue 'string'

Cause: An attempt to drop the saga entity failed because the subscriber associated with this entity could not be dropped.

Action: Retry the operation or contact administrator to manually drop the subscriber associated with this entity.

ORA-25824: Cannot enroll participant for saga id 'string'

Cause: An attempt to enroll a saga participant failed because the saga id did not exist or the initiator of the saga was not found or the saga was already committed or rolledback.

Action: No action required.

ORA-25950: missing where clause in join index specification

Cause: An attempt to create a join index was made, which failed because no valid where clause was found.

Action: Ensure that a where clause with valid join conditions is specified in the create index statement.

ORA-25951: join index where clause cannot contain OR condition

Cause: An attempt to create a join index was made, which failed because there was an OR branch in the where clause.

Action: Reformulate the where clause without using ORs.

ORA-25952: join index must only contain inner equi-joins

Cause: An attempt to create a join index was made, which failed because it included a predicate which wasn't an equi-inner join.

Action: Remove the inappropriate predicate.

ORA-25953: join index cannot be a functional index

Cause: An attempt to create a join index was made, which failed because a functional index was requested or necessary (such as is the case for indexing columns using timezone).

Action: Remove any functional indexing columns.

ORA-25954: missing primary key or unique constraint on dimension

Cause: An attempt to create a join index was made, which failed because one or more dimensions did not have an appropriate constraint matching the join conditions.

Action: Ensure that the where clause is correct (contains all of the constraint columns) and that an enforced constraint is on each dimension table.

ORA-25955: all tables must be joined in the where clause

Cause: An attempt to create a join index was made, which failed because one of the tables in the from clause did not appear in the where clause.

Action: Ensure that the where clause contains all from clause tables.

ORA-25956: join index cannot be created on tables owned by SYS

Cause: An attempt to create a join index was made, which failed because one of the tables was owned by SYS.

Action: Ensure that no join index related table is owned by SYS.

ORA-25957: join index where clause cannot contain cycles

Cause: An attempt to create a join index was made, which failed because the where clause contains a cycle.

Action: Ensure that the where clause is in the form of a star or snowflake schema.

ORA-25958: join index where clause predicate may only contain column references

Cause: An attempt to create a join index was made, which failed because a predicate in the where clause contained something other than a simple column.

Action: Ensure that the where clause only contains columns.

ORA-25959: join index must be of the bitmap type

Cause: An attempt to create a join index was made, which failed because no bitmap keyword was used.

Action: Make the index a bitmap index.

ORA-25960: join index cannot be based on a temporary table

Cause: An attempt to create a join index was made, which failed because one of the tables was temporary.

Action: Ensure no underlying tables are temporary.

ORA-25961: join index prevents dml cascade constraint operation

Cause: An attempt to execute dml resulted in the need to perform dml on another table because of a cascade constraint. The join index only allows one of its underlying tables to be modified at a time.

Action: Drop the join index or remove the constraint.

ORA-25962: join index prevents multitable insert or merge

Cause: An attempt to execute an merge or multitable insert on a table that was used to create a bitmap join index was made. Merge and multitable inserts are not supported on tables that were used to create a bitmap join index.

Action: Drop the join index.

ORA-25963: join index must be created on tables

Cause: An attempt to create a join index was made, which failed because the from clause contains non table object.

Action: Ensure that the from clause only contains tables.

ORA-25964: column type incompatible with join column type

Cause: The datatype of the join column is incompatible with the datatype of the joined column.

Action: Select a compatible datatype for the join column.

ORA-25965: fact table must be included in the from clause

Cause: An attempt to create a join index was made, which failed because the from clause does not contain the fact table.

Action: Ensure that the from clause contains the fact table.

ORA-25966: join index cannot be based on an index organized table

Cause: An attempt to create a join index was made, which failed because one of the tables was an index organized table.

Action: Ensure no underlying tables are index organized.

ORA-26000: partition load specified but table *string* is not partitioned

Cause: The Loader control file contains a PARTITION clause but the table being loaded is not partitioned.

Action: Remove the partition specification from the SQL*Loader control file and retry the load.

ORA-26001: Index *string* specified in SORTED INDEXES does not exist on table *string*

Cause: A nonexistent index was specified in the SORTED INDEXES clause.

Action: Do not specify as a SORTED INDEX.

ORA-26002: Table *string* has index defined upon it.

Cause: Parallel load was specified into a table which has index defined upon it.

Action: Drop index(es) defined upon table, or don't use parallel load, or use SKIP_INDEX_MAINTENANCE option.

ORA-26003: parallel load not supported for index-organized table *string*.

Cause: Parallel load is not supported for index-organized tables.

Action: load the index-organized table without the PARALLEL option.

ORA-26004: Tables loaded through the direct path may not be clustered

Cause: User attempted to load a clustered table via the direct path.

Action: Use the conventional path.

ORA-26005: Invalid handle for direct path load

Cause: In direct path load, the handle passed in does not match the type listed.

Action: Verify the handle and type are correct.

ORA-26006: Incorrect bind variable in column *string*'s sql expression - *string*

Cause: In direct path load, the bind variables listed in the sql expression do not match the input argument column names.

Action: Verify all the input arguments are listed in the expression as bind variables, and all the bind variables are listed as input arguments to the expression. Or verify that there were no errors in executing the OCI statements when getting the bind variable list.

ORA-26007: invalid value for SETID or OID column

Cause: The value passed in a Direct Path API stream for a column containing a SETID or OID has an invalid value. SETIDs and Object IDs must be either 16 bytes of RAW data or 32 bytes of hexadecimal characters.

Action: Regenerate the Direct Path API stream with a valid value for the SETID column.

ORA-26008: Invalid syntax or bind variable in SQL string for column *string*.*string*

Cause: See following error message for more information. A SQL string cannot have quoted strings improperly terminated. A bind variable in a SQL string cannot have a length of 0, cannot exceed maximum length of 30 characters, and cannot be missing a double quote.

Action: Fix the SQL string. See following error for more information.

ORA-26009: stream verification error: *string*

Cause: An error has occurred in a Data Pump stream verification operation.

Action: Contact Oracle Support Services.

ORA-26010: Column *string* in table *string* is NOT NULL and is not being loaded

Cause: A column which is NOT NULL in the database is not being loaded and will cause every row to be rejected.

Action: Load the column by specifying the NOT NULL column in the INTO TABLE clause in the SQL*Loader control file.

ORA-26011: Cannot load type *string* into column *string* in table *string*

Cause: A column can only store data of type declared for that column. And a substitutable column can only store data of valid subtypes of the supertype declared for that column.

Action: Check that the type or subtype specified is valid for that column.

ORA-26012: header in file *string* has an incompatible version number

Cause: A dump file was specified for a load operation whose version number is incompatible with the dump file version currently produced by the Oracle server on the

system. Usually this message indicates that the dump file was produced by a newer version of the Oracle server.

Action: Load this dump file using the same version of the Oracle server that created the file.

ORA-26013: List allocated may not be big enough

Cause: There seems to be a discrepancy between the size for a list or buffer allocated by direct path api and the size needed.

Action: Contact Oracle Customer Support.

ORA-26014: unexpected error on *string string* while retrieving *string\string*

Cause: The SQL error was returned from an OCIStmtExecute call.

Action: Correct the SQL error that was returned.

ORA-26015: Array column *string* in table *string* is not supported by direct path

Cause: User attempted to load an array column via the direct path.

Action: Use the conventional path.

ORA-26016: Virtual column *string* in table *string.string* cannot be loaded by direct path

Cause: You attempted to load an virtual column using the direct path.

Action: Virtual columns cannot be loaded using the direct path.

ORA-26017: global indexes not allowed for direct path load of table partition *string*

Cause: Global indexes are defined on a table when direct path loading a single partition of the table.

Action: Remove the global index from the named table and retry the operation.

ORA-26018: Column *string* in table *string* does not exist

Cause: Column specified in the loader control file does not exist.

Action: Make sure the column exists and that you have privileges on it. Correct the loader control file if it is wrong.

ORA-26019: Column *string* in table *string* of type *string* not supported by direct path

Cause: The Specified column of SQL column type %s is not supported by the direct path loader.

Action: If the column is NULLable, remove it from the control file description. Then it will be loaded as a NULL.

ORA-26020: index *string.string* loaded successfully with *string* keys

Cause: Non-partitioned index information put to loader log file.

Action: None. Informational only.

ORA-26021: index *string.string* partition *string* loaded successfully with *string* keys

Cause: Partitioned index information put to loader log file.

Action: None. Informational only.

ORA-26022: index *string.string* was made unusable due to:

Cause: A Non-partitioned index was made index unusable due to the error displayed below this error.

Action: Depending on the error, either rebuild the index, or drop and re-create it.

ORA-26023: index *string.string* partition *string* was made unusable due to:

Cause: A partition of a partitioned index was made index unusable due to error displayed below this error.

Action: Depending on the error, either rebuild the index partition, or drop and re-create the entire index.

ORA-26024: SKIP_UNUSABLE_INDEXES requested and index segment was initially unusable

Cause: User requested SKIP_UNUSABLE_INDEXES option, and the index segment was in unusable state prior to the beginning of the load.

Action: Informational only. User will need to either rebuild the index or index partition, or re-create the index.

ORA-26025: SKIP_INDEX_MAINTENANCE option requested

Cause: User requested that index maintenance be skipped on a direct path load.

Action: The listed index was put into Index Unusable state due to the user requesting that index maintenance be skipped. Either rebuild the index or index partitions, or drop and re-create the index.

ORA-26026: unique index *string.string* initially in unusable state

Cause: A unique index is in IU state (a unique index cannot have index maintenance skipped via SKIP_UNUSABLE_INDEXES).

Action: Either rebuild the index or index partition, or use SKIP_INDEX_MAINTENANCE if the client is SQL*Loader.

ORA-26027: unique index *string.string* partition *string* initially in unusable state

Cause: A partition of a unique index is in IU state (a unique index cannot have index maintenance skipped via SKIP_UNUSABLE_INDEXES).

Action: Either rebuild the index or index partition, or use SKIP_INDEX_MAINTENANCE if the client is SQL*Loader.

ORA-26028: index *string.string* initially in unusable state

Cause: An index is in IU state prior to the beginning of a direct path load, it cannot be maintained by the loader.

Action: Either rebuild the index, re-create the index, or use either SKIP_UNUSABLE_INDEXES or SKIP_INDEX_MAINTENANCE (Sql*Loader only).

ORA-26029: index *string.string* partition *string* initially in unusable state

Cause: A partition of an index is in IU state prior to the beginning of a direct path load, it cannot be maintained by the loader.

Action: Either rebuild index partition, re-create the index, or use either SKIP_UNUSABLE_INDEXES or SKIP_INDEX_MAINTENANCE (Sql*Loader only).

ORA-26030: index *string.string* had *string* partitions made unusable due to:

Cause: A logical index error occurred on a partitioned index which affected one or more index partitions, which are listed below this message.

Action: The affected index partitions will have to be re-built, or, the entire index dropped and re-created.

ORA-26031: index maintenance error, the load cannot continue

Cause: A index error occurred during the index maintenance phase of a direct path load. The load cannot continue. See error message below this message.

Action: See action for the error message which follows this one.

ORA-26032: index *string.string* loading aborted after *string* keys

Cause: An index error occurred during direct-load of an index-organized table. Loading had to be aborted. No rows were loaded.

Action: Check the key just following the number of keys mentioned above. This key caused the index problem mentioned in an earlier message.

ORA-26033: column *string.string* encryption properties differ for source or target table

Cause: The source and destination columns did not have the same encryption properties.

Action: For security reasons, check that the source and target table have the same encryption properties.

ORA-26034: Column *string* does not exist in stream\n

Cause: Column specified in the column list does not exist in the stream.

Action: Make sure the column exists or remove it from the list.

ORA-26035: Error attempting to encrypt or decrypt column

Cause: An error occurred while attempting to encrypt or decrypt a database column.

Action: Verify correct encryption key was specified.

ORA-26036: subpartition load specified but table *string* is not subpartitioned\n

Cause: The Loader control file contains a PARTITION clause but the table being loaded is not subpartitioned.

Action: Remove the subpartition specification from the SQL*Loader control file and retry the load.

ORA-26037: must specify partition name(s) for system partitioned table *string*\n

Cause: An attempt was made to load a system partitioned table with no partition name(s) specified.

Action: Specify the partition name(s) explicitly.

ORA-26038: attempt to write audit record for SQL*Loader direct path load of *string.string* failed with error code: *number*\n

Cause: An attempt to write an audit record during a SQL*Loader direct path load failed.

Action: Contact Oracle Support Services.

ORA-26040: Data block was loaded using the NOLOGGING option

Cause: Trying to access data in block that was loaded without redo generation using the NOLOGGING/UNRECOVERABLE option

Action: Drop the object containing the block.

ORA-26041: DATETIME/INTERVAL datatype conversion error

Cause: The column could not be converted from DATETIME datatype to internal DATETIME/CHARACTER datatype.

Action: Contact Oracle Customer Support.

ORA-26045: REF column string expects string arguments; found string

Cause: The number of arguments for the REF column is incorrect.

Action: Specify the correct number of input arguments for REFs. 1. Unscoped system-generated REFs can have exactly 1 or 2 input arguments. a) It has exactly 1 input argument (one for the OID value) if a fixed table name was specified through OCI_DIRPATH_EXPR_REF_TBLNAME. b) It has exactly 2 input arguments (one for the table name and one for the OID value) if a fixed table name was not specified through OCI_DIRPATH_EXPR_REF_TBLNAME. 2. Scoped system-generated REFs can have 1 or 2 input arguments. Because a table name argument is not needed for a scoped ref, only 1 argument (OID value) is expected. But if the table name argument is given, it's still accepted. 3. Scoped primary-key REFs with N columns in its primary-key OID can have N or N+1 input arguments. Because a table name argument is not needed for a scoped ref, only N arguments (making up the OID value) is expected. But if the table name argument is given, it's still accepted.

ORA-26046: REF column string expects scoped table name string; user passed in string

Cause: The scoped table name passed in by the user does not match the name in the schema.

Action: Specify the correct table name for the scoped REF column.

ORA-26048: Scoped REF column has wrong table name

Cause: The scoped table name passed in by the user does not match the name in the schema.

Action: Specify the correct table name for the scoped REF column.

ORA-26049: Unscoped REF column has non-existent table name

Cause: The table name passed in by the user does not exist in the schema.

Action: Specify a valid table name for the unscoped REF column.

ORA-26050: Direct path load of domain index is not supported for this column type

Cause: Direct path can not load a domain index of that column type.

Action: Drop the index and try again or load using conventional path.

ORA-26051: internal error parsing packed decimal format string

Cause: A packed decimal field with a non-zero scale factor is mapped to a character column. In order to perform the datatype conversion, a numeric format string must be

created based on the input field's precision and scale specifications. Direct path loader encountered an error in creating this format string.

Action: Examine the packed decimal field's precision and scale specifications and make sure that they contain valid values.

ORA-26052: Unsupported type *number* for SQL expression on column *string*.\n

Cause: The direct path api does not support a SQL expression on a column of that type.

Action: Make sure the types are correct.

ORA-26053: Row was not loaded due to conversion error.\n

Cause: The current row was not loaded due to a conversion error.

Action: Continue with the load anyways. 260xx - 260xx Direct Path API

ORA-26054: Direct Path Context prepared for a different mode than operation requested.\n

Cause: The user prepared the direct path context for one operation (Load, Unload, Convert), but then tried to perform a different operation.

Action: Make sure the direct path context mode and operation matches.

ORA-26055: Invalid buffer specified for direct path unload\n

Cause: The user specified a zero length or null buffer to be used for the Direct Path Unload operation.

Action: Specify a valid buffer and length.

ORA-26056: Requested direct path operation on a view is not supported.\n

Cause: An attempt was made to load into a view using direct path that has user-defined types, XML data, object type table or SQL expressions.

Action: Do not attempt to use direct path when loading a view that has nonscalar columns or when using SQL expressions on input columns.

ORA-26057: Conversion is not necessary for this direct path stream.\n

Cause: User attempted to convert a direct path stream that does not require conversion.

Action: Load the stream without conversion it.

ORA-26058: unexpected error fetching metadata for column *string* in table *string*\n

Cause: The direct path API encountered an unexpected error while retrieving metadata for a column.

Action: Contact Oracle support.

ORA-26059: Data is too large for column *string*\n

Cause: The direct path API encountered a column that can not be loaded because the input data is too large for a column.

Action: Make the target column larger.

ORA-26060: Can not convert type identifier for column *string*\n

Cause: The direct path API encountered a type identifier for a column that can not be loaded because a mapping can not be found for the input value.

Action: Verify the input data.

ORA-26061: Concurrent direct unloads is not allowed.\n

Cause: User attempted a direct unload when another is still in progress.

Action: Complete the current direct unload before starting another.

ORA-26062: Can not continue from previous errors.\n

Cause: User attempted to continue a direct path load after receiving an error which indicates the load can not continue.

Action: Address the original error that was returned.

ORA-26063: Can not flashback to specified SCN value - Wrap: *string* Base: *string*.\n

Cause: User specified an SCN which occurs before the last time the table definition was modified.

Action: Specify a more recent SCN.

ORA-26064: Invalid SCN specified - Wrap: *string* Base: *string*.\n

Cause: User specified an invalid SCN.

Action: Specify a valid SCN.

ORA-26065: check constraint cannot reference column, *string*, in direct path load\n

Cause: An enabled check constraint was found on a column stored as a lob.

Action: Either disable the check constraint before loading the table data using the direct path mode, or use the conventional path mode instead.

ORA-26066: cannot load duplicate tables with a domain index because not all domain index keys are being loaded\n

Cause: User SQLLDR control file loaded the same table multiple times but did not load all domain index keys for each INTO clause.

Action: Load all domain index keys when loading the table multiple times.

ORA-26076: cannot set or reset value after direct path structure is allocated

Cause: Client attempted to set or reset the number of rows in a direct path structure after it has already been allocated and initialized. Attributes used is one of the following: - OCI_ATTR_NUM_ROWS: to set # of rows in a direct path column array - OCI_ATTR_DIRPATH_DCACHE_SIZE: to set size of a date cache (default is 0) - OCI_ATTR_DIRPATH_DCACHE_DISABLE: to set whether date cache will be disabled on overflow (default is FALSE)

Action: Set the following attributes before: - OCI_ATTR_NUM_ROWS: before calling OCIHandleAlloc for column array - OCI_ATTR_DIRPATH_DCACHE_SIZE: before calling OCIDirPathPrepare - OCI_ATTR_DIRPATH_DCACHE_DISABLE: before calling OCIDirPathPrepare

ORA-26077: direct path column array is not initialized

Cause: Client attempted to allocate a column array for a direct path function context before allocating a column array for the table-level direct path context.

Action: Allocate the table-level direct path context's column array via OCCHandleAlloc before allocating column arrays for direct path function contexts.

ORA-26078: file "*string*" is not part of database being loaded

Cause: A parallel load file was specified which is not part of the database.

Action: Check filename and pathname for correctness.

ORA-26079: file "*string*" is not part of table *string.string*

Cause: A parallel load file was specified which is not in the tablespace of the table being loaded.

Action: Check to make sure that the specified parallel load file is in the tablespace of the table being loaded.

ORA-26080: file "*string*" is not part of table *string.string* partition *string*

Cause: A parallel load file was specified which is not in the tablespace of the table (partition, subpartition) being loaded. When a partitioned table is being loaded, the file must be in the tablespace of every partition or subpartition (i.e. each (sub)partition must be in the same tablespace).

Action: Specify a different parallel load file, or no file at all.

ORA-26082: load of overlapping segments on table *string.string* is not allowed

Cause: Client application is attempting to do multiple direct path load operations on the same table, but the segments overlap.

Action: Check the partition names (subname attribute of the direct path context) being loaded. Make sure you are not loading a table, and a partition of the same table. Make sure you are not loading a partition, and a sub-partition within the same partition.

ORA-26083: unsupported direct path stream version *string*

Cause: The stream version requested is not supported by the server.

Action: Check to make sure that the VERSION attribute of the direct stream is not being set to an invalid value.

ORA-26084: direct path context already finished

Cause: An OCIDirPathLoadStream operation was attempted after OCIDirPathFinish was called. Once a direct path operation has been finished, no more data can be loaded.

Action: Check program logic to make sure OCIDirPathLoadStream is not called after OCIDirPathFinish.

ORA-26085: direct path operation must start its own transaction

Cause: A direct path operation is being attempted within a transaction that has already been started.

Action: Commit the transaction and Prepare the direct path operation again.

ORA-26086: direct path does not support triggers

Cause: A direct path operation is being attempted on a table which has enabled triggers.

Action: Disable the triggers on the table and try again.

ORA-26088: scalar column "string" must be specified prior to LOB columns

Cause: All scalar columns (i.e. non-LOB and non-LONG columns) must be specified by the client of the direct path API prior to specifying any LOB columns.

Action: Specify all scalar columns prior to specifying any LOB columns.

ORA-26089: LONG column "string" must be specified last

Cause: A client of the direct path API specified a LONG column to be loaded, but the LONG column was not the last column to be specified.

Action: Specify the LONG column last.

ORA-26090: row is in partial state

Cause: A direct path operation is being finished or a data save request has been made, but the table for which the request is being made on has a row in partial state. The row must be completed before the segment high water marks can be moved.

Action: Either complete the row, or abort the direct path operation.

ORA-26091: requested direct path operation not supported

Cause: A direct path operation was requested that is not supported

Action: Do not use that operation. Currently, UNLOAD is not supported.

ORA-26092: only LONG or LOB types can be partial

Cause: A column which is not a LONG or LOB had the OCI_DIRPATH_COL_PARTIAL flag associated with it. Only LONG or LOB type columns can be loaded in pieces.

Action: Do not use the OCI_DIRPATH_COL_PARTIAL flag for the column.

ORA-26093: input data column size (number) exceeds the maximum input size (number)

Cause: The user attempted to specify a column size (%d) that exceeded the maximum allowable input size (%d)."

Action: Make sure the input column metadata matches the column definition.

ORA-26094: stream format error: input column overflow

Cause: An input stream contained data for more input columns than specified by the client of the direct path API.

Action: Make sure that the stream being loaded is for the correct table. Check initialization sequence.

ORA-26095: unprocessed stream data exists

Cause: Either a OCIDirPathLoadStream call was made which provided more stream data prior to the server being able to fully process the stream data that it already has, or a OCIDirPathFinish call was made when the server had unprocessed stream data.

Action: Most likely an application mis-use of the direct path API. Make sure that the stream is not being reset inadvertently prior to any previous stream data being processed, or, that OCIDirPathFinish is not being called prematurely (i.e. stream pushed, error encountered and LoadStream not called to process the remainder of the stream before Finish is called.)

ORA-26096: transfer size too small for row data (*number bytes required*)

Cause: Either the transfer buffer size specified, or the default transfer buffer size (if you did not specify a size), is too small to contain a single row of the converted row data.

Action: Set the transfer buffer size attribute of the direct path context to be larger.

ORA-26097: unsupported conversion required for column *string*

Cause: The conversion required for the column was not supported. For example, conversion from date to number was not supported.

Action: Ensure that the type is correct for the source and destination.

ORA-26098: direct path context is not prepared

Cause: A direct path api function was called with a direct path context which has not been prepared.

Action: Make sure all necessary attributes in the direct path context have been set, and the context is prepared via OCIDirPathPrepare.

ORA-26099: direct path context is already prepared

Cause: OCIDirPathPrepare was called with a context that has already been prepared.

Action: Free the direct path context, set necessary attributes, and call OCIDirPathPrepare.

ORA-26100: unused error

Cause: This error is not used.

Action: No action required.

ORA-26101: tablespace # in file header is *string* rather than *string* for file *string*

Cause: The tablespace number in the file header is inconsistent with that in the control file.

Action: Check if the control file has been migrated correctly. Retry with the correct control file and data file.

ORA-26102: relative file # in file header is *string* rather than *string* for file *string*

Cause: The relative file number in the file header is inconsistent with that in the control file.

Action: Check if the control file has been migrated correctly. Retry with the correct control file and data file.

ORA-26103: V6 or V7 data file used to create control file

Cause: The file header of the referenced file is in V6 or V7 format.

Action: Either remove the file from the create control file command, or somehow migrate the file header to V8 format.

ORA-26104: unexpected error on *string string* while locking object, return code: *string*, obj: *string*

Cause: An attempt to lock the object failed.

Action: Retry the operation. If the operation continues to fail, contact Oracle Support Services.

ORA-26500: error on caching "*string*". "*string*"

Cause: Attempt to cache the replication information which is unavailable in the catalog for the object.

Action: Use `dbms_reputil.sync_up_rep` to validate the replication catalog, or use `dbms_reputil.make_internal_pkg` to validate internal package.

ORA-26501: RepAPI operation failure

Cause: An external RepAPI operation failed.

Action: consult detail error message.

ORA-26502: error resignal

Cause: An internal service failed and signalled an error"

Action: consult detail error message.

ORA-26503: internal RepAPI operation failure on object *string.string*

Cause: An unexpected internal RepAPI failure was detected

Action: Contact Oracle support.

ORA-26504: operation not implemented

Cause: The caller requested a RepAPI operation that was not implemented

Action: Do not issue this call.

ORA-26505: unexpected internal null

Cause: An internal buffer control structure was NULL

Action: Verify that sufficient memory resources are available to RepAPI.

ORA-26506: null global context

Cause: An internal buffer control structure was NULL

Action: Verify that sufficient memory resources are available to RepAPI.

ORA-26507: null master connection

Cause: The master connection handle was or became invalid.

Action: Verify that the master connection is valid.

ORA-26508: null materialized view connection

Cause: The client connection handle was or became invalid.

Action: Verify that the client connection is valid.

ORA-26509: null materialized view control structure

Cause: An internal materialized view control structure could not be obtained.

Action: Check that the owner and users provided are correct.

ORA-26510: materialized view name: '*string*' is greater than max. allowed length of *string* bytes

Cause: The specified materialized view name was too long.

Action: Shorten the materialized view name.

ORA-26511: master table '*string.string*' not found

Cause: A RepAPI operation was attempted against a non-existent or invalid master table

Action: Verify that the master table object exists.

ORA-26512: error pushing transaction to def\$error

Cause: An unexpected error occurred while sending an def\$error rpc to the master site

Action: Verify that the DBMS_DEFER package is valid and executable by the RepAPI client. Contact the local or master site administrator, if necessary.

ORA-26513: push error: master proc. string\$RP.string failed for trans:string seq:string

Cause: A conflict/error occurred at the master site while executing a \$RP.rep_insert(), rep_update(), or rep_delete() function which was not handled by conflict resolution logic at the master.

Action: Notify master site system administrator or DBA.

ORA-26514: object 'string.string' not found

Cause: The specified object was expected but not found.

Action: Verify that the specified object exists and is valid.

ORA-26515: no master log available for 'string.string'

Cause: The specified master log was not found or available for the named table.

Action: Create the master log at the master site or correct any problems that may exist with the log.

ORA-26516: no push transaction acknowledgement

Cause: RepAPI was unable to confirm that the last pushed transaction was successfully committed by the master site.

Action: Verify that the communications link between the local site and the master site is still valid. If the transaction has not been committed at the master, repush the transaction.

ORA-26517: materialized view control entry for 'string.string' was not found

Cause: The specified materialized view catalog control record was not found.

Action: Verify that the local materialized view catalog is valid and that the local materialized view is properly defined.

ORA-26518: push queue synchronization error detected

Cause: Client tried to repush a transaction has already been committed at the master site. A common cause of this problem is an error at the local site in initializing or updating the local site transaction sequence mechanism.

Action: Verify that transaction data that RepAPI was attempting to repush to the master site exists at the master table and is valid and consistent with the local site. If this error occurs, redundantly identified transactions are ignored and then purged from the local updatable materialized view logs. Check that the local site is correctly assigning new transactionIDs and is not accidentally generating non-unique values.

ORA-26519: no memory available to allocate

Cause: There was no memory left for the RepAPI process. This error may occur when RepAPI is trying to allocate a new table buffer area.

Action: Shutdown one or more local applications to attempt to free heap memory and retry the RepAPI operation.

ORA-26520: internal memory failure

Cause: An internal memory error was detected.

Action: Check if other errors have occurred or determine if any local application may have corrupted the memory subsystem.

ORA-26521: rpc initialization error

Cause: An error occurred during the initialization of a PL/SQL rpc.

Action: Verify that the procedure to be invoked exists and is valid at the master site and is executable by the RepAPI user.

ORA-26522: rpc execution error

Cause: An error occurred during the execution of a PL/SQL rpc.

Action: Check the error messages from the remote procedure and fix any remote site problems that may be preventing the execution of the invoked rpc.

ORA-26523: rpc termination error

Cause: An error occurred during the termination of a PL/SQL rpc. This is usually caused by master site being unable to close an opened cursor or if RepAPI cannot deallocate internal memory.

Action: Fix any server side problems first, determine if the RepAPI memory subsystem has been corrupted.

ORA-26524: nls subsystem initialization failure for product=*string*, facility=*string*

Cause: The NLS product/facility error message file could not be located or properly initialized.

Action: Check that the error message directory and file(s) have been properly installed.

ORA-26525: session connection attempt failed for *string* (@*string*)

Cause: A connection could not be established to the specified database using the provided connection string.

Action: Check that the user, password, connect string, names services, network, and any remote site listener process are properly installed and working.

ORA-26526: materialized view sql ddl parse/expansion failed for *string.string*

Cause: The client sql materialized view definition query could not be properly parsed by the master Oracle site.

Action: Check that materialized view ddl sql is compatible with the currently connected version of Oracle and does not violate any of the RepAPI sql limitations or restrictions.

ORA-26527: local store callback init phase failed for '*string.string*'

Cause: The client callback failed during its INIT phase for the named object.

Action: Verify that the objects referenced by the client callback exist and are valid. Refer to the vendor-specific callback error code reference to diagnose the local problem. Record all error state and notify Oracle support.

ORA-26528: local store callback proc phase failed for 'string.string'

Cause: The client callback failed during its PROC phase for the named object.

Action: Refer to the vendor-specific callback error code reference to diagnose the local problem. Record all error state and notify Oracle support.

ORA-26529: local store callback term phase failed for 'string.string'

Cause: The client callback failed during its TERM phase for the named object.

Action: Refer to the vendor-specific callback error code reference to diagnose the local problem. Record all error state and notify Oracle support.

ORA-26530: unable to build materialized view refresh control list

Cause: The materialized view control list could not be constructed. This is generally the result of an error while accessing the local materialized view catalog.

Action: Verify that the named materialized view(s) are properly defined and valid.

ORA-26532: replication parallel push simulated site failure

Cause: A parallel push executed with event 26531 enabled raises this error to simulation failure of network or destination site.

Action: Do not enable the event for normal operation.

ORA-26534: collision: tranID number ignored and purged

Cause: A transaction that was pushed had a transaction ID that collided with a transaction that was previously pushed and committed at the master site.

Action: See the action section for E_QUEUESYNC (26518).

ORA-26535: number byte row cache insufficient for table with rowsize=number

Cause: A transaction that was pushed had a transaction ID that collided with a transaction that was previously pushed and committed at the master site.

Action: Increase the RepAPI row buffer size or reduce the width of the replicated tables.

ORA-26536: refresh was aborted because of conflicts caused by deferred transactions

Cause: There are outstanding conflicts logged in the DEFERROR table at the materialized view's master site.

Action: Resolve the conflicts in the master DEFERROR table and refresh again after the table is empty. Alternatively, refresh with REFRESH_AFTER_ERRORS, even if there are conflicts in the master's DEFERROR table. Proceeding despite conflicts can result in an updatable materialized view's changes appearing to be temporarily lost, until a refresh succeeds after the conflicts are resolved.

ORA-26562: last RepAPI error**ORA-26563: renaming this table is not allowed**

Cause: An attempt was made to rename a replicated table, an updatable materialized view table, a table that had logical partition tracking created, or the master table of a materialized view for which a materialized view log was created.

Action: Either, drop the logical partition tracking, unregister the replicated table with `dbms_repcat.drop_master_repobject`, or use the recommended procedure to rename the master table of a materialized view.

ORA-26564: *string* argument is not of specified type

Cause: User passed type of the given argument number doesn't match with the type of the argument in the stored arguments.

Action: Invoke correct type procedure (i.e. get_XXX_arg)

ORA-26565: Call to *type_arg* made before calling *dbms_defer.call*

Cause: User invoked *type_arg* procedure before starting a deferred call

Action: Invoke various procedures in the correct order.

ORA-26566: Couldn't open connect to *string*

Cause: Failed to open connection using given dblink

Action: Make sure that the dblink is valid and remote m/c is up.

ORA-26571: *string.string.string*: number of arguments (*string*) does not match replication catalog

Cause: number of arguments does not match replication catalog

Action: examine total number of arguments for the rpc call

ORA-26572: *string.string.string*: argument *string* does not match replication catalog

Cause: the (rpc) call is corrupted

Action: examine total number of arguments and each argument for the rpc call

ORA-26575: remote database does not support replication parallel propagation

Cause: The remote database has a version lower than Oracle 8.0 and hence does not understand replication parallel propagation.

Action: Use serial propagation or upgrade the remote database to Oracle 8.0 or above.

ORA-26576: cannot acquire SR enqueue

Cause: An attempt to acquire the SR enqueue in exclusive mode failed.

Action: n/a

ORA-26577: PRESERVE TABLE can not be used when dropping old style materialized view *string.string*n

Cause: The materialized view consists of a view and a container table.

Action: Drop the materialized view without PRESERVE TABLE option.

ORA-26578: No capture in this multitenant container database associated with queue "*string*".

Cause: An outbound server's queue was not associated with a capture from the same multitenant container database (CDB) before adding or starting an outbound server.

Action: Execute the DBMS_STREAMS_ADM.CREATE_CAPTURE procedure to create a capture before adding or starting an outbound server.

ORA-26579: Restarting capture worker because *string* PDBs have been assigned to capture worker.

Cause: Capture worker restarted because there were too many pluggable databases (PDBs) assigned to it.

Action: None. The Shared Capture Service will restart.

ORA-26580: Must use *string.string* procedure for shared capture *string*.

Cause: An incorrect procedure was executed for a shared capture."

Action: Run the suggested procedure.

ORA-26581: LCR packing error (*number* bytes remaining, required *number* bytes).

Cause: There was not enough space in the LCR buffer to pack the logical change record (LCR).

Action: Capture will automatically restart.

ORA-26582: cannot alter this parameter because previous ALTER statement is in progress

Cause: An attempt was made to alter the parameter when the previous operation was still in progress.

Action: Retry after the previous ALTER statement is complete.

ORA-26583: modifying *string* parameter requires SID='*' qualifier

Cause: The SID='*' qualifier was not specified in the command. The setting for the specified parameter must be exactly the same on all Oracle RAC database instances.

Action: Reenter the command using SID='*' or without the SID qualifier.

ORA-26584: Altering '*string*' parameter requires SCOPE=BOTH.

Cause: An attempt was made to alter a system parameter without SCOPE=BOTH.

Action: Reexecute the statement with SCOPE=BOTH.

ORA-26585: cannot configure more shared capture instances than number of Oracle RAC instances (*string*)

Cause: The specified NUM_INSTANCES was greater than the number of Oracle RAC instances.

Action: Retry the operation with a lower number of instances.

ORA-26586: Shared Capture Service has already been enabled.

Cause: An attempt was made to enable the Shared Capture Service when it was already enabled.

Action: Disable the service before enabling it.

ORA-26587: cannot disable Shared Capture Service while there are PDBs still registered to it

Cause: An attempt was made to disable Shared Capture Service while there were pluggable databases (PDBs) registered to it.

Action: Query the CDB_SHARED_CAPTURE_PDBS view from the root container to check which PDBs are still registered and unregister all Extracts from those PDBs.

ORA-26588: Shared Capture Service is not enabled.

Cause: Shared Capture Service was not enabled.

Action: Run the DBMS_SHARED_CAPTURE_ADM.ENABLE_SERVICE procedure to enable the service before retrying the operation.

ORA-26589: cannot stop Shared Capture Service while there are PDBs still registered to it

Cause: An attempt was made to stop Shared Capture Service while there were pluggable databases (PDBs) registered to it.

Action: Perform one of the following: 1) Retry the same command with FORCE argument set to TRUE. 2) Check the CBB_SHARED_CAPTURE_PDBS view to see which PDBs are still registered and unregister all Extracts from those PDBs.

ORA-26590: The JOB_QUEUE_PROCESSES parameter must be greater than zero.

Cause: Parameter JOB_QUEUE_PROCESSES was set to zero.

Action: Run the ALTER SYSTEM statement to increase the parameter value.

ORA-26591: The specified tablespace is not an automatic segment space management tablespace.

Cause: Shared Capture Service required an automatic segment space management tablespace.

Action: Specify an automatic segment space management tablespace.

ORA-26592: An invalid tablespace name specified.

Cause: An attempt was made to use SYS, SYSAUX, or SYSEXT for the Shared Capture Service.

Action: Specify a valid tablespace name.

ORA-26593: cannot drop capture *string* because one or more PDBs are currently registered to this capture

Cause: One or more pluggable databases (PDBs) were currently registered to the specified capture.

Action: Retry dropping the capture with the FORCE option set to TRUE or unregister all PDBs from the capture then re-drop the capture.

ORA-26594: Change table *string* for PDB *string* has been dropped.

Cause: The specified change table was dropped.

Action: Delete the pluggable database (PDB) Extract then register and re-create it.

ORA-26595: Pluggable database (PDB) '*string*' is already captured by '*string*'.

Cause: The specified PDB was captured by the Shared Capture Service.

Action: Provide another pluggable database name.

ORA-26596: Updating parameter *string* is not allowed for Shared Capture Service.

Cause: An attempt was made to update a forbidden parameter.

Action: Remove the specified parameter.

ORA-26650: *string string* background process *string* might not be started successfully

Cause: An error occurred during creation of a capture or apply background process.

Action: Review V\$STREAMS_CAPTURE and V\$STREAMS_APPLY_COORDINATOR views for the status of these processes. Also check the trace file for more information.

ORA-26651: Unable to start or stop capture process *string*

Cause: An attempt was made to start or stop a capture process while another capture process was concurrently starting or stopping.

Action: You cannot concurrently start or stop capture processes. Wait before attempting to start or stop additional capture processes.

ORA-26652: Capture *string* did not start properly and is currently in state *string*

Cause: An attempt to restart a capture process failed.

Action: Review V\$STREAMS_CAPTURE view for the state of the capture process. Also check the trace files for more information.

ORA-26653: Apply *string* did not start properly and is currently in state *string*

Cause: An attempt to restart an apply process failed.

Action: Streams: Review V\$STREAMS_APPLY% views for the state of the apply process. Also check the trace files for more information. XStream: Review V\$XSTREAM_APPLY% views for the state of the apply process. Also check the trace files for more information. GoldenGate: Review V\$GG_APPLY% views for the state of the apply process. Also check the trace files for more information.

ORA-26654: Capture *string* attempted to connect to apply *string* already configured for *string*

Cause: An attempt was made by a GoldenGate, XStream or Streams Capture or XStream In to connect to an Apply that is already connected in the other mode.

Action: You cannot connect a capture to an apply already configured for another apply mode. Create or connect to another apply.

ORA-26655: Invalid *string* specified for *string* procedure

Cause: An attempt was made to execute the specified procedure with an invalid SCN value.

Action: Resubmit procedure with a valid SCN value.

ORA-26656: supplemental logging version error: *string*

Cause: The supplemental logging versions of capture side and apply side are incompatible.

Action: For incompatibility caused by a newer apply side, please bypass or migrate the incompatible logs manually and consider upgrading or patching the capture side. For incompatibility caused by an unrecognizable version group or an older apply side, please upgrade or patch the apply side. For invalid versions, the logs might have been corrupted; please verify the integrity of the supplemental logging data on the capture side.

ORA-26660: Invalid action context value for *string*

Cause: The value specified in the action context is invalid for use in GoldenGate, XStream or Streams.

Action: Check that the type and value are correct.

ORA-26662: unable to process *string* data dictionary information for object

Cause: The database was unable to process Oracle GoldenGate, XStream or Oracle Streams data dictionary for this object.

Action: Check that the compatibility for the database supports the object, and check the trace file for information about the object.

ORA-26663: error queue for apply process *string* must be empty

Cause: The error queue for this apply process contains error entries.

Action: Execute or delete errors in the error queue.

ORA-26664: cannot create *string* process *string*

Cause: An attempt was made to create a GoldenGate, XStream or Streams process when another was being created concurrently.

Action: Wait for the creation of the other GoldenGate, XStream or Streams process to finish before attempting to create the process.

ORA-26665: *string* process *string* already exists

Cause: An attempt was made to create a GoldenGate, XStream or Streams process that already exists.

Action: Either specify another process or remove the existing GoldenGate, XStream or Streams process.

ORA-26666: cannot alter *string* process *string*

Cause: An attempt was made to alter a GoldenGate, XStream or Streams process that is currently running.

Action: Stop the GoldenGate, XStream or Streams process with FORCE parameter set to TRUE and reissue the command.

ORA-26667: invalid *string* parameter *string*

Cause: An attempt was made to specify an invalid parameter.

Action: Check the documentation for valid parameters.

ORA-26668: *string* process *string* exists

Cause: An attempt to remove the component failed because it is associated with the GoldenGate, XStream or Streams process.

Action: Either remove the process manually or specify the "cascade" option in dbms_streams_adm.remove_queue.

ORA-26669: parameter *string* inconsistent with parameter *string*

Cause: An attempt was made to specify a subprogram parameter value that is inconsistent with another parameter value.

Action: Check the documentation for valid parameter values.

ORA-26670: No capture is found for queue '*string*'

Cause: An attempt was made to add an XStream outbound server to a queue using uncommitted data mode when no co-located XStream capture was configured for that queue.

Action: Change to committed data mode or configure a local XStream capture for the specified queue then retry the operation.

ORA-26671: maximum number of *string* processes exceeded

Cause: Cannot create additional GoldenGate, XStream or Streams processes since the maximum number of processes has been reached.

Action: Remove existing GoldenGate, XStream or Streams processes and retry the operation.

ORA-26672: timeout occurred while stopping *string* process *string*

Cause: Timeout occurred while waiting for a GoldenGate, XStream or Streams process to shut down.

Action: Retry the operation. If the error persists, try stopping the process with the FORCE option, or contact Oracle Support Services.

ORA-26673: duplicate column name *string*

Cause: An attempt was made to specify a duplicate column name in an LCR.

Action: Remove the duplicate column and retry the operation.

ORA-26674: Column mismatch in '*string.string*' (LCR: *string* type=*string*; DB: *string* type=*string*)

Cause: The columns in the LCR were not the same or not found in the database table.

Action: Alter the database table.

ORA-26675: cannot create *string* capture process *string*

Cause: GoldenGate, XStream or Streams capture process could not be created because one or more parameters contain invalid value.

Action: Refer to trace file for more details.

ORA-26676: Table '*string.string*' has *string* columns in the LCR and *string* columns in the replicated site

Cause: The number of columns in the LCR was not the same as the the replicated site.

Action: Alter the table structure

ORA-26677: *string* downstream capture process *string* cannot proceed

Cause: Database global name has been set to a value which is same as the source database name of the downstream capture process.

Action: Change database global name to a value other than the source database name for the downstream capture.

ORA-26678: *string* downstream capture process for source database *string* must be created at database *string* first

Cause: A GoldenGate, XStream or Streams downstream capture process was nonexistent when this operation was attempted.

Action: Create a GoldenGate, XStream or Streams downstream capture process, then retry the operation.

ORA-26679: operation not allowed on LOB or LONG columns in LCR

Cause: Certain operations on LOB/LONG columns of the LCR through rule-based transformations, DML handlers, or error handlers were not allowed.

Action: Do not perform restricted operations on LOB or LONG columns in LCRs. See the documentation for operations that are restricted on LOB/LONG columns in LCRs.

ORA-26680: object type not supported

Cause: The specified object type is not supported.

Action: Retry with a supported object type.

ORA-26681: command type not supported

Cause: The specified command type is not supported.

Action: Retry with a supported command type.

ORA-26682: invalid value for publication_on

Cause: The publication_on parameter should be either 'Y' or 'N'

Action: Retry with a proper value for publication_on.

ORA-26683: invalid value for value_type

Cause: The value_type parameter should be either 'OLD' or 'NEW'

Action: Retry with proper value_type.

ORA-26684: invalid value for value_type

Cause: The value_type parameter should be one of 'OLD', 'NEW' or '*'

Action: Retry with proper value_type.

ORA-26685: cannot apply transactions from multiple sources

Cause: Transactions from multiple sources were sent to the same apply process.

Action: Create multiple apply processes and create appropriate rules so that transactions from only one source reach an apply process.

ORA-26686: cannot capture from specified SCN

Cause: An attempt was made to specify an invalid SCN.

Action: Retry with a valid SCN.

ORA-26687: no instantiation SCN provided for "string"."string" in source database "string"

Cause: Object SCN was not set. If the object is a table, then both fields will be filled, for example "SCOTT"."EMP". If the object is a schema, only one field will be set, for example "SCOTT"."". And if the object is the entire database, no fields will be set, for example ""."".

Action: Set the SCN by calling DBMS_APPLY_ADM.SET_%_INSTANTIATION_SCN

ORA-26688: missing key in LCR

Cause: Metadata mismatch, or not enough information in the user generated LCR.

Action: Alter the database object, or provide all defined keys in the LCR.

ORA-26689: column datatype mismatch in LCR

Cause: The datatypes of columns in the LCR are not the same as the datatypes in the database object.

Action: Alter the database object.

ORA-26690: datatype not supported at non-Oracle system

Cause: One of the columns of the LCR being applied was of a datatype not supported by either the target non-Oracle system or by the Oracle transparent gateway through which the apply is being done.

Action: Do not apply data of this type. If possible, filter out columns containing such datatypes before applying.

ORA-26691: operation not supported at non-Oracle system

Cause: The apply process attempted an operation that is either not supported by the non-Oracle system or by the Oracle transparent gateway through which the apply is being done. Some kinds of DML (like procedure and function calls) and all DDL will cause this error to be raised.

Action: Do not attempt to apply such LCRs to non-Oracle systems. If possible, filter out such LCRs before applying.

ORA-26692: invalid value *string*, *string* should be in *string* format

Cause: The parameter specified was not in the correct format.

Action: Specify the parameter value in the correct format.

ORA-26693: *string string* process dropped successfully, but error occurred while dropping rule set *string*

Cause: An attempt to drop an unused rule set failed after dropping the GoldenGate, XStream or Streams process successfully.

Action: Check existence of rule set and manually drop if necessary.

ORA-26694: error while enqueueing into queue *string.string*

Cause: An error occurred while enqueueing a message.

Action: If the situation described in the next error on the stack can be corrected, do so.

ORA-26695: error on call to *string*: return code *string*

Cause: A locking related call failed.

Action: Try the call again after fixing the condition indicated by the return code.

ORA-26696: no *string* data dictionary for object with number *string* and version number *string* from source database *string*

Cause: An attempt to access the database object failed because the data dictionary for the object was either never populated or it was purged.

Action: Make sure the GoldenGate, XStream or Streams data dictionary is created by calling DBMS_CAPTURE_ADM.PREPARE_%_INSTANTIATION.

ORA-26697: LCR contains extra column '*string*'

Cause: The LCR contained more columns than the replicated table.

Action: Alter the database object.

ORA-26698: *string* did not have a *string* rule set

Cause: The GoldenGate, XStream or Streams client does not have a rule set of the indicated type.

Action: Verify that the GoldenGate, XStream or Streams client has a rule set of the specified type, and retry the operation.

ORA-26699: *string* message consumer *string* already exists

Cause: An attempt was made to create a GoldenGate, XStream or Streams message consumer that already exists.

Action: Either specify another message consumer or remove the existing GoldenGate, XStream or Streams message consumer.

ORA-26701: *string* process *string* does not exist

Cause: An attempt was made to access a GoldenGate, XStream or Streams process which does not exist.

Action: Check with the relevant security views for the correct name of the object.

ORA-26704: The Owner instance *string* of the queue table is not up or the QMNO process is down.**ORA-26705: cannot downgrade capture process after Streams data dictionary has been upgraded**

Cause: An attempt was made to downgrade a capture process after it has upgraded the GoldenGate, XStream or Streams data dictionary.

Action: Drop the capture process before attempting the downgrade.

ORA-26706: cannot downgrade capture process

Cause: An attempt was made to downgrade a capture process that has a higher version than the downgrade release version.

Action: Drop the capture process after capture has finished consuming all the redo logs before attempting the downgrade.

ORA-26708: remote DDL not supported by STREAMS : dblink *string*

Cause: The apply process attempted to apply a DDL LCR via a dblink. This is not supported.

Action: Do not attempt to apply DDL LCRs via a dblink. If possible, filter out DDL LCRs before applying.

ORA-26709: remote file server (RFS) restart due to real-time mining change in Oracle GoldenGate

Cause: The remote file server (RFS) process was restarted due to a change in the real-time mining option of Oracle GoldenGate.

Action: No action required. This is an informational message only.

ORA-26710: incompatible version marker encountered during Capture

Cause: Capture process cannot mine redo from a version higher than the current software release version.

Action: Drop and recreate the capture process.

ORA-26711: remote table does not contain a primary key constraint

Cause: The master table for remote apply does not contain a primary key constraint or the primary key constraint has been disabled.

Action: Create a primary key constraint on the master table or enable the existing constraint.

ORA-26712: remote object is "string"."string"\@"string"

Cause: See the preceding error message to identify the cause. This message names the remote object, usually a table or view, for which an error occurred when GoldenGate, XStream or Streams tried to access it for remote apply.

Action: See the preceding error message.

ORA-26713: remote object does not exist or is inaccessible

Cause: GoldenGate, XStream or Streams replication could not access the named table or view at a remote database to apply changes.

Action: Confirm that the given remote table or view exists and is accessible through the given database link. When using a Heterogeneous Services database link to access a non-Oracle system, it may be necessary to check administration details for network connections at the non-Oracle system.

ORA-26714: User Error *string* encountered during apply process

Cause: An error was encountered during an apply process.

Action: Query the DBA_APPLY_ERROR view to determine the error and take the appropriate action.

ORA-26715: time limit reached

Cause: The specified time limit was reached for the GoldenGate, XStream or Streams process.

Action: Restart the GoldenGate, XStream or Streams process, increasing the TIME_LIMIT parameter if necessary.

ORA-26716: message limit reached

Cause: The specified message limit was reached for the Capture process.

Action: Restart the Capture process, increasing the MESSAGE_LIMIT parameter if necessary.

ORA-26717: SCN limit reached

Cause: The specified SCN limit was reached for the GoldenGate, XStream or Streams process.

Action: Change the MAXIMUM_SCN parameter, then restart the GoldenGate, XStream or Streams process.

ORA-26718: transaction limit reached

Cause: The specified transaction limit was reached for the Apply process.

Action: Restart the Apply process, increasing the TRANSACTION_LIMIT parameter if necessary.

ORA-26721: enqueue of the LCR not allowed

Cause: An apply process attempted to enqueue an LCR with a LONG column. This is not supported.

Action: Modify rules or unset the enqueue destination to prevent LCRs with LONG columns from being enqueued by the apply process.

ORA-26723: user "*string*" requires the role "*string*"

Cause: The caller did not have the specified role or called the procedure from a definer's rights package or procedure.

Action: Grant the specified role to the caller. If the procedure is called from a definer's rights package or procedure, change the definer's rights package or procedure to an invoker's rights package or procedure. Or grant all the privileges for the specified role explicitly.

ORA-26724: only SYS is allowed to set the Capture or Apply user to SYS.

Cause: The Capture or Apply user was specified as SYS by a user other than SYS.

Action: Set SYS as the Capture or Apply user while logged in as SYS.

ORA-26725: cannot downgrade apply handlers

Cause: An attempt was made to downgrade apply handlers that are not associated with a local database object, or the apply handlers are associated with a specific apply process.

Action: Drop the associated apply handlers before attempting the downgrade.

ORA-26726: standby and DOWNSTREAM_REAL_TIME_MINE are incompatible

Cause: An attempt was made to set the standby database and DOWNSTREAM_REAL_TIME_MINE option of the Oracle GoldenGate, XStream or Oracle Streams capture process on the same database.

Action: Do not attempt to set the DOWNSTREAM_REAL_TIME_MINE option for a Oracle GoldenGate, XStream or Oracle Streams capture process on a standby database. Do not attempt to change a database role to standby if there exists a capture process with the DOWNSTREAM_REAL_TIME_MINE parameter set to Y.

ORA-26727: Cannot alter queue_to_queue property of existing propagation.

Cause: The queue_to_queue property was specified for an existing propagation.

Action: Pass NULL for the queue_to_queue argument.

ORA-26730: *string* '*string*' already exists

Cause: An attempt to use FILE GROUP, FILE GROUP VERSION, or FILE GROUP FILE failed because the item in question already exists.

Action: Remove the object if appropriate and re-attempt the operation.

ORA-26731: *string* '*string*' does not exist

Cause: A FILE GROUP, FILE GROUP VERSION, or FILE GROUP FILE was specified that does not exist.

Action: Make sure the object exists and re-attempt the operation.

ORA-26732: invalid file group *string* privilege

Cause: The specified privilege number that was specified is invalid.

Action: Check specification of `dbms_file_group` for valid privileges.

ORA-26733: timed-out waiting for file group lock

Cause: The procedure waited too long while getting a lock to perform a file group repository operation.

Action: Retry the operation.

ORA-26734: different `datafiles_directory_object` parameter must be specified

Cause: The attempted operation involved datafiles platform conversion which required the `datafiles_directory_object` parameter to be specified for placing the converted data files.

Action: Retry the operation after specifying a valid `datafiles_directory_object` parameter. This directory must be different from the directory objects for any of the datafiles for the specified file group version.

ORA-26735: operation not allowed on the specified file group version

Cause: One or more datafiles or export dump file(s) were missing from the specified file group version.

Action: Retry the operation after adding all the data files and Data Pump dump file(s) to the specified version.

ORA-26736: Data Pump error

Cause: A Data Pump error occurred when the procedure performed a File Group Repository operation.

Action: Check the error stack and trace file for error details.

ORA-26737: version *string* already has an export dump file

Cause: A Data Pump dump file was added to a file group version that already has a dump file.

Action: Remove the existing dump file if appropriate, and retry the operation.

ORA-26738: *string 'string'* is not empty

Cause: The FILE GROUP or FILE GROUP VERSION being dropped contained objects.

Action: Remove the child objects, then retry the operation.

ORA-26740: cannot downgrade because there are file groups

Cause: An attempt was made to downgrade a database that has file groups.

Action: Drop all file groups before attempting the downgrade.

ORA-26741: cannot assemble lob

Cause: An attempt was made to assemble lob, but the compatibility of the source database for the LOB information is lower than 10.2.0.

Action: Set `ASSEMBLE_LOBS` to `FALSE` in the DML or error handler while this handler is processing LOB information from a source database with a compatibility level lower than 10.2.0.

ORA-26742: Maximum number of ignored transactions exceeded

Cause: An attempt was made to add more than the allowed number of ignored transactions.

Action: Please clear the current list of ignored transactions.

ORA-26744: *string* capture process "*string*" does not support "*string*"."*string*" because of the following reason: *string*

Cause: GoldenGate, XStream or Streams capture encountered a table with an unsupported property. The most common reason is an unsupported column data type.

Action: Revise the Capture rules to skip over the table in question. One way might be to add a negative rule excluding changes from the unsupported table from being captured. Streams: Also query the DBA_STREAMS_UNSUPPORTED view to determine which tables are not supported by Streams and for what reason. Consider adding negative rules for any tables that may be captured, but are present in this view. XStream: Also query the DBA_XSTREAM_OUT_SUPPORT_MODE view to determine which tables are not supported by XStream and for what reason. Consider adding negative rules for any tables that may be captured, but are present in this view. GoldenGate: Also query the DBA_GOLDENGATE_SUPPORT_MODE view to determine which tables are not supported by GoldenGate and for what reason. Consider adding EXCLUDETABLE statements for any tables that may be captured, but are present in this view. For potential workarounds to certain unsupported properties, see Metalink.

ORA-26745: cursors (*string*) are not sufficient

Cause: The maximum number of open cursors was too small for GoldenGate, XStream or Streams Apply.

Action: Increase the value of open_cursors.

ORA-26746: DDL rule "*string*"."*string*" not allowed for this operation

Cause: A DDL rule was specified for this operation.

Action: Specify a non-DDL rule for this operation.

ORA-26747: The one-to-many transformation function *string* encountered the following error: *string*

Cause: The specified transformation function encountered an error.

Action: Ensure that the function does not process or return DDL LCRs. Also ensure that the function does not return NULL.

ORA-26748: The one-to-one transformation function *string* encountered the following error: *string*

Cause: The specified transformation function encountered an error.

Action: Ensure that the function does not return an LCR that has a different type from the LCR which was passed to the function. Also ensure that the function does not return NULL. For DDL transformation functions, creating and returning a new DDL LCR is not allowed.

ORA-26752: Unsupported LCR received for "*string*"."*string*"

Cause: GoldenGate, XStream or Streams capture process received an LCR with unsupported operation from LogMiner.

Action: Stream: If this object is listed in DBA_STREAMS_UNSUPPORTED view, modify rules to prevent changes made to this object from getting captured. XStream: If this object is listed in DBA_XSTREAM_OUT_SUPPORT_MODE view, modify rules to prevent changes made to this object from getting captured. GoldenGate: If this object is listed in DBA_GOLDENGATE_SUPPORT_MODE view, modify rules to prevent changes made to this object from getting captured.

ORA-26753: Mismatched columns found in 'string.string'

Cause: The columns in the LCR were not the same as the table in the database.

Action: Alter the database table.

ORA-26754: cannot specify both one-to-one transformation function *string* and one-to-many transformation function *string*

Cause: Both a one-to-one transformation function and a one-to-many transformation function were specified for a rule.

Action: Remove either the one-to-one transformation function, or the one-to-many transformation function.

ORA-26757: Timed out waiting for remote operation on instance *string* to finish

ORA-26760: Could not find message number *string* for transaction with id *string*

Cause: Error

Action: Contact Oracle support"

ORA-26761: Standby Redo Logs not available for real time mining

Cause: Standby Redo Logs required for real time mining by downstream capture process were not available.

Action: Check the configuration of Standby Redo Logs and retry the operation at a later time. To start the capture process without real time mining property, reset DOWNSTREAM_REAL_TIME_MINE parameter of the capture process and retry the operation.

ORA-26762: Cannot autogenerate name for parameter *string* because of the following reason: *string*

Cause: An error was encountered while attempting to generate a name for a parameter which was passed a NULL value.

Action: If possible, fix the error, otherwise specify the parameter name explicitly.

ORA-26763: invalid file type "*string*"

Cause: An invalid file type was specified for the ASM file.

Action: Check documentation for valid ASM file types.

ORA-26764: invalid parameter "*string*" for local capture "*string*"

Cause: An invalid parameter was specified for the local capture process.

Action: Check documentation for valid parameters.

ORA-26765: invalid parameter "*string*" for downstream capture "*string*"

Cause: An invalid parameter was specified for the downstream capture process.

Action: Check documentation for valid parameters.

ORA-26766: Unexpected redo pattern encountered by LogMiner

Cause: LogMiner encountered an unexpected redo pattern. This is usually caused by tables with unsupported data types or newer table features.

Action: Remove the capture rule for the table and restart capture.

ORA-26767: Not enough redo log information for LogMiner

Cause: Direct-path SQL with NOLOGGING option or a SQL*Loader operation with UNRECOVERABLE clause was specified for the table.

Action: Remove the capture rule for the table and restart capture.

ORA-26768: Maximum number of unsupported tables exceeded

Cause: An attempt was made to add more than the allowed number of unsupported tables.

Action: Clear the current list of unsupported tables.

ORA-26770: Index-organized table not supported**ORA-26771: User-defined column type not supported****ORA-26772: Encrypted column not supported****ORA-26773: Invalid data type for column "*string*"****ORA-26774: Queue table not supported****ORA-26775: Temporary table not supported****ORA-26776: Subordinate object not supported****ORA-26777: External table not supported****ORA-26778: File column not supported****ORA-26779: Materialized view not supported****ORA-26780: Object table not supported****ORA-26781: Nested table not supported**

Cause: Any DML to Nested table is not supported if the table or its parent is being replicated.

Action: n/a

ORA-26782: Function-based index not supported**ORA-26783: Column data type not supported****ORA-26785: Object has a NULL value**

Cause: A method was invoked on a NULL object.

Action: Initialize the object with a non-NULL value.

ORA-26786: A row with key *string* exists but has conflicting column(s) *string* in table *string*

Cause: The row to update or delete exists in the table but had conflicting value for some columns.

Action: For Streams and XStream, please define a conflict resolution, or resolve the conflict and execute the error transaction using DBMS_APPLY_ADM.EXECUTE_ERROR. For logical standby, please verify the status of the database guard to ensure local modifications are not allowed, then re-instantiate the table and contact support if the problem persists. For GoldenGate, configure Conflict Resolution (CDR) or REPERROR handler for the table and restart replicat.

ORA-26787: The row with key *string* does not exist in table *string*

Cause: The row to update or delete does not exist in the table.

Action: For Streams and XStream, please define a conflict resolution, or resolve the conflict and execute the error transaction using DBMS_APPLY_ADM.EXECUTE_ERROR. For logical standby, please verify the status of the database guard to ensure local modifications are not allowed, then re-instantiate the table and contact support if the problem persists. For GoldenGate, configure Conflict Resolution (CDR) or REPERROR handler for the table and restart replicat.

ORA-26788: The column *string* is not encrypted in the local database.

Cause: The column in the destination database is NOT encrypted while it is encrypted in the source database.

Action: Set the corresponding column property in the destination database to 'encrypted' or change the apply parameter, PRESERVE_ENCRYPTED_COLS, to 'N' to suppress the error.

ORA-26789: Cannot split propagation *string* because only one propagation originates from its source queue "*string*". "*string*"

Cause: Only one propagation originated from the propagation source queue.

Action: Please do not split this propagation.

ORA-26790: Requesting a lock on *string* "*string*" timed out

Cause: Could not get a lock on the object because another process was holding the lock.

Action: Please try later.

ORA-26791: Cannot split or merge propagation "*string*"

Cause: A process tried to split or merge this propagation, but failed and left STREAMS in an inconsistent state.

Action: Query DBA_RECOVERABLE_SCRIPT_BLOCKS view, and roll back the script which tried to split or merge this propagation.

ORA-26792: Invalid source database name *string*

Cause: The value for the source database global name was not valid.

Action: Specify a valid database global name. If the source database is not the local database, check the listener is up and running.

ORA-26793: Number of capture processes that enqueued message to queue "*string*". "*string*" not equal to one

Cause: Split-merge API requires only one capture process enqueued message to the queue where the propagation originated

Action: Please drop one capture, or split or merge another propagation.

ORA-26794: Hierarchically enabled tables not supported

Cause: Hierarchically enabled tables are not supported.

Action: Disable hierarchy for the table.

ORA-26795: Cannot modify an LCR received from an XStream outbound server

Cause: An attempt was made to modify an LCR generated by an XStream outbound server.

Action: Clone the LCR generated by the XStream outbound server by using the provided OCILCR* functions, such as OCILCRNew, OCILCRHeaderSet, and OCILCRRowColumnInfoSet. Then modify the cloned LCR.

ORA-26798: LOB logical change record (LCR) missing LOB column in table "*string*". "*string*"

Cause: The apply slave could not fill update LOB because of missing LOB column.

Action: Check that all LOB columns have been sent correctly.

ORA-26799: unique constraint *string.string* violated for table *string.string* with column values *string*

Cause: The row to update or insert violated the unique constraint.

Action: For XStreams, define a conflict resolution, or resolve the conflict and execute the error transaction using DBMS_APPLY_ADM.EXECUTE_ERROR.

ORA-26800: Apply not the only subscriber for "*string*". "*string*".

Cause: The combined capture and apply optimization could not be used since Apply was not the lone subscriber to the queue.

Action: Apply has to be the only subscriber to the queue.

ORA-26801: More than one subscriber for "*string*". "*string*".

Cause: Multiple subscribers were found when the combined capture and apply optimization was configured to only work for one subscriber.

Action: Configure a single subscriber, apply or propagation for the queue, or enable the optimization for multiple subscribers.

ORA-26802: Queue "*string*". "*string*" has messages.

Cause: The combined capture and apply optimization could not be used since the queue had messages.

Action: Make sure queue is empty before starting apply and capture.

ORA-26803: Subscribers have changed for queue "*string*". "*string*".

Cause: The combined capture and apply optimization could not be used since the subscribers had changed.

Action: Optimization can be used only if the queue has a single subscriber.

ORA-26804: Apply "string" is disabled.

Cause: The apply process was disabled or aborted.

Action: Start the apply process.

ORA-26805: Queue "string"."string" has rule based subscribers.

Cause: The combined capture and apply optimization could not be used since the queue had rule based subscribers.

Action: Make sure queue has no rule based subscribers before starting apply and capture.

ORA-26806: Remote database could not support combined capture and apply optimization.

Cause: The remote database has a version lower than Oracle 11.0 and hence does not understand combined capture and apply optimization.

Action: Upgrade the remote database to Oracle 11.0 or above in order to use the combined capture and apply optimization.

ORA-26807: Database link is not NULL for Apply with the name "string" .

Cause: The combined capture and apply optimization could not be used since apply_database_link was not NULL.

Action: Drop and recreate the apply with NULL value for apply_database_link.

ORA-26808: Apply process string died unexpectedly.

Cause: Apply process died unexpectedly.

Action: Check your system for anomalies and restart apply. If this error persists, contact Oracle Support Services. See trace file for more details.

ORA-26809: Capture aborted: checkpoint-free mode requires combined capture and apply mode.

Cause: The requirements for combined capture and apply mode were broken.

Action: Restore the combined capture and apply mode and then restart the capture. If combined capture and apply mode is no longer desired, drop the existing checkpoint-free capture and create another one that will take checkpoints.

ORA-26810: Apply "string" on database "string" is in the mode of combined capture and apply.

Cause: The combined capture and apply optimization could not be used because Apply was already in the mode of combined capture and apply.

Action: Do not configure two captures for one apply.

ORA-26811: Client has already attached to string apply "string".

Cause: The client has already attached to the specified apply process.

Action: Detach apply process before reattach.

ORA-26812: An active session currently attached to XStream server "string".

Cause: An attempt was made to attach to the specified XStream server while another session was attached to it.

Action: Retry when there is no session attaching to the specified XStream server.

ORA-26813: The value for argument "ARRAY_SIZE" is too small

Cause: The value for argument "ARRAY_SIZE" was less than the number of columns in the requested column list.

Action: Check the return value for "NUM_COLUMNS" parameter then allocate all input arrays to at least that size and invoke the same OCI function again.

ORA-26814: The value for argument *string* exceeds maximum *string*

Cause: The value for specified value exceeded the maximum allowed.

Action: Correct the value of specified argument.

ORA-26815: Error from Apply Network Receiver for Apply "*string*" and Capture "*string*".

Cause: The Apply Network Receiver aborted due to an unexpected error.

Action: Query DBA_APPLY_ERROR to determine the error and then restart the Capture and Apply.

ORA-26816: *string* apply process "*string*" (OS id *string*) is exiting due to ORA-*string*.

Cause: An apply process encountered an unexpected error.

Action: Query DBA_APPLY to examine the status of Apply and restart Apply if needed.

ORA-26817: *string* capture process "*string*" is unable to communicate with capture server *string* during initialization.

Cause: Capture server might not be started properly

Action: Fix any errors during capture server creation and re-start capture process

ORA-26818: *string* capture process *string* receives an error from capture server.

Cause: Capture server received an error.

Action: Check log for error details.

ORA-26819: *string* capture server for apply "*string*" and capture "*string*" encounters disabled or aborted propagation "*string*".

Cause: Propagation was disabled or aborted.

Action: Start propagation.

ORA-26820: *string* capture server for apply "*string*" and propagation "*string*" becomes active and needs join capture process "*string*".

Cause: Capture server was waiting for propagation or apply to start

Action: Capture process needs restart (done automatically).

ORA-26821: No propagation process found between source queue "*string*".*string*" and destination queue "*string*".*string*".

Cause: Propagation has not been configured.

Action: Configure a propagation between specified queues and restart capture.

ORA-26822: Failure in creating capture servers (ksv error code *string*).

Cause: Failure in ksv slave creation.

Action: Identify the actual ksv error and act accordingly.

ORA-26823: *string* capture server *string* is unable to communicate with capture process "*string*".

Cause: Capture process was not started properly or was aborted.

Action: If Oracle GoldenGate, XStream or Streams capture process was stopped, then restart the capture process. Otherwise, fix any errors during the capture process creation and restart the capture process.

ORA-26824: user-defined XStream callback error

Cause: A value other than OCI_CONTINUE or OCI_SUCCESS was returned for the user-defined XStream callback function. Any returned value other than OCI_CONTINUE or OCI_SUCCESS is invalid.

Action: Verify that either OCI_CONTINUE or OCI_SUCCESS is returned from the user-defined XStream callback function.

ORA-26825: STREAMS process "*string*" is not configured as an XStream outbound server.

Cause: An attempt was made to attach to a STREAMS apply process, which was not configured as an XStream outbound server.

Action: Check the apply name or re-create the apply process as an XStream outbound server.

ORA-26826: *string* apply coordinator and apply slave are unable to communicate.

Cause: GoldenGate, XStream or Streams Apply process may have died unexpectedly.

Action: Check your system for anomalies and restart apply. If this error persists, contact Oracle Support Services. See trace file for more details.

ORA-26827: Insufficient privileges to attach to XStream outbound server "*string*".

Cause: Sufficient privileges were not granted to attach to the specified XStream outbound server.

Action: Query DBA_XSTREAM_OUTBOUND view to get the connect_user value for the specified outbound server. Then modify the application to connect to the outbound server's database using this value.

ORA-26828: XStream outbound server "*string*" requires combined capture and apply mode.

Cause: The specified XStream outbound server was not in combined capture and apply mode.

Action: Restore the combined capture and apply mode and then restart the capture.

ORA-26829: Cannot set "DISABLE_ON_ERROR" parameter to 'N'.

Cause: An attempt was made to change the "DISABLE_ON_ERROR" parameter for an XStream outbound server to 'N'.

Action: Remove invalid statement.

ORA-26830: Cannot define handler for an XStream outbound server.

Cause: An attempt was made to define a handler for an XStream outbound server.

Action: Remove invalid statement.

ORA-26831: Cannot delete or execute error transaction from XStream outbound server "*string*".

Cause: An attempt was made to delete or execute an error transaction from the specified XStream outbound server.

Action: Remove invalid statement.

ORA-26832: Unable to create XStream outbound server "*string*" due to existing handler.

Cause: An attempt was made to create the specified XStream outbound server while there was a handler defined for the specified server.

Action: Use DBMS_APPLY_ADM.SET_DML_HANDLER procedure to remove all handlers defined on the specified server then retry statement.

ORA-26833: *string* failed to update acknowledgment SCN for propagation "*string*" from capture "*string*" to apply "*string*".

Cause: propagation might have been modified after GoldenGate, XStream or Streams was started.

Action: Ensure propagation is configured properly and restart GoldenGate, XStream or Streams.

ORA-26834: Unable to alter parameter '*string*' because *string* capture process is not configured to run locally

Cause: An attempt was made to alter the specified capture parameter when the GoldenGate, XStream or Streams capture process was not configured to run on the local database.

Action: Remove the invalid parameter or use DBMS_CAPTURE_ADM.ALTER_CAPTURE procedure to alter the parameter.

ORA-26835: The source database for XStream outbound server "*string*" is invalid

Cause: An attempt was made to add an XStream outbound server with a source database that was different from the associated capture's source database.

Action: Correct the value for the 'source_database' parameter in the call.

ORA-26836: The specified rules must be created from the same subsetting condition

Cause: An attempt was made to remove an outbound server's subset rules when the specified INSERT, UPDATE, and DELETE rules were not created from the same subsetting condition.

Action: Correct the rules in the statement.

ORA-26837: Server "*string*" is not an XStream inbound server

Cause: An attempt was made to execute a procedure not appropriate on an XStream inbound server.

Action: Replace with a procedure appropriate for an XStream inbound server and resubmit.

ORA-26838: Setting apply parameter "*string*" is not permitted for XStream Outbound Server

Cause: An attempt was made to set an apply parameter that was not applicable for XStream Outbound Server.

Action: Configure XStream Outbound Server using valid parameters. Check the documentation for valid parameter values.

ORA-26839: Apply tag for apply "*string*" is not permitted for XStream Outbound Server

Cause: An attempt was made to set an apply tag that was not applicable for XStream Outbound Server.

Action: Do not set the apply tag when using XStream Outbound Server.

ORA-26840: Combined capture and apply optimization is disabled because *string* is unable to identify an apply for the source database "*string*".

Cause: There were multiple Streams apply processes using the same queue which made combined capture and apply (CCA) optimization not possible.

Action: If Streams performance is an issue, check the "Combined Capture and Apply Optimization" chapter in the "Oracle Streams Concepts and Administration" book. Then reconfigure the Streams processes to meet this optimization's requirements.

ORA-26841: No subscribers are found for queue "*string*". "*string*".

Cause: No propagation or apply was configured for the specified queue.

Action: Configure propagation or apply for the specified queue.

ORA-26842: Setting apply directive "*string*" is not permitted for XStream Outbound Server

Cause: An attempt was made to set an apply directive that was not applicable for XStream Outbound Server.

Action: Configure XStream Outbound Server using valid directives. Check the documentation for valid directives.

ORA-26843: Local propagation "*string*" found for capture queue "*string*". "*string*".

Cause: The combined capture and apply optimization could not be used because a local propagation was attached to the capture queue.

Action: Remove the local propagation and restart capture.

ORA-26844: Found "*string*" active automatic split jobs for *string* Capture "*string*" in DBA_STREAMS_SPLIT_MERGE

Cause: Only one active split job is allowed for each GoldenGate, XStream or Streams Capture, but multiple active automatic split jobs were found in DBA_STREAMS_SPLIT_MERGE.

Action: Check trace to see how the jobs were submitted and drop them.

ORA-26845: Found "*string*" active split rows with the same cloned *string* Capture "*string*" in DBA_STREAMS_SPLIT_MERGE

Cause: In DBA_STREAMS_SPLIT_MERGE, for active split rows, the column CLONED_CAPTURE_NAME should be unique. However, multiple rows were found whose ACTION_TYPE column is 'SPLIT', ACTIVE column is 'ACTIVE' and have the same CLONED_CAPTURE_NAME.

Action: Check trace to see how the rows were inserted and call DBMS_STREAMS_ADM.RECOVER_OPERATION() for error recovery.

ORA-26846: Found "string" active automatic merge jobs for cloned string Capture "string" in DBA_STREAMS_SPLIT_MERGE

Cause: Only one active merge job is allowed for each cloned GoldenGate, XStream or Streams Capture , but multiple active automatic merge jobs were found in DBA_STREAMS_SPLIT_MERGE.

Action: Check trace to see how the jobs were submitted and drop them.

ORA-26847: Found invalid string type: "string"

Cause: Invalid GoldenGate, XStream or Streams type to split off was found. Type should only be 'PROPAGATION'(1) or 'APPLY'(2).

Action: Check trace to see how the invalid GoldenGate, XStream or Streams type was created and correct it.

ORA-26848: Split a nonexistent Streams Capture process "string" in job "string"

Cause: The job attempted to split a non-existent original Streams Capture.

Action: Drop the split job, or wait until the Streams Capture comes to existence.

ORA-26849: Split a nonsplittable string Capture process "string" in job "string"

Cause: The job tried to split a GoldenGate, XStream or Streams Capture that was not splittable. That is, the Capture either had less than two subscribers, or it was not the only Capture of its queue.

Action: Drop the split job, or wait until the GoldenGate, XStream or Streams Capture becomes splittable.

ORA-26850: Changes to queue subscribers were detected by string capture process.

Cause: The subscribers for capture queue might have changed.

Action: Capture process will restart automatically.

ORA-26851: Unable to connect to apply "string" because it has connected to another capture.

Cause: Another capture process is already connected to apply.

Action: Wait for the connected capture process to terminate or abort the connected capture process.

ORA-26852: Invalid NULL value for column_value parameter.

Cause: NULL is not allowed to be passed as the column value.

Action: Replace NULL with a proper AnyData instance containing NULL, e.g., sys.AnyData.ConvertVarchar2(NULL), as the column value if the column value is NULL.

ORA-26853: invalid cca maximum percentage string

Cause: Specified percentage value was not in range 0 - 100.

Action: Specify a percentage value in the range 0 - 100.

ORA-26854: *string string* has no enqueue or dequeue privileges to the queue.

Cause: The GoldenGate, XStream or Streams user did not have enqueue or dequeue privilege to the queue.

Action: Grant GoldenGate, XStream or Streams user enqueue or dequeue privileges to the queue.

ORA-26855: *string string* has insufficient database privilege to access the queue.

Cause: The GoldenGate, XStream or Streams user did not have sufficient database privilege to access the queue.

Action: Grant GoldenGate, XStream or Streams user database privileges to access the queue.

ORA-26856: STREAMS *string* has insufficient database privilege to access the queue.

Cause: The GoldenGate, XStream or Streams user did not have sufficient database privilege to access the queue.

Action: Grant GoldenGate, XStream or Streams user database privileges to access the queue.

ORA-26857: LCR position cannot be null (XID=*string*).

Cause: The position of an LCR in the specified transaction was null.

Action: Use OCILCRHeaderSet to define the LCR position.

ORA-26858: LCR position must be strictly increasing (XID=*string*, LCR position=*string*, previous position=*string*).

Cause: The position of an LCR in the specified transaction was less than or equal to the previous LCR in transaction.

Action: Use OCILCRHeaderSet to correct the LCR position.

ORA-26859: Server "*string*" is not an XStream outbound server

Cause: An attempt was made to execute a procedure not appropriate on an XStream outbound server.

Action: Replace with a procedure appropriate for an XStream outbound server and resubmit.

ORA-26860: Different transactions must have different transaction IDs (XID=*string*, LCR position=*string*, previous commit position=*string*).

Cause: The position of an LCR in the specified transaction was greater than the position of the previous commit LCR in transaction with same transaction ID.

Action: Use different transaction IDs for different transactions.

ORA-26862: LCR position must be greater than the processed low position of the XStream inbound server (XID=*string*, LCR position=*string*).

Cause: The position of a logical change record (LCR) in the specified transaction was less than or equal to the processed low position of the XStream inbound server.

Action: Use OCILCRHeaderSet to correct the LCR position.

ORA-26863: Job "*string*" showing as an active job in DBA_STREAMS_SPLIT_MERGE does not exist in DBA_SCHEDULER_JOBS.

Cause: An active job showing in DBA_STREAMS_SPLIT_MERGE did not exist. It may have been dropped accidentally or something was wrong with it.

Action: Check trace to identify the problem and call DBMS_STREAMS_ADM.RECOVER_OPERATION() for error recovery.

ORA-26864: Error occurred in *string* automatic job: "*string*"

Cause: An error has happened inside GoldenGate, XStream or Streams automatic job.

Action: Check trace for more detail.

ORA-26865: must send a COMMIT LCR to end transaction '*string*' before sending another transaction

Cause: An attempt was made by a client application to send LCRs for a new transaction before sending a COMMIT LCR for the specified transaction.

Action: Modify the client application to send a COMMIT LCR at the end of the specified transaction.

ORA-26866: The Queue of *string* Apply process "*string*" is not changeable.

Cause: Not all of the conditions for the Queue of a GoldenGate, XStream or Streams Apply process to be changeable were met. Conditions are: -The Apply process is not running. -The Apply process has no error. -The Apply process has no spilling. -The Apply process is not used for XStream Outbound or Inbound Servers. -The Apply process is a local Apply process. -The corresponding GoldenGate, XStream or Streams Capture process should be stopped.

Action: Make sure all of the conditions are met.

ORA-26867: *string* must be called during OCIXStreamOutLCRReceive execution

Cause: An attempt was made to execute the specified function while OCIXStreamOutLCRReceive call was not in progress.

Action: Check your program and make sure the specified call is invoked during OCIXStreamOutLCRReceive callback function.

ORA-26868: *string* must be called during OCIXStreamInLCRSend execution

Cause: An attempt was made to execute the specified function while OCIXStreamInLCRSend call was not in progress.

Action: Check your program and make sure the specified call is invoked during OCIXStreamInLCRSend callback function.

ORA-26869: must attach to an XStream inbound server before executing *string* function

Cause: An attempt was made to invoke the specified function before executing OCIXStreamInAttach call.

Action: Add OCIXStreamInAttach call before the specified function.

ORA-26870: cannot call *string* while OCIXStreamInLCRCallbackSend call is still executing.

Cause: An attempt was made to invoke the specified call while OCIXStreamInLCRCallbackSend call was executing.

Action: Check your program and remove the specified call when there is an OCIXStreamInLCRCallbackSend call in progress.

ORA-26871: unexpected *string* call (expecting *string*)

Cause: Could be one of the following reasons: 1) An attempt was made to invoke OCIXStreamInChunkSend when the most recent LCR or chunk sent did not have the OCI_XSTREAM_MORE_ROW_DATA flag set; 2) An attempt was made to invoke OCIXStreamInLCRSend when the most recent LCR or chunk sent had OCI_XSTREAM_MORE_ROW_DATA flag set.

Action: n/a

ORA-26872: must attach to an XStream outbound server before executing *string* function

Cause: An attempt was made to invoke the specified function before executing OCIXStreamOutAttach call.

Action: Add OCIXStreamOutAttach call before the specified function.

ORA-26873: cannot call *string* while OCIXStreamOutLCRCallbackReceive call is still executing.

Cause: An attempt was made to invoke the specified call while OCIXStreamOutLCRCallbackReceive call was executing.

Action: Check your program and remove the specified call when there is an OCIXStreamOutLCRCallbackReceive call in progress.

ORA-26874: *string* Capture process "*string*" cannot be split.

Cause: An attempt was made to split a GoldenGate, XStream or Streams Capture process that could not be split. That is, the Capture process either had less than two subscribers, or it was not the only Capture process of its queue.

Action: Wait until the GoldenGate, XStream or Streams Capture process can be split.

ORA-26875: Timeout while *string* automatic split job "*string*" waits for the subscriber "*string*" of Capture process "*string*" to acknowledge split

Cause: To split a subscriber of a GoldenGate, XStream or Streams Capture process, an automatic split job needs to wait until the subscriber acknowledges the split. The wait timed out.

Action: n/a

ORA-26876: invalid processed low-watermark (current position=*string*; new position=*string*)

Cause: An attempt was made to set the processed low-watermark to a value that was less than the current processed low-watermark.

Action: Correct the processed low-watermark in OCIXStreamOutProcessedLWMSets call.

ORA-26877: must reattach after an OCIXStreamOut call was interrupted

Cause: An attempt was made to execute another OCIXStreamOut API when an earlier call was interrupted because the XStream outbound server was disabled or the client requested cancellation of the operation.

Action: Execute OCIXStreamOutAttach call to reattach to the same XStream outbound server.

ORA-26878: inconsistent input LCR (LCR is '*string*' type, expecting '*string*')

Cause: An attempt was made to send an LCR that was not consistent with the specified LCR type.

Action: Correct your application to specify an LCR type that agrees with the LCR to be sent.

ORA-26879: "SET_ENQUEUE_DESTINATION" directive is not permitted on rules used by XStream outbound server "*string*"

Cause: One or more rules, used by the specified XStream outbound server, had SET_ENQUEUE_DESTINATION directive defined.

Action: Execute the following: 1) Execute query SELECT xr.rule_owner, xr.rule_name, xr.rule_set_owner, xr.rule_set_name FROM dba_apply_enqueue e, dba_xstream_rules xr WHERE e.rule_owner = xr.rule_owner AND e.rule_name = xr.rule_name AND xr.streams_name = *specified outbound server*; 2) For each rule returned, execute DBMS_APPLY_ADM.SET_ENQUEUE_DESTINATION procedure to set the destination queue to null, or execute DBMS_RULE_ADM.REMOVE_RULE to remove that rule from its associated rule set.

ORA-26880: "SET_EXECUTE" directive is not permitted on rules used by XStream outbound server "*string*"

Cause: One or more rules, used by the specified XStream outbound server, had SET_EXECUTE directive defined.

Action: Execute the following: 1) Execute query SELECT xr.rule_owner, xr.rule_name, xr.rule_set_owner, xr.rule_set_name FROM dba_apply_execute e, dba_xstream_rules xr WHERE e.rule_owner = xr.rule_owner AND e.rule_name = xr.rule_name AND xr.streams_name = *specified outbound server*; 2) For each rule returned, use DBMS_APPLY_ADM.SET_EXECUTE procedure to set the EXECUTE parameter to TRUE, or use DBMS_RULE_ADM.REMOVE_RULE to remove that rule from its associated rule set.

ORA-26881: ORA-*string*: *string* raised in *string* automatic *string* job:"*string*"."*string*" for Capture process "*string*" and cloned Capture process "*string*".

Cause: An error was raised in a GoldenGate, XStream or Streams automatic split/merge job for the given original and cloned Capture processes.

Action: Check the corresponding split/merge row in DBA_STREAMS_SPLIT_MERGE view, alert log and trace file for details.

ORA-26882: Timeout while *string* automatic split/merge job:"*string*"."*string*" tried to lock Capture process "*string*".

Cause: The GoldenGate, XStream or Streams Capture process could be locked by other automatic split/merge jobs.

Action: No action required. The GoldenGate, XStream or Streams automatic split/merge job will retry automatically.

ORA-26883: Timeout due to *string* Apply process "*string*" while merge original Capture process "*string*" and cloned Capture process "*string*".

Cause: When merging two GoldenGate, XStream or Streams Capture processes, the merge needs to wait until the Apply process of the cloned Capture process goes ahead of the slowest subscriber of the original Capture process. This wait timed out.

Action: Make sure the GoldenGate, XStream or Streams Apply process still works properly.

ORA-26884: Not allowed to specify OCI_LCR_ROW_COLVAL_OLD with OCILCR_NEW_ONLY_MODE.

Cause: An attempt was made to call OCILCRRowColumnInfoGet function with OCI_LCR_ROW_COLVAL_OLD and OCILCR_NEW_ONLY_MODE.

Action: Change OCI_LCR_ROW_COLVAL_OLD to OCI_LCR_ROW_COLVAL_NEW or remove OCILCR_NEW_ONLY_MODE argument.

ORA-26885: OCIXStreamInCommit called before OCIXStreamInFlush

Cause: An attempt was made to call OCIXStreamInCommit before calling OCIXStreamInFlush.

Action: Call OCIXStreamInFlush prior to calling OCIXStreamInCommit.

ORA-26886: LCR commit position (*string*) must be greater than the applied high position of the XStream inbound server (position=*string*).

Cause: The position of the commit logical change record (LCR) was less than or equal to the applied high position of the XStream inbound server.

Action: Set the commit position higher than the applied high position.

ORA-26887: Insufficient privileges to attach to XStream inbound server *string*.

Cause: Sufficient privileges were not granted to attach to the specified XStream inbound server.

Action: Query DBA_XSTREAM_INBOUND view to get the apply_user value for the specified XStream outbound server. Then, modify the application to connect to the inbound server's database using this value.

ORA-26888: Redo compatibility must be release 10.2 or later.

Cause: XStream Out redo compatibility was not release 10.2 or later.

Action: Drop the outbound server.

ORA-26889: LOB assembly not supported for PDML parent transaction *string*, child transaction *string*.

Cause: LOB assembly is not supported for PDML transactions.

Action: Disable LOB assembly, or filter out the PDML transaction.

ORA-26890: Invalid update LCR on Oracle Sequence *string*.*string*

Cause: The new value column list of an update LCR on an Oracle Sequence did not have non-null columns "CYCLE#", "INCREMENT\$", "CACHE" and "HIGHWATER".

Action: Make sure the new value column list has all the required columns. This might be a user error if the LCR is from an XStream In client.

ORA-26891: Target Oracle Sequence *string*.*string* has inconsistent parameters with the source.

Cause: The source and target Oracle Sequences did not have the identical cache size, increment value, and cycle flag needed for replication purposes.

Action: Make sure the source and target Oracle Sequences have identical parameters. This might be a user error if the LCR is from an XStream In client.

ORA-26892: XStream feature not supported

Cause: The XStream feature was not supported.

Action: No action necessary.

ORA-26893: Input LCR must be a commit LCR

Cause: The input LCR was not a commit LCR.

Action: Make sure the input LCR is a commit LCR.

ORA-26894: Invalid "string" in Apply Progress redo

Cause: The value of the field reported was possibly corrupted.

Action: Contact Oracle Support Services.

ORA-26895: Setting parameter "string" of Streams process "string" is only permitted for Oracle GoldenGate or XStream.

Cause: An attempt was made to set a parameter that is only allowed for XStream.

Action: Oracle GoldenGate license is needed to use this parameter.

ORA-26896: Attempted to connect multiple Oracle GoldenGate Capture processes, including "string", with XStream outbound server "string" through queue "string"."string"

Cause: An attempt was made to connect multiple Oracle GoldenGate Capture processes through a queue with the XStream outbound server.

Action: Each XStream outbound server can only connect with one co-located Capture process. Remove extra Capture processes.

ORA-26897: Unable to start string capture "string" because its subscribers "string" and "string" have different purpose

Cause: An attempt was made to start an Oracle Capture process but it failed to start because its subscribers had conflicting purpose.

Action: Remove one of the specified subscribers from the capture queue.

ORA-26898: Unable to create "string" because there is an Oracle Capture process using the same queue "string"."string"

Cause: An attempt was made to create an inbound server using the same queue that was used by an Oracle Capture process.

Action: Resubmit the statement using another queue name.

ORA-26899: internal string error

Cause: An internal Streams, XStream or GoldenGate error has occurred.

Action: Please contact Oracle customer support.

ORA-26900: Streams failed to update data dictionary table for propagation "string" from capture "string" to apply "string".

Cause: The data dictionary table was corrupted.

Action: Validate the data dictionary table to restart GoldenGate, XStream or Streams capture process.

ORA-26901: string propagation sender in the combined capture and apply mode is to be suspended while apply is disabled.

Cause: The corresponding subscriber was dropped or split.

Action: No action necessary.

ORA-26902: *string* propagation sender in the combined capture and apply mode is to be suspended while apply is enabled.

Cause: The corresponding subscriber was dropped or split.

Action: No action necessary.

ORA-26903: Invalid edition name "*string*"

Cause: The edition associated with the LCR did not exist in the destination database.

Action: Check if the edition needs to be created manually on the destination database or if the CREATE EDITION statement for this edition has been applied properly on the destination database.

ORA-26904: Invalid bind variable "*string*" in LCR field expression.

Cause: In the statement handler, the bind variables listed in the SQL expression did not match the allowed Logical Change Record field names.

Action: Verify that all the bind variables listed in the expression are legal Logical Change Record fields.

ORA-26905: Invalid LCR method expression "*string*" in statement handler.

Cause: The Logical Change Record method listed was not allowed in the statement handler.

Action: Verify that the Logical Change Record method listed in the expression is a legal DBMS_LCR method.

ORA-26906: No change handler exists.

Cause: There was no change handler for the specified apply, operation, source table, change table, and capture values.

Action: Query DBA_APPLY_CHANGE_HANDLERS view to find the correct change handler.

ORA-26907: Insufficient privileges to set converge tag

Cause: Privileges were insufficient to set converge tag.

Action: The invoker needs EXECUTE_CATALOG_ROLE or execute privilege on DBMS_STREAMS_ADM to set converge tag. Grant appropriate privileges to the invoker.

ORA-26908: XStream API must be executed using a dedicated server process.

Cause: An attempt was made to execute XStream API using a shared server process.

Action: Replace the connect string in the client application to use a dedicated server process.

ORA-26909: cannot reexecute an eager error

Cause: An attempt was made to reexecute an eager error transaction. An eager transaction is applied before the apply process sees the commit or rollback for the transaction.

Action: Fix the cause of the eager error and restart the apply process. When apply is restarted, capture will automatically resend the transaction, and the transaction will be applied by the apply process.

ORA-26910: user error *string* encountered in eager mode

Cause: An error was encountered during eager apply. An eager transaction is applied before the apply process sees the commit or rollback for the transaction. If an error occurs during an eager transaction, the transaction will be rolled back.

Action: Query the DBA_APPLY_ERROR view to determine the error and take the appropriate action. The apply process will need to be restarted to apply the transaction that had the error. When apply is restarted, capture will automatically resend the transaction, and the transaction will be applied by the apply process.

ORA-26911: invalid oldest position (current position=*string*; new position=*string*)

Cause: An attempt was made to set the oldest position to a value that was less than the current value.

Action: Correct the oldest_position argument in OCIXStreamOutProcessedLWMSet2 call.

ORA-26912: not allowed to invoke '*string*' while in committed data-only mode

Cause: An attempt was made to call the specified API while the attached XStream server was in committed data-only mode.

Action: Perform one of the following: 1) If the invalid call is OCIXStreamOutProcessedLWMSet2, then change it to OCIXStreamOutProcessedLWMSet or pass a null oldest_position to OCIXStreamOutProcessedLWMSet2 call. 2) If the invalid call is OCIXStreamInProcessedLWMGet2, then change it to OCIXStreamInProcessedLWMGet or pass a null oldest_position to OCIXStreamInProcessedLWMGet2 call.

ORA-26913: must connect to instance *string* where *string string* server "*string*" is running

Cause: The client application was not connected to the same Oracle RAC instance as the specified Oracle GoldenGate or XStream server.

Action: Connect to the specified instance using the network service name obtained from the following query: SELECT network_name FROM all_queues q, all_xstream_outbound ob WHERE q.owner = ob.queue_owner AND q.name = ob.queue_name AND server_name = '<server_name>';

ORA-26914: Unable to communicate with *string* capture process "*string*" from outbound server "*string*".

Cause: Capture process might not have been started properly or was aborted.

Action: If Oracle GoldenGate or XStream capture process was stopped, then restart the capture process. Otherwise, query the DBA_CAPTURE view to determine the reason and take the appropriate action. If the error is ORA-4031, either increase the initialization parameter STREAMS_POOL_SIZE or increase the capture parameter MAX_SGA_SIZE or increase both. Refer to the XStream documentation for additional information on these parameters.

ORA-26915: Unable to return Logical Change Record (LCR) information due to missing data dictionary.

Cause: The current session was unable to return the requested information on the given LCR due to missing dictionary data on that LCR.

Action: Detach and reattach the XStream outbound server. Then retry the current call.

ORA-26916: Must call OCIPOGGRedoLogOpen function before OCIPOGGRedoLogRead

Cause: An attempt was made to call OCIPOGGRedoLogRead before calling OCIPOGGRedoLogOpen.

Action: Add OCIPOGGRedoLogOpen call before OCIPOGGRedoLogRead.

ORA-26917: OCIPOGG API must be executed using a dedicated server process.

Cause: An attempt was made to execute OCIPOGG API using a shared server process.

Action: Replace the connect string in the client application to use a dedicated server process.

ORA-26918: Must use 'string' procedure for outbound server "string".

Cause: An attempt was made to execute START_APPLY on an outbound server that uses uncommitted data mode.

Action: Use the specified procedure instead.

ORA-26919: Capture "string" is not associated with queue "string"."string".

Cause: The capture specified in the ADD_OUTBOUND procedure was not associated with the specified queue.

Action: Resubmit the ADD_OUTBOUND procedure after removing either the capture_name or the queue_name argument.

ORA-26920: string outbound server "string" has been stopped.

Cause: The specified outbound server was stopped.

Action: Execute START_OUTBOUND procedure to restart the outbound server or execute OCIXStreamOutAttach function to reattach to the outbound server.

ORA-26921: Cannot alter the start SCN or time of string Capture "string".

Cause: An attempt was made to alter the start SCN or time for a capture while other outbound servers were still attached to it.

Action: Execute the following: 1) Get the names of other outbound servers currently attached to the specified Capture using the query: SELECT server_name FROM dba_xstream_outbound WHERE (status = 'ATTACHED') AND (server_name '<altered_server>') AND (capture_name = '<specified_capture_name>'); 2) Detach the client application from each server_name returned. 3) Retry the operation.

ORA-26922: user string does not have LOGMINING privilege

Cause: An attempt was made to start the capture process or attach to an outbound server when the specified user did not have LOGMINING privilege.

Action: Grant LOGMINING privilege to the specified user and resubmit the failed operation.

ORA-26923: cannot configure string outbound server "string" with string capture "string" due to different purpose

Cause: An attempt was made to configure an outbound server with a capture used for different purpose.

Action: Execute the following: 1) Get the purpose of each capture and its associated queue: SELECT capture_name, queue_owner, queue_name, purpose FROM dba_capture; 2) Resubmit the statement using a queue or capture with the same purpose.

ORA-26924: cannot configure *string* using "*string*". "*string*" queue because it is used by "*string*" for *string* purpose

Cause: An attempt was made to configure the specified process using a queue already used by another process for different purpose.

Action: Resubmit the statement using another queue of the same purpose.

ORA-26925: cannot configure outbound server "*string*" with capture "*string*" because it is not using apply-state checkpoint

Cause: An attempt was made to configure an outbound server with a capture not using apply-state checkpoint.

Action: Specify a different capture in the ADD_OUTBOUND procedure or re-create the capture and resubmit the statement.

ORA-26926: Unable to attach because capture "*string*" is missing dictionary redo logs

Cause: The specified capture was unable to locate the dictionary redo log.

Action: Check the state of the specified capture from gv\$streams_capture to determine the SCN or filename of the missing log file. Confirm that the filename exists and is accessible online and also in the DBA_REGISTERED_ARCHIVED_LOG view. In addition, for local capture, confirm that an entry exists for the file in the V\$ARCHIVED_LOG view. If an entry is missing, it can be added using the ALTER DATABASE REGISTER ... LOGFILE command, specifying the keyword LOGICAL LOGFILE or PHYSICAL LOGFILE as appropriate.

ORA-26927: Unable to communicate with *string* capture process "*string*" from outbound server "*string*".

Cause: A timeout occurred while waiting for capture to respond.

Action: Check the state of the specified capture from GV\$XSTREAM_CAPTURE view. Determine the reason for capture's unresponsiveness. If streams_pool_size is not set or set with an inadequate value, consider setting or increasing the value of this parameter.

ORA-26928: Unable to communicate with *string* apply coordinator process "*string*" from outbound server "*string*".

Cause: A timeout occurred while waiting for apply coordinator to respond.

Action: Check the state of the specified apply coordinator from GV\$STREAMS_APPLY_COORDINATOR view. Determine the reason for apply coordinator's unresponsiveness. If streams_pool_size is not set or set with an inadequate value, consider setting or increasing the value of this parameter.

ORA-26929: altering an outbound server with a remote capture is not allowed

Cause: An attempt was made to alter an outbound server with a remote capture.

Action: None

ORA-26930: User "*string*" does not have privileges to perform this operation

Cause: An attempt was made to create, alter, or drop a process that has a different user (such as capture user or apply user) than the invoking user.

Action: Perform this operation as the owner of the process. Alternatively, perform the operation with the DBA role enabled.

ORA-26931: This procedure can only be invoked from the root container.

Cause: An attempt was made to execute a procedure in a multitenant container database (PDB) or a non-container database.

Action: Execute the procedure from the root container.

ORA-26932: Streams configuration is not allowed in a container database.

Cause: An attempt was made to configure a Streams environment in a container database.

Action: None

ORA-26933: Cannot start Streams process "*string*" while in a container database.

Cause: An attempt was made to start the specified Streams process while in a container database.

Action: None

ORA-26934: Streams synchronous capture is not supported in a container database.

Cause: An attempt was made to perform a DML operation on a table being captured by a Streams synchronous capture in a container database.

Action: Remove all Streams synchronous captures then reexecute the DML operation.

ORA-26935: Unsupported type *string.string* for parameter for procedure *string.string.string.ln*

Cause: Apply encountered a procedure call with a parameter with an unsupported type.

Action: Modify the rules to filter out the procedure call.

ORA-26936: must execute OCIPOGGCaptureAttach before invoking *string* function

Cause: An attempt was made to invoke the specified function before executing OCIPOGGCaptureAttach call.

Action: Add OCIPOGGCaptureAttach call before the specified function.

ORA-26937: client has already attached to *string* capture "*string*".

Cause: The client was already attached to the specified capture.

Action: Detach from the specified capture before reattaching.

ORA-26938: cannot pack LCR into LCR buffer (buffer size is *string*, LCR size is *string*)

Cause: The logical change record (LCR) buffer was not large enough to store the current LCR.

Action: Increase the buffer size in the OCIPOGGCaptureAttach call.

ORA-26939: *string* capture "*string*" is disabled.

Cause: The capture process was disabled or aborted.

Action: Start the capture process.

ORA-26940: OCIPOGGCapture API must be executed using a dedicated server process.

Cause: An attempt was made to execute OCIPOGGCapture API using a shared server process.

Action: Replace the connect string in the client application to use a dedicated server process.

ORA-26941: unable to perform LOB assembly for table *string.string*

Cause: The apply process was unable to perform the LOB assembly for a DML for the specified table.

Action: Verify that the storage type for the columns are compatible at the source and destination.

ORA-26942: LCR should not contain old value for column *string* in table *string.string*

Cause: The LCR contained old values for LOB, XMLType and object columns.

Action: Remove old values for any LOB, XMLType and object columns in the LCR.

ORA-26943: cross PDB operation not allowed

Cause: An attempt was made to perform an operation on a container database different from the container database where the call was made.

Action: Log into the root container or into the container where you want to perform the requested action.

ORA-26944: User "*string*" attempted to invoke a procedure without proper permissions.

Cause: An attempt was made to invoke a procedure without proper permissions.

Action: Grant the user any of the roles for using Oracle GoldenGate. The roles are OGG_CAPTURE_ADMIN, OGG_APPLY_ADMIN, and OGG_APPLY_PROCREP.

ORA-26945: unsupported hint *string*

Cause: The specified hint was not supported.

Action: Remove the hint from the SQL statement.

ORA-26946: OCIPOGGRedoLog API not supported in CDB.

Cause: An attempt was made to call an OCIPOGGRedoLog API in a multitenant container database (CDB).

Action: Do not call the OCIPOGGRedoLog API in a CDB.

ORA-26947: Oracle GoldenGate replication is not enabled.

Cause: The 'enable_goldengate_replication' parameter was not set to 'true'.

Action: Set the 'enable_goldengate_replication' parameter to 'true' and retry the operation. Oracle GoldenGate license is needed to use this parameter.

ORA-26948: Streams API must be executed using a dedicated server process.

Cause: The dblink configured for the propagation from the capture queue to the apply queue is using a shared server connection.

Action: Modify the dblink for this propagation to use a dedicated server connection.

ORA-26949: Advanced Replication is not allowed in a container database.

Cause: An attempt was made to configure an advanced replication in a multitenant container database (CDB).

Action: Do not call the Advanced Replication API in a CDB.

ORA-26951: table "*string*"."*string*" has column data type not supported by conflict resolution

Cause: A conflict was detected, but unsupported columns prevented resolving the conflict.

Action: Remove conflict resolution configuration for tables with LOB, LONG, XML, object, or extended types.

ORA-26952: could not clone from the specified clone_capture_name *string* while creating capture process *string*

Cause: The specified clone_capture_name could not be used as a clone candidate while creating the capture process.

Action: Re-create the capture without setting clone_capture_name.

ORA-26953: source database character set is not a subset of the mining database character set

Cause: An attempt was made to configure a downstream capture but the source database character set was not a subset of the mining database character set.

Action: Use AL32UTF8 character set or other compatible character set for the mining database.

ORA-26954: invalid protocol (opcode *string*) received during XStream execution

Cause: An internal protocol error occurred while executing an XStream function.

Action: Contact Oracle Support Services.

ORA-26955: cannot capture TIMESTAMP WITH LOCAL TIME ZONE data type

Cause: The capture process was unable to capture TIMESTAMP WITH LOCAL TIME ZONE data type because the source database time zone was not available.

Action: Refer to My Oracle Support Note 1928808.1 to set the source database time zone for the specified capture process.

ORA-26956: capture *string* created successfully but the source database time zone is not available

Cause: The capture process was created successfully; however, it will not be able to capture TIMESTAMP WITH LOCAL TIME ZONE data type unless the source database time zone is set.

Action: Refer to My Oracle Support Note 1928808.1 to set the source database time zone for the specified capture process.

ORA-26957: LCR identifier length is invalid.

Cause: A logical change record (LCR) identifier with an incompatible length was used.

Action: Use an LCR identifier compatible with release 12.2 or higher specification.

ORA-26958: LCR identifier version is invalid.

Cause: An invalid logical change record (LCR) identifier version number was used.

Action: Use an LCR identifier version compatible with release 12.2 or higher specification.

ORA-26959: SCN value does not fit in SCN version 1.

Cause: The system change number (SCN) value was too big to fit in the original SCN specification.

Action: Use an SCN value compatible with the original SCN specification.

ORA-26960: automatic CDR already configured for table "*string*"."*string*"

Cause: Automatic conflict detection and resolution was already configured.

Action: Remove the automatic conflict detection and resolution configuration and retry.

ORA-26961: automatic CDR not configured for table "*string*"."*string*"

Cause: Automatic conflict detection and resolution was not configured.

Action: None

ORA-26962: automatic CDR delta resolution not configured for column "*string*"

Cause: Automatic conflict detection and resolution delta resolution was not configured.

Action: None

ORA-26963: automatic CDR column group cannot be created

Cause: Automatic conflict detection and resolution was configured with column granularity.

Action: Remove the column-level configuration and retry.

ORA-26964: column "*string*" already assigned to a column group

Cause: The column was already part of a column group.

Action: Remove the column from the column group and retry.

ORA-26965: column group name "*string*" not available

Cause: The column group name was already in use.

Action: Remove the existing column group and retry.

ORA-26967: delete tombstone table "*string*"."*string*" cannot be dropped

Cause: An attempt was made to drop a delete tombstone table.

Action: Remove the automatic conflict detection and resolution from the base table.

ORA-26968: column group "*string*" not found

Cause: The column group did not exist.

Action: Check if the column group needs to be created.

ORA-26969: column "*string*" not part of column group "*string*"

Cause: The column did not belong to the column group.

Action: Check the column list and retry.

ORA-26970: table "*string*" does not contain a primary key constraint

Cause: An attempt was made to configure automatic conflict detection and resolution with delete tombstones on a table without a primary key.

Action: Add a primary key and retry.

ORA-26971: resolution column "string" not present

Cause: The resolution column was not set in the logical change record (LCR).

Action: Manually resolve the conflict.

ORA-26972: An apply process attempted to modify the SYSAUX tablespace.

Cause: An ALTER TABLESPACE DDL to SYSAUX was attempted by Oracle GoldenGate, XStream or Streams process.

Action: Only SYS is allowed to modify SYSAUX.

ORA-26973: Automatic CDR not supported for table "string"."string" which has unsupported column "string".

Cause: Automatic conflict detection and resolution (CDR) support for long, nested table or non-scalar abstract data type (ADT) attribute column failed. CDR did not support long, nested table or non-scalar ADT attribute columns.

Action: None

ORA-26974: Apply process is stuck in synchronous error handling mode.

Cause: The apply process ran out of memory or queue space while suspended for synchronous error handling.

Action: Restart Oracle GoldenGate Replicat process.

ORA-26975: Only one instance of an Oracle GoldenGate downstream live standby is permitted.

Cause: An attempt was made to create an additional capture session for an Oracle GoldenGate downstream live standby system.

Action: None

ORA-26976: Oracle Streams is no longer supported.

Cause: An attempt was made to use a feature of Oracle Streams.

Action: None

ORA-26977: Parameter 'string' is not a valid parameter for an XStream inbound server.

Cause: An attempt was made to alter a parameter that was not valid for an XStream inbound server.

Action: None

ORA-26978: cannot specify more than 1000 key columns

Cause: An attempt was made to define more than 1000 key columns.

Action: Reduce the number of key columns.

ORA-26979: missing BLOCKING keyword

Cause: Syntax error.

Action: Use the correct syntax: ENABLE/DISABLE GOLDENGATE BLOCKING MODE.

ORA-26980: missing MODE keyword

Cause: Syntax error.

Action: Use the correct syntax: ENABLE/DISABLE GOLDENGATE BLOCKING MODE.

ORA-26981: operation was unsupported during Oracle GoldenGate blocking mode

Cause: An unsupported operation was attempted while Oracle GoldenGate was in blocking mode.

Action: Execute ALTER DATABASE DISABLE GOLDENGATE BLOCKING MODE and retry the operation.

ORA-26982: unable to drop minimal supplemental logging when Oracle GoldenGate blocking mode is enabled

Cause: Minimal supplemental logging could not be dropped while Oracle GoldenGate Blocking was enabled.

Action: Issue ALTER DATABASE DISABLE GOLDENGATE BLOCKING MODE, then reissue the command.

ORA-26984: Automatic Conflict Detection and Resolution site priority action can only be OVERWRITE or IGNORE

Cause: Site priority action was ambiguous.

Action: Choose either OVERWRITE or IGNORE as site priority action.

ORA-26985: Automatic Conflict Detection and Resolution conflict resolution require keyvers column 'string.string'

Cause: ACDR conflict resolution other than latest timestamp requires keyver.

Action: Alter the database table to add keyver with ACDR procedures.

ORA-26986: cannot *string* Oracle GoldenGate downstream capture process *string*

Cause: The Oracle GoldenGate downstream capture process could not be created or dropped because the capture process failed to acquire a lock to enable or disable the client.

Action: Refer to the trace file for more details.

ORA-26987: cannot rename delete tombstone table

Cause: Renaming a delete tombstone table was not supported.

Action: Do not rename an Oracle GoldenGate automatic conflict detection and resolution delete tombstone table.

ORA-26988: Cannot grant Oracle GoldenGate privileges. The procedure GRANT_ADMIN_PRIVILEGE is disabled.

Cause: An attempt was made to grant privileges for using Oracle GoldenGate by calling the DBMS_GOLDENGATE_AUTH.GRANT_ADMIN_PRIVILEGE procedure. Starting with Oracle Database release 23c, the procedure has been disabled and replaced by roles.

Action: Grant the corresponding Oracle GoldenGate roles: OGG_CAPTURE role for using Extract. OGG_APPLY role for using Replicat. OGG_APPLY_PROCREP role for using procedural replication with Replicat.

ORA-26989: Cannot grant XStream privileges. The procedure GRANT_ADMIN_PRIVILEGE is disabled.

Cause: An attempt was made to grant privileges for using XStream by calling the DBMS_XSTREAM_AUTH.GRANT_ADMIN_PRIVILEGE procedure. Starting with Oracle Database release 23c, the procedure has been disabled and replaced by roles.

Action: Grant the corresponding XStream roles: XSTREAM_CAPTURE role for using the XStream Out APIs. XSTREAM_APPLY role for using the XStream In APIs.

ORA-26990: cannot modify or drop columns or constraints on tombstone table key

Cause: Modifications and drops of tombstone table key columns and constraints was not allowed.

Action: If you need to make modifications to the tombstone table key columns or constraints, remove the tombstone table and re-add it.

ORA-26991: Automatic Conflict Detection and Resolution conflict resolution cannot format existing data timestamp'

Cause: ACDR conflict resolution is unable to format existing data timestamp.

Action: Fix the existing data timestamp provided.

ORA-26992: cannot create a capture in CDB root when database has a DGPDB

Cause: An attempt was made to create an Oracle GoldenGate or XStream Out capture in a multitenant container database (CDB) root on a database where a Data Guard per Pluggable Database existed and this was not allowed.

Action: If possible, create the capture from within the pluggable database (PDB) of interest.

ORA-26993: Cannot have unique index on Automatic Conflict Detection and Resolution enabled blockchain or immutable table *string.string*.

Cause: Automatic Conflict Detection and Resolution could not be added to this blockchain or immutable table because a unique index is present.

Action: Remove the unique index and instead create a unique constraint.

ORA-26994: Can have only one unique or primary key constraint on Automatic Conflict Detection and Resolution enabled blockchain or immutable table *string.string*.

Cause: Automatic Conflict Detection and Resolution could not be added to this blockchain or immutable table because there was not exactly one unique or primary key constraint.

Action: Have at most a single unique constraint or primary key.

ORA-26995: Automatic Conflict Detection and Resolution is not supported on version v1 blockchain or immutable table *string.string*.

Cause: Automatic Conflict Detection and Resolution is not supported on version v1 blockchain or immutable tables.

Action: If Automatic Conflict Detection and Resolution is needed, the table data will need to be moved to a version v2 immutable or blockchain table.

ORA-26996: Automatic Conflict Detection and Resolution procedure is not supported for blockchain or immutable table *string.string*.

Cause: Only add and remove Automatic Conflict Detection and Resolution procedures are supported on blockchain or immutable tables. Column groups, delta resolution. setting

columns unused, and custom handlers features are not supported for blockchain or immutable tables.

Action: If changes besides the unsupported features are needed in the Automatic Conflict Detection and Resolution configuration then the configuration will need to be removed and then added with the new configuration.

ORA-26997: Automatic Conflict Detection and Resolution cannot be added to blockchain or immutable table *string.string*.

Cause: Automatic Conflict Detection and Resolution could not be added to this blockchain or immutable table because of the option requested. Neither column resolution nor custom handlers are supported

Action: Remove the unsupported option requested.

ORA-26998: Invalid JSON update at table *string.string* column *string*.

Cause: LCR column metadata indicated data format is JSON update but it cannot be parsed.

Action: Consult XStream Interface in the Oracle Call Programmer's Guide for valid column flags and formats.

ORA-27000: skgfsbi: failed to initialize storage subsystem (SBT) layer

Cause: sbtinit returned an error, additional information indicates error

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27001: unsupported device type

Cause: the specified device type is supported on this platform

Action: check V\$BACKUP_DEVICE for supported device types

ORA-27002: function called with invalid device structure

Cause: internal error, additional information indicates which function encountered error

Action: Check for the trace file and contact Oracle Support Services.

ORA-27003: cannot open file on device allocated with NOIO option

Cause: internal error, a file is being created/retrieved on a device allocated with NOIO option, additional information indicates which function encountered error

Action: Check for the trace file and contact Oracle Support Services.

ORA-27004: invalid blocksize specified

Cause: Internal error. Blocksize specified was incorrect for the device on which the file was created. Additional information indicated the specified blocksize and the function that encountered the error.

Action: Check for the trace file and contact Oracle Support Services.

ORA-27005: cannot open file for async I/O on device not supporting async

Cause: internal error, a file is being opened for async I/O on a device that does not support async I/O, additional information indicates which function encountered error

Action: Check for the trace file and contact Oracle Support Services.

ORA-27006: sbtremove returned error

Cause: additional information indicates error returned by sbtremove, and the function that encountered the error

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27007: failed to open file

Cause: sbtopen returned error, additional information indicates error returned from sbtopen, and the function that encountered the error

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27008: function called with invalid file structure

Cause: Internal error. Additional information indicated the function that encountered the error.

Action: Check for the trace file and contact Oracle Support Services.

ORA-27009: cannot write to file opened for read

Cause: internal error

Action: Check for the trace file and contact Oracle Support Services.

ORA-27010: skgfwrt: write to file failed

Cause: sbtwrite returned error, additional information indicates error returned from sbtwrite

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27011: skgfrd: cannot read from file opened for write

Cause: internal error

Action: Check for the trace file and contact Oracle Support Services.

ORA-27012: skgfrd: read from file failed

Cause: sbtread returned error, additional information indicates error returned from sbtread

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27013: skgqdel: cannot delete an open file

Cause: internal error

Action: Check for the trace file and contact Oracle Support Services.

ORA-27014: skgqpini: translation error while expanding SS_UDMPDIR

Cause: Failure of sltln in skgqpini

Action: Check additional return error for more information.

ORA-27015: skgfcls: failed to close the file

Cause: sbtclose returned error, additional information indicates error returned from sbtclose

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27016: skgfcls: sbtinfo returned error

Cause: additional information indicates error returned from sbtinfo

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27017: skgfcls: media handle returned by sbtinfo exceeds max length(SSTMXQMH)

Cause: media handle string length exceeds SSTMXQMH

Action: verify that vendor's storage subsystem product is operating correctly, and that the platform limit (SSTMXQMH) is atleast 64 (the limit specified for sbtinfo). additional information indicates the media handle string length returned by sbtinfo, and the limit (SSTMXQMH)

ORA-27018: BLKSIZE is not a multiple of the minimum physical block size

Cause: User-specified BLKSIZE (blocking factor) is not a multiple of the minimum block size that is permitted on this platform.

Action: Two ADDITIONAL INFORMATION messages are displayed which show the blocking factor provided by the user and the minimum physical block size. Specify a BLKSIZE that is an integral multiple of the minimum block size.

ORA-27019: tape filename length exceeds limit (SBTOPMXF)

Cause: length of tape filename provided to sequential I/O OSD functions is too long

Action: additional information indicates in which function this error is encountered, the length of filename provided, and the limit on filename

ORA-27020: named devices not supported

Cause: the platform or the specified device type does not support named devices

Action: do not specify device name or use a device type that supports named devices. Use V\$BACKUP_DEVICE view to see what device types and names (if any) are available.

ORA-27021: sequential file handle must be specified

Cause: The filename which will be passed to sbtopen was not specified.

Action: Specify a filename and continue. If this is a backup set being created via Recovery Manager, use the 'format' option to specify the backup piece handle name.

ORA-27022: skgfqsbi: could not allocate memory for media manager

Cause: Oracle could not allocate memory required by the media management software which is linked with Oracle to provide backup/restore services.

Action: Increase the amount of memory available to the Oracle process and retry the backup/restore.

ORA-27023: skgfqsbi: media manager protocol error

Cause: The media management software which is linked with Oracle to provide backup/restore services did not provide its function pointer structure to Oracle.

Action: This is an internal error in the media management product. Contact the media management vendor.

ORA-27024: skgfqsbi: sbtinit2 returned error

Cause: sbtinit2 returned an error. This happens during a backup or restore operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27025: skgfsbi: invalid media manager context area size

Cause: The media management software requested a context area size which is greater than the maximum allowable size.

Action: This is an internal error in the media management product. Contact the media management vendor.

ORA-27026: skgfrls: sbtend returned error

Cause: sbtend returned an error. This happens during a backup or restore operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27027: sbtremove2 returned error

Cause: sbtremove2 returned an error. This happens when deleting a backup file.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27028: skgfcrcr: sbtbackup returned error

Cause: sbtbackup returned an error. This happens when creating a backup file during a backup operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27029: skgfrtrv: sbtrestore returned error

Cause: sbtrestore returned an error. This happens when retrieving a backup file during a restore operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27030: skgfwrt: sbtwrite2 returned error

Cause: sbtwrite2 returned an error. This happens while writing a backup file during a backup operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27031: mirror resilvering functions not supported

Cause: internal error

Action: Check for the trace file and contact Oracle Support Services.

ORA-27032: failed to obtain file size limit

Cause: getrlimit system call returned an error

Action: check errno

ORA-27033: failed to obtain file size limit

Cause: ulimit system call returned an error

Action: check errno

ORA-27034: maximum length of ORACLE_SID exceeded

Cause: too many characters in the ORACLE_SID string

Action: rename the ORACLE_SID to a string of up to the maximum number of characters specified for your system

ORA-27035: logical block size is invalid

Cause: logical block size for oracle files must be a multiple of the physical block size, and less than the maximum

Action: block size specified is returned as additional information, check init.ora parameters, additional information also indicates which function encountered the error

ORA-27036: translation error, unable to expand file name

Cause: additional information indicates stln/slnrm error, and also indicates which function encountered the error

Action: check additional information

ORA-27037: unable to obtain file status

Cause: stat system call returned an error, additional information indicates which function encountered the error

Action: check errno

ORA-27038: created file already exists

Cause: trying to create a database file, but file by that name already exists

Action: verify that name is correct, specify reuse if necessary

ORA-27039: create file failed, file size limit reached

Cause: an attempt was made to create a file that exceeds the process's file size limit, additional information indicates which function encountered the error

Action: raise the file size limit

ORA-27040: file create error, unable to create file

Cause: create system call returned an error, unable to create file

Action: verify filename, and permissions

ORA-27041: unable to open file

Cause: open system call returned an error, additional information indicates which function encountered the error

Action: check errno

ORA-27042: not enough space on raw partition to fulfill request

Cause: The file was too large for a raw partition. Additional information indicates which function encountered an error.

Action: Check the trace file and contact Oracle Support Services.

ORA-27043: unable to seek to beginning of file

Cause: seek system call failed, additional information indicates which function encountered the error

Action: check errno

ORA-27044: unable to write the header block of file

Cause: write system call failed, additional information indicates which function encountered the error

Action: check errno

ORA-27045: unable to close the file

Cause: close system call failed, additional information indicates which function encountered the error

Action: check errno

ORA-27046: file size is not a multiple of logical block size

Cause: file size as indicated by stat is not correct, additional information indicates which function encountered the error

Action: verify that the file has not been overwritten or truncated

ORA-27047: unable to read the header block of file

Cause: read system call failed, additional information indicates which function encountered the error

Action: check errno

ORA-27048: skgfifi: file header information is invalid

Cause: possibly trying to use a non-database file as a database file

Action: verify that file is a database file

ORA-27049: unable to seek to and read the last block

Cause: an attempt was made to seek to and read the last block in file, additional information indicates which function encountered error

Action: check errno

ORA-27050: function called with invalid file information structure

Cause: There was an internal error. Additional information indicates which function encountered an error.

Action: Check for a trace file and contact Oracle Support Services.

ORA-27052: unable to flush file data

Cause: fsync system call returned error, additional information indicates which function encountered the error

Action: check errno

ORA-27053: blocksize in file header not a multiple of logical block size

Cause: the logical block size is invalid, additional information indicates the logical block size and the blocksize in the file header

Action: use a different logical block size, or do not reuse file

ORA-27054: NFS file system where the file is created or resides is not mounted with correct options

Cause: The file was on an NFS partition and either reading the mount tab file failed or the partition was not mounted with the correct mount option.

Action: Make sure mount tab file has read access for Oracle user and the NFS partition where the file resides is mounted correctly. For the list of mount options to use refer to your platform specific documentation.

ORA-27055: failed to allocate disk space

Cause: The call to allocate disk space failed. Additional information indicates the function that errored out and the space requested.

Action: Check errno. It might indicate a more detailed reason for failure.

ORA-27056: could not delete file

Cause: unlink system call returned error

Action: check errno

ORA-27057: cannot perform async I/O to file

Cause: internal error, query is being asked about async vector I/O when the file does not support async I/O

Action: Check for the trace file and contact Oracle Support Services.

ORA-27058: file I/O question parameter is invalid

Cause: internal error, invalid query is being asked

Action: Check for the trace file and contact Oracle Support Services.

ORA-27059: could not reduce file size

Cause: An attempt to reduce file size using ftruncate system call returned an error.

Action: Check for additional errno messages for more information.

ORA-27060: could not set close-on-exec bit on file

Cause: fcntl system call returned error

Action: check errno

ORA-27061: waiting for async I/Os failed

Cause: aiowait function returned error

Action: check errno

ORA-27062: could not find pending async I/Os

Cause: There should have been some async I/Os in the system but a blocking aiowait indicates that there are no more I/Os. It could be either because of an Oracle bug or the vendor's OS bug, or it could be due to a NFS server not responding.

Action: Check Oracle trace file, OS message files and contact Oracle Support.

ORA-27063: number of bytes read/written is incorrect

Cause: the number of bytes read/written as returned by aiowait does not match the original number, additional information indicates both these numbers

Action: check errno

ORA-27064: cannot perform async I/O to file

Cause: internal error, asked to perform async I/O when IOV indicates that it cannot be performed on the file

Action: Check for the trace file and contact Oracle Support Services.

ORA-27065: cannot perform async vector I/O to file

Cause: internal error, asked to perform async vector I/O when it cannot be performed on the file

Action: Check for the trace file and contact Oracle Support Services.

ORA-27066: number of buffers in vector I/O exceeds maximum

Cause: internal error, number of buffers in vector I/O exceeds maximum allowed by the OSD, additional information indicates both these numbers

Action: Check for the trace file and contact Oracle Support Services.

ORA-27067: size of I/O buffer is invalid

Cause: internal error, buffer size is either 0, or greater than SSTIOMAX or not a multiple of logical block size, additional information indicates where in function the error was encountered and the buffer size

Action: Check for the trace file and contact Oracle Support Services.

ORA-27068: I/O buffer is not aligned properly

Cause: internal error, buffer is not aligned to SSIOALIGN boundary, additional information indicates where in function the error was encountered and the buffer pointer

Action: Check for the trace file and contact Oracle Support Services.

ORA-27069: attempt to do I/O beyond the range of the file

Cause: internal error, the range of blocks being read or written is outside the range of the file, additional information indicates the starting block number, number of blocks in I/O, and the last valid block in the file

Action: Check for the trace file and contact Oracle Support Services.

ORA-27070: async read/write failed

Cause: aioread/aiowrite system call returned error, additional information indicates starting block number of I/O

Action: check errno

ORA-27071: unable to seek to desired position in file

Cause: lseek system call returned error, additional information indicates block number in file to which seek was attempted

Action: check errno

ORA-27072: File I/O error

Cause: read/write/readv/writev system call returned error, additional information indicates starting block number of I/O

Action: check errno

ORA-27073: Trying to close a file which has async I/Os pending to be dequeued

Cause: internal error, the file is being closed but not all async I/Os to the file have been dequeued, additional information indicates number of I/Os pending on the file

Action: Check for the trace file and contact Oracle Support Services.

ORA-27074: unable to determine limit for open files

Cause: The getrlimit() system call returned an error.

Action: Check errno.

ORA-27075: SSTMOFRC constant too large

Cause: internal error

Action: Check for the trace file and contact Oracle Support Services.

ORA-27076: unable to set limit for open files

Cause: The setrlimit() system call returned an error.

Action: Check errno.

ORA-27077: too many files open

Cause: internal error, the number of files opened through skgfofi has reached the limit

Action: Check for trace file and contact Oracle Support.

ORA-27078: unable to determine limit for open files

Cause: The getrlimit() system call returned an error.

Action: Check errno.

ORA-27079: unable to set async IO limit

Cause: The setting of the limit for async I/O has failed.

Action: Check errno.

ORA-27080: too many files open

Cause: The number of files opened has reached the system limit.

Action: Check the error, and set system configuration values.

ORA-27081: unable to close the file

Cause: The close() system call failed.

Action: Check errno.

ORA-27083: waiting for async I/Os failed

Cause: The aio_waitn() library call returned an error.

Action: Check errno.

ORA-27084: unable to get/set file status flags

Cause: The `fcntl()` system call with `F_GETFL/F_SETFL` flag returned an error.

Action: Check errno.

ORA-27085: Asynchronous I/O operation failed

Cause: `lio_listio()` system call returned an error.

Action: Check errno. Also, determine if the disk space is sufficient.

ORA-27086: unable to lock file - already in use

Cause: the file is locked by another process, indicating that it is currently in use by a database instance.

Action: determine which database instance legitimately owns this file.

ORA-27087: Unable to get share lock. File not readable.

Cause: A share lock request was made on a file that did not have read access.

Action: Ensure that the file has read-only or read/write access.

ORA-27088: unable to get file status

Cause: file not open or file descriptor is invalid.

Action: Make sure the file is open and the descriptor is valid.

ORA-27089: unable to release advisory lock

Cause: The release of the file lock failed because: * Either the file descriptor was invalid, or * The process was interrupted, or * The kernel failed due to other reasons

Action: Check the additional error messages for more information about the cause of the error.

ORA-27090: Unable to reserve kernel resources for asynchronous disk I/O

Cause: The system call to reserve kernel resources for asynchronous I/O has failed.

Action: Check errno

ORA-27091: unable to queue I/O

Cause: `read/write/readv/writev` system call returned error, additional information indicates starting block number of I/O

Action: check errno

ORA-27092: size of file exceeds file size limit of the process

Cause: an attempt was made to open a file that exceeds the process's file size limit (`ulimit`), additional information shows the current limit (logical blocks) and the size of the file (logical blocks)

Action: increase the processes file size limit (`ulimit`) and retry

ORA-27093: could not delete directory

Cause: `rmdir` system call returned error

Action: check errno

ORA-27094: raw volume used can damage partition table

Cause: A raw device with VTOC information was provided as a database file.

Action: Make sure the disk partition that is provided to Oracle does not start at sector 0

ORA-27095: fail to get the disk sector size

Cause: The system call to get the sector size failed. Additional information indicates which function encountered the error.

Action: Check error number.

ORA-27096: fail to get file size

Cause: The system call to get file size failed. Additional information indicates which function encountered the error.

Action: Check error number.

ORA-27097: failed to set Access Control List ownership for ASM devices

Cause: The system call to set ACL ownership for ASM devices failed. Additional information indicates which function encountered the error.

Action: Refer to Microsoft documentation for an explanation of the accompanying error code and text.

ORA-27098: failed to rename file

Cause: The system call to change the file name failed. Additional information indicates which function encountered the error.

Action: Check the Oracle trace file for additional information on file name and reason for failure.

ORA-27099: failed to create file

Cause: The system call to create this file type in this file system failed. Check if the creation of this file type is supported in this file system. Additional information indicates which function encountered the error.

Action: Refer to Oracle documentation for additional details.

ORA-27100: shared memory realm already exists

Cause: Tried to start duplicate instances, or tried to restart an instance that had not been properly shutdown

Action: Use a different instance name, or cleanup the failed instance's SGA

ORA-27101: shared memory realm does not exist

Cause: Unable to locate shared memory realm

Action: Verify that the realm is accessible

ORA-27102: out of memory

Cause: Out of memory

Action: Consult the trace file for details

ORA-27103: internal error

Cause: internal error

Action: contact Oracle support

ORA-27104: system-defined limits for shared memory was misconfigured

Cause: System-defined shared memory limits were inadequate for Oracle.

Action: Consult the alert file for details.

ORA-27105: unable to support any system page size for shared memory allocation

Cause: Current configuration was not supported by any system page size.

Action: Consult the alert file for details.

ORA-27106: system pages not available to allocate memory

Cause: System page count for supported page sizes was misconfigured.

Action: Configure system page count as recommended in the alert file.

ORA-27107: AUTO value for USE_LARGE_PAGES parameter is no longer supported.

Cause: The USE_LARGE_PAGES configuration parameter was set to AUTO.

Action: Refer to the alert file for details.

ORA-27108: shared global area (SGA) creation failed due to configuration issue

Cause: System configuration issue.

Action: Refer to the alert file for details.

ORA-27109: Setting of values for parameters related to SGA creation is not compatible.

Cause: Values set for parameters used in creating the system global area (SGA) were not compatible.

Action: Check the alert log and relevant trace file for more information. Modify the parameter values that are incompatible.

ORA-27120: unable to remove shared memory segment

Cause: shmctl() call failed

Action: check permissions on segment, contact Oracle support

ORA-27121: unable to determine size of shared memory segment

Cause: shmctl() call failed

Action: check permissions on segment, contact Oracle support

ORA-27122: unable to protect memory

Cause: mprotect() call failed

Action: contact Oracle support

ORA-27123: unable to attach to shared memory segment

Cause: shmat() call failed

Action: check permissions on segment, contact Oracle support

ORA-27124: unable to detach from shared memory segment

Cause: shmdt() call failed

Action: contact Oracle support

ORA-27125: unable to create shared memory segment

Cause: shmget() call failed

Action: contact Oracle support

ORA-27126: unable to lock shared memory segment in core

Cause: insufficient privileges to lock shared memory segment in core

Action: make sure process is running with necessary privileges.

ORA-27127: unable to unlock shared memory segment

Cause: insufficient privileges to unlock shared memory segment

Action: make sure process is running with necessary privileges.

ORA-27128: unable to determine pagesize

Cause: sysconf() call failed

Action: contact Oracle support

ORA-27133: unable to determine stacksize

Cause: getrlimit() call failed

Action: Contact Oracle Support Services.

ORA-27134: unable to set stacksize

Cause: setrlimit() call failed

Action: Contact Oracle Support Services.

ORA-27135: Operating System hard stack limit is set too low

Cause: Operating System hard stack limit was set too low.

Action: Check additional information for current and minimum limit. Increase the Operating System hard stack limit and retry.

ORA-27136: MPMT and VLM are both enabled

Cause: When the `_mpmt_enabled` parameter is set to TRUE, none of the following parameters should be set to TRUE: `* use_indirect_buffers` `* _db_block_cache_protect` `* _db_block_cache_clone`

Action: Either turn off Multi Process Multi Threads (MPMT) or turn off all the other parameters.

ORA-27137: unable to allocate large pages to create a shared memory segment

Cause: Parameter `USE_LARGE_PAGES` set to only, but large pages were not configured properly

Action: Check alert file for more information

ORA-27138: unable to allocate large pages with current parameter setting

Cause: The USE_LARGE_PAGES parameter setting was not compatible with other parameters used.

Action: Check the alert log for more information. Modify the USE_LARGE_PAGES parameter setting, or adjust the other parameters. Large pages are compatible with SGA_TARGET, SGA_MAX_SIZE and SHARED_POOL_SIZE parameters. Large pages are not / compatible with MEMORY_TARGET, MEMORY_MAX_TARGET and _DB_BLOCK_CACHE_PROTECT parameters. The database instance using Exadata storage and large System Global Area (SGA) must set USE_LARGE_PAGES to ONLY or AUTO_ONLY.

ORA-27139: unable to reserve Oracle VM mapping in process address space

Cause: The address space region was already mapped.

Action: Contact Oracle Support Services.

ORA-27140: attach to post/wait facility failed

Cause: The program attempted to initialize the post/wait facility, but the facility could not be attached.

Action: Check for additional errors and contact Oracle Support.

ORA-27141: invalid process ID

Cause: process operation attempted using invalid process ID

Action: contact Oracle Support

ORA-27142: could not create new process

Cause: OS system call

Action: check errno and if possible increase the number of processes

ORA-27143: OS system call failure

Cause: OS system call failed

Action: check errno and contact Oracle support

ORA-27144: attempt to kill process failed

Cause: OS system call error

Action: check errno and contact Oracle Support

ORA-27145: insufficient resources for requested number of processes

Cause: OS system call error

Action: check errno and contact Oracle Support

ORA-27146: post/wait initialization failed

Cause: OS system call failed

Action: check errno and contact Oracle Support

ORA-27147: post/wait reset failed

Cause: OS system call failed

Action: check errno and contact Oracle Support

ORA-27148: spawn wait error

Cause: OS system call failed

Action: check errno and contact Oracle Support

ORA-27149: assignment out of range

Cause: internal error, requested conversion too large for type

Action: contact Oracle Support

ORA-27150: attempt to notify process of pending oradebug call failed

Cause: OS system call

Action: check errno contact Oracle Support

ORA-27151: buffer not large enough to hold process ID string

Cause: internal error

Action: contact Oracle Support

ORA-27152: attempt to post process failed

Cause: OS system call failed

Action: check errno and contact Oracle Support

ORA-27153: wait operation failed

Cause: OS system called failed

Action: check errno contact Oracle Support

ORA-27154: post/wait create failed

Cause: internal error, multiple post/wait creates attempted simultaneously

Action: check errno and contact Oracle Support

ORA-27155: could not execute file

Cause: OS system call failed

Action: check errno and contact Oracle Support

ORA-27156: request for process information failed

Cause: internal error

Action: contact Oracle Support

ORA-27157: OS post/wait facility removed

Cause: the post/wait facility for which the calling process is awaiting action is removed from the system

Action: check errno and contact Oracle Support

ORA-27158: process control failure

Cause: Oracle was unable to set the specified process control.

Action: Consult the Oracle Administrator's Guide.

ORA-27159: failure setting process scheduling priority

Cause: Oracle was unable to set the scheduling priority desired.

Action: Consult the Oracle Administrator's Guide.

ORA-27160: process requested to perform operation

Cause: The current process was requested to perform an operation by another process.

Action: This is used internally; no action is required.

ORA-27161: request for Oracle binary information failed

Cause: The program was unable to get information about the Oracle binary.

Action: Check for additional errors and contact Oracle support.

ORA-27162: thread creation failed

Cause: The program was unable to create a thread.

Action: Check errno and contact Oracle support.

ORA-27163: out of memory

Cause: The program ran out of memory when allocating a temporary data structure.

Action: Increase the amount of memory on the system.

ORA-27164: tried to join detached thread

Cause: The program tried to join a detached thread.

Action: This is an internal error; contact Oracle support.

ORA-27165: tried to join thread that does not exist

Cause: The program tried to join a thread that does not exist.

Action: This is an internal error; contact Oracle support.

ORA-27166: tried to join current thread

Cause: A thread in the program tried to join itself.

Action: This is an internal error; contact Oracle support.

ORA-27168: Translation from hostname to network address failed

Cause: Internal error

Action: Contact Oracle Support Services.

ORA-27180: failed to create memory protection key

Cause: An attempt to create a memory protection key for a virtual memory range failed.

Action: Check errno in the trace file and contact Oracle Support Services.

ORA-27181: failed to destroy memory protection key

Cause: An attempt to destroy a memory protection key for a virtual memory range failed.

Action: Check errno in the trace file and contact Oracle Support Services.

ORA-27182: failed to protect virtual memory range using memory protection key

Cause: An attempt to protect a virtual memory range using a memory protection key failed.

Action: Check errno in the trace file and contact Oracle Support Services.

ORA-27183: unable to locate symbol name in the SGA (system global area) symbol table

Cause: An attempt was made to locate or operate on a symbol that was not present in the SGA symbol table.

Action: Check errno in the trace file and contact Oracle Support Services.

ORA-27184: specified symbol number is not in the range of symbols in the SGA (system global area) table

Cause: An attempt was made to locate or operate on a symbol that was not present in the SGA symbol table.

Action: Check errno in the trace file and contact Oracle Support Services.

ORA-27185: buffer of insufficient length specified for reading symbol data

Cause: An attempt was made to read the symbol data using a read buffer of insufficient length.

Action: Check errno in the trace file and contact Oracle Support Services.

ORA-27186: large buffer specified for writing into symbol data

Cause: An attempt was made to write into the symbol data using a write buffer of length greater than the symbol maximum size.

Action: Check errno in the trace file and contact Oracle Support Services.

ORA-27187: SGA (system global area) symbol table operations not supported

Cause: An attempt was made to do a system global area (SGA) symbol table operation, but symbol table operations were not enabled for database, Oracle Automatic Storage Management (Oracle ASM) instances or non-Linux setups.

Action: Check errno in the trace file and contact Oracle Support Services.

ORA-27188: specification for parameter controlling the number of granules per SGA file is invalid

Cause: Setting of the parameter that controls the number of granules per system global area (SGA) file was not compatible with the other parameters used. The number of granules per SGA file cannot be greater than 1 when the SGA shrink functionality is enabled.

Action: Check the alert log for more information. Set the parameter that controls the number of granules per SGA file to 1 or appropriately modify the parameters to disable the SGA shrink functionality.

ORA-27190: skgfrd: sbtread2 returned error

Cause: sbtread returned an error. This happens while reading a backup file during a restore operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27191: sbtinfo2 returned error

Cause: sbtinfo2 returned an error. This happens while retrieving backup file information from the media manager's catalog.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27192: skgfcls: sbtclose2 returned error - failed to close file

Cause: sbtclose2 returned an error. This happens while closing a backup file during a backup or restore operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27193: sbtinfo2 did not return volume label

Cause: sbtinfo2 did not return the volume label information for the backup file that was just created.

Action: This is an internal error in the media management product. Contact the media management vendor.

ORA-27194: skgfdvcmd: sbtcommand returned error

Cause: sbtcommand returned an error. This happens when an rman SEND command is issued.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27195: proxy copy not supported

Cause: An attempt was made to do a proxy backup or restore, but the media management software installed with Oracle does not support proxy copy.

Action: Re-run the backup in non-proxy mode, or contact the media management vendor if the software is supposed to support proxy copy.

ORA-27196: skgfpbk: sbtpcbbackup returned error

Cause: sbtpcbbackup returned an error. This happens when a proxy backup is begun.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27197: skgfprs: sbtpcrestore returned error

Cause: sbtpcrestore returned an error. This happens when a proxy restore is begun.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27198: skgfpvl: sbtpcvalidate returned error

Cause: sbtpcvalidate returned an error. This happens during a proxy backup or restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27199: skgfpst: sbtpcstatus returned error

Cause: sbtpcstatus returned an error. This happens during a proxy backup or restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27200: skgfpgo: sbtpcstart returned error

Cause: sbtpcstart returned an error. This happens during a proxy backup or restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27201: skgfpcm: sbtpccommit returned error

Cause: sbtpccommit returned an error. This happens during a proxy backup or restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27202: skgfpen: sbtpcend returned error

Cause: sbtpcend returned an error. This happens during a proxy backup or restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27203: skgfpcb: sbtpcquerybackup returned error

Cause: sbtpcquerybackup returned an error. This happens during a proxy backup.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27204: skgfpcr: sbtpcqueryrestore returned error

Cause: sbtpcqueryrestore returned an error. This happens during a proxy restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27205: skgfpcn: sbtpccancel returned error

Cause: sbtpccancel returned an error. This happens during a proxy restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27206: requested file not found in media management catalog

Cause: A backup file used in a recovery manager catalog maintenance command was not found in the media management catalog.

Action: Retry the command with a different file.

ORA-27207: syntax error in device PARMS - parentheses mismatch or missing

Cause: User-supplied PARMS value has incorrect syntax.

Action: Retry the command with correct syntax: ENV=(..) BLKSIZE=nnnn

ORA-27208: syntax error in device PARMS - environment variable value missing

Cause: User-supplied PARMS value has incorrect syntax.

Action: Retry the command with correct syntax: ENV=(var1=val1,var2=val2,..)

ORA-27209: syntax error in device PARMS - unknown keyword or missing =

Cause: User-supplied PARMS value has incorrect syntax. The server expected to find ENV or BLKSIZE, but found an unknown keyword.

Action: Retry the command with correct syntax: ENV=(..) BLKSIZE=nnnn

ORA-27210: syntax error in device PARMS

Cause: User-supplied PARMS value has incorrect syntax.

Action: Retry the command with correct syntax: ENV=(..) BLKSIZE=nnnn

ORA-27211: Failed to load Media Management Library

Cause: User-supplied SBT_LIBRARY or libobk.so could not be loaded. Call to dlopen for media library returned error. See Additional information for error code.

Action: Retry the command with proper media library. Or re-install Media management module for Oracle.

ORA-27212: some entrypoints in Media Management Library are missing

Cause: media library does not have one of the following entrypoints : sbtinfo, sbtread, sbtwrite, sbtremove, sbtopen, sbtclose, sbtinit

Action: Retry the command with proper media library.

ORA-27213: failed to unload Media Management Library

Cause: dlclose for media library returned error. See Additional Additional information for error code.

Action: contact Oracle Support.

ORA-27214: skgfrsfe: file search failed

Cause: The FindNextFile function returned unpected error.

Action: Check errors on the error stack for an explanation why the search for files could not be successfully executed.

ORA-27215: skgfgsmcs: sbtinfo2 returned unknown file

Cause: During an sbtinfo2() call, the media management software returned information about an unknown backup file.

Action: Contact the media management vendor.

ORA-27216: skgfgsmcs: sbtinfo2 returned a malformed response

Cause: The media management software returned a malformed response during an sbtinfo2() call.

Action: Contact the media management vendor.

ORA-27217: failed to load Media Management Library from secure location

Cause: SBT libraries were not installed in a secure location.

Action: Remove SBT_SECURE parameter or Request third party vendors to provide patch that installs SBT libraries in secured locations as mandated by Oracle.

ORA-27218: failed to read Oracle ACFS mirror

Cause: An attempt to communicate with the Oracle Advanced Cluster File System (Oracle ACFS) kernel driver failed.

Action: Check errors on the error stack for an explanation of why communication with Oracle ACFS was not successful.

ORA-27219: syntax error in device PARMS - quotes missing or mismatch

Cause: The user-supplied PARMS value had incorrect syntax. Either quotes were missing or there was a mismatch in the ENV parameter.

Action: Retry the command with matching quotes inside ENV parameter.

ORA-27230: OS system call failure

Cause: OS system call failed

Action: check errno and contact Oracle support

ORA-27231: unable to close file

Cause: A file could not be closed.

Action: See accompanying errors.

ORA-27232: unable to get file information

Cause: Information about the file could not be obtained.

Action: See accompanying errors.

ORA-27233: file is not an ELF file

Cause: A file was not an ELF file.

Action: Check for file corruption and contact Oracle Support Services.

ORA-27234: unable to read file

Cause: A file could not be read.

Action: See accompanying errors.

ORA-27235: unable to map file region into memory

Cause: A file region could not be mapped into memory.

Action: See accompanying errors.

ORA-27236: unable to unmap file from memory

Cause: A file region could not be unmapped from memory.

Action: See accompanying errors.

ORA-27237: ELF file is not a relocatable object file

Cause: An ELF file was not the expected type.

Action: Supply the expected type of file.

ORA-27238: ELF file is not an executable

Cause: An ELF file was not the expected type.

Action: Supply the expected type of file.

ORA-27239: ELF file is not a shared object file

Cause: An ELF file was not the expected type.

Action: Supply the expected type of file.

ORA-27240: ELF file does not have a required section

Cause: An ELF file did not have a required section.

Action: Contact Oracle Support Services.

ORA-27241: ELF-shared library has multiple sections of the same type

Cause: An ELF-shared library had multiple sections of the same type.

Action: Contact Oracle Support Services.

ORA-27242: ELF file has invalid hash table entry size

Cause: An ELF file had an invalid hash table entry size.

Action: Contact Oracle Support Services.

ORA-27243: ELF file has too many relocation sections

Cause: An ELF file had too many relocation sections.

Action: Contact Oracle Support Services.

ORA-27244: unable to determine base value for data relocation from ELF file

Cause: An ELF file was missing important information.

Action: Contact Oracle Support Services.

ORA-27245: unable to dlopen() binary image

Cause: A file could not be accessed via dlopen().

Action: See accompanying errors and make file available.

ORA-27246: unable to open file

Cause: A file could not be opened.

Action: See accompanying errors and make file available.

ORA-27247: unable to add a file section

Cause: A file section could not be added.

Action: Contact Oracle Support Services.

ORA-27248: operating system call failure

Cause: Operating system call failed.

Action: Contact Oracle Support Services.

ORA-27250: OS system call failure

Cause: OS system call failed

Action: check errno and contact Oracle support

ORA-27270: Memory allocation for a group list object failed.

Cause: An attempt was made to allocate memory for a group list object.

Action: Contact Oracle Support to determine if this an operating system issue or an internal Oracle error.

ORA-27271: Group name lookup in operating system failed.

Cause: A process failed to determine the members of a UNIX group.

Action: This is an internal error. When encountered, please contact Oracle Support Services for assistance.

ORA-27275: operating system debug library call failure

Cause: Operating system debug library call failed.

Action: This is an internal error. Contact Oracle Support Services.

ORA-27276: operating system call failure

Cause: Operating system call failed.

Action: This is an internal error. Contact Oracle Support Services.

ORA-27277: invalid address

Cause: Incorrect or badly formatted address was supplied.

Action: Specify a valid address.

ORA-27278: no debug attribute found

Cause: The expected debug attribute was not found.

Action: This object file is malformed, use different object file.

ORA-27279: Cannot find referred type.

Cause: Malformed debug object.

Action: This object file is malformed, use different object file.

ORA-27280: debug information is not found

Cause: Could not find requested debug information.

Action: Use an object file with proper debug information.

ORA-27300: OS system dependent operation:*string* failed with status: *string*

Cause: OS system call error

Action: contact Oracle Support

ORA-27301: OS failure message: *string*

Cause: OS system call error

Action: contact Oracle Support

ORA-27302: failure occurred at: *string*

Cause: OS system call error

Action: contact Oracle Support

ORA-27303: additional information: *string*

Cause: OS system call error

Action: contact Oracle Support

ORA-27351: conflicting values of job attributes *string* and *string*

Cause: The values of two attributes passed in to the CREATE_JOBS call or the JOB object constructor conflicted with each other. This is usually because both attributes cannot be non-NULL at the same time.

Action: Resolve the conflict by changing the value of one of the attributes and issue the call again.

ORA-27353: job attribute *string* is missing

Cause: An attribute needed to fully specify a job was not passed in to a call to CREATE_JOBS or the JOB object constructor.

Action: Issue the call again with the required attribute set.

ORA-27354: attribute *string* cannot be set for *string* jobs

Cause: The CREATE_JOBS call or the JOB object constructor was called with an argument that is illegal in the case of lightweight or in-memory jobs.

Action: Set the argument to the default value and issue the call again.

ORA-27356: invalid job argument

Cause: An invalid job argument was passed into either the CREATE_JOBS call or the JOB object constructor.

Action: Correct the argument value and issue the call again.

ORA-27357: duplicate reference to job object *string*

Cause: The scheduler CREATE_JOBS call had two or more references to the same job.

Action: Eliminate the duplicate references and issue the call again.

ORA-27359: duplicate reference to attribute *string* of job *string*

Cause: The scheduler SET_JOB_ATTRIBUTES call had two or more references to a specific attribute of a job.

Action: Eliminate the duplicate references and issue the call again.

ORA-27361: scheduler API invoked with illegal or inconsistent arguments

Cause: A DBMS_SCHEDULER API call was invoked with either illegal or inconsistent arguments.

Action: Refer to scheduler documentation for the call, make the necessary changes and issue the call again.

ORA-27362: batch API call completed with errors

Cause: Some of the commands submitted to a scheduler batch API call could not be successfully carried out because of errors. Other commands in the batch may have completed successfully.

Action: Check the view `SCHEDULER_JOB_ERRORS` to see which commands failed and why. Make the appropriate corrections and submit the failed commands again.

ORA-27363: invalid program for *string* job

Cause: An attempt was made to create a lightweight or in-memory job using an invalid program. A program used in a lightweight or in-memory job has to be enabled, has to be in the same schema as the job, and the program action has to be either a PL/SQL block or a stored procedure.

Action: Use a valid program for the lightweight job.

ORA-27364: remote database "*string*" already registered as *string*

Cause: The user attempted to register a remote database that was already registered.

Action: To update the registration information, the `REPLACE` argument of the `REGISTER_REMOTE_DATABASE` procedure should be set to `TRUE`. If the registration information is already current, no further action is needed.

ORA-27365: job has been notified to stop, but failed to do so immediately

Cause: The job specified in the `stop_job` command cannot be stopped immediately (because it is rolling back or blocked on a network operation), but it has been notified to stop. This means it will be stopped as soon as possible after its current uninterruptable operation is done.

Action: No action is required for the job to be stopped, but calling `stop_job` with force (if you have the privilege) may cause the job to be stopped sooner.

ORA-27366: job "*string*"."*string*" is not running

Cause: An attempt was made to stop a job that was not running.

Action: Verify the status of the job. If the job is running but this message is still being returned, contact Oracle support.

ORA-27367: program "*string*"."*string*" associated with this job is disabled

Cause: An attempt was made to run a job whose program has been disabled.

Action: Reenable the program before running the job.

ORA-27369: job of type *string* failed with exit code: *string*

Cause: A problem was encountered while running a job of type `EXECUTABLE`. The cause of the actual problem is identified by the exit code.

Action: Correct the cause of the exit code and reschedule the job.

ORA-27370: job slave failed to launch a job of type `EXECUTABLE`

Cause: The scheduler ran into an error when the job slave tried to start a job of type `EXECUTABLE`. The rest of the error stack will provide more detailed information on what the exact problem was.

Action: Correct the problem specified in the error stack and reschedule the job.

ORA-27371: jobs of type EXECUTABLE are not supported on this platform

Cause: The user tried to create a job or program of type EXECUTABLE on a platform where such jobs are not supported.

Action: Switch to a different platform or create a different type of job or program.

ORA-27372: length of action and arguments exceeds platform limit *string*

Cause: The total length of the job or program action and the arguments exceeds the platform limit specified.

Action: Reduce the total length by specifying fewer and/or shorter arguments

ORA-27373: unknown or illegal event source queue

Cause: The source queue specified for the event based job or event based schedule was either not found or was of the wrong type.

Action: Check if the queue exists. If it does make sure it is a multiple consumer queue and it is a post 8.1 compatible queue. Single consumer queues and old-style queues cannot be used as event source queues.

ORA-27374: insufficient privileges on event source queue

Cause: The job owner had insufficient privileges on the event source queue that was specified for the job.

Action: The job owner has to have dequeue privileges on event source queue or he has to have manage queue or dequeue any queue system privileges. Make sure one of these privileges is granted.

ORA-27375: valid agent name must be specified for secure queues

Cause: The queue specified for the event based job or schedule was a secure queue and either no agent name was specified or an invalid agent name was specified.

Action: If no agent name was specified, retry the call with a valid agent name. If the agent name was valid, check if the agent is currently subscribed to the queue and, in the case of jobs, check if the agent has been authorized to act as the job owner.

ORA-27376: event condition cannot be NULL

Cause: A null event condition was passed in for an event based job or schedule. This is not allowed.

Action: Pass in a legal event condition.

ORA-27377: windows cannot have event based schedules

Cause: Event based schedules for windows are currently not supported.

Action: Use a time-based schedule instead.

ORA-27378: cannot stop jobs of type EXECUTABLE on this platform

Cause: An attempt was made to stop a job of type EXECUTABLE on a platform where the stop operation was not supported.

Action: If the attempt to stop the job was made with the FORCE option set to FALSE, try again but change the FORCE option to TRUE.

ORA-27379: INSTANCE_ID attribute conflicts with job class settings

Cause: The value of the INSTANCE_ID attribute of the job conflicted with the value of the SERVICE attribute of its job class.

Action: Change the value of the INSTANCE_ID attribute or place the job in a job class whose settings do not conflict with the INSTANCE_ID attribute. Then re-enable the job.

ORA-27380: not enough units to satisfy the constraint

Cause: There were not enough resources to satisfy the constraint.

Action: Add more resource units.

ORA-27381: job cannot run, state is RESOURCE_UNAVAILABLE

Cause: The job could not run because one of the resources was in a BLOCKED_ALL_JOBS state.

Action: Change the resource to either ENFORCE_CONSTRAINTS or IGNORE_CONSTRAINTS.

ORA-27382: job type *string* has errors in the job action

Cause: There were errors in the job action when the FAIL_ON_SCRIPT_ERROR job attribute was set to TRUE.

Action: Ensure that the job action has no errors or set FAIL_ON_SCRIPT_ERROR job attribute to FALSE. FAIL_ON_SCRIPT_ERROR is only valid for SQL_SCRIPT, BACKUP_SCRIPT, EXECUTABLE and EXTERNAL_SCRIPT job types.

ORA-27398: Job *string* cannot be enabled. The associated program has been dropped.

Cause: The program associated with this job was force dropped. The job could not be enable.

Action: Retry with a job that has a valid program.

ORA-27399: job type EXECUTABLE requires the CREATE EXTERNAL JOB privilege

Cause: The owner of a job of type EXECUTABLE does not have the CREATE EXTERNAL JOB system privilege.

Action: Grant the CREATE EXTERNAL JOB system privilege to the job owner or create another job in a schema which does have the CREATE EXTERNAL JOB system privilege.

ORA-27400: In a PDB, the JOB_QUEUE_PROCESSES initialization parameter can only be set to 1000 or 0.

Cause: A value other than 1000 or 0 was specified for the JOB_QUEUE_PROCESSES initialization parameter. Inside a pluggable database (PDB), the JOB_QUEUE_PROCESSES initialization parameter can only accept the values of 1000 or 0 to indicate whether or not jobs should run in the PDB.

Action: Specify a proper value for this parameter.

ORA-27411: Empty or NULL string is not a valid repeat interval.

Cause: An empty or NULL string was provided as a repeat interval for a window, a job or a schedule.

Action: Specify a valid repeat interval. For example, 'FREQ=DAILY;BYHOUR=8;BYMINUTE=0;BYSECOND=0' for a job that executes daily at 8 a.m. For a PL/SQL expression, ensure that it evaluates to a specific point in time and not NULL.

ORA-27412: repeat interval or calendar contains invalid identifier: *string*

Cause: The calendar string or calendar definition for the repeat interval of a job, schedule or window contained an unsupported keyword or reference to an undefined calendar.

Action: Correct the repeat interval such that it no longer contains the invalid keyword.

ORA-27413: repeat interval is too long

Cause: The repeat interval consisted of a calendar string larger than the maximum size allowed.

Action: Use a shorter calendar string for the repeat interval.

ORA-27414: Invalid *string* clause value

Cause: The BY clause value was not recognized or was out-of-range for the frequency specified.

Action: Specify a valid BY clause value.

ORA-27415: repeat interval or calendar must start with a frequency clause

Cause: The specified calendar string for the repeat interval did not start with a frequency clause.

Action: Create a repeat interval that starts with a frequency clause, for example 'FREQ=YEARLY;BYMONTH=FEB'

ORA-27416: BYDAY clause in repeat interval or calendar contains an invalid weekday

Cause: The BYDAY clause of the repeat interval contained a value that did not represent a weekday.

Action: Use the correct three letter abbreviations for weekdays, for example MON for Monday and FRI for Friday.

ORA-27417: BYWEEKNO clause requires YEARLY clause

Cause: A repeat interval or calendar contained a BYWEEKNO clause with a frequency other than yearly.

Action: Remove the BYWEEKNO clause or change the frequency to YEARLY.

ORA-27418: syntax error in repeat interval or calendar

Cause: The repeat interval or calendar definition was not recognized as valid syntax.

Action: Specify a valid repeat interval.

ORA-27419: unable to determine valid execution date from repeat interval

Cause: The specified repeat interval contained conflicting clauses that made it impossible to ever find a matching date, e.g., 'FREQ=YEARLY;BYMONTH=FEB;BYMONTHDAY=31'. Alternatively, the scheduler reached its maximum number of attempts to try to find a valid execution date. This occurs when theoretically there is a valid execution date far in the future, but the scheduler took too many attempts to determine this date.

Action: Remove the conflicting clauses, or simplify the repeat interval so that it is easier to determine the next execution date.

ORA-27420: Following message from *string* interval interpreter

Cause: The repeat interval or calendar definition was not recognized as valid syntax.

Action: Specify a valid repeat interval.

ORA-27421: calendar expression restriction *string* encountered

Cause: The calendar expression was not valid because a limit test failed. For example, the maximum value of the interval that can be specified in the INTERVAL clause is limited to a value derived from the frequency clause.

Action: Specify a valid calendar definition.

ORA-27422: usage of *string* not supported in embedded calendar application "*string*".*string*"

Cause: The main calendar definition used an embedded calendar in an INCLUDE, EXCLUDE, INTERSECT, or FREQ clause for which extra limitations apply.

Action: Remove the specific clause from the calendar definition.

ORA-27423: calendar clause *string* specified more than once

Cause: The calendar definition contained a clause that was specified twice or more times.

Action: Append the values in the second clause to the first clause and remove the second clause.

ORA-27424: calendar clauses *string* and *string* are incompatible

Cause: The calendar definition contained clauses that were incompatible.

Action: Change or remove either clause.

ORA-27425: instance_id cannot be specified if database is not in Oracle RAC mode

Cause: 'stop_job' was called with 'instance_id' outside Oracle RAC mode.

Action: Do not specify this parameter for 'stop_job' unless in Oracle RAC mode.

ORA-27431: chain "*string*".*string*" has a user-managed rule set

Cause: An attempt was made to modify a rule set that is not managed by the Scheduler.

Action: Modify the rule set directly using the dbms_rule_adm package or create another chain without specifying a rule set.

ORA-27432: step "*string*" does not exist for chain "*string*".*string*"

Cause: The step specified does not exist for the given chain.

Action: Reissue the command using a step that exists for this chain.

ORA-27433: cannot alter state of step "*string*" for job "*string*".*string*" to *string*

Cause: The step cannot be changed to the requested state. The state of a running step cannot be changed. A step which is running or has already run cannot be run again.

Action: Wait until the step has finished running.

ORA-27434: cannot alter chain step job "*string*"."*string*"."*string*"

Cause: A step job of a running chain cannot be altered, only stopped or dropped.

Action: Stop or drop the chain step job or alter the running chain step instead.

ORA-27435: chain job terminated abnormally

Cause: A chain job has ended abnormally. The error code for the running chain could not be retrieved.

Action: No action necessary. The job will run again when it is scheduled to.

ORA-27436: Scheduler agent operation failed with message: *string*

Cause: The Scheduler agent encountered an unexpected error when trying to perform the specified action.

Action: Review the provided message and the Scheduler agent log for information on how to fix the issue or contact Oracle Support Services.

ORA-27451: *string* cannot be NULL

Cause: An attempt was made to set a NOT NULL scheduler attribute to NULL.

Action: Reissue the command using a non-NULL value for the specified attribute.

ORA-27452: "*string*" is an invalid name for a database object.

Cause: An invalid name was used to identify a database object.

Action: Reissue the command using a valid name.

ORA-27453: "*string*" is an invalid job or program argument name.

Cause: An invalid job or program argument name was specified.

Action: Reissue the command using a valid name for this argument.

ORA-27454: argument name and position cannot be NULL

Cause: The name or position of a program or job argument was defined as NULL.

Action: Reissue the command providing either a valid argument name or valid argument position.

ORA-27455: Only "SYS" is a valid schema for a *string*.

Cause: A non-SYS schema was specified for an object that must be in the SYS schema.

Action: Reissue the command, leaving out the schema name or using the schema name of SYS.

ORA-27456: not all arguments of program "*string*"."*string*" have been defined

Cause: The number_of_arguments attribute of the named program did not match the actual number of arguments that have been defined.

Action: Define as many arguments as the number of arguments, or change the number of arguments.

ORA-27457: argument *string* of job "*string*"."*string*" has no value

Cause: No value was provided for the job argument with the specified position.

Action: Provide a value for the job argument using any of the `set_job_xxxx_value()` routines. Or, when using a named program, specify a default value for the corresponding argument of the program.

ORA-27458: A program of type PLSQL_BLOCK cannot have any arguments.

Cause: An attempt was made to create or enable a program of type PLSQL_BLOCK with arguments. This is not allowed.

Action: Change the number of arguments to zero, or change the type of the program.

ORA-27459: A program of type EXECUTABLE must have character-only arguments.

Cause: A program of type EXECUTABLE was created or enabled with one or more arguments of non-character datatypes.

Action: Change the arguments to be of character-only datatypes.

ORA-27460: cannot execute disabled job "string"."string"

Cause: An attempt was made to run a job that is disabled.

Action: Enable the job and then reschedule the job.

ORA-27461: The value for attribute string is too large.

Cause: The value that was provided for the specified attribute was too large.

Action: Reissue the command using a smaller or shorter value.

ORA-27463: invalid program type string

Cause: An invalid program type was specified.

Action: Reissue the command using a valid program type.

ORA-27464: invalid schedule type string

Cause: An invalid schedule type was specified.

Action: Reissue the command using a valid schedule type.

ORA-27465: invalid value string for attribute string

Cause: An invalid value was provided for the specified attribute.

Action: Reissue the command using a valid value for this attribute.

ORA-27467: invalid datatype for string value

Cause: The value provided for the named scheduler attribute was of an invalid datatype.

Action: Reissue the command using a value of the correct datatype.

ORA-27468: "string"."string" is locked by another process

Cause: An attempt was made to read or modify the state of the named scheduler object when another process was also updating the same object and held the lock.

Action: Retry the operation. Scheduler locks are held for a very short duration. If the error persists, contact Oracle Support.

ORA-27469: string is not a valid string attribute

Cause: A nonexistent attribute was specified.

Action: Reissue the command using a valid attribute for that specific scheduler object.

ORA-27470: failed to re-enable "*string*"."*string*" after making requested change

Cause: A change was made to an enabled scheduler object that caused it to become disabled.

Action: Alter the object so that it becomes valid and then enable it.

ORA-27471: window "*string*"."*string*" is already closed

Cause: An attempt was made to close a window that was not open.

Action: No action required.

ORA-27472: invalid metadata attribute *string*

Cause: An invalid metadata attribute was specified.

Action: Reissue the command using a valid metadata attribute.

ORA-27473: argument *string* does not exist

Cause: An argument which was specified does not exist.

Action: Reissue the command using an argument name defined by the program or using a valid argument position.

ORA-27474: cannot give both an argument name and an argument position

Cause: An argument was specified using both a name and a position.

Action: Reissue the command using either the argument name or the argument position but not both.

ORA-27475: unknown *string* "*string*"."*string*"

Cause: The specified object did not exist, privileges were not granted, or the object was of the wrong type.

Action: Specify an object of the correct type on which you have privileges.

ORA-27476: "*string*"."*string*" does not exist

Cause: A database object was specified that does not exist.

Action: Reissue the command using an object that exists or create a new object and then reissue this command.

ORA-27477: "*string*"."*string*" already exists

Cause: An attempt was made to create an object with a name that has already been used by another object in the same schema.

Action: Reissue the command using a different name or schema.

ORA-27478: job "*string*"."*string*" is running

Cause: An attempt was made to drop a job that is currently running.

Action: Stop the job and then reissue the command, or reissue the command specifying the force option to stop the job first.

ORA-27479: Cannot *string* "*string*"."*string*" because other objects depend on it

Cause: An attempt was made to drop or disable a scheduler object that has jobs associated with it without specifying the force option.

Action: Alter the associated jobs so they do not point to the scheduler object being dropped or disabled and then reissue the command. Alternatively reissue the command specifying the force option. If the force option is specified and a scheduler object is being dropped, all associated jobs will be disabled.

ORA-27480: window "*string*" is currently open

Cause: An attempt was made to drop a window that is currently open, or to manually open a window while another window is already open.

Action: Close the window that is open and then reissue the command, or reissue the command while setting the force option to TRUE.

ORA-27481: "*string*"."*string*" has an invalid schedule

Cause: An attempt was made to enable a job or window that has an invalid schedule.

Action: Alter the schedule of the job or window so that it is valid and then reissue the enable command.

ORA-27482: The scheduler credential "*string*"."*string*" is unusable.

Cause: An attempt was made to use a scheduler credential for which the key to decrypt its password was lost. Therefore, the password of the credential could not be retrieved.

Action: Reset the PASSWORD attribute of the credential by calling DBMS_CREDENTIAL.UPDATE_CREDENTIAL.

ORA-27483: "*string*"."*string*" has an invalid END_DATE

Cause: An attempt was made to enable a job or window that has an invalid end_date. Either the end_date is before the start_date or the end_date is in the past.

Action: Alter the job or window so that the end date becomes valid (possibly null) and then reissue the command.

ORA-27484: Argument names are not supported for jobs without a program.

Cause: An attempt was made to set or reset a job argument by using the name of the argument. Identifying job arguments by their name is only supported in combination with jobs that are based on programs. Jobs that are not using a program cannot have named arguments.

Action: Use argument position instead of name and then issue the command again.

ORA-27485: argument "*string*" already exists at a different position

Cause: An attempt was made to create or replace an argument with a name that is already used by an argument at a different position.

Action: Use a different name for the argument or drop or alter the argument which already exists with this name and then reissue the command.

ORA-27486: insufficient privileges

Cause: An attempt was made to perform a scheduler operation without the required privileges.

Action: Ask a sufficiently privileged user to perform the requested operation, or grant the required privileges to the proper user(s).

ORA-27487: invalid object privilege for a *string*

Cause: The granted object privilege is not valid for the specified scheduler object.

Action: Check the scheduler documentation to verify which object privileges can be granted on which scheduler objects.

ORA-27488: unable to set *string* because *string* was/were already set

Cause: An attempt was made to set an object's attribute even though one or more conflicting attributes of the same object had already been set.

Action: Set the other conflicting attributes to NULL and then reissue the command.

ORA-27489: unable to process job "*string*"."*string*" from job class "*string*"

Cause: An error was encountered while processing the named job from the specified job class.

Action: Resolve the error for this job and then reissue the command. See the next error message on the stack to find out what the error for the job is.

ORA-27490: cannot open disabled window "*string*"."*string*"

Cause: The user tried to open a disabled window.

Action: Enable the window and then try to open it again.

ORA-27491: repeat_interval and start_date cannot both be NULL

Cause: An attempt was made to set both repeat_interval and start_date to equal NULL for a Scheduler window or schedule.

Action: If either repeat_interval or start_date is set to equal NULL, the other should be set to a non-NULL value.

ORA-27492: unable to run job "*string*"."*string*": scheduler unavailable

Cause: A job run with current session set to false can not be issued if the scheduler is not active. Check value of job_queue_processes parameter, issue dbms_job.set_enabled(true), database is in upgrade/migrate mode, database is in data guard mode, or scheduler attribute SCHEDULER_DISABLED is set to TRUE

Action: Run the job in the current session or activate the scheduler

ORA-27493: In-memory job "*string.string*" cannot be modified

Cause: Once enabled, the full in-memory job could not be further modified.

Action: The only actions that can be taken now are to stop or drop the job.

ORA-27494: operation not permitted on lightweight and in-memory jobs

Cause: An attempt was made to perform an action that was not permitted.

Action: Check Oracle Scheduler documentation to see which actions can be performed on the desired job.

ORA-27495: attribute *string* cannot be set for in-memory jobs

Cause: An attempt was made in a CREATE or SET_ATTRIBUTE call to set an attribute that could not be set for run-time in-memory jobs.

Action: If you need to set this attribute, use either regular or lightweight jobs.

ORA-27496: credential "string"."string" is disabled

Cause: An attempt was made to run a job, file watcher or external procedure whose credential was disabled.

Action: Reenable the credential before running the job, file watcher or external procedure.

ORA-27497: operation is not permitted inside a pluggable database

Cause: This operation was not permitted in a pluggable database.

Action: Log into the root database and retry the operation.

ORA-27498: resource constraint object type mismatch

Cause: Not all of the resource constraints of a resource were of the same type.

Action: Delete existing constraints for the resource.

ORA-27499: in-memory job metadata is too large

Cause: The in-memory job was too large. Due to the need to keep in-memory jobs efficient and performing well, we limit the size of in-memory job metadata to 8 kilobytes. This includes the space used for job argument values.

Action: Reduce the size of the job metadata and try again. If all the metadata is needed, then you should create some other type of job.

ORA-27500: inter-instance IPC error

Cause: This is an operating system/cluster interconnect error.

Action: Check the extra information and contact Oracle Support Services.

ORA-27501: IPC error creating a port

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27502: IPC error deleting OSD context

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27503: IPC error attempting to cancel request

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27504: IPC error creating OSD context

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27505: IPC error destroying a port

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27506: IPC error connecting to a port

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of `errno` and contact Oracle Support Services.

ORA-27507: IPC error disconnecting from a port

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of `errno` and contact Oracle Support Services.

ORA-27508: IPC error sending a message

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of `errno` and contact Oracle Support Services.

ORA-27509: IPC error receiving a message

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of `errno` and contact Oracle Support Services.

ORA-27510: IPC error waiting for a request to complete

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of `errno` and contact Oracle Support Services.

ORA-27512: IPC error posting a process

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of `errno` and contact Oracle Support Services.

ORA-27513: parameter *string* contains invalid value *string*

Cause: The program could not identify the value as an IP address.

Action: Change the value to be a valid IP address.

ORA-27514: IPC error copying memory to remote process

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of `errno` and contact Oracle Support Services.

ORA-27515: inadequate memlock limit or driver settings

Cause: Inter Process Communication(IPC) queue creation failed due to inadequate memlock limit or driver settings.

Action: Set a higher memlock limit and review the network driver settings to ensure that this limit is accepted.

ORA-27528: Transport: *string* required by *string* is not available

Cause: The IP addresses assigned to the instance did not support the specified transport.

Action: Check the IP addresses used in the alert log and contact Oracle Support Services.

ORA-27529: IPC IP address *string* is not available.

Cause: The IP address assigned to the instance was not associated with any network adapters.

Action: Ensure that the IP address is assigned to a network adapter.

ORA-27530: IPC Ephemeral ports on IP address *string* are exhausted.

ORA-27532: IPC global name service error

Cause: The global name space service used by KSPX reported an error

Action: Check additional error messages in the process trace file and contact Oracle Support Services.

ORA-27534: Out of RDMA device contexts**ORA-27541: NMON event service background process terminated with error**

Cause: The NMON event service process died.

Action: No action required.

ORA-27542: Failed to unprepare a buffer prepared for remote update

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27543: Failed to cancel outstanding IPC request

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27544: Failed to map memory region for export

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27545: Fail to prepare buffer for remote update

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27546: Oracle compiled against IPC interface version *string.string* found version *string.string*

Cause: A misconfiguration or installation error occurred.

Action: Install the IPC library for this release of Oracle.

ORA-27547: Unable to query IPC OSD attribute *string*

Cause: This is an operating system-dependent IPC error.

Action: Contact Oracle support Services.

ORA-27548: Unable to unprepare IPC buffer

Cause: This is an operating system-dependent IPC error.

Action: Contact Oracle support Services.

ORA-27550: Target ID protocol check failed. tid vers=*string*, type=*string*, remote instance number=*string*, local instance number=*string*

Cause: The local Oracle Real Application Cluster instance and remote instance are running with incompatible implementation of the inter-instance IPC protocol library. A misconfiguration or installation error occurred.

Action: Check additional error messages in the alert log and the process trace file.

ORA-27552: exception accessing GSM in Oracle RAC cluster

Cause: Global Shared Memory (GSM) was used to provide shared memory semantics on an Oracle RAC cluster. An error occurred while accessing GSM hosted on a remote node.

Action: Contact Oracle Support Services.

ORA-27553: incompatible IPC settings in Oracle RAC cluster

Cause: Inter-process Communication (IPC) settings were not compatible with other instances in the Oracle RAC cluster.

Action: Check additional error messages in the alert log and IPC0 trace file.

ORA-27601: Cell storage initialization failed, cell library error code [string]

Cause: Cell storage client did not succeed in initializing.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27602: Failure to publish network status information, cell library error code [string]

Cause: Network status information publishing failed.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27603: Cell storage I/O error, I/O failed on disk string at offset string for data length string

Cause: Cell storage I/O read or write failed, possibly due to a configuration problem or a hardware failure.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27604: Cell storage ioctl error, ioctl failed on disk string

Cause: ioctl operation on a cell storage disk failed.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27605: Smart I/O failed as a handle could not be obtained to the cell "string" as the cell is not accessible.

Cause: The cell could have been unavailable.

Action: Ensure the cell is available. Check the network connectivity.

ORA-27606: Smart I/O failed because the diskgroup was found to be unmounted. tablespace number: "string", file number: "string"

Cause: The diskgroup to which the specified file belongs was found to be unmounted.

Action: Ensure that the diskgroup to which the specified file belongs is mounted.

ORA-27607: Smart I/O failed because there were no online disks. tablespace number: "string", file number: "string"

Cause: There were no online disks found for the specified file.

Action: Ensure the diskgroup to which the specified file belongs to is mounted. Ensure that the disks are online. Check the availability of cells and check the network.

ORA-27608: Smart I/O failed because the disk "string" on the cell "string" was not open. error code: "string", "string"

Cause: The specified disk on the specified cell could not be opened.

Action: Ensure the cell is available. Check the network.

ORA-27609: Smart I/O failed due to a network error to the cell "*string*". error code "*string*", "*string*"

Cause: The specified cell could not be connected to.

Action: Ensure that the cell is available. Check the network.

ORA-27610: Smart I/O failed due to shortage of memory on the cell "*string*"

Cause: The specified cell had a shortage of memory to perform smart I/O.

Action: Reduce the parallel degree or number of Oracle sessions executing smart I/O.

ORA-27611: Smart I/O failed due to a block corruption detected on the host. The block was received from cell "*string*". disk: "*string*", block: "*string*", disk offset: "*string*"

Cause: The data block indicated was corrupted on the host, but a corruption was not found on the cell.

Action: This may be due to a transient network error or a real block corruption. Check your network for any errors. Analyze the segment to which the file belongs. If there is indeed a corruption, try to restore the block using RMAN block recovery. If there is a trace file, report the errors in it to Oracle Support Services. If analyze did not report an error and network did not have any error, report the problem to Oracle Support Services as this appears to be a software error.

ORA-27612: Smart I/O failed due to a block corruption detected on the cell "*string*". disk: "*string*", block: "*string*", disk offset: "*string*"

Cause: The data block indicated was found to be corrupted on the cell.

Action: This may be due to a software error or a real data corruption. Analyze the segment. If there is indeed a block corruption, try to restore the block using RMAN block level recovery. If there is a trace file, report the errors in it to Oracle Support Services. If analyze did not report an error, report the problem to Oracle Support Services as this appears to be a software error.

ORA-27613: Smart I/O failed due to an I/O error on the cell "*string*". disk: "*string*", block: "*string*", disk offset: "*string*" I/O size: "*string*"

Cause: An I/O request failed on the specified cell and disk.

Action: Check the specified disk on the cell.

ORA-27614: Smart I/O failed due to an error "*string, string*" from the cell "*string*". disk: "*string*", block: "*string*", disk offset: "*string*" I/O size: "*string*"

Cause: An I/O request failed, due to an internal error on the specified cell and disk.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27615: Smart I/O file to ASM disk translation failed with error: *string*.

Cause: An internal error caused a smart I/O operation to fail.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27616: ASM Allocation Unit: *string*

Cause: This error message is usually accompanied by another message, indicating the real problem. This message exists to provide additional information to Oracle Support Services.

Action: Check the next error message.

ORA-27617: Smart I/O failed because of an internal error. Cell "*string*", disk "*string*", cell library error code "*string, string*", error information "*string*"

Cause: An internal error caused a smart I/O operation to fail.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27618: Smart I/O failed because of an internal error. Cell "*string*", cell library error code "*string, string*", error information "*string*"

Cause: An internal error caused a smart I/O operation to fail.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27619: Smart I/O failed because of an internal error when determining the time zone file version. Error code "*string*"

Cause: An internal error caused a smart I/O operation to fail.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27621: The value of *string* is not valid for parameter *string*

Cause: Incorrect value is specified for an internal parameter.

Action: This parameter should only be set by Oracle Support Services. Check the additional diagnostic information in the trace file and contact Oracle Support Services for recommendations on setting this parameter.

ORA-27623: Cell automation SQL action failed

Cause: Cell automation manager or worker process failed to execute SQL action through OCI recursive call.

Action: Check the alert log and process trace file for additional information. Contact Oracle Support Services if the errors specified in the trace file cannot be corrected.

ORA-27624: Smart I/O failed because the number of reconnects to the cell "*string*" exceeded the maximum allowed "*string*".

Cause: The number of reconnects to a cell exceeded the maximum allowed. This problem indicates a possible network problem or a software problem on the cell.

Action: If the cellsv is being restarted repeatedly, in a short interval, check the system load. The problem may be corrected by rebooting the cell. If the system is not overloaded, the repeated restarts are likely due to software problem. Report the problem to Oracle Support Services along with alert log and trace files. If the cellsv is not restarting, the problem may be in the IB network. Check the network between the host and all the cells.

ORA-27625: Exadata configuration failed.

Cause: One or both of the files, cellinit.ora and cellip.ora, were either invalid or missing.

Action: Check if the files, cellinit.ora and cellip.ora, are both present. They can be found in the \$OSSCONF directory. If both are present, check if their contents are valid and correct. If

the files are invalid or missing, produce files with valid information in the \$OSSCONF directory. For information on how to set up these files, see the Exadata Users Guide.

ORA-27626: Exadata error: *string* (*string*)

Cause: The cause of this error is dependent on the context in which this error is reported.

Action: See the primary error reported with this error.

ORA-27627: Software edition incompatible with Exadata storage.

Cause: Oracle Exadata can be used only with Oracle Database Enterprise Edition.

Action: Check if Oracle is linked with the Enterprise Edition options.

ORA-27628: An invalid value was specified for the parameter *string*.

Cause: An invalid value was specified for a parameter.

Action: Check the additional diagnostic information in the trace file and contact Oracle Support Services if further help is required.

ORA-27629: External table smart I/O failed because the cell is not accessible.

Cause: The cell was unavailable.

Action: Ensure the cell is available.

ORA-27631: External encryption or decryption is disabled.

Cause: Either decryption was disabled in the cellinit.ora initialization parameter file, or the cryptography mode requested by the database was incompatible with what was available on the cell.

Action: No action is necessary. The Exadata cell returns data in pass-through mode when encryption or decryption is required.

ORA-27777: Event set to enable MGA tracing

Cause: An event was set to enable MGA tracing on the system.

Action: If the event was set by request of Oracle Support Services, no action is needed. If not, please contact Oracle Support Services as setting this event can degrade the performance of your database or have other side-effects.

ORA-27778: MGA namespace is already marked for deletion.

Cause: Managed Global Area (MGA) namespace was already marked for deletion. No further attaches are allowed.

Action: This is a diagnostic message; no action is needed.

ORA-27779: MGA segment creation failure

Cause: The Managed Global Area (MGA) segment creation failed.

Action: Check other error messages for additional information.

ORA-27780: MGA segment deletion failure

Cause: The Managed Global Area (MGA) segment deletion failed.

Action: Check other error messages for additional information.

ORA-27781: MGA segment attach failure

Cause: The Managed Global Area (MGA) segment attach failed.

Action: Check other error messages for additional information.

ORA-27782: MGA segment detach failure

Cause: The Managed Global Area (MGA) segment detach failed.

Action: Check other error messages for additional information.

ORA-27800: invalid configuration (*string*) for event creation (*string*)

Cause: An invalid configuration value was specified while creating the event.

Action: Make sure all configuration values are valid and retry the operation. Consult the manuals for valid configuration values. If the issue persists, contact Oracle Support Services.

ORA-27801: event notification handle not valid

Cause: The event notification handle was not valid.

Action: None

ORA-27890: invalid namespace context type

Cause: The namespace context type was invalid.

Action: None

ORA-27891: Namespace invalid *string*

Cause: An invalid parameter was passed to namespace layer.

Action: None

ORA-27892: invalid namespace context handle

Cause: The namespace context handle was invalid.

Action: None

ORA-27893: given namespace context handle not attached

Cause: The namespace context handle not attached.

Action: None

ORA-27894: given namespace context handle attached

Cause: The namespace context handle attached.

Action: None

ORA-28000: The account is locked.

Cause: The wrong password was used for FAILED_LOGIN_ATTEMPTS consecutive login attempts, or the DBA locked the account, or the user was a common user locked in the root container.

Action: Wait for the PASSWORD_LOCK_TIME to elapse or contact the DBA to unlock the account manually using the ALTER USER command with the ACCOUNT UNLOCK clause. The PASSWORD_LOCK_TIME is the password profile limit which specifies how long the account remains in the LOCKED (TIMED) status after the wrong password was used for

FAILED_LOGIN_ATTEMPTS consecutive login attempts. A user's account status can be found in the ACCOUNT_STATUS column of the DBA_USERS view.

ORA-28001: The password has expired.

Cause: The user's account expired and the password must be changed. This occurred if any of the following was true: * The database administrator caused the user's account to expire by using the ALTER USER PASSWORD EXPIRE statement. * The user's account was associated with a password profile with a limited password life, and the user's password had not been changed in accordance with the PASSWORD_LIFE_TIME parameter. * The user's account was created as part of either a database import inside a Pluggable Database (PDB) or as a clone of an existing PDB. And the user's password did not meet the requirements of the mandatory profile enforced in the PDB.

Action: Change the password or contact the Database Administrator to understand the rules for choosing the new password which complies with the mandatory password profile.

ORA-28002: the password will expire within *string* days

Cause: The password of the user's account expired and entered the grace period and should be changed. This can happen if any of the following is true: * The user account was associated with a password profile with a limited password grace period. * The user account was created as part of either a database import inside a Pluggable Database (PDB) or clone of an existing PDB and the user's password did not meet the requirements of the mandatory profile (that was configured with a limited password grace period) enforced in the PDB. Since the password grace period has not yet elapsed, the user is not prompted to input a new password and an ORA-28002 warning message will continue to be displayed upon each successful login to the user account, until the user changes their password. After the grace period has elapsed, the password expires and until the user successfully changes their password their login will continue to fail with an ORA-28001 error.

Action: Change the password or contact the database administrator to understand the rules for choosing the new password which complies with the mandatory profile.

ORA-28003: password verification for the specified password failed

Cause: The new password did not meet the necessary complexity specifications and the password_verify_function failed

Action: Enter a different password. Contact the DBA to know the rules for choosing the new password

ORA-28004: invalid argument for function specified in PASSWORD_VERIFY_FUNCTION *string*

Cause: The password verification function does not have the required number and type of input/output arguments and/or the return argument

Action: Check the manual to find out the format of the password verification function

ORA-28005: invalid logon flags

Cause: The flags are not properly set or conflicting flags are set in making calls

Action: Call the function with appropriate flags set.

ORA-28006: conflicting values for parameters *string* and *string*

Cause: The parameters PASSWORD_REUSE_TIME and PASSWORD_REUSE_MAX cannot both be set. One parameter should be unlimited while other is set

Action: Set one value to UNLIMITED explicitly

ORA-28007: the password cannot be reused

Cause: The password cannot be reused for the specified number of days or for the specified number of password changes
