| NUM_PCT_TABLES        | NUMBER        |      | Number of PCT detail tables                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| NUM_FRESH_PCT_REGIONS | NUMBER        |      | Number of fresh PCT partition regions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| NUM_STALE_PCT_REGIONS | NUMBER        |      | Number of stale PCT partition regions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| SEGMENT_CREATED       | VARCHAR2(3)   |      | Indicates whether the materialized view was created using the SEGMENT CREATION DEFERRED clause. The value is YES if the segment for the materialized view is created and NO if it is not.                                                                                                                                                                                                                                                                                                                                                            |
| EVALUATION_EDITION    | VARCHAR2(128) |      | Name of the edition in which editioned objects referenced in an expression column are resolved                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| UNUSABLE_BEFORE       | VARCHAR2(128) |      | Name of the oldest edition in which the stored results of the materialized view's subquery may be used for query rewrite. In editions before the specified edition, the stored results of the materialized view's data are considered unusable. This value is NULL if no such edition is specified.                                                                                                                                                                                                                                                  |
| UNUSABLE_BEGINNING    | VARCHAR2(128) |      | Name of the oldest edition in which the stored results of the materialized view's subquery may <i>not</i> be used for query rewrite. The data is unusable for query rewrite in the specified edition and in any descendants of this edition. This value is NULL if no such edition is specified.                                                                                                                                                                                                                                                     |
| DEFAULT_COLLATION     | VARCHAR2(100) |      | Default collation for the materialized view                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| ON_QUERY_COMPUTATION  | VARCHAR2(1)   |      | Indicates whether the materialized view is a real-time materialized view (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| AUTO <sup>1</sup>     | VARCHAR2(3)   |      | Indicates whether the materialized view is an automatic materialized view (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

### 3.290 ALL\_NESTED\_TABLE\_COLS

ALL\_NESTED\_TABLE\_COLS describes the columns of the nested tables accessible to the current user. To gather statistics for this view, use the DBMS\_STATS package.

Related Views

- DBA\_NESTED\_TABLE\_COLS describes the columns of all nested tables in the database.
- USER\_NESTED\_TABLE\_COLS describes the columns of the nested tables owned by the current user. This view does not display the OWNER column.

| Column          | Datatype      | NULL     | Description                                                                                                                                                              |
|-----------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128) | NOT NULL | Owner of the nested table                                                                                                                                                |
| TABLE_NAME      | VARCHAR2(128) | NOT NULL | Name of the nested table                                                                                                                                                 |
| COLUMN_NAME     | VARCHAR2(128) | NOT NULL | Column name                                                                                                                                                              |
| DATA_TYPE       | VARCHAR2(128) |          | Data type of the column                                                                                                                                                  |
| DATA_TYPE_MOD   | VARCHAR2(3)   |          | Data type modifier of the column                                                                                                                                         |
| DATA_TYPE_OWNER | VARCHAR2(128) |          | Owner of the data type of the column                                                                                                                                     |
| DATA_LENGTH     | NUMBER        | NOT NULL | Length of the column (in bytes)                                                                                                                                          |
| DATA_PRECISION  | NUMBER        |          | Decimal precision for NUMBER data type; binary precision for FLOAT data type; NULL for all other data types                                                              |
| DATA_SCALE      | NUMBER        |          | Digits to the right of the decimal point in a number                                                                                                                     |
| NULLABLE        | VARCHAR2(1)   |          | Indicates whether a column allows NULLs. The value is N if there is a NOT NULL constraint on the column or if the column is part of a PRIMARY KEY.                       |
| COLUMN_ID       | NUMBER        |          | Sequence number of the column as created                                                                                                                                 |
| DEFAULT_LENGTH  | NUMBER        |          | Length of the default value for the column                                                                                                                               |
| DATA_DEFAULT    | LONG          |          | Default value for the column                                                                                                                                             |
| NUM_DISTINCT    | NUMBER        |          | Number of distinct values in the column.<br>This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views. |
| LOW_VALUE       | RAW(1000)     |          | Low value in the column.<br>This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.                 |

| Column               | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------|--------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| HIGH_VALUE           | RAW(1000)    |      | High value in the column.<br>This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.                                                                                                                                                                                                                                                                                                                                                             |
| DENSITY              | NUMBER       |      | If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints.<br>If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT.<br>This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.                                               |
| NUM_NULLS            | NUMBER       |      | Number of NULLs in the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| NUM_BUCKETS          | NUMBER       |      | Number of buckets in the histogram for the column<br><b>Note:</b> The number of buckets in a histogram is specified in the SIZE parameter of the SQL ANALYZE statement. However, Oracle Database does not create a histogram with more buckets than the number of rows in the sample. Also, if the sample contains any values that are very repetitious, Oracle Database creates the specified number of buckets, but the value indicated by this column may be smaller because of an internal compression algorithm. |
| LAST_ANALYZED        | DATE         |      | Date on which this column was most recently analyzed                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| SAMPLE_SIZE          | NUMBER       |      | Sample size used in analyzing this column                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| CHARACTER_SET_NAME   | VARCHAR2(44) |      | Name of the character set: <ul style="list-style-type: none"> <li>CHAR_CS</li> <li>NCHAR_CS</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                |
| CHAR_COL_DECL_LENGTH | NUMBER       |      | Declaration length of the character type column                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| GLOBAL_STATS         | VARCHAR2(3)  |      | GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO                                                                                                                                                                                                                                                                                                                                                                                                              |
| USER_STATS           | VARCHAR2(3)  |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| AVG_COL_LEN          | NUMBER       |      | Average length of the column (in bytes)                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| CHAR_LENGTH          | NUMBER       |      | Displays the length of the column in characters. This value only applies to the following data types: <ul style="list-style-type: none"> <li>CHAR</li> <li>VARCHAR2</li> <li>NCHAR</li> <li>NVARCHAR2</li> </ul>                                                                                                                                                                                                                                                                                                      |
| CHAR_USED            | VARCHAR2(1)  |      | Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the data type is not any of the following (NULL): <ul style="list-style-type: none"> <li>CHAR</li> <li>VARCHAR2</li> <li>NCHAR</li> <li>NVARCHAR2</li> </ul>                                                                                                                                                                                                                                                        |

| Column             | Datatype       | NULL     | Description                                                                                                                               |
|--------------------|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------|
| V80_FMT_IMAGE      | VARCHAR2(3)    |          | Indicates whether the column data is in release 8.0 image format (YES) or not (NO)                                                        |
| DATA_UPGRADED      | VARCHAR2(3)    |          | Indicates whether the column data has been upgraded to the latest type version format (YES) or not (NO)                                   |
| HIDDEN_COLUMN      | VARCHAR2(3)    |          | Indicates whether the column is a hidden column (YES) or not (NO)                                                                         |
| VIRTUAL_COLUMN     | VARCHAR2(3)    |          | Indicates whether the column is a virtual column (YES) or not (NO)                                                                        |
| SEGMENT_COLUMN_ID  | NUMBER         |          | Sequence number of the column in the segment                                                                                              |
| INTERNAL_COLUMN_ID | NUMBER         | NOT NULL | Internal sequence number of the column                                                                                                    |
| HISTOGRAM          | VARCHAR2(15)   |          | Indicates existence/type of histogram: <ul style="list-style-type: none"> <li>NONE</li> <li>FREQUENCY</li> <li>HEIGHT BALANCED</li> </ul> |
| QUALIFIED_COL_NAME | VARCHAR2(4000) |          | Qualified column name                                                                                                                     |

## 3.291 ALL\_NESTED\_TABLES

ALL\_NESTED\_TABLES describes the nested tables in tables accessible to the current user.

#### Related Views

- DBA\_NESTED\_TABLES describes all nested tables in the database.
- USER\_NESTED\_TABLES describes nested tables owned by the current user. This view does not display the OWNER column.

| Column              | Datatype       | NULL | Description                                                                 |
|---------------------|----------------|------|-----------------------------------------------------------------------------|
| OWNER               | VARCHAR2(128)  |      | Owner of the nested table                                                   |
| TABLE_NAME          | VARCHAR2(128)  |      | Name of the nested table                                                    |
| TABLE_TYPE_OWNER    | VARCHAR2(128)  |      | Owner of the type of which the nested table was created                     |
| TABLE_TYPE_NAME     | VARCHAR2(128)  |      | Name of the type of the nested table                                        |
| PARENT_TABLE_NAME   | VARCHAR2(128)  |      | Name of the parent table containing the nested table                        |
| PARENT_TABLE_COLUMN | VARCHAR2(4000) |      | Column name of the parent table that corresponds to the nested table        |
| STORAGE_SPEC        | VARCHAR2(30)   |      | Indicates whether storage for the nested table is USER_SPECIFIED or DEFAULT |

| Column                | Datatype     | NULL | Description                                                                |
|-----------------------|--------------|------|----------------------------------------------------------------------------|
| RETURN_TYPE           | VARCHAR2(20) |      | Return type of the varray column (LOCATOR) or (VALUE)                      |
| ELEMENT_SUBSTITUTABLE | VARCHAR2(25) |      | Indicates whether the nested table element is substitutable (Y) or not (N) |

## 3.292 ALL\_OBJ\_COLATTRS

ALL\_OBJ\_COLATTRS describes object columns and attributes contained in the tables accessible to the current user.

#### Related Views

- DBA\_OBJ\_COLATTRS describes object columns and attributes contained in all tables in the database.
- USER\_OBJ\_COLATTRS describes object columns and attributes contained in the tables owned by the current user. This view does not display the OWNER column.

| Column        | Datatype       | NULL | Description                                                  |
|---------------|----------------|------|--------------------------------------------------------------|
| OWNER         | VARCHAR2(128)  |      | Owner of the table                                           |
| TABLE_NAME    | VARCHAR2(128)  |      | Name of the table containing the object column or attribute  |
| COLUMN_NAME   | VARCHAR2(4000) |      | Fully qualified name of the object column or attribute       |
| SUBSTITUTABLE | VARCHAR2(15)   |      | Indicates whether the column is substitutable (Y) or not (N) |

## 3.293 ALL\_OBJECT\_TABLES

ALL\_OBJECT\_TABLES describes the object tables accessible to the current user.

#### Related Views

- DBA\_OBJECT\_TABLES describes all object tables in the database.
- USER\_OBJECT\_TABLES describes the object tables owned by the current user. This view does not display the OWNER column.

| Column          | Datatype      | NULL     | Description                                                                                                                                                                         |
|-----------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128) | NOT NULL | Owner of the table                                                                                                                                                                  |
| TABLE_NAME      | VARCHAR2(128) | NOT NULL | Name of the table                                                                                                                                                                   |
| TABLESPACE_NAME | VARCHAR2(30)  |          | Name of the tablespace containing the table; NULL for partitioned, temporary, and index-organized tables                                                                            |
| CLUSTER_NAME    | VARCHAR2(128) |          | Name of the cluster, if any, to which the table belongs                                                                                                                             |
| IOT_NAME        | VARCHAR2(128) |          | Name of the index-organized table, if any, to which the overflow or mapping table entry belongs. If the IOT_TYPE column is not NULL, then this column contains the base table name. |
| STATUS          | VARCHAR2(8)   |          | If a previous DROP TABLE operation failed, indicates whether the table is unusable (UNUSABLE) or valid (VALID)                                                                      |
| PCT_FREE        | NUMBER        |          | Minimum percentage of free space in a block; NULL for partitioned tables                                                                                                            |
| PCT_USED        | NUMBER        |          | Minimum percentage of used space in a block; NULL for partitioned tables                                                                                                            |
| INI_TRANS       | NUMBER        |          | Initial number of transactions; NULL for partitioned tables                                                                                                                         |
| MAX_TRANS       | NUMBER        |          | Maximum number of transactions; NULL for partitioned tables                                                                                                                         |
| INITIAL_EXTENT  | NUMBER        |          | Size of the initial extent (in bytes); NULL for partitioned tables                                                                                                                  |
| NEXT_EXTENT     | NUMBER        |          | Size of secondary extents (in bytes); NULL for partitioned tables                                                                                                                   |
| MIN_EXTENTS     | NUMBER        |          | Minimum number of extents allowed in the segment; NULL for partitioned tables                                                                                                       |
| MAX_EXTENTS     | NUMBER        |          | Maximum number of extents allowed in the segment; NULL for partitioned tables                                                                                                       |
| PCT_INCREASE    | NUMBER        |          | Percentage increase in extent size; NULL for partitioned tables                                                                                                                     |
| FREELISTS       | NUMBER        |          | Number of process freelists allocated to the segment; NULL for partitioned tables                                                                                                   |
| FREELIST_GROUPS | NUMBER        |          | Number of freelist groups allocated to the segment; NULL for partitioned tables                                                                                                     |
| LOGGING         | VARCHAR2(3)   |          | Indicates whether or not changes to the table are logged: <ul style="list-style-type: none"> <li>• YES</li> <li>• NO</li> </ul>                                                     |
| BACKED_UP       | VARCHAR2(1)   |          | Indicates whether the table has been backed up since the last modification (Y) or not (N)                                                                                           |
| NUM_ROWS        | NUMBER        |          | Number of rows in the table                                                                                                                                                         |
| BLOCKS          | NUMBER        |          | Number of used blocks in the table                                                                                                                                                  |
| EMPTY_BLOCKS    | NUMBER        |          | Number of empty (never used) blocks in the table                                                                                                                                    |
| AVG_SPACE       | NUMBER        |          | Average available free space in the table                                                                                                                                           |
| CHAIN_CNT       | NUMBER        |          | Number of chained rows in the table                                                                                                                                                 |
| AVG_ROW_LEN     | NUMBER        |          | Average row length, including row overhead                                                                                                                                          |

| Column                    | Datatype      | NULL | Description                                                                                                                                                                                                                               |
|---------------------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AVG_SPACE_FREELIST_BLOCKS | NUMBER        |      | Average free space of all blocks on a freelist                                                                                                                                                                                            |
| NUM_FREELIST_BLOCKS       | NUMBER        |      | Number of blocks on the freelist                                                                                                                                                                                                          |
| DEGREE                    | VARCHAR2(10)  |      | Number of parallel execution processes per instance for scanning the table, or DEFAULT                                                                                                                                                    |
| INSTANCES                 | VARCHAR2(10)  |      | Number of instances across which the table is to be scanned, or DEFAULT                                                                                                                                                                   |
| CACHE                     | VARCHAR2(5)   |      | Indicates whether the table is to be cached in the buffer cache (Y) or not (N)                                                                                                                                                            |
| TABLE_LOCK                | VARCHAR2(8)   |      | Indicates whether table locking is enabled (ENABLED) or disabled (DISABLED)                                                                                                                                                               |
| SAMPLE_SIZE               | NUMBER        |      | Sample size used in analyzing this table                                                                                                                                                                                                  |
| LAST_ANALYZED             | DATE          |      | Date on which this table was most recently analyzed                                                                                                                                                                                       |
| PARTITIONED               | VARCHAR2(3)   |      | Indicates whether the table is partitioned (YES) or not (NO)                                                                                                                                                                              |
| IOT_TYPE                  | VARCHAR2(12)  |      | If the table is an index-organized table, then IOT_TYPE is IOT, IOT_OVERFLOW, or IOT_MAPPING. If the table is not an index-organized table, then IOT_TYPE is NULL.                                                                        |
| OBJECT_ID_TYPE            | VARCHAR2(16)  |      | Indicates whether the object ID (OID) is USER-DEFINED or SYSTEM GENERATED                                                                                                                                                                 |
| TABLE_TYPE_OWNER          | VARCHAR2(128) |      | Owner of the type of the table                                                                                                                                                                                                            |
| TABLE_TYPE                | VARCHAR2(128) |      | Type of the table                                                                                                                                                                                                                         |
| TEMPORARY                 | VARCHAR2(1)   |      | Indicates whether this is a temporary table (Y) or not (N)                                                                                                                                                                                |
| SECONDARY                 | VARCHAR2(1)   |      | Indicates whether the object table is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge (Y) or not (N)                                                                                                |
| NESTED                    | VARCHAR2(3)   |      | Indicates whether the table is a nested table (YES) or not (NO)                                                                                                                                                                           |
| BUFFER_POOL               | VARCHAR2(7)   |      | Buffer pool to be used for table blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• RECYCLE</li> <li>• NULL</li> </ul>                                                                                   |
| FLASH_CACHE               | VARCHAR2(7)   |      | Database Smart Flash Cache hint to be used for table blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> Solaris and Oracle Linux functionality only.                                     |
| CELL_FLASH_CACHE          | VARCHAR2(7)   |      | Cell flash cache hint to be used for table blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> <b>See Also:</b> Oracle Exadata Storage Server Software documentation for more information |

| Column          | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ROW_MOVEMENT    | VARCHAR2(8)   |      | Indicates whether partitioned row movement is enabled (ENABLED) or disabled (DISABLED)                                                                                                                                                                                                                                                                                                                                                                                      |
| GLOBAL_STATS    | VARCHAR2(3)   |      | GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO                                                                                                                                                                                                                                                                                                                                                                    |
| USER_STATS      | VARCHAR2(3)   |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                            |
| DURATION        | VARCHAR2(15)  |      | Indicates the duration of a temporary table: <ul style="list-style-type: none"> <li>• SYS\$SESSION - Rows are preserved for the duration of the session</li> <li>• SYS\$TRANSACTION - Rows are deleted after COMMIT</li> </ul> Null - Permanent table                                                                                                                                                                                                                       |
| SKIP_CORRUPT    | VARCHAR2(8)   |      | Indicates whether Oracle Database ignores blocks marked corrupt during table and index scans (ENABLED) or raises an error (DISABLED). To enable this feature, run the DBMS_REPAIR.SKIP_CORRUPT_BLOCKS procedure.                                                                                                                                                                                                                                                            |
| MONITORING      | VARCHAR2(3)   |      | Indicates whether the table has the MONITORING attribute set (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                              |
| CLUSTER_OWNER   | VARCHAR2(128) |      | Owner of the cluster, if any, to which the table belongs                                                                                                                                                                                                                                                                                                                                                                                                                    |
| DEPENDENCIES    | VARCHAR2(8)   |      | Indicates whether row-level dependency tracking is enabled (ENABLED) or disabled (DISABLED)                                                                                                                                                                                                                                                                                                                                                                                 |
| COMPRESSION     | VARCHAR2(8)   |      | Indicates whether table compression is enabled (ENABLED) or not (DISABLED); NULL for partitioned tables                                                                                                                                                                                                                                                                                                                                                                     |
| COMPRESS_FOR    | VARCHAR2(30)  |      | Default compression for what kind of operations: <ul style="list-style-type: none"> <li>• BASIC</li> <li>• ADVANCED</li> <li>• QUERY LOW</li> <li>• QUERY HIGH</li> <li>• ARCHIVE LOW</li> <li>• ARCHIVE HIGH</li> <li>• NULL</li> </ul> The QUERY LOW, QUERY HIGH, ARCHIVE LOW, and ARCHIVE HIGH values are associated with Hybrid Columnar Compression, a feature of the Enterprise Edition of Oracle Database. See <i>Oracle Database Concepts</i> for more information. |
| DROPPED         | VARCHAR2(3)   |      | Indicates whether the table has been dropped and is in the recycle bin (YES) or not (NO); NULL for partitioned tables<br><br>This view does not return the names of tables that have been dropped.                                                                                                                                                                                                                                                                          |
| SEGMENT_CREATED | VARCHAR2(3)   |      | Indicates whether the table segment has been created (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                      |
| INMEMORY        | VARCHAR2(8)   |      | Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for this segment                                                                                                                                                                                                                                                                                                                                                 |

| Column               | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----------------------|--------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INMEMORY_PRIORITY    | VARCHAR2(8)  |      | <p>Indicates the priority for In-Memory Column Store (IM column store) population. Possible values:</p> <ul style="list-style-type: none"> <li>• LOW</li> <li>• MEDIUM</li> <li>• HIGH</li> <li>• CRITICAL</li> <li>• NONE</li> <li>• NULL</li> </ul> <p>This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_PARTITIONS.</p>            |
| INMEMORY_DISTRIBUTE  | VARCHAR2(15) |      | <p>Indicates how the IM column store is distributed in an Oracle Real Application Clusters (Oracle RAC) environment:</p> <ul style="list-style-type: none"> <li>• AUTO</li> <li>• BY ROWID RANGE</li> <li>• BY PARTITION</li> <li>• BY SUBPARTITION</li> </ul>                                                                                                                                                                                                                                      |
| INMEMORY_COMPRESSION | VARCHAR2(17) |      | <p>Indicates the compression level for the IM column store:</p> <ul style="list-style-type: none"> <li>• NO MEMCOMPRESS</li> <li>• FOR DML</li> <li>• FOR QUERY [ LOW   HIGH ]</li> <li>• FOR CAPACITY [ LOW   HIGH ]</li> <li>• AUTO</li> <li>• NULL</li> </ul> <p>This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_PARTITIONS.</p> |
| INMEMORY_DUPLICATE   | VARCHAR2(13) |      | <p>Indicates the duplicate setting for the IM column store in an Oracle RAC environment:</p> <ul style="list-style-type: none"> <li>• NO DUPLICATE</li> <li>• DUPLICATE</li> <li>• DUPLICATE ALL</li> </ul>                                                                                                                                                                                                                                                                                         |
| EXTERNAL             | VARCHAR2(3)  |      | <p>Indicates whether the table is an external table (YES) or not (NO).</p>                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Column                  | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CELLMEMORY <sup>1</sup> | VARCHAR2(24)   |      | <p>The value for columnar compression in the storage cell flash cache. Possible values:</p> <ul style="list-style-type: none"> <li>ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form</li> <li>DISABLED: Oracle Exadata Storage is prevented from caching in columnar form</li> <li>NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression)</li> <li>FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format</li> <li>FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format</li> </ul>                                                                                                                              |
| HYBRID                  | VARCHAR2(3)    |      | Indicates whether the table is a hybrid partitioned table (YES) or not (NO). A hybrid partitioned table can contain a mixture of partitions stored in segments and partitions stored externally.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| INMEMORY_SERVICE        | VARCHAR2(12)   |      | <p>Indicates how the IM column store is populated on various instances. The possible values are:</p> <ul style="list-style-type: none"> <li>DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default.</li> <li>NONE: Data is not populated on any instance.</li> <li>ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter.</li> <li>USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.</li> </ul> |
| INMEMORY_SERVICE_NAME   | VARCHAR2(1000) |      | Indicates the service name for the service on which the IM column store should be populated. This column has a value only when the corresponding INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| MEMOPTIMIZE_READ        | VARCHAR2(8)    |      | Indicates whether the table is enabled for Fast Key Based Access (ENABLED) or not (DISABLED)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| MEMOPTIMIZE_WRITE       | VARCHAR2(8)    |      | For internal use only                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| HAS_SENSITIVE_COLUMN    | VARCHAR2(3)    |      | Indicates whether the table has one or more sensitive columns (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| LOGICAL_REPLICATION     | VARCHAR2(8)    |      | Indicates whether the table is enabled for logical replication (ENABLED) or not (DISABLED). This setting is ignored if database-wide column data supplemental logging is enabled.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| OWNER          | VARCHAR2(128) | NOT NULL | Owner of the object                                                                                                                                                                                                                                                                                                      |
| OBJECT_NAME    | VARCHAR2(128) | NOT NULL | Name of the object                                                                                                                                                                                                                                                                                                       |
| SUBOBJECT_NAME | VARCHAR2(128) |          | Name of the subobject (for example, partition)                                                                                                                                                                                                                                                                           |
| OBJECT_ID      | NUMBER        | NOT NULL | Dictionary object number of the object                                                                                                                                                                                                                                                                                   |
| DATA_OBJECT_ID | NUMBER        |          | Dictionary object number of the segment that contains the object.<br><b>Note:</b> OBJECT_ID and DATA_OBJECT_ID display data dictionary metadata. Do not confuse these numbers with the unique 16-byte object identifier ( <i>object ID</i> ) that Oracle Database assigns to row objects in object tables in the system. |
| OBJECT_TYPE    | VARCHAR2(23)  |          | Type of the object (such as TABLE, INDEX)                                                                                                                                                                                                                                                                                |
| CREATED        | DATE          | NOT NULL | Timestamp for the creation of the object                                                                                                                                                                                                                                                                                 |
| LAST_DDL_TIME  | DATE          | NOT NULL | Timestamp for the last modification of the object and dependent objects resulting from a DDL statement (including grants and revokes)                                                                                                                                                                                    |
| TIMESTAMP      | VARCHAR2(19)  |          | Timestamp for the specification of the object (character data)                                                                                                                                                                                                                                                           |
| STATUS         | VARCHAR2(7)   |          | Status of the object: <ul style="list-style-type: none"><li>• VALID</li><li>• INVALID</li><li>• N/A</li></ul>                                                                                                                                                                                                            |
| TEMPORARY      | VARCHAR2(1)   |          | Indicates whether the object is temporary (the current session can see only data that it placed in this object itself) (Y) or not (N)                                                                                                                                                                                    |
| GENERATED      | VARCHAR2(1)   |          | Indicates whether the name of this object was system-generated (Y) or not (N)                                                                                                                                                                                                                                            |

| Column            | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SECONDARY         | VARCHAR2(1)   |          | Indicates whether this is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge (Y) or not (N)                                                                                                                                                                                                                                                                                              |
| NAMESPACE         | NUMBER        | NOT NULL | Namespace for the object                                                                                                                                                                                                                                                                                                                                                                                                    |
| EDITION_NAME      | VARCHAR2(128) |          | Name of the edition in which the object is actual                                                                                                                                                                                                                                                                                                                                                                           |
| SHARING           | VARCHAR2(18)  |          | Values: <ul style="list-style-type: none"> <li>• DATA LINK - If the object is data-linked or a data link to an object in the root</li> <li>• METADATA LINK - If the object is metadata-linked or a metadata link to an object in the root</li> <li>• EXTENDED DATA LINK - If the object is extended-data-linked or an extended data link to an object in the root</li> <li>• NONE - If none of the above applies</li> </ul> |
| EDITIONABLE       | VARCHAR2(1)   |          | Values: <ul style="list-style-type: none"> <li>• Y - For objects marked EDITIONABLE</li> <li>• N - For objects marked NONEDITIONABLE</li> <li>• NULL - For objects whose type is not editionable in the database</li> </ul>                                                                                                                                                                                                 |
| ORACLE_MAINTAINED | VARCHAR2(1)   |          | Denotes whether the object was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). An object for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script.                                                                                                                                                                     |
| APPLICATION       | VARCHAR2(1)   |          | Indicates whether the object is an Application common object (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                 |
| DEFAULT_COLLATION | VARCHAR2(100) |          | Default collation for the object                                                                                                                                                                                                                                                                                                                                                                                            |
| DUPLICATED        | VARCHAR2(1)   |          | Indicates whether this object is duplicated on this shard (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                    |
| SHARDED           | VARCHAR2(1)   |          | Indicates whether this object is sharded (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                     |
| IMPORTED_OBJECT   | VARCHAR2(1)   |          | Indicates whether this object is imported (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                    |
| CREATED_APPID     | NUMBER        |          | ID of the Application that created the object                                                                                                                                                                                                                                                                                                                                                                               |
| CREATED_VSNID     | NUMBER        |          | ID of the Application Version that created the object                                                                                                                                                                                                                                                                                                                                                                       |
| MODIFIED_APPID    | NUMBER        |          | ID of the Application that last modified the object                                                                                                                                                                                                                                                                                                                                                                         |
| MODIFIED_VSNID    | NUMBER        |          | ID of the Application Version that last modified the object                                                                                                                                                                                                                                                                                                                                                                 |

## 3.295 ALL\_OBJECTS\_AE

ALL\_OBJECTS\_AE describes the objects (across all editions) accessible to the current user. Dropped objects appear in this view with OBJECT\_TYPE = NON-EXISTENT.

### Related Views

- DBA\_OBJECTS\_AE describes all objects (across all editions) in the database.
- USER\_OBJECTS\_AE describes the objects (across all editions) owned by the current user. This view does not display the OWNER column.

| Column         | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                 |
|----------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128) | NOT NULL | Owner of the object                                                                                                                                                                                                                                                                                                                                                                                                         |
| OBJECT_NAME    | VARCHAR2(128) | NOT NULL | Name of the object                                                                                                                                                                                                                                                                                                                                                                                                          |
| SUBOBJECT_NAME | VARCHAR2(128) |          | Name of the subobject (for example, partition)                                                                                                                                                                                                                                                                                                                                                                              |
| OBJECT_ID      | NUMBER        | NOT NULL | Dictionary object number of the object                                                                                                                                                                                                                                                                                                                                                                                      |
| DATA_OBJECT_ID | NUMBER        |          | Dictionary object number of the segment which contains the object                                                                                                                                                                                                                                                                                                                                                           |
| OBJECT_TYPE    | VARCHAR2(23)  |          | Type of the object                                                                                                                                                                                                                                                                                                                                                                                                          |
| CREATED        | DATE          | NOT NULL | Timestamp for the creation of the object                                                                                                                                                                                                                                                                                                                                                                                    |
| LAST_DDL_TIME  | DATE          | NOT NULL | Timestamp for the last modification of the object and dependent objects resulting from a DDL statement (including grants and revokes)                                                                                                                                                                                                                                                                                       |
| TIMESTAMP      | VARCHAR2(19)  |          | Timestamp for the specification of the object (character data)                                                                                                                                                                                                                                                                                                                                                              |
| STATUS         | VARCHAR2(7)   |          | Status of the object: <ul style="list-style-type: none"> <li>• VALID</li> <li>• INVALID</li> <li>• N/A</li> </ul>                                                                                                                                                                                                                                                                                                           |
| TEMPORARY      | VARCHAR2(1)   |          | Indicates whether the object is temporary (the current session can see only data that it placed in this object itself) (Y) or not (N)                                                                                                                                                                                                                                                                                       |
| GENERATED      | VARCHAR2(1)   |          | Indicates whether the name of this object was system-generated (Y) or not (N)                                                                                                                                                                                                                                                                                                                                               |
| SECONDARY      | VARCHAR2(1)   |          | Indicates whether this is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge (Y) or not (N)                                                                                                                                                                                                                                                                                              |
| NAMESPACE      | NUMBER        | NOT NULL | Namespace for the object                                                                                                                                                                                                                                                                                                                                                                                                    |
| EDITION_NAME   | VARCHAR2(128) |          | Name of the edition in which the object is actual                                                                                                                                                                                                                                                                                                                                                                           |
| SHARING        | VARCHAR2(18)  |          | Values: <ul style="list-style-type: none"> <li>• DATA LINK - If the object is data-linked or a data link to an object in the root</li> <li>• METADATA LINK - If the object is metadata-linked or a metadata link to an object in the root</li> <li>• EXTENDED DATA LINK - If the object is extended-data-linked or an extended data link to an object in the root</li> <li>• NONE - If none of the above applies</li> </ul> |

| Column            | Datatype      | NULL | Description                                                                                                                                                                                                                                             |
|-------------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| EDITIONABLE       | VARCHAR2(1)   |      | Values: <ul style="list-style-type: none"> <li>Y - For objects marked EDITIONABLE</li> <li>N - For objects marked NONEDITIONABLE</li> <li>NULL - For objects whose type is not editionable in the database</li> </ul>                                   |
| ORACLE_MAINTAINED | VARCHAR2(1)   |      | Denotes whether the object was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). An object for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script. |
| APPLICATION       | VARCHAR2(1)   |      | Indicates whether the object is an Application common object (Y) or not (N)                                                                                                                                                                             |
| DEFAULT_COLLATION | VARCHAR2(100) |      | Default collation for the object                                                                                                                                                                                                                        |
| DUPLICATED        | VARCHAR2(1)   |      | Indicates whether this object is duplicated on this shard (Y) or not (N)                                                                                                                                                                                |
| SHARDED           | VARCHAR2(1)   |      | Indicates whether this object is sharded (Y) or not (N)                                                                                                                                                                                                 |
| IMPORTED_OBJECT   | VARCHAR2(1)   |      | Indicates whether this object is imported (Y) or not (N)                                                                                                                                                                                                |
| CREATED_APPID     | NUMBER        |      | ID of the Application that created the object                                                                                                                                                                                                           |
| CREATED_VSNID     | NUMBER        |      | ID of the Application Version that created the object                                                                                                                                                                                                   |
| MODIFIED_APPID    | NUMBER        |      | ID of the Application that last modified the object                                                                                                                                                                                                     |
| MODIFIED_VSNID    | NUMBER        |      | ID of the Application Version that last modified the object                                                                                                                                                                                             |

## 3.296 ALL\_OPANCILLARY

ALL\_OPANCILLARY describes operators whose bindings are ancillary to other (primary) operators.

#### Related Views

- DBA\_OPANCILLARY describes such information about all operators in the database.
- USER\_OPANCILLARY describes such information about operators owned by the current user.

| Column        | Datatype      | NULL     | Description                              |
|---------------|---------------|----------|------------------------------------------|
| OWNER         | VARCHAR2(128) | NOT NULL | Owner of the ancillary operator          |
| OPERATOR_NAME | VARCHAR2(128) | NOT NULL | Name of the ancillary operator           |
| BINDING#      | NUMBER        | NOT NULL | Binding number of the ancillary operator |
| PRIMOP_OWNER  | VARCHAR2(128) | NOT NULL | Owner of the primary operator            |
| PRIMOP_NAME   | VARCHAR2(128) | NOT NULL | Name of the primary operator             |

| Column       | Datatype | NULL     | Description                            |
|--------------|----------|----------|----------------------------------------|
| PRIMOP_BIND# | NUMBER   | NOT NULL | Binding number of the primary operator |

## 3.297 ALL\_OPARGUMENTS

ALL\_OPARGUMENTS describes arguments for each operator binding accessible to the current user.

#### Related Views

- DBA\_OPARGUMENTS describes arguments of all operator bindings in the database.
- USER\_OPARGUMENTS describes arguments of all operator bindings owned by the current user.

| Column        | Datatype      | NULL     | Description                                      |
|---------------|---------------|----------|--------------------------------------------------|
| OWNER         | VARCHAR2(128) | NOT NULL | Owner of the operator argument                   |
| OPERATOR_NAME | VARCHAR2(128) | NOT NULL | Name of the operator argument                    |
| BINDING#      | NUMBER        | NOT NULL | Binding number of the operator argument          |
| POSITION      | NUMBER        | NOT NULL | Position of the operator argument (1, 2, 3, ...) |
| ARGUMENT_TYPE | VARCHAR2(61)  |          | Datatype of the operator argument                |

## 3.298 ALL\_OPBINDINGS

ALL\_OPBINDINGS describes the binding functions and methods on the operators accessible to the current user.

#### Related Views

- DBA\_OPBINDINGS describes the binding functions and methods on all operators in the database.
- USER\_OPBINDINGS describes the binding functions and methods on the operators owned by the current user.

| Column                     | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER                      | VARCHAR2(128) | NOT NULL | Owner of the operator                                                                                                                                                                                                                                                                                                                                              |
| OPERATOR_NAME              | VARCHAR2(128) | NOT NULL | Name of the operator                                                                                                                                                                                                                                                                                                                                               |
| BINDING#                   | NUMBER        | NOT NULL | Binding number of the operator                                                                                                                                                                                                                                                                                                                                     |
| FUNCTION_NAME              | VARCHAR2(92)  |          | Name of the binding function or method as specified by the user                                                                                                                                                                                                                                                                                                    |
| RETURN_SCHEMA              | VARCHAR2(128) |          | Name of the schema of the return type if the return type of the binding is an object type                                                                                                                                                                                                                                                                          |
| RETURN_TYPE                | VARCHAR2(128) |          | Name of the return type                                                                                                                                                                                                                                                                                                                                            |
| IMPLEMENTATION_TYPE_SCHEMA | VARCHAR2(128) |          | If the operator was created WITH INDEX CONTEXT or SCAN CONTEXT, then this column displays the schema of the implementation type used by the functional implementation of the operator as a scan context (null if the operator was created without this syntax).<br><b>See Also:</b> the CREATE OPERATOR statement in <i>Oracle Database SQL Language Reference</i> |
| IMPLEMENTATION_TYPE        | VARCHAR2(128) |          | If the operator was created WITH INDEX CONTEXT or SCAN CONTEXT, then this column displays the name of the implementation type used by the functional implementation of the operator as a scan context (null if the operator was created without this syntax).<br><b>See Also:</b> the CREATE OPERATOR statement in <i>Oracle Database SQL Language Reference</i>   |
| PROPERTY                   | VARCHAR2(43)  |          | Property of the operator binding: <ul style="list-style-type: none"> <li>• WITH INDEX CONTEXT</li> <li>• COMPUTE ANCILLARY DATA</li> <li>• ANCILLARY TO</li> <li>• WITH COLUMN CONTEXT</li> <li>• WITH INDEX, COLUMN CONTEXT</li> <li>• COMPUTE ANCILLARY DATA, WITH COLUMN CONTEXT</li> </ul>                                                                     |

## Static Data Dictionary Views: ALL\_PART\_COL\_STATISTICS to DATABASE\_PROPERTIES

This chapter contains the static data dictionary views ALL\_PART\_COL\_STATISTICS through DATABASE\_PROPERTIES.

### 4.1 ALL\_PART\_COL\_STATISTICS

ALL\_PART\_COL\_STATISTICS displays column statistics and histogram information for the table partitions accessible to the current user.

#### Related Views

- DBA\_PART\_COL\_STATISTICS displays column statistics and histogram information for all table partitions in the database.
- USER\_PART\_COL\_STATISTICS displays column statistics and histogram information for the table partitions owned by the current user. This view does not display the OWNER column.

| Column         | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                 |
|----------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128)  | NOT NULL | Owner of the partitioned table                                                                                                                                                                                                                                                                                                              |

## 4.2 ALL\_PART\_HISTOGRAMS

ALL\_PART\_HISTOGRAMS displays the histogram data (endpoints per histogram) for the histograms on the table partitions accessible to the current user.

#### Related Views

- DBA\_PART\_HISTOGRAMS displays the histogram data for the histograms on all table partitions in the database.
- USER\_PART\_HISTOGRAMS displays the histogram data for the histograms on the table partitions owned by the current user. This view does not display the OWNER column.

**Note**

These views are populated only if you collect statistics on the index using the DBMS\_STATS package.

| Column                    | Datatype       | NULL | Description                                                                                              |
|---------------------------|----------------|------|----------------------------------------------------------------------------------------------------------|
| OWNER                     | VARCHAR2(128)  |      | Owner of the table                                                                                       |
| TABLE_NAME                | VARCHAR2(128)  |      | Name of the table                                                                                        |
| PARTITION_NAME            | VARCHAR2(128)  |      | Name of the table partition                                                                              |
| COLUMN_NAME               | VARCHAR2(4000) |      | Name of the column                                                                                       |
| BUCKET_NUMBER             | NUMBER         |      | Bucket number of the histogram                                                                           |
| ENDPOINT_VALUE            | NUMBER         |      | Normalized endpoint values for the bucket                                                                |
| ENDPOINT_ACTUAL_VALUE     | VARCHAR2(4000) |      | Actual (not normalized) string value of the endpoint for the bucket                                      |
| ENDPOINT_ACTUAL_VALUE_RAW | RAW(1000)      |      | Endpoint actual value in raw format                                                                      |
| ENDPOINT_REPEAT_COUNT     | NUMBER         |      | Frequency of the endpoint (applies only to hybrid histograms, and is set to 0 for other histogram types) |

## 4.3 ALL\_PART\_INDEXES

ALL\_PART\_INDEXES displays the object-level partitioning information for the partitioned indexes accessible to the current user.

**Related Views**

- DBA\_PART\_INDEXES displays the object-level partitioning information for all partitioned indexes in the database.
- USER\_PART\_INDEXES displays the object-level partitioning information for the partitioned indexes owned by the current user. This view does not display the OWNER column.

| Column     | Datatype      | NULL     | Description                    |
|------------|---------------|----------|--------------------------------|
| OWNER      | VARCHAR2(128) | NOT NULL | Owner of the partitioned index |
| INDEX_NAME | VARCHAR2(128) | NOT NULL | Name of the partitioned index  |
| TABLE_NAME | VARCHAR2(128) | NOT NULL | Name of the partitioned table  |

| Column                    | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                  |
|---------------------------|--------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PARTITIONING_TYPE         | VARCHAR2(9)  |          | Type of the partitioning method: <ul style="list-style-type: none"> <li>NONE - Not specified</li> </ul> <b>See Also:</b> the *_INDEXES view <ul style="list-style-type: none"> <li>RANGE</li> <li>HASH</li> <li>SYSTEM</li> <li>LIST</li> <li>REFERENCE</li> </ul>           |

## 4.5 ALL\_PART\_LOBS

ALL\_PART\_LOBS displays table-level information about the partitioned LOBs accessible to the current user, including default attributes for LOB data partitions.

### Related Views

- DBA\_PART\_LOBS displays table-level information about all partitioned LOBs in the database.
- USER\_PART\_LOBS displays table-level information about the partitioned LOBs owned by the current user. This view does not display the TABLE\_OWNER column.

| Column         | Datatype       | NULL     | Description                                        |
|----------------|----------------|----------|----------------------------------------------------|
| TABLE_OWNER    | VARCHAR2(128)  | NOT NULL | Owner of the partitioned table containing the LOBs |
| TABLE_NAME     | VARCHAR2(128)  | NOT NULL | Name of the partitioned table containing the LOBs  |
| COLUMN_NAME    | VARCHAR2(4000) |          | Name of the LOB column                             |
| LOB_NAME       | VARCHAR2(128)  | NOT NULL | Name of the partitioned LOB                        |
| LOB_INDEX_NAME | VARCHAR2(128)  | NOT NULL | Name of the partitioned LOB index                  |

| Column              | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

## 4.6 ALL\_PART\_TABLES

ALL\_PART\_TABLES displays the object-level partitioning information for the partitioned tables accessible to the current user.

#### Related Views

- DBA\_PART\_TABLES displays the object-level partitioning information for all partitioned tables in the database.
- USER\_PART\_TABLES displays the object-level partitioning information for the partitioned tables owned by the current user. This view does not display the OWNER column.

| Column     | Datatype      | NULL | Description                    |
|------------|---------------|------|--------------------------------|
| OWNER      | VARCHAR2(128) |      | Owner of the partitioned table |
| TABLE_NAME | VARCHAR2(128) |      | Name of the partitioned table  |

| Column                    | Datatype     | NULL | Description                                                                                                                                                                                                                                                                      |
|---------------------------|--------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| DEF_COMPRESS_FOR     | VARCHAR2(30) |      | Default compression for what kind of operations to be used when adding a partition: <ul style="list-style-type: none"> <li>BASIC</li> <li>ADVANCED</li> <li>QUERY LOW<sup>1</sup></li> <li>QUERY HIGH<sup>1</sup></li> <li>ARCHIVE LOW<sup>1</sup></li> <li>ARCHIVE HIGH<sup>1</sup></li> <li>UNKNOWN</li> <li>NULL</li> </ul> |
| DEF_BUFFER_POOL      | VARCHAR2(7)  |      | Default buffer pool to be used when adding a partition: <ul style="list-style-type: none"> <li>DEFAULT</li> <li>KEEP</li> <li>RECYCLE</li> <li>NULL</li> </ul>                                                                                                                                                                 |
| DEF_FLASH_CACHE      | VARCHAR2(7)  |      | Default Database Smart Flash Cache hint to be used when adding a partition: <ul style="list-style-type: none"> <li>DEFAULT</li> <li>KEEP</li> <li>NONE</li> </ul> <p>Solaris and Oracle Linux functionality only.</p>                                                                                                          |
| DEF_CELL_FLASH_CACHE | VARCHAR2(7)  |      | Default cell flash cache hint to be used when adding a partition: <ul style="list-style-type: none"> <li>DEFAULT</li> <li>KEEP</li> <li>NONE</li> </ul> <p><b>See Also:</b> Oracle Exadata Storage Server Software documentation for more information</p>                                                                      |

| Column                   | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                    |
|--------------------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REF_PTN_CONSTRAINT_NAME  | VARCHAR2(128)  |      | Name of the partitioning referential constraint for reference-partitioned tables                                                                                                                                                                                                               |
| INTERVAL                 | VARCHAR2(1000) |      | String of the interval value                                                                                                                                                                                                                                                                   |
| AUTOLIST                 | VARCHAR2(3)    |      | Indicates whether a table is partitioned by auto list partitioning (YES) or not (NO)                                                                                                                                                                                                           |
| INTERVAL_SUBPARTITION    | VARCHAR2(1000) |      | String of the subpartition interval value                                                                                                                                                                                                                                                      |
| AUTOLIST_SUBPARTITION    | VARCHAR2(3)    |      | Indicates whether auto list partitioning is being used (YES) or not (NO) for this subpartition                                                                                                                                                                                                 |
| IS_NESTED                | VARCHAR2(3)    |      | Indicates whether the partitioned table is a nested table (YES) or not (NO)<br><b>See Also:</b> the *_NESTED_TABLES view for the parent table name/column                                                                                                                                      |
| DEF_SEGMENT_CREATION     | VARCHAR2(4)    |      | Specifies whether the default for segment creation was specified on the table level: <ul style="list-style-type: none"> <li>• NO - deferred was specified</li> <li>• YES - immediate was specified</li> <li>• NONE - a default for segment creation was not specified</li> </ul>               |
| DEF_INDEXING             | VARCHAR2(3)    |      | Indicates the indexing property specified for the table.<br>Possible values: <ul style="list-style-type: none"> <li>• ON - INDEXING on was specified explicitly, or no indexing property was specified</li> <li>• OFF - INDEXING off was specified.</li> </ul>                                 |
| DEF_INMEMORY             | VARCHAR2(8)    |      | Indicates whether the In-Memory Column Store (IM column store) is by default enabled (ENABLED), disabled (DISABLED), or not specified (NONE) for partitions in this table                                                                                                                      |
| DEF_INMEMORY_PRIORITY    | VARCHAR2(8)    |      | Indicates the default priority for In-Memory Column Store (IM column store) population. Possible values: <ul style="list-style-type: none"> <li>• LOW</li> <li>• MEDIUM</li> <li>• HIGH</li> <li>• CRITICAL</li> <li>• NONE</li> <li>• NULL</li> </ul>                                         |
| DEF_INMEMORY_DISTRIBUTE  | VARCHAR2(15)   |      | Indicates how the IM column store is distributed by default for partitions of the table in an Oracle Real Application Clusters (Oracle RAC) environment: <ul style="list-style-type: none"> <li>• AUTO</li> <li>• BY ROWID RANGE</li> <li>• BY PARTITION</li> <li>• BY SUBPARTITION</li> </ul> |
| DEF_INMEMORY_COMPRESSION | VARCHAR2(17)   |      | Default compression level for the IM column store: <ul style="list-style-type: none"> <li>• NO MEMCOMPRESS</li> <li>• FOR DML</li> <li>• FOR QUERY [ LOW   HIGH ]</li> <li>• FOR CAPACITY [ LOW   HIGH ]</li> <li>• AUTO</li> <li>• NULL</li> </ul>                                            |

| Column                      | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DEF_INMEMORY_DUPLICATE      | VARCHAR2(13)   |      | Indicates the default duplicate setting for the IM column store in an Oracle RAC environment: <ul style="list-style-type: none"> <li>• NO DUPLICATE</li> <li>• DUPLICATE</li> <li>• DUPLICATE ALL</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| DEF_READ_ONLY               | VARCHAR2(3)    |      | Indicates the default setting for new partitions: <ul style="list-style-type: none"> <li>• YES: The default setting for new partitions is read-only.</li> <li>• NO: The default setting for new partitions is read/write.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| DEF_CELLMEMORY <sup>2</sup> | VARCHAR2(24)   |      | Shows the default value for the CELLMEMORY attribute that new partitions in the parent table will inherit unless the behavior is overridden explicitly                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| DEF_INMEMORY_SERVICE        | VARCHAR2(12)   |      | Indicates how the IM column store is populated on various instances by default for partitions of the table. The possible values are: <ul style="list-style-type: none"> <li>• DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default.</li> <li>• NONE: Data is not populated on any instance.</li> <li>• ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter.</li> <li>• USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the DEF_INMEMORY_SERVICE_NAME column.</li> </ul> |
| DEF_INMEMORY_SERVICE_NAME   | VARCHAR2(1000) |      | Specifies the service name for the service on which the IM column store should be populated by default for partitions of the table. This column has a value only when the corresponding DEF_INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| AUTO                        | VARCHAR2(3)    |      | Indicates whether the table was automatically partitioned (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

<sup>1</sup> Hybrid Columnar Compression is a feature of the Enterprise Edition of Oracle Database that is dependent on the underlying storage system. See *Oracle Database Concepts* for more information.

<sup>2</sup> This column is intended for use with Oracle Exadata

## 4.7 ALL\_PARTIAL\_DROP\_TABS

ALL\_PARTIAL\_DROP\_TABS describes tables accessible to the current user that have partially completed DROP COLUMN operations. Such operations might have been interrupted by the user or by a system crash.

### Related Views

- DBA\_PARTIAL\_DROP\_TABS describes all tables in the database that have partially completed DROP COLUMN operations.
- USER\_PARTIAL\_DROP\_TABS describes tables in the schema of the current user that have partially completed DROP COLUMN operations. This view does not display the OWNER column.

| Column     | Datatype      | NULL     | Description         |
|------------|---------------|----------|---------------------|
| OWNER      | VARCHAR2(128) | NOT NULL | Owner of the object |
| TABLE_NAME | VARCHAR2(128) | NOT NULL | Name of the table   |

## 4.8 ALL\_PENDING\_CONV\_TABLES

ALL\_PENDING\_CONV\_TABLES describes the pending conversion tables (tables which are not upgraded to the latest type version) accessible to the current user.

### Related Views

- DBA\_PENDING\_CONV\_TABLES describes all pending conversion tables in the database.
- USER\_PENDING\_CONV\_TABLES describes the pending conversion tables owned by the current user. This view does not display the OWNER column.

| Column     | Datatype      | NULL     | Description        |
|------------|---------------|----------|--------------------|
| OWNER      | VARCHAR2(128) | NOT NULL | Owner of the table |
| TABLE_NAME | VARCHAR2(128) | NOT NULL | Name of the table  |

## 4.9 ALL\_PLSQL\_COLL\_TYPES

ALL\_PLSQL\_COLL\_TYPES describes named PL/SQL collection types accessible to the user.

### Related Views

- DBA\_PLSQL\_COLL\_TYPES describes all named PL/SQL collection types in the database. This view does not display the CHAR\_USED column.
- USER\_PLSQL\_COLL\_TYPES describes the user's own named PL/SQL collection types. This view does not display the OWNER or CHAR\_USED columns.

| Column             | Datatype      | NULL | Description                                                                                 |
|--------------------|---------------|------|---------------------------------------------------------------------------------------------|
| OWNER              | VARCHAR2(128) |      | Owner of the type                                                                           |
| TYPE_NAME          | VARCHAR2(128) |      | Name of the type                                                                            |
| PACKAGE_NAME       | VARCHAR2(128) |      | Name of the package containing the collection                                               |
| COLL_TYPE          | VARCHAR2(128) |      | Collection type                                                                             |
| UPPER_BOUND        | NUMBER        |      | The upper bound of a varray or length constraint of an index by VARCHAR2 table              |
| ELEM_TYPE_OWNER    | VARCHAR2(128) |      | Owner of the type of the element                                                            |
| ELEM_TYPE_NAME     | VARCHAR2(136) |      | Name of the type of the element                                                             |
| ELEM_TYPE_PACKAGE  | VARCHAR2(128) |      | Name of the package containing the element                                                  |
| LENGTH             | NUMBER        |      | Length of the CHAR element or maximum length of the VARCHAR or VARCHAR2 element             |
| PRECISION          | NUMBER        |      | Decimal precision of the NUMBER or DECIMAL element or binary precision of the FLOAT element |
| SCALE              | NUMBER        |      | Scale of the NUMBER or DECIMAL element                                                      |
| CHARACTER_SET_NAME | VARCHAR2(44)  |      | Character set name of the element                                                           |
| ELEM_STORAGE       | VARCHAR2(7)   |      | Storage optimization specification for VARRAY of numeric elements                           |
| NULLS_STORED       | VARCHAR2(3)   |      | Indicates whether null information is stored with each VARRAY element (YES) or not (NO)     |
| CHAR_USED          | VARCHAR2(1)   |      | C if the width was specified in characters, B if in bytes                                   |
| INDEX_BY           | VARCHAR2(14)  |      | Index by BINARY_INTEGER or VARCHAR2                                                         |
| ELEM_TYPE_MOD      | VARCHAR2(7)   |      | Type modifier of the element                                                                |

## 4.10 ALL\_PLSQL\_OBJECT\_SETTINGS

ALL\_PLSQL\_OBJECT\_SETTINGS displays information about the compiler settings for the stored objects accessible to the current user.

### Related Views

- DBA\_PLSQL\_OBJECT\_SETTINGS displays information about the compiler settings for all stored objects in the database.
- USER\_PLSQL\_OBJECT\_SETTINGS displays information about the compiler settings for the stored objects owned by the current user. This view does not display the OWNER column.

| Column               | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER                | VARCHAR2(128)  | NOT NULL | Owner of the object                                                                                                                                                                                                                                                                                                                                                                      |
| NAME                 | VARCHAR2(128)  | NOT NULL | Name of the object                                                                                                                                                                                                                                                                                                                                                                       |
| TYPE                 | VARCHAR2(12)   |          | Type of the object: <ul style="list-style-type: none"> <li>• PROCEDURE</li> <li>• FUNCTION</li> <li>• PACKAGE</li> <li>• PACKAGE BODY</li> <li>• TRIGGER</li> <li>• TYPE</li> <li>• TYPE BODY</li> </ul>                                                                                                                                                                                 |
| PLSQL_OPTIMIZE_LEVEL | NUMBER         |          | Optimization level that was used to compile the object                                                                                                                                                                                                                                                                                                                                   |
| PLSQL_CODE_TYPE      | VARCHAR2(4000) |          | Compilation mode for the object                                                                                                                                                                                                                                                                                                                                                          |
| PLSQL_DEBUG          | VARCHAR2(4000) |          | Indicates whether the object was compiled with debug information or not                                                                                                                                                                                                                                                                                                                  |
| PLSQL_WARNINGS       | VARCHAR2(4000) |          | Compiler warning settings that were used to compile the object                                                                                                                                                                                                                                                                                                                           |
| NLS_LENGTH_SEMANTICS | VARCHAR2(4000) |          | NLS length semantics that were used to compile the object                                                                                                                                                                                                                                                                                                                                |
| PLSQL_CCFLAGS        | VARCHAR2(4000) |          | Conditional compilation flag settings that were used to compile the object                                                                                                                                                                                                                                                                                                               |
| PLSCOPE_SETTINGS     | VARCHAR2(4000) |          | Settings for using PL/Scope                                                                                                                                                                                                                                                                                                                                                              |
| ORIGIN_CON_ID        | NUMBER         |          | The ID of the container where the data originates.<br>Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows in non-CDBs. This value is not used for CDBs.</li> <li>• <i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root)</li> </ul> |

## 4.12 ALL\_PLSQL\_TYPES

ALL\_PLSQL\_TYPES describes the PL/SQL types accessible to the user.

### Related Views

- DBA\_PLSQL\_TYPES describes all the PL/SQL types in the database.
- USER\_PLSQL\_TYPES describes the user's own PL/SQL types. This view does not display the OWNER column.

| Column         | Datatype      | NULL     | Description                                                                      |
|----------------|---------------|----------|----------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128) | NOT NULL | Owner of the type                                                                |
| TYPE_NAME      | VARCHAR2(136) |          | Name of the type                                                                 |
| PACKAGE_NAME   | VARCHAR2(128) | NOT NULL | Name of the package containing the type                                          |
| TYPE_OID       | RAW(16)       | NOT NULL | Object identifier (OID) of the type                                              |
| TYPECODE       | VARCHAR2(58)  |          | Typecode of the type                                                             |
| ATTRIBUTES     | NUMBER        |          | Number of attributes in the type                                                 |
| CONTAINS_PLSQL | VARCHAR2(3)   |          | Indicates whether the type contains PL/SQL-specific data types (YES) or not (NO) |

## 4.13 ALL\_POLICIES

ALL\_POLICIES describes all Oracle Virtual Private Database (VPD) security policies for objects accessible to the current user. A security policy is a list of security requirements and rules that regulate row level access to those database objects.

#### Related Views

- DBA\_POLICIES describes all Oracle Virtual Private Database (VPD) security policies in the database.
- USER\_POLICIES describes all Oracle Virtual Private Database (VPD) security policies associated with objects owned by the current user. This view does not display the OBJECT\_OWNER column.

| Column       | Datatype      | NULL | Description                                                                                  |
|--------------|---------------|------|----------------------------------------------------------------------------------------------|
| OBJECT_OWNER | VARCHAR2(128) |      | Owner of the synonym, table, or view                                                         |
| OBJECT_NAME  | VARCHAR2(128) |      | Name of the synonym, table, or view                                                          |
| POLICY_GROUP | VARCHAR2(128) |      | Name of the policy group                                                                     |
| POLICY_NAME  | VARCHAR2(128) |      | Name of the policy                                                                           |
| PF_OWNER     | VARCHAR2(128) |      | Owner of the policy function                                                                 |
| PACKAGE      | VARCHAR2(128) |      | Name of the package containing the policy function                                           |
| FUNCTION     | VARCHAR2(128) |      | Name of the policy function                                                                  |
| SEL          | VARCHAR2(3)   |      | Indicates whether the policy is applied to queries on the object (YES) or not (NO)           |
| INS          | VARCHAR2(3)   |      | Indicates whether the policy is applied to INSERT statements on the object (YES) or not (NO) |
| UPD          | VARCHAR2(3)   |      | Indicates whether the policy is applied to UPDATE statements on the object (YES) or not (NO) |

| Column         | Datatype     | NULL | Description                                                                                                                                                                          |
|----------------|--------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DEL            | VARCHAR2(3)  |      | Indicates whether the policy is applied to DELETE statements on the object (YES) or not (NO)                                                                                         |
| IDX            | VARCHAR2(3)  |      | Indicates whether the policy is enforced for index maintenance on the object (YES) or not (NO)                                                                                       |
| CHK_OPTION     | VARCHAR2(3)  |      | Indicates whether the check option is enforced for the policy (YES) or not (NO)                                                                                                      |
| ENABLE         | VARCHAR2(3)  |      | Indicates whether the policy is enabled (YES) or disabled (NO)                                                                                                                       |
| STATIC_POLICY  | VARCHAR2(3)  |      | Indicates whether the policy is static (YES) or not (NO). This column is obsolete because information about static policies is shown in the POLICY_TYPE column.                      |
| POLICY_TYPE    | VARCHAR2(24) |      | Policy type: <ul style="list-style-type: none"> <li>• STATIC</li> <li>• SHARED_STATIC</li> <li>• CONTEXT_SENSITIVE</li> <li>• SHARED_CONTEXT_SENSITIVE</li> <li>• DYNAMIC</li> </ul> |
| LONG_PREDICATE | VARCHAR2(3)  |      | Indicates whether the policy function can return a maximum of 32 KB of predicate (YES) or not (NO). If NO, the default maximum predicate size is 4000 bytes.                         |
| COMMON         | VARCHAR2(3)  |      | Indicates whether the policy is applied and enforced in all application PDBs (YES) or only in the local PDB (NO)                                                                     |
| INHERITED      | VARCHAR2(3)  |      | Indicates whether the policy is inherited from the root (YES) or not (NO)                                                                                                            |

## 4.14 ALL\_POLICY\_ATTRIBUTES

ALL\_POLICY\_ATTRIBUTES lists the attribute associations {Namespaces, Attributes} of context-sensitive and shared context-sensitive Oracle Virtual Private Database (VPD) policies for objects accessible to the current user.

#### Related Views

- DBA\_POLICY\_ATTRIBUTES lists the attribute associations {Namespaces, Attributes} of all context-sensitive and shared context-sensitive Oracle Virtual Private Database (VPD) policies in the database.

- `USER_POLICY_ATTRIBUTES` lists the attribute associations {Namespaces, Attributes} of all context-sensitive and shared-context sensitive Oracle Virtual Private Database (VPD) policies for synonyms, tables, or views owned by the user.

| Column       | Datatype      | NULL | Description                                                                                                                |
|--------------|---------------|------|----------------------------------------------------------------------------------------------------------------------------|
| OBJECT_OWNER | VARCHAR2(128) |      | Owner of the synonym, table, or view                                                                                       |
| OBJECT_NAME  | VARCHAR2(128) |      | Name of the synonym, table, or view                                                                                        |
| POLICY_GROUP | VARCHAR2(128) |      | Name of the policy group                                                                                                   |
| POLICY_NAME  | VARCHAR2(128) |      | Name of the policy                                                                                                         |
| NAMESPACE    | VARCHAR2(128) |      | Name of the local application context                                                                                      |
| ATTRIBUTE    | VARCHAR2(128) |      | Name of the attribute                                                                                                      |
| COMMON       | VARCHAR2(3)   |      | Indicates whether the policy attribute is applied and enforced in all application PDBs (YES) or only in the local PDB (NO) |
| INHERITED    | VARCHAR2(3)   |      | Indicates whether the policy attribute is inherited from the root (YES) or not (NO)                                        |

## 4.15 ALL\_POLICY\_CONTEXTS

`ALL_POLICY_CONTEXTS` describes the driving contexts defined for the synonyms, tables, and views accessible to the current user.

#### Related Views

- `DBA_POLICY_CONTEXTS` describes all driving contexts in the database.
- `USER_POLICY_CONTEXTS` describes the driving contexts defined for the synonyms, tables, and views owned by the current user. This view does not display the `OBJECT_OWNER` column.

| Column       | Datatype      | NULL     | Description                                                                                                              |
|--------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------|
| OBJECT_OWNER | VARCHAR2(128) | NOT NULL | Owner of the synonym, table, or view                                                                                     |
| OBJECT_NAME  | VARCHAR2(128) | NOT NULL | Name of the synonym, table, or view                                                                                      |
| NAMESPACE    | VARCHAR2(128) | NOT NULL | Namespace of the driving context                                                                                         |
| ATTRIBUTE    | VARCHAR2(128) | NOT NULL | Attribute of the driving context                                                                                         |
| COMMON       | VARCHAR2(3)   |          | Indicates whether the policy context is applied and enforced in all application PDBs (YES) or only in the local PDB (NO) |
| INHERITED    | VARCHAR2(3)   |          | Indicates whether the policy context is inherited from the root (YES) or not (NO)                                        |

## 4.16 ALL\_POLICY\_GROUPS

ALL\_POLICY\_GROUPS describes the policy groups defined for the synonyms, tables, and views accessible to the current user.

**Related Views**

- DBA\_POLICY\_GROUPS describes all policy groups in the database.
- USER\_POLICY\_GROUPS describes the policy groups defined for the synonyms, tables, and views owned by the current user. This view does not display the OBJECT\_OWNER column.

| Column       | Datatype      | NULL | Description                                                                                                            |
|--------------|---------------|------|------------------------------------------------------------------------------------------------------------------------|
| OBJECT_OWNER | VARCHAR2(128) |      | Owner of the synonym, table, or view                                                                                   |
| OBJECT_NAME  | VARCHAR2(128) |      | Name of the synonym, table, or view                                                                                    |
| POLICY_GROUP | VARCHAR2(128) |      | Name of the policy group                                                                                               |
| COMMON       | VARCHAR2(3)   |      | Indicates whether the policy group is applied and enforced in all application PDBs (YES) or only in the local PDB (NO) |
| INHERITED    | VARCHAR2(3)   |      | Indicates whether the policy group is inherited from the root (YES) or not (NO)                                        |

## 4.17 ALL\_PROCEEDURES

ALL\_PROCEEDURES lists all functions and procedures that are accessible to the current user, along with associated properties. For example, ALL\_PROCEEDURES indicates whether or not a function is pipelined, parallel enabled or an aggregate function. If a function is pipelined or an aggregate function, the associated implementation type (if any) is also identified.

**Related Views**

- DBA\_PROCEEDURES lists all functions and procedures available in the database, along with associated properties.
- USER\_PROCEEDURES lists all functions and procedures owned by the current user, along with associated properties. It does not contain the OWNER column.

| Column                                  | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER                                   | VARCHAR2(128)  |      | Owner of the procedure                                                                                                                                                                                                                                                                                                                                                            |

| DESTINATION_QUEUE_NAME      | VARCHAR2(128)  |          | Name of the destination queue of the propagation                                                                                                                                                                                         |
| DESTINATION_DBLINK          | VARCHAR2(128)  |          | Database link to propagate events from the source queue to the destination queue                                                                                                                                                         |
| RULE_SET_OWNER              | VARCHAR2(128)  |          | Owner of the propagation positive rule set                                                                                                                                                                                               |
| RULE_SET_NAME               | VARCHAR2(128)  |          | Name of the propagation positive rule set                                                                                                                                                                                                |
| NEGATIVE_RULE_SET_OWNER     | VARCHAR2(128)  |          | Owner of the propagation negative rule set                                                                                                                                                                                               |
| NEGATIVE_RULE_SET_NAME      | VARCHAR2(128)  |          | Name of the propagation negative rule set                                                                                                                                                                                                |
| QUEUE_TO_QUEUE              | VARCHAR2(5)    |          | Indicates whether the propagation is a queue-to-queue propagation (TRUE) or not (FALSE). A queue-to-queue propagation always has its own exclusive propagation job to propagate messages from the source queue to the destination queue. |
| STATUS                      | VARCHAR2(8)    |          | Status of the propagation: <ul style="list-style-type: none"> <li>• DISABLED</li> <li>• ENABLED</li> <li>• ABORTED</li> </ul>                                                                                                            |
| ERROR_MESSAGE               | VARCHAR2(4000) |          | Error message last encountered by propagation                                                                                                                                                                                            |
| ERROR_DATE                  | DATE           |          | Time that propagation last encountered an error                                                                                                                                                                                          |
| ORIGINAL_PROPAGATION_NAME   | VARCHAR2(128)  |          | Original propagation from which the propagation is cloned                                                                                                                                                                                |
| ORIGINAL_SOURCE_QUEUE_OWNER | VARCHAR2(128)  |          | Source queue owner of the original propagation                                                                                                                                                                                           |

| Column                     | Datatype      | NULL | Description                                                                                           |
|----------------------------|---------------|------|-------------------------------------------------------------------------------------------------------|
| ORIGINAL_SOURCE_QUEUE_NAME | VARCHAR2(128) |      | Source queue name of the original propagation                                                         |
| ACKED_SCN                  | NUMBER        |      | Acknowledged SCN of the subscribers of captured messages in the destination queue for the propagation |
| AUTO_MERGE_THRESHOLD       | NUMBER        |      | Merge threshold value for merging the propagation back to the original source queue                   |

## 4.19 ALL\_QUEUE\_EVENT\_STREAMS

ALL\_QUEUE\_EVENT\_STREAMS describes the Transactional Event Queue (TEQ) event streams accessible to the current user.

#### Related Views

- DBA\_QUEUE\_EVENT\_STREAMS describes all TEQ event streams in the database.
- USER\_QUEUE\_EVENT\_STREAMS describes the TEQ event streams owned by the current user.

| Column                | Datatype      | NULL     | Description                                                                                                            |

## 4.20 ALL\_QUEUE\_SCHEDULES

ALL\_QUEUE\_SCHEDULES describes the propagation schedules whose source queues are accessible to the current user.

### Related Views

- DBA\_QUEUE\_SCHEDULES describes all propagation schedules in the database.
- USER\_QUEUE\_SCHEDULES describes the propagation schedules whose source queues are owned by the current user. This view does not display the SCHEMA column.

| Column             | Datatype                    | NULL | Description                                                                                                             |
|--------------------|-----------------------------|------|-------------------------------------------------------------------------------------------------------------------------|
| SCHEMA             | VARCHAR2(128)               |      | Source queue owner                                                                                                      |
| QNAME              | VARCHAR2(128)               |      | Source queue name                                                                                                       |
| DESTINATION        | VARCHAR2(395)               |      | Destination name, currently limited to be a DBLINK name                                                                 |
| START_DATE         | TIMESTAMP(6) WITH TIME ZONE |      | Date at which to start propagation                                                                                      |
| START_TIME         | VARCHAR2(8)                 |      | Time of day at which to start propagation (in HH:MI:SS format)                                                          |
| PROPAGATION_WINDOW | NUMBER                      |      | Duration for the propagation window (in seconds)                                                                        |
| NEXT_TIME          | VARCHAR2(4000)              |      | Function to compute the start of the next propagation window                                                            |
| LATENCY            | NUMBER                      |      | Maximum wait time to propagate a message during the propagation window                                                  |
| SCHEDULE_DISABLED  | VARCHAR2(1)                 |      | Indicates whether the schedule is disabled (Y) or enabled (N). If disabled, then the schedule will not be executed.     |
| PROCESS_NAME       | VARCHAR2(4)                 |      | Name of the process executing the schedule; NULL if not currently executing                                             |
| SESSION_ID         | VARCHAR2(82)                |      | Session ID and session serial number of the job executing this schedule (SID, SERIAL#); NULL if not currently executing |
| INSTANCE           | NUMBER                      |      | Cluster database instance number executing the schedule                                                                 |
| LAST_RUN_DATE      | TIMESTAMP(6) WITH TIME ZONE |      | Date of the last successful execution                                                                                   |
| LAST_RUN_TIME      | VARCHAR2(8)                 |      | Time of day of the last successful execution (in HH:MI:SS format)                                                       |

| Column                | Datatype                    | NULL | Description                                                                                                                                                      |
|-----------------------|-----------------------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CURRENT_START_DATE    | TIMESTAMP(6) WITH TIME ZONE |      | Date at which the current window of this schedule was started                                                                                                    |
| CURRENT_START_TIME    | VARCHAR2(8)                 |      | Time of day at which the current window of this schedule was started (in HH:MI:SS format)                                                                        |
| NEXT_RUN_DATE         | TIMESTAMP(6) WITH TIME ZONE |      | Date at which the next window of this schedule will be started                                                                                                   |
| NEXT_RUN_TIME         | VARCHAR2(8)                 |      | Time of day at which the next window of this schedule will be started (in HH:MI:SS format)                                                                       |
| TOTAL_TIME            | NUMBER                      |      | Total time spent by the system in executing this schedule (in seconds)                                                                                           |
| TOTAL_NUMBER          | NUMBER                      |      | Total number of messages propagated in this schedule                                                                                                             |
| TOTAL_BYTES           | NUMBER                      |      | Total number of bytes propagated in this schedule                                                                                                                |
| MAX_NUMBER            | NUMBER                      |      | Maximum number of messages propagated in a propagation window                                                                                                    |
| MAX_BYTES             | NUMBER                      |      | Maximum number of bytes propagated in a propagation window                                                                                                       |
| AVG_NUMBER            | NUMBER                      |      | Average number of messages propagated in a propagation window                                                                                                    |
| AVG_SIZE              | NUMBER                      |      | Average size of a propagated message (in bytes)                                                                                                                  |
| AVG_TIME              | NUMBER                      |      | Average time to propagate a message (in seconds)                                                                                                                 |
| FAILURES              | NUMBER                      |      | Number of consecutive times schedule execution has failed, if any. After 16 consecutive failures, a propagation job becomes disabled automatically.              |
| LAST_ERROR_DATE       | DATE                        |      | Date of the last unsuccessful execution                                                                                                                          |
| LAST_ERROR_TIME       | VARCHAR2(8)                 |      | Time of day of the last unsuccessful execution (in HH:MI:SS format)                                                                                              |
| LAST_ERROR_MSG        | VARCHAR2(4000)              |      | Error number and error message text of the last unsuccessful execution                                                                                           |
| MESSAGE_DELIVERY_MODE | VARCHAR2(10)                |      | Message delivery mode: <ul style="list-style-type: none"> <li>• PERSISTENT</li> <li>• BUFFERED</li> </ul>                                                        |
| ELAPSED_DEQUEUE_TIME  | NUMBER                      |      | Elapsed dequeue time (in hundredths of a second)                                                                                                                 |
| ELAPSED_PICKLE_TIME   | NUMBER                      |      | Elapsed pickle time (time taken to linearize a logical change record (LCR) into a stream of bytes that can be sent over the network) (in hundredths of a second) |
| JOB_NAME              | VARCHAR2(128)               |      | Name of the Scheduler job                                                                                                                                        |

## 4.21 ALL\_QUEUE\_SUBSCRIBERS

ALL\_QUEUE\_SUBSCRIBERS displays the list of subscribers that the current user has privilege to dequeue from.

### Related Views

- DBA\_QUEUE\_SUBSCRIBERS displays the list of subscribers on all queues in the database.
- USER\_QUEUE\_SUBSCRIBERS displays the list of subscribers on queues that are under the current user's schema. This view does not display the OWNER column.

| Column                   | Datatype       | NULL     | Description                                                                                                                                                |

| <code>OBJECT_TYPE</code>        | <code>VARCHAR2(257)</code> |      | Object type of the payload when <code>TYPE</code> is <code>OBJECT</code>                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <code>SORT_ORDER</code>         | <code>VARCHAR2(22)</code>  |      | User-specified sort order                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <code>RECIPIENTS</code>         | <code>VARCHAR2(8)</code>   |      | <code>SINGLE</code> or <code>MULTIPLE</code> recipients                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <code>MESSAGE_GROUPING</code>   | <code>VARCHAR2(13)</code>  |      | <code>NONE</code> or <code>TRANSACTIONAL</code>                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <code>REPLICATION_MODE</code>   | <code>VARCHAR2(22)</code>  |      | Indicates whether the queue tables are enabled for replication through Oracle GoldenGate. If the queue tables are replicated, these values appear in the column: <ul style="list-style-type: none"> <li>• <code>REPLICATED_SOURCE</code>: This value is displayed for a source queue table.</li> <li>• <code>REPLICATED_DESTINATION</code>: This value is displayed for a destination queue table.</li> </ul> If replication is not enabled on the queue tables, then this column is empty. |
| <code>COMPATIBLE</code>         | <code>VARCHAR2(6)</code>   |      | Lowest release level which the queue table is compatible with (for example, <code>8.0.3</code> )                                                                                                                                                                                                                                                                                                                                                                                            |
| <code>PRIMARY_INSTANCE</code>   | <code>NUMBER</code>        |      | Indicates the instance number of the instance which is the primary owner of the queue table. A value of 0 indicates that there is no primary owner.                                                                                                                                                                                                                                                                                                                                         |
| <code>SECONDARY_INSTANCE</code> | <code>NUMBER</code>        |      | Indicates the instance number of the instance which is the secondary owner of the queue table. This instance becomes the owner of the queue table if the primary owner goes down. A value of 0 indicates that there is no secondary owner.                                                                                                                                                                                                                                                  |
| <code>OWNER_INSTANCE</code>     | <code>NUMBER</code>        |      | Instance number of the instance which currently owns the queue table                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <code>USER_COMMENT</code>       | <code>VARCHAR2(50)</code>  |      | Comment supplied by the user                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <code>SECURE</code>             | <code>VARCHAR2(3)</code>   |      | Indicates whether the queue table is secure ( <code>YES</code> ) or not ( <code>NO</code> )                                                                                                                                                                                                                                                                                                                                                                                                 |

## 4.23 ALL\_QUEUES

ALL\_QUEUES describes all queues on which the current user has enqueue or dequeue privileges. If the user has any Advanced Queuing system privileges, like `MANAGE ANY QUEUE`, `ENQUEUE ANY QUEUE` or `DEQUEUE ANY QUEUE`, then this view describes all queues in the database.

### Related Views

- `DBA_QUEUES` describes all queues in the database.
- `USER_QUEUES` describes the operational characteristics of every queue owned by the current user. This view does not display the `OWNER` column.

| Column                      | Datatype      | NULL     | Description                                                                                                                                                      |
|-----------------------------|---------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER                       | VARCHAR2(128) | NOT NULL | Owner of the queue                                                                                                                                               |
| NAME                        | VARCHAR2(128) | NOT NULL | Name of the queue                                                                                                                                                |
| QUEUE_TABLE                 | VARCHAR2(128) | NOT NULL | Name of the table the queue data resides in                                                                                                                      |
| QID                         | NUMBER        | NOT NULL | Object number of the queue                                                                                                                                       |
| QUEUE_TYPE                  | VARCHAR2(20)  |          | Type of the queue. Possible values: <ul style="list-style-type: none"> <li>• EXCEPTION_QUEUE</li> <li>• NON_PERSISTENT_QUEUE</li> <li>• NORMAL_QUEUE</li> </ul>  |
| MAX_RETRIES                 | NUMBER        |          | Maximum number of retries allowed when dequeuing from the queue                                                                                                  |
| RETRY_DELAY                 | NUMBER        |          | Time interval between retries                                                                                                                                    |
| ENQUEUE_ENABLED             | VARCHAR2(7)   |          | Indicates whether the queue is enabled for enqueue (YES) or not (NO)                                                                                             |
| DEQUEUE_ENABLED             | VARCHAR2(7)   |          | Indicates whether the queue is enabled for dequeue (YES) or not (NO)                                                                                             |
| RETENTION                   | VARCHAR2(40)  |          | Time interval (in seconds) processed messages are retained in the queue, or <code>FOREVER</code>                                                                 |
| USER_COMMENT                | VARCHAR2(50)  |          | User specified comment                                                                                                                                           |
| NETWORK_NAME                | VARCHAR2(512) |          | Network name                                                                                                                                                     |
| SHARDED                     | VARCHAR2(5)   |          | TRUE if queue is sharded, FALSE otherwise                                                                                                                        |
| QUEUE_CATEGORY <sup>1</sup> | VARCHAR2(25)  |          | Queue category. Possible values: <ul style="list-style-type: none"> <li>• Classic Queue</li> <li>• Sharded Queue</li> <li>• Transactional Event Queue</li> </ul> |
| RECIPIENTS <sup>1</sup>     | VARCHAR2(8)   |          | SINGLE or MULTIPLE recipients                                                                                                                                    |

<sup>1</sup> This column is available starting with Oracle Database 21c.

# 4.24 ALL\_REFRESH

ALL\_REFRESH describes all the refresh groups accessible to the current user.

Related Views

- DBA\_REFRESH describes all refresh groups in the database.
- USER\_REFRESH describes all refresh groups owned by the current user.

| Column               | Datatype      | NULL     | Description                                                                                                                 |
|----------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------|
| ROWNER               | VARCHAR2(128) | NOT NULL | Owner of the refresh group                                                                                                  |
| RNAME                | VARCHAR2(128) | NOT NULL | Name of the refresh group                                                                                                   |
| REFGROUP             | NUMBER        |          | Internal identifier of the refresh group                                                                                    |
| IMPLICIT_DESTROY     | VARCHAR2(1)   |          | Indicates whether the refresh group is destroyed when its last item is subtracted (Y) or not (N)                            |
| PUSH_DEFERRED_RPC    | VARCHAR2(1)   |          | Indicates whether changes are pushed from the snapshot to the master before refresh (Y) or not (N)                          |
| REFRESH_AFTER_ERRORS | VARCHAR2(1)   |          | Indicates whether to proceed with refresh despite errors when pushing deferred RPCs (Y) or not (N)                          |
| ROLLBACK_SEG         | VARCHAR2(128) |          | Name of the rollback segment to use while refreshing                                                                        |
| JOB                  | NUMBER        |          | Identifier of the job used to refresh the group automatically                                                               |
| NEXT_DATE            | DATE          |          | Date that this job will next be refreshed automatically, if not broken                                                      |
| INTERVAL             | VARCHAR2(200) |          | A date function used to compute the next NEXT_DATE                                                                          |
| BROKEN               | VARCHAR2(1)   |          | Indicates whether the job is broken and will never be run (Y) or not (N)                                                    |
| PURGE_OPTION         | NUMBER(38)    |          | Method for purging the transaction queue after each push (1 indicates quick purge option; 2 indicates precise purge option) |
| PARALLELISM          | NUMBER(38)    |          | Level of parallelism for transaction propagation                                                                            |
| HEAP_SIZE            | NUMBER(38)    |          | Size of the heap                                                                                                            |
| JOB_NAME             | VARCHAR2(128) |          | The name of the job used to automatically refresh the group                                                                 |

## 4.25 ALL\_REFRESH\_CHILDREN

ALL\_REFRESH\_CHILDREN describes all the objects in refresh groups that are accessible to the current user.

### Related Views

- DBA\_REFRESH\_CHILDREN describes the objects in all refresh groups in the database.
- USER\_REFRESH\_CHILDREN describes the objects in all refresh groups owned by the current user.

| Column               | Datatype      | NULL     | Description                                                                                                                |
|----------------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------|
| OWNER                | VARCHAR2(128) | NOT NULL | Owner of the object in the refresh group                                                                                   |
| NAME                 | VARCHAR2(128) | NOT NULL | Name of the object in the refresh group                                                                                    |
| TYPE                 | VARCHAR2(128) |          | Type of the object in the refresh group                                                                                    |
| ROWNER               | VARCHAR2(128) | NOT NULL | Owner of the refresh group                                                                                                 |
| RNAME                | VARCHAR2(128) | NOT NULL | Name of the refresh group                                                                                                  |
| REFGROUP             | NUMBER        |          | Internal identifier of the refresh group                                                                                   |
| IMPLICIT_DESTROY     | VARCHAR2(1)   |          | Indicates whether the refresh group is destroyed when its last item is subtracted (Y) or not (N)                           |
| PUSH_DEFERRED_RPC    | VARCHAR2(1)   |          | Indicates whether changes are pushed from the snapshot to the master before refresh (Y) or not (N)                         |
| REFRESH_AFTER_ERRORS | VARCHAR2(1)   |          | Indicates whether to proceed with refresh despite errors when pushing deferred RPCs (Y) or not (N)                         |
| ROLLBACK_SEG         | VARCHAR2(128) |          | Name of the rollback segment to use while refreshing                                                                       |
| JOB                  | NUMBER        |          | Identifier of the job used to refresh the group automatically                                                              |
| NEXT_DATE            | DATE          |          | Date that this job will next be refreshed automatically, if not broken                                                     |
| INTERVAL             | VARCHAR2(200) |          | A date function used to compute the next NEXT_DATE                                                                         |
| BROKEN               | VARCHAR2(1)   |          | Indicates whether the job is broken and will never be run (Y) or not (N)                                                   |
| PURGE_OPTION         | NUMBER(38)    |          | Method for purging the transaction queue after each push. 1 indicates quick purge option; 2 indicates precise purge option |
| PARALLELISM          | NUMBER(38)    |          | Level of parallelism for transaction propagation                                                                           |
| HEAP_SIZE            | NUMBER(38)    |          | Size of the heap                                                                                                           |
| JOB_NAME             | VARCHAR2(128) |          | The name of the job used to automatically refresh the group                                                                |

## 4.26 ALL\_REFRESH\_DEPENDENCIES

ALL\_REFRESH\_DEPENDENCIES displays the names of the dependent detail or container tables of all the materialized views in the current schema.

| Column              | Datatype      | NULL     | Description                                                                           |
|---------------------|---------------|----------|---------------------------------------------------------------------------------------|
| OWNER               | VARCHAR2(128) | NOT NULL | Owner of the table                                                                    |
| TABLE_NAME          | VARCHAR2(128) | NOT NULL | Table name, unique within this schema                                                 |
| PARENT_OBJECT_TYPE  | CHAR(17)      |          | MATERIALIZED VIEW                                                                     |
| OLDEST_REFRESH_SCN  | NUMBER        |          | Minimum SCN of any summary or materialized view that has TABLE_NAME as a detail table |
| OLDEST_REFRESH_DATE | DATE          |          | SYSDATE when last refreshed                                                           |

## 4.27 ALL\_REFS

ALL\_REFS describes the REF columns and REF attributes in object type columns accessible to the current user.

### Related Views

- DBA\_REFS describes all REF columns and REF attributes in the database.
- USER\_REFS describes the REF columns and REF attributes in object type columns owned by the current user. This view does not display the OWNER column.

| Column            | Datatype       | NULL     | Description                                                                                                                                            |
|-------------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER             | VARCHAR2(128)  | NOT NULL | Owner of the table                                                                                                                                     |
| TABLE_NAME        | VARCHAR2(128)  | NOT NULL | Name of the table                                                                                                                                      |
| COLUMN_NAME       | VARCHAR2(4000) |          | Name of the REF column or attribute. If it is not a top-level attribute, the value of COLUMN_NAME should be a path name starting with the column name. |
| WITH_ROWID        | VARCHAR2(3)    |          | Indicates whether the REF value is stored with ROWID (YES) or not (NO)                                                                                 |
| IS_SCOPED         | VARCHAR2(3)    |          | Indicates whether the REF column is scoped (YES) or not (NO)                                                                                           |
| SCOPE_TABLE_OWNER | VARCHAR2(128)  |          | Owner of the scope table, if it exists and is accessible by the user                                                                                   |
| SCOPE_TABLE_NAME  | VARCHAR2(128)  |          | Name of the scope table, if it exists and is accessible by the user                                                                                    |
| OBJECT_ID_TYPE    | VARCHAR2(33)   |          | Indicates whether the object ID (OID) is USER-DEFINED or SYSTEM GENERATED                                                                              |

# 4.28 ALL\_REGISTERED\_MVIEWS

ALL\_REGISTERED\_MVIEWS describes all registered materialized views (registered at a master site or a master materialized view site) accessible to the current user.

A materialized view created with the BUILD DEFERRED option of the CREATE MATERIALIZED VIEW statement is only registered with ALL\_REGISTERED\_MVIEWS if that materialized view has been completely refreshed at least once.

Related Views

- DBA\_REGISTERED\_MVIEWS describes all registered materialized views in the database.
- USER\_REGISTERED\_MVIEWS describes all registered materialized views owned by the current user.

| Column         | Datatype      | NULL     | Description                                                                                                                                |
|----------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128) | NOT NULL | Owner of the materialized view                                                                                                             |
| NAME           | VARCHAR2(128) | NOT NULL | Name of the materialized view                                                                                                              |
| MVIEW_SITE     | VARCHAR2(128) | NOT NULL | Global name of the materialized view site                                                                                                  |
| CAN_USE_LOG    | VARCHAR2(3)   |          | Indicates whether the materialized view can use a materialized view log (YES) or the materialized view is too complex to use a log (NO)    |
| UPDATABLE      | VARCHAR2(3)   |          | Indicates whether the materialized view is updatable (YES) or not and the materialized view is read only (NO)                              |
| REFRESH_METHOD | VARCHAR2(11)  |          | Indicates whether the materialized view uses primary key (PRIMARY KEY), rowids (ROWID), or object identifiers (OBJECT ID) for fast refresh |
| MVIEW_ID       | NUMBER(38)    |          | Identifier for the materialized view used by the masters for fast refresh                                                                  |
| VERSION        | VARCHAR2(26)  |          | Oracle version of the materialized view                                                                                                    |
| QUERY_TXT      | LONG          |          | Query that defines the materialized view                                                                                                   |

## 4.29 ALL\_REGISTRY\_BANNERS

ALL\_REGISTRY\_BANNERS displays the valid components loaded into the database.

| Column      | Datatype     | NULL | Description                                |
|-------------|--------------|------|--------------------------------------------|
| BANNER      | VARCHAR2(80) |      | Component display banner                   |
| BANNER_FULL | VARCHAR2(80) |      | Component display banner with full version |

## 4.30 ALL\_REPL\_DBNAME\_MAPPING

ALL\_REPL\_DBNAME\_MAPPING provides details about the database name mapping in replication for the current user.

### Related View

DBA\_REPL\_DBNAME\_MAPPING provides details about the database name mapping in replication.

| Column                | Datatype      | NULL | Description                                                                                                        |
|-----------------------|---------------|------|--------------------------------------------------------------------------------------------------------------------|
| SOURCE_ROOT_NAME      | VARCHAR2(128) |      | The fully qualified global name of the root in a multitenant container database (CDB) where the changes originated |
| SOURCE_DATABASE_NAME  | VARCHAR2(128) |      | The fully qualified global name of the pluggable database (PDB) where the changes originated                       |
| SOURCE_CONTAINER_NAME | VARCHAR2(128) |      | The container name of the database where the changes originated                                                    |

## 4.36 ALL\_SCHEDULER\_CHAIN\_RULES

ALL\_SCHEDULER\_CHAIN\_RULES displays information about the rules for the chains accessible to the current user (that is, those chains that the user has ALTER or EXECUTE privileges for).

**Related Views**

- DBA\_SCHEDULER\_CHAIN\_RULES displays information about the rules for all chains in the database.
- USER\_SCHEDULER\_CHAIN\_RULES displays information about the rules for the chains owned by the current user. This view does not display the OWNER column.

| Column     | Datatype       | NULL     | Description                                       |
|------------|----------------|----------|---------------------------------------------------|
| OWNER      | VARCHAR2(128)  | NOT NULL | Owner of the Scheduler chain that the rule is in  |
| CHAIN_NAME | VARCHAR2(128)  | NOT NULL | Name of the Scheduler chain that the rule is in   |
| RULE_OWNER | VARCHAR2(128)  | NOT NULL | Owner of the rule                                 |
| RULE_NAME  | VARCHAR2(128)  |          | Name of the rule                                  |
| CONDITION  | VARCHAR2(4000) |          | Boolean condition triggering the rule             |
| ACTION     | VARCHAR2(4000) |          | Action to be performed when the rule is triggered |
| COMMENTS   | VARCHAR2(4000) |          | User-specified comments about the rule            |

## 4.58 ALL\_SCHEDULER\_REMOTE\_DATABASES

ALL\_SCHEDULER\_REMOTE\_DATABASES displays information about the remote databases accessible to the current user that have been registered as sources and destinations for remote database jobs.

#### Related View

DBA\_SCHEDULER\_REMOTE\_DATABASES displays information about all remote databases that have been registered as sources and destinations for remote database jobs.

| Column        | Datatype      | NULL     | Description                                                                                         |
|---------------|---------------|----------|-----------------------------------------------------------------------------------------------------|
| DATABASE_NAME | VARCHAR2(512) | NOT NULL | Global name of the remote database                                                                  |
| REGISTERED_AS | VARCHAR2(11)  |          | Indicates whether the database is registered as a source (SOURCE) or as a destination (DESTINATION) |
| DATABASE_LINK | VARCHAR2(512) | NOT NULL | Name of a valid database link to the remote database                                                |

## 4.60 ALL\_SCHEDULER\_RESOURCES

ALL\_SCHEDULER\_RESOURCES displays all scheduler resource objects in the database that are accessible to the current user.

### Related Views

- DBA\_SCHEDULER\_RESOURCES displays all scheduler resource objects in the database.
- USER\_SCHEDULER\_RESOURCES displays all scheduler resource objects in the database from the schema of the current user. This view does not display the OWNER column.

| Column             | Datatype      | NULL     | Description                                                     |
|--------------------|---------------|----------|-----------------------------------------------------------------|
| OWNER              | VARCHAR2(128) | NOT NULL | Owner of the resource object                                    |
| RESOURCE_NAME      | VARCHAR2(128) | NOT NULL | Name of the resource object                                     |
| STATUS             | VARCHAR2(19)  |          | Resource status for resource object.                            |
| RESOURCE_UNITS     | NUMBER        |          | Maximum number of available units for the resource object       |
| UNITS_USED         | NUMBER        |          | Current number of resource units in use for the resource object |
| JOBS_RUNNING_COUNT | NUMBER        |          | Current number of running jobs using the resource object        |
| COMMENTS           | VARCHAR2(256) |          | Comments for the resource object                                |

## 4.61 ALL\_SCHEDULER\_RSC\_CONSTRAINTS

ALL\_SCHEDULER\_RSC\_CONSTRAINTS lists all Oracle Scheduler resource constraint members accessible to the current user.

### Related Views

- DBA\_SCHEDULER\_RSC\_CONSTRAINTS lists all Oracle Scheduler resource constraint members in the database.
- USER\_SCHEDULER\_RSC\_CONSTRAINTS lists all Oracle Scheduler resource constraint members owned by the current user.

| Column         | Datatype      | NULL     | Description                                      |
|----------------|---------------|----------|--------------------------------------------------|
| OBJECT_OWNER   | VARCHAR2(128) | NOT NULL | Owner of the resource object the member is in    |
| OBJECT_NAME    | VARCHAR2(128) | NOT NULL | Name of the resource object the member is in     |
| RESOURCE_OWNER | VARCHAR2(128) | NOT NULL | Owner of the resource constraint resource member |
| RESOURCE_NAME  | VARCHAR2(128) | NOT NULL | Name of the resource constraint resource member  |

| Column     | Datatype | NULL | Description                                                             |
|------------|----------|------|-------------------------------------------------------------------------|
| UNITS_USED | NUMBER   |      | Number of units used of the resource by this constraint resource member |

## 4.62 ALL\_SCHEDULER\_RUNNING\_CHAINS

ALL\_SCHEDULER\_RUNNING\_CHAINS displays information about the chain steps of the running chains accessible to the current user (that is, those chains that the user has ALTER privileges for). In the case of nested chains, this view also enables you to traverse the hierarchy of the chain with a SQL statement that contains a CONNECT BY clause linking up the JOB\_SUBNAME and STEP\_JOB\_SUBNAME columns.

### Related Views

- DBA\_SCHEDULER\_RUNNING\_CHAINS displays information about the chain steps of all running chains in the database.
- USER\_SCHEDULER\_RUNNING\_CHAINS displays information about the chain steps of the running chains owned by the current user. This view does not display the OWNER column.

| Column      | Datatype      | NULL     | Description                                                                                                                                                                                                                                                        |
|-------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER       | VARCHAR2(128) | NOT NULL | Owner of the job which is running the chain                                                                                                                                                                                                                        |
| JOB_NAME    | VARCHAR2(128) | NOT NULL | Name of the job which is running the chain                                                                                                                                                                                                                         |
| JOB_SUBNAME | VARCHAR2(128) |          | Subname of the job which is running the chain (for a nested chain), else NULL                                                                                                                                                                                      |
| CHAIN_OWNER | VARCHAR2(128) | NOT NULL | Owner of the chain being run                                                                                                                                                                                                                                       |
| CHAIN_NAME  | VARCHAR2(128) | NOT NULL | Name of the chain being run                                                                                                                                                                                                                                        |
| STEP_NAME   | VARCHAR2(128) | NOT NULL | Name of the step of the running chain                                                                                                                                                                                                                              |
| STATE       | VARCHAR2(15)  |          | State of the running chain step: <ul style="list-style-type: none"> <li>• NOT_STARTED</li> <li>• RUNNING</li> <li>• SUCCEEDED</li> <li>• STOPPED</li> <li>• FAILED</li> <li>• SCHEDULED</li> <li>• RETRY SCHEDULED</li> <li>• PAUSED</li> <li>• STALLED</li> </ul> |
| ERROR_CODE  | NUMBER        |          | Error code with which the step completed (if it has completed)                                                                                                                                                                                                     |
| COMPLETED   | VARCHAR2(5)   |          | Indicates whether the running chain step has completed (TRUE) or not (FALSE)                                                                                                                                                                                       |

| Column              | Datatype                     | NULL | Description                                                                                     |
|---------------------|------------------------------|------|-------------------------------------------------------------------------------------------------|
| START_DATE          | TIMESTAMP(6) WITH TIME ZONE  |      | Date when the running chain step started (if it has started)                                    |
| END_DATE            | TIMESTAMP(6) WITH TIME ZONE  |      | Date when the running chain step stopped (if it has stopped)                                    |
| DURATION            | INTERVAL DAY(9) TO SECOND(6) |      | Amount of time it took the chain step to complete (if it has completed)                         |
| SKIP                | VARCHAR2(5)                  |      | Indicates whether the chain step should be skipped (TRUE) or not (FALSE)                        |
| PAUSE               | VARCHAR2(5)                  |      | Indicates whether the chain step should be paused after running (TRUE) or not (FALSE)           |
| PAUSE_BEFORE        | VARCHAR2(5)                  |      | Indicates whether the chain step should be paused before running (TRUE) or not (FALSE)          |
| RESTART_ON_RECOVERY | VARCHAR2(5)                  |      | Indicates whether the chain step will be restarted on database recovery (TRUE) or not (FALSE)   |
| RESTART_ON_FAILURE  | VARCHAR2(5)                  |      | Indicates whether the chain step will be restarted on application failure (TRUE) or not (FALSE) |
| STEP_JOB_SUBNAME    | VARCHAR2(128)                |      | Subname of the job running the step                                                             |
| STEP_JOB_LOG_ID     | NUMBER                       |      | Log ID of the job running the step                                                              |

`DBA_SCHEDULER_WINDOW_DETAILS` displays log details for all Scheduler windows in the database.

| Column            | Datatype                     | NULL | Description                                                                          |
|-------------------|------------------------------|------|--------------------------------------------------------------------------------------|
| LOG_ID            | NUMBER                       |      | Unique identifier of the log entry (foreign key of the *_SCHEDULER_WINDOW_LOG views) |
| LOG_DATE          | TIMESTAMP(6) WITH TIME ZONE  |      | Date of the log entry                                                                |
| OWNER             | VARCHAR2(128)                |      | Owner of the Scheduler window                                                        |
| WINDOW_NAME       | VARCHAR2(261)                |      | Name of the Scheduler window                                                         |
| REQ_START_DATE    | TIMESTAMP(6) WITH TIME ZONE  |      | Requested start date for the Scheduler window                                        |
| ACTUAL_START_DATE | TIMESTAMP(6) WITH TIME ZONE  |      | Actual start date of the Scheduler window                                            |
| WINDOW_DURATION   | INTERVAL DAY(3) TO SECOND(0) |      | Requested duration of the Scheduler window                                           |
| ACTUAL_DURATION   | INTERVAL DAY(3) TO SECOND(0) |      | Actual duration for which the Scheduler window lasted                                |
| INSTANCE_ID       | NUMBER                       |      | Identifier of the instance on which the window was run                               |
| ADDITIONAL_INFO   | VARCHAR2(4000)               |      | Additional information on the entry, if applicable                                   |

## 4.66 ALL\_SCHEDULER\_WINDOW\_GROUPS

ALL\_SCHEDULER\_WINDOW\_GROUPS displays information about the Scheduler window groups accessible to the current user.

### Related View

DBA\_SCHEDULER\_WINDOW\_GROUPS displays information about all Scheduler window groups in the database.

| Column            | Datatype       | NULL     | Description                                                                                                                                                    |
|-------------------|----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| WINDOW_GROUP_NAME | VARCHAR2(128)  | NOT NULL | Name of the window group                                                                                                                                       |
| ENABLED           | VARCHAR2(5)    |          | Indicates whether the window group is enabled (TRUE) or disabled (FALSE)                                                                                       |
| NUMBER_OF_WINDOWS | NUMBER         |          | Number of members in the window group                                                                                                                          |
| NEXT_START_DATE   | VARCHAR2(64)   |          | If a window group is disabled, then this column will be NULL. Otherwise, it will be set to the earliest NEXT_START_DATE from the enabled windows in the group. |
| COMMENTS          | VARCHAR2(4000) |          | Optional comment about the window group                                                                                                                        |

## 4.70 ALL\_SEC\_RELEVANT\_COLS

ALL\_SEC\_RELEVANT\_COLS describes the security relevant columns of the security policies for the tables and views accessible to the current user.

### Related Views

- DBA\_SEC\_RELEVANT\_COLS describes the security relevant columns of all security policies in the database.
- USER\_SEC\_RELEVANT\_COLS describes the security relevant columns of the security policies for the tables and views owned by the current user. This view does not display the OBJECT\_OWNER column.

| Column         | Datatype      | NULL | Description                                                                                                                               |
|----------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_OWNER   | VARCHAR2(128) |      | Owner of the table or view                                                                                                                |
| OBJECT_NAME    | VARCHAR2(128) |      | Name of the table or view                                                                                                                 |
| POLICY_GROUP   | VARCHAR2(128) |      | Name of the policy group                                                                                                                  |
| POLICY_NAME    | VARCHAR2(128) |      | Name of the policy                                                                                                                        |
| SEC_REL_COLUMN | VARCHAR2(128) |      | Name of the security relevant column                                                                                                      |
| COLUMN_OPTION  | VARCHAR2(8)   |      | Option of the security relevant column: <ul style="list-style-type: none"> <li>• NONE</li> <li>• ALL_ROWS</li> </ul>                      |
| COMMON         | VARCHAR2(3)   |      | Indicates whether the policy security relevant column is applied and enforced in all application PDBs (YES) or only in the local PDB (NO) |
| INHERITED      | VARCHAR2(3)   |      | Indicates whether the policy security relevant column is inherited from the root (YES) or not (NO)                                        |

## 4.71 ALL\_SECONDARY\_OBJECTS

ALL\_SECONDARY\_OBJECTS provides information about secondary objects associated with domain indexes accessible to the user.

This view is only relevant for domain indexes. And currently, the secondary objects can only be tables.

**Related Views**

- DBA\_SECONDARY\_OBJECTS provides information about all secondary objects that are associated with domain indexes in the database.
- USER\_SECONDARY\_OBJECTS provides information about secondary objects associated with domain indexes owned by the current user.

| Column                 | Datatype      | NULL     | Description                                               |
|------------------------|---------------|----------|-----------------------------------------------------------|
| INDEX_OWNER            | VARCHAR2(128) | NOT NULL | Owner of the domain index                                 |
| INDEX_NAME             | VARCHAR2(128) | NOT NULL | Name of the domain index                                  |
| SECONDARY_OBJECT_OWNER | VARCHAR2(128) | NOT NULL | Owner of the secondary object created by the domain index |
| SECONDARY_OBJECT_NAME  | VARCHAR2(128) | NOT NULL | Name of the secondary object created by the domain index  |
| SECONDARY_OBJDATA_TYPE | VARCHAR2(20)  |          | Type of the secondary object created by the domain index  |

## 4.72 ALL\_SEQUENCES

ALL\_SEQUENCES describes all sequences accessible to the current user.

**Related Views**

- DBA\_SEQUENCES describes all sequences in the database.
- USER\_SEQUENCES describes all sequences owned by the current user. This view does not display the SEQUENCE\_OWNER column.

| Column         | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                              |
|----------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SEQUENCE_OWNER | VARCHAR2(128) | NOT NULL | Owner of the sequence                                                                                                                                                                                                                                                                                    |
| SEQUENCE_NAME  | VARCHAR2(128) | NOT NULL | Sequence name                                                                                                                                                                                                                                                                                            |
| MIN_VALUE      | NUMBER        |          | Minimum value of the sequence                                                                                                                                                                                                                                                                            |
| MAX_VALUE      | NUMBER        |          | Maximum value of the sequence                                                                                                                                                                                                                                                                            |
| INCREMENT_BY   | NUMBER        | NOT NULL | Value by which sequence is incremented                                                                                                                                                                                                                                                                   |
| CYCLE_FLAG     | VARCHAR2(1)   |          | Indicates whether the sequence wraps around on reaching the limit (Y) or not (N)                                                                                                                                                                                                                         |
| ORDER_FLAG     | VARCHAR2(1)   |          | Indicates whether sequence numbers are generated in order (Y) or not (N)                                                                                                                                                                                                                                 |
| CACHE_SIZE     | NUMBER        | NOT NULL | Number of sequence numbers to cache                                                                                                                                                                                                                                                                      |
| LAST_NUMBER    | NUMBER        | NOT NULL | Last sequence number written to disk. If a sequence uses caching, the number written to disk is the last number placed in the sequence cache. This number is likely to be greater than the last sequence number that was used.<br><br>For session sequences, the value in this column should be ignored. |
| SCALE_FLAG     | VARCHAR2(1)   |          | Indicates whether this is a scalable sequence (Y) or not (N)                                                                                                                                                                                                                                             |
| EXTEND_FLAG    | VARCHAR2(1)   |          | Indicates whether this scalable sequence's generated values extend beyond MAX_VALUE or MIN_VALUE (Y) or not (N)                                                                                                                                                                                          |
| SHARDED_FLAG   | VARCHAR2(1)   |          | Indicates whether this is a sharded sequence (Y) or not (N)                                                                                                                                                                                                                                              |
| SESSION_FLAG   | VARCHAR2(1)   |          | Indicates whether sequence values are session private (Y) or not (N)                                                                                                                                                                                                                                     |
| KEEP_VALUE     | VARCHAR2(1)   |          | Indicates whether sequence values are kept during replay after a failure (Y) or not (N)                                                                                                                                                                                                                  |

| NETWORK_NAME        | VARCHAR2(512) |      | Network name used to connect to the service                                                                                                                                                                                                                                                          |
| CREATION_DATE       | DATE          |      | Date the service was created                                                                                                                                                                                                                                                                         |
| CREATION_DATE_HASH  | NUMBER        |      | Hash of the creation date                                                                                                                                                                                                                                                                            |
| FAILOVER_METHOD     | VARCHAR2(64)  |      | TAF only for compatibility - BASIC or NONE                                                                                                                                                                                                                                                           |
| FAILOVER_TYPE       | VARCHAR2(64)  |      | AUTO for Transparent Application Continuity, TRANSACTION for Application Continuity, SESSION or SELECT for TAF.                                                                                                                                                                                      |
| FAILOVER_RETRIES    | NUMBER(10)    |      | For Application Continuity and TAF, when reconnecting after a failure, number of attempts to re-connect per incident                                                                                                                                                                                 |
| FAILOVER_DELAY      | NUMBER(10)    |      | For Application Continuity and TAF, when reconnecting after a failure, delay between each connection retry (in seconds)                                                                                                                                                                              |
| MIN_CARDINALITY     | NUMBER        |      | Reserved for internal use                                                                                                                                                                                                                                                                            |
| MAX_CARDINALITY     | NUMBER        |      | Reserved for internal use                                                                                                                                                                                                                                                                            |
| GOAL                | VARCHAR2(12)  |      | Runtime Load Balancing Goal being used to create run-time load balancing and connection load balancing advice: <ul style="list-style-type: none"> <li>NONE</li> <li>SERVICE_TIME - Connections are balanced by response time</li> <li>THROUGHPUT - Connections are balanced by throughput</li> </ul> |
| DTP                 | VARCHAR2(1)   |      | DTP (distributed transaction processing) enforces all sessions for a service at one instance. This is a requirement for XA before 11g, and is a requirement if resuming and suspending the same XA branch.                                                                                           |
| ENABLED             | VARCHAR2(3)   |      | Reserved for internal use                                                                                                                                                                                                                                                                            |
| AQ_HA_NOTIFICATIONS | VARCHAR2(3)   |      | To enable FAN for OCI connections, set AQ HA Notifications to True. For Oracle Database 12c, FAN uses ONS (Oracle Notification Service)                                                                                                                                                              |
| CLB_GOAL            | VARCHAR2(5)   |      | Connection load balancing goal. When using run-time load balancing, GOAL=SERVICE_TIME or THROUGHPUT, set to SHORT. For a session count per service only, use LONG.                                                                                                                                   |
| EDITION             | VARCHAR2(128) |      | A non-NULL value specifies the initial session edition for subsequent database connections that use the service and do not specify an edition. A NULL value has no effect.                                                                                                                           |

| Column                    | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|---------------------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMMIT_OUTCOME            | VARCHAR2(3)   |      | <p>For Transaction Guard, indicates whether the database service associated with the user session has the COMMIT_OUTCOME service attribute enabled (YES) or not (NO). This attribute applies on a per session basis and is set at connect time.</p> <p>When COMMIT_OUTCOME = YES:</p> <ul style="list-style-type: none"> <li>Transaction Guard manages the commit status for all supported transaction types. The outcome of a COMMIT transaction is known. If there is an outage, the application can use <code>DBMS_APP_CONT.GET_LTXID_OUTCOME</code> to return a reliable status for the last in-flight work.</li> <li>A logical transaction ID (LTXID) is set for each user session at login and at each successful commit.</li> </ul> <p><b>See Also:</b> For information about preserving the commit outcome, see <i>Oracle Database Development Guide</i>. For information about logical transaction IDs, see <i>Oracle Database Development Guide</i>.</p> |
| RETENTION_TIMEOUT         | NUMBER        |      | <p>For Transaction Guard, when COMMIT_OUTCOME = YES, this value indicates the amount of time (in seconds) that the commit outcome is retained in the database.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| REPLAY_INITIATION_TIMEOUT | NUMBER        |      | <p>For Application Continuity, indicates a time period (in seconds) after which the request will not be replayed. The time period starts at the first request submission. The default value is 300 seconds, which is 5 minutes.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| SESSION_STATE_CONSISTENCY | VARCHAR2(128) |      | <p>Describes how non-transactional is changed during a request. This parameter is considered only if <code>failover_type</code> is set to TRANSACTION for Application Continuity. Examples of session state are NLS settings, optimizer preferences, event settings, PL/SQL global variables, temporary tables, advanced queues, LOBs and result cache. If non-transactional values change after the request starts, the default value of DYNAMIC should be set. Almost all applications should use DYNAMIC mode. If you are unsure, use DYNAMIC mode.</p>                                                                                                                                                                                                                                                                                                                                                                                                         |
| GLOBAL_SERVICE            | VARCHAR2(3)   |      | <p>Indicates whether the service is global. A global service is managed by Global Data Services (GDS) and can be provided by multiple databases that contain replicated data. Possible values:</p> <ul style="list-style-type: none"> <li>YES: Indicates the service is global</li> <li>NO: Indicates the service is not global</li> </ul> <p>This attribute is set when using GDS. It cannot be set by a user.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Column                  | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PDB                     | VARCHAR2(128) |      | <p>Name of a PDB associated with a given service. Will contain NULL for a non-CDB or if the service is not associated with a PDB (that is, connecting to a CDB using this service will cause a user to connect to the root.)</p> <p>When managing services for a PDB, use SRVCTL for Oracle RAC and Oracle RAC One Node databases, or connect to that PDB if it is a single instance (not RAC). The PDB attribute shows which PDB has the service. It cannot be set or modified explicitly.</p>                                                                        |
| SQL_TRANSLATION_PROFILE | VARCHAR2(261) |      | A non-NULL value specifies the initial SQL translation profile for subsequent database connections that use the service and do not specify a SQL translation profile. A NULL value has no effect.                                                                                                                                                                                                                                                                                                                                                                      |
| MAX_LAG_TIME            | VARCHAR2(128) |      | The maximum replication lag (in seconds) that is acceptable for a data replica to be used for providing the database service. Can only be specified for global services using the Global Data Services (GDS) interfaces. It is not supported to change this value at local databases.                                                                                                                                                                                                                                                                                  |
| GSM_FLAGS               | NUMBER        |      | Flags specific to Global Data Services (GDS). Can only be specified for global services using the GDS interfaces. It is not supported to change these values at local databases.                                                                                                                                                                                                                                                                                                                                                                                       |
| PQ_SVC                  | VARCHAR2(64)  |      | Name of the associated parallel query rim service                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| STOP_OPTION             | VARCHAR2(13)  |      | Stop option for sessions of this service for planned maintenance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| FAILOVER_RESTORE        | VARCHAR2(6)   |      | <p>Indicates whether sessions restore their commonly used session state (such as NLS and schema settings) when they are failed over. Possible values:</p> <ul style="list-style-type: none"> <li>AUTO - Sessions restore their commonly used session state when they are failed over with Transparent Application Continuity</li> <li>LEVEL1 - Sessions restore their commonly used session state when they are failed over with Application Continuity</li> <li>NONE - Sessions do not restore their commonly used session state when they are failed over</li> </ul> |
| DRAIN_TIMEOUT           | NUMBER        |      | Number of seconds to wait for sessions to be drained                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| TABLE_FAMILY_ID         | NUMBER        |      | Sharded table family ID associated with the service                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| PLACEMENT_POLICY        | NUMBER        |      | <p>Placement policy for the service. ## 4.79 ALL\_SQLJ\_TYPE\_METHODS

ALL\_SQLJ\_TYPE\_METHODS describes the methods of the SQLJ object types accessible to the current user.

### Related Views

- DBA\_SQLJ\_TYPE\_METHODS describes the methods of all SQLJ object types in the database.
- USER\_SQLJ\_TYPE\_METHODS describes the methods of the SQLJ object types owned by the current user. This view does not display the OWNER column.

| Column            | Datatype       | NULL     | Description                                                                                                    |
|-------------------|----------------|----------|----------------------------------------------------------------------------------------------------------------|
| OWNER             | VARCHAR2(128)  | NOT NULL | Owner of the type                                                                                              |
| TYPE_NAME         | VARCHAR2(128)  | NOT NULL | Name of the type                                                                                               |
| METHOD_NAME       | VARCHAR2(128)  | NOT NULL | Name of the method                                                                                             |
| EXTERNAL_VAR_NAME | VARCHAR2(4000) |          | Name of the external variable                                                                                  |
| METHOD_NO         | NUMBER         | NOT NULL | Method number that distinguishes overloaded methods (not to be used as an ID number)                           |
| METHOD_TYPE       | VARCHAR2(6)    |          | Type of the method: <ul style="list-style-type: none"> <li>• MAP</li> <li>• ORDER</li> <li>• PUBLIC</li> </ul> |
| PARAMETERS        | NUMBER         | NOT NULL | Number of parameters to the method                                                                             |
| RESULTS           | NUMBER         | NOT NULL | Number of results returned by the method                                                                       |
| FINAL             | VARCHAR2(3)    |          | Indicates whether the method is final (YES) or not (NO)                                                        |
| INSTANTIABLE      | VARCHAR2(3)    |          | Indicates whether the method is instantiable (YES) or not (NO)                                                 |
| OVERRIDING        | VARCHAR2(3)    |          | Indicates whether the method is overriding a supertype method (YES) or not (NO)                                |
| INHERITED         | VARCHAR2(3)    |          | Indicates whether the method is inherited from a supertype (YES) or not (NO)                                   |

| CON_DBID                 | NUMBER        |      | The database ID of the PDB                                                                                                                                                                                    |
| SQL_ID                   | VARCHAR2(13)  |      | SQL identifier of the parent cursor in the library cache                                                                                                                                                      |
| FORCE_MATCHING_SIGNATURE | NUMBER        |      | The signature used when the CURSOR_SHARING parameter is set to FORCE                                                                                                                                          |
| PLAN_HASH_VALUE          | NUMBER        |      | Numerical representation of the SQL plan for the cursor. Comparing one PLAN_HASH_VALUE to another easily identifies whether or not two plans are the same (rather than comparing the two plans line-by-line). |
| POSITION                 | NUMBER        |      | Bind position                                                                                                                                                                                                 |
| VALUE                    | ANYDATA       |      | Bind value. This column is NULL for PL/SQL bind types.                                                                                                                                                        |
| CAPTURED                 | CHAR(1)       |      | Binds captured                                                                                                                                                                                                |
| SQL_SEQ                  | NUMBER        |      | SQL sequence                                                                                                                                                                                                  |

## 4.83 ALL\_SQLSET\_PLANS

ALL\_SQLSET\_PLANS describes captured plans for statements in the SQL tuning sets accessible to the current user.

### Related Views

- DBA\_SQLSET\_PLANS describes captured plans in the SQL tuning sets in the database.
- USER\_SQLSET\_PLANS describes captured plans for statements in the SQL tuning sets owned by the current user. This view does not display the SQLSET\_OWNER column.

| Column                   | Datatype       | NULL     | Description                                                                                                                                                                                                     |
|--------------------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SQLSET_NAME              | VARCHAR2(128)  | NOT NULL | Name of SQL tuning set for the statement                                                                                                                                                                        |
| SQLSET_OWNER             | VARCHAR2(128)  |          | User name of SQL tuning set owner                                                                                                                                                                               |
| SQLSET_ID                | NUMBER         | NOT NULL | ID of SQL tuning set for the statement                                                                                                                                                                          |
| CON_DBID                 | NUMBER         | NOT NULL | The database ID of the PDB                                                                                                                                                                                      |
| SQL_ID                   | VARCHAR2(13)   | NOT NULL | SQL identifier of the parent cursor in the library cache                                                                                                                                                        |
| FORCE_MATCHING_SIGNATURE | NUMBER         | NOT NULL | The signature used when the CURSOR_SHARING parameter is set to FORCE                                                                                                                                            |
| PLAN_HASH_VALUE          | NUMBER         | NOT NULL | Numerical representation of the SQL plan for the cursor. Comparing one PLAN_HASH_VALUE to another easily identifies whether or not two plans are the same (rather than comparing the two plans line-by-line).   |
| SQL_SEQ                  | NUMBER         | NOT NULL | SQL sequence                                                                                                                                                                                                    |
| STATEMENT_ID             | VARCHAR2(128)  |          | Statement ID                                                                                                                                                                                                    |
| PLAN_ID                  | NUMBER         |          | Plan ID                                                                                                                                                                                                         |
| TIMESTAMP                | DATE           |          | Date and time timestamp                                                                                                                                                                                         |
| REMARKS                  | VARCHAR2(4000) |          | Remarks                                                                                                                                                                                                         |
| OPERATION                | VARCHAR2(128)  |          | Name of the internal operation performed in this step (for example, TABLE ACCESS)                                                                                                                               |
| OPTIONS                  | VARCHAR2(255)  |          | A variation on the operation described in the OPERATION column (for example, FULL)                                                                                                                              |
| OBJECT_NODE              | VARCHAR2(128)  |          | Name of the database link used to reference the object (a table name or view name). For local queries that use parallel execution, this column describes the order in which output from operations is consumed. |
| OBJECT_OWNER             | VARCHAR2(128)  |          | Name of the user who owns the schema containing the table or index                                                                                                                                              |
| OBJECT_NAME              | VARCHAR2(128)  |          | Name of the table or index                                                                                                                                                                                      |
| OBJECT_ALIAS             | VARCHAR2(261)  |          | Alias for the object                                                                                                                                                                                            |
| OBJECT_INSTANCE          | NUMBER(38)     |          | Instance number for the object                                                                                                                                                                                  |

| Column          | Datatype      | NULL     | Description                                                                                                                                                                                                                                       |
|-----------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_TYPE     | VARCHAR2(128) |          | Type of the object                                                                                                                                                                                                                                |
| OPTIMIZER       | VARCHAR2(255) |          | Current mode of the optimizer for the first row in the plan (statement line), for example, CHOOSE. When the operation is a database access (for example, TABLE ACCESS), this column indicates whether or not the object is analyzed.              |
| SEARCH_COLUMNS  | NUMBER        |          | Number of index columns with start and stop keys (that is, the number of columns with matching predicates)                                                                                                                                        |
| ID              | NUMBER(38)    | NOT NULL | A number assigned to each step in the execution plan                                                                                                                                                                                              |
| PARENT_ID       | NUMBER(38)    |          | ID of the next execution step that operates on the output of the current step                                                                                                                                                                     |
| DEPTH           | NUMBER(38)    |          | Depth (or level) of the operation in the tree. It is not necessary to issue a CONNECT BY statement to get the level information, which is generally used to indent the rows from the PLAN_TABLE table. The root operation (statement) is level 0. |
| POSITION        | NUMBER(38)    |          | Order of processing for all operations that have the same PARENT_ID.                                                                                                                                                                              |
| COST            | NUMBER(38)    |          | Cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.                                                                                                  |
| CARDINALITY     | NUMBER(38)    |          | Estimate, made by the cost-based optimizer, of the number of rows produced by the operation                                                                                                                                                       |
| BYTES           | NUMBER(38)    |          | Estimate, made by the cost-based optimizer, of the number of bytes produced by the operation                                                                                                                                                      |
| OTHER_TAG       | VARCHAR2(255) |          | Describes the contents of the OTHER column. For information about values, see <i>Oracle Database SQL Tuning Guide</i> .                                                                                                                           |
| PARTITION_START | VARCHAR2(255) |          | Start partition of a range of accessed partitions                                                                                                                                                                                                 |
| PARTITION_STOP  | VARCHAR2(255) |          | Stop partition of a range of accessed partitions                                                                                                                                                                                                  |
| PARTITION_ID    | NUMBER(38)    |          | Step that computes the pair of values of the PARTITION_START and PARTITION_STOP columns                                                                                                                                                           |
| OTHER           | LONG          |          | Other information specific to the execution step that users may find useful. For information about values, see <i>Oracle Database SQL Tuning Guide</i> .                                                                                          |
| DISTRIBUTION    | VARCHAR2(128) |          | Stores the method used to distribute rows from producer query servers to consumer query servers                                                                                                                                                   |
| CPU_COST        | NUMBER(38)    |          | CPU cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.                                                                                              |
| IO_COST         | NUMBER(38)    |          | I/O cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.                                                                                              |
| TEMP_SPACE      | NUMBER(38)    |          | Temporary space usage of the operation (sort or hash join) as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.                                                             |

| Column            | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------|----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ACCESS_PREDICATES | VARCHAR2(4000) |      | Predicates used to locate rows in an access structure. For example, start or stop predicates for an index range scan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| FILTER_PREDICATES | VARCHAR2(4000) |      | Predicates used to filter rows before producing them                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| PROJECTION        | VARCHAR2(4000) |      | Expressions produced by the operation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| TIME              | NUMBER(38)     |      | Elapsed time (in seconds) of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| QBLOCK_NAME       | VARCHAR2(128)  |      | Name of the query block                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| OTHER_XML         | CLOB           |      | Provides extra information specific to an execution step of the execution plan. The content of this column is structured using XML since multiple pieces of information can be stored there. This includes: <ul style="list-style-type: none"> <li>Name of the schema against which the query was parsed</li> <li>Release number of the Oracle Database that produced the explain plan</li> <li>Hash value associated with the execution plan</li> <li>Name (if any) of the outline or the SQL profile used to build the execution plan</li> <li>Indication of whether or not dynamic statistics were used to produce the plan</li> <li>The outline data, a set of optimizer hints that can be used to regenerate the same plan</li> </ul> For further information about values, see <i>Oracle Database SQL Tuning Guide</i> . |
| EXECUTIONS        | NUMBER         |      | Number of times the plan has been executed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| LAST_CR_BUFFER_GETS    | NUMBER       |      | Number of buffers retrieved in consistent mode, during the last execution. Buffers are usually retrieved in consistent mode for queries.                                                           |
| LAST_CU_BUFFER_GETS    | NUMBER       |      | Number of buffers retrieved in current mode, during the last execution. Buffers are retrieved in current mode for statements such as INSERT, UPDATE, and DELETE.                                   |
| LAST_DISK_READS        | NUMBER       |      | Number of physical disk reads performed by the operation, during the last execution                                                                                                                |
| LAST_DISK_WRITES       | NUMBER       |      | Number of physical disk writes performed by the operation, during the last execution                                                                                                               |
| LAST_ELAPSED_TIME      | NUMBER       |      | Elapsed time (in microseconds) corresponding to this operation, during the last execution                                                                                                          |
| POLICY                 | VARCHAR2(10) |      | Sizing policy for this work area: <ul style="list-style-type: none"> <li>• MANUAL</li> <li>• AUTO</li> </ul>                                                                                       |
| ESTIMATED_OPTIMAL_SIZE | NUMBER       |      | Estimated size (in KB) required by this work area to execute the operation completely in memory (optimal execution). This is either derived from optimizer statistics or from previous executions. |
| ESTIMATED_ONEPASS_SIZE | NUMBER       |      | Estimated size (in KB) required by this work area to execute the operation in a single pass. This is either derived from optimizer statistics or from previous executions.                         |
| LAST_MEMORY_USED       | NUMBER       |      | Memory size (in KB) used by this work area during the last execution of the cursor                                                                                                                 |
| LAST_EXECUTION         | VARCHAR2(10) |      | Indicates whether this work area ran using OPTIMAL, ONE PASS, or under ONE PASS memory requirement (MULTI-PASS), during the last execution of the cursor                                           |
| LAST_DEGREE            | NUMBER       |      | Degree of parallelism used, during the last execution of the cursor                                                                                                                                |
| TOTAL_EXECUTIONS       | NUMBER       |      | Number of times this work area was active                                                                                                                                                          |
| OPTIMAL_EXECUTIONS     | NUMBER       |      | Number of times this work area ran in optimal mode                                                                                                                                                 |
| ONEPASS_EXECUTIONS     | NUMBER       |      | Number of times this work area ran in one pass mode                                                                                                                                                |
| MULTIPASSES_EXECUTIONS | NUMBER       |      | Number of times this work area ran below the one pass memory requirement                                                                                                                           |
| ACTIVE_TIME            | NUMBER       |      | Average time this work area is active (in hundredths of a second)                                                                                                                                  |
| MAX_TEMPSEG_SIZE       | NUMBER       |      | Maximum temporary segment size (in bytes) created by an instantiation of this work area. This column is null if this work area has never spilled to disk.                                          |
| LAST_TEMPSEG_SIZE      | NUMBER       |      | Temporary segment size (in bytes) created in the last instantiation of this work area. This column is null if the last instantiation of this work area did not spill to disk.                      |

## 4.84 ALL\_SQLSET\_REFERENCES

ALL\_SQLSET\_REFERENCES describes whether or not the SQL tuning sets accessible to the current user are active.

**Related Views**

- DBA\_SQLSET\_REFERENCES describes whether or not all SQL tuning sets in the database are active. A SQL tuning set cannot be dropped if it is referenced.
- USER\_SQLSET\_REFERENCES describes whether or not the SQL tuning sets owned by the current user are active.

| Column       | Datatype      | NULL     | Description                                    |
|--------------|---------------|----------|------------------------------------------------|
| SQLSET_NAME  | VARCHAR2(128) | NOT NULL | Name of the SQL tuning set                     |
| SQLSET_OWNER | VARCHAR2(128) |          | User name of SQL tuning set owner              |
| SQLSET_ID    | NUMBER        | NOT NULL | Identifier of the SQL tuning set               |
| ID           | NUMBER        | NOT NULL | Reference identifier                           |
| OWNER        | VARCHAR2(128) |          | User who registered to use the SQL tuning set  |
| DESCRIPTION  | VARCHAR2(256) |          | Description of the usage of the SQL tuning set |
| CREATED      | DATE          |          | Date the reference was created                 |

## 4.85 ALL\_SQLSET\_STATEMENTS

ALL\_SQLSET\_STATEMENTS displays information about the SQL statements, along with their statistics, that form all SQL tuning sets accessible to the current user.

**Related Views**

- DBA\_SQLSET\_STATEMENTS displays information about the SQL statements, along with their statistics, that form all SQL tuning sets in the database.
- USER\_SQLSET\_STATEMENTS displays information about the SQL statements, along with their statistics, that form the SQL tuning sets owned by the current user. This view does not display the SQLSET\_OWNER column.

| Column                   | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SQLSET_NAME              | VARCHAR2(128) | NOT NULL | Name of the SQL tuning set for the statement                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| SQLSET_OWNER             | VARCHAR2(128) |          | User name of the SQL tuning set owner                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| SQLSET_ID                | NUMBER        | NOT NULL | ID of the SQL tuning set for the statement                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| CON_DBID                 | NUMBER        | NOT NULL | The database ID of the PDB                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| SQL_ID                   | VARCHAR2(13)  | NOT NULL | SQL identifier of the parent cursor in the library cache                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| FORCE_MATCHING_SIGNATURE | NUMBER        | NOT NULL | The signature used when the CURSOR_SHARING parameter is set to FORCE                                                                                                                                                                                                                                                                                                                                                                                                                       |
| SQL_TEXT                 | CLOB          |          | Full text for the SQL statement exposed as a CLOB column.                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| PARSING_SCHEMA_NAME      | VARCHAR2(128) |          | Name of the user in whose schema the statement was parsed                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| PLAN_HASH_VALUE          | NUMBER        | NOT NULL | Hash value for the plan corresponding to statistics in this record                                                                                                                                                                                                                                                                                                                                                                                                                         |

| BINDS_CAPTURED           | CHAR(1)       |          | Binds captured                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| MODULE                   | VARCHAR2(64)  |          | Contains the name of the module that was executing when the SQL statement was first parsed, which is set by calling DBMS_APPLICATION_INFO.SET_MODULE                                                                                                                                                                                                                                                                                                                                       |
| ACTION                   | VARCHAR2(64)  |          | Contains the name of the action that was executing when the SQL statement was first parsed, which is set by calling DBMS_APPLICATION_INFO.SET_ACTION                                                                                                                                                                                                                                                                                                                                       |
| ELAPSED_TIME             | NUMBER        |          | Elapsed time (in microseconds) used by this cursor for parsing, executing, and fetching                                                                                                                                                                                                                                                                                                                                                                                                    |
| CPU_TIME                 | NUMBER        |          | CPU time (in microseconds) used by this cursor for parsing, executing, and fetching                                                                                                                                                                                                                                                                                                                                                                                                        |
| BUFFER_GETS              | NUMBER        |          | Number of buffer gets for this child cursor                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| DISK_READS               | NUMBER        |          | Number of disk reads for this child cursor                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| DIRECT_WRITES            | NUMBER        |          | Number of direct writes for this child cursor                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| ROWS_PROCESSED           | NUMBER        |          | Total number of rows that the parsed SQL statement returns                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| FETCHES                  | NUMBER        |          | Number of fetches associated with the SQL statement                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| EXECUTIONS               | NUMBER        |          | Number of executions that took place on this object since it was brought into the library cache                                                                                                                                                                                                                                                                                                                                                                                            |
| END_OF_FETCH_COUNT       | NUMBER        |          | Number of times this cursor was fully executed since the cursor was brought into the library cache. The value of this statistic is not incremented when the cursor is partially executed, either because it failed during the execution or because only the first few rows produced by this cursor are fetched before the cursor is closed or re-executed. By definition, the value of the END_OF_FETCH_COUNT column should be less than, or equal to, the value of the EXECUTIONS column. |
| OPTIMIZER_COST           | NUMBER        |          | Cost of this query, given by the optimizer                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## 4.88 ALL\_STORED\_SETTINGS

ALL\_STORED\_SETTINGS provides information about the persistent parameter settings for stored PL/SQL units for which the current user has execute privileges.

#### Related Views

- DBA\_STORED\_SETTINGS lists information about the persistent parameter settings for stored PL/SQL units for which the current user has execute privileges. It also returns parameter

information for all objects in the database and is accessible only to users with the SELECT\_CATALOG\_ROLE privilege.

- USER\_STORED\_SETTINGS lists information about the persistent parameter settings for stored PL/SQL units, but only shows information about PL/SQL units owned by the current user. This view does not display the OWNER column.

| Column        | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                           |

## 4.89 ALL\_STREAMS\_GLOBAL\_RULES

ALL\_STREAMS\_GLOBAL\_RULES displays information about rules.

ALL\_STREAMS\_GLOBAL\_RULES displays information about the following types of rules:

- Global rules created for the capture processes that enqueue the captured changes into queues accessible to the current user
- Global rules created for the propagations that have a source queue accessible to the current user

- Global rules created for the apply processes that dequeue events from queues accessible to the current user

This view does not contain information about rules created using the DBMS\_RULE\_ADM package.

#### Related View

DBA\_STREAMS\_GLOBAL\_RULES displays information about the global rules created for all capture processes, propagations, and apply processes in the database.

| Column             | Datatype       | NULL     | Description                                                                                                                                                                    |
|--------------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STREAMS_NAME       | VARCHAR2(128)  |          | Name of the Replication process or propagation                                                                                                                                 |
| STREAMS_TYPE       | VARCHAR2(11)   |          | Type of the Replication process or propagation: <ul style="list-style-type: none"> <li>• CAPTURE</li> <li>• PROPAGATION</li> <li>• APPLY</li> </ul>                            |
| RULE_TYPE          | VARCHAR2(9)    |          | Type of the rule: <ul style="list-style-type: none"> <li>• DML</li> <li>• DDL</li> </ul>                                                                                       |
| INCLUDE_TAGGED_LCR | VARCHAR2(3)    |          | Indicates whether a redo entry or logical change record (LCR) with a non-NULL tag is considered for capture, propagation, or apply (YES) or not (NO)                           |
| SOURCE_DATABASE    | VARCHAR2(128)  |          | Source database in the rule condition. The rule evaluates to true for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this source database. |
| RULE_NAME          | VARCHAR2(128)  | NOT NULL | Name of the rule                                                                                                                                                               |
| RULE_OWNER         | VARCHAR2(128)  | NOT NULL | Owner of the rule                                                                                                                                                              |
| RULE_CONDITION     | VARCHAR2(4000) |          | First 4000 bytes of the system-generated rule condition evaluated by the rules engine                                                                                          |

## 4.92 ALL\_STREAMS\_SCHEMA\_RULES

ALL\_STREAMS\_SCHEMA\_RULES displays information about several types of schema rules.

ALL\_STREAMS\_SCHEMA\_RULES displays information about these types of schema rules:

- Schema rules created for the capture processes that enqueue the captured changes into queues accessible to the current user
- Schema rules created for the propagations that have a source queue accessible to the current user
- Schema rules created for the apply processes that dequeue events from queues accessible to the current user

This view does not contain information about rules created using the DBMS\_RULE\_ADM package.

### Related View

DBA\_STREAMS\_SCHEMA\_RULES displays information about the schema rules created for all capture processes, propagations, and apply processes in the database.

| Column       | Datatype      | NULL | Description                                    |
|--------------|---------------|------|------------------------------------------------|
| STREAMS_NAME | VARCHAR2(128) |      | Name of the Replication process or propagation |

| Column             | Datatype       | NULL     | Description                                                                                                                                                                    |
|--------------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STREAMS_TYPE       | VARCHAR2(11)   |          | Type of the Replication process or propagation: <ul style="list-style-type: none"> <li>• CAPTURE</li> <li>• PROPAGATION</li> <li>• APPLY</li> </ul>                            |
| SCHEMA_NAME        | VARCHAR2(128)  |          | Schema name in the rule condition. The rule evaluates to true for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this schema name.         |
| RULE_TYPE          | VARCHAR2(7)    |          | Type of the rule: <ul style="list-style-type: none"> <li>• DML</li> <li>• DDL</li> </ul>                                                                                       |
| INCLUDE_TAGGED_LCR | VARCHAR2(3)    |          | Indicates whether a redo entry or logical change record (LCR) with a non-NULL tag is considered for capture, propagation, or apply (YES) or not (NO)                           |
| SOURCE_DATABASE    | VARCHAR2(128)  |          | Source database in the rule condition. The rule evaluates to true for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this source database. |
| RULE_NAME          | VARCHAR2(128)  | NOT NULL | Name of the rule                                                                                                                                                               |
| RULE_OWNER         | VARCHAR2(128)  | NOT NULL | Owner of the rule                                                                                                                                                              |
| RULE_CONDITION     | VARCHAR2(4000) |          | First 4000 bytes of the system-generated rule condition evaluated by the rules engine                                                                                          |

## 4.93 ALL\_STREAMS\_TABLE\_RULES

ALL\_STREAMS\_TABLE\_RULES displays information about several types of rules.

ALL\_STREAMS\_TABLE\_RULES displays information about these types of table and subset rules:

- Table rules created for the capture processes that enqueue the captured changes into queues accessible to the current user
- Table rules created for the propagations that have a source queue accessible to the current user
- Table rules created for the apply processes that dequeue events from queues accessible to the current user
- Subset rules created for the apply processes that have a source queue accessible to the current user

This view does not contain information about rules created using the DBMS\_RULE\_ADM package.

**Related View**

DBA\_STREAMS\_TABLE\_RULES displays information about the table rules created for all capture processes, propagations, and apply processes in the database.

| Column               | Datatype       | NULL     | Description                                                                                                                                                                          |
|----------------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STREAMS_NAME         | VARCHAR2(128)  |          | Name of the Replication process or propagation                                                                                                                                       |
| STREAMS_TYPE         | VARCHAR2(12)   |          | Type of the Replication process or propagation: <ul style="list-style-type: none"> <li>• CAPTURE</li> <li>• PROPAGATION</li> <li>• APPLY</li> <li>• DEQUEUE</li> </ul>               |
| TABLE_OWNER          | VARCHAR2(128)  |          | Table owner in the rule condition. The rule evaluates to true for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this table owner.               |
| TABLE_NAME           | VARCHAR2(128)  |          | Table name in the rule condition. The rule evaluates to true for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this table name.                 |
| RULE_TYPE            | VARCHAR2(7)    |          | Type of the rule: <ul style="list-style-type: none"> <li>• DML</li> <li>• DDL</li> </ul>                                                                                             |
| DML_CONDITION        | VARCHAR2(4000) |          | Row subsetting condition, if the rule is a subset rule                                                                                                                               |
| SUBSETTING_OPERATION | VARCHAR2(6)    |          | DML operation for row subsetting in the rule condition, if the rule is a subset rule: <ul style="list-style-type: none"> <li>• INSERT</li> <li>• UPDATE</li> <li>• DELETE</li> </ul> |
| INCLUDE_TAGGED_LCR   | VARCHAR2(3)    |          | The rule evaluates to true for a logical change record (LCR) only if the LCR contains this command type after internal transformation.                                               |
| SOURCE_DATABASE      | VARCHAR2(128)  |          | Indicates whether a redo entry or logical change record (LCR) with a non-NULL tag is considered for capture, propagation, or apply (YES) or not (NO)                                 |
| RULE_NAME            | VARCHAR2(128)  | NOT NULL | Source database in the rule condition. The rule evaluates to true for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this source database.       |
| RULE_OWNER           | VARCHAR2(128)  | NOT NULL | Name of the rule                                                                                                                                                                     |
| RULE_CONDITION       | VARCHAR2(4000) |          | Owner of the rule                                                                                                                                                                    |
|                      |                |          | First 4000 bytes of the system-generated rule condition evaluated by the rules engine                                                                                                |

## 4.95 ALL\_SUBPART\_COL\_STATISTICS

ALL\_SUBPART\_COL\_STATISTICS describes column statistics and histogram information for subpartitions of partitioned objects accessible to the current user.

### Related Views

- DBA\_SUBPART\_COL\_STATISTICS provides this information for all subpartitions in the database.
- USER\_SUBPART\_COL\_STATISTICS provides this information for subpartitions of all partitioned objects owned by the current user. This view does not display the OWNER column.

| Column            | Datatype       | NULL     | Description                             |
|-------------------|----------------|----------|-----------------------------------------|
| OWNER             | VARCHAR2(128)  | NOT NULL | Owner of the table                      |
| TABLE_NAME        | VARCHAR2(128)  | NOT NULL | Name of the table                       |
| SUBPARTITION_NAME | VARCHAR2(128)  |          | Table subpartition name                 |
| COLUMN_NAME       | VARCHAR2(4000) |          | Column name                             |
| NUM_DISTINCT      | NUMBER         |          | Number of distinct values in the column |

| Column        | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                 |
|---------------|--------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LOW_VALUE     | RAW(1000)    |      | Low value in the column                                                                                                                                                                                                                                                                                                                     |
| HIGH_VALUE    | RAW(1000)    |      | High value in the column                                                                                                                                                                                                                                                                                                                    |
| DENSITY       | NUMBER       |      | If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints.<br><br>If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT. |
| NUM_NULLS     | NUMBER       |      | Number of NULLs in the column                                                                                                                                                                                                                                                                                                               |
| NUM_BUCKETS   | NUMBER       |      | Number of buckets in histogram for the column                                                                                                                                                                                                                                                                                               |
| SAMPLE_SIZE   | NUMBER       |      | Sample size used in analyzing this column                                                                                                                                                                                                                                                                                                   |
| LAST_ANALYZED | DATE         |      | Date on which this column was most recently analyzed                                                                                                                                                                                                                                                                                        |
| GLOBAL_STATS  | VARCHAR2(3)  |      | GLOBAL_STATS will be YES if statistics have been gathered or NO if statistics have not been gathered                                                                                                                                                                                                                                        |
| USER_STATS    | VARCHAR2(3)  |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                                                                                                            |
| NOTES         | VARCHAR2(41) |      | Describes some additional properties of the statistics. For example, if the value is INCREMENTAL, the global statistics are derived from synopses, that is, the global statistics are incrementally maintained.                                                                                                                             |
| AVG_COL_LEN   | NUMBER       |      | Average length of the column (in bytes)                                                                                                                                                                                                                                                                                                     |
| HISTOGRAM     | VARCHAR2(15) |      | Indicates existence/type of histogram: <ul style="list-style-type: none"> <li>• NONE</li> <li>• FREQUENCY</li> <li>• HEIGHT BALANCED</li> <li>• HYBRID</li> <li>• TOP-FREQUENCY</li> </ul>                                                                                                                                                  |

## 4.96 ALL\_SUBPART\_HISTOGRAMS

ALL\_SUBPART\_HISTOGRAMS displays the actual histogram data (end-points per histogram) for histograms on table subpartitions accessible to the current user.

#### Related Views

- DBA\_SUBPART\_HISTOGRAMS displays this information for all subpartitions in the database.
- USER\_SUBPART\_HISTOGRAMS displays this information for subpartitions of all partitioned objects owned by the current user. This view does not display the OWNER column.

**Note**

These views are populated only if you collect statistics on the index using the DBMS\_STATS package.

| Column                    | Datatype       | NULL | Description                                                                                              |
|---------------------------|----------------|------|----------------------------------------------------------------------------------------------------------|
| OWNER                     | VARCHAR2(128)  |      | Owner of the table                                                                                       |
| TABLE_NAME                | VARCHAR2(128)  |      | Name of the table                                                                                        |
| SUBPARTITION_NAME         | VARCHAR2(128)  |      | Table subpartition name                                                                                  |
| COLUMN_NAME               | VARCHAR2(4000) |      | Column name                                                                                              |
| BUCKET_NUMBER             | NUMBER         |      | Bucket number                                                                                            |
| ENDPOINT_VALUE            | NUMBER         |      | Normalized endpoint values for this bucket                                                               |
| ENDPOINT_ACTUAL_VALUE     | VARCHAR2(4000) |      | Actual (not normalized) string value of the endpoint for this bucket                                     |
| ENDPOINT_ACTUAL_VALUE_RAW | RAW(1000)      |      | Endpoint actual value in raw format                                                                      |
| ENDPOINT_REPEAT_COUNT     | NUMBER         |      | Frequency of the endpoint (applies only to hybrid histograms, and is set to 0 for other histogram types) |

## 4.97 ALL\_SUBPART\_KEY\_COLUMNS

ALL\_SUBPART\_KEY\_COLUMNS displays subpartitioning key columns for composite-partitioned tables (and local indexes on composite-partitioned tables) accessible to the current user.

**Related Views**

- DBA\_SUBPART\_KEY\_COLUMNS displays this information for all subpartitions in the database.
- USER\_SUBPART\_KEY\_COLUMNS displays this information for subpartitions of all partitioned objects owned by the current user. This view does not display the OWNER column.

| Column      | Datatype       | NULL | Description                                                                          |
|-------------|----------------|------|--------------------------------------------------------------------------------------|
| OWNER       | VARCHAR2(128)  |      | Owner of the partitioned table or index                                              |
| NAME        | VARCHAR2(128)  |      | Name of the partitioned table or index                                               |
| OBJECT_TYPE | CHAR(5)        |      | Object type: <ul style="list-style-type: none"><li>• TABLE</li><li>• INDEX</li></ul> |
| COLUMN_NAME | VARCHAR2(4000) |      | Column name                                                                          |

| Column             | Datatype | NULL | Description                                                                               |
|--------------------|----------|------|-------------------------------------------------------------------------------------------|
| COLUMN_POSITION    | NUMBER   |      | Position of the column within the subpartitioning key                                     |
| COLLATED_COLUMN_ID | NUMBER   |      | Internal sequence number of the column for which this column provides linguistic ordering |

## 4.99 ALL\_SUMDELTA

ALL\_SUMDELTA lists direct path load entries accessible to the current user.

| Column        | Datatype    | NULL     | Description                                                     |
|---------------|-------------|----------|-----------------------------------------------------------------|
| TABLEOBJ#     | NUMBER      | NOT NULL | Object number of the table                                      |
| PARTITIONOBJ# | NUMBER      | NOT NULL | Object number of table partitions (if the table is partitioned) |
| DMLOPERATION  | VARCHAR2(1) |          | Type of DML operation applied to the table                      |
| SCN           | NUMBER      | NOT NULL | SCN when the bulk DML occurred                                  |
| TIMESTAMP     | DATE        | NOT NULL | Timestamp of the log entry                                      |
| LOWROWID      | ROWID       | NOT NULL | Start ROWID in the loaded rowid range                           |
| HIGHROWID     | ROWID       | NOT NULL | End ROWID in the loaded rowid range                             |
| SEQUENCE      | NUMBER      |          | Sequence number of the direct load                              |
| XID           | NUMBER      |          | Transaction ID                                                  |

## 4.100 ALL\_SYNC\_CAPTURE

ALL\_SYNC\_CAPTURE displays information about the synchronous capture processes that store the captured changes in queues accessible to the current user.

#### Related View

DBA\_SYNC\_CAPTURE displays information about all synchronous capture processes in the database.

| Column       | Datatype      | NULL     | Description                                         |
|--------------|---------------|----------|-----------------------------------------------------|
| CAPTURE_NAME | VARCHAR2(128) | NOT NULL | Name of the capture process                         |
| QUEUE_NAME   | VARCHAR2(128) | NOT NULL | Name of the queue used for holding captured changes |

| Column         | Datatype      | NULL     | Description                                          |
|----------------|---------------|----------|------------------------------------------------------|
| QUEUE_OWNER    | VARCHAR2(128) | NOT NULL | Owner of the queue used for holding captured changes |
| RULE_SET_NAME  | VARCHAR2(128) |          | Rule set used by the capture process                 |
| RULE_SET_OWNER | VARCHAR2(128) |          | Owner of the rule set                                |
| CAPTURE_USER   | VARCHAR2(128) |          | Current user who is enqueueing captured messages     |

## 4.101 ALL\_SYNC\_CAPTURE\_PREPARED\_TABS

ALL\_SYNC\_CAPTURE\_PREPARED\_TABS displays information about the tables accessible to the current user that are prepared for synchronous capture instantiation.

### Related View

DBA\_SYNC\_CAPTURE\_PREPARED\_TABS displays information about all tables in the database that are prepared for synchronous capture instantiation.

| Column      | Datatype      | NULL     | Description                                                       |
|-------------|---------------|----------|-------------------------------------------------------------------|
| TABLE_OWNER | VARCHAR2(128) | NOT NULL | Owner of the table prepared for synchronous capture instantiation |
| TABLE_NAME  | VARCHAR2(128) | NOT NULL | Name of the table prepared for synchronous capture instantiation  |
| SCN         | NUMBER        | NOT NULL | SCN from which changes can be captured                            |
| TIMESTAMP   | DATE          |          | Time at which the table was ready to be instantiated              |

## 4.103 ALL\_SYNONYMS

ALL\_SYNONYMS describes the synonyms accessible to the current user.

The following criteria determine the list of synonyms that ALL\_SYNONYMS shows:

- All private synonyms owned by the logged-in user, even if the base object pointed to is not accessible.
- All public synonyms, even if the base object pointed to is not accessible.
- All private synonyms owned by a different user, where the ultimate base object pointed to by that synonym or by any chain of nested synonyms, is known to be accessible because of a grant to the logged-in user, or a grant to a role in effect for this session.
- If the current session has any of the following privileges, then all synonyms that point directly to local objects are shown because it is assumed that the session can access those objects:
  - LOCK ANY TABLE
  - READ ANY TABLE
  - SELECT ANY TABLE
  - INSERT ANY TABLE
  - UPDATE ANY TABLE
  - DELETE ANY TABLE

Synonyms that point to remote objects are excluded because the system privileges just listed do not automatically convey access to those remote objects. Also, if the synonyms point to objects other than tables and views (such as sequences, PL/SQL procedures, and so on) then this rule may show synonyms that ultimately resolve to objects that this session cannot access.

- All private synonyms owned by a different user, where the synonym is via a database link, are excluded.

### Related Views

- DBA\_SYNONYMS describes all synonyms in the database.
- USER\_SYNONYMS describes the synonyms owned by the current user. This view does not display the OWNER column.

| Column        | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                       |
|---------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER         | VARCHAR2(128) |      | Owner of the synonym                                                                                                                                                                                                                                                                                                                                                              |
| SYNONYM_NAME  | VARCHAR2(128) |      | Name of the synonym                                                                                                                                                                                                                                                                                                                                                               |
| TABLE_OWNER   | VARCHAR2(128) |      | Owner of the object referenced by the synonym, or creator of the referring synonym if the target is a public synonym (that is, the object referred to by TABLE_NAME).<br><br>Although the column is called TABLE_OWNER, the object owned is not necessarily a table. It can be any general object such as a view, sequence, stored procedure, synonym, and so on.                 |
| TABLE_NAME    | VARCHAR2(128) |      | Name of the object referenced by the synonym.<br>Although the column is called TABLE_NAME, the object does not necessarily have to be a table. It can be any general object such as a view, sequence, stored procedure, synonym, and so on.                                                                                                                                       |
| DB_LINK       | VARCHAR2(128) |      | Name of the database link referenced, if any                                                                                                                                                                                                                                                                                                                                      |
| ORIGIN_CON_ID | VARCHAR2(256) |      | The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows in non-CDBs. This value is not used for CDBs.</li> <li><i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root)</li> </ul> |

## 4.104 ALL\_TAB\_COL\_STAT\_MODELS

ALL\_TAB\_COL\_STAT\_MODELS describes real-time statistics models for all tables accessible to the current user.

Real-time statistics models use machine learning algorithms to predict the number of distinct values (NDV) for table columns.

### Related Views

- DBA\_TAB\_COL\_STAT\_MODELS describes real-time statistics models for all tables in the database.
- USER\_TAB\_COL\_STAT\_MODELS describes real-time statistics models for all tables owned by the current user. This view does not display the OWNER column.

| Column     | Datatype      | NULL     | Description        |
|------------|---------------|----------|--------------------|
| OWNER      | VARCHAR2(128) | NOT NULL | Owner of the table |
| TABLE_NAME | VARCHAR2(128) | NOT NULL | Name of the table  |

| Column      | Datatype                       | NULL     | Description                                                |
|-------------|--------------------------------|----------|------------------------------------------------------------|
| COLUMN_NAME | VARCHAR2(128)                  | NOT NULL | Name of the table column to which the model applies        |
| STATS_TYPE  | VARCHAR2(7)                    |          | Statistics type<br>The value of this column is always NDV. |
| MODEL_NAME  | VARCHAR2(200)                  | NOT NULL | Name of the model                                          |
| STATUS      | VARCHAR2(8)                    |          | Status of the model (ENABLED or DISABLED)                  |
| CREATED     | TIMESTAMP(6) WITH<br>TIME_ZONE |          | Time at which the model was created                        |
| LAST_USED   | TIMESTAMP(6) WITH<br>TIME_ZONE |          | Time at which the model was most recently used             |

# 4.106 ALL\_TAB\_COLS

ALL\_TAB\_COLS describes the columns of the tables, views, and clusters accessible to the current user.

To gather statistics for this view, use the DBMS\_STATS package.

This view differs from ALL\_TAB\_COLUMNS in that system-generated hidden columns are not filtered out.

## Related Views

- DBA\_TAB\_COLS describes the columns of all tables, views, and clusters in the database.
- USER\_TAB\_COLS describes the columns of the tables, views, and clusters owned by the current user. This view does not display the OWNER column.

This information is now in the {TAB PART}_COL_STATISTICS views.                                                                                                                                                                                                                                                                                                                                                                 |
| DENSITY              | NUMBER       |      | If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints.<br><br>If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT.<br>This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.                                               |
| NUM_NULLS            | NUMBER       |      | Number of NULLs in the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| NUM_BUCKETS          | NUMBER       |      | Number of buckets in the histogram for the column<br><br><b>Note:</b> The number of buckets in a histogram is specified in the SIZE parameter of the ANALYZE SQL statement. However, Oracle Database does not create a histogram with more buckets than the number of rows in the sample. Also, if the sample contains any values that are very repetitious, Oracle Database creates the specified number of buckets, but the value indicated by this column may be smaller because of an internal compression algorithm. |
| LAST_ANALYZED        | DATE         |      | Date on which this column was most recently analyzed                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| SAMPLE_SIZE          | NUMBER       |      | Sample size used in analyzing this column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| CHAR_COL_DECL_LENGTH | NUMBER       |      | Declaration length of the character type column                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| GLOBAL_STATS         | VARCHAR2(3)  |      | GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO                                                                                                                                                                                                                                                                                                                                                                                                                  |
| USER_STATS           | VARCHAR2(3)  |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| AVG_COL_LEN          | NUMBER       |      | Average length of the column (in bytes)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| CHAR_LENGTH          | NUMBER       |      | Displays the length of the column in characters. This value only applies to the following datatypes: <ul style="list-style-type: none"> <li>CHAR</li> <li>VARCHAR2</li> <li>NCHAR</li> <li>NVARCHAR2</li> </ul>                                                                                                                                                                                                                                                                                                           |

| Column             | Datatype       | NULL     | Description                                                                                                                                                                                                                                                   |
|--------------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CHAR_USED          | VARCHAR2(1)    |          | Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the datatype is not any of the following (NULL): <ul style="list-style-type: none"> <li>CHAR</li> <li>VARCHAR2</li> <li>NCHAR</li> <li>NVARCHAR2</li> </ul> |
| V80_FMT_IMAGE      | VARCHAR2(3)    |          | Indicates whether the column data is in release 8.0 image format (YES) or not (NO)                                                                                                                                                                            |
| DATA_UPGRADED      | VARCHAR2(3)    |          | Indicates whether the column data has been upgraded to the latest type version format (YES) or not (NO)                                                                                                                                                       |
| HIDDEN_COLUMN      | VARCHAR2(3)    |          | Indicates whether the column is a hidden column (YES) or not (NO)                                                                                                                                                                                             |
| VIRTUAL_COLUMN     | VARCHAR2(3)    |          | Indicates whether the column is a virtual column (YES) or not (NO)                                                                                                                                                                                            |
| SEGMENT_COLUMN_ID  | NUMBER         |          | Sequence number of the column in the segment                                                                                                                                                                                                                  |
| INTERNAL_COLUMN_ID | NUMBER         | NOT NULL | Internal sequence number of the column                                                                                                                                                                                                                        |
| HISTOGRAM          | VARCHAR2(15)   |          | Indicates existence/type of histogram: <ul style="list-style-type: none"> <li>NONE</li> <li>FREQUENCY</li> <li>TOP-FREQUENCY</li> <li>HEIGHT BALANCED</li> <li>HYBRID</li> </ul>                                                                              |
| QUALIFIED_COL_NAME | VARCHAR2(4000) |          | Qualified column name                                                                                                                                                                                                                                         |
| USER_GENERATED     | VARCHAR2(3)    |          | Indicates whether the column is a user-generated column (YES) or a system-generated column (NO). Invisible columns are hidden columns that are also user-generated columns.                                                                                   |
| DEFAULT_ON_NULL    | VARCHAR2(3)    |          | Indicates whether the column has DEFAULT ON NULL semantics (YES) or not (NO)                                                                                                                                                                                  |
| IDENTITY_COLUMN    | VARCHAR2(3)    |          | Indicates whether this is an identity column (YES) or not (NO)                                                                                                                                                                                                |
| EVALUATION_EDITION | VARCHAR2(128)  |          | Name of the edition in which editioned objects referenced in an expression column are resolved                                                                                                                                                                |
| UNUSABLE_BEFORE    | VARCHAR2(128)  |          | Name of the oldest edition in which the column is usable                                                                                                                                                                                                      |
| UNUSABLE_BEGINNING | VARCHAR2(128)  |          | Name of the oldest edition in which the column becomes perpetually unusable                                                                                                                                                                                   |
| COLLATION          | VARCHAR2(100)  |          | Collation for the column. Only applies to columns with character data types.                                                                                                                                                                                  |
| COLLATED_COLUMN_ID | NUMBER         |          | Internal sequence number of a column, for which this virtual column generates a collation key.                                                                                                                                                                |

## 4.107 ALL\_TAB\_COLUMNS

ALL\_TAB\_COLUMNS describes the columns of the tables, views, and clusters accessible to the current user.

To gather statistics for this view, use the DBMS\_STATS package.

This view filters out system-generated hidden columns. The ALL\_TAB\_COLS view does not filter out system-generated hidden columns.

### Related Views

- DBA\_TAB\_COLUMNS describes the columns of all tables, views, and clusters in the database.
- USER\_TAB\_COLUMNS describes the columns of the tables, views, and clusters owned by the current user. This view does not display the OWNER column.

| Column          | Datatype      | NULL     | Description                                                                                                                                                                                              |
|-----------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128) | NOT NULL | Owner of the table, view, or cluster                                                                                                                                                                     |
| TABLE_NAME      | VARCHAR2(128) | NOT NULL | Name of the table, view, or cluster                                                                                                                                                                      |
| COLUMN_NAME     | VARCHAR2(128) | NOT NULL | Column name                                                                                                                                                                                              |
| DATA_TYPE       | VARCHAR2(128) |          | Data type of the column                                                                                                                                                                                  |
| DATA_TYPE_MOD   | VARCHAR2(3)   |          | Data type modifier of the column                                                                                                                                                                         |
| DATA_TYPE_OWNER | VARCHAR2(128) |          | Owner of the data type of the column                                                                                                                                                                     |
| DATA_LENGTH     | NUMBER        | NOT NULL | Length of the column (in bytes)                                                                                                                                                                          |
| DATA_PRECISION  | NUMBER        |          | Decimal precision for NUMBER data type; binary precision for FLOAT data type; NULL for all other data types                                                                                              |
| DATA_SCALE      | NUMBER        |          | Digits to the right of the decimal point in a number                                                                                                                                                     |
| NULLABLE        | VARCHAR2(1)   |          | Indicates whether a column allows NULLs. The value is N if there is a NOT NULL constraint on the column or if the column is part of a PRIMARY KEY. The constraint should be in an ENABLE VALIDATE state. |
| COLUMN_ID       | NUMBER        |          | Sequence number of the column as created                                                                                                                                                                 |
| DEFAULT_LENGTH  | NUMBER        |          | Length of the default value for the column                                                                                                                                                               |
| DATA_DEFAULT    | LONG          |          | Default value for the column                                                                                                                                                                             |
| NUM_DISTINCT    | NUMBER        |          | Number of distinct values in the column.<br>This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.                                 |

| Column               | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------|--------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LOW_VALUE            | RAW(1000)    |      | Low value in the column.<br>This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.                                                                                                                                                                                                                                                                                                                                                              |
| HIGH_VALUE           | RAW(1000)    |      | High value in the column.<br>This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.                                                                                                                                                                                                                                                                                                                                                             |
| DENSITY              | NUMBER       |      | If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints.<br>If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT.<br>This column remains for backward compatibility with Oracle7. This information is now in the {TAB PART}_COL_STATISTICS views.                                               |
| NUM_NULLS            | NUMBER       |      | Number of NULLs in the column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| NUM_BUCKETS          | NUMBER       |      | Number of buckets in the histogram for the column<br><b>Note:</b> The number of buckets in a histogram is specified in the SIZE parameter of the ANALYZE SQL statement. However, Oracle Database does not create a histogram with more buckets than the number of rows in the sample. Also, if the sample contains any values that are very repetitious, Oracle Database creates the specified number of buckets, but the value indicated by this column may be smaller because of an internal compression algorithm. |
| LAST_ANALYZED        | DATE         |      | Date on which this column was most recently analyzed                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| SAMPLE_SIZE          | NUMBER       |      | Sample size used in analyzing this column                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| CHARACTER_SET_NAME   | VARCHAR2(44) |      | Name of the character set: <ul style="list-style-type: none"> <li>CHAR_CS</li> <li>NCHAR_CS</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                |
| CHAR_COL_DECL_LENGTH | NUMBER       |      | Declaration length of the character type column                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| GLOBAL_STATS         | VARCHAR2(3)  |      | GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO                                                                                                                                                                                                                                                                                                                                                                                                              |
| USER_STATS           | VARCHAR2(3)  |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| AVG_COL_LEN          | NUMBER       |      | Average length of the column (in bytes)                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| CHAR_LENGTH          | NUMBER       |      | Displays the length of the column in characters. This value only applies to the following datatypes: <ul style="list-style-type: none"> <li>CHAR</li> <li>VARCHAR2</li> <li>NCHAR</li> <li>NVARCHAR2</li> </ul>                                                                                                                                                                                                                                                                                                       |

| Column             | Datatype      | NULL | Description                                                                                                                                                                                                                                                   |
|--------------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CHAR_USED          | VARCHAR2(1)   |      | Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the datatype is not any of the following (NULL): <ul style="list-style-type: none"> <li>CHAR</li> <li>VARCHAR2</li> <li>NCHAR</li> <li>NVARCHAR2</li> </ul> |
| V80_FMT_IMAGE      | VARCHAR2(3)   |      | Indicates whether the column data is in release 8.0 image format (YES) or not (NO)                                                                                                                                                                            |
| DATA_UPGRADED      | VARCHAR2(3)   |      | Indicates whether the column data has been upgraded to the latest type version format (YES) or not (NO)                                                                                                                                                       |
| HISTOGRAM          | VARCHAR2(15)  |      | Indicates existence/type of histogram: <ul style="list-style-type: none"> <li>NONE</li> <li>FREQUENCY</li> <li>TOP-FREQUENCY</li> <li>HEIGHT BALANCED</li> <li>HYBRID</li> </ul>                                                                              |
| DEFAULT_ON_NULL    | VARCHAR2(3)   |      | Indicates whether the column has DEFAULT ON NULL semantics (YES) or not (NO)                                                                                                                                                                                  |
| IDENTITY_COLUMN    | VARCHAR2(3)   |      | Indicates whether this is an identity column (YES) or not (NO)                                                                                                                                                                                                |
| EVALUATION_EDITION | VARCHAR2(128) |      | Name of the edition in which editioned objects referenced in an expression column are resolved                                                                                                                                                                |
| UNUSABLE_BEFORE    | VARCHAR2(128) |      | Name of the oldest edition in which the column is usable                                                                                                                                                                                                      |
| UNUSABLE_BEGINNING | VARCHAR2(128) |      | Name of the oldest edition in which the column becomes perpetually unusable                                                                                                                                                                                   |
| COLLATION          | VARCHAR2(100) |      | Collation for the column. Only applies to columns with character data types.                                                                                                                                                                                  |

## 4.110 ALL\_TAB\_HISTOGRAMS

ALL\_TAB\_HISTOGRAMS describes histograms on tables and views accessible to the current user.

The ALL\_TAB\_HISTOGRAMS view may contain a one-bucket histogram, which in fact signifies "No histogram" to the Oracle Database software. Therefore, it should not be queried to indicate the presence or absence of a histogram on a particular column. Instead, query the value of column HISTOGRAM in the ALL\_TAB\_COL\_STATISTICS view.

**Related Views**

- DBA\_TAB\_HISTOGRAMS describes histograms on all tables and views in the database.
- USER\_TAB\_HISTOGRAMS describes histograms on all tables and views owned by the current user. This view does not display the OWNER column.

**① Note**

These views are populated only if you collect statistics on the table using the DBMS\_STATS package. For more information, see *Oracle Database PL/SQL Packages and Types Reference*.

| Column                    | Datatype       | NULL | Description                                                                                              |
|---------------------------|----------------|------|----------------------------------------------------------------------------------------------------------|
| OWNER                     | VARCHAR2(128)  |      | Owner of the table                                                                                       |
| TABLE_NAME                | VARCHAR2(128)  |      | Name of the table                                                                                        |
| COLUMN_NAME               | VARCHAR2(4000) |      | Column name or attribute of the object type column                                                       |
| ENDPOINT_NUMBER           | NUMBER         |      | Histogram bucket number                                                                                  |
| ENDPOINT_VALUE            | NUMBER         |      | Normalized endpoint value for this bucket                                                                |
| ENDPOINT_ACTUAL_VALUE     | VARCHAR2(4000) |      | Actual (not normalized) string value of the endpoint for this bucket                                     |
| ENDPOINT_ACTUAL_VALUE_RAW | RAW(1000)      |      | Endpoint actual value in raw format                                                                      |
| ENDPOINT_REPEAT_COUNT     | NUMBER         |      | Frequency of the endpoint (applies only to hybrid histograms, and is set to 0 for other histogram types) |

| Column | Datatype    | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## 4.112 ALL\_TAB\_MODIFICATIONS

ALL\_TAB\_MODIFICATIONS describes tables accessible to the current user that have been modified since the last time statistics were gathered on the tables.

**Related Views**

- DBA\_TAB\_MODIFICATIONS describes such information for all tables in the database.
- USER\_TAB\_MODIFICATIONS describes such information for tables owned by the current user. This view does not display the TABLE\_OWNER column.

| Column            | Datatype      | NULL | Description                                                                             |
|-------------------|---------------|------|-----------------------------------------------------------------------------------------|
| TABLE_OWNER       | VARCHAR2(128) |      | Owner of the modified table                                                             |
| TABLE_NAME        | VARCHAR2(128) |      | Name of the modified table                                                              |
| PARTITION_NAME    | VARCHAR2(128) |      | Name of the modified partition                                                          |
| SUBPARTITION_NAME | VARCHAR2(128) |      | Name of the modified subpartition                                                       |
| INSERTS           | NUMBER        |      | Approximate number of inserts since the last time statistics were gathered              |
| UPDATES           | NUMBER        |      | Approximate number of updates since the last time statistics were gathered              |
| DELETES           | NUMBER        |      | Approximate number of deletes since the last time statistics were gathered              |
| TIMESTAMP         | DATE          |      | Indicates the last time the table was modified                                          |
| TRUNCATED         | VARCHAR2(3)   |      | Indicates whether the table has been truncated since the last analyze (YES) or not (NO) |
| DROP_SEGMENTS     | NUMBER        |      | Number of partition and subpartition segments dropped since the last analyze            |

## 4.113 ALL\_TAB\_PARTITIONS

ALL\_TAB\_PARTITIONS displays partition-level partitioning information, partition storage parameters, and partition statistics generated by the DBMS\_STATS package for the partitions accessible to the current user.

**Related Views**

- DBA\_TAB\_PARTITIONS displays such information for all partitions in the database.
- USER\_TAB\_PARTITIONS displays such information for the partitions of all partitioned objects owned by the current user. This view does not display the TABLE\_OWNER column.

**Note**

Columns marked with an asterisk (\*) are populated only if you collect statistics on the table with the DBMS\_STATS package.

**Note**

The following is true for the columns below that include double asterisks (\*\*) in the column description:

The column can display information about segment-level attributes (for simple partitioned tables) or metadata (for composite partitioned tables). In a simple partitioned table, the partition physically contains the data (the segment) in the database. In a composite partitioned table, the partition is metadata and the data itself is stored in the subpartitions.

| Column             | Datatype      | NULL | Description                                                                                                                     |
|--------------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------|
| TABLE_OWNER        | VARCHAR2(128) |      | Owner of the table                                                                                                              |
| TABLE_NAME         | VARCHAR2(128) |      | Name of the table                                                                                                               |
| COMPOSITE          | VARCHAR2(3)   |      | Indicates whether the table is composite-partitioned (YES) or not (NO)                                                          |
| PARTITION_NAME     | VARCHAR2(128) |      | Name of the partition                                                                                                           |

## 4.115 ALL\_TAB\_PRIVS

ALL\_TAB\_PRIVS describes grants.

ALL\_TAB\_PRIVS describes the following types of grants:

- Object grants for which the current user is the object owner, grantor, or grantee
- Object grants for which an enabled role or PUBLIC is the grantee

### Related Views

- DBA\_TAB\_PRIVS describes all object grants in the database.
- USER\_TAB\_PRIVS describes the object grants for which the current user is the object owner, grantor, or grantee.

| Column       | Datatype      | NULL | Description                                                                                                                                                                                                                                               |

| OBJECT_TYPE               | VARCHAR2(12)  |      | Type of the object: <ul style="list-style-type: none"> <li>• TABLE</li> <li>• PARTITION</li> <li>• SUBPARTITION</li> </ul> |
| NUM_ROWS                  | NUMBER        |      | Number of rows in the object                                                                                               |
| BLOCKS                    | NUMBER        |      | Number of used blocks in the object                                                                                        |
| EMPTY_BLOCKS              | NUMBER        |      | Number of empty blocks in the object                                                                                       |
| AVG_SPACE                 | NUMBER        |      | Average available free space in the object                                                                                 |
| CHAIN_CNT                 | NUMBER        |      | Number of chained rows in the object                                                                                       |
| AVG_ROW_LEN               | NUMBER        |      | Average row length, including row overhead                                                                                 |
| AVG_SPACE_FREELIST_BLOCKS | NUMBER        |      | Average freespace of all blocks on a freelist                                                                              |
| NUM_FREELIST_BLOCKS       | NUMBER        |      | Number of blocks on the freelist                                                                                           |
| AVG_CACHED_BLOCKS         | NUMBER        |      | Average number of blocks in the buffer cache                                                                               |
| AVG_CACHE_HIT_RATIO       | NUMBER        |      | Average cache hit ratio for the object                                                                                     |
| IM_IMCU_COUNT             | NUMBER        |      | Number of In-Memory Compression Units (IMCUs) in the table                                                                 |
| IM_BLOCK_COUNT            | NUMBER        |      | Number of In-Memory blocks in the table                                                                                    |
| IM_STAT_UPDATE_TIME       | TIMESTAMP(9)  |      | The timestamp of the most recent update to the In-Memory statistics                                                        |
| SCAN_RATE                 | NUMBER        |      | Scan rate for the object in megabytes per second. This statistic is only relevant or meaningful for external tables.       |

| Column          | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SAMPLE_SIZE     | NUMBER       |      | Sample size used in analyzing the table                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| LAST_ANALYZED   | DATE         |      | Date of the most recent time the table was analyzed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| GLOBAL_STATS    | VARCHAR2(3)  |      | GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| USER_STATS      | VARCHAR2(3)  |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| STATTYPE_LOCKED | VARCHAR2(5)  |      | Type of statistics lock: <ul style="list-style-type: none"> <li>• DATA</li> <li>• CACHE</li> <li>• ALL</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| STALE_STATS     | VARCHAR2(7)  |      | Indicates whether statistics for the object are stale (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| NOTES           | VARCHAR2(25) |      | Describes some additional properties of the statistics. For example, a value of STATS_ON_CONVENTIONAL_LOAD indicates that the statistics are obtained by online statistics gathering for conventional DML.                                                                                                                                                                                                                                                                                                                                                                                                  |
| SCOPE           | VARCHAR2(7)  |      | The value is SHARED for statistics gathered on any table other than global temporary tables.<br>For a global temporary table, the possible values are: <ul style="list-style-type: none"> <li>• SESSION - Indicates that the statistics are session-specific</li> <li>• SHARED - Indicates that the statistics are shared across all sessions</li> </ul> See <i>Oracle Database PL/SQL Packages and Types Reference</i> for information about using the GLOBAL_TEMP_TABLE_STATS preference of the DBMS_STATS package to control whether to gather session or shared statistics for global temporary tables. |

## 4.120 ALL\_TAB\_STATS\_HISTORY

ALL\_TAB\_STATS\_HISTORY provides a history of table statistics modifications for all tables accessible to the current user.

#### Related Views

- DBA\_TAB\_STATS\_HISTORY provides a history of table statistics modifications for all tables in the database.

- USER\_TAB\_STATS\_HISTORY provides a history of table statistics modifications for all tables owned by the current user.

| Column            | Datatype                       | NULL | Description                               |
|-------------------|--------------------------------|------|-------------------------------------------|
| OWNER             | VARCHAR2(128)                  |      | Owner of the object                       |
| TABLE_NAME        | VARCHAR2(128)                  |      | Name of the table                         |
| PARTITION_NAME    | VARCHAR2(128)                  |      | Name of the partition                     |
| SUBPARTITION_NAME | VARCHAR2(128)                  |      | Name of the subpartition                  |
| STATS_UPDATE_TIME | TIMESTAMP(6) WITH<br>TIME_ZONE |      | Time at which the statistics were updated |

## 4.121 ALL\_TAB\_SUBPARTITIONS

ALL\_TAB\_SUBPARTITIONS displays, for each table subpartition accessible to the current user, the subpartition name, name of the table and partition to which it belongs, its storage attributes, and statistics generated by the DBMS\_STATS package.

#### Related Views

- DBA\_TAB\_SUBPARTITIONS displays such information for all subpartitions in the database.
- USER\_TAB\_SUBPARTITIONS displays such information for subpartitions of all partitioned objects owned by the current user. This view does not display the TABLE\_OWNER column.

| Column                | Datatype      | NULL     | Description                                        |
|-----------------------|---------------|----------|----------------------------------------------------|
| TABLE_OWNER           | VARCHAR2(128) | NOT NULL | Owner of the table                                 |
| TABLE_NAME            | VARCHAR2(128) | NOT NULL | Name of the table                                  |
| PARTITION_NAME        | VARCHAR2(128) |          | Name of the partition                              |

| EMPTY_BLOCKS    | NUMBER       |      | Number of empty blocks in the subpartition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| AVG_SPACE       | NUMBER       |      | Average space in the subpartition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| CHAIN_CNT       | NUMBER       |      | Chain count                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| AVG_ROW_LEN     | NUMBER       |      | Average row length                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| SAMPLE_SIZE     | NUMBER       |      | Sample size                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| LAST_ANALYZED   | DATE         |      | Date on which this table was most recently analyzed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| BUFFER_POOL     | VARCHAR2(7)  |      | Buffer pool for this subpartition: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• RECYCLE</li> <li>• NULL</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                     |

| Column              | Datatype     | NULL | Description                                                                                                                                                                                                                                              |
|---------------------|--------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FLASH_CACHE         | VARCHAR2(7)  |      | Database Smart Flash Cache hint to be used for subpartition blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> Solaris and Oracle Linux functionality only.                                             |
| CELL_FLASH_CACHE    | VARCHAR2(7)  |      | Cell flash cache hint to be used for subpartition blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> <b>See Also:</b> Oracle Exadata Storage Server Software documentation for more information         |
| GLOBAL_STATS        | VARCHAR2(3)  |      | GLOBAL_STATS will be YES if statistics have been gathered or NO if statistics have not been gathered                                                                                                                                                     |
| USER_STATS          | VARCHAR2(3)  |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                         |
| INTERVAL            | VARCHAR2(3)  |      | Indicates whether the partition is in the interval section of an interval partitioned table (YES) or whether the partition is in the range section (NO)                                                                                                  |
| SEGMENT_CREATED     | VARCHAR2(3)  |      | Indicates whether the table subpartition segment has been created (YES) or not (NO); N/A indicates that this table is not subpartitioned                                                                                                                 |
| INDEXING            | VARCHAR2(3)  |      | Indicates the indexing property.<br>Possible values: <ul style="list-style-type: none"> <li>• ON - Indexing is on for this subpartition</li> <li>• OFF - Indexing is off for this subpartition</li> </ul>                                                |
| READ_ONLY           | VARCHAR2(3)  |      | Indicates whether a subpartition is read-only or read/write: <ul style="list-style-type: none"> <li>• YES: The default setting for the subpartition is read-only.</li> <li>• NO: The default setting for the subpartition is read/write.</li> </ul>      |
| INMEMORY            | VARCHAR2(8)  |      | Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for this subpartition                                                                                                                         |
| INMEMORY_PRIORITY   | VARCHAR2(8)  |      | Indicates the priority for In-Memory Column Store (IM column store) population. Possible values: <ul style="list-style-type: none"> <li>• LOW</li> <li>• MEDIUM</li> <li>• HIGH</li> <li>• CRITICAL</li> <li>• NONE</li> <li>• NULL</li> </ul>           |
| INMEMORY_DISTRIBUTE | VARCHAR2(15) |      | Indicates how the IM column store is distributed in an Oracle Real Application Clusters (Oracle RAC) environment: <ul style="list-style-type: none"> <li>• AUTO</li> <li>• BY ROWID RANGE</li> <li>• DBY PARTITION</li> <li>• BY SUBPARTITION</li> </ul> |

| Column                | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INMEMORY_COMPRESSION  | VARCHAR2(17)   |      | <p>Indicates the compression level for the IM column store:</p> <ul style="list-style-type: none"> <li>• NO MEMCOMPRESS</li> <li>• FOR DML</li> <li>• FOR QUERY [ LOW   HIGH ]</li> <li>• FOR CAPACITY [ LOW   HIGH ]</li> <li>• AUTO</li> <li>• NULL</li> </ul> <p>This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_SUBPARTITIONS.</p>                                                                                                                                                                                                                                                                           |
| INMEMORY_DUPLICATE    |                |      | <p>Indicates the duplicate setting for the IM column store in an Oracle RAC environment:</p> <ul style="list-style-type: none"> <li>• DUPLICATE</li> <li>• NO DUPLICATE</li> <li>• DUPLICATE ALL</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| INMEMORY_SERVICE      | VARCHAR2(12)   |      | <p>Indicates how the IM column store is populated on various instances. The possible values are:</p> <ul style="list-style-type: none"> <li>• DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default.</li> <li>• NONE: Data is not populated on any instance.</li> <li>• ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter.</li> <li>• USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.</li> </ul> |
| INMEMORY_SERVICE_NAME | VARCHAR2(1000) |      | <p>Indicates the service name for the service on which the IM column store should be populated. This column has a value only when the corresponding INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| CELLMEMORY            | VARCHAR2(24)   |      | <p>The value for columnar compression in the storage cell flash cache. Possible values:</p> <ul style="list-style-type: none"> <li>• ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form</li> <li>• DISABLED: Oracle Exadata Storage is prevented from caching in columnar form</li> <li>• NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression)</li> <li>• FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format</li> <li>• FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format</li> </ul> <p>This column is intended for use with Oracle Exadata.</p>                                                                |

| Column            | Datatype    | NULL | Description                                                                                  |
|-------------------|-------------|------|----------------------------------------------------------------------------------------------|
| MEMOPTIMIZE_READ  | VARCHAR2(8) |      | Indicates whether the table is enabled for Fast Key Based Access (ENABLED) or not (DISABLED) |
| MEMOPTIMIZE_WRITE | VARCHAR2(8) |      | For internal use only                                                                        |

## 4.122 ALL\_TABLES

ALL\_TABLES describes the relational tables accessible to the current user. To gather statistics for this view, use the DBMS\_STATS package.

### Related Views

- DBA\_TABLES describes all relational tables in the database.
- USER\_TABLES describes the relational tables owned by the current user. This view does not display the OWNER column.

### ① Note

Columns marked with an asterisk (\*) are populated only if you collect statistics on the table with the DBMS\_STATS package.

| Column          | Datatype      | NULL     | Description                                                                                                                                                                         |
|-----------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128) | NOT NULL | Owner of the table                                                                                                                                                                  |
| TABLE_NAME      | VARCHAR2(128) | NOT NULL | Name of the table                                                                                                                                                                   |
| TABLESPACE_NAME | VARCHAR2(30)  |          | Name of the tablespace containing the table; NULL for partitioned, temporary, and index-organized tables                                                                            |
| CLUSTER_NAME    | VARCHAR2(128) |          | Name of the cluster, if any, to which the table belongs                                                                                                                             |
| IOT_NAME        | VARCHAR2(128) |          | Name of the index-organized table, if any, to which the overflow or mapping table entry belongs. If the IOT_TYPE column is not NULL, then this column contains the base table name. |
| STATUS          | VARCHAR2(8)   |          | If a previous DROP TABLE operation failed, indicates whether the table is unusable (UNUSABLE) or valid (VALID)                                                                      |
| PCT_FREE        | NUMBER        |          | Minimum percentage of free space in a block; NULL for partitioned tables                                                                                                            |

| Column                    | Datatype     | NULL | Description                                                                                                                                                    |
|---------------------------|--------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PCT_USED                  | NUMBER       |      | Minimum percentage of used space in a block; NULL for partitioned tables                                                                                       |
| INI_TRANS                 | NUMBER       |      | Initial number of transactions; NULL for partitioned tables                                                                                                    |
| MAX_TRANS                 | NUMBER       |      | Maximum number of transactions; NULL for partitioned tables                                                                                                    |
| INITIAL_EXTENT            | NUMBER       |      | Size of the initial extent (in bytes); NULL for partitioned tables                                                                                             |
| NEXT_EXTENT               | NUMBER       |      | Size of secondary extents (in bytes); NULL for partitioned tables                                                                                              |
| MIN_EXTENTS               | NUMBER       |      | Minimum number of extents allowed in the segment; NULL for partitioned tables                                                                                  |
| MAX_EXTENTS               | NUMBER       |      | Maximum number of extents allowed in the segment; NULL for partitioned tables                                                                                  |
| PCT_INCREASE              | NUMBER       |      | Percentage increase in extent size; NULL for partitioned tables                                                                                                |
| FREELISTS                 | NUMBER       |      | Number of process freelists allocated to the segment; NULL for partitioned tables                                                                              |
| FREELIST_GROUPS           | NUMBER       |      | Number of freelist groups allocated to the segment; NULL for partitioned tables                                                                                |
| LOGGING                   | VARCHAR2(3)  |      | Indicates whether or not changes to the table are logged; NULL for partitioned tables: <ul style="list-style-type: none"> <li>• YES</li> <li>• NO</li> </ul>   |
| BACKED_UP                 | VARCHAR2(1)  |      | Indicates whether the table has been backed up since the last modification (Y) or not (N)                                                                      |
| NUM_ROWS*                 | NUMBER       |      | Number of rows in the table                                                                                                                                    |
| BLOCKS*                   | NUMBER       |      | Number of used data blocks in the table                                                                                                                        |
| EMPTY_BLOCKS              | NUMBER       |      | Number of empty (never used) data blocks in the table. This column is populated only if you collect statistics on the table using the DBMS_STATS package.      |
| AVG_SPACE*                | NUMBER       |      | Average amount of free space, in bytes, in a data block allocated to the table                                                                                 |
| CHAIN_CNT*                | NUMBER       |      | Number of rows in the table that are chained from one data block to another, or which have migrated to a new block, requiring a link to preserve the old ROWID |
| AVG_ROW_LEN*              | NUMBER       |      | Average length of a row in the table (in bytes)                                                                                                                |
| AVG_SPACE_FREELIST_BLOCKS | NUMBER       |      | Average freespace of all blocks on a freelist                                                                                                                  |
| NUM_FREELIST_BLOCKS       | NUMBER       |      | Number of blocks on the freelist                                                                                                                               |
| DEGREE                    | VARCHAR2(10) |      | Number of threads per instance for scanning the table, or DEFAULT                                                                                              |
| INSTANCES                 | VARCHAR2(10) |      | Number of instances across which the table is to be scanned, or DEFAULT                                                                                        |
| CACHE                     | VARCHAR2(5)  |      | Indicates whether the table is to be cached in the buffer cache (Y) or not (N)                                                                                 |

| Column           | Datatype     | NULL | Description                                                                                                                                                                                                                                           |
|------------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TABLE_LOCK       | VARCHAR2(8)  |      | Indicates whether table locking is enabled (ENABLED) or disabled (DISABLED)                                                                                                                                                                           |
| SAMPLE_SIZE      | NUMBER       |      | Sample size used in analyzing the table                                                                                                                                                                                                               |
| LAST_ANALYZED    | DATE         |      | Date on which the table was most recently analyzed                                                                                                                                                                                                    |
| PARTITIONED      | VARCHAR2(3)  |      | Indicates whether the table is partitioned (YES) or not (NO)                                                                                                                                                                                          |
| IOT_TYPE         | VARCHAR2(12) |      | If the table is an index-organized table, then IOT_TYPE is IOT, IOT_OVERFLOW, or IOT_MAPPING. If the table is not an index-organized table, then IOT_TYPE is NULL.                                                                                    |
| TEMPORARY        | VARCHAR2(1)  |      | Indicates whether the table is temporary (Y) or not (N)                                                                                                                                                                                               |
| SECONDARY        | VARCHAR2(1)  |      | Indicates whether the table is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge (Y) or not (N)                                                                                                                   |
| NESTED           | VARCHAR2(3)  |      | Indicates whether the table is a nested table (YES) or not (NO)                                                                                                                                                                                       |
| BUFFER_POOL      | VARCHAR2(7)  |      | Buffer pool for the table; NULL for partitioned tables: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• RECYCLE</li> <li>• NULL</li> </ul>                                                                                |
| FLASH_CACHE      | VARCHAR2(7)  |      | Database Smart Flash Cache hint to be used for table blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> Solaris and Oracle Linux functionality only.                                                 |
| CELL_FLASH_CACHE | VARCHAR2(7)  |      | Cell flash cache hint to be used for table blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> <b>See Also:</b> Oracle Exadata Storage Server Software documentation for more information             |
| ROW_MOVEMENT     | VARCHAR2(8)  |      | Indicates whether partitioned row movement is enabled (ENABLED) or disabled (DISABLED)                                                                                                                                                                |
| GLOBAL_STATS     | VARCHAR2(3)  |      | GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO                                                                                                                                              |
| USER_STATS       | VARCHAR2(3)  |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                      |
| DURATION         | VARCHAR2(15) |      | Indicates the duration of a temporary table: <ul style="list-style-type: none"> <li>• SYS\$SESSION - Rows are preserved for the duration of the session</li> <li>• SYS\$TRANSACTION - Rows are deleted after COMMIT</li> </ul> Null - Permanent table |
| SKIP_CORRUPT     | VARCHAR2(8)  |      | Indicates whether Oracle Database ignores blocks marked corrupt during table and index scans (ENABLED) or raises an error (DISABLED). To enable this feature, run the DBMS_REPAIR.SKIP_CORRUPT_BLOCKS procedure.                                      |
| MONITORING       | VARCHAR2(3)  |      | This column is obsolete                                                                                                                                                                                                                               |

| Column          | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CLUSTER_OWNER   | VARCHAR2(128) |      | Owner of the cluster, if any, to which the table belongs                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| DEPENDENCIES    | VARCHAR2(8)   |      | Indicates whether row-level dependency tracking is enabled (ENABLED) or disabled (DISABLED)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| COMPRESSION     | VARCHAR2(8)   |      | Indicates whether table compression is enabled (ENABLED) or not (DISABLED); NULL for partitioned tables                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| COMPRESS_FOR    | VARCHAR2(30)  |      | <p>Default compression for what kind of operations:</p> <ul style="list-style-type: none"> <li>BASIC</li> <li>ADVANCED</li> <li>QUERY LOW</li> <li>QUERY HIGH</li> <li>ARCHIVE LOW</li> <li>ARCHIVE HIGH</li> <li>QUERY LOW ROW LEVEL LOCKING</li> <li>QUERY HIGH ROW LEVEL LOCKING</li> <li>ARCHIVE LOW ROW LEVEL LOCKING</li> <li>ARCHIVE HIGH ROW LEVEL LOCKING</li> <li>NO ROW LEVEL LOCKING</li> <li>NULL</li> </ul> <p>The QUERY LOW, QUERY HIGH, ARCHIVE LOW, ARCHIVE HIGH, QUERY LOW ROW LEVEL LOCKING, QUERY HIGH ROW LEVEL LOCKING, ARCHIVE LOW ROW LEVEL LOCKING, ARCHIVE HIGH ROW LEVEL LOCKING, and NO ROW LEVEL LOCKING values are associated with Hybrid Columnar Compression, a feature of the Enterprise Edition of Oracle Database that is dependent on the underlying storage system. See <i>Oracle Database Concepts</i> for more information.</p> |
| DROPPED         | VARCHAR2(3)   |      | <p>Indicates whether the table has been dropped and is in the recycle bin (YES) or not (NO); NULL for partitioned tables</p> <p>This view does not return the names of tables that have been dropped.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| READ_ONLY       | VARCHAR2(3)   |      | <p>Indicates whether the table segment is READ-ONLY or not. Possible values:</p> <ul style="list-style-type: none"> <li>YES - The table segment is READ-ONLY</li> <li>NO - The table segment is not READ-ONLY</li> <li>N/A - Not applicable. This value appears in a partitioned table, where there is no segment that relates to the logical table object.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| CLUSTERING           | VARCHAR2(3)  |      | Indicates whether the table has the attribute clustering clause (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                            |
| ACTIVITY_TRACKING    | VARCHAR2(23) |      | Indicates whether Heat Map tracking is enabled on the table                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| DML_TIMESTAMP        | VARCHAR2(25) |      | Modification time, creation time, or both for Automatic Data Optimization                                                                                                                                                                                                                                                                                                                                                                                                                    |
| HAS_IDENTITY         | VARCHAR2(3)  |      | Indicates whether the table has an identity column (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                         |
| CONTAINER_DATA       | VARCHAR2(3)  |      | Indicates whether the table contains container-specific data. Possible values: <ul style="list-style-type: none"> <li>• YES if the table was created with the CONTAINER_DATA clause</li> <li>• NO otherwise</li> </ul>                                                                                                                                                                                                                                                                       |
| INMEMORY             | VARCHAR2(8)  |      | Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for the table                                                                                                                                                                                                                                                                                                                                                                     |
| INMEMORY_PRIORITY    | VARCHAR2(8)  |      | Indicates the priority for In-Memory Column Store (IM column store) population. Possible values: <ul style="list-style-type: none"> <li>• LOW</li> <li>• MEDIUM</li> <li>• HIGH</li> <li>• CRITICAL</li> <li>• NONE</li> <li>• NULL</li> </ul>                                                                                                                                                                                                                                               |
| INMEMORY_DISTRIBUTE  | VARCHAR2(15) |      | Indicates how the IM column store is distributed in an Oracle Real Application Clusters (Oracle RAC) environment: <ul style="list-style-type: none"> <li>• AUTO</li> <li>• BY ROWID RANGE</li> <li>• DUPLICATE</li> <li>• NONE</li> <li>• NULL</li> </ul>                                                                                                                                                                                                                                    |
| INMEMORY_COMPRESSION | VARCHAR2(17) |      | Indicates the compression level for the IM column store: <ul style="list-style-type: none"> <li>• NO MEMCOMPRESS</li> <li>• FOR DML</li> <li>• FOR QUERY [ LOW   HIGH ]</li> <li>• FOR CAPACITY [ LOW   HIGH ]</li> <li>• AUTO</li> <li>• NULL</li> </ul> <p>This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_PARTITIONS.</p> |
| INMEMORY_DUPLICATE   | VARCHAR2(13) |      | Indicates the duplicate setting for the IM column store in an Oracle RAC environment: <ul style="list-style-type: none"> <li>• NO DUPLICATE</li> <li>• DUPLICATE</li> <li>• DUPLICATE ALL</li> </ul>                                                                                                                                                                                                                                                                                         |

| Column                 | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|------------------------|---------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DEFAULT_COLLATION      | VARCHAR2(100) |      | Default collation for the table                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| DUPLICATED             | VARCHAR2(1)   |      | Indicates whether the table is duplicated on this shard (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| SHARDED                | VARCHAR2(1)   |      | Indicates whether the table is sharded (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| EXTERNALLY_SHARDED     | VARCHAR2(1)   |      | Indicates whether the table is externally sharded (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| EXTERNALLY_DUPLICATED  | VARCHAR2(1)   |      | Indicates whether the table is externally duplicated (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| EXTERNAL               | VARCHAR2(3)   |      | Indicates whether the table is an external table (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| HYBRID                 | VARCHAR2(3)   |      | Indicates whether the table is a hybrid partitioned table (YES) or not (NO). A hybrid partitioned table can contain a mixture of partitions stored in segments and partitions stored externally.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| CELLMEMORY             | VARCHAR2(24)  |      | <p>The value for columnar compression in the storage cell flash cache. Possible values:</p> <ul style="list-style-type: none"> <li>ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form</li> <li>DISABLED: Oracle Exadata Storage is prevented from caching in columnar form</li> <li>NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression)</li> <li>FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format</li> <li>FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format</li> </ul> <p>This column is intended for use with Oracle Exadata.</p>                                                                  |
| CONTAINERS_DEFAULT     | VARCHAR2(3)   |      | Indicates whether the table is enabled for CONTAINERS( ) by default (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| CONTAINER_MAP          | VARCHAR2(3)   |      | Indicates whether the table is enabled for use with the container_map database property (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| EXTENDED_DATA_LINK     | VARCHAR2(3)   |      | Indicates whether the table is enabled for fetching an extended data link from the root (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| EXTENDED_DATA_LINK_MAP | VARCHAR2(3)   |      | For internal use only                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| INMEMORY_SERVICE       | VARCHAR2(12)  |      | <p>Indicates how the IM column store is populated on various instances. The possible values are:</p> <ul style="list-style-type: none"> <li>DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default.</li> <li>NONE: Data is not populated on any instance.</li> <li>ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter.</li> <li>USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.</li> </ul> |

| Column                | Datatype       | NULL | Description                                                                                                                                                                                                                 |
|-----------------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INMEMORY_SERVICE_NAME | VARCHAR2(1000) |      | Indicates the service name for the service on which the IM column store should be populated. This column has a value only when the corresponding INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null. |
| CONTAINER_MAP_OBJECT  | VARCHAR2(3)    |      | Indicates whether the table is used as the value of the container_map database property (YES) or not (NO)                                                                                                                   |
| MEMOPTIMIZE_READ      | VARCHAR2(8)    |      | Indicates whether the table is enabled for Fast Key Based Access (ENABLED) or not (DISABLED)                                                                                                                                |
| MEMOPTIMIZE_WRITE     | VARCHAR2(8)    |      | For internal use only                                                                                                                                                                                                       |
| HAS_SENSITIVE_COLUMN  | VARCHAR2(3)    |      | Indicates whether the table has one or more sensitive columns (YES) or not (NO)                                                                                                                                             |
| ADMIT_NULL            | VARCHAR2(3)    |      | Indicates whether the table admits null CON_ID data (YES) or not (NO)                                                                                                                                                       |
| DATA_LINK_DML_ENABLED | VARCHAR2(3)    |      | Indicates whether DML is permitted on the Data Link table (YES) or not (NO)                                                                                                                                                 |
| LOGICAL_REPLICATION   | VARCHAR2(8)    |      | Indicates whether the table is enabled for logical replication (ENABLED) or not (DISABLED). This setting is ignored if database-wide column data supplemental logging is enabled.                                           |

### Examples

This SQL query returns the names of the tables in the EXAMPLES tablespace:

```
SELECT table_name FROM all_tables
WHERE tablespace_name = 'EXAMPLE' ORDER BY table_name;
```

This SQL query returns the name of the tablespace that contains the HR schema:

```
SELECT DISTINCT tablespace_name FROM all_tables WHERE owner='HR';
```

## 4.123 ALL\_TRANSFORMATIONS

ALL\_TRANSFORMATIONS displays information about all transformations accessible to the current user.

These transformations can be specified with Advanced Queuing operations such as enqueue, dequeue, and subscribe to automatically integrate transformations in AQ messaging.

**Related Views**

- DBA\_TRANSFORMATIONS displays information about all transformations in the database.
- USER\_TRANSFORMATIONS displays information about transformations owned by the current user. This view does not display the OWNER column.

| Column            | Datatype      | NULL     | Description                              |
|-------------------|---------------|----------|------------------------------------------|
| TRANSFORMATION_ID | NUMBER        | NOT NULL | Unique identifier for the transformation |
| OWNER             | VARCHAR2(128) | NOT NULL | Owning user of the transformation        |
| NAME              | VARCHAR2(128) | NOT NULL | Transformation name                      |
| FROM_TYPE         | VARCHAR2(128) |          | Source type name                         |
| TO_TYPE           | VARCHAR2(256) |          | Target type name                         |

## 4.124 ALL\_TRIGGER\_COLS

ALL\_TRIGGER\_COLS describes the use of columns in the triggers accessible to the current user and in triggers on tables accessible to the current user.

If the user has the CREATE ANY TRIGGER privilege, then this view describes the use of columns in all triggers in the database.

**Related Views**

- DBA\_TRIGGER\_COLS describes the use of columns in all triggers in the database.
- USER\_TRIGGER\_COLS describes the use of columns in the triggers owned by the current user and in triggers on tables owned by the current user.

| Column        | Datatype       | NULL | Description                                                                      |
|---------------|----------------|------|----------------------------------------------------------------------------------|
| TRIGGER_OWNER | VARCHAR2(128)  |      | Owner of the trigger                                                             |
| TRIGGER_NAME  | VARCHAR2(128)  |      | Name of the trigger                                                              |
| TABLE_OWNER   | VARCHAR2(128)  |      | Owner of the table on which the trigger is defined                               |
| TABLE_NAME    | VARCHAR2(128)  |      | Table on which the trigger is defined                                            |
| COLUMN_NAME   | VARCHAR2(4000) |      | Name of the column used in the trigger                                           |
| COLUMN_LIST   | VARCHAR2(3)    |      | Indicates whether the column is specified in the UPDATE clause (YES) or not (NO) |

| Column       | Datatype     | NULL | Description                                                                                                                                                                                                                                                       |
|--------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COLUMN_USAGE | VARCHAR2(17) |      | How the column is used in the trigger: <ul style="list-style-type: none"> <li>• NEW IN</li> <li>• OLD IN</li> <li>• NEW IN OLD IN</li> <li>• NEW OUT</li> <li>• NEW IN OUT</li> <li>• NEW OUT OLD IN</li> <li>• NEW IN OUT OLD IN</li> <li>• PARENT IN</li> </ul> |

## 4.125 ALL\_TRIGGER\_ORDERING

ALL\_TRIGGER\_ORDERING describes the triggers accessible to the current user that have FOLLOWS or PRECEDES ordering.

#### Related Views

- DBA\_TRIGGER\_ORDERING describes all triggers in the database that have FOLLOWS or PRECEDES ordering.
- USER\_TRIGGER\_ORDERING describes the triggers owned by the current user that have FOLLOWS or PRECEDES ordering. This view does not display the TRIGGER\_OWNER column.

| Column                   | Datatype      | NULL     | Description                                                                                                                                          |
|--------------------------|---------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| TRIGGER_OWNER            | VARCHAR2(128) | NOT NULL | Owner of the trigger                                                                                                                                 |
| TRIGGER_NAME             | VARCHAR2(128) | NOT NULL | Name of the trigger                                                                                                                                  |
| REFERENCED_TRIGGER_OWNER | VARCHAR2(128) |          | Owner of the referenced trigger                                                                                                                      |
| REFERENCED_TRIGGER_NAME  | VARCHAR2(128) |          | Name of the referenced trigger                                                                                                                       |
| ORDERING_TYPE            | VARCHAR2(8)   |          | Type of the ordering between the trigger and the referenced trigger: <ul style="list-style-type: none"> <li>• FOLLOWS</li> <li>• PRECEDES</li> </ul> |

## 4.126 ALL\_TRIGGERS

ALL\_TRIGGERS describes the triggers on tables accessible to the current user.

If the user has the CREATE ANY TRIGGER privilege, then this view describes all triggers in the database.

### Related Views

- DBA\_TRIGGERS describes all triggers in the database.
- USER\_TRIGGERS describes the triggers owned by the current user. This view does not display the OWNER column.

| Column            | Datatype       | NULL | Description                                                                                                                                                                                                                        |
|-------------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER             | VARCHAR2(128)  |      | Owner of the trigger                                                                                                                                                                                                               |
| TRIGGER_NAME      | VARCHAR2(128)  |      | Name of the trigger                                                                                                                                                                                                                |
| TRIGGER_TYPE      | VARCHAR2(16)   |      | When the trigger fires: <ul style="list-style-type: none"> <li>• BEFORE STATEMENT</li> <li>• BEFORE EACH ROW</li> <li>• AFTER STATEMENT</li> <li>• AFTER EACH ROW</li> <li>• INSTEAD OF</li> <li>• COMPOUND</li> </ul>             |
| TRIGGERING_EVENT  | VARCHAR2(246)  |      | DML, DDL, or database event that fires the trigger<br><b>See Also:</b> <i>Oracle Database PL/SQL Language Reference</i> for additional information about triggers and triggering events.                                           |
| TABLE_OWNER       | VARCHAR2(128)  |      | Owner of the table on which the trigger is defined                                                                                                                                                                                 |
| BASE_OBJECT_TYPE  | VARCHAR2(18)   |      | Base object on which the trigger is defined: <ul style="list-style-type: none"> <li>• TABLE</li> <li>• VIEW</li> <li>• SCHEMA</li> <li>• DATABASE</li> </ul>                                                                       |
| TABLE_NAME        | VARCHAR2(128)  |      | If the base object type of the trigger is SCHEMA or DATABASE, then this column is NULL; if the base object type of the trigger is TABLE or VIEW, then this column indicates the table or view name on which the trigger is defined |
| COLUMN_NAME       | VARCHAR2(4000) |      | Name of the nested table column (if a nested table trigger), else NULL                                                                                                                                                             |
| REFERENCING_NAMES | VARCHAR2(422)  |      | Names used for referencing OLD and NEW column values from within the trigger                                                                                                                                                       |
| WHEN_CLAUSE       | VARCHAR2(4000) |      | Must evaluate to TRUE for TRIGGER_BODY to execute                                                                                                                                                                                  |
| STATUS            | VARCHAR2(8)    |      | Indicates whether the trigger is enabled (ENABLED) or disabled (DISABLED); a disabled trigger will not fire                                                                                                                        |
| DESCRIPTION       | VARCHAR2(4000) |      | Trigger description; useful for re-creating a trigger creation statement                                                                                                                                                           |

| Column            | Datatype     | NULL | Description                                                                                                                                                                                                                                       |
|-------------------|--------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ACTION_TYPE       | VARCHAR2(11) |      | Action type of the trigger body: <ul style="list-style-type: none"> <li>CALL</li> <li>PL/SQL</li> </ul>                                                                                                                                           |
| TRIGGER_BODY      | LONG         |      | Statements executed by the trigger when it fires                                                                                                                                                                                                  |
| CROSSEDITION      | VARCHAR2(7)  |      | Type of crossedition trigger: <ul style="list-style-type: none"> <li>FORWARD</li> <li>REVERSE</li> <li>NO</li> </ul>                                                                                                                              |
| BEFORE_STATEMENT  | VARCHAR2(3)  |      | Indicates whether the trigger has a BEFORE STATEMENT section (YES) or not (NO)                                                                                                                                                                    |
| BEFORE_ROW        | VARCHAR2(3)  |      | Indicates whether the trigger has a BEFORE EACH ROW section (YES) or not (NO)                                                                                                                                                                     |
| AFTER_ROW         | VARCHAR2(3)  |      | Indicates whether the trigger has an AFTER EACH ROW section (YES) or not (NO)                                                                                                                                                                     |
| AFTER_STATEMENT   | VARCHAR2(3)  |      | Indicates whether the trigger has an AFTER STATEMENT section (YES) or not (NO)                                                                                                                                                                    |
| INSTEAD_OF_ROW    | VARCHAR2(3)  |      | Indicates whether the trigger has an INSTEAD OF section (YES) or not (NO)                                                                                                                                                                         |
| FIRE_ONCE         | VARCHAR2(3)  |      | Indicates whether the trigger will fire only for user processes making changes (YES) or whether the trigger will also fire for Replication Apply or SQL Apply processes (NO)                                                                      |
| APPLY_SERVER_ONLY | VARCHAR2(3)  |      | Indicates whether the trigger will only fire for a Replication Apply or SQL Apply process (YES) or not (NO). If set to YES, then the setting of FIRE_ONCE does not matter.<br><b>See Also:</b> the DBMS_DDL.SET_TRIGGER_FIRING_PROPERTY procedure |

## 4.127 ALL\_TRIGGERS\_AE

ALL\_TRIGGERS\_AE describes the triggers on tables (across all editions) accessible to the current user.

If the user has the CREATE ANY TRIGGER privilege, then this view describes all triggers (across all editions) in the database.

#### Related Views

- DBA\_TRIGGERS\_AE describes all triggers (across all editions) in the database.

- USER\_TRIGGERS\_AE describes the triggers (across all editions) owned by the current user. This view does not display the OWNER column.

| Column            | Datatype       | NULL | Description                                                                                                                                                                                                                        |
|-------------------|----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER             | VARCHAR2(128)  |      | Owner of the trigger                                                                                                                                                                                                               |
| TRIGGER_NAME      | VARCHAR2(128)  |      | Name of the trigger                                                                                                                                                                                                                |
| TRIGGER_TYPE      | VARCHAR2(16)   |      | When the trigger fires: <ul style="list-style-type: none"> <li>• BEFORE STATEMENT</li> <li>• BEFORE EACH ROW</li> <li>• AFTER STATEMENT</li> <li>• AFTER EACH ROW</li> <li>• INSTEAD OF</li> <li>• COMPOUND</li> </ul>             |
| TRIGGERING_EVENT  | VARCHAR2(246)  |      | DML, DDL, or database event that fires the trigger<br><b>See Also:</b> <i>Oracle Database PL/SQL Language Reference</i> for additional information about triggers and triggering events.                                           |
| TABLE_OWNER       | VARCHAR2(128)  |      | Owner of the table on which the trigger is defined                                                                                                                                                                                 |
| BASE_OBJECT_TYPE  | VARCHAR2(18)   |      | Base object on which the trigger is defined: <ul style="list-style-type: none"> <li>• TABLE</li> <li>• VIEW</li> <li>• SCHEMA</li> <li>• DATABASE</li> </ul>                                                                       |
| TABLE_NAME        | VARCHAR2(128)  |      | If the base object type of the trigger is SCHEMA or DATABASE, then this column is NULL; if the base object type of the trigger is TABLE or VIEW, then this column indicates the table or view name on which the trigger is defined |
| COLUMN_NAME       | VARCHAR2(4000) |      | Name of the nested table column (if a nested table trigger), else NULL                                                                                                                                                             |
| REFERENCING_NAMES | VARCHAR2(422)  |      | Names used for referencing OLD and NEW column values from within the trigger                                                                                                                                                       |
| WHEN_CLAUSE       | VARCHAR2(4000) |      | Must evaluate to TRUE for TRIGGER_BODY to execute                                                                                                                                                                                  |
| STATUS            | VARCHAR2(8)    |      | Indicates whether the trigger is enabled (ENABLED) or disabled (DISABLED); a disabled trigger will not fire                                                                                                                        |
| DESCRIPTION       | VARCHAR2(4000) |      | Trigger description; useful for re-creating a trigger creation statement                                                                                                                                                           |
| ACTION_TYPE       | VARCHAR2(11)   |      | Action type of the trigger body: <ul style="list-style-type: none"> <li>• CALL</li> <li>• PL/SQL</li> </ul>                                                                                                                        |
| TRIGGER_BODY      | LONG           |      | Statements executed by the trigger when it fires                                                                                                                                                                                   |
| CROSSEDITION      | VARCHAR2(7)    |      | Type of crossedition trigger: <ul style="list-style-type: none"> <li>• FORWARD</li> <li>• REVERSE</li> <li>• NO</li> </ul>                                                                                                         |
| BEFORE_STATEMENT  | VARCHAR2(3)    |      | Indicates whether the trigger has a BEFORE STATEMENT section (YES) or not (NO)                                                                                                                                                     |
| BEFORE_ROW        | VARCHAR2(3)    |      | Indicates whether the trigger has a BEFORE EACH ROW section (YES) or not (NO)                                                                                                                                                      |

| Column            | Datatype      | NULL | Description                                                                                                                                                                                                                                           |
|-------------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AFTER_ROW         | VARCHAR2(3)   |      | Indicates whether the trigger has an AFTER EACH ROW section (YES) or not (NO)                                                                                                                                                                         |
| AFTER_STATEMENT   | VARCHAR2(3)   |      | Indicates whether the trigger has an AFTER STATEMENT section (YES) or not (NO)                                                                                                                                                                        |
| INSTEAD_OF_ROW    | VARCHAR2(3)   |      | Indicates whether the trigger has an INSTEAD OF section (YES) or not (NO)                                                                                                                                                                             |
| FIRE_ONCE         | VARCHAR2(3)   |      | Indicates whether the trigger will fire only for user processes making changes (YES) or whether the trigger will also fire for Replication Apply or SQL Apply processes (NO)                                                                          |
| APPLY_SERVER_ONLY | VARCHAR2(3)   |      | Indicates whether the trigger will only fire for a Replication Apply or SQL Apply process (YES) or not (NO). If set to YES, then the setting of FIRE_ONCE does not matter.<br><br><b>See Also:</b> the DBMS_DDL.SET_TRIGGER_FIRING_PROPERTY procedure |
| EDITION_NAME      | VARCHAR2(128) |      | Name of the application edition where the trigger is defined                                                                                                                                                                                          |

## 4.128 ALL\_TSTZ\_TAB\_COLS

ALL\_TSTZ\_TAB\_COLS displays information about the columns of the tables accessible to the current user, which have columns defined on `TIMESTAMP WITH TIME ZONE` data types or object types containing attributes of `TIMESTAMP WITH TIME ZONE` data types.

#### Related Views

- DBA\_TSTZ\_TAB\_COLS displays information about the columns of all tables in the database, which have columns defined on `TIMESTAMP WITH TIME ZONE` data types or object types containing attributes of `TIMESTAMP WITH TIME ZONE` data types. This view does not display the `COLUMN_NAME`, `NESTED`, and `VIRTUAL_COLUMN` columns.
- USER\_TSTZ\_TAB\_COLS displays information about the columns of the tables owned by the current user, which have columns defined on `TIMESTAMP WITH TIME ZONE` data types or object types containing attributes of `TIMESTAMP WITH TIME ZONE` data types. This view does not display the `OWNER`, `COLUMN_NAME`, `NESTED`, and `VIRTUAL_COLUMN` columns.

| Column     | Datatype      | NULL     | Description        |
|------------|---------------|----------|--------------------|
| OWNER      | VARCHAR2(128) | NOT NULL | Owner of the table |
| TABLE_NAME | VARCHAR2(128) | NOT NULL | Name of the table  |

| Column             | Datatype       | NULL     | Description                                                     |
|--------------------|----------------|----------|-----------------------------------------------------------------|
| COLUMN_NAME        | VARCHAR2(128)  | NOT NULL | Column name                                                     |
| QUALIFIED_COL_NAME | VARCHAR2(4000) |          | Qualified column name                                           |
| NESTED             | NUMBER         |          | Indicates whether the column is a nested table (1) or not (0)   |
| VIRTUAL_COLUMN     | NUMBER         |          | Indicates whether the column is a virtual column (1) or not (0) |
| SCALAR_COLUMN      | NUMBER         |          | Indicates whether the column is a scalar column (1) or not (0)  |
| UNUSED_COLUMN      | NUMBER         |          | Indicates whether the column is an unused column (1) or not (0) |

## 4.130 ALL\_TYPE\_ATTRS

ALL\_TYPE\_ATTRS describes the attributes of the object types accessible to the current user.

### Related Views

- DBA\_TYPE\_ATTRS describes the attributes of all object types in the database. This view does not include the CHAR\_USED column.
- USER\_TYPE\_ATTRS describes the attributes of the object types owned by the current user. This view does not display the OWNER or CHAR\_USED column.

| Column              | Datatype      | NULL | Description                                                                                                                                                   |
|---------------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER               | VARCHAR2(128) |      | Owner of the type                                                                                                                                             |
| TYPE_NAME           | VARCHAR2(128) |      | Name of the type                                                                                                                                              |
| ATTR_NAME           | VARCHAR2(128) |      | Name of the attribute                                                                                                                                         |
| ATTR_TYPE_MOD       | VARCHAR2(7)   |      | Type modifier of the attribute: <ul style="list-style-type: none"> <li>• REF</li> <li>• POINTER</li> </ul>                                                    |
| ATTR_TYPE_OWNER     | VARCHAR2(128) |      | Owner of the type of the attribute                                                                                                                            |
| ATTR_TYPE_NAME      | VARCHAR2(128) |      | Name of the type of the attribute                                                                                                                             |
| LENGTH              | NUMBER        |      | Length of the CHAR attribute, or maximum length of the VARCHAR or VARCHAR2 attribute.                                                                         |
| PRECISION           | NUMBER        |      | Decimal precision of the NUMBER or DECIMAL attribute, or binary precision of the FLOAT attribute.                                                             |
| SCALE               | NUMBER        |      | Scale of the NUMBER or DECIMAL attribute                                                                                                                      |
| CHARACTER_SET _NAME | VARCHAR2(44)  |      | Character set name of the attribute (CHAR_CS or NCHAR_CS)                                                                                                     |
| ATTR_NO             | NUMBER        |      | Syntactical order number or position of the attribute as specified in the type specification or CREATE TYPE statement (not to be used as an ID number)        |
| INHERITED           | VARCHAR2(3)   |      | Indicates whether the attribute is inherited from a supertype (YES) or not (NO)                                                                               |
| CHAR_USED           | VARCHAR2(1)   |      | Indicates whether the attribute uses BYTE length semantics (B) or CHAR length semantics (C). For NCHAR and NVARCHAR2 attribute types, this value is always C. |

| INSERTABLE  | VARCHAR2(3)   |          | Indicates whether the column is insertable (YES) or not (NO)             |

| Column    | Datatype    | NULL | Description                                                 |
|-----------|-------------|------|-------------------------------------------------------------|
| DELETABLE | VARCHAR2(3) |      | Indicates whether the column is deletable (YES) or not (NO) |

<sup>1</sup> Starting with Oracle Database 21c, there is a circumstance under which a column is updatable even if its UPDATABLE value is NO in this view. A column with a NO value can be updated if it is in a non-key-preserved table, the UPDATE operation updates only columns in that table, and the update is deterministic, that is, it updates each row only once. See *Oracle Database Concepts* for more information.

#### Note

The values shown in the UPDATABLE, INSERTABLE, and DELETABLE columns are not instantly updated when a DDL operation that would affect these attributes occurs on one of the tables referenced in the FROM clause of the view definition. For example, these columns are not instantly updated when a primary key or unique constraint is added to or removed from the non-key-preserved table. To remedy this situation, recompile the view using the ALTER VIEW COMPILE statement to ensure that the latest information is displayed.

## 4.137 ALL\_USERS

ALL\_USERS lists all users of the database visible to the current user.

This view does not describe the users (see the related views).

#### Related Views

- DBA\_USERS describes all users of the database, and contains more columns than ALL\_USERS.
- USER\_USERS describes the current user, and contains more columns than ALL\_USERS.

| Column   | Datatype      | NULL     | Description                                                                                                                                                                          |
|----------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| USERNAME | VARCHAR2(128) | NOT NULL | Name of the user                                                                                                                                                                     |
| USER_ID  | NUMBER        | NOT NULL | ID number of the user                                                                                                                                                                |
| CREATED  | DATE          | NOT NULL | User creation date                                                                                                                                                                   |
| COMMON   | VARCHAR2(3)   |          | Indicates whether a given user is common. Possible values: <ul style="list-style-type: none"> <li>• YES if a user is common</li> <li>• NO if a user is local (not common)</li> </ul> |

| Column                      | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ORACLE_MAINTAINED           | VARCHAR2(1)   |      | Denotes whether the user was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). A user for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script.                                                                                                                                                                                                                                                                 |
| INHERITED                   | VARCHAR2(3)   |      | Indicates whether the user definition was inherited from another container (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                       |
| DEFAULT_COLLATION           | VARCHAR2(100) |      | Default collation for the user's schema                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| IMPLICIT                    | VARCHAR2(3)   |      | Indicates whether this user is a common user created by an implicit application (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                  |
| ALL_SHARD                   | VARCHAR2(3)   |      | <p>In a sharded database, the value in this column indicates whether the user was created with shard DDL enabled. The possible values are:</p> <ul style="list-style-type: none"><li>• YES: The user was created with shard DDL enabled. The user exists on all shards and the shard catalog.</li><li>• NO: The user was created without shard DDL enabled. The user exists only in the database in which the user was created.</li></ul> <p>In a non-sharded database, the value in this column is always NO.</p> |
| EXTERNAL_SHARD <sup>1</sup> | VARCHAR2(3)   |      | <p>In a federated sharded database, the value in this column indicates whether the user is an external shard user (YES) or not (NO).</p> <p>In other types of databases, the value in this column is always NO.</p>                                                                                                                                                                                                                                                                                                |

<sup>1</sup> This column is available starting with Oracle Database 21c.

## 4.138 ALL\_USTATS

ALL\_USTATS describes the user-defined statistics collected on the tables and indexes accessible to the current user.

**Related Views**

- DBA\_USTATS describes the user-defined statistics collected on all tables and indexes in the database.
- USER\_USTATS describes the user-defined statistics collected on the tables and indexes owned by the current user.

| Column           | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                   |
|------------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_OWNER     | VARCHAR2(128) |      | Owner of the table or index for which the statistics have been collected                                                                                                                                                                                                                                                                                      |
| OBJECT_NAME      | VARCHAR2(128) |      | Name of the table or index for which the statistics have been collected                                                                                                                                                                                                                                                                                       |
| PARTITION_NAME   | VARCHAR2(128) |      | Partition name of a table; NULL if the table is either nonpartitioned or the entry corresponds to the aggregate statistics for the table                                                                                                                                                                                                                      |
| OBJECT_TYPE      | VARCHAR2(6)   |      | Type of the object for which statistics have been collected: <ul style="list-style-type: none"> <li>• INDEX</li> <li>• COLUMN</li> </ul>                                                                                                                                                                                                                      |
| ASSOCIATION      | VARCHAR2(8)   |      | Statistics type association: <ul style="list-style-type: none"> <li>• DIRECT Direct association with the object for which the statistics have been collected</li> <li>• IMPLICIT - Association for which the statistics have been collected is with the column type or index type, and the object is an instance of that column type or index type</li> </ul> |
| COLUMN_NAME      | VARCHAR2(128) |      | Column name, if OBJECT_TYPE is COLUMN, for which statistics have been collected                                                                                                                                                                                                                                                                               |
| STATSTYPE_SCHEMA | VARCHAR2(128) |      | Schema of the statistics type which was used to collect the statistics                                                                                                                                                                                                                                                                                        |
| STATSTYPE_NAME   | VARCHAR2(128) |      | Name of the statistics type which was used to collect statistics                                                                                                                                                                                                                                                                                              |
| STATISTICS       | RAW(2000)     |      | User-collected statistics for the object                                                                                                                                                                                                                                                                                                                      |

## 4.140 ALL\_VIEWS

ALL\_VIEWS describes the views accessible to the current user.

#### Related Views

- DBA\_VIEWS describes all views in the database.
- USER\_VIEWS describes the views owned by the current user. This view does not display the OWNER column.

| Column           | Datatype       | NULL     | Description                                                                                                                                                                            |
|------------------|----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER            | VARCHAR2(128)  | NOT NULL | Owner of the view                                                                                                                                                                      |
| VIEW_NAME        | VARCHAR2(128)  | NOT NULL | Name of the view                                                                                                                                                                       |
| TEXT_LENGTH      | NUMBER         |          | Length of the view text                                                                                                                                                                |
| TEXT             | LONG           |          | View text. This column returns the correct value only when the row originates from the current container. The BEQUEATH clause will not appear as part of the TEXT column in this view. |
| TEXT_VC          | VARCHAR2(4000) |          | View text. This column may truncate the view text. The BEQUEATH clause will not appear as part of the TEXT_VC column in this view.                                                     |
| TYPE_TEXT_LENGTH | NUMBER         |          | Length of the type clause of the typed view                                                                                                                                            |
| TYPE_TEXT        | VARCHAR2(4000) |          | Type clause of the typed view                                                                                                                                                          |
| OID_TEXT_LENGTH  | NUMBER         |          | Length of the WITH OID clause of the typed view                                                                                                                                        |
| OID_TEXT         | VARCHAR2(4000) |          | WITH OID clause of the typed view                                                                                                                                                      |
| VIEW_TYPE_OWNER  | VARCHAR2(128)  |          | Owner of the type of the view if the view is a typed view                                                                                                                              |
| VIEW_TYPE        | VARCHAR2(128)  |          | Type of the view if the view is a typed view                                                                                                                                           |

| Column                 | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                  |
|------------------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SUPERVIEW_NAME         | VARCHAR2(128) |      | Name of the superview                                                                                                                                                                                                                                                                                                                                        |
| EDITIONING_VIEW        | VARCHAR2(1)   |      | Reserved for future use                                                                                                                                                                                                                                                                                                                                      |
| READ_ONLY              | VARCHAR2(1)   |      | Indicates whether the view is read-only (Y) or not (N)                                                                                                                                                                                                                                                                                                       |
| CONTAINER_DATA         | VARCHAR2(1)   |      | Indicates whether the view contains container-specific data. Possible values: <ul style="list-style-type: none"> <li>Y if the view was created with the CONTAINER_DATA clause</li> <li>N otherwise</li> </ul>                                                                                                                                                |
| BEQUEATH               | VARCHAR2(12)  |      | Possible values: <ul style="list-style-type: none"> <li>CURRENT_USER: When the view is a BEQUEATH CURRENT_USER view</li> <li>DEFINER: When the view is a BEQUEATH DEFINER view</li> </ul> For more information about the syntax and semantics of the BEQUEATH clause in the SQL CREATE VIEW statement, see <i>Oracle Database SQL Language Reference</i> .   |
| ORIGIN_CON_ID          | VARCHAR2(256) |      | The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows in non-CDBs. This value is not used for CDBs.</li> <li>n: This value is used for rows containing data that originate in the container with container ID n (n = 1 if the row originates in root)</li> </ul> |
| DEFAULT_COLLATION      | VARCHAR2(100) |      | Default collation for the view                                                                                                                                                                                                                                                                                                                               |
| CONTAINERS_DEFAULT     | VARCHAR2(3)   |      | Indicates whether the view is enabled for CONTAINERS( ) by default (YES) or not (NO)                                                                                                                                                                                                                                                                         |
| CONTAINER_MAP          | VARCHAR2(3)   |      | Indicates whether the view is enabled for use with the container_map database property (YES) or not (NO)                                                                                                                                                                                                                                                     |
| EXTENDED_DATA_LINK     | VARCHAR2(3)   |      | Indicates whether the view is enabled for fetching an extended data link from the root (YES) or not (NO)                                                                                                                                                                                                                                                     |
| EXTENDED_DATA_LINK_MAP | VARCHAR2(3)   |      | For internal use only                                                                                                                                                                                                                                                                                                                                        |
| HAS_SENSITIVE_COLUMN   | VARCHAR2(3)   |      | Indicates whether the view has one or more sensitive columns (YES) or not (NO)                                                                                                                                                                                                                                                                               |
| ADMIT_NULL             | VARCHAR2(3)   |      | Indicates whether the view admits null CON_ID data (YES) or not (NO)                                                                                                                                                                                                                                                                                         |
| PDB_LOCAL_ONLY         | VARCHAR2(3)   |      | For internal use only                                                                                                                                                                                                                                                                                                                                        |

## 4.142 ALL\_WARNING\_SETTINGS

ALL\_WARNING\_SETTINGS displays information about the warning parameter settings for the objects accessible to the current user.

### Related Views

- DBA\_WARNING\_SETTINGS displays information about the warning parameter settings for all objects in the database.
- USER\_WARNING\_SETTINGS displays information about the warning parameter settings for the objects owned by the current user. This view does not display the OWNER column.

| Column      | Datatype      | NULL     | Description                 |
|-------------|---------------|----------|-----------------------------|
| OWNER       | VARCHAR2(128) | NOT NULL | Owner of the object         |
| OBJECT_NAME | VARCHAR2(128) | NOT NULL | Name of the object          |
| OBJECT_ID   | NUMBER        | NOT NULL | Object number of the object |

| Column      | Datatype     | NULL | Description                                                                                                                                                                                |
|-------------|--------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_TYPE | VARCHAR2(12) |      | Type of the object: <ul style="list-style-type: none"> <li>PROCEDURE</li> <li>FUNCTION</li> <li>PACKAGE</li> <li>PACKAGE BODY</li> <li>TRIGGER</li> <li>TYPE</li> <li>TYPE BODY</li> </ul> |
| WARNING     | VARCHAR2(40) |      | Warning number or category: <ul style="list-style-type: none"> <li>INFORMATIONAL</li> <li>PERFORMANCE</li> <li>SEVERE</li> <li>ALL</li> </ul>                                              |
| SETTING     | VARCHAR2(7)  |      | Value of the warning setting: <ul style="list-style-type: none"> <li>DISABLE</li> <li>ENABLE</li> <li>ERROR</li> </ul>                                                                     |

|-----------------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PROCESSED_LOW_POSITION      | RAW(64)       |          | Position of the processed low transaction                                                                                                                                                                                                                                                                                                  |
| APPLIED_LOW_POSITION        | RAW(64)       |          | All messages with a commit position less than this value have been applied                                                                                                                                                                                                                                                                 |
| APPLIED_HIGH_POSITION       | RAW(64)       |          | Highest commit position of a transaction that has been applied                                                                                                                                                                                                                                                                             |
| SPILL_POSITION              | RAW(64)       |          | Position of the spill low watermark of the transactions currently being applied                                                                                                                                                                                                                                                            |
| OLDEST_POSITION             | RAW(64)       |          | Earliest position of the transactions currently being applied                                                                                                                                                                                                                                                                              |
| OLDEST_MESSAGE_NUMBER       | NUMBER        | NOT NULL | Earliest message number of the transactions currently being applied                                                                                                                                                                                                                                                                        |
| APPLIED_MESSAGE_NUMBER      | NUMBER        | NOT NULL | Message number up to which all transactions have definitely been applied. This value is the low watermark for the inbound server. That is, messages with a commit message number less than or equal to this message number have definitely been applied, but some messages with a higher commit message number may also have been applied. |
| APPLIED_TIME                | DATE          |          | Time at which the message with the message number displayed in the APPLIED_MESSAGE_NUMBER column was applied                                                                                                                                                                                                                               |
| APPLIED_MESSAGE_CREATE_TIME | DATE          |          | Time at which the message with the message number displayed in the APPLIED_MESSAGE_NUMBER column was created at its source database                                                                                                                                                                                                        |
| SPILL_MESSAGE_NUMBER        | NUMBER        |          | Spill low watermark. Any message with a lower SCN has either been applied or spilled to disk. The XStream client application does not need to send logical change records (LCRs) with a lower SCN than the spill low watermark. Spilled messages may not have been applied yet.                                                            |
| SOURCE_DATABASE             | VARCHAR2(128) | NOT NULL | Database where the transaction originated                                                                                                                                                                                                                                                                                                  |
| SOURCE_ROOT_NAME            | VARCHAR2(128) |          | The global name of the source root database                                                                                                                                                                                                                                                                                                |

## 4.163 ALL\_XSTREAM\_OUTBOUND\_PROGRESS

ALL\_XSTREAM\_OUTBOUND\_PROGRESS displays information about the progress made by the XStream outbound servers accessible to the current user.

### Related View

DBA\_XSTREAM\_OUTBOUND\_PROGRESS displays information about the progress made by all XStream outbound servers in the database.

| Column      | Datatype      | NULL     | Description                 |
|-------------|---------------|----------|-----------------------------|
| SERVER_NAME | VARCHAR2(128) | NOT NULL | Name of the outbound server |

| Column                 | Datatype      | NULL     | Description                                                                                                  |
|------------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------|
| SOURCE_DATABASE        | VARCHAR2(128) |          | Global name of the database where the transaction originated. For a PDB, this is the global name of the PDB. |
| PROCESSED_LOW_POSITION | RAW(64)       |          | Position of the low-watermark transaction processed by the outbound server                                   |
| PROCESSED_LOW_TIME     | DATE          |          | Time when the processed low position was last updated by the outbound server                                 |
| OLDEST_POSITION        | RAW(64)       |          | The position of the earliest LCR that is required by the XStream client application                          |
| SOURCE_ROOT_NAME       | VARCHAR2(128) |          | The global name of the source root database                                                                  |
| PROCESSED_LOW_SCN      | NUMBER        | NOT NULL | SCN of the processed low transaction                                                                         |
| OLDEST_SCN             | NUMBER        | NOT NULL | Oldest SCN of the transactions currently being captured                                                      |

## 4.164 ALL\_XSTREAM\_RULES

ALL\_XSTREAM\_RULES displays information about the XStream rules accessible to the current user.

### Related View

DBA\_XSTREAM\_RULES displays information about all XStream server rules in the database.

| Column            | Datatype      | NULL     | Description                                                                                                                 |
|-------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------|
| STREAMS_NAME      | VARCHAR2(128) |          | Name of the XStream process                                                                                                 |
| STREAMS_TYPE      | VARCHAR2(12)  |          | Type of the XStream process: <ul style="list-style-type: none"> <li>• CAPTURE</li> <li>• APPLY</li> </ul>                   |
| STREAMS_RULE_TYPE | VARCHAR2(9)   |          | The XStream type of the rule: <ul style="list-style-type: none"> <li>• TABLE</li> <li>• SCHEMA</li> <li>• GLOBAL</li> </ul> |
| RULE_SET_OWNER    | VARCHAR2(128) |          | Owner of the rule set                                                                                                       |
| RULE_SET_NAME     | VARCHAR2(128) |          | Name of the rule set                                                                                                        |
| RULE_SET_TYPE     | CHAR(8)       |          | Type of the rule set: <ul style="list-style-type: none"> <li>• POSITIVE</li> <li>• NEGATIVE</li> </ul>                      |
| RULE_OWNER        | VARCHAR2(128) | NOT NULL | Owner of the rule                                                                                                           |
| RULE_NAME         | VARCHAR2(128) | NOT NULL | Name of the rule                                                                                                            |

| Column                  | Datatype       | NULL | Description                                                                                                                                                     |
|-------------------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| RULE_TYPE               | VARCHAR2(9)    |      | The type of the rule: <ul style="list-style-type: none"> <li>• DML</li> <li>• DDL</li> </ul>                                                                    |
| RULE_CONDITION          | CLOB           |      | Current rule condition                                                                                                                                          |
| SCHEMA_NAME             | VARCHAR2(128)  |      | For table and schema rules, the schema name                                                                                                                     |
| OBJECT_NAME             | VARCHAR2(128)  |      | For table rules, the table name                                                                                                                                 |
| INCLUDE_TAGGED_LCR      | VARCHAR2(3)    |      | Indicates whether to include tagged LCRs (YES) or not (NO)                                                                                                      |
| SUBSETTING_OPERATION    | VARCHAR2(6)    |      | For subset rules, the type of operation: <ul style="list-style-type: none"> <li>• INSERT</li> <li>• UPDATE</li> <li>• DELETE</li> </ul>                         |
| DML_CONDITION           | VARCHAR2(4000) |      | For subset rules, the row subsetting condition                                                                                                                  |
| SOURCE_DATABASE         | VARCHAR2(128)  |      | The global name of the database where the LCRs originated. In a PDB, this is the global name of the PDB.                                                        |
| ORIGINAL_RULE_CONDITION | VARCHAR2(4000) |      | For rules created by the XStream administrative APIs, the original rule condition when the rule was created                                                     |
| SAME_RULE_CONDITION     | VARCHAR2(3)    |      | For rules created by the XStream administrative APIs, indicates whether the current rule condition is the same as the original rule condition (YES) or not (NO) |
| SOURCE_ROOT_NAME        | VARCHAR2(128)  |      | The global name of the source root database                                                                                                                     |
| SOURCE_CONTAINER_NAME   | VARCHAR2(128)  |      | The container name of the database where the transactions originated                                                                                            |

# 4.166 ALL\_XTERNAL\_LOC\_PARTITIONS

ALL\_XTERNAL\_LOC\_PARTITIONS describes partition-level locations accessible to the current user.

If an external table is partitioned, then the existing ALL\_EXTERNAL\_LOCATIONS, DBA\_EXTERNAL\_LOCATIONS, and USER\_EXTERNAL\_LOCATIONS views will have no rows for that table. Instead, locations will be indicated in the ALL\_XTERNAL\_LOC\_PARTITIONS, DBA\_XTERNAL\_LOC\_PARTITIONS, USER\_XTERNAL\_LOC\_PARTITIONS, ALL\_XTERNAL\_LOC\_SUBPARTITIONS, DBA\_XTERNAL\_LOC\_SUBPARTITIONS, and USER\_XTERNAL\_LOC\_SUBPARTITIONS views.

**Related Views**

- DBA\_XTERNAL\_LOC\_PARTITIONS describes partition-level locations in the database.
- USER\_XTERNAL\_LOC\_PARTITIONS describes partition-level locations owned by the current user. This view does not display the OWNER column.

| Column          | Datatype       | NULL | Description                                                             |
|-----------------|----------------|------|-------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128)  |      | Owner of the partitioned external table                                 |
| TABLE_NAME      | VARCHAR2(128)  |      | Name of the partitioned external table                                  |
| PARTITION_NAME  | VARCHAR2(128)  |      | Name of the partition                                                   |
| LOCATION        | VARCHAR2(4000) |      | External table location clause for the partition                        |
| DIRECTORY_OWNER | CHAR(3)        |      | Owner of the directory containing the external table partition location |
| DIRECTORY_NAME  | VARCHAR2(128)  |      | Name of the directory containing the external table partition location  |

## 4.170 ALL\_XTERNAL\_TAB\_SUBPARTITIONS

ALL\_XTERNAL\_TAB\_SUBPARTITIONS describes subpartition-level information for partitioned external tables accessible to the current user.

### Related Views

- DBA\_XTERNAL\_TAB\_SUBPARTITIONS describes subpartition-level information for partitioned external tables in the database.
- USER\_XTERNAL\_TAB\_SUBPARTITIONS describes subpartition-level information for partitioned external tables owned by the current user. This view does not display the TABLE\_OWNER column.

| Column                  | Datatype      | NULL     | Description                                                     |
|-------------------------|---------------|----------|-----------------------------------------------------------------|
| TABLE_OWNER             | VARCHAR2(128) | NOT NULL | Owner of the partitioned external table                         |
| TABLE_NAME              | VARCHAR2(128) | NOT NULL | Name of the partitioned external table                          |
| PARTITION_NAME          | VARCHAR2(128) |          | Name of the partition                                           |
| SUBPARTITION_NAME       | VARCHAR2(128) |          | Name of the subpartition                                        |
| DEFAULT_DIRECTORY_OWNER | CHAR(3)       |          | Owner of the default directory for the external table partition |
| DEFAULT_DIRECTORY_NAME  | VARCHAR2(128) |          | Name of the default directory for the external table partition  |
| ACCESS_TYPE             | VARCHAR2(7)   |          | Type of access parameters for the partition (BLOB, CLOB)        |
| ACCESS_PARAMETERS       | CLOB          |          | Access parameters for the external table partition              |

| FACT_TABLE                | VARCHAR2(128) |      | Name of the fact table on which the zone map is defined                                                                                                                                                                                  |
| SCALE                     | NUMBER        |      | Scale factor of the zone map                                                                                                                                                                                                             |
| HIERARCHICAL              | VARCHAR2(12)  |      | Indicates whether the zone map is hierarchical (YES) or not (NO)                                                                                                                                                                         |
| WITH_CLUSTERING           | VARCHAR2(15)  |      | Indicates whether the zone map is created with the CLUSTERING clause (YES) or not (NO)                                                                                                                                                   |
| AUTOMATIC <sup>1</sup>    | VARCHAR2(9)   |      | Indicates whether the zone map is automatic (YES) or not (NO)                                                                                                                                                                            |
| QUERY                     | LONG          |      | Zone map defining query                                                                                                                                                                                                                  |
| QUERY_LEN                 | NUMBER(38)    |      | Length of defining query in bytes                                                                                                                                                                                                        |
| PRUNING                   | VARCHAR2(8)   |      | Indicates whether the zone map is enabled for pruning (ENABLED) or not (DISABLED)                                                                                                                                                        |
| REFRESH_MODE              | VARCHAR2(17)  |      | Refresh mode for the zone map: <ul style="list-style-type: none"> <li>• COMMIT</li> <li>• DEMAND</li> <li>• DATAMOVEMENT</li> <li>• LOAD</li> <li>• LOAD DATAMOVEMENT</li> </ul>                                                         |
| REFRESH_METHOD            | VARCHAR2(14)  |      | Refresh method for the zone map <ul style="list-style-type: none"> <li>• COMPLETE</li> <li>• FORCE</li> <li>• FAST</li> </ul>                                                                                                            |
| LAST_REFRESH_METHOD       | VARCHAR2(19)  |      | The last refresh method used for the zone map: <ul style="list-style-type: none"> <li>• NA</li> <li>• COMPLETE</li> <li>• FAST</li> <li>• ERROR-UNKNOWN</li> </ul>                                                                       |
| LAST_REFRESH_TIME         | TIMESTAMP(9)  |      | Time of the last refresh                                                                                                                                                                                                                 |
| INVALID                   | VARCHAR2(7)   |      | Indicates whether the zone map is invalid due to some DDL (YES) or not (NO)                                                                                                                                                              |
| STALE                     | VARCHAR2(7)   |      | Indicates whether the zone map is stale because of DML operations and cannot be used for pruning (YES) or not (NO), or whether this cannot be determined (UNKNOWN)                                                                       |
| PARTLY_STALE <sup>1</sup> | VARCHAR2(12)  |      | Indicates whether the zone map is partly stale (YES) or not (NO), or whether this cannot be determined (UNKNOWN). A partly stale zone map contains both fresh and stale zones.                                                           |
| INCOMPLETE <sup>1</sup>   | VARCHAR2(12)  |      | Indicates whether the zone map has missing zones (YES) or not (NO), or whether this cannot be determined (UNKNOWN). Missing zones result when data is added to the base table and a subsequent refresh of the zone map is not performed. |

| Column        | Datatype     | NULL | Description                                                                                                                                                                                                                                   |
|---------------|--------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| UNUSABLE      | VARCHAR2(8)  |      | Indicates whether the zone map has been marked unusable by the owner (YES) or not (NO)                                                                                                                                                        |
| COMPILE_STATE | VARCHAR2(19) |      | Current compile state of the zone map: <ul style="list-style-type: none"><li>• VALID</li><li>• AUTHORIZATION_ERROR</li><li>• COMPILATION_ERROR</li><li>• NEEDS_COMPILE</li><li>• ERROR_UNKNOWN</li></ul> Similar to ALL_MVIEWS.COMPILE_STATE. |

<sup>1</sup> This column is available starting with Oracle Database 21c.

 **Note**

This view is intended for use with Oracle Exadata release 12.1.2.1.1 or later.

 **See Also**

- ["DBA\\_ZONEMAPS"](#)
- ["USER\\_ZONEMAPS"](#)
- *Oracle Database Data Warehousing Guide* for more information about zone maps

## 4.173 AUDIT\_ACTIONS

AUDIT\_ACTIONS describes audit trail action type codes. This table can be used to map action type numbers to action type names.

 **Note**

The mapping explained in this view is valid for audit trail records from the following views only, and such audit records are generated only when unified auditing is not enabled:

- DBA\_AUDIT\_TRAIL
- DBA\_COMMON\_AUDIT\_TRAIL
- DBA\_FGA\_AUDIT\_TRAIL
- USER\_AUDIT\_TRAIL
- V\$XML\_AUDIT\_TRAIL

**Note**

This view is relevant when using traditional auditing. Traditional auditing is deprecated in Oracle Database 21c. Oracle recommends that you instead use unified auditing, which enables selective and more effective auditing inside Oracle Database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column | Datatype     | NULL     | Description                            |
|--------|--------------|----------|----------------------------------------|
| ACTION | NUMBER       | NOT NULL | Numeric audit trail action type code.  |
| NAME   | VARCHAR2(28) | NOT NULL | Name of the type of audit trail action |

## 4.174 AUDIT\_UNIFIED\_CONTEXTS

AUDIT\_UNIFIED\_CONTEXTS describes the application context's attributes, which are configured to be captured in the audit trail.

**Note**

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column    | Datatype      | NULL | Description                                                                                                            |
|-----------|---------------|------|------------------------------------------------------------------------------------------------------------------------|
| NAMESPACE | VARCHAR2(128) |      | Application context namespace                                                                                          |
| ATTRIBUTE | VARCHAR2(128) |      | Application context attribute                                                                                          |
| USER_NAME | VARCHAR2(128) |      | Username of database user for whom the application context's attribute is configured to be captured in the audit trail |

## 4.175 AUDIT\_UNIFIED\_ENABLED\_POLICIES

AUDIT\_UNIFIED\_ENABLED\_POLICIES describes all the audit policies that are enabled in the database.

### Note

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column         | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                          |
|----------------|---------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| POLICY_NAME    | VARCHAR2(128) |      | Name of the audit policy                                                                                                                                                                                                                                                                                                                                             |
| ENABLED_OPTION | VARCHAR2(15)  |      | Enabled option of the audit policy. Possible values: <ul style="list-style-type: none"><li>• BY USER: For policies that are enabled on users</li><li>• EXCEPT USER: For policies that are enabled on users</li><li>• BY GRANTED ROLE: For policies that are enabled on roles</li><li>• INVALID: For policies that are not enabled on either users or roles</li></ul> |
| ENTITY_NAME    | VARCHAR2(128) |      | Database entity (user name or role name) on which the audit policy is enabled.<br>When an audit policy is enabled on all database users, ALL USERS is displayed in this column.                                                                                                                                                                                      |
| ENTITY_TYPE    | VARCHAR2(7)   |      | Database entity type. Possible values: <ul style="list-style-type: none"><li>• USER: Indicates that the policy is enabled on a user or users.</li><li>• ROLE: Indicates that the policy is enabled on a role or roles.</li></ul>                                                                                                                                     |
| SUCCESS        | VARCHAR2(3)   |      | Indicates whether the audit policy is enabled for auditing successful events (YES) or not (NO)                                                                                                                                                                                                                                                                       |
| FAILURE        | VARCHAR2(3)   |      | Indicates whether the audit policy is enabled for auditing unsuccessful events (YES) or not (NO)                                                                                                                                                                                                                                                                     |

## 4.176 AUDIT\_UNIFIED\_POLICIES

AUDIT\_UNIFIED\_POLICIES describes all audit policies created in the database.

### Note

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column             | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                           |
|--------------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| POLICY_NAME        | VARCHAR2(128)  |      | Name of the audit policy                                                                                                                                                                                                                                                                                                                                              |
| AUDIT_CONDITION    | VARCHAR2(4000) |      | Condition associated with the audit policy                                                                                                                                                                                                                                                                                                                            |
| CONDITION_EVAL_OPT | VARCHAR2(9)    |      | Evaluation option associated with the audit policy's condition. The possible values are STATEMENT, SESSION, INSTANCE, and NONE.                                                                                                                                                                                                                                       |
| AUDIT_OPTION       | VARCHAR2(128)  |      | Auditing option defined in the audit policy                                                                                                                                                                                                                                                                                                                           |
| AUDIT_OPTION_TYPE  | VARCHAR2(18)   |      | Type of the auditing option. Possible values: <ul style="list-style-type: none"> <li>• SYSTEM PRIVILEGE</li> <li>• STANDARD ACTION</li> <li>• SYSTEM ACTION</li> <li>• XS ACTION</li> <li>• OLS_ACTION</li> <li>• DATAPUMP ACTION</li> <li>• DIRECT LOAD ACTION</li> <li>• DV ACTION</li> <li>• INVALID</li> <li>• OBJECT ACTION</li> <li>• ROLE PRIVILEGE</li> </ul> |
| OBJECT_SCHEMA      | VARCHAR2(128)  |      | Owner of the object, for an object-specific auditing option                                                                                                                                                                                                                                                                                                           |
| OBJECT_NAME        | VARCHAR2(128)  |      | Name of the object, for an object-specific auditing option                                                                                                                                                                                                                                                                                                            |
| OBJECT_TYPE        | VARCHAR2(23)   |      | Type of the object, for an object-specific auditing option                                                                                                                                                                                                                                                                                                            |

| Column              | Datatype    | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------------|-------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COMMON              | VARCHAR2(3) |      | <p>Indicates whether the audit policy is a common audit policy or local audit policy. The value is NULL for a non-CDB.</p> <p>For local audit policies, the value of the COMMON column is always NO.</p> <p>For a CDB common policy:</p> <ul style="list-style-type: none"> <li>If you query AUDIT_UNIFIED_POLICIES from the CDB root container, the value of the COMMON column will be YES and the value of the INHERITED column will be NO.</li> <li>If you query AUDIT_UNIFIED_POLICIES from any other container besides the CDB root container, the value of the COMMON column and the INHERITED column will be YES.</li> </ul> <p>For an application container common policy:</p> <ul style="list-style-type: none"> <li>If you query AUDIT_UNIFIED_POLICIES from the application root container, the value of the COMMON column will be YES and the value of the INHERITED column will be NO.</li> <li>If you query AUDIT_UNIFIED_POLICIES from any other container besides the application root container, the value of the COMMON column and the INHERITED column will be YES.</li> </ul> |
| INHERITED           | VARCHAR2(3) |      | Indicates whether the audit policy was inherited from another container (YES) or not (NO). This value is NULL for non-CDBs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| AUDIT_ONLY_TOPLEVEL | VARCHAR2(3) |      | Indicates whether the audit policy is defined to audit only top level SQL statements (YES) or both top level SQL statements and recursive SQL statements (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| ORACLE_SUPPLIED     | VARCHAR2(3) |      | <p>Indicates whether the audit policy is an Oracle-supplied policy (YES) or not (NO)</p> <p>Oracle-supplied policies are also called predefined policies.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## 4.177 AUDIT\_UNIFIED\_POLICY\_COMMENTS

AUDIT\_UNIFIED\_POLICY\_COMMENTS shows the description of each unified audit policy, if a description was entered for the unified audit policy using the COMMENT SQL statement.

### ① Note

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column      | Datatype      | NULL     | Description                      |
|-------------|---------------|----------|----------------------------------|
| POLICY_NAME | VARCHAR2(128) | NOT NULL | Name of the unified audit policy |

| Column   | Datatype       | NULL | Description                                                                                 |
|----------|----------------|------|---------------------------------------------------------------------------------------------|
| COMMENTS | VARCHAR2(4000) |      | Description of the unified audit policy, if one was entered using the COMMENT SQL statement |

## 4.178 AUDITABLE\_SYSTEM\_ACTIONS

AUDITABLE\_SYSTEM\_ACTIONS maps the auditable system action numbers to the action names. These actions are configurable for audit when unified auditing is enabled.

The actions include:

- All standard RDBMS actions (from the V\$SQLCOMMAND view) except the following, which are not configurable for auditing:
  - ALTER EDITION
  - ALTER REWRITE EQUIVALENCE
  - ALTER SUMMARY
  - ALTER TRACING
  - CREATE BITMAPFILE
  - CREATE CONTROL FILE
  - CREATE DATABASE
  - CREATE SUMMARY
  - DECLARE REWRITE EQUIVALENCE
  - DROP BITMAPFILE
  - DROP DATABASE
  - DROP REWRITE EQUIVALENCE
  - DROP SUMMARY
  - FLASHBACK DATABASE
  - MERGE
  - SAVEPOINT
  - SET CONSTRAINTS
  - UNDROP OBJECT
  - UPDATE INDEXES
  - UPDATE JOIN INDEX
  - VALIDATE INDEX
- Other actions:
  - ALL
  - LOGON
  - LOGOFF

**Note**

This view is populated only in an Oracle Database where unified auditing is enabled.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column    | Datatype     | NULL | Description                                           |
|-----------|--------------|------|-------------------------------------------------------|
| TYPE      | NUMBER       |      | Numeric component type for system wide actions        |
| COMPONENT | VARCHAR2(64) |      | Name of component for system wide actions             |
| ACTION    | NUMBER       |      | Numeric auditable action code for system wide actions |
| NAME      | VARCHAR2(64) |      | Name of auditable action                              |

Some auditable actions in AUDITABLE\_SYSTEM\_ACTIONS have different names than their equivalent commands in V\$SQLCOMMAND, as shown in the following table:

| AUDITABLE_SYSTEM_ACTIONS Action Name | V\$SQLCOMMAND Command Name |
|--------------------------------------|----------------------------|
| GRANT                                | GRANT OBJECT               |
| REVOKE                               | REVOKE OBJECT              |
| AUDIT                                | AUDIT OBJECT               |
| NOAUDIT                              | NOAUDIT OBJECT             |
| EXECUTE                              | PL/SQL EXECUTE             |
| EXPLAIN PLAN                         | EXPLAIN                    |
| CALL                                 | CALL METHOD                |
| PURGE DBA_RECYCLEBIN                 | PURGE DBA RECYCLEBIN       |

## 4.179 CAT

CAT is a synonym for USER\_CATALOG.

**See Also**

["USER\\_CATALOG"](#)

## 4.180 CATALOG

CATALOG is included for compatibility. Oracle recommends that you not use this view.

## 4.181 CHAINED\_ROWS

CHAINED\_ROWS stores the output for the ANALYZE statement with the LIST CHAINED ROWS clause.

You must run the `utlchain.sql` or `utlchn1.sql` script to create this table.

| Column            | Description                                     |
|-------------------|-------------------------------------------------|
| OWNER_NAME        | Table owner                                     |
| TABLE_NAME        | Table name                                      |
| CLUSTER_NAME      | Cluster the table is in, if any                 |
| PARTITION_NAME    | The name of the partition                       |
| SUBPARTITION_NAME | The name of the subpartition                    |
| HEAD_ROWID        | ROWID the chained row is accessed by            |
| ANALYZE_TIMESTAMP | Date/time that the ANALYZE statement was issued |

## 4.182 CLIENT\_RESULT\_CACHE\_STAT\$

CLIENT\_RESULT\_CACHE\_STAT\$ displays various client result cache settings and usage statistics.

Statistics are stored as name, value pairs. For each client cache ID, there will be multiple rows for each statistic.

| Column   | Datatype      | NULL     | Description                                            |
|----------|---------------|----------|--------------------------------------------------------|
| CACHE_ID | NUMBER        | NOT NULL | Unique ID per client cache                             |
| STAT_ID  | NUMBER        | NOT NULL | Statistic ID                                           |
| NAME     | VARCHAR2(128) |          | Name of the statistic (see <a href="#">Table 4-1</a> ) |
| VALUE    | NUMBER        |          | Value of the statistic                                 |

**Table 4-1 CLIENT\_RESULT\_CACHE\_STAT\$ Statistics**

| Statistic Name       | Description                                                                                                                                  |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| Block Size           | Size (in bytes) of each memory block in the result cache.                                                                                    |
| Block Count Max      | Maximum number of blocks that can be allocated in the result cache based on the cache size configuration parameters on server and on client. |
| Block Count Current  | Current number of blocks allocated by the client result cache.                                                                               |
| Hash Bucket Count    | Size of the hash table used for query matching.                                                                                              |
| Create Count Success | Number of cached result sets that did not get invalidated before caching all the rows of the result set.                                     |
| Create Count Failure | Number of cached result sets that did not fetch all the rows in the result set.                                                              |
| Find Count           | Number of cache hits.                                                                                                                        |
| Invalidation Count   | Number of cached result sets that got invalidated due to database changes that could have affected the result set.                           |
| Delete Count Invalid | Number of cached result sets not invalidated whose memory was reclaimed by result cache.                                                     |

Table 4-1 (Cont.) CLIENT\_RESULT\_CACHE\_STAT\$\$ Statistics

| Statistic Name     | Description                                                                           |
|--------------------|---------------------------------------------------------------------------------------|
| Delete Count Valid | Number of invalidated cached result rests whose memory was reclaimed by result cache. |

## 4.183 CLU

CLU is a synonym for USER\_CLUSTERS.

① See Also  
["USER\\_CLUSTERS"](#)

## 4.184 COL

COL is included for compatibility. Oracle recommends that you not use this view.

## 4.185 COLS

COLS is a synonym for USER\_TAB\_COLUMNS.

① See Also  
["USER\\_TAB\\_COLUMNS"](#)

## 4.186 DATABASE\_EXPORT\_OBJECTS

DATABASE\_EXPORT\_OBJECTS lists simple path names for some of the object types belonging to a full Data Pump export, which is invoked using the FULL=Y parameter on the expdp command.

Users of the Data Pump Export and Import utilities can query this view to determine valid values for the EXCLUDE and INCLUDE parameters.

| Column      | Datatype       | NULL     | Description                                                                                                                                       |
|-------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_PATH | VARCHAR2(200)  | NOT NULL | Simple path name for the object type                                                                                                              |
| COMMENTS    | VARCHAR2(2000) |          | Comment on the object type                                                                                                                        |
| NAMED       | CHAR(1)        |          | Do objects of this type have names? If yes (Y), then the name can be specified in the optional name_clause on the EXCLUDE and INCLUDE parameters. |

**① See Also**

- ["SCHEMA\\_EXPORT\\_OBJECTS"](#)
- ["TABLE\\_EXPORT\\_OBJECTS"](#)
- *Oracle Database Utilities* for more information on performing a full Data Pump export using the expdp command

## 4.187 DATABASE\_PROPERTIES

DATABASE\_PROPERTIES lists permanent database properties.

| Column         | Datatype       | NULL     | Description          |
|----------------|----------------|----------|----------------------|
| PROPERTY_NAME  | VARCHAR2(128)  | NOT NULL | Property name        |
| PROPERTY_VALUE | VARCHAR2(4000) |          | Property value       |
| DESCRIPTION    | VARCHAR2(4000) |          | Property description |

**① Note**

The CDB\_PROPERTIES view provides access to data visible to PDBs through the DATABASE\_PROPERTIES view.

# 5

## Static Data Dictionary Views: DBA\_2PC\_NEIGHBORS to DBA\_HIST\_JAVA\_POOL\_ADVICE

This chapter contains the static data dictionary views DBA\_2PC\_NEIGHBORS through DBA\_HIST\_JAVA\_POOL\_ADVICE.

### 5.1 DBA\_2PC\_NEIGHBORS

DBA\_2PC\_NEIGHBORS describes incoming and outgoing connections for pending transactions.

| Column        | Datatype      | NULL | Description                                                               |
|---------------|---------------|------|---------------------------------------------------------------------------|
| LOCAL_TRAN_ID | VARCHAR2(22)  |      | Local identifier of a transaction                                         |
| IN_OUT        | VARCHAR2(3)   |      | IN for incoming connections, OUT for outgoing                             |
| DATABASE      | VARCHAR2(128) |      | IN for client database name, OUT for outgoing database link               |
| DBUSER_OWNER  | VARCHAR2(128) |      | IN for name of local user, OUT for owner of database link                 |
| INTERFACE     | VARCHAR2(1)   |      | C for request commit, otherwise N for prepare or request read only commit |
| DBID          | VARCHAR2(16)  |      | Database ID at the other end of the connection                            |
| SESS#         | NUMBER(38)    |      | Session number of the connection at this database                         |
| BRANCH        | VARCHAR2(128) |      | Transaction branch ID of the connection at this database                  |

### 5.2 DBA\_2PC\_PENDING

DBA\_2PC\_PENDING describes distributed transactions awaiting recovery.

| Column         | Datatype      | NULL     | Description                                                                 |
|----------------|---------------|----------|-----------------------------------------------------------------------------|
| LOCAL_TRAN_ID  | VARCHAR2(22)  | NOT NULL | String of form: n.n.n; n is a number                                        |
| GLOBAL_TRAN_ID | VARCHAR2(169) |          | Globally unique transaction ID                                              |
| STATE          | VARCHAR2(16)  | NOT NULL | Collecting, prepared, committed, forced commit, or forced rollback          |
| MIXED          | VARCHAR2(3)   |          | YES indicates part of the transaction committed and part rolled back        |
| ADVICE         | VARCHAR2(1)   |          | C for commit, R for rollback, else NULL                                     |
| TRAN_COMMENT   | VARCHAR2(255) |          | Text for commit work comment text                                           |
| FAIL_TIME      | DATE          | NOT NULL | Value of SYSDATE when the row was inserted (transaction or system recovery) |

| Column      | Datatype      | NULL     | Description                                                          |
|-------------|---------------|----------|----------------------------------------------------------------------|
| FORCE_TIME  | DATE          |          | Time of manual force decision (null if not forced locally)           |
| RETRY_TIME  | DATE          | NOT NULL | Time automatic recovery (RECO) last tried to recover the transaction |
| OS_USER     | VARCHAR2(64)  |          | Operating system-specific name for the end-user                      |
| OS_TERMINAL | VARCHAR2(255) |          | Operating system-specific name for the end-user terminal             |
| HOST        | VARCHAR2(128) |          | Name of the host system for the end-user                             |
| DB_USER     | VARCHAR2(128) |          | Oracle user name of the end-user at the topmost database             |
| COMMIT#     | VARCHAR2(16)  |          | Global commit number for committed transactions                      |

## 5.3 DBA\_ACCHK\_EVENTS

DBA\_ACCHK\_EVENTS displays information about events that occurred during an Application Continuity Protection Check (ACCHK) workload run.

Each row in this view represents one trace record for an event. You can use this view in conjunction with the DBA\_ACCHK\_STATISTICS view. Join the SESSION\_ID and SERIAL# columns in this view with the SESSION\_ID and SERIAL# columns in DBA\_ACCHK\_STATISTICS to view Application Continuity protection statistics for a particular session.

The ACCHK\_READ role allows users with no administrative privileges to query this view.

| Column       | Datatype                    | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------|-----------------------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INST_ID      | NUMBER                      |      | Identifier for the instance in which the trace record was generated                                                                                                                                                                                                                                                                                                                                                                                |
| CON_ID       | NUMBER                      |      | The ID of the container to which the data pertains.<br>Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |
| TIMESTAMP    | TIMESTAMP(3) WITH TIME ZONE |      | Time at which the event occurred                                                                                                                                                                                                                                                                                                                                                                                                                   |
| SESSION_ID   | NUMBER                      |      | ID of the session that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                  |
| SERIAL#      | NUMBER                      |      | Serial number of the session that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                       |
| SERVICE_NAME | VARCHAR2(64)                |      | Service name of the session that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                        |
| PROGRAM      | VARCHAR2(84)                |      | Name of the operating system program that generated the trace record                                                                                                                                                                                                                                                                                                                                                                               |
| MODULE       | VARCHAR2(64)                |      | Name of the module that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                 |
| ACTION       | VARCHAR2(64)                |      | Name of the action that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                 |

| Column     | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SQL_ID     | VARCHAR2(13) |      | SQL identifier of the SQL statement that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| CALL_NAME  | VARCHAR2(20) |      | Name of the user call that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| EVENT_TYPE | VARCHAR2(16) |      | Event type. Possible values: <ul style="list-style-type: none"> <li>DISABLED - The event caused capture or replay to be disabled. Refer to the ERROR_CODE column for more information.</li> <li>NEVER ENABLED - Neither Application Continuity nor Transparent Application Continuity was enabled for the session when the event occurred.</li> <li>NOT ENABLING - The event describes why the database could not reenable protection after protection was disabled. Refer to the ERROR_CODE column for more information.</li> <li>REPLAY FAILED - The event describes why the session did not fail over. This event only occurs if Application Continuity could not fail over. Refer to the ERROR_CODE column for more information.</li> </ul> |
| ERROR_CODE | NUMBER       |      | If an error occurred, this column displays the error code: <i>ORA-number</i> . Otherwise, the value of this column is 0.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

## 5.4 DBA\_ACCHK\_EVENTS\_SUMMARY

DBA\_ACCHK\_EVENTS\_SUMMARY displays summary information about events that occurred during an Application Continuity Protection Check (ACCHK) workload run.

This view describes the number of times a particular type of event occurred in a session. You can use this view in conjunction with the DBA\_ACCHK\_STATISTICS\_SUMMARY view. Join the INST\_ID and CON\_ID columns in this view with the INST\_ID and CON\_ID columns in DBA\_ACCHK\_STATISTICS\_SUMMARY to view Application Continuity protection statistics for a particular instance.

The ACCHK\_READ role allows users with no administrative privileges to query this view.

| Column  | Datatype | NULL | Description                 |
|---------|----------|------|-----------------------------|
| INST_ID | NUMBER   |      | Identifier for the instance |

| Column           | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------|--------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID           | NUMBER       |      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul>                                                                                                                                                                                                                                                                                                |
| SERVICE_NAME     | VARCHAR2(64) |      | Service name of the session                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| FAILOVER_TYPE    | VARCHAR2(16) |      | Indicates the FAILOVER_TYPE service setting for the session. Possible values: <ul style="list-style-type: none"> <li>AUTO - Transparent Application Continuity (TAC) was enabled for the session</li> <li>TRANSACTION - Application Continuity (AC) was enabled for the session</li> <li>NONE - Failover was disabled for the session</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                               |
| FAILOVER_RESTORE | VARCHAR2(16) |      | Indicates the FAILOVER_RESTORE service setting for the session. Possible values: <ul style="list-style-type: none"> <li>AUTO - Transparent Application Continuity</li> <li>LEVEL1 - Application Continuity</li> <li>NONE - Session state was not restored at failover</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| RESET_STATE      | VARCHAR2(16) |      | Indicates the RESET_STATE service setting for the session. Possible values: <ul style="list-style-type: none"> <li>LEVEL1 - The session state was cleaned at the end of a request</li> <li>NONE - The session state was not cleaned at the end of a request</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| PROGRAM          | VARCHAR2(84) |      | Name of the operating system program that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| MODULE           | VARCHAR2(64) |      | Name of the module that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| ACTION           | VARCHAR2(64) |      | Name of the action that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| SQL_ID           | VARCHAR2(13) |      | SQL identifier of the SQL statement that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| CALL_NAME        | VARCHAR2(20) |      | Name of the user call that generated the trace record                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| EVENT_TYPE       | VARCHAR2(16) |      | Event type. Possible values: <ul style="list-style-type: none"> <li>DISABLED - The event caused capture or replay to be disabled. Refer to the ERROR_CODE column for more information.</li> <li>NEVER ENABLED - Neither Application Continuity nor Transparent Application Continuity was enabled for the session when the event occurred.</li> <li>NOT ENABLING - The event describes why the database could not reenale protection after protection was disabled. Refer to the ERROR_CODE column for more information.</li> <li>REPLAY FAILED - The event describes why the session did not fail over. This event only occurs if Application Continuity could not fail over. Refer to the ERROR_CODE column for more information.</li> </ul> |

| Column     | Datatype | NULL | Description                                                                                                              |
|------------|----------|------|--------------------------------------------------------------------------------------------------------------------------|
| ERROR_CODE | NUMBER   |      | If an error occurred, this column displays the error code: <i>ORA-number</i> . Otherwise, the value of this column is 0. |
| FREQUENCY  | NUMBER   |      | Number of times the event occurred during the workload run                                                               |

**Note**

This view is available starting with Oracle Database 21c.

## 5.5 DBA\_ACCHK\_STATISTICS

DBA\_ACCHK\_STATISTICS displays Application Continuity protection statistics for each session that executed during an Application Continuity Protection Check (ACCHK) workload run.

ACCHK should be used on a running workload. Sessions that are terminated are not included in this view.

The ACCHK\_READ role allows users with no administrative privileges to query this view.

| Column        | Datatype                    | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------|-----------------------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INST_ID       | NUMBER                      |      | Identifier for the instance for the session                                                                                                                                                                                                                                                                                                                                                                                                     |
| CON_ID        | NUMBER                      |      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |
| TIMESTAMP     | TIMESTAMP(3) WITH TIME ZONE |      | Time at which the session was terminated and the statistics were reported                                                                                                                                                                                                                                                                                                                                                                       |
| SESSION_ID    | NUMBER                      |      | ID of the session                                                                                                                                                                                                                                                                                                                                                                                                                               |
| SERIAL#       | NUMBER                      |      | Serial number of the session                                                                                                                                                                                                                                                                                                                                                                                                                    |
| STAT_TYPE     | VARCHAR2(32)                |      | Type of statistic<br>The value of this column is always SESSION_STATISTICS.                                                                                                                                                                                                                                                                                                                                                                     |
| SERVICE_NAME  | VARCHAR2(64)                |      | Service name of the session                                                                                                                                                                                                                                                                                                                                                                                                                     |

## 5.6 DBA\_ACCHK\_STATISTICS\_SUMMARY

DBA\_ACCHK\_STATISTICS\_SUMMARY displays a summary of Application Continuity protection statistics for each session that executed during an Application Continuity Protection Check (ACCHK) workload run.

ACCHK should be used on a running workload. Sessions that are terminated are not included in this view.

The ACCHK\_READ role allows users with no administrative privileges to query this view.

| Column  | Datatype | NULL | Description                                 |
|---------|----------|------|---------------------------------------------|
| INST_ID | NUMBER   |      | Identifier for the instance for the session |

| Column                          | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID                          | NUMBER       |      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |
| SERVICE_NAME                    | VARCHAR2(64) |      | Service name of the session                                                                                                                                                                                                                                                                                                                                                                                                                     |
| FAILOVER_TYPE                   | VARCHAR2(16) |      | Indicates the FAILOVER_TYPE service setting for the session. Possible values: <ul style="list-style-type: none"> <li>AUTO - Transparent Application Continuity (TAC) was enabled for the session</li> <li>TRANSACTION - Application Continuity (AC) was enabled for the session</li> <li>NONE - Failover was disabled for the session</li> </ul>                                                                                                |
| FAILOVER_RESTORE                | VARCHAR2(16) |      | Indicates the FAILOVER_RESTORE service setting for the session. Possible values: <ul style="list-style-type: none"> <li>AUTO - Transparent Application Continuity</li> <li>LEVEL1 - Application Continuity</li> <li>NONE - Session state is not restored at failover</li> </ul>                                                                                                                                                                 |
| RESET_STATE                     | VARCHAR2(16) |      | Indicates the RESET_STATE service setting for the session. Possible values: <ul style="list-style-type: none"> <li>LEVEL1 - The session state was cleaned at the end of a request</li> <li>NONE - The session state was not cleaned at the end of a request</li> </ul>                                                                                                                                                                          |
| TOTAL_REQUESTS                  | NUMBER       |      | Number of requests received for this session                                                                                                                                                                                                                                                                                                                                                                                                    |
| PROTECTED_CALLS_PERCENT         | NUMBER       |      | Percentage of user calls within requests protected by Application Continuity for failover                                                                                                                                                                                                                                                                                                                                                       |
| PROTECTED_TIME_PERCENT          | NUMBER       |      | Percentage of time spent within requests protected by Application Continuity for failover                                                                                                                                                                                                                                                                                                                                                       |
| AVG_USER_CALLS_IN_REQUESTS      | NUMBER       |      | Average number of user calls received from the application within requests (between begin request and end request)                                                                                                                                                                                                                                                                                                                              |
| AVG_PROTECTED_CALLS_IN_REQUESTS | NUMBER       |      | Average number of user calls protected by Application Continuity within requests (between begin request and end request)                                                                                                                                                                                                                                                                                                                        |
| AVG_TIME_IN_REQUESTS            | NUMBER       |      | Average time in microseconds spent in user calls within requests (between begin request and end request)                                                                                                                                                                                                                                                                                                                                        |
| AVG_TIME_PROTECTED_IN_REQUESTS  | NUMBER       |      | Average time in microseconds for user calls protected by Application Continuity within requests (between begin request and end request)                                                                                                                                                                                                                                                                                                         |

## 5.7 DBA\_ACL\_NAME\_MAP

DBA\_ACL\_NAME\_MAP maps new names of the access control lists for PL/SQL network utility packages from old XDB names.

| Column    | Datatype       | NULL     | Description                                 |
|-----------|----------------|----------|---------------------------------------------|
| XDB_NAME  | VARCHAR2(4000) | NOT NULL | The old XDB name of the access control list |
| ACL       | VARCHAR2(128)  |          | The new name of the access control list     |
| ACL_OWNER | VARCHAR2(128)  |          | The owner of the access control list        |

## 5.8 DBA\_ACTIVITY\_CONFIG

DBA\_ACTIVITY\_CONFIG describes the configuration parameters that control the Object Activity Tracking System (OATS).

| Column            | Datatype       | NULL     | Description                                                                                                                                                                      |
|-------------------|----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_DBNAME        | VARCHAR2(128)  | NOT NULL | Name of the container to which the data pertains                                                                                                                                 |
| PARAMETER_NAME    | VARCHAR2(128)  | NOT NULL | Name of the configuration parameter                                                                                                                                              |
| PARAMETER_VALUE   | VARCHAR2(4000) |          | Value of the configuration parameter                                                                                                                                             |
| LAST_UPDATED_TIME | TIMESTAMP(3)   |          | If the value of the configuration parameter was last updated by a user, then this column displays the time at which the parameter was updated. Otherwise, this column is null.   |
| LAST_UPDATED_USER | VARCHAR2(128)  |          | If the value of the configuration parameter was last updated by a user, then this column displays the name of the user who performed the update. Otherwise, this column is null. |

## 5.9 DBA\_ACTIVITY\_MVIEW

DBA\_ACTIVITY\_MVIEW describes materialized view activity snapshots that were recently taken by the Object Activity Tracking System (OATS).

Each row in this view represents one recently completed activity snapshot and describes the materialized view activity that occurred during the snapshot interval.

| Column     | Datatype      | NULL     | Description                                      |
|------------|---------------|----------|--------------------------------------------------|
| SNAP_ID    | NUMBER        | NOT NULL | Activity snapshot identifier                     |
| CON_DBNAME | VARCHAR2(128) | NOT NULL | Name of the container to which the data pertains |

| Column              | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|---------------------|---------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INSTANCE_NUMBER     | NUMBER        | NOT NULL | Identifier for the instance in which the activity snapshot was taken                                                                                                                                                                                                                                                                                                                                                                                 |
| BEGIN_TIME          | TIMESTAMP(3)  | NOT NULL | Begin time for the activity snapshot interval                                                                                                                                                                                                                                                                                                                                                                                                        |
| END_TIME            | TIMESTAMP(3)  | NOT NULL | End time for the activity snapshot interval                                                                                                                                                                                                                                                                                                                                                                                                          |
| MVIEW_NAME          | VARCHAR2(128) | NOT NULL | Name of the materialized view for which the activity snapshot was taken                                                                                                                                                                                                                                                                                                                                                                              |
| MVIEW_OWNER         | VARCHAR2(128) | NOT NULL | Owner of materialized view for which the activity snapshot was taken                                                                                                                                                                                                                                                                                                                                                                                 |
| USER_CLASS          | VARCHAR2(7)   |          | Indicates whether the activity was performed by the RDBMS (SYS) or by a user (NON-SYS)                                                                                                                                                                                                                                                                                                                                                               |
| COMPILES            | NUMBER        |          | Number of times the materialized view was compiled<br>This number includes: <ul style="list-style-type: none"> <li>• Explicit compiles performed with the SQL statement ALTER MATERIALIZED VIEW ... COMPILE</li> <li>• Automatic compiles that occurred because the structure of an underlying base table changed</li> </ul>                                                                                                                         |
| REWRITES_TEXTMATCH  | NUMBER        |          | Number of query rewrites that used the text match rewrite method                                                                                                                                                                                                                                                                                                                                                                                     |
| REWRITES_GENERAL    | NUMBER        |          | Number of query rewrites that used general rewrite methods                                                                                                                                                                                                                                                                                                                                                                                           |
| REWRITES_PARTIAL    | NUMBER        |          | Number of query rewrites that occurred when the view was partially stale<br>This number includes: <ul style="list-style-type: none"> <li>• UNION ALL operations involving rewritten queries that had one branch with the materialized view and the other branch with its underlying base tables (partial rewrites)</li> <li>• Single query block rewrites of the materialized view that involved a join back to its underlying base table</li> </ul> |
| REWRITES_DELTA      | NUMBER        |          | Number of query rewrites that used stale data in the materialized view plus the delta information stored in the materialized view logs                                                                                                                                                                                                                                                                                                               |
| REWRITES_PCT        | NUMBER        |          | Number of partition change tracking (PCT) rewrites                                                                                                                                                                                                                                                                                                                                                                                                   |
| REWRITES_HINTED     | NUMBER        |          | Number of query rewrites that occurred because the materialized view was eligible for query rewrite and the SELECT statement contained the REWRITE hint with the name of the materialized view specified in the hint                                                                                                                                                                                                                                 |

| NOREWRITES_STALE    | NUMBER        |          | Number of query executions that did not use query rewrite because the materialized view was eligible for query rewrite, but stale                                                                                                                                                                                                                                                                                                                    |
| REFRESHES_ON_DEMAND | NUMBER        |          | Number of ON DEMAND refreshes<br>This type of refresh is performed on materialized views that use the ON DEMAND refresh mode, which instructs the database to refresh the materialized view only when a manual refresh is launched by one of the three DBMS_MVIEW refresh procedures.                                                                                                                                                                |

| Column                 | Datatype | NULL | Description                                                                                                                                                                                                                                                                                         |
|------------------------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| REFRESHES_ON_COMMIT    | NUMBER   |      | Number of ON COMMIT refreshes<br>This type of refresh is performed on materialized views that use the ON COMMIT refresh mode, which instructs the database to refresh the materialized view whenever the database commits a transaction that operates on a master table of the materialized view.   |
| REFRESHES_ON_STATEMENT | NUMBER   |      | Number of ON STATEMENT refreshes<br>This type of refresh is performed on materialized views that use the ON STATEMENT refresh mode, which instructs the database to perform an automatic refresh of the materialized view every time a DML operation is performed on any of the view's base tables. |
| REFRESHES_SCHEDULED    | NUMBER   |      | Number of scheduled refreshes                                                                                                                                                                                                                                                                       |
| REFRESHES_AUTOMATIC    | NUMBER   |      | Number of automatic refreshes                                                                                                                                                                                                                                                                       |
| REFRESHES_FAST         | NUMBER   |      | Number of incremental refreshes                                                                                                                                                                                                                                                                     |
| REFRESHES_COMPLETE     | NUMBER   |      | Number of full refreshes                                                                                                                                                                                                                                                                            |
| REFRESHES_PCT          | NUMBER   |      | Number of partition change tracking (PCT) refreshes                                                                                                                                                                                                                                                 |

**Note**

The counts in this view are approximate in order to keep system overhead low. Also, there are database activities, such as statistics collection, query compilation, and query optimization, that may cause the counts to be different than expected or to vary slightly across successive queries.

**Note**

This view is available starting with Oracle Database 21c.

## 5.10 DBA\_ACTIVITY\_SNAPSHOT\_META

DBA\_ACTIVITY\_SNAPSHOT\_META displays information about activity snapshots taken by the Object Activity Tracking System (OATS).

| Column     | Datatype      | NULL     | Description                                      |
|------------|---------------|----------|--------------------------------------------------|
| SNAP_ID    | NUMBER        | NOT NULL | Activity snapshot identifier                     |
| CON_DBNAME | VARCHAR2(128) | NOT NULL | Name of the container to which the data pertains |

| Column             | Datatype                        | NULL     | Description                                                                    |
|--------------------|---------------------------------|----------|--------------------------------------------------------------------------------|
| INSTANCE_NUMBER    | NUMBER                          | NOT NULL | Identifier for the instance in which the activity snapshot was taken           |
| BEGIN_TIME         | TIMESTAMP(3)                    | NOT NULL | Begin time for the activity snapshot interval                                  |
| END_TIME           | TIMESTAMP(3)                    | NOT NULL | End time for the activity snapshot interval                                    |
| FLUSH_ELAPSED_TIME | INTERVAL DAY(2)<br>TO SECOND(3) |          | Amount of time spent creating the activity snapshot                            |
| FLUSH_IS_MANUAL    | VARCHAR2(3)                     |          | Indicates whether the activity snapshot was created manually (YES) or not (NO) |

## 5.11 DBA\_ACTIVITY\_TABLE

DBA\_ACTIVITY\_TABLE describes table activity snapshots that were recently taken by the Object Activity Tracking System (OATS).

Each row in this view represents one recently completed activity snapshot and describes the table activity that occurred during the snapshot interval.

| Column              | Datatype      | NULL     | Description                                                          |
|---------------------|---------------|----------|----------------------------------------------------------------------|
| SNAP_ID             | NUMBER        | NOT NULL | Activity snapshot identifier                                         |
| CON_DBNAME          | VARCHAR2(128) | NOT NULL | Name of the container to which the data pertains                     |
| INSTANCE_NUMBER     | NUMBER        | NOT NULL | Identifier for the instance in which the activity snapshot was taken |
| BEGIN_TIME          | TIMESTAMP(3)  | NOT NULL | Begin time for the activity snapshot interval                        |
| END_TIME            | TIMESTAMP(3)  | NOT NULL | End time for the activity snapshot interval                          |
| TABLE_NAME          | VARCHAR2(128) | NOT NULL | Name of the table for which the activity snapshot was taken          |
| TABLE_OWNER         | VARCHAR2(128) | NOT NULL | Owner of the table for which the activity snapshot was taken         |
| USER_CLASS          | VARCHAR2(7)   |          | Reserved for future use                                              |
| SCANS               | NUMBER        |          | Number of table scans                                                |
| LOADS               | NUMBER        |          | Number of table loads                                                |
| LOAD_ROWS           | NUMBER        |          | Number of rows that were loaded into the table                       |
| INSERT_ROWS         | NUMBER        |          | Number of rows that were inserted into the table                     |
| DELETE_ROWS         | NUMBER        |          | Number of rows that were deleted from the table                      |
| UPDATE_ROWS         | NUMBER        |          | Number of table rows that were updated                               |
| TRUNCATES           | NUMBER        |          | Number of table truncations                                          |
| TRUNCATED_ROWS      | NUMBER        |          | Number of table rows that were deleted due to table truncations      |
| PARTITION_TRUNCATES | NUMBER        |          | Number of table partition or subpartition truncations                |

| Column                   | Datatype | NULL | Description                                                                                   |
|--------------------------|----------|------|-----------------------------------------------------------------------------------------------|
| PARTITION_TRUNCATED_ROWS | NUMBER   |      | Number of table rows that were deleted due to table partition or subpartition truncations     |
| PARTITION_CREATES        | NUMBER   |      | Number of table partitions or subpartitions that were created                                 |
| PARTITION_DROPS          | NUMBER   |      | Number of table partition or subpartition drops                                               |
| PARTITION_DROPS_ROWS     | NUMBER   |      | Number of table rows that were dropped due to table partition or subpartition drops           |
| PARTITION_MOVES          | NUMBER   |      | Number of table partition or subpartition moves                                               |
| PARTITION_MOVES_ROWS     | NUMBER   |      | Number of table rows that were moved due to table partition or subpartition moves             |
| PARTITION_SPLITS         | NUMBER   |      | Number of table partition or subpartition splits                                              |
| PARTITION_SPLITS_ROWS    | NUMBER   |      | Number of table rows that were split due to table partition or subpartition splits            |
| PARTITION_MERGES         | NUMBER   |      | Number of table partition or subpartition merges                                              |
| PARTITION_MERGES_ROWS    | NUMBER   |      | Number of table rows that were merged due to table partition or subpartition merges           |
| PARTITION_COALESCE_ROWS  | NUMBER   |      | Number of table rows that were redistributed due to table partition or subpartition coalesces |
| PARTITION_COALESCE_ROWS  | NUMBER   |      | Number of table rows that were redistributed due to table partition or subpartition coalesces |
| PARTITION_EXCHANGES      | NUMBER   |      | Number of table partition or subpartition exchanges                                           |
| PARTITION_EXCHANGES_ROWS | NUMBER   |      | Number of table rows that were exchanged due to table partition or subpartition exchanges     |

**Note**

The counts in this view are approximate in order to keep system overhead low. Also, there are database activities, such as statistics collection, query compilation, and query optimization, that may cause the counts to be different than expected or to vary slightly across successive queries.

**Note**

This view does not contain information related to temporary tables or external tables.

**Note**

This view is available starting with Oracle Database 21c.

## 5.12 DBA\_ADDM\_FDG\_BREAKDOWN

DBA\_ADDM\_FDG\_BREAKDOWN describes the contribution for each finding from the different instances.

There is one row for each finding and for each instance participating in the analysis. Rows are omitted if the impact from that instance is not sufficient to register a finding in a local ADDM analysis.

### Related View

USER\_ADDM\_FDG\_BREAKDOWN describes the contribution for each finding from the different instances owned by the current user.

| Column               | Datatype | NULL     | Description                                                                                   |
|----------------------|----------|----------|-----------------------------------------------------------------------------------------------|
| TASK_ID              | NUMBER   | NOT NULL | Identifies the task to which this finding belongs (see DBA_ADVISOR_TASKS)                     |
| FINDING_ID           | NUMBER   | NOT NULL | Identifies the finding (see DBA_ADVISOR_FINDINGS)                                             |
| INSTANCE_NUMBER      | NUMBER   | NOT NULL | The number of the instance contributing to the finding                                        |
| DATABASE_TIME        | NUMBER   |          | The database time, in microseconds, accumulated by this instance during the analysis period   |
| ACTIVE_SESSIONS      | NUMBER   |          | The average number of active sessions of the finding in this instance                         |
| PERC_ACTIVE_SESSIONS | NUMBER   |          | The percentage of contribution from this instance compared to the total impact of the finding |

## 5.13 DBA\_ADDM\_FINDINGS

DBA\_ADDM\_FINDINGS displays the ADDM findings discovered by all advisors in the database.

Each row for ADDM tasks in the related DBA\_ADVISOR\_FINDINGS view has a corresponding row in this view.

### Related View

USER\_ADDM\_FINDINGS displays the ADDM findings discovered by the advisors owned by the current user. Each row for ADDM tasks in the related USER\_ADVISOR\_FINDINGS view has a corresponding row in this view. The USER\_ADDM\_FINDINGS view does not display the OWNER column.

| Column    | Datatype      | NULL     | Description            |
|-----------|---------------|----------|------------------------|
| OWNER     | VARCHAR2(128) |          | Owner of the task      |
| TASK_ID   | NUMBER        | NOT NULL | Identifier of the task |
| TASK_NAME | VARCHAR2(128) |          | Name of the task       |

| Column           | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                              |
|------------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| EXECUTION_NAME   | VARCHAR2(128)  |          | The name of the task execution with which this entry (row) is associated                                                                                                                                                                                                                 |
| FINDING_ID       | NUMBER         | NOT NULL | Identifier of the finding                                                                                                                                                                                                                                                                |
| FINDING_NAME     | VARCHAR2(4000) |          | Name of the finding                                                                                                                                                                                                                                                                      |
| TYPE             | VARCHAR2(11)   |          | Type of the finding:<br>PROBLEM<br>SYMPTOM<br>ERROR<br>INFORMATION                                                                                                                                                                                                                       |
| TYPE_ID          | NUMBER         | NOT NULL | Numeric ID for the value in column TYPE                                                                                                                                                                                                                                                  |
| PARENT           | NUMBER         | NOT NULL | Identifier of the parent finding                                                                                                                                                                                                                                                         |
| OBJECT_ID        | NUMBER         |          | Identifier of the associated object, if any                                                                                                                                                                                                                                              |
| IMPACT_TYPE      | VARCHAR2(4000) |          | Impact of the finding on the system                                                                                                                                                                                                                                                      |

## 5.14 DBA\_ADDM\_INSTANCES

DBA\_ADDM\_INSTANCES displays instance-level information for ADDM tasks that finished executing.

For each instance that was supposed to be analyzed (whether it was or not) there is one row describing information about it.

### Related View

USER\_ADDM\_INSTANCES displays instance-level information for ADDM tasks that finished executing in all instances owned by the current user.

| Column           | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------------|--------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TASK_ID          | NUMBER       | NOT NULL | The ID of the main ADDM task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| INSTANCE_NUMBER  | NUMBER       | NOT NULL | The number of the instance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| INSTANCE_NAME    | VARCHAR2(16) |          | The name of the instance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| HOST_NAME        | VARCHAR2(64) |          | The name of the system on which the instance was running                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| STATUS           | VARCHAR2(10) |          | How information from this instance was used by the ADDM task.<br>A value of ANALYZED means that the instance participated fully in the analysis. For the following remaining values, the instance was not used during task execution, for the stated reason:<br>BOUNCED - the instance was shut down or started during the analysis period<br>NO_SNAPS - there were either begin or end snapshots missing for the instance<br>NO_STATS - there were key statistics missing for the instance<br>NOT_FOUND - no mention of this instance could be found in AWR during the analysis period |
| DATABASE_TIME    | NUMBER       |          | The database time, in microseconds, accumulated by this instance during the analysis period                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| ACTIVE_SESSIONS  | NUMBER       |          | The average number of active sessions for the instance during the analysis period                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| PERC_ACTIVE_SESS | NUMBER       |          | The percentage of active sessions for this instance, out of the total active sessions for the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| METER_LEVEL      | VARCHAR2(6)  |          | Reserved for future use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| LOCAL_TASK_ID    | NUMBER       |          | The ID of a local ADDM task that contained an analysis of the instance for the same analysis period as that of the main task. If the main task is a local ADDM, then this value is the same as the TASK_ID value.                                                                                                                                                                                                                                                                                                                                                                       |

## 5.15 DBA\_ADDM\_SYSTEM\_DIRECTIVES

DBA\_ADDM\_SYSTEM\_DIRECTIVES displays information about global instances for ADDM system directives.

| Column         | Datatype       | NULL     | Description                                                                                                                    |
|----------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------|
| INSTANCE_ID    | NUMBER         | NOT NULL | Unique ID for the directive instance. The directive management engine automatically generates ID numbers.                      |
| INSTANCE_NAME  | VARCHAR2(128)  | NOT NULL | User-assigned name for the directive instance.                                                                                 |
| DIRECTIVE_NAME | VARCHAR2(128)  | NOT NULL | Any value that further classifies this directive within a domain. The domain and the name form a unique key for the directive. |
| DESCRIPTION    | VARCHAR2(4000) |          | Description of the ADDM system directive, shown in the language used by the current session                                    |

## 5.16 DBA\_ADDM\_TASK\_DIRECTIVES

DBA\_ADDM\_TASK\_DIRECTIVES displays information about all ADDM task directives in the database.

### Related View

USER\_ADDM\_TASK\_DIRECTIVES displays information about ADDM task directives owned by the current user.

| Column         | Datatype       | NULL     | Description                                                                                                                    |
|----------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------|
| TASK_ID        | NUMBER         |          | An ADDM advisor task identifier to which the directive instance is associated                                                  |
| TASK_NAME      | VARCHAR2(128)  |          | An ADDM advisor task to which the directive instance is associated                                                             |
| USERNAME       | VARCHAR2(128)  | NOT NULL | Database user who owns the ADDM task instance                                                                                  |
| SEQ_ID         | NUMBER         | NOT NULL | Unique ID for the directive instance. The directive management engine automatically generates ID numbers.                      |
| INSTANCE_NAME  | VARCHAR2(128)  | NOT NULL | A user-assigned name for the ADDM task directive instance                                                                      |
| DIRECTIVE_NAME | VARCHAR2(128)  | NOT NULL | Any value that further classifies this directive within a domain. The domain and the name form a unique key for the directive. |
| DESCRIPTION    | VARCHAR2(4000) |          | Description of the ADDM task directive, shown in the language used by the current session                                      |

## 5.17 DBA\_ADDM\_TASKS

DBA\_ADDM\_TASKS displays information about all ADDM tasks in the database.

The view contains one row for each row in the related DBA\_ADVISOR\_TASKS view that has ADVISOR\_NAME=ADDM and STATUS=COMPLETED.

### Related View

USER\_ADDM\_TASKS displays information about the ADDM tasks owned by the current user. The view contains one row for each row in the related USER\_ADVISOR\_TASKS view that has ADVISOR\_NAME=ADDM and STATUS=COMPLETED. This view does not display the OWNER column.

| Column                | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| EXECUTION_DESCRIPTION | VARCHAR2(256)  |          | Optional description of the last execution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| EXECUTION_START       | DATE           |          | Execution start date and time of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| EXECUTION_END         | DATE           |          | Execution end date and time of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| STATUS                | VARCHAR2(11)   |          | Current operational status of the task: <ul style="list-style-type: none"> <li>• INITIAL - Initial state of the task; no recommendations are present</li> <li>• EXECUTING - Task is currently running</li> <li>• INTERRUPTED - Task analysis was interrupted by the user. Recommendation data, if present, can be viewed and reported at this time.</li> <li>• COMPLETED - Task successfully completed the analysis operation. Recommendation data can be viewed and reported.</li> <li>• ERROR - An error occurred during the analysis operation. Recommendations, if present, can be viewed and reported at this time.</li> </ul> |
| STATUS_MESSAGE        | VARCHAR2(4000) |          | Informational message provided by the advisor, regarding the status                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| PCT_COMPLETION_TIME   | NUMBER         |          | Percent completion, in terms of time, of the task when it is executing                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Column               | Datatype       | NULL     | Description                                                                                                                                                      |
|----------------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PROGRESS_METRIC      | NUMBER         |          | Metric that measures the progress of the task in terms of quality. Each advisor may have its own metric.                                                         |
| METRIC_UNITS         | VARCHAR2(64)   |          | Unit of the metric used to measure progress                                                                                                                      |
| ACTIVITY_COUNTER     | NUMBER         |          | Counter that is updated frequently by the advisor, denoting that useful work is being performed                                                                  |
| RECOMMENDATION_COUNT | NUMBER         |          | Number of recommendations produced                                                                                                                               |
| ERROR_MESSAGE        | VARCHAR2(4000) |          | Informational message or an error message indicating the current operation or condition                                                                          |
| SOURCE               | VARCHAR2(128)  |          | Optional name that identifies the creator of the task                                                                                                            |
| HOW_CREATED          | VARCHAR2(30)   |          | Optional task or template on which the object was based                                                                                                          |
| READ_ONLY            | VARCHAR2(5)    |          | Indicates whether the task is read-only (TRUE) or not (FALSE)                                                                                                    |
| SYSTEM_TASK          | VARCHAR2(5)    |          | Indicates whether the task is a system task (TRUE) or not (FALSE). The automatic SQL tuning task, SYS_AUTO_SQL_TUNING_TASK, is one example of a system task.     |
| ADVISOR_ID           | NUMBER         | NOT NULL | Unique identifier for the advisor                                                                                                                                |
| STATUS#              | NUMBER         |          | Reserved for internal use                                                                                                                                        |
| DBID                 | NUMBER         |          | The database ID that the task was using                                                                                                                          |
| DBNAME               | VARCHAR2(9)    |          | The name of the database that the task was analyzing                                                                                                             |
| DBVERSION            | VARCHAR2(17)   |          | The version of the database that the task was analyzing                                                                                                          |
| ANALYSIS_VERSION     | VARCHAR2(17)   |          | The version of the database that executed the task                                                                                                               |
| BEGIN_SNAP_ID        | NUMBER         |          | The snapshot ID that starts the analysis period                                                                                                                  |
| BEGIN_TIME           | TIMESTAMP(3)   |          | The SYSDATE at the time the BEGIN_SNAP_ID was taken                                                                                                              |
| END_SNAP_ID          | NUMBER         |          | The snapshot ID that ends the analysis period                                                                                                                    |
| END_TIME             | TIMESTAMP(3)   |          | The SYSDATE at the time the END_SNAP_ID was taken                                                                                                                |
| REQUESTED_ANALYSIS   | VARCHAR2(8)    |          | The type of ADDM analysis that was requested before task execution, as follows:<br>DATABASE - global ADDM<br>INSTANCE - local ADDM<br>PARTIAL - continental ADDM |
| ACTUAL_ANALYSIS      | VARCHAR2(8)    |          | The type of ADDM analysis that was actually performed when the task was executed (either DATABASE, INSTANCE, or PARTIAL)                                         |
| DATABASE_TIME        | NUMBER         |          | The total database time accumulated in the analysis period (and analyzed instances) in microseconds                                                              |
| ACTIVE_SESSIONS      | NUMBER         |          | The average active sessions during the analysis period (and analyzed sessions)                                                                                   |
| METER_LEVEL          | VARCHAR2(6)    |          | Reserved for future use                                                                                                                                          |
| FDG_COUNT            | NUMBER         |          | The number of findings for the ADDM task, which will appear in the list of findings in a default ADDM report                                                     |

| Column                         | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------------|--------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DB_TYPE_DETECTED <sup>1</sup>  | VARCHAR2(10) |      | Indicates the open mode of the database that the task was analyzing, as detected by ADDM. Possible values: <ul style="list-style-type: none"> <li>• READ-ONLY</li> <li>• READ-WRITE</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| DB_TYPE_ANALYZED <sup>1</sup>  | VARCHAR2(10) |      | Indicates the assumed open mode of the database that the task was analyzing. If the value of this column is different from the value of the DB_TYPE_DETECTED column, then ADDM ignored the detected open mode of the database and analyzed the task as if it occurred on a database with the assumed open mode. Possible values: <ul style="list-style-type: none"> <li>• READ-ONLY</li> <li>• READ-WRITE</li> </ul>                                                                                                                                                                                                                                                                              |
| CDB_TYPE_DETECTED <sup>1</sup> | VARCHAR2(25) |      | Indicates the type of database that the task was analyzing, as detected by ADDM. Possible values: <ul style="list-style-type: none"> <li>• NON-CDB - A non-CDB</li> <li>• CDB ROOT - The root container in a CDB</li> <li>• PDB - A pluggable database (PDB) in a CDB</li> <li>• AUTONOMOUS DATA WAREHOUSE - A PDB that hosts an Oracle Autonomous Data Warehouse Cloud service</li> <li>• AUTONOMOUS OLTP - A PDB that hosts an Oracle Autonomous Transaction Processing service</li> </ul>                                                                                                                                                                                                      |
| CDB_TYPE_ANALYZED <sup>1</sup> | VARCHAR2(25) |      | Indicates the assumed type of database that the task was analyzing. If the value of this column is different from the value of the CDB_TYPE_DETECTED column, then ADDM ignored the detected type of database and analyzed the task as if it occurred on the assumed type of database. Possible values: <ul style="list-style-type: none"> <li>• NON-CDB - A non-CDB</li> <li>• CDB ROOT - The root container in a CDB</li> <li>• PDB - A pluggable database (PDB) in a CDB</li> <li>• AUTONOMOUS DATA WAREHOUSE - A PDB that hosts an Oracle Autonomous Data Warehouse Cloud service</li> <li>• AUTONOMOUS OLTP - A PDB that hosts an Oracle Autonomous Transaction Processing service</li> </ul> |

<sup>1</sup> This column is available starting with Oracle Database 19c. If the task was analyzing a database at a release earlier than Oracle Database 19c, and that database was subsequently upgraded to Oracle Database 19c, then the value of this column is NULL.

## 5.18 DBA\_ADVISOR\_ACTIONS

DBA\_ADVISOR\_ACTIONS displays information about the actions associated with all recommendations in the database.

Each action is specified by the COMMAND and ATTR1 through ATTR6 columns. Each command defines how the attribute columns will be used.

### Related View

USER\_ADVISOR\_ACTIONS displays information about the actions associated with the recommendations owned by the current user. This view does not display the OWNER column.

| Column         | Datatype       | NULL     | Description                                                                                                                                |
|----------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128)  |          | Owner of the task                                                                                                                          |
| TASK_ID        | NUMBER         | NOT NULL | Identifier of the task                                                                                                                     |
| TASK_NAME      | VARCHAR2(128)  |          | Name of the task                                                                                                                           |
| EXECUTION_NAME | VARCHAR2(128)  |          | The name of the task execution with which this entry (row) is associated                                                                   |
| REC_ID         | NUMBER         | NOT NULL | Recommendation associated with the action                                                                                                  |
| ACTION_ID      | NUMBER         | NOT NULL | Unique identifier for the action                                                                                                           |
| OBJECT_ID      | NUMBER         |          | Object associated with the action                                                                                                          |
| COMMAND        | VARCHAR2(64)   |          | Command to be executed<br><b>See Also:</b> DBA_ADVISOR_COMMANDS for a list of commands                                                     |
| COMMAND_ID     | NUMBER         | NOT NULL | ID of the command to be executed<br><b>See Also:</b> DBA_ADVISOR_COMMANDS for a list of commands                                           |
| FLAGS          | NUMBER         |          | Advisor-specific flags                                                                                                                     |
| ATTR1          | VARCHAR2(4000) |          | Parameters defining the command                                                                                                            |
| ATTR2          | VARCHAR2(4000) |          | Parameters defining the command                                                                                                            |
| ATTR3          | VARCHAR2(4000) |          | Parameters defining the command                                                                                                            |
| ATTR4          | VARCHAR2(4000) |          | Parameters defining the command                                                                                                            |
| ATTR5          | CLOB           |          | Parameters defining the command; to be used if the text is significantly large (for example, a SQL statement defining a materialized view) |
| ATTR6          | CLOB           |          | Parameters defining the command; to be used if the text is significantly large (for example, a SQL statement defining a materialized view) |
| NUM_ATTR1      | NUMBER         |          | General numeric attribute                                                                                                                  |
| NUM_ATTR2      | NUMBER         |          | General numeric attribute                                                                                                                  |
| NUM_ATTR3      | NUMBER         |          | General numeric attribute                                                                                                                  |

## 5.19 DBA\_ADVISOR\_COMMANDS

DBA\_ADVISOR\_COMMANDS displays information about the commands used by all advisors in the database for specifying recommendation actions.

In addition to the set of commands in the COMMAND column of V\$SESSION, the following additional commands are defined:

- RUN ADVISOR
- CHECK EXECUTION PLAN
- ALTER PARAMETER
- ENABLE TRACE

| Column       | Datatype     | NULL | Description               |
|--------------|--------------|------|---------------------------|
| COMMAND_ID   | NUMBER       |      | Identifier of the command |
| COMMAND_NAME | VARCHAR2(64) |      | Name of the command       |

## 5.20 DBA\_ADVISOR\_DEF\_PARAMETERS

DBA\_ADVISOR\_DEF\_PARAMETERS displays all default task parameters and their current values in the database.

When a task or object is created, the parameters and their values are copied into the private parameter table.

| Column                | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| IS_MODIFIABLE_ANYTIME | VARCHAR2(1)    |          | Indicates whether the parameter value can be modified when the task is not in its initial state (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| IS_SYSTEM_TASK_ONLY   | VARCHAR2(1)    |          | Indicates whether the task is a system task (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| DESCRIPTION           | VARCHAR2(4000) |          | Optional description of the parameter                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| EXECUTION_TYPE        | VARCHAR2(128)  |          | Type of the last execution. This information is optional for single-execution tasks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## 5.21 DBA\_ADVISOR\_DEFINITIONS

DBA\_ADVISOR\_DEFINITIONS displays the properties of all advisors in the database.

The view contains one row for each task, representing the current state of the task as well as execution-specific data such as progress monitoring and completion status.

| Column       | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ADVISOR_ID   | NUMBER        | NOT NULL | Unique identifier for the advisor                                                                                                                                                                                                                                                                                                                                                                             |
| ADVISOR_NAME | VARCHAR2(128) | NOT NULL | Name of the advisor                                                                                                                                                                                                                                                                                                                                                                                           |

## 5.22 DBA\_ADVISOR\_DIR\_DEFINITIONS

DBA\_ADVISOR\_DIR\_DEFINITIONS provides a definition of the base directive.

| Column         | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ID             | NUMBER        | NOT NULL | Unique id for directive. The directive management engine automatically generates ID numbers. The identifier is unique among all directives regardless of the domain name and directive name.                                                                                                                                                                                                                                                       |
| ADVISOR_ID     | NUMBER        | NOT NULL | Identifier number of the owner advisor.                                                                                                                                                                                                                                                                                                                                                                                                            |
| ADVISOR_NAME   | VARCHAR2(128) | NOT NULL | The name of the advisor to which this directive belongs.                                                                                                                                                                                                                                                                                                                                                                                           |
| DIRECTIVE_NAME | VARCHAR2(128) | NOT NULL | Any value that further classifies this directive within a domain. The domain and the name form a unique key for the directive.                                                                                                                                                                                                                                                                                                                     |
| DOMAIN_NAME    | VARCHAR2(128) | NOT NULL | Domain or namespace name.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| DESCRIPTION    | VARCHAR2(256) | NOT NULL | An optional description that documents the purpose of the directive.                                                                                                                                                                                                                                                                                                                                                                               |
| TYPE           | NUMBER        | NOT NULL | Further describes the use of the directive. Possible values are: <ol style="list-style-type: none"> <li><b>1. Filter</b> - An Xpath filter</li> <li><b>2. Single Value</b> - Evaluation returns a single string value</li> <li><b>3. Multiple Values</b> - Evaluation returns one to many string values</li> <li><b>4. Conditional</b> - Evaluation returns a single value based on an input key, similar to a CASE or SWITCH statement</li> </ol> |
| TYPE_NAME      | VARCHAR2(15)  |          | A decoded version of the TYPE column.                                                                                                                                                                                                                                                                                                                                                                                                              |
| TASK_STATUS    | VARCHAR2(9)   |          | The status of the directive instances when a task is not in its initial state. Possible values are: <ul style="list-style-type: none"> <li>• IMMUTABLE</li> <li>• MUTABLE</li> </ul>                                                                                                                                                                                                                                                               |

| Column    | Datatype    | NULL     | Description                                                                                                                                                       |
|-----------|-------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INSTANCES | VARCHAR2(8) |          | Indicates whether a directive will permit multiple instances. Possible values are: <ul style="list-style-type: none"> <li>• SINGLE</li> <li>• MULTIPLE</li> </ul> |
| METADATA  | CLOB        | NOT NULL | A DTD that is used to process the directive.                                                                                                                      |

## 5.23 DBA\_ADVISOR\_DIR\_INSTANCES

DBA\_ADVISOR\_DIR\_INSTANCES provides information about all global instances for a directive.

| Column        | Datatype      | NULL     | Description                                                                                               |
|---------------|---------------|----------|-----------------------------------------------------------------------------------------------------------|
| DIRECTIVE_ID  | NUMBER        | NOT NULL | Unique id for directive. The directive management engine automatically generates ID numbers.              |
| INSTANCE_ID   | NUMBER        | NOT NULL | Unique id for the directive instance. The directive management engine automatically generates ID numbers. |
| INSTANCE_NAME | VARCHAR2(128) | NOT NULL | A user-assigned name for the directive instance.                                                          |
| DATA          | CLOB          | NOT NULL | An XML document that gives meaningful default values for all parts of the directive.                      |

## 5.24 DBA\_ADVISOR\_DIR\_TASK\_INST

DBA\_ADVISOR\_DIR\_TASK\_INST provides information about all task directive instances.

### Related View

USER\_ADVISOR\_DIR\_TASK\_INST provides information about all task directive instances owned by the current user.

| Column        | Datatype      | NULL     | Description                                                                                               |
|---------------|---------------|----------|-----------------------------------------------------------------------------------------------------------|
| DIRECTIVE_ID  | NUMBER        | NOT NULL | Unique id for directive. The directive management engine automatically generates ID numbers.              |
| SEQ_ID        | NUMBER        | NOT NULL | Unique id for the directive instance. The directive management engine automatically generates ID numbers. |
| INSTANCE_NAME | VARCHAR2(128) | NOT NULL | A user-assigned name for the directive instance.                                                          |
| USERNAME      | VARCHAR2(128) | NOT NULL | Database user who owns the task instance.                                                                 |
| TASK_ID       | NUMBER        |          | An advisor task identifier to which the directive instance is associated                                  |
| TASK_NAME     | VARCHAR2(128) |          | An advisor task to which the directive instance is associated.                                            |
| DATA          | CLOB          | NOT NULL | An XML document that gives meaningful default values for all parts of the directive.                      |

## 5.25 DBA\_ADVISOR\_EXEC\_PARAMETERS

DBA\_ADVISOR\_EXEC\_PARAMETERS displays the parameter values used for past executions of tasks.

It is more useful for advisors supporting multiple executions, such as SQL Performance Analyzer, where a parameter can have different values for different executions.

### Related View

USER\_ADVISOR\_EXEC\_PARAMETERS displays the parameter values used for past executions of tasks owned by the current user.

| Column                | Datatype       | NULL     | Description                                                                                                    |
|-----------------------|----------------|----------|----------------------------------------------------------------------------------------------------------------|
| OWNER                 | VARCHAR2(128)  |          | Owner of the task                                                                                              |
| TASK_ID               | NUMBER         | NOT NULL | Unique identifier of the task                                                                                  |
| TASK_NAME             | VARCHAR2(128)  |          | Name of the task                                                                                               |
| EXECUTION_NAME        | VARCHAR2(128)  | NOT NULL | Name of the task execution with which this entry (row) is associated                                           |
| EXECUTION_TYPE        | VARCHAR2(128)  |          | Type of the last execution. This information is optional for single-execution tasks.                           |
| PARAMETER_NAME        | VARCHAR2(128)  | NOT NULL | Name of the parameter                                                                                          |
| PARAMETER_VALUE       | VARCHAR2(4000) |          | Value of the parameter. Numeric parameter values are converted to a string equivalent.                         |
| PARAMETER_TYPE        | VARCHAR2(10)   |          | Datatype of the parameter (see DBA_ADVISOR_PARAMETERS)                                                         |
| IS_DEFAULT            | VARCHAR2(1)    |          | Indicates whether the parameter value is set to the advisor's default value (Y) or not (N)                     |
| IS_OUTPUT             | VARCHAR2(1)    |          | Indicates whether the task execution process sets the parameter value (Y) or not (N)                           |
| IS_MODIFIABLE_ANYTIME | VARCHAR2(1)    |          | Indicates whether the parameter value can be modified when the task is not in its initial state (Y) or not (N) |
| DESCRIPTION           | VARCHAR2(4000) |          | Optional description of the parameter                                                                          |
| PARAMETER_FLAGS       | NUMBER         | NOT NULL | Reserved for internal use                                                                                      |
| PARAMETER_TYPE#       | NUMBER         | NOT NULL | Reserved for internal use                                                                                      |

## 5.26 DBA\_ADVISOR\_EXECUTION\_TYPES

DBA\_ADVISOR\_EXECUTION\_TYPES displays possible execution action for a given advisor.

Only advisors that support multiple executions of their tasks have entries in this view.

| Column                | Datatype       | NULL     | Description                                |
|-----------------------|----------------|----------|--------------------------------------------|
| ADVISOR_NAME          | VARCHAR2(128)  | NOT NULL | Name of the advisor                        |
| EXECUTION_TYPE        | VARCHAR2(128)  | NOT NULL | Execution type supported by the advisor    |
| EXECUTION_DESCRIPTION | VARCHAR2(4000) |          | Optional description of the execution type |

## 5.27 DBA\_ADVISOR\_EXECUTIONS

DBA\_ADVISOR\_EXECUTIONS displays metadata information for task executions.

For example, the SQL Performance Analyzer creates a minimum of three executions to perform a change impact analysis on a SQL workload. The first one collects performance data for the version of the workload before the change, the second one collects data for the version of the workload after the change, and the third one performs impact analysis. All of these executions belong to the same task and are grouped into this view. Similarly, the automatic SQL tuning task, SYS\_AUTO\_SQL\_TUNING\_TASK, creates a new execution for each tuning run.

### Related View

USER\_ADVISOR\_EXECUTIONS displays metadata information for task executions owned by the current user.

| Column                  | Datatype      | NULL     | Description                                                                                                                                         |
|-------------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER                   | VARCHAR2(128) |          | Owner of the task                                                                                                                                   |
| TASK_ID                 | NUMBER        | NOT NULL | Unique identifier of the task                                                                                                                       |
| TASK_NAME               | VARCHAR2(128) |          | Name of the task                                                                                                                                    |
| EXECUTION_NAME          | VARCHAR2(128) | NOT NULL | Name of the task execution with which this entry (row) is associated                                                                                |
| EXECUTION_ID            | NUMBER        | NOT NULL | Execution ID                                                                                                                                        |
| DESCRIPTION             | VARCHAR2(256) |          | User-supplied description of the task                                                                                                               |
| EXECUTION_TYPE          | VARCHAR2(128) |          | Type of the last execution (optional for single-execution tasks)                                                                                    |
| EXECUTION_TYPE#         | NUMBER        |          | Reserved for internal use                                                                                                                           |
| EXECUTION_START         | DATE          |          | Execution start date and time                                                                                                                       |
| EXECUTION_LAST_MODIFIED | DATE          | NOT NULL | Last modified date and time for the execution                                                                                                       |
| EXECUTION_END           | DATE          |          | Execution end date and time                                                                                                                         |
| ADVISOR_NAME            | VARCHAR2(128) |          | Advisor associated with the task                                                                                                                    |
| REQUESTED_DOP           | NUMBER        |          | The degree of parallelism (DOP) value requested by the user (through the TEST_EXECUTE_DOP parameter). It can be any value greater or equal to zero. |

| Column               | Datatype       | NULL     | Description                                                                                                                                                                                                     |
|----------------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ACTUAL_DOP           | NUMBER         |          | The actual degree of parallelism (DOP) with which the execution finished. If the requested DOP is greater than what is available on the system, the ACTUAL_DOP value can be lower than the REQUESTED_DOP value. |
| CONCURRENT_EXECUTION | VARCHAR2(3)    |          | Indicates whether concurrency was used for this execution (YES) or not (NO)                                                                                                                                     |
| ADVISOR_ID           | NUMBER         | NOT NULL | Unique identifier for the advisor                                                                                                                                                                               |
| STATUS               | VARCHAR2(11)   |          | Current operational status of the task: <ul style="list-style-type: none"> <li>• EXECUTING</li> <li>• COMPLETED</li> <li>• INTERRUPTED</li> <li>• CANCELLED</li> <li>• FATAL ERROR</li> </ul>                   |
| STATUS#              | NUMBER         | NOT NULL | Reserved for internal use                                                                                                                                                                                       |
| STATUS_MESSAGE       | VARCHAR2(4000) |          | Informational message provided by the advisor regarding the status                                                                                                                                              |
| ERROR_MESSAGE        | VARCHAR2(4000) |          | Informational message or an error message indicating the current operation or condition                                                                                                                         |

## 5.28 DBA\_ADVISOR\_FDG\_BREAKDOWN

DBA\_ADVISOR\_FDG\_BREAKDOWN describes the contribution from the different instances to the findings for each ADDM task.

This view is populated only with ADDM tasks that are analyzing multiple instances (that is, the ACTUAL\_ANALYSIS column in the task's row in DBA\_ADDM\_TASKS is set to DATABASE or PARTIAL).

### Related View

USER\_ADVISOR\_FDG\_BREAKDOWN describes the contribution from the different instances to the findings for each ADDM task owned by the current user.

| Column          | Datatype | NULL     | Description                                                                                                |
|-----------------|----------|----------|------------------------------------------------------------------------------------------------------------|
| TASK_ID         | NUMBER   | NOT NULL | Unique identifier of the task (see DBA_ADVISOR_TASKS and DBA_ADDM_TASKS)                                   |
| FINDING_ID      | NUMBER   | NOT NULL | Identifier of the finding to which this breakdown applies (see DBA_ADVISOR_FINDINGS and DBA_ADDM_FINDINGS) |
| INSTANCE_NUMBER | NUMBER   | NOT NULL | The number of the instance for the breakdown                                                               |
| IMPACT          | NUMBER   |          | The database time (in microseconds) of the finding in the instance                                         |
| PERC_IMPACT     | NUMBER   |          | Percentage of the contribution of the instance to the overall finding's impact                             |

| Column         | Datatype      | NULL | Description                                                              |
|----------------|---------------|------|--------------------------------------------------------------------------|
| EXECUTION_NAME | VARCHAR2(128) |      | The name of the task execution with which this entry (row) is associated |

## 5.29 DBA\_ADVISOR\_FINDING\_NAMES

DBA\_ADVISOR\_FINDING\_NAMES provides a list of all finding names registered with the Advisor Framework.

| Column       | Datatype       | NULL     | Description            |
|--------------|----------------|----------|------------------------|
| ID           | NUMBER         |          | ID of the finding name |
| ADVISOR_NAME | VARCHAR2(128)  | NOT NULL | Advisor name           |
| FINDING_NAME | VARCHAR2(4000) |          | Finding name           |

## 5.30 DBA\_ADVISOR\_FINDINGS

DBA\_ADVISOR\_FINDINGS displays the findings discovered by all advisors in the database.

### Related View

USER\_ADVISOR\_FINDINGS displays the findings discovered by the advisors owned by the current user. This view does not display the OWNER column.

| Column         | Datatype       | NULL     | Description                                                                                                                                 |
|----------------|----------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128)  |          | Owner of the task                                                                                                                           |
| TASK_ID        | NUMBER         | NOT NULL | Identifier of the task                                                                                                                      |
| TASK_NAME      | VARCHAR2(128)  |          | Name of the task                                                                                                                            |
| EXECUTION_NAME | VARCHAR2(128)  |          | The name of the task execution with which this entry (row) is associated                                                                    |
| FINDING_ID     | NUMBER         | NOT NULL | Identifier of the finding                                                                                                                   |
| FINDING_NAME   | VARCHAR2(4000) |          | Name of the finding                                                                                                                         |
| TYPE           | VARCHAR2(11)   |          | Type of the finding: <ul style="list-style-type: none"> <li>• PROBLEM</li> <li>• SYMPTOM</li> <li>• ERROR</li> <li>• INFORMATION</li> </ul> |
| TYPE_ID        | NUMBER         | NOT NULL | Numeric ID for the value in column TYPE                                                                                                     |
| PARENT         | NUMBER         | NOT NULL | Identifier of the parent finding                                                                                                            |
| OBJECT_ID      | NUMBER         |          | Identifier of the associated object, if any                                                                                                 |
| IMPACT_TYPE    | VARCHAR2(4000) |          | Impact of the finding on the system                                                                                                         |

| Column    | Datatype       | NULL | Description                                                                                                                                                     |
|-----------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IMPACT    | NUMBER         |      | Impact value                                                                                                                                                    |
| MESSAGE   | VARCHAR2(4000) |      | Message describing the finding                                                                                                                                  |
| MORE_INFO | VARCHAR2(4000) |      | Additional info associated with the finding                                                                                                                     |
| FILTERED  | VARCHAR2(1)    |      | A value of Y means that the row in the view was filtered out by a directive (or a combination of directives). A value of N means that the row was not filtered. |
| FLAGS     | NUMBER         |      | For internal use only by advisor framework clients                                                                                                              |

## 5.33 DBA\_ADVISOR\_OBJECT\_TYPES

DBA\_ADVISOR\_OBJECT\_TYPES displays information about the object types used by all advisors in the database.

In addition to the regular database object types (such as TABLE and INDEX), the following types are defined:

- SYSTEM
- I/O
- SGA
- PGA
- SHARED POOL
- BUFFER CACHE
- LIBRARY CACHE
- PROCESS
- SESSION
- ENQUEUE
- LATCH
- ROLLBACK SEGMENT
- FILE
- PARAMETER
- CURSOR
- SQL
- SQL WORKLOAD

| Column         | Datatype     | NULL | Description     |
|----------------|--------------|------|-----------------|
| OBJECT_TYPE_ID | NUMBER       |      | Type identifier |
| OBJECT_TYPE    | VARCHAR2(64) |      | Type name       |

## 5.34 DBA\_ADVISOR\_OBJECTS

DBA\_ADVISOR\_OBJECTS displays information about the objects currently referenced by all advisors in the database.

Each row in the view pertains to an object instantiation.

### Related View

USER\_ADVISOR\_OBJECTS displays information about the objects currently referenced by the advisors owned by the current user. This view does not display the OWNER ATTR21, and ATTR22 columns.

| Column         | Datatype       | NULL     | Description                                                                                                                                |
|----------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128)  |          | Owner of the object                                                                                                                        |
| OBJECT_ID      | NUMBER         | NOT NULL | Identifier of the object                                                                                                                   |
| TYPE           | VARCHAR2(64)   |          | Name of the type                                                                                                                           |
| TYPE_ID        | NUMBER         | NOT NULL | Type identifier number                                                                                                                     |
| TASK_ID        | NUMBER         | NOT NULL | Task referencing the object                                                                                                                |
| TASK_NAME      | VARCHAR2(128)  |          | Name of the task                                                                                                                           |
| EXECUTION_NAME | VARCHAR2(128)  |          | The name of the task execution with which this entry (row) is associated                                                                   |
| ATTR1          | VARCHAR2(4000) |          | Attributes and identifier of the object                                                                                                    |
| ATTR2          | VARCHAR2(4000) |          | Attributes and identifier of the object                                                                                                    |
| ATTR3          | VARCHAR2(4000) |          | Attributes and identifier of the object                                                                                                    |
| ATTR4          | CLOB           |          | Attributes and identifiers that cannot be expressed in the ATTR1, ATTR2, and ATTR3 columns                                                 |
| ATTR5          | VARCHAR2(4000) |          | Attributes and identifier of the object                                                                                                    |
| ATTR6          | RAW(2000)      |          | Attributes and identifier of the object                                                                                                    |
| ATTR7          | NUMBER         |          | Attributes and identifier of the object                                                                                                    |
| ATTR8          | NUMBER         |          | Attributes and identifier of the object                                                                                                    |
| ATTR9          | NUMBER         |          | Attributes and identifier of the object                                                                                                    |
| ATTR10         | NUMBER         |          | Attributes and identifier of the object                                                                                                    |
| ATTR11         | NUMBER         |          | Attributes and identifier of the object                                                                                                    |
| ATTR16         | VARCHAR2(4000) |          | Attributes and identifier of the object                                                                                                    |
| ATTR17         | VARCHAR2(4000) |          | Attributes and identifier of the object                                                                                                    |
| ATTR18         | VARCHAR2(4000) |          | Attributes and identifier of the object                                                                                                    |
| ATTR21         | DATE           |          | Attributes and identifier of the object                                                                                                    |
| ATTR22         | DATE           |          | Attributes and identifier of the object                                                                                                    |
| OTHER          | CLOB           |          | Other attributes and identifiers of the object                                                                                             |
| ADV_SQL_ID     | VARCHAR2(13)   |          | If the object type is SQL, then this column contains the SQL identifier of the SQL statement. Otherwise, the value of this column is null. |

### Note

The definition of the ATTRn columns depends on the advisors that are using the object. For example, the SQL object type defines the attribute columns as follows:

- ATTR1 contains the SQL ID
- ATTR2 contains the SQL address (in the cursor cache)
- ATTR4 contains the SQL text

## 5.35 DBA\_ADVISOR\_PARAMETERS

DBA\_ADVISOR\_PARAMETERS displays all task parameters and their current values in the database.

This data is accessible by all tasks.

### Related View

USER\_ADVISOR\_PARAMETERS displays the task parameters and their current values for the tasks owned by the current user. This view does not display the OWNER column.

| Column          | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

## 5.37 DBA\_ADVISOR\_RECOMMENDATIONS

DBA\_ADVISOR\_RECOMMENDATIONS displays the results of an analysis of all recommendations in the database.

A recommendation can have multiple actions associated with it. Actions are described in the DBA\_ADVISOR\_ACTIONS view. A recommendation also points to a set of rationales that present a justification/reasoning for that recommendation. These rationales are in the DBA\_ADVISOR\_RATIONALE view.

### Related View

USER\_ADVISOR\_RECOMMENDATIONS displays the results of an analysis of the recommendations owned by the current user. This view does not display the OWNER column.

| Column         | Datatype       | NULL     | Description                                                                                                                                                                                                      |
|----------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128)  |          | Owner of the task                                                                                                                                                                                                |
| REC_ID         | NUMBER         | NOT NULL | Unique identifier of the recommendation                                                                                                                                                                          |
| TASK_ID        | NUMBER         | NOT NULL | Task that owns the recommendation                                                                                                                                                                                |
| TASK_NAME      | VARCHAR2(128)  |          | Name of the task                                                                                                                                                                                                 |
| EXECUTION_NAME | VARCHAR2(128)  |          | The name of the task execution with which this entry (row) is associated                                                                                                                                         |
| FINDING_ID     | NUMBER         |          | Unique identifier of the finding                                                                                                                                                                                 |
| TYPE           | VARCHAR2(30)   |          | Type of the recommendation                                                                                                                                                                                       |
| RANK           | NUMBER         |          | Ranking, in terms of importance, within the set of recommendations generated for the task                                                                                                                        |
| PARENT_REC_IDS | VARCHAR2(4000) |          | Comma-separated list of the recommendation IDs of the parent recommendations. If this column is nonzero, then the recommendation depends on the parents, and cannot be accepted if the parents are not accepted. |

| Column            | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BENEFIT_TYPE      | VARCHAR2(4000) |      | Describes the benefit obtained by carrying out the recommendation<br><br>If there is a set of parents for the recommendation, then the benefit is the cumulative benefit (the improvement in system performance when this and all prior parent recommendations are accepted).<br><br>If there are no parents, then this is the improvement when the recommendation is accepted, independent of other recommendations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| BENEFIT           | NUMBER         |      | Calculated benefit value<br><br>This column displays an estimate of the savings in total activity (or load) on the system if all actions of the recommendation are implemented.<br><br>Recommendations are not additive, that is, the benefit from one recommendation may overlap with the benefit from another. For example, Oracle might recommend increasing the shared pool size, or reducing hard parses (by not using literals), and both recommendations might reduce the same part of the workload related to parsing.<br><br>The benefit is given in both pure active sessions and as a percent of the average active sessions of the analysis time period. Therefore, if the benefit is 20% of active sessions, Oracle estimates that if you apply the actions on the same workload, the average active sessions on the server will be reduced by 20%. The DBA_ADDM_TASKS view displays the average active sessions for an ADDM task. |
| ANNOTATION_STATUS | VARCHAR2(11)   |      | When a task is complete, the recommendations are marked ACCEPT. The status can be changed later using the MARK_RECOMMENDATION procedure: <ul style="list-style-type: none"> <li>• ACCEPT - Current recommendation is ready to implement. This recommendation can also be used as advice for future analysis operations.</li> <li>• REJECT - Current recommendation is not acceptable to the user, and therefore will be excluded from any implementation scripts. This recommendation can also be used as advice for future analysis operations.</li> <li>• IGNORE - Though not rejected, the current recommendation will be ignored when generating scripts and will never be used as advice to future analysis operations.</li> </ul>                                                                                                                                                                                                         |
| FLAGS             | NUMBER         |      | Advisor-specific flags                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| FILTERED          | VARCHAR2(1)    |      | A value of Y means that the row in the view was filtered out by a directive (or a combination of directives). A value of N means that the row was not filtered.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| REC_TYPE_ID       | NUMBER         |      | Recommendation type ID                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## 5.38 DBA\_ADVISOR\_SQLA\_REC\_SUM

DBA\_ADVISOR\_SQLA\_REC\_SUM displays recommendation rollup information for all workload objects in the database after an Access Advisor analysis operation.

**Related View**

USER\_ADVISOR\_SQLA\_REC\_SUM displays recommendation rollup information for the workload objects owned by the current user. This view does not display the OWNER column.

| Column         | Datatype      | NULL | Description                                                                                                                              |
|----------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128) |      | Owner of the task                                                                                                                        |
| TASK_ID        | NUMBER        |      | Unique identifier of the task                                                                                                            |
| TASK_NAME      | VARCHAR2(128) |      | Name of the task                                                                                                                         |
| REC_ID         | NUMBER        |      | Identifier of the recommendation                                                                                                         |
| TOTAL_STMTS    | NUMBER        |      | Total number of statements processed during analysis                                                                                     |
| TOTAL_PRECOST  | NUMBER        |      | Total cost of executing the statements in which the recommended object will be used, before the recommendations                          |
| TOTAL_POSTCOST | NUMBER        |      | Total cost of executing the statements in which the recommended object will be utilized, after the recommendations have been implemented |

## 5.39 DBA\_ADVISOR\_SQLA\_TABLES

DBA\_ADVISOR\_SQLA\_TABLES displays cross references between the workload statements and the tables referenced in the statement.

**Related View**

USER\_ADVISOR\_SQLA\_TABLES displays cross references between the workload statements and the tables referenced in the statement for the current user. This view does not display the OWNER column.

| Column  | Datatype      | NULL | Description                   |
|---------|---------------|------|-------------------------------|
| OWNER   | VARCHAR2(128) |      | Owner of the workload object  |
| TASK_ID | NUMBER        |      | Unique identifier of the task |

| Column      | Datatype      | NULL | Description                                              |
|-------------|---------------|------|----------------------------------------------------------|
| TASK_NAME   | VARCHAR2(128) |      | Name of the task                                         |
| SQL_ID      | VARCHAR2(13)  |      | SQL identifier of the parent cursor in the library cache |
| STMT_ID     | NUMBER        |      | Statement ID                                             |
| TABLE_OWNER | VARCHAR2(128) |      | Owner of the table                                       |
| TABLE_NAME  | VARCHAR2(128) |      | Table name                                               |

## 5.40 DBA\_ADVISOR\_SQLA\_WK\_MAP

DBA\_ADVISOR\_SQLA\_WK\_MAP displays the workload references for all tasks in the database.

Workload references are necessary to allow the SQL Access Advisor to find required workload data.

### Related View

USER\_ADVISOR\_SQLA\_WK\_MAP displays the workload references for the tasks owned by the current user. This view does not display the OWNER column.

| Column        | Datatype      | NULL | Description                                                                                                                     |
|---------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------|
| OWNER         | VARCHAR2(128) |      | Owner of the task                                                                                                               |
| TASK_ID       | NUMBER        |      | Unique identifier of the task                                                                                                   |

| SQLSET_NAME         | VARCHAR2(128) |          | Name of the SQL tuning set for the statement                                                                                                                                                                  |
| WORKLOAD_NAME       | VARCHAR2(128) |          | Name of the workload                                                                                                                                                                                          |
| SQL_ID              | VARCHAR(13)   | NOT NULL | Generated identifier of the statement                                                                                                                                                                         |
| SQL_SEQ             | NUMBER        | NOT NULL | SQL sequence                                                                                                                                                                                                  |
| PLAN_HASH_VALUE     | NUMBER        | NOT NULL | Numerical representation of the SQL plan for the cursor. Comparing one PLAN_HASH_VALUE to another easily identifies whether or not two plans are the same (rather than comparing the two plans line-by-line). |
| PARSING_SCHEMA_NAME | VARCHAR2(128) |          | Schema name that was used to originally build this child cursor                                                                                                                                               |
| USERNAME            | VARCHAR2(128) |          | Name of the user executing the statement                                                                                                                                                                      |
| MODULE              | VARCHAR2(64)  |          | Name of the module issuing the statement                                                                                                                                                                      |
| ACTION              | VARCHAR2(64)  |          | Module action for the statement                                                                                                                                                                               |
| CPU_TIME            | NUMBER        |          | Total CPU count (in seconds) of the executing statement                                                                                                                                                       |
| BUFFER_GETS         | NUMBER        |          | Total number of buffer gets for the statement                                                                                                                                                                 |
| DISK_READS          | NUMBER        |          | Total disk-read I/O count for the statement                                                                                                                                                                   |
| ELAPSED_TIME        | NUMBER        |          | Total elapsed time (in seconds) of the executing statement                                                                                                                                                    |
| ROWS_PROCESSED      | NUMBER        |          | Total number of rows processed by the statement                                                                                                                                                               |
| EXECUTIONS          | NUMBER        |          | Total number of times the statement was executed                                                                                                                                                              |
| FIRST_LOAD_TIME     | DATE          |          | Load time of parent cursor                                                                                                                                                                                    |
| LAST_EXECUTION_DATE | DATE          |          | Date on which the statement was last executed                                                                                                                                                                 |
| PRIORITY            | NUMBER        |          | Business importance of the statement: <ul style="list-style-type: none"> <li>• 1 - High</li> <li>• 2 - Medium</li> <li>• 3 - Low</li> </ul>                                                                   |
| COMMAND_TYPE        | NUMBER        |          | Type of the command                                                                                                                                                                                           |
| STAT_PERIOD         | NUMBER        |          | Unused                                                                                                                                                                                                        |

| Column             | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------|----------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ACTIVE_STAT_PERIOD | NUMBER   |      | Effective period of time (in seconds) during which the SQL statement was active                                                                                                                                                                                                                                                                                                                                                                                                              |
| SQL_TEXT           | CLOB     |      | Text of the SQL statement                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| PRECOST            | NUMBER   |      | Cost of executing the statement in the workload prior to the recommendations                                                                                                                                                                                                                                                                                                                                                                                                                 |
| POSTCOST           | NUMBER   |      | Cost of executing the statement in the workload after the recommendations                                                                                                                                                                                                                                                                                                                                                                                                                    |
| IMPORTANCE         | NUMBER   |      | Advisor-calculated importance value                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| REC_ID             | NUMBER   |      | Associated recommendation identifier                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| VALIDATED          | NUMBER   |      | Indicates whether the statement is valid for analysis: <ul style="list-style-type: none"> <li>• 0 - Statement will not be analyzed by the EXECUTE_TASK procedure. Typically, the statement references one or more tables that do not have valid statistics. To correct this problem, ensure that the tables have valid statistics and execute the RESET_SQLWKLD procedure on the current workload.</li> <li>• 1- Statement is eligible for analysis by the EXECUTE_TASK procedure</li> </ul> |

## 5.43 DBA\_ADVISOR\_SQLSTATS

DBA\_ADVISOR\_SQLSTATS displays execution statistics for the test-execution of different SQL plans during the advisor analysis.

### Related View

USER\_ADVISOR\_SQLSTATS displays execution statistics owned by the current user for the test-execution of different SQL plans during the advisor analysis.

| Column          | Datatype      | NULL     | Description                                                                                                               |
|-----------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------|
| TASK_NAME       | VARCHAR2(128) |          | Advisor task name in which the SQL statement was executed (see DBA_ADVISOR_TASKS)                                         |
| TASK_ID         | NUMBER(38)    | NOT NULL | Advisor task ID in which the SQL statement was executed (see DBA_ADVISOR_TASKS)                                           |
| EXECUTION_NAME  | VARCHAR2(128) | NOT NULL | Advisor task execution in which the SQL statement was executed (see DBA_ADVISOR_EXECUTIONS)                               |
| EXECUTION_TYPE  | VARCHAR2(128) |          | Type of the advisor task execution in which the SQL statement was executed (see DBA_ADVISOR_EXECUTIONS)                   |
| OBJECT_ID       | NUMBER(38)    | NOT NULL | Advisor object ID identifying the relevant SQL statement (see DBA_ADVISOR_OBJECTS)                                        |
| PLAN_ID         | NUMBER        | NOT NULL | Plan ID number generated to uniquely identify a plan for a particular SQL statement (foreign key to DBA_ADVISOR_SQLPLANS) |
| SQL_ID          | VARCHAR2(13)  | NOT NULL | Identifier for the SQL statement executed                                                                                 |
| PLAN_HASH_VALUE | NUMBER        | NOT NULL | Hash value of the SQL execution plan                                                                                      |

| Column                      | Datatype    | NULL | Description                                                                                      |
|-----------------------------|-------------|------|--------------------------------------------------------------------------------------------------|
| ATTR1                       | NUMBER      |      | For internal use only                                                                            |
| CON_DBID                    | NUMBER      |      | The database ID of the pluggable database (PDB)                                                  |
| PARSE_TIME                  | NUMBER      |      | Parse time (in microseconds) measured for the SQL                                                |
| ELAPSED_TIME                | NUMBER      |      | Elapsed time (in microseconds) to execute the SQL and fetch all of its rows, after parsing       |
| CPU_TIME                    | NUMBER      |      | CPU time (in microseconds) to execute the SQL and fetch all of its rows, after parsing           |
| USER_IO_TIME                | NUMBER      |      | I/O time (in microseconds) to execute the SQL and fetch all of its rows, after parsing           |
| BUFFER_GETS                 | NUMBER      |      | Number of buffer gets measured for executing the SQL and fetching all of its rows                |
| DISK_READS                  | NUMBER      |      | Number of disk reads measured for executing the SQL and fetching all of its rows                 |
| DIRECT_WRITES               | NUMBER      |      | Number of direct writes measured for executing the SQL and fetching all of its rows              |
| PHYSICAL_READ_REQUESTS      | NUMBER      |      | Number of physical read I/O requests issued by the monitored SQL                                 |
| PHYSICAL_WRITE_REQUESTS     | NUMBER      |      | Number of physical write I/O requests issued by the monitored SQL                                |
| PHYSICAL_READ_BYTES         | NUMBER      |      | Number of bytes read from disks by the monitored SQL                                             |
| PHYSICAL_WRITE_BYTES        | NUMBER      |      | Number of bytes written to disks by the monitored SQL                                            |
| ROWS_PROCESSED              | NUMBER      |      | Number of rows returned by the SQL execution                                                     |
| FETCHES                     | NUMBER      |      | Number of fetches for the SQL execution                                                          |
| EXECUTIONS                  | NUMBER      |      | Execution count for the SQL. This column will always have a value of 1 or 0.                     |
| END_OF_FETCH_COUNT          | NUMBER      |      | Indicates whether the SQL was executed to end-of-fetch (1) or not (0)                            |
| OPTIMIZER_COST              | NUMBER      |      | Optimizer cost for the execution plan                                                            |
| OTHER                       | CLOB        |      | For internal use only                                                                            |
| TESTEXEC_TOTAL_EXECS        | NUMBER      |      | Total number of executions during test execute                                                   |
| IO_INTERCONNECT_BYTES       | NUMBER      |      | Number of I/O bytes exchanged between Oracle Database and the storage system                     |
| TESTEXEC_FIRST_EXEC_IGNORED | VARCHAR2(1) |      | Indicates whether the first execution in test execute is ignored (Y) or not (N)                  |
| CON_DBID                    | NUMBER      |      | The database ID of the PDB                                                                       |
| ATTR2                       | NUMBER      |      | For internal use only                                                                            |
| ATTR3                       | NUMBER      |      | For internal use only                                                                            |
| CACHED_GETS                 | NUMBER      |      | The total of the db block gets from cache statistic and the consistent gets from cache statistic |
| DIRECT_GETS                 | NUMBER      |      | The total of the db block gets direct statistic and the consistent gets direct statistic         |
| EXECUTIONS_ORIGINAL         | NUMBER      |      | Number of original executions from the SQL tuning set, independent of trial executions           |

| Column       | Datatype | NULL | Description                                                                |
|--------------|----------|------|----------------------------------------------------------------------------|
| OBJECT_FLAGS | NUMBER   |      | Value of the flags from the execution of the SQL, such as timeout or error |

## 5.46 DBA\_ADVISOR\_SQLW\_STMTS

DBA\_ADVISOR\_SQLW\_STMTS displays rows that correspond to all statements in the workload.

All columns are guaranteed to be non-null.

### Related View

USER\_ADVISOR\_SQLW\_STMTS displays rows that correspond to the statements in the workload owned by the current user. This view does not display the OWNER column.

| Column              | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

# 5.47 DBA\_ADVISOR\_SQLW\_SUM

DBA\_ADVISOR\_SQLW\_SUM displays an aggregated picture of all SQLWkld workload objects in the database.

**Related View**

USER\_ADVISOR\_SQLW\_SUM displays an aggregated picture of the SQLWkld workload objects owned by the current user. This view does not display the OWNER column.

| Column          | Datatype       | NULL     | Description                                                                            |
|-----------------|----------------|----------|----------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128)  |          | Owner of the workload object                                                           |
| WORKLOAD_ID     | NUMBER         | NOT NULL | Unique identifier number of the workload object                                        |
| WORKLOAD_NAME   | VARCHAR2(128)  |          | Unique name of the workload                                                            |
| DESCRIPTION     | VARCHAR2(256)  |          | User-specified description of the workload                                             |
| CREATE_DATE     | DATE           | NOT NULL | Date on which the workload object was created                                          |
| MODIFY_DATE     | DATE           | NOT NULL | Date of last update to the current workload                                            |
| NUM_SELECT_STMT | NUMBER         |          | Number of SELECT statements in the workload                                            |
| NUM_UPDATE_STMT | NUMBER         |          | Number of UPDATE statements in the workload                                            |
| NUM_DELETE_STMT | NUMBER         |          | Number of DELETE statements in the workload                                            |
| NUM_INSERT_STMT | NUMBER         |          | Number of INSERT statements in the workload                                            |
| NUM_MERGE_STMT  | NUMBER         |          | Number of MERGE statements in the workload                                             |
| SOURCE          | VARCHAR2(128)  |          | Optional name that identifies the creator of the object                                |
| HOW_CREATED     | VARCHAR2(30)   |          | Optional object or template on which the object was based                              |
| DATA_SOURCE     | VARCHAR2(2000) |          | Workload data source                                                                   |
| READ_ONLY       | VARCHAR2(5)    |          | Indicates whether or not the workload can be modified or deleted (TRUE) or not (FALSE) |

## 5.50 DBA\_ADVISOR\_TASKS

DBA\_ADVISOR\_TASKS displays information about all tasks in the database.

The view contains one row for each task. Each task has a name that is unique to the owner. Task names are just informational and no uniqueness is enforced within any other namespace.

### Related View

USER\_ADVISOR\_TASKS displays information about the tasks owned by the current user. This view does not display the OWNER column.

| Column                | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| EXECUTION_START       | DATE          |          | Execution start date and time of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| EXECUTION_END         | DATE          |          | Execution end date and time of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| STATUS                | VARCHAR2(11)  |          | Current operational status of the task: <ul style="list-style-type: none"> <li>• INITIAL - Initial state of the task; no recommendations are present</li> <li>• EXECUTING - Task is currently running</li> <li>• INTERRUPTED - Task analysis was interrupted by the user. Recommendation data, if present, can be viewed and reported at this time.</li> <li>• COMPLETED - Task successfully completed the analysis operation. Recommendation data can be viewed and reported.</li> <li>• ERROR - An error occurred during the analysis operation. Recommendations, if present, can be viewed and reported at this time.</li> </ul> |

| Column               | Datatype       | NULL     | Description                                                                                                                                                  |
|----------------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS_MESSAGE       | VARCHAR2(4000) |          | Informational message provided by the advisor regarding the status                                                                                           |
| PCT_COMPLETION_TIME  | NUMBER         |          | Percent completion, in terms of time, of the task when it is executing                                                                                       |
| PROGRESS_METRIC      | NUMBER         |          | Metric that measures the progress of the task in terms of quality. Each advisor may have its own metric.                                                     |
| METRIC_UNITS         | VARCHAR2(64)   |          | Unit of the metric used to measure progress                                                                                                                  |
| ACTIVITY_COUNTER     | NUMBER         |          | Counter that is updated frequently by the advisor, denoting that useful work is being performed                                                              |
| RECOMMENDATION_COUNT | NUMBER         |          | Number of recommendations produced                                                                                                                           |
| ERROR_MESSAGE        | VARCHAR2(4000) |          | Informational message or an error message indicating the current operation or condition                                                                      |
| SOURCE               | VARCHAR2(128)  |          | Optional name that identifies the creator of the task                                                                                                        |
| HOW_CREATED          | VARCHAR2(30)   |          | Optional task or template on which the object was based                                                                                                      |
| READ_ONLY            | VARCHAR2(5)    |          | Indicates whether the task is read-only (TRUE) or not (FALSE)                                                                                                |
| SYSTEM_TASK          | VARCHAR2(5)    |          | Indicates whether the task is a system task (TRUE) or not (FALSE). The automatic SQL tuning task, SYS_AUTO_SQL_TUNING_TASK, is one example of a system task. |
| ADVISOR_ID           | NUMBER         | NOT NULL | Unique identifier for the advisor                                                                                                                            |
| STATUS#              | NUMBER         |          | Reserved for internal use                                                                                                                                    |

## 5.51 DBA\_ADVISOR\_TEMPLATES

DBA\_ADVISOR\_TEMPLATES displays information about all templates in the database.

### Related View

USER\_ADVISOR\_TEMPLATES displays information about the templates owned by the current user. This view does not display the OWNER column.

| Column       | Datatype      | NULL     | Description                           |
|--------------|---------------|----------|---------------------------------------|
| OWNER        | VARCHAR2(128) |          | Owner of the task                     |
| TASK_ID      | NUMBER        | NOT NULL | Unique identifier of the task         |
| TASK_NAME    | VARCHAR2(128) |          | Name of the task                      |
| DESCRIPTION  | VARCHAR2(256) |          | User-supplied description of the task |
| ADVISOR_NAME | VARCHAR2(128) |          | Advisor associated with the task      |
| CREATED      | DATE          | NOT NULL | Creation date of the task             |

| Column        | Datatype      | NULL     | Description                                                                 |
|---------------|---------------|----------|-----------------------------------------------------------------------------|
| LAST_MODIFIED | DATE          | NOT NULL | Date on which the task was last modified                                    |
| SOURCE        | VARCHAR2(128) |          | Optional task or template on which the template was based                   |
| READ_ONLY     | VARCHAR2(5)   |          | Indicates whether the task can be modified or deleted (TRUE) or not (FALSE) |

## 5.52 DBA\_ADVISOR\_USAGE

DBA\_ADVISOR\_USAGE displays the usage information for each type of advisor in the database.

| Column            | Datatype      | NULL     | Description                     |
|-------------------|---------------|----------|---------------------------------|
| ADVISOR_ID        | NUMBER        | NOT NULL | Type of the advisor             |
| ADVISOR_NAME      | VARCHAR2(128) | NOT NULL | Name of the advisor             |
| LAST_EXEC_TIME    | DATE          | NOT NULL | Date of the last execution      |
| NUM_EXECS         | NUMBER        | NOT NULL | Cumulative number of executions |
| NUM_DB_REPORTS    | NUMBER        | NOT NULL | Cumulative number of reports    |
| FIRST_REPORT_TIME | DATE          |          | Time of the first report        |
| LAST_REPORT_TIME  | DATE          |          | Time of the last report         |

## 5.53 DBA\_ALERT\_HISTORY

DBA\_ALERT\_HISTORY describes a time-limited history of alerts which are no longer outstanding.

| Column           | Datatype                    | NULL     | Description                                         |
|------------------|-----------------------------|----------|-----------------------------------------------------|
| SEQUENCE_ID      | NUMBER                      | NOT NULL | Alert sequence number                               |
| REASON_ID        | NUMBER                      |          | ID of the alert reason                              |
| OWNER            | VARCHAR2(128)               |          | Owner of the object on which the alert was issued   |
| OBJECT_NAME      | VARCHAR2(513)               |          | Name of the object                                  |
| SUBOBJECT_NAME   | VARCHAR2(128)               |          | Name of the subobject (for example: partition)      |
| OBJECT_TYPE      | VARCHAR2(64)                |          | Type of the object (for example: table, tablespace) |
| REASON           | VARCHAR2(4000)              |          | Reason for the alert                                |
| TIME_SUGGESTED   | TIMESTAMP(6) WITH TIME ZONE |          | Time when the alert was last updated                |
| CREATION_TIME    | TIMESTAMP(6) WITH TIME ZONE |          | Time when the alert was first created               |
| SUGGESTED_ACTION | VARCHAR2(4000)              |          | Advice of the recommended action                    |

| Column               | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------------|---------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ADVISOR_NAME         | VARCHAR2(128) |      | Name of the advisor to be invoked for more information                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| METRIC_VALUE         | NUMBER        |      | Value of the related metrics                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| CON_ID               | NUMBER        |      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.54 DBA\_ALERT\_HISTORY\_DETAIL

DBA\_ALERT\_HISTORY\_DETAIL describes a time-limited history of cleared and outstanding alerts.

| Column         | Datatype      | NULL     | Description                                    |
|----------------|---------------|----------|------------------------------------------------|
| SEQUENCE_ID    | NUMBER        | NOT NULL | Alert sequence number                          |
| REASON_ID      | NUMBER        |          | ID of the alert reason                         |
| OWNER          | VARCHAR2(128) |          | Owner of the object on which alert is issued   |
| OBJECT_NAME    | VARCHAR2(513) |          | Name of the object                             |
| SUBOBJECT_NAME | VARCHAR2(128) |          | Name of the subobject (for example: partition) |

| Column                  | Datatype                    | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------|-----------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_TYPE             | VARCHAR2(64)                |          | Type of the object (for example: table, tablespace)                                                                                                                                                                                                                                                                                                                                                                                                   |
| REASON                  | VARCHAR2(4000)              |          | Reason for the alert                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| TIME_SUGGESTED          | TIMESTAMP(6) WITH TIME ZONE |          | Time when the alert was last updated                                                                                                                                                                                                                                                                                                                                                                                                                  |
| CREATION_TIME           | TIMESTAMP(6) WITH TIME ZONE |          | Time when the alert was first created                                                                                                                                                                                                                                                                                                                                                                                                                 |
| SUGGESTED_ACTION        | VARCHAR2(4000)              |          | Advice of the recommended action                                                                                                                                                                                                                                                                                                                                                                                                                      |
| ADVISOR_NAME            | VARCHAR2(128)               |          | Name of the advisor to be invoked for more information                                                                                                                                                                                                                                                                                                                                                                                                |
| METRIC_VALUE            | NUMBER                      |          | Value of the related metrics                                                                                                                                                                                                                                                                                                                                                                                                                          |
| MESSAGE_TYPE            | VARCHAR2(12)                |          | Message type: <ul style="list-style-type: none"> <li>• Notification</li> <li>• Warning</li> </ul>                                                                                                                                                                                                                                                                                                                                                     |

| EXECUTION_CONTEXT_ID    | VARCHAR2(128)               |          | Execution Context ID                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| ERROR_INSTANCE_ID       | VARCHAR2(142)               |          | ID of an error instance plus a sequence number                                                                                                                                                                                                                                                                                                                                                                                                        |
| RESOLUTION              | VARCHAR2(11)                |          | Resolution: <ul style="list-style-type: none"> <li>• Cleared</li> <li>• Outstanding</li> <li>• N/A</li> </ul>                                                                                                                                                                                                                                                                                                                                         |
| STATE_TRANSITION_NUMBER | NUMBER                      | NOT NULL | Sequence number of the state transition for the alert                                                                                                                                                                                                                                                                                                                                                                                                 |
| PDB_NAME                | VARCHAR2(128)               |          | PDB name                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| CON_ID                  | NUMBER                      |          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.55 DBA\_ALL\_TABLES

DBA\_ALL\_TABLES describes all object tables and relational tables in the database. Its columns are the same as those in ALL\_ALL\_TABLES.

### ① See Also

["ALL\\_ALL\\_TABLES"](#)

## 5.56 DBA\_ANALYTIC\_VIEW\_AGGR\_DIMS

DBA\_ANALYTIC\_VIEW\_AGGR\_DIMS describes the aggregation function dimensions of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_AGGR\_DIMS.

### ① Note

This view is available starting with Oracle Database 21c.

### ① See Also

["ALL\\_ANALYTIC\\_VIEW\\_AGGR\\_DIMS"](#)

## 5.57 DBA\_ANALYTIC\_VIEW\_AGGR\_FNS

DBA\_ANALYTIC\_VIEW\_AGGR\_FNS describes the aggregation functions of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_AGGR\_FNS.

### ① Note

This view is available starting with Oracle Database 21c.

### ① See Also

["ALL\\_ANALYTIC\\_VIEW\\_AGGR\\_FNS"](#)

## 5.58 DBA\_ANALYTIC\_VIEW\_AGGR\_FNS\_AE

DBA\_ANALYTIC\_VIEW\_AGGR\_FNS\_AE describes the aggregation functions of all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_AGGR\_FNS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

"[ALL\\_ANALYTIC\\_VIEW\\_AGGR\\_FNS\\_AE](#)"

## 5.59 DBA\_ANALYTIC\_VIEW\_AGR\_DIMS

DBA\_ANALYTIC\_VIEW\_AGR\_DIMS describes the aggregation function dimensions of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_AGR\_DIMS.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

"[ALL\\_ANALYTIC\\_VIEW\\_AGR\\_DIMS](#)"

## 5.60 DBA\_ANALYTIC\_VIEW\_AGR\_DIMS\_AE

DBA\_ANALYTIC\_VIEW\_AGR\_DIMS\_AE describes the aggregation function dimensions of all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_AGR\_DIMS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

**① See Also**

["ALL\\_ANALYTIC\\_VIEW\\_AGR\\_DIMS\\_AE"](#)

## 5.61 DBA\_ANALYTIC\_VIEW\_ATTR\_CLASS

DBA\_ANALYTIC\_VIEW\_ATTR\_CLASS describes the attribute classifications of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_ATTR\_CLASS.

**① See Also**

["ALL\\_ANALYTIC\\_VIEW\\_ATTR\\_CLASS"](#)

## 5.62 DBA\_ANALYTIC\_VIEW\_ATTR\_CLS

DBA\_ANALYTIC\_VIEW\_ATTR\_CLS is identical to DBA\_ANALYTIC\_VIEW\_ATTR\_CLASS.

**① Note**

This view is available starting with Oracle Database 21c, Release Update 21.5.

**① See Also**

["DBA\\_ANALYTIC\\_VIEW\\_ATTR\\_CLASS"](#)

## 5.63 DBA\_ANALYTIC\_VIEW\_ATTR\_CLS\_AE

DBA\_ANALYTIC\_VIEW\_ATTR\_CLS\_AE describes the attribute classifications of all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_ATTR\_CLS\_AE.

**① Note**

This view is available starting with Oracle Database 21c, Release Update 21.5.

**① See Also**

["ALL\\_ANALYTIC\\_VIEW\\_ATTR\\_CLS\\_AE"](#)

## 5.64 DBA\_ANALYTIC\_VIEW\_BAS\_MEAS

DBA\_ANALYTIC\_VIEW\_BAS\_MEAS is identical to DBA\_ANALYTIC\_VIEW\_BASE\_MEAS.

### **Note**

This view is available starting with Oracle Database 21c, Release Update 21.5.

### **See Also**

["DBA\\_ANALYTIC\\_VIEW\\_BASE\\_MEAS"](#)

## 5.65 DBA\_ANALYTIC\_VIEW\_BAS\_MEAS\_AE

DBA\_ANALYTIC\_VIEW\_BAS\_MEAS\_AE describes the base measures in all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_BAS\_MEAS\_AE.

### **Note**

This view is available starting with Oracle Database 21c, Release Update 21.5.

### **See Also**

["ALL\\_ANALYTIC\\_VIEW\\_BAS\\_MEAS\\_AE"](#)

## 5.66 DBA\_ANALYTIC\_VIEW\_BASE\_MEAS

DBA\_ANALYTIC\_VIEW\_BASE\_MEAS describes the base measures in all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_BASE\_MEAS.

### **See Also**

["ALL\\_ANALYTIC\\_VIEW\\_BASE\\_MEAS"](#)

## 5.67 DBA\_ANALYTIC\_VIEW\_CALC\_MEAS

DBA\_ANALYTIC\_VIEW\_CALC\_MEAS describes the calculated measures in all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_CALC\_MEAS.

### ① See Also

["ALL\\_ANALYTIC\\_VIEW\\_CALC\\_MEAS"](#)

## 5.68 DBA\_ANALYTIC\_VIEW\_CLASS

DBA\_ANALYTIC\_VIEW\_CLASS describes the classifications of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_CLASS.

### ① See Also

["ALL\\_ANALYTIC\\_VIEW\\_CLASS"](#)

## 5.69 DBA\_ANALYTIC\_VIEW\_CLASS\_AE

DBA\_ANALYTIC\_VIEW\_CLASS\_AE describes the classifications of all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_CLASS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_ANALYTIC\\_VIEW\\_CLASS\\_AE"](#)

## 5.70 DBA\_ANALYTIC\_VIEW\_CLC\_MEAS

DBA\_ANALYTIC\_VIEW\_CLC\_MEAS is identical to DBA\_ANALYTIC\_VIEW\_CALC\_MEAS.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

**① See Also**

["DBA\\_ANALYTIC\\_VIEW\\_CALC\\_MEAS"](#)

## 5.71 DBA\_ANALYTIC\_VIEW\_CLC\_MEAS\_AE

DBA\_ANALYTIC\_VIEW\_CLC\_MEAS\_AE describes the calculated measures in all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_CLC\_MEAS\_AE.

**① Note**

This view is available starting with Oracle Database 21c, Release Update 21.5.

**① See Also**

["ALL\\_ANALYTIC\\_VIEW\\_CLC\\_MEAS\\_AE"](#)

## 5.72 DBA\_ANALYTIC\_VIEW\_COLUMNS

DBA\_ANALYTIC\_VIEW\_COLUMNS describes the columns of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_COLUMNS.

**① See Also**

["ALL\\_ANALYTIC\\_VIEW\\_COLUMNS"](#)

## 5.73 DBA\_ANALYTIC\_VIEW\_COLUMNS\_AE

DBA\_ANALYTIC\_VIEW\_COLUMNS\_AE describes the columns of all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_COLUMNS\_AE.

**① Note**

This view is available starting with Oracle Database 21c, Release Update 21.5.

**① See Also**

["ALL\\_ANALYTIC\\_VIEW\\_COLUMNS\\_AE"](#)

## 5.74 DBA\_ANALYTIC\_VIEW\_DIM\_ATTRS

DBA\_ANALYTIC\_VIEW\_DIM\_ATTRS is identical to DBA\_ANALYTIC\_VIEW\_DIM\_ATTRS.

### Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### See Also

["DBA\\_ANALYTIC\\_VIEW\\_DIM\\_ATTRS"](#)

## 5.75 DBA\_ANALYTIC\_VIEW\_DIM\_ATTRS\_AE

DBA\_ANALYTIC\_VIEW\_DIM\_ATTRS\_AE describes the attributes of the attribute dimensions in all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_DIM\_ATTRS\_AE.

### Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### See Also

["ALL\\_ANALYTIC\\_VIEW\\_DIM\\_ATTRS\\_AE"](#)

## 5.76 DBA\_ANALYTIC\_VIEW\_DIM\_ATTRS

DBA\_ANALYTIC\_VIEW\_DIM\_ATTRS describes the attributes of all attribute dimensions in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_DIM\_ATTRS.

### Note

This view is available starting with Oracle Database 21c.

### See Also

["ALL\\_ANALYTIC\\_VIEW\\_DIM\\_ATTRS"](#)

## 5.77 DBA\_ANALYTIC\_VIEW\_DIM\_CLASS

DBA\_ANALYTIC\_VIEW\_DIM\_CLASS describes the classifications of the attribute dimensions in all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_DIM\_CLASS.

### ① See Also

["ALL\\_ANALYTIC\\_VIEW\\_DIM\\_CLASS"](#)

## 5.78 DBA\_ANALYTIC\_VIEW\_DIM\_CLS

DBA\_ANALYTIC\_VIEW\_DIM\_CLS is identical to DBA\_ANALYTIC\_VIEW\_DIM\_CLASS.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["DBA\\_ANALYTIC\\_VIEW\\_DIM\\_CLASS"](#)

## 5.79 DBA\_ANALYTIC\_VIEW\_DIM\_CLS\_AE

DBA\_ANALYTIC\_VIEW\_DIM\_CLS\_AE describes the classifications of the attribute dimensions in all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_DIM\_CLS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_ANALYTIC\\_VIEW\\_DIM\\_CLS\\_AE"](#)

## 5.80 DBA\_ANALYTIC\_VIEW\_DIMENSIONS

DBA\_ANALYTIC\_VIEW\_DIMENSIONS describes the attribute dimensions in all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_DIMENSIONS.

### See Also

["ALL\\_ANALYTIC\\_VIEW\\_DIMENSIONS"](#)

## 5.81 DBA\_ANALYTIC\_VIEW\_DIMS

DBA\_ANALYTIC\_VIEW\_DIMS is identical to DBA\_ANALYTIC\_VIEW\_DIMENSIONS.

### Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### See Also

["DBA\\_ANALYTIC\\_VIEW\\_DIMENSIONS"](#)

## 5.82 DBA\_ANALYTIC\_VIEW\_DIMS\_AE

DBA\_ANALYTIC\_VIEW\_DIMS\_AE describes the attribute dimensions in all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_DIMS\_AE.

### Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### See Also

["ALL\\_ANALYTIC\\_VIEW\\_DIMS\\_AE"](#)

## 5.83 DBA\_ANALYTIC\_VIEW\_FACT\_COLS

DBA\_ANALYTIC\_VIEW\_FACT\_COLS describes the fact columns of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_FACT\_COLS.

### ① Note

This view is available starting with Oracle Database 21c.

### ① See Also

["ALL\\_ANALYTIC\\_VIEW\\_FACT\\_COLS"](#)

## 5.84 DBA\_ANALYTIC\_VIEW\_FCT\_COLS

DBA\_ANALYTIC\_VIEW\_FCT\_COLS is identical to DBA\_ANALYTIC\_VIEW\_FACT\_COLS.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["DBA\\_ANALYTIC\\_VIEW\\_FACT\\_COLS"](#)

## 5.85 DBA\_ANALYTIC\_VIEW\_FCT\_COLS\_AE

DBA\_ANALYTIC\_VIEW\_FCT\_COLS\_AE describes the fact columns of all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_FCT\_COLS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

## 5.86 DBA\_ANALYTIC\_VIEW\_HIER\_CLASS

DBA\_ANALYTIC\_VIEW\_HIER\_CLASS describes the classifications of the hierarchies in all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_HIER\_CLASS.

### ① See Also

["ALL\\_ANALYTIC\\_VIEW\\_HIER\\_CLASS"](#)

## 5.87 DBA\_ANALYTIC\_VIEW\_HIER\_CLS

DBA\_ANALYTIC\_VIEW\_HIER\_CLS is identical to DBA\_ANALYTIC\_VIEW\_HIER\_CLASS.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["DBA\\_ANALYTIC\\_VIEW\\_HIER\\_CLASS"](#)

## 5.88 DBA\_ANALYTIC\_VIEW\_HIER\_CLS\_AE

DBA\_ANALYTIC\_VIEW\_HIER\_CLS\_AE describes the classifications of the hierarchies in all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_HIER\_CLS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_ANALYTIC\\_VIEW\\_HIER\\_CLS\\_AE"](#)

## 5.89 DBA\_ANALYTIC\_VIEW\_HIERS

DBA\_ANALYTIC\_VIEW\_HIERS describes the hierarchies in all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_HIERS.

### ① See Also

["ALL\\_ANALYTIC\\_VIEW\\_HIERS"](#)

## 5.90 DBA\_ANALYTIC\_VIEW\_HIERS\_AE

DBA\_ANALYTIC\_VIEW\_HIERS\_AE describes the hierarchies in all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_HIERS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_ANALYTIC\\_VIEW\\_HIERS\\_AE"](#)

## 5.91 DBA\_ANALYTIC\_VIEW\_KEYS

DBA\_ANALYTIC\_VIEW\_KEYS describes the key columns of the attribute dimensions in all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_KEYS.

### ① See Also

["ALL\\_ANALYTIC\\_VIEW\\_KEYS"](#)

## 5.92 DBA\_ANALYTIC\_VIEW\_KEYS\_AE

DBA\_ANALYTIC\_VIEW\_KEYS\_AE describes the key columns of the attribute dimensions in all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_KEYS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

**① See Also**

["ALL\\_ANALYTIC\\_VIEW\\_KEYS\\_AE"](#)

## 5.93 DBA\_ANALYTIC\_VIEW\_LEVEL\_CLASS

DBA\_ANALYTIC\_VIEW\_LEVEL\_CLASS describes the level classifications of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_LEVEL\_CLASS.

**① See Also**

["ALL\\_ANALYTIC\\_VIEW\\_LEVEL\\_CLASS"](#)

## 5.94 DBA\_ANALYTIC\_VIEW\_LEVELS

DBA\_ANALYTIC\_VIEW\_LEVELS describes the levels in the hierarchies in all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_LEVELS.

**① See Also**

["ALL\\_ANALYTIC\\_VIEW\\_LEVELS"](#)

## 5.95 DBA\_ANALYTIC\_VIEW\_LEVELS\_AE

DBA\_ANALYTIC\_VIEW\_LEVELS\_AE describes the levels in the hierarchies in all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_LEVELS\_AE.

**① Note**

This view is available starting with Oracle Database 21c, Release Update 21.5.

**① See Also**

["ALL\\_ANALYTIC\\_VIEW\\_LEVELS\\_AE"](#)

## 5.96 DBA\_ANALYTIC\_VIEW\_LVL\_CLS

DBA\_ANALYTIC\_VIEW\_LVL\_CLS is identical to DBA\_ANALYTIC\_VIEW\_LEVEL\_CLASS.

### **Note**

This view is available starting with Oracle Database 21c, Release Update 21.5.

### **See Also**

["DBA\\_ANALYTIC\\_VIEW\\_LEVEL\\_CLASS"](#)

## 5.97 DBA\_ANALYTIC\_VIEW\_LVL\_CLS\_AE

DBA\_ANALYTIC\_VIEW\_LVL\_CLS\_AE describes the level classifications of all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_LVL\_CLS\_AE.

### **Note**

This view is available starting with Oracle Database 21c, Release Update 21.5.

### **See Also**

["ALL\\_ANALYTIC\\_VIEW\\_LVL\\_CLS\\_AE"](#)

## 5.98 DBA\_ANALYTIC\_VIEW\_LVLGRPS

DBA\_ANALYTIC\_VIEW\_LVLGRPS describes the analytic view measure and level groups of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_LVLGRPS.

### **See Also**

["ALL\\_ANALYTIC\\_VIEW\\_LVLGRPS"](#)

## 5.99 DBA\_ANALYTIC\_VIEW\_LVLGRPS\_AE

DBA\_ANALYTIC\_VIEW\_LVLGRPS\_AE describes the analytic view measure and level groups of all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_LVLGRPS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_ANALYTIC\\_VIEW\\_LVLGRPS\\_AE"](#)

## 5.100 DBA\_ANALYTIC\_VIEW\_MEAS\_CLASS

DBA\_ANALYTIC\_VIEW\_MEAS\_CLASS describes the classifications of the measures of all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_MEAS\_CLASS.

### ① See Also

["ALL\\_ANALYTIC\\_VIEW\\_MEAS\\_CLASS"](#)

## 5.101 DBA\_ANALYTIC\_VIEW\_MEAS\_CLS

DBA\_ANALYTIC\_VIEW\_MEAS\_CLS is identical to DBA\_ANALYTIC\_VIEW\_MEAS\_CLASS.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["DBA\\_ANALYTIC\\_VIEW\\_MEAS\\_CLASS"](#)

## 5.102 DBA\_ANALYTIC\_VIEW\_MEAS\_CLS\_AE

DBA\_ANALYTIC\_VIEW\_MEAS\_CLS\_AE describes the classifications of the measures of all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEW\_MEAS\_CLS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_ANALYTIC\\_VIEW\\_MEAS\\_CLS\\_AE"](#)

## 5.103 DBA\_ANALYTIC\_VIEWS

DBA\_ANALYTIC\_VIEWS describes all analytic views in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEWS.

### ① See Also

["ALL\\_ANALYTIC\\_VIEWS"](#)

## 5.104 DBA\_ANALYTIC\_VIEWS\_AE

DBA\_ANALYTIC\_VIEWS\_AE describes all analytic views (across all editions) in the database. Its columns are the same as those in ALL\_ANALYTIC\_VIEWS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_ANALYTIC\\_VIEWS\\_AE"](#)

## 5.105 DBA\_APP\_ERRORS

DBA\_APP\_ERRORS displays errors raised when an application PDB synchronizes with an application in the application root.

This view displays errors raised during the last synchronization for each application.

| Column            | Datatype       | NULL     | Description                                                            |
|-------------------|----------------|----------|------------------------------------------------------------------------|
| APP_NAME          | VARCHAR2(128)  |          | Name of the application whose statement was captured                   |
| APP_STATEMENT     | CLOB           |          | Application statement                                                  |
| ERRORNUM          | NUMBER         |          | Error number for the statement                                         |
| ERRORMSG          | VARCHAR2(4000) |          | Error message for the statement                                        |
| SYNC_TIME         | DATE           | NOT NULL | Sync time for the statement                                            |
| SYSTEM_IGNOREABLE | VARCHAR2(1)    |          | Indicates whether the error is a system-ignorable error (Y) or not (N) |
| USER_IGNOREABLE   | VARCHAR2(1)    |          | Indicates whether the error is a user-ignorable error (Y) or not (N)   |

## 5.106 DBA\_APP\_ERRORS\_HISTORY

DBA\_APP\_ERRORS\_HISTORY displays the history of errors raised when an application PDB synchronizes with an application in the application root.

This view displays errors raised during the last 10 synchronizations for each application.

| Column            | Datatype       | NULL     | Description                                                            |
|-------------------|----------------|----------|------------------------------------------------------------------------|
| APP_NAME          | VARCHAR2(128)  |          | Name of the application whose statement was captured                   |
| APP_STATEMENT     | CLOB           |          | Application statement                                                  |
| ERRORNUM          | NUMBER         |          | Error number for the statement                                         |
| ERRORMSG          | VARCHAR2(4000) |          | Error message for the statement                                        |
| SYNC_TIME         | TIMESTAMP(6)   | NOT NULL | Sync time for the statement                                            |
| SYSTEM_IGNOREABLE | VARCHAR2(1)    |          | Indicates whether the error is a system-ignorable error (Y) or not (N) |
| USER_IGNOREABLE   | VARCHAR2(1)    |          | Indicates whether the error is a user-ignorable error (Y) or not (N)   |

### Note

This view is available starting with Oracle Database 21c.

## 5.107 DBA\_APP\_PATCHES

DBA\_APP\_PATCHES describes all the application patches in the application container.

| Column            | Datatype       | NULL | Description                               |
|-------------------|----------------|------|-------------------------------------------|
| APP_NAME          | VARCHAR2(128)  |      | Name of the application                   |
| PATCH_NUMBER      | NUMBER         |      | Patch number                              |
| PATCH_MIN_VERSION | VARCHAR2(30)   |      | Minimum application version for the patch |
| PATCH_STATUS      | VARCHAR2(10)   |      | Status of the patch                       |
| PATCH_COMMENT     | VARCHAR2(4000) |      | Comment associated with the patch         |
| PATCH_CHECKSUM    | NUMBER         |      | Checksum for the patch                    |

## 5.108 DBA\_APP\_PDB\_STATUS

DBA\_APP\_PDB\_STATUS provides information about applications in all the application PDBs in the current application container. It provides this information when queried in the application root.

The view should be queried in the application root.

This view can be used to show which version of an application has been synced to which application PDBs.

| Column      | Datatype      | NULL | Description                |
|-------------|---------------|------|----------------------------|
| CON_UID     | NUMBER        |      | Unique ID of the PDB       |
| APP_NAME    | VARCHAR2(128) |      | Name of the application    |
| APP_ID      | NUMBER        |      | Id of the application      |
| APP_VERSION | VARCHAR2(30)  |      | Version of the application |
| APP_STATUS  | VARCHAR2(12)  |      | Status of the application  |

## 5.109 DBA\_APP\_STATEMENTS

DBA\_APP\_STATEMENTS describes all statements from all the applications in the application container.

| Column        | Datatype | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                         |
|---------------|----------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ORIGIN_CON_ID | NUMBER   |          | The ID of the container where the data originates.<br>Possible values include: <ul style="list-style-type: none"><li>• 0: This value is used for rows in non-CDBs. This value is not used for CDBs.</li><li>• <i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i>=1 if the row originates in root)</li></ul> |
| STATEMENT_ID  | NUMBER   |          | Statement ID                                                                                                                                                                                                                                                                                                                                                                        |
| CAPTURE_TIME  | DATE     | NOT NULL | Time of capture of the application statement                                                                                                                                                                                                                                                                                                                                        |
| APP_STATEMENT | CLOB     |          | Application statement                                                                                                                                                                                                                                                                                                                                                               |

| Column         | Datatype      | NULL     | Description                                                        |
|----------------|---------------|----------|--------------------------------------------------------------------|
| APP_NAME       | VARCHAR2(128) |          | Name of the application whose statement was captured               |
| APP_STATUS     | VARCHAR2(12)  |          | Status of the application when the statement was captured          |
| PATCH_NUMBER   | NUMBER        |          | Patch number of patch installation when the statement was captured |
| VERSION_NUMBER | NUMBER        |          | Version number when the statement was captured                     |
| SESSION_ID     | NUMBER        |          | Unique session ID when the statement was captured                  |
| OPCODE         | NUMBER        | NOT NULL | Operation code indicating the statement type                       |

## 5.110 DBA\_APP\_VERSIONS

DBA\_APP\_VERSIONS displays information about all application versions installed in an application container.

| Column               | Datatype       | NULL | Description                                                            |
|----------------------|----------------|------|------------------------------------------------------------------------|
| APP_NAME             | VARCHAR2(128)  |      | Name of the application                                                |
| APP_VERSION          | VARCHAR2(30)   |      | Version of the application                                             |
| APP_VERSION_COMMENT  | VARCHAR2(4000) |      | Comment associated with the application version                        |
| APP_VERSION_CHECKSUM | NUMBER         |      | Checksum for the application version                                   |
| APP_ROOT_CLONE_NAME  | VARCHAR2(64)   |      | Name of the application root clone that corresponds to the application |

### ① See Also

*Oracle Multitenant Administrator's Guide* for more information about application containers

## 5.111 DBA\_APPLICATION\_ROLES

DBA\_APPLICATION\_ROLES describes all the roles that have authorization policy functions defined.

### Related View

USER\_APPLICATION\_ROLES describes all the roles for the current user that have authorization policy functions defined.

| Column  | Datatype      | NULL     | Description                      |
|---------|---------------|----------|----------------------------------|
| ROLE    | VARCHAR2(128) | NOT NULL | Name of the application role     |
| SCHEMA  | VARCHAR2(128) | NOT NULL | Schema of the authorized package |
| PACKAGE | VARCHAR2(128) | NOT NULL | Name of the authorized package   |

**① See Also**

["USER\\_APPLICATION\\_ROLES"](#)

## 5.112 DBA\_APPLICATIONS

DBA\_APPLICATIONS provides information about the applications in the current application container.

| Column              | Datatype      | NULL | Description                                                  |
|---------------------|---------------|------|--------------------------------------------------------------|
| APP_NAME            | VARCHAR2(128) |      | Name of the application                                      |
| APP_ID              | NUMBER        |      | ID of the application                                        |
| APP_VERSION         | VARCHAR2(30)  |      | Version of the application                                   |
| APP_STATUS          | VARCHAR2(12)  |      | Status of the application                                    |
| APP_IMPLICIT        | VARCHAR2(1)   |      | Indicates whether the application is implicit (Y) or not (N) |
| APP_CAPTURE_SERVICE | VARCHAR2(64)  |      | Service name used for the capture                            |
| APP_CAPTURE_MODULE  | VARCHAR2(64)  |      | Module name used for the capture                             |

## 5.113 DBA\_APPLY

DBA\_APPLY displays information about all apply processes in the database. Its columns are the same as those in ALL\_APPLY.

**① See Also**

["ALL\\_APPLY"](#)

## 5.114 DBA\_APPLY\_CHANGE\_HANDLERS

DBA\_APPLY\_CHANGE\_HANDLERS displays information about the change handlers on all tables in the database. Its columns are the same as those in ALL\_APPLY\_CHANGE\_HANDLERS.

**① See Also**

["ALL\\_APPLY\\_CHANGE\\_HANDLERS"](#)

## 5.115 DBA\_APPLY\_CONFLICT\_COLUMNS

DBA\_APPLY\_CONFLICT\_COLUMNS displays information about the conflict handlers on all tables in the database. Its columns are the same as those in ALL\_APPLY\_CONFLICT\_COLUMNS.

### ① See Also

["ALL\\_APPLY\\_CONFLICT\\_COLUMNS"](#)

## 5.116 DBA\_APPLY\_DML\_CONF\_HANDLERS

DBA\_APPLY\_DML\_CONF\_HANDLERS provides details about DML conflict handlers. Its columns are the same as those in ALL\_APPLY\_DML\_CONF\_HANDLERS.

### ① See Also

["ALL\\_APPLY\\_DML\\_CONF\\_HANDLERS"](#)

## 5.117 DBA\_APPLY\_DML\_HANDLERS

DBA\_APPLY\_DML\_HANDLERS displays information about the DML handlers on all tables in the database. Its columns are the same as those in ALL\_APPLY\_DML\_HANDLERS.

### ① See Also

["ALL\\_APPLY\\_DML\\_HANDLERS"](#)

## 5.118 DBA\_APPLY\_ENQUEUE

DBA\_APPLY\_ENQUEUE displays information about the apply enqueue actions for all rules in the database. Its columns are the same as those in ALL\_APPLY\_ENQUEUE.

### ① See Also

["ALL\\_APPLY\\_ENQUEUE"](#)

## 5.119 DBA\_APPLY\_ERROR

DBA\_APPLY\_ERROR displays information about the error transactions generated by all apply processes in the database. Its columns are the same as those in ALL\_APPLY\_ERROR.

### ① See Also

["ALL\\_APPLY\\_ERROR"](#)

## 5.120 DBA\_APPLY\_ERROR\_MESSAGES

DBA\_APPLY\_ERROR\_MESSAGES displays information about the individual messages in all of the error transactions generated by all apply processes in the database. Its columns are the same as those in ALL\_APPLY\_ERROR\_MESSAGES.

For XStream inbound servers, each message in an error transaction is an LCR.

### ① Note

- Messages that were spilled from memory to hard disk do not appear in this view.
- This view does not contain information related to XStream outbound servers.

### ① See Also

["ALL\\_APPLY\\_ERROR\\_MESSAGES"](#)

## 5.121 DBA\_APPLY\_EXECUTE

DBA\_APPLY\_EXECUTE displays information about the apply execute actions for all rules in the database. Its columns are the same as those in ALL\_APPLY\_EXECUTE.

### ① See Also

["ALL\\_APPLY\\_EXECUTE"](#)

## 5.122 DBA\_APPLY\_HANDLE\_COLLISIONS

DBA\_APPLY\_HANDLE\_COLLISIONS provides details about apply handlers for collisions at the table level. Its columns are the same as those in ALL\_APPLY\_HANDLE\_COLLISIONS.

### ① See Also

["ALL\\_APPLY\\_HANDLE\\_COLLISIONS"](#)

## 5.123 DBA\_APPLY\_INSTANTIATED\_GLOBAL

DBA\_APPLY\_INSTANTIATED\_GLOBAL displays information about databases for which an instantiation SCN has been set. Its columns are the same as those in ALL\_APPLY\_INSTANTIATED\_GLOBAL.

### ① See Also

["ALL\\_APPLY\\_INSTANTIATED\\_GLOBAL"](#)

## 5.124 DBA\_APPLY\_INSTANTIATED\_OBJECTS

DBA\_APPLY\_INSTANTIATED\_OBJECTS displays information about objects for which an instantiation SCN has been set. Its columns are the same as those in ALL\_APPLY\_INSTANTIATED\_OBJECTS.

### ① See Also

["ALL\\_APPLY\\_INSTANTIATED\\_OBJECTS"](#)

## 5.125 DBA\_APPLY\_INSTANTIATED\_SCHEMAS

DBA\_APPLY\_INSTANTIATED\_SCHEMAS displays information about schemas for which an instantiation SCN has been set. Its columns are the same as those in ALL\_APPLY\_INSTANTIATED\_SCHEMAS.

### ① See Also

["ALL\\_APPLY\\_INSTANTIATED\\_SCHEMAS"](#)

## 5.126 DBA\_APPLY\_KEY\_COLUMNS

DBA\_APPLY\_KEY\_COLUMNS displays information about the substitute key columns for all tables in the database. Its columns are the same as those in ALL\_APPLY\_KEY\_COLUMNS.

### ① See Also

["ALL\\_APPLY\\_KEY\\_COLUMNS"](#)

## 5.127 DBA\_APPLY\_OBJECT\_DEPENDENCIES

DBA\_APPLY\_OBJECT\_DEPENDENCIES displays information about the object dependencies for all apply processes in the database.

| Column              | Datatype      | NULL     | Description                |
|---------------------|---------------|----------|----------------------------|
| OBJECT_OWNER        | VARCHAR2(128) | NOT NULL | Owner of the object        |
| OBJECT_NAME         | VARCHAR2(128) | NOT NULL | Name of the object         |
| PARENT_OBJECT_OWNER | VARCHAR2(128) | NOT NULL | Parent of the object owner |
| PARENT_OBJECT_NAME  | VARCHAR2(128) | NOT NULL | Parent of the named object |

## 5.128 DBA\_APPLY\_PARAMETERS

DBA\_APPLY\_PARAMETERS displays information about the parameters for all apply processes in the database. Its columns are the same as those in ALL\_APPLY\_PARAMETERS.

### ① See Also

["ALL\\_APPLY\\_PARAMETERS"](#)

## 5.129 DBA\_APPLY\_PROGRESS

DBA\_APPLY\_PROGRESS displays information about the progress made by all apply processes in the database. Its columns are the same as those in ALL\_APPLY\_PROGRESS.

### ① See Also

["ALL\\_APPLY\\_PROGRESS"](#)

## 5.130 DBA\_APPLY\_REPERROR\_HANDLERS

DBA\_APPLY\_REPERROR\_HANDLERS provides details about apply reperror handlers. Its columns are the same as those in ALL\_APPLY\_REPERROR\_HANDLERS.

### ① See Also

["ALL\\_APPLY\\_REPERROR\\_HANDLERS"](#)

## 5.131 DBA\_APPLY\_SPILL\_TXN

DBA\_APPLY\_SPILL\_TXN displays information about the transactions spilled from memory to hard disk by all apply processes in the database.

| Column                    | Datatype      | NULL     | Description                                                                                                     |
|---------------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------|
| APPLY_NAME                | VARCHAR2(128) | NOT NULL | Name of the apply process that spilled one or more transactions                                                 |
| XIDUSN                    | NUMBER        | NOT NULL | Transaction ID undo segment number                                                                              |
| XIDSLT                    | NUMBER        | NOT NULL | Transaction ID slot number                                                                                      |
| XIDSQN                    | NUMBER        | NOT NULL | Transaction ID sequence number                                                                                  |
| PDB_ID                    | NUMBER        |          | PDB ID number                                                                                                   |
| FIRST_SCN                 | NUMBER        | NOT NULL | SCN of the first message in the transaction                                                                     |
| MESSAGE_COUNT             | NUMBER        |          | Number of messages spilled for the transaction                                                                  |
| FIRST_MESSAGE_CREATE_TIME | DATE          |          | Source creation time of the first message in the transaction                                                    |
| SPILL_CREATION_TIME       | DATE          |          | Time the first message was spilled                                                                              |
| FIRST_POSITION            | RAW(64)       |          | Position of the first message in this transaction. This column is populated only for an XStream inbound server. |
| TRANSACTION_ID            | VARCHAR2(128) |          | Transaction ID of the spilled transaction                                                                       |

## 5.132 DBA\_APPLY\_TABLE\_COLUMNS

DBA\_APPLY\_TABLE\_COLUMNS displays, for all tables in the database, information about the nonkey table columns for which apply process conflict detection has been stopped for update and delete operations. Its columns are the same as those in ALL\_APPLY\_TABLE\_COLUMNS.

### ① See Also

["ALL\\_APPLY\\_TABLE\\_COLUMNS"](#)

## 5.133 DBA\_APPLY\_VALUE\_DEPENDENCIES

DBA\_APPLY\_VALUE\_DEPENDENCIES displays information about the value dependencies for all apply processes in the database.

| Column          | Datatype      | NULL     | Description            |
|-----------------|---------------|----------|------------------------|
| DEPENDENCY_NAME | VARCHAR2(128) | NOT NULL | Name of the dependency |
| OBJECT_OWNER    | VARCHAR2(128) | NOT NULL | Owner of the object    |
| OBJECT_NAME     | VARCHAR2(128) | NOT NULL | Name of the object     |
| COLUMN_NAME     | VARCHAR2(128) | NOT NULL | Name of the column     |
| COLUMN_POSITION | NUMBER        |          | Position of the column |

## 5.134 DBA\_AQ\_AGENT\_PRIVS

DBA\_AQ\_AGENT\_PRIVS displays information about the registered AQ agents that are mapped to all users in the database.

### Related View

USER\_AQ\_AGENT\_PRIVS displays information about the registered AQ agents that are mapped to the current user. This view does not display the DB\_USERNAME column.

| Column       | Datatype      | NULL     | Description                                                                        |
|--------------|---------------|----------|------------------------------------------------------------------------------------|
| AGENT_NAME   | VARCHAR2(128) | NOT NULL | Name of the AQ agent                                                               |
| DB_USERNAME  | VARCHAR2(128) |          | Name of the database user that the agent maps to                                   |
| HTTP_ENABLED | VARCHAR2(4)   |          | Indicates whether the agent is allowed to access AQ through HTTP (YES) or not (NO) |
| SMTP_ENABLED | VARCHAR2(4)   |          | Indicates whether the agent is allowed to access AQ through SMTP (YES) or not (NO) |

### ① See Also

["USER\\_AQ\\_AGENT\\_PRIVS"](#)

## 5.135 DBA\_AQ\_AGENTS

DBA\_AQ\_AGENTS displays information about all registered AQ agents in the database.

| Column       | Datatype      | NULL     | Description                                                                        |
|--------------|---------------|----------|------------------------------------------------------------------------------------|
| AGENT_NAME   | VARCHAR2(128) | NOT NULL | Name of the AQ agent                                                               |
| HTTP_ENABLED | VARCHAR2(4)   |          | Indicates whether the agent is allowed to access AQ through HTTP (YES) or not (NO) |
| SMTP_ENABLED | VARCHAR2(4)   |          | Indicates whether the agent is allowed to access AQ through SMTP (YES) or not (NO) |

## 5.136 DBA\_ARGUMENTS

DBA\_ARGUMENTS lists the arguments of the functions and procedures that are available in the database. Its columns are the same as those in ALL\_ARGUMENTS.

### ① See Also

- ["ALL\\_ARGUMENTS"](#)
- ["DBA\\_PROCEEDURES"](#) for information about the functions and procedures that are available in the database

## 5.137 DBA\_ASSEMBLIES

DBA\_ASSEMBLIES provides information about all assemblies in the database. Its columns are the same as those in ALL\_ASSEMBLIES.

### ① See Also

["ALL\\_ASSEMBLIES"](#)

## 5.138 DBA\_ASSOCIATIONS

DBA\_ASSOCIATIONS describes all user-defined statistics in the database. Its columns are the same as those in ALL\_ASSOCIATIONS.

### ① See Also

["ALL\\_ASSOCIATIONS"](#)

## 5.139 DBA\_ATTRIBUTE\_DIM\_ATTR\_CLASS

DBA\_ATTRIBUTE\_DIM\_ATTR\_CLASS describes the attribute classifications of all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_ATTR\_CLASS.

### ① See Also

["ALL\\_ATTRIBUTE\\_DIM\\_ATTR\\_CLASS"](#)

## 5.140 DBA\_ATTRIBUTE\_DIM\_ATTR\_CLS

DBA\_ATTRIBUTE\_DIM\_ATTR\_CLS is identical to DBA\_ATTRIBUTE\_DIM\_ATTR\_CLASS.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["DBA\\_ATTRIBUTE\\_DIM\\_ATTR\\_CLASS"](#)

## 5.141 DBA\_ATTRIBUTE\_DIM\_ATTR\_CLS\_AE

DBA\_ATTRIBUTE\_DIM\_ATTR\_CLS\_AE describes the attribute classifications of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_ATTR\_CLS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_ATTRIBUTE\\_DIM\\_ATTR\\_CLS\\_AE"](#)

## 5.142 DBA\_ATTRIBUTE\_DIM\_ATTRS

DBA\_ATTRIBUTE\_DIM\_ATTRS describes the attributes of all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_ATTRS.

### ① See Also

["ALL\\_ATTRIBUTE\\_DIM\\_ATTRS"](#)

## 5.143 DBA\_ATTRIBUTE\_DIM\_ATTRS\_AE

DBA\_ATTRIBUTE\_DIM\_ATTRS\_AE describes the attributes of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_ATTRS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_ATTRIBUTE\\_DIM\\_ATTRS\\_AE"](#)

## 5.144 DBA\_ATTRIBUTE\_DIM\_CLASS

DBA\_ATTRIBUTE\_DIM\_CLASS describes the classifications of all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_CLASS.

### ① See Also

["ALL\\_ATTRIBUTE\\_DIM\\_CLASS"](#)

## 5.145 DBA\_ATTRIBUTE\_DIM\_CLASS\_AE

DBA\_ATTRIBUTE\_DIM\_CLASS\_AE describes the classifications of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_CLASS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_ATTRIBUTE\\_DIM\\_CLASS\\_AE"](#)

## 5.146 DBA\_ATTRIBUTE\_DIM\_JN\_PTHS

DBA\_ATTRIBUTE\_DIM\_JN\_PTHS is identical to DBA\_ATTRIBUTE\_DIM\_JOIN\_PATHS.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["DBA\\_ATTRIBUTE\\_DIM\\_JOIN\\_PATHS"](#)

## 5.147 DBA\_ATTRIBUTE\_DIM\_JN\_PTHS\_AE

DBA\_ATTRIBUTE\_DIM\_JN\_PTHS\_AE describes the join paths for all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_JN\_PTHS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_ATTRIBUTE\\_DIM\\_JN\\_PTHS\\_AE"](#)

## 5.148 DBA\_ATTRIBUTE\_DIM\_JOIN\_PATHS

DBA\_ATTRIBUTE\_DIM\_JOIN\_PATHS describes the join paths for all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_JOIN\_PATHS.

### ① See Also

["ALL\\_ATTRIBUTE\\_DIM\\_JOIN\\_PATHS"](#)

## 5.149 DBA\_ATTRIBUTE\_DIM\_KEYS

DBA\_ATTRIBUTE\_DIM\_KEYS describes the keys of all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_KEYS.

### ① See Also

["ALL\\_ATTRIBUTE\\_DIM\\_KEYS"](#)

## 5.150 DBA\_ATTRIBUTE\_DIM\_KEYS\_AE

DBA\_ATTRIBUTE\_DIM\_KEYS\_AE describes the keys of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_KEYS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_ATTRIBUTE\\_DIM\\_KEYS\\_AE"](#)

## 5.151 DBA\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS

DBA\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS describes the attributes of the levels of all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS.

### ① See Also

["ALL\\_ATTRIBUTE\\_DIM\\_LEVEL\\_ATTRS"](#)

## 5.152 DBA\_ATTRIBUTE\_DIM\_LEVELS

DBA\_ATTRIBUTE\_DIM\_LEVELS describes the levels of all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_LEVELS.

### ① See Also

["ALL\\_ATTRIBUTE\\_DIM\\_LEVELS"](#)

## 5.153 DBA\_ATTRIBUTE\_DIM\_LEVELS\_AE

DBA\_ATTRIBUTE\_DIM\_LEVELS\_AE describes the levels of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_LEVELS\_AE.

### Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### See Also

["ALL\\_ATTRIBUTE\\_DIM\\_LEVELS\\_AE"](#)

## 5.154 DBA\_ATTRIBUTE\_DIM\_LVL\_ATTRS

DBA\_ATTRIBUTE\_DIM\_LVL\_ATTRS is identical to DBA\_ATTRIBUTE\_DIM\_LEVEL\_ATTRS.

### Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### See Also

["DBA\\_ATTRIBUTE\\_DIM\\_LEVEL\\_ATTRS"](#)

## 5.155 DBA\_ATTRIBUTE\_DIM\_LVL\_ATTRS\_AE

DBA\_ATTRIBUTE\_DIM\_LVL\_ATTRS\_AE describes the attributes of the levels of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_LVL\_ATTRS\_AE.

### Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### See Also

["ALL\\_ATTRIBUTE\\_DIM\\_LVL\\_ATTRS\\_AE"](#)

## 5.156 DBA\_ATTRIBUTE\_DIM\_LVL\_CLASS

DBA\_ATTRIBUTE\_DIM\_LVL\_CLASS describes the level classifications of all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_LVL\_CLASS.

### ① See Also

["ALL\\_ATTRIBUTE\\_DIM\\_LVL\\_CLASS"](#)

## 5.157 DBA\_ATTRIBUTE\_DIM\_LVL\_CLS

DBA\_ATTRIBUTE\_DIM\_LVL\_CLS is identical to DBA\_ATTRIBUTE\_DIM\_LVL\_CLASS.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["DBA\\_ATTRIBUTE\\_DIM\\_LVL\\_CLASS"](#)

## 5.158 DBA\_ATTRIBUTE\_DIM\_LVL\_CLS\_AE

DBA\_ATTRIBUTE\_DIM\_LVL\_CLS\_AE describes the level classifications of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_LVL\_CLS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_ATTRIBUTE\\_DIM\\_LVL\\_CLS\\_AE"](#)

## 5.159 DBA\_ATTRIBUTE\_DIM\_ORD\_ATTRS

DBA\_ATTRIBUTE\_DIM\_ORD\_ATTRS is identical to DBA\_ATTRIBUTE\_DIM\_ORDER\_ATTRS.

### **Note**

This view is available starting with Oracle Database 21c, Release Update 21.5.

### **See Also**

["DBA\\_ATTRIBUTE\\_DIM\\_ORDER\\_ATTRS"](#)

## 5.160 DBA\_ATTRIBUTE\_DIM\_ORD\_ATTRS\_AE

DBA\_ATTRIBUTE\_DIM\_ORD\_ATTRS\_AE describes the order attributes of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_ORD\_ATTRS\_AE.

### **Note**

This view is available starting with Oracle Database 21c, Release Update 21.5.

### **See Also**

["ALL\\_ATTRIBUTE\\_DIM\\_ORD\\_ATTRS\\_AE"](#)

## 5.161 DBA\_ATTRIBUTE\_DIM\_ORDER\_ATTRS

DBA\_ATTRIBUTE\_DIM\_ORDER\_ATTRS describes the order attributes of all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_ORDER\_ATTRS.

### **See Also**

["ALL\\_ATTRIBUTE\\_DIM\\_ORDER\\_ATTRS"](#)

## 5.162 DBA\_ATTRIBUTE\_DIM\_TABLES

DBA\_ATTRIBUTE\_DIM\_TABLES describes the tables used by all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_TABLES.

### ① See Also

["ALL\\_ATTRIBUTE\\_DIM\\_TABLES"](#)

## 5.163 DBA\_ATTRIBUTE\_DIM\_TABLES\_AE

DBA\_ATTRIBUTE\_DIM\_TABLES\_AE describes the tables used by all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIM\_TABLES\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_ATTRIBUTE\\_DIM\\_TABLES\\_AE"](#)

## 5.164 DBA\_ATTRIBUTE\_DIMENSIONS

DBA\_ATTRIBUTE\_DIMENSIONS describes all attribute dimensions in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIMENSIONS.

### ① See Also

["ALL\\_ATTRIBUTE\\_DIMENSIONS"](#)

## 5.165 DBA\_ATTRIBUTE\_DIMENSIONS\_AE

DBA\_ATTRIBUTE\_DIMENSIONS\_AE describes all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_DIMENSIONS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

**① See Also**

["ALL\\_ATTRIBUTE\\_DIMENSIONS\\_AE"](#)

## 5.166 DBA\_ATTRIBUTE\_TRANSFORMATIONS

DBA\_ATTRIBUTE\_TRANSFORMATIONS describes the transformation functions for all transformations in the database. Its columns are the same as those in ALL\_ATTRIBUTE\_TRANSFORMATIONS.

**① See Also**

["ALL\\_ATTRIBUTE\\_TRANSFORMATIONS"](#)

## 5.167 DBA\_AUDIT\_EXISTS

DBA\_AUDIT\_EXISTS displays audit trail entries produced by AUDIT EXISTS and AUDIT NOT EXISTS.

**① Note**

This view is relevant when using traditional auditing. Traditional auditing is deprecated in Oracle Database 21c. Oracle recommends that you instead use unified auditing, which enables selective and more effective auditing inside Oracle Database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

| Column      | Datatype      | NULL | Description                                                                                                                                                       |
|-------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OS_USERNAME | VARCHAR2(255) |      | Operating system login username of the user whose actions were audited                                                                                            |
| USERNAME    | VARCHAR2(128) |      | Name (not ID number) of the user whose actions were audited                                                                                                       |
| USERHOST    | VARCHAR2(128) |      | Client host machine name                                                                                                                                          |
| TERMINAL    | VARCHAR2(255) |      | Identifier of the user's terminal                                                                                                                                 |
| TIMESTAMP   | DATE          |      | Date and time of the creation of the audit trail entry (date and time of user login for entries created by AUDIT SESSION) in the local database session time zone |
| OWNER       | VARCHAR2(128) |      | Intended creator of the non-existent object                                                                                                                       |
| OBJ_NAME    | VARCHAR2(128) |      | Name of the object affected by the action                                                                                                                         |

| Column        | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| ACTION_NAME   | VARCHAR2(28)  |      | Name of the action type corresponding to the numeric code in the ACTION column in DBA_AUDIT_TRAIL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| NEW_OWNER     | VARCHAR2(128) |      | Owner of the object named in the NEW_NAME column                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| NEW_NAME      | VARCHAR2(128) |      | New name of an object after a RENAME or the name of the underlying object                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| OBJ_PRIVILEGE | VARCHAR2(32)  |      | <p>Object privileges granted or revoked by a GRANT or REVOKE statement. The value of this column is a 32-character string of Y and dash (-) characters. Each character corresponds to a numbered privilege in the following list. The left-most character corresponds to privilege 0, the next character corresponds to privilege 1, and so on. The right-most character corresponds to privilege 31.</p> <p>0 - ALTER<br/> 1 - AUDIT<br/> 2 - COMMENT<br/> 3 - DELETE<br/> 4 - GRANT<br/> 5 - INDEX<br/> 6 - INSERT<br/> 7 - LOCK<br/> 8 - CREATE<br/> 9 - SELECT<br/> 10 - UPDATE<br/> 11 - REFERENCES<br/> 12 - EXECUTE<br/> 13 - VIEW<br/> 14 - DROP<br/> 15 - ANALYZE<br/> 16 - CREATE<br/> 17 - READ<br/> 18 - WRITE<br/> 19 - KEEP SEQUENCE<br/> 20 - ENQUEUE<br/> 21 - DEQUEUE<br/> 22 - UNDER<br/> 23 - ON COMMIT<br/> 24 - REWRITE<br/> 25 - UPSERT<br/> 26 - DEBUG<br/> 27 - FLASHBACK<br/> 28 - MERGE<br/> 29 - USE<br/> 30 - FLASHBACK ARCHIVE<br/> 31 - DIRECTORY EXECUTE</p> <p>A Y indicates that the privilege was granted or revoked by the statement. A dash indicates that the privilege was not affected by the statement. For example, the following value indicates that the MERGE privilege was granted or revoked by the statement:</p> <p>-----Y---</p> |

| Column             | Datatype                    | NULL     | Description                                                                                                                                                                  |
|--------------------|-----------------------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SYS_PRIVILEGE      | VARCHAR2(40)                |          | System privileges granted or revoked by a GRANT or REVOKE statement                                                                                                          |
| GRANTEE            | VARCHAR2(128)               |          | Name of the grantee specified in a GRANT or REVOKE statement                                                                                                                 |
| SESSIONID          | NUMBER                      | NOT NULL | Numeric ID for each Oracle session                                                                                                                                           |
| ENTRYID            | NUMBER                      | NOT NULL | Numeric ID for each audit trail entry in the session                                                                                                                         |
| STATEMENTID        | NUMBER                      | NOT NULL | Numeric ID for each statement run                                                                                                                                            |
| RETURNCODE         | NUMBER                      | NOT NULL | Oracle error code generated by the action. Some useful values: <ul style="list-style-type: none"> <li>• 0 - Action succeeded</li> <li>• 2004 - Security violation</li> </ul> |
| CLIENT_ID          | VARCHAR2(128)               |          | Client identifier in each Oracle session                                                                                                                                     |
| ECONTEXT_ID        | VARCHAR2(64)                |          | Application execution context identifier                                                                                                                                     |
| SESSION_CPU        | NUMBER                      |          | Amount of CPU time used by each Oracle session                                                                                                                               |
| EXTENDED_TIMESTAMP | TIMESTAMP(6) WITH TIME ZONE |          | Timestamp of the creation of the audit trail entry (timestamp of user login for entries created by AUDIT SESSION) in UTC (Coordinated Universal Time) time zone              |
| PROXY_SESSIONID    | NUMBER                      |          | Proxy session serial number, if an enterprise user has logged in through the proxy mechanism                                                                                 |
| GLOBAL_UID         | VARCHAR2(32)                |          | Global user identifier for the user, if the user has logged in as an enterprise user                                                                                         |
| INSTANCE_NUMBER    | NUMBER                      |          | Instance number as specified by the INSTANCE_NUMBER initialization parameter                                                                                                 |
| OS_PROCESS         | VARCHAR2(16)                |          | Operating System process identifier of the Oracle process                                                                                                                    |
| TRANSACTIONID      | RAW(8)                      |          | Transaction identifier of the transaction in which the object is accessed or modified                                                                                        |
| SCN                | NUMBER                      |          | System change number (SCN) of the query                                                                                                                                      |
| SQL_BIND           | NVARCHAR2(2000)             |          | Bind variable data of the query                                                                                                                                              |
| SQL_TEXT           | NVARCHAR2(2000)             |          | SQL text of the query                                                                                                                                                        |
| OBJ_EDITION_NAME   | VARCHAR2(128)               |          | Name of the edition containing the audited object                                                                                                                            |

### Note

The SQL\_BIND and SQL\_TEXT columns are only populated if the AUDIT\_TRAIL initialization parameter is set to db, extended.

# 5.168 DBA\_AUDIT\_MGMT\_CLEAN\_EVENTS

DBA\_AUDIT\_MGMT\_CLEAN\_EVENTS displays information about the history of audit trail cleanup or purge events.

Periodically, you should delete the contents of this view so that it will not grow too large.

**Note**

This view is intended for use with traditional auditing (pre-Oracle Database 12c auditing) only, not for unified auditing.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column       | Datatype                    | NULL     | Description                                                                                                                                                                                                                                                                                                   |
|--------------|-----------------------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUDIT_TRAIL  | VARCHAR2(28)                |          | Audit trail that was cleaned at the time of the event: <ul style="list-style-type: none"><li>• STANDARD AUDIT TRAIL</li><li>• FGA AUDIT TRAIL</li><li>• STANDARD AND FGA AUDIT TRAIL</li><li>• OS AUDIT TRAIL</li><li>• XML AUDIT TRAIL</li><li>• OS AND XML AUDIT TRAIL</li><li>• ALL AUDIT TRAILS</li></ul> |
| RAC_INSTANCE | NUMBER                      | NOT NULL | Instance number indicating the Oracle RAC instance that was cleaned up at the time of the event; 0 implies not applicable                                                                                                                                                                                     |
| CLEANUP_TIME | TIMESTAMP(6) WITH TIME ZONE |          | Timestamp when the cleanup event completed                                                                                                                                                                                                                                                                    |
| DELETE_COUNT | NUMBER                      |          | Number of audit records or audit files that were deleted at the time of the event                                                                                                                                                                                                                             |
| WAS_FORCED   | VARCHAR2(3)                 |          | Indicates whether a forced cleanup occurred (YES) or not (NO); forced cleanup bypasses the last archive timestamp set                                                                                                                                                                                         |

**Note**

In a read-only database, including an Oracle Active Data Guard physical standby database, this view is not populated. Instead, a summary of cleanup events is written to the respective database instance's alert log file.

## 5.169 DBA\_AUDIT\_MGMT\_CLEANUP\_JOBS

DBA\_AUDIT\_MGMT\_CLEANUP\_JOBS displays information about the configured audit trail purge jobs.

### Note

This view is populated in any Oracle Database where auditing is enabled, regardless of whether pre-Oracle Database 12c auditing or unified auditing is enabled for the database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

| Column                     | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| JOB_NAME                   | VARCHAR2(100) | NOT NULL | Name of the audit trail purge job                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| JOB_STATUS                 | VARCHAR2(8)   |          | Current status of the audit trail purge job (ENABLED) or (DISABLED)                                                                                                                                                                                                                                                                                                                                                                                                           |
| AUDIT_TRAIL                | VARCHAR2(28)  |          | Audit trail for which the audit trail purge job is configured: <ul style="list-style-type: none"> <li>• STANDARD AUDIT TRAIL</li> <li>• FGA AUDIT TRAIL</li> <li>• STANDARD AND FGA AUDIT TRAIL</li> <li>• OS AUDIT TRAIL</li> <li>• XML AUDIT TRAIL</li> <li>• OS AND XML AUDIT TRAIL</li> <li>• ALL AUDIT TRAILS</li> <li>• UNIFIED AUDIT TRAIL</li> </ul>                                                                                                                  |
| JOB_FREQUENCY              | VARCHAR2(100) |          | Frequency at which the audit trail purge job runs                                                                                                                                                                                                                                                                                                                                                                                                                             |
| USE_LAST_ARCHIVE_TIMESTAMP | VARCHAR2(3)   |          | Indicates whether the audit trail purge job invocation uses the last archive timestamp. The last archive timestamp is shown in the LAST_ARCHIVE_TS column of the DBA_AUDIT_MGMT_LAST_ARCH_TS view. Possible values: <ul style="list-style-type: none"> <li>• YES - Indicates that the audit trail purge job invocation uses the last archive timestamp</li> <li>• NO - Indicates that the audit trail purge job invocation does not use the last archive timestamp</li> </ul> |
| JOB_CONTAINER              | VARCHAR2(7)   |          | In a CDB, indicates whether audit trail purge job will be performed only in the current container or in all the containers. Possible values: <ul style="list-style-type: none"> <li>• CURRENT - Indicates that audit trail purge job will be performed only in the current container</li> <li>• ALL - Indicates that audit trail purge job will be performed in all the containers</li> </ul> In a non-CDB, the value in this column is always CURRENT.                       |

| RAC_INSTANCE    | NUMBER                      | NOT NULL | Oracle RAC instance number for which the last archive timestamp applies; 0 implies not applicable                                                                                                                                                 |
| LAST_ARCHIVE_TS | TIMESTAMP(6) WITH TIME ZONE |          | Timestamp of the last audit record or audit file that has been archived                                                                                                                                                                           |
| DATABASE_ID     | NUMBER                      | NOT NULL | Database ID of the audit records to clean up                                                                                                                                                                                                      |
| CONTAINER_GUID  | VARCHAR2(33)                | NOT NULL | GUID of the container of the audit records to clean up                                                                                                                                                                                            |

**① Note**

In a read-only database, including an Oracle Active Data Guard physical standby database, this view is not populated when `DBMS_AUDIT_MGMT.SET_LAST_ARCHIVE_TIMESTAMP` is invoked. In such a case, use `DBMS_AUDIT_MGMT.GET_LAST_ARCHIVE_TIMESTAMP` to check for the timestamp, if it was configured for the database instance.

## 5.172 DBA\_AUDIT\_OBJECT

DBA\_AUDIT\_OBJECT displays audit trail records for all objects in the database.

**① Note**

This view is relevant when using traditional auditing. Traditional auditing is deprecated in Oracle Database 21c. Oracle recommends that you instead use unified auditing, which enables selective and more effective auditing inside Oracle Database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

**Related View**

USER\_AUDIT\_OBJECT displays audit trail records for the objects accessible to the current user.

| Column      | Datatype      | NULL | Description                                                                                                                                                       |
|-------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OS_USERNAME | VARCHAR2(255) |      | Operating system login username of the user whose actions were audited                                                                                            |
| USERNAME    | VARCHAR2(128) |      | Name (not ID number) of the user whose actions were audited                                                                                                       |
| USERHOST    | VARCHAR2(128) |      | Client host machine name                                                                                                                                          |
| TERMINAL    | VARCHAR2(255) |      | Identifier of the user's terminal                                                                                                                                 |
| TIMESTAMP   | DATE          |      | Date and time of the creation of the audit trail entry (date and time of user login for entries created by AUDIT SESSION) in the local database session time zone |
| OWNER       | VARCHAR2(128) |      | Creator of the object affected by the action                                                                                                                      |
| OBJ_NAME    | VARCHAR2(128) |      | Name of the object affected by the action                                                                                                                         |
| ACTION_NAME | VARCHAR2(28)  |      | Name of the action type corresponding to the numeric code in the ACTION column in DBA_AUDIT_TRAIL                                                                 |
| NEW_OWNER   | VARCHAR2(128) |      | Owner of the object named in the NEW_NAME column                                                                                                                  |
| NEW_NAME    | VARCHAR2(128) |      | New name of an object after a RENAME or the name of the underlying object                                                                                         |

| Column             | Datatype                    | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------|-----------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SES_ACTIONS        | VARCHAR2(19)                |          | Session summary (a string of 16 characters, one for each action type in the order ALTER, AUDIT, COMMENT, DELETE, GRANT, INDEX, INSERT, LOCK, RENAME, SELECT, UPDATE, REFERENCES, and EXECUTE). Positions 14, 15, and 16 are reserved for future use. The characters are: <ul style="list-style-type: none"> <li>- - None</li> <li>S - Success</li> <li>F - Failure</li> <li>B - Both</li> </ul> |
| COMMENT_TEXT       | VARCHAR2(4000)              |          | Text comment on the audit trail                                                                                                                                                                                                                                                                                                                                                                 |
| SESSIONID          | NUMBER                      | NOT NULL | Numeric ID for each Oracle session                                                                                                                                                                                                                                                                                                                                                              |
| ENTRYID            | NUMBER                      | NOT NULL | Numeric ID for each audit trail entry in the session                                                                                                                                                                                                                                                                                                                                            |
| STATEMENTID        | NUMBER                      | NOT NULL | Numeric ID for each statement run                                                                                                                                                                                                                                                                                                                                                               |
| RETURNCODE         | NUMBER                      | NOT NULL | Oracle error code generated by the action. Some useful values: <ul style="list-style-type: none"> <li>0 - Action succeeded</li> <li>2004 - Security violation</li> </ul>                                                                                                                                                                                                                        |
| PRIV_USED          | VARCHAR2(40)                |          | System privilege used to execute the action                                                                                                                                                                                                                                                                                                                                                     |
| CLIENT_ID          | VARCHAR2(128)               |          | Client identifier in each Oracle session                                                                                                                                                                                                                                                                                                                                                        |
| ECONTEXT_ID        | VARCHAR2(64)                |          | Application execution context identifier                                                                                                                                                                                                                                                                                                                                                        |
| SESSION_CPU        | NUMBER                      |          | Amount of CPU time used by each Oracle session                                                                                                                                                                                                                                                                                                                                                  |
| EXTENDED_TIMESTAMP | TIMESTAMP(6) WITH TIME ZONE |          | Timestamp of the creation of the audit trail entry (timestamp of user login for entries created by AUDIT SESSION) in UTC (Coordinated Universal Time) time zone                                                                                                                                                                                                                                 |
| PROXY_SESSIONID    | NUMBER                      |          | Proxy session serial number, if an enterprise user has logged in through the proxy mechanism                                                                                                                                                                                                                                                                                                    |
| GLOBAL_UID         | VARCHAR2(32)                |          | Global user identifier for the user, if the user has logged in as an enterprise user                                                                                                                                                                                                                                                                                                            |
| INSTANCE_NUMBER    | NUMBER                      |          | Instance number as specified by the INSTANCE_NUMBER initialization parameter                                                                                                                                                                                                                                                                                                                    |
| OS_PROCESS         | VARCHAR2(16)                |          | Operating System process identifier of the Oracle process                                                                                                                                                                                                                                                                                                                                       |
| TRANSACTIONID      | RAW(8)                      |          | Transaction identifier of the transaction in which the object is accessed or modified                                                                                                                                                                                                                                                                                                           |
| SCN                | NUMBER                      |          | System change number (SCN) of the query                                                                                                                                                                                                                                                                                                                                                         |
| SQL_BIND           | NVARCHAR2(2000)             |          | Bind variable data of the query                                                                                                                                                                                                                                                                                                                                                                 |
| SQL_TEXT           | NVARCHAR2(2000)             |          | SQL text of the query                                                                                                                                                                                                                                                                                                                                                                           |
| OBJ_EDITION_NAME   | VARCHAR2(128)               |          | Name of the edition containing the audited object                                                                                                                                                                                                                                                                                                                                               |

### Note

The SQL\_BIND and SQL\_TEXT columns are only populated if the AUDIT\_TRAIL initialization parameter is set to db, extended.

## 5.173 DBA\_AUDIT\_POLICIES

DBA\_AUDIT\_POLICIES describes all fine-grained auditing policies in the database. Its columns are the same as those in ALL\_AUDIT\_POLICIES.

**① See Also**

["ALL\\_AUDIT\\_POLICIES"](#)

## 5.174 DBA\_AUDIT\_POLICY\_COLUMNS

DBA\_AUDIT\_POLICY\_COLUMNS describes all fine-grained auditing policy columns in the database. Its columns are the same as those in ALL\_AUDIT\_POLICY\_COLUMNS.

**① See Also**

["ALL\\_AUDIT\\_POLICY\\_COLUMNS"](#)

## 5.175 DBA\_AUDIT\_SESSION

DBA\_AUDIT\_SESSION displays all audit trail records concerning CONNECT and DISCONNECT.

**① Note**

This view is relevant when using traditional auditing. Traditional auditing is deprecated in Oracle Database 21c. Oracle recommends that you instead use unified auditing, which enables selective and more effective auditing inside Oracle Database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

**Related View**

USER\_AUDIT\_SESSION displays the audit trail records concerning connections and disconnections of the current user.

| Column             | Datatype                    | NULL     | Description                                                                                                                                                                  |
|--------------------|-----------------------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OS_USERNAME        | VARCHAR2(255)               |          | Operating system login username of the user whose actions were audited                                                                                                       |
| USERNAME           | VARCHAR2(128)               |          | Name (not ID number) of the user whose actions were audited                                                                                                                  |
| USERHOST           | VARCHAR2(128)               |          | Client host machine name                                                                                                                                                     |

| OBJ_PRIVILEGE | VARCHAR2(32) |      | <p>Object privileges granted or revoked by a GRANT or REVOKE statement. The value of this column is a 32-character string of Y and dash (-) characters. Each character corresponds to a numbered privilege in the following list. The left-most character corresponds to privilege 0, the next character corresponds to privilege 1, and so on. The right-most character corresponds to privilege 31.</p> <ul style="list-style-type: none"> <li>0 - ALTER</li> <li>1 - AUDIT</li> <li>2 - COMMENT</li> <li>3 - DELETE</li> <li>4 - GRANT</li> <li>5 - INDEX</li> <li>6 - INSERT</li> <li>7 - LOCK</li> <li>8 - CREATE</li> <li>9 - SELECT</li> <li>10 - UPDATE</li> <li>11 - REFERENCES</li> <li>12 - EXECUTE</li> <li>13 - VIEW</li> <li>14 - DROP</li> <li>15 - ANALYZE</li> <li>16 - CREATE</li> <li>17 - READ</li> <li>18 - WRITE</li> <li>19 - KEEP SEQUENCE</li> <li>20 - ENQUEUE</li> <li>21 - DEQUEUE</li> <li>22 - UNDER</li> <li>23 - ON COMMIT</li> <li>24 - REWRITE</li> <li>25 - UPSERT</li> <li>26 - DEBUG</li> <li>27 - FLASHBACK</li> <li>28 - MERGE</li> <li>29 - USE</li> <li>30 - FLASHBACK ARCHIVE</li> <li>31 - DIRECTORY EXECUTE</li> </ul> <p>A Y indicates that the privilege was granted or revoked by the statement. A dash indicates that the privilege was not affected by the statement. For example, the following value indicates that the MERGE privilege was granted or revoked by the statement:</p> <p>-----Y---</p> |
| SYS_PRIVILEGE | VARCHAR2(40) |      | System privileges granted or revoked by a GRANT or REVOKE statement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| ADMIN_OPTION  | VARCHAR2(1)  |      | Signifies the role or system privilege was granted with the ADMIN option                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Column             | Datatype                    | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------|-----------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GRANTEE            | VARCHAR2(128)               |          | Name of the grantee specified in a GRANT or REVOKE statement                                                                                                                                                                                                                                                                                                                                    |
| AUDIT_OPTION       | VARCHAR2(40)                |          | Auditing option set with the AUDIT statement                                                                                                                                                                                                                                                                                                                                                    |
| SES_ACTIONS        | VARCHAR2(19)                |          | Session summary (a string of 16 characters, one for each action type in the order ALTER, AUDIT, COMMENT, DELETE, GRANT, INDEX, INSERT, LOCK, RENAME, SELECT, UPDATE, REFERENCES, and EXECUTE). Positions 14, 15, and 16 are reserved for future use. The characters are: <ul style="list-style-type: none"> <li>- - None</li> <li>S - Success</li> <li>F - Failure</li> <li>B - Both</li> </ul> |
| COMMENT_TEXT       | VARCHAR2(4000)              |          | Text comment on the audit trail, inserted by the application                                                                                                                                                                                                                                                                                                                                    |
| SESSIONID          | NUMBER                      | NOT NULL | Numeric ID for each Oracle session                                                                                                                                                                                                                                                                                                                                                              |
| ENTRYID            | NUMBER                      | NOT NULL | Numeric ID for each audit trail entry in the session                                                                                                                                                                                                                                                                                                                                            |
| STATEMENTID        | NUMBER                      | NOT NULL | Numeric ID for each statement run                                                                                                                                                                                                                                                                                                                                                               |
| RETURNCODE         | NUMBER                      | NOT NULL | Oracle error code generated by the action. Some useful values: <ul style="list-style-type: none"> <li>0 - Action succeeded</li> <li>2004 - Security violation</li> </ul>                                                                                                                                                                                                                        |
| PRIV_USED          | VARCHAR2(40)                |          | System privilege used to execute the action                                                                                                                                                                                                                                                                                                                                                     |

# 5.177 DBA\_AUDIT\_TRAIL

DBA\_AUDIT\_TRAIL displays all standard audit trail entries.

**Note**

This view is relevant when using traditional auditing. Traditional auditing is deprecated in Oracle Database 21c. Oracle recommends that you instead use unified auditing, which enables selective and more effective auditing inside Oracle Database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

**Related View**

USER\_AUDIT\_TRAIL displays the standard audit trail entries related to the current user.

| Column      | Datatype      | NULL | Description                                                                                                                                                       |
|-------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OS_USERNAME | VARCHAR2(255) |      | Operating system login username of the user whose actions were audited                                                                                            |
| USERNAME    | VARCHAR2(128) |      | Name (not ID number) of the user whose actions were audited                                                                                                       |
| USERHOST    | VARCHAR2(128) |      | Client host machine name                                                                                                                                          |
| TERMINAL    | VARCHAR2(255) |      | Identifier of the user's terminal                                                                                                                                 |
| TIMESTAMP   | DATE          |      | Date and time of the creation of the audit trail entry (date and time of user login for entries created by AUDIT SESSION) in the local database session time zone |
| OWNER       | VARCHAR2(128) |      | Creator of the object affected by the action                                                                                                                      |
| OBJ_NAME    | VARCHAR2(128) |      | Name of the object affected by the action                                                                                                                         |

| Column      | Datatype      | NULL     | Description                                                                                       |
|-------------|---------------|----------|---------------------------------------------------------------------------------------------------|
| ACTION      | NUMBER        | NOT NULL | Numeric action type code. The corresponding name of the action type is in the ACTION_NAME column. |
| ACTION_NAME | VARCHAR2(28)  |          | Name of the action type corresponding to the numeric code in the ACTION column                    |
| NEW_OWNER   | VARCHAR2(128) |          | Owner of the object named in the NEW_NAME column                                                  |
| NEW_NAME    | VARCHAR2(128) |          | New name of the object after a RENAME or the name of the underlying object                        |

| Column        | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------|--------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJ_PRIVILEGE | VARCHAR2(32) |      | <p>Object privileges granted or revoked by a GRANT or REVOKE statement. The value of this column is a 32-character string of Y and dash (-) characters. Each character corresponds to a numbered privilege in the following list. The left-most character corresponds to privilege 0, the next character corresponds to privilege 1, and so on. The right-most character corresponds to privilege 31.</p> <p>0 - ALTER<br/> 1 - AUDIT<br/> 2 - COMMENT<br/> 3 - DELETE<br/> 4 - GRANT<br/> 5 - INDEX<br/> 6 - INSERT<br/> 7 - LOCK<br/> 8 - CREATE<br/> 9 - SELECT<br/> 10 - UPDATE<br/> 11 - REFERENCES<br/> 12 - EXECUTE<br/> 13 - VIEW<br/> 14 - DROP<br/> 15 - ANALYZE<br/> 16 - CREATE<br/> 17 - READ<br/> 18 - WRITE<br/> 19 - KEEP SEQUENCE<br/> 20 - ENQUEUE<br/> 21 - DEQUEUE<br/> 22 - UNDER<br/> 23 - ON COMMIT<br/> 24 - REWRITE<br/> 25 - UPSERT<br/> 26 - DEBUG<br/> 27 - FLASHBACK<br/> 28 - MERGE<br/> 29 - USE<br/> 30 - FLASHBACK ARCHIVE<br/> 31 - DIRECTORY EXECUTE</p> <p>A Y indicates that the privilege was granted or revoked by the statement. A dash indicates that the privilege was not affected by the statement. For example, the following value indicates that the MERGE privilege was granted or revoked by the statement:</p> <p>-----Y---</p> |
| SYS_PRIVILEGE | VARCHAR2(40) |      | System privileges granted or revoked by a GRANT or REVOKE statement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| ADMIN_OPTION  | VARCHAR2(1)  |      | Indicates whether the role or system privilege was granted with the ADMIN option                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Column        | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| GRANTEE       | VARCHAR2(128)  |          | Name of the grantee specified in a GRANT or REVOKE statement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| AUDIT_OPTION  | VARCHAR2(40)   |          | Auditing option set with the AUDIT statement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| SES_ACTIONS   | VARCHAR2(19)   |          | Session summary (a string of 16 characters, one for each action type in the order ALTER, AUDIT, COMMENT, DELETE, GRANT, INDEX, INSERT, LOCK, RENAME, SELECT, UPDATE, REFERENCES, and EXECUTE). Positions 14, 15, and 16 are reserved for future use. The characters are: <ul style="list-style-type: none"> <li>- - None</li> <li>S - Success</li> <li>F - Failure</li> <li>B - Both</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| LOGOFF_TIME   | DATE           |          | Date and time of user log off                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| LOGOFF_LREAD  | NUMBER         |          | Logical reads for the session                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| LOGOFF_PREAD  | NUMBER         |          | Physical reads for the session                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| LOGOFF_LWRITE | NUMBER         |          | Logical writes for the session                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| LOGOFF_DLOCK  | VARCHAR2(40)   |          | Deadlocks detected during the session                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| COMMENT_TEXT  | VARCHAR2(4000) |          | Text comment on the audit trail entry, providing more information about the statement audited<br><br>Also indicates how the user or remote call was authenticated. The method can be one of the following: <ul style="list-style-type: none"> <li>DATABASE - Authentication was done by password</li> <li>NETWORK - Authentication was done by Oracle Net Services or strong authentication</li> <li>PROXY - Client was authenticated by another user; the name of the proxy user follows the method type</li> </ul> When an object is accessed remotely over a database link, the COMMENT_TEXT column also captures the information about the database link. For example:<br><br>DBLINK_INFO:<br>(SOURCE_GLOBAL_NAME=view02.regress.rdbms.dev.us.example.com,<br>DBLINK_NAME=VIEW05_LINK.REGRESS.RDBMS.DEV.US.EXAMPLE.COM,<br>SOURCE_AUDIT_SESSIONID=250805) |
| SESSIONID     | NUMBER         | NOT NULL | Numeric ID for each Oracle session. Each user session gets a unique session ID.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| ENTRYID       | NUMBER         | NOT NULL | Numeric ID for each audit trail entry in the session. The entry ID is an index of a session's audit entries that starts at 1 and increases to the number of entries that are written.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Column             | Datatype                    | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------|-----------------------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATEMENTID        | NUMBER                      | NOT NULL | <i>n</i> th statement in the user session. The first SQL statement gets a value of 1 and the value is incremented for each subsequent SQL statement. Note that one SQL statement can create more than one audit trail entry (for example, when more than one object is audited from the same SQL statement), and in this case the statement ID remains the same for that statement and the entry ID increases for each audit trail entry created by the statement. |
| RETURNCODE         | NUMBER                      | NOT NULL | Oracle error code generated by the action. Some useful values: <ul style="list-style-type: none"> <li>• 0 - Action succeeded</li> <li>• 2004 - Security violation</li> </ul>                                                                                                                                                                                                                                                                                       |
| PRIV_USED          | VARCHAR2(40)                |          | System privilege used to execute the action                                                                                                                                                                                                                                                                                                                                                                                                                        |

## 5.178 DBA\_AUTO\_INDEX\_CONFIG

DBA\_AUTO\_INDEX\_CONFIG displays the current configuration parameter settings for automatic indexing.

You can set automatic indexing configuration parameters by using the DBMS\_AUTO\_INDEX.CONFIGURE procedure.

| Column          | Datatype       | NULL     | Description                                         |
|-----------------|----------------|----------|-----------------------------------------------------|
| PARAMETER_NAME  | VARCHAR2(128)  | NOT NULL | Name of the configuration parameter                 |
| PARAMETER_VALUE | VARCHAR2(4000) |          | Value of the configuration parameter                |
| LAST_MODIFIED   | TIMESTAMP(6)   |          | Time at which the parameter value was last modified |
| MODIFIED_BY     | VARCHAR2(128)  |          | User who last modified the parameter value          |

## 5.179 DBA\_AUTO\_MV\_ANALYSIS\_ACTIONS

DBA\_AUTO\_MV\_ANALYSIS\_ACTIONS displays information about analysis and tuning activities associated with automatic materialized views.

Each action is specified by the COMMAND and attribute (ATTR1 through ATTR6) columns. Each command defines how the attribute columns will be used.

| Column  | Datatype      | NULL     | Description            |
|---------|---------------|----------|------------------------|
| OWNER   | VARCHAR2(128) |          | Owner of the task      |
| TASK_ID | NUMBER        | NOT NULL | Identifier of the task |

| Column               | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                  |
|----------------------|----------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TASK_NAME            | VARCHAR2(128)  |          | Name of the task<br>The value of this column is always SYS_AUTO_MV_TASK.                                                                                                                                                                                                     |
| EXECUTION_NAME       | VARCHAR2(128)  |          | The name of the task execution with which this entry (row) is associated                                                                                                                                                                                                     |
| REC_ID               | NUMBER         | NOT NULL | Recommendation associated with the action                                                                                                                                                                                                                                    |
| ACTION_ID            | NUMBER         | NOT NULL | Unique identifier for the action                                                                                                                                                                                                                                             |
| OBJECT_ID            | NUMBER         |          | Object associated with the action                                                                                                                                                                                                                                            |
| COMMAND              | VARCHAR2(64)   |          | Command to be executed<br><b>See Also:</b> DBA_ADVISOR_COMMANDS for a list of commands                                                                                                                                                                                       |
| COMMAND_ID           | NUMBER         | NOT NULL | ID of the command to be executed<br><b>See Also:</b> DBA_ADVISOR_COMMANDS for a list of commands                                                                                                                                                                             |
| FLAGS                | NUMBER         |          | Advisor-specific flags                                                                                                                                                                                                                                                       |

## 5.180 DBA\_AUTO\_MV\_ANALYSIS\_EXECUTIONS

DBA\_AUTO\_MV\_ANALYSIS\_EXECUTIONS displays information about analysis and tuning executions associated with automatic materialized views.

| Column                  | Datatype       | NULL     | Description                                                                                                                                                                                                     |
|-------------------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER                   | VARCHAR2(128)  |          | Owner of the task                                                                                                                                                                                               |
| TASK_ID                 | NUMBER         | NOT NULL | Unique identifier of the task                                                                                                                                                                                   |
| TASK_NAME               | VARCHAR2(128)  |          | Name of the task<br>The value of this column is always SYS_AUTO_MV_TASK.                                                                                                                                        |
| EXECUTION_NAME          | VARCHAR2(128)  | NOT NULL | Name of the task execution with which this entry (row) is associated                                                                                                                                            |
| EXECUTION_ID            | NUMBER         | NOT NULL | Execution ID                                                                                                                                                                                                    |
| DESCRIPTION             | VARCHAR2(256)  |          | User-supplied description of the task                                                                                                                                                                           |
| EXECUTION_TYPE          | VARCHAR2(128)  |          | Type of the last execution (optional for single-execution tasks)                                                                                                                                                |
| EXECUTION_TYPE#         | NUMBER         |          | Reserved for internal use                                                                                                                                                                                       |
| EXECUTION_START         | DATE           |          | Execution start date and time                                                                                                                                                                                   |
| EXECUTION_LAST_MODIFIED | DATE           | NOT NULL | Last modified date and time for the execution                                                                                                                                                                   |
| EXECUTION_END           | DATE           |          | Execution end date and time                                                                                                                                                                                     |
| REQUESTED_DOP           | NUMBER         |          | The degree of parallelism (DOP) value requested by the user (through the TEST_EXECUTE_DOP parameter). It can be any value greater or equal to zero.                                                             |
| ACTUAL_DOP              | NUMBER         |          | The actual degree of parallelism (DOP) with which the execution finished. If the requested DOP is greater than what is available on the system, the ACTUAL_DOP value can be lower than the REQUESTED_DOP value. |
| CONCURRENT_EXECUTION    | VARCHAR2(3)    |          | Indicates whether concurrency was used for this execution (YES) or not (NO)                                                                                                                                     |
| ADVISOR_NAME            | VARCHAR2(128)  |          | Advisor associated with the task                                                                                                                                                                                |
| ADVISOR_ID              | NUMBER         | NOT NULL | Unique identifier for the advisor                                                                                                                                                                               |
| STATUS                  | VARCHAR2(11)   |          | Current operational status of the task: <ul style="list-style-type: none"> <li>• EXECUTING</li> <li>• COMPLETED</li> <li>• INTERRUPTED</li> <li>• CANCELLED</li> <li>• FATAL ERROR</li> </ul>                   |
| STATUS#                 | NUMBER         | NOT NULL | Reserved for internal use                                                                                                                                                                                       |
| STATUS_MESSAGE          | VARCHAR2(4000) |          | Informational message provided by the advisor regarding the status                                                                                                                                              |

| Column        | Datatype       | NULL | Description                                                                             |
|---------------|----------------|------|-----------------------------------------------------------------------------------------|
| ERROR_MESSAGE | VARCHAR2(4000) |      | Informational message or an error message indicating the current operation or condition |

## 5.181 DBA\_AUTO\_MV\_ANALYSIS\_RECOMMENDATIONS

DBA\_AUTO\_MV\_ANALYSIS\_RECOMMENDATIONS displays recommendations associated with automatic materialized views.

| Column          | Datatype      | NULL     | Description                                                              |
|-----------------|---------------|----------|--------------------------------------------------------------------------|
| TASK_NAME       | VARCHAR2(128) |          | Name of the task<br>The value of this column is always SYS_AUTO_MV_TASK. |
| EXECUTION_NAME  | VARCHAR2(128) | NOT NULL | The name of the task execution with which this entry (row) is associated |
| RECOMMENDATIONS | CLOB          |          | Recommendation for the task                                              |

## 5.182 DBA\_AUTO\_MV\_ANALYSIS\_REPORT

DBA\_AUTO\_MV\_ANALYSIS\_REPORT reports on analyses and recommendations associated with automatic materialized views.

| Column         | Datatype       | NULL     | Description                                                                                                  |
|----------------|----------------|----------|--------------------------------------------------------------------------------------------------------------|
| TASK_NAME      | VARCHAR2(128)  |          | Name of the task<br>The value of this column is always SYS_AUTO_MV_TASK.                                     |
| EXECUTION_NAME | VARCHAR2(128)  |          | The name of the task execution with which this entry (row) is associated                                     |
| SEQUENCE       | NUMBER         | NOT NULL | Sequence number of the journal entry (unique for each task). This sequence number is used to order the data. |
| MESSAGE        | VARCHAR2(4000) |          | Entry in the journal                                                                                         |

Recommendation data can be viewed and reported.</li> <li>ERROR - An error occurred during the analysis operation. Recommendations, if present, can be viewed and reported at this time.</li> </ul> |
| STATUS_MESSAGE        | VARCHAR2(4000) |          | Informational message provided by the advisor regarding the status                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| PCT_COMPLETION_TIME   | NUMBER         |          | Percent completion, in terms of time, of the task when it is executing                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| PROGRESS_METRIC       | NUMBER         |          | Metric that measures the progress of the task in terms of quality. Each advisor may have its own metric.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| METRIC_UNITS          | VARCHAR2(64)   |          | Unit of the metric used to measure progress                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| ACTIVITY_COUNTER      | NUMBER         |          | Counter that is updated frequently by the advisor, denoting that useful work is being performed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Column               | Datatype       | NULL     | Description                                                                             |
|----------------------|----------------|----------|-----------------------------------------------------------------------------------------|
| RECOMMENDATION_COUNT | NUMBER         |          | Number of recommendations produced                                                      |
| ERROR_MESSAGE        | VARCHAR2(4000) |          | Informational message or an error message indicating the current operation or condition |
| SOURCE               | VARCHAR2(128)  |          | Optional name that identifies the creator of the task                                   |
| HOW_CREATED          | VARCHAR2(30)   |          | Optional task or template on which the object was based                                 |
| READ_ONLY            | VARCHAR2(5)    |          | Indicates whether the task is read-only (TRUE) or not (FALSE)                           |
| SYSTEM_TASK          | VARCHAR2(5)    |          | Indicates whether the task is a system task (TRUE) or not (FALSE)                       |
| ADVISOR_ID           | NUMBER         | NOT NULL | Unique identifier for the advisor                                                       |
| STATUS#              | NUMBER         |          | Reserved for internal use                                                               |

## 5.184 DBA\_AUTO\_MV\_CONFIG

DBA\_AUTO\_MV\_CONFIG displays configuration parameters associated with automatic materialized views and automatic zone maps.

The configuration parameters displayed in this view can be updated with CONFIGURE procedure of the DBMS\_AUTO\_MV package.

| Column          | Datatype       | NULL     | Description                                      |
|-----------------|----------------|----------|--------------------------------------------------|
| PARAMETER_NAME  | VARCHAR2(128)  | NOT NULL | Name of the configuration parameter              |
| PARAMETER_VALUE | VARCHAR2(4000) |          | Value of the configuration parameter             |
| LAST_UPDATED    | TIMESTAMP(6)   |          | Date and time of the last parameter value update |
| UPDATED_BY      | VARCHAR2(128)  |          | User who last updated the parameter value        |
| DESCRIPTION     | VARCHAR2(72)   |          | Description of the configuration parameter       |

**Note**

This view is available starting with Oracle Database 21c.

## 5.185 DBA\_AUTO\_MV\_MAINT\_REPORT

DBA\_AUTO\_MV\_MAINT\_REPORT displays maintenance operation details associated with automatic materialized view refresh.

| Column             | Datatype       | NULL | Description                                                      |
|--------------------|----------------|------|------------------------------------------------------------------|
| SWAT_MM_START_TIME | DATE           |      | Date and time of the maintenance invocation                      |
| MESSAGE            | VARCHAR2(4000) |      | Message associated with the materialized view maintenance action |

### Note

This view is available starting with Oracle Database 21c.

## 5.186 DBA\_AUTO\_MV\_REFRESH\_HISTORY

DBA\_AUTO\_MV\_REFRESH\_HISTORY describes automatic materialized view refreshes.

| Column               | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                 |
|----------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MVIEW_OWNER          | VARCHAR2(128) | NOT NULL | Owner of the materialized view                                                                                                                                                                                                                                                                                              |
| MVIEW_NAME           | VARCHAR2(128) | NOT NULL | Name of the materialized view                                                                                                                                                                                                                                                                                               |
| SWAT_MM_START_TIME   | DATE          |          | Date and time of the maintenance invocation                                                                                                                                                                                                                                                                                 |
| REFRESH_START_TIME   | DATE          |          | Date and time the refresh started                                                                                                                                                                                                                                                                                           |
| REFRESH_END_TIME     | DATE          |          | Date and time the refresh ended                                                                                                                                                                                                                                                                                             |
| ELAPSED_REFRESH_TIME | NUMBER        |          | Duration of the refresh (in seconds)                                                                                                                                                                                                                                                                                        |
| STATUS               | NUMBER        |          | Status of the refresh. Possible values: <ul style="list-style-type: none"><li>0 - The refresh is in-progress</li><li>1 - The refresh completed successfully</li><li>2 - An error occurred during the refresh. Refer to the value of the ERROR column for more information.</li><li>3 - The refresh was terminated</li></ul> |
| ERROR                | NUMBER        |          | If an error occurred during the refresh, this column displays the error number, which corresponds to error code <i>ORA-number</i> . Otherwise, the value of this column is 0.                                                                                                                                               |

## 5.187 DBA\_AUTO\_MV\_VERIFICATION\_REPORT

DBA\_AUTO\_MV\_VERIFICATION\_REPORT displays information about verifications associated with automatic materialized views.

| Column         | Datatype       | NULL | Description                                                              |
|----------------|----------------|------|--------------------------------------------------------------------------|
| TASK_NAME      | VARCHAR2(128)  |      | Name of the task                                                         |
| EXECUTION_NAME | VARCHAR2(128)  |      | The name of the task execution with which this entry (row) is associated |
| MESSAGE        | VARCHAR2(4000) |      | Message associated with the inference                                    |

### Note

This view is available starting with Oracle Database 21c.

## 5.188 DBA\_AUTO\_MV\_VERIFICATION\_STATUS

DBA\_AUTO\_MV\_VERIFICATION\_STATUS displays the status of verifications associated with automatic materialized views.

| Column                          | Datatype      | NULL     | Description                                                                         |
|---------------------------------|---------------|----------|-------------------------------------------------------------------------------------|
| TASK_NAME                       | VARCHAR2(128) |          | Name of the task                                                                    |
| EXECUTION_NAME                  | VARCHAR2(128) | NOT NULL | The name of the task execution with which this entry (row) is associated            |
| STS_NAME_FOR_SRS                | VARCHAR2(256) |          | Name of the SQL tuning set used for simple random sampling                          |
| STS_OWNER_NAME_FOR_SRS          | CHAR(3)       |          | Owner of the SQL tuning set used for simple random sampling                         |
| SPA_TASK_NAME_FOR_SRS           | VARCHAR2(256) |          | Name of the SQL Performance Analyzer task used for simple random sampling           |
| SPA_OWNER_NAME_FOR_SRS          | CHAR(3)       |          | Owner of the SQL Performance Analyzer task used for simple random sampling          |
| STS_NAME_FOR_VERIFICATION       | VARCHAR2(256) |          | Name of the SQL tuning set used for verification on sampled queries                 |
| STS_OWNER_NAME_FOR_VERIFICATION | CHAR(3)       |          | Owner of the SQL tuning set used for verification on sampled queries                |
| SPA_TASK_NAME_FOR_VERIFICATION  | VARCHAR2(256) |          | Name of the SQL Performance Analyzer task used for verification on sampled queries  |
| SPA_OWNER_NAME_FOR_VERIFICATION | CHAR(3)       |          | Owner of the SQL Performance Analyzer task used for verification on sampled queries |
| START_TIME                      | TIMESTAMP(6)  |          | Date and time the verification started                                              |
| END_TIME                        | TIMESTAMP(6)  |          | Date and time the verification ended                                                |
| STATUS                          | VARCHAR2(128) |          | Verification status                                                                 |

## 5.189 DBA\_AUTO\_SEGADV\_CTL

DBA\_AUTO\_SEGADV\_CTL exposes the control information used by the segment advisor.

This information gives the DBA an idea of what is happening in the auto advisor.

| Column           | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                         |
|------------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUTO_TASKID      | NUMBER        |      | Unique task ID generated by the auto advisor                                                                                                                                                                                                                                                                        |
| TABLESPACE_NAME  | VARCHAR2(30)  |      | Name of the tablespace containing the segment                                                                                                                                                                                                                                                                       |
| SEGMENT_OWNER    | VARCHAR2(128) |      | Owner of the segment                                                                                                                                                                                                                                                                                                |
| SEGMENT_NAME     | VARCHAR2(128) |      | Name of the segment                                                                                                                                                                                                                                                                                                 |
| SEGMENT_TYPE     | VARCHAR2(18)  |      | The type of segment (TABLE, INDEX, and so on)                                                                                                                                                                                                                                                                       |
| PARTITION_NAME   | VARCHAR2(128) |      | Name of the subsegment (if partitioned)                                                                                                                                                                                                                                                                             |
| STATUS           | VARCHAR2(40)  |      | Status of the analysis: <ul style="list-style-type: none"> <li>NEW - the segment/tablespace has not been analyzed</li> <li>BEING-PROCESSED - the segment/tablespace is being processed</li> <li>COMPLETE - the segment/tablespace has been analyzed</li> <li>ERROR - problem with the segment/tablespace</li> </ul> |
| REASON           | VARCHAR2(40)  |      | Reason why this segment was chosen                                                                                                                                                                                                                                                                                  |
| REASON_VALUE     | NUMBER        |      | A value associated with the reason                                                                                                                                                                                                                                                                                  |
| CREATION_TIME    | TIMESTAMP(6)  |      | Time when this entry was created                                                                                                                                                                                                                                                                                    |
| PROCESSED_TASKID | NUMBER        |      | Auto advisor task that was used to process the segment/tablespace                                                                                                                                                                                                                                                   |
| END_TIME         | TIMESTAMP(6)  |      | Time at which the advisor task was completed                                                                                                                                                                                                                                                                        |

## 5.190 DBA\_AUTO\_SEGADV\_SUMMARY

DBA\_AUTO\_SEGADV\_SUMMARY provides a summary of the auto advisor task runs.

| Column                | Datatype     | NULL     | Description                                     |
|-----------------------|--------------|----------|-------------------------------------------------|
| AUTO_TASKID           | NUMBER       | NOT NULL | Unique auto task ID                             |
| SNAPID                | NUMBER       |          | Maximum AWR snapid used to process the segments |
| SEGMENTS_SELECTED     | NUMBER       |          | Number of segments chosen for analysis          |
| SEGMENTS_PROCESSED    | NUMBER       |          | Number of segments actually processed           |
| TABLESPACE_SELECTED   | NUMBER       |          | Number of tablespaces chosen for analysis       |
| TABLESPACE_PROCESSED  | NUMBER       |          | Number of tablespaces actually processed        |
| RECOMMENDATIONS_COUNT | NUMBER       |          | Number of recommendations generated             |
| START_TIME            | TIMESTAMP(6) |          | Time at which the auto task was started         |

| Column   | Datatype     | NULL | Description                       |
|----------|--------------|------|-----------------------------------|
| END_TIME | TIMESTAMP(6) |      | Time at which the auto task ended |

## 5.191 DBA\_AUTO\_STAT\_EXECUTIONS

DBA\_AUTO\_STAT\_EXECUTIONS displays information about automatic optimizer statistics collection tasks, which are executed by the automated maintenance tasks infrastructure (known as AutoTask).

| Column      | Datatype                    | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------|-----------------------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OPID        | NUMBER                      |      | Unique identifier for the execution of the task                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| ORIGIN      | VARCHAR2(19)                |      | Origin of the execution of the task. Possible values: <ul style="list-style-type: none"> <li>AUTO_TASK: A standard automatic optimizer statistics collection task, which is executed automatically in an Oracle Scheduler window, known as maintenance window</li> <li>HIGH_FREQ_AUTO_TASK: A high-frequency automatic optimizer statistics collection task, which is executed at frequent intervals and complements the standard automatic optimizer statistics collection tasks</li> </ul> |
| STATUS      | VARCHAR2(49)                |      | Status of the execution of the task. Possible values: <ul style="list-style-type: none"> <li>IN PROGRESS: The operation is currently running</li> <li>COMPLETED: The operation has completed successfully</li> <li>FAILED: The operation has failed</li> <li>TIMED OUT: The operation timed out because the time allocated for the maintenance window was not sufficient for the operation to complete</li> </ul>                                                                            |
| START_TIME  | TIMESTAMP(6) WITH TIME ZONE |      | Start time for the execution of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| END_TIME    | TIMESTAMP(6) WITH TIME ZONE |      | End time for the execution of the task                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| COMPLETED   | NUMBER                      |      | Number of objects for which statistics collection was completed during the execution of the task                                                                                                                                                                                                                                                                                                                                                                                             |
| FAILED      | NUMBER                      |      | Number of objects for which statistics collection failed during the execution of the task                                                                                                                                                                                                                                                                                                                                                                                                    |
| TIMED_OUT   | NUMBER                      |      | Number of objects for which statistics collection timed out during the execution of the task                                                                                                                                                                                                                                                                                                                                                                                                 |
| IN_PROGRESS | NUMBER                      |      | Number of objects for which statistics collection is in progress during the execution of the task                                                                                                                                                                                                                                                                                                                                                                                            |

## 5.192 DBA\_AUTO\_ZONEMAP\_CONFIG

DBA\_AUTO\_ZONEMAP\_CONFIG describes the current settings for automatic zone map configuration parameters.

| Column          | Datatype       | NULL     | Description                                        |
|-----------------|----------------|----------|----------------------------------------------------|
| PARAMETER_NAME  | VARCHAR2(128)  | NOT NULL | Parameter name                                     |
| PARAMETER_VALUE | VARCHAR2(4000) |          | Parameter value                                    |
| LAST_UPDATED    | TIMESTAMP(6)   |          | Time at which the parameter value was last updated |
| UPDATED_BY      | VARCHAR2(128)  |          | User who last updated the parameter value          |
| DESCRIPTION     | VARCHAR2(71)   |          | Brief description of the parameter                 |

### Note

This view is available starting with Oracle Database 21c.

## 5.193 DBA\_AUTOTASK\_CLIENT

DBA\_AUTOTASK\_CLIENT displays statistical data for each automated maintenance task over 7-day and 30-day periods.

| Column                 | Datatype                        | NULL | Description                                                                                                                                                     |
|------------------------|---------------------------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CLIENT_NAME            | VARCHAR2(64)                    |      | Name of the client                                                                                                                                              |
| STATUS                 | VARCHAR2(8)                     |      | Job status: <ul style="list-style-type: none"> <li>• ENABLED</li> <li>• DISABLED</li> </ul>                                                                     |
| CONSUMER_GROUP         | VARCHAR2(128)                   |      | Consumer group used for normal priority jobs for this client                                                                                                    |
| CLIENT_TAG             | VARCHAR2(2)                     |      | Tag used to identify jobs for this client                                                                                                                       |
| PRIORITY_OVERRIDE      | VARCHAR2(7)                     |      | User-specified priority at which the task executes: <ul style="list-style-type: none"> <li>• URGENT</li> <li>• HIGH</li> <li>• MEDIUM</li> <li>• LOW</li> </ul> |
| ATTRIBUTES             | VARCHAR2(4000)                  |      | Attributes of the client                                                                                                                                        |
| WINDOW_GROUP           | VARCHAR2(64)                    |      | Window group used to schedule jobs                                                                                                                              |
| SERVICE_NAME           | VARCHAR2(64)                    |      | Name of the service on which jobs will execute for the client                                                                                                   |
| RESOURCE_PERCENTAGE    | NUMBER                          |      | Percentage of maintenance resources for high priority maintenance tasks for this client                                                                         |
| USE_RESOURCE_ESTIMATES | VARCHAR2(5)                     |      | Indicates whether resource estimates are used for this client (TRUE) or not (FALSE)                                                                             |
| MEAN_JOB_DURATION      | INTERVAL DAY(9)<br>TO SECOND(9) |      | Average elapsed time for a job for this client (in seconds)                                                                                                     |

| Column                       | Datatype                        | NULL | Description                                                                             |
|------------------------------|---------------------------------|------|-----------------------------------------------------------------------------------------|
| MEAN_JOB_CPU                 | INTERVAL DAY(9)<br>TO SECOND(9) |      | Average CPU time for a job submitted by this client (in seconds)                        |
| MEAN_JOB_ATTEMPTS            | NUMBER                          |      | Average number of attempts it takes to complete a task                                  |
| MEAN_INCOMING_TASKS_7_DAYS   | NUMBER                          |      | Average number of incoming tasks at the Maintenance Window Start over the last 7 days   |
| MEAN_INCOMING_TASKS_30_DAYS  | NUMBER                          |      | Average number of incoming tasks at the Maintenance Window Start over the last 30 days  |
| TOTAL_CPU_LAST_7_DAYS        | INTERVAL DAY(9)<br>TO SECOND(9) |      | Cumulative CPU time used by the jobs for this client over the last 7 days (in seconds)  |
| TOTAL_CPU_LAST_30_DAYS       | INTERVAL DAY(9)<br>TO SECOND(9) |      | Cumulative CPU time used by the jobs for this client over the last 30 days (in seconds) |
| MAX_DURATION_LAST_7_DAYS     | INTERVAL DAY(3)<br>TO SECOND(0) |      | Maximum elapsed time for a job over the last 7 days (in seconds)                        |
| MAX_DURATION_LAST_30_DAYS    | INTERVAL DAY(3)<br>TO SECOND(0) |      | Maximum elapsed time for a job over the last 30 days (in seconds)                       |
| WINDOW_DURATION_LAST_7_DAYS  | INTERVAL DAY(9)<br>TO SECOND(9) |      | Total time during which the client was active during the last 7 days                    |
| WINDOW_DURATION_LAST_30_DAYS | INTERVAL DAY(9)<br>TO SECOND(9) |      | Total time during which the client was active during the last 30 days                   |
| LAST_CHANGE                  | TIMESTAMP(6) WITH<br>TIME ZONE  |      | Timestamp of last configuration change for the client                                   |

## 5.194 DBA\_AUTOTASK\_CLIENT\_HISTORY

DBA\_AUTOTASK\_CLIENT\_HISTORY displays per-window history of job execution counts for each automated maintenance task.

This information is viewable in the Job History page of Enterprise Manager.

| Column            | Datatype                        | NULL | Description                                                                                 |
|-------------------|---------------------------------|------|---------------------------------------------------------------------------------------------|
| CLIENT_NAME       | VARCHAR2(64)                    |      | Name of the client                                                                          |
| WINDOW_NAME       | VARCHAR2(261)                   |      | Name of the maintenance window                                                              |
| WINDOW_START_TIME | TIMESTAMP(6) WITH<br>TIME ZONE  |      | Maintenance window start time                                                               |
| WINDOW_DURATION   | INTERVAL DAY(9)<br>TO SECOND(6) |      | Window duration (NULL for currently open window)                                            |
| JOBS_CREATED      | NUMBER                          |      | Number of jobs created on behalf of the client in this window                               |
| JOBS_STARTED      | NUMBER                          |      | Number of jobs started on behalf of the client during the maintenance window                |
| JOBS_COMPLETED    | NUMBER                          |      | Number of jobs successfully completed on behalf of the client during the maintenance window |
| WINDOW_END_TIME   | TIMESTAMP(6) WITH<br>TIME ZONE  |      | Window end time                                                                             |

## 5.195 DBA\_AUTOTASK\_CLIENT\_JOB

DBA\_AUTOTASK\_CLIENT\_JOB displays information about currently running Scheduler jobs created for automated maintenance tasks.

DBA\_AUTOTASK\_CLIENT\_JOB provides information about some objects targeted by those jobs, as well as some additional statistics from previous instantiations of the same task. Some of this additional data is taken from generic Scheduler views.

| Column               | Datatype      | NULL     | Description                                                                                                                                                                                                                                                          |
|----------------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CLIENT_NAME          | VARCHAR2(64)  |          | Name of the client                                                                                                                                                                                                                                                   |
| JOB_NAME             | VARCHAR2(65)  |          | Name of the job                                                                                                                                                                                                                                                      |
| JOB_SCHEDULER_STATUS | VARCHAR2(15)  |          | Job status: <ul style="list-style-type: none"> <li>• DISABLED</li> <li>• RETRY SCHEDULED</li> <li>• SCHEDULED</li> <li>• RUNNING</li> <li>• COMPLETED</li> <li>• BROKEN</li> <li>• FAILED</li> <li>• REMOTE</li> <li>• SUCCEEDED</li> <li>• CHAIN_STALLED</li> </ul> |
| TASK_NAME            | VARCHAR2(64)  |          | Name of the task being performed                                                                                                                                                                                                                                     |
| TASK_TARGET_TYPE     | VARCHAR2(64)  |          | Type of the target being processed                                                                                                                                                                                                                                   |
| TASK_TARGET_NAME     | VARCHAR2(513) | NOT NULL | Name of the target                                                                                                                                                                                                                                                   |
| TASK_PRIORITY        | VARCHAR2(7)   |          | Priority of the task: <ul style="list-style-type: none"> <li>• URGENT</li> <li>• HIGH</li> <li>• MEDIUM</li> <li>• LOW</li> </ul>                                                                                                                                    |
| TASK_OPERATION       | VARCHAR2(64)  |          | Operation performed on the object                                                                                                                                                                                                                                    |

## 5.196 DBA\_AUTOTASK\_JOB\_HISTORY

DBA\_AUTOTASK\_JOB\_HISTORY displays the history of automated maintenance task job runs. Jobs are added to this view after they finish executing.

| Column            | Datatype                     | NULL | Description                              |
|-------------------|------------------------------|------|------------------------------------------|
| CLIENT_NAME       | VARCHAR2(64)                 |      | Name of the automated maintenance client |
| WINDOW_NAME       | VARCHAR2(261)                |      | Name of the maintenance window           |
| WINDOW_START_TIME | TIMESTAMP(6) WITH TIME ZONE  |      | Start time of the maintenance window     |
| WINDOW_DURATION   | INTERVAL DAY(9) TO SECOND(6) |      | Duration of the maintenance window       |
| JOB_NAME          | VARCHAR2(261)                |      | Name of the maintenance job              |
| JOB_STATUS        | VARCHAR2(30)                 |      | Status of the maintenance job            |

| Column         | Datatype                     | NULL | Description                          |
|----------------|------------------------------|------|--------------------------------------|
| JOB_START_TIME | TIMESTAMP(6) WITH TIME ZONE  |      | Start time of the maintenance job    |
| JOB_DURATION   | INTERVAL DAY(3) TO SECOND(0) |      | Duration of the maintenance job      |
| JOB_ERROR      | NUMBER                       |      | Error code for the job (if any)      |
| JOB_INFO       | VARCHAR2(4000)               |      | Additional information about the job |

## 5.197 DBA\_AUTOTASK\_OPERATION

DBA\_AUTOTASK\_OPERATION displays all automated maintenance task operations for each client.

| Column                 | Datatype                    | NULL | Description                                                                                                                                                     |
|------------------------|-----------------------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CLIENT_NAME            | VARCHAR2(64)                |      | Name of the client                                                                                                                                              |
| OPERATION_NAME         | VARCHAR2(64)                |      | Name of the operation                                                                                                                                           |
| OPERATION_TAG          | VARCHAR2(3)                 |      | Tag for the operation                                                                                                                                           |
| PRIORITY_OVERRIDE      | VARCHAR2(7)                 |      | User-specified priority at which the task executes: <ul style="list-style-type: none"> <li>• URGENT</li> <li>• HIGH</li> <li>• MEDIUM</li> <li>• LOW</li> </ul> |
| ATTRIBUTES             | VARCHAR2(4000)              |      | Attributes of the operation                                                                                                                                     |
| USE_RESOURCE_ESTIMATES | VARCHAR2(5)                 |      | Indicates whether resource usage estimates are used for the operation (TRUE) or not (FALSE)                                                                     |
| STATUS                 | VARCHAR2(8)                 |      | Job status: <ul style="list-style-type: none"> <li>• ENABLED</li> <li>• DISABLED</li> </ul>                                                                     |
| LAST_CHANGE            | TIMESTAMP(6) WITH TIME ZONE |      | Timestamp of the last change                                                                                                                                    |

## 5.198 DBA\_AUTOTASK\_SCHEDULE

DBA\_AUTOTASK\_SCHEDULE displays the schedule of maintenance windows for the next 32 days for each client.

| Column      | Datatype                     | NULL | Description                                                                   |
|-------------|------------------------------|------|-------------------------------------------------------------------------------|
| WINDOW_NAME | VARCHAR2(128)                |      | Name of the maintenance window                                                |
| START_TIME  | TIMESTAMP(6) WITH TIME ZONE  |      | Projected start time of the window                                            |
| DURATION    | INTERVAL DAY(3) TO SECOND(0) |      | Currently defined duration of the window (NULL for the currently open window) |

## 5.199 DBA\_AUTOTASK\_SCHEDULE\_CONTROL

DBA\_AUTOTASK\_SCHEDULE\_CONTROL displays the status of automated tasks.

| Column             | Datatype                    | NULL     | Description                                                                                                                                                                                             |
|--------------------|-----------------------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DBID               | NUMBER                      | NOT NULL | Identifier of the database used by the task                                                                                                                                                             |
| TASK_ID            | NUMBER                      | NOT NULL | Identifier of the task                                                                                                                                                                                  |
| INSTANCE_NUMBER    | NUMBER                      | NOT NULL | Instance number for the task                                                                                                                                                                            |
| TASK_NAME          | VARCHAR2(64)                |          | Name of the task                                                                                                                                                                                        |
| STATUS             | VARCHAR2(10)                |          | Status of the task<br>Possible values: <ul style="list-style-type: none"> <li>• FAILED</li> <li>• RUNNING</li> <li>• SCHEDULED</li> <li>• SKIPPED</li> <li>• SUCCEEDED</li> <li>• TERMINATED</li> </ul> |
| ELAPSED_TIME       | NUMBER                      |          | Elapsed time of the last execution (in seconds)                                                                                                                                                         |
| LAST_SCHEDULE_TIME | TIMESTAMP(3) WITH TIME ZONE |          | Last time the task was scheduled to execute                                                                                                                                                             |
| LAST_EXEC_INSTNUM  | NUMBER                      |          | Oracle RAC instance number for the database instance used for the last execution of the task                                                                                                            |

## 5.200 DBA\_AUTOTASK\_SETTINGS

DBA\_AUTOTASK\_SETTINGS displays the settings for automated tasks.

| Column       | Datatype     | NULL     | Description                                                             |
|--------------|--------------|----------|-------------------------------------------------------------------------|
| DBID         | NUMBER       | NOT NULL | Identifier of the database used by the task                             |
| TASK_ID      | NUMBER       | NOT NULL | Identifier of the task                                                  |
| TASK_NAME    | VARCHAR2(64) |          | Name of the task                                                        |
| INTERVAL     | NUMBER       |          | The time interval between task invocations (in seconds)                 |
| MAX_RUN_TIME | NUMBER       |          | Maximum run time allowed for the task before it is stopped (in seconds) |
| ENABLED      | VARCHAR2(5)  |          | Indicates whether the task is enabled (TRUE) or not (FALSE)             |

### Note

This view is available starting with Oracle Database 21c.

## 5.201 DBA\_AUTOTASK\_STATUS

DBA\_AUTOTASK\_STATUS displays status information for automated maintenance.

| Column      | Datatype                    | NULL | Description                                                                                                                                                                           |
|-------------|-----------------------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS      | VARCHAR2(8)                 |      | Shows the status of automated maintenance. Possible values are: <ul style="list-style-type: none"> <li>• ENABLED</li> <li>• DISABLED</li> <li>• ALLOWED</li> <li>• INVALID</li> </ul> |
| LAST_CHANGE | TIMESTAMP(6) WITH TIME ZONE |      | Timestamp of last status change                                                                                                                                                       |

## 5.202 DBA\_AUTOTASK\_TASK

DBA\_AUTOTASK\_TASK displays information about current and past automated maintenance tasks.

| Column               | Datatype       | NULL     | Description                                                                                                                                                                                                                                                          |
|----------------------|----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CLIENT_NAME          | VARCHAR2(64)   |          | Name of the client                                                                                                                                                                                                                                                   |
| TASK_NAME            | VARCHAR2(64)   |          | Name of the task being performed                                                                                                                                                                                                                                     |
| TASK_TARGET_TYPE     | VARCHAR2(64)   |          | Target type of the task                                                                                                                                                                                                                                              |

| LAST_TRY_IO_RATE     | NUMBER       |      | I/O rate during the last run (in seconds)                                                                                                                                                                                                                                   |
| LAST_TRY_UNDO_RATE   | NUMBER       |      | UNDO generation rate during the last run (in seconds)                                                                                                                                                                                                                       |
| LAST_TRY_CPU_WAIT    | NUMBER       |      | Time spent waiting for CPU during the last run (in seconds)                                                                                                                                                                                                                 |
| LAST_TRY_IO_WAIT     | NUMBER       |      | Time spent waiting for I/O during the last run (in seconds)                                                                                                                                                                                                                 |
| LAST_TRY_UNDO_WAIT   | NUMBER       |      | Time spent waiting for UNDO during the last run (in seconds)                                                                                                                                                                                                                |
| LAST_TRY_TEMP_WAIT   | NUMBER       |      | Time spent waiting for temporary space during the last run (in seconds)                                                                                                                                                                                                     |
| LAST_TRY_CONCURRENCY | NUMBER       |      | Concurrency wait time during the last run (in seconds)                                                                                                                                                                                                                      |
| LAST_TRY_CONTENTION  | NUMBER       |      | Contention wait time during the last run (in seconds)                                                                                                                                                                                                                       |
| MEAN_GOOD_DURATION   | NUMBER       |      | Average elapsed time for successful executions of this task (in seconds)                                                                                                                                                                                                    |
| MEAN_GOOD_CPU_TIME   | NUMBER       |      | Average CPU time for successful executions of this task (in seconds)                                                                                                                                                                                                        |
| MEAN_GOOD_TEMP       | NUMBER       |      | Average temporary space usage for successful executions of this task (in KB)                                                                                                                                                                                                |
| MEAN_GOOD_DOP        | NUMBER       |      | Average peak degree of parallelism for successful executions of this task                                                                                                                                                                                                   |
| MEAN_GOOD_IO         | NUMBER       |      | Average I/O utilization for successful executions of this task (in KB per second)                                                                                                                                                                                           |
| MEAN_GOOD_UNDO       | NUMBER       |      | Average UNDO generation rate for this task (in KB per second)                                                                                                                                                                                                               |
| MEAN_GOOD_CPU_WAIT   | NUMBER       |      | Average time waiting for CPU for successful executions of this task (in seconds)                                                                                                                                                                                            |
| MEAN_GOOD_IO_WAIT    | NUMBER       |      | Average time waiting for I/O for successful executions of this task (in seconds)                                                                                                                                                                                            |
| MEAN_GOOD_UNDO_WAIT  | NUMBER       |      | Average time waiting for UNDO for successful executions of this task (in seconds)                                                                                                                                                                                           |
| MEAN_GOOD_TEMP_WAIT  | NUMBER       |      | Average time waiting for temporary space for successful executions of this task (in seconds)                                                                                                                                                                                |

| Column                | Datatype       | NULL | Description                                                                       |
|-----------------------|----------------|------|-----------------------------------------------------------------------------------|
| MEAN_GOOD_CONCURRENCY | NUMBER         |      | Average concurrency wait time for successful executions of this task (in seconds) |
| MEAN_GOOD_CONTENTION  | NUMBER         |      | Average contention wait time for successful executions of this task (in seconds)  |
| INFO_FIELD_1          | VARCHAR2(4000) |      | Client-interpreted information                                                    |
| INFO_FIELD_2          | CLOB           |      | Client-interpreted information                                                    |
| INFO_FIELD_3          | NUMBER         |      | Client-interpreted information                                                    |
| INFO_FIELD_4          | NUMBER         |      | Client-interpreted information                                                    |

## 5.203 DBA\_AUTOTASK\_WINDOW\_CLIENTS

DBA\_AUTOTASK\_WINDOW\_CLIENTS displays the windows that belong to MAINTENANCE\_WINDOW\_GROUP, along with the Enabled or Disabled status for the window for each maintenance task.

DBA\_AUTOTASK\_WINDOW\_CLIENTS is primarily used by Enterprise Manager.

| Column           | Datatype                    | NULL     | Description                                                                                                                         |
|------------------|-----------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------|
| WINDOW_NAME      | VARCHAR2(128)               | NOT NULL | Name of the maintenance window                                                                                                      |
| WINDOW_NEXT_TIME | TIMESTAMP(6) WITH TIME ZONE |          | Next scheduled window open time unless the window is disabled                                                                       |
| WINDOW_ACTIVE    | VARCHAR2(5)                 |          | Indicates whether the window is currently active (open) (TRUE) or not (FALSE)                                                       |
| AUTOTASK_STATUS  | VARCHAR2(8)                 |          | Status of the automated maintenance task subsystem: <ul style="list-style-type: none"> <li>• ENABLED</li> <li>• DISABLED</li> </ul> |
| OPTIMIZER_STATS  | VARCHAR2(8)                 |          | Status of optimizer statistics gathering: <ul style="list-style-type: none"> <li>• ENABLED</li> <li>• DISABLED</li> </ul>           |
| SEGMENT_ADVISOR  | VARCHAR2(8)                 |          | Status of Segment Advisor: <ul style="list-style-type: none"> <li>• ENABLED</li> <li>• DISABLED</li> </ul>                          |
| SQL_TUNE_ADVISOR | VARCHAR2(8)                 |          | Status of SQL Tuning Advisor: <ul style="list-style-type: none"> <li>• ENABLED</li> <li>• DISABLED</li> </ul>                       |

## 5.204 DBA\_AUTOTASK\_WINDOW\_HISTORY

DBA\_AUTOTASK\_WINDOW\_HISTORY displays historical information for automated maintenance task windows.

| Column            | Datatype                    | NULL | Description                    |
|-------------------|-----------------------------|------|--------------------------------|
| WINDOW_NAME       | VARCHAR2(261)               |      | Name of the maintenance window |
| WINDOW_START_TIME | TIMESTAMP(6) WITH TIME ZONE |      | Window start time              |

| Column          | Datatype                       | NULL | Description     |
|-----------------|--------------------------------|------|-----------------|
| WINDOW_END_TIME | TIMESTAMP(6) WITH<br>TIME_ZONE |      | Window end time |

## 5.205 DBA\_AW\_PS

DBA\_AW\_PS describes the page spaces in all analytic workspaces in the database. Its columns are the same as those in ALL\_AW\_PS.

### ① See Also

["ALL\\_AW\\_PS"](#)

## 5.206 DBA\_AWS

DBA\_AWS describes all analytic workspaces in the database. Its columns are the same as those in ALL\_AWS.

### ① See Also

["ALL\\_AWS"](#)

## 5.207 DBA\_BASE\_TABLE\_MVIEWS

DBA\_BASE\_TABLE\_MVIEWS describes all materialized views using materialized view logs in the database. Its columns are the same as those in ALL\_BASE\_TABLE\_MVIEWS.

### ① See Also

["ALL\\_BASE\\_TABLE\\_MVIEWS"](#)

## 5.208 DBA\_BLOCKCHAIN\_TABLES

DBA\_BLOCKCHAIN\_TABLES describes all blockchain tables in the database. Its columns are the same as those in ALL\_BLOCKCHAIN\_TABLES.

### ① See Also

["ALL\\_BLOCKCHAIN\\_TABLES"](#)

## 5.209 DBA\_BLOCKERS

DBA\_BLOCKERS displays a session if it is not waiting for a locked object but is holding a lock on an object for which another session is waiting.

In an Oracle RAC environment, this only applies if the blocker is on the same instance.

| Column          | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------|----------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| HOLDING_SESSION | NUMBER   |      | Session holding a lock                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| CON_ID          | NUMBER   |      | The ID of the container to which the data pertains.<br>Possible values include: <ul style="list-style-type: none"><li>• 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs.</li><li>• 1: This value is used for rows containing data that pertain to only the root</li><li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |

## 5.210 DBA\_CAPTURE

DBA\_CAPTURE displays information about all capture processes in the database. Its columns are the same as those in ALL\_CAPTURE.

### ① See Also

"[ALL\\_CAPTURE](#)"

## 5.211 DBA\_CAPTURE\_EXTRA\_ATTRIBUTES

DBA\_CAPTURE\_EXTRA\_ATTRIBUTES displays information about the extra attributes for all capture processes in the database. Its columns are the same as those in ALL\_CAPTURE\_EXTRA\_ATTRIBUTES.

### ① See Also

"[ALL\\_CAPTURE\\_EXTRA\\_ATTRIBUTES](#)"

## 5.212 DBA\_CAPTURE\_PARAMETERS

DBA\_CAPTURE\_PARAMETERS displays information about the parameters for all capture processes in the database. Its columns are the same as those in ALL\_CAPTURE\_PARAMETERS.

**① See Also**

["ALL\\_CAPTURE\\_PARAMETERS"](#)

## 5.213 DBA\_CAPTURE\_PREPARED\_DATABASE

DBA\_CAPTURE\_PREPARED\_DATABASE displays information about when the local database was prepared for instantiation. Its columns are the same as those in ALL\_CAPTURE\_PREPARED\_DATABASE.

**① See Also**

["ALL\\_CAPTURE\\_PREPARED\\_DATABASE"](#)

## 5.214 DBA\_CAPTURE\_PREPARED\_SCHEMAS

DBA\_CAPTURE\_PREPARED\_SCHEMAS displays information about all schemas prepared for instantiation at the local database. Its columns are the same as those in ALL\_CAPTURE\_PREPARED\_SCHEMAS.

**① See Also**

["ALL\\_CAPTURE\\_PREPARED\\_SCHEMAS"](#)

## 5.215 DBA\_CAPTURE\_PREPARED\_TABLES

DBA\_CAPTURE\_PREPARED\_TABLES displays information about all tables prepared for instantiation at the local database. Its columns are the same as those in ALL\_CAPTURE\_PREPARED\_TABLES.

**① See Also**

["ALL\\_CAPTURE\\_PREPARED\\_TABLES"](#)

## 5.216 DBA\_CATALOG

DBA\_CATALOG lists all tables, views, clusters, synonyms, and sequences in the database. Its columns are the same as those in ALL\_CATALOG.

### ① See Also

["ALL\\_CATALOG"](#)

## 5.217 DBA\_CDB\_RSRC\_PLAN\_DIRECTIVES

DBA\_CDB\_RSRC\_PLAN\_DIRECTIVES provides information about all the CDB resource plan directives.

### ① Note

ORA\$DEFAULT\_PDB\_DIRECTIVE is the default directive for PDBs. For more information about ORA\$DEFAULT\_PDB\_DIRECTIVE, see *Oracle Multitenant Administrator's Guide*.

| Column                | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                          |
|-----------------------|---------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PLAN                  | VARCHAR2(128) |      | Name of the CDB resource plan to which this directive belongs                                                                                                                                                                                                                                                        |
| PLUGGABLE_DATABASE    | VARCHAR2(128) |      | Name of the PDB referred to. NULL for profile directives                                                                                                                                                                                                                                                             |
| PROFILE               | VARCHAR2(128) |      | For internal use only                                                                                                                                                                                                                                                                                                |
| DIRECTIVE_TYPE        | VARCHAR2(30)  |      | For internal use only                                                                                                                                                                                                                                                                                                |
| SHARES                | NUMBER        |      | Resource allocation, expressed in shares                                                                                                                                                                                                                                                                             |
| UTILIZATION_LIMIT     | NUMBER        |      | Maximum resource utilization allowed, expressed in percentage                                                                                                                                                                                                                                                        |
| PARALLEL_SERVER_LIMIT | NUMBER        |      | Maximum percentage of the parallel target used before queueing subsequent parallel queries                                                                                                                                                                                                                           |
| MEMORY_MIN            | NUMBER        |      | The percentage of Exadata Smart Flash Cache and Exadata PMEM cache that is guaranteed to the PDB<br>This percentage is based on the total amount of space allocated to the CDB for Exadata Smart Flash Cache and Exadata PMEM cache.<br>See <i>Oracle Exadata System Software User's Guide</i> for more information. |
| MEMORY_LIMIT          | NUMBER        |      | The maximum percentage of Exadata Smart Flash Cache and Exadata PMEM cache that the PDB can use<br>This percentage is based on the total amount of space allocated to the CDB for Exadata Smart Flash Cache and Exadata PMEM cache.<br>See <i>Oracle Exadata System Software User's Guide</i> for more information.  |

| Column    | Datatype       | NULL | Description                                                                          |
|-----------|----------------|------|--------------------------------------------------------------------------------------|
| COMMENTS  | VARCHAR2(2000) |      | Text comment on the resource plan directive                                          |
| STATUS    | VARCHAR2(128)  |      | PENDING if it is part of the pending area, NULL otherwise                            |
| MANDATORY | VARCHAR2(3)    |      | Whether the resource plan directive is mandatory. Mandatory plans cannot be deleted. |

**Note**

Oracle recommends that you do not use the `parallel_server_limit` directive in a CDB resource plan.

## 5.218 DBA\_CDB\_RSRC\_PLANS

DBA\_CDB\_RSRC\_PLANS provides information about all the CDB resource plans.

| Column    | Datatype       | NULL     | Description                                                                |
|-----------|----------------|----------|----------------------------------------------------------------------------|
| PLAN_ID   | NUMBER         | NOT NULL | CDB resource plan ID                                                       |
| PLAN      | VARCHAR2(128)  |          | CDB resource plan name                                                     |
| COMMENTS  | VARCHAR2(2000) |          | Text comment on the CDB resource plan                                      |
| STATUS    | VARCHAR2(128)  |          | PENDING if it is part of the pending area, NULL otherwise                  |
| MANDATORY | VARCHAR2(3)    |          | Whether the resource plan is mandatory. Mandatory plans cannot be deleted. |

## 5.219 DBA\_CERTIFICATES

DBA\_CERTIFICATES displays all certificates in the database which are used for signature verification for blockchain tables. Its columns are the same as those in ALL\_CERTIFICATES.

**Note**

This view is available starting with Oracle Database 21c.

**See Also**

["ALL\\_CERTIFICATES"](#)

## 5.220 DBA\_CHANGE\_NOTIFICATION\_REGS

DBA\_CHANGE\_NOTIFICATION\_REGS describes all change notification registrations in the database.

### Related View

USER\_CHANGE\_NOTIFICATION\_REGS describes the change notification registrations owned by the current user. This view does not display the USERNAME column.

| Column            | Datatype      | NULL | Description                                                                                                                 |
|-------------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------|
| USERNAME          | VARCHAR2(31)  |      | For invoker's rights units, the user creating the registration<br>For definer's rights units, the owner of the registration |
| REGID             | NUMBER        |      | Internal registration ID                                                                                                    |
| REGFLAGS          | NUMBER        |      | Registration flags                                                                                                          |
| CALLBACK          | VARCHAR2(256) |      | Notification callback                                                                                                       |
| OPERATIONS_FILTER | NUMBER        |      | Operations filter (if specified)                                                                                            |
| CHANGELAG         | NUMBER        |      | Transaction lag between notifications (if specified)                                                                        |
| TIMEOUT           | NUMBER        |      | Registration timeout (if specified)                                                                                         |
| TABLE_NAME        | VARCHAR2(63)  |      | Name of the registered table                                                                                                |

## 5.221 DBA\_CHECKED\_ROLES

DBA\_CHECKED\_ROLES lists the roles (without role grant paths) that are used for the role analysis policies reported by the DBMS\_CAPTURE.GENERATE\_RESULT procedure.

This view provides access to analyzed role records in SYS tables.

You must have the CAPTURE\_ADMIN role to access this view.

| Column       | Datatype      | NULL     | Description                                                                     |
|--------------|---------------|----------|---------------------------------------------------------------------------------|
| CAPTURE      | VARCHAR2(128) | NOT NULL | Name of a role analysis policy                                                  |
| SEQUENCE     | NUMBER        | NOT NULL | The sequence number of the role analysis run during which the role was reported |
| OS_USER      | VARCHAR2(128) |          | Operating system login username                                                 |
| USERHOST     | VARCHAR2(128) |          | Client host machine name                                                        |
| MODULE       | VARCHAR2(64)  |          | Module name                                                                     |
| USERNAME     | VARCHAR2(128) | NOT NULL | Name of the user whose role was reported                                        |
| CHECKED_ROLE | VARCHAR2(128) |          | Checked role                                                                    |
| RUN_NAME     | VARCHAR2(128) |          | The name of the run during which the role was reported                          |

① **See Also**  
["DBA\\_CHECKED\\_ROLES\\_PATH"](#)

## 5.222 DBA\_CHECKED\_ROLES\_PATH

DBA\_CHECKED\_ROLES\_PATH lists the roles that are used for the role analysis policies reported by the DBMS\_PRIVILEGE\_CAPTURE.GENERATE\_RESULT procedure.

This view provides access to analyzed role records in SYS tables.

You must have the CAPTURE\_ADMIN role to access this view.

| Column       | Datatype      | NULL     | Description                                                                     |
|--------------|---------------|----------|---------------------------------------------------------------------------------|
| CAPTURE      | VARCHAR2(128) | NOT NULL | Name of a role analysis policy                                                  |
| SEQUENCE     | NUMBER        | NOT NULL | The sequence number of the role analysis run during which the role was reported |
| OS_USER      | VARCHAR2(128) |          | Operating system login username                                                 |
| USERHOST     | VARCHAR2(128) |          | Client host machine name                                                        |
| MODULE       | VARCHAR2(64)  |          | Module name                                                                     |
| USERNAME     | VARCHAR2(128) | NOT NULL | Name of the user whose role was reported                                        |
| CHECKED_ROLE | VARCHAR2(128) |          | Checked role                                                                    |
| PATH         | GRANT_PATH    |          | Role grant paths                                                                |
| RUN_NAME     | VARCHAR2(128) |          | The name of the run during which the role was reported                          |

① **See Also**  
["DBA\\_CHECKED\\_ROLES"](#)

## 5.223 DBA\_CLU\_COLUMNS

DBA\_CLU\_COLUMNS maps all table columns to related cluster columns.

### Related View

USER\_CLU\_COLUMNS maps all table columns owned by the current user to related cluster columns. This view does not display the OWNER column.

| Column          | Datatype       | NULL     | Description                                       |
|-----------------|----------------|----------|---------------------------------------------------|
| OWNER           | VARCHAR2(128)  | NOT NULL | Owner of the cluster                              |
| CLUSTER_NAME    | VARCHAR2(128)  | NOT NULL | Name of the cluster                               |
| CLU_COLUMN_NAME | VARCHAR2(128)  | NOT NULL | Key column in the cluster                         |
| TABLE_NAME      | VARCHAR2(128)  | NOT NULL | Clustered table name                              |
| TAB_COLUMN_NAME | VARCHAR2(4000) |          | Key column or attribute of the object type column |

**① See Also**

["USER\\_CLU\\_COLUMNS"](#)

## 5.224 DBA\_CLUSTER\_HASH\_EXPRESSIONS

DBA\_CLUSTER\_HASH\_EXPRESSIONS lists hash functions for all hash clusters in the database. Its columns are the same as those in ALL\_CLUSTER\_HASH\_EXPRESSIONS.

**① See Also**

["ALL\\_CLUSTER\\_HASH\\_EXPRESSIONS"](#)

## 5.225 DBA\_CLUSTERING\_DIMENSIONS

DBA\_CLUSTERING\_DIMENSIONS describes dimension tables associated with all tables with an attribute clustering clause in the database. Its columns are the same as those in ALL\_CLUSTERING\_DIMENSIONS.

**① See Also**

- ["ALL\\_CLUSTERING\\_DIMENSIONS"](#)
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 5.226 DBA\_CLUSTERING\_JOINS

DBA\_CLUSTERING\_JOINS describes joins to the dimension tables associated with all tables with an attribute clustering clause in the database. Its columns are the same as those in ALL\_CLUSTERING\_JOINS.

**① See Also**

- ["ALL\\_CLUSTERING\\_JOINS"](#)
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 5.227 DBA\_CLUSTERING\_KEYS

DBA\_CLUSTERING\_KEYS describes clustering keys for all tables with an attribute clustering clause. Its columns are the same as those in ALL\_CLUSTERING\_KEYS.

### ① See Also

- ["ALL\\_CLUSTERING\\_KEYS"](#)
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 5.228 DBA\_CLUSTERING\_TABLES

DBA\_CLUSTERING\_TABLES describes all the tables with an attribute clustering clause. Its columns are the same as those in ALL\_CLUSTERING\_TABLES.

### ① See Also

- ["ALL\\_CLUSTERING\\_TABLES"](#)
- *Oracle Database Data Warehousing Guide* for information about attribute clustering with zone maps

## 5.229 DBA\_CLUSTERS

DBA\_CLUSTERS describes all clusters in the database. Its columns are the same as those in ALL\_CLUSTERS.

### ① Note

["ALL\\_CLUSTERS"](#)

## 5.230 DBA\_CODE\_ROLE\_PRIVS

DBA\_CODE\_ROLE\_PRIVS describes all the roles that are associated with program units in the database. Its columns are the same as those in ALL\_CODE\_ROLE\_PRIVS.

### ① See Also

["ALL\\_CODE\\_ROLE\\_PRIVS"](#)

## 5.231 DBA\_COL\_COMMENTS

DBA\_COL\_COMMENTS displays comments on the columns of all tables and views in the database. Its columns are the same as those in ALL\_COL\_COMMENTS.

### ① See Also

["ALL\\_COL\\_COMMENTS"](#)

## 5.232 DBA\_COL\_PENDING\_STATS

DBA\_COL\_PENDING\_STATS describes the pending statistics of all columns in the database. Its columns are the same as those in ALL\_COL\_PENDING\_STATS.

### ① See Also

["ALL\\_COL\\_PENDING\\_STATS"](#)

## 5.233 DBA\_COL\_PRIVS

DBA\_COL\_PRIVS describes all column object grants in the database.

### Related View

USER\_COL\_PRIVS describes the column object grants for which the current user is the object owner, grantor, or grantee.

| Column      | Datatype      | NULL | Description                                                                                                                                                                                                                                            |
|-------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GRANTEE     | VARCHAR2(128) |      | Name of the user or role to whom access was granted                                                                                                                                                                                                    |
| OWNER       | VARCHAR2(128) |      | Owner of the object                                                                                                                                                                                                                                    |
| TABLE_NAME  | VARCHAR2(128) |      | Name of the object                                                                                                                                                                                                                                     |
| COLUMN_NAME | VARCHAR2(128) |      | Name of the column                                                                                                                                                                                                                                     |
| GRANTOR     | VARCHAR2(128) |      | Name of the user who performed the grant                                                                                                                                                                                                               |
| PRIVILEGE   | VARCHAR2(40)  |      | Privilege on the column                                                                                                                                                                                                                                |
| GRANTABLE   | VARCHAR2(3)   |      | Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)                                                                                                                                                                    |
| COMMON      | VARCHAR2(3)   |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"><li>• YES if the privilege was granted commonly (CONTAINER=ALL was used)</li><li>• NO if the privilege was granted locally (CONTAINER=ALL was not used)</li></ul> |
| INHERITED   | VARCHAR2(3)   |      | Indicates whether the privilege grant was inherited from another container (YES) or not (NO)                                                                                                                                                           |

## 5.234 DBA\_COLL\_TYPES

DBA\_COLL\_TYPES describes all named collection types (arrays, nested tables, object tables, and so on) in the database. Its columns are the same as those in ALL\_COLL\_TYPES.

① **Note**  
["ALL\\_COLL\\_TYPES"](#)

## 5.235 DBA\_COMMON\_AUDIT\_TRAIL

DBA\_COMMON\_AUDIT\_TRAIL displays all standard and fine-grained audit trail entries, mandatory and SYS audit records written in XML format.

① **Note**

This view is relevant when using traditional auditing. Traditional auditing is deprecated in Oracle Database 21c. Oracle recommends that you instead use unified auditing, which enables selective and more effective auditing inside Oracle Database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

| Column          | Datatype     | NULL | Description                                                                                                                                                                                                                         |
|-----------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 5.237 DBA\_COMPARISON\_COLUMNS

DBA\_COMPARISON\_COLUMNS displays information about the columns for all comparison objects in the database.

**Related View**

USER\_COMPARISON\_COLUMNS displays information about the columns for the comparison objects owned by the current user. This view does not display the OWNER column.

| Column          | Datatype      | NULL     | Description                                                    |
|-----------------|---------------|----------|----------------------------------------------------------------|
| OWNER           | VARCHAR2(128) | NOT NULL | Owner of the comparison                                        |
| COMPARISON_NAME | VARCHAR2(128) | NOT NULL | Name of the comparison                                         |
| COLUMN_POSITION | NUMBER        | NOT NULL | Position of the column                                         |
| COLUMN_NAME     | VARCHAR2(128) | NOT NULL | Name of the column                                             |
| INDEX_COLUMN    | VARCHAR2(1)   |          | Indicates whether the column is an index column (Y) or not (N) |

## 5.238 DBA\_COMPARISON\_ROW\_DIF

DBA\_COMPARISON\_ROW\_DIF displays information about the differing rows in all comparison scans in the database.

**Related View**

USER\_COMPARISON\_ROW\_DIF displays information about the differing rows in the comparison scans owned by the current user. This view does not display the OWNER column.

| Column          | Datatype       | NULL     | Description                             |
|-----------------|----------------|----------|-----------------------------------------|
| OWNER           | VARCHAR2(128)  | NOT NULL | Owner of the comparison                 |
| COMPARISON_NAME | VARCHAR2(128)  | NOT NULL | Name of the comparison                  |
| SCAN_ID         | NUMBER         | NOT NULL | Scan ID for the comparison scan         |
| LOCAL_ROWID     | ROWID          |          | Local rowid of the differing row        |
| REMOTE_ROWID    | ROWID          |          | Remote rowid of the differing row       |
| INDEX_VALUE     | VARCHAR2(4000) |          | Index column value of the differing row |

| Column           | Datatype     | NULL | Description                                                                                         |
|------------------|--------------|------|-----------------------------------------------------------------------------------------------------|
| STATUS           | VARCHAR2(3)  |      | Status of the differing row: <ul style="list-style-type: none"> <li>• SUC</li> <li>• DIF</li> </ul> |
| LAST_UPDATE_TIME | TIMESTAMP(6) |      | Time that this row was last updated                                                                 |

## 5.240 DBA\_COMPARISON\_SCAN\_VALUES

DBA\_COMPARISON\_SCAN\_VALUES displays information about the values for all comparison scans in the database.

### Related View

USER\_COMPARISON\_SCAN\_VALUES displays information about the values for the comparison scans owned by the current user. This view does not display the OWNER column.

| Column           | Datatype       | NULL     | Description                                   |
|------------------|----------------|----------|-----------------------------------------------|
| OWNER            | VARCHAR2(128)  | NOT NULL | Owner of the comparison scan                  |
| COMPARISON_SCAN  | VARCHAR2(128)  | NOT NULL | Name of the comparison scan                   |
| SCAN_ID          | NUMBER         | NOT NULL | Scan ID                                       |
| COLUMN_POSITION  | NUMBER         | NOT NULL | Column position, as in DBA_COMPARISON_COLUMNS |
| MIN_VALUE        | VARCHAR2(4000) |          | Minimum value of the scan                     |
| MAX_VALUE        | VARCHAR2(4000) |          | Maximum value of the scan                     |
| LAST_UPDATE_TIME | TIMESTAMP(6)   |          | Time that this row was last updated           |

## 5.241 DBA\_CONNECT\_ROLE\_GRANTEES

DBA\_CONNECT\_ROLE\_GRANTEES displays information about users who are granted the CONNECT privilege.

| Column                         | Datatype       | NULL | Description                                                                        |
|--------------------------------|----------------|------|------------------------------------------------------------------------------------|
| GRANTEE                        | VARCHAR2(128)  |      | User or schema to which the CONNECT role is granted                                |
| PATH_OF_CONNECT_ROLE_GRA<br>NT | VARCHAR2(4000) |      | The path of role inheritance through which the grantee is granted the CONNECT role |
| ADMIN_OPT                      | VARCHAR2(3)    |      | Whether or not the grantee was granted the ADMIN option for the CONNECT role       |

## 5.242 DBA\_CONNECTION\_TESTS

DBA\_CONNECTION\_TESTS provides information about connection tests in use for CDBs and PDBs.

This view shows SQL and non-SQL connection tests.

| Column               | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PREDEFINED           | VARCHAR2(1)   |      | Indicates whether the test is predefined or custom. Possible values: <ul style="list-style-type: none"> <li>Y: The test is predefined.</li> <li>N: The test is added by the user.</li> </ul> Predefined tests can be disabled, but not deleted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| CONNECTION_TEST_TYPE | VARCHAR2(15)  |      | Indicates the test type. Possible values include: <ul style="list-style-type: none"> <li>ENDREQUEST_TEST: Used when request boundaries are received at the RDBMS. Oracle Connection Pools and all application servers using JDK9 send request boundaries to the RDBMS starting in Oracle Database 12c Release 2 (12.2.0.1).</li> <li>PING_TEST: Used when you are using tests that use the ping function to test the connection, including the OCIPing, isValid, isUsable, connection.status, and PING_DATABASE connection tests.</li> <li>SQL_TEST: Application servers and applications use SQL tests to check the validity of a connection. Use this value for SQL based connection tests, for example (SELECT 1 FROM DUAL;)</li> </ul> The test type values are the CONNECTION_TEST_TYPE parameter values that can be specified for the ENABLE_CONNECTION_TEST and DISABLE_CONNECTION_TEST procedures for the DBMS_APP_CONT_ADMIN PL/SQL package. |
| SQL_CONNECTION_TEST  | VARCHAR2(64)  |      | SQL test. This column is null for non-SQL tests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| SERVICE_NAME         | VARCHAR2(128) |      | Optional service name qualifier                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| ENABLED              | VARCHAR2(1)   |      | Indicates whether the SQL test is enabled. Possible values: <ul style="list-style-type: none"> <li>Y: The test is enabled.</li> <li>N: The test is not enabled.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## 5.243 DBA\_CONS\_COLUMNS

DBA\_CONS\_COLUMNS describes all columns in the database that are specified in constraints. Its columns are the same as those in ALL\_CONS\_COLUMNS.

#### ① See Also

["ALL\\_CONS\\_COLUMNS"](#)

## 5.244 DBA\_CONS\_OBJ\_COLUMNS

DBA\_CONS\_OBJ\_COLUMNS displays information about the types that object columns (or attributes) or collection elements have been constrained to, in all tables in the database. Its columns are the same as those in ALL\_CONS\_OBJ\_COLUMNS.

### ① See Also

["ALL\\_CONS\\_OBJ\\_COLUMNS"](#)

## 5.245 DBA\_CONSTRAINTS

DBA\_CONSTRAINTS describes all constraint definitions on all tables in the database. Its columns are the same as those in ALL\_CONSTRAINTS.

### ① See Also

["ALL\\_CONSTRAINTS"](#)

## 5.246 DBA\_CONTAINER\_DATA

DBA\_CONTAINER\_DATA displays default (user-level) and object-specific CONTAINER\_DATA attributes for container data objects.

Objects created with the CONTAINER\_DATA clause include CONTAINER\_DATA attributes.

| Column         | Datatype      | NULL | Description                                                                           |
|----------------|---------------|------|---------------------------------------------------------------------------------------|
| USERNAME       | VARCHAR2(128) |      | Name of the user whose attribute is described by this row                             |
| DEFAULT_ATTR   | CHAR2(1)      |      | An indicator of whether the attribute is a default attribute                          |
| OWNER          | VARCHAR2(128) |      | Name of the object owner if the attribute is object-specific                          |
| OBJECT_NAME    | VARCHAR2(128) |      | Name of the object if the attribute is object-specific                                |
| ALL_CONTAINERS | VARCHAR2(1)   |      | An indicator of whether this attribute applies to all containers                      |
| CONTAINER_NAME | VARCHAR2(128) |      | Name of a container included in this attribute if it does not apply to all containers |

# 5.247 DBA\_CONTEXT

DBA\_CONTEXT provides all context namespace information in the database.

**Related View**

ALL\_CONTEXT describes all context namespaces in the current session for which attributes and values have been specified using the DBMS\_SESSION.SET\_CONTEXT procedure. This view does not describe the TYPE and ORIGIN\_CON\_ID columns.

| Column        | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                      |

| INACTIVITY_TIMEOUT     | NUMBER        |      | Maximum time (in seconds) that the pooled server can stay idle in the pool. After this time, the server is terminated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| MAX_THINK_TIME         | NUMBER        |      | Maximum time of inactivity (in seconds) for a client after obtaining a pooled server from the pool. After obtaining a pooled server from the pool, if the client application does not issue a database call for the time specified by this column, then the pooled server is freed and the client connection is terminated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| MAX_USE_SESSION        | NUMBER        |      | Number of times a pooled server can be taken and released to the pool                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| MAX_LIFETIME_SESSION   | NUMBER        |      | Time (in seconds) for a pooled server to live in the pool                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| NUM_CBROK              | NUMBER        |      | Number of connection brokers spawned per instance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| MAXCONN_CBROK          | NUMBER        |      | Maximum number of connections per connection broker                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| MAX_TXN_THINK_TIME     | NUMBER        |      | Maximum time of inactivity (in seconds) for a client after it obtains a pooled server from the pool and starts a transaction. If the client application does not issue a database call for the time specified by MAX_TXN_THINK_TIME while in a transaction, the pooled server is freed, the transaction is rolled back, and the client connection is terminated. The default value is 0, which means MAX_THINK_TIME applies for all connections, irrespective of transactions being open or not in those connections. Care should be taken while setting the two parameters MAX_THINK_TIME and MAX_TXN_THINK_TIME to higher values, as it would mean the servers are not released to the pool for a longer time, even if clients are not responding for any reason, thereby making other users wait unnecessarily. |

| Column | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------|----------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   |      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"><li>• 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs.</li><li>• 1: This value is used for rows containing data that pertain to only the root</li><li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li></ul> |

## 5.249 DBA\_CPU\_USAGE\_STATISTICS

DBA\_CPU\_USAGE\_STATISTICS displays database CPU usage statistics.

| Column           | Datatype     | NULL     | Description                         |
|------------------|--------------|----------|-------------------------------------|
| DBID             | NUMBER       | NOT NULL | Database ID                         |
| VERSION          | VARCHAR2(17) | NOT NULL | Database version                    |
| TIMESTAMP        | DATE         | NOT NULL | Time at which the CPU usage changed |
| CPU_COUNT        | NUMBER       |          | CPU count of the database           |
| CPU_CORE_COUNT   | NUMBER       |          | CPU core count of the database      |
| CPU_SOCKET_COUNT | NUMBER       |          | CPU socket count of the database    |

## 5.250 DBA\_CQ\_NOTIFICATION\_QUERIES

DBA\_CQ\_NOTIFICATION\_QUERIES describes the registered queries for all CQ notifications in the database.

#### Related View

USER\_CQ\_NOTIFICATION\_QUERIES describes the registered queries for the CQ notifications owned by the current user. This view does not display the USERNAME column.

| Column    | Datatype | NULL | Description                                       |
|-----------|----------|------|---------------------------------------------------|
| QUERYID   | NUMBER   |      | ID of the query                                   |
| QUERYTEXT | CLOB     |      | Text of the query                                 |
| REGID     | NUMBER   |      | Registration ID that the query is registered with |

| Column   | Datatype     | NULL | Description                               |
|----------|--------------|------|-------------------------------------------|
| USERNAME | VARCHAR2(31) |      | Name of the user who registered the query |

① **See Also**

"[USER\\_CQ\\_NOTIFICATION\\_QUERIES](#)"

## 5.251 DBA\_CREDENTIALS

DBA\_CREDENTIALS lists all credentials in the database. Its columns are the same as those in ALL\_CREDENTIALS.

① **See Also**

"[ALL\\_CREDENTIALS](#)"

## 5.252 DBA\_CUBE\_ATTR\_VISIBILITY

DBA\_CUBE\_ATTR\_VISIBILITY describes all OLAP attributes visible for the dimensions, hierarchies, and levels in the database. Its columns are the same as those in ALL\_CUBE\_ATTR\_VISIBILITY.

① **See Also**

"[ALL\\_CUBE\\_ATTR\\_VISIBILITY](#)"

## 5.253 DBA\_CUBE\_ATTRIBUTES

DBA\_CUBE\_ATTRIBUTES describes the attributes for all OLAP cube dimensions in the database. Its columns are the same as those in ALL\_CUBE\_ATTRIBUTES.

① **See Also**

"[ALL\\_CUBE\\_ATTRIBUTES](#)"

## 5.254 DBA\_CUBE\_BUILD\_PROCESSES

DBA\_CUBE\_BUILD\_PROCESSES describes all OLAP build processes and maintenance scripts in the database. Its columns are the same as those in ALL\_CUBE\_BUILD\_PROCESSES.

 **See Also**

["ALL\\_CUBE\\_BUILD\\_PROCESSES"](#)

## 5.255 DBA\_CUBE\_CALCULATED\_MEMBERS

DBA\_CUBE\_CALCULATED\_MEMBERS describes the calculated members for all OLAP cube dimensions in the database. Its columns are the same as those in ALL\_CUBE\_CALCULATED\_MEMBERS.

 **See Also**

["ALL\\_CUBE\\_CALCULATED\\_MEMBERS"](#)

## 5.256 DBA\_CUBE\_DIM\_LEVELS

DBA\_CUBE\_DIM\_LEVELS describes all OLAP dimension levels in the database. Its columns are the same as those in ALL\_CUBE\_DIM\_LEVELS.

 **See Also**

["ALL\\_CUBE\\_DIM\\_LEVELS"](#)

## 5.257 DBA\_CUBE\_DIM\_MODELS

DBA\_CUBE\_DIM\_MODELS describes the models for all OLAP dimensions in the database. Its columns are the same as those in ALL\_CUBE\_DIM\_MODELS.

 **See Also**

["ALL\\_CUBE\\_DIM\\_MODELS"](#)

## 5.258 DBA\_CUBE\_DIM\_VIEW\_COLUMNS

DBA\_CUBE\_DIM\_VIEW\_COLUMNS describes the columns of the relational views of all OLAP cube dimensions in the database. Its columns are the same as those in ALL\_CUBE\_DIM\_VIEW\_COLUMNS.

### ① See Also

["ALL\\_CUBE\\_DIM\\_VIEW\\_COLUMNS"](#)

## 5.259 DBA\_CUBE\_DIM\_VIEWS

DBA\_CUBE\_DIM\_VIEWS describes the relational views of all OLAP dimensions in the database. Its columns are the same as those in ALL\_CUBE\_DIM\_VIEWS.

### ① See Also

["ALL\\_CUBE\\_DIM\\_VIEWS"](#)

## 5.260 DBA\_CUBE\_DIMENSIONALITY

DBA\_CUBE\_DIMENSIONALITY describes the dimension order for all OLAP cubes in the database. Its columns are the same as those in ALL\_CUBE\_DIMENSIONALITY.

### ① See Also

["ALL\\_CUBE\\_DIMENSIONALITY"](#)

## 5.261 DBA\_CUBE\_DIMENSIONS

DBA\_CUBE\_DIMENSIONS describes all OLAP cube dimensions in the database. Its columns are the same as those in ALL\_CUBE\_DIMENSIONS.

### ① See Also

["ALL\\_CUBE\\_DIMENSIONS"](#)

## 5.262 DBA\_CUBE\_HIER\_LEVELS

DBA\_CUBE\_HIER\_LEVELS describes the hierarchy levels for all OLAP cube dimensions in the database. Its columns are the same as those in ALL\_CUBE\_HIER\_LEVELS.

### ① See Also

["ALL\\_CUBE\\_HIER\\_LEVELS"](#)

## 5.263 DBA\_CUBE\_HIER\_VIEW\_COLUMNS

DBA\_CUBE\_HIER\_VIEW\_COLUMNS describes the columns of the relational hierarchy views of all OLAP cube dimensions in the database. Its columns are the same as those in ALL\_CUBE\_HIER\_VIEW\_COLUMNS.

### ① See Also

["ALL\\_CUBE\\_HIER\\_VIEW\\_COLUMNS"](#)

## 5.264 DBA\_CUBE\_HIER\_VIEWS

DBA\_CUBE\_HIER\_VIEWS describes the hierarchies for all OLAP cube dimensions in the database. Its columns are the same as those in ALL\_CUBE\_HIER\_VIEWS.

### ① See Also

["ALL\\_CUBE\\_HIER\\_VIEWS"](#)

## 5.265 DBA\_CUBE\_HIERARCHIES

DBA\_CUBE\_HIERARCHIES describes all OLAP dimension hierarchies in the database. Its columns are the same as those in ALL\_CUBE\_HIERARCHIES.

### ① See Also

["ALL\\_CUBE\\_HIERARCHIES"](#)

## 5.266 DBA\_CUBE\_MEASURES

DBA\_CUBE\_MEASURES describes the measures for all OLAP cubes in the database. Its columns are the same as those in ALL\_CUBE\_MEASURES.

### ① See Also

["ALL\\_CUBE\\_MEASURES"](#)

## 5.267 DBA\_CUBE\_NAMED\_BUILD\_SPECS

DBA\_CUBE\_NAMED\_BUILD\_SPECS describes the OLAP cube named build specifications in the database. Its columns are the same as those in ALL\_CUBE\_NAMED\_BUILD\_SPECS.

### ① See Also

["ALL\\_CUBE\\_NAMED\\_BUILD\\_SPECS"](#)

## 5.268 DBA\_CUBE\_SUB\_PARTITION\_LEVELS

DBA\_CUBE\_SUB\_PARTITION\_LEVELS describes the OLAP secondary partition levels in the database. Its columns are the same as those in ALL\_CUBE\_SUB\_PARTITION\_LEVELS.

### ① See Also

["ALL\\_CUBE\\_SUB\\_PARTITION\\_LEVELS"](#)

## 5.269 DBA\_CUBE\_VIEW\_COLUMNS

DBA\_CUBE\_VIEW\_COLUMNS describes the columns of relational views of all OLAP cubes in the database. Its columns are the same as those in ALL\_CUBE\_VIEW\_COLUMNS.

### ① See Also

["ALL\\_CUBE\\_VIEW\\_COLUMNS"](#)

## 5.270 DBA\_CUBE\_VIEWS

DBA\_CUBE\_VIEWS describes the relational views of all OLAP cubes in the database. Its columns are the same as those in ALL\_CUBE\_VIEWS.

### See Also

["ALL\\_CUBE\\_VIEWS"](#)

## 5.271 DBA\_CUBES

DBA\_CUBES describes all OLAP cubes in the database. Its columns are the same as those in ALL\_CUBES.

### See Also

["ALL\\_CUBES"](#)

## 5.272 DBA\_DATA\_FILES

DBA\_DATA\_FILES describes database files.

### Note

When you query the DBA\_DATA\_FILES data dictionary view, Oracle must have access to all tablespaces and their data files if the requested information is not already available in the dictionary. If the tablespaces are encrypted, then you must open the Oracle wallet (keystore) before you can query DBA\_DATA\_FILES. You can use the ADMINISTER KEY MANAGEMENT SET KEYSTORE OPEN statement to open the keystore.

| Column          | Datatype      | NULL | Description                                                                                                                                |
|-----------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------|
| FILE_NAME       | VARCHAR2(513) |      | Name of the database file                                                                                                                  |
| FILE_ID         | NUMBER        |      | Absolute file number of the database file                                                                                                  |
| TABLESPACE_NAME | VARCHAR2(30)  |      | Name of the tablespace to which the file belongs                                                                                           |
| BYTES           | NUMBER        |      | Size of the file in bytes                                                                                                                  |
| BLOCKS          | NUMBER        |      | Size of the file in Oracle blocks                                                                                                          |
| STATUS          | VARCHAR2(9)   |      | File status: AVAILABLE or INVALID (INVALID means that the file number is not in use, for example, a file in a tablespace that was dropped) |
| RELATIVE_FNO    | NUMBER        |      | Relative file number                                                                                                                       |
| AUTOEXTENSIBLE  | VARCHAR2(3)   |      | Autoextensible indicator                                                                                                                   |
| MAXBYTES        | NUMBER        |      | Maximum file size in bytes                                                                                                                 |

| Column             | Datatype    | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## 5.273 DBA\_DATAPUMP\_JOBS

DBA\_DATAPUMP\_JOBS identifies all active Data Pump jobs in the database, regardless of their state, on an instance (or on all instances for Real Application Clusters). It also shows all Data Pump control job tables not currently associated with an active job.

### Related View

USER\_DATAPUMP\_JOBS displays the Data Pump jobs owned by the current user. This view does not display the OWNER\_NAME column.

| Column            | Datatype      | NULL | Description                                                                  |
|-------------------|---------------|------|------------------------------------------------------------------------------|
| OWNER_NAME        | VARCHAR2(128) |      | User that initiated the job                                                  |
| JOB_NAME          | VARCHAR2(128) |      | User-supplied name for the job (or the default name generated by the server) |
| OPERATION         | VARCHAR2(128) |      | Type of job                                                                  |
| JOB_MODE          | VARCHAR2(128) |      | Mode of job                                                                  |
| STATE             | VARCHAR2(128) |      | Current job state                                                            |
| DEGREE            | NUMBER        |      | Number of worker processes performing the operation                          |
| ATTACHED_SESSIONS | NUMBER        |      | Number of sessions attached to the job                                       |
| DATAPUMP_SESSIONS | NUMBER        |      | Number of Data Pump sessions participating in the job                        |

## 5.274 DBA\_DATAPUMP\_SESSIONS

DBA\_DATAPUMP\_SESSIONS identifies the user sessions that are attached to a Data Pump job. The information in this view is useful for determining why a stopped Data Pump operation has not gone away.

| Column      | Datatype      | NULL | Description                                                                   |
|-------------|---------------|------|-------------------------------------------------------------------------------|
| OWNER_NAME  | VARCHAR2(128) |      | User that initiated the job                                                   |
| JOB_NAME    | VARCHAR2(128) |      | User-supplied name for the job (or the default name generated by the server)  |
| INSTANCE_ID | NUMBER        |      | Instance ID                                                                   |
| SADDR       | RAW(4   8)    |      | Address of the session attached to the job. Can be used with V\$SESSION view. |

| Column       | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------------|--------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SESSION_TYPE | VARCHAR2(14) |      | Data Pump session type: <ul style="list-style-type: none"> <li>• DBMS_DATAPUMP - Data Pump interface process (one for each active instantiation of DBMS_DATAPUMP.OPEN and DBMS_DATAPUMP.ATTACH per job.)</li> <li>• MASTER - Data Pump control job process (one per job)</li> <li>• WORKER - worker process (1 to <i>n</i> per job, depending on degree of parallelism)</li> <li>• EXTERNAL TABLE - external table data access process (1 to <i>n</i>, depending on degree of parallelism, for jobs that use external tables as the data access method for some tables)</li> <li>• OTHER</li> </ul> |

## 5.275 DBA\_DB\_LINK\_SOURCES

DBA\_DB\_LINK\_SOURCES identifies all unique source databases that opened database links to the local database.

By default, only a DBA has access to this view. However, a DBA can grant access to this view to others.

This view is based on a persistent table that resides in the same system tablespace that is used by Database Auditing.

In a multitenant container database (CDB) environment, for every DBA\_ view, there is a corresponding CDB\_ view that contains data for all the pluggable databases (PDBs) in the CDB. A query on the CDB\_DB\_LINK\_SOURCES view done in the CDB\$ROOT container will show sources of all the database links recorded in all PDBs. A query on the corresponding DBA\_DB\_LINK\_SOURCES view done in a PDB show information corresponding to that PDB only (that is, where that specific PDB was the target of an inbound database link).

Note that the CDB\_ views would only show data from PDBs that are open at the time the query is issued. Therefore, when you are diagnosing sources of database links, Oracle recommends that you keep open any or all PDBs that might contain useful information for the diagnosis.

| Column    | Datatype      | NULL     | Description                                                                                         |
|-----------|---------------|----------|-----------------------------------------------------------------------------------------------------|
| SOURCE_ID | NUMBER        | NOT NULL | Unique ID that identifies an incoming database link                                                 |
| DB_NAME   | VARCHAR2(256) | NOT NULL | Global name of the source database                                                                  |
| DBID      | NUMBER        | NOT NULL | Database identifier of the source database. Maps to the DBID of the source database in V\$DATABASE. |

| Column           | Datatype      | NULL     | Description                                                                                                                                                                    |
|------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DB_UNIQUE_NAME   | VARCHAR2(256) |          | Unique database name of the source database. Maps to the DB_UNIQUE_NAME of the source database in V\$DATABASE. Null for source databases that do not provide this information. |
| HOST_NAME        | VARCHAR2(256) |          | Resolved host name. Null if not available.                                                                                                                                     |
| IP_ADDRESS       | VARCHAR2(128) |          | IP address of source machine. Null if not available.                                                                                                                           |
| PROTOCOL         | VARCHAR2(64)  |          | One of supported protocols such as ipc, sdp, tcp, or tcps. Null if not available.                                                                                              |
| USERNAME         | VARCHAR2(128) | NOT NULL | Oracle username of the user who logged into the local database. Maps to the USERNAME column in V\$SESSION.                                                                     |
| USER#            | NUMBER        | NOT NULL | Oracle user id of the user who logged into the local database. Maps to the USER# column in V\$SESSION.                                                                         |
| FIRST_LOGON_TIME | TIMESTAMP(6)  | NOT NULL | The timestamp of the first connection on this database link in UTC                                                                                                             |
| LAST_LOGON_TIME  | TIMESTAMP(6)  |          | The timestamp of the last connection on this database link in UTC                                                                                                              |
| LOGON_COUNT      | NUMBER        |          | Number of times connection has been established through this database link                                                                                                     |

- ["ALL\\_DB\\_LINKS"](#)
- ["DBA\\_DB\\_LINK\\_SOURCES"](#)
- ["DBA\\_EXTERNAL\\_SCN\\_ACTIVITY"](#)

## 5.277 DBA\_DBFS\_HS

DBA\_DBFS\_HS shows all Database File System (DBFS) hierarchical stores.

### Related View

USER\_DBFS\_HS shows all Database File System hierarchical stores owned by the current user. This view does not display the STOREOWNER column.

| Column     | Datatype      | NULL | Description    |
|------------|---------------|------|----------------|
| STORENAME  | VARCHAR2(256) |      | Name of store  |
| STOREOWNER | VARCHAR2(64)  |      | Owner of store |

### See Also

["USER\\_DBFS\\_HS"](#)

## 5.278 DBA\_DBFS\_HS\_COMMANDS

DBA\_DBFS\_HS\_COMMANDS shows all the registered store commands for all Database File System (DBFS) hierarchical stores.

### Related View

USER\_DBFS\_HS\_COMMANDS shows all the registered store commands for all DBFS hierarchical stores owned by current user. This view does not display the STOREOWNER column.

| Column       | Datatype      | NULL | Description                                                                                                                                                                                                   |
|--------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STORENAME    | VARCHAR2(256) |      | Name of store                                                                                                                                                                                                 |
| STOREOWNER   | VARCHAR2(64)  |      | Owner of store                                                                                                                                                                                                |
| STORECOMMAND | VARCHAR2(512) |      | Store command                                                                                                                                                                                                 |
| STOREFLAGS   | NUMBER        |      | Valid values are: <ul style="list-style-type: none"><li>• 1 - Indicates that the command is sent to the device before put</li><li>• 2 - Indicates that the command is sent to the device before get</li></ul> |

## 5.279 DBA\_DBFS\_HS\_FIXED\_PROPERTIES

DBA\_DBFS\_HS\_FIXED\_PROPERTIES shows non-modifiable properties of all Database File System (DBFS) hierarchical stores.

### Related View

USER\_DBFS\_HS\_FIXED\_PROPERTIES shows non-modifiable properties of all DBFS hierarchical stores owned by current user. This view does not display the STORE\_OWNER column.

| Column      | Datatype      | NULL     | Description    |
|-------------|---------------|----------|----------------|
| STORE_NAME  | VARCHAR2(128) | NOT NULL | Name of store  |
| STORE_OWNER | VARCHAR2(128) | NOT NULL | Owner of store |
| PROP_NAME   | VARCHAR2(256) | NOT NULL | Property name  |
| PROP_VALUE  | VARCHAR2(256) | NOT NULL | Property value |

### See Also

["USER\\_DBFS\\_HS\\_FIXED\\_PROPERTIES"](#)

## 5.280 DBA\_DBFS\_HS\_PROPERTIES

DBA\_DBFS\_HS\_PROPERTIES shows modifiable properties of all Database File System (DBFS) hierarchical stores.

### Related View

USER\_DBFS\_HS\_PROPERTIES shows modifiable properties of all DBFS hierarchical stores owned by current user. This view does not display the STOREOWNER column.

| Column        | Datatype      | NULL | Description    |
|---------------|---------------|------|----------------|
| STORENAME     | VARCHAR2(256) |      | Name of store  |
| STOREOWNER    | VARCHAR2(64)  |      | Owner of store |
| PROPERTYNAME  | VARCHAR2(256) |      | Property name  |
| PROPERTYVALUE | VARCHAR2(256) |      | Property value |

## 5.281 DBA\_DDL\_LOCKS

DBA\_DDL\_LOCKS lists all DDL locks held in the database and all outstanding requests for a DDL lock.

| Column         | Datatype       | NULL | Description                                                                                                                                                                                                                             |
|----------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SESSION_ID     | NUMBER         |      | Session identifier                                                                                                                                                                                                                      |
| OWNER          | VARCHAR2(128)  |      | Owner of the lock                                                                                                                                                                                                                       |
| NAME           | VARCHAR2(1000) |      | Name of the lock                                                                                                                                                                                                                        |
| TYPE           | VARCHAR2(40)   |      | Lock type: <ul style="list-style-type: none"><li>• Cursor</li><li>• Table/Procedure/Type</li><li>• Body</li><li>• Trigger</li><li>• Index</li><li>• Cluster</li><li>• Java Source</li><li>• Java Resource</li><li>• Java Data</li></ul> |
| MODE_HELD      | VARCHAR2(9)    |      | Lock mode: <ul style="list-style-type: none"><li>• None</li><li>• Null</li><li>• Share</li><li>• Exclusive</li></ul>                                                                                                                    |
| MODE_REQUESTED | VARCHAR2(9)    |      | Lock request type: <ul style="list-style-type: none"><li>• None</li><li>• Null</li><li>• Share</li><li>• Exclusive</li></ul>                                                                                                            |

### See Also

*Oracle Database Concepts* for more information about DDL locks

## 5.282 DBA\_DEPENDENCIES

DBA\_DEPENDENCIES describes all dependencies in the database between procedures, packages, functions, package bodies, and triggers, including dependencies on views created without any database links. Its columns are the same as those in ALL\_DEPENDENCIES.

### See Also

["ALL\\_DEPENDENCIES"](#)

## 5.283 DBA\_DIGEST\_VERIFIERS

DBA\_DIGEST\_VERIFIERS enables the database administrator to check which users have Digest verifiers stored on disk and the type of hashing algorithm used for the verifiers.

| Column               | Datatype      | NULL | Description                                                                                                                                                           |
|----------------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| USERNAME             | VARCHAR2(128) |      | Name of the user                                                                                                                                                      |
| HAS_DIGEST_VERIFIERS | VARCHAR2(3)   |      | YES if a Digest verifier exists, NO otherwise                                                                                                                         |
| DIGEST_TYPE          | CHAR(3)       |      | The type of hashing algorithm used for the Digest verifier. For instance, MD5 for users with MD5 Digest verifiers. If no Digest verifier exists, this column is NULL. |

## 5.284 DBA\_DIM\_ATTRIBUTES

DBA\_DIM\_ATTRIBUTES describes the relationships between dimension levels and functionally dependent columns in the database. The level columns and the dependent column must be in the same table. This view's columns are the same as those in ALL\_DIM\_ATTRIBUTES.

### ① See Also

"[ALL\\_DIM\\_ATTRIBUTES](#)"

## 5.285 DBA\_DIM\_CHILD\_OF

DBA\_DIM\_CHILD\_OF describes a hierarchical relationship of 1 to  $n$  between all the pairs of levels in the dimensions in the database. Its columns are the same as those in ALL\_DIM\_CHILD\_OF.

### ① See Also

"[ALL\\_DIM\\_CHILD\\_OF](#)"

## 5.286 DBA\_DIM\_HIERARCHIES

DBA\_DIM\_HIERARCHIES describes all the dimension hierarchies in the database. Its columns are the same as those in ALL\_DIM\_HIERARCHIES.

### ① See Also

"[ALL\\_DIM\\_HIERARCHIES](#)"

## 5.287 DBA\_DIM\_JOIN\_KEY

DBA\_DIM\_JOIN\_KEY describes all joins in the database between two dimension tables. The join is always specified between a parent dimension level column and a child column. This view's columns are the same as those in ALL\_DIM\_JOIN\_KEY.

### ① See Also

"[ALL\\_DIM\\_JOIN\\_KEY](#)"

## 5.288 DBA\_DIM\_LEVEL\_KEY

DBA\_DIM\_LEVEL\_KEY describes the columns of all dimension levels in the database. This view's columns are the same as those in ALL\_DIM\_LEVEL\_KEY.

### ① See Also

"[ALL\\_DIM\\_LEVEL\\_KEY](#)"

## 5.289 DBA\_DIM\_LEVELS

DBA\_DIM\_LEVELS describes all dimension levels in the database. All columns of a dimension level must come from the same relation. This view's columns are the same as those in ALL\_DIM\_LEVELS.

### ① See Also

"[ALL\\_DIM\\_LEVELS](#)"

## 5.290 DBA\_DIMENSIONS

DBA\_DIMENSIONS represents dimension objects. Its columns are the same as those in ALL\_DIMENSIONS.

### ① See Also

"[ALL\\_DIMENSIONS](#)"

## 5.291 DBA\_DIRECTORIES

DBA\_DIRECTORIES describes all directory objects in the database. Its columns are the same as those in ALL\_DIRECTORIES.

### See Also

["ALL\\_DIRECTORIES"](#)

## 5.292 DBA\_DISCOVERY\_SOURCE

DBA\_DISCOVERY\_SOURCE describes sensitive data discovery import information.

| Column      | Datatype      | NULL | Description                                                                                                                                                                 |
|-------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SOURCE_NAME | VARCHAR2(128) |      | The name of the discovery source. In the case of Application Data Model (ADM), this is the ADM instance name.                                                               |
| SOURCE_TYPE | VARCHAR2(6)   |      | The type of the source: <ul style="list-style-type: none"><li>• ADM: import from ADM</li><li>• CUSTOM: custom import</li><li>• DB: discovered within the database</li></ul> |
| CTIME       | TIMESTAMP(6)  |      | The last time sensitive data was imported from this source                                                                                                                  |

## 5.293 DBA\_DML\_LOCKS

DBA\_DML\_LOCKS lists all DML locks held in the database and all outstanding requests for a DML lock.

| Column     | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                               |
|------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SESSION_ID | NUMBER        |          | Session holding or acquiring the lock                                                                                                                                                                                                                                                     |
| OWNER      | VARCHAR2(128) | NOT NULL | Owner of the lock                                                                                                                                                                                                                                                                         |
| NAME       | VARCHAR2(128) | NOT NULL | Name of the lock                                                                                                                                                                                                                                                                          |
| MODE_HELD  | VARCHAR2(13)  |          | The type of lock held. The values are: <ul style="list-style-type: none"><li>• ROWS_S (SS): row share lock</li><li>• ROW-X (SX): row exclusive lock</li><li>• SHARE (S): share lock</li><li>• S/ROW-X (SSX): exclusive lock</li><li>• NONE: lock requested but not yet obtained</li></ul> |

| Column          | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                        |
|-----------------|--------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MODE_REQUESTED  | VARCHAR2(13) |      | Lock request type. The values are: <ul style="list-style-type: none"> <li>ROWS_S (SS): row share lock</li> <li>ROW-X (SX): row exclusive lock</li> <li>SHARE (S): share lock</li> <li>S/ROW-X (SSX): exclusive lock</li> <li>NONE: Lock identifier obtained; lock not held or requested</li> </ul> |
| LAST_CONVERT    | NUMBER       |      | Time since current mode was granted                                                                                                                                                                                                                                                                |
| BLOCKING_OTHERS | VARCHAR2(40) |      | Blocking others                                                                                                                                                                                                                                                                                    |

## 5.294 DBA\_DMT\_FREE\_SPACE

DBA\_DMT\_FREE\_SPACE describes the free extents in all dictionary managed tablespaces in the database.

| Column        | Datatype | NULL     | Description                                               |
|---------------|----------|----------|-----------------------------------------------------------|
| TABLESPACE_ID | NUMBER   | NOT NULL | Identifier number of the tablespace containing the extent |
| FILE_ID       | NUMBER   | NOT NULL | File identifier number of the file containing the extent  |
| BLOCK_ID      | NUMBER   | NOT NULL | Starting block number of the extent                       |
| BLOCKS        | NUMBER   | NOT NULL | Size of the extent (in Oracle blocks)                     |

## 5.295 DBA\_DMT\_USED\_EXTENTS

DBA\_DMT\_USED\_EXTENTS describes the extents comprising the segments in all dictionary managed tablespaces in the database.

| Column         | Datatype | NULL     | Description                                               |
|----------------|----------|----------|-----------------------------------------------------------|
| SEGMENT_FILEID | NUMBER   | NOT NULL | File number of the segment header of the extent           |
| SEGMENT_BLOCK  | NUMBER   | NOT NULL | Block number of the segment header of the extent          |
| TABLESPACE_ID  | NUMBER   | NOT NULL | Identifier number of the tablespace containing the extent |
| EXTENT_ID      | NUMBER   | NOT NULL | Extent number in the segment                              |
| FILEID         | NUMBER   | NOT NULL | File identifier number of the file containing the extent  |
| BLOCK          | NUMBER   | NOT NULL | Starting block number of the extent                       |
| LENGTH         | NUMBER   | NOT NULL | Number of blocks in the extent                            |

## 5.296 DBA\_EDITION\_COMMENTS

DBA\_EDITION\_COMMENTS describes the comments on all editions in the database. Its columns are the same as those in ALL\_EDITION\_COMMENTS.

### ① See Also

["ALL\\_EDITION\\_COMMENTS"](#)

## 5.297 DBA\_EDITED\_TYPES

DBA\_EDITED\_TYPES lists all types that are editioned by default for every user in the database.

### Related View

USER\_EDITED\_TYPES lists the types that are editioned by default for the current user. This view does not display the SCHEMA column.

| Column      | Datatype      | NULL     | Description                                     |
|-------------|---------------|----------|-------------------------------------------------|
| SCHEMA      | VARCHAR2(128) | NOT NULL | Schema in which the object types is editionable |
| OBJECT_TYPE | VARCHAR2(23)  |          | Object type that is editionable                 |

### ① See Also

["USER\\_EDITED\\_TYPES"](#)

## 5.298 DBA\_EDITING\_VIEW\_COLS

DBA\_EDITING\_VIEW\_COLS describes the relationship between the columns of all editing views in the database and the table columns to which they map. Its columns are the same as those in ALL\_EDITING\_VIEW\_COLS.

### ① See Also

["ALL\\_EDITING\\_VIEW\\_COLS"](#)

## 5.299 DBA\_EDITIONING\_VIEW\_COLS\_AE

DBA\_EDITIONING\_VIEW\_COLS\_AE describes the relationship between the columns of all editioning views (across all editions) in the database and the table columns to which they map. Its columns are the same as those in ALL\_EDITIONING\_VIEW\_COLS\_AE.

### ① See Also

["ALL\\_EDITIONING\\_VIEW\\_COLS\\_AE"](#)

## 5.300 DBA\_EDITIONING\_VIEWS

DBA\_EDITIONING\_VIEWS describes all editioning views in the database. Its columns are the same as those in ALL\_EDITIONING\_VIEWS.

### ① See Also

["ALL\\_EDITIONING\\_VIEWS"](#)

## 5.301 DBA\_EDITIONING\_VIEWS\_AE

DBA\_EDITIONING\_VIEWS\_AE describes all editioning views (across all editions) in the database. Its columns are the same as those in ALL\_EDITIONING\_VIEWS\_AE.

### ① See Also

["ALL\\_EDITIONING\\_VIEWS\\_AE"](#)

## 5.302 DBA\_EDITIONS

DBA\_EDITIONS describes all editions in the database. Its columns are the same as those in ALL\_EDITIONS.

### ① See Also

- ["ALL\\_EDITIONS"](#)
- *Oracle Database Development Guide* for more information about editions

## 5.303 DBA\_ENABLED\_AGGREGATIONS

DBA\_ENABLED\_AGGREGATIONS displays information about enabled on-demand statistic aggregation.

| Column           | Datatype     | NULL | Description                                                                                                                                                  |
|------------------|--------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AGGREGATION_TYPE | VARCHAR2(21) |      | Type of the aggregation: <ul style="list-style-type: none"> <li>CLIENT_ID</li> <li>SERVICE</li> <li>SERVICE_MODULE</li> <li>SERVICE_MODULE_ACTION</li> </ul> |
| PRIMARY_ID       | VARCHAR2(64) |      | Primary qualifier (specific client identifier or service name)                                                                                               |
| QUALIFIER_ID1    | VARCHAR2(48) |      | Secondary qualifier (specific module name)                                                                                                                   |
| QUALIFIER_ID2    | VARCHAR2(32) |      | Additional qualifier (specific action name)                                                                                                                  |

## 5.304 DBA\_ENABLED\_TRACES

DBA\_ENABLED\_TRACES displays information about enabled SQL traces.

| Column        | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                |
|---------------|--------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TRACE_TYPE    | VARCHAR2(21) |      | Type of the trace: <ul style="list-style-type: none"> <li>CLIENT_ID</li> <li>SERVICE</li> <li>SERVICE_MODULE</li> <li>SERVICE_MODULE_ACTION</li> <li>DATABASE</li> </ul>                                                                                                                                                                                                                   |
| PRIMARY_ID    | VARCHAR2(64) |      | Primary qualifier (specific client identifier or service name)                                                                                                                                                                                                                                                                                                                             |
| QUALIFIER_ID1 | VARCHAR2(64) |      | Secondary qualifier (specific module name)                                                                                                                                                                                                                                                                                                                                                 |
| QUALIFIER_ID2 | VARCHAR2(64) |      | Additional qualifier (specific action name)                                                                                                                                                                                                                                                                                                                                                |
| WAITS         | VARCHAR2(5)  |      | Indicates whether waits are traced (TRUE) or not (FALSE)                                                                                                                                                                                                                                                                                                                                   |
| BINDS         | VARCHAR2(5)  |      | Indicates whether binds are traced (TRUE) or not (FALSE)                                                                                                                                                                                                                                                                                                                                   |
| PLAN_STATS    | VARCHAR2(10) |      | Indicates whether cursor execution statistics are traced. Possible values include: <ul style="list-style-type: none"> <li>ALL_EXEC: Execution statistics are dumped at each cursor execution</li> <li>NEVER: Execution statistics are never dumped</li> <li>FIRST_EXEC: Execution statistics are dumped during the first execution of the cursor. This is the default behavior.</li> </ul> |
| INSTANCE_NAME | VARCHAR2(16) |      | Instance name for tracing restricted to named instances                                                                                                                                                                                                                                                                                                                                    |

## 5.305 DBA\_ENCRYPTED\_COLUMNS

DBA\_ENCRYPTED\_COLUMNS maintains encryption algorithm information for all encrypted columns in the database. Its columns are the same as those in ALL\_ENCRYPTED\_COLUMNS.

**① See Also**

["ALL\\_ENCRYPTED\\_COLUMNS"](#)

## 5.306 DBA\_EPG\_DAD\_AUTHORIZATION

DBA\_EPG\_DAD\_AUTHORIZATION describes the DADs that are authorized to use different user's privileges.

**Related View**

USER\_EPG\_DAD\_AUTHORIZATION describes the DADs that are authorized to use the user's privileges. This view does not display the USERNAME column.

| Column   | Datatype      | NULL     | Description                                                    |
|----------|---------------|----------|----------------------------------------------------------------|
| DAD_NAME | VARCHAR2(64)  | NOT NULL | Name of DAD                                                    |
| USERNAME | VARCHAR2(128) | NOT NULL | Name of the user whose privileges the DAD is authorized to use |

**① See Also**

["USER\\_EPG\\_DAD\\_AUTHORIZATION"](#)

## 5.307 DBA\_ERROR\_TRANSLATIONS

DBA\_ERROR\_TRANSLATIONS describes all error translations in the database. Its columns are the same as those in ALL\_ERROR\_TRANSLATIONS.

**① See Also**

["ALL\\_ERROR\\_TRANSLATIONS"](#)

## 5.308 DBA\_ERRORS

DBA\_ERRORS describes the current errors on all stored objects in the database. Its columns are the same as those in ALL\_ERRORS.

### ① See Also

["ALL\\_ERRORS"](#)

## 5.309 DBA\_ERRORS\_AE

DBA\_ERRORS\_AE describes the current errors on all stored objects (across all editions) in the database. Its columns are the same as those in ALL\_ERRORS\_AE.

### ① See Also

["ALL\\_ERRORS\\_AE"](#)

## 5.310 DBA\_EVALUATION\_CONTEXT\_TABLES

DBA\_EVALUATION\_CONTEXT\_TABLES describes the tables in all rule evaluation contexts in the database. Its columns are the same as those in ALL\_EVALUATION\_CONTEXT\_TABLES.

### ① See Also

["ALL\\_EVALUATION\\_CONTEXT\\_TABLES"](#)

## 5.311 DBA\_EVALUATION\_CONTEXT\_VARS

DBA\_EVALUATION\_CONTEXT\_VARS describes the variables in all rule evaluation contexts in the database. Its columns are the same as those in ALL\_EVALUATION\_CONTEXT\_VARS.

### ① See Also

["ALL\\_EVALUATION\\_CONTEXT\\_VARS"](#)

## 5.312 DBA\_EVALUATION\_CONTEXTS

DBA\_EVALUATION\_CONTEXTS describes all rule evaluation contexts in the database. Its columns are the same as those in ALL\_EVALUATION\_CONTEXTS.

### See Also

["ALL\\_EVALUATION\\_CONTEXTS"](#)

## 5.313 DBA\_EXP\_FILES

DBA\_EXP\_FILES describes export files.

| Column      | Datatype      | NULL     | Description                                               |
|-------------|---------------|----------|-----------------------------------------------------------|
| EXP_VERSION | NUMBER(3)     | NOT NULL | Version number of the export session                      |
| EXP_TYPE    | VARCHAR2(11)  |          | Type of export file: complete, cumulative, or incremental |
| FILE_NAME   | VARCHAR2(100) | NOT NULL | Name of the export file                                   |
| USER_NAME   | VARCHAR2(128) | NOT NULL | Name of user who executed export                          |
| TIMESTAMP   | DATE          | NOT NULL | Timestamp of the export session                           |

## 5.314 DBA\_EXP\_OBJECTS

DBA\_EXP\_OBJECTS describes objects that have been incrementally exported.

| Column         | Datatype      | NULL     | Description                          |
|----------------|---------------|----------|--------------------------------------|
| OWNER          | VARCHAR2(128) | NOT NULL | Owner of exported object             |
| OBJECT_NAME    | VARCHAR2(128) | NOT NULL | Name of exported object              |
| OBJECT_TYPE    | VARCHAR2(13)  |          | Type of exported object              |
| CUMULATIVE     | DATE          |          | Timestamp of last cumulative export  |
| INCREMENTAL    | DATE          | NOT NULL | Timestamp of last incremental export |
| EXPORT_VERSION | NUMBER(3)     | NOT NULL | The ID of the export session         |

## 5.315 DBA\_EXP\_VERSION

DBA\_EXP\_VERSION displays the version number of the last export session.

| Column      | Datatype  | NULL     | Description                               |
|-------------|-----------|----------|-------------------------------------------|
| EXP_VERSION | NUMBER(3) | NOT NULL | Version number of the last export session |

## 5.316 DBA\_EXPRESSION\_STATISTICS

DBA\_EXPRESSION\_STATISTICS provides expression usage tracking statistics for all the tables in the database. Its columns are the same as those in ALL\_EXPRESSION\_STATISTICS.

### ① See Also

["ALL\\_EXPRESSION\\_STATISTICS"](#)

## 5.317 DBA\_EXTENTS

DBA\_EXTENTS describes the extents comprising the segments in all tablespaces in the database.

Note that if a data file (or entire tablespace) is offline in a locally managed tablespace, you will not see any extent information. If an object has extents in an online file of the tablespace, you will see extent information about the offline data file. However, if the object is entirely in the offline file, a query of this view will not return any records.

### Related View

USER\_EXTENTS describes the extents comprising the segments owned by the current user's objects. This view does not display the OWNER, FILE\_ID, BLOCK\_ID, or RELATIVE\_FNO columns.

| Column          | Datatype      | NULL | Description                                                    |
|-----------------|---------------|------|----------------------------------------------------------------|
| OWNER           | VARCHAR2(128) |      | Owner of the segment associated with the extent                |
| SEGMENT_NAME    | VARCHAR2(128) |      | Name of the segment associated with the extent                 |
| PARTITION_NAME  | VARCHAR2(128) |      | Object Partition Name (Set to NULL for nonpartitioned objects) |
| SEGMENT_TYPE    | VARCHAR2(18)  |      | Type of the segment: INDEX PARTITION, TABLE PARTITION          |
| TABLESPACE_NAME | VARCHAR2(30)  |      | Name of the tablespace containing the extent                   |
| EXTENT_ID       | NUMBER        |      | Extent number in the segment                                   |
| FILE_ID         | NUMBER        |      | Absolute file number of the data file containing the extent    |
| BLOCK_ID        | NUMBER        |      | Starting block number of the extent                            |
| BYTES           | NUMBER        |      | Size of the extent in bytes                                    |
| BLOCKS          | NUMBER        |      | Size of the extent in Oracle blocks                            |
| RELATIVE_FNO    | NUMBER        |      | Relative file number of the first extent block                 |

### ① See Also

["USER\\_EXTENTS"](#)

## 5.318 DBA\_EXTERNAL\_LOCATIONS

DBA\_EXTERNAL\_LOCATIONS describes the locations (data sources) of all external tables in the database. Its columns are the same as those in ALL\_EXTERNAL\_LOCATIONS.

### 📘 See Also

["ALL\\_EXTERNAL\\_LOCATIONS"](#)

## 5.319 DBA\_EXTERNAL\_SCN\_ACTIVITY

DBA\_EXTERNAL\_SCN\_ACTIVITY works in conjunction with the DBA\_DB\_LINK\_SOURCES and DBA\_DB\_LINKS views to determine the source of high SCN activities.

If the SCN is increased by an inbound database link, then you can join the DBA\_EXTERNAL\_SCN\_ACTIVITY view with the DBA\_DB\_LINK\_SOURCES view on the INBOUND\_DB\_LINK\_SOURCE\_ID column to get details of the remote database where the SCN increase originated.

If the SCN is increased by an outbound database link, then the INBOUND\_DB\_LINK\_SOURCE\_ID column will be NULL, but the OUTBOUND\_DB\_LINK\_NAME and OUTBOUND\_DB\_LINK\_OWNER columns can be joined with the DB\_LINK and OWNER columns respectively in the DBA\_DB\_LINKS view to determine the remote database that caused the SCN increase.

If neither of the above cases are true (the INBOUND\_DB\_LINK\_SOURCE\_ID, OUTBOUND\_DB\_LINK\_NAME, and OUTBOUND\_DB\_LINK\_OWNER are all NULL), then the SCN increase resulted from a client connection and not as a result of a database link to or from another database. You can join the SESSION\_ID and SESSION\_SERIAL# columns with the SID and SERIAL# columns in V\$SESSION to get the client session details.

In a multitenant container database (CDB) environment, for every DBA\_ view, there is a corresponding CDB\_ view that contains data for all the pluggable databases (PDBs) in the CDB.

As the SCN is a property of the CDB (and not a PDB), a DBA interested in understanding large SCN jumps will likely find the CDB\_EXTERNAL\_SCN\_ACTIVITY view more useful for diagnosing SCN jumps on a CDB. Querying the CDB\_EXTERNAL\_SCN\_ACTIVITY view from CDB\$ROOT ensures that external SCN jumps occurring on all PDBs are looked at and noticed. On the other hand, a query on the corresponding DBA\_EXTERNAL\_SCN\_ACTIVITY view, or a query on the CDB\_EXTERNAL\_SCN\_ACTIVITY view done from a PDB would only show data for that PDB (that is, details regarding any external activity that occurred on that specific PDB that resulted in large SCN jumps).

Note that the CDB\_ views would only show data from PDBs that are open at the time the query is issued. Therefore, when you are diagnosing sources of external SCN activities, Oracle recommends that you keep open any or all PDBs that might contain useful information for the diagnosis.

| Column              | Datatype     | NULL     | Description                            |
|---------------------|--------------|----------|----------------------------------------|
| OPERATION_TIMESTAMP | TIMESTAMP(6) | NOT NULL | Timestamp when SCN was received in UTC |

| Column                    | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                 |
|---------------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SESSION_ID                | NUMBER        | NOT NULL | Session identifier of the local session that created this entry. Maps to V\$SESSION.SID and to V\$ACTIVE_SESSION_HISTORY.SESSION_ID.                                                                                                                                                                                                                                                                                        |
| SESSION_SERIAL#           | NUMBER        | NOT NULL | Session serial number of the local session that created this entry. Maps to V\$SESSION.SERIAL# and to V\$ACTIVE_SESSION_HISTORY.SESSION_SERIAL#.                                                                                                                                                                                                                                                                            |
| AUDIT_SESSIONID           | NUMBER        |          | Session identifier that can be joined with DBA_AUDIT_TRAIL.SESSIONID or UNIFIED_AUDIT_TRAIL.SESSIONID (depending on which kind of auditing is enabled). Null if auditing is not enabled.                                                                                                                                                                                                                                    |
| USERNAME                  | VARCHAR2(128) | NOT NULL | Oracle username of the user who logged into the local database. Maps to V\$SESSION.USERNAME.                                                                                                                                                                                                                                                                                                                                |
| INBOUND_DB_LINK_SOURCE_ID | NUMBER        |          | If the SCN was bumped by an inbound database link, then this is the inbound database link identified by the DBA_DB_LINK_SOURCES.SOURCE_ID database link.<br>If the SCN was not increased by an inbound database link, then this value is null.                                                                                                                                                                              |
| OUTBOUND_DB_LINK_NAME     | VARCHAR2(128) |          | If the SCN was bumped by an outbound database link, then this is the outbound database link identified by the DBA_DB_LINKS.DB_LINK database link.<br>Using this column and the OUTBOUND_DB_LINK_OWNER column, you can determine the source of the SCN increase for outbound links.<br>If the SCN was not increased by an outbound database link, then this value is null.                                                   |
| OUTBOUND_DB_LINK_OWNER    | VARCHAR2(128) |          | If the SCN was bumped by an outbound database link, then this is the owner of the outbound database link identified by DBA_DB_LINKS.OWNER.<br>Using this column and the OUTBOUND_DB_LINK_NAME column, you can determine the source of the SCN increase for outbound links.<br>If the SCN was not increased by an outbound database link, then this value is null.                                                           |
| RESULT                    | VARCHAR2(64)  | NOT NULL | The following SCN activities are captured: <ul style="list-style-type: none"> <li>REJECTED_HIGH_SCN - SCN rejection due to unreasonable value</li> <li>REJECTED_HIGH_DELTA - SCN rejection due to unreasonable rate of growth</li> <li>ACCEPTED - SCN accepted with warning</li> </ul> Regular SCN activities which do not result in errors or warnings are not captured. SCN errors and warnings also appear in alert.log. |
| EXTERNAL_SCN              | NUMBER        | NOT NULL | The external SCN received from an inbound database link, an outbound database link, or a client                                                                                                                                                                                                                                                                                                                             |
| SCN_ADJUSTMENT            | NUMBER        | NOT NULL | For ACCEPTED SCNs in the RESULT column, how much the local SCN was increased.<br>For REJECTED SCNs in the RESULT column, the attempted SCN increase.                                                                                                                                                                                                                                                                        |

5.320 DBA\_EXTERNAL\_TABLES

DBA\_EXTERNAL\_TABLES describes all external tables in the database. Its columns are the same as those in ALL\_EXTERNAL\_TABLES.

① See Also

- ["ALL\\_EXTERNAL\\_TABLES"](#)

5.321 DBA\_FEATURE\_USAGE\_STATISTICS

DBA\_FEATURE\_USAGE\_STATISTICS displays information about database feature usage statistics.

| Column             | Datatype     | NULL     | Description                                                                                 |
|--------------------|--------------|----------|---------------------------------------------------------------------------------------------|
| DBID               | NUMBER       | NOT NULL | Database identifier of the database being tracked                                           |
| NAME               | VARCHAR2(64) | NOT NULL | Name of the feature                                                                         |
| VERSION            | VARCHAR2(17) | NOT NULL | Database version in which the feature was tracked                                           |
| DETECTED_USAGES    | NUMBER       | NOT NULL | Number of times the system has detected usage for the feature                               |
| TOTAL_SAMPLES      | NUMBER       | NOT NULL | Number of times the system has woken up and checked for feature usage                       |
| CURRENTLY_USED     | VARCHAR2(5)  |          | Indicates whether usage was detected the last time the system checked (TRUE) or not (FALSE) |
| FIRST_USAGE_DATE   | DATE         |          | First sample time the system detected usage of the feature                                  |
| LAST_USAGE_DATE    | DATE         |          | Last sample time the system detected usage of the feature                                   |
| AUX_COUNT          | NUMBER       |          | This column stores feature-specific usage data in number format.                            |
| FEATURE_INFO       | CLOB         |          | This column stores feature-specific usage data in character format.                         |
| LAST_SAMPLE_DATE   | DATE         |          | The last time the system checked for usage                                                  |
| LAST_SAMPLE_PERIOD | NUMBER       |          | Amount of time (in seconds) between the last two usage sample times                         |

| Column                             | Datatype      | NULL | Description                                               |
|------------------------------------|---------------|------|-----------------------------------------------------------|
| SAMPLE_INTERVAL                    | NUMBER        |      | Sample interval                                           |
| DESCRIPTION                        | VARCHAR2(128) |      | Description of the feature and usage detection logic      |
| LAST_FEAT_SAMPLE_DATE <sup>1</sup> | DATE          |      | The last time the system checked for usage of the feature |

<sup>1</sup> This column is available starting with Oracle Database 21c.

### Note

Use the following SQL query to list the database features and their descriptions in alphabetical order:

```
SELECT name, description FROM dba_feature_usage_statistics
ORDER BY name;
```

## 5.322 DBA\_FGA\_AUDIT\_TRAIL

DBA\_FGA\_AUDIT\_TRAIL displays all audit records for fine-grained auditing.

### Note

This view is relevant when using traditional auditing. Traditional auditing is deprecated in Oracle Database 21c. Oracle recommends that you instead use unified auditing, which enables selective and more effective auditing inside Oracle Database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

| Column        | Datatype       | NULL     | Description                                                        |
|---------------|----------------|----------|--------------------------------------------------------------------|
| SESSION_ID    | NUMBER         | NOT NULL | Session id of the query                                            |
| TIMESTAMP     | DATE           |          | Date and time of the query in the local database session time zone |
| DB_USER       | VARCHAR2(128)  |          | Database username who executed the query                           |
| OS_USER       | VARCHAR2(255)  |          | Operating system username who executed the query                   |
| USERHOST      | VARCHAR2(128)  |          | Client host machine name                                           |
| CLIENT_ID     | VARCHAR2(128)  |          | Client identifier in each Oracle session                           |
| ECONTEXT_ID   | VARCHAR2(64)   |          | Application execution context identifier                           |
| EXT_NAME      | VARCHAR2(4000) |          | External name                                                      |
| OBJECT_SCHEMA | VARCHAR2(128)  |          | Owner of the table or view                                         |

| Column             | Datatype                    | NULL | Description                                                                                                                                                                                               |
|--------------------|-----------------------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_NAME        | VARCHAR2(128)               |      | Name of the table or view                                                                                                                                                                                 |
| POLICY_NAME        | VARCHAR2(128)               |      | Name of the Fine-Grained Auditing Policy                                                                                                                                                                  |
| SCN                | NUMBER                      |      | System change number (SCN) of the query                                                                                                                                                                   |
| SQL_TEXT           | NVARCHAR2(2000)             |      | SQL text of the query                                                                                                                                                                                     |
| SQL_BIND           | NVARCHAR2(2000)             |      | Bind variable data of the query                                                                                                                                                                           |
| COMMENT\$TEXT      | VARCHAR2(4000)              |      | Comments                                                                                                                                                                                                  |
| STATEMENT_TYPE     | VARCHAR2(7)                 |      | Statement type of the query: <ul style="list-style-type: none"> <li>• SELECT</li> <li>• INSERT</li> <li>• UPDATE</li> <li>• DELETE</li> </ul>                                                             |
| EXTENDED_TIMESTAMP | TIMESTAMP(6) WITH TIME ZONE |      | Timestamp of the query in UTC (Coordinated Universal Time) time zone                                                                                                                                      |
| PROXY_SESSIONID    | NUMBER                      |      | Proxy session serial number, if an enterprise user has logged in through the proxy mechanism                                                                                                              |
| GLOBAL_UID         | VARCHAR2(32)                |      | Global user identifier for the user, if the user has logged in as an enterprise user                                                                                                                      |
| INSTANCE_NUMBER    | NUMBER                      |      | Instance number as specified by the INSTANCE_NUMBER initialization parameter                                                                                                                              |
| OS_PROCESS         | VARCHAR2(16)                |      | Operating System process identifier of the Oracle process                                                                                                                                                 |
| TRANSACTIONID      | RAW(8)                      |      | Transaction identifier of the transaction in which the object is accessed or modified                                                                                                                     |
| STATEMENTID        | NUMBER                      |      | Numeric ID for each statement run (a statement may cause many actions)                                                                                                                                    |
| ENTRYID            | NUMBER                      |      | Numeric ID for each audit trail entry in the session                                                                                                                                                      |
| OBJ_EDITION_NAME   | VARCHAR2(128)               |      | Name of the edition containing the audited object                                                                                                                                                         |
| DBID               | NUMBER                      |      | Database identifier of the audited database                                                                                                                                                               |
| RLS_INFO           | CLOB                        |      | Stores virtual private database (VPD) policy names and predicates separated by delimiter.<br><br>To format the output into individual rows, use the DBMS_AUDIT_UTIL.DECODE_RLS_INFO_ATTRAIL_FGA function. |
| CURRENT_USER       | VARCHAR2(128)               |      | Effective user for the statement execution                                                                                                                                                                |

### **Note**

The SQL\_BIND and SQL\_TEXT columns are populated only if the policy has been created with the AUDIT\_TRAIL parameter set to db, extended.

**① See Also**

*Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_AUDIT_UTIL.DECODE_RLS_INFO_ATTRAIL_FGA` function.

## 5.323 DBA\_FILE\_GROUP\_EXPORT\_INFO

`DBA_FILE_GROUP_EXPORT_INFO` shows export-related information for each version in the database that has a valid Data Pump dump file. Its columns are the same as those in `ALL_FILE_GROUP_EXPORT_INFO`.

**① See Also**

"[ALL\\_FILE\\_GROUP\\_EXPORT\\_INFO](#)".

## 5.324 DBA\_FILE\_GROUP\_FILES

`DBA_FILE_GROUP_FILES` shows the file set for each versioned file group in the database. Its columns are the same as those in `ALL_FILE_GROUP_FILES`.

**① See Also**

"[ALL\\_FILE\\_GROUP\\_FILES](#)"

## 5.325 DBA\_FILE\_GROUP\_TABLES

`DBA_FILE_GROUP_TABLES` shows information about all the tables in the database that can be imported using the file set. Its columns are the same as those in `ALL_FILE_GROUP_TABLES`.

**① See Also**

"[ALL\\_FILE\\_GROUP\\_TABLES](#)"

## 5.326 DBA\_FILE\_GROUP\_TABLESPACES

DBA\_FILE\_GROUP\_TABLESPACES shows information about the transportable tablespaces present (partially or completely) in all file sets in the database (when the file set contains dump files). Its columns are the same as those in ALL\_FILE\_GROUP\_TABLESPACES.

### ① See Also

["ALL\\_FILE\\_GROUP\\_TABLESPACES"](#)

## 5.327 DBA\_FILE\_GROUP\_VERSIONS

DBA\_FILE\_GROUP\_VERSIONS shows top-level version information for all file groups in the database. Its columns are the same as those in ALL\_FILE\_GROUP\_VERSIONS.

### ① See Also

["ALL\\_FILE\\_GROUP\\_VERSIONS"](#)

## 5.328 DBA\_FILE\_GROUPS

DBA\_FILE\_GROUPS shows top-level metadata about all file groups in the database. Its columns are the same as those for ALL\_FILE\_GROUPS.

### ① See Also

["ALL\\_FILE\\_GROUPS"](#)

## 5.329 DBA\_FLASHBACK\_ARCHIVE

DBA\_FLASHBACK\_ARCHIVE describes all flashback archives available in the database.

### Related View

USER\_FLASHBACK\_ARCHIVE describes the flashback archives available to the current user.

| Column                 | Datatype      | NULL     | Description                                                                    |
|------------------------|---------------|----------|--------------------------------------------------------------------------------|
| OWNER_NAME             | VARCHAR2(255) |          | Name of the creator of the flashback archive                                   |
| FLASHBACK_ARCHIVE_NAME | VARCHAR2(255) | NOT NULL | Name of the flashback archive                                                  |
| FLASHBACK_ARCHIVE#     | NUMBER        | NOT NULL | Number of the flashback archive                                                |
| RETENTION_IN_DAYS      | NUMBER        | NOT NULL | Maximum duration (in days) for which data is retained in the flashback archive |
| CREATE_TIME            | TIMESTAMP(9)  |          | Time at which the flashback archive was created                                |

| Column          | Datatype     | NULL | Description                                                                                                   |
|-----------------|--------------|------|---------------------------------------------------------------------------------------------------------------|
| LAST_PURGE_TIME | TIMESTAMP(9) |      | Time at which the data in the flashback archive was last purged by the system                                 |
| STATUS          | VARCHAR2(7)  |      | Indicates whether the flashback archive is a default flashback archive for the system (DEFAULT) or not (NULL) |

 **See Also**

["USER\\_FLASHBACK\\_ARCHIVE"](#)

## 5.330 DBA\_FLASHBACK\_ARCHIVE\_TABLES

DBA\_FLASHBACK\_ARCHIVE\_TABLES displays information about all tables in the database that are enabled for Flashback Archive.

### Related View

USER\_FLASHBACK\_ARCHIVE\_TABLES displays information about the tables owned by the current user that are enabled for Flashback Archive.

| Column                 | Datatype      | NULL     | Description                                                                   |
|------------------------|---------------|----------|-------------------------------------------------------------------------------|
| TABLE_NAME             | VARCHAR2(128) | NOT NULL | Name of the table enabled for Flashback Archive                               |
| OWNER_NAME             | VARCHAR2(128) | NOT NULL | Owner name of the table enabled for Flashback Archive                         |
| FLASHBACK_ARCHIVE_NAME | VARCHAR2(255) | NOT NULL | Name of the flashback archive                                                 |
| ARCHIVE_TABLE_NAME     | VARCHAR2(53)  |          | Name of the archive table containing the historical data for the user table   |
| STATUS                 | VARCHAR2(13)  |          | Status of whether flashback archive is enabled or being disabled on the table |

 **See Also**

["USER\\_FLASHBACK\\_ARCHIVE\\_TABLES"](#)

## 5.331 DBA\_FLASHBACK\_ARCHIVE\_TS

DBA\_FLASHBACK\_ARCHIVE\_TS describes all tablespaces in the flashback archives available in the database.

| Column                 | Datatype      | NULL     | Description                                   |
|------------------------|---------------|----------|-----------------------------------------------|
| FLASHBACK_ARCHIVE_NAME | VARCHAR2(255) | NOT NULL | Name of the flashback archive                 |
| FLASHBACK_ARCHIVE#     | NUMBER        | NOT NULL | Number of the flashback archive               |
| TABLESPACE_NAME        | VARCHAR2(30)  | NOT NULL | Name of a tablespace in the flashback archive |

| Column      | Datatype     | NULL | Description                                                                                                           |
|-------------|--------------|------|-----------------------------------------------------------------------------------------------------------------------|
| QUOTA_IN_MB | VARCHAR2(40) |      | Maximum space (in MB) that can be used for Flashback Archive from the tablespace; NULL indicates no Quota restriction |

## 5.332 DBA\_FLASHBACK\_TXN\_REPORT

DBA\_FLASHBACK\_TXN\_REPORT displays information about all compensating transactions that have been committed in the database.

Each row in this view is associated with one compensating transaction.

### Related View

USER\_FLASHBACK\_TXN\_REPORT displays information about the compensating transactions owned by the current user that have been committed in the database. This view does not display the USERNAME column.

| Column                | Datatype      | NULL     | Description                                                                                         |
|-----------------------|---------------|----------|-----------------------------------------------------------------------------------------------------|
| COMPENSATING_XID      | RAW(8)        | NOT NULL | Transaction responsible for backout                                                                 |
| COMPENSATING_TXN_NAME | VARCHAR2(256) |          | Name of the compensating transaction                                                                |
| COMMIT_TIME           | DATE          |          | Timestamp when the compensating transaction committed                                               |
| XID_REPORT            | CLOB          |          | An XML report describing the details of the transactions backed out by the compensating transaction |
| USERNAME              | VARCHAR2(128) | NOT NULL | User who is executing the compensating transaction                                                  |

## 5.333 DBA\_FLASHBACK\_TXN\_STATE

DBA\_FLASHBACK\_TXN\_STATE displays information about the compensating status of all transactions in the database.

For each compensating transaction, there could be multiple rows, where each row provides the dependency relation between the transactions that have been compensated by the compensating transaction.

### Related View

USER\_FLASHBACK\_TXN\_STATE displays information about the compensating status of the transactions owned by the current user. This view does not display the USERNAME column.

| Column           | Datatype | NULL | Description                                    |
|------------------|----------|------|------------------------------------------------|
| COMPENSATING_XID | RAW(8)   |      | Transaction ID of the compensating transaction |

| Column        | Datatype      | NULL     | Description                                                                                                                                                               |
|---------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| XID           | RAW(8)        |          | A transaction that has been compensated by the compensating transaction                                                                                                   |
| DEPENDENT_XID | RAW(8)        |          | A dependent transaction of XID<br><b>Note:</b> In the case of BACKOUT_MODE = CASCADE, there must be another row with XID = DEPENDENT_XID of this column.                  |
| BACKOUT_MODE  | VARCHAR2(16)  |          | Mode in which XID was backed out: <ul style="list-style-type: none"> <li>• NOCASCADE</li> <li>• NOCASCADE_FORCE</li> <li>• NONCONFLICT_ONLY</li> <li>• CASCADE</li> </ul> |
| USERNAME      | VARCHAR2(128) | NOT NULL | User who is performing the compensating transaction                                                                                                                       |

## 5.334 DBA\_FREE\_SPACE

DBA\_FREE\_SPACE describes the free extents in all tablespaces in the database.

If a data file (or entire tablespace) is offline in a locally managed tablespace, you will not see any extent information. If an object has extents in an online file of the tablespace, you will see extent information about the offline data file. However, if the object is entirely in the offline file, a query of this view will not return any records.

If a data file does not have any free space, you will not see a row for the data file in this view.

### Related View

USER\_FREE\_SPACE describes the free extents in the tablespaces accessible to the current user.

| Column          | Datatype     | NULL | Description                                                 |
|-----------------|--------------|------|-------------------------------------------------------------|
| TABLESPACE_NAME | VARCHAR2(30) |      | Name of the tablespace containing the extent                |
| FILE_ID         | NUMBER       |      | Absolute file number of the data file containing the extent |
| BLOCK_ID        | NUMBER       |      | Starting block number of the extent                         |
| BYTES           | NUMBER       |      | Size of the extent (in bytes)                               |
| BLOCKS          | NUMBER       |      | Size of the extent (in Oracle blocks)                       |
| RELATIVE_FNO    | NUMBER       |      | Relative file number of the file containing the extent      |

## 5.335 DBA\_FREE\_SPACE\_COALESCED

DBA\_FREE\_SPACE\_COALESCED describes statistics on coalesced space in all tablespaces in the database.

| Column                    | Datatype     | NULL | Description                                                    |
|---------------------------|--------------|------|----------------------------------------------------------------|
| TABLESPACE_NAME           | VARCHAR2(30) |      | Name of the tablespace                                         |
| TOTAL_EXTENTS             | NUMBER       |      | Total number of free extents in the tablespace                 |
| EXTENTS_COALESCED         | NUMBER       |      | Total number of coalesced free extents in the tablespace       |
| PERCENT_EXTENTS_COALESCED | NUMBER       |      | Percentage of coalesced free extents in the tablespace         |
| TOTAL_BYTES               | NUMBER       |      | Total number of free bytes in the tablespace                   |
| BYTES_COALESCED           | NUMBER       |      | Total number of coalesced free bytes in the tablespace         |
| TOTAL_BLOCKS              | NUMBER       |      | Total number of free Oracle blocks in the tablespace           |
| BLOCKS_COALESCED          | NUMBER       |      | Total number of coalesced free Oracle blocks in the tablespace |
| PERCENT_BLOCKS_COALESCED  | NUMBER       |      | Percentage of coalesced free Oracle blocks in the tablespace   |

## 5.336 DBA\_GG\_AUTO\_CDR\_COLUMN\_GROUPS

DBA\_GG\_AUTO\_CDR\_COLUMN\_GROUPS provides details about all of the Oracle GoldenGate automatic conflict detection and resolution (CDR) column groups in the database.

Its columns are the same as those in ALL\_GG\_AUTO\_CDR\_COLUMN\_GROUPS.

### ① See Also

["ALL\\_GG\\_AUTO\\_CDR\\_COLUMN\\_GROUPS"](#)

## 5.337 DBA\_GG\_AUTO\_CDR\_COLUMNS

DBA\_GG\_AUTO\_CDR\_COLUMNS provides details about all of the Oracle GoldenGate automatic conflict detection and resolution (CDR) columns in the database.

Its columns are the same as those in ALL\_GG\_AUTO\_CDR\_COLUMNS.

### ① See Also

["ALL\\_GG\\_AUTO\\_CDR\\_COLUMNS"](#)

## 5.338 DBA\_GG\_AUTO\_CDR\_TABLES

DBA\_GG\_AUTO\_CDR\_TABLES provides details about all the tables configured for Oracle GoldenGate automatic conflict detection and resolution (CDR).

Its columns are the same as those in ALL\_GG\_AUTO\_CDR\_TABLES.

### ① See Also

["ALL\\_GG\\_AUTO\\_CDR\\_TABLES"](#)

## 5.339 DBA\_GG\_INBOUND\_PROGRESS

DBA\_GG\_INBOUND\_PROGRESS displays information about the progress made by all GoldenGate inbound servers in the database. Its columns are the same as those in ALL\_GG\_INBOUND\_PROGRESS.

### ① See Also

["ALL\\_GG\\_INBOUND\\_PROGRESS"](#)

## 5.340 DBA\_GG\_PROC\_OBJECT\_EXCLUSION

DBA\_GG\_PROC\_OBJECT\_EXCLUSION provides details about all tables that should be filtered when operating on given objects.

| Column        | Datatype      | NULL | Description                                    |
|---------------|---------------|------|------------------------------------------------|
| PACKAGE_OWNER | VARCHAR2(384) |      | Procedure package owner                        |
| PACKAGE_NAME  | VARCHAR2(384) |      | Procedure package name                         |
| OBJECT_OWNER  | VARCHAR2(384) |      | Object owner to filter for the given procedure |
| OBJECT_NAME   | VARCHAR2(384) |      | Object name to filter for the given procedure  |

## 5.341 DBA\_GG\_PROCEDURE\_ANNOTATION

DBA\_GG\_PROCEDURE\_ANNOTATION annotates the position of Owner and Object arguments in procedure calls.

| Column         | Datatype      | NULL     | Description             |
|----------------|---------------|----------|-------------------------|
| PACKAGE_OWNER  | VARCHAR2(384) | NOT NULL | Procedure package owner |
| PACKAGE_NAME   | VARCHAR2(384) | NOT NULL | Procedure package name  |
| PROCEDURE_NAME | VARCHAR2(384) | NOT NULL | Procedure name          |

| Column                | Datatype      | NULL     | Description                                                    |
|-----------------------|---------------|----------|----------------------------------------------------------------|
| OBJECT_OWNER_ARGPOS   | NUMBER        | NOT NULL | Object owner name position in argument list, -1 if not present |
| OBJECT_ARGPOS         | NUMBER        | NOT NULL | Object name position in argument list, -1 if not present       |
| MIN_DB_VERSION        | VARCHAR2(100) |          | Minimum database version for the procedure                     |
| MAX_DB_VERSION        | VARCHAR2(100) |          | Maximum database version for the procedure                     |
| MIN_REDO_COMPAT_LEVEL | VARCHAR2(100) |          | Minimum redo compatibility for the procedure                   |
| MAX_REDO_COMPAT_LEVEL | VARCHAR2(100) |          | Maximum redo compatibility for the procedure                   |
| FLAGS                 | NUMBER        |          | Additional information about procedure arguments               |

## 5.342 DBA\_GG\_SUPPORTED\_PACKAGES

DBA\_GG\_SUPPORTED\_PACKAGES provides details about supported procedure packages for Oracle GoldenGate replication.

| Column                | Datatype      | NULL     | Description                                          |
|-----------------------|---------------|----------|------------------------------------------------------|
| OWNER                 | VARCHAR2(384) | NOT NULL | Procedure package owner                              |
| NAME                  | VARCHAR2(384) | NOT NULL | Procedure package name                               |
| FEATURE               | VARCHAR2(384) | NOT NULL | DBMS feature that the procedure package belongs to   |
| MIN_DB_VERSION        | VARCHAR2(100) |          | Minimum database version for the supported package   |
| MAX_DB_VERSION        | VARCHAR2(100) |          | Maximum database version for the supported package   |
| MIN_REDO_COMPAT_LEVEL | VARCHAR2(100) |          | Minimum redo compatibility for the supported package |
| MAX_REDO_COMPAT_LEVEL | VARCHAR2(100) |          | Maximum redo compatibility for the supported package |
| SUPPORTED_LEVEL       | VARCHAR2(100) |          | Supported level of the package                       |

## 5.343 DBA\_GG\_SUPPORTED\_PROCEDURES

DBA\_GG\_SUPPORTED\_PROCEDURES provides details about all procedures that are supported for Oracle GoldenGate replication.

| Column                | Datatype      | NULL | Description                                              |
|-----------------------|---------------|------|----------------------------------------------------------|
| OWNER                 | VARCHAR2(128) |      | Procedure package owner                                  |
| PACKAGE_NAME          | VARCHAR2(128) |      | Procedure package name                                   |
| PROCEDURE_NAME        | VARCHAR2(128) |      | Procedure name                                           |
| MIN_DB_VERSION        | VARCHAR2(100) |      | Minimum database version for the procedure               |
| MAX_DB_VERSION        | VARCHAR2(100) |      | Maximum database version for the procedure               |
| MIN_REDO_COMPAT_LEVEL | VARCHAR2(100) |      | Minimum redo compatibility for the procedure             |
| MAX_REDO_COMPAT_LEVEL | VARCHAR2(100) |      | Maximum redo compatibility for the procedure             |
| SUPPORTED_MODE        | VARCHAR2(100) |      | Supported mode for the procedure: ALWAYS or DBMS_ROLLING |

| Column                | Datatype    | NULL | Description                                                                                                                                        |
|-----------------------|-------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| EXCLUSION_RULE_EXISTS | VARCHAR2(3) |      | Specifies whether an exclusion rule exists for the procedure (YES) or not (NO).<br><b>See Also:</b> <a href="#">"DBA_GG_PROC_OBJECT_EXCLUSION"</a> |

## 5.344 DBA\_GLOBAL\_CONTEXT

DBA\_GLOBAL\_CONTEXT displays the definition (name, schema, and package) of all global contexts created in the database.

This view is a subset of DBA\_CONTEXT, which describes all contexts, including global contexts.

| Column    | Datatype      | NULL     | Description                                                            |
|-----------|---------------|----------|------------------------------------------------------------------------|
| NAMESPACE | VARCHAR2(128) | NOT NULL | Name of the context namespace                                          |
| SCHEMA    | VARCHAR2(128) | NOT NULL | Schema of the package that administers the globally accessible context |
| PACKAGE   | VARCHAR2(128) | NOT NULL | Package that administers the globally accessible context               |

### ① See Also

- ["DBA\\_CONTEXT"](#)
- *Oracle Database Security Guide* for more information about using global application contexts
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS\_SESSION.SET\_CONTEXT procedure

## 5.345 DBA\_GOLDENGATE\_INBOUND

DBA\_GOLDENGATE\_INBOUND displays information about all GoldenGate inbound servers in the database. Its columns are the same as those in ALL\_GOLDENGATE\_INBOUND.

### ① See Also

["ALL\\_GOLDENGATE\\_INBOUND"](#)

## 5.346 DBA\_GOLDENGATE\_NOT\_UNIQUE

DBA\_GOLDENGATE\_NOT\_UNIQUE displays all tables that have no primary and no non-null unique indexes.

Most of the tables displayed by this view are supported because their columns contain enough information to be maintained by Oracle GoldenGate. Some tables, however, cannot be supported because their columns do not contain the necessary information. Unsupported tables usually contain a column defined using an unsupported data type.

| Column     | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------|---------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER      | VARCHAR2(128) |      | Schema name of the non-unique table                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| TABLE_NAME | VARCHAR2(128) |      | Table name of the non-unique table                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| BAD_COLUMN | VARCHAR2(1)   |      | Indicates that the table has a column not useful in the where clause. Possible values: <ul style="list-style-type: none"> <li>Y - Table column is defined using an unbounded data type, such as LONG or BLOB. If two rows in the table match except in their LOB columns, then the table cannot be maintained properly. Log apply services will attempt to maintain these tables, but you must ensure the application does not allow uniqueness only in the unbounded columns.</li> <li>N - Enough column information is present to maintain the table in Oracle GoldenGate but the log transport services and log apply services would run more efficiently if you added a primary key. You should consider adding a disabled RELY constraint to these tables.</li> </ul> |

## 5.347 DBA\_GOLDENGATE\_PRIVILEGES

DBA\_GOLDENGATE\_PRIVILEGES displays details about Oracle GoldenGate privileges. Its columns are the same as those in ALL\_GOLDENGATE\_PRIVILEGES.

### ① See Also

"[ALL\\_GOLDENGATE\\_PRIVILEGES](#)"

## 5.348 DBA\_GOLDENGATE\_RULES

DBA\_GOLDENGATE\_RULES displays information about all GoldenGate server rules in the database. Its columns are the same as those in ALL\_GOLDENGATE\_RULES.

### ① See Also

"[ALL\\_GOLDENGATE\\_RULES](#)"

## 5.349 DBA\_GOLDENGATE\_SUPPORT\_MODE

DBA\_GOLDENGATE\_SUPPORT\_MODE displays information about the level of Oracle GoldenGate capture process support for the tables in the database.

| Column      | Datatype      | NULL | Description |
|-------------|---------------|------|-------------|
| OWNER       | VARCHAR2(128) |      | Table owner |
| OBJECT_NAME | VARCHAR2(128) |      | Table name  |

| Column                   | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SUPPORT_MODE             | VARCHAR2(8)    |      | Capture process support level for the table: <ul style="list-style-type: none"> <li>FULL - A capture process can capture changes made to all of the columns in the table</li> <li>ID KEY - A capture process can capture changes made to the key columns and any other columns in the table supported by the capture process, except for LOB, LONG, LONG RAW, and XMLType columns.</li> <li>INTERNAL - A capture process cannot capture changes made to any columns in the table because the table is secondary to a user-created table and is updated implicitly when changes are made to the user-created table. Such tables include mapping tables for index-organized tables, storage tables for nested tables, materialized view logs, secondary objects associated with domain indexes, and temporary tables.</li> <li>PLSQL - A capture process can capture changes made to the table as long as Procedural Supplemental Logging is enabled on the source database. Such tables include hierarchy-enabled tables, AQ queue tables, and tables containing columns of type MDSYS.SDO_TOPO_GEOMETRY, MDSYS.SDO_GEORASTER, or MDSYS.SDO_RDF_TRIPLE_S.</li> <li>NONE - A capture process cannot capture changes made to any columns in the table because the table is not supported for replication.</li> </ul> |
| EXPLANATION <sup>1</sup> | VARCHAR2(4000) |      | Reason the table does not have FULL capture process support<br>This column is populated only when both of the following conditions are met: <ul style="list-style-type: none"> <li>The value of the COMPATIBLE initialization parameter is 20.0 or higher</li> <li>The value of the SUPPORT_MODE column is ID KEY, INTERNAL, PLSQL, or NONE</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

<sup>1</sup> This column is available starting with Oracle Database 21c.

## 5.350 DBA\_HANG\_MANAGER\_PARAMETERS

DBA\_HANG\_MANAGER\_PARAMETERS shows the available user tunable Hang Manager parameters and their values.

| Column         | Datatype     | NULL     | Description                                                           |
|----------------|--------------|----------|-----------------------------------------------------------------------|
| NAME           | VARCHAR2(40) | NOT NULL | String representation of the parameter names                          |
| CURRENT_VALUE  | VARCHAR2(20) |          | String representation of the parameter values                         |
| CURRENT_TIME   | DATE         |          | Time when the current value was set                                   |
| PREVIOUS_VALUE | VARCHAR2(20) |          | String representation of the parameter value from the previous update |
| PREVIOUS_TIME  | DATE         |          | Time when the previous value was set                                  |

**Note**

- ["V\\$HANG\\_INFO"](#)
- ["V\\$HANG\\_SESSION\\_INFO"](#)
- ["V\\$HANG\\_STATISTICS"](#)

## 5.351 DBA\_HEAT\_MAP\_SEG\_HISTOGRAM

DBA\_HEAT\_MAP\_SEG\_HISTOGRAM displays segment access information for all segments. Its columns are the same as those in ALL\_HEAT\_MAP\_SEG\_HISTOGRAM.

**See Also**

["ALL\\_HEAT\\_MAP\\_SEG\\_HISTOGRAM"](#)

## 5.352 DBA\_HEAT\_MAP\_SEGMENT

DBA\_HEAT\_MAP\_SEGMENT displays the latest segment access time for all segments. Its columns are the same as those in ALL\_HEAT\_MAP\_SEGMENT.

**See Also**

["ALL\\_HEAT\\_MAP\\_SEGMENT"](#)

## 5.353 DBA\_HEATMAP\_TOP\_OBJECTS

DBA\_HEATMAP\_TOP\_OBJECTS displays heat map information for the top 10000 objects by default.

If the database contains fewer than 10000 objects, then fewer than 10000 objects are returned by the view.

| Column          | Datatype      | NULL | Description                                           |
|-----------------|---------------|------|-------------------------------------------------------|
| OWNER           | VARCHAR2(128) |      | Object owner                                          |
| OBJECT_NAME     | VARCHAR2(128) |      | Object name                                           |
| OBJECT_TYPE     | VARCHAR2(18)  |      | Object type                                           |
| TABLESPACE_NAME | VARCHAR2(30)  |      | Tablespace name                                       |
| SEGMENT_COUNT   | NUMBER        |      | Segments in the tablespace                            |
| OBJECT_SIZE     | NUMBER        |      | Size of the object in MB                              |
| MIN_WRITETIME   | DATE          |      | Oldest modification time for a set of blocks          |
| MAX_WRITETIME   | DATE          |      | Latest modification time for a set of blocks          |
| AVG_WRITETIME   | DATE          |      | Average of the modification times for a set of blocks |
| MIN_READTIME    | DATE          |      | Oldest read time for a set of blocks                  |

| Column         | Datatype | NULL | Description                                   |
|----------------|----------|------|-----------------------------------------------|
| MAX_READTIME   | DATE     |      | Latest read time for a set of blocks          |
| AVG_READTIME   | DATE     |      | Average of the read times for a set of blocks |
| MIN_FTSTIME    | DATE     |      | Minimum full table scan time of the object    |
| MAX_FTSTIME    | DATE     |      | Maximum full table scan time of the object    |
| AVG_FTSTIME    | DATE     |      | Average full table scan time of the object    |
| MIN_LOOKUPTIME | DATE     |      | Minimum lookup time of the object             |
| MAX_LOOKUPTIME | DATE     |      | Maximum lookup time of the object             |
| AVG_LOOKUPTIME | DATE     |      | Average lookup time of the object             |

## 5.354 DBA\_HEATMAP\_TOP\_TABLESPACES

DBA\_HEATMAP\_TOP\_TABLESPACES displays heat map information for the top 100 tablespaces.

| Column          | Datatype      | NULL | Description                                            |
|-----------------|---------------|------|--------------------------------------------------------|
| TABLESPACE_NAME | VARCHAR2(128) |      | Tablespace name                                        |
| SEGMENT_COUNT   | NUMBER        |      | Segments in the tablespace                             |
| ALLOCATED_BYTES | NUMBER        |      | Total bytes allocated to the objects in the tablespace |
| MIN_WRITETIME   | DATE          |      | Minimum write time of objects tracked                  |
| MAX_WRITETIME   | DATE          |      | Maximum write time of objects tracked                  |
| AVG_WRITETIME   | DATE          |      | Average write time of objects tracked                  |
| MIN_READTIME    | DATE          |      | Minimum read time of objects tracked                   |
| MAX_READTIME    | DATE          |      | Maximum read time of objects tracked                   |
| AVG_READTIME    | DATE          |      | Average read time of objects tracked                   |
| MIN_FTSTIME     | DATE          |      | Minimum full table scan time of objects tracked        |
| MAX_FTSTIME     | DATE          |      | Maximum full table scan time of objects tracked        |
| AVG_FTSTIME     | DATE          |      | Average full table scan time of objects tracked        |
| MIN_LOOKUPTIME  | DATE          |      | Minimum lookup time of objects tracked                 |
| MAX_LOOKUPTIME  | DATE          |      | Maximum lookup time of objects tracked                 |
| AVG_LOOKUPTIME  | DATE          |      | Average lookup time of objects tracked                 |

## 5.355 DBA\_HIER\_CLASS

DBA\_HIER\_CLASS describes the classifications of all hierarchies in the database. Its columns are the same as those in ALL\_HIER\_CLASS.

 **See Also**

["ALL\\_HIER\\_CLASS"](#)

## 5.356 DBA\_HIER\_CLASS\_AE

DBA\_HIER\_CLASS\_AE describes the classifications of all hierarchies (across all editions) in the database. Its columns are the same as those in ALL\_HIER\_CLASS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_HIER\\_CLASS\\_AE"](#)

## 5.357 DBA\_HIER\_COLUMNS

DBA\_HIER\_COLUMNS describes the columns of all hierarchies in the database. Its columns are the same as those in ALL\_HIER\_COLUMNS.

### ① See Also

["ALL\\_HIER\\_COLUMNS"](#)

## 5.358 DBA\_HIER\_COLUMNS\_AE

DBA\_HIER\_COLUMNS\_AE describes the columns of all hierarchies (across all editions) in the database. Its columns are the same as those in ALL\_HIER\_COLUMNS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_HIER\\_COLUMNS\\_AE"](#)

## 5.359 DBA\_HIER\_HIER\_ATTR\_CLASS

DBA\_HIER\_HIER\_ATTR\_CLASS describes the classifications of the hierarchical attributes of all hierarchies in the database. Its columns are the same as those in ALL\_HIER\_HIER\_ATTR\_CLASS.

### ① See Also

["ALL\\_HIER\\_HIER\\_ATTR\\_CLASS"](#)

## 5.360 DBA\_HIER\_HIER\_ATTR\_CLASS\_AE

DBA\_HIER\_HIER\_ATTR\_CLASS\_AE describes the classifications of the hierarchical attributes of all hierarchies (across all editions) in the database. Its columns are the same as those in ALL\_HIER\_HIER\_ATTR\_CLASS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_HIER\\_HIER\\_ATTR\\_CLASS\\_AE"](#)

## 5.361 DBA\_HIER\_HIER\_ATTRIBUTES

DBA\_HIER\_HIER\_ATTRIBUTES describes the hierarchical attributes of all hierarchies in the database. Its columns are the same as those in ALL\_HIER\_HIER\_ATTRIBUTES.

### ① See Also

["ALL\\_HIER\\_HIER\\_ATTRIBUTES"](#)

## 5.362 DBA\_HIER\_HIER\_ATTRIBUTES\_AE

DBA\_HIER\_HIER\_ATTRIBUTES\_AE describes the hierarchical attributes of all hierarchies (across all editions) in the database. Its columns are the same as those in ALL\_HIER\_HIER\_ATTRIBUTES\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_HIER\\_HIER\\_ATTRIBUTES\\_AE"](#)

## 5.363 DBA\_HIER\_JOIN\_PATHS

DBA\_HIER\_JOIN\_PATHS describes the join paths for all hierarchies in the database. Its columns are the same as those in ALL\_HIER\_JOIN\_PATHS.

### ① See Also

["ALL\\_HIER\\_JOIN\\_PATHS"](#)

## 5.364 DBA\_HIER\_JOIN\_PATHS\_AE

DBA\_HIER\_JOIN\_PATHS\_AE describes the join paths for all hierarchies (across all editions) in the database. Its columns are the same as those in ALL\_HIER\_JOIN\_PATHS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_HIER\\_JOIN\\_PATHS\\_AE"](#)

## 5.365 DBA\_HIER\_LEVEL\_ID\_ATTRS

DBA\_HIER\_LEVEL\_ID\_ATTRS describes the attributes that uniquely identify members of the levels of all hierarchies in the database. Its columns are the same as those in ALL\_HIER\_LEVEL\_ID\_ATTRS.

### See Also

["ALL\\_HIER\\_LEVEL\\_ID\\_ATTRS"](#)

## 5.366 DBA\_HIER\_LEVEL\_ID\_ATTRS\_AE

DBA\_HIER\_LEVEL\_ID\_ATTRS\_AE describes the attributes that uniquely identify members of the levels of all hierarchies (across all editions) in the database. Its columns are the same as those in ALL\_HIER\_LEVEL\_ID\_ATTRS\_AE.

### Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### See Also

["ALL\\_HIER\\_LEVEL\\_ID\\_ATTRS\\_AE"](#)

## 5.367 DBA\_HIER\_LEVELS

DBA\_HIER\_LEVELS describes the levels of all hierarchies in the database. Its columns are the same as those in ALL\_HIER\_LEVELS.

### See Also

["ALL\\_HIER\\_LEVELS"](#)

## 5.368 DBA\_HIER\_LEVELS\_AE

DBA\_HIER\_LEVELS\_AE describes the levels of all hierarchies (across all editions) in the database. Its columns are the same as those in ALL\_HIER\_LEVELS\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_HIER\\_LEVELS\\_AE"](#)

## 5.369 DBA\_HIERARCHIES

DBA\_HIERARCHIES describes all hierarchies in the database. Its columns are the same as those in ALL\_HIERARCHIES.

### ① See Also

["ALL\\_HIERARCHIES"](#)

## 5.370 DBA\_HIERARCHIES\_AE

DBA\_HIERARCHIES\_AE describes all hierarchies (across all editions) in the database. Its columns are the same as those in ALL\_HIERARCHIES\_AE.

### ① Note

This view is available starting with Oracle Database 21c, Release Update 21.5.

### ① See Also

["ALL\\_HIERARCHIES\\_AE"](#)

## 5.371 DBA\_HIGH\_WATER\_MARK\_STATISTICS

DBA\_HIGH\_WATER\_MARK\_STATISTICS displays information about database high-watermark statistics.

| Column      | Datatype      | NULL     | Description                                                                    |
|-------------|---------------|----------|--------------------------------------------------------------------------------|
| DBID        | NUMBER        | NOT NULL | Identifier of the database for which the high-watermark statistics are tracked |
| NAME        | VARCHAR2(64)  | NOT NULL | Name of the high-watermark statistic (see <a href="#">Table 5-1</a> )          |
| VERSION     | VARCHAR2(17)  | NOT NULL | Database version in which the high watermarks were tracked                     |
| HIGHWATER   | NUMBER        |          | Highest value of the statistic seen at sampling time                           |
| LAST_VALUE  | NUMBER        |          | Value of the statistic at the last sample time                                 |
| DESCRIPTION | VARCHAR2(128) |          | Description of the high-watermark statistics (see <a href="#">Table 5-1</a> )  |

**Table 5-1 DBA\_HIGH\_WATER\_MARK\_STATISTICS Statistics**

| Name              | Description                                                |
|-------------------|------------------------------------------------------------|
| ACTIVE_SESSIONS   | Maximum Number of Active Sessions seen in the system       |
| CPU_COUNT         | Maximum Number of CPUs                                     |
| DATAFILES         | Maximum Number of Datafiles                                |
| DB_SIZE           | Maximum Size of the Database (Bytes)                       |
| EXADATA_DISKS     | Number of physical disks                                   |
| INSTANCES         | Oracle Database instances                                  |
| PART_INDEXES      | Maximum Number of Partitions belonging to an User Index    |
| PART_TABLES       | Maximum Number of Partitions belonging to an User Table    |
| QUERY_LENGTH      | Maximum Query Length                                       |
| SEGMENT_SIZE      | Size of Largest Segment (Bytes)                            |
| SESSIONS          | Maximum Number of Concurrent Sessions seen in the database |
| SQL_NCHAR_COLUMNS | Maximum Number of SQL NCHAR Columns                        |
| TABLESPACES       | Maximum Number of Tablespaces                              |
| USER_INDEXES      | Number of User Indexes                                     |
| USER_MV           | Maximum Number of Materialized Views (User)                |
| USER_TABLES       | Number of User Tables                                      |

## 5.372 DBA\_HIST\_ACTIVE\_SESS\_HISTORY

DBA\_HIST\_ACTIVE\_SESS\_HISTORY displays the history of the contents of the in-memory active session history of recent system activity.

DBA\_HIST\_ACTIVE\_SESS\_HISTORY contains snapshots of V\$ACTIVE\_SESSION\_HISTORY. See "[V\\$ACTIVE\\_SESSION\\_HISTORY](#)" for further interpretation details for many of these columns (except SNAP\_ID, DBID, and INSTANCE\_NUMBER).

### Note

If you want to perform a join with the snapshots view, use the DBA\_HIST\_ASH\_SNAPSHOT view instead of the DBA\_HIST\_SNAPSHOT view.

| Column                     | Datatype     | NULL     | Description                                                                                                      |
|----------------------------|--------------|----------|------------------------------------------------------------------------------------------------------------------|
| SNAP_ID                    | NUMBER       | NOT NULL | Unique snapshot ID                                                                                               |
| DBID                       | NUMBER       | NOT NULL | Database ID for the snapshot                                                                                     |
| INSTANCE_NUMBER            | NUMBER       | NOT NULL | Instance number for the snapshot                                                                                 |
| SAMPLE_ID                  | NUMBER       | NOT NULL | ID of the sample                                                                                                 |
| SAMPLE_TIME                | TIMESTAMP(3) | NOT NULL | Time of the sample                                                                                               |
| SAMPLE_TIME_UTC            | TIMESTAMP(3) |          | SAMPLE_TIME in UTC                                                                                               |
| USECS_PER_ROW              | NUMBER       |          | Time in microseconds since the last active session history sample                                                |
| SESSION_ID                 | NUMBER       | NOT NULL | Session identifier                                                                                               |
| SESSION_SERIAL#            | NUMBER       |          | Session serial number (used to uniquely identify a session's objects)                                            |
| SESSION_TYPE               | VARCHAR2(10) |          | Session type: <ul style="list-style-type: none"> <li>• FOREGROUND</li> <li>• BACKGROUND</li> </ul>               |
| FLAGS                      | NUMBER       |          | Reserved for future use                                                                                          |
| USER_ID                    | NUMBER       |          | Oracle user identifier                                                                                           |
| SQL_ID                     | VARCHAR2(13) |          | SQL identifier of the SQL statement that is currently being executed                                             |
| IS_SQLID_CURRENT           | VARCHAR2(1)  |          | Indicates whether the SQL identifier in the SQL_ID column is being executed (Y) or not (N)                       |
| SQL_CHILD_NUMBER           | NUMBER       |          | Child number of the SQL statement that is currently being executed                                               |
| SQL_OPCODE                 | NUMBER       |          | Indicates what phase of operation the SQL statement is in                                                        |
| SQL_OPNAME                 | VARCHAR2(64) |          | SQL command name                                                                                                 |
| FORCE_MATCHING_SIGNATURE   | NUMBER       |          | Signature used when the CURSOR_SHARING parameter is set to FORCE                                                 |
| TOP_LEVEL_SQL_ID           | VARCHAR2(13) |          | SQL identifier of the top level SQL statement                                                                    |
| TOP_LEVEL_SQL_OPCODE       | NUMBER       |          | Indicates what phase of operation the top level SQL statement was in                                             |
| SQL_PLAN_HASH_VALUE        | NUMBER       |          | Numerical representation of the SQL plan for the cursor                                                          |
| SQL_FULL_PLAN_HASH_VALUE   | NUMBER       |          | Numerical representation of the complete SQL plan for the cursor being executed by this session                  |
| SQL_ADAPTIVE_PLAN_RESOLVED | NUMBER       |          | Indicates whether the SQL plan of the sampled database session is a resolved adaptive plan or not                |
| SQL_PLAN_LINE_ID           | NUMBER       |          | SQL plan line ID                                                                                                 |
| SQL_PLAN_OPERATION         | VARCHAR2(64) |          | Plan operation name                                                                                              |
| SQL_PLAN_OPTIONS           | VARCHAR2(64) |          | Plan operation options                                                                                           |
| SQL_EXEC_ID                | NUMBER       |          | SQL execution identifier                                                                                         |
| SQL_EXEC_START             | DATE         |          | Time when the execution of the SQL started                                                                       |
| PLSQL_ENTRY_OBJECT_ID      | NUMBER       |          | Object ID of the top-most PL/SQL subprogram on the stack (or NULL if there is no PL/SQL subprogram on the stack) |

| Column                    | Datatype     | NULL | Description                                                                                                                                                                            |
|---------------------------|--------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PLSQL_ENTRY_SUBPROGRAM_ID | NUMBER       |      | Subprogram ID of the top-most PL/SQL subprogram on the stack (or NULL if there is no PL/SQL subprogram on the stack)                                                                   |
| PLSQL_OBJECT_ID           | NUMBER       |      | Object ID of the currently executing PL/SQL subprogram (or NULL if executing SQL)                                                                                                      |
| PLSQL_SUBPROGRAM_ID       | NUMBER       |      | Subprogram ID of the currently executing PL/SQL object (or NULL if executing SQL)                                                                                                      |
| QC_INSTANCE_ID            | NUMBER       |      | Query coordinator instance ID                                                                                                                                                          |
| QC_SESSION_ID             | NUMBER       |      | Query coordinator session ID                                                                                                                                                           |
| QC_SESSION_SERIAL#        | NUMBER       |      | Query coordinator session serial number                                                                                                                                                |
| PX_FLAGS                  | NUMBER       |      | Reserved for internal use                                                                                                                                                              |
| EVENT                     | VARCHAR2(64) |      | If SESSION_STATE = WAITING, then the event for which the session was waiting at the time of sampling.<br>If SESSION_STATE = ON CPU, then this column will be NULL.                     |
| EVENT_ID                  | NUMBER       |      | Identifier of the resource or event for which the session is waiting or for which the session last waited                                                                              |
| SEQ#                      | NUMBER       |      | Sequence number that uniquely identifies the wait (incremented for each wait)                                                                                                          |
| P1TEXT                    | VARCHAR2(64) |      | Text of first additional parameter                                                                                                                                                     |
| P1                        | NUMBER       |      | First additional parameter                                                                                                                                                             |
| P2TEXT                    | VARCHAR2(64) |      | Text of second additional parameter                                                                                                                                                    |
| P2                        | NUMBER       |      | Second additional parameter                                                                                                                                                            |
| P3TEXT                    | VARCHAR2(64) |      | Text of third additional parameter                                                                                                                                                     |
| P3                        | NUMBER       |      | Third additional parameter                                                                                                                                                             |
| WAIT_CLASS                | VARCHAR2(64) |      | Wait class name of the event for which the session was waiting at the time of sampling. Interpretation is similar to that of the EVENT column. Maps to V\$SESSION.WAIT_CLASS.          |
| WAIT_CLASS_ID             | NUMBER       |      | Wait class identifier of the event for which the session was waiting at the time of sampling. Interpretation is similar to that of the EVENT column. Maps to V\$SESSION.WAIT_CLASS_ID. |
| WAIT_TIME                 | NUMBER       |      | Total wait time (in microseconds) for the event for which the session last waited (0 if currently waiting)                                                                             |
| SESSION_STATE             | VARCHAR2(7)  |      | Session state: <ul style="list-style-type: none"> <li>• WAITING</li> <li>• ON CPU</li> </ul>                                                                                           |
| TIME_WAITED               | NUMBER       |      | Time that the current session actually spent waiting for the event (in microseconds). This column is set for waits that were in progress at the time the sample was taken.             |

| Column                   | Datatype     | NULL | Description                                                                                                                                                                                                                                  |
|--------------------------|--------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BLOCKING_SESSION_STATUS  | VARCHAR2(11) |      | Status of the blocking session: <ul style="list-style-type: none"> <li>• VALID</li> <li>• NO HOLDER</li> <li>• GLOBAL</li> <li>• NOT IN WAIT</li> <li>• UNKNOWN</li> </ul>                                                                   |
| BLOCKING_SESSION         | NUMBER       |      | Session identifier of the blocking session. Populated only when the session was waiting for enqueues or a "buffer busy" wait. Maps to V\$SESSION.BLOCKING_SESSION.                                                                           |
| BLOCKING_SESSION_SERIAL# | NUMBER       |      | Serial number of the blocking session                                                                                                                                                                                                        |
| BLOCKING_INST_ID         | NUMBER       |      | Instance number of the blocker shown in BLOCKING_SESSION                                                                                                                                                                                     |
| BLOCKING_HANGCHAIN_INFO  | VARCHAR2(1)  |      | Indicates whether the information about BLOCKING_SESSION comes from the hang chain (Y) or not (N)                                                                                                                                            |
| CURRENT_OBJ#             | NUMBER       |      | Object ID of the object that the session is currently referencing. This information is only available if the session was waiting for Application, Cluster, Concurrency, and User I/O wait events. Maps to V\$SESSION.ROW_WAIT_OBJ#.          |
| CURRENT_FILE#            | NUMBER       |      | File number of the file containing the block that the session is currently referencing. This information is only available if the session was waiting for Cluster, Concurrency, and User I/O wait events. Maps to V\$SESSION.ROW_WAIT_FILE#. |
| CURRENT_BLOCK#           | NUMBER       |      | ID of the block that the session is currently referencing                                                                                                                                                                                    |
| CURRENT_ROW#             | NUMBER       |      | Row identifier that the session is referencing                                                                                                                                                                                               |
| TOP_LEVEL_CALL#          | NUMBER       |      | Oracle top level call number                                                                                                                                                                                                                 |
| TOP_LEVEL_CALL_NAME      | VARCHAR2(64) |      | Oracle top level call name                                                                                                                                                                                                                   |
| CONSUMER_GROUP_ID        | NUMBER       |      | Consumer group ID                                                                                                                                                                                                                            |
| XID                      | RAW(8)       |      | Transaction ID that the session was working on at the time of sampling. V\$SESSION does not contain this information.                                                                                                                        |
| REMOTE_INSTANCE#         | NUMBER       |      | Remote instance identifier that will serve the block that this session is waiting for. This information is only available if the session was waiting for cluster events.                                                                     |
| TIME_MODEL               | NUMBER       |      | Time model information                                                                                                                                                                                                                       |
| IN_CONNECTION_MGMT       | VARCHAR2(1)  |      | Indicates whether the session was doing connection management at the time of sampling (Y) or not (N)                                                                                                                                         |
| IN_PARSE                 | VARCHAR2(1)  |      | Indicates whether the session was parsing at the time of sampling (Y) or not (N)                                                                                                                                                             |
| IN_HARD_PARSE            | VARCHAR2(1)  |      | Indicates whether the session was hard parsing at the time of sampling (Y) or not (N)                                                                                                                                                        |
| IN_SQL_EXECUTION         | VARCHAR2(1)  |      | Indicates whether the session was executing SQL statements at the time of sampling (Y) or not (N)                                                                                                                                            |
| IN_PLSQL_EXECUTION       | VARCHAR2(1)  |      | Indicates whether the session was executing PL/SQL at the time of sampling (Y) or not (N)                                                                                                                                                    |

| Column                      | Datatype     | NULL | Description                                                                                                                    |
|-----------------------------|--------------|------|--------------------------------------------------------------------------------------------------------------------------------|
| IN_PLSQL_RPC                | VARCHAR2(1)  |      | Indicates whether the session was executing inbound PL/SQL RPC calls at the time of sampling (Y) or not (N)                    |
| IN_PLSQL_COMPILATION        | VARCHAR2(1)  |      | Indicates whether the session was compiling PL/SQL at the time of sampling (Y) or not (N)                                      |
| IN_JAVA_EXECUTION           | VARCHAR2(1)  |      | Indicates whether the session was executing Java at the time of sampling (Y) or not (N)                                        |
| IN_BIND                     | VARCHAR2(1)  |      | Indicates whether the session was doing bind operations at the time of sampling (Y) or not (N)                                 |
| IN_CURSOR_CLOSE             | VARCHAR2(1)  |      | Indicates whether the session was closing a cursor at the time of sampling (Y) or not (N)                                      |
| IN_SEQUENCE_LOAD            | VARCHAR2(1)  |      | Indicates whether the session is loading in sequence (in sequence load code) (Y) or not (N)                                    |
| IN_INMEMORY_QUERY           | VARCHAR2(1)  |      | Indicates whether the session was querying the In-Memory Column Store (IM column store) at the time of sampling (Y) or not (N) |
| IN_INMEMORY_POPULATE        | VARCHAR2(1)  |      | Indicates whether the session was populating the IM column store at the time of sampling (Y) or not (N)                        |
| IN_INMEMORY_PREPOPULATE     | VARCHAR2(1)  |      | Indicates whether the session was prepopulating the IM column store at the time of sampling (Y) or not (N)                     |
| IN_INMEMORY_REPOPULATE      | VARCHAR2(1)  |      | Indicates whether the session was repopulating the IM column store at the time of sampling (Y) or not (N)                      |
| IN_INMEMORY_TREPOPULATE     | VARCHAR2(1)  |      | Indicates whether the session was trickle repopulating the IM column store at the time of sampling (Y) or not (N)              |
| IN_TABLESPACE_ENCRYPTION    | VARCHAR2(1)  |      | Indicates whether encryption or decryption of a tablespace occurred at the time of sampling (Y) or not (N)                     |
| CAPTURE_OVERHEAD            | VARCHAR2(1)  |      | Indicates whether the session is executing capture code (Y) or not (N)                                                         |
| REPLAY_OVERHEAD             | VARCHAR2(1)  |      | Indicates whether the session is executing replay code (Y) or not (N)                                                          |
| IS_CAPTURED                 | VARCHAR2(1)  |      | Indicates whether the session is being captured (Y) or not (N)                                                                 |
| IS_REPLAYED                 | VARCHAR2(1)  |      | Indicates whether the session is being replayed (Y) or not (N)                                                                 |
| IS_REPLAY_SYNC_TOKEN_HOLDER | VARCHAR2(1)  |      | Indicates whether the session is holding a synchronization token (Y) or not (N) during workload replay                         |
| SERVICE_HASH                | NUMBER       |      | Hash that identifies the Service                                                                                               |
| PROGRAM                     | VARCHAR2(84) |      | Name of the operating system program                                                                                           |
| MODULE                      | VARCHAR2(64) |      | Name of the currently executing module as set by the DBMS_APPLICATION_INFO.SET_MODULE procedure                                |
| ACTION                      | VARCHAR2(64) |      | Name of the currently executing action as set by the DBMS_APPLICATION_INFO.SET_ACTION procedure                                |
| CLIENT_ID                   | VARCHAR2(64) |      | Client identifier of the session                                                                                               |
| MACHINE                     | VARCHAR2(64) |      | Client's operating system machine name                                                                                         |
| PORT                        | NUMBER       |      | Client port number                                                                                                             |

| Column                      | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------|--------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ECID                        | VARCHAR2(64) |      | Execution context identifier (sent by Application Server)                                                                                                                                                                                                                                                                                                                                                                       |
| DBREPLAY_FILE_ID            | NUMBER       |      | If the session is being captured or replayed, then DBREPLAY_FILE_ID is the file ID for the workload capture or workload replay; otherwise it is NULL.                                                                                                                                                                                                                                                                           |
| DBREPLAY_CALL_COUNTER       | NUMBER       |      | If the session is being captured or replayed, then DBREPLAY_CALL_COUNTER is the call counter of the user call that is being captured or replayed; otherwise it is NULL.                                                                                                                                                                                                                                                         |
| TM_DELTA_TIME               | NUMBER       |      | Time interval (in microseconds) over which TM_DELTA_CPU_TIME and TM_DELTA_DB_TIME are accumulated                                                                                                                                                                                                                                                                                                                               |
| TM_DELTA_CPU_TIME           | NUMBER       |      | Amount of time this session spent on CPU over the last TM_DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                               |
| TM_DELTA_DB_TIME            | NUMBER       |      | Amount of time spent by this session in database calls over the last TM_DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                 |
| DELTA_TIME                  | NUMBER       |      | Time interval (in microseconds) since the last time this session was sampled or created, over which the next five statistics are accumulated                                                                                                                                                                                                                                                                                    |
| DELTA_READ_IO_REQUESTS      | NUMBER       |      | Number of read I/O requests made by this session over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                          |
| DELTA_WRITE_IO_REQUESTS     | NUMBER       |      | Number of write I/O requests made by this session over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                         |
| DELTA_READ_IO_BYTES         | NUMBER       |      | Number of I/O bytes read by this session over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                                  |
| DELTA_WRITE_IO_BYTES        | NUMBER       |      | Number of I/O bytes written by this session over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                               |
| DELTA_INTERCONNECT_IO_BYTES | NUMBER       |      | Number of I/O bytes sent over the I/O interconnect over the last DELTA_TIME microseconds                                                                                                                                                                                                                                                                                                                                        |
| PGA_ALLOCATED               | NUMBER       |      | Amount of PGA memory (in bytes) consumed by this session at the time this sample was taken                                                                                                                                                                                                                                                                                                                                      |
| TEMP_SPACE_ALLOCATED        | NUMBER       |      | Amount of TEMP memory (in bytes) consumed by this session at the time this sample was taken                                                                                                                                                                                                                                                                                                                                     |
| DBOP_NAME                   | VARCHAR2(64) |      | Database operation name. If the type is SQL, the DBOP_NAME will be NULL.                                                                                                                                                                                                                                                                                                                                                        |
| DBOP_EXEC_ID                | NUMBER       |      | Database operation execution identifier for the current execution. If the type is SQL, the DBOP_EXEC_ID will be NULL.                                                                                                                                                                                                                                                                                                           |
| CON_DBID                    | NUMBER       |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                              |
| CON_ID                      | NUMBER       |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li>n: Where n is the applicable container ID for the rows containing data</li> </ul> |

## 5.373 DBA\_HIST\_APPLY\_SUMMARY

DBA\_HIST\_APPLY\_SUMMARY displays historical statistics information about each apply process for Oracle GoldenGate, and Oracle XStream. This view is intended for use with Automatic Workload Repository (AWR).

| Column                         | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                            |
|--------------------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID                        | NUMBER        | NOT NULL | Unique snapshot ID                                                                                                                                                                                                                                                                                     |
| DBID                           | NUMBER        | NOT NULL | Database ID for the snapshot                                                                                                                                                                                                                                                                           |
| INSTANCE_NUMBER                | NUMBER        | NOT NULL | Instance number for the snapshot                                                                                                                                                                                                                                                                       |
| APPLY_NAME                     | VARCHAR2(128) | NOT NULL | Name of the apply process                                                                                                                                                                                                                                                                              |
| STARTUP_TIME                   | DATE          | NOT NULL | The time that the apply process was last started                                                                                                                                                                                                                                                       |
| READER_TOTAL_MESSAGES_DEQUEUED | NUMBER        |          | Total number of messages dequeued since the apply process was last started                                                                                                                                                                                                                             |
| READER_LAG                     | NUMBER        |          | For captured messages, the delay (in seconds) between the creation of the last message and it being received by the apply process. For user enqueued messages, the delay between the message being enqueued in the local database and being received by the apply process.                             |
| COORD_TOTAL_RECEIVED           | NUMBER        |          | Total number of transactions received by the coordinator process since the apply process was last started                                                                                                                                                                                              |
| COORD_TOTAL_APPLIED            | NUMBER        |          | Total number of transactions applied by the apply process since the apply process was last started                                                                                                                                                                                                     |
| COORD_TOTAL_ROLLBACKS          | NUMBER        |          | Number of transactions which were rolled back due to unexpected contention                                                                                                                                                                                                                             |
| COORD_TOTAL_WAIT_DEPS          | NUMBER        |          | Number of times since the apply process was last started that an apply server waited to apply a logical change record (LCR) in a transaction until another apply server applied a transaction because of a dependency between the transactions                                                         |
| COORD_TOTAL_WAIT_CMTS          | NUMBER        |          | Number of times since the apply process was last started that an apply server waited to commit a transaction until another apply server committed a transaction to serialize commits                                                                                                                   |
| COORD_LWM_LAG                  | NUMBER        |          | For captured messages, the delay (in seconds) between the creation of the message corresponding to the low watermark and it being applied by the apply process. For user enqueued messages, the delay between the message being enqueued in the local database and being applied by the apply process. |

| Column                        | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| CON_DBID                      | NUMBER        |          | The database ID of the PDB                                                                                                                                                                                                                                                                                                                                                                                                                            |
| REPLICAT_NAME                 | VARCHAR2(128) |          | The name of the replicat group created from GGSCI using GoldenGate                                                                                                                                                                                                                                                                                                                                                                                    |
| UNASSIGNED_COMPLETE_TXN       | NUMBER        |          | Total number of complete transactions that the coordinator has not assigned to any apply servers                                                                                                                                                                                                                                                                                                                                                      |
| TOTAL_LCRS_RETRIED            | NUMBER        |          | Total number of LCRs retried by this server                                                                                                                                                                                                                                                                                                                                                                                                           |
| TOTAL_TRANSACTIONS_RETRIED    | NUMBER        |          | Total transactions retried by this server                                                                                                                                                                                                                                                                                                                                                                                                             |
| TOTAL_ERRORS                  | NUMBER        |          | Number of transactions applied by the apply process that resulted in an apply error since the apply process was last started                                                                                                                                                                                                                                                                                                                          |
| SESSION_MODULE                | VARCHAR2(64)  | NOT NULL | Session module. Valid values: <ul style="list-style-type: none"> <li>• XStream</li> <li>• GoldenGate</li> </ul>                                                                                                                                                                                                                                                                                                                                       |
| CON_ID                        | NUMBER        |          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.374 DBA\_HIST\_ASH\_SNAPSHOT

DBA\_HIST\_ASH\_SNAPSHOT provides the list of snapshots that contains Active Session History (ASH) data.

This view differs from DBA\_HIST\_SNAPSHOT in that it provides snapshots which had errors flushing some Automatic Workload Repository (AWR) tables, but for which ASH data may be successfully flushed (DBA\_HIST\_SNAPSHOT filters out snapshots which had errors flushing AWR tables).

| Column              | Datatype     | NULL     | Description                                    |
|---------------------|--------------|----------|------------------------------------------------|
| SNAP_ID             | NUMBER       | NOT NULL | Unique snapshot ID                             |
| DBID                | NUMBER       | NOT NULL | Database ID for the snapshot                   |
| INSTANCE_NUMBER     | NUMBER       | NOT NULL | Instance number for the snapshot               |
| STARTUP_TIME        | TIMESTAMP(3) | NOT NULL | Startup time of the instance                   |
| BEGIN_INTERVAL_TIME | TIMESTAMP(3) | NOT NULL | Time at the beginning of the snapshot interval |

| Column            | Datatype                        | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## 5.375 DBA\_HIST\_BASELINE

DBA\_HIST\_BASELINE displays information on baselines taken in the system.

For each baseline, this view displays the complete time range and whether the baseline is the default baseline.

| Column        | Datatype     | NULL | Description                          |
|---------------|--------------|------|--------------------------------------|
| DBID          | NUMBER       |      | Database ID                          |
| BASELINE_ID   | NUMBER       |      | Internal ID for the baseline         |
| BASELINE_NAME | VARCHAR2(64) |      | User-specified name for the baseline |

| Column             | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## 5.377 DBA\_HIST\_BASELINE\_METADATA

DBA\_HIST\_BASELINE\_METADATA displays metadata information for the baseline.

| Column        | Datatype     | NULL     | Description                          |
|---------------|--------------|----------|--------------------------------------|
| DBID          | NUMBER       | NOT NULL | Database ID                          |
| BASELINE_ID   | NUMBER       | NOT NULL | Internal ID for the baseline         |
| BASELINE_NAME | VARCHAR2(64) |          | User-specified name for the baseline |

| Column             | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BASELINE_TYPE      | VARCHAR2(13) |      | The baseline type, as follows:<br>STATIC - baselines that are created manually by the user<br>MOVING WINDOW - baselines that have dynamic start and end snapshot IDs<br>GENERATED - baselines that are automatically generated by the system, using a template                                                                                                                                                                                  |
| START_SNAP_ID      | NUMBER       |      | Start snapshot ID for the baseline                                                                                                                                                                                                                                                                                                                                                                                                              |
| END_SNAP_ID        | NUMBER       |      | End snapshot ID for the baseline                                                                                                                                                                                                                                                                                                                                                                                                                |
| MOVING_WINDOW_SIZE | NUMBER       |      | If BASELINE_TYPE is MOVING WINDOW, this field is the size of the moving window in number of days.<br>If NULL, then the window size is the value of the AWR retention setting.                                                                                                                                                                                                                                                                   |
| CREATION_TIME      | DATE         |      | Time the baseline was created                                                                                                                                                                                                                                                                                                                                                                                                                   |
| EXPIRATION         | NUMBER       |      | How long to keep the baseline, in number of days. If the value is NULL, the baseline will be kept forever.                                                                                                                                                                                                                                                                                                                                      |
| TEMPLATE_NAME      | VARCHAR2(64) |      | Name of the template that created this baseline, if any                                                                                                                                                                                                                                                                                                                                                                                         |
| LAST_TIME_COMPUTED | DATE         |      | Last time that statistics were computed on the baseline                                                                                                                                                                                                                                                                                                                                                                                         |
| CON_ID             | NUMBER       |      | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.378 DBA\_HIST\_BASELINE\_TEMPLATE

DBA\_HIST\_BASELINE\_TEMPLATE displays the templates used by the system for baseline generation.

The system uses this information to determine which baselines should be automatically created or removed.

| Column        | Datatype      | NULL     | Description                                                                                         |
|---------------|---------------|----------|-----------------------------------------------------------------------------------------------------|
| DBID          | NUMBER        | NOT NULL | Database ID                                                                                         |
| TEMPLATE_ID   | NUMBER        | NOT NULL | Internal ID for the template                                                                        |
| TEMPLATE_NAME | VARCHAR2(128) | NOT NULL | Name of the template                                                                                |
| TEMPLATE_TYPE | VARCHAR2(9)   | NOT NULL | Type of the template, as follows:<br>SINGLE - one time period<br>REPEATING - maintain a time period |

| Column               | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BASELINE_NAME_PREFIX | VARCHAR2(128) | NOT NULL | Name to use for the baselines that are created:<br>For a template type of SINGLE, the BASELINE_NAME_PREFIX is the name that will be used.<br>For a template type of REPEATING, the BASELINE_NAME will be the prefix to the name.                                                                                                                                                                                                                   |
| START_TIME           | DATE          | NOT NULL | For a template type of SINGLE, this is the start time for future baselines<br>For a template type of REPEATING, this is the effective start time that baselines should start being generated.                                                                                                                                                                                                                                                      |
| END_TIME             | DATE          | NOT NULL | For a template type of SINGLE, this is the end time for future baselines.<br>For a template type of REPEATING, this is the effective end time that baselines should stop being generated.                                                                                                                                                                                                                                                          |
| DAY_OF_WEEK          | VARCHAR2(9)   |          | For a template type of REPEATING, this indicates the day of the week to create the baseline: SUNDAY, MONDAY, TUESDAY, WEDNESDAY, THURSDAY, FRIDAY, SATURDAY, ALL.                                                                                                                                                                                                                                                                                  |
| HOUR_IN_DAY          | NUMBER        |          | For a template type of REPEATING, a value from 0 - 23 to indicate the hour of the day to create the baseline for.                                                                                                                                                                                                                                                                                                                                  |
| DURATION             | NUMBER        |          | For a template type of REPEATING, the length of time for the baseline to be created.                                                                                                                                                                                                                                                                                                                                                               |
| EXPIRATION           | NUMBER        |          | How long to keep the baseline, in number of days                                                                                                                                                                                                                                                                                                                                                                                                   |
| REPEAT_INTERVAL      | VARCHAR2(128) |          | String that represents the time repeating information in the format used by the DBMS_SCHEDULER package                                                                                                                                                                                                                                                                                                                                             |
| LAST_GENERATED       | DATE          |          | Last time a baseline was generated for this template                                                                                                                                                                                                                                                                                                                                                                                               |
| CON_ID               | NUMBER        |          | The ID of the container to which the data pertains.<br>Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.381 DBA\_HIST\_BUFFERED\_QUEUES

DBA\_HIST\_BUFFERED\_QUEUES displays historical information about all buffered queues available for the instance.

| Column          | Datatype      | NULL     | Description                      |
|-----------------|---------------|----------|----------------------------------|
| SNAP_ID         | NUMBER        | NOT NULL | Unique snapshot ID               |
| DBID            | NUMBER        | NOT NULL | Database ID for the snapshot     |
| INSTANCE_NUMBER | NUMBER        | NOT NULL | Instance number for the snapshot |
| QUEUE_SCHEMA    | VARCHAR2(128) | NOT NULL | Owner of the queue               |
| QUEUE_NAME      | VARCHAR2(128) | NOT NULL | Name of the queue                |
| STARTUP_TIME    | DATE          | NOT NULL | Startup time of the instance     |

| Column                       | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| SNAP_ID              | NUMBER         | NOT NULL | Unique snapshot ID                                                                                                                                       |
| DBID                 | NUMBER         | NOT NULL | Database ID for the snapshot                                                                                                                             |
| INSTANCE_NUMBER      | NUMBER         | NOT NULL | Instance number for the snapshot                                                                                                                         |
| QUEUE_SCHEMA         | VARCHAR2(128)  | NOT NULL | Owner of the queue                                                                                                                                       |
| QUEUE_NAME           | VARCHAR2(128)  | NOT NULL | Name of the queue                                                                                                                                        |
| SUBSCRIBER_ID        | NUMBER         | NOT NULL | Internal subscriber number (for identification)                                                                                                          |
| SUBSCRIBER_NAME      | VARCHAR2(128)  |          | Name of the subscriber                                                                                                                                   |
| SUBSCRIBER_ADDRESS   | VARCHAR2(1024) |          | Address of the subscribing agent                                                                                                                         |
| SUBSCRIBER_TYPE      | VARCHAR2(128)  |          | Type of subscriber: <ul style="list-style-type: none"> <li>• PROXY - Proxy subscriber</li> <li>• SUBSCRIBOR</li> </ul>                                   |
| STARTUP_TIME         | DATE           | NOT NULL | Startup time of the instance                                                                                                                             |
| LAST_BROWSED_SEQ     | NUMBER         |          | Sequence number of the most recently browsed message for the subscriber (comparable to the number of messages in the V\$STREAMS_APPLY_READER view)       |
| LAST_BROWSED_NUM     | NUMBER         |          | Internal Message number for the most recently browsed message for the subscriber                                                                         |
| LAST_DEQUEUED_SEQ    | NUMBER         |          | Sequence number of the most recently dequeued message for the subscriber (comparable to the number of messages in the V\$STREAMS_APPLY_COORDINATOR view) |
| LAST_DEQUEUED_NUM    | NUMBER         |          | Internal Message number for the most recently dequeued message for the subscriber                                                                        |
| CURRENT_ENQ_SEQ      | NUMBER         |          | Current sequence number of the most recently enqueued message for the subscriber                                                                         |
| NUM_MSGS             | NUMBER         |          | Total number of outstanding messages currently enqueued in the buffered queue for the subscriber (includes the count of the messages overflowed to disk) |
| CNUM_MSGS            | NUMBER         |          | Cumulative total number of messages enqueued for the subscriber since the creation of the buffered queue                                                 |
| TOTAL_DEQUEUED_MSG   | NUMBER         |          | Total number of messages dequeued by the subscriber                                                                                                      |
| TOTAL_SPILLED_MSG    | NUMBER         |          | Total number of spilled messages for the subscriber                                                                                                      |
| EXPIRED_MSGS         | NUMBER         |          | Number of expired messages                                                                                                                               |
| MESSAGE_LAG          | NUMBER         |          | Message lag of the subscriber                                                                                                                            |
| ELAPSED_DEQUEUE_TIME | NUMBER         |          | Total time spent in dequeue (in hundredths of a second)                                                                                                  |
| DEQUEUE_CPU_TIME     | NUMBER         |          | Total CPU time for dequeue (in hundredths of a second)                                                                                                   |
| LAST_DEQUEUE_TIME    | TIMESTAMP(3)   |          | Last message dequeue time                                                                                                                                |
| OLDEST_MSGID         | RAW(16)        |          | Message ID of the oldest message                                                                                                                         |
| OLDEST_MSG_ENQTM     | TIMESTAMP(3)   |          | Enqueue time of the oldest message                                                                                                                       |
| CON_DBID             | NUMBER         |          | The database ID of the PDB for the sampled session                                                                                                       |

| Column | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.383 DBA\_HIST\_CAPTURE

DBA\_HIST\_CAPTURE displays historical statistics information about each capture process for Oracle GoldenGate, and XStream capture operations.

This view is intended for use with Automatic Workload Repository (AWR).

| Column                  | Datatype      | NULL     | Description                                                                                                                                      |
|-------------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID                 | NUMBER        | NOT NULL | Unique snapshot ID                                                                                                                               |
| DBID                    | NUMBER        | NOT NULL | Database ID for the snapshot                                                                                                                     |
| INSTANCE_NUMBER         | NUMBER        | NOT NULL | Instance number for the snapshot                                                                                                                 |
| CAPTURE_NAME            | VARCHAR2(128) | NOT NULL | Name of the capture process                                                                                                                      |
| STARTUP_TIME            | DATE          | NOT NULL | Time that the capture process was last started                                                                                                   |
| LAG                     | NUMBER        |          | Delay (in seconds) between the creation and capture of the most recently captured message                                                        |
| TOTAL_MESSAGES_CAPTURED | NUMBER        |          | Total changes captured since the capture process was last started                                                                                |
| TOTAL_MESSAGES_ENQUEUED | NUMBER        |          | Total number of messages enqueued since the capture process was last started                                                                     |
| ELAPSED_RULE_TIME       | NUMBER        |          | Elapsed time (in hundredths of a second) evaluating rules since the capture process was last started                                             |
| ELAPSED_ENQUEUE_TIME    | NUMBER        |          | Elapsed time (in hundredths of a second) enqueueing messages since the capture process was last started                                          |
| ELAPSED_REDO_WAIT_TIME  | NUMBER        |          | Elapsed time (in hundredths of a second) spent by the capture process in the WAITING FOR REDO state since the capture process was last started.  |
| ELAPSED_PAUSE_TIME      | NUMBER        |          | Elapsed pause time (in hundredths of a second) spent by the capture process since the capture process was last restarted                         |
| CON_DBID                | NUMBER        |          | The database ID of the PDB                                                                                                                       |
| EXTRACT_NAME            | VARCHAR2(128) |          | Name of the extract process, if applicable                                                                                                       |
| BYTES_REDO_MINED        | NUMBER        |          | The total amount of redo data mined (in bytes) since the capture process last started                                                            |
| BYTES_SENT              | NUMBER        |          | Total number of bytes sent by the capture process to the extract process since the last time the extract process attached to the capture process |

| Column         | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------|--------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SESSION_MODULE | VARCHAR2(64) | NOT NULL | Session module. Valid values: <ul style="list-style-type: none"> <li>• XStream</li> <li>• GoldenGate</li> </ul>                                                                                                                                                                                                                                                                                                                                       |
| CON_ID         | NUMBER       |          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.384 DBA\_HIST\_CHANNEL\_WAITS

DBA\_HIST\_CHANNEL\_WAITS display the amount of messages broadcast on KSR and KSXR channels as well as the total time taken for the broadcast to complete.

KSR channels are local to an instance, that is, only processes within an instance subscribed to the channel can receive the message. KSXR channels allow messages to be broadcast across instances. The messages broadcast and the total time to broadcast are cumulative from the start of the instance. Channels with high overall average wait times could indicate potential problems with a subscriber on that channel which can lead to poor scaled performance.

| Column             | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                     |
|--------------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID            | NUMBER       |      | Unique snapshot ID                                                                                                                                                                                                                                                                                                                              |
| DBID               | NUMBER       |      | Database ID for the snapshot                                                                                                                                                                                                                                                                                                                    |
| INSTANCE_NUMBER    | NUMBER       |      | Instance number for the snapshot                                                                                                                                                                                                                                                                                                                |
| CHANNEL            | VARCHAR2(64) |      | The name of the KSR or KSXR channel                                                                                                                                                                                                                                                                                                             |
| MESSAGES_PUBLISHED | NUMBER       |      | The cumulative count of messages published on the channel (from instance startup)                                                                                                                                                                                                                                                               |
| WAIT_COUNT         | NUMBER       |      | The total number of times a publisher has waited for a broadcast to complete. This metric is only pertinent for asynchronous broadcasts where the broadcast can be dispatched and publisher can wait for completion at a later point of time. A high wait count along with increased wait time can indicate a potential performance bottleneck. |
| WAIT_TIME_USEC     | NUMBER       |      | The cumulative amount of time in microseconds that publishers have waited for message broadcast to complete. Average time for broadcast on a channel can be computed by dividing WAIT_TIME_USEC by WAIT_COUNT. A high average time can indicate a potential performance bottleneck.                                                             |
| CON_DBID           | NUMBER       |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                              |

| Column | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------|----------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CON_ID | NUMBER   |      | <p>The ID of the container that CON_DBID identifies. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.385 DBA\_HIST\_CLUSTER\_INTERCON

DBA\_HIST\_CLUSTER\_INTERCON displays information about the devices used by the instance to access the interconnect (that is, communicate with other instances).

| Column          | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------|---------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID         | NUMBER        | NOT NULL | Unique snapshot ID                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| DBID            | NUMBER        | NOT NULL | Database ID for the snapshot                                                                                                                                                                                                                                                                                                                                                                                                                         |
| INSTANCE_NUMBER | NUMBER        | NOT NULL | Instance number for the snapshot                                                                                                                                                                                                                                                                                                                                                                                                                     |
| NAME            | VARCHAR2(256) | NOT NULL | Operating system name of the device                                                                                                                                                                                                                                                                                                                                                                                                                  |

## 5.386 DBA\_HIST\_COLORED\_SQL

DBA\_HIST\_COLORED\_SQL displays the SQL IDs that have been marked for AWR SQL capture.

If a SQL statement is colored using the DBMS\_WORKLOAD\_REPOSITORY.ADD\_COLORED\_SQL procedure, then AWR will always capture the SQL statistics for the colored SQL ID. A SQL statement can be removed from coloring using the DBMS\_WORKLOAD\_REPOSITORY.REMOVE\_COLORED\_SQL procedure.

| Column      | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## 5.389 DBA\_HIST\_CON\_SYSMETRIC\_HIST

DBA\_HIST\_CON\_SYSMETRIC\_HIST externalizes all available history of the system metric values for the entire set of data kept in the database. This view contains snapshots of V\$CON\_SYSMETRIC\_HISTORY.

### Note

This view is not populated and is reserved for future use.

## 5.390 DBA\_HIST\_CON\_SYSMETRIC\_SUMM

DBA\_HIST\_CON\_SYSMETRIC\_SUMM displays a history of statistical summary of all metric values in the system metrics long duration (60-second) group. This view contains snapshots of V\$CON\_SYSMETRIC\_SUMMARY.

| Column          | Datatype | NULL | Description                               |
|-----------------|----------|------|-------------------------------------------|
| SNAP_ID         | NUMBER   |      | Unique snapshot ID                        |
| DBID            | NUMBER   |      | Database ID for the snapshot              |
| INSTANCE_NUMBER | NUMBER   |      | Instance number for the snapshot          |
| BEGIN_TIME      | DATE     |      | Begin time of the interval                |
| END_TIME        | DATE     |      | End time of the interval                  |
| INTSIZE         | NUMBER   |      | Interval size (in hundredths of a second) |
| GROUP_ID        | NUMBER   |      | Group ID                                  |

| Column             | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## 5.393 DBA\_HIST\_CR\_BLOCK\_SERVER

DBA\_HIST\_CR\_BLOCK\_SERVER displays historical statistics on the Global Cache Service processes (LMS) used in cache fusion.

This view contains snapshots of V\$CR\_BLOCK\_SERVER.

| Column           | Datatype | NULL     | Description                                                                                                                                                               |
|------------------|----------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SNAP_ID          | NUMBER   | NOT NULL | Unique snapshot ID                                                                                                                                                        |
| DBID             | NUMBER   | NOT NULL | Database ID for the snapshot                                                                                                                                              |
| INSTANCE_NUMBER  | NUMBER   | NOT NULL | Instance number for the snapshot                                                                                                                                          |
| CR_REQUESTS      | NUMBER   |          | Number of CR blocks served due to remote CR block requests                                                                                                                |
| CURRENT_REQUESTS | NUMBER   |          | <p>Number of current blocks served due to remote CR block requests</p> <p>CR_REQUESTS + CURRENT_REQUESTS = global cache CR blocks served (from V\$SYSSTAT).</p>           |
| DATA_REQUESTS    | NUMBER   |          | Number of current or CR requests for data blocks                                                                                                                          |
| UNDO_REQUESTS    | NUMBER   |          | Number of CR requests for undo blocks                                                                                                                                     |
| TX_REQUESTS      | NUMBER   |          | <p>Number of CR requests for undo segment header blocks</p> <p>DATA_REQUESTS + UNDO_REQUESTS + TX_REQUESTS = total number of requests handled by the LMS processes</p>    |
| CURRENT_RESULTS  | NUMBER   |          | Number of requests for which no changes were rolled out of the block returned to the requesting instance                                                                  |
| PRIVATE_RESULTS  | NUMBER   |          | Number of requests for which changes were rolled out of the block returned to the requesting instance, and only the requesting transaction can use the resulting CR block |
| ZERO_RESULTS     | NUMBER   |          | Number of requests for which changes were rolled out of the block returned to the requesting instance. Only zero-XID transactions can use the block.                      |

| Column                 | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|------------------------|----------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DISK_READ_RESULTS      | NUMBER   |      | Number of requests for which the requesting instance had to read the requested block from disk                                                                                                                                                                                                                                                                                                                                                |
| FAIL_RESULTS           | NUMBER   |      | Number of requests that failed; the requesting transaction must reissue the request                                                                                                                                                                                                                                                                                                                                                           |
| FAIRNESS_DOWN_CONVERTS | NUMBER   |      | Number of times an instance receiving a request has down-converted an X lock on a block because it was not modifying the block                                                                                                                                                                                                                                                                                                                |
| FLUSHES                | NUMBER   |      | Number of times the log has been flushed by an LMS process                                                                                                                                                                                                                                                                                                                                                                                    |
| FLUSHES                | NUMBER   |      | Number of times the log has been flushed by an LMS process                                                                                                                                                                                                                                                                                                                                                                                    |
| BUILDS                 | NUMBER   |      | Number of requests for which the server had to fabricate a CR block                                                                                                                                                                                                                                                                                                                                                                           |
| LIGHT_WORKS            | NUMBER   |      | Number of times the light-work rule was evoked. This rule prevents the LMS processes from going to disk while responding to CR requests for data, undo, or undo segment header blocks. This rule can prevent the LMS process from completing its response to the CR request.                                                                                                                                                                  |
| ERRORS                 | NUMBER   |      | Number of times an error was signalled by an LMS process                                                                                                                                                                                                                                                                                                                                                                                      |
| CON_DBID               | NUMBER   |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                            |
| CON_ID                 | NUMBER   |      | The ID of the container that CON_DBID identifies. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.394 DBA\_HIST\_CURRENT\_BLOCK\_SERVER

DBA\_HIST\_CURRENT\_BLOCK\_SERVER displays historical statistics on the Global Cache Service processes (LMS) used in cache fusion.

This view contains snapshots of V\$CURRENT\_BLOCK\_SERVER.

| Column          | Datatype | NULL     | Description                      |
|-----------------|----------|----------|----------------------------------|
| SNAP_ID         | NUMBER   | NOT NULL | Unique snapshot ID               |
| DBID            | NUMBER   | NOT NULL | Database ID for the snapshot     |
| INSTANCE_NUMBER | NUMBER   | NOT NULL | Instance number for the snapshot |

| Column     | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------|----------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PIN0       | NUMBER   |      | Pins taking less than 100 microseconds                                                                                                                                                                                                                                                                                                                                                                                                           |
| PIN1       | NUMBER   |      | Pins taking 100 microseconds to 1 millisecond                                                                                                                                                                                                                                                                                                                                                                                                    |
| PIN10      | NUMBER   |      | Pins taking 1 to 10 milliseconds                                                                                                                                                                                                                                                                                                                                                                                                                 |
| PIN100     | NUMBER   |      | Pins taking 10 to 100 milliseconds                                                                                                                                                                                                                                                                                                                                                                                                               |
| PIN1000    | NUMBER   |      | Pins taking 100 to 1000 milliseconds                                                                                                                                                                                                                                                                                                                                                                                                             |
| PIN10000   | NUMBER   |      | Pins taking 1000 to 10000 milliseconds                                                                                                                                                                                                                                                                                                                                                                                                           |
| FLUSH0     | NUMBER   |      | Flushes taking less than 100 microseconds                                                                                                                                                                                                                                                                                                                                                                                                        |
| FLUSH1     | NUMBER   |      | Flushes taking 100 microseconds to 1 millisecond                                                                                                                                                                                                                                                                                                                                                                                                 |
| FLUSH10    | NUMBER   |      | Flushes taking 1 to 10 milliseconds                                                                                                                                                                                                                                                                                                                                                                                                              |
| FLUSH100   | NUMBER   |      | Flushes taking 10 to 100 milliseconds                                                                                                                                                                                                                                                                                                                                                                                                            |
| FLUSH1000  | NUMBER   |      | Flushes taking 100 to 1000 milliseconds                                                                                                                                                                                                                                                                                                                                                                                                          |
| FLUSH10000 | NUMBER   |      | Flushes taking 1000 to 10000 milliseconds                                                                                                                                                                                                                                                                                                                                                                                                        |
| CON_DBID   | NUMBER   |      | The database ID of the PDB for the sampled session                                                                                                                                                                                                                                                                                                                                                                                               |
| CON_ID     | NUMBER   |      | The ID of the container that CON_DBID identifies.<br>Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>1: This value is used for rows containing data that pertain to only the root</li> <li><i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |

## 5.395 DBA\_HIST\_DATABASE\_INSTANCE

DBA\_HIST\_DATABASE\_INSTANCE displays the databases and instances in the Workload Repository.

| Column          | Datatype     | NULL     | Description                                                                                                                 |
|-----------------|--------------|----------|-----------------------------------------------------------------------------------------------------------------------------|
| DBID            | NUMBER       | NOT NULL | Database ID                                                                                                                 |
| INSTANCE_NUMBER | NUMBER       | NOT NULL | Instance number                                                                                                             |
| STARTUP_TIME    | TIMESTAMP(3) | NOT NULL | Startup time of the instance                                                                                                |
| PARALLEL        | VARCHAR2(3)  | NOT NULL | Indicates whether the instance is running in an Oracle Real Application Clusters (Oracle RAC) environment (YES) or not (NO) |
| VERSION         | VARCHAR2(17) | NOT NULL | Database version                                                                                                            |
| DB_NAME         | VARCHAR2(9)  |          | Name of the database                                                                                                        |
| INSTANCE_NAME   | VARCHAR2(16) |          | Name of the instance                                                                                                        |

| Column             | Datatype                    | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------|-----------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| HOST_NAME          | VARCHAR2(64)                |          | Name of the host                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| LAST_ASH_SAMPLE_ID | NUMBER                      | NOT NULL | Last sample ID for the active session history                                                                                                                                                                                                                                                                                                                                                                                                         |
| PLATFORM_NAME      | VARCHAR2(101)               |          | Platform on which the instance is running                                                                                                                                                                                                                                                                                                                                                                                                             |
| CDB                | VARCHAR2(3)                 |          | Possible values are: <ul style="list-style-type: none"> <li>• YES if the database is a CDB</li> <li>• NO if the database is not a CDB</li> </ul>                                                                                                                                                                                                                                                                                                      |
| EDITION            | VARCHAR2(7)                 |          | The edition of the database: <ul style="list-style-type: none"> <li>• P0: Personal Edition</li> <li>• XE: Express Edition</li> <li>• SE2: Standard Edition or Standard Edition 2</li> <li>• EE: Enterprise Edition</li> <li>• HP: Enterprise Edition - High Performance</li> <li>• XP: Enterprise Edition - Extreme Performance</li> </ul>                                                                                                            |
| DB_UNIQUE_NAME     | VARCHAR2(30)                |          | Unique database name                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| DATABASE_ROLE      | VARCHAR2(16)                |          | Current role of the database: <ul style="list-style-type: none"> <li>• SNAPSHOT STANDBY</li> <li>• LOGICAL STANDBY</li> <li>• PHYSICAL STANDBY</li> <li>• PRIMARY</li> <li>• FAR SYNC</li> </ul>                                                                                                                                                                                                                                                      |
| CDB_ROOT_DBID      | NUMBER                      |          | The database ID of the CDB root for the sampled session                                                                                                                                                                                                                                                                                                                                                                                               |
| CON_ID             | NUMBER                      |          | The ID of the container to which the data pertains. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs.</li> <li>• 1: This value is used for rows containing data that pertain to only the root</li> <li>• <i>n</i>: Where <i>n</i> is the applicable container ID for the rows containing data</li> </ul> |
| STARTUP_TIME_TZ    | TIMESTAMP(3) WITH TIME ZONE |          | Startup time of the instance                                                                                                                                                                                                                                                                                                                                                                                                                          |

## 5.396 DBA\_HIST\_DATAFILE

DBA\_HIST\_DATAFILE displays a history of the data file information from the control file.

This view contains snapshots of V\$DATAFILE.

| Column | Datatype | NULL     | Description |
|--------|----------|----------|-------------|
| DBID   | NUMBER   | NOT NULL | Database ID |
