Oracle AI Database Database Reference, 26ai

G43716-01

Copyright © 2002, 2025, Oracle and/or its affiliates.

Primary Author: Mary Beth Roeser

Contributing Authors: Sarika Surampudi

Contributors: Nipun Agarwal, Nigel Bayliss, Neerja Bhatt, Wilson Chan, Sumanta Chatterjee, Eugene Chong, Thuvan Hoang, Mark Johnson, Jonathan Klein, Sushil Kumar, Tirthankar Lahiri, Bill Lee, Yunrui Li, Juan Loaiza, Rich Long, Catherine Luu, Neil MacNaughton, Gopal Mulagund, Kant Patel, Mark Ramacher, Suvendu Ray, Debbie Steiner, Malai Stalin, Seema Sundara, Murali Thiyagarajah, Alex Tsukerman, Kothanda Umamageswaran, Steve Vivian, Eric Voss, Tak Wang, Steve Wertheimer, Andy Witkowski, Daniel Wong, Qin Yu, Mohamed Ziauddin

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

1 Changes in This Release for Oracle AI Database Reference

1.1 Changes in Oracle AI Database 26ai, Release Update 23.26.0 1
1.2 Changes in Oracle AI Database 26ai, Release Update 23.9 1
1.3 Changes in Oracle AI Database 26ai, Release Update 23.8 2
1.4 Changes in Oracle AI Database 26ai, Release Update 23.7 2
1.5 Changes in Oracle AI Database 26ai, Release Update 23.6 3
1.6 Changes in Oracle AI Database 26ai, Release Update 23.4 3
1.6.1 New Features 3
1.6.2 Deprecated Features 9
1.6.3 Desupported Features 10

Part I Initialization Parameters

2 Initialization Parameters

2.1 Uses of Initialization Parameters 1
2.1.1 Types of Initialization Parameters 2
2.1.1.1 Derived Parameters 2
2.1.1.2 Operating System-Dependent Parameters 2
2.1.1.3 Variable Parameters 2
2.2 Basic Initialization Parameters 3
2.3 Parameter Files 3
2.3.1 Server Parameter Files 3
2.3.2 Initialization Parameter Files 4
2.3.2.1 About the Character Set of Parameter Values 4

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.3.2.2 Specifying Values in an Initialization Parameter File 5
2.4 Changing Parameter Values in a Parameter File 9
2.4.1 Parameters by Functional Category 9
2.4.2 Modifiable Parameters 18
2.4.3 Displaying Current Parameter Values 27
2.4.4 Parameters You Should Not Specify in the Parameter File 28
2.4.5 When Parameters Are Set Incorrectly 28
2.5 Reading the Parameter Descriptions 28
2.6 Initialization Parameter Descriptions 29
2.7 ADG_ACCOUNT_INFO_TRACKING 30
2.8 ADG_REDIRECT_DML 30
2.9 ALERT_LOG_MAX_SIZE 31
2.10 ALLOW_GLOBAL_DBLINKS 32
2.11 ALLOW_GROUP_ACCESS_TO_SGA 32
2.12 ALLOW_LEGACY_RECO_PROTOCOL 33
2.13 ALLOW_ROWID_COLUMN_TYPE 33
2.14 APPROX_FOR_AGGREGATION 34
2.15 APPROX_FOR_COUNT_DISTINCT 35
2.16 APPROX_FOR_PERCENTILE 36
2.17 AQ_TM_PROCESSES 37
2.18 ARCHIVE_LAG_TARGET 38
2.19 ASM_DISKGROUPS 38
2.20 ASM_DISKSTRING 39
2.21 ASM_IO_PROCESSES 40
2.22 ASM_POWER_LIMIT 41
2.23 ASM_PREFERRED_READ_FAILURE_GROUPS 41
2.24 AUDIT_FILE_DEST 43
2.25 AUDIT_SYS_OPERATIONS 44
2.26 AUDIT_SYSLOG_LEVEL 45
2.27 AUDIT_TRAIL 47
2.28 AUTOTASK_MAX_ACTIVE_PDBS 49
2.29 AWR_PDB_AUTOFLUSH_ENABLED 49
2.30 AWR_PDB_MAX_PARALLEL_SLAVES 51
2.31 AWR_SNAPSHOT_TIME_OFFSET 51
2.32 BACKGROUND_CORE_DUMP 52
2.33 BACKGROUND_DUMP_DEST 53
2.34 BACKUP_TAPE_IO_SLAVES 53
2.35 BITMAP_MERGE_AREA_SIZE 54
2.36 BLANK_TRIMMING 55
2.37 BLOCKCHAIN_TABLE_MAX_NO_DROP 56
2.38 BLOCKCHAIN_TABLE_RETENTION_THRESHOLD 57
2.39 CIRCUITS 57

Preface

This manual provides reference information about database initialization parameters, static data dictionary views, dynamic performance views, database limits, and SQL scripts that are part of the Oracle AI Database.

This preface contains these topics:

- Audience
- Documentation Accessibility
- Diversity and Inclusion
- Related Documents
- Conventions

Audience

Oracle AI Database Reference is intended for database administrators, system administrators, and database application developers.

To use this document, you need to be familiar with the following:

- Oracle database management system (DBMS) concepts
- Your operating system environment

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

Access to Oracle Support

Oracle customer access to and use of Oracle support services will be pursuant to the terms and conditions specified in their Oracle order for the applicable services.

Diversity and Inclusion

Oracle is fully committed to diversity and inclusion. Oracle respects and values having a diverse workforce that increases thought leadership and innovation. As part of our initiative to build a more inclusive culture that positively impacts our employees, customers, and partners, we are working to remove insensitive terms from our products and documentation. We are also mindful of the necessity to maintain compatibility with our customers' existing technologies and the need to ensure continuity of service as Oracle's offerings and industry standards evolve. Because of these technical constraints, our effort to remove insensitive terms is ongoing and will take time and external cooperation.

Related Documents

For more information, see these Oracle resources:

- *Oracle AI Database Concepts* for a comprehensive introduction to the concepts and terminology used in this manual
- *Oracle AI Database Administrator's Guide* for information about administering Oracle AI Database
- *Oracle AI Database Upgrade Guide* for the procedures for upgrading a previous release of Oracle to the new release
- *Oracle AI Database SQL Language Reference* for information on Oracle's SQL commands and functions
- *Oracle AI Database Development Guide* for information about developing database applications within Oracle AI Database

The complete documentation set for Oracle AI Database is available on the Oracle Help Center: http://docs.oracle.com/database/

Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
italic	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
`monospace`	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

Changes in This Release for Oracle AI Database Reference

This chapter lists the following changes in *Oracle AI Database Reference* for Oracle AI Database 26ai:

- Changes in Oracle AI Database 26ai, Release Update 23.26.0
- Changes in Oracle AI Database 26ai, Release Update 23.9
- Changes in Oracle AI Database 26ai, Release Update 23.8
- Changes in Oracle AI Database 26ai, Release Update 23.7
- Changes in Oracle AI Database 26ai, Release Update 23.6
- Changes in Oracle AI Database 26ai, Release Update 23.4

1.1 Changes in Oracle AI Database 26ai, Release Update 23.26.0

The following static data dictionary views are new in Oracle AI Database 26ai, Release Update 23.26.0:

- DBA_APP_SKIPPED_PATCHES
- DBA_APP_SKIPPED_STATEMENTS
- DBA_APP_SKIPPED_VERSIONS
- ALL_PG_COMMENTS, DBA_PG_COMMENTS, and USER_PG_COMMENTS

1.2 Changes in Oracle AI Database 26ai, Release Update 23.9

The following initialization parameters are new in Oracle AI Database 26ai, Release Update 23.9:

- ALERT_LOG_MAX_SIZE
- DEBUG_LOG_MAX_SIZE
- MFA_DUO_API_HOST
- MFA_OMA_IAM_DOMAIN_URL
- MFA_SENDER_EMAIL_DISPLAYNAME
- MFA_SENDER_EMAIL_ID
- MFA_SMTP_HOST
- MFA_SMTP_PORT

The following static data dictionary views are new in Oracle AI Database 26ai, Release Update 23.9:

Copyright © 2002, 2025, Oracle and/or its affiliates.

- DBA_APP_ROLLBACK_STATEMENTS
- ALL_EXTERNAL_TAB_CACHE_LOCATIONS, DBA_EXTERNAL_TAB_CACHE_LOCATIONS, and USER_EXTERNAL_TAB_CACHE_LOCATIONS
- ALL_EXTERNAL_TAB_CACHES, DBA_EXTERNAL_TAB_CACHES, and USER_EXTERNAL_TAB_CACHES

The following dynamic performance views are new in Oracle AI Database 26ai, Release Update 23.9:

- V$OBJECT_BUFFERS
- V$VECTOR_GRAPH_INDEX_CHKPT
- V$VECTOR_GRAPH_INDEX_SNAPSHOT

1.3 Changes in Oracle AI Database 26ai, Release Update 23.8

The following initialization parameter is new in Oracle AI Database 26ai, Release Update 23.8:

- PLSQL_FUNCTION_DYNAMIC_STATS

The following dynamic performance view is new in Oracle AI Database 26ai, Release Update 23.8:

- V$CACHE_FUSION_HISTOGRAM

1.4 Changes in Oracle AI Database 26ai, Release Update 23.7

The following static data dictionary views are new in Oracle AI Database 26ai, Release Update 23.7:

- DBA_AUTO_STAT_OBJ_GATHER_DETAILS
- ALL_AVTUNE_ARCHIVE_CACHE_LEVELS, DBA_AVTUNE_ARCHIVE_CACHE_LEVELS, and USER_AVTUNE_ARCHIVE_CACHE_LEVELS
- ALL_AVTUNE_ARCHIVE_QUERIES, DBA_AVTUNE_ARCHIVE_QUERIES, and USER_AVTUNE_ARCHIVE_QUERIES
- ALL_AVTUNE_ARCHIVE_QUERY_LEVELS, DBA_AVTUNE_ARCHIVE_QUERY_LEVELS, and USER_AVTUNE_ARCHIVE_QUERY_LEVELS
- ALL_AVTUNE_ARCHIVE_QUERY_MEASURES, DBA_AVTUNE_ARCHIVE_QUERY_MEASURES, and USER_AVTUNE_ARCHIVE_QUERY_MEASURES

1.5 Changes in Oracle AI Database 26ai, Release Update 23.6

The following initialization parameter is new in Oracle AI Database 26ai, Release Update 23.6:

- UNIFIED_AUDIT_TRAIL_EXCLUDE_COLUMNS

The following static data dictionary views are new in Oracle AI Database 26ai, Release Update 23.6:

- ALL_JSON_COLLECTION_VIEWS, DBA_JSON_COLLECTION_VIEWS, and USER_JSON_COLLECTION_VIEWS

1.6 Changes in Oracle AI Database 26ai, Release Update 23.4

This section lists the following changes in *Oracle AI Database Reference* for Oracle AI Database 26ai, Release Update 23.4

- New Features
- Deprecated Features
- Desupported Features

1.6.1 New Features

- The following feature is new in Oracle AI Database 26ai, Release Update 23.4:
  - The maximum number of columns allowed in a database table or view has been increased from 1000 to 4096.

    See: MAX_COLUMNS
- The following initialization parameters are new in Oracle AI Database 26ai, Release Update 23.4:
  - ALLOW_LEGACY_RECO_PROTOCOL
  - BLOCKCHAIN_TABLE_RETENTION_THRESHOLD
  - CLIENT_PREFETCH_ROWS
  - DB_FLASHBACK_LOG_DEST
  - DB_FLASHBACK_LOG_DEST_SIZE
  - DB_RECOVERY_AUTO_REKEY
  - ERROR_MESSAGE_DETAILS
  - GROUP_BY_POSITION_ENABLED
  - HYBRID_READ_ONLY
  - IDENTITY_PROVIDER_CONFIG

Copyright © 2002, 2025, Oracle and/or its affiliates.

  - IDENTITY_PROVIDER_TYPE
  - INMEMORY_OPTIMIZED_DATE
  - IORM_LIMIT_POLICY
  - JSON_BEHAVIOR
  - JSON_EXPRESSION_CHECK
  - MAX_COLUMNS
  - MAX_SAGA_DURATION
  - MEMOPTIMIZE_WRITE_AREA_SIZE
  - MEMOPTIMIZE_WRITES
  - MEMORY_MAX_SIZE
  - MEMORY_SIZE
  - MLE_PROG_LANGUAGES
  - PLSQL_IMPLICIT_CONVERSION_BOOL
  - PRIORITY_TXNS_HIGH_WAIT_TARGET

Oracle AI Database New Features for a complete list of new features for this release

1.6.2 Deprecated Features

The following features are deprecated in Oracle AI Database 26ai, and may be desupported in a future release:

Initialization parameters:

- ENCRYPT_NEW_TABLESPACES
- ONE_STEP_PLUGIN_FOR_PDB_WITH_TDE
- PRE_PAGE_SGA
- REMOTE_OS_ROLES

Static data dictionary views:

- DBA_HANG_MANAGER_PARAMETERS

Dynamic performance views:

- V$FS_FAILOVER_STATS
- V$PQ_SLAVE
- V$RECOVERY_SLAVE

> *Oracle AI Database Upgrade Guide* for a complete list of deprecated features for this release

1.6.3 Desupported Features

The following features are desupported in Oracle AI Database 26ai:

- The `ACTIVE_INSTANCE_COUNT` initialization parameter
- The `OPTIMIZER_SECURE_VIEW_MERGING` initialization parameter
- The `V$EMX_USAGE_STATS` view

> **See Also**

Part I
Initialization Parameters

Database initialization parameters can be specified in a parameter file to start or configure an instance.

This part contains the following chapter:

- Initialization Parameters

> **Note**
>
> A multitenant container database is the only supported architecture in Oracle Database 21c and later releases. While the documentation is being revised, legacy terminology may persist. In most cases, "database" and "non-CDB" refer to a CDB or PDB, depending on context. In some contexts, such as upgrades, "non-CDB" refers to a non-CDB from a previous release.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2

Initialization Parameters

This chapter contains detailed descriptions (in alphabetical order) of the database initialization parameters.

This chapter contains the following topics:

- Uses of Initialization Parameters
- Basic Initialization Parameters
- Parameter Files
- Changing Parameter Values in a Parameter File
- Reading the Parameter Descriptions
- Initialization Parameter Descriptions

2.1 Uses of Initialization Parameters

Initialization parameters are used to perform various functions.

For example, initialization parameters are used to:

- Set limits for the entire database
- Set user or process limits
- Set limits on database resources
- Affect performance (these are called **variable parameters**)

  Variable parameters are of particular interest to database administrators, because these parameters are used primarily to improve database performance.

Database administrators can use initialization parameters to:

- Optimize performance by adjusting memory structures, such as the number of database buffers in memory
- Set database-wide defaults, such as the amount of space initially allocated for a context area when it is created
- Set database limits, such as the maximum number of database users
- Specify names of files or directories required by the database

Many initialization parameters can be fine-tuned to improve database performance. Other parameters should never be altered or should be altered only under the supervision of Oracle Support Services.

All initialization parameters are optional. Oracle has a default value for each parameter. This value may be operating system-dependent, depending on the parameter.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.1.1 Types of Initialization Parameters

The Oracle database server has derived parameters, operating system-dependent parameters, and variable parameters.

- Derived Parameters
- Operating System-Dependent Parameters
- Variable Parameters (these can be dynamic parameters or any of the preceding ones)

2.1.1.1 Derived Parameters

Some initialization parameters are **derived**, meaning that their values are calculated from the values of other parameters. Normally, you should not alter values for derived parameters, but if you do, then the value you specify will override the calculated value.

For example, the default value of the `SESSIONS` parameter is derived from the value of the `PROCESSES` parameter. If the value of `PROCESSES` changes, then the default value of `SESSIONS` changes as well, unless you override it with a specified value.

2.1.1.2 Operating System-Dependent Parameters

The valid values or value ranges of some initialization parameters depend upon the host operating system. For example, the parameter `DB_BLOCK_BUFFERS` indicates the number of data buffers in main memory, and its maximum value depends on the operating system. The size of those buffers, set by `DB_BLOCK_SIZE`, has an operating system-dependent default value.

> **See Also**
>
> Your operating system-specific Oracle documentation for more information on operating system-dependent Oracle parameters and operating system parameters

2.1.1.3 Variable Parameters

The variable initialization parameters offer the most potential for improving system performance. Some variable parameters set capacity limits but do not affect performance. For example, when the value of `OPEN_CURSORS` is 10, a user process attempting to open its eleventh cursor receives an error. Other variable parameters affect performance but do not impose absolute limits. For example, reducing the value of `DB_BLOCK_BUFFERS` does not prevent work even though it may slow down performance.

Increasing the values of variable parameters may improve your system's performance, but increasing most parameters also increases the system global area (SGA) size. A larger SGA can improve database performance up to a point. In virtual memory operating systems, an SGA that is too large can degrade performance if it is swapped in and out of memory. Operating system parameters that control virtual memory working areas should be set with the SGA size in mind. The operating system configuration can also limit the maximum size of the SGA.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.2 Basic Initialization Parameters

Most databases should only need to have the database basic initialization parameters set to run properly and efficiently.

Oracle advises you to become familiar with the basic parameters and only use other parameters when directed to by feature documentation or in special circumstances. The following is a list of the database basic initialization parameters:

CLUSTER_DATABASE
COMPATIBLE
CONTROL_FILES
DB_BLOCK_SIZE
DB_CREATE_FILE_DEST
DB_CREATE_ONLINE_LOG_DEST_*n*
DB_DOMAIN
DB_NAME
DB_RECOVERY_FILE_DEST
DB_RECOVERY_FILE_DEST_SIZE
DB_UNIQUE_NAME
INSTANCE_NUMBER
LDAP_DIRECTORY_SYSAUTH
LOG_ARCHIVE_DEST_*n*
LOG_ARCHIVE_DEST_STATE_*n*
NLS_DATE_LANGUAGE
NLS_TERRITORY
OPEN_CURSORS
PGA_AGGREGATE_TARGET
PROCESSES
REMOTE_LISTENER
REMOTE_LOGIN_PASSWORDFILE
SESSIONS
SGA_TARGET
SHARED_SERVERS
STAR_TRANSFORMATION_ENABLED
UNDO_TABLESPACE

2.3 Parameter Files

A **parameter file** is a file that contains a list of initialization parameters and a value for each parameter. You specify initialization parameters in a parameter file that reflect your particular installation.

Oracle supports the following two types of parameter files:

- Server Parameter Files
- Initialization Parameter Files

2.3.1 Server Parameter Files

A **server parameter file** is a binary file that acts as a repository for initialization parameters.

Copyright © 2002, 2025, Oracle and/or its affiliates.

The server parameter file can reside on the computer where the Oracle database server executes. Initialization parameters stored in a server parameter file are persistent, in that any changes made to the parameters while an instance is running can persist across instance shutdown and startup.

> **See Also**
>
> *Oracle AI Database Administrator's Guide* for an introduction to and detailed information about managing and using server parameter files and initialization parameter files

2.3.2 Initialization Parameter Files

An **initialization parameter file** is a text file that contains a list of initialization parameters.

> **Note**
>
> See "About the Character Set of Parameter Values" for more information about the character set to use when specifying values in an initialization parameter file.

The following are sample entries in an initialization parameter file:

```
PROCESSES = 100
OPEN_LINKS = 12
GLOBAL_NAMES = true
```

The name of the initialization parameter file varies depending on the operating system. For example, it can be in mixed case or lowercase, or it can have a logical name or a variation of the name `init.ora`. Also supplied is an `initdw.ora` file, which contains suggested parameter settings for data warehouses and data marts. The database administrator can choose a different file name for the initialization parameter file.

Refer to your operating system-specific Oracle documentation for the default locations and filenames for initialization parameter files on your operating system. The initialization parameter file is read by the client-side tool used to start the server (such as SQL*Plus).

Sample initialization parameter files are provided on the Oracle distribution medium for each operating system. A sample file is sufficient for initial use, but you will probably want to modify the file to tune the database for best performance. Any changes will take effect after you completely shut down and restart the instance.

2.3.2.1 About the Character Set of Parameter Values

Only characters from the default character set of the database platform are supported in parameter values. For all platforms except IBM z/OS and Fujitsu BS2000 the default platform character set is US7ASCII (7-bit ASCII).

The database behavior is undefined when parameter values with unsupported characters are specified. When using the `ALTER SYSTEM` statement to set a parameter value in a server parameter file, make sure only supported characters are used. The database does not always report an error when a value with unsupported characters is specified.

Copyright © 2002, 2025, Oracle and/or its affiliates.

The initialization parameter file is a client-side file. When used, it is located on the host on which you start SQL*Plus to start up a database instance. The initialization parameter file must be written in the client character set as specified by the NLS_LANG client setting. However, parameter values should not contain characters not supported by the default character set of the database.

2.3.2.2 Specifying Values in an Initialization Parameter File

This section describes several aspects of setting parameter values in an initialization parameter file.

2.3.2.2.1 Rules Governing Initialization Parameter Files

This section describes the rules that govern the specification of parameters in initialization parameter files.

- An initialization parameter file should contain only parameters and comments. A pound sign (#) starts a comment line. The rest of the line is ignored.
- Comments must use the same character set as parameter values.
- You can specify parameters in any order.
- Case (upper or lower) in filenames is significant only if case is significant on the host operating system.
- To enter several parameters on one line, use spaces between parameter names and values, as in the following example:

  ```
  PROCESSES = 100 CPU_COUNT = 1 OPEN_CURSORS = 10
  ```

- Some parameters, such as ROLLBACK_SEGMENTS, accept multiple values. Any of the following represent valid syntax.
  - Enter multiple values enclosed in parentheses and separated by commas. For example:

    ```
    ROLLBACK_SEGMENTS = (SEG1, SEG2, SEG3, SEG4, SEG5)
    ```

  - Enter multiple values without parentheses and commas. For example:

    ```
    ROLLBACK_SEGMENTS = SEG1 SEG2 SEG3 SEG4 SEG5
    ```

  - Enter multiple values, one per line. For example:

    ```
    ROLLBACK_SEGMENTS = SEG1
    ROLLBACK_SEGMENTS = SEG2
    ROLLBACK_SEGMENTS = SEG3
    ROLLBACK_SEGMENTS = SEG4
    ROLLBACK_SEGMENTS = SEG5
    ```

  If you enter values for one parameter on multiple lines, then the entries must be on consecutive lines. If they are not, then the first entry will not be processed properly. For example, in the following entry the setting for SEG3 and SEG4 will override the setting for SEG1 and SEG2:

  ```
  ROLLBACK_SEGMENTS = SEG1 SEG2
  OPEN_CURSORS = 10
  ROLLBACK_SEGMENTS = SEG3 SEG4
  ```

- A backslash (\), also known as an escape character, indicates continuation of the parameter specification. If a backslash continues a line, then the continued line must have no leading spaces. For example:

Copyright © 2002, 2025, Oracle and/or its affiliates.

```
ROLLBACK_SEGMENTS = (SEG1, SEG2, \
SEG3, SEG4, SEG5)
```

- You can use the `IFILE` initialization parameter to embed the contents of another initialization parameter file into the current initialization parameter file.
- Enclose in quotation marks any parameter values that contain spaces or tabs. You can use either single or double quotation marks unless otherwise indicated. For example:

```
NLS_TERRITORY = 'CZECH REPUBLIC'
```

> **Note**
>
> Listing parameters in alphabetical order in the initialization parameter file can help you to find them and can help ensure that each parameter is specified only once.

- Enclose in quotation marks any parameter value that contains a special character.

> **See Also**
>
> - Your operating system-specific Oracle documentation for more information on initialization parameter files
> - "IFILE"

2.3.2.2.2 Using Expressions for Parameter Values

You can specify an expression as the value for an initialization parameter.

The optimal value for an initialization parameter can depend on environmental characteristics, such as system configurations, run-time decisions, and the values of other parameters. In previous releases, you were required to specify an absolute value when setting an initialization parameter, which meant that maintaining its optimal value required manual oversight and adjustments. Starting with Oracle Database 21c, you can specify an expression as the value for some initialization parameters, which enables the database to automatically adjust the parameter value in response to environmental changes.

Specifying an expression for a parameter value is also useful in Oracle Real Application Cluster (Oracle RAC) environments. You can specify the same expression for a parameter value across all Oracle RAC instances, but the expression will be evaluated on a per-instance basis, utilizing the environmental characteristics of the current instance. This allows the database to fine-tune the parameter value for each Oracle RAC instance.

You can specify expressions only for initialization parameters of type integer or big integer.

Initialization parameter expressions can contain the following constructs:

1. Integer values

```
OLAP_PAGE_POOL_SIZE = 1073741824
```

2. Decimal values, but only when they are part of a numeric operation

```
CPU_COUNT = 8 * 0.6
```

Copyright © 2002, 2025, Oracle and/or its affiliates.

If the operation evaluates to a decimal value, then the result is truncated to an integer value. The above example would set `CPU_COUNT` to `4`.

3. An integer value followed by an indicator that the integer is expressed in kilobytes (`k` or `K`), megabytes (`m` or `M`), gigabytes (`g` or `G`), terabytes (`t` or `T`), petabytes (`p` or `P`), or exabytes (`e` or `E`)

   ```
   OLAP_PAGE_POOL_SIZE = 900m
   MEMORY_TARGET = 2G
   ```

4. Other parameter names

   ```
   JOB_QUEUE_PROCESSES = PROCESSES
   ```

5. The binary operators for multiplication (`*`), division (`/`), modulo (`%`), addition (`+`), and subtraction (`-`)

   ```
   SHARED_SERVERS = MAX_SHARED_SERVERS / 2
   DATA_GUARD_MAX_LONGIO_TIME = DATA_GUARD_MAX_IO_TIME + 10 * 3
   ```

   Operator precedence: the multiplication, division, and modulo operators are evaluated first, from left to right, and then the addition and subtraction operators are evaluated from left to right.

   If the expression evaluates to a decimal value, then the result is truncated to an integer value.

6. Parentheses, which allow you to override operator precedence

   ```
   SHARED_SERVERS = (MAX_SHARED_SERVERS - 1) / 2
   DATA_GUARD_MAX_LONGIO_TIME = (DATA_GUARD_MAX_IO_TIME + 10) * 3
   ```

7. The `MIN` and `MAX` functions. These functions take two operands and return the minimum and maximum value, respectively.

   ```
   AQ_TM_PROCESSES = MIN(40, PROCESSES * .1)
   SESSIONS = MAX(200, PROCESSES * 1.5)
   ```

8. Environment variable values, which must be preceded by the dollar sign ($)

   ```
   CPU_COUNT = $SYSTEM_CPU/5
   ```

You can specify an expression when using any of the following methods to set an initialization parameter:

- In a server parameter file (SPFILE)
- In a text initialization parameter file, for example, `init`*`ORACLE_SID`*`.ora`.

  Note that you cannot use expressions in a client-side text initialization parameter file (PFILE).
- In the SQL statements `ALTER SESSION SET` and `ALTER SYSTEM SET`. In this case you must enclose the expression in single quotation marks. For example:

  ```
  ALTER SESSION SET AQ_TM_PROCESSES = 'MIN(40, PROCESSES * .1)';
  ALTER SYSTEM SET JOB_QUEUE_PROCESSES = 'PROCESSES' SCOPE=BOTH;
  ```

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.3.2.2.3 Using Special Characters in Parameter Values

If a parameter value contains a special character, then the special character must be preceded by a backslash or the entire parameter value must be enclosed in quotation marks.

For example, you can specify special characters using either of the following:

```
DB_DOMAIN = 'JAPAN.ACME#.COM'
```

```
DB_DOMAIN = JAPAN.ACME\#.COM
```

Table 2-1 lists the special characters you can use in initialization parameter files.

Table 2-1 Special Characters in Initialization Parameter Files

Character	Name	Description
#	Number sign	Comment
(	Left parenthesis	Start list of values
)	Right parenthesis	End list of values
"	Double quotation mark	Start or end of quoted string
'	Single quotation mark	Start or end of quoted string
=	Equal sign	Separator of keyword and values
,	Comma	Separator of elements
-	Minus sign	Precedes UNIX-style keywords
\	Backslash	Escape character

If a special character must be treated literally in an initialization parameter file, then it must either be preceded by the backslash character, or the entire string containing the special character must be enclosed in quotation marks.

2.3.2.2.4 Using the Escape Character

In an initialization parameter file, a backslash (\) can also signify a line continuation. If the backslash is followed by an alphanumeric character, then the backslash is treated as a normal character in the input.

If it is not followed by an alphanumeric character, then the backslash is treated either as a backslash or as a continuation character.

> **See Also**
>
> "Rules Governing Initialization Parameter Files"

2.3.2.2.5 Using Quotation Marks

Quotation marks can be nested in two ways in an initialization parameter file.

The first method is to double the quotation marks in the nested string. For example:

```
NLS_DATE_FORMAT = '''Today is'' MM/DD/YYYY'
```

Copyright © 2002, 2025, Oracle and/or its affiliates.

The second method is to alternate single and double quotation marks. For example:

```
NLS_DATE_FORMAT = '"Today is" MM/DD/YYYY'
```

2.4 Changing Parameter Values in a Parameter File

You can change the value of a parameter in a parameter file in several ways.

- By editing an initialization parameter file

  In most cases, the new value takes effect the next time you start an instance of the database.
- By issuing an `ALTER SYSTEM SET ... SCOPE=SPFILE` statement to update a server parameter file
- By issuing an `ALTER SYSTEM RESET` statement to clear an initialization parameter value.

> **See Also**
>
> *Oracle AI Database Administrator's Guide* for more information about using the `ALTER SYSTEM RESET` statement to clear initialization parameter values

2.4.1 Parameters by Functional Category

2.4.2 Modifiable Parameters

You can modify some initialization parameters using the `ALTER SESSION` or `ALTER SYSTEM` statements while an instance is running.

Use the following syntax to modify initialization parameters:

```
ALTER SESSION SET parameter_name = value
ALTER SYSTEM SET parameter_name = value [DEFERRED]
```

Whenever a parameter is modified using the `ALTER SYSTEM` statement, the Oracle AI Database records the statement that modifies the parameter in the alert log.

The `ALTER SESSION` statement changes the value of the specified parameter for the duration of the session that invokes the statement. The value of the parameter does not change for other sessions in the instance. The value of the following initialization parameters can be changed with `ALTER SESSION`:

The `ALTER SYSTEM ... DEFERRED` statement does not modify the global value of the parameter for existing sessions, but the value will be modified for future sessions that connect to the database. The value of the following initialization parameters can be changed with `ALTER SYSTEM ... DEFERRED`:

AUDIT_FILE_DEST
BACKUP_TAPE_IO_SLAVES
CLIENT_STATISTICS_LEVEL
OBJECT_CACHE_MAX_SIZE_PERCENT
OBJECT_CACHE_OPTIMAL_SIZE
OLAP_PAGE_POOL_SIZE
PRIVATE_TEMP_TABLE_PREFIX
RECYCLEBIN
SESSION_CACHED_CURSORS
SORT_AREA_RETAINED_SIZE
SORT_AREA_SIZE

2.4.3 Displaying Current Parameter Values

You can use the SQL*Plus `SHOW PARAMETERS` statement to see the current settings for initialization parameters.

For example:

```
SQL> SHOW PARAMETERS
```

This statement displays all parameters in alphabetical order, along with their current values.

Enter the following text string to display all parameters having `BLOCK` in their names:

```
SQL> SHOW PARAMETERS BLOCK
```

You can use the `SPOOL` command to write the output to a file.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.4.4 Parameters You Should Not Specify in the Parameter File

You should not specify these types of parameters in your parameter files:

- Parameters that you never alter unless instructed to do so by Oracle to resolve a problem
- Derived parameters, which normally do not need altering because their values are calculated automatically by the Oracle database server

2.4.5 When Parameters Are Set Incorrectly

When a parameter is set incorrectly, the effect can be different for different parameters, or based on how low or high the parameter is set.

Some parameters have a minimum setting below which an Oracle instance will not start. For other parameters, setting the value too low or too high may cause Oracle to perform badly, but it will still run. Also, Oracle may convert some values outside the acceptable range to usable levels.

If a parameter value is too low or too high, or you have reached the maximum for some resource, then Oracle returns an error. Frequently, you can wait a short while and retry the operation when the system is not as busy. If a message occurs repeatedly, then you should shut down the instance, adjust the relevant parameter, and restart the instance.

2.5 Reading the Parameter Descriptions

This section describes the properties that are documented in the initialization parameter descriptions.

PARAMETER_NAME

Property	Description
Parameter type	Specifies the type of the parameter: • A Boolean parameter accepts either `true` or `false` as its value. • A string parameter accepts any sequence of characters as its value, subject to the syntax for the parameter. • An integer parameter accepts a 4-byte value that can range from 0 to 2^{32} - 1. • A parameter file parameter accepts an initialization parameter file specification as its value. • A **big integer** parameter accepts an 8-byte value that can range from 0 to 2^{64} - 1. You specify a value for a big integer as an integer together with an optional modifier such as K, M, or G, which respectively denotes kilobytes, megabytes, or gigabytes. For example, 1000, 100 KB, 50 MB and 2 GB are valid specifications for big integers.
Syntax	For string and big integer parameters, specifies the valid syntax for specifying the parameter.
Default value	Specifies the value that the parameter assumes if a value is not explicitly specified. For most initialization parameters, the value that is documented for the **Default value** property is obtained by querying the `DEFAULT_VALUE` column in the `V$PARAMETER` view for the parameter.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Modifiable	Specifies whether the parameter can be changed for the current session (by an `ALTER SESSION` statement) or for all sessions in the current instance (by an `ALTER SYSTEM` statement): • `ALTER SESSION` overrides the instance-wide setting of the parameter for the current session only. You can restore the instance-wide setting for that session only by issuing another `ALTER SESSION` statement. • `ALTER SYSTEM` can be used to change the value in the server parameter file (SPFILE) of any initialization parameter. Such a change takes effect only in subsequent instances. The parameter descriptions indicate only those parameters that can be modified for the current instance.
Modifiable in a PDB	Specifies whether the parameter can be modified in a PDB (Yes) or not (No) For most initialization parameters, the value that is documented for the **Modifiable in a PDB** property is obtained by querying the `ISPDB_MODIFIABLE` column in the `V$PARAMETER` view for the parameter.
Range of values	Specifies the valid range of values that this parameter can assume, shown as a minimum and maximum value. Not applicable to all parameters.
Basic	Specifies whether the parameter is a basic initialization parameter or not
Oracle RAC	Specifies how the values for this parameter must be specified for multiple instances in an Oracle Real Application Clusters environment. Not applicable to all parameters.

For each parameter, paragraphs following these details further describe the parameter and the effects of different settings.

See Also

"V$PARAMETER"

2.6 Initialization Parameter Descriptions

The remainder of this chapter describes the initialization parameters in alphabetical order.

Initialization parameter values apply to the entire database, not to an individual user, unless otherwise specified.

Note

Parameters that have become obsolete are not documented.

See Also

- *Oracle AI Database Upgrade Guide* for information about obsolete parameters
- Your system release bulletins or other operating system-specific Oracle documentation

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.7 ADG_ACCOUNT_INFO_TRACKING

ADG_ACCOUNT_INFO_TRACKING controls login attempts of users on Oracle Active Data Guard standby databases. It extends the control of user account security information.

Property	Description
Parameter type	String
Syntax	ADG_ACCOUNT_INFO_TRACKING = { LOCAL | GLOBAL }
Default value	LOCAL
Modifiable	No
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be used on all instances.

Setting ADG_ACCOUNT_INFO_TRACKING to LOCAL (the default value) continues to enforce the default behavior, by maintaining a local copy of users account information in the standby's in-memory view. Login failures are only tracked locally on a per database basis, and login is denied when the failure maximum is reached.

Setting the parameter to GLOBAL triggers a more secure behavior, by maintaining a single global copy of users account information across all Data Guard databases (primary and standby). Login failures across all databases in the Data Guard configuration count towards the maximum count and logins anywhere will be denied when the count is reached. This setting improves security against login attacks across a production database and all Active Data Guard standby databases.

2.8 ADG_REDIRECT_DML

Use ADG_REDIRECT_DML to enable or disable automatic redirection of DML operations from a standby to the primary in Oracle Active Data Guard environments.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM Can be modified at the session level with a special ALTER SESSION command. See details below.
Modifiable in a PDB	No
Range of values	true | false
Basic	No
Oracle RAC	Different instances can use different values.

Automatic redirection of DML operations to the primary can be configured at the system level or the session level. The session level setting overrides the system level setting.

- To enable automatic redirection of DML operations to the primary at the system level, set ADG_REDIRECT_DML to true.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- To disable automatic redirection of DML operations to the primary at the system level, set `ADG_REDIRECT_DML` to `false`.
- To enable automatic redirection of DML operations from a standby to the primary for the current session, issue the following SQL statement:

  ```
  ALTER SESSION ENABLE ADG_REDIRECT_DML;
  ```

- To disable automatic redirection of DML operations from a standby to the primary for the current session, issue the following SQL statement:

  ```
  ALTER SESSION DISABLE ADG_REDIRECT_DML;
  ```

See Also

Oracle Data Guard Concepts and Administration for more information about automatic redirection of DML operations

2.9 ALERT_LOG_MAX_SIZE

`ALERT_LOG_MAX_SIZE` specifies the maximum size of the alert log (in bytes).

Property	Description
Parameter type	Big integer
Syntax	`ALERT_LOG_MAX_SIZE = integer [K | M | G]`
Default value	`1000M`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	0, 50 MB to operating system-dependent
Basic	No
Oracle RAC	Multiple instances can have different values.

Space for the alert log is allocated in segments of 50 MB each. Therefore, the default value of 1000 MB for this parameter indicates that the maximum alert log size is 20 segments, each with a size of 50 MB.

If you set this parameter to value that is not a multiple of 50 MB, the effective maximum alert log size will be the next higher multiple of 50 MB. For example, the following statement specifies a maximum alert log size of 120 MB. However, it will result in an effective maximum alert log size of 150 MB (3 segments of 50 MB):

```
ALTER SYSTEM SET ALERT_LOG_MAX_SIZE = 120M;
```

Setting this parameter to 0 specifies that there can be an unlimited number of 50 MB XML alert log segments, while the alert text log file consists of a single segment that can grow to an unlimited size.

If you specify a value less than 50 MB (other than 0), an error will occur.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai, Release Update 23.9.

2.10 ALLOW_GLOBAL_DBLINKS

`ALLOW_GLOBAL_DBLINKS` specifies whether LDAP lookup for database links is allowed for the database.

Property	Description
Parameter type	Boolean
Syntax	`ALLOW_GLOBAL_DBLINKS = { FALSE | TRUE }`
Default value	`FALSE`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No
Oracle RAC	The same value must be used on all instances.

The following values can be set:

- `FALSE`: LDAP lookup for a database link's definition is not allowed for the database.
- `TRUE`: LDAP lookup for a database link's definition is allowed for the database.

2.11 ALLOW_GROUP_ACCESS_TO_SGA

`ALLOW_GROUP_ACCESS_TO_SGA` controls `group` access to shared memory on UNIX platforms.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	No
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No
Oracle RAC	The same value must be used on all instances.

The default value is `false`, which means that database shared memory is created with `owner` access only. In Oracle Database releases prior to Oracle Database 12c Release 2 (12.2.0.1), database shared memory was created with `owner` and `group` access.

When this parameter is set to `true`, database shared memory is created with `owner` and `group` access. This behavior grants permissions to DBAs to manage shared memory outside the database, but also allows DBAs to read and write to shared memory, which may not be desirable for certain installations.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.12 ALLOW_LEGACY_RECO_PROTOCOL

`ALLOW_LEGACY_RECO_PROTOCOL` specifies whether the distributed transactions recovery process RECO uses a legacy recovery protocol or an upgraded recovery protocol.

Property	Description
Parameter type	Boolean
Default value	`true`
Modifiable	No
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No
Oracle RAC	All instances must use the same value.

By default, `ALLOW_LEGACY_RECO_PROTOCOL` is set to `true`, which instructs RECO to use the legacy recovery protocol available in releases prior to Oracle AI Database 26ai.

Setting this parameter to `false` instructs RECO to use an upgraded recovery protocol. In this case, all databases involved in distributed transactions must run Oracle AI Database 26ai or later. If you set this parameter to `false` and a pre-Oracle AI Database 26ai database is involved in a distributed transaction, the distributed transaction recovery will fail. To ensure that distributed transaction recovery will complete successfully, the `ALLOW_LEGACY_RECO_PROTOCOL` must remain set to `true` until all databases are upgraded to at least Oracle AI Database 26ai.

Note

This parameter is available starting with Oracle AI Database 26ai.

See Also

Oracle AI Database Administrator's Guide for more information about this parameter

2.13 ALLOW_ROWID_COLUMN_TYPE

`ALLOW_ROWID_COLUMN_TYPE` determines whether table columns of data type `ROWID` are allowed to be created.

Note

This parameter is valid only for Oracle Autonomous Database on dedicated Exadata infrastructure. On other types of Oracle databases, the value of this parameter is ignored and `ROWID` columns are always allowed to be created.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true	false`
Basic	No
Oracle RAC	Multiple instances should use the same value

Values:

- `false`

  Columns of data type `ROWID` are not allowed.

  You cannot specify `ROWID` columns when creating tables, nor can you add `ROWID` columns to existing tables. If the value of this parameter is changed from `true` to `false` at a time when `ROWID` columns exist in the database, then those columns are allowed to remain. However, Oracle recommends that you leave this parameter set to its default value of `false` and avoid introducing `ROWID` columns into Oracle Autonomous Database on dedicated Exadata infrastructure.

- `true`

  Columns of data type `ROWID` are allowed.

  If you choose this setting, be aware that `ROWID` columns are incompatible with rolling upgrade operations and other internal operations that physically move table rows. At a minimum, database activities involving `ROWID` columns should be suspended during upgrades. Applications using `ROWID` columns should introduce correctness validation to mitigate against logical errors in the application if a row relocates.

2.14 APPROX_FOR_AGGREGATION

`APPROX_FOR_AGGREGATION` replaces exact query processing for aggregation queries with approximate query processing.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true	false`
Basic	No
Oracle RAC	Different instances can use different values.

Data analysis applications heavily use aggregate function and analytic function queries. Aggregation functions and analytic functions require sorting of large volumes of data, and exact query answering requires lots of memory, and can be time consuming. With approximate query processing, the results of aggregate function and analytic function queries are returned much faster than with exact query processing. Approximate query processing is useful for

Copyright © 2002, 2025, Oracle and/or its affiliates.

situations where a tolerable amount of error is acceptable in order to obtain faster query results.

The values that can be set are:

- `false`:

  Approximate query processing is not used for aggregation queries and analytic queries.
- `true`: Approximate query processing is used for aggregation queries and analytic queries.

See Also

- "APPROX_FOR_COUNT_DISTINCT"
- "APPROX_FOR_PERCENTILE"

2.15 APPROX_FOR_COUNT_DISTINCT

`APPROX_FOR_COUNT_DISTINCT` automatically replaces `COUNT (DISTINCT expr)` queries with `APPROX_COUNT_DISTINCT` queries.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SESSION, ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No
Oracle RAC	Different instances can use different values.

Query results for `APPROX_COUNT_DISTINCT` queries are returned faster than the equivalent `COUNT (DISTINCT expr)` queries. `APPROX_COUNT_DISTINCT` queries are useful for situations where a tolerable amount of error is acceptable in order to obtain faster query results than with a `COUNT (DISTINCT expr)` query.

See Also

- "APPROX_FOR_AGGREGATION"
- "APPROX_FOR_PERCENTILE"

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.16 APPROX_FOR_PERCENTILE

APPROX_FOR_PERCENTILE converts exact percentile functions to their approximate percentile function counterparts.

Property	Description
Parameter type	String
Syntax	APPROX_FOR_PERCENTILE = { NONE | PERCENTILE_CONT | PERCENTILE_CONT DETERMINISTIC | PERCENTILE_DISC | PERCENTILE_DISC DETERMINISTIC | ALL | ALL DETERMINISTIC }
Default value	none
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can use different values.

Approximate percentile function queries are faster than their exact percentile function query counterparts, so they can be useful in situations where a tolerable amount of error is acceptable in order to obtain faster query results.

The values that can be set are:

- NONE:

  No queries are converted. This is the default value.
- PERCENTILE_CONT:

  Converts PERCENTILE_CONT queries to APPROX_PERCENTILE queries.
- PERCENTILE_CONT DETERMINISTIC:

  Converts PERCENTILE_CONT queries to APPROX_PERCENTILE DETERMINSTIC queries.
- PERCENTILE_DISC:

  Converts PERCENTILE_DISC queries to APPROX_PERCENTILE queries.
- PERCENTILE DISC DETERMINISTIC:

  Converts PERCENTILE_DISC queries to APPROX_PERCENTILE DETERMINISTIC queries.
- ALL:

  Converts both PERCENTILE_CONT queries and PERCENTILE_DISC queries to APPROX_PERCENTILE queries.
- ALL DETERMINISTIC:

  Converts both PERCENTILE_CONT and PERCENTILE_DISC queries to APPROX_PERCENTILE DETERMINISTIC queries.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- "APPROX_FOR_AGGREGATION"
- "APPROX_FOR_COUNT_DISTINCT"
- *Oracle AI Database SQL Language Reference* for information about `APPROX_MEDIAN` aggregate functions
- *Oracle AI Database SQL Language Reference* for information about `APPROX_PERCENTILE` aggregate functions

2.17 AQ_TM_PROCESSES

`AQ_TM_PROCESSES` controls time monitoring on queue messages and controls processing of messages with delay and expiration properties specified.

Property	Description
Parameter type	Integer
Default value	`1`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`0` to `40`
Basic	No

You do not need to specify a value for this parameter because Oracle AI Database automatically determines the number of processes and autotunes them, as necessary. Therefore, Oracle highly recommends that you leave the `AQ_TM_PROCESSES` parameter unspecified and let the system autotune.

The default value for `AQ_TM_PROCESSES` is used if the client does not explicitly set a value for the parameter in the `init.ora` file or using the `ALTER SYSTEM` statement.

Note

If you want to disable the Queue Monitor Coordinator, then you must set `AQ_TM_PROCESSES` to 0 in your parameter file. Oracle strongly recommends that you do NOT set `AQ_TM_PROCESSES` to 0.

See Also

Oracle AI Database Transactional Event Queues and Advanced Queuing User's Guide for more information about this parameter

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.18 ARCHIVE_LAG_TARGET

`ARCHIVE_LAG_TARGET` forces a log switch after the specified amount of time elapses.

Property	Description
Parameter type	Integer
Default value	`0` (disabled)
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	0 or any integer in [60, 7200]
Basic	No
Oracle RAC	Multiple instances should use the same value

A 0 value disables the time-based thread advance feature; otherwise, the value represents the number of seconds. Values larger than 7200 seconds are not of much use in maintaining a reasonable lag in the standby database. The typical, or recommended value is 1800 (30 minutes). Extremely low values can result in frequent log switches, which could degrade performance; such values can also make the archiver process too busy to archive the continuously generated logs.

See Also

Oracle AI Database Administrator's Guide for more information about setting this parameter

2.19 ASM_DISKGROUPS

`ASM_DISKGROUPS` specifies a list of disk group names that an Oracle ASM instance mounts at startup when the `ALTER DISKGROUP ALL MOUNT` statement is issued.

Property	Description
Parameter type	String
Syntax	`ASM_DISKGROUPS = diskgroup [, diskgroup ] ...`
Default value	There is no default value.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	Comma-separated list of strings, up to 30 characters
Basic	No
Oracle RAC	Multiple instances can have different values.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> This parameter may only be specified in an Oracle Automatic Storage Management (Oracle ASM) instance.

The Oracle ASM instance startup process executes `ALTER DISKGROUP ALL MOUNT` unless the `NOMOUNT` startup option is specified.

The `ASM_DISKGROUPS` parameter is dynamic. If you are using a server parameter file (SPFILE), then you do not have to manually alter the value of `ASM_DISKGROUPS` in most situations. Oracle ASM automatically adds a disk group to the parameter when the disk group is successfully created or mounted. Oracle ASM also automatically removes a disk group from the parameter when the disk group is dropped. However, the SPFILE is not updated on a manual dismount.

Issuing the `ALTER DISKGROUP...ALL MOUNT` or `ALTER DISKGROUP...ALL DISMOUNT` command does not affect the value of this parameter.

Supporting Up to 511 Disk Groups for an Oracle ASM Instance

In Oracle Database 12*c* Release 1 or later, Oracle ASM configurations support up to 511 disk groups. Oracle ASM configurations with Oracle Database releases before 12*c* Release 1 can only support up to 63 disk groups.

> **See Also**
>
> *Oracle Automatic Storage Management Administrator's Guide* for more information about and examples of using this parameter

2.20 ASM_DISKSTRING

`ASM_DISKSTRING` specifies an operating system-dependent value used by Oracle ASM to limit the set of disks considered for discovery.

Property	Description
Parameter type	String
Syntax	`ASM_DISKSTRING = discovery_string [, discovery_string ] ...`
Default value	The null string; Oracle Automatic Storage Management discovery finds all disks in an operating system-specific location to which the Oracle Automatic Storage Management instance has read/write access.
Modifiable	`ALTER SESSION, ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances can have different values. Different nodes might see the same disks under different names; however, each instance must be able to use its `ASM_DISKSTRING` to discover the same physical media as the other nodes in the cluster.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> This parameter may only be specified in an Oracle Automatic Storage Management (Oracle ASM) instance.

When a new disk is added to a disk group, each Oracle ASM instance that has the disk group mounted must be able to discover the new disk using the value of `ASM_DISKSTRING`.

In most cases, the default value will be sufficient. Using a more restrictive value may reduce the time required for Oracle ASM to perform discovery, and thus improve disk group mount time or the time for adding a disk to a disk group. A "?" at the beginning of the string gets expanded to the Oracle home directory. Depending on the operating system, wildcard characters can be used. It may be necessary to dynamically change `ASM_DISKSTRING` before adding a disk so that the new disk will be discovered.

An attempt to dynamically modify `ASM_DISKSTRING` will be rejected and the old value retained if the new value cannot be used to discover a disk that is in a disk group that is already mounted.

> **See Also**
>
> *Oracle Automatic Storage Management Administrator's Guide* for more information and examples of using this parameter

2.21 ASM_IO_PROCESSES

`ASM_IO_PROCESSES` specifies the number of I/O worker processes to be started in an Oracle IOServer instance.

Property	Description
Parameter type	Integer
Default value	`20`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	`1 – 32`
Basic	No
Oracle RAC	Multiple instances can have different values.

This parameter is applicable only in an Oracle IOServer instance, which runs out of an Oracle Grid Infrastructure home.

The default value should work in most cases. However, under heavy I/O load, there may be some delays associated with posting processes out of I/O waits. In this case, a slightly higher value than the default may be appropriate.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.22 ASM_POWER_LIMIT

ASM_POWER_LIMIT specifies the maximum power on an Oracle ASM instance for disk rebalancing.

Property	Description
Parameter type	Integer
Default value	1
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to 11[1]
Basic	No
Oracle RAC	Multiple instances can have different values.

[1] Beginning with Oracle Database 11*g* Release 2 (11.2.0.2), if the COMPATIBLE.ASM disk group attribute is set to 11.2.0.2 or higher, then the range of values is 0 to 1024.

Note

- This parameter may only be specified in an Oracle Automatic Storage Management (Oracle ASM) instance.
- In an Oracle Exadata or Oracle Data Appliance environment, you cannot set this parameter to 0.

The higher the limit, the faster rebalancing will complete. Lower values will take longer, but consume fewer processing and I/O resources.

If the POWER clause of a rebalance operation is not specified, then the default power will be the value of ASM_POWER_LIMIT.

See Also

Oracle Automatic Storage Management Administrator's Guide for more information about using this parameter

2.23 ASM_PREFERRED_READ_FAILURE_GROUPS

ASM_PREFERRED_READ_FAILURE_GROUPS specifies the failure groups that contain preferred read disks. Preferred disks are instance specific.

Property	Description
Parameter type	String
Syntax	ASM_PREFERRED_READ_FAILURE_GROUPS = '<diskgroup_name>.<failure_group_name>, ...'

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Default value	NULL
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No
Oracle RAC	The value is different on different nodes

Note

The ASM_PREFERRED_READ_FAILURE_GROUPS initialization parameter is deprecated in Oracle Database 12*c* Release 2 (12.2.0.1) and may be desupported in a future release. It is replaced by the PREFERRED_READ.ENABLED disk group attribute.

See *Oracle Automatic Storage Management Administrator's Guide* for more information about the PREFERRED_READ.ENABLED disk group attribute.

To reset the parameter value to null, issue the following statement, which updates the server parameter file (SP file), then reboot Oracle ASM so that the change takes effect:

```
alter system reset asm_preferred_read_failure_groups;
```

See Also

Oracle Automatic Storage Management Administrator's Guide for more information about this parameter

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.24 AUDIT_FILE_DEST

`AUDIT_FILE_DEST` specifies the operating system directory into which the audit trail is written when the `AUDIT_TRAIL` initialization parameter is set to **os**, **xml**, or **xml,extended**.

> **Note**
>
> This parameter is deprecated and applies only to traditional auditing. Oracle strongly recommends against the use of this parameter. If you attempt to set this parameter, you will incur the following errors:
>
> ```
> ORA-32004: obsolete or deprecated parameter(s) specified for string
> instance
> ORA-32006: AUDIT_FILE_DEST initialization parameter has been deprecated
> ```
>
> Traditional auditing is desupported starting in Oracle AI Database 26ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored. However, you cannot create new traditional audit settings. You can delete existing traditional audit settings. See *Oracle AI Database Security Guide* for more information about how this desupport works.

Property	Description
Parameter type	String
Syntax	`AUDIT_FILE_DEST = '`*`directory`*`'`
Default value	The first default value is: *`ORACLE_BASE`*`/admin/`*`ORACLE_SID`*`/adump` The second default value, which is used if the first default value does not exist or is unusable, is: *`ORACLE_HOME`*`/rdbms/audit` Both of these default values are for UNIX systems. Other platforms may have different defaults. In a multitenant container database (CDB), both of these default values will be appended with the GUID of the pluggable database (PDB) to store audit records that belong to the PDB. For example, if the PDB's GUID is `03E1F908EE04252CE053B280E80AAAA3`, the first default directory will be: *`ORACLE_BASE`*`/admin/`*`ORACLE_SID`*`/adump/` `03E1F908EE04252CE053B280E80AAAA3` You can use the `V$CONTAINERS` view to query a PDB's GUID.
Modifiable	`ALTER SYSTEM ... DEFERRED`
Modifiable in a PDB	No
Basic	No

If you do not explicitly set a value for this parameter in the initialization file, then at least one of the two default operating system directories mentioned in the preceding table must exist and be writeable. Otherwise, the instance will fail to start.

If you explicitly set a value for this parameter in the initialization file, then the directory you specify must exist and be writeable. Otherwise, the instance will fail to start.

Copyright © 2002, 2025, Oracle and/or its affiliates.

The audit records will be written in XML format if the AUDIT_TRAIL initialization parameter is set to **xml** or **xml, extended**. It is also the location to which mandatory auditing information is written and, if so specified by the AUDIT_SYS_OPERATIONS initialization parameter, audit records for user SYS.

In a multitenant container database (CDB), the scope of the settings for this initialization parameter is the CDB. Although the audit trail is provided per pluggable database (PDB) in a CDB, this initialization parameter cannot be configured for individual PDBs.

See Also

- "V$PDBS"

2.25 AUDIT_SYS_OPERATIONS

AUDIT_SYS_OPERATIONS enables or disables the auditing of directly issued user SQL statements with SYS authorization. These include SQL statements directly issued by users when connected with the SYSASM, SYSBACKUP, SYSDBA, SYSDG, SYSKM, or SYSOPER privileges, as well as SQL statements that have been executed with SYS authorization using the PL/SQL package DBMS_SYS_SQL.

Note

This parameter is deprecated and applies only to traditional auditing. Oracle strongly recommends against the use of this parameter. If you attempt to set this parameter, you will incur the following errors:

```
ORA-32004: obsolete or deprecated parameter(s) specified for string
instance
ORA-32006: AUDIT_SYS_OPERATIONS initialization parameter has been
deprecated
```

Traditional auditing is desupported starting in Oracle AI Database 26ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored. However, you cannot create new traditional audit settings. You can delete existing traditional audit settings. See *Oracle AI Database Security Guide* for more information about how this desupport works.

Property	Description
Parameter type	Boolean
Default value	FALSE
Modifiable	No
Modifiable in a PDB	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Range of values	TRUE | FALSE
Basic	No

The audit records are written to the operating system's audit trail. The audit records will be written in XML format if the AUDIT_TRAIL initialization parameter is set to xml or xml, extended

On UNIX platforms, if the AUDIT_SYSLOG_LEVEL parameter has also been set, then it overrides the AUDIT_TRAIL parameter and SYS audit records are written to the system audit log using the SYSLOG utility.

In a CDB, the scope of the settings for this initialization parameter is the CDB. Although the audit trail is provided per PDB in a CDB, this initialization parameter cannot be configured for individual PDBs.

2.26 AUDIT_SYSLOG_LEVEL

AUDIT_SYSLOG_LEVEL allows SYS and standard OS audit records to be written to the system audit log using the SYSLOG utility.

> **Note**
>
> This parameter is deprecated and applies only to traditional auditing. Oracle strongly recommends against the use of this parameter. If you attempt to set this parameter, you will incur the following errors:
>
> ```
> ORA-32004: obsolete or deprecated parameter(s) specified for string
> instance
> ORA-32006: AUDIT_SYSLOG_LEVEL initialization parameter has been
> deprecated
> ```
>
> Traditional auditing is desupported starting in Oracle AI Database 26ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored. However, you cannot create new traditional audit settings. You can delete existing traditional audit settings. See *Oracle AI Database Security Guide* for more information about how this desupport works.

Property	Description
Parameter type	String
Syntax	AUDIT_SYSLOG_LEVEL = '*facility_clause.priority_clause*'
Syntax	**facility_clause::=** { USER | LOCAL[0 | 1 | 2 | 3 | 4 | 5 | 6 | 7] | SYSLOG | DAEMON | KERN | MAIL | AUTH | LPR | NEWS | UUCP | CRON }
Syntax	**priority_clause::=** { NOTICE | INFO | DEBUG | WARNING | ERR | CRIT | ALERT | EMERG }
Default value	There is no default value.
Modifiable	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Modifiable in a PDB	No
Basic	No
Examples	`AUDIT_SYSLOG_LEVEL = 'KERN.EMERG';` `AUDIT_SYSLOG_LEVEL = 'LOCAL1.WARNING';`

If you use this parameter, it is best to assign a file corresponding to every combination of facility and priority (especially `KERN.EMERG`) in `syslog.conf` . Sometimes these are assigned to print to the console in the default `syslog.conf` file. This can become annoying and will be useless as audit logs. Also, if you use this parameter, it is best to set the maximum length of syslog messages in the system to 512 bytes.

Note

Audit records written to the system audit log could get truncated to 512 bytes, and different parts of the same audit record may not be joined to get the original complete audit record.

See Also

Oracle AI Database Security Guide for information about configuring syslog auditing

If `AUDIT_SYSLOG_LEVEL` is set and `SYS` auditing is enabled (`AUDIT_SYS_OPERATIONS = TRUE`), then `SYS` audit records are written to the system audit log. If `AUDIT_SYSLOG_LEVEL` is set and standard audit records are being sent to the operating system (`AUDIT_TRAIL = os`), then standard audit records are written to the system audit log.

In a CDB, the scope of the settings for this initialization parameter is the CDB. Although the audit trail is provided per PDB in a CDB, this initialization parameter cannot be configured for individual PDBs.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.27 AUDIT_TRAIL

`AUDIT_TRAIL` enables or disables database auditing.

> **Note**
>
> This parameter is deprecated and applies only to traditional auditing. Oracle strongly recommends against the use of this parameter. If you attempt to set this parameter, you will incur the following errors:
>
> ```
> ORA-32004: obsolete or deprecated parameter(s) specified for string instance
> ORA-32006: AUDIT_TRAIL initialization parameter has been deprecated
> ```
>
> Traditional auditing is desupported starting in Oracle AI Database 26ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored. However, you cannot create new traditional audit settings. You can delete existing traditional audit settings. See *Oracle AI Database Security Guide* for more information about how this desupport works.

Property	Description
Parameter type	String
Syntax	`AUDIT_TRAIL = { none | os | db [, extended] | xml [, extended] }`
Default value	`none`
Modifiable	No
Modifiable in a PDB	No
Basic	No

Values

- `none`

  Disables standard auditing. This value is the default if the `AUDIT_TRAIL` parameter was not set in the initialization parameter file or if you created the database using a method other than Database Configuration Assistant. If you created the database using Database Configuration Assistant, then the default is `db`.

- `os`

  Directs all audit records to an operating system file. Oracle recommends that you use the `os` setting, particularly if you are using an ultra-secure database configuration.

- `db`

  Directs audit records to the database audit trail (the `SYS.AUD$` table), except for records that are always written to the operating system audit trail. Use this setting for a general database for manageability.

  If the database was started in read-only mode with `AUDIT_TRAIL` set to `db`, then Oracle AI Database internally sets `AUDIT_TRAIL` to `os`. Check the alert log for details.

- `db, extended`

Copyright © 2002, 2025, Oracle and/or its affiliates.

Performs all actions of AUDIT_TRAIL=db, and also populates the SQL bind and SQL text CLOB-type columns of the SYS.AUD$ table, when available. These two columns are populated only when this parameter is specified. When standard auditing is used with DB, EXTENDED, then virtual private database (VPD) predicates and policy names are also populated in the SYS.AUD$ table.

If the database was started in read-only mode with AUDIT_TRAIL set to db, extended, then Oracle AI Database internally sets AUDIT_TRAIL to os. Check the alert log for details.

- xml

  Writes to the operating system audit record file in XML format. Records all elements of the AuditRecord node except Sql_Text and Sql_Bind to the operating system XML audit file.

- xml, extended

  Performs all actions of AUDIT_TRAIL=xml, and includes SQL text and SQL bind information in the audit trail.

You can use the SQL AUDIT statement to set auditing options regardless of the setting of this parameter.

In a CDB, the scope of the settings for this initialization parameter is the CDB. Although the audit trail is provided per PDB in a CDB, this initialization parameter cannot be configured for individual PDBs.

Examples

The following statement sets the db, extended value for the AUDIT_TRAIL parameter. The new value takes effect after the database is restarted.

```
SQL> alter system set AUDIT_TRAIL=db, extended scope=spfile;

System altered.

SQL>
```

The following statement sets the xml, extended value for the AUDIT_TRAIL parameter. The new value takes effect after the database is restarted.

```
SQL> alter system set AUDIT_TRAIL=xml, extended scope=spfile;

System altered.

SQL>
```

The following statement sets the db value for the AUDIT_TRAIL parameter. The new value takes effect after the database is restarted.

```
SQL> alter system set AUDIT_TRAIL=db scope=spfile;

System altered.

SQL>
```

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.28 AUTOTASK_MAX_ACTIVE_PDBS

`AUTOTASK_MAX_ACTIVE_PDBS` enables you to specify the maximum number of PDBs that can schedule automated maintenance tasks at the same time (during a maintenance window).

Property	Description
Parameter type	Integer
Default value	2
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	`0` to the number of PDBs in the CDB
Basic	No
Oracle RAC	The same value should be used on all instances.

This parameter only affects PDBs. The CDB$ROOT container (CDB root) for a CDB can always schedule and run maintenance tasks during a maintenance window.

The default value is 2. Therefore, by default, two PDBs and the CDB root can run tasks at the same time during a maintenance window.

This parameter can be set only in the CDB root, not in a PDB.

See Also

- "ENABLE_AUTOMATIC_MAINTENANCE_PDB" for information on disabling or enabling the running of automated maintenance tasks for specific PDBs or for all the PDBs in CDB
- *Oracle AI Database Administrator's Guide* for more information about managing automated database maintenance tasks

2.29 AWR_PDB_AUTOFLUSH_ENABLED

`AWR_PDB_AUTOFLUSH_ENABLED` enables you to specify whether to enable or disable automatic Automatic Workload Repository (AWR) snapshots for all the PDBs in a CDB or for individual PDBs in a CDB.

Property	Description
Parameter type	Boolean

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Default value	`true`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No
Oracle RAC	The same value must be used on all instances.

Note

The value of this parameter in `CDB$ROOT` (the root of a CDB) has no effect in the root. Automatic AWR snapshots are always enabled in the root, regardless of the setting of this parameter.

The default value of `AWR_PDB_AUTOFLUSH_ENABLED` is `true`. Thus, by default, automatic AWR snapshots are enabled for all the PDBs in a CDB.

When you change the value of `AWR_PDB_AUTOFLUSH_ENABLED` in the CDB root, the new value takes effect in all the PDBs in the CDB.

Therefore, if you change the value of `AWR_PDB_AUTOFLUSH_ENABLED` in the CDB root to `false`, the value of `AWR_PDB_AUTOFLUSH_ENABLED` is also changed to `false` in all of the PDBs, so that automatic AWR snapshots are disabled for all the PDBs.

You can also change the value of `AWR_PDB_AUTOFLUSH_ENABLED` in any of the individual PDBs in a CDB, and the value that is set for each individual PDB will be honored. This enables you to enable or disable automatic AWR snapshots for individual PDBs.

When a new PDB is created, or a PDB from a previous database release is upgraded to the current database release, automatic AWR snapshots are enabled or disabled for the PDB based on the current value of `AWR_PDB_AUTOFLUSH_ENABLED` in the root.

See Also

- *Oracle AI Database Performance Tuning Guide* for more information about Automatic Workload Repository (AWR)
- *Oracle AI Database Performance Tuning Guide* for more information about AWR snapshots

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.30 AWR_PDB_MAX_PARALLEL_SLAVES

AWR_PDB_MAX_PARALLEL_SLAVES enables a DBA to allocate the correct amount of resources to enable quick and timely Automatic Workload Repository (AWR) flushes for multitenant container databases (CDBs).

Property	Description
Parameter type	Integer
Default value	10
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	1 – 30
Basic	No
Oracle RAC	Different instances can use different values.

Use AWR_PDB_MAX_PARALLEL_SLAVES to control the amount of resources dedicated to AWR snapshot flushing in pluggable databases (PDBs). With this parameter, a DBA can modify the maximum number of MMON worker processes (M*nnn* background processes) that can concurrently be used to handle AWR flush operations for the entire CDB.

For CDBs with a large number of PDBs enabled to create automatic AWR snapshots, a DBA can increase this parameter to enable timely AWR flushing. For CDBs with a small number of PDBs enabled, the value of this parameter can be decreased to reduce the concurrency and the chance of performance spikes.

Note that this parameter is set in the root of a CDB and determines the maximum degree of parallelism used to create AWR automatic snapshots for PDBs.

See Also

- "AWR_PDB_AUTOFLUSH_ENABLED" for information about enabling the automatic creation of AWR PDB snapshots
- *Oracle AI Database Performance Tuning Guide* for an introduction to AWR
- "Background Processes" for more information about the MMON and M*nnn* background processes

2.31 AWR_SNAPSHOT_TIME_OFFSET

AWR_SNAPSHOT_TIME_OFFSET specifies an offset for the Automatic Workload Repository (AWR) snapshot start time.

Property	Description
Parameter type	Integer
Default value	There is no offset by default.
Modifiable	ALTER SYSTEM

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Modifiable in a PDB	No
Range of values	0 - 3599, or the special value 1000000
Basic	No
Oracle RAC	Multiple instances should use the same value

AWR snapshots normally start at the top of the hour (12:00, 1:00, 2:00, and so on). This parameter allows DBAs to specify an offset for the AWR snapshot start time.

This is a useful parameter to avoid CPU spikes from multiple instances all starting their AWR snapshots at the same time. If you have a large system with many instances on it (like many Exadata installations), and you are experiencing such CPU spikes, this parameter can be very useful.

The parameter is specified in seconds. Normally, you set it to a value less than 3600. If you set the special value 1000000 (1,000,000), you get an automatic mode, in which the offset is based on the database name.

The automatic mode is an effective way of getting a reasonable distribution of offset times when you have a very large number of instances running on the same node.

2.32 BACKGROUND_CORE_DUMP

`BACKGROUND_CORE_DUMP` specifies whether Oracle includes the SGA in the core file for Oracle background processes.

Property	Description
Parameter type	String
Syntax	`BACKGROUND_CORE_DUMP = { partial | full }`
Default value	`partial`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No

Values

- `partial`

  Oracle does not include the SGA in the core dump.
- `full`

  Oracle includes the SGA in the core dump.

> **See Also**
>
> "SHADOW_CORE_DUMP"

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.33 BACKGROUND_DUMP_DEST

`BACKGROUND_DUMP_DEST` specifies the pathname (directory or disc) where debugging trace files for the background processes (LGWR, DBW*n*, and so on) are written during Oracle operations.

Property	Description
Parameter type	String
Syntax	`BACKGROUND_DUMP_DEST = { pathname | directory }`
Default value	Operating system-dependent
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	Any valid local path, directory, or disk
Basic	No

Note

The `BACKGROUND_DUMP_DEST` parameter is deprecated in Oracle Database 12*c* Release 1 (12.1.0.1).

An **alert log** in the directory specified by `BACKGROUND_DUMP_DEST` logs significant database events and messages. Anything that affects the database instance or global database is recorded here. The alert log is a normal text file. Its file name is operating system-dependent. For platforms that support multiple instances, it takes the form `alert_`*`sid`*`.log`, where *sid* is the system identifier. This file grows slowly, but without limit, so you might want to delete it periodically. You can delete the file even when the database is running.

Note

This parameter is ignored by the diagnosability infrastructure introduced in Oracle Database 11g Release 1 (11.1), which places trace and core files in a location controlled by the `DIAGNOSTIC_DEST` initialization parameter.

See Also

- *Oracle AI Database Administrator's Guide* for more information on the DIAGNOSTIC_DEST initialization parameter
- "USER_DUMP_DEST" for information on setting a destination for server process trace files

2.34 BACKUP_TAPE_IO_SLAVES

`BACKUP_TAPE_IO_SLAVES` specifies whether I/O server processes are used by Recovery Manager to back up, copy, or restore data to tape.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SYSTEM ... DEFERRED`
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No

When the value is set to `true`, Oracle uses an I/O server process to write to or read from a tape device. When the value is set to `false` (the default), Oracle does not use I/O server process for backups. Instead, the shadow process engaged in the backup accesses the tape device.

Note

You cannot perform duplexed backups unless you enable this parameter. Otherwise, Oracle returns an error. When this parameter is enabled, Recovery Manager will configure as many server processes as needed for the number of backup copies requested.

See Also

- *Oracle AI Database Backup and Recovery User's Guide* for more information on duplexed backups
- "DBWR_IO_SLAVES"

2.35 BITMAP_MERGE_AREA_SIZE

`BITMAP_MERGE_AREA_SIZE` specifies the amount of memory Oracle uses to merge bitmaps retrieved from a range scan of the index.

Property	Description
Parameter type	Integer
Default value	`1048576` (1 MB)
Modifiable	No
Modifiable in a PDB	Yes
Range of values	Operating system-dependent
Basic	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> Oracle does not recommend using the `BITMAP_MERGE_AREA_SIZE` parameter unless the instance is configured with the shared server option. Oracle recommends that you enable automatic sizing of SQL working areas by setting `PGA_AGGREGATE_TARGET` instead. `BITMAP_MERGE_AREA_SIZE` is retained for backward compatibility.

`BITMAP_MERGE_AREA_SIZE` is relevant only for systems containing bitmap indexes. A larger value usually improves performance, because the bitmap segments must be sorted before being merged into a single bitmap.

> **See Also**
>
> *Oracle AI Database SQL Tuning Guide* for more information on using bitmap indexes for performance

2.36 BLANK_TRIMMING

`BLANK_TRIMMING` specifies the data assignment semantics of character datatypes.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	No
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No

Values

- `TRUE`

  Allows the data assignment of a source character string or variable to a destination character column or variable even though the source length is longer than the destination length. In this case, however, the additional length over the destination length must be all blanks, else an exception condition is raised. This value complies with the semantics of SQL-92 Transitional Level and above.

- `FALSE`

  Disallows the data assignment if the source length is longer than the destination length and reverts to SQL92 Entry Level semantics.

> **See Also**
>
> *Oracle AI Database Globalization Support Guide* for more information on how using this parameter can help prevent data truncation issues during character set migration

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.37 BLOCKCHAIN_TABLE_MAX_NO_DROP

BLOCKCHAIN_TABLE_MAX_NO_DROP lets you control the maximum amount of idle time that can be specified when creating a blockchain table or an immutable table. The idle time represents the length of time the table must be inactive before it can be dropped. When explicitly set by a user, the only value allowed for this parameter is 0.

Property	Description
Parameter type	Integer
Default value	None
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	None or 0
Basic	No
Oracle RAC	The same value must be used on all instances.

When creating a blockchain table or an immutable table with the SQL statement CREATE TABLE, you can specify the clause NO DROP UNTIL *number* DAYS IDLE. This clause specifies the number of days the table must be inactive before it can be dropped, that is, the number of days that must pass after the most recent row insertion before the table can be dropped.

- If BLOCKCHAIN_TABLE_MAX_NO_DROP is set to 0, then when a user creates a blockchain table or an immutable table, and specifies the NO DROP UNTIL *number* DAYS IDLE clause, the value of *number* must be 0:

  ```
  CREATE BLOCKCHAIN TABLE ... NO DROP UNTIL 0 DAYS IDLE ...
  CREATE IMMUTABLE TABLE ... NO DROP UNTIL 0 DAYS IDLE ...
  ```

  This allows the table to be dropped at any time, regardless of how long the table has been inactive.
- If BLOCKCHAIN_TABLE_MAX_NO_DROP is not set, then when a user creates a blockchain table or an immutable table, and specifies the NO DROP UNTIL *number* DAYS IDLE clause, any number value can be specified for *number*.

> **See Also**
>
> *Oracle AI Database SQL Language Reference* for information about the CREATE TABLE statement

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.38 BLOCKCHAIN_TABLE_RETENTION_THRESHOLD

`BLOCKCHAIN_TABLE_RETENTION_THRESHOLD` lets you control the maximum amount of idle time that can be specified when a database user without the `TABLE RETENTION` system privilege creates or alters a blockchain table or an immutable table.

Property	Description
Parameter type	Integer
Default value	16
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	0 to 365,000
Basic	No
Oracle RAC	The same value must be used on all instances.

The idle time for a non-empty blockchain table or a non-empty immutable table represents the length of time (in days) the table must be inactive before it can be dropped.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

2.39 CIRCUITS

`CIRCUITS` specifies the total number of virtual circuits that are available for inbound and outbound network sessions.

Property	Description
Parameter type	Integer
Default value	`4294967295`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No

It is one of several parameters that contribute to the total SGA requirements of an instance.

You should not specify a value for this parameter unless you want to limit the number of virtual circuits.

> **See Also**
>
> - *Oracle AI Database Concepts* for more information on memory structures
> - *Oracle AI Database Concepts* for more information on processes

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.40 CLIENT_PREFETCH_ROWS

Use CLIENT_PREFETCH_ROWS to enable clients to reduce the number of roundtrips required while fetching rows of a query result set.

Property	Description
Parameter type	Integer
Default value	0 (only client-side settings apply)
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to UB4MAXVAL (usually 4294967295) UB4MAXVAL is defined in the oratypes.h header file, which is found in the public directory. Its value may vary according to the operating system you are using.
Basic	No

CLIENT_PREFETCH_ROWS specifies the number of rows to be prefetched by the Oracle client driver, without making any changes to the client application. The client driver buffers the prefetched rows after each successful query execution and for each subsequent fetch request sent to the database.

This parameter applies only to clients that use Oracle Call Interface (OCI) to connect to the database.

This parameter applies only with Oracle Instant Client/Oracle Database Client 19.17 (or later) and 21.8 (or later), for all platforms.

The CLIENT_PREFETCH_ROWS parameter can be set with ALTER SESSION or ALTER SYSTEM. If the parameter value changes using ALTER SESSION, the new value becomes effective for that specific session on subsequent resultset fetches. If the parameter value changes using ALTER SYSTEM, the new value takes effect for the statements that run on connections created after the ALTER SYSTEM command.

For example, if CLIENT_PREFETCH_ROWS is set to 100 and a client application asks to fetch 10 rows, a total of 110 rows are returned to the client driver. The first 10 rows out of the 110 rows are given to the application, and the client driver internally buffers the remaining 100 rows. The next 10 row fetches from the client application, each with 10 rows per fetch iteration can be fulfilled from the 100 rows that are internally buffered by the client driver. This process reduces the number of required network roundtrips to and from the database. In this example, on the 11th fetch, a new network roundtrip is incurred and the database returns the next batch of 110 rows, as long as the result set is not exhausted, and the cycle repeats.

Notes for setting CLIENT_PREFETCH_ROWS:

- When CLIENT_PREFETCH_ROWS is set to a non-zero value, its value takes precedence over the default OCI_ATTR_PREFETCH_ROWS value for prefetch row count.
- If the OCI_ATTR_PREFETCH_ROWS value is set to a non-default value, then the CLIENT_PREFETCH_ROWS value is ignored for the prefetch row count.
- Using CLIENT_PREFETCH_ROWS with OCIAttrSet():

Copyright © 2002, 2025, Oracle and/or its affiliates.

`OCI_ATTR_PREFETCH_ROWS` sets the number of top-level rows to be prefetched. The default value is 1 row. However, if `CLIENT_PREFETCH_ROWS` is set, the number of top-level rows to be prefetched is determined by the following precedence

1. If you set the `OCI_ATTR_PREFETCH_ROWS` attribute using `OCIAttrSet()` function or `oraaccess.xml` as the value '1', then the database initialization parameter `CLIENT_PREFETCH_ROWS` value takes precedence and determines the number of top-level rows to be prefetched.
2. If you set the `OCI_ATTR_PREFETCH_ROWS` attribute using `OCIAttrSet()` function or `oraaccess.xml` as the value 'x' other than 1, then 'x' number of top-level rows will be prefetched, and the database initialization parameter `CLIENT_PREFETCH_ROWS` is ignored.
3. If you do not set an `OCI_ATTR_PREFETCH_ROWS` value using `OCIAttrSet()` or `oraaccess.xml`, then the database initialization parameter `CLIENT_PREFETCH_ROWS` value takes precedence and determines the number of top-level rows to be prefetched.

- Using `CLIENT_PREFETCH_ROWS` with `OCIAttrGet()`:

  The function `OCIAttrGet()` returns the effective prefetch row value set from `OCI_ATTR_PREFETCH_ROWS`, `oraaccess.xml` and the database initialization parameter `CLIENT_PREFETCH_ROWS`. If the `OCI_ATTR_PREFETCH_MEMORY` value is set, the value returned by `OCIAttrGet()` might not be the final prefetch rows value and may be restricted to the maximum number of rows allowed by the memory value specified by the `OCI_ATTR_PREFETCH_MEMORY` attribute.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

> **See Also**
>
> *Oracle Call Interface Developer's Guide* for more information about fetching results and setting the prefetch count, as well as the `OCI_ATTR_PREFETCH_MEMORY` and `OCI_ATTR_PREFETCH_ROWS` attributes, and the `OCIAttrGet()` and `OCIAttrSet()` functions

2.41 CLIENT_RESULT_CACHE_LAG

`CLIENT_RESULT_CACHE_LAG` specifies the maximum time (in milliseconds) since the last round trip to the server, before which the OCI client query execute makes a round trip to get any database changes related to the queries cached on the client.

Property	Description
Parameter type	Big integer
Syntax	`CLIENT_RESULT_CACHE_LAG = integer`
Default value	`3000`
Modifiable	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Modifiable in a PDB	Yes
Range of values	`0` to operating system-dependent
Basic	No

> **See Also**
>
> *Oracle Call Interface Developer's Guide* for more information about the client query cache feature

2.42 CLIENT_RESULT_CACHE_SIZE

`CLIENT_RESULT_CACHE_SIZE` specifies the maximum size of the client per-process result set cache (in bytes).

Property	Description
Parameter type	Big integer
Syntax	`CLIENT_RESULT_CACHE_SIZE = integer [K | M | G]`
Default value	`0`
Modifiable	No
Modifiable in a PDB	Yes
Range of values	`0` to operating system-dependent
Basic	No

All OCI client processes inherit this maximum size. Setting a nonzero value enables the client query cache feature. This can be overridden by the client configuration parameter `OCI_RESULT_CACHE_MAX_SIZE`.

> **See Also**
>
> *Oracle Call Interface Developer's Guide* for more information about the client query cache feature

2.43 CLIENT_STATISTICS_LEVEL

`CLIENT_STATISTICS_LEVEL` controls whether database clients report network statistics to the database.

This parameter applies only to clients that use Oracle Call Interface (OCI) to connect to the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	String
Syntax	`CLIENT_STATISTICS_LEVEL = { TYPICAL | OFF }`
Default value	`TYPICAL`
Modifiable	`ALTER SYSTEM ... DEFERRED`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be used on all instances.

Database clients sometimes have performance issues when interacting with the database over a network (LAN or WAN). You can use this parameter to enable clients to collect network statistics and periodically send them to the database, where the statistics are displayed in `AWR` and `V$` views. These statistics include TCP and SQL*Net statistics. They complement existing database statistics and can be used to analyze, troubleshoot, and tune potential network performance or configuration issues.

Possible values:

- `TYPICAL`

  This setting enables clients to collect network statistics and periodically send them to the database.

- `OFF`

  This setting disables this feature. Clients will not send network statistics to the database.

When you modify this parameter, the new setting applies only to subsequent new connections to database clients.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Note

To view a complete listing of the statistics that are collected and reported when this feature is enabled, issue the following SQL statement:

```
SELECT name FROM V$STATNAME
  WHERE name LIKE 'Client%' ORDER BY name;

NAME
----------------------------------------------------
Client Advertised Receive Window
Client Advertised Send Window
Client Data Segments In
Client Data Segments Out
Client Lost Packets
Client Path Maximum Transmission Unit(MTU)
Client Send Congestion Window
Client Time (usec) Busy Sending Data
Client Time (usec) Busy Sending Data under Congestion
Client Time (usec) Last Ack Received
Client Time (usec) Last Ack Sent
Client Time (usec) Last Data Received
Client Time (usec) Last Data Sent
Client Time (usec) Limited by Receive Window
Client Time (usec) Limited by Send Buffer
Client Time (usec) Round Trip Time
Client Time (usec) Round Trip Time Variance
Client Total Bytes Acked
Client Total Bytes Received
Client Total Number of Retransmitted Packets
```

2.44 CLONEDB

`CLONEDB` should be set on Direct NFS Client CloneDB databases. When this parameter is set, the CloneDB database uses the database backup as the backing store for the datafiles.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	No
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No
Oracle RAC	The same value should be set for all instances.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- See *Oracle AI Database Administrator's Guide* for more information about cloning databases on network attached storage (NAS).
- "CLONEDB_DIR"

2.45 CLONEDB_DIR

`CLONEDB_DIR` sets the directory path where CloneDB bitmap files should be created and accessed.

Property	Description
Parameter type	String
Syntax	`CLONEDB_DIR = string`
Default value	`$ORACLE_HOME/dbs`
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	In an Oracle RAC environment, this parameter should be set to a shared location that is accessible from all the instances.

By default the CloneDB bitmap file is created under the `$ORACLE_HOME/dbs` directory. This directory may not be in a shared location in an Oracle RAC environment, and therefore this parameter is provided to identify a shared location where CloneDB specific files can be created.

See Also

"CLONEDB"

2.46 CLUSTER_DATABASE

`CLUSTER_DATABASE` is an Oracle RAC parameter that specifies whether Oracle RAC is enabled.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	No
Modifiable in a PDB	No
Range of values	`true | false`
Basic	Yes
Oracle RAC	For all instances, the value must be set to `true`.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle Real Application Clusters Administration and Deployment Guide* for an introduction to Oracle RAC

2.47 CLUSTER_INTERCONNECTS

`CLUSTER_INTERCONNECTS` can be used in Oracle Real Application Clusters environments to indicate cluster interconnects available for use for the database traffic.

Property	Description
Parameter type	String
Syntax	`CLUSTER_INTERCONNECTS = ifn [: ifn ] ...`
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Range of values	One or more IP addresses, separated by colons
Basic	No

Use this parameter to override the default interconnect configured for the database traffic, which is stored in the cluster registry. This procedure also may be useful with Data Warehouse systems that have reduced availability requirements and high interconnect bandwidth demands.

`CLUSTER_INTERCONNECTS` specifically overrides the following:

- Network classifications stored by `oifcfg` in the OCR.
- The default interconnect chosen by Oracle.

If you want to load-balance the interconnect, then Oracle recommends that you use link-bonding at the operating system level, even if you have two databases on the same server, so that multiple interconnects use the same address. Note that multiple private addresses provide load balancing, but do not provide failover unless bonded. If you specify multiple addresses in init.ora using `CLUSTER_INTERCONNECTS`, instead of bonding multiple addresses at the operating system level, then typically availability is reduced, because each network interface card failure will take down that instance.

Refer to your vendor documentation for information about bonding interfaces. Some vendor bonding architectures may require the use of this parameter.

If you have multiple database instances on Oracle Real Application Clusters nodes and want to use a specific interface for each instance, then you can set the `CLUSTER_INTERCONNECTS` initialization parameter to the IP address for each database instance. For example:

```
hr1.init.ora.cluster_interconnects="192.0.2.111"
oltp3.init.ora.cluster_interconnects="192.0.2.112"
```

If the Oracle RAC interconnect is configured to run on a different interface than the Oracle Clusterware interconnect, then this configuration can cause reduced availability, as failovers or instance evictions can be delayed if the Oracle RAC interconnect fails while the Oracle Clusterware NIC remains up.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle Real Application Clusters Administration and Deployment Guide* for additional information about using `CLUSTER_INTERCONNECTS`

2.48 COMMIT_LOGGING

`COMMIT_LOGGING` is an advanced parameter used to control how redo is batched by Log Writer.

Property	Description
Parameter type	String
Syntax	`COMMIT_LOGGING = { IMMEDIATE | BATCH }`
Default value	There is no default value.
Modifiable	Yes (at both session-level and system-level)
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Each instance may have its own setting

If `COMMIT_LOGGING` is altered after setting `COMMIT_WAIT` to `FORCE_WAIT`, then the `FORCE_WAIT` option is no longer valid.

2.49 COMMIT_POINT_STRENGTH

`COMMIT_POINT_STRENGTH` specifies a value that determines the **commit point site** in a distributed transaction.

Property	Description
Parameter type	Integer
Default value	1
Modifiable	No
Modifiable in a PDB	Yes
Range of values	0 to 255
Basic	No

> **Note**
>
> This parameter is relevant only in distributed database systems.

The node in the transaction with the highest value for `COMMIT_POINT_STRENGTH` will be the commit point site.

The commit point site of a database should reflect the amount of critical shared data in the database. For example, a database on a mainframe computer typically shares more data

Copyright © 2002, 2025, Oracle and/or its affiliates.

among users than one on a personal computer. Therefore, COMMIT_POINT_STRENGTH should be set to a higher value for the mainframe computer.

The commit point site stores information about the status of transactions. Other computers in a distributed transaction require this information during Oracle's two-phase commit, so it is desirable to have machines that are always available as commit point sites. Therefore, set COMMIT_POINT_STRENGTH to a higher value on your more available machines.

See Also

- *Oracle AI Database Concepts* and *Oracle AI Database Administrator's Guide* for information on two-phase commit
- Your operating system-specific Oracle documentation for the default value of this parameter

2.50 COMMIT_WAIT

COMMIT_WAIT is an advanced parameter used to control when the redo for a commit is flushed to the redo logs.

Property	Description
Parameter type	String
Syntax	COMMIT_WAIT = { NOWAIT | WAIT | FORCE_WAIT }
Default value	There is no default value.
Modifiable	Yes (at both session-level and system-level)
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Each instance may have its own setting

Be aware that the NOWAIT option can cause a failure that occurs after the database receives the commit message, but before the redo log records are written. This can falsely indicate to a transaction that its changes are persistent. Also, it can violate the durability of ACID (Atomicity, Consistency, Isolation, Durability) transactions if the database shuts down unexpectedly.

If the parameter is set to FORCE_WAIT, the default behavior (immediate flushing of the redo log buffer with wait) is used. If this is a system setting, the session level and transaction level options will be ignored. If this is a session level setting, the transaction level options will be ignored. If COMMIT_WAIT is altered after it has been set to FORCE_WAIT, then the FORCE_WAIT option is no longer valid.

2.51 COMMIT_WRITE

COMMIT_WRITE is an advanced parameter used to control how redo for transaction commits is written to the redo logs.

Property	Description
Parameter type	String
Syntax	COMMIT_WRITE = '{IMMEDIATE | BATCH},{WAIT |NOWAIT}'

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Default value	If this parameter is not explicitly specified, then database commit behavior defaults to writing commit records to disk before control is returned to the client. If only `IMMEDIATE` or `BATCH` is specified, but not `WAIT` or `NOWAIT`, then `WAIT` mode is assumed. If only `WAIT` or `NOWAIT` is specified, but not `IMMEDIATE` or `BATCH`, then `IMMEDIATE` mode is assumed. Be aware that the `NOWAIT` option can cause a failure that occurs after the database receives the commit message, but before the redo log records are written. This can falsely indicate to a transaction that its changes are persistent. Also, it can violate the durability of ACID (Atomicity, Consistency, Isolation, Durability) transactions if the database shuts down unexpectedly.
Modifiable	Yes (at both session-level and system-level). Values supplied for `COMMIT_WRITE` in an `ALTER SYSTEM` or `ALTER SESSION` statement must be separated by a comma.
Modifiable in a PDB	Yes
Range of values	Single-quoted, comma-separated list of either `IMMEDIATE` or `BATCH`, and either `WAIT` or `NOWAIT`.
Basic	No
Oracle RAC	Each instance may have its own setting

The `IMMEDIATE` and `BATCH` options control how redo is batched by Log Writer. The `WAIT` and `NOWAIT` options control when the redo for a commit is flushed to the redo logs.

> **Note**
>
> The `COMMIT_WRITE` parameter is deprecated. It is retained for backward compatibility only. It is replaced by the `COMMIT_LOGGING` and `COMMIT_WAIT` parameters.

2.52 COMMON_USER_PREFIX

`COMMON_USER_PREFIX` specifies a prefix that the names of common users, roles, and profiles in a multitenant container database (CDB) must start with.

Property	Description
Parameter type	String
Syntax	`COMMON_USER_PREFIX = prefix`
Default value	In a CDB root, `C##` is the default value. In an application root, the empty string is the default value.
Modifiable	No
Modifiable in a PDB	No However, you can modify this parameter in an application root.
Basic	No
Oracle RAC	Multiple instances must have the same value

Copyright © 2002, 2025, Oracle and/or its affiliates.

Names of local users, roles, and profiles must not start with the same prefix. A case-insensitive comparison of the prefixes for user, role, and profile names to the value of this parameter is done.

When a value is set for COMMON_USER_PREFIX, Oracle will require that the names of common users, roles, and profiles start with the string assigned to this parameter.

The names of users, roles, and profiles created using this prefix must be valid names.

Regardless of the value of the COMMON_USER_PREFIX parameter, the names of local users, roles, and profiles cannot start with C##. Similarly, the names of application common users and local users in an application PDB cannot start with C##.

⚠ Caution

You can change the value of the COMMON_USER_PREFIX parameter, but do so only with great care.

If COMMON_USER_PREFIX is set to an empty string, Oracle will *not* enforce any restrictions on the names of common or local users, roles, and profiles.

Setting this parameter to an empty string will result in no restrictions being placed on names of common and local users, roles, and profiles, which could lead to conflicts between the names of local and common users, roles, and profiles when a PDB is plugged into a different CDB, or when opening a PDB that was closed when a common user was created.

ⓘ Note

COMMON_USER_PREFIX can be set in the context of an application container.

If you set COMMON_USER_PREFIX in the application root to a non-null value, then the application common user should start with that prefix, and a local user created in an application PDB cannot start with that prefix.

By default, COMMON_USER_PREFIX is the empty string in an application root.

ⓘ Note

When you query the V$PARAMETER or V$SYSTEM_PARAMETER view, a value of NONE is returned for the DEFAULT_VALUE column for the COMMON_USER_PREFIX parameter.

However, the database enforces a default value of C## for a CDB root and a default value of the empty string for an application root.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.53 COMPATIBLE

`COMPATIBLE` enables you to use a new release of Oracle while ensuring the ability to downgrade the database to an earlier release.

Property	Description
Parameter type	String
Syntax	`COMPATIBLE = release_number`
Default value	Oracle AI Database 26ai, Release Update 23.6 or later: `23.6.0` Oracle AI Database 26ai, Release Update 23.5: `23.5.0` Oracle AI Database 26ai, Release Update 23.4: `23.4.0`
Modifiable	Oracle AI Database 26ai, Release Update 23.9 or later: Yes, with restrictions. See "Dynamic Modification of the COMPATIBLE Initialization Parameter". Oracle AI Database 26ai, Release Update 23.8 or earlier: No
Modifiable in a PDB	No
Range of values	`19.0.0` to default release Values must be specified as at least three decimal numbers with each number separated by a dot, such as `23.6.0` or `23.6.0.0`
Basic	Yes
Oracle RAC	Multiple instances must have the same value.

The `COMPATIBLE` parameter specifies the Oracle version number that the database disk format must be compatible with. The database can be downgraded to the version specified in the `COMPATIBLE` parameter or any later version.

Setting `COMPATIBLE` ensures that new features do not write data formats or structures to disk that are not compatible with the earlier release, preventing a future downgrade. Features that require a higher value of `COMPATIBLE` to work correctly may be restricted or disabled to ensure downgrades are possible.

Typically, users keep `COMPATIBLE` unchanged when upgrading their Oracle software. After upgrade, users will run the new release of the Oracle software for a few weeks to ensure that the new release is working correctly. Afterwards, users can choose to update `COMPATIBLE` to the latest version to take advantage of the new features.

The following guidelines apply when applying a Release Update or Release Update Revision:

Copyright © 2002, 2025, Oracle and/or its affiliates.

- For Oracle AI Database 26ai:

  The value of the COMPATIBLE parameter should be changed when you apply a Release Update (RU) only under the following circumstance: You are running the Oracle AI Database 26ai, RU 23.4, and you have *explicitly* set COMPATIBLE to any value (including the default value of 23.4.0). You then apply a Release Update. In this case:

  – If you apply RU 23.5, then you must set the value of COMPATIBLE to 23.5.0 in order to use all of the features of Oracle AI Database 26ai, including the features introduced in RU 23.5.

  – If you apply RU 23.6 through 23.26.0, then you must set the value of COMPATIBLE to 23.6.0 in order to use all of the features of Oracle AI Database 26ai, including the features introduced in RU 23.6.

  The value of the COMPATIBLE parameter should not be changed when you apply a Release Update Revision (RUR) in Oracle AI Database 26ai.

- For Oracle Database 21c, Oracle Database 19c, and Oracle Database 18c:

  The value of the COMPATIBLE parameter should not be changed for an RU or an RUR. For example, assume you are running Oracle Database 21c and the value of COMPATIBLE is 21.0.0. You then apply Oracle Database 21c, RU 21.4. Do not set the value of COMPATIBLE to 21.4.0; leave it set to 21.0.0.

Dynamic Modification of the COMPATIBLE Initialization Parameter

Starting with Oracle AI Database 26ai, RU 23.9, you can dynamically modify the value of COMPATIBLE for all sessions in the current instance. This allows you to use database features that require a COMPATIBLE setting that is greater than your current setting, without having to restart the database instance.

You can dynamically modify the COMPATIBLE setting by using the SQL command ALTER DATABASE SET DOWNGRADE COMPATIBILITY.

For example, assume you are running Oracle AI Database 26ai, RU 23.26.0, and COMPATIBLE is set to 23.4.0. If you would like to use features that are available with a COMPATIBLE setting of 23.6.0, without having to restart the database instance, you can dynamically update the COMPATIBLE setting as follows:

```
SQL> SHO PARAMETER COMPATIBLE

NAME                         TYPE        VALUE
---------------------------- ----------- -------------
compatible                   string      23.4.0.0

SQL> ALTER DATABASE SET DOWNGRADE COMPATIBILITY TO '23.6.0';

Database altered.

SQL> SHO PARAMETER COMPATIBLE

NAME                         TYPE        VALUE
---------------------------- ----------- -------------

compatible                   string      23.6.0.0
```

Copyright © 2002, 2025, Oracle and/or its affiliates.

After dynamically changing the value of COMPATIBLE, be sure to set COMPATIBLE to the new value in the initialization parameter file or server parameter file. Otherwise, an error will occur the next time the database instance is restarted.

Notes:

- Dynamic modification of COMPATIBLE is available only on Oracle AI Database 26ai, and only when changing to a higher COMPATIBLE value within Oracle AI Database 26ai.
- If there are primary and multiple standbys, then you must issue the command on standbys first, and then on the primary.
- If the command is interrupted, then you can issue the change COMPATIBLE command again.
- If the command is issued on the primary database, then it must be issued in an instance where CDB$ROOT is open.
- If multiple sessions issue the same command concurrently, then only one of them will succeed.

Notes

- The value of the COMPATIBLE parameter can be increased to a higher version, but it can never be decreased to a lower version.
- When using a standby database, this parameter must have the same value on both the primary and standby databases.

See Also

Oracle AI Database Upgrade Guide for more information on setting this parameter

2.54 CONNECTION_BROKERS

CONNECTION_BROKERS is used to specify connection broker types, the number of connection brokers of each type, and the maximum number of connections per broker.

Property	Description
Parameter type	String
Syntax	`CONNECTION_BROKERS = broker_description[,...]`
Syntax	**`broker_description::=`** `((type_clause)(brokers_clause)[(broker_options)])`
Syntax	**`type_clause::=`** `TYPE={ DEDICATED | EMON | POOLED }` Indicates the broker type. This is a mandatory parameter.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Syntax	**`brokers_clause::=`** `BROKERS=`*`integer`* Indicates the number of brokers of the specified type. This is a mandatory parameter. The specified integer value must be greater than or equal to 0. If set to 0, brokers will not accept new connections, but existing connections will continue as normal.
Syntax	**`broker_options::=`** `CONNECTIONS=`*`integer`* The maximum number of connections per broker. This is an optional parameter. If the specified integer value is greater than the maximum allowed for the platform, the maximum allowed for the platform is used.
Default value	The default value for the initialization parameter will contain the `DEDICATED` and `EMON` broker types. Certain types of brokers are only started when certain features are enabled, so their configuration will only apply if the broker is needed.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No
Oracle RAC	The same value should be set on all instances

The connection brokers are used in these cases:

- DEDICATED brokers are used by the multiprocess and multithreaded Oracle features. See *Oracle AI Database Concepts* for more information about these features.

  `DEDICATED` brokers are also used when the `USE_DEDICATED_BROKER` initialization parameter is set to `true`. See "USE_DEDICATED_BROKER" for more information about the `USE_DEDICATED_BROKER` initialization parameter.

- EMON brokers are used when there is a client registered for notification over 12*c* AQ queues. It is not on by default. See *Oracle AI Database Transactional Event Queues and Advanced Queuing User's Guide* for more information about AQ queues.

- POOLED brokers are used whenever a Database Resident Connection Pooling (DRCP) pool is active. See *Oracle AI Database Concepts* for more information about DRCP pooling.

  The POOLED broker does not appear in the parameter by default. In this case, the DRCP fields are used. If you specify the `POOLED` broker in the parameter, then that specification will override the DRCP fields, and further attempts to set the DRCP fields will then throw an error. Oracle recommends that the parameter be used instead of the DRCP fields.

To make it easier to modify the list, individual entries are indexed using the `TYPE` so it is not necessary to re-specify the entire list. For example, to adjust the number of `DEDICATED` brokers:

```
alter system set connection_brokers = '((TYPE=DEDICATED)(BROKERS=2))'
```

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.55 CONTAINER_DATA

Use `CONTAINER_DATA` to control whether queries on extended data-linked objects from within a PDB return rows from both the root and the PDB, or rows from only the PDB.

Property	Description
Parameter type	String
Syntax	`CONTAINER_DATA = { ALL | CURRENT | CURRENT_DICTIONARY }`
Default value	`ALL`
Modifiable	`ALTER SESSION`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can use different values.

This parameter controls the behavior of queries on the following types of objects:

- Extended data-linked application common objects

  This type of object stores shared data in an application root, and also allows application PDBs to store local data that is unique to each application PDB.

  When this type of object is queried from an application root, only the shared data in the application root is returned.

  When this type of object is queried from an application PDB, the value of the `CONTAINER_DATA` initialization parameter controls the query result as follows:

  - `ALL`: The query returns both the shared data in the application root and the local data pertaining to the application PDB
  - `CURRENT`: The query returns only the local data pertaining to the application PDB
  - `CURRENT_DICTIONARY`: The query returns both the shared data in the application root and the local data pertaining to the application PDB

- Extended data-linked Oracle-supplied data dictionary objects

  This type of object stores data pertaining to the CDB root, as well as data pertaining to individual PDBs.

  When this type of object is queried from the CDB root, only data pertaining to the CDB root is returned.

  When this type of object is queried from a PDB, the value of the `CONTAINER_DATA` initialization parameter controls the query result as follows:

  - `ALL`: The query returns data pertaining to both the CDB root and the PDB
  - `CURRENT`: The query returns only data pertaining to the PDB
  - `CURRENT_DICTIONARY`: The query returns only data pertaining to the PDB

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.56 CONTAINERS_PARALLEL_DEGREE

CONTAINERS_PARALLEL_DEGREE can be used to control the degree of parallelism of a query involving containers().

Property	Description
Parameter type	Integer
Default value	65535
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	Cannot be set to a value lower than 2 or higher than 65535.
Basic	No
Oracle RAC	Different values can be set on different instances.

The value of CONTAINERS_PARALLEL_DEGREE, if set, will override the default DOP for a containers() query.

By default, a containers() query uses a degree of parallelism equal to (1 + number of open PDBs) in the case of CDB root and (1 + number of open application PDBs) in the case of application root.

If the value of CONTAINERS_PARALLEL_DEGREE is lower than 65535, then this value is used as the degree of parallelism of a query involving containers(). Otherwise (when the value is 65535), the default degree of parallelism is (1 + number of open PDBs) or (1 + number of open application PDBs) as described above.

See Also

- *Oracle Multitenant Administrator's Guide* for more information about CDB roots
- *Oracle Multitenant Administrator's Guide* for more information about application roots

2.57 CONTROL_FILE_RECORD_KEEP_TIME

CONTROL_FILE_RECORD_KEEP_TIME specifies the minimum number of days before a reusable record in the control file can be reused.

Property	Description
Parameter type	Integer
Default value	7 (days)
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to 365 (days)
Basic	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

In the event a new record must be added to a reusable section and the oldest record has not aged enough, the record section expands. If this parameter is set to 0, then reusable sections never expand, and records are reused as needed.

If the number of reusable records in the control file exceeds the circular reuse record limit `UB4MAXVAL`, then reusable records will be overwritten even if `CONTROL_FILE_RECORD_KEEP_TIME` has not elapsed. `UB4MAXVAL` is defined in the `oratypes.h` header file, which is found in the `public` directory. Its value may vary according to the operating system you are using.

Note

This parameter applies only to records in the control file that are circularly reusable (such as archive log records and various backup records). It does not apply to records such as data file, tablespace, and redo thread records, which are never reused unless the corresponding object is dropped from the tablespace.

See Also

- "CONTROL_FILES"
- *Oracle AI Database Backup and Recovery User's Guide* for more information about this parameter

2.58 CONTROL_FILES

`CONTROL_FILES` specifies one or more names of control files, separated by commas.

Property	Description
Parameter type	String
Syntax	`CONTROL_FILES = filename [, filename ] ...` **Note:** The control file name can be an OMF (Oracle Managed Files) name. This occurs when the control file is re-created using the `CREATE CONTROLFILE REUSE` statement.
Default value	Operating system-dependent
Modifiable	No
Modifiable in a PDB	No
Range of values	1 to 8 filenames
Basic	Yes
Oracle RAC	Multiple instances must have the same value.

Every database has a **control file**, which contains entries that describe the structure of the database (such as its name, the timestamp of its creation, and the names and locations of its data files and redo files).

Oracle recommends that you multiplex multiple control files on different devices or mirror the file at the operating system level.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle AI Database Administrator's Guide* for information about specifying control files at database creation

2.59 CONTROL_MANAGEMENT_PACK_ACCESS

CONTROL_MANAGEMENT_PACK_ACCESS specifies which of the Server Manageability Packs should be active.

Property	Description
Parameter type	String
Syntax	CONTROL_MANAGEMENT_PACK_ACCESS = { NONE | DIAGNOSTIC | DIAGNOSTIC+TUNING }
Default value	Enterprise Edition: DIAGNOSTIC+TUNING Oracle AI Database Free: DIAGNOSTIC+TUNING All other editions: NONE
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

The following packs are available:

- The DIAGNOSTIC pack includes AWR, ADDM, and so on.
- The TUNING pack includes SQL Tuning Advisor, SQLAccess Advisor, and so on.

  A license for DIAGNOSTIC is required for enabling the TUNING pack.

Values

- NONE

  Neither pack is available.
- DIAGNOSTIC

  Only the DIAGNOSTIC pack is available.
- DIAGNOSTIC+TUNING

  Both packs are available.

> **See Also**
>
> *Oracle AI Database Licensing Information User Manual*

2.60 CORE_DUMP_DEST

CORE_DUMP_DEST specifies the directory where Oracle dumps core files.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	String
Syntax	`CORE_DUMP_DEST = directory`
Default value	*ORACLE_HOME*`/DBS`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No

`CORE_DUMP_DEST` is primarily a UNIX parameter and may not be supported on your platform.

> **Note**
>
> This parameter is ignored by the new diagnosability infrastructure introduced in Oracle Database 11g Release 1 (11.1), which places trace and core files in a location controlled by the `DIAGNOSTIC_DEST` initialization parameter.

> **See Also**
>
> "DIAGNOSTIC_DEST"

2.61 CPU_COUNT

`CPU_COUNT` specifies the number of CPUs available for Oracle AI Database to use.

Property	Description
Parameter type	String
Default value	`0`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`0` to unlimited
Basic	No
Oracle RAC	The same value should be used on all instances.

On CPUs with multiple CPU threads, it specifies the total number of available CPU threads. Various components of Oracle AI Database are configured based on the number of CPUs, such as the Optimizer, Parallel Query, and Resource Manager.

If `CPU_COUNT` is set to `0` (its default setting), then Oracle AI Database continuously monitors the number of CPUs reported by the operating system and uses the current count. If `CPU_COUNT` is set to a value other than `0`, then Oracle AI Database will use this count rather than the actual number of CPUs, thus disabling dynamic CPU reconfiguration.

When Resource Manager is managing CPU (`RESOURCE_MANAGER_PLAN` is set), then the database's CPU utilization is limited to `CPU_COUNT` CPU threads. This feature is called Instance

Copyright © 2002, 2025, Oracle and/or its affiliates.

Caging. If Resource Manager is enabled at the CDB level, then the PDB's CPU utilization is limited to the PDB's CPU_COUNT.

Note

Setting CPU_COUNT to a value greater than the current number of CPUs results in an error. However, if CPU_COUNT is set to a value greater than the current number of CPUs in the initialization parameter file, then CPU_COUNT is capped to the current number of CPUs.

Note

When a value is not explicitly set for CPU_COUNT, the maximum default value for CPU_COUNT is 2 for an Oracle ASM Proxy instance, 4 for an Oracle ASM instance, and 8 for an Oracle IOServer instance.

2.62 CPU_MIN_COUNT

CPU_MIN_COUNT specifies the minimum number of CPUs required by a pluggable database (PDB) at any given time.

Property	Description
Parameter type	String
Syntax	CPU_MIN_COUNT = '*value*'
Default value	The value of CPU_COUNT
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of Values	Decimal values from 0.1 through 0.95, where the decimal value is a multiple of 0.05 Integer values from 1 up to and including the value of CPU_COUNT
Basic	No
Oracle RAC	The same value should be used on all instances.

Copyright © 2002, 2025, Oracle and/or its affiliates.

This parameter specifies the minimum number of CPUs required by a PDB at any given time. For multi-threaded CPUs, this number corresponds to CPU threads, not CPU cores.

You can set this parameter at the CDB level, and for each individual PDB. This enables you to control each PDBs minimum share of CPU utilization within a CDB. If the sum of the `CPU_MIN_COUNT` values across all open PDBs in a CDB is equal to the value of `CPU_MIN_COUNT` for the CDB, then the CDB instance is considered full. If the sum exceeds the value of `CPU_MIN_COUNT` for the CDB, then the CDB instance is over-provisioned. Oracle does not prevent you from over-provisioning a CDB.

Resource Manager is enabled at the CDB level by setting the `RESOURCE_MANAGER_PLAN` at the root level to the name of a CDB resource plan. If the CDB resource plan has no configured CPU directives, that is, the `SHARES` and `UTILIZATION_LIMIT` directives are unset, then Resource Manager uses the `CPU_COUNT` and `CPU_MIN_COUNT` settings for the PDB to manage CPU utilization.

Note

Setting this parameter to a very low value can result in insufficient CPU allocation and poor performance.

See Also

"CPU_COUNT"

2.63 CREATE_BITMAP_AREA_SIZE

`CREATE_BITMAP_AREA_SIZE` specifies the amount of memory (in bytes) allocated for bitmap creation.

Property	Description
Parameter type	Integer
Default value	`0`
Modifiable	No
Modifiable in a PDB	Yes
Range of values	Operating system-dependent
Basic	No

This parameter is relevant only for systems containing bitmap indexes.

Note

Oracle does not recommend using the `CREATE_BITMAP_AREA_SIZE` parameter unless the instance is configured with the shared server option. Oracle recommends that you enable automatic sizing of SQL working areas by setting `PGA_AGGREGATE_TARGET` instead. `CREATE_BITMAP_AREA_SIZE` is retained for backward compatibility.

Copyright © 2002, 2025, Oracle and/or its affiliates.

A larger value may speed up index creation.

Cardinality is the number of unique values in a column in relation to the number of rows in the table. If cardinality is very small, you can set a small value for this parameter. For example, if cardinality is only 2, then the value can be in kilobytes rather than megabytes. As a general rule, the higher the cardinality, the more memory is needed for optimal performance.

See Also

Oracle AI Database SQL Tuning Guide for more information on using bitmap indexes

2.64 CREATE_STORED_OUTLINES

`CREATE_STORED_OUTLINES` determines whether Oracle automatically creates and stores an outline for each query submitted during the session.

Property	Description
Parameter type	String
Syntax	`CREATE_STORED_OUTLINES = { true | false | category_name } [NOOVERRIDE]`
Default value	There is no default value.
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No

Values

- `true`

  Enables automatic outline creation for subsequent queries in the same session. These outlines receive a unique system-generated name and are stored in the `DEFAULT` category. If a particular query already has an outline defined for it in the `DEFAULT` category, then that outline will remain and a new outline will not be created.

- `false`

  Disables automatic outline creation during the session. This is the default.

- *`category_name`*

  Enables the same behavior as `true` except that any outline created during the session is stored in the *`category_name`* category.

- `NOOVERRIDE`

  `NOOVERRIDE` specifies that this system setting will not override the setting for any session in which this parameter was explicitly set. If you do not specify `NOOVERRIDE`, then this setting takes effect in all sessions.

See Also

Oracle AI Database SQL Tuning Guide for more information on setting this parameter

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.65 CURSOR_BIND_CAPTURE_DESTINATION

CURSOR_BIND_CAPTURE_DESTINATION determines the location at which bind variables that are captured from SQL cursors are available.

Property	Description
Parameter type	String
Syntax	CURSOR_BIND_CAPTURE_DESTINATION = { off | memory | memory+disk }
Default value	memory+disk
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Values

- off

  Bind variables are not captured from SQL cursors.

- memory

  Bind variables are captured from SQL cursors, and are available only in memory (V$ views).

- memory+disk

  Bind variables are captured from SQL cursors, and are available in memory (V$ views) and disk (Automatic Workload Repository tables, SQL Tuning Set tables, and so on).

  When you specify this value with a SQL ALTER SESSION or ALTER SYSTEM statement, enclose the value in single quotes or double quotes. For example:

```
ALTER SESSION SET CURSOR_BIND_CAPTURE_DESTINATION = 'memory+disk';
ALTER SYSTEM SET CURSOR_BIND_CAPTURE_DESTINATION = "memory+disk";
```

2.66 CURSOR_INVALIDATION

CURSOR_INVALIDATION controls whether deferred cursor invalidation or immediate cursor invalidation is used for DDL statements by default.

Property	Description
Parameter type	String
Syntax	CURSOR_INVALIDATION = { DEFERRED | IMMEDIATE }
Default value	IMMEDIATE
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can have different values.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Deferred invalidation reduces the number of cursor invalidations and spreads the recompilation workload over time. Note that when the recompilation workload is spread over time, a cursor may run with a sub-optimal plan until it is recompiled, and may incur small execution-time overhead.

Prior to Oracle Database 12*c* Release 2 (12.2.0.1), immediate cursor invalidation was used.

This parameter provides system or session level default for the `DEFERRED` or `IMMEDIATE` option for the `INVALIDATION` clause in DDL statements.

When this parameter is set to `DEFERRED`, an application can take advantage of reduced cursor invalidation without making any other application changes.

When this parameter is set to `IMMEDIATE`, the application will experience the same cursor invalidation behavior as in Oracle Database 12*c* Release 1 (12.1).

2.67 CURSOR_SHARING

`CURSOR_SHARING` determines what kind of SQL statements can share the same cursors.

Property	Description
Parameter type	String
Syntax	`CURSOR_SHARING = { EXACT | FORCE }`
Default value	`EXACT`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No

Values

- `FORCE`

  Allows the creation of a new cursor if sharing an existing cursor, or if the cursor plan is not optimal.

- `EXACT`

  Only allows statements with identical text to share the same cursor.

> **See Also**
>
> *Oracle AI Database SQL Tuning Guide* before setting the `CURSOR_SHARING` parameter to learn about the performance implications

2.68 CURSOR_SPACE_FOR_TIME

`CURSOR_SPACE_FOR_TIME` lets you use more space for cursors to save time.

Property	Description
Parameter type	Boolean

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Default value	`false`
Modifiable	No
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No

> **Note**
>
> The `CURSOR_SPACE_FOR_TIME` parameter is deprecated. It is retained for backward compatibility only.

This parameter affects both the shared SQL area and the client's private SQL area.

Most users will not need to set this parameter because of the significantly enhanced concurrency modifications introduced in Oracle Database 10*g* Release 2 (10.2.0.2) and later.

Values

- `true`

  Shared SQL areas are kept pinned in the shared pool. As a result, shared SQL areas are not aged out of the pool as long as an open cursor references them. Because each active cursor's SQL area is present in memory, execution is faster. However, the shared SQL areas never leave memory while they are in use. Therefore, you should set this parameter to `true` only when the shared pool is large enough to hold all open cursors simultaneously.

  In addition, a setting of `true` retains the private SQL area allocated for each cursor between executions instead of discarding it after cursor execution, saving cursor allocation and initialization time.

- `false`

  Shared SQL areas can be deallocated from the library cache to make room for new SQL statements.

> **Note**
>
> If this parameter is set to `true`, then the `SERIAL_REUSE` parameter is disabled.

> **See Also**
>
> - "SERIAL_REUSE"

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.69 DATA_GUARD_MAX_IO_TIME

DATA_GUARD_MAX_IO_TIME sets the maximum number of seconds that can elapse before a process is considered hung while performing a regular I/O operation in an Oracle Data Guard environment. Regular I/O operations include read, write, and status operations.

> **See Also**
>
> "DATA_GUARD_MAX_LONGIO_TIME," which enables you to set the timeout for long I/O operations, such as open and close operations, in an Oracle Data Guard environment

Property	Description
Parameter type	Integer
Default value	240
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	10 to 7200
Basic	No
Oracle RAC	Different instances can use different values.

2.70 DATA_GUARD_MAX_LONGIO_TIME

DATA_GUARD_MAX_LONGIO_TIME sets the maximum number of seconds that can elapse before a process is considered hung while performing a long I/O operation in an Oracle Data Guard environment. Long I/O operations include open and close operations.

Property	Description
Parameter type	Integer
Default value	240
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	10 to 7200
Basic	No
Oracle RAC	Different instances can use different values.

> **See Also**
>
> "DATA_GUARD_MAX_IO_TIME"

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.71 DATA_GUARD_SYNC_LATENCY

DATA_GUARD_SYNC_LATENCY controls how many seconds the Log Writer (LGWR) process waits beyond the response of the first in a series of Oracle Data Guard SYNC redo transport mode connections.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to the number of seconds specified by the NET_TIMEOUT attribute for the LOG_ARCHIVE_DEST_n parameter
Basic	No
Oracle RAC	The same value must be used on all instances.

The default value is 0, which means that the LGWR will wait up to the number of seconds specified by the NET_TIMEOUT attribute of the LOG_ARCHIVE_DEST_n parameter for each SYNC standby destination.

For example, in an Oracle Data Guard configuration that has two standbys which receive redo in SYNC mode, you would define LOG_ARCHIVE_DEST_2 and LOG_ARCHIVE_DEST_3 to use SYNC transport with DATA_GUARD_SYNC_LATENCY set to a value of 2 seconds. When redo needs to be sent to the standbys, it is sent to both the LOG_ARCHIVE_DEST_2 and LOG_ARCHIVE_DEST_3 connections in parallel and the LGWR will wait for acknowledgement. If LOG_ARCHIVE_DEST_2 responds with its message acknowledging that the redo has been received first, the LGWR will not wait for LOG_ARCHIVE_DEST_3 to respond for more than 2 extra seconds (DATA_GUARD_SYNC_LATENCY). If LOG_ARCHIVE_DEST_3 does not respond within those 2 seconds the LGWR disconnects from LOG_ARCHIVE_DEST_3, putting it into the error state. Redo continues to be sent to LOG_ARCHIVE_DEST_2 as usual. After the duration of the REOPEN attribute for LOG_ARCHIVE_DEST_3 has elapsed, the LGWR reconnects to LOG_ARCHIVE_DEST_3 and redo transfer continues. In this manner, the maximum impact of having the second SYNC standby would be restricted to 2 seconds more than having only one SYNC standby, while allowing the Oracle Data Guard configuration to maintain the desired protection level.

LGWR will never wait longer than the value of the NET_TIMEOUT attribute of the LOG_ARCHIVE_DEST_n parameter, regardless of the value of DATA_GUARD_SYNC_LATENCY.

"LOG_ARCHIVE_DEST_*n*"

2.72 DATA_TRANSFER_CACHE_SIZE

DATA_TRANSFER_CACHE_SIZE sets the size of the data transfer cache (in bytes) used to receive data blocks (typically from a primary database in an Oracle Data Guard environment) for

Copyright © 2002, 2025, Oracle and/or its affiliates.

consumption by an instance during execution of an `RMAN RECOVER ... NONLOGGED BLOCK` command.

Property	Description
Parameter type	Big integer
Syntax	`DATA_TRANSFER_CACHE_SIZE = integer [K | M | G]`
Default value	If `SGA_TARGET` is set, then if `DATA_TRANSFER_CACHE_SIZE` is not specified, the default size of the data transfer cache is 0 (internally determined by Oracle AI Database). If `SGA_TARGET` is set and `DATA_TRANSFER_CACHE_SIZE` is specified, then the user-specified value indicates the minimum value for the data transfer cache. If `SGA_TARGET` is not set, the data transfer cache will not be available.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	0 – 512M, rounded up to the next granule size
Basic	No
Oracle RAC	Multiple instances can have different values.

This initialization parameter needs to be set only for databases that do not use Automatic Memory Management and that use the `RMAN RECOVER ... NONLOGGED BLOCK` command.

2.73 DB_*n*K_CACHE_SIZE

`DB_nK_CACHE_SIZE` (where *n* = 2, 4, 8, 16, 32) specifies the size of the cache for the *n*K buffers.

Property	Description
Parameter type	Big integer
Syntax	`DB_[2 | 4 | 8 | 16 | 32]K_CACHE_SIZE = integer [K | M | G]`
Default value	`0` (additional block size caches are not configured by default)
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	Minimum: `0` (values greater than zero are automatically modified to be either the granule size * number of processor groups, or 4 MB * number of CPUs, whichever is greater) Maximum: operating system-dependent
Basic	No

You can set this parameter only when `DB_BLOCK_SIZE` has a value other than *n*K. For example, if `DB_BLOCK_SIZE=4096`, then you cannot specify the parameter `DB_4K_CACHE_SIZE` (because the size for the 4 KB block cache is already specified by `DB_CACHE_SIZE`).

Do not set this parameter to zero if there are any online tablespaces with an *n*K block size.

Operating system-specific block size restrictions apply. For example, you cannot set `DB_32K_CACHE_SIZE` if the operating system's maximum block size is less than 32 KB. Also, you cannot set `DB_2K_CACHE_SIZE` if the minimum block size is greater than 2 KB.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> Your operating system-specific Oracle documentation for more information on block size restrictions

2.74 DB_BIG_TABLE_CACHE_PERCENT_TARGET

`DB_BIG_TABLE_CACHE_PERCENT_TARGET` specifies the cache section target size for automatic big table caching, as a percentage of the buffer cache.

Property	Description
Parameter type	String
Syntax	`DB_BIG_TABLE_CACHE_PERCENT_TARGET = string`
Default value	`0`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No
Oracle RAC	Multiple instances can have different values, but it is recommended to keep the big table cache section size uniform.

Automatic big table caching enables parallel queries and serial queries to use the buffer cache, which enhances the in-memory query capabilities of Oracle AI Database. Automatic big table caching is designed primarily to enhance performance for data warehouse workloads, but it also improves performance in mixed workloads.

Starting in Oracle Database 12*c* Release 1 (12.1.0.2), table scans can use a different algorithm in the following scenarios:

- Parallel queries:

  In single-instance and Oracle Real Application Clusters (Oracle RAC) databases, parallel queries can use the automatic big table cache when the `DB_BIG_TABLE_CACHE_PERCENT_TARGET` initialization parameter is set to a nonzero value, and the `PARALLEL_DEGREE_POLICY` initialization parameter is set to `AUTO` or `ADAPTIVE`.

- Serial queries:

  In a single-instance configuration only, serial queries can use the automatic big table cache when the `DB_BIG_TABLE_CACHE_PERCENT_TARGET` initialization parameter is set to a nonzero value.

When a nonzero value is specified for the `DB_BIG_TABLE_CACHE_PERCENT_TARGET` parameter, the value indicates the percentage of the buffer cache to reserve for the big table cache. The largest value that can be specified with the `DB_BIG_TABLE_CACHE_PERCENT_TARGET` parameter is 90, which reserves 10% of the buffer cache for usage besides table scans.

The default value of this parameter is `0`. Therefore, automatic big table caching is not enabled by default. When automatic big table caching is not enabled, queries might run using the least recently used (LRU) mechanism for cached reads, or might decide to use direct reads for the table scan.

If a large table is about the size of the combined size of the big table cache of all instances, the table will be partitioned and cached or mostly cached on all instances. With in-memory parallel

Copyright © 2002, 2025, Oracle and/or its affiliates.

query, this could eliminate most disk reads for queries on the table, or the database could intelligently read from disk only for the portion of the table that does not fit in the big table cache. If the big table cache cannot cache all the tables to be scanned, only the most frequently accessed tables will be cached, and the rest will be read via direct read automatically.

Use these guidelines when setting the parameter:

- If you do not enable automatic degree of parallelism (DOP) in your Oracle RAC environment, do not set this parameter because the big table cache is not used in that situation.
- When setting this parameter, consider the workload mix: how much of the workload is for OLTP; insert, update, and random access; and how much of the workload involves table scans. Because data warehouse workloads often perform large table scans, you may consider giving the big table cache section a higher percentage of buffer cache space for data warehouses.
- This parameter can be dynamically changed if the workload changes. The change could take some time to reach the target (depending on the current workload) because buffer cache memory might be actively used at that time.

Note

Automatic big table caching uses temperature and object-based algorithms to track medium and big tables. Oracle will cache very small tables, but they will not be tracked by automatic big table caching.

See Also

- "PARALLEL_DEGREE_POLICY"
- See "V$BT_SCAN_CACHE" and "V$BT_SCAN_OBJ_TEMPS" for more information about the big table cache
- *Oracle AI Database VLDB and Partitioning Guide* for more information about this parameter and about automatic big table caching

2.75 DB_BLOCK_BUFFERS

`DB_BLOCK_BUFFERS` specifies the number of database buffers in the buffer cache.

Property	Description
Parameter type	Integer
Default value	`0`
Modifiable	No
Modifiable in a PDB	No
Range of values	`50` to an operating system-specific maximum
Basic	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Oracle RAC	Multiple instances can have different values, and you can change the values as needed.

> **Note**
>
> `DB_BLOCK_BUFFERS` cannot be combined with the dynamic `DB_CACHE_SIZE` parameter; combining these parameters in the same parameter file will produce an error.

`DB_BLOCK_BUFFERS` is one of several parameters that contribute to the total memory requirements of the SGA of an instance.

This parameter, together with `DB_BLOCK_SIZE`, determines the total size of the buffer cache. Effective use of the buffer cache can greatly reduce the I/O load on the database. `DB_BLOCK_SIZE` can be specified only when the database is first created, so you use `DB_BLOCK_BUFFERS` to control the size of the buffer cache.

> **Note**
>
> The `DB_BLOCK_BUFFERS` initialization parameter is deprecated. It is maintained for backward compatibility.
>
> Oracle recommends that you use `DB_CACHE_SIZE` instead.

> **See Also**
>
> "DB_CACHE_SIZE"

2.76 DB_BLOCK_CHECKING

`DB_BLOCK_CHECKING` specifies whether Oracle AI Database performs block checking for database blocks.

Property	Description
Parameter type	String
Syntax	`DB_BLOCK_CHECKING = { FALSE | OFF | LOW | MEDIUM | TRUE | FULL }`
Default value	`FALSE`
Modifiable	`ALTER SYSTEM`

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Modifiable in a PDB	Yes, with the following restriction: If block checking is enabled for a CDB, then you cannot subsequently disable block checking in any of its PDBs. That is, if the value of `DB_BLOCK_CHECKING` in a CDB is `LOW`, `MEDIUM`, `TRUE`, or `FULL`, and you then attempt to set the value of `DB_BLOCK_CHECKING` in one of its PDBs to `FALSE` or `OFF`, an error will occur.
Basic	No

Values

- `OFF` or `FALSE`

  No block checking is performed for blocks in user tablespaces. However, semantic block checking for `SYSTEM` tablespace blocks is always turned on.

- `LOW`

  Basic block header checks are performed after block contents change in memory (for example, after `UPDATE`, `INSERT` or `DELETE` statements, or after inter-instance block transfers in Oracle RAC).

- `MEDIUM`

  All `LOW` checks and full semantic checks are performed for all objects except indexes (whose contents can be reconstructed by a drop+rebuild on encountering a corruption).

- `FULL` or `TRUE`

  All `LOW` and `MEDIUM` checks and full semantic checks are performed for all objects.

Oracle checks a block by going through the data in the block, making sure it is logically self-consistent. Block checking can often prevent memory and data corruption. Block checking typically causes 1% to 10% overhead in most applications, depending on workload and the parameter value. Specific DML overhead may be higher. The more updates or inserts in a workload, the more expensive it is to turn on block checking. You should set `DB_BLOCK_CHECKING` to `FULL` if the performance overhead is acceptable.

For backward compatibility, the use of `FALSE` (implying `OFF`) and `TRUE` (implying `FULL`) is preserved.

⚠ Caution

Before enabling block checking with this parameter, Oracle recommends that you detect and repair any logical corruptions in the database. Otherwise, a block that contains logical corruption will be marked as "soft corrupt" after block checking is enabled and the block is modified by a DML statement. This will result in `ORA-1578` errors and the block will be unreadable. For more information about detecting and repairing logical corruptions, see *Oracle AI Database Backup and Recovery User's Guide*.

ⓘ See Also

Oracle AI Database Administrator's Guide for more information about this parameter

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.77 DB_BLOCK_CHECKSUM

DB_BLOCK_CHECKSUM determines whether DBW*n* and the direct loader will calculate a checksum (a number calculated from all the bytes stored in the block) and store it in the cache header of every data block when writing it to disk.

Property	Description
Parameter type	String
Syntax	DB_BLOCK_CHECKSUM = { OFF | FALSE | TYPICAL | TRUE | FULL }
Default value	TYPICAL
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

Checksums are verified when a block is read - only if this parameter is TYPICAL or FULL and the last write of the block stored a checksum. In FULL mode, Oracle also verifies the checksum before a change application from update/delete statements and recomputes it after the change is applied. In addition, Oracle gives every log block a checksum before writing it to the current log.

Most of the log block checksum is done by the generating foreground processes, while the LGWR or the LGWR worker processes (LG*nn* processes) perform the rest of the work, for better CPU and cache efficiency.

If this parameter is set to OFF, DBW*n* calculates checksums only for the SYSTEM tablespace, but not for user tablespaces. In addition, no log checksum is performed when this parameter is set to OFF.

Checksums allow Oracle to detect corruption caused by underlying disks, storage systems, or I/O systems. If set to FULL, DB_BLOCK_CHECKSUM also catches in-memory corruptions and stops them from making it to the disk. Turning on this feature in TYPICAL mode causes only an additional 1% to 2% overhead. In the FULL mode it causes 4% to 5% overhead. Oracle recommends that you set DB_BLOCK_CHECKSUM to TYPICAL.

For backward compatibility the use of TRUE (implying TYPICAL) and FALSE (implying OFF) values is preserved.

See Also

Oracle AI Database Backup and Recovery Reference for more information about this parameter

2.78 DB_BLOCK_SIZE

DB_BLOCK_SIZE specifies (in bytes) the size of Oracle database blocks.

Property	Description
Parameter type	Integer

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Default value	8192
Modifiable	No
Modifiable in a PDB	No
Range of values	2048 to 32768, but your operating system may have a narrower range
Basic	Yes
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

> **Note**
>
> Set this parameter at the time of database creation. Do not alter it afterward.

Typical values for DB_BLOCK_SIZE are 4096 and 8192. The value of this parameter must be a multiple of the physical block size at the device level.

The value for DB_BLOCK_SIZE in effect at the time you create the database determines the size of the blocks. The value must remain set to its initial value.

For Oracle Real Application Clusters (Oracle RAC), this parameter affects the maximum value of the FREELISTS storage parameter for tables and indexes. Oracle uses one database block for each freelist group. Decision support system (DSS) and data warehouse database environments tend to benefit from larger block size values.

> **Note**
>
> 64-bit operating systems support a maximum DB_BLOCK_SIZE value of 32768

> **See Also**
>
> - *Oracle AI Database Administrator's Guide* for information on setting this parameter
> - *Oracle AI Database SQL Language Reference* for information on freelist groups

2.79 DB_CACHE_ADVICE

DB_CACHE_ADVICE enables or disables statistics gathering used for predicting behavior with different cache sizes through the V$DB_CACHE_ADVICE performance view.

Property	Description
Parameter type	String
Syntax	DB_CACHE_ADVICE = { ON | READY | OFF }

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Default value	If STATISTICS_LEVEL is set to TYPICAL or ALL, then ON If STATISTICS_LEVEL is set to BASIC, then OFF
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

Values

- OFF

  Advisory is turned off and the memory for the advisory is not allocated.

- READY

  Advisory is turned off but the memory for the advisory remains allocated. Allocating the memory before the advisory is actually turned on avoids the risk of an error when you switch the parameter to ON.

  If the parameter is switched to this state from ON, the contents of the view are preserved and the memory for the advisory is retained.

  If the parameter is switched to this state from OFF, you may get an error.

- ON

  Advisory is turned on. CPU and memory overheads are incurred. Attempting to set the parameter to this state when it is already in the OFF state may result in an error. Otherwise, the view (V$DB_CACHE_ADVICE) is reset and statistics are gathered to the newly refreshed view.

  If the parameter is in the READY state, you can set it to ON without any errors because the memory is already allocated. The view is reset and statistics are displayed in the newly refreshed view.

See Also

"V$DB_CACHE_ADVICE"

2.80 DB_CACHE_SIZE

DB_CACHE_SIZE specifies the size of the DEFAULT buffer pool for buffers with the primary block size (the block size defined by the DB_BLOCK_SIZE initialization parameter).

Note

Oracle recommends against setting this parameter in a PDB. The only shared memory sizing parameter that should be set in a PDB is SGA_TARGET, which specifies the maximum SGA that the PDB can use at any time.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	Big integer
Syntax	`DB_CACHE_SIZE = integer [K | M | G]`
Default value	If `SGA_TARGET` is set: If the parameter is not specified, then the default is `0` (internally determined by Oracle AI Database). If the parameter is specified, then the user-specified value indicates a minimum value for the memory pool. If `SGA_TARGET` is not set, then the default is either 48 MB or 4 MB * number of CPUs, whichever is greater
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No

The value must be at least `4M * number of cpus` (smaller values are automatically rounded up to this value). A user-specified value larger than this is rounded up to the nearest granule size. A value of zero is invalid because it is needed for the `DEFAULT` memory pool of the primary block size, which is the block size for the `SYSTEM` tablespace.

See Also

- "SGA_TARGET"

2.81 DB_CREATE_FILE_DEST

`DB_CREATE_FILE_DEST` specifies the default location for Oracle-managed datafiles.

Property	Description
Parameter type	String
Syntax	`DB_CREATE_FILE_DEST = directory | disk group`
Default value	There is no default value.
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	Yes

This location is also used as the default location for Oracle-managed control files and online redo logs if none of the `DB_CREATE_ONLINE_LOG_DEST_n` initialization parameters are specified.

If a file system directory is specified as the default location, then the directory must already exist; Oracle does not create it. The directory must have appropriate permissions that allow Oracle to create files in it. Oracle generates unique names for the files, and a file thus created is an Oracle Managed File.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle AI Database Administrator's Guide* for more information on setting this parameter and on Oracle Managed Files

2.82 DB_CREATE_ONLINE_LOG_DEST_*n*

`DB_CREATE_ONLINE_LOG_DEST_n` (where *n* = 1, 2, 3, ... 5) specifies the default location for Oracle-managed control files and online redo logs.

Property	Description
Parameter type	String
Syntax	`DB_CREATE_ONLINE_LOG_DEST_[1 | 2 | 3 | 4 | 5] = directory | disk group`
Default value	There is no default value.
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	Yes

If more than one `DB_CREATE_ONLINE_LOG_DEST_n` parameter is specified, then the control file or online redo log is multiplexed across the locations of the other `DB_CREATE_ONLINE_LOG_DEST_n` parameters. One member of each online redo log is created in each location, and one control file is created in each location.

Specifying at least two parameters provides greater fault tolerance for the control files and online redo logs if one of the locations should fail.

If a file system directory is specified as the default location, then the directory must already exist; Oracle does not create it. The directory must have appropriate permissions that allow Oracle to create files in it. Oracle generates unique names for the files, and a file thus created is an Oracle Managed File.

> **See Also**
>
> *Oracle AI Database Administrator's Guide* for more information on setting this parameter and on Oracle Managed Files

2.83 DB_DOMAIN

In a distributed database system, `DB_DOMAIN` specifies the logical location of the database within the network structure.

Property	Description
Parameter type	String
Syntax	`DB_DOMAIN = domain_name`
Default value	There is no default value.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Modifiable	No
Modifiable in a PDB	Yes
Range of values	Any legal string of name components, separated by periods and up to 128 characters long (including the periods).
Basic	Yes
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

You should set this parameter if this database is or ever will be part of a distributed system. The value consists of the extension components of a global database name, consisting of valid identifiers (any alphanumeric ASCII characters), separated by periods.

> **Note**
>
> Oracle recommends that you specify `DB_DOMAIN` as a unique string for all databases in a domain.

This parameter allows one department to create a database without worrying that it might have the same name as a database created by another department. If one sales department's `DB_DOMAIN` is `JAPAN.EXAMPLE.COM`, then their `SALES` database (`SALES.JAPAN.EXAMPLE.COM`) is uniquely distinguished from another database with `DB_NAME` = `SALES` but with `DB_DOMAIN` = `US.EXAMPLE.COM`.

If you omit the domains from the name of a database link, Oracle expands the name by qualifying the database with the domain of your local database as it currently exists in the data dictionary, and then stores the link name in the data dictionary. `DB_DOMAIN` should start with an alphabetic character and exclude these characters:

```
"!@%^&*()+=\\|`~[{]};:'\",<>/?"
```

> **See Also**
>
> - *Oracle AI Database Administrator's Guide* for more information on setting this parameter
> - The data dictionary view "GLOBAL_NAME"

2.84 DB_FILE_MULTIBLOCK_READ_COUNT

`DB_FILE_MULTIBLOCK_READ_COUNT` specifies the maximum number of blocks read in one I/O operation during a sequential scan.

Property	Description
Parameter type	Integer

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Default value	The default value corresponds to the maximum I/O size that can be efficiently performed and is platform-dependent
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	Operating system-dependent
Basic	No

`DB_FILE_MULTIBLOCK_READ_COUNT` is one of the parameters you can use to minimize I/O during table scans. The total number of I/Os needed to perform a full table scan depends on such factors as the size of the table, the multiblock read count, and whether parallel execution is being utilized for the operation.

The default value of this parameter is a value that corresponds to the maximum I/O size that can be performed efficiently. This value is platform-dependent and is 1MB for most platforms.

Because the parameter is expressed in blocks, it will be set to a value that is equal to the maximum I/O size that can be performed efficiently divided by the standard block size. Note that if the number of sessions is extremely large the multiblock read count value is decreased to avoid the buffer cache getting flooded with too many table scan buffers.

Even though the default value may be a large value, the optimizer will not favor large I/Os if you do not set this parameter. It will favor large I/Os only if you explicitly set this parameter to a large value.

Online transaction processing (OLTP) and batch environments typically have values in the range of 4 to 16 for this parameter. DSS and data warehouse environments tend to benefit most from maximizing the value of this parameter. The optimizer is more likely to choose a full table scan over an index if the value of this parameter is high.

The maximum value is the operating system's maximum I/O size expressed as Oracle blocks ((max I/O size)/`DB_BLOCK_SIZE`). If you set this parameter to a value greater than the maximum, then Oracle uses the maximum.

> **See Also**
>
> *Oracle AI Database Performance Tuning Guide* for information about how setting this parameter incorrectly can cause excessive I/O waits for some execution plans

2.85 DB_FILE_NAME_CONVERT

`DB_FILE_NAME_CONVERT` is useful for creating a duplicate database for recovery purposes. It converts the filename of a new datafile on the primary database to a filename on the standby database.

Property	Description
Parameter type	String

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description

Syntax	`DB_FILE_NAME_CONVERT = 'string1' , 'string2' , 'string3' , 'string4' , ...`
	Where:
	• *string1* is the pattern of the primary database filename
	• *string2* is the pattern of the standby database filename
	• *string3* is the pattern of the primary database filename
	• *string4* is the pattern of the standby database filename
	You can enclose each string in single or double quotation marks.
	You can specify as many pairs of primary and standby replacement strings as required. However, starting with Oracle Database 12c Release 2 (12.2), Oracle recommends that you limit the number of pairs to 99.
	Example:
	`DB_FILE_NAME_CONVERT = '/dbs/t1/','/dbs/t1/s','dbs/t2/','dbs/t2/s'`

Default value	There is no default value.
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No

If you add a datafile to the primary database, you must add a corresponding file to the standby database. When the standby database is updated, this parameter converts the datafile name on the primary database to the datafile name on the standby database. The file on the standby database must exist and be writable, or the recovery process will halt with an error.

Set the value of this parameter to one or more pairs of strings. The first string in a pair is the pattern found in the datafile names on the primary database. The second string in a pair is the pattern found in the datafile names on the standby database.

If you specify an odd number of strings (the last string has no corresponding replacement string), an error is returned during startup. If the filename being converted matches more than one pattern in the pattern/replace string list, the first matched pattern takes effect. There is no limit on the number of pairs that you can specify in this parameter (other than the hard limit of the maximum length of multivalue parameters). However, starting with Oracle Database 12c Release 2 (12.2), Oracle recommends that you limit the number of pairs to 99.

You can also use `DB_FILE_NAME_CONVERT` to rename the datafiles in the clone control file when setting up a clone database during tablespace point-in-time recovery.

See Also

- *Oracle AI Database Backup and Recovery User's Guide* for more information about database backup and recovery

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.86 DB_FILES

`DB_FILES` specifies the maximum number of database files that can be opened for this database.

Property	Description
Parameter type	Integer
Default value	`200`
Modifiable	No
Modifiable in a PDB	Yes
Range of values	Minimum: the largest among the absolute file numbers of the datafiles in the database Maximum: operating system-dependent
Basic	No
Oracle RAC	Multiple instances must have the same value.

The maximum valid value is the maximum number of files, subject to operating system constraint, that will ever be specified for the database, including files to be added by `ADD DATAFILE` statements.

If you increase the value of `DB_FILES`, then you must shut down and restart all instances accessing the database before the new value can take effect. If you have a primary and standby database, then they should have the same value for this parameter.

See Also

- *Oracle Real Application Clusters Administration and Deployment Guide* for information on setting this parameter in an Oracle RAC environment
- Your operating system-specific Oracle documentation for the default value of this parameter

2.87 DB_FLASH_CACHE_FILE

`DB_FLASH_CACHE_FILE` specifies file name(s) for the flash memory or disk group representing a collection of flash memory, for use with Database Smart Flash Cache.

Property	Description
Parameter type	String
Syntax	`DB_FLASH_CACHE_FILE = filename [,filename]... | disk group`
Default value	There is no default value.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

You can specify up to 16 file names for flash memory devices. For example, if there are three flash raw devices:

```
db_flash_cache_file = /dev/raw/sda, /dev/raw/sdb, /dev/raw/sdc
```

Specifying this parameter without also specifying the DB_FLASH_CACHE_SIZE initialization parameter is not allowed.

Enabling Database Smart Flash Cache with TDE Encryption

When enabling Database Smart Flash Cache with TDE encryption, you must additionally configure the wallet with the WALLET_ROOT and TDE_CONFIGURATION initialization parameters.

Smart Flash Cache encrypts blocks with the following behavior based on the setting of TABLESPACE_ENCRYPTION:

- When TABLESPACE_ENCRYPTION is set to AUTO_ENABLE, all buffers will be encrypted in flash cache. You are required to set TABLESPACE_ENCRYPTION to AUTO_ENABLE on Oracle Cloud Infrastructure (OCI).
- When TABLESPACE_ENCRYPTION is set to MANUAL_ENABLE, the buffer will get encrypted in flash cache if the block belongs to an encrypted tablespace. MANUAL_ENABLE is the default for on-premises databases.
- When TABLESPACE_ENCRYPTION is set to DECRYPT_ONLY, all buffers will be written unencrypted in flash cache.

See Also

- "DB_FLASH_CACHE_SIZE"
- "TABLESPACE_ENCRYPTION"

2.88 DB_FLASH_CACHE_SIZE

DB_FLASH_CACHE_SIZE specifies the size of the Database Smart Flash Cache (flash cache). This parameter may only be specified at instance startup.

Property	Description
Parameter type	Big integer
Syntax	DB_FLASH_CACHE_SIZE = *integer* [K | M | G | T] [, *integer* [K | M | G | T]]...
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to (DB_BLOCK_SIZE * 256 MB) • If DB_BLOCK_SIZE = 2 KB, then 0 to 512 GB • If DB_BLOCK_SIZE = 4 KB, then 0 to 1 TB • If DB_BLOCK_SIZE = 8 KB, then 0 to 2 TB • If DB_BLOCK_SIZE = 16 KB, then 0 to 4 TB • If DB_BLOCK_SIZE = 32 KB, then 0 to 8 TB
Basic	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

You can specify up to 16 file sizes, for each of the flash memory devices specified with DB_FLASH_CACHE_FILE. For example, if there are three flash raw devices, you can specify the sizes of each device as follows:

```
db_flash_cache_file = /dev/raw/sda, /dev/raw/sdb, /dev/raw/sdc
db_flash_cache_size = 32G, 32G, 64G
```

If your flash cache consists of one flash cache device, you can dynamically change this parameter to 0 for that flash cache device (disabling the flash cache) after the database is started. You can then reenable the flash cache by setting this parameter for the device back to the original value when the database was started. Dynamic resizing of DB_FLASH_CACHE_SIZE or reenabling flash cache to a different size is not supported.

If your flash cache includes multiple flash cache devices, you can dynamically change the parameter to 0 for a particular flash cache device (turning it off) after the database is started. You can then reenable that flash cache device by setting this parameter for the device back to the original value it had when the database was started (turning it back on).

For example, to turn off the /dev/raw/sdb flash cache device:

```
db_flash_cache_file = /dev/raw/sda, /dev/raw/sdb, /dev/raw/sdc
db_flash_cache_size = 32G, 0, 64G
```

And, to turn the /dev/raw/sdb flash cache device back on again:

```
db_flash_cache_file = /dev/raw/sda, /dev/raw/sdb, /dev/raw/sdc
db_flash_cache_size = 32G, 32G, 64G
```

See Also

"DB_FLASH_CACHE_FILE"

2.89 DB_FLASHBACK_LOG_DEST

DB_FLASHBACK_LOG_DEST specifies the location for flashback database log storage.

Property	Description
Parameter type	String
Syntax	DB_FLASHBACK_LOG_DEST = *directory* | *disk group*
Default value	There is no default value.
Modifiable	ALTER SYSTEM ... SID='*' See "Modifying DB_FLASHBACK_LOG_DEST with ALTER SYSTEM"
Modifiable in a PDB	No
Basic	No
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

This parameter allows you to specify a location for flashback database logs that is separate from the fast recovery area used by backups. For example, you could place flashback database logs in high-performance storage.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Before assigning a value to this parameter, you must set the DB_FLASHBACK_LOG_DEST_SIZE parameter to a nonzero value.

Modifying DB_FLASHBACK_LOG_DEST with ALTER SYSTEM

When modifying the DB_FLASHBACK_LOG_DEST parameter with the ALTER SYSTEM statement, you must disable and reenable flashback logging. For example:

```
SQL> alter database flashback off;

Database altered.

SQL> alter system set db_flashback_log_dest='/u01/oracle/dbs/ofba2';

System altered.

SQL> alter database flashback on;

Database altered.
```

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

> **See Also**
>
> - "DB_FLASHBACK_LOG_DEST_SIZE"
> - "V$FLASHBACK_LOG_DEST"
> - *Oracle AI Database Backup and Recovery User's Guide* for more information about this parameter

2.90 DB_FLASHBACK_LOG_DEST_SIZE

DB_FLASHBACK_LOG_DEST_SIZE specifies the hard limit (in bytes) on the total space to be used by flashback database log files stored in DB_FLASHBACK_LOG_DEST.

Property	Description
Parameter type	Big integer
Syntax	DB_FLASHBACK_LOG_DEST_SIZE = *integer* [K | M | G]
Default value	0
Modifiable	ALTER SYSTEM ... SID='*'
Modifiable in a PDB	No
Range of values	0 to operating system dependent
Basic	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

Note

This parameter is available starting with Oracle AI Database 26ai.

See Also

- "DB_FLASHBACK_LOG_DEST"
- "V$FLASHBACK_LOG_DEST"
- *Oracle AI Database Backup and Recovery User's Guide* for more information about this parameter

2.91 DB_FLASHBACK_RETENTION_TARGET

`DB_FLASHBACK_RETENTION_TARGET` specifies the upper limit (in minutes) on how far back in time the database may be flashed back.

Property	Description
Parameter type	Integer
Default value	`1440` (minutes)
Modifiable	`ALTER SYSTEM ... SID='*'`
Modifiable in a PDB	No
Range of values	`0` to 2^{31} - `1`
Basic	No

How far back one can flashback a database depends on how much flashback data Oracle has kept in the fast recovery area.

See Also

Oracle Data Guard Broker for enabling Flashback Database on Oracle Data Guard primary and target standby databases

2.92 DB_INDEX_COMPRESSION_INHERITANCE

`DB_INDEX_COMPRESSION_INHERITANCE` dictates how index creation inherits compression attributes.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	String
Syntax	`DB_INDEX_COMPRESSION_INHERITANCE = { TABLESPACE | TABLE | ALL | NONE }`
Default value	`NONE`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

Values:

- `TABLESPACE`

  Index inheritance is based on tablespace attributes.

- `TABLE`

  Index inheritance is based on table attributes.

- `ALL`

  Index inheritance is based on table settings. However, if the table does not have default compression attributes, then index inheritance is based on tablespace attributes.

- `NONE`

  There is no index inheritance from the table or tablespace.

If the `CREATE INDEX` statement specifies compression attributes, then the value of `DB_INDEX_COMPRESSION_INHERITANCE` is ignored, and there is no inheritance from the table or tablespace. When there is table inheritance or tablespace inheritance (and the tablespace does not have an explicit index compression clause), then the following matrix is used:

Table/Tablespace Level Compression	Inherited Compression for Index
`OLTP`	`ADVANCED LOW`
`QUERY LOW`, `QUERY HIGH`	`ADVANCED HIGH`
`ARCHIVE LOW`, `ARCHIVE HIGH`	`ADVANCED HIGH`

> **Note**
>
> The value of `DB_INDEX_COMPRESSION_INHERITANCE` is ignored when creating an index owned by `SYS`. Such indexes do not inherit index compression attributes from tables or tablespaces. If you want to compress an index owned by `SYS`, you must explicitly specify the index compression attributes in the `CREATE INDEX` or `ALTER INDEX` statement.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle AI Database Administrator's Guide* for more information about index compression

2.93 DB_KEEP_CACHE_SIZE

`DB_KEEP_CACHE_SIZE` specifies the size of the `KEEP` buffer pool.

Property	Description
Parameter type	Big integer
Syntax	`DB_KEEP_CACHE_SIZE = integer [K | M | G]`
Default value	`0` (`DB_KEEP_CACHE_SIZE` is not configured by default)
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	Minimum: `0` (values greater than zero are automatically modified to be either the granule size * number of processor groups, or 4 MB * number of CPUs, whichever is greater) Maximum: operating system-dependent
Basic	No

The size of the buffers in the `KEEP` buffer pool is the primary block size (the block size defined by the `DB_BLOCK_SIZE` initialization parameter).

> **See Also**
>
> - "DB_RECYCLE_CACHE_SIZE"
> - *Oracle AI Database Performance Tuning Guide* for information on setting these parameters and on using multiple buffer pools

2.94 DB_LOST_WRITE_PROTECT

`DB_LOST_WRITE_PROTECT` enables or disables lost write detection.

Property	Description
Parameter type	String
Syntax	`DB_LOST_WRITE_PROTECT = { AUTO | TYPICAL | FULL | NONE }`
Default value	`AUTO`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes This parameter is modifiable in a PDB in Oracle AI Database 26ai, starting with Release Update 23.7.
Basic	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Oracle RAC	In Oracle RAC instances, this parameter value is system-wide.

A data block lost write occurs when an I/O subsystem acknowledges the completion of the block write, while in fact the write did not occur in the persistent storage.

Values:

- `AUTO`

  When this parameter is set to `AUTO` on a primary database, the instance automatically decides whether it logs buffer cache reads in the redo log or not, depending on the status of the standby databases. Specifically, the primary database only logs buffer cache reads if physical standby databases with real time redo apply exist.

  When this parameter is set to `AUTO` on a standby database, the instance will automatically decide whether it incurs additional performance overhead to perform lost write detection or not, depending on whether apply is keeping up. If apply lag is beyond the reasonable threshold, the standby database will skip lost write protection temporarily until redo apply catches up with primary again, to ensure the lowest Data Guard role transition timings.

  The reasonable threshold is determined as follows:

  – If Fast Start Failover (FSFO) is configured through Data Guard Broker, based on apply lag threshold, then the threshold is the lesser of 60 seconds and two-thirds of the FSFO apply lag threshold.

  – Otherwise, the threshold is 60 seconds.

- `TYPICAL`

  When this parameter is set to `TYPICAL` on a primary database, the instance logs buffer cache reads for read/write tablespaces in the redo log, which is necessary for detection of lost writes.

  When this parameter is set to `TYPICAL` on a standby database, or on a primary database during media recovery, the instance performs lost write detection, regardless of higher redo apply lags that may impact Data Guard role transition timings.

- `FULL`

  When this parameter is set to `FULL` on a primary database, the instance logs reads for read-only tablespaces and read/write tablespaces.

  When this parameter is set to `FULL` on a standby database, or on a primary database during media recovery, the instance performs lost write detection.

- `NONE`

  When this parameter is set to `NONE` on either a primary database or a standby database, no lost write detection functionality is enabled.

2.95 DB_NAME

`DB_NAME` specifies a database identifier of up to 8 characters.

Property	Description
Parameter type	String

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Syntax	`DB_NAME = database_name`
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Basic	Yes
Oracle RAC	You must set this parameter for every instance. Multiple instances must have the same value.

This parameter must be specified and must correspond to the name specified in the `CREATE DATABASE` statement.

If you have multiple databases, the value of this parameter should match the Oracle instance identifier of each one to avoid confusion with other databases running on the system. The value of `DB_NAME` must be the same in both the standby and production initialization parameter files.

The database name specified in either the `STARTUP` command or the `ALTER DATABASE ... MOUNT` statement for each instance of the cluster database must correspond to the `DB_NAME` initialization parameter setting.

The following characters are valid in a database name: alphanumeric characters, underscore (_), number sign (#), and dollar sign ($). No other characters are valid. The database name must start with an alphabetic character. Oracle removes double quotation marks before processing the database name. Therefore you cannot use double quotation marks to embed other characters in the name. The database name is case insensitive.

See Also

Oracle AI Database Administrator's Guide and *Oracle Real Application Clusters Administration and Deployment Guide* for more information on setting this parameter

2.96 DB_PERFORMANCE_PROFILE

`DB_PERFORMANCE_PROFILE` specifies the performance profile for a database or a pluggable database (PDB).

Property	Description
Parameter type	String
Syntax	`DB_PERFORMANCE_PROFILE = string`
Default value	There is no default value.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value should be set on all instances.

Copyright © 2002, 2025, Oracle and/or its affiliates.

A performance profile supports easier management for hundreds of databases or PDBs.

On Oracle Exadata, the performance profile for the regular database or CDB is pushed down to the Exadata storage cells. The performance profile is used for the management of Exadata I/O Resource Manager.

A CDB resource plan can specify different resource controls for a performance profile using the `DBMS_RESOURCE_MANAGER.CREATE_CDB_PROFILE_DIRECTIVE` procedure. A PDB with a matching performance profile will use the specified controls.

The value of `DB_PERFORMANCE_PROFILE` can be up to 30 characters and is not case sensitive.

See Also

Oracle AI Database PL/SQL Packages and Types Reference for information about the `DBMS_RESOURCE_MANAGER.CREATE_CDB_PROFILE_DIRECTIVE` procedure.

2.97 DB_RECOVERY_AUTO_REKEY

Use `DB_RECOVERY_AUTO_REKEY` to enable or disable automatic tablespace rekey recovery on Oracle Data Guard standby instances.

Property	Description
Parameter type	String
Syntax	`DB_RECOVERY_AUTO_REKEY = { ON | OFF }`
Default value	`ON`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No
Oracle RAC	Multiple instances should use the same value.

This parameter is effective when Oracle Data Guard standby recovery encounters a redo that indicates that the primary database performed a tablespace rekey. If the value of this parameter is `ON`, then standby recovery automatically performs the corresponding tablespace rekey. If the value of this parameter is `OFF`, then standby recovery does not perform a tablespace rekey.

Note

This parameter is available starting with Oracle AI Database 26ai.

2.98 DB_RECOVERY_FILE_DEST

`DB_RECOVERY_FILE_DEST` specifies the default location for the fast recovery area.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	String
Syntax	`DB_RECOVERY_FILE_DEST = directory | disk group`
Default value	There is no default value.
Modifiable	`ALTER SYSTEM ... SID='*'`
Modifiable in a PDB	No
Basic	Yes
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

The fast recovery area contains multiplexed copies of current control files and online redo logs, as well as archived redo logs, flashback logs, and RMAN backups.

Specifying this parameter without also specifying the `DB_RECOVERY_FILE_DEST_SIZE` initialization parameter is not allowed.

See Also

- *Oracle AI Database Backup and Recovery User's Guide* for information on setting up and configuring the fast recovery area
- "DB_RECOVERY_FILE_DEST_SIZE"

2.99 DB_RECOVERY_FILE_DEST_SIZE

`DB_RECOVERY_FILE_DEST_SIZE` specifies (in bytes) the hard limit on the total space to be used by target database recovery files created in the fast recovery area.

Property	Description
Parameter type	Big integer
Syntax	`DB_RECOVERY_FILE_DEST_SIZE = integer [K | M | G]`
Default value	`0`
Modifiable	`ALTER SYSTEM ... SID='*'`
Modifiable in a PDB	No
Basic	Yes
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

Note that neither block 0 nor the OS block header of each Oracle file is included in this size. Allow an extra 10% for this data when computing the actual disk usage required for the fast recovery area.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- *Oracle AI Database Backup and Recovery User's Guide* for information on setting up and configuring the fast recovery area
- "DB_RECOVERY_FILE_DEST"

2.100 DB_RECYCLE_CACHE_SIZE

`DB_RECYCLE_CACHE_SIZE` specifies the size of the `RECYCLE` buffer pool.

Property	Description
Parameter type	Big integer
Syntax	`DB_RECYCLE_CACHE_SIZE = integer [K | M | G]`
Default value	`0` (`DB_RECYCLE_CACHE_SIZE` is not configured by default)
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	Minimum: `0` (values greater than zero are automatically modified to be either the granule size * number of processor groups, or 4 MB * number of CPUs, whichever is greater) Maximum: operating system-dependent
Basic	No

The size of the buffers in the `RECYCLE` pool is the primary block size (the block size defined by the `DB_BLOCK_SIZE` initialization parameter).

See Also

- "DB_KEEP_CACHE_SIZE"
- *Oracle AI Database Performance Tuning Guide* for information on setting these parameters and on using multiple buffer pools

2.101 DB_SECUREFILE

`DB_SECUREFILE` specifies whether to treat LOB files as SecureFiles.

Property	Description
Parameter type	String
Syntax	`DB_SECUREFILE = { NEVER | PERMITTED | PREFERRED | ALWAYS | IGNORE }`
Default value	`PERMITTED if the COMPATIBLE initialization parameter is set to 11.2.0.1, 11.2.0.2, or 11.2.0.3, or PREFERRED if the COMPATIBLE initialization parameter is set to 12.0.0.0 or higher`

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Values

- NEVER

  Any LOBs that are specified as SecureFiles are created as BasicFiles LOBs. All SecureFiles-specific storage options and features (for example, compress, encrypt, deduplicate) will cause an exception. The BasicFiles LOB defaults will be used for storage options not specified.

- PERMITTED

  LOBs are allowed to be created as SecureFiles.

- PREFERRED

  All LOBs are created as SecureFiles unless BASICFILE is explicitly specified in the LOB storage clause or the tablespace is a Manual Segment Space Management tablespace. When PREFERRED is set, cases where BASICFILE would otherwise be inherited from the partition or column level LOB storage are ignored; the LOBs will be created as SecureFiles instead.

- ALWAYS

  Attempts to create all LOBs as SecureFiles LOBs but creates any LOBs not in an Automatic Segment Space Managed (ASSM) tablespace as BasicFiles LOBs, unless SECUREFILE is explicitly specified. Any BasicFiles LOB storage options that are specified will be ignored and the SecureFiles LOB defaults will be used for all storage options not specified.

- IGNORE

  The SECUREFILE keyword and all SecureFiles options are ignored.

If the COMPATIBLE initialization parameter is not set to 11.1.0 or higher, then LOBs are not treated as SecureFiles.

If there is a LOB column with two partitions (one that has a tablespace for which ASSM is enabled and one that has a tablespace for which ASSM is not enabled), then LOBs in the partition with the ASSM-enabled tablespace will be treated as SecureFiles and LOBs in the other partition will be treated as BasicFiles.

If an application is not certified with SecureFiles, the value of the DB_SECUREFILE initialization parameter can be set to PERMITTED to get the default behavior of Oracle Database 11*g*.

2.102 DB_ULTRA_SAFE

DB_ULTRA_SAFE sets the default values for other parameters that control protection levels.

Property	Description
Parameter type	String
Syntax	DB_ULTRA_SAFE = { OFF | DATA_ONLY | DATA_AND_INDEX }
Default value	OFF
Modifiable	No
Modifiable in a PDB	No
Basic	No

Values

- OFF

  When any of DB_BLOCK_CHECKING, DB_BLOCK_CHECKSUM, or DB_LOST_WRITE_PROTECT are explicitly set, no changes are made.
- DATA_ONLY
  - DB_BLOCK_CHECKING will be set to MEDIUM.
  - DB_LOST_WRITE_PROTECT will be set to TYPICAL.
  - DB_BLOCK_CHECKSUM will be set to FULL.
- DATA_AND_INDEX
  - DB_BLOCK_CHECKING will be set to FULL.
  - DB_LOST_WRITE_PROTECT will be set to TYPICAL.
  - DB_BLOCK_CHECKSUM will be set to FULL.

See Also

- "DB_BLOCK_CHECKING"
- "DB_BLOCK_CHECKSUM"
- "DB_LOST_WRITE_PROTECT"

2.103 DB_UNIQUE_NAME

DB_UNIQUE_NAME specifies a globally unique name for the database.

Property	Description
Parameter type	String
Syntax	DB_UNIQUE_NAME = *database_unique_name*

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Default value	Database instances: the value of DB_NAME Oracle Automatic Storage Management instances: +ASM
Modifiable	No
Modifiable in a PDB	No
Basic	Yes
Oracle RAC	Multiple instances must have the same value.

Databases with the same DB_NAME within the same DB_DOMAIN (for example, copies of a database created for reporting or a physical standby) must have a unique DB_UNIQUE_NAME. Every database's DB_UNIQUE_NAME must be unique within the enterprise.

The value of DB_UNIQUE_NAME can be up to 30 characters and is case insensitive. The following characters are valid in a database name: alphanumeric characters, underscore (_), number sign (#), and dollar sign ($).

Note

DB_UNIQUE_NAME is used by several components within an Oracle instance to default file names or file paths, such as the default for the DG_BROKER_CONFIG_FILE*n* initialization parameter. In these cases, on UNIX platforms, the dollar sign ($) character will be removed from the path or file name, because the character is used by Oracle to define the start of an environment variable substitution within a path or file name.

Note

As part of their operations, some database tools or utilities create a string that uniquely identifies a database. The string may include the DB_UNIQUE_NAME for a database, and other identifying information for the database, such as the database SID. Oracle AI Database restricts some identifiers to 30 characters, so using a short DB_UNIQUE_NAME can help prevent ORA-00972 "identifier is too long" messages from database tools and utilities that create a string that includes the DB_UNIQUE_NAME.

See Also

Oracle Data Guard Concepts and Administration and *Oracle AI Database Administrator's Guide* for more information on setting this parameter

2.104 DB_UNRECOVERABLE_SCN_TRACKING

DB_UNRECOVERABLE_SCN_TRACKING enables or disables the tracking of unrecoverable (NOLOGGING) direct-path INSERT and direct-path load operations.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	Boolean
Default value	`true`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true	false`
Basic	No
Oracle RAC	Multiple instances must have the same value

When the value is set to `true`, updates are made to the controlfile that maintains the `V$DATAFILE.UNRECOVERABLE_CHANGE#` and `V$DATAFILE.UNRECOVERABLE_TIME` columns. When the value is set to `false`, updates are not made to the controlfile. Setting this parameter to `false` may improve performance of direct-path `NOLOGGING` operations.

2.105 DB_WRITER_PROCESSES

`DB_WRITER_PROCESSES` specifies the initial number of Database Writer Processes for an instance. This parameter is useful for systems that modify data heavily.

Property	Description
Parameter type	Integer
Default value	1 or `CPU_COUNT` / 8, whichever is greater. If the number of processor groups is less than 100 but greater than the number of Database Writer Processes, then the number of Database Writer Processes is adjusted to be a multiple of the number of processor groups. If the number of Database Writer Processes is greater than or equal to the number of processor groups, then there is no adjustment. For Oracle Solaris on SPARC systems, the default value of this parameter is calculated using an internal algorithm.
Modifiable	No
Modifiable in a PDB	No
Range of values	1 to 100
Basic	No

There can be 1 to 100 Database Writer Processes. The names of the first 36 Database Writer Processes are DBW0-DBW9 and DBWa-DBWz. The names of the 37th through 100th Database Writer Processes are BW36-BW99.

See Also

- Background Processes for additional information about the Database Writer Process
- *Oracle AI Database Concepts* for information on when the Database Writer Process writes dirty buffers to disk

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.106 DBFIPS_140

DBFIPS_140 enables Transparent Data Encryption (TDE) and DBMS_CRYPTO PL/SQL package program units to run in a mode compliant to the Federal Information Processing Standard (subsequently known as "FIPS mode").

Property	Description
Parameter type	Boolean
Default value	FALSE
Modifiable	No
Modifiable in a PDB	No
Range of values	TRUE | FALSE
Basic	No
Oracle RAC	All instances must use the same value.

Values:

- TRUE

  Set this parameter to TRUE to use TDE and DBMS_CRYPTO in FIPS mode. This means that only FIPS-compliant algorithms may be used.

  This method of configuring FIPS mode is considered a legacy configuration, but it is still supported. Oracle recommends that you instead use the consolidated FIPS_140 parameter in the fips.ora file. See *Oracle AI Database Security Guide* for more information.

  Note that this parameter can be set to TRUE during a rolling RAC upgrade. However, verify that TDE is using a FIPS-compliant algorithm before making the change. If you are not using a FIPS-compliant algorithm and you set this parameter to TRUE, you will not be able to read the data.

- FALSE

  When this parameter is set to FALSE, all algorithms (FIPS-compliant or not) may be used. This is the default.

See Also

Oracle AI Database Security Guide for a table that describes the effect of setting the value of DBFIPS_140 to TRUE or FALSE on different platforms

2.107 DBNEST_ENABLE

DBNEST_ENABLE allows you to enable or disable dbNest.

Note

This parameter is applicable only on Linux systems.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	String
Syntax	`DBNEST_ENABLE = { NONE | CDB_RESOURCE_PDB_ALL }`
Default value	`NONE`
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	All instances should use the same value.

DbNest provides operating system resource isolation and management, file system isolation, and secure computing for PDBs. The infrastructure is implemented as a Linux-specific package that provides hierarchical containers, called nests. A CDB resides within a single parent nest, while PDBs reside within the individual child nests created within the parent. The isolation and resource management properties of a nest are separate. A full nest includes both isolation and resource management. Alternatively, you can configure a partial nest that includes only resource management.

You can set the following values for this parameter:

- `NONE`: Disables dbNest. This is the default value.
- `CDB_RESOURCE_PDB_ALL`: Enables a resource management-only nest for the CDB and a full nest for each PDB.

> **See Also**
>
> *Oracle Multitenant Administrator's Guide* for information on securing and isolating resources using dbNest

2.108 DBNEST_PDB_FS_CONF

`DBNEST_PDB_FS_CONF` specifies the dbNest file system configuration file for a PDB.

> **Note**
>
> This parameter is applicable only on Linux systems.

Property	Description
Parameter type	String
Syntax	`DBNEST_PDB_FS_CONF = '`*`pathname`*`'`
Default value	None
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	Multiple instances can have different values.

Copyright © 2002, 2025, Oracle and/or its affiliates.

A dbNest file system configuration file specifies directories to be mounted inside the nest for a PDB. These directories are mounted in addition to the default directories.

For *pathname*, specify the full operating system path for the file.

If you do not set this parameter, then only the default directories are mounted.

See Also

Oracle Multitenant Administrator's Guide for information on dbNest file system configuration files

2.109 DBWR_IO_SLAVES

DBWR_IO_SLAVES specifies the number of I/O server processes used by the DBW0 process.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	No
Modifiable in a PDB	No
Range of values	0 to operating system-dependent
Basic	No

DBWR_IO_SLAVES is relevant only on systems with only one database writer process (DBW0). The DBW0 process and its server processes always write to disk. By default, the value is 0 and I/O server processes are not used.

If you set DBWR_IO_SLAVES to a nonzero value, the number of I/O server processes used by the ARCH and LGWR processes is set to 4. However, the number of I/O server processes used by Recovery Manager is set to 4 only if asynchronous I/O is disabled (either your platform does not support asynchronous I/O or disk_asynch_io is set to false).

Typically, I/O server processes are used to simulate asynchronous I/O on platforms that do not support asynchronous I/O or that implement it inefficiently. However, you can use I/O server processes even when asynchronous I/O is being used. In that case the I/O server processes will use asynchronous I/O.

I/O server processes are also useful in database environments with very large I/O throughput, even if asynchronous I/O is enabled.

See Also

- "BACKUP_TAPE_IO_SLAVES"
- *Oracle AI Database Performance Tuning Guide* for more information about this parameter

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.110 DDL_LOCK_TIMEOUT

`DDL_LOCK_TIMEOUT` specifies a time limit for how long DDL statements will wait in a DML lock queue.

Property	Description
Parameter type	Integer
Default value	`0`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	0 to 1,000,000 (in seconds)
Basic	No

A value of zero indicates a status of `NOWAIT`. The maximum value of 1,000,000 seconds will result in the DDL statement waiting forever to acquire a DML lock.

If a lock is not acquired before the timeout period expires, then an error is returned.

See Also

- *Oracle AI Database Administrator's Guide* for more information about the `DDL_LOCK_TIMEOUT` parameter
- *Oracle AI Database Development Guide* for information about nonblocking and blocking DDL

2.111 DEBUG_LOG_MAX_SIZE

`DEBUG_LOG_MAX_SIZE` specifies the maximum size of the debug log (in bytes).

Property	Description
Parameter type	Big integer
Syntax	`DEBUG_LOG_MAX_SIZE = integer [K | M | G]`
Default value	`1000M`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	0, 50 MB to operating system-dependent
Basic	No
Oracle RAC	Multiple instances can have different values.

Space for the debug log is allocated in segments of 50 MB each. Therefore, the default value of 1000 MB for this parameter indicates that the maximum debug log size is 20 segments, each with a size of 50 MB.

If you set this parameter to value that is not a multiple of 50 MB, the effective maximum debug log size will be the next higher multiple of 50 MB. For example, the following statement

Copyright © 2002, 2025, Oracle and/or its affiliates.

specifies a maximum debug log size of 120 MB. However, it will result in an effective maximum debug log size of 150 MB (3 segments of 50 MB):

```
ALTER SYSTEM SET DEBUG_LOG_MAX_SIZE = 120M;
```

Setting this parameter to 0 specifies that there can be an unlimited number of 50 MB XML debug log segments, while the debug text log file consists of a single segment that can grow to an unlimited size.

If you specify a value less than 50 MB (other than 0), an error will occur.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai, Release Update 23.9.

2.112 DEFAULT_SHARING

`DEFAULT_SHARING` sets the value of the sharing clause in statements creating objects in an application root.

Property	Description
Parameter type	String
Syntax	`DEFAULT_SHARING = { NONE | METADATA | DATA | EXTENDED DATA }`
Default value	For types of objects that support sharing, `METADATA` is the default. For types of objects that do not support sharing, `NONE` is the default.
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	All instances must have the same value

Specifying `SHARING=` in the create DDL overrides the value of the `DEFAULT_SHARING` parameter.

Example

Issuing the following `ALTER SYSTEM` statement in an application root sets the default value of the sharing clause to `NONE` in the server parameter file for the application root:

```
ALTER SYSTEM SET DEFAULT_SHARING = NONE SCOPE = SPFILE;
```

2.113 DEFERRED_SEGMENT_CREATION

`DEFERRED_SEGMENT_CREATION` specifies the semantics of deferred segment creation.

Property	Description
Parameter type	Boolean
Default value	`true`

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No

If set to `true`, then segments for tables and their dependent objects (LOBs, indexes) will not be created until the first row is inserted into the table.

Before creating a set of tables, if it is known that a significant number of them will not be populated, then consider setting this parameter to `true`. This saves disk space and minimizes install time.

2.114 DG_BROKER_CONFIG_FILE*n*

`DG_BROKER_CONFIG_FILE`*n* (where *n* = 1, 2) specifies the names for the Data Guard broker configuration files.

Property	Description
Parameter type	String
Syntax	`DG_BROKER_CONFIG_FILE[1 | 2] = filename`
Default value	Operating system-dependent
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	One filename
Basic	No

Every database that is part of a Data Guard broker configuration has two broker configuration files, which contain entries that describe the state and properties of the configuration (such as the sites and databases that are part of the configuration, the roles and properties of each of the databases, and the state of each of the elements of the configuration). Two files are provided to always maintain the last known good state of the configuration.

If `DG_BROKER_CONFIG_FILE`*n* is not explicitly defined, then it is set to an operating system-specific default value at instance startup. This parameter can be altered only when the Data Guard broker is not running. See "DG_BROKER_START" for information on how to stop and start the broker.

See Also

Oracle Data Guard Broker for more information about setting this parameter

2.115 DG_BROKER_START

`DG_BROKER_START` enables Oracle to determine whether the Oracle Data Guard broker should be started.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SYSTEM...SID='*'`
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No

The Oracle Data Guard broker consists of background processes, foreground processes, and the system global area (SGA). The background and foreground processes exist as long as the instance exists, whenever this parameter is set to `true`.

If the database is never going to be configured in an Oracle Data Guard broker configuration, then you can leave this parameter unspecified and accept the default value of `false`. If the database is part of an Oracle Data Guard broker configuration, then you can simplify automatic startup of the broker by setting this parameter to `true` in the initialization parameter file.

See Also

Oracle Data Guard Broker for examples of using this parameter to start the Oracle Data Guard broker

2.116 DIAGNOSTIC_DEST

As of Oracle Database 11g Release 1 (11.1), the diagnostics for each database instance are located in a dedicated directory that is specified by the `DIAGNOSTIC_DEST` initialization parameter.

Property	Description
Parameter type	String
Syntax	`DIAGNOSTIC_DEST = { pathname | directory }`
Default value	Derived from the value of the `$ORACLE_BASE` environment variable. If `$ORACLE_BASE` is not set, then derived from `ORACLE_BASE` as set by the Oracle Universal Installer. If `ORACLE_BASE` is not set, then `$ORACLE_HOME/rdbms/log` is used.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No
Oracle RAC	This parameter can be set on each instance. Oracle recommends that each instance in a cluster specify a `DIAGNOSTIC_DEST` directory location that is located on shared disk and that the same value for `DIAGNOSTIC_DEST` be specified for each instance.

The structure of the directory specified by `DIAGNOSTIC_DEST` is as follows:

`<diagnostic_dest>/diag/rdbms/<dbname>/<instname>`

Copyright © 2002, 2025, Oracle and/or its affiliates.

This location is known as the Automatic Diagnostic Repository (ADR) Home. For example, if the database name is `proddb` and the instance name is `proddb1`, the ADR home directory would be `<diagnostic_dest>/diag/rdbms/proddb/proddb1`.

The following files are located under the ADR home directory:

- Trace files - located in subdirectory `<adr-home>/trace`
- Alert logs - located in subdirectory `<adr-home>/alert`. In addition, the `alert.log` file is now in XML format, which conforms to the Oracle ARB logging standard.
- Core files - located in the subdirectory `<adr-home>/cdump`
- Incident files - the occurrence of each serious error (for example, ORA-600, ORA-1578, ORA-7445) causes an incident to be created. Each incident is assigned an ID and dumping for each incident (error stack, call stack, block dumps, and so on) is stored in its own file, separated from process trace files. Incident dump files are located in `<adr-home>/incident/<incdir#>`. You can find the incident dump file location inside the process trace file.

See Also

Oracle Automatic Storage Management Administrator's Guide for an example of the diagnostic directory for an Oracle ASM instance

2.117 DIAGNOSTICS_CONTROL

`DIAGNOSTICS_CONTROL` enables you to control and monitor the users who perform potentially unsafe database diagnostic operations.

Property	Description
Parameter type	String
Syntax	`DIAGNOSTICS_CONTROL = { ERROR | WARNING | IGNORE }`
Default value	`IGNORE`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No
Oracle RAC	The same value must be used on all instances.

When diagnosing Oracle database issues, an Oracle Support Service staff member might instruct you to perform diagnostic operations. Some diagnostic operations are harmless. However, others could have adverse effects if not performed properly with the guidance of an Oracle Support Service staff member. In order to control and monitor who performs such diagnostic operations, Oracle Database 21c introduced the following security controls:

- Potentially unsafe diagnostic operations are internally identified in the database. These operations include setting certain debug events and debug actions with the `ALTER SESSION` or `ALTER SYSTEM` statement. For example:

```
ALTER SESSION SET EVENTS '1357 trace name context forever, level 2';
ALTER SYSTEM SET EVENTS 'trace[vos]';
```

Copyright © 2002, 2025, Oracle and/or its affiliates.

- A user can be authorized to perform potentially unsafe diagnostic operations, either by being granted the `ENABLE DIAGNOSTICS` system privilege, or by being granted the `DBA` role, or by authenticating as `SYSDBA`.
- The `DIAGNOSTICS_CONTROL` initialization parameter enables you to specify how the database responds when an *unauthorized* user attempts to perform these diagnostic operations. The possible values are:
  - `ERROR`: When an unauthorized user attempts to perform a potentially unsafe diagnostic operation, the attempt fails with error `ORA-01031: insufficient privileges`.
  - `WARNING`: When an unauthorized user attempts to perform a potentially unsafe diagnostic operation, the attempt succeeds, but a warning is written to the alert log.
  - `IGNORE`: When an unauthorized user attempts to perform a potentially unsafe diagnostic operation, the attempt succeeds and no error messages or warnings occur. This is the default.

> **Note**
>
> When altering the `DIAGNOSTICS_CONTROL` initialization parameter, be aware of the following guidelines:
>
> - To modify this parameter with the `ALTER SYSTEM` command, you must be authenticated `AS SYSDBA`.
> - In Oracle RAC environments, it is currently not possible to modify this parameter on remote instances by specifying the `SID` clause in the `ALTER SYSTEM SET` statement.

2.118 DISK_ASYNCH_IO

`DISK_ASYNCH_IO` controls whether I/O to datafiles, control files, and logfiles is asynchronous (that is, whether parallel server processes can overlap I/O requests with CPU processing during table scans).

Property	Description
Parameter type	Boolean
Default value	`true`
Modifiable	No
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No

If your platform supports asynchronous I/O to disk, Oracle recommends that you leave this parameter set to its default value. However, if the asynchronous I/O implementation is not stable, you can set this parameter to `false` to disable asynchronous I/O. If your platform does not support asynchronous I/O to disk, this parameter has no effect.

If you set `DISK_ASYNCH_IO` to `false`, then you can increase `DB_WRITER_PROCESSES` or use `DBWR_IO_SLAVES` to simulate asynchronous I/O.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.119 DISPATCHERS

`DISPATCHERS` configures dispatcher processes in the shared server architecture.

Property	Description
Parameter type	String
Syntax	`DISPATCHERS = '`*`dispatch_clause`*`'`

Syntax	**`dispatch_clause::=`**
	`(PROTOCOL =` *`protocol`*`) |`
	`(ADDRESS =` *`address`*`) |`
	`(DESCRIPTION =` *`description`* `)`
	`[options_clause]`

Syntax	**`options_clause::=`**
	`(DISPATCHERS =` *`integer`* `|`
	`SESSIONS =` *`integer`* `|`
	`CONNECTIONS =` *`integer`* `|`
	`MULTIPLEX = {1 | ON | YES | TRUE |`
	`0 | OFF | NO | FALSE | BOTH | IN | OUT} |`
	`LISTENER =` *`tnsname`* `|`
	`SERVICE =` *`service`* `|`
	`INDEX =` *`integer`*`)`

Default value	If `SHARED_SERVERS` is greater than `0`, then `DISPATCHERS` defaults to `'(PROTOCOL=tcp)'`, causing 1 TCP/IP dispatcher to be created.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No

The parsing software supports a name-value syntax to enable the specification of attributes in a position-independent, case-insensitive manner. For example:

```
DISPATCHERS = '(PROTOCOL=TCP)(DISPATCHERS=3)'
```

Attributes may be specified using the full attribute name or any substring beginning with the first 3 characters. For example, `SESSIONS` can be specified as `SES`, `SESS`, `SESSI`, and so on.

Specify only one of the following attributes: `PROTOCOL`, `ADDRESS`, or `DESCRIPTION`. If you specify either `ADDRESS` or `DESCRIPTION`, then you can specify additional network attributes. Doing so supports multi-homed hosts.

Copyright © 2002, 2025, Oracle and/or its affiliates.

dispatch_clause

- PROTOCOL

  The network protocol for which the dispatcher generates a listening endpoint.

- ADDRESS

  The network protocol address of the endpoint on which the dispatchers listen.

- DESCRIPTION

  The network description of the endpoint on which the dispatchers listen, including the protocol address.

options_clause

- DISPATCHERS

  The initial number of dispatchers to start. The default is 1.

- SESSIONS

  The maximum number of network sessions to allow for each dispatcher. The default is operating system-specific. Most operating systems have a default of 16 KB.

- CONNECTIONS

  The maximum number of network connections to allow for each dispatcher. The default is operating system-specific.

- MULTIPLEX

  Enables the Oracle Connection Manager session multiplexing feature.

  – The values 1, ON, YES, TRUE, and BOTH indicate that Network Session Multiplex is enabled for both incoming and outgoing network connections.

  – The value IN indicates that Network Session Multiplex is enabled for incoming network connections.

  – The value OUT indicates that Network Session Multiplexing is enabled for outgoing network connections.

  – The values 0, NO, OFF, and FALSE indicate that Network Session Multiplexing is disabled for both incoming and outgoing network connections. This is the default.

- LISTENER

  Specifies the network name of an address or address list of the Oracle Net listeners with which the dispatchers will register.

  The LISTENER attribute facilitates administration of multi-homed hosts. This attribute specifies the appropriate listeners with which the dispatchers will register. The LISTENER attribute takes precedence over the LOCAL_LISTENER and REMOTE_LISTENER parameters. See "LOCAL_LISTENER" and "REMOTE_LISTENER".

- SERVICE

  Specifies one or more names by which clients can connect to the dispatchers. The SERVICE attribute takes precedence over any settings configured by using the SRVCTL command-line utility, the GDSCTL command-line utility, or the DBMS_SERVICE PL/SQL package.

- INDEX

Copyright © 2002, 2025, Oracle and/or its affiliates.

Use this attribute in an `ALTER SYSTEM SET DISPATCHERS` statement to indicate which dispatcher configuration you want to modify. (If you specify `INDEX` in the initialization parameter file, Oracle AI Database ignores it.) In an `ALTER SYSTEM` statement, `INDEX` specifies the order in which the parameter's values were initialized. The value ranges from `0` (for the first dispatcher configuration) to one less than the total number of dispatcher configurations you define.

For example, if you specify 3 dispatcher configurations in the initialization parameter file, you would modify the third dispatcher configuration by specifying `INDEX=2` in the `ALTER SYSTEM` statement. You could also add another dispatcher configuration in the `ALTER SYSTEM` statement by specifying `INDEX=3`.

If `INDEX` is not specified in the `ALTER SYSTEM` statement, then the `PROTOCOL`, `ADDRESS`, or `DESCRIPTION` attributes must be specified, and if a dispatcher configuration matching this `PROTOCOL`, `ADDRESS`, or `DESCRIPTION` exists, then that configuration will be modified. Otherwise, a new configuration will be added.

- "SHARED_SERVERS"
- *Oracle AI Database Net Services Administrator's Guide* and *Oracle AI Database Administrator's Guide* for more information on setting this parameter

2.120 DISTRIBUTED_LOCK_TIMEOUT

`DISTRIBUTED_LOCK_TIMEOUT` specifies the amount of time (in seconds) for distributed transactions to wait for locked resources.

Property	Description
Parameter type	Integer
Default value	`60`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	1 to 2^{31} - 1
Basic	No

See Also

Oracle AI Database Concepts for more information on data concurrency

2.121 DML_LOCKS

`DML_LOCKS` specifies the maximum number of DML locks—one for each table modified in a transaction.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	Integer
Default value	Derived: 4 * TRANSACTIONS
Modifiable	No
Modifiable in a PDB	No
Range of values	20 to unlimited; a setting of 0 disables enqueues
Basic	No
Oracle RAC	You must set this parameter for every instance, and all instances must have positive values or all must be 0.

A **DML lock** is a lock obtained on a table that is undergoing a DML operation (insert, update, delete). The DML_LOCKS value should equal the grand total of locks on tables currently referenced by all users. For example, if three users are modifying data in one table, then three entries would be required. If three users are modifying data in two tables, then six entries would be required.

The default value assumes an average of four tables referenced for each transaction. For some systems, this value may not be enough.

Enqueues are shared memory structures that serialize access to database resources. If you set the value of DML_LOCKS to 0, enqueues are disabled and performance is slightly increased. However, you should be aware of the following restrictions when you set you DML_LOCKS to 0:

- You cannot use DROP TABLE, CREATE INDEX statements
- You cannot use explicit lock statements such as LOCK TABLE IN EXCLUSIVE MODE
- Enterprise Manager cannot run on any instances for which DML_LOCKS is set to 0

Oracle holds more locks during parallel DML than during serial execution. Therefore, if your database supports a lot of parallel DML, you may need to increase the value of this parameter.

See Also

- *Oracle AI Database Concepts* for a discussion of lock and enqueue resources needed for parallel DML
- *Oracle AI Database Concepts* for more information on data concurrency

2.122 DNFS_BATCH_SIZE

DNFS_BATCH_SIZE controls the number of asynchronous I/O's that can be queued by an Oracle process when Direct NFS Client is enabled.

Property	Description
Parameter type	Integer
Default value	4096
Modifiable	No
Modifiable in a PDB	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Range of values	0 - 4096
Basic	No

In environments where the NFS server cannot handle a large number of outstanding asynchronous I/O requests, use this parameter to limit the number of I/O's issued by an Oracle foreground process. The recommended setting for this parameter is to start at 128 and increase or decrease it based on NFS server performance.

See Also

Oracle AI Database Performance Tuning Guide for additional information about the `DNFS_BATCH_SIZE` initialization parameter

2.123 DRCP_CONNECTION_LIMIT

`DRCP_CONNECTION_LIMIT` specifies the maximum number of Database Resident Connection Pooling (DRCP) connections for a PDB.

Property	Description
Parameter type	Integer
Default value	In `CDB$ROOT`: `0` (unlimited) In a PDB: • If a persistent value for `SESSIONS` was explicitly set for the PDB (`ALTER SYSTEM SET SESSIONS = n SCOPE={SPFILE\|BOTH}`), and the PDB was subsequently restarted, then the default value is (10 * `SESSIONS`). • Otherwise, the PDB inherits the value for this parameter from `CDB$ROOT`.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`0` to operating system-dependent A value of `0` specifies that there is no limit on the number of DRCP connections.
Basic	No
Oracle RAC	Different instances can use different values.

`DRCP_CONNECTION_LIMIT` is a PDB-inherited parameter. The value of this parameter in `CDB$ROOT` is not a CDB-wide limit. It is the default value for each PDB.

2.124 DRCP_DEDICATED_OPT

Use `DRCP_DEDICATED_OPT` to enable or disable the use of dedicated optimization with Database Resident Connection Pooling (DRCP).

Dedicated optimization causes DRCP to behave like a dedicated server when the number of connections to the DRCP broker is less than the DRCP maximum size.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	String
Syntax	`DRCP_DEDICATED_OPT = { YES | NO }`
Default value	`NO`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes, according to the following guidelines: • When the `ENABLE_PER_PDB_DRCP` initialization parameter is set to `true`, `DRCP_DEDICATED_OPT` can be modified only at the PDB level; it cannot be modified for the CDB root. • When the `ENABLE_PER_PDB_DRCP` initialization parameter is set to `false`, `DRCP_DEDICATED_OPT` can be modified only for the CDB root; it cannot be modified at the PDB level.
Basic	No
Oracle RAC	Different instances can use different values.

When the value of this parameter is set to `YES`, the use of dedicated optimization with DRCP is enabled. When it is set to `NO`, the use of dedicated optimization with DRCP is disabled.

See Also

- *Oracle AI Database Administrator's Guide* for more information about setting this parameter
- "ENABLE_PER_PDB_DRCP"

2.125 DST_UPGRADE_INSERT_CONV

`DST_UPGRADE_INSERT_CONV` specifies whether internal operators will be allocated on top of `TIMESTAMP WITH TIME ZONE` (TSTZ) columns of tables which have not been upgraded during the upgrade window of daylight saving time patching for `TIMESTAMP WITH TIME ZONE` data.

Property	Description
Parameter type	Boolean
Default value	`true`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No

Values

- `true`

  Internal operators will be allocated on top of TSTZ columns of tables which have not been upgraded. This is the default.

- `false`

Copyright © 2002, 2025, Oracle and/or its affiliates.

Internal operators will not be allocated on top of TSTZ columns of tables which have not been upgraded.

When DST_UPGRADE_INSERT_CONV is set to true during the upgrade window of the daylight saving time patching process:

- `SELECT` queries on tables with TSTZ data which have not been upgraded will use internal operators on top of TSTZ columns to present TSTZ data as if they were recorded using the new time zone translation rules.
- DML on tables with TSTZ data which have not been upgraded will use internal operators on top of TSTZ columns to ensure that the TSTZ data is recorded using the old time zone translation rules in order to be consistent with the existing TSTZ data in the same tables.

Note

Oracle strongly recommends that this parameter is set to `true` throughout the upgrade window of the daylight saving time patching process. This parameter reduces the performance impact since indexes on TSTZ columns will be disabled whenever internal operators are allocated. If the parameter is set to `false`, then indexes will be used and this may affect performance of queries against TSTZ data during the DST upgrade window. Turning off this parameter during the upgrade window may corrupt data on disk when DMLs occur for tables with TSTZ data which have not yet been upgraded.

See Also

Oracle AI Database Globalization Support Guide for more information about this parameter

2.126 ENABLE_AUTOMATIC_MAINTENANCE_PDB

`ENABLE_AUTOMATIC_MAINTENANCE_PDB` can be used to enable or disable the running of automated maintenance tasks for all the PDBs in a CDB or for individual PDBs in a CDB.

Property	Description
Parameter type	Boolean
Default value	`true`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No
Oracle RAC	The same value should be used for all instances.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> The value of this parameter in CDB$ROOT (the root of a CDB) has no effect in the root. Automated maintenance tasks are always run in the root, regardless of the setting of this parameter.

By default, the value of `ENABLE_AUTOMATIC_MAINTENANCE_PDB` is `true` in CDB$ROOT (the root container in the CDB) and in the individual PDBs in a CDB. This means that by default, automated maintenance tasks are run for the CDB root and all the PDBs in the CDB.

When you change the value of `ENABLE_AUTOMATIC_MAINTENANCE_PDB` in the CDB root, the new value takes effect in the root and in all the PDBs in the CDB.

Therefore, if you change the value of `ENABLE_AUTOMATIC_MAINTENANCE_PDB` in the CDB root to `false`, the value of `ENABLE_AUTOMATIC_MAINTENANCE_PDB` is also changed to `false` in all of the PDBs in the CDB.

You can also change the value of `ENABLE_AUTOMATIC_MAINTENANCE_PDB` in any of the individual PDBs in a CDB, and the value that is set for each individual PDB will be honored. This enables you to enable or disable automated maintenance tasks for individual PDBs.

> **See Also**
>
> - "AUTOTASK_MAX_ACTIVE_PDBS" for information about specifying the maximum number of PDBs that can schedule automated maintenance tasks at the same time
> - *Oracle AI Database Administrator's Guide* for more information about managing automated database maintenance tasks

2.127 ENABLE_DDL_LOGGING

`ENABLE_DDL_LOGGING` enables or disables the writing of a subset of data definition language (DDL) statements to a DDL log.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No

The DDL log is a file that has the same format and basic behavior as the alert log, but it only contains the DDL statements issued by the database. The DDL log is created only for the RDBMS component and only if the `ENABLE_DDL_LOGGING` initialization parameter is set to `true`. When this parameter is set to `false`, DDL statements are not included in the DDL log, but they are included in the alert log.

Copyright © 2002, 2025, Oracle and/or its affiliates.

The DDL log contains one log record for each DDL statement issued by the database. The DDL log is included in IPS incident packages.

There are two DDL logs that contain the same information. One is an XML file, and the other is a text file. The DDL log is stored in the `log/ddl` subdirectory of the ADR home.

When `ENABLE_DDL_LOGGING` is set to `true`, the following DDL statements are written to the log:

- `ALTER/CREATE/DROP/TRUNCATE CLUSTER`
- `ALTER/CREATE/DROP FUNCTION`
- `GRANT`
- `ALTER/CREATE/DROP INDEX`
- `ALTER/CREATE/DROP OUTLINE`
- `ALTER/CREATE/DROP PACKAGE`
- `ALTER/CREATE/DROP PACKAGE BODY`
- `ALTER/CREATE/DROP PROCEDURE`
- `ALTER/CREATE/DROP PROFILE`
- `REVOKE`
- `ALTER/CREATE/DROP SEQUENCE`
- `CREATE/DROP SYNONYM`
- `ALTER/CREATE/DROP/RENAME/TRUNCATE TABLE`
- `ALTER/CREATE/DROP TRIGGER`
- `ALTER/CREATE/DROP TYPE`
- `ALTER/CREATE/DROP TYPE BODY`
- `DROP USER`
- `ALTER/CREATE/DROP VIEW`

Note

The DDL statement written to the log may be truncated. You can use DDL triggers to view the entire DDL statement. See *Oracle AI Database PL/SQL Language Reference* for more information about DDL triggers.

See Also

Oracle AI Database Licensing Information User Manual for licensing information for the `ENABLE_DDL_LOGGING` initialization parameter.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.128 ENABLE_DNFS_DISPATCHER

ENABLE_DNFS_DISPATCHER enables dispatcher support for the Oracle Direct NFS client.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	No
Range of values	true | false
Basic	No
Oracle RAC	All instances should use the same value.

When this parameter is set to true in the initialization parameter file, dispatcher processes will be spawned for the Oracle Direct NFS client.

The number of dispatcher processes spawned is calculated as one-eighth of the value of the CPU_COUNT parameter.

See Also

"CPU_COUNT"

2.129 ENABLE_GOLDENGATE_REPLICATION

ENABLE_GOLDENGATE_REPLICATION controls services provided by the RDBMS for Oracle GoldenGate (both capture and apply services).

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true | false
Basic	No
Oracle RAC	All instances must have the same setting

Set this parameter to true to enable RDBMS services used by Oracle GoldenGate.

This parameter primarily controls supplemental logging required to support logical replication of new data types and operations. The redo log file is designed to be applied physically to a database, therefore the default contents of the redo log file often do not contain sufficient information to allow logged changes to be converted into SQL statements. Supplemental logging adds extra information into the redo log files so that replication can convert logged changes into SQL statements without having to access the database for each change.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Previously these extra changes were controlled by the supplemental logging DDL. Now the `ENABLE_GOLDENGATE_REPLICATION` parameter must also be set to enable the required supplemental logging for any new data types or operations.

All enhancements to supplemental logging required to support logical replication are also controlled by this parameter.

The RDBMS services controlled by this parameter also include (but are not limited to):

- Transparent Data Encryption (including Tablespace Encryption) utilities used by GoldenGate Extract
- Service to read redo logs used by GoldenGate Extract
- Service to suppress triggers used by GoldenGate Replicat
- Service to handle transient duplicate handling used by GoldenGate Replicat
- Service to bypass referential integrity checking used by GoldenGate Replicat
- Services required to run Oracle GoldenGate in Integrated Extract and Integrated Replicat

> **Note**
>
> When this database parameter is set to `true`, you must have a valid Oracle GoldenGate license or an authorized managed cloud client to use the enabled features. GoldenGate licenses or authorized managed cloud clients are required for all 3rd party or end-user tools that are used with this feature. Refer to *Oracle GoldenGate Licensing Information* and ensure that you have obtained the appropriate licensing before setting this parameter to `true`.

2.130 ENABLE_IMC_WITH_MIRA

`ENABLE_IMC_WITH_MIRA` enables or disables the In-Memory Column Store and Oracle Data Guard Multi-Instance Redo Apply, at the same time, on an Active Data Guard standby database.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No
Oracle RAC	Different instances can use different values.

The value of this parameter is relevant only on the instance where MRP0 is spawned at the start of Redo Apply on a standby database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.131 ENABLE_PER_PDB_DRCP

ENABLE_PER_PDB_DRCP controls whether Database Resident Connection Pooling (DRCP) configures one connection pool for the entire CDB or one isolated connection pool for each PDB.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	No
Range of values	true | false
Basic	No
Oracle RAC	Multiple instances must have the same value.

Possible values:

- true

  DRCP creates one isolated connection pool for each PDB. You can connect to a particular PDB and configure, manage, and monitor its connection pool according to the specific requirements for that PDB. For example, you can set values for the MIN_AUTH_SERVERS, MAX_AUTH_SERVERS, and DRCP_DEDICATED_OPT initialization parameters for a PDB, and you can use the DBMS_CONNECTION_POOL package to manage the connection pool for a PDB.

  When ENABLE_PER_PDB_DRCP is set to true, there is no connection pool for the entire CDB. The values of the MIN_AUTH_SERVERS, MAX_AUTH_SERVERS, and DRCP_DEDICATED_OPT initialization parameters have no meaning in the CDB root and you cannot alter them, nor can you use the DBMS_CONNECTION_POOL package while connected to the CDB root.

- false

  DRCP creates one connection pool for the entire CDB. This connection pool is shared by all PDBs. You can set the MIN_AUTH_SERVERS, MAX_AUTH_SERVERS, and DRCP_DEDICATED_OPT initialization parameters only in the CDB root, and you can use the DBMS_CONNECTION_POOL only while connected to the CDB root.

See Also

- "MIN_AUTH_SERVERS"
- "MAX_AUTH_SERVERS"
- "DRCP_DEDICATED_OPT"
- *Oracle AI Database PL/SQL Packages and Types Reference* for more information on the DBMS_CONNECTION_POOL package

2.132 ENABLE_PLUGGABLE_DATABASE

ENABLE_PLUGGABLE_DATABASE is a bootstrap initialization parameter to create a CDB.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	No
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No

This parameter enables a database in `NOMOUNT` startup mode to know that it is a CDB.

> **Note**
>
> See *Oracle Multitenant Administrator's Guide* for more information about CDBs and PDBs.

2.133 ENABLED_PDBS_ON_STANDBY

`ENABLED_PDBS_ON_STANDBY` specifies which pluggable databases (PDBs) to replicate on an Oracle Data Guard standby database.

Property	Description
Parameter type	String
Syntax	`ENABLED_PDBS_ON_STANDBY = PDB-list`
Default value	`*` if no value is specified for this parameter in the `init.ora` file
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No
Oracle RAC	All instances should use the same value.

> **Note**
>
> This parameter is meaningful only on standby databases. Its settings are ignored on a primary database.

PDB-list accepts a list of PDB names represented by glob patterns such as “PDB?” or “PDB*a”, “PDB2”. The glob pattern rules are like those of UNIX shells. The asterisk (*) and question mark (?) wildcard characters are supported. The ? wildcard character matches exactly one unknown character, and the * wildcard character matches any number of unknown characters. Also, the minus sign (-) character can be used as the first character in a PDB name to indicate that the PDB should be excluded on the standby database.

The following characters are valid in a PDB name: alphanumeric characters, underscore (_), number sign (#), and dollar sign ($). No other characters are valid. Oracle removes double quotation before processing the PDB name. Therefore you cannot use double quotation marks

Copyright © 2002, 2025, Oracle and/or its affiliates.

to embed other characters in the name. The PDB name is case insensitive. These are the same naming conventions as for a database name (as described in the DB_NAME initialization parameter description).

These rules apply for the ENABLED_PDBS_ON_STANDBY parameter:

- Any PDB names that match glob patterns starting with minus sign (-) will not be part of the standby database.
- If a PDB name matches several patterns in the *PDB-list* at the same time, the rightmost matched pattern has the highest precedence.
- If this parameter is not specified in the init.ora file, it is assumed that "*" is specified by default.
- If one or more patterns are specified in this parameter, it is assumed that "-*" is implicitly specified in the leftmost position. For example, ENABLED_PDBS_ON_STANDBY="PDB1", "PDB2" is equivalent to ENABLED_PDBS_ON_STANDBY="-*", "PDB1", "PDB2". It means that a PDB name that does not match any patterns is not allowed to be part of the standby.

Examples

These examples assumes that nine new PDBs named PDB1A, PDB1B, PDB1C, PDB2A, PDB2B, PDB2C, PDB3A, PDB3B, and PDB3C are being added to the primary database.

1. If STANDBY1 sets ENABLED_PDBS_ON_STANDBY="*" on STANDBY1, then all nine PDBs will be created on STANDBY1.
2. If STANDBY1 sets ENABLED_PDBS_ON_STANDBY="PDB1*" on STANDBY1, then PDB1A, PDB1B, and PDB1C will be created on STANDBY1.
3. If STANDBY1 sets ENABLED_PDBS_ON_STANDBY="PDB*A" on STANDBY1, then PDB1A, PDB2A, and PDB3A will be created on STANDBY1.
4. If STANDBY1 sets ENABLED_PDBS_ON_STANDBY="PDB1*", "-PDB*A" on STANDBY1, then PDB1B and PDB1C will be created on STANDBY1.
5. If STANDBY1 sets ENABLED_PDBS_ON_STANDBY="*", "-PDB*A", "-PDB*B" on STANDBY1, then PDB1C, PDB2C and PDB3C will be created on STANDBY1. All other PDBs match "*", and the rightmost pattern has the higher precedence, so they are excluded on the standby.
6. If STANDBY1 sets ENABLED_PDBS_ON_STANDBY="*", "-PDB*A", "PDB2A" on STANDBY1, then PDB1A and PDB3A are excluded, but all other PDBs including PDB2A will be created.

2.134 ENCRYPT_NEW_TABLESPACES

ENCRYPT_NEW_TABLESPACES specifies whether to encrypt newly created user tablespaces.

Property	Description
Parameter type	String
Syntax	ENCRYPT_NEW_TABLESPACES = { CLOUD_ONLY | ALWAYS | DDL }
Default value	CLOUD_ONLY
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value should be specified for all instances.

Copyright © 2002, 2025, Oracle and/or its affiliates.

The values that can be specified for the ENCRYPT_NEW_TABLESPACES parameter have the following meanings:

- CLOUD_ONLY:

  When a user tablespace is created in the Oracle Cloud, it will be transparently encrypted if the ENCRYPTION … ENCRYPT clause for the SQL CREATE TABLESPACE statement is not specified. The encryption algorithm is determined by the value of the TABLESPACE_ENCRYPTION_DEFAULT_ALGORITHM initialization parameter. When a user tablespace is created in an on-premises database, the ENCRYPTION clause of the CREATE TABLESPACE statement determines if the tablespace is encrypted.

  CLOUD_ONLY is the default value.

- ALWAYS:

  Whether the user tablespace is created in the Oracle Cloud or in an on-premises database, the tablespace will be transparently encrypted if the ENCRYPTION … ENCRYPT clause is not specified in the CREATE TABLESPACE statement. The encryption algorithm is determined by the value of the TABLESPACE_ENCRYPTION_DEFAULT_ALGORITHM initialization parameter.

- DDL:

  Whether the user tablespace is created in the Oracle Cloud or in an on-premises database, the CREATE TABLESPACE statement follows the specified DDL. If no ENCRYPTION clause is specified, then the tablespace will not be encrypted. If the ENCRYPTION USING … ENCRYPT clause is specified, then the specified algorithm will be used to encrypt the tablespace. If ENCRYPTION ENCRYPT is specified, but no algorithm is specified, then the encryption algorithm is determined by the value of the TABLESPACE_ENCRYPTION_DEFAULT_ALGORITHM initialization parameter.

Note

ENCRYPT_NEW_TABLESPACES is deprecated in Oracle AI Database 26ai and may be removed in a future release. Oracle recommends that you use the TABLESPACE_ENCRYPTION initialization parameter instead.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.135 ERROR_MESSAGE_DETAILS

Use `ERROR_MESSAGE_DETAILS` to control whether the database raises an additional stacked error message, with further details about the data values encountering the error, when displaying error messages.

Property	Description
Parameter type	String
Syntax	`ERROR_MESSAGE_DETAILS = { ON | OFF | DISALLOWED }`
Default value	`ON`
Modifiable	`ALTER SESSION` can be used to set this parameter to `ON` or `OFF`. `ALTER SYSTEM` can be used to set this parameter to `ON`, `OFF`, or `DISALLOWED`.
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can use different values.

This parameter allows you to instruct the database to show or omit explanatory details about data values causing an error. Providing this information usually makes it easier for the user to understand why the error occurred. If this is not desired, this parameter can be used to omit these additional details.

The detailed error message is being raised as a stacked error, meaning that applications will see the root cause error as the main error and will have to further traverse the stack to gain insights into the details. SQL command line tools will automatically traverse the entire stack and print the entire error message stack.

You can set this parameter for the database instance or PDB with the `ALTER SYSTEM` statement, or for the current session with the `ALTER SESSION` statement, using these values:

- `ON`: The database will provide additional explanatory details when displaying error messages. This is the default.
- `OFF`: The database will not provide additional explanatory details. This is the behavior prior to Oracle AI Database 26ai.

Additionally, you can set the following value only at the database instance or PDB level with the `ALTER SYSTEM` statement:

- `DISALLOWED`: The database will not provide additional explanatory details, and users cannot override this behavior for the current session with the `ALTER SESSION` statement.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

2.136 EVENT

`EVENT` is a parameter used only to debug the system.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	String
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Basic	No

Do not alter the value of this parameter except under the supervision of Oracle Support Services staff.

2.137 EXTERNAL_KEYSTORE_CREDENTIAL_LOCATION

`EXTERNAL_KEYSTORE_CREDENTIAL_LOCATION` specifies the location of the secure external keystore.

Property	Description
Parameter type	String
Syntax	`EXTERNAL_KEYSTORE_CREDENTIAL_LOCATION = file-location`
Default value	No default value
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	This parameter can be set on each instance. Oracle recommends that if the instances have a shared location, then use a directory on the shared location for this parameter and set the same value on all Oracle RAC instances. If the database does not have a shared location, then each instance of the database will have its own directory and the value should be set per-instance.

TDE keystore credentials can be stored in a secure external keystore to automate Transparent Data Encryption (TDE) operations.

To automate the setting of the Master Key in a newly-provisioned PDB, set `EXTERNAL_KEYSTORE_CREDENTIAL_LOCATION` so that the CDB knows the location of the secure external keystore.

When a file specification is set with this parameter, the secure external keystore is looked for in that location. If the secure external keystore is not found in that location, then this parameter is ignored.

See Also

Oracle AI Database Transparent Data Encryption Guide for more information about using TDE

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.138 FAL_CLIENT

`FAL_CLIENT` specifies the FAL (fetch archive log) client name that is used by the FAL service, configured through the `FAL_SERVER` initialization parameter, to refer to the FAL client.

Property	Description
Parameter type	String
Syntax	`FAL_CLIENT = string`
Default value	There is no default value.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No

The value is an Oracle Net service name, which is assumed to be configured properly on the FAL server system to point to the FAL client (standby database).

See Also

Oracle Data Guard Concepts and Administration for more information about FAL server

2.139 FAL_SERVER

`FAL_SERVER` specifies the FAL (fetch archive log) server for a standby database.

Property	Description
Parameter type	String
Syntax	`FAL_SERVER = string`
Default value	There is no default value.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No

The value is an Oracle Net service name, which is assumed to be configured properly on the standby database system to point to the desired FAL server.

See Also

Oracle Data Guard Concepts and Administration for more information about FAL server

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.140 FAST_START_MTTR_TARGET

FAST_START_MTTR_TARGET enables you to specify the number of seconds the database takes to perform crash recovery of a single instance.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to 3600 seconds
Basic	No
Oracle RAC	Multiple instances can have different values, and you can change the values at run time.

When specified, FAST_START_MTTR_TARGET is overridden by LOG_CHECKPOINT_INTERVAL.

See Also

- *Oracle AI Database Performance Tuning Guide* for an example of setting the lower bound for this parameter
- *Oracle AI Database Performance Tuning Guide* for an example of setting the upper bound for this parameter
- *Oracle AI Database Performance Tuning Guide* for an example of selecting a preliminary value for this parameter

2.141 FAST_START_PARALLEL_ROLLBACK

FAST_START_PARALLEL_ROLLBACK specifies the degree of parallelism used when recovering terminated transactions.

Property	Description
Parameter type	String
Syntax	FAST_START_PARALLEL_ROLLBACK = { HIGH | LOW | FALSE }
Default value	LOW
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Terminated transactions are transactions that are active before a system failure. If a system fails when there are uncommitted parallel DML or DDL transactions, then you can speed up transaction recovery during startup by using this parameter.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Values

- `FALSE`

  Parallel rollback is disabled

- `LOW`

  Limits the maximum degree of parallelism to 2 * `CPU_COUNT`

- `HIGH`

  Limits the maximum degree of parallelism to 4 * `CPU_COUNT`

If you change the value of this parameter, then transaction recovery will be stopped and restarted with the new implied degree of parallelism.

> **See Also**
>
> *Oracle AI Database VLDB and Partitioning Guide* for more information about this parameter

2.142 FILE_MAPPING

`FILE_MAPPING` specifies whether file mapping is enabled.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No

> **Note**
>
> The `FILE_MAPPING` initialization parameter is deprecated. It is still supported for backward compatibility.

The FMON background process is started to manage the mapping information when file mapping is enabled.

> **See Also**
>
> *Oracle AI Database Administrator's Guide* for more information about the file mapping feature

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.143 FILEIO_NETWORK_ADAPTERS

`FILEIO_NETWORK_ADAPTERS` specifies a list of network adapters that can be used to access the disk storage.

Property	Description
Parameter type	String
Syntax	`FILEIO_NETWORK_ADAPTERS = adapter_name [, adapter_name ] ...`
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Range of values	One or more network adapter names, separated by commas
Basic	No

On platforms where the database files reside in network attached storage, this parameter provides the storage access library the list of network adapters that can be used to access the storage.

The network adapter name is a fully qualified address name of the network card that can be accessed through the host name database or using the Network Information Service. The components of the adapter name are separated by periods. For example, the following is a fully qualified adapter name:

```
ib1.oracle.com
```

2.144 FILESYSTEMIO_OPTIONS

`FILESYSTEMIO_OPTIONS` specifies I/O operations for file system files. This parameter is platform-specific and has a default value that is suitable for a particular platform.

Property	Description
Parameter type	String
Syntax	`FILESYSTEMIO_OPTIONS = { ASYNCH | DIRECTIO | SETALL | NONE }`
Default value	Varies by database version and operating system.
Modifiable	No
Modifiable in a PDB	No
Basic	No

Values:

- `ASYNCH` - Enable asynchronous I/O on file system files, which has no timing requirement for transmission.
- `DIRECTIO` - Enable direct I/O on file system files, which bypasses the buffer cache.
- `SETALL` - Enable both asynchronous and direct I/O on file system files.
- `NONE` - Disable both asynchronous and direct I/O on file system files.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- Your platform-specific documentation for more details
- *Oracle AI Database Performance Tuning Guide* for information about setting this parameter before running I/O calibration

2.145 FIXED_DATE

FIXED_DATE enables you to set a constant date that SYSDATE will always return instead of the current date.

Property	Description
Parameter type	String
Syntax	FIXED_DATE = [YYYY-MM-DD-HH24:MI:SS (or the default Oracle date format) | NONE]
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

To undo a fixed date setting, specify FIXED_DATE=NONE. This parameter is useful primarily for testing. The value can be in the format shown above or in the default Oracle date format, without a time.

2.146 FORWARD_LISTENER

FORWARD_LISTENER specifies the name of a listener to which a connection must be forwarded by an existing set of remote listeners.

Property	Description
Parameter type	String
Syntax	FORWARD_LISTENER = listener-name
Default value	NULL
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	A different value can be set on different instances.

The parameter is useful when it is difficult to change an existing client connect string, for example, after an offsite database has been moved into the Oracle Cloud. With the FORWARD_LISTENER parameter, clients can continue to connect to their offsite listener, and the offsite listener forwards the connection to the Oracle Cloud listener.

Once a forward listener has been configured through the FORWARD_LISTENER parameter, the LOCAL_LISTENER parameter can be cleared by setting its value to -oracle-none- so that all the connections coming to an existing set of remote listeners configured through the

Copyright © 2002, 2025, Oracle and/or its affiliates.

REMOTE_LISTENER parameter are forwarded only to listeners configured through FORWARD_LISTENER.

The FORWARD_LISTENER parameter can also be specified in the LISTENER_NETWORKS parameter.

Examples

The following setup can be used to forward all the database connections coming to an existing customer SCAN listener to the Oracle Cloud SCAN listener.

```
REMOTE_LISTENER=customer-scan
FORWARD_LISTENER=oracle-cloud-scan
LOCAL_LISTENER=oracle-none-
```

See Also

- "LOCAL_LISTENER"
- "REMOTE_LISTENER"
- "LISTENER_NETWORKS"
- *Oracle Clusterware Administration and Deployment Guide* for information about SCAN listeners

2.147 GCS_SERVER_PROCESSES

GCS_SERVER_PROCESSES specifies the number of background GCS server processes (LMS*n* and LM*nn*) to serve the inter-instance traffic among Oracle RAC instances.

If there is high Cache Fusion congestion on the system, the number of GCS server processes could be increased to reduce Cluster wait time. Additionally, the number of GCS server processes could be increased to reduce the application brownout time associated with Cluster reconfiguration and Dynamic Re-mastering (DRM).

Property	Description
Parameter type	Integer
Default value	Oracle calculates the default value as follows (in order of precedence): 1. If CLUSTER_DATABASE is set to false, then 0 2. If Oracle ASM, then 1 3. If 1 - 3 CPUS, then 1 4. If 4 - 15 CPUs, then 2 5. On Linux systems, or if 128 or more CPUs and SGA is 100 GB or more on other platforms, then (CPUs / 6). If the result includes a fraction, then the fraction is disregarded. 6. Otherwise, the value is 2 + (CPUs / 32). If the result includes a fraction, then the fraction is disregarded. For example, if you have 20 CPUs, then 2 + (20 / 32) would equal 2 GCS processes. 7. On NUMA-enabled systems with 32 or more CPUs, the value is rounded up to a multiple of the number of NUMA processor groups, with a limit of (CPUs / 4) rounded down to a multiple of the number of NUMA processor groups.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Modifiable	No
Modifiable in a PDB	No
Range of values	`0` if Oracle RAC is disabled (`CLUSTER_DATABASE` is set to `false`) `1` to `100` if Oracle RAC is enabled (`CLUSTER_DATABASE` is set to `true`)
Basic	No
Oracle RAC	Multiple instances can have different values.

GCS server processes are only seen in an Oracle RAC environment.

2.148 GLOBAL_NAMES

`GLOBAL_NAMES` specifies whether a database link is required to have the same name as the database to which it connects.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No

If the value of `GLOBAL_NAMES` is `false`, then no check is performed. If you use or plan to use distributed processing, then Oracle recommends that you set this parameter to `true` to ensure the use of consistent naming conventions for databases and links in a networked environment.

See Also

Oracle AI Database Administrator's Guide for more information on setting this parameter

2.149 GLOBAL_TXN_PROCESSES

`GLOBAL_TXN_PROCESSES` specifies the initial number of GTX*n* background processes (GTX0, ... GTX9 and GTXa, ... GTXj) per instance to support global (XA) transactions in an Oracle RAC environment.

Property	Description
Parameter type	Integer
Default value	`1`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Range of values	`0` to `20`
Basic	No
Oracle RAC	Multiple instances can have different values.

If you want to disable the GTX*n* background processes, then you must set `GLOBAL_TXN_PROCESSES` to `0` in your parameter file. Setting this parameter to `0` will disable the XA support on an Oracle RAC database. Error `ORA-55712` will be returned if you try to run XA transactions on an Oracle RAC database with this parameter set to `0`. You can change the setting to a nonzero value at run time to turn on the support for XA.

`GLOBAL_TXN_PROCESSES` is useful for systems that process global (XA) transactions heavily. You do not need to specify a value for this parameter since Oracle AI Database automatically determines the number of processes and autotunes them, as necessary. GTX*n* background processes are only seen in an Oracle RAC environment.

See Also

Oracle AI Database Development Guide for more information about this parameter

2.150 GROUP_BY_POSITION_ENABLED

`GROUP_BY_POSITION_ENABLED` controls whether a positive integer in a `GROUP BY` clause is treated as the ordinal position of an expression in the select list.

Property	Description
Parameter type	Boolean
Default value	`FALSE`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`TRUE	FALSE`
Basic	No
Oracle RAC	The same value must be used on all instances.

In SQL `SELECT` statements, you can specify the `GROUP BY` clause when you want to group the selected rows that share a common value for an expression and return a single row of summary information for each group.

In previous releases, if you wanted to group rows according to the value of an expression in the select list, you specified the expression as it appeared in the select list. For example:

```
SELECT department_id, COUNT(*)
  FROM employees
  GROUP BY department_id;
```

Starting with Oracle AI Database 26ai, when `GROUP_BY_POSITION_ENABLED` is set to `TRUE`, you can specify `GROUP BY` *`position`*, where *`position`* is a positive integer that represents the ordinal

Copyright © 2002, 2025, Oracle and/or its affiliates.

position of an expression in the select list. For example, the following SELECT statement groups the selected rows by the value of department_id:

```
SELECT department_id, COUNT(*)
  FROM employees
  GROUP BY 1;
```

The following SELECT statement groups the selected rows, first by the value of manager_id, and then by the value of hired_year:

```
SELECT manager_id, EXTRACT(YEAR FROM hire_date) AS hired_year, COUNT(*)
  FROM employees
  GROUP BY 1, 2;
```

Note

This parameter is available starting with Oracle AI Database 26ai.

See Also

Oracle AI Database SQL Language Reference for more information about the GROUP BY clause of the SELECT statement

2.151 HASH_AREA_SIZE

HASH_AREA_SIZE specifies the maximum amount of memory, in bytes, to be used for hash joins.

Property	Description
Parameter type	Integer
Default value	Derived: 2 * SORT_AREA_SIZE
Modifiable	ALTER SESSION
Modifiable in a PDB	No
Range of values	0 to operating system-dependent
Basic	No

Note

Oracle does not recommend using the HASH_AREA_SIZE parameter unless the instance is configured with the shared server option. Oracle recommends that you enable automatic sizing of SQL working areas by setting PGA_AGGREGATE_TARGET instead. HASH_AREA_SIZE is retained for backward compatibility.

HASH_AREA_SIZE is relevant to parallel execution operations and to the query portion of DML or DDL statements.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- *Oracle AI Database Concepts* for information on hash joins in general

2.152 HEARTBEAT_BATCH_SIZE

Use `HEARTBEAT_BATCH_SIZE` to configure the heartbeat batch size, which is the number of heartbeats sent during one heartbeat period.

Property	Description
Parameter type	Integer
Default value	5
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	2 to `100`
Basic	No
Oracle RAC	Multiple instances must have the same value.

2.153 HEAT_MAP

Use `HEAT_MAP` to enable or disable both the Heat Map and Automatic Data Optimization (ADO) features.

Property	Description
Parameter type	String
Syntax	`HEAT_MAP = { ON | OFF }`
Default value	`OFF`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	If specified, use the same value on all instances

Setting the `HEAT_MAP` initialization parameter to `ON` causes the database to track read and write access of all segments, as well as modification of database blocks, due to DMLs and DDLs. These activities are not tracked for objects in the `SYSTEM` and `SYSAUX` tablespaces.

See Also

- *Oracle AI Database VLDB and Partitioning Guide* for more information about enabling and disabling the Heat Map feature
- *Oracle AI Database VLDB and Partitioning Guide* for more information about Heat Map tracking

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.154 HI_SHARED_MEMORY_ADDRESS

`HI_SHARED_MEMORY_ADDRESS` specifies the starting address at run time of the system global area (SGA).

Property	Description
Parameter type	Integer
Default value	`0`
Modifiable	No
Modifiable in a PDB	No
Basic	No

This parameter is ignored on platforms that specify the SGA's starting address at linktime.

On 64-bit platforms, use `HI_SHARED_MEMORY_ADDRESS` to specify the high-order 32 bits of a 64-bit address. Use `SHARED_MEMORY_ADDRESS` to specify the low-order 32 bits of the address (see "SHARED_MEMORY_ADDRESS"). If both parameters are 0 or unspecified, the SGA address defaults to a platform-specific location.

2.155 HS_AUTOREGISTER

`HS_AUTOREGISTER` enables or disables automatic self-registration of Heterogeneous Services (HS) agents.

Property	Description
Parameter type	Boolean
Default value	`true`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No

When enabled, information is uploaded into the server's data dictionary to describe a previously unknown agent class or a new agent version.

Oracle recommends that you set this parameter to `true`. Oracle incurs less overhead when establishing subsequent connections through the same agent if self-registered information is available in the server's data dictionary.

See Also

Oracle AI Database Heterogeneous Connectivity User's Guide for more information about using HS agents

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.156 HYBRID_READ_ONLY

HYBRID_READ_ONLY enables or disables hybrid read-only mode for a pluggable database (PDB).

Property	Description
Parameter type	Boolean
Default value	FALSE
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	TRUE | FALSE
Basic	No
Oracle RAC	Different instances can use different values.

Hybrid read-only mode allows a PDB to operate in read/write mode or read-only mode, depending on the type of user that is connected to the PDB. The PDB operates in read/write mode for CDB common users, and read-only mode for application common users and local users. Hybrid read-only mode allows CDB common users to perform patching and maintenance operations on an open PDB, while application common users and local users can use the PDB as if it were open in read-only mode.

- To enable hybrid read-only mode for a PDB, connect to the PDB and set HYBRID_READ_ONLY to TRUE. The PDB must be in READ WRITE mode before you enable hybrid read-only mode.
- To disable hybrid read-only mode for a PDB, connect to the PDB and set HYBRID_READ_ONLY to FALSE.

You can determine whether a PDB is in hybrid read-only mode by querying the IS_HYBRID_READ_ONLY column of the V$CONTAINER_TOPOLOGY view.

When a PDB is in hybrid read-only mode, the OPEN_MODE column in the V$CONTAINERS and V$PDBS views reflects the mode for the querying user, that is, the OPEN_MODE column returns READ WRITE when queried by a CDB common user, and READ ONLY when queried by an application common user or a local user.

> **Note**
>
> When you set the value of this parameter in a PDB to TRUE, the TRUE value will not persist when the PDB is closed and reopened. You can remedy this in one of the following ways:
>
> - Specify HYBRID READ ONLY when opening the PDB:
>
>   ALTER PLUGGABLE DATABASE *pdb_name* OPEN HYBRID READ ONLY;
>
> - After opening the PDB, connect to the PDB and set this parameter to TRUE again:
>
>   ALTER SYSTEM SET HYBRID_READ_ONLY = TRUE;

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

> **See Also**
>
> "V$CONTAINER_TOPOLOGY"

2.157 IDENTITY_PROVIDER_CONFIG

Use `IDENTITY_PROVIDER_CONFIG` to configure the database to use Microsoft Azure Active Directory (Azure AD) as an external identity provider.

Property	Description
Parameter type	String
Syntax	`IDENTITY_PROVIDER_CONFIG = '{ "application_id_uri" : "string", "tenant_id" : "string", "app_id" : "string" }'` Where: • The `application_id_uri` value is obtained from the registered application, to be mapped in the JWT "aud" (audience) claim. It must be domain qualified and start with "https://" to specify the OCI database to access. • The `tenant_id` value is obtained from the tenant configuration and is also available on the database application registration overview page. • The `app_id` value is obtained from the registered resource application and is also available on the database application registration overview page.
Default value	None
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be used on all instances.

This parameter is effective only when the database is enabled to use Azure AD as an external identity provider, that is, when the `IDENTITY_PROVIDER_TYPE` initialization parameter is set to `AZURE_AD`. You must use this parameter to specify Azure AD configuration settings.

Example:

```
ALTER SYSTEM SET IDENTITY_PROVIDER_CONFIG =
  '{ "application_id_uri" : "https://example.com/pdb1",
     "tenant_id" : "111a1111-a11a-111a-111111111111a",
```

Copyright © 2002, 2025, Oracle and/or its affiliates.

```
  "app_id" : "11aa1a1-aaaa-1111-1111-1111aa111111" }'
SCOPE=BOTH;
```

Note

Setting the value of this parameter is only one step in a series of steps for configuring the database to use Azure AD. Refer to *Oracle AI Database Security Guide* for the complete steps before you set this parameter.

Note

For additional information about using this parameter with Oracle Autonomous Database, refer to "Use Azure Active Directory (Azure AD) with Autonomous Database".

Note

This parameter is not available to update directly for Oracle Autonomous Database Serverless.

Note

This parameter is available in Oracle Database 19c, starting with version 19.16, and in Oracle AI Database 26ai. This parameter is not available in Oracle Database 21c.

See Also

"IDENTITY_PROVIDER_TYPE"

2.158 IDENTITY_PROVIDER_TYPE

`IDENTITY_PROVIDER_TYPE` specifies an external identity provider for the database.

Property	Description
Parameter type	String
Syntax	`IDENTITY_PROVIDER_TYPE = { AZURE_AD | OCI_IAM | NONE }`
Default value	`NONE`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be used on all instances.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Values:

- `AZURE_AD` - Enables the database to use Microsoft Azure Active Directory (Azure AD) as an external identity provider.

  When you specify this value, you must also specify configuration settings for Azure AD by setting the `IDENTITY_PROVIDER_CONFIG` initialization parameter.
- `OCI_IAM` - Enables the database to use Oracle Cloud Infrastructure Identity and Access Management (OCI IAM) as an external identity provider.

  When you specify this value, there is no need to specify configuration settings with the `IDENTITY_PROVIDER_CONFIG` initialization parameter.
- `NONE` - The database will not use Azure AD or OCI IAM as an external identity provider.

Note

Setting the value of this parameter is only one step in a series of steps for configuring an external identity provider for the database. Refer to *Oracle AI Database Security Guide* for the complete set of steps for configuring Azure AD or OCI IAM before you set this parameter value.

Note

The following resources offer additional information about using this parameter with Oracle Autonomous Database:

- "Use Azure Active Directory (Azure AD) with Autonomous Database"
- "Use Identity and Access Management (IAM) Authentication with Autonomous Database"

Note

This parameter is not available to update directly for Oracle Autonomous Database Serverless.

Note

This parameter is available in Oracle Database 19c, starting with version 19.16, and in Oracle AI Database 26ai. This parameter is not available in Oracle Database 21c.

See Also

"IDENTITY_PROVIDER_CONFIG"

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.159 IFILE

Use `IFILE` to embed another parameter file within the current parameter file.

Property	Description
Parameter type	Parameter file
Syntax	`IFILE = parameter_file_name`
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Range of values	Valid parameter filenames
Basic	No
Oracle RAC	Multiple instances can have different values.

For example:

```
IFILE = COMMON.ORA
```

You can have up to three levels of nesting. In this example, the file `COMMON.ORA` could contain a second `IFILE` parameter for the file `COMMON2.ORA`, which could contain a third `IFILE` parameter for the file `GCPARMS.ORA`. You can also include multiple parameter files in one parameter file by listing `IFILE` several times with different values:

```
IFILE = DBPARMS.ORA
IFILE = GCPARMS.ORA
IFILE = LOGPARMS.ORA
```

> **Note**
>
> You must list multiple entries on contiguous lines of the parameter file.

2.160 IGNORE_SESSION_SET_PARAM_ERRORS

`IGNORE_SESSION_SET_PARAM_ERRORS` controls whether the database ignores errors when clients attempt to modify session parameter values.

Property	Description
Parameter type	String
Syntax	`IGNORE_SESSION_SET_PARAM_ERRORS = parameter_name [, parameter_name ] ...`
Default value	None
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances should use the same value.

Copyright © 2002, 2025, Oracle and/or its affiliates.

The IGNORE_SESSION_SET_PARAM_ERRORS parameter allows you to change the outcome of the following scenario:

1. An Oracle database uses PDB lockdown profiles to prevent certain initialization parameters from being modified with the ALTER SESSION statement.
2. A database client attempts to modify one of those parameters with the ALTER SESSION statement. The client has no knowledge that the parameter is locked down.
3. The database returns an error to the client.

To prevent the database from returning an error in the preceding scenario, set the value of IGNORE_SESSION_SET_PARAM_ERRORS to a comma-separated list of locked down initialization parameters. Thereafter, if a client attempts to modify one of those parameters with the ALTER SESSION statement, the database will ignore the modification attempt and indicate to the client that the operation was successful.

You can set the IGNORE_SESSION_SET_PARAM_ERRORS parameter while connected to a specific PDB, or you can apply it to all PDBs by setting it in the CDB root.

Example

The CURSOR_INVALIDATION and CURSOR_SHARING parameters are locked down in one of the PDBs in your database. If a client application attempts to modify either of these parameters, you want the database to ignore the request and allow the application to continue running without incurring an error. To achieve this, you can connect to the PDB and set the IGNORE_SESSION_SET_PARAM_ERRORS parameter. For example:

```
ALTER SYSTEM SET IGNORE_SESSION_SET_PARAM_ERRORS = CURSOR_INVALIDATION,
CURSOR_SHARING;
```

2.161 INMEMORY_ADG_ENABLED

INMEMORY_ADG_ENABLED indicates whether in-memory for Active Data Guard is enabled in addition to the in-memory cache size.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true | false
Basic	No
Oracle RAC	The same value should be used on all instances. If the value for this parameter is changed on one instance, the parameter's value should be changed to the same value on the other instances.

For Active Data Guard, media recovery needs to retrieve in-memory objects when applying redo and to invalidate the related objects after the query advance. This parameter controls whether media recovery does the retrieving and invalidating.

This parameter should be set on standby databases. The value of this parameter is meaningless on a primary database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

If the standby is an Oracle RAC instance, then all the different standby instances must have this parameter set to the same value.

This parameter is a dynamic system-modifiable parameter whose value can be changed only when Active Data Guard recovery is not running.

If you start multi-instance redo apply (MIRA) Active Data Guard recovery, all instances involved in MIRA must have the parameter set to the same value, otherwise MIRA will signal an error.

Example

If the standby is an Oracle RAC instance, this parameter should be set to the same value on all the Oracle RAC instances:

```
SQL> alter system set inmemory_adg_enabled=true sid='*';
```

See Also

- "INMEMORY_SIZE"
- *Oracle AI Database In-Memory Guide* for more information about deploying an In-Memory Column Store (IM column store) in an Active Data Guard environment

2.162 INMEMORY_AUTOMATIC_LEVEL

`INMEMORY_AUTOMATIC_LEVEL` is used to enable the Automatic In-Memory feature, which automates the management of the In-Memory Column Store (IM column store) to help ensure that the working data set is in the IM column store at all times.

Property	Description
Parameter type	String
Syntax	`INMEMORY_AUTOMATIC_LEVEL = { LOW | MEDIUM | HIGH | OFF }`
Default value	`OFF`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	All instances should use the same value.

Typically, among all the IM enabled segments, only a subset is actively queried at any time. This subset is known as the working data set. The working data set is expected to change over time for many applications.

`INMEMORY_AUTOMATIC_LEVEL` attempts to keep the working data set in the IM column store at all times by moving segments in and out of the IM column store based on access patterns.

Oracle recommends that you provision enough memory for the working data set to fit in the IM column store.

The following values can be set:

Copyright © 2002, 2025, Oracle and/or its affiliates.

- `LOW`: The database evicts cold segments from the IM column store when it is under memory pressure.
- `MEDIUM`: The database evicts cold segments from the IM column store when it is under memory pressure. This level includes an additional optimization that ensures that any hot segment that was not populated because of memory pressure is populated first.
- `HIGH`: All segments in the database are enabled for the IM column store, except segments belonging to Oracle-maintained users and segments from external tables. Automatic In-Memory manages all segments enabled for the IM column store, keeping hot segments in the IM column store and evicting cold segments. This level includes an additional optimization that ensures that any hot segment that was not populated because of memory pressure is populated first.
- `OFF`: Automatic In-Memory is disabled. This value returns the IM column store to the behavior that existed prior to Oracle Database 18c, when the Automatic In-Memory features was introduced. If you do not expect a stable working data set, set the parameter to `OFF`. This is the default value.

See Also

- *Oracle AI Database Licensing Information User Manual* to learn which database offerings support the Automatic In-Memory feature
- *Oracle AI Database In-Memory Guide* for more information about configuring the Automatic In-Memory feature

2.163 INMEMORY_CLAUSE_DEFAULT

`INMEMORY_CLAUSE_DEFAULT` enables you to specify a default In-Memory Column Store (IM column store) clause for new tables and materialized views.

Note

The setting of his parameter has no effect on In-Memory external tables or hybrid partitioned tables.

Property	Description
Parameter type	String
Syntax	`INMEMORY_CLAUSE_DEFAULT = '[INMEMORY] [NO INMEMORY] [other-clauses]'`
Syntax	**other-clauses::=** `[compression-clause] [priority-clause] [rac-clause]`
Syntax	**compression-clause::=** `NO MEMCOMPRESS | MEMCOMPRESS FOR { DML | QUERY [ LOW | HIGH ] | CAPACITY [LOW | HIGH] }`[1]
Syntax	**priority-clause::=** `PRIORITY { LOW | MEDIUM | HIGH | CRITICAL | NONE }`[1]

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Syntax	**rac-clause::=** `[distribute-clause] [duplicate-clause]`[1]
Syntax	**distribute-clause::=** `DISTRIBUTE [ AUTO | BY ROWID RANGE ]`[1]
Syntax	**duplicate-clause::=** `NO DUPLICATE | DUPLICATE [ ALL ]`[1]
Default value	An empty string
Modifiable	`ALTER SESSION, ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	All instances should use the same value

1 See Table 2-2 for more information about this clause.

If the `INMEMORY_CLAUSE_DEFAULT` parameter is unset or set to an empty string (the default), only tables and materialized views explicitly specified as `INMEMORY` will be populated into the IM column store. Setting the value of the `INMEMORY_CLAUSE_DEFAULT` parameter to `NO INMEMORY` has the same effect as setting it to the default value.

If the `INMEMORY_CLAUSE_DEFAULT` parameter is set, then any *newly created* table or materialized view specified as `INMEMORY` will inherit unspecified attributes from this parameter. This can force certain in-memory options by default that are not explicitly specified in the syntax. For example, if the `INMEMORY_CLAUSE_DEFAULT` parameter is set to `MEMCOMPRESS FOR CAPACITY LOW` and a table is created as `INMEMORY PRIORITY HIGH`, then the table is treated as if it was declared as `INMEMORY MEMCOMPRESS FOR CAPACITY LOW PRIORITY HIGH`.

If `INMEMORY` is specified as part of this parameter, then all newly created tables and materialized views will be populated into the IM column store, except tables and materialized views explicitly specified as `NO INMEMORY`. For example, if this parameter is set to `INMEMORY MEMCOMPRESS FOR CAPACITY HIGH`, then all new tables will be created as if this clause were present in the SQL `CREATE TABLE` statement. If there is a default `INMEMORY` value for the tablespace for a given segment, then it will override the value for this parameter.

Table 2-2 Meaning of INMEMORY_CLAUSE_DEFAULT Parameter Values

Syntax	Description
`INMEMORY`	Specifies that all newly-created tables and materialized views populate the IM column store unless they are specified as `NO INMEMORY` in the SQL `CREATE TABLE` or `CREATE MATERIALIZED VIEW` statement
`NO INMEMORY`	Specifies that only tables and materialized views explicitly specified as `INMEMORY` in the SQL `CREATE TABLE` or `CREATE MATERIALIZED VIEW` statements populate the IM column store
`compression-clause`	Specifies that in-memory compression should be used for the instance. Use the `MEMCOMPRESS FOR` values to specify the in-memory compression level.
`NO MEMCOMPRESS`	When `NO MEMCOMPRESS` is specified, no in-memory compression is done in the IM column store.
`MEMCOMPRESS FOR`	`MEMCOMPRESS FOR` is used to indicate the in-memory compression level for the IM column store.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Table 2-2 (Cont.) Meaning of INMEMORY_CLAUSE_DEFAULT Parameter Values

Syntax	Description
DML	When DML is specified, the IM column store is optimized for DML operations, and some lightweight in-memory compression may be done.
QUERY	When QUERY is specified, the in-memory compression level is for high performance. If QUERY is specified without LOW or HIGH, it defaults to QUERY LOW.
QUERY LOW	When QUERY LOW is specified, the in-memory compression level provides the highest performance.
QUERY HIGH	When QUERY HIGH is specified, the in-memory compression level provides a balance between compression and performance, weighted toward performance.
CAPACITY	When CAPACITY is specified without LOW or HIGH, it defaults to CAPACITY LOW.
CAPACITY LOW	When CAPACITY LOW is specified, the in-memory compression level is a balance between compression and performance, weighted toward capacity.
CAPACITY HIGH	When CAPACITY HIGH is specified, the in-memory compression level is for highest capacity.
priority-clause	Specifies the priority to use when populating tables in the IM column store. Use the PRIORITY values to specify the priority. By default, the population of a table in the IM column store can be delayed until the database determines it is useful. On database instance startup, tables are populated in priority order.
PRIORITY NONE	When PRIORITY NONE is specified, the population of a table in the IM column store can be delayed until the database determines it is useful. This is the default value when no priority is specified.
PRIORITY LOW	When PRIORITY LOW is specified for a table or tables, the population of those tables in the IM column store is done before tables that have no priority specified.
PRIORITY MEDIUM	When PRIORITY MEDIUM is specified for a table or tables, the population of those tables in the IM column store is done before tables that have no priority and PRIORITY LOW specified.
PRIORITY HIGH	When PRIORITY HIGH is specified for a table or tables, the population of those tables in the IM column store is done before tables that have no priority, PRIORITY LOW, and PRIORITY MEDIUM specified.
PRIORITY CRITICAL	When PRIORITY CRITICAL is specified for a table or tables, the population of those tables in the IM column store is done before tables that have no priority, PRIORITY LOW, PRIORITY MEDIUM, and PRIORITY HIGH specified.
rac-clause	Specifies how tables in the IM column store will be managed among Oracle Real Application Clusters (Oracle RAC) instances. Use the distribute-clause and duplicate-clause to specify how tables in the IM store will be managed in Oracle RAC instances. For a non-Oracle RAC database, these settings have no effect, because the whole table or partition has to be on the single instance.
distribute-clause	Specifies how a table is distributed among Oracle RAC instances.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Table 2-2 (Cont.) Meaning of INMEMORY_CLAUSE_DEFAULT Parameter Values

Syntax	Description
`DISTRIBUTE AUTO`	Specifies that the database will automatically decide how to distribute tables in the IM column store across the Oracle RAC instances based on the type of partitioning and the value of the `duplicate-clause`. `DISTRIBUTE AUTO` is the default, and it is also used when `DISTRIBUTE` is specified by itself.
`DISTRIBUTE BY ROWID RANGE`	Specifies that the tables in the IM column store will be distributed by rowid range to different Oracle RAC instances.
`duplicate-clause`	Specifies how many copies of each In-Memory Compression Unit (IMCU) of the tables in the IM column store will be spread across all the Oracle RAC instances. **Note:** The `duplicate-clause` is only applicable if you are using Oracle Real Application Clusters (Oracle RAC) on an engineered system. Otherwise, the `duplicate-clause` is ignored and there is only one copy of each IMCU in memory.
`NO DUPLICATE`	Data is not duplicated across Oracle RAC instances. This is the default.
`DUPLICATE`	Data is duplicated on another Oracle RAC instance, resulting in data existing on a total of two Oracle RAC instances.
`DUPLICATE ALL`	Data is duplicated across all Oracle RAC instances. If you specify `DUPLICATE ALL`, then the database uses the `DISTRIBUTE AUTO` setting, regardless of whether or how you specify the `distribute-clause`.

Examples

The following statement causes no tables to populate the IM column store:

```
alter system set INMEMORY_CLAUSE_DEFAULT='NO INMEMORY'
scope=both;
```

The following statement causes new tables and materialized views (except those specified as `NO INMEMORY`) to populate the IM column store at the high capacity compression level:

```
alter system set
INMEMORY_CLAUSE_DEFAULT='INMEMORY MEMCOMPRESS FOR CAPACITY HIGH'
scope=both;
```

The following statement causes new tables (even those specified as `NO INMEMORY`) to populate the IM column store at the highest performance compression level at `LOW` priority:

```
alter system set
INMEMORY_CLAUSE_DEFAULT='INMEMORY MEMCOMPRESS FOR QUERY LOW PRIORITY LOW'
scope=both;
```

The following statement causes new tables (even those specified as `NO INMEMORY`) to populate the IM column store without any in-memory compression:

```
alter system set
INMEMORY_CLAUSE_DEFAULT='INMEMORY NO MEMCOMPRESS'
scope=both;
```

The following statement causes tables in the IM column store to be duplicated on every Oracle RAC instance, unless on a non-engineered system. For a non-engineered system, the `duplicate-clause` (`DUPLICATE ALL`) will be ignored and tables in the column store will be

Copyright © 2002, 2025, Oracle and/or its affiliates.

automatically distributed across the Oracle RAC instance, with only one copy of each IMCU in the tables in the IM column store:

```
alter system set
INMEMORY_CLAUSE_DEFAULT='INMEMORY MEMCOMPRESS FOR QUERY
DISTRIBUTE AUTO DUPLICATE ALL'
scope=both;
```

The following statement sets the value of the `INMEMORY_CLAUSE_DEFAULT` parameter back to its default value, the empty string:

```
alter system set
INMEMORY_CLAUSE_DEFAULT=''
scope=both;
```

2.164 INMEMORY_DEEP_VECTORIZATION

`INMEMORY_DEEP_VECTORIZATION` enables or disables the deep vectorization framework.

Property	Description
Parameter type	Boolean
Default value	`TRUE`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`TRUE` | `FALSE`
Basic	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Deep vectorization can optimize complex SQL operations (such as joins) by pipelining physical operators inside each SQL operator and vectorizing them.

See Also

Oracle AI Database In-Memory Guide for information about deep vectorization

2.165 INMEMORY_EXPRESSIONS_USAGE

`INMEMORY_EXPRESSIONS_USAGE` controls which In-Memory Expressions (IM expressions) are populated into the In-Memory Column Store (IM column store) and are available for queries.

Property	Description
Parameter type	String
Syntax	`INMEMORY_EXPRESSIONS_USAGE = { STATIC_ONLY | DYNAMIC_ONLY | ENABLE | DISABLE }`
Default value	`ENABLE`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be used on all instances.

The four values for this parameter are:

- `STATIC_ONLY`: Tables enabled for in-memory and containing certain data types such as Oracle numbers or JSON will have these columns populated in the IM column store using a more efficient representation. Note that this setting will increase the in-memory footprint for some tables. A static configuration enables the IM column store to cache OSON (binary JSON) columns, which are marked with an IS_JSON check constraint. Internally, an OSON column is a hidden virtual column named `SYS_IME_OSON`. In contrast, a dynamic configuration automatically creates and populates frequently used expressions.
- `DYNAMIC_ONLY`: IM expressions will be automatically created and populated into the IM column store, if used in conjunction with PL/SQL procedure `DBMS_INMEMORY.IME_CAPTURE_EXPRESSIONS`. Note that setting this value will increase the in-memory footprint for some tables.
- `ENABLE`: Both static and dynamic IM expressions will be populated into the IM column store and available to be used by queries. Note that setting this value will increase the in-memory footprint for some tables. This is the default value.
- `DISABLE`: No IM expressions of any kind will be populated into the IM column store.

Changing the mode of a parameter does not have an immediate effect on existing in-memory data. For example, if the `inmemory_expressions_usage` clause is changed from `DYNAMIC_ONLY` to `DISABLE`, the stored IM expressions are not immediately removed. The next repopulation will not bring back the expressions in memory, thereby effectively removing the expressions.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.166 INMEMORY_FORCE

`INMEMORY_FORCE` allows you to specify whether objects, such as tables, materialized views, and partitions, that are specified as `INMEMORY` are populated into the In-Memory Column Store (IM column store) or not.

Property	Description
Parameter type	String
Syntax	`INMEMORY_FORCE = { DEFAULT | OFF | BASE_LEVEL | CELLMEMORY_LEVEL }`
Default value	`DEFAULT`
Modifiable	You can use `ALTER SYSTEM` to dynamically modify this parameter setting as follows: • From `DEFAULT` to `OFF` • From `OFF` to `DEFAULT` • From `BASE_LEVEL` to `DEFAULT` • From `CELLMEMORY_LEVEL` to `DEFAULT` • From `CELLMEMORY_LEVEL` to `OFF` All other modifications of this parameter require you to update the initialization file and restart the instance.
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	All instances should use the same value.

The following values can be set:

- `DEFAULT`

  The IM column store is populated with objects that are specified as `INMEMORY`.

- `OFF`

  Even if the IM column store is configured on this instance, no objects are populated in memory.

- `BASE_LEVEL`

  Enables Database In-Memory Base Level. The Base Level lets you to experiment with Oracle Database In-Memory features without purchasing the Oracle Database In-Memory option.

  When the Base Level is enabled, the value of the `INMEMORY_SIZE` initialization parameter is limited to 16 GB for a CDB. In an Oracle RAC environment, the value of `INMEMORY_SIZE` is limited to 16 GB for each instance. The compression level for all objects and columns is

Copyright © 2002, 2025, Oracle and/or its affiliates.

automatically and transparently set to `QUERY LOW`. Automatic In-Memory is disabled, and In-Memory Column Store feature tracking is tracked for "In-Memory Base Level" rather than "In-Memory Column Store." The CellMemory feature is disabled for Oracle Exadata.

- `CELLMEMORY_LEVEL`

  CellMemory is an Exadata feature that allows you to use Exadata Smart Flash Cache to populate data in in-memory columnar format. In older releases of Oracle Database, in order to use the CellMemory feature, you were required to enable the IM column store (by setting `INMEMORY_SIZE` to a value greater than `0`), even if you had no intention of using the IM column store. This incurred the overhead of enabling the IM column store without any benefit. Starting with Oracle Database release 19c, version 19.8, you can use the CellMemory feature without enabling the IM column store by setting `INMEMORY_FORCE=CELLMEMORY_LEVEL` and `INMEMORY_SIZE=0`. With these settings, the IM column store is not enabled and queries can use CellMemory to scan objects.

  Note that if the value of `INMEMORY_SIZE` is greater than `0`, then setting `INMEMORY_FORCE=CELLMEMORY_LEVEL` is equivalent to setting `INMEMORY_FORCE=DEFAULT`. The IM column store is enabled, even if you only use CellMemory.

2.167 INMEMORY_MAX_POPULATE_SERVERS

`INMEMORY_MAX_POPULATE_SERVERS` specifies the maximum number of background populate servers to use for In-Memory Column Store (IM column store) population, so that these servers do not overload the rest of the system.

Property	Description
Parameter type	Integer
Default value	Half of the value of `CPU_COUNT` or the `PGA_AGGREGATE_TARGET` value divided by 512M, whichever is less. See the "CPU_COUNT" description for information about how `CPU_COUNT` is calculated.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	0 to a value based on the number of cores in the system.
Basic	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Oracle RAC	All instances should use the same value.

This parameter has meaning only if the `INMEMORY_SIZE` parameter is also set to a positive value.

The value to use for this parameter depends on the number of cores in the system. A certain percentage of CPU should be allocated for in-memory background population, and this parameter should be set accordingly. You can also set this parameter to `0` to temporarily disable populate tasks on the system from executing.

Note

Be careful not to set the value of this parameter too high. If it is set close to the number of cores or higher, no CPU could be left for the rest of the system to run.

Note

The IM column store is not populated if this parameter is set to 0.

2.168 INMEMORY_OPTIMIZED_ARITHMETIC

`INMEMORY_OPTIMIZED_ARITHMETIC` encodes the `NUMBER` data type in in-memory tables compressed with `QUERY LOW` as a fixed-width native integer scaled by a common exponent.

Property	Description
Parameter type	String
Syntax	`INMEMORY_OPTIMIZED_ARITHMETIC = { ENABLE | DISABLE }`
Default value	`DISABLE`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Oracle RAC	Different values can be specified on different instances.

The Oracle AI Database `NUMBER` format can incur a significant performance overhead when executing queries because arithmetic operations cannot be performed natively in hardware.

When `INMEMORY_OPTIMIZED_ARITHMETIC` is set to `ENABLE`, for tables compressed with `QUERY LOW`, `NUMBER` columns are encoded as a fixed-width native integer scaled by a common exponent. This In-Memory optimized number format enables fast calculations using SIMD hardware. By using SIMD vector processing, arithmetic operations, simple aggregations, and group-by aggregations can benefit significantly.

Not all row sources in the query processing engine have support for the In-Memory optimized number format. Therefore, the IM column store must store both the traditional Oracle AI Database `NUMBER` data type and the In-Memory optimized number type. This means that the acceleration in analytic query performance comes at a cost of increased space overhead.

When `INMEMORY_OPTIMIZED_ARITHMETIC` is set to `DISABLE` (the default), the database does not use the optimized encoding.

If `INMEMORY_OPTIMIZED_ARITHMETIC` is set to `ENABLE` and then to `DISABLE`, the optimized number format for existing IMCUs is not dropped immediately. Instead, as the IM column store repopulates IMCUs, the new IMCUs do not use the optimized encoding.

See Also

Oracle AI Database In-Memory Guide for details about the improved performance and increased space overhead when `INMEMORY_OPTIMIZED_ARITHMETIC` is enabled

2.169 INMEMORY_OPTIMIZED_DATE

Use `INMEMORY_OPTIMIZED_DATE` to enable or disable the In-Memory Optimized Dates feature.

Property	Description
Parameter type	String
Syntax	`INMEMORY_OPTIMIZED_DATE = { ENABLE | DISABLE }`
Default value	`DISABLE`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can use different values.

When this parameter is set to `ENABLE`, In-Memory can run date-based analytic queries much faster by leveraging the In-Memory Expressions framework.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

> **See Also**
>
> *Oracle AI Database In-Memory Guide* for more information about the In-Memory Optimized Dates feature

2.170 INMEMORY_QUERY

`INMEMORY_QUERY` is used to enable or disable in-memory queries for the entire database at the session or system level.

Property	Description
Parameter type	String
Syntax	`INMEMORY_QUERY = { ENABLE | DISABLE }`
Default value	`ENABLE`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	All instances should use the same value.

This parameter is helpful when you want to test workloads with and without the use of the In-Memory Column Store (IM column store).

This parameter enables in-memory queries for the entire database by default when the `INMEMORY_SIZE` parameter is specified.

Set this parameter to `DISABLE` if you want to disable in-memory queries.

> - *Oracle AI Database In-Memory Guide* for more information about the IM column store

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.171 INMEMORY_SIZE

`INMEMORY_SIZE` sets the size of the In-Memory Area, which contains the IM Column Store (IM column store) on a database instance.

Property	Description
Parameter type	Big integer
Syntax	`INMEMORY_SIZE = integer [K | M | G]`
Default value	`0`
Modifiable	You can use `ALTER SYSTEM` to increase or decrease the value of this parameter. However, the value of this parameter must always be greater than or equal to its value at instance startup.
Modifiable in a PDB	Yes
Range of values	`0` to the amount of memory left in the SGA after other allocations A value of `0` specifies that the IM column store is not allocated and no In-Memory features are enabled. A value greater than `0` and less than `100M` specifies that the IM column store is enabled for future growth, but no memory is currently provisioned to the In-Memory Area.
Basic	No
Oracle RAC	All instances should use the same value.

The database must be restarted after setting this parameter to enable the IM column store.

Typically this parameter should be set to at least the size needed to accommodate all the tables that will use the IM column store. It can be set higher to allow for growth of those tables or to accommodate other tables that will use the IM column store in the future.

This parameter can also be set per PDB to limit the maximum size of the IM column store for that PDB. Note that the sum of the PDB values do not have to equal the CDB value, and the sum of the PDB values may even be greater than the CDB value.

Unless this parameter is specifically set on a PDB, each PDB inherits the CDB value, which means they can use all of the available IM column store.

The value specified for this parameter counts toward `SGA_TARGET`. For example, if you set `SGA_TARGET` to 10 GB and you set `INMEMORY_SIZE` to 2 GB, then 20% of the `SGA_TARGET` setting is allocated to the In-Memory Area.

Starting with Oracle AI Database 26ai, Automatic In-Memory Sizing can automatically grow or shrink the In-Memory Area based on the benefits of the column store if the following conditions are true:

- `SGA_TARGET > 0`
- `INMEMORY_AUTOMATIC_LEVEL = MEDIUM` or `HIGH`
- `VECTOR_MEMORY_SIZE` is set to `0` or not specified

In-Memory Dynamic Scans require the Resource Manager. Therefore, the Resource Manager is automatically enabled when you change the value of `INMEMORY_SIZE` from `0` to a non-zero value. No specific resource plan is required.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Database In-Memory Base Level allows a maximum of 16 GB for the size of the In-Memory Area. Therefore, if Database In-Memory Base Level is enabled (the value of the `INMEMORY_FORCE` initialization parameter is set to `BASE_LEVEL`), then the value of `INMEMORY_SIZE` cannot exceed 16 GB for a CDB. In an Oracle RAC environment, the value of `INMEMORY_SIZE` is limited to 16 GB for each instance.

2.172 INMEMORY_TRICKLE_REPOPULATE_SERVERS_PERCENT

`INMEMORY_TRICKLE_REPOPULATE_SERVERS_PERCENT` limits the maximum number of background populate servers used for In-Memory Column Store (IM column store) repopulation, as trickle repopulation is designed to use only a small percentage of the populate servers.

Property	Description
Parameter type	Integer
Default value	`1`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	`0 to 50`
Basic	No
Oracle RAC	All instances should use the same value.

The value for this parameter is a percentage of the `INMEMORY_MAX_POPULATE_SERVERS` initialization parameter value.

For example, if this parameter is set to 5 and `INMEMORY_MAX_POPULATE_SERVERS` is set to 10, then on average half of a core is used for trickle repopulation.

The default value of 1 is good in most cases. In some cases, if you want to disable trickle repopulate, this parameter can be set to 0. If you want to keep the system more aggressively up to date (at the expense of more background CPU), you can set the parameter to higher values such as 5 or 10.

Copyright © 2002, 2025, Oracle and/or its affiliates.

A value of greater than 50 is not allowed, so that at least half of the populate servers are available for other (re)populate tasks. On some systems, a value of less than 50 can be problematic, depending on other workload.

This parameter has meaning only if the `INMEMORY_SIZE` parameter is also set to a positive value.

2.173 INMEMORY_VIRTUAL_COLUMNS

`INMEMORY_VIRTUAL_COLUMNS` controls which user-defined virtual columns are stored as In-Memory virtual columns (IM columns).

Property	Description
Parameter type	String
Syntax	`INMEMORY_VIRTUAL_COLUMNS = { ENABLE | MANUAL | DISABLE }`
Default value	`MANUAL`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be used on all instances.

IM virtual columns improve query performance by avoiding the necessity of repeated calculations. Also, the database can scan and filter IM virtual columns using techniques such as SIMD vector processing.

These values can be set for the parameter:

- `ENABLE`: For a table or partition that has been enabled for in-memory storage, all virtual columns will be stored in-memory at the default table or partition memcompress level unless:
  - They have been explicitly excluded using the no inmemory syntax.
  - They have been altered to have a different memcompress level than the base table or partition, in which case they will be stored at the specified memcompress level.
- `MANUAL`: This is the default value for the parameter. For a table or partition that has been enabled for in-memory storage, no virtual columns will be stored in-memory unless:
  - They have been explicitly marked for inmemory, in which case they will be stored in-memory at the table or partition memcompress level.
  - They have been marked for inmemory with a different memcompress level than the base table or partition, in which case they will be stored at the specified memcompress level.
- `DISABLE`: For a table or partition that has been enabled for in-memory storage, no virtual columns will ever be stored in-memory. Any changes to the inmemory_column_clause for a virtual column including changes in memcompress level will be recorded, but not acted upon with regards to population of virtual columns.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- "INMEMORY_EXPRESSIONS_USAGE"
- *Oracle AI Database In-Memory Guide* for more information about IM virtual columns

2.174 INSTANCE_ABORT_DELAY_TIME

`INSTANCE_ABORT_DELAY_TIME` specifies how much time to delay an internal initiated instance termination (in seconds), such as when an irrecoverable process dies or an irrecoverable instance error occurs.

Property	Description
Parameter type	Integer
Default value	`0`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	`0` and higher
Basic	No
Oracle RAC	Different instances should use the same value.

This parameter does not apply to a `SHUTDOWN ABORT` operation or any instance termination necessary to implement a user command.

Setting this parameter to a value greater than 0 enables a DBA to take some actions before a termination occurs due to an irrecoverable error. Note that since the instance is in an irrecoverable state, the DBA should not be too ambitious with the actions taken because some processes and/ or resources may be corrupted or unavailable, making complex actions impossible. Oracle does not guarantee what it is possible when an instance is in this state. A message is written to the alert log when the delayed termination is initiated. The value will not apply in the case of PMON death.

The larger the specified value, the longer the instance stays up, and the potential increases for other problems to occur. If you set this parameter, Oracle recommends setting it to a value between 0 and 60.

2.175 INSTANCE_GROUPS

Used with the `PARALLEL_INSTANCE_GROUP` parameter, `INSTANCE_GROUPS` lets you restrict parallel query operations to a limited number of instances.

Property	Description
Parameter type	String
Syntax	`INSTANCE_GROUPS = group_name [, group_name ] ...`
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Range of values	One or more instance group names, separated by commas
Basic	No
Oracle RAC	Multiple instances can have different values.

> **Note**
>
> The `INSTANCE_GROUPS` parameter is deprecated. It is retained for backward compatibility only.

`INSTANCE_GROUPS` is an Oracle RAC parameter that you can specify only in parallel mode.

This parameter specifies one or more instance groups and assigns the current instance to those groups. If one of the specified groups is also specified in the `PARALLEL_INSTANCE_GROUP` parameter, then Oracle allocates query processes for a parallel operation from this instance.

> **See Also**
>
> - *Oracle Real Application Clusters Administration and Deployment Guide* for more information on parallel query execution in a Real Application Clusters environment
> - "PARALLEL_INSTANCE_GROUP"

2.176 INSTANCE_MODE

`INSTANCE_MODE` indicates whether the instance is read-write, read-only, or read-mostly.

Property	Description
Parameter type	String
Syntax	`INSTANCE_MODE = { READ-WRITE | READ-ONLY | READ-MOSTLY }`
Default value	`READ-WRITE`
Modifiable	No
Basic	No
Oracle RAC	See the Oracle RAC restrictions in the initialization parameter description below.

A `READ-WRITE` instance is a regular Oracle instance.

A `READ-ONLY` instance is an Oracle instance that can only be opened in read-only mode.

A `READ-MOSTLY` instance is an Oracle instance that performs very few database writes.

These restrictions apply when setting the parameter on different Oracle Real Application Clusters (Oracle RAC) instances:

Copyright © 2002, 2025, Oracle and/or its affiliates.

1. There must be at least one running instance with `INSTANCE_MODE` set to `READ-WRITE` at any given time. If the only instance with `INSTANCE_MODE` set to `READ-WRITE` goes down, all other instances will be brought down by Oracle automatically.
2. An instance with `INSTANCE_MODE` set to `READ-ONLY` cannot be the first instance to open a database or any pluggable database (PDB) among all instances in an Oracle RAC cluster.
3. Oracle does not support co-existence of an instance with `INSTANCE_MODE` set to `READ-ONLY` and an instance with `INSTANCE_MODE` set to `READ-MOSTLY` in the same Oracle RAC cluster.

2.177 INSTANCE_NAME

In an Oracle Real Application Clusters environment, multiple instances can be associated with a single database service. Clients can override Oracle's connection load balancing by specifying a particular instance by which to connect to the database. `INSTANCE_NAME` specifies the unique name of this instance.

Property	Description
Parameter type	String
Syntax	`INSTANCE_NAME = instance_id`
Default value	The instance's SID **Note:** The SID identifies the instance's shared memory on a host, but may not uniquely distinguish this instance from other instances.
Modifiable	No
Modifiable in a PDB	No
Range of values	Alphanumeric ASCII characters and the underscore (_) character, up to a maximum of 255 characters
Basic	No

In a single-instance database system, the instance name is usually the same as the database name.

See Also

Oracle Real Application Clusters Administration and Deployment Guide and *Oracle AI Database Net Services Administrator's Guide* for more information

2.178 INSTANCE_NUMBER

`INSTANCE_NUMBER` specifies a unique number that maps the instance to one free list group for each database object created with storage parameter `FREELIST GROUPS`.

Property	Description
Parameter type	Integer
Default value	`0` (zero)
Modifiable	No
Modifiable in a PDB	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Range of values	1 to maximum number of instances specified when the database was created
Basic	Yes
Oracle RAC	You must set this parameter for every instance, and all instances must have different values.

`INSTANCE_NUMBER` is an Oracle RAC parameter that can be specified in parallel mode or exclusive mode.

The `INSTANCE` parameter of the `ALTER TABLE ... ALLOCATE EXTENT` statement assigns an extent to a particular free list group. If you set `INSTANCE_NUMBER` to the value specified for the `INSTANCE` parameter, the instance uses that extent for inserts and for updates that expand rows.

The practical maximum value of this parameter is the maximum number of instances specified in the `CREATE DATABASE` statement. The absolute maximum is operating system-dependent.

See Also

Oracle Real Application Clusters Administration and Deployment Guide for more information

2.179 INSTANCE_TYPE

`INSTANCE_TYPE` specifies whether the instance is a database instance, an Oracle Automatic Storage Management (Oracle ASM) instance, or an Oracle ASM Proxy instance.

Property	Description
Parameter type	String
Syntax	`INSTANCE_TYPE = { RDBMS | ASM | ASMPROXY }`
Default value	`RDBMS`
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	Multiple instances must have the same value.

Values

- `RDBMS`

  The instance is a database instance.

- `ASM`

  The instance is an Oracle ASM instance.

- `ASMPROXY`

  The instance is an Oracle ASM proxy instance.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle Automatic Storage Management Administrator's Guide* for information about managing Oracle Flex ASM

2.180 IORM_LIMIT_POLICY

`IORM_LIMIT_POLICY` specifies the policy for computing the Exadata I/O Resource Management (IORM) share and limit values for pluggable databases.

Property	Description
Parameter type	String
Syntax	`IORM_LIMIT_POLICY = { RM_PLAN | CPU_COUNT_RATIO }`
Default value	`RM_PLAN`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No
Oracle RAC	Multiple instances should use the same value.

Values:

- `RM_PLAN`
  - If a CDB resource plan is not specified by the user, that is, the CDB resource plan is set to `DEFAULT_CDB_PLAN`, then this setting gives equal IORM shares to all PDBs and specifies no utilization limits. If the `CPU_MIN_COUNT` initialization parameter is set, the IORM share values are determined by using the RAC-wide PDB value of `CPU_MIN_COUNT`. Otherwise, the IORM share values for each PDB are determined using the RAC-wide PDB value of `CPU_COUNT`.
  - If a user-defined CDB resource plan has been specified by setting the `RESOURCE_MANAGER_PLAN` initialization parameter, then the IORM share and utilization limit values for the PDBs are obtained from that resource plan.
- `CPU_COUNT_RATIO`

  If the `CPU_MIN_COUNT` initialization parameter is set, the IORM share values are determined by using the RAC-wide PDB value of `CPU_MIN_COUNT`. Otherwise, the IORM share values for each PDB are determined using the RAC-wide PDB value of `CPU_COUNT`. In either case, IORM utilization limit values for each PDB are computed as a ratio of the RAC-wide PDB `CPU_COUNT` to the RAC-wide CDB `CPU_COUNT`.

The IORM utilization limit applies only to flash devices. It is not applicable for hard disks or XRMEM devices. The utilization limit is used for managing flash IOPS and throughput, and is not used to manage PDB flash cache space usage.

> **Note**
>
> This parameter allows a third setting, `CPU_COUNT_BASED`. However, this setting is not supported.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

2.181 JAVA_JIT_ENABLED

`JAVA_JIT_ENABLED` enables or disables the Just-in-Time (JIT) compiler for the Oracle Java Virtual Machine (OracleJVM) environment.

Property	Description
Parameter type	Boolean
Default value	Operating system-dependent
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No

For platforms that support the JIT compiler, the default value of this parameter is `true`; otherwise the default value is `false`. Attempting to set this parameter to `true` on unsupported platforms will result in an error.

> **See Also**
>
> *Oracle AI Database Java Developer's Guide* for more information about setting this parameter

2.182 JAVA_MAX_SESSIONSPACE_SIZE

`JAVA_MAX_SESSIONSPACE_SIZE` specifies (in bytes) the maximum amount of session space made available to a Java program executing in the server.

Property	Description
Parameter type	Integer
Default value	`0`
Modifiable	No
Modifiable in a PDB	No
Range of values	0 to 2 GB - 1
Basic	No

Java session space is the memory that holds Java state from one database call to another. When a user's session-duration Java state attempts to exceed the amount specified by `JAVA_MAX_SESSIONSPACE_SIZE`, the Java virtual machine terminates the session with an out-of-memory failure.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- *Oracle AI Database Java Developer's Guide* for more information about this parameter
- "JAVA_SOFT_SESSIONSPACE_LIMIT"

2.183 JAVA_POOL_SIZE

`JAVA_POOL_SIZE` specifies (in bytes) the size of the Java pool, from which the Java memory manager allocates most Java state during run-time execution. This memory includes the shared in-memory representation of Java method and class definitions, as well as the Java objects that are migrated to the Java session space at end-of-call.

Property	Description
Parameter type	Big integer
Syntax	`JAVA_POOL_SIZE = integer [K | M | G]`
Default value	If `SGA_TARGET` is set: If the parameter is not specified, then the default is `0` (internally determined by the Oracle AI Database). If the parameter is specified, then the user-specified value indicates a minimum value for the memory pool. If `SGA_TARGET` is not set: 24 MB, rounded up to the nearest granule size
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	Minimum: `0` (values greater than zero are rounded up to the nearest granule size) Maximum: operating system-dependent
Basic	No

See Also

Oracle AI Database Java Developer's Guide for more information about this parameter

2.184 JAVA_SOFT_SESSIONSPACE_LIMIT

`JAVA_SOFT_SESSIONSPACE_LIMIT` specifies (in bytes) a **soft limit** on Java memory usage in a session, as a means to warn you if a user's session-duration Java state is using too much memory.

Property	Description
Parameter type	Integer
Default value	`0`
Modifiable	No
Modifiable in a PDB	No
Range of values	0 to 2 GB - 1

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Basic	No

Java session space is the memory that holds Java state from one database call to another. When a user's session-duration Java state exceeds the size specified by `JAVA_SOFT_SESSIONSPACE_LIMIT`, Oracle generates a warning that goes into the trace files.

See Also

- *Oracle AI Database Java Developer's Guide* for more information on this parameter
- "JAVA_MAX_SESSIONSPACE_SIZE"

2.185 JOB_QUEUE_PROCESSES

`JOB_QUEUE_PROCESSES` specifies the maximum number of job workers per CDB or PDB that can be created for the execution of `DBMS_JOB` jobs and Oracle Scheduler (`DBMS_SCHEDULER`) jobs.

Property	Description
Parameter type	Integer
Default value	Derived. The lesser value of: • `CPU_COUNT * 20` • `SESSIONS / 4` If the result of the above derivation is less than twice the number of open containers in the CDB, then the value of this parameter is adjusted to equal twice the number of open containers in the CDB. Containers include `CDB$ROOT`, `PDB$SEED`, PDBs, application roots, application seeds, and application PDBs. You can obtain the number of open containers in a CDB with the following query: `SELECT COUNT(*) FROM V$CONTAINERS WHERE open_mode != 'MOUNTED';`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`0` to `4000`
Basic	No
Oracle RAC	Multiple instances can have different values.

`DBMS_JOB` and Oracle Scheduler share the same job coordinator and job workers, and they are both controlled by the `JOB_QUEUE_PROCESSES` parameter. The actual number of job workers created for Oracle Scheduler jobs is auto-tuned by the Scheduler depending on several factors, including available resources, Resource Manager settings, and currently running jobs. However, the combined total number of job workers running `DBMS_JOB` jobs and Oracle Scheduler jobs in a CDB or PDB can never exceed the value of `JOB_QUEUE_PROCESSES` for that CDB or PDB.

Copyright © 2002, 2025, Oracle and/or its affiliates.

The default value for JOB_QUEUE_PROCESSES provides a compromise between quality of service for applications and reasonable use of system resources. However, it is possible that the default value does not suit every environment. In such cases, you can use the following guidelines to fine tune this parameter:

- In a CDB root:
  Set JOB_QUEUE_PROCESSES to the maximum number of job workers that can be used simultaneously in the entire CDB. Oracle recommends that you set the value of this parameter to at least twice the number of open containers in the CDB, otherwise, there might be severe starvation between PDBs trying to run multiple jobs. If JOB_QUEUE_PROCESSES is set to 0 in a CDB root, then DBMS_JOB and Oracle Scheduler jobs cannot run in the CDB root or in any PDB, regardless of the JOB_QUEUE_PROCESSES setting at the PDB level.
- In a PDB:
  Set JOB_QUEUE_PROCESSES to the maximum number of job workers that can be used simultaneously in the PDB. The actual number depends on the resources assigned by Resource Manager and the demand in other containers. When multiple PDBs request jobs, Oracle Scheduler attempts to give all PDBs a fair share of the processes. Oracle recommends that you set the value of this parameter to at least 2 in a PDB. However, if you do not want to run DBMS_JOB and Oracle Scheduler jobs in a PDB, then set JOB_QUEUE_PROCESSES to 0 in the PDB.

Materialized views and AutoTask use Oracle Scheduler for automatic refreshes. Setting JOB_QUEUE_PROCESS to 0 will disable these features and any other features that use Oracle Scheduler or DBMS_JOB.

Note

DBMS_JOB is deprecated in Oracle Database 12*c* Release 2 (12.2.0.1) and may be removed in a future release. Oracle recommends that you use DBMS_SCHEDULER instead.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.186 JSON_BEHAVIOR

JSON_BEHAVIOR allows you to specify various default behaviors, at the session level, for certain SQL/JSON functions and conditions.

Property	Description
Parameter type	String
Syntax	JSON_BEHAVIOR = "*flag*:*value*[;*flag*:*value*]..." There must be no spaces inside of the double quotation marks.
Default value	None
Modifiable	ALTER SESSION
Modifiable in a PDB	No
Basic	No

This parameter allows you to change the default return data type, default type-compatibility, and default error behavior during a session for certain SQL/JSON functions and conditions. This lets you enforce consistent session-level JSON processing behavior, reducing the need for explicit overriding of default behaviors within individual SQL statements.

For example, by default, the JSON_QUERY function uses lax type-compatibility when comparing data. You can use this parameter to specify that all invocations of the JSON_QUERY function in a session use strict type-compatibility, by default.

You can specify one or more of the following flags, in any order:

- JSON_QUERY_RET_VARCHAR

  Value: TRUE or FALSE (default)

  Specifies the default return data type for the JSON_QUERY function when the RETURNING *data_type* clause is omitted.

  If you set this flag to TRUE, then the return data type for the JSON_QUERY function is VARCHAR2(4000), regardless of its input data type.

  The default value of FALSE causes the JSON_QUERY function to use the data type of its input for the return data type.

- LAX_JSON_EXISTS

  Value: TRUE (default) or FALSE

  Specifies the default type-compatibility for the JSON_EXISTS condition when the TYPE(STRICT|LAX) clause is omitted.

  If you set this flag to FALSE, then the JSON_EXISTS condition will behave as if were run with TYPE(STRICT) syntax. That is, when searching for a value in an array, if an array value does not match the data type of the search value, then the condition will behave as specified by the ON ERROR clause.

  The default value of TRUE causes the JSON_EXISTS condition to behave as if it were run with the default TYPE(LAX) syntax, and it will attempt to convert array values to the search value data type, when necessary.

- LAX_JSON_QUERY

  Value: TRUE (default) or FALSE

Copyright © 2002, 2025, Oracle and/or its affiliates.

Specifies the default type-compatibility for the JSON_QUERY function when the TYPE(STRICT|LAX) clause is omitted.

If you set this flag to FALSE, then the JSON_QUERY function behaves as if it were run with TYPE(STRICT) syntax. That is, when searching for a value in an array, if an array value does not match the data type of the search value, then the function will behave as specified by the ON ERROR clause.

The default value of TRUE causes the JSON_QUERY function to behave as if it were run with the default TYPE(LAX) syntax, and it will attempt to convert array values to the search value data type, when necessary.

- LAX_JSON_TABLE

  Value: TRUE (default) or FALSE

  Specifies the default type-compatibility for the JSON_TABLE function when the TYPE(STRICT|LAX) clause is omitted.

  If you set this flag to FALSE, then the JSON_TABLE function behaves as if were run with TYPE(STRICT) syntax. That is, if the value of the function's chosen key is not of the specified return data type, then the function will behave as specified by the ON ERROR clause.

  The default value of TRUE causes the JSON_TABLE function to behave as if it were run with the default TYPE(LAX) syntax, and it will attempt to convert the chosen key to the specified return data type, when necessary.

- LAX_JSON_VALUE

  Value: TRUE (default) or FALSE

  Specifies the default type-compatibility for the JSON_VALUE function when the TYPE(STRICT|LAX) clause is omitted.

  If you set this flag to FALSE, then the JSON_VALUE function behaves as if were run with TYPE(STRICT) syntax. That is, if the function's return value is not of the specified return data type, then the function will behave as specified by the ON ERROR clause.

  The default value of TRUE causes the JSON_VALUE function to behave as if it were run with the default TYPE(LAX) syntax, and it will attempt to convert the return value to the specified return data type, when necessary.

- ON_ERROR

  Value: ERROR or NULL (default)

  Specifies the default behavior for the functions JSON_QUERY, JSON_TABLE (without the EXISTS clause), and JSON_VALUE when the ON ERROR clause is omitted. By default, these functions return a null value in the event of an error, which can make it difficult to identify invalid queries.

  If you set this flag to ERROR, then these functions will return an error for invalid queries.

  The default value of NULL causes these functions to return a null value in the event of an error.

Examples

```
ALTER SESSION SET JSON_BEHAVIOR = "ON_ERROR:ERROR";

ALTER SESSION SET JSON_BEHAVIOR =
"LAX_JSON_QUERY:FALSE;LAX_JSON_TABLE:FALSE;LAX_JSON_VALUE:FALSE";
```

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

> **See Also**
>
> *Oracle AI Database SQL Language Reference* for more information about the `JSON_QUERY`, `JSON_TABLE`, and `JSON_VALUE` functions, and the `JSON_EXISTS` condition

2.187 JSON_EXPRESSION_CHECK

Use `JSON_EXPRESSION_CHECK` to enable or disable JSON query statement checking.

Property	Description
Parameter type	String
Syntax	`JSON_EXPRESSION_CHECK = { ON | OFF }`
Default value	`OFF`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can use different values.

Set this parameter to `ON` to enable JSON query statement checking; set it to `OFF` to disable JSON query statement checking.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

> **See Also**
>
> *JSON-Relational Duality Developer's Guide* for more information about `JSON_EXPRESSION_CHECK`

2.188 LARGE_POOL_SIZE

`LARGE_POOL_SIZE` specifies (in bytes) the size of the large pool allocation heap.

Property	Description
Parameter type	Big integer

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Syntax	`LARGE_POOL_SIZE = integer [K | M | G]`
Default value	If `SGA_TARGET` is set, but a value is not specified for `LARGE_POOL_SIZE`, then the default is `0` (internally determined by the Oracle database). If `LARGE_POOL_SIZE` is specified, then the user-specified value indicates a minimum value for the memory pool. If `SGA_TARGET` is not set, then the default is `0`.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	Minimum: the granule size Maximum: operating system-dependent
Basic	No

The large pool allocation heap is used in shared server systems for session memory, by parallel execution for message buffers, and by backup processes for disk I/O buffers. Parallel execution allocates buffers out of the large pool only when `SGA_TARGET` is set.

You can specify the value of this parameter using a number, optionally followed by K or M to specify kilobytes or megabytes, respectively. If you do not specify K or M, then the number is taken as bytes.

See Also

Oracle AI Database Performance Tuning Guide for more information on setting this parameter

2.189 LDAP_DIRECTORY_ACCESS

`LDAP_DIRECTORY_ACCESS` specifies whether Oracle refers to Oracle Internet Directory for user authentication information.

Note

Enterprise User Security (EUS) is deprecated with Oracle AI Database 26ai.

Oracle recommends that you migrate to using Centrally Managed Users (CMU). This feature enables you to directly connect with Microsoft Active Directory without an intervening directory service for enterprise user authentication and authorization to the database. If your Oracle Database is in the cloud, you can also choose to move to one of the newer integrations with a cloud identity provider.

Property	Description
Parameter type	String
Syntax	`LDAP_DIRECTORY_ACCESS = { NONE | PASSWORD | SSL }`
Default value	`NONE`

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

If directory access is turned on, then this parameter also specifies how users are authenticated.

Values

- NONE

  Oracle does not refer to Oracle Internet Directory for Enterprise User Security information.

- PASSWORD

  Oracle tries to connect to the enterprise directory service using the database password stored in the database wallet. If that fails, then the Oracle Internet Directory connection fails and the database will not be able to retrieve enterprise roles and schema mappings upon enterprise user login.

- SSL

  Oracle tries to connect to Oracle Internet Directory using SSL.

> **See Also**
>
> *Oracle AI Database Enterprise User Security Administrator's Guide* for more information on Enterprise User Security

Using LDAP_DIRECTORY_ACCESS with PDBs

PDBs can use password or SSL authentication with Oracle Internet Directory for EUS, or Microsoft Active Directory for CMU, when the parameter value is set accordingly.

The LDAP_DIRECTORY_ACCESS initialization parameter is PDB-specific and can be set as follows:

- When you use the ALTER SYSTEM command to set the value of LDAP_DIRECTORY_ACCESS while connected to the CDB root:
  - If you specify the CONTAINER=ALL clause, then the setting applies to the CDB root and all PDBs.
  - If you omit the CONTAINER=ALL clause, or specify the CONTAINER=CURRENT clause, then the setting applies only to the CDB root.
- When you use the ALTER SYSTEM command to set the value of LDAP_DIRECTORY_ACCESS while connected to a PDB, the setting applies only to that PDB.
- When you set the value of LDAP_DIRECTORY_ACCESS in an initialization parameter file, the setting applies only to the CDB root; it does not apply to the PDBs.

For a CDB, if the wallet location is not specified in sqlnet.ora, then the default database wallet path is:

ORACLE_BASE/admin/*db-unique-name/pdb-GUID*/wallet (if ORACLE_BASE is set)

or:

Copyright © 2002, 2025, Oracle and/or its affiliates.

`ORACLE_HOME/admin/db-unique-name/pdb-GUID/wallet` (if `ORACLE_BASE` is not set)

The exception is for the root database, which has a default wallet path of:

`ORACLE_BASE/admin/db-unique-name/wallet` (if `ORACLE_BASE` is set)

or:

`ORACLE_HOME/admin/db-unique-name/wallet` (if `ORACLE_BASE` is not set)

All PDBs in a CDB have the same database unique name. By placing wallets in the default location, each PDB can have its own identity.

Note that because there is only one `sqlnet.ora` file for a CDB, the wallet location in `sqlnet.ora` is only used by the CDB root container. Because each PDB must have its own wallet, a PDB wallet will be specified by the *pdb-GUID* under the wallet location in `sqlnet.ora`.

For the root container of a CDB, the wallet location is:

WALLET_LOCATION_specified_in_sqlnet.ora

For each PDB of the CDB, the wallet location is:

WALLET_LOCATION_specified_in_sqlnet.ora/pdb-GUID/

> **Note**
>
> Oracle databases are registered with Oracle Internet Directory using Database Configuration Assistant (DBCA). For registration with Oracle Internet Directory to work, all the PDBs for a CDB must be registered using DBCA.

Using LDAP_DIRECTORY_ACCESS with Non-CDBs

For non-CDBs, if the wallet location is not specified in `sqlnet.ora`, then the default database wallet path is:

`ORACLE_BASE/admin/db-unique-name/wallet` (if `ORACLE_BASE` is set)

or:

`ORACLE_HOME/admin/db-unique-name/wallet` (if `ORACLE_BASE` is not set)

> **See Also**
>
> *Oracle AI Database Enterprise User Security Administrator's Guide* for an example of setting the value of this parameter to `SSL` in the server parameter file using `ALTER SYSTEM`

2.190 LDAP_DIRECTORY_SYSAUTH

`LDAP_DIRECTORY_SYSAUTH` allows or disallows directory-based authorization for users granted administrative privileges, such as `SYSDBA`, `SYSOPER`, `SYSBACKUP`, `SYSDG`, and `SYSKM`.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	String
Syntax	`LDAP_DIRECTORY_SYSAUTH = { yes | no }`
Default value	`no`
Modifiable	No
Modifiable in a PDB	Yes
Basic	Yes

When `LDAP_DIRECTORY_SYSAUTH` is set to `yes`, directory users are allowed to connect to the database as `SYSDBA`, `SYSOPER`, `SYSBACKUP`, `SYSDG`, or `SYSKM`, if they have mapped database global users that are granted corresponding administrative privileges such as `SYSDBA`, `SYSOPER`, `SYSBACKUP`, `SYSDG`, and `SYSKM`.

When `LDAP_DIRECTORY_SYSAUTH` is set to `no`, directory users are not allowed to connect to the database as `SYSDBA`, `SYSOPER`, `SYSBACKUP`, `SYSDG`, or `SYSKM`, even if they have mapped database global users that are granted corresponding administrative privileges such as `SYSDBA`, `SYSOPER`, `SYSBACKUP`, `SYSDG`, and `SYSKM`.

When modifying this parameter in a PDB, use the `ALTER SYSTEM` command with `SCOPE=SPFILE`.

2.191 LICENSE_MAX_SESSIONS

`LICENSE_MAX_SESSIONS` specifies the maximum number of concurrent user sessions allowed.

Property	Description
Parameter type	Integer
Default value	`0`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	0 to number of session licenses
Basic	No
Oracle RAC	Multiple instances can have different values, but the total for all instances mounting a database should be less than or equal to the total number of sessions licensed for that database.

> **Note**
>
> Oracle no longer offers licensing by the number of concurrent sessions. Therefore the `LICENSE_MAX_SESSIONS` and `LICENSE_SESSIONS_WARNING` initialization parameters have been deprecated.

When the limit specified by `LICENSE_MAX_SESSIONS` is reached, only users with the `RESTRICTED SESSION` privilege can connect to the database. Users who are not able to connect receive a warning message indicating that the system has reached maximum capacity.

Copyright © 2002, 2025, Oracle and/or its affiliates.

A zero value indicates that concurrent usage (session) licensing is not enforced. If you set this parameter to a nonzero number, you might also want to set LICENSE_SESSIONS_WARNING (see "LICENSE_SESSIONS_WARNING").

Do not enable both concurrent usage licensing and user licensing. Set either LICENSE_MAX_SESSIONS or LICENSE_MAX_USERS to zero.

See Also

Oracle AI Database Administrator's Guide for more information about this parameter

2.192 LICENSE_MAX_USERS

LICENSE_MAX_USERS specifies the maximum number of users you can create in the database.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to number of user licenses
Basic	No
Oracle RAC	Oracle recommends that multiple instances have the same value.

When you reach the limit specified by LICENSE_MAX_USERS, you cannot create more users. You can, however, increase the limit.

Note

Oracle no longer offers licensing by the number of concurrent sessions. Therefore the LICENSE_MAX_SESSIONS and LICENSE_SESSIONS_WARNING initialization parameters have been deprecated.

See Also

Oracle AI Database Administrator's Guide for more information about this parameter

2.193 LICENSE_SESSIONS_WARNING

LICENSE_SESSIONS_WARNING specifies a warning limit on the number of concurrent user sessions.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	Integer
Default value	`0`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	0 to value of `LICENSE_MAX_SESSIONS` parameter
Basic	No
Oracle RAC	Multiple instances can have different values.

> **Note**
>
> Oracle no longer offers licensing by the number of concurrent sessions. Therefore the `LICENSE_MAX_SESSIONS` and `LICENSE_SESSIONS_WARNING` initialization parameters have been deprecated.

When this limit specified by `LICENSE_SESSIONS_WARNING` is reached, additional users can connect, but Oracle writes a message in the alert log for each new connection. Users with `RESTRICTED SESSION` privilege who connect after the limit is reached receive a warning message stating that the system is nearing its maximum capacity.

If this parameter is set to zero, no warning is given as you approach the concurrent usage (session) limit. If you set this parameter to a nonzero number, you should also set `LICENSE_MAX_SESSIONS` (see "LICENSE_MAX_SESSIONS").

> **See Also**
>
> - *Oracle AI Database Administrator's Guide* for more information on setting this parameter

2.194 LISTENER_NETWORKS

`LISTENER_NETWORKS` specifies one or more sets of local, forward, and remote listeners for cross-registration. All listeners within the same *network_name* will cross-register.

Property	Description
Parameter type	String

Syntax	`LISTENER_NETWORKS =`
	
	`'((NAME=`*network_name*`)`
	`(LOCAL_LISTENER=["]`*listener_address*`[,...]["])`
	`(FORWARD_LISTENER=["]`*listener_address*`[,...]["])`
	`[(REMOTE_LISTENER=["]`*listener_address*`[,...]["])])'`
	`[,...]`

Default value	There is no default value.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No

If a *network_name* is specified multiple times, then the resulting listener set is the union of each specification. This can be used to specify sets that require more than 255 characters, which is the per element limit.

The *listener_address* specifies a string that is an address, address list, or an alias that resolves to an address or address list of Oracle Net listeners. If an alias, the address or address list is specified in the TNSNAMES.ORA file or another address repository as configured for your system.

If a comma is used to specify a *listener_address* list, then the set of addresses must be surrounded by double quotes.

See Also

- "LOCAL_LISTENER"
- "FORWARD_LISTENER"
- "REMOTE_LISTENER"
- *Oracle AI Database Net Services Administrator's Guide* for more information on setting this parameter

2.195 LOB_SIGNATURE_ENABLE

`LOB_SIGNATURE_ENABLE` is used to enable or disable the LOB locator signature feature.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No
Oracle RAC	Multiple instances must have the same value.

You can secure your LOBs by enabling the LOB locator signature feature. A LOB locator is a pointer to the location of a large object (LOB) value. If the `LOB_SIGNATURE_ENABLED` initialization parameter is set to `true`, then when you create a LOB, Oracle AI Database automatically assigns a signature to the LOB locator. When Oracle AI Database receives a request from a client, it uses the signature to determine if any tampering with the LOB locator has occurred.

When this parameter is set to `true`, you also have the option of further securing your LOBs by encrypting your LOB locator signature keys.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle AI Database Security Guide* for more information on LOB locator signatures and encrypting LOB locator signature keys

2.196 LOCAL_LISTENER

`LOCAL_LISTENER` specifies a network name that resolves to an address or address list of Oracle Net local listeners (that is, listeners that run on the same system as this instance). The address or address list is specified in the `TNSNAMES.ORA` file or other address repository as configured for your system.

Property	Description
Parameter type	String
Syntax	`LOCAL_LISTENER = network_name`
Default value	`(ADDRESS = (PROTOCOL=TCP)(HOST=hostname)(PORT=1521))` where *hostname* is the network name of the local host.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No

> **See Also**
>
> - *Oracle AI Database Concepts* for more information about listener processes and dispatcher processes
> - *Oracle AI Database Net Services Administrator's Guide* and your operating system-specific Oracle documentation for more information about specifying network addresses for the protocols on your system

2.197 LOCK_NAME_SPACE

`LOCK_NAME_SPACE` specifies the namespace that the distributed lock manager (DLM) uses to generate lock names.

Property	Description
Parameter type	String
Syntax	`LOCK_NAME_SPACE = namespace`
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Range of values	Up to 8 alphanumeric characters. No special characters allowed.
Basic	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> The LOCK_NAME_SPACE parameter is deprecated. It is retained for backward compatibility only.

Consider setting this parameter if a standby or clone database has the same database name on the same cluster as the primary database.

If the standby database resides on the same file system as the primary database, then set LOCK_NAME_SPACE in the standby parameter file to a distinct value such as the following:

```
LOCK_NAME_SPACE = standby
```

2.198 LOCK_SGA

LOCK_SGA locks the entire SGA into physical memory.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	No
Modifiable in a PDB	No
Range of values	true | false
Basic	No

It is usually advisable to lock the SGA into real (physical) memory, especially if the use of virtual memory would include storing some of the SGA using disk space. This parameter is ignored on platforms that do not support it.

> **See Also**
>
> *Oracle AI Database Performance Tuning Guide* for more information about using this parameter

2.199 LOG_ARCHIVE_CONFIG

LOG_ARCHIVE_CONFIG enables or disables the sending of redo logs to remote destinations and the receipt of remote redo logs, and specifies the unique database names (DB_UNIQUE_NAME) for each database in the Data Guard configuration.

Property	Description
Parameter type	String

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description

Syntax	LOG_ARCHIVE_CONFIG =
	
	{
	[SEND | NOSEND]
	[RECEIVE | NORECEIVE]
	[DG_CONFIG=(*remote_db_unique_name1* [, ...
	remote_db_unique_name30) | NODG_CONFIG]
	}

Default value	NULL
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No

Values

- SEND

  Enables the sending of redo logs to remote destinations
- NOSEND

  Disables the sending of redo logs to remote destinations
- RECEIVE

  Enables the receipt of remotely archived redo logs
- NORECEIVE

  Disables the receipt of remotely archived redo logs
- DG_CONFIG

  Specifies a list of up to 30 unique database names (defined with the DB_UNIQUE_NAME initialization parameter) for all of the databases in the Data Guard configuration.
- NODG_CONFIG

  Eliminates the list of service provider names previously specified with the DG_CONFIG option.

When this parameter has not been set, its default value is NULL. However, the NULL value is treated as if the parameter has been set to 'SEND, RECEIVE, NODG_CONFIG'.

2.200 LOG_ARCHIVE_DEST

Use LOG_ARCHIVE_DEST to specify the destination to which redo log files will be archived.

Property	Description
Parameter type	String
Syntax	LOG_ARCHIVE_DEST = *filespec*
Default value	Null
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Range of values	Any valid path or device name, except raw partitions
Basic	No
Oracle RAC	Multiple instances can have different values.

> **Note**
>
> For Enterprise Edition users, this parameter has been deprecated in favor of the `LOG_ARCHIVE_DEST_n` parameters. If Oracle Enterprise Edition is not installed or it is installed, but you have not specified any `LOG_ARCHIVE_DEST_n` parameters, this parameter is valid.

`LOG_ARCHIVE_DEST` is applicable only if you are running the database in `ARCHIVELOG` mode or are recovering a database from archived redo logs. `LOG_ARCHIVE_DEST` is incompatible with the `LOG_ARCHIVE_DEST_n` parameters, and must be defined as the null string ("") or (' ') when any `LOG_ARCHIVE_DEST_n` parameter has a value other than a null string. Use a text string to specify the default location and root of the disk file or tape device when archiving redo log files. (Archiving to tape is not supported on all operating systems.) The value cannot be a raw partition.

If `LOG_ARCHIVE_DEST` is not explicitly defined and all the `LOG_ARCHIVE_DEST_n` parameters have null string values, `LOG_ARCHIVE_DEST` is set to an operating system-specific default value on instance startup.

To override the destination that this parameter specifies, either specify a different destination for manual archiving or use the SQL*Plus statement `ARCHIVE LOG START` *`filespec`* for automatic archiving, where *`filespec`* is the new archive destination. To permanently change the destination, use the statement `ALTER SYSTEM SET LOG_ARCHIVE_DEST =` *`filespec`*, where *`filespec`* is the new archive destination.

Neither `LOG_ARCHIVE_DEST` nor `LOG_ARCHIVE_FORMAT` have to be complete file or directory specifiers themselves; they only need to form a valid file path after the variables are substituted into `LOG_ARCHIVE_FORMAT` and the two parameters are concatenated together.

2.201 LOG_ARCHIVE_DEST_*n*

The LOG_ARCHIVE_DEST_*n* initialization parameter defines up to 31 (where *n* = 1, 2, 3, ... 31) destinations, each of which *must* specify either the LOCATION or the SERVICE attribute to specify where to archive the redo data.

Property	Description
Parameter type	String
Syntax	LOG_ARCHIVE_DEST_[1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 | 21 | 22 | 23 | 24 | 25 | 26 | 27 | 28 | 29 | 30 | 31] = { *null_string* | { LOCATION=*path_name* | SERVICE=*service_name* } [MANDATORY] [REOPEN[=*seconds*]] [DELAY[=*minutes*]] [ENCRYPTION=ENABLED|DISABLED] [GROUP=*group*] [NOREGISTER] [PRIORITY=*priority*] [TEMPLATE=*template*] [ALTERNATE=*destination*] [MAX_FAILURE=*count*] [SYNC | ASYNC] [AFFIRM | NOAFFIRM] [NET_TIMEOUT=*seconds*] [VALID_FOR=(*redo_log_type*,*database_role*)] [DB_UNIQUE_NAME] [COMPRESSION={ENABLE|DISABLE|ZLIB|LZO}] }
Default value	There is no default value.
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	No
Basic	Yes

All other attributes except the LOCATION or SERVICE attributes are optional. Note that whether you are specifying the LOCATION attribute or the SERVICE attribute, it must be the first attribute supplied in the list of attributes.

If you choose not to enter any attributes, then you can specify a NULL string by entering the following:

```
LOG_ARCHIVE_DEST_n=' ';
```

You set the attributes for the LOG_ARCHIVE_DEST_*n* initialization parameter to control different aspects of how redo transport services transfer redo data from a production or primary database destination to another (standby) database destination. You can query the V$ARCHIVE_DEST view to see the current attribute settings for each destination (n).

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> Some of the attributes for this parameter are deprecated, but are being retained for backward compatibility. See "Deprecated Attributes for LOG_ARCHIVE_DEST_n".

For every LOG_ARCHIVE_DEST_n initialization parameter that you define, you must specify a corresponding LOG_ARCHIVE_DEST_STATE_n parameter. The LOG_ARCHIVE_DEST_STATE_n (where n is an integer from 1 to 31) initialization parameter specifies whether the corresponding destination is currently enabled or disabled.

> **See Also**
>
> "LOG_ARCHIVE_DEST_STATE_*n*"

Destinations LOG_ARCHIVE_DEST_11 through LOG_ARCHIVE_DEST_31 do not support the SYNC, ARCH, LOCATION, MANDATORY, or ALTERNATE attributes, and cannot be specified as the target of the ALTERNATE attribute.

LOG_ARCHIVE_DEST_11 through LOG_ARCHIVE_DEST_31 can only be used when the COMPATIBLE initialization parameter is set to 11.2.0 or higher.

Values

> **See Also**
>
> *Oracle Data Guard Concepts and Administration* for detailed descriptions of all the values listed in this section

- AFFIRM and NOAFFIRM

  Control whether a redo transport destination acknowledges received redo data before or after writing it to the standby redo log. The default is NOAFFIRM.

- ALTERNATE=LOG_ARCHIVE_DEST_*n*

  Specifies an alternate archiving destination to be used when the original destination fails. There is no default value; if an alternate destination is not specified, then archiving does not automatically change to another destination if the original destination fails.

- ASYNC

  The redo data generated by a transaction need not have been received at a destination which has this attribute before that transaction can commit. This is the default behavior if neither SYNC nor ASYNC is specified.

- COMPRESSION

  Indicates whether network compression is enabled or disabled, or disabled, or whether the ZLIB or LZO algorithm is used. The possible values include:

  – DISABLE: Compression is disabled.

  – ENABLE: Compression is enabled. The ZLIB compression algorithm is used.

Copyright © 2002, 2025, Oracle and/or its affiliates.

  - ZLIB: ZLIB compression is used.
  - LZO: LZO compression is used.

  The Advanced Compression option is required in order to use the COMPRESSION attribute.

- DB_UNIQUE_NAME=*name*

  Specifies a unique name for the database at this destination. You must specify a name; there is no default value.

- DELAY[=*minutes*]

  Specifies a minimum time lag between when redo data is archived on a standby site retrieving redo from a primary and when the archived redo log file is applied to the standby database or any standbys cascading from it. If you specify the DELAY attribute without a time interval, the default is 30 minutes.

- ENCRYPTION=DISABLE|ENABLE

  Controls whether encryption of the redo stream sent to Zero Data Loss Recovery Appliance (Recovery Appliance) is enabled or disabled. The default value for the attribute is DISABLE.

  This attribute cannot be used with the COMPRESSION, LOCATION, or SYNC attributes.

  To use the ENCRYPTION attribute, you must set the COMPATIBLE initialization parameter to 11.2.0.4 or higher on the protected database.

  > **See Also**
  >
  > *Zero Data Loss Recovery Appliance Administrator's Guide* for introductory information about Recovery Appliance

- GROUP=*group*

  The GROUP attribute is used to specify membership in a specific collection of log archive destinations. Groups are numbered 1 through 8. The default group (GROUP=0) is special in that it cannot be assigned. The default group is populated with all destinations that are not explicitly assigned to a group. All groups other than the default group must consist of a set of remote destinations. No group (other than the default group) can contain local destinations.

- LOCATION=*local_disk_directory* or USE_DB_RECOVERY_FILE_DEST

  Specifies either a local file system destination or the directory, file system, or Automatic Storage Management disk group that will serve as the fast recovery area. You must specify this attribute for at least one destination. You can specify either a local disk directory or fast recovery area with the LOCATION attribute. You *must* include either the LOCATION or the SERVICE attribute for each destination to specify where to archive the redo data.

- MANDATORY

  Specifies that the transmission of redo data to the destination must succeed before the local online redo log file can be made available for reuse. If the MANDATORY attribute is not specified, then the destination is optional.

- MAX_FAILURE

  Controls the consecutive number of times redo transport services attempt to reestablish communication and transmit redo data to a failed destination before the primary database gives up on the destination. See the MAX_FAILURE description in *Oracle Data Guard*

Copyright © 2002, 2025, Oracle and/or its affiliates.

Concepts and Administration for usage notes about how this attribute is handled differently in Oracle Database 12*c* Release 2 (12.2.0.1) and in Oracle Database 12*c* Release 1 (12.1.0.2).

- `NET_TIMEOUT=`*seconds*

  Specifies the number of seconds the log writer process on the primary system waits for status from the SYNC (NSS*n*) process before terminating the network connection. The default is 30 seconds.

- `NOREGISTER`

  Indicates that the location of the archived redo log file is not to be recorded at the corresponding destination.

- `PRIORITY=`*priority*

  The `PRIORITY` attribute is used to specify preference within a group of log archive destinations. Priorities are numbered 1 through 8. A lower value represents a higher priority. The lowest priority (`PRIORITY=8`) is special in the sense that if that priority is active then all destinations at that priority will be made active. If any higher priority destination returns to service then that destination will be made active and all low priority destinations will be made inactive because they will be receiving redo from one of the other redo destinations, either through cascading or a Far Sync.

- `REOPEN`[=*seconds*]

  Specifies the minimum number of seconds before the archiver processes (ARC*n*) or the log writer process (LGWR) should try again to access a previously failed destination. The default is 300 seconds.

- `SERVICE=`*net_service_name*

  Specifies a valid Oracle Net service name (`SERVICE=`*net_service_name*) that identifies the remote Oracle database instance to which redo data will be sent. Each destination *must* specify either the `LOCATION` or the `SERVICE` attribute. There is no default net service name.

- `SYNC`

  The redo data generated by a transaction must have been received by every enabled destination which has this attribute before that transaction can commit.

- `TEMPLATE=`*filename_template*`_%t_%s_%r`

  Specifies a path name and a file name template for archived redo log files created at a redo transport destination that contain redo data from the database where this attribute is specified. This attribute overrides the value of the `LOG_ARCHIVE_FORMAT` initialization parameter at a redo transport destination. This attribute does not have a default value.

- `VALID_FOR=(redo_log_type, database_role)`

  Identifies when redo transport services can transmit redo data to destinations based on the following factors:

  – `redo_log_type`—whether online redo log files, standby redo log files, or both are *currently* being archived on the database at this destination

  – `database_role`—whether the database is *currently* running in the primary or the standby role

Deprecated Attributes for LOG_ARCHIVE_DEST_n

The following attributes are deprecated for the `LOG_ARCHIVE_DEST_`*n* parameter. They are retained for backward compatibility only.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Table 2-3 Deprecated Attributes on the LOG_ARCHIVE_DEST_n Initialization Parameter

Deprecated Attribute	Alternative
ARCH	Specify SYNC or ASYNC. ASYNC is the default if neither attribute is specified.
LGWR	Specify SYNC or ASYNC. ASYNC is the default if neither attribute is specified.
OPTIONAL	Destinations are optional by default.
VERIFY	None. This attribute is only used with the deprecated ARCH attribute.

In addition, note the following changes to the ASYNC and SYNC attributes:

- The BLOCKS keyword on the ASYNC attribute is no longer needed.

  It is no longer necessary to set this keyword because Data Guard dynamically adjusts the block count up or down to an appropriate number of blocks, as necessary.
- The PARALLEL and NOPARALLEL keywords on the SYNC attribute are no longer needed.

2.202 LOG_ARCHIVE_DEST_STATE_*n*

The LOG_ARCHIVE_DEST_STATE_*n* parameters (where *n* = 1, 2, 3, ... 31) specify the availability state of the corresponding destination.

Property	Description
Parameter type	String
Syntax	LOG_ARCHIVE_DEST_STATE_[1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 | 21 | 22 | 23 | 24 | 25 | 26 | 27 | 28 | 29 | 30 | 31] = { enable | defer | alternate | reset }
Default value	enable
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	No
Basic	Yes

The parameter suffix (1 through 31) specifies one of the corresponding LOG_ARCHIVE_DEST_*n* destination parameters.

Values

- enable

  Specifies that a valid log archive destination can be used for a subsequent archiving operation (automatic or manual). This is the default.
- defer

  Specifies that valid destination information and attributes are preserved, but the destination is excluded from archiving operations until reenabled.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- `alternate`

  Specifies that a log archive destination is not enabled but will become enabled if communications to another destination fail.

- `reset`

  Functions the same as `defer`, but clears any error messages for the destination if it had previously failed.

The `LOG_ARCHIVE_DEST_STATE_n` parameters have no effect on the `ENABLE` state for the `LOG_ARCHIVE_DEST` or `LOG_ARCHIVE_DUPLEX_DEST` parameters.

The `V$ARCHIVE_DEST` dynamic performance view shows values in use for the current session. The `DEST_ID` column of that view corresponds to the archive destination suffix *n*.

See Also

- *Oracle Data Guard Concepts and Administration* for more information about this parameter
- "V$ARCHIVE_DEST"

2.203 LOG_ARCHIVE_DUPLEX_DEST

`LOG_ARCHIVE_DUPLEX_DEST` is similar to the initialization parameter `LOG_ARCHIVE_DEST`. This parameter specifies a second archive destination: the **duplex** archive destination. This duplex archive destination can be either a must-succeed or a best-effort archive destination, depending on how many archive destinations must succeed (as specified in the `LOG_ARCHIVE_MIN_SUCCEED_DEST` parameter).

Property	Description
Parameter type	String
Syntax	`LOG_ARCHIVE_DUPLEX_DEST = filespec`
Default value	There is no default value.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	Either a null string or any valid path or device name, except raw partitions
Basic	No

Note

If you are using Oracle Enterprise Edition, this parameter is deprecated in favor of the `LOG_ARCHIVE_DEST_n` parameters. If Oracle Enterprise Edition is not installed or it is installed but you have not specified any `LOG_ARCHIVE_DEST_n` parameters, this parameter is valid.

The default setting of a null string ("") or (' ') indicates that a duplex archive destination does not exist.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- "LOG_ARCHIVE_DEST_*n*"
- "LOG_ARCHIVE_MIN_SUCCEED_DEST"
- "V$ARCHIVE_DEST"
- *Oracle AI Database Administrator's Guide* for an example of using this parameter to specify an optional secondary archive destination

2.204 LOG_ARCHIVE_FORMAT

Use `LOG_ARCHIVE_FORMAT` to specify the default filename format when archiving redo log files.

Property	Description
Parameter type	String
Syntax	`LOG_ARCHIVE_FORMAT = filename`
Default value	Operating system-dependent
Modifiable	No
Modifiable in a PDB	No
Range of values	Any string that resolves to a valid filename
Basic	No
Oracle RAC	Multiple instances can have different values, but identical values are recommended.

`LOG_ARCHIVE_FORMAT` is applicable only if you are using the redo log in `ARCHIVELOG` mode. Use a text string and variables to specify the default filename format when archiving redo log files. The string generated from this format is appended to the string specified in the `LOG_ARCHIVE_DEST` parameter.

The following variables can be used in the format:

%s log sequence number

%S log sequence number, zero filled

%t thread number

%T thread number, zero filled

%a activation ID

%d database ID

%r resetlogs ID that ensures unique names are constructed for the archived log files across multiple incarnations of the database

Using uppercase letters for the variables (for example, `%S`) causes the value to be fixed length and padded to the left with zeros. An example of specifying the archive redo log filename format follows:

```
LOG_ARCHIVE_FORMAT = 'log%t_%s_%r.arc'
```

Copyright © 2002, 2025, Oracle and/or its affiliates.

Archive log file names must contain each of the elements %s (sequence), %t (thread), and %r (resetlogs ID) to ensure that all archive log file names are unique. If the LOG_ARCHIVE_FORMAT initialization parameter is set in the parameter file, then make sure the parameter value contains the %s, %t, and %r elements. Otherwise, the following error is displayed at the time of instance startup:

```
ORA-19905: log_archive_format must contain %s, %t and %r
```

Neither LOG_ARCHIVE_DEST nor LOG_ARCHIVE_FORMAT have to be complete file or directory specifiers themselves; they only need to form a valid file path after the variables are substituted into LOG_ARCHIVE_FORMAT and the two parameters are concatenated together.

LOG_ARCHIVE_FORMAT is ignored in these cases:

- For archived log files that go to the fast recovery area
- When LOG_ARCHIVE_DEST[_n] points to the root of an Oracle ASM disk group (for example, +DATA). The directory of a disk group (for example, +DATA/logs) must be specified for the parameter to be honored.

In these cases where LOG_ARCHIVE_FORMAT is ignored, an Oracle ASM file name is used. See *Oracle Automatic Storage Management Administrator's Guide* for more information on Oracle ASM file names.

- *Oracle AI Database Backup and Recovery User's Guide*, *Oracle Data Guard Concepts and Administration*, and *Oracle Real Application Clusters Administration and Deployment Guide* for more information about this parameter
- Your operating system- specific Oracle documentation for the default value and range of values for LOG_ARCHIVE_FORMAT

2.205 LOG_ARCHIVE_MAX_PROCESSES

LOG_ARCHIVE_MAX_PROCESSES specifies the maximum number of ARC*n* processes that can be created.

Property	Description
Parameter type	Integer
Default value	4
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	1 to 30
Basic	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- "Background Processes" for more information about ARC*n* processes
- *Oracle AI Database Administrator's Guide* for more information about LOG_ARCHIVE_MAX_PROCESSES

2.206 LOG_ARCHIVE_MIN_SUCCEED_DEST

LOG_ARCHIVE_MIN_SUCCEED_DEST defines the minimum number of destinations that must succeed in order for the online logfile to be available for reuse.

Property	Description
Parameter type	Integer
Default value	1
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	1 to 10 if you are using LOG_ARCHIVE_DEST_*n* 1 or 2 if you are using LOG_ARCHIVE_DEST and LOG_ARCHIVE_DUPLEX_DEST
Basic	No

If you are using the LOG_ARCHIVE_DEST_*n* parameters and automatic archiving is enabled, then the value of this parameter cannot exceed the number of enabled, valid destinations specified as MANDATORY plus the number of enabled, valid destinations that are configured with the OPTIONAL and LOCATION attributes.

If you are using LOG_ARCHIVE_DEST and LOG_ARCHIVE_DUPLEX_DEST and automatic archiving is enabled, a value of 1 specifies that the destination specified in LOG_ARCHIVE_DEST must succeed. A value of 2 specifies that the destinations specified in both parameters must succeed.

If the value of this parameter is less than the number of enabled, valid MANDATORY destinations, this parameter is ignored in favor of the MANDATORY destination count. If the value is more than the number of enabled, valid MANDATORY destinations, then some of the enabled, valid destinations configured with the OPTIONAL and LOCATION attributes are treated as MANDATORY.

You can switch dynamically from using the older parameters to the LOG_ARCHIVE_DEST_*n* parameter using ALTER SYSTEM, as follows:

1. Set LOG_ARCHIVE_MIN_SUCCEED_DEST to 1.
2. Set the value of LOG_ARCHIVE_DEST and LOG_ARCHIVE_DUPLEX_DEST to the null string.
3. Set the desired number of destinations for the LOG_ARCHIVE_DEST_*n* parameters.
4. Reset LOG_ARCHIVE_MIN_SUCCEED_DEST to the desired value.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- *Oracle AI Database Administrator's Guide* for more information on setting this parameter
- "LOG_ARCHIVE_DEST_*n*", "LOG_ARCHIVE_DUPLEX_DEST", and "V$ARCHIVE_DEST" for information on related parameters

2.207 LOG_ARCHIVE_TRACE

LOG_ARCHIVE_TRACE enables and controls the generation of comprehensive trace information for log archiving and redo transport activity.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0, 1, 2, 4, 8, 16, 32, 64, 128, 256, 512, 1024, 2048, 4096, 8192, 16384, 32768
Basic	No
Oracle RAC	Multiple instances can have different values.

The additional tracing that is output when setting LOG_ARCHIVE_TRACE to a non-zero value can appear in trace files for an archive process, RFS process, LGWR process, SYNC process, ASYNC process, foreground process, MRP process, recovery process, log apply process, startup process, shutdown process, and other processes that use redo transport services.

Table 2-4 describes the valid LOG_ARCHIVE_TRACE values.

Table 2-4 LOG_ARCHIVE_TRACE Values

Value	Description	More Information
0	Disables archivelog tracing (this is the default)	
1	High-level tracing	High-level tracing provides a small amount of tracing from most redo transport processes. When a value is specified that is not high-level (not 1), the high-level tracing for that value will be output to the trace file even if the high-level tracing has not been specifically requested. For example, if you set LOG_ARCHIVE_TRACE to 128, you will get all the trace messages pertaining to the FAL engine, *including* the high-level tracing from the FAL engine.
2	Tracks Data Guard interfaces	This tracing level is for the various Data Guard configuration parameters, the various Data Guard related SQL commands, the various Data Guard table accesses, and some Data Guard internal interfaces.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Table 2-4 (Cont.) LOG_ARCHIVE_TRACE Values

Value	Description	More Information
4	Tracks common redo transport services	This tracing level is for a number of common services provided by redo transport to various internal users (such as the RFS process, the LGWR process, and the ASYNC process). These include locking primitives, use of common VOS (Virtual Operating System) interfaces, task scheduling, process monitoring, control file access, and other miscellaneous common services.
8	Tracks database protection mode	
16	Tracks disk and network I/O requests	
32	Tracks redo transport destinations	
64	Tracks redo transport archive engine	
128	Tracks redo transport FAL (fetch archive log) engine	
256	Tracks Physical, Logical, and Availability Machine clients of RFS process	
512	Tracks redo transport of LGWR, SYNC, and ASYNC processes	
1024	Tracks redo transport RFS process	
2048	Tracks redo transport gap resolution	
4096	Tracks real-time apply	
8192	Tracks recovery process	
16384	Tracks redo transport buffer management	
32768	Tracks LogMiner dictionary	

You can combine tracing levels by adding together the values of the desired tracing levels. For example, a setting of 3 will generate level 1 and level 2 trace output. You can set different values for the primary and standby database.

When this parameter is set to the default value of 0, Oracle will still generate appropriate alert and trace entries in response to error conditions. If you change the value of this parameter dynamically in an `ALTER SYSTEM` statement, the change takes effect immediately.

Many of the trace messages from redo transport processes include a routine name at the beginning of the trace message. The first part of the routine name specifies the module for that routine. Table 2-5 shows the tracing value used for each redo transport module. Note that the tracing value for transport modules can change from release to release.

Table 2-5 Tracing Values Used for Redo Transport Modules

Module Name	Purpose	Tracing Value
krsa	Locking primitives	4
krsb	Buffer management	16384
krsc	Crash recovery	64

Copyright © 2002, 2025, Oracle and/or its affiliates.

Table 2-5 (Cont.) Tracing Values Used for Redo Transport Modules

Module Name	Purpose	Tracing Value
krsd	Destination	32
krse	Archive engine	64
krsf	FAL engine	128
krsg	Gap resolution	2048
krsh	Helper	4
krsi	Input/output	16
krsj	Protection mode	8
krsk	Control file access	4
krsl	Log writer	512
krsm	MRP process	8192
krsn	Configuration	2
krso	Process monitor	4
krsp	Physical standby and Availability Machine RFS client	256
krsq	SQL commands	2
krsr	RFS process	1024
krst	Tables	2
krsu	Network I/O	16
krsv	VOS front end	4
krsw	ASYNC process	512
krsx	Internal interfaces	2

See Also

Oracle AI Database Administrator's Guide

2.208 LOG_BUFFER

`LOG_BUFFER` specifies the amount of memory (in bytes) that Oracle uses when buffering redo entries to a redo log file.

Property	Description
Parameter type	Big integer
Default value	2 MB to 32 MB, depending on the SGA size and CPU count
Modifiable	No
Modifiable in a PDB	No
Range of values	2 MB to operating system-dependent
Basic	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Redo log entries contain a record of the changes that have been made to the database block buffers. The LGWR process writes redo log entries from the log buffer to a redo log file.

The log buffer size depends on the number of redo strands in the system. One redo strand is allocated for every 16 CPUs and has a default size of 2 MB. Oracle allocates a minimum of 2 redo strands per instance. When the log buffer size is not specified, any remaining memory in the redo granules is given to the log buffer.

See Also

- Your operating system-specific Oracle documentation for the default value and range of values
- *Oracle AI Database Performance Tuning Guide* for information on resizing the redo log buffer using this parameter

2.209 LOG_CHECKPOINT_INTERVAL

`LOG_CHECKPOINT_INTERVAL` specifies the frequency of checkpoints in terms of the number of redo log file blocks that can exist between an incremental checkpoint and the last block written to the redo log. This number refers to physical operating system blocks, not database blocks.

Property	Description
Parameter type	Integer
Default value	`0`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	`0` to 2^{31} - 1
Basic	No
Oracle RAC	Multiple instances can have different values.

Regardless of this value, a checkpoint always occurs when switching from one online redo log file to another. Therefore, if the value exceeds the actual redo log file size, checkpoints occur only when switching logs. Checkpoint frequency is one of the factors that influence the time required for the database to recover from an unexpected failure.

Note

- Specifying a value of `0` (zero) for `LOG_CHECKPOINT_INTERVAL` has the same effect as setting the parameter to infinity and causes the parameter to be ignored. Only nonzero values of this parameter are considered meaningful.
- Recovery I/O can also be limited by setting the `LOG_CHECKPOINT_TIMEOUT` parameter or by the size specified for the smallest redo log. For information on which mechanism is controlling checkpointing behavior, query the `V$INSTANCE_RECOVERY` view.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- "LOG_CHECKPOINT_TIMEOUT"
- "V$INSTANCE_RECOVERY"
- *Oracle AI Database Performance Tuning Guide* for information on disabling or removing this parameter when the FAST_START_MTTR_TARGET parameter is set

2.210 LOG_CHECKPOINT_TIMEOUT

LOG_CHECKPOINT_TIMEOUT specifies (in seconds) the amount of time that has passed since the incremental checkpoint at the position where the last write to the redo log (sometimes called the **tail of the log**) occurred. This parameter also signifies that no buffer will remain dirty (in the cache) for more than *integer* seconds.

Property	Description
Parameter type	Integer
Default value	1800
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to 2^{31} - 1
Basic	No
Oracle RAC	Multiple instances can have different values.

Specifying a value of 0 for the timeout disables time-based checkpoints. Hence, setting the value to 0 is not recommended unless FAST_START_MTTR_TARGET is set.

Note

- A checkpoint scheduled to occur because of this parameter is delayed until the completion of the previous checkpoint if the previous checkpoint has not yet completed.
- Recovery I/O can also be limited by setting the LOG_CHECKPOINT_INTERVAL parameter or by the size specified for the smallest redo log. For information on which mechanism is controlling checkpointing behavior, query the V$INSTANCE_RECOVERY view.

See Also

- "LOG_CHECKPOINT_TIMEOUT"
- "V$INSTANCE_RECOVERY"
- *Oracle AI Database Performance Tuning Guide* for information on disabling or removing this parameter when the FAST_START_MTTR_TARGET parameter is set

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.211 LOG_CHECKPOINTS_TO_ALERT

`LOG_CHECKPOINTS_TO_ALERT` lets you log your checkpoints to the alert log. Doing so is useful for determining whether checkpoints are occurring at the desired frequency.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No

2.212 LOG_FILE_NAME_CONVERT

`LOG_FILE_NAME_CONVERT` converts the filename of a new log file on the primary database to the filename of a log file on the standby database.

Property	Description
Parameter type	String

Syntax	`LOG_FILE_NAME_CONVERT = '`*`string1`*`' , '`*`string2`*`' , '`*`string3`*`' , '`*`string4`*`' , ...`
	Where:
	• *`string1`* is the pattern of the primary database filename
	• *`string2`* is the pattern of the standby database filename
	• *`string3`* is the pattern of the primary database filename
	• *`string4`* is the pattern of the standby database filename
	You can enclose each string in single or double quotation marks.
	You can specify as many pairs of primary and standby replacement strings as required.
	Example:
	`LOG_FILE_NAME_CONVERT = '/dbs/t1/','/dbs/t1/s','dbs/t2/','dbs/t2/s'`

Default value	There is no default value.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No

If you add a log file to the primary database, you must add a corresponding file to the standby database.

Set the value of this parameter to one or more pairs of strings. The first string is the pattern found in the log file names on the primary database. The second string is the pattern found in the log file names on the standby database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

When the standby database is updated, this parameter converts the log file name on the primary database to the log file name on the standby database. The file must exist on the standby database and must be writable or the recovery process will halt with an error.

If you specify an odd number of strings (the last string has no corresponding replacement string), an error is signalled during startup. If the filename being converted matches more than one pattern in the pattern/replace string list, the first matched pattern takes effect. There is no limit on the number of pairs that you can specify in this parameter (other than the hard limit of the maximum length of multivalue parameters).

You should also use `LOG_FILE_NAME_CONVERT` to rename the logfiles in the clone control file when setting up the clone database during tablespace point-in-time recovery.

> **Note**
>
> The `LOG_FILE_NAME_CONVERT` parameter applies only to online logs (not to archived logs).

> **See Also**
>
> *Oracle Data Guard Concepts and Administration*

2.213 LONG_MODULE_ACTION

`LONG_MODULE_ACTION` enables the use of longer lengths for modules and actions.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No
Oracle RAC	The same value must be used on all instances.

Module length was 48 bytes and action length was 32 bytes in Oracle Database releases prior to Oracle Database 12*c* Release 2 (12.2.0.1).

Starting with Oracle Database 12*c* Release 2 (12.2.0.1):

- If `LONG_MODULE_ACTION` is set to `TRUE` (the default value), then the length of modules and actions will be 64 bytes each.
- If `LONG_MODULE_ACTION` is set to `FALSE`, then the length of modules will be 48 bytes, and the length of actions will be 32 bytes.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.214 MANDATORY_USER_PROFILE

MANDATORY_USER_PROFILE specifies the mandatory user profile for a CDB or PDB.

Property	Description
Parameter type	String
Syntax	MANDATORY_USER_PROFILE = *profile_name*
Default value	There is no default value
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances must use the same value.

For *profile_name*, specify the name of a mandatory user profile. Mandatory user profiles are common profiles created in the CDB root with the following SQL statement:

```
CREATE MANDATORY PROFILE ... CONTAINER = ALL;
```

You can set the value of MANDATORY_USER_PROFILE in the CDB root or in a PDB.

- When you set this parameter in the CDB root, the specified mandatory user profile applies to the CDB root and all PDBs.
- When you set this parameter in a PDB, the specified mandatory user profile applies only to that PDB and overrides the mandatory user profile for the CDB root, if any.

Only common users with the commonly granted ALTER SYSTEM privilege or the commonly granted SYSDBA privilege can set the value of MANDATORY_USER_PROFILE in the CDB root or in a PDB. This prevents local PDB administrators from circumventing any restrictions that are enforced at the CDB root.

See Also

See *Oracle AI Database Security Guide* for more information about mandatory user profiles

2.215 MAX_AUTH_SERVERS

MAX_AUTH_SERVERS specifies the maximum number of authentication servers in the authentication pool. This pool authenticates user connections when client applications connect to Database Resident Connection Pooling (DRCP).

Property	Description
Parameter type	Integer
Default value	25
Modifiable	ALTER SYSTEM

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Modifiable in a PDB	Yes, according to the following guidelines: • When the ENABLE_PER_PDB_DRCP initialization parameter is set to true, MAX_AUTH_SERVERS can be modified only at the PDB level; it cannot be modified for the CDB root. • When the ENABLE_PER_PDB_DRCP initialization parameter is set to false, MAX_AUTH_SERVERS can be modified only for the CDB root; it cannot be modified at the PDB level.
Range of values	Minimum: MIN_AUTH_SERVERS or 1, whichever is the greater value Maximum: operating system-dependent
Basic	No
Oracle RAC	Different instances can use different values.

The value of this parameter must be greater than or equal to the value of the MIN_AUTH_SERVERS initialization parameter, which specifies the minimum number of authentication servers in the authentication pool. The exception is when MIN_AUTH_SERVERS = 0. In this case, the value of MAX_AUTH_SERVERS must be greater than or equal to 1.

See Also

- *Oracle AI Database Administrator's Guide* for more information about setting this parameter
- "ENABLE_PER_PDB_DRCP"
- "MIN_AUTH_SERVERS"

2.216 MAX_COLUMNS

Use MAX_COLUMNS to enable or disable Wide Tables for the database.

Property	Description
Parameter type	String
Syntax	MAX_COLUMNS = { STANDARD | EXTENDED }
Default value	STANDARD
Modifiable	No
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances must use the same value.

Values:

- To enable Wide Tables, set this parameter to EXTENDED. With this setting, the maximum number of columns allowed in a database table or view is 4096.

  The COMPATIBLE initialization parameter must be set to 23.0.0.0 or higher in order to set MAX_COLUMNS = EXTENDED.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- To disable Wide Tables, set this parameter to `STANDARD`. With this setting, the maximum number of columns allowed in a database table or view is 1000. This matches the behavior in releases prior to Oracle AI Database 26ai.

You can change the value of `MAX_COLUMNS` from `STANDARD` to `EXTENDED` at any time. However, you can change the value of `MAX_COLUMNS` from `EXTENDED` to `STANDARD` only when all tables and views in the database contain 1000 or fewer columns.

> **Note**
>
> The increased column limit of 4096 is supported by Oracle AI Database 26ai clients, such as SQL*Plus, OCI, JDBC-OCI, unmanaged ODP.NET, and open source drivers. Older client versions (pre-Oracle AI Database 26ai) do not support the increased column limit and cannot access more than 1000 columns in a table or view.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

2.217 MAX_DATAPUMP_JOBS_PER_PDB

`MAX_DATAPUMP_JOBS_PER_PDB` determines the maximum number of concurrent Oracle Data Pump jobs per PDB.

Property	Description
Parameter type	String
Syntax	`MAX_DATAPUMP_JOBS_PER_PDB = { AUTO | integer }`
Default value	`AUTO`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`0` to `250` or `AUTO`
Basic	No
Oracle RAC	The same value must be used on all instances.

When this parameter has a value of `AUTO`, Oracle Data Pump will derive its actual value to be 50% of the `SESSIONS` initialization parameter.

A value that is too large could cause Oracle Data Pump to consume too many system resources, while a value that is too small could prevent users from performing their Oracle Data Pump tasks.

The main resource Oracle Data Pump uses is shared pool in the System Global Area (SGA) for the database. Parallel jobs increase the number of sessions and, depending on the job, the number of PX servers used.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- *Oracle AI Database Utilities* for more information about using Oracle Data Pump with CDBs
- *Oracle AI Database PL/SQL Packages and Types Reference* for more information about the DBMS_DATAPUMP PL/SQL package

2.218 MAX_DATAPUMP_PARALLEL_PER_JOB

MAX_DATAPUMP_PARALLEL_PER_JOB specifies the maximum number of parallel processes allowed per Oracle Data Pump job.

Property	Description
Parameter type	String
Syntax	MAX_DATAPUMP_PARALLEL_PER_JOB = { *integer* | AUTO }
Default value	AUTO
Range of values	1 to 1024, or AUTO
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can use different values.

When this parameter has a value of AUTO, Oracle Data Pump derives its value to be 50 percent of the value of the SESSIONS initialization parameter.

2.219 MAX_DISPATCHERS

MAX_DISPATCHERS specifies the maximum number of dispatcher processes allowed to be running simultaneously.

Property	Description
Parameter type	Integer
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	If MAX_DISPATCHERS is specified, then it should be greater than or equal to the number of dispatchers specified by the DISPATCHERS parameter and less than the number of processes specified by the PROCESSES parameter.
Basic	No

This parameter can be overridden by the DISPATCHERS parameter and is maintained for backward compatibility with older releases.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- *Oracle AI Database Administrator's Guide* for more information about this parameter
- Your operating system-specific Oracle documentation for the default value and range of values

2.220 MAX_DUMP_FILE_SIZE

`MAX_DUMP_FILE_SIZE` specifies the maximum size of trace files (excluding the alert log).

Property	Description
Parameter type	String
Syntax	`MAX_DUMP_FILE_SIZE = { integer [K | M | G] | UNLIMITED }`
Default value	Oracle AI Database Free: `32M` (4 segments of 8 MB each) For all other Oracle AI Database offerings, the default value is `1G`, which means: • The maximum size for trace files generated by foreground processes is 1 GB (5 segments of 200 MB each). • The maximum size for other trace files, such as incident trace files and trace files generated by background processes, is 10 GB (5 segments of 2 GB each).
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	0 to unlimited, or `UNLIMITED`
Basic	No

You can change this limit if you are concerned that trace files may use too much space.

- A numeric value for `MAX_DUMP_FILE_SIZE` specifies the maximum size in operating system blocks.
- A numeric value followed by a `K` or `M` or `G` suffix specifies the file size in kilobytes, megabytes, or gigabytes.
- The special value string `UNLIMITED` means that there is no upper limit on trace file size. Thus, dump files can be as large as the operating system permits.

When the trace file is limited in size, it may be automatically split into multiple files, called segments, if needed. This process is call trace file segmentation. The segments will have the same file name as the active trace file, but with an extra segment number appended.

The trace file can be split into a maximum of 5 segments, and the size of each segment will typically be 1/5th of the trace file limit.

When the combined size of all the trace file segments exceeds the specified limit, the oldest segment is deleted, and a new, empty segment is created. Thus, the trace file always contains the most recent trace information. The first segment is never deleted, because it may contain relevant information about the initial state of the process, unless it ages out and gets purged. Rotation will happen between the remaining segments only.

Note that trace file segmentation will not occur when this parameter is set to a value less than 25 MB.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle AI Database Administrator's Guide* and *Oracle AI Database SQL Tuning Guide* for more information on setting this parameter

2.221 MAX_IDLE_BLOCKER_TIME

`MAX_IDLE_BLOCKER_TIME` specifies the maximum number of minutes that a blocking session can be idle. After that point, the session is automatically terminated.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	0 to the maximum integer. The value of 0 indicates that there is no limit.
Basic	No
Oracle RAC	Different instances can use different values.

A session is considered to be a blocking session when it is holding resources required by other sessions. For example:

- The session is holding a lock required by another session.
- The session is a parallel operation and its consumer group, PDB, or database has either reached its maximum parallel server limit or has queued parallel operations.
- The session's PDB or database instance is about to reach its `SESSIONS` or `PROCESSES` limit.

This parameter differs from the `MAX_IDLE_TIME` parameter in that `MAX_IDLE_TIME` applies to all sessions (blocking and non-blocking), whereas `MAX_IDLE_BLOCKING_TIME` applies only to blocking sessions. Therefore, in order for `MAX_IDLE_BLOCKING_TIME` to be effective, its limit must be less than the `MAX_IDLE_TIME` limit.

> **Note**
>
> This parameter does not have an effect on parallel query processes, nor on `SYS` user sessions.

> **See Also**
>
> "MAX_IDLE_TIME"

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.222 MAX_IDLE_TIME

`MAX_IDLE_TIME` specifies the maximum number of minutes that a session can be idle. After that point, the session is automatically terminated.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	0 to the maximum integer. The value of 0 indicates that there is no limit.
Basic	No
Oracle RAC	Different instances can use different values.

See Also

"MAX_IDLE_BLOCKER_TIME" to learn how to set a lower idle time limit for sessions that are holding resources required by other sessions

2.223 MAX_IOPS

`MAX_IOPS` enables you to set the maximum number of I/Os that can be issued per second on a per pluggable database (PDB) basis. This parameter is used to throttle PDB I/Os.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`0` to the maximum `Integer` value. A very low value (for example, under 100 I/Os per second) is not recommended.
Basic	No
Oracle RAC	Different values can be set on different instances.

DBWR I/Os, control file I/Os, password file I/Os and other critical I/Os are exempted from the rate limit set by this parameter, but their I/Os are accounted for while throttling. Because of these exemptions, the PDB's actual I/O rate may sometimes exceed the limit.

This feature is enabled for multitenant container database (CDB) only. The feature is not supported on Oracle Exadata.

This parameter can be set from inside a PDB. If the parameter is set in CDB$ROOT, all the PDBs in that CDB will inherit the parameter value from CDB$ROOT. This parameter cannot be set in a non-CDB environment.

Copyright © 2002, 2025, Oracle and/or its affiliates.

The default value of `0` means that no limits are set on the maximum number of I/Os that can be issued per second in a PDB.

If Oracle processes need to wait because of this IO rate limit, the wait event is resmgr: I/O rate limit.

See Also

- "MAX_MBPS"
- "resmgr: I/O rate limit"

Examples

This example shows how to use SQL statements to set a maximum of 3000 I/Os per second on a PDB named CDB1_PDB1:

```
alter session set container = cdb1_pdb1;
alter system set max_iops = 3000;
```

2.224 MAX_MBPS

`MAX_MBPS` enables you to set the maximum number of megabytes (MB) of I/Os issued per second on a per pluggable database (PDB) basis. This parameter is used to throttle PDB I/Os.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`0` to the maximum `Integer` value. A very low value (for example, under 25 MB per second) is not recommended.
Basic	No
Oracle RAC	Different values can be set on different instances.

DBWR I/Os, control file I/Os, password file I/Os and other critical I/Os are exempted from the throughput limit set by this parameter, but their I/Os are accounted for while throttling. Because of these exemptions, the PDB's actual I/O rate may sometimes exceed the limit.

This feature is enabled for multitenant container database (CDB) only. The feature is not supported on Oracle Exadata.

This parameter can be set from inside a PDB. If the parameter is set in CDB$ROOT, all the PDBs in that CDB will inherit the parameter value from CDB$ROOT. This parameter cannot be set in a non-CDB environment.

The default value of `0` means that no limits are set on the maximum number of megabytes (MB) of I/Os that can be issued per second in a PDB.

If Oracle processes need to wait because of this IO rate limit, the wait event is resmgr: I/O rate limit.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> - "MAX_IOPS"
> - "resmgr: I/O rate limit"

Examples

This example shows how to use SQL statements to set a maximum of 200 megabytes per second on a PDB named CDB1_PDB1:

```
alter session set container = cdb1_pdb1;
alter system set max_mbps = 200;
```

2.225 MAX_PDBS

MAX_PDBS allows you to limit the number of pluggable databases (PDBs) that can be created in a CDB or an application container.

Property	Description
Parameter type	Integer
Default value	Depends on the Oracle AI Database edition Possible values: 5, 254, or 4098
Modifiable	ALTER SYSTEM ... SID='*'
Modifiable in a PDB	No. However, this parameter can be modified in the application root of an application container.
Range of values	Minimum: 0 Maximum: The default value for the Oracle AI Database edition (5, 254, or 4098)
Basic	No
Oracle RAC	The same value must be used on all instances.

This parameter can only be set while connected to the CDB root or an application root.

This parameter applies to PDBs, application containers, and application PDBs. An application PDB is a PDB that resides in an application container.

This parameter does not apply to the PDB seed (PDB$SEED), application seeds, or application root clones.

> **Note**
>
> The maximum number of PDBs that you are allowed to create in a CDB depends on the licensing policy for your Oracle AI Database edition. To learn more, refer to the Oracle Multitenant information in the "Consolidation" table in *Oracle AI Database Licensing Information User Manual*.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.226 MAX_SAGA_DURATION

MAX_SAGA_DURATION specifies the maximum duration for a saga (in seconds).

If a saga exists for longer than the amount of time specified by this parameter, it is considered incomplete and is eligible for termination.

Property	Description
Parameter type	Integer
Default value	86400 seconds (equivalent to 24 hours)
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	1 to 2^{31} - 1
Basic	No
Oracle RAC	Multiple instances must have the same value.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

2.227 MAX_SHARED_SERVERS

MAX_SHARED_SERVERS specifies the maximum number of shared server processes allowed to be running simultaneously. Setting this parameter enables you to reserve process slots for other processes, such as dedicated servers.

Property	Description
Parameter type	Integer
Default value	There is no default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	If MAX_SHARED_SERVERS is specified, then it should be greater than or equal to SHARED_SERVERS and less than PROCESSES.
Basic	No

When you want to reduce the range of shared servers, you can reduce MAX_SHARED_SERVERS before reducing SHARED_SERVERS. If MAX_SHARED_SERVERS is lower than SHARED_SERVERS, then the number of shared servers will not vary but will remain at the constant level specified by SHARED_SERVERS. If MAX_SHARED_SERVERS is not specified, then a shared server process may be spawned as long as the number of free process slots is greater than 1 / 8 the maximum number of processes, or 2 if PROCESSES is less than 24.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- "SHARED_SERVERS"
- "PROCESSES"
- *Oracle AI Database Administrator's Guide* for more information on setting this parameter
- *Oracle AI Database Concepts* for information on processes
- Your operating system-specific Oracle documentation for the default value and range of values

2.228 MAX_STRING_SIZE

`MAX_STRING_SIZE` controls the maximum size of `VARCHAR2`, `NVARCHAR2`, and `RAW` data types in SQL.

Property	Description
Parameter type	String
Syntax	`MAX_STRING_SIZE = { STANDARD | EXTENDED }`
Default value	`STANDARD`
Modifiable	`ALTER SYSTEM` ... SID='*'[1]
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances must use the same value.

1 Use ALTER SYSTEM only when the database is in UPGRADE mode, and run the utl32k.sql script afterward, as explained in this section.

`STANDARD` means that the length limits for Oracle Database releases prior to Oracle Database 12*c* apply (for example, 4000 bytes for `VARCHAR2` and `NVARCHAR2`, and 2000 bytes for `RAW`).

`EXTENDED` means that the 32767 byte limit introduced in Oracle Database 12*c* applies.

The `COMPATIBLE` initialization parameter must be set to `12.0.0.0` or higher to set `MAX_STRING_SIZE = EXTENDED`.

You can change the value of `MAX_STRING_SIZE` from `STANDARD` to `EXTENDED`. However, you cannot change the value of `MAX_STRING_SIZE` from `EXTENDED` to `STANDARD`.

By setting `MAX_STRING_SIZE = EXTENDED`, users are taking an explicit action that could introduce application incompatibility in their database. Applications that do not want to use the expanded data types can be rewritten for compatibility with either setting; for example, these applications could use explicit CASTs to fix the length of `VARCHAR2` expressions during `CREATE TABLE AS SELECT`.

Altering `MAX_STRING_SIZE` will update database objects and possibly invalidate them, as follows:

- Tables with virtual columns will be updated with new data type metadata for virtual columns of `VARCHAR2(4000)`, 4000-byte `NVARCHAR2`, or `RAW(2000)` type.

Copyright © 2002, 2025, Oracle and/or its affiliates.

  - Functional indexes will become unusable if a change to their associated virtual columns causes the index key to exceed index key length limits. Attempts to rebuild such indexes will fail with `ORA-01450: maximum key length exceeded`.

- Views will be invalidated if they contain `VARCHAR2(4000)`, 4000-byte `NVARCHAR2`, or `RAW(2000)` typed expression columns.
- Materialized views will be updated with new metadata `VARCHAR2(4000)`, 4000-byte `NVARCHAR2`, and `RAW(2000)` typed expression columns

Increasing the Maximum Size of VARCHAR2, NVARCHAR2, and RAW Columns in a CDB

To increase the maximum size of `VARCHAR2`, `NVARCHAR2`, and `RAW` columns in a CDB and in all the PDBs in the CDB:

1. Connect to the CDB AS SYSDBA.
2. In the root, change the setting of `MAX_STRING_SIZE` to `EXTENDED`:

```
ALTER SESSION SET CONTAINER=CDB$ROOT;
ALTER SYSTEM SET max_string_size=extended SCOPE=SPFILE;
```

> **Note**
>
> The root continues to use `STANDARD` semantics even after `MAX_STRING_SIZE` is set to `EXTENDED`. The reason for setting `MAX_STRING_SIZE` to `EXTENDED` in the root is so all the PDBs in the CDB can inherit the `EXTENDED` setting from the root.

3. Shut down the CDB.
4. Restart the CDB in UPGRADE mode.

```
startup upgrade;
```

5. Use the `catcon.pl` script to run the `rdbms/admin/utl32k.sql` script in the root and in all the PDBs in the CDB to increase the maximum size of the `VARCHAR2`, `NVARCHAR2`, and `RAW` columns. The --force_pdb_mode 'UPGRADE' option is used to ensure that all PDBs, including application root clones, are opened in migrate mode. Enter the SYS password when prompted:

```
$ cd $ORACLE_HOME/rdbms/admin
$ mkdir /scratch/mydir/utl32k_cdb_pdbs_output
$ $ORACLE_HOME/perl/bin/perl $ORACLE_HOME/rdbms/admin/catcon.pl -u SYS --
force_pdb_mode 'UPGRADE' -d $ORACLE_HOME/rdbms/admin -l '/scratch/mydir/
utl32k_cdb_pdbs_output' -b
utl32k_cdb_pdbs_output utl32k.sql
catcon: ALL catcon-related output will be written to [/scratch/mydir/
utl32k_cdb_pdbs_output/utl32k_cdb_pdbs_output_catcon_23172.lst]
catcon: See [/scratch/mydir/utl32k_cdb_pdbs_output/
utl32k_cdb_pdbs_output*.log] files for output generated by scripts
catcon: See [/scratch/mydir/utl32k_cdb_pdbs_output/
utl32k_cdb_pdbs_output_*.lst] files for spool files, if any
Enter Password:
catcon.pl: completed successfully
$
```

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> The `utl32k.sql` script increases the maximum size of the `VARCHAR2`, `NVARCHAR2`, and `RAW` columns for the views where this is required. The script does not increase the maximum size of the `VARCHAR2`, `NVARCHAR2`, and `RAW` columns in some views because of the way the SQL for those views is written.

6. Connect to the CDB AS SYSDBA and shut down the database.
7. Restart the CDB in NORMAL mode.

   ```
   startup;
   ```

8. Use the `catcon.pl` script to run the `rdbms/admin/utlrp.sql` script to recompile invalid objects in the root and in all the PDBs in the CDB. The --force_pdb_mode 'READ WRITE' option is used to ensure that all the PDBs (including application root clones) are opened in read write mode. Enter the SYS password when prompted:

   ```
   $ cd $ORACLE_HOME/rdbms/admin
   $ mkdir /scratch/mydir/utlrp_cdb_pdbs_output
   $ $ORACLE_HOME/perl/bin/perl $ORACLE_HOME/rdbms/admin/catcon.pl -u SYS --
   force_pdb_mode 'READ WRITE' -d $ORACLE_HOME/rdbms/admin -l '/scratch/mydir/
   utlrp_cdb_pdbs_output' -b utlrp_cdb_pdbs_output utlrp.sql
   catcon: ALL catcon-related output will be written to [/scratch/mydir/
   utlrp_cdb_pdbs_output/utlrp_cdb_pdbs_output_catcon_24271.lst]
   catcon: See [/scratch/mydir/utlrp_cdb_pdbs_output/
   utlrp_cdb_pdbs_output*.log] files for output generated by scripts
   catcon: See [/scratch/mydir/utlrp_cdb_pdbs_output/
   utlrp_cdb_pdbs_output_*.lst] files for spool files, if any
   Enter Password:
   catcon.pl: completed successfully
   $
   ```

> **See Also**
>
> *Oracle Multitenant Administrator's Guide* for information about using the `catcon.pl` script to run Oracle-supplied scripts in a CDB and PDBs.

Increasing the Maximum Size of VARCHAR2, NVARCHAR2, and RAW Columns in a PDB

To increase the maximum size of `VARCHAR2`, `NVARCHAR2`, and `RAW` columns in a PDB:

1. Shut down the PDB.
2. Reopen the PDB in migrate mode.

> **Note**
>
> The following SQL statement can be used to reopen a PDB in migrate mode when the current container is the PDB:
>
> `ALTER PLUGGABLE DATABASE` *pdb-name* `OPEN UPGRADE;`

Copyright © 2002, 2025, Oracle and/or its affiliates.

3. Change the setting of MAX_STRING_SIZE in the PDB to EXTENDED.
4. Run the rdbms/admin/utl32k.sql script in the PDB. You must be connected AS SYSDBA to run the utl32k.sql script.
5. Reopen the PDB in NORMAL mode.

> **Note**
>
> The utl32k.sql script increases the maximum size of the VARCHAR2, NVARCHAR2, and RAW columns for the views where this is required. The script does not increase the maximum size of the VARCHAR2, NVARCHAR2, and RAW columns in some views because of the way the SQL for those views is written.

6. Run the rdbms/admin/utlrp.sql script in the PDB to recompile invalid objects. You must be connected AS SYSDBA to run the script.

> **See Also**
>
> *Oracle Multitenant Administrator's Guide* for more information about modifying the open mode of PDBs.

Increasing the Maximum Size of VARCHAR2, NVARCHAR2, and RAW Columns in an Oracle RAC Database

To increase the maximum size of VARCHAR2, NVARCHAR2, and RAW columns in an Oracle RAC database:

1. Shut down all of the Oracle RAC database instances, except one.
2. Restart the Oracle RAC database instance in UPGRADE mode.
3. Change the setting of MAX_STRING_SIZE to EXTENDED.
4. Run the rdbms/admin/utl32k.sql script in the Oracle RAC database instance. You must be connected AS SYSDBA to run the script.
5. Restart all Oracle RAC database instances in NORMAL mode.

> **Note**
>
> The utl32k.sql script increases the maximum size of the VARCHAR2, NVARCHAR2, and RAW columns for the views where this is required. The script does not increase the maximum size of the VARCHAR2, NVARCHAR2, and RAW columns in some views because of the way the SQL for those views is written.

6. Run the rdbms/admin/utlrp.sql script to recompile invalid objects. You must be connected AS SYSDBA to run the script.

Increasing the Maximum Size of VARCHAR2, NVARCHAR2, and RAW Columns in an Oracle Data Guard Logical Standby Database

To increase the maximum size of VARCHAR2, NVARCHAR2, and RAW columns in an Oracle Data Guard logical standby database:

Copyright © 2002, 2025, Oracle and/or its affiliates.

1. Shut down the Oracle Data Guard primary database and logical standby database.
2. Restart the primary database and logical standby database in `UPGRADE` mode.
3. Change the setting of `MAX_STRING_SIZE` to `EXTENDED` on the primary database and logical standby database.
4. Run the `rdbms/admin/utl32k.sql` script on both the primary database and the logical standby database. You must be connected `AS SYSDBA` to run the script.
5. Restart the primary database and logical standby database in `NORMAL` mode.

> **Note**
>
> The `utl32k.sql` script increases the maximum size of the `VARCHAR2`, `NVARCHAR2`, and `RAW` columns for the views where this is required. The script does not increase the maximum size of the `VARCHAR2`, `NVARCHAR2`, and `RAW` columns in some views because of the way the SQL for those views is written.

6. Run the `rdbms/admin/utlrp.sql` script on the primary database and logical standby database to recompile invalid objects. You must be connected `AS SYSDBA` to run the script.
7. Restart SQL Apply.

> *Oracle AI Database Globalization Support Guide* for more information about the `MAX_STRING_SIZE` parameter

2.229 MEMOPTIMIZE_POOL_SIZE

`MEMOPTIMIZE_POOL_SIZE` sets the size of the memoptimize pool, a memory area in the system global area (SGA) used by the Memoptimized Rowstore.

Property	Description
Parameter type	Big integer
Syntax	`MEMOPTIMIZE_POOL_SIZE = integer [K | M | G]`
Default value	0
Modifiable	No
Modifiable in a PDB	No
Range of values	0 to no maximum
Basic	No
Oracle RAC	Different values can be used on different instances.

The Memoptimized Rowstore improves the data query performance of applications, such as Internet of Things (IoT), that frequently query tables based on primary key values.

The Memoptimized Rowstore provides the capability of fast lookup of data for the tables that are mainly queried based on primary key columns.

Copyright © 2002, 2025, Oracle and/or its affiliates.

This parameter specifies an integer value to indicate the amount of SGA to use for allocating the following structures for the memoptimize pool:

- The size of the buffer cache region: This is the total number of blocks for all `MEMOPTIMIZE FOR READ` tables.
- The size of the hash index segmented data structure pointing to the special blocks of `MEMOPTIMIZE FOR READ` tables.

Calculate the buffer cache requirement for the table being considered for `MEMOPTIMIZE FOR READ`, and include an additional 25% memory requirement for the hash index segmented data structure.

These structures are allocated from SGA at instance startup.

The value specified for this parameter counts toward `SGA_TARGET`. For example, if you set `SGA_TARGET` to 10 GB and you set `MEMOPTIMIZE_POOL_SIZE` to 2 GB, then 20% of the `SGA_TARGET` setting is allocated to the memoptimize pool.

Unlike other SGA components such as the buffer cache and shared pool, the memoptimize pool size is not controlled by automatic memory management. The database does not automatically shrink the memoptimize pool when the buffer cache or shared pool requires more memory, or increase the memoptimize pool when it runs out of space. You can only increase the size of the memoptimize pool by manually adjusting the `MEMOPTIMIZE_POOL_SIZE` initialization parameter.

See Also

Oracle AI Database Performance Tuning Guide for more information about the Memoptimized Rowstore and the memoptimize pool.

2.230 MEMOPTIMIZE_WRITE_AREA_SIZE

`MEMOPTIMIZE_WRITE_AREA_SIZE` specifies the size of the ingest buffer in the large pool of the SGA. The ingest buffer is where Memoptimized Rowstore fast ingest inserts are buffered.

Property	Description
Parameter type	Big integer
Syntax	`MEMOPTIMIZE_WRITE_AREA_SIZE = integer [K | M | G]`
Default value	`0`
Modifiable	`ALTER SYSTEM ... SID='*'`
Modifiable in a PDB	No
Range of values	`0` to operating system-dependent
Basic	No
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

2.231 MEMOPTIMIZE_WRITES

`MEMOPTIMIZE_WRITES` allows you to instruct the database to always use fast ingest when inserting data into tables enabled for Memoptimized Rowstore fast ingest.

Property	Description
Parameter type	String
Syntax	`MEMOPTIMIZE_WRITES = { HINT | ON }`
Default value	`HINT`
Modifiable	`ALTER SESSION`
Modifiable in a PDB	No
Basic	No

The fast ingest feature of Memoptimized Rowstore was introduced in Oracle Database 19c. At that time, the only way to direct the database to use fast ingest was to specify the `MEMOPTIMIZE_WRITE` hint in the `INSERT` statement.

Starting with Oracle AI Database 26ai, you can also direct the database to use fast ingest by setting the `MEMOPTIMIZE_WRITES` initialization parameter as follows:

- `ON` - When inserting data into tables enabled for fast ingest, the fast ingest feature is always used, regardless of whether the `MEMOPTIMIZE_WRITE` hint is specified in the `INSERT` statement.
- `HINT` - When inserting data into tables enabled for fast ingest, the fast ingest feature is used only when the `MEMOPTIMIZE_WRITE` hint is specified in the `INSERT` statement.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

2.232 MEMORY_MAX_SIZE

`MEMORY_MAX_SIZE` specifies the maximum value to which a DBA can set the `MEMORY_SIZE` initialization parameter.

Property	Description
Parameter type	Big integer
Syntax	`MEMORY_MAX_SIZE = integer [K | M | G]`
Default value	The value of the `MEMORY_SIZE` initialization parameter
Modifiable	No
Modifiable in a PDB	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Range of values	MEMORY_SIZE to the physical memory size available to the Oracle database
Basic	No
Oracle RAC	Different instances can use different values.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

> **See Also**
>
> "MEMORY_SIZE" for more information about how the settings of MEMORY_MAX_SIZE and MEMORY_SIZE affect each other

2.233 MEMORY_MAX_TARGET

MEMORY_MAX_TARGET specifies the maximum value to which a DBA can set the MEMORY_TARGET initialization parameter.

Property	Description
Parameter type	Big integer
Syntax	MEMORY_MAX_TARGET = *integer* [K | M | G]
Default value	0
Modifiable	No
Modifiable in a PDB	No
Range of values	0 to the physical memory size available to the Oracle AI Database
Basic	No

> **Note**
>
> On Linux platforms only, Oracle recommends against explicitly setting values for MEMORY_TARGET and MEMORY_MAX_TARGET in the initialization parameter file at the time of instance startup. Doing so may result in suboptimal small page allocation in the SGA. Furthermore, if the USE_LARGE_PAGES parameter is set to ONLY and you attempt to set values for MEMORY_TARGET and MEMORY_MAX_TARGET, the instance will fail to start.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- *Oracle AI Database Administrator's Guide* for more information about managing memory
- "MEMORY_TARGET"
- "USE_LARGE_PAGES"

2.234 MEMORY_SIZE

MEMORY_SIZE specifies the size of instance-wide usable memory.

Property	Description
Parameter type	Big integer
Syntax	MEMORY_SIZE = *integer* [K | M | G]
Default value	0
Modifiable	You can use ALTER SYSTEM to increase or decrease the value of this parameter. However, the value of this parameter must always be greater than or equal to its value at instance startup.
Modifiable in a PDB	No
Range of values	1536 MB to MEMORY_MAX_SIZE
Basic	No
Oracle RAC	Different instances can use different values.

In a text-based initialization parameter file, if you omit MEMORY_MAX_SIZE and include a value for MEMORY_SIZE, then the database automatically sets MEMORY_MAX_SIZE to the value of MEMORY_SIZE. If you omit the line for MEMORY_SIZE and include a value for MEMORY_MAX_SIZE, the MEMORY_SIZE parameter defaults to 0. After instance startup, you can dynamically change MEMORY_SIZE to a nonzero value, provided that it does not exceed the value of MEMORY_MAX_SIZE.

Based on the value of MEMORY_SIZE, the values for the SGA and PGA parameters SGA_TARGET and PGA_AGGREGATE_LIMIT will be calculated internally for the instance. The sizing will also depend on the large page settings.

When MEMORY_SIZE is set to a nonzero value, the CDB-level values for the following SGA and PGA parameters will be ignored by the database: SGA_MAX_SIZE, PGA_AGGREGATE_LIMIT, and SGA_TARGET. If you assign a value to any of these parameters at the time of instance startup, the database will not report an error, but the parameter value will be ignored. If you dynamically modify any of these parameters, an error will be reported.

When MEMORY_SIZE is set to a nonzero value, the MEMORY_MAX_TARGET and MEMORY_TARGET parameters should be set to 0. If you attempt to set either of these parameters to a nonzero value, the request will be ignored, and a warning will be written to the alert log at startup.

Note

This parameter is available starting with Oracle AI Database 26ai.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> "MEMORY_MAX_SIZE"

2.235 MEMORY_TARGET

MEMORY_TARGET specifies the Oracle system-wide usable memory.

The database tunes memory to the MEMORY_TARGET value, reducing or enlarging the SGA and PGA as needed.

Property	Description
Parameter type	Big integer
Syntax	MEMORY_TARGET = *integer* [K | M | G]
Default value	0 (SGA autotuning is disabled for DEFERRED mode autotuning requests, but allowed for IMMEDIATE mode autotuning requests)
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	152 MB to MEMORY_MAX_TARGET
Basic	No

MEMORY_TARGET should be set higher than or equal to the sum of the current sizes of the SGA and PGA.

In a text-based initialization parameter file, if you omit MEMORY_MAX_TARGET and include a value for MEMORY_TARGET, then the database automatically sets MEMORY_MAX_TARGET to the value of MEMORY_TARGET. If you omit the line for MEMORY_TARGET and include a value for MEMORY_MAX_TARGET, the MEMORY_TARGET parameter defaults to zero. After startup, you can then dynamically change MEMORY_TARGET to a nonzero value, provided that it does not exceed the value of MEMORY_MAX_TARGET.

Total memory usage can grow beyond the value of MEMORY_TARGET. For example, memory is allocated to PL/SQL tables and varrays regardless of the value of MEMORY_TARGET as long as memory is available at the operating system level.

In the **Default value** field, IMMEDIATE mode autotuning requests are necessary to avoid ORA-04031 errors. The DEFERRED and IMMEDIATE modes are reflected in the OPER_MODE column of the V$MEMORY_RESIZE_OPS view.

> **Note**
>
> On Linux platforms only, Oracle recommends against explicitly setting values for MEMORY_TARGET and MEMORY_MAX_TARGET in the initialization parameter file at the time of instance startup. Doing so may result in suboptimal small page allocation in the SGA. Furthermore, if the USE_LARGE_PAGES parameter is set to ONLY and you attempt to set values for MEMORY_TARGET and MEMORY_MAX_TARGET, the instance will fail to start.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> The default value of SGA_MAX_SIZE depends on the values of MEMORY_TARGET and MEMORY_MAX_TARGET.

> **See Also**
>
> - "MEMORY_MAX_TARGET"
> - "USE_LARGE_PAGES"

2.236 MFA_DUO_API_HOST

MFA_DUO_API_HOST specifies the host name of the Cisco Duo security API to be used for multi-factor authentication using Cisco Duo push notifications.

Property	Description
Parameter type	String
Syntax	MFA_DUO_API_HOST = *string*
Default value	None
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances can have different values.

This parameter is configured at the PDB level. Setting this parameter allows users in a PDB to be registered for multi-factor authentication using Cisco Duo push notifications.

Set this parameter to a valid Duo API host. For example:

```
ALTER SYSTEM SET MFA_DUO_API_HOST = "api-855fd6a0.duosecurity.com";
```

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai, Release Update 23.9.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle AI Database Security Guide* for more information about this parameter

2.237 MFA_OMA_IAM_DOMAIN_URL

`MFA_OMA_IAM_DOMAIN_URL` specifies the OCI IAM domain URL for multi-factor authentication using Oracle Mobile Authenticator (OMA) push notifications.

Property	Description
Parameter type	String
Syntax	`MFA_OMA_IAM_DOMAIN_URL = string`
Default value	None
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances can have different values.

This parameter is configured at the PDB level. Setting this parameter allows users in a PDB to be registered for multi-factor authentication using OMA push notifications.

Set this parameter to a valid OCI IAM domain URL. For example:

```
ALTER SYSTEM SET MFA_OMA_IAM_DOMAIN_URL =
   "https://idcs-cbcb9aaca84945e78466ab5b2e576360.identity.oraclecloud.com";
```

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai, Release Update 23.9.

> **See Also**
>
> *Oracle AI Database Security Guide* for more information about this parameter

2.238 MFA_SENDER_EMAIL_DISPLAYNAME

`MFA_SENDER_EMAIL_DISPLAYNAME` specifies the `From:` display name for emails sent to users when configuring multi-factor authentication using Oracle Mobile Authenticator (OMA) or Cisco Duo push notifications.

Property	Description
Parameter type	String

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Syntax	`MFA_SENDER_EMAIL_DISPLAYNAME = string`
Default value	None
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances can have different values.

This parameter is configured at the PDB level. When adding OMA or Duo as an additional authentication method for a user in a PDB, the user is sent an email with instructions on how to register a device. This parameter specifies the display name used in those emails.

Set this parameter to the desired email display name. For example:

```
ALTER SYSTEM SET MFA_SENDER_EMAIL_DISPLAYNAME = "Database MFA Registration";
```

Note

This parameter is available starting with Oracle AI Database 26ai, Release Update 23.9.

See Also

Oracle AI Database Security Guide for more information about this parameter

2.239 MFA_SENDER_EMAIL_ID

`MFA_SENDER_EMAIL_ID` specifies the `From:` email ID for emails sent to users when configuring multi-factor authentication using Oracle Mobile Authenticator (OMA) or Cisco Duo push notifications.

Property	Description
Parameter type	String
Syntax	`MFA_SENDER_EMAIL_ID = string`
Default value	None
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances can have different values.

This parameter is configured at the PDB level. When adding OMA or Duo as an additional authentication method for a user in a PDB, the user is sent an email with instructions on how to register a device. This parameter specifies the email ID that is used in those emails.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Set this parameter to the desired email ID. For example:

```
ALTER SYSTEM SET MFA_SENDER_EMAIL_ID =
   "database_mfa_registration@example.com";
```

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai, Release Update 23.9.

> **See Also**
>
> *Oracle AI Database Security Guide* for more information about this parameter

2.240 MFA_SMTP_HOST

`MFA_SMTP_HOST` specifies the SMTP host for emails sent to users when configuring multi-factor authentication using Oracle Mobile Authenticator (OMA) or Cisco Duo push notifications.

Property	Description
Parameter type	String
Syntax	`MFA_SMTP_HOST = string`
Default value	None
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances can have different values.

This parameter is configured at the PDB level. When adding OMA or Duo as an additional authentication method for a user in a PDB, the user is sent an email with instructions on how to register a device. This parameter specifies the SMTP host name for those emails.

Set this parameter to a valid SMTP host name. For example:

```
ALTER SYSTEM SET MFA_SMTP_HOST =
   "smtp.email.us-sanjose-1.oci.oraclecloud.com";
```

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai, Release Update 23.9.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle AI Database Security Guide* for more information about this parameter

2.241 MFA_SMTP_PORT

`MFA_SMTP_PORT` specifies the SMTP port for emails sent to users when configuring multi-factor authentication using Oracle Mobile Authenticator (OMA) or Cisco Duo push notifications.

Property	Description
Parameter type	Integer
Default value	587
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	25 to 587
Basic	No
Oracle RAC	Multiple instances can have different values.

This parameter is configured at the PDB level. When adding OMA or Duo as an additional authentication method for a user in a PDB, the user is sent an email with instructions on how to register a device. This parameter specifies the SMTP port for those emails.

Set this parameter to to a valid SMTP port. For example:

```
ALTER SYSTEM SET MFA_SMTP_PORT = 587;
```

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai, Release Update 23.9.

> **See Also**
>
> *Oracle AI Database Security Guide* for more information about this parameter

2.242 MIN_AUTH_SERVERS

`MIN_AUTH_SERVERS` specifies the minimum number of authentication servers in the authentication pool. This pool authenticates user connections when client applications connect to Database Resident Connection Pooling (DRCP).

Property	Description
Parameter type	Integer

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Default value	If the ENABLE_PER_PDB_DRCP initialization parameter is set to `true`, then the default value for MIN_AUTH_SERVERS is `0` in each PDB. If the ENABLE_PER_PDB_DRCP initialization parameter is set to `false`, then the default value for MIN_AUTH_SERVERS is `1` in the CDB root.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes, according to the following guidelines: • When the ENABLE_PER_PDB_DRCP initialization parameter is set to `true`, MIN_AUTH_SERVERS can be modified only at the PDB level; it cannot be modified for the CDB root. • When the ENABLE_PER_PDB_DRCP initialization parameter is set to `false`, MIN_AUTH_SERVERS can be modified only for the CDB root; it cannot be modified at the PDB level.
Range of values	Minimum: `0` Maximum: MAX_AUTH_SERVERS or PROCESSES, whichever is the lesser value
Basic	No
Oracle RAC	Different instances can use different values.

The value of this parameter must be less than or equal to the values of both the MAX_AUTH_SERVERS initialization parameter and the PROCESSES initialization parameter. The MAX_AUTH_SERVERS parameter specifies the maximum number of authentication servers in the authentication pool. The PROCESSES parameter specifies the maximum number of operating system user processes that can simultaneously connect to Oracle.

See Also

- *Oracle AI Database Administrator's Guide* for more information about setting this parameter
- "ENABLE_PER_PDB_DRCP"
- "MAX_AUTH_SERVERS"
- "PROCESSES"

2.243 MLE_PROG_LANGUAGES

Use MLE_PROG_LANGUAGES to enable or disable Oracle Database Multilingual Engine (MLE) completely, or selectively enable certain languages.

Property	Description
Parameter type	String
Syntax	MLE_PROG_LANGUAGES = { ALL | JAVASCRIPT | OFF }
Default value	ALL
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Oracle RAC	Multiple instances must have the same value.

Values:

- `ALL` - Enable MLE completely.
- `JAVASCRIPT` - Enable MLE for JavaScript only. Note that MLE currently supports JavaScript as its sole language. Therefore, the `JAVASCRIPT` setting has the same effect as the `ALL` setting.
- `OFF` - Disable MLE completely.

  If MLE is disabled completely at the CDB level, it cannot be enabled at the PDB or session level. Similarly, if MLE is disabled completely at the PDB level, it cannot be enabled at the session level.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

> **See Also**
>
> *Oracle AI Database JavaScript Developer's Guide* for more information about this parameter

2.244 MULTISHARD_QUERY_DATA_CONSISTENCY

`MULTISHARD_QUERY_DATA_CONSISTENCY` enables you to specify a data consistency setting for multi-shard queries.

Property	Description
Parameter type	String
Syntax	`MULTISHARD_QUERY_DATA_CONSISTENCY = { STRONG | SHARD_LOCAL | DELAYED_STANDBY_ALLOWED | STANDBY_ONLY | STANDBY_PREFERRED | LOCAL_STANDBY_ONLY | LOCAL_STANDBY_PREFERRED }`
Default value	`STRONG`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can use different values.

You can use `MULTISHARD_QUERY_DATA_CONSISTENCY` to avoid the cost of SCN synchronization when executing multi-shard queries across shards, which can be globally distributed.

`MULTISHARD_QUERY_DATA_CONSISTENCY` can be set at the system level or the session level.

The values that can be set for `MULTISHARD_QUERY_DATA_CONSISTENCY` are:

Copyright © 2002, 2025, Oracle and/or its affiliates.

- `STRONG`: SCN synchronization is performed across all shards, and data is consistent across all shards. This setting provides global consistent read capability. This is the default value.
- `SHARD_LOCAL`: SCN synchronization is not performed across all shards. Data is consistent within each shard. This setting provides the most current data.
- `DELAYED_STANDBY_ALLOWED`: SCN synchronization is not performed across all shards. Data is consistent within each shard. This setting allows data to be fetched from Data Guard standby databases when possible (for example, depending on load balancing), and may return stale data from standby databases.
- `STANDBY_ONLY`: SCN synchronization is not performed across all shards. Data is consistent within each shard. Data is fetched only from standbys. If there are multiple standbys, chunks are distributed equally among them. If no standbys exist or none are alive, an error is raised.
- `STANDBY_PREFERRED`: SCN synchronization is not performed across all shards. Data is consistent within each shard. Data is fetched from the standbys when they are available, that is, the primary shard is excluded. If there are multiple standbys, chunks are distributed equally among them. If there is no standby to serve the request, data is fetched from the primary shard.
- `LOCAL_STANDBY_ONLY`: SCN synchronization is not performed across all shards. Data is consistent within each shard. This setting supports region affinity for cross-shard queries. It allows data to be fetched from standby shards in the same region as the coordinator running the query. If there are no standby shards available, an error is raised.
- `LOCAL_STANDBY_PREFERRED`: This setting is similar to the `LOCAL_STANDBY_ONLY` setting, except the database attempts to find a shard from which to fetch data in the following order:
  1. Standby shards in the same region; chunks distributed equally among shards
  2. Primary shard in the same region
  3. Standby shards in the buddy region; chunks distributed equally among shards
  4. Primary shard in the buddy region
  5. If no shards are available, raise an error.

> **Note**
>
> The `LOCAL_STANDBY_ONLY` and `LOCAL_STANDBY_PREFERRED` settings are available starting with Oracle AI Database 26ai, Release Update 23.9.

> **See Also**
>
> *Oracle Globally Distributed Database Guide* for more information about specifying consistency levels in a multi-shard query

2.245 NLS_CALENDAR

`NLS_CALENDAR` specifies which calendar system Oracle uses.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	String
Syntax	`NLS_CALENDAR = "calendar_system"`
Default value	None, implies `GREGORIAN`
Modifiable	`ALTER SESSION`
Modifiable in a PDB	Yes
Range of values	Any valid calendar format name
Basic	No

`NLS_CALENDAR` can have one of the following values:

- `Arabic Hijrah`
- `English Hijrah`
- `Ethiopian`
- `GREGORIAN`
- `Japanese Imperial`
- `Persian`
- `ROC Official` (Republic of China)
- `Thai Buddha`

For example, suppose `NLS_CALENDAR` is set to `English Hijrah`. The date format is `DD Month YYYY`. If the date is March 7, 2025, then the `SYSDATE` is displayed as follows:

```
SELECT SYSDATE FROM DUAL;
SYSDATE
--------------------------
07 Ramadan            1446
```

> **Note**
>
> The value of the initialization parameter `NLS_CALENDER` is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. If the initialization parameter is not specified, the initial session value becomes `GREGORIAN`. This initial value is overridden by a client-side value if the client is OCI-based and the `NLS_LANG` client setting (environment variable) is defined.

> **See Also**
>
> *Oracle AI Database Globalization Support Guide* for a listing of available calendar systems

2.246 NLS_COMP

`NLS_COMP` specifies the collation behavior of the database session.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	String
Syntax	`NLS_COMP = { BINARY | LINGUISTIC | ANSI }`
Default value	`BINARY`
Modifiable	`ALTER SESSION`
Modifiable in a PDB	Yes
Basic	No

Values

- `BINARY`

  Normally, comparisons in the `WHERE` clause and in PL/SQL blocks is binary unless you specify the `NLSSORT` function.

- `LINGUISTIC`

  Comparisons for all SQL operations in the `WHERE` clause and in PL/SQL blocks should use the linguistic sort specified in the `NLS_SORT` parameter. To improve the performance, you can also define a linguistic index on the column for which you want linguistic comparisons.

- `ANSI`

  A setting of `ANSI` is for backward compatibility; in general, you should set `NLS_COMP` to `LINGUISTIC`

> **Note**
>
> Unless you explicitly set the value for `NLS_COMP` in your initialization parameter file, a default value of NULL is shown in the following views: `V$PARAMETER`, `V$SYSTEM_PARAMETER`, `V$PARAMETER2`, `V$SYSTEM_PARAMETER2`, and `NLS_INSTANCE_PARAMETERS`. However, the actual default value, and behavior, is `BINARY`. Note that you cannot change the default to NULL, because NULL is not among the valid values.

Examples

See *Oracle AI Database Globalization Support Guide* for examples of using this parameter.

> **Note**
>
> The value of this initialization parameter `NLS_COMP` is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the `NLS_LANG` client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.247 NLS_CURRENCY

NLS_CURRENCY specifies the string to use as the local currency symbol for the L number format element. The default value of this parameter is determined by NLS_TERRITORY.

Property	Description
Parameter type	String
Syntax	NLS_CURRENCY = *currency_symbol*
Default value	Derived from NLS_TERRITORY
Modifiable	ALTER SESSION
Modifiable in a PDB	Yes
Range of values	Any valid character string, with a maximum of 10 bytes (not including null)
Basic	No

Note

The value of this initialization parameter NLS_CURRENCY is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the NLS_LANG client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

See Also

- *Oracle AI Database Globalization Support Guide* for more information about this parameter
- *Oracle AI Database SQL Language Reference* for information on number format elements

2.248 NLS_DATE_FORMAT

NLS_DATE_FORMAT specifies the default datetime format model to use with the TO_CHAR and TO_DATE functions. The default value of this parameter is determined by NLS_TERRITORY.

Property	Description
Parameter type	String
Syntax	NLS_DATE_FORMAT = "*format*"
Default value	Derived from NLS_TERRITORY
Modifiable	ALTER SESSION
Modifiable in a PDB	Yes
Range of values	Any valid datetime format model

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Basic	No

The value of this parameter can be any valid datetime format model, and the value must be surrounded by double quotation marks. For example:

```
NLS_DATE_FORMAT = "MM/DD/YYYY"
```

> **Note**
>
> The value of this initialization parameter NLS_DATE_FORMAT is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the NLS_LANG client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

> **See Also**
>
> - *Oracle AI Database SQL Language Reference* for more information on datetime format models
> - *Oracle AI Database Globalization Support Guide* for more information about this parameter

2.249 NLS_DATE_LANGUAGE

NLS_DATE_LANGUAGE specifies the language to use for the spelling of day and month names and date abbreviations (a.m., p.m., AD, BC) returned by the TO_DATE and TO_CHAR functions.

Property	Description
Parameter type	String
Syntax	NLS_DATE_LANGUAGE = *language*
Default value	Derived from NLS_LANGUAGE
Modifiable	ALTER SESSION
Modifiable in a PDB	Yes
Range of values	Any valid NLS_LANGUAGE value
Basic	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> The value of this initialization parameter `NLS_DATE_LANGUAGE` is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the `NLS_LANG` client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

> **See Also**
>
> - *Oracle AI Database Globalization Support Guide* for more information about this parameter
> - *Oracle AI Database SQL Language Reference* for information on the `TO_DATE` function.
> - *Oracle AI Database SQL Language Reference* for information on the `TO_CHAR` function.

2.250 NLS_DUAL_CURRENCY

`NLS_DUAL_CURRENCY` specifies the dual currency symbol (such as "Euro") for the territory. The default is the dual currency symbol defined in the territory of your current language environment.

Property	Description
Parameter type	String
Syntax	`NLS_DUAL_CURRENCY = currency_symbol`
Default value	Derived from `NLS_TERRITORY`
Modifiable	`ALTER SESSION`
Modifiable in a PDB	Yes
Range of values	Any valid format name up to 10 characters
Basic	No

> **Note**
>
> The value of this initialization parameter `NLS_DUAL_CURRENCY` is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the `NLS_LANG` client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle AI Database Globalization Support Guide* for more information about this parameter

2.251 NLS_ISO_CURRENCY

`NLS_ISO_CURRENCY` determines the string to use as the international currency symbol corresponding to the C number format element in a call to the `TO_CHAR` function.

Property	Description
Parameter type	String
Syntax	`NLS_ISO_CURRENCY = territory`
Default value	Derived from `NLS_TERRITORY`
Modifiable	`ALTER SESSION`
Modifiable in a PDB	Yes
Range of values	Any valid `NLS_TERRITORY` value
Basic	No

Local currency symbols can be ambiguous. For example, a dollar sign ($) can refer to U.S. dollars or Australian dollars. ISO Specification 4217 defines unique "international" currency symbols for the currencies of specific territories or countries. The value of the `NLS_ISO_CURRENCY` parameter is the Oracle name of the territory whose ISO currency symbol is returned in place of the C number format element. For example, if `NLS_ISO_CURRENCY` is set to `AMERICA`, the string 'USD' is returned by `TO_CHAR` where the C element is specified in the format.

> **Note**
>
> The value of this initialization parameter `NLS_ISO_CURRENCY` is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the `NLS_LANG` client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

> **See Also**
>
> - *Oracle AI Database Globalization Support Guide* for more information about this parameter
> - *Oracle AI Database SQL Language Reference* for information on number format elements

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.252 NLS_LANGUAGE

NLS_LANGUAGE specifies the default language of the database.

Property	Description
Parameter type	String
Syntax	NLS_LANGUAGE = *language*
Default value	Operating system-dependent, derived from the NLS_LANG environment variable
Modifiable	ALTER SESSION
Modifiable in a PDB	Yes
Range of values	Any valid language name
Basic	Yes

This language specified by NLS_LANGUAGE is used for messages, day and month names, symbols for AD, BC, a.m., and p.m., and the default sorting mechanism. This parameter also determines the default values of the parameters NLS_DATE_LANGUAGE and NLS_SORT.

> **Note**
>
> The value of this initialization parameter NLS_LANGUAGE is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the NLS_LANG client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

Examples

See these examples of using the NLS_LANGUAGE parameter:

- For an example of setting NLS_LANGUAGE to Italian, see *Oracle AI Database Globalization Support Guide*.
- For an example of overriding default values for NLS_LANGUAGE and NLS_TERRITORY during a session, see *Oracle AI Database Globalization Support Guide*.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- *Oracle AI Database Globalization Support Guide* for more information about this parameter.

- *Oracle AI Database Globalization Support Guide* for information on overriding the default values for this parameter
- Your operating system-specific Oracle documentation and the release notes for your country

2.253 NLS_LENGTH_SEMANTICS

`NLS_LENGTH_SEMANTICS` is used to specify length semantics.

Property	Description
Parameter type	String
Syntax	`NLS_LENGTH_SEMANTICS = string` Example: `NLS_LENGTH_SEMANTICS = 'CHAR'`
Default value	`BYTE`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`BYTE | CHAR`
Basic	No

The session-level value of `NLS_LENGTH_SEMANTICS` specifies the default length semantics to use for `VARCHAR2` and `CHAR` table columns, user-defined object attributes, and PL/SQL variables in database objects created in the session. This default may be overridden by the explicit length semantics qualifiers `BYTE` and `CHAR` in column, attribute, and variable definitions.

The instance-level value of `NLS_LENGTH_SEMANTICS` provides a default for the session-level value if `NLS_LENGTH_SEMANTICS` is not set explicitly by the database client through the `NLS_LENGTH_SEMANTICS` client environment variable (does not apply to JDBC Thin clients), or the `ALTER SESSION SET NLS_LENGTH_SEMANTICS` statement.

`NCHAR`, `NVARCHAR2`, `CLOB`, and `NCLOB` columns are always character-based.

Sessions logged in as `SYS` do not use the `NLS_LENGTH_SEMANTICS` parameter. They use `BYTE` length semantics for all created objects unless overridden by the explicit `BYTE` and `CHAR` qualifiers in object definitions (SQL DDL statements).

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> Oracle strongly recommends that you do NOT set the `NLS_LENGTH_SEMANTICS` parameter to `CHAR` in the instance or server parameter file. This may cause many existing installation scripts to unexpectedly create columns with character length semantics, resulting in run-time errors, including buffer overflows.

> **See Also**
>
> *Oracle AI Database Globalization Support Guide* for more information about this parameter

2.254 NLS_NCHAR_CONV_EXCP

`NLS_NCHAR_CONV_EXCP` determines whether an error is reported when there is data loss during an implicit or explicit character type conversion between NCHAR/NVARCHAR2 and CHAR/VARCHAR2.

Property	Description
Parameter type	String
Syntax	`NLS_NCHAR_CONV_EXCP = { TRUE | FALSE }`
Default value	`FALSE`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No

The default value results in no error being reported.

> **See Also**
>
> *Oracle AI Database Globalization Support Guide* for more information about this parameter

2.255 NLS_NUMERIC_CHARACTERS

`NLS_NUMERIC_CHARACTERS` specifies the characters to use as the group separator and decimal character.

Property	Description
Parameter type	String
Syntax	`NLS_NUMERIC_CHARACTERS = "`*`decimal_character group_separator`*`"`

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Default value	Derived from NLS_TERRITORY
Modifiable	ALTER SESSION
Modifiable in a PDB	Yes
Basic	No

NLS_NUMERIC_CHARACTERS overrides those characters defined implicitly by NLS_TERRITORY. The group separator separates integer groups (that is, thousands, millions, billions, and so on). The decimal separates the integer portion of a number from the decimal portion.

You can specify any character as the decimal or group separator. The two characters specified must be single-byte and must be different from each other. The characters cannot be any numeric character or any of the following characters: plus (+), minus sign (-), less than sign (<), greater than sign (>). Either character can be a space.

For example, if you want to specify a comma as the decimal character and a space as the group separator, you would set this parameter as follows:

```
NLS_NUMERIC_CHARACTERS = ", "
```

Note

The value of this initialization parameter NLS_NUMERIC_CHARACTERS is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the NLS_LANG client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

See Also

Oracle AI Database Globalization Support Guide for more information about this parameter

2.256 NLS_SORT

NLS_SORT specifies the collating sequence for character value comparison in various SQL operators and clauses.

Property	Description
Parameter type	String
Syntax	NLS_SORT = { BINARY | *linguistic_definition* }
Default value	Derived from NLS_LANGUAGE
Modifiable	ALTER SESSION
Modifiable in a PDB	Yes

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Range of values	BINARY or any valid linguistic definition name
Basic	No

For example, NLS_SORT specifies the collating sequence for character value comparison in these SQL operators and clauses: ORDER BY, GROUP BY, comparison conditions (=, <>, <=, >=), IN, BETWEEN, LIKE, MIN/MAX, GREATEST/LEAST, and INSTR.

- If the value is BINARY, then comparison is based directly on byte values in the binary encoding of the character values being compared. The ordering depends on the character set of the compared values, which is either the database character set (for VARCHAR2, CHAR, LONG, and CLOB) or the national character set (for NVARCHAR2, NCHAR, and NCLOB).
- If the value is a named linguistic sort, then comparison is defined by this sort. A linguistic sort uses various rules to achieve ordering expected by speakers of one or more natural languages. This is usually the same ordering that is used in dictionaries and telephone directories in those languages.

The exact operators and query clauses that obey the NLS_SORT parameter depend on the value of the NLS_COMP parameter. If an operator or clause does not obey the NLS_SORT value, as determined by NLS_COMP, the collation used is BINARY.

The BINARY comparison is faster and uses less resources than any linguistic comparison but for text in a natural language, it does not provide ordering expected by users.

The value of NLS_SORT affects execution plans of queries. Because a standard index cannot be used as a source of values sorted in a linguistic order, an explicit sort operation must usually be performed instead of an index range scan. A functional index on the NLSSORT function may be defined to provide values sorted in a linguistic order and reintroduce the index range scan to the execution plan.

Note

The value of the initialization parameter NLS_SORT is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overriden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the NLS_LANG client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

See Also

- *Oracle AI Database Globalization Support Guide* for more information about this parameter and a current listing of values you can specify

2.257 NLS_TERRITORY

NLS_TERRITORY specifies the name of the territory whose conventions are to be followed for day and week numbering.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	String
Syntax	`NLS_TERRITORY = territory`
Default value	Operating system-dependent
Modifiable	`ALTER SESSION`
Modifiable in a PDB	Yes
Range of values	Any valid territory name
Basic	Yes

This parameter also establishes the default date format, the default decimal character and group separator, and the default ISO and local currency symbols.

For information on these settings, see "NLS_DATE_FORMAT", "NLS_NUMERIC_CHARACTERS", "NLS_CURRENCY", and "NLS_ISO_CURRENCY".

> **Note**
>
> The value of this initialization parameter `NLS_TERRITORY` is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the `NLS_LANG` client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

Examples

For an example of overriding the default value for the `NLS_TERRITORY` parameter, see *Oracle AI Database Globalization Support Guide*.

> **See Also**
>
> - *Oracle AI Database Globalization Support Guide* for a complete list of territories
> - Your operating system-specific Oracle documentation for the territory-dependent default values for these parameters

2.258 NLS_TIMESTAMP_FORMAT

`NLS_TIMESTAMP_FORMAT` defines the datetime format model to use with the `TO_CHAR` and `TO_TIMESTAMP` functions.

Property	Description
Parameter type	String
Syntax	`NLS_TIMESTAMP_FORMAT = "format"`
Default value	Derived from `NLS_TERRITORY`

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Modifiable	ALTER SESSION
Modifiable in a PDB	Yes
Range of values	Any valid datetime format model
Basic	No

The value must be surrounded by quotation marks as follows:

```
NLS_TIMESTAMP_FORMAT = 'YYYY-MM-DD HH:MI:SS.FF'
```

You can specify the value of NLS_TIMESTAMP_FORMAT by setting it in the initialization parameter file. You can specify its value for a client as a client environment variable.

You can also alter the value of NLS_TIMESTAMP_FORMAT by changing its value in the initialization parameter and then restarting the instance. To alter the value during a session use the ALTER SESSION SET statement.

Note

The value of this initialization parameter NLS_TIMESTAMP_FORMAT is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the NLS_LANG client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

See Also

- *Oracle AI Database SQL Language Reference* for more information on datetime format models
- *Oracle AI Database Globalization Support Guide* for more information about this parameter

2.259 NLS_TIMESTAMP_TZ_FORMAT

NLS_TIMESTAMP_TZ_FORMAT defines the default datetime format model to use with the TO_CHAR and TO_TIMESTAMP_TZ functions.

Property	Description
Parameter type	String
Syntax	NLS_TIMESTAMP_TZ_FORMAT = "*format*"
Default value	Derived from NLS_TERRITORY
Modifiable	ALTER SESSION
Modifiable in a PDB	Yes
Range of values	Any valid datetime format model

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Basic	No

The value must be surrounded by quotation marks as follows:

```
NLS_TIMESTAMP_TZ_FORMAT = 'YYYY-MM-DD HH:MI:SS.FF TZH:TZM'
```

You can specify the value of `NLS_TIMESTAMP_TZ_FORMAT` by setting it in the initialization parameter file. You can specify its value for a client as a client environment variable.

You can also alter the value of `NLS_TIMESTAMP_TZ_FORMAT` by changing its value in the initialization parameter and then restarting the instance. To alter the value during a session use the `ALTER SESSION SET` statement.

Note

The value of this initialization parameter `NLS_TIMESTAMP_TZ_FORMAT` is used to initialize the session value of this parameter, which is the actual value referenced by the SQL query processing. This initial value is overridden by a client-side value if the client uses the Oracle JDBC driver or if the client is OCI-based and the `NLS_LANG` client setting (environment variable) is defined. The initialization parameter value is, therefore, usually ignored.

See Also

- *Oracle AI Database SQL Language Reference* for more information on datetime format models

2.260 NONCDB_COMPATIBLE

`NONCDB_COMPATIBLE` enables you to get behavior similar to a non-CDB when issuing SQL commands inside a PDB in a CDB.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	No
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No

Set this parameter if you are using a single PDB in your CDB configuration and you have legacy code that causes `ORA-65040` when you run it in the PDB.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Values

- `TRUE`

  Indicates the behavior for SQL statements will be like a non-CDB although the statements are issued in a PDB in a CDB.

- `FALSE`

  Indicates the behavior will for SQL statements will be like a CDB. This is the default value of the parameter.

There are some statements (such as `ALTER DB BACKUP CONTROLFILE`) which can be issued in a non-CDB, but in a CDB they must be issued in the root (because they affect the whole CDB) and would result in an error if issued in a PDB.

Some `ALTER DATABASE` or `ALTER SYSTEM` statements are not permitted inside a PDB, and they will fail if `NONCDB_COMPATIBLE=FALSE` is set in `init.ora`. However, these statements will succeed if `NONCDB_COMPATIBLE=TRUE` is set.

See Also

- *Oracle Multitenant Administrator's Guide* for an introduction to PDBs and CDBs

- *Oracle Multitenant Administrator's Guide* for information about the ALTER SYSTEM statements that can be run in a PDB.

2.261 OBJECT_CACHE_MAX_SIZE_PERCENT

The **object cache** is a memory block on the client that allows applications to store entire objects and to navigate among them without round trips to the server. `OBJECT_CACHE_MAX_SIZE_PERCENT` specifies the percentage of the optimal cache size that the session object cache can grow past the optimal size.

Property	Description
Parameter type	Integer
Default value	`10`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM ... DEFERRED`
Modifiable in a PDB	Yes
Range of values	0 to operating system-dependent maximum
Basic	No

The maximum size is equal to the optimal size plus the product of this percentage and the optimal size. When the cache size exceeds this maximum size, the system will attempt to shrink the cache to the optimal size.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> - "OBJECT_CACHE_OPTIMAL_SIZE" for a description of the object cache
> - *Pro*C/C++ Developer's Guide* and *Oracle Call Interface Developer's Guide* for information on precompiler use of the object cache

2.262 OBJECT_CACHE_OPTIMAL_SIZE

`OBJECT_CACHE_OPTIMAL_SIZE` specifies (in bytes) the size to which the session object cache is reduced when the size of the cache exceeds the maximum size.

Property	Description
Parameter type	Integer
Default value	`51200000` (50M)
Modifiable	`ALTER SESSION`, `ALTER SYSTEM ... DEFERRED`
Modifiable in a PDB	Yes
Range of values	10 KB to operating system-dependent maximum
Basic	No

The **object cache** is a memory block on the client that allows applications to store entire objects and to navigate among them without round trips to the server. On the server, it is used to cache frequently used objects requested as a result of client requests to help in performance.

> **See Also**
>
> *Pro*C/C++ Developer's Guide* and *Oracle Call Interface Developer's Guide* for information on precompiler use of the object cache

2.263 OFS_THREADS

`OFS_THREADS` sets the maximum number of Oracle file system (OFS) threads that can be started to service Oracle file system requests.

Property	Description
Parameter type	Integer
Default value	4
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	2 to 128
Basic	No
Oracle RAC	The same value should be specified on all instances.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> This initialization parameter is supported only on the Linux operating system.

> **See Also**
>
> *Oracle AI Database Administrator's Guide* for more information about the Oracle AI Database NFS server feature

2.264 OLAP_PAGE_POOL_SIZE

`OLAP_PAGE_POOL_SIZE` specifies (in bytes) the size of the OLAP page pool.

Property	Description
Parameter type	Big integer
Syntax	`OLAP_PAGE_POOL_SIZE = integer [K | M | G]`
Default value	`0`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM ... DEFERRED`
Modifiable in a PDB	Yes
Range of values	0, 2097152 (2 MB) to 2^{31} - 1
Basic	No

> **Caution**
>
> Oracle strongly recommends that you leave this parameter set to its default value of `0`. This instructs the database to autonomously adjust the OLAP page pool size to serve the requirements of the analytic workspaces. Setting this parameter to a value other than `0` can lead to errors in OLAP processing or wasted memory.

> **See Also**
>
> *Oracle OLAP User's Guide* for more information about the OLAP option for Oracle AI Database

2.265 ONE_STEP_PLUGIN_FOR_PDB_WITH_TDE

If a pluggable database (PDB) has Transparent Data Encryption-encrypted (TDE-encrypted) tables or tablespaces, you can enable `ONE_STEP_PLUGIN_FOR_PDB_WITH_TDE` on the target CDB to simplify the move of TDE keys in a single step PDB move operation.

`ONE_STEP_PLUGIN_FOR_PDB_WITH_TDE` eliminates the need of having to manually provide a keystore password when you import the TDE keys into the PDB after it has moved to the target CDB.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	Boolean
Default value	FALSE
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true | false
Basic	No
Oracle RAC	A different value can be set for this parameter on different Oracle RAC instances.

The default for ONE_STEP_PLUGIN_FOR_PDB_WITH_TDE is FALSE.

When ONE_STEP_PLUGIN_FOR_PDB_WITH_TDE is set to TRUE on the target CDB, the plug in of the PDB does not require a keystore password.

> **Note**
>
> The ONE_STEP_PLUGIN_FOR_PDB_WITH_TDE parameter is deprecated in Oracle AI Database 26ai.
>
> ONE_STEP_PLUGIN_FOR_PDB_WITH_TDE enables you to clone remotely or to relocate encrypted PDBs without providing the Transparent Data Encryption (TDE) keystore password. However, EXTERNAL STORE provides the same functionality, and is universally applicable to all ADMINISTER KEY MANAGEMENT statements that do not change the TDE configuration. Instead of using ONE_STEP_PLUGIN_FOR_PDB_WITH_TDE, Oracle recommends that you use the IDENTIFIED BY EXTERNAL STORE clause for the ADMINISTER KEY MANAGEMENT statement.

2.266 OPEN_CURSORS

OPEN_CURSORS specifies the maximum number of open cursors (handles to private SQL areas) a session can have at once. You can use this parameter to prevent a session from opening an excessive number of cursors.

Property	Description
Parameter type	Integer
Default value	50
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to 65535
Basic	Yes

It is important to set the value of OPEN_CURSORS high enough to prevent your application from running out of open cursors. The number will vary from one application to another. Assuming that a session does not open the number of cursors specified by OPEN_CURSORS, there is no added overhead to setting this value higher than actually needed.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- *Oracle AI Database Performance Tuning Guide* for more information on setting this parameter
- Your operating system-specific Oracle documentation for the range of values

2.267 OPEN_LINKS

`OPEN_LINKS` specifies the maximum number of concurrent open connections to remote databases in one session. These connections include database links, as well as external procedures and cartridges, each of which uses a separate process.

Property	Description
Parameter type	Integer
Default value	4
Modifiable	No
Modifiable in a PDB	Yes
Range of values	0 to 32768
Basic	No

Oracle counts one open link for the following:

- For each user that references a public or private database link
- For each external procedure or cartridge connection when it is executed for the first time

Both types of connections close when the session ends. You can also close a database link connection explicitly by issuing an `ALTER SESSION CLOSE DATABASE LINK` statement.

You should set this parameter to allow for the external procedure and cartridge connections expected during the session plus the number of databases referred to in typical distributed transactions (that is, a single SQL statement that references multiple databases), so that all the databases can be open to execute the statement. For example, if queries alternately access databases A, B, and C, and `OPEN_LINKS` is set to `2`, time will be lost waiting while one connection is broken and another made. Increase the value if many different databases are accessed over time.

This parameter refers only to connections used for distributed transactions. Direct connections to a remote database specified as an application connects are not counted.

If you set `OPEN_LINKS` to `0`, then no distributed transactions are allowed.

In a multitenant container database (CDB), the `OPEN_LINKS` parameter can be set at both the root and at the PDB level using either an initialization parameter file (PFILE) or server parameter file (SPFILE). You need to restart the instance or reopen the PDB for a new `OPEN_LINKS` value to become effective.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> "OPEN_LINKS_PER_INSTANCE" for information on setting open connections globally for a database instance

2.268 OPEN_LINKS_PER_INSTANCE

`OPEN_LINKS_PER_INSTANCE` specifies the maximum number of migratable open connections globally for each database instance.

Property	Description
Parameter type	Integer
Default value	4
Modifiable	No
Modifiable in a PDB	No
Range of values	0 to 2^{31} - 1
Basic	No
Oracle RAC	Multiple instances can have different values.

XA transactions use migratable open connections so that the connections are cached after a transaction is committed. Another transaction can use the connection, provided the user who created the connection is the same as the user who owns the transaction.

`OPEN_LINKS_PER_INSTANCE` is different from `OPEN_LINKS`, which indicates the number of connections from a session. The `OPEN_LINKS` parameter is not applicable to XA applications.

> **See Also**
>
> - "OPEN_LINKS"
> - *Oracle AI Database Development Guide* for more information about using this parameter in Oracle XA applications

2.269 OPTIMIZER_ADAPTIVE_PLANS

`OPTIMIZER_ADAPTIVE_PLANS` controls adaptive plans. Adaptive plans are execution plans built with alternative choices that are decided at run time based on statistics collected as the query executes.

Property	Description
Parameter type	Boolean
Default value	`true`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Basic	No
Oracle RAC	The same value must be set on all instances

Setting this parameter to `false` disables the following adaptive features:

- Nested loop join/hash join selection
- Star transformation bitmap pruning
- Adaptive parallel distribution method

> **See Also**
>
> *Oracle AI Database SQL Tuning Guide* for information about adaptive plans

2.270 OPTIMIZER_ADAPTIVE_REPORTING_ONLY

`OPTIMIZER_ADAPTIVE_REPORTING_ONLY` controls reporting-only mode for adaptive optimizations.

Property	Description
Parameter type	Boolean
Default value	`FALSE`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`TRUE	FALSE`
Basic	No

When `OPTIMIZER_ADAPTIVE_REPORTING_ONLY` is set to `FALSE`, reporting-only mode is off, and the adaptive optimizations are enabled as usual.

When `OPTIMIZER_ADAPTIVE_REPORTING_ONLY` is set to `TRUE`, adaptive optimizations run in reporting-only mode. With this setting, the information required for an adaptive optimization is gathered, but no action is taken to change the plan. For instance, an adaptive plan will always choose the default (optimizer-chosen) plan, but information is collected on what plan to adapt to in non-reporting mode. This information can be viewed in the adaptive plan report.

This parameter affects only adaptive optimizations that are enabled.

> **See Also**
>
> - *Oracle AI Database SQL Tuning Guide* for more information about adaptive plans and automatic reoptimization
> - *Oracle AI Database SQL Tuning Guide* for information on controlling adaptive optimization

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.271 OPTIMIZER_ADAPTIVE_STATISTICS

`OPTIMIZER_ADAPTIVE_STATISTICS` controls adaptive statistics. Some query shapes are too complex to rely on base table statistics alone, so the optimizer augments these statistics with adaptive statistics.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true	false`
Basic	No
Oracle RAC	The same value must be set on all instances

Setting this parameter to `false` disables the following adaptive features:

- SQL plan directives
- Statistics feedback for joins
- Adaptive dynamic sampling for parallel execution

> **Note**
>
> Setting `OPTIMIZER_ADAPTIVE_STATISTICS` to `false` preserves the statistics feedback functionality that was introduced in Oracle Database 11*g*.
>
> `OPTIMIZER_ADAPTIVE_STATISTICS` does not control the creation of SQL plan directives. SQL plan directives will be created even if this parameter is `false`, but they will not be used to refine SQL execution plans with dynamic sampling.

> **See Also**
>
> *Oracle AI Database SQL Tuning Guide* for information about adaptive plans

2.272 OPTIMIZER_CAPTURE_SQL_PLAN_BASELINES

`OPTIMIZER_CAPTURE_SQL_PLAN_BASELINES` enables or disables the automatic recognition of repeatable SQL statements, as well as the generation of SQL plan baselines for such statements.

Property	Description
Parameter type	Boolean
Default value	`false`

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No

See Also

Oracle AI Database SQL Tuning Guide for more information about the optimizer

2.273 OPTIMIZER_CAPTURE_SQL_QUARANTINE

`OPTIMIZER_CAPTURE_SQL_QUARANTINE` enables or disables the automatic creation of SQL Quarantine configurations.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No
Oracle RAC	Different instances can use different values.

Values:

- `true`

  Enables the automatic creation of SQL Quarantine configurations. If the Resource Manager terminates a SQL statement because the statement has exceeded resource limits, then the database automatically creates a SQL Quarantine configuration for the execution plan used by the terminated SQL statement. Note that the *plan* for a terminated SQL statement is quarantined, not the statement itself.

- `false`

  Disables the automatic creation of SQL Quarantine configurations.

See Also

- *Oracle AI Database SQL Tuning Guide* for more information about SQL Quarantine

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.274 OPTIMIZER_CROSS_SHARD_RESILIENCY

`OPTIMIZER_CROSS_SHARD_RESILIENCY` enables resilient execution of cross shard queries.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true	false`
Basic	No
Oracle RAC	The same value must be used on all instances.

When this parameter is set to `true` and a cross-shard query fails on one or more shards, the query execution continues on the Oracle Data Guard standbys of the failed shards. This parameter is not set to `true` by default, because there may be performance overhead for the resilient query execution.

2.275 OPTIMIZER_DYNAMIC_SAMPLING

`OPTIMIZER_DYNAMIC_SAMPLING` controls both when the database gathers dynamic statistics, and the size of the sample that the optimizer uses to gather the statistics.

Property	Description
Parameter type	Integer
Default value	If `OPTIMIZER_FEATURES_ENABLE` is set to `10.0.0` or higher, then 2 If `OPTIMIZER_FEATURES_ENABLE` is set to `9.2.0`, then 1 If `OPTIMIZER_FEATURES_ENABLE` is set to `9.0.1` or lower, then `0`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`0` to 11
Basic	No

> **Note**
>
> Dynamic statistics were called dynamic sampling in releases earlier than Oracle Database 12*c* Release 1 (12.1).

If the value of `OPTIMIZER_DYNAMIC_SAMPLING` is set to 11, the `OPTIMIZER_FEATURES_ENABLE` setting has no effect on the `OPTIMIZER_DYNAMIC_SAMPLING` setting.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle AI Database SQL Tuning Guide* for detailed information about the values (0 – 11) that can be set for the `OPTIMIZER_DYNAMIC_SAMPLING` parameter.

2.276 OPTIMIZER_FEATURES_ENABLE

`OPTIMIZER_FEATURES_ENABLE` acts as an umbrella parameter for enabling a series of optimizer features based on an Oracle release number.

Property	Description
Parameter type	String
Syntax	`OPTIMIZER_FEATURES_ENABLE = { 8.0.0 | 8.0.3 | 8.0.4 | 8.0.5 | 8.0.6 | 8.0.7 | 8.1.0 | 8.1.3 | 8.1.4 | 8.1.5 | 8.1.6 | 8.1.7 | 9.0.0 | 9.0.1 | 9.2.0 | 9.2.0.8 | 10.1.0 | 10.1.0.3 | 10.1.0.4 | 10.1.0.5 | 10.2.0.1 | 10.2.0.2 | 10.2.0.3 | 10.2.0.4 | 10.2.0.5 | 11.1.0.6 | 11.1.0.7 | 11.2.0.1 | 11.2.0.2 | 11.2.0.3 | 11.2.0.4 | 12.1.0.1 | 12.1.0.2 | 12.2.0.1 | 18.1.0 | 19.1.0 | 21.1.0 | 23.1.0 }`
Default value	`23.1.0`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No

For example, if you upgrade your database from release 19c to release 21ai, but you want to keep the release 19c optimizer behavior, you can do so by setting this parameter to `19.1.0`. At a later time, you can try the enhancements introduced in releases up to and including release 26ai by setting the parameter to `21.1.0`.

> **Note**
>
> When setting this parameter to a value representing Oracle Database 18c or later, you must specify three numeric values separated by periods, such as `21.1.0` or `23.1.0`.

Table 2-6 describes some of the optimizer features that are enabled when you set the `OPTIMIZER_FEATURES_ENABLE` parameter to `12.1.0.2` or a later release.

Table 2-6 Optimizer Features for Oracle Database 12c and Later Releases

Features	12.1.0.2	12.2.0.1	18c	19c	21c	26ai
Adaptive Query Optimization	X	X	X	X	X	X
Online statistics gathering for bulk loads	X	X	X	X	X	X
Session level statistics for Global Temporary Tables	X	X	X	X	X	X
Multi-table left outer joins	X	X	X	X	X	X

See Also

Oracle AI Database SQL Tuning Guide for more information about the optimizer

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.277 OPTIMIZER_IGNORE_HINTS

`OPTIMIZER_IGNORE_HINTS` enables embedded hints to be ignored.

Property	Description
Parameter type	Boolean
Default value	`FALSE`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No
Oracle RAC	Different values can be set on different instances.

When this parameter is set to `TRUE`, the optimizer ignores embedded hints.

The default value is `FALSE`. When this parameter's value is `FALSE`, the optimizer does not ignore embedded hints.

2.278 OPTIMIZER_IGNORE_PARALLEL_HINTS

`OPTIMIZER_IGNORE_PARALLEL_HINTS` enables embedded parallel hints to be ignored.

Property	Description
Parameter type	Boolean
Default value	`FALSE`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No
Oracle RAC	Different values can be set on different instances.

When this parameter is set to `TRUE`, the optimizer ignores embedded parallel hints.

The default value is `FALSE`. When this parameter's value is `FALSE`, the optimizer does not ignore parallel embedded hints.

2.279 OPTIMIZER_INDEX_CACHING

`OPTIMIZER_INDEX_CACHING` lets you adjust the behavior of cost-based optimization to favor nested loops joins and IN-list iterators.

Property	Description
Parameter type	Integer
Default value	`0`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Modifiable in a PDB	Yes
Range of values	0 to 100
Basic	No

The cost of executing an index using an IN-list iterator or of executing a nested loops join when an index is used to access the inner table depends on the caching of that index in the buffer cache. The amount of caching depends on factors that the optimizer cannot predict, such as the load on the system and the block access patterns of different users.

You can modify the optimizer's assumptions about index caching for nested loops joins and IN-list iterators by setting this parameter to a value between 0 and 100 to indicate the percentage of the index blocks the optimizer should assume are in the cache. Setting this parameter to a higher value makes nested loops joins and IN-list iterators look less expensive to the optimizer. As a result, it will be more likely to pick nested loops joins over hash or sort-merge joins and to pick indexes using IN-list iterators over other indexes or full table scans. The default for this parameter is 0, which results in default optimizer behavior.

See Also

Oracle AI Database SQL Language Reference for additional information about this initialization parameter

2.280 OPTIMIZER_INDEX_COST_ADJ

`OPTIMIZER_INDEX_COST_ADJ` lets you tune optimizer behavior for access path selection to be more or less index friendly—that is, to make the optimizer more or less prone to selecting an index access path over a full table scan.

Property	Description
Parameter type	Integer
Default value	`100`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	1 to 10000
Basic	No

The default for this parameter is 100 percent, at which the optimizer evaluates index access paths at the regular cost. Any other value makes the optimizer evaluate the access path at that percentage of the regular cost. For example, a setting of 50 makes the index access path look half as expensive as normal.

Note

The adjustment does not apply to user-defined cost functions for domain indexes.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle AI Database SQL Language Reference* for additional information about this initialization parameter

2.281 OPTIMIZER_INMEMORY_AWARE

`OPTIMIZER_INMEMORY_AWARE` enables or disables all of the optimizer cost model enhancements for in-memory.

Property	Description
Parameter type	Boolean
Default value	`true`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No
Oracle RAC	All instances should use the same value

Setting the parameter to `false` causes the optimizer to ignore the in-memory property of tables during the optimization of SQL statements. This behavior can also be achieved by setting the `OPTIMIZER_FEATURES_ENABLE` initialization parameter to values lower than 12.1.0.2.

> **See Also**
>
> - "OPTIMIZER_FEATURES_ENABLE"
> - *Oracle AI Database Concepts* and *Oracle AI Database SQL Tuning Guide* for more information about the optimizer

2.282 OPTIMIZER_MODE

`OPTIMIZER_MODE` establishes the default behavior for choosing an optimization approach for the instance.

Property	Description
Parameter type	String
Syntax	`OPTIMIZER_MODE =` `{ FIRST_ROWS_[1 | 10 | 100 | 1000] | FIRST_ROWS | ALL_ROWS }`
Default value	`ALL_ROWS`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Values

- `FIRST_ROWS_n`

  The optimizer uses a cost-based approach and optimizes with a goal of best response time to return the first *n* rows (where *n* = 1, 10, 100, 1000).

- `FIRST_ROWS`

  The optimizer uses a mix of costs and heuristics to find a best plan for fast delivery of the first few rows.

  `FIRST_ROWS` is available for backward compatibility and plan stability; use `FIRST_ROWS_n` instead.

- `ALL_ROWS`

  The optimizer uses a cost-based approach for all SQL statements in the session and optimizes with a goal of best throughput (minimum resource use to complete the entire statement).

See Also

- *Oracle AI Database SQL Tuning Guide* for more information on setting this parameter
- *Oracle AI Database Concepts* and *Oracle AI Database SQL Tuning Guide* for more information about the optimizer

2.283 OPTIMIZER_REAL_TIME_STATISTICS

`OPTIMIZER_REAL_TIME_STATISTICS` controls whether the database automatically gathers real-time statistics during conventional DML operations.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No
Oracle RAC	Different values can be set on different instances.

When this parameter is set to `true`, the database automatically gathers real-time statistics during conventional DML operations. The default setting is `false`, which means real-time statistics are disabled.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.284 OPTIMIZER_SESSION_TYPE

`OPTIMIZER_SESSION_TYPE` controls how the database performs automatic indexing for SQL statements in the session.

Property	Description
Parameter type	String
Syntax	`OPTIMIZER_SESSION_TYPE = { NORMAL | CRITICAL | ADHOC }`
Default value	`NORMAL`
Modifiable	`ALTER SESSION`
Modifiable in a PDB	No
Basic	No

Values:

- `NORMAL`

  Automatic indexing is performed normally for SQL statements in the session. The automatic indexing process identifies auto index candidates, creates auto indexes, and verifies them against SQL statements.

- `CRITICAL`

  Automatic indexing is performed for SQL statements in the session, with a higher priority given to long-running statements. The automatic indexing process identifies auto index candidates and creates auto indexes. However, auto indexes are verified against SQL statements in descending order of elapsed execution time for each statement.

- `ADHOC`

  Automatic indexing is suspended for SQL statements in the session. The automatic indexing process does not identify auto index candidates, create auto indexes, or verify auto indexes against SQL statements. This setting is useful when running ad hoc queries or testing new functionality.

See Also

Oracle AI Database Administrator's Guide for more information about how automatic indexing works

2.285 OPTIMIZER_USE_INVISIBLE_INDEXES

`OPTIMIZER_USE_INVISIBLE_INDEXES` enables or disables the use of invisible indexes.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Range of values	`true | false`
Basic	No

Values

- `true`

  Invisible indexes are treated as visible (normal) indexes.

- `false`

  Invisible indexes will not be considered by the optimizer but will still be maintained by DML operations.

2.286 OPTIMIZER_USE_PENDING_STATISTICS

`OPTIMIZER_USE_PENDING_STATISTICS` specifies whether the optimizer uses pending statistics when compiling SQL statements.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No

See Also

Oracle AI Database SQL Tuning Guide for more information on setting this parameter

2.287 OPTIMIZER_USE_SQL_PLAN_BASELINES

`OPTIMIZER_USE_SQL_PLAN_BASELINES` enables or disables the use of SQL plan baselines stored in SQL Management Base.

Property	Description
Parameter type	Boolean
Default value	`true`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

When enabled, the optimizer looks for a SQL plan baseline for the SQL statement being compiled. If one is found in SQL Management Base, then the optimizer will cost each of the baseline plans and pick one with the lowest cost.

See Also

- *Oracle AI Database SQL Tuning Guide* for information on enabling automatic initial plan capture
- *Oracle AI Database SQL Tuning Guide* for information about configuring the capture and use of SQL plan baselines

2.288 OPTIMIZER_USE_SQL_QUARANTINE

`OPTIMIZER_USE_SQL_QUARANTINE` determines whether the optimizer considers SQL Quarantine configurations when choosing an execution plan for a SQL statement.

Property	Description
Parameter type	Boolean
Default value	`true`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No
Oracle RAC	Different instances can use different values.

Values:

- `true`

  The optimizer considers SQL Quarantine configurations when choosing an execution plan for a SQL statement. The statement will be terminated if it would otherwise use a quarantined execution plan.

- `false`

  The optimizer ignores SQL Quarantine configurations when choosing an execution plan for a SQL statement. It may use any execution plan, regardless of its quarantine status.

See Also

- "DBA_SQL_QUARANTINE"
- "OPTIMIZER_CAPTURE_SQL_QUARANTINE"
- *Oracle AI Database SQL Tuning Guide* for more information about SQL Quarantine

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.289 OS_AUTHENT_PREFIX

`OS_AUTHENT_PREFIX` specifies a prefix that Oracle AI Database uses to authenticate users attempting to connect to the server.

Property	Description
Parameter type	String
Syntax	`OS_AUTHENT_PREFIX = authentication_prefix`
Default value	`OPS$`
Modifiable	No
Modifiable in a PDB	No
Basic	No

Oracle AI Database concatenates the value of this parameter to the beginning of the user's operating system account name. When a connection request is attempted, Oracle AI Database compares the prefixed username with Oracle user names in the database.

The default value of this parameter is `OPS$` for backward compatibility with previous versions. However, you might prefer to set the prefix value to "" (a null string), thereby eliminating the addition of any prefix to operating system account names.

Note

The text of the `OS_AUTHENT_PREFIX` parameter is case sensitive on some operating systems.

See Also

- *Oracle AI Database Security Guide* for more information on setting this parameter
- Your operating system-specific Oracle documentation for the default value

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.290 OS_ROLES

OS_ROLES determines whether Oracle or the operating system identifies and manages the roles of each username.

> **Note**
>
> Enterprise User Security (EUS) is deprecated with Oracle AI Database 26ai.
>
> Oracle recommends that you migrate to using Centrally Managed Users (CMU). This feature enables you to directly connect with Microsoft Active Directory without an intervening directory service for enterprise user authentication and authorization to the database. If your Oracle Database is in the cloud, you can also choose to move to one of the newer integrations with a cloud identity provider.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	No
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No

Values

- TRUE

  The operating system completely manages the role grants for all database usernames. When a user attempts to create a session, the username's security domain is initialized using the roles identified by the operating system.

  Revocation by Oracle of roles granted by the operating system is ignored, as are any roles previously granted by Oracle.

- FALSE

  Oracle identifies and manages the roles.

> **See Also**
>
> *Oracle AI Database Administrator's Guide* and *Oracle AI Database Enterprise User Security Administrator's Guide* for more information on roles and on setting this parameter

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.291 OUTBOUND_DBLINK_PROTOCOLS

OUTBOUND_DBLINK_PROTOCOLS specifies the network protocols allowed for communicating for outbound database links in the database.

Property	Description
Parameter type	String
Syntax	OUTBOUND_DBLINK_PROTOCOLS = { ALL | NONE | [TCP | [,] | TCPS | [,] | IPC] }
Default value	ALL
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No
Oracle RAC	The same value must be used on all instances.

Specify a value of ALL to allow all network protocols, and a value of NONE to disallow all network communication protocols for database link communication. Specify a single value or a list of comma separated network communication protocols to allow only certain network protocols for outbound database link communication.

2.292 PARALLEL_ADAPTIVE_MULTI_USER

PARALLEL_ADAPTIVE_MULTI_USER, when set to true, enables an adaptive algorithm designed to improve performance in multiuser environments that use parallel execution.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true | false
Basic	No

The algorithm automatically reduces the requested degree of parallelism based on the system load at query startup time. The effective degree of parallelism is based on the default degree of parallelism, or the degree from the table or hints, divided by a reduction factor.

The algorithm assumes that the system has been tuned for optimal performance in a single-user environment.

Tables and hints use the default degree of parallelism.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> The PARALLEL_ADAPTIVE_MULTI_USER initialization parameter is deprecated in Oracle Database 12*c* Release 2 (12.2.0.1) and may be removed in a future release. Oracle recommends that you use the parallel statement queuing feature instead.

> **See Also**
>
> - *Oracle AI Database SQL Language Reference* for more information about optimizer hints
> - *Oracle AI Database VLDB and Partitioning Guide* for more information about parallel statement queuing

2.293 PARALLEL_DEGREE_LIMIT

PARALLEL_DEGREE_LIMIT limits the degree of parallelism used by the optimizer to ensure that parallel server processes do not flood the system.

Property	Description
Parameter type	String
Syntax	PARALLEL_DEGREE_LIMIT = { CPU | AUTO | IO | *integer* }
Default value	CPU
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

With automatic degree of parallelism, Oracle automatically decides whether a statement should execute in parallel and what degree of parallelism the statement should use. The optimizer automatically determines the degree of parallelism for a statement based on the resource requirements of the statement. However, PARALLEL_DEGREE_LIMIT enforces the limit for the degree of parallelism used by the optimizer.

Values

- CPU

  The maximum degree of parallelism is limited by the number of CPUs in the system. The formula used to calculate the limit is PARALLEL_THREADS_PER_CPU * CPU_COUNT * the number of instances available (by default, all the opened instances on the cluster but can be constrained using PARALLEL_INSTANCE_GROUP or service specification). This is the default.

- AUTO

  This value is equivalent to the CPU value.

- IO

  The maximum degree of parallelism the optimizer can use is limited by the I/O capacity of the system. The value is calculated by dividing the total system throughput by the maximum I/O bandwidth per process. You must run the

Copyright © 2002, 2025, Oracle and/or its affiliates.

DBMS_RESOURCE_MANAGER.CALIBRATE_IO procedure on the system to use the IO setting. This procedure will calculate the total system throughput and the maximum I/O bandwidth per process.

- *integer*

  A numeric value for this parameter specifies the maximum degree of parallelism the optimizer can choose for a SQL statement when automatic degree of parallelism is active. Automatic degree of parallelism is only enabled if PARALLEL_DEGREE_POLICY is set to ADAPTIVE, AUTO, or LIMITED.

See Also

- *Oracle AI Database VLDB and Partitioning Guide* for information about automatic degree of parallelism
- *Oracle AI Database PL/SQL Packages and Types Reference* for information on the DBMS_RESOURCE_MANAGER.CALIBRATE_IO procedure

2.294 PARALLEL_DEGREE_POLICY

PARALLEL_DEGREE_POLICY specifies whether automatic degree of parallelism, statement queuing, and in-memory parallel execution will be enabled.

Property	Description
Parameter type	String
Syntax	PARALLEL_DEGREE_POLICY = { MANUAL | LIMITED | AUTO | ADAPTIVE }
Default value	MANUAL
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Values

Note

Automatic degree of parallelism will be enabled regardless of the value of PARALLEL_DEGREE_POLICY if a PARALLEL hint is used at the SQL statement level.

- MANUAL

  Disables automatic degree of parallelism, statement queuing, and in-memory parallel execution. This reverts the behavior of parallel execution to what it was prior to Oracle Database 11*g* Release 2 (11.2). This is the default.

- LIMITED

  Enables automatic degree of parallelism for some statements but statement queuing and in-memory Parallel Execution are disabled. Automatic degree of parallelism is only applied

Copyright © 2002, 2025, Oracle and/or its affiliates.

to those statements that access tables or indexes decorated explicitly with the DEFAULT degree of parallelism using the PARALLEL clause. Statements that do not access any tables or indexes decorated with the DEFAULT degree of parallelism will retain the MANUAL behavior.

- AUTO

  Enables automatic degree of parallelism, statement queuing, and in-memory parallel execution.

- ADAPTIVE

  This value enables automatic degree of parallelism, statement queuing and in-memory parallel execution, similar to the AUTO value. In addition, performance feedback is enabled. Performance feedback helps to improve the degree of parallelism automatically chosen for repeated SQL statements. After the initial execution of a statement, the degree of parallelism chosen by the optimizer is compared to the degree of parallelism computed based on the actual execution performance. If they vary significantly, then the statement is marked for re-parse and the initial execution performance statistics (for example, CPU-time) are provided as feedback for subsequent executions. The optimizer uses the initial execution performance statistics to better determine a degree of parallelism for subsequent executions.

See Also

- *Oracle AI Database SQL Language Reference* for information about PARALLEL hints
- *Oracle AI Database VLDB and Partitioning Guide* for information about automatic degree of parallelism

2.295 PARALLEL_EXECUTION_MESSAGE_SIZE

PARALLEL_EXECUTION_MESSAGE_SIZE specifies the size of messages used for parallel execution (formerly referred to as parallel query, PDML, Parallel Recovery, replication).

Property	Description
Parameter type	Integer
Default value	Operating system-dependent
Modifiable	No
Modifiable in a PDB	No
Range of values	Minimum: 2148 Maximum: 65536, but some operating systems may have a smaller value
Basic	No
Oracle RAC	Multiple instances must have the same value.

On most platforms, the default value is as follows:

- 16384 bytes if COMPATIBLE is set to 11.2.0 or higher
- 2148 bytes if COMPATIBLE is less than 11.2.0

Copyright © 2002, 2025, Oracle and/or its affiliates.

The default value is adequate for most applications. Larger values require a larger shared pool. Larger values result in better performance at the cost of higher memory use. For this reason, replication gets no benefit from increasing the size.

> **See Also**
>
> *Oracle AI Database VLDB and Partitioning Guide* to learn how this parameter affects memory consumption for parallel operations, including parallel execution

2.296 PARALLEL_FORCE_LOCAL

`PARALLEL_FORCE_LOCAL` controls parallel execution in an Oracle RAC environment.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No

By default, the parallel server processes selected to execute a SQL statement can operate on any or all Oracle RAC nodes in the cluster. By setting `PARALLEL_FORCE_LOCAL` to `true`, the parallel server processes are restricted so that they can only operate on the same Oracle RAC node where the query coordinator resides (the node on which the SQL statement was executed).

> **See Also**
>
> *Oracle AI Database VLDB and Partitioning Guide* for more information about this parameter

2.297 PARALLEL_INSTANCE_GROUP

Used in conjunction with services or with the `INSTANCE_GROUPS` parameter, `PARALLEL_INSTANCE_GROUP` lets you restrict parallel query operations to a limited number of instances.

Property	Description
Parameter type	String
Syntax	`PARALLEL_INSTANCE_GROUP = service_name | group_name`
Default value	There is no default value; parallel execution is enabled across all currently active instances.
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Range of values	Any service name or any group name specified in the INSTANCE_GROUPS parameter of any active instance
Basic	No
Oracle RAC	Multiple instances can have different values.

PARALLEL_INSTANCE_GROUP is an Oracle RAC parameter that you can specify in parallel mode only. Note that the INSTANCE_GROUPS parameter has been deprecated.

This parameter identifies the parallel instance group Oracle will use for spawning parallel execution processes. If used in conjunction with services, then parallel operations will spawn parallel execution processes only on instances defined in the service. If used in conjunction with INSTANCE_GROUPS, then parallel operations will spawn parallel execution processes only on instances that specify a matching group in their INSTANCE_GROUPS parameter.

If the value assigned to PARALLEL_INSTANCE_GROUP is the name of a service or group that does not exist, then the operation runs serially. No parallelism is used.

2.298 PARALLEL_MAX_SERVERS

PARALLEL_MAX_SERVERS specifies the maximum number of parallel execution processes and parallel recovery processes for an instance. As demand increases, Oracle AI Database increases the number of processes from the number created at instance startup up to this value.

Property	Description
Parameter type	Integer
Default value	PARALLEL_THREADS_PER_CPU * CPU_COUNT * *concurrent_parallel_users* * 5
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to 32767
Basic	No
Oracle RAC	Multiple instances can have different values.

> **Note**
>
> This parameter applies to parallel execution in exclusive mode as well as in a Real Application Clusters environment.

The number of concurrent parallel users running at default degree of parallelism on an instance depends on the memory initialization parameter settings for the instance. For example, if the MEMORY_TARGET or SGA_TARGET initialization parameter is set, then the number of concurrent_parallel_users = 4. If neither MEMORY_TARGET or SGA_TARGET is set, then PGA_AGGREGATE_TARGET is examined. If a value is set for PGA_AGGREGATE_TARGET, then concurrent_parallel_users = 2. If a value is not set for PGA_AGGREGATE_TARGET, then concurrent_parallel_users = 1.

Copyright © 2002, 2025, Oracle and/or its affiliates.

The database system always reserves a certain number of reserved processes. Therefore, the following two values are taken into account when setting the PARALLEL_MAX_SERVERS initialization parameter:

- The default value of PARALLEL_MAX_SERVERS determined using the calculation in the table above
- The value of the PROCESSES initialization parameter minus the number of reserved processes

The lower of the two values is used as the default value of PARALLEL_MAX_SERVERS, and if you attempt to explicitly set PARALLEL_MAX_SERVERS to a value that is higher than either of the values, then the setting is adjusted to the lower of the two values.

When the PARALLEL_MAX_SERVERS parameter is set to a value lower than the value in the table above, the lower default value enables the database to start service processes and allows user processes to connect to the database.

If the FAST_START_PARALLEL_ROLLBACK initialization parameter is set to LOW or HIGH, then its value should be taken into account when setting PARALLEL_MAX_SERVERS. If FAST_START_PARALLEL_ROLLBACK = LOW, then PARALLEL_MAX_SERVERS should not be set to a value lower than CPU_COUNT * 2. If FAST_START_PARALLEL_ROLLBACK = HIGH, then PARALLEL_MAX_SERVERS should not be set to a value lower than CPU_COUNT * 4.

The default value for PARALLEL_MAX_SERVERS for a PDB is determined using the calculation in the table above with the PDB's CPU_COUNT value.

Note

If you set this parameter too low, then some queries may not have a parallel execution process available to them during query processing. If you set it too high, then memory resource shortages may occur during peak periods, which can degrade performance.

See Also

Oracle AI Database SQL Tuning Guide for more information about parallel execution

2.299 PARALLEL_MIN_DEGREE

PARALLEL_MIN_DEGREE controls the minimum degree of parallelism computed by automatic degree of parallelism.

Property	Description
Parameter type	String
Syntax	PARALLEL_MIN_DEGREE = [n | CPU]
Default value	1
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Oracle RAC	A different value can be set on different instances.

The value of PARALLEL_MIN_DEGREE is either a number that corresponds to the lower bound on the degree of parallelism computed by automatic degree of parallelism, or the string value CPU, which is computed by the function CPU_COUNT * PARALLEL_THREADS_PER_CPU.

The default value of PARALLEL_MIN_DEGREE is 1.

Note

PARALLEL_MIN_DEGREE has no impact in either of these cases:

- When the value of PARALLEL_MIN_DEGREE is greater than the value of CPU_COUNT
- When the object is Oracle-owned, such as a dictionary table or view created on a dictionary table

See Also

- "PARALLEL_DEGREE_LIMIT"
- *Oracle AI Database VLDB and Partitioning Guide* for information about how the optimizer automatically determines the degree of parallelism for a statement

2.300 PARALLEL_MIN_PERCENT

PARALLEL_MIN_PERCENT lets you specify the minimum percentage of the requested number of parallel execution processes required for parallel execution.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SESSION
Modifiable in a PDB	No
Range of values	0 to 100
Basic	No
Oracle RAC	Multiple instances can have different values.

This parameter controls the behavior for parallel operations when parallel statement queuing is not enabled (when PARALLEL_DEGREE_POLICY is set to manual or limited). It ensures that an operation always gets a minimum percentage of parallel execution servers or errors out. Setting this parameter ensures that parallel operations will not execute unless adequate resources are available. The default value of 0 means that no minimum percentage of processes has been set.

Consider the following settings:

Copyright © 2002, 2025, Oracle and/or its affiliates.

```
PARALLEL_MIN_PERCENT = 50
PARALLEL_MIN_SERVERS = 5
PARALLEL_MAX_SERVERS = 10
```

If 8 of the 10 parallel execution processes are busy, only 2 processes are available. If you then request a query with a degree of parallelism of 8, the minimum 50% will not be met.

You can use this parameter with PARALLEL_ADAPTIVE_MULTI_USER. In a multi-user environment, an individual user or application can set PARALLEL_MIN_PERCENT to a minimum value until sufficient resources are available on the system and an acceptable degree of parallelism is returned.

See Also

- *Oracle AI Database SQL Tuning Guide* for more information about parallel execution
- "PARALLEL_DEGREE_POLICY", "PARALLEL_MAX_SERVERS", "PARALLEL_MIN_SERVERS", and "PARALLEL_ADAPTIVE_MULTI_USER"

2.301 PARALLEL_MIN_SERVERS

PARALLEL_MIN_SERVERS is the number of parallel execution processes Oracle creates when the instance is started. These processes will be kept active to service parallel statements.

Property	Description
Parameter type	Integer
Default value	CPU_COUNT * PARALLEL_THREADS_PER_CPU * 2
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Default value to the value of PARALLEL_MAX_SERVERS
Basic	No
Oracle RAC	Multiple instances can have different values.

Note

This parameter applies to parallel execution in exclusive mode as well as in an Oracle Real Application Clusters environment.

Note

When the PROCESSES initialization parameter is set to a value that is lower than the documented default value for the PARALLEL_MIN_SERVERS parameter in the table above, the database sets the default value of PARALLEL_MIN_SERVERS to a value that is lower than the documented default value. The lower default value enables the database to start service processes and allows user processes to connect to the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle AI Database Administrator's Guide* for more information about parallel execution servers

2.302 PARALLEL_MIN_TIME_THRESHOLD

`PARALLEL_MIN_TIME_THRESHOLD` specifies the minimum execution time a statement should have before the statement is considered for automatic degree of parallelism.

Property	Description
Parameter type	String
Syntax	`PARALLEL_MIN_TIME_THRESHOLD = { AUTO | integer }`
Default value	`AUTO`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No

By default, this parameter is set to 10 seconds. Automatic degree of parallelism is only enabled if `PARALLEL_DEGREE_POLICY` is set to `ADAPTIVE`, `AUTO`, or `LIMITED`.

If all tables referenced by a SQL statement use In-Memory Column Store (IM column store), then `PARALLEL_MIN_TIME_THRESHOLD` defaults to 1.

> **See Also**
>
> *Oracle AI Database VLDB and Partitioning Guide* for information about automatic degree of parallelism

2.303 PARALLEL_SERVERS_TARGET

`PARALLEL_SERVERS_TARGET` specifies the number of parallel server processes allowed to run parallel statements before statement queuing will be used.

Property	Description
Parameter type	Integer
Default value	For a CDB: Equal to the `PARALLEL_MAX_SERVERS` value for the CDB. For a PDB or non-CDB: `PARALLEL_THREADS_PER_CPU * CPU_COUNT * concurrent_parallel_users * 2`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`0` to `PARALLEL_MAX_SERVERS`

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Basic	No

When the parameter PARALLEL_DEGREE_POLICY is set to ADAPTIVE or AUTO, Oracle will queue SQL statements that require parallel execution, if the necessary parallel server processes are not available. In a single instance database, statement queuing will begin once the number of parallel server processes active on the system is equal to or greater than PARALLEL_SERVERS_TARGET. In an Oracle RAC database, a statement running on one instance can allocate parallel server processes on another instance when necessary. For example, if a statement running on one instance requires parallel execution, but the number of parallel server processes active on that instance is equal to or greater than the value of PARALLEL_SERVERS_TARGET for that instance, then the statement can allocate parallel server processes on a different instance. Therefore, statement queuing in an Oracle RAC database will begin only when every instance has reached its PARALLEL_SERVER_TARGET threshold.

Note

Consumer groups that have been marked with the PARALLEL_STMT_CRITICAL directive set to BYPASS_QUEUE are allowed to bypass the parallel statement queue, and therefore may drive the total number of active parallel server processes beyond PARALLEL_SERVERS_TARGET. Parallel statements issued with PARALLEL_DEGREE_POLICY not set to ADAPTIVE and AUTO can also drive the total number of active parallel server processes beyond PARALLEL_SERVERS_TARGET.

By default, PARALLEL_SERVERS_TARGET is set lower than the maximum number of parallel server processes allowed on the system (PARALLEL_MAX_SERVERS) to ensure each parallel statement will get all of the parallel server resources required and to prevent overloading the system with parallel server processes.

The number of concurrent parallel users running at default degree of parallelism on an instance depends on the memory initialization parameter settings for the instance. For example, if the MEMORY_TARGET or SGA_TARGET initialization parameter is set, then the number of concurrent_parallel_users = 4. If neither MEMORY_TARGET or SGA_TARGET is set, then PGA_AGGREGATE_TARGET is examined. If a value is set for PGA_AGGREGATE_TARGET, then concurrent_parallel_users = 2. If a value is not set for PGA_AGGREGATE_TARGET, then concurrent_parallel_users = 1.

Note that all serial (non-parallel) statements will execute immediately even if statement queuing has been activated.

By default, all PDB queries are subjected to queuing at the PDB level first by the PDB's PARALLEL_SERVERS_TARGET value, and then at the CDB level by the CDB's PARALLEL_SERVERS_TARGET value. This default behavior prevents any SQL statement inside a PDB from getting downgraded if parallel servers are exhausted in the CDB.

Parallel statement queuing is enabled by default at the CDB level because the CDB has a default value for PARALLEL_SERVERS_TARGET. You can disable parallel statement queuing at the CDB level by using ALTER SYSTEM to set PARALLEL_SERVERS_TARGET to 0 for the CDB.

The default value for PARALLEL_SERVERS_TARGET for a PDB is determined using the calculation in the table above with the PDB's CPU_COUNT value.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Note

A PDB can set a lower limit for parallel execution servers than the limit specified in the CDB resource plan. When the PARALLEL_SERVERS_TARGET initialization parameter is set in a PDB, and parallel execution server limit is specified for a PDB in the CDB resource plan, then the lower of the two limits is enforced. For example, assume that the PARALLEL_SERVERS_TARGET initialization parameter is set to 100 in the CDB root. Also assume that hrpdb has its PARALLEL_SERVERS_TARGET initialization parameter set to 50 and the CDB plan has a directive for hrpdb with parallel_server_limit set to 70%. In this case, the limit for parallel execution servers for hrpdb is 50, because 50 is lower than the CDB resource plan limit of 70 for hrpdb.

2.304 PARALLEL_THREADS_PER_CPU

PARALLEL_THREADS_PER_CPU describes the number of parallel execution processes or threads that a CPU can handle during parallel execution.

Property	Description
Parameter type	Integer
Default value	1
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Any nonzero number
Basic	No

Note

This parameter applies to parallel execution in exclusive mode as well as in an Oracle Real Application Clusters environment.

This parameter is used in determining the default values of other parallel execution related parameters, for example, PARALLEL_MAX_SERVERS. It is also used in determining the default

Copyright © 2002, 2025, Oracle and/or its affiliates.

degree of parallelism for SQL statements, and determining the upper bound for the degree of parallelism in automatic degree of parallelism. The default value is adequate in most cases.

See Also

- *Oracle AI Database SQL Tuning Guide* for more information about parallel execution

2.305 PDB_FILE_NAME_CONVERT

`PDB_FILE_NAME_CONVERT` maps names of existing files to new file names when processing a `CREATE PLUGGABLE DATABASE` statement, as well as when processing the `ENABLE PLUGGABLE DATABASE` clause of the `CREATE DATABASE` statement, if the *`file_name_convert_clause`* is not specified and Oracle Managed Files is not enabled.

Property	Description
Parameter type	String

Syntax	`PDB_FILE_NAME_CONVERT = '`*`string1`*`' , '`*`string2`*`' , '`*`string3`*`' , '`*`string4`*`' , ...`
	Where:
	• *`string1`* is the pattern of the existing filename
	• *`string2`* is the pattern of the new filename
	• *`string3`* is the pattern of the existing filename
	• *`string4`* is the pattern of the new filename
	You can enclose each string in single or double quotation marks.
	You can specify as many pairs of existing and new replacement strings as required.
	Example:
	`PDB_FILE_NAME_CONVERT = '/dbs/t1/','/dbs/t1/s','dbs/t2/','dbs/t2/s'`

Default value	There is no default value
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	You must set this parameter for every instance, and multiple instances must have the same value.

File name patterns specified in this initialization parameter cannot match files or directories managed by Oracle Managed Files.

See Also

Oracle Multitenant Administrator's Guide for more information about this parameter

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.306 PDB_LOCKDOWN

PDB_LOCKDOWN determines the PDB lockdown profile that applies to a PDB.

Property	Description
Parameter type	String
Syntax	PDB_LOCKDOWN = pdb-lockdown-profile-name
Default value	NULL
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	All instances should have the same value

A PDB lockdown profile is a mechanism to restrict operations (such as setting values of certain parameters and using certain options) that can be performed by users connected to a given PDB. You can also restrict execution of any packages that allow network access, for example, UTL_SMTP.

You create lockdown profiles using the SQL CREATE LOCKDOWN PROFILE statement. Then you can set a profile using the SQL ALTER SESSION or ALTER SYSTEM statement. See the Examples section.

This parameter can be set using the ALTER SYSTEM statement with scope set to MEMORY, SPFILE, or BOTH.

The lockdown profile for PDBs can be specified by a common user with common ALTER SYSTEM or common SYSDBA privilege.

If a PDB lockdown profile is dropped, any PDB to which the dropped profile was assigned (by means of storing the dropped profile name in the PDB_LOCKDOWN parameter) will continue to have its PDB_LOCKDOWN parameter set to the dropped lockdown profile name. However, the PDB will not have any restrictions imposed by the dropped lockdown profile.

Lockdown profiles can now be created in an application root and are referred to as application lockdown profiles.

A CDB common user with common SYSDBA or common ALTER SYSTEM privilege can only set PDB_LOCKDOWN to a CDB lockdown profile. Similarly, an application common user with application common SYSDBA or application common ALTER SYSTEM privilege can only set PDB_LOCKDOWN to an application lockdown profile.

An application common user cannot overwrite PDB_LOCKDOWN if PDB_LOCKDOWN is already set to a CDB lockdown profile in an application root or application PDB.

If the PDB_LOCKDOWN parameter in a PDB is set to the name of a lockdown profile different from that in its ancestor (for a CDB, the CDB root or, for application PDBs, the application root), the following will govern the interaction between restrictions imposed by these profiles:

- If the PDB_LOCKDOWN parameter in a PDB (including an application PDB) is set to a CDB lockdown profile, lockdown profiles specified by the PDB_LOCKDOWN parameter in CDB root (and for application PDBs, the application root) are ignored.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- If the PDB_LOCKDOWN parameter in an application PDB is set to an application lockdown profile while the PDB_LOCKDOWN parameter in the application root or CDB root is set to a CDB lockdown profile, in addition to the rules stipulated in the application lockdown profile, the DISABLE rules from the CDB lockdown profile set in its nearest ancestor (that is, an application root or CDB root) are inherited.
- If there are conflicts between rules comprising the CDB lockdown profile and the application lockdown profile, the rules in the CDB lockdown profile will take precedence (for example, the OPTION_VALUE clause of a CDB lockdown profile will take precedence over the OPTION_VALUE clause of an application lockdown profile).

Examples

This example shows how the SYS user can connect to the database AS SYSDBA and use the CREATE LOCKDOWN PROFILE statement in the root of a CDB to define a new lockdown profile. After defining the new lockdown profile, the SYS user can assign the new lockdown profile to a PDB using the PDB_LOCKDOWN parameter:

```
SQL> ALTER SESSION SET CONTAINER=CDB$ROOT;

Session altered.

SQL> CREATE LOCKDOWN PROFILE MYPROFILE;

Lockdown Profile created.

SQL> ALTER SESSION SET CONTAINER=CDB1_PDB1;

Session altered.

SQL> ALTER SYSTEM SET PDB_LOCKDOWN=MYPROFILE;

System altered.

SQL> SHOW PARAMETER PDB_LOCKDOWN

NAME           TYPE        VALUE
-------------- ----------- ---------
pdb_lockdown   string      MYPROFILE
SQL>
```

2.307 PDB_OS_CREDENTIAL

PDB_OS_CREDENTIAL determines the identity of the operating system user (OS user) employed when interacting with the operating system from a PDB.

Property	Description
Parameter type	String
Syntax	PDB_OS_CREDENTIAL = *credential*
Default value	None
Modifiable	No
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value should be used for all instances

> **Note**
>
> The Oracle OS user will continue to be used when interacting with the operating system from the root.

The Oracle OS user is usually a highly privileged user, and using the same user for operating system interactions for every PDB is not recommended. Also, using the same OS user for operating system interactions from different PDBs may compromise data belonging to a given PDB.

In contrast, using an OS user described by a credential whose name is specified as a value of the PDB_OS_CREDENTIAL parameter helps ensure that operating system interactions are performed as a less powerful user and provides the ability to protect data belonging to one PDB from being accessed by users connected to another PDB. A credential is an object that is created using the CREATE_CREDENTIAL procedure for the DBMS_CREDENTIAL package.

The operating system interactions that are done as the OS user name specified in the credential include:

- External jobs that do not already have an operating system credential specified
- External table pre-processors
- PL/SQL library executions

This parameter can be specified for all the PDBs in a CDB but the CDB-wide value can be overridden for a specific PDB and can be modified *only* by a common administrative user with the EXECUTE privilege for the DBMS_CREDENTIAL PL/SQL package and the ALTER SYSTEM system privilege.

If a value is not set for this parameter for a given PDB, the Oracle OS User will continue to be used when interacting with the operating system from that PDB.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.308 PERMIT_92_WRAP_FORMAT

`PERMIT_92_WRAP_FORMAT` allows Oracle Database release 9.2 wrapped versions of PL/SQL source text to be used in Oracle Database releases 10.2 and later when this parameter is set to `true`.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	No
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No
Oracle RAC	Multiple instances should use the same value

Oracle recommends that wrapped files be created using the PL/SQL Wrapper utility from Oracle Database release 10 or later.

See Also

Oracle AI Database PL/SQL Language Reference for more information about PL/SQL source text wrapping

2.309 PGA_AGGREGATE_LIMIT

`PGA_AGGREGATE_LIMIT` specifies a limit on the aggregate PGA memory consumed by the instance.

Property	Description
Parameter type	Big integer
Syntax	`PGA_AGGREGATE_LIMIT = integer [K | M | G]`

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Default value	If MEMORY_TARGET is set, then PGA_AGGREGATE_LIMIT defaults to the MEMORY_MAX_TARGET value. If MEMORY_TARGET is not set, then PGA_AGGREGATE_LIMIT defaults to 200% of PGA_AGGREGATE_TARGET. If MEMORY_TARGET is not set, and PGA_AGGREGATE_TARGET is explicitly set to 0, then the value of PGA_AGGREGATE_LIMIT is set to 90% of the physical memory size minus the total SGA size. In all cases, the default PGA_AGGREGATE_LIMIT is at least 2GB and at least 3MB times the PROCESSES parameter (and at least 5MB times the PROCESSES parameter for an Oracle RAC instance). For a PDB, the default value is the same as the CDB's default value.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	Do not attempt to set PGA_AGGREGATE_LIMIT below its default value, even in a parameter file (pfile), or instance startup will fail. However, PGA_AGGREGATE_LIMIT can be set to 0 either in a parameter file or dynamically after startup. If a value of 0 is specified, it means there is no limit to the aggregate PGA memory consumed by the instance.
Basic	No

Actions Taken When PGA_AGGREGATE_LIMIT is Exceeded

Parallel queries will be treated as a unit. First, the sessions that are using the most untunable memory will have their calls terminated. Then, if the total PGA memory usage is still over the limit, the sessions that are using the most untunable memory will be terminated.

SYS processes and background processes other than job queue processes will not be subjected to any of the actions described in this section. Instead, if they are using the most untunable memory, they will periodically write a brief summary of their PGA usage to a trace file.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Note

This parameter is optional for pluggable databases (PDBs). When this parameter is set for a PDB, it specifies the maximum PGA size for the PDB.

To be able to use Resource Manager in a CDB to control the amount of memory each PDB can use:

- The `NONCDB_COMPATIBLE` initialization parameter must be set to `FALSE` at the CDB level (in the root of the CDB).
- The `MEMORY_TARGET` initialization parameter must not be set at the CDB level.
- You must set the `PGA_AGGREGATE_LIMIT` initialization parameter in a PDB to a value that meets these requirements:
  - Less than or equal to the `PGA_AGGREGATE_LIMIT` value set at the CDB level
  - Greater than or equal to twice the value of `PGA_AGGREGATE_TARGET` set in the PDB

  When you set `PGA_AGGREGATE_LIMIT` in a PDB to a value that does not meet these requirements, you receive an error. If these requirements are violated after the PDB's parameter is set (for example, if the `PGA_AGGREGATE_LIMIT` value is changed at the CDB level), Oracle will adjust the PDB's value to meet these requirements.

See Also

- "MEMORY_TARGET"
- "PGA_AGGREGATE_TARGET"
- *Oracle Multitenant Administrator's Guide* for more information about the initialization parameters that control the memory usage of PDBs
- *Oracle AI Database Performance Tuning Guide* for more information about this parameter

2.310 PGA_AGGREGATE_TARGET

`PGA_AGGREGATE_TARGET` specifies the target aggregate PGA memory available to all server processes attached to the instance.

Property	Description
Parameter type	Big integer
Syntax	`PGA_AGGREGATE_TARGET = integer [K | M | G]`
Default value	`10` MB or 20% of the size of the SGA, whichever is greater For a PDB, the default value is the same as the CDB's default value.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Range of values	Minimum: 10 MB Maximum: 4096 GB - 1
Basic	Yes

To set a hard limit for aggregate PGA memory, use the `PGA_AGGREGATE_LIMIT` parameter.

Setting `PGA_AGGREGATE_TARGET` to a nonzero value has the effect of automatically setting the `WORKAREA_SIZE_POLICY` parameter to `AUTO`. With this setting, SQL working areas used by memory-intensive SQL operators (such as sort, group-by, hash-join, bitmap merge, and bitmap create) will be automatically sized. A nonzero value for this parameter is the default since, unless you specify otherwise, Oracle sets it to 20% of the SGA or 10 MB, whichever is greater.

Setting `PGA_AGGREGATE_TARGET` to 0 automatically sets the `WORKAREA_SIZE_POLICY` parameter to `MANUAL`. With this setting, SQL working areas are sized using the `*_AREA_SIZE` parameters.

Oracle attempts to keep the amount of private memory below the target specified by this parameter by adapting the size of the working areas to private memory. When increasing the value of this parameter, you indirectly increase the memory allotted to working areas. Consequently, more memory-intensive operations are able to run fully in memory and fewer will work their way over to disk.

If Automatic Memory Management is enabled (`MEMORY_TARGET` is set to a positive value) and `PGA_AGGREGATE_TARGET` is also set to a positive value, the `PGA_AGGREGATE_TARGET` value acts as the minimum value for the size of the instance PGA.

Note

This parameter is optional for pluggable databases (PDBs). When this parameter is set for a PDB, it specifies the target aggregate PGA size for the PDB.

To be able to use Resource Manager in a CDB to control the amount of memory each PDB can use:

- The `NONCDB_COMPATIBLE` initialization parameter must be set to `FALSE` at the CDB level (in the root of the CDB).
- The `MEMORY_TARGET` initialization parameter must not be set at the CDB level.
- You must set the `PGA_AGGREGATE_TARGET` initialization parameter in a PDB to a value that meets these requirements:
  - Less than or equal to the `PGA_AGGREGATE_TARGET` value set at the CDB level
  - Less than or equal to 50% of the `PGA_AGGREGATE_LIMIT` initialization parameter value set at the CDB level
  - Less than or equal to 50% of the `PGA_AGGREGATE_LIMIT` value set in the PDB

  When you set `PGA_AGGREGATE_TARGET` in a PDB to a value that does not meet these requirements, you receive an error. If these requirements are violated after the PDB's parameter is set (for example, if the `PGA_AGGREGATE_TARGET` value is changed at the CDB level), Oracle will adjust the PDB's value to meet these requirements.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.311 PKCS11_LIBRARY_LOCATION

`PKCS11_LIBRARY_LOCATION` specifies the PKCS#11 library location for Transparent Data Encryption (TDE).

Property	Description
Parameter type	String
Syntax	`PKCS11_LIBRARY_LOCATION = 'library_location'`
Default value	None
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be used on all instances.

For *`library_location`*, specify the full operating system path to the PKCS#11 library. For example:

```
ALTER SYSTEM SET PKCS11_LIBRARY_LOCATION =
    '/opt/oracle/extapi/64/pkcs11/okv/21.8/liborapkcs.so';
```

See Also

"V$PKCS11_PATH"

2.312 PLSCOPE_SETTINGS

`PLSCOPE_SETTINGS` controls the compile time collection, cross-reference, and storage of PL/SQL source code identifier data.

Property	Description
Parameter type	String

Syntax	`PLSCOPE_SETTINGS = 'value_clause [, value_clause ]'`
	value_clause::=
	`{ IDENTIFIERS | STATEMENTS } : { ALL | NONE | PUBLIC (for IDENTIFIERS only) | SQL (for IDENTIFIERS only) | PLSQL (for IDENTIFIERS only) }`

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Default value	'IDENTIFIERS:NONE'
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Values

- IDENTIFIERS:ALL

  Enables the collection of all source code identifier data.
- IDENTIFIERS:NONE

  Disables the collection of all source code identifier data.
- IDENTIFIERS: PUBLIC

  Enables the collection of all PUBLIC user identifier data (except for DEFINITION)
- IDENTIFIERS:SQL

  Enables the collection of all SQL identifier data.
- IDENTIFIERS:PLSQL

  Enables the collection of all PLSQL identifier data.
- STATEMENTS:ALL

  Enables the collection of all SQL statements used in PL/SQL.
- STATEMENTS:NONE

  Disables the collection of all statements.

PLSCOPE_SETTINGS can be set on a session, system, or per-library unit (ALTER COMPILE) basis. The current setting of PLSCOPE_SETTINGS for any library unit can be attained by querying the *_PLSQL_OBJECT_SETTINGS views. Any identifier data collected by setting this parameter can be accessed using the *_IDENTIFIERS views.

When a STATEMENTS setting is not specified, and IDENTIFIERS is specified but set to a value other than NONE, STATEMENTS defaults to a setting of ALL, which is equal to:

```
IDENTIFIERS: [ALL|PLSQL|PLSQL|PUBLIC]
```

Examples

The following parameter setting causes PL/SQL and SQL identifiers and statements to be collected:

```
PLSCOPE_SETTINGS = 'IDENTIFIERS:ALL, STATEMENTS:ALL'
```

The following parameter setting causes only SQL identifiers and statements to be collected:

```
PLSCOPE_SETTINGS = 'IDENTIFIERS:SQL, STATEMENTS:ALL'
```

Copyright © 2002, 2025, Oracle and/or its affiliates.

The following parameter setting causes only PL/SQL identifiers to be collected:

```
PLSCOPE_SETTINGS = 'IDENTIFIERS:PLSQL, STATEMENTS:NONE'
```

The following parameter setting causes no identifier data to be collected, and drops any existing identifier data:

```
PLSCOPE_SETTINGS = 'IDENTIFIERS: NONE'
```

- *Oracle AI Database PL/SQL Language Reference* for more information about this parameter

2.313 PLSQL_CCFLAGS

PLSQL_CCFLAGS provides a mechanism that allows PL/SQL programmers to control conditional compilation of each PL/SQL library unit independently.

Property	Description
Parameter type	String
Syntax	PLSQL_CCFLAGS = '<*v1*>:<*c1*>,<*v2*>:<*c2*>,...,<*vn*>:<*cn*>'
Default value	Empty string
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	Any string literal that satisfies the internal syntax
Basic	No
Examples	ALTER SESSION SET PLSQL_CCFLAGS = 'DeBug:TruE'; ALTER SESSION SET PLSQL_CCFLAGS = 'debug:TRUE';

Values

- <*vi*> has the form of an unquoted PL/SQL identifier. It is unrestricted and can be a reserved word or a keyword. The text is insensitive to case. Each one is known as a flag or flag name. Each <*vi*> can occur more than once in the string, each occurrence can have a different flag value, and the flag values can be of different kinds.
- <*ci*> is one of the following: a PL/SQL boolean literal, a PLS_INTEGER literal, or the literal NULL. The text is insensitive to case. Each one is known as a flag value and corresponds to a flag name.

You can define any allowable value for PLSQL_CCFLAGS. However, Oracle recommends that this parameter be used for controlling the conditional compilation of debugging or tracing code. It is recommended that the following identifiers not be used as flag name values:

- Names of Oracle parameters (for example, NLS_LENGTH_SEMANTICS)

Copyright © 2002, 2025, Oracle and/or its affiliates.

- Identifiers with any of the following prefixes: `PLS_`, `PLSQL_`, `PLSCC_`, `ORA_`, `ORACLE_`, `DBMS_`, `SYS_`

> **See Also**
>
> *Oracle AI Database PL/SQL Language Reference* for more information about this parameter

2.314 PLSQL_CODE_TYPE

`PLSQL_CODE_TYPE` specifies the compilation mode for PL/SQL library units.

Property	Description
Parameter type	String
Syntax	`PLSQL_CODE_TYPE = { INTERPRETED | NATIVE }`
Default value	`INTERPRETED`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No

Values

- `INTERPRETED`

  PL/SQL library units will be compiled to PL/SQL bytecode format. Such modules are executed by the PL/SQL interpreter engine.

- `NATIVE`

  PL/SQL library units (with the possible exception of top-level anonymous PL/SQL blocks) will be compiled to native (machine) code. Such modules will be executed natively without incurring any interpreter overhead.

When the value of this parameter is changed, it has no effect on PL/SQL library units that have already been compiled. The value of this parameter is stored persistently with each library unit.

If a PL/SQL library unit is compiled native, all subsequent automatic recompilations of that library unit will use native compilation.

> **See Also**
>
> *Oracle AI Database PL/SQL Language Reference* for more information about this parameter

2.315 PLSQL_DEBUG

`PLSQL_DEBUG` specifies whether or not PL/SQL library units will be compiled for debugging.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No

> **Note**
>
> The `PLSQL_DEBUG` parameter is deprecated. It is retained for backward compatibility only.

Values

- `true`

  PL/SQL library units will be compiled for debugging
- `false`

  PL/SQL library units will be compiled for normal execution

When `PLSQL_DEBUG` is set to `true`, PL/SQL library units are always compiled `INTERPRETED` in order to be debuggable.

When the value of this parameter is changed, it has no effect on PL/SQL library units that have already been compiled. The value of this parameter is stored persistently with each library unit.

2.316 PLSQL_FUNCTION_DYNAMIC_STATS

`PLSQL_FUNCTION_DYNAMIC_STATS` specifies, at the session level, whether dynamic statistics are allowed to be generated for PL/SQL functions.

Property	Description
Parameter type	String
Syntax	`PLSQL_FUNCTION_DYNAMIC_STATS = { PREFERENCE | ON | OFF | CHOOSE }`
Default value	`PREFERENCE`
Modifiable	`ALTER SESSION`
Modifiable in a PDB	No
Basic	No

Dynamic statistics is an optimization technique in which the database uses recursive SQL to scan a small random sample of the blocks in a table. In earlier releases, the optimizer made the decision to allow dynamic statistics for some PL/SQL functions, and disallow dynamic statistics for others.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Starting with Oracle AI Database 26ai, Release Update 23.8, Oracle provides users with more control over dynamic statistics for PL/SQL functions. The `DBMS_STATS` package offers procedures that allow you to set and view global-level and function-level preferences for generating dynamic statistics for PL/SQL functions.

Additionally, the `PLSQL_FUNCTION_DYNAMIC_STATS` parameter allows you to override these preferences for a particular session. You can specify the following values:

- `PREFERENCE` - Do not override. Use the global-level and function-level preferences that were set with the `DBMS_STATS` package for generating dynamic statistics for PL/SQL functions. This is the default.
- `ON` - Enable dynamic statistics in the session for all PL/SQL functions.
- `OFF` - Disable dynamic statistics in the session for all PL/SQL functions.
- `CHOOSE` - Allow the optimizer to choose whether dynamic statistics are generated in the session for each PL/SQL function.

Note

This parameter is available starting with Oracle AI Database 26ai, Release Update 23.8.

See Also

- *Oracle AI Database PL/SQL Packages and Types Reference* for more information about the `DBMS_STATS` package
- *Oracle AI Database SQL Tuning Guide* for more information about this parameter

2.317 PLSQL_IMPLICIT_CONVERSION_BOOL

`PLSQL_IMPLICIT_CONVERSION_BOOL` allows or disallows implicit conversions in PL/SQL between numeric data types and the `BOOLEAN` data type, and between character data types and the `BOOLEAN` data type.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No

When this parameter is set to `true`, PL/SQL supports the following implicit data type conversions:

- Numeric data type to `BOOLEAN` data type
  - Non-zero numeric values are implicitly converted to the `BOOLEAN` value `TRUE`

Copyright © 2002, 2025, Oracle and/or its affiliates.

  - The numeric value of `0` is implicitly converted to the `BOOLEAN` value `FALSE`
- Character data type to `BOOLEAN` data type
  - Character values such as `'true'`, `'t'`, `'yes'`, `'y'`, `'1'`, and `'on'` (case-insensitive) are implicitly converted to the `BOOLEAN` value `TRUE`
  - Character values such as `'false'`, `'f'`, `'no'`, `'n'`, `'0'`, and `'off'` (case-insensitive) are implicitly converted to the `BOOLEAN` value `FALSE`
- `BOOLEAN` data type to numeric data type
  - The `BOOLEAN` value `TRUE` is implicitly converted to the numeric value `1`
  - The `BOOLEAN` value `FALSE` is implicitly converted to the numeric value `0`
- `BOOLEAN` data type to character data type
  - The `BOOLEAN` value `TRUE` is implicitly converted to the character value `'TRUE'`
  - The `BOOLEAN` value `FALSE` is implicitly converted to the character value `'FALSE'`

When this parameter is set to `false`, PL/SQL does not support such implicit conversions.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

2.318 PLSQL_OPTIMIZE_LEVEL

`PLSQL_OPTIMIZE_LEVEL` specifies the optimization level that will be used to compile PL/SQL library units. The higher the setting of this parameter, the more effort the compiler makes to optimize PL/SQL library units.

Property	Description
Parameter type	Integer
Default value	2
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`0` to 3
Basic	No

Values

- `0`

  Maintains the evaluation order and hence the pattern of side effects, exceptions, and package initializations of Oracle9*i* and earlier releases. Also removes the new semantic identity of `BINARY_INTEGER` and `PLS_INTEGER` and restores the earlier rules for the evaluation of integer expressions. Although code will run somewhat faster than it did in Oracle9*i*, use of level 0 will forfeit most of the performance gains of PL/SQL in Oracle Database 10*g*.

- `1`

Copyright © 2002, 2025, Oracle and/or its affiliates.

Applies a wide range of optimizations to PL/SQL programs including the elimination of unnecessary computations and exceptions, but generally does not move source code out of its original source order.

- 2

  Applies a wide range of modern optimization techniques beyond those of level 1 including changes which may move source code relatively far from its original location.

- 3

  Applies a wide range of optimization techniques beyond those of level 2, automatically including techniques not specifically requested.

Generally, setting this parameter to 2 pays off in better execution performance. If, however, the compiler runs slowly on a particular source module or if optimization does not make sense for some reason (for example, during rapid turnaround development), then setting this parameter to 1 will result in almost as good a compilation with less use of compile-time resources.

The value of this parameter is stored persistently with the library unit.

See Also

- *Oracle AI Database PL/SQL Language Reference* for more information about this parameter
- *Oracle AI Database Development Guide* for an example of using this parameter

2.319 PLSQL_V2_COMPATIBILITY

`PLSQL_V2_COMPATIBILITY` is used to specify whether nonstandard behavior that PL/SQL Version 2 allows will be allowed in PL/SQL Version 8.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true	false`
Basic	No

Note

The `PLSQL_V2_COMPATIBILITY` parameter is deprecated. It is retained for backward compatibility only.

PL/SQL Version 2 allows some nonstandard behavior that Version 8 disallows. If you want to retain that behavior for backward compatibility, set `PLSQL_V2_COMPATIBILITY` to `true`. If you set it to `false`, then PL/SQL Version 8 behavior is enforced and Version 2 behavior is not allowed.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle AI Database PL/SQL Language Reference* for a description of the differences between PL/SQL Version 2 and Version 8, and for more information on setting this parameter

2.320 PLSQL_WARNINGS

`PLSQL_WARNINGS` enables or disables the reporting of warning messages by the PL/SQL compiler, and specifies which warning messages to show as errors.

Property	Description
Parameter type	String
Syntax	`PLSQL_WARNINGS = 'value_clause' [, 'value_clause' ] ...`

Syntax	**`value_clause::=`**
	`{ ENABLE | DISABLE | ERROR }:`
	`{ ALL`
	`| SEVERE`
	`| INFORMATIONAL`
	`| PERFORMANCE`
	`| { integer`
	`| (integer [, integer ] ...)`
	`}`
	`}`

Default value	`'DISABLE:ALL'`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No

Examples	`PLSQL_WARNINGS = 'ENABLE:SEVERE', 'DISABLE:INFORMATIONAL';`
	`PLSQL_WARNINGS = 'DISABLE:ALL';`
	`PLSQL_WARNINGS = 'DISABLE:5000', 'ENABLE:5001', 'ERROR:5002';`
	`PLSQL_WARNINGS = 'ENABLE:(5000,5001,5002)', 'DISABLE:(6000,6001)';`

`value_clause`

Multiple value clauses may be specified, enclosed in quotes and separated by commas. Each value clause is composed of a qualifier, a colon (`:`), and a modifier.

Qualifier values:

- `ENABLE`

  Enable a specific warning or a set of warnings

- `DISABLE`

  Disable a specific warning or a set of warnings

- `ERROR`

Copyright © 2002, 2025, Oracle and/or its affiliates.

Treat a specific warning or a set of warnings as errors

Modifier values:

- `ALL`

  Apply the qualifier to all warning messages
- `SEVERE`

  Apply the qualifier to only those warning messages in the `SEVERE` category
- `INFORMATIONAL`

  Apply the qualifier to only those warning messages in the `INFORMATIONAL` category
- `PERFORMANCE`

  Apply the qualifier to only those warning messages in the `PERFORMANCE` category

> **See Also**
>
> *Oracle AI Database PL/SQL Language Reference* for more information about this parameter

2.321 PMEM_FILESTORE

`PMEM_FILESTORE` specifies the Persistent Memory Filestores (PMEM Filestores) that the database automatically mounts during instance startup.

Property	Description
Parameter type	String
Syntax	`PMEM_FILESTORE = ( 'mount_point', 'backing_file' [, 'mount_point', 'backing_file' ]... )`
Default value	None
Modifiable	No
Modifiable in a PDB	No
Basic	No

You can specify one or more PMEM Filestores to be mounted during instance startup.

Specify the following pair of values for each PMEM Filestore:

- *`mount_point`*: The operating system directory path for the mount point of the PMEM Filestore
- *`backing_file`*: The operating system file path for the backing file of the PMEM Filestore

For example:

```
PMEM_FILESTORE=('/var/db/db_1', '/var/db_storage/db1.f')

PMEM_FILESTORE=('/var/db/db_1', '/var/db_storage/db1.f', '/var/db/db_2',
'/var/db_storage/db2.f')
```

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.322 PRE_PAGE_SGA

PRE_PAGE_SGA determines whether Oracle accesses the entire SGA at instance startup.

Operating system page table entries are then prebuilt for each page of the SGA.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	No
Modifiable in a PDB	No
Range of values	true | false
Basic	No

When this parameter is set to true, the database server touches the entire SGA after the instance startup. These accesses are done by a background process and are initiated after the instance startup. The accesses cause the OS to allocate memory to the SGA and populate the page tables, making the SGA memory resident and increasing database performance.

> **Note**
>
> This setting does not prevent your operating system from paging or swapping the SGA after it is initially read into memory.

> **Note**
>
> The PRE_PAGE_SGA parameter is deprecated in Oracle AI Database 26ai because it is obsolete. Setting this parameter typically provides little or no potential performance benefits, and can create problems.
>
> The Oracle Database design for SGA packaging has evolved over time, so that process start-up effects on the SGA are initiated after instance startup, and there is little to no benefit in changing the value for PRE_PAGE_SGA. The only use case for this parameter is on Oracle Exadata systems, which should have PRE_PAGE_SGA set to TRUE.

2.323 PRIORITY_TXNS_HIGH_WAIT_TARGET

PRIORITY_TXNS_HIGH_WAIT_TARGET specifies the maximum number of seconds that a HIGH priority transaction will wait for a row lock before the Priority Transactions feature rolls back a lower priority transaction holding the lock.

Property	Description
Parameter type	Integer
Default value	2147483647

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	1 to 2147483647
Basic	No
Oracle RAC	Different instances can use different values.

The Priority Transactions feature automatically rolls back low-priority transactions that are blocking higher priority transactions from obtaining row locks.

This parameter is one of four initialization parameters that enable you to configure Priority Transactions. The other parameters are:

- TXN_PRIORITY - Specifies a priority (HIGH, MEDIUM, or LOW) for all transactions in a user session
- PRIORITY_TXNS_MEDIUM_WAIT_TARGET - Specifies the maximum number of seconds that a MEDIUM priority transaction will wait for a row lock
- PRIORITY_TXNS_MODE - Specifies whether to enable Priority Transactions or test Priority Transactions by running in tracking mode

Note

This parameter is available starting with Oracle AI Database 26ai.

See Also

- "TXN_PRIORITY"
- "PRIORITY_TXNS_MEDIUM_WAIT_TARGET"
- "PRIORITY_TXNS_MODE"
- *Oracle AI Database Administrator's Guide* for more information about Priority Transactions

2.324 PRIORITY_TXNS_MEDIUM_WAIT_TARGET

PRIORITY_TXNS_MEDIUM_WAIT_TARGET specifies the maximum number of seconds that a MEDIUM priority transaction will wait for a row lock before the Priority Transactions feature rolls back a lower priority transaction holding the lock.

Property	Description
Parameter type	Integer
Default value	2147483647
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Range of values	1 to 2147483647
Basic	No
Oracle RAC	Different instances can use different values.

The Priority Transactions feature automatically rolls back low-priority transactions that are blocking higher priority transactions from obtaining row locks.

This parameter is one of four initialization parameters that enable you to configure Priority Transactions. The other parameters are:

- `TXN_PRIORITY` - Specifies a priority (`HIGH`, `MEDIUM`, or `LOW`) for all transactions in a user session
- `PRIORITY_TXNS_HIGH_WAIT_TARGET` - Specifies the maximum number of seconds that a `HIGH` priority transaction will wait for a row lock
- `PRIORITY_TXNS_MODE` - Specifies whether to enable Priority Transactions or test Priority Transactions by running in tracking mode

Note

This parameter is available starting with Oracle AI Database 26ai.

See Also

- "TXN_PRIORITY"
- "PRIORITY_TXNS_HIGH_WAIT_TARGET"
- "PRIORITY_TXNS_MODE"
- *Oracle AI Database Administrator's Guide* for more information about Priority Transactions

2.325 PRIORITY_TXNS_MODE

`PRIORITY_TXNS_MODE` specifies the mode for Priority Transactions.

Property	Description
Parameter type	String
Syntax	`PRIORITY_TXNS_MODE = { ROLLBACK | TRACK }`
Default value	`ROLLBACK`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances must have the same value.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Values:

- `ROLLBACK` - This setting enables Priority Transactions. The database will automatically roll back low-priority transactions that are blocking higher priority transactions from obtaining row locks.

  Before enabling Priority Transactions, ensure that the following initialization parameters are configured properly:

  - `PRIORITY_TXNS_HIGH_WAIT_TARGET` - Specifies the maximum number of seconds that a `HIGH` priority transaction will wait for a row lock
  - `PRIORITY_TXNS_MEDIUM_WAIT_TARGET` - Specifies the maximum number of seconds that a `MEDIUM` priority transaction will wait for a row lock
  - `TXN_PRIORITY` - Specifies a priority (`HIGH`, `MEDIUM`, or `LOW`) for all transactions in a user session

  When running in `ROLLBACK` mode, you can track the performance of Priority Transactions by monitoring the following statistics:

  - `txns rollback priority_txns_high_wait_target`
  - `txns rollback priority_txns_medium_wait_target`

- `TRACK` - This setting allows you to track the potential behavior of Priority Transactions. You can use this mode to tune the Priority Transactions initialization parameters before enabling `ROLLBACK` mode.

  The database determines when `HIGH` and `MEDIUM` priority transactions would be rolled back, given the current values of the Priority Transactions initialization parameters. However, instead of actually rolling back the transactions, the database only increments the following statistics:

  - `txns track mode priority_txns_high_wait_target`
  - `txns track mode priority_txns_medium_wait_target`

  You can also monitor the following wait events to determine the amount of time transactions are waiting for row locks:

  - `enq: TX - row lock (HIGH priority)`
  - `enq: TX - row lock (MEDIUM priority)`
  - `enq: TX - row lock (LOW priority)`

Note

This parameter is available starting with Oracle AI Database 26ai.

See Also

- "PRIORITY_TXNS_HIGH_WAIT_TARGET"
- "PRIORITY_TXNS_MEDIUM_WAIT_TARGET"
- "TXN_PRIORITY"
- *Oracle AI Database Administrator's Guide* for more information about Priority Transactions

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.326 PRIVATE_TEMP_TABLE_PREFIX

PRIVATE_TEMP_TABLE_PREFIX specifies the prefix that the database uses for private temporary tables.

Property	Description
Parameter type	String
Syntax	PRIVATE_TEMP_TABLE_PREFIX = *string*
Default value	ORA$PTT_
Modifiable	ALTER SYSTEM ... DEFERRED
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be specified on each instance.

The default value used for the PRIVATE_TEMP_TABLE_PREFIX parameter is ORA$PTT_.

If you choose to specify a different prefix value, it must begin with the string ORA$ and must be unique across the database. Use the following SQL query to determine if the prefix value is unique (in the query, replace prefix-value with your actual prefix value):

```
select count(*) from obj$ where name like '<prefix-value>%';
```

If the above query returns 0, then the prefix you specified is an appropriate value to set.

Note

After setting the prefix, regular table, view, and object names cannot use the same prefix.

See Also

- "DBA_PRIVATE_TEMP_TABLES"
- "USER_PRIVATE_TEMP_TABLES"
- *Oracle AI Database Administrator's Guide* for an introduction to private temporary tables

2.327 PROCESSES

PROCESSES specifies the maximum number of operating system user processes that can simultaneously connect to Oracle.

Property	Description
Parameter type	Integer

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Default value	The value is derived, and it typically depends on the number of cores reported in the alert log.
Modifiable	No
Modifiable in a PDB	No
Range of values	80 to operating system dependent
Basic	Yes
Oracle RAC	Multiple instances can have different values.

The value for this parameter should allow for all background processes such as locks, job queue processes, and parallel execution processes.

The default values of the `SESSIONS` and `TRANSACTIONS` parameters are derived from this parameter. Therefore, if you change the value of `PROCESSES`, you should evaluate whether to adjust the values of those derived parameters.

See Also

- Your operating system-specific Oracle documentation for the range of values
- *Oracle AI Database Concepts* for an introduction to Oracle database instance processes

2.328 PROCESSOR_GROUP_NAME

`PROCESSOR_GROUP_NAME` specifies the name of the processor group that this instance should run in.

Property	Description
Parameter type	String
Syntax	`PROCESSOR_GROUP_NAME = string`
Default value	There is no default value
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	For Oracle RAC databases, it is recommended that the operating system processor groups for each database instance are all named the same, so that the same `PROCESSOR_GROUP_NAME` value can be used. However, you can choose to use different names. In this case, you would set the `PROCESSOR_GROUP_NAME` explicitly for each database instance.

This initialization parameter is supported on the Linux and Solaris operating systems.

`PROCESSOR_GROUP_NAME` instructs the database instance to run itself within the specified operating system processor group. All Oracle processes will be bound to the CPUs in this group and will only run on these CPUs.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Notes

- Oracle recommends that this parameter be set only for databases on which the `USE_DEDICATED_BROKER` initialization parameter is also set to `TRUE`.
- For NUMA systems, all SGA and PGA memory allocated by the database instance will be allocated from NUMA nodes within the group.
- Starting with Oracle Database Appliance (ODA) release 19.9, you can use `PROCESSOR_GROUP_NAME` to specify the set of CPU cores on which the database on ODA will run. For more information, refer to *Oracle Database Appliance X8-2 Deployment and User's Guide*.

See Also

"USE_DEDICATED_BROKER"

2.329 QUERY_REWRITE_ENABLED

Use `QUERY_REWRITE_ENABLED` to enable or disable query rewriting globally for the database.

Property	Description
Parameter type	String
Syntax	`QUERY_REWRITE_ENABLED = { false | true | force }`
Default value	If `OPTIMIZER_FEATURES_ENABLE` is set to `10.0.0` or higher, then `true` If `OPTIMIZER_FEATURES_ENABLE` is set to `9.2.0` or lower, then `false`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances can have different values.

Values

- `false`

  Oracle does not use rewrite.

- `true`

  Oracle costs the query with rewrite and without rewrite and chooses the method with the lower cost.

- `force`

  Oracle always uses rewrite and does not evaluate the cost before doing so. Use `force` when you know that the query will always benefit from rewrite and when reduction in compile time is important.

To take advantage of query rewrite for a particular materialized view, you must enable query rewrite for that materialized view, and you must enable cost-based optimization.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- *Oracle AI Database Data Warehousing Guide* for information on query rewrite of materialized views
- *Oracle AI Database SQL Tuning Guide* and "OPTIMIZER_MODE" for information on cost-based optimization

2.330 QUERY_REWRITE_INTEGRITY

`QUERY_REWRITE_INTEGRITY` determines the degree to which Oracle must enforce query rewriting. At the safest level, Oracle does not use query rewrite transformations that rely on unenforced relationships.

Property	Description
Parameter type	String
Syntax	`QUERY_REWRITE_INTEGRITY = { enforced | trusted | stale_tolerated }`
Default value	`enforced`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances can have different values.

`QUERY_REWRITE_INTEGRITY` is relevant for materialized views as well as for foreign key constraints in `NOVALIDATE` state.

Values

- `enforced`

  Oracle enforces and guarantees consistency and integrity.

- `trusted`

  Oracle allows rewrites using relationships that have been declared, but that are not enforced by Oracle.

- `stale_tolerated`

  Oracle allows rewrites using unenforced relationships. Materialized views are eligible for rewrite even if they are known to be inconsistent with the underlying detail data. You must set the `QUERY_REWRITE_INTEGRITY` initialization parameter to `stale_tolerated` before querying an external table in the In-Memory Column Store (IM column store).

If a foreign key constraint is in `NOVALIDATE` state, join elimination is not done when `QUERY_REWRITE_INTEGRITY=enforced`. This means that queries with joins over a foreign key constraint that is in `RELY NOVALIDATE` state can potentially take longer to parse and execute as the optimizer does not trust the `RELY`.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- "INMEMORY_CLAUSE_DEFAULT"
- *Oracle AI Database Data Warehousing Guide* for more information about query rewrite for materialized views
- *Oracle AI Database Data Warehousing Guide* for more information about the `QUERY_REWRITE_INTEGRITY` parameter

2.331 RDBMS_SERVER_DN

`RDBMS_SERVER_DN` specifies the Distinguished Name (DN) of the Oracle server. It is used for retrieving Enterprise Roles from an enterprise directory service.

Note

Enterprise User Security (EUS) is deprecated with Oracle AI Database 26ai.

Oracle recommends that you migrate to using Centrally Managed Users (CMU). This feature enables you to directly connect with Microsoft Active Directory without an intervening directory service for enterprise user authentication and authorization to the database. If your Oracle Database is in the cloud, you can also choose to move to one of the newer integrations with a cloud identity provider.

Property	Description
Parameter type	X.500 Distinguished Name
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Range of values	All X.500 Distinguished Name format values
Basic	No

Note

The `RDBMS_SERVER_DN` parameter is deprecated in Oracle Database 12*c* Release 1 (12.1.0.2). It is replaced by the `LDAP_DIRECTORY_ACCESS` initialization parameter.

If you do not want to use a directory for enterprise user and privilege management, but prefer to use SSL authentication alone, do not set this parameter.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- *Oracle AI Database Enterprise User Security Administrator's Guide* for more information on enterprise roles and the enterprise directory service
- "LDAP_DIRECTORY_ACCESS"

2.332 READ_ONLY

READ_ONLY enables or disables read-only mode for a user session.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SESSION
Modifiable in a PDB	No
Range of values	true | false
Basic	No
Oracle RAC	Different instances can use different values.

The READ_ONLY parameter allows you to prohibit write operations in a user session, without having to put an entire CDB or container into read-only mode. You can set this parameter in a session created by any type of user, such as a CDB common user, an application common user, or a local user. This parameter is effective in any type of container, such as the CDB root, a PDB, an application root, or an application PDB, when the container is open in read/write mode.

- To enable read-only mode for the current session, set the READ_ONLY parameter to true. You cannot set this parameter to true when there are active transactions in the session.
- To disable read-only mode for the current session, set the READ_ONLY parameter to false.

The READ_ONLY parameter value for a user session does not affect the value of the OPEN_MODE column for the session's container, as displayed in views such as V$CONTAINER_TOPOLOGY, V$CONTAINERS, V$DATABASE, and V$PDBS.

Note

This parameter is available starting with Oracle AI Database 26ai.

2.333 READ_ONLY_OPEN_DELAYED

READ_ONLY_OPEN_DELAYED determines when datafiles in read-only tablespaces are accessed.

Property	Description
Parameter type	Boolean
Default value	false

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Modifiable	No
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No

Values

- `true`

  The datafiles are accessed for the first time only when an attempt is made to read data stored within them.

- `false`

  The datafiles are accessed at database open time.

You can use this parameter to speed up some operations (primarily opening the database) for very large databases when substantial portions of the database are stored in read-only tablespaces. Consider setting this parameter to `true` for such databases, especially if portions of the read-only data are stored on slow-access devices or hierarchical storage.

> **See Also**
>
> *Oracle AI Database Administrator's Guide* for information on the consequences of delaying access of datafiles in read-only tablespaces

2.334 RECOVERY_PARALLELISM

`RECOVERY_PARALLELISM` specifies the number of processes to participate in instance or crash recovery.

Property	Description
Parameter type	Integer
Default value	System-determined parallel recovery
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	System-determined, but cannot exceed `PARALLEL_MAX_SERVERS` initialization parameter setting
Basic	No

To force serial crash and instance recovery, set the `RECOVERY_PARALLELISM` parameter to 0 or 1. 0 or 1 disable parallel instance and crash recovery on a system that has multiple CPUs. An alert log displays the degree of parallelism that was chosen when the database instance/ recovery starts.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> - *Oracle Real Application Clusters Administration and Deployment Guide* for information on setting this parameter in an Oracle RAC environment

2.335 RECYCLEBIN

`RECYCLEBIN` is used to control whether the Flashback Drop capability is turned on or off.

Property	Description
Parameter type	String
Syntax	`RECYCLEBIN = { on | off }`
Default value	`on`
Modifiable	`ALTER SESSION, ALTER SYSTEM ... DEFERRED`
Modifiable in a PDB	Yes
Basic	No

If the parameter is set to `off`, then dropped tables do not go into the recycle bin. If this parameter is set to `on`, then dropped tables go into the recycle bin and can be recovered.

> **See Also**
>
> *Oracle AI Database Administrator's Guide* for more information about using Flashback Drop and managing the recycle bin

2.336 REDO_TRANSPORT_USER

`REDO_TRANSPORT_USER` specifies the name of the user whose password verifier is used when a remote login password file is used for redo transport authentication. This user must have the `SYSOPER` privilege and must have the same password in the database that initiates the redo transport session and in the database that is the target of the redo transport session.

Property	Description
Parameter type	String
Syntax	`REDO_TRANSPORT_USER = user_name`
Default value	There is no default value.
Range of values	Any character string that matches the name of a user who has been granted the SYSOPER privilege
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No
Oracle RAC	Every instance should use the same value

Copyright © 2002, 2025, Oracle and/or its affiliates.

The value of this parameter is case sensitive and must exactly match the value of the USERNAME column of a row in the V$PWFILE_USERS view. The value of the SYSOPER column of the row must also be TRUE.

If this parameter is not specified, then the password verifier of the SYS user will be used when a remote login password file is used for redo transport authentication.

> **See Also**
>
> *Oracle Data Guard Concepts and Administration* for more information about this parameter

2.337 REMOTE_DEPENDENCIES_MODE

REMOTE_DEPENDENCIES_MODE specifies how Oracle should handle dependencies upon remote PL/SQL stored procedures.

Property	Description
Parameter type	String
Syntax	REMOTE_DEPENDENCIES_MODE = { TIMESTAMP | SIGNATURE }
Default value	TIMESTAMP
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No

Values

- TIMESTAMP

  The client running the procedure compares the timestamp recorded on the server-side procedure with the current timestamp of the local procedure and executes the procedure only if the timestamps match.

- SIGNATURE

  Oracle allows the procedure to execute as long as the signatures are considered safe. This setting allows client PL/SQL applications to be run without recompilation.

> **See Also**
>
> *Oracle AI Database Development Guide* for suggestions for managing dependencies

2.338 REMOTE_LISTENER

REMOTE_LISTENER specifies a network name that resolves to an address or address list of Oracle Net remote listeners (that is, listeners that are not running on the same system as this instance). The address or address list is specified in the TNSNAMES.ORA file or other address repository as configured for your system.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	String
Syntax	`REMOTE_LISTENER = network_name`
Default value	There is no default value.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	Yes

See Also

- *Oracle AI Database Concepts* for more information about listener processes and dispatcher processes
- *Oracle AI Database Net Services Administrator's Guide* and your operating system-specific Oracle documentation for more information about specifying network addresses for the protocols on your system
- *Oracle Clusterware Administration and Deployment Guide* for information about SCAN addresses

2.339 REMOTE_LOGIN_PASSWORDFILE

`REMOTE_LOGIN_PASSWORDFILE` specifies whether Oracle checks for a password file.

Property	Description
Parameter type	String
Syntax	`REMOTE_LOGIN_PASSWORDFILE = { SHARED | EXCLUSIVE | NONE }`
Default value	`EXCLUSIVE`
Modifiable	No
Modifiable in a PDB	No
Basic	Yes
Oracle RAC	Multiple instances must have the same value.

Values

- `SHARED`

  One or more databases can use the password file. The password file can contain `SYS` and non-`SYS` users.

  When `REMOTE_LOGIN_PASSWORDFILE` is set to `SHARED`:

  – The database disables modification of the password file by an ASM or RDBMS instance.

  – If you attempt to change the password of a user that is in the password file, the operation fails with "ORA-01999: password file cannot be updated in SHARED mode.

Copyright © 2002, 2025, Oracle and/or its affiliates.

  - If you attempt to change the password of an administrative user (except SYS) that is *not* in the password file, the password change operation will succeed, but the new password will not go into effect. This is because the password is updated only in the data dictionary and not in the password file.
  - Grants and revokes of administrative privileges (`SYSDBA`, `SYSOPER`, `SYSASM`, `SYSBACKUP`, `SYSDG`, `SYSKM`) to or from individual users are not allowed. For example, `GRANT SYSDBA TO SCOTT` fails with "ORA-01999: password file cannot be updated in SHARED mode."
  - If the password file does not exist, then the behavior is the same as setting `REMOTE_LOGIN_PASSWORDFILE` to `NONE`.

- `EXCLUSIVE`

  The password file is intended for use by ASM instances in the same cluster or by one or more instances of the same Oracle database.

  The password file can contain `SYS` and non-`SYS` users.

  If the password file does not exist, then the behavior is the same as setting `REMOTE_LOGIN_PASSWORDFILE` to `NONE`.

- `NONE`

  ASM and RDBMS instances ignore the password file. Therefore, privileged users must be authenticated by the operating system.

> **Note**
>
> If you change `REMOTE_LOGIN_PASSWORDFILE` to `EXCLUSIVE` or `SHARED` from `NONE`, then ensure that the password file is synchronized with the dictionary passwords.

2.340 REMOTE_OS_ROLES

`REMOTE_OS_ROLES` specifies whether operating system roles are allowed for remote clients.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	No
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No

The default value, `false`, causes Oracle to identify and manage roles for remote clients.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> `REMOTE_OS_ROLES` is deprecated in Oracle AI Database 26ai. The ability for a remote client to authenticate a user within Oracle Database was eliminated when the `REMOTE_OS_AUTHENT` initialization parameter was desupported in Oracle Database 21c. Therefore, `REMOTE_OS_ROLES` no longer has a supported use case and is deprecated.

2.341 REMOTE_RECOVERY_FILE_DEST

`REMOTE_RECOVERY_FILE_DEST` specifies a directory from which to read archive log files during a pluggable database (PDB) refresh operation if the source is not available.

Property	Description
Parameter type	String
Syntax	`REMOTE_RECOVERY_FILE_DEST = string`
Default value	None
Modifiable	`ALTER SYSTEM ... SID='*'`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The directory location where archive redo logs are accessible can be different on different instances, so this parameter can be set to different values on different instances.

For a PDB refresh copy to be in sync with its source, redo is accessed from the source PDB over a database link. Sometimes the source PDB or the CDB to which the source PDB belongs is not accessible when the refresh copy needs to be updated. In those cases, if this parameter is set, an attempt will be made to read archive log files from the directory specified by this parameter.

2.342 REPLICATION_DEPENDENCY_TRACKING

`REPLICATION_DEPENDENCY_TRACKING` enables or disables dependency tracking for read/write operations to the database.

Property	Description
Parameter type	Boolean
Default value	`true`
Modifiable	No
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No

Dependency tracking is essential for propagating changes in a replicated environment in parallel.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Values

- `TRUE`

  Enables dependency tracking.

- `FALSE`

  Allows read/write operations to the database to run faster, but does not produce dependency information for Oracle to perform parallel propagation.

> **Note**
>
> Do not specify this value unless you are sure that your application will not perform any read/write operations to the replicated tables.

2.343 RESOURCE_LIMIT

`RESOURCE_LIMIT` determines whether resource limits are enforced in database profiles.

Property	Description
Parameter type	Boolean
Default value	`true`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No

Values

- `TRUE`

  Enables the enforcement of resource limits

- `FALSE`

  Disables the enforcement of resource limits

> **See Also**
>
> *Oracle AI Database Administrator's Guide* and *Oracle AI Database SQL Language Reference* for more information on setting resource limits for profiles

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.344 RESOURCE_MANAGE_GOLDENGATE

RESOURCE_MANAGE_GOLDENGATE determines whether Oracle GoldenGate apply processes in the database are resource managed.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	true | false
Basic	No
Oracle RAC	All instances should use the same value.

To enable Resource Manager, set the RESOURCE_MANAGER_PLAN parameter.

By default, Oracle GoldenGate apply processes in the database are not resource managed. Given that replication to a PDB requires a separate Oracle GoldenGate apply process, it is possible that the apply processes for one PDB could end up consuming most of the CPU on the machine, even if there is a CPU resource management plan in place to limit CPU usage per PDB.

You can set the following values for the RESOURCE_MANAGE_GOLDENGATE parameter:

- TRUE: With this setting, Oracle GoldenGate apply processes in the database are resource managed based on the resources allocated to the GoldenGate apply user.
- FALSE: With this setting, Oracle GoldenGate apply processes are not resource managed.

2.345 RESOURCE_MANAGER_CPU_ALLOCATION

RESOURCE_MANAGER_CPU_ALLOCATION specifies the number of CPUs that the Resource Manager should use. The Resource Manager controls how a system's CPUs are utilized by its database's sessions.

> **Note**
>
> The RESOURCE_MANAGER_CPU_ALLOCATION parameter is deprecated and its value is ignored. This parameter is retained only for backward compatibility. Use the CPU_COUNT parameter instead.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	0 to operating system-specific

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Basic	No

The Resource Manager schedules database sessions on the CPUs according to a resource plan that has been configured and enabled by the DBA. Normally, the Resource Manager schedules enough database sessions to keep all CPUs utilized. However, in some scenarios, a DBA may only want to schedule enough database sessions to keep a subset of the CPUs utilized.

See Also

"CPU_COUNT"

2.346 RESOURCE_MANAGER_CPU_SCOPE

`RESOURCE_MANAGER_CPU_SCOPE` controls the scope of CPU resource management.

In previous releases, Oracle offered one method of CPU resource management, which operated within a database instance. Starting with Oracle AI Database 26ai, Oracle offers an alternative method for CPU resource management, which operates across all database instances on the server. This parameter allows you to choose between the two methods.

Property	Description
Parameter type	String
Syntax	`RESOURCE_MANAGER_CPU_SCOPE = { SERVER_WIDE | INSTANCE_ONLY }`
Default value	`INSTANCE_ONLY`
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	The same value must be used on all instances.

Values:

- `SERVER_WIDE` - Enables server-level inter-instance CPU resource management

  Introduced in Oracle AI Database 26ai, this method can be used when multiple database instances share a Linux server. It enables CPU resource management across all database instances on the server. With this method, Oracle automatically configures Linux control groups (cgroups) with the desired CPU sharing and CPU utilization limits, and then places database sessions into the appropriate cgroups.

  In order to use this method, the following system and database requirements must be met:

  - This method requires the Linux operating system. It is supported on Oracle Autonomous Database, Oracle Database Exadata Cloud@Customer, Oracle Database Exadata Cloud Service, and on-premises Oracle Exadata systems. This method is not supported on non-Exadata Linux systems.
  - The server operating system must be Unbreakable Enterprise Kernel (UEK) version 5 or later.

Copyright © 2002, 2025, Oracle and/or its affiliates.

You can configure this method as follows:

- Oracle Autonomous Database: All system and database requirements are installed and configured by default. `RESOURCE_MANAGER_CPU_SCOPE` is set to `SERVER_WIDE` by default.
- Oracle Database Exadata Cloud@Customer: All system and database requirements are installed and configured by default. `RESOURCE_MANAGER_CPU_SCOPE` is set to `INSTANCE_ONLY` by default. You must set it to `SERVER_WIDE` if you want to use this method.
- Oracle Database Exadata Cloud Service and on-premises Oracle Exadata systems: The Exadata image meets all system and database requirements. `RESOURCE_MANAGER_CPU_SCOPE` is set to `INSTANCE_ONLY` by default. You must set it to `SERVER_WIDE` if you want to use this method.

When you specify the `SERVER_WIDE` setting, the value of the `PROCESSOR_GROUP_NAME` initialization parameter is ignored.

- `INSTANCE_ONLY` - Enables CPU resource management only within the database instance.

  This is the method of CPU resource management used in releases prior to Oracle AI Database 26ai. It is supported on all Oracle databases.

Note

This parameter is available starting with Oracle AI Database 26ai.

See Also

Oracle AI Database Administrator's Guide for more information about setting this parameter

2.347 RESOURCE_MANAGER_PLAN

`RESOURCE_MANAGER_PLAN` specifies the resource plan to use for a database (CDB or non-CDB).

Property	Description
Parameter type	String
Syntax	`RESOURCE_MANAGER_PLAN = resource_plan_name`
Default value	There is no default value.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	Any valid character string
Basic	No

In a CDB

In the root for a CDB, `RESOURCE_MANAGER_PLAN` specifies the CDB resource plan. A CDB resource plan allocates resources among PDBs.

Copyright © 2002, 2025, Oracle and/or its affiliates.

A CDB resource plan is created using `DBMS_RESOURCE_MANAGER.CREATE_CDB_PLAN` and `CREATE_CDB_PLAN_DIRECTIVE`.

> **See Also**
>
> - *Oracle AI Database Administrator's Guide* for more information about using `DBMS_RESOURCE_MANAGER.CREATE_CDB_PLAN` and `DBMS_RESOURCE_MANAGER.CREATE_CDB_PLAN_DIRECTIVE`
> - *Oracle AI Database PL/SQL Packages and Types Reference* for more information about the `CREATE_CDB_PLAN` procedure and `CREATE_CDB_PLAN_DIRECTIVE` procedure for the `DBMS_RESOURCE_MANAGER` package

A session must be `root` to change the value of `RESOURCE_MANAGER_PLAN` for a CDB using the `ALTER SYSTEM` statement. For example, to enable and disable a CDB resource plan:

```
SQL> ALTER SYSTEM SET RESOURCE_MANAGER_PLAN = CDB_resource_plan_name;
SQL> ALTER SYSTEM SET RESOURCE_MANAGER_PLAN = '';
```

In a PDB, `RESOURCE_MANAGER_PLAN` specifies the PDB resource plan to use for the PDB.

A session must be in the PDB to enable or disable a PDB resource plan for that PDB. For example, to enable and disable a PDB resource plan:

```
SQL> ALTER SYSTEM SET RESOURCE_MANAGER_PLAN = PDB_resource_plan_name;
SQL> ALTER SYSTEM SET RESOURCE_MANAGER_PLAN = '';
```

In a PDB, the PDB resource plan has some restrictions compared to the resource plan of a non-CDB. The following restrictions apply to PDB resource plans:

- A PDB resource plan cannot have subplans.
- A PDB resource plan cannot have a multiple-level scheduling policy.

To enforce certain PDB resource plan policies, policies regarding resource allocation among PDBs should exist in the CDB resource plan. Without a CDB resource plan, certain PDB resource plan policies will not be enforced. If a PDB resource plan contains CPU or parallel statement queuing directives and a CDB resource plan is not specified, then Resource Manager will automatically enable the `DEFAULT_CDB_PLAN` plan. To prevent this behavior, set the `RESOURCE_MANAGER_PLAN` parameter at the root level to `ORA$INTERNAL_CDB_PLAN`.

> **Note**
>
> See *Oracle AI Database Administrator's Guide* for information on CPU, I/O bandwidth, and parallel execution servers requirements in CDB resource plans, and for a description of the results in the PDB resource plans when those requirements are not met.

In a Non-CDB

`RESOURCE_MANAGER_PLAN` specifies the top-level resource plan to use for an instance in a non-CDB. The resource manager will load this top-level resource plan along with all its descendants (subplans, directives, and consumer groups). If you do not specify this parameter, the resource manager is off by default.

Copyright © 2002, 2025, Oracle and/or its affiliates.

You can change the setting of this parameter using the `ALTER SYSTEM` statement to turn on the resource manager (if it was previously off) or to turn off the resource manager or change the current resource plan (if it was previously on). If you specify a resource plan that does not exist in the data dictionary, Oracle returns an error message.

2.348 RESULT_CACHE_AUTO_BLOCKLIST

Use `RESULT_CACHE_AUTO_BLOCKLIST` to enable or disable adaptive result cache object exclusion.

Property	Description
Parameter type	String
Syntax	`RESULT_CACHE_AUTO_BLOCKLIST = { OFF | ON }`
Default value	`ON`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can use different values.

When this parameter is set to `ON`, adaptive result cache object exclusion is enabled.

When this parameter is set to `OFF`, adaptive result cache object exclusion is disabled.

Note

This parameter is available starting with Oracle AI Database 26ai.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.349 RESULT_CACHE_EXECUTION_THRESHOLD

RESULT_CACHE_EXECUTION_THRESHOLD specifies the maximum number of times a PL/SQL function can be executed before its result is stored in the result cache.

Property	Description
Parameter type	Integer
Default value	2
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to operating system-dependent
Basic	No
Oracle RAC	Multiple instances can have different values.

2.350 RESULT_CACHE_INTEGRITY

RESULT_CACHE_INTEGRITY specifies whether the database enforces result cache integrity.

Property	Description
Parameter type	String
Syntax	RESULT_CACHE_INTEGRITY = { ENFORCED | TRUSTED }
Default value	Oracle Autonomous Database: ENFORCED All other Oracle databases: TRUSTED
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can have different values.

Values:

- ENFORCED

  Regardless of the setting of the RESULT_CACHE_MODE initialization parameter or any specified hints, only deterministic constructs will be eligible for result caching. For example, queries using PL/SQL functions that are not explicitly declared as deterministic will not be cached. This setting enforces result cache integrity.

- TRUSTED

  The database honors the setting of the RESULT_CACHE_MODE initialization parameter and any specified hints, and will consider queries using possibly nondeterministic constructs as candidates for result caching. For example, queries using PL/SQL functions that are not explicitly declared as deterministic may be cached. Results that are certain to be nondeterministic (for example, SYSDATE or constructs involving SYSDATE) will not be cached. This setting does not enforce result cache integrity, which matches the behavior in releases prior to Oracle AI Database 26ai.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

> **See Also**
>
> "RESULT_CACHE_MODE"

2.351 RESULT_CACHE_MAX_RESULT

`RESULT_CACHE_MAX_RESULT` specifies the percentage of `RESULT_CACHE_MAX_SIZE` that any single result can use.

Property	Description
Parameter type	Integer
Default value	5 percent
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`0` to `100`
Basic	No
Oracle RAC	Multiple instances can have different values.

2.352 RESULT_CACHE_MAX_SIZE

`RESULT_CACHE_MAX_SIZE` specifies the maximum amount of SGA memory (in bytes) that can be used by the result cache.

Property	Description
Parameter type	Big integer
Syntax	`RESULT_CACHE_MAX_SIZE = integer [K | M | G]`
Default value	Derived from the values of `SHARED_POOL_SIZE`, `SGA_TARGET`, and `MEMORY_TARGET`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`0` to operating system-dependent
Basic	No
Oracle RAC	You must either set this parameter to `0` on all instances to disable the result cache, or use a nonzero value on all instances. Disabling the result cache on some instances may lead to incorrect results.

Values of this parameter greater than `0` are rounded up to the next multiple of 32 KB. If the value of this parameter is `0`, then the feature is disabled.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle AI Database Performance Tuning Guide* for information about tuning the result cache

2.353 RESULT_CACHE_MAX_TEMP_RESULT

`RESULT_CACHE_MAX_TEMP_RESULT` specifies the percentage of `RESULT_CACHE_MAX_TEMP_SIZE` that any single cached query result can consume.

Property	Description
Parameter type	Integer
Default value	5 percent
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`0` to `100`
Basic	No
Oracle RAC	Multiple instances can have different values.

2.354 RESULT_CACHE_MAX_TEMP_SIZE

`RESULT_CACHE_MAX_TEMP_SIZE` specifies the maximum amount of temporary tablespace (in bytes) that can be consumed by the result cache.

Property	Description
Parameter type	Big integer
Syntax	`RESULT_CACHE_MAX_TEMP_SIZE = integer [K | M | G]`
Default value	`RESULT_CACHE_MAX_SIZE * 10`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`0` to operating system-dependent
Basic	No
Oracle RAC	You must either set this parameter to `0` on all instances to disable the result cache, or use a nonzero value on all instances. Disabling the result cache on some instances may lead to incorrect results.

If you attempt to set this parameter to a value that is less than 5% of the size of the SGA, then this parameter will be set to 5% of the size of the SGA. If you attempt to set this parameter to a value that is more than 10% of the current total unused space available for temporary tablespaces in the `SYS` schema, then this parameter will be set to 10% of the current total unused space available for temporary tablespaces in the `SYS` schema.

If the value of this parameter is 0, then the result cache is disabled for the PDB.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle AI Database Performance Tuning Guide* for information about tuning the result cache

2.355 RESULT_CACHE_MODE

`RESULT_CACHE_MODE` specifies which queries are eligible to store result sets in the result cache. Only query execution plans with the result cache operator will attempt to read from or write to the result cache.

Property	Description
Parameter type	String
Syntax	`RESULT_CACHE_MODE = { MANUAL | MANUAL_TEMP | FORCE | FORCE_TEMP }`
Default value	Oracle Autonomous Database: `FORCE` All other Oracle databases: `MANUAL`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can have different values.

Values

- `MANUAL`

  Query results can only be stored in the result cache by using a query hint or table annotation.

- `MANUAL_TEMP`

  Query results can only be stored in the result cache by using a query hint or table annotation. All hinted queries are allowed to leverage temporary segments on disk unless explicitly prohibited by using the `/*+ RESULT_CACHE (TEMP=FALSE) */` hint.

- `FORCE`

  All query results are stored in the result cache. If a query result is not in the cache, then the database executes the query and stores the result in the cache. Subsequent executions of the same SQL statement that include the `/*+ RESULT_CACHE */` hint will retrieve data from the cache. Sessions will use these results, if possible. To exclude query results from the cache, use the `/*+ NO_RESULT_CACHE */` hint.

- `FORCE_TEMP`

  All query results are stored in the result cache. All queries are allowed to leverage temporary segments on disk unless explicitly prohibited by a hint.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **⚠ Caution**
>
> If this parameter is set to `FORCE` or `FORCE_TEMP`, then Oracle recommends setting the `RESULT_CACHE_INTEGRITY` parameter to `ENFORCED`, which ensures that only deterministic constructs are eligible for result caching. This prevents the caching of nondeterministic constructs, which can potentially cause material changes to results. See "RESULT_CACHE_INTEGRITY" for more information.

> **ⓘ See Also**
>
> - *Oracle AI Database SQL Tuning Guide* for more information on how the result cache handles PL/SQL functions before changing the value of this initialization parameter
> - *Oracle AI Database SQL Language Reference* for more information about the `NO_RESULT_CACHE` hint

2.356 RESULT_CACHE_REMOTE_EXPIRATION

`RESULT_CACHE_REMOTE_EXPIRATION` specifies the number of minutes that a result using a remote object is allowed to remain valid.

Property	Description
Parameter type	Integer
Default value	`0`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`0` to operating system-dependent
Basic	No

Setting this parameter to `0` implies that results using remote objects should not be cached. Setting this parameter to a nonzero value can produce stale answers (for example, if the remote table used by a result is modified at the remote database).

> **ⓘ See Also**
>
> *Oracle AI Database Performance Tuning Guide* for information about tuning the result cache

2.357 RESUMABLE_TIMEOUT

`RESUMABLE_TIMEOUT` enables or disables resumable statements and specifies resumable timeout at the system level.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	Integer
Default value	`0` (seconds)
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`0` to 2^{31} - 1 (in seconds)
Basic	No
Oracle RAC	Multiple instances can have different values.

> **See Also**
>
> *Oracle AI Database Administrator's Guide* for more information about enabling resumable space allocation, what conditions are correctable, and what statements can be made resumable

2.358 ROLLBACK_SEGMENTS

`ROLLBACK_SEGMENTS` allocates one or more rollback segments by name to this instance.

Property	Description
Parameter type	String
Syntax	`ROLLBACK_SEGMENTS =` `(segment_name [, segment_name] ... )`
Default value	If you do not specify this parameter, the instance uses public rollback segments by default, unless the `UNDO_MANAGEMENT` initialization parameter is set to `AUTO`. In that case, the `ROLLBACK_SEGMENTS` parameter is ignored and automatic undo management is used.
Modifiable	No
Modifiable in a PDB	Yes
Range of values	Any rollback segment names listed in `DBA_ROLLBACK_SEGS` except `SYSTEM`
Basic	No
Oracle RAC	Multiple instances must have different values.

If you set this parameter, the instance acquires all of the rollback segments named in this parameter, even if the number of rollback segments exceeds the minimum number required by the instance (calculated as `TRANSACTIONS / TRANSACTIONS_PER_ROLLBACK_SEGMENT`).

You cannot change the value of this parameter dynamically, but you can change its value and then restart the instance. Although this parameter usually specifies private rollback segments, it can also specify public rollback segments if they are not already in use.

To find the name, segment ID number, and status of each rollback segment in the database, query the data dictionary view `DBA_ROLLBACK_SEGS`.

When `UNDO_MANAGEMENT` is set to `AUTO`, `ROLLBACK_SEGMENTS` is ignored.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- *Oracle Real Application Clusters Administration and Deployment Guide* for information on setting this parameter in an Oracle RAC environment

2.359 SAGA_HIST_RETENTION

`SAGA_HIST_RETENTION` specifies the length of time (in minutes) that completed sagas are retained in the `DBA_HIST_SAGAS` and `USER_HIST_SAGAS` views.

Property	Description
Parameter type	Integer
Default value	`43200` minutes (equivalent to 30 days)
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	1 - 2147483647 minutes
Basic	No
Oracle RAC	Multiple instances must have the same value.

Note

This parameter is available starting with Oracle AI Database 26ai.

See Also

- "ALL_HIST_SAGAS"
- "DBA_HIST_SAGAS"
- "USER_HIST_SAGAS"

2.360 SEC_MAX_FAILED_LOGIN_ATTEMPTS

`SEC_MAX_FAILED_LOGIN_ATTEMPTS` specifies the number of authentication attempts that can be made by a client on a connection to the server process.

Property	Description
Parameter type	Integer
Default value	3
Modifiable	No
Modifiable in a PDB	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Range of values	An integer greater than or equal to 1.
Basic	No

These login attempts can be for multiple user accounts in the same connection. After the specified number of failure attempts, the connection will be automatically dropped by the server process, and the server process is terminated.

See Also

Oracle AI Database Security Guide for more information about this parameter

2.361 SEC_PROTOCOL_ERROR_FURTHER_ACTION

`SEC_PROTOCOL_ERROR_FURTHER_ACTION` specifies the further execution of a server process when receiving bad packets from a possibly malicious client.

Property	Description
Parameter type	String
Syntax	`SEC_PROTOCOL_ERROR_FURTHER_ACTION = { CONTINUE	(DELAY,integer)	(DROP,integer) }`
Default value	`(DROP,3)`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No

Values

- `CONTINUE`

  The server process continues execution. The database server may be subject to a Denial of Service (DoS) if bad packets continue to be sent by a malicious client.

- `(DELAY,integer)`

  The client experiences a delay of *integer* seconds before the server process accepts the next request from the same client connection. Malicious clients are prevented from excessive consumption of server resources while legitimate clients experience a degradation in performance but can continue to function.

- `(DROP,integer)`

  The server forcefully terminates the client connection after *integer* cumulative bad packets. The server protects itself at the expense of the client (for example, a client transaction may be lost). The client may reconnect and attempt the same operation.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

Oracle AI Database Security Guide for examples of using this parameter

2.362 SEC_PROTOCOL_ERROR_TRACE_ACTION

`SEC_PROTOCOL_ERROR_TRACE_ACTION` specifies the kind of logging the database server does when bad packets are received from a possibly malicious client, apart from the client receiving the error.

Property	Description
Parameter type	String
Syntax	`SEC_PROTOCOL_ERROR_TRACE_ACTION = { NONE | TRACE | LOG | ALERT }`
Default value	`TRACE`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No

Values

- `NONE`

  The database server does not record it in any of the trace files.

- `TRACE`

  A short entry is made in the alert log file and a detailed incident file is generated. The server trace file also will have an entry about the protocol error and incident file.

- `LOG`

  The server trace file will have an entry about the protocol violation.

- `ALERT`

  A short entry is made in the alert log file and in the server trace file about the protocol violation.

2.363 SEC_RETURN_SERVER_RELEASE_BANNER

`SEC_RETURN_SERVER_RELEASE_BANNER` specifies whether the server returns complete database software information to unauthenticated clients.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	No
Modifiable in a PDB	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Range of values	`true | false`
Basic	No

Values

- `true`

  Returns complete database version information to the client.
- `false`

  Returns a generic version string to the client.

> **See Also**
>
> *Oracle Call Interface Developer's Guide* and *Oracle AI Database Security Guide* for more information on controlling the display of the database version banner.

2.364 SERIAL_REUSE

`SERIAL_REUSE` specifies which types of cursors make use of the serial-reusable memory feature. This feature allocates private cursor memory in the SGA so that it can be reused (serially, not concurrently) by sessions executing the same cursor.

Property	Description
Parameter type	String
Syntax	`SERIAL_REUSE = { disable | all | select | dml | plsql | force }`
Default value	`disable`
Modifiable	No
Modifiable in a PDB	No
Basic	No

> **Note**
>
> The `SERIAL_REUSE` parameter is deprecated. It is retained for backward compatibility only.

Values

- `disable`

  Disables the option for all SQL statement types. This value overrides any other values included in the list.
- `all`

Copyright © 2002, 2025, Oracle and/or its affiliates.

Enables the option for both DML and SELECT statements. Equivalent to setting select, dml, and plsql.

- select

  Enables the option for SELECT statements.

- dml

  Enables the option for DML statements.

- plsql

  Currently has no effect (although PL/SQL packages do support the serial-reuse memory option using PL/SQL pragmas).

> **Note**
>
> If CURSOR_SPACE_FOR_TIME is set to true, then the value of SERIAL_REUSE is ignored and treated as if it were set to disable.

> **See Also**
>
> "CURSOR_SPACE_FOR_TIME"

2.365 SERVICE_NAMES

SERVICE_NAMES specifies one or more names by which clients can connect to the instance.

Property	Description
Parameter type	String
Syntax	SERVICE_NAMES = *db_service_name* [, *db_service_name* [...]]
Default value	DB_UNIQUE_NAME.DB_DOMAIN if defined
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Range of values	Any ASCII string or comma-separated list of string names
Basic	No
Oracle RAC	Do not set the SERVICE_NAMES parameter for Oracle RAC environments. Instead, define services using Oracle Enterprise Manager and manage those services using Server Control (SRVCTL) utility.

The instance registers its service names with the listener. When a client requests a service, the listener determines which instances offer the requested service and routes the client to the appropriate instance.

You can specify multiple service names to distinguish among different uses of the same database. For example:

```
SERVICE_NAMES = sales.example.com, widgetsales.example.com
```

Copyright © 2002, 2025, Oracle and/or its affiliates.

You can also use service names to identify a single service that is available from two different databases through the use of replication.

If you do not qualify the names in this parameter with a domain, Oracle qualifies them with the value of the DB_DOMAIN parameter. If DB_DOMAIN is not specified, then no domain will be applied to the non-qualified SERVICE_NAMES values.

When you specify additional service names with this parameter, the default service name is not overridden. The default service name plus the additional service names specified with this parameter are the service names that clients can use to connect to the database.

Note

The SERVICE_NAMES initialization parameter is deprecated in Oracle Database 19c and may be desupported in a future release.

Use of the SERVICE_NAMES parameter is no longer actively supported. It must not be used for high availability (HA) deployments and it is not supported for HA operations. This restriction includes FAN, load balancing, FAILOVER_TYPE, FAILOVER_RESTORE, SESSION_STATE_CONSISTENCY, and any other uses.

To manage your services, Oracle recommends that you instead use the SRVCTL command-line utility, the GDSCTL command-line utility, or the DBMS_SERVICE PL/SQL package.

See Also

- *Oracle AI Database Net Services Administrator's Guide* for more information on this parameter and its settings
- *Oracle Real Application Clusters Administration and Deployment Guide* for information about services administration in an Oracle RAC environment
- "DB_DOMAIN"

2.366 SESSION_CACHED_CURSORS

SESSION_CACHED_CURSORS specifies the number of session cursors to cache.

Property	Description
Parameter type	Integer
Default value	50
Modifiable	ALTER SESSION, ALTER SYSTEM ... DEFERRED
Modifiable in a PDB	Yes
Range of values	0 to operating system-dependent
Basic	No
Oracle RAC	Multiple instances can have different values.

Repeated parse calls of the same SQL (including recursive SQL) or PL/SQL statement cause the session cursor for that statement to be moved into the session cursor cache. Oracle uses a

Copyright © 2002, 2025, Oracle and/or its affiliates.

least recently used algorithm to remove entries in the session cursor cache to make room for new entries when needed.

> **See Also**
>
> *Oracle AI Database Performance Tuning Guide* for information about enabling the session cursor cache

2.367 SESSION_EXIT_ON_PACKAGE_STATE_ERROR

Use `SESSION_EXIT_ON_PACKAGE_STATE_ERROR` to force a hard session exit when a session's state has been invalidated.

Exiting sessions after state invalidation avoids errors that can occur when applications mishandle an invalid state.

Property	Description
Parameter type	Boolean
Default value	`FALSE`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`TRUE | FALSE`
Basic	No
Oracle RAC	Different instances can use different values.

Set `SESSION_EXIT_ON_PACKAGE_STATE_ERROR` to `TRUE` to force a hard session exit under the following circumstances:

- When a stateful PL/SQL package undergoes modification, the sessions that have an active instantiation of the package receive an `ORA-4068` error when they attempt to run it. When `SESSION_EXIT_ON_PACKAGE_STATE_ERROR` is set to `TRUE`, the session immediately exits instead of raising `ORA-04068`. This can be advantageous because many applications are better equipped to handle a session being discarded, and failing to catch errors related to session state, such as `ORA-04068`, can lead to silent data corruption.
- When an Oracle Database Multilingual Engine (MLE) module or environment is modified via DDL, sessions that have an active instantiation of the object receive an `ORA-4106` or `ORA-4107` error. Setting `SESSION_EXIT_ON_PACKAGE_STATE_ERROR` to `TRUE` forces sessions to be disconnected if the session state is invalidated. Because many applications capture session disconnect, this option can help simplify the recovery from the invalidation of an existing session state.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.368 SESSION_MAX_OPEN_FILES

SESSION_MAX_OPEN_FILES specifies the maximum number of BFILEs that can be opened in any session. Once this number is reached, subsequent attempts to open more files in the session by using DBMS_LOB.FILEOPEN() or OCILobFileOpen() will fail. The maximum value for this parameter depends on the equivalent parameter defined for the underlying operating system.

Property	Description
Parameter type	Integer
Default value	10
Modifiable	No
Modifiable in a PDB	No
Range of values	1 to either 50 or the value of MAX_OPEN_FILES defined at the operating system level, whichever is less
Basic	No

See Also

- *Oracle AI Database SecureFiles and Large Objects Developer's Guide* for information on LOBs in general
- *Oracle AI Database SecureFiles and Large Objects Developer's Guide* for information on BFILEs
- *Oracle AI Database PL/SQL Packages and Types Reference* for information on the DBMS_LOB.FILEOPEN() procedure
- *Oracle Call Interface Developer's Guide* for information on the OCILobFileOpen() procedure

2.369 SESSIONS

SESSIONS specifies the maximum number of sessions that can be created in the system.

Property	Description
Parameter type	Integer
Default value	Derived: (1.5 * PROCESSES) + 22
Modifiable	ALTER SYSTEM can be used in a PDB only to change the value of the SESSIONS parameter for that PDB. ALTER SYSTEM *cannot* be used to change the value of the SESSIONS parameter in a non-CDB or in CDB$ROOT.
Modifiable in a PDB	Yes
Range of values	1 to (2^{18} - 1), which is 1 to 262143
Basic	Yes

Copyright © 2002, 2025, Oracle and/or its affiliates.

Because every login requires a session, this parameter effectively determines the maximum number of concurrent users in the system. You should always set this parameter explicitly to a value equivalent to your estimate of the maximum number of concurrent users, plus the number of background processes, plus approximately 10% for recursive sessions.

Oracle uses the default value of this parameter as its minimum. Values between 1 and the default do not trigger errors, but Oracle ignores them and uses the default instead.

The default values of the `ENQUEUE_RESOURCES` and `TRANSACTIONS` parameters are derived from `SESSIONS`. Therefore, if you increase the value of `SESSIONS`, you should consider whether to adjust the values of `ENQUEUE_RESOURCES` and `TRANSACTIONS` as well. (Note that `ENQUEUE_RESOURCES` is obsolete as of Oracle Database 10g release 2 (10.2).)

In a shared server environment, the value of `PROCESSES` can be quite small. Therefore, Oracle recommends that you adjust the value of `SESSIONS` to approximately 1.1 * total number of *connections*.

For a CDB, the root container's `SESSIONS` parameter specifies the total number of sessions for the database.

The `SESSIONS` parameter for a PDB specifies the total number of sessions that can be used by that PDB. Its value defaults to the root container's `SESSIONS` value. If the PDB tries to use more sessions than configured by its `SESSIONS` parameter, an `ORA-00018` error message is generated. For PDBs, the SESSIONS parameter does not count recursive sessions and hence does not require the 10% adjustment.

The `SESSIONS` parameter for a PDB can only be modified by the PDB. It cannot be set higher than the CDB's `SESSIONS` value.

- *Oracle AI Database Concepts* for more information on memory structures
- *Oracle AI Database Concepts* for more information on processes
- *Oracle Multitenant Administrator's Guide* for more information about CDBs and PDBs

2.370 SGA_MAX_SIZE

`SGA_MAX_SIZE` specifies the maximum size of the SGA for the lifetime of the instance.

Property	Description
Parameter type	Big integer
Syntax	`SGA_MAX_SIZE = integer [K | M | G]`
Default value	Initial size of SGA at startup, dependent on the sizes of different pools in the SGA, such as buffer cache, shared pool, large pool, and so on.
Modifiable	No
Modifiable in a PDB	No
Range of values	0 to operating system-dependent

Copyright © 2002, 2025, Oracle and/or its affiliates.

On 64-bit platforms and non-Windows 32-bit platforms, when either MEMORY_TARGET or MEMORY_MAX_TARGET is specified, the default value of SGA_MAX_SIZE is set to the larger of the two parameters. This causes more address space to be reserved for expansion of the SGA.

On Windows 32-bit platforms, the default value of SGA_MAX_SIZE is the largest of the following values:

- 60% of MEMORY_TARGET, if specified
- 60% of MEMORY_MAX_TARGET, if specified
- 25% of the total available virtual address space

See Also

Oracle AI Database Performance Tuning Guide for more information about this parameter

2.371 SGA_MIN_SIZE

SGA_MIN_SIZE indicates a possible minimum value for SGA usage of a pluggable database (PDB).

Property	Description
Parameter type	Big integer
Syntax	SGA_MIN_SIZE = *integer* [K | M | G]
Default value	0
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	0 to 50% of SGA_TARGET
Basic	No
Oracle RAC	The same value must be used for all instances.

Setting this parameter at the CDB level has no effect.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Note

To be able to use Resource Manager in a CDB to control the amount of memory each PDB can use:

- The NONCDB_COMPATIBLE initialization parameter must be set to FALSE at the CDB level (in the root of the CDB).
- The MEMORY_TARGET initialization parameter must not be set at the CDB level.
- A value for SGA_TARGET must be set at the CDB level.

  If SGA_TARGET is not set at the CDB level, then setting SGA_MIN_SIZE in a PDB has no effect. You will not receive an error message, and the PDB's SGA_MIN_SIZE value will not be enforced.
- You must set the SGA_MIN_SIZE value to a value that meets these requirements:
  - In a PDB, to a value that is less than or equal to 50% of the value of SGA_TARGET in the PDB
  - In a PDB, to a value that is less than or equal to 50% of the value of SGA_TARGET at the CDB level
  - In a PDB, to a value that is less than the value of SGA_MAX_SIZE at the CDB level
  - Across all the open PDBs in a CDB, the sum of SGA_MIN_SIZE values must be less than or equal to 50% of the managed SGA total at the CDB level. Managed SGA is DB_CACHE_SIZE plus SHARED_POOL_SIZE.

  When you set SGA_MIN_SIZE in a PDB to a value that does not meet these requirements, you receive an error.

See Also

Oracle Multitenant Administrator's Guide for more information about the initialization parameters that control the memory usage of PDBs

2.372 SGA_TARGET

SGA_TARGET specifies the total size of all SGA components.

Property	Description
Parameter type	Big integer
Syntax	SGA_TARGET = *integer* [K | M | G]
Default value	0 (SGA autotuning is disabled for DEFERRED mode autotuning requests, but allowed for IMMEDIATE mode autotuning requests)
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Range of values	64 MB to SGA_MAX_SIZE Note that if MEMORY_MAX_TARGET > 0, then the value of SGA_TARGET also cannot exceed the value of MEMORY_MAX_TARGET.
Basic	Yes

If SGA_TARGET is specified, then the following memory pools are automatically sized:

- Buffer cache (DB_CACHE_SIZE)
- Shared pool (SHARED_POOL_SIZE)
- Large pool (LARGE_POOL_SIZE)
- Java pool (JAVA_POOL_SIZE)
- Streams pool (STREAMS_POOL_SIZE)
- Data transfer cache (DATA_TRANSFER_CACHE_SIZE)

If these automatically tuned memory pools are set to nonzero values, then those values are used as minimum levels by Automatic Shared Memory Management. You would set minimum values if an application component needs a minimum amount of memory to function properly.

The following pools are manually sized components and are not affected by Automatic Shared Memory Management:

- Log buffer
- Other buffer caches, such as KEEP, RECYCLE, and other block sizes
- Fixed SGA and other internal allocations

The memory allocated to these pools is deducted from the total available for SGA_TARGET when Automatic Shared Memory Management computes the values of the automatically tuned memory pools.

In the **Default value** field, IMMEDIATE mode autotuning requests are necessary to avoid ORA-04031 errors. The DEFERRED and IMMEDIATE modes are reflected in the OPER_MODE column of the V$MEMORY_RESIZE_OPS view.

If Automatic Memory Management is enabled (MEMORY_TARGET is set to a positive value) and SGA_TARGET is also set to a positive value, the SGA_TARGET value acts as the minimum value for the size of the SGA.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Note

This parameter is optional for pluggable databases (PDBs). When this parameter is set for a PDB, it specifies the maximum SGA that the PDB can use at any time. When this parameter is not set at the PDB level, the PDB has no limit for the amount of SGA it can use, other than the CDB's SGA size.

To be able to use Resource Manager in a CDB to control the amount of memory each PDB can use:

- The `NONCDB_COMPATIBLE` initialization parameter must be set to `FALSE` at the CDB level (in the root of the CDB).
- The `MEMORY_TARGET` initialization parameter must not be set at the CDB level.
- You must set the `SGA_TARGET` initialization parameter at the CDB level.
- You must set `SGA_TARGET` in a PDB.

  If you set a PDB's `SGA_TARGET` value and `SGA_TARGET` is not set at the CDB level, you will not receive an error message and the PDB's `SGA_TARGET` value will not be enforced.
- When setting `SGA_TARGET` in a PDB, the following requirements must be met:
  - The value of `SGA_TARGET` in the PDB must be less than or equal to the `SGA_TARGET` value at the CDB level.
  - The value of `SGA_TARGET` in the PDB must be less than or equal to the `SGA_MAX_SIZE` value at the CDB level.
  - The value of `SGA_TARGET` in the PDB must be twice the PDB's `DB_CACHE_SIZE` value, if the PDB's `DB_CACHE_SIZE` value is set.
  - The value of `SGA_TARGET` in the PDB must be twice the PDB's `SHARED_POOL_SIZE` value, if the PDB's `SHARED_POOL_SIZE` value is set.
  - The value of `SGA_TARGET` in the PDB must be twice the PDB's `SGA_MIN_SIZE` value, if the PDB's `SGA_MIN_SIZE` value is set.

  When you set `SGA_TARGET` in a PDB to a value that does not meet these requirements, you receive an error.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.373 SHADOW_CORE_DUMP

`SHADOW_CORE_DUMP` specifies whether Oracle includes the SGA in the core file for foreground (client) processes.

Property	Description
Parameter type	String
Syntax	`SHADOW_CORE_DUMP = { partial | full | none }`
Default value	`partial`. On Windows, the default value is `none`.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No

Values

- `partial`

  Oracle does not include the SGA in the core dump.
- `full`

  Oracle includes the SGA in the core dump.
- `none`

  No core files will be generated for foreground processes.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> "BACKGROUND_CORE_DUMP"

2.374 SHARD_ENABLE_RAFT_FOLLOWER_READ

Use `SHARD_ENABLE_RAFT_FOLLOWER_READ` to enable or disable reads from follower replication units in a shard.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

2.375 SHARD_RAFT_LOGFILE_SIZE

`SHARD_RAFT_LOGFILE_SIZE` specifies (in bytes) the size of Raft log files.

Property	Description
Parameter type	Big integer
Syntax	`SHARD_RAFT_LOGFILE_SIZE = integer [K | M | G]`
Default value	`1G`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`0` to operating system-dependent
Basic	No
Oracle RAC	Different instances can use different values.

Each replication unit (RU) has 3 Raft log files. Therefore, the log capacity of an RU is 3 times the value of this parameter.

When you modify the value of this parameter in the current instance, the change takes effect the first time a Raft log file is subsequently overwritten.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

2.376 SHARED_MEMORY_ADDRESS

SHARED_MEMORY_ADDRESS and HI_SHARED_MEMORY_ADDRESS specify the starting address at run time of the system global area (SGA). This parameter is ignored on the many platforms that specify the SGA's starting address at linktime.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	No
Modifiable in a PDB	No
Basic	No

Use this parameter to specify the entire address on 32-bit platforms and to specify the low-order 32 bits of a 64-bit address on 64-bit platforms. Use HI_SHARED_MEMORY_ADDRESS to specify the high-order 32 bits of a 64-bit address on 64-bit platforms. If both parameters are 0 or unspecified, the SGA address defaults to a platform-specific location.

> **See Also**
>
> "HI_SHARED_MEMORY_ADDRESS"

2.377 SHARED_POOL_RESERVED_SIZE

SHARED_POOL_RESERVED_SIZE specifies (in bytes) the shared pool space that is reserved for large contiguous requests for shared pool memory.

Property	Description
Parameter type	Big integer
Syntax	SHARED_POOL_RESERVED_SIZE = *integer* [K | M | G]
Default value	5% of the value of SHARED_POOL_SIZE
Modifiable	No
Modifiable in a PDB	No
Range of values	Minimum: 5000 Maximum: half of the value of SHARED_POOL_SIZE
Basic	No

You can use this parameter to avoid performance degradation in the shared pool in situations where pool fragmentation forces Oracle to search for and free chunks of unused pool to satisfy the current request.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> - "SHARED_POOL_SIZE"
> - *Oracle AI Database Performance Tuning Guide* for information on sizing the shared pool

2.378 SHARED_POOL_SIZE

`SHARED_POOL_SIZE` specifies (in bytes) the size of the shared pool.

> **Note**
>
> Oracle recommends against setting this parameter in a PDB. The only shared memory sizing parameter that should be set in a PDB is `SGA_TARGET`, which specifies the maximum SGA that the PDB can use at any time.

Property	Description
Parameter type	Big integer
Syntax	`SHARED_POOL_SIZE = integer [K | M | G]`
Default value	If `SGA_TARGET` is set: If the parameter is not specified, then the default is `0` (internally determined by the Oracle AI Database). If the parameter is specified, then the user-specified value indicates a minimum value for the memory pool. If `SGA_TARGET` is not set (32-bit platforms): 64 MB, rounded up to the nearest granule size. If `SGA_TARGET` is not set (64-bit platforms): 128 MB, rounded up to the nearest granule size. For considerations when dealing with database instances using Oracle ASM, see "SHARED_POOL_SIZE and Automatic Storage Management".
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	Minimum: the granule size Maximum: operating system-dependent
Basic	No

The shared pool contains shared cursors, stored procedures, control structures, and other structures. If `SGA_TARGET` is not set, then Oracle also allocates parallel execution message buffers from the shared pool. Larger values improve performance in multiuser systems. Smaller values use less memory.

You can monitor utilization of the shared pool by querying the view `V$SGASTAT`.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- "SGA_TARGET"
- "V$SGASTAT"
- *Oracle Multitenant Administrator's Guide* for more information about the initialization parameters that control the memory usage of PDBs
- *Oracle AI Database Performance Tuning Guide* for more information on setting this parameter

SHARED_POOL_SIZE and Automatic Storage Management

On a database instance using Oracle Automatic Storage Management (Oracle ASM), additional memory is required to store extent maps. As a general guideline, you can aggregate the values from the following queries to obtain current database storage size that is either already on Oracle ASM or will be stored in Oracle ASM. Then determine the redundancy type that is used (or will be used), and calculate the value for `SHARED_POOL_SIZE`, using the aggregated value as input.

```
SELECT SUM(BYTES)/(1024*1024*1024) FROM V$DATAFILE;
SELECT SUM(BYTES)/(1024*1024*1024) FROM V$LOGFILE a, V$LOG b
WHERE a.group#=b.group#;
SELECT SUM(BYTES)/(1024*1024*1024) FROM V$TEMPFILE WHERE
status='ONLINE';
```

Additionally, keep the following guidelines in mind:

- For disk groups using external redundancy:

  (Every 100G of space needs 1M of extra shared pool) + 2M
- For disk groups using normal redundancy:

  (Every 50G of space needs 1M of extra shared pool) + 4M
- For disk groups using high redundancy:

  (Every 33G of space needs 1M of extra shared pool) + 6M

2.379 SHARED_SERVER_SESSIONS

`SHARED_SERVER_SESSIONS` specifies the total number of shared server sessions to allow.

Property	Description
Parameter type	Integer
Default value	There is no default value.
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	If `SHARED_SERVER_SESSIONS` is specified, then it should be less than `SESSIONS`. If `SHARED_SERVER_SESSIONS` is not specified, then a shared server session may be created as long as there is a free session slot.
Basic	No

Setting this parameter enables you to reserve user sessions for dedicated servers.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle AI Database Concepts* for more information on sessions

2.380 SHARED_SERVERS

SHARED_SERVERS specifies the number of server processes that you want to create when an instance is started. If system load decreases, then this minimum number of servers is maintained. Therefore, you should take care not to set SHARED_SERVERS too high at system startup.

Property	Description
Parameter type	Integer
Default value	0, meaning that shared server is not on. If you are using shared server architecture or if the DISPATCHERS parameter is set such that the total number of dispatchers is more than 0, then the default value is 1.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	The value of this parameter should be less than MAX_SHARED_SERVERS. If it is greater than or equal to MAX_SHARED_SERVERS, then the number of servers will not be self-tuned but will remain constant, as specified by SHARED_SERVERS.
Basic	Yes

Starting with Oracle Database 12*c* Release 1 (12.1.0.2), the SHARED_SERVERS parameter can be set on PDBs. However, unlike most other parameters that can be set on a PDB, this parameter can only be used within a PDB to enable or disable use of shared servers for that PDB. Therefore, in a PDB, the DBA can either set SHARED_SERVERS to 0 to disable use of shared servers for that PDB or use ALTER SYSTEM RESET SHARED_SERVERS to re-enable shared servers for the PDB. The configuration of shared servers for the CDB can only be done in the root.

> **See Also**
>
> - "DISPATCHERS"
> - "MAX_SHARED_SERVERS"
> - *Oracle AI Database Administrator's Guide* for more information on setting this parameter

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.381 SHRD_DUPL_TABLE_REFRESH_RATE

SHRD_DUPL_TABLE_REFRESH_RATE displays the duplicated table refresh rate (in seconds).

Property	Description
Parameter type	Integer
Default value	60
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	20 to 2^{31} - 1
Basic	No
Oracle RAC	All instances should use the same instance.

You can change the value of this parameter to change the duplicated table refresh rate.

A duplicated table is a table that has the same contents on all shards in a sharded database. Duplicated tables are implemented using materialized views that are refreshed at a certain rate.

See Also

- *Oracle Globally Distributed Database Guide* for an introduction to sharding
- *Oracle Globally Distributed Database Guide* for more information about duplicated tables

2.382 SKIP_UNUSABLE_INDEXES

SKIP_UNUSABLE_INDEXES enables or disables the use and reporting of tables with unusable indexes or index partitions.

Property	Description
Parameter type	Boolean
Default value	true
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true | false
Basic	No

If a SQL statement uses a hint that forces the usage of an unusable index, then this hint takes precedence over initialization parameter settings, including SKIP_UNUSABLE_INDEXES. If the optimizer chooses an unusable index, then an ORA-01502 error will result. (See *Oracle AI Database Administrator's Guide* for more information about using hints.)

Values

- true

Copyright © 2002, 2025, Oracle and/or its affiliates.

Disables error reporting of indexes and index partitions marked UNUSABLE. This setting allows all operations (inserts, deletes, updates, and selects) on tables with unusable indexes or index partitions.

> **Note**
>
> If an index is used to enforce a UNIQUE constraint on a table, then allowing insert and update operations on the table might violate the constraint. Therefore, this setting does not disable error reporting for unusable indexes that are unique.

- `false`

  Enables error reporting of indexes marked UNUSABLE. This setting does not allow inserts, deletes, and updates on tables with unusable indexes or index partitions.

> **See Also**
>
> *Oracle AI Database SQL Language Reference* for more information about hints

2.383 SMTP_OUT_SERVER

`SMTP_OUT_SERVER` specifies the SMTP host and port to which `UTL_MAIL` delivers out-bound E-mail.

Property	Description
Parameter type	String
Syntax	`SMTP_OUT_SERVER = server_clause [, server_clause ] ...`
Syntax	**`server_clause::=`** *`host_name`*`[:port]`
Default value	There is no default value.
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No

Multiple servers may be specified, separated by commas.

If the first server in the list is unavailable, then `UTL_MAIL` tries the second server, and so on.

If `SMTP_OUT_SERVER` is not specified, then the SMTP server name defaults to the value of `DB_DOMAIN`, the port number defaults to `25`, and the SMTP domain defaults to the suffix of `DB_DOMAIN`.

> **See Also**
>
> *Oracle AI Database PL/SQL Packages and Types Reference* for information on the `UTL_MAIL` package

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.384 SORT_AREA_RETAINED_SIZE

SORT_AREA_RETAINED_SIZE specifies (in bytes) the maximum amount of the user global area (UGA) memory retained after a sort run completes. The retained size controls the size of the read buffer, which Oracle uses to maintain a portion of the sort in memory. This memory is released back to the UGA, not to the operating system, after the last row is fetched from the sort space.

Property	Description
Parameter type	Integer
Default value	Derived from SORT_AREA_SIZE
Modifiable	ALTER SESSION, ALTER SYSTEM ... DEFERRED
Modifiable in a PDB	Yes
Range of values	From the value equivalent of two database blocks to the value of SORT_AREA_SIZE
Basic	No

Note

Oracle does not recommend using the SORT_AREA_RETAINED_SIZE parameter unless the instance is configured with the shared server option. Oracle recommends that you enable automatic sizing of SQL working areas by setting PGA_AGGREGATE_TARGET instead. SORT_AREA_RETAINED_SIZE is retained for backward compatibility.

Oracle may allocate multiple sort spaces of this size for each query. Usually, only one or two sorts occur simultaneously, even for complex queries. In some cases, however, additional concurrent sorts are required, and each sort keeps its own memory area. If the shared server is used, allocation is to the SGA until the value in SORT_AREA_RETAINED_SIZE is reached. The difference between SORT_AREA_RETAINED_SIZE and SORT_AREA_SIZE is allocated to the PGA.

Note

The default value as reflected in the V$PARAMETER dynamic performance view is 0. However, if you do not explicitly set this parameter, Oracle actually uses the value of the SORT_AREA_SIZE parameter.

See Also

- "SORT_AREA_SIZE"
- *Oracle AI Database Performance Tuning Guide* for information on setting the values of this parameter and the SORT_AREA_SIZE parameter to tune sort operations using shared servers

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.385 SORT_AREA_SIZE

SORT_AREA_SIZE specifies (in bytes) the maximum amount of memory Oracle will use for a sort.

Property	Description
Parameter type	Integer
Default value	65536
Modifiable	ALTER SESSION, ALTER SYSTEM ... DEFERRED
Modifiable in a PDB	Yes
Range of values	Minimum: the value equivalent of six database blocks Maximum: operating system-dependent
Basic	No

> **Note**
>
> Oracle does not recommend using the SORT_AREA_SIZE parameter unless the instance is configured with the shared server option. Oracle recommends that you enable automatic sizing of SQL working areas by setting PGA_AGGREGATE_TARGET instead. SORT_AREA_SIZE is retained for backward compatibility.

After the sort is complete, but before the rows are returned, Oracle releases all of the memory allocated for the sort, except the amount specified by the SORT_AREA_RETAINED_SIZE parameter. After the last row is returned, Oracle releases the remainder of the memory.

Increasing SORT_AREA_SIZE size improves the efficiency of large sorts.

Each sort in a query can consume memory up to the amount specified by SORT_AREA_SIZE, and there can be multiple sorts in a query. Also, if a query is executed in parallel, each PX server can consume memory up to the amount specified by SORT_AREA_SIZE for each sort it does.

SORT_AREA_SIZE is also used for inserts and updates to bitmap indexes. Setting this value appropriately results in a bitmap segment being updated only once for each DML operation, even if more than one row in that segment changes.

Larger values of SORT_AREA_SIZE permit more sorts to be performed in memory. If more space is required to complete the sort than will fit into the memory provided, then temporary segments on disk are used to hold the intermediate sort runs.

The default is adequate for most OLTP operations. You might want to adjust this parameter for decision support systems, batch jobs, or large CREATE INDEX operations.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- "SORT_AREA_RETAINED_SIZE"

2.386 SPATIAL_VECTOR_ACCELERATION

`SPATIAL_VECTOR_ACCELERATION` enables or disables the spatial vector acceleration.

Property	Description
Parameter type	Boolean
Default value	`true`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No
Oracle RAC	Multiple instances should use the same value

The setting of `true` for this parameter improves spatial vector query performance.

See Also

Oracle Spatial Developer's Guide for more information about this parameter

2.387 SPFILE

The value of this parameter is the name of the current server parameter file (`SPFILE`) in use.

Property	Description
Parameter type	String
Syntax	`SPFILE = spfile_name`
Default value	*`ORACLE_BASE_CONFIG`*`/dbs/spfile.ora`
Modifiable	No
Modifiable in a PDB	No
Range of values	Any valid `SPFILE`
Basic	No
Oracle RAC	Multiple instances must have the same value.

This parameter can be defined in a client side PFILE to indicate the name of the server parameter file to use.

Copyright © 2002, 2025, Oracle and/or its affiliates.

When the default server parameter file is used by the server, the value of SPFILE is internally set by the server.

The SPFILE resides in the *ORACLE_BASE_CONFIG*/dbs directory; however, users can place it anywhere on their system as long as it is specified in an initialization parameter file.

> **See Also**
>
> *Oracle AI Database Administrator's Guide* for more information about creating the server parameter file

2.388 SQL_ERROR_MITIGATION

Use SQL_ERROR_MITIGATION to enable or disable automatic error mitigation for SQL statements.

Property	Description
Parameter type	String
Syntax	SQL_ERROR_MITIGATION = { ON | OFF }
Default value	ON
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can use different values.

Set this parameter to ON to enable automatic error mitigation for SQL statements; set it to OFF to disable automatic error mitigation for SQL statements.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

2.389 SQL_HISTORY_ENABLED

Use SQL_HISTORY_ENABLED to enable or disable SQL history monitoring.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true | false
Basic	No
Oracle RAC	Different instances can use different values.

Copyright © 2002, 2025, Oracle and/or its affiliates.

To enable SQL history monitoring, set this parameter to `true`. This feature monitors user-issued SQL statements in each user session on a best effort, depending on memory capacity. DDL, DML, and query statements are monitored; SQL statements issued in the background and recursive SQL statements are excluded. The monitored information is exposed by the `V$SQL_HISTORY` dynamic performance view.

To disable SQL history monitoring, set this parameter to `false`.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

> **See Also**
>
> "V$SQL_HISTORY"

2.390 SQL_TRACE

`SQL_TRACE` enables or disables the SQL trace facility.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No

Setting this parameter to `true` provides information on tuning that you can use to improve performance.

> **Note**
>
> Using this initialization parameter to enable the SQL trace facility for the entire instance can have a severe performance impact. Enable the facility for specific sessions using the `ALTER SESSION` statement. If you must enable the facility on an entire production environment, then you can minimize performance impact by:
>
> - Maintaining at least 25% idle CPU capacity
> - Maintaining adequate disk space for the `USER_DUMP_DEST` location
> - Striping disk space over sufficient disks

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> The SQL_TRACE parameter is deprecated. Oracle recommends that you use the DBMS_MONITOR and DBMS_SESSION packages instead. SQL_TRACE is retained for backward compatibility only.

> **See Also**
>
> - "USER_DUMP_DEST"
> - *Oracle AI Database PL/SQL Packages and Types Reference* for more information about the DBMS_MONITOR package
> - *Oracle AI Database PL/SQL Packages and Types Reference* for more information about the DBMS_SESSION package
> - *Oracle AI Database Performance Tuning Guide* for more information about performance diagnostic tools

2.391 SQL_TRANSPILER

SQL_TRANSPILER enables or disables the SQL Transpiler.

Property	Description
Parameter type	String
Syntax	SQL_TRANSPILER = { ON | OFF }
Default value	OFF
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Different instances can use different values.

When this parameter is set to ON, the SQL Transpiler feature is enabled and PL/SQL functions are automatically transpiled into SQL expressions whenever possible, without user intervention. When this parameter is set to OFF, the SQL Transpiler feature is disabled.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

2.392 SQL92_SECURITY

SQL92_SECURITY specifies whether users must have been granted the SELECT privilege on a table in order to specify certain clauses in a DELETE, INSERT, MERGE, or UPDATE statement.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	Boolean
Default value	TRUE
Modifiable	No
Modifiable in a PDB	Yes
Range of values	TRUE | FALSE
Basic	No

The SQL standard specifies that security administrators should be able to require that users have the SELECT privilege on a table when executing a DELETE, INSERT, MERGE, or UPDATE statement that references table column values in certain clauses. This requirement is enforced when SQL92_SECURITY is set to TRUE.

Values

- TRUE
  - A user must have the SELECT privilege on the target table in order to reference its columns in:
    - The WHERE clause of a DELETE or UPDATE statement
    - The right hand side of an assignment in the SET clause of an UPDATE statement
    - The RETURNING clause of a DELETE, INSERT, or UPDATE statement
  - A user must have the SELECT privilege on the source and target tables of a MERGE statement in order specify the RETURNING clause.
  - A user must have the SELECT privilege on the target table of a MERGE statement in order specify the DELETE clause, or the WHERE clause of the WHEN MATCHED THEN UPDATE clause.
- FALSE
  - A user with the DELETE privilege on the target table of a DELETE statement may reference columns of the target table in the WHERE clause of the DELETE statement.
  - A user with the UPDATE privilege on the target table of an UPDATE statement may reference columns of the target table in the WHERE clause or on the right hand side of any assignment in the SET clause of the UPDATE statement.
  - A user with the READ or SELECT privilege on the target table of a DELETE, INSERT, or UPDATE statement may reference columns of the target table in the RETURNING clause.
  - A user with the READ or SELECT privilege on the source and target tables of a MERGE statement may specify the RETURNING clause.
  - A user with the DELETE privilege on the target table of a MERGE statement may specify the DELETE clause.
  - A user with the UPDATE privilege on the target table of a MERGE statement may specify the WHERE clause of the WHEN MATCHED THEN UPDATE clause.

2.393 SQLTUNE_CATEGORY

SQLTUNE_CATEGORY specifies the category name for use by sessions to qualify the lookup of SQL profiles during SQL compilation.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	String
Syntax	`SQLTUNE_CATEGORY = category_name`
Default value	`DEFAULT`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No

See Also

Oracle AI Database PL/SQL Packages and Types Reference for information on the `DBMS_SQLTUNE` package

2.394 STANDBY_DB_PRESERVE_STATES

`STANDBY_DB_PRESERVE_STATES` controls whether user sessions, buffers, and other internal states of the instance are retained when a readable physical standby database is converted to a primary database. This parameter is meaningful on a physical standby database that is open in real-time query mode.

Property	Description
Parameter type	String
Syntax	`STANDBY_DB_PRESERVE_STATES = { NONE | SESSION | BUFFER | ALL }`
Default value	`NONE`
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	The same value must be used on all instances.

Values

- `NONE`

  Nothing is retained. All sessions are disconnected and all buffers are flushed. This is the default value.

- `SESSION`

  The role transition waits 10 seconds for active sessions to finish the current statement or top-level PL/SQL call. The sessions that are still active after 10 seconds are terminated. The sessions that complete their work in this lap of time are retained, along with inactive sessions. If the database is reopened as the primary within 300 seconds, the retained sessions resume their operations as if nothing had happened. If the database (or individual PDB) is not opened in the primary role within 300 seconds, the sessions will be terminated.

- `BUFFER`

Copyright © 2002, 2025, Oracle and/or its affiliates.

All current buffers are retained. Media recovery buffers are converted to current buffers and retained, if possible. When the database is reopened as the primary, the retained buffers are available for use, which may enable queries to run faster during the first few minutes of operation. If the database (or an individual PDB) is not opened in the primary role, the buffers will be flushed.

- `ALL`

  This value is equivalent to setting both the `SESSION` and `BUFFER` values.

> **Note**
>
> Sessions that have long running queries or are using database links will not be retained regardless of the setting of this parameter.

> **See Also**
>
> - *Oracle Data Guard Concepts and Administration* for more information about real-time query mode
> - *Oracle Data Guard Concepts and Administration* for more information about preserving user sessions and buffers when a standby database is converted to a primary database

2.395 STANDBY_FILE_MANAGEMENT

`STANDBY_FILE_MANAGEMENT` enables or disables automatic standby file management.

Property	Description
Parameter type	String
Syntax	`STANDBY_FILE_MANAGEMENT = { MANUAL | AUTO }`
Default value	`MANUAL`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Basic	No

When automatic standby file management is enabled, operating system file additions and deletions on the primary database are replicated on the standby database. `STANDBY_FILE_MANAGEMENT` is only applicable to physical standby databases.

Values

- `MANUAL`

  Disables automatic standby file management

- `AUTO`

  Enables automatic standby file management

Setting `STANDBY_FILE_MANAGEMENT` to `AUTO` causes Oracle to automatically create files on the standby database and, in some cases, overwrite existing files. Care must be taken when

Copyright © 2002, 2025, Oracle and/or its affiliates.

setting STANDBY_FILE_MANAGEMENT and DB_FILE_NAME_CONVERT so that existing standby files will not be accidentally overwritten.

If the standby database is on the same system as the primary database, then ensure that the primary and standby systems do not point to the same files.

See Also

Oracle Data Guard Concepts and Administration for more information about setting this parameter

2.396 STANDBY_PDB_SOURCE_FILE_DBLINK

STANDBY_PDB_SOURCE_FILE_DBLINK specifies the name of a database link that will be used to try to copy the datafiles from a source PDB to which the database link points.

Property	Description
Parameter type	String
Syntax	STANDBY_PDB_SOURCE_FILE_DBLINK = database-link
Default value	NULL
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No
Oracle RAC	Different values can be set on different instances.

In Oracle Database releases prior to Oracle Database 18c, if a PDB was created by cloning a PDB from the same CDB (a local clone), on a standby the datafiles were automatically copied from the source PDB. However, when the PDB was created as a remote clone, the user was responsible for copying datafiles to the Oracle Managed Files (OMF) location on the standby.

To address that deficiency, the STANDBY_PDB_SOURCE_FILE_DBLINK parameter specifies the name of a database link that will be used to try to copy the datafiles from a source PDB to which the database link points. The file copy is done only if the database link points to the source PDB and the source PDB is open in read only mode. Otherwise, the user is still responsible for copying datafiles to the OMF location on the standby.

This parameter can also be used to try to copy files in cases where the source PDB's files are not present on the standby. For example, the source PDB could have been created with standbys=NONE. In this case, the STANDBY_PDB_SOURCE_FILE_DBLINK parameter can enable the standby to copy files from the primary if there is a database link set up to the primary.

See Also

"STANDBY_PDB_SOURCE_FILE_DIRECTORY"

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.397 STANDBY_PDB_SOURCE_FILE_DIRECTORY

STANDBY_PDB_SOURCE_FILE_DIRECTORY specifies a directory location on the standby where source datafiles for instantiating the standby PDB may be found.

Property	Description
Parameter type	String
Syntax	STANDBY_PDB_SOURCE_FILE_DIRECTORY = datafiles-directory
Default value	NULL
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No
Oracle RAC	Different values can be set on different instances.

In Oracle Database releases prior to Oracle Database 18c, if a PDB was plugged into a CDB, on a standby, the datafiles were expected to be in PDB's Oracle Managed Files (OMF) directory location. If they were not found there, the user had to copy the datafiles to the OMF location and then restart redo apply on the standby.

To address that deficiency, the STANDBY_PDB_SOURCE_FILE_DIRECTORY specifies a directory location on the standby where source datafiles for instantiating the PDB may be found. If the datafiles are not found there, an attempt will be made to locate them in the OMF location on the standby.

This parameter can also be used to try to copy files in cases where the source PDB's files are not present on the standby. For example, the source PDB could have been created with standbys=NONE. In this case, the STANDBY_PDB_SOURCE_FILE_DIRECTORY parameter can enable the standby to copy files from a location if they are made available.

See Also

"STANDBY_PDB_SOURCE_FILE_DBLINK"

2.398 STAR_TRANSFORMATION_ENABLED

STAR_TRANSFORMATION_ENABLED determines whether a cost-based query transformation will be applied to star queries.

Property	Description
Parameter type	String
Syntax	STAR_TRANSFORMATION_ENABLED = { FALSE | TRUE | TEMP_DISABLE }
Default value	FALSE
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Basic	Yes

Copyright © 2002, 2025, Oracle and/or its affiliates.

Values

- `FALSE`

  The transformation will not be applied.

- `TRUE`

  The optimizer will consider performing a cost-based query transformation on the star query.

- `TEMP_DISABLE`

  The optimizer will consider performing a cost-based query transformation on the star query but will not use temporary tables in the star transformation.

See Also

- *Oracle AI Database SQL Tuning Guide* for information on enabling star queries

2.399 STATISTICS_LEVEL

`STATISTICS_LEVEL` specifies the level of collection for database and operating system statistics.

Oracle AI Database collects these statistics for a variety of purposes, including making self-management decisions.

Property	Description
Parameter type	String
Syntax	`STATISTICS_LEVEL = { ALL | TYPICAL | BASIC }`
Default value	`TYPICAL`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No

The default setting of `TYPICAL` ensures collection of all major statistics required for database self-management functionality and provides best overall performance. The default value should be adequate for most environments.

When the `STATISTICS_LEVEL` parameter is set to `ALL`, additional statistics are added to the set of statistics collected with the `TYPICAL` setting. The additional statistics are timed operating system statistics and plan execution statistics.

Setting the `STATISTICS_LEVEL` parameter to `BASIC` disables the collection of many of the important statistics required by Oracle AI Database features and functionality, including:

- All server-generated alerts
- Automatic Database Diagnostic Monitor (ADDM)
- Automatic optimizer statistics collection
- Automatic SGA Memory Management
- Automatic Workload Repository (AWR) Snapshots

Copyright © 2002, 2025, Oracle and/or its affiliates.

- Buffer cache advisory
- Database time distribution statistics (V$SESS_TIME_MODEL and V$SYS_TIME_MODEL)
- End to End Application Tracing (V$CLIENT_STATS)
- Monitoring of statistics
- MTTR advisory
- Object Activity Tracking System (OATS)
- Object level statistics
- PGA Target advisory
- Segment level statistics
- Service level statistics
- Shared pool sizing advisory
- Timed statistics

> **Note**
>
> Oracle strongly recommends that you do not disable these important features and functionality.

When the STATISTICS_LEVEL parameter is modified by ALTER SYSTEM, all advisories or statistics are dynamically turned on or off, depending on the new value of STATISTICS_LEVEL. When modified by ALTER SESSION, the following advisories or statistics are turned on or off in the local session only. Their systemwide state is not changed:

- Timed statistics
- Timed operating system statistics
- Plan execution statistics

The V$STATISTICS_LEVEL view displays information about the status of the statistics or advisories controlled by the STATISTICS_LEVEL parameter. See "V$STATISTICS_LEVEL".

> **See Also**
>
> *Oracle AI Database Performance Tuning Guide* for more information about this parameter

2.400 STREAMS_POOL_SIZE

The STREAMS_POOL_SIZE value helps determine the size of the Streams pool.

Property	Description
Parameter type	Big integer
Syntax	STREAMS_POOL_SIZE = *integer* [K | M | G]

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Default value	`0`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	Minimum: `0` (values greater than zero are rounded up to the nearest granule size) Maximum: operating system-dependent
Basic	No

Oracle's Automatic Shared Memory Management feature manages the size of the Streams pool when the `SGA_TARGET` initialization parameter is set to a nonzero value. If the `STREAMS_POOL_SIZE` initialization parameter also is set to a nonzero value, then Automatic Shared Memory Management uses this value as a minimum for the Streams pool.

If `SGA_TARGET` is set to a nonzero value and `STREAMS_POOL_SIZE` is not specified or is set to a null value, Automatic Shared Memory Management uses 0 (zero) bytes as a minimum for the Streams pool.

If the `STREAMS_POOL_SIZE` initialization parameter is set to a nonzero value, and the `SGA_TARGET` parameter is set to 0 (zero), then the Streams pool size is the value specified by the `STREAMS_POOL_SIZE` parameter, in bytes.

If both the `STREAMS_POOL_SIZE` and the `SGA_TARGET` initialization parameters are set to 0 (zero), then, by default, on the first request for Streams pool memory in a database, an amount of memory equal to 10% of the shared pool is transferred from the buffer cache to the Streams pool. Products and features that use the Streams pool include Oracle GoldenGate, XStream, Oracle Advanced Queuing, and Oracle Data Pump.

The Streams pool is a shared resource, and the amount of memory a process can use from the Streams pool is determined by the application. The capture or apply parameter `MAX_SGA_SIZE` can be controlled for Oracle GoldenGate or XStream. For Oracle Advanced Queuing, use the procedures in the `dbms_aqadm` package to control the amount of Streams Pool needed.

See Also

- *Oracle AI Database XStream Guide* for information on configuring the Streams pool for an XStream Out configuration
- *Oracle AI Database XStream Guide* for information on configuring the Streams pool for an XStream In configuration
- *Oracle AI Database PL/SQL Packages and Types Reference* for more information about the `dbms_aqadm` package

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.401 SYSDATE_AT_DBTIMEZONE

SYSDATE_AT_DBTIMEZONE enables special handling for the date and time value returned in calls to SYSDATE and SYSTIMESTAMP.

Depending on the value of SYSDATE_AT_DBTIMEZONE, you see either the date and time based on the default Autonomous Database time zone, Coordinated Universal Time (UTC), or based on the time zone that you set in your database.

> **Note**
>
> This parameter is valid only for Oracle Autonomous Database Serverless. On other types of Oracle databases, the value of this parameter is ignored.

> **See Also**
>
> *Using Oracle Autonomous Database Serverless* for more information about this parameter

2.402 TABLESPACE_ENCRYPTION

TABLESPACE_ENCRYPTION specifies the tablespace encryption policy for a database.

Property	Description
Parameter type	String
Syntax	TABLESPACE_ENCRYPTION = { AUTO_ENABLE | MANUAL_ENABLE | DECRYPT_ONLY }
Default value	Cloud databases: AUTO_ENABLE On-premises databases: MANUAL_ENABLE
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	The same value should be specified for all instances.

The TABLESPACE_ENCRYPTION parameter is an alternative to the deprecated ENCRYPT_NEW_TABLESPACES parameter. Similar to ENCRYPT_NEW_TABLESPACES, this parameter allows you to specify whether to encrypt newly created user tablespaces. However, the TABLESPACE_ENCRYPTION parameter offers an additional benefit in Data Guard environments. In previous releases, tablespaces in Data Guard environments were required to use the same encryption policy on the primary and standby databases. For example, if all tablespaces were encrypted on the primary database, then all tablespaces were required to be encrypted on the standby database. The TABLESPACE_ENCRYPTION parameter eliminates this requirement and allows you to use different tablespace encryption policies on primary and standby databases. See *Oracle AI Database Transparent Data Encryption Guide* for more information.

Copyright © 2002, 2025, Oracle and/or its affiliates.

If the behavior specified by the ENCRYPT_NEW_TABLESPACES setting conflicts with the behavior specified by the TABLESPACE_ENCRYPTION setting, then the TABLESPACE_ENCRYPTION behavior takes precedence.

Values:

- AUTO_ENABLE

  Use this setting if you would like to encrypt all tablespaces in the database.

  All newly created tablespaces will be encrypted. In the CREATE TABLESPACE statement, if you specify the DECRYPT clause, it will be ignored and the tablespace will be encrypted. If you specify the ENCRYPTION USING *algorithm* ENCRYPT clause, the specified algorithm will be used to encrypt the tablespace. If you specify the ENCRYPTION ENCRYPT clause and do not specify an algorithm, the tablespace will be encrypted with the algorithm specified by the TABLESPACE_ENCRYPTION_DEFAULT_ALGORITHM parameter.

  If an existing tablespace is unencrypted, the database writes a warning to the alert log. See *Oracle AI Database Transparent Data Encryption Guide* for information about encrypting existing tablespaces.

  If you attempt to decrypt an existing encrypted tablespace, an error will occur.

  This is the default setting for Cloud databases. Moreover, because all tablespaces must be encrypted in the Cloud, setting this parameter to MANUAL_ENABLE or DECRYPT_ONLY for a Cloud database will be ignored and the Cloud database will behave as if the setting is AUTO_ENABLE.

- MANUAL_ENABLE

  Use this setting if you would like to manually control which tablespaces are encrypted.

  To encrypt a tablespace, specify the ENCRYPTION ... ENCRYPT clause in the CREATE TABLESPACE statement. If you specify the ENCRYPTION USING *algorithm* ENCRYPT clause, the specified algorithm will be used to encrypt the tablespace. If you specify the ENCRYPTION ENCRYPT clause and do not specify an algorithm, the tablespace will be encrypted with the algorithm specified by the TABLESPACE_ENCRYPTION_DEFAULT_ALGORITHM parameter.

  This is the default setting for on-premises databases. This setting is ignored for Cloud databases.

- DECRYPT_ONLY

  Use this setting if you do not want any encrypted tablespaces in the database.

  All newly created tablespaces must be unencrypted. If you specify the ENCRYPT clause in the CREATE TABLESPACE statement, an error will occur.

  If an existing tablespace is encrypted, the database writes a warning to the alert log. See *Oracle AI Database Transparent Data Encryption Guide* for information about decrypting existing tablespaces.

  If you attempt to encrypt an existing unencrypted tablespace, an error will occur.

  This setting is valid only for on-premises databases. This setting is ignored for Cloud databases.

2.403 TABLESPACE_ENCRYPTION_DEFAULT_ALGORITHM

`TABLESPACE_ENCRYPTION_DEFAULT_ALGORITHM` specifies the default algorithm the database uses when encrypting a tablespace.

Property	Description
Parameter type	String
Syntax	`TABLESPACE_ENCRYPTION_DEFAULT_ALGORITHM = { AES128 | AES192 | AES256 | ARIA128 | ARIA192 | ARIA256 | 3DES168 }` **Note:** `3DES168` must be enclosed in single quotation marks when specified in the `ALTER SYSTEM` command.
Default value	`AES256`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value should be specified for all instances.

The value of this initialization parameter determines the algorithm the database uses if an encryption algorithm is not specified when creating an encrypted tablespace or when encrypting an existing tablespace. For example, the value of this parameter takes effect when:

- You create a tablespace with the `CREATE TABLESPACE` statement and you specify the `ENCRYPTION … ENCRYPT` clause, but you do not specify the `USING` keyword and an algorithm.
- You create a tablespace with the `CREATE TABLESPACE` statement and you do not specify the `ENCRYPTION … ENCRYPT` clause. However, the value of the `ENCRYPT_NEW_TABLESPACES` initialization parameter instructs the database to encrypt the tablespace.
- You encrypt an existing tablespace with the `ALTER TABLESPACE` statement, either by specifying the `ENCRYPTION OFFLINE ENCRYPT` clause or the `ENCRYPTION ONLINE … ENCRYPT` clause, and you do not specify the `USING` keyword and an algorithm.

> **Note**
>
> GOST 28147-89 has been deprecated by the Russian government, and SEED has been deprecated by the South Korean government. If you need South Korean government-approved TDE cryptography, then use ARIA instead. If you are using GOST 28147-89, then you must decrypt and encrypt with another supported TDE algorithm. The decryption algorithms for GOST 28147-89 and SEED are included in Oracle AI Database 26ai, but are deprecated, and the GOST encryption algorithm is desupported with Oracle AI Database 26ai. If you are using GOST or SEED for TDE encryption, then Oracle recommends that you online re-key to another algorithm before upgrading to Oracle AI Database 26ai. However, with the exception of the HP Itanium platform, the GOST and SEED decryption libraries are available with Oracle AI Database 26ai, so you can also decrypt after upgrading.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.404 TAPE_ASYNCH_IO

`TAPE_ASYNCH_IO` controls whether I/O to sequential devices (for example, backup or restore of Oracle data to or from tape) is asynchronous—that is, whether parallel server processes can overlap I/O requests with CPU processing during table scans.

Property	Description
Parameter type	Boolean
Default value	`true`
Modifiable	No
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No

If your platform supports asynchronous I/O to sequential devices, Oracle recommends that you leave this parameter set to its default. However, if the asynchronous I/O implementation is not stable, you can set `TAPE_ASYNCH_IO` to `false` to disable asynchronous I/O. If your platform does not support asynchronous I/O to sequential devices, this parameter has no effect.

See Also

Oracle AI Database VLDB and Partitioning Guide for more information about this parameter

2.405 TDE_CONFIGURATION

Use `TDE_CONFIGURATION` to set the type of keystore that is used for Transparent Data Encryption (TDE) by the root container; united PDBs inherit the value from the root container, isolated PDBs can be set individually.

Before Oracle Database 18c, each PDB stored its separate encryption keys in the CDB's keystore (united mode). Starting with Oracle Database 18c Cloud environments, a PDB can optionally store its encryption keys in a separate keystore (isolated mode), thus allowing protection by a separate keystore password. Starting with Oracle Database 19c, version 19.14, isolated mode is available for all Oracle database deployments, including on-premises databases, legacy deployments, and engineered systems.

The `WALLET_ROOT` initialization parameter must be set in order for `TDE_CONFIGURATION` to take effect.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	String
Syntax	`TDE_CONFIGURATION = "{ KEYSTORE_CONFIGURATION = value [; CONTAINER = pdb-name] }"`

Syntax	**value ::=**
	`{`
	`FILE |`
	`OKV |`
	`HSM |`
	`FILE|OKV |`
	`FILE|HSM |`
	`OKV|FILE |`
	`HSM|FILE`
	`}`
	Notes:
	• The `KEYSTORE_CONFIGURATION` value is case-insensitive. For example, you can specify `FILE` or `file`.
	• `FILE|OKV`, `FILE|HSM`, `OKV|FILE`, and `HSM|FILE` are values. The vertical bars they contain are not separators in the syntax shown above.

Default value	None
Modifiable	`ALTER SYSTEM`[1]
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be specified on all instances using the `ALTER SYSTEM SET TDE_CONFIGURATION="KEYSTORE_CONFIGURATION=value" SCOPE=BOTH SID='*';` statement.

[1] In some cases, when this parameter is set using `ALTER SYSTEM SCOPE=SPFILE`, the `SHOW PARAMETER TDE_CONFIGURATION` statement does not show the correct value. However, the value set for `TDE_CONFIGURATION` can be derived from information shown in the `V$ENCRYPTION_WALLET` view.

The following attributes can be specified:

- `KEYSTORE_CONFIGURATION` attribute. This attribute is required. The value specified with this attribute configures the keystore type for the specified PDB. The following values can be specified for this attribute:
  - `FILE`: This value configures a wallet keystore.
  - `OKV`: This value configures the database to use Oracle Key Vault (OKV) for TDE key management.

    This value is also used to disable an auto-login OKV configuration and cause any existing `cwallet.sso` files, containing the credentials to the OKV server as the `OKV_PASSWORD` client secret, to be ignored.
  - `HSM`: This value configures a hardware security module (HSM).

    Oracle does not support the use of HSMs for TDE key management. For more information, see My Oracle Support note 2310066.1 "Oracle TDE Support With 3rd Party HSM Vendors" at the following URL: https://support.oracle.com/rs?type=doc&id=2310066.1

Copyright © 2002, 2025, Oracle and/or its affiliates.

  - FILE|OKV: This value configures a reverse migration from OKV to a wallet keystore.
  - FILE|HSM: This value configures a reverse migration from a HSM to a wallet keystore.
  - OKV|FILE: This value configures a migration from a wallet to OKV.

    This value is also used in an auto-login OKV configuration, because in this configuration a cwallet.sso file, containing the OKV_PASSWORD client secret, must be used by the Oracle server to obtain the credentials to log in to the OKV server.
  - HSM|FILE: This value configures a migration from a wallet to a HSM.

    Oracle does not support the use of HSMs for TDE key management. For more information, see My Oracle Support note 2310066.1 "Oracle TDE Support With 3rd Party HSM Vendors" at the following URL: https://support.oracle.com/rs?type=doc&id=2310066.1

  Some of the KEYSTORE_CONFIGURATION attribute values consist of a single word, for example, the FILE, OKV, and HSM values. The other KEYSTORE_CONFIGURATION attribute values consist of two words separated by the "|" character that is a required part of the value's syntax, for example, the FILE|OKV, FILE|HSM, OKV|FILE, and HSM|FILE values.

- CONTAINER attribute: This optional attribute can be used only when setting the parameter in the CDB$ROOT of a CDB. The CONTAINER attribute can be specified only when the CDB$ROOT is in MOUNTED state. With this attribute, you must specify the name of the PDB for which you are setting the parameter. When you specify the CONTAINER attribute, you must use a semicolon ";" as the separation character between the KEYSTORE_CONFIGURATION and CONTAINER attributes.

Examples

The following statement configures a wallet keystore for the open PDB from which the statement is issued:

```
ALTER SYSTEM SET TDE_CONFIGURATION="KEYSTORE_CONFIGURATION=FILE" SCOPE=BOTH SID='*';
```

The following statement configures an OKV keystore for the PDB in MOUNTED state from which the statement is issued:

```
ALTER SYSTEM SET TDE_CONFIGURATION="KEYSTORE_CONFIGURATION=OKV" SCOPE=SPFILE SID='*';
```

The following statement configures an isolated standby PDB for an auto-open Oracle Key Vault setup; standby PDBs are MOUNTED, so the command must be executed in the standby root CDB:

```
ALTER SYSTEM SET TDE_CONFIGURATION="KEYSTORE_CONFIGURATION=OKV|FILE;
CONTAINER=FINANCIALS" SCOPE=both SID='*';
```

> **Note**
>
> In an Oracle Data Guard configuration, during keystore migration to OKV or OCI Key Management Service (KMS), or reverse migration to FILE, after the configuration change to OKV|FILE or FILE|OKV respectively, the wallet must be closed and reopened on the standby.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.406 TDE_KEY_CACHE

Use `TDE_KEY_CACHE` to enable or disable sharing of Transparent Data Encryption (TDE) master encryption keys across Oracle processes.

Note

This parameter is available only for databases in Oracle Cloud Infrastructure (OCI) that use the OCI Key Management Service (KMS) for TDE key management.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true | false`
Basic	No
Oracle RAC	The same value must be used on all instances.

Values:

- `true`

  Enables sharing of TDE master encryption keys across Oracle processes
- `false`

  Disables sharing of TDE master encryption keys across Oracle processes

See Also

- *Oracle AI Database Transparent Data Encryption Guide* for more information about setting the TDE master encryption key in a hardware keystore in united mode

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.407 TEMP_UNDO_ENABLED

TEMP_UNDO_ENABLED determines whether transactions within a particular session can have a temporary undo log.

Property	Description
Parameter type	Boolean
Default value	false
Modifiable	ALTER SESSION, ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	true | false
Basic	No
Oracle RAC	Each session of each instance can have its own value or not set any value at all

The default choice for database transactions has been to have a single undo log per transaction. This parameter, at the session level / system level scope, lets a transaction split its undo log into temporary undo log (for changes on temporary objects) and permanent undo log (for changes on persistent objects).

By splitting the undo stream of a transaction into two streams (temporary and permanent), a database can provide separate storage and retention model for these. This results in overall reduction in the size of undo log and redo log in the database

If database applications make use of temporary objects (using global temporary tables or temporary table transformations), it is advisable to set this parameter's value to true.

When TEMP_UNDO_ENABLED is set to true and the COMPATIBLE initialization parameter is set to 12.0.0, this feature is enabled. The temporary undo feature is enabled for the session in which it is set. Setting it across the system will affect all existing and upcoming sessions. If the value is set in the init.ora file, all upcoming sessions will inherit this value unless overwritten by an explicit ALTER SESSION or ALTER SYSTEM statement. All undo for operations on temporary objects is deemed temporary.

If TEMP_UNDO_ENABLED is not set to true, existing applications that make use of temporary objects run as is without any change.

Once the value of the parameter is set, it cannot be changed for the lifetime of the session. If the session has temporary objects using temporary undo, the parameter cannot be disabled for the session. Similarly, if the session already has temporary objects using regular undo, setting this parameter will have no effect.

This parameter is only applicable for the primary database. For a standby database, this parameter is ignored because temporary undo is enabled by default on the standby database.

Oracle AI Database Administrator's Guide for information on managing temporary undo

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.408 THREAD

THREAD has been superseded by the INSTANCE_NAME and INSTANCE_NUMBER parameters, and will be made obsolete in a future release of the Oracle AI Database.

Property	Description
Parameter type	Integer
Default value	0
Modifiable	No
Modifiable in a PDB	No
Range of values	0 to the maximum number of enabled threads
Basic	No
Oracle RAC	If specified, multiple instances must have different values.

See Also

"INSTANCE_NAME" and "INSTANCE_NUMBER"

2.409 THREADED_EXECUTION

THREADED_EXECUTION specifies whether to enable the multithreaded Oracle model.

Property	Description
Parameter type	Boolean
Default value	On UNIX and Linux: false On Windows: true
Modifiable	No
Modifiable in a PDB	No
Range of values	true | false
Basic	No
Oracle RAC	If specified, all instances must use the same value

THREADED_EXECUTION on UNIX and Linux

Oracle Database 12*c* introduced the THREADED_EXECUTION initialization parameter for databases running on UNIX and Linux systems. On such databases, the default value for THREADED_EXECUTION is false. Setting this parameter to true enables the multithreaded Oracle model, which allows Oracle processes on UNIX and Linux to run as operating system threads in separate address spaces.

By default, some background processes on UNIX and Linux always use threaded execution; the remaining Oracle processes run as operating system processes. Thus, an "Oracle process" is not always equivalent to an "operating system process."

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> When `THREADED_EXECUTION` is set to `true` on databases running on UNIX and Linux systems, which enables the multithreaded Oracle model, operating system authentication is not supported. Attempts to connect to the database using operating system authentication (for example, `CONNECT / AS SYSDBA` or `CONNECT /`) when this initialization parameter is set to `true` receive an `ORA-01031 "insufficient privileges"` error.
>
> The solution to this error is to always use the password when connecting to the database.
>
> Also, when this initialization parameter is set to `true` on databases running on UNIX and Linux systems, the `DEDICATED_THROUGH_BROKER_listener-name=ON` parameter should be added to the listener.ora file, where *`listener-name`* is the name of the Oracle Net listener and the `LOCAL_LISTENER` initialization parameter should be set to a TNS name entry corresponding to your instance service. This enables the server to spawn threads when connections to the database are requested through the listener.

THREADED_EXECUTION on Windows

Starting with Oracle Database 21c, the `THREADED_EXECUTION` initialization parameter is supported for databases running on Microsoft Windows. On such databases, this parameter must remain set to its default value of `true`; setting this parameter to `false` on databases running on Windows is not supported. The introduction of this parameter does not change the threading model for Oracle database on Windows. As in previous releases, an Oracle Database server instance on Windows is a service with a single multi-threaded operating system process. However, starting with Oracle Database 21c, you will observe changes to the `V$PROCESS` view, the dedicated connection broker, and the naming of trace files. For details about these changes, refer to *Oracle AI Database Administrator's Reference for Microsoft Windows*.

> **Note**
>
> Unlike on UNIX and Linux systems, when `THREADED_EXECUTION` is set to `true` on Windows, operating system authentication is supported.

> **See Also**

> - *Oracle AI Database Net Services Administrator's Guide* for an overview of Oracle Net listener

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.410 TIME_AT_DBTIMEZONE

TIME_AT_DBTIMEZONE specifies whether time-dependent database operations use the time zone of the database host system or the time zone of the PDB.

Some examples of time-dependent database operations are running the SQL functions SYSDATE and SYSTIMESTAMP, querying table columns of type DATE or TIMESTAMP, using Oracle Job scheduler, performing materialized view refresh, and using Oracle Flashback Technology.

Property	Description
Parameter type	String
Syntax	TIME_AT_DBTIMEZONE = { OFF | USER_SQL | DATABASE }
Default value	OFF
Modifiable	No
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances must use the same value.

Values:

- OFF - For all time-dependent operations, the database uses the time zone of the database host system that was in effect when the database was started. This is the behavior in releases prior to Oracle AI Database 26ai.
- USER_SQL - The SQL functions SYSDATE and SYSTIMESTAMP return the date and time based on the DBTIMEZONE setting for the PDB. For all other time-dependent operations, the database uses the time zone of the database host system that was in effect when the database was started.
- DATABASE - For all time-dependent operations, the database uses the time zone specified by the DBTIMEZONE setting for the PDB.

Note

This parameter is available starting with Oracle AI Database 26ai.

See Also

- *Oracle AI Database SQL Language Reference* for information about the SYSDATE function
- *Oracle AI Database SQL Language Reference* for information about the SYSTIMESTAMP function

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.411 TIMED_OS_STATISTICS

`TIMED_OS_STATISTICS` specifies (in seconds) the interval at which Oracle collects operating system statistics when a request is made from the client to the server or when a request completes.

Property	Description
Parameter type	Integer
Default value	If `STATISTICS_LEVEL` is set to `ALL`, then `60` If `STATISTICS_LEVEL` is set to `BASIC` or `TYPICAL`, then `0`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	Unlimited
Basic	No

On dedicated servers, Oracle collects operating system statistics at user logon and after each subsequent client invocation through the OCI into the Oracle server as a remote procedure call message.

On shared servers, Oracle collects statistics when client calls to Oracle are processed.

A value of zero specifies that operating system statistics are not gathered. To collect statistics, set a value meaningful for your application and site needs.

> **Note**
>
> Gathering operating system statistics is very expensive. Oracle recommends that you set this parameter in an `ALTER SYSTEM` statement rather than in the initialization parameter file, and that you reset the value to zero as soon as the needed statistics have been gathered.

> **See Also**
>
> *Oracle AI Database Performance Tuning Guide* for more information about this parameter

2.412 TIMED_STATISTICS

`TIMED_STATISTICS` specifies whether statistics related to time are collected.

Property	Description
Parameter type	Boolean
Default value	If `STATISTICS_LEVEL` is set to `TYPICAL` or `ALL`, then `true` If `STATISTICS_LEVEL` is set to `BASIC`, then `false`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Modifiable in a PDB	Yes
Range of values	`true	false`
Basic	No

Values

- `true`

  The statistics are collected and stored in trace files or displayed in the `V$SESSTATS` and `V$SYSSTATS` dynamic performance views.

- `false`

  The value of all time-related statistics is set to zero. This setting lets Oracle avoid the overhead of requesting the time from the operating system.

Starting with release 11.1.0.7.0, the value of the `TIMED_STATISTICS` parameter cannot be set to `false` if the value of `STATISTICS_LEVEL` is set to `TYPICAL` or `ALL`.

On some systems with very fast timer access, Oracle might enable timing even if this parameter is set to `false`. On these systems, setting the parameter to `true` can sometimes produce more accurate statistics for long-running operations.

See Also

- *Oracle AI Database SQL Tuning Guide* for more information on setting this parameter
- Statistics Descriptions indicates which statistics depend on the setting of this parameter.

2.413 TIMEZONE_VERSION_UPGRADE_ONLINE

`TIMEZONE_VERSION_UPGRADE_ONLINE` enables you to keep the database running in normal mode while upgrading time zone data using the `DBMS_DST` package.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`true	false`
Basic	No
Oracle RAC	Multiple instances must have the same value.

In releases prior to Oracle Database 21c, you were required to put the database in `UPGRADE` mode in order to initiate a time zone data upgrade using the `DBMS_DST` package. Starting with Oracle Database 21c, you can perform such an upgrade while the database is in normal mode by setting the value of `TIMEZONE_VERSION_UPGRADE_ONLINE` to `true`.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> Setting the value of this parameter is only one step in a series of steps for upgrading your time zone data. Refer to *Oracle AI Database Globalization Support Guide* for the complete set of steps before you set this parameter value.

2.414 TRACE_ENABLED

`TRACE_ENABLED` controls tracing of the execution history, or code path, of Oracle. Oracle Support Services uses this information for debugging.

Property	Description
Parameter type	Boolean
Default value	`true`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No
Oracle RAC	The default value is `TRUE`. Oracle recommends that multiple instances have the same value.

When `TRACE_ENABLED` is set to `true`, Oracle records information in specific files when errors occur.

Oracle records this information for all instances, even if only one instance terminates. This allows Oracle to retain diagnostics for an entire cluster.

Although the overhead incurred from this processing is not excessive, you can improve performance by setting `TRACE_ENABLED` to `false`. You might do this, for example, to meet high-end benchmark requirements. However, if you leave this parameter set to `false`, you may lose valuable diagnostic information. Therefore, always set `TRACE_ENABLED` to `true` to trace system problems and to reduce diagnostic efforts when unexplained instance failures occur.

2.415 TRACEFILE_IDENTIFIER

`TRACEFILE_IDENTIFIER` specifies a custom identifier that becomes part of the Oracle Trace file name. Such a custom identifier is used to identify a trace file simply from its name and without having to open it or view its contents.

Property	Description
Parameter type	String
Syntax	`TRACEFILE_IDENTIFIER = "traceid"`
Default value	There is no default value.
Modifiable	`ALTER SESSION`
Modifiable in a PDB	No
Range of values	Any characters that can occur as part of a file name on the customer platform
Basic	No

Copyright © 2002, 2025, Oracle and/or its affiliates.

Each time this parameter is dynamically modified, the next trace dump will be written to a trace file which has the new parameter value embedded in its name. Trace file continuity information is automatically added to both the old and new trace files to indicate that these trace files belong to the same process.

This parameter can only be used to change the name of the foreground process' trace file; the background processes continue to have their trace files named in the regular format. For foreground processes, the `TRACEID` column of the `V$PROCESS` view contains the current value of the `TRACEFILE_IDENTIFIER` parameter. When this parameter value is set, the trace file name has the following format:

*sid*_ora_*pid*_*traceid*.trc

In this example, *sid* is the Oracle instance ID, *pid* is the process ID, and *traceid* is the value of the `TRACEFILE_IDENTIFIER` parameter.

See Also

- *Oracle AI Database SQL Tuning Guide* for more information about this parameter
- This parameter is not supported on all operating systems. See your operating system-specific Oracle documentation for more information.

2.416 TRANSACTION_RECOVERY

`TRANSACTION_RECOVERY` specifies whether transaction recovery is enabled or disabled for a PDB.

Transaction recovery refers to the series of steps that the database performs in the event of a crash (either an instance crash or a transaction crash) to roll back uncommitted transactions.

Property	Description
Parameter type	String
Syntax	`TRANSACTION_RECOVERY = { ENABLED | DISABLED }`
Default value	`ENABLED`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances must use the same value.

Values:

- `ENABLED` - Transaction recovery is enabled for a PDB.
- `DISABLED` - Transaction recovery is disabled for a PDB.

During normal operation, the value of this parameter is set to `ENABLED` by the database and this setting should not be modified by a DBA. However, there are two circumstances under which it is permissible for a DBA to modify the value of this parameter:

- A quarantined transaction is a transaction that is isolated and for which transaction recovery will not be attempted while the quarantine on it remains. It requires intervention by the DBA to first resolve the issue that caused the transaction to be quarantined, and

Copyright © 2002, 2025, Oracle and/or its affiliates.

then to drop the transaction quarantine so that transaction recovery is attempted again. If transaction recovery becomes disabled on a PDB due to an excessive number of quarantined transactions (a process known as "transaction quarantine escalation"), then the database automatically sets the value of this parameter to `DISABLED`. When this happens, the DBA should take corrective action for the quarantined transactions, then restart transaction recovery for the PDB by setting the value of this parameter to `ENABLED`. Refer to *Oracle AI Database Administrator's Guide* to learn about this entire process before you set this parameter.

- While working to resolve an issue, Oracle Support may instruct a DBA to temporarily disable transaction recovery by setting this parameter to `DISABLED`. After the issue has been resolved, this parameter should ultimately be set back to `ENABLED` so that normal database operation can resume.

⚠ Caution

You should never set this parameter to `DISABLED` unless specifically directed to do so by Oracle Support. Setting this parameter to `DISABLED` could lead to severe problems

ⓘ Note

This parameter is available starting with Oracle AI Database 26ai.

2.417 TRANSACTIONS

`TRANSACTIONS` specifies how many rollback segments to online when `UNDO_MANAGEMENT = MANUAL`.

Property	Description
Parameter type	Integer
Default value	Derived: (1.1 * `SESSIONS`)
Modifiable	No
Modifiable in a PDB	No
Range of values	4 to 2^{31} - 1
Basic	No
Oracle RAC	Multiple instances can have different values.

The maximum number of concurrent transactions is now restricted by undo tablespace size (`UNDO_MANAGEMENT = AUTO`) or the number of online rollback segments (`UNDO_MANAGEMENT = MANUAL`).

2.418 TRANSACTIONS_PER_ROLLBACK_SEGMENT

`TRANSACTIONS_PER_ROLLBACK_SEGMENT` specifies the number of concurrent transactions you expect each rollback segment to have to handle.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	Integer
Default value	5
Modifiable	No
Modifiable in a PDB	No
Range of values	1 to operating system-dependent
Basic	No
Oracle RAC	Multiple instances can have different values.

The minimum number of rollback segments acquired at startup is `TRANSACTIONS` divided by the value for this parameter. For example, if `TRANSACTIONS` is 101 and this parameter is 10, then the minimum number of rollback segments acquired would be the ratio 101/10, rounded up to 11.

You can acquire more rollback segments by naming them in the parameter `ROLLBACK_SEGMENTS`.

See Also

Your operating system-specific Oracle documentation for the range of values for this parameter.

2.419 TRUE_CACHE

Use `TRUE_CACHE` to specify that an instance is a True Cache.

Property	Description
Parameter type	Boolean
Default value	`false`
Modifiable	No
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No

Set this parameter to `true` on a True Cache. Otherwise, leave this parameter set to `false`.

Note

This parameter is available starting with Oracle AI Database 26ai.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle True Cache User's Guide* for more information about this parameter

2.420 TXN_PRIORITY

`TXN_PRIORITY` specifies the priority for all user transactions in a session.

Property	Description
Parameter type	String
Syntax	`TXN_PRIORITY = { HIGH | MEDIUM | LOW }`
Default value	`HIGH`
Modifiable	`ALTER SESSION`
Modifiable in a PDB	No
Basic	No

The Priority Transactions feature automatically rolls back low-priority transactions that are blocking higher priority transactions from obtaining row locks.

You can use the `TXN_PRIORITY` parameter to assign a priority (`HIGH`, `MEDIUM`, or `LOW`) to all transactions in a particular user session. Priority Transactions then operates as follows for the three priorities:

- `HIGH` - Priority Transactions never rolls back a `HIGH` priority transaction in order to release a row lock for another transaction. This is the default.
- `MEDIUM` - Priority Transactions will roll back a `MEDIUM` priority transaction if it is holding a row lock required by a `HIGH` priority transaction, and the `HIGH` priority transaction has been waiting for the row lock longer than the time specified by the `PRIORITY_TXNS_HIGH_WAIT_TARGET` parameter.
- `LOW` - Priority Transactions will roll back a `LOW` priority transaction if it is holding a row lock required by a `HIGH` or `MEDIUM` priority transaction, and the `HIGH` or `MEDIUM` priority transaction has been waiting for the row lock longer than the time specified by the `PRIORITY_TXNS_HIGH_WAIT_TARGET` or `PRIORITY_TXNS_MEDIUM_WAIT_TARGET` parameter, respectively.

  If a `LOW` priority transaction is blocked waiting for a row lock, Priority Transactions will not roll back the transaction holding the row lock, regardless of its priority.

You can view the priority and maximum wait time for a transaction by querying the `TXN_PRIORITY` and `PRIORITY_TXNS_WAIT_TARGET` columns in the `V$TRANSACTION` view.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- "PRIORITY_TXNS_HIGH_WAIT_TARGET"
- "PRIORITY_TXNS_MEDIUM_WAIT_TARGET"
- "PRIORITY_TXNS_MODE"
- "V$TRANSACTION"
- *Oracle AI Database Administrator's Guide* for more information about Priority Transactions

2.421 UNDO_MANAGEMENT

`UNDO_MANAGEMENT` specifies which undo space management mode the system should use.

Property	Description
Parameter type	String
Syntax	`UNDO_MANAGEMENT = { MANUAL | AUTO }`
Default value	`AUTO`
Modifiable	No
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances must have the same value.

When `UNDO_MANAGEMENT` is set to `AUTO`, the instance starts in automatic undo management mode. In manual undo management mode, undo space is allocated externally as rollback segments.

Note

In a CDB, the `UNDO_MANAGEMENT` initialization parameter must be set to `AUTO`, and an undo tablespace is required to be created to manage the undo data.

See Also

- *Oracle AI Database Administrator's Guide* for more information about this parameter
- *Oracle AI Database Administrator's Guide* for more information about managing undo data

2.422 UNDO_RETENTION

`UNDO_RETENTION` specifies (in seconds) the low threshold value of undo retention.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	Integer
Default value	`900`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Range of values	`0` to 2^{31} - `1`
Basic	No
Oracle RAC	Oracle recommends that multiple instances have the same value.

For both `AUTOEXTEND` undo tablespaces and fixed-size undo tablespaces, the system retains undo for at least the time specified in this parameter, and automatically tunes the undo retention period to satisfy the undo requirements of the queries.

Automatic tuning of undo retention is not supported for LOBs. The `RETENTION` value for LOB columns is set to the value of the `UNDO_RETENTION` parameter.

The `UNDO_RETENTION` parameter is honored only if the current undo tablespace has enough space. If an active transaction requires undo space and the undo tablespace does not have available space, then the system starts reusing unexpired undo space. This action can potentially cause some queries to fail with a "snapshot too old" message.

The amount of time for which undo is retained for the Oracle AI Database for the current undo tablespace can be obtained by querying the `TUNED_UNDORETENTION` column of the `V$UNDOSTAT` dynamic performance view.

Recommendations for Modifying UNDO_RETENTION

Oracle generally recommends that you leave `UNDO_RETENTION` set to its default value. Modifying this parameter is recommended only in the following situations:

- You may want to increase the value of `UNDO_RETENTION` when using flashback features, such as Oracle Flashback Query, which require undo to be retained for longer than the longest running query in the system.
- In Oracle Active Data Guard environments, you may want to increase the value of `UNDO_RETENTION` on the primary instance in order to accommodate undo retention requirements on the standby instances. This allows the primary instance to retain undo for a longer period of time to serve queries on the standby instances. For more information, see *Oracle AI Database Administrator's Guide* and *Oracle Data Guard Concepts and Administration*.

Modifying UNDO_RETENTION in a CDB

You can set the value of `UNDO_RETENTION` in the CDB root (`CDB$ROOT`) and in individual PDBs. The CDB root and PDBs can have the same value or different values. Note that you can modify this parameter in a PDB only if the PDB is in local undo mode; you cannot modify this parameter if the PDB is in shared undo mode.

Starting with Oracle Database release 19c, version 19.9, the value of `UNDO_RETENTION` is not inherited in a CDB. Therefore, if you change the value for `UNDO_RETENTION` in the CDB root, the PDBs do not inherit the new value. If you want to change the value for `UNDO_RETENTION` at the

Copyright © 2002, 2025, Oracle and/or its affiliates.

PDB level, you must explicitly do so. For example, if your CDB contains two PDBs (PDB1 and PDB2), you can set UNDO_RETENTION to 2000 in the CDB root and both PDBs as follows:

```
ALTER SESSION SET CONTAINER = CDB$ROOT;
ALTER SYSTEM SET UNDO_RETENTION=2000 SCOPE=BOTH;

ALTER SESSION SET CONTAINER = PDB1;
ALTER SYSTEM SET UNDO_RETENTION=2000 SCOPE=BOTH;

ALTER SESSION SET CONTAINER = PDB2;
ALTER SYSTEM SET UNDO_RETENTION=2000 SCOPE=BOTH;
```

2.423 UNDO_TABLESPACE

UNDO_TABLESPACE specifies the undo tablespace to be used when an instance starts. If this parameter is specified when the instance is in manual undo management mode, then an error will occur and startup will fail.

Property	Description
Parameter type	String
Syntax	UNDO_TABLESPACE = *undoname*
Default value	The first available undo tablespace in the database.
Modifiable	ALTER SYSTEM
Modifiable in a PDB	Yes
Range of values	Legal name of an existing undo tablespace
Basic	Yes
Oracle RAC	Each instance must have a unique value for this parameter, when it is set.

If the UNDO_TABLESPACE parameter is omitted, the first available undo tablespace in the database is chosen. If no undo tablespace is available, the instance will start without an undo tablespace. In such cases, user transactions will be executed using the SYSTEM rollback segment. You should avoid running in this mode under normal circumstances.

You can replace an undo tablespace with another undo tablespace while the instance is running.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> When you update this parameter on the primary database in an Oracle Data Guard configuration, you must also update it on all the physical standby databases in the configuration. This ensures that the standby databases can find the undo tablespace when they become the primary database.

> **See Also**
>
> *Oracle AI Database SQL Language Reference* for information about creating undo tablespaces

2.424 UNIFIED_AUDIT_COMMON_SYSTEMLOG

`UNIFIED_AUDIT_COMMON_SYSTEMLOG` specifies whether key fields of unified audit records generated due to common audit policies will be written to the SYSLOG utility.

> **Note**
>
> This initialization parameter is supported only on UNIX platforms.

Property	Description
Parameter type	String

Syntax	`UNIFIED_AUDIT_COMMON_SYSTEMLOG = '`*`facility_clause.priority_clause`*`'`
	`facility_clause``::=`
	`{ USER | LOCAL[ 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 ] }`
	`priority_clause``::=`
	`{ NOTICE | INFO | DEBUG | WARNING | ERR | CRIT | ALERT | EMERG }`

Default value	None
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	The same value must be used on all instances.

When this parameter is set, key fields of unified audit records generated due to common audit policies are written to SYSLOG. These fields uniquely identify the detailed unified audit records in the `UNIFIED_AUDIT_TRAIL` view. Only a subset of unified audit record fields are written to ensure that the audit record entries do not exceed the maximum allowed size for a SYSLOG entry (typically 1024 bytes).

Do not set this parameter if you do not want key fields of unified audit records generated due to common audit policies written to SYSLOG.

Copyright © 2002, 2025, Oracle and/or its affiliates.

This parameter differs from the UNIFIED_AUDIT_SYSTEMLOG parameter in that it is set at the CDB level and enables all unified audit records from common unified audit policies to be consolidated into a single destination, whereas UNIFIED_AUDIT_SYSTEMLOG is set at the PDB level and enables the logging of unified audit records on a per-PDB basis.

See Also

- "UNIFIED_AUDIT_SYSTEMLOG"
- "UNIFIED_AUDIT_TRAIL"
- *Oracle AI Database Security Guide* for a table that maps the names given to the unified audit records fields that are written to SYSLOG to the corresponding column names in the UNIFIED_AUDIT_TRAIL view

2.425 UNIFIED_AUDIT_SYSTEMLOG

UNIFIED_AUDIT_SYSTEMLOG specifies whether key fields of unified audit records will be written to the SYSLOG utility (on UNIX platforms) or to the Windows Event Viewer (on Windows). In a CDB, this parameter is a per-PDB static initialization parameter.

Property	Description
Parameter type	String for UNIX platforms, Boolean for Windows
Syntax	**On UNIX:** UNIFIED_AUDIT_SYSTEMLOG = '*facility_clause*.*priority_clause*' *facility_clause*::= { USER | LOCAL[0 | 1 | 2 | 3 | 4 | 5 | 6 | 7] } *priority_clause*::= { NOTICE | INFO | DEBUG | WARNING | ERR | CRIT | ALERT | EMERG } **On Windows:** UNIFIED_AUDIT_SYSTEMLOG = { FALSE | TRUE }
Default value	No default on UNIX platforms FALSE on Windows
Modifiable	No
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	The same value must be used on all instances.

When this parameter is set on UNIX, key fields of unified audit records are written to SYSLOG. When this parameter is set on Windows, key fields of unified audit records are written to the Windows Event Viewer.

Do not set this parameter (or set it to FALSE on Windows) if you do not want key fields of unified audit records written to SYSLOG or the Windows Event Viewer.

When UNIFIED_AUDIT_SYSTEMLOG is enabled, the key fields of the unified audit records that are written to SYSLOG or Windows Event Viewer uniquely identify the detailed unified audit records in the UNIFIED_AUDIT_TRAIL view. Only a subset of the unified audit record fields are

Copyright © 2002, 2025, Oracle and/or its affiliates.

written to ensure that the audit record entries do not exceed the maximum allowed size for a SYSLOG entry (typically 1024 bytes).

This parameter differs from the `UNIFIED_AUDIT_COMMON_SYSTEMLOG` parameter in that it is set at the PDB level and enables the logging of unified audit records on a per-PDB basis, whereas `UNIFIED_AUDIT_COMMON_SYSTEMLOG` is set at the CDB level and enables all unified audit records from common unified audit policies to be consolidated into a single destination.

See Also

- "UNIFIED_AUDIT_COMMON_SYSTEMLOG"
- "UNIFIED_AUDIT_TRAIL"
- *Oracle AI Database Security Guide* for a table that maps the names given to the unified audit records fields that are written to SYSLOG and the Windows Event Viewer to the corresponding column names in the `UNIFIED_AUDIT_TRAIL` view

2.426 UNIFIED_AUDIT_TRAIL_EXCLUDE_COLUMNS

`UNIFIED_AUDIT_TRAIL_EXCLUDE_COLUMNS` controls whether columns containing sensitive data are populated in the `UNIFIED_AUDIT_TRAIL` view.

Property	Description
Parameter type	String

Syntax	`UNIFIED_AUDIT_TRAIL_EXCLUDE_COLUMNS = NONE`
	`UNIFIED_AUDIT_TRAIL_EXCLUDE_COLUMNS = column [, column ]...`
	Possible values for *column*:
	• `DP_CLOB_PARAMETERS1`
	• `RLS_INFO`
	• `SQL_BINDS`
	• `SQL_TEXT`

Default value	`NONE`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	Multiple instances can have different values.

You can use this parameter to prevent the unified audit trail from including certain detailed values that may be sensitive. Administrators should evaluate the trade-off between data privacy and forensic completeness before setting this parameter.

By default, the value of this parameter is `NONE`, which instructs the database to populate all columns in `UNIFIED_AUDIT_TRAIL`.

If you set this parameter to one or more of the following column names, the database will stop populating those columns in `UNIFIED_AUDIT_TRAIL`:

- `DP_CLOB_PARAMETERS1` - Displays parameters used by Data Pump export or import, in JSON format

Copyright © 2002, 2025, Oracle and/or its affiliates.

- `RLS_INFO` - Displays virtual private database (VPD), Oracle Label Security (OLS), Real Application Security (RAS), and redaction policy names and predicates
- `SQL_BINDS` - Displays a list of bind variables associated with `SQL_TEXT`
- `SQL_TEXT` - Displays the text of the SQL being monitored

Note that column data that is present at the time you set this parameter is retained.

Note

This parameter is available starting with Oracle AI Database 26ai, Release Update 23.6.

"UNIFIED_AUDIT_TRAIL"

2.427 UNIFORM_LOG_TIMESTAMP_FORMAT

`UNIFORM_LOG_TIMESTAMP_FORMAT` specifies that a uniform timestamp format be used in Oracle AI Database trace (.trc) files and log files (such as the alert log).

Property	Description
Parameter type	Boolean
Default value	`true`
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	`true | false`
Basic	No
Oracle RAC	Multiple instances should use the same value.

When the value of `UNIFORM_LOG_TIMESTAMP_FORMAT` is `TRUE`, the format used for timestamps in trace files is standardized on universal time with millisecond precision. For example:

```
2012-09-26 00:16:47.154
```

When the value of `UNIFORM_LOG_TIMESTAMP_FORMAT` is `FALSE`, trace files include a mix of timestamps using different precisions, with some timestamps showing local time and other timestamps showing universal time.

Copyright © 2002, 2025, Oracle and/or its affiliates.

2.428 USE_DEDICATED_BROKER

USE_DEDICATED_BROKER determines how dedicated servers are spawned.

> **Note**
>
> Starting with Oracle AI Database 26ai, the type for this parameter is changed from Boolean to String, the NONE and CDB values are introduced, and the default value is changed from FALSE to NONE. However, there is no change to the functionality of this parameter, because the NONE value is equivalent to FALSE, and the CDB value is equivalent to TRUE.

Property	Description
Parameter type	String
Syntax	USE_DEDICATED_BROKER = { NONE | FALSE | CDB | TRUE }
Default value	NONE unless multithreaded Oracle is enabled[1]
Modifiable	ALTER SYSTEM
Modifiable in a PDB	No
Basic	No
Oracle RAC	If specified, all instances must use the same value

[1] Multithreaded Oracle is enabled by setting the THREADED_EXECUTION initialization parameter to TRUE.

When this parameter is set to NONE or FALSE, the listener spawns a dedicated server directly.

When this parameter is set to CDB or TRUE, the listener hands the connection to a dedicated connection broker that spawns the dedicated server. Unlike the listener, the dedicated connection broker is a database process, and hence it can implement policies leveraging database information before the spawn.

To enable the dedicated connection broker using the USE_DEDICATED_BROKER initialization parameter, you must:

1. Set the USE_DEDICATED_BROKER initialization parameter to TRUE.
2. Set the DEDICATED_THROUGH_BROKER_*listener-name* parameter to on in the listener.ora file.

Performing these two steps configures the Connection Broker Process (N*nnn*).

> **Note**
>
> When multithreaded Oracle is enabled, the dedicated connection broker process is also enabled and used.

Configuration of the brokers is controlled by the CONNECTION_BROKERS initialization parameter.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- "CONNECTION_BROKERS" for more information about configuring brokers
- Table F-1 for more information about the Connection Broker Process (N*nnn*)

- *Oracle AI Database Net Services Reference* for more information about the `DEDICATED_THROUGH_BROKER_`*listener-name* parameter in the listener.ora file

2.429 USE_LARGE_PAGES

`USE_LARGE_PAGES` is used to manage the database's use of large pages for SGA memory.

Note

This parameter is applicable only on the Linux operating system. However, setting this parameter to `FALSE` can cause performance degradation on any platform.

The exception is when `USE_LARGE_PAGES` is set to `FALSE` automatically in an Oracle ASM instance because `MEMORY_TARGET` is enabled (set to a non-zero value). In this case, the `FALSE` setting does not cause performance degradation.

Property	Description
Parameter type	String
Syntax	`USE_LARGE_PAGES = { TRUE | FALSE | AUTO | ONLY | AUTO_ONLY }`
Default value	`ONLY` for Exadata Database Service in the cloud, Base Database Service in the cloud, and databases created using Exadata automation tools such as Oracle Exadata Deployment Assistant (OEDA) and OEDA Command Line Utility (OEDACLI) `AUTO_ONLY` for all other Exadata systems `TRUE` for all other systems
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	Multiple instances can use different values

This parameter does not affect process-private memory allocations.

Values

These values can be specified for `USE_LARGE_PAGES`:

- `TRUE`

  Specifies that the instance can use large pages if large pages are configured on the system.

Copyright © 2002, 2025, Oracle and/or its affiliates.

In Oracle Database 11*g* Release 2 (11.2.0.2), if there are not enough large pages configured on the system, then regular sized pages will be used to allocate SGA memory. This can cause the free large pages to go unused, and the operating system can allocate a huge amount of memory to create page tables to map SGA into physical pages for the Oracle processes. This may lead to `ORA-04030` errors and severe performance degradation on an instance.

In Oracle Database 11*g* Release 2 (11.2.0.3) and later releases, Oracle allocates as much of the SGA as it can in large pages, and if it runs out, it will allocate the rest of the SGA using regular sized pages. This can cause the instance to create additional shared memory segments for the SGA, but the total SGA size will be unchanged. In this supported mixed page mode allocation, the database will exhaust the available large pages before switching to regular sized pages.

- `FALSE`

  Specifies that the instance will not use large pages. This setting is not recommended because it can cause severe performance degradation for the instance. Although the `USE_LARGE_PAGES` initialization parameter applies only to Linux systems, setting this parameter to `FALSE` can cause performance degradation on any platform.

- `AUTO`

  Specifies that, during startup, the instance will calculate and request the number of large pages it requires. If the operating system cannot fulfill this request, then the instance will start with a combination of large and regular pages.

- `ONLY`

  Specifies that the instance will fail to start if large pages cannot be used for the entire SGA memory. Oracle recommends this setting for consistent performance. This setting is the default setting for Exadata Database Service in the cloud and Base Database Service in the cloud.

  When `USE_LARGE_PAGES` is set to `ONLY`, you must not explicitly set values for `MEMORY_TARGET` and `MEMORY_MAX_TARGET` in the initialization parameter file. Doing so will prevent the instance from starting.

- `AUTO_ONLY`

  Specifies that, during startup, the instance will calculate and request the number of large pages it requires. If the operating system can fulfill this request, then the instance will start successfully. If the operating system cannot fulfill this request, then the instance will fail to start. This ensures that no instances will run with under-provisioned large pages. This setting is available starting with Oracle Database 19c and it is the default setting for on-premises Exadata systems.

See Also

- "MEMORY_TARGET"
- "MEMORY_MAX_TARGET"

2.430 USER_DUMP_DEST

`USER_DUMP_DEST` specifies the pathname for a directory where the server will write debugging trace files on behalf of a user process.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Parameter type	String
Syntax	`USER_DUMP_DEST = { pathname | directory }`
Default value	Operating system-dependent
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	No
Range of values	Any valid local path, directory, or disk
Basic	No

> **Note**
>
> The `USER_DUMP_DEST` initialization parameter is deprecated.

For example, this directory might be set as follows:

- On MS-DOS: `C:\ORACLE\UTRC`
- On UNIX: `/oracle/utrc`
- On VMS: `DISK$UR3:[ORACLE.UTRC]`

> **Note**
>
> This parameter is ignored by the diagnosability infrastructure introduced in Oracle Database 11g Release 1 (11.1), which places trace and core files in a location controlled by the `DIAGNOSTIC_DEST` initialization parameter.

> **See Also**
>
> - *Oracle AI Database SQL Tuning Guide* for more information about the use of trace files
> - Your operating system-specific Oracle documentation for the range of values

2.431 VECTOR_MEMORY_SIZE

`VECTOR_MEMORY_SIZE` specifies the size of the Vector Pool.

Property	Description
Parameter type	Big integer
Syntax	`VECTOR_MEMORY_SIZE = integer [K | M | G]`
Default value	0
Modifiable	`ALTER SYSTEM`
Modifiable in a PDB	Yes

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Range of values	0 to 70% of the SGA size
Basic	No
Oracle RAC	Different instances can use different values.

`VECTOR_MEMORY_SIZE` specifies either the current size of the Vector Pool (at the CDB level) or the maximum Vector Pool usage allowed by a PDB (at the PDB level).

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

> **See Also**
>
> *Oracle AI Database AI Vector Search User's Guide* for more information about this parameter

2.432 WALLET_ROOT

`WALLET_ROOT` specifies the path to the root of a directory tree containing a subdirectory for each pluggable database (PDB).

Property	Description
Parameter type	String
Syntax	`WALLET_ROOT = wallet-root-directory-path`
Default value	There is no default value.
Modifiable	No
Modifiable in a PDB	No
Basic	No
Oracle RAC	Multiple instances must have the same value.

The name of the various wallet files is always the same, regardless of the component they are associated with. The wallets for each component are stored under each PDB GUID directory within the `WALLET_ROOT` directory structure in a directory whose name is based on the component name. For example, for the TDE component, the subdirectory name is `tde`.

The `TDE_CONFIGURATION` initialization parameter cannot be set unless the `WALLET_ROOT` parameter is also set.

For example, the contents of the directory at the location specified by the `WALLET_ROOT` initialization parameter could look as follows, where *wallet-root* is the directory specified by the `WALLET_ROOT` parameter:

```
wallet-root/eus/ewallet.p12
wallet-root/tde/ewallet.p12
```

Copyright © 2002, 2025, Oracle and/or its affiliates.

```
wallet-root/tde/ewallet_2016120918333644.p12
wallet-root/tde_seps/cwallet.sso
wallet-root/tls/ewallet.p12
wallet-root/xdb_wallet/ewallet.p12
wallet-root/3FD1C95B48205D0FE053C5A0E40AEF8C/tde/ewallet.p12
wallet-root/3FD1C95B48205D0FE053C5A0E40AEF8C/tde/ewallet_2016110918331622.p12
wallet-root/3FD1C95B48205D0FE053C5A0E40AEF8C/tde/ewallet_2016110918332363.p12
wallet-root/3FD1C95B48205D0FE053C5A0E40AEF8C/tde_seps/cwallet.sso
wallet-root/3FD1C95B48205D0FE053C5A0E40AEF8C/tls/cwallet.sso
wallet-root/3FD1C95B48205D0FE053C5A0E40AEF8C/tls/ewallet.p12
```

When the `WALLET_ROOT` parameter is set, you can omit the path from some `ADMINISTER KEY MANAGEMENT` commands.

The `WALLET_ROOT` value can include references to environment variables. The following example shows how to use `WALLET_ROOT` when multiple TDE-enabled databases are installed into the same `ORACLE_HOME`:

```
WALLET_ROOT=/etc/ORACLE/KEYSTORES/$ORACLE_SID
```

The `ORACLE_SID` environment variable (or the `DB_UNIQUE_NAME` environment variable for Oracle RAC) makes sure that each database that is installed into the same `ORACLE_HOME` has its own set of wallets and TDE keys. This sets the root of the wallet directory hierarchy to the directory specified by `wallet-root-directory-path`.

> **Note**
>
> The normalized length of the `wallet-root-directory-name` that is specified with the `WALLET_ROOT` parameter cannot exceed 255 characters, otherwise one of the following sets of error messages is displayed:
>
> ```
> ORA-46693: The WALLET_ROOT location is missing or invalid.
> ORA-32021: parameter value longer than 255 characters
> ORA-01078: failure in processing system parameters
>
>
> ORA-46693: The WALLET_ROOT location is missing or invalid.
> ORA-07204: sltln: name translation failed due to lack of output buffer
> space.
> ORA-01078: failure in processing system parameters
> ```
>
> The normalized length includes the length of expanded environment variables specified with the `WALLET_ROOT` parameter. The values of the environment variables of the user who starts the instance are used in the normalization of the `WALLET_ROOT` parameter.
>
> The `SHOW PARAMETER WALLET_ROOT` command always displays the normalized value (with all the environment variables expanded).

For non-ASM file systems, the PDB GUID-extended paths for the TDE component are created automatically under the directory specified by the `WALLET_ROOT` parameter when any Transparent Data Encryption (TDE) wallet is created for a PDB.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Enabling Automatic Creation of Directories Under WALLET_ROOT

By using the specific configuration of `WALLET_ROOT` described in each of the following sub-sections, Oracle AI Database can be configured to automatically create the necessary *pdb-guid* and *component name* directories under the `WALLET_ROOT` directory path. Other settings of `WALLET_ROOT` are allowed, but would not result in the automatic creation of the necessary sub-directories by the ASM OMF layer.

Required setting to enable auto-directory creation for a database not using Oracle ASM

For a database not using Oracle ASM filesystems, the `WALLET_ROOT` parameter needs to be set as follows:

```
WALLET_ROOT=wallet-root-directory-path
```

This sets the root of the wallet directory hierarchy to the directory specified by `wallet-root-directory-path`. For example:

```
/etc/ORACLE/KEYSTORES/FINANCE
```

When this is done, Oracle AI Database automatically creates the directory for the TDE wallet of a CDB$ROOT at the following location:

```
/etc/ORACLE/KEYSTORES/FINANCE/tde
```

The directories, that Oracle AI Database automatically creates for holding the TDE wallets of isolated PDBs, will include the *pdb-guid*. For example:

```
/etc/ORACLE/KEYSTORES/FINANCE/3FD1C95B48205D0FE053C5A0E40AEF8C/tde
```

Required setting to enable auto-directory creation for a database using Oracle ASM with Oracle Managed Files

For a database using ASM with OMF, the `WALLET_ROOT` parameter needs to begin with a plus sign followed by a disk group name and the value of the `DB_UNIQUE_NAME` initialization parameter. In the example below, `DATA` is the name of a disk group and `FINRAC` is the value of the `DB_UNIQUE_NAME` initialization parameter:

```
WALLET_ROOT=+DATA/FINRAC
```

When this is done, Oracle AI Database automatically creates the necessary directory within the ASM filesystem at the following location when the `ADMINISTER KEY MANAGEMENT CREATE KEYSTORE` command is run:

```
+DATA/FINRAC/tde
```

For isolated PDBs, the directories that Oracle AI Database automatically creates for holding the TDE wallets of PDBs will include the *pdb-guid*. For example:

```
+DATA/FINRAC/3FD1C95B48205D0FE053C5A0E40AEF8C/tde
```

Required setting to enable auto-directory creation for RAC-enabled databases

For a RAC-enabled database, only shared TDE wallets are supported (as opposed to individual TDE-wallets per RAC instance). `WALLET_ROOT` can either point to an ASM disk group, or a directory in ACFS. If the `WALLET_ROOT` parameter points to `+diskgroup/dbname`, then the `/tde` sub-directory is automatically created when issuing an `ADMINISTER KEY MANAGEMENT CREATE KEYSTORE` command. For example, when`WALLET_ROOT` is set to `+DATA/FINANCE`, the directory `+DATA/FINANCE/tde` is automatically created. This guarantees that when multiple databases are installed, their TDE-wallets are kept separate.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> "TDE_CONFIGURATION"

2.433 WORKAREA_SIZE_POLICY

`WORKAREA_SIZE_POLICY` specifies the policy for sizing work areas. This parameter controls the mode in which working areas are tuned.

Property	Description
Parameter type	String
Syntax	`WORKAREA_SIZE_POLICY = { AUTO | MANUAL }`
Default value	`AUTO`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No

Values

You can specify the following values for `WORKAREA_SIZE_POLICY`:

- `AUTO`

  When `AUTO` is specified, work areas used by memory-intensive operators are sized automatically, based on the PGA memory used by the system, the target PGA memory set in `PGA_AGGREGATE_TARGET`, and the requirement of each individual operator.

- `MANUAL`

  When `MANUAL` is specified, the sizing of work areas is manual and based on the values of the `*_AREA_SIZE` parameter corresponding to the operation (for example, a sort uses `SORT_AREA_SIZE`). Specifying `MANUAL` may result in sub-optimal performance and poor PGA memory utilization.

> **See Also**
>
> *Oracle AI Database Performance Tuning Guide* for additional information on setting this parameter

2.434 XML_CLIENT_SIDE_DECODING

Use `XML_CLIENT_SIDE_DECODING` to enable or disable XML client-side decoding.

Property	Description
Parameter type	String
Syntax	`XML_CLIENT_SIDE_DECODING = { TRUE | FALSE }`
Default value	`TRUE`

Copyright © 2002, 2025, Oracle and/or its affiliates.

Property	Description
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No

Values:

- `TRUE` - Enable XML client-side decoding. This is the default setting.
- `FALSE` - Disable XML client-side decoding. This setting may be beneficial if you are using CSX binary XML storage and have millions or billions of distinct tokens with no XML namespaces in their token tables. Setting this parameter to `FALSE` may improve the performance of queries on those no-namespace tokens.

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

2.435 XML_DB_EVENTS

`XML_DB_EVENTS` enables or disables XML DB events.

Property	Description
Parameter type	String
Syntax	`XML_DB_EVENTS = { enable | disable }`
Default value	`enable`
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No

Changing this parameter through an `ALTER SESSION` statement affects only the current session. Only users with the `XDBADMIN` role are allowed to change this parameter in a session.

Changing this parameter through an `ALTER SYSTEM` statement will make a systemwide change of this parameter; however, the change is only registered by new sessions started after the change. Currently running sessions need to be restarted to pick up the new change. Users must have the `ALTER SYSTEM` privilege to make a systemwide change.

> **See Also**
>

2.436 XML_PARAMS

`XML_PARAMS` lets you adjust the behavior for `XMLType` data.

Property	Description
Parameter type	String
Syntax	`XML_PARAMS = "parameter=value [, parameter=value ] ..."`
Default value	None
Modifiable	`ALTER SESSION`, `ALTER SYSTEM`
Modifiable in a PDB	Yes
Basic	No
Oracle RAC	If specified, Oracle recommends that multiple instances have the same value.

You can specify one of the following for *parameter=value*:

- `xml_default_storage_tbx=true`

  Sets the default `XMLType` storage to Transportable Binary XML (TBX) when no storage type is explicitly specified. Starting with Oracle AI Database 26ai, this is the default and recommended storage type for all `XMLType` data, even if this parameter is not set. Note that Transportable Binary XML must be stored as Securefiles LOBs.

- `xml_default_storage_tbx=false`

  Sets the default `XMLType` storage to Not-Transportable Binary XML (CSX) when no storage type is explicitly specified. This setting can be used as a workaround for applications that still rely on the CSX storage type. Not-Transportable Binary XML can be stored as Basicfiles LOBs or Securefiles LOBs.

Example:

```
ALTER SYSTEM SET XML_PARAMS = "xml_default_storage_tbx=true";
```

> **Note**
>
> This parameter is available starting with Oracle AI Database 26ai.

Part II
Static Data Dictionary Views

This part describes data dictionary tables and views. These tables and views are called **static**, because they change only when a change is made to the data dictionary (for example, when a new table is created or when a user is granted new privileges).
This part contains the following chapters:

- Static Data Dictionary Views: ALL_ALL_TABLES to ALL_OUTLINES
- Static Data Dictionary Views: ALL_PART_COL_STATISTICS to DATABASE_PROPERTIES
- Static Data Dictionary Views: DBA_2PC_NEIGHBORS to DBA_HIST_JAVA_POOL_ADVICE
- Static Data Dictionary Views: DBA_HIST_LATCH to DBA_STORED_SETTINGS
- Static Data Dictionary Views: DBA_STREAMS_ADD_COLUMN to USER_ZONEMAPS

> **Note**
>
> Oracle also maintains views that monitor ongoing database activity. These **dynamic performance views** are described in Dynamic Performance Views .

> **Note**
>
> A multitenant container database is the only supported architecture in Oracle Database 21c and later releases. While the documentation is being revised, legacy terminology may persist. In most cases, "database" and "non-CDB" refer to a CDB or PDB, depending on context. In some contexts, such as upgrades, "non-CDB" refers to a non-CDB from a previous release.

3

Static Data Dictionary Views: ALL_ALL_TABLES to ALL_OUTLINES

This chapter describes the first set (in alphabetical order) of static data dictionary views.

The remaining static data dictionary views appear in alphabetical order in Static Data Dictionary Views: ALL_PART_COL_STATISTICS to DATABASE_PROPERTIES through Static Data Dictionary Views: DBA_STREAMS_ADD_COLUMN to USER_ZONEMAPS.

This chapter contains the following topics:

- About Static Data Dictionary Views
- AWR_PDB_* Views
- AWR_ROOT_* Views
- CDB_* Views
- DBA_HIST_* Views
- Oracle Database Real Application Security Views
- Oracle Database Vault Views
- Oracle Label Security Views
- Oracle Workspace Manager Views
- Recovery Catalog Views
- Static Data Dictionary View Descriptions

3.1 About Static Data Dictionary Views

Data dictionary tables are not directly accessible, but you can access information in them through data dictionary views. To list the data dictionary views available to you, query the view `DICTIONARY`.
Many data dictionary tables have three corresponding views:

- An `ALL_` view displays all the information accessible to the current user, including information from the current user's schema as well as information from objects in other schemas, if the current user has access to those objects by way of grants of privileges or roles.
- A `DBA_` view displays all relevant information in the entire database. `DBA_` views are intended only for administrators. They can be queried only by users with the `SYSDBA` system privilege or `SELECT ANY DICTIONARY` privilege, or `SELECT_CATALOG_ROLE` role, or by users with direct privileges granted to them. The `SELECT ANY DICTIONARY` privilege is assigned to the `DBA` role when the system is initially installed.
- A `USER_` view displays all the information from the schema of the current user. No special privileges are required to query these views.

The columns of the `ALL_`, `DBA_`, and `USER_` views corresponding to a single data dictionary table are usually nearly identical. Therefore, these views are described in full only once in this

Copyright © 2002, 2025, Oracle and/or its affiliates.

chapter, at their first occurrence alphabetically, and are listed without full descriptions at their other occurrences.

> **See Also**
>
> "Static Data Dictionary View Descriptions" introduces the alphabetical listing of view descriptions that are documented in this manual

3.2 AWR_PDB_* Views

The AWR_PDB views show the local Automatic Workload Repository (AWR) data present on a CDB root or a PDB from where the AWR_PDB views are accessed.

The AWR_PDB views on a CDB root show the AWR data stored on the CDB root.

The AWR_PDB views on a PDB show the AWR data stored on that PDB.

> **See Also**
>
> - "AWR_ROOT_* Views"
> - *Oracle AI Database Performance Tuning Guide* for an introduction to AWR
> - *Oracle AI Database Performance Tuning Guide* for more information about AWR_PDB views and related views for accessing AWR in a multitenant environment

3.3 AWR_ROOT_* Views

The AWR_ROOT views show the AWR data stored only on a CDB root. In general, the AWR_ROOT views are equivalent to the DBA_HIST views.

When the AWR_ROOT views are accessed from a CDB root, they show the AWR data specific to the CDB root.

When the AWR_ROOT views are accessed from a PDB, they show the AWR data specific to that PDB.

> **See Also**
>
> - "AWR_PDB_* Views"
> - *Oracle AI Database Performance Tuning Guide* for an introduction to AWR
> - *Oracle AI Database Performance Tuning Guide* for more information about AWR_ROOT views and related views for accessing AWR in a multitenant environment

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.4 CDB_* Views

For every DBA_* view, a CDB_* view is defined. In the root of a multitenant container database (CDB), CDB_* views can be used to obtain information about tables, tablespaces, users, privileges, parameters, and so on contained in the root and in pluggable databases (PDBs). The CDB_* views can be queried only by users with the `SYSDBA` system privilege or `SELECT ANY DICTIONARY` privilege, or `SELECT_CATALOG_ROLE` role, or by users with direct privileges granted to them.

CDB_* views are container data objects. When a user connected to the root queries a CDB_* view, the query results will depend on the `CONTAINER_DATA` attribute for users for the view. The `CONTAINER_DATA` clause of the SQL `ALTER USER` statement is used to set and modify users' `CONTAINER_DATA` attribute.

The CDB_* views are owned by `SYS`, regardless of who owns the underlying DBA_* view.

By default, a user connected to the root will only see data pertaining to the root.

See Also

- *Oracle AI Database Security Guide* for more information about container data objects
- *Oracle AI Database SQL Language Reference* for more information about the `CONTAINER_DATA` clause for the SQL `ALTER USER` statement

CDB_* views include these hidden columns:

- `CON$NAME`: This column includes the name of the container whose data a given CDB_* row represents
- `CDB$NAME`: This column displays the name of the CDB whose data a given CDB_* row represents

In a PDB, the CDB_* views only show objects visible through a corresponding DBA_* view.

In addition to all the columns found in a given DBA_* view, the corresponding CDB_* view also contains the `CON_ID` column, which identifies a container whose data a given CDB_* row represents. In a non-CDB, the value of a `CON_ID` column will be `0`.

CDB views can return data from different containers in a CDB when queried from the root container. These objects will implicitly convert data to the character set of the root container (AL32UTF8) and then return the result to the user. Some character sets may have character expansion (more bytes needed to represent a character) when converted to AL32UTF8, so there may be data truncation if the view column width is not able to accommodate data from a given PDB.

Data is returned by these views from all open PDBs at the time the query is issued, except for PDBs that are open in RESTRICTED mode. In an Oracle RAC environment, data returned by these views may vary according to the instance to which a session is connected.

3.5 DBA_HIST_* Views

The DBA_HIST views show the local Automatic Workload Repository (AWR) data present on a CDB root or a PDB.

Copyright © 2002, 2025, Oracle and/or its affiliates.

If a DBA_HIST view is queried from a CDB root, the view shows all the AWR data stored on the CDB root.

If a DBA_HIST view is queried from a PDB, the view shows the subset of the CDB root AWR data that is specific to that PDB. Also, the view shows the PDB level snapshots at that PDB, if they exist.

See Also

- *Oracle AI Database Performance Tuning Guide* for an introduction to AWR
- *Oracle AI Database Performance Tuning Guide* for an introduction to Oracle AI Database views for accessing AWR data stored on the CDB root and individual PDBs in a multitenant environment

3.6 Oracle Database Real Application Security Views

This manual describes these Oracle Database Real Application Security auditing views:

- DBA_XS_AUDIT_POLICY_OPTIONS
- DBA_XS_AUDIT_TRAIL
- DBA_XS_ENB_AUDIT_POLICIES

Descriptions of the other Oracle Database Real Application Security views are provided in *Oracle AI Database Real Application Security Administrator's and Developer's Guide*.

Note

Oracle Database Real Application Security views include `_XS_` in the view name.

3.7 Oracle Database Vault Views

Descriptions of Oracle Database Vault views are not provided in this manual.

See *Oracle AI Database Vault Administrator's Guide* for descriptions of Oracle Database Vault views.

Note

Oracle Database Vault views include `_DV_` in the view name.

3.8 Oracle Label Security Views

Descriptions of Oracle Label Security views are not provided in this manual.

See *Oracle Label Security Administrator's Guide* for descriptions of Oracle Label Security views.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> Oracle Label Security views include `_SA_` in the view name.

3.9 Oracle Workspace Manager Views

A number of data dictionary views are relevant only if you are using Oracle Workspace Manager:

- `ALL_MP_GRAPH_WORKSPACES` and `USER_MP_GRAPH_WORKSPACES`
- `ALL_MP_PARENT_WORKSPACES` and `USER_MP_PARENT_WORKSPACES`
- `ALL_REMOVED_WORKSPACES` and `USER_REMOVED_WORKSPACES`
- `ALL_VERSION_HVIEW`
- `ALL_WM_CONS_COLUMNS` and `USER_WM_CONS_COLUMNS`
- `ALL_WM_CONSTRAINTS` and `USER_WM_CONSTRAINTS`
- `ALL_WM_IND_COLUMNS` and `USER_WM_IND_COLUMNS`
- `ALL_WM_IND_EXPRESSIONS` and `USER_WM_IND_EXPRESSIONS`
- `ALL_WM_LOCKED_TABLES` and `USER_WM_LOCKED_TABLES`
- `ALL_WM_MODIFIED_TABLES` and `USER_WM_MODIFIED_TABLES`
- `ALL_WM_RIC_INFO` and `USER_WM_RIC_INFO`
- `ALL_WM_TAB_TRIGGERS` and `USER_WM_TAB_TRIGGERS`
- `ALL_WM_VERSIONED_TABLES` and `USER_WM_VERSIONED_TABLES`
- `ALL_WM_VT_ERRORS`, `DBA_WM_VT_ERRORS`, and `USER_WM_VT_ERRORS`
- `ALL_WORKSPACE_PRIVS` and `USER_WORKSPACE_PRIVS`
- `ALL_WORKSPACE_SAVEPOINTS` and `USER_WORKSPACE_SAVEPOINTS`
- `ALL_WORKSPACES`, `DBA_WORKSPACES`, and `USER_WORKSPACES`
- `DBA_WM_SYS_PRIVS`
- `DBA_WORKSPACE_SESSIONS`
- `ROLE_WM_PRIVS`
- `USER_WM_PRIVS`
- `WM_COMPRESS_BATCH_SIZES`
- `WM_COMPRESSIBLE_TABLES`
- `WM_EVENTS_INFO`
- `WM_INSTALLATION`

Copyright © 2002, 2025, Oracle and/or its affiliates.

> *Oracle AI Database Workspace Manager Developer's Guide* for information about these views

3.10 Recovery Catalog Views

The following data dictionary views are only available after you create an optional recovery catalog (which contains schemas containing information about backups) for use with Recovery Manager:

- RC_ARCHIVED_LOG
- RC_BACKUP_ARCHIVELOG_DETAILS
- RC_BACKUP_ARCHIVELOG_SUMMARY
- RC_BACKUP_CONTROLFILE
- RC_BACKUP_CONTROLFILE_DETAILS
- RC_BACKUP_CONTROLFILE_SUMMARY
- RC_BACKUP_COPY_DETAILS
- RC_BACKUP_COPY_SUMMARY
- RC_BACKUP_CORRUPTION
- RC_BACKUP_DATAFILE
- RC_BACKUP_DATAFILE_DETAILS
- RC_BACKUP_DATAFILE_SUMMARY
- RC_BACKUP_FILES
- RC_BACKUP_PIECE
- RC_BACKUP_PIECE_DETAILS
- RC_BACKUP_REDOLOG
- RC_BACKUP_SET
- RC_BACKUP_SET_DETAILS
- RC_BACKUP_SET_SUMMARY
- RC_BACKUP_SPFILE
- RC_BACKUP_SPFILE_DETAILS
- RC_BACKUP_SPFILE_SUMMARY
- RC_CHECKPOINT
- RC_CONTROLFILE_COPY
- RC_COPY_CORRUPTION
- RC_DATABASE
- RC_DATABASE_BLOCK_CORRUPTION
- RC_DATABASE_INCARNATION
- RC_DATAFILE
- RC_DATAFILE_COPY
- RC_LOG_HISTORY
- RC_OFFLINE_RANGE
- RC_PROXY_ARCHIVEDLOG
- RC_PROXY_ARCHIVELOG_DETAILS
- RC_PROXY_ARCHIVELOG_SUMMARY
- RC_PROXY_CONTROLFILE
- RC_PROXY_COPY_DETAILS

Copyright © 2002, 2025, Oracle and/or its affiliates.

RC_PROXY_COPY_SUMMARY
RC_PROXY_DATAFILE
RC_REDO_LOG
RC_REDO_THREAD
RC_RESTORE_POINT
RC_RESYNC
RC_RMAN_BACKUP_JOB_DETAILS
RC_RMAN_BACKUP_SUBJOB_DETAILS
RC_RMAN_BACKUP_TYPE
RC_RMAN_CONFIGURATION
RC_RMAN_OUTPUT
RC_RMAN_STATUS
RC_SITE
RC_STORED_SCRIPT

3.11 Static Data Dictionary View Descriptions

The remainder of this chapter describes the static data dictionary views in alphabetical order.

3.12 ALL_ALL_TABLES

ALL_ALL_TABLES describes the object tables and relational tables accessible to the current user.

Related Views

- DBA_ALL_TABLES describes all object tables and relational tables in the database.
- USER_ALL_TABLES describes the object tables and relational tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the table; NULL for partitioned, temporary, and index-organized tables
CLUSTER_NAME	VARCHAR2(128)		Name of the cluster, if any, to which the table belongs

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
IOT_NAME	VARCHAR2(128)		Name of the index-organized table, if any, to which the overflow or mapping table entry belongs. If the IOT_TYPE column is not NULL, then this column contains the base table name.
STATUS	VARCHAR2(8)		If a previous DROP TABLE operation failed, indicates whether the table is unusable (UNUSABLE) or valid (VALID)
PCT_FREE	NUMBER		Minimum percentage of free space in a block; NULL for partitioned tables
PCT_USED	NUMBER		Minimum percentage of used space in a block; NULL for partitioned tables
INI_TRANS	NUMBER		Initial number of transactions; NULL for partitioned tables
MAX_TRANS	NUMBER		Maximum number of transactions; NULL for partitioned tables
INITIAL_EXTENT	NUMBER		Size of the initial extent (in bytes); NULL for partitioned tables
NEXT_EXTENT	NUMBER		Size of secondary extents (in bytes); NULL for partitioned tables
MIN_EXTENTS	NUMBER		Minimum number of extents allowed in the segment; NULL for partitioned tables
MAX_EXTENTS	NUMBER		Maximum number of extents allowed in the segment; NULL for partitioned tables
PCT_INCREASE	NUMBER		Percentage increase in extent size; NULL for partitioned tables
FREELISTS	NUMBER		Number of process freelists allocated to the segment; NULL for partitioned tables
FREELIST_GROUPS	NUMBER		Number of freelist groups allocated to the segment
LOGGING	VARCHAR2(3)		Indicates whether or not changes to the table are logged: • YES • NO
BACKED_UP	VARCHAR2(1)		Indicates whether the table has been backed up since the last modification (Y) or not (N)
NUM_ROWS	NUMBER		Number of rows in the table
BLOCKS	NUMBER		Number of used blocks in the table
EMPTY_BLOCKS	NUMBER		Number of empty (never used) blocks in the table
AVG_SPACE	NUMBER		Average available free space in the table
CHAIN_CNT	NUMBER		Number of rows in the table that are chained from one data block to another or that have migrated to a new block, requiring a link to preserve the old rowid. This column is updated only after you analyze the table.
AVG_ROW_LEN	NUMBER		Average row length, including row overhead
AVG_SPACE_FREELIST_BLOCKS	NUMBER		Average freespace of all blocks on a freelist
NUM_FREELIST_BLOCKS	NUMBER		Number of blocks on the freelist

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DEGREE	VARCHAR2(10)		Number of threads per instance for scanning the table, or DEFAULT
INSTANCES	VARCHAR2(10)		Number of instances across which the table is to be scanned, or DEFAULT
CACHE	VARCHAR2(5)		Indicates whether the table is to be cached in the buffer cache (Y) or not (N)
TABLE_LOCK	VARCHAR2(8)		Indicates whether table locking is enabled (ENABLED) or disabled (DISABLED)
SAMPLE_SIZE	NUMBER		Sample size used in analyzing the table
LAST_ANALYZED	DATE		Date on which the table was most recently analyzed
PARTITIONED	VARCHAR2(3)		Indicates whether the table is partitioned (YES) or not (NO)
IOT_TYPE	VARCHAR2(12)		If the table is an index-organized table, then IOT_TYPE is IOT, IOT_OVERFLOW, or IOT_MAPPING. If the table is not an index-organized table, then IOT_TYPE is NULL.
OBJECT_ID_TYPE	VARCHAR2(16)		Indicates whether the object ID (OID) is USER-DEFINED or SYSTEM GENERATED
TABLE_TYPE_OWNER	VARCHAR2(128)		If an object table, owner of the type from which the table is created
TABLE_TYPE	VARCHAR2(128)		If an object table, type of the table
TEMPORARY	VARCHAR2(1)		Indicates whether the table is temporary (Y) or not (N)
SECONDARY	VARCHAR2(1)		Indicates whether the table is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge to contain the contents of a domain index (Y) or not (N)
NESTED	VARCHAR2(3)		Indicates whether the table is a nested table (YES) or not (NO)
BUFFER_POOL	VARCHAR2(7)		Buffer pool to be used for table blocks: • DEFAULT • KEEP • RECYCLE • NULL
FLASH_CACHE	VARCHAR2(7)		Database Smart Flash Cache hint to be used for table blocks: • DEFAULT • KEEP • NONE Solaris and Oracle Linux functionality only.
CELL_FLASH_CACHE	VARCHAR2(7)		Cell flash cache hint to be used for table blocks: • DEFAULT • KEEP • NONE **See Also:** Oracle Exadata Storage Server Software documentation for more information
ROW_MOVEMENT	VARCHAR2(8)		If a partitioned table, indicates whether row movement is enabled (ENABLED) or disabled (DISABLED)
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
DURATION	VARCHAR2(15)		Indicates the duration of a temporary table: SYS$SESSION - Rows are preserved for the duration of the session SYS$TRANSACTION - Rows are deleted after COMMIT Null - Permanent table
SKIP_CORRUPT	VARCHAR2(8)		Indicates whether Oracle AI Database ignores blocks marked corrupt during table and index scans (ENABLED) or raises an error (DISABLED). To enable this feature, run the DBMS_REPAIR.skip_corrupt_blocks procedure.
MONITORING	VARCHAR2(3)		Indicates whether the table has the MONITORING attribute set (YES) or not (NO)
CLUSTER_OWNER	VARCHAR2(128)		Owner of the cluster, if any, to which the table belongs
DEPENDENCIES	VARCHAR2(8)		Indicates whether row-level dependency tracking is enabled (ENABLED) or disabled (DISABLED)
COMPRESSION	VARCHAR2(8)		Indicates whether table compression is enabled (ENABLED) or not (DISABLED); NULL for partitioned tables
COMPRESS_FOR	VARCHAR2(30)		Default compression for what kind of operations: • BASIC • ADVANCED • QUERY LOW • QUERY HIGH • ARCHIVE LOW • ARCHIVE HIGH • NULL The QUERY LOW, QUERY HIGH, ARCHIVE LOW, and ARCHIVE HIGH values are associated with Hybrid Columnar Compression, a feature of the Enterprise Edition of Oracle AI Database that is dependent on the underlying storage system. See *Oracle AI Database Concepts* for more information.
DROPPED	VARCHAR2(3)		Indicates whether the table has been dropped and is in the recycle bin (YES) or not (NO); NULL for partitioned tables This view does not return the names of tables that have been dropped.
SEGMENT_CREATED	VARCHAR2(3)		Indicates whether the table segment has been created (YES) or not (NO)
INMEMORY	VARCHAR2(8)		Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for this table

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
INMEMORY_PRIORITY	VARCHAR2(8)		Indicates the priority at which this table is populated into the In-Memory Column Store (IM column store). Possible values: • LOW • MEDIUM • HIGH • CRITICAL • NONE • NULL This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_PARTITIONS.
INMEMORY_DISTRIBUTE	VARCHAR2(15)		Indicates how the table will be distributed in the IM column stores in an Oracle Real Application Clusters (Oracle RAC) environment: • AUTO • BY ROWID RANGE • BY PARTITION • BY SUBPARTITION
INMEMORY_COMPRESSION	VARCHAR2(17)		Compression level for the in-memory store: • NO MEMCOMPRESS • FOR DML • FOR QUERY [LOW | HIGH] • FOR CAPACITY [LOW | HIGH] • AUTO • NULL This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_PARTITIONS.
INMEMORY_DUPLICATE	VARCHAR2(13)		Indicates the duplicate setting for the In-Memory Column Store (IM column store) in an Oracle RAC environment: • NO DUPLICATE • DUPLICATE • DUPLICATE ALL
EXTERNAL	VARCHAR2(3)		Indicates whether the table is an external table (YES) or not (NO)
HYBRID	VARCHAR2(3)		Indicates whether the table is a hybrid partitioned table (YES) or not (NO). A hybrid partitioned table can contain a mixture of partitions stored in segments and partitions stored externally.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
CELLMEMORY[1]	VARCHAR2(24)		The value for columnar compression in the storage cell flash cache. Possible values: • ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form • DISABLED: Oracle Exadata Storage is prevented from caching in columnar form • NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression) • FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format • FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format
INMEMORY_SERVICE	VARCHAR2(12)		Indicates how the IM column store is populated on various instances. The possible values are: • DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default. • NONE: Data is not populated on any instance. • ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter. • USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.
INMEMORY_SERVICE_NAME	VARCHAR2(1000)		Indicates the service name for the service on which the IM column store should be populated. This column has a value only when the corresponding INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null.
MEMOPTIMIZE_READ	VARCHAR2(8)		Indicates whether the table is enabled for Fast Key Based Access (ENABLED) or not (DISABLED)
MEMOPTIMIZE_WRITE	VARCHAR2(8)		For internal use only
HAS_SENSITIVE_COLUMN	VARCHAR2(3)		Indicates whether the table has one or more sensitive columns (YES) or not (NO)
LOGICAL_REPLICATION	VARCHAR2(8)		Indicates whether the table is enabled for logical replication (ENABLED) or not (DISABLED). This setting is ignored if database-wide column data supplemental logging is enabled.
STAGING	VARCHAR2(3)		Indicates whether the table is a staging table (YES) or not (NO)
HAS_RESERVABLE_COLUMN	VARCHAR2(3)		Indicates whether the table has one or more reservable columns (YES) or not (NO)
VECTOR_INDEX_TYPE[2]	VARCHAR2(28)		Name of the vector index type, if any, to which the auxiliary table entry belongs

1 This column is intended for use with Oracle Exadata.

2 This column is available starting with Oracle AI Database 26ai, Release Update 23.9.

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.13 ALL_ANALYTIC_VIEW_AGGR_DIMS

`ALL_ANALYTIC_VIEW_AGGR_DIMS` describes the aggregation function dimensions of the analytic views accessible to the current user.

Related Views

- `DBA_ANALYTIC_VIEW_AGGR_DIMS` describes the aggregation function dimensions of all analytic views in the database.
- `USER_ANALYTIC_VIEW_AGGR_DIMS` describes the aggregation function dimensions of the analytic views owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
`OWNER`	`VARCHAR2(128)`	`NOT NULL`	Owner of the analytic view
`ANALYTIC_VIEW_NAME`	`VARCHAR2(128)`	`NOT NULL`	Name of the analytic view
`AGGR_GROUP_NAME`	`VARCHAR2(128)`	`NOT NULL`	Aggregation group name of the analytic view aggregation function
`DIM_NAME`	`VARCHAR2(128)`		Dimension name of the analytic view aggregation function
`ORDER_NUM`	`NUMBER`	`NOT NULL`	Order number of the dimension within the analytic view aggregation function
`ORIGIN_CON_ID`	`NUMBER`		The ID of the container where the data originates. Possible values include: • `0`: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).

3.14 ALL_ANALYTIC_VIEW_AGGR_FNS

ALL_ANALYTIC_VIEW_AGGR_FNS describes the aggregation functions of the analytic views accessible to the current user.

Related Views

- DBA_ANALYTIC_VIEW_AGGR_FNS describes the aggregation functions of all analytic views in the database.
- USER_ANALYTIC_VIEW_AGGR_FNS describes the aggregation functions of the analytic views owned by the current user. This view does not display the OWNER or ORIGIN_CON_ID columns.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
AGGR_GROUP_NAME	VARCHAR2(128)	NOT NULL	Aggregation group name of the analytic view aggregation function
FUNCTION_NAME	VARCHAR2(128)		Name of the analytic view aggregation function
DEPTH	NUMBER	NOT NULL	Depth of the inner aggregation function
IS_DISTINCT	VARCHAR2(1)		Column that indicates if the function uses the distinct modifier
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
AGGR_GROUP_NAME	VARCHAR2(128)	NOT NULL	Aggregation group name of the analytic view aggregation function
FUNCTION_NAME	VARCHAR2(128)		Name of the analytic view aggregation function
DEPTH	NUMBER	NOT NULL	Depth of the inner aggregation function
IS_DISTINCT	VARCHAR2(1)		Column that indicates if the function uses the distinct modifier
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the analytic view is defined

3.29 ALL_ANALYTIC_VIEW_COLUMNS

ALL_ANALYTIC_VIEW_COLUMNS describes the columns of the analytic views accessible to the current user.

Related Views

- DBA_ANALYTIC_VIEW_COLUMNS describes the columns of all analytic views in the database.
- USER_ANALYTIC_VIEW_COLUMNS describes the columns of the analytic views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
DIMENSION_NAME	VARCHAR2(128)		Alias of the analytic view dimension in the analytic view; for a measure the value is MEASURES
HIER_NAME	VARCHAR2(128)		Alias of the analytic view hierarchy within DIMENSION_NAME in the analytic view; for a measure the value is MEASURES
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column
ROLE	VARCHAR2(4)	NOT NULL	The role the attribute plays in the analytic view: • KEY • AKEY • HIER • PROP • MEAS
DATA_TYPE	VARCHAR2(106)	NOT NULL	Datatype of the column
DATA_LENGTH	NUMBER	NOT NULL	Length of the column (in bytes)
DATA_PRECISION	NUMBER		Decimal precision for the NUMBER datatype; binary precision for the FLOAT datatype, NULL for all other datatypes

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DATA_SCALE	NUMBER		Number of digits to the right of the decimal point in a number
NULLABLE	CHAR(1)	NOT NULL	Indicates whether a column allows NULL values; the value is N if there is a NOT NULL constraint on the column or if the column is part of a PRIMARY KEY
CHARACTER_SET_NAME	VARCHAR2(44)		Name of the character set: • CHAR_CS • NCHAR_CS
CHAR_COL_DECL_LENGTH	NUMBER		Declaration length of the character type column
CHAR_USED	VARCHAR2(1)		Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the datatype is not any of the following (NULL): • CHAR • VARCHAR2 • NCHAR • NVARCHAR2
ORDER_NUM	NUMBER	NOT NULL	Order of the column, with the hierarchy columns first followed by measure columns. The columns for a hierarchy are grouped together, listed in their order in the HIERARCHIES clause of the analytic view definition. Within a hierarchy, attributes are listed first in order of their definition in the ATTRIBUTES clause of the attribute dimension definition followed by hierarchical attributes in the DIMENSION BY clause of the analytic view.
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).

3.37 ALL_ANALYTIC_VIEW_DIMENSIONS

ALL_ANALYTIC_VIEW_DIMENSIONS describes the attribute dimensions in the analytic views accessible to the current user.

Related Views

- DBA_ANALYTIC_VIEW_DIMENSIONS describes the attribute dimensions in all analytic views in the database.
- USER_ANALYTIC_VIEW_DIMENSIONS describes the attribute dimensions in the analytic views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
DIMENSION_OWNER	VARCHAR2(128)	NOT NULL	Owner of the schema containing the attribute dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute dimension
DIMENSION_ALIAS	VARCHAR2(128)		Alias of the attribute dimension in the analytic view
DIMENSION_TYPE	VARCHAR2(8)		Type of the attribute dimension: • TIME • STANDARD
ALL_MEMBER_NAME	CLOB		An expression for the name of the ALL member for the attribute dimension
ALL_MEMBER_CAPTION	CLOB		An expression for the caption for the ALL member of the attribute dimension, or NULL if not specified
ALL_MEMBER_DESCRIPTION	CLOB		An expression for the description for the ALL member of the attribute dimension, or NULL if not specified
REFERENCES_DISTINCT	VARCHAR2(1)		Indicates whether the reference between the fact table key and the attribute dimension attribute specifies the DISTINCT keyword. Possible values are: • Y: The reference specifies the DISTINCT keyword. • N: The reference does not specify the DISTINCT keyword.
ORDER_NUM	NUMBER	NOT NULL	Order number of the attribute dimension in the analytic view
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).

LEVEL_NAME	VARCHAR2(128)		Name of the level in the hierarchy in the group
MEASURE_NAME	VARCHAR2(128)		Names of the measures in the group
MAT_TABLE_OWNER	VARCHAR2(128)		If the schema for an aggregation table is specified for the analytic view, then the schema owner; otherwise NULL
MAT_TABLE_NAME	VARCHAR2(128)		If an aggregation table is specified for an analytic view, then the name of the materialized table; otherwise NULL
AV_LVLGRP_ORDER	NUMBER		Order of the groups in the analytic view
LEVEL_MEAS_ORDER	NUMBER		Order of the levels and measures in the group
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).

3.56 ALL_ANALYTIC_VIEW_LVLGRPS_AE

ALL_ANALYTIC_VIEW_LVLGRPS_AE describes the analytic view measure and level groups of the analytic views (across all editions) accessible to the current user.

Related Views

- DBA_ANALYTIC_VIEW_LVLGRPS_AE describes the analytic view measure and level groups of all analytic views (across all editions) in the database.
- USER_ANALYTIC_VIEW_LVLGRPS_AE describes the analytic view measure and level groups of the analytic views (across all editions) owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2(128)		Name of the analytic view
CACHE_TYPE	VARCHAR2(128)		Type of the materialized view; one of the following: • DYNAMIC • MATERIALIZED (the default value)
DIMENSION_ALIAS	VARCHAR2(128)		Alias of the attribute dimension in the group
HIER_ALIAS	VARCHAR2(128)		Alias of the hierarchy associated with the attribute dimension in the group
LEVEL_NAME	VARCHAR2(128)		Name of the level in the hierarchy in the group
MEASURE_NAME	VARCHAR2(128)		Names of the measures in the group
MAT_TABLE_OWNER	VARCHAR2(128)		If the schema for an aggregation table is specified for the analytic view, then the schema owner; otherwise NULL
MAT_TABLE_NAME	VARCHAR2(128)		If an aggregation table is specified for an analytic view, then the name of the materialized table; otherwise NULL
AV_LVLGRP_ORDER	NUMBER		Order of the groups in the analytic view
LEVEL_MEAS_ORDER	NUMBER		Order of the levels and measures in the group
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the analytic view is defined

3.57 ALL_ANALYTIC_VIEW_MEAS_CLASS

ALL_ANALYTIC_VIEW_MEAS_CLASS describes the classifications of the measures of the analytic views accessible to the current user.

Related Views

- DBA_ANALYTIC_VIEW_MEAS_CLASS describes the classifications of the measures of all analytic views in the database.
- USER_ANALYTIC_VIEW_MEAS_CLASS describes the classifications of the measures of the analytic views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
MEASURE_NAME	VARCHAR2(128)		Name of the measure associated with the classification
CLASSIFICATION	VARCHAR2(128)		Classification associated with the measure of the analytic view
VALUE	CLOB		Value of the classification, or NULL if not specified
LANGUAGE	VARCHAR2(64)		NLS_LANGUAGE value associated with the classification, or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order of the classification in the list of classifications associated with the measure
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).

3.59 ALL_ANALYTIC_VIEW_MEAS_CLS_AE

ALL_ANALYTIC_VIEW_MEAS_CLS_AE describes the classifications of the measures of the analytic views (across all editions) accessible to the current user.

Related Views

- DBA_ANALYTIC_VIEW_MEAS_CLS_AE describes the classifications of the measures of all analytic views (across all editions) in the database.
- USER_ANALYTIC_VIEW_MEAS_CLS_AE describes the classifications of the measures of the analytic views (across all editions) owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
MEASURE_NAME	VARCHAR2(128)		Name of the measure associated with the classification
CLASSIFICATION	VARCHAR2(128)		Classification associated with the measure of the analytic view
VALUE	CLOB		Value of the classification, or NULL if not specified
LANGUAGE	VARCHAR2(64)		NLS_LANGUAGE value associated with the classification, or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order of the classification in the list of classifications associated with the measure
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the analytic view is defined

3.60 ALL_ANALYTIC_VIEWS

ALL_ANALYTIC_VIEWS describes the analytic views accessible to the current user.

Related Views

- DBA_ANALYTIC_VIEWS describes all analytic views in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- USER_ANALYTIC_VIEWS describes the analytic views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
ANALYTIC_VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the fact table or view on which the analytic view is defined
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the fact table or view on which the analytic view is defined
TABLE_ALIAS	VARCHAR2(128)		Alias of the fact table or view on which the analytic view is defined; the default is TABLE_NAME
IS_REMOTE	VARCHAR2(1)		Indicates whether the source is a remote table. The values are: • Y - Remote table • N - Local table
DEFAULT_AGGR	VARCHAR2(128)		Default aggregation of the analytic view
DEFAULT_AGGR_GROUP_NAME	VARCHAR2(128)	NOT NULL	Always DEFAULT_AGGREGATION$ at present
DEFAULT_MEASURE	VARCHAR2(128)		Name of the default measure of the analytic view
COMPILE_STATE	VARCHAR2(7)		Compile status of the analytic view: • VALID • INVALID
DYN_ALL_CACHE	CHAR(1)		The value of this column is always N
QUERY_TRANSFORM_ENABLED	VARCHAR2(1)		Indicates whether query transformation is enabled for the analytic view (Y) or not (N)
QUERY_TRANSFORM_RELY	VARCHAR2(1)		Indicates whether the RELY option is specified for the query transformation (Y) or not (N)
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).

3.61 ALL_ANALYTIC_VIEWS_AE

ALL_ANALYTIC_VIEWS_AE describes the analytic views (across all editions) accessible to the current user.

Related Views

- DBA_ANALYTIC_VIEWS_AE describes all analytic views (across all editions) in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- `USER_ANALYTIC_VIEWS_AE` describes the analytic views (across all editions) owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
`OWNER`	`VARCHAR2(128)`	`NOT NULL`	Owner of the analytic view
`ANALYTIC_VIEW_NAME`	`VARCHAR2(128)`	`NOT NULL`	Name of the analytic view
`TABLE_OWNER`	`VARCHAR2(128)`	`NOT NULL`	Owner of the fact table or view on which the analytic view is defined
`TABLE_NAME`	`VARCHAR2(128)`	`NOT NULL`	Name of the fact table or view on which the analytic view is defined
`TABLE_ALIAS`	`VARCHAR2(128)`		Alias of the fact table or view on which the analytic view is defined; the default is `TABLE_NAME`
`IS_REMOTE`	`VARCHAR2(1)`		Indicates whether the source is a remote table. The values are: • `Y` - Remote table • `N` - Local table
`DEFAULT_AGGR`	`VARCHAR2(128)`		Default aggregation of the analytic view
`DEFAULT_AGGR_GROUP_NAME`	`VARCHAR2(128)`	`NOT NULL`	Always `DEFAULT_AGGREGATION$` at present
`DEFAULT_MEASURE`	`VARCHAR2(128)`		Name of the default measure of the analytic view
`COMPILE_STATE`	`VARCHAR2(7)`		Compile status of the analytic view: • `VALID` • `INVALID`
`DYN_ALL_CACHE`	`CHAR(1)`		The value of this column is always `N`
`QUERY_TRANSFORM_ENABLED`	`VARCHAR2(1)`		Indicates whether query transformation is enabled for the analytic view (`Y`) or not (`N`)
`QUERY_TRANSFORM_RELY`	`VARCHAR2(1)`		Indicates whether the `RELY` option is specified for the query transformation (`Y`) or not (`N`)
`ORIGIN_CON_ID`	`NUMBER`		The ID of the container where the data originates. Possible values include: • `0`: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).
`EDITION_NAME`	`VARCHAR2(128)`		Name of the application edition where the analytic view is defined

3.64 ALL_ANNOTATIONS_USAGE

ALL_ANNOTATIONS_USAGE provides usage information about schema annotations accessible to the current user.

Related Views

- DBA_ANNOTATIONS_USAGE provides usage information about all schema annotations in the database.
- USER_ANNOTATIONS_USAGE provides usage information about schema annotations owned by the current user. This view does not display the ANNOTATION_OWNER column.

Column	Datatype	NULL	Description
OBJECT_NAME	VARCHAR2(128)		Object name
OBJECT_TYPE	VARCHAR2(9)		Object type
COLUMN_NAME	VARCHAR2(128)		If the annotation is specified for a table column, view column, or domain column, the name of the column; otherwise NULL
DOMAIN_NAME	VARCHAR2(128)		If the annotation is carried over from a domain or a domain column, the name of the domain; otherwise NULL Note that domains carry over their annotations to objects that reference them.
DOMAIN_OWNER	VARCHAR2(128)		If the annotation is carried over from a domain or domain column, the owner of the domain; otherwise NULL Note that domains carry over their annotations to objects that reference them.
ANNOTATION_OWNER	VARCHAR2(128)		Annotation owner
ANNOTATION_NAME	VARCHAR2(1024)		Annotation name
ANNOTATION_VALUE	VARCHAR2(4000)		Optional annotation value A NULL value is possible when the annotation does not require a value, that is, when the annotation is defined solely by its name.

Note

This view is available starting with Oracle AI Database 26ai.

3.65 ALL_APPLY

ALL_APPLY displays information about the apply processes that dequeue messages from queues accessible to the current user.

Related View

DBA_APPLY displays information about all apply processes in the database.

Column	Datatype	NULL	Description
APPLY_NAME	VARCHAR2(128)	NOT NULL	Name of the apply process
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue from which the apply process dequeues
QUEUE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the queue from which the apply process dequeues
APPLY_CAPTURED	VARCHAR2(3)		Indicates whether the apply process applies captured messages (YES) or user-enqueued messages (NO)
RULE_SET_NAME	VARCHAR2(128)		Name of the positive rule set used by the apply process for filtering
RULE_SET_OWNER	VARCHAR2(128)		Owner of the positive rule set used by the apply process for filtering
APPLY_USER	VARCHAR2(128)		User who is applying messages
APPLY_DATABASE_LINK	VARCHAR2(128)		Database link to which changes are applied. If NULL, then changes are applied to the local database.
APPLY_TAG	RAW(2000)		Tag associated with redo log records that are generated when changes are made by the apply process
DDL_HANDLER	VARCHAR2(98)		Name of the user-specified data definition language (DDL) handler, which handles DDL logical change records (LCRs)
PRECOMMIT_HANDLER	VARCHAR2(98)		Name of the user-specified pre-commit handler
MESSAGE_HANDLER	VARCHAR2(98)		Name of the user-specified procedure that handles dequeued messages other than logical change records (LCRs)
STATUS	VARCHAR2(8)		Status of the apply process: • DISABLED • ENABLED • ABORTED

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
MAX_APPLIED_MESSAGE_NUMBER	NUMBER		System change number (SCN) corresponding to the apply process high watermark for the last time the apply process was stopped using the DBMS_APPLY_ADM.STOP_APPLY procedure with the force parameter set to false. The apply process high watermark is the SCN beyond which no messages have been applied.
NEGATIVE_RULE_SET_NAME	VARCHAR2(128)		Name of the negative rule set used by the apply process for filtering
NEGATIVE_RULE_SET_OWNER	VARCHAR2(128)		Owner of the negative rule set used by the apply process for filtering
STATUS_CHANGE_TIME	DATE		Time that the STATUS of the apply process was changed
ERROR_NUMBER	NUMBER		Error number if the apply process was terminated
ERROR_MESSAGE	VARCHAR2(4000)		Error message if the apply process was terminated
MESSAGE_DELIVERY_MODE	VARCHAR2(10)		Reserved for internal use
PURPOSE	VARCHAR2(19)		Purpose of the apply process: • GoldenGate Apply - An Oracle GoldenGate Inbound server configured by Oracle GoldenGate integrated replicat • XStream Out - An XStream outbound server in an XStream Out configuration • XStream In - An XStream inbound server in an XStream In configuration • AUDIT VAULT - An apply process in an audit vault configuration • CHANGE DATA CAPTURE - An apply process in a change data capture configuration
LCRID_VERSION	NUMBER		LCR ID format currently being used

3.66 ALL_APPLY_CHANGE_HANDLERS

ALL_APPLY_CHANGE_HANDLERS displays information about the change handlers on the tables accessible to the current user.

Related View

DBA_APPLY_CHANGE_HANDLERS displays information about the change handlers on all tables in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
CHANGE_TABLE_OWNER	VARCHAR2(128)		Owner of the change table
CHANGE_TABLE_NAME	VARCHAR2(128)		Name of the change table
SOURCE_TABLE_OWNER	VARCHAR2(128)		Owner of the source table
SOURCE_TABLE_NAME	VARCHAR2(128)		Name of the source table
HANDLER_NAME	VARCHAR2(128)		Name of the statement-based change handler
CAPTURE_VALUES	VARCHAR2(3)		Indicates whether to capture the old (OLD), new (NEW), or both (*) values
APPLY_NAME	VARCHAR2(128)		Name of the apply process
OPERATION_NAME	VARCHAR2(10)		Name of the DML operation to which the DML handler is set: • DEFAULT • INSERT • UPDATE • DELETE • LOB_UPDATE
CREATION_TIME	TIMESTAMP(6)		Change handler creation time
MODIFICATION_TIME	TIMESTAMP(6)		Change handler modification time

See Also

3.67 ALL_APPLY_CONFLICT_COLUMNS

ALL_APPLY_CONFLICT_COLUMNS displays information about the conflict handlers on the tables accessible to the current user.

Related View

DBA_APPLY_CONFLICT_COLUMNS displays information about the conflict handlers on all tables in the database.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)		Owner of the object on which the update conflict handler is defined
OBJECT_NAME	VARCHAR2(128)		Name of the object on which the update conflict handler is defined
METHOD_NAME	VARCHAR2(92)		Name of the update conflict handler used to resolve conflicts
RESOLUTION_COLUMN	VARCHAR2(4000)		Name of the column used to resolve conflicts
COLUMN_NAME	VARCHAR2(128)		Name of a column in the column list for the update conflict handler
APPLY_DATABASE_LINK	VARCHAR2(128)		Database link to which changes are applied. If null, then changes are applied to the local database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> "DBA_APPLY_CONFLICT_COLUMNS"

3.68 ALL_APPLY_DML_CONF_HANDLERS

ALL_APPLY_DML_CONF_HANDLERS provides details about DML conflict handlers on objects visible to the current user.

Related View

DBA_APPLY_DML_CONF_HANDLERS provides details about DML conflict handlers.

Column	Datatype	NULL	Description
APPLY_NAME	VARCHAR2(128)		Name of the apply process
OBJECT_OWNER	VARCHAR2(128)		Owner of the target object
OBJECT_NAME	VARCHAR2(128)		Name of the target object
SOURCE_OBJECT_OWNER	VARCHAR2(128)		Source database owner of the object
SOURCE_OBJECT_NAME	VARCHAR2(128)		Source database name of the object
COMMAND_TYPE	VARCHAR2(6)		Type of the DML operation: INSERT, UPDATE, or DELETE
CONFLICT_TYPE	VARCHAR2(11)		Type of conflict: • ROW EXISTS • ROW MISSING
METHOD_NAME	VARCHAR2(9)		Method used for resolving the error, depending on the conflict type: • OVERWRITE • RECORD • IGNORE • MAXIMUM • MINIMUM • DELTA
CONFLICT_HANDLER_NAME	VARCHAR2(128)		Name of the conflict handler
RESOLUTION_COLUMN	VARCHAR2(128)		Name of the column used to resolve the conflict for MAXIMUM, MINIMUM, and DELTA
SET_BY	VARCHAR2(10)		Entity that set up the handler: • USER • GOLDENGATE

> **See Also**
>
> "DBA_APPLY_DML_CONF_HANDLERS"

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.69 ALL_APPLY_DML_HANDLERS

ALL_APPLY_DML_HANDLERS displays information about the DML handlers on the tables accessible to the current user.

Related View

DBA_APPLY_DML_HANDLERS displays information about the DML handlers on all tables in the database.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the object on which the DML handler is specified
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object on which the DML handler is specified
OPERATION_NAME	VARCHAR2(13)		Name of the DML operation for which the DML handler is used: • DEFAULT • INSERT • UPDATE • DELETE • LOB_UPDATE • ASSEMBLE_LOBS
USER_PROCEDURE	VARCHAR2(98)		Name of the user-specified DML handler, which handles row logical change records that contain the DML operation in the OPERATION_NAME column on the object
ERROR_HANDLER	VARCHAR2(1)		Indicates whether the DML handler handles only the relevant row logical change records that result in apply errors (Y) or all relevant row logical change records (N)
APPLY_DATABASE_LINK	VARCHAR2(128)		Database link to which changes are applied. If null, then changes are applied to the local database.
APPLY_NAME	VARCHAR2(128)		Name of the apply process for the given object
ASSEMBLE_LOBS	VARCHAR2(1)		Indicates whether LOB assembly is used for LOB columns in logical change records (LCRs) processed by the handler (Y) or not (N) LOB assembly combines multiple LCRs for a LOB column resulting from a single row change into one row LCR before passing the LCR to the handler.
SET_BY	VARCHAR2(10)		Entity that set up the handler. Possible values include: • GOLDENGATE • USER

3.70 ALL_APPLY_ENQUEUE

ALL_APPLY_ENQUEUE displays information about the apply enqueue actions for the rules where the destination queue exists and is accessible to the current user.

Related View

DBA_APPLY_ENQUEUE displays information about the apply enqueue actions for all rules in the database.

Column	Datatype	NULL	Description
RULE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule
RULE_NAME	VARCHAR2(128)	NOT NULL	Name of the rule
DESTINATION_QUEUE_NAME	VARCHAR2(4000)		Name of the queue where events satisfying the rule will be enqueued

See Also

"DBA_APPLY_ENQUEUE"

3.71 ALL_APPLY_ERROR

ALL_APPLY_ERROR displays information about the error transactions generated by the apply processes that dequeue messages from queues accessible to the current user.

Related Views

- DBA_APPLY_ERROR displays information about the error transactions generated by all apply processes in the database.
- USER_APPLY_ERROR displays information about the error transactions generated by apply processes visible to the current user. This view does not display the SOURCE_ROOT_NAME column.

Column	Datatype	NULL	Description
APPLY_NAME	VARCHAR2(128)		Name of the apply process at the local database which processed the transaction
QUEUE_NAME	VARCHAR2(128)		Name of the queue at the local database from which the transaction was dequeued
QUEUE_OWNER	VARCHAR2(128)		Owner of the queue at the local database from which the transaction was dequeued
LOCAL_TRANSACTION_ID	VARCHAR2(22)		Local transaction ID for the error transaction
SOURCE_DATABASE	VARCHAR2(128)		Database where the transaction originated
SOURCE_TRANSACTION_ID	VARCHAR2(128)		Original transaction ID at the source database
SOURCE_COMMIT_SCN	NUMBER		Original commit system change number (SCN) for the transaction at the source database

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
MESSAGE_NUMBER	NUMBER		Identifier for the message in the transaction that raised an error
ERROR_NUMBER	NUMBER		Error number of the error raised by the transaction
ERROR_MESSAGE	VARCHAR2(4000)		Error message of the error raised by the transaction
RECIPIENT_ID	NUMBER		User ID of the original user that applied the transaction
RECIPIENT_NAME	VARCHAR2(128)		Name of the original user that applied the transaction
MESSAGE_COUNT	NUMBER		Total number of messages inside the error transaction
ERROR_CREATION_TIME	DATE		Time that the error was created
SOURCE_COMMIT_POSITION	RAW(64)		Original commit position for the transaction
ERROR_TYPE	VARCHAR2(11)		NULL if the apply process can access all of the LCRs in the error transaction. EAGER ERROR if the apply process cannot access all of the LCRs in the error transaction. This error type typically means that the apply process was applying LCRs in a large transaction. When the ERROR_TYPE is EAGER ERROR, manage the error transaction using the instructions in *Oracle AI Database XStream Guide*. RECORD LCR indicates that a single LCR has been recorded as requested by user-specified error handling configuration RECORD TXN NO LCRS indicates that the identified transaction encountered an error and only the transaction ID is recorded as requested by user-specified error handling configuration RECORD TXN WITH LCRS indicates that the identified transaction encountered and error. The entire transaction is recorded as requested by user-specified error handling configuration. UNHANDLED ERRORS NO LCR indicates that the identified transaction encountered an error and there was no error handling specified for this handler. No LCRs are recorded for this transaction. DISCARDED is used to mark recorded and discarded LCRs.
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database
ERROR_POSITION	RAW(64)		LCR position at which the error occurred

See Also

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.72 ALL_APPLY_ERROR_MESSAGES

ALL_APPLY_ERROR_MESSAGES displays information about the individual messages in an error transaction generated by the apply processes that dequeue messages from queues accessible to the current user.

For XStream inbound servers, each message in an error transaction is a logical change record (LCR).

> **Note**
>
> - Messages that were spilled from memory to hard disk do not appear in this view.
> - This view does not contain information related to XStream outbound servers.

Related View

DBA_APPLY_ERROR_MESSAGES displays information about the individual messages in all of the error transactions generated by all apply processes in the database.

Column	Datatype	NULL	Description
MESSAGE_ID	RAW(16)		Unique identifier of the message stored in the error queue
LOCAL_TRANSACTION_ID	VARCHAR2(22)		Local transaction ID for the error transaction
TRANSACTION_MESSAGE_NUMBER	NUMBER		Message number of the message that raised the error. The message number is a sequence number for the messages in the transaction, starting with 1.
ERROR_NUMBER	NUMBER		Error number of the error raised by the transaction. The error number is populated only for the LCR that raised the error. This field is NULL for the other LCRs in the transaction.
ERROR_MESSAGE	VARCHAR2(4000)		Error message of the error raised by the transaction. The error message is populated only for the LCR that raised the error. This field is NULL for the other LCRs in the transaction.
SOURCE_OBJECT_OWNER	VARCHAR2(128)		Owner of the object at the source database
SOURCE_OBJECT_NAME	VARCHAR2(128)		Name of the object at the source database
OBJECT_OWNER	VARCHAR2(128)		Owner of the target table
OBJECT_NAME	VARCHAR2(128)		Object name of the target table
PRIMARY_KEY	VARCHAR2(4000)		Primary key of the table row that caused the source transaction to fail at the target
POSITION	RAW(64)		The LCR position
OPERATION	VARCHAR2(100)		The DML or DDL operation represented in the LCR

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
CONFLICT_TYPE	VARCHAR2(18)		Conflict type. Possible values: • INSERT ROW EXISTS: DML operation is INSERT and a row already exists with the specified key value. • UPDATE ROW EXISTS: DML operation is UPDATE. A row with the specified key exists but has conflicting values for some columns. • UPDATE ROW MISSING: DML operation is UPDATE and no row with the specified key value exists. • DELETE ROW EXISTS: DML operation is DELETE. A row with the specified key exists but has conflicting values for some columns • DELETE ROW MISSING: DML operation is DELETE and no row with the specified key value exists.
APPLIED_STATE	VARCHAR2(22)		Conflict applied state. Possible values: • WON: Incoming LCR was applied in its entirety • PARTIAL: Incoming LCR was applied for one or more conflict groups • LOST: Incoming LCR was not applied • SITE PRIORITY, WON: Site priority resolution was in effect and incoming LCR was applied in its entirety • SITE PRIORITY, PARTIAL: Site priority resolution was in effect and incoming LCR was applied for one or more conflict groups • SITE PRIORITY, LOST: Site priority resolution was in effect and incoming LCR was not applied
SEQ#	NUMBER		Trail file number (Oracle GoldenGate)
RBA	NUMBER		Position with Trail file (Oracle GoldenGate)
CONFLICT_INFO	VARCHAR2(4000)		Identifies the conflict group information
SOURCE_PACKAGE_NAME	VARCHAR2(128)		Package name of the source for procedural replication
PACKAGE_NAME	VARCHAR2(128)		Package name of the destination for procedural replication
MESSAGE	CLOB		The content of the LCR. Content includes column name and value for old and/or new values in DML LCRs. For DDL LCRs, the content is the text of the DDL SQL.

3.73 ALL_APPLY_EXECUTE

ALL_APPLY_EXECUTE displays information about the apply execute actions for the rules visible to the current user.

Related View

DBA_APPLY_EXECUTE displays information about the apply execute actions for all rules in the database.

Column	Datatype	NULL	Description
RULE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule
RULE_NAME	VARCHAR2(128)	NOT NULL	Name of the rule
EXECUTE_EVENT	VARCHAR2(2)		Indicates whether the event satisfying the rule is executed

See Also

"DBA_APPLY_EXECUTE"

3.74 ALL_APPLY_HANDLE_COLLISIONS

ALL_APPLY_HANDLE_COLLISIONS provides details about apply handlers for collisions on objects visible to the user at the table level.

Related View

DBA_APPLY_HANDLE_COLLISIONS provides details about apply handlers for collisions at the table level.

Column	Datatype	NULL	Description
APPLY_NAME	VARCHAR2(128)	NOT NULL	Name of the apply process
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the target object
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the target object
SOURCE_OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Source database owner of the object
SOURCE_OBJECT_NAME	VARCHAR2(128)	NOT NULL	Source database name of the object
ENABLED	VARCHAR2(1)	NOT NULL	State of the collision handlers: Y for enabled, N for disabled
SET_BY	VARCHAR2(10)		Entity that set up the handler: • USER • GOLDENGATE

See Also

"DBA_APPLY_HANDLE_COLLISIONS"

3.75 ALL_APPLY_INSTANTIATED_GLOBAL

ALL_APPLY_INSTANTIATED_GLOBAL displays information for the current user about databases for which an instantiation SCN has been set.

Related View

DBA_APPLY_INSTANTIATED_GLOBAL displays information about databases for which an instantiation SCN has been set.

Column	Datatype	NULL	Description
SOURCE_DATABASE	VARCHAR2(128)	NOT NULL	Name of the database that was instantiated
INSTANTIATION_SCN	NUMBER		Instantiation SCN for the database. Only changes committed after this SCN are applied by an apply process.
APPLY_DATABASE_LINK	VARCHAR2(128)		Database link to which changes are applied. If null, then changes are applied to the local database.
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database

See Also

"DBA_APPLY_INSTANTIATED_GLOBAL"

3.76 ALL_APPLY_INSTANTIATED_OBJECTS

ALL_APPLY_INSTANTIATED_OBJECTS displays information about objects accessible to the current user for which an instantiation SCN has been set.

Related View

DBA_APPLY_INSTANTIATED_OBJECTS displays information about objects for which an instantiation SCN has been set.

Column	Datatype	NULL	Description
SOURCE_DATABASE	VARCHAR2(128)	NOT NULL	Name of the database where the object originated
SOURCE_OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the object at the source database
SOURCE_OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object at the source database
SOURCE_OBJECT_TYPE	VARCHAR2(11)		Type of the object at the source database
INSTANTIATION_SCN	NUMBER		Instantiation SCN for the object. Only changes committed after this SCN are applied by an apply process.
IGNORE_SCN	NUMBER		SCN below which the instantiation SCN cannot be set. This value corresponds to the SCN value at the source database at the time when the object was prepared for instantiation.
APPLY_DATABASE_LINK	VARCHAR2(128)		Database link to which changes are applied. If null, then changes are applied to the local database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database

> **See Also**
>
> "DBA_APPLY_INSTANTIATED_OBJECTS"

3.77 ALL_APPLY_INSTANTIATED_SCHEMAS

ALL_APPLY_INSTANTIATED_SCHEMAS displays information about schemas accessible to the current user for which an instantiation SCN has been set.

Related View

DBA_APPLY_INSTANTIATED_SCHEMAS displays information about schemas for which an instantiation SCN has been set.

Column	Datatype	NULL	Description
SOURCE_DATABASE	VARCHAR2(128)	NOT NULL	Name of the database where the schema originated
SOURCE_SCHEMA	VARCHAR2(128)		Name of the schema at the source database
INSTANTIATION_SCN	NUMBER		Instantiation SCN for the schema. Only changes committed after this SCN are applied by an apply process.
APPLY_DATABASE_LINK	VARCHAR2(128)		Database link to which changes are applied. If null, then changes are applied to the local database.
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database

> **See Also**

> "DBA_APPLY_INSTANTIATED_SCHEMAS"

3.78 ALL_APPLY_KEY_COLUMNS

ALL_APPLY_KEY_COLUMNS displays information about the substitute key columns for the tables accessible to the current user. Substitute key columns are set using the DBMS_APPLY_ADM.SET_KEY_COLUMNS procedure.

Related View

DBA_APPLY_KEY_COLUMNS displays information about the substitute key columns for all tables in the database.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the object on which substitute key columns are set

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object on which substitute key columns are set
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Column name of a column specified as a substitute key column
APPLY_DATABASE_LINK	VARCHAR2(128)		Database link to which changes are applied. If null, then changes are applied to the local database.

See Also

- "DBA_APPLY_KEY_COLUMNS"
- *Oracle AI Database PL/SQL Packages and Types Reference* for more information about the DBMS_APPLY_ADM.SET_KEY_COLUMNS procedure

3.79 ALL_APPLY_PARAMETERS

ALL_APPLY_PARAMETERS displays information about the parameters for the apply processes that dequeue events from queues accessible to the current user.

Related View

DBA_APPLY_PARAMETERS displays information about the parameters for all apply processes in the database.

Column	Datatype	NULL	Description
APPLY_NAME	VARCHAR2(128)	NOT NULL	Name of the apply process
PARAMETER	VARCHAR2(128)	NOT NULL	Name of the parameter
VALUE	VARCHAR2(4000)		Parameter value
SET_BY_USER	VARCHAR2(3)		Indicates whether the parameter value was set by the user (YES) or was not set by the user (NO). If NO for a parameter, then the parameter is set to its default value. If YES for a parameter, then the parameter may or may not be set to its default value.

See Also

"DBA_APPLY_PARAMETERS"

3.80 ALL_APPLY_PROGRESS

ALL_APPLY_PROGRESS displays information about the progress made by the apply processes that dequeue events from queues accessible to the current user. This view only contains

Copyright © 2002, 2025, Oracle and/or its affiliates.

information about captured events. It does not contain information about user-enqueued events.

Related View

DBA_APPLY_PROGRESS displays information about the progress made by all apply processes in the database.

Column	Datatype	NULL	Description
APPLY_NAME	VARCHAR2(128)	NOT NULL	Name of the apply process
SOURCE_DATABASE	VARCHAR2(128)	NOT NULL	Global name of the source database of the changes that are applied by the apply process
APPLIED_MESSAGE_NUMBER	NUMBER	NOT NULL	Message number up to which all transactions have definitely been applied. This value is the low watermark for the apply process. That is, messages with a commit message number less than or equal to this message number have definitely been applied, but some messages with a higher commit message number may also have been applied.
OLDEST_MESSAGE_NUMBER	NUMBER	NOT NULL	Earliest message number of the transactions currently being dequeued and applied
APPLY_TIME	DATE		Time at which the message with the message number displayed in the APPLIED_MESSAGE_NUMBER column was applied
APPLIED_MESSAGE_CREATE_TIME	DATE		Time at which the message with the message number displayed in the APPLIED_MESSAGE_NUMBER column was created at its source database
OLDEST_TRANSACTION_ID	VARCHAR2(128)		Oldest transaction ID of interest. (useful for detecting long-running or large transactions)
SPILL_MESSAGE_NUMBER	NUMBER		Spill low watermark. Any message with a lower SCN has either been applied or spilled to disk (it will be dequeued from the Streams queue and capture will not need to resend any logical change records (LCRs) with a lower SCN). Spilled messages may not have been applied yet.
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database

See Also

"DBA_APPLY_PROGRESS"

3.81 ALL_APPLY_REPERROR_HANDLERS

ALL_APPLY_REPERROR_HANDLERS provides details about apply reperror handlers on objects visible to the user.

Related View

DBA_APPLY_REPERROR_HANDLERS provides details about apply reperror handlers.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
APPLY_NAME	VARCHAR2(128)	NOT NULL	Name of the apply process
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object
SOURCE_OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Source database owner of the source object
SOURCE_OBJECT_NAME	VARCHAR2(128)	NOT NULL	Source database name of the object
ERROR_NUMBER	NUMBER	NOT NULL	Error number for the handler
METHOD	VARCHAR2(18)		Error handling method: • ABEND • RECORD • IGNORE • RETRY • RETRY_TRANSACTION • RECORD_TRANSACTION
MAX_RETRIES	NUMBER		Maximum number of times to retry for the method RETRY and RETRY_TRANSACTION
DELAY_CSECS	NUMBER		Number of centiseconds to wait between retries for RETRY and RETRY_TRANSACTION
SET_BY	VARCHAR2(10)		Entity that set up the handler: • USER • GOLDENGATE

See Also

"DBA_APPLY_REPERROR_HANDLERS"

3.82 ALL_APPLY_TABLE_COLUMNS

ALL_APPLY_TABLE_COLUMNS displays, for the tables accessible to the current user, information about the nonkey table columns for which apply process conflict detection has been stopped for update and delete operations.

Conflict detection for nonkey columns can be stopped using the DBMS_APPLY_ADM.COMPARE_OLD_VALUES procedure.

Related View

DBA_APPLY_TABLE_COLUMNS displays, for all tables in the database, information about the nonkey table columns for which apply process conflict detection has been stopped for update and delete operations.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)		Owner of the table
OBJECT_NAME	VARCHAR2(128)		Name of the table
COLUMN_NAME	VARCHAR2(4000)		Name of the column

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
COMPARE_OLD_ON_DELETE	VARCHAR2(3)		Indicates whether to Compare the old value of the column on deletes (YES) or not (NO)
COMPARE_OLD_ON_UPDATE	VARCHAR2(3)		Indicates whether to Compare the old value of the column on updates (YES) or not (NO)
APPLY_DATABASE_LINK	VARCHAR2(128)		For remote tables, name of the database link pointing to the remote database

See Also

- "DBA_APPLY_TABLE_COLUMNS"
- *Oracle AI Database PL/SQL Packages and Types Reference* for more information about the DBMS_APPLY_ADM.COMPARE_OLD_VALUES procedure

3.83 ALL_ARGUMENTS

ALL_ARGUMENTS lists the arguments of the functions and procedures that are accessible to the current user.

Note

The following changes have been made to this view:

- Starting with Oracle Database 12c release 1 (12.1.0.2), this view omits procedures with no arguments. Prior to Oracle Database 12c release 1 (12.1.0.2), a procedure with no arguments was presented as a single row in this view.
- Starting with Oracle Database 18c, this view displays only one row for an argument that is a composite type. Prior to Oracle Database 18c, this view displayed multiple rows for composite types.

  To obtain information about composite type arguments, use the value of the TYPE_NAME column in this view to query the ALL_PLSQL_TYPES, ALL_PLSQL_TYPE_ATTRS, and ALL_PLSQL_COLL_TYPES views, which fully describe composite types.

See *Oracle AI Database Upgrade Guide* for more information about these changes.

Related Views

- DBA_ARGUMENTS lists the arguments of the functions and procedures that are available in the database.
- USER_ARGUMENTS lists the arguments of the functions and procedures that are owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
OBJECT_NAME	VARCHAR2(128)		Name of the procedure or function

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PACKAGE_NAME	VARCHAR2(128)		Name of the package
OBJECT_ID	NUMBER	NOT NULL	Object number of the object
OVERLOAD	VARCHAR2(40)		Indicates the *n*th overloading ordered by its appearance in the source; otherwise, it is NULL.
SUBPROGRAM_ID	NUMBER		Unique subprogram identifier
ARGUMENT_NAME	VARCHAR2(128)		Name of the argument A null argument name is used to denote a function return.
POSITION	NUMBER	NOT NULL	This column holds the position of this item in the argument list, or 0 for a function return value.
SEQUENCE	NUMBER	NOT NULL	Defines the sequential order of the argument. Argument sequence starts from 1. Return type comes first, and each argument will follow.
DATA_LEVEL	NUMBER	NOT NULL	Nesting depth of the argument for composite types **Note:** Starting with Oracle Database 18c, the value of this columns is always 0, because this view displays only one row for each argument. This view no longer displays multiple rows for composite type arguments.
DATA_TYPE	VARCHAR2(30)		Datatype of the argument
DEFAULTED	VARCHAR2(1)		Specifies whether or not the argument is defaulted
DEFAULT_VALUE	LONG		Reserved for future use
DEFAULT_LENGTH	NUMBER		Reserved for future use
IN_OUT	VARCHAR2(9)		Direction of the argument: • IN • OUT • IN/OUT
DATA_LENGTH	NUMBER		Length of the column (in bytes)
DATA_PRECISION	NUMBER		Length in decimal digits (NUMBER) or binary digits (FLOAT)
DATA_SCALE	NUMBER		Digits to the right of the decimal point in a number
RADIX	NUMBER		Argument radix for a number
CHARACTER_SET_NAME	VARCHAR2(44)		Character set name for the argument
TYPE_OWNER	VARCHAR2(128)		Owner of the type of the argument
TYPE_NAME	VARCHAR2(128)		Name of the type of the argument. If the type is a package local type (that is, it is declared in a package specification), then this column displays the name of the package.
TYPE_SUBNAME	VARCHAR2(128)		Relevant only for package local types. Displays the name of the type declared in the package identified in the TYPE_NAME column.
TYPE_LINK	VARCHAR2(128)		Relevant only for package local types when the package identified in the TYPE_NAME column is a remote package. This column displays the database link used to refer to the remote package.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
TYPE_OBJECT_TYPE	VARCHAR2(7)		Displays the type of the type described by the TYPE_OWNER, TYPE_NAME, and TYPE_SUBNAME columns. Possible values are: • TABLE • VIEW • PACKAGE • TYPE
PLS_TYPE	VARCHAR2(128)		For numeric arguments, the name of the PL/SQL type of the argument. Null otherwise.
CHAR_LENGTH	NUMBER		Character limit for string datatypes
CHAR_USED	VARCHAR2(1)		Indicates whether the byte limit (B) or char limit (C) is official for the string
ORIGIN_CON_ID	VARCHAR2(256)		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root)

Note

To list the procedure names in a package, use the ALL_PROCEDURES view.

3.84 ALL_ASSEMBLIES

ALL_ASSEMBLIES provides information about assemblies accessible to the current user.

Related Views

- DBA_ASSEMBLIES provides information about all assemblies in the database.
- USER_ASSEMBLIES provides information about all assemblies owned by the current user. This view does not display the OWNER column.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the assembly
ASSEMBLY_NAME	VARCHAR2(128)	NOT NULL	Name of the assembly
FILE_SPEC	VARCHAR2(4000)		Operating system file specification of the assembly
SECURITY_LEVEL	VARCHAR2(10)		The maximum security level of the assembly
IDENTITY	VARCHAR2(4000)		The identity of the assembly
STATUS	VARCHAR2(7)		Status of the assembly

See Also

3.85 ALL_ASSOCIATIONS

ALL_ASSOCIATIONS describes user-defined statistics associated with objects accessible to the current user.

Related Views

- DBA_ASSOCIATIONS describes all user-defined statistics in the database.
- USER_ASSOCIATIONS describes user-defined statistics associated with objects owned by the current user.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the object for which the association is being defined
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object for which the association is being defined
COLUMN_NAME	VARCHAR2(128)		Column name in the object for which the association is being defined
OBJECT_TYPE	VARCHAR2(9)		Kind of object with which statistics are being associated: column, type, package or function, indextype, or domain index.
STATSTYPE_SCHEMA	VARCHAR2(128)		Owner of the statistics type
STATSTYPE_NAME	VARCHAR2(128)		Name of statistics type that contains the cost, selectivity or statistics functions
DEF_SELECTIVITY	NUMBER		Default selectivity of the object, if any
DEF_CPU_COST	NUMBER		Default CPU cost of the object, if any
DEF_IO_COST	NUMBER		Default I/O cost of the object, if any
DEF_NET_COST	NUMBER		Default networking cost of the object, if any
INTERFACE_VERSION	NUMBER		Identifies the version number of the ODCIStats interface. Value is 1 for statistics type implementing Oracle8*i* 8.1; 0 for types implementing Oracle9*i* 9.0.0.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
MAINTENANCE_TYPE	VARCHAR2(14)		Specifies whether the object is system-managed or user-managed

3.86 ALL_ATTRIBUTE_DIM_ATTR_CLASS

ALL_ATTRIBUTE_DIM_ATTR_CLASS describes the attribute classifications of the attribute dimensions accessible to the current user.

Related Views

- DBA_ATTRIBUTE_DIM_ATTR_CLASS describes the attribute classifications of all attribute dimensions in the database.
- USER_ATTRIBUTE_DIM_ATTR_CLASS describes the attribute classifications of the attribute dimensions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the attribute dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute dimension
ATTRIBUTE_NAME	VARCHAR2(128)		Name of the attribute
CLASSIFICATION	VARCHAR2(128)		Classification associated with the attribute
VALUE	CLOB		Value of the classification, or NULL if not specified
LANGUAGE	VARCHAR2(64)		NLS_LANGUAGE value associated with the classification, or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order of the classification in the list of classifications associated with the attribute
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).

3.88 ALL_ATTRIBUTE_DIM_ATTR_CLS_AE

ALL_ATTRIBUTE_DIM_ATTR_CLS_AE describes the attribute classifications of the attribute dimensions (across all editions) accessible to the current user.

Related Views

- DBA_ATTRIBUTE_DIM_ATTR_CLS_AE describes the attribute classifications of all attribute dimensions (across all editions) in the database.
- USER_ATTRIBUTE_DIM_ATTR_CLS_AE describes the attribute classifications of the attribute dimensions (across all editions) owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the attribute dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute dimension
ATTRIBUTE_NAME	VARCHAR2(128)		Name of the attribute
CLASSIFICATION	VARCHAR2(128)		Classification associated with the attribute
VALUE	CLOB		Value of the classification, or NULL if not specified
LANGUAGE	VARCHAR2(64)		NLS_LANGUAGE value associated with the classification, or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order of the classification in the list of classifications associated with the attribute
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the attribute dimension is defined

3.96 ALL_ATTRIBUTE_DIM_KEYS

`ALL_ATTRIBUTE_DIM_KEYS` describes the keys of the attribute dimensions accessible to the current user.

Related Views

- `DBA_ATTRIBUTE_DIM_KEYS` describes the keys of all attribute dimensions in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- USER_ATTRIBUTE_DIM_KEYS describes the keys of the attribute dimensions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the attribute dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute dimension
LEVEL_NAME	VARCHAR2(128)		Name of the level of the key
IS_ALTERNATE	VARCHAR2(1)		Indicates whether the attribute dimension key is an alternate key (Y) or not (N)
ATTRIBUTE_NAME	VARCHAR2(128)		Name of the key attribute
ATTR_ORDER_NUM	NUMBER	NOT NULL	Order of the attribute in the list of attributes comprising the key
KEY_ORDER_NUM	NUMBER	NOT NULL	Order of the key in the list of keys (if alternate keys are specified)
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).

3.111 ALL_ATTRIBUTE_DIMENSIONS

ALL_ATTRIBUTE_DIMENSIONS describes the attribute dimensions accessible to the current user.

Related Views

- DBA_ATTRIBUTE_DIMENSIONS describes all attribute dimensions in the database.
- USER_ATTRIBUTE_DIMENSIONS describes the attribute dimensions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of attribute dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute dimension
DIMENSION_TYPE	VARCHAR2(8)		Type of the attribute dimension: • TIME • STANDARD
CACHE_STAR	VARCHAR2(12)	NOT NULL	Type of the cache for the dimension star table: • NONE indicates that no cache is being used • DYNAMIC • MATERIALIZED (the default value when a cache is used)
MAT_TABLE_OWNER	VARCHAR2(128)		The owner of the materialized table
MAT_TABLE_NAME	VARCHAR2(128)		The name of the materialized table
ALL_MEMBER_NAME	CLOB	NOT NULL	An expression for the name of the ALL member for the attribute dimension
ALL_MEMBER_CAPTION	CLOB		An expression for the caption for the ALL member of the attribute dimension, or NULL if not specified
ALL_MEMBER_DESCRIPTION	CLOB		An expression for the description for the ALL member of the attribute dimension
COMPILE_STATE	VARCHAR2(7)		Compile status of the attribute dimension: • VALID • INVALID
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).

3.114 ALL_AUDIT_POLICIES

ALL_AUDIT_POLICIES describes the fine-grained auditing policies on the tables and views accessible to the current user.

Related Views

- DBA_AUDIT_POLICIES describes all fine-grained auditing policies in the database.
- USER_AUDIT_POLICIES describes the fine-grained auditing policies on the tables and views owned by the current user. This view does not display the OBJECT_SCHEMA column.

Column	Datatype	NULL	Description
OBJECT_SCHEMA	VARCHAR2(128)		Name of the schema that includes the table or view

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OBJECT_NAME	VARCHAR2(128)		Name of the table or view
POLICY_OWNER	VARCHAR2(128)		Owner of the policy
POLICY_NAME	VARCHAR2(128)		Name of the policy
POLICY_TEXT	VARCHAR2(4000)		Audit condition
POLICY_COLUMN	VARCHAR2(128)		This column is deprecated. Query the ALL_AUDIT_POLICY_COLUMNS view for fine-grained auditing policy column information.
PF_SCHEMA	VARCHAR2(128)		Owner of the audit handler function
PF_PACKAGE	VARCHAR2(128)		Name of the package containing the audit handler function
PF_FUNCTION	VARCHAR2(128)		Name of the audit handler function
ENABLED	VARCHAR2(3)		Indicates whether the policy is enabled (YES) or disabled (NO)
SEL	VARCHAR2(3)		Indicates whether the policy is applied to queries on the object (YES) or not (NO)
INS	VARCHAR2(3)		Indicates whether the policy is applied to INSERT statements on the object (YES) or not (NO)
UPD	VARCHAR2(3)		Indicates whether the policy is applied to UPDATE statements on the object (YES) or not (NO)
DEL	VARCHAR2(3)		Indicates whether the policy is applied to DELETE statements on the object (YES) or not (NO)
AUDIT_TRAIL	VARCHAR2(12)		Indicates the audit trail to which the audit records generated by this audit policy will be written: • DB - Audit records are written to DBA_FGA_AUDIT_TRAIL (fine-grained audit trail) • DB+EXTENDED - Audit records are written to DBA_FGA_AUDIT_TRAIL (fine-grained audit trail) and the SQL_TEXT and SQL_BIND columns are populated for this policy • XML - Audit records are written to V$XML_AUDIT_TRAIL (XML audit files) • XML+EXTENDED - Audit records are written to V$XML_AUDIT_TRAIL (XML audit files) and the SQL_TEXT and SQL_BIND columns are populated for this policy
POLICY_COLUMN_OPTIONS	VARCHAR2(11)		Indicates whether all columns in the AUDIT_COLUMN parameter (ALL_COLUMNS) or any of the columns in the AUDIT_COLUMN parameter (ANY_COLUMNS) are considered for triggering fine-grained auditing
COMMON	VARCHAR2(3)		Indicates whether the policy applies across multiple containers (YES) or not (NO)
INHERITED	VARCHAR2(3)		Indicates whether the policy was inherited from another container (YES) or not (NO)

3.115 ALL_AUDIT_POLICY_COLUMNS

ALL_AUDIT_POLICY_COLUMNS describes the fine-grained auditing policy columns on the tables and views accessible to the current user.

Related Views

- DBA_AUDIT_POLICY_COLUMNS describes all fine-grained auditing policy columns in the database.
- USER_AUDIT_POLICY_COLUMNS describes the fine-grained auditing policy columns on the tables and views owned by the current user.

Column	Datatype	NULL	Description
OBJECT_SCHEMA	VARCHAR2(128)		Owner of the table or view
OBJECT_NAME	VARCHAR2(128)		Name of the table or view
POLICY_NAME	VARCHAR2(128)		Name of the policy
POLICY_COLUMN	VARCHAR2(128)		Relevant column of the policy

See Also

- "DBA_AUDIT_POLICY_COLUMNS"
- "USER_AUDIT_POLICY_COLUMNS"

3.116 ALL_AVTUNE_ARCHIVE_CACHE_LEVELS

ALL_AVTUNE_ARCHIVE_CACHE_LEVELS displays the levels of the cache used by archive queries of the auto-cache enabled analytic views accessible to the current user.

Related Views

- DBA_AVTUNE_ARCHIVE_CACHE_LEVELS displays the levels of the cache used by archive queries of all auto-cache enabled analytic views in the database.
- USER_AVTUNE_ARCHIVE_CACHE_LEVELS displays the levels of the cache used by archive queries of the auto-cache enabled analytic views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
AV_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DIMENSION_NAME	VARCHAR2(128)		Name of the analytic view dimension
HIERARCHY_NAME	VARCHAR2(128)		Name of the hierarchy
LEVEL_NAME	VARCHAR2(128)		Name of the level
ORDER_NUM	NUMBER	NOT NULL	Order of the levels of the cache
INST_ID	NUMBER	NOT NULL	Identifier of the instance where the query was executed
CACHE_ID	NUMBER(38)	NOT NULL	ID of the cache

Note

This view is available starting with Oracle AI Database 26ai, Release Update 23.7.

See Also

3.117 ALL_AVTUNE_ARCHIVE_QUERIES

ALL_AVTUNE_ARCHIVE_QUERIES displays the query history used for auto tuning the auto-cache enabled analytic views accessible to the current user.

Related Views

- DBA_AVTUNE_ARCHIVE_QUERIES displays the query history used for auto tuning all auto-cache enabled analytic views in the database.
- USER_AVTUNE_ARCHIVE_QUERIES displays the query history used for auto tuning the auto-cache enabled analytic views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
AV_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
QUERY_TOTAL_TIME	NUMBER(38,3)		Amount of time (in seconds) that was taken for the query
QUERY_TIMESTAMP	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the query
SQL_ID	VARCHAR2(13)	NOT NULL	SQL identifier for the query object
INST_ID	NUMBER	NOT NULL	Identifier of the instance where the query was executed
CACHE_ID	NUMBER(38)		If a cache was used, the ID of the cache. Otherwise, null.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
HARD_PARSE_TIME	NUMBER	NOT NULL	Average hard parse time used (in seconds)
EXECUTIONS	NUMBER	NOT NULL	Number of executions of the query

Note

This view is available starting with Oracle AI Database 26ai, Release Update 23.7.

3.118 ALL_AVTUNE_ARCHIVE_QUERY_LEVELS

ALL_AVTUNE_ARCHIVE_QUERY_LEVELS displays levels of the query in the archives of the auto-cache enabled analytic views accessible to the current user.

Related Views

- DBA_AVTUNE_ARCHIVE_QUERY_LEVELS displays levels of the query in the archives of all auto-cache enabled analytic views in the database.
- USER_AVTUNE_ARCHIVE_QUERY_LEVELS displays levels of the query in the archives of the auto-cache enabled analytic views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
AV_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
DIMENSION_NAME	VARCHAR2(128)		Name of the analytic view dimension
HIERARCHY_NAME	VARCHAR2(128)		Name of the hierarchy
LEVEL_NAME	VARCHAR2(128)		Name of the level
SQL_ID	VARCHAR2(13)	NOT NULL	SQL identifier for the query object
INST_ID	NUMBER	NOT NULL	Identifier of the instance where the query was executed
ORDER_NUM	NUMBER	NOT NULL	Order of the levels of the query

3.122 ALL_AVTUNE_AV_AGG_CACHES

`ALL_AVTUNE_AV_AGG_CACHES` displays aggregation caches for the auto-cache enabled analytic views accessible to the current user.

Related Views

- `DBA_AVTUNE_AV_AGG_CACHES` displays aggregation caches for all auto-cache enabled analytic views in the database.
- `USER_AVTUNE_AV_AGG_CACHES` displays aggregation caches for the auto-cache enabled analytic views owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
`OWNER`	`VARCHAR2(128)`	`NOT NULL`	Owner of the analytic view
`AV_NAME`	`VARCHAR2(128)`	`NOT NULL`	Name of the analytic view
`TABLE_NAME`	`VARCHAR2(128)`		Name of the aggregation table
`NUM_ROWS`	`NUMBER`		Number of rows of the aggregation table created for the cache
`CREATED_TIME`	`TIMESTAMP(6) WITH TIME ZONE`	`NOT NULL`	Time of the cache creation
`LAST_QUERY_TIME`	`TIMESTAMP(6) WITH TIME ZONE`		The last time the cache was used
`CACHE_ID`	`NUMBER(38)`	`NOT NULL`	ID of the cache

> **Note**

3.123 ALL_AVTUNE_CALLBACK_ARGS

ALL_AVTUNE_CALLBACK_ARGS displays user-provided callback arguments for the auto-cache enabled analytic views accessible to the current user.

Related Views

- DBA_AVTUNE_CALLBACK_ARGS displays user-provided callback arguments for all auto-cache enabled analytic views in the database.
- USER_AVTUNE_CALLBACK_ARGS displays user-provided callback arguments for the auto-cache enabled analytic views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
AV_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
ARG_INDEX	NUMBER	NOT NULL	Argument index
ARG_VALUE	CLOB		Argument value
CALLBACK_TYPE	VARCHAR2(7)	NOT NULL	Callback type (CREATE or REFRESH)

Note

This view is available starting with Oracle AI Database 26ai, Release Update 23.7.

3.124 ALL_AVTUNE_ENABLED_AV_DIMENSIONS

ALL_AVTUNE_ENABLED_AV_DIMENSIONS displays the enabled attribute dimensions for the auto-cache enabled analytic views accessible to the current user.

Related Views

- DBA_AVTUNE_ENABLED_AV_DIMENSIONS displays the enabled attribute dimensions for all auto-cache enabled analytic views in the database.
- USER_AVTUNE_ENABLED_AV_DIMENSIONS displays the enabled attribute dimensions for the auto-cache enabled analytic views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the analytic view

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DIMENSION_OWNER	VARCHAR2(128)	NOT NULL	Owner of the attribute dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute dimension
AV_NAME	VARCHAR2(128)		Name of the analytic view
TABLE_NAME	VARCHAR2(128)		Name of the aggregation table
LAST_REFRESH_TIME	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the last refresh

Note

This view is available starting with Oracle AI Database 26ai, Release Update 23.7.

3.125 ALL_AVTUNE_ENABLED_AVS

ALL_AVTUNE_ENABLED_AVS displays the auto-cache enabled analytic views accessible to the current user.

Related Views

- DBA_AVTUNE_ENABLED_AVS displays all auto-cache enabled analytic views in the database.
- USER_AVTUNE_ENABLED_AVS displays the auto-cache enabled analytic views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic view
AV_NAME	VARCHAR2(128)	NOT NULL	Name of the analytic view
TOTAL_CACHE_PCT	NUMBER	NOT NULL	Maximum size (number of rows) of all caches as a percentage of the fact table size
REFRESH_INTVL	NUMBER	NOT NULL	Number of minutes to wait between each cache refresh
LAST_REFRESH_TIME	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the last refresh
NUM_QUERIES	NUMBER	NOT NULL	Minimum number of queries on a level group before being considered for a cache
AVG_QUERY_TIME	NUMBER	NOT NULL	Average number of seconds each query should take on a level group before being considered for a cache
LAST_UPDATE_TIME	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the last update

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
MAX_NUM_CACHES	NUMBER(38)	NOT NULL	Maximum number of caches for the analytic view
TUNING_INTVL	NUMBER	NOT NULL	Number of minutes to wait between each tuning operation
PURGE_ARCHIVE_INTVL	INTERVAL DAY(2) TO SECOND(6)	NOT NULL	Number of days, hours, minutes or seconds to wait between purging queries
SINGLE_CACHE_PCT	NUMBER	NOT NULL	Maximum ratio in percentage between the size (number of rows) of the cache and the fact table
CACHE_MODE	VARCHAR2(11)	NOT NULL	Cache mode (FLOOR or QUERY_MATCH)
ARCHIVE_INTVL	NUMBER	NOT NULL	Number of minutes to wait between each archive operation
NUM_TUNES	NUMBER(38)	NOT NULL	Number of caches to create in each tuning operation
CACHE_CREATE_CBK_NAME	VARCHAR2(128)		Name of the callback procedure that will be called in order to create the cache
CACHE_CREATE_CBK_PKG_NAME	VARCHAR2(128)		Name of the package that contains the create callback procedure
CACHE_REFRESH_CBK_NAME	VARCHAR2(128)		Name of the callback procedure that will be called when performing a refresh
CACHE_REFRESH_CBK_PKG_NAME	VARCHAR2(128)		Name of the package that contains the refresh callback procedure
FACT_ROWS	NUMBER(38)		Size (number of rows) of the fact table
LAST_SYNC_TIME	TIMESTAMP(6) WITH TIME ZONE		The last time the analytic view was synced with the DDL
OBJ_PREFIX	VARCHAR2(128)		Naming prefix to be used when creating analytic view objects
EDITION	VARCHAR2(128)	NOT NULL	Name of the edition in which the analytic view was enabled

Note

This view is available starting with Oracle AI Database 26ai, Release Update 23.7.

3.126 ALL_AVTUNE_ENABLED_DIMENSIONS

ALL_AVTUNE_ENABLED_DIMENSIONS displays the enabled attribute dimensions accessible to the current user.

Related Views

- DBA_AVTUNE_ENABLED_DIMENSIONS displays all enabled attribute dimensions in the database.
- USER_AVTUNE_ENABLED_DIMENSIONS displays the enabled attribute dimensions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the attribute dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute dimension
TABLE_NAME	VARCHAR2(128)		Name of the aggregation table
REFRESH_INTVL	NUMBER		Number of minutes to wait between each cache refresh
LAST_REFRESH_TIME	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the last refresh
LAST_UPDATE_TIME	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the last update
OBJ_PREFIX	VARCHAR2(128)		Naming prefix to be used when creating analytic view objects
EDITION	VARCHAR2(128)	NOT NULL	Name of the edition in which the attribute dimension was enabled

Note

This view is available starting with Oracle AI Database 26ai, Release Update 23.7.

3.127 ALL_AW_PS

ALL_AW_PS describes the page spaces in the analytic workspaces accessible to the current user.

Related Views

- DBA_AW_PS describes the page spaces in all analytic workspaces in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- USER_AW_PS describes the page spaces in the analytic workspaces owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic workspace
AW_NUMBER	NUMBER	NOT NULL	Number of the analytic workspace
AW_NAME	VARCHAR2(128)		Name of the analytic workspace
PSNUMBER	NUMBER(10)		Number of the page space
GENERATIONS	NUMBER		Number of active generations in the page space
MAXPAGES	NUMBER		Maximum pages allocated in the page space

3.128 ALL_AWS

ALL_AWS describes the analytic workspaces accessible to the current user.

Related Views

- DBA_AWS describes all analytic workspaces in the database.
- USER_AWS describes the analytic workspaces owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the analytic workspace
AW_NUMBER	NUMBER	NOT NULL	Number of the analytic workspace
AW_NAME	VARCHAR2(128)		Name of the analytic workspace
AW_VERSION	VARCHAR2(4)		Format version of the analytic workspace: • 9.1 • 10.1 • 10.2 • 11.1
PAGESPACES	NUMBER		Number of pagespaces in the analytic workspace
GENERATIONS	NUMBER		Number of active generations in the analytic workspace
FROZEN	VARCHAR2(6)		Freeze state of the analytic workspace: • Frozen • NoThaw

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.129 ALL_BASE_TABLE_MVIEWS

`ALL_BASE_TABLE_MVIEWS` describes the materialized views using materialized view logs accessible to the current user. A materialized view log can be created for a master, base table, or master materialized view. Query this view at the master site or the master materialized view site to show one row for each materialized view using a materialized view log.

Related Views

- `DBA_BASE_TABLE_MVIEWS` describes all materialized views using materialized view logs in the database.
- `USER_BASE_TABLE_MVIEWS` describes the materialized views using materialized view logs owned by the current user.

Column	Datatype	NULL	Description
`OWNER`	`VARCHAR2(128)`	`NOT NULL`	Schema in which the master table or the master materialized view was created
`MASTER`	`VARCHAR2(128)`	`NOT NULL`	Name of the master table or the master materialized view
`MVIEW_LAST_REFRESH_TIME`	`DATE`	`NOT NULL`	Date when the materialized view based on the master was last refreshed
`MVIEW_ID`	`NUMBER(38)`		Unique identifier of the materialized view that is based on the master

See Also

- "DBA_BASE_TABLE_MVIEWS"
- "USER_BASE_TABLE_MVIEWS"

3.130 ALL_BLOCKCHAIN_ROW_VERSION_COLS

`ALL_BLOCKCHAIN_ROW_VERSION_COLS` displays information about row versioned columns in the blockchain tables accessible to the current user.

Related Views

- `DBA_BLOCKCHAIN_ROW_VERSION_COLS` displays information about row versioned columns in all blockchain tables in the database.
- `USER_BLOCKCHAIN_ROW_VERSION_COLS` displays information about row versioned columns in the blockchain tables owned by the current user.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Schema containing the blockchain table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the blockchain table
ROW_VERSION_NAME	VARCHAR2(128)	NOT NULL	Name of the row version
USER_CHAIN	VARCHAR2(3)		Indicates whether row versioning with user chains is enabled for the blockchain table (YES) or not (NO)
KEYCOL1_NAME	VARCHAR2(128)	NOT NULL	Name of version key column 1
KEYCOL2_NAME	VARCHAR2(128)		Name of version key column 2 Null if only one version key column is specified for the row version
KEYCOL3_NAME	VARCHAR2(128)		Name of version key column 3 Null if only one or two version key columns are specified for the row version

Note

This view is available starting with Oracle AI Database 26ai.

See Also

- "DBA_BLOCKCHAIN_ROW_VERSION_COLS"
- "USER_BLOCKCHAIN_ROW_VERSION_COLS"

3.131 ALL_BLOCKCHAIN_ROW_VERSION_HISTORY

ALL_BLOCKCHAIN_ROW_VERSION_HISTORY provides a history of row versions in the blockchain tables accessible to the current user.

This view is populated for a blockchain table with a row version only when rows are purged from that blockchain table. For each different value of the PDB_GUID and KEYCOL*n*_VALUE columns, information about only the youngest purged row is kept in the view.

Related Views

- DBA_BLOCKCHAIN_ROW_VERSION_HISTORY provides a history of row versions in all blockchain tables in the database.
- USER_BLOCKCHAIN_ROW_VERSION_HISTORY provides a history of row versions in the blockchain tables owned by the current user. This view does not display the SCHEMA_NAME column.

Column	Datatype	NULL	Description
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Schema containing the blockchain table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the blockchain table
ROW_VERSION_NAME	VARCHAR2(128)	NOT NULL	Name of the row version

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PDB_GUID	RAW(16)		Global unique identifier of the pluggable database that inserted the row before any GoldenGate processes might have replicated the row to another database
KEYCOL1_VALUE	VARCHAR2(400)		Value associated with version key column 1
KEYCOL2_VALUE	VARCHAR2(400)		Value associated with version key column 2 Null if only one version key column is specified for the row version
KEYCOL3_VALUE	VARCHAR2(400)		Value associated with version key column 3 Null if only one or two version key columns are specified for the row version
VERSION_NUMBER	NUMBER		Row version number
USER_CHAIN_HASH	RAW(2000)		User chain cryptographic hash
ROW_CREATE_TIME	TIMESTAMP(6) WITH TIME ZONE		Date and time at which the row version was created
INST_ID	NUMBER		Identifier of any instance using a distributed or XA transaction to append to the row version history
TRAN_ID	VARCHAR2(22)		Identifier of any distributed transaction branch that is appending to the row version history

Note

This view is available starting with Oracle AI Database 26ai.

See Also

- "DBA_BLOCKCHAIN_ROW_VERSION_HISTORY"

3.132 ALL_BLOCKCHAIN_TABLE_CHAINS

ALL_BLOCKCHAIN_TABLE_CHAINS displays system chain information for the blockchain tables accessible to the current user.

Related Views

- DBA_BLOCKCHAIN_TABLE_CHAINS displays system chain information for all blockchain tables in the database.
- USER_BLOCKCHAIN_TABLE_CHAINS displays system chain information for the blockchain tables owned by the current user. This view does not display the SCHEMA_NAME column.

Column	Datatype	NULL	Description
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Name of the schema containing the blockchain table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Blockchain table name

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PDB_GUID	RAW(16)		Global unique identifier of the pluggable database that can insert rows into the chain
INSTANCE_ID	NUMBER	NOT NULL	Identifier of the instance on the PDB that can insert rows into the chain
CHAIN_ID	NUMBER	NOT NULL	Chain ID number By default, chains are numbered from 0 to 31.
EPOCH_NUMBER	NUMBER		Epoch number for this section of the chain
HASH_DATA_FMT_VER	NUMBER		Hash data format version for this section of the chain
MIN_SEQ_NUMBER	NUMBER		Smallest sequence number in this section of the chain
MAX_SEQ_NUMBER	NUMBER		Largest sequence number in this section of the chain
LAST_CREATE_TIME	TIMESTAMP(6) WITH TIME ZONE		Time at which the last row was added to this section of the chain
TRAN_ID	VARCHAR2(22)		Identifier of any distributed transaction that is appending a row to the chain
DELETED_SEQ_NUM	NUMBER		Largest sequence number for rows in the chain that have been deleted
DELETED_ROW_HASH	RAW(2000)		Cryptographic hash that was stored in the row of the chain with sequence number DELETED_SEQ_NUM
LAST_ROW_HASH	RAW(2000)		Cryptographic hash stored in the last row in this section of the chain with sequence number MAX_SEQ_NUMBER

Note

This view is available starting with Oracle AI Database 26ai.

3.133 ALL_BLOCKCHAIN_TABLE_EPOCHS

ALL_BLOCKCHAIN_TABLE_EPOCHS displays epoch information for the blockchain tables accessible to the current user.

Related Views

- DBA_BLOCKCHAIN_TABLE_EPOCHS displays epoch information for all blockchain tables in the database.
- USER_BLOCKCHAIN_TABLE_EPOCHS displays epoch information for the blockchain tables owned by the current user. This view does not display the SCHEMA_NAME column.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Name of the schema containing the blockchain table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Blockchain table name
EPOCH_NUMBER	NUMBER		Epoch number
EPOCH_NAME	VARCHAR2(11)		Epoch name describes the reason for the epoch and is one of the following values: • CREATE • IMPORT • ADD COLUMN • DROP COLUMN
PDB_GUID	RAW(16)		Global unique identifier of the pluggable database where the blockchain table epoch was created
HASH_ALGORITHM	VARCHAR2(8)		Algorithm used for computing the cryptographic hash on each row produced in the epoch The value of this column is always SHA2_512.
HASH_DATA_FORMAT_VERSION	NUMBER		Hash data format version for the epoch
START_TIME	TIMESTAMP(6) WITH TIME ZONE		Time at which the epoch was created

Note

This view is available starting with Oracle AI Database 26ai.

3.134 ALL_BLOCKCHAIN_TABLE_HASH_COL_ORDER

ALL_BLOCKCHAIN_TABLE_HASH_COL_ORDER displays information about columns used to compute the cryptographic hash in the blockchain tables accessible to the current user.

Related Views

- DBA_BLOCKCHAIN_TABLE_HASH_COL_ORDER displays information about columns used to compute the cryptographic hash in all blockchain tables in the database.
- USER_BLOCKCHAIN_TABLE_HASH_COL_ORDER displays information about columns used to compute the cryptographic hash in the blockchain tables owned by the current user. This view does not display the SCHEMA_NAME column.

Column	Datatype	NULL	Description
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Name of the schema containing the blockchain table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Blockchain table name

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
EPOCH_NUMBER	NUMBER		Epoch number
COLUMN_NAME	VARCHAR2(128)		Name of the user column or hidden column
COLUMN_POSITION	NUMBER		Order in which the column is hashed
INTERNAL_COLUMN_ID	NUMBER		Internal column ID
COLUMN_DATA_TYPE	VARCHAR2(106)		Data type of the user column or hidden column

Note

This view is available starting with Oracle AI Database 26ai.

3.135 ALL_BLOCKCHAIN_TABLES

ALL_BLOCKCHAIN_TABLES describes the blockchain tables accessible to the current user.

Related Views

- DBA_BLOCKCHAIN_TABLES describes all blockchain tables in the database.
- USER_BLOCKCHAIN_TABLES describes the blockchain tables owned by the current user. This view does not display the SCHEMA_NAME column.

Column	Datatype	NULL	Description
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	The schema containing the blockchain table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the blockchain table
ROW_RETENTION	NUMBER		Row retention period for the blockchain table, that is, the minimum number of days a row must be retained and cannot be deleted after it is inserted into the table If the value of this column is NULL, then rows can never be deleted from the table.
ROW_RETENTION_LOCKED	VARCHAR2(3)		Indicates whether the row retention period for the blockchain table is locked. Possible values: • YES: The row retention period is locked. You cannot change the row retention period • NO: The row retention period is not locked. You can change the row retention period to a value higher than the current value with the SQL statement ALTER TABLE … NO DELETE UNTIL *n* DAYS AFTER INSERT

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
TABLE_INACTIVITY_RETENTION	NUMBER		Number of days for which the blockchain table must be inactive before it can be dropped, that is, the number of days that must pass after the most recent row insertion before the table can be dropped A table with no rows can be dropped at any time, regardless of this column value.
HASH_ALGORITHM	VARCHAR2(8)		Algorithm used for computing the cryptographic hash for each table row
TABLE_VERSION	VARCHAR2(7)		Blockchain table version. Possible values: • V1 • V2
CURRENT_EPOCH	NUMBER		Current epoch number for the blockchain table
MAX_SYSTEM_CHAINS	NUMBER		Number of system chains in each database instance that can link rows with a cryptographic hash
DELETE_TIME	TIMESTAMP(6) WITH TIME ZONE		Youngest threshold used to delete rows in the blockchain table

3.136 ALL_CAPTURE

ALL_CAPTURE displays information about the capture processes that enqueue the captured changes into queues accessible to the current user.

Related View

DBA_CAPTURE displays information about all capture processes in the database.

Column	Datatype	NULL	Description
CAPTURE_NAME	VARCHAR2(128)	NOT NULL	Name of the capture process
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue used for staging captured changes
QUEUE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the queue used for staging captured changes
RULE_SET_NAME	VARCHAR2(128)		Name of the positive rule set used by the capture process for filtering
RULE_SET_OWNER	VARCHAR2(128)		Owner of the positive rule set
CAPTURE_USER	VARCHAR2(128)		Current user who is enqueuing captured messages
START_SCN	NUMBER		System change number (SCN) from which the capture process will start to capture changes. START_SCN is only modified as the result of an ALTER_CAPTURE statement or if the FIRST_SCN moves beyond the existing START_SCN.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
STATUS	VARCHAR2(8)		Status of the capture process: • DISABLED • ENABLED • ABORTED
CAPTURED_SCN	NUMBER		System change number (SCN) of the last redo log record scanned
APPLIED_SCN	NUMBER		System change number (SCN) of the most recent message dequeued by the relevant apply processes. All changes below this SCN have been dequeued by all apply processes that apply changes captured by this capture process.
USE_DATABASE_LINK	VARCHAR2(3)		Indicates whether the source database name is used as the database link to connect to the source database from the downstream database (YES) or not (NO). If the capture process was created at the source database, then this column will be NULL.
FIRST_SCN	NUMBER		System change number (SCN) from which the capture process can be restarted. FIRST_SCN indicates the lowest SCN to which the capture can be repositioned.
SOURCE_DATABASE	VARCHAR2(128)		Global name of the source database
SOURCE_DBID	NUMBER		Database ID of the source database
SOURCE_RESETLOGS_SCN	NUMBER		Resetlogs system change number (SCN) of the source database
SOURCE_RESETLOGS_TIME	NUMBER		Resetlogs time of the source database
LOGMINER_ID	NUMBER		Session ID of the Oracle LogMiner session associated with the capture process
NEGATIVE_RULE_SET_NAME	VARCHAR2(128)		Name of the negative rule set used by the capture process for filtering
NEGATIVE_RULE_SET_OWNER	VARCHAR2(128)		Owner of the negative rule set used by the capture process for filtering
MAX_CHECKPOINT_SCN	NUMBER		System change number (SCN) at which the last checkpoint was taken by the capture process
REQUIRED_CHECKPOINT_SCN	NUMBER		Lowest checkpoint SCN for which the capture process requires redo information. **Note:** This SCN value does not necessarily correspond with a checkpoint SCN value.
LOGFILE_ASSIGNMENT	VARCHAR2(8)		Logfile assignment type for the capture process: • IMPLICIT • EXPLICIT
STATUS_CHANGE_TIME	DATE		Time that the STATUS of the capture process was changed
ERROR_NUMBER	NUMBER		Error number if the capture process was terminated
ERROR_MESSAGE	VARCHAR2(4000)		Error message if the capture process was terminated
VERSION	VARCHAR2(64)		Version number of the capture process
CAPTURE_TYPE	VARCHAR2(10)		Type of the capture process: • DOWNSTREAM • LOCAL
LAST_ENQUEUED_SCN	NUMBER		Last enqueued system change number (SCN)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
CHECKPOINT_RETENTION_TIME	NUMBER		Checkpoint retention time **Note:** When the checkpoint retention time for a capture process is set to INFINITE, then the value displayed in this column is 4294967295.
START_TIME	TIMESTAMP(6)		Time from which the capture process will start to capture changes. START_TIME is related to START_SCN and can only be modified by an ALTER_CAPTURE statement. You can modify either START_SCN or START_TIME, but not both at the same time.
PURPOSE	VARCHAR2(18)		Purpose of the capture process: • GoldenGate Capture - A capture process configured using Oracle GoldenGate Extract in integrated capture mode • XStream Out - A capture process in an XStream Out configuration • AUDIT VAULT - A capture process in an audit vault configuration
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database
CLIENT_NAME	VARCHAR2(4000)		Client name of the capture process. This is the outbound name for XStream Out, and the extract name for GoldenGate.
CLIENT_STATUS	VARCHAR2(8)		Status of the client process: • DISABLED - For XStream Out if the outbound server is not running; for GoldenGate if the capture process is not running • DETACHED - For XStream Out if the outbound server is running, but the XStream client application is not attached to it; For GoldenGate if the capture process is running, but the extract process is not attached to it • ATTACHED - For XStream out if the outbound server is running and the XStream client application is attached to it; For GoldenGate if the capture process is running and the extract process is attached to it • ABORTED - For XStream out if the outbound server became disabled because it encountered an error; for GoldenGate if the capture process became disabled because it encountered an error
OLDEST_SCN	NUMBER		Oldest SCN of the transactions currently being processed
FILTERED_SCN	NUMBER		SCN of the low watermark transaction processed
USE_SHARED_CAPTURE	VARCHAR2(3)		Reserved for future use
SHARED_CAPTURE_NAME	VARCHAR2(128)		Reserved for future use
CONVERSION_STATE	VARCHAR2(34)		Reserved for future use
CONVERSION_SCN	NUMBER		Reserved for future use
ALT_LOGMNR_SID	NUMBER		Reserved for future use

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.137 ALL_CAPTURE_EXTRA_ATTRIBUTES

ALL_CAPTURE_EXTRA_ATTRIBUTES displays information about the extra attributes for the capture processes accessible to the current user.

Related View

DBA_CAPTURE_EXTRA_ATTRIBUTES displays information about the extra attributes for all capture processes in the database.

Column	Datatype	NULL	Description
CAPTURE_NAME	VARCHAR2(128)	NOT NULL	Name of the capture process
ATTRIBUTE_NAME	VARCHAR2(128)	NOT NULL	Name of the extra attribute
INCLUDE	VARCHAR2(3)		Indicates whether the extra attribute is included (YES) or not (NO)
ROW_ATTRIBUTE	VARCHAR2(3)		Indicates whether the extra attribute is a row LCR attribute (YES) or not (NO)
DDL_ATTRIBUTE	VARCHAR2(3)		Indicates whether the extra attribute is a DDL LCR attribute (YES) or not (NO)

See Also

"DBA_CAPTURE_EXTRA_ATTRIBUTES"

3.138 ALL_CAPTURE_PARAMETERS

ALL_CAPTURE_PARAMETERS displays information about the parameters for the capture processes that enqueue the captured changes into queues accessible to the current user.

Related View

DBA_CAPTURE_PARAMETERS displays information about the parameters for all capture processes in the database.

Column	Datatype	NULL	Description
CAPTURE_NAME	VARCHAR2(128)	NOT NULL	Name of the capture process
PARAMETER	VARCHAR2(128)	NOT NULL	Name of the parameter
VALUE	VARCHAR2(4000)		Parameter value

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SET_BY_USER	VARCHAR2(3)		Indicates whether the parameter value was set by the user (YES) or was not set by the user (NO). If NO, then the parameter is set to its default value. If YES, then the parameter may or may not be set to its default value.
SOURCE_DATABASE	VARCHAR2(128)		Global name of the container for which the capture parameter is defined

See Also

"DBA_CAPTURE_PARAMETERS"

3.139 ALL_CAPTURE_PREPARED_DATABASE

ALL_CAPTURE_PREPARED_DATABASE displays information about when the local database was prepared for instantiation. If the local database was not prepared for instantiation, then this view contains no rows.

Related View

DBA_CAPTURE_PREPARED_DATABASE displays information about when the local database was prepared for instantiation.

Column	Datatype	NULL	Description
TIMESTAMP	DATE		Date and time at which the local database was ready to be instantiated
SUPPLEMENTAL_LOG_DATA_PK	VARCHAR2(8)		Status of database-level PRIMARY KEY COLUMNS supplemental logging: • IMPLICIT • EXPLICIT • NO
SUPPLEMENTAL_LOG_DATA_UI	VARCHAR2(8)		Status of database-level UNIQUE INDEX COLUMNS supplemental logging: • IMPLICIT • EXPLICIT • NO
SUPPLEMENTAL_LOG_DATA_FK	VARCHAR2(8)		Status of database-level FOREIGN KEY COLUMNS supplemental logging: • IMPLICIT • EXPLICIT • NO
SUPPLEMENTAL_LOG_DATA_ALL	VARCHAR2(8)		Status of database-level ALL COLUMNS supplemental logging: • IMPLICIT • EXPLICIT • NO

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.140 ALL_CAPTURE_PREPARED_SCHEMAS

ALL_CAPTURE_PREPARED_SCHEMAS displays information about the schemas prepared for instantiation that are accessible to the current user at the local database.

Related View

DBA_CAPTURE_PREPARED_SCHEMAS displays information about all schemas prepared for instantiation at the local database.

Column	Datatype	NULL	Description
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Name of the schema that is ready to be instantiated
TIMESTAMP	DATE		Date and time at which the schema was ready to be instantiated
SUPPLEMENTAL_LOG_DATA_PK	VARCHAR2(8)		Status of schema-level PRIMARY KEY COLUMNS supplemental logging: • IMPLICIT • EXPLICIT • NO
SUPPLEMENTAL_LOG_DATA_UI	VARCHAR2(8)		Status of schema-level UNIQUE INDEX COLUMNS supplemental logging: • IMPLICIT • EXPLICIT • NO
SUPPLEMENTAL_LOG_DATA_FK	VARCHAR2(8)		Status of schema-level FOREIGN KEY COLUMNS supplemental logging: • IMPLICIT • EXPLICIT • NO
SUPPLEMENTAL_LOG_DATA_ALL	VARCHAR2(8)		Status of schema-level ALL COLUMNS supplemental logging: • IMPLICIT • EXPLICIT • NO

> **See Also**

3.141 ALL_CAPTURE_PREPARED_TABLES

ALL_CAPTURE_PREPARED_TABLES displays information about the tables prepared for instantiation that are accessible to the current user at the local database.

Related View

DBA_CAPTURE_PREPARED_TABLES displays information about all tables prepared for instantiation at the local database.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table that is ready to be instantiated
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table that is ready to be instantiated
SCN	NUMBER	NOT NULL	Smallest system change number (SCN) for which the table can be instantiated
TIMESTAMP	DATE		Date and time at which the table was ready to be instantiated
SUPPLEMENTAL_LOG_DATA_PK	VARCHAR2(8)		Status of table-level PRIMARY KEY COLUMNS supplemental logging: • IMPLICIT • EXPLICIT • NO
SUPPLEMENTAL_LOG_DATA_UI	VARCHAR2(8)		Status of table-level UNIQUE INDEX COLUMNS supplemental logging: • IMPLICIT • EXPLICIT • NO
SUPPLEMENTAL_LOG_DATA_FK	VARCHAR2(8)		Status of table-level FOREIGN KEY COLUMNS supplemental logging: • IMPLICIT • EXPLICIT • NO
SUPPLEMENTAL_LOG_DATA_ALL	VARCHAR2(8)		Status of table-level ALL COLUMNS supplemental logging: • IMPLICIT • EXPLICIT • NO

3.142 ALL_CATALOG

ALL_CATALOG displays the tables, clusters, views, synonyms, and sequences accessible to the current user.

Related Views

- DBA_CATALOG displays all tables, clusters, views, synonyms, and sequences in the entire database.
- USER_CATALOG displays the tables, clusters, views, synonyms, and sequences in the current user's schema. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the TABLE, CLUSTER, VIEW, SYNONYM, SEQUENCE, or UNDEFINED
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the TABLE, CLUSTER, VIEW, SYNONYM, SEQUENCE, or UNDEFINED
TABLE_TYPE	VARCHAR2(11)		Type of the TABLE, CLUSTER, VIEW, SYNONYM, SEQUENCE, or UNDEFINED

See Also

- "DBA_CATALOG"

3.143 ALL_CERTIFICATES

ALL_CERTIFICATES displays the certificates accessible to the current user which are used for signature verification for blockchain tables.

Related Views

- DBA_CERTIFICATES displays all certificates in the database which are used for signature verification for blockchain tables.
- USER_CERTIFICATES displays the certificates added by the current user which are used for signature verification for blockchain tables. This view does not display the USER_NAME column.

Column	Datatype	NULL	Description
CERTIFICATE_ID	RAW(1000)	NOT NULL	ID for the certificate
USER_NAME	VARCHAR2(128)		User who added the certificate
DISTINGUISHED_NAME	VARCHAR2(2000)		Uniquely identifies the entity that owns the certificate
CERTIFICATE	BLOB		Contents of the certificate

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

3.144 ALL_CLUSTER_HASH_EXPRESSIONS

ALL_CLUSTER_HASH_EXPRESSIONS displays hash functions for all hash clusters accessible to the current user.

Related Views

- DBA_CLUSTER_HASH_EXPRESSIONS displays hash functions for all hash clusters in the database.
- USER_CLUSTER_HASH_EXPRESSIONS displays hash functions for all hash clusters owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cluster
CLUSTER_NAME	VARCHAR2(128)	NOT NULL	Name of the cluster
HASH_EXPRESSION	LONG		Text of the hash function of the hash cluster

See Also

- "DBA_CLUSTER_HASH_EXPRESSIONS"

3.145 ALL_CLUSTERING_DIMENSIONS

ALL_CLUSTERING_DIMENSIONS describes dimension tables associated with tables with an attribute clustering clause that the user owns or has system privileges for.

Related Views

- DBA_CLUSTERING_DIMENSIONS describes dimension tables associated with all tables with an attribute clustering clause in the database.
- USER_CLUSTERING_DIMENSIONS describes dimension tables associated with tables with an attribute clustering clause owned by the user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the attribute clustering table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute clustering table
DIMENSION_OWNER	VARCHAR2(128)	NOT NULL	Owner of the dimension table
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the dimension table

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.146 ALL_CLUSTERING_JOINS

`ALL_CLUSTERING_JOINS` describes joins to the dimension tables associated with tables with an attribute clustering clause the user owns or has system privileges for.

Related Views

- `DBA_CLUSTERING_JOINS` describes joins to the dimension tables associated with all tables with an attribute clustering clause in the database.
- `USER_CLUSTERING_JOINS` describes joins to the dimension tables associated with tables with an attribute clustering clause owned by the user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
`OWNER`	`VARCHAR2(128)`	`NOT NULL`	Owner of the attribute clustering table
`TABLE_NAME`	`VARCHAR2(128)`	`NOT NULL`	Name of the attribute clustering table
`TAB1_OWNER`	`VARCHAR2(128)`	`NOT NULL`	Table 1 owner of the join
`TAB1_NAME`	`VARCHAR2(128)`	`NOT NULL`	Table 1 name of the join
`TAB1_COLUMN`	`VARCHAR2(128)`	`NOT NULL`	Table 1 column name of the join
`TAB2_OWNER`	`VARCHAR2(128)`	`NOT NULL`	Table 2 owner of the join
`TAB2_NAME`	`VARCHAR2(128)`	`NOT NULL`	Table 2 name of the join
`TAB2_COLUMN`	`VARCHAR2(128)`	`NOT NULL`	Table 2 column name of the join

3.147 ALL_CLUSTERING_KEYS

`ALL_CLUSTERING_KEYS` describes clustering keys for tables with an attribute clustering clause accessible to the user.

Related Views

- `DBA_CLUSTERING_KEYS` describes clustering keys for all tables with an attribute clustering clause.
- `USER_CLUSTERING_KEYS` describes clustering keys for tables with an attribute clustering clause owned by the user.

Column	Datatype	NULL	Description
`OWNER`	`VARCHAR2(128)`	`NOT NULL`	Owner of the table on which the clustering clause is defined
`TABLE_NAME`	`VARCHAR2(128)`	`NOT NULL`	Name of the table on which the clustering clause is defined
`DETAIL_OWNER`	`VARCHAR2(128)`	`NOT NULL`	Owner of the detailed table contributing to the clustering keys
`DETAIL_NAME`	`VARCHAR2(128)`	`NOT NULL`	Name of the detailed table contributing to the clustering keys
`DETAIL_COLUMN`	`VARCHAR2(128)`	`NOT NULL`	Name of the detail column
`POSITION`	`NUMBER`	`NOT NULL`	Position of the column in the clustering clause
`GROUPID`	`NUMBER`	`NOT NULL`	Group ID of the column in the clustering clause

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.148 ALL_CLUSTERING_TABLES

`ALL_CLUSTERING_TABLES` describes tables with an attribute clustering clause that are accessible to the user.

Related Views

- `DBA_CLUSTERING_TABLES` describes all the tables with an attribute clustering clause.
- `USER_CLUSTERING_TABLES` describes the tables with an attribute clustering clause owned by the user.

Column	Datatype	NULL	Description
`OWNER`	`VARCHAR2(128)`	`NOT NULL`	Owner of the table
`TABLE_NAME`	`VARCHAR2(128)`	`NOT NULL`	Name of the table
`CLUSTERING_TYPE`	`VARCHAR2(11)`		Clustering type: • `INTERLEAVED` • `LINEAR`
`ON_LOAD`	`VARCHAR2(3)`		Indicates whether Oracle will cluster data on load (`YES`) or not (`NO`)
`ON_DATAMOVEMENT`	`VARCHAR2(3)`		Indicates whether Oracle will cluster data on data movement, for example, partition move (`YES`), or not (`NO`)
`VALID`	`VARCHAR2(3)`		Indicates if clustering is valid (`YES`) or not (`NO`). For clustering with dimension tables, it is required that the joins of the fact table to the dimensions is via primary key or unique key on the dimension table. Therefore, dimension join keys must have a valid primary key or unique key constraint. If the primary key or unique key constraint is not valid, then clustering will not occur. If there are no joins in the `CLUSTERING` clause, then the value of this column is `YES`.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
WITH_ZONEMAP	VARCHAR2(3)		Indicates if a zonemap was created with clustering (YES) or not (NO).
LAST_LOAD_CLST	TIMESTAMP(6)		Last time the clustering occurred on load
LAST_DATAMOVE_CLST	TIMESTAMP(6)		Last time the clustering occurred on data movement, for example, partition move

3.149 ALL_CLUSTERS

ALL_CLUSTERS describes all clusters accessible to the current user.

Related Views

- DBA_CLUSTERS describes all clusters in the database.
- USER_CLUSTERS describes all clusters owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cluster
CLUSTER_NAME	VARCHAR2(128)	NOT NULL	Name of the cluster
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the cluster
PCT_FREE	NUMBER		Minimum percentage of free space in a block
PCT_USED	NUMBER		Minimum percentage of used space in a block
KEY_SIZE	NUMBER		Estimated size of cluster key plus associated rows
INI_TRANS	NUMBER	NOT NULL	Initial number of transactions
MAX_TRANS	NUMBER	NOT NULL	Maximum number of transactions
INITIAL_EXTENT	NUMBER		Size of the initial extent in bytes
NEXT_EXTENT	NUMBER		Size of secondary extents in bytes

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
MIN_EXTENTS	NUMBER		Minimum number of extents allowed in the segment
MAX_EXTENTS	NUMBER		Maximum number of extents allowed in the segment
PCT_INCREASE	NUMBER		Percentage increase in extent size
FREELISTS	NUMBER		Number of process freelists allocated to this segment
FREELIST_GROUPS	NUMBER		Number of freelist groups allocated to this segment
AVG_BLOCKS_PER_KEY	NUMBER		Number of blocks in the table divided by number of cluster keys
CLUSTER_TYPE	VARCHAR2(5)		Type of the cluster: • INDEX - B*-Tree index • HASH - Hash
FUNCTION	VARCHAR2(15)		If the cluster is a hash cluster, the hash function
HASHKEYS	NUMBER		If the cluster is a hash cluster, the number of hash keys (hash buckets)
DEGREE	VARCHAR2(10)		Number of threads per instance for scanning the cluster, or DEFAULT
INSTANCES	VARCHAR2(10)		Number of instances across which the cluster is to be scanned , or DEFAULT
CACHE	VARCHAR2(5)		Indicates whether the cluster is to be cached in the buffer cache (Y) or not (N)
BUFFER_POOL	VARCHAR2(7)		Buffer pool to be used for cluster blocks: • DEFAULT • KEEP • RECYCLE • NULL
FLASH_CACHE	VARCHAR2(7)		Database Smart Flash Cache hint to be used for cluster blocks: • DEFAULT • KEEP • NONE Solaris and Oracle Linux functionality only.
CELL_FLASH_CACHE	VARCHAR2(7)		Cell flash cache hint to be used for cluster blocks: • DEFAULT • KEEP • NONE **See Also:** Oracle Exadata Storage Server Software documentation for more information
SINGLE_TABLE	VARCHAR2(5)		Indicates whether this is a single-table cluster (Y) or not (N)
DEPENDENCIES	VARCHAR2(8)		Indicates whether row-level dependency tracking is enabled (ENABLED) or disabled (DISABLED)

3.150 ALL_CODE_ROLE_PRIVS

ALL_CODE_ROLE_PRIVS describes all the roles that are associated with program units owned or accessible by the current user.

Related Views

- DBA_CODE_ROLE_PRIVS describes all the roles that are associated with program units in the database.
- USER_CODE_ROLE_PRIVS describes all the roles that are associated with program units owned by current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Username of the owner of the object
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object
OBJECT_TYPE	VARCHAR2(9)		Type of the object
ROLE	VARCHAR2(128)	NOT NULL	The role associated with the object

See Also

- "DBA_CODE_ROLE_PRIVS"
- "USER_CODE_ROLE_PRIVS"
- *Oracle AI Database Security Guide* for more information about granting and revoking roles to and from program units

3.151 ALL_COL_COMMENTS

ALL_COL_COMMENTS displays comments on the columns of the tables and views accessible to the current user.

Related Views

- DBA_COL_COMMENTS displays comments on the columns of all tables and views in the database.
- USER_COL_COMMENTS displays comments on the columns of the tables and views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the object
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column
COMMENTS	VARCHAR2(4000)		Comment on the column

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs • *n*: This value is used for rows containing data that originate in the container with the ID *n* (*n*=1 if the data originates in root)

3.152 ALL_COL_PENDING_STATS

ALL_COL_PENDING_STATS describes the pending statistics of the columns accessible to the current user.

Related Views

- DBA_COL_PENDING_STATS describes the pending statistics of all columns in the database.
- USER_COL_PENDING_STATS describes the pending statistics of the columns owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table
PARTITION_NAME	VARCHAR2(128)		Name of the partition
SUBPARTITION_NAME	VARCHAR2(128)		Name of the subpartition
COLUMN_NAME	VARCHAR2(128)		Name of the column
NUM_DISTINCT	NUMBER		Number of distinct values in the column
LOW_VALUE	RAW(32)		Low value in the column
HIGH_VALUE	RAW(32)		High value in the column
DENSITY	NUMBER		If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints. If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT.
NUM_NULLS	NUMBER		Number of NULLs in the column
AVG_COL_LEN	NUMBER		Average length of the column (in bytes)
SAMPLE_SIZE	NUMBER		Sample size used in analyzing the column
LAST_ANALYZED	DATE		Most recent date on which the column was analyzed

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.153 ALL_COL_PRIVS

ALL_COL_PRIVS describes the following types of grants:

- Column object grants for which the current user is the object owner, grantor, or grantee
- Column object grants for which an enabled role or PUBLIC is the grantee

Related Views

- DBA_COL_PRIVS describes all column object grants in the database.
- USER_COL_PRIVS describes the column object grants for which the current user is the object owner, grantor, or grantee.

Column	Datatype	NULL	Description
GRANTOR	VARCHAR2(128)		Name of the user who performed the grant
GRANTEE	VARCHAR2(128)		Name of the user or role to whom access was granted
TABLE_SCHEMA	VARCHAR2(128)		Schema of the object
TABLE_NAME	VARCHAR2(128)		Name of the object
COLUMN_NAME	VARCHAR2(128)		Name of the column
PRIVILEGE	VARCHAR2(40)		Privilege on the column: • INSERT • REFERENCES • UPDATE
GRANTABLE	VARCHAR2(3)		Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2(3)		Indicates whether the privilege grant was inherited from another container (YES) or not (NO)

3.154 ALL_COL_PRIVS_MADE

ALL_COL_PRIVS_MADE describes the column object grants for which the current user is the object owner or grantor.

Related View

USER_COL_PRIVS_MADE describes the column object grants for which the current user is the object owner. This view does not display the OWNER column.

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2(128)		Name of the user or role to whom access was granted
OWNER	VARCHAR2(128)		Owner of the object
TABLE_NAME	VARCHAR2(128)		Name of the object
COLUMN_NAME	VARCHAR2(128)		Name of the column
GRANTOR	VARCHAR2(128)		Name of the user who performed the grant
PRIVILEGE	VARCHAR2(40)		Privilege on the column: • INSERT • REFERENCES • UPDATE
GRANTABLE	VARCHAR2(3)		Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2(3)		Indicates whether the privilege grant was inherited from another container (YES) or not (NO)

3.155 ALL_COL_PRIVS_RECD

ALL_COL_PRIVS_RECD describes the following types of grants:

- Column object grants for which the current user is the grantee
- Column object grants for which an enabled role or PUBLIC is the grantee

Related View

USER_COL_PRIVS_RECD describes the column object grants for which the current user is the grantee. This view does not display the GRANTEE column.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2(128)		Name of the user or role to whom access was granted
OWNER	VARCHAR2(128)		Owner of the object
TABLE_NAME	VARCHAR2(128)		Name of the object
COLUMN_NAME	VARCHAR2(128)		Name of the column
GRANTOR	VARCHAR2(128)		Name of the user who performed the grant
PRIVILEGE	VARCHAR2(40)		Privilege on the column: • INSERT • REFERENCES • UPDATE
GRANTABLE	VARCHAR2(3)		Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
INHERITED	VARCHAR2(3)		Indicates whether the privilege grant was inherited from another container (YES) or not (NO)

3.156 ALL_COLL_TYPES

ALL_COLL_TYPES describes all named collection types (varrays and nested tables) accessible to the current user.

Related Views

- DBA_COLL_TYPES describes all named collection types in the database.
- USER_COLL_TYPES describes all named collection types owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the collection
TYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the collection
COLL_TYPE	VARCHAR2(128)	NOT NULL	Description of the collection, such as VARYING ARRAY, [nested] TABLE
UPPER_BOUND	NUMBER		For varrays only, maximum size
ELEM_TYPE_MOD	VARCHAR2(7)		Type modifier of the element
ELEM_TYPE_OWNER	VARCHAR2(128)		Owner of the type upon which the collection is based. This value is useful primarily for a user-defined type.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ELEM_TYPE_NAME	VARCHAR2(128)		Name of the data type or user-defined type upon which the collection is based
LENGTH	NUMBER		Length of CHAR elements or maximum length of VARCHAR or VARCHAR2 elements
PRECISION	NUMBER		Decimal precision of NUMBER or DECIMAL elements; binary precision of FLOAT elements
SCALE	NUMBER		Scale of NUMBER or DECIMAL elements
CHARACTER_SET_NAME	VARCHAR2(44)		Name of the character set (CHAR_CS | NCHAR_CS)
ELEM_STORAGE	VARCHAR2(7)		Obsolete column
NULLS_STORED	VARCHAR2(3)		Obsolete column
CHAR_USED	VARCHAR2(1)		Indicates whether the attribute uses BYTE length semantics (B) or CHAR length semantics (C). For NCHAR and NVARCHAR2 attribute types, this value is always C.

3.157 ALL_CONS_COLUMNS

ALL_CONS_COLUMNS describes columns that are accessible to the current user and that are specified in constraints.

Related Views

- DBA_CONS_COLUMNS describes all columns in the database that are specified in constraints.
- USER_CONS_COLUMNS describes columns that are owned by the current user and that are specified in constraints.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the constraint definition
CONSTRAINT_NAME	VARCHAR2(128)	NOT NULL	Name of the constraint definition If the constraint is inherited from a data use case domain specified for the column, a system-generated constraint name is displayed, not the constraint name specified in the data use case domain.
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table with the constraint definition

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
COLUMN_NAME	VARCHAR2(4000)		Name of the column or attribute of the object type column specified in the constraint definition **Note:** If you create a constraint on a user-defined REF column, the system creates the constraint on the attributes that make up the REF column. Therefore, the column names displayed in this view are the attribute names, with the REF column name as a prefix, in the following form: "REF_name"."attribute"
POSITION	NUMBER		Original position of the column or attribute in the definition of the object
DOMAIN_OWNER	VARCHAR2(128)		If the constraint is inherited from a data use case domain specified for the column, the owner of the data use case domain
DOMAIN_NAME	VARCHAR2(128)		If the constraint is inherited from a data use case domain specified for the column, the name of the data use case domain

See Also

- "DBA_CONS_COLUMNS"
- "USER_CONS_COLUMNS"

3.158 ALL_CONS_OBJ_COLUMNS

ALL_CONS_OBJ_COLUMNS displays information about the types that object columns (or attributes) or collection elements have been constrained to, in the tables accessible to the current user.

Related Views

- DBA_CONS_OBJ_COLUMNS displays information about the types that object columns (or attributes) or collection elements have been constrained to, in all tables in the database.
- USER_CONS_OBJ_COLUMNS displays information about the types that object columns (or attributes) or collection elements have been constrained to, in the tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table containing the object column or attribute
COLUMN_NAME	VARCHAR2(4000)		Fully qualified name of the object column or attribute
CONS_TYPE_OWNER	VARCHAR2(128)		Owner of the type that the column (or element) is constrained to
CONS_TYPE_NAME	VARCHAR2(128)		Name of the type that the column (or element) is constrained to

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
CONS_TYPE_ONLY	VARCHAR2(15)		Indicates whether the column (or element) is constrained to ONLY type (Y) or not (N)

See Also

- "DBA_CONS_OBJ_COLUMNS"
- "USER_CONS_OBJ_COLUMNS"

3.159 ALL_CONSTRAINTS

ALL_CONSTRAINTS describes constraint definitions on tables accessible to the current user.

Related Views

- DBA_CONSTRAINTS describes all constraint definitions in the database.
- USER_CONSTRAINTS describes constraint definitions on tables in the current user's schema.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the constraint definition
CONSTRAINT_NAME	VARCHAR2(128)		Name of the constraint definition If the constraint is defined in a data use case domain, this column displays a system-generated constraint name. The constraint name specified in the data use case domain is displayed in DOMAIN_CONSTRAINT_NAME.
CONSTRAINT_TYPE	VARCHAR2(1)		Type of the constraint definition: • C - Check constraint on a table • P - Primary key • U - Unique key • R - Referential integrity • V - With check option, on a view • O - With read only, on a view • H - Hash expression • F - Constraint that involves a REF column • S - Supplemental logging
TABLE_NAME	VARCHAR2(128)		Name associated with the table (or view) with the constraint definition
SEARCH_CONDITION	LONG		Text of search condition for a check constraint. This column returns the correct value only when the row originates from the current container.
SEARCH_CONDITION_VC	VARCHAR2(4000)		Text of search condition for a check constraint. This column may truncate the search condition.
R_OWNER	VARCHAR2(128)		Owner of the table referred to in a referential constraint
R_CONSTRAINT_NAME	VARCHAR2(128)		Name of the unique constraint definition for the referenced table
DOMAIN_OWNER	VARCHAR2(128)		If the constraint is inherited from a data use case domain, the owner of the data use case domain

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DOMAIN_NAME	VARCHAR2(128)		If the constraint is inherited from a data use case domain, the name of the data use case domain
DOMAIN_CONSTRAINT_NAME	VARCHAR2(128)		If the constraint is inherited from a data use case domain, the name of the constraint definition, as specified in the data use case domain
DELETE_RULE	VARCHAR2(9)		Delete rule for a referential constraint: • CASCADE • SET NULL • NO ACTION
STATUS	VARCHAR2(8)		Enforcement status of the constraint: • ENABLED • DISABLED
DEFERRABLE	VARCHAR2(14)		Indicates whether the constraint is deferrable (DEFERRABLE) or not (NOT DEFERRABLE)
DEFERRED	VARCHAR2(9)		Indicates whether the constraint was initially deferred (DEFERRED) or not (IMMEDIATE)
VALIDATED	VARCHAR2(13)		When STATUS = ENABLED, possible values are: • VALIDATED - All data obeys the constraint (that is, the existing data in the table was validated when the constraint was enabled, as well as any subsequent data entered into the table) • NOT VALIDATED - All data may not obey the constraint (that is, the existing data in the table was not validated when the constraint was enabled, but subsequent data entered into the table was validated) When STATUS = DISABLED, possible values are: • VALIDATED - All data obeys the constraint, but the unique index on the constraint has been dropped. This setting is useful in data warehousing environments, but has some restrictions. Refer to *Oracle AI Database Data Warehousing Guide* for more information on this setting. • NOT VALIDATED - All data may not obey the constraint
GENERATED	VARCHAR2(14)		Indicates whether the name of the constraint is user-generated (USER NAME) or system-generated (GENERATED NAME) If the constraint is defined in a data use case domain, the value of this column is always GENERATED NAME and applies to the system-generated name for the constraint (CONSTRAINT_NAME), not the user-specified name for the constraint (DOMAIN_CONSTRAINT_NAME).
BAD	VARCHAR2(3)		Indicates whether this constraint specifies a century in an ambiguous manner (BAD) or not (NULL). To avoid errors resulting from this ambiguity, rewrite the constraint using the TO_DATE function with a four-digit year. **See Also:** the TO_DATE function in *Oracle AI Database SQL Language Reference* and *Oracle AI Database Development Guide*

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
RELY	VARCHAR2(4)		When VALIDATED = NOT VALIDATED, this column indicates whether the constraint is to be taken into account for query rewrite (RELY) or not (NULL). When VALIDATED = VALIDATED, this column is not meaningful. **See Also:** *constraints* in *Oracle AI Database SQL Language Reference*
PRECHECK	VARCHAR2(10)		Indicates whether the constraint is a precheckable JSON constraint (PRECHECK) or not (NOPRECHECK)
LAST_CHANGE	DATE		When the constraint was last enabled or disabled
INDEX_OWNER	VARCHAR2(128)		Name of the user owning the index
INDEX_NAME	VARCHAR2(128)		Name of the index (only shown for unique and primary-key constraints)
INVALID	VARCHAR2(7)		Indicates whether the constraint is invalid (INVALID) or not (NULL)
VIEW_RELATED	VARCHAR2(14)		Indicates whether the constraint depends on a view (DEPEND ON VIEW) or not (NULL)
ORIGIN_CON_ID	VARCHAR2(256)		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root)

3.160 ALL_CONTEXT

ALL_CONTEXT describes all context namespaces in the current session for which attributes and values have been specified using the DBMS_SESSION.SET_CONTEXT procedure. This view does not display the TYPE and ORIGIN_CON_ID columns.

Related View

DBA_CONTEXT describes all context namespaces defined in the database, regardless whether any attributes have been specified for them using the DBMS_SESSION.SET_CONTEXT procedure.

Column	Datatype	NULL	Description
NAMESPACE	VARCHAR2(128)	NOT NULL	Name of the context namespace
SCHEMA	VARCHAR2(128)	NOT NULL	Schema name of the designated package that can set attributes using this namespace

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PACKAGE	VARCHAR2(128)	NOT NULL	Package name of the designated package that can set attributes using this namespace

See Also

- "DBA_CONTEXT"
- *Oracle AI Database PL/SQL Packages and Types Reference* for more information about the DBMS_SESSION.SET_CONTEXT procedure

3.161 ALL_CREDENTIALS

ALL_CREDENTIALS lists all credentials visible to the user.

Related Views

- DBA_CREDENTIALS lists all credentials in the database.
- USER_CREDENTIALS lists credentials owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the credential
CREDENTIAL_NAME	VARCHAR2(128)	NOT NULL	Name of the credential
USERNAME	VARCHAR2(32767)		Name of the user that will be used to log in to the remote database or the remote or local operating system
WINDOWS_DOMAIN	VARCHAR2(30)		For a Windows target, the Windows domain to use when logging in
COMMENTS	VARCHAR2(4000)		Comments on the credential
ENABLED	VARCHAR2(5)		Indicates whether this credential is enabled (TRUE) or not (FALSE)

Note

DBMS_CREDENTIAL lists credentials that can be used to run external procedures, or by DBMS_SCHEDULER for remote or external jobs, or for storing or retrieving files from the operating system.

If a credential is disabled, then any of the actions above that attempts to use the credential will fail.

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.162 ALL_CUBE_ATTR_VISIBILITY

ALL_CUBE_ATTR_VISIBILITY describes the OLAP attributes visible for the dimensions, hierarchies, and levels accessible to the current user.

Related Views

- DBA_CUBE_ATTR_VISIBILITY describes all OLAP attributes visible for the dimensions, hierarchies, and levels in the database.
- USER_CUBE_ATTR_VISIBILITY describes the OLAP attributes visible for the dimensions, hierarchies, and levels owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the cube dimension
DIMENSION_NAME	VARCHAR2(128)		Name of a cube dimension (such as TIME)
ATTRIBUTE_NAME	VARCHAR2(128)		Name of an attribute of the dimension (such as LONG_DESCRIPTION or END_DATE)
HIERARCHY_NAME	VARCHAR2(128)		Name of a hierarchy for the dimension (such as CALENDAR)
LEVEL_NAME	VARCHAR2(128)		Name of the dimension level (such as MONTH)
FROM_TYPE	VARCHAR2(10)		Identifies the dimension type that the current row derives the attribute visibility from. Possible values: • DIMENSION - Derives the attribute visibility from itself. • HIERARCHY - Derives the attribute visibility from the VisibleAttributes explicitly set on the associated DIMENSION or itself. • DIM_LEVEL - Derives the attribute visibility from the VisibleAttributes explicitly set on the associated DIMENSION or itself. • HIER_LEVEL - Derives the attribute visibility from the VisibleAttributes explicitly set on the associated DIMENSION, HIERARCHY, DIM_LEVEL, or itself.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
TO_TYPE	VARCHAR2(10)		Identifies the dimension type for the current row. Possible values: • DIMENSION - When the TO_TYPE is DIMENSION, then only the DIMENSION_NAME is populated. • HIERARCHY - When the TO_TYPE is HIERARCHY, then only the DIMENSION_NAME and HIERARCHY_NAME are populated. • DIM_LEVEL - When the TO_TYPE is DIM_LEVEL, then only the DIMENSION_NAME and LEVEL_NAME are populated. • HIER_LEVEL - When the TO_TYPE is HIER_LEVEL, then only the HIERARCHY_NAME and LEVEL_NAME are populated.

- "DBA_CUBE_ATTR_VISIBILITY"
- "USER_CUBE_ATTR_VISIBILITY"

3.163 ALL_CUBE_ATTRIBUTES

ALL_CUBE_ATTRIBUTES describes the attributes for the OLAP cube dimensions accessible to the current user.

Related Views

- DBA_CUBE_ATTRIBUTES describes the attributes for all OLAP cube dimensions in the database.
- USER_CUBE_ATTRIBUTES describes the attributes for the OLAP cube dimensions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of a cube dimension (such as TIME)
ATTRIBUTE_NAME	VARCHAR2(128)	NOT NULL	Name of an attribute of the dimension (such as LONG_DESCRIPTION or END_DATE)
ATTRIBUTE_ID	NUMBER	NOT NULL	ID of the attribute of the dimension
TARGET_DIMENSION_NAME	VARCHAR2(128)		Name of the target dimension of the attribute
ATTRIBUTE_ROLE	VARCHAR2(17)		Special role this attribute plays; NULL if none: • SHORT_DESCRIPTION • LONG_DESCRIPTION • DESCRIPTION • TIME_SPAN • END_DATE
DESCRIPTION	NVARCHAR2(300)		Description of the attribute in the session language
ATTRIBUTE_GROUP_NAME	VARCHAR2(200)		Name of the attribute group

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DATA_TYPE	VARCHAR2(106)		Data type of the attribute, (such as VARCHAR2 or FLOAT)
DATA_LENGTH	NUMBER	NOT NULL	Length of a text data type
DATA_PRECISION	NUMBER		Precision of a numeric data type
DATA_SCALE	NUMBER		Scale of a numeric data type
CREATE_INDEX	VARCHAR2(3)		Create index flag of the OLAP attribute. Possible values: • YES: The attribute is represented in the AW as a relation. Setting CreateIndex="True" in the metadata guarantees that it will be represented in the AW as a relation. • NO: The attribute is not represented in the AW as a relation. Setting CreateIndex="False" in the metadata does not guarantee that it will be represented in the AW a a variable; the system will make that determination.
IS_MULTI_LINGUAL	VARCHAR2(3)		Shows the setting for the IsMultiLingual flag of the OLAP Atttribute. Possible values: • YES: The attribute is set as multilingual. Setting IsMultiLingual to True in the metadata means that the attribute can have a value per language instead of a single value. • NO: The attribute is not set as multilingual. Setting IsMultiLingual to False in the metadata means that the attribute has only one value, independent of language.

3.164 ALL_CUBE_BUILD_PROCESSES

ALL_CUBE_BUILD_PROCESSES describes the OLAP build processes and maintenance scripts accessible to the current user.

Related Views

- DBA_CUBE_BUILD_PROCESSES describes all OLAP build processes and maintenance scripts in the database.
- USER_CUBE_BUILD_PROCESSES describes the OLAP build processes and maintenance scripts owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the build process

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
BUILD_PROCESS_NAME	VARCHAR2(128)	NOT NULL	Name of the build process
BUILD_PROCESS_ID	NUMBER	NOT NULL	ID of the build process
BUILD_PROCESS	CLOB		Syntax of the build process
DESCRIPTION	NVARCHAR2(300)		Description of the build process in the session language

See Also

- "DBA_CUBE_BUILD_PROCESSES"
- "USER_CUBE_BUILD_PROCESSES"

3.165 ALL_CUBE_CALCULATED_MEMBERS

ALL_CUBE_CALCULATED_MEMBERS describes the calculated members for the OLAP cube dimensions accessible to the current user.

Related Views

- DBA_CUBE_CALCULATED_MEMBERS describes the calculated members for all OLAP cube dimensions in the database.
- USER_CUBE_CALCULATED_MEMBERS describes the calculated members for the OLAP cube dimensions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of a cube dimension
MEMBER_NAME	VARCHAR2(128)	NOT NULL	Name of a calculated member in the cube dimension
IS_CUSTOM_AGGREGATE	VARCHAR2(3)		Indicates whether the calculated member is a custom aggregate (YES) or not (NO)
STORAGE_TYPE	VARCHAR2(10)		Storage type of the calculated member: • DYNAMIC - Value of the member is calculated for a query • PRECOMPUTE - Value of the member is calculated and stored during data maintenance
EXPRESSION	CLOB		Expression used to generate the value of the calculated member

3.166 ALL_CUBE_DIM_LEVELS

ALL_CUBE_DIM_LEVELS describes the OLAP dimension levels accessible to the current user.

Related Views

- DBA_CUBE_DIM_LEVELS describes all OLAP dimension levels in the database.
- USER_CUBE_DIM_LEVELS describes the OLAP dimension levels owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of a dimension, such as CUSTOMER
LEVEL_NAME	VARCHAR2(128)	NOT NULL	Name of a level in the dimension, such as WAREHOUSE
LEVEL_ID	NUMBER	NOT NULL	ID of the dimension level
DESCRIPTION	NVARCHAR2(300)		Description of the dimension level in the session language

See Also

- "DBA_CUBE_DIM_LEVELS"
- "USER_CUBE_DIM_LEVELS"

3.167 ALL_CUBE_DIM_MODELS

ALL_CUBE_DIM_MODELS describes the models for the OLAP dimensions accessible to the current user.

Related Views

- DBA_CUBE_DIM_MODELS describes the models for all OLAP dimensions in the database.
- USER_CUBE_DIM_MODELS describes the models for the OLAP dimensions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of a cube dimension
MODEL_NAME	VARCHAR2(128)	NOT NULL	Name of a model for the cube dimension
MODEL_ID	NUMBER	NOT NULL	ID of the model
DESCRIPTION	NVARCHAR2(300)		Description of the model in the session language

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- "DBA_CUBE_DIM_MODELS"

3.168 ALL_CUBE_DIM_VIEW_COLUMNS

ALL_CUBE_DIM_VIEW_COLUMNS describes the columns of the relational views of the OLAP cube dimensions accessible to the current user.

Related Views

- DBA_CUBE_DIM_VIEW_COLUMNS describes the columns of the relational views of all OLAP cube dimensions in the database.
- USER_CUBE_DIM_VIEW_COLUMNS describes the columns of the relational views of the OLAP cube dimensions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the cube dimension
DIMENSION_NAME	VARCHAR2(128)		Name of a cube dimension, such as PRODUCT
VIEW_NAME	VARCHAR2(128)		Name of a view of the dimension, such as PRODUCT_VIEW
COLUMN_NAME	VARCHAR2(128)		Name of a column in the view, such as LONG_DESCRIPTION or WAREHOUSE_ID
COLUMN_TYPE	VARCHAR2(11)		Type of the column: • KEY - A key of the dimension view (that is, the dimension value itself) • LEVEL_NAME - Name of the level (if any) corresponding to a row in the view • DIM_ORDER - A column by which the results may be ordered (if present) • MEMBER_TYPE • ATTRIBUTE - An attribute owned by the dimension
OBJECT_NAME	VARCHAR2(128)		Name of the level or attribute represented in the column, such as LONG_DESCRIPTION or WAREHOUSE_ID

See Also

- "DBA_CUBE_DIM_VIEW_COLUMNS"
- "USER_CUBE_DIM_VIEW_COLUMNS"

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.169 ALL_CUBE_DIM_VIEWS

ALL_CUBE_DIM_VIEWS describes the relational views of the OLAP dimensions accessible to the current user.

Related Views

- DBA_CUBE_DIM_VIEWS describes the relational views of all OLAP dimensions in the database.
- USER_CUBE_DIM_VIEWS describes the relational views of the OLAP dimensions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of a cube dimension, such as PRODUCT
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of a view of the cube dimension, such as PRODUCT_VIEW

See Also

- "DBA_CUBE_DIM_VIEWS"
- "USER_CUBE_DIM_VIEWS"

3.170 ALL_CUBE_DIMENSIONALITY

ALL_CUBE_DIMENSIONALITY describes the dimension order for the OLAP cubes accessible to the current user.

Related Views

- DBA_CUBE_DIMENSIONALITY describes the dimension order for all OLAP cubes in the database.
- USER_CUBE_DIMENSIONALITY describes the dimension order for the OLAP cubes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube
CUBE_NAME	VARCHAR2(128)	NOT NULL	Name of a cube, such as UNITS_CUBE
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of a dimension of the cube, such as PRODUCT
DIMENSIONALITY_NAME	VARCHAR2(200)		The name of a dimensionality of the cube. For example, a cube dimensioned by the PRODUCT dimension can have a product dimension named PRODUCT_DIM.
DIMENSIONALITY_ID	NUMBER	NOT NULL	ID of the cube dimensionality
ORDER_NUM	NUMBER	NOT NULL	Order number of the dimension in the cube

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
IS_SPARSE	NUMBER		Indicates whether the dimension is sparse in the cube (1) or not sparse (0)
ET_ATTR_PREFIX	VARCHAR2(200)		Specifies the prefix that will be added to the column names in the Materialized Views to ensure uniqueness. If the user does not specify an ET_ATTR_PREFIX for any dimensions in a cube, then they default in the pattern D1_, D2_, and so on.

3.171 ALL_CUBE_DIMENSIONS

ALL_CUBE_DIMENSIONS describes the OLAP cube dimensions accessible to the current user.

Related Views

- DBA_CUBE_DIMENSIONS describes all OLAP cube dimensions in the database.
- USER_CUBE_DIMENSIONS describes the OLAP cube dimensions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of a cube dimension, such as TIME
DIMENSION_ID	NUMBER	NOT NULL	ID of the cube dimension
DIMENSION_TYPE	VARCHAR2(17)		Type of the OLAP cube dimension: • STANDARD • TIME
AW_NAME	VARCHAR2(128)		Name of the analytic workspace that contains the cube dimension, such as GLOBAL
DEFAULT_HIERARCHY_NAME	VARCHAR2(128)		Name of the default hierarchy for the cube dimension, such as FISCAL
DESCRIPTION	NVARCHAR2(300)		Description of the cube dimension in the session language
HIERARCHY_CONSISTENCY_RULE	VARCHAR2(200)		Hierarchy consistency rule of the OLAP cube dimension. Possible values: • CONSISTENT • STAR_CONSISTENT • SOLVE_CONSISTENT

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ADD_UNIQUE_KEY_PREFIX	VARCHAR2(3)		Add_Unique_Key_Prefix flag of the OLAP cube dimension. Possible values: • YES: This is the value if AddUniqueKeyPrefix="True" was set in the metadata. This tells the system to add the level name prefix to the dimension members. This should be done when a dimension member can have the same value across different levels, for example, New York (state) and New York (city). • NO: This is the value if AddUniqueKeyPrefix="True" was not set in the metadata.
CUSTOM_ORDER	CLOB		The textual representation of the sort orderby clause used to load dimension members into the AW

3.172 ALL_CUBE_HIER_LEVELS

ALL_CUBE_HIER_LEVELS describes the hierarchy levels for the OLAP cube dimensions accessible to the current user.

Related Views

- DBA_CUBE_HIER_LEVELS describes the hierarchy levels for all OLAP cube dimensions in the database.
- USER_CUBE_HIER_LEVELS describes the hierarchy levels for the OLAP cube dimensions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of a cube dimension, such as TIME
HIERARCHY_NAME	VARCHAR2(128)	NOT NULL	Name of a hierarchy for the dimension, such as CALENDAR
LEVEL_NAME	VARCHAR2(128)	NOT NULL	Name of the dimension level, such as MONTH
HIERARCHY_LEVEL_ID	NUMBER	NOT NULL	ID of the hierarchy level
ORDER_NUM	NUMBER	NOT NULL	Order number of the level within the hierarchy; 0 is the top level
DESCRIPTION	NVARCHAR2(300)		Description of the level in the session language

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.173 ALL_CUBE_HIER_VIEW_COLUMNS

ALL_CUBE_HIER_VIEW_COLUMNS describes the columns of the relational hierarchy views of the OLAP cube dimensions accessible to the current user.

Related Views

- DBA_CUBE_HIER_VIEW_COLUMNS describes the columns of the relational hierarchy views of all OLAP cube dimensions in the database.
- USER_CUBE_HIER_VIEW_COLUMNS describes the columns of the relational hierarchy views of the OLAP cube dimensions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the cube dimension
DIMENSION_NAME	VARCHAR2(128)		Name of a cube dimension, such as TIME
HIERARCHY_NAME	VARCHAR2(128)		Name of a hierarchy for the cube dimension, such as CALENDAR
VIEW_NAME	VARCHAR2(128)		Name of a view of the hierarchy, such as TIME_CALENDAR_VIEW
COLUMN_NAME	VARCHAR2(128)		Name of a column in the view, such as CALENDAR_QUARTER or PARENT
COLUMN_TYPE	VARCHAR2(11)		Type of the column: • KEY - A key of the hierarchy view (that is, the hierarchy value itself) • PARENT - Dimension value of the parent of the current row in the view (or NULL if no parent) • LEVEL_NAME - Name of the level (if any) corresponding to a row in the view • DEPTH - Depth in the hierarchy tree of the current row in the view • HIER_ORDER - A column by which the results may be ordered (if present) • MEMBER_TYPE • ATTRIBUTE - An attribute owned by the hierarchy • LEVEL - One of the level columns comprising the hierarchy
OBJECT_NAME	VARCHAR2(128)		Name of a level or attribute for the dimension

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.174 ALL_CUBE_HIER_VIEWS

ALL_CUBE_HIER_VIEWS describes the hierarchies for the OLAP cube dimensions accessible to the current user.

Related Views

- DBA_CUBE_HIER_VIEWS describes the hierarchies for all OLAP cube dimensions in the database.
- USER_CUBE_HIER_VIEWS describes the hierarchies for the OLAP cube dimensions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of a cube dimension, such as TIME
HIERARCHY_NAME	VARCHAR2(128)	NOT NULL	Name of a hierarchy for the cube dimension, such as CALENDAR
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of a view of the hierarchy, such as TIME_CALENDAR_VIEW

See Also

- "DBA_CUBE_HIER_VIEWS"

3.175 ALL_CUBE_HIERARCHIES

ALL_CUBE_HIERARCHIES describes the OLAP dimension hierarchies accessible to the current user.

Related Views

- DBA_CUBE_HIERARCHIES describes all OLAP dimension hierarchies in the database.
- USER_CUBE_HIERARCHIES describes the OLAP dimension hierarchies owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of a dimension, such as TIME

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
HIERARCHY_NAME	VARCHAR2(128)	NOT NULL	Name of a hierarchy for the dimension, such as CALENDAR
HIERARCHY_ID	NUMBER	NOT NULL	ID of the hierarchy
HIERARCHY_TYPE	VARCHAR2(5)		Type of the hierarchy: • LEVEL • VALUE
DESCRIPTION	NVARCHAR2(300)		Description of the hierarchy in the session language
IS_RAGGED	NUMBER		Indicates whether ragged hierarchies are permitted in subsequent builds. User dimensions that are enabled for materialized views and Time dimensions are set to 0. Builds then check the data for ragged hierarchies and fail if one is detected. When User dimensions are set to 1, the builds do not check for ragged hierarchies.
IS_SKIP_LEVEL	NUMBER		Indicates whether skip-level hierarchies are permitted in subsequent builds. User dimensions that are enabled for materialized views and Time dimensions are set to 0. Builds then check the data for skip-level hierarchies and fail if one is detected. When User dimensions are set to 1, the builds do not check for skip-level hierarchies.
REFRESH_MVIEW_NAME	VARCHAR2(200)		Name of the Refresh Materialized View associated with the hierarchy
CUSTOM_ORDER	CLOB		The textual representation of the sort orderby clause used to load dimension members of the hierarchy into the AW

3.176 ALL_CUBE_MEASURES

ALL_CUBE_MEASURES describes the measures for the OLAP cubes accessible to the current user.

Related Views

- DBA_CUBE_MEASURES describes the measures for all OLAP cubes in the database.
- USER_CUBE_MEASURES describes the measures for the OLAP cubes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube
CUBE_NAME	VARCHAR2(128)	NOT NULL	Name of a cube, such as UNITS_CUBE
MEASURE_NAME	VARCHAR2(128)	NOT NULL	Name of a measure in the cube, such as SALES

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
MEASURE_ID	NUMBER	NOT NULL	ID of a measure
OVERRIDE_SOLVE_SPEC	CLOB		Syntax text for the measure's consistent solve specification that overrides that of its cube
MEASURE_TYPE	VARCHAR2(7)		Type of the OLAP measure: • BASE - Base measures store the data • DERIVED - Derived measures calculate the data from base measures; also called calculated measures
EXPRESSION	CLOB		Expression that provides the values of the measure
DESCRIPTION	NVARCHAR2(300)		Description of the measure in the session language
DATA_TYPE	VARCHAR2(106)		Data type of the measure, such as NUMBER
DATA_LENGTH	NUMBER	NOT NULL	Length of a character data type
DATA_PRECISION	NUMBER		Precision of a numeric data type
DATA_SCALE	NUMBER		Scale of a numeric data type
LOOP_VAR_OVERRIDE	VARCHAR2(200)		The value that overrides the $LOOP_VAR property of the OLAP derived measure
LOOP_DENSE_OVERRIDE	VARCHAR2(200)		The value that overrides the $LOOP_DENSE property of the OLAP derived measure
LOOP_TYPE	VARCHAR2(200)		The $LOOP_TYPE property of the OLAP derived measure. Possible values: • INNER • OUTER • DENSE

3.177 ALL_CUBE_NAMED_BUILD_SPECS

ALL_CUBE_NAMED_BUILD_SPECS describes the OLAP cube named build specifications in the database that are accessible by the user.

Related Views

- DBA_CUBE_NAMED_BUILD_SPECS describes the OLAP cube named build specifications in the database.
- USER_CUBE_NAMED_BUILD_SPECS describes the OLAP cube named build specifications in the database that are owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the OLAP named build specification

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
CUBE_NAME	VARCHAR2(128)	NOT NULL	Name of the OLAP cube
NAMED_BUILD_SPEC	CLOB		Name of the OLAP cube named build specification

See Also

- "DBA_CUBE_NAMED_BUILD_SPECS"

3.178 ALL_CUBE_SUB_PARTITION_LEVELS

ALL_CUBE_SUB_PARTITION_LEVELS describes the OLAP secondary partition levels in the database that are accessible by the user.

Related Views

- DBA_CUBE_SUB_PARTITION_LEVELS describes the OLAP secondary partition levels in the database.
- USER_CUBE_SUB_PARTITION_LEVELS describes the OLAP secondary partition levels in the database that are owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the OLAP secondary partition level
CUBE_NAME	VARCHAR2(128)		Name of the OLAP cube
SUB_PARTITION_LEVEL_NAME	VARCHAR2(200)		Name of the secondary partition level of the OLAP cube
PRECOMPUTE_PERCENT	NUMBER		Precompute percent of the secondary partition level of the OLAP cube
PARTITION_DIMENSION_NAME	VARCHAR2(128)		Name of the cube dimension for which there is a secondary partition level on the OLAP cube
PARTITION_HIERARCHY_NAME	VARCHAR2(128)		Name of the hierarchy for which there is a secondary partition level on the OLAP cube
PARTITION_LEVEL_NAME	VARCHAR2(128)		Name of the hierarchy level for which there is a secondary partition level on the OLAP cube
SUB_PARTITION_LEVEL_ORDER	NUMBER		Order number of the secondary partition level on the OLAP cube

See Also

- "DBA_CUBE_SUB_PARTITION_LEVELS"

3.179 ALL_CUBE_VIEW_COLUMNS

ALL_CUBE_VIEW_COLUMNS describes the columns of the relational views of the OLAP cubes accessible to the current user.

Related Views

- DBA_CUBE_VIEW_COLUMNS describes the columns of relational views of all OLAP cubes in the database.
- USER_CUBE_VIEW_COLUMNS describes the columns of relational views of OLAP cubes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the cube
CUBE_NAME	VARCHAR2(128)		Name of a cube, such as UNITS_CUBE
VIEW_NAME	VARCHAR2(128)		Name of a view of the cube, such as PRODUCT_VIEW
COLUMN_NAME	VARCHAR2(128)		Name of a column in the view, such as DIM_KEY or LEVEL_NAME
COLUMN_TYPE	VARCHAR2(7)		Type of the column: • MEASURE • KEY
OBJECT_NAME	VARCHAR2(128)		Name of the measure or dimension represented in the column

See Also

- "DBA_CUBE_VIEW_COLUMNS"

3.180 ALL_CUBE_VIEWS

ALL_CUBE_VIEWS describes the relational views of the OLAP cubes accessible to the current user.

Related Views

- DBA_CUBE_VIEWS describes the relational views of all OLAP cubes in the database.
- USER_CUBE_VIEWS describes the relational views of the OLAP cubes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube
CUBE_NAME	VARCHAR2(128)	NOT NULL	Name of a cube, such as UNITS_CUBE
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of a view of the cube, such as UNITS_CUBE_VIEW

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

3.181 ALL_CUBES

ALL_CUBES describes the OLAP cubes accessible to the current user.

Related Views

- DBA_CUBES describes all OLAP cubes in the database.
- USER_CUBES describes the OLAP cubes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the cube
CUBE_NAME	VARCHAR2(128)	NOT NULL	Name of a cube, such as UNITS_CUBE
CUBE_ID	NUMBER	NOT NULL	ID of a cube
AW_NAME	VARCHAR2(128)		Name of the analytic workspace that contains the cube, such as GLOBAL
CONSISTENT_SOLVE_SPEC	CLOB		Default aggregation rules for the cube
DESCRIPTION	NVARCHAR2(300)		Description of the cube in the session language
SPARSE_TYPE	VARCHAR2(200)		Text value indicating the type of sparsity for the OLAP cube
PRECOMPUTE_CONDITION	CLOB		Condition syntax representing the precompute condition of the OLAP cube
PRECOMPUTE_PERCENT	NUMBER		Percentage of aggregate data values that are calculated and stored during data maintenance. If the cube is partitioned, then this percentage is for the bottom partitions.
PRECOMPUTE_PERCENT_TOP	NUMBER		Percentage of aggregate data values in the top partition that are calculated and stored during data maintenance
PARTITION_DIMENSION_NAME	VARCHAR2(128)		Name of the dimension used to partition the cube, such as TIME
PARTITION_HIERARCHY_NAME	VARCHAR2(128)		Name of the dimension hierarchy used to partition the cube, such as CALENDAR
PARTITION_LEVEL_NAME	VARCHAR2(128)		Name of the level used to partition the cube, such as QUARTER
REFRESH_MVIEW_NAME	VARCHAR2(200)		Name of the refresh materialized view for the OLAP cube
REWRITE_MVIEW_NAME	VARCHAR2(200)		Name of the rewrite materialized view for the OLAP cube
DEFAULT_BUILD_SPEC	CLOB		The default build specification for the OLAP cube

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
MEASURE_STORAGE	VARCHAR2(200)		The measure storage for the OLAP cube. Possible values: • INDEPENDENT • SHARED
SQL_CUBE_STORAGE_TYPE	CLOB		The SQL cube storage type for the OLAP cube. This value represents a SQL data type.
CUBE_STORAGE_TYPE	VARCHAR2(200)		The cube storage type for the OLAP cube. This value represents a DML data type.

- "DBA_CUBES"
- "USER_CUBES"

3.182 ALL_DB_LINKS

ALL_DB_LINKS describes the database links accessible to the current user.

Related Views

- DBA_DB_LINKS describes all database links in the database.
- USER_DB_LINKS describes the database links owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the database link
DB_LINK	VARCHAR2(128)	NOT NULL	Name of the database link
USERNAME	VARCHAR2(128)		Name of the user to be used when connecting to a remote database
CREDENTIAL_NAME	VARCHAR2(128)		Name of the credential to be used when connecting to a remote database
CREDENTIAL_OWNER	VARCHAR2(128)		Owner of the credential to be used when connecting to a remote database
HOST	VARCHAR2(2000)		Oracle Net connect string
CREATED	DATE	NOT NULL	Creation time of the database link
HIDDEN	VARCHAR2(3)		For internal use only
SHARD_INTERNAL	VARCHAR2(3)		Indicates whether the database link is used to support operations across sharded databases. Possible values: • YES: The database link is used and managed for to support sharded databases • NO: The database link is not used and managed to support sharded databases Users should not alter or delete database links that are used and managed to support sharded databases.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
VALID	VARCHAR2(3)		Indicates whether the database link is valid and usable. Possible values: • YES: The database link is valid and usable. • NO: The database link is invalid and unusable.
INTRA_CDB	VARCHAR2(3)		For internal use only

- "DBA_DB_LINKS"
- "USER_DB_LINKS"
- "DBA_DB_LINK_SOURCES"
- "DBA_EXTERNAL_SCN_ACTIVITY"

3.183 ALL_DEF_AUDIT_OPTS

ALL_DEF_AUDIT_OPTS contains default object-auditing options that will be applied when objects are created.

The output for each column takes one of the following forms:

- -/-: no default auditing
- S/-: auditing whenever successful
- -/S: auditing whenever not successful

Note

This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle AI Database 26ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle AI Database Security Guide* for more information about how this desupport works.

Column	Datatype	NULL	Description
ALT	VARCHAR2(3)		Auditing ALTER WHENEVER SUCCESSFUL / UNSUCCESSFUL
AUD	VARCHAR2(3)		Auditing AUDIT WHENEVER SUCCESSFUL / UNSUCCESSFUL
COM	VARCHAR2(3)		Auditing COMMENT WHENEVER SUCCESSFUL / UNSUCCESSFUL
DEL	VARCHAR2(3)		Auditing DELETE WHENEVER SUCCESSFUL / UNSUCCESSFUL
GRA	VARCHAR2(3)		Auditing GRANT WHENEVER SUCCESSFUL / UNSUCCESSFUL
IND	VARCHAR2(3)		Auditing INDEX WHENEVER SUCCESSFUL / UNSUCCESSFUL
INS	VARCHAR2(3)		Auditing INSERT WHENEVER SUCCESSFUL / UNSUCCESSFUL

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
LOC	VARCHAR2(3)		Auditing LOCK WHENEVER SUCCESSFUL / UNSUCCESSFUL
REN	VARCHAR2(3)		Auditing RENAME WHENEVER SUCCESSFUL / UNSUCCESSFUL
SEL	VARCHAR2(3)		Auditing SELECT WHENEVER SUCCESSFUL / UNSUCCESSFUL
UPD	VARCHAR2(3)		Auditing UPDATE WHENEVER SUCCESSFUL / UNSUCCESSFUL
EXE	VARCHAR2(3)		Auditing EXECUTE WHENEVER SUCCESSFUL / UNSUCCESSFUL
FBK	VARCHAR2(3)		Auditing FLASHBACK WHENEVER SUCCESSFUL / UNSUCCESSFUL
REA	VARCHAR2(3)		Auditing READ WHENEVER SUCCESSFUL / UNSUCCESSFUL

3.184 ALL_DEPENDENCIES

ALL_DEPENDENCIES describes dependencies between procedures, packages, functions, package bodies, and triggers accessible to the current user, including dependencies on views created without any database links. This view does not display the SCHEMAID column.

Related Views

- DBA_DEPENDENCIES describes all dependencies between objects in the database. This view does not display the SCHEMAID column.
- USER_DEPENDENCIES describes dependencies between objects in the current user's schema. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
NAME	VARCHAR2(128)	NOT NULL	Name of the object
TYPE	VARCHAR2(18)		Type of the object
REFERENCED_OWNER	VARCHAR2(128)		Owner of the referenced object (remote owner if remote object)
REFERENCED_NAME	VARCHAR2(128)		Name of the referenced object
REFERENCED_TYPE	VARCHAR2(18)		Type of the referenced object
REFERENCED_LINK_NAME	VARCHAR2(128)		Name of the link to the parent object (if remote)
DEPENDENCY_TYPE	VARCHAR2(4)		Indicates whether the dependency is a REF dependency (REF) or not (HARD)

See Also

- "DBA_DEPENDENCIES"
- "USER_DEPENDENCIES"

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.185 ALL_DEQUEUE_QUEUES

ALL_DEQUEUE_QUEUES describes all queues on which the current user has dequeue privileges. If the user has any Advanced Queuing system privileges, such as DEQUEUE ANY QUEUE or MANAGE ANY QUEUE, then this view describes all queues in the database.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the queue
NAME	VARCHAR2(128)	NOT NULL	Name of the queue
QUEUE_TABLE	VARCHAR2(128)	NOT NULL	Name of the table in which the queue data resides
QID	NUMBER	NOT NULL	Object number of the queue
QUEUE_TYPE	VARCHAR2(20)		Type of the queue. Possible values: • EXCEPTION_QUEUE • NORMAL_QUEUE
MAX_RETRIES	NUMBER		Maximum number of retries allowed when dequeuing from the queue
RETRY_DELAY	NUMBER		Time interval between retries
ENQUEUE_ENABLED	VARCHAR2(7)		Indicates whether the queue is enabled for enqueue (YES) or not (NO)
DEQUEUE_ENABLED	VARCHAR2(7)		Indicates whether the queue is enabled for dequeue (YES) or not (NO)
RETENTION	VARCHAR2(40)		Time interval that processed messages are retained in the queue, or FOREVER
USER_COMMENT	VARCHAR2(50)		User-specified comment
NETWORK_NAME	VARCHAR2(512)		Network name of the queue service
SHARDED	VARCHAR2(5)		TRUE if the queue is sharded, FALSE otherwise
QUEUE_CATEGORY	VARCHAR2(25)		Queue category. Possible values: • Classic Queue • Sharded Queue • Transactional Event Queue
RECIPIENTS	VARCHAR2(8)		SINGLE or MULTIPLE recipients

3.186 ALL_DIM_ATTRIBUTES

ALL_DIM_ATTRIBUTES describes the relationship between a dimension level and a functionally dependent column. The level columns and the dependent column must be in the same table.

Related Views

- DBA_DIM_ATTRIBUTES describes all such dimension relationships in the database.
- USER_DIM_ATTRIBUTES describes all such dimension attributes in the current user's schema.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the dimension

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ATTRIBUTE_NAME	VARCHAR2(128)		Name of the attribute
LEVEL_NAME	VARCHAR2(128)		Name of the hierarchy level
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Dependent column name
INFERRED	CHAR(1)		Indicates whether the attribute is inferred from a JOIN KEY specification (Y) or not (N)

See Also

- "DBA_DIM_ATTRIBUTES"
- "USER_DIM_ATTRIBUTES"

3.187 ALL_DIM_CHILD_OF

ALL_DIM_CHILD_OF describes hierarchical relationships of 1 to *n* between the pairs of levels in the dimensions accessible to the current user.

Related Views

- DBA_DIM_CHILD_OF describes all such hierarchical relationships in the database.
- USER_DIM_CHILD_OF describes all such hierarchical attributes in the current user's schema.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the dimension
HIERARCHY_NAME	VARCHAR2(128)		Hierarchy name
POSITION	NUMBER	NOT NULL	Hierarchical position within this hierarchy, position 1 being the most detailed
CHILD_LEVEL_NAME	VARCHAR2(128)		Child side of 1:n relationship
JOIN_KEY_ID	VARCHAR2(40)		If non-null, then the child joins to the parent
PARENT_LEVEL_NAME	VARCHAR2(128)		Parent side of 1:n relationship in relation to the CHILD_LEVEL_NAME

See Also

- "DBA_DIM_CHILD_OF"
- "USER_DIM_CHILD_OF"

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.188 ALL_DIM_HIERARCHIES

ALL_DIM_HIERARCHIES describes all dimension hierarchies accessible to the current user.

Related Views

- DBA_DIM_HIERARCHIES describes all such hierarchies in the database.
- USER_DIM_HIERARCHIES describes all such hierarchies owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the dimension
HIERARCHY_NAME	VARCHAR2(128)		Hierarchy name

See Also

- "DBA_DIM_HIERARCHIES"
- "USER_DIM_HIERARCHIES"

3.189 ALL_DIM_JOIN_KEY

ALL_DIM_JOIN_KEY describes the joins between two dimension tables that are accessible to the current user. The join is always specified between a parent dimension level column and a child column.

Related Views

- DBA_DIM_JOIN_KEY describes all such joins in the database.
- USER_DIM_JOIN_KEY describes all such joins owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the dimension
DIM_KEY_ID	NUMBER	NOT NULL	Join key ID (unique within a dimension)
LEVEL_NAME	VARCHAR2(128)		Name of the hierarchy level
KEY_POSITION	NUMBER	NOT NULL	Ordinal position of the key column within the level
HIERARCHY_NAME	VARCHAR2(128)		Name of the hierarchy
CHILD_JOIN_OWNER	VARCHAR2(128)	NOT NULL	Owner of the join column table
CHILD_JOIN_TABLE	VARCHAR2(128)	NOT NULL	Name of the join column table
CHILD_JOIN_COLUMN	VARCHAR2(128)	NOT NULL	Name of the join column
CHILD_LEVEL_NAME	VARCHAR2(128)		Name of the child hierarchy level of the join key

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- "DBA_DIM_JOIN_KEY"
- "USER_DIM_JOIN_KEY"

3.190 ALL_DIM_LEVEL_KEY

ALL_DIM_LEVEL_KEY describes a column of a dimension level accessible to the current user. The position of a column within a level is specified by KEY_POSITION.

Related Views

- DBA_DIM_LEVEL_KEY describes all columns of dimension levels in the database.
- USER_DIM_LEVEL_KEY describes all columns of dimension levels owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the dimension
LEVEL_NAME	VARCHAR2(128)		Name of the hierarchy level
KEY_POSITION	NUMBER	NOT NULL	Ordinal position of the key column within the level
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the key column

See Also

- "DBA_DIM_LEVEL_KEY"
- "USER_DIM_LEVEL_KEY"

3.191 ALL_DIM_LEVELS

ALL_DIM_LEVELS describes the dimension levels accessible to the current user. All columns of a dimension level must come from the same relation.

Related Views

- DBA_DIM_LEVELS describes all dimension levels in the database.
- USER_DIM_LEVELS describes the levels of all dimensions owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the dimension
LEVEL_NAME	VARCHAR2(128)		Unique within a dimension
NUM_COLUMNS	NUMBER		Number of columns in the level definition
DETAILOBJ_OWNER	VARCHAR2(128)	NOT NULL	Owner of the detail object that the keys of this level come from

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DETAILOBJ_NAME	VARCHAR2(128)	NOT NULL	Name of the table that the keys of this level come from
SKIP_WHEN_NULL	VARCHAR2(1)		Indicates whether the level is declared with the SKIP WHEN NULL clause (Y) or not (N)

See Also

- "DBA_DIM_LEVELS"
- "USER_DIM_LEVELS"

3.192 ALL_DIMENSIONS

ALL_DIMENSIONS describes the dimension objects accessible to the current user.

Related Views

- DBA_DIMENSIONS describes all dimensions in the database.
- USER_DIMENSIONS describes the dimensions in the current user's schema.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the dimension
DIMENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the dimension
INVALID	VARCHAR2(1)		Indicates whether the dimension is invalid (Y) or valid (N)
COMPILE_STATE	VARCHAR2(13)		Compile status of the dimension: • INVALID • NEEDS_COMPILE • ERROR
REVISION	NUMBER		Dimension revision level

See Also

- "DBA_DIMENSIONS"
- "USER_DIMENSIONS"

3.193 ALL_DIRECTIVES

ALL_DIRECTIVES describes the directives accessible to the current user.

Related Views

- DBA_DIRECTIVES describes all directives in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- USER_DIRECTIVES describes the directives owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the directive
DIRECTIVE_NAME	VARCHAR2(128)	NOT NULL	Name of the directive
DIRECTIVE_TYPE	VARCHAR2(9)		Type of the directive The value of this column is always NOTIFY.
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the table or duality view object associated with the directive
STATUS	VARCHAR2(9)		Indicates whether the directive will be evaluated (ENABLED) or not (DISABLED)
VALIDATED	VARCHAR2(10)		Reserved for future use
ON_CLAUSE	VARCHAR2(36)		Operations that will trigger the directive This column displays a list of one or more of the following operations: • DELETE • INSERT • SELECT • UPDATE
USING_TYPE	VARCHAR2(16)		Using type of the directive The value of this column is always NOTIFICATION LOG.
USING_CLAUSE	VARCHAR2(4000)		Using clause of the directive
PROCESSING_STAGE_CLAUSE	VARCHAR2(15)		Reserved for future use
SCOPE_STAGE	VARCHAR2(12)		Reserved for future use

3.194 ALL_DIRECTORIES

ALL_DIRECTORIES describes all directories accessible to the current user.

Related View

DBA_DIRECTORIES describes all directories in the database.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the directory (always SYS)
DIRECTORY_NAME	VARCHAR2(128)	NOT NULL	Name of the directory
DIRECTORY_PATH	VARCHAR2(4000)		Operating system pathname for the directory

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ORIGIN_CON_ID	VARCHAR2(256)		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root)

3.195 ALL_DOMAIN_COLS

ALL_DOMAIN_COLS describes columns of the data use case domains accessible to the current user.

This view displays use case domain column attributes. Use case domain columns with alternative data types are displayed for each possible data type.

Related Views

- DBA_DOMAIN_COLS describes columns of all data use case domains in the database.
- USER_DOMAIN_COLS describes columns of the data use case domains owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the use case domain
DOMAIN_NAME	VARCHAR2(128)	NOT NULL	Name of the use case domain
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column
COLUMN_ID	NUMBER	NOT NULL	Column number in the use case domain
DATA_TYPE_ID	NUMBER	NOT NULL	Indicates whether this row represents the primary (1) or secondary (2) data type specification for the column
DATA_TYPE	VARCHAR2(106)		Data type of the column
DATA_LENGTH	NUMBER		Length of the column (in bytes)
DATA_PRECISION	NUMBER		Decimal precision for NUMBER data type; binary precision for FLOAT data type; null for all other data types
DATA_SCALE	NUMBER		Digits to the right of the decimal point in a number; null for all other data types
NULLABLE	VARCHAR2(1)		Indicates whether a column allows NULLs. The value is N if there is a NOT NULL constraint on the column.
DATA_DEFAULT	CLOB		Default value for the column
DEFAULT_LENGTH	NUMBER		Length of the default value for the column (in bytes)
DEFAULT_ON_NULL	VARCHAR2(3)		Indicates whether the column has DEFAULT ON NULL for INSERT semantics (YES) or not (NO)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DEFAULT_ON_NULL_UPD	VARCHAR2(3)		Indicates whether the column has DEFAULT ON NULL for UPDATE semantics (YES) or not (NO)
CHARACTER_SET_NAME	VARCHAR2(44)		For character type columns, the name of the character set for the column: • CHAR_CS • NCHAR_CS
CHAR_COL_DECL_LENGTH	NUMBER		For character type columns, the declared length of the column (in bytes)
COLLATION	VARCHAR2(100)		For character type columns, the collation for the column If a collation was not specified, the value of this column is null.
EXACT	BOOLEAN		Indicates whether the column data type specification is strict (TRUE) or not (FALSE)
CHAR_LENGTH	NUMBER		For character type columns, the length of the column (in characters)
DISCRIMINANT	BOOLEAN		Indicates whether the column is a discriminant column in a flexible domain (TRUE) or not (FALSE)

Note

This view is available starting with Oracle AI Database 26ai.

3.196 ALL_DOMAIN_CONSTRAINTS

ALL_DOMAIN_CONSTRAINTS describes constraint definitions in the data use case domains accessible to the current user.

Related Views

- DBA_DOMAIN_CONSTRAINTS describes constraint definitions in all data use case domains in the database.
- USER_DOMAIN_CONSTRAINTS describes constraint definitions in the data use case domains owned by the current user.

Column	Datatype	NULL	Description
NAME	VARCHAR2(128)	NOT NULL	Name of the constraint definition

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DOMAIN_OWNER	VARCHAR2(128)	NOT NULL	Owner of the use case domain in which the constraint is defined
DOMAIN_NAME	VARCHAR2(128)	NOT NULL	Name of the use case domain in which the constraint is defined
CONSTRAINT_TYPE	VARCHAR2(1)		Type of the constraint definition The value of this column is always C, which means the constraint is either a check constraint or a NOT NULL constraint.
SEARCH_CONDITION	CLOB		Text of the search condition for a check constraint
STATUS	VARCHAR2(8)		Enforcement status of the constraint: • ENABLED • DISABLED
DEFERRABLE	VARCHAR2(14)		Indicates whether the constraint is deferrable (DEFERRABLE) or not (NOT DEFERRABLE)
DEFERRED	VARCHAR2(9)		Indicates whether the constraint was initially deferred (DEFERRED) or not (IMMEDIATE)
VALIDATED	VARCHAR2(13)		When STATUS = ENABLED, possible values are: • VALIDATED - All data obeys the constraint (that is, the existing data in the table was validated when the constraint was enabled, as well as any subsequent data entered into the table) • NOT VALIDATED - All data may not obey the constraint (that is, the existing data in the table was not validated when the constraint was enabled, but subsequent data entered into the table was validated) When STATUS = DISABLED, possible values are: • VALIDATED - All data obeys the constraint, but the unique index on the constraint has been dropped. This setting is useful in data warehousing environments, but has some restrictions. Refer to *Oracle AI Database Data Warehousing Guide* for more information on this setting. • NOT VALIDATED - All data may not obey the constraint
GENERATED	VARCHAR2(14)		Indicates whether the name of the constraint is user-generated (USER NAME) or system-generated (GENERATED NAME)
BAD	VARCHAR2(3)		Indicates whether the constraint specifies a century in an ambiguous manner (BAD) or not (null). To avoid errors resulting from this ambiguity, rewrite the constraint using the TO_DATE function with a four-digit year. **See Also:** the TO_DATE function in *Oracle AI Database SQL Language Reference* and *Oracle AI Database Development Guide*

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
RELY	VARCHAR2(4)		When VALIDATED = NOT VALIDATED, this column indicates whether the constraint is to be taken into account for query rewrite (RELY) or not (null). When VALIDATED = VALIDATED, this column is not meaningful. **See Also:** *constraints* in *Oracle AI Database SQL Language Reference*
INVALID	VARCHAR2(7)		Indicates whether the constraint is invalid (INVALID) or not (null)
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).

Note

This view is available starting with Oracle AI Database 26ai.

3.197 ALL_DOMAINS

ALL_DOMAINS describes the data use case domains accessible to the current user.

Related Views

- DBA_DOMAINS describes all data use case domains in the database.
- USER_DOMAINS describes the data use case domains owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the use case domain
NAME	VARCHAR2(128)	NOT NULL	Name of the use case domain
COLS	NUMBER	NOT NULL	Number of columns in the use case domain
DISCRIMINANTCOLS	NUMBER		For flexible domains, the number of discriminant columns in the use case domain. Otherwise, 0.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
BUILTIN	BOOLEAN		Indicates whether the use case domain is built-in (TRUE) or not (FALSE)
DATA_DISPLAY	CLOB		Text of the DISPLAY expression for the use case domain
DISPLAY_LENGTH	NUMBER		Length of the DISPLAY expression for the use case domain (in bytes) Null if a DISPLAY expression was not specified.
DATA_ORDER	CLOB		Text of the ORDER expression for the use case domain
ORDER_LENGTH	NUMBER		Length of the ORDER expression for the use case domain (in bytes) Null if an ORDER expression was not specified.
SELECTOR	CLOB		For flexible domains, the text of the domain selector expression. Otherwise, null.
SELECTOR_LENGTH	NUMBER		For flexible domains, the length of the domain selector expression (in bytes). Otherwise, null.
TYPE	VARCHAR2(10)		Use case domain type: • ENUMERATED • FLEXIBLE

Note

This view is available starting with Oracle AI Database 26ai.

3.198 ALL_EDITION_COMMENTS

ALL_EDITION_COMMENTS describes the comments on the editions accessible to the current user.

Related View

DBA_EDITION_COMMENTS describes the comments on all editions in the database.

Column	Datatype	NULL	Description
EDITION_NAME	VARCHAR2(128)	NOT NULL	Name of the edition
COMMENTS	VARCHAR2(4000)		Edition comments

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> "DBA_EDITION_COMMENTS"

3.199 ALL_EDITIONING_VIEW_COLS

ALL_EDITIONING_VIEW_COLS describes the relationship between the columns of the editioning views accessible to the current user and the table columns to which they map.

Related Views

- DBA_EDITIONING_VIEW_COLS describes the relationship between the columns of all editioning views in the database and the table columns to which they map.
- USER_EDITIONING_VIEW_COLS describes the relationship between the columns of the editioning views owned by the current user and the table columns to which they map. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of an editioning view
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of an editioning view
VIEW_COLUMN_ID	NUMBER	NOT NULL	Column number within the editioning view
VIEW_COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column in the editioning view
TABLE_COLUMN_ID	NUMBER	NOT NULL	Column number of a table column to which this editioning view column maps
TABLE_COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of a table column to which this editioning view column maps

> **See Also**

3.200 ALL_EDITIONING_VIEW_COLS_AE

ALL_EDITIONING_VIEW_COLS_AE describes the relationship between the columns of the editioning views (across all editions) accessible to the current user and the table columns to which they map.

Related Views

- DBA_EDITIONING_VIEW_COLS_AE describes the relationship between the columns of all editioning views (across all editions) in the database and the table columns to which they map.
- USER_EDITIONING_VIEW_COLS_AE describes the relationship between the columns of the editioning views (across all editions) owned by the current user and the table columns to which they map. This view does not display the OWNER column.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of an editioning view
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of an editioning view
VIEW_COLUMN_ID	NUMBER	NOT NULL	Column number within the editioning view
VIEW_COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column in the editioning view
TABLE_COLUMN_ID	NUMBER	NOT NULL	Column number of a table column to which this editioning view column maps
TABLE_COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of a table column to which this editioning view column maps
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the editioning view is defined

See Also

- "DBA_EDITIONING_VIEW_COLS_AE"

3.202 ALL_EDITIONING_VIEWS_AE

ALL_EDITIONING_VIEWS_AE describes the editioning views (across all editions) accessible to the current user.

Related Views

- DBA_EDITIONING_VIEWS_AE describes all editioning views (across all editions) in the database.
- USER_EDITIONING_VIEWS_AE describes the editioning views (across all editions) owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of an editioning view
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of an editioning view
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of an editioning view's base table
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the editioning view is defined

See Also

- "DBA_EDITIONING_VIEWS_AE"
- "USER_EDITIONING_VIEWS_AE"

3.203 ALL_EDITIONS

ALL_EDITIONS describes the editions accessible to the current user.

Related View

DBA_EDITIONS describes all editions in the database.

Column	Datatype	NULL	Description
EDITION_NAME	VARCHAR2(128)	NOT NULL	Name of the edition
PARENT_EDITION_NAME	VARCHAR2(128)		Name of the parent edition for this edition
USABLE	VARCHAR2(3)		Indicates whether the edition is usable (YES) or unusable (NO)

See Also

- "DBA_EDITIONS"
- *Oracle AI Database Development Guide* for more information about editions

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.204 ALL_ENCRYPTED_COLUMNS

ALL_ENCRYPTED_COLUMNS displays encryption algorithm information for the encrypted columns in the tables accessible to the current user.

Related Views

- DBA_ENCRYPTED_COLUMNS displays encryption algorithm information for all encrypted columns in the database.
- USER_ENCRYPTED_COLUMNS displays encryption algorithm information for the encrypted columns in the tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column
ENCRYPTION_ALG	VARCHAR2(29)		Encryption algorithm used to protect secrecy of data in this column: • 3 Key Triple DES 168 bits key • AES 128 bits key • AES 192 bits key • AES 256 bits key
SALT	VARCHAR2(3)		Indicates whether the column is encrypted with SALT (YES) or not (NO)
INTEGRITY_ALG	VARCHAR2(12)		Integrity algorithm used for the column: • SHA-1 • NOMAC

See Also

- "DBA_ENCRYPTED_COLUMNS"
- "USER_ENCRYPTED_COLUMNS"

3.205 ALL_ERROR_TRANSLATIONS

ALL_ERROR_TRANSLATIONS describes all error translations accessible to the user.

Related Views

- DBA_ERROR_TRANSLATIONS describes all error translations in the database.
- USER_ERROR_TRANSLATIONS describes all error translations owned by the user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the SQL translation profile

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PROFILE_NAME	VARCHAR2(128)	NOT NULL	Name of the SQL translation profile
ERROR_CODE	NUMBER	NOT NULL	The Oracle error code
TRANSLATED_CODE	NUMBER		The translated error code
TRANSLATED_SQLSTATE	VARCHAR2(5)		The translated SQLSTATE
ENABLED	VARCHAR2(5)		TRUE if the translation is enabled, FALSE otherwise.
REGISTRATION_TIME	TIMESTAMP(6)		Time the translation was registered
COMMENTS	VARCHAR2(4000)		Comment on the translation

See Also

- "DBA_ERROR_TRANSLATIONS"
- "USER_ERROR_TRANSLATIONS"

3.206 ALL_ERRORS

ALL_ERRORS describes the current errors on the stored objects accessible to the current user.

Related Views

- DBA_ERRORS describes the current errors on all stored objects in the database.
- USER_ERRORS describes the current errors on the stored objects owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
NAME	VARCHAR2(128)	NOT NULL	Name of the object

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
TYPE	VARCHAR2(12)		Type of the object: • ANALYTIC VIEW • ASSEMBLY • ATTRIBUTE DIMENSION • DIMENSION • FUNCTION • HIERARCHY • JAVA CLASS • JAVA SOURCE • LIBRARY • MLE ENV • MLE MODULE • PACKAGE • PACKAGE BODY • PROCEDURE • QUEUE • TRIGGER • TYPE • TYPE BODY • VIEW
SEQUENCE	NUMBER	NOT NULL	Sequence number (for ordering purposes)
LINE	NUMBER	NOT NULL	Line number at which the error occurred
POSITION	NUMBER	NOT NULL	Position in the line at which the error occurred
TEXT	VARCHAR2(4000)	NOT NULL	Text of the error
ATTRIBUTE	VARCHAR2(9)		Indicates whether the error is an error (ERROR) or a warning (WARNING)
MESSAGE_NUMBER	NUMBER		Numeric error number (without any prefix)

See Also

- "DBA_ERRORS"

  "USER_ERRORS"

3.207 ALL_ERRORS_AE

ALL_ERRORS_AE describes the current errors on the stored objects (across all editions) accessible to the current user.

Related Views

- DBA_ERRORS_AE describes the current errors on all stored objects (across all editions) in the database.
- USER_ERRORS_AE describes the current errors on the stored objects (across all editions) owned by the current user. This view does not display the OWNER column.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
NAME	VARCHAR2(128)	NOT NULL	Name of the object
TYPE	VARCHAR2(12)		Type of the object: • ANALYTIC VIEW • ASSEMBLY • ATTRIBUTE DIMENSION • DIMENSION • FUNCTION • HIERARCHY • JAVA CLASS • JAVA SOURCE • LIBRARY • MLE ENV • MLE MODULE • PACKAGE • PACKAGE BODY • PROCEDURE • QUEUE • TRIGGER • TYPE • TYPE BODY • VIEW
SEQUENCE	NUMBER	NOT NULL	Sequence number (for ordering purposes)
LINE	NUMBER	NOT NULL	Line number at which this error occurred
POSITION	NUMBER	NOT NULL	Position in the line at which this error occurred
TEXT	VARCHAR2(4000)	NOT NULL	Text of the error
ATTRIBUTE	VARCHAR2(9)		Indicates whether the error is an error (ERROR) or a warning (WARNING)
MESSAGE_NUMBER	NUMBER		Numeric error number (without any prefix)
EDITION_NAME	VARCHAR2(128)		Name of the edition in which the object is actual

3.208 ALL_EVALUATION_CONTEXT_TABLES

ALL_EVALUATION_CONTEXT_TABLES describes the tables in the rule evaluation contexts accessible to the current user.

Related Views

- DBA_EVALUATION_CONTEXT_TABLES describes the tables in all rule evaluation contexts in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- USER_EVALUATION_CONTEXT_TABLES describes the tables in the rule evaluation contexts owned by the current user. This view does not display the EVALUATION_CONTEXT_OWNER column.

Column	Datatype	NULL	Description
EVALUATION_CONTEXT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the evaluation context
EVALUATION_CONTEXT_NAME	VARCHAR2(128)	NOT NULL	Name of the evaluation context
TABLE_ALIAS	VARCHAR2(128)		Alias for a table in the evaluation context
TABLE_NAME	VARCHAR2(4000)		Name of the table referred to by the table alias

See Also

- "DBA_EVALUATION_CONTEXT_TABLES"
- "USER_EVALUATION_CONTEXT_TABLES"

3.209 ALL_EVALUATION_CONTEXT_VARS

ALL_EVALUATION_CONTEXT_VARS describes the variables in the rule evaluation contexts accessible to the current user.

Related Views

- DBA_EVALUATION_CONTEXT_VARS describes the variables in all rule evaluation contexts in the database.
- USER_EVALUATION_CONTEXT_VARS describes the variables in the rule evaluation contexts owned by the current user. This view does not display the EVALUATION_CONTEXT_OWNER column.

Column	Datatype	NULL	Description
EVALUATION_CONTEXT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the evaluation context
EVALUATION_CONTEXT_NAME	VARCHAR2(128)	NOT NULL	Name of the evaluation context
VARIABLE_NAME	VARCHAR2(128)		Name of a variable in the evaluation context
VARIABLE_TYPE	VARCHAR2(4000)		Datatype of the variable
VARIABLE_VALUE_FUNCTION	VARCHAR2(4000)		Function used to retrieve the value of the variable; NULL for variables that are not implicit
VARIABLE_METHOD_FUNCTION	VARCHAR2(228)		Function used to retrieve the result of method invocation on the variable. Such a function can speed up evaluation, if there are many simple rules that invoke the method on the variable.

3.210 ALL_EVALUATION_CONTEXTS

ALL_EVALUATION_CONTEXTS describes the rule evaluation contexts accessible to the current user.

Related Views

- DBA_EVALUATION_CONTEXTS describes all rule evaluation contexts in the database.
- USER_EVALUATION_CONTEXTS describes the rule evaluation contexts owned by the current user. This view does not display the EVALUATION_CONTEXT_OWNER column.

Column	Datatype	NULL	Description
EVALUATION_CONTEXT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the evaluation context
EVALUATION_CONTEXT_NAME	VARCHAR2(128)	NOT NULL	Name of the evaluation context
EVALUATION_FUNCTION	VARCHAR2(4000)		Evaluation function associated with the evaluation context, if any
EVALUATION_CONTEXT_COMMENT	VARCHAR2(4000)		Comment specified with the evaluation context, if any

See Also

- "DBA_EVALUATION_CONTEXTS"
- "USER_EVALUATION_CONTEXTS"

3.211 ALL_EXPRESSION_STATISTICS

ALL_EXPRESSION_STATISTICS provides expression usage tracking statistics for tables that are accessible to the current user.

Related Views

- DBA_EXPRESSION_STATISTICS provides expression usage tracking statistics for all the tables in the database.
- USER_EXPRESSION_STATISTICS provides expression usage tracking statistics for tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table contained in the expression
EXPRESSION_ID	NUMBER		Expression ID of the current expression
SNAPSHOT	VARCHAR2(10)		Type of snapshot for the expression: • LATEST: Latest snapshot • CUMULATIVE: Cumulative snapshot • WINDOW: Window snapshot
EVALUATION_COUNT	NUMBER		Number of times the expression has been evaluated

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
FIXED_COST	NUMBER	NOT NULL	Optimizer fixed cost of evaluating the expression
DYNAMIC_COST	NUMBER		Optimizer dynamic cost of evaluating the expression
EXPRESSION_TEXT	VARCHAR2(4000)	NOT NULL	Text of the expression
CREATED	DATE	NOT NULL	Time this expression is first evaluated
LAST_MODIFIED	DATE		Time this expression is last evaluated

See Also

- "DBA_EXPRESSION_STATISTICS"
- "USER_EXPRESSION_STATISTICS"

3.212 ALL_EXTERNAL_LOCATIONS

ALL_EXTERNAL_LOCATIONS describes the locations (data sources) of the external tables accessible to the current user.

Related Views

- DBA_EXTERNAL_LOCATIONS describes the locations (data sources) of all external tables in the database.
- USER_EXTERNAL_LOCATIONS describes the locations (data sources) of the external tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the external table location
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the corresponding external table
LOCATION	VARCHAR2(4000)		External table location clause
DIRECTORY_OWNER	CHAR(3)		Owner of the directory containing the external table location
DIRECTORY_NAME	VARCHAR2(128)		Name of the directory containing the external table location

See Also

- "DBA_EXTERNAL_LOCATIONS"
- "USER_EXTERNAL_LOCATIONS"

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.213 ALL_EXTERNAL_TAB_CACHE_LOCATIONS

ALL_EXTERNAL_TAB_CACHE_LOCATIONS describes the files in cloud storage that are accessible to the current user and belong to cached external tables.

Related Views

- DBA_EXTERNAL_TAB_CACHE_LOCATIONS describes all files in cloud storage that belong to cached external tables.
- USER_EXTERNAL_TAB_CACHE_LOCATIONS describes the files in cloud storage that are owned by the current user and belong to cached external tables. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the file
CACHE_NAME	VARCHAR2(128)	NOT NULL	Name of the external table cache to which the file belongs
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the external table on which the cache is based
PATH	VARCHAR2(3000)	NOT NULL	Cloud storage path of the file
FILE_NAME	VARCHAR2(3000)	NOT NULL	Name of the file
CACHED	VARCHAR2(3)		Indicates whether the file has been cached (YES) or not (NO)
STALE	VARCHAR2(3)		Indicates whether the cached content is stale (YES) or not (NO)
CACHE_SIZE	NUMBER		Amount of tablespace consumed by the file (in bytes)
FILE_SIZE	NUMBER		Size of the file (in bytes)
USAGE_COUNT	NUMBER		Number of times the file is used in queries
ETAG	VARCHAR2(4000)		ETAG of the file
FILE_LAST_MODIFIED	TIMESTAMP(6) WITH TIME ZONE		Time at which the file was last modified
LAST_REFRESHED	TIMESTAMP(6) WITH TIME ZONE		Last refresh time of the external table cache
LAST_ACCESSED	TIMESTAMP(6) WITH TIME ZONE		Last access time of the file or external table cache

Note

This view is available starting with Oracle AI Database 26ai, Release Update 23.9.

See Also

- "DBA_EXTERNAL_TAB_CACHE_LOCATIONS"

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.214 ALL_EXTERNAL_TAB_CACHES

ALL_EXTERNAL_TAB_CACHES describes the external table caches accessible to the current user.

Related Views

- DBA_EXTERNAL_TAB_CACHES describes all external table caches in the database.
- USER_EXTERNAL_TAB_CACHES describes the external table caches owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the external table cache
CACHE_TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the external table cache
EXTERNAL_TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the external table on which the cache is based
CACHED	VARCHAR2(3)		Indicates whether the external table has been cached (YES) or not (NO)
STALE	VARCHAR2(3)		Indicates whether the cached content is stale (YES) or not (NO)
DISABLED	VARCHAR2(3)		Indicates whether the cached content is disabled (YES) or not (NO)
TYPE	NUMBER	NOT NULL	External table partition type
CACHE_MAX_SIZE	NUMBER		Maximum size of the external table cache (in bytes)
CACHE_CUR_SIZE	NUMBER		Current size of the external table cache (in bytes)
LAST_REFRESH_TIME	TIMESTAMP(6) WITH TIME ZONE		Last refresh time of the external table cache
REFRESH_INTERVAL	INTERVAL DAY(2) TO SECOND(6)		Reserved for future use
AUTO	VARCHAR2(3)		Indicates whether the external table cache is enabled for auto caching (YES) or not (NO)

Note

This view is available starting with Oracle AI Database 26ai, Release Update 23.9.

See Also

- "DBA_EXTERNAL_TAB_CACHES"
- "USER_EXTERNAL_TAB_CACHES"

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.215 ALL_EXTERNAL_TABLES

ALL_EXTERNAL_TABLES describes the external tables accessible to the current user.

Related Views

- DBA_EXTERNAL_TABLES describes all external tables in the database.
- USER_EXTERNAL_TABLES describes the external tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the external table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the external table
TYPE_OWNER	CHAR(3)		Owner of the implementation type for the external table access driver
TYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the implementation type for the external table access driver
DEFAULT_DIRECTORY_OWNER	CHAR(3)		Owner of the default directory for the external table
DEFAULT_DIRECTORY_NAME	VARCHAR2(128)	NOT NULL	Name of the default directory for the external table
REJECT_LIMIT	VARCHAR2(40)		Reject limit for the external table, or UNLIMITED
ACCESS_TYPE	VARCHAR2(7)		Type of access parameters for the external table: • BLOB • CLOB
ACCESS_PARAMETERS	CLOB		Access parameters for the external table
PROPERTY	VARCHAR2(10)		Property of the external table: • REFERENCED - Referenced columns • ALL - All columns
INMEMORY	VARCHAR2(8)		Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for this table
INMEMORY_COMPRESSION	VARCHAR2(17)		Indicates the compression level for the IM column store: • NO MEMCOMPRESS • FOR DML • FOR CAPACITY [HIGH | LOW] • FOR QUERY [HIGH | LOW] • NULL This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_EXTERNAL_TABLES but non-NULL for ALL_XTERNAL_TAB_PARTITIONS.

3.216 ALL_GG_AUTO_CDR_COLUMN_GROUPS

ALL_GG_AUTO_CDR_COLUMN_GROUPS provides details about Oracle GoldenGate automatic conflict detection and resolution (CDR) column groups owned by the current user.

Related View

DBA_GG_AUTO_CDR_COLUMN_GROUPS provides details about all of the Oracle GoldenGate automatic CDR column groups in the database.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Table name
COLUMN_GROUP_NAME	VARCHAR2(128)	NOT NULL	Column group name
RESOLUTION_COLUMN	VARCHAR2(128)	NOT NULL	Timestamp resolution column

See Also

"DBA_GG_AUTO_CDR_COLUMN_GROUPS"

3.217 ALL_GG_AUTO_CDR_COLUMNS

ALL_GG_AUTO_CDR_COLUMNS provides details about Oracle GoldenGate automatic conflict detection and resolution (CDR) columns owned by the current user.

Related View

DBA_GG_AUTO_CDR_COLUMNS provides details about all of the Oracle GoldenGate automatic CDR columns in the database.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Table name
COLUMN_GROUP_NAME	VARCHAR2(128)		Column group name
COLUMN_NAME	VARCHAR2(128)		Column name
RESOLUTION_COLUMN	VARCHAR2(128)		Timestamp resolution column

See Also

"DBA_GG_AUTO_CDR_COLUMNS"

3.218 ALL_GG_AUTO_CDR_TABLES

ALL_GG_AUTO_CDR_TABLES provides details about tables configured for Oracle GoldenGate automatic conflict detection and resolution (CDR) that are owned by the current user.

Related View

DBA_GG_AUTO_CDR_TABLES provides details about all the tables configured for Oracle GoldenGate automatic conflict detection and resolution (CDR).

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Table name
RESOLUTION_GRANULARITY	VARCHAR2(6)		Resolution granularity: • ROW • COLUMN
FETCHCOLS	VARCHAR2(3)		Extract fetchcols configuration: • Yes: Extract will fetch non-scalar data • No: Extract will not fetch non-scalar data
RECORD_CONFLICTS	VARCHAR2(3)		Monitoring of conflicts: • Yes: Conflict info is recorded • No: Conflict info is not recorded
USE_CUSTOM_HANDLERS	VARCHAR2(4)		Use of customized or automatic conflict handlers: • All: If using custom handlers • None: If using automatic handlers
ROW_RESOLUTION_METHOD	VARCHAR2(18)		Indicates which row-level conflict resolution method to use when the old value of the logical change record (LCR) timestamp column is different from the timestamp column value in the table. Possible values: • EARLIEST TIMESTAMP: The conflict will be resolved in favor of the LCR when the new value of the LCR timestamp column is *less than* the timestamp column value in the table • LATEST TIMESTAMP: The conflict will be resolved in favor of the LCR when the new value of the LCR timestamp column is *greater than* the timestamp column value in the table
DELETE_ALWAYS_WINS	VARCHAR2(3)		When a conflict occurs between a delete operation and another operation, a YES value indicates that the delete operation succeeds and the other operation is discarded, and a NO value indicates that there is no special preference for the delete operation
IGNORE_SITE_PRIORITY	VARCHAR2(3)		When a conflict occurs between a target table change and a source table change, and SITE PRIORITY has been specified, this value indicates whether SITE PRIORITY should be ignored (YES) or not (NO)
TOMBSTONE_TABLE	VARCHAR2(128)		Tombstone table name (if table has delete tombstoning enabled)
ROW_RESOLUTION_COLUMN	VARCHAR2(128)	NOT NULL	Name of row-level timestamp column

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
KEY_VERSION_COLUMN	VARCHAR2(8)		Indicates whether the table contains a hidden column named KEYVER$$, which contains a version timestamp Possible values: • KEYVER$$ - The table contains a KEYVER$$ column • NONE - The table does not contain a KEYVER$$ column
EXISTING_DATA_TIMESTAMP	TIMESTAMP(6)		Timestamp to give existing rows when a new timestamp column is added

3.219 ALL_GG_INBOUND_PROGRESS

ALL_GG_INBOUND_PROGRESS displays information about the progress made by the GoldenGate inbound servers accessible to the current user.

Related View

DBA_GG_INBOUND_PROGRESS displays information about the progress made by all GoldenGate inbound servers in the database.

Column	Datatype	NULL	Description
SERVER_NAME	VARCHAR2(128)	NOT NULL	Name of the inbound server
PROCESSED_LOW_POSITION	VARCHAR2(4000)		Position of the processed low transaction
APPLIED_LOW_POSITION	VARCHAR2(4000)		All messages with commit position less than this value have been applied. This column should be used to view the progress of the GoldenGate apply. This column will hold an Oracle SCN numeric value in text format for an Oracle source database. For a non-Oracle source database, this column will hold the apply low position in GoldenGate CSN text format for that specific source database.
APPLIED_HIGH_POSITION	VARCHAR2(4000)		Highest commit position of a transaction that has been applied
SPILL_POSITION	VARCHAR2(4000)		Position of the spill low watermark of the transactions currently being applied
OLDEST_POSITION	VARCHAR2(4000)		Earliest position of the transactions currently being applied
APPLIED_LOW_SCN	NUMBER	NOT NULL	All SCN below or equal to this number have been successfully applied. This column is not applicable for GoldenGate replication since the source database may be non-Oracle.
APPLIED_TIME	DATE		Time at which the APPLIED_MESSAGE_NUMBER message was applied

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
APPLIED_MESSAGE_CREATE_TIME	DATE		Time at which the APPLIED_MESSAGE_NUMBER message was created
SOURCE_DATABASE	VARCHAR2(128)		Database where the transaction originated
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database where all transactions originated
LOGBSN	VARCHAR2(4000)		Log BSN value from the GoldenGate trail file

See Also

"DBA_GG_INBOUND_PROGRESS"

3.220 ALL_GOLDENGATE_INBOUND

ALL_GOLDENGATE_INBOUND displays information about the GoldenGate inbound servers accessible to the current user.

Related View

DBA_GOLDENGATE_INBOUND displays information about all GoldenGate inbound servers in the database.

Column	Datatype	NULL	Description
REPLICAT_NAME	VARCHAR2(4000)		The name of the replicat group created from GGSCI using GoldenGate
SERVER_NAME	VARCHAR2(128)	NOT NULL	Name of the inbound server
APPLY_USER	VARCHAR2(128)		Name of the user who can connect to the inbound server and apply messages
USER_COMMENT	VARCHAR2(4000)		User comment
CREATE_DATE	TIMESTAMP(6)		Date when inbound server was created
STATUS	VARCHAR2(8)		Status of the inbound server: • DISABLED - The inbound server is not running. • DETACHED - The inbound server is running, but the GoldenGate client application is not attached to it. • ATTACHED - The inbound server is running, and the GoldenGate client application is attached to it. • ABORTED - The inbound server became disabled because it encountered an error.

3.221 ALL_GOLDENGATE_PRIVILEGES

ALL_GOLDENGATE_PRIVILEGES displays details about Oracle GoldenGate privileges for the user. Oracle GoldenGate privileges are granted using the DBMS_GOLDENGATE_AUTH package.

Related Views

- DBA_GOLDENGATE_PRIVILEGES displays details about Oracle GoldenGate privileges for all users who have been granted Oracle GoldenGate privileges.
- USER_GOLDENGATE_PRIVILEGES displays details about Oracle GoldenGate privileges. This view does not display the USERNAME column.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user that is granted the privilege
PRIVILEGE_TYPE	VARCHAR2(7)		Type of privilege granted: • APPLY • CAPTURE • *: Both APPLY and CAPTURE
GRANT_SELECT_PRIVILEGES	VARCHAR2(3)		Shows whether the set of privileges granted to the administrator make the administrator a full privilege administrator or a minimum privilege administrator: • YES: The administrator has the SELECT_CATALOG_ROLE role and other privileges, is considered a full privilege administrator, and can manage any Oracle GoldenGate configuration. • NO: The administrator is considered a minimum privilege administrator, and can only manage Oracle GoldenGate configurations where the apply_user or capture_user (based on the PRIVILEGE_TYPE column) matches the username.
CREATE_TIME	TIMESTAMP(6)		Time at which the privilege was granted
LAST_MODIFIED	TIMESTAMP(6)		Time at which the privilege was last modified

3.222 ALL_GOLDENGATE_RULES

ALL_GOLDENGATE_RULES displays information about the GoldenGate rules accessible to the current user.

Related View

DBA_GOLDENGATE_RULES displays information about all GoldenGate server rules in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
COMPONENT_NAME	VARCHAR2(128)		Name of the GoldenGate process
COMPONENT_TYPE	VARCHAR2(7)		Type of the GoldenGate process: • CAPTURE • APPLY
COMPONENT_RULE_TYPE	VARCHAR2(9)		For global, schema or table rules, the GoldenGate type of the rule: • TABLE • SCHEMA • GLOBAL
RULE_SET_OWNER	VARCHAR2(1)		This column is obsolete
RULE_SET_NAME	VARCHAR2(1)		This column is obsolete
RULE_SET_TYPE	VARCHAR2(1)		This column is obsolete
RULE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule
RULE_NAME	VARCHAR2(128)	NOT NULL	Name of the rule
RULE_TYPE	VARCHAR2(9)		For global, schema or table rules, the type of the rule: • DML • DDL
RULE_CONDITION	VARCHAR2(1)		This column is obsolete
SCHEMA_NAME	VARCHAR2(128)		For table and schema rules, the schema name
OBJECT_NAME	VARCHAR2(128)		For table rules, the table name
INCLUDE_TAGGED_LCR	VARCHAR2(3)		For global, schema or table rules, indicates whether to include tagged LCRs (YES) or not (NO)
SUBSETTING_OPERATION	VARCHAR2(1)		This column is obsolete
DML_CONDITION	VARCHAR2(4000)		For subset rules, the row subsetting condition
SOURCE_DATABASE	VARCHAR2(128)		For global, schema or table rules, the name of the database where the LCRs originated
ORIGINAL_RULE_CONDITION	VARCHAR2(1)		This column is obsolete
SAME_RULE_CONDITION	VARCHAR2(1)		This column is obsolete
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database where the transactions originated
SOURCE_CONTAINER_NAME	VARCHAR2(128)		The container name of the database where the transactions originated

3.223 ALL_HEAT_MAP_SEG_HISTOGRAM

ALL_HEAT_MAP_SEG_HISTOGRAM displays segment access information for all segments visible to the user.

Related Views

- DBA_HEAT_MAP_SEG_HISTOGRAM displays segment access information for all segments.
- USER_HEAT_MAP_SEG_HISTOGRAM displays segment access information for segments owned by the user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Table owner
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object
SUBOBJECT_NAME	VARCHAR2(128)		Name of the sub-object
TRACK_TIME	DATE		System time when the segment access was tracked
SEGMENT_WRITE	VARCHAR2(3)		Indicates whether the segment has write access (YES or NO)
FULL_SCAN	VARCHAR2(3)		Indicates whether the segment has full table scan (YES or NO)
LOOKUP_SCAN	VARCHAR2(3)		Indicates whether the segment has lookup scan (YES or NO)

See Also

- "DBA_HEAT_MAP_SEG_HISTOGRAM"
- "USER_HEAT_MAP_SEG_HISTOGRAM"

3.224 ALL_HEAT_MAP_SEGMENT

ALL_HEAT_MAP_SEGMENT displays the latest segment access time for all segments visible to the user. The timestamps in the view are coarse with a granularity of a day reflecting the flush times of the heat map.

Related Views

- DBA_HEAT_MAP_SEGMENT displays the latest segment access time for all segments.
- USER_HEAT_MAP_SEGMENT displays the latest segment access time for all segments owned by the user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Table owner
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object
SUBOBJECT_NAME	VARCHAR2(128)		Name of the sub-object

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SEGMENT_WRITE_TIME	DATE		Latest timestamp on which the segment has write access
SEGMENT_READ_TIME	DATE		Latest timestamp on which the segment has read access
FULL_SCAN	DATE		Latest timestamp on which the segment has full table scan
LOOKUP_SCAN	DATE		Latest timestamp on which the segment has index scan

3.225 ALL_HIER_CLASS

ALL_HIER_CLASS describes the classifications of the hierarchies accessible to the current user.

Related Views

- DBA_HIER_CLASS describes the classifications of all hierarchies in the database.
- USER_HIER_CLASS describes the classifications of the hierarchies owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the hierarchy
HIER_NAME	VARCHAR2(128)	NOT NULL	Name of the hierarchy
CLASSIFICATION	VARCHAR2(128)		Classification associated with the hierarchy
VALUE	CLOB		Value of the classification or NULL if not specified
LANGUAGE	VARCHAR2(64)		NLS_LANGUAGE value associated with the classification or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order of the classification in the list of classifications associated with the hierarchy
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).

3.226 ALL_HIER_CLASS_AE

ALL_HIER_CLASS_AE describes the classifications of the hierarchies (across all editions) accessible to the current user.

Related Views

- DBA_HIER_CLASS_AE describes the classifications of all hierarchies (across all editions) in the database.
- USER_HIER_CLASS_AE describes the classifications of the hierarchies (across all editions) owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the hierarchy
HIER_NAME	VARCHAR2(128)	NOT NULL	Name of the hierarchy
CLASSIFICATION	VARCHAR2(128)		Classification associated with the hierarchy
VALUE	CLOB		Value of the classification or NULL if not specified
LANGUAGE	VARCHAR2(64)		NLS_LANGUAGE value associated with the classification or NULL if not specified
ORDER_NUM	NUMBER	NOT NULL	Order of the classification in the list of classifications associated with the hierarchy
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the hierarchy is defined

3.227 ALL_HIER_COLUMNS

ALL_HIER_COLUMNS describes the columns of the hierarchies accessible to the current user.

Related Views

- DBA_HIER_COLUMNS describes the columns of all hierarchies in the database.
- USER_HIER_COLUMNS describes the columns of the hierarchies owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the hierarchy
HIER_NAME	VARCHAR2(128)	NOT NULL	Name of the hierarchy
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column
ROLE	VARCHAR2(4)		The role the attribute plays in the hierarchy: • KEY • AKEY • HIER • PROP
DATA_TYPE	VARCHAR2(106)		Datatype of the column
DATA_LENGTH	NUMBER	NOT NULL	Length of the column (in bytes)
DATA_PRECISION	NUMBER		Decimal precision for the NUMBER datatype; binary precision for the FLOAT datatype, NULL for all other datatypes
DATA_SCALE	NUMBER		Number of digits to the right of the decimal point in a number
NULLABLE	CHAR(1)		Indicates whether a column allows NULL values; the value is N if there is a NOT NULL constraint on the column or if the column is part of a PRIMARY KEY
CHARACTER_SET_NAME	VARCHAR2(44)		Name of the character set: • CHAR_CS • NCHAR_CS
CHAR_COL_DECL_LENGTH	NUMBER		Declaration length of the character type column
CHAR_USED	VARCHAR2(1)		Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the datatype is not any of the following (NULL): • CHAR • VARCHAR2 • NCHAR • NVARCHAR2
ORDER_NUM	NUMBER	NOT NULL	Order of the column, with attributes first in the order specified in the definition of the hierarchy followed by hierarchical attributes

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).

ALL_HIER_LEVEL_ID_ATTRS describes the attributes that uniquely identify members of the levels of the hierarchies accessible to the current user.

Related Views

- DBA_HIER_LEVEL_ID_ATTRS describes the attributes that uniquely identify members of the levels of all hierarchies in the database.
- USER_HIER_LEVEL_ID_ATTRS describes the attributes that uniquely identify members of the levels of the hierarchies owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the hierarchy
HIER_NAME	VARCHAR2(128)	NOT NULL	Name of the hierarchy
LEVEL_NAME	VARCHAR2(128)	NOT NULL	Name of hierarchy level
ATTRIBUTE_NAME	VARCHAR2(128)	NOT NULL	Name of the unique identifier attribute
ORDER_NUM	NUMBER	NOT NULL	Order of the level in the list of unique identifier attributes for the level
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).

3.236 ALL_HIER_LEVEL_ID_ATTRS_AE

ALL_HIER_LEVEL_ID_ATTRS_AE describes the attributes that uniquely identify members of the levels of the hierarchies (across all editions) accessible to the current user.

Related Views

- DBA_HIER_LEVEL_ID_ATTRS_AE describes the attributes that uniquely identify members of the levels of all hierarchies (across all editions) in the database.
- USER_HIER_LEVEL_ID_ATTRS_AE describes the attributes that uniquely identify members of the levels of the hierarchies (across all editions) owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the hierarchy
HIER_NAME	VARCHAR2(128)	NOT NULL	Name of the hierarchy
LEVEL_NAME	VARCHAR2(128)	NOT NULL	Name of hierarchy level
ATTRIBUTE_NAME	VARCHAR2(128)	NOT NULL	Name of the unique identifier attribute
ORDER_NUM	NUMBER	NOT NULL	Order of the level in the list of unique identifier attributes for the level
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root).
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the hierarchy is defined

3.241 ALL_HIST_SAGAS

ALL_HIST_SAGAS provides a history of the completed sagas accessible to the current user.

This view displays sagas that were either initiated in the current PDB or joined by participants in the current PDB.

Completed sagas are retained in this view for the length of time specified by the SAGA_HIST_RETENTION initialization parameter. The default is 30 days.

Related Views

- DBA_HIST_SAGAS provides a history of all completed sagas in the database.
- USER_HIST_SAGAS provides a history of the completed sagas owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
ID	RAW(16)	NOT NULL	Saga ID
INITIATOR	VARCHAR2(128)		Name of the saga initiator
IS_INITIATOR	VARCHAR2(3)		Indicates whether this participant is the saga initiator (YES) or not (NO)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
COORDINATOR	VARCHAR2(128)		Name of the saga coordinator
COORDINATOR_TYPE	VARCHAR2(50)		Type of the saga coordinator: • Internal • External
OWNER	VARCHAR2(128)	NOT NULL	Owner of the saga participant
PARTICIPANT	VARCHAR2(128)	NOT NULL	Name of the saga participant
STATUS	VARCHAR2(15)		Saga status: • Auto Committed • Auto Rolledback • Committed • Finalization • Rejected • Rolledback
VERSION	NUMBER	NOT NULL	Saga version
DURATION	NUMBER		Time limit for the saga (in seconds)
START_TIME	TIMESTAMP(6) WITH TIME ZONE		Saga start time
FINALIZATION_TIME	TIMESTAMP(6) WITH TIME ZONE		Time at which the saga finalization was initiated
COMPLETION_TIME	TIMESTAMP(6) WITH TIME ZONE		Time at which the saga was marked as completed, that is, all saga participants responded to the finalization request

Note

This view is available starting with Oracle AI Database 26ai.

3.243 ALL_HIVE_COLUMNS

ALL_HIVE_COLUMNS describes all Hive columns accessible to the current user in a Hive metastore.

Related Views

- DBA_HIVE_COLUMNS describes all Hive columns in a Hive metastore.
- USER_HIVE_COLUMNS describes all Hive columns owned by the current user in a Hive metastore.

Column	Datatype	NULL	Description
CLUSTER_ID	VARCHAR2(4000)		Identifier for the Hadoop cluster
DATABASE_NAME	VARCHAR2(4000)		Hive database where the owning Hive table resides
TABLE_NAME	VARCHAR2(4000)		Hive table name that the column belongs to
COLUMN_NAME	VARCHAR2(4000)		Hive column name
HIVE_COLUMN_TYPE	VARCHAR2(4000)		Data type of the Hive column
ORACLE_COLUMN_TYPE	VARCHAR2(4000)		Equivalent Oracle data type of the Hive column
LOCATION	VARCHAR2(4000)		Physical location of the Hive table
OWNER	VARCHAR2(4000)		Owner of the Hive table
CREATION_TIME	DATE		Time that the Hive column was created
HIVE_URI	VARCHAR2(4000)		The connection string (URI and port number) for the metastore database

See Also

- "DBA_HIVE_COLUMNS"
- "USER_HIVE_COLUMNS"

3.244 ALL_HIVE_DATABASES

ALL_HIVE_DATABASES describes all the Hive schemas accessible to the current user in a Hadoop cluster.

Related Views

- DBA_HIVE_DATABASES describes all the Hive schemas in a Hadoop cluster.
- USER_HIVE_DATABASES describes all the Hive schemas owned by the current user in a Hadoop cluster.

Column	Datatype	NULL	Description
CLUSTER_ID	VARCHAR2(4000)		Hadoop cluster name
DATABASE_NAME	VARCHAR2(4000)		Name of the Hive database
DESCRIPTION	VARCHAR2(4000)		Description of the Hive database

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DB_LOCATION	VARCHAR2(4000)		Physical location of the Hive database
HIVE_URI	VARCHAR2(4000)		The connection string (URI and port number) for the metastore database

See Also

- "DBA_HIVE_DATABASES"
- "USER_HIVE_DATABASES"

3.245 ALL_HIVE_PART_KEY_COLUMNS

ALL_HIVE_PART_KEY_COLUMNS provides information about all Hive table partition columns accessible to the current user in the database.

Related Views

- DBA_HIVE_PART_KEY_COLUMNS provides information about all Hive table partition columns in the database.
- USER_HIVE_PART_KEY_COLUMNS provides information about all Hive table partition columns owned by the current user in the database.

Column	Datatype	NULL	Description
CLUSTER_ID	VARCHAR2(4000)		Hadoop cluster name
DATABASE_NAME	VARCHAR2(4000)		Hive database where the Hive table resides
TABLE_NAME	VARCHAR2(4000)		Hive table name
OWNER	VARCHAR2(4000)		Owner of the Hive table
COLUMN_NAME	VARCHAR2(4000)		Partition column name
COLUMN_TYPE	VARCHAR2(4000)		Partition column type
COLUMN_POSITION	NUMBER		Partition column position in the Hive partition specification
ORACLE_COLUMN_TYPE	VARCHAR2(4000)		Equivalent Oracle data type of the Hive column

See Also

- "DBA_HIVE_PART_KEY_COLUMNS"

3.246 ALL_HIVE_TAB_PARTITIONS

ALL_HIVE_TAB_PARTITIONS provides information about all Hive table partitions accessible to the current user in the database.

Related Views

- DBA_HIVE_TAB_PARTITIONS provides information about all Hive table partitions in the database.
- USER_HIVE_TAB_PARTITIONS provides information about all Hive table partitions owned by the current user in the database.

Column	Datatype	NULL	Description
CLUSTER_ID	VARCHAR2(4000)		Hadoop cluster name
DATABASE_NAME	VARCHAR2(4000)		Hive database where the Hive table resides
TABLE_NAME	VARCHAR2(4000)		Hive table name
LOCATION	VARCHAR2(4000)		Physical location of the Hive partition
OWNER	VARCHAR2(4000)		Owner of the Hive table
PARTITION_SPECS	VARCHAR2(4000)		The current Hive partition specification
PART_SIZE	NUMBER		Partition size in bytes
CREATION_TIME	DATE		Time that the partition was created

See Also

- "DBA_HIVE_TAB_PARTITIONS"
- "USER_HIVE_TAB_PARTITIONS"

3.247 ALL_HIVE_TABLES

ALL_HIVE_TABLES provides information about all the Hive tables accessible to the current user in the Hive metastore.

Related Views

- DBA_HIVE_TABLES provides information about all Hive tables in the Hive metastore.
- USER_HIVE_TABLES provides information about all Hive tables owned by the current user in the Hive metastore.

Column	Datatype	NULL	Description
CLUSTER_ID	VARCHAR2(4000)		Hadoop cluster name
DATABASE_NAME	VARCHAR2(4000)		Hive database where the Hive table resides
TABLE_NAME	VARCHAR2(4000)		Hive table name
LOCATION	VARCHAR2(4000)		Physical location of the Hive table
NO_OF_COLS	NUMBER		Number of columns in the Hive table

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
CREATION_TIME	DATE		Creation time of the Hive table
LAST_ACCESSED_TIME	DATE		Time that the Hive table was last accessed
OWNER	VARCHAR2(4000)		Owner of the Hive table
TABLE_TYPE	VARCHAR2(4000)		Type of the Hive table
PARTITIONED	VARCHAR2(4000)		Is this Hive table partitioned?
NO_OF_PART_KEYS	NUMBER		Number of partition keys in the Hive table
INPUT_FORMAT	VARCHAR2(4000)		Hive table input format
OUTPUT_FORMAT	VARCHAR2(4000)		Hive table output format
SERIALIZATION	VARCHAR2(4000)		Hive table serialization
COMPRESSED	NUMBER		Is this Hive table compressed?
HIVE_URI	VARCHAR2(4000)		The connection string (URI and port number) for the metastore database

See Also

- "DBA_HIVE_TABLES"
- "USER_HIVE_TABLES"

3.248 ALL_IDENTIFIERS

ALL_IDENTIFIERS displays information about the identifiers in the stored objects accessible to the current user.

Related Views

- DBA_IDENTIFIERS displays information about the identifiers in all stored objects in the database.
- USER_IDENTIFIERS displays information about the identifiers in the stored objects owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the identifier
NAME	VARCHAR2(128)		Name of the identifier
SIGNATURE	VARCHAR2(32)		Signature of the identifier

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
TYPE	VARCHAR2(18)		Type of the identifier. For SQL identifiers, the types include: • TABLE • VIEW • SEQUENCE • ALIAS • COLUMN • MATERIALIZED VIEW • OPERATOR For PL/SQL identifiers, the types include: • FUNCTION • PROCEDURE • PACKAGE
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object where the identifier action occurred
OBJECT_TYPE	VARCHAR2(13)		Type of the object where the identifier action occurred
USAGE	VARCHAR2(11)		Type of the identifier usage: • DECLARATION • DEFINITION • CALL • REFERENCE • ASSIGNMENT
USAGE_ID	NUMBER		Unique key for the identifier usage within the object
LINE	NUMBER		Line number of the identifier action
COL	NUMBER		Column number of the identifier action
USAGE_CONTEXT_ID	NUMBER		Context USAGE_ID of the identifier usage
CHARACTER_SET	VARCHAR2(10)		Contains the value of the character set clause when it is used in a variable identifier declaration. These are the possible values when the character set is derived from another variable identifier: • CHAR_CS • NCHAR_CS • IDENTIFIER
ATTRIBUTE	VARCHAR2(7)		Column contains the attribute value when %attribute is used in a variable declaration. Possible values: • ROWTYPE • TYPE • CHARSET
CHAR_USED	VARCHAR2(4)		Contains the type of the length constraint when it is used in a string length constraint declaration. Possible values: • CHAR • BYTE
LENGTH	NUMBER		Contains the numeric length constraint value for a string length constraint declaration
PRECISION	NUMBER		Contains the numeric precision when it is used in a variable declaration
PRECISION2	NUMBER		Contains the numeric second precision value (for instance, interval types) used in a variable declaration

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SCALE	NUMBER		Contains the numeric scale value used in a variable declaration.
LOWER_RANGE	NUMBER		Contains the numeric lower range value used by a variable declaration with a range constraint
UPPER_RANGE	NUMBER		Contains the numeric upper range value used by a variable declaration with a range constraint
NULL_CONSTRAINT	VARCHAR2(8)		This column is set when a NULL constraint is used by a variable declaration. Possible values: • NULL • NOT NULL
SQL_BUILTIN	VARCHAR2(3)		Is set to YES when an identifier is a SQL builtin used in a SQL statement issued from PL/SQL. Otherwise, this column is set to NO.
IMPLICIT	VARCHAR2(3)		Indicates whether the identifier is an implicit identifier that does not appear in the source (YES) or not (NO)
DECLARED_OWNER	VARCHAR2(128)	NOT NULL	Owner of the object in which this identifier was declared
DECLARED_OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object in which this identifier was declared
DECLARED_OBJECT_TYPE	VARCHAR2(12)		Type of the object in which this identifier was declared
ORIGIN_CON_ID	VARCHAR2(256)		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root)

See Also

- "DBA_IDENTIFIERS"
- "USER_IDENTIFIERS"

3.249 ALL_IMMUTABLE_ROW_VERSION_COLS

ALL_IMMUTABLE_ROW_VERSION_COLS displays information about row versioned columns in the immutable tables accessible to the current user.

Related Views

- DBA_IMMUTABLE_ROW_VERSION_COLS displays information about row versioned columns in all immutable tables in the database.
- USER_IMMUTABLE_ROW_VERSION_COLS displays information about row versioned columns in the immutable tables owned by the current user.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Schema containing the immutable table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the immutable table
ROW_VERSION_NAME	VARCHAR2(128)	NOT NULL	Name of the row version
KEYCOL1_NAME	VARCHAR2(128)	NOT NULL	Name of version key column 1
KEYCOL2_NAME	VARCHAR2(128)		Name of version key column 2 Null if only one version key column is specified for the row version
KEYCOL3_NAME	VARCHAR2(128)		Name of version key column 3 Null if only one or two version key columns are specified for the row version

Note

This view is available starting with Oracle AI Database 26ai.

See Also

- "DBA_IMMUTABLE_ROW_VERSION_COLS"
- "USER_IMMUTABLE_ROW_VERSION_COLS"

3.250 ALL_IMMUTABLE_ROW_VERSION_HISTORY

ALL_IMMUTABLE_ROW_VERSION_HISTORY provides a history of row versions in the immutable tables accessible to the current user.

This view is populated for an immutable table with a row version only when rows are purged from that immutable table. For each different value of the PDB_GUID and KEYCOL*n*_VALUE columns, information about only the youngest purged row is kept in the view.

Related Views

- DBA_IMMUTABLE_ROW_VERSION_HISTORY provides a history of row versions in all immutable tables in the database.
- USER_IMMUTABLE_ROW_VERSION_HISTORY provides a history of row versions in the immutable tables owned by the current user. This view does not display the SCHEMA_NAME column.

Column	Datatype	NULL	Description
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Schema containing the immutable table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the immutable table
ROW_VERSION_NAME	VARCHAR2(128)	NOT NULL	Name of the row version
PDB_GUID	RAW(16)		Global unique identifier of the pluggable database that inserted the row before any GoldenGate processes might have replicated the row to another database

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
KEYCOL1_VALUE	VARCHAR2(400)		Value of version key column 1
KEYCOL2_VALUE	VARCHAR2(400)		Value of version key column 2 Null if only one version key column is specified for the row version
KEYCOL3_VALUE	VARCHAR2(400)		Value of version key column 3 Null if only one or two version key columns are specified for the row version
VERSION_NUMBER	NUMBER		Row version number
ROW_CREATE_TIME	TIMESTAMP(6) WITH TIME ZONE		Date and time at which the row version was created
INST_ID	NUMBER		Identifier of any instance using a distributed or XA transaction to append to the row version history
TRAN_ID	VARCHAR2(22)		Identifier of any distributed transaction branch that is appending to the row version history

Note

This view is available starting with Oracle AI Database 26ai.

See Also

- "DBA_IMMUTABLE_ROW_VERSION_HISTORY"
- "USER_IMMUTABLE_ROW_VERSION_HISTORY"

3.251 ALL_IMMUTABLE_TABLE_COLUMNS

ALL_IMMUTABLE_TABLE_COLUMNS displays information about columns valid in each epoch in the immutable tables accessible to the current user.

Related Views

- DBA_IMMUTABLE_TABLE_COLUMNS displays information about columns valid in each epoch in all immutable tables in the database.
- USER_IMMUTABLE_TABLE_COLUMNS displays information about columns valid in each epoch in the immutable tables owned by the current user. This view does not display the SCHEMA_NAME column.

Column	Datatype	NULL	Description
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Name of the schema containing the immutable table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Immutable table name
EPOCH_NUMBER	NUMBER		Epoch number
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column
INTERNAL_COLUMN_ID	NUMBER	NOT NULL	Internal identifier of the column

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
COLUMN_DATA_TYPE	VARCHAR2(106)		Data type of the column

Note

This view is available starting with Oracle AI Database 26ai.

See Also

- "DBA_IMMUTABLE_TABLE_COLUMNS"
- "USER_IMMUTABLE_TABLE_COLUMNS"

3.252 ALL_IMMUTABLE_TABLE_EPOCHS

ALL_IMMUTABLE_TABLE_EPOCHS displays epoch information for the immutable tables accessible to the current user.

Related Views

- DBA_IMMUTABLE_TABLE_EPOCHS displays epoch information for all immutable tables in the database.
- USER_IMMUTABLE_TABLE_EPOCHS displays epoch information for the immutable tables owned by the current user. This view does not display the SCHEMA_NAME column.

Column	Datatype	NULL	Description
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Name of the schema containing the immutable table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Immutable table name
EPOCH_NUMBER	NUMBER		Epoch number
EPOCH_NAME	VARCHAR2(11)		Epoch name describes the reason for the epoch and is one of the following values: • CREATE • IMPORT • ADD COLUMN • DROP COLUMN
PDB_GUID	RAW(16)		Global unique identifier of the pluggable database where the immutable table epoch was created
START_TIME	TIMESTAMP(6) WITH TIME ZONE		Time at which the epoch was created

Note

This view is available starting with Oracle AI Database 26ai.

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.253 ALL_IMMUTABLE_TABLES

ALL_IMMUTABLE_TABLES describes the immutable tables accessible to the current user.

Related Views

- DBA_IMMUTABLE_TABLES describes all immutable tables in the database.
- USER_IMMUTABLE_TABLES describes the immutable tables owned by the current user. This view does not display the SCHEMA_NAME column.

Column	Datatype	NULL	Description
SCHEMA_NAME	VARCHAR2(128)	NOT NULL	The schema containing the immutable table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the immutable table
ROW_RETENTION	NUMBER		Row retention period for the immutable table, that is, the minimum number of days a row must be retained and cannot be deleted after it is inserted into the table If the value of this column is NULL, then rows can never be deleted from the table.
ROW_RETENTION_LOCKED	VARCHAR2(3)		Indicates whether the row retention period for the immutable table is locked. Possible values: • YES: The row retention period is locked. You cannot change the row retention period • NO: The row retention period is not locked. You can change the row retention period to a value higher than the current value with the SQL statement ALTER TABLE … NO DELETE UNTIL *n* DAYS AFTER INSERT
TABLE_INACTIVITY_RETENTION	NUMBER		Number of days for which the immutable table must be inactive before it can be dropped, that is, the number of days that must pass after the most recent row insertion before the table can be dropped A table with no rows can be dropped at any time, regardless of this column value.
TABLE_VERSION	VARCHAR2(7)		Immutable table version. Possible values: • V1 • V2
CURRENT_EPOCH	NUMBER		Current epoch number for the immutable table
DELETE_TIME	TIMESTAMP(6) WITH TIME ZONE		Youngest threshold used to delete rows in the immutable table

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.254 ALL_INCOMPLETE_SAGAS

`ALL_INCOMPLETE_SAGAS` describes the incomplete sagas accessible to the current user.

This view displays sagas that were either initiated in the current PDB or joined by participants in the current PDB.

Related Views

- `DBA_INCOMPLETE_SAGAS` describes all incomplete sagas in the database.
- `USER_INCOMPLETE_SAGAS` describes the incomplete sagas owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
`ID`	`RAW(16)`	`NOT NULL`	Saga ID
`INITIATOR`	`VARCHAR2(128)`		Name of the saga initiator
`IS_INITIATOR`	`VARCHAR2(3)`		Indicates whether this participant is the saga initiator (`YES`) or not (`NO`)
`COORDINATOR`	`VARCHAR2(128)`		Name of the saga coordinator
`COORDINATOR_TYPE`	`VARCHAR2(50)`		Type of the saga coordinator: • `Internal` • `External`
`OWNER`	`VARCHAR2(128)`	`NOT NULL`	Owner of the saga participant
`PARTICIPANT`	`VARCHAR2(128)`	`NOT NULL`	Name of the saga participant
`STATUS`	`VARCHAR2(15)`		Saga status: • `Commit Failed` • `Rollback Failed` • `Timeout`
`VERSION`	`NUMBER`	`NOT NULL`	Saga version
`DURATION`	`NUMBER`		Time limit for the saga (in seconds)
`START_TIME`	`TIMESTAMP(6) WITH TIME ZONE`		Saga start time

> **Note**
>
> This view is available starting with Oracle AI Database 26ai.

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.255 ALL_IND_COLUMNS

ALL_IND_COLUMNS describes the columns of indexes on all tables accessible to the current user.

Related Views

- DBA_IND_COLUMNS describes the columns of indexes on all tables in the database.
- USER_IND_COLUMNS describes the columns of indexes owned by the current user and columns of indexes on tables owned by the current user. This view does not display the INDEX_OWNER or TABLE_OWNER columns.

Note

For join indexes, the TABLE_NAME and TABLE_OWNER columns in this view may not match the TABLE_NAME and TABLE_OWNER columns you find in the *_INDEXES (and other similar) data dictionary views.

Column	Datatype	NULL	Description
INDEX_OWNER	VARCHAR2(128)	NOT NULL	Owner of the index
INDEX_NAME	VARCHAR2(128)	NOT NULL	Name of the index
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table or cluster
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table or cluster
COLUMN_NAME	VARCHAR2(4000)		Column name or attribute of the object type column **Note:** If you create an index on a user-defined REF column, the system creates the index on the attributes that make up the REF column. Therefore, the column names displayed in this view are the attribute names, with the REF column name as a prefix, in the following form: "REF_name"."attribute"
COLUMN_POSITION	NUMBER	NOT NULL	Position of the column or attribute within the index
COLUMN_LENGTH	NUMBER	NOT NULL	Indexed length of the column
CHAR_LENGTH	NUMBER		Maximum codepoint length of the column
DESCEND	VARCHAR2(4)		Indicates whether the column is sorted in descending order (DESC) or ascending order (ASC)
COLLATED_COLUMN_ID	NUMBER		Internal sequence number of the column for which this column provides linguistic ordering

3.256 ALL_IND_EXPRESSIONS

ALL_IND_EXPRESSIONS describes the expressions of function-based indexes on tables accessible to the current user.

Related Views

- DBA_IND_EXPRESSIONS describes the expressions of all function-based indexes in the database.
- USER_IND_EXPRESSIONS describes the expressions of function-based indexes on tables owned by the current user. This view does not display the INDEX_OWNER or TABLE_OWNER columns.

Column	Datatype	NULL	Description
INDEX_OWNER	VARCHAR2(128)	NOT NULL	Owner of the index
INDEX_NAME	VARCHAR2(128)	NOT NULL	Name of the index
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table or cluster
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table or cluster
COLUMN_EXPRESSION	LONG		Function-based index expression defining the column
COLUMN_POSITION	NUMBER	NOT NULL	Position of the column or attribute within the index

See Also

- "USER_IND_EXPRESSIONS"

3.257 ALL_IND_PARTITIONS

ALL_IND_PARTITIONS displays, for each index partition accessible to the current user, the partition-level partitioning information, the storage parameters for the partition, and various partition statistics generated by the DBMS_STATS package.

Related Views

- DBA_IND_PARTITIONS describes all index partitions in the database.
- USER_IND_PARTITIONS describes the index partitions owned by the current user. This view does not display the INDEX_OWNER column.

Column	Datatype	NULL	Description
INDEX_OWNER	VARCHAR2(128)		Owner of the index

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
INDEX_NAME	VARCHAR2(128)		Name of the index
COMPOSITE	VARCHAR2(3)		Indicates whether the partition belongs to a local index on a composite-partitioned table (YES) or not (NO)
PARTITION_NAME	VARCHAR2(128)		Name of the partition
SUBPARTITION_COUNT	NUMBER		If a local index on a composite-partitioned table, the number of subpartitions in the partition
HIGH_VALUE	LONG		Partition bound value expression
HIGH_VALUE_LENGTH	NUMBER		Length of the partition bound value expression
PARTITION_POSITION	NUMBER		Position of the partition within the index
STATUS	VARCHAR2(8)		Indicates whether the index partition is usable (USABLE) or not (UNUSABLE)
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the partition
PCT_FREE	NUMBER		Minimum percentage of free space in a block
INI_TRANS	NUMBER		Initial number of transactions
MAX_TRANS	NUMBER		Maximum number of transactions
INITIAL_EXTENT	NUMBER		Size of the initial extent in bytes
NEXT_EXTENT	NUMBER		Size of secondary extents in bytes
MIN_EXTENT	NUMBER		Minimum number of extents allowed in the segment
MAX_EXTENT	NUMBER		Maximum number of extents allowed in the segment
MAX_SIZE	NUMBER		Maximum number of blocks allowed in the segment
PCT_INCREASE	NUMBER		Percentage increase in extent size
FREELISTS	NUMBER		Number of process freelists allocated in this segment
FREELIST_GROUPS	NUMBER		Number of process freelist groups allocated in this segment
LOGGING	VARCHAR2(7)		Indicates whether or not changes to the index are logged: • NONE - Not specified **See Also:** the *_IND_SUBPARTITIONS view • YES • NO
COMPRESSION	VARCHAR2(13)		Type of compression being used for the partition: • ENABLED - Prefix compression • ADVANCED HIGH - Advanced high compression • ADVANCED LOW - Advanced low compression • DISABLED - No compression is present
BLEVEL	NUMBER		B*-Tree level (depth of the index from its root block to its leaf blocks). A depth of 0 indicates that the root block and leaf block are the same.
LEAF_BLOCKS	NUMBER		Number of leaf blocks in the index partition
DISTINCT_KEYS	NUMBER		Number of distinct keys in the index partition
AVG_LEAF_BLOCKS_PER_KEY	NUMBER		Average number of leaf blocks in which each distinct value in the index appears, rounded to the nearest integer. For indexes that enforce UNIQUE and PRIMARY KEY constraints, this value is always 1.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
AVG_DATA_BLOCKS_PER_KEY	NUMBER		Average number of data blocks in the table that are pointed to by a distinct value in the index rounded to the nearest integer. This statistic is the average number of data blocks that contain rows that contain a given value for the indexed columns.
CLUSTERING_FACTOR	NUMBER		Indicates the amount of order of the rows in the table based on the values of the index. • If the value is near the number of blocks, then the table is very well ordered. In this case, the index entries in a single leaf block tend to point to rows in the same data blocks. • If the value is near the number of rows, then the table is very randomly ordered. In this case, it is unlikely that index entries in the same leaf block point to rows in the same data blocks.
NUM_ROWS	NUMBER		Number of rows returned
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this partition
LAST_ANALYZED	DATE		Date on which this partition was most recently analyzed
BUFFER_POOL	VARCHAR2(7)		Actual buffer pool for the partition: • DEFAULT • KEEP • RECYCLE • NULL
FLASH_CACHE	VARCHAR2(7)		Database Smart Flash Cache hint to be used for partition blocks: • DEFAULT • KEEP • NONE Solaris and Oracle Linux functionality only.
CELL_FLASH_CACHE	VARCHAR2(7)		Cell flash cache hint to be used for partition blocks: • DEFAULT • KEEP • NONE **See Also:** Oracle Exadata Storage Server Software documentation for more information
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
PCT_DIRECT_ACCESS	NUMBER		If a secondary index on index-organized table, the percentage of rows with VALID guess
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics have been gathered or NO if statistics have been aggregated from subpartitions or have not been gathered
DOMIDX_OPSTATUS	VARCHAR2(6)		Status of the operation on a domain index: • NULL - Index is not a domain index • VALID - Operation performed without errors • FAILED - Operation failed with an error
PARAMETERS	VARCHAR2(1000)		For a domain index, the parameter string

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
INTERVAL	VARCHAR2(3)		Indicates whether the partition is in the interval section of an interval partitioned table (YES) or whether the partition is in the range section (NO)
SEGMENT_CREATED	VARCHAR2(3)		Indicates whether the index partition segment has been created (YES) or not (NO); N/A indicates that this index is subpartitioned and no segment exists at the partition level
ORPHANED_ENTRIES	VARCHAR2(3)		Indicates whether a global index partition contains stale entries because of deferred index maintenance during DROP/TRUNCATE PARTITION, or MODIFY PARTITION INDEXING OFF operations. Possible values: • YES - the index partition contains orphaned entries • NO - the index partition does not contain orphaned entries
HIGH_VALUE_CLOB	CLOB		High value (boundary) information for the index partition, in CLOB format
HIGH_VALUE_JSON	JSON		High value (boundary) information for the index partition, in JSON format

3.258 ALL_IND_PENDING_STATS

ALL_IND_PENDING_STATS describes the pending statistics for tables, partitions, and subpartitions accessible to the current user collected using the DBMS_STATS package.

Related Views

- DBA_IND_PENDING_STATS describes pending statistics for all tables, partitions, and subpartitions in the database.
- USER_IND_PENDING_STATS describes pending statistics for tables, partitions, and subpartitions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Name of the index owner
INDEX_NAME	VARCHAR2(128)		Index name
TABLE_OWNER	VARCHAR2(128)		Table owner name
TABLE_NAME	VARCHAR2(128)		Name of the table
PARTITION_NAME	VARCHAR2(128)		Name of the partition

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SUBPARTITION_NAME	VARCHAR2(128)		Name of the subpartition
BLEVEL	NUMBER		Number of levels in the index
LEAF_BLOCKS	NUMBER		Number of leaf blocks in the index
DISTINCT_KEYS	NUMBER		Number of distinct keys in the index
AVG_LEAF_BLOCKS_PER_KEY	NUMBER		Average number of leaf blocks per key
AVG_DATA_BLOCKS_PER_KEY	NUMBER		Average number of data blocks per key
CLUSTERING_FACTOR	NUMBER		Clustering factor
NUM_ROWS	NUMBER		Number of rows in the index
SAMPLE_SIZE	NUMBER		Sample size
LAST_ANALYZED	DATE		Time of the last analysis

3.259 ALL_IND_STATISTICS

ALL_IND_STATISTICS displays optimizer statistics for the indexes on the tables accessible to the current user collected using the DBMS_STATS package.

Related Views

- DBA_IND_STATISTICS displays optimizer statistics for all indexes in the database.
- USER_IND_STATISTICS displays optimizer statistics for the indexes on the tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the index
INDEX_NAME	VARCHAR2(128)		Name of the index
TABLE_OWNER	VARCHAR2(128)		Owner of the indexed object
TABLE_NAME	VARCHAR2(128)		Name of the indexed object
PARTITION_NAME	VARCHAR2(128)		Name of the partition
PARTITION_POSITION	NUMBER		Position of the partition within the index
SUBPARTITION_NAME	VARCHAR2(128)		Name of the subpartition
SUBPARTITION_POSITION	NUMBER		Position of the subpartition within the partition
OBJECT_TYPE	VARCHAR2(12)		Type of the object: • INDEX • PARTITION • SUBPARTITION

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
BLEVEL	NUMBER		B-Tree level
LEAF_BLOCKS	NUMBER		Number of leaf blocks in the index
DISTINCT_KEYS	NUMBER		Number of distinct keys in the index
AVG_LEAF_BLOCKS_PER_KEY	NUMBER		Average number of leaf blocks per key
AVG_DATA_BLOCKS_PER_KEY	NUMBER		Average number of data blocks per key
CLUSTERING_FACTOR	NUMBER		Indicates the amount of order of the rows in the table based on the values of the index. • If the value is near the number of blocks, then the table is very well ordered. In this case, the index entries in a single leaf block tend to point to rows in the same data blocks. • If the value is near the number of rows, then the table is very randomly ordered. In this case, it is unlikely that index entries in the same leaf block point to rows in the same data blocks.
NUM_ROWS	NUMBER		Number of rows in the index
AVG_CACHED_BLOCKS	NUMBER		Average number of blocks in the buffer cache
AVG_CACHE_HIT_RATIO	NUMBER		Average cache hit ratio for the object
SAMPLE_SIZE	NUMBER		Sample size used in analyzing the index
LAST_ANALYZED	DATE		Date of the most recent time the index was analyzed
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
STATTYPE_LOCKED	VARCHAR2(5)		Type of statistics lock
STALE_STATS	VARCHAR2(3)		Whether statistics for the object are stale or not
SCOPE	VARCHAR2(7)		The value is SHARED for statistics gathered on any table other than global temporary tables. For a global tempoary table, the possible values are: • SESSION - Indicates that the statistics are session-specific • SHARED - Indicates that the statistics are shared across all sessions See *Oracle AI Database PL/SQL Packages and Types Reference* for information about using the GLOBAL_TEMP_TABLE_STATS preference of the DBMS_STATS package to control whether to gather session or shared statistics for global temporary tables.

3.260 ALL_IND_SUBPARTITIONS

ALL_IND_SUBPARTITIONS displays, for each index subpartition accessible to the current user, the subpartition-level partitioning information, the storage parameters for the subpartition, and various subpartition statistics generated by the DBMS_STATS package.

Related Views

- DBA_IND_SUBPARTITIONS describes all index subpartitions in the database.
- USER_IND_SUBPARTITIONS describes the index subpartitions owned by the current user. This view does not display the INDEX_OWNER column.

Column	Datatype	NULL	Description
INDEX_OWNER	VARCHAR2(128)	NOT NULL	Owner of the index
INDEX_NAME	VARCHAR2(128)	NOT NULL	Name of the index
PARTITION_NAME	VARCHAR2(128)		Name of the partition
SUBPARTITION_NAME	VARCHAR2(128)		Name of the subpartition
HIGH_VALUE	LONG		Subpartition bound value expression
HIGH_VALUE_LENGTH	NUMBER	NOT NULL	Length of the subpartition bound value expression
PARTITION_POSITION	NUMBER		Position of the partition within the index
SUBPARTITION_POSITION	NUMBER		Position of a subpartition within a partition
STATUS	VARCHAR2(8)		Indicates whether the index partition is usable (USABLE) or not (UNUSABLE)
TABLESPACE_NAME	VARCHAR2(30)	NOT NULL	Name of the tablespace containing the partition
PCT_FREE	NUMBER	NOT NULL	Minimum percentage of free space in a block
INI_TRANS	NUMBER	NOT NULL	Initial number of transactions
MAX_TRANS	NUMBER	NOT NULL	Maximum number of transactions
INITIAL_EXTENT	NUMBER		Size of the initial extent in bytes
NEXT_EXTENT	NUMBER		Size of secondary extents in bytes
MIN_EXTENT	NUMBER		Minimum number of extents allowed in the segment
MAX_EXTENT	NUMBER		Maximum number of extents allowed in the segment
MAX_SIZE	NUMBER		Maximum number of blocks allowed in the segment
PCT_INCREASE	NUMBER	NOT NULL	Percentage increase in extent size
FREELISTS	NUMBER		Number of process freelists allocated in this segment
FREELIST_GROUPS	NUMBER		Number of process freelist groups allocated in this segment
LOGGING	VARCHAR2(3)		Indicates whether or not changes to the index are logged: • YES • NO
COMPRESSION	VARCHAR2(13)		Type of compression being used for the subpartition: • ENABLED - Prefix compression • ADVANCED HIGH - Advanced high compression • ADVANCED LOW - Advanced low compression • DISABLED - No compression is present

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
BLEVEL	NUMBER		B-Tree level (depth of the index from its root block to its leaf blocks). A depth of 0 indicates that the root block and leaf block are the same.
LEAF_BLOCKS	NUMBER		Number of leaf blocks in the index
DISTINCT_KEYS	NUMBER		Number of distinct keys in the index partition
AVG_LEAF_BLOCKS_PER_KEY	NUMBER		Average number of leaf blocks in which each distinct value in the index appears, rounded to the nearest integer. For indexes that enforce UNIQUE and PRIMARY KEY constraints, this value is always 1.
AVG_DATA_BLOCKS_PER_KEY	NUMBER		Average number of data blocks in the table that are pointed to by a distinct value in the index rounded to the nearest integer. This statistic is the average number of data blocks that contain rows that contain a given value for the indexed columns.
CLUSTERING_FACTOR	NUMBER		Indicates the amount of order of the rows in the table based on the values of the index. • If the value is near the number of blocks, then the table is very well ordered. In this case, the index entries in a single leaf block tend to point to rows in the same data blocks. • If the value is near the number of rows, then the table is very randomly ordered. In this case, it is unlikely that index entries in the same leaf block point to rows in the same data blocks.
NUM_ROWS	NUMBER		Number of rows in this index subpartition
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this subpartition
LAST_ANALYZED	DATE		Date on which this partition was most recently analyzed
BUFFER_POOL	VARCHAR2(7)		Buffer pool for the subpartition: • DEFAULT • KEEP • RECYCLE • NULL
FLASH_CACHE	VARCHAR2(7)		Database Smart Flash Cache hint to be used for subpartition blocks: • DEFAULT • KEEP • NONE Solaris and Oracle Linux functionality only.
CELL_FLASH_CACHE	VARCHAR2(7)		Cell flash cache hint to be used for subpartition blocks: • DEFAULT • KEEP • NONE **See Also:** Oracle Exadata Storage Server Software documentation for more information

3.261 ALL_INDEXES

ALL_INDEXES describes the indexes on the tables accessible to the current user.

To gather statistics for this view and the related views DBA_INDEXES and USER_INDEXES, use the DBMS_STATS package.

Related Views

- DBA_INDEXES describes all indexes in the database.
- USER_INDEXES describes the indexes owned by the current user. This view does not display the OWNER column.

Note

Column names followed by an asterisk are populated only if you collect statistics on the index using the DBMS_STATS package.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the index
INDEX_NAME	VARCHAR2(128)	NOT NULL	Name of the index

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
INDEX_TYPE	VARCHAR2(27)		Type of the index: • BITMAP • CLUSTER • DOMAIN • FUNCTION-BASED BITMAP • FUNCTION-BASED DOMAIN • FUNCTION-BASED NORMAL • FUNCTION-BASED NORMAL/REV • IOT - TOP • LOB • NORMAL • NORMAL/REV • VECTOR
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the indexed object
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the indexed object
TABLE_TYPE	VARCHAR2(11)		Type of the indexed object In the DBA_INDEXES and USER_INDEXES views, the possible values are: • CLUSTER • INDEX • NEXT OBJECT • SEQUENCE • SYNONYM • TABLE • VIEW In the ALL_INDEXES view, the value of this column is always TABLE and the data type is CHAR(5).
UNIQUENESS	VARCHAR2(9)		Indicates whether the index is unique (UNIQUE) or nonunique (NONUNIQUE)
COMPRESSION	VARCHAR2(13)		Type of compression being used for the index: • ENABLED - Prefix compression • ADVANCED HIGH - Advanced high compression • ADVANCED LOW - Advanced low compression • DISABLED - No compression is present
PREFIX_LENGTH	NUMBER		Number of columns in the prefix of the compression key
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the index
INI_TRANS	NUMBER		Initial number of transactions
MAX_TRANS	NUMBER		Maximum number of transactions
INITIAL_EXTENT	NUMBER		Size of the initial extent
NEXT_EXTENT	NUMBER		Size of secondary extents
MIN_EXTENTS	NUMBER		Minimum number of extents allowed in the segment
MAX_EXTENTS	NUMBER		Maximum number of extents allowed in the segment
PCT_INCREASE	NUMBER		Percentage increase in extent size
PCT_THRESHOLD	NUMBER		Threshold percentage of block space allowed per index entry

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
INCLUDE_COLUMN	NUMBER		Column ID of the last column to be included in index-organized table primary key (non-overflow) index. This column maps to the COLUMN_ID column of the *_TAB_COLUMNS view.
FREELISTS	NUMBER		Number of process freelists allocated to this segment
FREELIST_GROUPS	NUMBER		Number of freelist groups allocated to this segment
PCT_FREE	NUMBER		Minimum percentage of free space in a block
LOGGING	VARCHAR2(3)		Indicates whether or not changes to the index are logged: • YES • NO
BLEVEL*	NUMBER		B*-Tree level (depth of the index from its root block to its leaf blocks). A depth of 0 indicates that the root block and leaf block are the same.
LEAF_BLOCKS*	NUMBER		Number of leaf blocks in the index
DISTINCT_KEYS*	NUMBER		Number of distinct indexed values. For indexes that enforce UNIQUE and PRIMARY KEY constraints, this value is the same as the number of rows in the table (*_TABLES.NUM_ROWS)
AVG_LEAF_BLOCKS_PER_KEY*	NUMBER		Average number of leaf blocks in which each distinct value in the index appears, rounded to the nearest integer. For indexes that enforce UNIQUE and PRIMARY KEY constraints, this value is always 1.
AVG_DATA_BLOCKS_PER_KEY*	NUMBER		Average number of data blocks in the table that are pointed to by a distinct value in the index rounded to the nearest integer. This statistic is the average number of data blocks that contain rows that contain a given value for the indexed columns.
CLUSTERING_FACTOR*	NUMBER		Indicates the amount of order of the rows in the table based on the values of the index. • If the value is near the number of blocks, then the table is very well ordered. In this case, the index entries in a single leaf block tend to point to rows in the same data blocks. • If the value is near the number of rows, then the table is very randomly ordered. In this case, it is unlikely that index entries in the same leaf block point to rows in the same data blocks. For bitmap indexes, this column is not applicable.
STATUS	VARCHAR2(8)		Indicates whether a nonpartitioned index is VALID or UNUSABLE
NUM_ROWS	NUMBER		Number of rows in the index. For bitmap indexes, this column is the number of distinct keys, so its value is the same as the DISTINCT_KEYS column.
SAMPLE_SIZE	NUMBER		Size of the sample used to analyze the index
LAST_ANALYZED	DATE		Date on which this index was most recently analyzed
DEGREE	VARCHAR2(40)		Number of threads per instance for scanning the index, or DEFAULT

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
INSTANCES	VARCHAR2(40)		Number of instances across which the indexes to be scanned, or DEFAULT
PARTITIONED	VARCHAR2(3)		Indicates whether the index is partitioned (YES) or not (NO)
TEMPORARY	VARCHAR2(1)		Indicates whether the index is on a temporary table (Y) or not (N)
GENERATED	VARCHAR2(1)		Indicates whether the name of the index is system-generated (Y) or not (N)
SECONDARY	VARCHAR2(1)		Indicates whether the index is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge (Y) or not (N)
BUFFER_POOL	VARCHAR2(7)		Buffer pool to be used for index blocks: • DEFAULT • KEEP • RECYCLE • NULL
FLASH_CACHE	VARCHAR2(7)		Database Smart Flash Cache hint to be used for index blocks: • DEFAULT • KEEP • NONE Solaris and Oracle Linux functionality only.
CELL_FLASH_CACHE	VARCHAR2(7)		Cell flash cache hint to be used for index blocks: • DEFAULT • KEEP • NONE **See Also:** Oracle Exadata Storage Server Software documentation for more information
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
DURATION	VARCHAR2(15)		Indicates the duration of a temporary table: • SYS$SESSION - Rows are preserved for the duration of the session • SYS$TRANSACTION - Rows are deleted after COMMIT NULL - Permanent table
PCT_DIRECT_ACCESS	NUMBER		For a secondary index on an index-organized table, the percentage of rows with VALID guess
ITYP_OWNER	VARCHAR2(128)		For a domain index, the owner of the indextype
ITYP_NAME	VARCHAR2(128)		For a domain index, the name of the indextype
PARAMETERS	VARCHAR2(1000)		For a domain index, the parameter string
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
DOMIDX_STATUS	VARCHAR2(12)		Status of a domain index: • NULL - Index is not a domain index • VALID - Index is a valid domain index • IDXTYP_INVLD - Indextype of the domain index is invalid

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DOMIDX_OPSTATUS	VARCHAR2(6)		Status of the operation on a domain index: • NULL - Index is not a domain index • VALID - Operation performed without errors • FAILED - Operation failed with an error
FUNCIDX_STATUS	VARCHAR2(8)		Status of a function-based index: • NULL - Index is not a function-based index • ENABLED - Function-based index is enabled • DISABLED - Function-based index is disabled
JOIN_INDEX	VARCHAR2(3)		Indicates whether the index is a join index (YES) or not (NO)
IOT_REDUNDANT_PKEY_ELIM	VARCHAR2(3)		Indicates whether redundant primary key columns are eliminated from secondary indexes on index-organized tables (YES) or not (NO)
DROPPED	VARCHAR2(3)		Indicates whether the index has been dropped and is in the recycle bin (YES) or not (NO); NULL for partitioned tables This view does not return the names of indexes that have been dropped.
VISIBILITY	VARCHAR2(9)		Indicates whether the index is VISIBLE or INVISIBLE to the optimizer
DOMIDX_MANAGEMENT	VARCHAR2(14)		If this is a domain index, indicates whether the domain index is system-managed (SYSTEM_MANAGED) or user-managed (USER_MANAGED)
SEGMENT_CREATED	VARCHAR2(3)		Indicates whether the index segment has been created (YES) or not (NO)
ORPHANED_ENTRIES	VARCHAR2(3)		Indicates whether a global index contains stale entries because of deferred index maintenance during DROP/ TRUNCATE PARTITION, or MODIFY PARTITION INDEXING OFF operations. Possible values: • YES - The index contains orphaned entries • NO - The index does not contain orphaned entries
INDEXING	VARCHAR2(7)		Indicates whether a global index is decoupled from the underlying table. Possible values: • PARTIAL - The index is partial, that is, it will follow the table's indexing property. • FULL - The index will include all partitions of the table.
AUTO	VARCHAR2(3)		Indicates whether the index is an auto index (YES) or not (NO)
CONSTRAINT_INDEX	VARCHAR2(3)		Indicates whether the index was created as part of a constraint (YES) or not (NO)

3.262 ALL_INDEXTYPE_ARRAYTYPES

ALL_INDEXTYPE_ARRAYTYPES displays information about the array types specified by the indextypes accessible to the current user.

Related Views

- DBA_INDEXTYPE_ARRAYTYPES displays information about the array types specified by all indextypes in the database.
- USER_INDEXTYPE_ARRAYTYPES displays information about the array types specified by the indextypes owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the indextype
INDEXTYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the indextype
BASE_TYPE_SCHEMA	VARCHAR2(128)		Name of the base type schema
BASE_TYPE_NAME	VARCHAR2(128)		Name of the base type name
BASE_TYPE	VARCHAR2(30)		Datatype of the base type
ARRAY_TYPE_SCHEMA	VARCHAR2(128)	NOT NULL	Name of the array type schema
ARRAY_TYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the array type name

ALL_INDEXTYPES displays information about the indextypes accessible to the current user.

Related Views

- DBA_INDEXTYPES displays information about all indextypes in the database.
- USER_INDEXTYPES displays information about the indextypes owned by the current user.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the indextype
INDEXTYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the indextype
IMPLEMENTATION_SCHEMA	VARCHAR2(128)	NOT NULL	Name of the schema for the indextype implementation (that is, containing the indextype operators)
IMPLEMENTATION_NAME	VARCHAR2(128)	NOT NULL	Name of the indextype implementation type
INTERFACE_VERSION	NUMBER		Version of the indextype interface
IMPLEMENTATION_VERSION	NUMBER	NOT NULL	Version of the indextype implementation
NUMBER_OF_OPERATORS	NUMBER		Number of operators associated with the indextype
PARTITIONING	VARCHAR2(10)		Kinds of local partitioning supported by the indextype: • NONE - Indextype does not support local domain indexes • RANGE - Indextype can support range partitioned local user managed domain indexes • LOCAL - Indextype can support local system managed domain indexes (range, list, hash, or interval)
ARRAY_DML	VARCHAR2(3)		Indicates whether the indextype supports array DML (YES) or not (NO)
MAINTENANCE_TYPE	VARCHAR2(14)		Indicates whether the indextype is system-managed (SYSTEM_MANAGED) or user-managed (USER_MANAGED)

3.266 ALL_INTERNAL_TRIGGERS

ALL_INTERNAL_TRIGGERS describes internal triggers on tables accessible to the current user. Internal triggers are internal pieces of code executed when a particular flag is set for a table. This view does not display the OWNER_NAME column.

Related Views

- DBA_INTERNAL_TRIGGERS describes internal triggers on all tables in the database.
- USER_INTERNAL_TRIGGERS describes all internal triggers on tables owned by the current user. This view does not display the OWNER_NAME column.

Column	Datatype	NULL	Description
TABLE_NAME	VARCHAR2(128)		Name of the table on which the trigger is defined
INTERNAL_TRIGGER_TYPE	VARCHAR2(19)		Indicates the type of internal trigger on the table

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- "DBA_INTERNAL_TRIGGERS"

3.267 ALL_JAVA_ARGUMENTS

ALL_JAVA_ARGUMENTS displays argument information about the stored Java classes accessible to the current user.

Related Views

- DBA_JAVA_ARGUMENTS displays argument information about all stored Java classes in the database.
- USER_JAVA_ARGUMENTS displays argument information about the stored Java classes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Java class
NAME	VARCHAR2(4000)		Name of the Java class
METHOD_INDEX	NUMBER		Index of the hosting method of the argument
METHOD_NAME	VARCHAR2(4000)		Name of the hosting method of the argument
ARGUMENT_POSITION	NUMBER		Position of the argument, starting from 0
ARRAY_DEPTH	NUMBER		Array depth of the type of the argument
BASE_TYPE	VARCHAR2(7)		Base type of the type of the argument: • int • long • float • double • boolean • byte • char • short • class
ARGUMENT_CLASS	VARCHAR2(4000)		Actual class name of the argument if the base type is class

See Also

- "DBA_JAVA_ARGUMENTS"
- "USER_JAVA_ARGUMENTS"

3.268 ALL_JAVA_CLASSES

ALL_JAVA_CLASSES displays class level information about the stored Java classes accessible to the current user.

Related Views

- DBA_JAVA_CLASSES displays class level information about all stored Java classes in the database.
- USER_JAVA_CLASSES displays class level information about the stored Java classes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Java class
NAME	VARCHAR2(4000)		Name of the Java class
MAJOR	NUMBER		Major version number of the Java class, as defined in the JVM specification
MINOR	NUMBER		Minor version number of the Java class, as defined in the JVM specification
KIND	VARCHAR2(50)		Indicates whether the stored object is a Java class (CLASS) or a Java interface (INTERFACE)
ACCESSIBILITY	VARCHAR2(9)		Accessibility of the Java class
IS_INNER	VARCHAR2(3)		Indicates whether this Java class is an inner class (YES) or not (NO)
IS_ABSTRACT	VARCHAR2(3)		Indicates whether this Java class is an abstract class (YES) or not (NO)
IS_FINAL	VARCHAR2(3)		Indicates whether this Java class is a final class (YES) or not (NO)
IS_STATIC	VARCHAR2(3)		Indicates whether this is a static inner class (YES) or not (NO)
IS_STRICTFP	VARCHAR2(3)		Indicates whether the class is declared strict floating point for portability (YES) or not (NO)
IS_SYNTHETIC	VARCHAR2(3)		Indicates whether this is an inner class generated by the compiler (YES) or not (NO)
IS_DEBUG	VARCHAR2(3)		Indicates whether this Java class contains debug information (YES) or not (NO)
SOURCE	VARCHAR2(4000)		Source designation of the Java class
SUPER	VARCHAR2(4000)		Super class of this Java class
OUTER	VARCHAR2(4000)		Outer class of this Java class if this Java class is an inner class

See Also

- "DBA_JAVA_CLASSES"
- "USER_JAVA_CLASSES"

3.269 ALL_JAVA_COMPILER_OPTIONS

ALL_JAVA_COMPILER_OPTIONS displays information about the native compiler options accessible to the current user.

Related Views

- DBA_JAVA_COMPILER_OPTIONS displays information about all native compiler options in the database.
- USER_JAVA_COMPILER_OPTIONS displays information about the native compiler options owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the native compiler option
OPTION_NAME	VARCHAR2(64)		Name of the native compiler option
VALUE	VARCHAR2(4000)		Value of the native compiler option

See Also

- "DBA_JAVA_COMPILER_OPTIONS"
- "USER_JAVA_COMPILER_OPTIONS"

3.270 ALL_JAVA_DERIVATIONS

ALL_JAVA_DERIVATIONS displays mapping information about Java source objects and their derived Java class objects and Java resource objects for the Java classes accessible to the current user.

Related Views

- DBA_JAVA_DERIVATIONS displays mapping information about Java source objects and their derived Java class objects and Java resource objects for all Java classes in the database.
- USER_JAVA_DERIVATIONS displays mapping information about Java source objects and their derived Java class objects and Java resource objects for the Java classes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Java source object
SOURCE_NAME	VARCHAR2(4000)		Name of the Java source object
CLASS_INDEX	NUMBER		Index of the derived Java class object
CLASS_NAME	VARCHAR2(4000)		Name of the derived Java class object

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- "DBA_JAVA_DERIVATIONS"

3.271 ALL_JAVA_FIELDS

ALL_JAVA_FIELDS displays field information about the stored Java classes accessible to the current user.

Related Views

- DBA_JAVA_FIELDS displays field information about all stored Java classes in the database.
- USER_JAVA_FIELDS displays field information about the stored Java classes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Java class
NAME	VARCHAR2(4000)		Name of the Java class
FIELD_INDEX	NUMBER		Index of the field
FIELD_NAME	VARCHAR2(4000)		Name of the field identified by the FIELD_INDEX column
ACCESSIBILITY	VARCHAR2(9)		Accessibility of the field: • PUBLIC • PRIVATE • PROTECTED
IS_STATIC	VARCHAR2(3)		Indicates whether the field is a static field (YES) or not (NO)
IS_FINAL	VARCHAR2(3)		Indicates whether the field is a final field (YES) or not (NO)
IS_VOLATILE	VARCHAR2(3)		Indicates whether the field is volatile (YES) or not (NO)
IS_TRANSIENT	VARCHAR2(3)		Indicates whether the field is transient (YES) or not (NO)
IS_SYNTHETIC	VARCHAR2(3)		Indicates whether the field is generated by the compiler (YES) or not (NO)
IS_ENUM	VARCHAR2(3)		Indicates whether the field is a member of an enum (YES) or not (NO)
ARRAY_DEPTH	NUMBER		Array depth of the type of the field
BASE_TYPE	VARCHAR2(7)		Base type of the type of the field: • int • long • float • double • boolean • byte • char • short • class

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
FIELD_CLASS	VARCHAR2(4000)		Actual class name of the base object if the base type is class

See Also

- "DBA_JAVA_FIELDS"

3.272 ALL_JAVA_IMPLEMENTS

ALL_JAVA_IMPLEMENTS describes interfaces implemented by the stored Java classes accessible to the current user.

Related Views

- DBA_JAVA_IMPLEMENTS describes interfaces implemented by all stored Java classes in the database.
- USER_JAVA_IMPLEMENTS describes interfaces implemented by the stored Java classes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Java class
NAME	VARCHAR2(4000)		Name of the Java class
INTERFACE_INDEX	NUMBER		Index of the interfaces implemented by the Java class
INTERFACE_NAME	VARCHAR2(4000)		Name of the interface identified by the INTERFACE_INDEX column

See Also

- "DBA_JAVA_IMPLEMENTS"
- "USER_JAVA_IMPLEMENTS"

3.273 ALL_JAVA_INNERS

ALL_JAVA_INNERS displays information about inner classes referred to by the stored Java classes accessible to the current user.

Related Views

- DBA_JAVA_INNERS displays information about inner classes referred to by all stored Java classes in the database.
- USER_JAVA_INNERS displays information about inner classes referred to by the stored Java classes owned by the current user. This view does not display the OWNER column.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Java class
NAME	VARCHAR2(4000)		Name of the Java class
INNER_INDEX	NUMBER		Index of the referred inner class
SIMPLE_NAME	VARCHAR2(4000)		Simple name of the referred inner class
FULL_NAME	VARCHAR2(4000)		Full name of the referred inner class
ACCESSIBILITY	VARCHAR2(9)		Accessibility of the referred inner class: • PUBLIC • PRIVATE • PROTECTED
IS_STATIC	VARCHAR2(3)		Indicates whether the referred inner class is declared static in the source file (YES) or not (NO)
IS_FINAL	VARCHAR2(3)		Indicates whether the referred inner class is declared final in the source file (YES) or not (NO)
IS_ABSTRACT	VARCHAR2(3)		Indicates whether the referred inner class is declared abstract in the source file (YES) or not (NO)
IS_INTERFACE	VARCHAR2(3)		Indicates whether the referred inner class is declared interface in the source file (YES) or not (NO)
IS_STRICTFP	VARCHAR2(3)		Indicates whether the inner class is declared strictfp (YES) or not (NO)
IS_SYNTHETIC	VARCHAR2(3)		Indicates whether the inner class is generated by the compiler (YES) or not (NO)
IS_ENUM	VARCHAR2(3)		Indicates whether the inner class is an enum (YES) or not (NO)
IS_ANNOTATION	VARCHAR2(3)		Indicates whether the inner class is an annotation (YES) or not (NO)
KIND	VARCHAR2(50)		Type (class, interface, enum or annotation) of the inner class
ALL_QUALIFIERS	VARCHAR2(101)		Concatenation of accessibility, type and other attributes of the inner class

See Also

- "DBA_JAVA_INNERS"
- "USER_JAVA_INNERS"

3.274 ALL_JAVA_LAYOUTS

ALL_JAVA_LAYOUTS displays class layout information about the stored Java classes accessible to the current user.

Related Views

- DBA_JAVA_LAYOUTS displays class layout information about all stored Java classes in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- USER_JAVA_LAYOUTS displays class layout information about the stored Java classes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Java class
NAME	VARCHAR2(4000)		Name of the Java class
INTERFACES	NUMBER		Number of interfaces that this Java class implements
INNER_CLASSES	NUMBER		Number of inner classes that this Java class contains
FIELDS	NUMBER		Number of locally declared fields that this Java class contains
STATIC_FIELDS	NUMBER		Number of locally declared static fields that this Java class contains
METHODS	NUMBER		Number of locally declared methods that this Java class contains
STATIC_METHODS	NUMBER		Number of locally declared static methods that this Java class contains
NATIVE_METHODS	NUMBER		Number of locally declared native methods that this Java class contains

See Also

- "DBA_JAVA_LAYOUTS"

3.275 ALL_JAVA_METHODS

ALL_JAVA_METHODS displays method information about the stored Java classes accessible to the current user.

Related Views

- DBA_JAVA_METHODS displays method information about all stored Java classes in the database.
- USER_JAVA_METHODS displays method information about the stored Java classes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Java class
NAME	VARCHAR2(4000)		Name of the Java class
METHOD_INDEX	NUMBER		Index of the method
METHOD_NAME	VARCHAR2(4000)		Name of the method identified by the METHOD_INDEX column
ACCESSIBILITY	VARCHAR2(9)		Accessibility of the method: • PUBLIC • PRIVATE • PROTECTED

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
IS_STATIC	VARCHAR2(3)		Indicates whether the method is a static method (YES) or not (NO)
IS_FINAL	VARCHAR2(3)		Indicates whether the method is a final method (YES) or not (NO)
IS_SYNCHRONIZED	VARCHAR2(3)		Indicates whether the method is a synchronized method (YES) or not (NO)
HAS_VARARGS	VARCHAR2(3)		Indicates whether the method has a variable number of arguments (YES) or not (NO)
IS_NATIVE	VARCHAR2(3)		Indicates whether the method is a native method (YES) or not (NO)
IS_ABSTRACT	VARCHAR2(3)		Indicates whether the method is an abstract method (YES) or not (NO)
IS_STRICTFP	VARCHAR2(3)		Indicates whether the method is a strict method (YES) or not (NO)
IS_SYNTHETIC	VARCHAR2(3)		Indicates whether the method is generated by the compiler (YES) or not (NO)
ARGUMENTS	NUMBER		Number of arguments of the method
THROWS	NUMBER		Number of exceptions thrown by the method
ARRAY_DEPTH	NUMBER		Array depth of the return type of the method
BASE_TYPE	VARCHAR2(7)		Base type of the return type of the method: • int • long • float • double • boolean • byte • char • short • class • void
RETURN_CLASS	VARCHAR2(4000)		Actual class name of the return value if the base type is class
IS_COMPILED	VARCHAR2(3)		Indicates whether the Java method has been natively compiled by the JIT compiler (YES) or not (NO)

3.276 ALL_JAVA_NCOMPS

ALL_JAVA_NCOMPS displays ncomp-related information about the Java classes accessible to the current user.

Related Views

- DBA_JAVA_NCOMPS displays ncomp-related information about all Java classes in the database.
- USER_JAVA_NCOMPS displays ncomp-related information about the Java classes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Java class object
NAME	VARCHAR2(4000)		Name of the Java class object
SOURCE	VARCHAR2(4000)		ncomp source shown in this row
INITIALIZER	VARCHAR2(4000)		ncomp initializer shown in this row
LIBRARYFILE	VARCHAR2(4000)		ncomp library file shown in this row
LIBRARY	VARCHAR2(4000)		ncomp library shown in this row

See Also

3.277 ALL_JAVA_RESOLVERS

ALL_JAVA_RESOLVERS displays information about resolvers of the Java classes accessible to the current user.

Related Views

- DBA_JAVA_RESOLVERS displays information about resolvers of all Java classes in the database.
- USER_JAVA_RESOLVERS displays information about resolvers of the Java classes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Java class object
NAME	VARCHAR2(4000)		Name of the Java class object
TERM_INDEX	NUMBER		Index of the resolver term in this row
PATTERN	VARCHAR2(4000)		Resolver pattern of the resolver term identified by the TERM_INDEX column
SCHEMA	VARCHAR2(64)		Resolver schema of the resolver term identified by the TERM_INDEX column

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.278 ALL_JAVA_THROWS

ALL_JAVA_THROWS displays information about exceptions thrown from methods of the Java classes accessible to the current user.

Related Views

- DBA_JAVA_THROWS displays information about exceptions thrown from methods of all Java classes in the database.
- USER_JAVA_THROWS displays information about exceptions thrown from methods of the Java classes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Java class
NAME	VARCHAR2(4000)		Name of the Java class
METHOD_INDEX	NUMBER		Index of the throwing method of the exception
METHOD_NAME	VARCHAR2(4000)		Name of the throwing method of the exception
EXCEPTION_INDEX	NUMBER		Index of the exception
EXCEPTION_CLASS	VARCHAR2(4000)		Class of the exception

3.279 ALL_JOBS

ALL_JOBS is a synonym for USER_JOBS.

> **See Also**
>
> "USER_JOBS"

3.280 ALL_JOIN_IND_COLUMNS

ALL_JOIN_IND_COLUMNS describes the join conditions of bitmap join indexes accessible to the current user. Bitmap join indexes are indexes built on a child table with an index key containing

Copyright © 2002, 2025, Oracle and/or its affiliates.

columns from associated parent tables, where all of the tables are connected through join conditions. There is one row for each join condition.

Related Views

- `DBA_JOIN_IND_COLUMNS` describes all join conditions in the database.
- `USER_JOIN_IND_COLUMNS` describes the join conditions owned by the current user. This view does not display the `INDEX_OWNER` column.

Column	Datatype	NULL	Description
`INDEX_OWNER`	`VARCHAR2(128)`	`NOT NULL`	Owner of the bitmap join index
`INDEX_NAME`	`VARCHAR2(128)`	`NOT NULL`	Name of the bitmap join index
`INNER_TABLE_OWNER`	`VARCHAR2(128)`	`NOT NULL`	Owner of the fact table
`INNER_TABLE_NAME`	`VARCHAR2(128)`	`NOT NULL`	Name of the fact table
`INNER_TABLE_COLUMN`	`VARCHAR2(128)`	`NOT NULL`	Name of the fact table join column
`OUTER_TABLE_OWNER`	`VARCHAR2(128)`	`NOT NULL`	Owner of the dimension table
`OUTER_TABLE_NAME`	`VARCHAR2(128)`	`NOT NULL`	Name of the dimension table
`OUTER_TABLE_COLUMN`	`VARCHAR2(128)`	`NOT NULL`	Name of the dimension table join column

3.283 ALL_JSON_COLLECTIONS

ALL_JSON_COLLECTIONS describes JSON collections accessible to the current user.

Related Views

- DBA_JSON_COLLECTIONS describes all JSON collections in the database.
- USER_JSON_COLLECTIONS describes JSON collections owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Name of the JSON collection owner
COLLECTION_NAME	VARCHAR2(128)		Name of the JSON collection

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
COLLECTION_TYPE	VARCHAR2(12)		Type of the JSON collection: • TABLE • VIEW • DUALITY VIEW

Note

This view is available starting with Oracle AI Database 26ai.

See Also

- "DBA_JSON_COLLECTIONS"
- "USER_JSON_COLLECTIONS"

3.284 ALL_JSON_COLUMNS

ALL_JSON_COLUMNS provides information on the JavaScript Object Notation (JSON) columns accessible to the current user.

This view displays information on table and view columns that are guaranteed to return JSON data. These include:

- Columns of data type JSON
- Columns on which a check constraint containing the IS JSON condition is defined, where the IS JSON condition is always enforced. Such check constraints can contain only the IS JSON condition, or they can contain the IS JSON condition as part of a logical AND condition.

  For example, the following check constraints ensure that the IS JSON condition is always enforced and will therefore cause mycol to appear in the ALL_JSON_COLUMNS view:

  ```
  mycol IS JSON
  mycol IS JSON AND LENGTH(mycol) > 100
  ```

  However, the following check constraint does not ensure that the IS JSON condition is enforced, because it is part of a logical OR condition, and will therefore cause mycol to be omitted from the ALL_JSON_COLUMNS view:

  ```
  mycol IS JSON OR LENGTH(mycol) > 100
  ```

- View columns that are defined as the return value of a SQL function that returns JSON data. Such functions include:
  - TREAT (*expr* AS JSON)
  - JSON_ARRAY, JSON_ARRAYAGG, JSON_MERGEPATCH, JSON_OBJECT, JSON_OBJECTAGG, JSON_QUERY, JSON_SERIALIZE, and JSON_TRANSFORM

Copyright © 2002, 2025, Oracle and/or its affiliates.

For example, in the following definition for view v1, column mycol is defined as the return value of the JSON_OBJECT function, which will therefore cause mycol to appear in the ALL_JSON_COLUMNS view:

```
CREATE TABLE t1 (text varchar2(100));
CREATE VIEW v1 AS SELECT JSON_OBJECT(text) AS mycol FROM t1;
```

Related Views

- DBA_JSON_COLUMNS provides information on all JSON columns.
- USER_JSON_COLUMNS provides information on the JSON columns for which the user is the owner. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table with the JSON column
TABLE_NAME	VARCHAR2(128)		Name of the table with the JSON column
OBJECT_TYPE	VARCHAR2(5)		Object type: • TABLE • VIEW
COLUMN_NAME	VARCHAR2(128)		Name of the JSON column
FORMAT	VARCHAR2(9)		Format of the JSON data
DATA_TYPE	VARCHAR2(13)		Data type of the JSON column

See Also

3.285 ALL_JSON_DATAGUIDE_FIELDS

ALL_JSON_DATAGUIDE_FIELDS extracts the path and type information from the data guides accessible to the current user, which are the data guides returned to the user by the ALL_JSON_DATAGUIDE view.

Related Views

- DBA_JSON_DATAGUIDE_FIELDS extracts the path and type information from all the data guides in the database, which are the data guides returned by the DBA_JSON_DATAGUIDE view.
- USER_JSON_DATAGUIDE_FIELDS extracts the path and type information from all the data guides in the current user's schema, which are the data guides returned to the user by the USER_JSON_DATAGUIDE view. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table containing the JSON column

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
TABLE_NAME	VARCHAR2(128)		Name of the table containing the JSON column
COLUMN_NAME	VARCHAR2(128)		Name of the JSON column that has data guide enabled
PATH	VARCHAR2(4000)		Path to the JSON field in the data guide
TYPE	VARCHAR2(40)		Type of the JSON field in the data guide
LENGTH	NUMBER		Maximum length of the JSON field value, in bytes

See Also

- "DBA_JSON_DATAGUIDE_FIELDS"

3.286 ALL_JSON_DATAGUIDES

ALL_JSON_DATAGUIDES provides information on the JavaScript Object Notation (JSON) columns accessible to the current user that have data guide enabled.

Related Views

- DBA_JSON_DATAGUIDES provides information on all JavaScript Object Notation (JSON) columns in the database that have data guide enabled.
- USER_JSON_DATAGUIDES provides information on the JavaScript Object Notation (JSON) columns owned by the current user that have data guide enabled. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table containing the JSON column
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table containing the JSON column
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the JSON column that has data guide enabled
DATAGUIDE	CLOB		The data guide of the JSON column in flat format

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.287 ALL_JSON_DOMAIN_SCHEMA_COLUMNS

ALL_JSON_DOMAIN_SCHEMA_COLUMNS describes JSON schema constraints on columns of data use case domains accessible to the current user.

Related Views

- DBA_JSON_DOMAIN_SCHEMA_COLUMNS describes JSON schema constraints on columns of all data use case domains in the database.
- USER_JSON_DOMAIN_SCHEMA_COLUMNS describes JSON schema constraints on columns of data use case domains owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the data use case domain containing the column on which the JSON schema constraint is defined
DOMAIN_NAME	VARCHAR2(128)	NOT NULL	Name of the data use case domain containing the column on which the JSON schema constraint is defined
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the data use case domain column on which the JSON schema constraint is defined
CONSTRAINT_NAME	VARCHAR2(128)	NOT NULL	Name of the JSON schema constraint
JSON_SCHEMA	JSON		JSON schema constraint definition
CAST_MODE	BOOLEAN		Indicates whether the JSON schema validator is operating in cast mode (TRUE) or not (FALSE)

Note

This view is available starting with Oracle AI Database 26ai.

See Also

- "DBA_JSON_DOMAIN_SCHEMA_COLUMNS"

3.288 ALL_JSON_DUALITY_VIEW_LINKS

ALL_JSON_DUALITY_VIEW_LINKS describes the links associated with the JSON-relational duality views accessible to the current user.

Related Views

- DBA_JSON_DUALITY_VIEW_LINKS describes the links associated with all JSON-relational duality views in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- USER_JSON_DUALITY_VIEW_LINKS describes the links associated with the JSON-relational duality views owned by the current user. This view does not display the VIEW_OWNER column.

Column	Datatype	NULL	Description
VIEW_OWNER	VARCHAR2(128)		Owner of the duality view
VIEW_NAME	VARCHAR2(128)		Name of the duality view
PARENT_TABLE_OWNER	VARCHAR2(128)		Owner of the parent table in the link
PARENT_TABLE_NAME	VARCHAR2(128)		Name of the parent table in the link
CHILD_TABLE_OWNER	VARCHAR2(128)		Owner of the child table in the link
CHILD_TABLE_NAME	VARCHAR2(128)		Name of the child table in the link
FROM_COLUMN	VARCHAR2(128)		Name of the column on the FROM side of the link
TO_COLUMN	VARCHAR2(128)		Name of the column on the TO side of the link
JOIN_TYPE	VARCHAR2(16)		Join type for the link: • nested - Primary key to foreign key. This implies a 0 to many relationship, which is a cardinality-expanding join. • outer - Foreign key to primary key: This implies a 0 to 1 relationship. This is a cardinality-preserving join, but it is possible that no TO value is found for a FROM value. • inner - This implies a 1 to 1 relationship. This is a cardinality-preserving join where, for each FROM value, one corresponding TO value is guaranteed. This value is currently not used.
KEY_NAME	VARCHAR2(128)		Name of the JSON key associated with the link

Note

This view is available starting with Oracle AI Database 26ai.

3.289 ALL_JSON_DUALITY_VIEW_TAB_COLS

ALL_JSON_DUALITY_VIEW_TAB_COLS describes the table columns associated with the JSON-relational duality views accessible to the current user.

Related Views

- DBA_JSON_DUALITY_VIEW_TAB_COLS describes the table columns associated with all JSON-relational duality views in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- `USER_JSON_DUALITY_VIEW_TAB_COLS` describes the table columns associated with the JSON-relational duality views owned by the current user. This view does not display the `VIEW_OWNER` column.

Column	Datatype	NULL	Description
`VIEW_OWNER`	`VARCHAR2(128)`		Owner of the duality view
`VIEW_NAME`	`VARCHAR2(128)`		Name of the duality view
`TABLE_OWNER`	`VARCHAR2(128)`		Owner of the table
`TABLE_NAME`	`VARCHAR2(128)`		Name of the table
`ROOT_TABLE`	`BOOLEAN`		Indicates whether the table is the root (topmost) table (`TRUE`) or not (`FALSE`)
`TABLE_NUMBER`	`NUMBER`		Number value that identifies this table in the duality view
`COLUMN_NAME`	`VARCHAR2(128)`		Name of the column
`DATA_TYPE`	`VARCHAR2(128)`		Data type of the column
`LENGTH`	`NUMBER`		For character data types, the maximum length of the column (in characters)
`JSON_KEY_NAME`	`NVARCHAR2(128)`		JSON key name corresponding to the column
`ALLOW_INSERT`	`BOOLEAN`		Indicates whether rows can be inserted into the table using the duality view (`TRUE`) or not (`FALSE`)
`ALLOW_UPDATE`	`BOOLEAN`		Indicates whether the column can be updated using the duality view (`TRUE`) or not (`FALSE`)
`ALLOW_DELETE`	`BOOLEAN`		Indicates whether rows can be deleted from the table using the duality view (`TRUE`) or not (`FALSE`)
`READ_ONLY`	`BOOLEAN`		Indicates whether changes to the column are prohibited (`TRUE`) or not (`FALSE`)
`IS_FLEX_COL`	`BOOLEAN`		Indicates whether the column is a flex column (`TRUE`) or not (`FALSE`)
`IS_GENERATED`	`BOOLEAN`		Indicates whether the value associated with `JSON_KEY_NAME` is a generated (`TRUE`) or not (`FALSE`)
`IS_HIDDEN`	`BOOLEAN`		Indicates whether `JSON_KEY_NAME` is hidden in the document (`TRUE`) or not (`FALSE`)
`PRIMARY_KEY_POS`	`NUMBER`		If the column is part of a primary key, its position in the primary key specification; otherwise, null
`ETAG_POS`	`NUMBER`		If the column is part of an ETAG, its position in the ETAG specification; otherwise, null
`ORDER_BY_POS`	`NUMBER`		If the column is part of the `ORDER BY` clause of the `JSON_ARRAYAGG` function, then its position in the `ORDER BY` clause; otherwise, null

Note

This view is available starting with Oracle AI Database 26ai.

3.290 ALL_JSON_DUALITY_VIEW_TABS

ALL_JSON_DUALITY_VIEW_TABS describes the tables associated with the JSON-relational duality views accessible to the current user.

Related Views

- DBA_JSON_DUALITY_VIEW_TABS describes the tables associated with all JSON-relational duality views in the database.
- USER_JSON_DUALITY_VIEW_TABS describes the tables associated with the JSON-relational duality views owned by the current user. This view does not display the VIEW_OWNER column.

Column	Datatype	NULL	Description
VIEW_OWNER	VARCHAR2(128)		Owner of the duality view
VIEW_NAME	VARCHAR2(128)		Name of the duality view
TABLE_OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table
WHERE_CLAUSE	NVARCHAR2(128)		SQL expression in the WHERE clause of the duality view query that accesses the table If the query does not contain a WHERE clause, then null.
ALLOW_INSERT	BOOLEAN		Indicates whether rows can be inserted into the table using the duality view (TRUE) or not (FALSE)
ALLOW_UPDATE	BOOLEAN		Indicates the default UPDATE clause for columns belonging to the table: • TRUE - Columns can be updated • FALSE - Columns cannot be updated Note that this default can be overridden on a per-column basis. See "ALL_JSON_DUALITY_VIEW_TAB_COLS" for column-specific information.
ALLOW_DELETE	BOOLEAN		Indicates whether rows can be deleted from the table using the duality view (TRUE) or not (FALSE)
READ_ONLY	BOOLEAN		Indicates whether the table is read-only in the duality view, that is, no rows can be modified, inserted, or deleted (TRUE) or not (FALSE)
HAS_FLEX_COL	BOOLEAN		Indicates whether the table contains a flex column (TRUE) or not (FALSE)
ROOT_TABLE	BOOLEAN		Indicates whether the table is the root (topmost) table (TRUE) or not (FALSE)
TABLE_NUMBER	NUMBER		Number value that identifies this table in the duality view

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PARENT_TABLE_NUMBER	NUMBER		Number value that points to the parent table in the hierarchy
RELATIONSHIP	VARCHAR2(10)		Relationship between the table (that is, the child table) and the parent table: • nested - The child table can return 0 to many rows for each row of the parent table. The corresponding JSON shows the child table's value in a JSON array. • singleton - The child table can return 0 to 1 row for each row of the parent table.

Note

This view is available starting with Oracle AI Database 26ai.

3.291 ALL_JSON_DUALITY_VIEWS

ALL_JSON_DUALITY_VIEWS describes the JSON-relational duality views accessible to the current user.

Related Views

- DBA_JSON_DUALITY_VIEWS describes all JSON-relational duality views in the database.
- USER_JSON_DUALITY_VIEWS describes the JSON-relational duality views owned by the current user. This view does not display the VIEW_OWNER column.

Column	Datatype	NULL	Description
VIEW_OWNER	VARCHAR2(128)		Owner of the duality view
VIEW_NAME	VARCHAR2(128)		Name of the duality view
JSON_COLUMN_NAME	CHAR(4)		Name of the column containing the JSON data
ROOT_TABLE_NAME	VARCHAR2(128)		Name of the root table
ROOT_TABLE_OWNER	VARCHAR2(128)		Owner of the root table
ALLOW_INSERT	BOOLEAN		Indicates whether inserts of top level objects or sub-objects into the duality view are allowed (TRUE) or not (FALSE)
ALLOW_UPDATE	BOOLEAN		Indicates whether updates to top level objects or sub-objects in the duality view are allowed (TRUE) or not (FALSE)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ALLOW_DELETE	BOOLEAN		Indicates whether deletes of top level objects or sub-objects from the duality view are allowed (TRUE) or not (FALSE)
READ_ONLY	BOOLEAN		Indicates whether the duality view is read-only, that is, no objects or sub-objects can be modified, inserted, or deleted (TRUE) or not (FALSE)
JSON_SCHEMA	JSON		JSON schema description of the JSON data
STATUS	VARCHAR2(7)		Status of the duality view (VALID or INVALID)
LOGICAL_REPLICATION[1]	VARCHAR2(8)		Indicates whether the duality view is enabled for logical replication (ENABLED) or not (DISABLED) This setting is ignored if database-wide column data supplemental logging is enabled.

1 This column is available starting with Oracle AI Database 26ai, Release Update 23.6.

Note

This view is available starting with Oracle AI Database 26ai.

3.292 ALL_JSON_INDEXES

ALL_JSON_INDEXES describes indexes on JSON data that are accessible to the current user.

Related Views

- DBA_JSON_INDEXES describes all indexes on JSON data in the database.
- USER_JSON_INDEXES describes indexes on JSON data that are owned by the current user. This view does not display the INDEX_OWNER column.

Column	Datatype	NULL	Description
INDEX_OWNER	VARCHAR2(128)	NOT NULL	Owner of the index
INDEX_NAME	VARCHAR2(128)	NOT NULL	Name of the index
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table on which the index is defined
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table on which the index is defined
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the JSON column on which the index is defined
COLUMN_DATATYPE	VARCHAR2(13)		Data type of the JSON column on which the index is defined

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SEARCH_INDEX	BOOLEAN		Indicates whether the index is a search index (TRUE) or not (FALSE)
FUNCTIONAL_INDEX	BOOLEAN		Indicates whether the index is a function-based index (TRUE) or not (FALSE)
COMPOSITE_INDEX	BOOLEAN		Indicates whether the index is a composite index (TRUE) or not (FALSE)
BITMAP_INDEX	BOOLEAN		Indicates whether the index is a bitmap index (TRUE) or not (FALSE)
MULTIVALUE_INDEX	BOOLEAN		Indicates whether the index is a multivalue index (TRUE) or not (FALSE)
INDEX_EXPRESSION	VARCHAR2(4000)		SQL text of the index expression

Note

This view is available starting with Oracle AI Database 26ai.

3.293 ALL_JSON_SCHEMA_COLUMNS

ALL_JSON_SCHEMA_COLUMNS describes JSON schema constraints on columns in tables accessible to the current user.

Related Views

- DBA_JSON_SCHEMA_COLUMNS describes JSON schema constraints on columns in all tables in the database.
- USER_JSON_SCHEMA_COLUMNS describes JSON schema constraints on columns in tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table containing the column on which the JSON schema constraint is defined
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table containing the column on which the JSON schema constraint is defined
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column on which the JSON schema constraint is defined
CONSTRAINT_NAME	VARCHAR2(128)	NOT NULL	Name of the JSON schema constraint
JSON_SCHEMA	JSON		JSON schema constraint definition

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
CAST_MODE	BOOLEAN		Indicates whether the JSON schema validator is operating in cast mode (TRUE) or not (FALSE)

Note

This view is available starting with Oracle AI Database 26ai.

3.294 ALL_LIBRARIES

ALL_LIBRARIES describes the libraries accessible to the current user.

Related Views

- DBA_LIBRARIES describes all libraries in the database.
- USER_LIBRARIES describes the libraries owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the library
LIBRARY_NAME	VARCHAR2(128)	NOT NULL	Library name
FILE_SPEC	VARCHAR2(2000)		Operating system file specification associated with the library
DYNAMIC	VARCHAR2(1)		Indicates whether the library is dynamically loadable (Y) or not (N)
STATUS	VARCHAR2(7)		Status of the library: • N/A • VALID • INVALID
AGENT	VARCHAR2(128)		Agent of the library
LEAF_FILENAME	VARCHAR2(2000)		Leaf filename of the library
ORIGIN_CON_ID	VARCHAR2(256)		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root)

3.295 ALL_LOB_PARTITIONS

ALL_LOB_PARTITIONS displays the LOB partitions in the tables accessible to the current user.

Related Views

- DBA_LOB_PARTITIONS displays all LOB partitions in the database.
- USER_LOB_PARTITIONS displays the LOB partitions owned by the current user. This view does not display the TABLE_OWNER column.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table
COLUMN_NAME	VARCHAR2(4000)		Name of the LOB column
LOB_NAME	VARCHAR2(128)		Name of the partitioned LOB item
PARTITION_NAME	VARCHAR2(128)		Name of the table partition
LOB_PARTITION_NAME	VARCHAR2(128)		Name of the LOB data partition
LOB_INDPART_NAME	VARCHAR2(128)		Name of the corresponding LOB index partition
PARTITION_POSITION	NUMBER		Position of the LOB data partition within the LOB item
COMPOSITE	VARCHAR2(3)		Indicates whether the partition is composite (YES) or not (NO)
CHUNK	NUMBER		Value of the CHUNK attribute of the LOB data partition
PCTVERSION	NUMBER		Value of the PCTVERSION attribute of the LOB data partition
CACHE	VARCHAR2(10)		Indicates whether and how the LOB data is to be cached in the buffer cache: • YES - LOB data is placed in the buffer cache • NO - LOB data either is not brought into the buffer cache or is brought into the buffer cache and placed at the least recently used end of the LRU list • CACHEREADS - LOB data is brought into the buffer cache only during read operations but not during write operations
IN_ROW	VARCHAR2(3)		Indicates whether the STORAGE IN ROW attribute is enabled for the LOB data partition (YES) or not (NO)
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the LOB data partition
INITIAL_EXTENT	VARCHAR2(40)		Size (in bytes) of the initial extent of the LOB data partition, or DEFAULT
NEXT_EXTENT	VARCHAR2(40)		Size (in bytes) of secondary extents of the LOB data partition, or DEFAULT

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
MIN_EXTENTS	VARCHAR2(40)		Minimum number of extents allowed in the segment of the LOB data partition, or DEFAULT
MAX_EXTENTS	VARCHAR2(40)		Maximum number of extents allowed in the segment of the LOB data partition, or DEFAULT
MAX_SIZE	VARCHAR2(40)		Maximum number of blocks allowed in the segment of the LOB data partition, or DEFAULT
RETENTION	VARCHAR2(7)		Retention option. Possible values for a SecureFiles segment: • NONE • AUTO • MIN • MAX • DEFAULT • INVALID Possible values for a BasicFiles segment: • YES • NO
MINRETENTION	VARCHAR2(40)		Minimum retention duration for a SecureFiles segment, or DEFAULT
PCT_INCREASE	VARCHAR2(40)		Percentage increase in extent size for the LOB data partition, or DEFAULT
FREELISTS	VARCHAR2(40)		Number of process freelists allocated in the segment of the LOB data partition, or DEFAULT
FREELIST_GROUPS	VARCHAR2(40)		Number of freelist groups allocated in the segment of the LOB data partition, or DEFAULT
LOGGING	VARCHAR2(7)		Indicates whether or not changes to the LOB are logged: • NONE - Not specified **See Also:** the *_LOB_SUBPARTITIONS view • YES • NO
BUFFER_POOL	VARCHAR2(7)		Buffer pool for the LOB partition blocks: • DEFAULT • KEEP • RECYCLE • NULL
FLASH_CACHE	VARCHAR2(7)		Database Smart Flash Cache hint to be used for partition blocks: • DEFAULT • KEEP • NONE Solaris and Oracle Linux functionality only.
CELL_FLASH_CACHE	VARCHAR2(7)		Cell flash cache hint to be used for partition blocks: • DEFAULT • KEEP • NONE **See Also:** Oracle Exadata Storage Server Software documentation for more information

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ENCRYPT	VARCHAR2(4)		Indicates whether or not the LOB is encrypted. Possible values for SecureFiles: • YES • NO Possible value for BasicFiles: • NONE - Not applicable
COMPRESSION	VARCHAR2(6)		Level of compression used for this LOB. Possible values for SecureFiles: • LOW • MEDIUM • HIGH • NO - Compression is off Possible value for BasicFiles: • NONE - Not applicable
DEDUPLICATION	VARCHAR2(15)		Kind of deduplication used for this LOB. Possible values for SecureFiles: • LOB - Deduplicate • NO - Keep duplicates Possible value for BasicFiles: • NONE - Not applicable
SECUREFILE	VARCHAR2(3)		Indicates whether the LOB is SecureFiles (YES) or not (NO)
SEGMENT_CREATED	VARCHAR2(3)		Indicates whether the LOB partition segment has been created (YES) or not (NO); N/A indicates that this LOB is subpartitioned and no segment exists at the partition level
MAX_INLINE	NUMBER		Size of inline LOB storage (in bytes) • For inline LOBs (IN_ROW = YES), this column displays the size of inline LOB storage (in bytes). • For out-of-inline LOBs (IN_ROW = NO), the value of this column is 0. • For LOBs in subpartitioned tables, the value of this column is null. Instead, refer to the MAX_INLINE column in the *_LOB_SUBPARTITIONS views.

3.296 ALL_LOB_SUBPARTITIONS

ALL_LOB_SUBPARTITIONS displays partition-level attributes of the LOB data subpartitions accessible to the current user.

Related Views

- DBA_LOB_SUBPARTITIONS displays partition-level attributes of all LOB data subpartitions in the database.
- USER_LOB_SUBPARTITIONS displays the LOB subpartitions owned by the current user. This view does not display the TABLE_OWNER column.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
COLUMN_NAME	VARCHAR2(4000)		Name of the LOB column
LOB_NAME	VARCHAR2(128)	NOT NULL	Name of the partitioned LOB item
LOB_PARTITION_NAME	VARCHAR2(128)		Name of the LOB data partition to which this LOB data subpartition belongs
SUBPARTITION_NAME	VARCHAR2(128)		Name of the table subpartition to which this LOB subpartition corresponds
LOB_SUBPARTITION_NAME	VARCHAR2(128)		Name of the LOB subpartition
LOB_INDSUBPART_NAME	VARCHAR2(128)		Name of the corresponding LOB index subpartition
SUBPARTITION_POSITION	NUMBER		Position of the LOB data partition within the LOB item
CHUNK	NUMBER		Value of the CHUNK attribute of the LOB data partition
PCTVERSION	NUMBER	NOT NULL	Value of the PCTVERSION attribute of the LOB data partition
CACHE	VARCHAR2(10)		Indicates whether and how the LOB data is to be cached in the buffer cache: • YES - LOB data is placed in the buffer cache • NO - LOB data either is not brought into the buffer cache or is brought into the buffer cache and placed at the least recently used end of the LRU list • CACHEREADS - LOB data is brought into the buffer cache only during read operations but not during write operations
IN_ROW	VARCHAR2(3)		Indicates whether the STORAGE IN ROW attribute of the LOB data partition is enabled (YES) or not (NO)
TABLESPACE_NAME	VARCHAR2(30)	NOT NULL	Name of the tablespace containing the LOB data partition
INITIAL_EXTENT	VARCHAR2(40)		Size in bytes of the initial extent for the LOB data partition
NEXT_EXTENT	VARCHAR2(40)		Size in bytes of secondary extents for the LOB data partition
MIN_EXTENTS	VARCHAR2(40)	NOT NULL	Minimum number of extents allowed in the segment of the LOB data partition
MAX_EXTENTS	VARCHAR2(40)	NOT NULL	Maximum number of extents allowed in the segment of the LOB data partition

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
MAX_SIZE	VARCHAR2(40)		Maximum number of blocks allowed in the segment of the LOB data partition
RETENTION	VARCHAR2(7)		Retention option. Possible values for a SecureFiles segment: • NONE • AUTO • MIN • MAX • DEFAULT • INVALID Possible values for a BasicFiles segment: • YES • NO
MINRETENTION	VARCHAR2(40)		Minimum retention duration for a SecureFiles segment
PCT_INCREASE	VARCHAR2(40)		Percentage increase in extent size for the LOB data partition
FREELISTS	VARCHAR2(40)		Number of process freelists allocated in the segment of the LOB data partition
FREELIST_GROUPS	VARCHAR2(40)		Number of freelist groups allocated in the segment of the LOB data partition
LOGGING	VARCHAR2(3)		Indicates whether or not changes to the LOB are logged: • YES • NO
BUFFER_POOL	VARCHAR2(7)		Buffer pool to be used for the LOB data partition blocks: • DEFAULT • KEEP • RECYCLE • NULL
FLASH_CACHE	VARCHAR2(7)		Database Smart Flash Cache hint to be used for subpartition blocks: • DEFAULT • KEEP • NONE Solaris and Oracle Linux functionality only.
CELL_FLASH_CACHE	VARCHAR2(7)		Cell flash cache hint to be used for subpartition blocks: • DEFAULT • KEEP • NONE **See Also:** Oracle Exadata Storage Server Software documentation for more information
ENCRYPT	VARCHAR2(4)		Indicates whether or not the LOB is encrypted. Possible values for SecureFiles: • YES • NO Possible value for BasicFiles: • NONE - Not applicable

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
COMPRESSION	VARCHAR2(6)		Level of compression used for this LOB. Possible values for SecureFiles: • LOW • MEDIUM • HIGH • NO - Compression is off Possible value for BasicFiles: • NONE - Not applicable
DEDUPLICATION	VARCHAR2(15)		Kind of deduplication used for this LOB. Possible values for SecureFiles: • LOB - Deduplicate • NO - Keep duplicates Possible value for BasicFiles: • NONE - Not applicable
SECUREFILE	VARCHAR2(3)		Indicates whether the LOB is SecureFiles (YES) or not (NO)
SEGMENT_CREATED	VARCHAR2(3)		Indicates whether the LOB subpartition segment has been created (YES) or not (NO); N/A indicates that this LOB is not subpartitioned
MAX_INLINE	NUMBER	NOT NULL	Size of inline LOB storage (in bytes) • For inline LOBs (IN_ROW = YES), this column displays the size of inline LOB storage (in bytes). • For out-of-inline LOBs (IN_ROW = NO), the value of this column is 0.

3.297 ALL_LOB_TEMPLATES

ALL_LOB_TEMPLATES describes the LOB subpartition templates accessible to the current user.

Related Views

- DBA_LOB_TEMPLATES describes all LOB subpartition templates in the database.
- USER_LOB_TEMPLATES describes the LOB subpartition templates owned by the current user. This view does not display the USER_NAME column.

Column	Datatype	NULL	Description
USER_NAME	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
LOB_COL_NAME	VARCHAR2(4000)		Name of the LOB column
SUBPARTITION_NAME	VARCHAR2(132)	NOT NULL	Name of the subpartition

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
LOB_SEGMENT_NAME	VARCHAR2(132)	NOT NULL	Name of the LOB segment
TABLESPACE_NAME	VARCHAR2(30)		Tablespace name of the subpartition

See Also

- "DBA_LOB_TEMPLATES"
- "USER_LOB_TEMPLATES"

3.298 ALL_LOBS

ALL_LOBS displays the large objects (LOBs) contained in tables accessible to the current user. LOBs include binary large objects (BLOBs) and character large objects (CLOBs). Binary files (BFILEs) are stored outside the database, so they are not displayed by this view or the related views.

Related Views

- DBA_LOBS describes all LOBs in the database.
- USER_LOBS describes the LOBs owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the object containing the LOB
TABLE_NAME	VARCHAR2(128)		Name of the object containing the LOB
COLUMN_NAME	VARCHAR2(4000)		Name of the LOB column or attribute
SEGMENT_NAME	VARCHAR2(128)		Name of the LOB segment
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the LOB segment
INDEX_NAME	VARCHAR2(128)		Name of the LOB index
CHUNK	NUMBER		Size (in bytes) of the LOB chunk as a unit of allocation or manipulation
PCTVERSION	NUMBER		Maximum percentage of the LOB space used for versioning
RETENTION	NUMBER		Maximum time duration for versioning of the LOB space
FREEPOOLS	NUMBER		Number of freepools for this LOB segment
CACHE	VARCHAR2(10)		Indicates whether and how the LOB data is to be cached in the buffer cache: • YES - LOB data is placed in the buffer cache • NO - LOB data either is not brought into the buffer cache or is brought into the buffer cache and placed at the least recently used end of the LRU list • CACHEREADS - LOB data is brought into the buffer cache only during read operations but not during write operations

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
LOGGING	VARCHAR2(7)		Indicates whether or not changes to the LOB are logged: • NONE - Not specified **See Also:** the *_LOB_SUBPARTITIONS view • YES • NO
ENCRYPT	VARCHAR2(4)		Indicates whether or not the LOB is encrypted. Possible values for SecureFiles: • YES • NO Possible value for BasicFiles: • NONE - Not applicable
COMPRESSION	VARCHAR2(6)		Level of compression used for this LOB. Possible values for SecureFiles: • LOW • MEDIUM • HIGH • NO - Compression is off Possible value for BasicFiles: • NONE - Not applicable
DEDUPLICATION	VARCHAR2(15)		Kind of deduplication used for this LOB. Possible values for SecureFiles: • LOB - Deduplicate • NO - Keep duplicates Possible value for BasicFiles: • NONE - Not applicable
IN_ROW	VARCHAR2(3)		Indicates whether some LOBs are stored inline with the base row (YES) or not (NO). For partitioned objects, refer to the *_LOB_PARTITIONS and *_PART_LOBS views.
FORMAT	VARCHAR2(15)		Indicates whether the LOB storage format depends on the endianness of the platform: • NOT APPLICABLE • ENDIAN SPECIFIC • ENDIAN NEUTRAL
PARTITIONED	VARCHAR2(3)		Indicates whether the LOB column is in a partitioned table (YES) or not (NO)
SECUREFILE	VARCHAR2(3)		Indicates whether the LOB is SecureFiles (YES) or not (NO)
SEGMENT_CREATED	VARCHAR2(3)		Indicates whether the LOB segment has been created (YES) or not (NO)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
RETENTION_TYPE	VARCHAR2(7)		Type of retention used for this LOB. Possible values for SecureFiles: • NONE • AUTO • MIN • MAX • DEFAULT • INVALID Possible values for BasicFiles: • YES • NO
RETENTION_VALUE	NUMBER		Minimum retention time (in seconds). This column is only meaningful for SecureFiles with RETENTION_TYPE set to MIN.
VALUE_BASED	VARCHAR2(3)		Indicates whether the LOB is value based (YES) or not (NO)
MAX_INLINE	NUMBER		Size of inline LOB storage (in bytes) • For inline LOBs in nonpartitioned tables (IN_ROW = YES and PARTITIONED = NO), this column displays the size of inline LOB storage (in bytes). • For out-of-inline LOBs in nonpartitioned tables (IN_ROW = NO and PARTITIONED = NO), the value of this column is 0. • For LOBs in partitioned tables (PARTITIONED = YES), the value of this column is null. Instead, refer to the MAX_INLINE column in the *_PART_LOBS, *_LOB_PARTITIONS, and *_LOB_SUBPARTITIONS views.

3.299 ALL_LOG_GROUP_COLUMNS

ALL_LOG_GROUP_COLUMNS describes columns that are accessible to the current user and that are specified in log groups.

Related Views

- DBA_LOG_GROUP_COLUMNS describes all columns in the database that are specified in log groups.
- USER_LOG_GROUP_COLUMNS describes columns that are owned by the current user and that are specified in log groups.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the log group definition
LOG_GROUP_NAME	VARCHAR2(128)	NOT NULL	Name of the log group definition
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table in which the log group is defined
COLUMN_NAME	VARCHAR2(4000)		Name of the column or attribute of the object type column specified in the log group definition
POSITION	NUMBER		Original position of the column or attribute in the definition of the object
LOGGING_PROPERTY	VARCHAR2(6)		Indicates whether the column or attribute would be supplementally logged (LOG) or not (NO LOG)

- "DBA_LOG_GROUP_COLUMNS"
- "USER_LOG_GROUP_COLUMNS"

3.300 ALL_LOG_GROUPS

ALL_LOG_GROUPS describes the log group definitions on the tables accessible to the current user.

Related Views

- DBA_LOG_GROUPS describes the log group definitions on all tables in the database.
- USER_LOG_GROUPS describes the log group definitions on the tables owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the log group definition
LOG_GROUP_NAME	VARCHAR2(128)	NOT NULL	Name of the log group definition
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table on which the log group is defined
LOG_GROUP_TYPE	VARCHAR2(28)		Type of the log group: • ALL COLUMN LOGGING • FOREIGN KEY LOGGING • PRIMARY KEY LOGGING • UNIQUE KEY LOGGING • USER LOG GROUP
ALWAYS	VARCHAR2(11)		Indicates whether the log group is an unconditional log group (ALWAYS) or a conditional log group (CONDITIONAL)
GENERATED	VARCHAR2(14)		Indicates whether the name of the supplemental log group was system generated (GENERATED NAME) or not (USER NAME)

3.301 ALL_MEASURE_FOLDER_CONTENTS

ALL_MEASURE_FOLDER_CONTENTS describes the contents of the OLAP measure folders accessible to the current user.

Related Views

- DBA_MEASURE_FOLDER_CONTENTS describes the contents of all OLAP measure folders in the database.
- USER_MEASURE_FOLDER_CONTENTS describes the contents of the OLAP measure folders owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the measure folder
MEASURE_FOLDER_NAME	VARCHAR2(128)	NOT NULL	Name of a measure folder
CUBE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the cube
CUBE_NAME	VARCHAR2(128)	NOT NULL	Name of a cube included in the measure folder
MEASURE_NAME	VARCHAR2(128)	NOT NULL	Name of a measure in the cube
ORDER_NUM	NUMBER	NOT NULL	Order number of the measure in the folder

See Also

- "DBA_MEASURE_FOLDER_CONTENTS"
- "USER_MEASURE_FOLDER_CONTENTS"

3.302 ALL_MEASURE_FOLDER_SUBFOLDERS

ALL_MEASURE_FOLDER_SUBFOLDERS describes the OLAP measure folders contained within the OLAP measure folders accessible to the user.

Related Views

- DBA_MEASURE_FOLDER_SUBFOLDERS describes the OLAP measure folders contained within the database OLAP measure folders.
- USER_MEASURE_FOLDER_SUBFOLDERS describes the OLAP measure folders contained within the OLAP measure folders owned by the current user. This view does not display the OWNER column.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the OLAP measure folder that contains a subfolder
MEASURE_FOLDER_NAME	VARCHAR2(128)	NOT NULL	Name of the OLAP measure folder that contains a subfolder
MEASURE_SUBFOLDER_OWNER	VARCHAR2(128)	NOT NULL	Owner of the OLAP measure folder subfolder
MEASURE_SUBFOLDER_NAME	VARCHAR2(128)	NOT NULL	Name of the owning OLAP measure folder subfolder

See Also

- "DBA_MEASURE_FOLDER_SUBFOLDERS"
- "USER_MEASURE_FOLDER_SUBFOLDERS"

3.303 ALL_MEASURE_FOLDERS

ALL_MEASURE_FOLDERS describes the OLAP measure folders accessible to the current user.

Related Views

- DBA_MEASURE_FOLDERS describes all OLAP measure folders in the database.
- USER_MEASURE_FOLDERS describes the OLAP measure folders owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the measure folder
MEASURE_FOLDER_NAME	VARCHAR2(128)	NOT NULL	Name of a measure folder
MEASURE_FOLDER_ID	NUMBER	NOT NULL	ID of a measure folder
DESCRIPTION	NVARCHAR2(300)		Description of the measure folder in the session language

See Also

- "DBA_MEASURE_FOLDERS"
- "USER_MEASURE_FOLDERS"

3.304 ALL_METADATA_PROPERTIES

ALL_METADATA_PROPERTIES describes OLAP metadata properties in the database that are accessible to the current user.

Related Views

- DBA_METADATA_PROPERTIES describes OLAP metadata properties in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- USER_METADATA_PROPERTIES describes OLAP metadata properties in the current user's schema. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the OLAP metadata property
OWNING_OBJECT_ID	NUMBER		Dictionary ID of the OLAP metadata property owner
OWNING_TYPE	VARCHAR2(23)		Owning type of the OLAP metadata property
PROPERTY_ID	NUMBER		Dictionary Id of the OLAP metadata property
PROPERTY_KEY	VARCHAR2(128)		Key of the OLAP metadata property
PROPERTY_VALUE	CLOB		Value of the OLAP metadata property
PROPERTY_ORDER	NUMBER		Order number of the OLAP metadata property

See Also

- "DBA_METADATA_PROPERTIES"
- "USER_METADATA_PROPERTIES"

3.305 ALL_METHOD_PARAMS

ALL_METHOD_PARAMS describes the method parameters of the object types accessible to the current user.

Related Views

- DBA_METHOD_PARAMS describes the method parameters of all object types in the database.
- USER_METHOD_PARAMS describes the method parameters of the object types owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the type
TYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the type
METHOD_NAME	VARCHAR2(128)	NOT NULL	Name of the method
METHOD_NO	NUMBER	NOT NULL	For an overloaded method, a number distinguishing this method from others of the same. Do not confuse this number with the object ID.
PARAM_NAME	VARCHAR2(128)	NOT NULL	Name of the parameter
PARAM_NO	NUMBER	NOT NULL	Parameter number (position)
PARAM_MODE	VARCHAR2(6)		Mode of the parameter (IN, OUT, IN OUT)
PARAM_TYPE_MOD	VARCHAR2(7)		Whether this parameter is a REF to another object
PARAM_TYPE_OWNER	VARCHAR2(128)		Owner of the type of the parameter
PARAM_TYPE_NAME	VARCHAR2(128)		Name of the type of the parameter
CHARACTER_SET_NAME	VARCHAR2(44)		Whether the character set or the method is fixed-length character set (CHAR_CS) or fixed-length national character set (NCHAR_CS), or a particular character set specified by the user

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- "DBA_METHOD_PARAMS"
- "USER_METHOD_PARAMS"

3.306 ALL_METHOD_RESULTS

ALL_METHOD_RESULTS describes the method results of the object types accessible to the current user.

Related Views

- DBA_METHOD_RESULTS describes the method results of all object types in the database.
- USER_METHOD_RESULTS describes the method results of the object types owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the type
TYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the type
METHOD_NAME	VARCHAR2(128)	NOT NULL	Name of the method
METHOD_NO	NUMBER	NOT NULL	For an overloaded method, a number distinguishing this method from others of the same. Do not confuse this number with the object ID.
RESULT_TYPE_MOD	VARCHAR2(7)		Whether this result is a REF to another object
RESULT_TYPE_OWNER	VARCHAR2(128)		Owner of the type of the result
RESULT_TYPE_NAME	VARCHAR2(128)		Name of the type of the result
CHARACTER_SET_NAME	VARCHAR2(44)		Whether the character set or the method is fixed-length character set (CHAR_CS) or fixed-length national character set (NCHAR_CS), or a particular character set specified by the user

See Also

- "DBA_METHOD_RESULTS"
- "USER_METHOD_RESULTS"

3.307 ALL_MINING_ALGORITHMS

ALL_MINING_ALGORITHMS describes the settings for a current user.

Column	Datatype	NULL	Description
ALGORITHM_NAME	VARCHAR2(128)		Algorithm used by the model.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
MINING_FUNCTION	VARCHAR2(30)		Function of the machine learning model. The machine learning function is specified when the model is built: • CLASSIFICATION • REGRESSION • CLUSTERING • FEATURE_EXTRACTION • ASSOCIATION_RULES • ATTRIBUTE_IMPORTANCE • ANOMALY DETECTION
ALGORITHM_TYPE	VARCHAR2(20)		Algorithm type of the model
ALGORITHM_METADATA	CLOB		Metadata of the algorithm
DESCRIPTION	VARCHAR2(4000)		Description of the algorithm

3.308 ALL_MINING_MODEL_ATTRIBUTES

ALL_MINING_MODEL_ATTRIBUTES describes the attributes of the machine learning models accessible to the current user.

Only the attributes in the model signature are included in this view. The attributes in the model signature correspond to the columns in the training data that were used to build the model.

Machine learning models are schema objects created by Oracle Machine Learning for SQL.

Related Views

- DBA_MINING_MODEL_ATTRIBUTES describes the attributes of all machine learning models in the database.
- USER_MINING_MODEL_ATTRIBUTES describes the attributes of the machine learning models owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the machine learning model
MODEL_NAME	VARCHAR2(128)	NOT NULL	Name of the machine learning model
ATTRIBUTE_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute The target attribute name for ONNX models (mining model with ALGORITHM set to ONNX) is always ORA$ONNXTARGET.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ATTRIBUTE_TYPE	VARCHAR2(12)		Logical type of the attribute. The type is identified during the model build or apply process: • CATEGORICAL: Character data • MIXED: The input signature column takes on more than one attribute type. This is due to user-defined embedded transformations that allow an input column to be transformed into multiple independent mining attributes, including mining attributes of different types. • NUMERICAL: Numeric data • PARTITION: The input signature column is used for the partitioning key • TEXT: Unstructured text data • UNSTRUCTURED: Unstructured data • VECTOR: Attribute of type vectors (typically, target attribute of embedding models).
DATA_TYPE	VARCHAR2(106)		Data type of the attribute
DATA_LENGTH	NUMBER		Length of the data type
DATA_PRECISION	NUMBER		Precision of a fixed point number. Precision, which is the total number of significant decimal digits, is represented as *p* in the data type NUMBER(p,s).
DATA_SCALE	NUMBER		Scale of a fixed point number. Scale, which is the number of digits from the decimal to the least significant digit, is represented as *s* in the data type NUMBER(p,s).
USAGE_TYPE	VARCHAR2(8)		Indicates whether the attribute was used to construct the model (ACTIVE) or not (INACTIVE). Some attributes may be eliminated by transformations or algorithmic processing. The *_MINING_MODEL_ATTRIBUTES view only lists the attributes used by the model, therefore the value of this column is always ACTIVE.
TARGET	VARCHAR2(3)		Indicates whether the attribute is the target of a predictive model (YES) or not (NO). The target describes the result that is produced when the model is applied.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ATTRIBUTE_SPEC	VARCHAR2(4000)		One or more keywords that identify special treatment for the attribute during model build. Values are: • FORCE_IN: (GLM only) When feature selection is enabled, forces the inclusion of the attribute in the model build. Feature selection is disabled by default. If the model is not using GLM with feature selection enabled, this value is ignored. • NOPREP: When ADP is on, prevents automatic transformation of the attribute. If ADP is OFF, this value is ignored. • TEXT: Causes the attribute to be treated as unstructured text data. The TEXT value supports three subsettings: POLICY_NAME, MAX_FEATURES, TOKEN_TYPE, and MIN_DOCUMENTS. Subsettings are specified as name:value pairs within parentheses. For example: (POLICY_NAME:mypolicy) (MAX_FEATURES:2000)(TOKEN_TYPE:THEME). See *Oracle Machine Learning for SQL API Guide* for details. • NULL: The ATTRIBUTE_SPEC for this attribute is NULL. ATTRIBUTE_SPEC is a parameter to the PL/SQL procedure DBMS_DATA_MINING_TRANSFORM.SET_TRANSFORM. See *Oracle AI Database PL/SQL Packages and Types Reference* for details.
VECTOR_INFO	VARCHAR2(56)		Indicates the number of vectors and their data type in an ONNX model Format: VECTOR(*dimension*,*element_type*) Example: VECTOR(768,float32)

3.309 ALL_MINING_MODEL_PARTITIONS

ALL_MINING_MODEL_PARTITIONS describes all the model partitions accessible to the user.

Related Views

- DBA_MINING_MODEL_PARTITIONS describes all the model partitions accessible to the system.
- USER_MINING_MODEL_PARTITIONS describes the user's own model partitions. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Name of the model owner
MODEL_NAME	VARCHAR2(128)	NOT NULL	Name of the model
PARTITION_NAME	VARCHAR2(4000)		Name of the model partition
POSITION	NUMBER		Column position number for partitioning column. Column position represents the position of the column in a multi-column partitioning key, or 1 for a unary column partitioning key.
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column used for partitioning

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
COLUMN_VALUE	VARCHAR2(4000)		Value of the column for this partition

3.310 ALL_MINING_MODEL_SETTINGS

ALL_MINING_MODEL_SETTINGS describes the settings of the machine learning models accessible to the current user.

Machine learning models are schema objects created by Oracle Machine Learning for SQL.

Related Views

- DBA_MINING_MODEL_SETTINGS describes the settings of all machine learning models in the database.
- USER_MINING_MODEL_SETTINGS describes the settings of the machine learning models owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the machine learning model
MODEL_NAME	VARCHAR2(128)	NOT NULL	Name of the machine learning model
SETTING_NAME	VARCHAR2(30)	NOT NULL	Name of the setting
SETTING_VALUE	VARCHAR2(4000)	–	Value of the setting
SETTING_TYPE	VARCHAR2(7)	–	Indicates whether the default value (DEFAULT) or a user-specified value (INPUT) is used by the model

See Also

Oracle AI Database PL/SQL Packages and Types Reference for descriptions of model settings

3.311 ALL_MINING_MODEL_VIEWS

ALL_MINING_MODEL_VIEWS provides a description of all the model views accessible to the user.

Related Views

- DBA_MINING_MODEL_VIEWS provides a description of all the model views in the database.
- USER_MINING_MODEL_VIEWS provides a description of the user's own model views. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the model view
MODEL_NAME	VARCHAR2(128)	NOT NULL	Name of the model to which model views belongs
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the model view

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
VIEW_TYPE	VARCHAR2(128)	–	Type of the model view

> **See Also**
>
> "ALL_MINING_MODEL_VIEWS" in *Oracle Machine Learning for SQL User's Guide*

3.312 ALL_MINING_MODEL_XFORMS

ALL_MINING_MODEL_XFORMS describes the user-specified transformations embedded in all models accessible to the user.

Related Views

- DBA_MINING_MODEL_XFORMS describes the user-specified transformations embedded in all models accessible in the system.
- USER_MINING_MODEL_XFORMS describes the user-specified transformations embedded with the user's own models. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Name of the model owner
MODEL_NAME	VARCHAR2(128)	NOT NULL	Name of the model
ATTRIBUTE_NAME	VARCHAR2(128)		Name of the attribute used in the transformation
ATTRIBUTE_SUBNAME	VARCHAR2(4000)		Subname of the attribute used in the transformation
ATTRIBUTE_SPEC	VARCHAR2(4000)		Attribute specification provided to model training
EXPRESSION	CLOB		Transformation expression provided to model training
REVERSE	VARCHAR2(3)		Indicates whether the specified transformation is a reverse transformation (YES) or a forward expression (NO)

3.313 ALL_MINING_MODELS

ALL_MINING_MODELS describes the machine learning models accessible to the current user.

Mining models are schema objects created by Oracle Machine Learning for SQL.

Related Views

- DBA_MINING_MODELS describes all machine learning models in the database.
- USER_MINING_MODELS describes the machine learning models owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the machine learning model

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
MODEL_NAME	VARCHAR2(128)	NOT NULL	Name of the machine learning model
MINING_FUNCTION	VARCHAR2(30)		Function of the mining model. The function identifies the class of problems that can be solved by this model. The machine learning function is specified when the model is built: • CLASSIFICATION • REGRESSION • CLUSTERING • EMBEDDING • FEATURE_EXTRACTION • ASSOCIATION_RULES • ATTRIBUTE_IMPORTANCE • TIME_SERIES
ALGORITHM	VARCHAR2(30)		Algorithm used by the model. Each machine learning function has a default algorithm. The default can be overridden with a model setting (see *_MINING_MODEL_SETTINGS): • APRIORI_ASSOCIATION_RULES • CUR_DECOMPOSITION • DECISION_TREE • EXPECTATION_MAXIMIZATION • EXPLICIT_SEMANTIC_ANALYS • EXPONENTIAL_SMOOTHING • EXTENSIBLE_LANG • GENERALIZED_LINEAR_MODEL • KMEANS • MINIMUM_DESCRIPTION_LENGTH • MSET_SPRT • NAIVE_BAYES • NEURAL_NETWORK • NONNEGATIVE_MATRIX_FACTOR • O_CLUSTER • ONNX • RANDOM_FOREST • SUPPORT_VECTOR_MACHINE • SINGULAR_VALUE_DECOMP • XGBOOST
ALGORITHM_TYPE	VARCHAR2(10)		R type algorithm. This column is used in R algorithm registration.
CREATION_DATE	DATE	NOT NULL	Date that the model was created
BUILD_DURATION	NUMBER		Time (in seconds) of the model build process
MODEL_SIZE	NUMBER		Size of the model (in megabytes)
PARTITIONED	VARCHAR2(3)		Indicates whether the model is partitioned or not. Possible values: • YES: The model is partitioned. • NO: The model is not partitioned

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
BUILD_SOURCE	CLOB		Input data source (provided by the user at build time) on which to build the model This column is populated for models created in Oracle AI Database 26ai or later. For older version models that were imported into Oracle AI Database 26ai or later, the value of this column is null.
COMMENTS	VARCHAR2(4000)		Comment applied to the model with a SQL COMMENT statement

3.314 ALL_MLE_ENV_IMPORTS

ALL_MLE_ENV_IMPORTS describes import name to module mappings in the Oracle Database Multilingual Engine (MLE) environments accessible to the current user.

Related Views

- DBA_MLE_ENV_IMPORTS describes import name to module mappings in all MLE environments in the database.
- USER_MLE_ENV_IMPORTS describes import name to module mappings in the MLE environments owned by the current user. This view does not display the ENV_OWNER column.

Column	Datatype	NULL	Description
ENV_OWNER	VARCHAR2(128)	NOT NULL	Owner of the MLE environment
ENV_NAME	VARCHAR2(128)	NOT NULL	Name of the MLE environment
ENV_ID	NUMBER	NOT NULL	Object number of the MLE environment
IMPORT_NAME	VARCHAR2(2048)	NOT NULL	Import name, as specified in the MLE environment's IMPORTS clause It is possible for a single MLE environment to have multiple import names. The import name is a case-sensitive identifier.
MODULE_OWNER	VARCHAR2(128)		Owner of the MLE module
MODULE_NAME	VARCHAR2(128)	NOT NULL	Name of the MLE module

Note

This view is available starting with Oracle AI Database 26ai.

3.315 ALL_MLE_ENVS

ALL_MLE_ENVS describes the Oracle Database Multilingual Engine (MLE) environments accessible to the current user.

Related Views

- DBA_MLE_ENVS describes all MLE environments in the database.
- USER_MLE_ENVS describes the MLE environments owned by the current user. This view does not display the ENV_OWNER column.

Column	Datatype	NULL	Description
ENV_OWNER	VARCHAR2(128)	NOT NULL	Owner of the MLE environment
ENV_NAME	VARCHAR2(128)	NOT NULL	Name of the MLE environment
ENV_ID	NUMBER	NOT NULL	Object number of the MLE environment
LANGUAGE_OPTIONS	VARCHAR2(4000)		MLE environment language options

Note

This view is available starting with Oracle AI Database 26ai.

See Also

- "DBA_MLE_ENVS"

3.316 ALL_MLE_MODULES

ALL_MLE_MODULES describes the Oracle Database Multilingual Engine (MLE) modules accessible to the current user.

Related Views

- DBA_MLE_MODULES describes all MLE modules in the database.
- USER_MLE_MODULES describes the MLE modules owned by the current user. This view does not display the MODULE_OWNER column.

Column	Datatype	NULL	Description
MODULE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the MLE module
MODULE_NAME	VARCHAR2(128)	NOT NULL	Name of the MLE module
MODULE_ID	NUMBER	NOT NULL	Object number of the MLE module
MODULE	BLOB	NOT NULL	Contents of the MLE module

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
LANGUAGE_OWNER	VARCHAR2(128)		Owner of the MLE language of the MLE module
LANGUAGE_NAME	VARCHAR2(128)	NOT NULL	Name of the MLE language of the MLE module
VERSION	VARCHAR2(256)		Version of the MLE module
METADATA	CLOB		Metadata of the MLE module
TYPE	VARCHAR2(7)		Type of the MLE module: • TEXT • UNKNOWN

Note

This view is available starting with Oracle AI Database 26ai.

See Also

- "DBA_MLE_MODULES"

3.317 ALL_MLE_PROCEDURES

ALL_MLE_PROCEDURES describes the Oracle Database Multilingual Engine (MLE) functions and procedures accessible to the current user.

Related Views

- DBA_MLE_PROCEDURES describes all MLE functions and procedures in the database.
- USER_MLE_PROCEDURES describes the MLE functions and procedures owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the top-level object • For a function or procedure defined in a package or type, this column displays the owner of the package or type. • For a standalone function or procedure, this column displays the owner of the function or procedure.
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the top-level object • For a function or procedure defined in a package or type, this column displays the name of the package or type. • For a standalone function or procedure, this column displays the name of the function or procedure.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PROCEDURE_NAME	VARCHAR2(128)		Name of the function or procedure • For a function or procedure defined in a package or type, this column displays the name of the function or procedure. • For a standalone function or procedure, the value of this column is null.
OBJECT_ID	NUMBER	NOT NULL	Object number of the object displayed in OBJECT_NAME This value corresponds to the OBJECT_ID column in the ALL_OBJECTS and ALL_PROCEDURES views.
SUBPROGRAM_ID	NUMBER	NOT NULL	Unique subprogram identifier
SIGNATURE	CLOB		Signature of the function or procedure (in the target language)
MODULE_OWNER	VARCHAR2(128)		Owner of the top-level MLE module
MODULE_NAME	VARCHAR2(128)		Name of the top-level MLE module
ENV_OWNER	VARCHAR2(128)		Owner of the MLE environment
ENV_NAME	VARCHAR2(128)		Name of the MLE environment
LANG_OWNER	VARCHAR2(128)		MLE language owner
LANG_NAME	VARCHAR2(128)		MLE language name
SRC	CLOB		Text of the source code for the function or procedure

Note

This view is available starting with Oracle AI Database 26ai.

3.318 ALL_MVIEW_AGGREGATES

ALL_MVIEW_AGGREGATES describes the grouping functions (aggregate operations) that appear in the SELECT list of materialized aggregate views accessible to the current user.

Related Views

- DBA_MVIEW_AGGREGATES describes all such grouping functions defined for all materialized views in the database.
- USER_MVIEW_AGGREGATES describes all such grouping functions defined for all materialized views owned by the current user.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> All three views exclude materialized views that reference remote tables or that include references to a nonstatic value such as SYSDATE or USER. These views also exclude materialized views that were created as "snapshots" before Oracle8*i* and that were never altered to enable query rewrite.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
POSITION_IN_SELECT	NUMBER	NOT NULL	Ordinal position of this aggregation within the SELECT list. For the position of nonaggregate elements of the select list, see "ALL_MVIEW_KEYS".
CONTAINER_COLUMN	VARCHAR2(128)	NOT NULL	Name of this column in the container table
AGG_FUNCTION	VARCHAR2(8)		Aggregation function
DISTINCTFLAG	VARCHAR2(1)		Indicates whether this aggregation is distinct (Y) or not (N)
MEASURE	LONG		SQL text of the measure, excluding the aggregation function. Equal to * for COUNT(*).

> **See Also**
>
> - "DBA_MVIEW_AGGREGATES"
> - "USER_MVIEW_AGGREGATES"

3.319 ALL_MVIEW_ANALYSIS

ALL_MVIEW_ANALYSIS describes the materialized views accessible to the current user. It provides additional information for analysis by applications. Minimal information is displayed for materialized views that do not support query rewrite (such as materialized views with remote master tables or nondeterministic functions).

Related Views

- DBA_MVIEW_ANALYSIS describes all such materialized views in the database.
- USER_MVIEW_ANALYSIS describes all such materialized views owned by the current user.

> **Note**
>
> All of the information in these views is also displayed in ALL_MVIEWS and its related views. Oracle recommends that you refer to ALL_MVIEWS for this information instead of these views.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
MVIEW_TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the container table (see next column)
CONTAINER_NAME	VARCHAR2(128)		Name of the internal container in which the materialized view data is held. Normally this is the same as MVIEW_NAME. For materialized views created before Oracle8*i*, Oracle Database attaches the 6-byte prefix SNAP$_. If MVIEW_NAME has more than 19 bytes, then Oracle Database truncates the name to 19 bytes and adds a 4-byte sequence number as a suffix to produce a nonambiguous CONTAINER_NAME.
LAST_REFRESH_SCN	NUMBER		System change number (SCN) of the last refresh operation
LAST_REFRESH_DATE	DATE		SYSDATE of the last refresh
REFRESH_METHOD	VARCHAR2(8)		Default refresh method: • FORCE • FAST • COMPLETE • NEVER
SUMMARY	VARCHAR2(1)		Indicates whether this materialized view includes a GROUP BY clause or aggregation (Y) or not (N)
FULLREFRESHTIM	NUMBER		Approximate refresh time, in seconds, for full refresh
INCREFRESHTIM	NUMBER		Approximate refresh time, in seconds, for fast refresh
CONTAINS_VIEWS	VARCHAR2(1)		Indicates whether this materialized view contains a view in its definition (Y) or not (N)
UNUSABLE	VARCHAR2(1)		Indicates whether this materialized view is UNUSABLE (inconsistent data) (Y) or not (N). A materialized view can be UNUSABLE if a system failure occurs during a full refresh.
RESTRICTED_SYNTAX	VARCHAR2(1)		Indicates whether this materialized view had a restriction in its defining query that limits the use of query rewrite (Y) or not (N). More complete information is provided by the REWRITE_CAPABILITY column of the *_MVIEWS view.
INC_REFRESHABLE	VARCHAR2(1)		Indicates whether this materialized view can be fast refreshed (Y) or not (N)
KNOWN_STALE	VARCHAR2(1)		Indicates whether the data contained in the materialized view is known to be inconsistent with the master table data because that has been updated since the last successful refresh (Y) or not (N)
INVALID	VARCHAR2(1)		Indicates whether this materialized view is in an invalid state (inconsistent metadata) (Y) or not (N)
REWRITE_ENABLED	VARCHAR2(1)		Indicates whether this materialized view is currently enabled for query rewrite (Y) or not (N)
QUERY_LEN	NUMBER		Length (in bytes) of the query field
QUERY	LONG		SELECT expression of the materialized view definition
REVISION	NUMBER	NOT NULL	Reserved for internal use

Copyright © 2002, 2025, Oracle and/or its affiliates.

> - "USER_MVIEW_ANALYSIS"

3.320 ALL_MVIEW_COMMENTS

ALL_MVIEW_COMMENTS displays comments on the materialized views accessible to the current user.

Related Views

- DBA_MVIEW_COMMENTS displays comments on the materialized views in the database.
- USER_MVIEW_COMMENTS displays comments on the materialized views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
COMMENTS	VARCHAR2(4000)		Comment on the materialized view

> **See Also**
>
> - "DBA_MVIEW_COMMENTS"
> - "USER_MVIEW_COMMENTS"

3.321 ALL_MVIEW_DETAIL_LOGICAL_PARTITION

ALL_MVIEW_DETAIL_LOGICAL_PARTITION displays freshness information, with respect to logical partition change tracking (LPCT) detail partitions, for the materialized views accessible to the current user.

Related Views

- DBA_MVIEW_DETAIL_LOGICAL_PARTITION displays freshness information, with respect to LPCT detail partitions, for all materialized views in the database.
- USER_MVIEW_DETAIL_LOGICAL_PARTITION displays freshness information, with respect to LPCT detail partitions, for the materialized views owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
DETAILOBJ_OWNER	VARCHAR2(128)	NOT NULL	Owner of the detail object
DETAILOBJ_NAME	VARCHAR2(128)	NOT NULL	Name of the detail object

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DETAIL_LOGICAL_PARTITION_NAME	VARCHAR2(128)		Name of the detail object logical partition
DETAIL_LOGICAL_PARTITION_NUMBER	NUMBER	NOT NULL	Unique identifier of the detail object logical partition
FRESHNESS	VARCHAR2(7)		Freshness state of the detail object logical partition. Possible values: • FRESH • STALE • UNKNOWN
LAST_REFRESH_TIME	DATE		Date and time at which the materialized view was last refreshed
DETAIL_LOGICAL_PARTITION_HIBOUND	LONG		High bound value for the detail object logical partition

Note

This view is available starting with Oracle AI Database 26ai.

3.322 ALL_MVIEW_DETAIL_PARTITION

ALL_MVIEW_DETAIL_PARTITION displays freshness information, with respect to partition change tracking (PCT) detail partitions, for the materialized views accessible to the current user.

Related Views

- DBA_MVIEW_DETAIL_PARTITION displays freshness information, with respect to PCT detail partitions, for all materialized views in the database.
- USER_MVIEW_DETAIL_PARTITION displays freshness information, with respect to PCT detail partitions, for the materialized views owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
DETAILOBJ_OWNER	VARCHAR2(128)	NOT NULL	Owner of the detail object
DETAILOBJ_NAME	VARCHAR2(128)	NOT NULL	Name of the detail object
DETAIL_PARTITION_NAME	VARCHAR2(128)		Name of the detail object partition
DETAIL_PARTITION_POSITION	NUMBER		Position of the detail object partition

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
FRESHNESS	VARCHAR2(7)		Freshness state of the detail object logical partition. Possible values: • FRESH • STALE • UNKNOWN
LAST_REFRESH_TIME	DATE		Date and time at which the materialized view was last refreshed

3.323 ALL_MVIEW_DETAIL_RELATIONS

ALL_MVIEW_DETAIL_RELATIONS describes the named detail relations that are either specified in the FROM list of the subquery that defines a materialized view accessible to the current user, or that are indirectly referenced through views in that FROM list. Inline views in the materialized view definition are not represented in this view or the related views.

Related Views

- DBA_MVIEW_DETAIL_RELATIONS describes all such detail relations defined for all materialized views in the database.
- USER_MVIEW_DETAIL_RELATIONS describes such detail relations defined for all materialized views owned by the current user.

Note

All three views exclude materialized views that reference remote tables or that includes references to a nonstatic value such as SYSDATE or USER. These views also exclude materialized views that were created as *snapshots* before Oracle8*i* and that were never altered to enable query rewrite.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
DETAILOBJ_OWNER	VARCHAR2(128)	NOT NULL	Detail object owner
DETAILOBJ_NAME	VARCHAR2(128)	NOT NULL	Detail object name (that is, the name of a table or view)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DETAILOBJ_TYPE	VARCHAR2(9)		Detail object type: • TABLE • VIEW • SNAPSHOT • CONTAINER • UNDEFINED
DETAILOBJ_ALIAS	VARCHAR2(128)		Implicit or explicit alias for detail relation
DETAILOBJ_PCT	VARCHAR2(1)		Indicates whether the detail object PCT is supported (Y) or not (N)
NUM_FRESH_PCT_PARTITIONS	NUMBER		Number of fresh PCT partitions
NUM_STALE_PCT_PARTITIONS	NUMBER		Number of stale PCT partitions

- "DBA_MVIEW_DETAIL_RELATIONS"
- "USER_MVIEW_DETAIL_RELATIONS"

3.324 ALL_MVIEW_DETAIL_SUBPARTITION

ALL_MVIEW_DETAIL_SUBPARTITION displays freshness information, with respect to partition change tracking (PCT) detail subpartitions, for the materialized views accessible to the current user.

Related Views

- DBA_MVIEW_DETAIL_SUBPARTITION displays freshness information, with respect to PCT detail subpartitions, for all materialized views in the database.
- USER_MVIEW_DETAIL_SUBPARTITION displays freshness information, with respect to PCT detail subpartitions, for the materialized views owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
DETAILOBJ_OWNER	VARCHAR2(128)	NOT NULL	Owner of the detail object
DETAILOBJ_NAME	VARCHAR2(128)	NOT NULL	Name of the detail object
DETAIL_PARTITION_NAME	VARCHAR2(128)		Name of the detail object partition
DETAIL_SUBPARTITION_NAME	VARCHAR2(128)		Name of the detail object subpartition
DETAIL_SUBPARTITION_POSITION	NUMBER		Position of the detail object subpartition
FRESHNESS	CHAR(5)		Freshness state of the detail object subpartition (FRESH or STALE)

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.325 ALL_MVIEW_JOINS

ALL_MVIEW_JOINS describes joins between two columns in the WHERE clause of the subquery that defines a materialized view accessible to the current user.

Related Views

- DBA_MVIEW_JOINS describes all such joins for all materialized views in the database.
- USER_MVIEW_JOINS describes such joins for all materialized views owned by the current user.

Note

All three views exclude materialized views that reference remote tables or that includes references to a nonstatic value such as SYSDATE or USER. These views also exclude materialized views that were created as "snapshots" before Oracle8*i* and that were never altered to enable query rewrite.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Materialized view name
DETAILOBJ1_OWNER	VARCHAR2(128)	NOT NULL	Owner of the first object in the join[1]
DETAILOBJ1_RELATION	VARCHAR2(128)	NOT NULL	Name of the first object in the join[1]
DETAILOBJ1_COLUMN	VARCHAR2(128)	NOT NULL	Join column of the first object in the join[1]
OPERATOR	CHAR(1)		Join operator[1]
OPERATOR_TYPE	VARCHAR2(1)		Indicates whether the join is an inner join (I) or the DETAILOBJ1 table is the left side of an outer join (L)[1]
DETAILOBJ2_OWNER	VARCHAR2(128)	NOT NULL	Owner of the second object in the join[1]
DETAILOBJ2_RELATION	VARCHAR2(128)	NOT NULL	Name of the second object in the join[1]
DETAILOBJ2_COLUMN	VARCHAR2(128)	NOT NULL	Join column of the second object in the join[1]

1 These rows relate only to materialized join views and materialized aggregate views. They describe the two detail objects of a materialized view join.

3.326 ALL_MVIEW_KEYS

ALL_MVIEW_KEYS describes the columns or expressions in the SELECT list upon which materialized views accessible to the current user are based.

Related Views

- DBA_MVIEW_KEYS describes such columns and expressions for all materialized views in the database.
- USER_MVIEW_KEYS describes such columns and expressions for all materialized views owned by the current user.

> **Note**
>
> All three views exclude materialized views that reference remote tables or that includes references to a nonstatic value such as SYSDATE or USER. These views also exclude materialized views that were created as *snapshots* before Oracle8*i* and that were never altered to enable query rewrite.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Materialized view name
POSITION_IN_SELECT	NUMBER	NOT NULL	Ordinal position of this key within the SELECT list
CONTAINER_COLUMN	VARCHAR2(128)	NOT NULL	Name of the column in the container table
DETAILOBJ_OWNER	VARCHAR2(128)	NOT NULL	Detail object owner
DETAILOBJ_NAME	VARCHAR2(128)	NOT NULL	Detail object name (for example, the name of a table or view)
DETAILOBJ_ALIAS	VARCHAR2(128)		Implicit or explicit alias for detail relation
DETAILOBJ_TYPE	VARCHAR2(5)		Detail object type: • TABLE • VIEW
DETAILOBJ_COLUMN	VARCHAR2(128)	NOT NULL	Name of the detail relation column

3.327 ALL_MVIEW_LOGS

ALL_MVIEW_LOGS describes all materialized view logs accessible to the current user.

Related Views

- DBA_MVIEW_LOGS describes all materialized view logs in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- USER_MVIEW_LOGS describes all materialized view logs owned by the current user.

Column	Datatype	NULL	Description
LOG_OWNER	VARCHAR2(128)		Owner of the materialized view log
MASTER	VARCHAR2(128)		Name of the master table or master materialized view whose changes are logged
LOG_TABLE	VARCHAR2(128)		Name of the table where the changes to the master table or master materialized view are logged
LOG_TRIGGER	VARCHAR2(128)		Obsolete with Oracle8*i* and later. Set to NULL. Formerly, this parameter was an after-row trigger on the master which inserted rows into the log.
ROWIDS	VARCHAR2(3)		Indicates whether rowid information is recorded (YES) or not (NO)
PRIMARY_KEY	VARCHAR2(3)		Indicates whether primary key information is recorded (YES) or not (NO)
OBJECT_ID	VARCHAR2(3)		Indicates whether object identifier information in an object table is recorded (YES) or not (NO)
FILTER_COLUMNS	VARCHAR2(3)		Indicates whether filter column information is recorded (YES) or not (NO)
SEQUENCE	VARCHAR2(3)		Indicates whether the sequence value, which provides additional ordering information, is recorded (YES) or not (NO)
INCLUDE_NEW_VALUES	VARCHAR2(3)		Indicates whether both old and new values are recorded (YES) or old values are recorded but new values are not recorded (NO)
PURGE_ASYNCHRONOUS	VARCHAR2(3)		Indicates whether the materialized view log is purged asynchronously (YES) or not (NO)
PURGE_DEFERRED	VARCHAR2(3)		Indicates whether the materialized view log is purged in a deferred manner (YES) or not (NO)
PURGE_START	DATE		For deferred purge, the purge start date
PURGE_INTERVAL	VARCHAR2(200)		For deferred purge, the purge interval
LAST_PURGE_DATE	DATE		Date of the last purge
LAST_PURGE_STATUS	NUMBER		Status of the last purge (error code or 0 for success)
NUM_ROWS_PURGED	NUMBER		Number of rows purged in the last purge
COMMIT_SCN_BASED	VARCHAR2(3)		Indicates whether the materialized view log is commit SCN-based (YES) or not (NO)
STAGING_LOG	VARCHAR2(3)		Indicates whether the materialized view log is a staging log for synchronous refresh (YES) or not (NO)
AUTO	VARCHAR2(6)		Indicates whether the materialized view log is an automatic materialized view log. Possible values: • YES - It is an automatic materialized view log • NO - It is a user-created materialized view log • HYBRID - It is a hybrid materialized view log. It was initially a user-created materialized view log and was subsequently altered automatically to include one or more additional columns to support an automatic materialized view.

3.328 ALL_MVIEW_REFRESH_TIMES

ALL_MVIEW_REFRESH_TIMES describes refresh times of the materialized views accessible to the current user.

Related Views

- DBA_MVIEW_REFRESH_TIMES describes refresh times of all materialized views in the database.
- USER_MVIEW_REFRESH_TIMES describes refresh times of the materialized views owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
MASTER_OWNER	VARCHAR2(128)		Owner of the master table
MASTER	VARCHAR2(128)		Name of the master table
LAST_REFRESH	DATE		SYSDATE from the master site at the time of the last refresh

See Also

- "DBA_MVIEW_REFRESH_TIMES"
- "USER_MVIEW_REFRESH_TIMES"

3.329 ALL_MVIEWS

ALL_MVIEWS describes all materialized views accessible to the current user.

Related Views

- DBA_MVIEWS describes all materialized views in the database.
- USER_MVIEWS describes all materialized views owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Schema in which the materialized view was created
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
CONTAINER_NAME	VARCHAR2(128)	NOT NULL	Name of the container in which the materialized view's data is held. Normally this is the same as MVIEW_NAME. For materialized views created before Oracle8*i*, Oracle Database attaches the 6-byte prefix SNAP$_. If MVIEW_NAME has more than 19 bytes, then Oracle Database truncates the name to 19 bytes and may add a 4-byte sequence number as a suffix to produce a nonambiguous CONTAINER_NAME.
QUERY	LONG		Query that defines the materialized view
QUERY_LEN	NUMBER(38)		Length (in bytes) of the defining query
UPDATABLE	VARCHAR2(1)		Indicates whether the materialized view is updatable (Y) or not (N)
UPDATE_LOG	VARCHAR2(128)		For updatable materialized views, the filename of the update log
MASTER_ROLLBACK_SEG	VARCHAR2(128)		Rollback segment for the master site or the master materialized view site
MASTER_LINK	VARCHAR2(128)		Database link for the master site or the master materialized view site
REWRITE_ENABLED	VARCHAR2(1)		Indicates whether rewrite is enabled (Y) or not (N)
REWRITE_CAPABILITY	VARCHAR2(9)		Indicates whether the materialized view is eligible for rewrite, and if so, what rules must be followed: • NONE - Materialized view cannot be used for rewrite, because rewrite is disallowed or prevented • TEXTMATCH - Defining query of the materialized view contained restrictions on the use of query rewrite • GENERAL - Defining query of the materialized view contained no restrictions on the use of query rewrite, so the database can apply any rewrite rule that is supported
REFRESH_MODE	VARCHAR2(6)		Refresh mode of the materialized view: • COMMIT - The database refreshes this materialized view when a transaction on one of the materialized view's masters commits • DEMAND - The database refreshes this materialized view whenever an appropriate refresh procedure is called • STATEMENT - The database refreshes this materialized view whenever a DML operation is performed on any of the materialized view’s base tables • NEVER - The database never refreshes this materialized view

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
REFRESH_METHOD	VARCHAR2(8)		Default method used to refresh the materialized view (can be overridden through the API): • COMPLETE - Materialized view is completely refreshed from the masters • FORCE - The database performs a fast refresh if possible, otherwise a complete refresh • FAST - The database performs an incremental refresh applying changes that correspond to changes in the masters since the last refresh • NEVER - User specified that the database should not refresh this materialized view
BUILD_MODE	VARCHAR2(9)		Indicates how the materialized view was populated during creation: • IMMEDIATE - Populated from the masters during creation • DEFERRED - Not populated during creation. Must be explicitly populated later by the user. • PREBUILT - Populated with an existing table during creation. The relationship of the contents of this prebuilt table to the materialized view's masters is unknown to the database.
FAST_REFRESHABLE	VARCHAR2(18)		Indicates whether the materialized view is eligible for incremental (fast) refresh. The database calculates this value statically, based on the materialized view definition query: • NO - Materialized view is not fast refreshable, and hence is complex • DML - Fast refresh is supported only for DML operations • DIRLOAD_DML - Fast refresh is supported for both direct loads and DML operations • DIRLOAD_LIMITEDDML - Fast refresh is supported for direct loads and a subset of DML operations
LAST_REFRESH_TYPE	VARCHAR2(8)		Method used for the most recent refresh: • COMPLETE - Most recent refresh was complete • FAST - Most recent refresh was fast (incremental) • NA - Materialized view has not yet been refreshed (for example, if it was created DEFERRED)
LAST_REFRESH_DATE	DATE		Date on which the materialized view was most recently refreshed (blank if not yet populated)
LAST_REFRESH_END_TIME	DATE		End time of the most recent refresh on the materialized view (blank if not yet populated)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
STALENESS	VARCHAR2(19)		Relationship between the contents of the materialized view and the contents of the materialized view's masters: • FRESH - Materialized view is a read-consistent view of the current state of its masters • IMPORT - Materialized view is imported from another database (the value of the UNKNOWN_IMPORT column is Y). Therefore, it is unknown whether the materialized view is in a read-consistent view of its masters from any point in time. The STALENESS of this view will turn to FRESH on a complete refresh. • NEEDS_COMPILE - Some object upon which the materialized view depends has changed. An ALTER MATERIALIZED VIEW...COMPILE statement is required to validate this materialized view and compute the staleness of the contents. • STALE - Materialized view is out of date because one or more of its masters has changed. If the materialized view was FRESH before it became STALE, then it is a read-consistent view of a former state of its masters. • UNDEFINED - Materialized view has remote masters. The concept of staleness is not defined for such materialized views. • UNKNOWN - The database does not know whether the materialized view is in a read-consistent view of its masters from any point in time (this is the case for materialized views created on prebuilt tables) • UNUSABLE - Materialized view is not a read-consistent view of its masters from any point in time
AFTER_FAST_REFRESH	VARCHAR2(19)		Specifies the staleness value that will occur if a fast refresh is applied to this materialized view. Its values are the same as for the STALENESS column, plus the value NA, which is used when fast refresh is not applicable to this materialized view.
UNKNOWN_PREBUILT	VARCHAR2(1)		Indicates whether the materialized view is prebuilt (Y) or not (N)
UNKNOWN_PLSQL_FUNC	VARCHAR2(1)		Indicates whether the materialized view contains PL/SQL functions (Y) or not (N)
UNKNOWN_EXTERNAL_TABLE	VARCHAR2(1)		Indicates whether the materialized view contains external tables (Y) or not (N)
UNKNOWN_CONSIDER_FRESH	VARCHAR2(1)		Indicates whether the materialized view is considered fresh (Y) or not (N)
UNKNOWN_IMPORT	VARCHAR2(1)		Indicates whether the materialized view is imported (Y) or not (N)
UNKNOWN_TRUSTED_FD	VARCHAR2(1)		Indicates whether the materialized view uses trusted constraints for refresh (Y) or not (N)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
COMPILE_STATE	VARCHAR2(19)		Validity of the materialized view with respect to the objects upon which it depends: • VALID - Materialized view has been validated without error, and no object upon which it depends has changed since the last validation • NEEDS_COMPILE - Some object upon which the materialized view depends has changed. An ALTER MATERIALIZED VIEW...COMPILE statement is required to validate this materialized view. • ERROR - Materialized view has been validated with one or more errors
USE_NO_INDEX	VARCHAR2(1)		Indicates whether the materialized view was created using the USING NO INDEX clause (Y) or the materialized view was created with the default index (N). The USING NO INDEX clause suppresses the creation of the default index.
STALE_SINCE	DATE		Time from when the materialized view became stale
NUM_PCT_TABLES	NUMBER		Number of PCT detail tables
NUM_FRESH_PCT_REGIONS	NUMBER		Number of fresh PCT partition regions
NUM_STALE_PCT_REGIONS	NUMBER		Number of stale PCT partition regions
SEGMENT_CREATED	VARCHAR2(3)		Indicates whether the materialized view was created using the SEGMENT CREATION DEFERRED clause. The value is YES if the segment for the materialized view is created and NO if it is not.
EVALUATION_EDITION	VARCHAR2(128)		Name of the edition in which editioned objects referenced in an expression column are resolved
UNUSABLE_BEFORE	VARCHAR2(128)		Name of the oldest edition in which the stored results of the materialized view's subquery may be used for query rewrite. In editions before the specified edition, the stored results of the materialized view's data are considered unusable. This value is NULL if no such edition is specified.
UNUSABLE_BEGINNING	VARCHAR2(128)		Name of the oldest edition in which the stored results of the materialized view's subquery may *not* be used for query rewrite. The data is unusable for query rewrite in the specified edition and in any descendants of this edition. This value is NULL if no such edition is specified.
DEFAULT_COLLATION	VARCHAR2(100)		Default collation for the materialized view
ON_QUERY_COMPUTATION	VARCHAR2(1)		Indicates whether the materialized view is a real-time materialized view (Y) or not (N)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
AUTO	VARCHAR2(10)		Indicates whether the materialized view is an automatic materialized view • NO - The materialized view is not an automatic materialized view • PSEUDO - The materialized view is marked as a candidate to become an automatic materialized view and will subsequently undergo a verification process • UNVERIFIED - The materialized view is undergoing a verification process to determine if it should become an automatic materialized view • YES - The materialized view is an automatic materialized view
CONCURRENT_REFRESH_ENABLED	VARCHAR2(1)		Indicates whether concurrent refresh is enabled for the materialized view (Y) or not (N)

3.330 ALL_NESTED_TABLE_COLS

ALL_NESTED_TABLE_COLS describes the columns of the nested tables accessible to the current user. To gather statistics for this view, use the DBMS_STATS package.

Related Views

- DBA_NESTED_TABLE_COLS describes the columns of all nested tables in the database.
- USER_NESTED_TABLE_COLS describes the columns of the nested tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the nested table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the nested table
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Column name
DATA_TYPE	VARCHAR2(128)		Data type of the column
DATA_TYPE_MOD	VARCHAR2(3)		Data type modifier of the column
DATA_TYPE_OWNER	VARCHAR2(128)		Owner of the data type of the column
DATA_LENGTH	NUMBER	NOT NULL	Length of the column (in bytes)
DATA_PRECISION	NUMBER		Decimal precision for NUMBER data type; binary precision for FLOAT data type; NULL for all other data types

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DATA_SCALE	NUMBER		Digits to the right of the decimal point in a number
NULLABLE	VARCHAR2(1)		Indicates whether a column allows NULLs. The value is N if there is a NOT NULL constraint on the column or if the column is part of a PRIMARY KEY.
COLUMN_ID	NUMBER		Sequence number of the column as created
DEFAULT_LENGTH	NUMBER		Length of the default value for the column
DATA_DEFAULT	LONG		Default value for the column
DATA_DEFAULT_VC	VARCHAR2(4000)		Default value for the column This column may truncate the default value.
NUM_DISTINCT	NUMBER		Number of distinct values in the column. This column remains for backward compatibility with Oracle7. This information is now in the {TAB|PART}_COL_STATISTICS views.
LOW_VALUE	RAW(1000)		Low value in the column. This column remains for backward compatibility with Oracle7. This information is now in the {TAB|PART}_COL_STATISTICS views.
HIGH_VALUE	RAW(1000)		High value in the column. This column remains for backward compatibility with Oracle7. This information is now in the {TAB|PART}_COL_STATISTICS views.
DENSITY	NUMBER		If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints. If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT. This column remains for backward compatibility with Oracle7. This information is now in the {TAB|PART}_COL_STATISTICS views.
NUM_NULLS	NUMBER		Number of NULLs in the column
NUM_BUCKETS	NUMBER		Number of buckets in the histogram for the column **Note:** The number of buckets in a histogram is specified in the SIZE parameter of the SQL ANALYZE statement. However, Oracle AI Database does not create a histogram with more buckets than the number of rows in the sample. Also, if the sample contains any values that are very repetitious, Oracle AI Database creates the specified number of buckets, but the value indicated by this column may be smaller because of an internal compression algorithm.
LAST_ANALYZED	DATE		Date on which this column was most recently analyzed
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this column
CHARACTER_SET_NAME	VARCHAR2(44)		Name of the character set: • CHAR_CS • NCHAR_CS
CHAR_COL_DECL_LENGTH	NUMBER		Declaration length of the character type column

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
AVG_COL_LEN	NUMBER		Average length of the column (in bytes)
CHAR_LENGTH	NUMBER		Displays the length of the column in characters. This value only applies to the following data types: • CHAR • VARCHAR2 • NCHAR • NVARCHAR2
CHAR_USED	VARCHAR2(1)		Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the data type is not any of the following (NULL): • CHAR • VARCHAR2 • NCHAR • NVARCHAR2
V80_FMT_IMAGE	VARCHAR2(3)		Indicates whether the column data is in release 8.0 image format (YES) or not (NO)
DATA_UPGRADED	VARCHAR2(3)		Indicates whether the column data has been upgraded to the latest type version format (YES) or not (NO)
HIDDEN_COLUMN	VARCHAR2(3)		Indicates whether the column is a hidden column (YES) or not (NO)
VIRTUAL_COLUMN	VARCHAR2(3)		Indicates whether the column is a virtual column (YES) or not (NO)
SEGMENT_COLUMN_ID	NUMBER		Sequence number of the column in the segment
INTERNAL_COLUMN_ID	NUMBER	NOT NULL	Internal sequence number of the column
HISTOGRAM	VARCHAR2(15)		Indicates existence/type of histogram: • NONE • FREQUENCY • HEIGHT BALANCED
QUALIFIED_COL_NAME	VARCHAR2(4000)		Qualified column name

3.331 ALL_NESTED_TABLES

ALL_NESTED_TABLES describes the nested tables in tables accessible to the current user.

Related Views

- DBA_NESTED_TABLES describes all nested tables in the database.
- USER_NESTED_TABLES describes nested tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the nested table
TABLE_NAME	VARCHAR2(128)		Name of the nested table
TABLE_TYPE_OWNER	VARCHAR2(128)		Owner of the type of which the nested table was created
TABLE_TYPE_NAME	VARCHAR2(128)		Name of the type of the nested table
PARENT_TABLE_NAME	VARCHAR2(128)		Name of the parent table containing the nested table
PARENT_TABLE_COLUMN	VARCHAR2(4000)		Column name of the parent table that corresponds to the nested table
STORAGE_SPEC	VARCHAR2(30)		Indicates whether storage for the nested table is USER_SPECIFIED or DEFAULT
RETURN_TYPE	VARCHAR2(20)		Return type of the varray column (LOCATOR) or (VALUE)
ELEMENT_SUBSTITUTABLE	VARCHAR2(25)		Indicates whether the nested table element is substitutable (Y) or not (N)

See Also

- "DBA_NESTED_TABLES"
- "USER_NESTED_TABLES"

3.332 ALL_NOTIFICATION_DIRECTIVES

ALL_NOTIFICATION_DIRECTIVES describes the notification directives accessible to the current user.

You can join this view with the ALL_DIRECTIVES view to obtain additional details about notification directives.

Related Views

- DBA_NOTIFICATION_DIRECTIVES describes all notification directives in the database.
- USER_NOTIFICATION_DIRECTIVES describes the notification directives owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the notification directive

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DIRECTIVE_NAME	VARCHAR2(128)	NOT NULL	Name of the notification directive
NOTIFICATION_TABLE	VARCHAR2(128)	NOT NULL	Notification table that tracks changes to the object
NOTIFICATION_VIEW	VARCHAR2(128)	NOT NULL	Notification view that tracks changes to the object
RETENTION	NUMBER		Retention time of the notification directive (in minutes)
NOTIFICATION_COLUMNS_CLAUSE	VARCHAR2(32767)		Columns clause of the notification directive

3.333 ALL_OBJ_COLATTRS

ALL_OBJ_COLATTRS describes object columns and attributes contained in the tables accessible to the current user.

Related Views

- DBA_OBJ_COLATTRS describes object columns and attributes contained in all tables in the database.
- USER_OBJ_COLATTRS describes object columns and attributes contained in the tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table containing the object column or attribute
COLUMN_NAME	VARCHAR2(4000)		Fully qualified name of the object column or attribute
SUBSTITUTABLE	VARCHAR2(15)		Indicates whether the column is substitutable (Y) or not (N)

3.334 ALL_OBJECT_TABLES

ALL_OBJECT_TABLES describes the object tables accessible to the current user.

Related Views

- DBA_OBJECT_TABLES describes all object tables in the database.
- USER_OBJECT_TABLES describes the object tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the table; NULL for partitioned, temporary, and index-organized tables
CLUSTER_NAME	VARCHAR2(128)		Name of the cluster, if any, to which the table belongs
IOT_NAME	VARCHAR2(128)		Name of the index-organized table, if any, to which the overflow or mapping table entry belongs. If the IOT_TYPE column is not NULL, then this column contains the base table name.
STATUS	VARCHAR2(8)		If a previous DROP TABLE operation failed, indicates whether the table is unusable (UNUSABLE) or valid (VALID)
PCT_FREE	NUMBER		Minimum percentage of free space in a block; NULL for partitioned tables
PCT_USED	NUMBER		Minimum percentage of used space in a block; NULL for partitioned tables
INI_TRANS	NUMBER		Initial number of transactions; NULL for partitioned tables
MAX_TRANS	NUMBER		Maximum number of transactions; NULL for partitioned tables
INITIAL_EXTENT	NUMBER		Size of the initial extent (in bytes); NULL for partitioned tables
NEXT_EXTENT	NUMBER		Size of secondary extents (in bytes); NULL for partitioned tables
MIN_EXTENTS	NUMBER		Minimum number of extents allowed in the segment; NULL for partitioned tables
MAX_EXTENTS	NUMBER		Maximum number of extents allowed in the segment; NULL for partitioned tables
PCT_INCREASE	NUMBER		Percentage increase in extent size; NULL for partitioned tables
FREELISTS	NUMBER		Number of process freelists allocated to the segment; NULL for partitioned tables
FREELIST_GROUPS	NUMBER		Number of freelist groups allocated to the segment; NULL for partitioned tables
LOGGING	VARCHAR2(3)		Indicates whether or not changes to the table are logged: • YES • NO

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
BACKED_UP	VARCHAR2(1)		Indicates whether the table has been backed up since the last modification (Y) or not (N)
NUM_ROWS	NUMBER		Number of rows in the table
BLOCKS	NUMBER		Number of used blocks in the table
EMPTY_BLOCKS	NUMBER		Number of empty (never used) blocks in the table
AVG_SPACE	NUMBER		Average available free space in the table
CHAIN_CNT	NUMBER		Number of chained rows in the table
AVG_ROW_LEN	NUMBER		Average row length, including row overhead
AVG_SPACE_FREELIST_BLOCKS	NUMBER		Average free space of all blocks on a freelist
NUM_FREELIST_BLOCKS	NUMBER		Number of blocks on the freelist
DEGREE	VARCHAR2(10)		Number of parallel execution processes per instance for scanning the table, or DEFAULT
INSTANCES	VARCHAR2(10)		Number of instances across which the table is to be scanned, or DEFAULT
CACHE	VARCHAR2(5)		Indicates whether the table is to be cached in the buffer cache (Y) or not (N)
TABLE_LOCK	VARCHAR2(8)		Indicates whether table locking is enabled (ENABLED) or disabled (DISABLED)
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this table
LAST_ANALYZED	DATE		Date on which this table was most recently analyzed
PARTITIONED	VARCHAR2(3)		Indicates whether the table is partitioned (YES) or not (NO)
IOT_TYPE	VARCHAR2(12)		If the table is an index-organized table, then IOT_TYPE is IOT, IOT_OVERFLOW, or IOT_MAPPING. If the table is not an index-organized table, then IOT_TYPE is NULL.
OBJECT_ID_TYPE	VARCHAR2(16)		Indicates whether the object ID (OID) is USER-DEFINED or SYSTEM GENERATED
TABLE_TYPE_OWNER	VARCHAR2(128)		Owner of the type of the table
TABLE_TYPE	VARCHAR2(128)		Type of the table
TEMPORARY	VARCHAR2(1)		Indicates whether this is a temporary table (Y) or not (N)
SECONDARY	VARCHAR2(1)		Indicates whether the object table is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge (Y) or not (N)
NESTED	VARCHAR2(3)		Indicates whether the table is a nested table (YES) or not (NO)
BUFFER_POOL	VARCHAR2(7)		Buffer pool to be used for table blocks: • DEFAULT • KEEP • RECYCLE • NULL

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
FLASH_CACHE	VARCHAR2(7)		Database Smart Flash Cache hint to be used for table blocks: • DEFAULT • KEEP • NONE Solaris and Oracle Linux functionality only.
CELL_FLASH_CACHE	VARCHAR2(7)		Cell flash cache hint to be used for table blocks: • DEFAULT • KEEP • NONE **See Also:** Oracle Exadata Storage Server Software documentation for more information
ROW_MOVEMENT	VARCHAR2(8)		Indicates whether partitioned row movement is enabled (ENABLED) or disabled (DISABLED)
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
DURATION	VARCHAR2(15)		Indicates the duration of a temporary table: • SYS$SESSION - Rows are preserved for the duration of the session • SYS$TRANSACTION - Rows are deleted after COMMIT Null - Permanent table
SKIP_CORRUPT	VARCHAR2(8)		Indicates whether the database ignores blocks marked corrupt during table and index scans (ENABLED) or raises an error (DISABLED). To enable this feature, run the DBMS_REPAIR.SKIP_CORRUPT_BLOCKS procedure.
MONITORING	VARCHAR2(3)		Indicates whether the table has the MONITORING attribute set (YES) or not (NO)
CLUSTER_OWNER	VARCHAR2(128)		Owner of the cluster, if any, to which the table belongs
DEPENDENCIES	VARCHAR2(8)		Indicates whether row-level dependency tracking is enabled (ENABLED) or disabled (DISABLED)
COMPRESSION	VARCHAR2(8)		Indicates whether table compression is enabled (ENABLED) or not (DISABLED); NULL for partitioned tables
COMPRESS_FOR	VARCHAR2(30)		Default compression for what kind of operations: • BASIC • ADVANCED • QUERY LOW • QUERY HIGH • ARCHIVE LOW • ARCHIVE HIGH • NULL The QUERY LOW, QUERY HIGH, ARCHIVE LOW, and ARCHIVE HIGH values are associated with Hybrid Columnar Compression, a feature of the Enterprise Edition of Oracle AI Database. See *Oracle AI Database Concepts* for more information.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DROPPED	VARCHAR2(3)		Indicates whether the table has been dropped and is in the recycle bin (YES) or not (NO); NULL for partitioned tables This view does not return the names of tables that have been dropped.
SEGMENT_CREATED	VARCHAR2(3)		Indicates whether the table segment has been created (YES) or not (NO)
INMEMORY	VARCHAR2(8)		Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for this segment
INMEMORY_PRIORITY	VARCHAR2(8)		Indicates the priority for In-Memory Column Store (IM column store) population. Possible values: • LOW • MEDIUM • HIGH • CRITICAL • NONE • NULL This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_PARTITIONS.
INMEMORY_DISTRIBUTE	VARCHAR2(15)		Indicates how the IM column store is distributed in an Oracle Real Application Clusters (Oracle RAC) environment: • AUTO • BY ROWID RANGE • BY PARTITION • BY SUBPARTITION
INMEMORY_COMPRESSION	VARCHAR2(17)		Indicates the compression level for the IM column store: • NO MEMCOMPRESS • FOR DML • FOR QUERY [LOW | HIGH] • FOR CAPACITY [LOW | HIGH] • AUTO • NULL This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_PARTITIONS.
INMEMORY_DUPLICATE	VARCHAR2(13)		Indicates the duplicate setting for the IM column store in an Oracle RAC environment: • NO DUPLICATE • DUPLICATE • DUPLICATE ALL
EXTERNAL	VARCHAR2(3)		Indicates whether the table is an external table (YES) or not (NO).

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
CELLMEMORY[1]	VARCHAR2(24)		The value for columnar compression in the storage cell flash cache. Possible values: • ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form • DISABLED: Oracle Exadata Storage is prevented from caching in columnar form • NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression) • FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format • FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format
HYBRID	VARCHAR2(3)		Indicates whether the table is a hybrid partitioned table (YES) or not (NO). A hybrid partitioned table can contain a mixture of partitions stored in segments and partitions stored externally.
INMEMORY_SERVICE	VARCHAR2(12)		Indicates how the IM column store is populated on various instances. The possible values are: • DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default. • NONE: Data is not populated on any instance. • ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter. • USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.
INMEMORY_SERVICE_NAME	VARCHAR2(1000)		Indicates the service name for the service on which the IM column store should be populated. This column has a value only when the corresponding INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null.
MEMOPTIMIZE_READ	VARCHAR2(8)		Indicates whether the table is enabled for Fast Key Based Access (ENABLED) or not (DISABLED)
MEMOPTIMIZE_WRITE	VARCHAR2(8)		For internal use only
HAS_SENSITIVE_COLUMN	VARCHAR2(3)		Indicates whether the table has one or more sensitive columns (YES) or not (NO)
LOGICAL_REPLICATION	VARCHAR2(8)		Indicates whether the table is enabled for logical replication (ENABLED) or not (DISABLED). This setting is ignored if database-wide column data supplemental logging is enabled.
STAGING	VARCHAR2(3)		Indicates whether the table is a staging table (YES) or not (NO)
HAS_RESERVABLE_COLUMN	VARCHAR2(3)		Indicates whether the table has one or more reservable columns (YES) or not (NO)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
VECTOR_INDEX_TYPE[2]	VARCHAR2(28)		Name of the vector index type, if any, to which the auxiliary table entry belongs

1 This column is intended for use with Oracle Exadata.

2 This column is available starting with Oracle AI Database 26ai, Release Update 23.9.

3.335 ALL_OBJECTS

ALL_OBJECTS describes all objects accessible to the current user.

Related Views

- DBA_OBJECTS describes all objects in the database.
- USER_OBJECTS describes all objects owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the object
OBJECT_NAME	VARCHAR2(128)		Name of the object
SUBOBJECT_NAME	VARCHAR2(128)		Name of the subobject (for example, partition)
OBJECT_ID	NUMBER		Dictionary object number of the object
DATA_OBJECT_ID	NUMBER		Dictionary object number of the segment that contains the object. **Note:** OBJECT_ID and DATA_OBJECT_ID display data dictionary metadata. Do not confuse these numbers with the unique 16-byte object identifier (*object ID*) that Oracle AI Database assigns to row objects in object tables in the system.
OBJECT_TYPE	VARCHAR2(23)		Type of the object (such as TABLE, INDEX)
CREATED	DATE		Timestamp for the creation of the object
LAST_DDL_TIME	DATE		Timestamp for the last modification of the object and dependent objects resulting from a DDL statement (including grants and revokes)
TIMESTAMP	VARCHAR2(19)		Timestamp for the specification of the object (character data)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
STATUS	VARCHAR2(7)		Status of the object: • VALID • INVALID • N/A
TEMPORARY	VARCHAR2(1)		Indicates whether the object is temporary (the current session can see only data that it placed in this object itself) (Y) or not (N)
GENERATED	VARCHAR2(1)		Indicates whether the name of this object was system-generated (Y) or not (N)
SECONDARY	VARCHAR2(1)		Indicates whether this is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge (Y) or not (N)
NAMESPACE	NUMBER		Namespace for the object
EDITION_NAME	VARCHAR2(128)		Name of the edition in which the object is actual
SHARING	VARCHAR2(18)		Values: • DATA LINK - If the object is data-linked or a data link to an object in the root • METADATA LINK - If the object is metadata-linked or a metadata link to an object in the root • EXTENDED DATA LINK - If the object is extended-data-linked or an extended data link to an object in the root • NONE - If none of the above applies
EDITIONABLE	VARCHAR2(1)		Values: • Y - For objects marked EDITIONABLE • N - For objects marked NONEDITIONABLE • NULL - For objects whose type is not editionable in the database
ORACLE_MAINTAINED	VARCHAR2(1)		Denotes whether the object was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). An object for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script.
APPLICATION	VARCHAR2(1)		Indicates whether the object is an Application common object (Y) or not (N)
DEFAULT_COLLATION	VARCHAR2(100)		Default collation for the object
DUPLICATED	VARCHAR2(1)		Indicates whether this object is duplicated on this shard (Y) or not (N)
SHARDED	VARCHAR2(1)		Indicates whether this object is sharded (Y) or not (N)
IMPORTED_OBJECT	VARCHAR2(1)		Indicates whether this object is imported (Y) or not (N)
SYNCHRONOUS_DUPLICATED	VARCHAR2(1)		Indicates whether this object is a synchronous duplicated table (Y) or not (N)
CREATED_APPID	NUMBER		ID of the Application that created the object
CREATED_VSNID	NUMBER		ID of the Application Version that created the object
MODIFIED_APPID	NUMBER		ID of the Application that last modified the object
MODIFIED_VSNID	NUMBER		ID of the Application Version that last modified the object

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.336 ALL_OBJECTS_AE

ALL_OBJECTS_AE describes the objects (across all editions) accessible to the current user. Dropped objects appear in this view with OBJECT_TYPE = NON-EXISTENT.

Related Views

- DBA_OBJECTS_AE describes all objects (across all editions) in the database.
- USER_OBJECTS_AE describes the objects (across all editions) owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the object
OBJECT_NAME	VARCHAR2(128)		Name of the object
SUBOBJECT_NAME	VARCHAR2(128)		Name of the subobject (for example, partition)
OBJECT_ID	NUMBER		Dictionary object number of the object
DATA_OBJECT_ID	NUMBER		Dictionary object number of the segment which contains the object
OBJECT_TYPE	VARCHAR2(23)		Type of the object
CREATED	DATE		Timestamp for the creation of the object
LAST_DDL_TIME	DATE		Timestamp for the last modification of the object and dependent objects resulting from a DDL statement (including grants and revokes)
TIMESTAMP	VARCHAR2(19)		Timestamp for the specification of the object (character data)
STATUS	VARCHAR2(7)		Status of the object: • VALID • INVALID • N/A
TEMPORARY	VARCHAR2(1)		Indicates whether the object is temporary (the current session can see only data that it placed in this object itself) (Y) or not (N)
GENERATED	VARCHAR2(1)		Indicates whether the name of this object was system-generated (Y) or not (N)
SECONDARY	VARCHAR2(1)		Indicates whether this is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge (Y) or not (N)
NAMESPACE	NUMBER		Namespace for the object
EDITION_NAME	VARCHAR2(128)		Name of the edition in which the object is actual

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SHARING	VARCHAR2(18)		Values: • DATA LINK - If the object is data-linked or a data link to an object in the root • METADATA LINK - If the object is metadata-linked or a metadata link to an object in the root • EXTENDED DATA LINK - If the object is extended-data-linked or an extended data link to an object in the root • NONE - If none of the above applies
EDITIONABLE	VARCHAR2(1)		Values: • Y - For objects marked EDITIONABLE • N - For objects marked NONEDITIONABLE • NULL - For objects whose type is not editionable in the database
ORACLE_MAINTAINED	VARCHAR2(1)		Denotes whether the object was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). An object for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script.
APPLICATION	VARCHAR2(1)		Indicates whether the object is an Application common object (Y) or not (N)
DEFAULT_COLLATION	VARCHAR2(100)		Default collation for the object
DUPLICATED	VARCHAR2(1)		Indicates whether this object is duplicated on this shard (Y) or not (N)
SHARDED	VARCHAR2(1)		Indicates whether this object is sharded (Y) or not (N)
IMPORTED_OBJECT	VARCHAR2(1)		Indicates whether this object is imported (Y) or not (N)
SYNCHRONOUS_DUPLICATED	VARCHAR2(1)		Indicates whether this object is a synchronous duplicated table (Y) or not (N)
CREATED_APPID	NUMBER		ID of the Application that created the object
CREATED_VSNID	NUMBER		ID of the Application Version that created the object
MODIFIED_APPID	NUMBER		ID of the Application that last modified the object
MODIFIED_VSNID	NUMBER		ID of the Application Version that last modified the object

3.337 ALL_OPANCILLARY

ALL_OPANCILLARY describes operators whose bindings are ancillary to other (primary) operators.

Related Views

- DBA_OPANCILLARY describes such information about all operators in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- USER_OPANCILLARY describes such information about operators owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the ancillary operator
OPERATOR_NAME	VARCHAR2(128)	NOT NULL	Name of the ancillary operator
BINDING#	NUMBER	NOT NULL	Binding number of the ancillary operator
PRIMOP_OWNER	VARCHAR2(128)	NOT NULL	Owner of the primary operator
PRIMOP_NAME	VARCHAR2(128)	NOT NULL	Name of the primary operator
PRIMOP_BIND#	NUMBER	NOT NULL	Binding number of the primary operator

See Also

- "DBA_OPANCILLARY"
- "USER_OPANCILLARY"

3.338 ALL_OPARGUMENTS

ALL_OPARGUMENTS describes arguments for each operator binding accessible to the current user.

Related Views

- DBA_OPARGUMENTS describes arguments of all operator bindings in the database.
- USER_OPARGUMENTS describes arguments of all operator bindings owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the operator argument
OPERATOR_NAME	VARCHAR2(128)	NOT NULL	Name of the operator argument
BINDING#	NUMBER	NOT NULL	Binding number of the operator argument
POSITION	NUMBER	NOT NULL	Position of the operator argument (1, 2, 3, ...)
ARGUMENT_TYPE	VARCHAR2(61)		Datatype of the operator argument

See Also

- "DBA_OPARGUMENTS"
- "USER_OPARGUMENTS"

Copyright © 2002, 2025, Oracle and/or its affiliates.

3.339 ALL_OPBINDINGS

ALL_OPBINDINGS describes the binding functions and methods on the operators accessible to the current user.

Related Views

- DBA_OPBINDINGS describes the binding functions and methods on all operators in the database.
- USER_OPBINDINGS describes the binding functions and methods on the operators owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the operator
OPERATOR_NAME	VARCHAR2(128)	NOT NULL	Name of the operator
BINDING#	NUMBER	NOT NULL	Binding number of the operator
FUNCTION_NAME	VARCHAR2(92)		Name of the binding function or method as specified by the user
RETURN_SCHEMA	VARCHAR2(128)		Name of the schema of the return type if the return type of the binding is an object type
RETURN_TYPE	VARCHAR2(128)		Name of the return type
IMPLEMENTATION_TYPE_SCHEMA	VARCHAR2(128)		If the operator was created WITH INDEX CONTEXT or SCAN CONTEXT, then this column displays the schema of the implementation type used by the functional implementation of the operator as a scan context (null if the operator was created without this syntax). **See Also:** the CREATE OPERATOR statement in *Oracle AI Database SQL Language Reference*
IMPLEMENTATION_TYPE	VARCHAR2(128)		If the operator was created WITH INDEX CONTEXT or SCAN CONTEXT, then this column displays the name of the implementation type used by the functional implementation of the operator as a scan context (null if the operator was created without this syntax). **See Also:** the CREATE OPERATOR statement in *Oracle AI Database SQL Language Reference*
PROPERTY	VARCHAR2(43)		Property of the operator binding: • WITH INDEX CONTEXT • COMPUTE ANCILLARY DATA • ANCILLARY TO • WITH COLUMN CONTEXT • WITH INDEX, COLUMN CONTEXT • COMPUTE ANCILLARY DATA, WITH COLUMN CONTEXT

3.340 ALL_OPERATOR_COMMENTS

ALL_OPERATOR_COMMENTS displays comments for the user-defined operators accessible to the current user.

Related Views

- DBA_OPERATOR_COMMENTS displays comments for all user-defined operators in the database.
- USER_OPERATOR_COMMENTS displays comments for the user-defined operators owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the user-defined operator
OPERATOR_NAME	VARCHAR2(128)	NOT NULL	Name of the user-defined operator
COMMENTS	VARCHAR2(4000)		Comment for the user-defined operator

See Also

- "DBA_OPERATOR_COMMENTS"
- "USER_OPERATOR_COMMENTS"

3.341 ALL_OPERATORS

ALL_OPERATORS describes the operators accessible to the current user.

Related Views

- DBA_OPERATORS describes all operators in the database.
- USER_OPERATORS describes the operators owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the operator
OPERATOR_NAME	VARCHAR2(128)	NOT NULL	Name of the operator
NUMBER_OF_BINDS	NUMBER	NOT NULL	Number of bindings associated with the operator

4

Static Data Dictionary Views: ALL_PART_COL_STATISTICS to DATABASE_PROPERTIES

This chapter contains the static data dictionary views ALL_PART_COL_STATISTICS through DATABASE_PROPERTIES.

4.1 ALL_PART_COL_STATISTICS

ALL_PART_COL_STATISTICS displays column statistics and histogram information for the table partitions accessible to the current user.

Related Views

- DBA_PART_COL_STATISTICS displays column statistics and histogram information for all table partitions in the database.
- USER_PART_COL_STATISTICS displays column statistics and histogram information for the table partitions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the partitioned table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
PARTITION_NAME	VARCHAR2(128)		Name of the table partition
COLUMN_NAME	VARCHAR2(4000)		Name of the column
NUM_DISTINCT	NUMBER		Number of distinct values in the column
LOW_VALUE	RAW(1000)		Low value in the column
HIGH_VALUE	RAW(1000)		High value in the column
DENSITY	NUMBER		If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints. If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT.
NUM_NULLS	NUMBER		Number of NULLs in the column
NUM_BUCKETS	NUMBER		Number of buckets in histogram for the column
SAMPLE_SIZE	NUMBER		Sample size used in analyzing the column
LAST_ANALYZED	DATE		Date on which the column was most recently analyzed
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics have been gathered or NO if statistics have been aggregated from subpartitions or have not been gathered

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
NOTES	VARCHAR2(81)		Additional properties of the statistics, if any. Possible values: • ADAPTIVE_SAMPLING: The column has synopses, and the synopses are in the adaptive sampling format introduced in Oracle Database 11*g* Release 1 (11.1). • HIST_FOR_INCREM_STATS: A histogram used to support incremental statistics has been created and it is not used for optimization. • HISTOGRAM_ONLY: Table statistics were gathered using the GATHER AUTO option and histograms were gathered without re-gathering other table and column statistics. • HYPERLOGLOG: The column has synopses, and the synopses are in the HyperLogLog format introduced in Oracle Database 12*c* Release 2 (12.2.0.1). • INCREMENTAL: The column has synopses. • STATS_ON_LOAD: Online statistics were gathered during direct path load. This column can be used to determine whether synopses in the adaptive sampling format have been phased out entirely and purged properly.
AVG_COL_LEN	NUMBER		Average length of the column (in bytes)
HISTOGRAM	VARCHAR2(15)		Indicates existence/type of histogram: • NONE • FREQUENCY • HEIGHT BALANCED • HYBRID • TOP-FREQUENCY

See Also

- "DBA_PART_COL_STATISTICS"
- "USER_PART_COL_STATISTICS"

4.2 ALL_PART_HISTOGRAMS

ALL_PART_HISTOGRAMS displays the histogram data (endpoints per histogram) for the histograms on the table partitions accessible to the current user.

Related Views

- DBA_PART_HISTOGRAMS displays the histogram data for the histograms on all table partitions in the database.
- USER_PART_HISTOGRAMS displays the histogram data for the histograms on the table partitions owned by the current user. This view does not display the OWNER column.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> These views are populated only if you collect statistics on the index using the DBMS_STATS package.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table
PARTITION_NAME	VARCHAR2(128)		Name of the table partition
COLUMN_NAME	VARCHAR2(4000)		Name of the column
BUCKET_NUMBER	NUMBER		Bucket number of the histogram
ENDPOINT_VALUE	NUMBER		Normalized endpoint values for the bucket
ENDPOINT_ACTUAL_VALUE	VARCHAR2(4000)		Actual (not normalized) string value of the endpoint for the bucket
ENDPOINT_ACTUAL_VALUE_RAW	RAW(1000)		Endpoint actual value in raw format
ENDPOINT_REPEAT_COUNT	NUMBER		Frequency of the endpoint (applies only to hybrid histograms, and is set to 0 for other histogram types)

> **See Also**
>
> - "DBA_PART_HISTOGRAMS"
> - "USER_PART_HISTOGRAMS"
> - *Oracle AI Database PL/SQL Packages and Types Reference* for more information about the DBMS_STATS package

4.3 ALL_PART_INDEXES

ALL_PART_INDEXES displays the object-level partitioning information for the partitioned indexes accessible to the current user.

Related Views

- DBA_PART_INDEXES displays the object-level partitioning information for all partitioned indexes in the database.
- USER_PART_INDEXES displays the object-level partitioning information for the partitioned indexes owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the partitioned index
INDEX_NAME	VARCHAR2(128)	NOT NULL	Name of the partitioned index
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the partitioned table

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PARTITIONING_TYPE	VARCHAR2(9)		Type of the partitioning method: • NONE - Not specified **See Also:** the *_INDEXES view • RANGE • HASH • SYSTEM • LIST • REFERENCE
SUBPARTITIONING_TYPE	VARCHAR2(9)		Type of the composite partitioning method: • NONE - Not specified **See Also:** the *_INDEXES view • RANGE • HASH • SYSTEM • LIST • REFERENCE
PARTITION_COUNT	NUMBER	NOT NULL	Number of partitions in the index
DEF_SUBPARTITION_COUNT	NUMBER		For a composite-partitioned index, the default number of subpartitions, if specified
PARTITIONING_KEY_COUNT	NUMBER	NOT NULL	Number of columns in the partitioning key
SUBPARTITIONING_KEY_COUNT	NUMBER		For a composite-partitioned index, the number of columns in the subpartitioning key
LOCALITY	VARCHAR2(6)		Indicates whether the partitioned index is local (LOCAL) or global (GLOBAL)
ALIGNMENT	VARCHAR2(12)		Indicates whether the partitioned index is prefixed (PREFIXED) or non-prefixed (NON_PREFIXED)
DEF_TABLESPACE_NAME	VARCHAR2(30)		For a local index, the default tablespace to be used when adding or splitting a table partition
DEF_PCT_FREE	NUMBER	NOT NULL	For a local index, the default PCTFREE value to be used when adding a table partition
DEF_INI_TRANS	NUMBER	NOT NULL	For a local index, the default INITRANS value to be used when adding a table partition
DEF_MAX_TRANS	NUMBER	NOT NULL	For a local index, the default MAXTRANS value to be used when adding a table partition
DEF_INITIAL_EXTENT	VARCHAR2(40)		For a local index, the default INITIAL value (in Oracle blocks) to be used when adding a table partition, or DEFAULT if no INITIAL value was specified
DEF_NEXT_EXTENT	VARCHAR2(40)		For a local index, the default NEXT value (in Oracle blocks) to be used when adding a table partition, or DEFAULT if no NEXT value was specified
DEF_MIN_EXTENTS	VARCHAR2(40)		For a local index, the default MINEXTENTS value to be used when adding a table partition, or DEFAULT if no MINEXTENTS value was specified
DEF_MAX_EXTENTS	VARCHAR2(40)		For a local index, the default MAXEXTENTS value to be used when adding a table partition, or DEFAULT if no MAXEXTENTS value was specified

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DEF_MAX_SIZE	VARCHAR2(40)		For a local index, the default MAXSIZE value to be used when adding a table partition, or DEFAULT if no MAXSIZE value was specified
DEF_PCT_INCREASE	VARCHAR2(40)		For a local index, the default PCTINCREASE value to be used when adding a table partition, or DEFAULT if no PCTINCREASE value was specified
DEF_FREELISTS	NUMBER	NOT NULL	For a local index, the default FREELISTS value to be used when adding a table partition
DEF_FREELIST_GROUPS	NUMBER	NOT NULL	For a local index, the default FREELIST GROUPS value to be used when adding a table partition
DEF_LOGGING	VARCHAR2(7)		For a local index, the default LOGGING attribute to be used when adding a table partition: • NONE - Not specified **See Also:** the *_INDEXES view • YES • NO
DEF_BUFFER_POOL	VARCHAR2(7)		For a local index, the default buffer pool to be used when adding a table partition: • DEFAULT • KEEP • RECYCLE • NULL
DEF_FLASH_CACHE	VARCHAR2(7)		For a local index, the default Database Smart Flash Cache hint to be used when adding a table partition: • DEFAULT • KEEP • NONE Solaris and Oracle Linux functionality only.
DEF_CELL_FLASH_CACHE	VARCHAR2(7)		For a local index, the default cell flash cache hint to be used when adding a table partition: • DEFAULT • KEEP • NONE **See Also:** Oracle Exadata Storage Server Software documentation for more information
DEF_PARAMETERS	VARCHAR2(1000)		Default parameter string for domain indexes
INTERVAL	VARCHAR2(1000)		String of the interval value
AUTOLIST	VARCHAR2(3)		Indicates whether a local index is partitioned by auto list partitioning (YES) or not (NO)
INTERVAL_SUBPARTITION	VARCHAR2(1000)		String of the subpartition interval value
AUTOLIST_SUBPARTITION	VARCHAR2(3)		Indicates whether a local index is subpartitioned by auto list partitioning (YES) or not (NO)

4.4 ALL_PART_KEY_COLUMNS

ALL_PART_KEY_COLUMNS describes the partitioning key columns for the partitioned objects accessible to the current user.

Related Views

- DBA_PART_KEY_COLUMNS describes the partitioning key columns for all partitioned objects in the database.
- USER_PART_KEY_COLUMNS describes the partitioning key columns for the partitioned objects owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the partitioned table or index
NAME	VARCHAR2(128)		Name of the partitioned table or index
OBJECT_TYPE	CHAR(5)		Object type: • TABLE • INDEX
COLUMN_NAME	VARCHAR2(4000)		Name of the column
COLUMN_POSITION	NUMBER		Position of the column within the partitioning key
COLLATED_COLUMN_ID	NUMBER		Internal sequence number of the column for which this column provides linguistic ordering

See Also

- "DBA_PART_KEY_COLUMNS"
- "USER_PART_KEY_COLUMNS"

4.5 ALL_PART_LOBS

ALL_PART_LOBS displays table-level information about the partitioned LOBs accessible to the current user, including default attributes for LOB data partitions.

Related Views

- DBA_PART_LOBS displays table-level information about all partitioned LOBs in the database.
- USER_PART_LOBS displays table-level information about the partitioned LOBs owned by the current user. This view does not display the TABLE_OWNER column.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the partitioned table containing the LOBs
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the partitioned table containing the LOBs
COLUMN_NAME	VARCHAR2(4000)		Name of the LOB column
LOB_NAME	VARCHAR2(128)	NOT NULL	Name of the partitioned LOB
LOB_INDEX_NAME	VARCHAR2(128)	NOT NULL	Name of the partitioned LOB index

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DEF_CHUNK	NUMBER	NOT NULL	Default value of CHUNK for a LOB data partition to be used when adding a partition
DEF_PCTVERSION	NUMBER	NOT NULL	Default value of PCTVERSION for a LOB data partition to be used when adding a partition
DEF_CACHE	VARCHAR2(10)		Indicates whether and how the LOB data is cached by default in the buffer cache: • YES - LOB data is placed in the buffer cache • NO - LOB data either is not brought into the buffer cache or is brought into the buffer cache and placed at the least recently used end of the LRU list • CACHEREADS - LOB data is brought into the buffer cache only during read operations but not during write operations
DEF_IN_ROW	VARCHAR2(3)		Indicates whether LOB data < 4000 bytes is stored by default inline (in the row) (YES) or not (NO); that is, whether or not ENABLE STORAGE IN ROW was specified when the LOB column was created or last altered
DEF_TABLESPACE_NAME	VARCHAR2(30)		Default tablespace for a LOB data partition to be used when adding a partition
DEF_INITIAL_EXTENT	VARCHAR2(40)		Default value of INITIAL for a LOB data partition to be used when adding a partition, or DEFAULT if no INITIAL value was specified
DEF_NEXT_EXTENT	VARCHAR2(40)		Default value of NEXT for a LOB data partition to be used when adding a partition, or DEFAULT if no NEXT value was specified
DEF_MIN_EXTENTS	VARCHAR2(40)		Default value of MINEXTENTS for a LOB data partition to be used when adding a partition, or DEFAULT if no MINEXTENTS value was specified
DEF_MAX_EXTENTS	VARCHAR2(40)		Default value of MAXEXTENTS for a LOB data partition to be used when adding a partition, or DEFAULT if no MAXEXTENTS value was specified
DEF_MAX_SIZE	VARCHAR2(40)		Default value of MAXSIZE for a LOB data partition to be used when adding a partition, or DEFAULT if no MAXSIZE value was specified
DEF_RETENTION	VARCHAR2(7)		Default value of RETENTION for a LOB data partition to be used when adding a partition. Possible values for SecureFiles: • NONE • AUTO • MIN • MAX • DEFAULT • INVALID Possible values for BasicFiles: • YES • NO
DEF_MINRET	VARCHAR2(40)		Default value of RETENTION MIN for a LOB data partition to be used when adding a partition, or DEFAULT if no RETENTION MIN value was specified

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DEF_PCT_INCREASE	VARCHAR2(40)		Default value of PCTINCREASE for a LOB data partition to be used when adding a partition, or DEFAULT if no PCTINCREASE value was specified
DEF_FREELISTS	VARCHAR2(40)		Default value of FREELISTS for a LOB data partition to be used when adding a partition, or DEFAULT if no FREELISTS value was specified
DEF_FREELIST_GROUPS	VARCHAR2(40)		Default value of FREELIST GROUPS for a LOB data partition to be used when adding a partition, or DEFAULT if no FREELIST GROUPS value was specified
DEF_LOGGING	VARCHAR2(7)		Default LOGGING attribute for a LOB data partition to be used when adding a partition: • NONE - Not specified **See Also:** the *_LOBS and *_LOB_PARTITIONS views • YES • NO
DEF_BUFFER_POOL	VARCHAR2(7)		Default buffer pool for a LOB data partition to be used when adding a partition: • DEFAULT • KEEP • RECYCLE • NULL
DEF_FLASH_CACHE	VARCHAR2(7)		Default Database Smart Flash Cache hint to be used when adding a partition: • DEFAULT • KEEP • NONE Solaris and Oracle Linux functionality only.
DEF_CELL_FLASH_CACHE	VARCHAR2(7)		Default cell flash cache hint to be used when adding a partition: • DEFAULT • KEEP • NONE **See Also:** Oracle Exadata Storage Server Software documentation for more information
DEF_ENCRYPT	VARCHAR2(4)		Default value of ENCRYPT for a LOB data partition to be used when adding a partition. Possible values for SecureFiles: • YES • NO Possible value for BasicFiles: • NONE - Not applicable

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DEF_COMPRESS	VARCHAR2(6)		Default value of COMPRESS for a LOB data partition to be used when adding a partition. Possible values for SecureFiles: • LOW • MEDIUM • HIGH • NO - Compression is off Possible value for BasicFiles: • NONE - Not applicable
DEF_DEDUPLICATE	VARCHAR2(15)		Default value of DEDUPLICATE for a LOB data partition to be used when adding a partition. Possible values for SecureFiles: • LOB - Deduplicate • NO - Keep duplicates Possible values for BasicFiles: • NONE - Not applicable
DEF_SECUREFILE	VARCHAR2(3)		Indicates whether the LOB is SecureFiles (YES) or not (NO)
DEF_MAX_INLINE	NUMBER		Default inline LOB size (in bytes)

- "USER_PART_LOBS"

4.6 ALL_PART_TABLES

ALL_PART_TABLES displays the object-level partitioning information for the partitioned tables accessible to the current user.

Related Views

- DBA_PART_TABLES displays the object-level partitioning information for all partitioned tables in the database.
- USER_PART_TABLES displays the object-level partitioning information for the partitioned tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the partitioned table
TABLE_NAME	VARCHAR2(128)		Name of the partitioned table

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PARTITIONING_TYPE	VARCHAR2(9)		Type of the partitioning method: • UNKNOWN - Not specified **See Also:** the *_TABLES view • RANGE • HASH • SYSTEM • LIST • REFERENCE
SUBPARTITIONING_TYPE	VARCHAR2(9)		Type of the composite partitioning method: • NONE - Not subpartitioned **See Also:** the *_TABLES view • RANGE • HASH • SYSTEM • LIST • REFERENCE
PARTITION_COUNT	NUMBER		Number of partitions in the table. For interval partitioned tables, the value of this column is always 1048575.
DEF_SUBPARTITION_COUNT	NUMBER		For a composite-partitioned table, the default number of subpartitions, if specified
PARTITIONING_KEY_COUNT	NUMBER		Number of columns in the partitioning key
SUBPARTITIONING_KEY_COUNT	NUMBER		For a composite-partitioned table, the number of columns in the subpartitioning key
STATUS	VARCHAR2(8)		If a previous DROP TABLE operation failed, indicates whether the table is unusable (UNUSABLE) or valid (VALID)
DEF_TABLESPACE_NAME	VARCHAR2(30)		Default tablespace to be used when adding a partition
DEF_PCT_FREE	NUMBER		Default value of PCTFREE to be used when adding a partition
DEF_PCT_USED	NUMBER		Default value of PCTUSED to be used when adding a partition
DEF_INI_TRANS	NUMBER		Default value of INITRANS to be used when adding a partition
DEF_MAX_TRANS	NUMBER		Default value of MAXTRANS to be used when adding a partition
DEF_INITIAL_EXTENT	VARCHAR2(40)		Default value of INITIAL (in Oracle blocks) to be used when adding a partition, or DEFAULT if no INITIAL value was specified
DEF_NEXT_EXTENT	VARCHAR2(40)		Default value of NEXT (in Oracle blocks) to be used when adding a partition, or DEFAULT if no NEXT value was specified
DEF_MIN_EXTENTS	VARCHAR2(40)		Default value of MINEXTENTS to be used when adding a partition, or DEFAULT if no MINEXTENTS value was specified
DEF_MAX_EXTENTS	VARCHAR2(40)		Default value of MAXEXTENTS to be used when adding a partition, or DEFAULT if no MAXEXTENTS value was specified

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DEF_MAX_SIZE	VARCHAR2(40)		Default value of MAXSIZE to be used when adding a partition, or DEFAULT if no MAXSIZE value was specified
DEF_PCT_INCREASE	VARCHAR2(40)		Default value of PCTINCREASE to be used when adding a partition, or DEFAULT if no PCTINCREASE value was specified
DEF_FREELISTS	NUMBER		Default value of FREELISTS to be used when adding a partition
DEF_FREELIST_GROUPS	NUMBER		Default value of FREELIST GROUPS to be used when adding a partition
DEF_LOGGING	VARCHAR2(7)		Default LOGGING attribute to be used when adding a partition: • NONE - Not specified **See Also:** the *_TABLES view • YES • NO
DEF_COMPRESSION	VARCHAR2(8)		Default compression to be used when adding a partition: • NONE - Not specified **See Also:** the *_TABLES view • ENABLED • DISABLED
DEF_COMPRESS_FOR	VARCHAR2(30)		Default compression for what kind of operations to be used when adding a partition: • BASIC • ADVANCED • QUERY LOW[1] • QUERY HIGH[1] • ARCHIVE LOW[1] • ARCHIVE HIGH[1] • UNKNOWN • NULL
DEF_BUFFER_POOL	VARCHAR2(7)		Default buffer pool to be used when adding a partition: • DEFAULT • KEEP • RECYCLE • NULL
DEF_FLASH_CACHE	VARCHAR2(7)		Default Database Smart Flash Cache hint to be used when adding a partition: • DEFAULT • KEEP • NONE Solaris and Oracle Linux functionality only.
DEF_CELL_FLASH_CACHE	VARCHAR2(7)		Default cell flash cache hint to be used when adding a partition: • DEFAULT • KEEP • NONE **See Also:** Oracle Exadata Storage Server Software documentation for more information

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
REF_PTN_CONSTRAINT_NAME	VARCHAR2(128)		Name of the partitioning referential constraint for reference-partitioned tables
INTERVAL	VARCHAR2(1000)		String of the interval value
AUTOLIST	VARCHAR2(3)		Indicates whether a table is partitioned by auto list partitioning (YES) or not (NO)
INTERVAL_SUBPARTITION	VARCHAR2(1000)		String of the subpartition interval value
AUTOLIST_SUBPARTITION	VARCHAR2(3)		Indicates whether auto list partitioning is being used (YES) or not (NO) for this subpartition
IS_NESTED	VARCHAR2(3)		Indicates whether the partitioned table is a nested table (YES) or not (NO) **See Also:** the *_NESTED_TABLES view for the parent table name/column
DEF_SEGMENT_CREATION	VARCHAR2(4)		Specifies whether the default for segment creation was specified on the table level: • NO - deferred was specified • YES - immediate was specified • NONE - a default for segment creation was not specified
DEF_INDEXING	VARCHAR2(3)		Indicates the indexing property specified for the table. Possible values: • ON - INDEXING on was specified explicitly, or no indexing property was specified • OFF - INDEXING off was specified.
DEF_INMEMORY	VARCHAR2(8)		Indicates whether the In-Memory Column Store (IM column store) is by default enabled (ENABLED), disabled (DISABLED), or not specified (NONE) for partitions in this table
DEF_INMEMORY_PRIORITY	VARCHAR2(8)		Indicates the default priority for In-Memory Column Store (IM column store) population. Possible values: • LOW • MEDIUM • HIGH • CRITICAL • NONE • NULL
DEF_INMEMORY_DISTRIBUTE	VARCHAR2(15)		Indicates how the IM column store is distributed by default for partitions of the table in an Oracle Real Application Clusters (Oracle RAC) environment: • AUTO • BY ROWID RANGE • BY PARTITION • BY SUBPARTITION
DEF_INMEMORY_COMPRESSION	VARCHAR2(17)		Default compression level for the IM column store: • NO MEMCOMPRESS • FOR DML • FOR QUERY [LOW | HIGH] • FOR CAPACITY [LOW | HIGH] • AUTO • NULL

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DEF_INMEMORY_DUPLICATE	VARCHAR2(13)		Indicates the default duplicate setting for the IM column store in an Oracle RAC environment: • NO DUPLICATE • DUPLICATE • DUPLICATE ALL
DEF_READ_ONLY	VARCHAR2(3)		Indicates the default setting for new partitions: • YES: The default setting for new partitions is read-only. • NO: The default setting for new partitions is read/write.
DEF_CELLMEMORY[2]	VARCHAR2(24)		Shows the default value for the CELLMEMORY attribute that new partitions in the parent table will inherit unless the behavior is overridden explicitly
DEF_INMEMORY_SERVICE	VARCHAR2(12)		Indicates how the IM column store is populated on various instances by default for partitions of the table. The possible values are: • DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default. • NONE: Data is not populated on any instance. • ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter. • USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the DEF_INMEMORY_SERVICE_NAME column.
DEF_INMEMORY_SERVICE_NAME	VARCHAR2(1000)		Specifies the service name for the service on which the IM column store should be populated by default for partitions of the table. This column has a value only when the corresponding DEF_INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null.
AUTO	VARCHAR2(3)		Indicates whether the table was automatically partitioned (YES) or not (NO)

1 Hybrid Columnar Compression is a feature of the Enterprise Edition of Oracle AI Database that is dependent on the underlying storage system. See *Oracle AI Database Concepts* for more information.
2 This column is intended for use with Oracle Exadata

4.7 ALL_PARTIAL_DROP_TABS

ALL_PARTIAL_DROP_TABS describes tables accessible to the current user that have partially completed DROP COLUMN operations. Such operations might have been interrupted by the user or by a system crash.

Related Views

- DBA_PARTIAL_DROP_TABS describes all tables in the database that have partially completed DROP COLUMN operations.
- USER_PARTIAL_DROP_TABS describes tables in the schema of the current user that have partially completed DROP COLUMN operations. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table

See Also

- "DBA_PARTIAL_DROP_TABS"
- "USER_PARTIAL_DROP_TABS"

4.8 ALL_PENDING_CONV_TABLES

ALL_PENDING_CONV_TABLES describes the pending conversion tables (tables which are not upgraded to the latest type version) accessible to the current user.

Related Views

- DBA_PENDING_CONV_TABLES describes all pending conversion tables in the database.
- USER_PENDING_CONV_TABLES describes the pending conversion tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table

See Also

- "DBA_PENDING_CONV_TABLES"
- "USER_PENDING_CONV_TABLES"

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.9 ALL_PG_COMMENTS

ALL_PG_COMMENTS describes comments on the property graphs accessible to the current user.

Related Views

- DBA_PG_COMMENTS describes comments on all property graphs in the database.
- USER_PG_COMMENTS describes comments on the property graphs owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the property graph
GRAPH_NAME	VARCHAR2(128)	NOT NULL	Name of the property graph
COMMENTS	VARCHAR2(4000)		Comment on the property graph

> **Note**
>
> This view is available starting with Oracle AI Database 26ai, Release Update 23.26.0.

> **See Also**
>
> - "DBA_PG_COMMENTS"
> - "USER_PG_COMMENTS"

4.10 ALL_PG_EDGE_RELATIONSHIPS

ALL_PG_EDGE_RELATIONSHIPS describes edge relationships in the property graphs accessible to the current user.

This view displays one row for each key column used for an edge relationship. For example, an edge table defined as follows will result in two rows in this view:

```
EDGE TABLES(et1 SOURCE KEY(cx, cy) REFERENCES vt1(fk1, fk2) ... )
```

Related Views

- DBA_PG_EDGE_RELATIONSHIPS describes edge relationships in all property graphs in the database.
- USER_PG_EDGE_RELATIONSHIPS describes edge relationships in the property graphs owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the property graph
GRAPH_NAME	VARCHAR2(128)	NOT NULL	Name of the property graph
EDGE_TAB_NAME	VARCHAR2(128)	NOT NULL	Name of the edge table

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
VERTEX_TAB_NAME	VARCHAR2(128)	NOT NULL	Name of the vertex table
EDGE_END	VARCHAR2(11)		Indicates whether the vertex table is a source vertex table (SOURCE) or a destination vertex table (DESTINATION)
EDGE_COL_NAME	VARCHAR2(128)	NOT NULL	Name of the foreign column in the edge table
VERTEX_COL_NAME	VARCHAR2(128)	NOT NULL	Name of the referenced column in the vertex table

Note

This view is available starting with Oracle AI Database 26ai.

See Also

- "DBA_PG_EDGE_RELATIONSHIPS"
- "USER_PG_EDGE_RELATIONSHIPS"

4.11 ALL_PG_ELEMENT_LABELS

ALL_PG_ELEMENT_LABELS describes labels for the element tables in the property graphs accessible to the current user.

Related Views

- DBA_PG_ELEMENT_LABELS describes labels for the element tables in all property graphs in the database.
- USER_PG_ELEMENT_LABELS describes labels for the element tables in the property graphs owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the property graph
GRAPH_NAME	VARCHAR2(128)	NOT NULL	Name of the property graph
ELEMENT_NAME	VARCHAR2(128)	NOT NULL	Name of the element table
LABEL_NAME	VARCHAR2(128)	NOT NULL	Name of the label

Note

This view is available starting with Oracle AI Database 26ai.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> - "DBA_PG_ELEMENT_LABELS"
> - "USER_PG_ELEMENT_LABELS"

4.12 ALL_PG_ELEMENTS

ALL_PG_ELEMENTS describes element tables in the property graphs accessible to the current user.

Related Views

- DBA_PG_ELEMENTS describes element tables in all property graphs in the database.
- USER_PG_ELEMENTS describes element tables in the property graphs owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the property graph
GRAPH_NAME	VARCHAR2(128)	NOT NULL	Name of the property graph
ELEMENT_NAME	VARCHAR2(128)	NOT NULL	Name of the element table
ELEMENT_KIND	VARCHAR2(6)		Kind of element table (VERTEX or EDGE)
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Schema in which the object storing the elements was created
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object storing the elements

> **Note**
>
> This view is available starting with Oracle AI Database 26ai.

> **See Also**
>
> - "DBA_PG_ELEMENTS"
> - "USER_PG_ELEMENTS"

4.13 ALL_PG_KEYS

ALL_PG_KEYS describes key columns in the property graphs accessible to the current user.

Related Views

- DBA_PG_KEYS describes key columns in all property graphs in the database.
- USER_PG_KEYS describes key columns in the property graphs owned by the current user. This view does not display the OWNER column.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the property graph
GRAPH_NAME	VARCHAR2(128)	NOT NULL	Name of the property graph
ELEMENT_NAME	VARCHAR2(128)	NOT NULL	Name of the element table
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column used to define the key

Note

This view is available starting with Oracle AI Database 26ai.

See Also

- "DBA_PG_KEYS"
- "USER_PG_KEYS"

4.14 ALL_PG_LABEL_PROPERTIES

ALL_PG_LABEL_PROPERTIES describes properties in the property graphs accessible to the current user.

Related Views

- DBA_PG_LABEL_PROPERTIES describes properties in all property graphs in the database.
- USER_PG_LABEL_PROPERTIES describes properties in the property graphs owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the property graph
GRAPH_NAME	VARCHAR2(128)	NOT NULL	Name of the property graph
LABEL_NAME	VARCHAR2(128)	NOT NULL	Name of the label
PROPERTY_NAME	VARCHAR2(128)	NOT NULL	Name of the property
DATA_TYPE	VARCHAR2(106)		Data type of the property
DATA_LENGTH	NUMBER	NOT NULL	Length of the data type (in bytes)
DATA_PRECISION	NUMBER		Decimal precision for NUMBER data type; binary precision for FLOAT data type; null for all other data types
DATA_SCALE	NUMBER		Digits to the right of the decimal point in a number; null for all other data types
DATA_CHAR_LENGTH	NUMBER		Maximum length of the property (in characters)
CHARACTER_SET_NAME	VARCHAR2(44)		Name of the character set: • CHAR_CS • NCHAR_CS

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
COLLATION	VARCHAR2(100)		Collation for the column. Only applies to columns with character data types.
PROPERTY_ORDER	NUMBER	NOT NULL	Declaration order of the property in the label

> **Note**
>
> This view is available starting with Oracle AI Database 26ai.

> **See Also**
>
> - "DBA_PG_LABEL_PROPERTIES"
> - "USER_PG_LABEL_PROPERTIES"

4.15 ALL_PG_LABELS

ALL_PG_LABELS describes labels in the property graphs accessible to the current user.

Related Views

- DBA_PG_LABELS describes labels in all property graphs in the database.
- USER_PG_LABELS describes labels in the property graphs owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the property graph
GRAPH_NAME	VARCHAR2(128)	NOT NULL	Name of the property graph
LABEL_NAME	VARCHAR2(128)	NOT NULL	Name of the label

> **Note**
>
> This view is available starting with Oracle AI Database 26ai.

> **See Also**
>
> - "DBA_PG_LABELS"
> - "USER_PG_LABELS"

4.16 ALL_PG_PROP_DEFINITIONS

ALL_PG_PROP_DEFINITIONS describes columns and expressions exposed as properties in the property graphs accessible to the current user.

Related Views

- DBA_PG_PROP_DEFINITIONS describes columns and expressions exposed as properties in all property graphs in the database.
- USER_PG_PROP_DEFINITIONS describes columns and expressions exposed as properties in the property graphs owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the property graph
GRAPH_NAME	VARCHAR2(128)	NOT NULL	Name of the property graph
ELEMENT_NAME	VARCHAR2(128)	NOT NULL	Name of the element table
PROPERTY_NAME	VARCHAR2(128)	NOT NULL	Name of the property
COLUMN_NAME	VARCHAR2(128)		Column exposed by the property
COLUMN_EXPR	LONG		Expression exposed by the property

Note

This view is available starting with Oracle AI Database 26ai.

See Also

- "DBA_PG_PROP_DEFINITIONS"
- "USER_PG_PROP_DEFINITIONS"

4.17 ALL_PLSQL_COLL_TYPES

ALL_PLSQL_COLL_TYPES describes named PL/SQL collection types accessible to the user.

Related Views

- DBA_PLSQL_COLL_TYPES describes all named PL/SQL collection types in the database. This view does not display the CHAR_USED column.
- USER_PLSQL_COLL_TYPES describes the user's own named PL/SQL collection types. This view does not display the OWNER or CHAR_USED columns.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the type
TYPE_NAME	VARCHAR2(128)		Name of the type

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PACKAGE_NAME	VARCHAR2(128)		Name of the package containing the collection
COLL_TYPE	VARCHAR2(128)		Collection type
UPPER_BOUND	NUMBER		The upper bound of a varray or length constraint of an index by VARCHAR2 table
ELEM_TYPE_OWNER	VARCHAR2(128)		Owner of the type of the element
ELEM_TYPE_NAME	VARCHAR2(136)		Name of the type of the element
ELEM_TYPE_PACKAGE	VARCHAR2(128)		Name of the package containing the element
LENGTH	NUMBER		Length of the CHAR element or maximum length of the VARCHAR or VARCHAR2 element
PRECISION	NUMBER		Decimal precision of the NUMBER or DECIMAL element or binary precision of the FLOAT element
SCALE	NUMBER		Scale of the NUMBER or DECIMAL element
CHARACTER_SET_NAME	VARCHAR2(44)		Character set name of the element
ELEM_STORAGE	VARCHAR2(7)		Storage optimization specification for VARRAY of numeric elements
NULLS_STORED	VARCHAR2(3)		Indicates whether null information is stored with each VARRAY element (YES) or not (NO)
CHAR_USED	VARCHAR2(1)		C if the width was specified in characters, B if in bytes
INDEX_BY	VARCHAR2(14)		Index by BINARY_INTEGER or VARCHAR2
ELEM_TYPE_MOD	VARCHAR2(7)		Type modifier of the element

4.18 ALL_PLSQL_OBJECT_SETTINGS

ALL_PLSQL_OBJECT_SETTINGS displays information about the compiler settings for the stored objects accessible to the current user.

Related Views

- DBA_PLSQL_OBJECT_SETTINGS displays information about the compiler settings for all stored objects in the database.
- USER_PLSQL_OBJECT_SETTINGS displays information about the compiler settings for the stored objects owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
NAME	VARCHAR2(128)	NOT NULL	Name of the object

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
TYPE	VARCHAR2(12)		Type of the object: • PROCEDURE • FUNCTION • PACKAGE • PACKAGE BODY • TRIGGER • TYPE • TYPE BODY
PLSQL_OPTIMIZE_LEVEL	NUMBER		Optimization level that was used to compile the object
PLSQL_CODE_TYPE	VARCHAR2(4000)		Compilation mode for the object
PLSQL_DEBUG	VARCHAR2(4000)		Indicates whether the object was compiled with debug information or not
PLSQL_WARNINGS	VARCHAR2(4000)		Compiler warning settings that were used to compile the object
NLS_LENGTH_SEMANTICS	VARCHAR2(4000)		NLS length semantics that were used to compile the object
PLSQL_CCFLAGS	VARCHAR2(4000)		Conditional compilation flag settings that were used to compile the object
PLSCOPE_SETTINGS	VARCHAR2(4000)		Settings for using PL/Scope
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root)
PLSQL_IMPLICIT_CONVERSION_BOOL	VARCHAR2(4000)		Indicates whether the object is to be compiled with implicit conversion for the BOOLEAN data type or not

- "DBA_PLSQL_OBJECT_SETTINGS"
- "USER_PLSQL_OBJECT_SETTINGS"

4.19 ALL_PLSQL_TYPE_ATTRS

ALL_PLSQL_TYPE_ATTRS describes the attributes of PL/SQL types accessible to the user.

Related Views

- DBA_PLSQL_TYPE_ATTRS describes the attributes of all PL/SQL types in the database.
- USER_PLSQL_TYPE_ATTRS describes the attributes of the user's own PL/SQL types. This view does not display the OWNER or CHAR_USED columns.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the type

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
TYPE_NAME	VARCHAR2(136)		Name of the type
PACKAGE_NAME	VARCHAR2(128)		Name of the package containing the type
ATTR_NAME	VARCHAR2(128)		Name of the attribute
ATTR_TYPE_MOD	VARCHAR2(7)		Type modifier of the attribute
ATTR_TYPE_OWNER	VARCHAR2(128)		Owner of the type of the attribute
ATTR_TYPE_NAME	VARCHAR2(136)		Name of the type of the attribute
ATTR_TYPE_PACKAGE	VARCHAR2(128)		Name of the package containing the attribute type
LENGTH	NUMBER		Length of the CHAR attribute or maximum length of the VARCHAR or VARCHAR2 attribute
PRECISION	NUMBER		Decimal precision of the NUMBER or DECIMAL attribute or binary precision of the FLOAT attribute
SCALE	NUMBER		Scale of the NUMBER or DECIMAL attribute
CHARACTER_SET_NAME	VARCHAR2(44)		Character set name of the attribute
ATTR_NO	NUMBER		Syntactical order number or position of the attribute as specified in the type specification or CREATE TYPE statement (not to be used as ID number)
CHAR_USED	VARCHAR2(1)		C if the width was specified in characters, B if in bytes

See Also

- "DBA_PLSQL_TYPE_ATTRS"
- "USER_PLSQL_TYPE_ATTRS"

4.20 ALL_PLSQL_TYPES

ALL_PLSQL_TYPES describes the PL/SQL types accessible to the user.

Related Views

- DBA_PLSQL_TYPES describes all the PL/SQL types in the database.
- USER_PLSQL_TYPES describes the user's own PL/SQL types. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the type
TYPE_NAME	VARCHAR2(136)		Name of the type
PACKAGE_NAME	VARCHAR2(128)	NOT NULL	Name of the package containing the type
TYPE_OID	RAW(16)	NOT NULL	Object identifier (OID) of the type
TYPECODE	VARCHAR2(58)		Typecode of the type
ATTRIBUTES	NUMBER		Number of attributes in the type
CONTAINS_PLSQL	VARCHAR2(3)		Indicates whether the type contains PL/SQL-specific data types (YES) or not (NO)

Copyright © 2002, 2025, Oracle and/or its affiliates.

- "USER_PLSQL_TYPES"

4.21 ALL_POLICIES

ALL_POLICIES describes all Oracle Virtual Private Database (VPD) security policies for objects accessible to the current user. A security policy is a list of security requirements and rules that regulate row level access to those database objects.

Related Views

- DBA_POLICIES describes all Oracle Virtual Private Database (VPD) security policies in the database.
- USER_POLICIES describes all Oracle Virtual Private Database (VPD) security policies associated with objects owned by the current user. This view does not display the OBJECT_OWNER or EDITION_NAME columns.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)		Owner of the synonym, table, or view
OBJECT_NAME	VARCHAR2(128)		Name of the synonym, table, or view
POLICY_GROUP	VARCHAR2(128)		Name of the policy group
POLICY_NAME	VARCHAR2(128)		Name of the policy
PF_OWNER	VARCHAR2(128)		Owner of the policy function
PACKAGE	VARCHAR2(128)		Name of the package containing the policy function
FUNCTION	VARCHAR2(128)		Name of the policy function
SEL	VARCHAR2(3)		Indicates whether the policy is applied to queries on the object (YES) or not (NO)
INS	VARCHAR2(3)		Indicates whether the policy is applied to INSERT statements on the object (YES) or not (NO)
UPD	VARCHAR2(3)		Indicates whether the policy is applied to UPDATE statements on the object (YES) or not (NO)
DEL	VARCHAR2(3)		Indicates whether the policy is applied to DELETE statements on the object (YES) or not (NO)
IDX	VARCHAR2(3)		Indicates whether the policy is enforced for index maintenance on the object (YES) or not (NO)
CHK_OPTION	VARCHAR2(3)		Indicates whether the check option is enforced for the policy (YES) or not (NO)
ENABLE	VARCHAR2(3)		Indicates whether the policy is enabled (YES) or disabled (NO)
STATIC_POLICY	VARCHAR2(3)		Indicates whether the policy is static (YES) or not (NO). This column is obsolete because information about static policies is shown in the POLICY_TYPE column.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
POLICY_TYPE	VARCHAR2(24)		Policy type: • STATIC • SHARED_STATIC • CONTEXT_SENSITIVE • SHARED_CONTEXT_SENSITIVE • DYNAMIC
LONG_PREDICATE	VARCHAR2(3)		Indicates whether the policy function can return a maximum of 32 KB of predicate (YES) or not (NO). If NO, the default maximum predicate size is 4000 bytes.
COMMON	VARCHAR2(3)		Indicates whether the policy is applied and enforced in all application PDBs (YES) or only in the local PDB (NO)
INHERITED	VARCHAR2(3)		Indicates whether the policy is inherited from the root (YES) or not (NO)
EDITION_NAME	VARCHAR2(128)		Name of the edition of the synonym or view For tables, the value of this column is null.

4.22 ALL_POLICY_ATTRIBUTES

ALL_POLICY_ATTRIBUTES lists the attribute associations {Namespaces, Attributes} of context-sensitive and shared context-sensitive Oracle Virtual Private Database (VPD) policies for objects accessible to the current user.

Related Views

- DBA_POLICY_ATTRIBUTES lists the attribute associations {Namespaces, Attributes} of all context-sensitive and shared context-sensitive Oracle Virtual Private Database (VPD) policies in the database.
- USER_POLICY_ATTRIBUTES lists the attribute associations {Namespaces, Attributes} of all context-sensitive and shared-context sensitive Oracle Virtual Private Database (VPD) policies for synonyms, tables, or views owned by the user.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)		Owner of the synonym, table, or view
OBJECT_NAME	VARCHAR2(128)		Name of the synonym, table, or view
POLICY_GROUP	VARCHAR2(128)		Name of the policy group
POLICY_NAME	VARCHAR2(128)		Name of the policy

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
NAMESPACE	VARCHAR2(128)		Name of the local application context
ATTRIBUTE	VARCHAR2(128)		Name of the attribute
COMMON	VARCHAR2(3)		Indicates whether the policy attribute is applied and enforced in all application PDBs (YES) or only in the local PDB (NO)
INHERITED	VARCHAR2(3)		Indicates whether the policy attribute is inherited from the root (YES) or not (NO)

See Also

- "DBA_POLICY_ATTRIBUTES"
- "USER_POLICY_ATTRIBUTES"

4.23 ALL_POLICY_CONTEXTS

ALL_POLICY_CONTEXTS describes the driving contexts defined for the synonyms, tables, and views accessible to the current user.

Related Views

- DBA_POLICY_CONTEXTS describes all driving contexts in the database.
- USER_POLICY_CONTEXTS describes the driving contexts defined for the synonyms, tables, and views owned by the current user. This view does not display the OBJECT_OWNER column.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the synonym, table, or view
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the synonym, table, or view
NAMESPACE	VARCHAR2(128)	NOT NULL	Namespace of the driving context
ATTRIBUTE	VARCHAR2(128)	NOT NULL	Attribute of the driving context
COMMON	VARCHAR2(3)		Indicates whether the policy context is applied and enforced in all application PDBs (YES) or only in the local PDB (NO)
INHERITED	VARCHAR2(3)		Indicates whether the policy context is inherited from the root (YES) or not (NO)

See Also

- "DBA_POLICY_CONTEXTS"
- "USER_POLICY_CONTEXTS"

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.24 ALL_POLICY_GROUPS

ALL_POLICY_GROUPS describes the policy groups defined for the synonyms, tables, and views accessible to the current user.

Related Views

- DBA_POLICY_GROUPS describes all policy groups in the database.
- USER_POLICY_GROUPS describes the policy groups defined for the synonyms, tables, and views owned by the current user. This view does not display the OBJECT_OWNER column.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)		Owner of the synonym, table, or view
OBJECT_NAME	VARCHAR2(128)		Name of the synonym, table, or view
POLICY_GROUP	VARCHAR2(128)		Name of the policy group
COMMON	VARCHAR2(3)		Indicates whether the policy group is applied and enforced in all application PDBs (YES) or only in the local PDB (NO)
INHERITED	VARCHAR2(3)		Indicates whether the policy group is inherited from the root (YES) or not (NO)

See Also

- "DBA_POLICY_GROUPS"
- "USER_POLICY_GROUPS"

4.25 ALL_PROCEDURES

ALL_PROCEDURES lists all functions and procedures that are accessible to the current user, along with associated properties.

For example, ALL_PROCEDURES indicates whether or not a function is pipelined, parallel enabled or an aggregate function. If a function is pipelined or an aggregate function, the associated implementation type (if any) is also identified.

Related Views

- DBA_PROCEDURES lists all functions and procedures available in the database, along with associated properties.
- USER_PROCEDURES lists all functions and procedures owned by the current user, along with associated properties. It does not contain the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the procedure
OBJECT_NAME	VARCHAR2(128)		Name of the object: top-level function, procedure, or package name
PROCEDURE_NAME	VARCHAR2(128)		Name of the procedure

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OBJECT_ID	NUMBER		Object number of the object
SUBPROGRAM_ID	NUMBER		Unique subprogram identifier
OVERLOAD	VARCHAR2(40)		Overload unique identifier
OBJECT_TYPE	VARCHAR2(13)		Object type
AGGREGATE	VARCHAR2(3)		Indicates whether the procedure is an aggregate function (YES) or not (NO)
PIPELINED	VARCHAR2(3)		Indicates whether the procedure is a pipelined table function (YES) or not (NO)
IMPLTYPEOWNER	VARCHAR2(128)		Owner of the implementation type, if any
IMPLTYPENAME	VARCHAR2(128)		Name of the implementation type, if any
PARALLEL	VARCHAR2(3)		Indicates whether the procedure or function is parallel-enabled (YES) or not (NO)
INTERFACE	VARCHAR2(3)		YES, if the procedure/function is a table function implemented using the ODCI interface; otherwise NO
DETERMINISTIC	VARCHAR2(3)		YES, if the procedure/function is declared to be deterministic; otherwise NO
AUTHID	VARCHAR2(12)		Indicates whether the procedure/function is declared to execute as DEFINER or CURRENT_USER (invoker)
RESULT_CACHE	VARCHAR2(3)		Indicates whether the function is result–cached (YES) or not (NO)
ORIGIN_CON_ID	VARCHAR2(256)		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root)
POLYMORPHIC	VARCHAR2(5)		The type of polymorphic table function: • ROW • TABLE • LEAF • NULL
SQL_MACRO	VARCHAR2(6)		Indicates whether the procedure is a SQL macro. Possible values: • SCALAR: The procedure is a SQL macro for a scalar expression • TABLE: The procedure is a SQL macro for a table expression • NULL: The procedure is not a SQL macro
BLOCKCHAIN	VARCHAR2(3)		For internal use only
BLOCKCHAIN_MANDATORY_VOTES	VARCHAR2(4000)		For internal use only
DYNAMIC_SAMPLING_ON[1]	VARCHAR2(3)		YES, if the dynamic statistics function preference is set to ON for this function; otherwise NO
DYNAMIC_SAMPLING_OFF[1]	VARCHAR2(3)		YES, if the dynamic statistics function preference is set to OFF for this function; otherwise NO

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DYNAMIC_SAMPLING_CHOOSE[1]	VARCHAR2(3)		YES, if the dynamic statistics function preference is set to CHOOSE for this function; otherwise NO
IS_FUNCTION[1]	VARCHAR2(3)		Indicates whether this is a function (YES) or not (NO)
IS_PROCEDURE[1]	VARCHAR2(3)		Indicates whether this is a procedure (YES) or not (NO)

[1] This column is available starting with Oracle AI Database 26ai, Release Update 23.8.

- "DBA_PROCEDURES"
- "USER_PROCEDURES"
- "ALL_ARGUMENTS" for information about the arguments of the functions and procedures that are accessible to the current user

4.26 ALL_PROPAGATION

ALL_PROPAGATION displays information about the propagations that have a source queue accessible to the current user.

Related View

DBA_PROPAGATION displays information about all propagations in the database.

Column	Datatype	NULL	Description
PROPAGATION_NAME	VARCHAR2(128)	NOT NULL	Name of the propagation
SOURCE_QUEUE_OWNER	VARCHAR2(128)		Owner of the source queue of the propagation
SOURCE_QUEUE_NAME	VARCHAR2(128)		Name of the source queue of the propagation
DESTINATION_QUEUE_OWNER	VARCHAR2(128)		Owner of the destination queue of the propagation
DESTINATION_QUEUE_NAME	VARCHAR2(128)		Name of the destination queue of the propagation
DESTINATION_DBLINK	VARCHAR2(128)		Database link to propagate events from the source queue to the destination queue
RULE_SET_OWNER	VARCHAR2(128)		Owner of the propagation positive rule set
RULE_SET_NAME	VARCHAR2(128)		Name of the propagation positive rule set
NEGATIVE_RULE_SET_OWNER	VARCHAR2(128)		Owner of the propagation negative rule set
NEGATIVE_RULE_SET_NAME	VARCHAR2(128)		Name of the propagation negative rule set
QUEUE_TO_QUEUE	VARCHAR2(5)		Indicates whether the propagation is a queue-to-queue propagation (TRUE) or not (FALSE). A queue-to-queue propagation always has its own exclusive propagation job to propagate messages from the source queue to the destination queue.
STATUS	VARCHAR2(8)		Status of the propagation: • DISABLED • ENABLED • ABORTED

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ERROR_MESSAGE	VARCHAR2(4000)		Error message last encountered by propagation
ERROR_DATE	DATE		Time that propagation last encountered an error
ORIGINAL_PROPAGATION_NAME	VARCHAR2(128)		Original propagation from which the propagation is cloned
ORIGINAL_SOURCE_QUEUE_OWNER	VARCHAR2(128)		Source queue owner of the original propagation
ORIGINAL_SOURCE_QUEUE_NAME	VARCHAR2(128)		Source queue name of the original propagation
ACKED_SCN	NUMBER		Acknowledged SCN of the subscribers of captured messages in the destination queue for the propagation
AUTO_MERGE_THRESHOLD	NUMBER		Merge threshold value for merging the propagation back to the original source queue

See Also

"DBA_PROPAGATION"

4.27 ALL_PROPERTY_GRAPHS

ALL_PROPERTY_GRAPHS describes the property graphs accessible to the current user.

Related Views

- DBA_PROPERTY_GRAPHS describes all property graphs in the database.
- USER_PROPERTY_GRAPHS describes the property graphs owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the property graph
GRAPH_NAME	VARCHAR2(128)	NOT NULL	Name of the property graph
GRAPH_MODE	VARCHAR2(8)		Mode of the property graph (ENFORCED or TRUSTED)
ALLOWS_MIXED_TYPES	VARCHAR2(3)		Indicates whether mixed property types are allowed in the property graph (YES) or not (NO)
INMEMORY	VARCHAR2(3)		Indicates whether the property graph is enabled for the In-Memory Column Store (YES) or not (NO)

Note

This view is available starting with Oracle AI Database 26ai.

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- "DBA_PROPERTY_GRAPHS"

4.28 ALL_QUEUE_EVENT_STREAMS

ALL_QUEUE_EVENT_STREAMS describes the Transactional Event Queue (TxEventQ) event streams accessible to the current user.

Related Views

- DBA_QUEUE_EVENT_STREAMS describes all TxEventQ event streams in the database.
- USER_QUEUE_EVENT_STREAMS describes the TxEventQ event streams owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the queue
NAME	VARCHAR2(128)	NOT NULL	Name of the queue
QUEUE_ID	NUMBER	NOT NULL	Queue ID
BASE_QUEUE_ID	NUMBER		If the queue is an exception queue, then this column displays the base queue ID
EVENT_STREAM_ID	NUMBER	NOT NULL	Event stream ID
DELAY_EVENT_STREAM_ID	NUMBER		Delay event stream ID
ENQUEUE_INSTANCE	NUMBER	NOT NULL	Event stream enqueue instance ID
EVENT_STREAM_TYPE	VARCHAR2(10)		Type of event stream. Possible values: • VOLATILE • PERSISTENT

See Also

- "DBA_QUEUE_EVENT_STREAMS"
- "USER_QUEUE_EVENT_STREAMS"
- *Oracle AI Database Transactional Event Queues and Advanced Queuing User's Guide* for more information about Oracle Transactional Event Queues and Advanced Queuing

4.29 ALL_QUEUE_SCHEDULES

ALL_QUEUE_SCHEDULES describes the propagation schedules whose source queues are accessible to the current user.

Related Views

- DBA_QUEUE_SCHEDULES describes all propagation schedules in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- USER_QUEUE_SCHEDULES describes the propagation schedules whose source queues are owned by the current user. This view does not display the SCHEMA column.

Column	Datatype	NULL	Description
SCHEMA	VARCHAR2(128)		Source queue owner
QNAME	VARCHAR2(128)		Source queue name
DESTINATION	VARCHAR2(395)		Destination name, currently limited to be a DBLINK name
START_DATE	TIMESTAMP(6) WITH TIME ZONE		Date at which to start propagation
START_TIME	VARCHAR2(8)		Time of day at which to start propagation (in HH:MI:SS format)
PROPAGATION_WINDOW	NUMBER		Duration for the propagation window (in seconds)
NEXT_TIME	VARCHAR2(4000)		Function to compute the start of the next propagation window
LATENCY	NUMBER		Maximum wait time to propagate a message during the propagation window
SCHEDULE_DISABLED	VARCHAR2(1)		Indicates whether the schedule is disabled (Y) or enabled (N). If disabled, then the schedule will not be executed.
PROCESS_NAME	VARCHAR2(4)		Name of the process executing the schedule; NULL if not currently executing
SESSION_ID	VARCHAR2(82)		Session ID and session serial number of the job executing this schedule (SID, SERIAL#); NULL if not currently executing
INSTANCE	NUMBER		Cluster database instance number executing the schedule
LAST_RUN_DATE	TIMESTAMP(6) WITH TIME ZONE		Date of the last successful execution
LAST_RUN_TIME	VARCHAR2(8)		Time of day of the last successful execution (in HH:MI:SS format)
CURRENT_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Date at which the current window of this schedule was started
CURRENT_START_TIME	VARCHAR2(8)		Time of day at which the current window of this schedule was started (in HH:MI:SS format)
NEXT_RUN_DATE	TIMESTAMP(6) WITH TIME ZONE		Date at which the next window of this schedule will be started
NEXT_RUN_TIME	VARCHAR2(8)		Time of day at which the next window of this schedule will be started (in HH:MI:SS format)
TOTAL_TIME	NUMBER		Total time spent by the system in executing this schedule (in seconds)
TOTAL_NUMBER	NUMBER		Total number of messages propagated in this schedule
TOTAL_BYTES	NUMBER		Total number of bytes propagated in this schedule
MAX_NUMBER	NUMBER		Maximum number of messages propagated in a propagation window
MAX_BYTES	NUMBER		Maximum number of bytes propagated in a propagation window
AVG_NUMBER	NUMBER		Average number of messages propagated in a propagation window

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
AVG_SIZE	NUMBER		Average size of a propagated message (in bytes)
AVG_TIME	NUMBER		Average time to propagate a message (in seconds)
FAILURES	NUMBER		Number of consecutive times schedule execution has failed, if any. After 16 consecutive failures, a propagation job becomes disabled automatically.
LAST_ERROR_DATE	DATE		Date of the last unsuccessful execution
LAST_ERROR_TIME	VARCHAR2(8)		Time of day of the last unsuccessful execution (in HH:MI:SS format)
LAST_ERROR_MSG	VARCHAR2(4000)		Error number and error message text of the last unsuccessful execution
MESSAGE_DELIVERY_MODE	VARCHAR2(10)		Message delivery mode: • PERSISTENT • BUFFERED
ELAPSED_DEQUEUE_TIME	NUMBER		Elapsed dequeue time (in hundredths of a second)
ELAPSED_PICKLE_TIME	NUMBER		Elapsed pickle time (time taken to linearize a logical change record (LCR) into a stream of bytes that can be sent over the network) (in hundredths of a second)
JOB_NAME	VARCHAR2(128)		Name of the Scheduler job

4.30 ALL_QUEUE_SUBSCRIBERS

ALL_QUEUE_SUBSCRIBERS displays the list of subscribers that the current user has privilege to dequeue from.

Related Views

- DBA_QUEUE_SUBSCRIBERS displays the list of subscribers on all queues in the database.
- USER_QUEUE_SUBSCRIBERS displays the list of subscribers on queues that are under the current user's schema. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the queue
QUEUE_NAME	VARCHAR2(128)		Name of the queue
QUEUE_TABLE	VARCHAR2(128)		Name of the queue table on which the queue is defined
CONSUMER_NAME	VARCHAR2(4000)		Name of the subscriber
ADDRESS	VARCHAR2(1024)		Address of the subscriber
PROTOCOL	NUMBER		Protocol of the subscriber
TRANSFORMATION	VARCHAR2(61)		Transformation for the subscriber

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
RULE	CLOB		Rule condition for the subscriber
DELIVERY_MODE	VARCHAR2(22)		Message delivery mode for the subscriber: • PERSISTENT • BUFFERED • PERSISTENT_OR_BUFFERED
IF_NONDURABLE_SUBSCRIBER	VARCHAR2(3)		Indicates whether the subscriber is a non-durable subscriber (YES) or not (NO)
QUEUE_TO_QUEUE	VARCHAR2(5)		Indicates whether the subscriber is a queue-to-queue subscriber (TRUE) or not (FALSE)
SUBSCRIBER_ID	NUMBER		ID of the subscriber
POS_BITMAP	NUMBER		Position of the subscriber in the bitmap

See Also

- "DBA_QUEUE_SUBSCRIBERS"
- "USER_QUEUE_SUBSCRIBERS"

4.31 ALL_QUEUE_TABLES

ALL_QUEUE_TABLES describes the queues in the queue tables accessible to the current user.

Related Views

- DBA_QUEUE_TABLES describes the queues in all queue tables in the database.
- USER_QUEUE_TABLES describes the queues in the queue tables created in the current user's schema. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the queue table
QUEUE_TABLE	VARCHAR2(128)		Name of the queue table
TYPE	VARCHAR2(9)		Type of user data: • RAW - Raw type • OBJECT - User-defined object type • VARIANT - Variant type (for internal use only)
OBJECT_TYPE	VARCHAR2(257)		Object type of the payload when TYPE is OBJECT
SORT_ORDER	VARCHAR2(22)		User-specified sort order
RECIPIENTS	VARCHAR2(8)		SINGLE or MULTIPLE recipients
MESSAGE_GROUPING	VARCHAR2(13)		NONE or TRANSACTIONAL

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
REPLICATION_MODE	VARCHAR2(22)		Indicates whether the queue tables are enabled for replication through Oracle GoldenGate. If the queue tables are replicated, these values appear in the column: • REPLICATED_SOURCE: This value is displayed for a source queue table. • REPLICATED_DESTINATION: This value is displayed for a destination queue table. If replication is not enabled on the queue tables, then this column is empty.
COMPATIBLE	VARCHAR2(6)		Lowest release level which the queue table is compatible with (for example, 8.0.3)
PRIMARY_INSTANCE	NUMBER		Indicates the instance number of the instance which is the primary owner of the queue table. A value of 0 indicates that there is no primary owner.
SECONDARY_INSTANCE	NUMBER		Indicates the instance number of the instance which is the secondary owner of the queue table. This instance becomes the owner of the queue table if the primary owner goes down. A value of 0 indicates that there is no secondary owner.
OWNER_INSTANCE	NUMBER		Instance number of the instance which currently owns the queue table
USER_COMMENT	VARCHAR2(128)		Comment supplied by the user
SECURE	VARCHAR2(3)		Indicates whether the queue table is secure (YES) or not (NO)

See Also

- "DBA_QUEUE_TABLES"
- "USER_QUEUE_TABLES"
- *Oracle AI Database Transactional Event Queues and Advanced Queuing User's Guide* for more information Advanced Queuing

4.32 ALL_QUEUES

ALL_QUEUES describes all queues on which the current user has enqueue or dequeue privileges. If the user has any Advanced Queuing system privileges, like MANAGE ANY QUEUE, ENQUEUE ANY QUEUE or DEQUEUE ANY QUEUE, then this view describes all queues in the database.

Related Views

- DBA_QUEUES describes all queues in the database.
- USER_QUEUES describes the operational characteristics of every queue owned by the current user. This view does not display the OWNER column.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the queue
NAME	VARCHAR2(128)	NOT NULL	Name of the queue
QUEUE_TABLE	VARCHAR2(128)	NOT NULL	Name of the table the queue data resides in
QID	NUMBER	NOT NULL	Object number of the queue
QUEUE_TYPE	VARCHAR2(20)		Type of the queue. Possible values: • EXCEPTION_QUEUE • NON_PERSISTENT_QUEUE • NORMAL_QUEUE
MAX_RETRIES	NUMBER		Maximum number of retries allowed when dequeuing from the queue
RETRY_DELAY	NUMBER		Time interval between retries
ENQUEUE_ENABLED	VARCHAR2(7)		Indicates whether the queue is enabled for enqueue (YES) or not (NO)
DEQUEUE_ENABLED	VARCHAR2(7)		Indicates whether the queue is enabled for dequeue (YES) or not (NO)
RETENTION	VARCHAR2(40)		Time interval (in seconds) processed messages are retained in the queue, or FOREVER
USER_COMMENT	VARCHAR2(128)		User specified comment
NETWORK_NAME	VARCHAR2(512)		Network name
SHARDED	VARCHAR2(5)		TRUE if queue is sharded, FALSE otherwise
QUEUE_CATEGORY	VARCHAR2(25)		Queue category. Possible values: • Classic Queue • Sharded Queue • Transactional Event Queue
RECIPIENTS	VARCHAR2(8)		SINGLE or MULTIPLE recipients

4.33 ALL_REFRESH

ALL_REFRESH describes all the refresh groups accessible to the current user.

Related Views

- DBA_REFRESH describes all refresh groups in the database.
- USER_REFRESH describes all refresh groups owned by the current user.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ROWNER	VARCHAR2(128)	NOT NULL	Owner of the refresh group
RNAME	VARCHAR2(128)	NOT NULL	Name of the refresh group
REFGROUP	NUMBER		Internal identifier of the refresh group
IMPLICIT_DESTROY	VARCHAR2(1)		Indicates whether the refresh group is destroyed when its last item is subtracted (Y) or not (N)
PUSH_DEFERRED_RPC	VARCHAR2(1)		Indicates whether changes are pushed from the snapshot to the master before refresh (Y) or not (N)
REFRESH_AFTER _ERRORS	VARCHAR2(1)		Indicates whether to proceed with refresh despite errors when pushing deferred RPCs (Y) or not (N)
ROLLBACK_SEG	VARCHAR2(128)		Name of the rollback segment to use while refreshing
JOB	NUMBER		Identifier of the job used to refresh the group automatically
NEXT_DATE	DATE		Date that this job will next be refreshed automatically, if not broken
INTERVAL	VARCHAR2(200)		A date function used to compute the next NEXT_DATE
BROKEN	VARCHAR2(1)		Indicates whether the job is broken and will never be run (Y) or not (N)
PURGE_OPTION	NUMBER(38)		Method for purging the transaction queue after each push (1 indicates quick purge option; 2 indicates precise purge option)
PARALLELISM	NUMBER(38)		Level of parallelism for transaction propagation
HEAP_SIZE	NUMBER(38)		Size of the heap
JOB_NAME	VARCHAR2(128)		The name of the job used to automatically refresh the group

See Also

- "DBA_REFRESH"
- "USER_REFRESH"

4.34 ALL_REFRESH_CHILDREN

ALL_REFRESH_CHILDREN describes all the objects in refresh groups that are accessible to the current user.

Related Views

- DBA_REFRESH_CHILDREN describes the objects in all refresh groups in the database.
- USER_REFRESH_CHILDREN describes the objects in all refresh groups owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object in the refresh group
NAME	VARCHAR2(128)	NOT NULL	Name of the object in the refresh group

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
TYPE	VARCHAR2(128)		Type of the object in the refresh group
ROWNER	VARCHAR2(128)	NOT NULL	Owner of the refresh group
RNAME	VARCHAR2(128)	NOT NULL	Name of the refresh group
REFGROUP	NUMBER		Internal identifier of the refresh group
IMPLICIT_DESTROY	VARCHAR2(1)		Indicates whether the refresh group is destroyed when its last item is subtracted (Y) or not (N)
PUSH_DEFERRED_RPC	VARCHAR2(1)		Indicates whether changes are pushed from the snapshot to the master before refresh (Y) or not (N)
REFRESH_AFTER _ERRORS	VARCHAR2(1)		Indicates whether to proceed with refresh despite errors when pushing deferred RPCs (Y) or not (N)
ROLLBACK_SEG	VARCHAR2(128)		Name of the rollback segment to use while refreshing
JOB	NUMBER		Identifier of the job used to refresh the group automatically
NEXT_DATE	DATE		Date that this job will next be refreshed automatically, if not broken
INTERVAL	VARCHAR2(200)		A date function used to compute the next NEXT_DATE
BROKEN	VARCHAR2(1)		Indicates whether the job is broken and will never be run (Y) or not (N)
PURGE_OPTION	NUMBER(38)		Method for purging the transaction queue after each push. 1 indicates quick purge option; 2 indicates precise purge option
PARALLELISM	NUMBER(38)		Level of parallelism for transaction propagation
HEAP_SIZE	NUMBER(38)		Size of the heap
JOB_NAME	VARCHAR2(128)		The name of the job used to automatically refresh the group

See Also

- "DBA_REFRESH_CHILDREN"
- "USER_REFRESH_CHILDREN"

4.35 ALL_REFRESH_DEPENDENCIES

ALL_REFRESH_DEPENDENCIES displays the names of the dependent detail or container tables of all the materialized views in the current schema.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Table name, unique within this schema
PARENT_OBJECT_TYPE	CHAR(17)		MATERIALIZED VIEW
OLDEST_REFRESH_SCN	NUMBER		Minimum SCN of any summary or materialized view that has TABLE_NAME as a detail table
OLDEST_REFRESH_DATE	DATE		SYSDATE when last refreshed

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.36 ALL_REFS

ALL_REFS describes the REF columns and REF attributes in object type columns accessible to the current user.

Related Views

- DBA_REFS describes all REF columns and REF attributes in the database.
- USER_REFS describes the REF columns and REF attributes in object type columns owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
COLUMN_NAME	VARCHAR2(4000)		Name of the REF column or attribute. If it is not a top-level attribute, the value of COLUMN_NAME should be a path name starting with the column name.
WITH_ROWID	VARCHAR2(3)		Indicates whether the REF value is stored with ROWID (YES) or not (NO)
IS_SCOPED	VARCHAR2(3)		Indicates whether the REF column is scoped (YES) or not (NO)
SCOPE_TABLE_OWNER	VARCHAR2(128)		Owner of the scope table, if it exists and is accessible by the user
SCOPE_TABLE_NAME	VARCHAR2(128)		Name of the scope table, if it exists and is accessible by the user
OBJECT_ID_TYPE	VARCHAR2(33)		Indicates whether the object ID (OID) is USER-DEFINED or SYSTEM GENERATED

See Also

- "DBA_REFS"
- "USER_REFS"

4.37 ALL_REGISTERED_MVIEWS

ALL_REGISTERED_MVIEWS describes all registered materialized views (registered at a master site or a master materialized view site) accessible to the current user.

A materialized view created with the BUILD DEFERRED option of the CREATE MATERIALIZED VIEW statement is only registered with ALL_REGISTERED_MVIEWS if that materialized view has been completely refreshed at least once.

Related Views

- DBA_REGISTERED_MVIEWS describes all registered materialized views in the database.
- USER_REGISTERED_MVIEWS describes all registered materialized views owned by the current user.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
MVIEW_SITE	VARCHAR2(128)	NOT NULL	Global name of the materialized view site
CAN_USE_LOG	VARCHAR2(3)		Indicates whether the materialized view can use a materialized view log (YES) or the materialized view is too complex to use a log (NO)
UPDATABLE	VARCHAR2(3)		Indicates whether the materialized view is updatable (YES) or not and the materialized view is read only (NO)
REFRESH_METHOD	VARCHAR2(11)		Indicates whether the materialized view uses primary key (PRIMARY KEY), rowids (ROWID), or object identifiers (OBJECT ID) for fast refresh
MVIEW_ID	NUMBER(38)		Identifier for the materialized view used by the masters for fast refresh
VERSION	VARCHAR2(26)		Oracle version of the materialized view
QUERY_TXT	LONG		Query that defines the materialized view

See Also

- "DBA_REGISTERED_MVIEWS"
- "USER_REGISTERED_MVIEWS"

4.38 ALL_REGISTRY_BANNERS

ALL_REGISTRY_BANNERS displays the valid components loaded into the database.

Column	Datatype	NULL	Description
BANNER	VARCHAR2(80)		Component display banner
BANNER_FULL	VARCHAR2(80)		Component display banner with full version

4.39 ALL_REPL_DBNAME_MAPPING

ALL_REPL_DBNAME_MAPPING provides details about the database name mapping in replication for the current user.

Related View

DBA_REPL_DBNAME_MAPPING provides details about the database name mapping in replication.

Column	Datatype	NULL	Description
SOURCE_ROOT_NAME	VARCHAR2(128)		The fully qualified global name of the root in a multitenant container database (CDB) where the changes originated
SOURCE_DATABASE_NAME	VARCHAR2(128)		The fully qualified global name of the pluggable database (PDB) where the changes originated

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SOURCE_CONTAINER_NAME	VARCHAR2(128)		The container name of the database where the changes originated

See Also

"DBA_REPL_DBNAME_MAPPING"

4.40 ALL_REPLICATION_PROCESS_EVENTS

ALL_REPLICATION_PROCESS_EVENTS provides information about the replication processes events accessible to the current user.

Related View

DBA_REPLICATION_PROCESS_EVENTS provides information about the replication processes events in the database.

Column	Datatype	NULL	Description
STREAMS_TYPE	VARCHAR2(10)		Streams type: • XStream • GoldenGate
PROCESS_TYPE	VARCHAR2(27)		Process type: • Capture • Capture server • Apply Coordinator • Apply Server • Apply Network Receiver • Apply Reader • Apply Hash server
STREAMS_NAME	VARCHAR2(128)	NOT NULL	Streams name
EVENT_NAME	VARCHAR2(128)		Event name: • START • STOP • ABORT • CREATE • DROP • PARAMETER CHANGE • HANDLER CREATE • HANDLER REMOVE • ALTER
DESCRIPTION	VARCHAR2(2000)		Event description
EVENT_TIME	TIMESTAMP(6)		Time when the event occurred
ERROR_NUMBER	NUMBER		Error number (valid when event is Error)
ERROR_MESSAGE	VARCHAR2(2000)		Error Message (valid when event is an error)

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.41 ALL_REWRITE_EQUIVALENCES

ALL_REWRITE_EQUIVALENCES describes the rewrite equivalences accessible to the current user.

Related Views

- DBA_REWRITE_EQUIVALENCES describes all rewrite equivalences in the database.
- USER_REWRITE_EQUIVALENCES describes the rewrite equivalences owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the rewrite equivalence
NAME	VARCHAR2(128)	NOT NULL	Name of the rewrite equivalence
SOURCE_STMT	CLOB		Source statement of the rewrite equivalence
DESTINATION_STMT	CLOB		Destination of the rewrite equivalence
REWRITE_MODE	VARCHAR2(10)		Rewrite mode of the rewrite equivalence: • DISABLED • TEXT_MATCH • GENERAL • RECURSIVE

> **See Also**
>
> - "DBA_REWRITE_EQUIVALENCES"
> - "USER_REWRITE_EQUIVALENCES"

4.42 ALL_RULE_SET_RULES

ALL_RULE_SET_RULES describes the rules in the rule sets accessible to the current user.

Related Views

- DBA_RULE_SET_RULES describes the rules in all rule sets in the database.
- USER_RULE_SET_RULES describes the rules in the rule sets owned by the current user. This view does not display the RULE_SET_OWNER column.

Column	Datatype	NULL	Description
RULE_SET_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule set
RULE_SET_NAME	VARCHAR2(128)	NOT NULL	Name of the rule set
RULE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
RULE_NAME	VARCHAR2(128)	NOT NULL	Name of the rule
RULE_SET_RULE_ENABLED	VARCHAR2(8)		Indicates whether the rule is enabled in the rule set (ENABLED) or not (DISABLED)
RULE_SET_RULE_EVAL_CTX_OWNER	VARCHAR2(128)		Owner of the evaluation context specified when the rule was added to the rule set, if any
RULE_SET_RULE_EVAL_CTX_NAME	VARCHAR2(128)		Name of the evaluation context specified when the rule was added to the rule set, if any
RULE_SET_RULE_COMMENT	VARCHAR2(4000)		Comment specified when the rule was added to the rule set, if any

See Also

- "DBA_RULE_SET_RULES"
- "USER_RULE_SET_RULES"

4.43 ALL_RULE_SETS

ALL_RULE_SETS describes the rule sets accessible to the current user.

Related Views

- DBA_RULE_SETS describes all rule sets in the database.
- USER_RULE_SETS describes the rule sets owned by the current user. This view does not display the RULE_SET_OWNER column.

Column	Datatype	NULL	Description
RULE_SET_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule set
RULE_SET_NAME	VARCHAR2(128)	NOT NULL	Name of the rule set
RULE_SET_EVAL_CONTEXT_OWNER	VARCHAR2(128)		Owner of the evaluation context associated with the rule set, if any
RULE_SET_EVAL_CONTEXT_NAME	VARCHAR2(128)		Name of the evaluation context associated with the rule set, if any
RULE_SET_COMMENT	VARCHAR2(4000)		Comment specified with the rule set, if any

See Also

4.44 ALL_RULES

ALL_RULES describes the rules accessible to the current user.

Related Views

- DBA_RULES describes all rules in the database.
- USER_RULES describes the rules owned by the current user. This view does not display the RULE_OWNER column.

Column	Datatype	NULL	Description
RULE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule
RULE_NAME	VARCHAR2(128)	NOT NULL	Name of the rule
RULE_CONDITION	CLOB		Expressions and operators that constitute the rule condition
RULE_EVALUATION_CONTEXT_OWNER	VARCHAR2(128)		Owner of the evaluation context associated with the rule, if any
RULE_EVALUATION_CONTEXT_NAME	VARCHAR2(128)		Name of the evaluation context associated with the rule, if any
RULE_ACTION_CONTEXT	RE$NV_LIST		Action context associated with the rule, if any
RULE_COMMENT	VARCHAR2(4000)		Comment specified with the rule, if any

4.45 ALL_SAGA_BROKERS

ALL_SAGA_BROKERS displays the saga brokers accessible to the current user.

Related Views

- DBA_SAGA_BROKERS displays all saga brokers in the database.
- USER_SAGA_BROKERS displays the saga brokers owned by the current user.

Column	Datatype	NULL	Description
ID	RAW(16)	NOT NULL	ID of the saga broker
NAME	VARCHAR2(128)	NOT NULL	Name of the saga broker
OWNER	VARCHAR2(128)	NOT NULL	Owner of the saga broker
BROKER_TOPIC	VARCHAR2(128)		Name of the queue used by the broker
REMOTE	VARCHAR2(50)		Indicates whether the saga broker is remote (TRUE) or not (FALSE)
VERSION	NUMBER	NOT NULL	Saga broker version

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
QUEUE_PARTITIONS	NUMBER	NOT NULL	Controls the degree of parallelism of the broker • For Classic Queue based brokers, the number of queues created • For TxEvent Queue based brokers, the number of internal partitions
QUEUE_TYPE	VARCHAR2(13)		Saga topic type: • Classic Queue • TxEvent Queue

Note

This view is available starting with Oracle AI Database 26ai.

4.46 ALL_SAGA_DETAILS

ALL_SAGA_DETAILS displays details for sagas accessible to the current user.

Related Views

- DBA_SAGA_DETAILS displays details for all sagas in the database.
- USER_SAGA_DETAILS displays details for sagas owned by the current user.

Column	Datatype	NULL	Description
ID	RAW(16)	NOT NULL	Saga ID
PARTICIPANT	VARCHAR2(128)	NOT NULL	Name of the saga participant
SOURCE	VARCHAR2(128)		Name of the saga participant responsible for the event
TARGET	VARCHAR2(128)		Name of the saga participant that is the target for the event
MESSAGE	VARCHAR2(2048)		Short description of the event
TYPE	NUMBER		Type of event
QUEUE_TYPE	NUMBER	NOT NULL	Type of saga queue
CREATED_TIME	TIMESTAMP(6) WITH TIME ZONE		Time at which the event was processed
MESSAGE_ID	RAW(16)		Internal identifier of the message
CORRELATION	VARCHAR2(128)		Correlation identifier

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.47 ALL_SAGA_ERRORS

`ALL_SAGA_ERRORS` describes errors generated by the sagas accessible to the current user.

This view displays sagas that were either initiated in the current PDB or joined by participants in the current PDB.

Related Views

- `DBA_INCOMPLETE_SAGAS` describes errors generated by all sagas in the database.
- `USER_SAGA_ERRORS` describes errors generated by the sagas owned by the current user.

Column	Datatype	NULL	Description
`SAGA_ID`	`RAW(16)`		Saga ID
`PARTICIPANT`	`VARCHAR2(128)`		Name of the saga participant
`SQL_ERROR`	`VARCHAR2(200)`		SQL error
`SQL_CODE`	`VARCHAR2(7)`		SQL error code
`ERROR_TIME`	`VARCHAR2(19)`		Time at which the error occurred
`ERROR_ANNOTATION`[1]	`VARCHAR2(128)`		Annotation on the function that caused the error
`ERROR_FUNCTION`[1]	`VARCHAR2(4000)`		Name of the function that caused the error

1 This column is available starting with Oracle AI Database 26ai, Release Update 23.9.

> **Note**
>
> This view is available starting with Oracle AI Database 26ai.

> **See Also**
>

4.48 ALL_SAGA_FINALIZATION

`ALL_SAGA_FINALIZATION` displays information about pending finalization actions for sagas accessible to the current user.

This view displays one row for each unique reservable table updated as part of a participant transaction for sagas that were either initiated in the current PDB or joined by participants in the current PDB.

Related Views

- `DBA_SAGA_FINALIZATION` displays information about pending finalization actions for all sagas in the database.
- `USER_SAGA_FINALIZATION` displays information about pending finalization actions for sagas owned by the current user.

Column	Datatype	NULL	Description
`SAGA_ID`	`RAW(16)`	`NOT NULL`	Saga ID
`PARTICIPANT`	`VARCHAR2(128)`		Name of the saga participant
`TXN_ID`	`VARCHAR2(32)`		ID of the reservable column transaction in the saga
`RESERVABLE_SCHEMA`	`VARCHAR2(128)`	`NOT NULL`	Schema of the reservable column table involved in the transaction
`RESERVABLE_TABLE`	`VARCHAR2(128)`	`NOT NULL`	Name of the reservable column table involved in the transaction
`RESERVABLE_JOURNAL`	`VARCHAR2(55)`		Name of the reservable journal table involved in the transaction
`STATUS`	`VARCHAR2(15)`		Status of the transaction: • `Initiated` - Participant transactions committed; saga not finalized • `Committed` - Saga branch committed • `Rolledback` - Saga branch rolled back • `Commit Failed` - Saga branch commit failed • `Rollback Failed` - Saga branch rollback failed

Note

This view is available starting with Oracle AI Database 26ai.

See Also

- "DBA_SAGA_FINALIZATION"
- "USER_SAGA_FINALIZATION"

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.49 ALL_SAGA_PARTICIPANT_SET

ALL_SAGA_PARTICIPANT_SET displays information about saga participants for sagas accessible to the current user.

Related Views

- DBA_INCOMPLETE_SAGAS displays information about saga participants for all sagas in the database.
- USER_SAGA_PARTICIPANT_SET displays information about saga participants for sagas owned by the current user.

Column	Datatype	NULL	Description
ID	RAW(16)	NOT NULL	Saga ID
COORDINATOR	VARCHAR2(128)	NOT NULL	Name of the saga coordinator
PARTICIPANT	VARCHAR2(128)	NOT NULL	Name of the saga participant
STATUS	VARCHAR2(57)		Saga status: • Joined • Committed • Rolledback • Commit Failed • Rollback Failed • Rejected • Auto Committed • Auto Rolledback
JOIN_TIME	TIMESTAMP(6) WITH TIME ZONE		Join time of the saga participant
COMPLETION_TIME	TIMESTAMP(6) WITH TIME ZONE		Completion time of the saga participant

Note

This view is available starting with Oracle AI Database 26ai.

See Also

- "DBA_SAGA_PARTICIPANT_SET"
- "USER_SAGA_PARTICIPANT_SET"

4.50 ALL_SAGA_PARTICIPANTS

ALL_SAGA_PARTICIPANTS describes the saga participants accessible to the current user.

This view displays sagas that were either initiated in the current PDB or joined by participants or coordinators in the current PDB.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Related Views

- `DBA_SAGA_PARTICIPANTS` describes all saga participants in the database.
- `USER_SAGA_PARTICIPANTS` describes the saga participants owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
`ID`	`RAW(16)`	`NOT NULL`	ID of the saga participant
`NAME`	`VARCHAR2(128)`	`NOT NULL`	Name of the saga participant
`OWNER`	`VARCHAR2(128)`	`NOT NULL`	Owner of the saga participant
`BROKER_NAME`	`VARCHAR2(128)`	`NOT NULL`	Name of the saga broker
`TYPE`	`VARCHAR2(50)`		Participant type: • `Coordinator` • `Participant`
`COORDINATOR`	`VARCHAR2(128)`		Name of the saga coordinator
`INCOMING_TOPIC`	`VARCHAR2(128)`	`NOT NULL`	Saga incoming topic
`OUTGOING_TOPIC`	`VARCHAR2(128)`	`NOT NULL`	Saga outgoing topic
`QUEUE_PARTITIONS`	`NUMBER`	`NOT NULL`	Number of saga topic partitions
`QUEUE_TYPE`	`VARCHAR2(13)`		Saga topic type: • `Classic Queue` • `TxEvent Queue`
`LISTENER_COUNT`	`VARCHAR2(40)`		Possible values: • `AQ` - The saga coordinator processes messages using the Advanced Queuing (AQ) notification mechanism. • `AUTO` - The saga coordinator processes messages using job queue processes that dequeue from the coordinator queue. This mechanism spawns a monitoring job that automatically adds and removes dequeuer jobs depending on the queue depth. • If this column displays a number value, then the value represents the number of fixed jobs that are created to process messages for the saga coordinator.
`VERSION`	`NUMBER`	`NOT NULL`	Saga participant version

Note

This view is available starting with Oracle AI Database 26ai.

4.51 ALL_SAGA_PENDING

ALL_SAGA_PENDING describes the pending sagas accessible to the current user.

This view displays sagas that were initiated in the current PDB.

Related Views

- DBA_SAGA_PENDING describes all pending sagas in the database.
- USER_SAGA_PENDING describes the pending sagas owned by the current user.

Column	Datatype	NULL	Description
SAGA_ID	RAW(16)	NOT NULL	Saga ID
PARTICIPANT	VARCHAR2(128)		Name of the saga participant
TXN_ID	VARCHAR2(16)		ID of the reservable column transaction in the saga
SCHEMA	VARCHAR2(128)	NOT NULL	Schema of the reservable column table involved in the transaction
RESERVABLE_TABLE	VARCHAR2(128)	NOT NULL	Name of the reservable column table involved in the transaction
RESERVABLE_JOURNAL_STATUS	VARCHAR2(12)		Status of the transaction in the reservable journal table
STATEMENT_TYPE	VARCHAR2(16)		SQL statement type (for example, UPDATE or MERGE)
OPERATION_TYPE	VARCHAR2(16)	NOT NULL	Type of saga operation (for example, commit, rollback, or timeout)
PRIMARYKEY_INFO	CLOB	NOT NULL	Primary key and its value in the row whose reservable column value was updated in this transaction
RESERVABLE_COL_INFO	CLOB	NOT NULL	Reservable column value update information in this transaction

> **Note**
>

4.52 ALL_SAGAS

ALL_SAGAS describes the active sagas accessible to the current user.

This view displays sagas that were either initiated in the current PDB or joined by participants in the current PDB.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Related Views

- DBA_SAGAS describes all active sagas in the database.
- USER_SAGAS describes the active sagas owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
ID	RAW(16)	NOT NULL	Saga ID
INITIATOR	VARCHAR2(128)		Name of the saga initiator
IS_INITIATOR	VARCHAR2(3)		Indicates whether this participant is the saga initiator (YES) or not (NO)
COORDINATOR	VARCHAR2(128)		Name of the saga coordinator
COORDINATOR_TYPE	VARCHAR2(50)		Type of the saga coordinator: • Internal • External
OWNER	VARCHAR2(128)	NOT NULL	Owner of the saga participant
PARTICIPANT	VARCHAR2(128)	NOT NULL	Name of the saga participant
STATUS	VARCHAR2(14)		Saga status: • New • Joining • Initiated • Joined
VERSION	NUMBER	NOT NULL	Saga version
DURATION	NUMBER		Time limit for the saga (in seconds)
START_TIME	TIMESTAMP(6) WITH TIME ZONE		Saga start time

Note

This view displays active sagas. Completed sagas are displayed in the ALL_HIST_SAGAS view.

Note

This view is available starting with Oracle AI Database 26ai.

4.53 ALL_SCHEDULER_CHAIN_RULES

ALL_SCHEDULER_CHAIN_RULES displays information about the rules for the chains accessible to the current user (that is, those chains that the user has ALTER or EXECUTE privileges for).

Related Views

- DBA_SCHEDULER_CHAIN_RULES displays information about the rules for all chains in the database.
- USER_SCHEDULER_CHAIN_RULES displays information about the rules for the chains owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Scheduler chain that the rule is in
CHAIN_NAME	VARCHAR2(128)	NOT NULL	Name of the Scheduler chain that the rule is in
RULE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule
RULE_NAME	VARCHAR2(128)		Name of the rule
CONDITION	VARCHAR2(4000)		Boolean condition triggering the rule
ACTION	VARCHAR2(4000)		Action to be performed when the rule is triggered
COMMENTS	VARCHAR2(4000)		User-specified comments about the rule

See Also

- "DBA_SCHEDULER_CHAIN_RULES"
- "USER_SCHEDULER_CHAIN_RULES"

4.54 ALL_SCHEDULER_CHAIN_STEPS

ALL_SCHEDULER_CHAIN_STEPS displays information about the defined steps of the chains accessible to the current user (that is, those chains that the user has ALTER or EXECUTE privileges for).

Related Views

- DBA_SCHEDULER_CHAIN_STEPS displays information about the defined steps of all chains in the database.
- USER_SCHEDULER_CHAIN_STEPS displays information about the defined steps of the chains owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Scheduler chain the step is in
CHAIN_NAME	VARCHAR2(128)	NOT NULL	Name of the Scheduler chain the step is in
STEP_NAME	VARCHAR2(128)	NOT NULL	Name of the chain step
PROGRAM_OWNER	VARCHAR2(392)		Owner of the program that runs during the step

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PROGRAM_NAME	VARCHAR2(392)		Name of the program that runs during the step
EVENT_SCHEDULE_OWNER	VARCHAR2(392)		Owner of the event schedule that this step waits for
EVENT_SCHEDULE_NAME	VARCHAR2(392)		Name of the event schedule that this step waits for
EVENT_QUEUE_OWNER	VARCHAR2(128)		Owner of the source queue into which the event will be raised
EVENT_QUEUE_NAME	VARCHAR2(128)		Name of the source queue into which the event will be raised
EVENT_QUEUE_AGENT	VARCHAR2(523)		Name of the AQ agent used by the user on the event source queue (for a secure queue)
EVENT_CONDITION	VARCHAR2(4000)		Boolean expression used as the subscription rule for an event on the source queue
CREDENTIAL_OWNER	VARCHAR2(128)		Owner of the credential to be used for an external step job
CREDENTIAL_NAME	VARCHAR2(128)		Name of the credential to be used for an external step job
DESTINATION	VARCHAR2(261)		Destination host on which a remote step job will run
SKIP	VARCHAR2(5)		Indicates whether the step should be skipped (TRUE) or not (FALSE)
PAUSE	VARCHAR2(5)		Indicates whether the step should be paused after running (TRUE) or not (FALSE)
PAUSE_BEFORE	VARCHAR2(5)		Indicates whether the step should be paused before running (TRUE) or not (FALSE)
RESTART_ON_RECOVERY	VARCHAR2(5)		Indicates whether the step should be restarted on database recovery (TRUE) or not (FALSE)
RESTART_ON_FAILURE	VARCHAR2(5)		Indicates whether the step should be restarted on application failure (TRUE) or not (FALSE)
STEP_TYPE	VARCHAR2(21)		Type of the step: • EVENT_SCHEDULE • INLINE_EVENT • SUBCHAIN • PROGRAM
TIMEOUT	INTERVAL DAY(3) TO SECOND(0)		Timeout for waiting on an event schedule

4.55 ALL_SCHEDULER_CHAINS

ALL_SCHEDULER_CHAINS displays information about the chains accessible to the current user (that is, those chains that the user has ALTER or EXECUTE privileges for).

Related Views

- DBA_SCHEDULER_CHAINS displays information about all chains in the database.
- USER_SCHEDULER_CHAINS displays information about the chains owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Scheduler chain
CHAIN_NAME	VARCHAR2(128)	NOT NULL	Name of the Scheduler chain
RULE_SET_OWNER	VARCHAR2(128)		Owner of the rule set describing the dependencies
RULE_SET_NAME	VARCHAR2(128)		Name of the rule set describing the dependencies
NUMBER_OF_RULES	NUMBER		Number of rules in the chain
NUMBER_OF_STEPS	NUMBER		Number of defined steps in the chain
ENABLED	VARCHAR2(5)		Indicates whether the chain is enabled (TRUE) or disabled (FALSE)
EVALUATION_INTERVAL	INTERVAL DAY(3) TO SECOND(0)		Periodic interval at which to reevaluate rules for the chain
USER_RULE_SET	VARCHAR2(5)		Indicates whether the chain uses a user-specified rule set (TRUE) or not (FALSE)
COMMENTS	VARCHAR2(4000)		Comments on the chain

See Also

4.56 ALL_SCHEDULER_CREDENTIALS

ALL_SCHEDULER_CREDENTIALS displays information about the credentials accessible to the current user (that is, those credentials that the user has ALTER or EXECUTE privileges for).

Note

This view is deprecated in favor of the ALL_CREDENTIALS view. Oracle recommends that you use ALL_CREDENTIALS instead. ALL_SCHEDULER_CREDENTIALS is retained for backward compatibility only.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Related Views

- DBA_SCHEDULER_CREDENTIALS displays information about all credentials in the database.
- USER_SCHEDULER_CREDENTIALS displays information about the credentials owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Scheduler credential
CREDENTIAL_NAME	VARCHAR2(128)	NOT NULL	Name of the Scheduler credential
USERNAME	VARCHAR2(32767)		Name of the user that will be used to log in to the remote database or operating system
DATABASE_ROLE	VARCHAR2(9)		For a database target, the database role to use when logging in: • SYSDBA • SYSOPER
WINDOWS_DOMAIN	VARCHAR2(30)		For a Windows target, the Windows domain to use when logging in
COMMENTS	VARCHAR2(4000)		Comments on the credential

4.57 ALL_SCHEDULER_DB_DESTS

ALL_SCHEDULER_DB_DESTS displays information about the destination objects accessible to the current user pointing to remote databases.

Related Views

- DBA_SCHEDULER_DB_DESTS displays information about all destination objects in the database pointing to remote databases.
- USER_SCHEDULER_DB_DESTS displays information about the destination objects owned by the current user pointing to remote databases. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of this destination object
DESTINATION_NAME	VARCHAR2(128)	NOT NULL	Name of this destination object
CONNECT_INFO	VARCHAR2(4000)		Connect string to connect to the remote database
AGENT	VARCHAR2(128)		Name of the agent through which the connection to the remote database is being made
ENABLED	VARCHAR2(5)		Indicates whether this destination object is enabled (TRUE) or disabled (FALSE)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
REFS_ENABLED	VARCHAR2(5)		Indicates whether all referenced objects are enabled (TRUE) or disabled (FALSE)
COMMENTS	VARCHAR2(4000)		Optional comment

4.59 ALL_SCHEDULER_EXTERNAL_DESTS

ALL_SCHEDULER_EXTERNAL_DESTS displays information about the destination objects accessible to the current user pointing to remote agents.

Related View

DBA_SCHEDULER_EXTERNAL_DESTS displays information about all destination objects in the database pointing to remote agents.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of this destination object
DESTINATION_NAME	VARCHAR2(128)	NOT NULL	Name of this destination object
HOSTNAME	VARCHAR2(256)		Name or IP address of the host on which the agent is located
PORT	NUMBER		Port that the agent is listening on
IP_ADDRESS	VARCHAR2(64)		IP address of the host on which the agent is located
ENABLED	VARCHAR2(5)		Indicates whether this destination object is enabled (TRUE) or disabled (FALSE)
COMMENTS	VARCHAR2(4000)		Optional comment

4.60 ALL_SCHEDULER_FILE_WATCHERS

ALL_SCHEDULER_FILE_WATCHERS displays information about the Scheduler file watch requests accessible to the current user.

Related Views

- DBA_SCHEDULER_FILE_WATCHERS displays information about all Scheduler file watch requests in the database.
- USER_SCHEDULER_FILE_WATCHERS displays information about the Scheduler file watch requests owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the file watch request
FILE_WATCHER_NAME	VARCHAR2(128)	NOT NULL	Name of the file watch request
ENABLED	VARCHAR2(5)		Indicates whether this file watch request is enabled (TRUE) or disabled (FALSE)
DESTINATION_OWNER	VARCHAR2(261)		Owner of the named destination object
DESTINATION	VARCHAR2(261)		Name of the destination object
DIRECTORY_PATH	VARCHAR2(4000)	NOT NULL	Name of the directory path where the file will arrive

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
FILE_NAME	VARCHAR2(512)	NOT NULL	Name or pattern specifying the files that need to be monitored
CREDENTIAL_OWNER	VARCHAR2(128)		Owner of the credential that should be used to authorize the file watch
CREDENTIAL_NAME	VARCHAR2(128)		Name of the credential that should be used to authorize the file watch
MIN_FILE_SIZE	NUMBER	NOT NULL	Minimum size of the file being monitored
STEADY_STATE_DURATION	INTERVAL DAY(3) TO SECOND(0)		Time to wait before concluding that the file has stopped growing
LAST_MODIFIED_TIME	TIMESTAMP(6) WITH TIME ZONE		Time at which this file watcher was last modified
COMMENTS	VARCHAR2(4000)		Comments on the file watch request

4.63 ALL_SCHEDULER_GROUPS

ALL_SCHEDULER_GROUPS displays information about the Scheduler object groups accessible to the current user.

Related Views

- DBA_SCHEDULER_GROUPS displays information about all Scheduler object groups in the database.
- USER_SCHEDULER_GROUPS displays information about the Scheduler object groups owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the group
GROUP_NAME	VARCHAR2(128)	NOT NULL	Name of the group
GROUP_TYPE	VARCHAR2(13)		Type of object contained in the group: • WINDOW • JOB • DB_DEST • EXTERNAL_DEST
ENABLED	VARCHAR2(5)		Indicates whether the group is enabled (TRUE) or disabled (FALSE)
NUMBER_OF_MEMBERS	NUMBER		Number of members in this group

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
COMMENTS	VARCHAR2(4000)		An optional comment about this group

See Also

- "DBA_SCHEDULER_GROUPS"

4.64 ALL_SCHEDULER_INCOMPAT_MEMBER

ALL_SCHEDULER_INCOMPAT_MEMBER displays all Scheduler incompatibility resource objects members accessible to the current user.

Related Views

- DBA_SCHEDULER_INCOMPAT_MEMBER displays all Scheduler incompatibility resource objects members in the database.
- USER_SCHEDULER_INCOMPAT_MEMBER displays all Scheduler incompatibility resource objects members owned by the current user.

Column	Datatype	NULL	Description
INCOMPATIBILITY_OWNER	VARCHAR2(128)	NOT NULL	Owner of the incompatibility resource object containing this member
INCOMPATIBILITY_NAME	VARCHAR2(128)	NOT NULL	Name of the incompatibility resource object containing this member
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the incompatibility resource member
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the incompatibility resource member

See Also

- "DBA_SCHEDULER_INCOMPAT_MEMBER"

4.65 ALL_SCHEDULER_INCOMPATS

ALL_SCHEDULER_INCOMPATS displays all Scheduler incompatibility resource objects accessible to the current user.

Related Views

- DBA_SCHEDULER_INCOMPATS displays all Scheduler incompatibility resource objects in the database.
- USER_SCHEDULER_INCOMPATS displays all Scheduler incompatibility resource objects owned by the current user. This view does not display the OWNER column.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the incompatibility resource object
INCOMPATIBILITY_NAME	VARCHAR2(128)	NOT NULL	Name of the incompatibility resource object
CONSTRAINT_LEVEL	VARCHAR2(13)		JOB_LEVEL or PROGRAM_LEVEL The default value JOB_LEVEL indicates that only a single job that is based on the program (or programs) mentioned in the object_name argument of the DBMS_SCHEDULER.CREATE_INCOMPATIBILITY procedure can run at one time. The value PROGRAM_LEVEL indicates that the programs are incompatible, but the jobs based on the same program are not incompatible.
ENABLED	VARCHAR2(5)		Indicates whether the incompatibility is enabled (TRUE) or not (FALSE)
JOBS_RUNNING_COUNT	NUMBER		Current number of running jobs using the incompatibility resource object
COMMENTS	VARCHAR2(256)		Comments for the resource incompatibility object

See Also

- "DBA_SCHEDULER_INCOMPATS"

4.66 ALL_SCHEDULER_JOB_ARGS

ALL_SCHEDULER_JOB_ARGS displays information about the arguments of the Scheduler jobs accessible to the current user.

Related Views

- DBA_SCHEDULER_JOB_ARGS displays information about the arguments of all Scheduler jobs in the database.
- USER_SCHEDULER_JOB_ARGS displays information about the arguments of the Scheduler jobs owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the job to which the argument belongs
JOB_NAME	VARCHAR2(128)		Name of the job to which the argument belongs
ARGUMENT_NAME	VARCHAR2(128)		Optional name of the argument
ARGUMENT_POSITION	NUMBER		Position of the argument in the argument list
ARGUMENT_TYPE	VARCHAR2(257)		Data type of the argument
VALUE	VARCHAR2(4000)		Value of the argument (in string format) if the argument is a string
ANYDATA_VALUE	ANYDATA		Value of the argument (in AnyData format)
OUT_ARGUMENT	VARCHAR2(5)		Reserved for future use

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.67 ALL_SCHEDULER_JOB_CLASSES

ALL_SCHEDULER_JOB_CLASSES displays information about the Scheduler job classes accessible to the current user.

Related View

DBA_SCHEDULER_JOB_CLASSES displays information about all Scheduler job classes in the database.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Scheduler job class
JOB_CLASS_NAME	VARCHAR2(128)	NOT NULL	Name of the Scheduler job class
RESOURCE_CONSUMER_GROUP	VARCHAR2(128)		Resource consumer group associated with the class
SERVICE	VARCHAR2(64)		Name of the service the class is associated with
LOGGING_LEVEL	VARCHAR2(11)		Amount of logging that will be done pertaining to the class: • OFF • RUNS • FAILED RUNS • FULL
LOG_HISTORY	NUMBER		History (in days) to maintain in the job log for the class
COMMENTS	VARCHAR2(4000)		Comments on the class

> **See Also**
>
> "DBA_SCHEDULER_JOB_CLASSES"

4.68 ALL_SCHEDULER_JOB_DESTS

ALL_SCHEDULER_JOB_DESTS displays information about the state of the jobs accessible to the current user at each of their destinations.

Related Views

- DBA_SCHEDULER_JOB_DESTS displays information about the state of all jobs in the database at each of their destinations.
- USER_SCHEDULER_JOB_DESTS displays information about the state of the jobs owned by the current user at each of their destinations. This view does not display the OWNER column.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the Scheduler job
JOB_NAME	VARCHAR2(128)		Name of the Scheduler job
JOB_SUBNAME	VARCHAR2(128)		Subname of the Scheduler job
CREDENTIAL_OWNER	VARCHAR2(128)		Owner of the credential used for the remote destination
CREDENTIAL_NAME	VARCHAR2(128)		Name of the credential used for the remote destination
DESTINATION_OWNER	VARCHAR2(261)		Owner of the destination object that points to the destination
DESTINATION	VARCHAR2(261)		Name of the destination object or the name of the destination itself
JOB_DEST_ID	NUMBER		Numerical ID assigned to the job at this destination
ENABLED	VARCHAR2(5)		Indicates whether the parent job is enabled (TRUE) or disabled (FALSE)
REFS_ENABLED	VARCHAR2(5)		Indicates whether this destination and its agent are enabled (TRUE) or disabled (FALSE)
STATE	VARCHAR2(15)		State of this job at this destination: • DISABLED • RUNNING • CHAIN_STALLED • SCHEDULED • RETRY SCHEDULED • READY TO RUN • COMPLETED • BROKEN • FAILED • SUCCEEDED • REMOTE • STOPPED
NEXT_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Next start time of this job at this destination
RUN_COUNT	NUMBER		Number of times this job has run at this destination
RETRY_COUNT	NUMBER		Number of times this job has been retried at this destination
FAILURE_COUNT	NUMBER		Number of times this job has failed at this destination
LAST_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Last time this job started at this destination
LAST_END_DATE	TIMESTAMP(6) WITH TIME ZONE		Last time this job ended at this destination

4.69 ALL_SCHEDULER_JOB_LOG

ALL_SCHEDULER_JOB_LOG displays log information for the Scheduler jobs accessible to the current user.

Related Views

- DBA_SCHEDULER_JOB_LOG displays log information for all Scheduler jobs in the database.
- USER_SCHEDULER_JOB_LOG displays log information for the Scheduler jobs owned by the current user.

Column	Datatype	NULL	Description
LOG_ID	NUMBER	NOT NULL	Unique identifier that identifies a row
LOG_DATE	TIMESTAMP(6) WITH TIME ZONE		Date of the log entry
OWNER	VARCHAR2(128)		Owner of the Scheduler job
JOB_NAME	VARCHAR2(261)		Name of the Scheduler job
JOB_SUBNAME	VARCHAR2(261)		Subname of the Scheduler job (for a chain step job)
JOB_CLASS	VARCHAR2(128)		Class that the job belonged to at the time of entry
OPERATION	VARCHAR2(30)		Operation corresponding to the log entry
STATUS	VARCHAR2(30)		Status of the operation, if applicable. Possible values for this column are dependent on the value in the OPERATION column. In most cases, STATUS will be NULL. Only for job run operations will it have a value. STATUS will be NULL when OPERATION is one of the following: • CREATE - Job was created • UPDATE - One or more job attributes have been modified • ENABLE - Job has been enabled • DISABLE - Job has been disabled • COMPLETED - For repeating jobs only, job has reached its end date or maximum number of runs • BROKEN - Job has reached its maximum number of failures STATUS can be SUCCEEDED (job run completed successfully), FAILED (job run failed), or STOPPED (job run was stopped) when OPERATION is one of the following: • RUN - Regular job run • RETRY_RUN - Job is being retried because the previous run resulted in an error and RESTARTABLE is set to TRUE • RECOVERY_RUN - Job is being rerun because the database went down, or the job worker process crashed and RESTARTABLE is set to TRUE
USER_NAME	VARCHAR2(128)		Name of the user who performed the operation, if applicable
CLIENT_ID	VARCHAR2(64)		Client identifier of the user who performed the operation, if applicable

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
GLOBAL_UID	VARCHAR2(32)		Global user identifier of the user who performed the operation, if applicable
CREDENTIAL_OWNER	VARCHAR2(261)		Owner of the credential used for this remote job run
CREDENTIAL_NAME	VARCHAR2(261)		Name of the credential used for this remote job run
DESTINATION_OWNER	VARCHAR2(261)		Owner of the destination object used in this remote job run; NULL if no object used
DESTINATION	VARCHAR2(261)		Destination for a remote job operation
ADDITIONAL_INFO	CLOB		Additional information on the entry, if applicable

See Also

- "DBA_SCHEDULER_JOB_LOG"

4.70 ALL_SCHEDULER_JOB_RUN_DETAILS

ALL_SCHEDULER_JOB_RUN_DETAILS displays log run details for the Scheduler jobs accessible to the current user.

Related Views

- DBA_SCHEDULER_JOB_RUN_DETAILS displays log run details for all Scheduler jobs in the database.
- USER_SCHEDULER_JOB_RUN_DETAILS displays log run details for the Scheduler jobs owned by the current user.

Column	Datatype	NULL	Description
LOG_ID	NUMBER	NOT NULL	Unique identifier of the log entry (foreign key of the *_SCHEDULER_JOB_LOG views)
LOG_DATE	TIMESTAMP(6) WITH TIME ZONE		Date of the log entry
OWNER	VARCHAR2(128)		Owner of the Scheduler job
JOB_NAME	VARCHAR2(261)		Name of the Scheduler job
JOB_SUBNAME	VARCHAR2(261)		Subname of the Scheduler job (for a chain step job)
STATUS	VARCHAR2(30)		Status of the job run
ERROR#	NUMBER		Error number in the case of an error
REQ_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Requested start date of the job run
ACTUAL_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Actual date on which the job was run
RUN_DURATION	INTERVAL DAY(3) TO SECOND(0)		Duration of the job run
INSTANCE_ID	NUMBER		Identifier of the instance on which the job was run

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SESSION_ID	VARCHAR2(128)		Session identifier of the job run
SLAVE_PID	VARCHAR2(30)		Process identifier of the worker on which the job was run
CPU_USED	INTERVAL DAY(3) TO SECOND(2)		Amount of CPU used for the job run
CREDENTIAL_OWNER	VARCHAR2(261)		Owner of the credential used for this remote job run
CREDENTIAL_NAME	VARCHAR2(261)		Name of the credential used for this remote job run
DESTINATION_OWNER	VARCHAR2(261)		Owner of the destination object used in this remote job run; NULL if no object used
DESTINATION	VARCHAR2(261)		Destination for a remote job operation
ADDITIONAL_INFO	VARCHAR2(4000)		Additional information on the job run, if applicable
ERRORS	VARCHAR2(4000)		Error messages generated by this job run
OUTPUT	VARCHAR2(4000)		Output messages generated by this job run
BINARY_ERRORS	BLOB		Error messages generated by this job run in a binary format
BINARY_OUTPUT	BLOB		Binary output messages generated by this job run

4.71 ALL_SCHEDULER_JOBS

ALL_SCHEDULER_JOBS displays information about the Scheduler jobs accessible to the current user.

Related Views

- DBA_SCHEDULER_JOBS displays information about all Scheduler jobs in the database.
- USER_SCHEDULER_JOBS displays information about the Scheduler jobs owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the Scheduler job
JOB_NAME	VARCHAR2(128)		Name of the Scheduler job
JOB_SUBNAME	VARCHAR2(128)		Subname of the Scheduler job (for a job running a chain step)
JOB_STYLE	VARCHAR2(17)		Job style: • REGULAR • LIGHTWEIGHT • IN_MEMORY_RUNTIME • IN_MEMORY_FULL

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
JOB_CREATOR	VARCHAR2(128)		Original creator of the job
CLIENT_ID	VARCHAR2(65)		Client identifier of the user creating the job
GLOBAL_UID	VARCHAR2(33)		Global user identifier of the user creating the job
PROGRAM_OWNER	VARCHAR2(4000)		Owner of the program associated with the job
PROGRAM_NAME	VARCHAR2(4000)		Name of the program associated with the job
JOB_TYPE	VARCHAR2(16)		Inline job action type: • PLSQL_BLOCK • STORED_PROCEDURE • EXECUTABLE • CHAIN • SQL_SCRIPT • BACKUP_SCRIPT • EXTERNAL_SCRIPT
JOB_ACTION	VARCHAR2(4000)		Inline job action
NUMBER_OF_ARGUMENTS	NUMBER		Inline number of job arguments
SCHEDULE_OWNER	VARCHAR2(4000)		Owner of the schedule that the job uses (can be a window or a window group)
SCHEDULE_NAME	VARCHAR2(4000)		Name of the schedule that the job uses (can be a window or a window group)
SCHEDULE_TYPE	VARCHAR2(12)		Type of the schedule that the job uses: • IMMEDIATE - Start date and repeat interval are NULL • ONCE - Repeat interval is NULL • PLSQL - PL/SQL expression used as schedule • CALENDAR - Oracle calendaring expression used as schedule • EVENT - Event schedule • NAMED - Named schedule • WINDOW - Window used as schedule • WINDOW_GROUP - Window group used as schedule
START_DATE	TIMESTAMP(6) WITH TIME ZONE		Original scheduled start date of the job (for an inline schedule)
REPEAT_INTERVAL	VARCHAR2(4000)		Inline schedule PL/SQL expression or calendar string
EVENT_QUEUE_OWNER	VARCHAR2(128)		Owner of the source queue into which the event will be raised
EVENT_QUEUE_NAME	VARCHAR2(128)		Name of the source queue into which the event will be raised
EVENT_QUEUE_AGENT	VARCHAR2(523)		Name of the AQ agent used by the user on the event source queue (if it is a secure queue)
EVENT_CONDITION	VARCHAR2(4000)		Boolean expression used as the subscription rule for the event on the source queue
EVENT_RULE	VARCHAR2(261)		Name of the rule used by the coordinator to trigger the event-based job
FILE_WATCHER_OWNER	VARCHAR2(261)		Owner of the file watcher on which this job is based
FILE_WATCHER_NAME	VARCHAR2(261)		Name of the file watcher on which this job is based
END_DATE	TIMESTAMP(6) WITH TIME ZONE		Date after which the job will no longer run (for an inline schedule)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
JOB_CLASS	VARCHAR2(128)		Name of the job class associated with the job
ENABLED	VARCHAR2(5)		Indicates whether the job is enabled (TRUE) or disabled (FALSE)
AUTO_DROP	VARCHAR2(5)		Indicates whether the job will be dropped when it has completed (TRUE) or not (FALSE)
RESTART_ON_RECOVERY	VARCHAR2(5)		Indicates whether the step should be restarted on database recovery (TRUE) or not (FALSE)
RESTART_ON_FAILURE	VARCHAR2(5)		Indicates whether the step should be restarted on application failure (TRUE) or not (FALSE)
STATE	VARCHAR2(20)		Current state of the job: • BLOCKED • BROKEN • CHAIN_STALLED • COMPLETED • DISABLED • FAILED • READY TO RUN • REMOTE • RESOURCE_UNAVAILABLE • RETRY SCHEDULED • RUNNING • SCHEDULED • SOME FAILED • STOPPED • SUCCEEDED
JOB_PRIORITY	NUMBER		Priority of the job relative to other jobs in the same class
RUN_COUNT	NUMBER		Number of times the job has run
UPTIME_RUN_COUNT	NUMBER		Number of runs since the database last restarted. For in-memory jobs, this column is populated, but the RUN_COUNT column is not populated. For all other jobs, this column is NULL.
MAX_RUNS	NUMBER		Maximum number of times the job is scheduled to run
FAILURE_COUNT	NUMBER		Number of times the job has failed to run
UPTIME_FAILURE_COUNT	NUMBER		Number of failures since the database last restarted. For in-memory jobs, this column is populated, but the FAILURE_COUNT column is not populated. For all other jobs, this column is NULL.
MAX_FAILURES	NUMBER		Number of times the job will be allowed to fail before being marked broken
RETRY_COUNT	NUMBER		Number of times the job has retried, if it is retrying
LAST_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Last date on which the job started running
LAST_RUN_DURATION	INTERVAL DAY(9) TO SECOND(6)		Amount of time the job took to complete during the last run
NEXT_RUN_DATE	TIMESTAMP(6) WITH TIME ZONE		Next date on which the job is scheduled to run

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SCHEDULE_LIMIT	INTERVAL DAY(3) TO SECOND(0)		Time after which a job which has not run yet will be rescheduled
MAX_RUN_DURATION	INTERVAL DAY(3) TO SECOND(0)		Maximum amount of time for which the job will be allowed to run
LOGGING_LEVEL	VARCHAR2(11)		Amount of logging that will be done pertaining to the job: • OFF • RUNS • FAILED RUNS • FULL
STORE_OUTPUT	VARCHAR2(5)		Indicates whether all job output messages for the job are stored in the OUTPUT column of the *_JOB_RUN_DETAILS views for job runs that are logged. Possible values: • TRUE: All job output messages for the job are stored in the OUTPUT column of the *_JOB_RUN_DETAILS views for job runs that are logged. This is the default for new jobs. A new job is a job created using Oracle Database 12*c* software. • FALSE: Job output messages for the job are not stored in the OUTPUT column of the *_JOB_RUN_DETAILS views. This is the default for existing jobs. An existing job is a job created using pre-Oracle Database 12*c* software.
STOP_ON_WINDOW_CLOSE	VARCHAR2(5)		Indicates whether the job will stop if a window associated with the job closes (TRUE) or not (FALSE)
INSTANCE_STICKINESS	VARCHAR2(5)		Indicates whether the job is sticky (TRUE) or not (FALSE)
RAISE_EVENTS	VARCHAR2(4000)		List of job events to raise for the job: • JOB_STARTED • JOB_SUCCEEDED • JOB_FAILED • JOB_BROKEN • JOB_COMPLETED • JOB_STOPPED • JOB_SCH_LIM_REACHED • JOB_DISABLED • JOB_CHAIN_STALLED • JOB_OVER_MAX_DUR
SYSTEM	VARCHAR2(5)		Indicates whether the job is a system job (TRUE) or not (FALSE)
JOB_WEIGHT	NUMBER		Weight of the job
NLS_ENV	VARCHAR2(4000)		NLS environment of the job
SOURCE	VARCHAR2(128)		Source global database identifier
NUMBER_OF_DESTINATIONS	NUMBER		Number of destinations associated with this job
DESTINATION_OWNER	VARCHAR2(261)		Owner of the destination object (if used), else NULL
DESTINATION	VARCHAR2(261)		Destination that this job will run on
CREDENTIAL_OWNER	VARCHAR2(128)		Owner of the credential to be used for an external job
CREDENTIAL_NAME	VARCHAR2(128)		Name of the credential to be used for an external job

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
INSTANCE_ID	NUMBER		Instance on which the user requests the job to run
DEFERRED_DROP	VARCHAR2(5)		Indicates whether the job will be dropped when completed due to user request (TRUE) or not (FALSE)
ALLOW_RUNS_IN_RESTRICTED_MODE	VARCHAR2(5)		Indicates whether the job is allowed to run in restricted session mode (TRUE) or not (FALSE)
COMMENTS	VARCHAR2(4000)		Comments on the job
FLAGS	NUMBER		This column is for internal use
RESTARTABLE	VARCHAR2(5)		Indicates whether the job can be restarted (TRUE) or not (FALSE)
HAS_CONSTRAINTS	VARCHAR2(5)		Indicates whether the job (not including the program of the job) is part of a resource constraint or incompatibility (TRUE) or not (FALSE)
CONNECT_CREDENTIAL_OWNER	VARCHAR2(128)		Owner of connect credential
CONNECT_CREDENTIAL_NAME	VARCHAR2(128)		Name of connect credential
FAIL_ON_SCRIPT_ERROR	VARCHAR2(5)		Indicates whether this job fails on script error (TRUE) or not (FALSE)

4.72 ALL_SCHEDULER_NOTIFICATIONS

ALL_SCHEDULER_NOTIFICATIONS displays information about the E-mail notifications for the jobs accessible to the current user.

Related Views

- DBA_SCHEDULER_NOTIFICATIONS displays information about the E-mail notifications for all jobs in the database.
- USER_SCHEDULER_NOTIFICATIONS displays information about the E-mail notifications for the jobs owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
NOTIFICATION_OWNER	VARCHAR2(128)	NOT NULL	Owner of this notification
OWNER	VARCHAR2(128)	NOT NULL	Owner of the job this notification is for
JOB_NAME	VARCHAR2(128)	NOT NULL	Name of the job this notification is for
JOB_SUBNAME	VARCHAR2(128)		Subname of the job this notification is for
RECIPIENT	VARCHAR2(4000)	NOT NULL	E-mail address to send this E-mail notification to
SENDER	VARCHAR2(4000)		E-mail address to send this E-mail notification from
SUBJECT	VARCHAR2(4000)		Subject of the notification E-mail
BODY	VARCHAR2(4000)		Body of the notification E-mail

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
FILTER_CONDITION	VARCHAR2(4000)		Filter specifying which job events to send notifications for
EVENT	VARCHAR2(19)		Job event to send notifications for: • JOB_STARTED • JOB_SUCCEEDED • JOB_FAILED • JOB_BROKEN • JOB_COMPLETED • JOB_STOPPED • JOB_SCH_LIM_REACHED • JOB_DISABLED • JOB_CHAIN_STALLED • JOB_OVER_MAX_DUR
EVENT_FLAG	NUMBER	NOT NULL	Event number of the job event to send notifications for

4.73 ALL_SCHEDULER_PROGRAM_ARGS

ALL_SCHEDULER_PROGRAM_ARGS displays information about the arguments of the Scheduler programs accessible to the current user.

Related Views

- DBA_SCHEDULER_PROGRAM_ARGS displays information about the arguments of all Scheduler programs in the database.
- USER_SCHEDULER_PROGRAM_ARGS displays information about the arguments of the Scheduler programs owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the program to which the argument belongs
PROGRAM_NAME	VARCHAR2(128)	NOT NULL	Name of the program to which the argument belongs
ARGUMENT_NAME	VARCHAR2(128)		Optional name of the argument
ARGUMENT_POSITION	NUMBER	NOT NULL	Position of the argument in the argument list
ARGUMENT_TYPE	VARCHAR2(257)		Data type of the argument

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
METADATA_ATTRIBUTE	VARCHAR2(19)		Metadata attribute: • JOB_NAME • JOB_OWNER • JOB_START • WINDOW_START • WINDOW_END • JOB_SUBNAME • EVENT_MESSAGE • JOB_SCHEDULED_START
DEFAULT_VALUE	VARCHAR2(4000)		Default value taken by the argument (in string format) if the argument is a string
DEFAULT_ANYDATA_VALUE	ANYDATA		Default value taken by the argument (in AnyData format)
OUT_ARGUMENT	VARCHAR2(5)		Reserved for future use

See Also

- "DBA_SCHEDULER_PROGRAM_ARGS"

4.74 ALL_SCHEDULER_PROGRAMS

ALL_SCHEDULER_PROGRAMS displays information about the Scheduler programs accessible to the current user.

Related Views

- DBA_SCHEDULER_PROGRAMS displays information about all Scheduler programs in the database.
- USER_SCHEDULER_PROGRAMS displays information about the Scheduler programs owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Scheduler program
PROGRAM_NAME	VARCHAR2(128)	NOT NULL	Name of the Scheduler program
PROGRAM_TYPE	VARCHAR2(16)		Type of the program action: • PLSQL_BLOCK • STORED_PROCEDURE • EXECUTABLE
PROGRAM_ACTION	VARCHAR2(4000)		String specifying the program action
NUMBER_OF_ARGUMENTS	NUMBER		Number of arguments accepted by the program
ENABLED	VARCHAR2(5)		Indicates whether the program is enabled (TRUE) or disabled (FALSE)
DETACHED	VARCHAR2(5)		This column is for internal use

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SCHEDULE_LIMIT	INTERVAL DAY(3) TO SECOND(0)		Maximum delay in running the program after the scheduled start
PRIORITY	NUMBER		Priority of the program
WEIGHT	NUMBER		Weight of the program
MAX_RUNS	NUMBER		Maximum number of runs of any job based on this program
MAX_FAILURES	NUMBER		Maximum number of failures of any job based on this program
MAX_RUN_DURATION	INTERVAL DAY(3) TO SECOND(0)		Maximum amount of time this program can run
HAS_CONSTRAINTS	VARCHAR2(5)		Indicates whether the job (not including the program of the job) is part of a resource constraint or incompatibility (TRUE) or not (FALSE)
NLS_ENV	VARCHAR2(4000)		NLS environment in which the program was created
COMMENTS	VARCHAR2(4000)		Comments on the program

4.75 ALL_SCHEDULER_REMOTE_DATABASES

ALL_SCHEDULER_REMOTE_DATABASES displays information about the remote databases accessible to the current user that have been registered as sources and destinations for remote database jobs.

Related View

DBA_SCHEDULER_REMOTE_DATABASES displays information about all remote databases that have been registered as sources and destinations for remote database jobs.

Column	Datatype	NULL	Description
DATABASE_NAME	VARCHAR2(512)	NOT NULL	Global name of the remote database
REGISTERED_AS	VARCHAR2(11)		Indicates whether the database is registered as a source (SOURCE) or as a destination (DESTINATION)
DATABASE_LINK	VARCHAR2(512)	NOT NULL	Name of a valid database link to the remote database

See Also

"DBA_SCHEDULER_REMOTE_DATABASES"

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.76 ALL_SCHEDULER_REMOTE_JOBSTATE

ALL_SCHEDULER_REMOTE_JOBSTATE displays information about the state of the jobs accessible to the current user at remote databases.

Related Views

- DBA_SCHEDULER_REMOTE_JOBSTATE displays information about the state of all jobs at remote databases.
- USER_SCHEDULER_REMOTE_JOBSTATE displays information about the state of the jobs owned by the current user at remote databases. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Scheduler job
JOB_NAME	VARCHAR2(128)	NOT NULL	Name of the Scheduler job
DESTINATION	VARCHAR2(512)	NOT NULL	Name of the job destination
STATE	VARCHAR2(15)		State of the job at the destination: • DISABLED • RETRY SCHEDULED • SCHEDULED • RUNNING • COMPLETED • BROKEN • FAILED • SUCCEEDED • STOPPED
NEXT_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Next start date of the job at the destination
RUN_COUNT	NUMBER		Run count of the job at the destination
FAILURE_COUNT	NUMBER		Failure count of the job at the destination
RETRY_COUNT	NUMBER		Retry count of the job at the destination
LAST_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Last start date of the job at the destination
LAST_END_DATE	TIMESTAMP(6) WITH TIME ZONE		Last end date of the job at the destination

4.77 ALL_SCHEDULER_RESOURCES

ALL_SCHEDULER_RESOURCES displays all scheduler resource objects in the database that are accessible to the current user.

Related Views

- DBA_SCHEDULER_RESOURCES displays all scheduler resource objects in the database.
- USER_SCHEDULER_RESOURCES displays all scheduler resource objects in the database from the schema of the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the resource object
RESOURCE_NAME	VARCHAR2(128)	NOT NULL	Name of the resource object
STATUS	VARCHAR2(19)		Resource status for resource object.
RESOURCE_UNITS	NUMBER		Maximum number of available units for the resource object
UNITS_USED	NUMBER		Current number of resource units in use for the resource object
JOBS_RUNNING_COUNT	NUMBER		Current number of running jobs using the resource object
COMMENTS	VARCHAR2(256)		Comments for the resource object

See Also

- "DBA_SCHEDULER_RESOURCES"
- "USER_SCHEDULER_RESOURCES"

4.78 ALL_SCHEDULER_RSC_CONSTRAINTS

ALL_SCHEDULER_RSC_CONSTRAINTS lists all Oracle Scheduler resource constraint members accessible to the current user.

Related Views

- DBA_SCHEDULER_RSC_CONSTRAINTS lists all Oracle Scheduler resource constraint members in the database.
- USER_SCHEDULER_RSC_CONSTRAINTS lists all Oracle Scheduler resource constraint members owned by the current user.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the resource object the member is in
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the resource object the member is in
RESOURCE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the resource constraint resource member
RESOURCE_NAME	VARCHAR2(128)	NOT NULL	Name of the resource constraint resource member

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
UNITS_USED	NUMBER		Number of units used of the resource by this constraint resource member

See Also

- "DBA_SCHEDULER_RSC_CONSTRAINTS"
- "USER_SCHEDULER_RSC_CONSTRAINTS"

4.79 ALL_SCHEDULER_RUNNING_CHAINS

ALL_SCHEDULER_RUNNING_CHAINS displays information about the chain steps of the running chains accessible to the current user (that is, those chains that the user has ALTER privileges for). In the case of nested chains, this view also enables you to traverse the hierarchy of the chain with a SQL statement that contains a CONNECT BY clause linking up the JOB_SUBNAME and STEP_JOB_SUBNAME columns.

Related Views

- DBA_SCHEDULER_RUNNING_CHAINS displays information about the chain steps of all running chains in the database.
- USER_SCHEDULER_RUNNING_CHAINS displays information about the chain steps of the running chains owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the job which is running the chain
JOB_NAME	VARCHAR2(128)	NOT NULL	Name of the job which is running the chain
JOB_SUBNAME	VARCHAR2(128)		Subname of the job which is running the chain (for a nested chain), else NULL
CHAIN_OWNER	VARCHAR2(128)	NOT NULL	Owner of the chain being run
CHAIN_NAME	VARCHAR2(128)	NOT NULL	Name of the chain being run
STEP_NAME	VARCHAR2(128)	NOT NULL	Name of the step of the running chain
STATE	VARCHAR2(15)		State of the running chain step: • NOT_STARTED • RUNNING • SUCCEEDED • STOPPED • FAILED • SCHEDULED • RETRY SCHEDULED • PAUSED • STALLED
ERROR_CODE	NUMBER		Error code with which the step completed (if it has completed)
COMPLETED	VARCHAR2(5)		Indicates whether the running chain step has completed (TRUE) or not (FALSE)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
START_DATE	TIMESTAMP(6) WITH TIME ZONE		Date when the running chain step started (if it has started)
END_DATE	TIMESTAMP(6) WITH TIME ZONE		Date when the running chain step stopped (if it has stopped)
DURATION	INTERVAL DAY(9) TO SECOND(6)		Amount of time it took the chain step to complete (if it has completed)
SKIP	VARCHAR2(5)		Indicates whether the chain step should be skipped (TRUE) or not (FALSE)
PAUSE	VARCHAR2(5)		Indicates whether the chain step should be paused after running (TRUE) or not (FALSE)
PAUSE_BEFORE	VARCHAR2(5)		Indicates whether the chain step should be paused before running (TRUE) or not (FALSE)
RESTART_ON_RECOVERY	VARCHAR2(5)		Indicates whether the chain step will be restarted on database recovery (TRUE) or not (FALSE)
RESTART_ON_FAILURE	VARCHAR2(5)		Indicates whether the chain step will be restarted on application failure (TRUE) or not (FALSE)
STEP_JOB_SUBNAME	VARCHAR2(128)		Subname of the job running the step
STEP_JOB_LOG_ID	NUMBER		Log ID of the job running the step

See Also

- "DBA_SCHEDULER_RUNNING_CHAINS"

4.80 ALL_SCHEDULER_RUNNING_JOBS

ALL_SCHEDULER_RUNNING_JOBS displays information about the running Scheduler jobs accessible to the current user.

Related Views

- DBA_SCHEDULER_RUNNING_JOBS displays information about all running Scheduler jobs in the database.
- USER_SCHEDULER_RUNNING_JOBS displays information about the running Scheduler jobs owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the running Scheduler job
JOB_NAME	VARCHAR2(128)		Name of the running Scheduler job
JOB_SUBNAME	VARCHAR2(128)		Subname of the running Scheduler job (for a job running a chain step)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
JOB_STYLE	VARCHAR2(17)		Job style: • REGULAR • LIGHTWEIGHT • IN_MEMORY_RUNTIME • IN_MEMORY_FULL
DETACHED	VARCHAR2(5)		Indicates whether the detached attribute is set for the job (TRUE) or not (FALSE). If the detached attribute is set, then the job will remain running even after the job action has completed.
SESSION_ID	NUMBER		Identifier of the session running the Scheduler job
SLAVE_PROCESS_ID	NUMBER		Process number of the worker process running the Scheduler job
SLAVE_OS_PROCESS_ID	VARCHAR2(12)		Process number of the operating system worker process running the scheduler job
RUNNING_INSTANCE	NUMBER		Database instance number of the worker process running the Scheduler job
RESOURCE_CONSUMER_GROUP	VARCHAR2(32)		Resource consumer group of the session in which the Scheduler job is running
ELAPSED_TIME	INTERVAL DAY(3) TO SECOND(2)		Elapsed time since the Scheduler job was started
CPU_USED	INTERVAL DAY(3) TO SECOND(2)		CPU time consumed by the running Scheduler job, if available
DESTINATION_OWNER	VARCHAR2(261)		Owner of the destination object (if used), else NULL
DESTINATION	VARCHAR2(261)		Destination that this job is running on
CREDENTIAL_OWNER	VARCHAR2(128)		Owner of the login credential used for this running job, if any
CREDENTIAL_NAME	VARCHAR2(128)		Name of the login credential used for this running job, if any
LOG_ID	NUMBER		Log ID used for this running job. This column maps to the LOG_ID column of the *_SCHEDULER_JOB_LOG and *_SCHEDULER_JOB_RUN_DETAILS views.

See Also

- "DBA_SCHEDULER_RUNNING_JOBS"
- "USER_SCHEDULER_RUNNING_JOBS"

4.81 ALL_SCHEDULER_SCHEDULES

ALL_SCHEDULER_SCHEDULES displays information about the Scheduler schedules accessible to the current user.

Related Views

- DBA_SCHEDULER_SCHEDULES displays information about all Scheduler schedules in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- USER_SCHEDULER_SCHEDULES displays information about the Scheduler schedules owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the schedule
SCHEDULE_NAME	VARCHAR2(128)	NOT NULL	Name of the schedule
SCHEDULE_TYPE	VARCHAR2(12)		Type of the schedule: • ONCE - Repeat interval is NULL • CALENDAR - Oracle calendaring expression used as schedule • EVENT - Event schedule
START_DATE	TIMESTAMP(6) WITH TIME ZONE		Start date for the repeat interval
REPEAT_INTERVAL	VARCHAR2(4000)		Calendar syntax expression for the schedule
EVENT_QUEUE_OWNER	VARCHAR2(128)		Owner of the source queue into which the event will be raised
EVENT_QUEUE_NAME	VARCHAR2(128)		Name of the source queue into which the event will be raised
EVENT_QUEUE_AGENT	VARCHAR2(523)		Name of the AQ agent used by the user on the event source queue (if it is a secure queue)
EVENT_CONDITION	VARCHAR2(4000)		Boolean expression used as the subscription rule for the event on the source queue
FILE_WATCHER_OWNER	VARCHAR2(261)		Owner of the file watcher on which this schedule is based
FILE_WATCHER_NAME	VARCHAR2(261)		Name of the file watcher on which this schedule is based
END_DATE	TIMESTAMP(6) WITH TIME ZONE		Cutoff date after which the schedule will not specify any dates
COMMENTS	VARCHAR2(4000)		Comments on the schedule

- "USER_SCHEDULER_SCHEDULES"

4.82 ALL_SCHEDULER_WINDOW_DETAILS

ALL_SCHEDULER_WINDOW_DETAILS displays log details for the Scheduler windows accessible to the current user.

Related View

DBA_SCHEDULER_WINDOW_DETAILS displays log details for all Scheduler windows in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
LOG_ID	NUMBER		Unique identifier of the log entry (foreign key of the *_SCHEDULER_WINDOW_LOG views)
LOG_DATE	TIMESTAMP(6) WITH TIME ZONE		Date of the log entry
OWNER	VARCHAR2(128)		Owner of the Scheduler window
WINDOW_NAME	VARCHAR2(261)		Name of the Scheduler window
REQ_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Requested start date for the Scheduler window
ACTUAL_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Actual start date of the Scheduler window
WINDOW_DURATION	INTERVAL DAY(3) TO SECOND(0)		Requested duration of the Scheduler window
ACTUAL_DURATION	INTERVAL DAY(3) TO SECOND(0)		Actual duration for which the Scheduler window lasted
INSTANCE_ID	NUMBER		Identifier of the instance on which the window was run
ADDITIONAL_INFO	VARCHAR2(4000)		Additional information on the entry, if applicable

See Also

"DBA_SCHEDULER_WINDOW_DETAILS"

4.83 ALL_SCHEDULER_WINDOW_GROUPS

ALL_SCHEDULER_WINDOW_GROUPS displays information about the Scheduler window groups accessible to the current user.

Related View

DBA_SCHEDULER_WINDOW_GROUPS displays information about all Scheduler window groups in the database.

Column	Datatype	NULL	Description
WINDOW_GROUP_NAME	VARCHAR2(128)	NOT NULL	Name of the window group
ENABLED	VARCHAR2(5)		Indicates whether the window group is enabled (TRUE) or disabled (FALSE)
NUMBER_OF_WINDOWS	NUMBER		Number of members in the window group
NEXT_START_DATE	VARCHAR2(64)		If a window group is disabled, then this column will be NULL. Otherwise, it will be set to the earliest NEXT_START_DATE from the enabled windows in the group.
COMMENTS	VARCHAR2(4000)		Optional comment about the window group

Copyright © 2002, 2025, Oracle and/or its affiliates.

"DBA_SCHEDULER_WINDOW_GROUPS"

4.84 ALL_SCHEDULER_WINDOW_LOG

ALL_SCHEDULER_WINDOW_LOG displays log information for the Scheduler windows accessible to the current user.

Related View

DBA_SCHEDULER_WINDOW_LOG displays log information for all Scheduler windows in the database.

Column	Datatype	NULL	Description
LOG_ID	NUMBER	NOT NULL	Unique identifier of the log entry
LOG_DATE	TIMESTAMP(6) WITH TIME ZONE		Date of the log entry
OWNER	VARCHAR2(128)		Owner of the Scheduler window
WINDOW_NAME	VARCHAR2(261)		Name of the Scheduler window
OPERATION	VARCHAR2(30)		Operation corresponding to the log entry
STATUS	VARCHAR2(30)		Status of the operation, if applicable
USER_NAME	VARCHAR2(128)		Name of the user who performed the operation, if applicable
CLIENT_ID	VARCHAR2(64)		Client identifier of the user who performed the operation, if applicable
GLOBAL_UID	VARCHAR2(32)		Global user identifier of the user who performed the operation, if applicable
ADDITIONAL_INFO	CLOB		Additional information on the entry, if applicable

4.85 ALL_SCHEDULER_WINDOWS

ALL_SCHEDULER_WINDOWS displays information about the Scheduler windows accessible to the current user.

Related View

DBA_SCHEDULER_WINDOWS displays information about all Scheduler windows in the database.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the Scheduler window

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
WINDOW_NAME	VARCHAR2(128)	NOT NULL	Name of the Scheduler window
RESOURCE_PLAN	VARCHAR2(128)		Resource plan associated with the window
SCHEDULE_OWNER	VARCHAR2(4000)		Owner of the schedule of the window
SCHEDULE_NAME	VARCHAR2(4000)		Name of the schedule of the window
SCHEDULE_TYPE	VARCHAR2(8)		Type of the schedule of the window: • ONCE - Repeat interval is NULL • NAMED - Named schedule • CALENDAR - Oracle calendaring expression used as schedule
START_DATE	TIMESTAMP(6) WITH TIME ZONE		Start date of the window (for an inline schedule)
REPEAT_INTERVAL	VARCHAR2(4000)		Calendar string for the window (for an inline schedule)
END_DATE	TIMESTAMP(6) WITH TIME ZONE		Date after which the window will no longer open (for an inline schedule)
DURATION	INTERVAL DAY(3) TO SECOND(0)		Duration of the window
WINDOW_PRIORITY	VARCHAR2(4)		Priority of the job relative to other windows: • HIGH • LOW
NEXT_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Next date on which the window is scheduled to start
LAST_START_DATE	TIMESTAMP(6) WITH TIME ZONE		Last date on which the window opened
ENABLED	VARCHAR2(5)		Indicates whether the window is enabled (TRUE) or disabled (FALSE)
ACTIVE	VARCHAR2(5)		Indicates whether the window is open (TRUE) or not (FALSE)
MANUAL_OPEN_TIME	TIMESTAMP(6) WITH TIME ZONE		Open time of the window if it was manually opened, else NULL
MANUAL_DURATION	INTERVAL DAY(3) TO SECOND(0)		Duration of the window if it was manually opened, else NULL
COMMENTS	VARCHAR2(4000)		Comments on the window

4.86 ALL_SCHEDULER_WINGROUP_MEMBERS

ALL_SCHEDULER_WINGROUP_MEMBERS displays the members of the Scheduler window groups accessible to the current user.

Related View

DBA_SCHEDULER_WINGROUP_MEMBERS displays the members of all Scheduler window groups in the database.

Column	Datatype	NULL	Description
WINDOW_GROUP_NAME	VARCHAR2(128)	NOT NULL	Name of the window group
WINDOW_NAME	VARCHAR2(128)	NOT NULL	Name of the window member of the window group

See Also

"DBA_SCHEDULER_WINGROUP_MEMBERS"

4.87 ALL_SEC_RELEVANT_COLS

ALL_SEC_RELEVANT_COLS describes the security relevant columns of the security policies for the tables and views accessible to the current user.

Related Views

- DBA_SEC_RELEVANT_COLS describes the security relevant columns of all security policies in the database.
- USER_SEC_RELEVANT_COLS describes the security relevant columns of the security policies for the tables and views owned by the current user. This view does not display the OBJECT_OWNER column.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)		Owner of the table or view
OBJECT_NAME	VARCHAR2(128)		Name of the table or view
POLICY_GROUP	VARCHAR2(128)		Name of the policy group
POLICY_NAME	VARCHAR2(128)		Name of the policy
SEC_REL_COLUMN	VARCHAR2(128)		Name of the security relevant column
COLUMN_OPTION	VARCHAR2(8)		Option of the security relevant column: • NONE • ALL_ROWS
COMMON	VARCHAR2(3)		Indicates whether the policy security relevant column is applied and enforced in all application PDBs (YES) or only in the local PDB (NO)
INHERITED	VARCHAR2(3)		Indicates whether the policy security relevant column is inherited from the root (YES) or not (NO)

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.88 ALL_SECONDARY_OBJECTS

ALL_SECONDARY_OBJECTS provides information about secondary objects associated with domain indexes accessible to the user.

This view is only relevant for domain indexes. And currently, the secondary objects can only be tables.

Related Views

- DBA_SECONDARY_OBJECTS provides information about all secondary objects that are associated with domain indexes in the database.
- USER_SECONDARY_OBJECTS provides information about secondary objects associated with domain indexes owned by the current user.

Column	Datatype	NULL	Description
INDEX_OWNER	VARCHAR2(128)	NOT NULL	Owner of the domain index
INDEX_NAME	VARCHAR2(128)	NOT NULL	Name of the domain index
SECONDARY_OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the secondary object created by the domain index
SECONDARY_OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the secondary object created by the domain index
SECONDARY_OBJDATA_TYPE	VARCHAR2(20)		Type of the secondary object created by the domain index

> **See Also**
>
> - "DBA_SECONDARY_OBJECTS"
> - "USER_SECONDARY_OBJECTS"

4.89 ALL_SEQUENCES

ALL_SEQUENCES describes all sequences accessible to the current user.

Related Views

- DBA_SEQUENCES describes all sequences in the database.
- USER_SEQUENCES describes all sequences owned by the current user. This view does not display the SEQUENCE_OWNER column.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SEQUENCE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the sequence
SEQUENCE_NAME	VARCHAR2(128)	NOT NULL	Sequence name
MIN_VALUE	NUMBER		Minimum value of the sequence
MAX_VALUE	NUMBER		Maximum value of the sequence
INCREMENT_BY	NUMBER	NOT NULL	Value by which sequence is incremented
CYCLE_FLAG	VARCHAR2(1)		Indicates whether the sequence wraps around on reaching the limit (Y) or not (N)
ORDER_FLAG	VARCHAR2(1)		Indicates whether sequence numbers are generated in order (Y) or not (N)
CACHE_SIZE	NUMBER	NOT NULL	Number of sequence numbers to cache
LAST_NUMBER	NUMBER	NOT NULL	Last sequence number written to disk. If a sequence uses caching, the number written to disk is the last number placed in the sequence cache. This number is likely to be greater than the last sequence number that was used. For session sequences, the value in this column should be ignored.
SCALE_FLAG	VARCHAR2(1)		Indicates whether this is a scalable sequence (Y) or not (N)
EXTEND_FLAG	VARCHAR2(1)		Indicates whether this scalable sequence's generated values extend beyond MAX_VALUE or MIN_VALUE (Y) or not (N)
SHARDED_FLAG	VARCHAR2(1)		Indicates whether this is a sharded sequence (Y) or not (N)
SESSION_FLAG	VARCHAR2(1)		Indicates whether sequence values are session private (Y) or not (N)
KEEP_VALUE	VARCHAR2(1)		Indicates whether sequence values are kept during replay after a failure (Y) or not (N)

4.90 ALL_SERVICES

ALL_SERVICES displays all services in the database. The view excludes rows marked for deletion.

Related View

DBA_SERVICES displays all services in the database. The view excludes rows marked for deletion.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SERVICE_ID	NUMBER		Unique ID for the service
NAME	VARCHAR2(64)		Name describing the workload
NAME_HASH	NUMBER		Hash of the short name for the service
NETWORK_NAME	VARCHAR2(512)		Network name used to connect to the service
CREATION_DATE	DATE		Date the service was created
CREATION_DATE_HASH	NUMBER		Hash of the creation date
FAILOVER_METHOD	VARCHAR2(64)		TAF only for compatibility - BASIC or NONE
FAILOVER_TYPE	VARCHAR2(64)		AUTO for Transparent Application Continuity, TRANSACTION for Application Continuity, SESSION or SELECT for TAF.
FAILOVER_RETRIES	NUMBER(10)		For Application Continuity and TAF, when reconnecting after a failure, number of attempts to re-connect per incident
FAILOVER_DELAY	NUMBER(10)		For Application Continuity and TAF, when reconnecting after a failure, delay between each connection retry (in seconds)
MIN_CARDINALITY	NUMBER		Reserved for internal use
MAX_CARDINALITY	NUMBER		Reserved for internal use
GOAL	VARCHAR2(12)		Runtime Load Balancing Goal being used to create run-time load balancing and connection load balancing advice: • NONE • SERVICE_TIME - Connections are balanced by response time • THROUGHPUT - Connections are balanced by throughput
DTP	VARCHAR2(1)		DTP (distributed transaction processing) enforces all sessions for a service at one instance. This is a requirement for XA before 11*g*, and is a requirement if resuming and suspending the same XA branch.
ENABLED	VARCHAR2(3)		Reserved for internal use
AQ_HA_NOTIFICATIONS	VARCHAR2(3)		To enable FAN for OCI connections, set AQ HA Notifications to True. For Oracle Database 12*c*, FAN uses ONS (Oracle Notification Service)
CLB_GOAL	VARCHAR2(5)		Connection load balancing goal. When using run-time load balancing, GOAL=SERVICE_TIME or THROUGHPUT, set to SHORT. For a session count per service only, use LONG.
EDITION	VARCHAR2(128)		A non-NULL value specifies the initial session edition for subsequent database connections that use the service and do not specify an edition. A NULL value has no effect.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
COMMIT_OUTCOME	VARCHAR2(3)		For Transaction Guard and Database Native Transaction Guard, indicates whether the database service associated with the user session has the COMMIT_OUTCOME service attribute enabled (YES) or not (NO). This attribute applies on a per session basis and is set at connect time. When the value of this column is YES, the commit status is managed for all supported transaction types and the outcome of a COMMIT transaction is preserved after the COMMIT has executed. Refer to the COMMIT_OUTCOME_FASTPATH column to view the preferred method for preserving the commit outcome. **See Also:** *Oracle AI Database Development Guide* for information about preserving the commit outcome
RETENTION_TIMEOUT	NUMBER		For Transaction Guard and Database Native Transaction Guard, when COMMIT_OUTCOME = YES, this value indicates the amount of time (in seconds) that the commit outcome is retained in the database.
REPLAY_INITIATION_TIMEOUT	NUMBER		For Application Continuity, indicates a time period (in seconds) after which the request will not be replayed. The time period starts at the first request submission. The default value is 300 seconds, which is 5 minutes.
SESSION_STATE_CONSISTENCY	VARCHAR2(128)		Describes how non-transactional is changed during a request. This parameter is considered only if failover_type is set to TRANSACTION for Application Continuity. Examples of session state are NLS settings, optimizer preferences, event settings, PL/SQL global variables, temporary tables, advanced queues, LOBs and result cache. If non-transactional values change after the request starts, the default value of DYNAMIC should be set. Almost all applications should use DYNAMIC mode. If you are unsure, use DYNAMIC mode.
GLOBAL_SERVICE	VARCHAR2(3)		Indicates whether the service is global. A global service is managed by Global Data Services (GDS) and can be provided by multiple databases that contain replicated data. Possible values: • YES: Indicates the service is global • NO: Indicates the service is not global This attribute is set when using GDS. It cannot be set by a user.
PDB	VARCHAR2(128)		Name of a PDB associated with a given service. Will contain NULL for a non-CDB or if the service is not associated with a PDB (that is, connecting to a CDB using this service will cause a user to connect to the root.) When managing services for a PDB, use SRVCTL for Oracle RAC and Oracle RAC One Node databases, or connect to that PDB if it is a single instance (not RAC). The PDB attribute shows which PDB has the service. It cannot be set or modified explicitly.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SQL_TRANSLATION_PROFILE	VARCHAR2(261)		A non-NULL value specifies the initial SQL translation profile for subsequent database connections that use the service and do not specify a SQL translation profile. A NULL value has no effect.
MAX_LAG_TIME	VARCHAR2(128)		The maximum replication lag (in seconds) that is acceptable for a data replica to be used for providing the database service. Can only be specified for global services using the Global Data Services (GDS) interfaces. It is not supported to change this value at local databases.
GSM_FLAGS	NUMBER		Flags specific to Global Data Services (GDS). Can only be specified for global services using the GDS interfaces. It is not supported to change these values at local databases.
PQ_SVC	VARCHAR2(64)		Name of the associated parallel query rim service
STOP_OPTION	VARCHAR2(13)		Stop option for sessions of this service for planned maintenance
FAILOVER_RESTORE	VARCHAR2(6)		Indicates whether sessions recover their commonly used session state (like NLS, schema) when they are failed over with TAF
DRAIN_TIMEOUT	NUMBER		Number of seconds to wait for sessions to be drained
TABLE_FAMILY_ID	NUMBER		Sharded table family ID associated with the service
PLACEMENT_POLICY	NUMBER		Placement policy for the service. Possible values: • 0: PDB-NONE • 1: PDB-SINGLETON • 2: PDB-UNIFORM **Note:** Values other than 0 are applicable only in the ATP-Dedicated Cloud in an Oracle RAC environment.
RESET_STATE	VARCHAR2(6)		Reset state for the service. Possible values: • LEVEL1 • NONE
PLACEMENT_TEMPLATE	VARCHAR2(64)		Reserved for future use

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
COMMIT_OUTCOME_FASTPATH	VARCHAR2(3)		For Transaction Guard and Database Native Transaction Guard, when COMMIT_OUTCOME = YES, the value of this column indicates the preferred method for preserving the commit outcome. Possible values: • YES - Database Native Transaction Guard is used. Each transaction is assigned a unique transaction identifier (DB XID) in the database. The DB XID and status of the corresponding transaction are maintained persistently in a transaction table. Note that if COMMIT_OUTCOME = YES, then the value of COMMIT_OUTCOME_FASTPATH defaults to YES. • NO - Transaction Guard is used. A logical transaction ID (LTXID) is set for each user session at login and at each successful commit. LTXIDs are used only when the commit is not in the same round-trip to the database as the start of the transaction. Moreover, some transaction types, such as commit on success transactions, DDL transactions, and PL/SQL transactions, will continue to use LTXIDs in the same round-trip. When Transaction Guard is used, the outcome of a COMMIT transaction is known. If there is an outage, the application can use DBMS_APP_CONT.GET_LTXID_OUTCOME to return a reliable status for the last in-flight work. **See Also:** *Oracle Real Application Clusters Administration and Deployment Guide* for information about logical transaction IDs
TRUE_CACHE_SERVICE	VARCHAR2(64)		True Cache service associated with this database service
PARENT_SERVICE	VARCHAR2(64)		Name of the parent service
TEMPLATE_TIMEOUT	NUMBER		Maximum number of seconds that can pass before templates for the service expire If the value of this column is 0, then template timeout is turned off.
VCSPARE1	VARCHAR2(1024)		Reserved for internal use
NSPARE1	NUMBER		Reserved for internal use
AUTO_CONNECTION_REBALANCE	NUMBER		Drain setting for service load balancing. Possible values: • 0 - DEFAULT • 1 - NONE • 255 - AUTO
NSPARE2	NUMBER		Reserved for internal use
NSPARE3	NUMBER		Reserved for internal use

4.91 ALL_SOURCE

ALL_SOURCE describes the text source of the stored objects accessible to the current user.

Related Views

- DBA_SOURCE describes the text source of all stored objects in the database.
- USER_SOURCE describes the text source of the stored objects owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
NAME	VARCHAR2(128)	NOT NULL	Name of the object
TYPE	VARCHAR2(12)		Type of object: • ASSEMBLEY • FUNCTION • LIBRARY • MLE MODULE • PACKAGE • PACKAGE BODY • PROCEDURE • TRIGGER • TYPE • TYPE BODY
LINE	NUMBER	NOT NULL	Line number of this line of source
TEXT	VARCHAR2(4000)		Text source of the stored object
ORIGIN_CON_ID	VARCHAR2(256)		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root)

See Also

4.92 ALL_SOURCE_AE

ALL_SOURCE_AE describes the text source of the stored objects (across all editions) accessible to the current user.

Related Views

- DBA_SOURCE_AE describes the text source of all stored objects (across all editions) in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- USER_SOURCE_AE describes the text source of the stored objects (across all editions) owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the object
NAME	VARCHAR2(128)		Name of the object
TYPE	VARCHAR2(12)		Type of the object: • ASSEMBLEY • FUNCTION • LIBRARY • MLE MODULE • PACKAGE • PACKAGE BODY • PROCEDURE • TRIGGER • TYPE • TYPE BODY
LINE	NUMBER		Line number of this line of source
TEXT	VARCHAR2(4000)		Source text
EDITION_NAME	VARCHAR2(128)		Name of the edition
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root)

4.93 ALL_SQL_TRANSLATION_PROFILES

ALL_SQL_TRANSLATION_PROFILES describes all SQL translation profiles accessible to the user.

Related Views

- DBA_SQL_TRANSLATION_PROFILES describes all SQL translation profiles in the database.
- USER_SQL_TRANSLATION_PROFILES describes all SQL translation profiles owned by the user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the SQL translation profile
PROFILE_NAME	VARCHAR2(128)	NOT NULL	Name of the SQL translation profile
TRANSLATOR	VARCHAR2(261)		The translator package

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
FOREIGN_SQL_SYNTAX	VARCHAR2(5)		Indicates whether the SQL syntax is foreign. Possible values: • TRUE • FALSE
TRANSLATE_NEW_SQL	VARCHAR2(5)		Indicates whether to translate new SQL statements and errors using the translator. Possible values: • TRUE • FALSE
RAISE_TRANSLATION_ERROR	VARCHAR2(5)		Indicates whether to raise translation error. Possible values: • TRUE • FALSE
LOG_TRANSLATION_ERROR	VARCHAR2(5)		Indicates whether to log translation error. Possible values: • TRUE • FALSE
TRACE_TRANSLATION	VARCHAR2(5)		Indicates whether to trace translation. Possible values: • TRUE • FALSE
LOG_ERRORS	VARCHAR2(5)		Indicates whether there are log errors (TRUE) or not (FALSE)

4.94 ALL_SQL_TRANSLATIONS

ALL_SQL_TRANSLATIONS describes all SQL translations accessible to the user.

Related Views

- DBA_SQL_TRANSLATIONS describes all SQL translations in the database.
- USER_SQL_TRANSLATIONS describes all SQL translations owned by the user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the SQL translation profile
PROFILE_NAME	VARCHAR2(128)	NOT NULL	Name of the SQL translation profile
SQL_TEXT	CLOB	NOT NULL	The SQL statement
TRANSLATED_TEXT	CLOB		The translated SQL statement

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SQL_ID	VARCHAR2(13)	NOT NULL	SQL identifier of the SQL statement
HASH_VALUE	NUMBER	NOT NULL	Hash value of the SQL statement
ENABLED	VARCHAR2(5)		Displays whether the translation is enabled. Possible values: • TRUE • FALSE
REGISTRATION_TIME	TIMESTAMP(6)		Time the translation was registered
CLIENT_INFO	VARCHAR2(64)		Client information when the SQL was parsed and the translation was registered
MODULE	VARCHAR2(64)		Module when the SQL was parsed and the translation was registered
ACTION	VARCHAR2(64)		Action when the SQL was parsed and the translation was registered
PARSING_USER_ID	NUMBER		Current user ID when the SQL was parsed and the translation was registered
PARSING_SCHEMA_ID	NUMBER		Current schema ID when the SQL was parsed and the translation was registered
COMMENTS	VARCHAR2(4000)		Comment on the translation
ERROR_CODE	NUMBER		Last error code when the SQL was run
ERROR_SOURCE	VARCHAR2(9)		Source of the last error
TRANSLATION_METHOD	VARCHAR2(10)		Method used to translate the SQL during the last error
DICTIONARY_SQL_ID	VARCHAR2(13)		SQL identifier of the SQL text in the translation dictionary used to translate the SQL during the last error

4.95 ALL_SQLJ_TYPE_ATTRS

ALL_SQLJ_TYPE_ATTRS describes the attributes of the SQLJ object types accessible to the current user.

Related Views

- DBA_SQLJ_TYPE_ATTRS describes the attributes of all SQLJ object types in the database.
- USER_SQLJ_TYPE_ATTRS describes the attributes of the object types owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the type
TYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the type

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ATTR_NAME	VARCHAR2(128)	NOT NULL	Name of the attribute
EXTERNAL_ATTR_NAME	VARCHAR2(4000)		External name of the attribute
ATTR_TYPE_MOD	VARCHAR2(7)		Type modifier of the attribute: • REF • POINTER
ATTR_TYPE_OWNER	VARCHAR2(128)		Owner of the type of the attribute
ATTR_TYPE_NAME	VARCHAR2(128)		Name of the type of the attribute
LENGTH	NUMBER		Length of the CHAR attribute, or maximum length of the VARCHAR or VARCHAR2 attribute.
PRECISION	NUMBER		Decimal precision of the NUMBER or DECIMAL attribute, or binary precision of the FLOAT attribute.
SCALE	NUMBER		Scale of the NUMBER or DECIMAL attribute
CHARACTER_SET _NAME	VARCHAR2(44)		Character set name of the attribute (CHAR_CS or NCHAR_CS)
ATTR_NO	NUMBER	NOT NULL	Syntactical order number or position of the attribute as specified in the type specification or CREATE TYPE statement (not to be used as an ID number)
INHERITED	VARCHAR2(3)		Indicates whether the attribute is inherited from a supertype (YES) or not (NO)

4.96 ALL_SQLJ_TYPE_METHODS

ALL_SQLJ_TYPE_METHODS describes the methods of the SQLJ object types accessible to the current user.

Related Views

- DBA_SQLJ_TYPE_METHODS describes the methods of all SQLJ object types in the database.
- USER_SQLJ_TYPE_METHODS describes the methods of the SQLJ object types owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the type
TYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the type
METHOD_NAME	VARCHAR2(128)	NOT NULL	Name of the method
EXTERNAL_VAR_NAME	VARCHAR2(4000)		Name of the external variable
METHOD_NO	NUMBER	NOT NULL	Method number that distinguishes overloaded methods (not to be used as an ID number)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
METHOD_TYPE	VARCHAR2(6)		Type of the method: • MAP • ORDER • PUBLIC
PARAMETERS	NUMBER	NOT NULL	Number of parameters to the method
RESULTS	NUMBER	NOT NULL	Number of results returned by the method
FINAL	VARCHAR2(3)		Indicates whether the method is final (YES) or not (NO)
INSTANTIABLE	VARCHAR2(3)		Indicates whether the method is instantiable (YES) or not (NO)
OVERRIDING	VARCHAR2(3)		Indicates whether the method is overriding a supertype method (YES) or not (NO)
INHERITED	VARCHAR2(3)		Indicates whether the method is inherited from a supertype (YES) or not (NO)

4.97 ALL_SQLJ_TYPES

ALL_SQLJ_TYPES describes the SQLJ object types accessible to the current user.

Related Views

- DBA_SQLJ_TYPES describes all SQLJ object types in the database.
- USER_SQLJ_TYPES describes the SQLJ object types owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the type
TYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the type
TYPE_OID	RAW(16)	NOT NULL	Object identifier (OID) of the type
EXTERNAL_NAME	VARCHAR2(4000)		External class name of the type
USING	VARCHAR2(21)		Representation of the type: • SQLData • CustomDatum • Serializable • Serializable Internal • ORAData
TYPECODE	VARCHAR2(128)		Typecode of the type
ATTRIBUTES	NUMBER		Number of attributes (if any) in the type
METHODS	NUMBER		Number of methods (if any) in the type

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PREDEFINED	VARCHAR2(3)		Indicates whether the type is a predefined type (YES) or not (NO)
INCOMPLETE	VARCHAR2(3)		Indicates whether the type is an incomplete type (YES) or not (NO)
FINAL	VARCHAR2(3)		Indicates whether the type is a final type (YES) or not (NO)
INSTANTIABLE	VARCHAR2(3)		Indicates whether the type is an instantiable type (YES) or not (NO)
SUPERTYPE_OWNER	VARCHAR2(128)		Owner of the supertype (NULL if type is not a subtype)
SUPERTYPE_NAME	VARCHAR2(128)		Name of the supertype (NULL if type is not a subtype)
LOCAL_ATTRIBUTES	NUMBER		Number of local (not inherited) attributes (if any) in the subtype
LOCAL_METHODS	NUMBER		Number of local (not inherited) methods (if any) in the subtype

4.98 ALL_SQLSET

ALL_SQLSET displays information about all SQL tuning sets accessible to the current user.

Related Views

- DBA_SQLSET displays information about all SQL tuning sets in the database.
- USER_SQLSET displays information about the SQL tuning sets owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
NAME	VARCHAR2(128)	NOT NULL	Name of the SQL tuning set
ID	NUMBER	NOT NULL	SQL tuning set identifier
CON_DBID	NUMBER	NOT NULL	The database ID of the PDB
OWNER	VARCHAR2(128)		Owner of the SQL tuning set
DESCRIPTION	VARCHAR2(256)		Description of the SQL tuning set
CREATED	DATE		Date the SQL tuning set was created
LAST_MODIFIED	DATE		Date the SQL tuning set was last modified
STATEMENT_COUNT	NUMBER		Number of statements in the SQL tuning set

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.99 ALL_SQLSET_BINDS

ALL_SQLSET_BINDS displays the bind values associated with all SQL tuning sets accessible to the current user.

Related Views

- DBA_SQLSET_BINDS displays the bind values associated with all SQL tuning sets in the database.
- USER_SQLSET_BINDS displays the bind values associated with the SQL tuning sets owned by the current user. This view does not display the SQLSET_OWNER column.

Column	Datatype	NULL	Description
SQLSET_NAME	VARCHAR2(128)		Name of the SQL tuning set for the statement
SQLSET_OWNER	VARCHAR2(128)		User name of the SQL tuning set owner
SQLSET_ID	NUMBER		ID of the SQL tuning set for the statement
CON_DBID	NUMBER		The database ID of the PDB
SQL_ID	VARCHAR2(13)		SQL identifier of the parent cursor in the library cache
FORCE_MATCHING_SIGNATURE	NUMBER		The signature used when the CURSOR_SHARING parameter is set to FORCE
PLAN_HASH_VALUE	NUMBER		Numerical representation of the SQL plan for the cursor. Comparing one PLAN_HASH_VALUE to another easily identifies whether or not two plans are the same (rather than comparing the two plans line-by-line).
POSITION	NUMBER		Bind position
VALUE	ANYDATA		Bind value. This column is NULL for PL/SQL bind types.
CAPTURED	CHAR(1)		Binds captured
SQL_SEQ	NUMBER		SQL sequence

4.100 ALL_SQLSET_PLANS

ALL_SQLSET_PLANS describes captured plans for statements in the SQL tuning sets accessible to the current user.

Related Views

- DBA_SQLSET_PLANS describes captured plans in the SQL tuning sets in the database.
- USER_SQLSET_PLANS describes captured plans for statements in the SQL tuning sets owned by the current user. This view does not display the SQLSET_OWNER column.

Column	Datatype	NULL	Description
SQLSET_NAME	VARCHAR2(128)	NOT NULL	Name of SQL tuning set for the statement
SQLSET_OWNER	VARCHAR2(128)		User name of SQL tuning set owner
SQLSET_ID	NUMBER	NOT NULL	ID of SQL tuning set for the statement
CON_DBID	NUMBER	NOT NULL	The database ID of the PDB
SQL_ID	VARCHAR2(13)	NOT NULL	SQL identifier of the parent cursor in the library cache
FORCE_MATCHING_SIGNATURE	NUMBER	NOT NULL	The signature used when the CURSOR_SHARING parameter is set to FORCE
PLAN_HASH_VALUE	NUMBER	NOT NULL	Numerical representation of the SQL plan for the cursor. Comparing one PLAN_HASH_VALUE to another easily identifies whether or not two plans are the same (rather than comparing the two plans line-by-line).
SQL_SEQ	NUMBER	NOT NULL	SQL sequence
STATEMENT_ID	VARCHAR2(128)		Statement ID
PLAN_ID	NUMBER		Plan ID
TIMESTAMP	DATE		Date and time timestamp
REMARKS	VARCHAR2(4000)		Remarks
OPERATION	VARCHAR2(128)		Name of the internal operation performed in this step (for example, TABLE ACCESS)
OPTIONS	VARCHAR2(255)		A variation on the operation described in the OPERATION column (for example, FULL)
OBJECT_NODE	VARCHAR2(128)		Name of the database link used to reference the object (a table name or view name). For local queries that use parallel execution, this column describes the order in which output from operations is consumed.
OBJECT_OWNER	VARCHAR2(128)		Name of the user who owns the schema containing the table or index
OBJECT_NAME	VARCHAR2(128)		Name of the table or index
OBJECT_ALIAS	VARCHAR2(261)		Alias for the object
OBJECT_INSTANCE	NUMBER(38)		Instance number for the object
OBJECT_TYPE	VARCHAR2(128)		Type of the object
OPTIMIZER	VARCHAR2(255)		Current mode of the optimizer for the first row in the plan (statement line), for example, CHOOSE. When the operation is a database access (for example, TABLE ACCESS), this column indicates whether or not the object is analyzed.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SEARCH_COLUMNS	NUMBER		Number of index columns with start and stop keys (that is, the number of columns with matching predicates)
ID	NUMBER(38)	NOT NULL	A number assigned to each step in the execution plan
PARENT_ID	NUMBER(38)		ID of the next execution step that operates on the output of the current step
DEPTH	NUMBER(38)		Depth (or level) of the operation in the tree. It is not necessary to issue a CONNECT BY statement to get the level information, which is generally used to indent the rows from the PLAN_TABLE table. The root operation (statement) is level 0.
POSITION	NUMBER(38)		Order of processing for all operations that have the same PARENT_ID.
COST	NUMBER(38)		Cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.
CARDINALITY	NUMBER(38)		Estimate, made by the cost-based optimizer, of the number of rows produced by the operation
BYTES	NUMBER(38)		Estimate, made by the cost-based optimizer, of the number of bytes produced by the operation
OTHER_TAG	VARCHAR2(255)		Describes the contents of the OTHER column. For information about values, see *Oracle AI Database SQL Tuning Guide*.
PARTITION_START	VARCHAR2(255)		Start partition of a range of accessed partitions
PARTITION_STOP	VARCHAR2(255)		Stop partition of a range of accessed partitions
PARTITION_ID	NUMBER(38)		Step that computes the pair of values of the PARTITION_START and PARTITION_STOP columns
OTHER	LONG		Other information specific to the execution step that users may find useful. For information about values, see *Oracle AI Database SQL Tuning Guide*.
DISTRIBUTION	VARCHAR2(128)		Stores the method used to distribute rows from producer query servers to consumer query servers
CPU_COST	NUMBER(38)		CPU cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.
IO_COST	NUMBER(38)		I/O cost of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.
TEMP_SPACE	NUMBER(38)		Temporary space usage of the operation (sort or hash join) as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.
ACCESS_PREDICATES	VARCHAR2(4000)		Predicates used to locate rows in an access structure. For example, start or stop predicates for an index range scan.
FILTER_PREDICATES	VARCHAR2(4000)		Predicates used to filter rows before producing them
PROJECTION	VARCHAR2(4000)		Expressions produced by the operation

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
TIME	NUMBER(38)		Elapsed time (in seconds) of the operation as estimated by the optimizer's cost-based approach. For statements that use the rule-based approach, this column is NULL.
QBLOCK_NAME	VARCHAR2(128)		Name of the query block
OTHER_XML	CLOB		Provides extra information specific to an execution step of the execution plan. The content of this column is structured using XML, which allows multiple pieces of information to be stored, including the following: • Name of the schema against which the query was parsed • Release number of the Oracle Database that produced the explain plan • Hash value associated with the execution plan • Name (if any) of the outline or the SQL profile used to build the execution plan • Indication of whether or not dynamic statistics were used to produce the plan • The outline data, a set of optimizer hints that can be used to regenerate the same plan • Additional data that describes the relationship between rows in the plan table and subplans of adaptive plans
EXECUTIONS	NUMBER		Number of times the plan has been executed
STARTS	NUMBER		Number of times this operation has been started, accumulated over the past executions
OUTPUT_ROWS	NUMBER		Number of rows produced by the row source, accumulated over the past executions
CR_BUFFER_GETS	NUMBER		Number of buffers received in consistent mode, accumulated over the past executions. Buffers are usually retrieved in consistent mode for queries.
CU_BUFFER_GETS	NUMBER		Number of buffers retrieved in current mode, accumulated over the past executions. Buffers are retrieved in current mode for statements such as INSERT, UPDATE, and DELETE.
DISK_READS	NUMBER		Number of physical disk reads performed by the operation, accumulated over the past executions
DISK_WRITES	NUMBER		Number of physical disk writes performed by the operation, accumulated over the past executions
ELAPSED_TIME	NUMBER		Elapsed time (in microseconds) corresponding to this operation, accumulated over the past executions
LAST_STARTS	NUMBER		Number of times this operation has been started, during the last execution
LAST_OUTPUT_ROWS	NUMBER		Number of rows produced by the row source, during the last execution
LAST_CR_BUFFER_GETS	NUMBER		Number of buffers retrieved in consistent mode, during the last execution. Buffers are usually retrieved in consistent mode for queries.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
LAST_CU_BUFFER_GETS	NUMBER		Number of buffers retrieved in current mode, during the last execution. Buffers are retrieved in current mode for statements such as INSERT, UPDATE, and DELETE.
LAST_DISK_READS	NUMBER		Number of physical disk reads performed by the operation, during the last execution
LAST_DISK_WRITES	NUMBER		Number of physical disk writes performed by the operation, during the last execution
LAST_ELAPSED_TIME	NUMBER		Elapsed time (in microseconds) corresponding to this operation, during the last execution
POLICY	VARCHAR2(10)		Sizing policy for this work area: • MANUAL • AUTO
ESTIMATED_OPTIMAL_SIZE	NUMBER		Estimated size (in KB) required by this work area to execute the operation completely in memory (optimal execution). This is either derived from optimizer statistics or from previous executions.
ESTIMATED_ONEPASS_SIZE	NUMBER		Estimated size (in KB) required by this work area to execute the operation in a single pass. This is either derived from optimizer statistics or from previous executions.
LAST_MEMORY_USED	NUMBER		Memory size (in KB) used by this work area during the last execution of the cursor
LAST_EXECUTION	VARCHAR2(10)		Indicates whether this work area ran using OPTIMAL, ONE PASS, or under ONE PASS memory requirement (MULTI-PASS), during the last execution of the cursor
LAST_DEGREE	NUMBER		Degree of parallelism used, during the last execution of the cursor
TOTAL_EXECUTIONS	NUMBER		Number of times this work area was active
OPTIMAL_EXECUTIONS	NUMBER		Number of times this work area ran in optimal mode
ONEPASS_EXECUTIONS	NUMBER		Number of times this work area ran in one pass mode
MULTIPASSES_EXECUTIONS	NUMBER		Number of times this work area ran below the one pass memory requirement
ACTIVE_TIME	NUMBER		Average time this work area is active (in hundredths of a second)
MAX_TEMPSEG_SIZE	NUMBER		Maximum temporary segment size (in bytes) created by an instantiation of this work area. This column is null if this work area has never spilled to disk.
LAST_TEMPSEG_SIZE	NUMBER		Temporary segment size (in bytes) created in the last instantiation of this work area. This column is null if the last instantiation of this work area did not spill to disk.
PARSING_USER_NAME	VARCHAR2(128)		Name of the parsing user

4.101 ALL_SQLSET_REFERENCES

ALL_SQLSET_REFERENCES describes whether or not the SQL tuning sets accessible to the current user are active.

Related Views

- DBA_SQLSET_REFERENCES describes whether or not all SQL tuning sets in the database are active. A SQL tuning set cannot be dropped if it is referenced.
- USER_SQLSET_REFERENCES describes whether or not the SQL tuning sets owned by the current user are active.

Column	Datatype	NULL	Description
SQLSET_NAME	VARCHAR2(128)	NOT NULL	Name of the SQL tuning set
SQLSET_OWNER	VARCHAR2(128)		User name of SQL tuning set owner
SQLSET_ID	NUMBER	NOT NULL	Identifier of the SQL tuning set
ID	NUMBER	NOT NULL	Reference identifier
OWNER	VARCHAR2(128)		User who registered to use the SQL tuning set
DESCRIPTION	VARCHAR2(256)		Description of the usage of the SQL tuning set
CREATED	DATE		Date the reference was created

4.102 ALL_SQLSET_STATEMENTS

ALL_SQLSET_STATEMENTS displays information about the SQL statements, along with their statistics, that form all SQL tuning sets accessible to the current user.

Related Views

- DBA_SQLSET_STATEMENTS displays information about the SQL statements, along with their statistics, that form all SQL tuning sets in the database.
- USER_SQLSET_STATEMENTS displays information about the SQL statements, along with their statistics, that form the SQL tuning sets owned by the current user. This view does not display the SQLSET_OWNER column.

Column	Datatype	NULL	Description
SQLSET_NAME	VARCHAR2(128)	NOT NULL	Name of the SQL tuning set for the statement
SQLSET_OWNER	VARCHAR2(128)		User name of the SQL tuning set owner
SQLSET_ID	NUMBER	NOT NULL	ID of the SQL tuning set for the statement
CON_DBID	NUMBER	NOT NULL	The database ID of the PDB
SQL_ID	VARCHAR2(13)	NOT NULL	SQL identifier of the parent cursor in the library cache

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
FORCE_MATCHING_SIGNATURE	NUMBER	NOT NULL	The signature used when the CURSOR_SHARING parameter is set to FORCE
SQL_TEXT	CLOB		Full text for the SQL statement exposed as a CLOB column.
PARSING_SCHEMA_NAME	VARCHAR2(128)		Name of the user in whose schema the statement was parsed
PLAN_HASH_VALUE	NUMBER	NOT NULL	Hash value for the plan corresponding to statistics in this record
BIND_DATA	RAW(2000)		Bind data
BINDS_CAPTURED	CHAR(1)		Binds captured
MODULE	VARCHAR2(64)		Contains the name of the module that was executing when the SQL statement was first parsed, which is set by calling DBMS_APPLICATION_INFO.SET_MODULE
ACTION	VARCHAR2(64)		Contains the name of the action that was executing when the SQL statement was first parsed, which is set by calling DBMS_APPLICATION_INFO.SET_ACTION
ELAPSED_TIME	NUMBER		Elapsed time (in microseconds) used by this cursor for parsing, executing, and fetching
CPU_TIME	NUMBER		CPU time (in microseconds) used by this cursor for parsing, executing, and fetching
BUFFER_GETS	NUMBER		Number of buffer gets for this child cursor
DISK_READS	NUMBER		Number of disk reads for this child cursor
DIRECT_WRITES	NUMBER		Number of direct writes for this child cursor
ROWS_PROCESSED	NUMBER		Total number of rows that the parsed SQL statement returns
FETCHES	NUMBER		Number of fetches associated with the SQL statement
EXECUTIONS	NUMBER		Number of executions that took place on this object since it was brought into the library cache
END_OF_FETCH_COUNT	NUMBER		Number of times this cursor was fully executed since the cursor was brought into the library cache. The value of this statistic in not incremented when the cursor is partially executed, either because it failed during the execution or because only the first few rows produced by this cursor are fetched before the cursor is closed or re-executed. By definition, the value of the END_OF_FETCH_COUNT column should be less than, or equal to, the value of the EXECUTIONS column.
OPTIMIZER_COST	NUMBER		Cost of this query, given by the optimizer
OPTIMIZER_ENV	RAW(2000)		Optimizer environment
PRIORITY	NUMBER		User-defined priority
COMMAND_TYPE	NUMBER		Oracle command type definition
FIRST_LOAD_TIME	VARCHAR2(19)		Timestamp of the parent creation time
STAT_PERIOD	NUMBER		Time (in seconds) during which the statistics of the SQL statement were collected
ACTIVE_STAT_PERIOD	NUMBER		Effective time (in seconds) during which the SQL statement was active
OTHER	CLOB		Client data, specified by the user, for this statement

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PLAN_TIMESTAMP	DATE		Timestamp for the plan corresponding to the statistics in this record
SQL_SEQ	NUMBER	NOT NULL	SQL sequence
LAST_EXEC_START_TIME	VARCHAR2(19)		For SQLs captured from the cursor cache, this is the time when the most recent execution of this SQL started
SHARABLE_MEM	NUMBER		Amount of shared memory used by the child cursor (in bytes)
EXACT_MATCHING_SIGNATURE	NUMBER		Signature calculated on the normalized SQL text. The normalization includes the removal of white space and the uppercasing of all non-literal strings.
RESULT_CACHE_EXECUTIONS	NUMBER		Number of result cache executions
SQL_PROFILE	VARCHAR2(128)		SQL profile used for this statement, if any
SQL_PLAN_BASELINE	VARCHAR2(128)		SQL plan baseline used for this statement, if any
SQL_PATCH	VARCHAR2(128)		SQL patch used for this statement, if any
AVG_HARD_PARSE_TIME	NUMBER		Average hard parse time (in microseconds) used by this cursor
USER_IO_WAIT_TIME	NUMBER		User I/O Wait Time (in microseconds); updated as the statement executes
IO_INTERCONNECT_BYTES	NUMBER		Number of I/O bytes exchanged between Oracle AI Database and the storage system
PARSING_USER_NAME	VARCHAR2(128)		Name of the parsing user

4.103 ALL_STAT_EXTENSIONS

ALL_STAT_EXTENSIONS displays information about the optimizer statistics extensions accessible to the current user.

Related Views

- DBA_STAT_EXTENSIONS displays information about all optimizer statistics extensions in the database.
- USER_STAT_EXTENSIONS displays information about the optimizer statistics extensions owned by the current user. This view does not display the OWNER column.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the extension
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table to which the extension belongs
EXTENSION_NAME	VARCHAR2(128)	NOT NULL	Name of the statistics extension
EXTENSION	CLOB		Extension (the expression or column group)
CREATOR	VARCHAR2(6)		Creator of the extension: • USER • SYSTEM
DROPPABLE	VARCHAR2(3)		Indicates whether the extension is droppable using DBMS_STATS.DROP_EXTENDED_STATS (YES) or not (NO)

See Also

- "DBA_STAT_EXTENSIONS"
- "USER_STAT_EXTENSIONS"
- *Oracle AI Database PL/SQL Packages and Types Reference* for more information about the DBMS_STATS.DROP_EXTENDED_STATS procedure

4.104 ALL_STATEMENTS

ALL_STATEMENTS describes all SQL statements in stored PL/SQL objects accessible to the user.

Related Views

- DBA_STATEMENTS describes SQL statements in stored PL/SQL objects accessible to SYS.
- USER_STATEMENTS describes SQL statements in stored PL/SQL objects accessible to the user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the statement
SIGNATURE	VARCHAR2(32)		Signature of the statement. Every statement type has a unique PL/Scope signature that identifies that instance of th statement.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
TYPE	VARCHAR2(17)		Type of the statement. Statement types correspond to statements that can be used in PL/SQL to execute or otherwise interact with SQL: • SELECT • UPDATE • INSERT • DELETE • MERGE • CLOSE • FETCH • OPEN • SAVEPOINT • COMMIT • SET_TRANSACTION • ROLLBACK • LOCK_TABLE • EXECUTE_IMMEDIATE
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object where the statement usage occurred
OBJECT_TYPE	VARCHAR2(12)		Type of the object where the statement usage occurred
USAGE_ID	NUMBER		Unique key for a statement usage within the object
LINE	NUMBER		Line number of the statement usage
COL	NUMBER		Column number of the statement usage
USAGE_CONTEXT_ID	NUMBER		Context USAGE_ID of an statement usage
SQL_ID	VARCHAR2(13)		SQL ID of the SQL statement. The value of this column is null for statements that do not have a SQL ID.
HAS_HINT	VARCHAR2(3)		YES if the SQL statement contains a hint, NO otherwise. If a hint appears inside of a subquery, then HAS_HINT will be YES for the containing statement or statements of the subquery as well as for the subquery itself.
HAS_INTO_BULK	VARCHAR2(3)		Indicates whether the statement contains a BULK_COLLECT clause (YES) or not (NO)
HAS_INTO_RETURNING	VARCHAR2(3)		Indicates whether the statement contains a RETURNING_INTO clause (YES) or not (NO)
HAS_INTO_RECORD	VARCHAR2(3)		Indicates whether the statement returns results into a PL/SQL record (YES) or not (NO)
HAS_CURRENT_OF	VARCHAR2(3)		Indicates whether the statement contains a HAS_CURRENT_OF clause (YES) or not (NO)
HAS_FOR_UPDATE	VARCHAR2(3)		Indicates whether the statement contains a HAS_FOR_UPDATE clause (YES) or not (NO)
HAS_IN_BINDS	VARCHAR2(3)		Indicates whether the statement contains an IN_BINDS clause (YES) or not (NO)
TEXT	VARCHAR2(4000)		The normalized form of the statement, when the statement has a normalized form. These are typically the same statements that have a SQL ID. The column value is null when the statement does not have a normalized form.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
FULL_TEXT	CLOB		Clob text of the SQL statement
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root)

- "DBA_STATEMENTS"
- "USER_STATEMENTS"

4.105 ALL_STORED_SETTINGS

ALL_STORED_SETTINGS provides information about the persistent parameter settings for stored PL/SQL units for which the current user has execute privileges.

Related Views

- DBA_STORED_SETTINGS lists information about the persistent parameter settings for stored PL/SQL units for which the current user has execute privileges. It also returns parameter information for all objects in the database and is accessible only to users with the SELECT_CATALOG_ROLE privilege.
- USER_STORED_SETTINGS lists information about the persistent parameter settings for stored PL/SQL units, but only shows information about PL/SQL units owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Name of the database user owning the stored PL/SQL unit
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the PL/SQL unit
OBJECT_ID	NUMBER	NOT NULL	Object number of the PL/SQL unit
OBJECT_TYPE	VARCHAR2(12)		The type of PL/SQL unit: PROCEDURE, FUNCTION, PACKAGE, PACKAGE BODY, TRIGGER, TYPE, or TYPE BODY
PARAM_NAME	VARCHAR2(128)	NOT NULL	The name of the parameter stored persistently with the PL/SQL unit
PARAM_VALUE	VARCHAR2(4000)		The TO_CHAR() representation of the value of the persistently stored parameter. The width of this column is operating system dependent; however, it is never less than 255.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root)

Note

This view is deprecated in favor of the ALL_PLSQL_OBJECT_SETTINGS view. Oracle recommends that you use ALL_PLSQL_OBJECT_SETTINGS instead. ALL_STORED_SETTINGS is retained for backward compatibility only.

See Also

"ALL_PLSQL_OBJECT_SETTINGS"

4.106 ALL_STREAMS_GLOBAL_RULES

ALL_STREAMS_GLOBAL_RULES displays information about rules.

ALL_STREAMS_GLOBAL_RULES displays information about the following types of rules:

- Global rules created for the capture processes that enqueue the captured changes into queues accessible to the current user
- Global rules created for the propagations that have a source queue accessible to the current user
- Global rules created for the apply processes that dequeue events from queues accessible to the current user

This view does not contain information about rules created using the DBMS_RULE_ADM package.

Related View

DBA_STREAMS_GLOBAL_RULES displays information about the global rules created for all capture processes, propagations, and apply processes in the database.

Column	Datatype	NULL	Description
STREAMS_NAME	VARCHAR2(128)		Name of the Replication process or propagation
STREAMS_TYPE	VARCHAR2(11)		Type of the Replication process or propagation: • CAPTURE • PROPAGATION • APPLY

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
RULE_TYPE	VARCHAR2(9)		Type of the rule: • DML • DDL
INCLUDE_TAGGED_LCR	VARCHAR2(3)		Indicates whether a redo entry or logical change record (LCR) with a non-NULL tag is considered for capture, propagation, or apply (YES) or not (NO)
SOURCE_DATABASE	VARCHAR2(128)		Source database in the rule condition. The rule evaluates to true for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this source database.
RULE_NAME	VARCHAR2(128)	NOT NULL	Name of the rule
RULE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule
RULE_CONDITION	VARCHAR2(4000)		First 4000 bytes of the system-generated rule condition evaluated by the rules engine

See Also

- "DBA_STREAMS_GLOBAL_RULES"
- *Oracle AI Database PL/SQL Packages and Types Reference* for more information about the DBMS_RULE_ADM package

4.107 ALL_STREAMS_MESSAGE_CONSUMERS

ALL_STREAMS_MESSAGE_CONSUMERS displays information about the Replication messaging clients accessible to the current user.

Related View

DBA_STREAMS_MESSAGE_CONSUMERS displays information about all Replication messaging clients in the database.

Column	Datatype	NULL	Description
STREAMS_NAME	VARCHAR2(128)	NOT NULL	Name of the messaging client
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue
QUEUE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the queue
RULE_SET_NAME	VARCHAR2(128)		Name of the positive rule set
RULE_SET_OWNER	VARCHAR2(128)		Owner of the positive rule set
NEGATIVE_RULE_SET_NAME	VARCHAR2(128)		Name of the negative rule set
NEGATIVE_RULE_SET_OWNER	VARCHAR2(128)		Owner of the negative rule set
NOTIFICATION_TYPE	VARCHAR2(9)		Type of the notification action: • PROCEDURE • MAIL • HTTP
NOTIFICATION_ACTION	VARCHAR2(256)		Notification action

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
NOTIFICATION_CONTEXT	ANYDATA		Context for the notification action

See Also

"DBA_STREAMS_MESSAGE_CONSUMERS"

4.108 ALL_STREAMS_NEWLY_SUPPORTED

ALL_STREAMS_NEWLY_SUPPORTED displays information about the tables accessible to the current user that are newly supported by capture processes.

Related View

DBA_STREAMS_NEWLY_SUPPORTED displays information about all tables in the database that are newly supported by capture processes.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table
REASON	VARCHAR2(39)		Reason why the table was not supported in a previous release: • IOT • column with user-defined type • unsupported column exists • object table • AQ queue table • temporary table • sub object • external table • materialized view • FILE column exists • materialized view log • materialized view container table • streams unsupported object • domain index
COMPATIBLE	CHAR(4)		Minimum database compatibility for capture processes to support the database object

See Also

"DBA_STREAMS_NEWLY_SUPPORTED"

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.109 ALL_STREAMS_SCHEMA_RULES

ALL_STREAMS_SCHEMA_RULES displays information about several types of schema rules.

ALL_STREAMS_SCHEMA_RULES displays information about these types of schema rules:

- Schema rules created for the capture processes that enqueue the captured changes into queues accessible to the current user
- Schema rules created for the propagations that have a source queue accessible to the current user
- Schema rules created for the apply processes that dequeue events from queues accessible to the current user

This view does not contain information about rules created using the DBMS_RULE_ADM package.

Related View

DBA_STREAMS_SCHEMA_RULES displays information about the schema rules created for all capture processes, propagations, and apply processes in the database.

Column	Datatype	NULL	Description
STREAMS_NAME	VARCHAR2(128)		Name of the Replication process or propagation
STREAMS_TYPE	VARCHAR2(11)		Type of the Replication process or propagation: • CAPTURE • PROPAGATION • APPLY
SCHEMA_NAME	VARCHAR2(128)		Schema name in the rule condition. The rule evaluates to true for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this schema name.
RULE_TYPE	VARCHAR2(7)		Type of the rule: • DML • DDL
INCLUDE_TAGGED_LCR	VARCHAR2(3)		Indicates whether a redo entry or logical change record (LCR) with a non-NULL tag is considered for capture, propagation, or apply (YES) or not (NO)
SOURCE_DATABASE	VARCHAR2(128)		Source database in the rule condition. The rule evaluates to true for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this source database.
RULE_NAME	VARCHAR2(128)	NOT NULL	Name of the rule
RULE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule
RULE_CONDITION	VARCHAR2(4000)		First 4000 bytes of the system-generated rule condition evaluated by the rules engine

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- "DBA_STREAMS_SCHEMA_RULES"

4.110 ALL_STREAMS_TABLE_RULES

ALL_STREAMS_TABLE_RULES displays information about several types of rules.

ALL_STREAMS_TABLE_RULES displays information about these types of table and subset rules:

- Table rules created for the capture processes that enqueue the captured changes into queues accessible to the current user
- Table rules created for the propagations that have a source queue accessible to the current user
- Table rules created for the apply processes that dequeue events from queues accessible to the current user
- Subset rules created for the apply processes that have a source queue accessible to the current user

This view does not contain information about rules created using the DBMS_RULE_ADM package.

Related View

DBA_STREAMS_TABLE_RULES displays information about the table rules created for all capture processes, propagations, and apply processes in the database.

Column	Datatype	NULL	Description
STREAMS_NAME	VARCHAR2(128)		Name of the Replication process or propagation
STREAMS_TYPE	VARCHAR2(12)		Type of the Replication process or propagation: • CAPTURE • PROPAGATION • APPLY • DEQUEUE
TABLE_OWNER	VARCHAR2(128)		Table owner in the rule condition. The rule evaluates to true for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this table owner.
TABLE_NAME	VARCHAR2(128)		Table name in the rule condition. The rule evaluates to true for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this table name.
RULE_TYPE	VARCHAR2(7)		Type of the rule: • DML • DDL
DML_CONDITION	VARCHAR2(4000)		Row subsetting condition, if the rule is a subset rule

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SUBSETTING_OPERATION	VARCHAR2(6)		DML operation for row subsetting in the rule condition, if the rule is a subset rule: • INSERT • UPDATE • DELETE The rule evaluates to true for a logical change record (LCR) only if the LCR contains this command type after internal transformation.
INCLUDE_TAGGED_LCR	VARCHAR2(3)		Indicates whether a redo entry or logical change record (LCR) with a non-NULL tag is considered for capture, propagation, or apply (YES) or not (NO)
SOURCE_DATABASE	VARCHAR2(128)		Source database in the rule condition. The rule evaluates to true for a redo entry or logical change record (LCR) only if the redo entry or LCR contains this source database.
RULE_NAME	VARCHAR2(128)	NOT NULL	Name of the rule
RULE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule
RULE_CONDITION	VARCHAR2(4000)		First 4000 bytes of the system-generated rule condition evaluated by the rules engine

See Also

- "DBA_STREAMS_TABLE_RULES"
- *Oracle AI Database PL/SQL Packages and Types Reference* for more information about the DBMS_RULE_ADM package

4.111 ALL_STREAMS_TRANSFORM_FUNCTION

ALL_STREAMS_TRANSFORM_FUNCTION displays information about the rule-based transformation functions accessible to the current user.

Related View

DBA_STREAMS_TRANSFORM_FUNCTION displays information about all rule-based transformation functions in the database.

Column	Datatype	NULL	Description
RULE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule associated with the transformation function
RULE_NAME	VARCHAR2(128)	NOT NULL	Name of the rule associated with the transformation function
VALUE_TYPE	VARCHAR2(4000)		Type of the transformation function name. This type must be VARCHAR2 for a rule-based transformation to work properly.
TRANSFORM_FUNCTION_NAME	VARCHAR2(4000)		Name of the transformation function (NULL if VALUE_TYPE is not VARCHAR2)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
CUSTOM_TYPE	VARCHAR2(11)		Type of the transformation function: • ONE TO ONE - One-to-one transformations • ONE TO MANY - One-to-many transformations

See Also

"DBA_STREAMS_TRANSFORM_FUNCTION"

4.112 ALL_SUBPART_COL_STATISTICS

ALL_SUBPART_COL_STATISTICS describes column statistics and histogram information for subpartitions of partitioned objects accessible to the current user.

Related Views

- DBA_SUBPART_COL_STATISTICS provides this information for all subpartitions in the database.
- USER_SUBPART_COL_STATISTICS provides this information for subpartitions of all partitioned objects owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
SUBPARTITION_NAME	VARCHAR2(128)		Table subpartition name
COLUMN_NAME	VARCHAR2(4000)		Column name
NUM_DISTINCT	NUMBER		Number of distinct values in the column
LOW_VALUE	RAW(1000)		Low value in the column
HIGH_VALUE	RAW(1000)		High value in the column
DENSITY	NUMBER		If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints. If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT.
NUM_NULLS	NUMBER		Number of NULLs in the column
NUM_BUCKETS	NUMBER		Number of buckets in histogram for the column
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this column
LAST_ANALYZED	DATE		Date on which this column was most recently analyzed
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics have been gathered or NO if statistics have not been gathered
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
NOTES	VARCHAR2(41)		Describes some additional properties of the statistics. For example, if the value is INCREMENTAL, the global statistics are derived from synopses, that is, the global statistics are incrementally maintained.
AVG_COL_LEN	NUMBER		Average length of the column (in bytes)
HISTOGRAM	VARCHAR2(15)		Indicates existence/type of histogram: • NONE • FREQUENCY • HEIGHT BALANCED • HYBRID • TOP-FREQUENCY

See Also

- "DBA_SUBPART_COL_STATISTICS"
- "USER_SUBPART_COL_STATISTICS"

4.113 ALL_SUBPART_HISTOGRAMS

ALL_SUBPART_HISTOGRAMS displays the actual histogram data (end-points per histogram) for histograms on table subpartitions accessible to the current user.

Related Views

- DBA_SUBPART_HISTOGRAMS displays this information for all subpartitions in the database.
- USER_SUBPART_HISTOGRAMS displays this information for subpartitions of all partitioned objects owned by the current user. This view does not display the OWNER column.

Note

These views are populated only if you collect statistics on the index using the DBMS_STATS package.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table
SUBPARTITION_NAME	VARCHAR2(128)		Table subpartition name
COLUMN_NAME	VARCHAR2(4000)		Column name
BUCKET_NUMBER	NUMBER		Bucket number
ENDPOINT_VALUE	NUMBER		Normalized endpoint values for this bucket
ENDPOINT_ACTUAL_VALUE	VARCHAR2(4000)		Actual (not normalized) string value of the endpoint for this bucket

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ENDPOINT_ACTUAL_VALUE_RAW	RAW(1000)		Endpoint actual value in raw format
ENDPOINT_REPEAT_COUNT	NUMBER		Frequency of the endpoint (applies only to hybrid histograms, and is set to 0 for other histogram types)

See Also

- "DBA_SUBPART_HISTOGRAMS"
- "USER_SUBPART_HISTOGRAMS"
- *Oracle AI Database PL/SQL Packages and Types Reference* for more information about the DBMS_STATS package

4.114 ALL_SUBPART_KEY_COLUMNS

ALL_SUBPART_KEY_COLUMNS displays subpartitioning key columns for composite-partitioned tables (and local indexes on composite-partitioned tables) accessible to the current user.

Related Views

- DBA_SUBPART_KEY_COLUMNS displays this information for all subpartitions in the database.
- USER_SUBPART_KEY_COLUMNS displays this information for subpartitions of all partitioned objects owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the partitioned table or index
NAME	VARCHAR2(128)		Name of the partitioned table or index
OBJECT_TYPE	CHAR(5)		Object type: • TABLE • INDEX
COLUMN_NAME	VARCHAR2(4000)		Column name
COLUMN_POSITION	NUMBER		Position of the column within the subpartitioning key
COLLATED_COLUMN_ID	NUMBER		Internal sequence number of the column for which this column provides linguistic ordering

See Also

- "DBA_SUBPART_KEY_COLUMNS"
- "USER_SUBPART_KEY_COLUMNS"

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.115 ALL_SUBPARTITION_TEMPLATES

ALL_SUBPARTITION_TEMPLATES describes the subpartition templates accessible to the current user.

Related Views

- DBA_SUBPARTITION_TEMPLATES describes all subpartition templates in the database.
- USER_SUBPARTITION_TEMPLATES describes the subpartition templates owned by the current user. This view does not display the USER_NAME column.

Column	Datatype	NULL	Description
USER_NAME	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
SUBPARTITION_NAME	VARCHAR2(132)	NOT NULL	Name of the subpartition
SUBPARTITION_POSITION	NUMBER		Position of the subpartition
TABLESPACE_NAME	VARCHAR2(30)		Tablespace name of the subpartition
HIGH_BOUND	LONG		Literal list values of the subpartition
COMPRESSION	VARCHAR2(4)		Compression values of COMPRESSION or NOCOMPRESSION can be specified in a subpartition template. The value in this column indicates whether the subpartition template specifies that for each new added composite partition, its subpartition data will be stored in compressed format (YES) or not (NO). If compression is not specified in the subpartition template, then the default is that data stored in newly-added subpartitions will not be stored in compressed format (NO).
INDEXING	VARCHAR2(4)		Indexing values of INDEXING ON or INDEXING OFF can be specified in a subpartition template. The value in this column indicates whether the subpartition template specifies that for each new added composite partition, its subpartition data will be considered for a partial index (ON) or not (OFF). If indexing is not specified in the subpartition template, then the default is that data stored in newly-added subpartitions will considered for a partial index (ON).
READ_ONLY	VARCHAR2(4)		Values of READ ONLY or READ WRITE can be specified in a subpartition template. The value in this column indicates whether the subpartition template specifies that for each new added composite partition, its subpartition data will be read only (YES) or not (NO). If the read clause is not specified in the subpartition template, then the default is that data stored in newly-added subpartitions will be read/write (NO).

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- "DBA_SUBPARTITION_TEMPLATES"

4.116 ALL_SUMDELTA

ALL_SUMDELTA lists direct path load entries accessible to the current user.

Column	Datatype	NULL	Description
TABLEOBJ#	NUMBER	NOT NULL	Object number of the table
PARTITIONOBJ#	NUMBER	NOT NULL	Object number of table partitions (if the table is partitioned)
DMLOPERATION	VARCHAR2(1)		Type of DML operation applied to the table
SCN	NUMBER	NOT NULL	SCN when the bulk DML occurred
TIMESTAMP	DATE	NOT NULL	Timestamp of the log entry
LOWROWID	ROWID	NOT NULL	Start ROWID in the loaded rowid range
HIGHROWID	ROWID	NOT NULL	End ROWID in the loaded rowid range
SEQUENCE	NUMBER		Sequence number of the direct load
XID	NUMBER		Transaction ID

4.117 ALL_SYNC_CAPTURE

ALL_SYNC_CAPTURE displays information about the synchronous capture processes that store the captured changes in queues accessible to the current user.

Related View

DBA_SYNC_CAPTURE displays information about all synchronous capture processes in the database.

Column	Datatype	NULL	Description
CAPTURE_NAME	VARCHAR2(128)	NOT NULL	Name of the capture process
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue used for holding captured changes
QUEUE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the queue used for holding captured changes
RULE_SET_NAME	VARCHAR2(128)		Rule set used by the capture process
RULE_SET_OWNER	VARCHAR2(128)		Owner of the rule set
CAPTURE_USER	VARCHAR2(128)		Current user who is enqueuing captured messages

4.118 ALL_SYNC_CAPTURE_PREPARED_TABS

ALL_SYNC_CAPTURE_PREPARED_TABS displays information about the tables accessible to the current user that are prepared for synchronous capture instantiation.

Related View

DBA_SYNC_CAPTURE_PREPARED_TABS displays information about all tables in the database that are prepared for synchronous capture instantiation.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table prepared for synchronous capture instantiation
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table prepared for synchronous capture instantiation
SCN	NUMBER	NOT NULL	SCN from which changes can be captured
TIMESTAMP	DATE		Time at which the table was ready to be instantiated

See Also

"DBA_SYNC_CAPTURE_PREPARED_TABS"

4.119 ALL_SYNC_CAPTURE_TABLES

ALL_SYNC_CAPTURE_TABLES displays information about the tables accessible to the current user that are captured by synchronous captures.

Related View

DBA_SYNC_CAPTURE_TABLES displays information about all tables in the database that are captured by synchronous captures.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)		Owner of the synchronous capture table
TABLE_NAME	VARCHAR2(128)		Name of the synchronous capture table
ENABLED	VARCHAR2(3)		Indicates whether synchronous capture is enabled for the table (YES) or not (NO)

See Also

"DBA_SYNC_CAPTURE_TABLES"

4.120 ALL_SYNONYMS

`ALL_SYNONYMS` describes the synonyms accessible to the current user.

The following criteria determine the list of synonyms that `ALL_SYNONYMS` shows:

- All private synonyms owned by the logged-in user, even if the base object pointed to is not accessible.
- All public synonyms, even if the base object pointed to is not accessible.
- All private synonyms owned by a different user, where the ultimate base object pointed to by that synonym or by any chain of nested synonyms, is know to be accessible because of a grant to the logged-in user, or a grant to a role in effect for this session.
- If the current session has any of the following privileges, then all synonyms that point directly to local objects are shown because it is assumed that the session can access those objects:
  - `LOCK ANY TABLE`
  - `READ ANY TABLE`
  - `SELECT ANY TABLE`
  - `INSERT ANY TABLE`
  - `UPDATE ANY TABLE`
  - `DELETE ANY TABLE`

  Synonyms that point to remote objects are excluded because the system privileges just listed do not automatically convey access to those remote objects. Also, if the synonyms point to objects other than tables and views (such as sequences, PL/SQL procedures, and so on) then this rule may show synonyms that ultimately resolve to objects that this session cannot access.
- All private synonyms owned by a different user, where the synonym is via a database link, are excluded.

Related Views

- `DBA_SYNONYMS` describes all synonyms in the database.
- `USER_SYNONYMS` describes the synonyms owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
`OWNER`	`VARCHAR2(128)`		Owner of the synonym
`SYNONYM_NAME`	`VARCHAR2(128)`		Name of the synonym
`TABLE_OWNER`	`VARCHAR2(128)`		Owner of the object referenced by the synonym, or creator of the referring synonym if the target is a public synonym (that is, the object referred to by `TABLE_NAME`). Although the column is called `TABLE_OWNER`, the object owned is not necessarily a table. It can be any general object such as a view, sequence, stored procedure, synonym, and so on.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
TABLE_NAME	VARCHAR2(128)		Name of the object referenced by the synonym. Although the column is called TABLE_NAME, the object does not necessarily have to be a table. It can be any general object such as a view, sequence, stored procedure, synonym, and so on.
DB_LINK	VARCHAR2(128)		Name of the database link referenced, if any
ORIGIN_CON_ID	VARCHAR2(256)		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root)

4.121 ALL_TAB_COL_STAT_MODELS

ALL_TAB_COL_STAT_MODELS describes real-time statistics models for all tables accessible to the current user.

Real-time statistics models use machine learning algorithms to predict the number of distinct values (NDV) for table columns.

Related Views

- DBA_TAB_COL_STAT_MODELS describes real-time statistics models for all tables in the database.
- USER_TAB_COL_STAT_MODELS describes real-time statistics models for all tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the table column to which the model applies
STATS_TYPE	VARCHAR2(7)		Statistics type The value of this column is always NDV.
MODEL_NAME	VARCHAR2(200)	NOT NULL	Name of the model
STATUS	VARCHAR2(8)		Status of the model (ENABLED or DISABLED)
CREATED	TIMESTAMP(6) WITH TIME ZONE		Time at which the model was created
LAST_USED	TIMESTAMP(6) WITH TIME ZONE		Time at which the model was most recently used

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.122 ALL_TAB_COL_STATISTICS

ALL_TAB_COL_STATISTICS displays column statistics and histogram information extracted from ALL_TAB_COLUMNS.

Related Views

- DBA_TAB_COL_STATISTICS displays such information extracted from "DBA_TAB_COLUMNS".
- USER_TAB_COL_STATISTICS displays such information extracted from "USER_TAB_COLUMNS". This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table
COLUMN_NAME	VARCHAR2(128)		Column name
NUM_DISTINCT	NUMBER		Number of distinct values in the column
LOW_VALUE	RAW(1000)		Low value in the column
HIGH_VALUE	RAW(1000)		High value in the column
DENSITY	NUMBER		If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints. If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT.
NUM_NULLS	NUMBER		Number of NULLs in the column
NUM_BUCKETS	NUMBER		Number of buckets in histogram for the column
LAST_ANALYZED	DATE		Date on which this column was most recently analyzed
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this column
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
NOTES	VARCHAR2(99)		Describes some additional properties of the statistics. For example: • A value of INCREMENTAL indicates that the global statistics are derived from synopses, that is, the global statistics are incrementally maintained. • A value of STATS_ON_CONVENTIONAL_LOAD indicates that the statistics are obtained by online statistics gathering for conventional DML.
AVG_COL_LEN	NUMBER		Average length of the column (in bytes)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
HISTOGRAM	VARCHAR2(15)		Indicates existence/type of histogram: • NONE • FREQUENCY • HEIGHT BALANCED • HYBRID • TOP-FREQUENCY
SCOPE	VARCHAR2(7)		The value is SHARED for statistics gathered on any table other than global temporary tables. For a global tempoary table, the possible values are: • SESSION - Indicates that the statistics are session-specific • SHARED - Indicates that the statistics are shared across all sessions See *Oracle AI Database PL/SQL Packages and Types Reference* for information about using the GLOBAL_TEMP_TABLE_STATS preference of the DBMS_STATS package to control whether to gather session or shared statistics for global temporary tables.

4.123 ALL_TAB_COLS

ALL_TAB_COLS describes the columns of the tables, views, and clusters accessible to the current user.

To gather statistics for this view, use the DBMS_STATS package.

This view differs from ALL_TAB_COLUMNS in that system-generated hidden columns are not filtered out.

Related Views

- DBA_TAB_COLS describes the columns of all tables, views, and clusters in the database.
- USER_TAB_COLS describes the columns of the tables, views, and clusters owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table, view, or cluster
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table, view, or cluster
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Column name
DATA_TYPE	VARCHAR2(128)		Data type of the column

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DATA_TYPE_MOD	VARCHAR2(3)		Data type modifier of the column
DATA_TYPE_OWNER	VARCHAR2(128)		Owner of the data type of the column
DATA_LENGTH	NUMBER	NOT NULL	Length of the column (in bytes)
DATA_PRECISION	NUMBER		Decimal precision for NUMBER datatype; binary precision for FLOAT datatype; NULL for all other datatypes
DATA_SCALE	NUMBER		Digits to the right of the decimal point in a number
NULLABLE	VARCHAR2(1)		Indicates whether a column allows NULLs. The value is N if there is a NOT NULL constraint on the column or if the column is part of a PRIMARY KEY.
COLUMN_ID	NUMBER		Sequence number of the column as created
DEFAULT_LENGTH	NUMBER		Length of the default value for the column
DATA_DEFAULT	LONG		Default value for the column
DATA_DEFAULT_VC	VARCHAR2(4000)		Default value for the column This column may truncate the default value.
NUM_DISTINCT	NUMBER		Number of distinct values in the column. This column remains for backward compatibility with Oracle7. This information is now in the {TAB|PART}_COL_STATISTICS views.
LOW_VALUE	RAW(1000)		Low value in the column. This column remains for backward compatibility with Oracle7. This information is now in the {TAB|PART}_COL_STATISTICS views.
HIGH_VALUE	RAW(1000)		High value in the column. This column remains for backward compatibility with Oracle7. This information is now in the {TAB|PART}_COL_STATISTICS views.
DENSITY	NUMBER		If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints. If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT. This column remains for backward compatibility with Oracle7. This information is now in the {TAB|PART}_COL_STATISTICS views.
NUM_NULLS	NUMBER		Number of NULLs in the column
NUM_BUCKETS	NUMBER		Number of buckets in the histogram for the column **Note:** The number of buckets in a histogram is specified in the SIZE parameter of the ANALYZE SQL statement. However, Oracle AI Database does not create a histogram with more buckets than the number of rows in the sample. Also, if the sample contains any values that are very repetitious, Oracle AI Database creates the specified number of buckets, but the value indicated by this column may be smaller because of an internal compression algorithm.
LAST_ANALYZED	DATE		Date on which this column was most recently analyzed

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this column
CHARACTER_SET_NAME	VARCHAR2(44)		Name of the character set: • CHAR_CS • NCHAR_CS
CHAR_COL_DECL_LENGTH	NUMBER		Declaration length of the character type column
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
AVG_COL_LEN	NUMBER		Average length of the column (in bytes)
CHAR_LENGTH	NUMBER		Displays the length of the column in characters. This value only applies to the following datatypes: • CHAR • VARCHAR2 • NCHAR • NVARCHAR2
CHAR_USED	VARCHAR2(1)		Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the datatype is not any of the following (NULL): • CHAR • VARCHAR2 • NCHAR • NVARCHAR2
V80_FMT_IMAGE	VARCHAR2(3)		Indicates whether the column data is in release 8.0 image format (YES) or not (NO)
DATA_UPGRADED	VARCHAR2(3)		Indicates whether the column data has been upgraded to the latest type version format (YES) or not (NO)
HIDDEN_COLUMN	VARCHAR2(3)		Indicates whether the column is a hidden column (YES) or not (NO)
VIRTUAL_COLUMN	VARCHAR2(3)		Indicates whether the column is a virtual column (YES) or not (NO)
SEGMENT_COLUMN_ID	NUMBER		Sequence number of the column in the segment
INTERNAL_COLUMN_ID	NUMBER	NOT NULL	Internal sequence number of the column
HISTOGRAM	VARCHAR2(15)		Indicates existence/type of histogram: • NONE • FREQUENCY • TOP-FREQUENCY • HEIGHT BALANCED • HYBRID
QUALIFIED_COL_NAME	VARCHAR2(4000)		Qualified column name
USER_GENERATED	VARCHAR2(3)		Indicates whether the column is a user-generated column (YES) or a system-generated column (NO). Invisible columns are hidden columns that are also user- generated columns.
DEFAULT_ON_NULL	VARCHAR2(3)		Indicates whether the column has DEFAULT ON NULL for INSERT semantics (YES) or not (NO)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DEFAULT_ON_NULL_UPD	VARCHAR2(3)		Indicates whether the column has DEFAULT ON NULL for UPDATE semantics (YES) or not (NO)
RESERVABLE_COLUMN	VARCHAR2(3)		Indicates whether the column is a reservable column (YES) or not (NO)
IDENTITY_COLUMN	VARCHAR2(3)		Indicates whether the column is an identity column (YES) or not (NO)
EVALUATION_EDITION	VARCHAR2(128)		Name of the edition in which editioned objects referenced in an expression column are resolved
UNUSABLE_BEFORE	VARCHAR2(128)		Name of the oldest edition in which the column is usable
UNUSABLE_BEGINNING	VARCHAR2(128)		Name of the oldest edition in which the column becomes perpetually unusable
COLLATION	VARCHAR2(100)		Collation for the column. Only applies to columns with character data types.
COLLATED_COLUMN_ID	NUMBER		Internal sequence number of a column, for which this virtual column generates a collation key.
DOMAIN_OWNER	VARCHAR2(128)		If a data use case domain is specified for the column, the owner of the data use case domain
DOMAIN_NAME	VARCHAR2(128)		If a data use case domain is specified for the column, the name of the data use case domain
DOMAIN_COLUMN_NAME	VARCHAR2(128)		If a data use case domain is specified for the column, the name of the data use case domain column
DOMAIN_ASSOCIATION_ID	NUMBER		If a data use case domain is specified for the column, the INTERNAL_COLUMN_ID of the first column associated with the domain
JSON_MODIFIER	VARCHAR2(448)		JSON-type modifier for the column A value is displayed only for columns of data type JSON. If one or more JSON-type modifiers are specified for the column, then the following is displayed: JSON(*modifier* [, *modifier*]...) Possible values for *modifier*: • ARRAY - JSON array • OBJECT - JSON object • SCALAR - JSON scalar • *data_type* - JSON scalar of type *data_type* If a JSON-type modifier is not specified for the column, then the following is displayed: JSON( )
VECTOR_INFO	VARCHAR2(56)		Indicates the number of vectors and their data type in an ONNX model Format: VECTOR(*dimension*,*element_type*) Example: VECTOR(768,float32)

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.124 ALL_TAB_COLUMNS

ALL_TAB_COLUMNS describes the columns of the tables, views, and clusters accessible to the current user.

To gather statistics for this view, use the DBMS_STATS package.

This view filters out system-generated hidden columns. The ALL_TAB_COLS view does not filter out system-generated hidden columns.

Related Views

- DBA_TAB_COLUMNS describes the columns of all tables, views, and clusters in the database.
- USER_TAB_COLUMNS describes the columns of the tables, views, and clusters owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table, view, or cluster
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table, view, or cluster
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Column name
DATA_TYPE	VARCHAR2(128)		Data type of the column
DATA_TYPE_MOD	VARCHAR2(3)		Data type modifier of the column
DATA_TYPE_OWNER	VARCHAR2(128)		Owner of the data type of the column
DATA_LENGTH	NUMBER	NOT NULL	Length of the column (in bytes)
DATA_PRECISION	NUMBER		Decimal precision for NUMBER data type; binary precision for FLOAT data type; NULL for all other data types
DATA_SCALE	NUMBER		Digits to the right of the decimal point in a number
NULLABLE	VARCHAR2(1)		Indicates whether a column allows NULLs. The value is N if there is a NOT NULL constraint on the column or if the column is part of a PRIMARY KEY. The constraint should be in an ENABLE VALIDATE state.
COLUMN_ID	NUMBER		Sequence number of the column as created
DEFAULT_LENGTH	NUMBER		Length of the default value for the column
DATA_DEFAULT	LONG		Default value for the column
DATA_DEFAULT_VC	VARCHAR2(4000)		Default value for the column This column may truncate the default value.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
NUM_DISTINCT	NUMBER		Number of distinct values in the column. This column remains for backward compatibility with Oracle7. This information is now in the {TAB|PART}_COL_STATISTICS views.
LOW_VALUE	RAW(1000)		Low value in the column. This column remains for backward compatibility with Oracle7. This information is now in the {TAB|PART}_COL_STATISTICS views.
HIGH_VALUE	RAW(1000)		High value in the column. This column remains for backward compatibility with Oracle7. This information is now in the {TAB|PART}_COL_STATISTICS views.
DENSITY	NUMBER		If a histogram is available on COLUMN_NAME, then this column displays the selectivity of a value that spans fewer than 2 endpoints in the histogram. It does not represent the selectivity of values that span 2 or more endpoints. If a histogram is not available on COLUMN_NAME, then the value of this column is 1/NUM_DISTINCT. This column remains for backward compatibility with Oracle7. This information is now in the {TAB|PART}_COL_STATISTICS views.
NUM_NULLS	NUMBER		Number of NULLs in the column
NUM_BUCKETS	NUMBER		Number of buckets in the histogram for the column **Note:** The number of buckets in a histogram is specified in the SIZE parameter of the ANALYZE SQL statement. However, Oracle AI Database does not create a histogram with more buckets than the number of rows in the sample. Also, if the sample contains any values that are very repetitious, Oracle AI Database creates the specified number of buckets, but the value indicated by this column may be smaller because of an internal compression algorithm.
LAST_ANALYZED	DATE		Date on which this column was most recently analyzed
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this column
CHARACTER_SET_NAME	VARCHAR2(44)		Name of the character set: • CHAR_CS • NCHAR_CS
CHAR_COL_DECL_LENGTH	NUMBER		Declaration length of the character type column
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
AVG_COL_LEN	NUMBER		Average length of the column (in bytes)
CHAR_LENGTH	NUMBER		Displays the length of the column in characters. This value only applies to the following datatypes: • CHAR • VARCHAR2 • NCHAR • NVARCHAR2

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
CHAR_USED	VARCHAR2(1)		Indicates that the column uses BYTE length semantics (B) or CHAR length semantics (C), or whether the datatype is not any of the following (NULL): • CHAR • VARCHAR2 • NCHAR • NVARCHAR2
V80_FMT_IMAGE	VARCHAR2(3)		Indicates whether the column data is in release 8.0 image format (YES) or not (NO)
DATA_UPGRADED	VARCHAR2(3)		Indicates whether the column data has been upgraded to the latest type version format (YES) or not (NO)
HISTOGRAM	VARCHAR2(15)		Indicates existence/type of histogram: • NONE • FREQUENCY • TOP-FREQUENCY • HEIGHT BALANCED • HYBRID

4.126 ALL_TAB_HISTGRM_PENDING_STATS

ALL_TAB_HISTGRM_PENDING_STATS describes pending statistics for tables, partitions, and subpartitions accessible to the current user.

Related Views

- DBA_TAB_HISTGRM_PENDING_STATS describes pending statistics for tables, partitions, and subpartitions in the database.
- USER_TAB_HISTGRM_PENDING_STATS describes pending statistics for tables, partitions, and subpartitions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table
PARTITION_NAME	VARCHAR2(128)		Name of the partition
SUBPARTITION_NAME	VARCHAR2(128)		Name of the subpartition
COLUMN_NAME	VARCHAR2(128)		Name of the column
ENDPOINT_NUMBER	NUMBER		Endpoint number
ENDPOINT_VALUE	NUMBER		Normalized endpoint value
ENDPOINT_ACTUAL_VALUE	VARCHAR2(4000)		Actual endpoint value
ENDPOINT_ACTUAL_VALUE_RAW	RAW(1000)		Endpoint actual value in raw format
ENDPOINT_REPEAT_COUNT	NUMBER		Frequency of the endpoint (applies only to hybrid histograms, and is set to 0 for other histogram types)

4.127 ALL_TAB_HISTOGRAMS

ALL_TAB_HISTOGRAMS describes histograms on tables and views accessible to the current user.

The ALL_TAB_HISTOGRAMS view may contain a one-bucket histogram, which in fact signifies "No histogram" to the Oracle AI Database software. Therefore, it should not be queried to indicate the presence or absence of a histogram on a particular column. Instead, query the value of column HISTOGRAM in the ALL_TAB_COL_STATISTICS view.

Related Views

- DBA_TAB_HISTOGRAMS describes histograms on all tables and views in the database.
- USER_TAB_HISTOGRAMS describes histograms on all tables and views owned by the current user. This view does not display the OWNER column.

> **Note**
>
> These views are populated only if you collect statistics on the table using the DBMS_STATS package. For more information, see *Oracle AI Database PL/SQL Packages and Types Reference*.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table
COLUMN_NAME	VARCHAR2(4000)		Column name or attribute of the object type column
ENDPOINT_NUMBER	NUMBER		Histogram bucket number
ENDPOINT_VALUE	NUMBER		Normalized endpoint value for this bucket
ENDPOINT_ACTUAL_VALUE	VARCHAR2(4000)		Actual (not normalized) string value of the endpoint for this bucket
ENDPOINT_ACTUAL_VALUE_RAW	RAW(1000)		Endpoint actual value in raw format
ENDPOINT_REPEAT_COUNT	NUMBER		Frequency of the endpoint (applies only to hybrid histograms, and is set to 0 for other histogram types)
SCOPE	VARCHAR2(7)		The value is SHARED for statistics gathered on any table other than global temporary tables. For a global tempoary table, the possible values are: • SESSION - Indicates that the statistics are session-specific • SHARED - Indicates that the statistics are shared across all sessions See *Oracle AI Database PL/SQL Packages and Types Reference* for information about using the GLOBAL_TEMP_TABLE_STATS preference of the DBMS_STATS package to control whether to gather session or shared statistics for global temporary tables.

4.129 ALL_TAB_MODIFICATIONS

ALL_TAB_MODIFICATIONS describes tables accessible to the current user that have been modified since the last time statistics were gathered on the tables.

Related Views

- DBA_TAB_MODIFICATIONS describes such information for all tables in the database.
- USER_TAB_MODIFICATIONS describes such information for tables owned by the current user. This view does not display the TABLE_OWNER column.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)		Owner of the modified table
TABLE_NAME	VARCHAR2(128)		Name of the modified table
PARTITION_NAME	VARCHAR2(128)		Name of the modified partition
SUBPARTITION_NAME	VARCHAR2(128)		Name of the modified subpartition
INSERTS	NUMBER		Approximate number of inserts since the last time statistics were gathered
UPDATES	NUMBER		Approximate number of updates since the last time statistics were gathered
DELETES	NUMBER		Approximate number of deletes since the last time statistics were gathered
TIMESTAMP	DATE		Indicates the last time the table was modified
TRUNCATED	VARCHAR2(3)		Indicates whether the table has been truncated since the last analyze (YES) or not (NO)
DROP_SEGMENTS	NUMBER		Number of partition and subpartition segments dropped since the last analyze

4.130 ALL_TAB_PARTITIONS

ALL_TAB_PARTITIONS displays partition-level partitioning information, partition storage parameters, and partition statistics generated by the DBMS_STATS package for the partitions accessible to the current user.

Related Views

- DBA_TAB_PARTITIONS displays such information for all partitions in the database.
- USER_TAB_PARTITIONS displays such information for the partitions of all partitioned objects owned by the current user. This view does not display the TABLE_OWNER column.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> Columns marked with an asterisk (*) are populated only if you collect statistics on the table with the DBMS_STATS package.

> **Note**
>
> The following is true for the columns below that include double asterisks (**) in the column description:
>
> The column can display information about segment-level attributes (for simple partitioned tables) or metadata (for composite partitioned tables). In a simple partitioned table, the partition physically contains the data (the segment) in the database. In a composite partitioned table, the partition is metadata and the data itself is stored in the subpartitions.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table
COMPOSITE	VARCHAR2(3)		Indicates whether the table is composite-partitioned (YES) or not (NO)
PARTITION_NAME	VARCHAR2(128)		Name of the partition
SUBPARTITION_COUNT	NUMBER		If this is a composite partitioned table, the number of subpartitions in the partition
HIGH_VALUE	LONG		Partition bound value expression
HIGH_VALUE_LENGTH	NUMBER		Length of the partition bound value expression
PARTITION_POSITION	NUMBER		Position of the partition within the table
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the partition**
PCT_FREE	NUMBER		Minimum percentage of free space in a block**
PCT_USED	NUMBER		Minimum percentage of used space in a block**
INI_TRANS	NUMBER		Initial number of transactions**
MAX_TRANS	NUMBER		Maximum number of transactions**
INITIAL_EXTENT	NUMBER		Size of the initial extent in bytes (for a range partition); size of the initial extent in blocks (for a composite partition)**
NEXT_EXTENT	NUMBER		Size of secondary extents in bytes (for a range partition); size of secondary extents in blocks (for a composite partition)**
MIN_EXTENT	NUMBER		Minimum number of extents allowed in the segment**
MAX_EXTENT	NUMBER		Maximum number of extents allowed in the segment**
MAX_SIZE	NUMBER		Maximum number of blocks allowed in the segment**
PCT_INCREASE	NUMBER		Percentage increase in extent size**
FREELISTS	NUMBER		Number of process freelists allocated in this segment**
FREELIST_GROUPS	NUMBER		Number of freelist groups allocated in this segment**

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
LOGGING	VARCHAR2(7)		Indicates whether or not changes to the table are logged:** • NONE - Not specified **See Also:** the *_TAB_SUBPARTITIONS view • YES • NO
COMPRESSION	VARCHAR2(8)		Indicates the actual compression property for a partition of a simple partitioned table, or the default (if specified) for subpartitions for composite partitioned tables, otherwise NONE.** • NONE - The partition is composite, and a default setting is not specified for compression. **See Also:** the *_TAB_SUBPARTITIONS view • ENABLED - The setting for compression is enabled. • DISABLED - The setting for compression is disabled.
COMPRESS_FOR	VARCHAR2(30)		Default compression for what kind of operations:** • BASIC • ADVANCED • QUERY LOW • QUERY HIGH • ARCHIVE LOW • ARCHIVE HIGH • NULL The QUERY_LOW, QUERY_HIGH, ARCHIVE_LOW, and ARCHIVE_HIGH values are associated with Hybrid Columnar Compression, a feature of the Enterprise Edition of Oracle AI Database that is dependent on the underlying storage system. See *Oracle AI Database Concepts* for more information.
NUM_ROWS*	NUMBER		Number of rows in the partition
BLOCKS*	NUMBER		Number of used data blocks in the partition
EMPTY_BLOCKS	NUMBER		Number of empty (never used) data blocks in the partition. This column is populated only if you collect statistics on the table using the DBMS_STATS package.
AVG_SPACE*	NUMBER		Average amount of free space, in bytes, in a data block allocated to the partition
CHAIN_CNT*	NUMBER		Number of rows in the partition that are chained from one data block to another, or which have migrated to a new block, requiring a link to preserve the old ROWID
AVG_ROW_LEN*	NUMBER		Average length of a row in the partition (in bytes)
SAMPLE_SIZE	NUMBER		Sample size used in analyzing this partition
LAST_ANALYZED	DATE		Date on which this partition was most recently analyzed
BUFFER_POOL	VARCHAR2(7)		Buffer pool to be used for the partition blocks:** • DEFAULT • KEEP • RECYCLE • NULL

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
FLASH_CACHE	VARCHAR2(7)		Database Smart Flash Cache hint to be used for partition blocks:** • DEFAULT • KEEP • NONE Solaris and Oracle Linux functionality only.
CELL_FLASH_CACHE	VARCHAR2(7)		Cell flash cache hint to be used for partition blocks:** • DEFAULT • KEEP • NONE **See Also:** Oracle Exadata Storage Server Software documentation for more information
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics have been gathered or NO if statistics have been aggregated from subpartitions or have not been gathered
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
IS_NESTED	VARCHAR2(3)		Indicates whether this is a nested table partition (YES) or not (NO) **See Also:** the *_NESTED_TABLES view for the parent table name/column
PARENT_TABLE_PARTITION	VARCHAR2(128)		Parent table's corresponding partition **See Also:** the *_NESTED_TABLES view for the parent table name/column
INTERVAL	VARCHAR2(3)		Indicates whether the partition is in the interval section of an interval partitioned table (YES) or whether the partition is in the range section (NO)
SEGMENT_CREATED	VARCHAR2(4)		Indicates the actual segment creation property for a partition of a simple partitioned table, or the default (if specified) for subpartitions for composite partitioned tables, otherwise NONE.** For a simple partitioned table, this column indicates whether a segment was created (YES) or not (NO). For composite partitioned tables, this column indicates whether or not a default segment creation property was explicitly specified. Possible values: • NONE - No default segment creation property was specified at the partition level. This value appears only for composite partitions, and is treated as an unspecified value. • YES - Immediate segment creation was explicitly specified at the partition level and will be used as the default for all of its subpartitions. • NO - Deferred segment creation was explicitly specified at the partition level and will be used as the default for all of its subpartitions.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
INDEXING	VARCHAR2(4)		Indicates the actual indexing property for a partition of a simple partitioned table, or the default (if specified) for subpartitions for composite partitioned tables, otherwise NONE.** Possible values: • NONE - The partition is composite, and a default setting is not specified for indexing. This value appears only for composite partitions, and is treated as an unspecified value. When a user adds a subpartition to a table, since the defaults for the partition are unspecified, the ALL_PART_TABLES.DEF_INDEXING value is used for the newly created subpartition. • ON - INDEXING is on. • OFF - INDEXING is off.
READ_ONLY	VARCHAR2(4)		Indicates the default setting for the partition: • YES: The default setting for the partition is read-only. • NO: The default setting for the partition is read/write. • NONE: No default setting is specified for the partition.
INMEMORY	VARCHAR2(8)		Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for this partition
INMEMORY_PRIORITY	VARCHAR2(8)		Indicates the priority for In-Memory Column Store (IM column store) population. Possible values: • LOW • MEDIUM • HIGH • CRITICAL • NONE • NULL
INMEMORY_DISTRIBUTE	VARCHAR2(15)		Indicates how the IM column store is distributed in an Oracle Real Application Clusters (Oracle RAC) environment: • AUTO • BY ROWID RANGE • BY PARTITION • BY SUBPARTITION

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
INMEMORY_COMPRESSION	VARCHAR2(17)		Indicates the compression level for the IM column store: • NO MEMCOMPRESS • FOR DML • FOR QUERY [LOW | HIGH] • FOR CAPACITY [LOW | HIGH] • AUTO • NULL This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_PARTITIONS.
INMEMORY_DUPLICATE	VARCHAR2(13)		Indicates the duplicate setting for the IM column store in an Oracle RAC environment: • NO DUPLICATE • DUPLICATE • DUPLICATE ALL
CELLMEMORY	VARCHAR2(24)		The value for columnar compression in the storage cell flash cache. Possible values: • ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form • DISABLED: Oracle Exadata Storage is prevented from caching in columnar form • NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression) • FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format • FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format This column is intended for use with Oracle Exadata.
INMEMORY_SERVICE	VARCHAR2(12)		Indicates how the IM column store is populated on various instances. The possible values are: • DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default. • NONE: Data is not populated on any instance. • ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter. • USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.
INMEMORY_SERVICE_NAME	VARCHAR2(100)		Indicates the service name for the service on which the IM column store should be populated. This column has a value only when the corresponding INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
MEMOPTIMIZE_READ	VARCHAR2(8)		Indicates whether the table is enabled for Fast Key Based Access (ENABLED) or not (DISABLED)
MEMOPTIMIZE_WRITE	VARCHAR2(8)		For internal use only
HIGH_VALUE_CLOB	CLOB		High value (boundary) information for the partition, in CLOB format
HIGH_VALUE_JSON	JSON		High value (boundary) information for the partition, in JSON format

4.131 ALL_TAB_PENDING_STATS

ALL_TAB_PENDING_STATS describes pending statistics for tables, partitions, and subpartitions accessible to the current user.

Related Views

- DBA_TAB_PENDING_STATS describes pending statistics for tables, partitions, and subpartitions in the database.
- USER_TAB_PENDING_STATS describes pending statistics for tables, partitions, and subpartitions owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table
PARTITION_NAME	VARCHAR2(128)		Name of the partition
SUBPARTITION_NAME	VARCHAR2(128)		Name of the subpartition
NUM_ROWS	NUMBER		Number of rows
BLOCKS	NUMBER		Number of blocks
AVG_ROW_LEN	NUMBER		Average row length
IM_IMCU_COUNT	NUMBER		Number of In-Memory Compression Units (IMCUs) in the table.
IM_BLOCK_COUNT	NUMBER		Number of In-Memory blocks in the table.
SCAN_RATE	NUMBER		Scan rate for the table in megabytes per second. This statistic is only relevant or meaningful for external tables.
SAMPLE_SIZE	NUMBER		Sample size

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
LAST_ANALYZED	DATE		Time of last analyze operation

4.132 ALL_TAB_PRIVS

ALL_TAB_PRIVS describes grants.

ALL_TAB_PRIVS describes the following types of grants:

- Object grants for which the current user is the object owner, grantor, or grantee
- Object grants for which an enabled role or PUBLIC is the grantee

Related Views

- DBA_TAB_PRIVS describes all object grants in the database.
- USER_TAB_PRIVS describes the object grants for which the current user is the object owner, grantor, or grantee.

Column	Datatype	NULL	Description
GRANTOR	VARCHAR2(128)		Name of the user who performed the grant
GRANTEE	VARCHAR2(128)		Name of the user or role to whom access was granted
TABLE_SCHEMA	VARCHAR2(128)		Schema of the object
TABLE_NAME	VARCHAR2(128)		Name of the object
PRIVILEGE	VARCHAR2(40)		Privilege on the object
GRANTABLE	VARCHAR2(3)		Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)
HIERARCHY	VARCHAR2(3)		Indicates whether the privilege was granted with the HIERARCHY OPTION (YES) or not (NO)
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
TYPE	VARCHAR2(24)		Type of the object
INHERITED	VARCHAR2(3)		Indicates whether the privilege grant was inherited from another container (YES) or not (NO)

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.133 ALL_TAB_PRIVS_MADE

ALL_TAB_PRIVS_MADE describes the object grants for which the current user is the object owner or grantor.

Related View

USER_TAB_PRIVS_MADE describes the object grants for which the current user is the object owner. This view does not display the OWNER column.

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2(128)		Name of the user or role to whom access was granted
OWNER	VARCHAR2(128)		Owner of the object
TABLE_NAME	VARCHAR2(128)		Name of the object
GRANTOR	VARCHAR2(128)		Name of the user who performed the grant
PRIVILEGE	VARCHAR2(40)		Privilege on the object
GRANTABLE	VARCHAR2(3)		Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)
HIERARCHY	VARCHAR2(3)		Indicates whether the privilege was granted with the HIERARCHY OPTION (YES) or not (NO)
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
TYPE	VARCHAR2(24)		Type of the object
INHERITED	VARCHAR2(3)		Indicates whether the privilege grant was inherited from another container (YES) or not (NO)

4.134 ALL_TAB_PRIVS_RECD

ALL_TAB_PRIVS_RECD describes object grants.

ALL_TAB_PRIVS_RECD describes the following types of grants:

- Object grants for which the current user is the grantee
- Object grants for which an enabled role or PUBLIC is the grantee

Copyright © 2002, 2025, Oracle and/or its affiliates.

Related View

USER_TAB_PRIVS_RECD describes the object grants for which the current user is the grantee. This view does not display the GRANTEE column.

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2(128)		Name of the user or role to whom access was granted
OWNER	VARCHAR2(128)		Owner of the object
TABLE_NAME	VARCHAR2(128)		Name of the object
GRANTOR	VARCHAR2(128)		Name of the user who performed the grant
PRIVILEGE	VARCHAR2(40)		Privilege on the object
GRANTABLE	VARCHAR2(3)		Indicates whether the privilege was granted with the GRANT OPTION (YES) or not (NO)
HIERARCHY	VARCHAR2(3)		Indicates whether the privilege was granted with the HIERARCHY OPTION (YES) or not (NO)
COMMON	VARCHAR2(3)		Indicates how the grant was made. Possible values: • YES if the privilege was granted commonly (CONTAINER=ALL was used) • NO if the privilege was granted locally (CONTAINER=ALL was not used)
TYPE	VARCHAR2(24)		Type of the object
INHERITED	VARCHAR2(3)		Indicates whether the privilege grant was inherited from another container (YES) or not (NO)

4.135 ALL_TAB_STAT_PREFS

ALL_TAB_STAT_PREFS displays information about statistics preferences for the tables accessible to the current user.

Related Views

- DBA_TAB_STAT_PREFS displays information about statistics preferences for all tables in the database.
- USER_TAB_STAT_PREFS displays information about statistics preferences for the tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
PREFERENCE_NAME	VARCHAR2(30)		Name of the preference
PREFERENCE_VALUE	VARCHAR2(4000)		Value of the preference

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.136 ALL_TAB_STATISTICS

ALL_TAB_STATISTICS displays optimizer statistics for the tables accessible to the current user.

Related Views

- DBA_TAB_STATISTICS displays optimizer statistics for all tables in the database.
- USER_TAB_STATISTICS displays optimizer statistics for the tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the object
TABLE_NAME	VARCHAR2(128)		Name of the table
PARTITION_NAME	VARCHAR2(128)		Name of the partition
PARTITION_POSITION	NUMBER		Position of the partition within the table
SUBPARTITION_NAME	VARCHAR2(128)		Name of the subpartition
SUBPARTITION_POSITION	NUMBER		Position of the subpartition within the partition
OBJECT_TYPE	VARCHAR2(12)		Type of the object: • TABLE • PARTITION • SUBPARTITION
NUM_ROWS	NUMBER		Number of rows in the object
BLOCKS	NUMBER		Number of used blocks in the object
EMPTY_BLOCKS	NUMBER		Number of empty blocks in the object
AVG_SPACE	NUMBER		Average available free space in the object
CHAIN_CNT	NUMBER		Number of chained rows in the object
AVG_ROW_LEN	NUMBER		Average row length, including row overhead
AVG_SPACE_FREELIST_BLOCKS	NUMBER		Average freespace of all blocks on a freelist
NUM_FREELIST_BLOCKS	NUMBER		Number of blocks on the freelist
AVG_CACHED_BLOCKS	NUMBER		Average number of blocks in the buffer cache
AVG_CACHE_HIT_RATIO	NUMBER		Average cache hit ratio for the object
IM_IMCU_COUNT	NUMBER		Number of In-Memory Compression Units (IMCUs) in the table
IM_BLOCK_COUNT	NUMBER		Number of In-Memory blocks in the table
IM_STAT_UPDATE_TIME	TIMESTAMP(9)		The timestamp of the most recent update to the In-Memory statistics
SCAN_RATE	NUMBER		Scan rate for the object in megabytes per second. This statistic is only relevant or meaningful for external tables.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SAMPLE_SIZE	NUMBER		Sample size used in analyzing the table
LAST_ANALYZED	DATE		Date of the most recent time the table was analyzed
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
STATTYPE_LOCKED	VARCHAR2(5)		Type of statistics lock: • DATA • CACHE • ALL
STALE_STATS	VARCHAR2(7)		Indicates whether statistics for the object are stale (YES) or not (NO)
NOTES	CHAR(25)		Describes some additional properties of the statistics. For example, a value of STATS_ON_CONVENTIONAL_LOAD indicates that the statistics are obtained by online statistics gathering for conventional DML.
SCOPE	VARCHAR2(7)		The value is SHARED for statistics gathered on any table other than global temporary tables. For a global temporary table, the possible values are: • SESSION - Indicates that the statistics are session-specific • SHARED - Indicates that the statistics are shared across all sessions See *Oracle AI Database PL/SQL Packages and Types Reference* for information about using the GLOBAL_TEMP_TABLE_STATS preference of the DBMS_STATS package to control whether to gather session or shared statistics for global temporary tables.

4.137 ALL_TAB_STATS_HISTORY

ALL_TAB_STATS_HISTORY provides a history of table statistics modifications for all tables accessible to the current user.

Related Views

- DBA_TAB_STATS_HISTORY provides a history of table statistics modifications for all tables in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- USER_TAB_STATS_HISTORY provides a history of table statistics modifications for all tables owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the object
TABLE_NAME	VARCHAR2(128)		Name of the table
PARTITION_NAME	VARCHAR2(128)		Name of the partition
SUBPARTITION_NAME	VARCHAR2(128)		Name of the subpartition
STATS_UPDATE_TIME	TIMESTAMP(6) WITH TIME ZONE		Time at which the statistics were updated

4.138 ALL_TAB_SUBPARTITIONS

ALL_TAB_SUBPARTITIONS displays, for each table subpartition accessible to the current user, the subpartition name, name of the table and partition to which it belongs, its storage attributes, and statistics generated by the DBMS_STATS package.

Related Views

- DBA_TAB_SUBPARTITIONS displays such information for all subpartitions in the database.
- USER_TAB_SUBPARTITIONS displays such information for subpartitions of all partitioned objects owned by the current user. This view does not display the TABLE_OWNER column.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
PARTITION_NAME	VARCHAR2(128)		Name of the partition
SUBPARTITION_NAME	VARCHAR2(128)		Name of the subpartition
HIGH_VALUE	LONG		Subpartition bound value expression
HIGH_VALUE_LENGTH	NUMBER	NOT NULL	Length of the subpartition bound value expression
PARTITION_POSITION	NUMBER		Position of the partition within the table
SUBPARTITION_POSITION	NUMBER		Position of the subpartition within the partition
TABLESPACE_NAME	VARCHAR2(30)	NOT NULL	Name of the tablespace containing the subpartition
PCT_FREE	NUMBER	NOT NULL	Minimum percentage of free space in a block
PCT_USED	NUMBER		Minimum percentage of used space in a block
INI_TRANS	NUMBER	NOT NULL	Initial number of transactions
MAX_TRANS	NUMBER	NOT NULL	Maximum number of transactions

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
INITIAL_EXTENT	NUMBER		Size of the initial extent in bytes (for a range partition); size of the initial extent in blocks (for a composite partition)
NEXT_EXTENT	NUMBER		Size of secondary extents in bytes (for a range partition); size of secondary extents in blocks (for a composite partition)
MIN_EXTENT	NUMBER		Minimum number of extents allowed in the segment
MAX_EXTENT	NUMBER		Maximum number of extents allowed in the segment
MAX_SIZE	NUMBER		Maximum number of blocks allowed in the segment
PCT_INCREASE	NUMBER		Percentage increase in extent size
FREELISTS	NUMBER		Number of freelist groups allocated in this segment
FREELIST_GROUPS	NUMBER		Number of freelist groups allocated in this segment
LOGGING	VARCHAR2(3)		Indicates whether or not changes to the table are logged: • YES • NO
COMPRESSION	VARCHAR2(8)		Indicates whether this subpartition is compressed (ENABLED) or not (DISABLED)
COMPRESS_FOR	VARCHAR2(30)		Default compression for what kind of operations: • BASIC • ADVANCED • QUERY LOW • QUERY HIGH • ARCHIVE LOW • ARCHIVE HIGH • NULL The QUERY_LOW, QUERY_HIGH, ARCHIVE_LOW, and ARCHIVE_HIGH values are associated with Hybrid Columnar Compression, a feature of the Enterprise Edition of Oracle AI Database that is dependent on the underlying storage system. See *Oracle AI Database Concepts* for more information.
NUM_ROWS	NUMBER		Number of rows in the subpartition
BLOCKS	NUMBER		Number of blocks in the subpartition
EMPTY_BLOCKS	NUMBER		Number of empty blocks in the subpartition
AVG_SPACE	NUMBER		Average space in the subpartition
CHAIN_CNT	NUMBER		Chain count
AVG_ROW_LEN	NUMBER		Average row length
SAMPLE_SIZE	NUMBER		Sample size
LAST_ANALYZED	DATE		Date on which this table was most recently analyzed
BUFFER_POOL	VARCHAR2(7)		Buffer pool for this subpartition: • DEFAULT • KEEP • RECYCLE • NULL

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
FLASH_CACHE	VARCHAR2(7)		Database Smart Flash Cache hint to be used for subpartition blocks: • DEFAULT • KEEP • NONE Solaris and Oracle Linux functionality only.
CELL_FLASH_CACHE	VARCHAR2(7)		Cell flash cache hint to be used for subpartition blocks: • DEFAULT • KEEP • NONE **See Also:** Oracle Exadata Storage Server Software documentation for more information
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics have been gathered or NO if statistics have not been gathered
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
INTERVAL	VARCHAR2(3)		Indicates whether the partition is in the interval section of an interval partitioned table (YES) or whether the partition is in the range section (NO)
SEGMENT_CREATED	VARCHAR2(3)		Indicates whether the table subpartition segment has been created (YES) or not (NO); N/A indicates that this table is not subpartitioned
INDEXING	VARCHAR2(3)		Indicates the indexing property. Possible values: • ON - Indexing is on for this subpartition • OFF - Indexing is off for this subpartition
READ_ONLY	VARCHAR2(3)		Indicates whether a subpartition is read-only or read/write: • YES: The default setting for the subpartition is read-only. • NO: The default setting for the subpartition is read/write.
INMEMORY	VARCHAR2(8)		Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for this subpartition
INMEMORY_PRIORITY	VARCHAR2(8)		Indicates the priority for In-Memory Column Store (IM column store) population. Possible values: • LOW • MEDIUM • HIGH • CRITICAL • NONE • NULL
INMEMORY_DISTRIBUTE	VARCHAR2(15)		Indicates how the IM column store is distributed in an Oracle Real Application Clusters (Oracle RAC) environment: • AUTO • BY ROWID RANGE • DBY PARTITION • BY SUBPARTITION

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
INMEMORY_COMPRESSION	VARCHAR2(17)		Indicates the compression level for the IM column store: • NO MEMCOMPRESS • FOR DML • FOR QUERY [LOW | HIGH] • FOR CAPACITY [LOW | HIGH] • AUTO • NULL This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_SUBPARTITIONS.
INMEMORY_DUPLICATE			Indicates the duplicate setting for the IM column store in an Oracle RAC environment: • DUPLICATE • NO DUPLICATE • DUPLICATE ALL
INMEMORY_SERVICE	VARCHAR2(12)		Indicates how the IM column store is populated on various instances. The possible values are: • DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default. • NONE: Data is not populated on any instance. • ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter. • USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.
INMEMORY_SERVICE_NAME	VARCHAR2(1000)		Indicates the service name for the service on which the IM column store should be populated. This column has a value only when the corresponding INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null.
CELLMEMORY	VARCHAR2(24)		The value for columnar compression in the storage cell flash cache. Possible values: • ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form • DISABLED: Oracle Exadata Storage is prevented from caching in columnar form • NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression) • FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format • FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format This column is intended for use with Oracle Exadata.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
MEMOPTIMIZE_READ	VARCHAR2(8)		Indicates whether the table is enabled for Fast Key Based Access (ENABLED) or not (DISABLED)
MEMOPTIMIZE_WRITE	VARCHAR2(8)		For internal use only
HIGH_VALUE_CLOB	CLOB		High value (boundary) information for the subpartition, in CLOB format
HIGH_VALUE_JSON	JSON		High value (boundary) information for the subpartition, in JSON format

4.139 ALL_TABLE_ACCESS_STATS

ALL_TABLE_ACCESS_STATS displays the scan count for tables and partitions accessible to the current user.

The scan data collection begins at instance startup.

Related Views

- DBA_TABLE_ACCESS_STATS displays the scan count for all tables and partitions in the database.
- USER_TABLE_ACCESS_STATS displays the scan count for tables and partitions owned by the current user. This view does not display the TABLE_OWNER column.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
PARTITION_NAME	VARCHAR2(128)		Name of the partition For non-partitioned tables, the value of this column is null.
INSTANCE_ID	NUMBER		ID of the instance in which the table or partition was scanned
READ_COUNT	NUMBER		Aggregated scan count since instance startup
LAST_ACCESSED_TIME	TIMESTAMP(0)		Date and time of the most recent scan

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> The ALL_TABLE_ACCESS_STATS and DBA_TABLE_ACCESS_STATS views do not display data for Oracle-maintained schemas. You can view data for an Oracle-maintained schema by connecting to the schema and querying the USER_TABLE_ACCESS_STATS view.

> **Note**
>
> This view is available starting with Oracle AI Database 26ai.

> - "DBA_TABLE_ACCESS_STATS"
> - "USER_TABLE_ACCESS_STATS"

4.140 ALL_TABLE_VIRTUAL_COLUMNS

ALL_TABLE_VIRTUAL_COLUMNS describes virtual columns in tables accessible to the current user.

Related Views

- DBA_TABLE_VIRTUAL_COLUMNS describes virtual columns in all tables in the database.
- USER_TABLE_VIRTUAL_COLUMNS describes virtual columns in tables owned by the current user.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
VIRTUAL_COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the virtual column
VIRTUAL_COLUMN_EXPRESSION	VARCHAR2(4000)		Expression of the virtual column
COLUMN_ID	NUMBER	NOT NULL	Sequence number of the column as created
SEGMENT_COLUMN_ID	NUMBER	NOT NULL	Sequence number of the column in the segment
INTERNAL_COLUMN_ID	NUMBER	NOT NULL	Internal sequence number of the column

> **Note**
>
> This view is available starting with Oracle AI Database 26ai.

4.141 ALL_TABLES

ALL_TABLES describes the relational tables accessible to the current user. To gather statistics for this view, use the DBMS_STATS package.

Related Views

- DBA_TABLES describes all relational tables in the database.
- USER_TABLES describes the relational tables owned by the current user. This view does not display the OWNER column.

> **Note**
>
> Columns marked with an asterisk (*) are populated only if you collect statistics on the table with the DBMS_STATS package.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the table; NULL for partitioned, temporary, and index-organized tables
CLUSTER_NAME	VARCHAR2(128)		Name of the cluster, if any, to which the table belongs
IOT_NAME	VARCHAR2(128)		Name of the index-organized table, if any, to which the overflow or mapping table entry belongs. If the IOT_TYPE column is not NULL, then this column contains the base table name.
STATUS	VARCHAR2(8)		If a previous DROP TABLE operation failed, indicates whether the table is unusable (UNUSABLE) or valid (VALID)
PCT_FREE	NUMBER		Minimum percentage of free space in a block; NULL for partitioned tables
PCT_USED	NUMBER		Minimum percentage of used space in a block; NULL for partitioned tables
INI_TRANS	NUMBER		Initial number of transactions; NULL for partitioned tables
MAX_TRANS	NUMBER		Maximum number of transactions; NULL for partitioned tables
INITIAL_EXTENT	NUMBER		Size of the initial extent (in bytes); NULL for partitioned tables
NEXT_EXTENT	NUMBER		Size of secondary extents (in bytes); NULL for partitioned tables

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
MIN_EXTENTS	NUMBER		Minimum number of extents allowed in the segment; NULL for partitioned tables
MAX_EXTENTS	NUMBER		Maximum number of extents allowed in the segment; NULL for partitioned tables
PCT_INCREASE	NUMBER		Percentage increase in extent size; NULL for partitioned tables
FREELISTS	NUMBER		Number of process freelists allocated to the segment; NULL for partitioned tables
FREELIST_GROUPS	NUMBER		Number of freelist groups allocated to the segment; NULL for partitioned tables
LOGGING	VARCHAR2(3)		Indicates whether or not changes to the table are logged; NULL for partitioned tables: • YES • NO
BACKED_UP	VARCHAR2(1)		Indicates whether the table has been backed up since the last modification (Y) or not (N)
NUM_ROWS*	NUMBER		Number of rows in the table
BLOCKS*	NUMBER		Number of used data blocks in the table
EMPTY_BLOCKS	NUMBER		Number of empty (never used) data blocks in the table. This column is populated only if you collect statistics on the table using the DBMS_STATS package.
AVG_SPACE*	NUMBER		Average amount of free space, in bytes, in a data block allocated to the table
CHAIN_CNT*	NUMBER		Number of rows in the table that are chained from one data block to another, or which have migrated to a new block, requiring a link to preserve the old ROWID
AVG_ROW_LEN*	NUMBER		Average length of a row in the table (in bytes)
AVG_SPACE_FREELIST_BLOCKS	NUMBER		Average freespace of all blocks on a freelist
NUM_FREELIST_BLOCKS	NUMBER		Number of blocks on the freelist
DEGREE	VARCHAR2(10)		Number of threads per instance for scanning the table, or DEFAULT
INSTANCES	VARCHAR2(10)		Number of instances across which the table is to be scanned, or DEFAULT
CACHE	VARCHAR2(5)		Indicates whether the table is to be cached in the buffer cache (Y) or not (N)
TABLE_LOCK	VARCHAR2(8)		Indicates whether table locking is enabled (ENABLED) or disabled (DISABLED)
SAMPLE_SIZE	NUMBER		Sample size used in analyzing the table
LAST_ANALYZED	DATE		Date on which the table was most recently analyzed
PARTITIONED	VARCHAR2(3)		Indicates whether the table is partitioned (YES) or not (NO)
IOT_TYPE	VARCHAR2(12)		If the table is an index-organized table, then IOT_TYPE is IOT, IOT_OVERFLOW, or IOT_MAPPING. If the table is not an index-organized table, then IOT_TYPE is NULL.
TEMPORARY	VARCHAR2(1)		Indicates whether the table is temporary (Y) or not (N)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SECONDARY	VARCHAR2(1)		Indicates whether the table is a secondary object created by the ODCIIndexCreate method of the Oracle Data Cartridge (Y) or not (N)
NESTED	VARCHAR2(3)		Indicates whether the table is a nested table (YES) or not (NO)
BUFFER_POOL	VARCHAR2(7)		Buffer pool for the table; NULL for partitioned tables: • DEFAULT • KEEP • RECYCLE • NULL
FLASH_CACHE	VARCHAR2(7)		Database Smart Flash Cache hint to be used for table blocks: • DEFAULT • KEEP • NONE Solaris and Oracle Linux functionality only.
CELL_FLASH_CACHE	VARCHAR2(7)		Cell flash cache hint to be used for table blocks: • DEFAULT • KEEP • NONE **See Also:** Oracle Exadata Storage Server Software documentation for more information
ROW_MOVEMENT	VARCHAR2(8)		Indicates whether partitioned row movement is enabled (ENABLED) or disabled (DISABLED)
GLOBAL_STATS	VARCHAR2(3)		GLOBAL_STATS will be YES if statistics are gathered or incrementally maintained, otherwise it will be NO
USER_STATS	VARCHAR2(3)		Indicates whether statistics were entered directly by the user (YES) or not (NO)
DURATION	VARCHAR2(15)		Indicates the duration of a temporary table: • SYS$SESSION - Rows are preserved for the duration of the session • SYS$TRANSACTION - Rows are deleted after COMMIT Null - Permanent table
SKIP_CORRUPT	VARCHAR2(8)		Indicates whether Oracle AI Database ignores blocks marked corrupt during table and index scans (ENABLED) or raises an error (DISABLED). To enable this feature, run the DBMS_REPAIR.SKIP_CORRUPT_BLOCKS procedure.
MONITORING	VARCHAR2(3)		This column is obsolete
CLUSTER_OWNER	VARCHAR2(128)		Owner of the cluster, if any, to which the table belongs
DEPENDENCIES	VARCHAR2(8)		Indicates whether row-level dependency tracking is enabled (ENABLED) or disabled (DISABLED)
COMPRESSION	VARCHAR2(8)		Indicates whether table compression is enabled (ENABLED) or not (DISABLED); NULL for partitioned tables

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
COMPRESS_FOR	VARCHAR2(30)		Default compression for what kind of operations: • BASIC • ADVANCED • QUERY LOW • QUERY HIGH • ARCHIVE LOW • ARCHIVE HIGH • QUERY LOW ROW LEVEL LOCKING • QUERY HIGH ROW LEVEL LOCKING • ARCHIVE LOW ROW LEVEL LOCKING • ARCHIVE HIGH ROW LEVEL LOCKING • NO ROW LEVEL LOCKING • NULL The QUERY LOW, QUERY HIGH, ARCHIVE LOW, ARCHIVE HIGH, QUERY LOW ROW LEVEL LOCKING, QUERY HIGH ROW LEVEL LOCKING, ARCHIVE LOW ROW LEVEL LOCKING, ARCHIVE HIGH ROW LEVEL LOCKING, and NO ROW LEVEL LOCKING values are associated with Hybrid Columnar Compression, a feature of the Enterprise Edition of Oracle AI Database that is dependent on the underlying storage system. See *Oracle AI Database Concepts* for more information.
DROPPED	VARCHAR2(3)		Indicates whether the table has been dropped and is in the recycle bin (YES) or not (NO); NULL for partitioned tables This view does not return the names of tables that have been dropped.
READ_ONLY	VARCHAR2(3)		Indicates whether the table segment is READ-ONLY or not. Possible values: • YES - The table segment is READ-ONLY • NO - The table segment is not READ-ONLY • N/A - Not applicable. This value appears in a partitioned table, where there is no segment that relates to the logical table object.
SEGMENT_CREATED	VARCHAR2(3)		Indicates whether the table segment is created. Possible values: • YES - The table segment is created. • NO - The table segment is not created. • N/A - Not applicable. This value appears in a partitioned table, where there is no segment that relates to the logical table object.
RESULT_CACHE	VARCHAR2(7)		Result cache mode annotation for the table: • DEFAULT - Table has not been annotated • FORCE • MANUAL
CLUSTERING	VARCHAR2(3)		Indicates whether the table has the attribute clustering clause (YES) or not (NO)
ACTIVITY_TRACKING	VARCHAR2(23)		Indicates whether Heat Map tracking is enabled on the table
DML_TIMESTAMP	VARCHAR2(25)		Modification time, creation time, or both for Automatic Data Optimization

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
HAS_IDENTITY	VARCHAR2(3)		Indicates whether the table has an identity column (YES) or not (NO)
CONTAINER_DATA	VARCHAR2(3)		Indicates whether the table contains container-specific data. Possible values: • YES if the table was created with the CONTAINER_DATA clause • NO otherwise
INMEMORY	VARCHAR2(8)		Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for the table
INMEMORY_PRIORITY	VARCHAR2(8)		Indicates the priority for In-Memory Column Store (IM column store) population. Possible values: • LOW • MEDIUM • HIGH • CRITICAL • NONE • NULL
INMEMORY_DISTRIBUTE	VARCHAR2(15)		Indicates how the IM column store is distributed in an Oracle Real Application Clusters (Oracle RAC) environment: • AUTO • BY ROWID RANGE • DUPLICATE • NONE • NULL
INMEMORY_COMPRESSION	VARCHAR2(17)		Indicates the compression level for the IM column store: • NO MEMCOMPRESS • FOR DML • FOR QUERY [LOW | HIGH] • FOR CAPACITY [LOW | HIGH] • AUTO • NULL This column has a value based on where the segments lie for a table. For example, if the table is partitioned and is enabled for the IM column store, the value is NULL for ALL_TABLES but non-NULL for ALL_TAB_PARTITIONS.
INMEMORY_DUPLICATE	VARCHAR2(13)		Indicates the duplicate setting for the IM column store in an Oracle RAC environment: • NO DUPLICATE • DUPLICATE • DUPLICATE ALL
DEFAULT_COLLATION	VARCHAR2(100)		Default collation for the table
DUPLICATED	VARCHAR2(1)		Indicates whether the table is duplicated on this shard (Y) or not (N)
SYNCHRONOUS_DUPLICATED	VARCHAR2(1)		Indicates whether the table is a synchronous duplicated table (Y) or not (N)
SHARDED	VARCHAR2(1)		Indicates whether the table is sharded (Y) or not (N)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
EXTERNALLY_SHARDED	VARCHAR2(1)		Indicates whether the table is externally sharded (Y) or not (N)
EXTERNALLY_DUPLICATED	VARCHAR2(1)		Indicates whether the table is externally duplicated (Y) or not (N)
EXTERNAL	VARCHAR2(3)		Indicates whether the table is an external table (YES) or not (NO)
HYBRID	VARCHAR2(3)		Indicates whether the table is a hybrid partitioned table (YES) or not (NO). A hybrid partitioned table can contain a mixture of partitions stored in segments and partitions stored externally.
CELLMEMORY	VARCHAR2(24)		The value for columnar compression in the storage cell flash cache. Possible values: • ENABLED: Oracle Exadata Storage will decide automatically whether to cache in columnar form • DISABLED: Oracle Exadata Storage is prevented from caching in columnar form • NO CACHECOMPRESS: Oracle Exadata Storage will cache in HCC format (no recompression) • FOR QUERY: Oracle Exadata Storage will recompress and cache in INMEMORY query high format • FOR CAPACITY: Oracle Exadata Storage will recompress and cache in INMEMORY capacity low format This column is intended for use with Oracle Exadata.
CONTAINERS_DEFAULT	VARCHAR2(3)		Indicates whether the table is enabled for CONTAINERS() by default (YES) or not (NO)
CONTAINER_MAP	VARCHAR2(3)		Indicates whether the table is enabled for use with the container_map database property (YES) or not (NO)
EXTENDED_DATA_LINK	VARCHAR2(3)		Indicates whether the table is enabled for fetching an extended data link from the root (YES) or not (NO)
EXTENDED_DATA_LINK_MAP	VARCHAR2(3)		For internal use only
INMEMORY_SERVICE	VARCHAR2(12)		Indicates how the IM column store is populated on various instances. The possible values are: • DEFAULT: Data is populated on all instances specified with the PARALLEL_INSTANCE_GROUP initialization parameter. If that parameter is not set, then the data is populated on all instances. This is the default. • NONE: Data is not populated on any instance. • ALL: Data is populated on all instances, regardless of the value of the PARALLEL_INSTANCE_GROUP initialization parameter. • USER_DEFINED: Data is populated only on the instances on which the user-specified service is active. The service name corresponding to this is stored in the INMEMORY_SERVICE_NAME column.
INMEMORY_SERVICE_NAME	VARCHAR2(1000)		Indicates the service name for the service on which the IM column store should be populated. This column has a value only when the corresponding INMEMORY_SERVICE is USER_DEFINED. In all other cases, this column is null.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
CONTAINER_MAP_OBJECT	VARCHAR2(3)		Indicates whether the table is used as the value of the container_map database property (YES) or not (NO)
MEMOPTIMIZE_READ	VARCHAR2(8)		Indicates whether the table is enabled for Fast Key Based Access (ENABLED) or not (DISABLED)
MEMOPTIMIZE_WRITE	VARCHAR2(8)		For internal use only
HAS_SENSITIVE_COLUMN	VARCHAR2(3)		Indicates whether the table has one or more sensitive columns (YES) or not (NO)
ADMIT_NULL	VARCHAR2(3)		Indicates whether the table admits null CON_ID data (YES) or not (NO)
DATA_LINK_DML_ENABLED	VARCHAR2(3)		Indicates whether DML is permitted on the Data Link table (YES) or not (NO)
LOGICAL_REPLICATION	VARCHAR2(8)		Indicates whether the table is enabled for logical replication (ENABLED) or not (DISABLED). This setting is ignored if database-wide column data supplemental logging is enabled.
STAGING	VARCHAR2(3)		Indicates whether the table is a staging table (YES) or not (NO)
HAS_RESERVABLE_COLUMN	VARCHAR2(3)		Indicates whether the table has one or more reservable columns (YES) or not (NO)
VECTOR_INDEX_TYPE[1]	VARCHAR2(28)		Name of the vector index type, if any, to which the auxiliary table entry belongs

1 This column is available starting with Oracle AI Database 26ai, Release Update 23.9.

Examples

This SQL query returns the names of the tables in the EXAMPLES tablespace:

```
SELECT table_name FROM all_tables
WHERE tablespace_name = 'EXAMPLE' ORDER BY table_name;
```

This SQL query returns the name of the tablespace that contains the HR schema:

```
SELECT DISTINCT tablespace_name FROM all_tables WHERE owner='HR';
```

4.142 ALL_TRANSFORMATIONS

ALL_TRANSFORMATIONS displays information about all transformations accessible to the current user.

These transformations can be specified with Advanced Queuing operations such as enqueue, dequeue, and subscribe to automatically integrate transformations in AQ messaging.

Related Views

- DBA_TRANSFORMATIONS displays information about all transformations in the database.
- USER_TRANSFORMATIONS displays information about transformations owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
TRANSFORMATION_ID	NUMBER	NOT NULL	Unique identifier for the transformation
OWNER	VARCHAR2(128)	NOT NULL	Owning user of the transformation
NAME	VARCHAR2(128)	NOT NULL	Transformation name
FROM_TYPE	VARCHAR2(128)		Source type name
TO_TYPE	VARCHAR2(256)		Target type name

See Also

- "DBA_TRANSFORMATIONS"
- "USER_TRANSFORMATIONS"

4.143 ALL_TRIGGER_COLS

ALL_TRIGGER_COLS describes the use of columns in the triggers accessible to the current user and in triggers on tables accessible to the current user.

If the user has the CREATE ANY TRIGGER privilege, then this view describes the use of columns in all triggers in the database.

Related Views

- DBA_TRIGGER_COLS describes the use of columns in all triggers in the database.
- USER_TRIGGER_COLS describes the use of columns in the triggers owned by the current user and in triggers on tables owned by the current user.

Column	Datatype	NULL	Description
TRIGGER_OWNER	VARCHAR2(128)		Owner of the trigger
TRIGGER_NAME	VARCHAR2(128)		Name of the trigger
TABLE_OWNER	VARCHAR2(128)		Owner of the table on which the trigger is defined
TABLE_NAME	VARCHAR2(128)		Table on which the trigger is defined
COLUMN_NAME	VARCHAR2(4000)		Name of the column used in the trigger

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
COLUMN_LIST	VARCHAR2(3)		Indicates whether the column is specified in the UPDATE clause (YES) or not (NO)
COLUMN_USAGE	VARCHAR2(17)		How the column is used in the trigger: • NEW IN • OLD IN • NEW IN OLD IN • NEW OUT • NEW IN OUT • NEW OUT OLD IN • NEW IN OUT OLD IN • PARENT IN

See Also

- "DBA_TRIGGER_COLS"
- "USER_TRIGGER_COLS"

4.144 ALL_TRIGGER_ORDERING

ALL_TRIGGER_ORDERING describes the triggers accessible to the current user that have FOLLOWS or PRECEDES ordering.

Related Views

- DBA_TRIGGER_ORDERING describes all triggers in the database that have FOLLOWS or PRECEDES ordering.
- USER_TRIGGER_ORDERING describes the triggers owned by the current user that have FOLLOWS or PRECEDES ordering. This view does not display the TRIGGER_OWNER column.

Column	Datatype	NULL	Description
TRIGGER_OWNER	VARCHAR2(128)	NOT NULL	Owner of the trigger
TRIGGER_NAME	VARCHAR2(128)	NOT NULL	Name of the trigger
REFERENCED_TRIGGER_OWNER	VARCHAR2(128)		Owner of the referenced trigger
REFERENCED_TRIGGER_NAME	VARCHAR2(128)		Name of the referenced trigger
ORDERING_TYPE	VARCHAR2(8)		Type of the ordering between the trigger and the referenced trigger: • FOLLOWS • PRECEDES

See Also

- "DBA_TRIGGER_ORDERING"
- "USER_TRIGGER_ORDERING"

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.145 ALL_TRIGGERS

ALL_TRIGGERS describes the triggers on tables accessible to the current user.

If the user has the CREATE ANY TRIGGER privilege, then this view describes all triggers in the database.

Related Views

- DBA_TRIGGERS describes all triggers in the database.
- USER_TRIGGERS describes the triggers owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the trigger
TRIGGER_NAME	VARCHAR2(128)		Name of the trigger
TRIGGER_TYPE	VARCHAR2(16)		When the trigger fires: • BEFORE STATEMENT • BEFORE EACH ROW • AFTER STATEMENT • AFTER EACH ROW • INSTEAD OF • COMPOUND
TRIGGERING_EVENT	VARCHAR2(246)		DML, DDL, or database event that fires the trigger **See Also:** *Oracle AI Database PL/SQL Language Reference* for additional information about triggers and triggering events.
TABLE_OWNER	VARCHAR2(128)		Owner of the table on which the trigger is defined
BASE_OBJECT_TYPE	VARCHAR2(18)		Base object on which the trigger is defined: • TABLE • VIEW • SCHEMA • DATABASE
TABLE_NAME	VARCHAR2(128)		If the base object type of the trigger is SCHEMA or DATABASE, then this column is NULL; if the base object type of the trigger is TABLE or VIEW, then this column indicates the table or view name on which the trigger is defined
COLUMN_NAME	VARCHAR2(4000)		Name of the nested table column (if a nested table trigger), else NULL
REFERENCING_NAMES	VARCHAR2(422)		Names used for referencing OLD and NEW column values from within the trigger
WHEN_CLAUSE	VARCHAR2(4000)		Must evaluate to TRUE for TRIGGER_BODY to execute
STATUS	VARCHAR2(8)		Indicates whether the trigger is enabled (ENABLED) or disabled (DISABLED); a disabled trigger will not fire
DESCRIPTION	VARCHAR2(4000)		Trigger description; useful for re-creating a trigger creation statement

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ACTION_TYPE	VARCHAR2(11)		Action type of the trigger body: • CALL • PL/SQL
TRIGGER_BODY	LONG		Statements executed by the trigger when it fires
CROSSEDITION	VARCHAR2(7)		Type of crossedition trigger: • FORWARD • REVERSE • NO
BEFORE_STATEMENT	VARCHAR2(3)		Indicates whether the trigger has a BEFORE STATEMENT section (YES) or not (NO)
BEFORE_ROW	VARCHAR2(3)		Indicates whether the trigger has a BEFORE EACH ROW section (YES) or not (NO)
AFTER_ROW	VARCHAR2(3)		Indicates whether the trigger has an AFTER EACH ROW section (YES) or not (NO)
AFTER_STATEMENT	VARCHAR2(3)		Indicates whether the trigger has an AFTER STATEMENT section (YES) or not (NO)
INSTEAD_OF_ROW	VARCHAR2(3)		Indicates whether the trigger has an INSTEAD OF section (YES) or not (NO)
FIRE_ONCE	VARCHAR2(3)		Indicates whether the trigger will fire only for user processes making changes (YES) or whether the trigger will also fire for Replication Apply or SQL Apply processes (NO)
APPLY_SERVER_ONLY	VARCHAR2(3)		Indicates whether the trigger will only fire for a Replication Apply or SQL Apply process (YES) or not (NO). If set to YES, then the setting of FIRE_ONCE does not matter. **See Also:** the DBMS_DDL.SET_TRIGGER_FIRING_PROPERTY procedure

See Also

- "DBA_TRIGGERS"
- "USER_TRIGGERS"
- *Oracle AI Database PL/SQL Packages and Types Reference* for more information about the DBMS_DDL.SET_TRIGGER_FIRING_PROPERTY procedure

4.146 ALL_TRIGGERS_AE

ALL_TRIGGERS_AE describes the triggers on tables (across all editions) accessible to the current user.

If the user has the CREATE ANY TRIGGER privilege, then this view describes all triggers (across all editions) in the database.

Related Views

- DBA_TRIGGERS_AE describes all triggers (across all editions) in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- USER_TRIGGERS_AE describes the triggers (across all editions) owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the trigger
TRIGGER_NAME	VARCHAR2(128)		Name of the trigger
TRIGGER_TYPE	VARCHAR2(16)		When the trigger fires: • BEFORE STATEMENT • BEFORE EACH ROW • AFTER STATEMENT • AFTER EACH ROW • INSTEAD OF • COMPOUND
TRIGGERING_EVENT	VARCHAR2(246)		DML, DDL, or database event that fires the trigger **See Also:** *Oracle AI Database PL/SQL Language Reference* for additional information about triggers and triggering events.
TABLE_OWNER	VARCHAR2(128)		Owner of the table on which the trigger is defined
BASE_OBJECT_TYPE	VARCHAR2(18)		Base object on which the trigger is defined: • TABLE • VIEW • SCHEMA • DATABASE
TABLE_NAME	VARCHAR2(128)		If the base object type of the trigger is SCHEMA or DATABASE, then this column is NULL; if the base object type of the trigger is TABLE or VIEW, then this column indicates the table or view name on which the trigger is defined
COLUMN_NAME	VARCHAR2(4000)		Name of the nested table column (if a nested table trigger), else NULL
REFERENCING_NAMES	VARCHAR2(422)		Names used for referencing OLD and NEW column values from within the trigger
WHEN_CLAUSE	VARCHAR2(4000)		Must evaluate to TRUE for TRIGGER_BODY to execute
STATUS	VARCHAR2(8)		Indicates whether the trigger is enabled (ENABLED) or disabled (DISABLED); a disabled trigger will not fire
DESCRIPTION	VARCHAR2(4000)		Trigger description; useful for re-creating a trigger creation statement
ACTION_TYPE	VARCHAR2(11)		Action type of the trigger body: • CALL • PL/SQL
TRIGGER_BODY	LONG		Statements executed by the trigger when it fires
CROSSEDITION	VARCHAR2(7)		Type of crossedition trigger: • FORWARD • REVERSE • NO
BEFORE_STATEMENT	VARCHAR2(3)		Indicates whether the trigger has a BEFORE STATEMENT section (YES) or not (NO)
BEFORE_ROW	VARCHAR2(3)		Indicates whether the trigger has a BEFORE EACH ROW section (YES) or not (NO)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
AFTER_ROW	VARCHAR2(3)		Indicates whether the trigger has an AFTER EACH ROW section (YES) or not (NO)
AFTER_STATEMENT	VARCHAR2(3)		Indicates whether the trigger has an AFTER STATEMENT section (YES) or not (NO)
INSTEAD_OF_ROW	VARCHAR2(3)		Indicates whether the trigger has an INSTEAD OF section (YES) or not (NO)
FIRE_ONCE	VARCHAR2(3)		Indicates whether the trigger will fire only for user processes making changes (YES) or whether the trigger will also fire for Replication Apply or SQL Apply processes (NO)
APPLY_SERVER_ONLY	VARCHAR2(3)		Indicates whether the trigger will only fire for a Replication Apply or SQL Apply process (YES) or not (NO). If set to YES, then the setting of FIRE_ONCE does not matter. **See Also:** the DBMS_DDL.SET_TRIGGER_FIRING_PROPERTY procedure
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the trigger is defined

See Also

- "DBA_TRIGGERS_AE"
- "USER_TRIGGERS_AE"

4.147 ALL_TSTZ_TAB_COLS

ALL_TSTZ_TAB_COLS displays information about the columns of the tables accessible to the current user, which have columns defined on TIMESTAMP WITH TIME ZONE data types or object types containing attributes of TIMESTAMP WITH TIME ZONE data types.

Related Views

- DBA_TSTZ_TAB_COLS displays information about the columns of all tables in the database, which have columns defined on TIMESTAMP WITH TIME ZONE data types or object types containing attributes of TIMESTAMP WITH TIME ZONE data types. This view does not display the COLUMN_NAME, NESTED, and VIRTUAL_COLUMN columns.
- USER_TSTZ_TAB_COLS displays information about the columns of the tables owned by the current user, which have columns defined on TIMESTAMP WITH TIME ZONE data types or object types containing attributes of TIMESTAMP WITH TIME ZONE data types. This view does not display the OWNER, COLUMN_NAME, NESTED, and VIRTUAL_COLUMN columns.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Column name
QUALIFIED_COL_NAME	VARCHAR2(4000)		Qualified column name
NESTED	NUMBER		Indicates whether the column is a nested table (1) or not (0)
VIRTUAL_COLUMN	NUMBER		Indicates whether the column is a virtual column (1) or not (0)
SCALAR_COLUMN	NUMBER		Indicates whether the column is a scalar column (1) or not (0)
UNUSED_COLUMN	NUMBER		Indicates whether the column is an unused column (1) or not (0)

See Also

- "DBA_TSTZ_TAB_COLS"
- "USER_TSTZ_TAB_COLS"

4.148 ALL_TSTZ_TABLES

ALL_TSTZ_TABLES displays information about the tables accessible to the current user, which have columns defined on TIMESTAMP WITH TIME ZONE data types or object types containing attributes of TIMESTAMP WITH TIME ZONE data types.

Related Views

- DBA_TSTZ_TABLES displays information about all tables in the database, which have columns defined on TIMESTAMP WITH TIME ZONE data types or object types containing attributes of TIMESTAMP WITH TIME ZONE data types.
- USER_TSTZ_TABLES displays information about the tables owned by the current user, which have columns defined on TIMESTAMP WITH TIME ZONE data types or object types containing attributes of TIMESTAMP WITH TIME ZONE data types. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
UPGRADE_IN_PROGRESS	VARCHAR2(3)		Indicates whether a table upgrade is in progress (YES) or not (NO)
READ_ONLY	VARCHAR2(3)		Indicates whether the table upgrade is in READ ONLY mode (YES) or not (NO)

4.149 ALL_TXEVENTQ_MIGRATION_STATUS

ALL_TXEVENTQ_MIGRATION_STATUS provides information about migrations from AQ classic queues to Transactional Event Queues (TxEventQs) accessible to the current user.

Related Views

- DBA_TXEVENTQ_MIGRATION_STATUS provides information about all migrations from AQ classic queues to Transactional Event Queues (TxEventQs). This view also displays the SUFFIX column.
- USER_TXEVENTQ_MIGRATION_STATUS provides information about migrations from AQ classic queues to Transactional Event Queues (TxEventQs) owned by the current user. This view does not display the SOURCE_SCHEMA_NAME and SUFFIX columns.

Column	Datatype	NULL	Description
SOURCE_SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Source schema name
SOURCE_QUEUE_NAME	VARCHAR2(128)	NOT NULL	Source AQ classic queue name
SOURCE_QUEUE_TABLE	VARCHAR2(128)		Source AQ classic queue table name
TARGET_SCHEMA_NAME	VARCHAR2(128)	NOT NULL	Target schema name
TARGET_QUEUE_NAME	VARCHAR2(128)	NOT NULL	Target TxEventQ name
EVENT_STATUS	NUMBER		Migration record/event type: • 0 - This row displays data about unsupported features captured via a migration API • 1 - This row displays specific migration API details that the user executed • 2 - This row displays data about unsupported features captured as warnings
EVENT	VARCHAR2(128)		Migration event. Possible values include: • Retry Delay • Message Grouping • Listen • Next Message
EVENT_TIMESTAMP	TIMESTAMP (6) WITH TIME ZONE		Date and time at which the migration event occurred
EVENT_ERROR_COMMENTS	VARCHAR2(1024)		Migration event error comments, if any

Note

This view is available starting with Oracle AI Database 26ai.

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.150 ALL_TYPE_ATTRS

ALL_TYPE_ATTRS describes the attributes of the object types accessible to the current user.

Related Views

- DBA_TYPE_ATTRS describes the attributes of all object types in the database. This view does not include the CHAR_USED column.
- USER_TYPE_ATTRS describes the attributes of the object types owned by the current user. This view does not display the OWNER or CHAR_USED column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the type
TYPE_NAME	VARCHAR2(128)		Name of the type
ATTR_NAME	VARCHAR2(128)		Name of the attribute
ATTR_TYPE_MOD	VARCHAR2(7)		Type modifier of the attribute: • REF • POINTER
ATTR_TYPE_OWNER	VARCHAR2(128)		Owner of the type of the attribute
ATTR_TYPE_NAME	VARCHAR2(128)		Name of the type of the attribute
LENGTH	NUMBER		Length of the CHAR attribute, or maximum length of the VARCHAR or VARCHAR2 attribute.
PRECISION	NUMBER		Decimal precision of the NUMBER or DECIMAL attribute, or binary precision of the FLOAT attribute.
SCALE	NUMBER		Scale of the NUMBER or DECIMAL attribute
CHARACTER_SET _NAME	VARCHAR2(44)		Character set name of the attribute (CHAR_CS or NCHAR_CS)
ATTR_NO	NUMBER		Syntactical order number or position of the attribute as specified in the type specification or CREATE TYPE statement (not to be used as an ID number)
INHERITED	VARCHAR2(3)		Indicates whether the attribute is inherited from a supertype (YES) or not (NO)
CHAR_USED	VARCHAR2(1)		Indicates whether the attribute uses BYTE length semantics (B) or CHAR length semantics (C). For NCHAR and NVARCHAR2 attribute types, this value is always C.

4.151 ALL_TYPE_METHODS

ALL_TYPE_METHODS describes the methods of the object types accessible to the current user.

Related Views

- DBA_TYPE_METHODS describes the methods of all object types in the database.
- USER_TYPE_METHODS describes the methods of the object types owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the type
TYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the type
METHOD_NAME	VARCHAR2(128)	NOT NULL	Name of the method
METHOD_NO	NUMBER	NOT NULL	Method number for distinguishing overloaded methods (not to be used as ID number)
METHOD_TYPE	VARCHAR2(6)		Type of the method: • MAP • ORDER • PUBLIC
PARAMETERS	NUMBER	NOT NULL	Number of parameters to the method
RESULTS	NUMBER	NOT NULL	Number of results returned by the method
FINAL	VARCHAR2(3)		Indicates whether the method is final (YES) or not (NO)
INSTANTIABLE	VARCHAR2(3)		Indicates whether the method is instantiable (YES) or not (NO)
OVERRIDING	VARCHAR2(3)		Indicates whether the method is overriding a supertype method (YES) or not (NO)
INHERITED	VARCHAR2(3)		Indicates whether the method is inherited from a supertype (YES) or not (NO)

- "USER_TYPE_METHODS"

4.152 ALL_TYPE_VERSIONS

ALL_TYPE_VERSIONS describes the versions of the object types accessible to the current user.

Related Views

- DBA_TYPE_VERSIONS describes the versions of all object types in the database.
- USER_TYPE_VERSIONS describes the versions of the object types owned by the current user. This view does not display the OWNER column.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the type
TYPE_NAME	VARCHAR2(128)	NOT NULL	Name of the type
VERSION#	NUMBER	NOT NULL	Internal version number of the type
TYPECODE	VARCHAR2(128)		Typecode of the type
STATUS	VARCHAR2(7)		Status of the type: • N/A • VALID • INVALID
LINE	NUMBER	NOT NULL	Line number of the type's spec
TEXT	VARCHAR2(4000)		Text of the type's spec
HASHCODE	RAW(17)		Hashcode of the type

See Also

- "DBA_TYPE_VERSIONS"
- "USER_TYPE_VERSIONS"

4.153 ALL_TYPES

ALL_TYPES describes the object types accessible to the current user.

Related Views

- DBA_TYPES describes all object types in the database.
- USER_TYPES describes the object types owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the type
TYPE_NAME	VARCHAR2(128)		Name of the type
TYPE_OID	RAW(16)		Object identifier (OID) of the type
TYPECODE	VARCHAR2(128)		Typecode of the type
ATTRIBUTES	NUMBER		Number of attributes (if any) in the type
METHODS	NUMBER		Number of methods (if any) in the type
PREDEFINED	VARCHAR2(3)		Indicates whether the type is a predefined type (YES) or not (NO)
INCOMPLETE	VARCHAR2(3)		Indicates whether the type is an incomplete type (YES) or not (NO)
FINAL	VARCHAR2(3)		Indicates whether the type is a final type (YES) or not (NO)
INSTANTIABLE	VARCHAR2(3)		Indicates whether the type is an instantiable type (YES) or not (NO)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PERSISTABLE	VARCHAR2(3)		Indicates whether the type is a persistable type (YES) or not (NO)
SUPERTYPE_OWNER	VARCHAR2(128)		Owner of the supertype (NULL if type is not a subtype)
SUPERTYPE_NAME	VARCHAR2(128)		Name of the supertype (NULL if type is not a subtype)
LOCAL_ATTRIBUTES	NUMBER		Number of local (not inherited) attributes (if any) in the subtype
LOCAL_METHODS	NUMBER		Number of local (not inherited) methods (if any) in the subtype
TYPEID	RAW(16)		Type ID value of the type

See Also

- "DBA_TYPES"
- "USER_TYPES"

4.154 ALL_UNIFIED_AUDIT_ACTIONS

ALL_UNIFIED_AUDIT_ACTIONS describes unified audit trail actions.

The actions described in this view are valid for audit trail records from the UNIFIED_AUDIT_TRAIL view. Such records are generated only when unified auditing is enabled.

See Also

- *Oracle AI Database Security Guide* for more information about unified auditing.
- *Oracle AI Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
TYPE	NUMBER	NOT NULL	Numeric component type for system wide actions
COMPONENT	VARCHAR2(64)	NOT NULL	Name of component for system wide actions
ACTION	NUMBER	NOT NULL	Numeric auditable action code for system wide actions **Note:** The action code values have changed from Oracle Database release 12.2 to the current release. If your applications have queries that include the ACTION column, and if these queries were written in release 12.2, then be aware that the output may be different if you are running these queries in the current release.
NAME	VARCHAR2(64)	NOT NULL	Name of auditable action

Copyright © 2002, 2025, Oracle and/or its affiliates.

> "UNIFIED_AUDIT_TRAIL"

4.155 ALL_UNUSED_COL_TABS

ALL_UNUSED_COL_TABS describes the tables accessible to the current user that contain unused columns.

Related Views

- DBA_UNUSED_COL_TABS describes all tables in the database that contain unused columns.
- USER_UNUSED_COL_TABS describes the tables owned by the current user that contain unused columns. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
COUNT	NUMBER		Number of unused columns

> **See Also**
>
> - "DBA_UNUSED_COL_TABS"
> - "USER_UNUSED_COL_TABS"

4.156 ALL_UPDATABLE_COLUMNS

ALL_UPDATABLE_COLUMNS describes all columns in a join view that are updatable by the current user, subject to appropriate privileges.

Related Views

- DBA_UPDATABLE_COLUMNS describes all columns in a join view that are updatable by the database administrator, subject to appropriate privileges.
- USER_UPDATABLE_COLUMNS describes all columns owned by the current user that are in a join view and are updatable by the current user, subject to appropriate privileges.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Column name
UPDATABLE	VARCHAR2(3)		Indicates whether the column is updatable (YES) or not (NO)[1]
INSERTABLE	VARCHAR2(3)		Indicates whether the column is insertable (YES) or not (NO)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
DELETABLE	VARCHAR2(3)		Indicates whether the column is deletable (YES) or not (NO)

[1] Starting with Oracle Database 21c, there is a circumstance under which a column is updatable even if its UPDATABLE value is NO in this view. A column with a NO value can be updated if it is in a non-key-preserved table, the UPDATE operation updates only columns in that table, and the update is deterministic, that is, it updates each row only once. See *Oracle AI Database Concepts* for more information.

Note

The values shown in the UPDATABLE, INSERTABLE, and DELETABLE columns are not instantly updated when a DDL operation that would affect these attributes occurs on one of the tables referenced in the FROM clause of the view definition. For example, these columns are not instantly updated when a primary key or unique constraint is added to or removed from the non-key-preserved table. To remedy this situation, recompile the view using the ALTER VIEW COMPILE statement to ensure that the latest information is displayed.

See Also

- "DBA_UPDATABLE_COLUMNS"
- "USER_UPDATABLE_COLUMNS"
- *Oracle AI Database Concepts* for information on updatable join views

4.157 ALL_USERS

ALL_USERS lists all users of the database visible to the current user.

This view does not describe the users (see the related views).

Related Views

- DBA_USERS describes all users of the database, and contains more columns than ALL_USERS.
- USER_USERS describes the current user, and contains more columns than ALL_USERS.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user
USER_ID	NUMBER	NOT NULL	ID number of the user
CREATED	DATE	NOT NULL	User creation date
COMMON	VARCHAR2(3)		Indicates whether a given user is common. Possible values: • YES if a user is common • NO if a user is local (not common)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ORACLE_MAINTAINED	VARCHAR2(1)		Denotes whether the user was created, and is maintained, by Oracle-supplied scripts (such as catalog.sql or catproc.sql). A user for which this column has the value Y must not be changed in any way except by running an Oracle-supplied script.
INHERITED	VARCHAR2(3)		Indicates whether the user definition was inherited from another container (YES) or not (NO)
DEFAULT_COLLATION	VARCHAR2(100)		Default collation for the user's schema
IMPLICIT	VARCHAR2(3)		Indicates whether this user is a common user created by an implicit application (YES) or not (NO)
ALL_SHARD	VARCHAR2(3)		In a sharded database, the value in this column indicates whether the user was created with shard DDL enabled. The possible values are: • YES: The user was created with shard DDL enabled. The user exists on all shards and the shard catalog. • NO: The user was created without shard DDL enabled. The user exists only in the database in which the user was created. In a non-sharded database, the value in this column is always NO.
EXTERNAL_SHARD	VARCHAR2(3)		In a federated sharded database, the value in this column indicates whether the user is an external shard user (YES) or not (NO). In other types of databases, the value in this column is always NO.
DICTIONARY_PROTECTED[1]	VARCHAR2(3)		Indicates whether the user's schema is dictionary protected (YES) or not (NO) **See Also:** *Oracle AI Database Security Guide* for more information about dictionary-protected schemas

1

4.158 ALL_USTATS

ALL_USTATS describes the user-defined statistics collected on the tables and indexes accessible to the current user.

Related Views

- DBA_USTATS describes the user-defined statistics collected on all tables and indexes in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- USER_USTATS describes the user-defined statistics collected on the tables and indexes owned by the current user.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)		Owner of the table or index for which the statistics have been collected
OBJECT_NAME	VARCHAR2(128)		Name of the table or index for which the statistics have been collected
PARTITION_NAME	VARCHAR2(128)		Partition name of a table; NULL if the table is either nonpartitioned or the entry corresponds to the aggregate statistics for the table
OBJECT_TYPE	VARCHAR2(6)		Type of the object for which statistics have been collected: • INDEX • COLUMN
ASSOCIATION	VARCHAR2(8)		Statistics type association: • DIRECT Direct association with the object for which the statistics have been collected • IMPLICIT - Association for which the statistics have been collected is with the column type or index type, and the object is an instance of that column type or index type
COLUMN_NAME	VARCHAR2(128)		Column name, if OBJECT_TYPE is COLUMN, for which statistics have been collected
STATSTYPE_SCHEMA	VARCHAR2(128)		Schema of the statistics type which was used to collect the statistics
STATSTYPE_NAME	VARCHAR2(128)		Name of the statistics type which was used to collect statistics
STATISTICS	RAW(2000)		User-collected statistics for the object

4.159 ALL_VARRAYS

ALL_VARRAYS describes the varrays accessible to the current user.

Related Views

- DBA_VARRAYS describes all varrays in the database.
- USER_VARRAYS describes the varrays owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table containing the varray
PARENT_TABLE_NAME	VARCHAR2(128)		Name of the containing table

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PARENT_TABLE_COLUMN	VARCHAR2(4000)		Name of the varray column or attribute
TYPE_OWNER	VARCHAR2(128)		Owner of the varray type
TYPE_NAME	VARCHAR2(128)		Name of the varray type
LOB_NAME	VARCHAR2(128)		Name of the LOB if the varray is stored in a LOB
STORAGE_SPEC	VARCHAR2(30)		Indicates whether the storage was defaulted (DEFAULT) or user-specified (USER_SPECIFIED)
RETURN_TYPE	VARCHAR2(20)		Return type of the column: • LOCATOR • VALUE
ELEMENT_SUBSTITUTABLE	VARCHAR2(25)		Indicates whether the varray element is substitutable (Y) or not (N)

See Also

- "DBA_VARRAYS"
- "USER_VARRAYS"

4.160 ALL_VIEWS

ALL_VIEWS describes the views accessible to the current user.

Related Views

- DBA_VIEWS describes all views in the database.
- USER_VIEWS describes the views owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the view
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the view
TEXT_LENGTH	NUMBER		Length of the view text
TEXT	LONG		View text. This column returns the correct value only when the row originates from the current container. The BEQUEATH clause will not appear as part of the TEXT column in this view.
TEXT_VC	VARCHAR2(4000)		View text. This column may truncate the view text. The BEQUEATH clause will not appear as part of the TEXT_VC column in this view.
TYPE_TEXT_LENGTH	NUMBER		Length of the type clause of the typed view
TYPE_TEXT	VARCHAR2(4000)		Type clause of the typed view
OID_TEXT_LENGTH	NUMBER		Length of the WITH OID clause of the typed view
OID_TEXT	VARCHAR2(4000)		WITH OID clause of the typed view
VIEW_TYPE_OWNER	VARCHAR2(128)		Owner of the type of the view if the view is a typed view

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
VIEW_TYPE	VARCHAR2(128)		Type of the view if the view is a typed view
SUPERVIEW_NAME	VARCHAR2(128)		Name of the superview
EDITIONING_VIEW	VARCHAR2(1)		Reserved for future use
READ_ONLY	VARCHAR2(1)		Indicates whether the view is read-only (Y) or not (N)
CONTAINER_DATA	VARCHAR2(1)		Indicates whether the view contains container-specific data. Possible values: • Y if the view was created with the CONTAINER_DATA clause • N otherwise
BEQUEATH	VARCHAR2(12)		Possible values: • CURRENT_USER: When the view is a BEQUEATH CURRENT_USER view • DEFINER: When the view is a BEQUEATH DEFINER view For more information about the syntax and semantics of the BEQUEATH clause in the SQL CREATE VIEW statement, see *Oracle AI Database SQL Language Reference*.
ORIGIN_CON_ID	VARCHAR2(256)		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root)
DEFAULT_COLLATION	VARCHAR2(100)		Default collation for the view
CONTAINERS_DEFAULT	VARCHAR2(3)		Indicates whether the view is enabled for CONTAINERS() by default (YES) or not (NO)
CONTAINER_MAP	VARCHAR2(3)		Indicates whether the view is enabled for use with the container_map database property (YES) or not (NO)
EXTENDED_DATA_LINK	VARCHAR2(3)		Indicates whether the view is enabled for fetching an extended data link from the root (YES) or not (NO)
EXTENDED_DATA_LINK_MAP	VARCHAR2(3)		For internal use only
HAS_SENSITIVE_COLUMN	VARCHAR2(3)		Indicates whether the view has one or more sensitive columns (YES) or not (NO)
ADMIT_NULL	VARCHAR2(3)		Indicates whether the view admits null CON_ID data (YES) or not (NO)
PDB_LOCAL_ONLY	VARCHAR2(3)		For internal use only
DUALITY_VIEW	VARCHAR2(3)		Indicates whether the view is a JSON-relational duality view (YES) or not (NO)

See Also

- "DBA_VIEWS"
- "USER_VIEWS"

4.161 ALL_VIEWS_AE

ALL_VIEWS_AE describes the views (across all editions) accessible to the current user.

Related Views

- DBA_VIEWS_AE describes all views (across all editions) in the database.
- USER_VIEWS_AE describes the views (across all editions) owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the view
VIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the view
TEXT_LENGTH	NUMBER		Length of the view text
TEXT	LONG		View text. The BEQUEATH clause will not appear as part of the TEXT column in this view.
TEXT_VC	VARCHAR2(4000)		View text. This column may truncate the view text. The BEQUEATH clause will not appear as part of the TEXT_VC column in this view.
TYPE_TEXT_LENGTH	NUMBER		Length of the type clause of the typed view
TYPE_TEXT	VARCHAR2(4000)		Type clause of the typed view
OID_TEXT_LENGTH	NUMBER		Length of the WITH OID clause of the typed view
OID_TEXT	VARCHAR2(4000)		WITH OID clause of the typed view
VIEW_TYPE_OWNER	VARCHAR2(128)		Owner of the type of the view if the view is an typed view
VIEW_TYPE	VARCHAR2(128)		Type of the view if the view is a typed view
SUPERVIEW_NAME	VARCHAR2(128)		Name of the superview, if the view is a subview
EDITIONING_VIEW	VARCHAR2(1)		Indicates whether the view is an editioning view (Y) or not (N)
READ_ONLY	VARCHAR2(1)		Indicates whether the view is read-only (Y) or not (N)
EDITION_NAME	VARCHAR2(128)		Name of the application edition where the object is defined
CONTAINER_DATA	VARCHAR2(1)		Indicates whether the view contains container-specific data. Possible values: • Y if the view was created with the CONTAINER_DATA clause • N otherwise
BEQUEATH	VARCHAR2(12)		Possible values: • CURRENT_USER: When the view is a BEQUEATH CURRENT_USER view • DEFINER: When the view is a BEQUEATH DEFINER view For more information about the syntax and semantics of the BEQUEATH clause in the SQL CREATE VIEW statement, see *Oracle AI Database SQL Language Reference*.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n* = 1 if the row originates in root)
DEFAULT_COLLATION	VARCHAR2(100)		Default collation for the view
CONTAINERS_DEFAULT	VARCHAR2(3)		Indicates whether the view is enabled for CONTAINERS() by default (YES) or not (NO)
CONTAINER_MAP	VARCHAR2(3)		Indicates whether the view is enabled for use with the container_map database property (YES) or not (NO)
EXTENDED_DATA_LINK	VARCHAR2(3)		Indicates whether the view is enabled for fetching an extended data link from the root (YES) or not (NO)
EXTENDED_DATA_LINK_MAP	VARCHAR2(3)		For internal use only
HAS_SENSITIVE_COLUMN	VARCHAR2(3)		Indicates whether the view has one or more sensitive columns (YES) or not (NO)
ADMIT_NULL	VARCHAR2(3)		Indicates whether the view admits null CON_ID data (YES) or not (NO)
PDB_LOCAL_ONLY	VARCHAR2(3)		For internal use only
DUALITY_VIEW	VARCHAR2(3)		Indicates whether the view is a JSON-relational duality view (YES) or not (NO)

4.162 ALL_WARNING_SETTINGS

ALL_WARNING_SETTINGS displays information about the warning parameter settings for the objects accessible to the current user.

Related Views

- DBA_WARNING_SETTINGS displays information about the warning parameter settings for all objects in the database.
- USER_WARNING_SETTINGS displays information about the warning parameter settings for the objects owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object
OBJECT_ID	NUMBER	NOT NULL	Object number of the object

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OBJECT_TYPE	VARCHAR2(12)		Type of the object: • PROCEDURE • FUNCTION • PACKAGE • PACKAGE BODY • TRIGGER • TYPE • TYPE BODY
WARNING	VARCHAR2(40)		Warning number or category: • INFORMATIONAL • PERFORMANCE • SEVERE • ALL
SETTING	VARCHAR2(7)		Value of the warning setting: • DISABLE • ENABLE • ERROR

See Also

- "DBA_WARNING_SETTINGS"

4.163 ALL_XML_INDEXES

ALL_XML_INDEXES describes the XML indexes accessible to the current user.

Related Views

- DBA_XML_INDEXES describes all XML indexes in the database.
- USER_XML_INDEXES describes the XML indexes owned by the current user. This view does not display the INDEX_OWNER column.

Column	Datatype	NULL	Description
INDEX_OWNER	VARCHAR2(128)	NOT NULL	Owner of the XML index
INDEX_NAME	VARCHAR2(128)	NOT NULL	Name of the XML index
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the indexed object
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the indexed object
TYPE	VARCHAR2(10)		Type of the indexed column: • REPOSITORY • BINARY • CLOB in OR • CLOB

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
INDEX_TYPE	VARCHAR2(27)		Type of the index: • STRUCTURED • STRUCTURED and UNSTRUCTURED • UNSTRUCTURED
PATH_TABLE_NAME	VARCHAR2(128)		Name of the path table
PARAMETERS	XMLTYPE		Indexed paths and Scheduler job information
ASYNC	VARCHAR2(9)		Asynchronous index type: • ON-COMMIT • MANUAL • EVERY • ALWAYS
STALE	VARCHAR2(5)		Indicates whether the index type is stale (TRUE) or not (FALSE)
PEND_TABLE_NAME	VARCHAR2(128)		Name of the pending table
EX_OR_INCLUDE	VARCHAR2(8)		Path subsetting: • INCLUDE • EXCLUDE • FULLY IX

See Also

- "DBA_XML_INDEXES"
- "USER_XML_INDEXES"

4.164 ALL_XML_NESTED_TABLES

ALL_XML_NESTED_TABLES describes all the tables and their corresponding nested tables accessible to the current user.

Related Views

- DBA_XML_NESTED_TABLES describes all the tables and their corresponding nested tables in the database.
- USER_XML_NESTED_TABLES describes all the tables and their corresponding nested tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table
NESTED_TABLE_NAME	VARCHAR2(128)		Name of the nested table
PARENT_COLUMN_NAME	VARCHAR2(4000)		Name of the parent XML column

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

- "DBA_XML_NESTED_TABLES"

4.165 ALL_XML_OUT_OF_LINE_TABLES

ALL_XML_OUT_OF_LINE_TABLES descibes all the out of line tables connected to a given root table for the same schema accessible to the current user.

Related Views

- DBA_XML_OUT_OF_LINE_TABLES describes all the out of line tables connected to a given root table for the same schema in the database.
- USER_XML_OUT_OF_LINE_TABLES describes all the out of line tables connected to a given root table for the same schema owned by the current user. This view does not display the TABLE_OWNER column.

Column	Datatype	NULL	Description
SCHEMA_URL	VARCHAR2(700)		The URL of the schema within which the out of line table is defined Refer to the **See Also** note below for links to more information about the schemaurl attribute for an XML schema.
SCHEMA_OWNER	VARCHAR2(128)		Owner of the schema
TABLE_NAME	VARCHAR2(128)		Name of the out of line table
TABLE_OWNER	VARCHAR2(128)		Owner of the out of line table

See Also

4.166 ALL_XML_SCHEMA_ATTRIBUTES

ALL_XML_SCHEMA_ATTRIBUTES describes all the attributes and their properties accessible to the current user.

Related Views

- DBA_XML_SCHEMA_ATTRIBUTES describes all the attributes and their properties accessible to the current user in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

- USER_XML_SCHEMA_ATTRIBUTES describes all the attributes and their properties owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		The user who owns the attribute
SCHEMA_URL	VARCHAR2(700)		The URL of the schema within which the attribute is defined Refer to the **See Also** note below for links to more information about the schemaurl attribute for an XML schema.
TARGET_NAMESPACE	VARCHAR2(2000)		The namespace of the attribute
ATTRIBUTE_NAME	VARCHAR2(2000)		Name of the attribute
IS_REF	NUMBER		Indicates whether an attribute was defined using a reference in the XML schema (1) or not (0)
TYPE_NAME	VARCHAR2(2000)		Name of the type of the attribute
GLOBAL	RAW(1)		Indicates whether the attribute is global (1) or not (0)
ATTRIBUTE	XMLTYPE		Actual XMLType for the attribute
ELEMENT_ID	RAW(20)		Element ID of the element to which the attribute belongs
SQL_TYPE	VARCHAR2(128)		XDB annotation for sqlType
SQL_NAME	VARCHAR2(128)		XDB annotation value for sqlName

4.167 ALL_XML_SCHEMA_COMPLEX_TYPES

ALL_XML_SCHEMA_COMPLEX_TYPES describes all complex types accessible to the current user.

Related Views

- DBA_XML_SCHEMA_COMPLEX_TYPES describes all complex types in the database.
- USER_XML_SCHEMA_COMPLEX_TYPES describes all complex types owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		The user who owns the type

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SCHEMA_URL	VARCHAR2(700)		The URL of the schema within which the type is defined Refer to the **See Also** note below for links to more information about the schemaurl attribute for an XML schema.
TARGET_NAMESPACE	VARCHAR2(2000)		The namespace of the type
COMPLEX_TYPE_NAME	VARCHAR2(256)		Name of the complex type
COMPLEX_TYPE	XMLTYPE(XMLSchema "http://xmlns.oracle.com/xdb/XDBSchema.xsd" Element "complexType")		The actual XMLType of the type
BASE_NAME	VARCHAR2(256)		Name of the base type to which the complex type refers
BASE_SCHEMA_URL	VARCHAR2(700)		The URL of the schema within which the complex type is defined
BASE_TARGET_NAMESPACE	VARCHAR2(2000)		The namespace of the type
MAINTAIN_DOM	RAW(1)		XDB annotation for maintainDOM
SQL_TYPE	VARCHAR2(128)		XDB annotation for sqlType
SQL_SCHEMA	VARCHAR2(128)		XDB annotation for sqlSchema

4.168 ALL_XML_SCHEMA_ELEMENTS

ALL_XML_SCHEMA_ELEMENTS describes all the elements and their properties accessible to the current user.

Related Views

- DBA_XML_SCHEMA_ELEMENTS describes all the elements and their properties.
- USER_XML_SCHEMA_ELEMENTS describes all the elements and their properties owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		The user who owns the element

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SCHEMA_URL	VARCHAR2(700)		The URL of the schema within which the element is defined Refer to the **See Also** note below for links to more information about the schemaurl attribute for an XML schema.
TARGET_NAMESPACE	VARCHAR2(2000)		The namespace of the element
ELEMENT_NAME	VARCHAR2(2000)		Name of the element
IS_REF	NUMBER		Indicates whether an attribute was defined using a reference in the XML schema (1) or not (0)
TYPE_NAME	VARCHAR2(2000)		Name of the type of the element
GLOBAL	RAW(1)		Indicates whether the attribute is global (1) or not (0)
ELEMENT	XMLTYPE		The actual XML fragment of the element
SQL_INLINE	RAW(1)		XDB annotation for sqlInline
SQL_TYPE	VARCHAR2(128)		XDB annotation value for sqlType
SQL_SCHEMA	VARCHAR2(128)		XDB annotation value for sqlSchema
DEFAULT_TABLE	VARCHAR2(128)		XDB annotation value for default table
SQL_NAME	VARCHAR2(128)		XDB annotation value for sqlName
SQL_COL_TYPE	VARCHAR2(128)		XDB annotation value for sqlColType
MAINTAIN_DOM	RAW(1)		XDB annotation for maintainDOM
MAINTAIN_ORDER	RAW(1)		XDB annotation for maintainOrder
ELEMENT_ID	RAW(20)		Unique identifier for the element
PARENT_ELEMENT_ID	RAW(20)		Identies the parent of the element

4.169 ALL_XML_SCHEMA_NAMESPACES

ALL_XML_SCHEMA_NAMESPACES describes all the available namespaces accessible to the current user.

Related Views

- DBA_XML_SCHEMA_NAMESPACES describes all the available namespaces.
- USER_XML_SCHEMA_NAMESPACES describes all the available namespaces owned by the current user. This view does not display the OWNER column.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		User who owns the namespace
TARGET_NAMESPACE	VARCHAR2(2000)		The target namespace
SCHEMA_URL	VARCHAR2(700)		The URL of the schema Refer to the **See Also** note below for links to more information about the schemaurl attribute for an XML schema.

4.171 ALL_XML_SCHEMA_SUBSTGRP_HEAD

`ALL_XML_SCHEMA_SUBSTGRP_HEAD` describes the heads of substitution groups accessible to the current user.

Related Views

- `DBA_XML_SCHEMA_SUBSTGRP_HEAD` describes the heads of substitution groups.
- `USER_XML_SCHEMA_SUBSTGRP_HEAD` describes the heads of substitution groups owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
`OWNER`	`VARCHAR2(128)`		The user who owns the element
`SCHEMA_URL`	`VARCHAR2(700)`		The URL of the schema within which the element is defined Refer to the **See Also** note below for links to more information about the `schemaurl` attribute for an XML schema.
`TARGET_NAMESPACE`	`VARCHAR2(2000)`		The namespace of the element
`ELEMENT_NAME`	`VARCHAR2(256)`		Name of the element
`ELEMENT`	`XMLTYPE(XMLSchema "http://xmlns.oracle.com/xdb/XDBSchema.xsd" Element "element")`		The actual XML fragment of the element

4.172 ALL_XML_SCHEMA_SUBSTGRP_MBRS

ALL_XML_SCHEMA_SUBSTGRP_MBRS describes all members of substitution groups accessible to the current user.

Related Views

- DBA_XML_SCHEMA_SUBSTGRP_MBRS describes all members of substitution groups.
- USER_XML_SCHEMA_SUBSTGRP_MBRS describes all members of substitution groups owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		The user who owns the element
SCHEMA_URL	VARCHAR2(700)		The URL of the schema within which the element is defined Refer to the **See Also** note below for links to more information about the schemaurl attribute for an XML schema.
TARGET_NAMESPACE	VARCHAR2(2000)		The namespace of the element
ELEMENT_NAME	VARCHAR2(256)		Name of the element
ELEMENT	XMLTYPE(XMLSchema "http://xmlns.oracle.com/xdb/XDBSchema.xsd" Element "element")		The actual XML fragment of the element
HEAD_OWNER	VARCHAR2(128)		The user who owns the head element for the current element
HEAD_SCHEMA_URL	VARCHAR2(700)		The URL of the schema within which the head element exists
HEAD_TARGET_NAMESPACE	VARCHAR2(2000)		The namespace of the head element
HEAD_ELEMENT_NAME	VARCHAR2(256)		Name of the head element
HEAD_ELEMENT	XMLTYPE(XMLSchema "http://xmlns.oracle.com/xdb/XDBSchema.xsd" Element "element")		The actual XMLType of the head element

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.173 ALL_XML_SCHEMAS

`ALL_XML_SCHEMAS` describes the registered XML schemas accessible to the current user.

Related Views

- `DBA_XML_SCHEMAS` describes all registered XML schemas in the database.
- `USER_XML_SCHEMAS` describes the registered XML schemas owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
`OWNER`	`VARCHAR2(128)`		Owner of the XML schema
`SCHEMA_URL`	`VARCHAR2(700)`		Schema URL of the XML schema Refer to the **See Also** note below for links to more information about the `schemaurl` attribute for an XML schema.
`LOCAL`	`VARCHAR2(3)`		Indicates whether the XML schema is local (`YES`) or global (`NO`)
`SCHEMA`	`XMLTYPE`		XML schema document
`INT_OBJNAME`	`VARCHAR2(4000)`		Internal database object name for the schema
`QUAL_SCHEMA_URL`	`VARCHAR2(865)`		Fully qualified schema URL
`HIER_TYPE`	`VARCHAR2(11)`		Type of hierarchy for which the schema is enabled: • `NONE` • `RESMETADATA` • `CONTENTS`
`BINARY`	`VARCHAR2(3)`		Indicates whether the XML Schema is registered for binary encoding usage (`YES`) or not (`NO`)
`SCHEMA_ID`	`RAW(16)`		Opaque schema identifier (16 bytes)
`HIDDEN`	`VARCHAR2(3)`		Indicates whether the XML Schema has been deleted in hidden mode (`YES`) or not (`NO`)

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.174 ALL_XML_TAB_COLS

`ALL_XML_TAB_COLS` describes the columns of the XML tables accessible to the current user.

Related Views

- `DBA_XML_TAB_COLS` describes the columns of all XML tables in the database.
- `USER_XML_TAB_COLS` describes the columns of the XML tables owned by the current user. This view does not display the `OWNER` column.

Column	Datatype	NULL	Description
`OWNER`	`VARCHAR2(128)`		Owner of the XML table
`TABLE_NAME`	`VARCHAR2(128)`		Name of the XML table
`COLUMN_NAME`	`VARCHAR2(4000)`		Name of the XML table column
`XMLSCHEMA`	`VARCHAR2(700)`		Name of the XML Schema that is used for the table definition
`SCHEMA_OWNER`	`VARCHAR2(128)`		Owner of the XML Schema that is used for the table definition
`ELEMENT_NAME`	`VARCHAR2(2000)`		Name of the XML SChema element that is used for the table
`STORAGE_TYPE`	`VARCHAR2(20)`		Storage option for the XMLType data: • `BINARY` • `CLOB` • `OBJECT-RELATIONAL` • `TRANSPORTABLE BINARY` **Note:** The `CLOB` storage option for XMLType data is deprecated in Oracle Database 12*c* Release 1 (12.1). Oracle recommends instead using the `TRANSPORTABLE BINARY` storage option.
`ANYSCHEMA`	`VARCHAR2(3)`		If storage is `BINARY`, indicates whether the column allows `ANYSCHEMA` (`YES`) or not (`NO`), else NULL
`NONSCHEMA`	`VARCHAR2(3)`		If storage is `BINARY`, indicates whether the column allows `NONSCHEMA` (`YES`) or not (`NO`), else NULL
`TOKENSETS`	`VARCHAR2(4000)`		This column is for internal use only.

4.175 ALL_XML_TABLES

ALL_XML_TABLES describes the XML tables accessible to the current user.

Related Views

- DBA_XML_TABLES describes all XML tables in the database.
- USER_XML_TABLES describes the XML tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the XML table
TABLE_NAME	VARCHAR2(128)		Name of the XML table
XMLSCHEMA	VARCHAR2(700)		Name of the XML Schema that is used for the table definition
SCHEMA_OWNER	VARCHAR2(128)		Owner of the XML Schema that is used for the table definition
ELEMENT_NAME	VARCHAR2(2000)		Name of the XML SChema element that is used for the table
STORAGE_TYPE	VARCHAR2(20)		Storage option for the XMLType data: • BINARY • CLOB • OBJECT-RELATIONAL • TRANSPORTABLE BINARY **Note:** The CLOB storage option for XMLType data is deprecated in Oracle Database 12*c* Release 1 (12.1). Oracle recommends instead using the TRANSPORTABLE BINARY storage option.
ANYSCHEMA	VARCHAR2(3)		If storage is BINARY, indicates whether the column allows ANYSCHEMA (YES) or not (NO), else NULL
NONSCHEMA	VARCHAR2(3)		If storage is BINARY, indicates whether the column allows NONSCHEMA (YES) or not (NO), else NULL
TOKENSETS	VARCHAR2(4000)		This column is for internal use only.

4.178 ALL_XSTREAM_ADMINISTRATOR

ALL_XSTREAM_ADMINISTRATOR displays information about the current users's granted privileges to be an XStream administrator by procedures in the DBMS_XSTREAM_AUTH package.

Related View

DBA_XSTREAM_ADMINISTRATOR displays information about the users who have been granted privileges to be XStream administrators by procedures in the DBMS_XSTREAM_AUTH package.

Column	Datatype	NULL	Description
USERNAME	VARCHAR2(128)	NOT NULL	Name of the user who has been granted privileges to be an XStream administrator
PRIVILEGE_TYPE	VARCHAR2(7)		Type of privilege granted: • APPLY • CAPTURE • * - Both APPLY and CAPTURE
GRANT_SELECT_PRIVILEGES	VARCHAR2(3)		Shows whether set of privileges granted to the user (grantee) includes the SELECT_CATALOG_ROLE role, which enables the user to manage other XStream servers that belong to other XStream users. Possible values: • YES: The administrator has the SELECT_CATALOG_ROLE role and other privileges, is considered a full privilege administrator, and can manage other users' XStream configuration • NO: The administrator is considered a minimum privilege administrator, and can only manage XStream configurations where the apply_user or capture_user (based on the PRIVILEGE_TYPE column) matches the username.
CREATE_TIME	TIMESTAMP(6)		Time at which the privilege was granted
LAST_MODIFIED	TIMESTAMP(6)		Time at which the privilege was last modified

See Also

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.179 ALL_XSTREAM_INBOUND

ALL_XSTREAM_INBOUND displays information about the XStream inbound servers accessible to the current user.

Related View

DBA_XSTREAM_INBOUND displays information about all XStream inbound servers in the database.

Column	Datatype	NULL	Description
SERVER_NAME	VARCHAR2(128)	NOT NULL	Name of the inbound server
QUEUE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the queue associated with the inbound server
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue associated with the inbound server
APPLY_USER	VARCHAR2(128)		Name of the user who can connect to the inbound server and apply messages
USER_COMMENT	VARCHAR2(4000)		User comment
CREATE_DATE	TIMESTAMP(6)		Date when the inbound server was created
STATUS	VARCHAR2(8)		Status of the inbound server: • DISABLED - The inbound server is not running. • DETACHED - The inbound server is running, but the XStream client application is not attached to it. • ATTACHED - The inbound server is running, and the XStream client application is attached to it. • ABORTED - The inbound server became disabled because it encountered an error.
COMMITTED_DATA_ONLY	VARCHAR2(3)		YES - means the inbound server can receive only LCRs in committed transactions from the XStream client application. A committed transaction is an assembled, noninterleaving transaction with no rollbacks.

> "DBA_XSTREAM_INBOUND"

4.180 ALL_XSTREAM_INBOUND_PROGRESS

ALL_XSTREAM_INBOUND_PROGRESS displays information about the progress made by the XStream inbound servers accessible to the current user.

Related View

DBA_XSTREAM_INBOUND_PROGRESS displays information about the progress made by all XStream inbound servers in the database.

Column	Datatype	NULL	Description
SERVER_NAME	VARCHAR2(128)	NOT NULL	Name of the inbound server

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PROCESSED_LOW_POSITION	RAW(64)		Position of the processed low transaction
APPLIED_LOW_POSITION	RAW(64)		All messages with a commit position less than this value have been applied
APPLIED_HIGH_POSITION	RAW(64)		Highest commit position of a transaction that has been applied
SPILL_POSITION	RAW(64)		Position of the spill low watermark of the transactions currently being applied
OLDEST_POSITION	RAW(64)		Earliest position of the transactions currently being applied
OLDEST_MESSAGE_NUMBER	NUMBER	NOT NULL	Earliest message number of the transactions currently being applied
APPLIED_MESSAGE_NUMBER	NUMBER	NOT NULL	Message number up to which all transactions have definitely been applied. This value is the low watermark for the inbound server. That is, messages with a commit message number less than or equal to this message number have definitely been applied, but some messages with a higher commit message number may also have been applied.
APPLIED_TIME	DATE		Time at which the message with the message number displayed in the APPLIED_MESSAGE_NUMBER column was applied
APPLIED_MESSAGE_CREATE_TIME	DATE		Time at which the message with the message number displayed in the APPLIED_MESSAGE_NUMBER column was created at its source database
SPILL_MESSAGE_NUMBER	NUMBER		Spill low watermark. Any message with a lower SCN has either been applied or spilled to disk. The XStream client application does not need to send logical change records (LCRs) with a lower SCN than the spill low watermark. Spilled messages may not have been applied yet.
SOURCE_DATABASE	VARCHAR2(128)	NOT NULL	Database where the transaction originated
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database

See Also

"DBA_XSTREAM_INBOUND_PROGRESS"

4.181 ALL_XSTREAM_OUT_SUPPORT_MODE

ALL_XSTREAM_OUT_SUPPORT_MODE displays information about the level of XStream capture process support for the tables accessible to the current user in the database.

Related View

DBA_XSTREAM_OUT_SUPPORT_MODE displays information about the level of XStream capture process support for the tables in the database.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Table owner
OBJECT_NAME	VARCHAR2(128)		Table name
SUPPORT_MODE	VARCHAR2(6)		Capture process support level for the table: • FULL - A capture process can capture changes made to all of the columns in the table. • ID KEY - A capture process can capture changes made to the key columns and any other columns in the table that are supported by the capture process, except for LOB, LONG, LONG RAW, and XMLType columns. • NONE - A capture process cannot capture changes made to any columns in the table.
EXPLANATION	VARCHAR2(4000)		Reason the table does not have FULL capture process support This column is populated only when both of the following conditions are met: • The value of the COMPATIBLE initialization parameter is 20.0 or higher • The value of the SUPPORT_MODE column is ID KEY or NONE

"DBA_XSTREAM_OUT_SUPPORT_MODE"

4.182 ALL_XSTREAM_OUTBOUND

ALL_XSTREAM_OUTBOUND displays information about the XStream outbound servers accessible to the current user.

Related View

DBA_XSTREAM_OUTBOUND displays information about all XStream outbound servers in the database.

Column	Datatype	NULL	Description
SERVER_NAME	VARCHAR2(128)	NOT NULL	Name of the outbound server
CONNECT_USER	VARCHAR2(128)		Name of the user who can connect to the outbound server and process the outbound LCRs
CAPTURE_NAME	VARCHAR2(128)		Name of the Replication capture process
SOURCE_DATABASE	VARCHAR2(128)		Database where the transaction originated
CAPTURE_USER	VARCHAR2(128)		Current user who is enqueuing captured messages
QUEUE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the queue associated with the outbound server
QUEUE_NAME	VARCHAR2(128)	NOT NULL	Name of the queue associated with the outbound server

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
USER_COMMENT	VARCHAR2(4000)		User comment
CREATE_DATE	TIMESTAMP(6)		Date when the outbound server was created
STATUS	VARCHAR2(8)		Status of the outbound server: • DISABLED - The outbound server is not running. • DETACHED - The outbound server is running, but the XStream client application is not attached to it. • ATTACHED - The outbound server is running, and the XStream client application is attached to it. • ABORTED - The outbound server became disabled because it encountered an error.
COMMITTED_DATA_ONLY	VARCHAR2(3)		YES if the outbound server can send only LCRs in committed transactions to the XStream client application. A committed transaction is an assembled, noninterleaving transaction with no rollbacks. NO if the outbound server can send LCRs in transactions that have not yet committed to the XStream client application. This mode is for internal Oracle use only.
START_SCN	NUMBER		The SCN from which the outbound server's capture process started capturing changes when it was last started
START_TIME	TIMESTAMP(6)		The time from which the outbound server's capture process started capturing changes when it was last started
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database
LCRID_VERSION	NUMBER		LCR ID format currently being used

4.183 ALL_XSTREAM_OUTBOUND_PROGRESS

ALL_XSTREAM_OUTBOUND_PROGRESS displays information about the progress made by the XStream outbound servers accessible to the current user.

Related View

DBA_XSTREAM_OUTBOUND_PROGRESS displays information about the progress made by all XStream outbound servers in the database.

Column	Datatype	NULL	Description
SERVER_NAME	VARCHAR2(128)	NOT NULL	Name of the outbound server
SOURCE_DATABASE	VARCHAR2(128)		Global name of the database where the transaction originated. For a PDB, this is the global name of the PDB.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PROCESSED_LOW_POSITION	RAW(64)		Position of the low-watermark transaction processed by the outbound server
PROCESSED_LOW_TIME	DATE		Time when the processed low position was last updated by the outbound server
OLDEST_POSITION	RAW(64)		The position of the earliest LCR that is required by the XStream client application
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database
PROCESSED_LOW_SCN	NUMBER	NOT NULL	SCN of the processed low transaction
OLDEST_SCN	NUMBER	NOT NULL	Oldest SCN of the transactions currently being captured

4.184 ALL_XSTREAM_RULES

ALL_XSTREAM_RULES displays information about the XStream rules accessible to the current user.

Related View

DBA_XSTREAM_RULES displays information about all XStream server rules in the database.

Column	Datatype	NULL	Description
STREAMS_NAME	VARCHAR2(128)		Name of the XStream process
STREAMS_TYPE	VARCHAR2(12)		Type of the XStream process: • CAPTURE • APPLY
STREAMS_RULE_TYPE	VARCHAR2(9)		The XStream type of the rule: • TABLE • SCHEMA • GLOBAL
RULE_SET_OWNER	VARCHAR2(128)		Owner of the rule set
RULE_SET_NAME	VARCHAR2(128)		Name of the rule set
RULE_SET_TYPE	CHAR(8)		Type of the rule set: • POSITIVE • NEGATIVE
RULE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the rule
RULE_NAME	VARCHAR2(128)	NOT NULL	Name of the rule
RULE_TYPE	VARCHAR2(9)		The type of the rule: • DML • DDL
RULE_CONDITION	CLOB		Current rule condition

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SCHEMA_NAME	VARCHAR2(128)		For table and schema rules, the schema name
OBJECT_NAME	VARCHAR2(128)		For table rules, the table name
INCLUDE_TAGGED_LCR	VARCHAR2(3)		Indicates whether to include tagged LCRs (YES) or not (NO)
SUBSETTING_OPERATION	VARCHAR2(6)		For subset rules, the type of operation: • INSERT • UPDATE • DELETE
DML_CONDITION	VARCHAR2(4000)		For subset rules, the row subsetting condition
SOURCE_DATABASE	VARCHAR2(128)		The global name of the database where the LCRs originated. In a PDB, this is the global name of the PDB.
ORIGINAL_RULE_CONDITION	VARCHAR2(4000)		For rules created by the XStream administrative APIs, the original rule condition when the rule was created
SAME_RULE_CONDITION	VARCHAR2(3)		For rules created by the XStream administrative APIs, indicates whether the current rule condition is the same as the original rule condition (YES) or not (NO)
SOURCE_ROOT_NAME	VARCHAR2(128)		The global name of the source root database
SOURCE_CONTAINER_NAME	VARCHAR2(128)		The container name of the database where the transactions originated

4.185 ALL_XSTREAM_TRANSFORMATIONS

ALL_XSTREAM_TRANSFORMATIONS displays information about all XStream transformations accessible to the current user, in order of execution.

Related View

DBA_XSTREAM_TRANSFORMATIONS displays information about all XStream transformations available on a system, in order of execution.

Column	Datatype	NULL	Description
RULE_OWNER	VARCHAR2(128)		Owner of the rule which has an associated transformation
RULE_NAME	VARCHAR2(128)		Name of the rule which has an associated transformation
TRANSFORM_TYPE	VARCHAR2(26)		Type of the transformation: • DECLARATIVE TRANSFORMATION • SUBSET RULE • CUSTOM TRANSFORMATION
FROM_SCHEMA_NAME	VARCHAR2(128)		Schema to be renamed

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
TO_SCHEMA_NAME	VARCHAR2(128)		New schema name
FROM_TABLE_NAME	VARCHAR2(128)		Table to be renamed
TO_TABLE_NAME	VARCHAR2(128)		New table name
SCHEMA_NAME	VARCHAR2(128)		Schema of the column to be modified
TABLE_NAME	VARCHAR2(128)		Table of the column to be modified
FROM_COLUMN_NAME	VARCHAR2(4000)		Column to be renamed
TO_COLUMN_NAME	VARCHAR2(4000)		New column name
COLUMN_NAME	VARCHAR2(4000)		Column to add or delete
COLUMN_VALUE	ANYDATA		Value of the column to add
COLUMN_TYPE	VARCHAR2(4000)		Type of the new column
COLUMN_FUNCTION	VARCHAR2(128)		Name of the default function used to add a column
VALUE_TYPE	VARCHAR2(3)		Indicates whether to modify the old (OLD), new (NEW), or both (*) values of the LCR
USER_FUNCTION_NAME	VARCHAR2(4000)		Name of the user-defined transformation function to run
SUBSETTING_OPERATION	VARCHAR2(6)		DML operation for row subsetting: • INSERT • UPDATE • DELETE
DML_CONDITION	VARCHAR2(4000)		Row subsetting condition
DECLARATIVE_TYPE	VARCHAR2(13)		Type of declarative transform to run: • KEEP COLUMNS • DELETE COLUMN • RENAME COLUMN • ADD COLUMN • RENAME TABLE • RENAME SCHEMA
PRECEDENCE	NUMBER		Execution order relative to other declarative transformations on the same STEP_NUMBER
STEP_NUMBER	NUMBER		Order in which this transformation should be executed

4.186 ALL_XTERNAL_LOC_PARTITIONS

ALL_XTERNAL_LOC_PARTITIONS describes partition-level locations accessible to the current user.

If an external table is partitioned, then the existing ALL_EXTERNAL_LOCATIONS, DBA_EXTERNAL_LOCATIONS, and USER_EXTERNAL_LOCATIONS views will have no rows for that table. Instead, locations will be indicated in the ALL_XTERNAL_LOC_PARTITIONS, DBA_XTERNAL_LOC_PARTITIONS, USER_XTERNAL_LOC_PARTITIONS,

Copyright © 2002, 2025, Oracle and/or its affiliates.

ALL_XTERNAL_LOC_SUBPARTITIONS, DBA_XTERNAL_LOC_SUBPARTITIONS, and USER_XTERNAL_LOC_SUBPARTITIONS views.

Related Views

- DBA_XTERNAL_LOC_PARTITIONS describes partition-level locations in the database.
- USER_XTERNAL_LOC_PARTITIONS describes partition-level locations owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the partitioned external table
TABLE_NAME	VARCHAR2(128)		Name of the partitioned external table
PARTITION_NAME	VARCHAR2(128)		Name of the partition
LOCATION	VARCHAR2(4000)		External table location clause for the partition
DIRECTORY_OWNER	CHAR(3)		Owner of the directory containing the external table partition location
DIRECTORY_NAME	VARCHAR2(128)		Name of the directory containing the external table partition location

See Also

- "DBA_XTERNAL_LOC_PARTITIONS"
- "USER_XTERNAL_LOC_PARTITIONS"

4.187 ALL_XTERNAL_LOC_SUBPARTITIONS

ALL_XTERNAL_LOC_SUBPARTITIONS describes subpartition-level locations accessible to the current user.

If an external table is partitioned, then the existing ALL_EXTERNAL_LOCATIONS, DBA_EXTERNAL_LOCATIONS, and USER_EXTERNAL_LOCATIONS views will have no rows for that table. Instead, locations will be indicated in the ALL_XTERNAL_LOC_PARTITIONS, DBA_XTERNAL_LOC_PARTITIONS, USER_XTERNAL_LOC_PARTITIONS, ALL_XTERNAL_LOC_SUBPARTITIONS, DBA_XTERNAL_LOC_SUBPARTITIONS, and USER_XTERNAL_LOC_SUBPARTITIONS views.

Related Views

- DBA_XTERNAL_LOC_SUBPARTITIONS describes subpartition-level locations in the database.
- USER_XTERNAL_LOC_SUBPARTITIONS describes subpartition-level locations owned by the current user. This view does not display the TABLE_OWNER column.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the partitioned external table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the partitioned external table
PARTITION_NAME	VARCHAR2(128)		Name of the partition
SUBPARTITION_NAME	VARCHAR2(128)		Name of the subpartition

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
LOCATION	VARCHAR2(4000)		External table location clause for the subpartition
DIRECTORY_OWNER	CHAR(3)		Owner of the directory containing the external table subpartition location
DIRECTORY_NAME	VARCHAR2(128)		Name of the directory containing the external table subpartition location

4.188 ALL_XTERNAL_PART_TABLES

ALL_XTERNAL_PART_TABLES describes object-level information for partitioned external tables accessible to the current user.

Related Views

- DBA_XTERNAL_PART_TABLES describes object-level information for partitioned external tables in the database
- USER_XTERNAL_PART_TABLES describes object-level information for partitioned external tables owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the partitioned external table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the partitioned external table
TYPE_OWNER	CHAR(3)		Owner of the implementation type for the external table access driver
TYPE_NAME	VARCHAR2(128)		Name of the implementation type for the external table access driver
DEFAULT_DIRECTORY_OWNER	CHAR(3)		Owner of the default directory for the external table
DEFAULT_DIRECTORY_NAME	VARCHAR2(128)		Name of the default directory for the external table
REJECT_LIMIT	VARCHAR2(40)		Reject limit for the external table, or UNLIMITED
ACCESS_TYPE	VARCHAR2(7)		Type of access parameters for the external table (BLOB, CLOB)
ACCESS_PARAMETERS	CLOB		Access parameters for the external table
PROPERTY	VARCHAR2(10)		Property of the external table (REFERENCED, ALL)
INMEMORY[1]	VARCHAR2(8)		Indicates whether the In-Memory Column Store (IM column store) is by default enabled (ENABLED), disabled (DISABLED), or not specified (NONE) for partitions in the external table

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
INMEMORY_COMPRESSION[1]	VARCHAR2(17)		Indicates the default compression level for the IM column store: • NO MEMCOMPRESS • FOR DML • FOR QUERY [LOW | HIGH] • FOR CAPACITY [LOW | HIGH] • NULL

1 This column is available starting with Oracle Database 21c. It appears in the USER_XTERNAL_PART_TABLES view and is omitted from the ALL_XTERNAL_PART_TABLES and DBA_XTERNAL_PART_TABLES views.

4.189 ALL_XTERNAL_TAB_PARTITIONS

ALL_XTERNAL_TAB_PARTITIONS describes partition-level information for partitioned external tables accessible to the current user.

Related Views

- DBA_XTERNAL_TAB_PARTITIONS describes partition-level information for partitioned external tables in the databae
- USER_XTERNAL_TAB_PARTITIONS describes partition-level information for partitioned external tables owned by the current user. This view does not display the TABLE_OWNER column.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)		Owner of the partitioned external table
TABLE_NAME	VARCHAR2(128)		Name of the partitioned external table
PARTITION_NAME	VARCHAR2(128)		Name of the partition
DEFAULT_DIRECTORY_OWNER	CHAR(3)		Owner of the default directory for the external table partition
DEFAULT_DIRECTORY_NAME	VARCHAR2(128)		Name of the default directory for the external table partition
ACCESS_TYPE	VARCHAR2(7)		Type of access parameters for the partition (BLOB, CLOB)
ACCESS_PARAMETERS	CLOB		Access parameters for the external table partition
PROPERTY	VARCHAR2(10)		Property of the external table partition: • REFERENCED - Referenced columns • ALL - All columns
INMEMORY	VARCHAR2(8)		Indicates whether the In-Memory Column Store (IM column store) is enabled (ENABLED) or disabled (DISABLED) for the external table partition

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
INMEMORY_COMPRESSION	VARCHAR2(17)		Indicates the compression level for the IM column store: • NO MEMCOMPRESS • FOR DML • FOR QUERY [LOW | HIGH] • FOR CAPACITY [LOW | HIGH] • NULL

4.191 ALL_ZONEMAP_MEASURES

ALL_ZONEMAP_MEASURES describes the measures for all zone maps accessible to the user.

Related Views

- DBA_ZONEMAP_MEASURES describes the measures for all the zone maps in the database.
- USER_ZONEMAP_MEASURES describes the measures for all the zone maps owned by the user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)	NOT NULL	Owner of the zone map
ZONEMAP_NAME	VARCHAR2(128)	NOT NULL	Name of the zone map
MEASURE	LONG		Column whose MIN/MAX value is computed
POSITION_IN_SELECT	NUMBER	NOT NULL	Original position of the mesaure aggregate on the SELECT list of zone map defining query
AGG_FUNCTION	VARCHAR2(13)		Name of aggregate in zone map table
AGG_COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column whose MIN/MAX per zone maintained

Note

This view is intended for use with Oracle Exadata release 12.1.2.1.1 or later.

See Also

- "DBA_ZONEMAP_MEASURES"
- "USER_ZONEMAP_MEASURES"
- *Oracle AI Database Data Warehousing Guide* for more information about zone maps

4.192 ALL_ZONEMAPS

ALL_ZONEMAPS describes all the zone maps accessible to the user.

Related Views

- DBA_ZONEMAPS describes all the zone maps in the database.
- USER_ZONEMAPS describes all the zone maps owned by the user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the zone map
ZONEMAP_NAME	VARCHAR2(128)		Name of the zone map
FACT_OWNER	VARCHAR2(128)		Owner of the fact table of the zone map

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
FACT_TABLE	VARCHAR2(128)		Name of the fact table on which the zone map is defined
SCALE	NUMBER		Scale factor of the zone map
HIERARCHICAL	VARCHAR2(3)		Indicates whether the zone map is hierarchical (YES) or not (NO)
WITH_CLUSTERING	VARCHAR2(3)		Indicates whether the zone map is created with the CLUSTERING clause (YES) or not (NO)
AUTOMATIC	VARCHAR2(3)		Indicates whether the zone map is automatic (YES) or not (NO)
QUERY	LONG		Zone map defining query
QUERY_LEN	NUMBER(38)		Length of defining query in bytes
PRUNING	VARCHAR2(8)		Indicates whether the zone map is enabled for pruning (ENABLED) or not (DISABLED)
REFRESH_MODE	VARCHAR2(17)		Refresh mode for the zone map: • COMMIT • DEMAND • DATAMOVEMENT • LOAD • LOAD DATAMOVEMENT
REFRESH_METHOD	VARCHAR2(13)		Refresh method for the zone map • COMPLETE • FAST • FORCE
LAST_REFRESH_METHOD	VARCHAR2(13)		The last refresh method used for the zone map: • COMPLETE • FAST • NA
LAST_REFRESH_TIME	TIMESTAMP(9)		Time of the last refresh
INVALID	VARCHAR2(3)		Indicates whether the zone map is invalid due to some DDL (YES) or not (NO)
STALE	VARCHAR2(7)		Indicates whether the zone map is stale because of DML operations and cannot be used for pruning (YES) or not (NO), or whether this cannot be determined (UNKNOWN)
PARTLY_STALE	VARCHAR2(7)		Indicates whether the zone map is partly stale (YES) or not (NO), or whether this cannot be determined (UNKNOWN). A partly stale zone map contains both fresh and stale zones.
INCOMPLETE	VARCHAR2(7)		Indicates whether the zone map has missing zones (YES) or not (NO), or whether this cannot be determined (UNKNOWN). Missing zones result when data is added to the base table and a subsequent refresh of the zone map is not performed.
UNUSABLE	VARCHAR2(3)		Indicates whether the zone map has been marked unusable by the owner (YES) or not (NO)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
COMPILE_STATE	VARCHAR2(19)		Current compile state of the zone map: • VALID • AUTHORIZATION_ERROR • COMPILATION_ERROR • NEEDS_COMPILE • ERROR_UNKNOWN Similar to ALL_MVIEWS.COMPILE_STATE.

Note

This view is intended for use with Oracle Exadata release 12.1.2.1.1 or later.

4.193 AUDIT_ACTIONS

AUDIT_ACTIONS describes audit trail action type codes. This table can be used to map action type numbers to action type names.

Note

The mapping explained in this view is valid for audit trail records from the following views only, and such audit records are generated only when unified auditing is not enabled:

- DBA_AUDIT_TRAIL
- DBA_COMMON_AUDIT_TRAIL
- DBA_FGA_AUDIT_TRAIL
- USER_AUDIT_TRAIL
- V$XML_AUDIT_TRAIL

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle AI Database 26ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle AI Database Security Guide* for more information about how this desupport works.

Column	Datatype	NULL	Description
ACTION	NUMBER	NOT NULL	Numeric audit trail action type code.
NAME	VARCHAR2(28)	NOT NULL	Name of the type of audit trail action

4.194 AUDIT_UNIFIED_CONTEXTS

AUDIT_UNIFIED_CONTEXTS describes the application context's attributes, which are configured to be captured in the audit trail.

> **Note**
>
> This view is populated only in an Oracle AI Database where unified auditing is enabled.
>
> - See *Oracle AI Database Security Guide* for more information about unified auditing.
> - See *Oracle AI Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
NAMESPACE	VARCHAR2(128)		Application context namespace
ATTRIBUTE	VARCHAR2(128)		Application context attribute
USER_NAME	VARCHAR2(128)		Username of database user for whom the application context's attribute is confiured to be captured in the audit trail

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.195 AUDIT_UNIFIED_ENABLED_POLICIES

`AUDIT_UNIFIED_ENABLED_POLICIES` describes all the audit policies that are enabled in the database.

> **Note**
>
> This view is populated only in an Oracle AI Database where unified auditing is enabled.
>
> - See *Oracle AI Database Security Guide* for more information about unified auditing.
> - See *Oracle AI Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
`POLICY_NAME`	`VARCHAR2(128)`		Name of the audit policy
`ENABLED_OPTION`	`VARCHAR2(15)`		Enabled option of the audit policy. Possible values: • `BY USER`: For policies that are enabled on users • `EXCEPT USER`: For policies that are enabled on users • `BY GRANTED ROLE`: For policies that are enabled on roles • `INVALID`: For policies that are not enabled on either users or roles
`ENTITY_NAME`	`VARCHAR2(128)`		Database entity (user name or role name) on which the audit policy is enabled. When an audit policy is enabled on all database users, `ALL USERS` is displayed in this column.
`ENTITY_TYPE`	`VARCHAR2(7)`		Database entity type. Possible values: • `USER`: Indicates that the policy is enabled on a user or users. • `ROLE`: Indicates that the policy is enabled on a role or roles.
`SUCCESS`	`VARCHAR2(3)`		Indicates whether the audit policy is enabled for auditing successful events (`YES`) or not (`NO`)
`FAILURE`	`VARCHAR2(3)`		Indicates whether the audit policy is enabled for auditing unsuccessful events (`YES`) or not (`NO`)

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.196 AUDIT_UNIFIED_POLICIES

AUDIT_UNIFIED_POLICIES describes all audit policies created in the database.

> **Note**
>
> This view is populated only in an Oracle AI Database where unified auditing is enabled.
>
> - See *Oracle AI Database Security Guide* for more information about unified auditing.
> - See *Oracle AI Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
POLICY_NAME	VARCHAR2(128)		Name of the audit policy
AUDIT_CONDITION	VARCHAR2(4000)		Condition associated with the audit policy
CONDITION_EVAL_OPT	VARCHAR2(9)		Evaluation option associated with the audit policy's condition. The possible values are STATEMENT, SESSION, INSTANCE, and NONE.
AUDIT_OPTION	VARCHAR2(128)		Auditing option defined in the audit policy
AUDIT_OPTION_TYPE	VARCHAR2(18)		Type of the auditing option. Possible values: • COLUMN ACTION • DATAPUMP ACTION • DIRECT LOAD ACTION • DV ACTION • INVALID • OBJECT ACTION • OLS_ACTION • ROLE PRIVILEGE • STANDARD ACTION • SYSTEM ACTION • SYSTEM PRIVILEGE • XS ACTION
OBJECT_SCHEMA	VARCHAR2(128)		Owner of the object, for an object-specific auditing option
OBJECT_NAME	VARCHAR2(128)		Name of the object, for an object-specific auditing option
OBJECT_TYPE	VARCHAR2(23)		Type of the object, for an object-specific auditing option

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
COMMON	VARCHAR2(3)		Indicates whether the audit policy is a common audit policy or local audit policy. The value is NULL for a non-CDB. For local audit policies, the value of the COMMON column is always NO. For a CDB common policy: • If you query AUDIT_UNIFIED_POLICIES from the CDB root container, the value of the COMMON column will be YES and the value of the INHERITED column will be NO. • If you query AUDIT_UNIFIED_POLICIES from any other container besides the CDB root container, the value of the COMMON column and the INHERITED column will be YES. For an application container common policy: • If you query AUDIT_UNIFIED_POLICIES from the application root container, the value of the COMMON column will be YES and the value of the INHERITED column will be NO. • If you query AUDIT_UNIFIED_POLICIES from any other container besides the application root container, the value of the COMMON column and the INHERITED column will be YES.
INHERITED	VARCHAR2(3)		Indicates whether the audit policy was inherited from another container (YES) or not (NO). This value is NULL for non-CDBs.
AUDIT_ONLY_TOPLEVEL	VARCHAR2(3)		Indicates whether the audit policy is defined to audit only top level SQL statements (YES) or both top level SQL statements and recursive SQL statements (NO)
ORACLE_SUPPLIED	VARCHAR2(3)		Indicates whether the audit policy is an Oracle-supplied policy (YES) or not (NO) Oracle-supplied policies are also called predefined policies.
COLUMN_NAME	VARCHAR2(128)		If AUDIT_OPTION_TYPE = COLUMN ACTION, then this column displays the name of the table column on which the audit policy was created. In this case, the OBJECT_SCHEMA, OBJECT_NAME, and OBJECT_TYPE columns apply to the table containing the audited column. Otherwise, the value of this column is null.

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.197 AUDIT_UNIFIED_POLICY_COMMENTS

AUDIT_UNIFIED_POLICY_COMMENTS shows the description of each unified audit policy, if a description was entered for the unified audit policy using the COMMENT SQL statement.

> **Note**
>
> This view is populated only in an Oracle AI Database where unified auditing is enabled.
>
> - See *Oracle AI Database Security Guide* for more information about unified auditing.
> - See *Oracle AI Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
POLICY_NAME	VARCHAR2(128)	NOT NULL	Name of the unified audit policy
COMMENTS	VARCHAR2(4000)		Description of the unified audit policy, if one was entered using the COMMENT SQL statement

4.198 AUDITABLE_SYSTEM_ACTIONS

AUDITABLE_SYSTEM_ACTIONS maps the auditable system action numbers to the action names. These actions are configurable for audit when unified auditing is enabled.

The actions include:

- All standard RDBMS actions (from the V$SQLCOMMAND view) except the following, which are not configurable for auditing:
  - ALTER EDITION
  - ALTER REWRITE EQUIVALENCE
  - ALTER SUMMARY
  - ALTER TRACING
  - CREATE BITMAPFILE
  - CREATE CONTROL FILE
  - CREATE DATABASE
  - CREATE SUMMARY
  - DECLARE REWRITE EQUIVALENCE
  - DROP BITMAPFILE
  - DROP DATABASE
  - DROP REWRITE EQUIVALENCE
  - DROP SUMMARY
  - FLASHBACK DATABASE

Copyright © 2002, 2025, Oracle and/or its affiliates.

  - MERGE
  - SAVEPOINT
  - SET CONSTRAINTS
  - UNDROP OBJECT
  - UPDATE INDEXES
  - UPDATE JOIN INDEX
  - VALIDATE INDEX
- Other actions:
  - ALL
  - LOGON
  - LOGOFF

> **Note**
>
> This view is populated only in an Oracle AI Database where unified auditing is enabled.
>
> - See *Oracle AI Database Security Guide* for more information about unified auditing.
> - See *Oracle AI Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
TYPE	NUMBER		Numeric component type for system wide actions
COMPONENT	VARCHAR2(64)		Name of component for system wide actions
ACTION	NUMBER		Numeric auditable action code for system wide actions
NAME	VARCHAR2(64)		Name of auditable action

Some auditable actions in AUDITABLE_SYSTEM_ACTIONS have different names than their equivalent commands in V$SQLCOMMAND, as shown in the following table:

AUDITABLE_SYSTEM_ACTIONS Action Name	V$SQLCOMMAND Command Name
GRANT	GRANT OBJECT
REVOKE	REVOKE OBJECT
AUDIT	AUDIT OBJECT
NOAUDIT	NOAUDIT OBJECT
EXECUTE	PL/SQL EXECUTE
EXPLAIN PLAN	EXPLAIN
CALL	CALL METHOD
PURGE DBA_RECYCLEBIN	PURGE DBA RECYCLEBIN

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> "V$SQLCOMMAND"

4.199 CAT

`CAT` is a synonym for `USER_CATALOG`.

> **See Also**
>
> "USER_CATALOG"

4.200 CATALOG

`CATALOG` is included for compatibility. Oracle recommends that you not use this view.

4.201 CHAINED_ROWS

`CHAINED_ROWS` stores the output for the `ANALYZE` statement with the `LIST CHAINED ROWS` clause.

You must run the `utlchain.sql` or `utlchn1.sql` script to create this table.

Column	Description
`OWNER_NAME`	Table owner
`TABLE_NAME`	Table name
`CLUSTER_NAME`	Cluster the table is in, if any
`PARTITION_NAME`	The name of the partition
`SUBPARTITION_NAME`	The name of the subpartition
`HEAD_ROWID`	ROWID the chained row is accessed by
`ANALYZE_TIMESTAMP`	Date/time that the `ANALYZE` statement was issued

4.202 CLIENT_RESULT_CACHE_STATS$

`CLIENT_RESULT_CACHE_STATS$` displays various client result cache settings and usage statistics.

Statistics are stored as name, value pairs. For each client cache ID, there will be multiple rows for each statistic.

Column	Datatype	NULL	Description
`CACHE_ID`	`NUMBER`	`NOT NULL`	Unique ID per client cache
`STAT_ID`	`NUMBER`	`NOT NULL`	Statistic ID
`NAME`	`VARCHAR2(128)`		Name of the statistic (see Table 4-1)
`VALUE`	`NUMBER`		Value of the statistic

Copyright © 2002, 2025, Oracle and/or its affiliates.

Table 4-1 CLIENT_RESULT_CACHE_STATS$ Statistics

Statistic Name	Description
Block Size	Size (in bytes) of each memory block in the result cache.
Block Count Max	Maximum number of blocks that can be allocated in the result cache based on the cache size configuration parameters on server and on client.
Block Count Current	Current number of blocks allocated by the client result cache.
Hash Bucket Count	Size of the hash table used for query matching.
Create Count Success	Number of cached result sets that did not get invalidated before caching all the rows of the result set.
Create Count Failure	Number of cached result sets that did not fetch all the rows in the result set.
Find Count	Number of cache hits.
Invalidation Count	Number of cached result sets that got invalidated due to database changes that could have affected the result set.
Delete Count Invalid	Number of cached result rests not invalidated whose memory was reclaimed by result cache.
Delete Count Valid	Number of invalidated cached result rests whose memory was reclaimed by result cache.

4.203 CLU

`CLU` is a synonym for `USER_CLUSTERS`.

See Also

"USER_CLUSTERS"

4.204 COL

`COL` is included for compatibility. Oracle recommends that you not use this view.

4.205 COLS

`COLS` is a synonym for `USER_TAB_COLUMNS`.

See Also

"USER_TAB_COLUMNS"

Copyright © 2002, 2025, Oracle and/or its affiliates.

4.206 DATABASE_EXPORT_OBJECTS

DATABASE_EXPORT_OBJECTS lists simple path names for some of the object types belonging to a full Data Pump export, which is invoked using the FULL=Y parameter on the expdp command.

Users of the Data Pump Export and Import utilities can query this view to determine valid values for the EXCLUDE and INCLUDE parameters.

Column	Datatype	NULL	Description
OBJECT_PATH	VARCHAR2(200)	NOT NULL	Simple path name for the object type
COMMENTS	VARCHAR2(2000)		Comment on the object type
NAMED	CHAR(1)		Do objects of this type have names? If yes (Y), then the name can be specified in the optional name_clause on the EXCLUDE and INCLUDE parameters.

See Also

- "SCHEMA_EXPORT_OBJECTS"
- "TABLE_EXPORT_OBJECTS"
- *Oracle AI Database Utilities* for more information on performing a full Data Pump export using the expdp command

4.207 DATABASE_PROPERTIES

DATABASE_PROPERTIES lists permanent database properties.

Column	Datatype	NULL	Description
PROPERTY_NAME	VARCHAR2(128)	NOT NULL	Property name
PROPERTY_VALUE	VARCHAR2(4000)		Property value
DESCRIPTION	VARCHAR2(4000)		Property description

Note

The CDB_PROPERTIES view provides access to data visible to PDBs through the DATABASE_PROPERTIES view.

Copyright © 2002, 2025, Oracle and/or its affiliates.

5

Static Data Dictionary Views: DBA_2PC_NEIGHBORS to DBA_HIST_JAVA_POOL_ADVICE

This chapter contains the static data dictionary views DBA_2PC_NEIGHBORS through DBA_HIST_JAVA_POOL_ADVICE.

5.1 DBA_2PC_NEIGHBORS

DBA_2PC_NEIGHBORS describes incoming and outgoing connections for pending transactions.

Column	Datatype	NULL	Description
LOCAL_TRAN_ID	VARCHAR2(22)		Local identifier of a transaction
IN_OUT	VARCHAR2(3)		IN for incoming connections, OUT for outgoing
DATABASE	VARCHAR2(128)		IN for client database name, OUT for outgoing database link
DBUSER_OWNER	VARCHAR2(128)		IN for name of local user, OUT for owner of database link
INTERFACE	VARCHAR2(1)		C for request commit, otherwise N for prepare or request read only commit
DBID	VARCHAR2(16)		Database ID at the other end of the connection
SESS#	NUMBER(38)		Session number of the connection at this database
BRANCH	VARCHAR2(128)		Transaction branch ID of the connection at this database

5.2 DBA_2PC_PENDING

DBA_2PC_PENDING describes distributed transactions awaiting recovery.

Column	Datatype	NULL	Description
LOCAL_TRAN_ID	VARCHAR2(22)	NOT NULL	String of form: n.n.n; n is a number
GLOBAL_TRAN_ID	VARCHAR2(169)		Globally unique transaction ID
STATE	VARCHAR2(16)	NOT NULL	Collecting, prepared, committed, forced commit, or forced rollback
MIXED	VARCHAR2(3)		YES indicates part of the transaction committed and part rolled back
ADVICE	VARCHAR2(1)		C for commit, R for rollback, else NULL
TRAN_COMMENT	VARCHAR2(255)		Text for commit work comment text
FAIL_TIME	DATE	NOT NULL	Value of SYSDATE when the row was inserted (transaction or system recovery)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
FORCE_TIME	DATE		Time of manual force decision (null if not forced locally)
RETRY_TIME	DATE	NOT NULL	Time automatic recovery (RECO) last tried to recover the transaction
OS_USER	VARCHAR2(64)		Operating system-specific name for the end-user
OS_TERMINAL	VARCHAR2(255)		Operating system-specific name for the end-user terminal
HOST	VARCHAR2(128)		Name of the host system for the end-user
DB_USER	VARCHAR2(128)		Oracle user name of the end-user at the topmost database
COMMIT#	VARCHAR2(16)		Global commit number for committed transactions

5.3 DBA_ACCHK_EVENTS

DBA_ACCHK_EVENTS displays information about events that occurred during an Application Continuity Protection Check (ACCHK) workload run.

Each row in this view represents one trace record for an event. You can use this view in conjunction with the DBA_ACCHK_STATISTICS view. Join the SESSION_ID and SERIAL# columns in this view with the SESSION_ID and SERIAL# columns in DBA_ACCHK_STATISTICS to view Application Continuity protection statistics for a particular session.

The ACCHK_READ role allows users with no administrative privileges to query this view.

Column	Datatype	NULL	Description
INST_ID	NUMBER	NOT NULL	Identifier for the instance in which the trace record was generated
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
TIMESTAMP	TIMESTAMP(3) WITH TIME ZONE		Time at which the event occurred
SESSION_ID	NUMBER	NOT NULL	ID of the session that generated the trace record
SERIAL#	NUMBER	NOT NULL	Serial number of the session that generated the trace record
SERVICE_NAME	VARCHAR2(64)		Service name of the session that generated the trace record
PROGRAM	VARCHAR2(84)		Name of the operating system program that generated the trace record
MODULE	VARCHAR2(64)		Name of the module that generated the trace record
ACTION	VARCHAR2(64)		Name of the action that generated the trace record

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SQL_ID	VARCHAR2(13)		SQL identifier of the SQL statement that generated the trace record
CALL_NAME	VARCHAR2(20)		Name of the user call that generated the trace record
EVENT_TYPE	VARCHAR2(16)		Event type. Possible values: • DISABLED - The event caused capture or replay to be disabled. Refer to the ERROR_CODE column for more information. • NEVER ENABLED - Neither Application Continuity nor Transparent Application Continuity was enabled for the session when the event occurred. • NOT ENABLING - The event describes why the database could not reenable protection after protection was disabled. Refer to the ERROR_CODE column for more information. • REPLAY FAILED - The event describes why the session did not fail over. This event only occurs if Application Continuity could not fail over. Refer to the ERROR_CODE column for more information.
ERROR_CODE	NUMBER		If an error occurred, this column displays the error code: ORA-*number*. Otherwise, the value of this column is 0.

See Also

"DBA_ACCHK_STATISTICS"

5.4 DBA_ACCHK_EVENTS_SUMMARY

DBA_ACCHK_EVENTS_SUMMARY displays summary information about events that occurred during an Application Continuity Protection Check (ACCHK) workload run.

This view describes the number of times a particular type of event occurred in a session. You can use this view in conjunction with the DBA_ACCHK_STATISTICS_SUMMARY view. Join the INST_ID and CON_ID columns in this view with the INST_ID and CON_ID columns in DBA_ACCHK_STATISTICS_SUMMARY to view Application Continuity protection statistics for a particular instance.

The ACCHK_READ role allows users with no administrative privileges to query this view.

Column	Datatype	NULL	Description
INST_ID	NUMBER	NOT NULL	Identifier for the instance

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
SERVICE_NAME	VARCHAR2(64)		Service name of the session
FAILOVER_TYPE	VARCHAR2(16)		Indicates the FAILOVER_TYPE service setting for the session. Possible values: • AUTO - Transparent Application Continuity (TAC) was enabled for the session • TRANSACTION - Application Continuity (AC) was enabled for the session • NONE - Failover was disabled for the session
FAILOVER_RESTORE	VARCHAR2(16)		Indicates the FAILOVER_RESTORE service setting for the session. Possible values: • AUTO - Transparent Application Continuity • LEVEL1 - Application Continuity • NONE - Session state was not restored at failover
RESET_STATE	VARCHAR2(16)		Indicates the RESET_STATE service setting for the session. Possible values: • LEVEL1 - The session state was cleaned at the end of a request • NONE - The session state was not cleaned at the end of a request
PROGRAM	VARCHAR2(84)		Name of the operating system program that generated the trace record
MODULE	VARCHAR2(64)		Name of the module that generated the trace record
ACTION	VARCHAR2(64)		Name of the action that generated the trace record
SQL_ID	VARCHAR2(13)		SQL identifier of the SQL statement that generated the trace record
CALL_NAME	VARCHAR2(20)		Name of the user call that generated the trace record
EVENT_TYPE	VARCHAR2(16)		Event type. Possible values: • DISABLED - The event caused capture or replay to be disabled. Refer to the ERROR_CODE column for more information. • NEVER ENABLED - Neither Application Continuity nor Transparent Application Continuity was enabled for the session when the event occurred. • NOT ENABLING - The event describes why the database could not reenable protection after protection was disabled. Refer to the ERROR_CODE column for more information. • REPLAY FAILED - The event describes why the session did not fail over. This event only occurs if Application Continuity could not fail over. Refer to the ERROR_CODE column for more information.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ERROR_CODE	NUMBER		If an error occurred, this column displays the error code: ORA-*number*. Otherwise, the value of this column is 0.
FREQUENCY	NUMBER		Number of times the event occurred during the workload run

5.5 DBA_ACCHK_STATISTICS

DBA_ACCHK_STATISTICS displays Application Continuity protection statistics for each session that executed during an Application Continuity Protection Check (ACCHK) workload run.

ACCHK should be used on a running workload. Sessions that are terminated are not included in this view.

The ACCHK_READ role allows users with no administrative privileges to query this view.

Column	Datatype	NULL	Description
INST_ID	NUMBER	NOT NULL	Identifier for the instance for the session
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
TIMESTAMP	TIMESTAMP(3) WITH TIME ZONE		Time at which the session was terminated and the statistics were reported
SESSION_ID	NUMBER	NOT NULL	ID of the session
SERIAL#	NUMBER	NOT NULL	Serial number of the session
STAT_TYPE	VARCHAR2(32)		Type of statistic The value of this column is always SESSION_STATISTICS.
SERVICE_NAME	VARCHAR2(64)		Service name of the session
FAILOVER_TYPE	VARCHAR2(16)		Indicates the FAILOVER_TYPE service setting for the session. Possible values: • AUTO - Transparent Application Continuity (TAC) was enabled for the session • TRANSACTION - Application Continuity (AC) was enabled for the session • NONE - Failover was disabled for the session
FAILOVER_RESTORE	VARCHAR2(16)		Indicates the FAILOVER_RESTORE service setting for the session. Possible values: • AUTO - Transparent Application Continuity • LEVEL1 - Application Continuity • NONE - Session state was not restored at failover

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
RESET_STATE	VARCHAR2(16)		Indicates the RESET_STATE service setting for the session. Possible values: • LEVEL1 - The session state was cleaned at the end of a request • NONE - The session state was not cleaned at the end of a request
PROGRAM	VARCHAR2(84)		Name of the operating system program
BEGIN_REQUESTS	NUMBER		Number of begin requests received for the session
END_REQUESTS	NUMBER		Number of end requests received for the session
USER_CALLS_IN_REQUESTS	NUMBER		Number of user calls received from the application within requests (between begin request and end request)
PROTECTED_CALLS_IN_REQUESTS	NUMBER		Number of user calls protected by Application Continuity (between begin request and end request)
TIME_IN_REQUESTS	NUMBER		Time in microseconds spent in user calls within requests (between begin request and end request)
TIME_PROTECTED_IN_REQUESTS	NUMBER		Time in microseconds for user calls protected by Application Continuity within requests (between begin request and end request)

5.6 DBA_ACCHK_STATISTICS_SUMMARY

DBA_ACCHK_STATISTICS_SUMMARY displays a summary of Application Continuity protection statistics for each session that executed during an Application Continuity Protection Check (ACCHK) workload run.

ACCHK should be used on a running workload. Sessions that are terminated are not included in this view.

The ACCHK_READ role allows users with no administrative privileges to query this view.

Column	Datatype	NULL	Description
INST_ID	NUMBER	NOT NULL	Identifier for the instance for the session
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data
SERVICE_NAME	VARCHAR2(64)		Service name of the session
FAILOVER_TYPE	VARCHAR2(16)		Indicates the FAILOVER_TYPE service setting for the session. Possible values: • AUTO - Transparent Application Continuity (TAC) was enabled for the session • TRANSACTION - Application Continuity (AC) was enabled for the session • NONE - Failover was disabled for the session

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
FAILOVER_RESTORE	VARCHAR2(16)		Indicates the FAILOVER_RESTORE service setting for the session. Possible values: • AUTO - Transparent Application Continuity • LEVEL1 - Application Continuity • NONE - Session state is not restored at failover
RESET_STATE	VARCHAR2(16)		Indicates the RESET_STATE service setting for the session. Possible values: • LEVEL1 - The session state was cleaned at the end of a request • NONE - The session state was not cleaned at the end of a request
TOTAL_REQUESTS	NUMBER		Number of requests received for this session
PROTECTED_CALLS_PERCENT	NUMBER		Percentage of user calls within requests protected by Application Continuity for failover
PROTECTED_TIME_PERCENT	NUMBER		Percentage of time spent within requests protected by Application Continuity for failover
AVG_USER_CALLS_IN_REQUESTS	NUMBER		Average number of user calls received from the application within requests (between begin request and end request)
AVG_PROT_CALLS_IN_REQUESTS	NUMBER		Average number of user calls protected by Application Continuity within requests (between begin request and end request)
AVG_TIME_IN_REQUESTS	NUMBER		Average time in microseconds spent in user calls within requests (between begin request and end request)
AVG_TIME_PROTECTED_IN_REQUESTS	NUMBER		Average time in microseconds for user calls protected by Application Continuity within requests (between begin request and end request)

5.7 DBA_ACL_NAME_MAP

DBA_ACL_NAME_MAP maps new names of the access control lists for PL/SQL network utility packages from old XDB names.

Column	Datatype	NULL	Description
XDB_NAME	VARCHAR2(4000)	NOT NULL	The old XDB name of the access control list
ACL	VARCHAR2(128)		The new name of the access control list
ACL_OWNER	VARCHAR2(128)		The owner of the access control list

5.8 DBA_ACTIVITY_CONFIG

DBA_ACTIVITY_CONFIG describes the configuration parameters that control the Object Activity Tracking System (OATS).

Column	Datatype	NULL	Description
CON_DBNAME	VARCHAR2(128)	NOT NULL	Name of the container to which the data pertains

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PARAMETER_NAME	VARCHAR2(128)	NOT NULL	Name of the configuration parameter
PARAMETER_VALUE	VARCHAR2(4000)		Value of the configuration parameter
LAST_UPDATED_TIME	TIMESTAMP(3)		If the value of the configuration parameter was last updated by a user, then this column displays the time at which the parameter was updated. Otherwise, this column is null.
LAST_UPDATED_USER	VARCHAR2(128)		If the value of the configuration parameter was last updated by a user, then this column displays the name of the user who performed the update. Otherwise, this column is null.

5.9 DBA_ACTIVITY_MVIEW

DBA_ACTIVITY_MVIEW describes materialized view activity snapshots that were recently taken by the Object Activity Tracking System (OATS).

Each row in this view represents one recently completed activity snapshot and describes the materialized view activity that occurred during the snapshot interval.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Activity snapshot identifier
CON_DBNAME	VARCHAR2(128)	NOT NULL	Name of the container to which the data pertains
INSTANCE_NUMBER	NUMBER	NOT NULL	Identifier for the instance in which the activity snapshot was taken
BEGIN_TIME	TIMESTAMP(3)	NOT NULL	Begin time for the activity snapshot interval
END_TIME	TIMESTAMP(3)	NOT NULL	End time for the activity snapshot interval
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view for which the activity snapshot was taken
MVIEW_OWNER	VARCHAR2(128)	NOT NULL	Owner of materialized view for which the activity snapshot was taken
USER_CLASS	VARCHAR2(7)		Indicates whether the activity was performed by the RDBMS (SYS) or by a user (NON-SYS)
COMPILES	NUMBER		Number of times the materialized view was compiled This number includes: • Explicit compiles performed with the SQL statement ALTER MATERIALIZED VIEW … COMPILE • Automatic compiles that occurred because the structure of an underlying base table changed
REWRITES_TEXTMATCH	NUMBER		Number of query rewrites that used the text match rewrite method
REWRITES_GENERAL	NUMBER		Number of query rewrites that used general rewrite methods

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
REWRITES_PARTIAL	NUMBER		Number of query rewrites that occurred when the view was partially stale This number includes: • UNION ALL operations involving rewritten queries that had one branch with the materialized view and the other branch with its underlying base tables (partial rewrites) • Single query block rewrites of the materialized view that involved a join back to its underlying base table
REWRITES_DELTA	NUMBER		Number of query rewrites that used stale data in the materialized view plus the delta information stored in the materialized view logs
REWRITES_PCT	NUMBER		Number of partition change tracking (PCT) rewrites
REWRITES_HINTED	NUMBER		Number of query rewrites that occurred because the materialized view was eligible for query rewrite and the SELECT statement contained the REWRITE hint with the name of the materialized view specified in the hint
NOREWRITES_HINTED	NUMBER		Reserved for future use
NOREWRITES_STALE	NUMBER		Number of query executions that did not use query rewrite because the materialized view was eligible for query rewrite, but stale
REFRESHES_ON_DEMAND	NUMBER		Number of ON DEMAND refreshes This type of refresh is performed on materialized views that use the ON DEMAND refresh mode, which instructs the database to refresh the materialized view only when a manual refresh is launched by one of the three DBMS_MVIEW refresh procedures.
REFRESHES_ON_COMMIT	NUMBER		Number of ON COMMIT refreshes This type of refresh is performed on materialized views that use the ON COMMIT refresh mode, which instructs the database to refresh the materialized view whenever the database commits a transaction that operates on a master table of the materialized view.
REFRESHES_ON_STATEMENT	NUMBER		Number of ON STATEMENT refreshes This type of refresh is performed on materialized views that use the ON STATEMENT refresh mode, which instructs the database to perform an automatic refresh of the materialized view every time a DML operation is performed on any of the view's base tables.
REFRESHES_SCHEDULED	NUMBER		Number of scheduled refreshes
REFRESHES_AUTOMATIC	NUMBER		Number of automatic refreshes
REFRESHES_FAST	NUMBER		Number of incremental refreshes
REFRESHES_COMPLETE	NUMBER		Number of full refreshes
REFRESHES_PCT	NUMBER		Number of partition change tracking (PCT) refreshes

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> The counts in this view are approximate in order to keep system overhead low. Also, there are database activities, such as statistics collection, query compilation, and query optimization, that may cause the counts to be different than expected or to vary slightly across successive queries.

> **See Also**
>
> "V$ACTIVITY_MVIEW" to view in-progress materialized view activity snapshots

5.10 DBA_ACTIVITY_SNAPSHOT_META

DBA_ACTIVITY_SNAPSHOT_META displays information about activity snapshots taken by the Object Activity Tracking System (OATS).

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Activity snapshot identifier
CON_DBNAME	VARCHAR2(128)	NOT NULL	Name of the container to which the data pertains
INSTANCE_NUMBER	NUMBER	NOT NULL	Identifier for the instance in which the activity snapshot was taken
BEGIN_TIME	TIMESTAMP(3)	NOT NULL	Begin time for the activity snapshot interval
END_TIME	TIMESTAMP(3)	NOT NULL	End time for the activity snapshot interval
FLUSH_ELAPSED_TIME	INTERVAL DAY(2) TO SECOND(3)		Amount of time spent creating the activity snapshot
FLUSH_IS_MANUAL	VARCHAR2(3)		Indicates whether the activity snapshot was created manually (YES) or not (NO)

5.11 DBA_ACTIVITY_TABLE

DBA_ACTIVITY_TABLE describes table activity snapshots that were recently taken by the Object Activity Tracking System (OATS).

Each row in this view represents one recently completed activity snapshot and describes the table activity that occurred during the snapshot interval.

Column	Datatype	NULL	Description
SNAP_ID	NUMBER	NOT NULL	Activity snapshot identifier
CON_DBNAME	VARCHAR2(128)	NOT NULL	Name of the container to which the data pertains
INSTANCE_NUMBER	NUMBER	NOT NULL	Identifier for the instance in which the activity snapshot was taken
BEGIN_TIME	TIMESTAMP(3)	NOT NULL	Begin time for the activity snapshot interval
END_TIME	TIMESTAMP(3)	NOT NULL	End time for the activity snapshot interval
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table for which the activity snapshot was taken

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table for which the activity snapshot was taken
USER_CLASS	VARCHAR2(7)		Reserved for future use
SCANS	NUMBER		Number of table scans
LOADS	NUMBER		Number of table loads
LOAD_ROWS	NUMBER		Number of rows that were loaded into the table
INSERT_ROWS	NUMBER		Number of rows that were inserted into the table
DELETE_ROWS	NUMBER		Number of rows that were deleted from the table
UPDATE_ROWS	NUMBER		Number of table rows that were updated
TRUNCATES	NUMBER		Number of table truncations
TRUNCATED_ROWS	NUMBER		Number of table rows that were deleted due to table truncations
PARTITION_TRUNCATES	NUMBER		Number of table partition or subpartition truncations
PARTITION_TRUNCATED_ROWS	NUMBER		Number of table rows that were deleted due to table partition or subpartition truncations
PARTITION_CREATES	NUMBER		Number of table partitions or subpartitions that were created
PARTITION_DROPS	NUMBER		Number of table partition or subpartition drops
PARTITION_DROPS_ROWS	NUMBER		Number of table rows that were dropped due to table partition or subpartition drops
PARTITION_MOVES	NUMBER		Number of table partition or subpartition moves
PARTITION_MOVES_ROWS	NUMBER		Number of table rows that were moved due to table partition or subpartition moves
PARTITION_SPLITS	NUMBER		Number of table partition or subpartition splits
PARTITION_SPLITS_ROWS	NUMBER		Number of table rows that were split due to table partition or subpartition splits
PARTITION_MERGES	NUMBER		Number of table partition or subpartition merges
PARTITION_MERGES_ROWS	NUMBER		Number of table rows that were merged due to table partition or subpartition merges
PARTITION_COALESCES	NUMBER		Number of table partition or subpartition coalesces
PARTITION_COALESCE_ROWS	NUMBER		Number of table rows that were redistributed due to table partition or subpartition coalesces
PARTITION_EXCHANGES	NUMBER		Number of table partition or subpartition exchanges
PARTITION_EXCHANGES_ROWS	NUMBER		Number of table rows that were exchanged due to table partition or subpartition exchanges

Note

The counts in this view are approximate in order to keep system overhead low. Also, there are database activities, such as statistics collection, query compilation, and query optimization, that may cause the counts to be different than expected or to vary slightly across successive queries.

5.12 DBA_ADDM_FDG_BREAKDOWN

DBA_ADDM_FDG_BREAKDOWN describes the contribution for each finding from the different instances.

There is one row for each finding and for each instance participating in the analysis. Rows are omitted if the impact from that instance is not sufficient to register a finding in a local ADDM analysis.

Related View

USER_ADDM_FDG_BREAKDOWN describes the contribution for each finding from the different instances owned by the current user.

Column	Datatype	NULL	Description
TASK_ID	NUMBER	NOT NULL	Identifies the task to which this finding belongs (see DBA_ADVISOR_TASKS)
FINDING_ID	NUMBER	NOT NULL	Identifies the finding (see DBA_ADVISOR_FINDINGS)
INSTANCE_NUMBER	NUMBER	NOT NULL	The number of the instance contributing to the finding
DATABASE_TIME	NUMBER		The database time, in microseconds, accumulated by this instance during the analysis period
ACTIVE_SESSIONS	NUMBER		The average number of active sessions of the finding in this instance
PERC_ACTIVE_SESSIONS	NUMBER		The percentage of contribution from this instance compared to the total impact of the finding

> **See Also**
>
> "USER_ADDM_FDG_BREAKDOWN"

5.13 DBA_ADDM_FINDINGS

DBA_ADDM_FINDINGS displays the ADDM findings discovered by all advisors in the database.

Each row for ADDM tasks in the related DBA_ADVISOR_FINDINGS view has a corresponding row in this view.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Related View

USER_ADDM_FINDINGS displays the ADDM findings discovered by the advisors owned by the current user. Each row for ADDM tasks in the related USER_ADVISOR_FINDINGS view has a corresponding row in this view. The USER_ADDM_FINDINGS view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
EXECUTION_NAME	VARCHAR2(128)		The name of the task execution with which this entry (row) is associated
FINDING_ID	NUMBER	NOT NULL	Identifier of the finding
FINDING_NAME	VARCHAR2(4000)		Name of the finding
TYPE	VARCHAR2(11)		Type of the finding: PROBLEM SYMPTOM ERROR INFORMATION
TYPE_ID	NUMBER	NOT NULL	Numeric ID for the value in column TYPE
PARENT	NUMBER	NOT NULL	Identifier of the parent finding
OBJECT_ID	NUMBER		Identifier of the associated object, if any
IMPACT_TYPE	VARCHAR2(4000)		Impact of the finding on the system
IMPACT	NUMBER		Impact value
MESSAGE	VARCHAR2(4000)		Message describing the finding
MORE_INFO	VARCHAR2(4000)		Additional info associated with the finding
FILTERED	VARCHAR2(1)		A value of Y means that the row in the view was filtered out by a directive (or a combination of directives). A value of N means that the row was not filtered.
FLAGS	NUMBER		For internal use only by advisor framework clients
DATABASE_TIME	NUMBER		The database time, in microseconds, accumulated by this finding
ACTIVE_SESSIONS	NUMBER		The average number of active sessions for the finding
PERC_ACTIVE_SESS	NUMBER		The percentage of active sessions for this finding out of the total active sessions for the task
IS_AGGREGATE	CHAR(1)		A value of Y means that this finding is created for global/continental ADDM as an aggregate of local ADDM findings. Otherwise, the value is N.
METER_LEVEL	VARCHAR2(6)		Reserved for future use

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
QUERY_IS_APPROX	CHAR(1)		Indicates whether the ASH SQL associated with the finding is an approximate query (Y) or an exact query (N). To get the associated query, use the TASK_NAME and FINDING_ID columns from this view and call the PL/SQL function DBMS_ADDM.GET_ASH_QUERY(task_name, finding_id).
TOP_CONTAINER_JSON[1]	VARCHAR2(4000)		A list of PDBs that are responsible for most of the finding and the percentage of total impact for each of those PDBs, in JSON format This information is determined according to specific criteria and is not always available.

1 This column is available starting with Oracle AI Database 26ai, Release Update 23.7.

See Also

- "USER_ADDM_FINDINGS"
- *Oracle AI Database PL/SQL Packages and Types Reference* for more information about the DBMS_ADDM.GET_ASH_QUERY procedure

5.14 DBA_ADDM_INSTANCES

DBA_ADDM_INSTANCES displays instance-level information for ADDM tasks that finished executing.

For each instance that was supposed to be analyzed (whether it was or not) there is one row describing information about it.

Related View

USER_ADDM_INSTANCES displays instance-level information for ADDM tasks that finished executing in all instances owned by the current user.

Column	Datatype	NULL	Description
TASK_ID	NUMBER	NOT NULL	The ID of the main ADDM task
INSTANCE_NUMBER	NUMBER	NOT NULL	The number of the instance
INSTANCE_NAME	VARCHAR2(16)		The name of the instance
HOST_NAME	VARCHAR2(64)		The name of the system on which the instance was running

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
STATUS	VARCHAR2(10)		How information from this instance was used by the ADDM task. A value of ANALYZED means that the instance participated fully in the analysis. For the following remaining values, the instance was not used during task execution, for the stated reason: BOUNCED - the instance was shut down or started during the analysis period NO_SNAPS - there were either begin or end snapshots missing for the instance NO_STATS - there were key statistics missing for the instance NOT_FOUND - no mention of this instance could be found in AWR during the analysis period
DATABASE_TIME	NUMBER		The database time, in microseconds, accumulated by this instance during the analysis period
ACTIVE_SESSIONS	NUMBER		The average number of active sessions for the instance during the analysis period
PERC_ACTIVE_SESS	NUMBER		The percentage of active sessions for this instance, out of the total active sessions for the task
METER_LEVEL	VARCHAR2(6)		Reserved for future use
LOCAL_TASK_ID	NUMBER		The ID of a local ADDM task that contained an analysis of the instance for the same analysis period as that of the main task. If the main task is a local ADDM, then this value is the same as the TASK_ID value.

See Also

"USER_ADDM_INSTANCES"

5.15 DBA_ADDM_PENDING_AUTOTASKS

DBA_ADDM_PENDING_AUTOTASKS displays information about all automatic ADDM tasks in the database that are currently being executed.

This view is accessible at both the CDB and PDB level and contains information about the ADDM tasks that were executed at each level. Oracle Autonomous Database and Oracle Cloud users can see information about the tasks that were executed in their PDB, obtain more diagnostic information on failed tasks, and manually re-execute those tasks. Once a task is executed successfully, its entry is removed from this view. Failed tasks automatically age out and are removed when the corresponding AWR snapshots age out.

Column	Datatype	NULL	Description
DBID	NUMBER		Database ID for the ADDM task
INSTANCE_NUMBER	NUMBER		Instance number for the ADDM task
END_SNAP_ID	NUMBER		End snapshot for the ADDM task

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
STATUS	VARCHAR2(20)		Status of the task execution
REGISTERED_TIME	TIMESTAMP(6)		Time at which the ADDM task was first registered for automatic execution
ERROR_MESSAGE	VARCHAR2(200)		If the execution of the ADDM task failed, the error message
CREATION_ATTEMPTS	NUMBER		The number of attempts to automatically start the ADDM task.
LAST_CREATION_ATTEMPT	TIMESTAMP(6)		The time of the last attempt to automatically start the ADDM task.
EXECUTION_ATTEMPTS	NUMBER		Number of times the ADDM task has attempted to be run
LAST_EXECUTION_ATTEMPT	TIMESTAMP(6)		Time of the most recent attempt to execute the ADDM task

Note

This view is available starting with Oracle AI Database 26ai.

5.16 DBA_ADDM_SCHEDULED_AUTOTASKS

DBA_ADDM_SCHEDULED_AUTOTASKS displays information about all automatic ADDM tasks in the database that are currently scheduled to be executed by the Manageability Monitor Process (MMON).

This view is accessible at both the CDB and PDB level and contains information about the ADDM tasks that are scheduled to be executed at each level. Oracle Autonomous Database and Oracle Cloud users can see information about the tasks that are scheduled for their PDB. Once a task starts executing, its entry is removed from this view.

Column	Datatype	NULL	Description
INSTANCE_NUMBER	NUMBER	NOT NULL	Instance number for the ADDM task
DBID	NUMBER	NOT NULL	Database ID for the ADDM task
END_SNAP_ID	NUMBER	NOT NULL	End snapshot for the ADDM task
TASK_TYPE	VARCHAR2(14)		Type of ADDM task: • INSTANCE LEVEL • SYSTEM LEVEL
SCHEDULED_SINCE_UTC	TIMESTAMP(6) WITH TIME ZONE		Time at which the ADDM task was scheduled to be executed, in UTC (Coordinated Universal Time) time zone

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

> **Note**
>
> This view is available starting with Oracle AI Database 26ai.

5.17 DBA_ADDM_SYSTEM_DIRECTIVES

DBA_ADDM_SYSTEM_DIRECTIVES displays information about global instances for ADDM system directives.

Column	Datatype	NULL	Description
INSTANCE_ID	NUMBER	NOT NULL	Unique ID for the directive instance. The directive management engine automatically generates ID numbers.
INSTANCE_NAME	VARCHAR2(128)	NOT NULL	User-assigned name for the directive instance.
DIRECTIVE_NAME	VARCHAR2(128)	NOT NULL	Any value that further classifies this directive within a domain. The domain and the name form a unique key for the directive.
DESCRIPTION	VARCHAR2(4000)		Description of the ADDM system directive, shown in the language used by the current session

5.18 DBA_ADDM_TASK_DIRECTIVES

DBA_ADDM_TASK_DIRECTIVES displays information about all ADDM task directives in the database.

Related View

USER_ADDM_TASK_DIRECTIVES displays information about ADDM task directives owned by the current user.

Column	Datatype	NULL	Description
TASK_ID	NUMBER		An ADDM advisor task identifier to which the directive instance is associated
TASK_NAME	VARCHAR2(128)		An ADDM advisor task to which the directive instance is associated
USERNAME	VARCHAR2(128)	NOT NULL	Database user who owns the ADDM task instance

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SEQ_ID	NUMBER	NOT NULL	Unique ID for the directive instance. The directive management engine automatically generates ID numbers.
INSTANCE_NAME	VARCHAR2(128)	NOT NULL	A user-assigned name for the ADDM task directive instance
DIRECTIVE_NAME	VARCHAR2(128)	NOT NULL	Any value that further classifies this directive within a domain. The domain and the name form a unique key for the directive.
DESCRIPTION	VARCHAR2(4000)		Description of the ADDM task directive, shown in the language used by the current session

"USER_ADDM_TASK_DIRECTIVES"

5.19 DBA_ADDM_TASKS

DBA_ADDM_TASKS displays information about all ADDM tasks in the database.

The view contains one row for each row in the related DBA_ADVISOR_TASKS view that has ADVISOR_NAME=ADDM and STATUS=COMPLETED.

Related View

USER_ADDM_TASKS displays information about the ADDM tasks owned by the current user. The view contains one row for each row in the related USER_ADVISOR_TASKS view that has ADVISOR_NAME=ADDM and STATUS=COMPLETED. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Unique identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
DESCRIPTION	VARCHAR2(256)		User-supplied description of the task
ADVISOR_NAME	VARCHAR2(128)		Advisor associated with the task
CREATED	DATE	NOT NULL	Creation date of the task
LAST_MODIFIED	DATE	NOT NULL	Date on which the task was last modified
PARENT_TASK_ID	NUMBER		Identifier of the parent task (if the task was created because of the recommendation of another task)
PARENT_RXEC_ID	NUMBER		Identifier of the recommendation within the parent task that resulted in the creation of the task
LAST_EXECUTION	VARCHAR2(128)		Name of the current or last task execution
EXECUTION_TYPE	VARCHAR2(128)		Type of the last execution. This information is optional for single-execution tasks.
EXECUTION_TYPE#	NUMBER		Reserved for internal use
EXECUTION_DESCRIPTION	VARCHAR2(256)		Optional description of the last execution

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
EXECUTION_START	DATE		Execution start date and time of the task
EXECUTION_END	DATE		Execution end date and time of the task
STATUS	VARCHAR2(11)		Current operational status of the task: • INITIAL - Initial state of the task; no recommendations are present • EXECUTING - Task is currently running • INTERRUPTED - Task analysis was interrupted by the user. Recommendation data, if present, can be viewed and reported at this time. • COMPLETED - Task successfully completed the analysis operation. Recommendation data can be viewed and reported. • ERROR - An error occurred during the analysis operation. Recommendations, if present, can be viewed and reported at this time.
STATUS_MESSAGE	VARCHAR2(4000)		Informational message provided by the advisor, regarding the status
PCT_COMPLETION_TIME	NUMBER		Percent completion, in terms of time, of the task when it is executing
PROGRESS_METRIC	NUMBER		Metric that measures the progress of the task in terms of quality. Each advisor may have its own metric.
METRIC_UNITS	VARCHAR2(64)		Unit of the metric used to measure progress
ACTIVITY_COUNTER	NUMBER		Counter that is updated frequently by the advisor, denoting that useful work is being performed
RECOMMENDATION_COUNT	NUMBER		Number of recommendations produced
ERROR_MESSAGE	VARCHAR2(4000)		Informational message or an error message indicating the current operation or condition
SOURCE	VARCHAR2(128)		Optional name that identifies the creator of the task
HOW_CREATED	VARCHAR2(30)		Optional task or template on which the object was based
READ_ONLY	VARCHAR2(5)		Indicates whether the task is read-only (TRUE) or not (FALSE)
SYSTEM_TASK	VARCHAR2(5)		Indicates whether the task is a system task (TRUE) or not (FALSE). The automatic SQL tuning task, SYS_AUTO_SQL_TUNING_TASK, is one example of a system task.
ADVISOR_ID	NUMBER	NOT NULL	Unique identifier for the advisor
STATUS#	NUMBER		Reserved for internal use
DBID	NUMBER		The database ID that the task was using
DBNAME	VARCHAR2(9)		The name of the database that the task was analyzing
DBVERSION	VARCHAR2(17)		The version of the database that the task was analyzing
ANALYSIS_VERSION	VARCHAR2(17)		The version of the database that executed the task
BEGIN_SNAP_ID	NUMBER		The snapshot ID that starts the analysis period
BEGIN_TIME	TIMESTAMP(3)		The SYSDATE at the time the BEGIN_SNAP_ID was taken
END_SNAP_ID	NUMBER		The snapshot ID that ends the analysis period
END_TIME	TIMESTAMP(3)		The SYSDATE at the time the END_SNAP_ID was taken

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
REQUESTED_ANALYSIS	VARCHAR2(8)		The type of ADDM analysis that was requested before task execution, as follows: DATABASE - global ADDM INSTANCE - local ADDM PARTIAL - continental ADDM
ACTUAL_ANALYSIS	VARCHAR2(8)		The type of ADDM analysis that was actually performed when the task was executed (either DATABASE, INSTANCE, or PARTIAL)
DATABASE_TIME	NUMBER		The total database time accumulated in the analysis period (and analyzed instances) in microseconds
ACTIVE_SESSIONS	NUMBER		The average active sessions during the analysis period (and analyzed sessions)
METER_LEVEL	VARCHAR2(6)		Reserved for future use
FDG_COUNT	NUMBER		The number of findings for the ADDM task, which will appear in the list of findings in a default ADDM report
DB_TYPE_DETECTED[1]	VARCHAR2(10)		Indicates the open mode of the database that the task was analyzing, as detected by ADDM. Possible values: • READ-ONLY • READ-WRITE
DB_TYPE_ANALYZED[1]	VARCHAR2(10)		Indicates the assumed open mode of the database that the task was analyzing. If the value of this column is different from the value of the DB_TYPE_DETECTED column, then ADDM ignored the detected open mode of the database and analyzed the task as if it occurred on a database with the assumed open mode. Possible values: • READ-ONLY • READ-WRITE
CDB_TYPE_DETECTED[1]	VARCHAR2(25)		Indicates the type of database that the task was analyzing, as detected by ADDM. Possible values: • NON-CDB - A non-CDB • CDB ROOT - The root container in a CDB • PDB - A pluggable database (PDB) in a CDB • AUTONOMOUS DATA WAREHOUSE - A PDB that hosts an Oracle Autonomous Data Warehouse Cloud service • AUTONOMOUS OLTP - A PDB that hosts an Oracle Autonomous Transaction Processing service

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
CDB_TYPE_ANALYZED[1]	VARCHAR2(25)		Indicates the assumed type of database that the task was analyzing. If the value of this column is different from the value of the CDB_TYPE_DETECTED column, then ADDM ignored the detected type of database and analyzed the task as if it occurred on the assumed type of database. Possible values: • NON-CDB - A non-CDB • CDB ROOT - The root container in a CDB • PDB - A pluggable database (PDB) in a CDB • AUTONOMOUS DATA WAREHOUSE - A PDB that hosts an Oracle Autonomous Data Warehouse Cloud service • AUTONOMOUS OLTP - A PDB that hosts an Oracle Autonomous Transaction Processing service
TOP_CONTAINER_JSON[2]	VARCHAR2(4000)		A list of PDBs that are responsible for most of the findings for the task and the percentage of total impact for each of those PDBs, in JSON format This information is determined according to specific criteria and is not always available.

1 This column is available starting with Oracle Database 19c. If the task was analyzing a database at a release earlier than Oracle Database 19c, and that database was subsequently upgraded to Oracle Database 19c, then the value of this column is NULL.
2 This column is available starting with Oracle AI Database 26ai, Release Update 23.7.

5.20 DBA_ADVISOR_ACTIONS

DBA_ADVISOR_ACTIONS displays information about the actions associated with all recommendations in the database.

Each action is specified by the COMMAND and ATTR1 through ATTR6 columns. Each command defines how the attribute columns will be used.

Related View

USER_ADVISOR_ACTIONS displays information about the actions associated with the recommendations owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
EXECUTION_NAME	VARCHAR2(128)		The name of the task execution with which this entry (row) is associated
REC_ID	NUMBER	NOT NULL	Recommendation associated with the action
ACTION_ID	NUMBER	NOT NULL	Unique identifier for the action

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OBJECT_ID	NUMBER		Object associated with the action
COMMAND	VARCHAR2(64)		Command to be executed **See Also:** DBA_ADVISOR_COMMANDS for a list of commands
COMMAND_ID	NUMBER	NOT NULL	ID of the command to be executed **See Also:** DBA_ADVISOR_COMMANDS for a list of commands
FLAGS	NUMBER		Advisor-specific flags
ATTR1	VARCHAR2(4000)		Parameters defining the command
ATTR2	VARCHAR2(4000)		Parameters defining the command
ATTR3	VARCHAR2(4000)		Parameters defining the command
ATTR4	VARCHAR2(4000)		Parameters defining the command
ATTR5	CLOB		Parameters defining the command; to be used if the text is significantly large (for example, a SQL statement defining a materialized view)
ATTR6	CLOB		Parameters defining the command; to be used if the text is significantly large (for example, a SQL statement defining a materialized view)
NUM_ATTR1	NUMBER		General numeric attribute
NUM_ATTR2	NUMBER		General numeric attribute
NUM_ATTR3	NUMBER		General numeric attribute
NUM_ATTR4	NUMBER		General numeric attribute
NUM_ATTR5	NUMBER		General numeric attribute
MESSAGE	VARCHAR2(4000)		Message associated with the action
FILTERED	VARCHAR2(1)		A value of Y means that the row in the view was filtered out by a directive (or a combination of directives). A value of N means that the row was not filtered.
RESULT_STATUS	VARCHAR2(25)		Result status. Possible values: • AUTOMATION PENDING • TIMED OUT • MISSING INFORMATION • COMPLETED WITH NO RESULTS • COMPLETED AND IMPLEMENTED • ENCOUNTERED ERROR • NOT AUTOMATED
RESULT_LAST_MODIFIED	TIMESTAMP(3)		Time at which result status was last modified
RESULT_MESSAGE	VARCHAR2(4000)		Result message text

5.21 DBA_ADVISOR_COMMANDS

DBA_ADVISOR_COMMANDS displays information about the commands used by all advisors in the database for specifying recommendation actions.

In addition to the set of commands in the COMMAND column of V$SESSION, the following additional commands are defined:

- RUN ADVISOR
- CHECK EXECUTION PLAN
- ALTER PARAMETER
- ENABLE TRACE

Column	Datatype	NULL	Description
COMMAND_ID	NUMBER		Identifier of the command
COMMAND_NAME	VARCHAR2(64)		Name of the command

5.22 DBA_ADVISOR_DEF_PARAMETERS

DBA_ADVISOR_DEF_PARAMETERS displays all default task parameters and their current values in the database.

When a task or object is created, the parameters and their values are copied into the private parameter table.

Column	Datatype	NULL	Description
ADVISOR_NAME	VARCHAR2(128)	NOT NULL	Name of the advisor that supports the parameter
PARAMETER_NAME	VARCHAR2(128)	NOT NULL	Name of the parameter
PARAMETER_VALUE	VARCHAR2(4000)	NOT NULL	Value of the parameter. Numeric parameter values are converted to a string equivalent. Possible keywords as values: • ALL • UNLIMITED • UNUSED

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PARAMETER_TYPE	VARCHAR2(10)		Datatype of the parameter: • NUMBER - Numeric value • STRING - String value. If the string contains special characters, then it will be enclosed in single quotes. • STRINGLIST - Comma-separated list of string elements. If a string element contains a comma or other special characters, then the element will be enclosed in single quotes. • TABLE - Single table reference. A reference will contain a schema name, followed by an optional table name. If the table name is omitted or is the character %, then the table name is interpreted as a wildcard. SQL quoted identifiers are supported. • TABLELIST - List of one or more comma-separated table references. A reference will contain schema name, followed by an optional table name. If the table name is omitted or is the character %, then the table name is interpreted as a wildcard. SQL quoted identifiers are supported.
IS_DEFAULT	VARCHAR2(1)		Indicates whether the parameter value is set to the advisor's default value (Y) or not (N)
IS_OUTPUT	VARCHAR2(1)		Indicates whether the task execution process sets the parameter value (Y) or not (N)
IS_MODIFIABLE_ANYTIME	VARCHAR2(1)		Indicates whether the parameter value can be modified when the task is not in its initial state (Y) or not (N)
IS_SYSTEM_TASK_ONLY	VARCHAR2(1)		Indicates whether the task is a system task (Y) or not (N)
DESCRIPTION	VARCHAR2(4000)		Optional description of the parameter
EXECUTION_TYPE	VARCHAR2(128)		Type of the last execution. This information is optional for single-execution tasks.

5.23 DBA_ADVISOR_DEFINITIONS

DBA_ADVISOR_DEFINITIONS displays the properties of all advisors in the database.

The view contains one row for each task, representing the current state of the task as well as execution-specific data such as progress monitoring and completion status.

Column	Datatype	NULL	Description
ADVISOR_ID	NUMBER	NOT NULL	Unique identifier for the advisor
ADVISOR_NAME	VARCHAR2(128)	NOT NULL	Name of the advisor

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PROPERTY	NUMBER	NOT NULL	Properties: • Bit 0: - Indicates whether the advisor runs in COMPREHENSIVE mode (1) or not (0) • Bit 1: - Indicates whether the advisor runs in LIMITED mode (1) or not (0) • Bit 2: - Indicates whether the advisor is resumable (1) or not (0) • Bit 3: - Indicates whether the advisor accepts user directives (1) or not (0)

5.24 DBA_ADVISOR_DIR_DEFINITIONS

DBA_ADVISOR_DIR_DEFINITIONS provides a definition of the base directive.

Column	Datatype	NULL	Description
ID	NUMBER	NOT NULL	Unique id for directive. The directive management engine automatically generates ID numbers. The identifier is unique among all directives regardless of the domain name and directive name.
ADVISOR_ID	NUMBER	NOT NULL	Identifier number of the owner advisor.
ADVISOR_NAME	VARCHAR2(128)	NOT NULL	The name of the advisor to which this directive belongs.
DIRECTIVE_NAME	VARCHAR2(128)	NOT NULL	Any value that further classifies this directive within a domain. The domain and the name form a unique key for the directive.
DOMAIN_NAME	VARCHAR2(128)	NOT NULL	Domain or namespace name.
DESCRIPTION	VARCHAR2(256)	NOT NULL	An optional description that documents the purpose of the directive.
TYPE	NUMBER	NOT NULL	Further describes the use of the directive. Possible values are: 1. **Filter** - An Xpath filter 2. **Single Value** - Evaluation returns a single string value 3. **Multiple Values** - Evaluation returns one to many string values 4. **Conditional** - Evaluation returns a single value based on an input key, similar to a CASE or SWITCH statement
TYPE_NAME	VARCHAR2(15)		A decoded version of the TYPE column.
TASK_STATUS	VARCHAR2(9)		The status of the directive instances when a task is not in its initial state. Possible values are: • IMMUTABLE • MUTABLE
INSTANCES	VARCHAR2(8)		Indicates whether a directive will permit multiple instances. Possible values are: • SINGLE • MULTIPLE

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
METADATA	CLOB	NOT NULL	A DTD that is used to process the directive.

5.25 DBA_ADVISOR_DIR_INSTANCES

DBA_ADVISOR_DIR_INSTANCES provides information about all global instances for a directive.

Column	Datatype	NULL	Description
DIRECTIVE_ID	NUMBER	NOT NULL	Unique id for directive. The directive management engine automatically generates ID numbers.
INSTANCE_ID	NUMBER	NOT NULL	Unique id for the directive instance. The directive management engine automatically generates ID numbers.
INSTANCE_NAME	VARCHAR2(128)	NOT NULL	A user-assigned name for the directive instance.
DATA	CLOB	NOT NULL	An XML document that gives meaningful default values for all parts of the directive.

5.26 DBA_ADVISOR_DIR_TASK_INST

DBA_ADVISOR_DIR_TASK_INST provides information about all task directive instances.

Related View

USER_ADVISOR_DIR_TASK_INST provides information about all task directive instances owned by the current user.

Column	Datatype	NULL	Description
DIRECTIVE_ID	NUMBER	NOT NULL	Unique id for directive. The directive management engine automatically generates ID numbers.
SEQ_ID	NUMBER	NOT NULL	Unique id for the directive instance. The directive management engine automatically generates ID numbers.
INSTANCE_NAME	VARCHAR2(128)	NOT NULL	A user-assigned name for the directive instance.
USERNAME	VARCHAR2(128)	NOT NULL	Database user who owns the task instance.
TASK_ID	NUMBER		An advisor task identifier to which the directive instance is associated
TASK_NAME	VARCHAR2(128)		An advisor task to which the directive instance is associated.
DATA	CLOB	NOT NULL	An XML document that gives meaningful default values for all parts of the directive.

See Also

"USER_ADVISOR_DIR_TASK_INST"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.27 DBA_ADVISOR_EXEC_PARAMETERS

DBA_ADVISOR_EXEC_PARAMETERS displays the parameter values used for past executions of tasks.

It is more useful for advisors supporting multiple executions, such as SQL Performance Analyzer, where a parameter can have different values for different executions.

Related View

USER_ADVISOR_EXEC_PARAMETERS displays the parameter values used for past executions of tasks owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Unique identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
EXECUTION_NAME	VARCHAR2(128)	NOT NULL	Name of the task execution with which this entry (row) is associated
EXECUTION_TYPE	VARCHAR2(128)		Type of the last execution. This information is optional for single-execution tasks.
PARAMETER_NAME	VARCHAR2(128)	NOT NULL	Name of the parameter
PARAMETER_VALUE	VARCHAR2(4000)		Value of the parameter. Numeric parameter values are converted to a string equivalent.
PARAMETER_TYPE	VARCHAR2(10)		Datatype of the parameter (see DBA_ADVISOR_PARAMETERS)
IS_DEFAULT	VARCHAR2(1)		Indicates whether the parameter value is set to the advisor's default value (Y) or not (N)
IS_OUTPUT	VARCHAR2(1)		Indicates whether the task execution process sets the parameter value (Y) or not (N)
IS_MODIFIABLE_ANYTIME	VARCHAR2(1)		Indicates whether the parameter value can be modified when the task is not in its initial state (Y) or not (N)
DESCRIPTION	VARCHAR2(4000)		Optional description of the parameter
PARAMETER_FLAGS	NUMBER	NOT NULL	Reserved for internal use
PARAMETER_TYPE#	NUMBER	NOT NULL	Reserved for internal use

See Also

"USER_ADVISOR_EXEC_PARAMETERS"

5.28 DBA_ADVISOR_EXECUTION_TYPES

DBA_ADVISOR_EXECUTION_TYPES displays possible execution action for a given advisor.

Only advisors that support multiple executions of their tasks have entries in this view.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ADVISOR_NAME	VARCHAR2(128)	NOT NULL	Name of the advisor
EXECUTION_TYPE	VARCHAR2(128)	NOT NULL	Execution type supported by the advisor
EXECUTION_DESCRIPTION	VARCHAR2(4000)		Optional description of the execution type

5.29 DBA_ADVISOR_EXECUTIONS

DBA_ADVISOR_EXECUTIONS displays metadata information for task executions.

For example, the SQL Performance Analyzer creates a minimum of three executions to perform a change impact analysis on a SQL workload. The first one collects performance data for the version of the workload before the change, the second one collects data for the version of the workload after the change, and the third one performs impact analysis. All of these executions belong to the same task and are grouped into this view. Similarly, the automatic SQL tuning task, SYS_AUTO_SQL_TUNING_TASK, creates a new execution for each tuning run.

Related View

USER_ADVISOR_EXECUTIONS displays metadata information for task executions owned by the current user.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Unique identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
EXECUTION_NAME	VARCHAR2(128)	NOT NULL	Name of the task execution with which this entry (row) is associated
EXECUTION_ID	NUMBER	NOT NULL	Execution ID
DESCRIPTION	VARCHAR2(256)		User-supplied description of the task
EXECUTION_TYPE	VARCHAR2(128)		Type of the last execution (optional for single-execution tasks)
EXECUTION_TYPE#	NUMBER		Reserved for internal use
EXECUTION_START	DATE		Execution start date and time
EXECUTION_LAST_MODIFIED	DATE	NOT NULL	Last modified date and time for the execution
EXECUTION_END	DATE		Execution end date and time
ADVISOR_NAME	VARCHAR2(128)		Advisor associated with the task
REQUESTED_DOP	NUMBER		The degree of parallelism (DOP) value requested by the user (through the TEST_EXECUTE_DOP parameter). It can be any value greater or equal to zero.
ACTUAL_DOP	NUMBER		The actual degree of parallelism (DOP) with which the execution finished. If the requested DOP is greater than than what is available on the system, the ACTUAL_DOP value can be lower than the REQUESTED_DOP value.
CONCURRENT_EXECUTION	VARCHAR2(3)		Indicates whether concurrency was used for this execution (YES) or not (NO)
ADVISOR_ID	NUMBER	NOT NULL	Unique identifier for the advisor

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
STATUS	VARCHAR2(11)		Current operational status of the task: • EXECUTING • COMPLETED • INTERRUPTED • CANCELLED • FATAL ERROR
STATUS#	NUMBER	NOT NULL	Reserved for internal use
STATUS_MESSAGE	VARCHAR2(4000)		Informational message provided by the advisor regarding the status
ERROR_MESSAGE	VARCHAR2(4000)		Informational message or an error message indicating the current operation or condition

See Also

"USER_ADVISOR_EXECUTIONS"

5.30 DBA_ADVISOR_FDG_BREAKDOWN

DBA_ADVISOR_FDG_BREAKDOWN describes the contribution from the different instances to the findings for each ADDM task.

This view is populated only with ADDM tasks that are analyzing multiple instances (that is, the ACTUAL_ANALYSIS column in the task's row in DBA_ADDM_TASKS is set to DATABASE or PARTIAL).

Related View

USER_ADVISOR_FDG_BREAKDOWN describes the contribution from the different instances to the findings for each ADDM task owned by the current user.

Column	Datatype	NULL	Description
TASK_ID	NUMBER	NOT NULL	Unique identifier of the task (see DBA_ADVISOR_TASKS and DBA_ADDM_TASKS)
FINDING_ID	NUMBER	NOT NULL	Identifier of the finding to which this breakdown applies (see DBA_ADVISOR_FINDINGS and DBA_ADDM_FINDINGS)
INSTANCE_NUMBER	NUMBER	NOT NULL	The number of the instance for the breakdown
IMPACT	NUMBER		The database time (in microseconds) of the finding in the instance
PERC_IMPACT	NUMBER		Percentage of the contribution of the instance to the overall finding's impact
EXECUTION_NAME	VARCHAR2(128)		The name of the task execution with which this entry (row) is associated

See Also

"USER_ADVISOR_FDG_BREAKDOWN"

5.31 DBA_ADVISOR_FINDING_NAMES

DBA_ADVISOR_FINDING_NAMES provides a list of all finding names registered with the Advisor Framework.

Column	Datatype	NULL	Description
ID	NUMBER		ID of the finding name
ADVISOR_NAME	VARCHAR2(128)	NOT NULL	Advisor name
FINDING_NAME	VARCHAR2(4000)		Finding name

5.32 DBA_ADVISOR_FINDINGS

DBA_ADVISOR_FINDINGS displays the findings discovered by all advisors in the database.

Related View

USER_ADVISOR_FINDINGS displays the findings discovered by the advisors owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
EXECUTION_NAME	VARCHAR2(128)		The name of the task execution with which this entry (row) is associated
FINDING_ID	NUMBER	NOT NULL	Identifier of the finding
FINDING_NAME	VARCHAR2(4000)		Name of the finding
TYPE	VARCHAR2(11)		Type of the finding: • PROBLEM • SYMPTOM • ERROR • INFORMATION
TYPE_ID	NUMBER	NOT NULL	Numeric ID for the value in column TYPE
PARENT	NUMBER	NOT NULL	Identifier of the parent finding
OBJECT_ID	NUMBER		Identifier of the associated object, if any
IMPACT_TYPE	VARCHAR2(4000)		Impact of the finding on the system
IMPACT	NUMBER		Impact value
MESSAGE	VARCHAR2(4000)		Message describing the finding
MORE_INFO	VARCHAR2(4000)		Additional info associated with the finding
FILTERED	VARCHAR2(1)		A value of Y means that the row in the view was filtered out by a directive (or a combination of directives). A value of N means that the row was not filtered.
FLAGS	NUMBER		For internal use only by advisor framework clients

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.33 DBA_ADVISOR_JOURNAL

DBA_ADVISOR_JOURNAL displays the journal entries for all tasks in the database.

Related View

USER_ADVISOR_JOURNAL displays the journal entries for the tasks owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Identifier of the task or workload object
TASK_NAME	VARCHAR2(128)		Name of the task or workload object
EXECUTION_NAME	VARCHAR2(128)		The name of the task execution with which this entry (row) is associated
JOURNAL_ENTRY_SEQ	NUMBER	NOT NULL	Sequence number of the journal entry (unique for each task). This sequence number is used to order the data.
JOURNAL_ENTRY_TYPE	VARCHAR2(12)		Type of the task: • FATAL • ERROR • WARNING • INFORMATION • INFORMATION[2 | 3 | 4 | 5 | 6]
JOURNAL_ENTRY	VARCHAR2(4000)		Entry in the journal

> **See Also**
>
> "USER_ADVISOR_JOURNAL"

5.34 DBA_ADVISOR_LOG

DBA_ADVISOR_LOG displays information about the current state of all tasks in the database, as well as execution-specific data such as progress monitoring and completion status.

The view contains one row for each task.

Related View

USER_ADVISOR_LOG displays information about the current state of the tasks owned by the current user. This view does not display the OWNER column.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
EXECUTION_START	DATE		Execution start date and time of the task
EXECUTION_END	DATE		Execution end date and time of the task
STATUS	VARCHAR2(11)		Current operational status of the task: • INITIAL - Initial state of the task; no recommendations are present • EXECUTING - Task is currently running • COMPLETED - Task successfully completed the analysis operation. Recommendation data can be viewed and reported. • INTERRUPTED - Task analysis was interrupted by the user. Recommendation data, if present, can be viewed and reported at this time. • CANCELLED • FATAL ERROR - An irrecoverable error occurred during the analysis operation. All recommendation data is unusable.
STATUS_MESSAGE	VARCHAR2(4000)		Informational message provided by the advisor regarding the status
PCT_COMPLETION_TIME	NUMBER		Percent completion, in terms of time, of the task when it is executing
PROGRESS_METRIC	NUMBER		Metric that measures the progress of the task in terms of quality. Each advisor could have its own metric.
METRIC_UNITS	VARCHAR2(64)		Unit of the metric used to measure progress
ACTIVITY_COUNTER	NUMBER		Counter that is updated frequently by the advisor, denoting that useful work is being performed
RECOMMENDATION_COUNT	NUMBER		Number of recommendations produced
ERROR_MESSAGE	VARCHAR2(4000)		Informational message or an error message indicating the current operation or condition

See Also

"USER_ADVISOR_LOG"

5.35 DBA_ADVISOR_OBJECT_TYPES

DBA_ADVISOR_OBJECT_TYPES displays information about the object types used by all advisors in the database.

In addition to the regular database object types (such as TABLE and INDEX), the following types are defined:

- SYSTEM
- I/O

Copyright © 2002, 2025, Oracle and/or its affiliates.

- SGA
- PGA
- SHARED POOL
- BUFFER CACHE
- LIBRARY CACHE
- PROCESS
- SESSION
- ENQUEUE
- LATCH
- ROLLBACK SEGMENT
- FILE
- PARAMETER
- CURSOR
- SQL
- SQL WORKLOAD

Column	Datatype	NULL	Description
OBJECT_TYPE_ID	NUMBER		Type identifier
OBJECT_TYPE	VARCHAR2(64)		Type name

5.36 DBA_ADVISOR_OBJECTS

DBA_ADVISOR_OBJECTS displays information about the objects currently referenced by all advisors in the database.

Each row in the view pertains to an object instantiation.

Related View

USER_ADVISOR_OBJECTS displays information about the objects currently referenced by the advisors owned by the current user. This view does not display the OWNER ATTR21, and ATTR22 columns.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the object
OBJECT_ID	NUMBER	NOT NULL	Identifier of the object
TYPE	VARCHAR2(64)		Name of the type
TYPE_ID	NUMBER	NOT NULL	Type identifier number
TASK_ID	NUMBER	NOT NULL	Task referencing the object
TASK_NAME	VARCHAR2(128)		Name of the task
EXECUTION_NAME	VARCHAR2(128)		The name of the task execution with which this entry (row) is associated
ATTR1	VARCHAR2(4000)		Attributes and identifier of the object

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ATTR2	VARCHAR2(4000)		Attributes and identifier of the object
ATTR3	VARCHAR2(4000)		Attributes and identifier of the object
ATTR4	CLOB		Attributes and identifiers that cannot be expressed in the ATTR1, ATTR2, and ATTR3 columns
ATTR5	VARCHAR2(4000)		Attributes and identifier of the object
ATTR6	RAW(2000)		Attributes and identifier of the object
ATTR7	NUMBER		Attributes and identifier of the object
ATTR8	NUMBER		Attributes and identifier of the object
ATTR9	NUMBER		Attributes and identifier of the object
ATTR10	NUMBER		Attributes and identifier of the object
ATTR11	NUMBER		Attributes and identifier of the object
ATTR16	VARCHAR2(4000)		Attributes and identifier of the object
ATTR17	VARCHAR2(4000)		Attributes and identifier of the object
ATTR18	VARCHAR2(4000)		Attributes and identifier of the object
ATTR21	DATE		Attributes and identifier of the object
ATTR22	DATE		Attributes and identifier of the object
OTHER	CLOB		Other attributes and identifiers of the object
ADV_SQL_ID	VARCHAR2(13)		If the object type is SQL, then this column contains the SQL identifier of the SQL statement. Otherwise, the value of this column is null.

Note

The definition of the ATTRn columns depends on the advisors that are using the object. For example, the SQL object type defines the attribute columns as follows:

- ATTR1 contains the SQL ID
- ATTR2 contains the SQL address (in the cursor cache)
- ATTR4 contains the SQL text

5.37 DBA_ADVISOR_PARAMETERS

DBA_ADVISOR_PARAMETERS displays all task parameters and their current values in the database.

This data is accessible by all tasks.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Related View

USER_ADVISOR_PARAMETERS displays the task parameters and their current values for the tasks owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task or workload object
TASK_ID	NUMBER	NOT NULL	Unique identifier number of the task or workload object
TASK_NAME	VARCHAR2(128)		Name of the task or workload object
PARAMETER_NAME	VARCHAR2(128)	NOT NULL	Name of the parameter
PARAMETER_VALUE	VARCHAR2(4000)	NOT NULL	Value of the parameter. Numeric parameter values are converted to a string equivalent. Possible keywords as values: • ALL • UNLIMITED • UNUSED
PARAMETER_TYPE	VARCHAR2(10)		Datatype of the parameter: • NUMBER - Numeric value • STRING - String value. If the string contains special characters, then it will be enclosed in single quotes. • STRINGLIST - Comma-separated list of string elements. If a string element contains a comma or other special characters, then the element will be enclosed in single quotes. • TABLE - Single table reference. A reference will contain a schema name, followed by an optional table name. If the table name is omitted or is the character %, then the table name is interpreted as a wildcard. SQL quoted identifiers are supported. • TABLELIST - List of one or more comma-separated table references. A reference will contain schema name, followed by an optional table name. If the table name is omitted or is the character %, then the table name is interpreted as a wildcard. SQL quoted identifiers are supported.
IS_DEFAULT	VARCHAR2(1)		Indicates whether the parameter value is set to the advisor's default value (Y) or not (N)
IS_OUTPUT	VARCHAR2(1)		Indicates whether the task execution process sets the parameter value (Y) or not (N)
IS_MODIFIABLE_ANYTIME	VARCHAR2(1)		Indicates whether the parameter value can be modified when the task is not in its initial state (Y) or not (N)
DESCRIPTION	VARCHAR2(4000)		Optional description of the parameter
EXECUTION_TYPE	VARCHAR2(128)		For advisors supporting multiple executions, the type of execution this parameter pertains to

5.38 DBA_ADVISOR_RATIONALE

DBA_ADVISOR_RATIONALE displays information about the rationales for all recommendations in the database.

Related View

USER_ADVISOR_RATIONALE displays information about the rationales for the recommendations owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
EXECUTION_NAME	VARCHAR2(128)		The name of the task execution with which this entry (row) is associated
REC_ID	NUMBER		Recommendation associated with the rationale
RATIONALE_ID	NUMBER	NOT NULL	Unique identifier for the rationale
IMPACT_TYPE	VARCHAR2(4000)		Impact on the system due to the problem described in the rationale. The impact can be described in terms of time, cost, or % degradation.
IMPACT	NUMBER		Calculated impact value
MESSAGE	VARCHAR2(4000)		Message containing an overview of the rationale
OBJECT_ID	NUMBER		Identifier of an object specified in the DBA_ADVISOR_OBJECTS view
TYPE	VARCHAR2(30)		Type of the rationale; defines what data exists in the attribute columns and how to interpret it: • TEXT - Text sentence for descriptive messages. The ATTR1 column contains the text. • CHART - Chart containing data to be displayed. The ATTR1 column contains the data.
ATTR1	VARCHAR2(4000)		Parameters defining the rationale
ATTR2	VARCHAR2(4000)		Parameters defining the rationale
ATTR3	VARCHAR2(4000)		Parameters defining the rationale
ATTR4	VARCHAR2(4000)		Parameters defining the rationale
ATTR5	CLOB		Parameters defining the rationale

5.39 DBA_ADVISOR_RECOMMENDATIONS

DBA_ADVISOR_RECOMMENDATIONS displays the results of an analysis of all recommendations in the database.

A recommendation can have multiple actions associated with it. Actions are described in the DBA_ADVISOR_ACTIONS view. A recommendation also points to a set of rationales that present a justification/reasoning for that recommendation. These rationales are in the DBA_ADVISOR_RATIONALE view.

Related View

USER_ADVISOR_RECOMMENDATIONS displays the results of an analysis of the recommendations owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
REC_ID	NUMBER	NOT NULL	Unique identifier of the recommendation
TASK_ID	NUMBER	NOT NULL	Task that owns the recommendation
TASK_NAME	VARCHAR2(128)		Name of the task
EXECUTION_NAME	VARCHAR2(128)		The name of the task execution with which this entry (row) is associated
FINDING_ID	NUMBER		Unique identifier of the finding
TYPE	VARCHAR2(30)		Type of the recommendation
RANK	NUMBER		Ranking, in terms of importance, within the set of recommendations generated for the task
PARENT_REC_IDS	VARCHAR2(4000)		Comma-separated list of the recommendation IDs of the parent recommendations. If this column is nonzero, then the recommendation depends on the parents, and cannot be accepted if the parents are not accepted.
BENEFIT_TYPE	VARCHAR2(4000)		Describes the benefit obtained by carrying out the recommendation If there is a set of parents for the recommendation, then the benefit is the cumulative benefit (the improvement in system performance when this and all prior parent recommendations are accepted). If there are no parents, then this is the improvement when the recommendation is accepted, independent of other recommendations.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
BENEFIT	NUMBER		Calculated benefit value This column displays an estimate of the savings in total activity (or load) on the system if all actions of the recommendation are implemented. Recommendations are not additive, that is, the benefit from one recommendation may overlap with the benefit from another. For example, Oracle might recommend increasing the shared pool size, or reducing hard parses (by not using literals), and both recommendations might reduce the same part of the workload related to parsing. The benefit is given in both pure active sessions and as a percent of the average active sessions of the analysis time period. Therefore, if the benefit is 20% of active sessions, Oracle estimates that if you apply the actions on the same workload, the average active sessions on the server will be reduced by 20%. The DBA_ADDM_TASKS view displays the average active sessions for an ADDM task.
ANNOTATION_STATUS	VARCHAR2(11)		When a task is complete, the recommendations are marked ACCEPT. The status can be changed later using the MARK_RECOMMENDATION procedure: • ACCEPT - Current recommendation is ready to implement. This recommendation can also be used as advice for future analysis operations. • REJECT - Current recommendation is not acceptable to the user, and therefore will be excluded from any implementation scripts. This recommendation can also be used as advice for future analysis operations. • IGNORE - Though not rejected, the current recommendation will be ignored when generating scripts and will never be used as advice to future analysis operations.
FLAGS	NUMBER		Advisor-specific flags
FILTERED	VARCHAR2(1)		A value of Y means that the row in the view was filtered out by a directive (or a combination of directives). A value of N means that the row was not filtered.
REC_TYPE_ID	NUMBER		Recommendation type ID

5.40 DBA_ADVISOR_SQLA_REC_SUM

DBA_ADVISOR_SQLA_REC_SUM displays recommendation rollup information for all workload objects in the database after an Access Advisor analysis operation.

Related View

USER_ADVISOR_SQLA_REC_SUM displays recommendation rollup information for the workload objects owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER		Unique identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
REC_ID	NUMBER		Identifier of the recommendation
TOTAL_STMTS	NUMBER		Total number of statements processed during analysis
TOTAL_PRECOST	NUMBER		Total cost of executing the statements in which the recommended object will be used, before the recommendations
TOTAL_POSTCOST	NUMBER		Total cost of executing the statements in which the recommended object will be utilized, after the recommendations have been implemented

See Also

"USER_ADVISOR_SQLA_REC_SUM"

5.41 DBA_ADVISOR_SQLA_TABLES

DBA_ADVISOR_SQLA_TABLES displays cross references between the workload statements and the tables referenced in the statement.

Related View

USER_ADVISOR_SQLA_TABLES displays cross references between the workload statements and the tables referenced in the statement for the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the workload object
TASK_ID	NUMBER		Unique identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
SQL_ID	VARCHAR2(13)		SQL identifier of the parent cursor in the library cache
STMT_ID	NUMBER		Statement ID
TABLE_OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Table name

Copyright © 2002, 2025, Oracle and/or its affiliates.

See Also

"USER_ADVISOR_SQLA_TABLES"

5.42 DBA_ADVISOR_SQLA_WK_MAP

DBA_ADVISOR_SQLA_WK_MAP displays the workload references for all tasks in the database.

Workload references are necessary to allow the SQL Access Advisor to find required workload data.

Related View

USER_ADVISOR_SQLA_WK_MAP displays the workload references for the tasks owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER		Unique identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
WORKLOAD_ID	NUMBER		Unique identifier of the workload object
WORKLOAD_NAME	VARCHAR2(128)		Name of the workload
IS_STS	NUMBER		Type of workload source: • 0 - SQL workload object • 1 - SQL Tuning Set

See Also

"USER_ADVISOR_SQLA_WK_MAP"

5.43 DBA_ADVISOR_SQLA_WK_STMTS

DBA_ADVISOR_SQLA_WK_STMTS displays information about all workload objects in the database after an Access Advisor analysis operation.

Related View

USER_ADVISOR_SQLA_WK_STMTS displays information about the workload objects owned by the current user after an Access Advisor analysis operation. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_NAME	VARCHAR2(128)		Name of the task
TASK_ID	NUMBER	NOT NULL	Unique identifier of the task
SQLSET_ID	NUMBER		ID of the SQL tuning set for the statement

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SQLSET_NAME	VARCHAR2(128)		Name of the SQL tuning set for the statement
WORKLOAD_NAME	VARCHAR2(128)		Name of the workload
SQL_ID	VARCHAR(13)	NOT NULL	Generated identifier of the statement
SQL_SEQ	NUMBER	NOT NULL	SQL sequence
PLAN_HASH_VALUE	NUMBER	NOT NULL	Numerical representation of the SQL plan for the cursor. Comparing one PLAN_HASH_VALUE to another easily identifies whether or not two plans are the same (rather than comparing the two plans line-by-line).
PARSING_SCHEMA_NAME	VARCHAR2(128)		Schema name that was used to originally build this child cursor
USERNAME	VARCHAR2(128)		Name of the user executing the statement
MODULE	VARCHAR2(64)		Name of the module issuing the statement
ACTION	VARCHAR2(64)		Module action for the statement
CPU_TIME	NUMBER		Total CPU count (in seconds) of the executing statement
BUFFER_GETS	NUMBER		Total number of buffer gets for the statement
DISK_READS	NUMBER		Total disk-read I/O count for the statement
ELAPSED_TIME	NUMBER		Total elapsed time (in seconds) of the executing statement
ROWS_PROCESSED	NUMBER		Total number of rows processed by the statement
EXECUTIONS	NUMBER		Total number of times the statement was executed
FIRST_LOAD_TIME	DATE		Load time of parent cursor
LAST_EXECUTION_DATE	DATE		Date on which the statement was last executed
PRIORITY	NUMBER		Business importance of the statement: • 1 - High • 2 - Medium • 3 - Low
COMMAND_TYPE	NUMBER		Type of the command
STAT_PERIOD	NUMBER		Unused
ACTIVE_STAT_PERIOD	NUMBER		Effective period of time (in seconds) during which the SQL statement was active
SQL_TEXT	CLOB		Text of the SQL statement
PRECOST	NUMBER		Cost of executing the statement in the workload prior to the recommendations
POSTCOST	NUMBER		Cost of executing the statement in the workload after the recommendations
IMPORTANCE	NUMBER		Advisor-calculated importance value
REC_ID	NUMBER		Associated recommendation identifier

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
VALIDATED	NUMBER		Indicates whether the statement is valid for analysis: • 0 - Statement will not be analyzed by the EXECUTE_TASK procedure. Typically, the statement references one or more tables that do not have valid statistics. To correct this problem, ensure that the tables have valid statistics and execute the RESET_SQLWKLD procedure on the current workload. • 1- Statement is eligible for analysis by the EXECUTE_TASK procedure

5.44 DBA_ADVISOR_SQLPLANS

DBA_ADVISOR_SQLPLANS displays the different SQL execution plans generated as part of an advisor analysis.

Related View

USER_ADVISOR_SQLPLANS displays the different SQL execution plans owned by the current user generated as part of an advisor analysis.

Column	Datatype	NULL	Description
TASK_NAME	VARCHAR2(128)		Advisor task name in which the SQL plan was generated (see DBA_ADVISOR_TASKS)
TASK_ID	NUMBER(38)	NOT NULL	Advisor task ID in which the SQL plan was generated (see DBA_ADVISOR_TASKS)
EXECUTION_NAME	VARCHAR2(128)	NOT NULL	Advisor task execution in which the SQL plan was generated (see DBA_ADVISOR_EXECUTIONS)
SQL_ID	VARCHAR2(13)	NOT NULL	Identifier for the relevant SQL statement
OBJECT_ID	NUMBER(38)	NOT NULL	Advisor object ID identifying the relevant SQL statement (see DBA_ADVISOR_OBJECTS)
ATTRIBUTE	VARCHAR2(34)		Text string identifying the type of the execution plan. The following values are used by the SQL Tuning Advisor: • Original - Original plan of the query • Original with adjusted cost - Same as Original but with adjusted cost • Using SQL profile - Plan with SQL profile applied • Using new indices - Plan with indexes applied
STATEMENT_ID	VARCHAR2(30)		Optional statement identifier specified in the EXPLAIN PLAN statement
PLAN_HASH_VALUE	NUMBER	NOT NULL	Numerical representation of the execution plan

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PLAN_ID	NUMBER	NOT NULL	Plan identifier
TIMESTAMP	DATE		Date and time when the EXPLAIN PLAN statement was issued
REMARKS	VARCHAR2(4000)		Place for comments that can be added to the steps of the execution plan
OPERATION	VARCHAR2(30)		Name of the operation performed at this step
OPTIONS	VARCHAR2(255)		Options used for the operation performed at this step
OBJECT_NODE	VARCHAR2(128)		Name of the database link used to reference the object
OBJECT_OWNER	VARCHAR2(128)		Owner of the object
OBJECT_NAME	VARCHAR2(128)		Name of the object
OBJECT_ALIAS	VARCHAR2(261)		Object alias
OBJECT_INSTANCE	NUMBER(38)		Numbered position of the object name in the original SQL statement
OBJECT_TYPE	VARCHAR2(30)		Descriptive modifier that further describes the type of object
OPTIMIZER	VARCHAR2(255)		Current mode of the optimizer
SEARCH_COLUMNS	NUMBER		Number of index columns with start and stop keys (that is, the number of columns with matching predicates)
ID	NUMBER(38)	NOT NULL	Identification number for this step in the execution plan
PARENT_ID	NUMBER(38)		ID of the next step that operates on the results of this step
DEPTH	NUMBER(38)		Depth
POSITION	NUMBER(38)		Order of processing for steps with the same parent ID
COST	NUMBER(38)		Cost of the current operation estimated by the cost-based optimizer (CBO)
CARDINALITY	NUMBER(38)		Number of rows returned by the current operation (estimated by the CBO)
BYTES	NUMBER(38)		Number of bytes returned by the current operation

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OTHER_TAG	VARCHAR2(255)		Describes the function of the SQL text in the OTHER column. Values for OTHER_TAG are: • SERIAL - SQL is the text of a locally-executed, serial query plan. Currently, SQL is not loaded in OTHER for this case. • SERIAL_FROM_REMOTE - SQL text shown in the OTHER column will be executed at a remote site • PARALLEL_COMBINED_WITH_PARENT - Parent of this operation is a DFO that performs both operations in the parallel execution plan • PARALLEL_COMBINED_WITH_CHILD - Child of this operation is a DFO that performs both operations in the parallel execution plan. • PARALLEL_TO_SERIAL - SQL text shown in the OTHER column is the top-level of the parallel plan. • PARALLEL_TO_PARALLEL - SQL text shown in the OTHER column is executed and output in parallel • PARALLEL_FROM_SERIAL - Operation consumes data from a serial operation and outputs it in parallel
PARTITION_START	VARCHAR2(255)		Start partition of a range of accessed partitions
PARTITION_STOP	VARCHAR2(255)		Stop partition of a range of accessed partitions
PARTITION_ID	NUMBER(38)		Step that has computed the pair of values of the PARTITION_START and PARTITION_STOP columns
OTHER	LONG		Information about parallel execution servers and parallel queries
DISTRIBUTION	VARCHAR2(30)		Distribution method
CPU_COST	NUMBER(38)		User-defined CPU cost
IO_COST	NUMBER(38)		User-defined I/O cost
TEMP_SPACE	NUMBER(38)		Temporary space usage of the operation (sort or hash-join) as estimated by the CBO
ACCESS_PREDICATES	VARCHAR2(4000)		Predicates used to locate rows in an access structure. For example, start or stop predicates for an index range scan.
FILTER_PREDICATES	VARCHAR2(4000)		Predicates used to filter rows before producing them
PROJECTION	VARCHAR2(4000)		Expressions produced by the operation
TIME	NUMBER(38)		Elapsed time (in seconds) of the operation as estimated by the CBO
QBLOCK_NAME	VARCHAR2(128)		Name of the query block

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OTHER_XML	CLOB		Provides extra information specific to an execution step of the execution plan. The content of this column is structured using XML, which allows multiple pieces of information to be stored, including the following: • Name of the schema against which the query was parsed • Release number of the Oracle Database that produced the explain plan • Hash value associated with the execution plan • Name (if any) of the outline or the SQL profile used to build the execution plan • Indication of whether or not dynamic statistics were used to produce the plan • The outline data, a set of optimizer hints that can be used to regenerate the same plan • Additional data that describes the relationship between rows in the plan table and subplans of adaptive plans

5.45 DBA_ADVISOR_SQLSTATS

DBA_ADVISOR_SQLSTATS displays execution statistics for the test-execution of different SQL plans during the advisor analysis.

Related View

USER_ADVISOR_SQLSTATS displays execution statistics owned by the current user for the test-execution of different SQL plans during the advisor analysis.

Column	Datatype	NULL	Description
TASK_NAME	VARCHAR2(128)		Advisor task name in which the SQL statement was executed (see DBA_ADVISOR_TASKS)
TASK_ID	NUMBER(38)	NOT NULL	Advisor task ID in which the SQL statement was executed (see DBA_ADVISOR_TASKS)
EXECUTION_NAME	VARCHAR2(128)	NOT NULL	Advisor task execution in which the SQL statement was executed (see DBA_ADVISOR_EXECUTIONS)
EXECUTION_TYPE	VARCHAR2(128)		Type of the advisor task execution in which the SQL statement was executed (see DBA_ADVISOR_EXECUTIONS)
OBJECT_ID	NUMBER(38)	NOT NULL	Advisor object ID identifying the relevant SQL statement (see DBA_ADVISOR_OBJECTS)
PLAN_ID	NUMBER	NOT NULL	Plan ID number generated to uniquely identify a plan for a particular SQL statement (foreign key to DBA_ADVISOR_SQLPLANS)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SQL_ID	VARCHAR2(13)	NOT NULL	Identifier for the SQL statement executed
PLAN_HASH_VALUE	NUMBER	NOT NULL	Hash value of the SQL execution plan
ATTR1	NUMBER		For internal use only
CON_DBID	NUMBER		The database ID of the pluggable database (PDB)
PARSE_TIME	NUMBER		Parse time (in microseconds) measured for the SQL
ELAPSED_TIME	NUMBER		Elapsed time (in microseconds) to execute the SQL and fetch all of its rows, after parsing
CPU_TIME	NUMBER		CPU time (in microseconds) to execute the SQL and fetch all of its rows, after parsing
USER_IO_TIME	NUMBER		I/O time (in microseconds) to execute the SQL and fetch all of its rows, after parsing
BUFFER_GETS	NUMBER		Number of buffer gets measured for executing the SQL and fetching all of its rows
DISK_READS	NUMBER		Number of disk reads measured for executing the SQL and fetching all of its rows
DIRECT_WRITES	NUMBER		Number of direct writes measured for executing the SQL and fetching all of its rows
PHYSICAL_READ_REQUESTS	NUMBER		Number of physical read I/O requests issued by the monitored SQL
PHYSICAL_WRITE_REQUESTS	NUMBER		Number of physical write I/O requests issued by the monitored SQL
PHYSICAL_READ_BYTES	NUMBER		Number of bytes read from disks by the monitored SQL
PHYSICAL_WRITE_BYTES	NUMBER		Number of bytes written to disks by the monitored SQL
ROWS_PROCESSED	NUMBER		Number of rows returned by the SQL execution
FETCHES	NUMBER		Number of fetches for the SQL execution
EXECUTIONS	NUMBER		Execution count for the SQL. This column will always have a value of 1 or 0.
END_OF_FETCH_COUNT	NUMBER		Indicates whether the SQL was executed to end-of-fetch (1) or not (0)
OPTIMIZER_COST	NUMBER		Optimizer cost for the execution plan
OTHER	CLOB		For internal use only
TESTEXEC_TOTAL_EXECS	NUMBER		Total number of executions during test execute
IO_INTERCONNECT_BYTES	NUMBER		Number of I/O bytes exchanged between Oracle AI Database and the storage system
TESTEXEC_FIRST_EXEC_IGNORED	VARCHAR2(1)		Indicates whether the first execution in test execute is ignored (Y) or not (N)
CON_DBID	NUMBER		The database ID of the PDB
ATTR2	NUMBER		For internal use only
ATTR3	NUMBER		For internal use only
CACHED_GETS	NUMBER		The total of the db block gets from cache statistic and the consistent gets from cache statistic
DIRECT_GETS	NUMBER		The total of the db block gets direct statistic and the consistent gets direct statistic

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
EXECUTIONS_ORIGINAL	NUMBER		Number of original executions from the SQL tuning set, independent of trial executions
OBJECT_FLAGS	NUMBER		Value of the flags from the execution of the SQL, such as timeout or error

- "USER_ADVISOR_SQLSTATS"
- "Statistics Descriptions" for more information about statistics

5.46 DBA_ADVISOR_SQLW_JOURNAL

DBA_ADVISOR_SQLW_JOURNAL displays the journal entries for all workload objects in the database.

Related View

USER_ADVISOR_SQLW_JOURNAL displays the journal entries for the workload objects owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the workload
WORKLOAD_ID	NUMBER	NOT NULL	Identifier number of the workload object
WORKLOAD_NAME	VARCHAR2(128)		Name of the workload object
JOURNAL_ENTRY_SEQ	NUMBER	NOT NULL	Sequence number of the journal entry (unique for each workload). The sequence number is used to order the data.
JOURNAL_ENTRY_TYPE	VARCHAR2(12)		Type of the task: • FATAL • ERROR • WARNING • INFORMATION • INFORMATION[2 | 3 | 4 | 5 | 6]
JOURNAL_ENTRY	VARCHAR2(4000)		Entry in the journal

See Also

5.47 DBA_ADVISOR_SQLW_PARAMETERS

DBA_ADVISOR_SQLW_PARAMETERS displays all workload parameters and their current values in the database.

Related View

USER_ADVISOR_SQLW_PARAMETERS displays the workload parameters and their current values owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task or workload object
WORKLOAD_ID	NUMBER	NOT NULL	Unique identifier number of the workload object
WORKLOAD_NAME	VARCHAR2(128)		Name of the workload object
PARAMETER_NAME	VARCHAR2(128)	NOT NULL	Name of the parameter
PARAMETER_VALUE	VARCHAR2(4000)	NOT NULL	Value of the parameter. Numeric parameter values are converted to a string equivalent. Possible keywords as values: • ALL • UNLIMITED • UNUSED
PARAMETER_TYPE	VARCHAR2(10)		Datatype of the parameter: • NUMBER - Numeric value • STRING - String value. If the string contains special characters, then it will be enclosed in single quotes. • STRINGLIST - Comma-separated list of string elements. If a string element contains a comma or other special characters, then the element will be enclosed in single quotes. • TABLE - Single table reference. A reference contains a schema name, followed by an optional table name. If the table name is omitted or is the character %, then the table name is interpreted as a wildcard. SQL quoted identifiers are supported. • TABLELIST - List of one or more comma-separated table references. A reference contains a schema name, followed by an optional table name. If the table name is omitted or is the character %, then the table name is interpreted as a wildcard. SQL quoted identifiers are supported.
DESCRIPTION	VARCHAR2(4000)		Parameter description

5.48 DBA_ADVISOR_SQLW_STMTS

DBA_ADVISOR_SQLW_STMTS displays rows that correspond to all statements in the workload.

All columns are guaranteed to be non-null.

Related View

USER_ADVISOR_SQLW_STMTS displays rows that correspond to the statements in the workload owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the workload object
WORKLOAD_ID	NUMBER	NOT NULL	Unique identifier number of the workload object
WORKLOAD_NAME	VARCHAR2(128)		Name of the workload
SQL_ID	NUMBER	NOT NULL	Generated identifier of the statement
HASH_VALUE	NUMBER		Hash value for the parent statement in the cache
USERNAME	VARCHAR2(128)		Name of the user executing the statement
MODULE	VARCHAR2(64)		Name of the module issuing the statement
ACTION	VARCHAR2(64)		Module action for the statement
CPU_TIME	NUMBER		Total CPU count (in seconds) of the executing statement
BUFFER_GETS	NUMBER		Total number of buffer gets for the statement
DISK_READS	NUMBER		Total disk-read I/O count for the statement
ELAPSED_TIME	NUMBER		Total elapsed time (in seconds) of the executing statement
ROWS_PROCESSED	NUMBER		Total number of rows processed by the statement
EXECUTIONS	NUMBER		Total number of times the statement was executed
OPTIMIZER_COST	NUMBER		Cost of executing the statement in the workload prior to the recommendations
LAST_EXECUTION_DATE	DATE		Date on which the statement was last executed
PRIORITY	NUMBER		Priority of the statement: • 1 - High • 2 - Medium • 3 - Low
COMMAND_TYPE	NUMBER		Type of the command
STAT_PERIOD	NUMBER		Unused
SQL_TEXT	CLOB		Text of the SQL statement
VALID	NUMBER		Indicates whether the statement is valid for analysis: • 0 - Statement will not be analyzed by the EXECUTE_TASK procedure. Typically, the statement references one or more tables that do not have valid statistics. To correct this problem, ensure that the tables have valid statistics and execute the RESET_SQLWKLD procedure on the current workload. • 1 - Statement is eligible for analysis by the EXECUTE_TASK procedure.

5.49 DBA_ADVISOR_SQLW_SUM

DBA_ADVISOR_SQLW_SUM displays an aggregated picture of all SQLWkld workload objects in the database.

Related View

USER_ADVISOR_SQLW_SUM displays an aggregated picture of the SQLWkld workload objects owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the workload object
WORKLOAD_ID	NUMBER	NOT NULL	Unique identifier number of the workload object
WORKLOAD_NAME	VARCHAR2(128)		Unique name of the workload
DESCRIPTION	VARCHAR2(256)		User-specified description of the workload
CREATE_DATE	DATE	NOT NULL	Date on which the workload object was created
MODIFY_DATE	DATE	NOT NULL	Date of last update to the current workload
NUM_SELECT_STMT	NUMBER		Number of SELECT statements in the workload
NUM_UPDATE_STMT	NUMBER		Number of UPDATE statements in the workload
NUM_DELETE_STMT	NUMBER		Number of DELETE statements in the workload
NUM_INSERT_STMT	NUMBER		Number of INSERT statements in the workload
NUM_MERGE_STMT	NUMBER		Number of MERGE statements in the workload
SOURCE	VARCHAR2(128)		Optional name that identifies the creator of the object
HOW_CREATED	VARCHAR2(30)		Optional object or template on which the object was based
DATA_SOURCE	VARCHAR2(2000)		Workload data source
READ_ONLY	VARCHAR2(5)		Indicates whether or not the workload can be modified or deleted (TRUE) or not (FALSE)

5.50 DBA_ADVISOR_SQLW_TABLES

DBA_ADVISOR_SQLW_TABLES displays cross references between the workload statements and the tables referenced in the statement.

Related View

USER_ADVISOR_SQLW_TABLES displays cross references between the workload statements and the tables referenced in the statement. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the workload object
WORKLOAD_ID	NUMBER		Unique identifier number of the workload object
WORKLOAD_NAME	VARCHAR2(128)		Name of the workload
SQL_ID	NUMBER		Identifier of the statement
TABLE_OWNER	VARCHAR2(128)		Owner of the table
TABLE_NAME	VARCHAR2(128)		Name of the table

> **See Also**
>
> "USER_ADVISOR_SQLW_TABLES"

5.51 DBA_ADVISOR_SQLW_TEMPLATES

DBA_ADVISOR_SQLW_TEMPLATES displays an aggregated picture of all SQLWkld template objects in the database.

Related View

USER_ADVISOR_SQLW_TEMPLATES displays an aggregated picture of the SQLWkld template objects owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the workload object
WORKLOAD_ID	NUMBER	NOT NULL	Unique identifier number of the workload object
WORKLOAD_NAME	VARCHAR2(128)		Unique name of the workload
DESCRIPTION	VARCHAR2(256)		User-specified description of the workload
CREATE_DATE	DATE	NOT NULL	Date on which the workload object was created
MODIFY_DATE	DATE	NOT NULL	Date of last update to the current workload
SOURCE	VARCHAR2(128)		Optional object or template on which the object was based
READ_ONLY	VARCHAR2(5)		Indicates whether the workload template can be modified or deleted (TRUE) or not (FALSE)

5.52 DBA_ADVISOR_TASKS

DBA_ADVISOR_TASKS displays information about all tasks in the database.

The view contains one row for each task. Each task has a name that is unique to the owner. Task names are just informational and no uniqueness is enforced within any other namespace.

Related View

USER_ADVISOR_TASKS displays information about the tasks owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Unique identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
DESCRIPTION	VARCHAR2(256)		User-supplied description of the task
ADVISOR_NAME	VARCHAR2(128)		Advisor associated with the task
CREATED	DATE	NOT NULL	Creation date of the task
LAST_MODIFIED	DATE	NOT NULL	Date on which the task was last modified
PARENT_TASK_ID	NUMBER		Identifier of the parent task (if the task was created because of the recommendation of another task)
PARENT_RXEC_ID	NUMBER		Identifier of the recommendation within the parent task that resulted in the creation of the task
LAST_EXECUTION	VARCHAR2(128)		Name of the current or last task execution
EXECUTION_TYPE	VARCHAR2(128)		Type of the last execution. This information is optional for single-execution tasks.
EXECUTION_TYPE#	NUMBER		Reserved for internal use
EXECUTION_DESCRIPTION	VARCHAR2(256)		Optional description of the last execution
EXECUTION_START	DATE		Execution start date and time of the task
EXECUTION_END	DATE		Execution end date and time of the task
STATUS	VARCHAR2(11)		Current operational status of the task: • INITIAL - Initial state of the task; no recommendations are present • EXECUTING - Task is currently running • INTERRUPTED - Task analysis was interrupted by the user. Recommendation data, if present, can be viewed and reported at this time. • COMPLETED - Task successfully completed the analysis operation. Recommendation data can be viewed and reported. • ERROR - An error occurred during the analysis operation. Recommendations, if present, can be viewed and reported at this time.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
STATUS_MESSAGE	VARCHAR2(4000)		Informational message provided by the advisor regarding the status
PCT_COMPLETION_TIME	NUMBER		Percent completion, in terms of time, of the task when it is executing
PROGRESS_METRIC	NUMBER		Metric that measures the progress of the task in terms of quality. Each advisor may have its own metric.
METRIC_UNITS	VARCHAR2(64)		Unit of the metric used to measure progress
ACTIVITY_COUNTER	NUMBER		Counter that is updated frequently by the advisor, denoting that useful work is being performed
RECOMMENDATION_COUNT	NUMBER		Number of recommendations produced
ERROR_MESSAGE	VARCHAR2(4000)		Informational message or an error message indicating the current operation or condition
SOURCE	VARCHAR2(128)		Optional name that identifies the creator of the task
HOW_CREATED	VARCHAR2(30)		Optional task or template on which the object was based
READ_ONLY	VARCHAR2(5)		Indicates whether the task is read-only (TRUE) or not (FALSE)
SYSTEM_TASK	VARCHAR2(5)		Indicates whether the task is a system task (TRUE) or not (FALSE). The automatic SQL tuning task, SYS_AUTO_SQL_TUNING_TASK, is one example of a system task.
ADVISOR_ID	NUMBER	NOT NULL	Unique identifier for the advisor
STATUS#	NUMBER		Reserved for internal use

See Also

"USER_ADVISOR_TASKS"

5.53 DBA_ADVISOR_TEMPLATES

DBA_ADVISOR_TEMPLATES displays information about all templates in the database.

Related View

USER_ADVISOR_TEMPLATES displays information about the templates owned by the current user. This view does not display the OWNER column.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Unique identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task
DESCRIPTION	VARCHAR2(256)		User-supplied description of the task
ADVISOR_NAME	VARCHAR2(128)		Advisor associated with the task
CREATED	DATE	NOT NULL	Creation date of the task

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
LAST_MODIFIED	DATE	NOT NULL	Date on which the task was last modified
SOURCE	VARCHAR2(128)		Optional task or template on which the template was based
READ_ONLY	VARCHAR2(5)		Indicates whether the task can be modified or deleted (TRUE) or not (FALSE)

See Also

"USER_ADVISOR_TEMPLATES"

5.54 DBA_ADVISOR_USAGE

DBA_ADVISOR_USAGE displays the usage information for each type of advisor in the database.

Column	Datatype	NULL	Description
ADVISOR_ID	NUMBER	NOT NULL	Type of the advisor
ADVISOR_NAME	VARCHAR2(128)	NOT NULL	Name of the advisor
LAST_EXEC_TIME	DATE	NOT NULL	Date of the last execution
NUM_EXECS	NUMBER	NOT NULL	Cumulative number of executions
NUM_DB_REPORTS	NUMBER	NOT NULL	Cumulative number of reports
FIRST_REPORT_TIME	DATE		Time of the first report
LAST_REPORT_TIME	DATE		Time of the last report

5.55 DBA_AIM_PERF_FEATURES

DBA_AIM_PERF_FEATURES describes table columns on which Automatic In-Memory (AIM) performance features are enabled.

Column	Datatype	NULL	Description
OWNER_NAME	VARCHAR2(128)	NOT NULL	Table owner
TABLE_NAME	VARCHAR2(128)	NOT NULL	Table name
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column on which AIM performance features are enabled
OPTIMIZED_ARITHMETIC	CHAR(1)		Indicates whether the column is optimized for arithmetic operations (Y) or not (N)
BLOOMFILTER_OPTIMIZATION	CHAR(1)		Indicates whether queries on the column use cached hash values to probe the bloom filter during hash joins (Y) or not (N)
VECTOR_OPTIMIZATION	CHAR(1)		Indicates whether data is stored in the column using vector optimization (Y) or not (N)
JOIN_GROUP	CHAR(1)		Indicates whether the column is part of a join group that was created by AIM (Y) or not (N)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
CREATION_DATE	DATE		Date and time at which the AIM performance features were implemented

> **Note**
>
> This view is available starting with Oracle AI Database 26ai.

5.56 DBA_ALERT_HISTORY

DBA_ALERT_HISTORY describes a time-limited history of alerts which are no longer outstanding.

Column	Datatype	NULL	Description
SEQUENCE_ID	NUMBER	NOT NULL	Alert sequence number
REASON_ID	NUMBER		ID of the alert reason
OWNER	VARCHAR2(128)		Owner of the object on which the alert was issued
OBJECT_NAME	VARCHAR2(513)		Name of the object
SUBOBJECT_NAME	VARCHAR2(128)		Name of the subobject (for example: partition)
OBJECT_TYPE	VARCHAR2(64)		Type of the object (for example: table, tablespace)
REASON	VARCHAR2(4000)		Reason for the alert
TIME_SUGGESTED	TIMESTAMP(6) WITH TIME ZONE		Time when the alert was last updated
CREATION_TIME	TIMESTAMP(6) WITH TIME ZONE		Time when the alert was first created
SUGGESTED_ACTION	VARCHAR2(4000)		Advice of the recommended action
ADVISOR_NAME	VARCHAR2(128)		Name of the advisor to be invoked for more information
METRIC_VALUE	NUMBER		Value of the related metrics
MESSAGE_TYPE	VARCHAR2(12)		Message type: • Notification • Warning
MESSAGE_GROUP	VARCHAR2(64)		Name of the message group to which the alert belongs
MESSAGE_LEVEL	NUMBER		Severity message level (1 to 32)
HOSTING_CLIENT_ID	VARCHAR2(64)		ID of the client or security group to which the alert relates
MODULE_ID	VARCHAR2(64)		ID of the module that originated the alert
PROCESS_ID	VARCHAR2(128)		Process ID
HOST_ID	VARCHAR2(256)		DNS host name of the originating host
HOST_NW_ADDR	VARCHAR2(256)		IP or other network address of the originating host
INSTANCE_NAME	VARCHAR2(16)		Originating instance name
INSTANCE_NUMBER	NUMBER		Originating instance number
USER_ID	VARCHAR2(128)		User ID

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
EXECUTION_CONTEXT_ID	VARCHAR2(128)		Execution Context ID
ERROR_INSTANCE_ID	VARCHAR2(142)		ID of an error instance plus a sequence number
RESOLUTION	VARCHAR2(7)		Resolution: • Cleared • N/A
PDB_NAME	VARCHAR2(128)		PDB name
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire multitenant container database (CDB). This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.57 DBA_ALERT_HISTORY_DETAIL

DBA_ALERT_HISTORY_DETAIL describes a time-limited history of cleared and outstanding alerts.

Column	Datatype	NULL	Description
SEQUENCE_ID	NUMBER	NOT NULL	Alert sequence number
REASON_ID	NUMBER		ID of the alert reason
OWNER	VARCHAR2(128)		Owner of the object on which alert is issued
OBJECT_NAME	VARCHAR2(513)		Name of the object
SUBOBJECT_NAME	VARCHAR2(128)		Name of the subobject (for example: partition)
OBJECT_TYPE	VARCHAR2(64)		Type of the object (for example: table, tablespace)
REASON	VARCHAR2(4000)		Reason for the alert
TIME_SUGGESTED	TIMESTAMP(6) WITH TIME ZONE		Time when the alert was last updated
CREATION_TIME	TIMESTAMP(6) WITH TIME ZONE		Time when the alert was first created
SUGGESTED_ACTION	VARCHAR2(4000)		Advice of the recommended action
ADVISOR_NAME	VARCHAR2(128)		Name of the advisor to be invoked for more information
METRIC_VALUE	NUMBER		Value of the related metrics
MESSAGE_TYPE	VARCHAR2(12)		Message type: • Notification • Warning
MESSAGE_GROUP	VARCHAR2(64)		Name of the message group to which the alert belongs
MESSAGE_LEVEL	NUMBER		Severity level (1 to 32)
HOSTING_CLIENT_ID	VARCHAR2(64)		ID of the client or security group to which the alert relates
MODULE_ID	VARCHAR2(64)		ID of the module that originated the alert

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PROCESS_ID	VARCHAR2(128)		Process id
HOST_ID	VARCHAR2(256)		DNS host name of the originating host
HOST_NW_ADDR	VARCHAR2(256)		IP or other network address of originating host
INSTANCE_NAME	VARCHAR2(16)		Originating instance name
INSTANCE_NUMBER	NUMBER		Originating instance number
USER_ID	VARCHAR2(128)		User ID
EXECUTION_CONTEXT_ID	VARCHAR2(128)		Execution Context ID
ERROR_INSTANCE_ID	VARCHAR2(142)		ID of an error instance plus a sequence number
RESOLUTION	VARCHAR2(11)		Resolution: • Cleared • Outstanding • N/A
STATE_TRANSITION_NUMBER	NUMBER	NOT NULL	Sequence number of the state transition for the alert
PDB_NAME	VARCHAR2(128)		PDB name
CON_ID	NUMBER		The ID of the container to which the data pertains. Possible values include: • 0: This value is used for rows containing data that pertain to the entire CDB. This value is also used for rows in non-CDBs. • 1: This value is used for rows containing data that pertain to only the root • *n*: Where *n* is the applicable container ID for the rows containing data

5.58 DBA_ALL_TABLES

DBA_ALL_TABLES describes all object tables and relational tables in the database. Its columns are the same as those in ALL_ALL_TABLES.

See Also

"ALL_ALL_TABLES"

5.59 DBA_ANALYTIC_VIEW_AGGR_DIMS

DBA_ANALYTIC_VIEW_AGGR_DIMS describes the aggregation function dimensions of all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_AGGR_DIMS.

See Also

"ALL_ANALYTIC_VIEW_AGGR_DIMS"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.60 DBA_ANALYTIC_VIEW_AGGR_FNS

DBA_ANALYTIC_VIEW_AGGR_FNS describes the aggregation functions of all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_AGGR_FNS.

See Also

"ALL_ANALYTIC_VIEW_AGGR_FNS"

5.61 DBA_ANALYTIC_VIEW_AGGR_FNS_AE

DBA_ANALYTIC_VIEW_AGGR_FNS_AE describes the aggregation functions of all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_AGGR_FNS_AE.

See Also

"ALL_ANALYTIC_VIEW_AGGR_FNS_AE"

5.62 DBA_ANALYTIC_VIEW_AGR_DIMS

DBA_ANALYTIC_VIEW_AGR_DIMS describes the aggregation function dimensions of all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_AGR_DIMS.

See Also

"ALL_ANALYTIC_VIEW_AGR_DIMS"

5.63 DBA_ANALYTIC_VIEW_AGR_DIMS_AE

DBA_ANALYTIC_VIEW_AGR_DIMS_AE describes the aggregation function dimensions of all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_AGR_DIMS_AE.

See Also

"ALL_ANALYTIC_VIEW_AGR_DIMS_AE"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.64 DBA_ANALYTIC_VIEW_ATTR_CLASS

DBA_ANALYTIC_VIEW_ATTR_CLASS describes the attribute classifications of all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_ATTR_CLASS.

See Also

"ALL_ANALYTIC_VIEW_ATTR_CLASS"

5.65 DBA_ANALYTIC_VIEW_ATTR_CLS

DBA_ANALYTIC_VIEW_ATTR_CLS is identical to DBA_ANALYTIC_VIEW_ATTR_CLASS.

See Also

"DBA_ANALYTIC_VIEW_ATTR_CLASS"

5.66 DBA_ANALYTIC_VIEW_ATTR_CLS_AE

DBA_ANALYTIC_VIEW_ATTR_CLS_AE describes the attribute classifications of all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_ATTR_CLS_AE.

See Also

"ALL_ANALYTIC_VIEW_ATTR_CLS_AE"

5.67 DBA_ANALYTIC_VIEW_BAS_MEAS

DBA_ANALYTIC_VIEW_BAS_MEAS is identical to DBA_ANALYTIC_VIEW_BASE_MEAS.

See Also

"DBA_ANALYTIC_VIEW_BASE_MEAS"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.68 DBA_ANALYTIC_VIEW_BAS_MEAS_AE

DBA_ANALYTIC_VIEW_BAS_MEAS_AE describes the base measures in all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_BAS_MEAS_AE.

See Also

"ALL_ANALYTIC_VIEW_BAS_MEAS_AE"

5.69 DBA_ANALYTIC_VIEW_BASE_MEAS

DBA_ANALYTIC_VIEW_BASE_MEAS describes the base measures in all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_BASE_MEAS.

See Also

"ALL_ANALYTIC_VIEW_BASE_MEAS"

5.70 DBA_ANALYTIC_VIEW_CALC_MEAS

DBA_ANALYTIC_VIEW_CALC_MEAS describes the calculated measures in all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_CALC_MEAS.

See Also

"ALL_ANALYTIC_VIEW_CALC_MEAS"

5.71 DBA_ANALYTIC_VIEW_CLASS

DBA_ANALYTIC_VIEW_CLASS describes the classifications of all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_CLASS.

See Also

"ALL_ANALYTIC_VIEW_CLASS"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.72 DBA_ANALYTIC_VIEW_CLASS_AE

DBA_ANALYTIC_VIEW_CLASS_AE describes the classifications of all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_CLASS_AE.

See Also

"ALL_ANALYTIC_VIEW_CLASS_AE"

5.73 DBA_ANALYTIC_VIEW_CLC_MEAS

DBA_ANALYTIC_VIEW_CLC_MEAS is identical to DBA_ANALYTIC_VIEW_CALC_MEAS.

See Also

"DBA_ANALYTIC_VIEW_CALC_MEAS"

5.74 DBA_ANALYTIC_VIEW_CLC_MEAS_AE

DBA_ANALYTIC_VIEW_CLC_MEAS_AE describes the calculated measures in all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_CLC_MEAS_AE.

See Also

"ALL_ANALYTIC_VIEW_CLC_MEAS_AE"

5.75 DBA_ANALYTIC_VIEW_COLUMNS

DBA_ANALYTIC_VIEW_COLUMNS describes the columns of all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_COLUMNS.

See Also

"ALL_ANALYTIC_VIEW_COLUMNS"

5.101 DBA_ANALYTIC_VIEW_LVLGRPS

DBA_ANALYTIC_VIEW_LVLGRPS describes the analytic view measure and level groups of all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_LVLGRPS.

See Also

"ALL_ANALYTIC_VIEW_LVLGRPS"

5.102 DBA_ANALYTIC_VIEW_LVLGRPS_AE

DBA_ANALYTIC_VIEW_LVLGRPS_AE describes the analytic view measure and level groups of all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_LVLGRPS_AE.

See Also

"ALL_ANALYTIC_VIEW_LVLGRPS_AE"

5.103 DBA_ANALYTIC_VIEW_MEAS_CLASS

DBA_ANALYTIC_VIEW_MEAS_CLASS describes the classifications of the measures of all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_MEAS_CLASS.

See Also

"ALL_ANALYTIC_VIEW_MEAS_CLASS"

5.104 DBA_ANALYTIC_VIEW_MEAS_CLS

DBA_ANALYTIC_VIEW_MEAS_CLS is identical to DBA_ANALYTIC_VIEW_MEAS_CLASS.

See Also

"DBA_ANALYTIC_VIEW_MEAS_CLASS"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.105 DBA_ANALYTIC_VIEW_MEAS_CLS_AE

DBA_ANALYTIC_VIEW_MEAS_CLS_AE describes the classifications of the measures of all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEW_MEAS_CLS_AE.

See Also

"ALL_ANALYTIC_VIEW_MEAS_CLS_AE"

5.106 DBA_ANALYTIC_VIEWS

DBA_ANALYTIC_VIEWS describes all analytic views in the database. Its columns are the same as those in ALL_ANALYTIC_VIEWS.

See Also

"ALL_ANALYTIC_VIEWS"

5.107 DBA_ANALYTIC_VIEWS_AE

DBA_ANALYTIC_VIEWS_AE describes all analytic views (across all editions) in the database. Its columns are the same as those in ALL_ANALYTIC_VIEWS_AE.

See Also

"ALL_ANALYTIC_VIEWS_AE"

5.108 DBA_ANNOTATION_VALUES

DBA_ANNOTATION_VALUES displays the values for all schema annotations in the database. Its columns are the same as those in ALL_ANNOTATION_VALUES.

Note

This view is available starting with Oracle AI Database 26ai.

See Also

"ALL_ANNOTATION_VALUES"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.109 DBA_ANNOTATIONS

DBA_ANNOTATIONS displays all schema annotations in the database. Its columns are the same as those in ALL_ANNOTATIONS.

> **Note**
>
> This view is available starting with Oracle AI Database 26ai.

> **See Also**
>
> "ALL_ANNOTATIONS"

5.110 DBA_ANNOTATIONS_USAGE

DBA_ANNOTATIONS_USAGE provides usage information about all schema annotations in the database. Its columns are the same as those in ALL_ANNOTATIONS_USAGE.

> **Note**
>
> This view is available starting with Oracle AI Database 26ai.

> **See Also**
>
> "ALL_ANNOTATIONS_USAGE"

5.111 DBA_APP_ERRORS

DBA_APP_ERRORS displays errors raised when an application PDB synchronizes with an application in the application root.

This view displays errors raised during the last synchronization for each application.

Column	Datatype	NULL	Description
APP_NAME	VARCHAR2(128)		Name of the application whose statement was captured
APP_STATEMENT	CLOB		Application statement
ERRORNUM	NUMBER		Error number for the statement
ERRORMSG	VARCHAR2(4000)		Error message for the statement
SYNC_TIME	DATE	NOT NULL	Sync time for the statement

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SYSTEM_IGNORABLE	VARCHAR2(1)		Indicates whether the error is a system-ignorable error (Y) or not (N)
USER_IGNORABLE	VARCHAR2(1)		Indicates whether the error is a user-ignorable error (Y) or not (N)

5.112 DBA_APP_ERRORS_HISTORY

DBA_APP_ERRORS_HISTORY displays the history of errors raised when an application PDB synchronizes with an application in the application root.

This view displays errors raised during the last 10 synchronizations for each application.

Column	Datatype	NULL	Description
APP_NAME	VARCHAR2(128)		Name of the application whose statement was captured
APP_STATEMENT	CLOB		Application statement
ERRORNUM	NUMBER		Error number for the statement
ERRORMSG	VARCHAR2(4000)		Error message for the statement
SYNC_TIME	TIMESTAMP(6)	NOT NULL	Sync time for the statement
SYSTEM_IGNORABLE	VARCHAR2(1)		Indicates whether the error is a system-ignorable error (Y) or not (N)
USER_IGNORABLE	VARCHAR2(1)		Indicates whether the error is a user-ignorable error (Y) or not (N)

5.113 DBA_APP_PATCHES

DBA_APP_PATCHES describes all the application patches in the application container.

Column	Datatype	NULL	Description
APP_NAME	VARCHAR2(128)		Name of the application
PATCH_NUMBER	NUMBER		Patch number
PATCH_MIN_VERSION	VARCHAR2(30)		Minimum application version for the patch
PATCH_STATUS	VARCHAR2(10)		Status of the patch
PATCH_COMMENT	VARCHAR2(4000)		Comment associated with the patch
PATCH_CHECKSUM	NUMBER		Checksum for the patch

5.114 DBA_APP_PDB_STATUS

DBA_APP_PDB_STATUS provides information about applications in all the application PDBs in the current application container. It provides this information when queried in the application root.

The view should be queried in the application root.

This view can be used to show which version of an application has been synced to which application PDBs.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
CON_UID	NUMBER		Unique ID of the PDB
APP_NAME	VARCHAR2(128)		Name of the application
APP_ID	NUMBER		Id of the application
APP_VERSION	VARCHAR2(30)		Version of the application
APP_STATUS	VARCHAR2(12)		Status of the application

5.115 DBA_APP_ROLLBACK_STATEMENTS

DBA_APP_ROLLBACK_STATEMENTS describes rollback statements.

Column	Datatype	NULL	Description
APP_NAME	VARCHAR2(128)		Name of the application
VERSION_NUMBER	NUMBER		Application version number
PATCH_NUMBER	NUMBER		Patch number of the application patch
ROLLBACK_TIME	DATE		Time of capture of the rollback statement
STATEMENT_ID	NUMBER	NOT NULL	Statement ID
LONGSQLTXT	CLOB		Rollback statement

> **Note**
>
> This view is available starting with Oracle AI Database 26ai, Release Update 23.9.

5.116 DBA_APP_SKIPPED_PATCHES

DBA_APP_SKIPPED_PATCHES describes skipped application patches in the application container.

Column	Datatype	NULL	Description
APP_NAME	VARCHAR2(128)		Name of the application for which the patch was skipped
PATCH_NUMBER	NUMBER		Patch number of the skipped application patch

> **Note**
>
> This view is available starting with Oracle AI Database 26ai, Release Update 23.26.0.

5.117 DBA_APP_SKIPPED_STATEMENTS

DBA_APP_SKIPPED_STATEMENTS describes statements that were skipped during application synchronization in the application container.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
APP_NAME	VARCHAR2(128)		Name of the application to which the skipped statement belongs
STATEMENT_ID	NUMBER	NOT NULL	Statement ID of the skipped statement
APP_STATEMENT	CLOB		Statement text of the skipped statement

> **Note**
>
> This view is available starting with Oracle AI Database 26ai, Release Update 23.26.0.

5.118 DBA_APP_SKIPPED_VERSIONS

DBA_APP_SKIPPED_VERSIONS describes skipped versions for applications in the application container.

Column	Datatype	NULL	Description
APP_NAME	VARCHAR2(128)		Name of the application for which the version was skipped
APP_VERSION	NUMBER		Application version that was skipped

> **Note**
>
> This view is available starting with Oracle AI Database 26ai, Release Update 23.26.0.

5.119 DBA_APP_STATEMENTS

DBA_APP_STATEMENTS describes all statements from all the applications in the application container.

Column	Datatype	NULL	Description
ORIGIN_CON_ID	NUMBER		The ID of the container where the data originates. Possible values include: • 0: This value is used for rows in non-CDBs. This value is not used for CDBs. • *n*: This value is used for rows containing data that originate in the container with container ID *n* (*n*=1 if the row originates in root)
STATEMENT_ID	NUMBER		Statement ID
CAPTURE_TIME	DATE	NOT NULL	Time of capture of the application statement
APP_STATEMENT	CLOB		Application statement
APP_NAME	VARCHAR2(128)		Name of the application whose statement was captured

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
APP_STATUS	VARCHAR2(12)		Status of the application when the statement was captured
PATCH_NUMBER	NUMBER		Patch number of patch installation when the statement was captured
VERSION_NUMBER	NUMBER		Version number when the statement was captured
SESSION_ID	NUMBER		Unique session ID when the statement was captured
OPCODE	NUMBER	NOT NULL	Operation code indicating the statement type

5.120 DBA_APP_VERSIONS

DBA_APP_VERSIONS displays information about all application versions installed in an application container.

Column	Datatype	NULL	Description
APP_NAME	VARCHAR2(128)		Name of the application
APP_VERSION	VARCHAR2(30)		Version of the application
APP_VERSION_COMMENT	VARCHAR2(4000)		Comment associated with the application version
APP_VERSION_CHECKSUM	NUMBER		Checksum for the application version
APP_ROOT_CLONE_NAME	VARCHAR2(64)		Name of the application root clone that corresponds to the application
APP_VERSION_BEGIN_TIME	DATE		Begin time of the most recent sync of the application
APP_VERSION_END_TIME	DATE		End time of the most recent sync of the application
APP_VERSION_NUMBER	NUMBER		Version number of the application version

See Also

Oracle Multitenant Administrator's Guide for more information about application containers

5.121 DBA_APPLICATION_ROLES

DBA_APPLICATION_ROLES describes all the roles that have authorization policy functions defined.

Related View

USER_APPLICATION_ROLES describes all the roles for the current user that have authorization policy functions defined.

Column	Datatype	NULL	Description
ROLE	VARCHAR2(128)	NOT NULL	Name of the application role
SCHEMA	VARCHAR2(128)	NOT NULL	Schema of the authorized package

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PACKAGE	VARCHAR2(128)	NOT NULL	Name of the authorized package

> **See Also**
>
> "USER_APPLICATION_ROLES"

5.122 DBA_APPLICATIONS

DBA_APPLICATIONS provides information about the applications in the current application container.

Column	Datatype	NULL	Description
APP_NAME	VARCHAR2(128)		Name of the application
APP_ID	NUMBER		ID of the application
APP_VERSION	VARCHAR2(30)		Version of the application
APP_STATUS	VARCHAR2(12)		Status of the application
APP_IMPLICIT	VARCHAR2(1)		Indicates whether the application is implicit (Y) or not (N)
APP_CAPTURE_SERVICE	VARCHAR2(64)		Service name used for the capture
APP_CAPTURE_MODULE	VARCHAR2(64)		Module name used for the capture

5.123 DBA_APPLY

DBA_APPLY displays information about all apply processes in the database. Its columns are the same as those in ALL_APPLY.

> **See Also**
>
> "ALL_APPLY"

5.124 DBA_APPLY_CHANGE_HANDLERS

DBA_APPLY_CHANGE_HANDLERS displays information about the change handlers on all tables in the database. Its columns are the same as those in ALL_APPLY_CHANGE_HANDLERS.

> **See Also**
>
> "ALL_APPLY_CHANGE_HANDLERS"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.125 DBA_APPLY_CONFLICT_COLUMNS

DBA_APPLY_CONFLICT_COLUMNS displays information about the conflict handlers on all tables in the database. Its columns are the same as those in ALL_APPLY_CONFLICT_COLUMNS.

See Also

"ALL_APPLY_CONFLICT_COLUMNS"

5.126 DBA_APPLY_DML_CONF_HANDLERS

DBA_APPLY_DML_CONF_HANDLERS provides details about DML conflict handlers. Its columns are the same as those in ALL_APPLY_DML_CONF_HANDLERS.

See Also

"ALL_APPLY_DML_CONF_HANDLERS"

5.127 DBA_APPLY_DML_HANDLERS

DBA_APPLY_DML_HANDLERS displays information about the DML handlers on all tables in the database. Its columns are the same as those in ALL_APPLY_DML_HANDLERS.

See Also

"ALL_APPLY_DML_HANDLERS"

5.128 DBA_APPLY_ENQUEUE

DBA_APPLY_ENQUEUE displays information about the apply enqueue actions for all rules in the database. Its columns are the same as those in ALL_APPLY_ENQUEUE.

See Also

"ALL_APPLY_ENQUEUE"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.129 DBA_APPLY_ERROR

DBA_APPLY_ERROR displays information about the error transactions generated by all apply processes in the database. Its columns are the same as those in ALL_APPLY_ERROR.

See Also

"ALL_APPLY_ERROR"

5.130 DBA_APPLY_ERROR_MESSAGES

DBA_APPLY_ERROR_MESSAGES displays information about the individual messages in all of the error transactions generated by all apply processes in the database. Its columns are the same as those in ALL_APPLY_ERROR_MESSAGES.

For XStream inbound servers, each message in an error transaction is an LCR.

Note

- Messages that were spilled from memory to hard disk do not appear in this view.
- This view does not contain information related to XStream outbound servers.

See Also

"ALL_APPLY_ERROR_MESSAGES"

5.131 DBA_APPLY_EXECUTE

DBA_APPLY_EXECUTE displays information about the apply execute actions for all rules in the database. Its columns are the same as those in ALL_APPLY_EXECUTE.

See Also

"ALL_APPLY_EXECUTE"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.132 DBA_APPLY_HANDLE_COLLISIONS

DBA_APPLY_HANDLE_COLLISIONS provides details about apply handlers for collisions at the table level. Its columns are the same as those in ALL_APPLY_HANDLE_COLLISIONS.

See Also

"ALL_APPLY_HANDLE_COLLISIONS"

5.133 DBA_APPLY_INSTANTIATED_GLOBAL

DBA_APPLY_INSTANTIATED_GLOBAL displays information about databases for which an instantiation SCN has been set. Its columns are the same as those in ALL_APPLY_INSTANTIATED_GLOBAL.

See Also

"ALL_APPLY_INSTANTIATED_GLOBAL"

5.134 DBA_APPLY_INSTANTIATED_OBJECTS

DBA_APPLY_INSTANTIATED_OBJECTS displays information about objects for which an instantiation SCN has been set. Its columns are the same as those in ALL_APPLY_INSTANTIATED_OBJECTS.

See Also

"ALL_APPLY_INSTANTIATED_OBJECTS"

5.135 DBA_APPLY_INSTANTIATED_SCHEMAS

DBA_APPLY_INSTANTIATED_SCHEMAS displays information about schemas for which an instantiation SCN has been set. Its columns are the same as those in ALL_APPLY_INSTANTIATED_SCHEMAS.

See Also

"ALL_APPLY_INSTANTIATED_SCHEMAS"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.136 DBA_APPLY_KEY_COLUMNS

DBA_APPLY_KEY_COLUMNS displays information about the substitute key columns for all tables in the database. Its columns are the same as those in ALL_APPLY_KEY_COLUMNS.

> **See Also**
>
> "ALL_APPLY_KEY_COLUMNS"

5.137 DBA_APPLY_OBJECT_DEPENDENCIES

DBA_APPLY_OBJECT_DEPENDENCIES displays information about the object dependencies for all apply processes in the database.

Column	Datatype	NULL	Description
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object
PARENT_OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Parent of the object owner
PARENT_OBJECT_NAME	VARCHAR2(128)	NOT NULL	Parent of the named object

5.138 DBA_APPLY_PARAMETERS

DBA_APPLY_PARAMETERS displays information about the parameters for all apply processes in the database. Its columns are the same as those in ALL_APPLY_PARAMETERS.

> **See Also**
>
> "ALL_APPLY_PARAMETERS"

5.139 DBA_APPLY_PROGRESS

DBA_APPLY_PROGRESS displays information about the progress made by all apply processes in the database. Its columns are the same as those in ALL_APPLY_PROGRESS.

> **See Also**
>
> "ALL_APPLY_PROGRESS"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.140 DBA_APPLY_REPERROR_HANDLERS

DBA_APPLY_REPERROR_HANDLERS provides details about apply reperror handlers. Its columns are the same as those in ALL_APPLY_REPERROR_HANDLERS.

See Also

"ALL_APPLY_REPERROR_HANDLERS"

5.141 DBA_APPLY_SPILL_TXN

DBA_APPLY_SPILL_TXN displays information about the transactions spilled from memory to hard disk by all apply processes in the database.

Column	Datatype	NULL	Description
APPLY_NAME	VARCHAR2(128)	NOT NULL	Name of the apply process that spilled one or more transactions
XIDUSN	NUMBER	NOT NULL	Transaction ID undo segment number
XIDSLT	NUMBER	NOT NULL	Transaction ID slot number
XIDSQN	NUMBER	NOT NULL	Transaction ID sequence number
PDB_ID	NUMBER		PDB ID number
FIRST_SCN	NUMBER	NOT NULL	SCN of the first message in the transaction
MESSAGE_COUNT	NUMBER		Number of messages spilled for the transaction
FIRST_MESSAGE_CREATE_TIME	DATE		Source creation time of the first message in the transaction
SPILL_CREATION_TIME	DATE		Time the first message was spilled
FIRST_POSITION	RAW(64)		Position of the first message in this transaction. This column is populated only for an XStream inbound server.
TRANSACTION_ID	VARCHAR2(128)		Transaction ID of the spilled transaction

5.142 DBA_APPLY_TABLE_COLUMNS

DBA_APPLY_TABLE_COLUMNS displays, for all tables in the database, information about the nonkey table columns for which apply process conflict detection has been stopped for update and delete operations. Its columns are the same as those in ALL_APPLY_TABLE_COLUMNS.

See Also

"ALL_APPLY_TABLE_COLUMNS"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.143 DBA_APPLY_VALUE_DEPENDENCIES

DBA_APPLY_VALUE_DEPENDENCIES displays information about the value dependencies for all apply processes in the database.

Column	Datatype	NULL	Description
DEPENDENCY_NAME	VARCHAR2(128)	NOT NULL	Name of the dependency
OBJECT_OWNER	VARCHAR2(128)	NOT NULL	Owner of the object
OBJECT_NAME	VARCHAR2(128)	NOT NULL	Name of the object
COLUMN_NAME	VARCHAR2(128)	NOT NULL	Name of the column
COLUMN_POSITION	NUMBER		Position of the column

5.144 DBA_AQ_AGENT_PRIVS

DBA_AQ_AGENT_PRIVS displays information about the registered AQ agents that are mapped to all users in the database.

Related View

USER_AQ_AGENT_PRIVS displays information about the registered AQ agents that are mapped to the current user. This view does not display the DB_USERNAME column.

Column	Datatype	NULL	Description
AGENT_NAME	VARCHAR2(128)	NOT NULL	Name of the AQ agent
DB_USERNAME	VARCHAR2(128)		Name of the database user that the agent maps to
HTTP_ENABLED	VARCHAR2(4)		Indicates whether the agent is allowed to access AQ through HTTP (YES) or not (NO)
SMTP_ENABLED	VARCHAR2(4)		Indicates whether the agent is allowed to access AQ through SMTP (YES) or not (NO)

See Also

"USER_AQ_AGENT_PRIVS"

5.145 DBA_AQ_AGENTS

DBA_AQ_AGENTS displays information about all registered AQ agents in the database.

Column	Datatype	NULL	Description
AGENT_NAME	VARCHAR2(128)	NOT NULL	Name of the AQ agent
HTTP_ENABLED	VARCHAR2(4)		Indicates whether the agent is allowed to access AQ through HTTP (YES) or not (NO)
SMTP_ENABLED	VARCHAR2(4)		Indicates whether the agent is allowed to access AQ through SMTP (YES) or not (NO)

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.146 DBA_ARGUMENTS

DBA_ARGUMENTS lists the arguments of the functions and procedures that are available in the database. Its columns are the same as those in ALL_ARGUMENTS.

See Also

- "ALL_ARGUMENTS"
- "DBA_PROCEDURES" for information about the functions and procedures that are available in the database

5.147 DBA_ASSEMBLIES

DBA_ASSEMBLIES provides information about all assemblies in the database. Its columns are the same as those in ALL_ASSEMBLIES.

See Also

"ALL_ASSEMBLIES"

5.148 DBA_ASSOCIATIONS

DBA_ASSOCIATIONS describes all user-defined statistics in the database. Its columns are the same as those in ALL_ASSOCIATIONS.

See Also

"ALL_ASSOCIATIONS"

5.149 DBA_ATTRIBUTE_DIM_ATTR_CLASS

DBA_ATTRIBUTE_DIM_ATTR_CLASS describes the attribute classifications of all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_ATTR_CLASS.

See Also

"ALL_ATTRIBUTE_DIM_ATTR_CLASS"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.150 DBA_ATTRIBUTE_DIM_ATTR_CLS

DBA_ATTRIBUTE_DIM_ATTR_CLS is identical to DBA_ATTRIBUTE_DIM_ATTR_CLASS.

See Also

"DBA_ATTRIBUTE_DIM_ATTR_CLASS"

5.151 DBA_ATTRIBUTE_DIM_ATTR_CLS_AE

DBA_ATTRIBUTE_DIM_ATTR_CLS_AE describes the attribute classifications of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_ATTR_CLS_AE.

See Also

"ALL_ATTRIBUTE_DIM_ATTR_CLS_AE"

5.152 DBA_ATTRIBUTE_DIM_ATTRS

DBA_ATTRIBUTE_DIM_ATTRS describes the attributes of all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_ATTRS.

See Also

"ALL_ATTRIBUTE_DIM_ATTRS"

5.153 DBA_ATTRIBUTE_DIM_ATTRS_AE

DBA_ATTRIBUTE_DIM_ATTRS_AE describes the attributes of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_ATTRS_AE.

See Also

"ALL_ATTRIBUTE_DIM_ATTRS_AE"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.154 DBA_ATTRIBUTE_DIM_CLASS

DBA_ATTRIBUTE_DIM_CLASS describes the classifications of all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_CLASS.

See Also

"ALL_ATTRIBUTE_DIM_CLASS"

5.155 DBA_ATTRIBUTE_DIM_CLASS_AE

DBA_ATTRIBUTE_DIM_CLASS_AE describes the classifications of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_CLASS_AE.

See Also

"ALL_ATTRIBUTE_DIM_CLASS_AE"

5.156 DBA_ATTRIBUTE_DIM_JN_PTHS

DBA_ATTRIBUTE_DIM_JN_PTHS is identical to DBA_ATTRIBUTE_DIM_JOIN_PATHS.

See Also

"DBA_ATTRIBUTE_DIM_JOIN_PATHS"

5.157 DBA_ATTRIBUTE_DIM_JN_PTHS_AE

DBA_ATTRIBUTE_DIM_JN_PTHS_AE describes the join paths for all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_JN_PTHS_AE.

See Also

"ALL_ATTRIBUTE_DIM_JN_PTHS_AE"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.158 DBA_ATTRIBUTE_DIM_JOIN_PATHS

DBA_ATTRIBUTE_DIM_JOIN_PATHS describes the join paths for all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_JOIN_PATHS.

See Also

"ALL_ATTRIBUTE_DIM_JOIN_PATHS"

5.159 DBA_ATTRIBUTE_DIM_KEYS

DBA_ATTRIBUTE_DIM_KEYS describes the keys of all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_KEYS.

See Also

"ALL_ATTRIBUTE_DIM_KEYS"

5.160 DBA_ATTRIBUTE_DIM_KEYS_AE

DBA_ATTRIBUTE_DIM_KEYS_AE describes the keys of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_KEYS_AE.

See Also

"ALL_ATTRIBUTE_DIM_KEYS_AE"

5.161 DBA_ATTRIBUTE_DIM_LEVEL_ATTRS

DBA_ATTRIBUTE_DIM_LEVEL_ATTRS describes the attributes of the levels of all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_LEVEL_ATTRS.

See Also

"ALL_ATTRIBUTE_DIM_LEVEL_ATTRS"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.162 DBA_ATTRIBUTE_DIM_LEVELS

DBA_ATTRIBUTE_DIM_LEVELS describes the levels of all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_LEVELS.

See Also

"ALL_ATTRIBUTE_DIM_LEVELS"

5.163 DBA_ATTRIBUTE_DIM_LEVELS_AE

DBA_ATTRIBUTE_DIM_LEVELS_AE describes the levels of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_LEVELS_AE.

See Also

"ALL_ATTRIBUTE_DIM_LEVELS_AE"

5.164 DBA_ATTRIBUTE_DIM_LVL_ATRS

DBA_ATTRIBUTE_DIM_LVL_ATRS is identical to DBA_ATTRIBUTE_DIM_LEVEL_ATTRS.

See Also

"DBA_ATTRIBUTE_DIM_LEVEL_ATTRS"

5.165 DBA_ATTRIBUTE_DIM_LVL_ATRS_AE

DBA_ATTRIBUTE_DIM_LVL_ATRS_AE describes the attributes of the levels of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_LVL_ATRS_AE.

See Also

"ALL_ATTRIBUTE_DIM_LVL_ATRS_AE"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.166 DBA_ATTRIBUTE_DIM_LVL_CLASS

DBA_ATTRIBUTE_DIM_LVL_CLASS describes the level classifications of all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_LVL_CLASS.

See Also

"ALL_ATTRIBUTE_DIM_LVL_CLASS"

5.167 DBA_ATTRIBUTE_DIM_LVL_CLS

DBA_ATTRIBUTE_DIM_LVL_CLS is identical to DBA_ATTRIBUTE_DIM_LVL_CLASS.

See Also

"DBA_ATTRIBUTE_DIM_LVL_CLASS"

5.168 DBA_ATTRIBUTE_DIM_LVL_CLS_AE

DBA_ATTRIBUTE_DIM_LVL_CLS_AE describes the level classifications of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_LVL_CLS_AE.

See Also

"ALL_ATTRIBUTE_DIM_LVL_CLS_AE"

5.169 DBA_ATTRIBUTE_DIM_ORD_ATRS

DBA_ATTRIBUTE_DIM_ORD_ATRS is identical to DBA_ATTRIBUTE_DIM_ORDER_ATTRS.

See Also

"DBA_ATTRIBUTE_DIM_ORDER_ATTRS"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.170 DBA_ATTRIBUTE_DIM_ORD_ATRS_AE

DBA_ATTRIBUTE_DIM_ORD_ATRS_AE describes the order attributes of all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_ORD_ATRS_AE.

See Also

"ALL_ATTRIBUTE_DIM_ORD_ATRS_AE"

5.171 DBA_ATTRIBUTE_DIM_ORDER_ATTRS

DBA_ATTRIBUTE_DIM_ORDER_ATTRS describes the order attributes of all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_ORDER_ATTRS.

See Also

"ALL_ATTRIBUTE_DIM_ORDER_ATTRS"

5.172 DBA_ATTRIBUTE_DIM_TABLES

DBA_ATTRIBUTE_DIM_TABLES describes the tables used by all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_TABLES.

See Also

"ALL_ATTRIBUTE_DIM_TABLES"

5.173 DBA_ATTRIBUTE_DIM_TABLES_AE

DBA_ATTRIBUTE_DIM_TABLES_AE describes the tables used by all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIM_TABLES_AE.

See Also

"ALL_ATTRIBUTE_DIM_TABLES_AE"

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.174 DBA_ATTRIBUTE_DIMENSIONS

DBA_ATTRIBUTE_DIMENSIONS describes all attribute dimensions in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIMENSIONS.

See Also

"ALL_ATTRIBUTE_DIMENSIONS"

5.175 DBA_ATTRIBUTE_DIMENSIONS_AE

DBA_ATTRIBUTE_DIMENSIONS_AE describes all attribute dimensions (across all editions) in the database. Its columns are the same as those in ALL_ATTRIBUTE_DIMENSIONS_AE.

See Also

"ALL_ATTRIBUTE_DIMENSIONS_AE"

5.176 DBA_ATTRIBUTE_TRANSFORMATIONS

DBA_ATTRIBUTE_TRANSFORMATIONS describes the transformation functions for all transformations in the database. Its columns are the same as those in ALL_ATTRIBUTE_TRANSFORMATIONS.

See Also

"ALL_ATTRIBUTE_TRANSFORMATIONS"

5.177 DBA_AUDIT_EXISTS

DBA_AUDIT_EXISTS displays audit trail entries produced by AUDIT EXISTS and AUDIT NOT EXISTS.

Note

This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle AI Database 26ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle AI Database Security Guide* for more information about how this desupport works.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OS_USERNAME	VARCHAR2(255)		Operating system login username of the user whose actions were audited
USERNAME	VARCHAR2(128)		Name (not ID number) of the user whose actions were audited
USERHOST	VARCHAR2(128)		Client host machine name
TERMINAL	VARCHAR2(255)		Identifier of the user's terminal
TIMESTAMP	DATE		Date and time of the creation of the audit trail entry (date and time of user login for entries created by AUDIT SESSION) in the local database session time zone
OWNER	VARCHAR2(128)		Intended creator of the non-existent object
OBJ_NAME	VARCHAR2(128)		Name of the object affected by the action
ACTION_NAME	VARCHAR2(28)		Name of the action type corresponding to the numeric code in the ACTION column in DBA_AUDIT_TRAIL
NEW_OWNER	VARCHAR2(128)		Owner of the object named in the NEW_NAME column
NEW_NAME	VARCHAR2(128)		New name of an object after a RENAME or the name of the underlying object

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OBJ_PRIVILEGE	VARCHAR2(34)		Object privileges granted or revoked by a GRANT or REVOKE statement The value of this column is a 34-character string of Y and dash (-) characters. Each character corresponds to a numbered privilege in the following list. The left-most character corresponds to privilege 0, the next character corresponds to privilege 1, and so on. The right-most character corresponds to privilege 33. 0 - ALTER 1 - AUDIT 2 - COMMENT 3 - DELETE 4 - GRANT 5 - INDEX 6 - INSERT 7 - LOCK 8 - CREATE 9 - SELECT 10 - UPDATE 11 - REFERENCES 12 - EXECUTE 13 - VIEW 14 - DROP 15 - ANALYZE 16 - CREATE 17 - READ 18 - WRITE 19 - KEEP SEQUENCE 20 - ENQUEUE 21 - DEQUEUE 22 - UNDER 23 - ON COMMIT 24 - REWRITE 25 - UPSERT 26 - DEBUG 27 - FLASHBACK 28 - MERGE 29 - USE 30 - FLASHBACK ARCHIVE 31 - DIRECTORY EXECUTE 32 - SIGN 33 - COLLECT DEBUG INFO A Y indicates that the privilege was granted or revoked by the statement. A dash indicates that the privilege was not affected by the statement. For example, the following value indicates that the MERGE privilege was granted or revoked by the statement: ----------------------------Y-----
SYS_PRIVILEGE	VARCHAR2(40)		System privileges granted or revoked by a GRANT or REVOKE statement

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
GRANTEE	VARCHAR2(128)		Name of the grantee specified in a GRANT or REVOKE statement
SESSIONID	NUMBER	NOT NULL	Numeric ID for each Oracle session
ENTRYID	NUMBER	NOT NULL	Numeric ID for each audit trail entry in the session
STATEMENTID	NUMBER	NOT NULL	Numeric ID for each statement run
RETURNCODE	NUMBER	NOT NULL	Oracle error code generated by the action. Some useful values: • 0 - Action succeeded • 2004 - Security violation
CLIENT_ID	VARCHAR2(128)		Client identifier in each Oracle session
ECONTEXT_ID	VARCHAR2(64)		Application execution context identifier
SESSION_CPU	NUMBER		Amount of CPU time used by each Oracle session
EXTENDED_TIMESTAMP	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the creation of the audit trail entry (timestamp of user login for entries created by AUDIT SESSION) in UTC (Coordinated Universal Time) time zone
PROXY_SESSIONID	NUMBER		Proxy session serial number, if an enterprise user has logged in through the proxy mechanism
GLOBAL_UID	VARCHAR2(32)		Global user identifier for the user, if the user has logged in as an enterprise user
INSTANCE_NUMBER	NUMBER		Instance number as specified by the INSTANCE_NUMBER initialization parameter
OS_PROCESS	VARCHAR2(16)		Operating System process identifier of the Oracle process
TRANSACTIONID	RAW(8)		Transaction identifier of the transaction in which the object is accessed or modified
SCN	NUMBER		System change number (SCN) of the query
SQL_BIND	NVARCHAR2(2000)		Bind variable data of the query
SQL_TEXT	NVARCHAR2(2000)		SQL text of the query
OBJ_EDITION_NAME	VARCHAR2(128)		Name of the edition containing the audited object

Note

The SQL_BIND and SQL_TEXT columns are only populated if the AUDIT_TRAIL initialization parameter is set to db, extended.

5.178 DBA_AUDIT_MGMT_CLEAN_EVENTS

DBA_AUDIT_MGMT_CLEAN_EVENTS displays information about the history of audit trail cleanup or purge events.

Periodically, you should delete the contents of this view so that it will not grow too large.

> **Note**
>
> This view is intended for use with traditional auditing (pre-Oracle Database 12c auditing) only, not for unified auditing.
>
> - See *Oracle AI Database Security Guide* for more information about unified auditing.
> - See *Oracle AI Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
AUDIT_TRAIL	VARCHAR2(28)		Audit trail that was cleaned at the time of the event: • STANDARD AUDIT TRAIL • FGA AUDIT TRAIL • STANDARD AND FGA AUDIT TRAIL • OS AUDIT TRAIL • XML AUDIT TRAIL • OS AND XML AUDIT TRAIL • ALL AUDIT TRAILS
RAC_INSTANCE	NUMBER	NOT NULL	Instance number indicating the Oracle RAC instance that was cleaned up at the time of the event; 0 implies not applicable
CLEANUP_TIME	TIMESTAMP(6) WITH TIME ZONE		Timestamp when the cleanup event completed
DELETE_COUNT	NUMBER		Number of audit records or audit files that were deleted at the time of the event
WAS_FORCED	VARCHAR2(3)		Indicates whether a forced cleanup occurred (YES) or not (NO); forced cleanup bypasses the last archive timestamp set

> **Note**
>
> In a read-only database, including an Oracle Active Data Guard physical standby database, this view is not populated. Instead, a summary of cleanup events is written to the respective database instance's alert log file.

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.179 DBA_AUDIT_MGMT_CLEANUP_JOBS

DBA_AUDIT_MGMT_CLEANUP_JOBS displays information about the configured audit trail purge jobs.

> **Note**
>
> This view is populated in any Oracle Database where auditing is enabled, regardless of whether pre-Oracle Database 12*c* auditing or unified auditing is enabled for the database.
>
> - See *Oracle AI Database Security Guide* for more information about unified auditing.
> - See *Oracle AI Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
JOB_NAME	VARCHAR2(100)	NOT NULL	Name of the audit trail purge job
JOB_STATUS	VARCHAR2(8)		Current status of the audit trail purge job (ENABLED) or (DISABLED)
AUDIT_TRAIL	VARCHAR2(28)		Audit trail for which the audit trail purge job is configured: • STANDARD AUDIT TRAIL • FGA AUDIT TRAIL • STANDARD AND FGA AUDIT TRAIL • OS AUDIT TRAIL • XML AUDIT TRAIL • OS AND XML AUDIT TRAIL • ALL AUDIT TRAILS • UNIFIED AUDIT TRAIL
JOB_FREQUENCY	VARCHAR2(100)		Frequency at which the audit trail purge job runs
USE_LAST_ARCHIVE_TIMESTAMP	VARCHAR2(3)		Indicates whether the audit trail purge job invocation uses the last archive timestamp. The last archive timestamp is shown in the LAST_ARCHIVE_TS column of the DBA_AUDIT_MGMT_LAST_ARCH_TS view. Possible values: • YES - Indicates that the audit trail purge job invocation uses the last archive timestamp • NO - Indicates that the audit trail purge job invocation does not use the last archive timestamp
JOB_CONTAINER	VARCHAR2(7)		In a CDB, indicates whether audit trail purge job will be performed only in the current container or in all the containers. Possible values: • CURRENT - Indicates that audit trail purge job will be performed only in the current container • ALL - Indicates that audit trail purge job will be performed in all the containers In a non-CDB, the value in this column is always CURRENT.

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.180 DBA_AUDIT_MGMT_CONFIG_PARAMS

DBA_AUDIT_MGMT_CONFIG_PARAMS displays information about the currently configured audit trail properties that are used by the DBMS_AUDIT_MGMT PL/SQL package.

> **Note**
>
> This view is populated in any Oracle Database where auditing is enabled, regardless of whether pre-Oracle Database 12*c* auditing or unified auditing is enabled for the database.
>
> - See *Oracle AI Database Security Guide* for more information about unified auditing.
> - See *Oracle AI Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
PARAMETER_NAME	VARCHAR2(1024)	NOT NULL	Name of the property
PARAMETER_VALUE	VARCHAR2(4000)		Value of the property
AUDIT_TRAIL	VARCHAR2(28)		Audit trails for which the property is configured: • STANDARD AUDIT TRAIL • FGA AUDIT TRAIL • STANDARD AND FGA AUDIT TRAIL • OS AUDIT TRAIL • XML AUDIT TRAIL • OS AND XML AUDIT TRAIL • ALL AUDIT TRAILS • UNIFIED AUDIT TRAIL

> **Note**
>
> In a read-only database, including an Oracle Active Data Guard physical standby database, this view is not populated when the DBMS_AUDIT_MGMT.SET_AUDIT_TRAIL PL/SQL procedure is invoked. If the procedure was used when the database was in read-only mode, use DBMS_AUDIT_MGMT.GET_AUDIT_TRAIL to check the value of the property.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **See Also**
>
> *Oracle AI Database PL/SQL Packages and Types Reference* for more information about the parameters specified with the `DBMS_AUDIT_MGMT.SET_AUDIT_TRAIL_PROPERTY` procedure

5.181 DBA_AUDIT_MGMT_LAST_ARCH_TS

`DBA_AUDIT_MGMT_LAST_ARCH_TS` displays information about the last archive timestamps set for audit trail cleanup or purges.

> **Note**
>
> This view is populated in any Oracle Database where auditing is enabled, regardless of whether pre-Oracle Database 12*c* auditing or unified auditing is enabled for the database.
>
> - See *Oracle AI Database Security Guide* for more information about unified auditing.
> - See *Oracle AI Database Upgrade Guide* for more information about migrating to unified auditing.

Column	Datatype	NULL	Description
`AUDIT_TRAIL`	`VARCHAR2(25)`		Audit trail for which the last archive timestamp applies: • `FGA AUDIT TRAIL` • `OS AUDIT TRAIL` • `STANDARD AUDIT TRAIL` • `UNIFIED AUDIT TRAIL` • `UNIFIED AUDIT TRAIL FILES` • `UNIFIED AUDIT TRAIL TABLE` • `XML AUDIT TRAIL`
`RAC_INSTANCE`	`NUMBER`	`NOT NULL`	Oracle RAC instance number for which the last archive timestamp applies; `0` implies not applicable
`LAST_ARCHIVE_TS`	`TIMESTAMP(6) WITH TIME ZONE`		Timestamp of the last audit record or audit file that has been archived
`DATABASE_ID`	`NUMBER`	`NOT NULL`	Database ID of the audit records to clean up
`CONTAINER_GUID`	`VARCHAR2(33)`	`NOT NULL`	GUID of the container of the audit records to clean up
`DB_UNIQUE_NAME`	`VARCHAR2(257)`	`NOT NULL`	Unique database name of the audited database, which is defined by the `DB_UNIQUE_NAME` initialization parameter. This value is useful for differentiating between the primary and standby databases in an Oracle Data Guard configuration.

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> In a read-only database, including an Oracle Active Data Guard physical standby database, this view is not populated when `DBMS_AUDIT_MGMT.SET_LAST_ARCHIVE_TIMESTAMP` is invoked. In such a case, use `DBMS_AUDIT_MGMT.GET_LAST_ARCHIVE_TIMESTAMP` to check for the timestamp, if it was configured for the database instance.

> **See Also**
>
> *Oracle AI Database PL/SQL Packages and Types Reference* for more information about `DBMS_AUDIT_MGMT` subprograms

5.182 DBA_AUDIT_OBJECT

`DBA_AUDIT_OBJECT` displays audit trail records for all objects in the database.

> **Note**
>
> This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle AI Database 26ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle AI Database Security Guide* for more information about how this desupport works.

Related View

`USER_AUDIT_OBJECT` displays audit trail records for the objects accessible to the current user.

Column	Datatype	NULL	Description
`OS_USERNAME`	`VARCHAR2(255)`		Operating system login username of the user whose actions were audited
`USERNAME`	`VARCHAR2(128)`		Name (not ID number) of the user whose actions were audited
`USERHOST`	`VARCHAR2(128)`		Client host machine name
`TERMINAL`	`VARCHAR2(255)`		Identifier of the user's terminal
`TIMESTAMP`	`DATE`		Date and time of the creation of the audit trail entry (date and time of user login for entries created by `AUDIT SESSION`) in the local database session time zone
`OWNER`	`VARCHAR2(128)`		Creator of the object affected by the action
`OBJ_NAME`	`VARCHAR2(128)`		Name of the object affected by the action
`ACTION_NAME`	`VARCHAR2(28)`		Name of the action type corresponding to the numeric code in the `ACTION` column in `DBA_AUDIT_TRAIL`
`NEW_OWNER`	`VARCHAR2(128)`		Owner of the object named in the `NEW_NAME` column

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
NEW_NAME	VARCHAR2(128)		New name of an object after a RENAME or the name of the underlying object
SES_ACTIONS	VARCHAR2(19)		Session summary (a string of 16 characters, one for each action type in the order ALTER, AUDIT, COMMENT, DELETE, GRANT, INDEX, INSERT, LOCK, RENAME, SELECT, UPDATE, REFERENCES, and EXECUTE). Positions 14, 15, and 16 are reserved for future use. The characters are: • - - None • S - Success • F - Failure • B - Both
COMMENT_TEXT	VARCHAR2(4000)		Text comment on the audit trail
SESSIONID	NUMBER	NOT NULL	Numeric ID for each Oracle session
ENTRYID	NUMBER	NOT NULL	Numeric ID for each audit trail entry in the session
STATEMENTID	NUMBER	NOT NULL	Numeric ID for each statement run
RETURNCODE	NUMBER	NOT NULL	Oracle error code generated by the action. Some useful values: • 0 - Action succeeded • 2004 - Security violation
PRIV_USED	VARCHAR2(40)		System privilege used to execute the action
CLIENT_ID	VARCHAR2(128)		Client identifier in each Oracle session
ECONTEXT_ID	VARCHAR2(64)		Application execution context identifier
SESSION_CPU	NUMBER		Amount of CPU time used by each Oracle session
EXTENDED_TIMESTAMP	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the creation of the audit trail entry (timestamp of user login for entries created by AUDIT SESSION) in UTC (Coordinated Universal Time) time zone
PROXY_SESSIONID	NUMBER		Proxy session serial number, if an enterprise user has logged in through the proxy mechanism
GLOBAL_UID	VARCHAR2(32)		Global user identifier for the user, if the user has logged in as an enterprise user
INSTANCE_NUMBER	NUMBER		Instance number as specified by the INSTANCE_NUMBER initialization parameter
OS_PROCESS	VARCHAR2(16)		Operating System process identifier of the Oracle process
TRANSACTIONID	RAW(8)		Transaction identifier of the transaction in which the object is accessed or modified
SCN	NUMBER		System change number (SCN) of the query
SQL_BIND	NVARCHAR2(2000)		Bind variable data of the query
SQL_TEXT	NVARCHAR2(2000)		SQL text of the query
OBJ_EDITION_NAME	VARCHAR2(128)		Name of the edition containing the audited object

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> The SQL_BIND and SQL_TEXT columns are only populated if the AUDIT_TRAIL initialization parameter is set to db, extended.

USER_AUDIT_SESSION displays the audit trail records concerning connections and disconnections of the current user.

Column	Datatype	NULL	Description
OS_USERNAME	VARCHAR2(255)		Operating system login username of the user whose actions were audited
USERNAME	VARCHAR2(128)		Name (not ID number) of the user whose actions were audited
USERHOST	VARCHAR2(128)		Client host machine name
TERMINAL	VARCHAR2(255)		Identifier of the user's terminal
TIMESTAMP	DATE		Date and time of the creation of the audit trail entry (date and time of user login for entries created by AUDIT SESSION) in the local database session time zone
ACTION_NAME	VARCHAR2(28)		Name of the action type corresponding to the numeric code in the ACTION column in DBA_AUDIT_TRAIL
LOGOFF_TIME	DATE		Date and time of user log off
LOGOFF_LREAD	NUMBER		Logical reads for the session
LOGOFF_PREAD	NUMBER		Physical reads for the session
LOGOFF_LWRITE	NUMBER		Logical writes for the session
LOGOFF_DLOCK	VARCHAR2(40)		Deadlocks detected during the session
SESSIONID	NUMBER	NOT NULL	Numeric ID for each Oracle session
RETURNCODE	NUMBER	NOT NULL	Oracle error code generated by the action. Some useful values: • 0 - Action succeeded • 2004 - Security violation
CLIENT_ID	VARCHAR2(128)		Client identifier in each Oracle session
SESSION_CPU	NUMBER		Amount of CPU time used by each Oracle session (in centiseconds)
EXTENDED_TIMESTAMP	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the creation of the audit trail entry (timestamp of user login for entries created by AUDIT SESSION) in UTC (Coordinated Universal Time) time zone
PROXY_SESSIONID	NUMBER		Proxy session serial number, if an enterprise user has logged in through the proxy mechanism
GLOBAL_UID	VARCHAR2(32)		Global user identifier for the user, if the user has logged in as an enterprise user
INSTANCE_NUMBER	NUMBER		Instance number as specified by the INSTANCE_NUMBER initialization parameter
OS_PROCESS	VARCHAR2(16)		Operating System process identifier of the Oracle process

Related View

USER_AUDIT_STATEMENT displays audit trail records for the GRANT, REVOKE, AUDIT, NOAUDIT, and ALTER SYSTEM statements issued by the current user.

Column	Datatype	NULL	Description
OS_USERNAME	VARCHAR2(255)		Operating system login username of the user whose actions were audited
USERNAME	VARCHAR2(128)		Name (not ID number) of the user whose actions were audited
USERHOST	VARCHAR2(128)		Client host machine name
TERMINAL	VARCHAR2(255)		Identifier of the user's terminal
TIMESTAMP	DATE		Date and time of the creation of the audit trail entry (date and time of user login for entries created by AUDIT SESSION) in the local database session time zone
OWNER	VARCHAR2(128)		Creator of the object affected by the action
OBJ_NAME	VARCHAR2(128)		Name of the object affected by the action
ACTION_NAME	VARCHAR2(28)		Name of the action type corresponding to the numeric code in the ACTION column in DBA_AUDIT_TRAIL
NEW_NAME	VARCHAR2(128)		New name of an object after a RENAME or the name of the underlying object

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OBJ_PRIVILEGE	VARCHAR2(34)		Object privileges granted or revoked by a GRANT or REVOKE statement The value of this column is a 34-character string of Y and dash (-) characters. Each character corresponds to a numbered privilege in the following list. The left-most character corresponds to privilege 0, the next character corresponds to privilege 1, and so on. The right-most character corresponds to privilege 33. 0 - ALTER 1 - AUDIT 2 - COMMENT 3 - DELETE 4 - GRANT 5 - INDEX 6 - INSERT 7 - LOCK 8 - CREATE 9 - SELECT 10 - UPDATE 11 - REFERENCES 12 - EXECUTE 13 - VIEW 14 - DROP 15 - ANALYZE 16 - CREATE 17 - READ 18 - WRITE 19 - KEEP SEQUENCE 20 - ENQUEUE 21 - DEQUEUE 22 - UNDER 23 - ON COMMIT 24 - REWRITE 25 - UPSERT 26 - DEBUG 27 - FLASHBACK 28 - MERGE 29 - USE 30 - FLASHBACK ARCHIVE 31 - DIRECTORY EXECUTE 32 - SIGN 33 - COLLECT DEBUG INFO A Y indicates that the privilege was granted or revoked by the statement. A dash indicates that the privilege was not affected by the statement. For example, the following value indicates that the MERGE privilege was granted or revoked by the statement: ----------------------------Y-----
SYS_PRIVILEGE	VARCHAR2(40)		System privileges granted or revoked by a GRANT or REVOKE statement

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ADMIN_OPTION	VARCHAR2(1)		Signifies the role or system privilege was granted with the ADMIN option
GRANTEE	VARCHAR2(128)		Name of the grantee specified in a GRANT or REVOKE statement
AUDIT_OPTION	VARCHAR2(40)		Auditing option set with the AUDIT statement
SES_ACTIONS	VARCHAR2(19)		Session summary (a string of 16 characters, one for each action type in the order ALTER, AUDIT, COMMENT, DELETE, GRANT, INDEX, INSERT, LOCK, RENAME, SELECT, UPDATE, REFERENCES, and EXECUTE). Positions 14, 15, and 16 are reserved for future use. The characters are: • - - None • S - Success • F - Failure • B - Both
COMMENT_TEXT	VARCHAR2(4000)		Text comment on the audit trail, inserted by the application
SESSIONID	NUMBER	NOT NULL	Numeric ID for each Oracle session
ENTRYID	NUMBER	NOT NULL	Numeric ID for each audit trail entry in the session
STATEMENTID	NUMBER	NOT NULL	Numeric ID for each statement run
RETURNCODE	NUMBER	NOT NULL	Oracle error code generated by the action. Some useful values: • 0 - Action succeeded • 2004 - Security violation
PRIV_USED	VARCHAR2(40)		System privilege used to execute the action
CLIENT_ID	VARCHAR2(128)		Client identifier in each Oracle session
ECONTEXT_ID	VARCHAR2(64)		Application execution context identifier
SESSION_CPU	NUMBER		Amount of CPU time used by each Oracle session
EXTENDED_TIMESTAMP	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the creation of the audit trail entry (timestamp of user login for entries created by AUDIT SESSION) in UTC (Coordinated Universal Time) time zone
PROXY_SESSIONID	NUMBER		Proxy session serial number, if an enterprise user has logged in through the proxy mechanism
GLOBAL_UID	VARCHAR2(32)		Global user identifier for the user, if the user has logged in as an enterprise user
INSTANCE_NUMBER	NUMBER		Instance number as specified by the INSTANCE_NUMBER initialization parameter
OS_PROCESS	VARCHAR2(16)		Operating System process identifier of the Oracle process
TRANSACTIONID	RAW(8)		Transaction identifier of the transaction in which the object is accessed or modified
SCN	NUMBER		System change number (SCN) of the query
SQL_BIND	NVARCHAR2(2000)		Bind variable data of the query
SQL_TEXT	NVARCHAR2(2000)		SQL text of the query
OBJ_EDITION_NAME	VARCHAR2(128)		Name of the edition containing the audited object

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**

5.187 DBA_AUDIT_TRAIL

DBA_AUDIT_TRAIL displays all standard audit trail entries.

> **Note**
>
> This view is deprecated and applies only to traditional auditing. Traditional auditing is desupported starting in Oracle AI Database 26ai. Though traditional auditing is desupported, any current traditional audit settings that you have will still be honored and are viewable with this view. See *Oracle AI Database Security Guide* for more information about how this desupport works.

Related View

USER_AUDIT_TRAIL displays the standard audit trail entries related to the current user.

Column	Datatype	NULL	Description
OS_USERNAME	VARCHAR2(255)		Operating system login username of the user whose actions were audited
USERNAME	VARCHAR2(128)		Name (not ID number) of the user whose actions were audited
USERHOST	VARCHAR2(128)		Client host machine name
TERMINAL	VARCHAR2(255)		Identifier of the user's terminal
TIMESTAMP	DATE		Date and time of the creation of the audit trail entry (date and time of user login for entries created by AUDIT SESSION) in the local database session time zone
OWNER	VARCHAR2(128)		Creator of the object affected by the action
OBJ_NAME	VARCHAR2(128)		Name of the object affected by the action
ACTION	NUMBER	NOT NULL	Numeric action type code. The corresponding name of the action type is in the ACTION_NAME column.
ACTION_NAME	VARCHAR2(28)		Name of the action type corresponding to the numeric code in the ACTION column
NEW_OWNER	VARCHAR2(128)		Owner of the object named in the NEW_NAME column

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
NEW_NAME	VARCHAR2(128)		New name of the object after a RENAME or the name of the underlying object
OBJ_PRIVILEGE	VARCHAR2(34)		Object privileges granted or revoked by a GRANT or REVOKE statement The value of this column is a 34-character string of Y and dash (-) characters. Each character corresponds to a numbered privilege in the following list. The left-most character corresponds to privilege 0, the next character corresponds to privilege 1, and so on. The right-most character corresponds to privilege 33. 0 - ALTER 1 - AUDIT 2 - COMMENT 3 - DELETE 4 - GRANT 5 - INDEX 6 - INSERT 7 - LOCK 8 - CREATE 9 - SELECT 10 - UPDATE 11 - REFERENCES 12 - EXECUTE 13 - VIEW 14 - DROP 15 - ANALYZE 16 - CREATE 17 - READ 18 - WRITE 19 - KEEP SEQUENCE 20 - ENQUEUE 21 - DEQUEUE 22 - UNDER 23 - ON COMMIT 24 - REWRITE 25 - UPSERT 26 - DEBUG 27 - FLASHBACK 28 - MERGE 29 - USE 30 - FLASHBACK ARCHIVE 31 - DIRECTORY EXECUTE 32 - SIGN 33 - COLLECT DEBUG INFO A Y indicates that the privilege was granted or revoked by the statement. A dash indicates that the privilege was not affected by the statement. For example, the following value indicates that the MERGE privilege was granted or revoked by the statement: ----------------------------Y-----

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SYS_PRIVILEGE	VARCHAR2(40)		System privileges granted or revoked by a GRANT or REVOKE statement
ADMIN_OPTION	VARCHAR2(1)		Indicates whether the role or system privilege was granted with the ADMIN option
GRANTEE	VARCHAR2(128)		Name of the grantee specified in a GRANT or REVOKE statement
AUDIT_OPTION	VARCHAR2(40)		Auditing option set with the AUDIT statement
SES_ACTIONS	VARCHAR2(19)		Session summary (a string of 16 characters, one for each action type in the order ALTER, AUDIT, COMMENT, DELETE, GRANT, INDEX, INSERT, LOCK, RENAME, SELECT, UPDATE, REFERENCES, and EXECUTE). Positions 14, 15, and 16 are reserved for future use. The characters are: • - - None • S - Success • F - Failure • B - Both
LOGOFF_TIME	DATE		Date and time of user log off
LOGOFF_LREAD	NUMBER		Logical reads for the session
LOGOFF_PREAD	NUMBER		Physical reads for the session
LOGOFF_LWRITE	NUMBER		Logical writes for the session
LOGOFF_DLOCK	VARCHAR2(40)		Deadlocks detected during the session
COMMENT_TEXT	VARCHAR2(4000)		Text comment on the audit trail entry, providing more information about the statement audited Also indicates how the user or remote call was authenticated. The method can be one of the following: • DATABASE - Authentication was done by password • NETWORK - Authentication was done by Oracle Net Services or strong authentication • PROXY - Client was authenticated by another user; the name of the proxy user follows the method type When an object is accessed remotely over a database link, the COMMENT_TEXT column also captures the information about the database link. For example: `DBLINK_INFO: (SOURCE_GLOBAL_NAME=view02.regress.rdbms.dev.us.example.com, DBLINK_NAME=VIEW05_LINK.REGRESS.RDBMS.DEV.US.EXAMPLE.COM, SOURCE_AUDIT_SESSIONID=250805)`
SESSIONID	NUMBER	NOT NULL	Numeric ID for each Oracle session. Each user session gets a unique session ID.
ENTRYID	NUMBER	NOT NULL	Numeric ID for each audit trail entry in the session. The entry ID is an index of a session's audit entries that starts at 1 and increases to the number of entries that are written.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
STATEMENTID	NUMBER	NOT NULL	*n*th statement in the user session. The first SQL statement gets a value of 1 and the value is incremented for each subsequent SQL statement. Note that one SQL statement can create more than one audit trail entry (for example, when more than one object is audited from the same SQL statement), and in this case the statement ID remains the same for that statement and the entry ID increases for each audit trail entry created by the statement.
RETURNCODE	NUMBER	NOT NULL	Oracle error code generated by the action. Some useful values: • 0 - Action succeeded • 2004 - Security violation
PRIV_USED	VARCHAR2(40)		System privilege used to execute the action
CLIENT_ID	VARCHAR2(128)		Client identifier in each Oracle session
ECONTEXT_ID	VARCHAR2(64)		Application execution context identifier
SESSION_CPU	NUMBER		Amount of CPU time used by each Oracle session (in centiseconds)
EXTENDED_TIMESTAMP	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the creation of the audit trail entry (timestamp of user login for entries created by AUDIT SESSION) in UTC (Coordinated Universal Time) time zone
PROXY_SESSIONID	NUMBER		Proxy session serial number, if an enterprise user has logged in through the proxy mechanism
GLOBAL_UID	VARCHAR2(32)		Global user identifier for the user, if the user has logged in as an enterprise user
INSTANCE_NUMBER	NUMBER		Instance number as specified by the INSTANCE_NUMBER initialization parameter
OS_PROCESS	VARCHAR2(16)		Operating System process identifier of the Oracle process
TRANSACTIONID	RAW(8)		Transaction identifier of the transaction in which the object is accessed or modified
SCN	NUMBER		System change number (SCN) of the creation of the audit trail entry
SQL_BIND	NVARCHAR2(2000)		Bind variable data of the query
SQL_TEXT	NVARCHAR2(2000)		SQL text of the query
OBJ_EDITION_NAME	VARCHAR2(128)		Name of the edition containing the audited object
DBID	NUMBER		Database identifier of the audited database
RLS_INFO	CLOB		Stores virtual private database (VPD) policy names and predicates separated by delimiter. To format the output into individual rows, use the DBMS_AUDIT_UTIL.DECODE_RLS_INFO_ATRAIL_STD function.
CURRENT_USER	VARCHAR2(128)		Effective user for the statement execution

Copyright © 2002, 2025, Oracle and/or its affiliates.

> **Note**
>
> The SQL_BIND and SQL_TEXT columns are only populated if the AUDIT_TRAIL initialization parameter is set to db, extended.

> **See Also**
>
> - "AUDIT_TRAIL"
> - "USER_AUDIT_TRAIL"
> - *Oracle AI Database PL/SQL Packages and Types Reference* for more information about the DBMS_AUDIT_UTIL.DECODE_RLS_INFO_ATRAIL_XML function.

5.188 DBA_AUTO_CLUSTERING_CONFIG

DBA_AUTO_CLUSTERING_CONFIG displays the current configuration parameter settings for automatic clustering.

Column	Datatype	NULL	Description
PARAMETER_NAME	VARCHAR2(128)	NOT NULL	Name of the configuration parameter
PARAMETER_VALUE	VARCHAR2(4000)		Value of the configuration parameter
LAST_UPDATED	TIMESTAMP(6) WITH TIME ZONE		Date and time at which the parameter value was last updated
UPDATED_BY	VARCHAR2(128)		User who last updated the parameter value
DESCRIPTION	VARCHAR2(73)		Brief description of the parameter

> **Note**
>
> This view is available starting with Oracle AI Database 26ai.

5.189 DBA_AUTO_CLUSTERING_RECOMMENDATIONS

DBA_AUTO_CLUSTERING_RECOMMENDATIONS displays recommendations associated with automatic clustering.

Column	Datatype	NULL	Description
TABLE_OWNER	VARCHAR2(128)	NOT NULL	Owner of the table
TABLE_NAME	VARCHAR2(128)	NOT NULL	Name of the table
RECOMMENDATION_ID	RAW(16)	NOT NULL	Unique ID representing the recommendation
SQLSET_OWNER	VARCHAR2(128)		Owner of the SQL tuning set that is used for the recommendation

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
SQLSET_NAME	VARCHAR2(128)		Name of the SQL tuning set that is used for the recommendation
CLUSTERING_METHOD	VARCHAR2(8)		Recommended clustering method for the table. Possible values: • SINGLE - Single table clustering (clustering is based on columns from a single table) • JOIN - Join clustering (clustering is based on columns from two or more tables that are joined together) A null value means there is no recommended clustering method for the table.
CLUSTERING_DDL	VARCHAR2(4000)		Not currently used
ZONEMAP_DDL	VARCHAR2(4000)		Not currently used
APPLY_MODE	VARCHAR2(16)		Mode for the application of the recommendation. Possible values: • FULL - Data clustered using online redefinition • INCREMENTAL - Data clustered incrementally
APPLY_START_TIMESTAMP	TIMESTAMP(6) WITH TIME ZONE		Date and time at which the application of the recommendation started A null value means the recommendation was not applied.
APPLY_END_TIMESTAMP	TIMESTAMP(6) WITH TIME ZONE		Date and time at which the application of the recommendation finished A null value means either the recommendation was not applied or the application of the recommendation is not finished.
STATUS	VARCHAR2(16)	NOT NULL	Verification or application status. Possible values: • ACCEPTED • FAILED • IMPLEMENTED • REJECTED • UNVERIFIED

> **Note**
>
> This view is available starting with Oracle AI Database 26ai.

5.190 DBA_AUTO_INDEX_CONFIG

DBA_AUTO_INDEX_CONFIG displays the current configuration parameter settings for automatic indexing.

You can set automatic indexing configuration parameters by using the DBMS_AUTO_INDEX.CONFIGURE procedure.

Column	Datatype	NULL	Description
PARAMETER_NAME	VARCHAR2(128)	NOT NULL	Name of the configuration parameter

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
PARAMETER_VALUE	VARCHAR2(4000)		Value of the configuration parameter
PARAMETER_VALUE_CLOB[1]	CLOB		Value of the configuration parameter, in CLOB format
LAST_MODIFIED	TIMESTAMP(6)		Time at which the parameter value was last modified
MODIFIED_BY	VARCHAR2(128)		User who last modified the parameter value

[1] This column is available starting with Oracle AI Database 26ai, Release Update 23.7.

See Also

Oracle AI Database PL/SQL Packages and Types Reference for more information about the DBMS_AUTO_INDEX.CONFIGURE procedure

5.191 DBA_AUTO_MV_ANALYSIS_ACTIONS

DBA_AUTO_MV_ANALYSIS_ACTIONS displays information about analysis and tuning activities associated with automatic materialized views.

Each action is specified by the COMMAND and attribute (ATTR1 through ATTR6) columns. Each command defines how the attribute columns will be used.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task The value of this column is always SYS_AUTO_MV_TASK.
EXECUTION_NAME	VARCHAR2(128)		The name of the task execution with which this entry (row) is associated
REC_ID	NUMBER	NOT NULL	Recommendation associated with the action
ACTION_ID	NUMBER	NOT NULL	Unique identifier for the action
OBJECT_ID	NUMBER		Object associated with the action
COMMAND	VARCHAR2(64)		Command to be executed **See Also:** DBA_ADVISOR_COMMANDS for a list of commands
COMMAND_ID	NUMBER	NOT NULL	ID of the command to be executed **See Also:** DBA_ADVISOR_COMMANDS for a list of commands
FLAGS	NUMBER		Advisor-specific flags
ATTR1	VARCHAR2(4000)		Parameters defining the command
ATTR2	VARCHAR2(4000)		Parameters defining the command
ATTR3	VARCHAR2(4000)		Parameters defining the command
ATTR4	VARCHAR2(4000)		Parameters defining the command

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ATTR5	CLOB		Parameters defining the command; to be used if the text is significantly large (for example, a SQL statement defining a materialized view)
ATTR6	CLOB		Parameters defining the command; to be used if the text is significantly large (for example, a SQL statement defining a materialized view)
NUM_ATTR1	NUMBER		General numeric attribute
NUM_ATTR2	NUMBER		General numeric attribute
NUM_ATTR3	NUMBER		General numeric attribute
NUM_ATTR4	NUMBER		General numeric attribute
NUM_ATTR5	NUMBER		General numeric attribute
MESSAGE	VARCHAR2(4000)		Message associated with the action
FILTERED	VARCHAR2(1)		A value of Y means that the row in the view was filtered out by a directive (or a combination of directives). A value of N means that the row was not filtered.
RESULT_STATUS	VARCHAR2(25)		Result status. Possible values: • AUTOMATION PENDING • TIMED OUT • MISSING INFORMATION • COMPLETED WITH NO RESULTS • COMPLETED AND IMPLEMENTED • ENCOUNTERED ERROR • NOT AUTOMATED
RESULT_LAST_MODIFIED	TIMESTAMP(3)		Time at which result status was last modified
RESULT_MESSAGE	VARCHAR2(4000)		Result message text

5.192 DBA_AUTO_MV_ANALYSIS_EXECUTIONS

DBA_AUTO_MV_ANALYSIS_EXECUTIONS displays information about analysis and tuning executions associated with automatic materialized views.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Unique identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task The value of this column is always SYS_AUTO_MV_TASK.
EXECUTION_NAME	VARCHAR2(128)	NOT NULL	Name of the task execution with which this entry (row) is associated
EXECUTION_ID	NUMBER	NOT NULL	Execution ID
DESCRIPTION	VARCHAR2(256)		User-supplied description of the task
EXECUTION_TYPE	VARCHAR2(128)		Type of the last execution (optional for single-execution tasks)
EXECUTION_TYPE#	NUMBER		Reserved for internal use
EXECUTION_START	DATE		Execution start date and time

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
EXECUTION_LAST_MODIFIED	DATE	NOT NULL	Last modified date and time for the execution
EXECUTION_END	DATE		Execution end date and time
REQUESTED_DOP	NUMBER		The degree of parallelism (DOP) value requested by the user (through the TEST_EXECUTE_DOP parameter). It can be any value greater or equal to zero.
ACTUAL_DOP	NUMBER		The actual degree of parallelism (DOP) with which the execution finished. If the requested DOP is greater than than what is available on the system, the ACTUAL_DOP value can be lower than the REQUESTED_DOP value.
CONCURRENT_EXECUTION	VARCHAR2(3)		Indicates whether concurrency was used for this execution (YES) or not (NO)
ADVISOR_NAME	VARCHAR2(128)		Advisor associated with the task
ADVISOR_ID	NUMBER	NOT NULL	Unique identifier for the advisor
STATUS	VARCHAR2(11)		Current operational status of the task: • EXECUTING • COMPLETED • INTERRUPTED • CANCELLED • FATAL ERROR
STATUS#	NUMBER	NOT NULL	Reserved for internal use
STATUS_MESSAGE	VARCHAR2(4000)		Informational message provided by the advisor regarding the status
ERROR_MESSAGE	VARCHAR2(4000)		Informational message or an error message indicating the current operation or condition

5.193 DBA_AUTO_MV_ANALYSIS_RECOMMENDATIONS

DBA_AUTO_MV_ANALYSIS_RECOMMENDATIONS displays recommendations associated with automatic materialized views.

Column	Datatype	NULL	Description
TASK_NAME	VARCHAR2(128)		Name of the task The value of this column is always SYS_AUTO_MV_TASK.
EXECUTION_NAME	VARCHAR2(128)	NOT NULL	The name of the task execution with which this entry (row) is associated
RECOMMENDATIONS	CLOB		Recommendation for the task

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.194 DBA_AUTO_MV_ANALYSIS_REPORT

DBA_AUTO_MV_ANALYSIS_REPORT reports on analyses and recommendations associated with automatic materialized views.

Column	Datatype	NULL	Description
TASK_NAME	VARCHAR2(128)		Name of the task The value of this column is always SYS_AUTO_MV_TASK.
EXECUTION_NAME	VARCHAR2(128)		The name of the task execution with which this entry (row) is associated
SEQUENCE	NUMBER	NOT NULL	Sequence number of the journal entry (unique for each task). This sequence number is used to order the data.
MESSAGE	VARCHAR2(4000)		Entry in the journal

5.195 DBA_AUTO_MV_ANALYSIS_TASK

DBA_AUTO_MV_ANALYSIS_TASK display analysis information associated with automatic materialized views.

Column	Datatype	NULL	Description
OWNER	VARCHAR2(128)		Owner of the task
TASK_ID	NUMBER	NOT NULL	Unique identifier of the task
TASK_NAME	VARCHAR2(128)		Name of the task The value of this column is always SYS_AUTO_MV_TASK.
DESCRIPTION	VARCHAR2(256)		User-supplied description of the task
ADVISOR_NAME	VARCHAR2(128)		Advisor associated with the task
CREATED	DATE	NOT NULL	Creation date of the task
LAST_MODIFIED	DATE	NOT NULL	Date on which the task was last modified
PARENT_TASK_ID	NUMBER		Identifier of the parent task (if the task was created because of the recommendation of another task)
PARENT_RXEC_ID	NUMBER		Identifier of the recommendation within the parent task that resulted in the creation of the task
LAST_EXECUTION	VARCHAR2(128)		Name of the current or last task execution
EXECUTION_TYPE	VARCHAR2(128)		Type of the last execution. This information is optional for single-execution tasks.
EXECUTION_TYPE#	NUMBER		Reserved for internal use
EXECUTION_DESCRIPTION	VARCHAR2(256)		Optional description of the last execution
EXECUTION_START	DATE		Execution start date and time of the task
EXECUTION_END	DATE		Execution end date and time of the task

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
STATUS	VARCHAR2(11)		Current operational status of the task: • INITIAL - Initial state of the task; no recommendations are present • EXECUTING - Task is currently running • INTERRUPTED - Task analysis was interrupted by the user. Recommendation data, if present, can be viewed and reported at this time. • COMPLETED - Task successfully completed the analysis operation. Recommendation data can be viewed and reported. • ERROR - An error occurred during the analysis operation. Recommendations, if present, can be viewed and reported at this time.
STATUS_MESSAGE	VARCHAR2(4000)		Informational message provided by the advisor regarding the status
PCT_COMPLETION_TIME	NUMBER		Percent completion, in terms of time, of the task when it is executing
PROGRESS_METRIC	NUMBER		Metric that measures the progress of the task in terms of quality. Each advisor may have its own metric.
METRIC_UNITS	VARCHAR2(64)		Unit of the metric used to measure progress
ACTIVITY_COUNTER	NUMBER		Counter that is updated frequently by the advisor, denoting that useful work is being performed
RECOMMENDATION_COUNT	NUMBER		Number of recommendations produced
ERROR_MESSAGE	VARCHAR2(4000)		Informational message or an error message indicating the current operation or condition
SOURCE	VARCHAR2(128)		Optional name that identifies the creator of the task
HOW_CREATED	VARCHAR2(30)		Optional task or template on which the object was based
READ_ONLY	VARCHAR2(5)		Indicates whether the task is read-only (TRUE) or not (FALSE)
SYSTEM_TASK	VARCHAR2(5)		Indicates whether the task is a system task (TRUE) or not (FALSE)
ADVISOR_ID	NUMBER	NOT NULL	Unique identifier for the advisor
STATUS#	NUMBER		Reserved for internal use

5.196 DBA_AUTO_MV_CONFIG

DBA_AUTO_MV_CONFIG displays configuration parameters associated with automatic materialized views and automatic zone maps.

The configuration parameters displayed in this view can be updated with CONFIGURE procedure of the DBMS_AUTO_MV package.

Column	Datatype	NULL	Description
PARAMETER_NAME	VARCHAR2(128)	NOT NULL	Name of the configuration parameter
PARAMETER_VALUE	VARCHAR2(4000)		Value of the configuration parameter
LAST_UPDATED	TIMESTAMP(6)		Date and time of the last parameter value update

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
UPDATED_BY	VARCHAR2(128)		User who last updated the parameter value
DESCRIPTION	VARCHAR2(72)		Description of the configuration parameter

> **See Also**
>
> *Oracle AI Database PL/SQL Packages and Types Reference* for more information about the DBMS_AUTO_MV.CONFIGURE procedure

5.197 DBA_AUTO_MV_MAINT_REPORT

DBA_AUTO_MV_MAINT_REPORT displays maintenance operation details associated with automatic materialized view refresh.

Column	Datatype	NULL	Description
SWAT_MM_START_TIME	DATE		Date and time of the maintenance invocation
MESSAGE	VARCHAR2(4000)		Message associated with the materialized view maintenance action

5.198 DBA_AUTO_MV_REFRESH_HISTORY

DBA_AUTO_MV_REFRESH_HISTORY describes automatic materialized view refreshes.

Column	Datatype	NULL	Description
MVIEW_OWNER	VARCHAR2(128)	NOT NULL	Owner of the materialized view
MVIEW_NAME	VARCHAR2(128)	NOT NULL	Name of the materialized view
SWAT_MM_START_TIME	DATE		Date and time of the maintenance invocation
REFRESH_START_TIME	DATE		Date and time the refresh started
REFRESH_END_TIME	DATE		Date and time the refresh ended
ELAPSED_REFRESH_TIME	NUMBER		Duration of the refresh (in seconds)
STATUS	NUMBER		Status of the refresh. Possible values: • 0 - The refresh is in-progress • 1 - The refresh completed successfully • 2 - An error occurred during the refresh. Refer to the value of the ERROR column for more information. • 3 - The refresh was terminated
ERROR	NUMBER		If an error occurred during the refresh, this column displays the error number, which corresponds to error code ORA-*number*. Otherwise, the value of this column is 0.

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.199 DBA_AUTO_MV_VERIFICATION_REPORT

DBA_AUTO_MV_VERIFICATION_REPORT displays information about verifications associated with automatic materialized views.

Column	Datatype	NULL	Description
TASK_NAME	VARCHAR2(128)		Name of the task
EXECUTION_NAME	VARCHAR2(128)		The name of the task execution with which this entry (row) is associated
MESSAGE	VARCHAR2(4000)		Message associated with the inference

5.200 DBA_AUTO_MV_VERIFICATION_STATUS

DBA_AUTO_MV_VERIFICATION_STATUS displays the status of verifications associated with automatic materialized views.

Column	Datatype	NULL	Description
TASK_NAME	VARCHAR2(128)		Name of the task
EXECUTION_NAME	VARCHAR2(128)	NOT NULL	The name of the task execution with which this entry (row) is associated
STS_NAME_FOR_SRS	VARCHAR2(256)		Name of the SQL tuning set used for simple random sampling
STS_OWNER_NAME_FOR_SRS	CHAR(3)		Owner of the SQL tuning set used for simple random sampling
SPA_TASK_NAME_FOR_SRS	VARCHAR2(256)		Name of the SQL Performance Analyzer task used for simple random sampling
SPA_OWNER_NAME_FOR_SRS	CHAR(3)		Owner of the SQL Performance Analyzer task used for simple random sampling
STS_NAME_FOR_VERIFICATION	VARCHAR2(256)		Name of the SQL tuning set used for verification on sampled queries
STS_OWNER_NAME_FOR_VERIFICATION	CHAR(3)		Owner of the SQL tuning set used for verification on sampled queries
SPA_TASK_NAME_FOR_VERIFICATION	VARCHAR2(256)		Name of the SQL Performance Analyzer task used for for verification on sampled queries
SPA_OWNER_NAME_FOR_VERIFICATION	CHAR(3)		Owner of the SQL Performance Analyzer task used for for verification on sampled queries
START_TIME	TIMESTAMP(6)		Date and time the verification started
END_TIME	TIMESTAMP(6)		Date and time the verification ended
STATUS	VARCHAR2(128)		Verification status

5.201 DBA_AUTO_SEGADV_CTL

DBA_AUTO_SEGADV_CTL exposes the control information used by the segment advisor.

This information gives the DBA an idea of what is happening in the auto advisor.

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
AUTO_TASKID	NUMBER		Unique task ID generated by the auto advisor
TABLESPACE_NAME	VARCHAR2(30)		Name of the tablespace containing the segment
SEGMENT_OWNER	VARCHAR2(128)		Owner of the segment
SEGMENT_NAME	VARCHAR2(128)		Name of the segment
SEGMENT_TYPE	VARCHAR2(18)		The type of segment (TABLE, INDEX, and so on)
PARTITION_NAME	VARCHAR2(128)		Name of the subsegment (if partitioned)
STATUS	VARCHAR2(40)		Status of the analysis: • NEW - the segment/tablespace has not been analyzed • BEING-PROCESSED - the segment/tablespace is being processed • COMPLETE - the segment/tablespace has been analyzed • ERROR - problem with the segment/tablespace
REASON	VARCHAR2(40)		Reason why this segment was chosen
REASON_VALUE	NUMBER		A value associated with the reason
CREATION_TIME	TIMESTAMP(6)		Time when this entry was created
PROCESSED_TASKID	NUMBER		Auto advisor task that was used to process the segment/tablespace
END_TIME	TIMESTAMP(6)		Time at which the advisor task was completed

5.202 DBA_AUTO_SEGADV_SUMMARY

DBA_AUTO_SEGADV_SUMMARY provides a summary of the auto advisor task runs.

Column	Datatype	NULL	Description
AUTO_TASKID	NUMBER	NOT NULL	Unique auto task ID
SNAPID	NUMBER		Maximum AWR snapid used to process the segments
SEGMENTS_SELECTED	NUMBER		Number of segments chosen for analysis
SEGMENTS_PROCESSED	NUMBER		Number of segments actually processed
TABLESPACE_SELECTED	NUMBER		Number of tablespaces chosen for analysis
TABLESPACE_PROCESSED	NUMBER		Number of tablespaces actually processed
RECOMMENDATIONS_COUNT	NUMBER		Number of recommendations generated
START_TIME	TIMESTAMP(6)		Time at which the auto task was started
END_TIME	TIMESTAMP(6)		Time at which the auto task ended

5.203 DBA_AUTO_STAT_EXECUTIONS

DBA_AUTO_STAT_EXECUTIONS displays information about automatic optimizer statistics collection tasks, which are executed by the automated maintenance tasks infrastructure (known as AutoTask).

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
OPID	NUMBER		Unique identifier for the execution of the task
ORIGIN	VARCHAR2(19)		Origin of the execution of the task. Possible values: • AUTO_TASK: A standard automatic optimizer statistics collection task, which is executed automatically in an Oracle Scheduler window, known as maintenance window • HIGH_FREQ_AUTO_TASK: A high-frequency automatic optimizer statistics collection task, which is executed at frequent intervals and complements the standard automatic optimizer statistics collection tasks
STATUS	VARCHAR2(49)		Status of the execution of the task. Possible values: • IN PROGRESS: The operation is currently running • COMPLETED: The operation has completed successfully • FAILED: The operation has failed • TIMED OUT: The operation timed out because the time allocated for the maintenance window was not sufficient for the operation to complete
START_TIME	TIMESTAMP(6) WITH TIME ZONE		Start time for the execution of the task
END_TIME	TIMESTAMP(6) WITH TIME ZONE		End time for the execution of the task
COMPLETED	NUMBER		Number of objects for which statistics collection was completed during the execution of the task
FAILED	NUMBER		Number of objects for which statistics collection failed during the execution of the task
TIMED_OUT	NUMBER		Number of objects for which statistics collection timed out during the execution of the task
IN_PROGRESS	NUMBER		Number of objects for which statistics collection is in progress during the execution of the task

5.204 DBA_AUTO_STAT_OBJ_GATHER_DETAILS

DBA_AUTO_STAT_OBJ_GATHER_DETAILS displays statistics gathering information on objects in their most recent active high frequency or auto statistics job run.

Column	Datatype	NULL	Description
TARGET	VARCHAR2(392)		Name of the target for statistics gathering, in the following form: *OWNER.OBJECT*[*.PART_SUBPART*] Where: • OWNER is the object owner • OBJECT is the name of the index or table • PART_SUBPART is the name of the partition or subpartition, when applicable
TARGET_OBJN	NUMBER		Target object number

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
TARGET_TYPE	VARCHAR2(40)		Target type: • INDEX • INDEX PARTITION • INDEX SUBPARTITION • TABLE • TABLE PARTITION • TABLE SUBPARTITION
TARGET_SIZE	NUMBER		Target size, in number of blocks
START_TIME	TIMESTAMP(6) WITH TIME ZONE		Start time of the most recent statistics gathering
END_TIME	TIMESTAMP(6) WITH TIME ZONE		End time of the most recent statistics gathering
STATUS	VARCHAR2(23)		Statistics gathering status: • COMPLETED - The object successfully completed its most recent statistics gathering • FAILED - The object failed during its most recent statistics gathering • IN PROGRESS - There is an active high frequency or auto statistics job window and the object is currently under statistics gathering • PENDING - There is an active high frequency or auto statistics job window and the object is determined to be a target for statistics gathering, but statistics gathering has not yet started in this window • SKIPPED - The object skipped its most recent statistics gathering • TIMED OUT - The object timed out during its most recent statistics gathering • TIMED OUT BEFORE START - Object was in the PENDING state when the task timed out
REASON_TO_GATHER	VARCHAR2(230)		Reason the object was chosen for statistics gathering in the most recent active high frequency or auto statistics job window
CONSECUTIVE_TIME_OUTS	NUMBER		Number of times the object has consecutively timed out in its most recent runs This value is capped at 7, which means the object has timed out consecutively 7 times or more.
FLAGS	NUMBER		Reserved for internal use
NOTES	VARCHAR2(4000)		Special notes for the most recent statistics gathering For example, the parameters used to gather statistics on the object, the reason an object was skipped, or the error message for an object that has errored out.

Note

This view is available starting with Oracle AI Database 26ai, Release Update 23.7.

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.205 DBA_AUTO_ZONEMAP_CONFIG

DBA_AUTO_ZONEMAP_CONFIG describes the current settings for automatic zone map configuration parameters.

Column	Datatype	NULL	Description
PARAMETER_NAME	VARCHAR2(128)	NOT NULL	Parameter name
PARAMETER_VALUE	VARCHAR2(4000)		Parameter value
LAST_UPDATED	TIMESTAMP(6)		Time at which the parameter value was last updated
UPDATED_BY	VARCHAR2(128)		User who last updated the parameter value
DESCRIPTION	VARCHAR2(71)		Brief description of the parameter

5.206 DBA_AUTOTASK_CLIENT

DBA_AUTOTASK_CLIENT displays statistical data for each automated maintenance task over 7-day and 30-day periods.

Column	Datatype	NULL	Description
CLIENT_NAME	VARCHAR2(64)		Name of the client
STATUS	VARCHAR2(8)		Job status: • ENABLED • DISABLED
CONSUMER_GROUP	VARCHAR2(128)		Consumer group used for normal priority jobs for this client
CLIENT_TAG	VARCHAR2(2)		Tag used to identify jobs for this client
PRIORITY_OVERRIDE	VARCHAR2(7)		User-specified priority at which the task executes: • URGENT • HIGH • MEDIUM • LOW
ATTRIBUTES	VARCHAR2(4000)		Attributes of the client
WINDOW_GROUP	VARCHAR2(64)		Window group used to schedule jobs
SERVICE_NAME	VARCHAR2(64)		Name of the service on which jobs will execute for the client
RESOURCE_PERCENTAGE	NUMBER		Percentage of maintenance resources for high priority maintenance tasks for this client
USE_RESOURCE_ESTIMATES	VARCHAR2(5)		Indicates whether resource estimates are used for this client (TRUE) or not (FALSE)
MEAN_JOB_DURATION	INTERVAL DAY(9) TO SECOND(9)		Average elapsed time for a job for this client (in seconds)
MEAN_JOB_CPU	INTERVAL DAY(9) TO SECOND(9)		Average CPU time for a job submitted by this client (in seconds)
MEAN_JOB_ATTEMPTS	NUMBER		Average number of attempts it takes to complete a task
MEAN_INCOMING_TASKS_7_DAYS	NUMBER		Average number of incoming tasks at the Maintenance Window Start over the last 7 days

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
MEAN_INCOMING_TASKS_30_DAYS	NUMBER		Average number of incoming tasks at the Maintenance Window Start over the last 30 days
TOTAL_CPU_LAST_7_DAYS	INTERVAL DAY(9) TO SECOND(9)		Cumulative CPU time used by the jobs for this client over the last 7 days (in seconds)
TOTAL_CPU_LAST_30_DAYS	INTERVAL DAY(9) TO SECOND(9)		Cumulative CPU time used by the jobs for this client over the last 30 days (in seconds)
MAX_DURATION_LAST_7_DAYS	INTERVAL DAY(3) TO SECOND(0)		Maximum elapsed time for a job over the last 7 days (in seconds)
MAX_DURATION_LAST_30_DAYS	INTERVAL DAY(3) TO SECOND(0)		Maximum elapsed time for a job over the last 30 days (in seconds)
WINDOW_DURATION_LAST_7_DAYS	INTERVAL DAY(9) TO SECOND(9)		Total time during which the client was active during the last 7 days
WINDOW_DURATION_LAST_30_DAYS	INTERVAL DAY(9) TO SECOND(9)		Total time during which the client was active during the last 30 days
LAST_CHANGE	TIMESTAMP(6) WITH TIME ZONE		Timestamp of last configuration change for the client
AUTOTASK_STATUS	VARCHAR2(8)		Status of the automated maintenance task subsystem: • ENABLED • DISABLED • ALLOWED

5.207 DBA_AUTOTASK_CLIENT_HISTORY

DBA_AUTOTASK_CLIENT_HISTORY displays per-window history of job execution counts for each automated maintenance task.

This information is viewable in the Job History page of Enterprise Manager.

Column	Datatype	NULL	Description
CLIENT_NAME	VARCHAR2(64)		Name of the client
WINDOW_NAME	VARCHAR2(261)		Name of the maintenance window
WINDOW_START_TIME	TIMESTAMP(6) WITH TIME ZONE		Maintenance window start time
WINDOW_DURATION	INTERVAL DAY(9) TO SECOND(6)		Window duration (NULL for currently open window)
JOBS_CREATED	NUMBER		Number of jobs created on behalf of the client in this window
JOBS_STARTED	NUMBER		Number of jobs started on behalf of the client during the maintenance window
JOBS_COMPLETED	NUMBER		Number of jobs successfully completed on behalf of the client during the maintenance window
WINDOW_END_TIME	TIMESTAMP(6) WITH TIME ZONE		Window end time

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.208 DBA_AUTOTASK_CLIENT_JOB

DBA_AUTOTASK_CLIENT_JOB displays information about currently running Scheduler jobs created for automated maintenance tasks.

DBA_AUTOTASK_CLIENT_JOB provides information about some objects targeted by those jobs, as well as some additional statistics from previous instantiations of the same task. Some of this additional data is taken from generic Scheduler views.

Column	Datatype	NULL	Description
CLIENT_NAME	VARCHAR2(64)		Name of the client
JOB_NAME	VARCHAR2(65)		Name of the job
JOB_SCHEDULER_STATUS	VARCHAR2(15)		Job status: • DISABLED • RETRY SCHEDULED • SCHEDULED • RUNNING • COMPLETED • BROKEN • FAILED • REMOTE • SUCCEEDED • CHAIN_STALLED
TASK_NAME	VARCHAR2(64)		Name of the task being performed
TASK_TARGET_TYPE	VARCHAR2(64)		Type of the target being processed
TASK_TARGET_NAME	VARCHAR2(513)	NOT NULL	Name of the target
TASK_PRIORITY	VARCHAR2(7)		Priority of the task: • URGENT • HIGH • MEDIUM • LOW
TASK_OPERATION	VARCHAR2(64)		Operation performed on the object

5.209 DBA_AUTOTASK_JOB_HISTORY

DBA_AUTOTASK_JOB_HISTORY displays the history of automated maintenance task job runs. Jobs are added to this view after they finish executing.

Column	Datatype	NULL	Description
CLIENT_NAME	VARCHAR2(64)		Name of the automated maintenance client
WINDOW_NAME	VARCHAR2(261)		Name of the maintenance window
WINDOW_START_TIME	TIMESTAMP(6) WITH TIME ZONE		Start time of the maintenance window
WINDOW_DURATION	INTERVAL DAY(9) TO SECOND(6)		Duration of the maintenance window
JOB_NAME	VARCHAR2(261)		Name of the maintenance job
JOB_STATUS	VARCHAR2(30)		Status of the maintenance job

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
JOB_START_TIME	TIMESTAMP(6) WITH TIME ZONE		Start time of the maintenance job
JOB_DURATION	INTERVAL DAY(3) TO SECOND(0)		Duration of the maintenance job
JOB_ERROR	NUMBER		Error code for the job (if any)
JOB_INFO	VARCHAR2(4000)		Additional information about the job

5.210 DBA_AUTOTASK_OPERATION

DBA_AUTOTASK_OPERATION displays all automated maintenance task operations for each client.

Column	Datatype	NULL	Description
CLIENT_NAME	VARCHAR2(64)		Name of the client
OPERATION_NAME	VARCHAR2(64)		Name of the operation
OPERATION_TAG	VARCHAR2(3)		Tag for the operation
PRIORITY_OVERRIDE	VARCHAR2(7)		User-specified priority at which the task executes: • URGENT • HIGH • MEDIUM • LOW
ATTRIBUTES	VARCHAR2(4000)		Attributes of the operation
USE_RESOURCE_ESTIMATES	VARCHAR2(5)		Indicates whether resource usage estimates are used for the operation (TRUE) or not (FALSE)
STATUS	VARCHAR2(8)		Job status: • ENABLED • DISABLED
LAST_CHANGE	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the last change

5.211 DBA_AUTOTASK_SCHEDULE

DBA_AUTOTASK_SCHEDULE displays the schedule of maintenance windows for the next 32 days for each client.

Column	Datatype	NULL	Description
WINDOW_NAME	VARCHAR2(128)		Name of the maintenance window
START_TIME	TIMESTAMP(6) WITH TIME ZONE		Projected start time of the window
DURATION	INTERVAL DAY(3) TO SECOND(0)		Currently defined duration of the window (NULL for the currently open window)

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.212 DBA_AUTOTASK_SCHEDULE_CONTROL

DBA_AUTOTASK_SCHEDULE_CONTROL displays the status of automated tasks.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Identifier of the database used by the task
TASK_ID	NUMBER	NOT NULL	Identifier of the task
INSTANCE_NUMBER	NUMBER		Instance number for the task
TASK_NAME	VARCHAR2(64)		Name of the task
STATUS	VARCHAR2(10)		Status of the task Possible values: • FAILED • RUNNING • SCHEDULED • SKIPPED • SUCCEEDED • TERMINATED
INTERVAL	NUMBER		The time interval between task invocations (in seconds)
MAX_RUN_TIME	NUMBER		Maximum run time allowed for the task before it is stopped (in seconds)
ELAPSED_TIME	NUMBER		Elapsed time of the last execution (in seconds)
LAST_SCHEDULE_TIME	TIMESTAMP(3) WITH TIME ZONE		Last time the task was scheduled to execute
LAST_EXEC_INSTNUM	NUMBER		Oracle RAC instance number for the database instance used for the last execution of the task
SUSPENDABLE_EPOCH_TIME	NUMBER		Time when the task will be released from suspension and resume being scheduled The time is displayed in UNIX epoch time format.
ENABLED	VARCHAR2(5)		Indicates whether the task is enabled (TRUE) or not (FALSE)

5.213 DBA_AUTOTASK_SETTINGS

DBA_AUTOTASK_SETTINGS displays the settings for automated tasks.

Column	Datatype	NULL	Description
DBID	NUMBER	NOT NULL	Identifier of the database used by the task
TASK_ID	NUMBER	NOT NULL	Identifier of the task
TASK_NAME	VARCHAR2(64)		Name of the task
INTERVAL	NUMBER		The time interval between task invocations (in seconds)
MAX_RUN_TIME	NUMBER		Maximum run time allowed for the task before it is stopped (in seconds)
ENABLED	VARCHAR2(5)		Indicates whether the task is enabled (TRUE) or not (FALSE)

Copyright © 2002, 2025, Oracle and/or its affiliates.

5.214 DBA_AUTOTASK_STATUS

DBA_AUTOTASK_STATUS displays status information for automated maintenance.

Column	Datatype	NULL	Description
STATUS	VARCHAR2(8)		Shows the status of automated maintenance. Possible values are: • ENABLED • DISABLED • ALLOWED • INVALID
LAST_CHANGE	TIMESTAMP(6) WITH TIME ZONE		Timestamp of last status change

5.215 DBA_AUTOTASK_TASK

DBA_AUTOTASK_TASK displays information about current and past automated maintenance tasks.

Column	Datatype	NULL	Description
CLIENT_NAME	VARCHAR2(64)		Name of the client
TASK_NAME	VARCHAR2(64)		Name of the task being performed
TASK_TARGET_TYPE	VARCHAR2(64)		Target type of the task
TASK_TARGET_NAME	VARCHAR2(513)	NOT NULL	Name of the target
OPERATION_NAME	VARCHAR2(64)		Operation performed on the object
ATTRIBUTES	VARCHAR2(4000)		Attributes of the task
TASK_PRIORITY	NUMBER		Task priority, relative to other tasks for this Client
PRIORITY_OVERRIDE	NUMBER		Task priority as overridden by the user
STATUS	VARCHAR2(8)		Status of the task: • DISABLED • DEFERRED • ENABLED
DEFERRED_WINDOW_NAME	VARCHAR2(65)		Appropriate window for this task
CURRENT_JOB_NAME	VARCHAR2(65)		Name of the currently scheduled job, if any
JOB_SCHEDULER_STATUS	VARCHAR2(15)		Job status: • DISABLED • RETRY SCHEDULED • SCHEDULED • RUNNING • COMPLETED • BROKEN • FAILED • REMOTE • SUCCEEDED • CHAIN_STALLED

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
ESTIMATE_TYPE	VARCHAR2(7)		Type of resource estimates applied: • DERIVED • FORCED • LOCKED
ESTIMATED_WEIGHT	NUMBER		Task weight indicator
ESTIMATED_DURATION	NUMBER		Estimated elapsed time for the job (in seconds)
ESTIMATED_CPU_TIME	NUMBER		Estimated CPU time for the job (in seconds)
ESTIMATED_TEMP	NUMBER		Estimated temporary space usage for the job (in KB)
ESTIMATED_DOP	NUMBER		Estimated degree of parallelism for the job
ESTIMATED_IO_RATE	NUMBER		Estimated I/O utilization for the job (in KB per second)
ESTIMATED_UNDO_RATE	NUMBER		Estimated UNDO generation rate for the job (in KB per second)
RETRY_COUNT	NUMBER		Number of attempts to perform this task since the last successful attempt
LAST_GOOD_DATE	TIMESTAMP(6) WITH TIME ZONE		Timestamp of the last successful attempt to perform this task
LAST_GOOD_PRIORITY	NUMBER		Job priority of the last successful attempt to perform this task
LAST_GOOD_DURATION	NUMBER		Elapsed time (in seconds) of the last successful attempt to perform this task
LAST_GOOD_CPU_TIME	NUMBER		CPU time for the job (in seconds) of the last successful attempt to perform this task
LAST_GOOD_TEMP	NUMBER		Temporary space usage for the job (in KB) of the last successful attempt to perform this task
LAST_GOOD_DOP	NUMBER		Peak degree of parallelism for the job during the last successful attempt to perform this task
LAST_GOOD_IO_RATE	NUMBER		I/O utilization rate for the job (in KB per second) of the last successful attempt to perform this task
LAST_GOOD_UNDO_RATE	NUMBER		NDO generation rate (in KB per second) of the last successful attempt to perform this task
LAST_GOOD_CPU_WAIT	NUMBER		Resource Manager wait time (in seconds) of the last successful attempt to perform this task
LAST_GOOD_IO_WAIT	NUMBER		Resource Manager wait time (in seconds) of the last successful attempt to perform this task
LAST_GOOD_UNDO_WAIT	NUMBER		Resource Manager wait time (in seconds) of the last successful attempt to perform this task
LAST_GOOD_TEMP_WAIT	NUMBER		Resource Manager wait time (in seconds) of the last successful attempt to perform this task
LAST_GOOD_CONCURRENCY	NUMBER		Concurrency wait time (in seconds) of the last successful attempt to perform this task
LAST_GOOD_CONTENTION	NUMBER		Contention wait time (in seconds) of the last successful attempt to perform this task
NEXT_TRY_DATE	TIMESTAMP(6) WITH TIME ZONE		Next projected start time for the deferred maintenance window
LAST_TRY_DATE	TIMESTAMP(6) WITH TIME ZONE		Time at which the task was last attempted

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
LAST_TRY_PRIORITY	NUMBER		Task priority at the time of the last attempt
LAST_TRY_RESULT	VARCHAR2(36)		Result code of the last execution of the task: • SUCCEEDED • FAILED • STOPPED BY USER ACTION • STOPPED AT END OF MAINTENANCE WINDOW • STOPPED AT INSTANCE SHUTDOWN • STOPPED
LAST_TRY_DURATION	NUMBER		Elapsed time of the last run (in seconds)
LAST_TRY_CPU_TIME	NUMBER		CPU time during the last run (in seconds)
LAST_TRY_TEMP	NUMBER		Temporary space usage for the job (in KB) for the last run
LAST_TRY_DOP	NUMBER		Peak degree of parallelism for the job during the last run
LAST_TRY_IO_RATE	NUMBER		I/O rate during the last run (in seconds)
LAST_TRY_UNDO_RATE	NUMBER		UNDO generation rate during the last run (in seconds)
LAST_TRY_CPU_WAIT	NUMBER		Time spent waiting for CPU during the last run (in seconds)
LAST_TRY_IO_WAIT	NUMBER		Time spent waiting for I/O during the last run (in seconds)
LAST_TRY_UNDO_WAIT	NUMBER		Time spent waiting for UNDO during the last run (in seconds)
LAST_TRY_TEMP_WAIT	NUMBER		Time spent waiting for temporary space during the last run (in seconds)
LAST_TRY_CONCURRENCY	NUMBER		Concurrency wait time during the last run (in seconds)
LAST_TRY_CONTENTION	NUMBER		Contention wait time during the last run (in seconds)
MEAN_GOOD_DURATION	NUMBER		Average elapsed time for successful executions of this task (in seconds)
MEAN_GOOD_CPU_TIME	NUMBER		Average CPU time for successful executions of this task (in seconds)
MEAN_GOOD_TEMP	NUMBER		Average temporary space usage for successful executions of this task (in KB)
MEAN_GOOD_DOP	NUMBER		Average peak degree of parallelism for successful executions of this task
MEAN_GOOD_IO	NUMBER		Average I/O utilization for successful executions of this task (in KB per second)
MEAN_GOOD_UNDO	NUMBER		Average UNDO generation rate for this task (in KB per second)
MEAN_GOOD_CPU_WAIT	NUMBER		Average time waiting for CPU for successful executions of this task (in seconds)
MEAN_GOOD_IO_WAIT	NUMBER		Average time waiting for I/O for successful executions of this task (in seconds)
MEAN_GOOD_UNDO_WAIT	NUMBER		Average time waiting for UNDO for successful executions of this task (in seconds)
MEAN_GOOD_TEMP_WAIT	NUMBER		Average time waiting for temporary space for successful executions of this task (in seconds)

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
MEAN_GOOD_CONCURRENCY	NUMBER		Average concurrency wait time for successful executions of this task (in seconds)
MEAN_GOOD_CONTENTION	NUMBER		Average contention wait time for successful executions of this task (in seconds)
INFO_FIELD_1	VARCHAR2(4000)		Client-interpreted information
INFO_FIELD_2	CLOB		Client-interpreted information
INFO_FIELD_3	NUMBER		Client-interpreted information
INFO_FIELD_4	NUMBER		Client-interpreted information

5.216 DBA_AUTOTASK_WINDOW_CLIENTS

DBA_AUTOTASK_WINDOW_CLIENTS displays the windows that belong to MAINTENANCE_WINDOW_GROUP, along with the Enabled or Disabled status for the window for each maintenance task.

DBA_AUTOTASK_WINDOW_CLIENTS is primarily used by Enterprise Manager.

Column	Datatype	NULL	Description
WINDOW_NAME	VARCHAR2(128)	NOT NULL	Name of the maintenance window
WINDOW_NEXT_TIME	TIMESTAMP(6) WITH TIME ZONE		Next scheduled window open time unless the window is disabled
WINDOW_ACTIVE	VARCHAR2(5)		Indicates whether the window is currently active (open) (TRUE) or not (FALSE)
AUTOTASK_STATUS	VARCHAR2(8)		Status of the automated maintenance task subsystem: • ENABLED • DISABLED
OPTIMIZER_STATS	VARCHAR2(8)		Status of optimizer statistics gathering: • ENABLED • DISABLED
SEGMENT_ADVISOR	VARCHAR2(8)		Status of Segment Advisor: • ENABLED • DISABLED
SQL_TUNE_ADVISOR	VARCHAR2(8)		Status of SQL Tuning Advisor: • ENABLED • DISABLED

5.217 DBA_AUTOTASK_WINDOW_HISTORY

DBA_AUTOTASK_WINDOW_HISTORY displays historical information for automated maintenance task windows.

Column	Datatype	NULL	Description
WINDOW_NAME	VARCHAR2(261)		Name of the maintenance window
WINDOW_START_TIME	TIMESTAMP(6) WITH TIME ZONE		Window start time

Copyright © 2002, 2025, Oracle and/or its affiliates.

Column	Datatype	NULL	Description
WINDOW_END_TIME	TIMESTAMP(6) WITH TIME ZONE		Window end time

5.218 DBA_AVTUNE_ARCHIVE_CACHE_LEVELS
