Primary Author: Mary Beth Roeser

Contributing Authors: David McDermid, Sarika Surampudi

Contributors: Nipun Agarwal, Nigel Bayliss, Neerja Bhatt, Wilson Chan, Sumanta Chatterjee, Eugene Chong, Bruce Ernst, Thuvan Hoang, Mark Johnson, Jonathan Klein, Sushil Kumar, Tirthankar Lahiri, Bill Lee, Yunrui Li, Juan Loaiza, Rich Long, Catherine Luu, Neil MacNaughton, Gopal Mulagund, Subramanian Muralidhar, Ravi Murthy, Kant Patel, Mark Ramacher, Suvendu Ray, Debbie Steiner, Malai Stalin, Seema Sundara, Murali Thiyagarajan, Alex Tsukerman, Kothanda Umamageswaran, Steve Vivian, Eric Voss, Tak Wang, Steve Wertheimer, Andy Witkowski, Daniel Wong, Brian Wright, Qin Yu, Mohamed Ziauddin

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

1 Changes in This Release for Oracle Database Reference

1.1 Changes in Oracle Database 21c, Release Update 21.5	1
1.2 Changes in Oracle Database 21c	1
1.2.1 New Features	2
1.2.2 Deprecated Features	4
1.2.3 Desupported Features	5

Part I Initialization Parameters

2 Initialization Parameters

2.1 Uses of Initialization Parameters	1
2.1.1 Types of Initialization Parameters	2
2.1.1.1 Derived Parameters	2
2.1.1.2 Operating System-Dependent Parameters	2
2.1.1.3 Variable Parameters	2
2.2 Basic Initialization Parameters	3
2.3 Parameter Files	3
2.3.1 Server Parameter Files	3
2.3.2 Initialization Parameter Files	4
2.3.2.1 About the Character Set of Parameter Values	4
2.3.2.2 Specifying Values in an Initialization Parameter File	5
2.4 Changing Parameter Values in a Parameter File	9
2.4.1 Parameters by Functional Category	9
2.4.2 Modifiable Parameters	17

2.4.3	Displaying Current Parameter Values	25
2.4.4	Parameters You Should Not Specify in the Parameter File	26
2.4.5	When Parameters Are Set Incorrectly	26
2.5	Reading the Parameter Descriptions	26
2.6	Initialization Parameter Descriptions	27
2.7	ACTIVE_INSTANCE_COUNT	28
2.8	ADG_ACCOUNT_INFO_TRACKING	29
2.9	ADG_REDIRECT_DML	29
2.10	ALLOW_GLOBAL_DBLINKS	30
2.11	ALLOW_GROUP_ACCESS_TO_SGA	30
2.12	ALLOW_ROWID_COLUMN_TYPE	31
2.13	APPROX_FOR_AGGREGATION	32
2.14	APPROX_FOR_COUNT_DISTINCT	32
2.15	APPROX_FOR_PERCENTILE	33
2.16	AQ_TM_PROCESSES	34
2.17	ARCHIVE_LAG_TARGET	35
2.18	ASM_DISKGROUPS	35
2.19	ASM_DISKSTRING	36
2.20	ASM_IO_PROCESSES	37
2.21	ASM_POWER_LIMIT	38
2.22	ASM_PREFERRED_READ_FAILURE_GROUPS	39
2.23	AUDIT_FILE_DEST	40
2.24	AUDIT_SYS_OPERATIONS	41
2.25	AUDIT_SYSLOG_LEVEL	42
2.26	AUDIT_TRAIL	43
2.27	AUTOTASK_MAX_ACTIVE_PDBS	45
2.28	AWR_PDB_AUTOFLUSH_ENABLED	46
2.29	AWR_PDB_MAX_PARALLEL_SLAVES	47
2.30	AWR_SNAPSHOT_TIME_OFFSET	47
2.31	BACKGROUND_CORE_DUMP	48
2.32	BACKGROUND_DUMP_DEST	49
2.33	BACKUP_TAPE_IO_SLAVES	49
2.34	BITMAP_MERGE_AREA_SIZE	50
2.35	BLANK_TRIMMING	51
2.36	BLOCKCHAIN_TABLE_MAX_NO_DROP	52
2.37	CIRCUITS	52
2.38	CLIENT_RESULT_CACHE_LAG	53
2.39	CLIENT_RESULT_CACHE_SIZE	53
2.40	CLIENT_STATISTICS_LEVEL	54
2.41	CLONEDB	55
2.42	CLONEDB_DIR	56
2.43	CLUSTER_DATABASE	56

2.44	CLUSTER_INTERCONNECTS	57
2.45	COMMIT_LOGGING	58
2.46	COMMIT_POINT_STRENGTH	58
2.47	COMMIT_WAIT	59
2.48	COMMIT_WRITE	60
2.49	COMMON_USER_PREFIX	60
2.50	COMPATIBLE	62
2.51	CONNECTION_BROKERS	63
2.52	CONTAINER_DATA	64
2.53	CONTAINERS_PARALLEL_DEGREE	65
2.54	CONTROL_FILE_RECORD_KEEP_TIME	66
2.55	CONTROL_FILES	67
2.56	CONTROL_MANAGEMENT_PACK_ACCESS	67
2.57	CORE_DUMP_DEST	68
2.58	CPU_COUNT	69
2.59	CPU_MIN_COUNT	70
2.60	CREATE_BITMAP_AREA_SIZE	71
2.61	CREATE_STORED_OUTLINES	72
2.62	CURSOR_BIND_CAPTURE_DESTINATION	72
2.63	CURSOR_INVALIDATION	73
2.64	CURSOR_SHARING	74
2.65	CURSOR_SPACE_FOR_TIME	74
2.66	DATA_GUARD_MAX_IO_TIME	75
2.67	DATA_GUARD_MAX_LONGIO_TIME	76
2.68	DATA_GUARD_SYNC_LATENCY	76
2.69	DATA_TRANSFER_CACHE_SIZE	77
2.70	DB_nK_CACHE_SIZE	78
2.71	DB_BIG_TABLE_CACHE_PERCENT_TARGET	78
2.72	DB_BLOCK_BUFFERS	80
2.73	DB_BLOCK_CHECKING	81
2.74	DB_BLOCK_CHECKSUM	82
2.75	DB_BLOCK_SIZE	83
2.76	DB_CACHE_ADVICE	84
2.77	DB_CACHE_SIZE	85
2.78	DB_CREATE_FILE_DEST	86
2.79	DB_CREATE_ONLINE_LOG_DEST_n	86
2.80	DB_DOMAIN	87
2.81	DB_FILE_MULTIBLOCK_READ_COUNT	88
2.82	DB_FILE_NAME_CONVERT	89
2.83	DB_FILES	90
2.84	DB_FLASH_CACHE_FILE	90
2.85	DB_FLASH_CACHE_SIZE	91

2.86	DB_FLASHBACK_RETENTION_TARGET	92
2.87	DB_INDEX_COMPRESSION_INHERITANCE	93
2.88	DB_KEEP_CACHE_SIZE	94
2.89	DB_LOST_WRITE_PROTECT	94
2.90	DB_NAME	95
2.91	DB_PERFORMANCE_PROFILE	96
2.92	DB_RECOVERY_FILE_DEST	96
2.93	DB_RECOVERY_FILE_DEST_SIZE	97
2.94	DB_RECYCLE_CACHE_SIZE	98
2.95	DB_SECUREFILE	98
2.96	DB_ULTRA_SAFE	100
2.97	DB_UNIQUE_NAME	100
2.98	DB_UNRECOVERABLE_SCN_TRACKING	101
2.99	DB_WRITER_PROCESSES	102
2.100	DBFIPS_140	103
2.101	DBNEST_ENABLE	103
2.102	DBNEST_PDB_FS_CONF	104

Index

Preface

This manual provides reference information about database initialization parameters, static data dictionary views, dynamic performance views, database limits, and SQL scripts that are part of the Oracle Database.

This preface contains these topics:

- [Audience](#)
- [Documentation Accessibility](#)
- [Diversity and Inclusion](#)
- [Related Documents](#)
- [Conventions](#)

Audience

Oracle Database Reference is intended for database administrators, system administrators, and database application developers.

To use this document, you need to be familiar with the following:

- Oracle database management system (DBMS) concepts
- Your operating system environment

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customer access to and use of Oracle support services will be pursuant to the terms and conditions specified in their Oracle order for the applicable services.

Diversity and Inclusion

Oracle is fully committed to diversity and inclusion. Oracle respects and values having a diverse workforce that increases thought leadership and innovation. As part of our initiative to build a more inclusive culture that positively impacts our employees, customers, and partners, we are working to remove insensitive terms from our products and documentation. We are also mindful of the necessity to maintain compatibility with our customers' existing technologies and the need to ensure continuity of service as Oracle's offerings and industry standards evolve. Because of these technical constraints, our effort to remove insensitive terms is ongoing and will take time and external cooperation.

Related Documents

For more information, see these Oracle resources:

- *Oracle Database Concepts* for a comprehensive introduction to the concepts and terminology used in this manual
- *Oracle Database Administrator's Guide* for information about administering Oracle Database
- *Oracle Database Upgrade Guide* for the procedures for upgrading a previous release of Oracle to the new release
- *Oracle Database SQL Language Reference* for information on Oracle's SQL commands and functions
- *Oracle Database Development Guide* for information about developing database applications within Oracle Database

The complete documentation set for Oracle Database is available on the Oracle Help Center:

<http://docs.oracle.com/database/>

Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

Changes in This Release for Oracle Database Reference

This chapter lists changes in *Oracle Database Reference*:

- [Changes in Oracle Database 21c, Release Update 21.5](#)
- [Changes in Oracle Database 21c](#)

1.1 Changes in Oracle Database 21c, Release Update 21.5

New AE Analytic Views

Oracle Database 21c, Release Update 21.5, introduces AE ("all edition") analytic views. Each new AE analytic view corresponds to an existing non-AE analytic view. AE views have the same columns as their non-AE counterparts, plus a column that displays the name of the application edition where the editioned object is defined.

The following table lists the new AE analytic views, divided into three categories: analytic view views, attribute dimension views, and hierarchy views. For brevity, only the ALL_ views are listed. The corresponding DBA_ and USER_ views are also available and are documented in this guide.

Analytic View Views	Attribute Dimension Views	Hierarchy Views
ALL_ANALYTIC_VIEW_AGGR_FNS_AE	ALL_ATTRIBUTE_DIM_ATTR_CLS_AE	ALL_HIER_CLASS_AE
ALL_ANALYTIC_VIEW_AGR_DIMS_AE	ALL_ATTRIBUTE_DIM_ATTRS_AE	ALL_HIER_COLUMNS_AE
ALL_ANALYTIC_VIEW_ATTR_CLS_AE	ALL_ATTRIBUTE_DIM_CLASS_AE	ALL_HIER_HIER_ATTR_CLASS_AE
ALL_ANALYTIC_VIEW_BAS_MEAS_AE	ALL_ATTRIBUTE_DIM_JN_PTHS_AE	ALL_HIER_HIER_ATTRIBUTES_AE
ALL_ANALYTIC_VIEW_CLASS_AE	ALL_ATTRIBUTE_DIM_KEYS_AE	ALL_HIER_JOIN_PATHS_AE
ALL_ANALYTIC_VIEW_CLC_MEAS_AE	ALL_ATTRIBUTE_DIM_LEVELS_AE	ALL_HIER_LEVEL_ID_ATTRS_AE
ALL_ANALYTIC_VIEW_COLUMNS_AE	ALL_ATTRIBUTE_DIM_LVL_ATTRS_AE	ALL_HIER_LEVELS_AE
ALL_ANALYTIC_VIEW_DIM_ATTRS_AE	ALL_ATTRIBUTE_DIM_LVL_CLS_AE	ALL_HIERARCHIES_AE
ALL_ANALYTIC_VIEW_DIM_CLS_AE	ALL_ATTRIBUTE_DIM_ORD_ATTRS_AE

1.2 Changes in Oracle Database 21c

This section lists the following changes in *Oracle Database Reference* for Oracle Database 21c:

- [New Features](#)

- [Deprecated Features](#)
- [Desupported Features](#)

1.2.1 New Features

- The following feature is new in Oracle Database 21c:
 - You can specify an expression as the value for initialization parameters of type integer and big integer. See "[Using Expressions for Parameter Values](#)."
- The following initialization parameters are new in Oracle Database 21c:
 - [BLOCKCHAIN_TABLE_MAX_NO_DROP](#)
 - [DBNEST_ENABLE](#)
 - [DBNEST_PDB_FS_CONF](#)
 - [DIAGNOSTICS_CONTROL](#)
 - [DRCP_CONNECTION_LIMIT](#)
 - [ENABLE_PER_PDB_DRCP](#)
 - [HEARTBEAT_BATCH_SIZE](#)
 - [MANDATORY_USER_PROFILE](#)
 - [OPTIMIZER_CROSS_SHARD_RESILIENCY](#)
 - [PKCS11_LIBRARY_LOCATION](#)
 - [PMEM_FILESTORE](#)
 - [RESULT_CACHE_EXECUTION_THRESHOLD](#)
 - [RESULT_CACHE_MAX_TEMP_RESULT](#)
 - [RESULT_CACHE_MAX_TEMP_SIZE](#)
 - [TABLESPACE_ENCRYPTION_DEFAULT_ALGORITHM](#)
 - [TDE_KEY_CACHE](#)
 - [TIMEZONE_VERSION_UPGRADE_ONLINE](#)
- The following static data dictionary views are new in Oracle Database 21c:
 - [DBA_ACCHK_EVENTS](#)
 - [DBA_ACCHK_EVENTS_SUMMARY](#)
 - [DBA_ACCHK_STATISTICS](#)
 - [DBA_ACCHK_STATISTICS_SUMMARY](#)
 - [DBA_ACTIVITY_CONFIG](#)
 - [DBA_ACTIVITY_MVIEW](#)
 - [DBA_ACTIVITY_SNAPSHOT_META](#)
 - [DBA_ACTIVITY_TABLE](#)
 - [ALL_ANALYTIC_VIEW_AGGR_DIMS](#), [DBA_ANALYTIC_VIEW_AGGR_DIMS](#), and [USER_ANALYTIC_VIEW_AGGR_DIMS](#)
 - [ALL_ANALYTIC_VIEW_AGGR_FNS](#), [DBA_ANALYTIC_VIEW_AGGR_FNS](#), and [USER_ANALYTIC_VIEW_AGGR_FNS](#)

- [ALL_ANALYTIC_VIEW_DIM_ATTRS](#), [DBA_ANALYTIC_VIEW_DIM_ATTRS](#), and [USER_ANALYTIC_VIEW_DIM_ATTRS](#)
- [ALL_ANALYTIC_VIEW_FACT_COLS](#), [DBA_ANALYTIC_VIEW_FACT_COLS](#), and [USER_ANALYTIC_VIEW_FACT_COLS](#)
- [DBA_APP_ERRORS_HISTORY](#)
- [USER_APPLICATION_ROLES](#)
- [DBA_AUTO_MV_ANALYSIS_ACTIONS](#)
- [DBA_AUTO_MV_ANALYSIS_EXECUTIONS](#)
- [DBA_AUTO_MV_ANALYSIS_RECOMMENDATIONS](#)
- [DBA_AUTO_MV_ANALYSIS_REPORT](#)
- [DBA_AUTO_MV_ANALYSIS_TASK](#)
- [DBA_AUTO_MV_CONFIG](#)
- [DBA_AUTO_MV_MAINT_REPORT](#)
- [DBA_AUTO_MV_REFRESH_HISTORY](#)
- [DBA_AUTO_MV_VERIFICATION_REPORT](#)
- [DBA_AUTO_MV_VERIFICATION_STATUS](#)
- [DBA_AUTO_ZONEMAP_CONFIG](#)
- [DBA_AUTOTASK_SETTINGS](#)
- [ALL_BLOCKCHAIN_TABLES](#), [DBA_BLOCKCHAIN_TABLES](#), and [USER_BLOCKCHAIN_TABLES](#)
- [ALL_CERTIFICATES](#), [DBA_CERTIFICATES](#), and [USER_CERTIFICATES](#)

1.2.2 Deprecated Features

The following features are deprecated in Oracle Database 21c, and may be desupported in a future release:

- Traditional auditing is deprecated. As a result, the following initialization parameters and views are deprecated:
 - Initialization parameters:
 - AUDIT_FILE_DEST
 - AUDIT_SYS_OPERATIONS
 - AUDIT_SYSLOG_LEVEL
 - AUDIT_TRAIL
 - Static data dictionary views:
 - ALL_DEF_AUDIT_OPTS
 - AUDIT_ACTIONS
 - DBA_AUDIT_EXISTS
 - DBA_AUDIT_OBJECT
 - DBA_AUDIT_SESSION
 - DBA_AUDIT_STATEMENT

DBA_AUDIT_TRAIL
DBA_COMMON_AUDIT_TRAIL
DBA_FGA_AUDIT_TRAIL
DBA_OBJ_AUDIT_OPTS
DBA_PRIV_AUDIT_OPTS
DBA_STMT_AUDIT_OPTS
USER_AUDIT_OBJECT
USER_AUDIT_SESSION
USER_AUDIT_STATEMENT
USER_AUDIT_TRAIL
USER_OBJ_AUDIT_OPTS

- Dynamic performance view:

V\$XML_AUDIT_TRAIL

- AQ sharded queues are deprecated. As a result, the following dynamic performance views are deprecated:

V\$AQ_CROSS_INSTANCE_JOBS
V\$AQ_MESSAGE_CACHE
V\$AQ_MESSAGE_CACHE_ADVICE
V\$AQ_MESSAGE_CACHE_STAT
V\$AQ_NONDUR_SUBSCRIBER
V\$AQ_NONDUR_SUBSCRIBER_LWM
V\$AQ_PARTITION_STATS
V\$AQ_REMOTE_DEQUEUE_AFFINITY
V\$AQ_SHARDED_SUBSCRIBER_STAT
V\$AQ_SUBSCRIBER_LOAD

1.2.3 Desupported Features

The following features are desupported in Oracle Database 21c:

- Initialization parameters:
CLUSTER_DATABASE_INSTANCES
REMOTE_OS_AUTHENT
SEC_CASE_SENSITIVE_LOGON
UNIFIED_AUDIT_SGA_QUEUE_SIZE
- Dynamic performance views:
V\$ASM_ACFS_SEC_ADMIN
V\$ASM_ACFS_SEC_CMDRULE
V\$ASM_ACFS_SEC_REALM
V\$ASM_ACFS_SEC_REALM_FILTER
V\$ASM_ACFS_SEC_REALM_GROUP

V\$ASM_ACFS_SEC_REALM_USER
V\$ASM_ACFS_SEC_RULE
V\$ASM_ACFS_SEC_RULESET
V\$ASM_ACFS_SEC_RULESET_RULE
V\$ASM_ACFS_SECURITY_INFO
V\$OBJECT_USAGE

Oracle Database Upgrade Guide for a complete list of desupported features for this release

Part I

Initialization Parameters

Database initialization parameters can be specified in a parameter file to start or configure an instance.

This part contains the following chapter:

- [Initialization Parameters](#)

Note

A multitenant container database is the only supported architecture in Oracle Database 21c. While the documentation is being revised, legacy terminology may persist. In most cases, "database" and "non-CDB" refer to a CDB or PDB, depending on context. In some contexts, such as upgrades, "non-CDB" refers to a non-CDB from a previous release.

2

Initialization Parameters

This chapter contains detailed descriptions (in alphabetical order) of the database initialization parameters.

This chapter contains the following topics:

- [Uses of Initialization Parameters](#)
- [Basic Initialization Parameters](#)
- [Parameter Files](#)
- [Changing Parameter Values in a Parameter File](#)
- [Reading the Parameter Descriptions](#)
- [Initialization Parameter Descriptions](#)

2.1 Uses of Initialization Parameters

Initialization parameters are used to perform various functions.

For example, initialization parameters are used to:

- Set limits for the entire database
- Set user or process limits
- Set limits on database resources
- Affect performance (these are called **variable parameters**)

Variable parameters are of particular interest to database administrators, because these parameters are used primarily to improve database performance.

Database administrators can use initialization parameters to:

- Optimize performance by adjusting memory structures, such as the number of database buffers in memory
- Set database-wide defaults, such as the amount of space initially allocated for a context area when it is created
- Set database limits, such as the maximum number of database users
- Specify names of files or directories required by the database

Many initialization parameters can be fine-tuned to improve database performance. Other parameters should never be altered or should be altered only under the supervision of Oracle Support Services.

All initialization parameters are optional. Oracle has a default value for each parameter. This value may be operating system-dependent, depending on the parameter.

2.1.1 Types of Initialization Parameters

The Oracle database server has derived parameters, operating system-dependent parameters, and variable parameters.

- [Derived Parameters](#)
- [Operating System-Dependent Parameters](#)
- [Variable Parameters](#) (these can be dynamic parameters or any of the preceding ones)

2.1.1.1 Derived Parameters

Some initialization parameters are **derived**, meaning that their values are calculated from the values of other parameters. Normally, you should not alter values for derived parameters, but if you do, then the value you specify will override the calculated value.

For example, the default value of the SESSIONS parameter is derived from the value of the PROCESSES parameter. If the value of PROCESSES changes, then the default value of SESSIONS changes as well, unless you override it with a specified value.

2.1.1.2 Operating System-Dependent Parameters

The valid values or value ranges of some initialization parameters depend upon the host operating system. For example, the parameter DB_BLOCK_BUFFERS indicates the number of data buffers in main memory, and its maximum value depends on the operating system. The size of those buffers, set by DB_BLOCK_SIZE, has an operating system-dependent default value.

① See Also

Your operating system-specific Oracle documentation for more information on operating system-dependent Oracle parameters and operating system parameters

2.1.1.3 Variable Parameters

The variable initialization parameters offer the most potential for improving system performance. Some variable parameters set capacity limits but do not affect performance. For example, when the value of OPEN_CURSORS is 10, a user process attempting to open its eleventh cursor receives an error. Other variable parameters affect performance but do not impose absolute limits. For example, reducing the value of DB_BLOCK_BUFFERS does not prevent work even though it may slow down performance.

Increasing the values of variable parameters may improve your system's performance, but increasing most parameters also increases the system global area (SGA) size. A larger SGA can improve database performance up to a point. In virtual memory operating systems, an SGA that is too large can degrade performance if it is swapped in and out of memory. Operating system parameters that control virtual memory working areas should be set with the SGA size in mind. The operating system configuration can also limit the maximum size of the SGA.

2.2 Basic Initialization Parameters

Most databases should only need to have the database basic initialization parameters set to run properly and efficiently.

Oracle advises you to become familiar with the basic parameters and only use other parameters when directed to by feature documentation or in special circumstances. The following is a list of the database basic initialization parameters:

[CLUSTER_DATABASE](#)
[COMPATIBLE](#)
[CONTROL_FILES](#)
[DB_BLOCK_SIZE](#)
[DB_CREATE_FILE_DEST](#)
[DB_CREATE_ONLINE_LOG_DEST_n](#)
[DB_DOMAIN](#)
[DB_NAME](#)
[DB_RECOVERY_FILE_DEST](#)
[DB_RECOVERY_FILE_DEST_SIZE](#)
[DB_UNIQUE_NAME](#)
[INSTANCE_NUMBER](#)
[LDAP_DIRECTORY_SYSAUTH](#)
[LOG_ARCHIVE_DEST_n](#)
[LOG_ARCHIVE_DEST_STATE_n](#)
[NLS_DATE_LANGUAGE](#)
[NLS_TERRITORY](#)
[OPEN_CURSORS](#)
[PGA_AGGREGATE_TARGET](#)
[PROCESSES](#)
[REMOTE_LISTENER](#)
[REMOTE_LOGIN_PASSWORDFILE](#)
[SESSIONS](#)
[SGA_TARGET](#)
[SHARED_SERVERS](#)
[STAR_TRANSFORMATION_ENABLED](#)
[UNDO_TABLESPACE](#)

2.3 Parameter Files

A **parameter file** is a file that contains a list of initialization parameters and a value for each parameter. You specify initialization parameters in a parameter file that reflect your particular installation.

Oracle supports the following two types of parameter files:

- [Server Parameter Files](#)
- [Initialization Parameter Files](#)

2.3.1 Server Parameter Files

A **server parameter file** is a binary file that acts as a repository for initialization parameters.

The server parameter file can reside on the computer where the Oracle database server executes. Initialization parameters stored in a server parameter file are persistent, in that any changes made to the parameters while an instance is running can persist across instance shutdown and startup.

① See Also

Oracle Database Administrator's Guide for an introduction to and detailed information about managing and using server parameter files and initialization parameter files

2.3.2 Initialization Parameter Files

An **initialization parameter file** is a text file that contains a list of initialization parameters.

① Note

See "[About the Character Set of Parameter Values](#)" for more information about the character set to use when specifying values in an initialization parameter file.

The following are sample entries in an initialization parameter file:

```
PROCESSES = 100  
OPEN_LINKS = 12  
GLOBAL_NAMES = true
```

The name of the initialization parameter file varies depending on the operating system. For example, it can be in mixed case or lowercase, or it can have a logical name or a variation of the name `init.ora`. Also supplied is an `initdw.ora` file, which contains suggested parameter settings for data warehouses and data marts. The database administrator can choose a different file name for the initialization parameter file.

Refer to your operating system-specific Oracle documentation for the default locations and filenames for initialization parameter files on your operating system. The initialization parameter file is read by the client-side tool used to start the server (such as SQL*Plus).

Sample initialization parameter files are provided on the Oracle distribution medium for each operating system. A sample file is sufficient for initial use, but you will probably want to modify the file to tune the database for best performance. Any changes will take effect after you completely shut down and restart the instance.

2.3.2.1 About the Character Set of Parameter Values

Only characters from the default character set of the database platform are supported in parameter values. For all platforms except IBM z/OS and Fujitsu BS2000 the default platform character set is US7ASCII (7-bit ASCII).

The database behavior is undefined when parameter values with unsupported characters are specified. When using the `ALTER SYSTEM` statement to set a parameter value in a server parameter file, make sure only supported characters are used. The database does not always report an error when a value with unsupported characters is specified.

The initialization parameter file is a client-side file. When used, it is located on the host on which you start SQL*Plus to start up a database instance. The initialization parameter file must

be written in the client character set as specified by the NLS_LANG client setting. However, parameter values should not contain characters not supported by the default character set of the database.

2.3.2.2 Specifying Values in an Initialization Parameter File

This section describes several aspects of setting parameter values in an initialization parameter file.

2.3.2.2.1 Rules Governing Initialization Parameter Files

This section describes the rules that govern the specification of parameters in initialization parameter files.

- An initialization parameter file should contain only parameters and comments. A pound sign (#) starts a comment line. The rest of the line is ignored.
- Comments must use the same character set as parameter values.
- You can specify parameters in any order.
- Case (upper or lower) in filenames is significant only if case is significant on the host operating system.
- To enter several parameters on one line, use spaces between parameter names and values, as in the following example:

```
PROCESSES = 100 CPU_COUNT = 1 OPEN_CURSORS = 10
```

- Some parameters, such as ROLLBACK_SEGMENTS, accept multiple values. Any of the following represent valid syntax.

- Enter multiple values enclosed in parentheses and separated by commas. For example:

```
ROLLBACK_SEGMENTS = (SEG1, SEG2, SEG3, SEG4, SEG5)
```

- Enter multiple values without parentheses and commas. For example:

```
ROLLBACK_SEGMENTS = SEG1 SEG2 SEG3 SEG4 SEG5
```

- Enter multiple values, one per line. For example:

```
ROLLBACK_SEGMENTS = SEG1  
ROLLBACK_SEGMENTS = SEG2  
ROLLBACK_SEGMENTS = SEG3  
ROLLBACK_SEGMENTS = SEG4  
ROLLBACK_SEGMENTS = SEG5
```

If you enter values for one parameter on multiple lines, then the entries must be on consecutive lines. If they are not, then the first entry will not be processed properly. For example, in the following entry the setting for SEG3 and SEG4 will override the setting for SEG1 and SEG2:

```
ROLLBACK_SEGMENTS = SEG1 SEG2  
OPEN_CURSORS = 10  
ROLLBACK_SEGMENTS = SEG3 SEG4
```

- A backslash (\), also known as an escape character, indicates continuation of the parameter specification. If a backslash continues a line, then the continued line must have no leading spaces. For example:

```
ROLLBACK_SEGMENTS = (SEG1, SEG2, \  
SEG3, SEG4, SEG5)
```

- You can use the `IFILE` initialization parameter to embed the contents of another initialization parameter file into the current initialization parameter file.
- Enclose in quotation marks any parameter values that contain spaces or tabs. You can use either single or double quotation marks unless otherwise indicated. For example:

```
NLS_TERRITORY = 'CZECH REPUBLIC'
```

Note

Listing parameters in alphabetical order in the initialization parameter file can help you to find them and can help ensure that each parameter is specified only once.

- Enclose in quotation marks any parameter value that contains a special character.

See Also

- Your operating system-specific Oracle documentation for more information on initialization parameter files
- ["IFILE"](#)

2.3.2.2.2 Using Expressions for Parameter Values

You can specify an expression as the value for an initialization parameter.

The optimal value for an initialization parameter can depend on environmental characteristics, such as system configurations, run-time decisions, and the values of other parameters. In previous releases, you were required to specify an absolute value when setting an initialization parameter, which meant that maintaining its optimal value required manual oversight and adjustments. Starting with Oracle Database 21c, you can specify an expression as the value for some initialization parameters, which enables the database to automatically adjust the parameter value in response to environmental changes.

Specifying an expression for a parameter value is also useful in Oracle Real Application Cluster (Oracle RAC) environments. You can specify the same expression for a parameter value across all Oracle RAC instances, but the expression will be evaluated on a per-instance basis, utilizing the environmental characteristics of the current instance. This allows the database to fine-tune the parameter value for each Oracle RAC instance.

You can specify expressions only for initialization parameters of type integer or big integer.

Initialization parameter expressions can contain the following constructs:

1. Integer values

```
OLAP_PAGE_POOL_SIZE = 1073741824
```

2. Decimal values, but only when they are part of a numeric operation

```
CPU_COUNT = 8 * 0.6
```

If the operation evaluates to a decimal value, then the result is truncated to an integer value. The above example would set `CPU_COUNT` to 4.

3. An integer value followed by an indicator that the integer is expressed in kilobytes (k or K), megabytes (m or M), gigabytes (g or G), terabytes (t or T), petabytes (p or P), or exabytes (e or E)

```
OLAP_PAGE_POOL_SIZE = 900m
MEMORY_TARGET = 2G
```

4. Other parameter names

```
JOB_QUEUE_PROCESSES = PROCESSES
```

5. The binary operators for multiplication (*), division (/), modulo (%), addition (+), and subtraction (-)

```
SHARED_SERVERS = MAX_SHARED_SERVERS / 2
DATA_GUARD_MAX_LONGIO_TIME = DATA_GUARD_MAX_IO_TIME + 10 * 3
```

Operator precedence: the multiplication, division, and modulo operators are evaluated first, from left to right, and then the addition and subtraction operators are evaluated from left to right.

If the expression evaluates to a decimal value, then the result is truncated to an integer value.

6. Parentheses, which allow you to override operator precedence

```
SHARED_SERVERS = (MAX_SHARED_SERVERS - 1) / 2
DATA_GUARD_MAX_LONGIO_TIME = (DATA_GUARD_MAX_IO_TIME + 10) * 3
```

7. The MIN and MAX functions. These functions take two operands and return the minimum and maximum value, respectively.

```
AQ_TM_PROCESSES = MIN(40, PROCESSES * .1)
SESSIONS = MAX(200, PROCESSES * 1.5)
```

8. Environment variable values, which must be preceded by the dollar sign (\$)

```
CPU_COUNT = $SYSTEM_CPU/5
```

You can specify an expression when using any of the following methods to set an initialization parameter:

- In a server parameter file (SPFILE)
- In a text initialization parameter file, for example, `initORACLE_SID.ora`.

Note that you cannot use expressions in a client-side text initialization parameter file (PFILE).

- In the SQL statements `ALTER SESSION SET` and `ALTER SYSTEM SET`. In this case you must enclose the expression in single quotation marks. For example:

```
ALTER SESSION SET AQ_TM_PROCESSES = 'MIN(40, PROCESSES * .1)';
ALTER SYSTEM SET JOB_QUEUE_PROCESSES = 'PROCESSES' SCOPE=BOTH;
```

2.3.2.2.3 Using Special Characters in Parameter Values

If a parameter value contains a special character, then the special character must be preceded by a backslash or the entire parameter value must be enclosed in quotation marks.

For example, you can specify special characters using either of the following:

```
DB_DOMAIN = 'JAPAN.ACME#.COM'  
  
DB_DOMAIN = JAPAN.ACME\#.COM
```

[Table 2-1](#) lists the special characters you can use in initialization parameter files.

Table 2-1 Special Characters in Initialization Parameter Files

Character	Name	Description
#	Number sign	Comment
(	Left parenthesis	Start list of values
)	Right parenthesis	End list of values
"	Double quotation mark	Start or end of quoted string
'	Single quotation mark	Start or end of quoted string
=	Equal sign	Separator of keyword and values
,	Comma	Separator of elements
-	Minus sign	Precedes UNIX-style keywords
\	Backslash	Escape character

If a special character must be treated literally in an initialization parameter file, then it must either be preceded by the backslash character, or the entire string containing the special character must be enclosed in quotation marks.

2.3.2.2.4 Using the Escape Character

In an initialization parameter file, a backslash (\) can also signify a line continuation. If the backslash is followed by an alphanumeric character, then the backslash is treated as a normal character in the input.

If it is not followed by an alphanumeric character, then the backslash is treated either as a backslash or as a continuation character.

 **See Also**

["Rules Governing Initialization Parameter Files"](#)

2.3.2.2.5 Using Quotation Marks

Quotation marks can be nested in two ways in an initialization parameter file.

The first method is to double the quotation marks in the nested string. For example:

```
NLS_DATE_FORMAT = '''Today is'' MM/DD/YYYY'
```

The second method is to alternate single and double quotation marks. For example:

```
NLS_DATE_FORMAT = '"Today is" MM/DD/YYYY'
```

2.4 Changing Parameter Values in a Parameter File

You can change the value of a parameter in a parameter file in several ways.

- By editing an initialization parameter file
In most cases, the new value takes effect the next time you start an instance of the database.
- By issuing an ALTER SYSTEM SET ... SCOPE=SPFILE statement to update a server parameter file
- By issuing an ALTER SYSTEM RESET statement to clear an initialization parameter value.

See Also

Oracle Database Administrator's Guide for more information about using the ALTER SYSTEM RESET statement to clear initialization parameter values

2.4.1 Parameters by Functional Category

2.4.2 Modifiable Parameters

You can modify some initialization parameters using the ALTER SESSION or ALTER SYSTEM statements while an instance is running.

Use the following syntax to modify initialization parameters:

```
ALTER SESSION SET parameter_name = value
ALTER SYSTEM SET parameter_name = value [DEFERRED]
```

Whenever a parameter is modified using the ALTER SYSTEM statement, the Oracle Database records the statement that modifies the parameter in the alert log.

The ALTER SESSION statement changes the value of the specified parameter for the duration of the session that invokes the statement. The value of the parameter does not change for other sessions in the instance. The value of the following initialization parameters can be changed with ALTER SESSION:

The ALTER SYSTEM ... DEFERRED statement does not modify the global value of the parameter for existing sessions, but the value will be modified for future sessions that connect to the database. The value of the following initialization parameters can be changed with ALTER SYSTEM ... DEFERRED:

[AUDIT_FILE_DEST](#)
[BACKUP_TAPE_IO_SLAVES](#)
[CLIENT_STATISTICS_LEVEL](#)

2.4.3 Displaying Current Parameter Values

You can use the SQL*Plus SHOW PARAMETERS statement to see the current settings for initialization parameters.

For example:

```
SQL> SHOW PARAMETERS
```

This statement displays all parameters in alphabetical order, along with their current values.

Enter the following text string to display all parameters having BLOCK in their names:

```
SQL> SHOW PARAMETERS BLOCK
```

You can use the SP00L command to write the output to a file.

2.4.4 Parameters You Should Not Specify in the Parameter File

You should not specify these types of parameters in your parameter files:

- Parameters that you never alter unless instructed to do so by Oracle to resolve a problem
- Derived parameters, which normally do not need altering because their values are calculated automatically by the Oracle database server

2.4.5 When Parameters Are Set Incorrectly

When a parameter is set incorrectly, the effect can be different for different parameters, or based on how low or high the parameter is set.

Some parameters have a minimum setting below which an Oracle instance will not start. For other parameters, setting the value too low or too high may cause Oracle to perform badly, but it will still run. Also, Oracle may convert some values outside the acceptable range to usable levels.

If a parameter value is too low or too high, or you have reached the maximum for some resource, then Oracle returns an error. Frequently, you can wait a short while and retry the operation when the system is not as busy. If a message occurs repeatedly, then you should shut down the instance, adjust the relevant parameter, and restart the instance.

2.5 Reading the Parameter Descriptions

This section describes the properties that are documented in the initialization parameter descriptions.

PARAMETER_NAME

Property	Description
Parameter type	Specifies the type of the parameter: • A Boolean parameter accepts either <code>true</code> or <code>false</code> as its value. • A string parameter accepts any sequence of characters as its value, subject to the syntax for the parameter. • An integer parameter accepts a 4-byte value that can range from 0 to $2^{32} - 1$. • A parameter file parameter accepts an initialization parameter file specification as its value. • A big integer parameter accepts an 8-byte value that can range from 0 to $2^{64} - 1$. You specify a value for a big integer as an integer together with an optional modifier such as K, M, or G, which respectively denotes kilobytes, megabytes, or gigabytes. For example, 1000, 100 KB, 50 MB and 2 GB are valid specifications for big integers.
Syntax	For string and big integer parameters, specifies the valid syntax for specifying the parameter.

Property	Description
Default value	Specifies the value that the parameter assumes if a value is not explicitly specified. For most initialization parameters, the value that is documented for the Default value property is obtained by querying the DEFAULT_VALUE column in the V\$PARAMETER view for the parameter.
Modifiable	Specifies whether the parameter can be changed for the current session (by an ALTER SESSION statement) or for all sessions in the current instance (by an ALTER SYSTEM statement): - ALTER SESSION overrides the instance-wide setting of the parameter for the current session only. You can restore the instance-wide setting for that session only by issuing another ALTER SESSION statement. - ALTER SYSTEM can be used to change the value in the server parameter file (SPFILE) of any initialization parameter. Such a change takes effect only in subsequent instances. The parameter descriptions indicate only those parameters that can be modified for the current instance.
Modifiable in a PDB	Specifies whether the parameter can be modified in a PDB (Yes) or not (No) For most initialization parameters, the value that is documented for the Modifiable in a PDB property is obtained by querying the ISPDB_MODIFIABLE column in the V\$PARAMETER view for the parameter.
Range of values	Specifies the valid range of values that this parameter can assume, shown as a minimum and maximum value. Not applicable to all parameters.
Basic	Specifies whether the parameter is a basic initialization parameter or not
Oracle RAC	Specifies how the values for this parameter must be specified for multiple instances in an Oracle Real Application Clusters environment. Not applicable to all parameters.

For each parameter, paragraphs following these details further describe the parameter and the effects of different settings.

① See Also

["V\\$PARAMETER"](#)

2.6 Initialization Parameter Descriptions

The remainder of this chapter describes the initialization parameters in alphabetical order.

Initialization parameter values apply to the entire database, not to an individual user, unless otherwise specified.

① Note

Parameters that have become obsolete are not documented.

① See Also

- *Oracle Database Upgrade Guide* for information about obsolete parameters
- Your system release bulletins or other operating system-specific Oracle documentation

2.7 ACTIVE_INSTANCE_COUNT

ACTIVE_INSTANCE_COUNT enables you to designate one instance in a two-instance cluster as the primary instance and the other instance as the secondary instance. This parameter has no functionality in a cluster with more than two instances.

Property	Description
Parameter type	Integer
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Range of values	1 or $\geq$ the number of instances in the cluster. (Values other than 1 have no effect on the active or standby status of any instances.)
Basic	No
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

① Note

The ACTIVE_INSTANCE_COUNT parameter is deprecated. It is retained for backward compatibility only.

When you set this parameter to 1, the first instance you start up becomes the primary instance and accepts client connections. The second instance starts up as a secondary instance and can accept client connections only if the first instance fails. In such an event, the secondary instance becomes the primary instance.

When the failed instance can once again be started up, it starts up as the secondary instance, and will not accept client connections unless the current primary instance fails.

① Note

This parameter functions only in a cluster with only two instances.

2.8 ADG_ACCOUNT_INFO_TRACKING

ADG_ACCOUNT_INFO_TRACKING controls login attempts of users on Oracle Active Data Guard standby databases. It extends the control of user account security information.

Property	Description
Parameter type	String
Syntax	ADG_ACCOUNT_INFO_TRACKING = { LOCAL GLOBAL }
Default value	LOCAL
Modifiable	No
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be used on all instances.

Setting ADG_ACCOUNT_INFO_TRACKING to LOCAL (the default value) continues to enforce the default behavior, by maintaining a local copy of users account information in the standby's in-memory view. Login failures are only tracked locally on a per database basis, and login is denied when the failure maximum is reached.

Setting the parameter to GLOBAL triggers a more secure behavior, by maintaining a single global copy of users account information across all Data Guard databases (primary and standby). Login failures across all databases in the Data Guard configuration count towards the maximum count and logins anywhere will be denied when the count is reached. This setting improves security against login attacks across a production database and all Active Data Guard standby databases.

2.9 ADG_REDIRECT_DML

Use ADG_REDIRECT_DML to enable or disable automatic redirection of DML operations from a standby to the primary in Oracle Active Data Guard environments.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM Can be modified at the session level with a special ALTER SESSION command. See details below.
Modifiable in a PDB	No
Range of values	true false
Basic	No
Oracle RAC	Different instances can use different values.

Automatic redirection of DML operations to the primary can be configured at the system level or the session level. The session level setting overrides the system level setting.

- To enable automatic redirection of DML operations to the primary at the system level, set ADG_REDIRECT_DML to true.

- To disable automatic redirection of DML operations to the primary at the system level, set ADG_REDIRECT_DML to false.
- To enable automatic redirection of DML operations from a standby to the primary for the current session, issue the following SQL statement:

```
ALTER SESSION ENABLE ADG_REDIRECT_DML;
```

- To disable automatic redirection of DML operations from a standby to the primary for the current session, issue the following SQL statement:

```
ALTER SESSION DISABLE ADG_REDIRECT_DML;
```

① See Also

Oracle Data Guard Concepts and Administration for more information about automatic redirection of DML operations

2.10 ALLOW_GLOBAL_DBLINKS

ALLOW_GLOBAL_DBLINKS specifies whether LDAP lookup for database links is allowed for the database.

Property	Description
Parameter type	Boolean
Syntax	ALLOW_GLOBAL_DBLINKS = { FALSE TRUE }
Default value	FALSE
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No
Oracle RAC	The same value must be used on all instances.

The following values can be set:

- FALSE: LDAP lookup for a database link's definition is not allowed for the database.
- TRUE: LDAP lookup for a database link's definition is allowed for the database.

2.11 ALLOW_GROUP_ACCESS_TO_SGA

ALLOW_GROUP_ACCESS_TO_SGA controls group access to shared memory on UNIX platforms.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	No

Property	Description
Range of values	true false
Basic	No
Oracle RAC	The same value must be used on all instances.

The default value is false, which means that database shared memory is created with owner access only. In Oracle Database releases prior to Oracle Database 12c Release 2 (12.2.0.1), database shared memory was created with owner and group access.

When this parameter is set to true, database shared memory is created with owner and group access. This behavior grants permissions to DBAs to manage shared memory outside the database, but also allows DBAs to read and write to shared memory, which may not be desirable for certain installations.

2.12 ALLOW_ROWID_COLUMN_TYPE

ALLOW_ROWID_COLUMN_TYPE determines whether table columns of data type ROWID are allowed to be created.

Note

This parameter is valid only for Oracle Autonomous Database on dedicated Exadata infrastructure. On other types of Oracle databases, the value of this parameter is ignored and ROWID columns are always allowed to be created.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	Multiple instances should use the same value

Values:

- false

Columns of data type ROWID are not allowed.

You cannot specify ROWID columns when creating tables, nor can you add ROWID columns to existing tables. If the value of this parameter is changed from true to false at a time when ROWID columns exist in the database, then those columns are allowed to remain. However, Oracle recommends that you leave this parameter set to its default value of false and avoid introducing ROWID columns into Oracle Autonomous Database on dedicated Exadata infrastructure.

- true

Columns of data type ROWID are allowed.

If you choose this setting, be aware that ROWID columns are incompatible with rolling upgrade operations and other internal operations that physically move table rows. At a minimum, database activities involving ROWID columns should be suspended during upgrades. Applications using ROWID columns should introduce correctness validation to mitigate against logical errors in the application if a row relocates.

2.13 APPROX_FOR_AGGREGATION

APPROX_FOR_AGGREGATION replaces exact query processing for aggregation queries with approximate query processing.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	Different instances can use different values.

Data analysis applications heavily use aggregate function and analytic function queries. Aggregation functions and analytic functions require sorting of large volumes of data, and exact query answering requires lots of memory, and can be time consuming. With approximate query processing, the results of aggregate function and analytic function queries are returned much faster than with exact query processing. Approximate query processing is useful for situations where a tolerable amount of error is acceptable in order to obtain faster query results.

The values that can be set are:

- false:
Approximate query processing is not used for aggregation queries and analytic queries.
- true: Approximate query processing is used for aggregation queries and analytic queries.

① See Also

- "[APPROX_FOR_COUNT_DISTINCT](#)"
- "[APPROX_FOR_PERCENTILE](#)"

2.14 APPROX_FOR_COUNT_DISTINCT

APPROX_FOR_COUNT_DISTINCT automatically replaces COUNT (DISTINCT *expr*) queries with APPROX_COUNT_DISTINCT queries.

Property	Description
Parameter type	Boolean
Default value	false

Property	Description
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	Different instances can use different values.

Query results for APPROX_COUNT_DISTINCT queries are returned faster than the equivalent COUNT (DISTINCT *expr*) queries. APPROX_COUNT_DISTINCT queries are useful for situations where a tolerable amount of error is acceptable in order to obtain faster query results than with a COUNT (DISTINCT *expr*) query.

① See Also

- ["APPROX_FOR_AGGREGATION"](#)
- ["APPROX_FOR_PERCENTILE"](#)

2.15 APPROX_FOR_PERCENTILE

APPROX_FOR_PERCENTILE converts exact percentile functions to their approximate percentile function counterparts.

Property	Description
Parameter type	String
Syntax	APPROX_FOR_PERCENTILE = { NONE PERCENTILE_CONT PERCENTILE_CONT DETERMINISTIC PERCENTILE_DISC PERCENTILE_DISC DETERMINISTIC ALL ALL DETERMINISTIC }
Default value	none
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can use different values.

Approximate percentile function queries are faster than their exact percentile function query counterparts, so they can be useful in situations where a tolerable amount of error is acceptable in order to obtain faster query results.

The values that can be set are:

- **NONE:**
No queries are converted. This is the default value.
- **PERCENTILE_CONT:**
Converts PERCENTILE_CONT queries to APPROX_PERCENTILE queries.
- **PERCENTILE_CONT DETERMINISTIC:**

Converts PERCENTILE_CONT queries to APPROX_PERCENTILE DETERMINISTIC queries.

- PERCENTILE_DISC:

Converts PERCENTILE_DISC queries to APPROX_PERCENTILE queries.

- PERCENTILE DISC DETERMINISTIC:

Converts PERCENTILE_DISC queries to APPROX_PERCENTILE DETERMINISTIC queries.

- ALL:

Converts both PERCENTILE_CONT queries and PERCENTILE_DISC queries to APPROX_PERCENTILE queries.

- ALL DETERMINISTIC:

Converts both PERCENTILE_CONT and PERCENTILE_DISC queries to APPROX_PERCENTILE DETERMINISTIC queries.

① See Also

- ["APPROX_FOR_AGGREGATION"](#)
- ["APPROX_FOR_COUNT_DISTINCT"](#)
- *Oracle Database SQL Language Reference* for information about APPROX_MEDIAN aggregate functions
- *Oracle Database SQL Language Reference* for information about APPROX_PERCENTILE aggregate functions

2.16 AQ_TM_PROCESSES

AQ_TM_PROCESSES controls time monitoring on queue messages and controls processing of messages with delay and expiration properties specified.

Property	Description
Parameter type	Integer
Default value	1
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to 40
Basic	No

You do not need to specify a value for this parameter because Oracle Database automatically determines the number of processes and autotunes them, as necessary. Therefore, Oracle highly recommends that you leave the AQ_TM_PROCESSES parameter unspecified and let the system autotune.

The default value for AQ_TM_PROCESSES is used if the client does not explicitly set a value for the parameter in the `init.ora` file or using the ALTER SYSTEM statement.

Note

If you want to disable the Queue Monitor Coordinator, then you must set AQ_TM_PROCESSES to 0 in your parameter file. Oracle strongly recommends that you do NOT set AQ_TM_PROCESSES to 0.

See Also

Oracle Database Advanced Queuing User's Guide for more information about this parameter

2.17 ARCHIVE_LAG_TARGET

ARCHIVE_LAG_TARGET forces a log switch after the specified amount of time elapses.

Property	Description
Parameter type	Integer
Default value	0 (disabled)
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 or any integer in [60, 7200]
Basic	No
Oracle RAC	Multiple instances should use the same value

A 0 value disables the time-based thread advance feature; otherwise, the value represents the number of seconds. Values larger than 7200 seconds are not of much use in maintaining a reasonable lag in the standby database. The typical, or recommended value is 1800 (30 minutes). Extremely low values can result in frequent log switches, which could degrade performance; such values can also make the archiver process too busy to archive the continuously generated logs.

See Also

Oracle Database Administrator's Guide for more information about setting this parameter

2.18 ASM_DISKGROUPS

ASM_DISKGROUPS specifies a list of disk group names that an Oracle ASM instance mounts at startup when the ALTER DISKGROUP ALL MOUNT statement is issued.

Property	Description
Parameter type	String

Property	Description
Syntax	ASM_DISKGROUPS = <i>diskgroup</i> [, <i>diskgroup</i>] ...
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Comma-separated list of strings, up to 30 characters
Basic	No
Oracle RAC	Multiple instances can have different values.

Note

This parameter may only be specified in an Oracle Automatic Storage Management (Oracle ASM) instance.

The Oracle ASM instance startup process executes ALTER DISKGROUP ALL MOUNT unless the NOMOUNT startup option is specified.

The ASM_DISKGROUPS parameter is dynamic. If you are using a server parameter file (SPFILE), then you do not have to manually alter the value of ASM_DISKGROUPS in most situations. Oracle ASM automatically adds a disk group to the parameter when the disk group is successfully created or mounted. Oracle ASM also automatically removes a disk group from the parameter when the disk group is dropped. However, the SPFILE is not updated on a manual dismount.

Issuing the ALTER DISKGROUP ...ALL MOUNT or ALTER DISKGROUP ...ALL DISMOUNT command does not affect the value of this parameter.

Supporting Up to 511 Disk Groups for an Oracle ASM Instance

In Oracle Database 12c Release 1 or later, Oracle ASM configurations support up to 511 disk groups. Oracle ASM configurations with Oracle Database releases before 12c Release 1 can only support up to 63 disk groups.

See Also

Oracle Automatic Storage Management Administrator's Guide for more information about and examples of using this parameter

2.19 ASM_DISKSTRING

ASM_DISKSTRING specifies an operating system-dependent value used by Oracle ASM to limit the set of disks considered for discovery.

Property	Description
Parameter type	String
Syntax	ASM_DISKSTRING = <i>discovery_string</i> [, <i>discovery_string</i>] ...

Property	Description
Default value	The null string; Oracle Automatic Storage Management discovery finds all disks in an operating system-specific location to which the Oracle Automatic Storage Management instance has read/write access.
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances can have different values. Different nodes might see the same disks under different names; however, each instance must be able to use its ASM_DISKSTRING to discover the same physical media as the other nodes in the cluster.

Note

This parameter may only be specified in an Oracle Automatic Storage Management (Oracle ASM) instance.

When a new disk is added to a disk group, each Oracle ASM instance that has the disk group mounted must be able to discover the new disk using the value of ASM_DISKSTRING.

In most cases, the default value will be sufficient. Using a more restrictive value may reduce the time required for Oracle ASM to perform discovery, and thus improve disk group mount time or the time for adding a disk to a disk group. A "?" at the beginning of the string gets expanded to the Oracle home directory. Depending on the operating system, wildcard characters can be used. It may be necessary to dynamically change ASM_DISKSTRING before adding a disk so that the new disk will be discovered.

An attempt to dynamically modify ASM_DISKSTRING will be rejected and the old value retained if the new value cannot be used to discover a disk that is in a disk group that is already mounted.

See Also

Oracle Automatic Storage Management Administrator's Guide for more information and examples of using this parameter

2.20 ASM_IO_PROCESSES

ASM_IO_PROCESSES specifies the number of I/O worker processes to be started in an Oracle IO Server instance.

Property	Description
Parameter type	Integer
Default value	20
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	1 – 32

Property	Description
Basic	No
Oracle RAC	Multiple instances can have different values.

This parameter is applicable only in an Oracle IOServer instance, which runs out of an Oracle Grid Infrastructure home.

The default value should work in most cases. However, under heavy I/O load, there may be some delays associated with posting processes out of I/O waits. In this case, a slightly higher value than the default may be appropriate.

2.21 ASM_POWER_LIMIT

ASM_POWER_LIMIT specifies the maximum power on an Oracle ASM instance for disk rebalancing.

Property	Description
Parameter type	Integer
Default value	1
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to 11 ¹
Basic	No
Oracle RAC	Multiple instances can have different values.

¹ Beginning with Oracle Database 11g Release 2 (11.2.0.2), if the COMPATIBLE.ASM disk group attribute is set to 11.2.0.2 or higher, then the range of values is 0 to 1024.

Note

- This parameter may only be specified in an Oracle Automatic Storage Management (Oracle ASM) instance.
- In an Oracle Exadata or Oracle Data Appliance environment, you cannot set this parameter to 0.

The higher the limit, the faster rebalancing will complete. Lower values will take longer, but consume fewer processing and I/O resources.

If the POWER clause of a rebalance operation is not specified, then the default power will be the value of ASM_POWER_LIMIT.

See Also

Oracle Automatic Storage Management Administrator's Guide for more information about using this parameter

2.22 ASM_PREFERRED_READ_FAILURE_GROUPS

ASM_PREFERRED_READ_FAILURE_GROUPS specifies the failure groups that contain preferred read disks. Preferred disks are instance specific.

Property	Description
Parameter type	String
Syntax	ASM_PREFERRED_READ_FAILURE_GROUPS = '<diskgroup_name>.<failure_group_name>, ...'
Default value	NULL
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No
Oracle RAC	The value is different on different nodes

① Note

The ASM_PREFERRED_READ_FAILURE_GROUPS initialization parameter is deprecated in Oracle Database 12c Release 2 (12.2.0.1) and may be desupported in a future release. It is replaced by the PREFERRED_READ.ENABLED disk group attribute.

See *Oracle Automatic Storage Management Administrator's Guide* for more information about the PREFERRED_READ.ENABLED disk group attribute.

To reset the parameter value to null, issue the following statement, which updates the server parameter file (SP file), then reboot Oracle ASM so that the change takes effect:

```
alter system reset asm_preferred_read_failure_groups;
```

① See Also

Oracle Automatic Storage Management Administrator's Guide for more information about this parameter

2.23 AUDIT_FILE_DEST

AUDIT_FILE_DEST specifies the operating system directory into which the audit trail is written when the AUDIT_TRAIL initialization parameter is set to **os**, **xml**, or **xml,extended**.

Note

This parameter is effective when using traditional auditing. Traditional auditing is deprecated in Oracle Database 21c. Oracle recommends that you instead use unified auditing, which enables selective and more effective auditing inside Oracle Database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

In an Oracle database that has migrated to unified auditing, the setting of this parameter has no effect.

Property	Description
Parameter type	String
Syntax	AUDIT_FILE_DEST = 'directory'
Default value	The first default value is: ORACLE_BASE/admin/ORACLE_SID/adump The second default value, which is used if the first default value does not exist or is unusable, is: ORACLE_HOME/rdbms/audit Both of these default values are for UNIX systems. Other platforms may have different defaults. In a multitenant container database (CDB), both of these default values will be appended with the GUID of the pluggable database (PDB) to store audit records that belong to the PDB. For example, if the PDB's GUID is 03E1F908EE04252CE053B280E80AAAA3, the first default directory will be: ORACLE_BASE/admin/ORACLE_SID/adump/ 03E1F908EE04252CE053B280E80AAAA3 You can use the V\$CONTAINERS view to query a PDB's GUID.
Modifiable	ALTER SYSTEM ... DEFERRED
Modifiable in a PDB	No
Basic	No

If you do not explicitly set a value for this parameter in the initialization file, then at least one of the two default operating system directories mentioned in the preceding table must exist and be writeable. Otherwise, the instance will fail to start.

If you explicitly set a value for this parameter in the initialization file, then the directory you specify must exist and be writeable. Otherwise, the instance will fail to start.

The audit records will be written in XML format if the AUDIT_TRAIL initialization parameter is set to **xml** or **xml, extended**. It is also the location to which mandatory auditing information is written and, if so specified by the AUDIT_SYS_OPERATIONS initialization parameter, audit records for user SYS.

In a multitenant container database (CDB), the scope of the settings for this initialization parameter is the CDB. Although the audit trail is provided per pluggable database (PDB) in a CDB, this initialization parameter cannot be configured for individual PDBs.

① See Also

- *Oracle Multitenant Administrator's Guide* for conceptual information about CDBs and PDBs
- *Oracle Multitenant Administrator's Guide* for information about managing CDBs and PDBs
- ["V\\$CONTAINERS"](#)
- ["V\\$PDBS"](#)

2.24 AUDIT_SYS_OPERATIONS

AUDIT_SYS_OPERATIONS enables or disables the auditing of directly issued user SQL statements with SYS authorization. These include SQL statements directly issued by users when connected with the SYSASM, SYSBACKUP, SYSDBA, SYSDG, SYSKM, or SYSOPER privileges, as well as SQL statements that have been executed with SYS authorization using the PL/SQL package DBMS_SYS_SQL.

① Note

This parameter is effective when using traditional auditing. Traditional auditing is deprecated in Oracle Database 21c. Oracle recommends that you instead use unified auditing, which enables selective and more effective auditing inside Oracle Database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

In an Oracle database that has migrated to unified auditing, the setting of this parameter has no effect.

Property	Description
Parameter type	Boolean
Default value	TRUE
Modifiable	No
Modifiable in a PDB	No
Range of values	TRUE FALSE
Basic	No

The audit records are written to the operating system's audit trail. The audit records will be written in XML format if the AUDIT_TRAIL initialization parameter is set to xml or xml, extended

On UNIX platforms, if the AUDIT_SYSLOG_LEVEL parameter has also been set, then it overrides the AUDIT_TRAIL parameter and SYS audit records are written to the system audit log using the SYSLOG utility.

In a CDB, the scope of the settings for this initialization parameter is the CDB. Although the audit trail is provided per PDB in a CDB, this initialization parameter cannot be configured for individual PDBs.

2.25 AUDIT_SYSLOG_LEVEL

AUDIT_SYSLOG_LEVEL allows SYS and standard OS audit records to be written to the system audit log using the SYSLOG utility.

Note

This parameter is effective when using traditional auditing. Traditional auditing is deprecated in Oracle Database 21c. Oracle recommends that you instead use unified auditing, which enables selective and more effective auditing inside Oracle Database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

In an Oracle database that has migrated to unified auditing, the setting of this parameter has no effect.

Property	Description
Parameter type	String
Syntax	AUDIT_SYSLOG_LEVEL = 'facility_clause.priority_clause'
Syntax	facility_clause::= { USER LOCAL[0 1 2 3 4 5 6 7] SYSLOG DAEMON KERN MAIL AUTH LPR NEWS UUCP CRON }
Syntax	priority_clause::= { NOTICE INFO DEBUG WARNING ERR CRIT ALERT EMERG }
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Basic	No
Examples	AUDIT_SYSLOG_LEVEL = 'KERN.EMERG'; AUDIT_SYSLOG_LEVEL = 'LOCAL1.WARNING';

If you use this parameter, it is best to assign a file corresponding to every combination of facility and priority (especially KERN.EMERG) in `syslog.conf`. Sometimes these are assigned to print to the console in the default `syslog.conf` file. This can become annoying and will be useless as audit logs. Also, if you use this parameter, it is best to set the maximum length of syslog messages in the system to 512 bytes.

Note

Audit records written to the system audit log could get truncated to 512 bytes, and different parts of the same audit record may not be joined to get the original complete audit record.

See Also

Oracle Database Security Guide for information about configuring syslog auditing

If `AUDIT_SYSLOG_LEVEL` is set and SYS auditing is enabled (`AUDIT_SYS_OPERATIONS = TRUE`), then SYS audit records are written to the system audit log. If `AUDIT_SYSLOG_LEVEL` is set and standard audit records are being sent to the operating system (`AUDIT_TRAIL = os`), then standard audit records are written to the system audit log.

In a CDB, the scope of the settings for this initialization parameter is the CDB. Although the audit trail is provided per PDB in a CDB, this initialization parameter cannot be configured for individual PDBs.

2.26 AUDIT_TRAIL

`AUDIT_TRAIL` enables or disables database auditing.

Note

This parameter is effective when using traditional auditing. Traditional auditing is deprecated in Oracle Database 21c. Oracle recommends that you instead use unified auditing, which enables selective and more effective auditing inside Oracle Database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

In an Oracle database that has migrated to unified auditing, the setting of this parameter has no effect.

Property	Description
Parameter type	String
Syntax	<code>AUDIT_TRAIL = { none os db [, extended] xml [, extended] }</code>
Default value	none
Modifiable	No
Modifiable in a PDB	No
Basic	No

Values

- none

Disables standard auditing. This value is the default if the AUDIT_TRAIL parameter was not set in the initialization parameter file or if you created the database using a method other than Database Configuration Assistant. If you created the database using Database Configuration Assistant, then the default is db.

- os

Directs all audit records to an operating system file. Oracle recommends that you use the os setting, particularly if you are using an ultra-secure database configuration.

- db

Directs audit records to the database audit trail (the SYS.AUD\$ table), except for records that are always written to the operating system audit trail. Use this setting for a general database for manageability.

If the database was started in read-only mode with AUDIT_TRAIL set to db, then Oracle Database internally sets AUDIT_TRAIL to os. Check the alert log for details.

- db, extended

Performs all actions of AUDIT_TRAIL=db, and also populates the SQL bind and SQL text CLOB-type columns of the SYS.AUD\$ table, when available. These two columns are populated only when this parameter is specified. When standard auditing is used with DB, EXTENDED, then virtual private database (VPD) predicates and policy names are also populated in the SYS.AUD\$ table.

If the database was started in read-only mode with AUDIT_TRAIL set to db, extended, then Oracle Database internally sets AUDIT_TRAIL to os. Check the alert log for details.

- xml

Writes to the operating system audit record file in XML format. Records all elements of the AuditRecord node except Sql_Text and Sql_Bind to the operating system XML audit file.

- xml, extended

Performs all actions of AUDIT_TRAIL=xml, and includes SQL text and SQL bind information in the audit trail.

You can use the SQL AUDIT statement to set auditing options regardless of the setting of this parameter.

In a CDB, the scope of the settings for this initialization parameter is the CDB. Although the audit trail is provided per PDB in a CDB, this initialization parameter cannot be configured for individual PDBs.

Examples

The following statement sets the db, extended value for the AUDIT_TRAIL parameter. The new value takes effect after the database is restarted.

```
SQL> alter system set AUDIT_TRAIL=db, extended scope=spfile;
```

System altered.

SQL>

The following statement sets the xml, extended value for the AUDIT_TRAIL parameter. The new value takes effect after the database is restarted.

```
SQL> alter system set AUDIT_TRAIL=xml, extended scope=spfile;
```

System altered.

SQL>

The following statement sets the db value for the AUDIT_TRAIL parameter. The new value takes effect after the database is restarted.

```
SQL> alter system set AUDIT_TRAIL=db scope=spfile;
```

System altered.

SQL>

① See Also

- *Oracle Database Security Guide* for information about configuring unified audit policies
- *Oracle Database Upgrade Guide* to learn more about traditional non-unified auditing

2.27 AUTOTASK_MAX_ACTIVE_PDBS

AUTOTASK_MAX_ACTIVE_PDBS enables you to specify the maximum number of PDBs that can schedule automated maintenance tasks at the same time (during a maintenance window).

Property	Description
Parameter type	Integer
Default value	2
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to the number of PDBs in the CDB
Basic	No
Oracle RAC	The same value should be used on all instances.

This parameter only affects PDBs. The CDB\$ROOT container (CDB root) for a CDB can always schedule and run maintenance tasks during a maintenance window.

The default value is 2. Therefore, by default, two PDBs and the CDB root can run tasks at the same time during a maintenance window.

This parameter can be set only in the CDB root, not in a PDB.

① See Also

- "[ENABLE_AUTOMATIC_MAINTENANCE_PDB](#)" for information on disabling or enabling the running of automated maintenance tasks for specific PDBs or for all the PDBs in CDB
- *Oracle Database Administrator's Guide* for more information about managing automated database maintenance tasks

2.28 AWR_PDB_AUTOFLUSH_ENABLED

AWR_PDB_AUTOFLUSH_ENABLED enables you to specify whether to enable or disable automatic Automatic Workload Repository (AWR) snapshots for all the PDBs in a CDB or for individual PDBs in a CDB.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	The same value must be used on all instances.

Note

The value of this parameter in CDB\$ROOT (the root of a CDB) has no effect in the root. Automatic AWR snapshots are always enabled in the root, regardless of the setting of this parameter.

The default value of AWR_PDB_AUTOFLUSH_ENABLED is false. Thus, by default, automatic AWR snapshots are disabled for all the PDBs in a CDB.

When you change the value of AWR_PDB_AUTOFLUSH_ENABLED in the CDB root, the new value takes effect in all the PDBs in the CDB.

Therefore, if you change the value of AWR_PDB_AUTOFLUSH_ENABLED in the CDB root to true, the value of AWR_PDB_AUTOFLUSH_ENABLED is also changed to true in all of the PDBs, so that automatic AWR snapshots are enabled for all the PDBs.

You can also change the value of AWR_PDB_AUTOFLUSH_ENABLED in any of the individual PDBs in a CDB, and the value that is set for each individual PDB will be honored. This enables you to enable or disable automatic AWR snapshots for individual PDBs.

When a new PDB is created, or a PDB from a previous database release is upgraded to the current database release, automatic AWR snapshots are enabled or disabled for the PDB based on the current value of AWR_PDB_AUTOFLUSH_ENABLED in the root.

See Also

- *Oracle Database Performance Tuning Guide* for more information about Automatic Workload Repository (AWR)
- *Oracle Database Performance Tuning Guide* for more information about AWR snapshots

2.29 AWR_PDB_MAX_PARALLEL_SLAVES

AWR_PDB_MAX_PARALLEL_SLAVES enables a DBA to allocate the correct amount of resources to enable quick and timely Automatic Workload Repository (AWR) flushes for multitenant container databases (CDBs).

Property	Description
Parameter type	Integer
Default value	10
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	1 – 30
Basic	No
Oracle RAC	Different instances can use different values.

Use AWR_PDB_MAX_PARALLEL_SLAVES to control the amount of resources dedicated to AWR snapshot flushing in pluggable databases (PDBs). With this parameter, a DBA can modify the maximum number of MMON worker processes (*Mnnn* background processes) that can concurrently be used to handle AWR flush operations for the entire CDB.

For CDBs with a large number of PDBs enabled to create automatic AWR snapshots, a DBA can increase this parameter to enable timely AWR flushing. For CDBs with a small number of PDBs enabled, the value of this parameter can be decreased to reduce the concurrency and the chance of performance spikes.

Note that this parameter is set in the root of a CDB and determines the maximum degree of parallelism used to create AWR automatic snapshots for PDBs.

① See Also

- "[AWR_PDB_AUTOFLUSH_ENABLED](#)" for information about enabling the automatic creation of AWR PDB snapshots
- *Oracle Database Performance Tuning Guide* for an introduction to AWR
- "[Background Processes](#)" for more information about the MMON and *Mnnn* background processes

2.30 AWR_SNAPSHOT_TIME_OFFSET

AWR_SNAPSHOT_TIME_OFFSET specifies an offset for the Automatic Workload Repository (AWR) snapshot start time.

Property	Description
Parameter type	Integer
Default value	There is no offset by default.
Modifiable	ALTER SYSTEM

Property	Description
Modifiable in a PDB	No
Range of values	0 - 3599, or the special value 1000000
Basic	No
Oracle RAC	Multiple instances should use the same value

AWR snapshots normally start at the top of the hour (12:00, 1:00, 2:00, and so on). This parameter allows DBAs to specify an offset for the AWR snapshot start time.

This is a useful parameter to avoid CPU spikes from multiple instances all starting their AWR snapshots at the same time. If you have a large system with many instances on it (like many Exadata installations), and you are experiencing such CPU spikes, this parameter can be very useful.

The parameter is specified in seconds. Normally, you set it to a value less than 3600. If you set the special value 1000000 (1,000,000), you get an automatic mode, in which the offset is based on the database name.

The automatic mode is an effective way of getting a reasonable distribution of offset times when you have a very large number of instances running on the same node.

2.31 BACKGROUND_CORE_DUMP

BACKGROUND_CORE_DUMP specifies whether Oracle includes the SGA in the core file for Oracle background processes.

Property	Description
Parameter type	String
Syntax	BACKGROUND_CORE_DUMP = { partial full }
Default value	partial
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

Values

- **partial**
Oracle does not include the SGA in the core dump.
- **full**
Oracle includes the SGA in the core dump.

See Also

["SHADOW_CORE_DUMP"](#)

2.32 BACKGROUND_DUMP_DEST

BACKGROUND_DUMP_DEST specifies the pathname (directory or disc) where debugging trace files for the background processes (LGWR, DBWn, and so on) are written during Oracle operations.

Property	Description
Parameter type	String
Syntax	BACKGROUND_DUMP_DEST = { <i>pathname</i> <i>directory</i> }
Default value	Operating system-dependent
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Any valid local path, directory, or disk
Basic	No

Note

The BACKGROUND_DUMP_DEST parameter is deprecated in Oracle Database 12c Release 1 (12.1.0.1).

An **alert log** in the directory specified by BACKGROUND_DUMP_DEST logs significant database events and messages. Anything that affects the database instance or global database is recorded here. The alert log is a normal text file. Its file name is operating system-dependent. For platforms that support multiple instances, it takes the form `alert_sid.log`, where *sid* is the system identifier. This file grows slowly, but without limit, so you might want to delete it periodically. You can delete the file even when the database is running.

Note

This parameter is ignored by the diagnosability infrastructure introduced in Oracle Database 11g Release 1 (11.1), which places trace and core files in a location controlled by the DIAGNOSTIC_DEST initialization parameter.

See Also

- *Oracle Database Administrator's Guide* for more information on the DIAGNOSTIC_DEST initialization parameter
- "[USER_DUMP_DEST](#)" for information on setting a destination for server process trace files

2.33 BACKUP_TAPE_IO_SLAVES

BACKUP_TAPE_IO_SLAVES specifies whether I/O server processes are used by Recovery Manager to back up, copy, or restore data to tape.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM ... DEFERRED
Modifiable in a PDB	No
Range of values	true false
Basic	No

When the value is set to true, Oracle uses an I/O server process to write to or read from a tape device. When the value is set to false (the default), Oracle does not use I/O server process for backups. Instead, the shadow process engaged in the backup accesses the tape device.

Note

You cannot perform duplexed backups unless you enable this parameter. Otherwise, Oracle returns an error. When this parameter is enabled, Recovery Manager will configure as many server processes as needed for the number of backup copies requested.

See Also

- *Oracle Database Backup and Recovery User's Guide* for more information on duplexed backups
- ["DBWR_IO_SLAVES"](#)

2.34 BITMAP_MERGE_AREA_SIZE

BITMAP_MERGE_AREA_SIZE specifies the amount of memory Oracle uses to merge bitmaps retrieved from a range scan of the index.

Property	Description
Parameter type	Integer
Default value	1048576 (1 MB)
Modifiable	No
Modifiable in a PDB	Yes
Range of values	Operating system-dependent
Basic	No

Note

Oracle does not recommend using the `BITMAP_MERGE_AREA_SIZE` parameter unless the instance is configured with the shared server option. Oracle recommends that you enable automatic sizing of SQL working areas by setting `PGA_AGGREGATE_TARGET` instead. `BITMAP_MERGE_AREA_SIZE` is retained for backward compatibility.

`BITMAP_MERGE_AREA_SIZE` is relevant only for systems containing bitmap indexes. A larger value usually improves performance, because the bitmap segments must be sorted before being merged into a single bitmap.

See Also

Oracle Database SQL Tuning Guide for more information on using bitmap indexes for performance

2.35 BLANK_TRIMMING

`BLANK_TRIMMING` specifies the data assignment semantics of character datatypes.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	Yes
Range of values	true false
Basic	No

Values

- TRUE

Allows the data assignment of a source character string or variable to a destination character column or variable even though the source length is longer than the destination length. In this case, however, the additional length over the destination length must be all blanks, else an exception condition is raised. This value complies with the semantics of SQL-92 Transitional Level and above.

- FALSE

Disallows the data assignment if the source length is longer than the destination length and reverts to SQL92 Entry Level semantics.

See Also

Oracle Database Globalization Support Guide for more information on how using this parameter can help prevent data truncation issues during character set migration

2.36 BLOCKCHAIN_TABLE_MAX_NO_DROP

BLOCKCHAIN_TABLE_MAX_NO_DROP lets you control the maximum amount of idle time that can be specified when creating a blockchain table or an immutable table. The idle time represents the length of time the table must be inactive before it can be dropped. When explicitly set by a user, the only value allowed for this parameter is 0.

Property	Description
Parameter type	Integer
Default value	None
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	None or 0
Basic	No
Oracle RAC	The same value must be used on all instances.

When creating a blockchain table or an immutable table with the SQL statement CREATE TABLE, you can specify the clause NO DROP UNTIL *number* DAYS IDLE. This clause specifies the number of days the table must be inactive before it can be dropped, that is, the number of days that must pass after the most recent row insertion before the table can be dropped.

- If BLOCKCHAIN_TABLE_MAX_NO_DROP is set to 0, then when a user creates a blockchain table or an immutable table, and specifies the NO DROP UNTIL *number* DAYS IDLE clause, the value of *number* must be 0:

```
CREATE BLOCKCHAIN TABLE ... NO DROP UNTIL 0 DAYS IDLE ...  
CREATE IMMUTABLE TABLE ... NO DROP UNTIL 0 DAYS IDLE ...
```

This allows the table to be dropped at any time, regardless of how long the table has been inactive.

- If BLOCKCHAIN_TABLE_MAX_NO_DROP is not set, then when a user creates a blockchain table or an immutable table, and specifies the NO DROP UNTIL *number* DAYS IDLE clause, any number value can be specified for *number*.

① See Also

Oracle Database SQL Language Reference for information about the CREATE TABLE statement

2.37 CIRCUITS

CIRCUITS specifies the total number of virtual circuits that are available for inbound and outbound network sessions.

Property	Description
Parameter type	Integer

Property	Description
Default value	4294967295
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

It is one of several parameters that contribute to the total SGA requirements of an instance.

You should not specify a value for this parameter unless you want to limit the number of virtual circuits.

See Also

- *Oracle Database Concepts* for more information on memory structures
- *Oracle Database Concepts* for more information on processes

2.38 CLIENT_RESULT_CACHE_LAG

CLIENT_RESULT_CACHE_LAG specifies the maximum time (in milliseconds) since the last round trip to the server, before which the OCI client query execute makes a round trip to get any database changes related to the queries cached on the client.

Property	Description
Parameter type	Big integer
Syntax	CLIENT_RESULT_CACHE_LAG = <i>integer</i>
Default value	3000
Modifiable	No
Modifiable in a PDB	Yes
Range of values	0 to operating system-dependent
Basic	No

See Also

Oracle Call Interface Programmer's Guide for more information about the client query cache feature

2.39 CLIENT_RESULT_CACHE_SIZE

CLIENT_RESULT_CACHE_SIZE specifies the maximum size of the client per-process result set cache (in bytes).

Property	Description
Parameter type	Big integer
Syntax	CLIENT_RESULT_CACHE_SIZE = <i>integer</i> [K M G]
Default value	0
Modifiable	No
Modifiable in a PDB	Yes
Range of values	0 to operating system-dependent
Basic	No

All OCI client processes inherit this maximum size. Setting a nonzero value enables the client query cache feature. This can be overridden by the client configuration parameter OCI_RESULT_CACHE_MAX_SIZE.

 See Also

Oracle Call Interface Programmer's Guide for more information about the client query cache feature

2.40 CLIENT_STATISTICS_LEVEL

CLIENT_STATISTICS_LEVEL controls whether database clients report network statistics to the database.

This parameter applies only to clients that use Oracle Call Interface (OCI) to connect to the database.

Property	Description
Parameter type	String
Syntax	CLIENT_STATISTICS_LEVEL = { TYPICAL OFF }
Default value	TYPICAL
Modifiable	ALTER SYSTEM ... DEFERRED
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be used on all instances.

Database clients sometimes have performance issues when interacting with the database over a network (LAN or WAN). You can use this parameter to enable clients to collect network statistics and periodically send them to the database, where the statistics are displayed in AWR and V\$ views. These statistics include TCP and SQL*Net statistics. They complement existing database statistics and can be used to analyze, troubleshoot, and tune potential network performance or configuration issues.

Possible values:

- TYPICAL

This setting enables clients to collect network statistics and periodically send them to the database.

- OFF

This setting disables this feature. Clients will not send network statistics to the database.

When you modify this parameter, the new setting applies only to subsequent new connections to database clients.

Note

To view a complete listing of the statistics that are collected and reported when this feature is enabled, issue the following SQL statement:

```
SELECT name FROM V$STATNAME
       WHERE name LIKE 'Client%' ORDER BY name;

NAME
-----
Client Advertised Receive Window
Client Advertised Send Window
Client Data Segments In
Client Data Segments Out
Client Lost Packets
Client Path Maximum Transmission Unit(MTU)
Client Send Congestion Window
Client Time (usec) Busy Sending Data
Client Time (usec) Busy Sending Data under Congestion
Client Time (usec) Last Ack Received
Client Time (usec) Last Ack Sent
Client Time (usec) Last Data Received
Client Time (usec) Last Data Sent
Client Time (usec) Limited by Receive Window
Client Time (usec) Limited by Send Buffer
Client Time (usec) Round Trip Time
Client Time (usec) Round Trip Time Variance
Client Total Bytes Acked
Client Total Bytes Received
Client Total Number of Retransmitted Packets
```

2.41 CLONEDB

CLONEDB should be set on Direct NFS Client CloneDB databases. When this parameter is set, the CloneDB database uses the database backup as the backing store for the datafiles.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	No

Property	Description
Range of values	true false
Basic	No
Oracle RAC	The same value should be set for all instances.

① See Also

- See *Oracle Database Administrator's Guide* for more information about cloning databases on network attached storage (NAS).
- "[CLONEDB_DIR](#)"

2.42 CLONEDB_DIR

CLONEDB_DIR sets the directory path where CloneDB bitmap files should be created and accessed.

Property	Description
Parameter type	String
Syntax	CLONEDB_DIR = <i>string</i>
Default value	\$ORACLE_HOME/dbs
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	In an Oracle RAC environment, this parameter should be set to a shared location that is accessible from all the instances.

By default the CloneDB bitmap file is created under the \$ORACLE_HOME/dbs directory. This directory may not be in a shared location in an Oracle RAC environment, and therefore this parameter is provided to identify a shared location where CloneDB specific files can be created.

① See Also

"[CLONEDB](#)"

2.43 CLUSTER_DATABASE

CLUSTER_DATABASE is an Oracle RAC parameter that specifies whether Oracle RAC is enabled.

Property	Description
Parameter type	Boolean
Default value	false

Property	Description
Modifiable	No
Modifiable in a PDB	No
Range of values	true false
Basic	Yes
Oracle RAC	For all instances, the value must be set to true.

See Also

Oracle Real Application Clusters Administration and Deployment Guide for an introduction to Oracle RAC

2.44 CLUSTER_INTERCONNECTS

CLUSTER_INTERCONNECTS can be used in Oracle Real Application Clusters environments to indicate cluster interconnects available for use for the database traffic.

Property	Description
Parameter type	String
Syntax	CLUSTER_INTERCONNECTS = <i>ifn</i> [: <i>ifn</i>] ...
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Range of values	One or more IP addresses, separated by colons
Basic	No

Use this parameter to override the default interconnect configured for the database traffic, which is stored in the cluster registry. This procedure also may be useful with Data Warehouse systems that have reduced availability requirements and high interconnect bandwidth demands.

CLUSTER_INTERCONNECTS specifically overrides the following:

- Network classifications stored by `oifcfg` in the OCR.
- The default interconnect chosen by Oracle.

If you want to load-balance the interconnect, then Oracle recommends that you use link-bonding at the operating system level, even if you have two databases on the same server, so that multiple interconnects use the same address. Note that multiple private addresses provide load balancing, but do not provide failover unless bonded. If you specify multiple addresses in `init.ora` using CLUSTER_INTERCONNECTS, instead of bonding multiple addresses at the operating system level, then typically availability is reduced, because each network interface card failure will take down that instance.

Refer to your vendor documentation for information about bonding interfaces. Some vendor bonding architectures may require the use of this parameter.

If you have multiple database instances on Oracle Real Application Clusters nodes and want to use a specific interface for each instance, then you can set the `CLUSTER_INTERCONNECTS` initialization parameter to the IP address for each database instance. For example:

```
hr1.init.ora.cluster_interconnects="192.0.2.111"  
oltp3.init.ora.cluster_interconnects="192.0.2.112"
```

If the Oracle RAC interconnect is configured to run on a different interface than the Oracle Clusterware interconnect, then this configuration can cause reduced availability, as failovers or instance evictions can be delayed if the Oracle RAC interconnect fails while the Oracle Clusterware NIC remains up.

① See Also

Oracle Real Application Clusters Administration and Deployment Guide for additional information about using `CLUSTER_INTERCONNECTS`

2.45 COMMIT_LOGGING

`COMMIT_LOGGING` is an advanced parameter used to control how redo is batched by Log Writer.

Property	Description
Parameter type	String
Syntax	<code>COMMIT_LOGGING = { IMMEDIATE BATCH }</code>
Default value	There is no default value.
Modifiable	Yes (at both session-level and system-level)
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Each instance may have its own setting

If `COMMIT_LOGGING` is altered after setting `COMMIT_WAIT` to `FORCE_WAIT`, then the `FORCE_WAIT` option is no longer valid.

2.46 COMMIT_POINT_STRENGTH

`COMMIT_POINT_STRENGTH` specifies a value that determines the **commit point site** in a distributed transaction.

Property	Description
Parameter type	Integer
Default value	1
Modifiable	No
Modifiable in a PDB	Yes
Range of values	0 to 255
Basic	No

Note

This parameter is relevant only in distributed database systems.

The node in the transaction with the highest value for COMMIT_POINT_STRENGTH will be the commit point site.

The commit point site of a database should reflect the amount of critical shared data in the database. For example, a database on a mainframe computer typically shares more data among users than one on a personal computer. Therefore, COMMIT_POINT_STRENGTH should be set to a higher value for the mainframe computer.

The commit point site stores information about the status of transactions. Other computers in a distributed transaction require this information during Oracle's two-phase commit, so it is desirable to have machines that are always available as commit point sites. Therefore, set COMMIT_POINT_STRENGTH to a higher value on your more available machines.

See Also

- *Oracle Database Concepts* and *Oracle Database Administrator's Guide* for information on two-phase commit
- Your operating system-specific Oracle documentation for the default value of this parameter

2.47 COMMIT_WAIT

COMMIT_WAIT is an advanced parameter used to control when the redo for a commit is flushed to the redo logs.

Property	Description
Parameter type	String
Syntax	COMMIT_WAIT = { NOWAIT WAIT FORCE_WAIT }
Default value	There is no default value.
Modifiable	Yes (at both session-level and system-level)
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Each instance may have its own setting

Be aware that the NOWAIT option can cause a failure that occurs after the database receives the commit message, but before the redo log records are written. This can falsely indicate to a transaction that its changes are persistent. Also, it can violate the durability of ACID (Atomicity, Consistency, Isolation, Durability) transactions if the database shuts down unexpectedly.

If the parameter is set to FORCE_WAIT, the default behavior (immediate flushing of the redo log buffer with wait) is used. If this is a system setting, the session level and transaction level options will be ignored. If this is a session level setting, the transaction level options will be ignored. If COMMIT_WAIT is altered after it has been set to FORCE_WAIT, then the FORCE_WAIT option is no longer valid.

2.48 COMMIT_WRITE

COMMIT_WRITE is an advanced parameter used to control how redo for transaction commits is written to the redo logs.

Property	Description
Parameter type	String
Syntax	COMMIT_WRITE = '{IMMEDIATE BATCH},{WAIT NOWAIT}'
Default value	If this parameter is not explicitly specified, then database commit behavior defaults to writing commit records to disk before control is returned to the client. If only IMMEDIATE or BATCH is specified, but not WAIT or NOWAIT, then WAIT mode is assumed. If only WAIT or NOWAIT is specified, but not IMMEDIATE or BATCH, then IMMEDIATE mode is assumed. Be aware that the NOWAIT option can cause a failure that occurs after the database receives the commit message, but before the redo log records are written. This can falsely indicate to a transaction that its changes are persistent. Also, it can violate the durability of ACID (Atomicity, Consistency, Isolation, Durability) transactions if the database shuts down unexpectedly.
Modifiable	Yes (at both session-level and system-level). Values supplied for COMMIT_WRITE in an ALTER SYSTEM or ALTER SESSION statement must be separated by a comma.
Modifiable in a PDB	Yes
Range of values	Single-quoted, comma-separated list of either IMMEDIATE or BATCH, and either WAIT or NOWAIT.
Basic	No
Oracle RAC	Each instance may have its own setting

The IMMEDIATE and BATCH options control how redo is batched by Log Writer. The WAIT and NOWAIT options control when the redo for a commit is flushed to the redo logs.

Note

The COMMIT_WRITE parameter is deprecated. It is retained for backward compatibility only. It is replaced by the COMMIT_LOGGING and COMMIT_WAIT parameters.

2.49 COMMON_USER_PREFIX

COMMON_USER_PREFIX specifies a prefix that the names of common users, roles, and profiles in a multitenant container database (CDB) must start with.

Property	Description
Parameter type	String
Syntax	COMMON_USER_PREFIX = prefix

Property	Description
Default value	In a CDB root, C## is the default value. In an application root, the empty string is the default value.
Modifiable	No
Modifiable in a PDB	No However, you can modify this parameter in an application root.
Basic	No
Oracle RAC	Multiple instances must have the same value

Names of local users, roles, and profiles must not start with the same prefix. A case-insensitive comparison of the prefixes for user, role, and profile names to the value of this parameter is done.

When a value is set for COMMON_USER_PREFIX, Oracle will require that the names of common users, roles, and profiles start with the string assigned to this parameter.

The names of users, roles, and profiles created using this prefix must be valid names.

Regardless of the value of the COMMON_USER_PREFIX parameter, the names of local users, roles, and profiles cannot start with C##. Similarly, the names of application common users and local users in an application PDB cannot start with C##.

 Caution

You can change the value of the COMMON_USER_PREFIX parameter, but do so only with great care.

If COMMON_USER_PREFIX is set to an empty string, Oracle will *not* enforce any restrictions on the names of common or local users, roles, and profiles.

Setting this parameter to an empty string will result in no restrictions being placed on names of common and local users, roles, and profiles, which could lead to conflicts between the names of local and common users, roles, and profiles when a PDB is plugged into a different CDB, or when opening a PDB that was closed when a common user was created.

 Note

COMMON_USER_PREFIX can be set in the context of an application container.

If you set COMMON_USER_PREFIX in the application root to a non-null value, then the application common user should start with that prefix, and a local user created in an application PDB cannot start with that prefix.

By default, COMMON_USER_PREFIX is the empty string in an application root.

Note

When you query the V\$PARAMETER or V\$SYSTEM_PARAMETER view, a value of NONE is returned for the DEFAULT_VALUE column for the COMMON_USER_PREFIX parameter.

However, the database enforces a default value of C## for a CDB root and a default value of the empty string for an application root.

2.50 COMPATIBLE

COMPATIBLE enables you to use a new release of Oracle while ensuring the ability to downgrade the database to an earlier release.

Property	Description
Parameter type	String
Syntax	COMPATIBLE = <i>release_number</i>
Default value	21.0.0
Modifiable	No
Modifiable in a PDB	No
Range of values	12.2.0 to default release Values must be specified as at least three decimal numbers with each pair separated by a dot, such as 21.0.0 or 21.0.0.0
Basic	Yes
Oracle RAC	Multiple instances must have the same value.

The COMPATIBLE parameter specifies the Oracle version number that the database disk format must be compatible with. The database can be downgraded to the version specified in the COMPATIBLE parameter or any later version.

Setting COMPATIBLE ensures that new features do not write data formats or structures to disk that are not compatible with the earlier release, preventing a future downgrade. Features that require a higher value of COMPATIBLE to work correctly may be restricted or disabled to ensure downgrades are possible.

Typically, users keep COMPATIBLE unchanged when upgrading their Oracle software. After upgrade, users will run the new release of the Oracle software for a few weeks to ensure that

the new release is working correctly. Afterwards, users can choose to update COMPATIBLE to the latest version to take advantage of the new features.

📘 Notes

- The value of the COMPATIBLE parameter can be increased to a higher version, but it can never be decreased to a lower version.
- The value of the COMPATIBLE parameter should not be changed for a Release Update (RU) or Release Update Revision (RUR). For example, assume you are running Oracle Database 21c and the value of COMPATIBLE is 21.0.0. You then apply Oracle Database Release Update 21.4.0.0.0. Do not set the value of COMPATIBLE to 21.4.0; leave it set to 21.0.0.
- When using a standby database, this parameter must have the same value on both the primary and standby databases.

📘 See Also

Oracle Database Upgrade Guide for more information on setting this parameter

2.51 CONNECTION_BROKERS

CONNECTION_BROKERS is used to specify connection broker types, the number of connection brokers of each type, and the maximum number of connections per broker.

Property	Description
Parameter type	String
Syntax	CONNECTION_BROKERS = broker_description[, ...]
Syntax	broker_description::= ((type_clause)(brokers_clause)[(broker_options)])
Syntax	type_clause::= TYPE={ DEDICATED EMON POOLED } Indicates the broker type. This is a mandatory parameter.
Syntax	brokers_clause::= BROKERS= <i>integer</i> Indicates the number of brokers of the specified type. This is a mandatory parameter. The specified integer value must be greater than or equal to 0. If set to 0, brokers will not accept new connections, but existing connections will continue as normal.
Syntax	broker_options::= CONNECTIONS= <i>integer</i> The maximum number of connections per broker. This is an optional parameter. If the specified integer value is greater than the maximum allowed for the platform, the maximum allowed for the platform is used.

Property	Description
Default value	The default value for the initialization parameter will contain the DEDICATED and EMON broker types. Certain types of brokers are only started when certain features are enabled, so their configuration will only apply if the broker is needed.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No
Oracle RAC	The same value should be set on all instances

The connection brokers are used in these cases:

- DEDICATED brokers are used by the multiprocess and multithreaded Oracle features. See *Oracle Database Concepts* for more information about these features.

DEDICATED brokers are also used when the USE_DEDICATED_BROKER initialization parameter is set to true. See "[USE_DEDICATED_BROKER](#)" for more information about the USE_DEDICATED_BROKER initialization parameter.

- EMON brokers are used when there is a client registered for notification over 12c AQ queues. It is not on by default. See *Oracle Database Advanced Queuing User's Guide* for more information about AQ queues.

- POOLED brokers are used whenever a Database Resident Connection Pooling (DRCP) pool is active. See *Oracle Database Concepts* for more information about DRCP pooling.

The POOLED broker does not appear in the parameter by default. In this case, the DRCP fields are used. If you specify the POOLED broker in the parameter, then that specification will override the DRCP fields, and further attempts to set the DRCP fields will then throw an error. Oracle recommends that the parameter be used instead of the DRCP fields.

To make it easier to modify the list, individual entries are indexed using the TYPE so it is not necessary to re-specify the entire list. For example, to adjust the number of DEDICATED brokers:

```
alter system set connection_brokers = '((TYPE=DEDICATED)(BROKERS=2))'
```

2.52 CONTAINER_DATA

Use CONTAINER_DATA to control whether queries on extended data-linked objects from within a PDB return rows from both the root and the PDB, or rows from only the PDB.

Property	Description
Parameter type	String
Syntax	CONTAINER_DATA = { ALL CURRENT CURRENT_DICTIONARY }
Default value	ALL
Modifiable	ALTER SESSION
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can use different values.

This parameter controls the behavior of queries on the following types of objects:

- Extended data-linked application common objects

This type of object stores shared data in an application root, and also allows application PDBs to store local data that is unique to each application PDB.

When this type of object is queried from an application root, only the shared data in the application root is returned.

When this type of object is queried from an application PDB, the value of the CONTAINER_DATA initialization parameter controls the query result as follows:

- ALL: The query returns both the shared data in the application root and the local data pertaining to the application PDB
- CURRENT: The query returns only the local data pertaining to the application PDB
- CURRENT_DICTIONARY: The query returns both the shared data in the application root and the local data pertaining to the application PDB

- Extended data-linked Oracle-supplied data dictionary objects

This type of object stores data pertaining to the CDB root, as well as data pertaining to individual PDBs.

When this type of object is queried from the CDB root, only data pertaining to the CDB root is returned.

When this type of object is queried from a PDB, the value of the CONTAINER_DATA initialization parameter controls the query result as follows:

- ALL: The query returns data pertaining to both the CDB root and the PDB
- CURRENT: The query returns only data pertaining to the PDB
- CURRENT_DICTIONARY: The query returns only data pertaining to the PDB

2.53 CONTAINERS_PARALLEL_DEGREE

CONTAINERS_PARALLEL_DEGREE can be used to control the degree of parallelism of a query involving containers().

Property	Description
Parameter type	Integer
Default value	65535
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	Cannot be set to a value lower than 2 or higher than 65535.
Basic	No
Oracle RAC	Different values can be set on different instances.

The value of CONTAINERS_PARALLEL_DEGREE, if set, will override the default DOP for a containers() query.

By default, a containers() query uses a degree of parallelism equal to (1 + number of open PDBs) in the case of CDB root and (1 + number of open application PDBs) in the case of application root.

If the value of CONTAINERS_PARALLEL_DEGREE is lower than 65535, then this value is used as the degree of parallelism of a query involving containers(). Otherwise (when the value is 65535),

the default degree of parallelism is (1 + number of open PDBs) or (1 + number of open application PDBs) as described above.

① See Also

- *Oracle Multitenant Administrator's Guide* for more information about CDB roots
- *Oracle Multitenant Administrator's Guide* for more information about application roots

2.54 CONTROL_FILE_RECORD_KEEP_TIME

CONTROL_FILE_RECORD_KEEP_TIME specifies the minimum number of days before a reusable record in the control file can be reused.

Property	Description
Parameter type	Integer
Default value	7 (days)
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to 365 (days)
Basic	No

In the event a new record must be added to a reusable section and the oldest record has not aged enough, the record section expands. If this parameter is set to 0, then reusable sections never expand, and records are reused as needed.

If the number of reusable records in the control file exceeds the circular reuse record limit UB4MAXVAL, then reusable records will be overwritten even if CONTROL_FILE_RECORD_KEEP_TIME has not elapsed. UB4MAXVAL is defined in the oratypes.h header file, which is found in the public directory. Its value may vary according to the operating system you are using.

① Note

This parameter applies only to records in the control file that are circularly reusable (such as archive log records and various backup records). It does not apply to records such as data file, tablespace, and redo thread records, which are never reused unless the corresponding object is dropped from the tablespace.

① See Also

- ["CONTROL_FILES"](#)
- *Oracle Database Backup and Recovery User's Guide* for more information about this parameter

2.55 CONTROL_FILES

CONTROL_FILES specifies one or more names of control files, separated by commas.

Property	Description
Parameter type	String
Syntax	<code>CONTROL_FILES = filename [, filename] ...</code> Note: The control file name can be an OMF (Oracle Managed Files) name. This occurs when the control file is re-created using the CREATE CONTROLFILE REUSE statement.
Default value	Operating system-dependent
Modifiable	No
Modifiable in a PDB	No
Range of values	1 to 8 filenames
Basic	Yes
Oracle RAC	Multiple instances must have the same value.

Every database has a **control file**, which contains entries that describe the structure of the database (such as its name, the timestamp of its creation, and the names and locations of its data files and redo files).

Oracle recommends that you multiplex multiple control files on different devices or mirror the file at the operating system level.

📘 See Also

Oracle Database Administrator's Guide for information about specifying control files at database creation

2.56 CONTROL_MANAGEMENT_PACK_ACCESS

CONTROL_MANAGEMENT_PACK_ACCESS specifies which of the Server Manageability Packs should be active.

Property	Description
Parameter type	String
Syntax	<code>CONTROL_MANAGEMENT_PACK_ACCESS = { NONE DIAGNOSTIC DIAGNOSTIC+TUNING }</code>
Default value	Enterprise Edition: DIAGNOSTIC+TUNING All other editions: NONE
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

The following packs are available:

- The DIAGNOSTIC pack includes AWR, ADDM, and so on.
 - The TUNING pack includes SQL Tuning Advisor, SQLAccess Advisor, and so on.
- A license for DIAGNOSTIC is required for enabling the TUNING pack.

Values

- NONE
Both packs are not available.
- DIAGNOSTIC
Only the DIAGNOSTIC pack is available.
- DIAGNOSTIC+TUNING
Both packs are available. This is the default.

① See Also

Oracle Database Licensing Information User Manual

2.57 CORE_DUMP_DEST

CORE_DUMP_DEST specifies the directory where Oracle dumps core files.

Property	Description
Parameter type	String
Syntax	CORE_DUMP_DEST = <i>directory</i>
Default value	ORACLE_HOME/DBS
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

CORE_DUMP_DEST is primarily a UNIX parameter and may not be supported on your platform.

① Note

This parameter is ignored by the new diagnosability infrastructure introduced in Oracle Database 11g Release 1 (11.1), which places trace and core files in a location controlled by the DIAGNOSTIC_DEST initialization parameter.

① See Also

["DIAGNOSTIC_DEST"](#)

2.58 CPU_COUNT

CPU_COUNT specifies the number of CPUs available for Oracle Database to use.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to unlimited
Basic	No
Oracle RAC	The same value should be used on all instances.

On CPUs with multiple CPU threads, it specifies the total number of available CPU threads. Various components of Oracle Database are configured based on the number of CPUs, such as the Optimizer, Parallel Query, and Resource Manager.

If CPU_COUNT is set to 0 (its default setting), then Oracle Database continuously monitors the number of CPUs reported by the operating system and uses the current count. If CPU_COUNT is set to a value other than 0, then Oracle Database will use this count rather than the actual number of CPUs, thus disabling dynamic CPU reconfiguration.

When Resource Manager is managing CPU (RESOURCE_MANAGER_PLAN is set), then the database's CPU utilization is limited to CPU_COUNT CPU threads. This feature is called Instance Caging. If Resource Manager is enabled at the CDB level, then the PDB's CPU utilization is limited to the PDB's CPU_COUNT.

Note

Setting CPU_COUNT to a value greater than the current number of CPUs results in an error. However, if CPU_COUNT is set to a value greater than the current number of CPUs in the initialization parameter file, then CPU_COUNT is capped to the current number of CPUs.

Note

When a value is not explicitly set for CPU_COUNT, the maximum default value for CPU_COUNT is 2 for an Oracle ASM Proxy instance, 4 for an Oracle ASM instance, and 8 for an Oracle IOServer instance.

① See Also

- ["CPU_MIN_COUNT"](#)
- *Oracle Database VLDB and Partitioning Guide* for information about how CPU_COUNT is used to determine the default degree of parallelism for a single instance or Oracle RAC configuration when the PARALLEL clause is specified but no degree of parallelism is listed
- *Oracle Database Administrator's Guide* for an example of how CPU resources are allocated if you enable instance caging and set a maximum utilization limit in a resource plan

2.59 CPU_MIN_COUNT

CPU_MIN_COUNT specifies the minimum number of CPUs required by a pluggable database (PDB) at any given time.

Property	Description
Parameter type	String
Syntax	CPU_MIN_COUNT = 'value'
Default value	The value of CPU_COUNT
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of Values	Decimal values from 0.1 through 0.95, where the decimal value is a multiple of 0.05 Integer values from 1 up to and including the value of CPU_COUNT
Basic	No
Oracle RAC	The same value should be used on all instances.

This parameter specifies the minimum number of CPUs required by a PDB at any given time. For multi-threaded CPUs, this number corresponds to CPU threads, not CPU cores.

You can set this parameter at the CDB level, and for each individual PDB. This enables you to control each PDB's minimum share of CPU utilization within a CDB. If the sum of the CPU_MIN_COUNT values across all open PDBs in a CDB is equal to the value of CPU_MIN_COUNT for the CDB, then the CDB instance is considered full. If the sum exceeds the value of CPU_MIN_COUNT for the CDB, then the CDB instance is over-provisioned. Oracle does not prevent you from over-provisioning a CDB.

Resource Manager is enabled at the CDB level by setting the RESOURCE_MANAGER_PLAN at the root level to the name of a CDB resource plan. If the CDB resource plan has no configured CPU directives, that is, the SHARES and UTILIZATION_LIMIT directives are unset, then Resource Manager uses the CPU_COUNT and CPU_MIN_COUNT settings for the PDB to manage CPU utilization.

Note

Setting this parameter to a very low value can result in insufficient CPU allocation and poor performance.

See Also

["CPU_COUNT"](#)

2.60 CREATE_BITMAP_AREA_SIZE

CREATE_BITMAP_AREA_SIZE specifies the amount of memory (in bytes) allocated for bitmap creation.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	No
Modifiable in a PDB	Yes
Range of values	Operating system-dependent
Basic	No

This parameter is relevant only for systems containing bitmap indexes.

Note

Oracle does not recommend using the CREATE_BITMAP_AREA_SIZE parameter unless the instance is configured with the shared server option. Oracle recommends that you enable automatic sizing of SQL working areas by setting PGA_AGGREGATE_TARGET instead. CREATE_BITMAP_AREA_SIZE is retained for backward compatibility.

A larger value may speed up index creation.

Cardinality is the number of unique values in a column in relation to the number of rows in the table. If cardinality is very small, you can set a small value for this parameter. For example, if cardinality is only 2, then the value can be in kilobytes rather than megabytes. As a general rule, the higher the cardinality, the more memory is needed for optimal performance.

See Also

Oracle Database SQL Tuning Guide for more information on using bitmap indexes

2.61 CREATE_STORED_OUTLINES

CREATE_STORED_OUTLINES determines whether Oracle automatically creates and stores an outline for each query submitted during the session.

Property	Description
Parameter type	String
Syntax	CREATE_STORED_OUTLINES = { true false <i>category_name</i> } [NOOVERRIDE]
Default value	There is no default value.
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Values

- **true**
Enables automatic outline creation for subsequent queries in the same session. These outlines receive a unique system-generated name and are stored in the DEFAULT category. If a particular query already has an outline defined for it in the DEFAULT category, then that outline will remain and a new outline will not be created.
- **false**
Disables automatic outline creation during the session. This is the default.
- ***category_name***
Enables the same behavior as true except that any outline created during the session is stored in the *category_name* category.
- **NOOVERRIDE**
NOOVERRIDE specifies that this system setting will not override the setting for any session in which this parameter was explicitly set. If you do not specify NOOVERRIDE, then this setting takes effect in all sessions.

See Also

Oracle Database SQL Tuning Guide for more information on setting this parameter

2.62 CURSOR_BIND_CAPTURE_DESTINATION

CURSOR_BIND_CAPTURE_DESTINATION determines the location at which bind variables that are captured from SQL cursors are available.

Property	Description
Parameter type	String

Property	Description
Syntax	CURSOR_BIND_CAPTURE_DESTINATION = { off memory memory+disk }
Default value	memory+disk
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Values

- off
Bind variables are not captured from SQL cursors.
- memory
Bind variables are captured from SQL cursors, and are available only in memory (V\$ views).
- memory+disk
Bind variables are captured from SQL cursors, and are available in memory (V\$ views) and disk (Automatic Workload Repository tables, SQL Tuning Set tables, and so on).

When you specify this value with a SQL ALTER SESSION or ALTER SYSTEM statement, enclose the value in single quotes or double quotes. For example:

```
ALTER SESSION SET CURSOR_BIND_CAPTURE_DESTINATION = 'memory+disk';
ALTER SYSTEM SET CURSOR_BIND_CAPTURE_DESTINATION = "memory+disk";
```

2.63 CURSOR_INVALIDATION

CURSOR_INVALIDATION controls whether deferred cursor invalidation or immediate cursor invalidation is used for DDL statements by default.

Property	Description
Parameter type	String
Syntax	CURSOR_INVALIDATION = { DEFERRED IMMEDIATE }
Default value	IMMEDIATE
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can have different values.

Deferred invalidation reduces the number of cursor invalidations and spreads the recompilation workload over time. Note that when the recompilation workload is spread over time, a cursor may run with a sub-optimal plan until it is recompiled, and may incur small execution-time overhead.

Prior to Oracle Database 12c Release 2 (12.2.0.1), immediate cursor invalidation was used.

This parameter provides system or session level default for the DEFERRED or IMMEDIATE option for the INVALIDATION clause in DDL statements.

When this parameter is set to DEFERRED, an application can take advantage of reduced cursor invalidation without making any other application changes.

When this parameter is set to IMMEDIATE, the application will experience the same cursor invalidation behavior as in Oracle Database 12c Release 1 (12.1).

2.64 CURSOR_SHARING

CURSOR_SHARING determines what kind of SQL statements can share the same cursors.

Property	Description
Parameter type	String
Syntax	CURSOR_SHARING = { EXACT FORCE }
Default value	EXACT
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Values

- **FORCE**
Allows the creation of a new cursor if sharing an existing cursor, or if the cursor plan is not optimal.
- **EXACT**
Only allows statements with identical text to share the same cursor.

① See Also

Oracle Database SQL Tuning Guide before setting the CURSOR_SHARING parameter to learn about the performance implications

2.65 CURSOR_SPACE_FOR_TIME

CURSOR_SPACE_FOR_TIME lets you use more space for cursors to save time.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	No
Range of values	true false
Basic	No

Note

The `CURSOR_SPACE_FOR_TIME` parameter is deprecated. It is retained for backward compatibility only.

This parameter affects both the shared SQL area and the client's private SQL area.

Most users will not need to set this parameter because of the significantly enhanced concurrency modifications introduced in Oracle Database 10g Release 2 (10.2.0.2) and later.

Values

- `true`

Shared SQL areas are kept pinned in the shared pool. As a result, shared SQL areas are not aged out of the pool as long as an open cursor references them. Because each active cursor's SQL area is present in memory, execution is faster. However, the shared SQL areas never leave memory while they are in use. Therefore, you should set this parameter to `true` only when the shared pool is large enough to hold all open cursors simultaneously.

In addition, a setting of `true` retains the private SQL area allocated for each cursor between executions instead of discarding it after cursor execution, saving cursor allocation and initialization time.

- `false`

Shared SQL areas can be deallocated from the library cache to make room for new SQL statements.

Note

If this parameter is set to `true`, then the `SERIAL_REUSE` parameter is disabled.

See Also

- ["SERIAL_REUSE"](#)

2.66 DATA_GUARD_MAX_IO_TIME

`DATA_GUARD_MAX_IO_TIME` sets the maximum number of seconds that can elapse before a process is considered hung while performing a regular I/O operation in an Oracle Data Guard environment. Regular I/O operations include read, write, and status operations.

See Also

["DATA_GUARD_MAX_LONGIO_TIME"](#), which enables you to set the timeout for long I/O operations, such as open and close operations, in an Oracle Data Guard environment

Property	Description
Parameter type	Integer
Default value	240
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	10 to 7200
Basic	No
Oracle RAC	Different instances can use different values.

2.67 DATA_GUARD_MAX_LONGIO_TIME

DATA_GUARD_MAX_LONGIO_TIME sets the maximum number of seconds that can elapse before a process is considered hung while performing a long I/O operation in an Oracle Data Guard environment. Long I/O operations include open and close operations.

Property	Description
Parameter type	Integer
Default value	240
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	10 to 7200
Basic	No
Oracle RAC	Different instances can use different values.

See Also

["DATA_GUARD_MAX_IO_TIME"](#)

2.68 DATA_GUARD_SYNC_LATENCY

DATA_GUARD_SYNC_LATENCY controls how many seconds the Log Writer (LGWR) process waits beyond the response of the first in a series of Oracle Data Guard SYNC redo transport mode connections.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to the number of seconds specified by the NET_TIMEOUT attribute for the LOG_ARCHIVE_DEST_n parameter
Basic	No

Property	Description
Oracle RAC	The same value must be used on all instances.

The default value is 0, which means that the LGWR will wait up to the number of seconds specified by the NET_TIMEOUT attribute of the LOG_ARCHIVE_DEST_n parameter for each SYNC standby destination.

For example, in an Oracle Data Guard configuration that has two standbys which receive redo in SYNC mode, you would define LOG_ARCHIVE_DEST_2 and LOG_ARCHIVE_DEST_3 to use SYNC transport with DATA_GUARD_SYNC_LATENCY set to a value of 2 seconds. When redo needs to be sent to the standbys, it is sent to both the LOG_ARCHIVE_DEST_2 and LOG_ARCHIVE_DEST_3 connections in parallel and the LGWR will wait for acknowledgement. If LOG_ARCHIVE_DEST_2 responds with its message acknowledging that the redo has been received first, the LGWR will not wait for LOG_ARCHIVE_DEST_3 to respond for more than 2 extra seconds (DATA_GUARD_SYNC_LATENCY). If LOG_ARCHIVE_DEST_3 does not respond within those 2 seconds the LGWR disconnects from LOG_ARCHIVE_DEST_3, putting it into the error state. Redo continues to be sent to LOG_ARCHIVE_DEST_2 as usual. After the duration of the REOPEN attribute for LOG_ARCHIVE_DEST_3 has elapsed, the LGWR reconnects to LOG_ARCHIVE_DEST_3 and redo transfer continues. In this manner, the maximum impact of having the second SYNC standby would be restricted to 2 seconds more than having only one SYNC standby, while allowing the Oracle Data Guard configuration to maintain the desired protection level.

LGWR will never wait longer than the value of the NET_TIMEOUT attribute of the LOG_ARCHIVE_DEST_n parameter, regardless of the value of DATA_GUARD_SYNC_LATENCY.

See Also

"[LOG_ARCHIVE_DEST_n](#)"

2.69 DATA_TRANSFER_CACHE_SIZE

DATA_TRANSFER_CACHE_SIZE sets the size of the data transfer cache (in bytes) used to receive data blocks (typically from a primary database in an Oracle Data Guard environment) for consumption by an instance during execution of an RMAN RECOVER ... NONLOGGED BLOCK command.

Property	Description
Parameter type	Big integer
Syntax	DATA_TRANSFER_CACHE_SIZE = <i>integer</i> [K M G]
Default value	If SGA_TARGET is set, then if DATA_TRANSFER_CACHE_SIZE is not specified, the default size of the data transfer cache is 0 (internally determined by Oracle Database). If SGA_TARGET is set and DATA_TRANSFER_CACHE_SIZE is specified, then the user-specified value indicates the minimum value for the data transfer cache. If SGA_TARGET is not set, the data transfer cache will not be available.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 – 512M, rounded up to the next granule size

Property	Description
Basic	No
Oracle RAC	Multiple instances can have different values.

This initialization parameter needs to be set only for databases that do not use Automatic Memory Management and that use the `RMAN RECOVER . . . NONLOGGED BLOCK` command.

2.70 DB_nK_CACHE_SIZE

DB_nK_CACHE_SIZE (where $n = 2, 4, 8, 16, 32$) specifies the size of the cache for the nK buffers.

Property	Description
Parameter type	Big integer
Syntax	DB_[2 4 8 16 32]K_CACHE_SIZE = <i>integer</i> [K M G]
Default value	0 (additional block size caches are not configured by default)
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Minimum: 0 (values greater than zero are automatically modified to be either the granule size * number of processor groups, or 4 MB * number of CPUs, whichever is greater) Maximum: operating system-dependent
Basic	No

You can set this parameter only when DB_BLOCK_SIZE has a value other than nK . For example, if DB_BLOCK_SIZE=4096, then you cannot specify the parameter DB_4K_CACHE_SIZE (because the size for the 4 KB block cache is already specified by DB_CACHE_SIZE).

Do not set this parameter to zero if there are any online tablespaces with an nK block size.

Operating system-specific block size restrictions apply. For example, you cannot set DB_32K_CACHE_SIZE if the operating system's maximum block size is less than 32 KB. Also, you cannot set DB_2K_CACHE_SIZE if the minimum block size is greater than 2 KB.

① See Also

Your operating system-specific Oracle documentation for more information on block size restrictions

2.71 DB_BIG_TABLE_CACHE_PERCENT_TARGET

DB_BIG_TABLE_CACHE_PERCENT_TARGET specifies the cache section target size for automatic big table caching, as a percentage of the buffer cache.

Property	Description
Parameter type	String

Property	Description
Syntax	DB_BIG_TABLE_CACHE_PERCENT_TARGET = <i>string</i>
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No
Oracle RAC	Multiple instances can have different values, but it is recommended to keep the big table cache section size uniform.

Automatic big table caching enables parallel queries and serial queries to use the buffer cache, which enhances the in-memory query capabilities of Oracle Database. Automatic big table caching is designed primarily to enhance performance for data warehouse workloads, but it also improves performance in mixed workloads.

Starting in Oracle Database 12c Release 1 (12.1.0.2), table scans can use a different algorithm in the following scenarios:

- **Parallel queries:**
In single-instance and Oracle Real Application Clusters (Oracle RAC) databases, parallel queries can use the automatic big table cache when the DB_BIG_TABLE_CACHE_PERCENT_TARGET initialization parameter is set to a nonzero value, and the PARALLEL_DEGREE_POLICY initialization parameter is set to AUTO or ADAPTIVE.
- **Serial queries:**
In a single-instance configuration only, serial queries can use the automatic big table cache when the DB_BIG_TABLE_CACHE_PERCENT_TARGET initialization parameter is set to a nonzero value.

When a nonzero value is specified for the DB_BIG_TABLE_CACHE_PERCENT_TARGET parameter, the value indicates the percentage of the buffer cache to reserve for the big table cache. The largest value that can be specified with the DB_BIG_TABLE_CACHE_PERCENT_TARGET parameter is 90, which reserves 10% of the buffer cache for usage besides table scans.

The default value of this parameter is 0. Therefore, automatic big table caching is not enabled by default. When automatic big table caching is not enabled, queries might run using the least recently used (LRU) mechanism for cached reads, or might decide to use direct reads for the table scan.

If a large table is about the size of the combined size of the big table cache of all instances, the table will be partitioned and cached or mostly cached on all instances. With in-memory parallel query, this could eliminate most disk reads for queries on the table, or the database could intelligently read from disk only for the portion of the table that does not fit in the big table cache. If the big table cache cannot cache all the tables to be scanned, only the most frequently accessed tables will be cached, and the rest will be read via direct read automatically.

Use these guidelines when setting the parameter:

- If you do not enable automatic degree of parallelism (DOP) in your Oracle RAC environment, do not set this parameter because the big table cache is not used in that situation.
- When setting this parameter, consider the workload mix: how much of the workload is for OLTP; insert, update, and random access; and how much of the workload involves table scans. Because data warehouse workloads often perform large table scans, you may

consider giving the big table cache section a higher percentage of buffer cache space for data warehouses.

- This parameter can be dynamically changed if the workload changes. The change could take some time to reach the target (depending on the current workload) because buffer cache memory might be actively used at that time.

① Note

Automatic big table caching uses temperature and object-based algorithms to track medium and big tables. Oracle will cache very small tables, but they will not be tracked by automatic big table caching.

① See Also

- ["PARALLEL_DEGREE_POLICY"](#)
- See ["V\\$BT_SCAN_CACHE"](#) and ["V\\$BT_SCAN_OBJ_TEMPS"](#) for more information about the big table cache
- *Oracle Database VLDB and Partitioning Guide* for more information about this parameter and about automatic big table caching

2.72 DB_BLOCK_BUFFERS

DB_BLOCK_BUFFERS specifies the number of database buffers in the buffer cache.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	No
Modifiable in a PDB	No
Range of values	50 to an operating system-specific maximum
Basic	No
Oracle RAC	Multiple instances can have different values, and you can change the values as needed.

① Note

DB_BLOCK_BUFFERS cannot be combined with the dynamic DB_CACHE_SIZE parameter; combining these parameters in the same parameter file will produce an error.

DB_BLOCK_BUFFERS is one of several parameters that contribute to the total memory requirements of the SGA of an instance.

This parameter, together with DB_BLOCK_SIZE, determines the total size of the buffer cache. Effective use of the buffer cache can greatly reduce the I/O load on the database.

DB_BLOCK_SIZE can be specified only when the database is first created, so you use DB_BLOCK_BUFFERS to control the size of the buffer cache.

Note

The DB_BLOCK_BUFFERS initialization parameter is deprecated. It is maintained for backward compatibility.

Oracle recommends that you use DB_CACHE_SIZE instead.

See Also

["DB_CACHE_SIZE"](#)

2.73 DB_BLOCK_CHECKING

DB_BLOCK_CHECKING specifies whether Oracle Database performs block checking for database blocks.

Property	Description
Parameter type	String
Syntax	DB_BLOCK_CHECKING = { FALSE OFF LOW MEDIUM TRUE FULL }
Default value	FALSE
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes, with the following restriction: If block checking is enabled for a CDB, then you cannot subsequently disable block checking in any of its PDBs. That is, if the value of DB_BLOCK_CHECKING in a CDB is LOW, MEDIUM, TRUE, or FULL, and you then attempt to set the value of DB_BLOCK_CHECKING in one of its PDBs to FALSE or OFF, an error will occur.
Basic	No

Values

- OFF or FALSE
No block checking is performed for blocks in user tablespaces. However, semantic block checking for SYSTEM tablespace blocks is always turned on.
- LOW
Basic block header checks are performed after block contents change in memory (for example, after UPDATE, INSERT or DELETE statements, or after inter-instance block transfers in Oracle RAC).
- MEDIUM
All LOW checks and full semantic checks are performed for all objects except indexes (whose contents can be reconstructed by a drop+rebuild on encountering a corruption).

- FULL or TRUE

All LOW and MEDIUM checks and full semantic checks are performed for all objects.

Oracle checks a block by going through the data in the block, making sure it is logically self-consistent. Block checking can often prevent memory and data corruption. Block checking typically causes 1% to 10% overhead in most applications, depending on workload and the parameter value. Specific DML overhead may be higher. The more updates or inserts in a workload, the more expensive it is to turn on block checking. You should set DB_BLOCK_CHECKING to FULL if the performance overhead is acceptable.

For backward compatibility, the use of FALSE (implying OFF) and TRUE (implying FULL) is preserved.

Caution

Before enabling block checking with this parameter, Oracle recommends that you detect and repair any logical corruptions in the database. Otherwise, a block that contains logical corruption will be marked as "soft corrupt" after block checking is enabled and the block is modified by a DML statement. This will result in ORA-1578 errors and the block will be unreadable. For more information about detecting and repairing logical corruptions, see *Oracle Database Backup and Recovery User's Guide*.

See Also

Oracle Database Administrator's Guide for more information about this parameter

2.74 DB_BLOCK_CHECKSUM

DB_BLOCK_CHECKSUM determines whether DBWn and the direct loader will calculate a checksum (a number calculated from all the bytes stored in the block) and store it in the cache header of every data block when writing it to disk.

Property	Description
Parameter type	String
Syntax	DB_BLOCK_CHECKSUM = { OFF FALSE TYPICAL TRUE FULL }
Default value	TYPICAL
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

Checksums are verified when a block is read - only if this parameter is TYPICAL or FULL and the last write of the block stored a checksum. In FULL mode, Oracle also verifies the checksum before a change application from update/delete statements and recomputes it after the change is applied. In addition, Oracle gives every log block a checksum before writing it to the current log.

Most of the log block checksum is done by the generating foreground processes, while the LGWR or the LGWR worker processes (LGnn processes) perform the rest of the work, for better CPU and cache efficiency.

If this parameter is set to OFF, DBWn calculates checksums only for the SYSTEM tablespace, but not for user tablespaces. In addition, no log checksum is performed when this parameter is set to OFF.

Checksums allow Oracle to detect corruption caused by underlying disks, storage systems, or I/O systems. If set to FULL, DB_BLOCK_CHECKSUM also catches in-memory corruptions and stops them from making it to the disk. Turning on this feature in TYPICAL mode causes only an additional 1% to 2% overhead. In the FULL mode it causes 4% to 5% overhead. Oracle recommends that you set DB_BLOCK_CHECKSUM to TYPICAL.

For backward compatibility the use of TRUE (implying TYPICAL) and FALSE (implying OFF) values is preserved.

① See Also

Oracle Database Backup and Recovery Reference for more information about this parameter

2.75 DB_BLOCK_SIZE

DB_BLOCK_SIZE specifies (in bytes) the size of Oracle database blocks.

Property	Description
Parameter type	Integer
Default value	8192
Modifiable	No
Modifiable in a PDB	No
Range of values	2048 to 32768, but your operating system may have a narrower range
Basic	Yes
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

① Note

Set this parameter at the time of database creation. Do not alter it afterward.

Typical values for DB_BLOCK_SIZE are 4096 and 8192. The value of this parameter must be a multiple of the physical block size at the device level.

The value for DB_BLOCK_SIZE in effect at the time you create the database determines the size of the blocks. The value must remain set to its initial value.

For Oracle Real Application Clusters (Oracle RAC), this parameter affects the maximum value of the FREELISTS storage parameter for tables and indexes. Oracle uses one database block

for each freelist group. Decision support system (DSS) and data warehouse database environments tend to benefit from larger block size values.

Note

64-bit operating systems support a maximum DB_BLOCK_SIZE value of 32768

See Also

- *Oracle Database Administrator's Guide* for information on setting this parameter
- *Oracle Database SQL Language Reference* for information on freelist groups

2.76 DB_CACHE_ADVICE

DB_CACHE_ADVICE enables or disables statistics gathering used for predicting behavior with different cache sizes through the V\$DB_CACHE_ADVICE performance view.

Property	Description
Parameter type	String
Syntax	DB_CACHE_ADVICE = { ON READY OFF }
Default value	If STATISTICS_LEVEL is set to TYPICAL or ALL, then ON If STATISTICS_LEVEL is set to BASIC, then OFF
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

Values

- OFF
Advisory is turned off and the memory for the advisory is not allocated.
- READY
Advisory is turned off but the memory for the advisory remains allocated. Allocating the memory before the advisory is actually turned on avoids the risk of an error when you switch the parameter to ON.
If the parameter is switched to this state from ON, the contents of the view are preserved and the memory for the advisory is retained.
If the parameter is switched to this state from OFF, you may get an error.
- ON
Advisory is turned on. CPU and memory overheads are incurred. Attempting to set the parameter to this state when it is already in the OFF state may result in an error. Otherwise, the view (V\$DB_CACHE_ADVICE) is reset and statistics are gathered to the newly refreshed view.

If the parameter is in the READY state, you can set it to ON without any errors because the memory is already allocated. The view is reset and statistics are displayed in the newly refreshed view.

① **See Also**

["V\\$DB_CACHE_ADVICE"](#)

2.77 DB_CACHE_SIZE

DB_CACHE_SIZE specifies the size of the DEFAULT buffer pool for buffers with the primary block size (the block size defined by the DB_BLOCK_SIZE initialization parameter).

① **Note**

Oracle recommends against setting this parameter in a PDB. The only shared memory sizing parameter that should be set in a PDB is SGA_TARGET, which specifies the maximum SGA that the PDB can use at any time.

Property	Description
Parameter type	Big integer
Syntax	DB_CACHE_SIZE = <i>integer</i> [K M G]
Default value	If SGA_TARGET is set: If the parameter is not specified, then the default is 0 (internally determined by the Oracle Database). If the parameter is specified, then the user-specified value indicates a minimum value for the memory pool. If SGA_TARGET is not set, then the default is either 48 MB or 4 MB * number of CPUs, whichever is greater
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

The value must be at least 4M * number of cpus (smaller values are automatically rounded up to this value). A user-specified value larger than this is rounded up to the nearest granule size. A value of zero is invalid because it is needed for the DEFAULT memory pool of the primary block size, which is the block size for the SYSTEM tablespace.

① **See Also**

- ["SGA_TARGET"](#)
- *Oracle Database Performance Tuning Guide* and *Oracle Database Administrator's Guide* for more information on setting this parameter
- *Oracle Multitenant Administrator's Guide* for more information about the initialization parameters that control the memory usage of PDBs

2.78 DB_CREATE_FILE_DEST

DB_CREATE_FILE_DEST specifies the default location for Oracle-managed datafiles.

Property	Description
Parameter type	String
Syntax	DB_CREATE_FILE_DEST = <i>directory</i> <i>disk group</i>
Default value	There is no default value.
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	Yes

This location is also used as the default location for Oracle-managed control files and online redo logs if none of the DB_CREATE_ONLINE_LOG_DEST_ *n* initialization parameters are specified.

If a file system directory is specified as the default location, then the directory must already exist; Oracle does not create it. The directory must have appropriate permissions that allow Oracle to create files in it. Oracle generates unique names for the files, and a file thus created is an Oracle Managed File.

📘 See Also

Oracle Database Administrator's Guide for more information on setting this parameter and on Oracle Managed Files

2.79 DB_CREATE_ONLINE_LOG_DEST_ *n*

DB_CREATE_ONLINE_LOG_DEST_ *n* (where *n* = 1, 2, 3, ... 5) specifies the default location for Oracle-managed control files and online redo logs.

Property	Description
Parameter type	String
Syntax	DB_CREATE_ONLINE_LOG_DEST_[1 2 3 4 5] = <i>directory</i> <i>disk group</i>
Default value	There is no default value.
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	Yes

If more than one DB_CREATE_ONLINE_LOG_DEST_ *n* parameter is specified, then the control file or online redo log is multiplexed across the locations of the other DB_CREATE_ONLINE_LOG_DEST_ *n* parameters. One member of each online redo log is created in each location, and one control file is created in each location.

Specifying at least two parameters provides greater fault tolerance for the control files and online redo logs if one of the locations should fail.

If a file system directory is specified as the default location, then the directory must already exist; Oracle does not create it. The directory must have appropriate permissions that allow Oracle to create files in it. Oracle generates unique names for the files, and a file thus created is an Oracle Managed File.

① See Also

Oracle Database Administrator's Guide for more information on setting this parameter and on Oracle Managed Files

2.80 DB_DOMAIN

In a distributed database system, DB_DOMAIN specifies the logical location of the database within the network structure.

Property	Description
Parameter type	String
Syntax	DB_DOMAIN = <i>domain_name</i>
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	Yes
Range of values	Any legal string of name components, separated by periods and up to 128 characters long (including the periods).
Basic	Yes
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

You should set this parameter if this database is or ever will be part of a distributed system. The value consists of the extension components of a global database name, consisting of valid identifiers (any alphanumeric ASCII characters), separated by periods.

① Note

Oracle recommends that you specify DB_DOMAIN as a unique string for all databases in a domain.

This parameter allows one department to create a database without worrying that it might have the same name as a database created by another department. If one sales department's DB_DOMAIN is JAPAN.EXAMPLE.COM, then their SALES database (SALES.JAPAN.EXAMPLE.COM) is uniquely distinguished from another database with DB_NAME = SALES but with DB_DOMAIN = US.EXAMPLE.COM.

If you omit the domains from the name of a database link, Oracle expands the name by qualifying the database with the domain of your local database as it currently exists in the data

dictionary, and then stores the link name in the data dictionary. DB_DOMAIN should start with an alphabetic character and exclude these characters:

"!@%^&*()+=\|`~[{}];:'\"",<>/?"

① See Also

- *Oracle Database Administrator's Guide* for more information on setting this parameter
- The data dictionary view "[GLOBAL_NAME](#)"

2.81 DB_FILE_MULTIBLOCK_READ_COUNT

DB_FILE_MULTIBLOCK_READ_COUNT specifies the maximum number of blocks read in one I/O operation during a sequential scan.

Property	Description
Parameter type	Integer
Default value	The default value corresponds to the maximum I/O size that can be efficiently performed and is platform-dependent
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	Operating system-dependent
Basic	No

DB_FILE_MULTIBLOCK_READ_COUNT is one of the parameters you can use to minimize I/O during table scans. The total number of I/Os needed to perform a full table scan depends on such factors as the size of the table, the multiblock read count, and whether parallel execution is being utilized for the operation.

The default value of this parameter is a value that corresponds to the maximum I/O size that can be performed efficiently. This value is platform-dependent and is 1MB for most platforms.

Because the parameter is expressed in blocks, it will be set to a value that is equal to the maximum I/O size that can be performed efficiently divided by the standard block size. Note that if the number of sessions is extremely large the multiblock read count value is decreased to avoid the buffer cache getting flooded with too many table scan buffers.

Even though the default value may be a large value, the optimizer will not favor large I/Os if you do not set this parameter. It will favor large I/Os only if you explicitly set this parameter to a large value.

Online transaction processing (OLTP) and batch environments typically have values in the range of 4 to 16 for this parameter. DSS and data warehouse environments tend to benefit most from maximizing the value of this parameter. The optimizer is more likely to choose a full table scan over an index if the value of this parameter is high.

The maximum value is the operating system's maximum I/O size expressed as Oracle blocks ((max I/O size)/DB_BLOCK_SIZE). If you set this parameter to a value greater than the maximum, then Oracle uses the maximum.

① See Also

Oracle Database Performance Tuning Guide for information about how setting this parameter incorrectly can cause excessive I/O waits for some execution plans

2.82 DB_FILE_NAME_CONVERT

DB_FILE_NAME_CONVERT is useful for creating a duplicate database for recovery purposes. It converts the filename of a new datafile on the primary database to a filename on the standby database.

Property	Description
Parameter type	String
Syntax	<pre>DB_FILE_NAME_CONVERT = 'string1' , 'string2' , 'string3' , 'string4' , ...</pre> Where: • <i>string1</i> is the pattern of the primary database filename • <i>string2</i> is the pattern of the standby database filename • <i>string3</i> is the pattern of the primary database filename • <i>string4</i> is the pattern of the standby database filename You can enclose each string in single or double quotation marks. You can specify as many pairs of primary and standby replacement strings as required. However, starting with Oracle Database 12c Release 2 (12.2), Oracle recommends that you limit the number of pairs to 99. Example: <pre>DB_FILE_NAME_CONVERT = '/dbs/t1/', '/dbs/t1/s', 'dbs/t2/', 'dbs/t2/s'</pre>
Default value	There is no default value.
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

If you add a datafile to the primary database, you must add a corresponding file to the standby database. When the standby database is updated, this parameter converts the datafile name on the primary database to the datafile name on the standby database. The file on the standby database must exist and be writable, or the recovery process will halt with an error.

Set the value of this parameter to one or more pairs of strings. The first string in a pair is the pattern found in the datafile names on the primary database. The second string in a pair is the pattern found in the datafile names on the standby database.

If you specify an odd number of strings (the last string has no corresponding replacement string), an error is returned during startup. If the filename being converted matches more than one pattern in the pattern/replace string list, the first matched pattern takes effect. There is no limit on the number of pairs that you can specify in this parameter (other than the hard limit of the maximum length of multivalue parameters). However, starting with Oracle Database 12c Release 2 (12.2), Oracle recommends that you limit the number of pairs to 99.

You can also use DB_FILE_NAME_CONVERT to rename the datafiles in the clone control file when setting up a clone database during tablespace point-in-time recovery.

① See Also

- *Oracle Database Backup and Recovery User's Guide* for more information about database backup and recovery
- *Oracle Data Guard Concepts and Administration* for more information about Oracle Data Guard

2.83 DB_FILES

DB_FILES specifies the maximum number of database files that can be opened for this database.

Property	Description
Parameter type	Integer
Default value	200
Modifiable	No
Modifiable in a PDB	Yes
Range of values	Minimum: the largest among the absolute file numbers of the datafiles in the database Maximum: operating system-dependent
Basic	No
Oracle RAC	Multiple instances must have the same value.

The maximum valid value is the maximum number of files, subject to operating system constraint, that will ever be specified for the database, including files to be added by ADD DATAFILE statements.

If you increase the value of DB_FILES, then you must shut down and restart all instances accessing the database before the new value can take effect. If you have a primary and standby database, then they should have the same value for this parameter.

① See Also

- *Oracle Real Application Clusters Administration and Deployment Guide* for information on setting this parameter in an Oracle RAC environment
- Your operating system-specific Oracle documentation for the default value of this parameter

2.84 DB_FLASH_CACHE_FILE

DB_FLASH_CACHE_FILE specifies file name(s) for the flash memory or disk group representing a collection of flash memory, for use with Database Smart Flash Cache.

Property	Description
Parameter type	String

Property	Description
Syntax	DB_FLASH_CACHE_FILE = <i>filename</i> [, <i>filename</i> ...] <i>disk group</i>
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

You can specify up to 16 file names for flash memory devices. For example, if there are three flash raw devices:

```
db_flash_cache_file = /dev/raw/sda, /dev/raw/sdb, /dev/raw/sdc
```

Specifying this parameter without also specifying the DB_FLASH_CACHE_SIZE initialization parameter is not allowed.

📘 **See Also**

["DB_FLASH_CACHE_SIZE"](#)

2.85 DB_FLASH_CACHE_SIZE

DB_FLASH_CACHE_SIZE specifies the size of the Database Smart Flash Cache (flash cache). This parameter may only be specified at instance startup.

Property	Description
Parameter type	Big integer
Syntax	DB_FLASH_CACHE_SIZE = <i>integer</i> [K M G T] [, <i>integer</i> [K M G T]]...
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to (DB_BLOCK_SIZE * 256 MB) • If DB_BLOCK_SIZE = 2 KB, then 0 to 512 GB • If DB_BLOCK_SIZE = 4 KB, then 0 to 1 TB • If DB_BLOCK_SIZE = 8 KB, then 0 to 2 TB • If DB_BLOCK_SIZE = 16 KB, then 0 to 4 TB • If DB_BLOCK_SIZE = 32 KB, then 0 to 8 TB
Basic	No

You can specify up to 16 file sizes, for each of the flash memory devices specified with DB_FLASH_CACHE_FILE. For example, if there are three flash raw devices, you can specify the sizes of each device as follows:

```
db_flash_cache_file = /dev/raw/sda, /dev/raw/sdb, /dev/raw/sdc
db_flash_cache_size = 32G, 32G, 64G
```

If your flash cache consists of one flash cache device, you can dynamically change this parameter to 0 for that flash cache device (disabling the flash cache) after the database is started. You can then reenable the flash cache by setting this parameter for the device back to the original value when the database was started. Dynamic resizing of DB_FLASH_CACHE_SIZE or reenabling flash cache to a different size is not supported.

If your flash cache includes multiple flash cache devices, you can dynamically change the parameter to 0 for a particular flash cache device (turning it off) after the database is started. You can then reenable that flash cache device by setting this parameter for the device back to the original value it had when the database was started (turning it back on).

For example, to turn off the /dev/raw/sdb flash cache device:

```
db_flash_cache_file = /dev/raw/sda, /dev/raw/sdb, /dev/raw/sdc
db_flash_cache_size = 32G, 0, 64G
```

And, to turn the /dev/raw/sdb flash cache device back on again:

```
db_flash_cache_file = /dev/raw/sda, /dev/raw/sdb, /dev/raw/sdc
db_flash_cache_size = 32G, 32G, 64G
```

① See Also

["DB_FLASH_CACHE_FILE"](#)

2.86 DB_FLASHBACK_RETENTION_TARGET

DB_FLASHBACK_RETENTION_TARGET specifies the upper limit (in minutes) on how far back in time the database may be flashed back.

Property	Description
Parameter type	Integer
Default value	1440 (minutes)
Modifiable	ALTER SYSTEM ... SID='*'
Modifiable in a PDB	No
Range of values	0 to $2^{31} - 1$
Basic	No

How far back one can flashback a database depends on how much flashback data Oracle has kept in the fast recovery area.

① See Also

Oracle Data Guard Broker for enabling Flashback Database on Oracle Data Guard primary and target standby databases

2.87 DB_INDEX_COMPRESSION_INHERITANCE

DB_INDEX_COMPRESSION_INHERITANCE dictates how index creation inherits compression attributes.

Property	Description
Parameter type	String
Syntax	DB_INDEX_COMPRESSION_INHERITANCE = { TABLESPACE TABLE ALL NONE }
Default value	NONE
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

Values:

- **TABLESPACE**
Index inheritance is based on tablespace attributes.
- **TABLE**
Index inheritance is based on table attributes.
- **ALL**
Index inheritance is based on table settings. However, if the table does not have default compression attributes, then index inheritance is based on tablespace attributes.
- **NONE**
There is no index inheritance from the table or tablespace.

If the CREATE INDEX statement specifies compression attributes, then the value of DB_INDEX_COMPRESSION_INHERITANCE is ignored, and there is no inheritance from the table or tablespace. When there is table inheritance or tablespace inheritance (and the tablespace does not have an explicit index compression clause), then the following matrix is used:

Table/Tablespace Level Compression	Inherited Compression for Index
OLTP	ADVANCED LOW
QUERY LOW, QUERY HIGH	ADVANCED HIGH
ARCHIVE LOW, ARCHIVE HIGH	ADVANCED HIGH

Note

The value of DB_INDEX_COMPRESSION_INHERITANCE is ignored when creating an index owned by SYS. Such indexes do not inherit index compression attributes from tables or tablespaces. If you want to compress an index owned by SYS, you must explicitly specify the index compression attributes in the CREATE INDEX or ALTER INDEX statement.

See Also

Oracle Database Administrator's Guide for more information about index compression

2.88 DB_KEEP_CACHE_SIZE

DB_KEEP_CACHE_SIZE specifies the size of the KEEP buffer pool.

Property	Description
Parameter type	Big integer
Syntax	DB_KEEP_CACHE_SIZE = <i>integer</i> [K M G]
Default value	0 (DB_KEEP_CACHE_SIZE is not configured by default)
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Minimum: 0 (values greater than zero are automatically modified to be either the granule size * number of processor groups, or 4 MB * number of CPUs, whichever is greater) Maximum: operating system-dependent
Basic	No

The size of the buffers in the KEEP buffer pool is the primary block size (the block size defined by the DB_BLOCK_SIZE initialization parameter).

See Also

- ["DB_RECYCLE_CACHE_SIZE"](#)
- *Oracle Database Performance Tuning Guide* for information on setting these parameters and on using multiple buffer pools

2.89 DB_LOST_WRITE_PROTECT

DB_LOST_WRITE_PROTECT enables or disables lost write detection.

Property	Description
Parameter type	String
Syntax	DB_LOST_WRITE_PROTECT = { NONE TYPICAL FULL }
Default value	NONE
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No
Oracle RAC	In Oracle RAC instances, the parameter value is systemwide.

A data block lost write occurs when an I/O subsystem acknowledges the completion of the block write, while in fact the write did not occur in the persistent storage.

When the parameter is set to TYPICAL on the primary database, the instance logs buffer cache reads for read/write tablespaces in the redo log, which is necessary for detection of lost writes.

When the parameter is set to FULL on the primary database, the instance logs reads for read-only tablespaces and read/write tablespaces.

When the parameter is set to TYPICAL or FULL on the standby database or on the primary database during media recovery, the instance performs lost write detection.

When the parameter is set to NONE on either the primary database or the standby database, no lost write detection functionality is enabled.

2.90 DB_NAME

DB_NAME specifies a database identifier of up to 8 characters.

Property	Description
Parameter type	String
Syntax	DB_NAME = <i>database_name</i>
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Basic	Yes
Oracle RAC	You must set this parameter for every instance. Multiple instances must have the same value.

This parameter must be specified and must correspond to the name specified in the CREATE DATABASE statement.

If you have multiple databases, the value of this parameter should match the Oracle instance identifier of each one to avoid confusion with other databases running on the system. The value of DB_NAME must be the same in both the standby and production initialization parameter files.

The database name specified in either the STARTUP command or the ALTER DATABASE ... MOUNT statement for each instance of the cluster database must correspond to the DB_NAME initialization parameter setting.

The following characters are valid in a database name: alphanumeric characters, underscore (_), number sign (#), and dollar sign (\$). No other characters are valid. The database name must start with an alphabetic character. Oracle removes double quotation marks before processing the database name. Therefore you cannot use double quotation marks to embed other characters in the name. The database name is case insensitive.

① See Also

Oracle Database Administrator's Guide and Oracle Real Application Clusters Administration and Deployment Guide for more information on setting this parameter

2.91 DB_PERFORMANCE_PROFILE

DB_PERFORMANCE_PROFILE specifies the performance profile for a database or a pluggable database (PDB).

Property	Description
Parameter type	String
Syntax	DB_PERFORMANCE_PROFILE = <i>string</i>
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value should be set on all instances.

A performance profile supports easier management for hundreds of databases or PDBs.

On Oracle Exadata, the performance profile for the regular database or CDB is pushed down to the Exadata storage cells. The performance profile is used for the management of Exadata I/O Resource Manager.

A CDB resource plan can specify different resource controls for a performance profile using the DBMS_RESOURCE_MANAGER.CREATE_CDB_PROFILE_DIRECTIVE procedure. A PDB with a matching performance profile will use the specified controls.

The value of DB_PERFORMANCE_PROFILE can be up to 30 characters and is not case sensitive.

① See Also

Oracle Database PL/SQL Packages and Types Reference for information about the DBMS_RESOURCE_MANAGER.CREATE_CDB_PROFILE_DIRECTIVE procedure.

2.92 DB_RECOVERY_FILE_DEST

DB_RECOVERY_FILE_DEST specifies the default location for the fast recovery area.

Property	Description
Parameter type	String
Syntax	DB_RECOVERY_FILE_DEST = <i>directory</i> <i>disk group</i>
Default value	There is no default value.
Modifiable	ALTER SYSTEM ... SID='*'
Modifiable in a PDB	No
Basic	Yes
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

The fast recovery area contains multiplexed copies of current control files and online redo logs, as well as archived redo logs, flashback logs, and RMAN backups.

Specifying this parameter without also specifying the DB_RECOVERY_FILE_DEST_SIZE initialization parameter is not allowed.

① See Also

- *Oracle Database Backup and Recovery User's Guide* for information on setting up and configuring the fast recovery area
- ["DB_RECOVERY_FILE_DEST_SIZE"](#)

2.93 DB_RECOVERY_FILE_DEST_SIZE

DB_RECOVERY_FILE_DEST_SIZE specifies (in bytes) the hard limit on the total space to be used by target database recovery files created in the fast recovery area.

Property	Description
Parameter type	Big integer
Syntax	DB_RECOVERY_FILE_DEST_SIZE = <i>integer</i> [K M G]
Default value	0
Modifiable	ALTER SYSTEM ... SID='*'
Modifiable in a PDB	No
Basic	Yes
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

Note that neither block 0 nor the OS block header of each Oracle file is included in this size. Allow an extra 10% for this data when computing the actual disk usage required for the fast recovery area.

① See Also

- *Oracle Database Backup and Recovery User's Guide* for information on setting up and configuring the fast recovery area
- ["DB_RECOVERY_FILE_DEST"](#)

2.94 DB_RECYCLE_CACHE_SIZE

DB_RECYCLE_CACHE_SIZE specifies the size of the RECYCLE buffer pool.

Property	Description
Parameter type	Big integer
Syntax	DB_RECYCLE_CACHE_SIZE = <i>integer</i> [K M G]
Default value	0 (DB_RECYCLE_CACHE_SIZE is not configured by default)
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Minimum: 0 (values greater than zero are automatically modified to be either the granule size * number of processor groups, or 4 MB * number of CPUs, whichever is greater) Maximum: operating system-dependent
Basic	No

The size of the buffers in the RECYCLE pool is the primary block size (the block size defined by the DB_BLOCK_SIZE initialization parameter).

① See Also

- ["DB_KEEP_CACHE_SIZE"](#)
- *Oracle Database Performance Tuning Guide* for information on setting these parameters and on using multiple buffer pools

2.95 DB_SECUREFILE

DB_SECUREFILE specifies whether to treat LOB files as SecureFiles.

Property	Description
Parameter type	String
Syntax	DB_SECUREFILE = { NEVER PERMITTED PREFERRED ALWAYS IGNORE }
Default value	PERMITTED if the COMPATIBLE initialization parameter is set to 11.2.0.1, 11.2.0.2, or 11.2.0.3, or PREFERRED if the COMPATIBLE initialization parameter is set to 12.0.0.0 or higher

Property	Description
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Values

- **NEVER**
Any LOBs that are specified as SecureFiles are created as BasicFiles LOBs. All SecureFiles-specific storage options and features (for example, compress, encrypt, deduplicate) will cause an exception. The BasicFiles LOB defaults will be used for storage options not specified.
- **PERMITTED**
LOBs are allowed to be created as SecureFiles.
- **PREFERRED**
All LOBs are created as SecureFiles unless BASICFILE is explicitly specified in the LOB storage clause or the tablespace is a Manual Segment Space Management tablespace. When PREFERRED is set, cases where BASICFILE would otherwise be inherited from the partition or column level LOB storage are ignored; the LOBs will be created as SecureFiles instead.
- **ALWAYS**
Attempts to create all LOBs as SecureFiles LOBs but creates any LOBs not in an Automatic Segment Space Managed (ASSM) tablespace as BasicFiles LOBs, unless SECUREFILE is explicitly specified. Any BasicFiles LOB storage options that are specified will be ignored and the SecureFiles LOB defaults will be used for all storage options not specified.
- **IGNORE**
The SECUREFILE keyword and all SecureFiles options are ignored.

If the COMPATIBLE initialization parameter is not set to 11.1.0 or higher, then LOBs are not treated as SecureFiles.

If there is a LOB column with two partitions (one that has a tablespace for which ASSM is enabled and one that has a tablespace for which ASSM is not enabled), then LOBs in the partition with the ASSM-enabled tablespace will be treated as SecureFiles and LOBs in the other partition will be treated as BasicFiles.

If an application is not certified with SecureFiles, the value of the DB_SECUREFILE initialization parameter can be set to PERMITTED to get the default behavior of Oracle Database 11g.

See Also

Oracle Database SecureFiles and Large Objects Developer's Guide for an example of setting this parameter using the ALTER SYSTEM statement

2.96 DB_ULTRA_SAFE

DB_ULTRA_SAFE sets the default values for other parameters that control protection levels.

Property	Description
Parameter type	String
Syntax	DB_ULTRA_SAFE = { OFF DATA_ONLY DATA_AND_INDEX }
Default value	OFF
Modifiable	No
Modifiable in a PDB	No
Basic	No

Values

- OFF
When any of DB_BLOCK_CHECKING, DB_BLOCK_CHECKSUM, or DB_LOST_WRITE_PROTECT are explicitly set, no changes are made.
- DATA_ONLY
 - DB_BLOCK_CHECKING will be set to MEDIUM.
 - DB_LOST_WRITE_PROTECT will be set to TYPICAL.
 - DB_BLOCK_CHECKSUM will be set to FULL.
- DATA_AND_INDEX
 - DB_BLOCK_CHECKING will be set to FULL.
 - DB_LOST_WRITE_PROTECT will be set to TYPICAL.
 - DB_BLOCK_CHECKSUM will be set to FULL.

See Also

- ["DB_BLOCK_CHECKING"](#)
- ["DB_BLOCK_CHECKSUM"](#)
- ["DB_LOST_WRITE_PROTECT"](#)

2.97 DB_UNIQUE_NAME

DB_UNIQUE_NAME specifies a globally unique name for the database.

Property	Description
Parameter type	String
Syntax	DB_UNIQUE_NAME = <i>database_unique_name</i>

Property	Description
Default value	Database instances: the value of DB_NAME Oracle Automatic Storage Management instances: +ASM
Modifiable	No
Modifiable in a PDB	No
Basic	Yes
Oracle RAC	Multiple instances must have the same value.

Databases with the same DB_NAME within the same DB_DOMAIN (for example, copies of a database created for reporting or a physical standby) must have a unique DB_UNIQUE_NAME. Every database's DB_UNIQUE_NAME must be unique within the enterprise.

The value of DB_UNIQUE_NAME can be up to 30 characters and is case insensitive. The following characters are valid in a database name: alphanumeric characters, underscore (_), number sign (#), and dollar sign (\$).

Note

DB_UNIQUE_NAME is used by several components within an Oracle instance to default file names or file paths, such as the default for the DG_BROKER_CONFIG_FILE*n* initialization parameter. In these cases, on UNIX platforms, the dollar sign (\$) character will be removed from the path or file name, because the character is used by Oracle to define the start of an environment variable substitution within a path or file name.

Note

As part of their operations, some database tools or utilities create a string that uniquely identifies a database. The string may include the DB_UNIQUE_NAME for a database, and other identifying information for the database, such as the database SID. Oracle Database restricts some identifiers to 30 characters, so using a short DB_UNIQUE_NAME can help prevent ORA-00972 "identifier is too long" messages from database tools and utilities that create a string that includes the DB_UNIQUE_NAME.

See Also

Oracle Data Guard Concepts and Administration and *Oracle Database Administrator's Guide* for more information on setting this parameter

2.98 DB_UNRECOVERABLE_SCN_TRACKING

DB_UNRECOVERABLE_SCN_TRACKING enables or disables the tracking of unrecoverable (NOLOGGING) direct-path INSERT and direct-path load operations.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	Multiple instances must have the same value

When the value is set to true, updates are made to the controlfile that maintains the V\$DATAFILE.UNRECOVERABLE_CHANGE# and V\$DATAFILE.UNRECOVERABLE_TIME columns. When the value is set to false, updates are not made to the controlfile. Setting this parameter to false may improve performance of direct-path NOLOGGING operations.

2.99 DB_WRITER_PROCESSES

DB_WRITER_PROCESSES specifies the initial number of Database Writer Processes for an instance. This parameter is useful for systems that modify data heavily.

Property	Description
Parameter type	Integer
Default value	1 or CPU_COUNT / 8, whichever is greater. If the number of processor groups is less than 100 but greater than the number of Database Writer Processes, then the number of Database Writer Processes is adjusted to be a multiple of the number of processor groups. If the number of Database Writer Processes is greater than or equal to the number of processor groups, then there is no adjustment. For Oracle Solaris on SPARC systems, the default value of this parameter is calculated using an internal algorithm.
Modifiable	No
Modifiable in a PDB	No
Range of values	1 to 100
Basic	No

There can be 1 to 100 Database Writer Processes. The names of the first 36 Database Writer Processes are DBW0-DBW9 and DBWa-DBWz. The names of the 37th through 100th Database Writer Processes are BW36-BW99.

① See Also

- [Background Processes](#) for additional information about the Database Writer Process
- *Oracle Database Concepts* for information on when the Database Writer Process writes dirty buffers to disk

2.100 DBFIPS_140

DBFIPS_140 enables Transparent Data Encryption (TDE) and DBMS_CRYPTO PL/SQL package program units to run in a mode compliant to the Federal Information Processing Standard (subsequently known as "FIPS mode").

Property	Description
Parameter type	Boolean
Default value	FALSE
Modifiable	No
Modifiable in a PDB	No
Range of values	TRUE FALSE
Basic	No
Oracle RAC	All instances must use the same value.

Values:

- TRUE

Set this parameter to TRUE to use TDE and DBMS_CRYPTO in FIPS mode. This means that only FIPS-compliant algorithms may be used.

This method of configuring FIPS mode is considered a legacy configuration, but it is still supported. Oracle recommends that you instead use the consolidated FIPS_140 parameter in the `fips.ora` file. See *Oracle Database Security Guide* for more information.

- FALSE

When this parameter is set to FALSE, all algorithms (FIPS-compliant or not) may be used. This is the default.

① See Also

Oracle Database Security Guide for a table that describes the effect of setting the value of DBFIPS_140 to TRUE or FALSE on different platforms

2.101 DBNEST_ENABLE

DBNEST_ENABLE allows you to enable or disable dbNest.

① Note

This parameter is applicable only on Linux systems.

Property	Description
Parameter type	String

Property	Description
Syntax	DBNEST_ENABLE = { NONE CDB_RESOURCE_PDB_ALL }
Default value	NONE
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	All instances should use the same value.

DbNest provides operating system resource isolation and management, file system isolation, and secure computing for PDBs. The infrastructure is implemented as a Linux-specific package that provides hierarchical containers, called nests. A CDB resides within a single parent nest, while PDBs reside within the individual child nests created within the parent. The isolation and resource management properties of a nest are separate. A full nest includes both isolation and resource management. Alternatively, you can configure a partial nest that includes only resource management.

You can set the following values for this parameter:

- **NONE:** Disables dbNest. This is the default value.
- **CDB_RESOURCE_PDB_ALL:** Enables a resource management-only nest for the CDB and a full nest for each PDB.

Note

This parameter is available starting with Oracle Database 21c.

See Also

Oracle Multitenant Administrator's Guide for information on securing and isolating resources using dbNest

2.102 DBNEST_PDB_FS_CONF

DBNEST_PDB_FS_CONF specifies the dbNest file system configuration file for a PDB.

Note

This parameter is applicable only on Linux systems.

Property	Description
Parameter type	String
Syntax	DBNEST_PDB_FS_CONF = 'pathname'
Default value	None

Property	Description
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	Multiple instances can have different values.

A dbNest file system configuration file specifies directories to be mounted inside the nest for a PDB. These directories are mounted in addition to the default directories.

For *pathname*, specify the full operating system path for the file.

If you do not set this parameter, then only the default directories are mounted.

① Note

This parameter is available starting with Oracle Database 21c.

① See Also

Oracle Multitenant Administrator's Guide for information on dbNest file system configuration files

2.103 DBWR_IO_SLAVES

DBWR_IO_SLAVES specifies the number of I/O server processes used by the DBW0 process.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	No
Modifiable in a PDB	No
Range of values	0 to operating system-dependent
Basic	No

DBWR_IO_SLAVES is relevant only on systems with only one database writer process (DBW0). The DBW0 process and its server processes always write to disk. By default, the value is 0 and I/O server processes are not used.

If you set DBWR_IO_SLAVES to a nonzero value, the number of I/O server processes used by the ARCH and LGWR processes is set to 4. However, the number of I/O server processes used by Recovery Manager is set to 4 only if asynchronous I/O is disabled (either your platform does not support asynchronous I/O or `disk_asynch_io` is set to `false`).

Typically, I/O server processes are used to simulate asynchronous I/O on platforms that do not support asynchronous I/O or that implement it inefficiently. However, you can use I/O server

processes even when asynchronous I/O is being used. In that case the I/O server processes will use asynchronous I/O.

I/O server processes are also useful in database environments with very large I/O throughput, even if asynchronous I/O is enabled.

① See Also

- ["BACKUP_TAPE_IO_SLAVES"](#)
- *Oracle Database Performance Tuning Guide* for more information about this parameter

2.104 DDL_LOCK_TIMEOUT

DDL_LOCK_TIMEOUT specifies a time limit for how long DDL statements will wait in a DML lock queue.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to 1,000,000 (in seconds)
Basic	No

A value of zero indicates a status of NOWAIT. The maximum value of 1,000,000 seconds will result in the DDL statement waiting forever to acquire a DML lock.

If a lock is not acquired before the timeout period expires, then an error is returned.

① See Also

- *Oracle Database Administrator's Guide* for more information about the DDL_LOCK_TIMEOUT parameter
- *Oracle Database Development Guide* for information about nonblocking and blocking DDL

2.105 DEFAULT_SHARING

DEFAULT_SHARING sets the value of the sharing clause in statements creating objects in an application root.

Property	Description
Parameter type	String
Syntax	DEFAULT_SHARING = { NONE METADATA DATA EXTENDED DATA }

Property	Description
Default value	For types of objects that support sharing, METADATA is the default. For types of objects that do not support sharing, NONE is the default.
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	All instances must have the same value

Specifying SHARING= in the create DDL overrides the value of the DEFAULT_SHARING parameter.

Example

Issuing the following ALTER SYSTEM statement in an application root sets the default value of the sharing clause to NONE in the server parameter file for the application root:

```
ALTER SYSTEM SET DEFAULT_SHARING = NONE SCOPE = SPFILE;
```

2.106 DEFERRED_SEGMENT_CREATION

DEFERRED_SEGMENT_CREATION specifies the semantics of deferred segment creation.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No

If set to true, then segments for tables and their dependent objects (LOBs, indexes) will not be created until the first row is inserted into the table.

Before creating a set of tables, if it is known that a significant number of them will not be populated, then consider setting this parameter to true. This saves disk space and minimizes install time.

2.107 DG_BROKER_CONFIG_FILEn

DG_BROKER_CONFIG_FILE n (where $n = 1, 2$) specifies the names for the Data Guard broker configuration files.

Property	Description
Parameter type	String
Syntax	DG_BROKER_CONFIG_FILE[1 2] = <i>filename</i>
Default value	Operating system-dependent
Modifiable	ALTER SYSTEM

Property	Description
Modifiable in a PDB	No
Range of values	One filename
Basic	No

Every database that is part of a Data Guard broker configuration has two broker configuration files, which contain entries that describe the state and properties of the configuration (such as the sites and databases that are part of the configuration, the roles and properties of each of the databases, and the state of each of the elements of the configuration). Two files are provided to always maintain the last known good state of the configuration.

If `DG_BROKER_CONFIG_FILEn` is not explicitly defined, then it is set to an operating system-specific default value at instance startup. This parameter can be altered only when the Data Guard broker is not running. See "[DG_BROKER_START](#)" for information on how to stop and start the broker.

① See Also

Oracle Data Guard Broker for more information about setting this parameter

2.108 DG_BROKER_START

`DG_BROKER_START` enables Oracle to determine whether the Oracle Data Guard broker should be started.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM...SID='*'
Modifiable in a PDB	No
Range of values	true false
Basic	No

The Oracle Data Guard broker consists of background processes, foreground processes, and the system global area (SGA). The background and foreground processes exist as long as the instance exists, whenever this parameter is set to true.

If the database is never going to be configured in an Oracle Data Guard broker configuration, then you can leave this parameter unspecified and accept the default value of false. If the database is part of an Oracle Data Guard broker configuration, then you can simplify automatic startup of the broker by setting this parameter to true in the initialization parameter file.

① See Also

Oracle Data Guard Broker for examples of using this parameter to start the Oracle Data Guard broker

2.109 DIAGNOSTIC_DEST

As of Oracle Database 11g Release 1 (11.1), the diagnostics for each database instance are located in a dedicated directory that is specified by the DIAGNOSTIC_DEST initialization parameter.

Property	Description
Parameter type	String
Syntax	DIAGNOSTIC_DEST = { pathname directory }
Default value	Derived from the value of the \$ORACLE_BASE environment variable. If \$ORACLE_BASE is not set, then derived from ORACLE_BASE as set by the Oracle Universal Installer. If ORACLE_BASE is not set, then \$ORACLE_HOME/rdbms/log is used.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No
Oracle RAC	This parameter can be set on each instance. Oracle recommends that each instance in a cluster specify a DIAGNOSTIC_DEST directory location that is located on shared disk and that the same value for DIAGNOSTIC_DEST be specified for each instance.

The structure of the directory specified by DIAGNOSTIC_DEST is as follows:

```
<diagnostic_dest>/diag/rdbms/<dbname>/<instname>
```

This location is known as the Automatic Diagnostic Repository (ADR) Home. For example, if the database name is proddb and the instance name is proddb1, the ADR home directory would be <diagnostic_dest>/diag/rdbms/proddb/proddb1.

The following files are located under the ADR home directory:

- Trace files - located in subdirectory <adr-home>/trace
- Alert logs - located in subdirectory <adr-home>/alert. In addition, the alert.log file is now in XML format, which conforms to the Oracle ARB logging standard.
- Core files - located in the subdirectory <adr-home>/cdump
- Incident files - the occurrence of each serious error (for example, ORA-600, ORA-1578, ORA-7445) causes an incident to be created. Each incident is assigned an ID and dumping for each incident (error stack, call stack, block dumps, and so on) is stored in its own file, separated from process trace files. Incident dump files are located in <adr-home>/incident/<incdir#>. You can find the incident dump file location inside the process trace file.

① See Also

Oracle Automatic Storage Management Administrator's Guide for an example of the diagnostic directory for an Oracle ASM instance

2.110 DIAGNOSTICS_CONTROL

DIAGNOSTICS_CONTROL enables you to control and monitor the users who perform potentially unsafe database diagnostic operations.

Property	Description
Parameter type	String
Syntax	DIAGNOSTICS_CONTROL = { ERROR WARNING IGNORE }
Default value	IGNORE
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No
Oracle RAC	The same value must be used on all instances.

When diagnosing Oracle database issues, an Oracle Support Service staff member might instruct you to perform diagnostic operations. Some diagnostic operations are harmless. However, others could have adverse effects if not performed properly with the guidance of an Oracle Support Service staff member. In order to control and monitor who performs such diagnostic operations, Oracle Database 21c introduces the following security controls:

- Potentially unsafe diagnostic operations are internally identified in the database. These operations include setting certain debug events and debug actions with the ALTER SESSION or ALTER SYSTEM statement. For example:

```
ALTER SESSION SET EVENTS '1357 trace name context forever, level 2';  
ALTER SYSTEM SET EVENTS 'trace[vos]';
```

- A user can be authorized to perform potentially unsafe diagnostic operations, either by being granted the ENABLE DIAGNOSTICS system privilege, or by being granted the DBA role, or by authenticating as SYSDBA.
- The DIAGNOSTICS_CONTROL initialization parameter enables you to specify how the database responds when an *unauthorized* user attempts to perform these diagnostic operations. The possible values are:
 - **ERROR:** When an unauthorized user attempts to perform a potentially unsafe diagnostic operation, the attempt fails with error ORA-01031: insufficient privileges.
 - **WARNING:** When an unauthorized user attempts to perform a potentially unsafe diagnostic operation, the attempt succeeds, but a warning is written to the alert log.
 - **IGNORE:** When an unauthorized user attempts to perform a potentially unsafe diagnostic operation, the attempt succeeds and no error messages or warnings occur. This is the default.

Note

When altering the `DIAGNOSTICS_CONTROL` initialization parameter, be aware of the following guidelines:

- To modify this parameter with the `ALTER SYSTEM` command, you must be authenticated AS SYSDBA.
- In Oracle RAC environments, it is currently not possible to modify this parameter on remote instances by specifying the `SID` clause in the `ALTER SYSTEM SET` statement.

Note

This parameter is available starting with Oracle Database 21c.

2.111 DISK_ASYNC_IO

`DISK_ASYNC_IO` controls whether I/O to datafiles, control files, and logfiles is asynchronous (that is, whether parallel server processes can overlap I/O requests with CPU processing during table scans).

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	No
Modifiable in a PDB	No
Range of values	true false
Basic	No

If your platform supports asynchronous I/O to disk, Oracle recommends that you leave this parameter set to its default value. However, if the asynchronous I/O implementation is not stable, you can set this parameter to `false` to disable asynchronous I/O. If your platform does not support asynchronous I/O to disk, this parameter has no effect.

If you set `DISK_ASYNC_IO` to `false`, then you can increase `DB_WRITER_PROCESSES` or use `DBWR_IO_SLAVES` to simulate asynchronous I/O.

See Also

- ["DB_WRITER_PROCESSES"](#)
- ["DBWR_IO_SLAVES"](#)
- *Oracle Database Performance Tuning Guide* for more information

2.112 DISPATCHERS

DISPATCHERS configures dispatcher processes in the shared server architecture.

Property	Description
Parameter type	String
Syntax	DISPATCHERS = ' <i>dispatch_clause</i> '
Syntax	dispatch_clause::= (<i>PROTOCOL</i> = <i>protocol</i>) (<i>ADDRESS</i> = <i>address</i>) (<i>DESCRIPTION</i> = <i>description</i>) [<i>options_clause</i>]
Syntax	options_clause::= (<i>DISPATCHERS</i> = <i>integer</i> <i>SESSIONS</i> = <i>integer</i> <i>CONNECTIONS</i> = <i>integer</i> <i>MULTIPLEX</i> = {1 ON YES TRUE 0 OFF NO FALSE BOTH IN OUT} <i>LISTENER</i> = <i>tnsname</i> <i>SERVICE</i> = <i>service</i> <i>INDEX</i> = <i>integer</i>)
Default value	If SHARED_SERVERS is greater than 0, then DISPATCHERS defaults to '(PROTOCOL=tcp)', causing 1 TCP/IP dispatcher to be created.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

The parsing software supports a name-value syntax to enable the specification of attributes in a position-independent, case-insensitive manner. For example:

```
DISPATCHERS = '(PROTOCOL=TCP)(DISPATCHERS=3)'
```

Attributes may be specified using the full attribute name or any substring beginning with the first 3 characters. For example, SESSIONS can be specified as SES, SESS, SESSI, and so on.

Specify only one of the following attributes: PROTOCOL, ADDRESS, or DESCRIPTION. If you specify either ADDRESS or DESCRIPTION, then you can specify additional network attributes. Doing so supports multi-homed hosts.

dispatch_clause

- **PROTOCOL**
The network protocol for which the dispatcher generates a listening endpoint.
- **ADDRESS**
The network protocol address of the endpoint on which the dispatchers listen.
- **DESCRIPTION**

The network description of the endpoint on which the dispatchers listen, including the protocol address.

options_clause

- DISPATCHERS

The initial number of dispatchers to start. The default is 1.

- SESSIONS

The maximum number of network sessions to allow for each dispatcher. The default is operating system-specific. Most operating systems have a default of 16 KB.

- CONNECTIONS

The maximum number of network connections to allow for each dispatcher. The default is operating system-specific.

- MULTIPLEX

Enables the Oracle Connection Manager session multiplexing feature.

- The values 1, ON, YES, TRUE, and BOTH indicate that Network Session Multiplex is enabled for both incoming and outgoing network connections.
- The value IN indicates that Network Session Multiplex is enabled for incoming network connections.
- The value OUT indicates that Network Session Multiplexing is enabled for outgoing network connections.
- The values 0, NO, OFF, and FALSE indicate that Network Session Multiplexing is disabled for both incoming and outgoing network connections. This is the default.

- LISTENER

Specifies the network name of an address or address list of the Oracle Net listeners with which the dispatchers will register.

The LISTENER attribute facilitates administration of multi-homed hosts. This attribute specifies the appropriate listeners with which the dispatchers will register. The LISTENER attribute takes precedence over the LOCAL_LISTENER and REMOTE_LISTENER parameters. See "[LOCAL_LISTENER](#)" and "[REMOTE_LISTENER](#)".

- SERVICE

Specifies one or more names by which clients can connect to the dispatchers. The SERVICE attribute takes precedence over any settings configured by using the SRVCTL command-line utility, the GDSCTL command-line utility, or the DBMS_SERVICE PL/SQL package.

- INDEX

Use this attribute in an ALTER SYSTEM SET DISPATCHERS statement to indicate which dispatcher configuration you want to modify. (If you specify INDEX in the initialization parameter file, the Oracle Database ignores it.) In an ALTER SYSTEM statement, INDEX specifies the order in which the parameter's values were initialized. The value ranges from 0 (for the first dispatcher configuration) to one less than the total number of dispatcher configurations you define.

For example, if you specify 3 dispatcher configurations in the initialization parameter file, you would modify the third dispatcher configuration by specifying INDEX=2 in the ALTER SYSTEM statement. You could also add another dispatcher configuration in the ALTER SYSTEM statement by specifying INDEX=3.

If INDEX is not specified in the ALTER SYSTEM statement, then the PROTOCOL, ADDRESS, or DESCRIPTION attributes must be specified, and if a dispatcher configuration matching this PROTOCOL, ADDRESS, or DESCRIPTION exists, then that configuration will be modified. Otherwise, a new configuration will be added.

📘 See Also

- ["SHARED_SERVERS"](#)
- *Oracle Database Net Services Administrator's Guide* and *Oracle Database Administrator's Guide* for more information on setting this parameter

2.113 DISTRIBUTED_LOCK_TIMEOUT

DISTRIBUTED_LOCK_TIMEOUT specifies the amount of time (in seconds) for distributed transactions to wait for locked resources.

Property	Description
Parameter type	Integer
Default value	60
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	1 to $2^{31} - 1$
Basic	No

📘 See Also

Oracle Database Concepts for more information on data concurrency

2.114 DML_LOCKS

DML_LOCKS specifies the maximum number of DML locks—one for each table modified in a transaction.

Property	Description
Parameter type	Integer
Default value	Derived: 4 * TRANSACTIONS
Modifiable	No
Modifiable in a PDB	No
Range of values	20 to unlimited; a setting of 0 disables enqueues
Basic	No
Oracle RAC	You must set this parameter for every instance, and all instances must have positive values or all must be 0.

A **DML lock** is a lock obtained on a table that is undergoing a DML operation (insert, update, delete). The DML_LOCKS value should equal the grand total of locks on tables currently referenced by all users. For example, if three users are modifying data in one table, then three entries would be required. If three users are modifying data in two tables, then six entries would be required.

The default value assumes an average of four tables referenced for each transaction. For some systems, this value may not be enough.

Enqueues are shared memory structures that serialize access to database resources. If you set the value of DML_LOCKS to 0, enqueues are disabled and performance is slightly increased. However, you should be aware of the following restrictions when you set you DML_LOCKS to 0:

- You cannot use DROP TABLE, CREATE INDEX statements
- You cannot use explicit lock statements such as LOCK TABLE IN EXCLUSIVE MODE
- Enterprise Manager cannot run on any instances for which DML_LOCKS is set to 0

Oracle holds more locks during parallel DML than during serial execution. Therefore, if your database supports a lot of parallel DML, you may need to increase the value of this parameter.

① See Also

- *Oracle Database Concepts* for a discussion of lock and enqueue resources needed for parallel DML
- *Oracle Database Concepts* for more information on data concurrency

2.115 DNFS_BATCH_SIZE

DNFS_BATCH_SIZE controls the number of asynchronous I/O's that can be queued by an Oracle process when Direct NFS Client is enabled.

Property	Description
Parameter type	Integer
Default value	4096
Modifiable	No
Modifiable in a PDB	No
Range of values	0 - 4096
Basic	No

In environments where the NFS server cannot handle a large number of outstanding asynchronous I/O requests, use this parameter to limit the number of I/O's issued by an Oracle foreground process. The recommended setting for this parameter is to start at 128 and increase or decrease it based on NFS server performance.

① See Also

Oracle Database Performance Tuning Guide for additional information about the DNFS_BATCH_SIZE initialization parameter

2.116 DRCP_CONNECTION_LIMIT

DRCP_CONNECTION_LIMIT specifies the maximum number of Database Resident Connection Pooling (DRCP) connections for a PDB.

Property	Description
Parameter type	Integer
Default value	In CDB\$ROOT: 0 (unlimited) In a PDB: - If a persistent value for SESSIONS was explicitly set for the PDB (ALTER SYSTEM SET SESSIONS = <i>n</i> SCOPE={SPFILE BOTH}), and the PDB was subsequently restarted, then the default value is (10 * SESSIONS). - Otherwise, the PDB inherits the value for this parameter from CDB\$ROOT.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to operating system-dependent A value of 0 specifies that there is no limit on the number of DRCP connections.
Basic	No
Oracle RAC	Different instances can use different values.

DRCP_CONNECTION_LIMIT is a PDB-inherited parameter. The value of this parameter in CDB\$ROOT is not a CDB-wide limit. It is the default value for each PDB.

① Note

This parameter is available starting with Oracle Database 21c.

2.117 DRCP_DEDICATED_OPT

Use DRCP_DEDICATED_OPT to enable or disable the use of dedicated optimization with Database Resident Connection Pooling (DRCP).

Dedicated optimization causes DRCP to behave like a dedicated server when the number of connections to the DRCP broker is less than the DRCP maximum size.

Property	Description
Parameter type	String
Syntax	DRCP_DEDICATED_OPT = { YES NO }
Default value	NO

Property	Description
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes, according to the following guidelines: - When the <code>ENABLE_PER_PDB_DRCP</code> initialization parameter is set to <code>true</code>, <code>DRCP_DEDICATED_OPT</code> can be modified only at the PDB level; it cannot be modified for the CDB root. - When the <code>ENABLE_PER_PDB_DRCP</code> initialization parameter is set to <code>false</code>, <code>DRCP_DEDICATED_OPT</code> can be modified only for the CDB root; it cannot be modified at the PDB level.
Basic	No
Oracle RAC	Different instances can use different values.

When the value of this parameter is set to YES, the use of dedicated optimization with DRCP is enabled. When it is set to NO, the use of dedicated optimization with DRCP is disabled.

Note

This parameter is available starting with Oracle Database release 19c, version 19.11.

See Also

- *Oracle Database Administrator's Guide* for more information about setting this parameter
- ["ENABLE_PER_PDB_DRCP"](#)

2.118 DST_UPGRADE_INSERT_CONV

`DST_UPGRADE_INSERT_CONV` specifies whether internal operators will be allocated on top of `TIMESTAMP WITH TIME ZONE (TSTZ)` columns of tables which have not been upgraded during the upgrade window of daylight saving time patching for `TIMESTAMP WITH TIME ZONE` data.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No

Values

- `true`
Internal operators will be allocated on top of TSTZ columns of tables which have not been upgraded. This is the default.

- false

Internal operators will not be allocated on top of TSTZ columns of tables which have not been upgraded.

When `DST_UPGRADE_INSERT_CONV` is set to true during the upgrade window of the daylight saving time patching process:

- SELECT queries on tables with TSTZ data which have not been upgraded will use internal operators on top of TSTZ columns to present TSTZ data as if they were recorded using the new time zone translation rules.
- DML on tables with TSTZ data which have not been upgraded will use internal operators on top of TSTZ columns to ensure that the TSTZ data is recorded using the old time zone translation rules in order to be consistent with the existing TSTZ data in the same tables.

Note

Oracle strongly recommends that this parameter is set to true throughout the upgrade window of the daylight saving time patching process. This parameter reduces the performance impact since indexes on TSTZ columns will be disabled whenever internal operators are allocated. If the parameter is set to false, then indexes will be used and this may affect performance of queries against TSTZ data during the DST upgrade window. Turning off this parameter during the upgrade window may corrupt data on disk when DMLs occur for tables with TSTZ data which have not yet been upgraded.

See Also

Oracle Database Globalization Support Guide for more information about this parameter

2.119 ENABLE_AUTOMATIC_MAINTENANCE_PDB

`ENABLE_AUTOMATIC_MAINTENANCE_PDB` can be used to enable or disable the running of automated maintenance tasks for all the PDBs in a CDB or for individual PDBs in a CDB.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	The same value should be used for all instances.

Note

The value of this parameter in CDB\$ROOT (the root of a CDB) has no effect in the root. Automated maintenance tasks are always run in the root, regardless of the setting of this parameter.

By default, the value of `ENABLE_AUTOMATIC_MAINTENANCE_PDB` is `true` in CDB\$ROOT (the root container in the CDB) and in the individual PDBs in a CDB. This means that by default, automated maintenance tasks are run for the CDB root and all the PDBs in the CDB.

When you change the value of `ENABLE_AUTOMATIC_MAINTENANCE_PDB` in the CDB root, the new value takes effect in the root and in all the PDBs in the CDB.

Therefore, if you change the value of `ENABLE_AUTOMATIC_MAINTENANCE_PDB` in the CDB root to `false`, the value of `ENABLE_AUTOMATIC_MAINTENANCE_PDB` is also changed to `false` in all of the PDBs in the CDB.

You can also change the value of `ENABLE_AUTOMATIC_MAINTENANCE_PDB` in any of the individual PDBs in a CDB, and the value that is set for each individual PDB will be honored. This enables you to enable or disable automated maintenance tasks for individual PDBs.

See Also

- "[AUTOTASK_MAX_ACTIVE_PDBS](#)" for information about specifying the maximum number of PDBs that can schedule automated maintenance tasks at the same time
- *Oracle Database Administrator's Guide* for more information about managing automated database maintenance tasks

2.120 ENABLE_DDL_LOGGING

`ENABLE_DDL_LOGGING` enables or disables the writing of a subset of data definition language (DDL) statements to a DDL log.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No

The DDL log is a file that has the same format and basic behavior as the alert log, but it only contains the DDL statements issued by the database. The DDL log is created only for the RDBMS component and only if the `ENABLE_DDL_LOGGING` initialization parameter is set to `true`. When this parameter is set to `false`, DDL statements are not included in the DDL log, but they are included in the alert log.

The DDL log contains one log record for each DDL statement issued by the database. The DDL log is included in IPS incident packages.

There are two DDL logs that contain the same information. One is an XML file, and the other is a text file. The DDL log is stored in the `log/ddl` subdirectory of the ADR home.

When `ENABLE_DDL_LOGGING` is set to `true`, the following DDL statements are written to the log:

- ALTER/CREATE/DROP/TRUNCATE CLUSTER
- ALTER/CREATE/DROP FUNCTION
- GRANT
- ALTER/CREATE/DROP INDEX
- ALTER/CREATE/DROP OUTLINE
- ALTER/CREATE/DROP PACKAGE
- ALTER/CREATE/DROP PACKAGE BODY
- ALTER/CREATE/DROP PROCEDURE
- ALTER/CREATE/DROP PROFILE
- REVOKE
- ALTER/CREATE/DROP SEQUENCE
- CREATE/DROP SYNONYM
- ALTER/CREATE/DROP/RENAME/TRUNCATE TABLE
- ALTER/CREATE/DROP TRIGGER
- ALTER/CREATE/DROP TYPE
- ALTER/CREATE/DROP TYPE BODY
- DROP USER
- ALTER/CREATE/DROP VIEW

Note

The DDL statement written to the log may be truncated. You can use DDL triggers to view the entire DDL statement. See *Oracle Database PL/SQL Language Reference* for more information about DDL triggers.

See Also

Oracle Database Licensing Information User Manual for licensing information for the `ENABLE_DDL_LOGGING` initialization parameter.

2.121 ENABLE_DNFS_DISPATCHER

ENABLE_DNFS_DISPATCHER enables dispatcher support for the Oracle Direct NFS client.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	No
Range of values	true false
Basic	No
Oracle RAC	All instances should use the same value.

When this parameter is set to true in the initialization parameter file, dispatcher processes will be spawned for the Oracle Direct NFS client.

The number of dispatcher processes spawned is calculated as one-eighth of the value of the CPU_COUNT parameter.

See Also

["CPU_COUNT"](#)

2.122 ENABLE_GOLDENGATE_REPLICATION

ENABLE_GOLDENGATE_REPLICATION controls services provided by the RDBMS for Oracle GoldenGate (both capture and apply services).

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true false
Basic	No
Oracle RAC	All instances must have the same setting

Set this parameter to true to enable RDBMS services used by Oracle GoldenGate.

This parameter primarily controls supplemental logging required to support logical replication of new data types and operations. The redo log file is designed to be applied physically to a database, therefore the default contents of the redo log file often do not contain sufficient information to allow logged changes to be converted into SQL statements. Supplemental logging adds extra information into the redo log files so that replication can convert logged changes into SQL statements without having to access the database for each change.

Previously these extra changes were controlled by the supplemental logging DDL. Now the `ENABLE_GOLDENGATE_REPLICATION` parameter must also be set to enable the required supplemental logging for any new data types or operations.

All enhancements to supplemental logging required to support logical replication are also controlled by this parameter.

The RDBMS services controlled by this parameter also include (but are not limited to):

- Transparent Data Encryption (including Tablespace Encryption) utilities used by GoldenGate Extract
- Service to read redo logs used by GoldenGate Extract
- Service to suppress triggers used by GoldenGate Replicat
- Service to handle transient duplicate handling used by GoldenGate Replicat
- Service to bypass referential integrity checking used by GoldenGate Replicat
- Services required to run Oracle GoldenGate in Integrated Extract and Integrated Replicat

Note

When this database parameter is set to true, you must have a valid Oracle GoldenGate license or an authorized managed cloud client to use the enabled features. GoldenGate licenses or authorized managed cloud clients are required for all 3rd party or end-user tools that are used with this feature. Refer to *Oracle GoldenGate Licensing Information* and ensure that you have obtained the appropriate licensing before setting this parameter to true.

2.123 ENABLE_IMC_WITH_MIRA

`ENABLE_IMC_WITH_MIRA` enables or disables the In-Memory Column Store and Oracle Data Guard Multi-Instance Redo Apply, at the same time, on an Active Data Guard standby database.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true false
Basic	No
Oracle RAC	Different instances can use different values.

The value of this parameter is relevant only on the instance where MRP0 is spawned at the start of Redo Apply on a standby database.

2.124 ENABLE_PER_PDB_DRCP

ENABLE_PER_PDB_DRCP controls whether Database Resident Connection Pooling (DRCP) configures one connection pool for the entire CDB or one isolated connection pool for each PDB.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	No
Range of values	true false
Basic	No
Oracle RAC	Multiple instances must have the same value.

Possible values:

- **true**

DRCP creates one isolated connection pool for each PDB. You can connect to a particular PDB and configure, manage, and monitor its connection pool according to the specific requirements for that PDB. For example, you can set values for the MIN_AUTH_SERVERS, MAX_AUTH_SERVERS, and DRCP_DEDICATED_OPT initialization parameters for a PDB, and you can use the DBMS_CONNECTION_POOL package to manage the connection pool for a PDB.

When ENABLE_PER_PDB_DRCP is set to true, there is no connection pool for the entire CDB. The values of the MIN_AUTH_SERVERS, MAX_AUTH_SERVERS, and DRCP_DEDICATED_OPT initialization parameters have no meaning in the CDB root and you cannot alter them, nor can you use the DBMS_CONNECTION_POOL package while connected to the CDB root.
- **false**

DRCP creates one connection pool for the entire CDB. This connection pool is shared by all PDBs. You can set the MIN_AUTH_SERVERS, MAX_AUTH_SERVERS, and DRCP_DEDICATED_OPT initialization parameters only in the CDB root, and you can use the DBMS_CONNECTION_POOL only while connected to the CDB root.

❗ Note

This parameter is available starting with Oracle Database 21c.

❗ See Also

- ["MIN_AUTH_SERVERS"](#)
- ["MAX_AUTH_SERVERS"](#)
- ["DRCP_DEDICATED_OPT"](#)
- *Oracle Database PL/SQL Packages and Types Reference* for more information on the DBMS_CONNECTION_POOL package

2.125 ENABLE_PLUGGABLE_DATABASE

ENABLE_PLUGGABLE_DATABASE is a bootstrap initialization parameter to create a CDB.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	No
Modifiable in a PDB	No
Range of values	true false
Basic	No

This parameter enables a database in NOMOUNT startup mode to know that it is a CDB.

Note

See *Oracle Multitenant Administrator's Guide* for more information about CDBs and PDBs.

2.126 ENABLED_PDBS_ON_STANDBY

ENABLED_PDBS_ON_STANDBY specifies which pluggable databases (PDBs) to replicate on an Oracle Data Guard standby database.

Property	Description
Parameter type	String
Syntax	ENABLED_PDBS_ON_STANDBY = <i>PDB-list</i>
Default value	* if no value is specified for this parameter in the <code>init.ora</code> file
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No
Oracle RAC	All instances should use the same value.

Note

This parameter is meaningful only on standby databases. Its settings are ignored on a primary database.

PDB-list accepts a list of PDB names represented by glob patterns such as "PDB?" or "PDB*a", "PDB2". The glob pattern rules are like those of UNIX shells. The asterisk (*) and question mark (?) wildcard characters are supported. The ? wildcard character matches exactly one unknown character, and the * wildcard character matches any number of unknown

characters. Also, the minus sign (-) character can be used as the first character in a PDB name to indicate that the PDB should be excluded on the standby database.

The following characters are valid in a PDB name: alphanumeric characters, underscore (_), number sign (#), and dollar sign (\$). No other characters are valid. Oracle removes double quotation before processing the PDB name. Therefore you cannot use double quotation marks to embed other characters in the name. The PDB name is case insensitive. These are the same naming conventions as for a database name (as described in the DB_NAME initialization parameter description).

These rules apply for the ENABLED_PDBS_ON_STANDBY parameter:

- Any PDB names that match glob patterns starting with minus sign (-) will not be part of the standby database.
- If a PDB name matches several patterns in the *PDB-list* at the same time, the rightmost matched pattern has the highest precedence.
- If this parameter is not specified in the `init.ora` file, it is assumed that "*" is specified by default.
- If one or more patterns are specified in this parameter, it is assumed that "-*" is implicitly specified in the leftmost position. For example, `ENABLED_PDBS_ON_STANDBY="PDB1"`, `"PDB2"` is equivalent to `ENABLED_PDBS_ON_STANDBY="-*", "PDB1", "PDB2"`. It means that a PDB name that does not match any patterns is not allowed to be part of the standby.

Examples

These examples assumes that nine new PDBs named PDB1A, PDB1B, PDB1C, PDB2A, PDB2B, PDB2C, PDB3A, PDB3B, and PDB3C are being added to the primary database.

- If STANDBY1 sets `ENABLED_PDBS_ON_STANDBY="*"` on STANDBY1, then all nine PDBs will be created on STANDBY1.
- If STANDBY1 sets `ENABLED_PDBS_ON_STANDBY="PDB1*"` on STANDBY1, then PDB1A, PDB1B, and PDB1C will be created on STANDBY1.
- If STANDBY1 sets `ENABLED_PDBS_ON_STANDBY="PDB*A"` on STANDBY1, then PDB1A, PDB2A, and PDB3A will be created on STANDBY1.
- If STANDBY1 sets `ENABLED_PDBS_ON_STANDBY="PDB1*", "-PDB*A"` on STANDBY1, then PDB1B and PDB1C will be created on STANDBY1.
- If STANDBY1 sets `ENABLED_PDBS_ON_STANDBY="*", "-PDB*A", "-PDB*B"` on STANDBY1, then PDB1C, PDB2C and PDB3C will be created on STANDBY1. All other PDBs match "*", and the rightmost pattern has the higher precedence, so they are excluded on the standby.
- If STANDBY1 sets `ENABLED_PDBS_ON_STANDBY="*", "-PDB*A", "PDB2A"` on STANDBY1, then PDB1A and PDB3A are excluded, but all other PDBs including PDB2A will be created.

2.127 ENCRYPT_NEW_TABLESPACES

ENCRYPT_NEW_TABLESPACES specifies whether to encrypt newly created user tablespaces.

Property	Description
Parameter type	String
Syntax	ENCRYPT_NEW_TABLESPACES = { CLOUD_ONLY ALWAYS DDL }
Default value	CLOUD_ONLY

Property	Description
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value should be specified for all instances.

The values that can be specified for the `ENCRYPT_NEW_TABLESPACES` parameter have the following meanings:

- **CLOUD_ONLY:**

When a user tablespace is created in the Oracle Cloud, it will be transparently encrypted if the `ENCRYPTION ... ENCRYPT` clause for the `SQL CREATE TABLESPACE` statement is not specified. The encryption algorithm is determined by the value of the `TABLESPACE_ENCRYPTION_DEFAULT_ALGORITHM` initialization parameter. When a user tablespace is created in an on-premises database, the `ENCRYPTION` clause of the `CREATE TABLESPACE` statement determines if the tablespace is encrypted.

`CLOUD_ONLY` is the default value.
- **ALWAYS:**

Whether the user tablespace is created in the Oracle Cloud or in an on-premises database, the tablespace will be transparently encrypted if the `ENCRYPTION ... ENCRYPT` clause is not specified in the `CREATE TABLESPACE` statement. The encryption algorithm is determined by the value of the `TABLESPACE_ENCRYPTION_DEFAULT_ALGORITHM` initialization parameter.
- **DDL:**

Whether the user tablespace is created in the Oracle Cloud or in an on-premises database, the `CREATE TABLESPACE` statement follows the specified DDL. If no `ENCRYPTION` clause is specified, then the tablespace will not be encrypted. If the `ENCRYPTION USING ... ENCRYPT` clause is specified, then the specified algorithm will be used to encrypt the tablespace. If `ENCRYPTION ENCRYPT` is specified, but no algorithm is specified, then the encryption algorithm is determined by the value of the `TABLESPACE_ENCRYPTION_DEFAULT_ALGORITHM` initialization parameter.

📘 See Also

- [TABLESPACE_ENCRYPTION_DEFAULT_ALGORITHM](#)
- *Oracle Database Advanced Security Guide* for more information about tablespace encryption
- *Oracle Database SQL Language Reference* for more information about the `CREATE TABLESPACE` statement

2.128 EVENT

`EVENT` is a parameter used only to debug the system.

Property	Description
Parameter type	String
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Basic	No

Do not alter the value of this parameter except under the supervision of Oracle Support Services staff.

2.129 EXTERNAL_KEYSTORE_CREDENTIAL_LOCATION

EXTERNAL_KEYSTORE_CREDENTIAL_LOCATION specifies the location of the secure external keystore.

Property	Description
Parameter type	String
Syntax	EXTERNAL_KEYSTORE_CREDENTIAL_LOCATION = file-location
Default value	No default value
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	This parameter can be set on each instance. Oracle recommends that if the instances have a shared location, then use a directory on the shared location for this parameter and set the same value on all Oracle RAC instances. If the database does not have a shared location, then each instance of the database will have its own directory and the value should be set per-instance.

TDE keystore credentials can be stored in a secure external keystore to automate Transparent Data Encryption (TDE) operations.

To automate the setting of the Master Key in a newly-provisioned PDB, set EXTERNAL_KEYSTORE_CREDENTIAL_LOCATION so that the CDB knows the location of the secure external keystore.

When a file specification is set with this parameter, the secure external keystore is looked for in that location. If the secure external keystore is not found in that location, then this parameter is ignored.

See Also

Oracle Database Advanced Security Guide for more information about using TDE

2.130 FAL_CLIENT

FAL_CLIENT specifies the FAL (fetch archive log) client name that is used by the FAL service, configured through the FAL_SERVER initialization parameter, to refer to the FAL client.

Property	Description
Parameter type	String
Syntax	FAL_CLIENT = <i>string</i>
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

The value is an Oracle Net service name, which is assumed to be configured properly on the FAL server system to point to the FAL client (standby database).

 See Also

Oracle Data Guard Concepts and Administration for more information about FAL server

2.131 FAL_SERVER

FAL_SERVER specifies the FAL (fetch archive log) server for a standby database.

Property	Description
Parameter type	String
Syntax	FAL_SERVER = <i>string</i>
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

The value is an Oracle Net service name, which is assumed to be configured properly on the standby database system to point to the desired FAL server.

 See Also

Oracle Data Guard Concepts and Administration for more information about FAL server

2.132 FAST_START_MTTR_TARGET

FAST_START_MTTR_TARGET enables you to specify the number of seconds the database takes to perform crash recovery of a single instance.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to 3600 seconds
Basic	No
Oracle RAC	Multiple instances can have different values, and you can change the values at run time.

When specified, FAST_START_MTTR_TARGET is overridden by LOG_CHECKPOINT_INTERVAL.

① See Also

- *Oracle Database Performance Tuning Guide* for an example of setting the lower bound for this parameter
- *Oracle Database Performance Tuning Guide* for an example of setting the upper bound for this parameter
- *Oracle Database Performance Tuning Guide* for an example of selecting a preliminary value for this parameter

2.133 FAST_START_PARALLEL_ROLLBACK

FAST_START_PARALLEL_ROLLBACK specifies the degree of parallelism used when recovering terminated transactions.

Property	Description
Parameter type	String
Syntax	FAST_START_PARALLEL_ROLLBACK = { HIGH LOW FALSE }
Default value	LOW
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

Terminated transactions are transactions that are active before a system failure. If a system fails when there are uncommitted parallel DML or DDL transactions, then you can speed up transaction recovery during startup by using this parameter.

Values

- FALSE
Parallel rollback is disabled
- LOW

Limits the maximum degree of parallelism to 2 * CPU_COUNT

- HIGH

Limits the maximum degree of parallelism to 4 * CPU_COUNT

If you change the value of this parameter, then transaction recovery will be stopped and restarted with the new implied degree of parallelism.

① See Also

Oracle Database VLDB and Partitioning Guide for more information about this parameter

2.134 FILE_MAPPING

FILE_MAPPING specifies whether file mapping is enabled.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true false
Basic	No

① Note

The FILE_MAPPING initialization parameter is deprecated. It is still supported for backward compatibility.

The FMON background process is started to manage the mapping information when file mapping is enabled.

① See Also

Oracle Database Administrator's Guide for more information about the file mapping feature

2.135 FILEIO_NETWORK_ADAPTERS

FILEIO_NETWORK_ADAPTERS specifies a list of network adapters that can be used to access the disk storage.

Property	Description
Parameter type	String
Syntax	FILEIO_NETWORK_ADAPTERS = <i>adapter_name</i> [, <i>adapter_name</i>] ...
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Range of values	One or more network adapter names, separated by commas
Basic	No

On platforms where the database files reside in network attached storage, this parameter provides the storage access library the list of network adapters that can be used to access the storage.

The network adapter name is a fully qualified address name of the network card that can be accessed through the host name database or using the Network Information Service. The components of the adapter name are separated by periods. For example, the following is a fully qualified adapter name:

ib1.oracle.com

2.136 FILESYSTEMIO_OPTIONS

FILESYSTEMIO_OPTIONS specifies I/O operations for file system files. This parameter is platform-specific and has a default value that is suitable for a particular platform.

Property	Description
Parameter type	String
Syntax	FILESYSTEMIO_OPTIONS = { ASYNCH DIRECTIO SETALL NONE }
Default value	Varies by database version and operating system.
Modifiable	No
Modifiable in a PDB	No
Basic	No

Values:

- ASYNCH - Enable asynchronous I/O on file system files, which has no timing requirement for transmission.
- DIRECTIO - Enable direct I/O on file system files, which bypasses the buffer cache.
- SETALL - Enable both asynchronous and direct I/O on file system files.
- NONE - Disable both asynchronous and direct I/O on file system files.

① See Also

- Your platform-specific documentation for more details
- *Oracle Database Performance Tuning Guide* for information about setting this parameter before running I/O calibration

2.137 FIXED_DATE

FIXED_DATE enables you to set a constant date that SYSDATE will always return instead of the current date.

Property	Description
Parameter type	String
Syntax	FIXED_DATE = [YYYY-MM-DD-HH24:MI:SS (or the default Oracle date format) NONE]
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

To undo a fixed date setting, specify FIXED_DATE=NONE. This parameter is useful primarily for testing. The value can be in the format shown above or in the default Oracle date format, without a time.

2.138 FORWARD_LISTENER

FORWARD_LISTENER specifies the name of a listener to which a connection must be forwarded by an existing set of remote listeners.

Property	Description
Parameter type	String
Syntax	FORWARD_LISTENER = listener-name
Default value	NULL
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	A different value can be set on different instances.

The parameter is useful when it is difficult to change an existing client connect string, for example, after an offsite database has been moved into the Oracle Cloud. With the FORWARD_LISTENER parameter, clients can continue to connect to their offsite listener, and the offsite listener forwards the connection to the Oracle Cloud listener.

Once a forward listener has been configured through the FORWARD_LISTENER parameter, the LOCAL_LISTENER parameter can be cleared by setting its value to -oracle-none- so that all the connections coming to an existing set of remote listeners configured through the

REMOTE_LISTENER parameter are forwarded only to listeners configured through FORWARD_LISTENER.

The FORWARD_LISTENER parameter can also be specified in the LISTENER_NETWORKS parameter.

Examples

The following setup can be used to forward all the database connections coming to an existing customer SCAN listener to the Oracle Cloud SCAN listener.

```
REMOTE_LISTENER=customer-scan
FORWARD_LISTENER=oracle-cloud-scan
LOCAL_LISTENER=oracle-none-
```

See Also

- ["LOCAL_LISTENER"](#)
- ["REMOTE_LISTENER"](#)
- ["LISTENER_NETWORKS"](#)
- *Oracle Clusterware Administration and Deployment Guide* for information about SCAN listeners

2.139 GCS_SERVER_PROCESSES

GCS_SERVER_PROCESSES specifies the number of background GCS server processes (LMSn and LMnn) to serve the inter-instance traffic among Oracle RAC instances.

If there is high Cache Fusion congestion on the system, the number of GCS server processes could be increased to reduce Cluster wait time. Additionally, the number of GCS server processes could be increased to reduce the application brownout time associated with Cluster reconfiguration and Dynamic Re-mastering (DRM).

Property	Description
Parameter type	Integer
Default value	Oracle calculates the default value as follows (in order of precedence): 1. If CLUSTER_DATABASE is set to false, then 0 2. If Oracle ASM, then 1 3. If 1 - 3 CPUS, then 1 4. If 4 - 15 CPUs, then 2 5. If 128 or more CPUs and SGA is 100 GB or more, then (CPUs / 6). If the result includes a fraction, then the fraction is disregarded. 6. Otherwise, the value is 2 + (CPUs / 32). If the result includes a fraction, then the fraction is disregarded. For example, if you have 20 CPUs, then 2 + (20 / 32) would equal 2 GCS processes. 7. On NUMA-enabled systems with 32 or more CPUs, the value is rounded up to a multiple of the number of NUMA processor groups, with a limit of (CPUs / 4) rounded down to a multiple of the number of NUMA processor groups.

Property	Description
Modifiable	No
Modifiable in a PDB	No
Range of values	0 if Oracle RAC is disabled (CLUSTER_DATABASE is set to false) 1 to 100 if Oracle RAC is enabled (CLUSTER_DATABASE is set to true)
Basic	No
Oracle RAC	Multiple instances can have different values.

GCS server processes are only seen in an Oracle RAC environment.

2.140 GLOBAL_NAMES

GLOBAL_NAMES specifies whether a database link is required to have the same name as the database to which it connects.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No

If the value of GLOBAL_NAMES is false, then no check is performed. If you use or plan to use distributed processing, then Oracle recommends that you set this parameter to true to ensure the use of consistent naming conventions for databases and links in a networked environment.

① See Also

Oracle Database Administrator's Guide for more information on setting this parameter

2.141 GLOBAL_TXN_PROCESSES

GLOBAL_TXN_PROCESSES specifies the initial number of GTX n background processes (GTX0, ... GTX9 and GTXa, ... GTXj) per instance to support global (XA) transactions in an Oracle RAC environment.

Property	Description
Parameter type	Integer
Default value	1
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to 20

Property	Description
Basic	No
Oracle RAC	Multiple instances can have different values.

If you want to disable the GTX n background processes, then you must set GLOBAL_TXN_PROCESSES to 0 in your parameter file. Setting this parameter to 0 will disable the XA support on an Oracle RAC database. Error ORA-55712 will be returned if you try to run XA transactions on an Oracle RAC database with this parameter set to 0. You can change the setting to a nonzero value at run time to turn on the support for XA.

GLOBAL_TXN_PROCESSES is useful for systems that process global (XA) transactions heavily. You do not need to specify a value for this parameter since Oracle Database automatically determines the number of processes and autotunes them, as necessary. GTX n background processes are only seen in an Oracle RAC environment.

See Also

Oracle Database Development Guide for more information about this parameter

2.142 HASH_AREA_SIZE

HASH_AREA_SIZE specifies the maximum amount of memory, in bytes, to be used for hash joins.

Property	Description
Parameter type	Integer
Default value	Derived: 2 * SORT_AREA_SIZE
Modifiable	ALTER SESSION
Modifiable in a PDB	No
Range of values	0 to operating system-dependent
Basic	No

Note

Oracle does not recommend using the HASH_AREA_SIZE parameter unless the instance is configured with the shared server option. Oracle recommends that you enable automatic sizing of SQL working areas by setting PGA_AGGREGATE_TARGET instead. HASH_AREA_SIZE is retained for backward compatibility.

HASH_AREA_SIZE is relevant to parallel execution operations and to the query portion of DML or DDL statements.

See Also

- *Oracle Database Concepts* for information on hash joins in general

2.143 HEARTBEAT_BATCH_SIZE

Use HEARTBEAT_BATCH_SIZE to configure the heartbeat batch size, which is the number of heartbeats sent during one heartbeat period.

Property	Description
Parameter type	Integer
Default value	5
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	2 to 100
Basic	No
Oracle RAC	Multiple instances must have the same value.

Note

This parameter is available starting with Oracle Database 21c.

2.144 HEAT_MAP

Use HEAT_MAP to enable or disable both the Heat Map and Automatic Data Optimization (ADO) features.

Property	Description
Parameter type	String
Syntax	HEAT_MAP = { ON OFF }
Default value	OFF
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	If specified, use the same value on all instances

Setting the HEAT_MAP initialization parameter to ON causes the database to track read and write access of all segments, as well as modification of database blocks, due to DMLs and DDLs. These activities are not tracked for objects in the SYSTEM and SYSAUX tablespaces.

① See Also

- *Oracle Database VLDB and Partitioning Guide* for more information about enabling and disabling the Heat Map feature
- *Oracle Database VLDB and Partitioning Guide* for more information about Heat Map tracking

2.145 HI_SHARED_MEMORY_ADDRESS

HI_SHARED_MEMORY_ADDRESS specifies the starting address at run time of the system global area (SGA).

Property	Description
Parameter type	Integer
Default value	0
Modifiable	No
Modifiable in a PDB	No
Basic	No

This parameter is ignored on platforms that specify the SGA's starting address at linktime.

On 64-bit platforms, use HI_SHARED_MEMORY_ADDRESS to specify the high-order 32 bits of a 64-bit address. Use SHARED_MEMORY_ADDRESS to specify the low-order 32 bits of the address (see "[SHARED_MEMORY_ADDRESS](#)"). If both parameters are 0 or unspecified, the SGA address defaults to a platform-specific location.

2.146 HS_AUTOREGISTER

HS_AUTOREGISTER enables or disables automatic self-registration of Heterogeneous Services (HS) agents.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true false
Basic	No

When enabled, information is uploaded into the server's data dictionary to describe a previously unknown agent class or a new agent version.

Oracle recommends that you set this parameter to true. Oracle incurs less overhead when establishing subsequent connections through the same agent if self-registered information is available in the server's data dictionary.

See Also

Oracle Database Heterogeneous Connectivity User's Guide for more information about using HS agents

2.147 IFILE

Use IFILE to embed another parameter file within the current parameter file.

Property	Description
Parameter type	Parameter file
Syntax	IFILE = <i>parameter_file_name</i>
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Range of values	Valid parameter filenames
Basic	No
Oracle RAC	Multiple instances can have different values.

For example:

```
IFILE = COMMON.ORA
```

You can have up to three levels of nesting. In this example, the file COMMON.ORA could contain a second IFILE parameter for the file COMMON2.ORA, which could contain a third IFILE parameter for the file GCPARMS.ORA. You can also include multiple parameter files in one parameter file by listing IFILE several times with different values:

```
IFILE = DBPARMS.ORA
IFILE = GCPARMS.ORA
IFILE = LOGPARMS.ORA
```

Note

You must list multiple entries on contiguous lines of the parameter file.

2.148 IGNORE_SESSION_SET_PARAM_ERRORS

IGNORE_SESSION_SET_PARAM_ERRORS controls whether the database ignores errors when clients attempt to modify session parameter values.

Property	Description
Parameter type	String
Syntax	IGNORE_SESSION_SET_PARAM_ERRORS = <i>parameter_name</i> [, <i>parameter_name</i>] ...
Default value	None

Property	Description
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances should use the same value.

The IGNORE_SESSION_SET_PARAM_ERRORS parameter allows you to change the outcome of the following scenario:

1. An Oracle database uses PDB lockdown profiles to prevent certain initialization parameters from being modified with the ALTER SESSION statement.
2. A database client attempts to modify one of those parameters with the ALTER SESSION statement. The client has no knowledge that the parameter is locked down.
3. The database returns an error to the client.

To prevent the database from returning an error in the preceding scenario, set the value of IGNORE_SESSION_SET_PARAM_ERRORS to a comma-separated list of locked down initialization parameters. Thereafter, if a client attempts to modify one of those parameters with the ALTER SESSION statement, the database will ignore the modification attempt and indicate to the client that the operation was successful.

You can set the IGNORE_SESSION_SET_PARAM_ERRORS parameter while connected to a specific PDB, or you can apply it to all PDBs by setting it in the CDB root.

Example

The CURSOR_INVALIDATION and CURSOR_SHARING parameters are locked down in one of the PDBs in your database. If a client application attempts to modify either of these parameters, you want the database to ignore the request and allow the application to continue running without incurring an error. To achieve this, you can connect to the PDB and set the IGNORE_SESSION_SET_PARAM_ERRORS parameter. For example:

```
ALTER SYSTEM SET IGNORE_SESSION_SET_PARAM_ERRORS = CURSOR_INVALIDATION,  
CURSOR_SHARING;
```

2.149 INMEMORY_ADG_ENABLED

INMEMORY_ADG_ENABLED indicates whether in-memory for Active Data Guard is enabled in addition to the in-memory cache size.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true false
Basic	No

Property	Description
Oracle RAC	The same value should be used on all instances. If the value for this parameter is changed on one instance, the parameter's value should be changed to the same value on the other instances.

For Active Data Guard, media recovery needs to retrieve in-memory objects when applying redo and to invalidate the related objects after the query advance. This parameter controls whether media recovery does the retrieving and invalidating.

This parameter should be set on standby databases. The value of this parameter is meaningless on a primary database.

If the standby is an Oracle RAC instance, then all the different standby instances must have this parameter set to the same value.

This parameter is a dynamic system-modifiable parameter whose value can be changed only when Active Data Guard recovery is not running.

If you start multi-instance redo apply (MIRA) Active Data Guard recovery, all instances involved in MIRA must have the parameter set to the same value, otherwise MIRA will signal an error.

Example

If the standby is an Oracle RAC instance, this parameter should be set to the same value on all the Oracle RAC instances:

```
SQL> alter system set inmemory_adg_enabled=true sid='*';
```

① See Also

- ["INMEMORY_SIZE"](#)
- *Oracle Database In-Memory Guide* for more information about deploying an In-Memory Column Store (IM column store) in an Active Data Guard environment

2.150 INMEMORY_AUTOMATIC_LEVEL

INMEMORY_AUTOMATIC_LEVEL is used to enable the Automatic In-Memory feature, which automates the management of the In-Memory Column Store (IM column store) to help ensure that the working data set is in the IM column store at all times.

Property	Description
Parameter type	String
Syntax	INMEMORY_AUTOMATIC_LEVEL = { LOW MEDIUM HIGH OFF }
Default value	OFF
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	All instances should use the same value.

Typically, among all the IM enabled segments, only a subset is actively queried at any time. This subset is known as the working data set. The working data set is expected to change over time for many applications.

INMEMORY_AUTOMATIC_LEVEL attempts to keep the working data set in the IM column store at all times by moving segments in and out of the IM column store based on access patterns.

Oracle recommends that you provision enough memory for the working data set to fit in the IM column store.

The following values can be set:

- **LOW:** The database evicts cold segments from the IM column store when it is under memory pressure.
- **MEDIUM:** The database evicts cold segments from the IM column store when it is under memory pressure. This level includes an additional optimization that ensures that any hot segment that was not populated because of memory pressure is populated first.
- **HIGH:** All segments in the database are enabled for the IM column store, except segments belonging to Oracle-maintained users and segments from external tables. Automatic In-Memory manages all segments enabled for the IM column store, keeping hot segments in the IM column store and evicting cold segments. This level includes an additional optimization that ensures that any hot segment that was not populated because of memory pressure is populated first.
- **OFF:** Automatic In-Memory is disabled. This value returns the IM column store to the behavior that existed prior to Oracle Database 18c, when the Automatic In-Memory features was introduced. If you do not expect a stable working data set, set the parameter to OFF. This is the default value.

① See Also

- *Oracle Database Licensing Information User Manual* to learn which database offerings support the Automatic In-Memory feature
- *Oracle Database In-Memory Guide* for more information about configuring the Automatic In-Memory feature

2.151 INMEMORY Clause DEFAULT

INMEMORY Clause DEFAULT enables you to specify a default In-Memory Column Store (IM column store) clause for new tables and materialized views.

① Note

The setting of this parameter has no effect on In-Memory external tables or hybrid partitioned tables.

Property	Description
Parameter type	String
Syntax	INMEMORY Clause DEFAULT = '[INMEMORY] [NO INMEMORY] [other-clauses]'

Property	Description
Syntax	other-clauses::= [compression-clause] [priority-clause] [rac-clause]
Syntax	compression-clause::= NO MEMCOMPRESS MEMCOMPRESS FOR { DML QUERY [LOW HIGH] CAPACITY [LOW HIGH] } ¹
Syntax	priority-clause::= PRIORITY { LOW MEDIUM HIGH CRITICAL NONE } ¹
Syntax	rac-clause::= [distribute-clause] [duplicate-clause] ¹
Syntax	distribute-clause::= DISTRIBUTE [AUTO BY ROWID RANGE] ¹
Syntax	duplicate-clause::= NO DUPLICATE DUPLICATE [ALL] ¹
Default value	An empty string
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	All instances should use the same value

¹ See [Table 2-2](#) for more information about this clause.

If the INMEMORY_CLAUSE_DEFAULT parameter is unset or set to an empty string (the default), only tables and materialized views explicitly specified as INMEMORY will be populated into the IM column store. Setting the value of the INMEMORY_CLAUSE_DEFAULT parameter to NO INMEMORY has the same effect as setting it to the default value.

If the INMEMORY_CLAUSE_DEFAULT parameter is set, then any *newly created* table or materialized view specified as INMEMORY will inherit unspecified attributes from this parameter. This can force certain in-memory options by default that are not explicitly specified in the syntax. For example, if the INMEMORY_CLAUSE_DEFAULT parameter is set to MEMCOMPRESS FOR CAPACITY LOW and a table is created as INMEMORY PRIORITY HIGH, then the table is treated as if it was declared as INMEMORY MEMCOMPRESS FOR CAPACITY LOW PRIORITY HIGH.

If INMEMORY is specified as part of this parameter, then all newly created tables and materialized views will be populated into the IM column store, except tables and materialized views explicitly specified as NO INMEMORY. For example, if this parameter is set to INMEMORY MEMCOMPRESS FOR CAPACITY HIGH, then all new tables will be created as if this clause were present in the SQL CREATE TABLE statement. If there is a default INMEMORY value for the tablespace for a given segment, then it will override the value for this parameter.

Table 2-2 Meaning of INMEMORY_CLAUSE_DEFAULT Parameter Values

Syntax	Description
INMEMORY	Specifies that all newly-created tables and materialized views populate the IM column store unless they are specified as NO INMEMORY in the SQL CREATE TABLE or CREATE MATERIALIZED VIEW statement

Table 2-2 (Cont.) Meaning of INMEMORY Clause DEFAULT Parameter Values

Syntax	Description
NO INMEMORY	Specifies that only tables and materialized views explicitly specified as INMEMORY in the SQL CREATE TABLE or CREATE MATERIALIZED VIEW statements populate the IM column store
compression-clause	Specifies that in-memory compression should be used for the instance. Use the MEMCOMPRESS FOR values to specify the in-memory compression level.
NO MEMCOMPRESS	When NO MEMCOMPRESS is specified, no in-memory compression is done in the IM column store.
MEMCOMPRESS FOR	MEMCOMPRESS FOR is used to indicate the in-memory compression level for the IM column store.
DML	When DML is specified, the IM column store is optimized for DML operations, and some lightweight in-memory compression may be done.
QUERY	When QUERY is specified, the in-memory compression level is for high performance. If QUERY is specified without LOW or HIGH, it defaults to QUERY LOW.
QUERY LOW	When QUERY LOW is specified, the in-memory compression level provides the highest performance.
QUERY HIGH	When QUERY HIGH is specified, the in-memory compression level provides a balance between compression and performance, weighted toward performance.
CAPACITY	When CAPACITY is specified without LOW or HIGH, it defaults to CAPACITY LOW.
CAPACITY LOW	When CAPACITY LOW is specified, the in-memory compression level is a balance between compression and performance, weighted toward capacity.
CAPACITY HIGH	When CAPACITY HIGH is specified, the in-memory compression level is for highest capacity.
priority-clause	Specifies the priority to use when populating tables in the IM column store. Use the PRIORITY values to specify the priority. By default, the population of a table in the IM column store can be delayed until the database determines it is useful. On database instance startup, tables are populated in priority order.
PRIORITY NONE	When PRIORITY NONE is specified, the population of a table in the IM column store can be delayed until the database determines it is useful. This is the default value when no priority is specified.
PRIORITY LOW	When PRIORITY LOW is specified for a table or tables, the population of those tables in the IM column store is done before tables that have no priority specified.
PRIORITY MEDIUM	When PRIORITY MEDIUM is specified for a table or tables, the population of those tables in the IM column store is done before tables that have no priority and PRIORITY LOW specified.
PRIORITY HIGH	When PRIORITY HIGH is specified for a table or tables, the population of those tables in the IM column store is done before tables that have no priority, PRIORITY LOW, and PRIORITY MEDIUM specified.

Table 2-2 (Cont.) Meaning of INMEMORY Clause DEFAULT Parameter Values

Syntax	Description
PRIORITY CRITICAL	When PRIORITY CRITICAL is specified for a table or tables, the population of those tables in the IM column store is done before tables that have no priority, PRIORITY LOW, PRIORITY MEDIUM, and PRIORITY HIGH specified.
rac-clause	Specifies how tables in the IM column store will be managed among Oracle Real Application Clusters (Oracle RAC) instances. Use the distribute-clause and duplicate-clause to specify how tables in the IM store will be managed in Oracle RAC instances. For a non-Oracle RAC database, these settings have no effect, because the whole table or partition has to be on the single instance.
distribute-clause	Specifies how a table is distributed among Oracle RAC instances.
DISTRIBUTE AUTO	Specifies that the database will automatically decide how to distribute tables in the IM column store across the Oracle RAC instances based on the type of partitioning and the value of the duplicate-clause. DISTRIBUTE AUTO is the default, and it is also used when DISTRIBUTE is specified by itself.
DISTRIBUTE BY ROWID RANGE	Specifies that the tables in the IM column store will be distributed by rowid range to different Oracle RAC instances.
duplicate-clause	Specifies how many copies of each In-Memory Compression Unit (IMCU) of the tables in the IM column store will be spread across all the Oracle RAC instances. Note: The duplicate-clause is only applicable if you are using Oracle Real Application Clusters (Oracle RAC) on an engineered system. Otherwise, the duplicate-clause is ignored and there is only one copy of each IMCU in memory.
NO DUPLICATE	Data is not duplicated across Oracle RAC instances. This is the default.
DUPLICATE	Data is duplicated on another Oracle RAC instance, resulting in data existing on a total of two Oracle RAC instances.
DUPLICATE ALL	Data is duplicated across all Oracle RAC instances. If you specify DUPLICATE ALL, then the database uses the DISTRIBUTE AUTO setting, regardless of whether or how you specify the distribute-clause.

Examples

The following statement causes no tables to populate the IM column store:

```
alter system set INMEMORY Clause DEFAULT='NO INMEMORY'
scope=both;
```

The following statement causes new tables and materialized views (except those specified as NO INMEMORY) to populate the IM column store at the high capacity compression level:

```
alter system set
INMEMORY Clause DEFAULT='INMEMORY MEMCOMPRESS FOR CAPACITY HIGH'
scope=both;
```

The following statement causes new tables (even those specified as NO INMEMORY) to populate the IM column store at the highest performance compression level at LOW priority:

```
alter system set  
INMEMORY Clause DEFAULT='INMEMORY MEMCOMPRESS FOR QUERY LOW PRIORITY LOW'  
scope=both;
```

The following statement causes new tables (even those specified as NO INMEMORY) to populate the IM column store without any in-memory compression:

```
alter system set  
INMEMORY Clause DEFAULT='INMEMORY NO MEMCOMPRESS'  
scope=both;
```

The following statement causes tables in the IM column store to be duplicated on every Oracle RAC instance, unless on a non-engineered system. For a non-engineered system, the duplicate-clause (DUPLICATE ALL) will be ignored and tables in the column store will be automatically distributed across the Oracle RAC instance, with only one copy of each IMCU in the tables in the IM column store:

```
alter system set  
INMEMORY Clause DEFAULT='INMEMORY MEMCOMPRESS FOR QUERY  
DISTRIBUTE AUTO DUPLICATE ALL'  
scope=both;
```

The following statement sets the value of the INMEMORY Clause DEFAULT parameter back to its default value, the empty string:

```
alter system set  
INMEMORY Clause DEFAULT=''   
scope=both;
```

2.152 INMEMORY_DEEP_VECTORIZATION

INMEMORY_DEEP_VECTORIZATION enables or disables the deep vectorization framework.

Property	Description
Parameter type	Boolean
Default value	TRUE
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	TRUE FALSE
Basic	No

Deep vectorization can optimize complex SQL operations (such as joins) by pipelining physical operators inside each SQL operator and vectorizing them.

Note

This parameter is available starting with Oracle Database 21c.

See Also

Oracle Database In-Memory Guide for information about deep vectorization

2.153 INMEMORY_EXPRESSIONS_USAGE

INMEMORY_EXPRESSIONS_USAGE controls which In-Memory Expressions (IM expressions) are populated into the In-Memory Column Store (IM column store) and are available for queries.

Property	Description
Parameter type	String
Syntax	INMEMORY_EXPRESSIONS_USAGE = { STATIC_ONLY DYNAMIC_ONLY ENABLE DISABLE }
Default value	ENABLE
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be used on all instances.

The four values for this parameter are:

- **STATIC_ONLY:** Tables enabled for in-memory and containing certain data types such as Oracle numbers or JSON will have these columns populated in the IM column store using a more efficient representation. Note that this setting will increase the in-memory footprint

for some tables. A static configuration enables the IM column store to cache OSON (binary JSON) columns, which are marked with an IS_JSON check constraint. Internally, an OSON column is a hidden virtual column named SYS_IME_OSON. In contrast, a dynamic configuration automatically creates and populates frequently used expressions.

- **DYNAMIC_ONLY:** IM expressions will be automatically created and populated into the IM column store, if used in conjunction with PL/SQL procedure `DBMS_INMEMORY.IME_CAPTURE_EXPRESSIONS`. Note that setting this value will increase the in-memory footprint for some tables.
- **ENABLE:** Both static and dynamic IM expressions will be populated into the IM column store and available to be used by queries. Note that setting this value will increase the in-memory footprint for some tables. This is the default value.
- **DISABLE:** No IM expressions of any kind will be populated into the IM column store.

Changing the mode of a parameter does not have an immediate effect on existing in-memory data. For example, if the `inmemory_expressions_usage` clause is changed from `DYNAMIC_ONLY` to `DISABLE`, the stored IM expressions are not immediately removed. The next repopulation will not bring back the expressions in memory, thereby effectively removing the expressions.

 See Also

- ["INMEMORY_VIRTUAL_COLUMNS"](#)
- *Oracle Database In-Memory Guide* for more information about IM expressions
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `DBMS_INMEMORY` PL/SQL package

2.154 INMEMORY_FORCE

`INMEMORY_FORCE` allows you to specify whether objects, such as tables, materialized views, and partitions, that are specified as `INMEMORY` are populated into the In-Memory Column Store (IM column store) or not.

Property	Description
Parameter type	String
Syntax	<code>INMEMORY_FORCE = { DEFAULT OFF BASE_LEVEL CELLMEMORY_LEVEL }</code>
Default value	DEFAULT
Modifiable	You can use <code>ALTER SYSTEM</code> to dynamically modify this parameter setting as follows: • From <code>DEFAULT</code> to <code>OFF</code> • From <code>OFF</code> to <code>DEFAULT</code> • From <code>BASE_LEVEL</code> to <code>DEFAULT</code> • From <code>CELLMEMORY_LEVEL</code> to <code>DEFAULT</code> • From <code>CELLMEMORY_LEVEL</code> to <code>OFF</code> All other modifications of this parameter require you to update the initialization file and restart the instance.
Modifiable in a PDB	Yes
Basic	No

Property	Description
Oracle RAC	All instances should use the same value.

The following values can be set:

- **DEFAULT**
The IM column store is populated with objects that are specified as INMEMORY.
- **OFF**
Even if the IM column store is configured on this instance, no objects are populated in memory.
- **BASE_LEVEL**
Enables Database In-Memory Base Level. The Base Level lets you to experiment with Oracle Database In-Memory features without purchasing the Oracle Database In-Memory option.

When the Base Level is enabled, the value of the INMEMORY_SIZE initialization parameter is limited to 16 GB for a CDB. In an Oracle RAC environment, the value of INMEMORY_SIZE is limited to 16 GB for each instance. The compression level for all objects and columns is automatically and transparently set to QUERY LOW. Automatic In-Memory is disabled, and In-Memory Column Store feature tracking is tracked for "In-Memory Base Level" rather than "In-Memory Column Store." The CellMemory feature is disabled for Oracle Exadata.
- **CELLMEMORY_LEVEL**
CellMemory is an Exadata feature that allows you to use Exadata Smart Flash Cache to populate data in in-memory columnar format. In older releases of Oracle Database, in order to use the CellMemory feature, you were required to enable the IM column store (by setting INMEMORY_SIZE to a value greater than 0), even if you had no intention of using the IM column store. This incurred the overhead of enabling the IM column store without any benefit. Starting with Oracle Database release 19c, version 19.8, you can use the CellMemory feature without enabling the IM column store by setting INMEMORY_FORCE=CELLMEMORY_LEVEL and INMEMORY_SIZE=0. With these settings, the IM column store is not enabled and queries can use CellMemory to scan objects.

Note that if the value of INMEMORY_SIZE is greater than 0, then setting INMEMORY_FORCE=CELLMEMORY_LEVEL is equivalent to setting INMEMORY_FORCE=DEFAULT. The IM column store is enabled, even if you only use CellMemory.

2.155 INMEMORY_MAX_POPULATE_SERVERS

INMEMORY_MAX_POPULATE_SERVERS specifies the maximum number of background populate servers to use for In-Memory Column Store (IM column store) population, so that these servers do not overload the rest of the system.

Property	Description
Parameter type	Integer
Default value	Half of the value of CPU_COUNT or the PGA_AGGREGATE_TARGET value divided by 512M, whichever is less. See the "CPU_COUNT" description for information about how CPU_COUNT is calculated.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to a value based on the number of cores in the system.
Basic	No
Oracle RAC	All instances should use the same value.

This parameter has meaning only if the INMEMORY_SIZE parameter is also set to a positive value.

The value to use for this parameter depends on the number of cores in the system. A certain percentage of CPU should be allocated for in-memory background population, and this parameter should be set accordingly. You can also set this parameter to 0 to temporarily disable populate tasks on the system from executing.

Note

Be careful not to set the value of this parameter too high. If it is set close to the number of cores or higher, no CPU could be left for the rest of the system to run.

① **Note**

The IM column store is not populated if this parameter is set to 0.

① **See Also**

- ["INMEMORY_CLAUSE_DEFAULT"](#)
- ["INMEMORY_FORCE"](#)
- ["INMEMORY_QUERY"](#)

- *Oracle Database In-Memory Guide* for more information about the IM column store

2.156 INMEMORY_OPTIMIZED_ARITHMETIC

INMEMORY_OPTIMIZED_ARITHMETIC encodes the NUMBER data type in in-memory tables compressed with QUERY LOW as a fixed-width native integer scaled by a common exponent.

Property	Description
Parameter type	String
Syntax	INMEMORY_OPTIMIZED_ARITHMETIC = { ENABLE DISABLE }
Default value	DISABLE
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different values can be specified on different instances.

The Oracle Database NUMBER format can incur a significant performance overhead when executing queries because arithmetic operations cannot be performed natively in hardware.

When INMEMORY_OPTIMIZED_ARITHMETIC is set to ENABLE, for tables compressed with QUERY LOW, NUMBER columns are encoded as a fixed-width native integer scaled by a common exponent. This In-Memory optimized number format enables fast calculations using SIMD hardware. By using SIMD vector processing, arithmetic operations, simple aggregations, and group-by aggregations can benefit significantly.

Not all row sources in the query processing engine have support for the In-Memory optimized number format. Therefore, the IM column store must store both the traditional Oracle Database NUMBER data type and the In-Memory optimized number type. This means that the acceleration in analytic query performance comes at a cost of increased space overhead.

When INMEMORY_OPTIMIZED_ARITHMETIC is set to DISABLE (the default), the database does not use the optimized encoding.

If `INMEMORY_OPTIMIZED_ARITHMETIC` is set to `ENABLE` and then to `DISABLE`, the optimized number format for existing IMCUs is not dropped immediately. Instead, as the IM column store repopulates IMCUs, the new IMCUs do not use the optimized encoding.

① See Also

Oracle Database In-Memory Guide for details about the improved performance and increased space overhead when `INMEMORY_OPTIMIZED_ARITHMETIC` is enabled

2.157 INMEMORY_QUERY

`INMEMORY_QUERY` is used to enable or disable in-memory queries for the entire database at the session or system level.

Property	Description
Parameter type	String
Syntax	<code>INMEMORY_QUERY = { ENABLE DISABLE }</code>
Default value	<code>ENABLE</code>
Modifiable	<code>ALTER SESSION</code> , <code>ALTER SYSTEM</code>
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	All instances should use the same value.

This parameter is helpful when you want to test workloads with and without the use of the In-Memory Column Store (IM column store).

This parameter enables in-memory queries for the entire database by default when the `INMEMORY_SIZE` parameter is specified.

Set this parameter to `DISABLE` if you want to disable in-memory queries.

① See Also

- *Oracle Database In-Memory Guide* for more information about the IM column store

2.158 INMEMORY_SIZE

INMEMORY_SIZE sets the size of the In-Memory Area, which contains the IM Column Store (IM column store) on a database instance.

Property	Description
Parameter type	Big integer
Syntax	INMEMORY_SIZE = <i>integer</i> [K M G]
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to the amount of memory left in the SGA after other allocations
Basic	No
Oracle RAC	All instances should use the same value.

The default value is 0, which means that the IM column store is not used.

The database must be restarted after setting this parameter to enable the IM column store.

The minimum size to which this parameter can be set is 100 MB.

Typically this parameter should be set to at least the size needed to accommodate all the tables that will use the IM column store. It can be set higher to allow for growth of those tables or to accommodate other tables that will use the IM column store in the future.

This parameter can also be set per PDB to limit the maximum size of the IM column store for that PDB. Note that the sum of the PDB values do not have to equal the CDB value, and the sum of the PDB values may even be greater than the CDB value.

Unless this parameter is specifically set on a PDB, each PDB inherits the CDB value, which means they can use all of the available IM column store.

The value specified for this parameter counts toward SGA_TARGET. For example, if you set SGA_TARGET to 10 GB and you set INMEMORY_SIZE to 2 GB, then 20% of the SGA_TARGET setting is allocated to the In-Memory Area.

Unlike other SGA components such as the buffer cache and shared pool, the In-Memory Area size is not controlled by automatic memory management. The database does not automatically shrink the In-Memory Area when the buffer cache or shared pool requires more memory, or increase the In-Memory Area when it runs out of space. You can only increase the size of the In-Memory Area by manually adjusting the INMEMORY_SIZE initialization parameter.

In-Memory Dynamic Scans require the Resource Manager. Therefore, the Resource Manager is automatically enabled when you change the value of INMEMORY_SIZE from 0 to a non-zero value. No specific resource plan is required.

Database In-Memory Base Level allows a maximum of 16 GB for the size of the In-Memory area. Therefore, if Database In-Memory Base Level is enabled (the value of the INMEMORY_FORCE initialization parameter is set to BASE_LEVEL), then the value of INMEMORY_SIZE cannot exceed 16 GB for a CDB. In an Oracle RAC environment, the value of INMEMORY_SIZE is limited to 16 GB for each instance.

2.159

INMEMORY_TRICKLE_REPOPULATE_SERVERS_PERCENT

INMEMORY_TRICKLE_REPOPULATE_SERVERS_PERCENT limits the maximum number of background populate servers used for In-Memory Column Store (IM column store) repopulation, as trickle repopulation is designed to use only a small percentage of the populate servers.

Property	Description
Parameter type	Integer
Default value	1
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to 50
Basic	No
Oracle RAC	All instances should use the same value.

The value for this parameter is a percentage of the INMEMORY_MAX_POPULATE_SERVERS initialization parameter value.

For example, if this parameter is set to 5 and INMEMORY_MAX_POPULATE_SERVERS is set to 10, then on average half of a core is used for trickle repopulation.

The default value of 1 is good in most cases. In some cases, if you want to disable trickle repopulate, this parameter can be set to 0. If you want to keep the system more aggressively up to date (at the expense of more background CPU), you can set the parameter to higher values such as 5 or 10.

A value of greater than 50 is not allowed, so that at least half of the populate servers are available for other (re)populate tasks. On some systems, a value of less than 50 can be problematic, depending on other workload.

This parameter has meaning only if the INMEMORY_SIZE parameter is also set to a positive value.

2.160 INMEMORY_VIRTUAL_COLUMNS

INMEMORY_VIRTUAL_COLUMNS controls which user-defined virtual columns are stored as In-Memory virtual columns (IM columns).

Property	Description
Parameter type	String
Syntax	INMEMORY_VIRTUAL_COLUMNS = { ENABLE MANUAL DISABLE }
Default value	MANUAL
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be used on all instances.

IM virtual columns improve query performance by avoiding the necessity of repeated calculations. Also, the database can scan and filter IM virtual columns using techniques such as SIMD vector processing.

These values can be set for the parameter:

- **ENABLE:** For a table or partition that has been enabled for in-memory storage, all virtual columns will be stored in-memory at the default table or partition memcompress level unless:
 - They have been explicitly excluded using the no inmemory syntax.
 - They have been altered to have a different memcompress level than the base table or partition, in which case they will be stored at the specified memcompress level.
- **MANUAL:** This is the default value for the parameter. For a table or partition that has been enabled for in-memory storage, no virtual columns will be stored in-memory unless:
 - They have been explicitly marked for inmemory, in which case they will be stored in-memory at the table or partition memcompress level.
 - They have been marked for inmemory with a different memcompress level than the base table or partition, in which case they will be stored at the specified memcompress level.
- **DISABLE:** For a table or partition that has been enabled for in-memory storage, no virtual columns will ever be stored in-memory. Any changes to the inmemory_column_clause for a virtual column including changes in memcompress level will be recorded, but not acted upon with regards to population of virtual columns.

📘 See Also

- ["INMEMORY_EXPRESSIONS_USAGE"](#)
- *Oracle Database In-Memory Guide* for more information about IM virtual columns

2.161 INSTANCE_ABORT_DELAY_TIME

INSTANCE_ABORT_DELAY_TIME specifies how much time to delay an internal initiated instance termination (in seconds), such as when an irrecoverable process dies or an irrecoverable instance error occurs.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 and higher
Basic	No
Oracle RAC	Different instances should use the same value.

This parameter does not apply to a SHUTDOWN ABORT operation or any instance termination necessary to implement a user command.

Setting this parameter to a value greater than 0 enables a DBA to take some actions before a termination occurs due to an irrecoverable error. Note that since the instance is in an irrecoverable state, the DBA should not be too ambitious with the actions taken because some processes and/ or resources may be corrupted or unavailable, making complex actions impossible. Oracle does not guarantee what it is possible when an instance is in this state. A message is written to the alert log when the delayed termination is initiated. The value will not apply in the case of PMON death.

The larger the specified value, the longer the instance stays up, and the potential increases for other problems to occur. If you set this parameter, Oracle recommends setting it to a value between 0 and 60.

2.162 INSTANCE_GROUPS

Used with the PARALLEL_INSTANCE_GROUP parameter, INSTANCE_GROUPS lets you restrict parallel query operations to a limited number of instances.

Property	Description
Parameter type	String
Syntax	INSTANCE_GROUPS = <i>group_name</i> [, <i>group_name</i>] ...
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Range of values	One or more instance group names, separated by commas
Basic	No
Oracle RAC	Multiple instances can have different values.

Note

The `INSTANCE_GROUPS` parameter is deprecated. It is retained for backward compatibility only.

`INSTANCE_GROUPS` is an Oracle RAC parameter that you can specify only in parallel mode.

This parameter specifies one or more instance groups and assigns the current instance to those groups. If one of the specified groups is also specified in the `PARALLEL_INSTANCE_GROUP` parameter, then Oracle allocates query processes for a parallel operation from this instance.

See Also

- *Oracle Real Application Clusters Administration and Deployment Guide* for more information on parallel query execution in a Real Application Clusters environment
- ["PARALLEL_INSTANCE_GROUP"](#)

2.163 INSTANCE_MODE

`INSTANCE_MODE` indicates whether the instance is read-write, read-only, or read-mostly.

Property	Description
Parameter type	String
Syntax	<code>INSTANCE_MODE = { READ-WRITE READ-ONLY READ-MOSTLY }</code>
Default value	<code>READ-WRITE</code>
Modifiable	No
Basic	No
Oracle RAC	See the Oracle RAC restrictions in the initialization parameter description below.

A `READ-WRITE` instance is a regular Oracle instance.

A `READ-ONLY` instance is an Oracle instance that can only be opened in read-only mode.

A `READ-MOSTLY` instance is an Oracle instance that performs very few database writes.

These restrictions apply when setting the parameter on different Oracle Real Application Clusters (Oracle RAC) instances:

1. There must be at least one running instance with `INSTANCE_MODE` set to `READ-WRITE` at any given time. If the only instance with `INSTANCE_MODE` set to `READ-WRITE` goes down, all other instances will be brought down by Oracle automatically.
2. An instance with `INSTANCE_MODE` set to `READ-ONLY` cannot be the first instance to open a database or any pluggable database (PDB) among all instances in an Oracle RAC cluster.
3. Oracle does not support co-existence of an instance with `INSTANCE_MODE` set to `READ-ONLY` and an instance with `INSTANCE_MODE` set to `READ-MOSTLY` in the same Oracle RAC cluster.

2.164 INSTANCE_NAME

In an Oracle Real Application Clusters environment, multiple instances can be associated with a single database service. Clients can override Oracle's connection load balancing by specifying a particular instance by which to connect to the database. `INSTANCE_NAME` specifies the unique name of this instance.

Property	Description
Parameter type	String
Syntax	<code>INSTANCE_NAME = instance_id</code>
Default value	The instance's SID Note: The SID identifies the instance's shared memory on a host, but may not uniquely distinguish this instance from other instances.
Modifiable	No
Modifiable in a PDB	No
Range of values	Alphanumeric ASCII characters and the underscore (_) character, up to a maximum of 255 characters
Basic	No

In a single-instance database system, the instance name is usually the same as the database name.

See Also

Oracle Real Application Clusters Administration and Deployment Guide and *Oracle Database Net Services Administrator's Guide* for more information

2.165 INSTANCE_NUMBER

`INSTANCE_NUMBER` specifies a unique number that maps the instance to one free list group for each database object created with storage parameter `FREELIST GROUPS`.

Property	Description
Parameter type	Integer
Default value	0 (zero)
Modifiable	No
Modifiable in a PDB	No
Range of values	1 to maximum number of instances specified when the database was created
Basic	Yes
Oracle RAC	You must set this parameter for every instance, and all instances must have different values.

`INSTANCE_NUMBER` is an Oracle RAC parameter that can be specified in parallel mode or exclusive mode.

The `INSTANCE` parameter of the `ALTER TABLE ... ALLOCATE EXTENT` statement assigns an extent to a particular free list group. If you set `INSTANCE_NUMBER` to the value specified for the `INSTANCE` parameter, the instance uses that extent for inserts and for updates that expand rows.

The practical maximum value of this parameter is the maximum number of instances specified in the `CREATE DATABASE` statement. The absolute maximum is operating system-dependent.

See Also

Oracle Real Application Clusters Administration and Deployment Guide for more information

2.166 INSTANCE_TYPE

`INSTANCE_TYPE` specifies whether the instance is a database instance, an Oracle Automatic Storage Management (Oracle ASM) instance, or an Oracle ASM Proxy instance.

Property	Description
Parameter type	String
Syntax	<code>INSTANCE_TYPE = { RDBMS ASM ASMPROXY }</code>
Default value	RDBMS
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	Multiple instances must have the same value.

- Values
- RDBMS
The instance is a database instance.
 - ASM
The instance is an Oracle ASM instance.
 - ASMPROXY
The instance is an Oracle ASM proxy instance.

See Also

Oracle Automatic Storage Management Administrator's Guide for information about managing Oracle Flex ASM

2.167 JAVA_JIT_ENABLED

JAVA_JIT_ENABLED enables or disables the Just-in-Time (JIT) compiler for the Oracle Java Virtual Machine (OracleJVM) environment.

Property	Description
Parameter type	Boolean
Default value	Operating system-dependent
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No

For platforms that support the JIT compiler, the default value of this parameter is true; otherwise the default value is false. Attempting to set this parameter to true on unsupported platforms will result in an error.

See Also

Oracle Database Java Developer's Guide for more information about setting this parameter

2.168 JAVA_MAX_SESSIONSPACE_SIZE

JAVA_MAX_SESSIONSPACE_SIZE specifies (in bytes) the maximum amount of session space made available to a Java program executing in the server.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	No
Modifiable in a PDB	No
Range of values	0 to 2 GB - 1
Basic	No

Java session space is the memory that holds Java state from one database call to another. When a user's session-duration Java state attempts to exceed the amount specified by JAVA_MAX_SESSIONSPACE_SIZE, the Java virtual machine terminates the session with an out-of-memory failure.

① See Also

- *Oracle Database Java Developer's Guide* for more information about this parameter
- ["JAVA_SOFT_SESSIONSPACE_LIMIT"](#)

2.169 JAVA_POOL_SIZE

JAVA_POOL_SIZE specifies (in bytes) the size of the Java pool, from which the Java memory manager allocates most Java state during run-time execution. This memory includes the shared in-memory representation of Java method and class definitions, as well as the Java objects that are migrated to the Java session space at end-of-call.

Property	Description
Parameter type	Big integer
Syntax	JAVA_POOL_SIZE = <i>integer</i> [K M G]
Default value	If SGA_TARGET is set: If the parameter is not specified, then the default is 0 (internally determined by the Oracle Database). If the parameter is specified, then the user-specified value indicates a minimum value for the memory pool. If SGA_TARGET is not set: 24 MB, rounded up to the nearest granule size
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Minimum: 0 (values greater than zero are rounded up to the nearest granule size) Maximum: operating system-dependent
Basic	No

① See Also

Oracle Database Java Developer's Guide for more information about this parameter

2.170 JAVA_SOFT_SESSIONSPACE_LIMIT

JAVA_SOFT_SESSIONSPACE_LIMIT specifies (in bytes) a **soft limit** on Java memory usage in a session, as a means to warn you if a user's session-duration Java state is using too much memory.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	No
Modifiable in a PDB	No
Range of values	0 to 2 GB - 1

Property	Description
Basic	No

Java session space is the memory that holds Java state from one database call to another. When a user's session-duration Java state exceeds the size specified by `JAVA_SOFT_SESSIONSPACE_LIMIT`, Oracle generates a warning that goes into the trace files.

See Also

- *Oracle Database Java Developer's Guide* for more information on this parameter
- "[JAVA_MAX_SESSIONSPACE_SIZE](#)"

2.171 JOB_QUEUE_PROCESSES

`JOB_QUEUE_PROCESSES` specifies the maximum number of job workers per CDB or PDB that can be created for the execution of `DBMS_JOB` jobs and Oracle Scheduler (`DBMS_SCHEDULER`) jobs.

Property	Description
Parameter type	Integer
Default value	Derived. The lesser value of: • <code>CPU_COUNT * 20</code> • <code>SESSIONS / 4</code> If the result of the above derivation is less than twice the number of open containers in the CDB, then the value of this parameter is adjusted to equal twice the number of open containers in the CDB. Containers include <code>CDB\$ROOT</code> , <code>PDB\$SEED</code> , PDBs, application roots, application seeds, and application PDBs. You can obtain the number of open containers in a CDB with the following query: <pre>SELECT COUNT(*) FROM V\$CONTAINERS WHERE open_mode != 'MOUNTED';</pre>
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to 4000
Basic	No
Oracle RAC	Multiple instances can have different values.

`DBMS_JOB` and Oracle Scheduler share the same job coordinator and job workers, and they are both controlled by the `JOB_QUEUE_PROCESSES` parameter. The actual number of job workers created for Oracle Scheduler jobs is auto-tuned by the Scheduler depending on several factors, including available resources, Resource Manager settings, and currently running jobs. However, the combined total number of job workers running `DBMS_JOB` jobs and Oracle Scheduler jobs in a CDB or PDB can never exceed the value of `JOB_QUEUE_PROCESSES` for that CDB or PDB.

The default value for `JOB_QUEUE_PROCESSES` provides a compromise between quality of service for applications and reasonable use of system resources. However, it is possible that the default value does not suit every environment. In such cases, you can use the following guidelines to fine tune this parameter:

- In a CDB root:
Set `JOB_QUEUE_PROCESSES` to the maximum number of job workers that can be used simultaneously in the entire CDB. Oracle recommends that you set the value of this parameter to at least twice the number of open containers in the CDB, otherwise, there might be severe starvation between PDBs trying to run multiple jobs. If `JOB_QUEUE_PROCESSES` is set to 0 in a CDB root, then `DBMS_JOB` and Oracle Scheduler jobs cannot run in the CDB root or in any PDB, regardless of the `JOB_QUEUE_PROCESSES` setting at the PDB level.
- In a PDB:
Set `JOB_QUEUE_PROCESSES` to the maximum number of job workers that can be used simultaneously in the PDB. The actual number depends on the resources assigned by Resource Manager and the demand in other containers. When multiple PDBs request jobs, Oracle Scheduler attempts to give all PDBs a fair share of the processes. Oracle recommends that you set the value of this parameter to at least 2 in a PDB. However, if you do not want to run `DBMS_JOB` and Oracle Scheduler jobs in a PDB, then set `JOB_QUEUE_PROCESSES` to 0 in the PDB.

Materialized views and AutoTask use Oracle Scheduler for automatic refreshes. Setting `JOB_QUEUE_PROCESS` to 0 will disable these features and any other features that use Oracle Scheduler or `DBMS_JOB`.

❗ Note

`DBMS_JOB` is deprecated in Oracle Database 12c Release 2 (12.2.0.1) and may be removed in a future release. Oracle recommends that you use `DBMS_SCHEDULER` instead.

❗ See Also

- *Oracle Database PL/SQL Packages and Types Reference* for more information on the `DBMS_SCHEDULER` package
- *Oracle Database Data Warehousing Guide* for more information on managing materialized views
- *Oracle Database Advanced Queuing User's Guide* for more information about job queue processes
- *Oracle Database Administrator's Guide* for more information about the maximum number of scheduler job processes

2.172 LARGE_POOL_SIZE

`LARGE_POOL_SIZE` specifies (in bytes) the size of the large pool allocation heap.

Property	Description
Parameter type	Big integer
Syntax	LARGE_POOL_SIZE = <i>integer</i> [K M G]
Default value	If SGA_TARGET is set, but a value is not specified for LARGE_POOL_SIZE, then the default is 0 (internally determined by the Oracle database). If LARGE_POOL_SIZE is specified, then the user-specified value indicates a minimum value for the memory pool. If SGA_TARGET is not set, then the default is 0.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Minimum: the granule size Maximum: operating system-dependent
Basic	No

The large pool allocation heap is used in shared server systems for session memory, by parallel execution for message buffers, and by backup processes for disk I/O buffers. Parallel execution allocates buffers out of the large pool only when SGA_TARGET is set.

You can specify the value of this parameter using a number, optionally followed by K or M to specify kilobytes or megabytes, respectively. If you do not specify K or M, then the number is taken as bytes.

① See Also

Oracle Database Performance Tuning Guide for more information on setting this parameter

2.173 LDAP_DIRECTORY_ACCESS

LDAP_DIRECTORY_ACCESS specifies whether Oracle refers to Oracle Internet Directory for user authentication information.

Property	Description
Parameter type	String
Syntax	LDAP_DIRECTORY_ACCESS = { NONE PASSWORD SSL }
Default value	NONE
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

If directory access is turned on, then this parameter also specifies how users are authenticated.

Values

- NONE

Oracle does not refer to Oracle Internet Directory for Enterprise User Security information.

- **PASSWORD**

Oracle tries to connect to the enterprise directory service using the database password stored in the database wallet. If that fails, then the Oracle Internet Directory connection fails and the database will not be able to retrieve enterprise roles and schema mappings upon enterprise user login.

- **SSL**

Oracle tries to connect to Oracle Internet Directory using SSL.

See Also

Oracle Database Enterprise User Security Administrator's Guide for more information on Enterprise User Security

Using LDAP_DIRECTORY_ACCESS with PDBs

PDBs can use password or SSL authentication with Oracle Internet Directory for EUS, or Microsoft Active Directory for CMU, when the parameter value is set accordingly.

The LDAP_DIRECTORY_ACCESS initialization parameter is PDB-specific and can be set as follows:

- When you use the ALTER SYSTEM command to set the value of LDAP_DIRECTORY_ACCESS while connected to the CDB root:
 - If you specify the CONTAINER=ALL clause, then the setting applies to the CDB root and all PDBs.
 - If you omit the CONTAINER=ALL clause, or specify the CONTAINER=CURRENT clause, then the setting applies only to the CDB root.
- When you use the ALTER SYSTEM command to set the value of LDAP_DIRECTORY_ACCESS while connected to a PDB, the setting applies only to that PDB.
- When you set the value of LDAP_DIRECTORY_ACCESS in an initialization parameter file, the setting applies only to the CDB root; it does not apply to the PDBs.

For a CDB, if the wallet location is not specified in `sqlnet.ora`, then the default database wallet path is:

ORACLE_BASE/admin/db-unique-name/pdb-GUID/wallet (if ORACLE_BASE is set)

or:

ORACLE_HOME/admin/db-unique-name/pdb-GUID/wallet (if ORACLE_BASE is not set)

The exception is for the root database, which has a default wallet path of:

ORACLE_BASE/admin/db-unique-name/wallet (if ORACLE_BASE is set)

or:

ORACLE_HOME/admin/db-unique-name/wallet (if ORACLE_BASE is not set)

All PDBs in a CDB have the same database unique name. By placing wallets in the default location, each PDB can have its own identity.

Note that because there is only one `sqlnet.ora` file for a CDB, the wallet location in `sqlnet.ora` is only used by the CDB root container. Because each PDB must have its own wallet, a PDB wallet will be specified by the *pdb-GUID* under the wallet location in `sqlnet.ora`.

For the root container of a CDB, the wallet location is:

`WALLET_LOCATION_specified_in_sqlnet.ora`

For each PDB of the CDB, the wallet location is:

`WALLET_LOCATION_specified_in_sqlnet.ora/pdb-GUID/`

Note

Oracle databases are registered with Oracle Internet Directory using Database Configuration Assistant (DBCA). For registration with Oracle Internet Directory to work, all the PDBs for a CDB must be registered using DBCA.

Using LDAP_DIRECTORY_ACCESS with Non-CDBs

For non-CDBs, if the wallet location is not specified in `sqlnet.ora`, then the default database wallet path is:

`ORACLE_BASE/admin/db-unique-name/wallet` (if `ORACLE_BASE` is set)

or:

`ORACLE_HOME/admin/db-unique-name/wallet` (if `ORACLE_BASE` is not set)

See Also

Oracle Database Enterprise User Security Administrator's Guide for an example of setting the value of this parameter to SSL in the server parameter file using ALTER SYSTEM

2.174 LDAP_DIRECTORY_SYSAUTH

LDAP_DIRECTORY_SYSAUTH allows or disallows directory-based authorization for users granted administrative privileges, such as SYSDBA, SYSOPER, SYSBACKUP, SYSDG, and SYSKM.

Property	Description
Parameter type	String
Syntax	LDAP_DIRECTORY_SYSAUTH = { yes no }
Default value	no
Modifiable	No
Modifiable in a PDB	Yes
Basic	Yes

When `LDAP_DIRECTORY_SYSAUTH` is set to yes, directory users are allowed to connect to the database as `SYSDBA`, `SYSOPER`, `SYSBACKUP`, `SYSDG`, or `SYSKM`, if they have mapped database global users that are granted corresponding administrative privileges such as `SYSDBA`, `SYSOPER`, `SYSBACKUP`, `SYSDG`, and `SYSKM`.

When `LDAP_DIRECTORY_SYSAUTH` is set to no, directory users are not allowed to connect to the database as `SYSDBA`, `SYSOPER`, `SYSBACKUP`, `SYSDG`, or `SYSKM`, even if they have mapped database global users that are granted corresponding administrative privileges such as `SYSDBA`, `SYSOPER`, `SYSBACKUP`, `SYSDG`, and `SYSKM`.

When modifying this parameter in a PDB, use the `ALTER SYSTEM` command with `SCOPE=SPFILE`.

2.175 LICENSE_MAX_SESSIONS

`LICENSE_MAX_SESSIONS` specifies the maximum number of concurrent user sessions allowed.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to number of session licenses
Basic	No
Oracle RAC	Multiple instances can have different values, but the total for all instances mounting a database should be less than or equal to the total number of sessions licensed for that database.

Note

Oracle no longer offers licensing by the number of concurrent sessions. Therefore the `LICENSE_MAX_SESSIONS` and `LICENSE_SESSIONS_WARNING` initialization parameters have been deprecated.

When the limit specified by `LICENSE_MAX_SESSIONS` is reached, only users with the `RESTRICTED SESSION` privilege can connect to the database. Users who are not able to connect receive a warning message indicating that the system has reached maximum capacity.

A zero value indicates that concurrent usage (session) licensing is not enforced. If you set this parameter to a nonzero number, you might also want to set `LICENSE_SESSIONS_WARNING` (see "[LICENSE_SESSIONS_WARNING](#)").

Do not enable both concurrent usage licensing and user licensing. Set either `LICENSE_MAX_SESSIONS` or `LICENSE_MAX_USERS` to zero.

See Also

Oracle Database Administrator's Guide for more information about this parameter

2.176 LICENSE_MAX_USERS

LICENSE_MAX_USERS specifies the maximum number of users you can create in the database.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to number of user licenses
Basic	No
Oracle RAC	Oracle recommends that multiple instances have the same value.

When you reach the limit specified by LICENSE_MAX_USERS, you cannot create more users. You can, however, increase the limit.

Note

Oracle no longer offers licensing by the number of concurrent sessions. Therefore the LICENSE_MAX_SESSIONS and LICENSE_SESSIONS_WARNING initialization parameters have been deprecated.

See Also

Oracle Database Administrator's Guide for more information about this parameter

2.177 LICENSE_SESSIONS_WARNING

LICENSE_SESSIONS_WARNING specifies a warning limit on the number of concurrent user sessions.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to value of LICENSE_MAX_SESSIONS parameter
Basic	No
Oracle RAC	Multiple instances can have different values.

Note

Oracle no longer offers licensing by the number of concurrent sessions. Therefore the LICENSE_MAX_SESSIONS and LICENSE_SESSIONS_WARNING initialization parameters have been deprecated.

When this limit specified by LICENSE_SESSIONS_WARNING is reached, additional users can connect, but Oracle writes a message in the alert log for each new connection. Users with RESTRICTED SESSION privilege who connect after the limit is reached receive a warning message stating that the system is nearing its maximum capacity.

If this parameter is set to zero, no warning is given as you approach the concurrent usage (session) limit. If you set this parameter to a nonzero number, you should also set LICENSE_MAX_SESSIONS (see "[LICENSE_MAX_SESSIONS](#)").

See Also

- *Oracle Database Administrator's Guide* for more information on setting this parameter

2.178 LISTENER_NETWORKS

LISTENER_NETWORKS specifies one or more sets of local, forward, and remote listeners for cross-registration. All listeners within the same *network_name* will cross-register.

Property	Description
Parameter type	String
Syntax	LISTENER_NETWORKS = '((NAME= <i>network_name</i>) (LOCAL_LISTENER=["] <i>listener_address</i> [,...]"]) (FORWARD_LISTENER=["] <i>listener_address</i> [,...]"]) [(REMOTE_LISTENER=["] <i>listener_address</i> [,...]"])]') [,...]
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

If a *network_name* is specified multiple times, then the resulting listener set is the union of each specification. This can be used to specify sets that require more than 255 characters, which is the per element limit.

The *listener_address* specifies a string that is an address, address list, or an alias that resolves to an address or address list of Oracle Net listeners. If an alias, the address or address list is specified in the TNSNAMES.ORA file or another address repository as configured for your system.

If a comma is used to specify a *listener_address* list, then the set of addresses must be surrounded by double quotes.

① See Also

- ["LOCAL_LISTENER"](#)
- ["FORWARD_LISTENER"](#)
- ["REMOTE_LISTENER"](#)
- *Oracle Database Net Services Administrator's Guide* for more information on setting this parameter

2.179 LOB_SIGNATURE_ENABLE

LOB_SIGNATURE_ENABLE is used to enable or disable the LOB locator signature feature.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	Multiple instances must have the same value.

You can secure your LOBs by enabling the LOB locator signature feature. A LOB locator is a pointer to the location of a large object (LOB) value. If the LOB_SIGNATURE_ENABLED initialization parameter is set to true, then when you create a LOB, Oracle Database automatically assigns a signature to the LOB locator. When Oracle Database receives a request from a client, it uses the signature to determine if any tampering with the LOB locator has occurred.

When this parameter is set to true, you also have the option of further securing your LOBs by encrypting your LOB locator signature keys.

① See Also

Oracle Database Security Guide for more information on LOB locator signatures and encrypting LOB locator signature keys

2.180 LOCAL_LISTENER

LOCAL_LISTENER specifies a network name that resolves to an address or address list of Oracle Net local listeners (that is, listeners that run on the same system as this instance). The address or address list is specified in the TNSNAMES.ORA file or other address repository as configured for your system.

Property	Description
Parameter type	String
Syntax	LOCAL_LISTENER = <i>network_name</i>
Default value	(ADDRESS = (PROTOCOL=TCP)(HOST= <i>hostname</i>)(PORT=1521)) where <i>hostname</i> is the network name of the local host.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

📘 See Also

- *Oracle Database Concepts* for more information about listener processes and dispatcher processes
- *Oracle Database Net Services Administrator's Guide* and your operating system-specific Oracle documentation for more information about specifying network addresses for the protocols on your system

2.181 LOCK_NAME_SPACE

LOCK_NAME_SPACE specifies the namespace that the distributed lock manager (DLM) uses to generate lock names.

Property	Description
Parameter type	String
Syntax	LOCK_NAME_SPACE = <i>namespace</i>
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Range of values	Up to 8 alphanumeric characters. No special characters allowed.
Basic	No

📘 Note

The LOCK_NAME_SPACE parameter is deprecated. It is retained for backward compatibility only.

Consider setting this parameter if a standby or clone database has the same database name on the same cluster as the primary database.

If the standby database resides on the same file system as the primary database, then set LOCK_NAME_SPACE in the standby parameter file to a distinct value such as the following:

```
LOCK_NAME_SPACE = standby
```

2.182 LOCK_SGA

LOCK_SGA locks the entire SGA into physical memory.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	No
Range of values	true false
Basic	No

It is usually advisable to lock the SGA into real (physical) memory, especially if the use of virtual memory would include storing some of the SGA using disk space. This parameter is ignored on platforms that do not support it.

① See Also

Oracle Database Performance Tuning Guide for more information about using this parameter

2.183 LOG_ARCHIVE_CONFIG

LOG_ARCHIVE_CONFIG enables or disables the sending of redo logs to remote destinations and the receipt of remote redo logs, and specifies the unique database names (DB_UNIQUE_NAME) for each database in the Data Guard configuration.

Property	Description
Parameter type	String
Syntax	<pre>LOG_ARCHIVE_CONFIG = { [SEND NOSEND] [RECEIVE NORECEIVE] [DG_CONFIG=(remote_db_unique_name1 [, ... remote_db_unique_name30) NODG_CONFIG] }</pre>
Default value	NULL
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

Values

- SEND

- Enables the sending of redo logs to remote destinations
- NOSEND
 - Disables the sending of redo logs to remote destinations
- RECEIVE
 - Enables the receipt of remotely archived redo logs
- NORECEIVE
 - Disables the receipt of remotely archived redo logs
- DG_CONFIG
 - Specifies a list of up to 30 unique database names (defined with the DB_UNIQUE_NAME initialization parameter) for all of the databases in the Data Guard configuration.
- NODG_CONFIG
 - Eliminates the list of service provider names previously specified with the DG_CONFIG option.

When this parameter has not been set, its default value is NULL. However, the NULL value is treated as if the parameter has been set to 'SEND, RECEIVE, NODG_CONFIG'.

2.184 LOG_ARCHIVE_DEST

Use LOG_ARCHIVE_DEST to specify the destination to which redo log files will be archived.

Property	Description
Parameter type	String
Syntax	LOG_ARCHIVE_DEST = <i>filespec</i>
Default value	Null
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Any valid path or device name, except raw partitions
Basic	No
Oracle RAC	Multiple instances can have different values.

Note

For Enterprise Edition users, this parameter has been deprecated in favor of the LOG_ARCHIVE_DEST_1 parameters. If Oracle Enterprise Edition is not installed or it is installed, but you have not specified any LOG_ARCHIVE_DEST_1 parameters, this parameter is valid.

LOG_ARCHIVE_DEST is applicable only if you are running the database in ARCHIVELOG mode or are recovering a database from archived redo logs. LOG_ARCHIVE_DEST is incompatible with the LOG_ARCHIVE_DEST_1 parameters, and must be defined as the null string ('') or (' ') when any LOG_ARCHIVE_DEST_1 parameter has a value other than a null string. Use a text string to specify the default location and root of the disk file or tape device when archiving redo log files.

(Archiving to tape is not supported on all operating systems.) The value cannot be a raw partition.

If LOG_ARCHIVE_DEST is not explicitly defined and all the LOG_ARCHIVE_DEST_ *n* parameters have null string values, LOG_ARCHIVE_DEST is set to an operating system-specific default value on instance startup.

To override the destination that this parameter specifies, either specify a different destination for manual archiving or use the SQL*Plus statement `ARCHIVE LOG START filespec` for automatic archiving, where *filespec* is the new archive destination. To permanently change the destination, use the statement `ALTER SYSTEM SET LOG_ARCHIVE_DEST = filespec`, where *filespec* is the new archive destination.

Neither LOG_ARCHIVE_DEST nor LOG_ARCHIVE_FORMAT have to be complete file or directory specifiers themselves; they only need to form a valid file path after the variables are substituted into LOG_ARCHIVE_FORMAT and the two parameters are concatenated together.

① See Also

- *Oracle Database Backup and Recovery User's Guide*
- "[LOG_ARCHIVE_DUPLEX_DEST](#)", "[LOG_ARCHIVE_MIN_SUCCEED_DEST](#)", and "[V\\$ARCHIVE_DEST](#)" for more information on setting this parameter
- Your Oracle operating system-specific documentation for the default value and for an example of how to specify the destination path or file name using LOG_ARCHIVE_DEST

2.185 LOG_ARCHIVE_DEST_

The LOG_ARCHIVE_DEST_ *n* initialization parameter defines up to 31 (where *n* = 1, 2, 3, ... 31) destinations, each of which *must* specify either the LOCATION or the SERVICE attribute to specify where to archive the redo data.

Property	Description
Parameter type	String

Property	Description
Syntax	<pre>LOG_ARCHIVE_DEST_<i>n</i> [1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31] = { null_string { LOCATION=<i>path_name</i> SERVICE=<i>service_name</i> } [MANDATORY] [REOPEN[=<i>seconds</i>]] [DELAY[=<i>minutes</i>]] [ENCRYPTION=ENABLED DISABLED] [GROUP=<i>group</i>] [NOREGISTER] [PRIORITY=<i>priority</i>] [TEMPLATE=<i>template</i>] [ALTERNATE=<i>destination</i>] [MAX_FAILURE=<i>count</i>] [SYNC ASYNC] [AFFIRM NOAFFIRM] [NET_TIMEOUT=<i>seconds</i>] [VALID_FOR=(<i>redo_log_type</i>,<i>database_role</i>)] [DB_UNIQUE_NAME] [COMPRESSION={ENABLE DISABLE ZLIB LZ0}] }</pre>
Default value	There is no default value.
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	No
Basic	Yes

All other attributes except the LOCATION or SERVICE attributes are optional. Note that whether you are specifying the LOCATION attribute or the SERVICE attribute, it must be the first attribute supplied in the list of attributes.

If you choose not to enter any attributes, then you can specify a NULL string by entering the following:

```
LOG_ARCHIVE_DEST_n=' ';
```

You set the attributes for the LOG_ARCHIVE_DEST_n initialization parameter to control different aspects of how redo transport services transfer redo data from a production or primary database destination to another (standby) database destination. You can query the V\$ARCHIVE_DEST view to see the current attribute settings for each destination (n).

Note

Some of the attributes for this parameter are deprecated, but are being retained for backward compatibility. See "[Deprecated Attributes for LOG_ARCHIVE_DEST_n](#)".

For every LOG_ARCHIVE_DEST_n initialization parameter that you define, you must specify a corresponding LOG_ARCHIVE_DEST_STATE_n parameter. The LOG_ARCHIVE_DEST_STATE_n (where n is an integer from 1 to 31) initialization parameter specifies whether the corresponding destination is currently enabled or disabled.

① See Also

["LOG_ARCHIVE_DEST_STATE_n"](#)

Destinations LOG_ARCHIVE_DEST_11 through LOG_ARCHIVE_DEST_31 do not support the SYNC, ARCH, LOCATION, MANDATORY, or ALTERNATE attributes, and cannot be specified as the target of the ALTERNATE attribute.

LOG_ARCHIVE_DEST_11 through LOG_ARCHIVE_DEST_31 can only be used when the COMPATIBLE initialization parameter is set to 11.2.0 or higher.

Values**① See Also**

Oracle Data Guard Concepts and Administration for detailed descriptions of all the values listed in this section

- AFFIRM and NOAFFIRM

Control whether a redo transport destination acknowledges received redo data before or after writing it to the standby redo log. The default is NOAFFIRM.

- ALTERNATE=LOG_ARCHIVE_DEST_n

Specifies an alternate archiving destination to be used when the original destination fails. There is no default value; if an alternate destination is not specified, then archiving does not automatically change to another destination if the original destination fails.

- ASYNC

The redo data generated by a transaction need not have been received at a destination which has this attribute before that transaction can commit. This is the default behavior if neither SYNC nor ASYNC is specified.

- COMPRESSION

Indicates whether network compression is enabled or disabled, or disabled, or whether the ZLIB or LZO algorithm is used. The possible values include:

- DISABLE: Compression is disabled.
- ENABLE: Compression is enabled. The ZLIB compression algorithm is used.
- ZLIB: ZLIB compression is used.
- LZ0: LZO compression is used.

The Advanced Compression option is required in order to use the COMPRESSION attribute.

- DB_UNIQUE_NAME=*name*

Specifies a unique name for the database at this destination. You must specify a name; there is no default value.

- DELAY[=*minutes*]

Specifies a minimum time lag between when redo data is archived on a standby site retrieving redo from a primary and when the archived redo log file is applied to the standby

database or any standbys cascading from it. If you specify the DELAY attribute without a time interval, the default is 30 minutes.

- ENCRYPTION=DISABLE|ENABLE

Controls whether encryption of the redo stream sent to Zero Data Loss Recovery Appliance (Recovery Appliance) is enabled or disabled. The default value for the attribute is DISABLE.

This attribute cannot be used with the COMPRESSION, LOCATION, or SYNC attributes.

To use the ENCRYPTION attribute, you must set the COMPATIBLE initialization parameter to 11.2.0.4 or higher on the protected database.

❗ See Also

Zero Data Loss Recovery Appliance Administrator's Guide for introductory information about Recovery Appliance

- GROUP=*group*

The GROUP attribute is used to specify membership in a specific collection of log archive destinations. Groups are numbered 1 through 8. The default group (GROUP=0) is special in that it cannot be assigned. The default group is populated with all destinations that are not explicitly assigned to a group. All groups other than the default group must consist of a set of remote destinations. No group (other than the default group) can contain local destinations.

- LOCATION=*local_disk_directory* or USE_DB_RECOVERY_FILE_DEST

Specifies either a local file system destination or the directory, file system, or Automatic Storage Management disk group that will serve as the fast recovery area. You must specify this attribute for at least one destination. You can specify either a local disk directory or fast recovery area with the LOCATION attribute. You *must* include either the LOCATION or the SERVICE attribute for each destination to specify where to archive the redo data.

- MANDATORY

Specifies that the transmission of redo data to the destination must succeed before the local online redo log file can be made available for reuse. If the MANDATORY attribute is not specified, then the destination is optional.

- MAX_FAILURE

Controls the consecutive number of times redo transport services attempt to reestablish communication and transmit redo data to a failed destination before the primary database gives up on the destination. See the MAX_FAILURE description in *Oracle Data Guard Concepts and Administration* for usage notes about how this attribute is handled differently in Oracle Database 12c Release 2 (12.2.0.1) and in Oracle Database 12c Release 1 (12.1.0.2).

- NET_TIMEOUT=*seconds*

Specifies the number of seconds the log writer process on the primary system waits for status from the SYNC (NSSn) process before terminating the network connection. The default is 30 seconds.

- NOREGISTER

Indicates that the location of the archived redo log file is not to be recorded at the corresponding destination.

- **PRIORITY=*priority***
The PRIORITY attribute is used to specify preference within a group of log archive destinations. Priorities are numbered 1 through 8. A lower value represents a higher priority. The lowest priority (PRIORITY=8) is special in the sense that if that priority is active then all destinations at that priority will be made active. If any higher priority destination returns to service then that destination will be made active and all low priority destinations will be made inactive because they will be receiving redo from one of the other redo destinations, either through cascading or a Far Sync.
- **REOPEN[=*seconds*]**
Specifies the minimum number of seconds before the archiver processes (ARCn) or the log writer process (LGWR) should try again to access a previously failed destination. The default is 300 seconds.
- **SERVICE=*net_service_name***
Specifies a valid Oracle Net service name (SERVICE=*net_service_name*) that identifies the remote Oracle database instance to which redo data will be sent. Each destination *must* specify either the LOCATION or the SERVICE attribute. There is no default net service name.
- **SYNC**
The redo data generated by a transaction must have been received by every enabled destination which has this attribute before that transaction can commit.
- **TEMPLATE=*filename_template_%t_%s_%r***
Specifies a path name and a file name template for archived redo log files created at a redo transport destination that contain redo data from the database where this attribute is specified. This attribute overrides the value of the LOG_ARCHIVE_FORMAT initialization parameter at a redo transport destination. This attribute does not have a default value.
- **VALID_FOR=(redo_log_type, database_role)**
Identifies when redo transport services can transmit redo data to destinations based on the following factors:
 - redo_log_type—whether online redo log files, standby redo log files, or both are *currently* being archived on the database at this destination
 - database_role—whether the database is *currently* running in the primary or the standby role

Deprecated Attributes for LOG_ARCHIVE_DEST_n

The following attributes are deprecated for the LOG_ARCHIVE_DEST_n parameter. They are retained for backward compatibility only.

Table 2-3 Deprecated Attributes on the LOG_ARCHIVE_DEST_n Initialization Parameter

Deprecated Attribute	Alternative
ARCH	Specify SYNC or ASYNC. ASYNC is the default if neither attribute is specified.
LGWR	Specify SYNC or ASYNC. ASYNC is the default if neither attribute is specified.
OPTIONAL	Destinations are optional by default.

Table 2-3 (Cont.) Deprecated Attributes on the LOG_ARCHIVE_DEST_n Initialization Parameter

Deprecated Attribute	Alternative
VERIFY	None. This attribute is only used with the deprecated ARCH attribute.

In addition, note the following changes to the ASYNC and SYNC attributes:

- The BLOCKS keyword on the ASYNC attribute is no longer needed.
It is no longer necessary to set this keyword because Data Guard dynamically adjusts the block count up or down to an appropriate number of blocks, as necessary.
- The PARALLEL and NOPARALLEL keywords on the SYNC attribute are no longer needed.

2.186 LOG_ARCHIVE_DEST_STATE_n

The LOG_ARCHIVE_DEST_STATE_n parameters (where $n = 1, 2, 3, \dots, 31$) specify the availability state of the corresponding destination.

Property	Description
Parameter type	String
Syntax	LOG_ARCHIVE_DEST_STATE_[1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31] = { enable defer alternate reset }
Default value	enable
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	No
Basic	Yes

The parameter suffix (1 through 31) specifies one of the corresponding LOG_ARCHIVE_DEST_n destination parameters.

Values

- **enable**
Specifies that a valid log archive destination can be used for a subsequent archiving operation (automatic or manual). This is the default.
- **defer**
Specifies that valid destination information and attributes are preserved, but the destination is excluded from archiving operations until reenabled.
- **alternate**
Specifies that a log archive destination is not enabled but will become enabled if communications to another destination fail.
- **reset**

Functions the same as `defer`, but clears any error messages for the destination if it had previously failed.

The `LOG_ARCHIVE_DEST_STATE_`*n* parameters have no effect on the `ENABLE` state for the `LOG_ARCHIVE_DEST` or `LOG_ARCHIVE_DUPLEX_DEST` parameters.

The `V$ARCHIVE_DEST` dynamic performance view shows values in use for the current session. The `DEST_ID` column of that view corresponds to the archive destination suffix *n*.

① See Also

- *Oracle Data Guard Concepts and Administration* for more information about this parameter
- "[V\\$ARCHIVE_DEST](#)"

2.187 LOG_ARCHIVE_DUPLEX_DEST

`LOG_ARCHIVE_DUPLEX_DEST` is similar to the initialization parameter `LOG_ARCHIVE_DEST`. This parameter specifies a second archive destination: the **duplex** archive destination. This duplex archive destination can be either a must-succeed or a best-effort archive destination, depending on how many archive destinations must succeed (as specified in the `LOG_ARCHIVE_MIN_SUCCEED_DEST` parameter).

Property	Description
Parameter type	String
Syntax	<code>LOG_ARCHIVE_DUPLEX_DEST = filespec</code>
Default value	There is no default value.
Modifiable	<code>ALTER SYSTEM</code>
Modifiable in a PDB	No
Range of values	Either a null string or any valid path or device name, except raw partitions
Basic	No

① Note

If you are using Oracle Enterprise Edition, this parameter is deprecated in favor of the `LOG_ARCHIVE_DEST_`*n* parameters. If Oracle Enterprise Edition is not installed or it is installed but you have not specified any `LOG_ARCHIVE_DEST_`*n* parameters, this parameter is valid.

The default setting of a null string ("") or (' ') indicates that a duplex archive destination does not exist.

① See Also

- ["LOG_ARCHIVE_DEST_n"](#)
- ["LOG_ARCHIVE_MIN_SUCCEED_DEST"](#)
- ["V\\$ARCHIVE_DEST"](#)
- *Oracle Database Administrator's Guide* for an example of using this parameter to specify an optional secondary archive destination

2.188 LOG_ARCHIVE_FORMAT

Use LOG_ARCHIVE_FORMAT to specify the default filename format when archiving redo log files.

Property	Description
Parameter type	String
Syntax	LOG_ARCHIVE_FORMAT = <i>filename</i>
Default value	Operating system-dependent
Modifiable	No
Modifiable in a PDB	No
Range of values	Any string that resolves to a valid filename
Basic	No
Oracle RAC	Multiple instances can have different values, but identical values are recommended.

LOG_ARCHIVE_FORMAT is applicable only if you are using the redo log in ARCHIVELOG mode. Use a text string and variables to specify the default filename format when archiving redo log files. The string generated from this format is appended to the string specified in the LOG_ARCHIVE_DEST parameter.

The following variables can be used in the format:

%s log sequence number

%S log sequence number, zero filled

%t thread number

%T thread number, zero filled

%a activation ID

%d database ID

%r resetlogs ID that ensures unique names are constructed for the archived log files across multiple incarnations of the database

Using uppercase letters for the variables (for example, %S) causes the value to be fixed length and padded to the left with zeros. An example of specifying the archive redo log filename format follows:

LOG_ARCHIVE_FORMAT = 'log%t_%s_%r.arc'

Archive log file names must contain each of the elements %s (sequence), %t (thread), and %r (resetlogs ID) to ensure that all archive log file names are unique. If the LOG_ARCHIVE_FORMAT initialization parameter is set in the parameter file, then make sure the parameter value contains the %s, %t, and %r elements. Otherwise, the following error is displayed at the time of instance startup:

```
ORA-19905: log_archive_format must contain %s, %t and %r
```

Neither LOG_ARCHIVE_DEST nor LOG_ARCHIVE_FORMAT have to be complete file or directory specifiers themselves; they only need to form a valid file path after the variables are substituted into LOG_ARCHIVE_FORMAT and the two parameters are concatenated together.

LOG_ARCHIVE_FORMAT is ignored in these cases:

- For archived log files that go to the fast recovery area
- When LOG_ARCHIVE_DEST[_n] points to the root of an Oracle ASM disk group (for example, +DATA). The directory of a disk group (for example, +DATA/logs) must be specified for the parameter to be honored.

In these cases where LOG_ARCHIVE_FORMAT is ignored, an Oracle ASM file name is used. See *Oracle Automatic Storage Management Administrator's Guide* for more information on Oracle ASM file names.

📘 See Also

- *Oracle Database Backup and Recovery User's Guide*, *Oracle Data Guard Concepts and Administration*, and *Oracle Real Application Clusters Administration and Deployment Guide* for more information about this parameter
- Your operating system- specific Oracle documentation for the default value and range of values for LOG_ARCHIVE_FORMAT

2.189 LOG_ARCHIVE_MAX_PROCESSES

LOG_ARCHIVE_MAX_PROCESSES specifies the maximum number of ARCn processes that can be created.

Property	Description
Parameter type	Integer
Default value	4
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	1 to 30
Basic	No

① See Also

- "[Background Processes](#)" for more information about ARC*n* processes
- *Oracle Database Administrator's Guide* for more information about LOG_ARCHIVE_MAX_PROCESSES

2.190 LOG_ARCHIVE_MIN_SUCCEED_DEST

LOG_ARCHIVE_MIN_SUCCEED_DEST defines the minimum number of destinations that must succeed in order for the online logfile to be available for reuse.

Property	Description
Parameter type	Integer
Default value	1
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	1 to 10 if you are using LOG_ARCHIVE_DEST_ <i>n</i> 1 or 2 if you are using LOG_ARCHIVE_DEST and LOG_ARCHIVE_DUPLEX_DEST
Basic	No

If you are using the LOG_ARCHIVE_DEST_*n* parameters and automatic archiving is enabled, then the value of this parameter cannot exceed the number of enabled, valid destinations specified as MANDATORY plus the number of enabled, valid destinations that are configured with the OPTIONAL and LOCATION attributes.

If you are using LOG_ARCHIVE_DEST and LOG_ARCHIVE_DUPLEX_DEST and automatic archiving is enabled, a value of 1 specifies that the destination specified in LOG_ARCHIVE_DEST must succeed. A value of 2 specifies that the destinations specified in both parameters must succeed.

If the value of this parameter is less than the number of enabled, valid MANDATORY destinations, this parameter is ignored in favor of the MANDATORY destination count. If the value is more than the number of enabled, valid MANDATORY destinations, then some of the enabled, valid destinations configured with the OPTIONAL and LOCATION attributes are treated as MANDATORY.

You can switch dynamically from using the older parameters to the LOG_ARCHIVE_DEST_*n* parameter using ALTER SYSTEM, as follows:

1. Set LOG_ARCHIVE_MIN_SUCCEED_DEST to 1.
2. Set the value of LOG_ARCHIVE_DEST and LOG_ARCHIVE_DUPLEX_DEST to the null string.
3. Set the desired number of destinations for the LOG_ARCHIVE_DEST_*n* parameters.
4. Reset LOG_ARCHIVE_MIN_SUCCEED_DEST to the desired value.

① See Also

- *Oracle Database Administrator's Guide* for more information on setting this parameter
- "[LOG_ARCHIVE_DEST_n](#)", "[LOG_ARCHIVE_DUPLEX_DEST](#)", and "[V\\$ARCHIVE_DEST](#)" for information on related parameters

2.191 LOG_ARCHIVE_TRACE

LOG_ARCHIVE_TRACE enables and controls the generation of comprehensive trace information for log archiving and redo transport activity.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0, 1, 2, 4, 8, 16, 32, 64, 128, 256, 512, 1024, 2048, 4096, 8192, 16384, 32768
Basic	No
Oracle RAC	Multiple instances can have different values.

The additional tracing that is output when setting LOG_ARCHIVE_TRACE to a non-zero value can appear in trace files for an archive process, RFS process, LGWR process, SYNC process, ASYNC process, foreground process, MRP process, recovery process, log apply process, startup process, shutdown process, and other processes that use redo transport services.

[Table 2-4](#) describes the valid LOG_ARCHIVE_TRACE values.

Table 2-4 LOG_ARCHIVE_TRACE Values

Value	Description	More Information
0	Disables archivelog tracing (this is the default)	
1	High-level tracing	High-level tracing provides a small amount of tracing from most redo transport processes. When a value is specified that is not high-level (not 1), the high-level tracing for that value will be output to the trace file even if the high-level tracing has not been specifically requested. For example, if you set LOG_ARCHIVE_TRACE to 128, you will get all the trace messages pertaining to the FAL engine, <i>including</i> the high-level tracing from the FAL engine.
2	Tracks Data Guard interfaces	This tracing level is for the various Data Guard configuration parameters, the various Data Guard related SQL commands, the various Data Guard table accesses, and some Data Guard internal interfaces.

Table 2-4 (Cont.) LOG_ARCHIVE_TRACE Values

Value	Description	More Information
4	Tracks common redo transport services	This tracing level is for a number of common services provided by redo transport to various internal users (such as the RFS process, the LGWR process, and the ASYNC process). These include locking primitives, use of common VOS (Virtual Operating System) interfaces, task scheduling, process monitoring, control file access, and other miscellaneous common services.
8	Tracks database protection mode	
16	Tracks disk and network I/O requests	
32	Tracks redo transport destinations	
64	Tracks redo transport archive engine	
128	Tracks redo transport FAL (fetch archive log) engine	
256	Tracks Physical, Logical, and Availability Machine clients of RFS process	
512	Tracks redo transport of LGWR, SYNC, and ASYNC processes	
1024	Tracks redo transport RFS process	
2048	Tracks redo transport gap resolution	
4096	Tracks real-time apply	
8192	Tracks recovery process	
16384	Tracks redo transport buffer management	
32768	Tracks LogMiner dictionary	

You can combine tracing levels by adding together the values of the desired tracing levels. For example, a setting of 3 will generate level 1 and level 2 trace output. You can set different values for the primary and standby database.

When this parameter is set to the default value of 0, Oracle will still generate appropriate alert and trace entries in response to error conditions. If you change the value of this parameter dynamically in an ALTER SYSTEM statement, the change takes effect immediately.

Many of the trace messages from redo transport processes include a routine name at the beginning of the trace message. The first part of the routine name specifies the module for that routine. [Table 2-5](#) shows the tracing value used for each redo transport module. Note that the tracing value for transport modules can change from release to release.

Table 2-5 Tracing Values Used for Redo Transport Modules

Module Name	Purpose	Tracing Value
krsa	Locking primitives	4
krsb	Buffer management	16384
krsc	Crash recovery	64

Table 2-5 (Cont.) Tracing Values Used for Redo Transport Modules

Module Name	Purpose	Tracing Value
krsd	Destination	32
krse	Archive engine	64
krsf	FAL engine	128
krsg	Gap resolution	2048
krsh	Helper	4
krsi	Input/output	16
krsj	Protection mode	8
krsk	Control file access	4
krsl	Log writer	512
krsm	MRP process	8192
krsn	Configuration	2
krso	Process monitor	4
krsp	Physical standby and Availability Machine RFS client	256
krsq	SQL commands	2
krsr	RFS process	1024
krst	Tables	2
krsu	Network I/O	16
krsv	VOS front end	4
krsw	ASYNCR process	512
krsx	Internal interfaces	2

See Also*Oracle Database Administrator's Guide*

2.192 LOG_BUFFER

LOG_BUFFER specifies the amount of memory (in bytes) that Oracle uses when buffering redo entries to a redo log file.

Property	Description
Parameter type	Big integer
Default value	2 MB to 32 MB, depending on the SGA size and CPU count
Modifiable	No
Modifiable in a PDB	No
Range of values	2 MB to operating system-dependent
Basic	No

Redo log entries contain a record of the changes that have been made to the database block buffers. The LGWR process writes redo log entries from the log buffer to a redo log file.

The log buffer size depends on the number of redo strands in the system. One redo strand is allocated for every 16 CPUs and has a default size of 2 MB. Oracle allocates a minimum of 2 redo strands per instance. When the log buffer size is not specified, any remaining memory in the redo granules is given to the log buffer.

① See Also

- Your operating system-specific Oracle documentation for the default value and range of values
- *Oracle Database Performance Tuning Guide* for information on resizing the redo log buffer using this parameter

2.193 LOG_CHECKPOINT_INTERVAL

LOG_CHECKPOINT_INTERVAL specifies the frequency of checkpoints in terms of the number of redo log file blocks that can exist between an incremental checkpoint and the last block written to the redo log. This number refers to physical operating system blocks, not database blocks.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to $2^{31} - 1$
Basic	No
Oracle RAC	Multiple instances can have different values.

Regardless of this value, a checkpoint always occurs when switching from one online redo log file to another. Therefore, if the value exceeds the actual redo log file size, checkpoints occur only when switching logs. Checkpoint frequency is one of the factors that influence the time required for the database to recover from an unexpected failure.

① Note

- Specifying a value of 0 (zero) for LOG_CHECKPOINT_INTERVAL has the same effect as setting the parameter to infinity and causes the parameter to be ignored. Only nonzero values of this parameter are considered meaningful.
- Recovery I/O can also be limited by setting the LOG_CHECKPOINT_TIMEOUT parameter or by the size specified for the smallest redo log. For information on which mechanism is controlling checkpointing behavior, query the V\$INSTANCE_RECOVERY view.

① See Also

- ["LOG_CHECKPOINT_TIMEOUT"](#)
- ["V\\$INSTANCE_RECOVERY"](#)
- *Oracle Database Performance Tuning Guide* for information on disabling or removing this parameter when the FAST_START_MTTR_TARGET parameter is set

2.194 LOG_CHECKPOINT_TIMEOUT

LOG_CHECKPOINT_TIMEOUT specifies (in seconds) the amount of time that has passed since the incremental checkpoint at the position where the last write to the redo log (sometimes called the **tail of the log**) occurred. This parameter also signifies that no buffer will remain dirty (in the cache) for more than *integer* seconds.

Property	Description
Parameter type	Integer
Default value	1800
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to $2^{31} - 1$
Basic	No
Oracle RAC	Multiple instances can have different values.

Specifying a value of 0 for the timeout disables time-based checkpoints. Hence, setting the value to 0 is not recommended unless FAST_START_MTTR_TARGET is set.

① Note

- A checkpoint scheduled to occur because of this parameter is delayed until the completion of the previous checkpoint if the previous checkpoint has not yet completed.
- Recovery I/O can also be limited by setting the LOG_CHECKPOINT_INTERVAL parameter or by the size specified for the smallest redo log. For information on which mechanism is controlling checkpointing behavior, query the V\$INSTANCE_RECOVERY view.

① See Also

- ["LOG_CHECKPOINT_TIMEOUT"](#)
- ["V\\$INSTANCE_RECOVERY"](#)
- *Oracle Database Performance Tuning Guide* for information on disabling or removing this parameter when the FAST_START_MTTR_TARGET parameter is set

2.195 LOG_CHECKPOINTS_TO_ALERT

LOG_CHECKPOINTS_TO_ALERT lets you log your checkpoints to the alert log. Doing so is useful for determining whether checkpoints are occurring at the desired frequency.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true false
Basic	No

2.196 LOG_FILE_NAME_CONVERT

LOG_FILE_NAME_CONVERT converts the filename of a new log file on the primary database to the filename of a log file on the standby database.

Property	Description
Parameter type	String
Syntax	<pre>LOG_FILE_NAME_CONVERT = 'string1' , 'string2' , 'string3' , 'string4' , ...</pre> Where: • <i>string1</i> is the pattern of the primary database filename • <i>string2</i> is the pattern of the standby database filename • <i>string3</i> is the pattern of the primary database filename • <i>string4</i> is the pattern of the standby database filename You can enclose each string in single or double quotation marks. You can specify as many pairs of primary and standby replacement strings as required. Example: <pre>LOG_FILE_NAME_CONVERT = '/dbs/t1/', '/dbs/t1/s', 'dbs/t2/', 'dbs/t2/s'</pre>
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

If you add a log file to the primary database, you must add a corresponding file to the standby database.

Set the value of this parameter to one or more pairs of strings. The first string is the pattern found in the log file names on the primary database. The second string is the pattern found in the log file names on the standby database.

When the standby database is updated, this parameter converts the log file name on the primary database to the log file name on the standby database. The file must exist on the standby database and must be writable or the recovery process will halt with an error.

If you specify an odd number of strings (the last string has no corresponding replacement string), an error is signalled during startup. If the filename being converted matches more than one pattern in the pattern/replace string list, the first matched pattern takes effect. There is no limit on the number of pairs that you can specify in this parameter (other than the hard limit of the maximum length of multivalue parameters).

You should also use LOG_FILE_NAME_CONVERT to rename the logfiles in the clone control file when setting up the clone database during tablespace point-in-time recovery.

Note

The LOG_FILE_NAME_CONVERT parameter applies only to online logs (not to archived logs).

Oracle Data Guard Concepts and Administration

2.197 LONG_MODULE_ACTION

LONG_MODULE_ACTION enables the use of longer lengths for modules and actions.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true false
Basic	No
Oracle RAC	The same value must be used on all instances.

Module length was 48 bytes and action length was 32 bytes in Oracle Database releases prior to Oracle Database 12c Release 2 (12.2.0.1).

Starting with Oracle Database 12c Release 2 (12.2.0.1):

- If LONG_MODULE_ACTION is set to TRUE (the default value), then the length of modules and actions will be 64 bytes each.
- If LONG_MODULE_ACTION is set to FALSE, then the length of modules will be 48 bytes, and the length of actions will be 32 bytes.

2.198 MANDATORY_USER_PROFILE

MANDATORY_USER_PROFILE specifies the mandatory user profile for a CDB or PDB.

Property	Description
Parameter type	String
Syntax	MANDATORY_USER_PROFILE = <i>profile_name</i>
Default value	There is no default value
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances must use the same value.

For *profile_name*, specify the name of a mandatory user profile. Mandatory user profiles are common profiles created in the CDB root with the following SQL statement:

```
CREATE MANDATORY PROFILE ... CONTAINER = ALL;
```

You can set the value of MANDATORY_USER_PROFILE in the CDB root or in a PDB.

- When you set this parameter in the CDB root, the specified mandatory user profile applies to the CDB root and all PDBs.
- When you set this parameter in a PDB, the specified mandatory user profile applies only to that PDB and overrides the mandatory user profile for the CDB root, if any.

Only common users with the commonly granted ALTER SYSTEM privilege or the commonly granted SYSDBA privilege can set the value of MANDATORY_USER_PROFILE in the CDB root or in a PDB. This prevents local PDB administrators from circumventing any restrictions that are enforced at the CDB root.

Note

This parameter is available starting with Oracle Database 21c.

See Also

See *Oracle Database Security Guide* for more information about mandatory user profiles

2.199 MAX_AUTH_SERVERS

MAX_AUTH_SERVERS specifies the maximum number of authentication servers in the authentication pool. This pool authenticates user connections when client applications connect to Database Resident Connection Pooling (DRCP).

Property	Description
Parameter type	Integer
Default value	25
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes, according to the following guidelines: • When the ENABLE_PER_PDB_DRCP initialization parameter is set to <code>true</code>, MAX_AUTH_SERVERS can be modified only at the PDB level; it cannot be modified for the CDB root. • When the ENABLE_PER_PDB_DRCP initialization parameter is set to <code>false</code>, MAX_AUTH_SERVERS can be modified only for the CDB root; it cannot be modified at the PDB level.
Range of values	Minimum: MIN_AUTH_SERVERS or 1, whichever is the greater value Maximum: operating system-dependent
Basic	No
Oracle RAC	Different instances can use different values.

The value of this parameter must be greater than or equal to the value of the MIN_AUTH_SERVERS initialization parameter, which specifies the minimum number of authentication servers in the authentication pool. The exception is when MIN_AUTH_SERVERS = 0. In this case, the value of MAX_AUTH_SERVERS must be greater than or equal to 1.

Note

This parameter is available starting with Oracle Database release 19c, version 19.10.

See Also

- *Oracle Database Administrator's Guide* for more information about setting this parameter
- ["ENABLE_PER_PDB_DRCP"](#)
- ["MIN_AUTH_SERVERS"](#)

2.200 MAX_DATAPUMP_JOBS_PER_PDB

MAX_DATAPUMP_JOBS_PER_PDB determines the maximum number of concurrent Oracle Data Pump jobs per PDB.

Property	Description
Parameter type	String
Syntax	MAX_DATAPUMP_JOBS_PER_PDB = { AUTO integer }
Default value	100
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to 250 or AUTO
Basic	No
Oracle RAC	The same value must be used on all instances.

The default value will not work for all databases. Database administrators will have to determine if the default value works well for their database.

When this parameter has a value of AUTO, Oracle Data Pump will derive its actual value to be 50% of the SESSIONS initialization parameter.

A value that is too large could cause Oracle Data Pump to consume too many system resources, while a value that is too small could prevent users from performing their Oracle Data Pump tasks.

The main resource Oracle Data Pump uses is shared pool in the System Global Area (SGA) for the database. Parallel jobs increase the number of sessions and, depending on the job, the number of PX servers used.

See Also

- *Oracle Database Utilities* for more information about using Oracle Data Pump with CDBs
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the DBMS_DATAPUMP PL/SQL package

2.201 MAX_DATAPUMP_PARALLEL_PER_JOB

MAX_DATAPUMP_PARALLEL_PER_JOB specifies the maximum number of parallel processes allowed per Oracle Data Pump job.

Property	Description
Parameter type	String
Syntax	MAX_DATAPUMP_PARALLEL_PER_JOB = { integer AUTO }
Default value	50
Range of values	1 to 1024, or AUTO

Property	Description
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can use different values.

When this parameter has a value of AUTO, Oracle Data Pump derives its value to be 50 percent of the value of the SESSIONS initialization parameter.

2.202 MAX_DISPATCHERS

MAX_DISPATCHERS specifies the maximum number of dispatcher processes allowed to be running simultaneously.

Property	Description
Parameter type	Integer
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	If MAX_DISPATCHERS is specified, then it should be greater than or equal to the number of dispatchers specified by the DISPATCHERS parameter and less than the number of processes specified by the PROCESSES parameter.
Basic	No

This parameter can be overridden by the DISPATCHERS parameter and is maintained for backward compatibility with older releases.

📘 See Also

- *Oracle Database Administrator's Guide* for more information about this parameter
- Your operating system-specific Oracle documentation for the default value and range of values

2.203 MAX_DUMP_FILE_SIZE

MAX_DUMP_FILE_SIZE specifies the maximum size of trace files (excluding the alert log).

Property	Description
Parameter type	String
Syntax	MAX_DUMP_FILE_SIZE = { <i>integer</i> [K M G] UNLIMITED }
Default value	UNLIMITED
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes

Property	Description
Range of values	0 to unlimited, or UNLIMITED
Basic	No

You can change this limit if you are concerned that trace files may use too much space.

- A numeric value for MAX_DUMP_FILE_SIZE specifies the maximum size in operating system blocks.
- A numeric value followed by a K or M or G suffix specifies the file size in kilobytes, megabytes, or gigabytes.
- The special value string UNLIMITED means that there is no upper limit on trace file size. Thus, dump files can be as large as the operating system permits.

When the trace file is limited in size, it may be automatically split into multiple files, called segments, if needed. This process is called trace file segmentation. The segments will have the same file name as the active trace file, but with an extra segment number appended.

The trace file can be split into a maximum of 5 segments, and the size of each segment will typically be 1/5th of the trace file limit.

When the combined size of all the trace file segments exceeds the specified limit, the oldest segment is deleted, and a new, empty segment is created. Thus, the trace file always contains the most recent trace information. The first segment is never deleted, because it may contain relevant information about the initial state of the process.

Note that trace file segmentation will not occur when this parameter is set to a value less than 25 MB.

① See Also

Oracle Database Administrator's Guide and *Oracle Database SQL Tuning Guide* for more information on setting this parameter

2.204 MAX_IDLE_BLOCKER_TIME

MAX_IDLE_BLOCKER_TIME specifies the maximum number of minutes that a blocking session can be idle. After that point, the session is automatically terminated.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to the maximum integer. The value of 0 indicates that there is no limit.
Basic	No
Oracle RAC	Different instances can use different values.

A session is considered to be a blocking session when it is holding resources required by other sessions. For example:

- The session is holding a lock required by another session.
- The session is a parallel operation and its consumer group, PDB, or database has either reached its maximum parallel server limit or has queued parallel operations.
- The session's PDB or database instance is about to reach its SESSIONS or PROCESSES limit.

This parameter differs from the MAX_IDLE_TIME parameter in that MAX_IDLE_TIME applies to all sessions (blocking and non-blocking), whereas MAX_IDLE_BLOCKING_TIME applies only to blocking sessions. Therefore, in order for MAX_IDLE_BLOCKING_TIME to be effective, its limit must be less than the MAX_IDLE_TIME limit.

Note

This parameter does not have an effect on parallel query processes, nor on SYS user sessions.

See Also

["MAX_IDLE_TIME"](#)

2.205 MAX_IDLE_TIME

MAX_IDLE_TIME specifies the maximum number of minutes that a session can be idle. After that point, the session is automatically terminated.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to the maximum integer. The value of 0 indicates that there is no limit.
Basic	No
Oracle RAC	Different instances can use different values.

See Also

["MAX_IDLE_BLOCKER_TIME"](#) to learn how to set a lower idle time limit for sessions that are holding resources required by other sessions

2.206 MAX_IOPS

MAX_IOPS enables you to set the maximum number of I/Os that can be issued per second on a per pluggable database (PDB) basis. This parameter is used to throttle PDB I/Os.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to the maximum Integer value. A very low value (for example, under 100 I/Os per second) is not recommended.
Basic	No
Oracle RAC	Different values can be set on different instances.

DBWR I/Os, control file I/Os, password file I/Os and other critical I/Os are exempted from the rate limit set by this parameter, but their I/Os are accounted for while throttling. Because of these exemptions, the PDB's actual I/O rate may sometimes exceed the limit.

This feature is enabled for multitenant container database (CDB) only. The feature is not supported on Oracle Exadata.

This parameter can be set from inside a PDB. If the parameter is set in CDB\$ROOT, all the PDBs in that CDB will inherit the parameter value from CDB\$ROOT. This parameter cannot be set in a non-CDB environment.

The default value of 0 means that no limits are set on the maximum number of I/Os that can be issued per second in a PDB.

If Oracle processes need to wait because of this IO rate limit, the wait event is resmgr: I/O rate limit.

① See Also

- ["MAX_MBPS"](#)
- ["resmgr: I/O rate limit"](#)

Examples

This example shows how to use SQL statements to set a maximum of 3000 I/Os per second on a PDB named CDB1_PDB1:

```
alter session set container = cdb1_pdb1;  
alter system set max_iops = 3000;
```

2.207 MAX_MBPS

MAX_MBPS enables you to set the maximum number of megabytes (MB) of I/Os issued per second on a per pluggable database (PDB) basis. This parameter is used to throttle PDB I/Os.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to the maximum Integer value. A very low value (for example, under 25 MB per second) is not recommended.
Basic	No
Oracle RAC	Different values can be set on different instances.

DBWR I/Os, control file I/Os, password file I/Os and other critical I/Os are exempted from the throughput limit set by this parameter, but their I/Os are accounted for while throttling. Because of these exemptions, the PDB's actual I/O rate may sometimes exceed the limit.

This feature is enabled for multitenant container database (CDB) only. The feature is not supported on Oracle Exadata.

This parameter can be set from inside a PDB. If the parameter is set in CDB\$ROOT, all the PDBs in that CDB will inherit the parameter value from CDB\$ROOT. This parameter cannot be set in a non-CDB environment.

The default value of 0 means that no limits are set on the maximum number of megabytes (MB) of I/Os that can be issued per second in a PDB.

If Oracle processes need to wait because of this IO rate limit, the wait event is resmgr: I/O rate limit.

① See Also

- ["MAX_IOPS"](#)
- ["resmgr: I/O rate limit"](#)

Examples

This example shows how to use SQL statements to set a maximum of 200 megabytes per second on a PDB named CDB1_PDB1:

```
alter session set container = cdb1_pdb1;  
alter system set max_mbps = 200;
```

2.208 MAX_PDBS

MAX_PDBS allows you to limit the number of pluggable databases (PDBs) that can be created in a CDB or an application container.

Property	Description
Parameter type	Integer
Default value	Depends on the Oracle Database edition Possible values: 5, 254, or 4098
Modifiable	ALTER SYSTEM ... SID='*'
Modifiable in a PDB	No. However, this parameter can be modified in the application root of an application container.
Range of values	Minimum: 0 Maximum: The default value for the Oracle Database edition (5, 254, or 4098)
Basic	No
Oracle RAC	The same value must be used on all instances.

This parameter can only be set while connected to the CDB root or an application root.

This parameter applies to PDBs, application containers, and application PDBs. An application PDB is a PDB that resides in an application container.

This parameter does not apply to the PDB seed (PDB\$SEED), application seeds, or application root clones.

Note

The maximum number of PDBs that you are allowed to create in a CDB depends on the licensing policy for your Oracle Database edition. To learn more, refer to the Oracle Multitenant information in the "Consolidation" table in *Oracle Database Licensing Information User Manual*.

2.209 MAX_SHARED_SERVERS

MAX_SHARED_SERVERS specifies the maximum number of shared server processes allowed to be running simultaneously. Setting this parameter enables you to reserve process slots for other processes, such as dedicated servers.

Property	Description
Parameter type	Integer
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	If MAX_SHARED_SERVERS is specified, then it should be greater than or equal to SHARED_SERVERS and less than PROCESSES.
Basic	No

When you want to reduce the range of shared servers, you can reduce MAX_SHARED_SERVERS before reducing SHARED_SERVERS. If MAX_SHARED_SERVERS is lower than SHARED_SERVERS, then the number of shared servers will not vary but will remain at the constant level specified by SHARED_SERVERS. If MAX_SHARED_SERVERS is not specified, then a shared server process may be spawned as long as the number of free process slots is greater than 1 / 8 the maximum number of processes, or 2 if PROCESSES is less than 24.

① See Also

- ["SHARED_SERVERS"](#)
- ["PROCESSES"](#)
- *Oracle Database Administrator's Guide* for more information on setting this parameter
- *Oracle Database Concepts* for information on processes
- Your operating system-specific Oracle documentation for the default value and range of values

2.210 MAX_STRING_SIZE

MAX_STRING_SIZE controls the maximum size of VARCHAR2, NVARCHAR2, and RAW data types in SQL.

Property	Description
Parameter type	String
Syntax	MAX_STRING_SIZE = { STANDARD EXTENDED }
Default value	STANDARD
Modifiable	ALTER SYSTEM ... SID=**1_
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances must use the same value.

¹ Use ALTER SYSTEM only when the database is in UPGRADE mode, and run the utl32k.sql script afterward, as explained in this section.

STANDARD means that the length limits for Oracle Database releases prior to Oracle Database 12c apply (for example, 4000 bytes for VARCHAR2 and NVARCHAR2, and 2000 bytes for RAW).

EXTENDED means that the 32767 byte limit introduced in Oracle Database 12c applies.

The COMPATIBLE initialization parameter must be set to 12.0.0.0 or higher to set MAX_STRING_SIZE = EXTENDED.

You can change the value of MAX_STRING_SIZE from STANDARD to EXTENDED. However, you cannot change the value of MAX_STRING_SIZE from EXTENDED to STANDARD.

By setting MAX_STRING_SIZE = EXTENDED, users are taking an explicit action that could introduce application incompatibility in their database. Applications that do not want to use the expanded data types can be rewritten for compatibility with either setting; for example, these applications

could use explicit CASTs to fix the length of VARCHAR2 expressions during CREATE TABLE AS SELECT.

Altering MAX_STRING_SIZE will update database objects and possibly invalidate them, as follows:

- Tables with virtual columns will be updated with new data type metadata for virtual columns of VARCHAR2(4000), 4000-byte NVARCHAR2, or RAW(2000) type.
 - Functional indexes will become unusable if a change to their associated virtual columns causes the index key to exceed index key length limits. Attempts to rebuild such indexes will fail with ORA-01450: maximum key length exceeded.
- Views will be invalidated if they contain VARCHAR2(4000), 4000-byte NVARCHAR2, or RAW(2000) typed expression columns.
- Materialized views will be updated with new metadata VARCHAR2(4000), 4000-byte NVARCHAR2, and RAW(2000) typed expression columns

Increasing the Maximum Size of VARCHAR2, NVARCHAR2, and RAW Columns in a CDB

To increase the maximum size of VARCHAR2, NVARCHAR2, and RAW columns in a CDB and in all the PDBs in the CDB:

1. Connect to the CDB AS SYSDBA.
2. In the root, change the setting of MAX_STRING_SIZE to EXTENDED:

```
ALTER SESSION SET CONTAINER=CDB$ROOT;
ALTER SYSTEM SET max_string_size=extended SCOPE=SPFILE;
```

Note

The root continues to use STANDARD semantics even after MAX_STRING_SIZE is set to EXTENDED. The reason for setting MAX_STRING_SIZE to EXTENDED in the root is so all the PDBs in the CDB can inherit the EXTENDED setting from the root.

3. Shut down the CDB.
 4. Restart the CDB in UPGRADE mode.
- ```
startup upgrade;
```
5. Use the catcon.pl script to run the rdbms/admin/utl32k.sql script in the root and in all the PDBs in the CDB to increase the maximum size of the VARCHAR2, NVARCHAR2, and RAW columns. The --force\_pdb\_mode 'UPGRADE' option is used to ensure that all PDBs, including application root clones, are opened in migrate mode. Enter the SYS password when prompted:

```
$ cd $ORACLE_HOME/rdbms/admin
$ mkdir /scratch/mydir/utl32k_cdb_pdb_output
$ $ORACLE_HOME/perl/bin/perl $ORACLE_HOME/rdbms/admin/catcon.pl -u SYS --
force_pdb_mode 'UPGRADE' -d $ORACLE_HOME/rdbms/admin -l '/scratch/mydir/
utl32k_cdb_pdb_output' -b
utl32k_cdb_pdb_output utl32k.sql
catcon: ALL catcon-related output will be written to [/scratch/mydir/
utl32k_cdb_pdb_output/utl32k_cdb_pdb_output_catcon_23172.lst]
```

```

catcon: See [/scratch/mydir/utl32k_cdb_pdb_output/
utl32k_cdb_pdb_output*.log] files for output generated by scripts
catcon: See [/scratch/mydir/utl32k_cdb_pdb_output/
utl32k_cdb_pdb_output_*.lst] files for spool files, if any
Enter Password:
catcon.pl: completed successfully
$

```

### Note

The `utl32k.sql` script increases the maximum size of the `VARCHAR2`, `NVARCHAR2`, and `RAW` columns for the views where this is required. The script does not increase the maximum size of the `VARCHAR2`, `NVARCHAR2`, and `RAW` columns in some views because of the way the SQL for those views is written.

6. Connect to the CDB AS SYSDBA and shut down the database.
7. Restart the CDB in NORMAL mode.

```
startup;
```

8. Use the `catcon.pl` script to run the `rdbms/admin/utlrp.sql` script to recompile invalid objects in the root and in all the PDBs in the CDB. The `--force_pdb_mode 'READ WRITE'` option is used to ensure that all the PDBs (including application root clones) are opened in read write mode. Enter the SYS password when prompted:

```

$ cd $ORACLE_HOME/rdbms/admin
$ mkdir /scratch/mydir/utlrp_cdb_pdb_output
$ $ORACLE_HOME/perl/bin/perl $ORACLE_HOME/rdbms/admin/catcon.pl -u SYS --
force_pdb_mode 'READ WRITE' -d $ORACLE_HOME/rdbms/admin -l '/scratch/mydir/
utlrp_cdb_pdb_output' -b utlrp_cdb_pdb_output utlrp.sql
catcon: ALL catcon-related output will be written to [/scratch/mydir/
utlrp_cdb_pdb_output/utlrp_cdb_pdb_output_catcon_24271.lst]
catcon: See [/scratch/mydir/utlrp_cdb_pdb_output/
utlrp_cdb_pdb_output*.log] files for output generated by scripts
catcon: See [/scratch/mydir/utlrp_cdb_pdb_output/
utlrp_cdb_pdb_output_*.lst] files for spool files, if any
Enter Password:
catcon.pl: completed successfully
$

```

### See Also

*Oracle Multitenant Administrator's Guide* for information about using the `catcon.pl` script to run Oracle-supplied scripts in a CDB and PDBs.

## Increasing the Maximum Size of VARCHAR2, NVARCHAR2, and RAW Columns in a PDB

To increase the maximum size of `VARCHAR2`, `NVARCHAR2`, and `RAW` columns in a PDB:

1. Shut down the PDB.

2. Reopen the PDB in migrate mode.

**Note**

The following SQL statement can be used to reopen a PDB in migrate mode when the current container is the PDB:

```
ALTER PLUGGABLE DATABASE pdb-name OPEN UPGRADE;
```

3. Change the setting of MAX\_STRING\_SIZE in the PDB to EXTENDED.
4. Run the `rdbms/admin/utl32k.sql` script in the PDB. You must be connected AS SYSDBA to run the `utl32k.sql` script.
5. Reopen the PDB in NORMAL mode.

**Note**

The `utl32k.sql` script increases the maximum size of the VARCHAR2, NVARCHAR2, and RAW columns for the views where this is required. The script does not increase the maximum size of the VARCHAR2, NVARCHAR2, and RAW columns in some views because of the way the SQL for those views is written.

6. Run the `rdbms/admin/utlrp.sql` script in the PDB to recompile invalid objects. You must be connected AS SYSDBA to run the script.

**See Also**

*Oracle Multitenant Administrator's Guide* for more information about modifying the open mode of PDBs.

### Increasing the Maximum Size of VARCHAR2, NVARCHAR2, and RAW Columns in an Oracle RAC Database

To increase the maximum size of VARCHAR2, NVARCHAR2, and RAW columns in an Oracle RAC database:

1. Shut down all of the Oracle RAC database instances, except one.
2. Restart the Oracle RAC database instance in UPGRADE mode.
3. Change the setting of MAX\_STRING\_SIZE to EXTENDED.
4. Run the `rdbms/admin/utl32k.sql` script in the Oracle RAC database instance. You must be connected AS SYSDBA to run the script.
5. Restart all Oracle RAC database instances in NORMAL mode.

**Note**

The `utl32k.sql` script increases the maximum size of the VARCHAR2, NVARCHAR2, and RAW columns for the views where this is required. The script does not increase the maximum size of the VARCHAR2, NVARCHAR2, and RAW columns in some views because of the way the SQL for those views is written.

6. Run the `rdbms/admin/utl32k.sql` script to recompile invalid objects. You must be connected AS SYSDBA to run the script.

**Increasing the Maximum Size of VARCHAR2, NVARCHAR2, and RAW Columns in an Oracle Data Guard Logical Standby Database**

To increase the maximum size of VARCHAR2, NVARCHAR2, and RAW columns in an Oracle Data Guard logical standby database:

1. Shut down the Oracle Data Guard primary database and logical standby database.
2. Restart the primary database and logical standby database in UPGRADE mode.
3. Change the setting of MAX\_STRING\_SIZE to EXTENDED on the primary database and logical standby database.
4. Run the `rdbms/admin/utl32k.sql` script on both the primary database and the logical standby database. You must be connected AS SYSDBA to run the script.
5. Restart the primary database and logical standby database in NORMAL mode.

**Note**

The `utl32k.sql` script increases the maximum size of the VARCHAR2, NVARCHAR2, and RAW columns for the views where this is required. The script does not increase the maximum size of the VARCHAR2, NVARCHAR2, and RAW columns in some views because of the way the SQL for those views is written.

6. Run the `rdbms/admin/utl32k.sql` script on the primary database and logical standby database to recompile invalid objects. You must be connected AS SYSDBA to run the script.
7. Restart SQL Apply.

**See Also**

*Oracle Database Globalization Support Guide* for more information about the MAX\_STRING\_SIZE parameter

## 2.211 MEMOPTIMIZE\_POOL\_SIZE

MEMOPTIMIZE\_POOL\_SIZE sets the size of the memoptimize pool, a memory area in the system global area (SGA) used by the Memoptimized Rowstore.

| Property       | Description |
|----------------|-------------|
| Parameter type | Big integer |

| Property                   | Description                                          |
|----------------------------|------------------------------------------------------|
| <b>Syntax</b>              | MEMOPTIMIZE_POOL_SIZE = <i>integer</i> [K   M   G]   |
| <b>Default value</b>       | 0                                                    |
| <b>Modifiable</b>          | No                                                   |
| <b>Modifiable in a PDB</b> | No                                                   |
| <b>Range of values</b>     | 0 to no maximum                                      |
| <b>Basic</b>               | No                                                   |
| <b>Oracle RAC</b>          | Different values can be used on different instances. |

The Memoptimized Rowstore improves the data query performance of applications, such as Internet of Things (IoT), that frequently query tables based on primary key values.

The Memoptimized Rowstore provides the capability of fast lookup of data for the tables that are mainly queried based on primary key columns.

This parameter specifies an integer value to indicate the amount of SGA to use for allocating the following structures for the memoptimize pool:

- The size of the buffer cache region: This is the total number of blocks for all MEMOPTIMIZE FOR READ tables.
- The size of the hash index segmented data structure pointing to the special blocks of MEMOPTIMIZE FOR READ tables.

Calculate the buffer cache requirement for the table being considered for MEMOPTIMIZE FOR READ, and include an additional 25% memory requirement for the hash index segmented data structure.

These structures are allocated from SGA at instance startup.

The value specified for this parameter counts toward SGA\_TARGET. For example, if you set SGA\_TARGET to 10 GB and you set MEMOPTIMIZE\_POOL\_SIZE to 2 GB, then 20% of the SGA\_TARGET setting is allocated to the memoptimize pool.

Unlike other SGA components such as the buffer cache and shared pool, the memoptimize pool size is not controlled by automatic memory management. The database does not automatically shrink the memoptimize pool when the buffer cache or shared pool requires more memory, or increase the memoptimize pool when it runs out of space. You can only increase the size of the memoptimize pool by manually adjusting the MEMOPTIMIZE\_POOL\_SIZE initialization parameter.

#### See Also

*Oracle Database Performance Tuning Guide* for more information about the Memoptimized Rowstore and the memoptimize pool.

## 2.212 MEMORY\_MAX\_TARGET

MEMORY\_MAX\_TARGET specifies the maximum value to which a DBA can set the MEMORY\_TARGET initialization parameter.

| Property            | Description                                                    |
|---------------------|----------------------------------------------------------------|
| Parameter type      | Big integer                                                    |
| Syntax              | MEMORY_MAX_TARGET = <i>integer</i> [K   M   G]                 |
| Default value       | 0                                                              |
| Modifiable          | No                                                             |
| Modifiable in a PDB | No                                                             |
| Range of values     | 0 to the physical memory size available to the Oracle Database |
| Basic               | No                                                             |

#### Note

On Linux platforms only, Oracle recommends against explicitly setting values for MEMORY\_TARGET and MEMORY\_MAX\_TARGET in the initialization parameter file at the time of instance startup. Doing so may result in suboptimal small page allocation in the SGA. Furthermore, if the USE\_LARGE\_PAGES parameter is set to ONLY and you attempt to set values for MEMORY\_TARGET and MEMORY\_MAX\_TARGET, the instance will fail to start.

## 2.213 MEMORY\_TARGET

MEMORY\_TARGET specifies the Oracle system-wide usable memory.

The database tunes memory to the MEMORY\_TARGET value, reducing or enlarging the SGA and PGA as needed.

| Property            | Description                                                                                                              |
|---------------------|--------------------------------------------------------------------------------------------------------------------------|
| Parameter type      | Big integer                                                                                                              |
| Syntax              | MEMORY_TARGET = <i>integer</i> [K   M   G]                                                                               |
| Default value       | 0 (SGA autotuning is disabled for DEFERRED mode autotuning requests, but allowed for IMMEDIATE mode autotuning requests) |
| Modifiable          | ALTER SYSTEM                                                                                                             |
| Modifiable in a PDB | No                                                                                                                       |
| Range of values     | 152 MB to MEMORY_MAX_TARGET                                                                                              |
| Basic               | No                                                                                                                       |

MEMORY\_TARGET should be set higher than or equal to the sum of the current sizes of the SGA and PGA.

In a text-based initialization parameter file, if you omit `MEMORY_MAX_TARGET` and include a value for `MEMORY_TARGET`, then the database automatically sets `MEMORY_MAX_TARGET` to the value of `MEMORY_TARGET`. If you omit the line for `MEMORY_TARGET` and include a value for `MEMORY_MAX_TARGET`, the `MEMORY_TARGET` parameter defaults to zero. After startup, you can then dynamically change `MEMORY_TARGET` to a nonzero value, provided that it does not exceed the value of `MEMORY_MAX_TARGET`.

Total memory usage can grow beyond the value of `MEMORY_TARGET`. For example, memory is allocated to PL/SQL tables and varrays regardless of the value of `MEMORY_TARGET` as long as memory is available at the operating system level.

In the **Default value** field, IMMEDIATE mode autotuning requests are necessary to avoid ORA-04031 errors. The DEFERRED and IMMEDIATE modes are reflected in the `OPER_MODE` column of the `V$MEMORY_RESIZE_OPS` view.

#### Note

On Linux platforms only, Oracle recommends against explicitly setting values for `MEMORY_TARGET` and `MEMORY_MAX_TARGET` in the initialization parameter file at the time of instance startup. Doing so may result in suboptimal small page allocation in the SGA. Furthermore, if the `USE_LARGE_PAGES` parameter is set to `ONLY` and you attempt to set values for `MEMORY_TARGET` and `MEMORY_MAX_TARGET`, the instance will fail to start.

#### Note

The default value of `SGA_MAX_SIZE` depends on the values of `MEMORY_TARGET` and `MEMORY_MAX_TARGET`.

## 2.214 MIN\_AUTH\_SERVERS

`MIN_AUTH_SERVERS` specifies the minimum number of authentication servers in the authentication pool. This pool authenticates user connections when client applications connect to Database Resident Connection Pooling (DRCP).

| Property       | Description |
|----------------|-------------|
| Parameter type | Integer     |

| Property                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Default value</b>       | If the <code>ENABLE_PER_PDB_DRCP</code> initialization parameter is set to <code>true</code> , then the default value for <code>MIN_AUTH_SERVERS</code> is 0 in each PDB.<br><br>If the <code>ENABLE_PER_PDB_DRCP</code> initialization parameter is set to <code>false</code> , then the default value for <code>MIN_AUTH_SERVERS</code> is 1 in the CDB root.                                                                                                                                                                    |
| <b>Modifiable</b>          | ALTER SYSTEM                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Modifiable in a PDB</b> | Yes, according to the following guidelines: <ul style="list-style-type: none"><li>• When the <code>ENABLE_PER_PDB_DRCP</code> initialization parameter is set to <code>true</code>, <code>MIN_AUTH_SERVERS</code> can be modified only at the PDB level; it cannot be modified for the CDB root.</li><li>• When the <code>ENABLE_PER_PDB_DRCP</code> initialization parameter is set to <code>false</code>, <code>MIN_AUTH_SERVERS</code> can be modified only for the CDB root; it cannot be modified at the PDB level.</li></ul> |
| <b>Range of values</b>     | Minimum: 0<br><br>Maximum: <code>MAX_AUTH_SERVERS</code> or <code>PROCESSES</code> , whichever is the lesser value                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Basic</b>               | No                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Oracle RAC</b>          | Different instances can use different values.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

The value of this parameter must be less than or equal to the values of both the `MAX_AUTH_SERVERS` initialization parameter and the `PROCESSES` initialization parameter. The `MAX_AUTH_SERVERS` parameter specifies the maximum number of authentication servers in the authentication pool. The `PROCESSES` parameter specifies the maximum number of operating system user processes that can simultaneously connect to Oracle.

#### Note

This parameter is available starting with Oracle Database release 19c, version 19.10.

## 2.215 MULTISHARD\_QUERY\_DATA\_CONSISTENCY

`MULTISHARD_QUERY_DATA_CONSISTENCY` enables you to specify a data consistency setting for multi-shard queries.

| Property              | Description |
|-----------------------|-------------|
| <b>Parameter type</b> | String      |

| Property                   | Description                                                                                                               |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>              | MULTISHARD_QUERY_DATA_CONSISTENCY = { STRONG   SHARD_LOCAL   DELAYED_STANDBY_ALLOWED   STANDBY_ONLY   STANDBY_PREFERRED } |
| <b>Default value</b>       | STRONG                                                                                                                    |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                                                                                               |
| <b>Modifiable in a PDB</b> | Yes                                                                                                                       |
| <b>Basic</b>               | No                                                                                                                        |
| <b>Oracle RAC</b>          | Different instances can use different values.                                                                             |

You can use MULTISHARD\_QUERY\_DATA\_CONSISTENCY to avoid the cost of SCN synchronization when executing multi-shard queries across shards, which can be globally distributed.

MULTISHARD\_QUERY\_DATA\_CONSISTENCY can be set at the system level or the session level.

The values that can be set for MULTISHARD\_QUERY\_DATA\_CONSISTENCY are:

- **STRONG:** SCN synchronization is performed across all shards, and data is consistent across all shards. This setting provides global consistent read capability. This is the default value.
- **SHARD\_LOCAL:** SCN synchronization is not performed across all shards. Data is consistent within each shard. This setting provides the most current data.
- **DELAYED\_STANDBY\_ALLOWED:** SCN synchronization is not performed across all shards. Data is consistent within each shard. This setting allows data to be fetched from Data Guard standby databases when possible (for example, depending on load balancing), and may return stale data from standby databases.
- **STANDBY\_ONLY:** SCN synchronization is not performed across all shards. Data is consistent within each shard. Data is fetched only from standbys. If there are multiple standbys, chunks are distributed equally among them. If no standbys exist or none are alive, an error is raised.
- **STANDBY\_PREFERRED:** SCN synchronization is not performed across all shards. Data is consistent within each shard. Data is fetched from the standbys when they are available, that is, the primary shard is excluded. If there are multiple standbys, chunks are distributed equally among them. If there is no standby to serve the request, data is fetched from the primary shard.

#### ① See Also

*Using Oracle Sharding* for more information about specifying consistency levels in a multi-shard query

## 2.216 NLS\_CALENDAR

NLS\_CALENDAR specifies which calendar system Oracle uses.

| Property              | Description                      |
|-----------------------|----------------------------------|
| <b>Parameter type</b> | String                           |
| <b>Syntax</b>         | NLS_CALENDAR = "calendar_system" |

| Property            | Description                    |
|---------------------|--------------------------------|
| Default value       | None, implies GREGORIAN        |
| Modifiable          | ALTER SESSION                  |
| Modifiable in a PDB | Yes                            |
| Range of values     | Any valid calendar format name |
| Basic               | No                             |

NLS\_CALENDAR can have one of the following values:

- Arabic Hijrah
- English Hijrah
- Ethiopian
- GREGORIAN
- Japanese Imperial
- Persian
- ROC Official (Republic of China)
- Thai Buddha

For example, suppose NLS\_CALENDAR is set to English Hijrah. The date format is DD Month YYYY. If the date is March 7, 2025, then the SYSDATE is displayed as follows:

```
SELECT SYSDATE FROM DUAL;
SYSDATE

07 Ramadan 1446
```

#### ① Note

The value of the initialization parameter NLS\_CALENDER is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. If the initialization parameter is not specified, the initial session value becomes GREGORIAN. This initial value is overridden by a client-side value if the client is OCI-based and the NLS\_LANG client setting (environment variable) is defined.

#### ① See Also

*Oracle Database Globalization Support Guide* for a listing of available calendar systems

## 2.217 NLS\_COMP

NLS\_COMP specifies the collation behavior of the database session.

| Property            | Description                               |
|---------------------|-------------------------------------------|
| Parameter type      | String                                    |
| Syntax              | NLS_COMP = { BINARY   LINGUISTIC   ANSI } |
| Default value       | BINARY                                    |
| Modifiable          | ALTER SESSION                             |
| Modifiable in a PDB | Yes                                       |
| Basic               | No                                        |

### Values

- BINARY  
Normally, comparisons in the WHERE clause and in PL/SQL blocks is binary unless you specify the NLSSORT function.
- LINGUISTIC  
Comparisons for all SQL operations in the WHERE clause and in PL/SQL blocks should use the linguistic sort specified in the NLS\_SORT parameter. To improve the performance, you can also define a linguistic index on the column for which you want linguistic comparisons.
- ANSI  
A setting of ANSI is for backward compatibility; in general, you should set NLS\_COMP to LINGUISTIC

#### ① Note

Unless you explicitly set the value for NLS\_COMP in your initialization parameter file, a default value of NULL is shown in the following views: V\$PARAMETER, V\$SYSTEM\_PARAMETER, V\$PARAMETER2, V\$SYSTEM\_PARAMETER2, and NLS\_INSTANCE\_PARAMETERS. However, the actual default value, and behavior, is BINARY. Note that you cannot change the default to NULL, because NULL is not among the valid values.

### Examples

See *Oracle Database Globalization Support Guide* for examples of using this parameter.

#### ① Note

The value of this initialization parameter NLS\_COMP is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the NLS\_LANG client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

## 2.218 NLS\_CURRENCY

NLS\_CURRENCY specifies the string to use as the local currency symbol for the L number format element. The default value of this parameter is determined by NLS\_TERRITORY.

| Property            | Description                                                                 |
|---------------------|-----------------------------------------------------------------------------|
| Parameter type      | String                                                                      |
| Syntax              | NLS_CURRENCY = <i>currency_symbol</i>                                       |
| Default value       | Derived from NLS_TERRITORY                                                  |
| Modifiable          | ALTER SESSION                                                               |
| Modifiable in a PDB | Yes                                                                         |
| Range of values     | Any valid character string, with a maximum of 10 bytes (not including null) |
| Basic               | No                                                                          |

### Note

The value of this initialization parameter NLS\_CURRENCY is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the NLS\_LANG client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

## 2.219 NLS\_DATE\_FORMAT

NLS\_DATE\_FORMAT specifies the default datetime format model to use with the TO\_CHAR and TO\_DATE functions. The default value of this parameter is determined by NLS\_TERRITORY.

| Property            | Description                         |
|---------------------|-------------------------------------|
| Parameter type      | String                              |
| Syntax              | NLS_DATE_FORMAT = " <i>format</i> " |
| Default value       | Derived from NLS_TERRITORY          |
| Modifiable          | ALTER SESSION                       |
| Modifiable in a PDB | Yes                                 |
| Range of values     | Any valid datetime format model     |

| Property | Description |
|----------|-------------|
| Basic    | No          |

The value of this parameter can be any valid datetime format model, and the value must be surrounded by double quotation marks. For example:

```
NLS_DATE_FORMAT = "MM/DD/YYYY"
```

#### Note

The value of this initialization parameter `NLS_DATE_FORMAT` is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the `NLS_LANG` client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

#### See Also

- *Oracle Database SQL Language Reference* for more information on datetime format models

## 2.220 NLS\_DATE\_LANGUAGE

`NLS_DATE_LANGUAGE` specifies the language to use for the spelling of day and month names and date abbreviations (a.m., p.m., AD, BC) returned by the `T0_DATE` and `T0_CHAR` functions.

| Property            | Description                               |
|---------------------|-------------------------------------------|
| Parameter type      | String                                    |
| Syntax              | <code>NLS_DATE_LANGUAGE = language</code> |
| Default value       | Derived from <code>NLS_LANGUAGE</code>    |
| Modifiable          | <code>ALTER SESSION</code>                |
| Modifiable in a PDB | Yes                                       |
| Range of values     | Any valid <code>NLS_LANGUAGE</code> value |
| Basic               | No                                        |

**Note**

The value of this initialization parameter `NLS_DATE_LANGUAGE` is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the `NLS_LANG` client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

**See Also**

- *Oracle Database SQL Language Reference* for information on the `TO_DATE` function.
- *Oracle Database SQL Language Reference* for information on the `TO_CHAR` function.

## 2.221 NLS\_DUAL\_CURRENCY

`NLS_DUAL_CURRENCY` specifies the dual currency symbol (such as "Euro") for the territory. The default is the dual currency symbol defined in the territory of your current language environment.

| Property                   | Description                                      |
|----------------------------|--------------------------------------------------|
| <b>Parameter type</b>      | String                                           |
| <b>Syntax</b>              | <code>NLS_DUAL_CURRENCY = currency_symbol</code> |
| <b>Default value</b>       | Derived from <code>NLS_TERRITORY</code>          |
| <b>Modifiable</b>          | <code>ALTER SESSION</code>                       |
| <b>Modifiable in a PDB</b> | Yes                                              |
| <b>Range of values</b>     | Any valid format name up to 10 characters        |
| <b>Basic</b>               | No                                               |

**Note**

The value of this initialization parameter `NLS_DUAL_CURRENCY` is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the `NLS_LANG` client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

**① See Also**

*Oracle Database Globalization Support Guide* for more information about this parameter

## 2.222 NLS\_ISO\_CURRENCY

NLS\_ISO\_CURRENCY determines the string to use as the international currency symbol corresponding to the C number format element in a call to the TO\_CHAR function.

| Property                   | Description                         |
|----------------------------|-------------------------------------|
| <b>Parameter type</b>      | String                              |
| <b>Syntax</b>              | NLS_ISO_CURRENCY = <i>territory</i> |
| <b>Default value</b>       | Derived from NLS_TERRITORY          |
| <b>Modifiable</b>          | ALTER SESSION                       |
| <b>Modifiable in a PDB</b> | Yes                                 |
| <b>Range of values</b>     | Any valid NLS_TERRITORY value       |
| <b>Basic</b>               | No                                  |

Local currency symbols can be ambiguous. For example, a dollar sign (\$) can refer to U.S. dollars or Australian dollars. ISO Specification 4217 defines unique "international" currency symbols for the currencies of specific territories or countries. The value of the NLS\_ISO\_CURRENCY parameter is the Oracle name of the territory whose ISO currency symbol is returned in place of the C number format element. For example, if NLS\_ISO\_CURRENCY is set to AMERICA, the string 'USD' is returned by TO\_CHAR where the C element is specified in the format.

**① Note**

The value of this initialization parameter NLS\_ISO\_CURRENCY is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the NLS\_LANG client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

**① See Also**

- *Oracle Database Globalization Support Guide* for more information about this parameter

## 2.223 NLS\_LANGUAGE

NLS\_LANGUAGE specifies the default language of the database.

| Property                   | Description                                                                |
|----------------------------|----------------------------------------------------------------------------|
| <b>Parameter type</b>      | String                                                                     |
| <b>Syntax</b>              | NLS_LANGUAGE = <i>language</i>                                             |
| <b>Default value</b>       | Operating system-dependent, derived from the NLS_LANG environment variable |
| <b>Modifiable</b>          | ALTER SESSION                                                              |
| <b>Modifiable in a PDB</b> | Yes                                                                        |
| <b>Range of values</b>     | Any valid language name                                                    |
| <b>Basic</b>               | Yes                                                                        |

This language specified by NLS\_LANGUAGE is used for messages, day and month names, symbols for AD, BC, a.m., and p.m., and the default sorting mechanism. This parameter also determines the default values of the parameters NLS\_DATE\_LANGUAGE and NLS\_SORT.

### Note

The value of this initialization parameter NLS\_LANGUAGE is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the NLS\_LANG client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

### Examples

See these examples of using the NLS\_LANGUAGE parameter:

- For an example of setting NLS\_LANGUAGE to Italian, see *Oracle Database Globalization Support Guide*.
- For an example of overriding default values for NLS\_LANGUAGE and NLS\_TERRITORY during a session, see *Oracle Database Globalization Support Guide*.

## 2.224 NLS\_LENGTH\_SEMANTICS

NLS\_LENGTH\_SEMANTICS is used to specify length semantics.

| Property            | Description                                                                    |
|---------------------|--------------------------------------------------------------------------------|
| Parameter type      | String                                                                         |
| Syntax              | NLS_LENGTH_SEMANTICS = <i>string</i><br>Example: NLS_LENGTH_SEMANTICS = 'CHAR' |
| Default value       | BYTE                                                                           |
| Modifiable          | ALTER SESSION, ALTER SYSTEM                                                    |
| Modifiable in a PDB | Yes                                                                            |
| Range of values     | BYTE   CHAR                                                                    |
| Basic               | No                                                                             |

The session-level value of NLS\_LENGTH\_SEMANTICS specifies the default length semantics to use for VARCHAR2 and CHAR table columns, user-defined object attributes, and PL/SQL variables in database objects created in the session. This default may be overridden by the explicit length semantics qualifiers BYTE and CHAR in column, attribute, and variable definitions.

The instance-level value of NLS\_LENGTH\_SEMANTICS provides a default for the session-level value if NLS\_LENGTH\_SEMANTICS is not set explicitly by the database client through the NLS\_LENGTH\_SEMANTICS client environment variable (does not apply to JDBC Thin clients), or the ALTER SESSION SET NLS\_LENGTH\_SEMANTICS statement.

NCHAR, NVARCHAR2, CLOB, and NCLOB columns are always character-based.

Sessions logged in as SYS do not use the NLS\_LENGTH\_SEMANTICS parameter. They use BYTE length semantics for all created objects unless overridden by the explicit BYTE and CHAR qualifiers in object definitions (SQL DDL statements).

**Note**

Oracle strongly recommends that you do NOT set the NLS\_LENGTH\_SEMANTICS parameter to CHAR in the instance or server parameter file. This may cause many existing installation scripts to unexpectedly create columns with character length semantics, resulting in run-time errors, including buffer overflows.

**See Also**

*Oracle Database Globalization Support Guide* for more information about this parameter

## 2.225 NLS\_NCHAR\_CONV\_EXCP

NLS\_NCHAR\_CONV\_EXCP determines whether an error is reported when there is data loss during an implicit or explicit character type conversion between NCHAR/NVARCHAR2 and CHAR/VARCHAR2.

| Property            | Description                            |
|---------------------|----------------------------------------|
| Parameter type      | String                                 |
| Syntax              | NLS_NCHAR_CONV_EXCP = { TRUE   FALSE } |
| Default value       | FALSE                                  |
| Modifiable          | ALTER SESSION, ALTER SYSTEM            |
| Modifiable in a PDB | Yes                                    |
| Basic               | No                                     |

The default value results in no error being reported.

**See Also**

*Oracle Database Globalization Support Guide* for more information about this parameter

## 2.226 NLS\_NUMERIC\_CHARACTERS

NLS\_NUMERIC\_CHARACTERS specifies the characters to use as the group separator and decimal character.

| Property       | Description                                                     |
|----------------|-----------------------------------------------------------------|
| Parameter type | String                                                          |
| Syntax         | NLS_NUMERIC_CHARACTERS =<br>"decimal_character group_separator" |

| Property                   | Description                |
|----------------------------|----------------------------|
| <b>Default value</b>       | Derived from NLS_TERRITORY |
| <b>Modifiable</b>          | ALTER SESSION              |
| <b>Modifiable in a PDB</b> | Yes                        |
| <b>Basic</b>               | No                         |

NLS\_NUMERIC\_CHARACTERS overrides those characters defined implicitly by NLS\_TERRITORY. The group separator separates integer groups (that is, thousands, millions, billions, and so on). The decimal separates the integer portion of a number from the decimal portion.

You can specify any character as the decimal or group separator. The two characters specified must be single-byte and must be different from each other. The characters cannot be any numeric character or any of the following characters: plus (+), minus sign (-), less than sign (<), greater than sign (>). Either character can be a space.

For example, if you want to specify a comma as the decimal character and a space as the group separator, you would set this parameter as follows:

```
NLS_NUMERIC_CHARACTERS = ', '
```

#### Note

The value of this initialization parameter NLS\_NUMERIC\_CHARACTERS is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the NLS\_LANG client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

#### See Also

*Oracle Database Globalization Support Guide* for more information about this parameter

## 2.227 NLS\_SORT

NLS\_SORT specifies the collating sequence for character value comparison in various SQL operators and clauses.

| Property                   | Description                                          |
|----------------------------|------------------------------------------------------|
| <b>Parameter type</b>      | String                                               |
| <b>Syntax</b>              | NLS_SORT = { BINARY   <i>linguistic_definition</i> } |
| <b>Default value</b>       | Derived from NLS_LANGUAGE                            |
| <b>Modifiable</b>          | ALTER SESSION                                        |
| <b>Modifiable in a PDB</b> | Yes                                                  |

| Property        | Description                                    |
|-----------------|------------------------------------------------|
| Range of values | BINARY or any valid linguistic definition name |
| Basic           | No                                             |

For example, NLS\_SORT specifies the collating sequence for character value comparison in these SQL operators and clauses: ORDER BY, GROUP BY, comparison conditions (=, <>, <=, >=), IN, BETWEEN, LIKE, MIN/MAX, GREATEST/LEAST, and INSTR.

- If the value is BINARY, then comparison is based directly on byte values in the binary encoding of the character values being compared. The ordering depends on the character set of the compared values, which is either the database character set (for VARCHAR2, CHAR, LONG, and CLOB) or the national character set (for NVARCHAR2, NCHAR, and NCLOB).
- If the value is a named linguistic sort, then comparison is defined by this sort. A linguistic sort uses various rules to achieve ordering expected by speakers of one or more natural languages. This is usually the same ordering that is used in dictionaries and telephone directories in those languages.

The exact operators and query clauses that obey the NLS\_SORT parameter depend on the value of the NLS\_COMP parameter. If an operator or clause does not obey the NLS\_SORT value, as determined by NLS\_COMP, the collation used is BINARY.

The BINARY comparison is faster and uses less resources than any linguistic comparison but for text in a natural language, it does not provide ordering expected by users.

The value of NLS\_SORT affects execution plans of queries. Because a standard index cannot be used as a source of values sorted in a linguistic order, an explicit sort operation must usually be performed instead of an index range scan. A functional index on the NLSSORT function may be defined to provide values sorted in a linguistic order and reintroduce the index range scan to the execution plan.

#### Note

The value of the initialization parameter NLS\_SORT is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the NLS\_LANG client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

#### See Also

- *Oracle Database Globalization Support Guide* for more information about this parameter and a current listing of values you can specify

## 2.228 NLS\_TERRITORY

NLS\_TERRITORY specifies the name of the territory whose conventions are to be followed for day and week numbering.

| Property            | Description                      |
|---------------------|----------------------------------|
| Parameter type      | String                           |
| Syntax              | NLS_TERRITORY = <i>territory</i> |
| Default value       | Operating system-dependent       |
| Modifiable          | ALTER SESSION                    |
| Modifiable in a PDB | Yes                              |
| Range of values     | Any valid territory name         |
| Basic               | Yes                              |

This parameter also establishes the default date format, the default decimal character and group separator, and the default ISO and local currency symbols.

For information on these settings, see "[NLS\\_DATE\\_FORMAT](#)", "[NLS\\_NUMERIC\\_CHARACTERS](#)", "[NLS\\_CURRENCY](#)", and "[NLS\\_ISO\\_CURRENCY](#)".

#### Note

The value of this initialization parameter NLS\_TERRITORY is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the NLS\_LANG client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

### Examples

For an example of overriding the default value for the NLS\_TERRITORY parameter, see *Oracle Database Globalization Support Guide*.

#### See Also

- *Oracle Database Globalization Support Guide* for a complete list of territories
- Your operating system-specific Oracle documentation for the territory-dependent default values for these parameters

## 2.229 NLS\_TIMESTAMP\_FORMAT

NLS\_TIMESTAMP\_FORMAT defines the datetime format model to use with the TO\_CHAR and TO\_TIMESTAMP functions.

| Property       | Description                              |
|----------------|------------------------------------------|
| Parameter type | String                                   |
| Syntax         | NLS_TIMESTAMP_FORMAT = " <i>format</i> " |
| Default value  | Derived from NLS_TERRITORY               |

| Property                   | Description                     |
|----------------------------|---------------------------------|
| <b>Modifiable</b>          | ALTER SESSION                   |
| <b>Modifiable in a PDB</b> | Yes                             |
| <b>Range of values</b>     | Any valid datetime format model |
| <b>Basic</b>               | No                              |

The value must be surrounded by quotation marks as follows:

```
NLS_TIMESTAMP_FORMAT = 'YYYY-MM-DD HH:MI:SS.FF'
```

You can specify the value of NLS\_TIMESTAMP\_FORMAT by setting it in the initialization parameter file. You can specify its value for a client as a client environment variable.

You can also alter the value of NLS\_TIMESTAMP\_FORMAT by changing its value in the initialization parameter and then restarting the instance. To alter the value during a session use the ALTER SESSION SET statement.

#### Note

The value of this initialization parameter NLS\_TIMESTAMP\_FORMAT is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the NLS\_LANG client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

#### See Also

- *Oracle Database SQL Language Reference* for more information on datetime format models
- *Oracle Database Globalization Support Guide* for more information about this parameter

## 2.230 NLS\_TIMESTAMP\_TZ\_FORMAT

NLS\_TIMESTAMP\_TZ\_FORMAT defines the default datetime format model to use with the TO\_CHAR and TO\_TIMESTAMP\_TZ functions.

| Property                   | Description                                 |
|----------------------------|---------------------------------------------|
| <b>Parameter type</b>      | String                                      |
| <b>Syntax</b>              | NLS_TIMESTAMP_TZ_FORMAT = " <i>format</i> " |
| <b>Default value</b>       | Derived from NLS_TERRITORY                  |
| <b>Modifiable</b>          | ALTER SESSION                               |
| <b>Modifiable in a PDB</b> | Yes                                         |
| <b>Range of values</b>     | Any valid datetime format model             |

| Property | Description |
|----------|-------------|
| Basic    | No          |

The value must be surrounded by quotation marks as follows:

```
NLS_TIMESTAMP_TZ_FORMAT = 'YYYY-MM-DD HH:MI:SS.FF TZH:TZM'
```

You can specify the value of `NLS_TIMESTAMP_TZ_FORMAT` by setting it in the initialization parameter file. You can specify its value for a client as a client environment variable.

You can also alter the value of `NLS_TIMESTAMP_TZ_FORMAT` by changing its value in the initialization parameter and then restarting the instance. To alter the value during a session use the `ALTER SESSION SET` statement.

#### Note

The value of this initialization parameter `NLS_TIMESTAMP_TZ_FORMAT` is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the `NLS_LANG` client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

#### See Also

- *Oracle Database SQL Language Reference* for more information on datetime format models
- *Oracle Database Globalization Support Guide* for more information about this parameter

## 2.231 NONCDB\_COMPATIBLE

`NONCDB_COMPATIBLE` enables you to get behavior similar to a non-CDB when issuing SQL commands inside a PDB in a CDB.

| Property            | Description  |
|---------------------|--------------|
| Parameter type      | Boolean      |
| Default value       | false        |
| Modifiable          | No           |
| Modifiable in a PDB | No           |
| Range of values     | true   false |
| Basic               | No           |

Set this parameter if you are using a single PDB in your CDB configuration and you have legacy code that causes `ORA-65040` when you run it in the PDB.

**Values**

- TRUE

Indicates the behavior for SQL statements will be like a non-CDB although the statements are issued in a PDB in a CDB.

- FALSE

Indicates the behavior will for SQL statements will be like a CDB. This is the default value of the parameter.

There are some statements (such as ALTER DB BACKUP CONTROLFILE) which can be issued in a non-CDB, but in a CDB they must be issued in the root (because they affect the whole CDB) and would result in an error if issued in a PDB.

Some ALTER DATABASE or ALTER SYSTEM statements are not permitted inside a PDB, and they will fail if NONCDB\_COMPATIBLE=FALSE is set in init.ora. However, these statements will succeed if NONCDB\_COMPATIBLE=TRUE is set.

**① See Also**

- *Oracle Multitenant Administrator's Guide* for an introduction to PDBs and CDBs

## 2.232 OBJECT\_CACHE\_MAX\_SIZE\_PERCENT

The **object cache** is a memory block on the client that allows applications to store entire objects and to navigate among them without round trips to the server.

OBJECT\_CACHE\_MAX\_SIZE\_PERCENT specifies the percentage of the optimal cache size that the session object cache can grow past the optimal size.

| Property                   | Description                              |
|----------------------------|------------------------------------------|
| <b>Parameter type</b>      | Integer                                  |
| <b>Default value</b>       | 10                                       |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM ... DEFERRED |
| <b>Modifiable in a PDB</b> | Yes                                      |
| <b>Range of values</b>     | 0 to operating system-dependent maximum  |
| <b>Basic</b>               | No                                       |

The maximum size is equal to the optimal size plus the product of this percentage and the optimal size. When the cache size exceeds this maximum size, the system will attempt to shrink the cache to the optimal size.

**① See Also**

- "[OBJECT\\_CACHE\\_OPTIMAL\\_SIZE](#)" for a description of the object cache
- *Pro\*C/C++ Programmer's Guide* and *Oracle Call Interface Programmer's Guide* for information on precompiler use of the object cache

## 2.233 OBJECT\_CACHE\_OPTIMAL\_SIZE

OBJECT\_CACHE\_OPTIMAL\_SIZE specifies (in bytes) the size to which the session object cache is reduced when the size of the cache exceeds the maximum size.

| Property                   | Description                                 |
|----------------------------|---------------------------------------------|
| <b>Parameter type</b>      | Integer                                     |
| <b>Default value</b>       | 10240000 (10M)                              |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM ... DEFERRED    |
| <b>Modifiable in a PDB</b> | Yes                                         |
| <b>Range of values</b>     | 10 KB to operating system-dependent maximum |
| <b>Basic</b>               | No                                          |

The **object cache** is a memory block on the client that allows applications to store entire objects and to navigate among them without round trips to the server. On the server, it is used to cache frequently used objects requested as a result of client requests to help in performance.

**① See Also**

*Pro\*C/C++ Programmer's Guide* and *Oracle Call Interface Programmer's Guide* for information on precompiler use of the object cache

## 2.234 OFS\_THREADS

OFS\_THREADS sets the maximum number of Oracle file system (OFS) threads that can be started to service Oracle file system requests.

| Property                   | Description                                          |
|----------------------------|------------------------------------------------------|
| <b>Parameter type</b>      | Integer                                              |
| <b>Default value</b>       | 4                                                    |
| <b>Modifiable</b>          | ALTER SYSTEM                                         |
| <b>Modifiable in a PDB</b> | No                                                   |
| <b>Range of values</b>     | 2 to 128                                             |
| <b>Basic</b>               | No                                                   |
| <b>Oracle RAC</b>          | The same value should be specified on all instances. |

**Note**

This initialization parameter is supported only on the Linux operating system.

**See Also**

*Oracle Database Administrator's Guide* for more information about the Oracle Database NFS server feature

## 2.235 OLAP\_PAGE\_POOL\_SIZE

OLAP\_PAGE\_POOL\_SIZE specifies (in bytes) the size of the OLAP page pool.

| Property            | Description                                      |
|---------------------|--------------------------------------------------|
| Parameter type      | Big integer                                      |
| Syntax              | OLAP_PAGE_POOL_SIZE = <i>integer</i> [K   M   G] |
| Default value       | 0                                                |
| Modifiable          | ALTER SESSION, ALTER SYSTEM ... DEFERRED         |
| Modifiable in a PDB | Yes                                              |
| Range of values     | 0, 2097152 (2 MB) to $2^{31} - 1$                |
| Basic               | No                                               |

**Caution**

Oracle strongly recommends that you leave this parameter set to its default value of 0. This instructs the database to autonomously adjust the OLAP page pool size to serve the requirements of the analytic workspaces. Setting this parameter to a value other than 0 can lead to errors in OLAP processing or wasted memory.

**See Also**

*Oracle OLAP User's Guide* for more information about the OLAP option for Oracle Database

## 2.236 ONE\_STEP\_PLUGIN\_FOR\_PDB\_WITH\_TDE

If a pluggable database (PDB) has Transparent Data Encryption-encrypted (TDE-encrypted) tables or tablespaces, you can enable ONE\_STEP\_PLUGIN\_FOR\_PDB\_WITH\_TDE on the target CDB to simplify the move of TDE keys in a single step PDB move operation.

ONE\_STEP\_PLUGIN\_FOR\_PDB\_WITH\_TDE eliminates the need of having to manually provide a keystore password when you import the TDE keys into the PDB after it has moved to the target CDB.

| Property            | Description                                                                        |
|---------------------|------------------------------------------------------------------------------------|
| Parameter type      | Boolean                                                                            |
| Default value       | FALSE                                                                              |
| Modifiable          | ALTER SYSTEM                                                                       |
| Modifiable in a PDB | No                                                                                 |
| Range of values     | true   false                                                                       |
| Basic               | No                                                                                 |
| Oracle RAC          | A different value can be set for this parameter on different Oracle RAC instances. |

The default for ONE\_STEP\_PLUGIN\_FOR\_PDB\_WITH\_TDE is FALSE.

When ONE\_STEP\_PLUGIN\_FOR\_PDB\_WITH\_TDE is set to TRUE on the target CDB, the plug in of the PDB does not require a keystore password.

## 2.237 OPEN\_CURSORS

OPEN\_CURSORS specifies the maximum number of open cursors (handles to private SQL areas) a session can have at once. You can use this parameter to prevent a session from opening an excessive number of cursors.

| Property            | Description  |
|---------------------|--------------|
| Parameter type      | Integer      |
| Default value       | 50           |
| Modifiable          | ALTER SYSTEM |
| Modifiable in a PDB | Yes          |
| Range of values     | 0 to 65535   |
| Basic               | Yes          |

It is important to set the value of OPEN\_CURSORS high enough to prevent your application from running out of open cursors. The number will vary from one application to another. Assuming that a session does not open the number of cursors specified by OPEN\_CURSORS, there is no added overhead to setting this value higher than actually needed.

### 📘 See Also

- *Oracle Database Performance Tuning Guide* for more information on setting this parameter
- Your operating system-specific Oracle documentation for the range of values

## 2.238 OPEN\_LINKS

OPEN\_LINKS specifies the maximum number of concurrent open connections to remote databases in one session. These connections include database links, as well as external procedures and cartridges, each of which uses a separate process.

| Property                   | Description |
|----------------------------|-------------|
| <b>Parameter type</b>      | Integer     |
| <b>Default value</b>       | 4           |
| <b>Modifiable</b>          | No          |
| <b>Modifiable in a PDB</b> | Yes         |
| <b>Range of values</b>     | 0 to 32768  |
| <b>Basic</b>               | No          |

Oracle counts one open link for the following:

- For each user that references a public or private database link
- For each external procedure or cartridge connection when it is executed for the first time

Both types of connections close when the session ends. You can also close a database link connection explicitly by issuing an `ALTER SESSION CLOSE DATABASE LINK` statement.

You should set this parameter to allow for the external procedure and cartridge connections expected during the session plus the number of databases referred to in typical distributed transactions (that is, a single SQL statement that references multiple databases), so that all the databases can be open to execute the statement. For example, if queries alternately access databases A, B, and C, and `OPEN_LINKS` is set to 2, time will be lost waiting while one connection is broken and another made. Increase the value if many different databases are accessed over time.

This parameter refers only to connections used for distributed transactions. Direct connections to a remote database specified as an application connects are not counted.

If you set `OPEN_LINKS` to 0, then no distributed transactions are allowed.

In a multitenant container database (CDB), the `OPEN_LINKS` parameter can be set at both the root and at the PDB level using either an initialization parameter file (PFILE) or server parameter file (SPFILE). You need to restart the instance or reopen the PDB for a new `OPEN_LINKS` value to become effective.

#### See Also

["OPEN\\_LINKS\\_PER\\_INSTANCE"](#) for information on setting open connections globally for a database instance

## 2.239 OPEN\_LINKS\_PER\_INSTANCE

`OPEN_LINKS_PER_INSTANCE` specifies the maximum number of migratable open connections globally for each database instance.

| Property                   | Description |
|----------------------------|-------------|
| <b>Parameter type</b>      | Integer     |
| <b>Default value</b>       | 4           |
| <b>Modifiable</b>          | No          |
| <b>Modifiable in a PDB</b> | No          |

| Property        | Description                                   |
|-----------------|-----------------------------------------------|
| Range of values | 0 to 2 <sup>31</sup> - 1                      |
| Basic           | No                                            |
| Oracle RAC      | Multiple instances can have different values. |

XA transactions use migratable open connections so that the connections are cached after a transaction is committed. Another transaction can use the connection, provided the user who created the connection is the same as the user who owns the transaction.

OPEN\_LINKS\_PER\_INSTANCE is different from OPEN\_LINKS, which indicates the number of connections from a session. The OPEN\_LINKS parameter is not applicable to XA applications.

#### ① See Also

- ["OPEN\\_LINKS"](#)
- *Oracle Database Development Guide* for more information about using this parameter in Oracle XA applications

## 2.240 OPTIMIZER\_ADAPTIVE\_PLANS

OPTIMIZER\_ADAPTIVE\_PLANS controls adaptive plans. Adaptive plans are execution plans built with alternative choices that are decided at run time based on statistics collected as the query executes.

| Property            | Description                                 |
|---------------------|---------------------------------------------|
| Parameter type      | Boolean                                     |
| Default value       | true                                        |
| Modifiable          | ALTER SESSION, ALTER SYSTEM                 |
| Modifiable in a PDB | Yes                                         |
| Range of values     | true   false                                |
| Basic               | No                                          |
| Oracle RAC          | The same value must be set on all instances |

Setting this parameter to false disables the following adaptive features:

- Nested loop join/hash join selection
- Star transformation bitmap pruning
- Adaptive parallel distribution method

#### ① See Also

*Oracle Database SQL Tuning Guide* for information about adaptive plans

## 2.241 OPTIMIZER\_ADAPTIVE\_REPORTING\_ONLY

OPTIMIZER\_ADAPTIVE\_REPORTING\_ONLY controls reporting-only mode for adaptive optimizations.

| Property                   | Description                 |
|----------------------------|-----------------------------|
| <b>Parameter type</b>      | Boolean                     |
| <b>Default value</b>       | FALSE                       |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM |
| <b>Modifiable in a PDB</b> | Yes                         |
| <b>Range of values</b>     | TRUE   FALSE                |
| <b>Basic</b>               | No                          |

When OPTIMIZER\_ADAPTIVE\_REPORTING\_ONLY is set to FALSE, reporting-only mode is off, and the adaptive optimizations are enabled as usual.

When OPTIMIZER\_ADAPTIVE\_REPORTING\_ONLY is set to TRUE, adaptive optimizations run in reporting-only mode. With this setting, the information required for an adaptive optimization is gathered, but no action is taken to change the plan. For instance, an adaptive plan will always choose the default (optimizer-chosen) plan, but information is collected on what plan to adapt to in non-reporting mode. This information can be viewed in the adaptive plan report.

This parameter affects only adaptive optimizations that are enabled.

### 📘 See Also

- *Oracle Database SQL Tuning Guide* for more information about adaptive plans and automatic reoptimization
- *Oracle Database SQL Tuning Guide* for information on controlling adaptive optimization

## 2.242 OPTIMIZER\_ADAPTIVE\_STATISTICS

OPTIMIZER\_ADAPTIVE\_STATISTICS controls adaptive statistics. Some query shapes are too complex to rely on base table statistics alone, so the optimizer augments these statistics with adaptive statistics.

| Property                   | Description                                 |
|----------------------------|---------------------------------------------|
| <b>Parameter type</b>      | Boolean                                     |
| <b>Default value</b>       | false                                       |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                 |
| <b>Modifiable in a PDB</b> | Yes                                         |
| <b>Range of values</b>     | true   false                                |
| <b>Basic</b>               | No                                          |
| <b>Oracle RAC</b>          | The same value must be set on all instances |

Setting this parameter to false disables the following adaptive features:

- SQL plan directives
- Statistics feedback for joins
- Adaptive dynamic sampling for parallel execution

#### 📘 Note

Setting `OPTIMIZER_ADAPTIVE_STATISTICS` to false preserves the statistics feedback functionality that was introduced in Oracle Database 11g.

`OPTIMIZER_ADAPTIVE_STATISTICS` does not control the creation of SQL plan directives. SQL plan directives will be created even if this parameter is false, but they will not be used to refine SQL execution plans with dynamic sampling.

#### 📘 See Also

*Oracle Database SQL Tuning Guide* for information about adaptive plans

## 2.243 OPTIMIZER\_CAPTURE\_SQL\_PLAN\_BASELINES

`OPTIMIZER_CAPTURE_SQL_PLAN_BASELINES` enables or disables the automatic recognition of repeatable SQL statements, as well as the generation of SQL plan baselines for such statements.

| Property            | Description                 |
|---------------------|-----------------------------|
| Parameter type      | Boolean                     |
| Default value       | false                       |
| Modifiable          | ALTER SESSION, ALTER SYSTEM |
| Modifiable in a PDB | Yes                         |
| Range of values     | true   false                |
| Basic               | No                          |

#### 📘 See Also

*Oracle Database SQL Tuning Guide* for more information about the optimizer

## 2.244 OPTIMIZER\_CAPTURE\_SQL\_QUARANTINE

OPTIMIZER\_CAPTURE\_SQL\_QUARANTINE enables or disables the automatic creation of SQL Quarantine configurations.

| Property                   | Description                                   |
|----------------------------|-----------------------------------------------|
| <b>Parameter type</b>      | Boolean                                       |
| <b>Default value</b>       | false                                         |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                   |
| <b>Modifiable in a PDB</b> | Yes                                           |
| <b>Range of values</b>     | true   false                                  |
| <b>Basic</b>               | No                                            |
| <b>Oracle RAC</b>          | Different instances can use different values. |

### Values:

- **true**  
Enables the automatic creation of SQL Quarantine configurations. If the Resource Manager terminates a SQL statement because the statement has exceeded resource limits, then the database automatically creates a SQL Quarantine configuration for the execution plan used by the terminated SQL statement. Note that the *plan* for a terminated SQL statement is quarantined, not the statement itself.
- **false**  
Disables the automatic creation of SQL Quarantine configurations.

## 2.245 OPTIMIZER\_CROSS\_SHARD\_RESILIENCY

OPTIMIZER\_CROSS\_SHARD\_RESILIENCY enables resilient execution of cross shard queries.

| Property                   | Description                                   |
|----------------------------|-----------------------------------------------|
| <b>Parameter type</b>      | Boolean                                       |
| <b>Default value</b>       | false                                         |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                   |
| <b>Modifiable in a PDB</b> | Yes                                           |
| <b>Range of values</b>     | true   false                                  |
| <b>Basic</b>               | No                                            |
| <b>Oracle RAC</b>          | The same value must be used on all instances. |

When this parameter is set to true and a cross-shard query fails on one or more shards, the query execution continues on the Oracle Data Guard standbys of the failed shards. This parameter is not set to true by default, because there may be performance overhead for the resilient query execution.

**Note**

This parameter is available starting with Oracle Database 21c.

## 2.246 OPTIMIZER\_DYNAMIC\_SAMPLING

OPTIMIZER\_DYNAMIC\_SAMPLING controls both when the database gathers dynamic statistics, and the size of the sample that the optimizer uses to gather the statistics.

| Property                   | Description                                                                                                                                                                              |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | Integer                                                                                                                                                                                  |
| <b>Default value</b>       | If OPTIMIZER_FEATURES_ENABLE is set to 10.0.0 or higher, then 2<br>If OPTIMIZER_FEATURES_ENABLE is set to 9.2.0, then 1<br>If OPTIMIZER_FEATURES_ENABLE is set to 9.0.1 or lower, then 0 |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                                                                                                                                                              |
| <b>Modifiable in a PDB</b> | Yes                                                                                                                                                                                      |
| <b>Range of values</b>     | 0 to 11                                                                                                                                                                                  |
| <b>Basic</b>               | No                                                                                                                                                                                       |

**Note**

Dynamic statistics were called dynamic sampling in releases earlier than Oracle Database 12c Release 1 (12.1).

If the value of OPTIMIZER\_DYNAMIC\_SAMPLING is set to 11, the OPTIMIZER\_FEATURES\_ENABLE setting has no effect on the OPTIMIZER\_DYNAMIC\_SAMPLING setting.

**See Also**

*Oracle Database SQL Tuning Guide* for detailed information about the values (0 – 11) that can be set for the OPTIMIZER\_DYNAMIC\_SAMPLING parameter.

## 2.247 OPTIMIZER\_FEATURES\_ENABLE

OPTIMIZER\_FEATURES\_ENABLE acts as an umbrella parameter for enabling a series of optimizer features based on an Oracle release number.

| Property                   | Description                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | String                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Syntax</b>              | OPTIMIZER_FEATURES_ENABLE = { 8.0.0   8.0.3   8.0.4   8.0.5   8.0.6   8.0.7   8.1.0   8.1.3   8.1.4   8.1.5   8.1.6   8.1.7   9.0.0   9.0.1   9.2.0   9.2.0.8   10.1.0   10.1.0.3   10.1.0.4   10.1.0.5   10.2.0.1   10.2.0.2   10.2.0.3   10.2.0.4   10.2.0.5   11.1.0.6   11.1.0.7   11.2.0.1   11.2.0.2   11.2.0.3   11.2.0.4   12.1.0.1   12.1.0.2   12.2.0.1   18.1.0   19.1.0   21.1.0 } |
| <b>Default value</b>       | 21.1.0                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Modifiable in a PDB</b> | Yes                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Basic</b>               | No                                                                                                                                                                                                                                                                                                                                                                                             |

For example, if you upgrade your database from release 11.1 to release 12.1, but you want to keep the release 11.1 optimizer behavior, you can do so by setting this parameter to 11.1.0.6. At a later time, you can try the enhancements introduced in releases up to and including release 12.1 by setting the parameter to 12.1.0.2.

#### Note

When setting this parameter to a value representing Oracle Database 18c or later, you must specify three numeric values separated by periods, such as 18.1.0 or 19.1.0.

[Table 2-6](#) describes some of the optimizer features that are enabled when you set the OPTIMIZER\_FEATURES\_ENABLE parameter to an 11.1 or 11.2 release.

[Table 2-7](#) describes some of the optimizer features that are enabled when you set the OPTIMIZER\_FEATURES\_ENABLE parameter to a 12.1 or later release.

#### See Also

*Oracle Database SQL Tuning Guide* for more information about the optimizer and for information about the features listed in the following tables

**Table 2-6 Optimizer Features for Oracle Database 11g Releases**

## 2.248 OPTIMIZER\_IGNORE\_HINTS

OPTIMIZER\_IGNORE\_HINTS enables embedded hints to be ignored.

| Property                   | Description                                         |
|----------------------------|-----------------------------------------------------|
| <b>Parameter type</b>      | Boolean                                             |
| <b>Default value</b>       | FALSE                                               |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                         |
| <b>Modifiable in a PDB</b> | Yes                                                 |
| <b>Range of values</b>     | true   false                                        |
| <b>Basic</b>               | No                                                  |
| <b>Oracle RAC</b>          | Different values can be set on different instances. |

When this parameter is set to TRUE, the optimizer ignores embedded hints.

The default value is FALSE. When this parameter's value is FALSE, the optimizer does not ignore embedded hints.

## 2.249 OPTIMIZER\_IGNORE\_PARALLEL\_HINTS

OPTIMIZER\_IGNORE\_PARALLEL\_HINTS enables embedded parallel hints to be ignored.

| Property                   | Description                                         |
|----------------------------|-----------------------------------------------------|
| <b>Parameter type</b>      | Boolean                                             |
| <b>Default value</b>       | FALSE                                               |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                         |
| <b>Modifiable in a PDB</b> | Yes                                                 |
| <b>Range of values</b>     | true   false                                        |
| <b>Basic</b>               | No                                                  |
| <b>Oracle RAC</b>          | Different values can be set on different instances. |

When this parameter is set to TRUE, the optimizer ignores embedded parallel hints.

The default value is FALSE. When this parameter's value is FALSE, the optimizer does not ignore parallel embedded hints.

## 2.250 OPTIMIZER\_INDEX\_CACHING

OPTIMIZER\_INDEX\_CACHING lets you adjust the behavior of cost-based optimization to favor nested loops joins and IN-list iterators.

| Property                   | Description                 |
|----------------------------|-----------------------------|
| <b>Parameter type</b>      | Integer                     |
| <b>Default value</b>       | 0                           |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM |
| <b>Modifiable in a PDB</b> | Yes                         |
| <b>Range of values</b>     | 0 to 100                    |
| <b>Basic</b>               | No                          |

The cost of executing an index using an IN-list iterator or of executing a nested loops join when an index is used to access the inner table depends on the caching of that index in the buffer cache. The amount of caching depends on factors that the optimizer cannot predict, such as the load on the system and the block access patterns of different users.

You can modify the optimizer's assumptions about index caching for nested loops joins and IN-list iterators by setting this parameter to a value between 0 and 100 to indicate the percentage of the index blocks the optimizer should assume are in the cache. Setting this parameter to a higher value makes nested loops joins and IN-list iterators look less expensive to the optimizer. As a result, it will be more likely to pick nested loops joins over hash or sort-merge joins and to pick indexes using IN-list iterators over other indexes or full table scans. The default for this parameter is 0, which results in default optimizer behavior.

### See Also

*Oracle Database SQL Language Reference* for additional information about this initialization parameter

## 2.251 OPTIMIZER\_INDEX\_COST\_ADJ

OPTIMIZER\_INDEX\_COST\_ADJ lets you tune optimizer behavior for access path selection to be more or less index friendly—that is, to make the optimizer more or less prone to selecting an index access path over a full table scan.

| Property                   | Description                 |
|----------------------------|-----------------------------|
| <b>Parameter type</b>      | Integer                     |
| <b>Default value</b>       | 100                         |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM |
| <b>Modifiable in a PDB</b> | Yes                         |
| <b>Range of values</b>     | 1 to 10000                  |
| <b>Basic</b>               | No                          |

The default for this parameter is 100 percent, at which the optimizer evaluates index access paths at the regular cost. Any other value makes the optimizer evaluate the access path at that percentage of the regular cost. For example, a setting of 50 makes the index access path look half as expensive as normal.

#### ① Note

The adjustment does not apply to user-defined cost functions for domain indexes.

#### ① See Also

*Oracle Database SQL Language Reference* for additional information about this initialization parameter

## 2.252 OPTIMIZER\_INMEMORY\_AWARE

OPTIMIZER\_INMEMORY\_AWARE enables or disables all of the optimizer cost model enhancements for in-memory.

| Property                   | Description                             |
|----------------------------|-----------------------------------------|
| <b>Parameter type</b>      | Boolean                                 |
| <b>Default value</b>       | true                                    |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM             |
| <b>Modifiable in a PDB</b> | Yes                                     |
| <b>Range of values</b>     | true   false                            |
| <b>Basic</b>               | No                                      |
| <b>Oracle RAC</b>          | All instances should use the same value |

Setting the parameter to false causes the optimizer to ignore the in-memory property of tables during the optimization of SQL statements. This behavior can also be achieved by setting the OPTIMIZER\_FEATURES\_ENABLE initialization parameter to values lower than 12.1.0.2.

## 2.253 OPTIMIZER\_MODE

OPTIMIZER\_MODE establishes the default behavior for choosing an optimization approach for the instance.

| Property            | Description                                                                      |
|---------------------|----------------------------------------------------------------------------------|
| Parameter type      | String                                                                           |
| Syntax              | OPTIMIZER_MODE =<br>{ FIRST_ROWS_[1   10   100   1000]   FIRST_ROWS   ALL_ROWS } |
| Default value       | ALL_ROWS                                                                         |
| Modifiable          | ALTER SESSION, ALTER SYSTEM                                                      |
| Modifiable in a PDB | Yes                                                                              |
| Basic               | No                                                                               |

### Values

- **FIRST\_ROWS\_*n***  
The optimizer uses a cost-based approach and optimizes with a goal of best response time to return the first *n* rows (where *n* = 1, 10, 100, 1000).
- **FIRST\_ROWS**  
The optimizer uses a mix of costs and heuristics to find a best plan for fast delivery of the first few rows.  
  
FIRST\_ROWS is available for backward compatibility and plan stability; use FIRST\_ROWS\_*n* instead.
- **ALL\_ROWS**  
The optimizer uses a cost-based approach for all SQL statements in the session and optimizes with a goal of best throughput (minimum resource use to complete the entire statement).

## 2.254 OPTIMIZER\_REAL\_TIME\_STATISTICS

OPTIMIZER\_REAL\_TIME\_STATISTICS controls whether the database automatically gathers real-time statistics during conventional DML operations.

| Property            | Description                 |
|---------------------|-----------------------------|
| Parameter type      | Boolean                     |
| Default value       | false                       |
| Modifiable          | ALTER SESSION, ALTER SYSTEM |
| Modifiable in a PDB | Yes                         |
| Range of values     | true   false                |
| Basic               | No                          |

| Property   | Description                                         |
|------------|-----------------------------------------------------|
| Oracle RAC | Different values can be set on different instances. |

When this parameter is set to `true`, the database automatically gathers real-time statistics during conventional DML operations. The default setting is `false`, which means real-time statistics are disabled.

## 2.255 OPTIMIZER\_SECURE\_VIEW\_MERGING

`OPTIMIZER_SECURE_VIEW_MERGING` enables the optimizer to use view merging to improve query performance without performing the checks that would otherwise be performed to ensure that view merging does not violate any security intentions of the view creator.

| Property            | Description                                  |
|---------------------|----------------------------------------------|
| Parameter type      | Boolean                                      |
| Default value       | <code>true</code>                            |
| Modifiable          | <code>ALTER SYSTEM</code>                    |
| Modifiable in a PDB | Yes                                          |
| Range of values     | <code>true</code>   <code>false</code>       |
| Basic               | No                                           |
| Oracle RAC          | Multiple instances can have different values |

### Values

- `false`  
Oracle Database does not perform security checks that may prevent view merging and predicate move-around.
- `true`  
Oracle Database performs checks to ensure that view merging and predicate move-around do not violate any security intentions of the view creator.

To enable the optimizer to use view merging for any query issued by a user, you must grant the `MERGE ANY VIEW` privilege to the user. Grant the `MERGE VIEW` privilege to a user on specific views to enable the optimizer to use view merging for queries on these views. These privileges are required only under specific conditions, such as when a view is not merged because the security checks fail.

### See Also

*Oracle Database SQL Tuning Guide* for more information about view merging

## 2.256 OPTIMIZER\_SESSION\_TYPE

OPTIMIZER\_SESSION\_TYPE controls how the database performs automatic indexing for SQL statements in the session.

| Property                   | Description                                            |
|----------------------------|--------------------------------------------------------|
| <b>Parameter type</b>      | String                                                 |
| <b>Syntax</b>              | OPTIMIZER_SESSION_TYPE = { NORMAL   CRITICAL   ADHOC } |
| <b>Default value</b>       | NORMAL                                                 |
| <b>Modifiable</b>          | ALTER SESSION                                          |
| <b>Modifiable in a PDB</b> | No                                                     |
| <b>Basic</b>               | No                                                     |

### Values:

- **NORMAL**  
Automatic indexing is performed normally for SQL statements in the session. The automatic indexing process identifies auto index candidates, creates auto indexes, and verifies them against SQL statements.
- **CRITICAL**  
Automatic indexing is performed for SQL statements in the session, with a higher priority given to long-running statements. The automatic indexing process identifies auto index candidates and creates auto indexes. However, auto indexes are verified against SQL statements in descending order of elapsed execution time for each statement.
- **ADHOC**  
Automatic indexing is suspended for SQL statements in the session. The automatic indexing process does not identify auto index candidates, create auto indexes, or verify auto indexes against SQL statements. This setting is useful when running ad hoc queries or testing new functionality.

### 📘 See Also

*Oracle Database Administrator's Guide* for more information about how automatic indexing works

## 2.257 OPTIMIZER\_USE\_INVISIBLE\_INDEXES

OPTIMIZER\_USE\_INVISIBLE\_INDEXES enables or disables the use of invisible indexes.

| Property                   | Description                 |
|----------------------------|-----------------------------|
| <b>Parameter type</b>      | Boolean                     |
| <b>Default value</b>       | false                       |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM |
| <b>Modifiable in a PDB</b> | Yes                         |

| Property        | Description  |
|-----------------|--------------|
| Range of values | true   false |
| Basic           | No           |

#### Values

- true  
Invisible indexes are treated as visible (normal) indexes.
- false  
Invisible indexes will not be considered by the optimizer but will still be maintained by DML operations.

## 2.258 OPTIMIZER\_USE\_PENDING\_STATISTICS

OPTIMIZER\_USE\_PENDING\_STATISTICS specifies whether the optimizer uses pending statistics when compiling SQL statements.

| Property            | Description                 |
|---------------------|-----------------------------|
| Parameter type      | Boolean                     |
| Default value       | false                       |
| Modifiable          | ALTER SESSION, ALTER SYSTEM |
| Modifiable in a PDB | Yes                         |
| Range of values     | true   false                |
| Basic               | No                          |

#### ① See Also

*Oracle Database SQL Tuning Guide* for more information on setting this parameter

## 2.259 OPTIMIZER\_USE\_SQL\_PLAN\_BASELINES

OPTIMIZER\_USE\_SQL\_PLAN\_BASELINES enables or disables the use of SQL plan baselines stored in SQL Management Base.

| Property            | Description                 |
|---------------------|-----------------------------|
| Parameter type      | Boolean                     |
| Default value       | true                        |
| Modifiable          | ALTER SESSION, ALTER SYSTEM |
| Modifiable in a PDB | Yes                         |
| Range of values     | true   false                |
| Basic               | No                          |

When enabled, the optimizer looks for a SQL plan baseline for the SQL statement being compiled. If one is found in SQL Management Base, then the optimizer will cost each of the baseline plans and pick one with the lowest cost.

## 2.260 OPTIMIZER\_USE\_SQL\_QUARANTINE

OPTIMIZER\_USE\_SQL\_QUARANTINE determines whether the optimizer considers SQL Quarantine configurations when choosing an execution plan for a SQL statement.

| Property            | Description                                   |
|---------------------|-----------------------------------------------|
| Parameter type      | Boolean                                       |
| Default value       | true                                          |
| Modifiable          | ALTER SESSION, ALTER SYSTEM                   |
| Modifiable in a PDB | Yes                                           |
| Range of values     | true   false                                  |
| Basic               | No                                            |
| Oracle RAC          | Different instances can use different values. |

#### Values:

- true  
The optimizer considers SQL Quarantine configurations when choosing an execution plan for a SQL statement. The statement will be terminated if it would otherwise use a quarantined execution plan.
- false  
The optimizer ignores SQL Quarantine configurations when choosing an execution plan for a SQL statement. It may use any execution plan, regardless of its quarantine status.

## 2.261 OS\_AUTHENT\_PREFIX

OS\_AUTHENT\_PREFIX specifies a prefix that Oracle Database uses to authenticate users attempting to connect to the server.

| Property            | Description                                      |
|---------------------|--------------------------------------------------|
| Parameter type      | String                                           |
| Syntax              | OS_AUTHENT_PREFIX = <i>authentication_prefix</i> |
| Default value       | OPS\$                                            |
| Modifiable          | No                                               |
| Modifiable in a PDB | No                                               |
| Basic               | No                                               |

Oracle Database concatenates the value of this parameter to the beginning of the user's operating system account name. When a connection request is attempted, Oracle Database compares the prefixed username with Oracle user names in the database.

The default value of this parameter is OPS\$ for backward compatibility with previous versions. However, you might prefer to set the prefix value to "" (a null string), thereby eliminating the addition of any prefix to operating system account names.

### Note

The text of the OS\_AUTHENT\_PREFIX parameter is case sensitive on some operating systems.

### See Also

- Your operating system-specific Oracle documentation for the default value

## 2.262 OS\_ROLES

OS\_ROLES determines whether Oracle or the operating system identifies and manages the roles of each username.

| Property            | Description  |
|---------------------|--------------|
| Parameter type      | Boolean      |
| Default value       | false        |
| Modifiable          | No           |
| Modifiable in a PDB | No           |
| Range of values     | true   false |
| Basic               | No           |

**Values**

- TRUE

The operating system completely manages the role grants for all database usernames. When a user attempts to create a session, the username's security domain is initialized using the roles identified by the operating system.

Revocation by Oracle of roles granted by the operating system is ignored, as are any roles previously granted by Oracle.

- FALSE

Oracle identifies and manages the roles.

**See Also**

## 2.263 OUTBOUND\_DBLINK\_PROTOCOLS

OUTBOUND\_DBLINK\_PROTOCOLS specifies the network protocols allowed for communicating for outbound database links in the database.

| Property                   | Description                                                                     |
|----------------------------|---------------------------------------------------------------------------------|
| <b>Parameter type</b>      | String                                                                          |
| <b>Syntax</b>              | OUTBOUND_DBLINK_PROTOCOLS = { ALL   NONE   [ TCP   [, ]   TCPS   [, ]   IPC ] } |
| <b>Default value</b>       | ALL                                                                             |
| <b>Modifiable</b>          | ALTER SYSTEM                                                                    |
| <b>Modifiable in a PDB</b> | No                                                                              |
| <b>Basic</b>               | No                                                                              |
| <b>Oracle RAC</b>          | The same value must be used on all instances.                                   |

Specify a value of ALL to allow all network protocols, and a value of NONE to disallow all network communication protocols for database link communication. Specify a single value or a list of comma separated network communication protocols to allow only certain network protocols for outbound database link communication.

## 2.264 PARALLEL\_ADAPTIVE\_MULTI\_USER

PARALLEL\_ADAPTIVE\_MULTI\_USER, when set to true, enables an adaptive algorithm designed to improve performance in multiuser environments that use parallel execution.

| Property            | Description  |
|---------------------|--------------|
| Parameter type      | Boolean      |
| Default value       | false        |
| Modifiable          | ALTER SYSTEM |
| Modifiable in a PDB | No           |
| Range of values     | true   false |
| Basic               | No           |

The algorithm automatically reduces the requested degree of parallelism based on the system load at query startup time. The effective degree of parallelism is based on the default degree of parallelism, or the degree from the table or hints, divided by a reduction factor.

The algorithm assumes that the system has been tuned for optimal performance in a single-user environment.

Tables and hints use the default degree of parallelism.

#### Note

The PARALLEL\_ADAPTIVE\_MULTI\_USER initialization parameter is deprecated in Oracle Database 12c Release 2 (12.2.0.1) and may be removed in a future release. Oracle recommends that you use the parallel statement queuing feature instead.

#### See Also

## 2.265 PARALLEL\_DEGREE\_LIMIT

PARALLEL\_DEGREE\_LIMIT limits the degree of parallelism used by the optimizer to ensure that parallel server processes do not flood the system.

| Property            | Description                                                  |
|---------------------|--------------------------------------------------------------|
| Parameter type      | String                                                       |
| Syntax              | PARALLEL_DEGREE_LIMIT = { CPU   AUTO   IO   <i>integer</i> } |
| Default value       | CPU                                                          |
| Modifiable          | ALTER SESSION, ALTER SYSTEM                                  |
| Modifiable in a PDB | Yes                                                          |
| Basic               | No                                                           |

With automatic degree of parallelism, Oracle automatically decides whether a statement should execute in parallel and what degree of parallelism the statement should use. The

optimizer automatically determines the degree of parallelism for a statement based on the resource requirements of the statement. However, `PARALLEL_DEGREE_LIMIT` enforces the limit for the degree of parallelism used by the optimizer.

### Values

- CPU

The maximum degree of parallelism is limited by the number of CPUs in the system. The formula used to calculate the limit is `PARALLEL_THREADS_PER_CPU * CPU_COUNT` \* the number of instances available (by default, all the opened instances on the cluster but can be constrained using `PARALLEL_INSTANCE_GROUP` or service specification). This is the default.

- AUTO

This value is equivalent to the CPU value.

- I/O

The maximum degree of parallelism the optimizer can use is limited by the I/O capacity of the system. The value is calculated by dividing the total system throughput by the maximum I/O bandwidth per process. You must run the `DBMS_RESOURCE_MANAGER.CALIBRATE_IO` procedure on the system to use the I/O setting. This procedure will calculate the total system throughput and the maximum I/O bandwidth per process.

- *integer*

A numeric value for this parameter specifies the maximum degree of parallelism the optimizer can choose for a SQL statement when automatic degree of parallelism is active. Automatic degree of parallelism is only enabled if `PARALLEL_DEGREE_POLICY` is set to `ADAPTIVE`, `AUTO`, or `LIMITED`.

### ① See Also

## 2.266 PARALLEL\_DEGREE\_POLICY

`PARALLEL_DEGREE_POLICY` specifies whether automatic degree of parallelism, statement queuing, and in-memory parallel execution will be enabled.

| Property                   | Description                                                                  |
|----------------------------|------------------------------------------------------------------------------|
| <b>Parameter type</b>      | String                                                                       |
| <b>Syntax</b>              | <code>PARALLEL_DEGREE_POLICY = { MANUAL   LIMITED   AUTO   ADAPTIVE }</code> |
| <b>Default value</b>       | MANUAL                                                                       |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                                                  |
| <b>Modifiable in a PDB</b> | Yes                                                                          |
| <b>Basic</b>               | No                                                                           |

## Values

### ① Note

Automatic degree of parallelism will be enabled regardless of the value of `PARALLEL_DEGREE_POLICY` if a `PARALLEL` hint is used at the SQL statement level.

- **MANUAL**  
Disables automatic degree of parallelism, statement queuing, and in-memory parallel execution. This reverts the behavior of parallel execution to what it was prior to Oracle Database 11g Release 2 (11.2). This is the default.
- **LIMITED**  
Enables automatic degree of parallelism for some statements but statement queuing and in-memory Parallel Execution are disabled. Automatic degree of parallelism is only applied to those statements that access tables or indexes decorated explicitly with the `DEFAULT` degree of parallelism using the `PARALLEL` clause. Statements that do not access any tables or indexes decorated with the `DEFAULT` degree of parallelism will retain the `MANUAL` behavior.
- **AUTO**  
Enables automatic degree of parallelism, statement queuing, and in-memory parallel execution.
- **ADAPTIVE**  
This value enables automatic degree of parallelism, statement queuing and in-memory parallel execution, similar to the `AUTO` value. In addition, performance feedback is enabled. Performance feedback helps to improve the degree of parallelism automatically chosen for repeated SQL statements. After the initial execution of a statement, the degree of parallelism chosen by the optimizer is compared to the degree of parallelism computed based on the actual execution performance. If they vary significantly, then the statement is marked for re-parse and the initial execution performance statistics (for example, CPU-time) are provided as feedback for subsequent executions. The optimizer uses the initial execution performance statistics to better determine a degree of parallelism for subsequent executions.

## 2.267 PARALLEL\_EXECUTION\_MESSAGE\_SIZE

`PARALLEL_EXECUTION_MESSAGE_SIZE` specifies the size of messages used for parallel execution (formerly referred to as parallel query, PDML, Parallel Recovery, replication).

| Property            | Description                                                                          |
|---------------------|--------------------------------------------------------------------------------------|
| Parameter type      | Integer                                                                              |
| Default value       | Operating system-dependent                                                           |
| Modifiable          | No                                                                                   |
| Modifiable in a PDB | No                                                                                   |
| Range of values     | Minimum: 2148<br>Maximum: 65536, but some operating systems may have a smaller value |
| Basic               | No                                                                                   |
| Oracle RAC          | Multiple instances must have the same value.                                         |

On most platforms, the default value is as follows:

- 16384 bytes if COMPATIBLE is set to 11.2.0 or higher
- 2148 bytes if COMPATIBLE is less than 11.2.0

The default value is adequate for most applications. Larger values require a larger shared pool. Larger values result in better performance at the cost of higher memory use. For this reason, replication gets no benefit from increasing the size.

#### 📘 See Also

*Oracle Database VLDB and Partitioning Guide* to learn how this parameter affects memory consumption for parallel operations, including parallel execution

## 2.268 PARALLEL\_FORCE\_LOCAL

PARALLEL\_FORCE\_LOCAL controls parallel execution in an Oracle RAC environment.

| Property            | Description                 |
|---------------------|-----------------------------|
| Parameter type      | Boolean                     |
| Default value       | false                       |
| Modifiable          | ALTER SESSION, ALTER SYSTEM |
| Modifiable in a PDB | Yes                         |
| Range of values     | true   false                |
| Basic               | No                          |

By default, the parallel server processes selected to execute a SQL statement can operate on any or all Oracle RAC nodes in the cluster. By setting PARALLEL\_FORCE\_LOCAL to true, the parallel server processes are restricted so that they can only operate on the same Oracle RAC node where the query coordinator resides (the node on which the SQL statement was executed).

**① See Also**

*Oracle Database VLDB and Partitioning Guide* for more information about this parameter

## 2.269 PARALLEL\_INSTANCE\_GROUP

Used in conjunction with services or with the `INSTANCE_GROUPS` parameter, `PARALLEL_INSTANCE_GROUP` lets you restrict parallel query operations to a limited number of instances.

| Property                   | Description                                                                                                       |
|----------------------------|-------------------------------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | String                                                                                                            |
| <b>Syntax</b>              | <code>PARALLEL_INSTANCE_GROUP = service_name   group_name</code>                                                  |
| <b>Default value</b>       | There is no default value; parallel execution is enabled across all currently active instances.                   |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                                                                                       |
| <b>Modifiable in a PDB</b> | Yes                                                                                                               |
| <b>Range of values</b>     | Any service name or any group name specified in the <code>INSTANCE_GROUPS</code> parameter of any active instance |
| <b>Basic</b>               | No                                                                                                                |
| <b>Oracle RAC</b>          | Multiple instances can have different values.                                                                     |

`PARALLEL_INSTANCE_GROUP` is an Oracle RAC parameter that you can specify in parallel mode only. Note that the `INSTANCE_GROUPS` parameter has been deprecated.

This parameter identifies the parallel instance group Oracle will use for spawning parallel execution processes. If used in conjunction with services, then parallel operations will spawn parallel execution processes only on instances defined in the service. If used in conjunction with `INSTANCE_GROUPS`, then parallel operations will spawn parallel execution processes only on instances that specify a matching group in their `INSTANCE_GROUPS` parameter.

If the value assigned to `PARALLEL_INSTANCE_GROUP` is the name of a service or group that does not exist, then the operation runs serially. No parallelism is used.

## 2.270 PARALLEL\_MAX\_SERVERS

`PARALLEL_MAX_SERVERS` specifies the maximum number of parallel execution processes and parallel recovery processes for an instance. As demand increases, Oracle Database increases the number of processes from the number created at instance startup up to this value.

| Property                   | Description                                                                       |
|----------------------------|-----------------------------------------------------------------------------------|
| <b>Parameter type</b>      | Integer                                                                           |
| <b>Default value</b>       | <code>PARALLEL_THREADS_PER_CPU * CPU_COUNT * concurrent_parallel_users * 5</code> |
| <b>Modifiable</b>          | ALTER SYSTEM                                                                      |
| <b>Modifiable in a PDB</b> | Yes                                                                               |

| Property        | Description                                   |
|-----------------|-----------------------------------------------|
| Range of values | 0 to 32767                                    |
| Basic           | No                                            |
| Oracle RAC      | Multiple instances can have different values. |

**Note**

This parameter applies to parallel execution in exclusive mode as well as in a Real Application Clusters environment.

The number of concurrent parallel users running at default degree of parallelism on an instance depends on the memory initialization parameter settings for the instance. For example, if the MEMORY\_TARGET or SGA\_TARGET initialization parameter is set, then the number of concurrent\_parallel\_users = 4. If neither MEMORY\_TARGET or SGA\_TARGET is set, then PGA\_AGGREGATE\_TARGET is examined. If a value is set for PGA\_AGGREGATE\_TARGET, then concurrent\_parallel\_users = 2. If a value is not set for PGA\_AGGREGATE\_TARGET, then concurrent\_parallel\_users = 1.

The database system always reserves a certain number of reserved processes. Therefore, the following two values are taken into account when setting the PARALLEL\_MAX\_SERVERS initialization parameter:

- The default value of PARALLEL\_MAX\_SERVERS determined using the calculation in the table above
- The value of the PROCESSES initialization parameter minus the number of reserved processes

The lower of the two values is used as the default value of PARALLEL\_MAX\_SERVERS, and if you attempt to explicitly set PARALLEL\_MAX\_SERVERS to a value that is higher than either of the values, then the setting is adjusted to the lower of the two values.

When the PARALLEL\_MAX\_SERVERS parameter is set to a value lower than the value in the table above, the lower default value enables the database to start service processes and allows user processes to connect to the database.

If the FAST\_START\_PARALLEL\_ROLLBACK initialization parameter is set to LOW or HIGH, then its value should be taken into account when setting PARALLEL\_MAX\_SERVERS. If FAST\_START\_PARALLEL\_ROLLBACK = LOW, then PARALLEL\_MAX\_SERVERS should not be set to a value lower than CPU\_COUNT \* 2. If FAST\_START\_PARALLEL\_ROLLBACK = HIGH, then PARALLEL\_MAX\_SERVERS should not be set to a value lower than CPU\_COUNT \* 4.

The default value for PARALLEL\_MAX\_SERVERS for a PDB is determined using the calculation in the table above with the PDB's CPU\_COUNT value.

**Note**

If you set this parameter too low, then some queries may not have a parallel execution process available to them during query processing. If you set it too high, then memory resource shortages may occur during peak periods, which can degrade performance.

*Oracle Database SQL Tuning Guide* for more information about parallel execution

## 2.271 PARALLEL\_MIN\_DEGREE

PARALLEL\_MIN\_DEGREE controls the minimum degree of parallelism computed by automatic degree of parallelism.

| Property                   | Description                                          |
|----------------------------|------------------------------------------------------|
| <b>Parameter type</b>      | String                                               |
| <b>Syntax</b>              | PARALLEL_MIN_DEGREE = [ n   CPU ]                    |
| <b>Default value</b>       | 1                                                    |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                          |
| <b>Modifiable in a PDB</b> | Yes                                                  |
| <b>Basic</b>               | No                                                   |
| <b>Oracle RAC</b>          | A different value can be set on different instances. |

The value of PARALLEL\_MIN\_DEGREE is either a number that corresponds to the lower bound on the degree of parallelism computed by automatic degree of parallelism, or the string value CPU, which is computed by the function CPU\_COUNT \* PARALLEL\_THREADS\_PER\_CPU.

The default value of PARALLEL\_MIN\_DEGREE is 1.

**① Note**

PARALLEL\_MIN\_DEGREE has no impact in either of these cases:

- When the value of PARALLEL\_MIN\_DEGREE is greater than the value of CPU\_COUNT
- When the object is Oracle-owned, such as a dictionary table or view created on a dictionary table

## 2.272 PARALLEL\_MIN\_PERCENT

PARALLEL\_MIN\_PERCENT lets you specify the minimum percentage of the requested number of parallel execution processes required for parallel execution.

| Property            | Description                                   |
|---------------------|-----------------------------------------------|
| Parameter type      | Integer                                       |
| Default value       | 0                                             |
| Modifiable          | ALTER SESSION                                 |
| Modifiable in a PDB | No                                            |
| Range of values     | 0 to 100                                      |
| Basic               | No                                            |
| Oracle RAC          | Multiple instances can have different values. |

This parameter controls the behavior for parallel operations when parallel statement queuing is not enabled (when `PARALLEL_DEGREE_POLICY` is set to `manual` or `limited`). It ensures that an operation always gets a minimum percentage of parallel execution servers or errors out. Setting this parameter ensures that parallel operations will not execute unless adequate resources are available. The default value of 0 means that no minimum percentage of processes has been set.

Consider the following settings:

```
PARALLEL_MIN_PERCENT = 50
PARALLEL_MIN_SERVERS = 5
PARALLEL_MAX_SERVERS = 10
```

If 8 of the 10 parallel execution processes are busy, only 2 processes are available. If you then request a query with a degree of parallelism of 8, the minimum 50% will not be met.

You can use this parameter with `PARALLEL_ADAPTIVE_MULTI_USER`. In a multi-user environment, an individual user or application can set `PARALLEL_MIN_PERCENT` to a minimum value until sufficient resources are available on the system and an acceptable degree of parallelism is returned.

## 2.273 PARALLEL\_MIN\_SERVERS

`PARALLEL_MIN_SERVERS` is the number of parallel execution processes Oracle creates when the instance is started. These processes will be kept active to service parallel statements.

| Property            | Description                                                     |
|---------------------|-----------------------------------------------------------------|
| Parameter type      | Integer                                                         |
| Default value       | <code>CPU_COUNT * PARALLEL_THREADS_PER_CPU * 2</code>           |
| Modifiable          | ALTER SYSTEM                                                    |
| Modifiable in a PDB | No                                                              |
| Range of values     | Default value to the value of <code>PARALLEL_MAX_SERVERS</code> |

| Property   | Description                                   |
|------------|-----------------------------------------------|
| Basic      | No                                            |
| Oracle RAC | Multiple instances can have different values. |

**Note**

This parameter applies to parallel execution in exclusive mode as well as in an Oracle Real Application Clusters environment.

**Note**

When the PROCESSES initialization parameter is set to a value that is lower than the documented default value for the PARALLEL\_MIN\_SERVERS parameter in the table above, the database sets the default value of PARALLEL\_MIN\_SERVERS to a value that is lower than the documented default value. The lower default value enables the database to start service processes and allows user processes to connect to the database.

## 2.274 PARALLEL\_MIN\_TIME\_THRESHOLD

PARALLEL\_MIN\_TIME\_THRESHOLD specifies the minimum execution time a statement should have before the statement is considered for automatic degree of parallelism.

| Property            | Description                                             |
|---------------------|---------------------------------------------------------|
| Parameter type      | String                                                  |
| Syntax              | PARALLEL_MIN_TIME_THRESHOLD = { AUTO   <i>integer</i> } |
| Default value       | AUTO                                                    |
| Modifiable          | ALTER SESSION, ALTER SYSTEM                             |
| Modifiable in a PDB | Yes                                                     |
| Basic               | No                                                      |

By default, this parameter is set to 10 seconds. Automatic degree of parallelism is only enabled if PARALLEL\_DEGREE\_POLICY is set to ADAPTIVE, AUTO, or LIMITED.

If all tables referenced by a SQL statement use In-Memory Column Store (IM column store), then PARALLEL\_MIN\_TIME\_THRESHOLD defaults to 1.

## 2.275 PARALLEL\_SERVERS\_TARGET

PARALLEL\_SERVERS\_TARGET specifies the number of parallel server processes allowed to run parallel statements before statement queuing will be used.

| Property            | Description                                                                                                                                                                                      |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Parameter type      | Integer                                                                                                                                                                                          |
| Default value       | For a CDB:<br>Equal to the PARALLEL_MAX_SERVERS value for the CDB.<br>For a PDB or non-CDB:<br>$\text{PARALLEL\_THREADS\_PER\_CPU} * \text{CPU\_COUNT} * \text{concurrent\_parallel\_users} * 2$ |
| Modifiable          | ALTER SYSTEM                                                                                                                                                                                     |
| Modifiable in a PDB | Yes                                                                                                                                                                                              |
| Range of values     | 0 to PARALLEL_MAX_SERVERS                                                                                                                                                                        |
| Basic               | No                                                                                                                                                                                               |

When the parameter PARALLEL\_DEGREE\_POLICY is set to ADAPTIVE or AUTO, Oracle will queue SQL statements that require parallel execution, if the necessary parallel server processes are not available. In a single instance database, statement queuing will begin once the number of parallel server processes active on the system is equal to or greater than PARALLEL\_SERVERS\_TARGET. In an Oracle RAC database, a statement running on one instance can allocate parallel server processes on another instance when necessary. For example, if a statement running on one instance requires parallel execution, but the number of parallel server processes active on that instance is equal to or greater than the value of PARALLEL\_SERVERS\_TARGET for that instance, then the statement can allocate parallel server processes on a different instance. Therefore, statement queuing in an Oracle RAC database will begin only when every instance has reached its PARALLEL\_SERVER\_TARGET threshold.

① Note

Consumer groups that have been marked with the PARALLEL\_STMT\_CRITICAL directive set to BYPASS\_QUEUE are allowed to bypass the parallel statement queue, and therefore may drive the total number of active parallel server processes beyond PARALLEL\_SERVERS\_TARGET. Parallel statements issued with PARALLEL\_DEGREE\_POLICY not set to ADAPTIVE and AUTO can also drive the total number of active parallel server processes beyond PARALLEL\_SERVERS\_TARGET.

By default, PARALLEL\_SERVERS\_TARGET is set lower than the maximum number of parallel server processes allowed on the system (PARALLEL\_MAX\_SERVERS) to ensure each parallel statement will get all of the parallel server resources required and to prevent overloading the system with parallel server processes.

The number of concurrent parallel users running at default degree of parallelism on an instance depends on the memory initialization parameter settings for the instance. For example, if the `MEMORY_TARGET` or `SGA_TARGET` initialization parameter is set, then the number of concurrent\_parallel\_users = 4. If neither `MEMORY_TARGET` or `SGA_TARGET` is set, then `PGA_AGGREGATE_TARGET` is examined. If a value is set for `PGA_AGGREGATE_TARGET`, then concurrent\_parallel\_users = 2. If a value is not set for `PGA_AGGREGATE_TARGET`, then concurrent\_parallel\_users = 1.

Note that all serial (non-parallel) statements will execute immediately even if statement queuing has been activated.

By default, all PDB queries are subjected to queuing at the PDB level first by the PDB's `PARALLEL_SERVERS_TARGET` value, and then at the CDB level by the CDB's `PARALLEL_SERVERS_TARGET` value. This default behavior prevents any SQL statement inside a PDB from getting downgraded if parallel servers are exhausted in the CDB.

Parallel statement queuing is enabled by default at the CDB level because the CDB has a default value for `PARALLEL_SERVERS_TARGET`. You can disable parallel statement queuing at the CDB level by using `ALTER SYSTEM` to set `PARALLEL_SERVERS_TARGET` to 0 for the CDB.

The default value for `PARALLEL_SERVERS_TARGET` for a PDB is determined using the calculation in the table above with the PDB's `CPU_COUNT` value.

#### Note

A PDB can set a lower limit for parallel execution servers than the limit specified in the CDB resource plan. When the `PARALLEL_SERVERS_TARGET` initialization parameter is set in a PDB, and parallel execution server limit is specified for a PDB in the CDB resource plan, then the lower of the two limits is enforced. For example, assume that the `PARALLEL_SERVERS_TARGET` initialization parameter is set to 100 in the CDB root. Also assume that hrpdb has its `PARALLEL_SERVERS_TARGET` initialization parameter set to 50 and the CDB plan has a directive for hrpdb with `parallel_server_limit` set to 70%. In this case, the limit for parallel execution servers for hrpdb is 50, because 50 is lower than the CDB resource plan limit of 70 for hrpdb.

## 2.276 PARALLEL\_THREADS\_PER\_CPU

`PARALLEL_THREADS_PER_CPU` describes the number of parallel execution processes or threads that a CPU can handle during parallel execution.

| Property            | Description        |
|---------------------|--------------------|
| Parameter type      | Integer            |
| Default value       | 1                  |
| Modifiable          | ALTER SYSTEM       |
| Modifiable in a PDB | No                 |
| Range of values     | Any nonzero number |
| Basic               | No                 |

#### Note

This parameter applies to parallel execution in exclusive mode as well as in an Oracle Real Application Clusters environment.

This parameter is used in determining the default values of other parallel execution related parameters, for example, `PARALLEL_MAX_SERVERS`. It is also used in determining the default degree of parallelism for SQL statements, and determining the upper bound for the degree of parallelism in automatic degree of parallelism. The default value is adequate in most cases.

## 2.277 PDB\_FILE\_NAME\_CONVERT

`PDB_FILE_NAME_CONVERT` maps names of existing files to new file names when processing a `CREATE PLUGGABLE DATABASE` statement, as well as when processing the `ENABLE PLUGGABLE DATABASE` clause of the `CREATE DATABASE` statement, if the *file\_name\_convert\_clause* is not specified and Oracle Managed Files is not enabled.

| Property       | Description |
|----------------|-------------|
| Parameter type | String      |

| Property                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>              | <code>PDB_FILE_NAME_CONVERT = 'string1' , 'string2' , 'string3' , 'string4' , ...</code><br>Where: <ul style="list-style-type: none"><li>• <code>string1</code> is the pattern of the existing filename</li><li>• <code>string2</code> is the pattern of the new filename</li><li>• <code>string3</code> is the pattern of the existing filename</li><li>• <code>string4</code> is the pattern of the new filename</li></ul> You can enclose each string in single or double quotation marks.<br>You can specify as many pairs of existing and new replacement strings as required.<br><b>Example:</b><br><code>PDB_FILE_NAME_CONVERT = '/dbs/t1/', '/dbs/t1/s', 'dbs/t2/', 'dbs/t2/s'</code> |
| <b>Default value</b>       | There is no default value                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Modifiable in a PDB</b> | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Basic</b>               | No                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Oracle RAC</b>          | You must set this parameter for every instance, and multiple instances must have the same value.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

File name patterns specified in this initialization parameter cannot match files or directories managed by Oracle Managed Files.

## 2.278 PDB\_LOCKDOWN

PDB\_LOCKDOWN determines the PDB lockdown profile that applies to a PDB.

| Property                   | Description                                           |
|----------------------------|-------------------------------------------------------|
| <b>Parameter type</b>      | String                                                |
| <b>Syntax</b>              | <code>PDB_LOCKDOWN = pdb-lockdown-profile-name</code> |
| <b>Default value</b>       | NULL                                                  |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                           |
| <b>Modifiable in a PDB</b> | Yes                                                   |
| <b>Basic</b>               | No                                                    |
| <b>Oracle RAC</b>          | All instances should have the same value              |

A PDB lockdown profile is a mechanism to restrict operations (such as setting values of certain parameters and using certain options) that can be performed by users connected to a given PDB. You can also restrict execution of any packages that allow network access, for example, UTL\_SMTP.

You create lockdown profiles using the SQL `CREATE LOCKDOWN PROFILE` statement. Then you can set a profile using the SQL `ALTER SESSION` or `ALTER SYSTEM` statement. See the Examples section.

This parameter can be set using the `ALTER SYSTEM` statement with scope set to `MEMORY`, `SPFILE`, or `BOTH`.

The lockdown profile for PDBs can be specified by a common user with common `ALTER SYSTEM` or common `SYSDBA` privilege.

If a PDB lockdown profile is dropped, any PDB to which the dropped profile was assigned (by means of storing the dropped profile name in the `PDB_LOCKDOWN` parameter) will continue to have its `PDB_LOCKDOWN` parameter set to the dropped lockdown profile name. However, the PDB will not have any restrictions imposed by the dropped lockdown profile.

Lockdown profiles can now be created in an application root and are referred to as application lockdown profiles.

A CDB common user with common `SYSDBA` or common `ALTER SYSTEM` privilege can only set `PDB_LOCKDOWN` to a CDB lockdown profile. Similarly, an application common user with application common `SYSDBA` or application common `ALTER SYSTEM` privilege can only set `PDB_LOCKDOWN` to an application lockdown profile.

An application common user cannot overwrite `PDB_LOCKDOWN` if `PDB_LOCKDOWN` is already set to a CDB lockdown profile in an application root or application PDB.

If the `PDB_LOCKDOWN` parameter in a PDB is set to the name of a lockdown profile different from that in its ancestor (for a CDB, the CDB root or, for application PDBs, the application root), the following will govern the interaction between restrictions imposed by these profiles:

- If the `PDB_LOCKDOWN` parameter in a PDB (including an application PDB) is set to a CDB lockdown profile, lockdown profiles specified by the `PDB_LOCKDOWN` parameter in CDB root (and for application PDBs, the application root) are ignored.
- If the `PDB_LOCKDOWN` parameter in an application PDB is set to an application lockdown profile while the `PDB_LOCKDOWN` parameter in the application root or CDB root is set to a CDB lockdown profile, in addition to the rules stipulated in the application lockdown profile, the `DISABLE` rules from the CDB lockdown profile set in its nearest ancestor (that is, an application root or CDB root) are inherited.
- If there are conflicts between rules comprising the CDB lockdown profile and the application lockdown profile, the rules in the CDB lockdown profile will take precedence (for example, the `OPTION_VALUE` clause of a CDB lockdown profile will take precedence over the `OPTION_VALUE` clause of an application lockdown profile).

## Examples

This example shows how the SYS user can connect to the database AS SYSDBA and use the `CREATE LOCKDOWN PROFILE` statement in the root of a CDB to define a new lockdown profile. After defining the new lockdown profile, the SYS user can assign the new lockdown profile to a PDB using the `PDB_LOCKDOWN` parameter:

```
SQL> ALTER SESSION SET CONTAINER=CDB$ROOT;
```

Session altered.

```
SQL> CREATE LOCKDOWN PROFILE MYPROFILE;
```

Lockdown Profile created.

```
SQL> ALTER SESSION SET CONTAINER=CDB1_PDB1;

Session altered.

SQL> ALTER SYSTEM SET PDB_LOCKDOWN=MYPROFILE;

System altered.

SQL> SHOW PARAMETER PDB_LOCKDOWN

NAME TYPE VALUE

pdb_lockdown string MYPROFILE
SQL>
```

## 2.279 PDB\_OS\_CREDENTIAL

PDB\_OS\_CREDENTIAL determines the identity of the operating system user (OS user) employed when interacting with the operating system from a PDB.

| Property                   | Description                                     |
|----------------------------|-------------------------------------------------|
| <b>Parameter type</b>      | String                                          |
| <b>Syntax</b>              | PDB_OS_CREDENTIAL = <i>credential</i>           |
| <b>Default value</b>       | None                                            |
| <b>Modifiable</b>          | No                                              |
| <b>Modifiable in a PDB</b> | Yes                                             |
| <b>Basic</b>               | No                                              |
| <b>Oracle RAC</b>          | The same value should be used for all instances |

#### ① Note

The Oracle OS user will continue to be used when interacting with the operating system from the root.

The Oracle OS user is usually a highly privileged user, and using the same user for operating system interactions for every PDB is not recommended. Also, using the same OS user for

operating system interactions from different PDBs may compromise data belonging to a given PDB.

In contrast, using an OS user described by a credential whose name is specified as a value of the `PDB_OS_CREDENTIAL` parameter helps ensure that operating system interactions are performed as a less powerful user and provides the ability to protect data belonging to one PDB from being accessed by users connected to another PDB. A credential is an object that is created using the `CREATE_CREDENTIAL` procedure for the `DBMS_CREDENTIAL` package.

The operating system interactions that are done as the OS user name specified in the credential include:

- External jobs that do not already have an operating system credential specified
- External table pre-processors
- PL/SQL library executions

This parameter can be specified for all the PDBs in a CDB but the CDB-wide value can be overridden for a specific PDB and can be modified *only* by a common administrative user with the `EXECUTE` privilege for the `DBMS_CREDENTIAL` PL/SQL package and the `ALTER SYSTEM` system privilege.

If a value is not set for this parameter for a given PDB, the Oracle OS User will continue to be used when interacting with the operating system from that PDB.

## 2.280 PERMIT\_92\_WRAP\_FORMAT

`PERMIT_92_WRAP_FORMAT` allows Oracle Database release 9.2 wrapped versions of PL/SQL source text to be used in Oracle Database releases 10.2 and later when this parameter is set to true.

| Property                   | Description  |
|----------------------------|--------------|
| <b>Parameter type</b>      | Boolean      |
| <b>Default value</b>       | false        |
| <b>Modifiable</b>          | No           |
| <b>Modifiable in a PDB</b> | No           |
| <b>Range of values</b>     | true   false |
| <b>Basic</b>               | No           |

| Property   | Description                                  |
|------------|----------------------------------------------|
| Oracle RAC | Multiple instances should use the same value |

Oracle recommends that wrapped files be created using the PL/SQL Wrapper utility from Oracle Database release 10 or later.

## 2.281 PGA\_AGGREGATE\_LIMIT

PGA\_AGGREGATE\_LIMIT specifies a limit on the aggregate PGA memory consumed by the instance.

| Property                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | Big integer                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Syntax</b>              | PGA_AGGREGATE_LIMIT = <i>integer</i> [K   M   G]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Default value</b>       | If MEMORY_TARGET is set, then PGA_AGGREGATE_LIMIT defaults to the MEMORY_MAX_TARGET value.<br><br>If MEMORY_TARGET is not set, then PGA_AGGREGATE_LIMIT defaults to 200% of PGA_AGGREGATE_TARGET.<br><br>If MEMORY_TARGET is not set, and PGA_AGGREGATE_TARGET is explicitly set to 0, then the value of PGA_AGGREGATE_LIMIT is set to 90% of the physical memory size minus the total SGA size.<br><br>In all cases, the default PGA_AGGREGATE_LIMIT is at least 2GB and at least 3MB times the PROCESSES parameter (and at least 5MB times the PROCESSES parameter for an Oracle RAC instance).<br><br>For a PDB, the default value is the same as the CDB's default value. |
| <b>Modifiable</b>          | ALTER SYSTEM                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Modifiable in a PDB</b> | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Range of values</b>     | Do not attempt to set PGA_AGGREGATE_LIMIT below its default value, even in a parameter file (pfile), or instance startup will fail. However, PGA_AGGREGATE_LIMIT can be set to 0 either in a parameter file or dynamically after startup. If a value of 0 is specified, it means there is no limit to the aggregate PGA memory consumed by the instance.                                                                                                                                                                                                                                                                                                                      |
| <b>Basic</b>               | No                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

### Actions Taken When PGA\_AGGREGATE\_LIMIT is Exceeded

Parallel queries will be treated as a unit. First, the sessions that are using the most untunable memory will have their calls terminated. Then, if the total PGA memory usage is still over the limit, the sessions that are using the most untunable memory will be terminated.

SYS processes and background processes other than job queue processes will not be subjected to any of the actions described in this section. Instead, if they are using the most

untunable memory, they will periodically write a brief summary of their PGA usage to a trace file.

### Note

This parameter is optional for pluggable databases (PDBs). When this parameter is set for a PDB, it specifies the maximum PGA size for the PDB.

To be able to use Resource Manager in a CDB to control the amount of memory each PDB can use:

- The `NONCDB_COMPATIBLE` initialization parameter must be set to `FALSE` at the CDB level (in the root of the CDB).
- The `MEMORY_TARGET` initialization parameter must not be set at the CDB level.
- You must set the `PGA_AGGREGATE_LIMIT` initialization parameter in a PDB to a value that meets these requirements:
  - Less than or equal to the `PGA_AGGREGATE_LIMIT` value set at the CDB level
  - Greater than or equal to twice the value of `PGA_AGGREGATE_TARGET` set in the PDB

When you set `PGA_AGGREGATE_LIMIT` in a PDB to a value that does not meet these requirements, you receive an error. If these requirements are violated after the PDB's parameter is set (for example, if the `PGA_AGGREGATE_LIMIT` value is changed at the CDB level), Oracle will adjust the PDB's value to meet these requirements.

## 2.282 PGA\_AGGREGATE\_TARGET

`PGA_AGGREGATE_TARGET` specifies the target aggregate PGA memory available to all server processes attached to the instance.

| Property       | Description                                                                                                                       |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------|
| Parameter type | Big integer                                                                                                                       |
| Syntax         | <code>PGA_AGGREGATE_TARGET = integer [K   M   G]</code>                                                                           |
| Default value  | 10 MB or 20% of the size of the SGA, whichever is greater<br>For a PDB, the default value is the same as the CDB's default value. |

| Property                   | Description                            |
|----------------------------|----------------------------------------|
| <b>Modifiable</b>          | ALTER SYSTEM                           |
| <b>Modifiable in a PDB</b> | Yes                                    |
| <b>Range of values</b>     | Minimum: 10 MB<br>Maximum: 4096 GB - 1 |
| <b>Basic</b>               | Yes                                    |

To set a hard limit for aggregate PGA memory, use the `PGA_AGGREGATE_LIMIT` parameter.

Setting `PGA_AGGREGATE_TARGET` to a nonzero value has the effect of automatically setting the `WORKAREA_SIZE_POLICY` parameter to `AUTO`. With this setting, SQL working areas used by memory-intensive SQL operators (such as sort, group-by, hash-join, bitmap merge, and bitmap create) will be automatically sized. A nonzero value for this parameter is the default since, unless you specify otherwise, Oracle sets it to 20% of the SGA or 10 MB, whichever is greater.

Setting `PGA_AGGREGATE_TARGET` to 0 automatically sets the `WORKAREA_SIZE_POLICY` parameter to `MANUAL`. With this setting, SQL working areas are sized using the `*_AREA_SIZE` parameters.

Oracle attempts to keep the amount of private memory below the target specified by this parameter by adapting the size of the working areas to private memory. When increasing the value of this parameter, you indirectly increase the memory allotted to working areas. Consequently, more memory-intensive operations are able to run fully in memory and fewer will work their way over to disk.

If Automatic Memory Management is enabled (`MEMORY_TARGET` is set to a positive value) and `PGA_AGGREGATE_TARGET` is also set to a positive value, the `PGA_AGGREGATE_TARGET` value acts as the minimum value for the size of the instance PGA.

**Note**

This parameter is optional for pluggable databases (PDBs). When this parameter is set for a PDB, it specifies the target aggregate PGA size for the PDB.

To be able to use Resource Manager in a CDB to control the amount of memory each PDB can use:

- The NONCDB\_COMPATIBLE initialization parameter must be set to FALSE at the CDB level (in the root of the CDB).
- The MEMORY\_TARGET initialization parameter must not be set at the CDB level.
- You must set the PGA\_AGGREGATE\_TARGET initialization parameter in a PDB to a value that meets these requirements:
  - Less than or equal to the PGA\_AGGREGATE\_TARGET value set at the CDB level
  - Less than or equal to 50% of the PGA\_AGGREGATE\_LIMIT initialization parameter value set at the CDB level
  - Less than or equal to 50% of the PGA\_AGGREGATE\_LIMIT value set in the PDB

When you set PGA\_AGGREGATE\_TARGET in a PDB to a value that does not meet these requirements, you receive an error. If these requirements are violated after the PDB's parameter is set (for example, if the PGA\_AGGREGATE\_TARGET value is changed at the CDB level), Oracle will adjust the PDB's value to meet these requirements.

## 2.283 PKCS11\_LIBRARY\_LOCATION

PKCS11\_LIBRARY\_LOCATION specifies the PKCS#11 library location for Transparent Data Encryption (TDE).

| Property            | Description                                   |
|---------------------|-----------------------------------------------|
| Parameter type      | String                                        |
| Syntax              | PKCS11_LIBRARY_LOCATION = 'library_location'  |
| Default value       | None                                          |
| Modifiable          | ALTER SYSTEM                                  |
| Modifiable in a PDB | Yes                                           |
| Basic               | No                                            |
| Oracle RAC          | The same value must be used on all instances. |

For *library\_location*, specify the full operating system path to the PKCS#11 library. For example:

```
ALTER SYSTEM SET PKCS11_LIBRARY_LOCATION =
 '/opt/oracle/extapi/64/pkcs11/okv/21.8/liborapkcs.so';
```

**Note**

This parameter is available starting with Oracle Database 21c.

## 2.284 PLSCOPE\_SETTINGS

PLSCOPE\_SETTINGS controls the compile time collection, cross-reference, and storage of PL/SQL source code identifier data.

| Property            | Description                                                                                                                                                                                                                |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Parameter type      | String                                                                                                                                                                                                                     |
| Syntax              | PLSCOPE_SETTINGS = 'value_clause [, value_clause ]'<br><b>value_clause::=</b><br>{ IDENTIFIERS   STATEMENTS } : { ALL   NONE   PUBLIC (for IDENTIFIERS only)   SQL (for IDENTIFIERS only)   PLSQL (for IDENTIFIERS only) } |
| Default value       | 'IDENTIFIERS:NONE'                                                                                                                                                                                                         |
| Modifiable          | ALTER SESSION, ALTER SYSTEM                                                                                                                                                                                                |
| Modifiable in a PDB | Yes                                                                                                                                                                                                                        |
| Basic               | No                                                                                                                                                                                                                         |

**Values**

- IDENTIFIERS:ALL  
Enables the collection of all source code identifier data.
- IDENTIFIERS:NONE  
Disables the collection of all source code identifier data.
- IDENTIFIERS: PUBLIC  
Enables the collection of all PUBLIC user identifier data (except for DEFINITION)
- IDENTIFIERS:SQL  
Enables the collection of all SQL identifier data.
- IDENTIFIERS:PLSQL

Enables the collection of all PLSQL identifier data.

- STATEMENTS:ALL

Enables the collection of all SQL statements used in PL/SQL.

- STATEMENTS:NONE

Disables the collection of all statements.

PLSCOPE\_SETTINGS can be set on a session, system, or per-library unit (ALTER COMPILER) basis. The current setting of PLSCOPE\_SETTINGS for any library unit can be attained by querying the \*\_PLSQL\_OBJECT\_SETTINGS views. Any identifier data collected by setting this parameter can be accessed using the \*\_IDENTIFIERS views.

When a STATEMENTS setting is not specified, and IDENTIFIERS is specified but set to a value other than NONE, STATEMENTS defaults to a setting of ALL, which is equal to:

IDENTIFIERS: [ALL|PLSQL|PUBLIC]

### Examples

The following parameter setting causes PL/SQL and SQL identifiers and statements to be collected:

```
PLSCOPE_SETTINGS = 'IDENTIFIERS:ALL, STATEMENTS:ALL'
```

The following parameter setting causes only SQL identifiers and statements to be collected:

```
PLSCOPE_SETTINGS = 'IDENTIFIERS:SQL, STATEMENTS:ALL'
```

The following parameter setting causes only PL/SQL identifiers to be collected:

```
PLSCOPE_SETTINGS = 'IDENTIFIERS:PLSQL, STATEMENTS:NONE'
```

The following parameter setting causes no identifier data to be collected, and drops any existing identifier data:

```
PLSCOPE_SETTINGS = 'IDENTIFIERS: NONE'
```

## 2.285 PLSQL\_CCFLAGS

PLSQL\_CCFLAGS provides a mechanism that allows PL/SQL programmers to control conditional compilation of each PL/SQL library unit independently.

| Property            | Description                                                                                        |
|---------------------|----------------------------------------------------------------------------------------------------|
| Parameter type      | String                                                                                             |
| Syntax              | PLSQL_CCFLAGS = '<v1>:<c1>,<v2>:<c2>,...,<vn>:<cn>'                                                |
| Default value       | Empty string                                                                                       |
| Modifiable          | ALTER SESSION, ALTER SYSTEM                                                                        |
| Modifiable in a PDB | Yes                                                                                                |
| Range of values     | Any string literal that satisfies the internal syntax                                              |
| Basic               | No                                                                                                 |
| Examples            | ALTER SESSION SET PLSQL_CCFLAGS = 'DeBug:TruE';<br>ALTER SESSION SET PLSQL_CCFLAGS = 'debug:TRUE'; |

### Values

- <vi> has the form of an unquoted PL/SQL identifier. It is unrestricted and can be a reserved word or a keyword. The text is insensitive to case. Each one is known as a flag or flag name. Each <vi> can occur more than once in the string, each occurrence can have a different flag value, and the flag values can be of different kinds.
- <ci> is one of the following: a PL/SQL boolean literal, a PLS\_INTEGER literal, or the literal NULL. The text is insensitive to case. Each one is known as a flag value and corresponds to a flag name.

You can define any allowable value for PLSQL\_CCFLAGS. However, Oracle recommends that this parameter be used for controlling the conditional compilation of debugging or tracing code. It is recommended that the following identifiers not be used as flag name values:

- Names of Oracle parameters (for example, NLS\_LENGTH\_SEMANTICS)
- Identifiers with any of the following prefixes: PLS\_, PLSQL\_, PLSCC\_, ORA\_, ORACLE\_, DBMS\_, SYS\_

#### 📘 See Also

*Oracle Database PL/SQL Language Reference* for more information about this parameter

## 2.286 PLSQL\_CODE\_TYPE

PLSQL\_CODE\_TYPE specifies the compilation mode for PL/SQL library units.

| Property            | Description                                |
|---------------------|--------------------------------------------|
| Parameter type      | String                                     |
| Syntax              | PLSQL_CODE_TYPE = { INTERPRETED   NATIVE } |
| Default value       | INTERPRETED                                |
| Modifiable          | ALTER SESSION, ALTER SYSTEM                |
| Modifiable in a PDB | Yes                                        |
| Basic               | No                                         |

Values

- **INTERPRETED**  
PL/SQL library units will be compiled to PL/SQL bytecode format. Such modules are executed by the PL/SQL interpreter engine.
- **NATIVE**  
PL/SQL library units (with the possible exception of top-level anonymous PL/SQL blocks) will be compiled to native (machine) code. Such modules will be executed natively without incurring any interpreter overhead.

When the value of this parameter is changed, it has no effect on PL/SQL library units that have already been compiled. The value of this parameter is stored persistently with each library unit.

If a PL/SQL library unit is compiled native, all subsequent automatic recompilations of that library unit will use native compilation.

① **See Also**

*Oracle Database PL/SQL Language Reference* for more information about this parameter

2.287 PLSQL\_DEBUG

PLSQL\_DEBUG specifies whether or not PL/SQL library units will be compiled for debugging.

| Property            | Description                 |
|---------------------|-----------------------------|
| Parameter type      | Boolean                     |
| Default value       | false                       |
| Modifiable          | ALTER SESSION, ALTER SYSTEM |
| Modifiable in a PDB | Yes                         |
| Range of values     | true   false                |
| Basic               | No                          |

① **Note**

The PLSQL\_DEBUG parameter is deprecated. It is retained for backward compatibility only.

Values

- **true**  
PL/SQL library units will be compiled for debugging
- **false**  
PL/SQL library units will be compiled for normal execution

When PLSQL\_DEBUG is set to true, PL/SQL library units are always compiled INTERPRETED in order to be debuggable.

When the value of this parameter is changed, it has no effect on PL/SQL library units that have already been compiled. The value of this parameter is stored persistently with each library unit.

## 2.288 PLSQL\_OPTIMIZE\_LEVEL

PLSQL\_OPTIMIZE\_LEVEL specifies the optimization level that will be used to compile PL/SQL library units. The higher the setting of this parameter, the more effort the compiler makes to optimize PL/SQL library units.

| Property                   | Description                 |
|----------------------------|-----------------------------|
| <b>Parameter type</b>      | Integer                     |
| <b>Default value</b>       | 2                           |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM |
| <b>Modifiable in a PDB</b> | Yes                         |
| <b>Range of values</b>     | 0 to 3                      |
| <b>Basic</b>               | No                          |

### Values

- 0  
Maintains the evaluation order and hence the pattern of side effects, exceptions, and package initializations of Oracle9i and earlier releases. Also removes the new semantic identity of BINARY\_INTEGER and PLS\_INTEGER and restores the earlier rules for the evaluation of integer expressions. Although code will run somewhat faster than it did in Oracle9i, use of level 0 will forfeit most of the performance gains of PL/SQL in Oracle Database 10g.
- 1  
Applies a wide range of optimizations to PL/SQL programs including the elimination of unnecessary computations and exceptions, but generally does not move source code out of its original source order.
- 2  
Applies a wide range of modern optimization techniques beyond those of level 1 including changes which may move source code relatively far from its original location.
- 3  
Applies a wide range of optimization techniques beyond those of level 2, automatically including techniques not specifically requested.

Generally, setting this parameter to 2 pays off in better execution performance. If, however, the compiler runs slowly on a particular source module or if optimization does not make sense for some reason (for example, during rapid turnaround development), then setting this parameter to 1 will result in almost as good a compilation with less use of compile-time resources.

The value of this parameter is stored persistently with the library unit.

**See Also**

- *Oracle Database PL/SQL Language Reference* for more information about this parameter
- *Oracle Database Development Guide* for an example of using this parameter

## 2.289 PLSQL\_V2\_COMPATIBILITY

PLSQL\_V2\_COMPATIBILITY is used to specify whether nonstandard behavior that PL/SQL Version 2 allows will be allowed in PL/SQL Version 8.

| Property                   | Description                 |
|----------------------------|-----------------------------|
| <b>Parameter type</b>      | Boolean                     |
| <b>Default value</b>       | false                       |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM |
| <b>Modifiable in a PDB</b> | Yes                         |
| <b>Range of values</b>     | true   false                |
| <b>Basic</b>               | No                          |

**Note**

The PLSQL\_V2\_COMPATIBILITY parameter is deprecated. It is retained for backward compatibility only.

PL/SQL Version 2 allows some nonstandard behavior that Version 8 disallows. If you want to retain that behavior for backward compatibility, set PLSQL\_V2\_COMPATIBILITY to true. If you set it to false, then PL/SQL Version 8 behavior is enforced and Version 2 behavior is not allowed.

**See Also**

*Oracle Database PL/SQL Language Reference* for a description of the differences between PL/SQL Version 2 and Version 8, and for more information on setting this parameter

## 2.290 PLSQL\_WARNINGS

PLSQL\_WARNINGS enables or disables the reporting of warning messages by the PL/SQL compiler, and specifies which warning messages to show as errors.

| Property              | Description                                             |
|-----------------------|---------------------------------------------------------|
| <b>Parameter type</b> | String                                                  |
| <b>Syntax</b>         | PLSQL_WARNINGS = 'value_clause' [, 'value_clause' ] ... |

| Property                   | Description                                                                                                                                                                                                                          |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>              | <b>value_clause ::=</b><br>{ ENABLE   DISABLE   ERROR }:<br>{ ALL<br>  SEVERE<br>  INFORMATIONAL<br>  PERFORMANCE<br>  { <i>integer</i><br>  ( <i>integer</i> [, <i>integer</i> ] ...) }<br>}                                        |
| <b>Default value</b>       | 'DISABLE:ALL'                                                                                                                                                                                                                        |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                                                                                                                                                                                                          |
| <b>Modifiable in a PDB</b> | Yes                                                                                                                                                                                                                                  |
| <b>Basic</b>               | No                                                                                                                                                                                                                                   |
| <b>Examples</b>            | PLSQL_WARNINGS = 'ENABLE:SEVERE', 'DISABLE:INFORMATIONAL';<br>PLSQL_WARNINGS = 'DISABLE:ALL';<br>PLSQL_WARNINGS = 'DISABLE:5000', 'ENABLE:5001', 'ERROR:5002';<br>PLSQL_WARNINGS = 'ENABLE:(5000,5001,5002)', 'DISABLE:(6000,6001)'; |

### value\_clause

Multiple value clauses may be specified, enclosed in quotes and separated by commas. Each value clause is composed of a qualifier, a colon (:), and a modifier.

#### Qualifier values:

- **ENABLE**  
Enable a specific warning or a set of warnings
- **DISABLE**  
Disable a specific warning or a set of warnings
- **ERROR**  
Treat a specific warning or a set of warnings as errors

#### Modifier values:

- **ALL**  
Apply the qualifier to all warning messages
- **SEVERE**  
Apply the qualifier to only those warning messages in the SEVERE category
- **INFORMATIONAL**  
Apply the qualifier to only those warning messages in the INFORMATIONAL category
- **PERFORMANCE**  
Apply the qualifier to only those warning messages in the PERFORMANCE category

**① See Also**

*Oracle Database PL/SQL Language Reference* for more information about this parameter

## 2.291 PMEM\_FILESTORE

PMEM\_FILESTORE specifies the Persistent Memory Filestores (PMEM Filestores) that the database automatically mounts during instance startup.

| Property                   | Description                                                                              |
|----------------------------|------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | String                                                                                   |
| <b>Syntax</b>              | PMEM_FILESTORE = ( 'mount_point', 'backing_file' [, 'mount_point', 'backing_file' ]... ) |
| <b>Default value</b>       | None                                                                                     |
| <b>Modifiable</b>          | No                                                                                       |
| <b>Modifiable in a PDB</b> | No                                                                                       |
| <b>Basic</b>               | No                                                                                       |

You can specify one or more PMEM Filestores to be mounted during instance startup.

Specify the following pair of values for each PMEM Filestore:

- *mount\_point*: The operating system directory path for the mount point of the PMEM Filestore
- *backing\_file*: The operating system file path for the backing file of the PMEM Filestore

For example:

```
PMEM_FILESTORE=(' /var/db/db_1', ' /var/db_storage/db1.f')
```

```
PMEM_FILESTORE=(' /var/db/db_1', ' /var/db_storage/db1.f', ' /var/db/db_2',
' /var/db_storage/db2.f')
```

**① Note**

This parameter is available starting with Oracle Database 21c.

## 2.292 PRE\_PAGE\_SGA

PRE\_PAGE\_SGA determines whether Oracle accesses the entire SGA at instance startup.

Operating system page table entries are then prebuilt for each page of the SGA.

| Property              | Description |
|-----------------------|-------------|
| <b>Parameter type</b> | Boolean     |

| Property            | Description  |
|---------------------|--------------|
| Default value       | true         |
| Modifiable          | No           |
| Modifiable in a PDB | No           |
| Range of values     | true   false |
| Basic               | No           |

When this parameter is set to true, the database server touches the entire SGA after the instance startup. These accesses are done by a background process and are initiated after the instance startup. The accesses cause the OS to allocate memory to the SGA and populate the page tables, making the SGA memory resident and increasing database performance.

**Note**

This setting does not prevent your operating system from paging or swapping the SGA after it is initially read into memory.

## 2.293 PRIVATE\_TEMP\_TABLE\_PREFIX

PRIVATE\_TEMP\_TABLE\_PREFIX specifies the prefix that the database uses for private temporary tables.

| Property            | Description                                        |
|---------------------|----------------------------------------------------|
| Parameter type      | String                                             |
| Syntax              | PRIVATE_TEMP_TABLE_PREFIX = <i>string</i>          |
| Default value       | ORA\$PTT_                                          |
| Modifiable          | ALTER SYSTEM ... DEFERRED                          |
| Modifiable in a PDB | Yes                                                |
| Basic               | No                                                 |
| Oracle RAC          | The same value must be specified on each instance. |

The default value used for the PRIVATE\_TEMP\_TABLE\_PREFIX parameter is ORA\$PTT\_.

If you choose to specify a different prefix value, it must begin with the string ORA\$ and must be unique across the database. Use the following SQL query to determine if the prefix value is unique (in the query, replace *prefix-value* with your actual prefix value):

```
select count(*) from obj$ where name like '<prefix-value>%';
```

If the above query returns 0, then the prefix you specified is an appropriate value to set.

**Note**

After setting the prefix, regular table, view, and object names cannot use the same prefix.

**① See Also**

- ["DBA\\_PRIVATE\\_TEMP\\_TABLES"](#)
- ["USER\\_PRIVATE\\_TEMP\\_TABLES"](#)
- *Oracle Database Administrator's Guide* for an introduction to private temporary tables

## 2.294 PROCESSES

PROCESSES specifies the maximum number of operating system user processes that can simultaneously connect to Oracle.

| Property                   | Description                                                                                      |
|----------------------------|--------------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | Integer                                                                                          |
| <b>Default value</b>       | The value is derived, and it typically depends on the number of cores reported in the alert log. |
| <b>Modifiable</b>          | No                                                                                               |
| <b>Modifiable in a PDB</b> | No                                                                                               |
| <b>Range of values</b>     | 80 to operating system dependent                                                                 |
| <b>Basic</b>               | Yes                                                                                              |
| <b>Oracle RAC</b>          | Multiple instances can have different values.                                                    |

The value for this parameter should allow for all background processes such as locks, job queue processes, and parallel execution processes.

The default values of the SESSIONS and TRANSACTIONS parameters are derived from this parameter. Therefore, if you change the value of PROCESSES, you should evaluate whether to adjust the values of those derived parameters.

## 2.295 PROCESSOR\_GROUP\_NAME

PROCESSOR\_GROUP\_NAME specifies the name of the processor group that this instance should run in.

| Property              | Description                          |
|-----------------------|--------------------------------------|
| <b>Parameter type</b> | String                               |
| <b>Syntax</b>         | PROCESSOR_GROUP_NAME = <i>string</i> |

| Property                   | Description                                                                                                                                                                                                                                                                                                                                    |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Default value</b>       | There is no default value                                                                                                                                                                                                                                                                                                                      |
| <b>Modifiable</b>          | No                                                                                                                                                                                                                                                                                                                                             |
| <b>Modifiable in a PDB</b> | No                                                                                                                                                                                                                                                                                                                                             |
| <b>Basic</b>               | No                                                                                                                                                                                                                                                                                                                                             |
| <b>Oracle RAC</b>          | For Oracle RAC databases, it is recommended that the operating system processor groups for each database instance are all named the same, so that the same PROCESSOR_GROUP_NAME value can be used. However, you can choose to use different names. In this case, you would set the PROCESSOR_GROUP_NAME explicitly for each database instance. |

This initialization parameter is supported on the Linux and Solaris operating systems.

PROCESSOR\_GROUP\_NAME instructs the database instance to run itself within the specified operating system processor group. All Oracle processes will be bound to the CPUs in this group and will only run on these CPUs.

#### Notes

- Oracle recommends that this parameter be set only for databases on which the USE\_DEDICATED\_BROKER initialization parameter is also set to TRUE.
- For NUMA systems, all SGA and PGA memory allocated by the database instance will be allocated from NUMA nodes within the group.
- Starting with Oracle Database Appliance (ODA) release 19.9, you can use PROCESSOR\_GROUP\_NAME to specify the set of CPU cores on which the database on ODA will run. For more information, refer to *Oracle Database Appliance X8-2 Deployment and User's Guide*.

#### See Also

## 2.296 QUERY\_REWRITE\_ENABLED

Use QUERY\_REWRITE\_ENABLED to enable or disable query rewriting globally for the database.

| Property                   | Description                                                                                                                             |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | String                                                                                                                                  |
| <b>Syntax</b>              | QUERY_REWRITE_ENABLED = { false   true   force }                                                                                        |
| <b>Default value</b>       | If OPTIMIZER_FEATURES_ENABLE is set to 10.0.0 or higher, then true<br>If OPTIMIZER_FEATURES_ENABLE is set to 9.2.0 or lower, then false |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                                                                                                             |
| <b>Modifiable in a PDB</b> | Yes                                                                                                                                     |
| <b>Basic</b>               | No                                                                                                                                      |

| Property   | Description                                   |
|------------|-----------------------------------------------|
| Oracle RAC | Multiple instances can have different values. |

#### Values

- `false`  
Oracle does not use rewrite.
- `true`  
Oracle costs the query with rewrite and without rewrite and chooses the method with the lower cost.
- `force`  
Oracle always uses rewrite and does not evaluate the cost before doing so. Use force when you know that the query will always benefit from rewrite and when reduction in compile time is important.

To take advantage of query rewrite for a particular materialized view, you must enable query rewrite for that materialized view, and you must enable cost-based optimization.

#### ① See Also

- *Oracle Database Data Warehousing Guide* for information on query rewrite of materialized views

## 2.297 QUERY\_REWRITE\_INTEGRITY

QUERY\_REWRITE\_INTEGRITY determines the degree to which Oracle must enforce query rewriting. At the safest level, Oracle does not use query rewrite transformations that rely on unenforced relationships.

| Property            | Description                                                        |
|---------------------|--------------------------------------------------------------------|
| Parameter type      | String                                                             |
| Syntax              | QUERY_REWRITE_INTEGRITY = { enforced   trusted   stale_tolerated } |
| Default value       | enforced                                                           |
| Modifiable          | ALTER SESSION, ALTER SYSTEM                                        |
| Modifiable in a PDB | Yes                                                                |
| Basic               | No                                                                 |
| Oracle RAC          | Multiple instances can have different values.                      |

QUERY\_REWRITE\_INTEGRITY is relevant for materialized views as well as for foreign key constraints in NOVALIDATE state.

### Values

- enforced

Oracle enforces and guarantees consistency and integrity.

- trusted

Oracle allows rewrites using relationships that have been declared, but that are not enforced by Oracle.

- stale\_tolerated

Oracle allows rewrites using unenforced relationships. Materialized views are eligible for rewrite even if they are known to be inconsistent with the underlying detail data. You must set the `QUERY_REWRITE_INTEGRITY` initialization parameter to `stale_tolerated` before querying an external table in the In-Memory Column Store (IM column store).

If a foreign key constraint is in `NOVALIDATE` state, join elimination is not done when `QUERY_REWRITE_INTEGRITY=enforced`. This means that queries with joins over a foreign key constraint that is in `RELY NOVALIDATE` state can potentially take longer to parse and execute as the optimizer does not trust the `RELY`.

#### ① See Also

- Oracle Database Data Warehousing Guide* for more information about the `QUERY_REWRITE_INTEGRITY` parameter

## 2.298 RDBMS\_SERVER\_DN

`RDBMS_SERVER_DN` specifies the Distinguished Name (DN) of the Oracle server. It is used for retrieving Enterprise Roles from an enterprise directory service.

| Property                   | Description                                |
|----------------------------|--------------------------------------------|
| <b>Parameter type</b>      | X.500 Distinguished Name                   |
| <b>Default value</b>       | There is no default value.                 |
| <b>Modifiable</b>          | No                                         |
| <b>Modifiable in a PDB</b> | No                                         |
| <b>Range of values</b>     | All X.500 Distinguished Name format values |
| <b>Basic</b>               | No                                         |

#### ① Note

The `RDBMS_SERVER_DN` parameter is deprecated in Oracle Database 12c Release 1 (12.1.0.2). It is replaced by the `LDAP_DIRECTORY_ACCESS` initialization parameter.

If you do not want to use a directory for enterprise user and privilege management, but prefer to use SSL authentication alone, do not set this parameter.

① **See Also**

- *Oracle Database Enterprise User Security Administrator's Guide* for more information on enterprise roles and the enterprise directory service
- "[LDAP\\_DIRECTORY\\_ACCESS](#)"

## 2.299 READ\_ONLY\_OPEN\_DELAYED

READ\_ONLY\_OPEN\_DELAYED determines when datafiles in read-only tablespaces are accessed.

| Property                   | Description  |
|----------------------------|--------------|
| <b>Parameter type</b>      | Boolean      |
| <b>Default value</b>       | false        |
| <b>Modifiable</b>          | No           |
| <b>Modifiable in a PDB</b> | No           |
| <b>Range of values</b>     | true   false |
| <b>Basic</b>               | No           |

### Values

- true  
The datafiles are accessed for the first time only when an attempt is made to read data stored within them.
- false  
The datafiles are accessed at database open time.

You can use this parameter to speed up some operations (primarily opening the database) for very large databases when substantial portions of the database are stored in read-only tablespaces. Consider setting this parameter to `true` for such databases, especially if portions of the read-only data are stored on slow-access devices or hierarchical storage.

① **See Also**

*Oracle Database Administrator's Guide* for information on the consequences of delaying access of datafiles in read-only tablespaces

## 2.300 RECOVERY\_PARALLELISM

RECOVERY\_PARALLELISM specifies the number of processes to participate in instance or crash recovery.

| Property                   | Description                                                                                |
|----------------------------|--------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | Integer                                                                                    |
| <b>Default value</b>       | System-determined parallel recovery                                                        |
| <b>Modifiable</b>          | ALTER SYSTEM                                                                               |
| <b>Modifiable in a PDB</b> | No                                                                                         |
| <b>Range of values</b>     | System-determined, but cannot exceed PARALLEL_MAX_SERVERS initialization parameter setting |
| <b>Basic</b>               | No                                                                                         |

To force serial crash and instance recovery, set the `RECOVERY_PARALLELISM` parameter to 0 or 1. 0 or 1 disable parallel instance and crash recovery on a system that has multiple CPUs. An alert log displays the degree of parallelism that was chosen when the database instance/recovery starts.

#### ① See Also

- *Oracle Real Application Clusters Administration and Deployment Guide* for information on setting this parameter in an Oracle RAC environment

## 2.301 RECYCLEBIN

RECYCLEBIN is used to control whether the Flashback Drop capability is turned on or off.

| Property                   | Description                              |
|----------------------------|------------------------------------------|
| <b>Parameter type</b>      | String                                   |
| <b>Syntax</b>              | <code>RECYCLEBIN = { on   off }</code>   |
| <b>Default value</b>       | on                                       |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM ... DEFERRED |
| <b>Modifiable in a PDB</b> | Yes                                      |
| <b>Basic</b>               | No                                       |

If the parameter is set to off, then dropped tables do not go into the recycle bin. If this parameter is set to on, then dropped tables go into the recycle bin and can be recovered.

#### ① See Also

*Oracle Database Administrator's Guide* for more information about using Flashback Drop and managing the recycle bin

## 2.302 REDO\_TRANSPORT\_USER

`REDO_TRANSPORT_USER` specifies the name of the user whose password verifier is used when a remote login password file is used for redo transport authentication. This user must have the

SYSOPER privilege and must have the same password in the database that initiates the redo transport session and in the database that is the target of the redo transport session.

| Property                   | Description                                                                                     |
|----------------------------|-------------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | String                                                                                          |
| <b>Syntax</b>              | REDO_TRANSPORT_USER = <i>user_name</i>                                                          |
| <b>Default value</b>       | There is no default value.                                                                      |
| <b>Range of values</b>     | Any character string that matches the name of a user who has been granted the SYSOPER privilege |
| <b>Modifiable</b>          | ALTER SYSTEM                                                                                    |
| <b>Modifiable in a PDB</b> | No                                                                                              |
| <b>Basic</b>               | No                                                                                              |
| <b>Oracle RAC</b>          | Every instance should use the same value                                                        |

The value of this parameter is case sensitive and must exactly match the value of the USERNAME column of a row in the V\$PWFILE\_USERS view. The value of the SYSOPER column of the row must also be TRUE.

If this parameter is not specified, then the password verifier of the SYS user will be used when a remote login password file is used for redo transport authentication.

#### See Also

*Oracle Data Guard Concepts and Administration* for more information about this parameter

## 2.303 REMOTE\_DEPENDENCIES\_MODE

REMOTE\_DEPENDENCIES\_MODE specifies how Oracle should handle dependencies upon remote PL/SQL stored procedures.

| Property                   | Description                                          |
|----------------------------|------------------------------------------------------|
| <b>Parameter type</b>      | String                                               |
| <b>Syntax</b>              | REMOTE_DEPENDENCIES_MODE = { TIMESTAMP   SIGNATURE } |
| <b>Default value</b>       | TIMESTAMP                                            |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                          |
| <b>Modifiable in a PDB</b> | Yes                                                  |
| <b>Basic</b>               | No                                                   |

#### Values

- TIMESTAMP

The client running the procedure compares the timestamp recorded on the server-side procedure with the current timestamp of the local procedure and executes the procedure only if the timestamps match.

- SIGNATURE

Oracle allows the procedure to execute as long as the signatures are considered safe. This setting allows client PL/SQL applications to be run without recompilation.

## 2.304 REMOTE\_LISTENER

REMOTE\_LISTENER specifies a network name that resolves to an address or address list of Oracle Net remote listeners (that is, listeners that are not running on the same system as this instance). The address or address list is specified in the TNSNAMES.ORA file or other address repository as configured for your system.

| Property            | Description                           |
|---------------------|---------------------------------------|
| Parameter type      | String                                |
| Syntax              | REMOTE_LISTENER = <i>network_name</i> |
| Default value       | There is no default value.            |
| Modifiable          | ALTER SYSTEM                          |
| Modifiable in a PDB | Yes                                   |
| Basic               | Yes                                   |

#### ① See Also

## 2.305 REMOTE\_LOGIN\_PASSWORDFILE

REMOTE\_LOGIN\_PASSWORDFILE specifies whether Oracle checks for a password file.

| Property            | Description                                               |
|---------------------|-----------------------------------------------------------|
| Parameter type      | String                                                    |
| Syntax              | REMOTE_LOGIN_PASSWORDFILE = { SHARED   EXCLUSIVE   NONE } |
| Default value       | EXCLUSIVE                                                 |
| Modifiable          | No                                                        |
| Modifiable in a PDB | No                                                        |

| Property   | Description                                  |
|------------|----------------------------------------------|
| Basic      | Yes                                          |
| Oracle RAC | Multiple instances must have the same value. |

### Values

- SHARED

One or more databases can use the password file. The password file can contain SYS and non-SYS users.

When REMOTE\_LOGIN\_PASSWORDFILE is set to SHARED:

- The database disables modification of the password file by an ASM or RDBMS instance.
- If you attempt to change the password of a user that is in the password file, the operation fails with "ORA-01999: password file cannot be updated in SHARED mode."
- If you attempt to change the password of an administrative user (except SYS) that is *not* in the password file, the password change operation will succeed, but the new password will not go into effect. This is because the password is updated only in the data dictionary and not in the password file.
- Grants and revokes of administrative privileges (SYSDBA, SYSOPER, SYSASM, SYSBACKUP, SYSDG, SYSKM) to or from individual users are not allowed. For example, GRANT SYSDBA TO SCOTT fails with "ORA-01999: password file cannot be updated in SHARED mode."
- If the password file does not exist, then the behavior is the same as setting REMOTE\_LOGIN\_PASSWORDFILE to NONE.

- EXCLUSIVE

The password file is intended for use by ASM instances in the same cluster or by one or more instances of the same Oracle database.

The password file can contain SYS and non-SYS users.

If the password file does not exist, then the behavior is the same as setting REMOTE\_LOGIN\_PASSWORDFILE to NONE.

- NONE

ASM and RDBMS instances ignore the password file. Therefore, privileged users must be authenticated by the operating system.

#### Note

If you change REMOTE\_LOGIN\_PASSWORDFILE to EXCLUSIVE or SHARED from NONE, then ensure that the password file is synchronized with the dictionary passwords.

## 2.306 REMOTE\_OS\_ROLES

REMOTE\_OS\_ROLES specifies whether operating system roles are allowed for remote clients.

| Property            | Description  |
|---------------------|--------------|
| Parameter type      | Boolean      |
| Default value       | false        |
| Modifiable          | No           |
| Modifiable in a PDB | No           |
| Range of values     | true   false |
| Basic               | No           |

The default value, false, causes Oracle to identify and manage roles for remote clients.

#### See Also

- *Oracle Database Security Guide* for more information on setting this parameter
- ["OS\\_ROLES"](#)

## 2.307 REMOTE\_RECOVERY\_FILE\_DEST

REMOTE\_RECOVERY\_FILE\_DEST specifies a directory from which to read archive log files during a pluggable database (PDB) refresh operation if the source is not available.

| Property            | Description                                                                                                                                                                     |
|---------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Parameter type      | String                                                                                                                                                                          |
| Syntax              | REMOTE_RECOVERY_FILE_DEST = <i>string</i>                                                                                                                                       |
| Default value       | None                                                                                                                                                                            |
| Modifiable          | ALTER SYSTEM ... SID='*'                                                                                                                                                        |
| Modifiable in a PDB | Yes                                                                                                                                                                             |
| Basic               | No                                                                                                                                                                              |
| Oracle RAC          | The directory location where archive redo logs are accessible can be different on different instances, so this parameter can be set to different values on different instances. |

For a PDB refresh copy to be in sync with its source, redo is accessed from the source PDB over a database link. Sometimes the source PDB or the CDB to which the source PDB belongs is not accessible when the refresh copy needs to be updated. In those cases, if this parameter is set, an attempt will be made to read archive log files from the directory specified by this parameter.

## 2.308 REPLICATION\_DEPENDENCY\_TRACKING

REPLICATION\_DEPENDENCY\_TRACKING enables or disables dependency tracking for read/write operations to the database.

| Property       | Description |
|----------------|-------------|
| Parameter type | Boolean     |

| Property                   | Description  |
|----------------------------|--------------|
| <b>Default value</b>       | true         |
| <b>Modifiable</b>          | No           |
| <b>Modifiable in a PDB</b> | No           |
| <b>Range of values</b>     | true   false |
| <b>Basic</b>               | No           |

Dependency tracking is essential for propagating changes in a replicated environment in parallel.

#### Values

- TRUE  
Enables dependency tracking.
- FALSE  
Allows read/write operations to the database to run faster, but does not produce dependency information for Oracle to perform parallel propagation.

#### Note

Do not specify this value unless you are sure that your application will not perform any read/write operations to the replicated tables.

## 2.309 RESOURCE\_LIMIT

RESOURCE\_LIMIT determines whether resource limits are enforced in database profiles.

| Property                   | Description  |
|----------------------------|--------------|
| <b>Parameter type</b>      | Boolean      |
| <b>Default value</b>       | true         |
| <b>Modifiable</b>          | ALTER SYSTEM |
| <b>Modifiable in a PDB</b> | Yes          |
| <b>Range of values</b>     | true   false |
| <b>Basic</b>               | No           |

#### Values

- TRUE  
Enables the enforcement of resource limits
- FALSE  
Disables the enforcement of resource limits

**① See Also**

*Oracle Database Administrator's Guide and Oracle Database SQL Language Reference* for more information on setting resource limits for profiles

## 2.310 RESOURCE\_MANAGE\_GOLDENGATE

RESOURCE\_MANAGE\_GOLDENGATE determines whether Oracle GoldenGate apply processes in the database are resource managed.

| Property                   | Description                              |
|----------------------------|------------------------------------------|
| <b>Parameter type</b>      | Boolean                                  |
| <b>Default value</b>       | false                                    |
| <b>Modifiable</b>          | ALTER SYSTEM                             |
| <b>Modifiable in a PDB</b> | No                                       |
| <b>Range of values</b>     | true   false                             |
| <b>Basic</b>               | No                                       |
| <b>Oracle RAC</b>          | All instances should use the same value. |

To enable Resource Manager, set the RESOURCE\_MANAGER\_PLAN parameter.

By default, Oracle GoldenGate apply processes in the database are not resource managed. Given that replication to a PDB requires a separate Oracle GoldenGate apply process, it is possible that the apply processes for one PDB could end up consuming most of the CPU on the machine, even if there is a CPU resource management plan in place to limit CPU usage per PDB.

You can set the following values for the RESOURCE\_MANAGE\_GOLDENGATE parameter:

- **TRUE:** With this setting, Oracle GoldenGate apply processes in the database are resource managed based on the resources allocated to the GoldenGate apply user.
- **FALSE:** With this setting, Oracle GoldenGate apply processes are not resource managed.

## 2.311 RESOURCE\_MANAGER\_CPU\_ALLOCATION

RESOURCE\_MANAGER\_CPU\_ALLOCATION specifies the number of CPUs that the Resource Manager should use. The Resource Manager controls how a system's CPUs are utilized by its database's sessions.

**① Note**

The RESOURCE\_MANAGER\_CPU\_ALLOCATION parameter is deprecated and its value is ignored. This parameter is retained only for backward compatibility. Use the CPU\_COUNT parameter instead.

| Property            | Description                    |
|---------------------|--------------------------------|
| Parameter type      | Integer                        |
| Default value       | 0                              |
| Modifiable          | ALTER SYSTEM                   |
| Modifiable in a PDB | No                             |
| Range of values     | 0 to operating system-specific |
| Basic               | No                             |

The Resource Manager schedules database sessions on the CPUs according to a resource plan that has been configured and enabled by the DBA. Normally, the Resource Manager schedules enough database sessions to keep all CPUs utilized. However, in some scenarios, a DBA may only want to schedule enough database sessions to keep a subset of the CPUs utilized.

📘 **See Also**  
["CPU\\_COUNT"](#)

## 2.312 RESOURCE\_MANAGER\_PLAN

RESOURCE\_MANAGER\_PLAN specifies the resource plan to use for a database (CDB or non-CDB).

| Property            | Description                                       |
|---------------------|---------------------------------------------------|
| Parameter type      | String                                            |
| Syntax              | RESOURCE_MANAGER_PLAN = <i>resource_plan_name</i> |
| Default value       | There is no default value.                        |
| Modifiable          | ALTER SYSTEM                                      |
| Modifiable in a PDB | Yes                                               |
| Range of values     | Any valid character string                        |
| Basic               | No                                                |

### In a CDB

In the root for a CDB, RESOURCE\_MANAGER\_PLAN specifies the CDB resource plan. A CDB resource plan allocates resources among PDBs.

A CDB resource plan is created using DBMS\_RESOURCE\_MANAGER.CREATE\_CDB\_PLAN and CREATE\_CDB\_PLAN\_DIRECTIVE.

### ① See Also

- *Oracle Database Administrator's Guide* for more information about using `DBMS_RESOURCE_MANAGER.CREATE_CDB_PLAN` and `DBMS_RESOURCE_MANAGER.CREATE_CDB_PLAN_DIRECTIVE`
- *Oracle Database PL/SQL Packages and Types Reference* for more information about the `CREATE_CDB_PLAN` procedure and `CREATE_CDB_PLAN_DIRECTIVE` procedure for the `DBMS_RESOURCE_MANAGER` package

A session must be root to change the value of `RESOURCE_MANAGER_PLAN` for a CDB using the `ALTER SYSTEM` statement. For example, to enable and disable a CDB resource plan:

```
SQL> ALTER SYSTEM SET RESOURCE_MANAGER_PLAN = CDB_resource_plan_name;
SQL> ALTER SYSTEM SET RESOURCE_MANAGER_PLAN = '';
```

In a PDB, `RESOURCE_MANAGER_PLAN` specifies the PDB resource plan to use for the PDB.

A session must be in the PDB to enable or disable a PDB resource plan for that PDB. For example, to enable and disable a PDB resource plan:

```
SQL> ALTER SYSTEM SET RESOURCE_MANAGER_PLAN = PDB_resource_plan_name;
SQL> ALTER SYSTEM SET RESOURCE_MANAGER_PLAN = '';
```

In a PDB, the PDB resource plan has some restrictions compared to the resource plan of a non-CDB. The following restrictions apply to PDB resource plans:

- A PDB resource plan cannot have subplans.
- A PDB resource plan cannot have a multiple-level scheduling policy.

To enforce certain PDB resource plan policies, policies regarding resource allocation among PDBs should exist in the CDB resource plan. Without a CDB resource plan, certain PDB resource plan policies will not be enforced. If a PDB resource plan contains CPU or parallel statement queuing directives and a CDB resource plan is not specified, then Resource Manager will automatically enable the `DEFAULT_CDB_PLAN` plan. To prevent this behavior, set the `RESOURCE_MANAGER_PLAN` parameter at the root level to `ORA$INTERNAL_CDB_PLAN`.

### ① Note

See *Oracle Database Administrator's Guide* for information on CPU, I/O bandwidth, and parallel execution servers requirements in CDB resource plans, and for a description of the results in the PDB resource plans when those requirements are not met.

### In a Non-CDB

`RESOURCE_MANAGER_PLAN` specifies the top-level resource plan to use for an instance in a non-CDB. The resource manager will load this top-level resource plan along with all its descendants (subplans, directives, and consumer groups). If you do not specify this parameter, the resource manager is off by default.

You can change the setting of this parameter using the `ALTER SYSTEM` statement to turn on the resource manager (if it was previously off) or to turn off the resource manager or change the

current resource plan (if it was previously on). If you specify a resource plan that does not exist in the data dictionary, Oracle returns an error message.

## 2.313 RESULT\_CACHE\_EXECUTION\_THRESHOLD

RESULT\_CACHE\_EXECUTION\_THRESHOLD specifies the maximum number of times a PL/SQL function can be executed before its result is stored in the result cache.

| Property                   | Description                                   |
|----------------------------|-----------------------------------------------|
| <b>Parameter type</b>      | Integer                                       |
| <b>Default value</b>       | 2                                             |
| <b>Modifiable</b>          | ALTER SYSTEM                                  |
| <b>Modifiable in a PDB</b> | Yes                                           |
| <b>Range of values</b>     | 0 to operating system-dependent               |
| <b>Basic</b>               | No                                            |
| <b>Oracle RAC</b>          | Multiple instances can have different values. |

#### ① Note

This parameter is available starting with Oracle Database 21c.

## 2.314 RESULT\_CACHE\_MAX\_RESULT

RESULT\_CACHE\_MAX\_RESULT specifies the percentage of RESULT\_CACHE\_MAX\_SIZE that any single result can use.

| Property                   | Description  |
|----------------------------|--------------|
| <b>Parameter type</b>      | Integer      |
| <b>Default value</b>       | 5 percent    |
| <b>Modifiable</b>          | ALTER SYSTEM |
| <b>Modifiable in a PDB</b> | Yes          |

| Property        | Description                                   |
|-----------------|-----------------------------------------------|
| Range of values | 0 to 100                                      |
| Basic           | No                                            |
| Oracle RAC      | Multiple instances can have different values. |

## 2.315 RESULT\_CACHE\_MAX\_SIZE

RESULT\_CACHE\_MAX\_SIZE specifies the maximum amount of SGA memory (in bytes) that can be used by the result cache.

| Property            | Description                                                                                                                                                                                                |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Parameter type      | Big integer                                                                                                                                                                                                |
| Syntax              | RESULT_CACHE_MAX_SIZE = <i>integer</i> [K   M   G]                                                                                                                                                         |
| Default value       | Derived from the values of SHARED_POOL_SIZE, SGA_TARGET, and MEMORY_TARGET                                                                                                                                 |
| Modifiable          | ALTER SYSTEM                                                                                                                                                                                               |
| Modifiable in a PDB | Yes                                                                                                                                                                                                        |
| Range of values     | 0 to operating system-dependent                                                                                                                                                                            |
| Basic               | No                                                                                                                                                                                                         |
| Oracle RAC          | You must either set this parameter to 0 on all instances to disable the result cache, or use a nonzero value on all instances. Disabling the result cache on some instances may lead to incorrect results. |

Values of this parameter greater than 0 are rounded up to the next multiple of 32 KB. If the value of this parameter is 0, then the feature is disabled.

## 2.316 RESULT\_CACHE\_MAX\_TEMP\_RESULT

RESULT\_CACHE\_MAX\_TEMP\_RESULT specifies the percentage of RESULT\_CACHE\_MAX\_TEMP\_SIZE that any single cached query result can consume.

| Property            | Description  |
|---------------------|--------------|
| Parameter type      | Integer      |
| Default value       | 5 percent    |
| Modifiable          | ALTER SYSTEM |
| Modifiable in a PDB | Yes          |
| Range of values     | 0 to 100     |
| Basic               | No           |

| Property   | Description                                   |
|------------|-----------------------------------------------|
| Oracle RAC | Multiple instances can have different values. |

**Note**

This parameter is available starting with Oracle Database 21c.

## 2.317 RESULT\_CACHE\_MAX\_TEMP\_SIZE

RESULT\_CACHE\_MAX\_TEMP\_SIZE specifies the maximum amount of temporary tablespace (in bytes) that can be consumed by the result cache.

| Property            | Description                                                                                                                                                                                                |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Parameter type      | Big integer                                                                                                                                                                                                |
| Syntax              | RESULT_CACHE_MAX_TEMP_SIZE = <i>integer</i> [K   M   G]                                                                                                                                                    |
| Default value       | RESULT_CACHE_MAX_SIZE * 10                                                                                                                                                                                 |
| Modifiable          | ALTER SYSTEM                                                                                                                                                                                               |
| Modifiable in a PDB | Yes                                                                                                                                                                                                        |
| Range of values     | 0 to operating system-dependent                                                                                                                                                                            |
| Basic               | No                                                                                                                                                                                                         |
| Oracle RAC          | You must either set this parameter to 0 on all instances to disable the result cache, or use a nonzero value on all instances. Disabling the result cache on some instances may lead to incorrect results. |

If you attempt to set this parameter to a value that is less than 5% of the size of the SGA, then this parameter will be set to 5% of the size of the SGA. If you attempt to set this parameter to a value that is more than 10% of the current total unused space available for temporary tablespaces in the SYS schema, then this parameter will be set to 10% of the current total unused space available for temporary tablespaces in the SYS schema.

If the value of this parameter is 0, then the result cache is disabled for the PDB.

**Note**

This parameter is available starting with Oracle Database 21c.

**See Also**

*Oracle Database Performance Tuning Guide* for information about tuning the result cache

## 2.318 RESULT\_CACHE\_MODE

RESULT\_CACHE\_MODE specifies which queries are eligible to store result sets in the result cache. Only query execution plans with the result cache operator will attempt to read from or write to the result cache.

| Property            | Description                                                       |
|---------------------|-------------------------------------------------------------------|
| Parameter type      | String                                                            |
| Syntax              | RESULT_CACHE_MODE = { MANUAL   MANUAL_TEMP   FORCE   FORCE_TEMP } |
| Default value       | MANUAL                                                            |
| Modifiable          | ALTER SESSION, ALTER SYSTEM                                       |
| Modifiable in a PDB | Yes                                                               |
| Basic               | No                                                                |
| Oracle RAC          | Multiple instances can have different values.                     |

### Values

- **MANUAL**  
Query results can only be stored in the result cache by using a query hint or table annotation.
- **MANUAL\_TEMP**  
Query results can only be stored in the result cache by using a query hint or table annotation. All hinted queries are allowed to leverage temporary segments on disk unless explicitly prohibited by using the /\*+ RESULT\_CACHE (TEMP=FALSE) \*/ hint.
- **FORCE**  
All query results are stored in the result cache. If a query result is not in the cache, then the database executes the query and stores the result in the cache. Subsequent executions of the same SQL statement that include the /\*+ RESULT\_CACHE \*/ hint will retrieve data from the cache. Sessions will use these results, if possible. To exclude query results from the cache, use the /\*+ NO\_RESULT\_CACHE \*/ hint.
- **FORCE\_TEMP**  
All query results are stored in the result cache. All queries are allowed to leverage temporary segments on disk unless explicitly prohibited by a hint.

### Note

The FORCE and FORCE\_TEMP modes are not generally recommended because queries that call non-deterministic PL/SQL functions are cached, potentially causing material changes to the results. Enabling the result cache in such a broad-based manner can also impact performance in mixed workload environments, where the same tables are continuously updated and retrieved.

## 2.319 RESULT\_CACHE\_REMOTE\_EXPIRATION

RESULT\_CACHE\_REMOTE\_EXPIRATION specifies the number of minutes that a result using a remote object is allowed to remain valid.

| Property                   | Description                     |
|----------------------------|---------------------------------|
| <b>Parameter type</b>      | Integer                         |
| <b>Default value</b>       | 0                               |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM     |
| <b>Modifiable in a PDB</b> | Yes                             |
| <b>Range of values</b>     | 0 to operating system-dependent |
| <b>Basic</b>               | No                              |

Setting this parameter to 0 implies that results using remote objects should not be cached. Setting this parameter to a nonzero value can produce stale answers (for example, if the remote table used by a result is modified at the remote database).

**① See Also**

*Oracle Database Performance Tuning Guide* for information about tuning the result cache

## 2.320 RESUMABLE\_TIMEOUT

RESUMABLE\_TIMEOUT enables or disables resumable statements and specifies resumable timeout at the system level.

| Property                   | Description                                   |
|----------------------------|-----------------------------------------------|
| <b>Parameter type</b>      | Integer                                       |
| <b>Default value</b>       | 0 (seconds)                                   |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                   |
| <b>Modifiable in a PDB</b> | Yes                                           |
| <b>Range of values</b>     | 0 to $2^{31} - 1$ (in seconds)                |
| <b>Basic</b>               | No                                            |
| <b>Oracle RAC</b>          | Multiple instances can have different values. |

**① See Also**

## 2.321 ROLLBACK\_SEGMENTS

ROLLBACK\_SEGMENTS allocates one or more rollback segments by name to this instance.

| Property                   | Description                                                                                                                                                                                                                                                      |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | String                                                                                                                                                                                                                                                           |
| <b>Syntax</b>              | ROLLBACK_SEGMENTS =<br>(segment_name [, segment_name] ... )                                                                                                                                                                                                      |
| <b>Default value</b>       | If you do not specify this parameter, the instance uses public rollback segments by default, unless the UNDO_MANAGEMENT initialization parameter is set to AUTO. In that case, the ROLLBACK_SEGMENTS parameter is ignored and automatic undo management is used. |
| <b>Modifiable</b>          | No                                                                                                                                                                                                                                                               |
| <b>Modifiable in a PDB</b> | Yes                                                                                                                                                                                                                                                              |
| <b>Range of values</b>     | Any rollback segment names listed in DBA_ROLLBACK_SEGS except SYSTEM                                                                                                                                                                                             |
| <b>Basic</b>               | No                                                                                                                                                                                                                                                               |
| <b>Oracle RAC</b>          | Multiple instances must have different values.                                                                                                                                                                                                                   |

If you set this parameter, the instance acquires all of the rollback segments named in this parameter, even if the number of rollback segments exceeds the minimum number required by the instance (calculated as  $\text{TRANSACTIONS} / \text{TRANSACTIONS\_PER\_ROLLBACK\_SEGMENT}$ ).

You cannot change the value of this parameter dynamically, but you can change its value and then restart the instance. Although this parameter usually specifies private rollback segments, it can also specify public rollback segments if they are not already in use.

To find the name, segment ID number, and status of each rollback segment in the database, query the data dictionary view DBA\_ROLLBACK\_SEGS.

When UNDO\_MANAGEMENT is set to AUTO, ROLLBACK\_SEGMENTS is ignored.

## 2.322 SEC\_MAX\_FAILED\_LOGIN\_ATTEMPTS

SEC\_MAX\_FAILED\_LOGIN\_ATTEMPTS specifies the number of authentication attempts that can be made by a client on a connection to the server process.

| Property            | Description                            |
|---------------------|----------------------------------------|
| Parameter type      | Integer                                |
| Default value       | 3                                      |
| Modifiable          | No                                     |
| Modifiable in a PDB | No                                     |
| Range of values     | An integer greater than or equal to 1. |
| Basic               | No                                     |

These login attempts can be for multiple user accounts in the same connection. After the specified number of failure attempts, the connection will be automatically dropped by the server process, and the server process is terminated.

*Oracle Database Security Guide* for more information about this parameter

## 2.323 SEC\_PROTOCOL\_ERROR\_FURTHER\_ACTION

SEC\_PROTOCOL\_ERROR\_FURTHER\_ACTION specifies the further execution of a server process when receiving bad packets from a possibly malicious client.

| Property            | Description                                                                                           |
|---------------------|-------------------------------------------------------------------------------------------------------|
| Parameter type      | String                                                                                                |
| Syntax              | SEC_PROTOCOL_ERROR_FURTHER_ACTION = { CONTINUE   (DELAY, <i>integer</i> )   (DROP, <i>integer</i> ) } |
| Default value       | (DROP, 3)                                                                                             |
| Modifiable          | ALTER SYSTEM                                                                                          |
| Modifiable in a PDB | No                                                                                                    |
| Basic               | No                                                                                                    |

### Values

- CONTINUE

The server process continues execution. The database server may be subject to a Denial of Service (DoS) if bad packets continue to be sent by a malicious client.

- (DELAY, *integer*)

The client experiences a delay of *integer* seconds before the server process accepts the next request from the same client connection. Malicious clients are prevented from excessive consumption of server resources while legitimate clients experience a degradation in performance but can continue to function.

- (DROP, *integer*)

The server forcefully terminates the client connection after *integer* cumulative bad packets. The server protects itself at the expense of the client (for example, a client transaction may be lost). The client may reconnect and attempt the same operation.

① **See Also**

*Oracle Database Security Guide* for examples of using this parameter

## 2.324 SEC\_PROTOCOL\_ERROR\_TRACE\_ACTION

SEC\_PROTOCOL\_ERROR\_TRACE\_ACTION specifies the kind of logging the database server does when bad packets are received from a possibly malicious client, apart from the client receiving the error.

| Property                   | Description                                                      |
|----------------------------|------------------------------------------------------------------|
| <b>Parameter type</b>      | String                                                           |
| <b>Syntax</b>              | SEC_PROTOCOL_ERROR_TRACE_ACTION = { NONE   TRACE   LOG   ALERT } |
| <b>Default value</b>       | TRACE                                                            |
| <b>Modifiable</b>          | ALTER SYSTEM                                                     |
| <b>Modifiable in a PDB</b> | No                                                               |
| <b>Basic</b>               | No                                                               |

### Values

- NONE  
The database server does not record it in any of the trace files.
- TRACE  
A short entry is made in the alert log file and a detailed incident file is generated. The server trace file also will have an entry about the protocol error and incident file.
- LOG  
The server trace file will have an entry about the protocol violation.
- ALERT  
A short entry is made in the alert log file and in the server trace file about the protocol violation.

## 2.325 SEC\_RETURN\_SERVER\_RELEASE\_BANNER

SEC\_RETURN\_SERVER\_RELEASE\_BANNER specifies whether the server returns complete database software information to unauthenticated clients.

| Property              | Description |
|-----------------------|-------------|
| <b>Parameter type</b> | Boolean     |

| Property            | Description  |
|---------------------|--------------|
| Default value       | false        |
| Modifiable          | No           |
| Modifiable in a PDB | No           |
| Range of values     | true   false |
| Basic               | No           |

#### Values

- true  
Returns complete database version information to the client.
- false  
Returns a generic version string to the client.

#### See Also

*Oracle Call Interface Programmer's Guide* and *Oracle Database Security Guide* for more information on controlling the display of the database version banner.

## 2.326 SERIAL\_REUSE

SERIAL\_REUSE specifies which types of cursors make use of the serial-reusable memory feature. This feature allocates private cursor memory in the SGA so that it can be reused (serially, not concurrently) by sessions executing the same cursor.

| Property            | Description                                                     |
|---------------------|-----------------------------------------------------------------|
| Parameter type      | String                                                          |
| Syntax              | SERIAL_REUSE = { disable   all   select   dml   plsql   force } |
| Default value       | disable                                                         |
| Modifiable          | No                                                              |
| Modifiable in a PDB | No                                                              |
| Basic               | No                                                              |

#### Note

The SERIAL\_REUSE parameter is deprecated. It is retained for backward compatibility only.

#### Values

- disable

Disables the option for all SQL statement types. This value overrides any other values included in the list.

- `all`  
Enables the option for both DML and SELECT statements. Equivalent to setting `select`, `dml`, and `plsql`.
- `select`  
Enables the option for SELECT statements.
- `dml`  
Enables the option for DML statements.
- `plsql`  
Currently has no effect (although PL/SQL packages do support the serial-reuse memory option using PL/SQL pragmas).

**Note**

If `CURSOR_SPACE_FOR_TIME` is set to `true`, then the value of `SERIAL_REUSE` is ignored and treated as if it were set to `disable`.

**See Also**

["CURSOR\\_SPACE\\_FOR\\_TIME"](#)

## 2.327 SERVICE\_NAMES

`SERVICE_NAMES` specifies one or more names by which clients can connect to the instance.

| Property                   | Description                                                                                                                                                                                                |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | String                                                                                                                                                                                                     |
| <b>Syntax</b>              | <code>SERVICE_NAMES =</code><br><code>db_service_name [ , db_service_name [ ... ] ]</code>                                                                                                                 |
| <b>Default value</b>       | <code>DB_UNIQUE_NAME.DB_DOMAIN</code> if defined                                                                                                                                                           |
| <b>Modifiable</b>          | <code>ALTER SYSTEM</code>                                                                                                                                                                                  |
| <b>Modifiable in a PDB</b> | No                                                                                                                                                                                                         |
| <b>Range of values</b>     | Any ASCII string or comma-separated list of string names                                                                                                                                                   |
| <b>Basic</b>               | No                                                                                                                                                                                                         |
| <b>Oracle RAC</b>          | Do not set the <code>SERVICE_NAMES</code> parameter for Oracle RAC environments. Instead, define services using Oracle Enterprise Manager and manage those services using Server Control (SRVCTL) utility. |

The instance registers its service names with the listener. When a client requests a service, the listener determines which instances offer the requested service and routes the client to the appropriate instance.

You can specify multiple service names to distinguish among different uses of the same database. For example:

```
SERVICE_NAMES = sales.example.com, widgetsales.example.com
```

You can also use service names to identify a single service that is available from two different databases through the use of replication.

If you do not qualify the names in this parameter with a domain, Oracle qualifies them with the value of the DB\_DOMAIN parameter. If DB\_DOMAIN is not specified, then no domain will be applied to the non-qualified SERVICE\_NAMES values.

When you specify additional service names with this parameter, the default service name is not overridden. The default service name plus the additional service names specified with this parameter are the service names that clients can use to connect to the database.

#### ① Note

The SERVICE\_NAMES initialization parameter is deprecated in Oracle Database 19c and may be desupported in a future release.

Use of the SERVICE\_NAMES parameter is no longer actively supported. It must not be used for high availability (HA) deployments and it is not supported for HA operations. This restriction includes FAN, load balancing, FAILOVER\_TYPE, FAILOVER\_RESTORE, SESSION\_STATE\_CONSISTENCY, and any other uses.

To manage your services, Oracle recommends that you instead use the SRVCTL command-line utility, the GDSCtl command-line utility, or the DBMS\_SERVICE PL/SQL package.

## 2.328 SESSION\_CACHED\_CURSORS

SESSION\_CACHED\_CURSORS specifies the number of session cursors to cache.

| Property                   | Description                              |
|----------------------------|------------------------------------------|
| <b>Parameter type</b>      | Integer                                  |
| <b>Default value</b>       | 50                                       |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM ... DEFERRED |
| <b>Modifiable in a PDB</b> | Yes                                      |
| <b>Range of values</b>     | 0 to operating system-dependent          |
| <b>Basic</b>               | No                                       |

| Property   | Description                                   |
|------------|-----------------------------------------------|
| Oracle RAC | Multiple instances can have different values. |

Repeated parse calls of the same SQL (including recursive SQL) or PL/SQL statement cause the session cursor for that statement to be moved into the session cursor cache. Oracle uses a least recently used algorithm to remove entries in the session cursor cache to make room for new entries when needed.

#### ① See Also

*Oracle Database Performance Tuning Guide* for information about enabling the session cursor cache

## 2.329 SESSION\_MAX\_OPEN\_FILES

SESSION\_MAX\_OPEN\_FILES specifies the maximum number of BFILES that can be opened in any session. Once this number is reached, subsequent attempts to open more files in the session by using `DBMS_LOB.FILEOPEN()` or `OCILOBFileOpen()` will fail. The maximum value for this parameter depends on the equivalent parameter defined for the underlying operating system.

| Property            | Description                                                                                            |
|---------------------|--------------------------------------------------------------------------------------------------------|
| Parameter type      | Integer                                                                                                |
| Default value       | 10                                                                                                     |
| Modifiable          | No                                                                                                     |
| Modifiable in a PDB | No                                                                                                     |
| Range of values     | 1 to either 50 or the value of MAX_OPEN_FILES defined at the operating system level, whichever is less |
| Basic               | No                                                                                                     |

## 2.330 SESSIONS

SESSIONS specifies the maximum number of sessions that can be created in the system.

| Property                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | Integer                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Default value</b>       | Derived: $(1.5 * PROCESSES) + 22$                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Modifiable</b>          | ALTER SYSTEM can be used in a PDB only to change the value of the SESSIONS parameter for that PDB.<br>ALTER SYSTEM <i>cannot</i> be used to change the value of the SESSIONS parameter in a non-CDB or in CDB\$ROOT.                                                                                                                                                                                                                                                               |
| <b>Modifiable in a PDB</b> | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Range of values</b>     | If you explicitly set a value for this parameter, then the range of values that you can specify is 1 to $(2^{16} - 1)$ , which is 1 to 65535.<br>If you do not explicitly set a value for this parameter, then it is set to the default value. If COMPATIBLE $\geq 19.0.0$ , then the default value will not exceed a maximum of $(2^{18} - 1)$ , which is 262143. If COMPATIBLE $< 19.0.0$ , then the default value will not exceed a maximum of $(2^{16} - 1)$ , which is 65535. |
| <b>Basic</b>               | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

Because every login requires a session, this parameter effectively determines the maximum number of concurrent users in the system. You should always set this parameter explicitly to a value equivalent to your estimate of the maximum number of concurrent users, plus the number of background processes, plus approximately 10% for recursive sessions.

Oracle uses the default value of this parameter as its minimum. Values between 1 and the default do not trigger errors, but Oracle ignores them and uses the default instead.

The default values of the ENQUEUE\_RESOURCES and TRANSACTIONS parameters are derived from SESSIONS. Therefore, if you increase the value of SESSIONS, you should consider whether to adjust the values of ENQUEUE\_RESOURCES and TRANSACTIONS as well. (Note that ENQUEUE\_RESOURCES is obsolete as of Oracle Database 10g release 2 (10.2).)

In a shared server environment, the value of PROCESSES can be quite small. Therefore, Oracle recommends that you adjust the value of SESSIONS to approximately  $1.1 * \text{total number of connections}$ .

For a CDB, the root container's SESSIONS parameter specifies the total number of sessions for the database.

The SESSIONS parameter for a PDB specifies the total number of sessions that can be used by that PDB. Its value defaults to the root container's SESSIONS value. If the PDB tries to use more sessions than configured by its SESSIONS parameter, an ORA-00018 error message is generated. For PDBs, the SESSIONS parameter does not count recursive sessions and hence does not require the 10% adjustment.

The SESSIONS parameter for a PDB can only be modified by the PDB. It cannot be set higher than the CDB's SESSIONS value.

## 2.331 SGA\_MAX\_SIZE

SGA\_MAX\_SIZE specifies the maximum size of the SGA for the lifetime of the instance.

| Property                   | Description                                                                                                                                     |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | Big integer                                                                                                                                     |
| <b>Syntax</b>              | SGA_MAX_SIZE = <i>integer</i> [K   M   G]                                                                                                       |
| <b>Default value</b>       | Initial size of SGA at startup, dependent on the sizes of different pools in the SGA, such as buffer cache, shared pool, large pool, and so on. |
| <b>Modifiable</b>          | No                                                                                                                                              |
| <b>Modifiable in a PDB</b> | No                                                                                                                                              |
| <b>Range of values</b>     | 0 to operating system-dependent                                                                                                                 |

On 64-bit platforms and non-Windows 32-bit platforms, when either MEMORY\_TARGET or MEMORY\_MAX\_TARGET is specified, the default value of SGA\_MAX\_SIZE is set to the larger of the two parameters. This causes more address space to be reserved for expansion of the SGA.

On Windows 32-bit platforms, the default value of SGA\_MAX\_SIZE is the largest of the following values:

- 60% of MEMORY\_TARGET, if specified
- 60% of MEMORY\_MAX\_TARGET, if specified
- 25% of the total available virtual address space

## 2.332 SGA\_MIN\_SIZE

SGA\_MIN\_SIZE indicates a possible minimum value for SGA usage of a pluggable database (PDB).

| Property                   | Description                                    |
|----------------------------|------------------------------------------------|
| <b>Parameter type</b>      | Big integer                                    |
| <b>Syntax</b>              | SGA_MIN_SIZE = <i>integer</i> [K   M   G]      |
| <b>Default value</b>       | 0                                              |
| <b>Modifiable</b>          | ALTER SYSTEM                                   |
| <b>Modifiable in a PDB</b> | Yes                                            |
| <b>Range of values</b>     | 0 to 50% of SGA_TARGET                         |
| <b>Basic</b>               | No                                             |
| <b>Oracle RAC</b>          | The same value must be used for all instances. |

Setting this parameter at the CDB level has no effect.

**Note**

To be able to use Resource Manager in a CDB to control the amount of memory each PDB can use:

- The `NONCDB_COMPATIBLE` initialization parameter must be set to `FALSE` at the CDB level (in the root of the CDB).
- The `MEMORY_TARGET` initialization parameter must not be set at the CDB level.
- A value for `SGA_TARGET` must be set at the CDB level.

If `SGA_TARGET` is not set at the CDB level, then setting `SGA_MIN_SIZE` in a PDB has no effect. You will not receive an error message, and the PDB's `SGA_MIN_SIZE` value will not be enforced.

- You must set the `SGA_MIN_SIZE` value to a value that meets these requirements:
  - In a PDB, to a value that is less than or equal to 50% of the value of `SGA_TARGET` in the PDB
  - In a PDB, to a value that is less than or equal to 50% of the value of `SGA_TARGET` at the CDB level
  - In a PDB, to a value that is less than the value of `SGA_MAX_SIZE` at the CDB level
  - Across all the open PDBs in a CDB, the sum of `SGA_MIN_SIZE` values must be less than or equal to 50% of the managed SGA total at the CDB level. Managed SGA is `DB_CACHE_SIZE` plus `SHARED_POOL_SIZE`.

When you set `SGA_MIN_SIZE` in a PDB to a value that does not meet these requirements, you receive an error.

**See Also**

*Oracle Multitenant Administrator's Guide* for more information about the initialization parameters that control the memory usage of PDBs

## 2.333 SGA\_TARGET

`SGA_TARGET` specifies the total size of all SGA components.

| Property                   | Description                                                                                                              |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | Big integer                                                                                                              |
| <b>Syntax</b>              | <code>SGA_TARGET = integer [K   M   G]</code>                                                                            |
| <b>Default value</b>       | 0 (SGA autotuning is disabled for DEFERRED mode autotuning requests, but allowed for IMMEDIATE mode autotuning requests) |
| <b>Modifiable</b>          | ALTER SYSTEM                                                                                                             |
| <b>Modifiable in a PDB</b> | Yes                                                                                                                      |

| Property               | Description                                                                                                                                      |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Range of values</b> | 64 MB to SGA_MAX_SIZE<br><br>Note that if MEMORY_MAX_TARGET > 0, then the value of SGA_TARGET also cannot exceed the value of MEMORY_MAX_TARGET. |
| <b>Basic</b>           | Yes                                                                                                                                              |

If SGA\_TARGET is specified, then the following memory pools are automatically sized:

- Buffer cache (DB\_CACHE\_SIZE)
- Shared pool (SHARED\_POOL\_SIZE)
- Large pool (LARGE\_POOL\_SIZE)
- Java pool (JAVA\_POOL\_SIZE)
- Streams pool (STREAMS\_POOL\_SIZE)
- Data transfer cache (DATA\_TRANSFER\_CACHE\_SIZE)

If these automatically tuned memory pools are set to nonzero values, then those values are used as minimum levels by Automatic Shared Memory Management. You would set minimum values if an application component needs a minimum amount of memory to function properly.

The following pools are manually sized components and are not affected by Automatic Shared Memory Management:

- Log buffer
- Other buffer caches, such as KEEP, RECYCLE, and other block sizes
- Fixed SGA and other internal allocations

The memory allocated to these pools is deducted from the total available for SGA\_TARGET when Automatic Shared Memory Management computes the values of the automatically tuned memory pools.

In the **Default value** field, IMMEDIATE mode autotuning requests are necessary to avoid ORA-04031 errors. The DEFERRED and IMMEDIATE modes are reflected in the OPER\_MODE column of the V\$MEMORY\_RESIZE\_OPS view.

If Automatic Memory Management is enabled (MEMORY\_TARGET is set to a positive value) and SGA\_TARGET is also set to a positive value, the SGA\_TARGET value acts as the minimum value for the size of the SGA.

**Note**

This parameter is optional for pluggable databases (PDBs). When this parameter is set for a PDB, it specifies the maximum SGA that the PDB can use at any time. When this parameter is not set at the PDB level, the PDB has no limit for the amount of SGA it can use, other than the CDB's SGA size.

To be able to use Resource Manager in a CDB to control the amount of memory each PDB can use:

- The `NONCDB_COMPATIBLE` initialization parameter must be set to `FALSE` at the CDB level (in the root of the CDB).
- The `MEMORY_TARGET` initialization parameter must not be set at the CDB level.
- You must set the `SGA_TARGET` initialization parameter at the CDB level.
- You must set `SGA_TARGET` in a PDB.

If you set a PDB's `SGA_TARGET` value and `SGA_TARGET` is not set at the CDB level, you will not receive an error message and the PDB's `SGA_TARGET` value will not be enforced.

- When setting `SGA_TARGET` in a PDB, the following requirements must be met:
  - The value of `SGA_TARGET` in the PDB must be less than or equal to the `SGA_TARGET` value at the CDB level.
  - The value of `SGA_TARGET` in the PDB must be less than or equal to the `SGA_MAX_SIZE` value at the CDB level.
  - The value of `SGA_TARGET` in the PDB must be twice the PDB's `DB_CACHE_SIZE` value, if the PDB's `DB_CACHE_SIZE` value is set.
  - The value of `SGA_TARGET` in the PDB must be twice the PDB's `SHARED_POOL_SIZE` value, if the PDB's `SHARED_POOL_SIZE` value is set.
  - The value of `SGA_TARGET` in the PDB must be twice the PDB's `SGA_MIN_SIZE` value, if the PDB's `SGA_MIN_SIZE` value is set.

When you set `SGA_TARGET` in a PDB to a value that does not meet these requirements, you receive an error.

## 2.334 SHADOW\_CORE\_DUMP

SHADOW\_CORE\_DUMP specifies whether Oracle includes the SGA in the core file for foreground (client) processes.

| Property                   | Description                                     |
|----------------------------|-------------------------------------------------|
| <b>Parameter type</b>      | String                                          |
| <b>Syntax</b>              | SHADOW_CORE_DUMP = { partial   full   none }    |
| <b>Default value</b>       | partial. On Windows, the default value is none. |
| <b>Modifiable</b>          | ALTER SYSTEM                                    |
| <b>Modifiable in a PDB</b> | Yes                                             |
| <b>Basic</b>               | No                                              |

**Values**

- **partial**  
Oracle does not include the SGA in the core dump.
- **full**  
Oracle includes the SGA in the core dump.
- **none**  
No core files will be generated for foreground processes.

**① See Also**["BACKGROUND\\_CORE\\_DUMP"](#)

## 2.335 SHARED\_MEMORY\_ADDRESS

SHARED\_MEMORY\_ADDRESS and HI\_SHARED\_MEMORY\_ADDRESS specify the starting address at run time of the system global area (SGA). This parameter is ignored on the many platforms that specify the SGA's starting address at linktime.

| Property                   | Description |
|----------------------------|-------------|
| <b>Parameter type</b>      | Integer     |
| <b>Default value</b>       | 0           |
| <b>Modifiable</b>          | No          |
| <b>Modifiable in a PDB</b> | No          |
| <b>Basic</b>               | No          |

Use this parameter to specify the entire address on 32-bit platforms and to specify the low-order 32 bits of a 64-bit address on 64-bit platforms. Use HI\_SHARED\_MEMORY\_ADDRESS to specify the high-order 32 bits of a 64-bit address on 64-bit platforms. If both parameters are 0 or unspecified, the SGA address defaults to a platform-specific location.

**① See Also**["HI\\_SHARED\\_MEMORY\\_ADDRESS"](#)

## 2.336 SHARED\_POOL\_RESERVED\_SIZE

SHARED\_POOL\_RESERVED\_SIZE specifies (in bytes) the shared pool space that is reserved for large contiguous requests for shared pool memory.

| Property                   | Description                                                     |
|----------------------------|-----------------------------------------------------------------|
| <b>Parameter type</b>      | Big integer                                                     |
| <b>Syntax</b>              | SHARED_POOL_RESERVED_SIZE = <i>integer</i> [K   M   G]          |
| <b>Default value</b>       | 5% of the value of SHARED_POOL_SIZE                             |
| <b>Modifiable</b>          | No                                                              |
| <b>Modifiable in a PDB</b> | No                                                              |
| <b>Range of values</b>     | Minimum: 5000<br>Maximum: half of the value of SHARED_POOL_SIZE |
| <b>Basic</b>               | No                                                              |

You can use this parameter to avoid performance degradation in the shared pool in situations where pool fragmentation forces Oracle to search for and free chunks of unused pool to satisfy the current request.

## 2.337 SHARED\_POOL\_SIZE

SHARED\_POOL\_SIZE specifies (in bytes) the size of the shared pool.

① Note

Oracle recommends against setting this parameter in a PDB. The only shared memory sizing parameter that should be set in a PDB is SGA\_TARGET, which specifies the maximum SGA that the PDB can use at any time.

| Property            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Parameter type      | Big integer                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Syntax              | SHARED_POOL_SIZE = <i>integer</i> [K   M   G]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Default value       | If SGA_TARGET is set: If the parameter is not specified, then the default is 0 (internally determined by the Oracle Database). If the parameter is specified, then the user-specified value indicates a minimum value for the memory pool.<br>If SGA_TARGET is not set (32-bit platforms): 64 MB, rounded up to the nearest granule size.<br>If SGA_TARGET is not set (64-bit platforms): 128 MB, rounded up to the nearest granule size.<br>For considerations when dealing with database instances using Oracle ASM, see <a href="#">"SHARED_POOL_SIZE and Automatic Storage Management"</a> . |
| Modifiable          | ALTER SYSTEM                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Modifiable in a PDB | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Range of values     | Minimum: the granule size<br>Maximum: operating system-dependent                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Basic               | No                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

The shared pool contains shared cursors, stored procedures, control structures, and other structures. If SGA\_TARGET is not set, then Oracle also allocates parallel execution message buffers from the shared pool. Larger values improve performance in multiuser systems. Smaller values use less memory.

You can monitor utilization of the shared pool by querying the view V\$SGASTAT.

**SHARED\_POOL\_SIZE and Automatic Storage Management**

On a database instance using Oracle Automatic Storage Management (Oracle ASM), additional memory is required to store extent maps. As a general guideline, you can aggregate the values from the following queries to obtain current database storage size that is either already on Oracle ASM or will be stored in Oracle ASM. Then determine the redundancy type that is used (or will be used), and calculate the value for SHARED\_POOL\_SIZE, using the aggregated value as input.

```
SELECT SUM(BYTES)/(1024*1024*1024) FROM V$DATAFILE;
SELECT SUM(BYTES)/(1024*1024*1024) FROM V$LOGFILE a, V$LOG b
WHERE a.group#=b.group#;
SELECT SUM(BYTES)/(1024*1024*1024) FROM V$TEMPFILE WHERE
status='ONLINE';
```

Additionally, keep the following guidelines in mind:

- For disk groups using external redundancy:  
(Every 100G of space needs 1M of extra shared pool) + 2M
- For disk groups using normal redundancy:  
(Every 50G of space needs 1M of extra shared pool) + 4M
- For disk groups using high redundancy:  
(Every 33G of space needs 1M of extra shared pool) + 6M

## 2.338 SHARED\_SERVER\_SESSIONS

SHARED\_SERVER\_SESSIONS specifies the total number of shared server sessions to allow.

| Property                   | Description                                                                                                                                                                                                    |
|----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | Integer                                                                                                                                                                                                        |
| <b>Default value</b>       | There is no default value.                                                                                                                                                                                     |
| <b>Modifiable</b>          | ALTER SYSTEM                                                                                                                                                                                                   |
| <b>Modifiable in a PDB</b> | No                                                                                                                                                                                                             |
| <b>Range of values</b>     | If SHARED_SERVER_SESSIONS is specified, then it should be less than SESSIONS. If SHARED_SERVER_SESSIONS is not specified, then a shared server session may be created as long as there is a free session slot. |
| <b>Basic</b>               | No                                                                                                                                                                                                             |

Setting this parameter enables you to reserve user sessions for dedicated servers.

**① See Also**

*Oracle Database Concepts* for more information on sessions

## 2.339 SHARED\_SERVERS

SHARED\_SERVERS specifies the number of server processes that you want to create when an instance is started. If system load decreases, then this minimum number of servers is maintained. Therefore, you should take care not to set SHARED\_SERVERS too high at system startup.

| Property                   | Description                                                                                                                                                                                                                           |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | Integer                                                                                                                                                                                                                               |
| <b>Default value</b>       | 0, meaning that shared server is not on.<br><br>If you are using shared server architecture or if the DISPATCHERS parameter is set such that the total number of dispatchers is more than 0, then the default value is 1.             |
| <b>Modifiable</b>          | ALTER SYSTEM                                                                                                                                                                                                                          |
| <b>Modifiable in a PDB</b> | Yes                                                                                                                                                                                                                                   |
| <b>Range of values</b>     | The value of this parameter should be less than MAX_SHARED_SERVERS. If it is greater than or equal to MAX_SHARED_SERVERS, then the number of servers will not be self-tuned but will remain constant, as specified by SHARED_SERVERS. |
| <b>Basic</b>               | Yes                                                                                                                                                                                                                                   |

Starting with Oracle Database 12c Release 1 (12.1.0.2), the SHARED\_SERVERS parameter can be set on PDBs. However, unlike most other parameters that can be set on a PDB, this parameter can only be used within a PDB to enable or disable use of shared servers for that PDB. Therefore, in a PDB, the DBA can either set SHARED\_SERVERS to 0 to disable use of shared servers for that PDB or use ALTER SYSTEM RESET SHARED\_SERVERS to re-enable shared servers for the PDB. The configuration of shared servers for the CDB can only be done in the root.

- *Oracle Database Administrator's Guide* for more information on setting this parameter

## 2.340 SHRD\_DUPL\_TABLE\_REFRESH\_RATE

SHRD\_DUPL\_TABLE\_REFRESH\_RATE displays the duplicated table refresh rate (in seconds).

| Property                   | Description                                 |
|----------------------------|---------------------------------------------|
| <b>Parameter type</b>      | Integer                                     |
| <b>Default value</b>       | 60                                          |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                 |
| <b>Modifiable in a PDB</b> | Yes                                         |
| <b>Range of values</b>     | 20 to $2^{31} - 1$                          |
| <b>Basic</b>               | No                                          |
| <b>Oracle RAC</b>          | All instances should use the same instance. |

You can change the value of this parameter to change the duplicated table refresh rate.

A duplicated table is a table that has the same contents on all shards in a sharded database. Duplicated tables are implemented using materialized views that are refreshed at a certain rate.

### ① See Also

- *Using Oracle Sharding* for an introduction to sharding
- *Using Oracle Sharding* for more information about duplicated tables

## 2.341 SKIP\_UNUSABLE\_INDEXES

SKIP\_UNUSABLE\_INDEXES enables or disables the use and reporting of tables with unusable indexes or index partitions.

| Property                   | Description                 |
|----------------------------|-----------------------------|
| <b>Parameter type</b>      | Boolean                     |
| <b>Default value</b>       | true                        |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM |
| <b>Modifiable in a PDB</b> | Yes                         |
| <b>Range of values</b>     | true   false                |
| <b>Basic</b>               | No                          |

If a SQL statement uses a hint that forces the usage of an unusable index, then this hint takes precedence over initialization parameter settings, including SKIP\_UNUSABLE\_INDEXES. If the optimizer chooses an unusable index, then an ORA-01502 error will result. (See *Oracle Database Administrator's Guide* for more information about using hints.)

### Values

- true

Disables error reporting of indexes and index partitions marked UNUSABLE. This setting allows all operations (inserts, deletes, updates, and selects) on tables with unusable indexes or index partitions.

**Note**

If an index is used to enforce a UNIQUE constraint on a table, then allowing insert and update operations on the table might violate the constraint. Therefore, this setting does not disable error reporting for unusable indexes that are unique.

- false  
Enables error reporting of indexes marked UNUSABLE. This setting does not allow inserts, deletes, and updates on tables with unusable indexes or index partitions.

**See Also**

*Oracle Database SQL Language Reference* for more information about hints

## 2.342 SMTP\_OUT\_SERVER

SMTP\_OUT\_SERVER specifies the SMTP host and port to which UTL\_MAIL delivers out-bound E-mail.

| Property            | Description                                                          |
|---------------------|----------------------------------------------------------------------|
| Parameter type      | String                                                               |
| Syntax              | SMTP_OUT_SERVER = <i>server_clause</i> [, <i>server_clause</i> ] ... |
| Syntax              | <b>server_clause ::=</b><br><i>host_name[:port]</i>                  |
| Default value       | There is no default value.                                           |
| Modifiable          | ALTER SESSION, ALTER SYSTEM                                          |
| Modifiable in a PDB | Yes                                                                  |
| Basic               | No                                                                   |

Multiple servers may be specified, separated by commas.

If the first server in the list is unavailable, then UTL\_MAIL tries the second server, and so on.

If SMTP\_OUT\_SERVER is not specified, then the SMTP server name defaults to the value of DB\_DOMAIN, the port number defaults to 25, and the SMTP domain defaults to the suffix of DB\_DOMAIN.

**See Also**

*Oracle Database PL/SQL Packages and Types Reference* for information on the UTL\_MAIL package

## 2.343 SORT\_AREA\_RETAINED\_SIZE

`SORT_AREA_RETAINED_SIZE` specifies (in bytes) the maximum amount of the user global area (UGA) memory retained after a sort run completes. The retained size controls the size of the read buffer, which Oracle uses to maintain a portion of the sort in memory. This memory is released back to the UGA, not to the operating system, after the last row is fetched from the sort space.

| Property                   | Description                                                                                  |
|----------------------------|----------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | Integer                                                                                      |
| <b>Default value</b>       | Derived from <code>SORT_AREA_SIZE</code>                                                     |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM ... DEFERRED                                                     |
| <b>Modifiable in a PDB</b> | Yes                                                                                          |
| <b>Range of values</b>     | From the value equivalent of two database blocks to the value of <code>SORT_AREA_SIZE</code> |
| <b>Basic</b>               | No                                                                                           |

### Note

Oracle does not recommend using the `SORT_AREA_RETAINED_SIZE` parameter unless the instance is configured with the shared server option. Oracle recommends that you enable automatic sizing of SQL working areas by setting `PGA_AGGREGATE_TARGET` instead. `SORT_AREA_RETAINED_SIZE` is retained for backward compatibility.

Oracle may allocate multiple sort spaces of this size for each query. Usually, only one or two sorts occur simultaneously, even for complex queries. In some cases, however, additional concurrent sorts are required, and each sort keeps its own memory area. If the shared server is used, allocation is to the SGA until the value in `SORT_AREA_RETAINED_SIZE` is reached. The difference between `SORT_AREA_RETAINED_SIZE` and `SORT_AREA_SIZE` is allocated to the PGA.

### Note

The default value as reflected in the `V$PARAMETER` dynamic performance view is 0. However, if you do not explicitly set this parameter, Oracle actually uses the value of the `SORT_AREA_SIZE` parameter.

### See Also

- "[SORT\\_AREA\\_SIZE](#)"
- *Oracle Database Performance Tuning Guide* for information on setting the values of this parameter and the `SORT_AREA_SIZE` parameter to tune sort operations using shared servers

## 2.344 SORT\_AREA\_SIZE

SORT\_AREA\_SIZE specifies (in bytes) the maximum amount of memory Oracle will use for a sort.

| Property                   | Description                                                                                 |
|----------------------------|---------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | Integer                                                                                     |
| <b>Default value</b>       | 65536                                                                                       |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM ... DEFERRED                                                    |
| <b>Modifiable in a PDB</b> | Yes                                                                                         |
| <b>Range of values</b>     | Minimum: the value equivalent of six database blocks<br>Maximum: operating system-dependent |
| <b>Basic</b>               | No                                                                                          |

### Note

Oracle does not recommend using the SORT\_AREA\_SIZE parameter unless the instance is configured with the shared server option. Oracle recommends that you enable automatic sizing of SQL working areas by setting PGA\_AGGREGATE\_TARGET instead. SORT\_AREA\_SIZE is retained for backward compatibility.

After the sort is complete, but before the rows are returned, Oracle releases all of the memory allocated for the sort, except the amount specified by the SORT\_AREA\_RETAINED\_SIZE parameter. After the last row is returned, Oracle releases the remainder of the memory.

Increasing SORT\_AREA\_SIZE size improves the efficiency of large sorts.

Each sort in a query can consume memory up to the amount specified by SORT\_AREA\_SIZE, and there can be multiple sorts in a query. Also, if a query is executed in parallel, each PX server can consume memory up to the amount specified by SORT\_AREA\_SIZE for each sort it does.

SORT\_AREA\_SIZE is also used for inserts and updates to bitmap indexes. Setting this value appropriately results in a bitmap segment being updated only once for each DML operation, even if more than one row in that segment changes.

Larger values of SORT\_AREA\_SIZE permit more sorts to be performed in memory. If more space is required to complete the sort than will fit into the memory provided, then temporary segments on disk are used to hold the intermediate sort runs.

The default is adequate for most OLTP operations. You might want to adjust this parameter for decision support systems, batch jobs, or large CREATE INDEX operations.

- ["SORT\\_AREA\\_RETAINED\\_SIZE"](#)

## 2.345 SPATIAL\_VECTOR\_ACCELERATION

SPATIAL\_VECTOR\_ACCELERATION enables or disables the spatial vector acceleration.

| Property                   | Description                                  |
|----------------------------|----------------------------------------------|
| <b>Parameter type</b>      | Boolean                                      |
| <b>Default value</b>       | true                                         |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                  |
| <b>Modifiable in a PDB</b> | Yes                                          |
| <b>Range of values</b>     | true   false                                 |
| <b>Basic</b>               | No                                           |
| <b>Oracle RAC</b>          | Multiple instances should use the same value |

The setting of true for this parameter improves spatial vector query performance.

**See Also**

*Oracle Spatial Developer's Guide* for more information about this parameter

## 2.346 SPFILE

The value of this parameter is the name of the current server parameter file (SPFILE) in use.

| Property                   | Description                                  |
|----------------------------|----------------------------------------------|
| <b>Parameter type</b>      | String                                       |
| <b>Syntax</b>              | SPFILE = <i>spfile_name</i>                  |
| <b>Default value</b>       | ORACLE_BASE_CONFIG/dbs/spfile.ora            |
| <b>Modifiable</b>          | No                                           |
| <b>Modifiable in a PDB</b> | No                                           |
| <b>Range of values</b>     | Any valid SPFILE                             |
| <b>Basic</b>               | No                                           |
| <b>Oracle RAC</b>          | Multiple instances must have the same value. |

This parameter can be defined in a client side PFILE to indicate the name of the server parameter file to use.

When the default server parameter file is used by the server, the value of SPFILE is internally set by the server.

The SPFILE resides in the `ORACLE_BASE_CONFIG/dbs` directory; however, users can place it anywhere on their system as long as it is specified in an initialization parameter file.

### ① See Also

*Oracle Database Administrator's Guide* for more information about creating the server parameter file

## 2.347 SQL\_TRACE

SQL\_TRACE enables or disables the SQL trace facility.

| Property            | Description                 |
|---------------------|-----------------------------|
| Parameter type      | Boolean                     |
| Default value       | false                       |
| Modifiable          | ALTER SESSION, ALTER SYSTEM |
| Modifiable in a PDB | Yes                         |
| Range of values     | true   false                |
| Basic               | No                          |

Setting this parameter to true provides information on tuning that you can use to improve performance.

### ① Note

Using this initialization parameter to enable the SQL trace facility for the entire instance can have a severe performance impact. Enable the facility for specific sessions using the `ALTER SESSION` statement. If you must enable the facility on an entire production environment, then you can minimize performance impact by:

- Maintaining at least 25% idle CPU capacity
- Maintaining adequate disk space for the `USER_DUMP_DEST` location
- Striping disk space over sufficient disks

### ① Note

The `SQL_TRACE` parameter is deprecated. Oracle recommends that you use the `DBMS_MONITOR` and `DBMS_SESSION` packages instead. `SQL_TRACE` is retained for backward compatibility only.

**① See Also**

- ["USER\\_DUMP\\_DEST"](#)

## 2.348 SQL92\_SECURITY

SQL92\_SECURITY specifies whether users must have been granted the SELECT privilege on a table in order to specify certain clauses in a DELETE, INSERT, or UPDATE statement.

| Property                   | Description  |
|----------------------------|--------------|
| <b>Parameter type</b>      | Boolean      |
| <b>Default value</b>       | TRUE         |
| <b>Modifiable</b>          | No           |
| <b>Modifiable in a PDB</b> | Yes          |
| <b>Range of values</b>     | TRUE   FALSE |
| <b>Basic</b>               | No           |

The SQL standard specifies that security administrators should be able to require that users have the SELECT privilege on a table when executing a DELETE, INSERT, or UPDATE statement that references table column values in a RETURNING, SET, or WHERE clause.

### Values

- TRUE

A user must have the SELECT privilege on the target table in order to reference its columns in:

  - The WHERE clause of a DELETE or UPDATE statement
  - The right hand side of an assignment in the SET clause of an UPDATE statement
  - The RETURNING clause of a DELETE, INSERT, or UPDATE statement
- FALSE
  - A user with the DELETE privilege on the target table of a DELETE statement may reference any column of that target table in the WHERE clause of the DELETE statement.
  - A user with the UPDATE privilege on the target table of an UPDATE statement may reference any column of that target table in the WHERE clause or on the right hand side of any assignment in the SET clause of the UPDATE statement.
  - A user with the READ or SELECT privilege on the target table of a DELETE, INSERT, or UPDATE statement may reference any column of that target table in the RETURNING clause.

## 2.349 SQLTUNE\_CATEGORY

SQLTUNE\_CATEGORY specifies the category name for use by sessions to qualify the lookup of SQL profiles during SQL compilation.

| Property            | Description                             |
|---------------------|-----------------------------------------|
| Parameter type      | String                                  |
| Syntax              | SQLTUNE_CATEGORY = <i>category_name</i> |
| Default value       | DEFAULT                                 |
| Modifiable          | ALTER SESSION, ALTER SYSTEM             |
| Modifiable in a PDB | Yes                                     |
| Basic               | No                                      |

### See Also

*Oracle Database PL/SQL Packages and Types Reference* for information on the DBMS\_SQLTUNE package

## 2.350 STANDBY\_DB\_PRESERVE\_STATES

STANDBY\_DB\_PRESERVE\_STATES controls whether user sessions, buffers, and other internal states of the instance are retained when a readable physical standby database is converted to a primary database. This parameter is meaningful on a physical standby database that is open in real-time query mode.

| Property            | Description                                                    |
|---------------------|----------------------------------------------------------------|
| Parameter type      | String                                                         |
| Syntax              | STANDBY_DB_PRESERVE_STATES = { NONE   SESSION   BUFFER   ALL } |
| Default value       | NONE                                                           |
| Modifiable          | No                                                             |
| Modifiable in a PDB | No                                                             |
| Basic               | No                                                             |
| Oracle RAC          | The same value must be used on all instances.                  |

### Values

- NONE  
Nothing is retained. All sessions are disconnected and all buffers are flushed. This is the default value.
- SESSION  
The role transition waits 10 seconds for active sessions to finish the current statement or top-level PL/SQL call. The sessions that are still active after 10 seconds are terminated. The sessions that complete their work in this lap of time are retained, along with inactive

sessions. If the database is reopened as the primary within 300 seconds, the retained sessions resume their operations as if nothing had happened. If the database (or individual PDB) is not opened in the primary role within 300 seconds, the sessions will be terminated.

- **BUFFER**

All current buffers are retained. Media recovery buffers are converted to current buffers and retained, if possible. When the database is reopened as the primary, the retained buffers are available for use, which may enable queries to run faster during the first few minutes of operation. If the database (or an individual PDB) is not opened in the primary role, the buffers will be flushed.

- **ALL**

This value is equivalent to setting both the SESSION and BUFFER values.

#### **Note**

Sessions that have long running queries or are using database links will not be retained regardless of the setting of this parameter.

#### **See Also**

- *Oracle Data Guard Concepts and Administration* for more information about real-time query mode
- *Oracle Data Guard Concepts and Administration* for more information about preserving user sessions and buffers when a standby database is converted to a primary database

## 2.351 STANDBY\_FILE\_MANAGEMENT

STANDBY\_FILE\_MANAGEMENT enables or disables automatic standby file management.

| Property                   | Description                                 |
|----------------------------|---------------------------------------------|
| <b>Parameter type</b>      | String                                      |
| <b>Syntax</b>              | STANDBY_FILE_MANAGEMENT = { MANUAL   AUTO } |
| <b>Default value</b>       | MANUAL                                      |
| <b>Modifiable</b>          | ALTER SYSTEM                                |
| <b>Modifiable in a PDB</b> | No                                          |
| <b>Basic</b>               | No                                          |

When automatic standby file management is enabled, operating system file additions and deletions on the primary database are replicated on the standby database. STANDBY\_FILE\_MANAGEMENT is only applicable to physical standby databases.

#### **Values**

- **MANUAL**  
Disables automatic standby file management

- AUTO

Enables automatic standby file management

Setting STANDBY\_FILE\_MANAGEMENT to AUTO causes Oracle to automatically create files on the standby database and, in some cases, overwrite existing files. Care must be taken when setting STANDBY\_FILE\_MANAGEMENT and DB\_FILE\_NAME\_CONVERT so that existing standby files will not be accidentally overwritten.

If the standby database is on the same system as the primary database, then ensure that the primary and standby systems do not point to the same files.

## 2.352 STANDBY\_PDB\_SOURCE\_FILE\_DBLINK

STANDBY\_PDB\_SOURCE\_FILE\_DBLINK specifies the name of a database link that will be used to try to copy the datafiles from a source PDB to which the database link points.

| Property                   | Description                                         |
|----------------------------|-----------------------------------------------------|
| <b>Parameter type</b>      | String                                              |
| <b>Syntax</b>              | STANDBY_PDB_SOURCE_FILE_DBLINK = database-link      |
| <b>Default value</b>       | NULL                                                |
| <b>Modifiable</b>          | ALTER SYSTEM                                        |
| <b>Modifiable in a PDB</b> | No                                                  |
| <b>Basic</b>               | No                                                  |
| <b>Oracle RAC</b>          | Different values can be set on different instances. |

In Oracle Database releases prior to Oracle Database 18c, if a PDB was created by cloning a PDB from the same CDB (a local clone), on a standby the datafiles were automatically copied from the source PDB. However, when the PDB was created as a remote clone, the user was responsible for copying datafiles to the Oracle Managed Files (OMF) location on the standby.

To address that deficiency, the STANDBY\_PDB\_SOURCE\_FILE\_DBLINK parameter specifies the name of a database link that will be used to try to copy the datafiles from a source PDB to which the database link points. The file copy is done only if the database link points to the source PDB and the source PDB is open in read only mode. Otherwise, the user is still responsible for copying datafiles to the OMF location on the standby.

This parameter can also be used to try to copy files in cases where the source PDB's files are not present on the standby. For example, the source PDB could have been created with standbys=NONE. In this case, the STANDBY\_PDB\_SOURCE\_FILE\_DBLINK parameter can enable the standby to copy files from the primary if there is a database link set up to the primary.

["STANDBY\\_PDB\\_SOURCE\\_FILE\\_DIRECTORY"](#)

## 2.353 STANDBY\_PDB\_SOURCE\_FILE\_DIRECTORY

STANDBY\_PDB\_SOURCE\_FILE\_DIRECTORY specifies a directory location on the standby where source datafiles for instantiating the standby PDB may be found.

| Property                   | Description                                             |
|----------------------------|---------------------------------------------------------|
| <b>Parameter type</b>      | String                                                  |
| <b>Syntax</b>              | STANDBY_PDB_SOURCE_FILE_DIRECTORY = datafiles-directory |
| <b>Default value</b>       | NULL                                                    |
| <b>Modifiable</b>          | ALTER SYSTEM                                            |
| <b>Modifiable in a PDB</b> | No                                                      |
| <b>Basic</b>               | No                                                      |
| <b>Oracle RAC</b>          | Different values can be set on different instances.     |

In Oracle Database releases prior to Oracle Database 18c, if a PDB was plugged into a CDB, on a standby, the datafiles were expected to be in PDB's Oracle Managed Files (OMF) directory location. If they were not found there, the user had to copy the datafiles to the OMF location and then restart redo apply on the standby.

To address that deficiency, the STANDBY\_PDB\_SOURCE\_FILE\_DIRECTORY specifies a directory location on the standby where source datafiles for instantiating the PDB may be found. If the datafiles are not found there, an attempt will be made to locate them in the OMF location on the standby.

This parameter can also be used to try to copy files in cases where the source PDB's files are not present on the standby. For example, the source PDB could have been created with standbys=NONE. In this case, the STANDBY\_PDB\_SOURCE\_FILE\_DIRECTORY parameter can enable the standby to copy files from a location if they are made available.

## 2.354 STAR\_TRANSFORMATION\_ENABLED

STAR\_TRANSFORMATION\_ENABLED determines whether a cost-based query transformation will be applied to star queries.

| Property                   | Description                                                   |
|----------------------------|---------------------------------------------------------------|
| <b>Parameter type</b>      | String                                                        |
| <b>Syntax</b>              | STAR_TRANSFORMATION_ENABLED = { FALSE   TRUE   TEMP_DISABLE } |
| <b>Default value</b>       | FALSE                                                         |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                                   |
| <b>Modifiable in a PDB</b> | Yes                                                           |
| <b>Basic</b>               | Yes                                                           |

**Values**

- FALSE  
The transformation will not be applied.
- TRUE  
The optimizer will consider performing a cost-based query transformation on the star query.
- TEMP\_DISABLE  
The optimizer will consider performing a cost-based query transformation on the star query but will not use temporary tables in the star transformation.

**See Also**

- *Oracle Database SQL Tuning Guide* for information on enabling star queries

## 2.355 STATISTICS\_LEVEL

STATISTICS\_LEVEL specifies the level of collection for database and operating system statistics. The Oracle Database collects these statistics for a variety of purposes, including making self-management decisions.

| Property                   | Description                                  |
|----------------------------|----------------------------------------------|
| <b>Parameter type</b>      | String                                       |
| <b>Syntax</b>              | STATISTICS_LEVEL = { ALL   TYPICAL   BASIC } |
| <b>Default value</b>       | TYPICAL                                      |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                  |
| <b>Modifiable in a PDB</b> | Yes                                          |
| <b>Basic</b>               | No                                           |

The default setting of TYPICAL ensures collection of all major statistics required for database self-management functionality and provides best overall performance. The default value should be adequate for most environments.

When the STATISTICS\_LEVEL parameter is set to ALL, additional statistics are added to the set of statistics collected with the TYPICAL setting. The additional statistics are timed operating system statistics and plan execution statistics.

Setting the STATISTICS\_LEVEL parameter to BASIC disables the collection of many of the important statistics required by Oracle Database features and functionality, including:

- All server-generated alerts
- Automatic Database Diagnostic Monitor (ADDM)
- Automatic optimizer statistics collection
- Automatic SGA Memory Management
- Automatic Workload Repository (AWR) Snapshots

- Buffer cache advisory
- Database time distribution statistics (V\$SESS\_TIME\_MODEL and V\$SYS\_TIME\_MODEL)
- End to End Application Tracing (V\$CLIENT\_STATS)
- Monitoring of statistics
- MTTR advisory
- Object Activity Tracking System (OATS)
- Object level statistics
- PGA Target advisory
- Segment level statistics
- Service level statistics
- Shared pool sizing advisory
- Timed statistics

#### Note

Oracle strongly recommends that you do not disable these important features and functionality.

When the STATISTICS\_LEVEL parameter is modified by ALTER SYSTEM, all advisories or statistics are dynamically turned on or off, depending on the new value of STATISTICS\_LEVEL. When modified by ALTER SESSION, the following advisories or statistics are turned on or off in the local session only. Their systemwide state is not changed:

- Timed statistics
- Timed operating system statistics
- Plan execution statistics

The V\$STATISTICS\_LEVEL view displays information about the status of the statistics or advisories controlled by the STATISTICS\_LEVEL parameter. See "[V\\$STATISTICS\\_LEVEL](#)".

## 2.356 STREAMS\_POOL\_SIZE

The STREAMS\_POOL\_SIZE value helps determine the size of the Streams pool.

| Property       | Description                                    |
|----------------|------------------------------------------------|
| Parameter type | Big integer                                    |
| Syntax         | STREAMS_POOL_SIZE = <i>integer</i> [K   M   G] |

| Property                   | Description                                                                                                             |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------|
| <b>Default value</b>       | 0                                                                                                                       |
| <b>Modifiable</b>          | ALTER SYSTEM                                                                                                            |
| <b>Modifiable in a PDB</b> | No                                                                                                                      |
| <b>Range of values</b>     | Minimum: 0 (values greater than zero are rounded up to the nearest granule size)<br>Maximum: operating system-dependent |
| <b>Basic</b>               | No                                                                                                                      |

Oracle's Automatic Shared Memory Management feature manages the size of the Streams pool when the `SGA_TARGET` initialization parameter is set to a nonzero value. If the `STREAMS_POOL_SIZE` initialization parameter also is set to a nonzero value, then Automatic Shared Memory Management uses this value as a minimum for the Streams pool.

If `SGA_TARGET` is set to a nonzero value and `STREAMS_POOL_SIZE` is not specified or is set to a null value, Automatic Shared Memory Management uses 0 (zero) bytes as a minimum for the Streams pool.

If the `STREAMS_POOL_SIZE` initialization parameter is set to a nonzero value, and the `SGA_TARGET` parameter is set to 0 (zero), then the Streams pool size is the value specified by the `STREAMS_POOL_SIZE` parameter, in bytes.

If both the `STREAMS_POOL_SIZE` and the `SGA_TARGET` initialization parameters are set to 0 (zero), then, by default, on the first request for Streams pool memory in a database, an amount of memory equal to 10% of the shared pool is transferred from the buffer cache to the Streams pool. Products and features that use the Streams pool include Oracle GoldenGate, XStream, Oracle Advanced Queuing, and Oracle Data Pump.

The Streams pool is a shared resource, and the amount of memory a process can use from the Streams pool is determined by the application. The capture or apply parameter `MAX_SGA_SIZE` can be controlled for Oracle GoldenGate or XStream. For Oracle Advanced Queuing, use the procedures in the `dbms_aqadm` package to control the amount of Streams Pool needed.

## 2.357 TABLESPACE\_ENCRYPTION\_DEFAULT\_ALGORITHM

TABLESPACE\_ENCRYPTION\_DEFAULT\_ALGORITHM specifies the default algorithm the database uses when encrypting a tablespace.

| Property                   | Description                                                                                                                                                                                                                                                    |
|----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | String                                                                                                                                                                                                                                                         |
| <b>Syntax</b>              | <code>TABLESPACE_ENCRYPTION_DEFAULT_ALGORITHM = { AES128   AES192   AES256   ARIA128   ARIA192   ARIA256   GOST256   SEED128   3DES168 }</code><br><b>Note:</b> 3DES168 must be enclosed in single quotation marks when specified in the ALTER SYSTEM command. |
| <b>Default value</b>       | AES128                                                                                                                                                                                                                                                         |
| <b>Modifiable</b>          | ALTER SYSTEM                                                                                                                                                                                                                                                   |
| <b>Modifiable in a PDB</b> | Yes                                                                                                                                                                                                                                                            |
| <b>Basic</b>               | No                                                                                                                                                                                                                                                             |
| <b>Oracle RAC</b>          | The same value should be specified for all instances.                                                                                                                                                                                                          |

The value of this initialization parameter determines the algorithm the database uses if an encryption algorithm is not specified when creating an encrypted tablespace or when encrypting an existing tablespace. For example, the value of this parameter takes effect when:

- You create a tablespace with the CREATE TABLESPACE statement and you specify the ENCRYPTION ... ENCRYPT clause, but you do not specify the USING keyword and an algorithm.
- You create a tablespace with the CREATE TABLESPACE statement and you do not specify the ENCRYPTION ... ENCRYPT clause. However, the value of the ENCRYPT\_NEW\_TABLESPACES initialization parameter instructs the database to encrypt the tablespace.
- You encrypt an existing tablespace with the ALTER TABLESPACE statement, either by specifying the ENCRYPTION OFFLINE ENCRYPT clause or the ENCRYPTION ONLINE ... ENCRYPT clause, and you do not specify the USING keyword and an algorithm.

### Note

This parameter is available starting with Oracle Database 21c.

## 2.358 TAPE\_ASYNC\_IO

TAPE\_ASYNC\_IO controls whether I/O to sequential devices (for example, backup or restore of Oracle data to or from tape) is asynchronous—that is, whether parallel server processes can overlap I/O requests with CPU processing during table scans.

| Property                   | Description  |
|----------------------------|--------------|
| <b>Parameter type</b>      | Boolean      |
| <b>Default value</b>       | true         |
| <b>Modifiable</b>          | No           |
| <b>Modifiable in a PDB</b> | No           |
| <b>Range of values</b>     | true   false |
| <b>Basic</b>               | No           |

If your platform supports asynchronous I/O to sequential devices, Oracle recommends that you leave this parameter set to its default. However, if the asynchronous I/O implementation is not stable, you can set TAPE\_ASYNC\_IO to false to disable asynchronous I/O. If your platform does not support asynchronous I/O to sequential devices, this parameter has no effect.

### See Also

*Oracle Database VLDB and Partitioning Guide* for more information about this parameter

## 2.359 TDE\_CONFIGURATION

Use TDE\_CONFIGURATION to set the type of keystore that is used for Transparent Data Encryption (TDE) by the root container; united PDBs inherit the value from the root container, isolated PDBs can be set individually.

Before Oracle Database 18c, each PDB stored its separate encryption keys in the CDB's keystore (united mode). Starting with Oracle Database 18c Cloud environments, a PDB can optionally store its encryption keys in a separate keystore (isolated mode), thus allowing protection by a separate keystore password. Starting with Oracle Database 19c, Release Update 19.14, isolated mode is available for all Oracle database deployments, including on-premises databases, legacy deployments, and engineered systems.

The WALLET\_ROOT initialization parameter must be set in order for TDE\_CONFIGURATION to take effect.

| Property              | Description                                                                         |
|-----------------------|-------------------------------------------------------------------------------------|
| <b>Parameter type</b> | String                                                                              |
| <b>Syntax</b>         | TDE_CONFIGURATION = "{ KEYSTORE_CONFIGURATION = value [ ; CONTAINER = pdb-name ] }" |

| Property                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>Default value</b>       | None                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Modifiable</b>          | ALTER SYSTEM <sup>1</sup>                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Modifiable in a PDB</b> | Yes                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Basic</b>               | No                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Oracle RAC</b>          | The same value must be specified on all instances using the ALTER SYSTEM SET TDE_CONFIGURATION="KEYSTORE_CONFIGURATION=va lue" SCOPE=BOTH SID='*'; statement.                                                                                                                                                                                                                                                                 |

<sup>1</sup> In some cases, when this parameter is set using ALTER SYSTEM SCOPE=SPFILE, the SHOW PARAMETER TDE\_CONFIGURATION statement does not show the correct value. However, the value set for TDE\_CONFIGURATION can be derived from information shown in the V\$ENCRYPTION\_WALLET view.

The following attributes can be specified:

- KEYSTORE\_CONFIGURATION attribute. This attribute is required. The value specified with this attribute configures the keystore type for the specified PDB. The following values can be specified for this attribute:
  - FILE: This value configures a wallet keystore.
  - OKV: This value configures the database to use Oracle Key Vault (OKV) for TDE key management.  
  
This value is also used to disable an auto-login OKV configuration and cause any existing cwallet.sso files, containing the credentials to the OKV server as the OKV\_PASSWORD client secret, to be ignored.
  - HSM: This value configures a hardware security module (HSM).  
  
Oracle does not support the use of HSMs for TDE key management. For more information, see My Oracle Support note 2310066.1 "Oracle TDE Support With 3rd Party HSM Vendors" at the following URL: <https://support.oracle.com/rs?type=doc&id=2310066.1>
  - FILE|OKV: This value configures a reverse migration from OKV to a wallet keystore.
  - FILE|HSM: This value configures a reverse migration from a HSM to a wallet keystore.
  - OKV|FILE: This value configures a migration from a wallet to OKV.

This value is also used in an auto-login OKV configuration, because in this configuration a `cwallet.sso` file, containing the `OKV_PASSWORD` client secret, must be used by the Oracle server to obtain the credentials to log in to the OKV server.

- `HSM|FILE`: This value configures a migration from a wallet to a HSM.

Oracle does not support the use of HSMs for TDE key management. For more information, see My Oracle Support note 2310066.1 "Oracle TDE Support With 3rd Party HSM Vendors" at the following URL: <https://support.oracle.com/rs?type=doc&id=2310066.1>

Some of the `KEystore_CONFIGURATION` attribute values consist of a single word, for example, the `FILE`, `OKV`, and `HSM` values. The other `KEystore_CONFIGURATION` attribute values consist of two words separated by the `|` character that is a required part of the value's syntax, for example, the `FILE|OKV`, `FILE|HSM`, `OKV|FILE`, and `HSM|FILE` values.

In Oracle Database releases prior to Oracle Database 18.1, keystore types were configured in `sqlnet.ora` using the `METHOD` attribute of the `SQLNET.ENCRYPTION_WALLET_LOCATION` parameter.

- `CONTAINER` attribute: This optional attribute can be used only when setting the parameter in the `CDB$ROOT` of a CDB. The `CONTAINER` attribute can be specified only when the `CDB$ROOT` is in `MOUNTED` state. With this attribute, you must specify the name of the PDB for which you are setting the parameter. When you specify the `CONTAINER` attribute, you must use a semicolon `;` as the separation character between the `KEystore_CONFIGURATION` and `CONTAINER` attributes.

## Examples

The following statement configures a wallet keystore for the open PDB from which the statement is issued:

```
ALTER SYSTEM SET TDE_CONFIGURATION="KEystore_CONFIGURATION=FILE" SCOPE=BOTH SID='*';
```

The following statement configures an OKV keystore for the PDB in `MOUNTED` state from which the statement is issued:

```
ALTER SYSTEM SET TDE_CONFIGURATION="KEystore_CONFIGURATION=OKV" SCOPE=SPFILE SID='*';
```

The following statement configures an isolated standby PDB for an auto-open Oracle Key Vault setup; standby PDBs are `MOUNTED`, so the command must be executed in the standby root CDB:

```
ALTER SYSTEM SET TDE_CONFIGURATION="KEystore_CONFIGURATION=OKV|FILE;
CONTAINER=FINANCIALS" SCOPE=both SID='*';
```

### Note

In an Oracle Data Guard configuration, during keystore migration to OKV or OCI Key Management Service (KMS), or reverse migration to `FILE`, after the configuration change to `OKV|FILE` or `FILE|OKV` respectively, the wallet must be closed and reopened on the standby.

## 2.360 TDE\_KEY\_CACHE

Use TDE\_KEY\_CACHE to enable or disable sharing of Transparent Data Encryption (TDE) master encryption keys across Oracle processes.

**① Note**

This parameter is available only for databases in Oracle Cloud Infrastructure (OCI) that use the OCI Key Management Service (KMS) for TDE key management.

| Property                   | Description                                   |
|----------------------------|-----------------------------------------------|
| <b>Parameter type</b>      | Boolean                                       |
| <b>Default value</b>       | false                                         |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                   |
| <b>Modifiable in a PDB</b> | Yes                                           |
| <b>Range of values</b>     | true   false                                  |
| <b>Basic</b>               | No                                            |
| <b>Oracle RAC</b>          | The same value must be used on all instances. |

**Values:**

- true  
Enables sharing of TDE master encryption keys across Oracle processes
- false  
Disables sharing of TDE master encryption keys across Oracle processes

**① Note**

This parameter is available starting with Oracle Database 21c.

## 2.361 TEMP\_UNDO\_ENABLED

TEMP\_UNDO\_ENABLED determines whether transactions within a particular session can have a temporary undo log.

| Property                   | Description                                                                      |
|----------------------------|----------------------------------------------------------------------------------|
| <b>Parameter type</b>      | Boolean                                                                          |
| <b>Default value</b>       | false                                                                            |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                                                      |
| <b>Modifiable in a PDB</b> | Yes                                                                              |
| <b>Range of values</b>     | true   false                                                                     |
| <b>Basic</b>               | No                                                                               |
| <b>Oracle RAC</b>          | Each session of each instance can have its own value or not set any value at all |

The default choice for database transactions has been to have a single undo log per transaction. This parameter, at the session level / system level scope, lets a transaction split its undo log into temporary undo log (for changes on temporary objects) and permanent undo log (for changes on persistent objects).

By splitting the undo stream of a transaction into two streams (temporary and permanent), a database can provide separate storage and retention model for these. This results in overall reduction in the size of undo log and redo log in the database

If database applications make use of temporary objects (using global temporary tables or temporary table transformations), it is advisable to set this parameter's value to true.

When TEMP\_UNDO\_ENABLED is set to true and the COMPATIBLE initialization parameter is set to 12.0.0, this feature is enabled. The temporary undo feature is enabled for the session in which it is set. Setting it across the system will affect all existing and upcoming sessions. If the value is set in the init.ora file, all upcoming sessions will inherit this value unless overwritten by an explicit ALTER SESSION or ALTER SYSTEM statement. All undo for operations on temporary objects is deemed temporary.

If TEMP\_UNDO\_ENABLED is not set to true, existing applications that make use of temporary objects run as is without any change.

Once the value of the parameter is set, it cannot be changed for the lifetime of the session. If the session has temporary objects using temporary undo, the parameter cannot be disabled for the session. Similarly, if the session already has temporary objects using regular undo, setting this parameter will have no effect.

This parameter is only applicable for the primary database. For a standby database, this parameter is ignored because temporary undo is enabled by default on the standby database.

**① See Also**

## 2.362 THREAD

THREAD has been superseded by the INSTANCE\_NAME and INSTANCE\_NUMBER parameters, and will be made obsolete in a future release of the Oracle Database.

| Property                   | Description                                                  |
|----------------------------|--------------------------------------------------------------|
| <b>Parameter type</b>      | Integer                                                      |
| <b>Default value</b>       | 0                                                            |
| <b>Modifiable</b>          | No                                                           |
| <b>Modifiable in a PDB</b> | No                                                           |
| <b>Range of values</b>     | 0 to the maximum number of enabled threads                   |
| <b>Basic</b>               | No                                                           |
| <b>Oracle RAC</b>          | If specified, multiple instances must have different values. |

## 2.363 THREADED\_EXECUTION

THREADED\_EXECUTION specifies whether to enable the multithreaded Oracle model.

| Property                   | Description                                         |
|----------------------------|-----------------------------------------------------|
| <b>Parameter type</b>      | Boolean                                             |
| <b>Default value</b>       | On UNIX and Linux: false<br>On Windows: true        |
| <b>Modifiable</b>          | No                                                  |
| <b>Modifiable in a PDB</b> | No                                                  |
| <b>Range of values</b>     | true   false                                        |
| <b>Basic</b>               | No                                                  |
| <b>Oracle RAC</b>          | If specified, all instances must use the same value |

### THREADED\_EXECUTION on UNIX and Linux

Oracle Database 12c introduced the THREADED\_EXECUTION initialization parameter for databases running on UNIX and Linux systems. On such databases, the default value for THREADED\_EXECUTION is false. Setting this parameter to true enables the multithreaded Oracle model, which allows Oracle processes on UNIX and Linux to run as operating system threads in separate address spaces.

By default, some background processes on UNIX and Linux always use threaded execution; the remaining Oracle processes run as operating system processes. Thus, an "Oracle process" is not always equivalent to an "operating system process."

#### Note

When `THREADED_EXECUTION` is set to `true` on databases running on UNIX and Linux systems, which enables the multithreaded Oracle model, operating system authentication is not supported. Attempts to connect to the database using operating system authentication (for example, `CONNECT / AS SYSDBA` or `CONNECT /`) when this initialization parameter is set to `true` receive an `ORA-01031 "insufficient privileges"` error.

The solution to this error is to always use the password when connecting to the database.

Also, when this initialization parameter is set to `true` on databases running on UNIX and Linux systems, the `DEDICATED_THROUGH_BROKER_listener-name=ON` parameter should be added to the `listener.ora` file, where *listener-name* is the name of the Oracle Net listener and the `LOCAL_LISTENER` initialization parameter should be set to a TNS name entry corresponding to your instance service. This enables the server to spawn threads when connections to the database are requested through the listener.

### THREADED\_EXECUTION on Windows

Starting with Oracle Database 21c, the `THREADED_EXECUTION` initialization parameter is supported for databases running on Microsoft Windows. On such databases, this parameter must remain set to its default value of `true`; setting this parameter to `false` on databases running on Windows is not supported. The introduction of this parameter does not change the threading model for Oracle database on Windows. As in previous releases, an Oracle Database server instance on Windows is a service with a single multi-threaded operating system process. However, starting with Oracle Database 21c, you will observe changes to the `V$PROCESS` view, the dedicated connection broker, and the naming of trace files. For details about these changes, refer to *Oracle Database Administrator's Reference for Microsoft Windows*.

#### Note

Unlike on UNIX and Linux systems, when `THREADED_EXECUTION` is set to `true` on Windows, operating system authentication is supported.

## 2.364 TIMED\_OS\_STATISTICS

TIMED\_OS\_STATISTICS specifies (in seconds) the interval at which Oracle collects operating system statistics when a request is made from the client to the server or when a request completes.

| Property                   | Description                                                                                          |
|----------------------------|------------------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | Integer                                                                                              |
| <b>Default value</b>       | If STATISTICS_LEVEL is set to ALL, then 60<br>If STATISTICS_LEVEL is set to BASIC or TYPICAL, then 0 |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                                                                          |
| <b>Modifiable in a PDB</b> | Yes                                                                                                  |
| <b>Range of values</b>     | Unlimited                                                                                            |
| <b>Basic</b>               | No                                                                                                   |

On dedicated servers, Oracle collects operating system statistics at user logon and after each subsequent client invocation through the OCI into the Oracle server as a remote procedure call message.

On shared servers, Oracle collects statistics when client calls to Oracle are processed.

A value of zero specifies that operating system statistics are not gathered. To collect statistics, set a value meaningful for your application and site needs.

### ① Note

Gathering operating system statistics is very expensive. Oracle recommends that you set this parameter in an `ALTER SYSTEM` statement rather than in the initialization parameter file, and that you reset the value to zero as soon as the needed statistics have been gathered.

*Oracle Database Performance Tuning Guide* for more information about this parameter

## 2.365 TIMED\_STATISTICS

TIMED\_STATISTICS specifies whether statistics related to time are collected.

| Property                   | Description                                                                                                |
|----------------------------|------------------------------------------------------------------------------------------------------------|
| <b>Parameter type</b>      | Boolean                                                                                                    |
| <b>Default value</b>       | If STATISTICS_LEVEL is set to TYPICAL or ALL, then true<br>If STATISTICS_LEVEL is set to BASIC, then false |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM                                                                                |
| <b>Modifiable in a PDB</b> | Yes                                                                                                        |
| <b>Range of values</b>     | true   false                                                                                               |
| <b>Basic</b>               | No                                                                                                         |

### Values

- **true**  
The statistics are collected and stored in trace files or displayed in the V\$SESSTATS and V\$SYSSTATS dynamic performance views.
- **false**  
The value of all time-related statistics is set to zero. This setting lets Oracle avoid the overhead of requesting the time from the operating system.

Starting with release 11.1.0.7.0, the value of the TIMED\_STATISTICS parameter cannot be set to false if the value of STATISTICS\_LEVEL is set to TYPICAL or ALL.

On some systems with very fast timer access, Oracle might enable timing even if this parameter is set to false. On these systems, setting the parameter to true can sometimes produce more accurate statistics for long-running operations.

### ① See Also

- *Oracle Database SQL Tuning Guide* for more information on setting this parameter
- [Statistics Descriptions](#) indicates which statistics depend on the setting of this parameter.

## 2.366 TIMEZONE\_VERSION\_UPGRADE\_ONLINE

TIMEZONE\_VERSION\_UPGRADE\_ONLINE enables you to keep the database running in normal mode while upgrading time zone data using the DBMS\_DST package.

| Property                   | Description  |
|----------------------------|--------------|
| <b>Parameter type</b>      | Boolean      |
| <b>Default value</b>       | false        |
| <b>Modifiable</b>          | ALTER SYSTEM |
| <b>Modifiable in a PDB</b> | Yes          |

| Property        | Description                                  |
|-----------------|----------------------------------------------|
| Range of values | true   false                                 |
| Basic           | No                                           |
| Oracle RAC      | Multiple instances must have the same value. |

In releases prior to Oracle Database 21c, you were required to put the database in UPGRADE mode in order to initiate a time zone data upgrade using the DBMS\_DST package. Starting with Oracle Database 21c, you can perform such an upgrade while the database is in normal mode by setting the value of TIMEZONE\_VERSION\_UPGRADE\_ONLINE to true.

 **Note**

Setting the value of this parameter is only one step in a series of steps for upgrading your time zone data. Refer to *Oracle Database Globalization Support Guide* for the complete set of steps before you set this parameter value.

## 2.367 TRACE\_ENABLED

TRACE\_ENABLED controls tracing of the execution history, or code path, of Oracle. Oracle Support Services uses this information for debugging.

| Property            | Description                                                                               |
|---------------------|-------------------------------------------------------------------------------------------|
| Parameter type      | Boolean                                                                                   |
| Default value       | true                                                                                      |
| Modifiable          | ALTER SYSTEM                                                                              |
| Modifiable in a PDB | No                                                                                        |
| Range of values     | true   false                                                                              |
| Basic               | No                                                                                        |
| Oracle RAC          | The default value is TRUE. Oracle recommends that multiple instances have the same value. |

When TRACE\_ENABLED is set to true, Oracle records information in specific files when errors occur.

Oracle records this information for all instances, even if only one instance terminates. This allows Oracle to retain diagnostics for an entire cluster.

Although the overhead incurred from this processing is not excessive, you can improve performance by setting TRACE\_ENABLED to false. You might do this, for example, to meet high-end benchmark requirements. However, if you leave this parameter set to false, you may lose valuable diagnostic information. Therefore, always set TRACE\_ENABLED to true to trace system problems and to reduce diagnostic efforts when unexplained instance failures occur.

## 2.368 TRACEFILE\_IDENTIFIER

TRACEFILE\_IDENTIFIER specifies a custom identifier that becomes part of the Oracle Trace file name. Such a custom identifier is used to identify a trace file simply from its name and without having to open it or view its contents.

| Property                   | Description                                                                   |
|----------------------------|-------------------------------------------------------------------------------|
| <b>Parameter type</b>      | String                                                                        |
| <b>Syntax</b>              | TRACEFILE_IDENTIFIER = " <i>traceid</i> "                                     |
| <b>Default value</b>       | There is no default value.                                                    |
| <b>Modifiable</b>          | ALTER SESSION                                                                 |
| <b>Modifiable in a PDB</b> | No                                                                            |
| <b>Range of values</b>     | Any characters that can occur as part of a file name on the customer platform |
| <b>Basic</b>               | No                                                                            |

Each time this parameter is dynamically modified, the next trace dump will be written to a trace file which has the new parameter value embedded in its name. Trace file continuity information is automatically added to both the old and new trace files to indicate that these trace files belong to the same process.

This parameter can only be used to change the name of the foreground process' trace file; the background processes continue to have their trace files named in the regular format. For foreground processes, the TRACEID column of the V\$PROCESS view contains the current value of the TRACEFILE\_IDENTIFIER parameter. When this parameter value is set, the trace file name has the following format:

*sid\_ora\_pid\_traceid.trc*

In this example, *sid* is the Oracle instance ID, *pid* is the process ID, and *traceid* is the value of the TRACEFILE\_IDENTIFIER parameter.

### See Also

- *Oracle Database SQL Tuning Guide* for more information about this parameter
- This parameter is not supported on all operating systems. See your operating system-specific Oracle documentation for more information.

## 2.369 TRANSACTIONS

TRANSACTIONS specifies how many rollback segments to online when UNDO\_MANAGEMENT = MANUAL.

| Property              | Description               |
|-----------------------|---------------------------|
| <b>Parameter type</b> | Integer                   |
| <b>Default value</b>  | Derived: (1.1 * SESSIONS) |
| <b>Modifiable</b>     | No                        |

| Property                   | Description                                   |
|----------------------------|-----------------------------------------------|
| <b>Modifiable in a PDB</b> | No                                            |
| <b>Range of values</b>     | 4 to $2^{31} - 1$                             |
| <b>Basic</b>               | No                                            |
| <b>Oracle RAC</b>          | Multiple instances can have different values. |

The maximum number of concurrent transactions is now restricted by undo tablespace size (UNDO\_MANAGEMENT = AUTO) or the number of online rollback segments (UNDO\_MANAGEMENT = MANUAL).

## 2.370 TRANSACTIONS\_PER\_ROLLBACK\_SEGMENT

TRANSACTIONS\_PER\_ROLLBACK\_SEGMENT specifies the number of concurrent transactions you expect each rollback segment to have to handle.

| Property                   | Description                                   |
|----------------------------|-----------------------------------------------|
| <b>Parameter type</b>      | Integer                                       |
| <b>Default value</b>       | 5                                             |
| <b>Modifiable</b>          | No                                            |
| <b>Modifiable in a PDB</b> | No                                            |
| <b>Range of values</b>     | 1 to operating system-dependent               |
| <b>Basic</b>               | No                                            |
| <b>Oracle RAC</b>          | Multiple instances can have different values. |

The minimum number of rollback segments acquired at startup is TRANSACTIONS divided by the value for this parameter. For example, if TRANSACTIONS is 101 and this parameter is 10, then the minimum number of rollback segments acquired would be the ratio 101/10, rounded up to 11.

You can acquire more rollback segments by naming them in the parameter ROLLBACK\_SEGMENTS.

### See Also

Your operating system-specific Oracle documentation for the range of values for this parameter.

## 2.371 UNDO\_MANAGEMENT

UNDO\_MANAGEMENT specifies which undo space management mode the system should use.

| Property              | Description                         |
|-----------------------|-------------------------------------|
| <b>Parameter type</b> | String                              |
| <b>Syntax</b>         | UNDO_MANAGEMENT = { MANUAL   AUTO } |

| Property                   | Description                                  |
|----------------------------|----------------------------------------------|
| <b>Default value</b>       | AUTO                                         |
| <b>Modifiable</b>          | No                                           |
| <b>Modifiable in a PDB</b> | Yes                                          |
| <b>Basic</b>               | No                                           |
| <b>Oracle RAC</b>          | Multiple instances must have the same value. |

When UNDO\_MANAGEMENT is set to AUTO, the instance starts in automatic undo management mode. In manual undo management mode, undo space is allocated externally as rollback segments.

**Note**

In a CDB, the UNDO\_MANAGEMENT initialization parameter must be set to AUTO, and an undo tablespace is required to be created to manage the undo data.

**See Also**

- *Oracle Database Administrator's Guide* for more information about this parameter
- *Oracle Database Administrator's Guide* for more information about managing undo data

## 2.372 UNDO\_RETENTION

UNDO\_RETENTION specifies (in seconds) the low threshold value of undo retention.

| Property                   | Description                                                    |
|----------------------------|----------------------------------------------------------------|
| <b>Parameter type</b>      | Integer                                                        |
| <b>Default value</b>       | 900                                                            |
| <b>Modifiable</b>          | ALTER SYSTEM                                                   |
| <b>Modifiable in a PDB</b> | Yes                                                            |
| <b>Range of values</b>     | 0 to $2^{31} - 1$                                              |
| <b>Basic</b>               | No                                                             |
| <b>Oracle RAC</b>          | Oracle recommends that multiple instances have the same value. |

For both AUTOEXTEND undo tablespaces and fixed-size undo tablespaces, the system retains undo for at least the time specified in this parameter, and automatically tunes the undo retention period to satisfy the undo requirements of the queries.

Automatic tuning of undo retention is not supported for LOBs. The RETENTION value for LOB columns is set to the value of the UNDO\_RETENTION parameter.

The UNDO\_RETENTION parameter is honored only if the current undo tablespace has enough space. If an active transaction requires undo space and the undo tablespace does not have

available space, then the system starts reusing unexpired undo space. This action can potentially cause some queries to fail with a "snapshot too old" message.

The amount of time for which undo is retained for the Oracle Database for the current undo tablespace can be obtained by querying the TUNED\_UNDORETENTION column of the V\$UNDOSTAT dynamic performance view.

### Recommendations for Modifying UNDO\_RETENTION

Oracle generally recommends that you leave UNDO\_RETENTION set to its default value. Modifying this parameter is recommended only in the following situations:

- You may want to increase the value of UNDO\_RETENTION when using flashback features, such as Oracle Flashback Query, which require undo to be retained for longer than the longest running query in the system.
- In Oracle Active Data Guard environments, you may want to increase the value of UNDO\_RETENTION on the primary instance in order to accommodate undo retention requirements on the standby instances. This allows the primary instance to retain undo for a longer period of time to serve queries on the standby instances. For more information, see *Oracle Database Administrator's Guide* and *Oracle Data Guard Concepts and Administration*.

### Modifying UNDO\_RETENTION in a CDB

You can set the value of UNDO\_RETENTION in the CDB root (CDB\$ROOT) and in individual PDBs. The CDB root and PDBs can have the same value or different values. Note that you can modify this parameter in a PDB only if the PDB is in local undo mode; you cannot modify this parameter if the PDB is in shared undo mode.

Starting with Oracle Database release 19c, version 19.9, the value of UNDO\_RETENTION is not inherited in a CDB. Therefore, if you change the value for UNDO\_RETENTION in the CDB root, the PDBs do not inherit the new value. If you want to change the value for UNDO\_RETENTION at the PDB level, you must explicitly do so. For example, if your CDB contains two PDBs (PDB1 and PDB2), you can set UNDO\_RETENTION to 2000 in the CDB root and both PDBs as follows:

```
ALTER SESSION SET CONTAINER = CDB$ROOT;
ALTER SYSTEM SET UNDO_RETENTION=2000 SCOPE=BOTH;
```

```
ALTER SESSION SET CONTAINER = PDB1;
ALTER SYSTEM SET UNDO_RETENTION=2000 SCOPE=BOTH;
```

```
ALTER SESSION SET CONTAINER = PDB2;
ALTER SYSTEM SET UNDO_RETENTION=2000 SCOPE=BOTH;
```

#### ① See Also

- *Oracle Database Administrator's Guide* for information about managing undo data

## 2.373 UNDO\_TABLESPACE

UNDO\_TABLESPACE specifies the undo tablespace to be used when an instance starts. If this parameter is specified when the instance is in manual undo management mode, then an error will occur and startup will fail.

| Property                   | Description                                                                |
|----------------------------|----------------------------------------------------------------------------|
| <b>Parameter type</b>      | String                                                                     |
| <b>Syntax</b>              | UNDO_TABLESPACE = <i>undoname</i>                                          |
| <b>Default value</b>       | The first available undo tablespace in the database.                       |
| <b>Modifiable</b>          | ALTER SYSTEM                                                               |
| <b>Modifiable in a PDB</b> | Yes                                                                        |
| <b>Range of values</b>     | Legal name of an existing undo tablespace                                  |
| <b>Basic</b>               | Yes                                                                        |
| <b>Oracle RAC</b>          | Each instance must have a unique value for this parameter, when it is set. |

If the UNDO\_TABLESPACE parameter is omitted, the first available undo tablespace in the database is chosen. If no undo tablespace is available, the instance will start without an undo tablespace. In such cases, user transactions will be executed using the SYSTEM rollback segment. You should avoid running in this mode under normal circumstances.

You can replace an undo tablespace with another undo tablespace while the instance is running.

### Note

When you update this parameter on the primary database in an Oracle Data Guard configuration, you must also update it on all the physical standby databases in the configuration. This ensures that the standby databases can find the undo tablespace when they become the primary database.

### See Also

*Oracle Database SQL Language Reference* for information about creating undo tablespaces

## 2.374 UNIFIED\_AUDIT\_COMMON\_SYSTEMLOG

UNIFIED\_AUDIT\_COMMON\_SYSTEMLOG specifies whether key fields of unified audit records generated due to common audit policies will be written to the SYSLOG utility.

### Note

This initialization parameter is supported only on UNIX platforms.

| Property                   | Description                                                                                                                                                                                                                                                    |
|----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| <b>Modifiable in a PDB</b> | No                                                                                                                                                                                                                                                             |
| <b>Basic</b>               | No                                                                                                                                                                                                                                                             |
| <b>Oracle RAC</b>          | The same value must be used on all instances.                                                                                                                                                                                                                  |

When this parameter is set, key fields of unified audit records generated due to common audit policies are written to SYSLOG. These fields uniquely identify the detailed unified audit records in the UNIFIED\_AUDIT\_TRAIL view. Only a subset of unified audit record fields are written to ensure that the audit record entries do not exceed the maximum allowed size for a SYSLOG entry (typically 1024 bytes).

Do not set this parameter if you do not want key fields of unified audit records generated due to common audit policies written to SYSLOG.

This parameter differs from the UNIFIED\_AUDIT\_SYSTEMLOG parameter in that it is set at the CDB level and enables all unified audit records from common unified audit policies to be consolidated into a single destination, whereas UNIFIED\_AUDIT\_SYSTEMLOG is set at the PDB level and enables the logging of unified audit records on a per-PDB basis.

## 2.375 UNIFIED\_AUDIT\_SYSTEMLOG

UNIFIED\_AUDIT\_SYSTEMLOG specifies whether key fields of unified audit records will be written to the SYSLOG utility (on UNIX platforms) or to the Windows Event Viewer (on Windows). In a CDB, this parameter is a per-PDB static initialization parameter.

| Property              | Description                                    |
|-----------------------|------------------------------------------------|
| <b>Parameter type</b> | String for UNIX platforms, Boolean for Windows |

| Property                   | Description                                                                                                                                                                                                                                                                                                                                      |

| <b>Modifiable</b>          | No                                                                                                                                                                                                                                                                                                                                               |
| <b>Modifiable in a PDB</b> | Yes                                                                                                                                                                                                                                                                                                                                              |
| <b>Basic</b>               | No                                                                                                                                                                                                                                                                                                                                               |
| <b>Oracle RAC</b>          | The same value must be used on all instances.                                                                                                                                                                                                                                                                                                    |

When this parameter is set on UNIX, key fields of unified audit records are written to SYSLOG. When this parameter is set on Windows, key fields of unified audit records are written to the Windows Event Viewer.

Do not set this parameter (or set it to FALSE on Windows) if you do not want key fields of unified audit records written to SYSLOG or the Windows Event Viewer.

When UNIFIED\_AUDIT\_SYSTEMLOG is enabled, the key fields of the unified audit records that are written to SYSLOG or Windows Event Viewer uniquely identify the detailed unified audit records in the UNIFIED\_AUDIT\_TRAIL view. Only a subset of the unified audit record fields are written to ensure that the audit record entries do not exceed the maximum allowed size for a SYSLOG entry (typically 1024 bytes).

This parameter differs from the UNIFIED\_AUDIT\_COMMON\_SYSTEMLOG parameter in that it is set at the PDB level and enables the logging of unified audit records on a per-PDB basis, whereas UNIFIED\_AUDIT\_COMMON\_SYSTEMLOG is set at the CDB level and enables all unified audit records from common unified audit policies to be consolidated into a single destination.

## 2.376 UNIFORM\_LOG\_TIMESTAMP\_FORMAT

UNIFORM\_LOG\_TIMESTAMP\_FORMAT specifies that a uniform timestamp format be used in Oracle Database trace (.trc) files and log files (such as the alert log).

| Property                   | Description                                   |
|----------------------------|-----------------------------------------------|
| <b>Parameter type</b>      | Boolean                                       |
| <b>Default value</b>       | true                                          |
| <b>Modifiable</b>          | ALTER SYSTEM                                  |
| <b>Modifiable in a PDB</b> | No                                            |
| <b>Range of values</b>     | true   false                                  |
| <b>Basic</b>               | No                                            |
| <b>Oracle RAC</b>          | Multiple instances should use the same value. |

When the value of UNIFORM\_LOG\_TIMESTAMP\_FORMAT is TRUE, the format used for timestamps in trace files is standardized on universal time with millisecond precision. For example:

2012-09-26 00:16:47.154

When the value of UNIFORM\_LOG\_TIMESTAMP\_FORMAT is FALSE, trace files include a mix of timestamps using different precisions, with some timestamps showing local time and other timestamps showing universal time.

## 2.377 USE\_DEDICATED\_BROKER

USE\_DEDICATED\_BROKER determines how dedicated servers are spawned.

| Property                   | Description                                               |
|----------------------------|-----------------------------------------------------------|
| <b>Parameter type</b>      | Boolean                                                   |
| <b>Default value</b>       | False unless multithreaded Oracle is enabled <sup>1</sup> |
| <b>Modifiable</b>          | ALTER SYSTEM                                              |
| <b>Modifiable in a PDB</b> | No                                                        |
| <b>Range of values</b>     | true   false                                              |
| <b>Basic</b>               | No                                                        |
| <b>Oracle RAC</b>          | If specified, all instances must use the same value       |

<sup>1</sup> Multithreaded Oracle is enabled by setting the `THREADED_EXECUTION` initialization parameter to `true`.

When this parameter is set to false, the listener spawns a dedicated server directly.

When this parameter is set to true, the listener hands the connection to a dedicated connection broker that spawns the dedicated server. Unlike the listener, the dedicated connection broker is a database process, and hence it can implement policies leveraging database information before the spawn.

To enable the dedicated connection broker using the `USE_DEDICATED_BROKER` initialization parameter, you must:

1. Set the USE\_DEDICATED\_BROKER initialization parameter to true.
  2. Set the DEDICATED\_THROUGH\_BROKER\_listener-name parameter to on in the listener.ora file.
- Performing these two steps configures the Connection Broker Process (Nnnn).

**Note**

When multithreaded Oracle is enabled, the dedicated connection broker process is also enabled and used.

Configuration of the brokers is controlled by the CONNECTION\_BROKERS initialization parameter.

## 2.378 USE\_LARGE\_PAGES

USE\_LARGE\_PAGES is used to manage the database's use of large pages for SGA memory.

**Note**

This parameter is applicable only on the Linux operating system. However, setting this parameter to FALSE can cause performance degradation on any platform.

The exception is when USE\_LARGE\_PAGES is set to FALSE automatically in an Oracle ASM instance because MEMORY\_TARGET is enabled (set to a non-zero value). In this case, the FALSE setting does not cause performance degradation.

| Property            | Description                                                                                                                                                                                                                                                                                                  |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Parameter type      | String                                                                                                                                                                                                                                                                                                       |
| Syntax              | USE_LARGE_PAGES = { TRUE   FALSE   AUTO   ONLY   AUTO_ONLY }                                                                                                                                                                                                                                                 |
| Default value       | ONLY for Exadata Database Service in the cloud, Base Database Service in the cloud, and databases created using Exadata automation tools such as Oracle Exadata Deployment Assistant (OEDA) and OEDA Command Line Utility (OEDACLI)<br>AUTO_ONLY for all other Exadata systems<br>TRUE for all other systems |
| Modifiable          | No                                                                                                                                                                                                                                                                                                           |
| Modifiable in a PDB | No                                                                                                                                                                                                                                                                                                           |

| Property   | Description                                 |
|------------|---------------------------------------------|
| Basic      | No                                          |
| Oracle RAC | Multiple instances can use different values |

This parameter does not affect process-private memory allocations.

### Values

These values can be specified for USE\_LARGE\_PAGES:

- **TRUE**  
Specifies that the instance can use large pages if large pages are configured on the system.  
  
In Oracle Database 11g Release 2 (11.2.0.2), if there are not enough large pages configured on the system, then regular sized pages will be used to allocate SGA memory. This can cause the free large pages to go unused, and the operating system can allocate a huge amount of memory to create page tables to map SGA into physical pages for the Oracle processes. This may lead to ORA-04030 errors and severe performance degradation on an instance.  
  
In Oracle Database 11g Release 2 (11.2.0.3) and later releases, Oracle allocates as much of the SGA as it can in large pages, and if it runs out, it will allocate the rest of the SGA using regular sized pages. This can cause the instance to create additional shared memory segments for the SGA, but the total SGA size will be unchanged. In this supported mixed page mode allocation, the database will exhaust the available large pages before switching to regular sized pages.
- **FALSE**  
Specifies that the instance will not use large pages. This setting is not recommended because it can cause severe performance degradation for the instance. Although the USE\_LARGE\_PAGES initialization parameter applies only to Linux systems, setting this parameter to FALSE can cause performance degradation on any platform.
- **AUTO**  
Specifies that, during startup, the instance will calculate and request the number of large pages it requires. If the operating system cannot fulfill this request, then the instance will start with a combination of large and regular pages.
- **ONLY**  
Specifies that the instance will fail to start if large pages cannot be used for the entire SGA memory. Oracle recommends this setting for consistent performance. This setting is the default setting for Exadata Database Service in the cloud and Base Database Service in the cloud.  
  
When USE\_LARGE\_PAGES is set to ONLY, you must not explicitly set values for MEMORY\_TARGET and MEMORY\_MAX\_TARGET in the initialization parameter file. Doing so will prevent the instance from starting.
- **AUTO\_ONLY**  
Specifies that, during startup, the instance will calculate and request the number of large pages it requires. If the operating system can fulfill this request, then the instance will start successfully. If the operating system cannot fulfill this request, then the instance will fail to start. This ensures that no instances will run with under-provisioned large pages. This

setting is available starting with Oracle Database 19c and it is the default setting for on-premises Exadata systems.

- ["MEMORY\\_MAX\\_TARGET"](#)

## 2.379 USER\_DUMP\_DEST

USER\_DUMP\_DEST specifies the pathname for a directory where the server will write debugging trace files on behalf of a user process.

| Property                   | Description                                             |
|----------------------------|---------------------------------------------------------|
| <b>Parameter type</b>      | String                                                  |
| <b>Syntax</b>              | USER_DUMP_DEST = { <i>pathname</i>   <i>directory</i> } |
| <b>Default value</b>       | Operating system-dependent                              |
| <b>Modifiable</b>          | ALTER SYSTEM                                            |
| <b>Modifiable in a PDB</b> | No                                                      |
| <b>Range of values</b>     | Any valid local path, directory, or disk                |
| <b>Basic</b>               | No                                                      |

#### ① Note

The USER\_DUMP\_DEST initialization parameter is deprecated.

For example, this directory might be set as follows:

- On MS-DOS: C:\ORACLE\UTRC
- On UNIX: /oracle/utrc
- On VMS: DISK\$UR3: [ORACLE.UTRC]

#### ① Note

This parameter is ignored by the diagnosability infrastructure introduced in Oracle Database 11g Release 1 (11.1), which places trace and core files in a location controlled by the DIAGNOSTIC\_DEST initialization parameter.

① See Also

- *Oracle Database SQL Tuning Guide* for more information about the use of trace files
- Your operating system-specific Oracle documentation for the range of values

## 2.380 WALLET\_ROOT

WALLET\_ROOT specifies the path to the root of a directory tree containing a subdirectory for each pluggable database (PDB).

| Property            | Description                                  |
|---------------------|----------------------------------------------|
| Parameter type      | String                                       |
| Syntax              | WALLET_ROOT = wallet-root-directory-path     |
| Default value       | There is no default value.                   |
| Modifiable          | No                                           |
| Modifiable in a PDB | No                                           |
| Basic               | No                                           |
| Oracle RAC          | Multiple instances must have the same value. |

The name of the various wallet files is always the same, regardless of the component they are associated with. The wallets for each component are stored under each PDB GUID directory within the WALLET\_ROOT directory structure in a directory whose name is based on the component name. For example, for the TDE component, the subdirectory name is tde.

If the WALLET\_ROOT parameter is not set, the SQLNET.ENCRYPTION\_WALLET\_LOCATION parameter is used (as in Oracle Database releases prior to Oracle Database 18c), but no isolated keystore can be used unless the WALLET\_ROOT parameter is set. The TDE\_CONFIGURATION initialization parameter cannot be used to configure any PDB to run in isolated mode unless the WALLET\_ROOT parameter is also set.

① Note

The SQLNET.ENCRYPTION\_WALLET\_LOCATION parameter is deprecated in Oracle Database 18c.

For example, the contents of the directory at the location specified by the WALLET\_ROOT initialization parameter could look as follows, where *wallet-root* is the directory specified by the WALLET\_ROOT parameter:

```
wallet-root/eus/ewallet.p12
wallet-root/tde/ewallet.p12
wallet-root/tde/ewallet_2016120918333644.p12
wallet-root/tde_seps/cwallet.sso
wallet-root/tls/ewallet.p12
wallet-root/xdw_wallet/ewallet.p12
wallet-root/3FD1C95B48205D0FE053C5A0E40AEF8C/tde/ewallet.p12
```

```
wallet-root/3FD1C95B48205D0FE053C5A0E40AEF8C/tde/ewallet_2016110918331622.p12
wallet-root/3FD1C95B48205D0FE053C5A0E40AEF8C/tde/ewallet_2016110918332363.p12
wallet-root/3FD1C95B48205D0FE053C5A0E40AEF8C/tde_seps/cwallet.sso
wallet-root/3FD1C95B48205D0FE053C5A0E40AEF8C/tls/cwallet.sso
wallet-root/3FD1C95B48205D0FE053C5A0E40AEF8C/tls/ewallet.p12
```

When the `WALLET_ROOT` parameter is set, you can omit the path from some `ADMINISTER KEY MANAGEMENT` commands.

The `WALLET_ROOT` value can include references to environment variables. The following example shows how to use `WALLET_ROOT` when multiple TDE-enabled databases are installed into the same `ORACLE_HOME`:

```
WALLET_ROOT=/etc/ORACLE/KEYSTORES/$ORACLE_SID
```

The `ORACLE_SID` environment variable (or the `DB_UNIQUE_NAME` environment variable for Oracle RAC) makes sure that each database that is installed into the same `ORACLE_HOME` has its own set of wallets and TDE keys. This sets the root of the wallet directory hierarchy to the directory specified by `wallet-root-directory-path`.

#### Note

The normalized length of the `wallet-root-directory-name` that is specified with the `WALLET_ROOT` parameter cannot exceed 255 characters, otherwise one of the following sets of error messages is displayed:

```
ORA-46693: The WALLET_ROOT location is missing or invalid.
ORA-32021: parameter value longer than 255 characters
ORA-01078: failure in processing system parameters
```

```
ORA-46693: The WALLET_ROOT location is missing or invalid.
ORA-07204: sltn: name translation failed due to lack of output buffer
space.
ORA-01078: failure in processing system parameters
```

The normalized length includes the length of expanded environment variables specified with the `WALLET_ROOT` parameter. The values of the environment variables of the user who starts the instance are used in the normalization of the `WALLET_ROOT` parameter.

The `SHOW PARAMETER WALLET_ROOT` command always displays the normalized value (with all the environment variables expanded).

For non-ASM file systems, the PDB GUID-extended paths for the TDE component are created automatically under the directory specified by the `WALLET_ROOT` parameter when any Transparent Data Encryption (TDE) wallet is created for a PDB.

### Enabling Automatic Creation of Directories Under `WALLET_ROOT`

By using the specific configuration of `WALLET_ROOT` described in each of the following sub-sections, Oracle Database can be configured to automatically create the necessary *pdb-guid*

and *component name* directories under the WALLET\_ROOT directory path. Other settings of WALLET\_ROOT are allowed, but would not result in the automatic creation of the necessary sub-directories by the ASM OMF layer.

### Required setting to enable auto-directory creation for a database not using Oracle ASM

For a database not using Oracle ASM filesystems, the WALLET\_ROOT parameter needs to be set as follows:

```
WALLET_ROOT=wallet-root-directory-path
```

This sets the root of the wallet directory hierarchy to the directory specified by `wallet-root-directory-path`. For example:

```
/etc/ORACLE/KEYSTORES/FINANCE
```

When this is done, Oracle Database automatically creates the directory for the TDE wallet of a CDB\$ROOT at the following location:

```
/etc/ORACLE/KEYSTORES/FINANCE/tde
```

The directories, that Oracle Database automatically creates for holding the TDE wallets of isolated PDBs, will include the *pdb-guid*. For example:

```
/etc/ORACLE/KEYSTORES/FINANCE/3FD1C95B48205D0FE053C5A0E40AEF8C/tde
```

### Required setting to enable auto-directory creation for a database using Oracle ASM with Oracle Managed Files

For a database using ASM with OMF, the WALLET\_ROOT parameter needs to begin with a plus sign followed by a disk group name and the value of the DB\_UNIQUE\_NAME initialization parameter. In the example below, DATA is the name of a disk group and FINRAC is the value of the DB\_UNIQUE\_NAME initialization parameter:

```
WALLET_ROOT=+DATA/FINRAC
```

When this is done, Oracle Database automatically creates the necessary directory within the ASM filesystem at the following location when the ADMINISTER KEY MANAGEMENT CREATE KEYSTORE command is run:

```
+DATA/FINRAC/tde
```

For isolated PDBs, the directories that Oracle Database automatically creates for holding the TDE wallets of PDBs will include the *pdb-guid*. For example:

```
+DATA/FINRAC/3FD1C95B48205D0FE053C5A0E40AEF8C/tde
```

### Required setting to enable auto-directory creation for RAC-enabled databases

For a RAC-enabled database, only shared TDE wallets are supported (as opposed to individual TDE-wallets per RAC instance). WALLET\_ROOT can either point to an ASM disk group, or a directory in ACFS. If the WALLET\_ROOT parameter points to *+diskgroup/dbname*, then the /tde sub-directory is automatically created when issuing an ADMINISTER KEY MANAGEMENT CREATE KEYSTORE command. For example, when WALLET\_ROOT is set to +DATA/FINANCE, the directory +DATA/FINANCE/tde is automatically created. This guarantees that when multiple databases are installed, their TDE-wallets are kept separate.

**① See Also**["TDE\\_CONFIGURATION"](#)

## 2.381 WORKAREA\_SIZE\_POLICY

WORKAREA\_SIZE\_POLICY specifies the policy for sizing work areas. This parameter controls the mode in which working areas are tuned.

| Property                   | Description                              |
|----------------------------|------------------------------------------|
| <b>Parameter type</b>      | String                                   |
| <b>Syntax</b>              | WORKAREA_SIZE_POLICY = { AUTO   MANUAL } |
| <b>Default value</b>       | AUTO                                     |
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM              |
| <b>Modifiable in a PDB</b> | Yes                                      |
| <b>Basic</b>               | No                                       |

### Values

You can specify the following values for WORKAREA\_SIZE\_POLICY:

- **AUTO**  
When AUTO is specified, work areas used by memory-intensive operators are sized automatically, based on the PGA memory used by the system, the target PGA memory set in PGA\_AGGREGATE\_TARGET, and the requirement of each individual operator.
- **MANUAL**  
When MANUAL is specified, the sizing of work areas is manual and based on the values of the \*\_AREA\_SIZE parameter corresponding to the operation (for example, a sort uses SORT\_AREA\_SIZE). Specifying MANUAL may result in sub-optimal performance and poor PGA memory utilization.

**① See Also**

*Oracle Database Performance Tuning Guide* for additional information on setting this parameter

## 2.382 XML\_DB\_EVENTS

XML\_DB\_EVENTS enables or disables XML DB events.

| Property              | Description                          |
|-----------------------|--------------------------------------|
| <b>Parameter type</b> | String                               |
| <b>Syntax</b>         | XML_DB_EVENTS = { enable   disable } |
| <b>Default value</b>  | enable                               |

| Property                   | Description                 |
|----------------------------|-----------------------------|
| <b>Modifiable</b>          | ALTER SESSION, ALTER SYSTEM |
| <b>Modifiable in a PDB</b> | Yes                         |
| <b>Basic</b>               | No                          |

Changing this parameter through an ALTER SESSION statement affects only the current session. Only users with the XDBADMIN role are allowed to change this parameter in a session.

Changing this parameter through an ALTER SYSTEM statement will make a systemwide change of this parameter; however, the change is only registered by new sessions started after the change. Currently running sessions need to be restarted to pick up the new change. Users must have the ALTER SYSTEM privilege to make a systemwide change.

# Part II

## Static Data Dictionary Views

This part describes data dictionary tables and views. These tables and views are called **static**, because they change only when a change is made to the data dictionary (for example, when a new table is created or when a user is granted new privileges).

This part contains the following chapters:

- [Static Data Dictionary Views: ALL\\_ALL\\_TABLES to ALL\\_OUTLINES](#)
- [Static Data Dictionary Views: ALL\\_PART\\_COL\\_STATISTICS to DATABASE\\_PROPERTIES](#)
- [Static Data Dictionary Views: DBA\\_2PC\\_NEIGHBORS to DBA\\_HIST\\_JAVA\\_POOL\\_ADVICE](#)
- [Static Data Dictionary Views: DBA\\_HIST\\_LATCH to DBA\\_STORED\\_SETTINGS](#)
- [Static Data Dictionary Views: DBA\\_STREAMS\\_ADD\\_COLUMN to USER\\_ZONEMAPS](#)

### Note

Oracle also maintains views that monitor ongoing database activity. These **dynamic performance views** are described in [Dynamic Performance Views](#).

### Note

A multitenant container database is the only supported architecture in Oracle Database 21c. While the documentation is being revised, legacy terminology may persist. In most cases, "database" and "non-CDB" refer to a CDB or PDB, depending on context. In some contexts, such as upgrades, "non-CDB" refers to a non-CDB from a previous release.

# 3

## Static Data Dictionary Views: ALL\_ALL\_TABLES to ALL\_OUTLINES

This chapter describes the first set (in alphabetical order) of static data dictionary views.

The remaining static data dictionary views appear in alphabetical order in [Static Data Dictionary Views: ALL\\_PART\\_COL\\_STATISTICS to DATABASE\\_PROPERTIES](#) through [Static Data Dictionary Views: DBA\\_STREAMS\\_ADD\\_COLUMN to USER\\_ZONEMAPS](#).

This chapter contains the following topics:

- [About Static Data Dictionary Views](#)
- [AWR\\_PDB\\_\\* Views](#)
- [AWR\\_ROOT\\_\\* Views](#)
- [CDB\\_\\* Views](#)
- [DBA\\_HIST\\_\\* Views](#)
- [Oracle Database Real Application Security Views](#)
- [Oracle Database Vault Views](#)
- [Oracle Label Security Views](#)
- [Oracle Workspace Manager Views](#)
- [Recovery Catalog Views](#)
- [Static Data Dictionary View Descriptions](#)

### 3.1 About Static Data Dictionary Views

Data dictionary tables are not directly accessible, but you can access information in them through data dictionary views. To list the data dictionary views available to you, query the view `DICTIONARY`.

Many data dictionary tables have three corresponding views:

- An `ALL_` view displays all the information accessible to the current user, including information from the current user's schema as well as information from objects in other schemas, if the current user has access to those objects by way of grants of privileges or roles.
- A `DBA_` view displays all relevant information in the entire database. `DBA_` views are intended only for administrators. They can be queried only by users with the `SYSDBA` system privilege or `SELECT ANY DICTIONARY` privilege, or `SELECT_CATALOG_ROLE` role, or by users with direct privileges granted to them. The `SELECT ANY DICTIONARY` privilege is assigned to the `DBA` role when the system is initially installed.
- A `USER_` view displays all the information from the schema of the current user. No special privileges are required to query these views.

The columns of the `ALL_`, `DBA_`, and `USER_` views corresponding to a single data dictionary table are usually nearly identical. Therefore, these views are described in full only once in this

chapter, at their first occurrence alphabetically, and are listed without full descriptions at their other occurrences.

#### ① See Also

"[Static Data Dictionary View Descriptions](#)" introduces the alphabetical listing of view descriptions that are documented in this manual

## 3.2 AWR\_PDB\_\* Views

The AWR\_PDB views show the local Automatic Workload Repository (AWR) data present on a CDB root or a PDB from where the AWR\_PDB views are accessed.

The AWR\_PDB views on a CDB root show the AWR data stored on the CDB root.

The AWR\_PDB views on a PDB show the AWR data stored on that PDB.

#### ① See Also

- "[AWR\\_ROOT\\_\\* Views](#)"
- *Oracle Database Performance Tuning Guide* for an introduction to AWR
- *Oracle Database Performance Tuning Guide* for more information about AWR\_PDB views and related views for accessing AWR in a multitenant environment

## 3.3 AWR\_ROOT\_\* Views

The AWR\_ROOT views show the AWR data stored only on a CDB root. In general, the AWR\_ROOT views are equivalent to the DBA\_HIST views.

When the AWR\_ROOT views are accessed from a CDB root, they show the AWR data specific to the CDB root.

When the AWR\_ROOT views are accessed from a PDB, they show the AWR data specific to that PDB.

#### ① See Also

- "[AWR\\_PDB\\_\\* Views](#)"
- *Oracle Database Performance Tuning Guide* for an introduction to AWR
- *Oracle Database Performance Tuning Guide* for more information about AWR\_ROOT views and related views for accessing AWR in a multitenant environment

## 3.4 CDB\_\* Views

For every DBA\_\* view, a CDB\_\* view is defined. In the root of a multitenant container database (CDB), CDB\_\* views can be used to obtain information about tables, tablespaces, users, privileges, parameters, and so on contained in the root and in pluggable databases (PDBs). The CDB\_\* views can be queried only by users with the SYSDBA system privilege or SELECT ANY DICTIONARY privilege, or SELECT\_CATALOG\_ROLE role, or by users with direct privileges granted to them.

CDB\_\* views are container data objects. When a user connected to the root queries a CDB\_\* view, the query results will depend on the CONTAINER\_DATA attribute for users for the view. The CONTAINER\_DATA clause of the SQL ALTER USER statement is used to set and modify users' CONTAINER\_DATA attribute.

The CDB\_\* views are owned by SYS, regardless of who owns the underlying DBA\_\* view.

By default, a user connected to the root will only see data pertaining to the root.

### ① See Also

- *Oracle Database Security Guide* for more information about container data objects
- *Oracle Database SQL Language Reference* for more information about the CONTAINER\_DATA clause for the SQL ALTER USER statement

CDB\_\* views include these hidden columns:

- CON\$NAME: This column includes the name of the container whose data a given CDB\_\* row represents
- CDB\$NAME: This column displays the name of the CDB whose data a given CDB\_\* row represents

In a PDB, the CDB\_\* views only show objects visible through a corresponding DBA\_\* view.

In addition to all the columns found in a given DBA\_\* view, the corresponding CDB\_\* view also contains the CON\_ID column, which identifies a container whose data a given CDB\_\* row represents. In a non-CDB, the value of a CON\_ID column will be 0.

CDB views can return data from different containers in a CDB when queried from the root container. These objects will implicitly convert data to the character set of the root container (AL32UTF8) and then return the result to the user. Some character sets may have character expansion (more bytes needed to represent a character) when converted to AL32UTF8, so there may be data truncation if the view column width is not able to accommodate data from a given PDB.

Data is returned by these views from all open PDBs at the time the query is issued, except for PDBs that are open in RESTRICTED mode. In an Oracle RAC environment, data returned by these views may vary according to the instance to which a session is connected.

## 3.5 DBA\_HIST\_\* Views

The DBA\_HIST views show the local Automatic Workload Repository (AWR) data present on a CDB root or a PDB.

If a `DBA_HIST` view is queried from a CDB root, the view shows all the AWR data stored on the CDB root.

If a `DBA_HIST` view is queried from a PDB, the view shows the subset of the CDB root AWR data that is specific to that PDB. Also, the view shows the PDB level snapshots at that PDB, if they exist.

#### ① See Also

- *Oracle Database Performance Tuning Guide* for an introduction to AWR
- *Oracle Database Performance Tuning Guide* for an introduction to Oracle Database views for accessing AWR data stored on the CDB root and individual PDBs in a multitenant environment

## 3.6 Oracle Database Real Application Security Views

This manual describes these Oracle Database Real Application Security auditing views:

- [DBA\\_XS\\_AUDIT\\_POLICY\\_OPTIONS](#)
- [DBA\\_XS\\_AUDIT\\_TRAIL](#)
- [DBA\\_XS\\_ENB\\_AUDIT\\_POLICIES](#)

Descriptions of the other Oracle Database Real Application Security views are provided in *Oracle Database Real Application Security Administrator's and Developer's Guide*.

#### ① Note

Oracle Database Real Application Security views include `_XS_` in the view name.

## 3.7 Oracle Database Vault Views

Descriptions of Oracle Database Vault views are not provided in this manual.

See *Oracle Database Vault Administrator's Guide* for descriptions of Oracle Database Vault views.

#### ① Note

Oracle Database Vault views include `_DV_` in the view name.

## 3.8 Oracle Label Security Views

Descriptions of Oracle Label Security views are not provided in this manual.

See *Oracle Label Security Administrator's Guide* for descriptions of Oracle Label Security views.

**Note**

Oracle Label Security views include `_SA_` in the view name.

## 3.9 Oracle Workspace Manager Views

A number of data dictionary views are relevant only if you are using Oracle Workspace Manager:

- `ALL_MP_GRAPH_WORKSPACES` and `USER_MP_GRAPH_WORKSPACES`
- `ALL_MP_PARENT_WORKSPACES` and `USER_MP_PARENT_WORKSPACES`
- `ALL_REMOVED_WORKSPACES` and `USER_REMOVED_WORKSPACES`
- `ALL_VERSION_HVIEW`
- `ALL_WM_CONS_COLUMNS` and `USER_WM_CONS_COLUMNS`
- `ALL_WM_CONSTRAINTS` and `USER_WM_CONSTRAINTS`
- `ALL_WM_IND_COLUMNS` and `USER_WM_IND_COLUMNS`
- `ALL_WM_IND_EXPRESSIONS` and `USER_WM_IND_EXPRESSIONS`
- `ALL_WM_LOCKED_TABLES` and `USER_WM_LOCKED_TABLES`
- `ALL_WM_MODIFIED_TABLES` and `USER_WM_MODIFIED_TABLES`
- `ALL_WM_RIC_INFO` and `USER_WM_RIC_INFO`
- `ALL_WM_TAB_TRIGGERS` and `USER_WM_TAB_TRIGGERS`
- `ALL_WM_VERSIONED_TABLES` and `USER_WM_VERSIONED_TABLES`

## 3.10 Recovery Catalog Views

The following data dictionary views are only available after you create an optional recovery catalog (which contains schemas containing information about backups) for use with Recovery Manager:

RC\_ARCHIVED\_LOG  
RC\_BACKUP\_ARCHIVELOG\_DETAILS  
RC\_BACKUP\_ARCHIVELOG\_SUMMARY  
RC\_BACKUP\_CONTROLFILE  
RC\_BACKUP\_CONTROLFILE\_DETAILS  
RC\_BACKUP\_CONTROLFILE\_SUMMARY  
RC\_BACKUP\_COPY\_DETAILS  
RC\_BACKUP\_COPY\_SUMMARY  
RC\_BACKUP\_CORRUPTION  
RC\_BACKUP\_DATAFILE  
RC\_BACKUP\_DATAFILE\_DETAILS  
RC\_BACKUP\_DATAFILE\_SUMMARY  
RC\_BACKUP\_FILES  
RC\_BACKUP\_PIECE  
RC\_BACKUP\_PIECE\_DETAILS  
RC\_BACKUP\_REDOLOG  
RC\_BACKUP\_SET  
RC\_BACKUP\_SET\_DETAILS  
RC\_BACKUP\_SET\_SUMMARY  
RC\_BACKUP\_SPFILE  
RC\_BACKUP\_SPFILE\_DETAILS  
RC\_BACKUP\_SPFILE\_SUMMARY  
RC\_CHECKPOINT  
RC\_CONTROLFILE\_COPY  
RC\_COPY\_CORRUPTION  
RC\_DATABASE  
RC\_DATABASE\_BLOCK\_CORRUPTION  
RC\_DATABASE\_INCARNATION  
RC\_DATAFILE  
RC\_DATAFILE\_COPY  
RC\_LOG\_HISTORY  
RC\_OFFLINE\_RANGE  
RC\_PROXY\_ARCHIVEDLOG  
RC\_PROXY\_ARCHIVELOG\_DETAILS  
RC\_PROXY\_ARCHIVELOG\_SUMMARY  
RC\_PROXY\_CONTROLFILE  
RC\_PROXY\_COPY\_DETAILS

RC\_PROXY\_COPY\_SUMMARY  
RC\_PROXY\_DATAFILE  
RC\_REDO\_LOG  
RC\_REDO\_THREAD  
RC\_RESTORE\_POINT  
RC\_RESYNC

### 3.11 Static Data Dictionary View Descriptions

The remainder of this chapter describes the static data dictionary views in alphabetical order.

### 3.12 ALL\_ALL\_TABLES

ALL\_ALL\_TABLES describes the object tables and relational tables accessible to the current user.

**Related Views**

- DBA\_ALL\_TABLES describes all object tables and relational tables in the database.
- USER\_ALL\_TABLES describes the object tables and relational tables owned by the current user. This view does not display the OWNER column.

| Column          | Datatype      | NULL | Description                                                                                              |
|-----------------|---------------|------|----------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128) |      | Owner of the table                                                                                       |
| TABLE_NAME      | VARCHAR2(128) |      | Name of the table                                                                                        |
| TABLESPACE_NAME | VARCHAR2(30)  |      | Name of the tablespace containing the table; NULL for partitioned, temporary, and index-organized tables |
| CLUSTER_NAME    | VARCHAR2(128) |      | Name of the cluster, if any, to which the table belongs                                                  |

| Column                    | Datatype      | NULL | Description                                                                                                                                                                                                            |
|---------------------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IOT_NAME                  | VARCHAR2(128) |      | Name of the index-organized table, if any, to which the overflow or mapping table entry belongs. If the IOT_TYPE column is not NULL, then this column contains the base table name.                                    |
| STATUS                    | VARCHAR2(8)   |      | If a previous DROP TABLE operation failed, indicates whether the table is unusable (UNUSABLE) or valid (VALID)                                                                                                         |
| PCT_FREE                  | NUMBER        |      | Minimum percentage of free space in a block; NULL for partitioned tables                                                                                                                                               |
| PCT_USED                  | NUMBER        |      | Minimum percentage of used space in a block; NULL for partitioned tables                                                                                                                                               |
| INI_TRANS                 | NUMBER        |      | Initial number of transactions; NULL for partitioned tables                                                                                                                                                            |
| MAX_TRANS                 | NUMBER        |      | Maximum number of transactions; NULL for partitioned tables                                                                                                                                                            |
| INITIAL_EXTENT            | NUMBER        |      | Size of the initial extent (in bytes); NULL for partitioned tables                                                                                                                                                     |
| NEXT_EXTENT               | NUMBER        |      | Size of secondary extents (in bytes); NULL for partitioned tables                                                                                                                                                      |
| MIN_EXTENTS               | NUMBER        |      | Minimum number of extents allowed in the segment; NULL for partitioned tables                                                                                                                                          |
| MAX_EXTENTS               | NUMBER        |      | Maximum number of extents allowed in the segment; NULL for partitioned tables                                                                                                                                          |
| PCT_INCREASE              | NUMBER        |      | Percentage increase in extent size; NULL for partitioned tables                                                                                                                                                        |
| FREELISTS                 | NUMBER        |      | Number of process freelists allocated to the segment; NULL for partitioned tables                                                                                                                                      |
| FREELIST_GROUPS           | NUMBER        |      | Number of freelist groups allocated to the segment                                                                                                                                                                     |
| LOGGING                   | VARCHAR2(3)   |      | Indicates whether or not changes to the table are logged: <ul style="list-style-type: none"> <li>• YES</li> <li>• NO</li> </ul>                                                                                        |
| BACKED_UP                 | VARCHAR2(1)   |      | Indicates whether the table has been backed up since the last modification (Y) or not (N)                                                                                                                              |
| NUM_ROWS                  | NUMBER        |      | Number of rows in the table                                                                                                                                                                                            |
| BLOCKS                    | NUMBER        |      | Number of used blocks in the table                                                                                                                                                                                     |
| EMPTY_BLOCKS              | NUMBER        |      | Number of empty (never used) blocks in the table                                                                                                                                                                       |
| AVG_SPACE                 | NUMBER        |      | Average available free space in the table                                                                                                                                                                              |
| CHAIN_CNT                 | NUMBER        |      | Number of rows in the table that are chained from one data block to another or that have migrated to a new block, requiring a link to preserve the old rowid. This column is updated only after you analyze the table. |
| AVG_ROW_LEN               | NUMBER        |      | Average row length, including row overhead                                                                                                                                                                             |
| AVG_SPACE_FREELIST_BLOCKS | NUMBER        |      | Average freespace of all blocks on a freelist                                                                                                                                                                          |
| NUM_FREELIST_BLOCKS       | NUMBER        |      | Number of blocks on the freelist                                                                                                                                                                                       |

| Column           | Datatype      | NULL | Description                                                                                                                                                                                                                               |
|------------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DEGREE           | VARCHAR2(10)  |      | Number of threads per instance for scanning the table, or DEFAULT                                                                                                                                                                         |
| INSTANCES        | VARCHAR2(10)  |      | Number of instances across which the table is to be scanned, or DEFAULT                                                                                                                                                                   |
| CACHE            | VARCHAR2(5)   |      | Indicates whether the table is to be cached in the buffer cache (Y) or not (N)                                                                                                                                                            |
| TABLE_LOCK       | VARCHAR2(8)   |      | Indicates whether table locking is enabled (ENABLED) or disabled (DISABLED)                                                                                                                                                               |
| SAMPLE_SIZE      | NUMBER        |      | Sample size used in analyzing the table                                                                                                                                                                                                   |
| LAST_ANALYZED    | DATE          |      | Date on which the table was most recently analyzed                                                                                                                                                                                        |
| PARTITIONED      | VARCHAR2(3)   |      | Indicates whether the table is partitioned (YES) or not (NO)                                                                                                                                                                              |
| IOT_TYPE         | VARCHAR2(12)  |      | If the table is an index-organized table, then IOT_TYPE is IOT, IOT_OVERFLOW, or IOT_MAPPING. If the table is not an index-organized table, then IOT_TYPE is NULL.                                                                        |
| OBJECT_ID_TYPE   | VARCHAR2(16)  |      | Indicates whether the object ID (OID) is USER-DEFINED or SYSTEM GENERATED                                                                                                                                                                 |
| TABLE_TYPE_OWNER | VARCHAR2(128) |      | If an object table, owner of the type from which the table is created                                                                                                                                                                     |
| TABLE_TYPE       | VARCHAR2(128) |      | If an object table, type of the table                                                                                                                                                                                                     |
| TEMPORARY        | VARCHAR2(1)   |      | Indicates whether the table is temporary (Y) or not (N)                                                                                                                                                                                   |
| SECONDARY        | VARCHAR2(1)   |      | Indicates whether the table is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge to contain the contents of a domain index (Y) or not (N)                                                             |
| NESTED           | VARCHAR2(3)   |      | Indicates whether the table is a nested table (YES) or not (NO)                                                                                                                                                                           |
| BUFFER_POOL      | VARCHAR2(7)   |      | Buffer pool to be used for table blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• RECYCLE</li> <li>• NULL</li> </ul>                                                                                   |
| FLASH_CACHE      | VARCHAR2(7)   |      | Database Smart Flash Cache hint to be used for table blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> Solaris and Oracle Linux functionality only.                                     |
| CELL_FLASH_CACHE | VARCHAR2(7)   |      | Cell flash cache hint to be used for table blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> <b>See Also:</b> Oracle Exadata Storage Server Software documentation for more information |
| ROW_MOVEMENT     | VARCHAR2(8)   |      | If a partitioned table, indicates whether row movement is enabled (ENABLED) or disabled (DISABLED)                                                                                                                                        |
| GLOBAL_STATS     | VARCHAR2(3)   |      | GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO                                                                                                                                  |

| Column          | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| USER_STATS      | VARCHAR2(3)   |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| DURATION        | VARCHAR2(15)  |      | Indicates the duration of a temporary table:<br>SYS\$SESSION - Rows are preserved for the duration of the session<br>SYS\$TRANSACTION - Rows are deleted after COMMIT<br>Null - Permanent table                                                                                                                                                                                                                                                                                                                                |
| SKIP_CORRUPT    | VARCHAR2(8)   |      | Indicates whether Oracle Database ignores blocks marked corrupt during table and index scans (ENABLED) or raises an error (DISABLED). To enable this feature, run the DBMS_REPAIR.skip_corrupt_blocks procedure.                                                                                                                                                                                                                                                                                                               |
| MONITORING      | VARCHAR2(3)   |      | Indicates whether the table has the MONITORING attribute set (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| CLUSTER_OWNER   | VARCHAR2(128) |      | Owner of the cluster, if any, to which the table belongs                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| DEPENDENCIES    | VARCHAR2(8)   |      | Indicates whether row-level dependency tracking is enabled (ENABLED) or disabled (DISABLED)                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| COMPRESSION     | VARCHAR2(8)   |      | Indicates whether table compression is enabled (ENABLED) or not (DISABLED); NULL for partitioned tables                                                                                                                                                                                                                                                                                                                                                                                                                        |
| COMPRESS_FOR    | VARCHAR2(30)  |      | Default compression for what kind of operations: <ul style="list-style-type: none"> <li>• BASIC</li> <li>• ADVANCED</li> <li>• QUERY LOW</li> <li>• QUERY HIGH</li> <li>• ARCHIVE LOW</li> <li>• ARCHIVE HIGH</li> <li>• NULL</li> </ul> The QUERY LOW, QUERY HIGH, ARCHIVE LOW, and ARCHIVE HIGH values are associated with Hybrid Columnar Compression, a feature of the Enterprise Edition of Oracle Database that is dependent on the underlying storage system. See <i>Oracle Database Concepts</i> for more information. |
| DROPPED         | VARCHAR2(3)   |      | Indicates whether the table has been dropped and is in the recycle bin (YES) or not (NO); NULL for partitioned tables<br><br>This view does not return the names of tables that have been dropped.                                                                                                                                                                                                                                                                                                                             |
| SEGMENT_CREATED | VARCHAR2(3)   |      | Indicates whether the table segment has been created (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| INMEMORY        | VARCHAR2(8)   |      | Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for this table                                                                                                                                                                                                                                                                                                                                                                                                      |

| Column               | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----------------------|--------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INMEMORY_PRIORITY    | VARCHAR2(8)  |      | <p>Indicates the priority at which this table is populated into the In-Memory Column Store (IM column store). Possible values:</p> <ul style="list-style-type: none"> <li>• LOW</li> <li>• MEDIUM</li> <li>• HIGH</li> <li>• CRITICAL</li> <li>• NONE</li> <li>• NULL</li> </ul> <p>This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_PARTITIONS.</p> |
| INMEMORY_DISTRIBUTE  | VARCHAR2(15) |      | <p>Indicates how the table will be distributed in the IM column stores in an Oracle Real Application Clusters (Oracle RAC) environment:</p> <ul style="list-style-type: none"> <li>• AUTO</li> <li>• BY ROWID RANGE</li> <li>• BY PARTITION</li> <li>• BY SUBPARTITION</li> </ul>                                                                                                                                                                                                                                   |
| INMEMORY_COMPRESSION | VARCHAR2(17) |      | <p>Compression level for the in-memory store:</p> <ul style="list-style-type: none"> <li>• NO MEMCOMPRESS</li> <li>• FOR DML</li> <li>• FOR QUERY [ LOW   HIGH ]</li> <li>• FOR CAPACITY [ LOW   HIGH ]</li> <li>• AUTO</li> <li>• NULL</li> </ul> <p>This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_PARTITIONS.</p>                               |
| INMEMORY_DUPLICATE   | VARCHAR2(13) |      | <p>Indicates the duplicate setting for the In-Memory Column Store (IM column store) in an Oracle RAC environment:</p> <ul style="list-style-type: none"> <li>• NO DUPLICATE</li> <li>• DUPLICATE</li> <li>• DUPLICATE ALL</li> </ul>                                                                                                                                                                                                                                                                                |
| EXTERNAL             | VARCHAR2(3)  |      | Indicates whether the table is an external table (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| HYBRID               | VARCHAR2(3)  |      | Indicates whether the table is a hybrid partitioned table (YES) or not (NO). A hybrid partitioned table can contain a mixture of partitions stored in segments and partitions stored externally.                                                                                                                                                                                                                                                                                                                    |

| Column                  | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CELLMEMORY <sup>1</sup> | VARCHAR2(24)   |      | <p>The value for columnar compression in the storage cell flash cache. Possible values:</p> <ul style="list-style-type: none"> <li>ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form</li> <li>DISABLED: Oracle Exadata Storage is prevented from caching in columnar form</li> <li>NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression)</li> <li>FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format</li> <li>FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format</li> </ul>                                                                                                                              |
| INMEMORY_SERVICE        | VARCHAR2(12)   |      | <p>Indicates how the IM column store is populated on various instances. The possible values are:</p> <ul style="list-style-type: none"> <li>DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default.</li> <li>NONE: Data is not populated on any instance.</li> <li>ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter.</li> <li>USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.</li> </ul> |
| INMEMORY_SERVICE_NAME   | VARCHAR2(1000) |      | Indicates the service name for the service on which the IM column store should be populated. This column has a value only when the corresponding INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| MEMOPTIMIZE_READ        | VARCHAR2(8)    |      | Indicates whether the table is enabled for Fast Key Based Access (ENABLED) or not (DISABLED)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| MEMOPTIMIZE_WRITE       | VARCHAR2(8)    |      | For internal use only                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| HAS_SENSITIVE_COLUMN    | VARCHAR2(3)    |      | Indicates whether the table has one or more sensitive columns (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| LOGICAL_REPLICATION     | VARCHAR2(8)    |      | Indicates whether the table is enabled for logical replication (ENABLED) or not (DISABLED). This setting is ignored if database-wide column data supplemental logging is enabled.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

<sup>1</sup> This column is intended for use with Oracle Exadata.

## 3.13 ALL\_ANALYTIC\_VIEW\_AGGR\_DIMS

ALL\_ANALYTIC\_VIEW\_AGGR\_DIMS describes the aggregation function dimensions of the analytic views accessible to the current user.

**Related Views**

- DBA\_ANALYTIC\_VIEW\_AGGR\_DIMS describes the aggregation function dimensions of all analytic views in the database.
- USER\_ANALYTIC\_VIEW\_AGGR\_DIMS describes the aggregation function dimensions of the analytic views owned by the current user. This view does not display the OWNER column.

| Column             | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                         |

### 3.14 ALL\_ANALYTIC\_VIEW\_AGGR\_FNS

ALL\_ANALYTIC\_VIEW\_AGGR\_FNS describes the aggregation functions of the analytic views accessible to the current user.

**Related Views**

- DBA\_ANALYTIC\_VIEW\_AGGR\_FNS describes the aggregation functions of all analytic views in the database.
- USER\_ANALYTIC\_VIEW\_AGGR\_FNS describes the aggregation functions of the analytic views owned by the current user. This view does not display the OWNER or ORIGIN\_CON\_ID columns.

| Column             | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                       |

## 3.16 ALL\_ANALYTIC\_VIEW\_AGR\_DIMS

ALL\_ANALYTIC\_VIEW\_AGR\_DIMS describes the aggregation function dimensions of the analytic views accessible to the current user.

### Related Views

- DBA\_ANALYTIC\_VIEW\_AGR\_DIMS describes the aggregation function dimensions of all analytic views in the database.
- USER\_ANALYTIC\_VIEW\_AGR\_DIMS describes the aggregation function dimensions of the analytic views owned by the current user. This view does not display the OWNER column.

| Column             | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                       |
|--------------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER              | VARCHAR2(128) | NOT NULL | Owner of the analytic view                                                                                                                                                                                                                                                                                                                                        |

## 3.28 ALL\_ANALYTIC\_VIEW\_CLC\_MEAS\_AE

ALL\_ANALYTIC\_VIEW\_CLC\_MEAS\_AE describes the calculated measures in the analytic views (across all editions) accessible to the current user.

### Related Views

- DBA\_ANALYTIC\_VIEW\_CLC\_MEAS\_AE describes the calculated measures in all analytic views (across all editions) in the database.
- USER\_ANALYTIC\_VIEW\_CLC\_MEAS\_AE describes the calculated measures in the analytic views (across all editions) owned by the current user. This view does not display the OWNER column.

| Column             | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                               |

## 3.29 ALL\_ANALYTIC\_VIEW\_COLUMNS

ALL\_ANALYTIC\_VIEW\_COLUMNS describes the columns of the analytic views accessible to the current user.

### Related Views

- DBA\_ANALYTIC\_VIEW\_COLUMNS describes the columns of all analytic views in the database.
- USER\_ANALYTIC\_VIEW\_COLUMNS describes the columns of the analytic views owned by the current user. This view does not display the OWNER column.

| Column             | Datatype      | NULL     | Description                                                                                                                                                                |
|--------------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER              | VARCHAR2(128) | NOT NULL | Owner of the analytic view                                                                                                                                                 |
| ANALYTIC_VIEW_NAME | VARCHAR2(128) | NOT NULL | Name of the analytic view                                                                                                                                                  |
| DIMENSION_NAME     | VARCHAR2(128) |          | Alias of the analytic view dimension in the analytic view; for a measure the value is MEASURES                                                                             |
| HIER_NAME          | VARCHAR2(128) |          | Alias of the analytic view hierarchy within DIMENSION_NAME in the analytic view; for a measure the value is MEASURES                                                       |
| COLUMN_NAME        | VARCHAR2(128) | NOT NULL | Name of the column                                                                                                                                                         |
| ROLE               | VARCHAR2(4)   | NOT NULL | The role the attribute plays in the analytic view: <ul style="list-style-type: none"> <li>• KEY</li> <li>• AKEY</li> <li>• HIER</li> <li>• PROP</li> <li>• MEAS</li> </ul> |
| DATA_TYPE          | VARCHAR2(106) | NOT NULL | Datatype of the column                                                                                                                                                     |
| DATA_LENGTH        | NUMBER        | NOT NULL | Length of the column (in bytes)                                                                                                                                            |
| DATA_PRECISION     | NUMBER        |          | Decimal precision for the NUMBER datatype; binary precision for the FLOAT datatype, NULL for all other datatypes                                                           |
| DATA_SCALE         | NUMBER        |          | Number of digits to the right of the decimal point in a number                                                                                                             |
| NULLABLE           | CHAR(1)       | NOT NULL | Indicates whether a column allows NULL values; the value is N if there is a NOT NULL constraint on the column or if the column is part of a PRIMARY KEY                    |

| Column               | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------------|--------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CHARACTER_SET_NAME   | VARCHAR2(44) |          | Name of the character set: <ul style="list-style-type: none"> <li>CHAR_CS</li> <li>NCHAR_CS</li> </ul>                                                                                                                                                                                                                                                                                                                                                 |
| CHAR_COL_DECL_LENGTH | NUMBER       |          | Declaration length of the character type column                                                                                                                                                                                                                                                                                                                                                                                                        |
| CHAR_USED            | VARCHAR2(1)  |          | Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the datatype is not any of the following (NULL): <ul style="list-style-type: none"> <li>CHAR</li> <li>VARCHAR2</li> <li>NCHAR</li> <li>NVARCHAR2</li> </ul>                                                                                                                                                                                          |
| ORDER_NUM            | NUMBER       | NOT NULL | Order of the column, with the hierarchy columns first followed by measure columns. The columns for a hierarchy are grouped together, listed in their order in the HIERARCHIES clause of the analytic view definition. Within a hierarchy, attributes are listed first in order of their definition in the ATTRIBUTES clause of the attribute dimension definition followed by hierarchical attributes in the DIMENSION BY clause of the analytic view. |
| ORIGIN_CON_ID        | NUMBER       |          | The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> <li>0: This value is used for rows in non-CDBs. This value is not used for CDBs.</li> <li><i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root).</li> </ul>                                                                     |

## 3.30 ALL\_ANALYTIC\_VIEW\_COLUMNS\_AE

ALL\_ANALYTIC\_VIEW\_COLUMNS\_AE describes the columns of the analytic views (across all editions) accessible to the current user.

#### Related Views

- DBA\_ANALYTIC\_VIEW\_COLUMNS\_AE describes the columns of all analytic views (across all editions) in the database.
- USER\_ANALYTIC\_VIEW\_COLUMNS\_AE describes the columns of the analytic views (across all editions) owned by the current user. This view does not display the OWNER column.

| Column             | Datatype      | NULL     | Description                |
|--------------------|---------------|----------|----------------------------|
| OWNER              | VARCHAR2(128) | NOT NULL | Owner of the analytic view |
| ANALYTIC_VIEW_NAME | VARCHAR2(128) | NOT NULL | Name of the analytic view  |

| Column               | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DIMENSION_NAME       | VARCHAR2(128) |          | Alias of the analytic view dimension in the analytic view; for a measure the value is MEASURES                                                                                                                                                                                                                                                                                                                                                         |
| HIER_NAME            | VARCHAR2(128) |          | Alias of the analytic view hierarchy within DIMENSION_NAME in the analytic view; for a measure the value is MEASURES                                                                                                                                                                                                                                                                                                                                   |
| COLUMN_NAME          | VARCHAR2(128) | NOT NULL | Name of the column                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| ROLE                 | VARCHAR2(4)   | NOT NULL | The role the attribute plays in the analytic view: <ul style="list-style-type: none"> <li>• KEY</li> <li>• AKEY</li> <li>• HIER</li> <li>• PROP</li> <li>• MEAS</li> </ul>                                                                                                                                                                                                                                                                             |
| DATA_TYPE            | VARCHAR2(106) | NOT NULL | Datatype of the column                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| DATA_LENGTH          | NUMBER        | NOT NULL | Length of the column (in bytes)                                                                                                                                                                                                                                                                                                                                                                                                                        |
| DATA_PRECISION       | NUMBER        |          | Decimal precision for the NUMBER datatype; binary precision for the FLOAT datatype, NULL for all other datatypes                                                                                                                                                                                                                                                                                                                                       |
| DATA_SCALE           | NUMBER        |          | Number of digits to the right of the decimal point in a number                                                                                                                                                                                                                                                                                                                                                                                         |
| NULLABLE             | CHAR(1)       | NOT NULL | Indicates whether a column allows NULL values; the value is N if there is a NOT NULL constraint on the column or if the column is part of a PRIMARY KEY                                                                                                                                                                                                                                                                                                |

## 3.39 ALL\_ANALYTIC\_VIEW\_DIMS\_AE

ALL\_ANALYTIC\_VIEW\_DIMS\_AE describes the attribute dimensions in the analytic views (across all editions) accessible to the current user.

### Related Views

- DBA\_ANALYTIC\_VIEW\_DIMS\_AE describes the attribute dimensions in all analytic views (across all editions) in the database.
- USER\_ANALYTIC\_VIEW\_DIMS\_AE describes the attribute dimensions in the analytic views (across all editions) owned by the current user. This view does not display the OWNER column.

## 3.42 ALL\_ANALYTIC\_VIEW\_FCT\_COLS\_AE

ALL\_ANALYTIC\_VIEW\_FCT\_COLS\_AE describes the fact columns of the analytic views (across all editions) accessible to the current user.

**Related Views**

- DBA\_ANALYTIC\_VIEW\_FCT\_COLS\_AE describes the fact columns of all analytic views (across all editions) in the database.
- USER\_ANALYTIC\_VIEW\_FCT\_COLS\_AE describes the fact columns of the analytic views (across all editions) owned by the current user. This view does not display the OWNER column.

| Column             | Datatype      | NULL     | Description                                                                           |

## 3.50 ALL\_ANALYTIC\_VIEW\_LEVEL\_CLASS

ALL\_ANALYTIC\_VIEW\_LEVEL\_CLASS describes the level classifications of the analytic views accessible to the current user.

**Related Views**

- DBA\_ANALYTIC\_VIEW\_LEVEL\_CLASS describes the level classifications of all analytic views in the database.
- USER\_ANALYTIC\_VIEW\_LEVEL\_CLASS describes the level classifications of the analytic views owned by the current user. This view does not display the OWNER column.

| Column             | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                       |

### 3.51 ALL\_ANALYTIC\_VIEW\_LEVELS

ALL\_ANALYTIC\_VIEW\_LEVELS describes the levels in the hierarchies in the analytic views accessible to the current user.

**Related Views**

- DBA\_ANALYTIC\_VIEW\_LEVELS describes the levels in the hierarchies in all analytic views in the database.
- USER\_ANALYTIC\_VIEW\_LEVELS describes the levels in the hierarchies in the analytic views owned by the current user. This view does not display the OWNER column.

| Column             | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                    |

## 3.52 ALL\_ANALYTIC\_VIEW\_LEVELS\_AE

ALL\_ANALYTIC\_VIEW\_LEVELS\_AE describes the levels in the hierarchies in the analytic views (across all editions) accessible to the current user.

### Related Views

- DBA\_ANALYTIC\_VIEW\_LEVELS\_AE describes the levels in the hierarchies in all analytic views (across all editions) in the database.
- USER\_ANALYTIC\_VIEW\_LEVELS\_AE describes the levels in the hierarchies in the analytic views (across all editions) owned by the current user. This view does not display the OWNER column.

| Column             | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                               |

## 3.57 ALL\_ANALYTIC\_VIEW\_MEAS\_CLASS

ALL\_ANALYTIC\_VIEW\_MEAS\_CLASS describes the classifications of the measures of the analytic views accessible to the current user.

#### Related Views

- DBA\_ANALYTIC\_VIEW\_MEAS\_CLASS describes the classifications of the measures of all analytic views in the database.
- USER\_ANALYTIC\_VIEW\_MEAS\_CLASS describes the classifications of the measures of the analytic views owned by the current user. This view does not display the OWNER column.

| Column             | Datatype      | NULL     | Description                                                                            |
|--------------------|---------------|----------|----------------------------------------------------------------------------------------|
| OWNER              | VARCHAR2(128) | NOT NULL | Owner of the analytic view                                                             |
| ANALYTIC_VIEW_NAME | VARCHAR2(128) | NOT NULL | Name of the analytic view                                                              |
| MEASURE_NAME       | VARCHAR2(128) |          | Name of the measure associated with the classification                                 |
| CLASSIFICATION     | VARCHAR2(128) |          | Classification associated with the measure of the analytic view                        |
| VALUE              | CLOB          |          | Value of the classification, or NULL if not specified                                  |
| LANGUAGE           | VARCHAR2(64)  |          | NLS_LANGUAGE value associated with the classification, or NULL if not specified        |
| ORDER_NUM          | NUMBER        | NOT NULL | Order of the classification in the list of classifications associated with the measure |

| Column        | Datatype | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                   |

## 3.61 ALL\_ANALYTIC\_VIEWS\_AE

ALL\_ANALYTIC\_VIEWS\_AE describes the analytic views (across all editions) accessible to the current user.

#### Related Views

- DBA\_ANALYTIC\_VIEWS\_AE describes all analytic views (across all editions) in the database.
- USER\_ANALYTIC\_VIEWS\_AE describes the analytic views (across all editions) owned by the current user. This view does not display the OWNER column.

| APPLY_NAME                 | VARCHAR2(128) | NOT NULL | Name of the apply process                                                                                                                                                                                                                                                                                 |
| QUEUE_NAME                 | VARCHAR2(128) | NOT NULL | Name of the queue from which the apply process dequeues                                                                                                                                                                                                                                                   |
| QUEUE_OWNER                | VARCHAR2(128) | NOT NULL | Owner of the queue from which the apply process dequeues                                                                                                                                                                                                                                                  |
| APPLY_CAPTURED             | VARCHAR2(3)   |          | Indicates whether the apply process applies captured messages (YES) or user-enqueued messages (NO)                                                                                                                                                                                                        |
| RULE_SET_NAME              | VARCHAR2(128) |          | Name of the positive rule set used by the apply process for filtering                                                                                                                                                                                                                                     |
| RULE_SET_OWNER             | VARCHAR2(128) |          | Owner of the positive rule set used by the apply process for filtering                                                                                                                                                                                                                                    |
| APPLY_USER                 | VARCHAR2(128) |          | User who is applying messages                                                                                                                                                                                                                                                                             |
| APPLY_DATABASE_LINK        | VARCHAR2(128) |          | Database link to which changes are applied. If NULL, then changes are applied to the local database.                                                                                                                                                                                                      |
| APPLY_TAG                  | RAW(2000)     |          | Tag associated with redo log records that are generated when changes are made by the apply process                                                                                                                                                                                                        |
| DDL_HANDLER                | VARCHAR2(98)  |          | Name of the user-specified data definition language (DDL) handler, which handles DDL logical change records (LCRs)                                                                                                                                                                                        |
| PRECOMMIT_HANDLER          | VARCHAR2(98)  |          | Name of the user-specified pre-commit handler                                                                                                                                                                                                                                                             |
| MESSAGE_HANDLER            | VARCHAR2(98)  |          | Name of the user-specified procedure that handles dequeued messages other than logical change records (LCRs)                                                                                                                                                                                              |
| STATUS                     | VARCHAR2(8)   |          | Status of the apply process: <ul style="list-style-type: none"> <li>• DISABLED</li> <li>• ENABLED</li> <li>• ABORTED</li> </ul>                                                                                                                                                                           |
| MAX_APPLIED_MESSAGE_NUMBER | NUMBER        |          | System change number (SCN) corresponding to the apply process high watermark for the last time the apply process was stopped using the DBMS_APPLY_ADM.STOP_APPLY procedure with the force parameter set to false. The apply process high watermark is the SCN beyond which no messages have been applied. |
| NEGATIVE_RULE_SET_NAME     | VARCHAR2(128) |          | Name of the negative rule set used by the apply process for filtering                                                                                                                                                                                                                                     |
| NEGATIVE_RULE_SET_OWNER    | VARCHAR2(128) |          | Owner of the negative rule set used by the apply process for filtering                                                                                                                                                                                                                                    |

| Column                | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

## 3.63 ALL\_APPLY\_CHANGE\_HANDLERS

ALL\_APPLY\_CHANGE\_HANDLERS displays information about the change handlers on the tables accessible to the current user.

### Related View

DBA\_APPLY\_CHANGE\_HANDLERS displays information about the change handlers on all tables in the database.

| Column             | Datatype      | NULL | Description                                                               |
|--------------------|---------------|------|---------------------------------------------------------------------------|
| CHANGE_TABLE_OWNER | VARCHAR2(128) |      | Owner of the change table                                                 |
| CHANGE_TABLE_NAME  | VARCHAR2(128) |      | Name of the change table                                                  |
| SOURCE_TABLE_OWNER | VARCHAR2(128) |      | Owner of the source table                                                 |
| SOURCE_TABLE_NAME  | VARCHAR2(128) |      | Name of the source table                                                  |
| HANDLER_NAME       | VARCHAR2(128) |      | Name of the statement-based change handler                                |
| CAPTURE_VALUES     | VARCHAR2(3)   |      | Indicates whether to capture the old (OLD), new (NEW), or both (*) values |

| Column            | Datatype      | NULL | Description                                                                                                                                                                                  |
|-------------------|---------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| APPLY_NAME        | VARCHAR2(128) |      | Name of the apply process                                                                                                                                                                    |
| OPERATION_NAME    | VARCHAR2(10)  |      | Name of the DML operation to which the DML handler is set: <ul style="list-style-type: none"><li>• DEFAULT</li><li>• INSERT</li><li>• UPDATE</li><li>• DELETE</li><li>• LOB_UPDATE</li></ul> |
| CREATION_TIME     | TIMESTAMP(6)  |      | Change handler creation time                                                                                                                                                                 |
| MODIFICATION_TIME | TIMESTAMP(6)  |      | Change handler modification time                                                                                                                                                             |

## 3.69 ALL\_APPLY\_ERROR\_MESSAGES

ALL\_APPLY\_ERROR\_MESSAGES displays information about the individual messages in an error transaction generated by the apply processes that dequeue messages from queues accessible to the current user.

For XStream inbound servers, each message in an error transaction is a logical change record (LCR).

**Note**

- Messages that were spilled from memory to hard disk do not appear in this view.
- This view does not contain information related to XStream outbound servers.

**Related View**

DBA\_APPLY\_ERROR\_MESSAGES displays information about the individual messages in all of the error transactions generated by all apply processes in the database.

| Column                     | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

## 3.70 ALL\_APPLY\_EXECUTE

ALL\_APPLY\_EXECUTE displays information about the apply execute actions for the rules visible to the current user.

#### Related View

DBA\_APPLY\_EXECUTE displays information about the apply execute actions for all rules in the database.

| Column        | Datatype      | NULL     | Description                                                 |
|---------------|---------------|----------|-------------------------------------------------------------|
| RULE_OWNER    | VARCHAR2(128) | NOT NULL | Owner of the rule                                           |
| RULE_NAME     | VARCHAR2(128) | NOT NULL | Name of the rule                                            |
| EXECUTE_EVENT | VARCHAR2(2)   |          | Indicates whether the event satisfying the rule is executed |

## 3.71 ALL\_APPLY\_HANDLE\_COLLISIONS

ALL\_APPLY\_HANDLE\_COLLISIONS provides details about apply handlers for collisions on objects visible to the user at the table level.

**Related View**

DBA\_APPLY\_HANDLE\_COLLISIONS provides details about apply handlers for collisions at the table level.

| Column              | Datatype      | NULL     | Description                                                                                                 |
|---------------------|---------------|----------|-------------------------------------------------------------------------------------------------------------|
| APPLY_NAME          | VARCHAR2(128) | NOT NULL | Name of the apply process                                                                                   |
| OBJECT_OWNER        | VARCHAR2(128) | NOT NULL | Owner of the target object                                                                                  |
| OBJECT_NAME         | VARCHAR2(128) | NOT NULL | Name of the target object                                                                                   |
| SOURCE_OBJECT_OWNER | VARCHAR2(128) | NOT NULL | Source database owner of the object                                                                         |
| SOURCE_OBJECT_NAME  | VARCHAR2(128) | NOT NULL | Source database name of the object                                                                          |
| ENABLED             | VARCHAR2(1)   | NOT NULL | State of the collision handlers: Y for enabled, N for disabled                                              |
| SET_BY              | VARCHAR2(10)  |          | Entity that set up the handler: <ul style="list-style-type: none"><li>• USER</li><li>• GOLDENGATE</li></ul> |

## 3.72 ALL\_APPLY\_INSTANTIATED\_GLOBAL

ALL\_APPLY\_INSTANTIATED\_GLOBAL displays information for the current user about databases for which an instantiation SCN has been set.

**Related View**

DBA\_APPLY\_INSTANTIATED\_GLOBAL displays information about databases for which an instantiation SCN has been set.

| Column            | Datatype      | NULL     | Description                                                                                                |
|-------------------|---------------|----------|------------------------------------------------------------------------------------------------------------|
| SOURCE_DATABASE   | VARCHAR2(128) | NOT NULL | Name of the database that was instantiated                                                                 |
| INSTANTIATION_SCN | NUMBER        |          | Instantiation SCN for the database. Only changes committed after this SCN are applied by an apply process. |

| Column              | Datatype      | NULL | Description                                                                                          |
|---------------------|---------------|------|------------------------------------------------------------------------------------------------------|
| APPLY_DATABASE_LINK | VARCHAR2(128) |      | Database link to which changes are applied. If null, then changes are applied to the local database. |
| SOURCE_ROOT_NAME    | VARCHAR2(128) |      | The global name of the source root database                                                          |

## 3.77 ALL\_APPLY\_PROGRESS

ALL\_APPLY\_PROGRESS displays information about the progress made by the apply processes that dequeue events from queues accessible to the current user. This view only contains information about captured events. It does not contain information about user-enqueued events.

**Related View**

DBA\_APPLY\_PROGRESS displays information about the progress made by all apply processes in the database.

| Column          | Datatype      | NULL     | Description                                                                             |
|-----------------|---------------|----------|-----------------------------------------------------------------------------------------|
| APPLY_NAME      | VARCHAR2(128) | NOT NULL | Name of the apply process                                                               |
| SOURCE_DATABASE | VARCHAR2(128) | NOT NULL | Global name of the source database of the changes that are applied by the apply process |

| Column                      | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                               |
|-----------------------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| APPLIED_MESSAGE_NUMBER      | NUMBER        | NOT NULL | Message number up to which all transactions have definitely been applied. This value is the low watermark for the apply process. That is, messages with a commit message number less than or equal to this message number have definitely been applied, but some messages with a higher commit message number may also have been applied. |
| OLDEST_MESSAGE_NUMBER       | NUMBER        | NOT NULL | Earliest message number of the transactions currently being dequeued and applied                                                                                                                                                                                                                                                          |
| APPLY_TIME                  | DATE          |          | Time at which the message with the message number displayed in the APPLIED_MESSAGE_NUMBER column was applied                                                                                                                                                                                                                              |
| APPLIED_MESSAGE_CREATE_TIME | DATE          |          | Time at which the message with the message number displayed in the APPLIED_MESSAGE_NUMBER column was created at its source database                                                                                                                                                                                                       |
| OLDEST_TRANSACTION_ID       | VARCHAR2(128) |          | Oldest transaction ID of interest. (useful for detecting long-running or large transactions)                                                                                                                                                                                                                                              |
| SPIII_MESSAGE_NUMBER        | NUMBER        |          | Spill low watermark. Any message with a lower SCN has either been applied or spilled to disk (it will be dequeued from the Streams queue and capture will not need to resend any logical change records (LCRs) with a lower SCN). Spilled messages may not have been applied yet.                                                         |
| SOURCE_ROOT_NAME            | VARCHAR2(128) |          | The global name of the source root database                                                                                                                                                                                                                                                                                               |

## 3.79 ALL\_APPLY\_TABLE\_COLUMNS

ALL\_APPLY\_TABLE\_COLUMNS displays, for the tables accessible to the current user, information about the nonkey table columns for which apply process conflict detection has been stopped for update and delete operations.

Conflict detection for nonkey columns can be stopped using the DBMS\_APPLY\_ADM.COMPARE\_OLD\_VALUES procedure.

### Related View

DBA\_APPLY\_TABLE\_COLUMNS displays, for all tables in the database, information about the nonkey table columns for which apply process conflict detection has been stopped for update and delete operations.

| Column                | Datatype       | NULL | Description                                                                           |
|-----------------------|----------------|------|---------------------------------------------------------------------------------------|
| OBJECT_OWNER          | VARCHAR2(128)  |      | Owner of the table                                                                    |
| OBJECT_NAME           | VARCHAR2(128)  |      | Name of the table                                                                     |
| COLUMN_NAME           | VARCHAR2(4000) |      | Name of the column                                                                    |
| COMPARE_OLD_ON_DELETE | VARCHAR2(3)    |      | Indicates whether to Compare the old value of the column on deletes (YES) or not (NO) |
| COMPARE_OLD_ON_UPDATE | VARCHAR2(3)    |      | Indicates whether to Compare the old value of the column on updates (YES) or not (NO) |
| APPLY_DATABASE_LINK   | VARCHAR2(128)  |      | For remote tables, name of the database link pointing to the remote database          |

## 3.80 ALL\_ARGUMENTS

ALL\_ARGUMENTS lists the arguments of the functions and procedures that are accessible to the current user.

**① Note**

The following changes have been made to this view:

- Starting with Oracle Database 12c release 1 (12.1.0.2), this view omits procedures with no arguments. Prior to Oracle Database 12c release 1 (12.1.0.2), a procedure with no arguments was presented as a single row in this view.
- Starting with Oracle Database 18c, this view displays only one row for an argument that is a composite type. Prior to Oracle Database 18c, this view displayed multiple rows for composite types.

To obtain information about composite type arguments, use the value of the `TYPE_NAME` column in this view to query the `ALL_PLSQL_TYPES`, `ALL_PLSQL_TYPE_ATTRS`, and `ALL_PLSQL_COLL_TYPES` views, which fully describe composite types.

See *Oracle Database Upgrade Guide* for more information about these changes.

**Related Views**

- `DBA_ARGUMENTS` lists the arguments of the functions and procedures that are available in the database.
- `USER_ARGUMENTS` lists the arguments of the functions and procedures that are owned by the current user. This view does not display the `OWNER` column.

| Column        | Datatype      | NULL     | Description                                                                                           |
|---------------|---------------|----------|-------------------------------------------------------------------------------------------------------|
| OWNER         | VARCHAR2(128) | NOT NULL | Owner of the object                                                                                   |
| OBJECT_NAME   | VARCHAR2(128) |          | Name of the procedure or function                                                                     |
| PACKAGE_NAME  | VARCHAR2(128) |          | Name of the package                                                                                   |
| OBJECT_ID     | NUMBER        | NOT NULL | Object number of the object                                                                           |
| OVERLOAD      | VARCHAR2(40)  |          | Indicates the <i>n</i> th overloading ordered by its appearance in the source; otherwise, it is NULL. |
| SUBPROGRAM_ID | NUMBER        |          | Unique subprogram identifier                                                                          |
| ARGUMENT_NAME | VARCHAR2(128) |          | Name of the argument<br>A null argument name is used to denote a function return.                     |

| Column             | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                     |
|--------------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| POSITION           | NUMBER        | NOT NULL | This column holds the position of this item in the argument list, or 0 for a function return value.                                                                                                                                                                             |
| SEQUENCE           | NUMBER        | NOT NULL | Defines the sequential order of the argument. Argument sequence starts from 1. Return type comes first, and each argument will follow.                                                                                                                                          |
| DATA_LEVEL         | NUMBER        | NOT NULL | Nesting depth of the argument for composite types<br><b>Note:</b> Starting with Oracle Database 18c, the value of this columns is always 0, because this view displays only one row for each argument. This view no longer displays multiple rows for composite type arguments. |
| DATA_TYPE          | VARCHAR2(30)  |          | Datatype of the argument                                                                                                                                                                                                                                                        |
| DEFAULTED          | VARCHAR2(1)   |          | Specifies whether or not the argument is defaulted                                                                                                                                                                                                                              |
| DEFAULT_VALUE      | LONG          |          | Reserved for future use                                                                                                                                                                                                                                                         |
| DEFAULT_LENGTH     | NUMBER        |          | Reserved for future use                                                                                                                                                                                                                                                         |
| IN_OUT             | VARCHAR2(9)   |          | Direction of the argument: <ul style="list-style-type: none"> <li>• IN</li> <li>• OUT</li> <li>• IN/OUT</li> </ul>                                                                                                                                                              |
| DATA_LENGTH        | NUMBER        |          | Length of the column (in bytes)                                                                                                                                                                                                                                                 |
| DATA_PRECISION     | NUMBER        |          | Length in decimal digits (NUMBER) or binary digits (FLOAT)                                                                                                                                                                                                                      |
| DATA_SCALE         | NUMBER        |          | Digits to the right of the decimal point in a number                                                                                                                                                                                                                            |
| RADIX              | NUMBER        |          | Argument radix for a number                                                                                                                                                                                                                                                     |
| CHARACTER_SET_NAME | VARCHAR2(44)  |          | Character set name for the argument                                                                                                                                                                                                                                             |
| TYPE_OWNER         | VARCHAR2(128) |          | Owner of the type of the argument                                                                                                                                                                                                                                               |
| TYPE_NAME          | VARCHAR2(128) |          | Name of the type of the argument. If the type is a package local type (that is, it is declared in a package specification), then this column displays the name of the package.                                                                                                  |
| TYPE_SUBNAME       | VARCHAR2(128) |          | Relevant only for package local types. Displays the name of the type declared in the package identified in the TYPE_NAME column.                                                                                                                                                |
| TYPE_LINK          | VARCHAR2(128) |          | Relevant only for package local types when the package identified in the TYPE_NAME column is a remote package. This column displays the database link used to refer to the remote package.                                                                                      |
| TYPE_OBJECT_TYPE   | VARCHAR2(7)   |          | Displays the type of the type described by the TYPE_OWNER, TYPE_NAME, and TYPE_SUBNAME columns. Possible values are: <ul style="list-style-type: none"> <li>• TABLE</li> <li>• VIEW</li> <li>• PACKAGE</li> <li>• TYPE</li> </ul>                                               |
| PLS_TYPE           | VARCHAR2(128) |          | For numeric arguments, the name of the PL/SQL type of the argument. Null otherwise.                                                                                                                                                                                             |
| CHAR_LENGTH        | NUMBER        |          | Character limit for string datatypes                                                                                                                                                                                                                                            |
| CHAR_USED          | VARCHAR2(1)   |          | Indicates whether the byte limit (B) or char limit (C) is official for the string                                                                                                                                                                                               |

| Column        | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                              |
|---------------|---------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ORIGIN_CON_ID | VARCHAR2(256) |      | <p>The ID of the container where the data originates. Possible values include:</p> <ul style="list-style-type: none"> <li>0: This value is used for rows in non-CDBs. This value is not used for CDBs.</li> <li><i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root)</li> </ul> |

#### Note

To list the procedure names in a package, use the ALL\_PROCEduRES view.

## 3.81 ALL\_ASSEMBLIES

ALL\_ASSEMBLIES provides information about assemblies accessible to the current user.

#### Related Views

- DBA\_ASSEMBLIES provides information about all assemblies in the database.
- USER\_ASSEMBLIES provides information about all assemblies owned by the current user. This view does not display the OWNER column.

| Column         | Datatype       | NULL     | Description                                         |
|----------------|----------------|----------|-----------------------------------------------------|
| OWNER          | VARCHAR2(128)  | NOT NULL | Owner of the assembly                               |
| ASSEMBLY_NAME  | VARCHAR2(128)  | NOT NULL | Name of the assembly                                |
| FILE_SPEC      | VARCHAR2(4000) |          | Operating system file specification of the assembly |
| SECURITY_LEVEL | VARCHAR2(10)   |          | The maximum security level of the assembly          |
| IDENTITY       | VARCHAR2(4000) |          | The identity of the assembly                        |
| STATUS         | VARCHAR2(7)    |          | Status of the assembly                              |

## 3.82 ALL\_ASSOCIATIONS

ALL\_ASSOCIATIONS describes user-defined statistics associated with objects accessible to the current user.

### Related Views

- DBA\_ASSOCIATIONS describes all user-defined statistics in the database.
- USER\_ASSOCIATIONS describes user-defined statistics associated with objects owned by the current user.

| Column            | Datatype      | NULL     | Description                                                                                                                                                  |
|-------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OBJECT_OWNER      | VARCHAR2(128) | NOT NULL | Owner of the object for which the association is being defined                                                                                               |
| OBJECT_NAME       | VARCHAR2(128) | NOT NULL | Name of the object for which the association is being defined                                                                                                |
| COLUMN_NAME       | VARCHAR2(128) |          | Column name in the object for which the association is being defined                                                                                         |
| OBJECT_TYPE       | VARCHAR2(9)   |          | Kind of object with which statistics are being associated: column, type, package or function, indextype, or domain index.                                    |
| STATSTYPE_SCHEMA  | VARCHAR2(128) |          | Owner of the statistics type                                                                                                                                 |
| STATSTYPE_NAME    | VARCHAR2(128) |          | Name of statistics type that contains the cost, selectivity or statistics functions                                                                          |
| DEF_SELECTIVITY   | NUMBER        |          | Default selectivity of the object, if any                                                                                                                    |
| DEF_CPU_COST      | NUMBER        |          | Default CPU cost of the object, if any                                                                                                                       |
| DEF_IO_COST       | NUMBER        |          | Default I/O cost of the object, if any                                                                                                                       |
| DEF_NET_COST      | NUMBER        |          | Default networking cost of the object, if any                                                                                                                |
| INTERFACE_VERSION | NUMBER        |          | Identifies the version number of the ODCIStats interface. Value is 1 for statistics type implementing Oracle8i 8.1; 0 for types implementing Oracle9i 9.0.0. |
| MAINTENANCE_TYPE  | VARCHAR2(14)  |          | Specifies whether the object is system-managed or user-managed                                                                                               |

## 3.85 ALL\_ATTRIBUTE\_DIM\_ATTR\_CLS\_AE

ALL\_ATTRIBUTE\_DIM\_ATTR\_CLS\_AE describes the attribute classifications of the attribute dimensions (across all editions) accessible to the current user.

**Related Views**

- DBA\_ATTRIBUTE\_DIM\_ATTR\_CLS\_AE describes the attribute classifications of all attribute dimensions (across all editions) in the database.
- USER\_ATTRIBUTE\_DIM\_ATTR\_CLS\_AE describes the attribute classifications of the attribute dimensions (across all editions) owned by the current user. This view does not display the OWNER column.

| Column         | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                    |

## 3.90 ALL\_ATTRIBUTE\_DIM\_JN\_PTHS

ALL\_ATTRIBUTE\_DIM\_JN\_PTHS is identical to ALL\_ATTRIBUTE\_DIM\_JOIN\_PATHS.

**Note**

This view is available starting with Oracle Database 21c, Release Update 21.5.

**See Also**

["ALL\\_ATTRIBUTE\\_DIM\\_JOIN\\_PATHS"](#)

## 3.91 ALL\_ATTRIBUTE\_DIM\_JN\_PTHS\_AE

ALL\_ATTRIBUTE\_DIM\_JN\_PTHS\_AE describes the join paths for the attribute dimensions (across all editions) accessible to the current user.

**Related Views**

- DBA\_ATTRIBUTE\_DIM\_JN\_PTHS\_AE describes the join paths for all attribute dimensions (across all editions) in the database.
- USER\_ATTRIBUTE\_DIM\_JN\_PTHS\_AE describes the join paths for the attribute dimensions (across all editions) owned by the current user.

### 3.94 ALL\_ATTRIBUTE\_DIM\_KEYS\_AE

ALL\_ATTRIBUTE\_DIM\_KEYS\_AE describes the keys of the attribute dimensions (across all editions) accessible to the current user.

**Related Views**

- DBA\_ATTRIBUTE\_DIM\_KEYS\_AE describes the keys of all attribute dimensions (across all editions) in the database.
- USER\_ATTRIBUTE\_DIM\_KEYS\_AE describes the keys of the attribute dimensions (across all editions) owned by the current user. This view does not display the OWNER column.

| Column         | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                       |

### 3.104 ALL\_ATTRIBUTE\_DIM\_ORD\_ATTRS\_AE

ALL\_ATTRIBUTE\_DIM\_ORD\_ATTRS\_AE describes the order attributes of the attribute dimensions (across all editions) accessible to the current user.

**Related Views**

- DBA\_ATTRIBUTE\_DIM\_ORD\_ATTRS\_AE describes the order attributes of all attribute dimensions (across all editions) in the database.
- USER\_ATTRIBUTE\_DIM\_ORD\_ATTRS\_AE describes the order attributes of the attribute dimensions (across all editions) owned by the current user. This view does not display the OWNER column.

| Column         | Datatype      | NULL     | Description                                                                                                      |

## 3.112 ALL\_AUDIT\_POLICY\_COLUMNS

ALL\_AUDIT\_POLICY\_COLUMNS describes the fine-grained auditing policy columns on the tables and views accessible to the current user.

### Related Views

- DBA\_AUDIT\_POLICY\_COLUMNS describes all fine-grained auditing policy columns in the database.
- USER\_AUDIT\_POLICY\_COLUMNS describes the fine-grained auditing policy columns on the tables and views owned by the current user.

| Column        | Datatype      | NULL | Description                   |
|---------------|---------------|------|-------------------------------|
| OBJECT_SCHEMA | VARCHAR2(128) |      | Owner of the table or view    |
| OBJECT_NAME   | VARCHAR2(128) |      | Name of the table or view     |
| POLICY_NAME   | VARCHAR2(128) |      | Name of the policy            |
| POLICY_COLUMN | VARCHAR2(128) |      | Relevant column of the policy |

## 3.113 ALL\_AW\_PS

ALL\_AW\_PS describes the page spaces in the analytic workspaces accessible to the current user.

### Related Views

- DBA\_AW\_PS describes the page spaces in all analytic workspaces in the database.
- USER\_AW\_PS describes the page spaces in the analytic workspaces owned by the current user. This view does not display the OWNER column.

| Column      | Datatype      | NULL     | Description                                    |
|-------------|---------------|----------|------------------------------------------------|
| OWNER       | VARCHAR2(128) | NOT NULL | Owner of the analytic workspace                |
| AW_NUMBER   | NUMBER        | NOT NULL | Number of the analytic workspace               |
| AW_NAME     | VARCHAR2(128) |          | Name of the analytic workspace                 |
| PSNUMBER    | NUMBER(10)    |          | Number of the page space                       |
| GENERATIONS | NUMBER        |          | Number of active generations in the page space |
| MAXPAGES    | NUMBER        |          | Maximum pages allocated in the page space      |

## 3.115 ALL\_BASE\_TABLE\_MVIEWS

ALL\_BASE\_TABLE\_MVIEWS describes the materialized views using materialized view logs accessible to the current user. A materialized view log can be created for a master, base table,

or master materialized view. Query this view at the master site or the master materialized view site to show one row for each materialized view using a materialized view log.

#### Related Views

- `DBA_BASE_TABLE_MVIEWS` describes all materialized views using materialized view logs in the database.
- `USER_BASE_TABLE_MVIEWS` describes the materialized views using materialized view logs owned by the current user.

| Column                  | Datatype      | NULL     | Description                                                                  |
|-------------------------|---------------|----------|------------------------------------------------------------------------------|
| OWNER                   | VARCHAR2(128) | NOT NULL | Schema in which the master table or the master materialized view was created |
| MASTER                  | VARCHAR2(128) | NOT NULL | Name of the master table or the master materialized view                     |
| MVIEW_LAST_REFRESH_TIME | DATE          | NOT NULL | Date when the materialized view based on the master was last refreshed       |
| MVIEW_ID                | NUMBER(38)    |          | Unique identifier of the materialized view that is based on the master       |

| RULE_SET_OWNER | VARCHAR2(128) |      | Owner of the positive rule set                                                                                                                                                                                           |
| CAPTURE_USER   | VARCHAR2(128) |      | Current user who is enqueueing captured messages                                                                                                                                                                         |
| START_SCN      | NUMBER        |      | System change number (SCN) from which the capture process will start to capture changes. START_SCN is only modified as the result of an ALTER_CAPTURE statement or if the FIRST_SCN moves beyond the existing START_SCN. |

| Column                  | Datatype       | NULL | Description                                                                                                                                                                                                                                         |
|-------------------------|----------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STATUS                  | VARCHAR2(8)    |      | Status of the capture process: <ul style="list-style-type: none"> <li>• DISABLED</li> <li>• ENABLED</li> <li>• ABORTED</li> </ul>                                                                                                                   |
| CAPTURED_SCN            | NUMBER         |      | System change number (SCN) of the last redo log record scanned                                                                                                                                                                                      |
| APPLIED_SCN             | NUMBER         |      | System change number (SCN) of the most recent message dequeued by the relevant apply processes. All changes below this SCN have been dequeued by all apply processes that apply changes captured by this capture process.                           |
| USE_DATABASE_LINK       | VARCHAR2(3)    |      | Indicates whether the source database name is used as the database link to connect to the source database from the downstream database (YES) or not (NO). If the capture process was created at the source database, then this column will be NULL. |
| FIRST_SCN               | NUMBER         |      | System change number (SCN) from which the capture process can be restarted. FIRST_SCN indicates the lowest SCN to which the capture can be repositioned.                                                                                            |
| SOURCE_DATABASE         | VARCHAR2(128)  |      | Global name of the source database                                                                                                                                                                                                                  |
| SOURCE_DBID             | NUMBER         |      | Database ID of the source database                                                                                                                                                                                                                  |
| SOURCE_RESETLOGS_SCN    | NUMBER         |      | Resetlogs system change number (SCN) of the source database                                                                                                                                                                                         |
| SOURCE_RESETLOGS_TIME   | NUMBER         |      | Resetlogs time of the source database                                                                                                                                                                                                               |
| LOGMINER_ID             | NUMBER         |      | Session ID of the Oracle LogMiner session associated with the capture process                                                                                                                                                                       |
| NEGATIVE_RULE_SET_NAME  | VARCHAR2(128)  |      | Name of the negative rule set used by the capture process for filtering                                                                                                                                                                             |
| NEGATIVE_RULE_SET_OWNER | VARCHAR2(128)  |      | Owner of the negative rule set used by the capture process for filtering                                                                                                                                                                            |
| MAX_CHECKPOINT_SCN      | NUMBER         |      | System change number (SCN) at which the last checkpoint was taken by the capture process                                                                                                                                                            |
| REQUIRED_CHECKPOINT_SCN | NUMBER         |      | Lowest checkpoint SCN for which the capture process requires redo information.<br><b>Note:</b> This SCN value does not necessarily correspond with a checkpoint SCN value.                                                                          |
| LOGFILE_ASSIGNMENT      | VARCHAR2(8)    |      | Logfile assignment type for the capture process: <ul style="list-style-type: none"> <li>• IMPLICIT</li> <li>• EXPLICIT</li> </ul>                                                                                                                   |
| STATUS_CHANGE_TIME      | DATE           |      | Time that the STATUS of the capture process was changed                                                                                                                                                                                             |
| ERROR_NUMBER            | NUMBER         |      | Error number if the capture process was terminated                                                                                                                                                                                                  |
| ERROR_MESSAGE           | VARCHAR2(4000) |      | Error message if the capture process was terminated                                                                                                                                                                                                 |
| VERSION                 | VARCHAR2(64)   |      | Version number of the capture process                                                                                                                                                                                                               |

## 3.118 ALL\_CAPTURE\_EXTRA\_ATTRIBUTES

ALL\_CAPTURE\_EXTRA\_ATTRIBUTES displays information about the extra attributes for the capture processes accessible to the current user.

### Related View

DBA\_CAPTURE\_EXTRA\_ATTRIBUTES displays information about the extra attributes for all capture processes in the database.

| Column         | Datatype      | NULL     | Description                                                                    |
|----------------|---------------|----------|--------------------------------------------------------------------------------|
| CAPTURE_NAME   | VARCHAR2(128) | NOT NULL | Name of the capture process                                                    |
| ATTRIBUTE_NAME | VARCHAR2(128) | NOT NULL | Name of the extra attribute                                                    |
| INCLUDE        | VARCHAR2(3)   |          | Indicates whether the extra attribute is included (YES) or not (NO)            |
| ROW_ATTRIBUTE  | VARCHAR2(3)   |          | Indicates whether the extra attribute is a row LCR attribute (YES) or not (NO) |
| DDL_ATTRIBUTE  | VARCHAR2(3)   |          | Indicates whether the extra attribute is a DDL LCR attribute (YES) or not (NO) |

## 3.123 ALL\_CATALOG

ALL\_CATALOG displays the tables, clusters, views, synonyms, and sequences accessible to the current user.

### Related Views

- DBA\_CATALOG displays all tables, clusters, views, synonyms, and sequences in the entire database.
- USER\_CATALOG displays the tables, clusters, views, synonyms, and sequences in the current user's schema. This view does not display the OWNER column.

| Column | Datatype      | NULL     | Description                                                        |
|--------|---------------|----------|--------------------------------------------------------------------|
| OWNER  | VARCHAR2(128) | NOT NULL | Owner of the TABLE, CLUSTER, VIEW, SYNONYM, SEQUENCE, or UNDEFINED |

| Column     | Datatype      | NULL     | Description                                                       |
|------------|---------------|----------|-------------------------------------------------------------------|
| TABLE_NAME | VARCHAR2(128) | NOT NULL | Name of the TABLE, CLUSTER, VIEW, SYNONYM, SEQUENCE, or UNDEFINED |
| TABLE_TYPE | VARCHAR2(11)  |          | Type of the TABLE, CLUSTER, VIEW, SYNONYM, SEQUENCE, or UNDEFINED |

## 3.124 ALL\_CERTIFICATES

ALL\_CERTIFICATES displays the certificates accessible to the current user which are used for signature verification for blockchain tables.

#### Related Views

- DBA\_CERTIFICATES displays all certificates in the database which are used for signature verification for blockchain tables.
- USER\_CERTIFICATES displays the certificates added by the current user which are used for signature verification for blockchain tables. This view does not display the USER\_NAME column.

| Column             | Datatype       | NULL     | Description                                              |
|--------------------|----------------|----------|----------------------------------------------------------|
| CERTIFICATE_ID     | RAW(16)        | NOT NULL | ID for the certificate                                   |
| USER_NAME          | VARCHAR2(128)  | NOT NULL | User who added the certificate                           |
| DISTINGUISHED_NAME | VARCHAR2(2000) |          | Uniquely identifies the entity that owns the certificate |
| CERTIFICATE        | BLOB           |          | Contents of the certificate                              |

## 3.125 ALL\_CLUSTER\_HASH\_EXPRESSIONS

ALL\_CLUSTER\_HASH\_EXPRESSIONS displays hash functions for all hash clusters accessible to the current user.

### Related Views

- DBA\_CLUSTER\_HASH\_EXPRESSIONS displays hash functions for all hash clusters in the database.
- USER\_CLUSTER\_HASH\_EXPRESSIONS displays hash functions for all hash clusters owned by the current user.

| Column          | Datatype      | NULL     | Description                                   |
|-----------------|---------------|----------|-----------------------------------------------|
| OWNER           | VARCHAR2(128) | NOT NULL | Owner of the cluster                          |
| CLUSTER_NAME    | VARCHAR2(128) | NOT NULL | Name of the cluster                           |
| HASH_EXPRESSION | LONG          |          | Text of the hash function of the hash cluster |

## 3.126 ALL\_CLUSTERING\_DIMENSIONS

ALL\_CLUSTERING\_DIMENSIONS describes dimension tables associated with tables with an attribute clustering clause that the user owns or has system privileges for.

### Related Views

- DBA\_CLUSTERING\_DIMENSIONS describes dimension tables associated with all tables with an attribute clustering clause in the database.
- USER\_CLUSTERING\_DIMENSIONS describes dimension tables associated with tables with an attribute clustering clause owned by the user. This view does not display the OWNER column.

| Column          | Datatype      | NULL     | Description                             |
|-----------------|---------------|----------|-----------------------------------------|
| OWNER           | VARCHAR2(128) | NOT NULL | Owner of the attribute clustering table |
| TABLE_NAME      | VARCHAR2(128) | NOT NULL | Name of the attribute clustering table  |
| DIMENSION_OWNER | VARCHAR2(128) | NOT NULL | Owner of the dimension table            |
| DIMENSION_NAME  | VARCHAR2(128) | NOT NULL | Name of the dimension table             |

## 3.127 ALL\_CLUSTERING\_JOINS

ALL\_CLUSTERING\_JOINS describes joins to the dimension tables associated with tables with an attribute clustering clause the user owns or has system privileges for.

**Related Views**

- DBA\_CLUSTERING\_JOINS describes joins to the dimension tables associated with all tables with an attribute clustering clause in the database.
- USER\_CLUSTERING\_JOINS describes joins to the dimension tables associated with tables with an attribute clustering clause owned by the user. This view does not display the OWNER column.

| Column      | Datatype      | NULL     | Description                             |
|-------------|---------------|----------|-----------------------------------------|
| OWNER       | VARCHAR2(128) | NOT NULL | Owner of the attribute clustering table |
| TABLE_NAME  | VARCHAR2(128) | NOT NULL | Name of the attribute clustering table  |
| TAB1_OWNER  | VARCHAR2(128) | NOT NULL | Table 1 owner of the join               |
| TAB1_NAME   | VARCHAR2(128) | NOT NULL | Table 1 name of the join                |
| TAB1_COLUMN | VARCHAR2(128) | NOT NULL | Table 1 column name of the join         |
| TAB2_OWNER  | VARCHAR2(128) | NOT NULL | Table 2 owner of the join               |
| TAB2_NAME   | VARCHAR2(128) | NOT NULL | Table 2 name of the join                |
| TAB2_COLUMN | VARCHAR2(128) | NOT NULL | Table 2 column name of the join         |

## 3.128 ALL\_CLUSTERING\_KEYS

ALL\_CLUSTERING\_KEYS describes clustering keys for tables with an attribute clustering clause accessible to the user.

**Related Views**

- DBA\_CLUSTERING\_KEYS describes clustering keys for all tables with an attribute clustering clause.
- USER\_CLUSTERING\_KEYS describes clustering keys for tables with an attribute clustering clause owned by the user.

| Column        | Datatype      | NULL     | Description                                                     |
|---------------|---------------|----------|-----------------------------------------------------------------|
| OWNER         | VARCHAR2(128) | NOT NULL | Owner of the table on which the clustering clause is defined    |
| TABLE_NAME    | VARCHAR2(128) | NOT NULL | Name of the table on which the clustering clause is defined     |
| DETAIL_OWNER  | VARCHAR2(128) | NOT NULL | Owner of the detailed table contributing to the clustering keys |
| DETAIL_NAME   | VARCHAR2(128) | NOT NULL | Name of the detailed table contributing to the clustering keys  |
| DETAIL_COLUMN | VARCHAR2(128) | NOT NULL | Name of the detail column                                       |
| POSITION      | NUMBER        | NOT NULL | Position of the column in the clustering clause                 |
| GROUPID       | NUMBER        | NOT NULL | Group ID of the column in the clustering clause                 |

| TABLE_NAME      | VARCHAR2(128) | NOT NULL | Name of the table                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| CLUSTERING_TYPE | VARCHAR2(11)  |          | Clustering type: <ul style="list-style-type: none"><li>• INTERLEAVED</li><li>• LINEAR</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                   |
| ON_LOAD         | VARCHAR2(3)   |          | Indicates whether Oracle will cluster data on load (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                              |
| ON_DATAMOVEMENT | VARCHAR2(3)   |          | Indicates whether Oracle will cluster data on data movement, for example, partition move (YES), or not (NO)                                                                                                                                                                                                                                                                                                                                                                                       |
| VALID           | VARCHAR2(3)   |          | Indicates if clustering is valid (YES) or not (NO).<br>For clustering with dimension tables, it is required that the joins of the fact table to the dimensions is via primary key or unique key on the dimension table. Therefore, dimension join keys must have a valid primary key or unique key constraint. If the primary key or unique key constraint is not valid, then clustering will not occur.<br>If there are no joins in the CLUSTERING clause, then the value of this column is YES. |
| WITH_ZONEMAP    | VARCHAR2(3)   |          | Indicates if a zonemap was created with clustering (YES) or not (NO).                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Column             | Datatype     | NULL | Description                                                                     |
|--------------------|--------------|------|---------------------------------------------------------------------------------|
| LAST_LOAD_CLST     | TIMESTAMP(6) |      | Last time the clustering occurred on load                                       |
| LAST_DATAMOVE_CLST | TIMESTAMP(6) |      | Last time the clustering occurred on data movement, for example, partition move |

## 3.130 ALL\_CLUSTERS

ALL\_CLUSTERS describes all clusters accessible to the current user.

#### Related Views

- DBA\_CLUSTERS describes all clusters in the database.
- USER\_CLUSTERS describes all clusters owned by the current user. This view does not display the OWNER column.

| Column          | Datatype      | NULL     | Description                                        |
|-----------------|---------------|----------|----------------------------------------------------|
| OWNER           | VARCHAR2(128) | NOT NULL | Owner of the cluster                               |
| CLUSTER_NAME    | VARCHAR2(128) | NOT NULL | Name of the cluster                                |
| TABLESPACE_NAME | VARCHAR2(30)  | NOT NULL | Name of the tablespace containing the cluster      |
| PCT_FREE        | NUMBER        |          | Minimum percentage of free space in a block        |
| PCT_USED        | NUMBER        |          | Minimum percentage of used space in a block        |
| KEY_SIZE        | NUMBER        |          | Estimated size of cluster key plus associated rows |
| INI_TRANS       | NUMBER        | NOT NULL | Initial number of transactions                     |
| MAX_TRANS       | NUMBER        | NOT NULL | Maximum number of transactions                     |
| INITIAL_EXTENT  | NUMBER        |          | Size of the initial extent in bytes                |
| NEXT_EXTENT     | NUMBER        |          | Size of secondary extents in bytes                 |
| MIN_EXTENTS     | NUMBER        | NOT NULL | Minimum number of extents allowed in the segment   |
| MAX_EXTENTS     | NUMBER        | NOT NULL | Maximum number of extents allowed in the segment   |
| PCT_INCREASE    | NUMBER        |          | Percentage increase in extent size                 |

| Column             | Datatype     | NULL | Description                                                                                                                                                                                                                                 |
|--------------------|--------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FREELISTS          | NUMBER       |      | Number of process freelists allocated to this segment                                                                                                                                                                                       |
| FREELIST_GROUPS    | NUMBER       |      | Number of freelist groups allocated to this segment                                                                                                                                                                                         |
| AVG_BLOCKS_PER_KEY | NUMBER       |      | Number of blocks in the table divided by number of cluster keys                                                                                                                                                                             |
| CLUSTER_TYPE       | VARCHAR2(5)  |      | Type of the cluster: <ul style="list-style-type: none"> <li>• INDEX - B*-Tree index</li> <li>• HASH - Hash</li> </ul>                                                                                                                       |
| FUNCTION           | VARCHAR2(15) |      | If the cluster is a hash cluster, the hash function                                                                                                                                                                                         |
| HASHKEYS           | NUMBER       |      | If the cluster is a hash cluster, the number of hash keys (hash buckets)                                                                                                                                                                    |
| DEGREE             | VARCHAR2(10) |      | Number of threads per instance for scanning the cluster, or DEFAULT                                                                                                                                                                         |
| INSTANCES          | VARCHAR2(10) |      | Number of instances across which the cluster is to be scanned , or DEFAULT                                                                                                                                                                  |
| CACHE              | VARCHAR2(5)  |      | Indicates whether the cluster is to be cached in the buffer cache (Y) or not (N)                                                                                                                                                            |
| BUFFER_POOL        | VARCHAR2(7)  |      | Buffer pool to be used for cluster blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• RECYCLE</li> <li>• NULL</li> </ul>                                                                                   |
| FLASH_CACHE        | VARCHAR2(7)  |      | Database Smart Flash Cache hint to be used for cluster blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> Solaris and Oracle Linux functionality only.                                     |
| CELL_FLASH_CACHE   | VARCHAR2(7)  |      | Cell flash cache hint to be used for cluster blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> <b>See Also:</b> Oracle Exadata Storage Server Software documentation for more information |
| SINGLE_TABLE       | VARCHAR2(5)  |      | Indicates whether this is a single-table cluster (Y) or not (N)                                                                                                                                                                             |
| DEPENDENCIES       | VARCHAR2(8)  |      | Indicates whether row-level dependency tracking is enabled (ENABLED) or disabled (DISABLED)                                                                                                                                                 |

## 3.131 ALL\_CODE\_ROLE\_PRIVS

ALL\_CODE\_ROLE\_PRIVS describes all the roles that are associated with program units owned or accessible by the current user.

### Related Views

- DBA\_CODE\_ROLE\_PRIVS describes all the roles that are associated with program units in the database.
- USER\_CODE\_ROLE\_PRIVS describes all the roles that are associated with program units owned by current user. This view does not display the OWNER column.

| Column      | Datatype      | NULL     | Description                         |
|-------------|---------------|----------|-------------------------------------|
| OWNER       | VARCHAR2(128) | NOT NULL | Username of the owner of the object |
| OBJECT_NAME | VARCHAR2(128) | NOT NULL | Name of the object                  |
| OBJECT_TYPE | VARCHAR2(9)   |          | Type of the object                  |
| ROLE        | VARCHAR2(128) | NOT NULL | The role associated with the object |

### 3.134 ALL\_COL\_PRIVS

ALL\_COL\_PRIVS describes the following types of grants:

- Column object grants for which the current user is the object owner, grantor, or grantee
- Column object grants for which an enabled role or PUBLIC is the grantee

**Related Views**

- DBA\_COL\_PRIVS describes all column object grants in the database.
- USER\_COL\_PRIVS describes the column object grants for which the current user is the object owner, grantor, or grantee.

| Column       | Datatype      | NULL | Description                                                                                                                                                                                                                                            |
|--------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GRANTOR      | VARCHAR2(128) |      | Name of the user who performed the grant                                                                                                                                                                                                               |
| GRANTEE      | VARCHAR2(128) |      | Name of the user or role to whom access was granted                                                                                                                                                                                                    |
| TABLE_SCHEMA | VARCHAR2(128) |      | Schema of the object                                                                                                                                                                                                                                   |
| TABLE_NAME   | VARCHAR2(128) |      | Name of the object                                                                                                                                                                                                                                     |
| COLUMN_NAME  | VARCHAR2(128) |      | Name of the column                                                                                                                                                                                                                                     |
| PRIVILEGE    | VARCHAR2(40)  |      | Privilege on the column: <ul style="list-style-type: none"><li>• INSERT</li><li>• REFERENCES</li><li>• UPDATE</li></ul>                                                                                                                                |
| GRANTABLE    | VARCHAR2(3)   |      | Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)                                                                                                                                                                    |
| COMMON       | VARCHAR2(3)   |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"><li>• YES if the privilege was granted commonly (CONTAINER=ALL was used)</li><li>• NO if the privilege was granted locally (CONTAINER=ALL was not used)</li></ul> |
| INHERITED    | VARCHAR2(3)   |      | Indicates whether the privilege grant was inherited from another container (YES) or not (NO)                                                                                                                                                           |

### 3.136 ALL\_COL\_PRIVS\_RECD

ALL\_COL\_PRIVS\_RECD describes the following types of grants:

- Column object grants for which the current user is the grantee
- Column object grants for which an enabled role or PUBLIC is the grantee

**Related View**

USER\_COL\_PRIVS\_RECD describes the column object grants for which the current user is the grantee. This view does not display the GRANTEE column.

| Column      | Datatype      | NULL | Description                                                                                                                                                                                                                                               |
|-------------|---------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GRANTEE     | VARCHAR2(128) |      | Name of the user or role to whom access was granted                                                                                                                                                                                                       |
| OWNER       | VARCHAR2(128) |      | Owner of the object                                                                                                                                                                                                                                       |
| TABLE_NAME  | VARCHAR2(128) |      | Name of the object                                                                                                                                                                                                                                        |
| COLUMN_NAME | VARCHAR2(128) |      | Name of the column                                                                                                                                                                                                                                        |
| GRANTOR     | VARCHAR2(128) |      | Name of the user who performed the grant                                                                                                                                                                                                                  |
| PRIVILEGE   | VARCHAR2(40)  |      | Privilege on the column: <ul style="list-style-type: none"> <li>• INSERT</li> <li>• REFERENCES</li> <li>• UPDATE</li> </ul>                                                                                                                               |
| GRANTABLE   | VARCHAR2(3)   |      | Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)                                                                                                                                                                       |
| COMMON      | VARCHAR2(3)   |      | Indicates how the grant was made. Possible values: <ul style="list-style-type: none"> <li>• YES if the privilege was granted commonly (CONTAINER=ALL was used)</li> <li>• NO if the privilege was granted locally (CONTAINER=ALL was not used)</li> </ul> |
| INHERITED   | VARCHAR2(3)   |      | Indicates whether the privilege grant was inherited from another container (YES) or not (NO)                                                                                                                                                              |

## 3.137 ALL\_COLL\_TYPES

ALL\_COLL\_TYPES describes all named collection types (varrays and nested tables) accessible to the current user.

### Related Views

- DBA\_COLL\_TYPES describes all named collection types in the database.
- USER\_COLL\_TYPES describes all named collection types owned by the current user. This view does not display the OWNER column.

| Column          | Datatype      | NULL     | Description                                                                                                   |
|-----------------|---------------|----------|---------------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128) | NOT NULL | Owner of the collection                                                                                       |
| TYPE_NAME       | VARCHAR2(128) | NOT NULL | Name of the collection                                                                                        |
| COLL_TYPE       | VARCHAR2(128) | NOT NULL | Description of the collection, such as VARYING ARRAY, [nested] TABLE                                          |
| UPPER_BOUND     | NUMBER        |          | For varrays only, maximum size                                                                                |
| ELEM_TYPE_MOD   | VARCHAR2(7)   |          | Type modifier of the element                                                                                  |
| ELEM_TYPE_OWNER | VARCHAR2(128) |          | Owner of the type upon which the collection is based. This value is useful primarily for a user-defined type. |

| Column             | Datatype      | NULL | Description                                                                                                                                                   |
|--------------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ELEM_TYPE_NAME     | VARCHAR2(128) |      | Name of the data type or user-defined type upon which the collection is based                                                                                 |
| LENGTH             | NUMBER        |      | Length of CHAR elements or maximum length of VARCHAR or VARCHAR2 elements                                                                                     |
| PRECISION          | NUMBER        |      | Decimal precision of NUMBER or DECIMAL elements; binary precision of FLOAT elements                                                                           |
| SCALE              | NUMBER        |      | Scale of NUMBER or DECIMAL elements                                                                                                                           |
| CHARACTER_SET_NAME | VARCHAR2(44)  |      | Name of the character set (CHAR_CS   NCHAR_CS)                                                                                                                |
| ELEM_STORAGE       | VARCHAR2(7)   |      | Obsolete column                                                                                                                                               |
| NULLS_STORED       | VARCHAR2(3)   |      | Obsolete column                                                                                                                                               |
| CHAR_USED          | VARCHAR2(1)   |      | Indicates whether the attribute uses BYTE length semantics (B) or CHAR length semantics (C). For NCHAR and NVARCHAR2 attribute types, this value is always C. |

## 3.139 ALL\_CONS\_OBJ\_COLUMNS

ALL\_CONS\_OBJ\_COLUMNS displays information about the types that object columns (or attributes) or collection elements have been constrained to, in the tables accessible to the current user.

**Related Views**

- DBA\_CONS\_OBJ\_COLUMNS displays information about the types that object columns (or attributes) or collection elements have been constrained to, in all tables in the database.
- USER\_CONS\_OBJ\_COLUMNS displays information about the types that object columns (or attributes) or collection elements have been constrained to, in the tables owned by the current user. This view does not display the OWNER column.

| Column          | Datatype       | NULL | Description                                                                          |
|-----------------|----------------|------|--------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128)  |      | Owner of the table                                                                   |
| TABLE_NAME      | VARCHAR2(128)  |      | Name of the table containing the object column or attribute                          |
| COLUMN_NAME     | VARCHAR2(4000) |      | Fully qualified name of the object column or attribute                               |
| CONS_TYPE_OWNER | VARCHAR2(128)  |      | Owner of the type that the column (or element) is constrained to                     |
| CONS_TYPE_NAME  | VARCHAR2(128)  |      | Name of the type that the column (or element) is constrained to                      |
| CONS_TYPE_ONLY  | VARCHAR2(15)   |      | Indicates whether the column (or element) is constrained to ONLY type (Y) or not (N) |

## 3.141 ALL\_CONTEXT

ALL\_CONTEXT describes all context namespaces in the current session for which attributes and values have been specified using the DBMS\_SESSION.SET\_CONTEXT procedure. This view does not display the TYPE and ORIGIN\_CON\_ID columns.

**Related View**

DBA\_CONTEXT describes all context namespaces defined in the database, regardless whether any attributes have been specified for them using the DBMS\_SESSION.SET\_CONTEXT procedure.

| Column    | Datatype      | NULL     | Description                                                                         |
|-----------|---------------|----------|-------------------------------------------------------------------------------------|
| NAMESPACE | VARCHAR2(128) | NOT NULL | Name of the context namespace                                                       |
| SCHEMA    | VARCHAR2(128) | NOT NULL | Schema name of the designated package that can set attributes using this namespace  |
| PACKAGE   | VARCHAR2(128) | NOT NULL | Package name of the designated package that can set attributes using this namespace |

## 3.142 ALL\_CREDENTIALS

ALL\_CREDENTIALS lists all credentials visible to the user.

**Related Views**

- DBA\_CREDENTIALS lists all credentials in the database.
- USER\_CREDENTIALS lists credentials owned by the current user. This view does not display the OWNER column.

| Column          | Datatype      | NULL     | Description                                                                                                 |
|-----------------|---------------|----------|-------------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128) | NOT NULL | Owner of the credential                                                                                     |
| CREDENTIAL_NAME | VARCHAR2(128) | NOT NULL | Name of the credential                                                                                      |
| USERNAME        | VARCHAR2(128) |          | Name of the user that will be used to log in to the remote database or the remote or local operating system |

| Column         | Datatype       | NULL | Description                                                        |
|----------------|----------------|------|--------------------------------------------------------------------|
| WINDOWS_DOMAIN | VARCHAR2(30)   |      | For a Windows target, the Windows domain to use when logging in    |
| COMMENTS       | VARCHAR2(4000) |      | Comments on the credential                                         |
| ENABLED        | VARCHAR2(5)    |      | Indicates whether this credential is enabled (TRUE) or not (FALSE) |

#### Note

DBMS\_CREDENTIAL lists credentials that can be used to run external procedures, or by DBMS\_SCHEDULER for remote or external jobs, or for storing or retrieving files from the operating system.

If a credential is disabled, then any of the actions above that attempts to use the credential will fail.

## 3.143 ALL\_CUBE\_ATTR\_VISIBILITY

ALL\_CUBE\_ATTR\_VISIBILITY describes the OLAP attributes visible for the dimensions, hierarchies, and levels accessible to the current user.

#### Related Views

- DBA\_CUBE\_ATTR\_VISIBILITY describes all OLAP attributes visible for the dimensions, hierarchies, and levels in the database.
- USER\_CUBE\_ATTR\_VISIBILITY describes the OLAP attributes visible for the dimensions, hierarchies, and levels owned by the current user. This view does not display the OWNER column.

| Column         | Datatype      | NULL | Description                                                                  |
|----------------|---------------|------|------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128) |      | Owner of the cube dimension                                                  |
| DIMENSION_NAME | VARCHAR2(128) |      | Name of a cube dimension (such as TIME)                                      |
| ATTRIBUTE_NAME | VARCHAR2(128) |      | Name of an attribute of the dimension (such as LONG_DESCRIPTION or END_DATE) |
| HIERARCHY_NAME | VARCHAR2(128) |      | Name of a hierarchy for the dimension (such as CALENDAR)                     |

| Column     | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|------------|---------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LEVEL_NAME | VARCHAR2(128) |      | Name of the dimension level (such as MONTH)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| FROM_TYPE  | VARCHAR2(10)  |      | Identifies the dimension type that the current row derives the attribute visibility from. Possible values: <ul style="list-style-type: none"> <li>DIMENSION - Derives the attribute visibility from itself.</li> <li>HIERARCHY - Derives the attribute visibility from the VisibleAttributes explicitly set on the associated DIMENSION or itself.</li> <li>DIM_LEVEL - Derives the attribute visibility from the VisibleAttributes explicitly set on the associated DIMENSION or itself.</li> <li>HIER_LEVEL - Derives the attribute visibility from the VisibleAttributes explicitly set on the associated DIMENSION, HIERARCHY, DIM_LEVEL, or itself.</li> </ul> |
| T0_TYPE    | VARCHAR2(10)  |      | Identifies the dimension type for the current row. Possible values: <ul style="list-style-type: none"> <li>DIMENSION - When the T0_TYPE is DIMENSION, then only the DIMENSION_NAME is populated.</li> <li>HIERARCHY - When the T0_TYPE is HIERARCHY, then only the DIMENSION_NAME and HIERARCHY_NAME are populated.</li> <li>DIM_LEVEL - When the T0_TYPE is DIM_LEVEL, then only the DIMENSION_NAME and LEVEL_NAME are populated.</li> <li>HIER_LEVEL - When the T0_TYPE is HIER_LEVEL, then only the HIERARCHY_NAME and LEVEL_NAME are populated.</li> </ul>                                                                                                      |

## 3.144 ALL\_CUBE\_ATTRIBUTES

ALL\_CUBE\_ATTRIBUTES describes the attributes for the OLAP cube dimensions accessible to the current user.

#### Related Views

- DBA\_CUBE\_ATTRIBUTES describes the attributes for all OLAP cube dimensions in the database.
- USER\_CUBE\_ATTRIBUTES describes the attributes for the OLAP cube dimensions owned by the current user. This view does not display the OWNER column.

| Column | Datatype      | NULL     | Description                 |
|--------|---------------|----------|-----------------------------|
| OWNER  | VARCHAR2(128) | NOT NULL | Owner of the cube dimension |

| Column                | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------|----------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DIMENSION_NAME        | VARCHAR2(128)  | NOT NULL | Name of a cube dimension (such as TIME)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| ATTRIBUTE_NAME        | VARCHAR2(128)  | NOT NULL | Name of an attribute of the dimension (such as LONG_DESCRIPTION or END_DATE)                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| ATTRIBUTE_ID          | NUMBER         | NOT NULL | ID of the attribute of the dimension                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| TARGET_DIMENSION_NAME | VARCHAR2(128)  |          | Name of the target dimension of the attribute                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| ATTRIBUTE_ROLE        | VARCHAR2(17)   |          | Special role this attribute plays; NULL if none: <ul style="list-style-type: none"> <li>• SHORT_DESCRIPTION</li> <li>• LONG_DESCRIPTION</li> <li>• DESCRIPTION</li> <li>• TIME_SPAN</li> <li>• END_DATE</li> </ul>                                                                                                                                                                                                                                                                                                                |
| DESCRIPTION           | NVARCHAR2(300) |          | Description of the attribute in the session language                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| ATTRIBUTE_GROUP_NAME  | VARCHAR2(200)  |          | Name of the attribute group                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| DATA_TYPE             | VARCHAR2(106)  |          | Data type of the attribute, (such as VARCHAR2 or FLOAT)                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| DATA_LENGTH           | NUMBER         | NOT NULL | Length of a text data type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| DATA_PRECISION        | NUMBER         |          | Precision of a numeric data type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| DATA_SCALE            | NUMBER         |          | Scale of a numeric data type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| CREATE_INDEX          | VARCHAR2(3)    |          | Create index flag of the OLAP attribute. Possible values: <ul style="list-style-type: none"> <li>• YES: The attribute is represented in the AW as a relation.<br/>Setting CreateIndex="True" in the metadata guarantees that it will be represented in the AW as a relation.</li> <li>• NO: The attribute is not represented in the AW as a relation.<br/>Setting CreateIndex="False" in the metadata does not guarantee that it will be represented in the AW as a variable; the system will make that determination.</li> </ul> |
| IS_MULTI_LINGUAL      | VARCHAR2(3)    |          | Shows the setting for the IsMultiLingual flag of the OLAP Attribute. Possible values: <ul style="list-style-type: none"> <li>• YES: The attribute is set as multilingual.<br/>Setting IsMultiLingual to True in the metadata means that the attribute can have a value per language instead of a single value.</li> <li>• NO: The attribute is not set as multilingual.<br/>Setting IsMultiLingual to False in the metadata means that the attribute has only one value, independent of language.</li> </ul>                      |

## 3.155 ALL\_CUBE\_HIER\_VIEWS

ALL\_CUBE\_HIER\_VIEWS describes the hierarchies for the OLAP cube dimensions accessible to the current user.

#### Related Views

- DBA\_CUBE\_HIER\_VIEWS describes the hierarchies for all OLAP cube dimensions in the database.
- USER\_CUBE\_HIER\_VIEWS describes the hierarchies for the OLAP cube dimensions owned by the current user. This view does not display the OWNER column.

| Column         | Datatype      | NULL     | Description                                                  |
|----------------|---------------|----------|--------------------------------------------------------------|
| OWNER          | VARCHAR2(128) | NOT NULL | Owner of the cube dimension                                  |
| DIMENSION_NAME | VARCHAR2(128) | NOT NULL | Name of a cube dimension, such as TIME                       |
| HIERARCHY_NAME | VARCHAR2(128) | NOT NULL | Name of a hierarchy for the cube dimension, such as CALENDAR |
| VIEW_NAME      | VARCHAR2(128) | NOT NULL | Name of a view of the hierarchy, such as TIME_CALENDAR_VIEW  |

## 3.158 ALL\_CUBE\_NAMED\_BUILD\_SPECS

ALL\_CUBE\_NAMED\_BUILD\_SPECS describes the OLAP cube named build specifications in the database that are accessible by the user.

**Related Views**

- DBA\_CUBE\_NAMED\_BUILD\_SPECS describes the OLAP cube named build specifications in the database.
- USER\_CUBE\_NAMED\_BUILD\_SPECS describes the OLAP cube named build specifications in the database that are owned by the current user. This view does not display the OWNER column.

| Column           | Datatype      | NULL     | Description                                     |
|------------------|---------------|----------|-------------------------------------------------|
| OWNER            | VARCHAR2(128) | NOT NULL | Owner of the OLAP named build specification     |
| CUBE_NAME        | VARCHAR2(128) | NOT NULL | Name of the OLAP cube                           |
| NAMED_BUILD_SPEC | CLOB          |          | Name of the OLAP cube named build specification |

## 3.159 ALL\_CUBE\_SUB\_PARTITION\_LEVELS

ALL\_CUBE\_SUB\_PARTITION\_LEVELS describes the OLAP secondary partition levels in the database that are accessible by the user.

**Related Views**

- DBA\_CUBE\_SUB\_PARTITION\_LEVELS describes the OLAP secondary partition levels in the database.
- USER\_CUBE\_SUB\_PARTITION\_LEVELS describes the OLAP secondary partition levels in the database that are owned by the current user. This view does not display the OWNER column.

| Column                   | Datatype      | NULL | Description                                            |
|--------------------------|---------------|------|--------------------------------------------------------|
| OWNER                    | VARCHAR2(128) |      | Owner of the OLAP secondary partition level            |
| CUBE_NAME                | VARCHAR2(128) |      | Name of the OLAP cube                                  |
| SUB_PARTITION_LEVEL_NAME | VARCHAR2(200) |      | Name of the secondary partition level of the OLAP cube |

| Column                    | Datatype      | NULL | Description                                                                                 |
|---------------------------|---------------|------|---------------------------------------------------------------------------------------------|
| PRECOMPUTE_PERCENT        | NUMBER        |      | Precompute percent of the secondary partition level of the OLAP cube                        |
| PARTITION_DIMENSION_NAME  | VARCHAR2(128) |      | Name of the cube dimension for which there is a secondary partition level on the OLAP cube  |
| PARTITION_HIERARCHY_NAME  | VARCHAR2(128) |      | Name of the hierarchy for which there is a secondary partition level on the OLAP cube       |
| PARTITION_LEVEL_NAME      | VARCHAR2(128) |      | Name of the hierarchy level for which there is a secondary partition level on the OLAP cube |
| SUB_PARTITION_LEVEL_ORDER | NUMBER        |      | Order number of the secondary partition level on the OLAP cube                              |

## 3.160 ALL\_CUBE\_VIEW\_COLUMNS

ALL\_CUBE\_VIEW\_COLUMNS describes the columns of the relational views of the OLAP cubes accessible to the current user.

#### Related Views

- DBA\_CUBE\_VIEW\_COLUMNS describes the columns of relational views of all OLAP cubes in the database.
- USER\_CUBE\_VIEW\_COLUMNS describes the columns of relational views of OLAP cubes owned by the current user. This view does not display the OWNER column.

| Column      | Datatype      | NULL | Description                                                                                    |
|-------------|---------------|------|------------------------------------------------------------------------------------------------|
| OWNER       | VARCHAR2(128) |      | Owner of the cube                                                                              |
| CUBE_NAME   | VARCHAR2(128) |      | Name of a cube, such as UNITS_CUBE                                                             |
| VIEW_NAME   | VARCHAR2(128) |      | Name of a view of the cube, such as PRODUCT_VIEW                                               |
| COLUMN_NAME | VARCHAR2(128) |      | Name of a column in the view, such as DIM_KEY or LEVEL_NAME                                    |
| COLUMN_TYPE | VARCHAR2(7)   |      | Type of the column: <ul style="list-style-type: none"> <li>• MEASURE</li> <li>• KEY</li> </ul> |
| OBJECT_NAME | VARCHAR2(128) |      | Name of the measure or dimension represented in the column                                     |

## 3.161 ALL\_CUBE\_VIEWS

ALL\_CUBE\_VIEWS describes the relational views of the OLAP cubes accessible to the current user.

**Related Views**

- DBA\_CUBE\_VIEWS describes the relational views of all OLAP cubes in the database.
- USER\_CUBE\_VIEWS describes the relational views of the OLAP cubes owned by the current user. This view does not display the OWNER column.

| Column    | Datatype      | NULL     | Description                                         |
|-----------|---------------|----------|-----------------------------------------------------|
| OWNER     | VARCHAR2(128) | NOT NULL | Owner of the cube                                   |
| CUBE_NAME | VARCHAR2(128) | NOT NULL | Name of a cube, such as UNITS_CUBE                  |
| VIEW_NAME | VARCHAR2(128) | NOT NULL | Name of a view of the cube, such as UNITS_CUBE_VIEW |

## 3.162 ALL\_CUBES

ALL\_CUBES describes the OLAP cubes accessible to the current user.

**Related Views**

- DBA\_CUBES describes all OLAP cubes in the database.
- USER\_CUBES describes the OLAP cubes owned by the current user. This view does not display the OWNER column.

| Column                | Datatype       | NULL     | Description                                                           |
|-----------------------|----------------|----------|-----------------------------------------------------------------------|
| OWNER                 | VARCHAR2(128)  |          | Owner of the cube                                                     |
| CUBE_NAME             | VARCHAR2(128)  | NOT NULL | Name of a cube, such as UNITS_CUBE                                    |
| CUBE_ID               | NUMBER         | NOT NULL | ID of a cube                                                          |
| AW_NAME               | VARCHAR2(128)  |          | Name of the analytic workspace that contains the cube, such as GLOBAL |
| CONSISTENT_SOLVE_SPEC | CLOB           |          | Default aggregation rules for the cube                                |
| DESCRIPTION           | NVARCHAR2(300) |          | Description of the cube in the session language                       |

| Column                   | Datatype      | NULL | Description                                                                                                                                                                |
|--------------------------|---------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SPARSE_TYPE              | VARCHAR2(200) |      | Text value indicating the type of sparsity for the OLAP cube                                                                                                               |
| PRECOMPUTE_CONDITION     | CLOB          |      | Condition syntax representing the precompute condition of the OLAP cube                                                                                                    |
| PRECOMPUTE_PERCENT       | NUMBER        |      | Percentage of aggregate data values that are calculated and stored during data maintenance. If the cube is partitioned, then this percentage is for the bottom partitions. |
| PRECOMPUTE_PERCENT_TOP   | NUMBER        |      | Percentage of aggregate data values in the top partition that are calculated and stored during data maintenance                                                            |
| PARTITION_DIMENSION_NAME | VARCHAR2(128) |      | Name of the dimension used to partition the cube, such as TIME                                                                                                             |
| PARTITION_HIERARCHY_NAME | VARCHAR2(128) |      | Name of the dimension hierarchy used to partition the cube, such as CALENDAR                                                                                               |
| PARTITION_LEVEL_NAME     | VARCHAR2(128) |      | Name of the level used to partition the cube, such as QUARTER                                                                                                              |
| REFRESH_MVIEW_NAME       | VARCHAR2(200) |      | Name of the refresh materialized view for the OLAP cube                                                                                                                    |
| REWRITE_MVIEW_NAME       | VARCHAR2(200) |      | Name of the rewrite materialized view for the OLAP cube                                                                                                                    |
| DEFAULT_BUILD_SPEC       | CLOB          |      | The default build specification for the OLAP cube                                                                                                                          |
| MEASURE_STORAGE          | VARCHAR2(200) |      | The measure storage for the OLAP cube. Possible values: <ul style="list-style-type: none"> <li>• INDEPENDENT</li> <li>• SHARED</li> </ul>                                  |
| SQL_CUBE_STORAGE_TYPE    | CLOB          |      | The SQL cube storage type for the OLAP cube. This value represents a SQL data type.                                                                                        |
| CUBE_STORAGE_TYPE        | VARCHAR2(200) |      | The cube storage type for the OLAP cube. This value represents a DML data type.                                                                                            |

## 3.164 ALL\_DEF\_AUDIT\_OPTS

ALL\_DEF\_AUDIT\_OPTS contains default object-auditing options that will be applied when objects are created.

The output for each column takes one of the following forms:

- -/-: no default auditing
- S/-: auditing whenever successful
- -/S: auditing whenever not successful

**Note**

This view is relevant when using traditional auditing. Traditional auditing is deprecated in Oracle Database 21c. Oracle recommends that you instead use unified auditing, which enables selective and more effective auditing inside Oracle Database.

- See *Oracle Database Security Guide* for more information about unified auditing.
- See *Oracle Database Upgrade Guide* for more information about migrating to unified auditing.

This view is populated only in an Oracle Database where unified auditing is not enabled. When unified auditing is enabled in Oracle Database, the audit records are populated in the new audit trail and can be viewed from UNIFIED\_AUDIT\_TRAIL.

| Column | Datatype    | NULL | Description                                           |
|--------|-------------|------|-------------------------------------------------------|
| ALT    | VARCHAR2(3) |      | Auditing ALTER WHENEVER SUCCESSFUL / UNSUCCESSFUL     |
| AUD    | VARCHAR2(3) |      | Auditing AUDIT WHENEVER SUCCESSFUL / UNSUCCESSFUL     |
| COM    | VARCHAR2(3) |      | Auditing COMMENT WHENEVER SUCCESSFUL / UNSUCCESSFUL   |
| DEL    | VARCHAR2(3) |      | Auditing DELETE WHENEVER SUCCESSFUL / UNSUCCESSFUL    |
| GRA    | VARCHAR2(3) |      | Auditing GRANT WHENEVER SUCCESSFUL / UNSUCCESSFUL     |
| IND    | VARCHAR2(3) |      | Auditing INDEX WHENEVER SUCCESSFUL / UNSUCCESSFUL     |
| INS    | VARCHAR2(3) |      | Auditing INSERT WHENEVER SUCCESSFUL / UNSUCCESSFUL    |
| LOC    | VARCHAR2(3) |      | Auditing LOCK WHENEVER SUCCESSFUL / UNSUCCESSFUL      |
| REN    | VARCHAR2(3) |      | Auditing RENAME WHENEVER SUCCESSFUL / UNSUCCESSFUL    |
| SEL    | VARCHAR2(3) |      | Auditing SELECT WHENEVER SUCCESSFUL / UNSUCCESSFUL    |
| UPD    | VARCHAR2(3) |      | Auditing UPDATE WHENEVER SUCCESSFUL / UNSUCCESSFUL    |
| EXE    | VARCHAR2(3) |      | Auditing EXECUTE WHENEVER SUCCESSFUL / UNSUCCESSFUL   |
| FBK    | VARCHAR2(3) |      | Auditing FLASHBACK WHENEVER SUCCESSFUL / UNSUCCESSFUL |
| REA    | VARCHAR2(3) |      | Auditing READ WHENEVER SUCCESSFUL / UNSUCCESSFUL      |

## 3.165 ALL\_DEPENDENCIES

ALL\_DEPENDENCIES describes dependencies between procedures, packages, functions, package bodies, and triggers accessible to the current user, including dependencies on views created without any database links. This view does not display the SCHEMAID column.

### Related Views

- DBA\_DEPENDENCIES describes all dependencies between objects in the database. This view does not display the SCHEMAID column.

- USER\_DEPENDENCIES describes dependencies between objects in the current user's schema. This view does not display the OWNER column.

| Column               | Datatype      | NULL     | Description                                                              |
|----------------------|---------------|----------|--------------------------------------------------------------------------|
| OWNER                | VARCHAR2(128) | NOT NULL | Owner of the object                                                      |
| NAME                 | VARCHAR2(128) | NOT NULL | Name of the object                                                       |
| TYPE                 | VARCHAR2(18)  |          | Type of the object                                                       |
| REFERENCED_OWNER     | VARCHAR2(128) |          | Owner of the referenced object (remote owner if remote object)           |
| REFERENCED_NAME      | VARCHAR2(128) |          | Name of the referenced object                                            |
| REFERENCED_TYPE      | VARCHAR2(18)  |          | Type of the referenced object                                            |
| REFERENCED_LINK_NAME | VARCHAR2(128) |          | Name of the link to the parent object (if remote)                        |
| DEPENDENCY_TYPE      | VARCHAR2(4)   |          | Indicates whether the dependency is a REF dependency (REF) or not (HARD) |

## 3.166 ALL\_DEQUEUE\_QUEUES

ALL\_DEQUEUE\_QUEUES describes all queues on which the current user has dequeue privileges. If the user has any Advanced Queuing system privileges, such as DEQUEUE ANY QUEUE or MANAGE ANY QUEUE, then this view describes all queues in the database.

| Column          | Datatype      | NULL     | Description                                                                                                                     |
|-----------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128) | NOT NULL | Owner of the queue                                                                                                              |
| NAME            | VARCHAR2(128) | NOT NULL | Name of the queue                                                                                                               |
| QUEUE_TABLE     | VARCHAR2(128) | NOT NULL | Name of the table in which the queue data resides                                                                               |
| QID             | NUMBER        | NOT NULL | Object number of the queue                                                                                                      |
| QUEUE_TYPE      | VARCHAR2(20)  |          | Type of the queue. Possible values: <ul style="list-style-type: none"> <li>• EXCEPTION_QUEUE</li> <li>• NORMAL_QUEUE</li> </ul> |
| MAX_RETRIES     | NUMBER        |          | Maximum number of retries allowed when dequeuing from the queue                                                                 |
| RETRY_DELAY     | NUMBER        |          | Time interval between retries                                                                                                   |
| ENQUEUE_ENABLED | VARCHAR2(7)   |          | Indicates whether the queue is enabled for enqueue ( YES ) or not ( NO )                                                        |
| DEQUEUE_ENABLED | VARCHAR2(7)   |          | Indicates whether the queue is enabled for dequeue ( YES ) or not ( NO )                                                        |
| RETENTION       | VARCHAR2(40)  |          | Time interval that processed messages are retained in the queue, or FOREVER                                                     |
| USER_COMMENT    | VARCHAR2(50)  |          | User-specified comment                                                                                                          |
| NETWORK_NAME    | VARCHAR2(512) |          | Network name of the queue service                                                                                               |

| Column                      | Datatype     | NULL | Description                                                                                                                                                      |
|-----------------------------|--------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SHARDED                     | VARCHAR2(5)  |      | TRUE if the queue is sharded, FALSE otherwise                                                                                                                    |
| QUEUE_CATEGORY <sup>1</sup> | VARCHAR2(25) |      | Queue category. Possible values: <ul style="list-style-type: none"> <li>• Classic Queue</li> <li>• Sharded Queue</li> <li>• Transactional Event Queue</li> </ul> |
| RECIPIENTS <sup>1</sup>     | VARCHAR2(8)  |      | SINGLE or MULTIPLE recipients                                                                                                                                    |

<sup>1</sup> This column is available starting with Oracle Database 21c.

## 3.167 ALL\_DIM\_ATTRIBUTES

ALL\_DIM\_ATTRIBUTES describes the relationship between a dimension level and a functionally dependent column. The level columns and the dependent column must be in the same table.

### Related Views

- DBA\_DIM\_ATTRIBUTES describes all such dimension relationships in the database.
- USER\_DIM\_ATTRIBUTES describes all such dimension attributes in the current user's schema.

| Column         | Datatype      | NULL     | Description                                                                              |
|----------------|---------------|----------|------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128) | NOT NULL | Owner of the dimension                                                                   |
| DIMENSION_NAME | VARCHAR2(128) | NOT NULL | Name of the dimension                                                                    |
| ATTRIBUTE_NAME | VARCHAR2(128) |          | Name of the attribute                                                                    |
| LEVEL_NAME     | VARCHAR2(128) |          | Name of the hierarchy level                                                              |
| COLUMN_NAME    | VARCHAR2(128) | NOT NULL | Dependent column name                                                                    |
| INFERRED       | CHAR(1)       |          | Indicates whether the attribute is inferred from a JOIN KEY specification (Y) or not (N) |

## 3.168 ALL\_DIM\_CHILD\_OF

ALL\_DIM\_CHILD\_OF describes hierarchical relationships of 1 to  $n$  between the pairs of levels in the dimensions accessible to the current user.

### Related Views

- DBA\_DIM\_CHILD\_OF describes all such hierarchical relationships in the database.
- USER\_DIM\_CHILD\_OF describes all such hierarchical attributes in the current user's schema.

| Column            | Datatype      | NULL     | Description                                                                     |
|-------------------|---------------|----------|---------------------------------------------------------------------------------|
| OWNER             | VARCHAR2(128) | NOT NULL | Owner of the dimension                                                          |
| DIMENSION_NAME    | VARCHAR2(128) | NOT NULL | Name of the dimension                                                           |
| HIERARCHY_NAME    | VARCHAR2(128) |          | Hierarchy name                                                                  |
| POSITION          | NUMBER        | NOT NULL | Hierarchical position within this hierarchy, position 1 being the most detailed |
| CHILD_LEVEL_NAME  | VARCHAR2(128) |          | Child side of 1:n relationship                                                  |
| JOIN_KEY_ID       | VARCHAR2(40)  |          | If non-null, then the child joins to the parent                                 |
| PARENT_LEVEL_NAME | VARCHAR2(128) |          | Parent side of 1:n relationship in relation to the CHILD_LEVEL_NAME             |

## 3.169 ALL\_DIM\_HIERARCHIES

ALL\_DIM\_HIERARCHIES describes all dimension hierarchies accessible to the current user.

#### Related Views

- DBA\_DIM\_HIERARCHIES describes all such hierarchies in the database.
- USER\_DIM\_HIERARCHIES describes all such hierarchies owned by the current user.

| Column         | Datatype      | NULL     | Description            |
|----------------|---------------|----------|------------------------|
| OWNER          | VARCHAR2(128) | NOT NULL | Owner of the dimension |
| DIMENSION_NAME | VARCHAR2(128) | NOT NULL | Name of the dimension  |
| HIERARCHY_NAME | VARCHAR2(128) |          | Hierarchy name         |

#### ① See Also

## 3.170 ALL\_DIM\_JOIN\_KEY

ALL\_DIM\_JOIN\_KEY describes the joins between two dimension tables that are accessible to the current user. The join is always specified between a parent dimension level column and a child column.

### Related Views

- DBA\_DIM\_JOIN\_KEY describes all such joins in the database.
- USER\_DIM\_JOIN\_KEY describes all such joins owned by the current user.

| Column            | Datatype      | NULL     | Description                                         |
|-------------------|---------------|----------|-----------------------------------------------------|
| OWNER             | VARCHAR2(128) | NOT NULL | Owner of the dimension                              |
| DIMENSION_NAME    | VARCHAR2(128) | NOT NULL | Name of the dimension                               |
| DIM_KEY_ID        | NUMBER        | NOT NULL | Join key ID (unique within a dimension)             |
| LEVEL_NAME        | VARCHAR2(128) |          | Name of the hierarchy level                         |
| KEY_POSITION      | NUMBER        | NOT NULL | Ordinal position of the key column within the level |
| HIERARCHY_NAME    | VARCHAR2(128) |          | Name of the hierarchy                               |
| CHILD_JOIN_OWNER  | VARCHAR2(128) | NOT NULL | Owner of the join column table                      |
| CHILD_JOIN_TABLE  | VARCHAR2(128) | NOT NULL | Name of the join column table                       |
| CHILD_JOIN_COLUMN | VARCHAR2(128) | NOT NULL | Name of the join column                             |
| CHILD_LEVEL_NAME  | VARCHAR2(128) |          | Name of the child hierarchy level of the join key   |

## 3.171 ALL\_DIM\_LEVEL\_KEY

ALL\_DIM\_LEVEL\_KEY describes a column of a dimension level accessible to the current user. The position of a column within a level is specified by KEY\_POSITION.

### Related Views

- DBA\_DIM\_LEVEL\_KEY describes all columns of dimension levels in the database.
- USER\_DIM\_LEVEL\_KEY describes all columns of dimension levels owned by the current user.

| Column         | Datatype      | NULL     | Description                                         |
|----------------|---------------|----------|-----------------------------------------------------|
| OWNER          | VARCHAR2(128) | NOT NULL | Owner of the dimension                              |
| DIMENSION_NAME | VARCHAR2(128) | NOT NULL | Name of the dimension                               |
| LEVEL_NAME     | VARCHAR2(128) |          | Name of the hierarchy level                         |
| KEY_POSITION   | NUMBER        | NOT NULL | Ordinal position of the key column within the level |
| COLUMN_NAME    | VARCHAR2(128) | NOT NULL | Name of the key column                              |

## 3.172 ALL\_DIM\_LEVELS

ALL\_DIM\_LEVELS describes the dimension levels accessible to the current user. All columns of a dimension level must come from the same relation.

### Related Views

- DBA\_DIM\_LEVELS describes all dimension levels in the database.
- USER\_DIM\_LEVELS describes the levels of all dimensions owned by the current user.

| Column          | Datatype      | NULL     | Description                                                                           |
|-----------------|---------------|----------|---------------------------------------------------------------------------------------|
| OWNER           | VARCHAR2(128) | NOT NULL | Owner of the dimension                                                                |
| DIMENSION_NAME  | VARCHAR2(128) | NOT NULL | Name of the dimension                                                                 |
| LEVEL_NAME      | VARCHAR2(128) |          | Unique within a dimension                                                             |
| NUM_COLUMNS     | NUMBER        |          | Number of columns in the level definition                                             |
| DETAILOBJ_OWNER | VARCHAR2(128) | NOT NULL | Owner of the detail object that the keys of this level come from                      |
| DETAILOBJ_NAME  | VARCHAR2(128) | NOT NULL | Name of the table that the keys of this level come from                               |
| SKIP_WHEN_NULL  | VARCHAR2(1)   |          | Indicates whether the level is declared with the SKIP WHEN NULL clause (Y) or not (N) |

## 3.185 ALL\_EVALUATION\_CONTEXT\_TABLES

ALL\_EVALUATION\_CONTEXT\_TABLES describes the tables in the rule evaluation contexts accessible to the current user.

#### Related Views

- DBA\_EVALUATION\_CONTEXT\_TABLES describes the tables in all rule evaluation contexts in the database.
- USER\_EVALUATION\_CONTEXT\_TABLES describes the tables in the rule evaluation contexts owned by the current user. This view does not display the EVALUATION\_CONTEXT\_OWNER column.

| Column                   | Datatype       | NULL     | Description                                      |
|--------------------------|----------------|----------|--------------------------------------------------|
| EVALUATION_CONTEXT_OWNER | VARCHAR2(128)  | NOT NULL | Owner of the evaluation context                  |
| EVALUATION_CONTEXT_NAME  | VARCHAR2(128)  | NOT NULL | Name of the evaluation context                   |
| TABLE_ALIAS              | VARCHAR2(128)  |          | Alias for a table in the evaluation context      |
| TABLE_NAME               | VARCHAR2(4000) |          | Name of the table referred to by the table alias |

## 3.186 ALL\_EVALUATION\_CONTEXT\_VARS

ALL\_EVALUATION\_CONTEXT\_VARS describes the variables in the rule evaluation contexts accessible to the current user.

#### Related Views

- DBA\_EVALUATION\_CONTEXT\_VARS describes the variables in all rule evaluation contexts in the database.
- USER\_EVALUATION\_CONTEXT\_VARS describes the variables in the rule evaluation contexts owned by the current user. This view does not display the EVALUATION\_CONTEXT\_OWNER column.

| Column                   | Datatype       | NULL     | Description                                                                                                                                                                                |
|--------------------------|----------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| EVALUATION_CONTEXT_OWNER | VARCHAR2(128)  | NOT NULL | Owner of the evaluation context                                                                                                                                                            |
| EVALUATION_CONTEXT_NAME  | VARCHAR2(128)  | NOT NULL | Name of the evaluation context                                                                                                                                                             |
| VARIABLE_NAME            | VARCHAR2(128)  |          | Name of a variable in the evaluation context                                                                                                                                               |
| VARIABLE_TYPE            | VARCHAR2(4000) |          | Datatype of the variable                                                                                                                                                                   |
| VARIABLE_VALUE_FUNCTION  | VARCHAR2(4000) |          | Function used to retrieve the value of the variable; NULL for variables that are not implicit                                                                                              |
| VARIABLE_METHOD_FUNCTION | VARCHAR2(228)  |          | Function used to retrieve the result of method invocation on the variable. Such a function can speed up evaluation, if there are many simple rules that invoke the method on the variable. |

## 3.191 ALL\_FILE\_GROUP\_EXPORT\_INFO

ALL\_FILE\_GROUP\_EXPORT\_INFO shows export-related information for each version accessible to the current user. There will only be information in this view for versions that have a valid Data Pump dump file.

### Related Views

- DBA\_FILE\_GROUP\_EXPORT\_INFO shows export-related information for each version in the database that has a valid Data Pump dump file.
- USER\_FILE\_GROUP\_EXPORT\_INFO shows export-related information for all file groups owned by the current user. This view does not display the FILE\_GROUP\_OWNER column.

| Column             | Datatype      | NULL     | Description                                |
|--------------------|---------------|----------|--------------------------------------------|
| FILE_GROUP_OWNER   | VARCHAR2(128) | NOT NULL | Owner of the file group                    |
| FILE_GROUP_NAME    | VARCHAR2(128) | NOT NULL | Name of the file group                     |
| VERSION_NAME       | VARCHAR2(128) | NOT NULL | User-specified name for the version        |
| VERSION            | NUMBER        | NOT NULL | Internal version number                    |
| EXPORT_VERSION     | VARCHAR2(128) | NOT NULL | Version of exported objects                |
| PLATFORM_NAME      | VARCHAR2(101) | NOT NULL | Platform on which the export was performed |
| EXPORT_TIME        | DATE          | NOT NULL | Time at which the export job was performed |
| EXPORT_SCN         | NUMBER        |          | SCN of the export job                      |
| SOURCE_GLOBAL_NAME | VARCHAR2(128) |          | Global name of the exporting database      |

## 3.194 ALL\_FILE\_GROUP\_TABLESPACES

ALL\_FILE\_GROUP\_TABLESPACES shows information about the transportable tablespaces present (partially or completely) in the file groups accessible to the current user (when the file groups contain dump files).

**Related Views**

- DBA\_FILE\_GROUP\_TABLESPACES shows information about the transportable tablespaces present (partially or completely) in all file groups in the database (when the file groups contain dump files).
- USER\_FILE\_GROUP\_TABLESPACES shows information about the transportable tablespaces present (partially or completely) in the file groups owned by the current user (when the file groups contain dump files). This view does not display the FILE\_GROUP\_OWNER column.

| Column           | Datatype      | NULL     | Description                                            |
|------------------|---------------|----------|--------------------------------------------------------|
| FILE_GROUP_OWNER | VARCHAR2(128) | NOT NULL | Owner of the file group                                |
| FILE_GROUP_NAME  | VARCHAR2(128) | NOT NULL | Name of the file group                                 |
| VERSION_NAME     | VARCHAR2(128) | NOT NULL | Version of the file group that contains the tablespace |
| VERSION          | NUMBER        | NOT NULL | Internal version number                                |
| TABLESPACE_NAME  | VARCHAR2(30)  | NOT NULL | Name of the tablespace                                 |

## 3.195 ALL\_FILE\_GROUP\_VERSIONS

ALL\_FILE\_GROUP\_VERSIONS shows top-level version information for the file groups accessible to the current user.

**Related Views**

- DBA\_FILE\_GROUP\_VERSIONS shows top-level version information for all file groups in the database.
- USER\_FILE\_GROUP\_VERSIONS shows top-level version information for all file groups owned by the current user. This view does not display the FILE\_GROUP\_OWNER column.

| Column            | Datatype                    | NULL     | Description                                             |
|-------------------|-----------------------------|----------|---------------------------------------------------------|
| FILE_GROUP_OWNER  | VARCHAR2(128)               | NOT NULL | Owner of the file group                                 |
| FILE_GROUP_NAME   | VARCHAR2(128)               | NOT NULL | Name of the file group                                  |
| VERSION_NAME      | VARCHAR2(128)               | NOT NULL | User-specified name for the version                     |
| VERSION           | NUMBER                      | NOT NULL | Internal version number                                 |
| CREATOR           | VARCHAR2(128)               | NOT NULL | User who created the version                            |
| CREATED           | TIMESTAMP(6) WITH TIME_ZONE | NOT NULL | Time at which the version was created                   |
| COMMENTS          | VARCHAR2(4000)              |          | Comments about the file group                           |
| DEFAULT_DIRECTORY | VARCHAR2(128)               |          | Default directory object for this version, if specified |

| ROW_RESOLUTION_METHOD <sup>1</sup> | VARCHAR2(18)  |          | Indicates which row-level conflict resolution method to use when the old value of the logical change record (LCR) timestamp column is different from the timestamp column value in the table. Possible values: <ul style="list-style-type: none"> <li>• EARLIEST TIMESTAMP: The conflict will be resolved in favor of the LCR when the new value of the LCR timestamp column is <i>less than</i> the timestamp column value in the table</li> <li>• LATEST TIMESTAMP: The conflict will be resolved in favor of the LCR when the new value of the LCR timestamp column is <i>greater than</i> the timestamp column value in the table</li> </ul> |
| DELETE_ALWAYS_WINS <sup>1</sup>    | VARCHAR2(3)   |          | When a conflict occurs between a delete operation and another operation, a YES value indicates that the delete operation succeeds and the other operation is discarded, and a NO value indicates that there is no special preference for the delete operation                                                                                                                                                                                                                                                                                                                                                                                    |
| IGNORE_SITE_PRIORITY <sup>1</sup>  | VARCHAR2(3)   |          | When a conflict occurs between a target table change and a source table change, and SITE PRIORITY has been specified, this value indicates whether SITE PRIORITY should be ignored (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Column                          | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                        |
|---------------------------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TOMBSTONE_TABLE                 | VARCHAR2(128) |          | Tombstone table name (if table has delete tombstoning enabled)                                                                                                                                                                                                                                     |
| ROW_RESOLUTION_COLUMN           | VARCHAR2(128) | NOT NULL | Name of row-level timestamp column                                                                                                                                                                                                                                                                 |
| KEY_VERSION_COLUMN <sup>1</sup> | VARCHAR2(8)   |          | Indicates whether the table contains a hidden column named KEYVER\$\$, which contains a version timestamp<br>Possible values: <ul style="list-style-type: none"> <li>KEYVER\$\$ - The table contains a KEYVER\$\$ column</li> <li>NONE - The table does not contain a KEYVER\$\$ column</li> </ul> |
| EXISTING_DATA_TIMESTAMP         | TIMESTAMP(6)  |          | Timestamp to give existing rows when a new timestamp column is added                                                                                                                                                                                                                               |

## 3.204 ALL\_HEAT\_MAP\_SEG\_HISTOGRAM

ALL\_HEAT\_MAP\_SEG\_HISTOGRAM displays segment access information for all segments visible to the user.

### Related Views

- DBA\_HEAT\_MAP\_SEG\_HISTOGRAM displays segment access information for all segments.
- USER\_HEAT\_MAP\_SEG\_HISTOGRAM displays segment access information for segments owned by the user. This view does not display the OWNER column.

| Column         | Datatype      | NULL     | Description                                                   |
|----------------|---------------|----------|---------------------------------------------------------------|
| OWNER          | VARCHAR2(128) | NOT NULL | Table owner                                                   |
| OBJECT_NAME    | VARCHAR2(128) | NOT NULL | Name of the object                                            |
| SUBOBJECT_NAME | VARCHAR2(128) |          | Name of the sub-object                                        |
| TRACK_TIME     | DATE          |          | System time when the segment access was tracked               |
| SEGMENT_WRITE  | VARCHAR2(3)   |          | Indicates whether the segment has write access (YES or NO)    |
| FULL_SCAN      | VARCHAR2(3)   |          | Indicates whether the segment has full table scan (YES or NO) |
| LOOKUP_SCAN    | VARCHAR2(3)   |          | Indicates whether the segment has lookup scan (YES or NO)     |

## 3.205 ALL\_HEAT\_MAP\_SEGMENT

ALL\_HEAT\_MAP\_SEGMENT displays the latest segment access time for all segments visible to the user. The timestamps in the view are coarse with a granularity of a day reflecting the flush times of the heat map.

### Related Views

- DBA\_HEAT\_MAP\_SEGMENT displays the latest segment access time for all segments.
- USER\_HEAT\_MAP\_SEGMENT displays the latest segment access time for all segments owned by the user. This view does not display the OWNER column.

| Column             | Datatype      | NULL     | Description                                               |
|--------------------|---------------|----------|-----------------------------------------------------------|
| OWNER              | VARCHAR2(128) | NOT NULL | Table owner                                               |
| OBJECT_NAME        | VARCHAR2(128) | NOT NULL | Name of the object                                        |
| SUBOBJECT_NAME     | VARCHAR2(128) |          | Name of the sub-object                                    |
| SEGMENT_WRITE_TIME | DATE          |          | Latest timestamp on which the segment has write access    |
| SEGMENT_READ_TIME  | DATE          |          | Latest timestamp on which the segment has read access     |
| FULL_SCAN          | DATE          |          | Latest timestamp on which the segment has full table scan |
| LOOKUP_SCAN        | DATE          |          | Latest timestamp on which the segment has index scan      |

## 3.209 ALL\_HIER\_COLUMNS\_AE

ALL\_HIER\_COLUMNS\_AE describes the columns of the hierarchies (across all editions) accessible to the current user.

### Related Views

- DBA\_HIER\_COLUMNS\_AE describes the columns of all hierarchies (across all editions) in the database.
- USER\_HIER\_COLUMNS\_AE describes the columns of the hierarchies (across all editions) owned by the current user. This view does not display the OWNER column.

| Column      | Datatype      | NULL     | Description            |
|-------------|---------------|----------|------------------------|
| OWNER       | VARCHAR2(128) | NOT NULL | Owner of the hierarchy |
| HIER_NAME   | VARCHAR2(128) | NOT NULL | Name of the hierarchy  |
| COLUMN_NAME | VARCHAR2(128) | NOT NULL | Name of the column     |

| Column               | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                            |
|----------------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ROLE                 | VARCHAR2(4)   |          | The role the attribute plays in the hierarchy: <ul style="list-style-type: none"> <li>• KEY</li> <li>• AKEY</li> <li>• HIER</li> <li>• PROP</li> </ul>                                                                                                                                                                                                                                 |

### 3.210 ALL\_HIER\_HIER\_ATTR\_CLASS

ALL\_HIER\_HIER\_ATTR\_CLASS describes the classifications of the hierarchical attributes of the hierarchies accessible to the current user.

**Related Views**

- DBA\_HIER\_HIER\_ATTR\_CLASS describes the classifications of the hierarchical attributes of all hierarchies in the database.
- USER\_HIER\_HIER\_ATTR\_CLASS describes the classifications of the hierarchical attributes of the hierarchies owned by the current user. This view does not display the OWNER column.

| Column         | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                       |

## 3.211 ALL\_HIER\_HIER\_ATTR\_CLASS\_AE

ALL\_HIER\_HIER\_ATTR\_CLASS\_AE describes the classifications of the hierarchical attributes of the hierarchies (across all editions) accessible to the current user.

### Related Views

- DBA\_HIER\_HIER\_ATTR\_CLASS\_AE describes the classifications of the hierarchical attributes of all hierarchies (across all editions) in the database.
- USER\_HIER\_HIER\_ATTR\_CLASS\_AE describes the classifications of the hierarchical attributes of the hierarchies (across all editions) owned by the current user. This view does not display the OWNER column.

| Column         | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                            |

### 3.217 ALL\_HIER\_LEVEL\_ID\_ATTRS\_AE

ALL\_HIER\_LEVEL\_ID\_ATTRS\_AE describes the attributes that uniquely identify members of the levels of the hierarchies (across all editions) accessible to the current user.

**Related Views**

- DBA\_HIER\_LEVEL\_ID\_ATTRS\_AE describes the attributes that uniquely identify members of the levels of all hierarchies (across all editions) in the database.

- USER\_HIER\_LEVEL\_ID\_ATTRS\_AE describes the attributes that uniquely identify members of the levels of the hierarchies (across all editions) owned by the current user. This view does not display the OWNER column.

| Column         | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                               |

## 3.223 ALL\_HIVE\_COLUMNS

ALL\_HIVE\_COLUMNS describes all Hive columns accessible to the current user in a Hive metastore.

### Related Views

- DBA\_HIVE\_COLUMNS describes all Hive columns in a Hive metastore.
- USER\_HIVE\_COLUMNS describes all Hive columns owned by the current user in a Hive metastore.

| Column             | Datatype       | NULL | Description                                                            |
|--------------------|----------------|------|------------------------------------------------------------------------|
| CLUSTER_ID         | VARCHAR2(4000) |      | Identifier for the Hadoop cluster                                      |
| DATABASE_NAME      | VARCHAR2(4000) |      | Hive database where the owning Hive table resides                      |
| TABLE_NAME         | VARCHAR2(4000) |      | Hive table name that the column belongs to                             |
| COLUMN_NAME        | VARCHAR2(4000) |      | Hive column name                                                       |
| HIVE_COLUMN_TYPE   | VARCHAR2(4000) |      | Data type of the Hive column                                           |
| ORACLE_COLUMN_TYPE | VARCHAR2(4000) |      | Equivalent Oracle data type of the Hive column                         |
| LOCATION           | VARCHAR2(4000) |      | Physical location of the Hive table                                    |
| OWNER              | VARCHAR2(4000) |      | Owner of the Hive table                                                |
| CREATION_TIME      | DATE           |      | Time that the Hive column was created                                  |
| HIVE_URI           | VARCHAR2(4000) |      | The connection string (URI and port number) for the metastore database |

## 3.225 ALL\_HIVE\_PART\_KEY\_COLUMNS

ALL\_HIVE\_PART\_KEY\_COLUMNS provides information about all Hive table partition columns accessible to the current user in the database.

#### Related Views

- DBA\_HIVE\_PART\_KEY\_COLUMNS provides information about all Hive table partition columns in the database.
- USER\_HIVE\_PART\_KEY\_COLUMNS provides information about all Hive table partition columns owned by the current user in the database.

| Column             | Datatype       | NULL | Description                                                   |
|--------------------|----------------|------|---------------------------------------------------------------|
| CLUSTER_ID         | VARCHAR2(4000) |      | Hadoop cluster name                                           |
| DATABASE_NAME      | VARCHAR2(4000) |      | Hive database where the Hive table resides                    |
| TABLE_NAME         | VARCHAR2(4000) |      | Hive table name                                               |
| OWNER              | VARCHAR2(4000) |      | Owner of the Hive table                                       |
| COLUMN_NAME        | VARCHAR2(4000) |      | Partition column name                                         |
| COLUMN_TYPE        | VARCHAR2(4000) |      | Partition column type                                         |
| COLUMN_POSITION    | NUMBER         |      | Partition column position in the Hive partition specification |
| ORACLE_COLUMN_TYPE | VARCHAR2(4000) |      | Equivalent Oracle data type of the Hive column                |

## 3.226 ALL\_HIVE\_TAB\_PARTITIONS

ALL\_HIVE\_TAB\_PARTITIONS provides information about all Hive table partitions accessible to the current user in the database.

### Related Views

- DBA\_HIVE\_TAB\_PARTITIONS provides information about all Hive table partitions in the database.
- USER\_HIVE\_TAB\_PARTITIONS provides information about all Hive table partitions owned by the current user in the database.

| Column          | Datatype       | NULL | Description                                |
|-----------------|----------------|------|--------------------------------------------|
| CLUSTER_ID      | VARCHAR2(4000) |      | Hadoop cluster name                        |
| DATABASE_NAME   | VARCHAR2(4000) |      | Hive database where the Hive table resides |
| TABLE_NAME      | VARCHAR2(4000) |      | Hive table name                            |
| LOCATION        | VARCHAR2(4000) |      | Physical location of the Hive partition    |
| OWNER           | VARCHAR2(4000) |      | Owner of the Hive table                    |
| PARTITION_SPECS | VARCHAR2(4000) |      | The current Hive partition specification   |
| PART_SIZE       | NUMBER         |      | Partition size in bytes                    |
| CREATION_TIME   | DATE           |      | Time that the partition was created        |

## 3.227 ALL\_HIVE\_TABLES

ALL\_HIVE\_TABLES provides information about all the Hive tables accessible to the current user in the Hive metastore.

### Related Views

- DBA\_HIVE\_TABLES provides information about all Hive tables in the Hive metastore.
- USER\_HIVE\_TABLES provides information about all Hive tables owned by the current user in the Hive metastore.

| Column        | Datatype       | NULL | Description                                |
|---------------|----------------|------|--------------------------------------------|
| CLUSTER_ID    | VARCHAR2(4000) |      | Hadoop cluster name                        |
| DATABASE_NAME | VARCHAR2(4000) |      | Hive database where the Hive table resides |
| TABLE_NAME    | VARCHAR2(4000) |      | Hive table name                            |
| LOCATION      | VARCHAR2(4000) |      | Physical location of the Hive table        |
| NO_OF_COLS    | NUMBER         |      | Number of columns in the Hive table        |

| Column             | Datatype       | NULL | Description                                                            |
|--------------------|----------------|------|------------------------------------------------------------------------|
| CREATION_TIME      | DATE           |      | Creation time of the Hive table                                        |
| LAST_ACCESSED_TIME | DATE           |      | Time that the Hive table was last accessed                             |
| OWNER              | VARCHAR2(4000) |      | Owner of the Hive table                                                |
| TABLE_TYPE         | VARCHAR2(4000) |      | Type of the Hive table                                                 |
| PARTITIONED        | VARCHAR2(4000) |      | Is this Hive table partitioned?                                        |
| NO_OF_PART_KEYS    | NUMBER         |      | Number of partition keys in the Hive table                             |
| INPUT_FORMAT       | VARCHAR2(4000) |      | Hive table input format                                                |
| OUTPUT_FORMAT      | VARCHAR2(4000) |      | Hive table output format                                               |
| SERIALIZATION      | VARCHAR2(4000) |      | Hive table serialization                                               |
| COMPRESSED         | NUMBER         |      | Is this Hive table compressed?                                         |
| HIVE_URI           | VARCHAR2(4000) |      | The connection string (URI and port number) for the metastore database |

## 3.228 ALL\_IDENTIFIERS

ALL\_IDENTIFIERS displays information about the identifiers in the stored objects accessible to the current user.

#### Related Views

- DBA\_IDENTIFIERS displays information about the identifiers in all stored objects in the database.
- USER\_IDENTIFIERS displays information about the identifiers in the stored objects owned by the current user. This view does not display the OWNER column.

| Column    | Datatype      | NULL     | Description                 |
|-----------|---------------|----------|-----------------------------|
| OWNER     | VARCHAR2(128) | NOT NULL | Owner of the identifier     |
| NAME      | VARCHAR2(128) |          | Name of the identifier      |
| SIGNATURE | VARCHAR2(32)  |          | Signature of the identifier |

| Column           | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                          |
|------------------|---------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TYPE             | VARCHAR2(18)  |          | Type of the identifier.<br>For SQL identifiers, the types include: <ul style="list-style-type: none"> <li>• TABLE</li> <li>• VIEW</li> <li>• SEQUENCE</li> <li>• ALIAS</li> <li>• COLUMN</li> <li>• MATERIALIZED VIEW</li> <li>• OPERATOR</li> </ul> For PL/SQL identifiers, the types include: <ul style="list-style-type: none"> <li>• FUNCTION</li> <li>• PROCEDURE</li> <li>• PACKAGE</li> </ul> |

| LINE             | NUMBER        |          | Line number of the identifier action                                                                                                                                                                                                                                                                                                                                                                 |
| COL              | NUMBER        |          | Column number of the identifier action                                                                                                                                                                                                                                                                                                                                                               |
| USAGE_CONTEXT_ID | NUMBER        |          | Context USAGE_ID of the identifier usage                                                                                                                                                                                                                                                                                                                                                             |
| CHARACTER_SET    | VARCHAR2(10)  |          | Contains the value of the character set clause when it is used in a variable identifier declaration. These are the possible values when the character set is derived from another variable identifier: <ul style="list-style-type: none"> <li>• CHAR_CS</li> <li>• NCHAR_CS</li> <li>• IDENTIFIER</li> </ul>                                                                                         |
| ATTRIBUTE        | VARCHAR2(7)   |          | Column contains the attribute value when %attribute is used in a variable declaration. Possible values: <ul style="list-style-type: none"> <li>• ROWTYPE</li> <li>• TYPE</li> <li>• CHARSET</li> </ul>                                                                                                                                                                                               |
| CHAR_USED        | VARCHAR2(4)   |          | Contains the type of the length constraint when it is used in a string length constraint declaration. Possible values: <ul style="list-style-type: none"> <li>• CHAR</li> <li>• BYTE</li> </ul>                                                                                                                                                                                                      |
| LENGTH           | NUMBER        |          | Contains the numeric length constraint value for a string length constraint declaration                                                                                                                                                                                                                                                                                                              |
| PRECISION        | NUMBER        |          | Contains the numeric precision when it is used in a variable declaration                                                                                                                                                                                                                                                                                                                             |
| PRECISION2       | NUMBER        |          | Contains the numeric second precision value (for instance, interval types) used in a variable declaration                                                                                                                                                                                                                                                                                            |

| Column               | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SCALE                | NUMBER        |          | Contains the numeric scale value used in a variable declaration.                                                                                                                                                                                                                                                                                                                      |
| LOWER_RANGE          | NUMBER        |          | Contains the numeric lower range value used by a variable declaration with a range constraint                                                                                                                                                                                                                                                                                         |
| UPPER_RANGE          | NUMBER        |          | Contains the numeric upper range value used by a variable declaration with a range constraint                                                                                                                                                                                                                                                                                         |
| NULL_CONSTRAINT      | VARCHAR2(8)   |          | This column is set when a NULL constraint is used by a variable declaration. Possible values: <ul style="list-style-type: none"> <li>• NULL</li> <li>• NOT NULL</li> </ul>                                                                                                                                                                                                            |
| SQL_BUILTIN          | VARCHAR2(3)   |          | Is set to YES when an identifier is a SQL builtin used in a SQL statement issued from PL/SQL. Otherwise, this column is set to NO.                                                                                                                                                                                                                                                    |
| IMPLICIT             | VARCHAR2(3)   |          | Indicates whether the identifier is an implicit identifier that does not appear in the source (YES) or not (NO)                                                                                                                                                                                                                                                                       |
| DECLARED_OWNER       | VARCHAR2(128) | NOT NULL | Owner of the object in which this identifier was declared                                                                                                                                                                                                                                                                                                                             |
| DECLARED_OBJECT_NAME | VARCHAR2(128) | NOT NULL | Name of the object in which this identifier was declared                                                                                                                                                                                                                                                                                                                              |
| DECLARED_OBJECT_TYPE | VARCHAR2(12)  |          | Type of the object in which this identifier was declared                                                                                                                                                                                                                                                                                                                              |
| ORIGIN_CON_ID        | VARCHAR2(256) |          | The ID of the container where the data originates. Possible values include: <ul style="list-style-type: none"> <li>• 0: This value is used for rows in non-CDBs. This value is not used for CDBs.</li> <li>• <i>n</i>: This value is used for rows containing data that originate in the container with container ID <i>n</i> (<i>n</i> = 1 if the row originates in root)</li> </ul> |

## 3.229 ALL\_IMMUTABLE\_TABLES

ALL\_IMMUTABLE\_TABLES describes the immutable tables accessible to the current user.

#### Related Views

- DBA\_IMMUTABLE\_TABLES describes all immutable tables in the database.
- USER\_IMMUTABLE\_TABLES describes the immutable tables owned by the current user. This view does not display the SCHEMA\_NAME column.

| Column      | Datatype      | NULL     | Description                               |
|-------------|---------------|----------|-------------------------------------------|
| SCHEMA_NAME | VARCHAR2(128) | NOT NULL | The schema containing the immutable table |
| TABLE_NAME  | VARCHAR2(128) | NOT NULL | Name of the immutable table               |

| Column                     | Datatype    | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------------------|-------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ROW_RETENTION              | NUMBER      |      | Row retention period for the immutable table, that is, the minimum number of days a row must be retained and cannot be deleted after it is inserted into the table. If the value of this column is NULL, then rows can never be deleted from the table.                                                                                                                                                                                                                |
| ROW_RETENTION_LOCKED       | VARCHAR2(3) |      | Indicates whether the row retention period for the immutable table is locked. Possible values: <ul style="list-style-type: none"> <li>• YES: The row retention period is locked. You cannot change the row retention period</li> <li>• NO: The row retention period is not locked. You can change the row retention period to a value higher than the current value with the SQL statement <code>ALTER TABLE ... NO DELETE UNTIL n DAYS AFTER INSERT</code></li> </ul> |
| TABLE_INACTIVITY_RETENTION | NUMBER      |      | Number of days for which the immutable table must be inactive before it can be dropped, that is, the number of days that must pass after the most recent row insertion before the table can be dropped. A table with no rows can be dropped at any time, regardless of this column value.                                                                                                                                                                              |

## 3.230 ALL\_IND\_COLUMNS

ALL\_IND\_COLUMNS describes the columns of indexes on all tables accessible to the current user.

#### Related Views

- DBA\_IND\_COLUMNS describes the columns of indexes on all tables in the database.
- USER\_IND\_COLUMNS describes the columns of indexes owned by the current user and columns of indexes on tables owned by the current user. This view does not display the INDEX\_OWNER or TABLE\_OWNER columns.

#### ① Note

For join indexes, the TABLE\_NAME and TABLE\_OWNER columns in this view may not match the TABLE\_NAME and TABLE\_OWNER columns you find in the \*\_INDEXES (and other similar) data dictionary views.

| Column      | Datatype      | NULL     | Description        |
|-------------|---------------|----------|--------------------|
| INDEX_OWNER | VARCHAR2(128) | NOT NULL | Owner of the index |
| INDEX_NAME  | VARCHAR2(128) | NOT NULL | Name of the index  |

| Column             | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                |
|--------------------|----------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TABLE_OWNER        | VARCHAR2(128)  | NOT NULL | Owner of the table or cluster                                                                                                                                                                                                                                                                                                                                              |
| TABLE_NAME         | VARCHAR2(128)  | NOT NULL | Name of the table or cluster                                                                                                                                                                                                                                                                                                                                               |
| COLUMN_NAME        | VARCHAR2(4000) |          | Column name or attribute of the object type column<br><b>Note:</b> If you create an index on a user-defined REF column, the system creates the index on the attributes that make up the REF column. Therefore, the column names displayed in this view are the attribute names, with the REF column name as a prefix, in the following form:<br><br>"REF_name"."attribute" |
| COLUMN_POSITION    | NUMBER         | NOT NULL | Position of the column or attribute within the index                                                                                                                                                                                                                                                                                                                       |
| COLUMN_LENGTH      | NUMBER         | NOT NULL | Indexed length of the column                                                                                                                                                                                                                                                                                                                                               |
| CHAR_LENGTH        | NUMBER         |          | Maximum codepoint length of the column                                                                                                                                                                                                                                                                                                                                     |
| DESCEND            | VARCHAR2(4)    |          | Indicates whether the column is sorted in descending order (DESC) or ascending order (ASC)                                                                                                                                                                                                                                                                                 |
| COLLATED_COLUMN_ID | NUMBER         |          | Internal sequence number of the column for which this column provides linguistic ordering                                                                                                                                                                                                                                                                                  |

## 3.231 ALL\_IND\_EXPRESSIONS

ALL\_IND\_EXPRESSIONS describes the expressions of function-based indexes on tables accessible to the current user.

#### Related Views

- DBA\_IND\_EXPRESSIONS describes the expressions of all function-based indexes in the database.
- USER\_IND\_EXPRESSIONS describes the expressions of function-based indexes on tables owned by the current user. This view does not display the INDEX\_OWNER or TABLE\_OWNER columns.

| Column            | Datatype      | NULL     | Description                                          |
|-------------------|---------------|----------|------------------------------------------------------|
| INDEX_OWNER       | VARCHAR2(128) | NOT NULL | Owner of the index                                   |
| INDEX_NAME        | VARCHAR2(128) | NOT NULL | Name of the index                                    |
| TABLE_OWNER       | VARCHAR2(128) | NOT NULL | Owner of the table or cluster                        |
| TABLE_NAME        | VARCHAR2(128) | NOT NULL | Name of the table or cluster                         |
| COLUMN_EXPRESSION | LONG          |          | Function-based index expression defining the column  |
| COLUMN_POSITION   | NUMBER        | NOT NULL | Position of the column or attribute within the index |

## 3.232 ALL\_IND\_PARTITIONS

ALL\_IND\_PARTITIONS displays, for each index partition accessible to the current user, the partition-level partitioning information, the storage parameters for the partition, and various partition statistics generated by the DBMS\_STATS package.

### Related Views

- DBA\_IND\_PARTITIONS describes all index partitions in the database.
- USER\_IND\_PARTITIONS describes the index partitions owned by the current user. This view does not display the INDEX\_OWNER column.

| Column             | Datatype      | NULL | Description                                                                                                 |
|--------------------|---------------|------|-------------------------------------------------------------------------------------------------------------|
| INDEX_OWNER        | VARCHAR2(128) |      | Owner of the index                                                                                          |
| INDEX_NAME         | VARCHAR2(128) |      | Name of the index                                                                                           |
| COMPOSITE          | VARCHAR2(3)   |      | Indicates whether the partition belongs to a local index on a composite-partitioned table (YES) or not (NO) |
| PARTITION_NAME     | VARCHAR2(128) |      | Name of the partition                                                                                       |
| SUBPARTITION_COUNT | NUMBER        |      | If a local index on a composite-partitioned table, the number of subpartitions in the partition             |
| HIGH_VALUE         | LONG          |      | Partition bound value expression                                                                            |
| HIGH_VALUE_LENGTH  | NUMBER        |      | Length of the partition bound value expression                                                              |
| PARTITION_POSITION | NUMBER        |      | Position of the partition within the index                                                                  |
| STATUS             | VARCHAR2(8)   |      | Indicates whether the index partition is usable (USABLE) or not (UNUSABLE)                                  |
| TABLESPACE_NAME    | VARCHAR2(30)  |      | Name of the tablespace containing the partition                                                             |
| PCT_FREE           | NUMBER        |      | Minimum percentage of free space in a block                                                                 |
| INI_TRANS          | NUMBER        |      | Initial number of transactions                                                                              |
| MAX_TRANS          | NUMBER        |      | Maximum number of transactions                                                                              |
| INITIAL_EXTENT     | NUMBER        |      | Size of the initial extent in bytes                                                                         |
| NEXT_EXTENT        | NUMBER        |      | Size of secondary extents in bytes                                                                          |
| MIN_EXTENT         | NUMBER        |      | Minimum number of extents allowed in the segment                                                            |
| MAX_EXTENT         | NUMBER        |      | Maximum number of extents allowed in the segment                                                            |
| MAX_SIZE           | NUMBER        |      | Maximum number of blocks allowed in the segment                                                             |
| PCT_INCREASE       | NUMBER        |      | Percentage increase in extent size                                                                          |
| FREELISTS          | NUMBER        |      | Number of process freelists allocated in this segment                                                       |
| FREELIST_GROUPS    | NUMBER        |      | Number of process freelist groups allocated in this segment                                                 |

| Column                  | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LOGGING                 | VARCHAR2(7)  |      | Indicates whether or not changes to the index are logged: <ul style="list-style-type: none"> <li>NONE - Not specified</li> </ul> <b>See Also:</b> the *_IND_SUBPARTITIONS view <ul style="list-style-type: none"> <li>YES</li> <li>NO</li> </ul>                                                                                                                                                                                                                                                                                          |
| COMPRESSION             | VARCHAR2(13) |      | Type of compression being used for the partition: <ul style="list-style-type: none"> <li>ENABLED - Prefix compression</li> <li>ADVANCED HIGH - Advanced high compression</li> <li>ADVANCED LOW - Advanced low compression</li> <li>DISABLED - No compression is present</li> </ul>                                                                                                                                                                                                                                                        |
| BLEVEL                  | NUMBER       |      | B*-Tree level (depth of the index from its root block to its leaf blocks). A depth of 0 indicates that the root block and leaf block are the same.                                                                                                                                                                                                                                                                                                                                                                                        |
| LEAF_BLOCKS             | NUMBER       |      | Number of leaf blocks in the index partition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| DISTINCT_KEYS           | NUMBER       |      | Number of distinct keys in the index partition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| AVG_LEAF_BLOCKS_PER_KEY | NUMBER       |      | Average number of leaf blocks in which each distinct value in the index appears, rounded to the nearest integer. For indexes that enforce UNIQUE and PRIMARY KEY constraints, this value is always 1.                                                                                                                                                                                                                                                                                                                                     |
| AVG_DATA_BLOCKS_PER_KEY | NUMBER       |      | Average number of data blocks in the table that are pointed to by a distinct value in the index rounded to the nearest integer. This statistic is the average number of data blocks that contain rows that contain a given value for the indexed columns.                                                                                                                                                                                                                                                                                 |
| CLUSTERING_FACTOR       | NUMBER       |      | Indicates the amount of order of the rows in the table based on the values of the index. <ul style="list-style-type: none"> <li>If the value is near the number of blocks, then the table is very well ordered. In this case, the index entries in a single leaf block tend to point to rows in the same data blocks.</li> <li>If the value is near the number of rows, then the table is very randomly ordered. In this case, it is unlikely that index entries in the same leaf block point to rows in the same data blocks.</li> </ul> |
| NUM_ROWS                | NUMBER       |      | Number of rows returned                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| SAMPLE_SIZE             | NUMBER       |      | Sample size used in analyzing this partition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| LAST_ANALYZED           | DATE         |      | Date on which this partition was most recently analyzed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| BUFFER_POOL             | VARCHAR2(7)  |      | Actual buffer pool for the partition: <ul style="list-style-type: none"> <li>DEFAULT</li> <li>KEEP</li> <li>RECYCLE</li> <li>NULL</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                              |
| FLASH_CACHE             | VARCHAR2(7)  |      | Database Smart Flash Cache hint to be used for partition blocks: <ul style="list-style-type: none"> <li>DEFAULT</li> <li>KEEP</li> <li>NONE</li> </ul> Solaris and Oracle Linux functionality only.                                                                                                                                                                                                                                                                                                                                       |

| Column            | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CELL_FLASH_CACHE  | VARCHAR2(7)    |      | Cell flash cache hint to be used for partition blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> <b>See Also:</b> Oracle Exadata Storage Server Software documentation for more information                                                                                                                                          |
| USER_STATS        | VARCHAR2(3)    |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                                                                                                                                                       |
| PCT_DIRECT_ACCESS | NUMBER         |      | If a secondary index on index-organized table, the percentage of rows with VALID guess                                                                                                                                                                                                                                                                                                 |
| GLOBAL_STATS      | VARCHAR2(3)    |      | GLOBAL_STATS will be YES if statistics have been gathered or NO if statistics have been aggregated from subpartitions or have not been gathered                                                                                                                                                                                                                                        |
| DOMIDX_OPSTATUS   | VARCHAR2(6)    |      | Status of the operation on a domain index: <ul style="list-style-type: none"> <li>• NULL - Index is not a domain index</li> <li>• VALID - Operation performed without errors</li> <li>• FAILED - Operation failed with an error</li> </ul>                                                                                                                                             |
| PARAMETERS        | VARCHAR2(1000) |      | For a domain index, the parameter string                                                                                                                                                                                                                                                                                                                                               |
| INTERVAL          | VARCHAR2(3)    |      | Indicates whether the partition is in the interval section of an interval partitioned table (YES) or whether the partition is in the range section (NO)                                                                                                                                                                                                                                |
| SEGMENT_CREATED   | VARCHAR2(3)    |      | Indicates whether the index partition segment has been created (YES) or not (NO); N/A indicates that this index is subpartitioned and no segment exists at the partition level                                                                                                                                                                                                         |
| ORPHANED_ENTRIES  | VARCHAR2(3)    |      | Indicates whether a global index partition contains stale entries because of deferred index maintenance during DROP/TRUNCATE PARTITION, or MODIFY PARTITION INDEXING OFF operations.<br>Possible values: <ul style="list-style-type: none"> <li>• YES - the index partition contains orphaned entries</li> <li>• NO - the index partition does not contain orphaned entries</li> </ul> |

| CLUSTERING_FACTOR       | NUMBER        |      | Indicates the amount of order of the rows in the table based on the values of the index. <ul style="list-style-type: none"> <li>• If the value is near the number of blocks, then the table is very well ordered. In this case, the index entries in a single leaf block tend to point to rows in the same data blocks.</li> <li>• If the value is near the number of rows, then the table is very randomly ordered. In this case, it is unlikely that index entries in the same leaf block point to rows in the same data blocks.</li> </ul> |
| NUM_ROWS                | NUMBER        |      | Number of rows in the index                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| AVG_CACHED_BLOCKS       | NUMBER        |      | Average number of blocks in the buffer cache                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| AVG_CACHE_HIT_RATIO     | NUMBER        |      | Average cache hit ratio for the object                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| SAMPLE_SIZE             | NUMBER        |      | Sample size used in analyzing the index                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| LAST_ANALYZED           | DATE          |      | Date of the most recent time the index was analyzed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| GLOBAL_STATS            | VARCHAR2(3)   |      | GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| USER_STATS              | VARCHAR2(3)   |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| STATTYPE_LOCKED         | VARCHAR2(5)   |      | Type of statistics lock                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| STALE_STATS             | VARCHAR2(3)   |      | Whether statistics for the object are stale or not                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Column | Datatype    | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------|-------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SCOPE  | VARCHAR2(7) |      | <p>The value is SHARED for statistics gathered on any table other than global temporary tables.</p> <p>For a global temporary table, the possible values are:</p> <ul style="list-style-type: none"> <li>SESSION - Indicates that the statistics are session-specific</li> <li>SHARED - Indicates that the statistics are shared across all sessions</li> </ul> <p>See <i>Oracle Database PL/SQL Packages and Types Reference</i> for information about using the GLOBAL_TEMP_TABLE_STATS preference of the DBMS_STATS package to control whether to gather session or shared statistics for global temporary tables.</p> |

## 3.235 ALL\_IND\_SUBPARTITIONS

ALL\_IND\_SUBPARTITIONS displays, for each index subpartition accessible to the current user, the subpartition-level partitioning information, the storage parameters for the subpartition, and various subpartition statistics generated by the DBMS\_STATS package.

#### Related Views

- DBA\_IND\_SUBPARTITIONS describes all index subpartitions in the database.
- USER\_IND\_SUBPARTITIONS describes the index subpartitions owned by the current user. This view does not display the INDEX\_OWNER column.

| Column                | Datatype      | NULL     | Description                                                                |
|-----------------------|---------------|----------|----------------------------------------------------------------------------|
| INDEX_OWNER           | VARCHAR2(128) | NOT NULL | Owner of the index                                                         |
| INDEX_NAME            | VARCHAR2(128) | NOT NULL | Name of the index                                                          |
| PARTITION_NAME        | VARCHAR2(128) |          | Name of the partition                                                      |
| SUBPARTITION_NAME     | VARCHAR2(128) |          | Name of the subpartition                                                   |
| HIGH_VALUE            | LONG          |          | Subpartition bound value expression                                        |
| HIGH_VALUE_LENGTH     | NUMBER        | NOT NULL | Length of the subpartition bound value expression                          |
| PARTITION_POSITION    | NUMBER        |          | Position of the partition within the index                                 |
| SUBPARTITION_POSITION | NUMBER        |          | Position of a subpartition within a partition                              |
| STATUS                | VARCHAR2(8)   |          | Indicates whether the index partition is usable (USABLE) or not (UNUSABLE) |
| TABLESPACE_NAME       | VARCHAR2(30)  | NOT NULL | Name of the tablespace containing the partition                            |

| Column                  | Datatype     | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

A depth of 0 indicates that the root block and leaf block are the same.                                                                                                                                                                                                                                                                                                                                                                                             |
| LEAF_BLOCKS             | NUMBER       |          | Number of leaf blocks in the index                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| DISTINCT_KEYS           | NUMBER       |          | Number of distinct keys in the index partition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| AVG_LEAF_BLOCKS_PER_KEY | NUMBER       |          | Average number of leaf blocks in which each distinct value in the index appears, rounded to the nearest integer. For indexes that enforce UNIQUE and PRIMARY KEY constraints, this value is always 1.                                                                                                                                                                                                                                                                                                                                         |
| AVG_DATA_BLOCKS_PER_KEY | NUMBER       |          | Average number of data blocks in the table that are pointed to by a distinct value in the index rounded to the nearest integer. This statistic is the average number of data blocks that contain rows that contain a given value for the indexed columns.                                                                                                                                                                                                                                                                                     |
| CLUSTERING_FACTOR       | NUMBER       |          | Indicates the amount of order of the rows in the table based on the values of the index. <ul style="list-style-type: none"> <li>• If the value is near the number of blocks, then the table is very well ordered. In this case, the index entries in a single leaf block tend to point to rows in the same data blocks.</li> <li>• If the value is near the number of rows, then the table is very randomly ordered. In this case, it is unlikely that index entries in the same leaf block point to rows in the same data blocks.</li> </ul> |
| NUM_ROWS                | NUMBER       |          | Number of rows in this index subpartition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| SAMPLE_SIZE             | NUMBER       |          | Sample size used in analyzing this subpartition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Column           | Datatype       | NULL | Description                                                                                                                                                                                                                                      |
|------------------|----------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LAST_ANALYZED    | DATE           |      | Date on which this partition was most recently analyzed                                                                                                                                                                                          |
| BUFFER_POOL      | VARCHAR2(7)    |      | Buffer pool for the subpartition: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• RECYCLE</li> <li>• NULL</li> </ul>                                                                                                 |
| FLASH_CACHE      | VARCHAR2(7)    |      | Database Smart Flash Cache hint to be used for subpartition blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> Solaris and Oracle Linux functionality only.                                     |
| CELL_FLASH_CACHE | VARCHAR2(7)    |      | Cell flash cache hint to be used for subpartition blocks: <ul style="list-style-type: none"> <li>• DEFAULT</li> <li>• KEEP</li> <li>• NONE</li> </ul> <b>See Also:</b> Oracle Exadata Storage Server Software documentation for more information |
| USER_STATS       | VARCHAR2(3)    |      | Indicates whether statistics were entered directly by the user (YES) or not (NO)                                                                                                                                                                 |
| GLOBAL_STATS     | VARCHAR2(3)    |      | GLOBAL_STATS will be YES if statistics have been gathered or NO if statistics have not been gathered                                                                                                                                             |
| INTERVAL         | VARCHAR2(3)    |      | Indicates whether the partition is in the interval section of an interval partitioned table (YES) or whether the partition is in the range section (NO)                                                                                          |
| SEGMENT_CREATED  | VARCHAR2(3)    |      | Indicates whether the index subpartition segment has been created (YES) or not (NO); N/A indicates that this index is not subpartitioned                                                                                                         |
| DOMIDX_OPSTATUS  | VARCHAR2(6)    |      | Status of the operation on the domain index: <ul style="list-style-type: none"> <li>• NULL - Index is not a domain index</li> <li>• VALID - Operation performed without errors</li> <li>• FAILED - Operation failed with an error</li> </ul>     |
| PARAMETERS       | VARCHAR2(1000) |      | For a domain index, the parameter string                                                                                                                                                                                                         |

# 3.236 ALL\_INDEXES

ALL\_INDEXES describes the indexes on the tables accessible to the current user.

To gather statistics for this view and the related views DBA\_INDEXES and USER\_INDEXES, use the DBMS\_STATS package.

## Related Views

- DBA\_INDEXES describes all indexes in the database.
- USER\_INDEXES describes the indexes owned by the current user. This view does not display the OWNER column.

### Note

Column names followed by an asterisk are populated only if you collect statistics on the index using the DBMS\_STATS package.

| Column      | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                     |
|-------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER       | VARCHAR2(128) | NOT NULL | Owner of the index                                                                                                                                                                                                                                                                                                                                              |
| INDEX_NAME  | VARCHAR2(128) | NOT NULL | Name of the index                                                                                                                                                                                                                                                                                                                                               |
| INDEX_TYPE  | VARCHAR2(27)  |          | Type of the index: <ul style="list-style-type: none"> <li>BITMAP</li> <li>CLUSTER</li> <li>DOMAIN</li> <li>FUNCTION-BASED BITMAP</li> <li>FUNCTION-BASED DOMAIN</li> <li>FUNCTION-BASED NORMAL</li> <li>FUNCTION-BASED NORMAL/REV</li> <li>IOT - TOP</li> <li>LOB</li> <li>NORMAL</li> <li>NORMAL/REV</li> </ul>                                                |
| TABLE_OWNER | VARCHAR2(128) | NOT NULL | Owner of the indexed object                                                                                                                                                                                                                                                                                                                                     |
| TABLE_NAME  | VARCHAR2(128) | NOT NULL | Name of the indexed object                                                                                                                                                                                                                                                                                                                                      |
| TABLE_TYPE  | VARCHAR2(11)  |          | Type of the indexed object<br>In the DBA_INDEXES and USER_INDEXES views, the possible values are: <ul style="list-style-type: none"> <li>CLUSTER</li> <li>INDEX</li> <li>NEXT OBJECT</li> <li>SEQUENCE</li> <li>SYNONYM</li> <li>TABLE</li> <li>VIEW</li> </ul> In the ALL_INDEXES view, the value of this column is always TABLE and the data type is CHAR(5). |

| Column                   | Datatype     | NULL | Description                                                                                                                                                                                                                                                                            |
|--------------------------|--------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| UNIQUENESS               | VARCHAR2(9)  |      | Indicates whether the index is unique (UNIQUE) or nonunique (NONUNIQUE)                                                                                                                                                                                                                |
| COMPRESSION              | VARCHAR2(13) |      | Type of compression being used for the index: <ul style="list-style-type: none"> <li>• ENABLED - Prefix compression</li> <li>• ADVANCED HIGH - Advanced high compression</li> <li>• ADVANCED LOW - Advanced low compression</li> <li>• DISABLED - No compression is present</li> </ul> |
| PREFIX_LENGTH            | NUMBER       |      | Number of columns in the prefix of the compression key                                                                                                                                                                                                                                 |
| TABLESPACE_NAME          | VARCHAR2(30) |      | Name of the tablespace containing the index                                                                                                                                                                                                                                            |
| INI_TRANS                | NUMBER       |      | Initial number of transactions                                                                                                                                                                                                                                                         |
| MAX_TRANS                | NUMBER       |      | Maximum number of transactions                                                                                                                                                                                                                                                         |
| INITIAL_EXTENT           | NUMBER       |      | Size of the initial extent                                                                                                                                                                                                                                                             |
| NEXT_EXTENT              | NUMBER       |      | Size of secondary extents                                                                                                                                                                                                                                                              |
| MIN_EXTENTS              | NUMBER       |      | Minimum number of extents allowed in the segment                                                                                                                                                                                                                                       |
| MAX_EXTENTS              | NUMBER       |      | Maximum number of extents allowed in the segment                                                                                                                                                                                                                                       |
| PCT_INCREASE             | NUMBER       |      | Percentage increase in extent size                                                                                                                                                                                                                                                     |
| PCT_THRESHOLD            | NUMBER       |      | Threshold percentage of block space allowed per index entry                                                                                                                                                                                                                            |
| INCLUDE_COLUMN           | NUMBER       |      | Column ID of the last column to be included in index-organized table primary key (non-overflow) index. This column maps to the COLUMN_ID column of the *_TAB_COLUMNS view.                                                                                                             |
| FREELISTS                | NUMBER       |      | Number of process freelists allocated to this segment                                                                                                                                                                                                                                  |
| FREELIST_GROUPS          | NUMBER       |      | Number of freelist groups allocated to this segment                                                                                                                                                                                                                                    |
| PCT_FREE                 | NUMBER       |      | Minimum percentage of free space in a block                                                                                                                                                                                                                                            |
| LOGGING                  | VARCHAR2(3)  |      | Indicates whether or not changes to the index are logged: <ul style="list-style-type: none"> <li>• YES</li> <li>• NO</li> </ul>                                                                                                                                                        |
| BLEVEL *                 | NUMBER       |      | B*-Tree level (depth of the index from its root block to its leaf blocks). A depth of 0 indicates that the root block and leaf block are the same.                                                                                                                                     |
| LEAF_BLOCKS*             | NUMBER       |      | Number of leaf blocks in the index                                                                                                                                                                                                                                                     |
| DISTINCT_KEYS*           | NUMBER       |      | Number of distinct indexed values. For indexes that enforce UNIQUE and PRIMARY KEY constraints, this value is the same as the number of rows in the table (*_TABLES.NUM_ROWS)                                                                                                          |
| AVG_LEAF_BLOCKS_PER_KEY* | NUMBER       |      | Average number of leaf blocks in which each distinct value in the index appears, rounded to the nearest integer. For indexes that enforce UNIQUE and PRIMARY KEY constraints, this value is always 1.                                                                                  |
| AVG_DATA_BLOCKS_PER_KEY* | NUMBER       |      | Average number of data blocks in the table that are pointed to by a distinct value in the index rounded to the nearest integer. This statistic is the average number of data blocks that contain rows that contain a given value for the indexed columns.                              |

| Column             | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------|--------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CLUSTERING_FACTOR* | NUMBER       |      | <p>Indicates the amount of order of the rows in the table based on the values of the index.</p> <ul style="list-style-type: none"> <li>If the value is near the number of blocks, then the table is very well ordered. In this case, the index entries in a single leaf block tend to point to rows in the same data blocks.</li> <li>If the value is near the number of rows, then the table is very randomly ordered. In this case, it is unlikely that index entries in the same leaf block point to rows in the same data blocks.</li> </ul> <p>For bitmap indexes, this column is not applicable.</p> |
| STATUS             | VARCHAR2(8)  |      | Indicates whether a nonpartitioned index is VALID or UNUSABLE                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| NUM_ROWS           | NUMBER       |      | <p>Number of rows in the index.</p> <p>For bitmap indexes, this column is the number of distinct keys, so its value is the same as the DISTINCT_KEYS column.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| SAMPLE_SIZE        | NUMBER       |      | Size of the sample used to analyze the index                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| PARAMETERS              | VARCHAR2(1000) |      | For a domain index, the parameter string                                                                                                                                                                                                              |
| GLOBAL_STATS            | VARCHAR2(3)    |      | GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO                                                                                                                                              |
| DOMIDX_STATUS           | VARCHAR2(12)   |      | Status of a domain index: <ul style="list-style-type: none"> <li>• NULL - Index is not a domain index</li> <li>• VALID - Index is a valid domain index</li> <li>• IDXTYP_INVLD - Indextype of the domain index is invalid</li> </ul>                  |
| DOMIDX_OPSTATUS         | VARCHAR2(6)    |      | Status of the operation on a domain index: <ul style="list-style-type: none"> <li>• NULL - Index is not a domain index</li> <li>• VALID - Operation performed without errors</li> <li>• FAILED - Operation failed with an error</li> </ul>            |
| FUNCIDX_STATUS          | VARCHAR2(8)    |      | Status of a function-based index: <ul style="list-style-type: none"> <li>• NULL - Index is not a function-based index</li> <li>• ENABLED - Function-based index is enabled</li> <li>• DISABLED - Function-based index is disabled</li> </ul>          |
| JOIN_INDEX              | VARCHAR2(3)    |      | Indicates whether the index is a join index (YES) or not (NO)                                                                                                                                                                                         |
| IOT_REDUNDANT_PKEY_ELIM | VARCHAR2(3)    |      | Indicates whether redundant primary key columns are eliminated from secondary indexes on index-organized tables (YES) or not (NO)                                                                                                                     |
| DROPPED                 | VARCHAR2(3)    |      | Indicates whether the index has been dropped and is in the recycle bin (YES) or not (NO); NULL for partitioned tables<br>This view does not return the names of indexes that have been dropped.                                                       |
| VISIBILITY              | VARCHAR2(9)    |      | Indicates whether the index is VISIBLE or INVISIBLE to the optimizer                                                                                                                                                                                  |
| DOMIDX_MANAGEMENT       | VARCHAR2(14)   |      | If this is a domain index, indicates whether the domain index is system-managed (SYSTEM_MANAGED) or user-managed (USER_MANAGED)                                                                                                                       |
| SEGMENT_CREATED         | VARCHAR2(3)    |      | Indicates whether the index segment has been created (YES) or not (NO)                                                                                                                                                                                |

| Column           | Datatype    | NULL | Description                                                                                                                                                                                                                                                                                                                                           |
|------------------|-------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ORPHANED_ENTRIES | VARCHAR2(3) |      | Indicates whether a global index contains stale entries because of deferred index maintenance during DROP/ TRUNCATE PARTITION, or MODIFY PARTITION INDEXING OFF operations.<br>Possible values: <ul style="list-style-type: none"> <li>YES - The index contains orphaned entries</li> <li>NO - The index does not contain orphaned entries</li> </ul> |
| INDEXING         | VARCHAR2(7) |      | Indicates whether a global index is decoupled from the underlying table.<br>Possible values: <ul style="list-style-type: none"> <li>PARTIAL - The index is partial, that is, it will follow the table's indexing property.</li> <li>FULL - The index will include all partitions of the table.</li> </ul>                                             |
| AUTO             | VARCHAR2(3) |      | Indicates whether the index is an auto index (YES) or not (NO)                                                                                                                                                                                                                                                                                        |
| CONSTRAINT_INDEX | VARCHAR2(3) |      | Indicates whether the index was created as part of a constraint (YES) or not (NO)                                                                                                                                                                                                                                                                     |

## 3.237 ALL\_INDEXTYPE\_ARRAYTYPES

ALL\_INDEXTYPE\_ARRAYTYPES displays information about the array types specified by the indextypes accessible to the current user.

#### Related Views

- DBA\_INDEXTYPE\_ARRAYTYPES displays information about the array types specified by all indextypes in the database.
- USER\_INDEXTYPE\_ARRAYTYPES displays information about the array types specified by the indextypes owned by the current user.

| Column            | Datatype      | NULL     | Description                   |
|-------------------|---------------|----------|-------------------------------|
| OWNER             | VARCHAR2(128) | NOT NULL | Owner of the indextype        |
| INDEXTYPE_NAME    | VARCHAR2(128) | NOT NULL | Name of the indextype         |
| BASE_TYPE_SCHEMA  | VARCHAR2(128) |          | Name of the base type schema  |
| BASE_TYPE_NAME    | VARCHAR2(128) |          | Name of the base type name    |
| BASE_TYPE         | VARCHAR2(30)  |          | Datatype of the base type     |
| ARRAY_TYPE_SCHEMA | VARCHAR2(128) | NOT NULL | Name of the array type schema |

| Column          | Datatype      | NULL     | Description                 |
|-----------------|---------------|----------|-----------------------------|
| ARRAY_TYPE_NAME | VARCHAR2(128) | NOT NULL | Name of the array type name |

## 3.241 ALL\_INTERNAL\_TRIGGERS

ALL\_INTERNAL\_TRIGGERS describes internal triggers on tables accessible to the current user. Internal triggers are internal pieces of code executed when a particular flag is set for a table. This view does not display the OWNER\_NAME column.

**Related Views**

- DBA\_INTERNAL\_TRIGGERS describes internal triggers on all tables in the database.
- USER\_INTERNAL\_TRIGGERS describes all internal triggers on tables owned by the current user. This view does not display the OWNER\_NAME column.

| Column                | Datatype      | NULL | Description                                         |
|-----------------------|---------------|------|-----------------------------------------------------|
| TABLE_NAME            | VARCHAR2(128) |      | Name of the table on which the trigger is defined   |
| INTERNAL_TRIGGER_TYPE | VARCHAR2(19)  |      | Indicates the type of internal trigger on the table |

## 3.242 ALL\_JAVA\_ARGUMENTS

ALL\_JAVA\_ARGUMENTS displays argument information about the stored Java classes accessible to the current user.

**Related Views**

- DBA\_JAVA\_ARGUMENTS displays argument information about all stored Java classes in the database.
- USER\_JAVA\_ARGUMENTS displays argument information about the stored Java classes owned by the current user. This view does not display the OWNER column.

| Column            | Datatype       | NULL     | Description                                 |
|-------------------|----------------|----------|---------------------------------------------|
| OWNER             | VARCHAR2(128)  | NOT NULL | Owner of the Java class                     |
| NAME              | VARCHAR2(4000) |          | Name of the Java class                      |
| METHOD_INDEX      | NUMBER         |          | Index of the hosting method of the argument |
| METHOD_NAME       | VARCHAR2(4000) |          | Name of the hosting method of the argument  |
| ARGUMENT_POSITION | NUMBER         |          | Position of the argument, starting from 0   |

| Column         | Datatype       | NULL | Description                                                                                                                                                                                                                            |
|----------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ARRAY_DEPTH    | NUMBER         |      | Array depth of the type of the argument                                                                                                                                                                                                |
| BASE_TYPE      | VARCHAR2(7)    |      | Base type of the type of the argument: <ul style="list-style-type: none"> <li>• int</li> <li>• long</li> <li>• float</li> <li>• double</li> <li>• boolean</li> <li>• byte</li> <li>• char</li> <li>• short</li> <li>• class</li> </ul> |
| ARGUMENT_CLASS | VARCHAR2(4000) |      | Actual class name of the argument if the base type is class                                                                                                                                                                            |

## 3.254 ALL\_JOBS

ALL\_JOBS is a synonym for USER\_JOBS.

**See Also**

["USER\\_JOBS"](#)

## 3.255 ALL\_JOIN\_IND\_COLUMNS

ALL\_JOIN\_IND\_COLUMNS describes the join conditions of bitmap join indexes accessible to the current user. Bitmap join indexes are indexes built on a child table with an index key containing columns from associated parent tables, where all of the tables are connected through join conditions. There is one row for each join condition.

### Related Views

- DBA\_JOIN\_IND\_COLUMNS describes all join conditions in the database.
- USER\_JOIN\_IND\_COLUMNS describes the join conditions owned by the current user. This view does not display the INDEX\_OWNER column.

| Column             | Datatype      | NULL     | Description                             |
|--------------------|---------------|----------|-----------------------------------------|
| INDEX_OWNER        | VARCHAR2(128) | NOT NULL | Owner of the bitmap join index          |
| INDEX_NAME         | VARCHAR2(128) | NOT NULL | Name of the bitmap join index           |
| INNER_TABLE_OWNER  | VARCHAR2(128) | NOT NULL | Owner of the fact table                 |
| INNER_TABLE_NAME   | VARCHAR2(128) | NOT NULL | Name of the fact table                  |
| INNER_TABLE_COLUMN | VARCHAR2(128) | NOT NULL | Name of the fact table join column      |
| OUTER_TABLE_OWNER  | VARCHAR2(128) | NOT NULL | Owner of the dimension table            |
| OUTER_TABLE_NAME   | VARCHAR2(128) | NOT NULL | Name of the dimension table             |
| OUTER_TABLE_COLUMN | VARCHAR2(128) | NOT NULL | Name of the dimension table join column |

### 3.256 ALL\_JSON\_COLUMNS

ALL\_JSON\_COLUMNS provides information on the JavaScript Object Notation (JSON) columns accessible to the current user.

This view displays information on table and view columns that are guaranteed to return JSON data. These include:

- Columns of data type JSON
- Columns on which a check constraint containing the IS JSON condition is defined, where the IS JSON condition is always enforced. Such check constraints can contain only the IS JSON condition, or they can contain the IS JSON condition as part of a logical AND condition.

For example, the following check constraints ensure that the IS JSON condition is always enforced and will therefore cause mycol to appear in the ALL\_JSON\_COLUMNS view:

```
mycol IS JSON
mycol IS JSON AND LENGTH(mycol) > 100
```

However, the following check constraint does not ensure that the IS JSON condition is enforced, because it is part of a logical OR condition, and will therefore cause mycol to be omitted from the ALL\_JSON\_COLUMNS view:

```
mycol IS JSON OR LENGTH(mycol) > 100
```

- View columns that are defined as the return value of a SQL function that returns JSON data. Such functions include:
  - TREAT ( *expr* AS JSON )
  - JSON\_ARRAY, JSON\_ARRAYAGG, JSON\_MERGEPATCH, JSON\_OBJECT, JSON\_OBJECTAGG, JSON\_QUERY, JSON\_SERIALIZE, and JSON\_TRANSFORM

For example, in the following definition for view v1, column mycol is defined as the return value of the JSON\_OBJECT function, which will therefore cause mycol to appear in the ALL\_JSON\_COLUMNS view:

```
CREATE TABLE t1 (text varchar2(100));
CREATE VIEW v1 AS SELECT JSON_OBJECT(text) AS mycol FROM t1;
```

Related Views

- DBA\_JSON\_COLUMNS provides information on all JSON columns.
- USER\_JSON\_COLUMNS provides information on the JSON columns for which the user is the owner. This view does not display the OWNER column.

| Column     | Datatype      | NULL | Description                             |
|------------|---------------|------|-----------------------------------------|
| OWNER      | VARCHAR2(128) |      | Owner of the table with the JSON column |
| TABLE_NAME | VARCHAR2(128) |      | Name of the table with the JSON column  |

| Column      | Datatype      | NULL | Description                                                                            |
|-------------|---------------|------|----------------------------------------------------------------------------------------|
| OBJECT_TYPE | VARCHAR2(5)   |      | Object type: <ul style="list-style-type: none"> <li>• TABLE</li> <li>• VIEW</li> </ul> |
| COLUMN_NAME | VARCHAR2(128) |      | Name of the JSON column                                                                |
| FORMAT      | VARCHAR2(9)   |      | Format of the JSON data                                                                |
| DATA_TYPE   | VARCHAR2(13)  |      | Data type of the JSON column                                                           |

## 3.257 ALL\_JSON\_DATAGUIDE\_FIELDS

ALL\_JSON\_DATAGUIDE\_FIELDS extracts the path and type information from the data guides accessible to the current user, which are the data guides returned to the user by the ALL\_JSON\_DATAGUIDE view.

#### Related Views

- DBA\_JSON\_DATAGUIDE\_FIELDS extracts the path and type information from all the data guides in the database, which are the data guides returned by the DBA\_JSON\_DATAGUIDE view.
- USER\_JSON\_DATAGUIDE\_FIELDS extracts the path and type information from all the data guides in the current user's schema, which are the data guides returned to the user by the USER\_JSON\_DATAGUIDE view. This view does not display the OWNER column.

| Column      | Datatype       | NULL | Description                                         |
|-------------|----------------|------|-----------------------------------------------------|
| OWNER       | VARCHAR2(128)  |      | Owner of the table containing the JSON column       |
| TABLE_NAME  | VARCHAR2(128)  |      | Name of the table containing the JSON column        |
| COLUMN_NAME | VARCHAR2(128)  |      | Name of the JSON column that has data guide enabled |
| PATH        | VARCHAR2(4000) |      | Path to the JSON field in the data guide            |
| TYPE        | VARCHAR2(40)   |      | Type of the JSON field in the data guide            |
| LENGTH      | NUMBER         |      | Maximum length of the JSON field value, in bytes    |

## 3.258 ALL\_JSON\_DATAGUIDES

ALL\_JSON\_DATAGUIDES provides information on the JavaScript Object Notation (JSON) columns accessible to the current user that have data guide enabled.

### Related Views

- DBA\_JSON\_DATAGUIDES provides information on all JavaScript Object Notation (JSON) columns in the database that have data guide enabled.
- USER\_JSON\_DATAGUIDES provides information on the JavaScript Object Notation (JSON) columns owned by the current user that have data guide enabled. This view does not display the OWNER column.

| Column      | Datatype      | NULL     | Description                                         |
|-------------|---------------|----------|-----------------------------------------------------|
| OWNER       | VARCHAR2(128) | NOT NULL | Owner of the table containing the JSON column       |
| TABLE_NAME  | VARCHAR2(128) | NOT NULL | Name of the table containing the JSON column        |
| COLUMN_NAME | VARCHAR2(128) | NOT NULL | Name of the JSON column that has data guide enabled |
| DATAGUIDE   | CLOB          |          | The data guide of the JSON column in flat format    |

## 3.260 ALL\_LOB\_PARTITIONS

ALL\_LOB\_PARTITIONS displays the LOB partitions in the tables accessible to the current user.

#### Related Views

- DBA\_LOB\_PARTITIONS displays all LOB partitions in the database.
- USER\_LOB\_PARTITIONS displays the LOB partitions owned by the current user. This view does not display the TABLE\_OWNER column.

| Column             | Datatype       | NULL | Description                                                    |
|--------------------|----------------|------|----------------------------------------------------------------|
| TABLE_OWNER        | VARCHAR2(128)  |      | Owner of the table                                             |
| TABLE_NAME         | VARCHAR2(128)  |      | Name of the table                                              |
| COLUMN_NAME        | VARCHAR2(4000) |      | Name of the LOB column                                         |
| LOB_NAME           | VARCHAR2(128)  |      | Name of the partitioned LOB item                               |
| PARTITION_NAME     | VARCHAR2(128)  |      | Name of the table partition                                    |
| LOB_PARTITION_NAME | VARCHAR2(128)  |      | Name of the LOB data partition                                 |
| LOB_INDPART_NAME   | VARCHAR2(128)  |      | Name of the corresponding LOB index partition                  |
| PARTITION_POSITION | NUMBER         |      | Position of the LOB data partition within the LOB item         |
| COMPOSITE          | VARCHAR2(3)    |      | Indicates whether the partition is composite (YES) or not (NO) |
| CHUNK              | NUMBER         |      | Value of the CHUNK attribute of the LOB data partition         |
| PCTVERSION         | NUMBER         |      | Value of the PCTVERSION attribute of the LOB data partition    |

| Column          | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CACHE           | VARCHAR2(10) |      | Indicates whether and how the LOB data is to be cached in the buffer cache: <ul style="list-style-type: none"> <li>• YES - LOB data is placed in the buffer cache</li> <li>• NO - LOB data either is not brought into the buffer cache or is brought into the buffer cache and placed at the least recently used end of the LRU list</li> <li>• CACHEREADS - LOB data is brought into the buffer cache only during read operations but not during write operations</li> </ul> |
| IN_ROW          | VARCHAR2(3)  |      | Indicates whether the STORAGE IN ROW attribute is enabled for the LOB data partition (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                        |
| TABLESPACE_NAME | VARCHAR2(30) |      | Name of the tablespace containing the LOB data partition                                                                                                                                                                                                                                                                                                                                                                                                                      |
| INITIAL_EXTENT  | VARCHAR2(40) |      | Size (in bytes) of the initial extent of the LOB data partition, or DEFAULT                                                                                                                                                                                                                                                                                                                                                                                                   |
| NEXT_EXTENT     | VARCHAR2(40) |      | Size (in bytes) of secondary extents of the LOB data partition, or DEFAULT                                                                                                                                                                                                                                                                                                                                                                                                    |
| MIN_EXTENTS     | VARCHAR2(40) |      | Minimum number of extents allowed in the segment of the LOB data partition, or DEFAULT                                                                                                                                                                                                                                                                                                                                                                                        |
| MAX_EXTENTS     | VARCHAR2(40) |      | Maximum number of extents allowed in the segment of the LOB data partition, or DEFAULT                                                                                                                                                                                                                                                                                                                                                                                        |
| MAX_SIZE        | VARCHAR2(40) |      | Maximum number of blocks allowed in the segment of the LOB data partition, or DEFAULT                                                                                                                                                                                                                                                                                                                                                                                         |
| RETENTION       | VARCHAR2(7)  |      | Retention option.<br>Possible values for a SecureFiles segment: <ul style="list-style-type: none"> <li>• NONE</li> <li>• AUTO</li> <li>• MIN</li> <li>• MAX</li> <li>• DEFAULT</li> <li>• INVALID</li> </ul> Possible values for a BasicFiles segment: <ul style="list-style-type: none"> <li>• YES</li> <li>• NO</li> </ul>                                                                                                                                                  |
| MINRETENTION    | VARCHAR2(40) |      | Minimum retention duration for a SecureFiles segment, or DEFAULT                                                                                                                                                                                                                                                                                                                                                                                                              |
| PCT_INCREASE    | VARCHAR2(40) |      | Percentage increase in extent size for the LOB data partition, or DEFAULT                                                                                                                                                                                                                                                                                                                                                                                                     |
| FREELISTS       | VARCHAR2(40) |      | Number of process freelists allocated in the segment of the LOB data partition, or DEFAULT                                                                                                                                                                                                                                                                                                                                                                                    |
| FREELIST_GROUPS | VARCHAR2(40) |      | Number of freelist groups allocated in the segment of the LOB data partition, or DEFAULT                                                                                                                                                                                                                                                                                                                                                                                      |

## 3.262 ALL\_LOB\_TEMPLATES

ALL\_LOB\_TEMPLATES describes the LOB subpartition templates accessible to the current user.

**Related Views**

- DBA\_LOB\_TEMPLATES describes all LOB subpartition templates in the database.
- USER\_LOB\_TEMPLATES describes the LOB subpartition templates owned by the current user. This view does not display the USER\_NAME column.

| Column            | Datatype       | NULL     | Description                         |
|-------------------|----------------|----------|-------------------------------------|
| USER_NAME         | VARCHAR2(128)  | NOT NULL | Owner of the table                  |
| TABLE_NAME        | VARCHAR2(128)  | NOT NULL | Name of the table                   |
| LOB_COL_NAME      | VARCHAR2(4000) |          | Name of the LOB column              |
| SUBPARTITION_NAME | VARCHAR2(132)  | NOT NULL | Name of the subpartition            |
| LOB_SEGMENT_NAME  | VARCHAR2(132)  | NOT NULL | Name of the LOB segment             |
| TABLESPACE_NAME   | VARCHAR2(30)   |          | Tablespace name of the subpartition |

## 3.263 ALL\_LOBS

ALL\_LOBS displays the large objects (LOBs) contained in tables accessible to the current user. LOBs include binary large objects (BLOBs) and character large objects (CLOBs). Binary files (BFILES) are stored outside the database, so they are not displayed by this view or the related views.

**Related Views**

- DBA\_LOBS describes all LOBs in the database.
- USER\_LOBS describes the LOBs owned by the current user. This view does not display the OWNER column.

| Column     | Datatype      | NULL | Description                            |
|------------|---------------|------|----------------------------------------|
| OWNER      | VARCHAR2(128) |      | Owner of the object containing the LOB |
| TABLE_NAME | VARCHAR2(128) |      | Name of the object containing the LOB  |

| Column          | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------|----------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COLUMN_NAME     | VARCHAR2(4000) |      | Name of the LOB column or attribute                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| SEGMENT_NAME    | VARCHAR2(128)  |      | Name of the LOB segment                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| TABLESPACE_NAME | VARCHAR2(30)   |      | Name of the tablespace containing the LOB segment                                                                                                                                                                                                                                                                                                                                                                                                                             |
| INDEX_NAME      | VARCHAR2(128)  |      | Name of the LOB index                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| CHUNK           | NUMBER         |      | Size (in bytes) of the LOB chunk as a unit of allocation or manipulation                                                                                                                                                                                                                                                                                                                                                                                                      |
| PCTVERSION      | NUMBER         |      | Maximum percentage of the LOB space used for versioning                                                                                                                                                                                                                                                                                                                                                                                                                       |
| RETENTION       | NUMBER         |      | Maximum time duration for versioning of the LOB space                                                                                                                                                                                                                                                                                                                                                                                                                         |
| FREEPOOLS       | NUMBER         |      | Number of freepools for this LOB segment                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| CACHE           | VARCHAR2(10)   |      | Indicates whether and how the LOB data is to be cached in the buffer cache: <ul style="list-style-type: none"> <li>• YES - LOB data is placed in the buffer cache</li> <li>• NO - LOB data either is not brought into the buffer cache or is brought into the buffer cache and placed at the least recently used end of the LRU list</li> <li>• CACHEREADS - LOB data is brought into the buffer cache only during read operations but not during write operations</li> </ul> |
| LOGGING         | VARCHAR2(7)    |      | Indicates whether or not changes to the LOB are logged: <ul style="list-style-type: none"> <li>• NONE - Not specified<br/><b>See Also:</b> the *_LOB_SUBPARTITIONS view</li> <li>• YES</li> <li>• NO</li> </ul>                                                                                                                                                                                                                                                               |
| ENCRYPT         | VARCHAR2(4)    |      | Indicates whether or not the LOB is encrypted.<br>Possible values for SecureFiles: <ul style="list-style-type: none"> <li>• YES</li> <li>• NO</li> </ul> Possible value for BasicFiles: <ul style="list-style-type: none"> <li>• NONE - Not applicable</li> </ul>                                                                                                                                                                                                             |
| COMPRESSION     | VARCHAR2(6)    |      | Level of compression used for this LOB.<br>Possible values for SecureFiles: <ul style="list-style-type: none"> <li>• LOW</li> <li>• MEDIUM</li> <li>• HIGH</li> <li>• NO - Compression is off</li> </ul> Possible value for BasicFiles: <ul style="list-style-type: none"> <li>• NONE - Not applicable</li> </ul>                                                                                                                                                             |
| DEDUPLICATION   | VARCHAR2(15)   |      | Kind of deduplication used for this LOB.<br>Possible values for SecureFiles: <ul style="list-style-type: none"> <li>• LOB - Deduplicate</li> <li>• NO - Keep duplicates</li> </ul> Possible value for BasicFiles: <ul style="list-style-type: none"> <li>• NONE - Not applicable</li> </ul>                                                                                                                                                                                   |

| Column          | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IN_ROW          | VARCHAR2(3)  |      | Indicates whether some LOBs are stored inline with the base row (YES) or not (NO). For partitioned objects, refer to the *_LOB_PARTITIONS and *_PART_LOBS views.                                                                                                                                                                                                                                                                                                                                                                                                                    |
| FORMAT          | VARCHAR2(15) |      | Indicates whether the LOB storage format depends on the endianness of the platform: <ul style="list-style-type: none"> <li>• NOT APPLICABLE</li> <li>• ENDIAN SPECIFIC</li> <li>• ENDIAN NEUTRAL</li> </ul>                                                                                                                                                                                                                                                                                                                                                                         |
| PARTITIONED     | VARCHAR2(3)  |      | Indicates whether the LOB column is in a partitioned table (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| SECUREFILE      | VARCHAR2(3)  |      | Indicates whether the LOB is SecureFiles (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| SEGMENT_CREATED | VARCHAR2(3)  |      | Indicates whether the LOB segment has been created (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| RETENTION_TYPE  | VARCHAR2(7)  |      | Type of retention used for this LOB.<br>Possible values for SecureFiles: <ul style="list-style-type: none"> <li>• NONE</li> <li>• AUTO</li> <li>• MIN</li> <li>• MAX</li> <li>• DEFAULT</li> <li>• INVALID</li> </ul> Possible values for BasicFiles: <ul style="list-style-type: none"> <li>• YES</li> <li>• NO</li> </ul>                                                                                                                                                                                                                                                         |
| RETENTION_VALUE | NUMBER       |      | Minimum retention time (in seconds). This column is only meaningful for SecureFiles with RETENTION_TYPE set to MIN.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| VALUE_BASED     | VARCHAR2(3)  |      | Indicates whether the LOB is value based (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| MAX_INLINE      | NUMBER       |      | Size of inline LOB storage (in bytes) <ul style="list-style-type: none"> <li>• For inline LOBs in nonpartitioned tables (IN_ROW = YES and PARTITIONED = NO), this column displays the size of inline LOB storage (in bytes).</li> <li>• For out-of-inline LOBs in nonpartitioned tables (IN_ROW = NO and PARTITIONED = NO), the value of this column is 0.</li> <li>• For LOBs in partitioned tables (PARTITIONED = YES), the value of this column is null. Instead, refer to the MAX_INLINE column in the *_PART_LOBS, *_LOB_PARTITIONS, and *_LOB_SUBPARTITIONS views.</li> </ul> |

## 3.264 ALL\_LOG\_GROUP\_COLUMNS

ALL\_LOG\_GROUP\_COLUMNS describes columns that are accessible to the current user and that are specified in log groups.

### Related Views

- DBA\_LOG\_GROUP\_COLUMNS describes all columns in the database that are specified in log groups.
- USER\_LOG\_GROUP\_COLUMNS describes columns that are owned by the current user and that are specified in log groups.

| Column           | Datatype       | NULL     | Description                                                                                     |
|------------------|----------------|----------|-------------------------------------------------------------------------------------------------|
| OWNER            | VARCHAR2(128)  | NOT NULL | Owner of the log group definition                                                               |
| LOG_GROUP_NAME   | VARCHAR2(128)  | NOT NULL | Name of the log group definition                                                                |
| TABLE_NAME       | VARCHAR2(128)  | NOT NULL | Name of the table in which the log group is defined                                             |
| COLUMN_NAME      | VARCHAR2(4000) |          | Name of the column or attribute of the object type column specified in the log group definition |
| POSITION         | NUMBER         |          | Original position of the column or attribute in the definition of the object                    |
| LOGGING_PROPERTY | VARCHAR2(6)    |          | Indicates whether the column or attribute would be supplementally logged (LOG) or not (NO LOG)  |

## 3.269 ALL\_METADATA\_PROPERTIES

ALL\_METADATA\_PROPERTIES describes OLAP metadata properties in the database that are accessible to the current user.

**Related Views**

- DBA\_METADATA\_PROPERTIES describes OLAP metadata properties in the database.
- USER\_METADATA\_PROPERTIES describes OLAP metadata properties in the current user's schema. This view does not display the OWNER column.

| Column           | Datatype      | NULL | Description                                       |
|------------------|---------------|------|---------------------------------------------------|
| OWNER            | VARCHAR2(128) |      | Owner of the OLAP metadata property               |
| OWNING_OBJECT_ID | NUMBER        |      | Dictionary ID of the OLAP metadata property owner |
| OWNING_TYPE      | VARCHAR2(23)  |      | Owning type of the OLAP metadata property         |
| PROPERTY_ID      | NUMBER        |      | Dictionary Id of the OLAP metadata property       |
| PROPERTY_KEY     | VARCHAR2(128) |      | Key of the OLAP metadata property                 |
| PROPERTY_VALUE   | CLOB          |      | Value of the OLAP metadata property               |
| PROPERTY_ORDER   | NUMBER        |      | Order number of the OLAP metadata property        |

## 3.272 ALL\_MINING\_ALGORITHMS

ALL\_MINING\_ALGORITHMS describes the settings for a current user.

| Column             | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                        |
|--------------------|----------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ALGORITHM_NAME     | VARCHAR2(128)  |      | Algorithm used by the model.                                                                                                                                                                                                                                                                                                                       |
| MINING_FUNCTION    | VARCHAR2(30)   |      | Function of the machine learning model. The machine learning function is specified when the model is built: <ul style="list-style-type: none"> <li>• CLASSIFICATION</li> <li>• REGRESSION</li> <li>• CLUSTERING</li> <li>• FEATURE_EXTRACTION</li> <li>• ASSOCIATION_RULES</li> <li>• ATTRIBUTE_IMPORTANCE</li> <li>• ANOMALY_DETECTION</li> </ul> |
| ALGORITHM_TYPE     | VARCHAR2(20)   |      | Algorithm type of the model                                                                                                                                                                                                                                                                                                                        |
| ALGORITHM_METADATA | CLOB           |      | Metadata of the algorithm                                                                                                                                                                                                                                                                                                                          |
| DESCRIPTION        | VARCHAR2(4000) |      | Description of the algorithm                                                                                                                                                                                                                                                                                                                       |

## 3.273 ALL\_MINING\_MODEL\_ATTRIBUTES

ALL\_MINING\_MODEL\_ATTRIBUTES describes the attributes of the machine learning models accessible to the current user.

Only the attributes in the model signature are included in this view. The attributes in the model signature correspond to the columns in the training data that were used to build the model.

Machine learning models are schema objects created by Oracle Machine Learning for SQL.

| ATTRIBUTE_TYPE | VARCHAR2(11)  | —        | <p>Logical type of the attribute. The type is identified during the model build or apply process:</p> <ul style="list-style-type: none"> <li>• NUMERICAL: Numeric data</li> <li>• CATEGORICAL: Character data</li> <li>• TEXT: Unstructured text data</li> <li>• PARTITION: The input signature column is used for the partitioning key</li> <li>• MIXED: The input signature column takes on more than one attribute type.</li> </ul> <p>This is due to user-defined embedded transformations that allow an input column to be transformed into multiple independent mining attributes, including mining attributes of different types.</p> |
| DATA_TYPE      | VARCHAR2(106) | —        | Data type of the attribute                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| DATA_LENGTH    | NUMBER        | —        | Length of the data type                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| DATA_PRECISION | NUMBER        | —        | Precision of a fixed point number. Precision, which is the total number of significant decimal digits, is represented as <i>p</i> in the data type NUMBER( <i>p</i> , <i>s</i> ).                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| DATA_SCALE     | NUMBER        | —        | Scale of a fixed point number. Scale, which is the number of digits from the decimal to the least significant digit, is represented as <i>s</i> in the data type NUMBER( <i>p</i> , <i>s</i> ).                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| USAGE_TYPE     | VARCHAR2(8)   | —        | Indicates whether the attribute was used to construct the model (ACTIVE) or not (INACTIVE). Some attributes may be eliminated by transformations or algorithmic processing. The *_MINING_MODEL_ATTRIBUTES view only lists the attributes used by the model, therefore the value of this column is always ACTIVE.                                                                                                                                                                                                                                                                                                                             |
| TARGET         | VARCHAR2(3)   | —        | Indicates whether the attribute is the target of a predictive model (YES) or not (NO). The target describes the result that is produced when the model is applied.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Column         | Datatype       | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|----------------|----------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ATTRIBUTE_SPEC | VARCHAR2(4000) | –    | <p>One or more keywords that identify special treatment for the attribute during model build. Values are:</p> <ul style="list-style-type: none"> <li>• <b>FORCE_IN</b>: (GLM only) When feature selection is enabled, forces the inclusion of the attribute in the model build. Feature selection is disabled by default. If the model is not using GLM with feature selection enabled, this value is ignored.</li> <li>• <b>NOPREP</b>: When ADP is on, prevents automatic transformation of the attribute. If ADP is OFF, this value is ignored.</li> <li>• <b>TEXT</b>: Causes the attribute to be treated as unstructured text data. The TEXT value supports three subsettings: <b>POLICY_NAME</b>, <b>MAX_FEATURES</b>, <b>TOKEN_TYPE</b>, and <b>MIN_DOCUMENTS</b>. Subsettings are specified as name:value pairs within parentheses. For example: (POLICY_NAME:mypolicy)(MAX_FEATURES:2000)(TOKEN_TYPE:THEME). See <i>Oracle Machine Learning for SQL API Guide</i> for details.</li> <li>• <b>NULL</b>: The ATTRIBUTE_SPEC for this attribute is NULL.</li> </ul> <p>ATTRIBUTE_SPEC is a parameter to the PL/SQL procedure <code>DBMS_DATA_MINING_TRANSFORM.SET_TRANSFORM</code>. See <i>Oracle Database PL/SQL Packages and Types Reference</i> for details.</p> |

## 3.274 ALL\_MINING\_MODEL\_PARTITIONS

ALL\_MINING\_MODEL\_PARTITIONS describes all the model partitions accessible to the user.

#### Related Views

- **DBA\_MINING\_MODEL\_PARTITIONS** describes all the model partitions accessible to the system.
- **USER\_MINING\_MODEL\_PARTITIONS** describes the user's own model partitions. This view does not display the OWNER column.

| Column         | Datatype      | NULL     | Description                 |
|----------------|---------------|----------|-----------------------------|
| OWNER          | VARCHAR2(128) | NOT NULL | Name of the model owner     |
| MODEL_NAME     | VARCHAR2(128) | NOT NULL | Name of the model           |
| PARTITION_NAME | VARCHAR2(128) | –        | Name of the model partition |

| Column       | Datatype       | NULL     | Description                                                                                                                                                                         |
|--------------|----------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| POSITION     | NUMBER         | –        | Column position number for partitioning column. Column position represents the position of the column in a multi-column partitioning key, or 1 for a unary column partitioning key. |
| COLUMN_NAME  | VARCHAR2(128)  | NOT NULL | Name of the column used for partitioning                                                                                                                                            |
| COLUMN_VALUE | VARCHAR2(4000) | –        | Value of the column for this partition                                                                                                                                              |

## 3.275 ALL\_MINING\_MODEL\_SETTINGS

ALL\_MINING\_MODEL\_SETTINGS describes the settings of the machine learning models accessible to the current user.

Machine learning models are schema objects created by Oracle Machine Learning for SQL.

### Related Views

- DBA\_MINING\_MODEL\_SETTINGS describes the settings of all machine learning models in the database.
- USER\_MINING\_MODEL\_SETTINGS describes the settings of the machine learning models owned by the current user. This view does not display the OWNER column.

| Column        | Datatype       | NULL     | Description                                                                                          |
|---------------|----------------|----------|------------------------------------------------------------------------------------------------------|
| OWNER         | VARCHAR2(128)  | NOT NULL | Owner of the machine learning model                                                                  |
| MODEL_NAME    | VARCHAR2(128)  | NOT NULL | Name of the machine learning model                                                                   |
| SETTING_NAME  | VARCHAR2(30)   | NOT NULL | Name of the setting                                                                                  |
| SETTING_VALUE | VARCHAR2(4000) | –        | Value of the setting                                                                                 |
| SETTING_TYPE  | VARCHAR2(7)    | –        | Indicates whether the default value (DEFAULT) or a user-specified value (INPUT) is used by the model |

## 3.277 ALL\_MINING\_MODEL\_XFORMS

ALL\_MINING\_MODEL\_XFORMS describes the user-specified transformations embedded in all models accessible to the user.

### Related Views

- DBA\_MINING\_MODEL\_XFORMS describes the user-specified transformations embedded in all models accessible in the system.
- USER\_MINING\_MODEL\_XFORMS describes the user-specified transformations embedded with the user's own models. This view does not display the OWNER column.

| Column            | Datatype       | NULL     | Description                                                                                                   |
|-------------------|----------------|----------|---------------------------------------------------------------------------------------------------------------|
| OWNER             | VARCHAR2(128)  | NOT NULL | Name of the model owner                                                                                       |
| MODEL_NAME        | VARCHAR2(128)  | NOT NULL | Name of the model                                                                                             |
| ATTRIBUTE_NAME    | VARCHAR2(128)  |          | Name of the attribute used in the transformation                                                              |
| ATTRIBUTE_SUBNAME | VARCHAR2(4000) |          | Subname of the attribute used in the transformation                                                           |
| ATTRIBUTE_SPEC    | VARCHAR2(4000) |          | Attribute specification provided to model training                                                            |
| EXPRESSION        | CLOB           |          | Transformation expression provided to model training                                                          |
| REVERSE           | VARCHAR2(3)    |          | Indicates whether the specified transformation is a reverse transformation (YES) or a forward expression (NO) |

## 3.278 ALL\_MINING\_MODELS

ALL\_MINING\_MODELS describes the machine learning models accessible to the current user.

Mining models are schema objects created by Oracle Machine Learning for SQL.

### Related Views

- DBA\_MINING\_MODELS describes all machine learning models in the database.
- USER\_MINING\_MODELS describes the machine learning models owned by the current user. This view does not display the OWNER column.

| Column          | Datatype       | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## 3.279 ALL\_MVIEW\_AGGREGATES

ALL\_MVIEW\_AGGREGATES describes the grouping functions (aggregate operations) that appear in the SELECT list of materialized aggregate views accessible to the current user.

**Related Views**

- DBA\_MVIEW\_AGGREGATES describes all such grouping functions defined for all materialized views in the database.
- USER\_MVIEW\_AGGREGATES describes all such grouping functions defined for all materialized views owned by the current user.

**① Note**

All three views exclude materialized views that reference remote tables or that include references to a nonstatic value such as SYSDATE or USER. These views also exclude materialized views that were created as "snapshots" before Oracle8i and that were never altered to enable query rewrite.

| Column             | Datatype      | NULL     | Description                                                                                                                                                        |
|--------------------|---------------|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER              | VARCHAR2(128) | NOT NULL | Owner of the materialized view                                                                                                                                     |
| MVIEW_NAME         | VARCHAR2(128) | NOT NULL | Name of the materialized view                                                                                                                                      |
| POSITION_IN_SELECT | NUMBER        | NOT NULL | Ordinal position of this aggregation within the SELECT list. For the position of nonaggregate elements of the select list, see " <a href="#">ALL_MVIEW_KEYS</a> ". |
| CONTAINER_COLUMN   | VARCHAR2(128) | NOT NULL | Name of this column in the container table                                                                                                                         |
| AGG_FUNCTION       | VARCHAR2(8)   |          | Aggregation function                                                                                                                                               |
| DISTINCTFLAG       | VARCHAR2(1)   |          | Indicates whether this aggregation is distinct (Y) or not (N)                                                                                                      |
| MEASURE            | LONG          |          | SQL text of the measure, excluding the aggregation function. Equal to * for COUNT(*).                                                                              |

## 3.280 ALL\_MVIEW\_ANALYSIS

ALL\_MVIEW\_ANALYSIS describes the materialized views accessible to the current user. It provides additional information for analysis by applications. Minimal information is displayed for materialized views that do not support query rewrite (such as materialized views with remote master tables or nondeterministic functions).

### Related Views

- DBA\_MVIEW\_ANALYSIS describes all such materialized views in the database.
- USER\_MVIEW\_ANALYSIS describes all such materialized views owned by the current user.

#### Note

All of the information in these views is also displayed in ALL\_MVIEWS and its related views. Oracle recommends that you refer to ALL\_MVIEWS for this information instead of these views.

| Column            | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER             | VARCHAR2(128) | NOT NULL | Owner of the materialized view                                                                                                                                                                                                                                                                                                                                                                            |
| MVIEW_NAME        | VARCHAR2(128) | NOT NULL | Name of the materialized view                                                                                                                                                                                                                                                                                                                                                                             |
| MVIEW_TABLE_OWNER | VARCHAR2(128) | NOT NULL | Owner of the container table (see next column)                                                                                                                                                                                                                                                                                                                                                            |
| CONTAINER_NAME    | VARCHAR2(128) |          | Name of the internal container in which the materialized view data is held. Normally this is the same as MVIEW_NAME. For materialized views created before Oracle8i, Oracle Database attaches the 6-byte prefix SNAP\$. If MVIEW_NAME has more than 19 bytes, then Oracle Database truncates the name to 19 bytes and adds a 4-byte sequence number as a suffix to produce a nonambiguous CONTAINER_NAME. |
| LAST_REFRESH_SCN  | NUMBER        |          | System change number (SCN) of the last refresh operation                                                                                                                                                                                                                                                                                                                                                  |
| LAST_REFRESH_DATE | DATE          |          | SYSDATE of the last refresh                                                                                                                                                                                                                                                                                                                                                                               |
| REFRESH_METHOD    | VARCHAR2(8)   |          | Default refresh method: <ul style="list-style-type: none"> <li>• FORCE</li> <li>• FAST</li> <li>• COMPLETE</li> <li>• NEVER</li> </ul>                                                                                                                                                                                                                                                                    |
| SUMMARY           | VARCHAR2(1)   |          | Indicates whether this materialized view includes a GROUP BY clause or aggregation (Y) or not (N)                                                                                                                                                                                                                                                                                                         |
| FULLREFRESHTIM    | NUMBER        |          | Approximate refresh time, in seconds, for full refresh                                                                                                                                                                                                                                                                                                                                                    |
| INCRFRESHTIM      | NUMBER        |          | Approximate refresh time, in seconds, for fast refresh                                                                                                                                                                                                                                                                                                                                                    |
| CONTAINS_VIEWS    | VARCHAR2(1)   |          | Indicates whether this materialized view contains a view in its definition (Y) or not (N)                                                                                                                                                                                                                                                                                                                 |
| UNUSABLE          | VARCHAR2(1)   |          | Indicates whether this materialized view is UNUSABLE (inconsistent data) (Y) or not (N). A materialized view can be UNUSABLE if a system failure occurs during a full refresh.                                                                                                                                                                                                                            |

| Column            | Datatype    | NULL     | Description                                                                                                                                                                                                                       |
|-------------------|-------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| RESTRICTED_SYNTAX | VARCHAR2(1) |          | Indicates whether this materialized view had a restriction in its defining query that limits the use of query rewrite (Y) or not (N). More complete information is provided by the REWRITE_CAPABILITY column of the *_MIEWS view. |
| INC_REFRESHABLE   | VARCHAR2(1) |          | Indicates whether this materialized view can be fast refreshed (Y) or not (N)                                                                                                                                                     |
| KNOWN_STALE       | VARCHAR2(1) |          | Indicates whether the data contained in the materialized view is known to be inconsistent with the master table data because that has been updated since the last successful refresh (Y) or not (N)                               |
| INVALID           | VARCHAR2(1) |          | Indicates whether this materialized view is in an invalid state (inconsistent metadata) (Y) or not (N)                                                                                                                            |
| REWRITE_ENABLED   | VARCHAR2(1) |          | Indicates whether this materialized view is currently enabled for query rewrite (Y) or not (N)                                                                                                                                    |
| QUERY_LEN         | NUMBER      |          | Length (in bytes) of the query field                                                                                                                                                                                              |
| QUERY             | LONG        |          | SELECT expression of the materialized view definition                                                                                                                                                                             |
| REVISION          | NUMBER      | NOT NULL | Reserved for internal use                                                                                                                                                                                                         |

## 3.281 ALL\_MVIEW\_COMMENTS

ALL\_MVIEW\_COMMENTS displays comments on the materialized views accessible to the current user.

#### Related Views

- DBA\_MVIEW\_COMMENTS displays comments on the materialized views in the database.
- USER\_MVIEW\_COMMENTS displays comments on the materialized views owned by the current user. This view does not display the OWNER column.

| Column     | Datatype       | NULL     | Description                      |
|------------|----------------|----------|----------------------------------|
| OWNER      | VARCHAR2(128)  | NOT NULL | Owner of the materialized view   |
| MVIEW_NAME | VARCHAR2(128)  | NOT NULL | Name of the materialized view    |
| COMMENTS   | VARCHAR2(4000) |          | Comment on the materialized view |

## 3.282 ALL\_MVIEW\_DETAIL\_PARTITION

ALL\_MVIEW\_DETAIL\_PARTITION displays freshness information, with respect to partition change tracking (PCT) detail partitions, for the materialized views accessible to the current user.

**Related Views**

- DBA\_MVIEW\_DETAIL\_PARTITION displays freshness information, with respect to PCT detail partitions, for all materialized views in the database.
- USER\_MVIEW\_DETAIL\_PARTITION displays freshness information, with respect to PCT detail partitions, for the materialized views owned by the current user.

| Column                    | Datatype      | NULL     | Description                                                                                                                                                           |
|---------------------------|---------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER                     | VARCHAR2(128) | NOT NULL | Owner of the materialized view                                                                                                                                        |
| MVIEW_NAME                | VARCHAR2(128) | NOT NULL | Name of the materialized view                                                                                                                                         |
| DETAILOBJ_OWNER           | VARCHAR2(128) | NOT NULL | Owner of the detail object                                                                                                                                            |
| DETAILOBJ_NAME            | VARCHAR2(128) | NOT NULL | Name of the detail object                                                                                                                                             |
| DETAIL_PARTITION_NAME     | VARCHAR2(128) |          | Name of the detail object partition                                                                                                                                   |
| DETAIL_PARTITION_POSITION | NUMBER        |          | Position of the detail object partition                                                                                                                               |
| FRESHNESS                 | VARCHAR2(7)   |          | Freshness state of the detail object logical partition.<br>Possible values: <ul style="list-style-type: none"><li>• FRESH</li><li>• STALE</li><li>• UNKNOWN</li></ul> |
| LAST_REFRESH_TIME         | DATE          |          | Date and time at which the materialized view was last refreshed                                                                                                       |

## 3.283 ALL\_MVIEW\_DETAIL\_RELATIONS

ALL\_MVIEW\_DETAIL\_RELATIONS describes the named detail relations that are either specified in the FROM list of the subquery that defines a materialized view accessible to the current user, or

that are indirectly referenced through views in that FROM list. Inline views in the materialized view definition are not represented in this view or the related views.

### Related Views

- DBA\_MVIEW\_DETAIL\_RELATIONS describes all such detail relations defined for all materialized views in the database.
- USER\_MVIEW\_DETAIL\_RELATIONS describes such detail relations defined for all materialized views owned by the current user.

#### Note

All three views exclude materialized views that reference remote tables or that includes references to a nonstatic value such as SYSDATE or USER. These views also exclude materialized views that were created as *snapshots* before Oracle8i and that were never altered to enable query rewrite.

| Column                   | Datatype      | NULL     | Description                                                                                                                                                 |
|--------------------------|---------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER                    | VARCHAR2(128) | NOT NULL | Owner of the materialized view                                                                                                                              |
| MVIEW_NAME               | VARCHAR2(128) | NOT NULL | Name of the materialized view                                                                                                                               |
| DETAILOBJ_OWNER          | VARCHAR2(128) | NOT NULL | Detail object owner                                                                                                                                         |
| DETAILOBJ_NAME           | VARCHAR2(128) | NOT NULL | Detail object name (that is, the name of a table or view)                                                                                                   |
| DETAILOBJ_TYPE           | VARCHAR2(9)   |          | Detail object type: <ul style="list-style-type: none"> <li>• TABLE</li> <li>• VIEW</li> <li>• SNAPSHOT</li> <li>• CONTAINER</li> <li>• UNDEFINED</li> </ul> |
| DETAILOBJ_ALIAS          | VARCHAR2(128) |          | Implicit or explicit alias for detail relation                                                                                                              |
| DETAILOBJ_PCT            | VARCHAR2(1)   |          | Indicates whether the detail object PCT is supported (Y) or not (N)                                                                                         |
| NUM_FRESH_PCT_PARTITIONS | NUMBER        |          | Number of fresh PCT partitions                                                                                                                              |
| NUM_STALE_PCT_PARTITIONS | NUMBER        |          | Number of stale PCT partitions                                                                                                                              |

## 3.284 ALL\_MVIEW\_DETAIL\_SUBPARTITION

ALL\_MVIEW\_DETAIL\_SUBPARTITION displays freshness information, with respect to partition change tracking (PCT) detail subpartitions, for the materialized views accessible to the current user.

### Related Views

- DBA\_MVIEW\_DETAIL\_SUBPARTITION displays freshness information, with respect to PCT detail subpartitions, for all materialized views in the database.
- USER\_MVIEW\_DETAIL\_SUBPARTITION displays freshness information, with respect to PCT detail subpartitions, for the materialized views owned by the current user.

| Column                       | Datatype      | NULL     | Description                                                        |
|------------------------------|---------------|----------|--------------------------------------------------------------------|
| OWNER                        | VARCHAR2(128) | NOT NULL | Owner of the materialized view                                     |
| MVIEW_NAME                   | VARCHAR2(128) | NOT NULL | Name of the materialized view                                      |
| DETAILOBJ_OWNER              | VARCHAR2(128) | NOT NULL | Owner of the detail object                                         |
| DETAILOBJ_NAME               | VARCHAR2(128) | NOT NULL | Name of the detail object                                          |
| DETAIL_PARTITION_NAME        | VARCHAR2(128) |          | Name of the detail object partition                                |
| DETAIL_SUBPARTITION_NAME     | VARCHAR2(128) |          | Name of the detail object subpartition                             |
| DETAIL_SUBPARTITION_POSITION | NUMBER        |          | Position of the detail object subpartition                         |
| FRESHNESS                    | CHAR(5)       |          | Freshness state of the detail object subpartition (FRESH or STALE) |

## 3.285 ALL\_MVIEW\_JOINS

ALL\_MVIEW\_JOINS describes joins between two columns in the WHERE clause of the subquery that defines a materialized view accessible to the current user.

### Related Views

- DBA\_MVIEW\_JOINS describes all such joins for all materialized views in the database.
- USER\_MVIEW\_JOINS describes such joins for all materialized views owned by the current user.

**Note**

All three views exclude materialized views that reference remote tables or that includes references to a nonstatic value such as SYSDATE or USER. These views also exclude materialized views that were created as "snapshots" before Oracle8i and that were never altered to enable query rewrite.

| Column              | Datatype      | NULL     | Description                                                                                                                |
|---------------------|---------------|----------|----------------------------------------------------------------------------------------------------------------------------|
| OWNER               | VARCHAR2(128) | NOT NULL | Owner of the materialized view                                                                                             |
| MVIEW_NAME          | VARCHAR2(128) | NOT NULL | Materialized view name                                                                                                     |
| DETAILOBJ1_OWNER    | VARCHAR2(128) | NOT NULL | Owner of the first object in the join <sup>1</sup>                                                                         |
| DETAILOBJ1_RELATION | VARCHAR2(128) | NOT NULL | Name of the first object in the join <sup>1</sup>                                                                          |
| DETAILOBJ1_COLUMN   | VARCHAR2(128) | NOT NULL | Join column of the first object in the join <sup>1</sup>                                                                   |
| OPERATOR            | CHAR(1)       |          | Join operator <sup>1</sup>                                                                                                 |
| OPERATOR_TYPE       | VARCHAR2(1)   |          | Indicates whether the join is an inner join (I) or the DETAILOBJ1 table is the left side of an outer join (L) <sup>1</sup> |
| DETAILOBJ2_OWNER    | VARCHAR2(128) | NOT NULL | Owner of the second object in the join <sup>1</sup>                                                                        |
| DETAILOBJ2_RELATION | VARCHAR2(128) | NOT NULL | Name of the second object in the join <sup>1</sup>                                                                         |
| DETAILOBJ2_COLUMN   | VARCHAR2(128) | NOT NULL | Join column of the second object in the join <sup>1</sup>                                                                  |

<sup>1</sup> These rows relate only to materialized join views and materialized aggregate views. They describe the two detail objects of a materialized view join.

## 3.286 ALL\_MVIEW\_KEYS

ALL\_MVIEW\_KEYS describes the columns or expressions in the SELECT list upon which materialized views accessible to the current user are based.

### Related Views

- DBA\_MVIEW\_KEYS describes such columns and expressions for all materialized views in the database.
- USER\_MVIEW\_KEYS describes such columns and expressions for all materialized views owned by the current user.

**Note**

All three views exclude materialized views that reference remote tables or that includes references to a nonstatic value such as SYSDATE or USER. These views also exclude materialized views that were created as *snapshots* before Oracle8i and that were never altered to enable query rewrite.

| Column             | Datatype      | NULL     | Description                                                                                   |
|--------------------|---------------|----------|-----------------------------------------------------------------------------------------------|
| OWNER              | VARCHAR2(128) | NOT NULL | Owner of the materialized view                                                                |
| MVIEW_NAME         | VARCHAR2(128) | NOT NULL | Materialized view name                                                                        |
| POSITION_IN_SELECT | NUMBER        | NOT NULL | Ordinal position of this key within the SELECT list                                           |
| CONTAINER_COLUMN   | VARCHAR2(128) | NOT NULL | Name of the column in the container table                                                     |
| DETAILOBJ_OWNER    | VARCHAR2(128) | NOT NULL | Detail object owner                                                                           |
| DETAILOBJ_NAME     | VARCHAR2(128) | NOT NULL | Detail object name (for example, the name of a table or view)                                 |
| DETAILOBJ_ALIAS    | VARCHAR2(128) |          | Implicit or explicit alias for detail relation                                                |
| DETAILOBJ_TYPE     | VARCHAR2(5)   |          | Detail object type: <ul style="list-style-type: none"> <li>• TABLE</li> <li>• VIEW</li> </ul> |
| DETAILOBJ_COLUMN   | VARCHAR2(128) | NOT NULL | Name of the detail relation column                                                            |

## 3.287 ALL\_MVIEW\_LOGS

ALL\_MVIEW\_LOGS describes all materialized view logs accessible to the current user.

### Related Views

- DBA\_MVIEW\_LOGS describes all materialized view logs in the database.
- USER\_MVIEW\_LOGS describes all materialized view logs owned by the current user.

| Column      | Datatype      | NULL | Description                                                                                                                                      |
|-------------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| LOG_OWNER   | VARCHAR2(128) |      | Owner of the materialized view log                                                                                                               |
| MASTER      | VARCHAR2(128) |      | Name of the master table or master materialized view whose changes are logged                                                                    |
| LOG_TABLE   | VARCHAR2(128) |      | Name of the table where the changes to the master table or master materialized view are logged                                                   |
| LOG_TRIGGER | VARCHAR2(128) |      | Obsolete with Oracle8i and later. Set to NULL. Formerly, this parameter was an after-row trigger on the master which inserted rows into the log. |

| Column             | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ROWIDS             | VARCHAR2(3)   |      | Indicates whether rowid information is recorded (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| PRIMARY_KEY        | VARCHAR2(3)   |      | Indicates whether primary key information is recorded (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| OBJECT_ID          | VARCHAR2(3)   |      | Indicates whether object identifier information in an object table is recorded (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                  |
| FILTER_COLUMNS     | VARCHAR2(3)   |      | Indicates whether filter column information is recorded (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| SEQUENCE           | VARCHAR2(3)   |      | Indicates whether the sequence value, which provides additional ordering information, is recorded (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                               |
| INCLUDE_NEW_VALUES | VARCHAR2(3)   |      | Indicates whether both old and new values are recorded (YES) or old values are recorded but new values are not recorded (NO)                                                                                                                                                                                                                                                                                                                                                                                      |
| PURGE_ASYNCHRONOUS | VARCHAR2(3)   |      | Indicates whether the materialized view log is purged asynchronously (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                            |
| PURGE_DEFERRED     | VARCHAR2(3)   |      | Indicates whether the materialized view log is purged in a deferred manner (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                      |
| PURGE_START        | DATE          |      | For deferred purge, the purge start date                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| PURGE_INTERVAL     | VARCHAR2(200) |      | For deferred purge, the purge interval                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| LAST_PURGE_DATE    | DATE          |      | Date of the last purge                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| LAST_PURGE_STATUS  | NUMBER        |      | Status of the last purge (error code or 0 for success)                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| NUM_ROWS_PURGED    | NUMBER        |      | Number of rows purged in the last purge                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| COMMIT_SCN_BASED   | VARCHAR2(3)   |      | Indicates whether the materialized view log is commit SCN-based (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| STAGING_LOG        | VARCHAR2(3)   |      | Indicates whether the materialized view log is a staging log for synchronous refresh (YES) or not (NO)                                                                                                                                                                                                                                                                                                                                                                                                            |
| AUTO <sup>1</sup>  | VARCHAR2(6)   |      | Indicates whether the materialized view log is an automatic materialized view log. Possible values: <ul style="list-style-type: none"> <li>• YES - It is an automatic materialized view log</li> <li>• NO - It is a user-created materialized view log</li> <li>• HYBRID - It is a hybrid materialized view log. It was initially a user-created materialized view log and was subsequently altered automatically to include one or more additional columns to support an automatic materialized view.</li> </ul> |

<sup>1</sup> This column is available starting with Oracle Database 21c.

## 3.288 ALL\_MVIEW\_REFRESH\_TIMES

ALL\_MVIEW\_REFRESH\_TIMES describes refresh times of the materialized views accessible to the current user.

### Related Views

- DBA\_MVIEW\_REFRESH\_TIMES describes refresh times of all materialized views in the database.
- USER\_MVIEW\_REFRESH\_TIMES describes refresh times of the materialized views owned by the current user.

| Column       | Datatype      | NULL     | Description                                                  |
|--------------|---------------|----------|--------------------------------------------------------------|
| OWNER        | VARCHAR2(128) | NOT NULL | Owner of the materialized view                               |
| NAME         | VARCHAR2(128) | NOT NULL | Name of the materialized view                                |
| MASTER_OWNER | VARCHAR2(128) |          | Owner of the master table                                    |
| MASTER       | VARCHAR2(128) |          | Name of the master table                                     |
| LAST_REFRESH | DATE          |          | SYSDATE from the master site at the time of the last refresh |

## 3.289 ALL\_MVIEWS

ALL\_MVIEWS describes all materialized views accessible to the current user.

### Related Views

- DBA\_MVIEWS describes all materialized views in the database.
- USER\_MVIEWS describes all materialized views owned by the current user.

| Column         | Datatype      | NULL     | Description                                                                                                                                                                                                                                                                                                                                                                                             |
|----------------|---------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OWNER          | VARCHAR2(128) | NOT NULL | Schema in which the materialized view was created                                                                                                                                                                                                                                                                                                                                                       |
| MVIEW_NAME     | VARCHAR2(128) | NOT NULL | Name of the materialized view                                                                                                                                                                                                                                                                                                                                                                           |
| CONTAINER_NAME | VARCHAR2(128) | NOT NULL | Name of the container in which the materialized view's data is held. Normally this is the same as MVIEW_NAME. For materialized views created before Oracle8i, Oracle Database attaches the 6-byte prefix SNAP\$_ . If MVIEW_NAME has more than 19 bytes, then Oracle Database truncates the name to 19 bytes and may add a 4-byte sequence number as a suffix to produce a nonambiguous CONTAINER_NAME. |
| QUERY          | LONG          |          | Query that defines the materialized view                                                                                                                                                                                                                                                                                                                                                                |

| Column              | Datatype      | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------|---------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| QUERY_LEN           | NUMBER(38)    |      | Length (in bytes) of the defining query                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| UPDATABLE           | VARCHAR2(1)   |      | Indicates whether the materialized view is updatable (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| UPDATE_LOG          | VARCHAR2(128) |      | For updatable materialized views, the filename of the update log                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| MASTER_ROLLBACK_SEG | VARCHAR2(128) |      | Rollback segment for the master site or the master materialized view site                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| MASTER_LINK         | VARCHAR2(128) |      | Database link for the master site or the master materialized view site                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| REWRITE_ENABLED     | VARCHAR2(1)   |      | Indicates whether rewrite is enabled (Y) or not (N)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| REWRITE_CAPABILITY  | VARCHAR2(9)   |      | Indicates whether the materialized view is eligible for rewrite, and if so, what rules must be followed: <ul style="list-style-type: none"> <li>NONE - Materialized view cannot be used for rewrite, because rewrite is disallowed or prevented</li> <li>TEXTMATCH - Defining query of the materialized view contained restrictions on the use of query rewrite</li> <li>GENERAL - Defining query of the materialized view contained no restrictions on the use of query rewrite, so Oracle Database can apply any rewrite rule that is supported</li> </ul>                     |
| REFRESH_MODE        | VARCHAR2(9)   |      | Refresh mode of the materialized view: <ul style="list-style-type: none"> <li>COMMIT - Oracle Database refreshes this materialized view when a transaction on one of the materialized view's masters commits</li> <li>DEMAND - Oracle Database refreshes this materialized view whenever an appropriate refresh procedure is called</li> <li>STATEMENT - Oracle Database refreshes this materialized view whenever a DML operation is performed on any of the materialized view's base tables</li> <li>NEVER - Oracle Database never refreshes this materialized view</li> </ul> |
| REFRESH_METHOD      | VARCHAR2(8)   |      | Default method used to refresh the materialized view (can be overridden through the API): <ul style="list-style-type: none"> <li>COMPLETE - Materialized view is completely refreshed from the masters</li> <li>FORCE - Oracle Database performs a fast refresh if possible, otherwise a complete refresh</li> <li>FAST - Oracle Database performs an incremental refresh applying changes that correspond to changes in the masters since the last refresh</li> <li>NEVER - User specified that Oracle Database should not refresh this materialized view</li> </ul>            |

| Column                | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------|--------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BUILD_MODE            | VARCHAR2(9)  |      | <p>Indicates how the materialized view was populated during creation:</p> <ul style="list-style-type: none"> <li>• IMMEDIATE - Populated from the masters during creation</li> <li>• DEFERRED - Not populated during creation. Must be explicitly populated later by the user.</li> <li>• PREBUILT - Populated with an existing table during creation. The relationship of the contents of this prebuilt table to the materialized view's masters is unknown to Oracle Database.</li> </ul>                                                                                                     |
| FAST_REFRESHABLE      | VARCHAR2(18) |      | <p>Indicates whether the materialized view is eligible for incremental (fast) refresh. Oracle Database calculates this value statically, based on the materialized view definition query:</p> <ul style="list-style-type: none"> <li>• NO - Materialized view is not fast refreshable, and hence is complex</li> <li>• DML - Fast refresh is supported only for DML operations</li> <li>• DIRLOAD_DML - Fast refresh is supported for both direct loads and DML operations</li> <li>• DIRLOAD_LIMITEDDML - Fast refresh is supported for direct loads and a subset of DML operations</li> </ul> |
| LAST_REFRESH_TYPE     | VARCHAR2(8)  |      | <p>Method used for the most recent refresh:</p> <ul style="list-style-type: none"> <li>• COMPLETE - Most recent refresh was complete</li> <li>• FAST - Most recent refresh was fast (incremental)</li> <li>• NA - Materialized view has not yet been refreshed (for example, if it was created DEFERRED)</li> </ul>                                                                                                                                                                                                                                                                             |
| LAST_REFRESH_DATE     | DATE         |      | Date on which the materialized view was most recently refreshed (blank if not yet populated)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Column                 | Datatype     | NULL | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------|--------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STALENESS              | VARCHAR2(19) |      | <p>Relationship between the contents of the materialized view and the contents of the materialized view's masters:</p> <ul style="list-style-type: none"> <li>FRESH - Materialized view is a read-consistent view of the current state of its masters</li> <li>IMPORT - Materialized view is imported from another database (the value of the UNKNOWN_IMPORT column is Y). Therefore, it is unknown whether the materialized view is in a read-consistent view of its masters from any point in time. The STALENESS of this view will turn to FRESH on a complete refresh.</li> <li>NEEDS_COMPILE - Some object upon which the materialized view depends has changed. An ALTER MATERIALIZED VIEW...COMPILE statement is required to validate this materialized view and compute the staleness of the contents.</li> <li>STALE - Materialized view is out of date because one or more of its masters has changed. If the materialized view was FRESH before it became STALE, then it is a read-consistent view of a former state of its masters.</li> <li>UNDEFINED - Materialized view has remote masters. The concept of staleness is not defined for such materialized views.</li> <li>UNKNOWN - Oracle Database does not know whether the materialized view is in a read-consistent view of its masters from any point in time (this is the case for materialized views created on prebuilt tables)</li> <li>UNUSABLE - Materialized view is not a read-consistent view of its masters from any point in time</li> </ul> |
| AFTER_FAST_REFRESH     | VARCHAR2(19) |      | Specifies the staleness value that will occur if a fast refresh is applied to this materialized view. Its values are the same as for the STALENESS column, plus the value NA, which is used when fast refresh is not applicable to this materialized view.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
