# Oracle® Communications Cloud Native Core, Certificate Management User Guide

Oracle Communications Cloud Native Core, Certificate Management User Guide, Release 25.1.200

G29081-01

Copyright © 2023, 2025, Oracle and/or its affiliates.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

## **Preface**

- <u>Documentation Accessibility</u>
- Diversity and Inclusion
- Conventions

# **Documentation Accessibility**

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <a href="http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc">http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc</a>.

#### **Access to Oracle Support**

Oracle customer access to and use of Oracle support services will be pursuant to the terms and conditions specified in their Oracle order for the applicable services.

# **Diversity and Inclusion**

Oracle is fully committed to diversity and inclusion. Oracle respects and values having a diverse workforce that increases thought leadership and innovation. As part of our initiative to build a more inclusive culture that positively impacts our employees, customers, and partners, we are working to remove insensitive terms from our products and documentation. We are also mindful of the necessity to maintain compatibility with our customers' existing technologies and the need to ensure continuity of service as Oracle's offerings and industry standards evolve. Because of these technical constraints, our effort to remove insensitive terms is ongoing and will take time and external cooperation.

## Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
italic	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

# My Oracle Support

My Oracle Support (<a href="https://support.oracle.com">https://support.oracle.com</a>) is your initial point of contact for all product support and training needs. A representative at Customer Access Support can assist you with My Oracle Support registration.

Call the Customer Access Support main number at 1-800-223-1711 (toll-free in the US), or call the Oracle Support hotline for your local country from the list at <a href="http://www.oracle.com/us/support/contact/index.html">http://www.oracle.com/us/support/contact/index.html</a>. When calling, make the selections in the sequence shown below on the Support telephone menu:

- 1. Select 2 for New Service Request.
- 2. Select **3** for Hardware, Networking and Solaris Operating System Support.
- 3. Select one of the following options:
  - For Technical issues such as creating a new Service Request (SR), select 1.
  - For Non-technical issues such as registration or assistance with My Oracle Support, select **2**.

You are connected to a live agent who can assist you with My Oracle Support registration and opening a support ticket.

My Oracle Support is available 24 hours a day, 7 days a week, 365 days a year.

# Acronyms

The following table lists the acronyms and the terminologies used in the document:

## Table Acronyms

Acronym	Description
3GPP	3rd Generation Partnership Project
API	Application Programming Interface
CCA	Client Credentials Assertions
СМР	Certificate Management Protocol
CNC	Cloud Native Core
CNC Console	Cloud Native Configuration Console
ОССМ	Oracle Communications Certificate Management
CA	Certification Authority is a trusted entity that issues Secure Sockets Layer (SSL) certificates. CAs are also called issuer in this document.
DNS	Domain Name Server
EE	End Entity
ECC	Elliptic Curve Cryptography
HSM	Hardware Security Module
IDP	Identity Provider
IR	Initialization Requests
PKI	Public Key Infrastructure
PoP	Proof of Possession
RA	Registration Authority
RSA	Rivest-Shamir-Adleman
SAN	Subject Alternative Name
URI	Uniform Resource Indicator
URN	Uniform Resource Name
CMP Identity Key	Private Key used by Certificate Management to sign the CMPv2 requests and establish trust between Certificate Management and CA.
CMP Identity Certificate	Certificate that corresponds to and certifies the CMP Identity Key. It is included in the CMPv2 requests for authentication by CA.

# What's New in This Guide

This section introduces the documentation updates for release 25.1.2xx.

Release 25.1.200 - G29081-01, June 2025

- Feature Updates:
   Updating Certificate Configurations
  - Added the <u>Updating Certificate Configurations</u> section to describe the feature.
  - Added the <u>Updating Certificates Sample Configuration</u> section to give an example of how to update certificates.
  - Added the <u>Recreating Certificates</u> section to add information on demand re-issuance of certificate using certificate recreate functionality.

## Introduction

Oracle Communications Cloud Native core, Certificate Management (OCCM) is an automated solution for managing the certificates needed for Oracle 5G Network Functions (NFs). OCCM constantly monitors and renews the certificates based on their validity or expiry period.

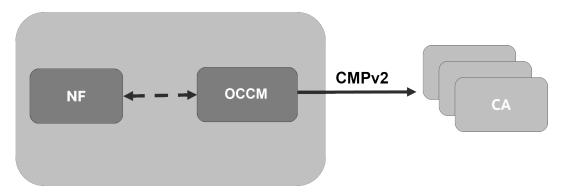

As 3GPP recommends using separate certificates based on the client or server mode and the type of workflow, it leads to many certificates in the network. Automated certificate management eliminates any possibilities of network disruption due to expired certificates. In SBA network deployments, the Network Functions (NFs) are required to support multiple operator certificates for different purposes and interfaces. This amounts to hundreds of certificates in the network with varying validity periods and unwieldy to monitor and renew the certificates manually. Hence, automation of certificate management becomes important to avoid network disruptions due to expired certificates.

## 1.1 Overview

OCCM integrates with the Certificate Authority(s) using Certificate Management Protocol Version 2 (CMPv2) and RFC4210 to facilitate these certificate management operations:

- Operator-initiated certificate creation
- Operator-initiated certificate recreation
- Automatic certificate monitoring and renewal

Figure 1-1 OCCM Integration with CA

OCCM supports transport of CMPv2 messages using HTTP-based protocol.

OCCM provides the following mechanisms to establish initial trust between OCCM and CA(s):

- 1. Certificate-based message signing
- 2. Pre-shared key or MAC based authentication

All the subsequent CMPv2 procedures are authenticated using the certificate-based mechanism in compliance with 3GPP TS 33.310.

The keys and X.509 certificates are managed using Kubernetes secrets.

## **OCCM Architecture**

OCCM is a Cloud Native application consisting of a single microservice. OCCM is packaged and delivered as a CSAR or Helm chart.

Figure 2-1 OCCM Architecture

## **Architecture Description**

OCCM is deployed as a single Kubernetes Pod and has a small resource footprint. The OCCM application uses a set of OpenSSL Certificate Management Protocol (CMP) CLI commands based on the provided configuration and the certificate management procedure that needs to be carried out at a point in time. The Output – Key and Certificate – is stored in configuration defined Kubernetes secret.

Operator provides the desired key and certificate configuration through Console. OCCM contacts the CA for certificate signing. After successful Certificate creation, OCCM writes the key and certificate in Kubernetes secrets.

### In the diagram above:

- 1. Operator provides the desired Key and Certificate configuration.
- OCCM contacts the CA for certificate signing.

3. OCCM writes the key and certificate in Kubernetes Secrets. Starts monitoring of the secret for modification or deletion.

OCCM provides the following deployment models to support certificate management for the integrated NF(s) instantiated within the same cluster:

- Dedicated deployment model OCCM resides in the same Kubernetes namespace as the NF or Components.
- Shared deployment model OCCM is deployed in a separate Kubernetes namespace and can manage certificates of multiple NFs or components deployed in other Kubernetes namespaces.

Appropriate permissions must be assigned to OCCM using Kubernetes Service Account, Role and Role Binding, based on the selected deployment model.

OCCM provides secret monitoring capabilities, which help the operator to monitor and manage previously created certificates. OCCM identifies and takes necessary action if certificates are modified or deleted manually, without experiencing loss of service.

Certificate monitoring is useful in the following scenarios:

- The certificate or the Kubernetes secret holding the certificate is deleted.
- The certificate is manually updated.

For more information, see "Monitoring Secrets for Manual Update or Delete" in the *Oracle Communications Cloud Native Configuration Console User Guide*.

# OCCM Supported Features

This section describes the features supported by Oracle Communications Cloud Native Core, Certificate Management (OCCM).

# 3.1 Integration with Certificate Authority

OCCM integrates with one or more Certificate Authorities (CAs) using the Certificate Management Protocol version 2 (CMPv2), as proposed by the 3GPP TS33.310. Operators have the flexibility to configure OCCM to integrate with a single CA or multiple CAs, depending on the layout of CA hierarchy deployed in the network. However, it is recommended that each intermediate CA manage multiple certificates of the same type.

The two CMPv2 procedures for different types of requests towards the CA used by OCCM are:

- Initialization procedure: CMPv2 Initialization Request (IR) is used for certificate create request.
- Key update procedure: CMPv2 Key Update Request (KUR) is used for certificate renewal request.

OCCM employs two modes to establish initial trust between the certificate management and CA:

- Using a pre-shared key
- Using a key and certificate

These options are available when the first request is made towards the CA. For all subsequent requests, OCCM uses the certificate based mechanism to sign the CMPv2 requests in compliance with 3GPP standards.

OCCM supports HTTP 1.0 and HTTP 1.1 versions. OCCM initiates the request using HTTP 1.0. If the CA supports HTTP 1.1 only, then OCCM shifts to using HTTP 1.1 version.

## 3.1.1 Establishing Initial Trust Between OCCM and CA

OCCM can be configured to establish trust between Oracle Communication Certificate (OCCM) and Certificate Authorities (CAs) by enabling PKI message protection in the following ways:

- MAC based trust establishment
- Certificate based trust establishment

## 3.1.1.1 MAC Based Trust Establishment

OCCM supports initial trust establishment with each of the configured CAs using the preconfigured pre-shared (MAC) key.

Certificate Operator NF CA x Manager Out-of-band/manual Procedure (1-2) 1) Set-up passcode/preshared Key using the Operator CAs interfaces 2) Configure Pre-shared Key, CA x Root certificate. 3) Certificate Enrolment(First Initialization) request, digitally signed using MAC based mechanism - Request for new CMP Identity Certificate. CMPv2 4) Verify using the preshared key, reference value 5) Enrolment Response digitally signed, includes CMP Identity certificate, CA certificate and CA certificate chain

Figure 3-1 MAC Based Trust Establishment

OCCM generates the key pair and requests for the CMP identity certificate for each of the configured CAs using the first Initialization Request. The first Initialization Request towards each of the CAs is signed using the preshared key. The CA authenticates the initialization request and signs the CMP identity certificate. OCCM can be configured to authenticate the responses of the first initializing procedure using the preshared (MAC) key. All subsequent requests are always signed using the CMP identity key and certificate.

## 3.1.1.2 Certificate Based Trust Establishment

OCCM supports initial trust establishment with CA using the preconfigured private key and x.509 certificate.

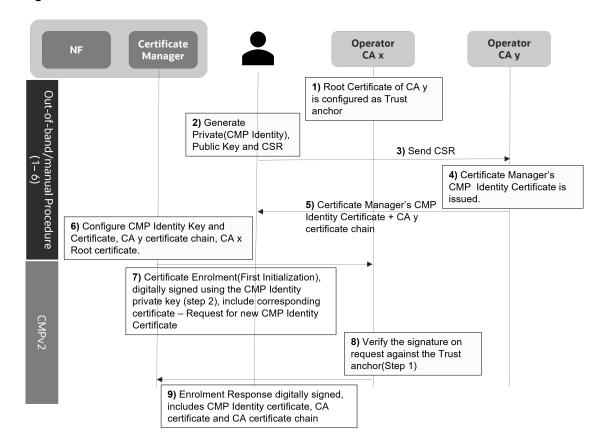

Figure 3-2 Certificate Based Trust Establishment

OCCM signs the first initialization request towards a CA using preconfigured key or certificate.

OCCM can be configured to:

- continue using the same key and certificate to sign the subsequent CMPv2 requests OR
- generate a new certificate using the first Initialization Request

In case OCCM uses the same key and certificate to sign the subsequent CMPv2 requests, OCCM requests for generation of the NF certificate in the first Initialization Request.

In case OCCM generates a new certificate using the first Initialization Request (IR), OCCM requests for generation of CMP identity certificate (OCCM certificate) in the first initialization request. End entity certificate (NF certificate) certificate generation is requested from next Initialization Request onwards.

The End Entity certificate initialization requests and the certificate confirms are digitally signed using the CMP Identity Key. OCCM supports Proof of Possession (PoP) in the initialization request. The PoP of the signing key contains the algorithm identifier and signature. This signature is based on the certificates template structure.

# 3.2 Support for HTTPs Encryption

#### **Managing HTTPs Encryption**

This feature enables you to encrypt the traffic between OCCM and CAs using HTTPs. HTTPs encryption at the transport layer adds an additional layer of security.

OCCM, as a HTTP Client, supports HTTPs connections with CAs using One-Way TLS when authenticating the identity if the CAs. OCCM manages a TrustStore (CA Bundle) to validate the certificates presented by the CAs in the certificate message of the TLS handshake procedure. You can either use the same CA Bundle configuration for all the configured CAs, or different CA Bundles as per your requirements.

OCCM validates the CA certificate as per the RFC 5280 standards, and the TLS handshake can get rejected if the certificate is invalid, or expired:

- Certificate Path validation
- Certificate expiry
- Certificate Strict checking

OCCM supports the following TLS configurations:

- Version TLSv1.2 and TLSv1.3 including support for version rollback to TLSv1.2 in case the CA does not support TLSv1.3
- OCCM acts as the HTTP(s) client while communicating with CA and all the relevant requirements apply.

#### **Configuring HTTPs Encryption**

The HTTPs functionality can be manually configured by the operator. The operator can:

- configure and manually update the CA Bundle used to validate the TLS handshake.
- enable and disable the strict checking of the X.509 certificates presented for HTTPs. This
  verifies if the certificates are RFC 5280 compliant.
- enable or disable the checking of X.509 certificate critical extensions.

# 3.3 Accessing OCCM from CNC Console

This section describes the procedure to access the OCCM cluster from the CNC Console GUI.

To access OCCM from CNC Console:

1. Log in to CNC Console using your login credentials.

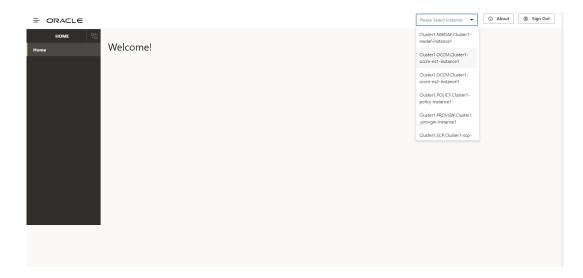

Figure 3-3 CNC Console Landing Page

2. From the **Select Instance** drop-down, select the **OCCM** Instance.

Figure 3-4 OCCM Instance

The OCCM menu appears on the left pane.

Figure 3-5 OCCM Configuration Options

# 3.4 Managing Issuers

Issuers, also called Certificate Authorities (CAs), are a trusted entity that issues X.509 certificates. OCCM supports the following aspects of issuer management:

- Pre-configuration for OCCM Bootstrapping
- Creating Issuers
- Updating Issuers
- Deleting Issuers

## 3.4.1 Pre-configuration for OCCM Bootstrapping

The following secrets can be pre-configured for OCCM bootstrapping:

MAC Secret: The MAC secret is a manually configured pre-shared key or password based MAC secret and reference. This is used by OCCM to sign the first initialization request. CA then validates the request and issues a signed OCCM certificate. For more information, see the 'Using the pre-shared key' section in OCCM Certificate Configuration Modes.
 To create the MAC Secret, run the following command:

kubectl create secret generic <k8s secret name> --from-literal=<mac secret
key>=<mac secret value> --from-literal=<reference key>=<reference value> n <namespace>

#### For example:

```
kubectl create secret generic cal-mac-secret --from-
literal=pwd='pass:****' --from-literal=ref='abcd' -n ns1
```

• CMP Identity Secret: The CMP Identity secret is a manually configured private key and certificate, using which OCCM certificate is requested from CA. This is used by OCCM to sign the first initialization request. CA then validates the request and issues a signed OCCM certificate. You can also use the same private key and certificate as OCCM certificate. For more information, see the 'Using the pre-configured private key and certificate' section in OCCM Certificate Configuration Modes.
To create the CMP Identity Key, run the following command:

kubectl create secret generic <k8s secret name> --from-file=<cmp key file
location> --from-file=<cmp cert file location> -n <namespace>

#### For example:

```
kubectl create secret generic cal-cmp-identity-secret --from-
file=cmpkey.pem --from-file=cmpcert.pem -n ns1
```

OCCM Trust Store Secret: The OCCM Trust Store secret holds OCCM trust store information (CA certificates), and is used as a trust anchor when validating the digital signature included in the CMP responses.

To create the OCCM Trust Store secret, run the following command:

kubectl create secret generic <k8s secret name> --from-file=<CA root cert
file location> --from-file=<Intermediate CA cert file location> --fromfile=<CMP server cert file location> -n <namespace>

## For example:

kubectl create secret generic cal-occm-trust-store-secret --fromfile=caroot.pem --from-file=intcacert.pem --from-file=servercert.pem -n ns1

**TLS Trust Store Secret:** If TLS is enabled for issuer, TLS Trust Store secret should be provided, else it should be skipped. It holds the CA certificates to be used as trust anchors

when authenticating the TLS server certificate. To create the TLS Trust Store secret, run the following command:

kubectl create secret generic <k8s secret name> --from-file=<CA cert file location> -n <namespace>

#### For example:

kubectl create secret generic cal-tls-trust-store-secret --fromfile=caroot1.pem -n ns1

#### HTTPS communication between OCCM and CA

OCCM supports HTTPS connections with CA using one-way TLS. To enable the same, the operator has to set enableTLS option in the issuer configuration to true and configure the HTTPS schemed server URL. TLS trust store has to be configured with trust anchors in order to authenticate the TLS server.

In order to enable or disable strict checking of the X.509 certificates presented for HTTPs, the following deployment time (helm) parameters can be configured.

- occmConfig.cmp.config.tls.enableX509StrictCheck: This field when set to true enables strict checking of the X.509 certificates presented for HTTPs. Errors are thrown for the certificates which are not compliant with RFC 5280.
- occmConfig.cmp.config.tls.ignoreCriticalExtensionsCheck: This field when set to true ignores checking of the critical extensions in X.509 certificates presented for HTTPs.

Normally, if an unhandled critical extension is present that is not supported by OpenSSL, the certificate is rejected in compliance with RFC 5280.

## (i) Note

This configuration will be applied only when TLS is enabled for an issuer.

## 3.4.2 Creating Issuer

Issuers are resources that represent CAs and are able to generate signed certificates. You can configure issuers through REST API or using the CNC Console GUI. The maximum number of issuers that can be supported at a time is 30.

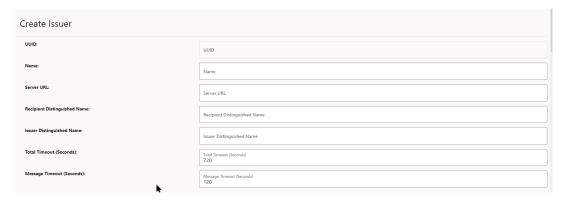

#### Configuring Issuer Using CNC Console GUI

To manually configure issuer using CNC Console GUI:

- Log in to CNC Console using your login credentials and select the OCCM Instance.
- Click **OCCM** from the left pane and then click **Issuer**.
- Click **Add**. The **Create Issuer** page appears.

Figure 3-6 Create Issuer

4. Enter the following information on the Create Issuer page:

Table 3-1 Create Issuer

Field Name	Description
Name	Name of the Issuer
Recipient Distinguished Name	Distinguished name(DN) of the CMP server (usually the addressed CA) used in the recipien field of CMP request message headers.
	The argument must be formatted as / type0=value0/type1=value1/type2=
	Special characters may be escaped by \ (backslash); whitespace is retained. Empty values are permitted, but the corresponding type will not be included. Giving a single / will lead to an empty sequence of RDNs (a NULL-DN).  Multi-valued RDNs can be formed by placing a character instead of a / between the AttributeValueAssertions (AVAs) that specify the members of the set. For example:
	/DC=org/DC=OpenSSL/DC=users/ UID=123456+CN=John Doe
Server URL	Domain URL of CA
Issuer Distinguished Name	X509 issuer Distinguished Name of the CA server to place in the requested certificate template in IR or KUR.
	The argument must be formatted as / type0=value0/type1=value1/type2=
	Special characters may be escaped by \ (backslash); whitespace is retained. Empty values are permitted, but the corresponding type will not be included. Giving a single / will lead to an empty sequence of RDNs (a NULL-DN). Multi-valued RDNs can be formed by placing a character instead of a / between the AttributeValueAssertions (AVAs) that specify the members of the set. For example:
	/DC=org/DC=OpenSSL/DC=users/ UID=123456+CN=John Doe
Total Timeout (Seconds)	The total time in seconds allowed for the CMP transaction to complete.

Table 3-1 (Cont.) Create Issuer

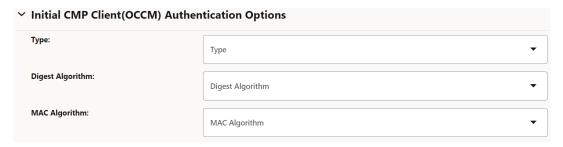

Field Name	Description
Message Timeout (Seconds)	The total time (in seconds) a CMP request- response message round trip is allowed to take.

5. Under Initial CMP Client(OCCM) Authentication Options, enter the following information:

**Table 3-2** Initial Authentication Options

Field Name	Possible Values
Туре	MAC, SIGNATURE For more information, see OCCM Certificate Configuration Modes.
Digest Algorithm	SHA256, SHA384, SHA512
MAC Algorithm	HMACSHA256, HMACSHA384, HMACSHA512

Figure 3-7 Initial CMP Client(OCCM) Authentication Options

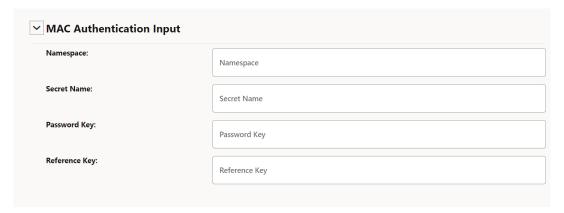

6. If you are using the password based MAC authentication mechanism, then under MAC Authentication Input, enter the following information:

**Table 3-3** MAC Authentication Input

Field Name	Description
Namespace	Name of the Kubernetes namespace.
Secret Name	Kubernetes secret name.
Password Key	Kubernetes secret data key against which MAC secret is provided.
Reference Key	Kubernetes secret data key against which reference string is provided.

Figure 3-8 MAC Authentication Input

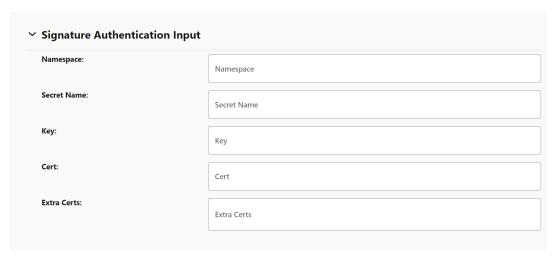

7. Under Signature Authentication Input, enter the following information:

**Table 3-4** Signature Authentication Input

Field Name	Description
Namespace	Name of the Kubernetes namespace.
Secret Name	A unique secret name.
Key	Kubernetes secret data key against which the pre-configured private key file (private key file for the client's current CMP signer certificate) is provided.
Cert	Kubernetes secret data key against which the pre-configured certificate (client's current CMP signer certificate) is provided.
Extra Certs	Extra Certificates, if any, for client authentication.

Figure 3-9 Signature Authentication Input

8. Under CMP Client Authentication Options For Other certificate, enter the following information:

Table 3-5 CMP Client Authentication Options For Other certificate

Field Name	Possible Values
Туре	SIGNATURE
Digest Algorithm	SHA256, SHA384, SHA512

Figure 3-10 CMP Client Authentication Options For Other certificate

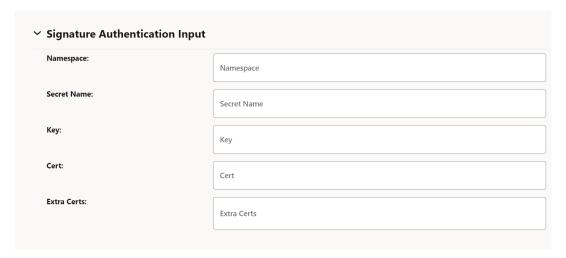

9. Under **Signature Authentication Input**, enter the following information:

**Table 3-6** Signature Authentication Input

Field Name	Description
Namespace	Name of the Kubernetes namespace
Secret Name	A unique secret name
Key	Kubernetes secret data key against which OCCM key is provided or created based on whether OCCM certificate is created in manual or automatic mode.
Cert	Kubernetes secret data key against which OCCM certificate is provided or created based on whether OCCM cert is created in manual or automatic mode.
Extra Certs	List of Kubernetes secret data keys against which the certificates to append in the extraCerts field can be provided or will be created (if received from CA) along with the OCCM certificate, based on whether OCCM cert is created in manual or automatic mode.

Figure 3-11 Signature Authentication Input

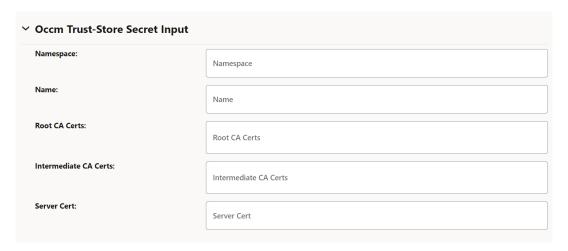

10. Under Occm Trust-Store Secret Input, enter the following information:

Table 3-7 Occm Trust-Store Secret Input

Field	Description
Namespace	Name of the Kubernetes namepace.
Name	Kubernetes secret which holds OCCM trust store information (CA certificates).
Root CA Certs	The certificate(s), typically of root CAs, the client uses as trust anchors when validating the certificate issued by CA.  Note: If server certificate is present, this is ignored.
Intermediate CA Certs	Any untrusted intermediate CA certificate(s) to use when validating newly enrolled certificates.
Server Cert	CMP server or CA server's certificate to expect and directly trust when validating the certificate issued by CA.  Note: If this is present, root CA certificates will be ignored.

Figure 3-12 Occm Trust-Store Secret Input

- 11. Enter either the root CA certificates and intermediate CA certificate, or the server certificate in the respective fields.
- **12.** Under TLS Configuration, enter the following information:

**Table 3-8 TLS Configuration** 

Field	Description
Enable TLS	When set to true, HTTPS connection to CA is made. Ensure that you select scheme as HTTPS in server URL if this is set to true.

Figure 3-13 TLS Configuration

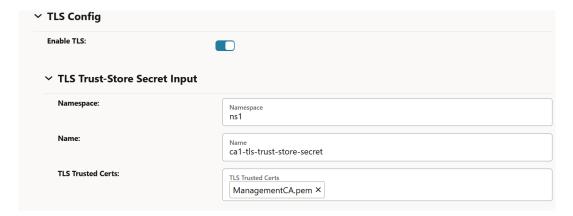

Table 3-9 TLS Trust-Store secret Input

Field	Description
Namespace	Kubernetets namespace where TLS trust store secret is present.
Name	Kubernetes secret which holds TLS trust store information (CA certificates).
TLS trusted Certs	Trusted certificate(s) to use for validating the TLS server certificate.

Figure 3-14 Enable TLS

13. Click Save.

## 3.4.3 Updating Issuer

The bulk certificate migration can be used to update the end point of the CA and Issuer by updating the field, such as server URL, recipient DN, and Issuer DN. As part of the bulk certificate migration, OCCM updates the link of all the certificate configurations previously linked to the Old CA to the new CA. The generated key pair and certificate overwrites the existing certificate. For more information, see <u>Bulk Migration of Certificates</u>.

You can update all the fields in Edit issuer if no certificate configuration is attached to it. However, if any certification configuration is mapped to the given issuer, only the HTTP scheme is updated (HTTP to HTTPS and vice versa). When the HTTP scheme is updated, the certificates that are created will not be impacted. The updated server endpoint is contacted for any further CMPv2 procedures performed after the update. The scheme (HTTP or HTTPS) will be effective.

To update the issuer:

- 1. Log in to CNC Console using your login credentials and select the OCCM Instance.
- 2. Click OCCM from the left pane and then click Issuer.

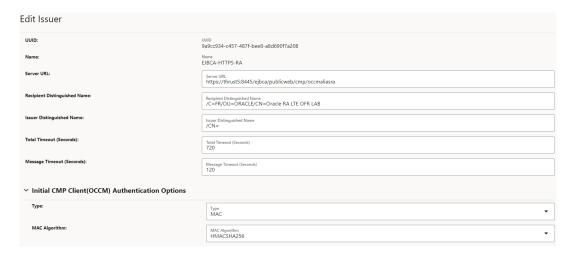

Figure 3-15 Issuer Page

Click the edit icon next to the issuer that you want to update. The Edit Issuer page appears.

Figure 3-16 Edit Issuer

4. Edit the fields that you need to update and then click Save.

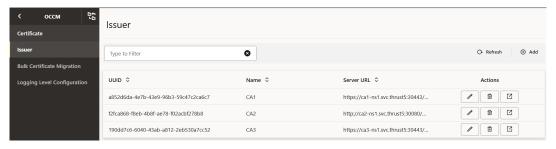

Issuer can't be edited if it is in use by any certificate.

## 3.4.4 Deleting Issuers

To delete issuers from CNC Console GUI:

- Log in to CNC Console using the login credentials, and select the OCCM Instance.
- 2. Click **OCCM** from the left pane and then click **Issuer**. All the available issuers are listed.

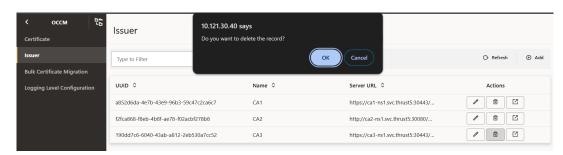

Figure 3-17 Issuer

Select the issuer to be deleted and click **Delete** and then click **OK** on the confirmation prompt to delete the issuer.

Figure 3-18 Delete Issuer

① Note

An issuer can only be deleted if there are no certificates referring to this issuer entry.

## 3.5 Managing Certificates

Once an issuer has been configured, an X.509 certificate can be requested. Each certificate configuration in OCCM is a certificate request. It specifies input fields that are used to generate a private key pair and a certificate signing request to obtain a signed certificate from the referenced issuer.

OCCM supports the following key aspects of certificate management:

- Creating CMP identity certificates (OCCM certificate)
- Creating end entity certificates (NF certificates)
- Updating Certificates
- Monitoring certificate expiry and renewing OCCM and NF certificates
- Polling for certificates
- · Deleting the certificate configuration

## 3.5.1 Creating CMP (OCCM) Identity Certificate

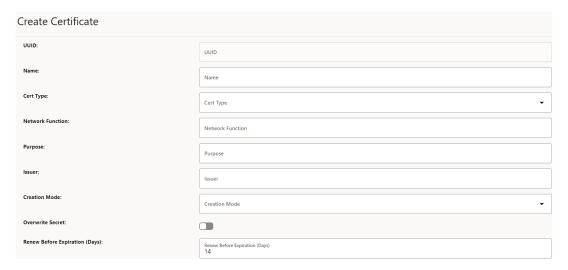

CMP identity certificate (OCCM certificate) is used by OCCM to identify itself to the external CA in CMPv2 messages.

To create a CMP identity certificate using CNC console:

- 1. Log in to CNC Console using your login credentials and select the OCCM Instance.
- 2. Click OCCM from the left pane and then click Certificate.
- 3. Click Add. The Create Certificate page appears.

Figure 3-19 Create CMP identity Certificate

4. Enter the following information:

Table 3-10 Create CMP identity Certificate

Field Name	Description and Possible Values
Name	Name of the certificate.
Cert Type	CMP (OCCM) Identity certificate
Network Function	OCCM
Purpose	Purpose of the OCCM certificate.
Issuer	Name of the issuer for the certificate.
Creation Mode	Possible values are MANUAL and AUTOMATIC. For more information, see OCCM Certificate Configuration Modes.

**5.** Under **Private Key Options**, enter the following information:

**Table 3-11 Private Key Options** 

Field Name	Possible Values
Key Algorithm	RSA, EC
Key Encoding	DER, PEM
Key Size	KEYSIZE_2048, KEYSIZE_4096
Elliptic Curve	SECP256r1, SECP384r1

Figure 3-20 Private Key Options

6. The **Private Key Output** section is auto populated from corresponding issuer after the certificate is saved. You can skip this section.

**Table 3-12 Private Key Output** 

Field Name	Description
Namespace	Name of the namespace.
Secret Name	Kubernetes Secret Name.
Key	Kubernetes secret key against which the keypair will be stored.

Figure 3-21 Private Key Output

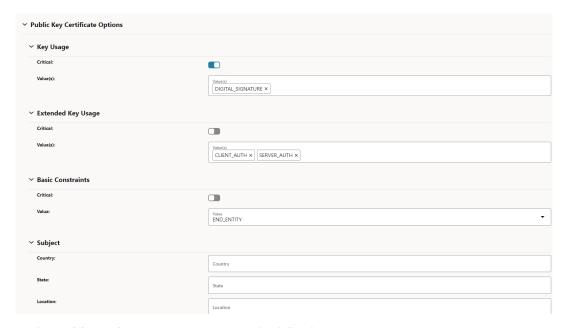

7. Under Public Key Certificate Options, enter the following:

**Table 3-13 Public Key Certificate Options** 

Field Name	Description
Key Usage	Value(s): DIGITAL_SIGNATURE
Extended Key Usage	Value(s): CLIENT_AUTH and SERVER_AUTH
Basic Constraints	Value(s): END_ENTITY
Subject	Country: Enter country code: State: Enter state code.
	Location: City or town where company is legally located.
	Organization: Name of your organization.
	Organisation Unit: Name of business unit.
	Common Name: The Common Name (CN) represents the server name to be protected by the certificate.
	Requested Validity (Days): Number of days requested for which the certificate will be valid.

Figure 3-22 Public Key Certificate Options

8. Under Subject Alternate Names, enter the following:

**Table 3-14 Subject Alternate Names** 

Field Name	Description
IP Address	The IPs you want to protect under this certificate.
DNS Names	List of DNS domain names.
URI ID API Roots	List of URI IDs.
URI ID URNs	List of URI IDs.

Figure 3-23 Subject Alternate Names

The Certificate Output section is auto populated from corresponding issuer after the certificate is saved. You can skip this section.

**Table 3-15 Certificate Output** 

	_
Field Name	Description
Namespace	Name of the namespace.
Secret Name	Name of the secret.

Table 3-15 (Cont.) Certificate Output

Field Name	Description
	The key against which the certificate will be populated.

Figure 3-24 Certificate Output

10. (Optional) Under Certificate Chain Output, enter the following:

**Table 3-16 Certificate Chain Output** 

Field Name	Description
Namespace	Name of the namespace.
Secret Name	Name of the secret.
Key	Kubernetes secret key against which the certificate chain will be stored.

Figure 3-25 Certificate Chain Output

If the **Certificate Chain Output** section is filled, then the certificate chain can either be obtained from the CA or can be configured manually. This is based on the <code>extractCertChainFromCmpResponse</code> helm parameter. For more information, see Oracle Communications Cloud Native Core, Certificate Management Installation, Upgrade, and Fault Recovery Guide.

extractCertChainFromCmpResponse: This field, when set to true, specifies that certificate chain will be extracted from CA's CMP response message. When false, the operator can configure the chain manually. This certificate chain is used in the TLS handshake along with the certificate.

#### 11. Merge Certificate and Certificate Chain:

To get the complete certificate chain including the leaf certificate and the intermediate CA certificate(s), enable the **Merge Certificate and Certificate Chain** option and provide the

same output secret for both Certificate Output and Certificate chain output fields. The Certificate Output secret can be taken from the issuer's CMP client options for Other Certificate field.

Figure 3-26 Merge Certificate and Certificate Chain

#### 12. Click Save.

## 3.5.1.1 OCCM Certificate Configuration Modes

The following section highlights the configuration applicable to these modes and control how the OCCM certificates are generated. The purpose of the following issuer configuration and certificate configuration sections is to highlight the difference in the fields for different modes.

OCCM can be configured with one of the following modes available to establish the initial Trust with the CA(s):

- Using the pre-shared key
- Using the pre-configured private key and certificate

### Using the Pre-shared Key

With this mode of configuration, OCCM signs the first initialization request using the pre-shared key. CA validates the request and issues a signed OCCM certificate.

#### 1. Issuer configuration

To configure the issuer using the pre-shared key,

- The MAC authentication input must be provided under CMP Client Authentication Options for OCCM Certificate.
- b. OCCM key and certificate output location must be specified under CMP Client Authentication Options for Other Certificate. OCCM certificate received from CA will be written here.

Figure 3-27 Initial CMP Client(OCCM) Authentication Options

#### 2. Certificate configuration

To configure the OCCM Certificate using the pre-shared key, select OCCM from the **Cert Type** drop down, and select AUTOMATIC from the **Life Cycle Management** on the **Create Certificate** page.

Figure 3-28 OCCM Certificate Configuration using Pre-shared Key

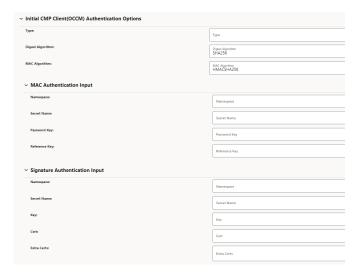

## Using the pre-configured private key and certificate

The pre-configured private key and certificate mode can be used in the following two ways:

- The pre-configured private key and certificate (generated out of band) can itself be used as the OCCM certificate.
  - a. Issuer Configuration
    - Here, you must skip the CMP Client Authentication Options for OCCM Certificate.

Figure 3-29 Issuer Configuration

ii. OCCM key and certificate output location must be specified under CMP Client Authentication Options for Other Certificate. Manually created OCCM key and certificate location should be specified here.

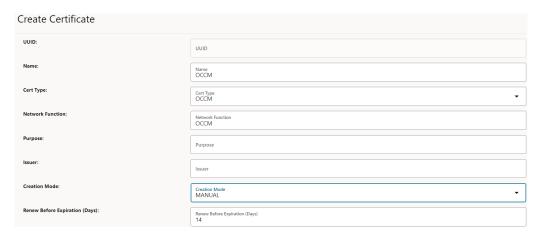

Figure 3-30 CMP Client Authentication Options for Other Certificate

b. OCCM Certificate Configuration

To configure the OCCM certificate, select OCCM from the **Cert Type** drop down, and select MANUAL from the **Life Cycle Management** on the **Create Certificate** page.

Figure 3-31 OCCM Certificate Configuration

- OCCM signs the first initialization request using the pre-configured private key and certificate. CA validates the request and issues a signed OCCM certificate.
  - a. Issuer Configuration

Here, to configure the issuer,

 Provide the Signature Authentication Input under CMP Client Authentication Options for OCCM Certificate.

Figure 3-32 Initial CMP Client(OCCM) Authentication Options

ii. OCCM key and certificate output location must be specified under CMP Client Authentication Options for Other Certificate. OCCM certificate received from CA will be written here.

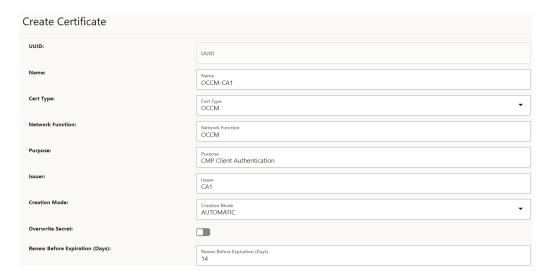

Figure 3-33 CMP Client Authentication Options for Other Certificate

#### b. OCCM Certificate Configuration

To configure the OCCM certificate, select OCCM from the **Cert Type** drop down, and select AUTOMATIC from the **Life Cycle Management** on the **Create Certificate** page.

Figure 3-34 Certificate Configuration

#### (i) Note

This configuration is available for each of the issuers, therefore the modes for the CAs can be controlled individually.

# 3.5.2 Creating End Entity (NF) Certificates

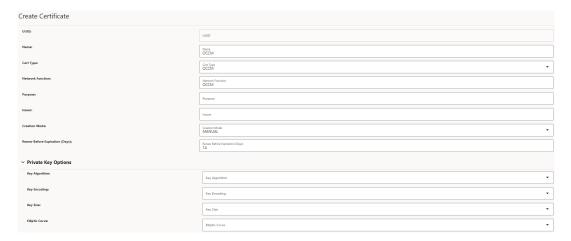

End entity certificate (NF Certificate) are used by NF and applications for various purposes, such as TLS.

To create End Entity certificate using CNC Console GUI:

- 1. Log in to CNC Console using your login credentials and select the OCCM Instance.
- 2. Click OCCM from the left pane and then click Certificate.
- Click Add. The Create Certificate page appears.

Figure 3-35 Create NF Certificate

4. Enter the following information:

Table 3-17 Create NF Certificate

Field Name	Description and Possible Values
Name	Name of the certificate.
Cert Type	Select OTHER for End Entity (NF) certificates.
Network Function	Name of the End Entity (NF).
Purpose	Purpose of the End Entity (NF) certificate.
Issuer	Name of the issuer for the certificate.
Creation Mode	Possible values are MANUAL and AUTOMATIC.

**5.** Under **Private Key Options**, enter the following information:

Table 3-18 Private Key Options

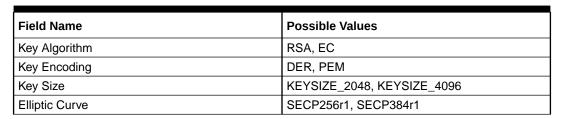

Figure 3-36 Private Key Options

6. Under Private Key Output, enter the following information:

Table 3-19 Private Key Output

Field Name	Description
Namespace	Name of the namespace.
Secret Name	Kubernetes Secret Name.
Key	Kubernetes secret key against which the keypair will be stored.

Figure 3-37 Private Key Output

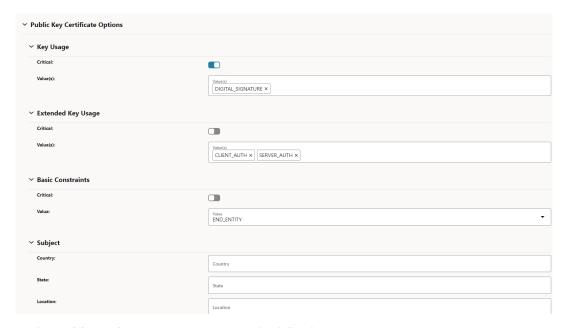

7. Under Public Key Certificate Options, enter the following:

**Table 3-20 Public Key Certificate Options** 

Field Name	Description
Key Usage	Value(s): DIGITAL_SIGNATURE
Extended Key Usage	Value(s): CLIENT_AUTH and SERVER_AUTH
Basic Constraints	Value(s): END_ENTITY
Subject	Country: Enter country code. State: Enter state code.
	Location: City or town where company is legally located.
	Organization: Name of your organization.
	Organisation Unit: Name of business unit.
	Common Name: The Common Name (CN) represents the server name to be protected by the certificate.
	Requested Validity (Days): Number of days requested for which the certificate will be valid.

Figure 3-38 Public Key Certificate Options

8. Under Subject Alternate Names, enter the following:

**Table 3-21 Subject Alternate Names** 

Field Name	Description
IP Address	The IPs you want to protect under this certificate.
DNS Names	List of DNS domain names.
URI ID API Roots	List of URI ID (API root of the NF Instance).
URI ID URNs	List of URI ID (URN of the NFInstanceId).

Figure 3-39 Subject Alternate Names

9. Under Certificate Output, enter the following for the NF certificate:

**Table 3-22 Certificate Output** 

Field Name	Description
Namespace	Name of the namespace.
Secret Name	Name of the secret.
Key	The key against which the certificate will be populated.

#### Figure 3-40 Certificate Output

10. (Optional) Under Certificate Chain Output, enter the following:

**Table 3-23 Certificate Chain Output** 

Field Name	Description
Namespace	Name of the namespace.
Secret Name	Name of the secret.
Key	Kubernetes secret key against which the certificate chain will be stored.

Figure 3-41 Certificate Chain Output

If the **Certificate Chain Output** section is filled, then the certificate chain (intermediate CA certificates) can either be obtained from the CA or can be configured manually. This is based on the <code>extractCertChainFromCmpResponse</code> helm parameter. For more information, see *Oracle Communications Cloud Native Core, Certificate Management Installation, Upgrade, and Fault Recovery Guide.* 

#### ① Note

extractCertChainFromCmpResponse: This field when set to true specifies that certificate chain will be extracted from CA's CMP response message. When false, the operator can configure the chain manually. This certificate chain can be used in the TLS handshake along with the certificate.

#### 11. Merge Certificate and Certificate Chain.

To get the complete chain including the leaf certificate and the intermediate CA certificate(s), enable the Merge Certificate and Certificate Chain option and provide the same output secret for both Certificate Output and Certificate chain output fields. The Certificate Output secret can be taken from the Issuer's CMP client options for Other Certificate field.

Figure 3-42 Merge Certificate and Certificate Chain

This is an optional field and is set to false by default. In case the issuer CA doesn't respond with the chain (intermediate CA certificates), only the leaf certificate will be populated against the specified Kubernetes secret key.

For example, The certificate chain (leaf certificate and intermediate CA certificate(s)) will be populated against the key *nrfcertchain.pem* of the Kubernetes secret *nrf-tls-secret* present in namespace *ns1*.

Figure 3-43 Sample Certificate Output and Certificare Chain Output

**12.** (Optional) under **CA Bundle Input**, enter the following information:

Table 3-24 CA Bundle Input

Field Name	Description
Namespace	Name of the namespace.
Secret Name	Name of the secret.
Key	Kubernetes secret key against which CA bundle certificate(s) will be stored.

Figure 3-44 CA Bundle Input

#### 13. Click Save.

For sample NF configuration, see <u>Creating End Entity (NF) Certificate Using OCCM - Sample Configuration</u>.

# 3.5.3 Updating Certificate Configurations

This feature enables users to edit specific fields within the certificate configuration. Subsequently, OCCM performs actions based on the updated fields, thereby modifying the end-entity certificate. The specific action undertaken hinges on the chosen field and the presence or absence of the corresponding certificate (secret) within the system. The edit scenarios can be categorized as follows:

- When the corresponding certificate secret is not created
- When the corresponding certificate secret is already created or already exists

#### (i) Note

Only end entity certificates can be edited. Editing CMP identity certificate is not supported.

To update the certificate using CNC console:

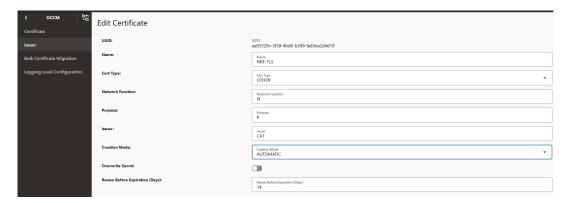

- 1. Log in to CNC Console using your login credentials and select the OCCM Instance.
- Click OCCM from the left pane and then click Certificate. This will list all the certificate configurations.

Figure 3-45 Certificate

3. Click the edit icon next to the certificate that you want to update. The Edit Certificate page appears.

Figure 3-46 Edit Certificate

4. Edit the fields that you need to update and then click **Save**.

Figure 3-47 Edit Certificate: Private Key Options

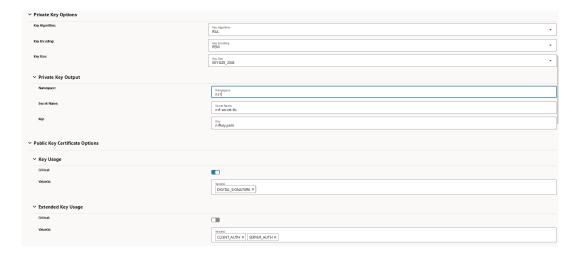

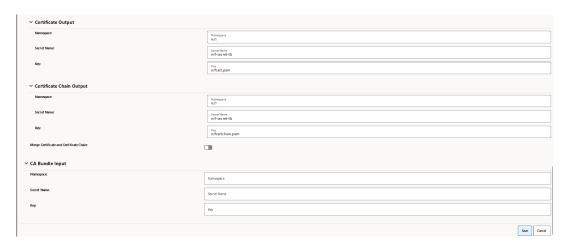

Figure 3-48 Edit Certificate: Certificate Output

# Modification of the End Entity Certificate Configuration when the Corresponding Certificate Secret is not Created

OCCM supports the update of all the end entity certificate configuration fields when the certificate secret is not created. The updated values are considered for the subsequent retries. Click **View** next to certificate configuration to verify the configuration. The updated configuration must be reflected.

Modification of the End Entity Certificate Configuration when the Corresponding Certificate Secret is Already Created or Exists

#### Non-editable Fields

The following fields cannot be edited when the certificate secret is already created:

- Name
- Cert Type
- Network Function
- Creation Mode

- Overwrite Secret
- kubernetes secret details such as namespace, name, and key

#### **Editable Fields**

The remaining fields are editable and can be further categorized as follows:

- When the following fields are updated, OCCM uses the CMPv2 IR to recreate the certificate. The generated certificate overwrites the existing certificate secret, if present.
  - Linked CA (Issuer)
  - Private Key options:
    - Key Algorithm
    - Elliptic curve
    - Key Encoding
    - Key Size
  - Subject
  - Values of Certificate Extensions:
    - Key Usage
    - Extended Key Usage
    - SAN

Click the **View** button next to certificate configuration to verify the configuration. The updated configuration must reflect. You can also verify the status of recreate certificate action triggered from the Grafana dashboard. For more information, see <u>Recreating</u> Certificates.

- When the following fields are updated, no immediate action is taken. The updated values are considered for subsequent operations, such as renewal or recreate.
  - Purpose
  - Requested Validity
  - "Critical" toggles for the following certificate extensions:
    - Key Usage
    - Extended Key Usage
    - SAN
    - Basic Constraints

Click the **View** button next to certificate configuration to verify the configuration. The updated configuration must be reflected.

3. When you update the Renew Before field, the updated configuration is considered for renewal with immediate effect. The renewal is rescheduled based on the updated configuration. Click View next to certificate configuration to verify the configuration. The updated configuration must be reflected.

For more information, see Updating Certificates - Sample Configuration.

# 3.5.4 Recreating Certificates

OCCM supports on-demand reissuance of certificate with the same configuration by using the certificate recreate functionality. The CMPv2 IR procedure is used to recreate the certificate.

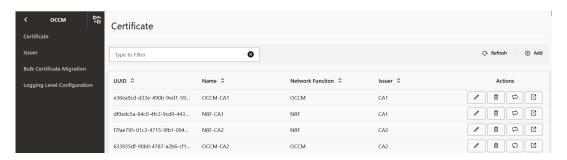

Based on the CMPv2 response, the corresponding key and certificates are overwritten in the Kubernetes secrets. Both the end entity and the CMP identity certificates can be recreated.

To recreate the certificate using CNC console:

- 1. Log in to CNC Console using your login credentials and select the OCCM Instance.
- 2. Click **OCCM** from the left pane and then click **Certificate**. This will list all the certificate configurations.

Figure 3-49 Recreate Certificate

3. Click the **recreate** icon next to the certificate that you want to recreate. The Recreate Certificate dialog box appears.

Figure 3-50 Recreate Certificate Dialog Box

#### ① Note

 The Certificate Edit button (pencil icon) was earlier being used for triggering certificate recreate prior to 25.1.200. From 25.1.200, a separate button for recreate has been added.

- If certificate recreation fails, OCCM retries certificate recreation repeatedly until it is successful or the configuration is deleted.
- Certificates that were created successfully and are in status READY, EXPIRED, or FAILED can be recreated.

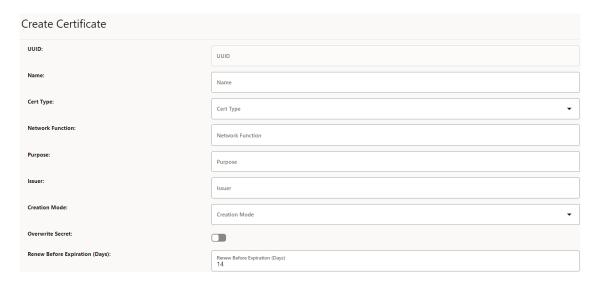

- Click Recreate to proceed. Click Cancel to discard your progress and close the dialog box.
- Check the Grafana dashboard to view the recreated certificate.

For more information, see Recreating Certificates - Sample Configuration.

# 3.5.5 Monitoring Certificate Expiry and Renewing Certificates

OCCM monitors the certificate validity and initiates automatic certificate renewal based on the renew before period configuration. You can update the **Renew Before Expiration (Days)** field on the **Create Certificate** page at the time of certificate creation. This field specifies the number of days before the certificate expiry date when the certificate must be renewed.

Figure 3-51 Renew Before Expiration (Days)

A CMPv2 Key Update Request (KUR) is sent to the issuing CA for certificate renewal. Once the renewal is successful, OCCM overwrites the configured kubernetes secret holding the old key and certificate with the new one and continues to monitor.

Grafana dashboards can be used to visualize certificate status, such as, expiry time the cert readiness status and the error reason in case the certificate creation fails etc.

# 3.5.5.1 Renewing CMP Identity (OCCM) Certificate

The Key Update Request (KUR) for CMP identity certificate is signed by the CMP identity key and certificate that is being renewed. The corresponding certificate is included in the extraCerts of the outgoing CMP message.

# 3.5.5.2 Renewing End Entity (NF) Certificate

The Key Update Request (KUR) for an end entity certificate is signed in the following two ways:

- Using CMP Identity key and certificate.
- Using the old end entity key and certificate that is being renewed.

The corresponding certificate is included in the extraCerts of the outgoing CMP message. To use the CMP Identity key and certificate as the signer, you must set the Key Update Request mode as follows:

- Set the occmConfig.cmp.config.useOccmCertSignForKur parameter to true at the time of OCCM deployment, then CMP Identity key and certificate is used to sign the CMP KUR message.
- If the occmConfig.cmp.config.useOccmCertSignForKur parameter is set to false, the certificate that is being renewed will be used as the signer.

#### Note

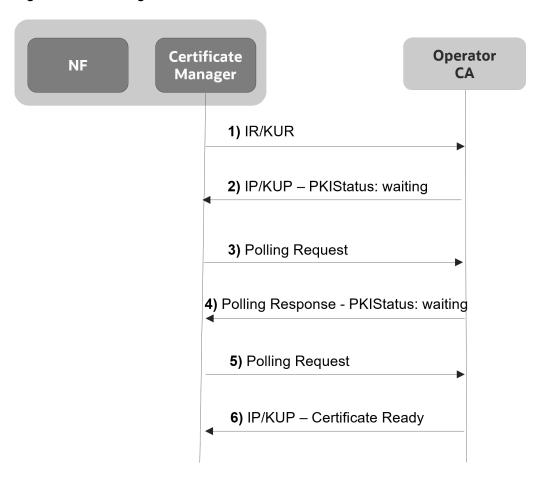

Grafana dashboard can be used to visualize the status of the certificate, such as, the remaining expiry of the certificate, the cert readiness status, and the error reason in case the certificate creation fails etc.

# 3.5.6 Polling for Certificates

After the IR or KUR, if the certificate is not available yet, the CA responds with PKI status 'Waiting'. The application keeps polling until the CA is ready with the certificate. Openssl implicitly handles polling. No additional configuration is required at the application level in this regard. However, the Total Timeout field can be set in the issuer configuration, which can restrict this polling time. It is the maximum number of seconds a transaction may take, including polling etc. If the time specified by total timeout has elapsed, the polling will stop.

Figure 3-52 Polling for Certificates

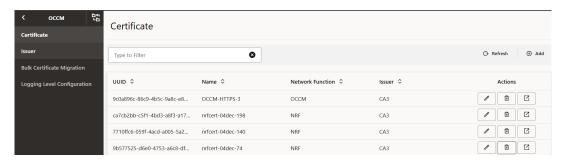

# 3.5.7 Deleting the Certificate Configuration

To delete the certificate configuration:

- 1. Log in to CNC Console using your login credentials and select the **OCCM** Instance.
- Click OCCM from the left pane and then click Certificate. All the available certificates will be listed

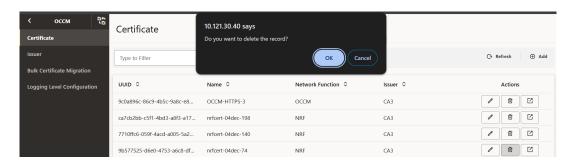

Figure 3-53 Certificate

3. Click **Delete** and click **OK** on the confirmation prompt to delete the certificate.

Figure 3-54 Certificate Delete

# 3.5.8 Bulk Migration of Certificates

The bulk migration of certificates is utilized when the issuer configuration needs to be updated, specifically to modify the issuer endpoint by updating fields, such as, the server URL, recipient DN, and issuer DN. This update is carried out by migrating the certificates in bulk from the current issuer to a newly created issuer with the necessary configuration.

To start the bulk migration, the operator must specify both the source and destination issuers in the request. During the process, all the certificates linked to the source issuer are retrieved and an automatic recreate (CMPv2 Initialization Request) is triggered for each certificate to the destination issuer. Based on the CMPv2 response, the relevant keys and certificates are updated in the existing Kubernetes secrets.

# 3.5.8.1 Initiating Bulk Certificate Migration

Perform the following steps to initiate the bulk certificate migration:

- Configure the destination issuer in the issuer configuration. For more information, see <u>Managing Issuers</u>.
- 2. Create CMP (OCCM) Identity certificate corresponding to the destination issuer. For more information, see Managing Certificates.
- 3. Initiate the bulk certificate migration as follows:
  - Log in to CNC Console using your login credentials and select the OCCM Instance.
  - Click OCCM from the left pane and then click Bulk Certificate Migration. The Bulk Certificate Migration page appears.

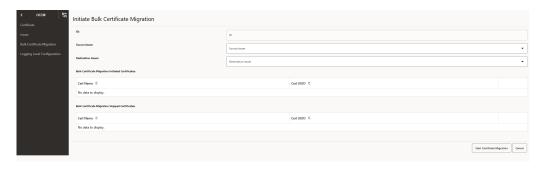

Figure 3-55 Bulk Certificate Migration

c. Click Add. The Initiate Bulk Certificate Migration page appears.

Figure 3-56 Initiate Bulk Certificate Migration

d. Choose the required information from the drop-down list on the Initiate Bulk Certificate Migration page:

**Table 3-25 Initiate Bulk Certificate Migration** 

Field Name	Description
Source Issuer	The issuer whose linked certificates is migrated.
Destination Issuer	The issuer to which the certificates are migrated.

The following fields must be kept empty in the request.

**Table 3-26 Initiate Bulk Certificate Migration** 

Field Name	Description
ID	Unique identifier for each bulk certificate migration.
Bulk Certificate Migration Initiated Certificates	List of certificates that will be migrated from source issuer to destination issuer.
Bulk Certificate Migration Skipped Certificates	List of certificates on which the migration is skipped because of the certificate status is other than ready, expired, or another recreate is already in process.

- 4. View the configuration to check the certificates on which migration is initiated.
- Check Grafana dashboard to verify the status of the migration of each certificate. For sample configuration, see <u>Initiating Bulk Certificate Migration</u> - <u>Sample Configuration</u>.

#### Note

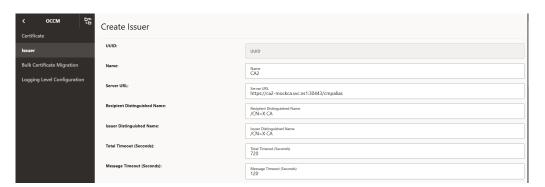

- Bulk certificate migration is supported for only linked End Entity (NF) certificates. It does not apply to CMP (OCCM) identity certificates.
- Certificates that have ben created successfully and are in READY, EXPIRED or FAILED status (say in renew retries) are considered for bulk migration.
- Only one bulk certificate migration can be triggered at a time.
- Issuer edit remains the same and allows the edits of all the fields if there are no
  certificate configuration attached. If the certificate is attached, then you can edit
  only the HTTP scheme (HTTP to HTTPS and vice-versa). If the CA end point is
  changed (with the change in parameters, such as server URL, Issuer DN, and
  recipient DN) then bulk migration is used to recreate all the certificates by linking
  the certificates to the configured destination issuer.

## 3.5.8.1.1 Initiating Bulk Certificate Migration - Sample Configuration

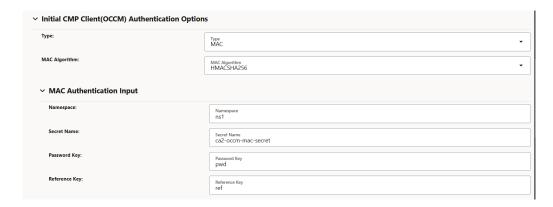

The following steps provides an example on how to initiate bulk migration of certificates from source issuer CA1 to destination issuer CA2:

1. Create the destination issuer CA2 with the requisite configuration. For more information about the steps, see Managing Issuers.

#### a. Figure 3-57 Create Issuer

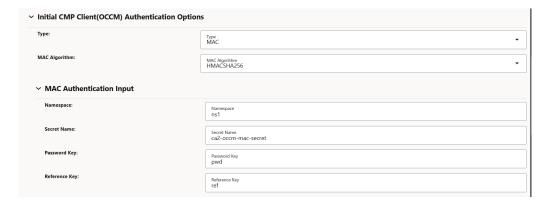

### b. Figure 3-58 Initial CMP Client (OCCM) Authentication Options

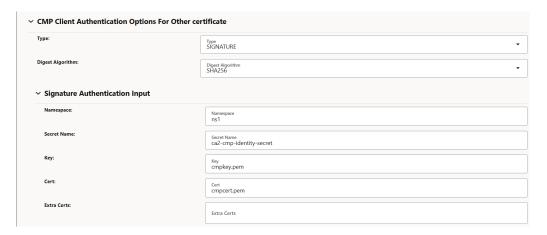

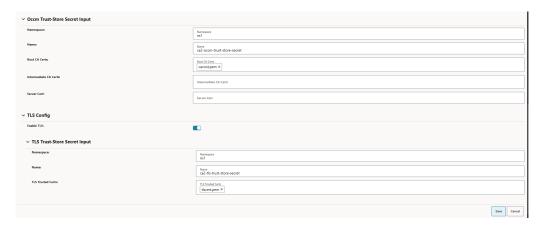

c. Figure 3-59 MAC Authentication Input

d. Figure 3-60 CMP Client Authentication Options For Other certificate

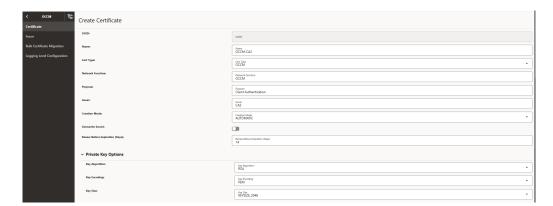

e. Figure 3-61 Occm Trust-Store Secret Input

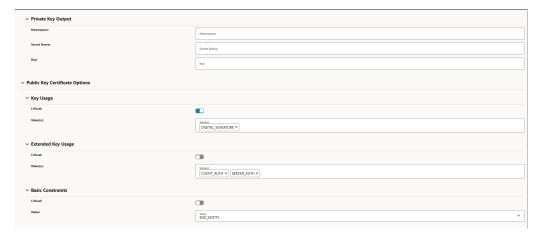

2. Create CMP (OCCM) Identity certificate OCCM-CA2 corresponding to the destination issuer CA2. For more information about the steps, see <a href="Managing Certificates">Managing Certificates</a>.

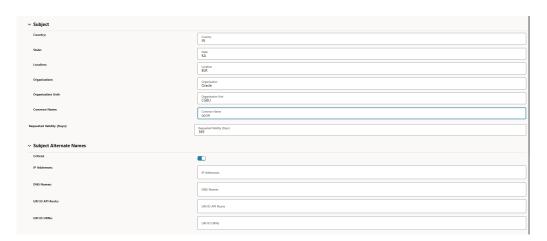

## a. Figure 3-62 Create Certificate

### b. Figure 3-63 Private Key

### c. Figure 3-64 Subject

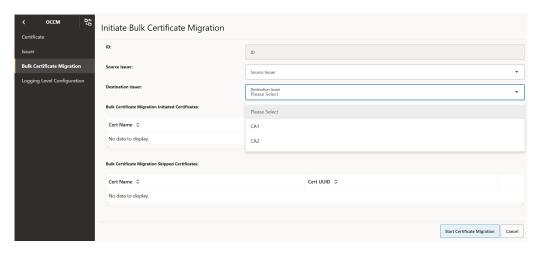

d. Figure 3-65 Certificate Output

- 3. Initiate the bulk certificate migration by choosing the source issuer as CA1 and destination issuer as CA2 from the drop downs list. Other fields must be empty.
  - a. Log in to CNC Console using your login credentials and select the OCCM Instance.
  - b. Click OCCM from the left pane and then click Bulk Certificate Migration.
  - c. The Bulk Certificate Migration page appears. Click **Add**. The Initiate Bulk Certificate Migration page appears.
  - d. Choose the source and destination issuer from the drop-down list and click on **Start Certificate Migration**.

Figure 3-66 Initiate Bulk Certificate Migration

e. A configuration is created and displayed as follows. This configuration can be viewed to know on which certificates migration was triggered and if it is skipped on any certificate.

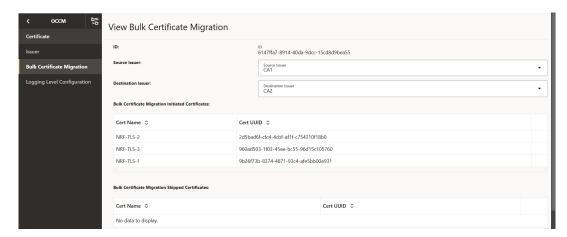

Figure 3-67 Bulk Certificate Migration

4. View the configuration to check the certificates on which migration is initiated.

Figure 3-68 View Bulk Certificate Migration

- 5. Check the Grafana dashboard to verify the migration status of each certificate displayed under the field Bulk Certificate Migration Initiated certificates:
  - a. When the migration is successful on a certificate.
    - To verify the migration status for each certificate refer to the *End Entity Certificate Expiry Time* and the *End Entity Certificate Readiness Status* panels .
    - On the End Entity Certificate Expiry Time the corresponding issuer of the certificate considered in bulk migration is updated to the destination issuer (CA2) and the expiry date will be extended based on the configuration.
    - On the End Entity Certificate Readiness Status the certificate will be in the READY state.

In the following example, the bulk migration is triggered on three certificates. The updated issuer, expiry, and the readiness status are shown as follows:

Figure 3-69 End Entity Certificate Expiry Time

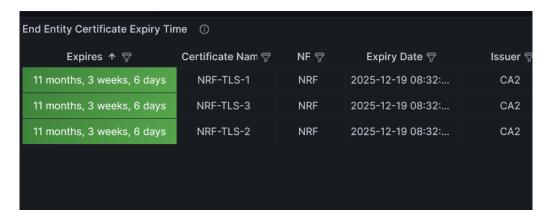

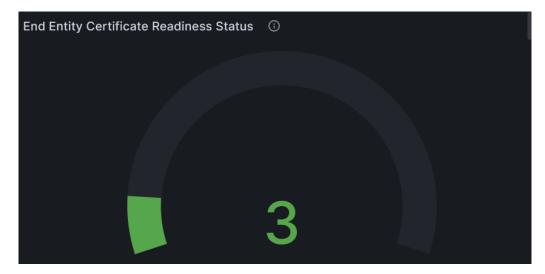

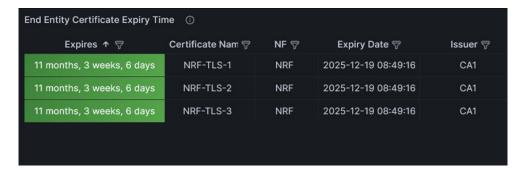

Figure 3-70 End Entity Certificate Readiness Status

- b. When the migration fails on a certificate.
  - The corresponding issuer of the certificate will NOT be updated to the destination issuer on the End Entity Certificate Expiry Time panel and it will keep pointing to the source issuer (CA1). The expiry will not be updated since recreation has failed. Similarly, the end entity certificate readiness status will also preserve the previous status. The failed migration on all the three certificates are as follows:

Figure 3-71 End Entity Certificate Expiry Time Failed

The *Bulk Cert Migrations Error* panel will have an entry of the certificate whose migration has failed. To check for a given migration, you must filter on the Bulk Migration UUID field. The issuer displayed is the configured destination issuer. The failed migration on all the three certificates for the given bulk migration are as follows.

Figure 3-72 Bulk Cert Migrations Error

 Logs must be checked to find out the reason of the failure and corrective action must be taken.

 Another migration can be initiated to retry for all the failed certificates from the source to the destination issuer.

# 3.5.8.2 Deleting Bulk Certificate Migration

Perform the following steps to delete the bulk certificate migration:

- 1. Log in to CNC Console using your login credentials and select the OCCM Instance.
- Click OCCM from the left pane and then click Bulk Certificate Migration.

Figure 3-73 Bulk Certificate Migration

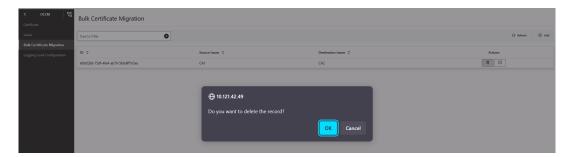

Click **Delete** icon available under the Actions column for the specific certificate. Click **OK** on the confirmation prompt to delete the configuration.

- The bulk certificate migration configuration cannot be deleted if the migration is in progress.
- The **Delete** option only removes the corresponding configuration.
- A maximum of 15 bulk certificate migration configuration are supported.

Figure 3-74 Delete Bulk Certificate Migration

# 3.6 OCCM Retry on Failure

OCCM supports retry on encountering failures during the certificate creation, certificate receation, certificate renewal, and manipulation of Kubernetes secrets.

- The procedure is retried until successful or interrupted by an action executed by the operator.
- Retry is not controlled through any maximum limit.
- The retry interval is an pre-defined value and set to 30s.

Some of the failure scenarios for which retries will be attempted:

- CA is unavailable, not reachable, or busy.
- Any errors returned by CA.

OCCM also provides a retry mechanism for errors encountered during Kubernetes secret update with the generated key and certificate. Based on the error encountered (insufficient permissions, Kubernetes internal errors etc), once the User fixes the issue, the Kubernetes secrets are automatically updated due to the ongoing retries.

#### (i) Note

In this case, there is no attempt to recreate the key and certificate. The retry is restricted to updating the Kubernetes secrets with the key and certificate that are already generated.

# 3.7 Network Policies

Network Policies are an application-centric construct that allow you to specify how a pod communicates with various network entities. It creates pod-level rules to control communication between the cluster pods and services, and to determine which pods and services can access one another inside a cluster.

Previously, the pods under deployment could be contacted by any other pods in the Kubernetes cluster without any restrictions. Now, Network Policy provides namespace-level isolation, which allows secured communications to and from OCCM with rules defined in the respective Network Policies. The network policies enforce access restrictions for all the applicable data flows except communication from Kubernetes node to pod for invoking container probe. For example, OCCM internal microservices can't be contacted directly by any other pods.

#### **Managing Support for Network Policies**

#### **Enable**

To use this feature, network policies need to be applied to the namespace where OCCM is applied.

#### Configure

You can configure this feature using Helm. For information about Configuring Network Policy for OCCM deployment, see Oracle Communications Certificate Management Installation, Upgrade, and Fault Recovery Guide.

#### **Observe**

There are no specific metrics and alerts required for the Support of Network Policy functionality.

# 3.8 Traffic Segregation

This feature provides end-to-end traffic segregation to OCCM based on traffic types. Within a Kubernetes cluster, traffic segregation can divide applications or workloads into distinct sections such as OAM, SBI, Kubernetes control traffic, etc. The Multus CNI container network interface (CNI) plugin for Kubernetes enables attaching multiple network interfaces to pods to help segregate traffic from OCCM microservice.

This feature addresses the challenge of logically separating IP traffic of different profiles, which are typically handled through a single network (Kubernetes overlay). The new functionality ensures that critical networks are not cross-connected or sharing the same routes, thereby preventing network congestion.

With traffic segregation, operators can segregate traffic to external feeds and applications more effectively. Previously, all external traffic was routed through the same external network, but now, egress traffic from the OCCM pods can be directed through non-default networks to third-party applications. This separation is achieved by leveraging cloud-native infrastructure and the load balancing algorithms in OCCNE.

The feature supports the configuration of separate networks, Network Attachment Definitions (NADs), and the Cloud Native Load Balancer (CNLB). These configurations are crucial for enabling cloud native load balancing, facilitating ingress-egress traffic separation, and optimizing load distribution within OCCM.

#### **Prerequisites**

The CNLB feature is only available in OCCM if OCCNE is installed with CNLB and Multus.

#### **Cloud Native Load Balancer (CNLB)**

CNE provides Cloud Native Load Balancer (CNLB) for managing the ingress and egress network as an alternate to the existing LBVM, lb-controller, and egress-controller solutions. You can enable or disable this feature only during a fresh CNE installation. When this feature is enabled, CNE automatically uses CNLB to control ingress traffic. To manage the egress traffic, you must preconfigure the egress network details in the cnlb.ini file before installing CNE.

For more information about enabling and configuring CNLB, see *Oracle Communications Cloud Native Core, Cloud Native Environment User Guide*, and *Oracle Communications Cloud Native Core, Cloud Native Environment Installation, Upgrade, and Fault Recovery Guide.* 

#### **Network Attachment Definitions for CNLB**

A Network Attachment Definition (NAD) is a resource used to set up a network attachment, in this case, a secondary network interface to a pod. OCCM supports following types of CNLB NADs:

**Egress Only Network Attachment Definitions** 

Egress Only NADs enable outbound traffic only. An NF pod can initiate traffic and route it through a CNLB application, translating the source IP address to an external egress IP address. An egress NAD contains network information to create interfaces for NF pods and routes to external subnets.

- Requirements:
  - Ingress NADs are already created for the desired internal networks.
  - Destination (egress) subnet addresses are known beforehand and defined under the cnlb.ini file's egress\_dest variable to generate NADs.
  - The use of an Egress NAD on a deployment can be combined with Ingress NADs to route traffic through specific CNLB apps.
- Naming Convention nf-<service\_network\_name>-egr

#### **Traffic Segregation**

The traffic segregation feature enables OCCM users to manage egress traffic, that is, all outgoing data and communication from OCCM to CAs. It ensures that the traffic directed towards CAs is segregated and managed to maintain security and improve efficiency.

**Note:** Incoming traffic like REST API requests are managed separately using CNC Console. CNC Console is responsible for managing and processing these incoming requests, ensuring that they are appropriately routed and secured.

### **Enable and Configure**

This feature is disabled by default. To enable this feature, you must configure the network attachment annotations in the custom values file. For more information, see the "Installing OCCM Package" section in the *Oracle Communications Certificate Management Installation, Upgrade, and Fault Recovery Guide.* 

#### **Observe**

There are no metrics, KPIs, or alerts required for this feature.

# Introducing OCCM in an Existing NF Deployment

This section describes the procedure to introduce OCCM in an existing NF deployment where certificates are managed manually. OCCM helps in automating certificate management.

You can move from manual management to automated manages in one of 2 ways:

- Using existing key and certificate.
- Using a new key and certificate.

#### Moving NFs from Manual Certificate Management to Automated Certificate Management with Existing Key and Certificate

To move NFs from manual certificate management to automated certificate management with existing key and certificate:

- Configure a key and certificate on OCCM. You must reuse the same Kubernetes secret and the content as used by NF with manually generated key and certificate. The NF configuration must not be updated.
- 2. OCCM monitors the existing key and certificate in the configured Kubernetes secret and renews it. The metrics attached to the key and certificate are generated.

#### (i) Note

The existing key and certificate are not validated against the configuration. However, the renewed certificate will be aligned with the configuration.

#### Moving NFs from Manual Certificate Management to Automated Certificate Management With new Key and Certificate

To move NFs from manual certificate management to automated certificate management with new key and certificate:

- 1. Configure a key and certificate on OCCM making sure to reuse the same Kubernetes secret as used by NF with manually generated key and certificate. Reusing the Kubernetes secret make sure that the NF configuration is not updated.
- 2. OCCM creates a new key and certificate in the configured Kubernetes secret and deletes the old key and certificate. The old key and certificate is deleted to generate OCCM metrics attached to the certificate creation.

#### **Procedure**

The operator can select the following values for the Creation Mode field:

- Manual (With existing key and certificate)
- Automatic (With new key and certificate)

#### Manual

In Manual mode, OCCM is configured to manage the lifecycle of existing the certificates. For example, the certificates that are already being used by NFs can be monitored by OCCM and further renewed by OCCM. In this case, the same Kubernetes secret and the content as used by NF with manually generated key and certificate is reused by OCCM.

#### (i) Note

The existing key and certificate are not validated against the configuration. Renewed certificate will be aligned with the configuration though.

#### **Automatic**

- In Automatic mode, OCCM can create fresh certificates, or overwrite the existing certificate with a new one. For example, if NFs want to create a new key and certificate to overwrite old one through OCCM, and monitor them, then a key and certificate can be created on OCCM using the same Kubernetes secret as used by NF with manually generated key and certificate
- OCCM creates a new key and certificate in the configured Kubernetes secret and deletes the old key and certificate

Table 4-1 Dependency of Creation Mode on Kubernetes Secret

Creation Mode	Description
Manual	Manual mode must be selected to continue using the existing key and certificate which are used by NF in the manual management.
	Operator needs to configure the same Kubernetes secret as used by the NF configuration.
Automatic	Automatic mode must be selected to generate a new key and certificate. OCCM generates a fresh key pair and certificate and creates a new Kubernetes secret. You must configure the Kubernetes secret details.
	Operator can also choose to overwrite an existing secret with the generated key pair and certificate by setting the Overwrite Secret flag to true and configuring the existing secret details.

Table 4-2 Behaviour of different Creation Modes

Creation Mode	Preexisting Kubernetes Secret	overwrite Secret Flag	Behaviour
Automatic	No	No Impact	Certificate is created irrespective of the overwrite flag.

Table 4-2 (Cont.) Behaviour of different Creation Modes

Creation Mode	Preexisting Kubernetes Secret	overwrite Secret Flag	Behaviour
Automatic	Yes	True or False	True: The Kubernetes secret is overridden. False: An error is thrown because you must either use a new secret or set the overwrite flag to true. This error is thrown upfront on the user interface or in the response if APIs are used.
Manual	No	NA	An error is thrown because OCCM expects a preconfigured Kubernetes secret. This error is thrown upfront on the user interface or in the response if APIs are used.
Manual	Yes	NA	Certificate configuration is created at OCCM for further certificate renewal and monitoring.

#### **Moving Back to Manual Certificate Management**

- If the operator wants to move back to manual certificate monitoring, then they can delete the entry from the OCCM configuration. OCCM doesn't delete the secret when the entry is deleted and the certificate can be monitored manually (if operator used same secret location).
- If user creates a separate secret during certificate management from OCCM, and the operator doesn't want to use the secret further, then operator can delete the entry from OCCM and must also delete the Kubernetes secret.

# Accessing OCCM Resources Through Curl and Postman

CNC Console provides a secure option for accessing OCCM resources through curl and postman using the CNC Console IAM access token. This section describes how to generate access tokens and access OCCM APIs.

# 5.1 Generate Access Tokens

CNC Console IAM provides a REST API for generating and refreshing access tokens.

To generate access tokens:

 Send a POST request to the following URL to get an access token from CNC Console IAM:

```
http://${cncc-iam-ingress-extrenal-ip}:${cncc-iam-ingress-service-port}/cncc/auth/realms/${realm}/protocol/openid-connect/token
```

For example: https://{host}:{port}/cncc/auth/realms/cncc/protocol/openid-connect/token

2. The body of the request must be *x-www-form-urlencoded* encoded as follows:

```
'client_id': 'your_client_id',
'username': 'your_username',
'password': 'your_password',
'grant_type': 'password'
For example:
```

```
'client_id': 'cncc-api-access',
'username': 'userl',
'password': '*******',
'grant_type': 'password'
```

3. Run the following curl command to generate access tokens:

```
curl --location --request POST 'http://{host}:{port}/cncc/auth/realms/cncc/
protocol/openid-connect/token' \
    --header 'Content-Type: application/x-www-form-urlencoded' \
    --data-urlencode 'grant_type=password' \
    --data-urlencode 'username=user1' \
    --data-urlencode 'password=*******' \
    --data-urlencode 'client_id=cncc-api-access'
```

4. In response, you will get an access\_token and a refresh\_token:

```
{
    "access_token": "eyJhbGc...0912Q",
```

```
"expires_in": 300,
"refresh_expires_in": 1800,
"refresh_token": "eyJhbG...5vKPF-ZIg",
"token_type": "bearer",
"not-before-policy": 0,
"session_state": "6c42d978-14ac-4793-ale3-789cfbdb2b74",
"scope": "email profile"
}
```

# 5.2 Refresh Access Tokens

If the access token has expired, you can refresh it by sending a POST request to the same URL, but containing the refresh token instead of username and password:

Perform the following procedure to refresh the access tokens:

If the access\_token has expired, it can be refreshed by sending a POST request to the same URL as above; but the POST method must have the refresh token instead of username and password. The format is as follows:

```
'client_id': 'your_client_id',
'refresh_token': refresh_token_from_previous_request,
'grant_type': 'refresh_token'

For Example:
'client_id': 'cncc-api-access',
'refresh_token': 'eyJhbGciOiJIU...dKnmFb5vKPF-ZIg',
'grant_type': 'refresh_token'
```

In response, you will receive a new access\_token and refresh\_token.

# 5.3 Issuer Configuration API Access

You need the CNC Console IAM access tokens to access the OCCM Issuer APIs through CNC Console.

You must include the following headers when you send an API request:

- Authorization: The access token must be used in every request to a NF resource by placing it in the Authorization header.
- oc-cncc-id: M-CNCC uses the oc-cncc-id header to find the agent or manager owning the instance.
- oc-cncc-instance-id: A-CNCC Core (or M-CNCC Core ) uses the oc-cncc-instance-id header to find the NF instance for routing.

Following headers must be passed in the curl or postman request while accessing the OCCM Issuers resource:

#### HTTP Request:

```
curl --request POST 'http://${occm-external-ip}:${occm-service-port}/occm-
config/v1/issuers/'
--header 'Content-Type: application/json'
```

```
--header 'oc-cncc-id: Cluster1'
--header 'oc-cncc-instance-id: Cluster1-occm-instance1'
--header 'Authorization: Bearer <Token>'
--data-raw '{
    "name": "CA1",
    "server": "http://cal-openssl-mock.nsl.svc.thrust5:8090",
    "recipientDN": "/CN=x.company.com",
    "issuerDN": "/CN=x.company.com",
    "totalTimeout": "720",
    "messageTimeout": "120",
    "cmpProtectionOccmCert": {
        "type": null,
        "digestAlgorithm": null,
        "macAlgorithm": null,
        "macK8sSecretIn": {
            "namespace": "",
            "name": "",
            "passKey": "",
            "refKey": ""
        "signK8sSecretIn": {
            "namespace": "",
            "name": "",
            "key": "",
            "cert": "",
            "extraCerts": []
    },
    "cmpProtectionOtherCert": {
        "type": "SIGNATURE",
        "digestAlgorithm": "SHA256",
        "signK8sSecretIn": {
            "namespace": "ns1",
            "name": "cal-cmp-identity-secret",
            "key": "cmpkey.pem",
            "cert": "cmpcert.pem",
            "extraCerts": []
    },
    "occmTrustStoreK8sSecretIn": {
        "namespace": "ns1",
        "name": "cal-occm-trust-store-secret",
        "rootCACerts": [
            "caroot.pem"
        "intCACerts": [
            "intcacert.pem"
        "serverCert": "servercert.pem"
    "tlsConfig": {
        "enableTLS": false,
        "tlsTrustStoreK8sSecretItem": {
        "namespace": "",
        "name": "",
```

```
"tlsTrustedCerts": []
     }
}
```

#### **HTTPS** Request

```
curl --request POST 'http://${occm-external-ip}:${occm-service-port}/occm-
config/v1/issuers/'
--header 'Content-Type: application/json'
--header 'oc-cncc-id: Cluster1'
--header 'oc-cncc-instance-id: Cluster1-occm-instance1'
--header 'Authorization: Bearer <Token>'
--data-raw '{
    "name": "CA1",
    "server": "https://cal-openssl-mock.nsl.svc.thrust5:8443",
    "recipientDN": "/CN=x.company.com",
    "issuerDN": "/CN=x.company.com",
    "totalTimeout": "720",
    "messageTimeout": "120",
    "cmpProtectionOccmCert": {
        "type": null,
        "digestAlgorithm": null,
        "macAlgorithm": null,
        "macK8sSecretIn": {
            "namespace": "",
            "name": "",
            "passKey": "",
            "refKey": ""
        "signK8sSecretIn": {
            "namespace": "",
            "name": "",
            "key": "",
            "cert": "",
            "extraCerts": []
    },
    "cmpProtectionOtherCert": {
        "type": "SIGNATURE",
        "digestAlgorithm": "SHA256",
        "signK8sSecretIn": {
            "namespace": "ns1",
            "name": "cal-cmp-identity-secret",
            "key": "cmpkey.pem",
            "cert": "cmpcert.pem",
            "extraCerts": []
    },
    "occmTrustStoreK8sSecretIn": {
        "namespace": "ns1",
        "name": "cal-occm-trust-store-secret",
        "rootCACerts": [
            "caroot.pem"
        ],
```

# 5.4 Certificate Configuration API Access

You need the CNC Console IAM access token that you generated to access OCCM Certificates Configuration API:

```
curl --request POST 'http://${occm-external-ip}:${occm-service-port}/occm-
config/v1/certs/'
--header 'Content-Type: application/json'
--header 'oc-cncc-id: Cluster1'
--header 'oc-cncc-instance-id: Cluster1-occm-instance1'
--header 'Authorization: Bearer <Token>'
--data-raw ' {
    "name": "NRF TLS Cert",
    "lcmType": "AUTOMATIC",
    "certType": "OTHER",
    "renewBefore": "14",
    "certPurpose": "NRF SBI",
    "issuer": "CA1",
    "privateKey": {
        "keyAlgo": "RSA",
        "keySize": "KEYSIZE_2048",
        "keyEncoding": "PEM",
        "ecCurve": null,
        "privateKeyK8sSecretOut": {
            "namespace": "ns1",
            "name": "nrf-tls-secret",
            "key": "nrfkey.pem"
    },
    "csr": {
        "extendedKeyUsage": {
            "critical": false,
            "extendedKeyUsageValues": [
                "CLIENT AUTH",
                "SERVER AUTH"
            ]
        "keyUsage": {
```

```
"critical": true,
        "keyUsaqeValues": [
            "DIGITAL SIGNATURE"
        ]
    "basicConstraints": {
        "critical": false,
        "basicConstraintsValue": "END_ENTITY"
    "subject": {
        "country": "IN",
        "state": "KA",
        "location": "BLR",
        "organization": "Oracle",
        "organizationUnit": "CGBU",
        "commonName": "a.company.com"
    },
    "days": "365",

```

} '

# 5.5 Bulk Certificate Migration API Access

You need the CNC Console IAM access token that you generated to access bulk certificate migration APIs.

```
curl --request POST 'http://${occm-external-ip}:${occm-service-port}/occm-
config/v1/certs/bulk-migrate'
   --header 'Content-Type: application/json'
   --header 'oc-cncc-id: Cluster1'
   --header 'oc-cncc-instance-id: Cluster1-occm-instance1'
   --header 'Authorization: Bearer <Token>'
   --data-raw ' {
        "sourceIssuerName": "CA1",
        "destinationIssuerName": "CA2"
}'
```

# 5.6 Logging API Access

You need the CNC Console IAM access token that you generated to access OCCM Logging APIs.

```
curl --location --request PUT 'http://host:port/occm-config/v1/occm/logging' \
--header 'oc-cncc-id: Cluster1' \
--header 'oc-cncc-instance-id: Cluster1-occm-instance1' \
--header 'Authorization: Bearer eyJhbGciOiJSUzIlNiIs...' \
--header 'Content-Type: application/json' \
--data-raw '{
    "appLogLevel": "DEBUG",
    "packageLogLevel": [
    {
        "packageName": "root",
        "logLevelForPackage": "ERROR"
    }
}
```

# **OCCM Metrics**

This chapter provides information about metrics for OCCM.

Table 6-1 Metric Type

Metric Type	Description	
Counter	Represents the total number of occurrences of an event or traffic, such as measuring the total amount of traffic received and transmitted by OCCM, and so on.	
Gauge	Represents a single numerical value that changes randomly. This metric type is used to measure various parameters, such as OCCM load values, memory usage, and so on.	
Histogram	Represents samples of observations (such as request durations or response sizes) and counts them in configurable buckets. It also provides a sum of all observed values.	

### **Dimension Description**

The following table describes different types of metric dimensions:

**Table 6-2 OCCM Dimension Description** 

<b>D</b>	Barriera	B
Dimension	Description	Possible Values
method	Http method	GET, PUT, POST, DELETE
httpVersion	Http protocol version	HTTP/1.1
scheme	Http protocol scheme	HTTP, UNKNOWN
uri	URL of requested API	/occm-config/v1/certs
nfType	API called by NF	eg: SCP, NRF, OCCM, NA
statusCode	Http status code	200, 202
certUuid	Unique ID for the purpose of logging and tracking	eg: 7523a545-089b-49e9-a05c- ae5141db544b
requestType	Type of request	IR, KUR
certName	Name of the certificate	NRFTLS-1, SCPTLS-1
certPurpose	Purpose of the certificate creation	NRF SBI
issuerName	Name of the Issuer	CA
errorReason	Reason of the error	eg:ERR_K8S_SECRET_CREATI ON_ERROR
operationType	Type of operation	CREATE, RENEW, DELETE, RECREATE
host	Application hosted on cluster	eg: occm.occncc- thrust5-01.svc.thrust5
application	Name of the application	ОССМ
caServer	URL of the Certificate Authority (Issuer)	eg: http://ca1-openssl-mock.occncc-thrust5-01.svc.thrust5:8089, https://ca2-openssl-mock.occncc-thrust5-01.svc.thrust5:8443

Table 6-2 (Cont.) OCCM Dimension Description

Dimension	Description	Possible Values
status	To know the status of openssl CMP cmd	SUCCESS, FAILED
belongs	To determine the secret belongs to which entity	certificate-other, certificate-occm, issuer
type	To determine the type of the secret	input-secret, output-secret
secret	Name of the secret	nrf-tls-secret
uuid	Unique id of the entity	eg: 7523a545-089b-49e9-a05c- ae5141db544b
event	Name of the event	eg: modify, delete
secretNamespace	Name of the secret's namespace	eg: occncc-thrust5-01

#### (i) Note

After OCCM application starts, the default metrics are visible for the following metrics without pegging any metric to list down the available metrics. The default metrics are visible all the time and the values for the labels will be empty. It is possible that in prometheus the labels of the metrics are not visible and only Kubernetes default labels are visible.

### 6.1 occm\_config\_http\_requests\_total

Table 6-3 occm\_config\_http\_requests\_total

Field	Details
Description	The total number of requests to the OCCM configuration service.
Туре	Counter
Dimensions	<ul> <li>host</li> <li>application</li> <li>httpVersion</li> <li>scheme</li> <li>method</li> <li>nfType</li> <li>uri</li> </ul>
Example	occm_config_http_requests_total{ application="occm", container="occm", endpoint="cnc-metrics", helm_sh_chart="occm-25.1.200", host="occm.occncc-thrust5-01.svc.thrust5", httpVersion="HTTP/1.1", instance="10.233.121.228:9000", job="occne-infra/occne-nf-cnc-podmonitor", method="POST", namespace="occncc-thrust5-01", nfType="NRF", pod="occm-occm-67764765f8-7rpm8", pod_template_hash="67764765f8", scheme="http", uri="/occm-config/v1/certs" }

# 6.2 occm\_config\_http\_response\_total

Table 6-4 occm\_config\_http\_response\_total

Field	Details
Description	The total number of responses from the OCCM configuration service
Туре	Counter
Dimensions	<ul> <li>host</li> <li>httpVersion</li> <li>scheme</li> <li>method</li> <li>nfType</li> <li>statusCode</li> <li>uri</li> </ul>
Example	occm_config_http_responses_total{ application="occm", container="occm", endpoint="cnc-metrics", helm_sh_chart="occm-25.1.200", host="occm.occncc-thrust5-01.svc.thrust5", httpVersion="HTTP/1.1", instance="10.233.121.228:9000", job="occne-infra/occne-nf-cnc-podmonitor", method="POST", namespace="occncc-thrust5-01", nfType="NRF", pod="occm-occm-67764765f8-7rpm8", pod_template_hash="67764765f8", scheme="http", statusCode="202", uri="/occm-config/v1/certs"}

### 6.3 occm\_cmp\_requests\_total

Table 6-5 occm\_cmp\_requests\_total

Field	Details
Description	The number of CMP requests to the CA.
Туре	Counter
Dimensions	<ul> <li>certUuid</li> <li>certName</li> <li>nfType</li> <li>requestType</li> <li>issuerName</li> <li>caServer</li> </ul>
Example	occm_cmp_requests_total{ application="occm", caServer="http://ca90-openssl-mock.occncc-thrust5-01.svc.thrust5:8083", certName="NRFTLS-47", certUuid="c0578b02-caab-454a-bd97-422b0e1c575b", container="occm", endpoint="cnc-metrics", helm_sh_chart="occm-25.1.200", instance="10.233.121.228:9000", issuerName="CA90", job="occne-infra/occne-nf-cnc-podmonitor", namespace="occncc-thrust5-01", nfType="NRF", pod="occm-occm-67764765f8-7rpm8", pod_template_hash="67764765f8", requestType="ir"}

# 6.7 occm\_cmp\_identity\_cert\_status

Table 6-9 occm\_cmp\_identity\_cert\_status

Field	Details
Description	It is the CMP Identity (OCCM) certificate status gauge metric. The Gauge values indicate the CMP Identity (OCCM) Certificate status. For example, CREATING(1), READY(2), FAILED(3), DELETED(6), EXPIRED(7), and WAITING(8).
Туре	Gauge
Dimensions	<ul> <li>certUuid</li> <li>nfType</li> <li>certName</li> <li>certPurpose</li> <li>issuerName</li> </ul>
Example	occm_cmp_identity_cert_status{ application="occm", certName="OCCM-HTTPS-1", certPurpose="HTTPS-RA", certUuid="164dea8d-a54e-4556-81d0-f0a923030416", container="occm", endpoint="cnc-metrics",helm_sh_chart="occm-25.1.200-COCCM-2520-metrics-improve-241128052710-9f49f6ef", instance="10.233.80.166:9000", issuerName="CA-1", job="occne-infra/occne-nf-cnc-podmonitor", namespace="occm-ns", nfType="OCCM", pod="occm-occm-59898cf755-vr2hq", pod_template_hash="59898cf755"} 2

### 6.8 occm\_end\_entity\_cert\_status

Table 6-10 occm\_end\_entity\_cert\_status

Field	Details
Description	It is the End Entity (NF) Cert status gauge metric. The Gauge values indicate the End Entity (NF) Certificate status. For example, CREATING(1), READY(2), FAILED(3), DELETED(6), EXPIRED(7), and WAITING(8).
Туре	Gauge
Dimensions	<ul> <li>certUuid</li> <li>nfType</li> <li>certName</li> <li>certPurpose</li> <li>issuerName</li> </ul>
Example	occm_end_entity_cert_status{ application="occm", certName="nrfcert-nov2711-1", certPurpose="NRF SBI", certUuid="591e3743-70d0-4425-9300-10ebb989d02c", container="occm", endpoint="cnc-metrics", helm_sh_chart="occm-25.1.200-COCCM-2520-metrics-improve-241128052710-9f49f6ef", instance="10.233.80.166:9000", issuerName="CA-1", job="occne-infra/occne-nf-cnc-podmonitor", namespace="occm-ns", nfType="NRF", pod="occm-occm-59898cf755-vr2hq", pod_template_hash="59898cf755"} 2

# 6.9 occm\_cmp\_cli\_durations\_seconds

Table 6-11 occm\_cmp\_cli\_durations\_seconds

Field	Details
Description	OCCM CMP CLI duration histogram metrics. It indicates the time taken for CMP CLI between request and response from CA.
Туре	Histogram
Dimensions	<ul> <li>certUuid</li> <li>nfType</li> <li>certName</li> <li>requestType</li> <li>caServer</li> </ul>
Example	occm_cmp_cli_durations_seconds{ application="occm", caServer="http://ejbca-ejbca-community-helm.occm-ns.svc.thrust5:30080/ejbca/publicweb/cmp/occmaliasra", certName="OCCM-test1", certUuid="c7343daa-9eb0-4ba5-9e02-67a945f2bd9b", container="occm", endpoint="cnc-metrics", helm_sh_chart="occm-25.1.200", namespace="occm-ns", nfType="OCCM", pod="occm-occm-ccfcbbbfb-nl22k", quantile="0.5", requestType="ir"}

### 6.10 occm\_cert\_request\_status\_total

Table 6-12 occm\_cert\_request\_status

Field	Details
Description	OCCM certificate request status counter metric. This metrics includes both CMP Identity (OCCM) and End Entity (NF).  It indicates CMP Identity (OCCM) and End Entity (NF) certificate status, error reason, operation type whether Create, Renew, or Recreate etc.
Туре	Counter
Dimensions	<ul> <li>certName</li> <li>certUuid</li> <li>errorReason</li> <li>issuerName</li> <li>metadata</li> <li>nfType</li> <li>operationType</li> </ul>
Example	occm_cert_request_status_total{ application="occm", certName="NRFTLS-47", certUuid="c0578b02-caab-454a-bd97-422b0e1c575b", container="occm", endpoint="cncmetrics", errorReason="OK", helm_sh_chart="occm-25.1.200", instance="10.233.121.228:9000", issuerName="CA90", job="occne-infra/occne-nf-cnc-podmonitor", metadata="NA", namespace="occncc-thrust5-01", nfType="NRF", operationType="RENEW", pod="occm-occm-67764765f8-7rpm8", pod_template_hash="67764765f8"}  For bulk certificate migration, operationType will be RECREATE and the metadata will have the bulk migration UUID. The errorReason is OK_BULK_CERT_MIGRATION or
	ERR_BULK_CERT_MIGRATION to depict success and failure cases respectively.  occm_cert_request_status_total{ application="occm", certName="NRFTLS-48", certUuid="c1278b02-caab-454a-bd97-422b0e1c805b", container="occm", endpoint="cnc- metrics", errorReason="OK_BULK_CERT_MIGRATION", helm_sh_chart="occm-25.1.200", instance="10.233.121.228:9000", issuerName="CA90", job="occne-infra/occne-nf-cnc- podmonitor", metadata="7787cac2-5250-4aee-9f7b-fe3e469d5f0e", namespace="occncc- thrust5-01", nfType="NRF", operationType="RECREATE", pod="occm- occm-67764765f8-7rpm8", pod_template_hash="67764765f8"}

# 6.11 occm\_secret\_event\_total

Table 6-13 occm\_secret\_event\_total

Field	Details
Description	Kubernetes secret event count. It will indicate the number of operations that have been performed to delete or modify a secret linked to OCCM.
Туре	Counter

Table 6-13 (Cont.) occm\_secret\_event\_total

Field	Details
Dimensions	<ul> <li>name</li> <li>uuid</li> <li>type</li> <li>belongs</li> <li>secret</li> <li>secretNamespace</li> <li>event</li> </ul>
Example	occm_secret_event_total{app_kubernetes_io_application="occm", app_kubernetes_io_component="occm", app_kubernetes_io_engVersion="25.1.200-COCM-1332-240722084346-939119a5", app_kubernetes_io_instance="occm", app_kubernetes_io_managed_by="Helm", app_kubernetes_io_microservice="occm", app_kubernetes_io_mktgVersion="25.1.200.0.0", app_kubernetes_io_name="occm", app_kubernetes_io_part_of="occm", app_kubernetes_io_vendor="Oracle", app_kubernetes_io_version="25.1.200.0.0", application="occm", belongs="certificate-other", container="occm", endpoint="cnc-metrics", event="deleted", exported_namespace="occm-ns", helm_sh_chart="occm-25.1.200-COCCM-1332-240722084346-939119a5", instance="10.233.80.225:8989", job="occne-infra/occne-nf-cnc-podmonitor", name="Nrf-tls8", namespace="occm-ns", pod="occm-occm-7b6fd5dcf7-7n4ld", pod_template_hash="7b6fd5dcf7", secret="nrf-tls-secret8", type="output-secret", uuid="2111e512-10d7-4ffd-a0db-a995d606bc60"}

### **OCCM Alerts**

This section describes the alerts available for OCCM.

#### Note

Alert file is packaged with OCCM CSAR package.

- Review the occm\_alerting\_rules\_promha\_<version>.yaml file and edit the value of
  the parameters in the occm\_alerting\_rules\_promha\_<version>.yaml file (if needed
  to be changed from default values) before configuring the alerts. See above table
  for details.
- kubernetes\_namespace is configured as kubernetes namespace in which OCCM is deployed. Default value is occm. Please update the occm\_alerting\_rules\_promha\_<version>.yaml file to reflect the correct OCCM kubernetes namespace.

Table 7-1 Alerts Levels or Severity Types

Alerts Levels / Severity Types	Definition
Critical	Indicates a severe issue that poses a significant risk to safety, security, or operational integrity. It requires immediate response to address the situation and prevent serious consequences. Raised for conditions may affect the service of OCCM.
Major	Indicates a more significant issue that has an impact on operations or poses a moderate risk. It requires prompt attention and action to mitigate potential escalation. Raised for conditions may affect the service of OCCM.
Minor	Indicates a situation that is low in severity and does not pose an immediate risk to safety, security, or operations. It requires attention but does not demand urgent action. Raised for conditions may affect the service of OCCM.
Info or Warn (Informational)	Provides general information or updates that are not related to immediate risks or actions. These alerts are for awareness and do not typically require any specific response. WARN and INFO alerts may not impact the service of OCCM.

### 7.1 OccmCmpIdentityCertExpirationMinor

Table 7-2 OccmCmpIdentityCertExpirationMinor

Field	Details
Description	CMP Identity (OCCM) certificate has expired. The certificate {{\$labels.certName}} used by {{\$labels.nfType}} for {{\$labels.certPurpose}} will expire within 90 days.

Table 7-2 (Cont.) OccmCmpIdentityCertExpirationMinor

Field	Details
Summary	namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: The certificate {{\$labels.certName}} used by {{\$labels.nfType}} for {{\$labels.certPurpose}} will expire soon within 90 days'
Severity	Minor
Condition	The CMP Identity (OCCM) certificate will expire within 90 days.
OID	1.3.6.1.4.1.323.5.3.54.1.2.7001
Metric Used	occm_cmp_identity_cert_expiration_seconds
Recommended Actions	Information that certificate is going to expire within 90 days. The alert is cleared when the certificate is renewed so that the certificate expiry day is below the minor threshold or when the certificate expiry day crosses the major threshold, in this case the alert is raised.
	Note: The threshold is configurable in the occm_alertingrules_ <version>.yaml file. Steps:</version>
	<ol> <li>Check the certificate configuration to renew before the expiry day.</li> <li>If this is unexpected, contact My Oracle Support.</li> </ol>

# 7.2 OccmCmpIdentityCertExpirationMajor

Table 7-3 OccmCmpIdentityCertExpirationMajor

Field	Details
Description	CMP Identity (OCCM) certificate has expired. The certificate {{\$labels.certName}} used by {{\$labels.nfType}} for {{\$labels.certPurpose}} will expire within 30 days.
Summary	namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: The certificate {{\$labels.certName}} used by {{\$labels.nfType}} for {{\$labels.certPurpose}} will expire soon within 30 days'
Severity	Major
Condition	The CMP Identity (OCCM) certificate will expire within 30 days.
OID	1.3.6.1.4.1.323.5.3.54.1.2.7001
Metric Used	occm_cmp_identity_cert_expiration_seconds

Table 7-3 (Cont.) OccmCmpIdentityCertExpirationMajor

Field	Details
Recommended Actions	Information that certificate is going to expire within 30 days. The alert is cleared when the certificate is renewed or when the certificate expiry days crosses the critical threshold, in which case the alert is raised.
	Note: The threshold is configurable in the occm_alertingrules_ <version>.yaml file.</version>
	Steps:
	Check the certificate configuration to renew before the expiry day.
	<ol> <li>Refer to the application logs on Kibana and filter based on occm service name. Check for ERROR WARNING logs related to the thread exceptions.</li> </ol>
	3. Perform the resolution steps depending on the failure reason.
	4. If this is unexpected, contact My Oracle Support.

# 7.3 OccmCmpIdentityCertExpirationCritical

Table 7-4 OccmCmpIdentityCertExpirationCritical

etalal	Data ila
Field	Details
Description	CMP Identity (OCCM) certificate has expired. The certificate {{\$labels.certName}} used by {{\$labels.nfType}} for {{\$labels.certPurpose}} will expire within one week.
Summary	namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: The certificate {{\$labels.certName}} used by {{\$labels.nfType}} for {{\$labels.certPurpose}} will expire soon within 1 week'
Severity	Critical
Condition	The CMP Identity (OCCM) certificate will expire within one week.
OID	1.3.6.1.4.1.323.5.3.54.1.2.7001
Metric Used	occm_cmp_identity_cert_expiration_seconds
Recommended Actions	Information that Certificate is going to expire within one week. The alert is cleared when the certificate is renewed.
	Note: The threshold is configurable in the occm_alertingrules_ <version>.yaml file.  Steps:</version>
	Check the certificate configuration to renew before the expiry day.
	Refer to the application logs on Kibana and filter based on occm service name. Check for ERROR WARNING logs related to the thread exceptions.
	3. Perform the resolution steps depending on the failure reason.
	4. If this is unexpected, contact My Oracle Support.

# 7.4 OccmCmpIdentityCertExpired

Table 7-5 OccmCmpIdentityCertExpired

Field	Details
Description	Alert is raised when the certificate expires and then recreation will be triggered. If the certificate recreation is successful then alert will be cleared automatically or the operator has to clear the alert manually. The certificate {{\$labels.certName}} used by {{\$labels.nfType}} for {{{\$labels.certPurpose}} is expired.
Summary	'namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: The certificate {{\$labels.certName}} used by {{\$labels.nfType}} for {{\$labels.certPurpose}} is expired'
Severity	Critical
Condition	The CMP Identity (OCCM) certificate has expired.
OID	1.3.6.1.4.1.323.5.3.54.1.2.7002
Metric Used	occm_cmp_identity_cert_expiration_seconds
Recommended Actions	Information that the certificate has expired. The alert is cleared when the certificate is recreated.  Steps:
	<ol> <li>Refer to the application logs on Kibana and filter based on occm service name. Check for ERROR WARNING logs related to the thread exceptions.</li> </ol>
	<ol><li>Perform the following steps if recreate fails and certificates are expired:</li></ol>
	a. Check logs to identify the root cause. The possible cause may be CA connection failure. In this case operator must manually configure the CMP Identity certificate.
	b. Get the kubernetes secret name corresponding to OCCM key and certificate location from the mapped issuer. This information is present under CMP client authentication options for Other Cert section of the issuer.
	<ul> <li>Manually create CMP Identity (OCCM) certificate and update the secret.</li> </ul>
	<ul> <li>Manual recreation of certificate can be triggered when CA connection resumes.</li> </ul>
	e. To renew expired certificate, see "Expired Certificate Detection" section in Oracle Communications Cloud Native Core, Certificate Management Troubleshooting Guide.
	3. If this is unexpected, contact My Oracle Support.

# 7.5 OccmEndEntityCertExpirationMinor

Table 7-6 OccmEndEntityCertExpirationMinor

Field	Details
Description	End Entity (NF) certificate has expired. The certificate {{\$labels.certName}} used by {{\$labels.nfType}} for {{\$labels.certPurpose}} will expire within 90 days.
Summary	namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: The certificate {{\$labels.certName}} used by {{\$labels.nfType}} for {{\$labels.certPurpose}} will expire soon within 90 days'
Severity	Minor
Condition	The End Entity (NF) certificate will expire within 90 days.
OID	1.3.6.1.4.1.323.5.3.54.1.2.7003
Metric Used	occm_end_entity_cert_expiration_seconds
Recommended Actions	Information that certificate is going to expire within 90 days. The alert is cleared when the certificate is renewed so that the certificate expiry day is below the minor threshold or when the certificate expiry day crosses the major threshold, in this case the alert is raised.
	Note: The threshold is configurable in the occm_alertingrules_ <version>.yaml file. Steps:</version>
	<ol> <li>Check the certificate configuration to renew before the expiry day.</li> <li>If this is unexpected, contact My Oracle Support.</li> </ol>

# 7.6 OccmEndEntityCertExpirationMajor

Table 7-7 OccmEndEntityCertExpirationMajor

Field	Details
Description	End Entity (NF) certificate has expired. The certificate {{\$labels.certName}} used by {{\$labels.nfType}} for {{\$labels.certPurpose}} will expire within 30 days.
Summary	'namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: The certificate {{\$labels.certName}} used by {{\$labels.nfType}} for {{\$labels.certPurpose}} will expire soon within 30 days.
Severity	Major
Condition	End Entity (NF) certificate will expire soon within 30 days.
OID	1.3.6.1.4.1.323.5.3.54.1.2.7003
Metric Used	occm_end_entity_cert_expiration_seconds

Table 7-7 (Cont.) OccmEndEntityCertExpirationMajor

Field	Details
Recommended Actions	Information that Certificate is going to expire within 30 days. The alert is cleared when the certificate is renewed or when the certificate expiry day crosses the critical threshold,, in this case the alert is raised.
	Note: The threshold is configurable in the occm_alertingrules_ <version>.yaml file.</version>
	Steps:
	Check the certificate configuration to renew before the expiry day.
	<ol> <li>Refer to the application logs on Kibana and filter based on occm service names. Check for ERROR WARNING logs related to thread exceptions.</li> </ol>
	3. Perform the resolution steps depending on the failure reason.
	4. If this is unexpected, contact My Oracle Support.

# 7.7 OccmEndEntityCertExpirationCritical

Table 7-8 OccmEndEntityCertExpirationCritical

Field	Details
Description	End Entity (NF) certificate has expired. The certificate {{\$labels.certName}} used by {{\$labels.nfType}} for {{\$labels.certPurpose}} will expire within one week.
Summary	'namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: The certificate {{\$labels.certName}} used by {{\$labels.nfType}} for {{\$labels.certPurpose}} will expire soon within 1 week'
Severity	Critical
Condition	End Entity (NF) certificate will expire soon within one week.
OID	1.3.6.1.4.1.323.5.3.54.1.2.7003
Metric Used	occm_end_entity_cert_expiration_seconds
Recommended Actions	Information that Certificate is going to expire within one week. The alert is cleared when the certificate is renewed.
	Note: The threshold is configurable in the occm_alertingrules_ <version>.yaml file. Steps:</version>
	Check the certificate configuration to renew before the expiry day.
	<ol><li>Refer to the application logs on Kibana and filter based on occm service names. Check for ERROR WARNING logs related to thread exceptions.</li></ol>
	3. Perform the resolution steps depending on the failure reason.
	4. If this is unexpected, contact My Oracle Support.

# 7.8 OccmEndEntityCertExpired

Table 7-9 OccmEndEntityCertExpired

Field	Details
Description	Alert is raised when the certificate expires and then recreation will be triggered. If the certificate recreation is successful then alert will be cleared automatically or the operator has to clear the alert manually. The certificate {{\$labels.certName}} used by {{\$labels.nfType}} for {{\$labels.certPurpose}} is expired'
Summary	'namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: The certificate {{\$labels.certName}} used by {{\$labels.nfType}} for {{\$labels.certPurpose}} is expired'
Severity	Critical
Condition	End Entity (NF) certificate has expired.
OID	1.3.6.1.4.1.323.5.3.54.1.2.7009
Metric Used	occm_end_entity_cert_expiration_seconds
Recommended Actions	Information that certificate has expired. The alert is cleared when the certificate is recreated.
	Steps:
	Refer to the application logs on Kibana and filter based on occm service name. Check for ERROR WARNING logs related to the thread exceptions.
	Perform the following steps if recreate fails and certificates are expired:
	<ul> <li>a. Check logs to identify the root cause. The possible cause may be CA connection failure.</li> </ul>
	b. As a resolution perform the recreate operation when is CA is accessible. Alert will be cleared once recreation is successful.
	c. If CA is still down then manually create the End-Entity (NF) certificate and update the details in secret, which is automatically monitored by OCCM.
	<ul> <li>d. Manual recreation of certificate can be triggered when CA connection resumes.</li> </ul>
	e. To renew expired certificate, see "Expired Certificate Detection" section in Oracle Communications Cloud Native Core, Certificate Management Troubleshooting Guide
	3. If this is unexpected, contact My Oracle Support.

### 7.9 OccmServiceDown

Table 7-10 OccmServiceDown

Field	Details
Description	OCCM Service Down Alert
	New certificates will not be created, and existing ones can not be renewed until OCCM is back
Summary	namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: OCCM service is down
Severity	Critical
Condition	The pods of the occm service is unavailable.
OID	1.3.6.1.4.1.323.5.3.54.1.2.7004
Metric Used	up  Note: This is a prometheus metric used for instance availability monitoring. If this metric is not available, use the similar metric as exposed by the monitoring system.
Recommended Actions	The alert is cleared when the occm service is available. Steps:
	Check the orchestration logs of occm service and check for liveness or readiness probe failures.
	2. Refer to the application logs on Kibana and filter based on occm service names. Check for ERROR WARNING logs related to thread exceptions.
	3. Depending on the failure reason, take the resolution steps.
	4. In case the issue persists, contact My Oracle Support.

# 7.10 OccmMemoryUsageMinorThreshold

Table 7-11 OccmMemoryUsageMinorThreshold

Field	Details
Description	OCCM Memory Usage Alert
	OCCM Memory Usage for pod {{ \$labels.pod }} has crossed the configured minor threshold (70%) (value={{ \$value }}) of its limit.
Summary	namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: Memory Usage of pod exceeded 70% of its limit.
Severity	Minor
Condition	A pod has reached the configured minor threshold( 70%) of its memory resource limits.
OID	1.3.6.1.4.1.323.5.3.54.1.2.7005

Table 7-11 (Cont.) OccmMemoryUsageMinorThreshold

Field	Details
Metric Used	container_memory_usage_bytes,
	<b>Note</b> : This is a kubernetes metric used for instance availability monitoring. If the metric is not available, use the similar metric as exposed by the monitoring system.
Recommended Actions	The alert gets cleared when the memory utilization falls below the Minor Threshold or crosses the major threshold, in which case OccmMemoryUsageMajorThreshold alert shall be raised.
	Note: The threshold is configurable in the occm_alertingrules_ <version>.yaml file. Steps:</version>
	<ol> <li>Refer to the application logs on Kibana and filter based on occm service name. Check for ERROR WARNING logs related to thread exceptions.</li> </ol>
	2. Depending on the failure reason, take the resolution steps.
	3. If this is unexpected, contact My Oracle Support.

# 7.11 OccmMemoryUsageMajorThreshold

Table 7-12 OccmMemoryUsageMajorThreshold

Field	Details
Description	OCCM Memory Usage Alert
	OCCM Memory Usage for pod {{ \$labels.pod }} has crossed the configured major threshold (80%) (value={{ \$value }}) of its limit.
Summary	namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: Memory Usage of pod exceeded 80% of its limit.
Severity	Major
Condition	A pod has reached the configured major threshold (80%) of its memory resource limits.
OID	1.3.6.1.4.1.323.5.3.54.1.2.7005
Metric Used	container_memory_usage_bytes,
	<b>Note</b> : This is a kubernetes metric used for instance availability monitoring. If the metric is not available, use the similar metric as exposed by the monitoring system.

Table 7-12 (Cont.) OccmMemoryUsageMajorThreshold

Field	Details
Recommended Actions	The alert gets cleared when the memory utilization falls below the Major Threshold or crosses the critical threshold, in which case OccmMemoryUsageMajorThreshold alert shall be raised Note: The threshold is configurable in the occm_alertingrules_ <version>.yaml file.  Steps:</version>
	<ol> <li>Refer to the application logs on Kibana and filter based on occm service name. Check for ERROR WARNING logs related to thread exceptions.</li> </ol>
	2. Depending on the failure reason, take the resolution steps.
	3. If this is unexpected, contact My Oracle Support.

# 7.12 OccmMemoryUsageCriticalThreshold

Table 7-13 OccmMemoryUsageCriticalThreshold

Field	Details
Description	OCCM Memory Usage Alert
	OCCM Memory Usage for pod {{ \$labels.pod }} has crossed the configured critical threshold (90%) (value={{ \$value }}) of its limit
Summary	namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: Memory Usage of pod exceeded 90% of its limit.
Severity	Critical
Condition	A pod has reached the configured critical threshold ( 90% ) of its memory resource limits
OID	1.3.6.1.4.1.323.5.3.54.1.2.7005
Metric Used	container_memory_usage_bytes,
	Note: This is a kubernetes metric used for instance availability monitoring. If the metric is not available, use the similar metric as exposed by the monitoring system.
Recommended Actions	The alert gets cleared when the memory utilization falls below the Critical Threshold.Note: The threshold is configurable in the alerts.yaml Note: The threshold is configurable in the occm_alertingrules_ <version>.yaml file.  Steps:</version>
	Refer to the application logs on Kibana and filter based on occm service name. Check for ERROR WARNING logs related to thread exceptions.
	2. Depending on the failure reason, take the resolution steps.
	3. If this is unexpected, contact My Oracle Support.

# 7.13 OccmCPUUsageMinorThreshold

Table 7-14 OccmCPUUsageMinorThreshold

Field	Details
Description	OCCM CPU Usage Alert
	OCCM Pod {{\$labels.pod}} has high CPU usage detected.
Summary	namespace: {{ \$labels.namespace}}, podname: {{ \$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: CPU usage is {{ \$value   printf "%.2f" }} which is usage is above 70% (current value is: {{ \$value }})
Severity	Minor
Condition	CPU usage is above 70%
OID	1.3.6.1.4.1.323.5.3.54.1.2.7006
Metric Used	container_cpu_usage_seconds_total
Recommended Actions	Information regarding CPU usage If it is above 70%
	The alert gets cleared when the CPU usage falls below the Minor Threshold.
	Note: The threshold is configurable in the occm_alertingrules_ <version>.yaml file.</version>
	Steps:
	Refer to the application logs on Kibana and filter based on occm service name. Check for ERROR WARNING logs related to thread exceptions.
	2. Depending on the failure reason, take the resolution steps.
	3. If this is unexpected, contact My Oracle Support.

### 7.14 OccmCMPFailureMinor

Table 7-15 OccmCMPFailureMinor

Field	Details
Description	OCCM CMP Command Execution Failure Alert
	The certificate {{\$labels.certName}} used by {{\$labels.nfType}} has failed while executing CMP cmd with {{\$labels.statusCode}}.
Summary	namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: The certificate {{\$labels.certName}} used by {{\$labels.nfType}} has failed while executing CMP cmd with {{\$labels.statusCode}}.
Severity	Minor
Condition	Certificate has failed while executing CMP cmds.
OID	1.3.6.1.4.1.323.5.3.54.1.2.7007
Metric Used	occm_cmp_responses_total

Table 7-15 (Cont.) OccmCMPFailureMinor

Field	Details
Recommended Actions	Information that the rate of certificate failure due to CMP command execution error has crossed the threshold. The alert is cleared when the rate of certificate failure due to CMP command execution error falls below the Minor threshold or when the error rate crosses the Major threshold, in which case the OccmCMPFailureMajor alert is raised.
	Note: The threshold is configurable in the occm_alertingrules_ <version>.yaml file. Steps:</version>
	<ol> <li>Refer to the application logs on Kibana and filter based on occm service name. Check for ERROR WARNING logs related to thread exceptions.</li> </ol>
	<ol> <li>Depending on the failure reason, take the resolution steps.</li> <li>If this is unexpected, contact My Oracle Support.</li> </ol>

# 7.15 OccmCMPFailureMajor

Table 7-16 OccmCMPFailureMajor

Field	Dataila
Field	Details
Description	OCCM CMP Command Execution Failure Alert
	The certificate {{\$labels.certName}} used by {{\$labels.nfType}} has failed while executing CMP cmd with {{\$labels.statusCode}}.
Summary	namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: The certificate {{\$labels.certName}} used by {{\$labels.nfType}} has failed while executing CMP cmd with {{\$labels.statusCode}}.
Severity	Major
Condition	Certificate has failed while executing CMP cmds
OID	1.3.6.1.4.1.323.5.3.54.1.2.7007
Metric Used	occm_cmp_responses_total
Recommended Actions	Information that the rate of certificate failure due to CMP command execution error has crossed the threshold. The alert is cleared when the rate of certificate failure due to CMP command execution error falls below the Major threshold or when the error rate crosses the Critical threshold, in which case the OccmCMPFailureCritical alert is raised. Note: The threshold is configurable in the
	occm_alertingrules_ <version>.yaml file.</version>
	Steps:
	Refer to the application logs on Kibana and filter based on occm service name. Check for ERROR WARNING logs related to thread exceptions.
	2. Depending on the failure reason, take the resolution steps.
	3. If this is unexpected, contact My Oracle Support.

### 7.16 OccmCMPFailureCritical

Table 7-17 OccmCMPFailureCritical

Field	Details
Description	OCCM CMP Command Execution Failure Alert
	The certificate {{\$labels.certName}} used by {{\$labels.nfType}} has failed while executing CMP cmd with {{\$labels.statusCode}}.
Summary	namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: The certificate {{\$labels.certName}} used by {{\$labels.nfType}} has failed while executing CMP cmd with {{\$labels.statusCode}}.
Severity	Critical
Condition	Certificate has failed while executing CMP cmds
OID	1.3.6.1.4.1.323.5.3.54.1.2.7007
Metric Used	occm_cmp_responses_total
Recommended Actions	Information that the rate of certificate failure due to CMP command execution error has crossed the threshold. The alert is cleared when the rate of certificate failure due to CMP command execution error falls below the Critical threshold.
	Note: The threshold is configurable in the occm_alertingrules_ <version>.yaml file.</version>
	Steps:
	Refer to the application logs on Kibana and filter based on occm service name. Check for ERROR WARNING logs related to thread exceptions.
	2. Depending on the failure reason, take the resolution steps.
	3. If this is unexpected, contact My Oracle Support.

### 7.17 OccmFailureMinor

Table 7-18 OccmFailureMinor

Field	Details
Description	OCCM Internal Failure Alert
	The certificate {{\$labels.certName}} used by {{\$labels.nfType}} has failed while creating cert with {{\$labels.errorReason}}.
Summary	namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: The certificate {{\$labels.certName}} used by {{\$labels.nfType}} has failed while creating cert with {{\$labels.errorReason}}.
Severity	Minor
Condition	Certificate has failed while creating
OID	1.3.6.1.4.1.323.5.3.54.1.2.7008
Metric Used	occm_cert_request_status_total

Table 7-18 (Cont.) OccmFailureMinor

Field	Details
Recommended Actions	Information that the rate of OCCM errors has crossed the threshold. The alert is cleared when the rate OCCM error falls below the Minor threshold or when the error rate crosses the Major threshold, in which case the OccmFailureMajor alert is raised.
	Note: The threshold is configurable in the occm_alertingrules_ <version>.yaml file. Steps:</version>
	Refer to the application logs on Kibana and filter based on occm service name. Check for ERROR WARNING logs related to thread exceptions.
	<ol> <li>Depending on the failure reason, take the resolution steps.</li> <li>If this is unexpected, contact My Oracle Support.</li> </ol>

# 7.18 OccmFailureMajor

Table 7-19 OccmFailureMajor

Field	Details
Description	OCCM Internal Failure Alert The certificate {{\$labels.certName}} used by {{\$labels.nfType}} has failed while creating cert with {{\$labels.errorReason}}.
Summary	namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: The certificate {{\$labels.certName}} used by {{\$labels.nfType}} has failed while creating cert with {{\$labels.errorReason}}.
Severity	Major
Condition	Certificate has failed while creating
OID	1.3.6.1.4.1.323.5.3.54.1.2.7008
Metric Used	occm_cert_request_status_total
Recommended Actions	Information that the rate of OCCM errors has crossed the threshold. The alert is cleared when the rate OCCM error falls below the Major threshold or when the error rate crosses the Critical threshold, in which case the OccmFailureCritical alert is raised.
	Note: The threshold is configurable in the occm_alertingrules_ <version>.yaml file.</version>
	Steps:
	Refer to the application logs on Kibana and filter based on occm service name. Check for ERROR WARNING logs related to thread exceptions.
	2. Depending on the failure reason, take the resolution steps.
	3. If this is unexpected, contact My Oracle Support.

### 7.19 OccmFailureCritical

Table 7-20 OccmFailureCritical

Field	Details
Description	OCCM CMP Command Execution Failure Alert The certificate {{\$labels.certName}} used by {{\$labels.nfType}} has failed while creating cert with {{\$labels.errorReason}}.
Summary	namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: The certificate {{\$labels.certName}} used by {{\$labels.nfType}} has failed while creating cert with {{\$labels.errorReason}}.
Severity	critical
Condition	Certificate has failed while creating
OID	1.3.6.1.4.1.323.5.3.54.1.2.7008
Metric Used	occm_cert_request_status_total
Recommended Actions	Information that the rate of certificate failure due to CMP command execution error has crossed the threshold. The alert is cleared when the rate of certificate failure due to CMP command execution error falls below the Critical threshold.
	Note: The threshold is configurable in the occm_alertingrules_ <version>.yaml file. Steps:</version>
	<ol> <li>Refer to the application logs on Kibana and filter based on occm service name. Check for ERROR WARNING logs related to thread exceptions.</li> </ol>
	2. Depending on the failure reason, take the resolution steps.
	3. If this is unexpected, contact My Oracle Support.

# 7.20 OccmInputSecretModifyMajor

Table 7-21 OccmInputSecretModifyMajor

Field	Details
Description	Input secret is modified by non-OCCM user The Secret {{\$labels.secret}} in {{\$labels.secretNamespace}} is modified by non-occm user, which is used by {{\$labels.name}}.'
Summary	'namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: The Secret {{\$labels.secret}} in {{\$labels.secretNamespace}} is modified by non-occm user, which is used by {{\$labels.name}} and {{\$labels.type}}.'
Severity	Major
Condition	Input secrets are modified by non-OCCM users or by the operator manually.
OID	1.3.6.1.4.1.323.5.3.54.1.2.7010
Metric Used	occm_secret_event_total

Table 7-21 (Cont.) OccmInputSecretModifyMajor

Field	Details
Recommended Actions	Information that the input secret is modified by non-OCCM user.
	Steps:
	Check input secrets for any modifications.
	2. See the alert label for the namespace and to see which secret alert is triggered.
	3. Update input secrets with correct data, if require.
	4. If this is unexpected, contact My Oracle Support.

# 7.21 OccmOutputSecretModifyMinor

Table 7-22 OccmOutputSecretModifyMinor

Field	Details
Description	Output secret is modified by non-OCCM user The Secret {{\$labels.secret}} in {{\$labels.secretNamespace}} is modified by non-occm user, which is used by {{\$labels.name}}.'
Summary	'namespace: {{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: The Secret {{\$labels.secret}} in {{\$labels.secretNamespace}} is modified by non-occm user, which is used by {{\$labels.name}} and {{\$labels.type}}.'
Severity	Minor
Condition	Output secrets are modified by non-OCCM user or by operator manually
OID	1.3.6.1.4.1.323.5.3.54.1.2.7011
Metric Used	occm_secret_event_total
Recommended Actions	Information that the output secret is modified by non-OCCM user. Steps:
	Check output secrets for any modifications.
	2. Automatic recreation will be triggered if certificate which is modified does not match with cert config.
	3. Updatation of validity will be done, if the modified certificate validation is successful with certification configuration. No recreation will be triggered in this case.
	4. If this is unexpected, contact My Oracle Support.

### 7.22 OccmK8sResourceDeleteMajor

Table 7-23 OccmK8sResourceDeleteMajor

Field	Details
Description	Kubernetes resource (secret or namespace) is deleted by non-OCCM user  The Kubernetes resource is deleted, which is used in {{\$labels.name}} of type {{\$labels.type}}. K8s resources, secretNamespace: {{\$labels.secretNamespace}} and secret: {{\$labels.secret}}'
Summary	{{\$labels.namespace}}, podname: {{\$labels.pod}}, timestamp: {{ with query "time()" }}{{ .   first   value   humanizeTimestamp }}{{ end }}: The k8s resource is deleted, which is used in {{\$labels.name}} of type {{\$labels.type}}. K8s resources, namespace: {{\$labels.secretNamespace}} and secret: {{\$labels.secret}}.'
Severity	Major
Condition	Kubernetes resources (secret or namespace) are deleted by non-OCCM user or by operator manually.
OID	1.3.6.1.4.1.323.5.3.54.1.2.7012
Metric Used	occm_secret_event_total
Recommended Actions	Information that the Kubernetes resources (secret or namespace) are deleted by non-OCCM user.  Steps:
	Check output secrets for any deletion.
	Automatic recreation of certificate will be triggered, if secret is deleted.
	3. if namespace is deleted, then automatic recreation of certificate does not happen and the operator must delete the certificate configuration from the OCCM which are associated with that namespace.
	4. If this is unexpected, contact My Oracle Support.

### 7.23 OCCM Alert and MIB Configuration in Prometheus

#### **CNE supporting Prometheus HA**

This section describes the measurement based Alert rules configuration for OCCM in Prometheus. You must use the updated <code>occm\_alerting\_rules\_promha\_<version>.yaml file.</code>

Run the following command to create ot update the PrometheusRule resource specified in the alert YAML file:

\$ kubectl apply -f occm\_alerting\_rules\_promha\_<version>.yaml

#### **Disabling Alerts**

This section describes the procedure to disable the alerts in OCCM. To disable alerts:

1. Edit occm\_alerting\_rules\_promha\_<version>.yaml file to remove specific alert.

2. Remove complete content of the specific alert from the occm\_alerting\_rules\_promha\_<version>.yaml file.

For example, ff you want to remove OccmServiceDown alert, remove the complete content:

```
## ALERT SAMPLE START##
- alert: OccmServiceDown
      annotations:
        description: 'New certificates will not be created, and existing
ones can not be renewed until OCCM is back'
        summary: 'namespace: {{$labels.namespace}}, podname:
\{\{\text{slabels.pod}\}\}, timestamp: \{\{\text{with query "time()" }\}\}\{\{\text{. | first | value }\}\}
| humanizeTimestamp }}{{ end }}: OCCM service is down'
      expr: absent(up{pod=~".*occm.*", namespace="occm-ns"}) or
(up\{pod=\sim".*occm.*", namespace="occm-ns"\}) == 0
      labels:
        severity: critical
        oid: "1.3.6.1.4.1.323.5.3.54.1.2.7004"
        namespace: ' {{ $labels.namespace }} '
        podname: ' {{$labels.pod}} '
## ALERT SAMPLE END##
```

3. Perform Alert configuration.

#### **Validating Alerts**

Configure and Validate Alerts in Prometheus Server. Refer to OCCM Alert Configuration for procedure to configure the alerts.

After configuring the alerts in Prometheus server, a user can verify that by following steps:

- 1. Open the Prometheus server from your browser using the <IP>:<Port>
- 2. Navigate to Status and then Rules
- 3. Search OCCM. OCCMAlerts list is displayed.

#### (i) Note

If you are unable to see the alerts, it means that the alert file has not loaded in a format which the Prometheus server accepts. Modify the file and try again.

#### **Configuring SNMP-Notifier**

Configure the IP and port of the SNMP trap receiver in the SNMP Notifier using following procedure:

1. Run the following command to edit the deployment:

```
kubectl edit deploy <snmp_notifier_deployment_name> -n <namespace>
```

#### Example:

\$ kubectl edit deploy occne-snmp-notifier -n occne-infra

#### 2. Edit the destination as follows:

--snmp.destination=<destination\_ip>:<destination\_port>

#### Example:

--snmp.destination=10.75.203.94:162

#### **MIB Files for OCCM**

There are two MIB files which are used to generate the traps. The user need to update these files along with the Alert file in order to fetch the traps in their environment.

- occm\_mib\_tc\_<version>.mib: This is considered as OCCM top level mib file, where the
  Objects and their data types are defined
- occm\_mib\_<version>.mib: This file fetches the Objects from the top level mib file and based on the Alert notification, these objects can be selected for display.

#### (i) Note

MIB files are packaged along with OCCM CSAR package. Download the file from MOS. For more information, see *Oracle Communications Cloud Native Core*, *Certificate Management Installation, Upgrade, and Fault Recovery Guide.* 

### **OCCM KPIs**

This section describes the KPIs available for OCCM.

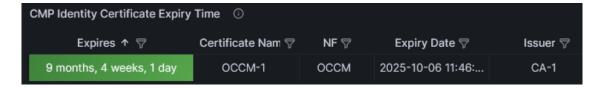

### 8.1 CMP Identity (OCCM) Certificate Expiry Time

Table 8-1 CMP Identity (OCCM) Certificate Expiry Time

Field	Details
Description	CMP Identity (OCCM) certificate expiry time to list Certificate Name and Expiry Date.
Expression	OCCM dashboard in grafana will show CMP Identity (OCCM) Certificate Expiry Time panel with columns. Table visualization listing Expires, NF, Certificate Name, Expiry Date. Expires column uses color coding to indicate near expiry status.  all:occm_cmp_identity_cert_expiration_seconds{namespace="\$namespace"} * 1000!
	= 0 Expires column:
	((occm_cmp_identity_cert_expiration_seconds{namespace="\$namespace"} != 0)-time())*1000

#### **OCCM KPI Dashboard**

Figure 8-1 CMP Identity (OCCM) Certificate Expiry Time

#### Color coding description:-

Red (Critical):- Certificate expiring within 0 <= 7 days Or Certificate expired <= 0 days

Light Red(Major):- Certificate expiring within > 7 <= 30 days

Orange (Minor):- Certificate expiring within > 30 <= 90

Yellow :- Certificate expiring within > 90 <= 180

Green :- Certificates not expiring sooner

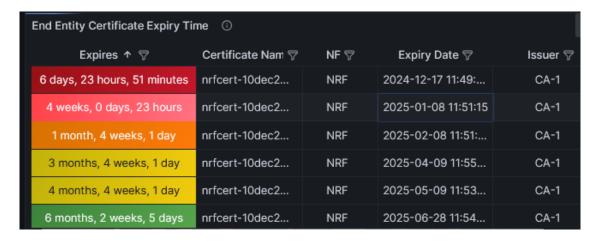

### 8.2 End Entity (NF) Certificate Expiry Time

Table 8-2 End Entity (NF) Certificate Expiry Time

Field	Details
Description	End Entity (NF) certificate expiry time to list Certificate Name and Expiry Date.
Expression	OCCM dashboard in grafana will show End Entity (NF) Certificate Expiry Time panel with columns. Table visualization listing Expires, NF, Certificate Name, Expiry Date. Expires column uses color coding to indicate near expiry status. all:occm_end_entity_cert_expiration_seconds{namespace="\$namespace"} * 1000 != 0
	Expires column: ((occm_end_entity_cert_expiration_seconds{namespace="\$namespace"} != 0)-time())*1000

#### **OCCM KPI Dashboard**

Figure 8-2 End Entity (NF) Certificate Expiry Time

#### Color coding description:-

Red (Critical):- Certificate expiring within 0 <= 7 days Or Certificate expired <= 0 days

Light Red(Major):- Certificate expiring within > 7 <= 30 days

Orange (Minor):- Certificate expiring within > 30 <= 90

Yellow :- Certificate expiring within > 90 <= 180

Green :- Certificates not expiring sooner

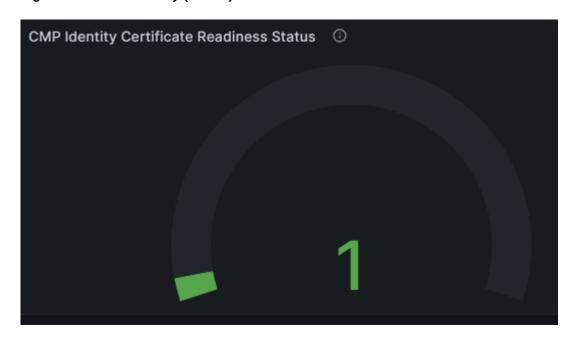

# 8.3 CMP Identity (OCCM) Certificate Readiness Status

Table 8-3 CMP Identity (OCCM) Certificate Readiness Status

Field	Details
Description	CMP Identity (OCCM) Certificate Readiness Status to indicate if number of Ready and Failed Certificates.
Expression	OCCM dashboard in grafana shows the CMP Identity (OCCM) Certificate Readiness Status panel panel gauge visualization to indicate if number of Ready and Failed Certificates
	Creating:count(occm_cmp_identity_cert_status{namespace="\$namespace"} == 1) (Color:Orange)
	Ready:count(occm_cmp_identity_cert_status{namespace="\$namespace"} == 2) (Color:Green)
	Failed:count(occm_cmp_identity_cert_status{namespace="\$namespace"} == 3) (Color:Red)
	Waiting:count(occm_cmp_identity_cert_status{namespace="\$namespace"} == 8) (Color:Light Orange)
	Expired:count(occm_cmp_identity_cert_status{namespace="\$namespace"} == 7) (Color:Red)
	During bulk certificate migration, the intermediate status displayed on the gauge includes duplicate certificate and might show an increased number. However, once the process is completed the eventual state will be consistent and will show the correct count of all the certificates.

#### **OCCM KPI Dashboard**

Figure 8-3 CMP Identity (OCCM) Certificate Readiness Status

Creating: Orange

Ready: Green

Failed: Red

Waiting: Light Orange

Expired: Red

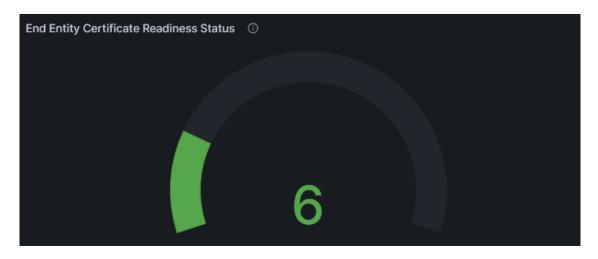

### 8.4 End Entity (NF) Certificate Readiness Status

Table 8-4 End Entity (NF) Certificate Readiness Status

Field	Details
Description	End Entity (NF) Certificate Readiness Status to indicate if number of Ready and Failed Certificates.
Expression	OCCM dashboard in grafana shows the End Entity (NF) Certificate Readiness Status panel gauge visualization to indicate if number of Ready and Failed Certificates
	Creating:count(occm_end_entity_cert_status{namespace="\$namespace"} == 1) (Color:Orange)
	Ready:count(occm_end_entity_cert_status{namespace="\$namespace"} == 2) (Color:Green)
	Failed:count(occm_end_entity_cert_status{namespace="\$namespace"} == 3) (Color:Red)
	Waiting:count(occm_end_entity_cert_status{namespace="\$namespace"} == 8) (Color:Light Orange)
	Expired:count(occm_end_entity_cert_status{namespace="\$namespace"} == 7) (Color:Red)
	During bulk certificate migration, the intermediate status displayed on the gauge includes duplicate certificate and might show an increased number. However, once the process is completed the eventual state will be consistent and will show the correct count of all the certificates.

#### **OCCM KPI Dashboard**

Figure 8-4 End Entity (NF) Certificate Readiness Status

Creating: Orange

Ready: Green

Failed: Red

Waiting: Light Orange

Expired : Red

### 8.5 CMP Request

#### Table 8-5 CMP Request

Field	Details
Description	Total CMP requests initiated from OCCM towards CA per NF
Expression	OCCM dashboard in grafana will show CMP Request panel which is total CMP requests per NF.
	all:sum(rate(occm_cmp_requests_total{namespace="\$namespace"}[2m]))
	SCP:sum(rate(occm_cmp_requests_total{namespace="\$namespace", nfType=~"SCP scp"}[2m]))
	NRF:sum(rate(occm_cmp_requests_total{namespace="\$namespace", nfType=~"NRF nrf"}[2m]))

# 8.6 CMP Responses

Table 8-6 CMP Responses

Field	Details
Description	Total CMP responses received from CA per NF by OCCM
Expression	OCCM dashboard in grafana will show CMP Response panel which is total CMP responses per NF.
	all:sum(rate(occm_cmp_responses_total{namespace="\$namespace"}[2m]))
	SCP:sum(rate(occm_cmp_responses_total{namespace="\$namespace", nfType=~"SCP scp"}[2m]))
	NRF:sum(rate(occm_cmp_responses_total{namespace="\$namespace", nfType=~"NRF nrf"}[2m]))

# 8.7 Configuration Requests

**Table 8-7 Configuration Requests** 

Field	Details
Description	Total Issuer, Certificate Configuration, and Bulk Certificate Migration requests.

Table 8-7 (Cont.) Configuration Requests

Field	Details
Expression	OCCM dashboard in grafana will show Config Requests panel. Total Issuer, Certificate configuration, and Bulk Certificate Migration requests.
	all:sum(rate(occm_config_http_requests_total{namespace="\$namespace"}[2m]))
	SCP certs:sum(rate(occm_config_http_requests_total{namespace="\$namespace", uri=~".*/certs.*", nfType=~"SCP scp"}[2m]))

- 2. UUID Certificate UUID
- 3. Operation Certificate Operation Type (CREATE or RENEW)
- 4. Reason Error code indicating Certificate Error or Warning Reason
- 5. Issuer Issuer Name linked to the Certificate

### 8.22 Bulk Certificate Migration Error

**Table 8-22 Bulk Certificate Migration Error** 

Field	Details
Description	List of certificates that are failed during bulk migration of certificate.
Expression	occm_cert_request_status_total{namespace="\$namespace", errorReason="ERR_BULK_CERT_MIGRATION"}

#### **OCCM KPI Dashboard**

Figure 8-6 Bulk Certificate Migration Error

#### **Displayed Columns**

- 1. Cert Name Name of the certificate whose migration failed.
- 2. UUID UUID of the certificate whose migration failed.
- 3. Issuer Name of the destination issuer to which the certificate is to be migrated.
- 4. Bulk Migration UUID The UUID of the bulk certificate migration.

# (i) Note

Filtering and sorting are available on all the fields. To get the certificates that failed the migration, you must filter the rows based on the bulk migration UUID.

# A.1 Certificate Configuration Examples

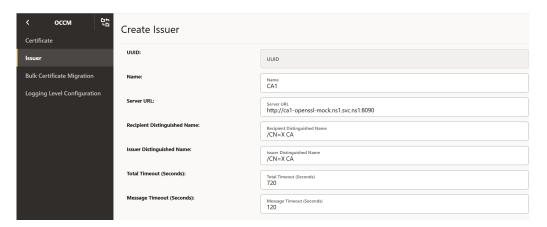

# A.1.1 Creating End Entity (NF) Certificate Using OCCM - Sample Configuration

This section describes the sequence of steps to be performed to generate a signed certificate (NF certificate) using OCCM

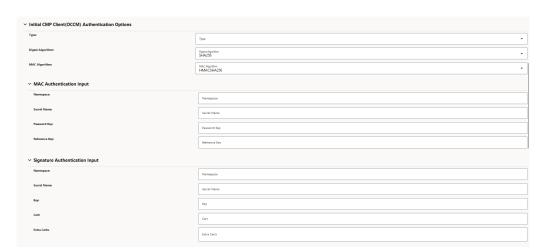

#### 1. Create the Issuer:

The following screenshots provide a sample configuration for creating the issuer using CNC Console GUI

a. Figure 7 Create Issuer

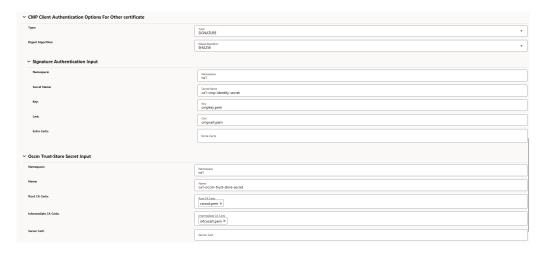

b. Figure 8 Initial CMP Client (OCCM) Authentication Options

c. Figure 9 CMP Client Authentication Options for Other Certificate

d. To enable HTTPS communication, provide HTTPS scheme in the server URL field and provide the TLS trust store certificates under TLS config.

Figure 10 HTTPS Scheme

Figure 11 Enable TLS Config

2. Create CMP Identity (OCCM) Certificate:

The following screenshots provide a sample configuration for creating CMP Identity (OCCM) certificate using CNC Console GUI. Here, OCCM certificate is configured manually.

a. Figure 12 Create CMP Identity (OCCM) Certificate

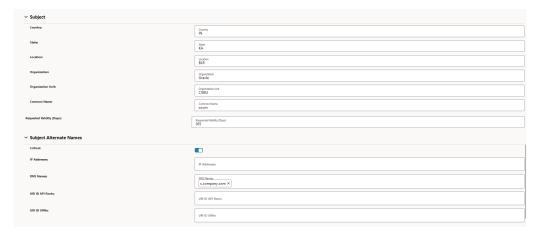

#### b. Figure 13 Private Key Options

# c. Figure 14 Public Key Certificate Options

#### d. Figure 15 Subject and Subject Alternate Name

#### e. Figure 16 Certificate Output and Certificate Chain Output

## 3. Create End Entity (NF) Certificate: (PEM encoding):

The following screenshots provide a sample configuration for creating NF Certificate using CNC Console GUI.

# a. Figure 17 Create End Entity (NF) Certificate

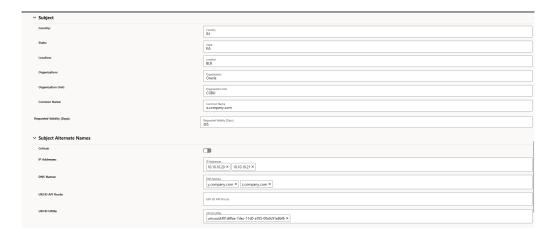

# b. Figure 18 Private Key Options

# c. Figure 19 Public Key Options

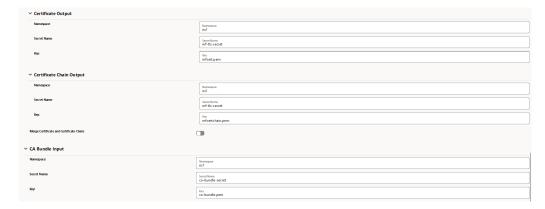

## d. Figure 20 Subject and Subject Alternate Names

#### e. Figure 21 Certificate Output

#### 4. Check Grafana Dashboard

Check the grafana dashboard to view the certificates created.

Figure 22 End Entity (NF) Sample Grafana Dasboard

Figure 23 CMP Identity (OCCM) Sample Grafana Dasboard

The screenshot shows that NRF TLS Cert and CA1 certificates are created successfully. The left panel indicates their expiry time and the right panel shows that both are ready to be consumed.

#### 5. Verify Kubernetes Secret

After the certificate request is submitted, verify whether the k8s secret specified under private key output and certificate output location is created or not.

Run the following command to get the content of the Kubernetes secret:

kubectl get secret <k8s-secret-name> -n <namespace> -o yaml

#### For example:

\$ kubectl get secret nrf-tls-secret -n ns1 -o yaml
apiVersion: v1

```
data:
  nrfcert.pem: LS0tLS1CRUdJTiBDRVJUSUZJQ0FURS0tLS0tCkXXXXXXXXXX
 nrfcertchain.pem: LS0tLS1CRUdJTiBDRVJUSUZJQ0FURS0tXXXXXXXXXXXXX
 kind: Secret
metadata:
  creationTimestamp: "2024-12-10T07:31:21Z"
 name: nrf-tls-secret
 namespace: ns1
 resourceVersion: "563348905"
 uid: f0eb452d-e977-4809-99b0-c541b154dabe
type: Opaque
Output of openssl x509 command for the certificate:
kubectl get secret <k8s-secret-name> -n <namespace> -o=go-
template='{{index .data "<certificate-output-K8s-secret-key>"}}' | base64 -
d | openssl x509 -text -noout
For example:
$ kubectl get secret nrf-tls-secret -n nsl -o=go-template='{{index .data
"nrfcert.pem"}}' | base64 -d | openssl x509 -text -noout
Certificate:
  Data:

```

# A.1.2 Updating Certificates - Sample Configuration

The following procedure provides an example on how to update certificates:

 Navigate to the Certificate page and select the certificate to be edited. View the current configuration before editing.

Figure 32 View Certificate

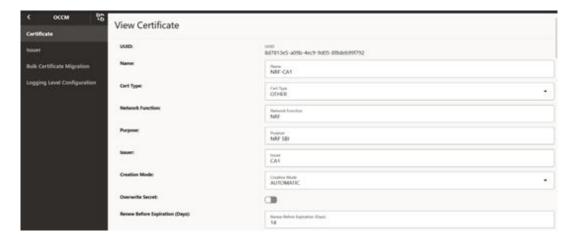

Figure 33 View Certificate: Private Key Options

Figure 34 View Certificate: Public Key Certificate Options

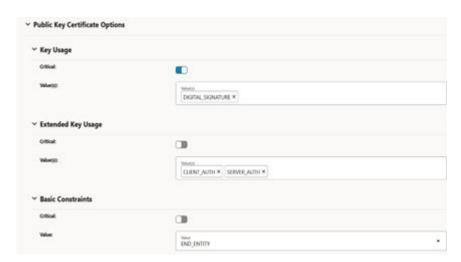

Figure 35 View Certificate: Subject

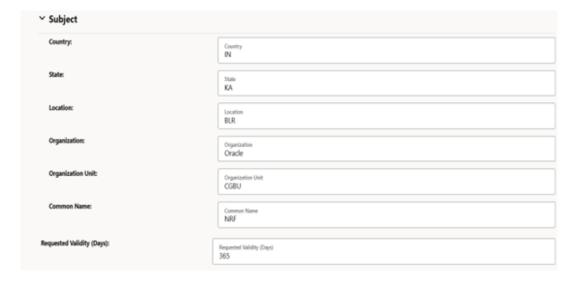

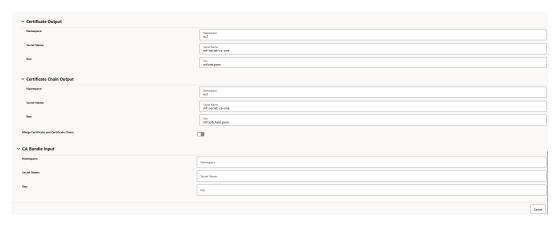

Figure 36 View Certificate: Subject Alternate Names (SANs)

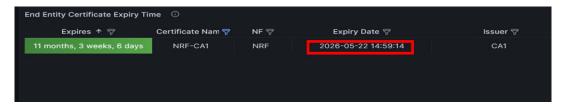

Figure 37 View Certificate: Certificate Output

2. Edit scenarios are applicable based on the field to be updated and whether the certificate (secret) exists in the system. Here, in the example the certificate to be updated is NRF-CA1 and field tobe updated is SAN (Subject alternate names). To check if the certificate exists, see the expiry panel in the Grafana dashboard. If the certificate exists, it will be listed there. The panel displays that the certificate exists in the system.

Figure 38 Grafana Dashboard

3. If the certificate (secret) exists in the system, verify its secret content with respect to current configuration before editing. Here in the example, no SAN entry can be seen on the certificate as certificate configuration related to SAN are missing.

Figure 39 Missing SANs

4. Edit the certificate configuration field(s) and click **Save**.

Figure 40 Certificate

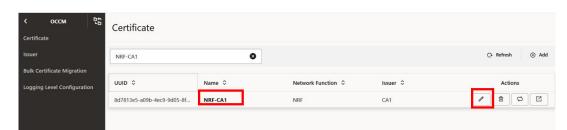

Figure 41 Edit Certificate

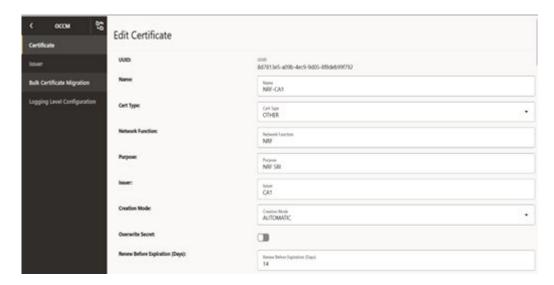

Figure 42 Edit Certificate: Private Key Options

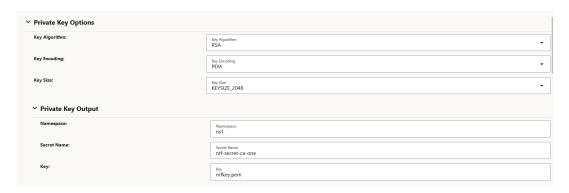

Figure 43 Edit Certificate: Public Key Certificate Options

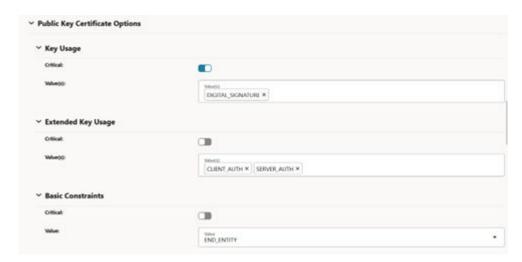

Figure 44 Edit Certificate: Subject

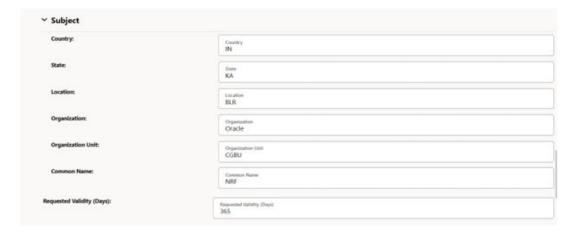

Figure 45 Edit Certificate: Subject ALternate Names (SANs)

Figure 46 Updated IP address and DNS Names

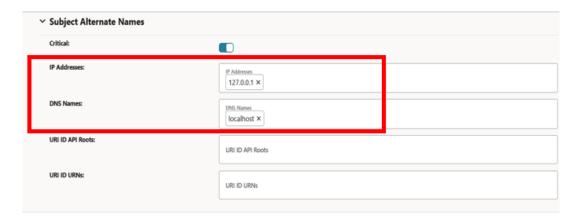

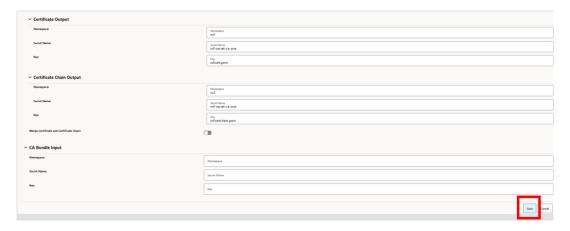

Figure 47 Click Save

5. The updated configuration appears when you view the edited certificate.

Figure 48 Certificate Page

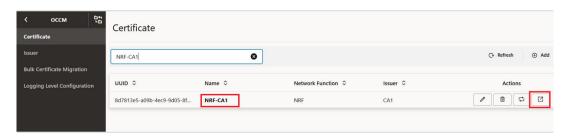

Figure 49 View Certificate

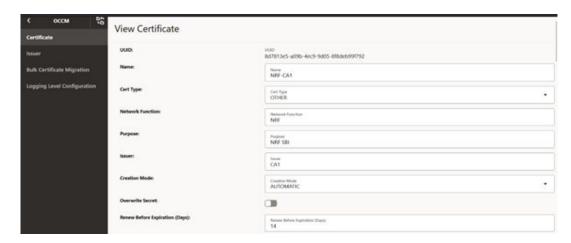

Figure 50 View Certificate: Private Key Options

Figure 51 View Certificate: Public Key Certificate Options

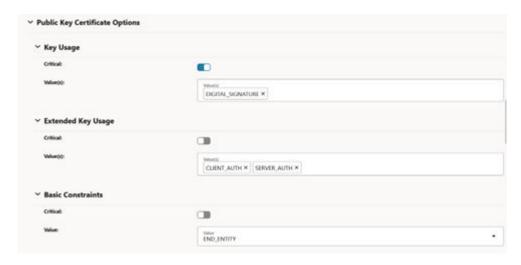

Figure 52 View Certificate: Subject

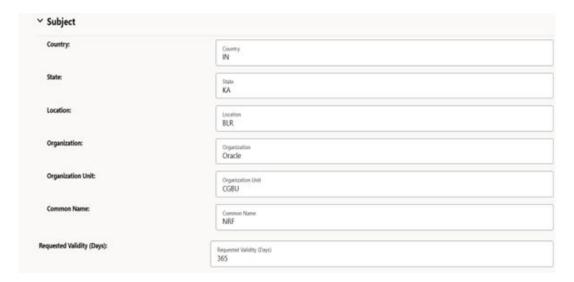

Figure 53 Updated Subject Alternate Names (SANs)

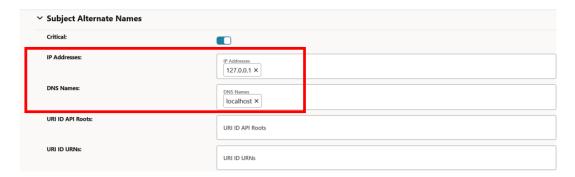

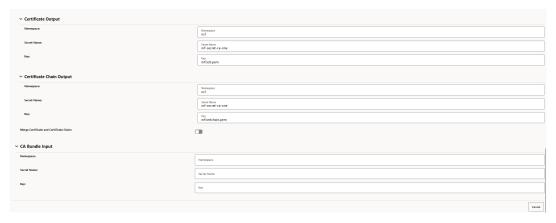

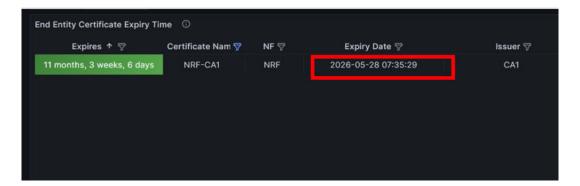

Figure 54 View Certificate: Certificate Output

6. If the field update triggers recreation, verify that certificate recreation with updated configuration is successful. See the Grafana dashboard to verify that the certificate expiry has been extended, the certificate status is ready, and the secret content has been updated as per the new configuration. In the following screenshot, the certificate expiry has been extended as shown in the End Entity Certificate Expiry Time panel.

Figure 55 End Entity Certificate Expiry Time panel

Verify that the secret content is updated as per the edited configuration.

Figure 56 Secret Updated with SAN

#### Note

If certificate recreation fails,

- OCCM will continue to reattempt certificate recreation with the updated configuration.
- Certificate expiry will not be extended.
- Certificate status will be set to FAILED.
- Certificate Errors table in the Grafana dashboard will list the certificate and the cause of failure.

# A.1.3 Recreating Certificates - Sample Configuration

This section describes the procedure to recreate a certificate.

To recreate certificates:

- 1. Log in to CNC Console using your login credentials and select the OCCM Instance.
- 2. Click OCCM from the left pane and then click Certificate.
- 3. Click the **Recreate Icon** next to the certificate that you want to recreate. For example, to recreate NRF-CA1, click the **recreate** button for NRF-CA1.

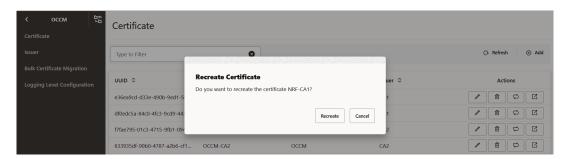

Figure 57 Recreate Icon

Certificate Type to Filter ① Add UUID ≎ Name ≎ Network Function ≎ Issuer 0 Actions Logging Level Configuration e36ea9cd-d33e-490b-9ed1-59... OCCM-CA1 CA1 OCCM ₫ ů f7fae795-01c3-4715-9fb1-094... NRF-CA2 NRF CA2 633935df-90b0-4787-a2b6-cf1... OCCM-CA2

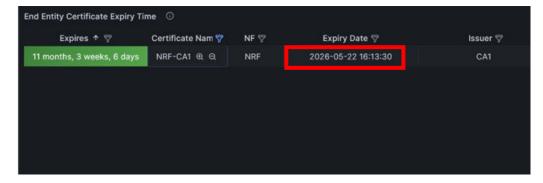

The Recreate Certificate dialog box appears.

Figure 58 Recreate Certificate

- Click Recreate to proceed. Click Cancel to discard your progress and close the dialog box.
- 5. Check the Grafana dashboard to view the recreated certificate
  - a. Check the 'End Entity Certificate Expiry Time' panel to verify that the certificate expiry date has extended after successful recreation. In case the recreation fails, the certificate expiry date will not be extended and will display the remaining validity.

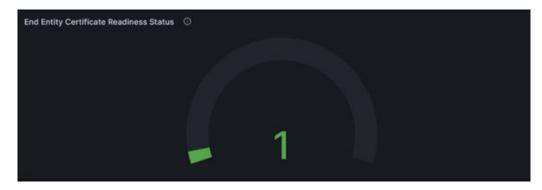

Figure 59 End Entity Certificate Expiry Time

b. Check the 'End Entity Certificate Readiness Status' panel to verify the certificate status. If recreation succeeds, the status will be set to READY, otherwise the status will be set to FAILED.

Figure 60 End Entity Certificate Readiness Status

6. Optionally, verify that the certificate validity has been extended by checking the content of the kubernetes secret corresponding to the configuration. Run the following command to verify the Kubernetes secret:

```
$ kubectl get secret nrf-secret-ca-one -o=go-template='{{index .data
"nrfcert.pem"}}' -n ns1 | base64 -d | openssl x509 -text -noout
```

A sample response is as follows:

Figure 61 Secret with Extended Validity

```
$ kuberd! get secret nrf-secret-ca-one-ongo-template*"{{index.data "nrfcert.petti"}}" -n ns1 |
besed-d | geensal x509 -text-poout.

# A.1.4 Initiating Bulk Certificate Migration - Sample Configuration

The following steps provides an example on how to initiate bulk migration of certificates from source issuer CA1 to destination issuer CA2:

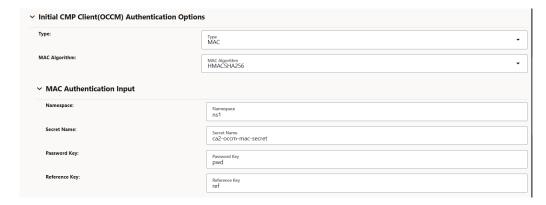

1. Create the destination issuer CA2 with the requisite configuration. For more information about the steps, see <a href="Managing Issuers">Managing Issuers</a>.

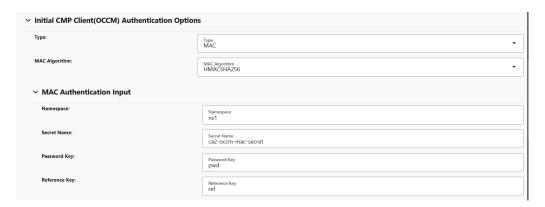

#### a. Figure 62 Create Issuer

# b. Figure 63 Initial CMP Client (OCCM) Authentication Options

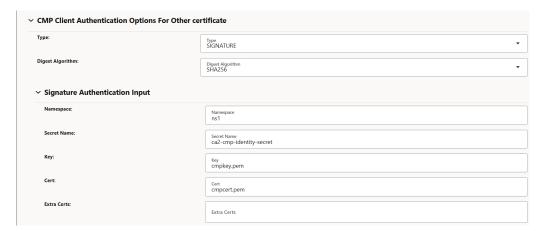

## c. Figure 64 MAC Authentication Input

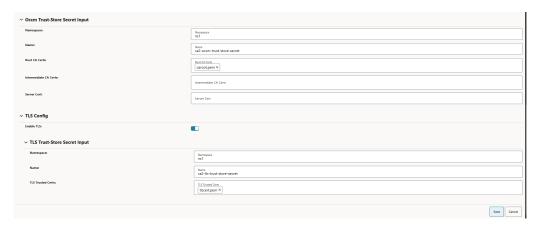

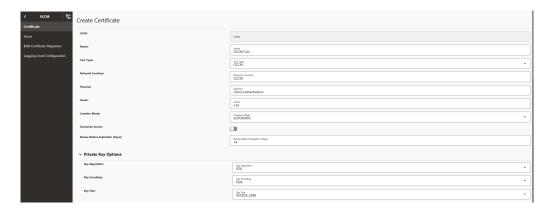

#### d. Figure 65 CMP Client Authentication Options For Other certificate

e. Figure 66 Occm Trust-Store Secret Input

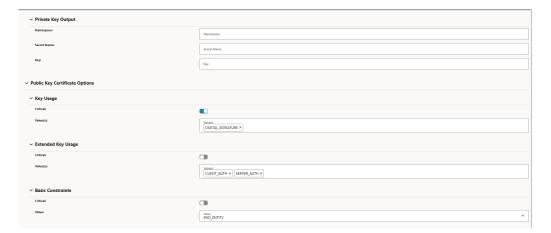

- **2.** Create CMP (OCCM) Identity certificate OCCM-CA2 corresponding to the destination issuer CA2. For more information about the steps, see <a href="Managing Certificates">Managing Certificates</a>.
  - a. Figure 67 Create Certificate

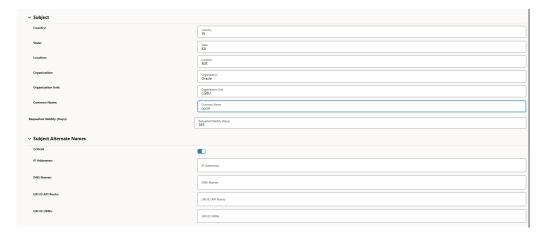

#### b. Figure 68 Private Key

#### c. Figure 69 Subject

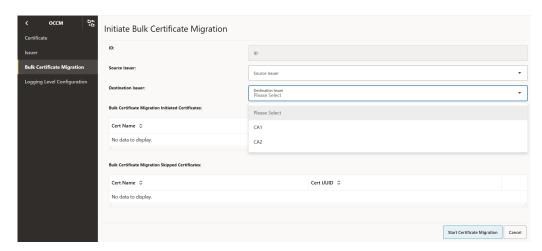

#### d. Figure 70 Certificate Output

- 3. Initiate the bulk certificate migration by choosing the source issuer as CA1 and destination issuer as CA2 from the drop downs list. Other fields must be empty.
  - Log in to CNC Console using your login credentials and select the OCCM Instance.
  - b. Click OCCM from the left pane and then click Bulk Certificate Migration.
  - c. The Bulk Certificate Migration page appears. Click Add. The Initiate Bulk Certificate Migration page appears.
  - Choose the source and destination issuer from the drop-down list and click on Start Certificate Migration.

Figure 71 Initiate Bulk Certificate Migration

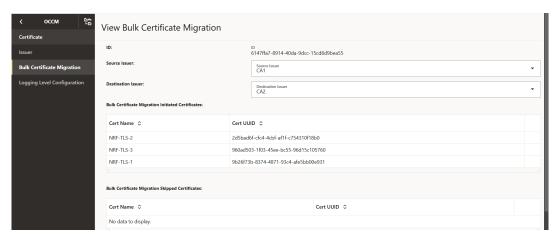

e. A configuration is created and displayed as follows. This configuration can be viewed to know on which certificates migration was triggered and if it is skipped on any certificate.

Figure 72 Bulk Certificate Migration

View the configuration to check the certificates on which migration is initiated.

Figure 73 View Bulk Certificate Migration

- 5. Check the Grafana dashboard to verify the migration status of each certificate displayed under the field Bulk Certificate Migration Initiated certificates:
  - a. When the migration is successful on a certificate.
    - To verify the migration status for each certificate refer to the *End Entity Certificate Expiry Time* and the *End Entity Certificate Readiness Status* panels .

- On the *End Entity Certificate Expiry Time* the corresponding issuer of the certificate considered in bulk migration is updated to the destination issuer (CA2) and the expiry date will be extended based on the configuration.
- On the End Entity Certificate Readiness Status the certificate will be in the READY state.

In the following example, the bulk migration is triggered on three certificates. The updated issuer, expiry, and the readiness status are shown as follows:

Figure 74 End Entity Certificate Expiry Time

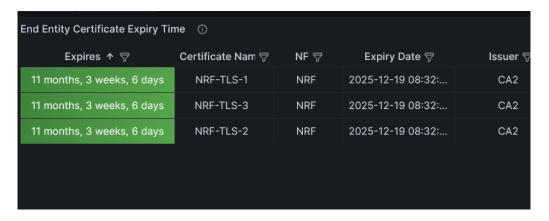

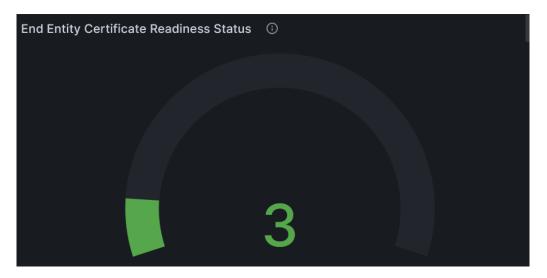

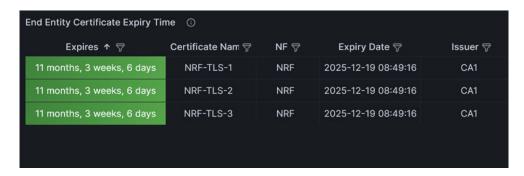

Figure 75 End Entity Certificate Readiness Status

- **b.** When the migration fails on a certificate.
  - The corresponding issuer of the certificate will NOT be updated to the destination issuer on the End Entity Certificate Expiry Time panel and it will keep pointing to the source issuer (CA1). The expiry will not be updated since recreation has failed. Similarly, the end entity certificate readiness status will also preserve the previous status. The failed migration on all the three certificates are as follows:

Figure 76 End Entity Certificate Expiry Time Failed

The Bulk Cert Migrations Error panel will have an entry of the certificate whose
migration has failed. To check for a given migration, you must filter on the Bulk
Migration UUID field. The issuer displayed is the configured destination issuer. The
failed migration on all the three certificates for the given bulk migration are as
follows.

Figure 77 Bulk Cert Migrations Error

- Logs must be checked to find out the reason of the failure and corrective action must be taken.
- Another migration can be initiated to retry for all the failed certificates from the source to the destination issuer.
