

Oracle® Communications Digital Business Experience

Concept to Market Implementation Guide

Release 25.10
G37709-01
October 2025

ORACLE®

Copyright © 2025, 2025, Oracle and/or its affiliates.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

About This Guide

This document describes how to implement the Concept to Market business process using Oracle Communications Digital Business Experience.

Audience

This document is intended for:

- Product Managers who design and launch product offers
- Individuals who are responsible for implementing the process flows for the Concept to Market business process

You should be familiar with the TM Forum's Open Digital Framework Concept to Market business process and its flows.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Conventions

The following text conventions are used in this document.

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

1

Concept to Market Implementation Overview

This chapter gives an overview of the Concept to Market business flow for the implementation of Oracle Communications Digital Business Experience.

About Concept to Market

Concept to Market is one of the core value streams defined in TM Forum's (TMF) Open Digital Framework (ODF). The process involves planning new products, services, or enhancements and then creating them and having them ready for the market through the product lifecycle.

The Concept to Market business processes are aligned with the TMF Open Digital Architecture (ODA) business architecture. It also aligns with the Business Process Framework (eTOM).

Concept to Market supports the following business processes:

- Business Proposal-to-Launch
- Assessment-to-Relaunch
- Assessment-to-Retirement

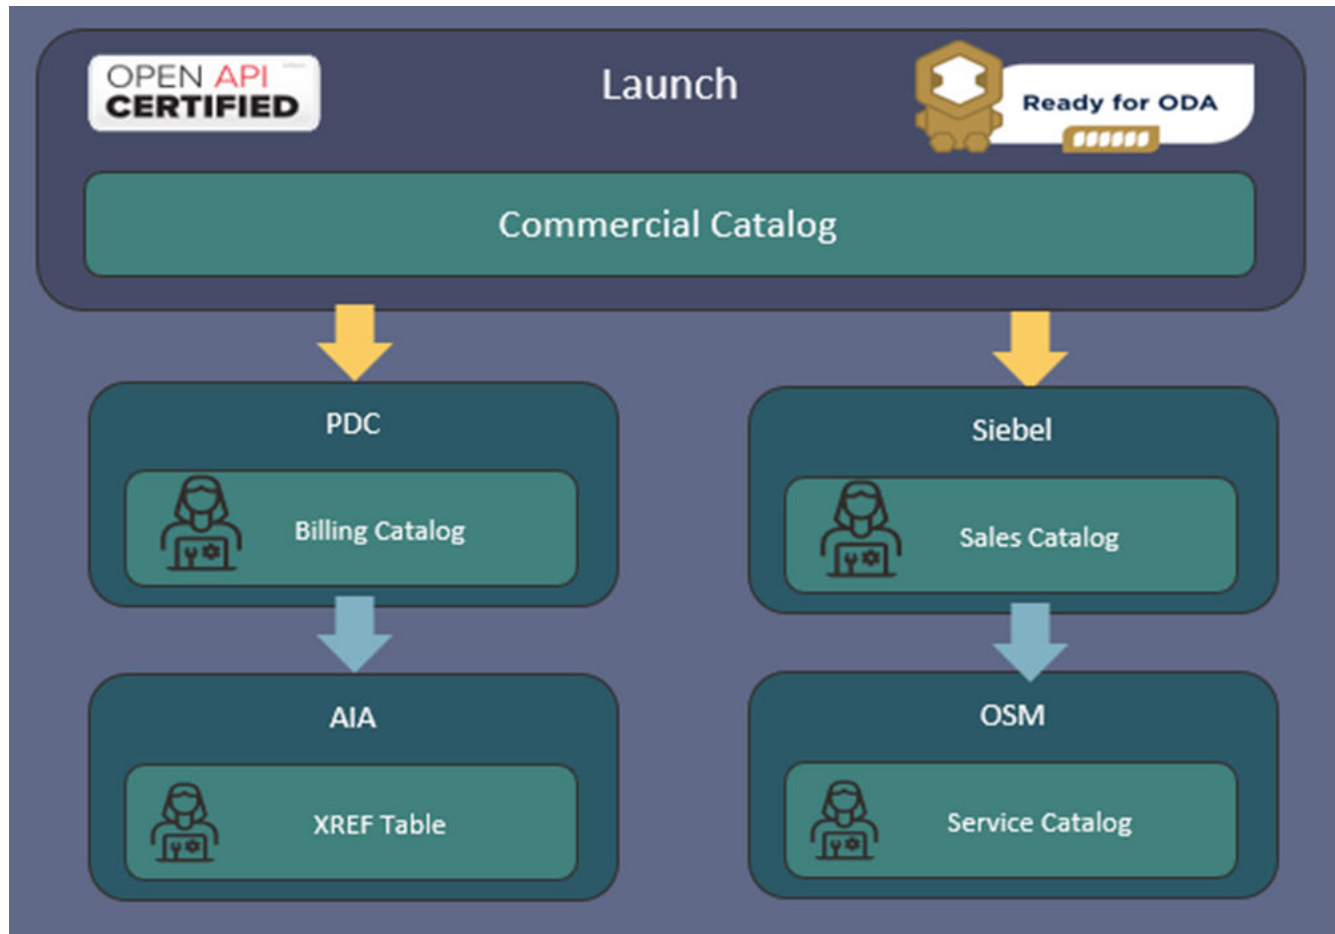

Digital Business Experience enables Product Managers to customize the Concept to Market business processes for their business by letting them manage the complete commercial catalog in Oracle Communications Launch Cloud Service, where they can work with various entities and synchronize them across the participating applications effortlessly.

You use the following applications to implement the Concept to Market business process:

- Oracle Communications Launch Cloud Service
- Oracle Siebel CRM
- Oracle Communications Pricing Design Center (PDC)
- Oracle Communications Order and Service Management (OSM) with Oracle Communications Design Studio

Launch Cloud Service is pre-integrated with Siebel CRM and BRM PDC. The solution uses Oracle Communications Application Integration Architecture (AIA) as an integration framework to integrate flows across Siebel CRM, PDC, and OSM. See *Integrate Launch with Digital Business Experience* in *Oracle Communications Launch Cloud Service Implementation Guide* for more information.

[Figure 1-1](#) depicts an overview of the Concept to Market business flow.

Figure 1-1 Overview of the Concept to Market Business Flow

The sections that follow provide conceptual and procedural information about all required design-time tasks that you perform to create a commercial catalog and launch your product offerings.

Concept to Market Implementation Process

This section describes the steps required to implement the Concept to Market business flow.

As a Product Manager, you perform the following tasks:

- Create product specifications and attributes
- Create simple offerings
- Create bundle offerings
- Create packages by associating relevant commercial bundles and service bundles
- Launch the product offerings
- Assess the product offerings and relaunch them after modifying the associations
- Assess and retire product offerings

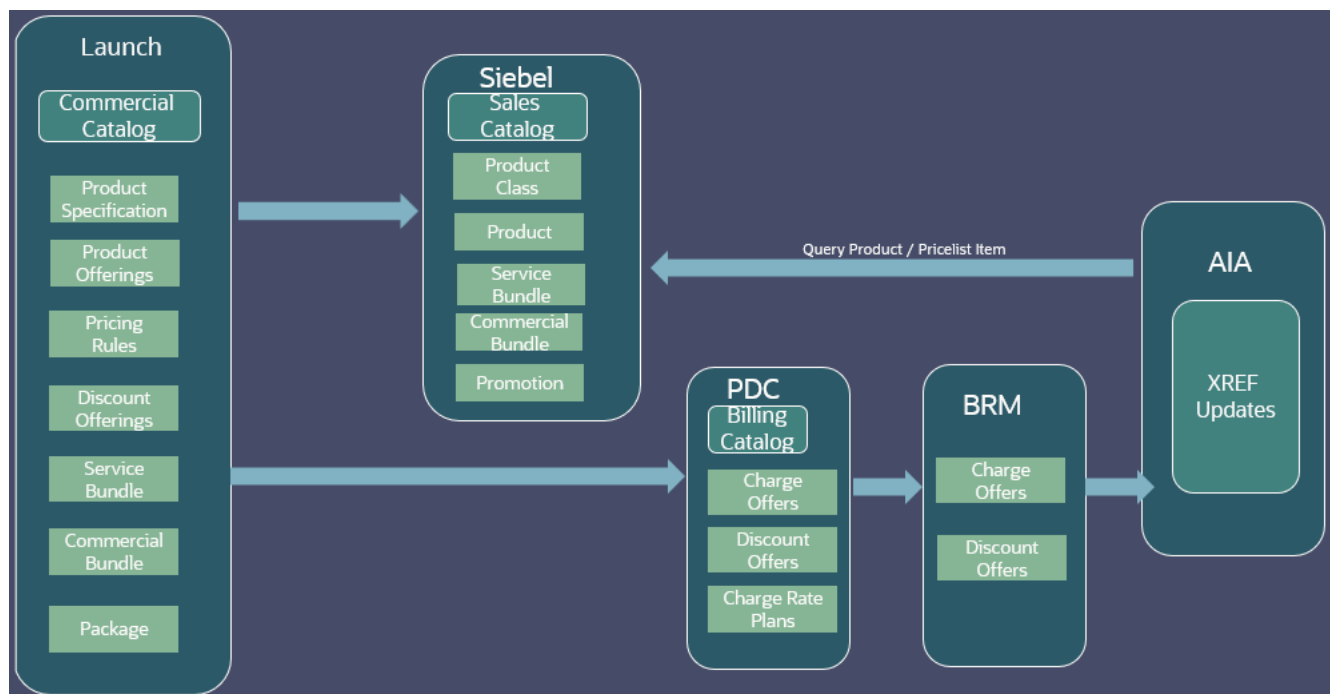

Architectural Overview of the Concept to Market Business Process

The architecture of the Concept to Market business flow includes the following:

- Integration across Launch, PDC, Siebel CRM, and AIA external reference.
- Query product classes flow. See Understanding the Query Product Classes Business Flow and Implementing the Query Product Classes Business Flow in *Oracle Communications Application Integration Architecture Order to Cash Integration Pack Implementation Guide* for more information.

[Figure 1-2](#) depicts the integration of various applications that enable the implementation of the Concept to Market business processes.

Figure 1-2 Integration of Applications for Implementing Concept to Market Business Processes

2

Business Proposal-to-Launch

Learn about the Business Proposal-to-Launch business process and tasks in Oracle Communications Digital Business Experience. This process starts with the Go-decision and ends with the commercial launch.

About Business Proposal-to-Launch

In the Business Proposal-to-Launch business process, you perform the following tasks:

- Create a product offering in Launch Cloud Service, which is the central commercial catalog system for the solution
- Launch the product offering

As a part of creating a product offering, in Launch, you create the following entities, along with any other entities required for your business needs:

- Product Specifications and Attributes
- Price Lists
- Simple Offerings
- Bundle Offerings
- Commitment Terms
- Rules for upgrade, eligibility, and compatibility

The following sections describe how to create these entities, provide recommendations for the solution, and provide examples of entities.

Entity Mappings

The entities you create in Launch are populated into Siebel CRM and BRM PDC. [Table 2-1](#) lists how the entities you create in Launch are mapped across these applications.

Table 2-1 Entity Mapping for Launch, Siebel, and PDC

Entity Name in Launch	Entity Name in Siebel CRM	Entity Name in BRM PDC
Product Specification	Product Class	NA
Attributes	Attributes	NA
Service, Device, and Accessory Offering	Product	Charge Offer
Discount Offering	Product	Discount Offer
Time-Based Offering	Product	Discount Offer
Service Bundle	Product with Product Type Bundle	NA
Commercial Bundle	Product with Product Type Bundle	NA

Table 2-1 (Cont.) Entity Mapping for Launch, Siebel, and PDC

Entity Name in Launch	Entity Name in Siebel CRM	Entity Name in BRM PDC
Product line	Product line	NA
Price list	Price list	NA
Package	Promotion	NA

Note

N/A indicates that the specific entity is not synced to BRM PDC.

Creating a Product Specification with Attributes

To define a commercial product, you start by creating a product specification with attributes in the Launch Cloud Service application. Product specifications and attributes are catalog entities that you use, among others, to design a product or a service that you want to sell.

A product specification consists of detailed description of tangible or intangible characteristics that are made externally available through the product offer. Attributes are characteristics of a product that you want to create and sell.

Note

Product specifications cannot be sold. Only products can be sold.

Product specifications enable you to organize and reuse these attributes when you add new products to your catalog. When you assign a product specification to a product, the product automatically inherits all the attributes defined in the product specification. You may choose to assign default values for those attributes in the products.

For example, as a Product Manager, consider a scenario in which you want to define multiple voice services and data services in your catalog. A voice service usually has attributes, such as `outgoingMinutes` and `incomingMinutes`. A data service usually has attributes such as `downloadSpeed` and `dataFUP`. The `outgoingMinutes` attribute can have values like 500 minutes, 700 minutes, and 1250 minutes. You may create a product specification with the name **Voice Service PS** and assign `outgoingMinutes` as one of the attributes with the value of 500 minutes. When you create a commercial product called **Basic Voice Service** using the product specification **Voice Service PS**, it will inherit the `outgoingMinutes` attribute with the value of 500 minutes.

For complete details and instructions about creating a product specification in Launch, see *Create a Product Specification* in the *Oracle Communications Launch Cloud Service User's Guide*.

Launch also allows you to create nested product specifications. This lets you create new product specifications by inheriting attributes of a parent product specification. Nested product specifications are also synced to Siebel CRM.

When published, a product specification in Launch is populated as **Product Class** in Siebel. Product classes published to Siebel can be further synchronized into Design Studio as product

specifications using the **query product classes** process integration of Application Integration Architecture (AIA).

Refer to the following guides for information about how a product specification works in each application:

- In Launch, see Product Specification Overview in *Oracle Communications Launch Cloud Service User's Guide*.
- In Siebel, see [About Product Classes](#) in *Oracle Communications Siebel Product Administration Guide*.
- In Service Catalog and Design, see [About Orchestration Product Specifications](#) in *Oracle Communications Service Catalog and Design Design Studio Modeling OSM Orchestration*.
- In AIA, see Understanding the Process Integration for Product Lifecycle Management in *Oracle Communications AIA Order to Cash Integration Pack Implementation Guide* for query product classes.

Recommendations for Product Specifications and Attributes

Caution

Revising or deleting a product specification that you have already published may create stale relationships across the applications in the solution.

Digital Business Experience uses pre-defined attributes to achieve certain functionality such as time-based offerings. For more information, see the respective topics in this guide.

Creating a Price List

A price list is a set of standard prices for commercial products. You can define a price list and associate prices of commercial products to one or more price lists to define and use products in Digital Business Experience. A product must exist in a price list for it to appear in the Siebel catalog.

You can use multiple price lists to offer different prices for the same product. A price list in Launch is populated into Siebel as a price list.

For more information about price lists, refer to the following:

- In Launch, see Pricing Structures in *Oracle Communications Launch Cloud Service User's Guide* and Integrate Launch with Digital Business Experience in *Oracle Communications Launch Cloud Service Implementation Guide*.
- In Siebel, see [About Price Lists](#) in *Oracle Communications Siebel Pricing Administration Guide*.

Recommendations for Price Lists

It is recommended that you create a single price list for the entire Digital Business Experience solution, unless you are intentionally creating a multi price-list model.

If you are creating a multi price-list package, make sure all fees of its components are available in all the price lists that you want to offer your package in.

Creating Catalogs and Categories

Catalogs and categories are created for logical grouping of product offerings and associated entities.

A Catalog provides a way to organize product offerings for both administrative and display purposes. A Category is used to group product offerings further into logical containers within catalogs. A product category can contain other categories (sub-categories). Each category can belong to only one catalog.

Catalogs and categories get synced only to Siebel CRM as catalogs and categories. These entities do not get synced to PDC.

Refer to the following guides for more information about how catalogs and categories work in each application:

- In Launch, see *Create Catalogs and Categories in Oracle Communications Launch Cloud Service User's Guide*.
- In Siebel, see [Creating and Managing Catalogs](#) in *Oracle Communications Siebel Order Management Guide*.

Creating Product Lines

Product lines are logical groupings of products. They are also called as offer families. When you define a product line, you name it and then specify all the products in that line. If you have products that are already defined, you can associate them with the product line. You can also assign product line managers.

Refer to the following guides for more information on how product lines work in each application:

- In Launch, see *Product Lines in Oracle Communications Launch Cloud Service User's Guide*.
- In Siebel, see [Creating Product Lines](#) in *Oracle Communications Siebel Order Management Guide*.

Creating an Offering

You use Launch to create product offerings. A product offering is an item that can be sold, ordered from the provider of the catalog or tracked as an asset. A product offering can be a simple offering or a bundle offering. A simple product offering has attributes, features, and characteristics but does not contain other product offerings. A bundle product offering is an assembly of two or more product offerings.

For more information about product offerings in Launch, see *Product Offers in Oracle Communications Launch Cloud Service User's Guide*.

This section contains the following topics:

- **Creating a Simple Product Offering:** This topic describes the entities and attributes required to create different types of simple product offerings.
- **Creating a Bundle Product Offering:** This topic describes the entities and attributes required to create different types of bundle product offerings.

- Package Models in Design-Time and Run-Time: This topic provides an illustration of a package model in design-time and run-time.
- Creating a Family Share Plan: This topic provides information on creating a family share plan.
- Creating Special Rate Calling List: This topic provides information on creating a special rate calling list.
- Fulfillment Item Code: This topic provides information on Fulfillment Item Code and its impact on run-time.
- Simple Service Bundle: This topic provides information on creating a Simple Service Bundle.
- Defining Overrides on the Product Definition: This topic describes the process of defining price overrides on the product definition.
- Setting Up Commitment Terms and Penalty: This topic provides information on setting up commitment terms and penalties for product offerings.
- Creating Price Alterations: This topic provides information on creating price alterations for different product offerings.

Creating a Simple Product Offering

You use Launch to create simple product offerings.

Launch lets you create the following types of simple product offerings:

- [Creating a Service, Device, or Accessory Offering](#)
- [Creating a Discount Offering](#)
- [Creating a Time-Based Offering](#)

All these simple product offerings are synced to Siebel CRM as products.

Service, device, and accessory offerings are synced to PDC as charge offerings. Discount and time-based offerings are synced to PDC as discount offerings.

To create a simple product offering in Launch, see *Create a Simple Offer in Oracle Communications Launch Cloud Service User's Guide*.

Creating a Service, Device, or Accessory Offering

Customer Service Providers (CSPs) normally create service offerings for non-tangible products, such as mobile and broadband services.

Service offerings can have one or more charges and allowances. Some examples are:

- An installation service charge of 100 USD at the time of purchase is a service offering with a one-time fee.
- A 100 Mbps broadband service that charges 25 USD per month is a service offering with a monthly recurring fee.
- A text service that charges 50 cents per text is a service offering with usage charges.
- An Email service can have multiple charges, as it can have a combination of a one-time charge and recurring charges. For example, an Email service can have a one-time activation charge of 10 USD and a monthly recurring charge of 5 USD.
- A voice service that charges 10 USD per month for 200 minutes of unlimited usage and 10 cents per minute after the free limit of 200 minutes is another example of a service offering

with multiple charges and allowances as it is a combination of recurring and usage charges.

CSPs normally create device and accessory offerings for tangible products, such as SIM cards, routers, and phone cases. Some examples are as follows:

- A phone that costs 499 USD at purchase is a device offering with a one-time fee.
- A phone case that costs 49 USD at purchase is an accessory offering with a one-time fee.

A service, device, or accessory offering gets synced to Siebel CRM as a simple product and to PDC as a charge offer.

The information you provide while creating a service, device, or accessory offering in Launch impacts the flow of the runtime module and the entire solution.

[Table 2-2](#) describes the information you provide while creating a service, device, or accessory offering and how the attributes are translated across participating applications in Digital Business Experience:

Table 2-2 Attribute Mapping for a Service, Device, or Accessory Offering

Name of the Attribute in Launch	Description	Name of the Attribute in Siebel CRM	Name of the Attribute in PDC
Name	Name of the service, device, or accessory offering you want to create.	Product Name	Name of the charge offer
Description	A description for the service, device, or accessory offering.	Product Description	Description of the charge offer
Start Date	The date from which the service, device, or accessory offering is valid.	Start Date of the product	Start Date of the charge offer
End Date	The date until which the service, device, or accessory offering is valid.	End Date of the product	End Date of the charge offer
Product Specification	The product specification associated with the service, device, or accessory offering.	Product Class of the product	Not Synced
Billing Type	The Billing Type of the service, device, or accessory offering. This can either be Subscription or Item . If you select Item , you can only select a one-time fee, as Item indicates an entity for which you pay once. An offering with Billing Type Item cannot include usage or recurring charges. But, for an offering with Billing Type Subscription , you can associate all types of fees with it.	Billing Type of the product	Billing Type of the charge offer
Billing Service Type	The Billing Service Type of the service, device, or accessory offering. It can be Account or any other user configured service.	Billing Service Type of the product	Service of the charge offer
Service Instance	This flag determines whether a service, device, or accessory offering is a simple service bundle or not. Digital Business Experience recommends to set this flag to true only if you want to use this service, device, or accessory offering as a simple service bundle.	Service Instance of the product	Not Synced
Pricing Commit Type	The Pricing Commit Type of the service, device, or accessory offering. It is either Dynamic or Committed .	Pricing Commit Type of the product	Not Synced

Table 2-2 (Cont.) Attribute Mapping for a Service, Device, or Accessory Offering

Name of the Attribute in Launch	Description	Name of the Attribute in Siebel CRM	Name of the Attribute in PDC
Dynamic Discount Method	The Dynamic Discount Method of the service, device, or accessory offering. You get Dynamic Discount Method if you select Dynamic for Pricing Commit Type . It is either Amount or Percentage .	Dynamic Discount Method of the product	Not Synced
Fulfillment Item Code	The Fulfillment Item Code of the service, device, or accessory offering.	Fulfillment Item Code of the product	Not Synced
Composition Type	The Composition Type of the service, device, or accessory offering. It can either be Partial Item or Whole Item . Digital Business Experience recommends that you set this as Whole Item for service, device, and accessory offerings.	Composition Type of the product	Not Synced
Orderable	This flag determines whether a service, device, or accessory offering can be ordered or not. Digital Business Experience recommends that you set this flag to true for service, device, and accessory offerings.	Orderable attribute of the product	Not Synced
Configurable	This flag determines whether a service, device, or accessory offering can be customized or not.	Customizable attribute of the product	Not Synced
Bill on Purchase	This flag determines whether a service, device, or accessory offering is billed at purchase or not. Digital Business Experience recommends that you set this flag to true for service, device, and accessory offerings.	Billable attribute of the product	Not Synced
Trackable as Asset	This flag determines whether a service, device, or accessory offering can be tracked as an asset or not. Digital Business Experience recommends that you set this flag to true for service, device, and accessory offerings.	Trackable as Asset attribute of the product	Not Synced
Product Line	The Product Line of the service, device, or accessory offering.	Product Line of the product	Not Synced

Pricing for Service, Device, or Accessory Offering

Launch allows you to add three types of fees for a service, device, and accessory offering; one-time fee, usage fee, and recurring fee. Following are the attributes available depending on the fee type you choose:

[Table 2-3](#) describes all the attributes of a one-time fee.

Table 2-3 Attributes of a One-Time Fee

Attribute	Description
Price Type	Purchase , Cancel , and Penalty are the available options for Price Type. Digital Business Experience recommends to select Purchase for service, device, and accessory offering. This gets synced to PDC as the relevant one-time event of the charge offer. This gets synced to Siebel CRM as the price type attribute of the product.
Price List	The price list associated with one-time fee. A single price list gets synced to PDC as single charge and a multi price-list gets synced as a charge selector. This gets synced to Siebel CRM as the price list of the product.

Table 2-3 (Cont.) Attributes of a One-Time Fee

Attribute	Description
Start Date and End Date	The starting and ending date of the one-time fee. This gets synced to both PDC and Siebel CRM.
Price	The value of the one-time fee. This gets synced to both PDC and Siebel CRM.

[Table 2-4](#) describes all the attributes of a recurring fee.

Table 2-4 Attributes of a Recurring Fee

Attributes	Description
Recurring Fee Type	Cycle , Cycle Arrears , and Cycle Forward Arrears are the available options for Recurring Fee Type . This gets synced to PDC as the relevant (cycle, cycle_arrears, and cycle_forward_arrears) recurring event of the charge offer. This gets synced to Siebel CRM as the price type attribute of the product.
Advanced Pricing Model	The advanced pricing model is used to configure an allowance.
Period	The interval at which the recurring fee is billed. Digital Business Experience recommends you to set this as Monthly for service, device or accessory offering.
Price List	The price list associated with the recurring fee. A single price list gets synced to PDC as single charge and a multi price-list gets synced as a charge selector. This gets synced to Siebel CRM as the price list of the product.
Start Date and End Date	The starting and ending date of the fee. This gets synced to both PDC and Siebel CRM.
Price	The value of the recurring fee. This gets synced to both PDC and Siebel CRM.

[Table 2-5](#) describes the attributes of a usage fee.

Table 2-5 Attributes of a Usage Fee

Attribute	Description
Price List	The price list associated with the usage fee. A single price list gets synced to PDC as single charge and a multi price-list gets synced as a charge selector. This gets synced to Siebel CRM as the price list of the product.
Usage Specification	The usage specification that is to be associated with the usage fee. This gets synced to PDC as the usage event of the charge offer. This does not get synced to Siebel CRM.
Metering Rule	The metering rule determines how the usage fee is measured. This gets synced to PDC as the usage event of the charge offering. Digital Business Experience supports the values Duration , Volume , and Occurrence . This does not get synced to Siebel CRM.
Unit of Measure	The unit of measure that is to be used for the usage fee. This gets synced to PDC as the usage event of the charge offer. This does not get synced to Siebel CRM.
Advanced Pricing Model	The Advanced Pricing Model is used to configure an Allowance , Volume-based , Tiered , or Attribute-Based price to the usage fee. Digital Business Experience supports Attribute-Based pricing to configure zone models. See Configuring Zone Models for Attribute-Based Pricing for more information.
Pricing Model Name	Name of the pricing model you want to configure.
Service Specification/Usage Specification	Gets auto-populated based on the respective specifications you have selected at various levels.

Table 2-5 (Cont.) Attributes of a Usage Fee

Attribute	Description
Service Specification Attributes/ Usage Specification Attributes	The attributes you want to configure. You have the option to configure all or any of these attributes depending on the specifications added while creating the service offering. You only need to add an attribute while configuring a Zone Value Map or a normal usage fee. Standard Zone has Impact Category as the default attribute so no need to add an attribute for this.
Zone Type	You can configure zone models using Zone Value Map or Standard Zone .
Select Zone	The specific zone that you want to associate with the usage fee you are setting up.
Attribute Flag	A flag in the name of the selected Attribute(s). You need to use this flag to select the specific attribute to which you need to add a Value Map. You need to at least set one of the attribute flags to true. For the Attributes with flags set to false, you can choose to add a specific zone rather than a zone Value Map.
Operator for the Attribute	This appears as the name of the attribute(s) you have selected and lets you configure an operator for all the selected attributes. Gets synced to PDC as the rule on the charge selector for the value map. This is only applicable for Zone Value map option.
Allowance Type	Digital Business Experience does not support Allowance Type , so do not add it.
Share Allowance	Do not set this flag to true as it is not supported by Digital Business Experience.
Start Date and End Date	The start and end dates of the usage fee determine the validity of the configured price.
Add Attribute-Based Pricing	This is an option to add all the required values for Attribute-based pricing if you are configuring zone models for usage fee using Zone Value Map or Standard Zone .
Value for the Selected Attribute	This option appears as the Attribute(s) added. For each Attribute, you can select a zone from the Value Map added or simple zone if the flag for this attribute is set to false. A Value Map allows you to configure a hierarchical set of values for an attribute. This option is only applicable for Zone Value Map . This gets synced to PDC as the value of the Attribute.
Zone Impact Category	The impact category you want to associate with the selected zone or zones in the value map. See Configure the Business Configurations for information on configuring the required Impact Categories to Launch. You must configure Impact Categories in order to select them from the drop-down list when setting up a usage fee using Zone Value Map or Standard Zone . This gets synced to PDC as Impact Category.
Price Format	The pricing format of the usage fee. This gets synced to the usage event of the charge offer. This does not get synced to Siebel CRM.
Price	The value of the usage fee. This gets synced to both PDC and Siebel CRM.

[Table 2-6](#) maps how service, device, and accessory offerings get synced across the applications in Digital Business Experience according to the fee type.

Table 2-6 Entity Mapping for Service, Device, and Accessory Offering

Launch	Siebel	PDC
Service, device, or accessory with one-time fee	Product with price type as one-time and price value captured in the price list	Single charge offer with a single related one-time event
Service, device, or accessory with recurring fee	Product with price type as recurring and price value captured in the price list	Single charge offer with a related monthly carried forward event
Service, device, or accessory with usage fee	Product with price type as usage and a price value of 0 captured in the price list	Single charge offer with a related delayed usage event
Service, device, or accessory with one-time and recurring fee	Two products with parent child relationship. Parent product with price type as recurring and child product with price type as one-time	Single charge offer with two related events: a one-time event and a monthly carried forward event

Table 2-6 (Cont.) Entity Mapping for Service, Device, and Accessory Offering

Launch	Siebel	PDC
Service, device, or accessory with recurring and usage fee	Single product with price type as recurring and price value of recurring fee captured in the price list	Single charge offer with two events: a monthly carried forward event and a delayed usage event
Service, device, or accessory with one-time and usage fee	Single product with price type as one-time and price value of one-time captured in the price list	Single charge offer with two events: a one-time event and a delayed usage event
Service, device, or accessory with one-time, recurring, and usage fee	Two products with parent child relationship. Parent product with price type as recurring and child product with price type as one-time	Single charge offer with three events: a one-time event, a monthly carried forward event, and a delayed usage event

Recommendations for Service, Device, and Accessory Offerings

- Item-type offerings can only have one-time fee, whereas subscription-type offerings can have any combination of fees, including one-time, recurring, and usage.
- When you purchase a subscription-type offering, a product instance is created under purchased offers in PDC, but when you purchase an item type offering, it is not tracked in PDC.
- Always set the **Trackable as Asset** flag to **true** for a subscription-type offering.
- You should map the service, device, and accessory to the correct **Billing Service Type**. If none of the custom **Billing Service Type** values apply to the offering, set the offering's **Billing Service Type** to **Account**.
- Ensure that all service-type offerings are either added to a service bundle or set as a simple service (by setting **Service Instance** to **true**).
- If you have set the **Billing Service Type** for an offering to **Account**, do not add that offering to a service bundle.

Creating a Discount Offering

CSPs create discount offerings to give their customers monetary and non-monetary benefits. Some examples are as follows:

- A discount of 10 USD on the monthly broadband service fee is a discount offering that provides a monetary benefit for a specific amount.
- A discount of 20% on the usage fee of a text service is a discount offering that provides a percentage-based monetary benefit in the form of a percentage.
- An allowance of 10 GB free data is a discount offering that provides a non-monetary benefit.

You also create discount offerings to provide consumption rules for usage allowances.

In Launch, discount offerings are configured as simple product offerings with **Offering Type** set to **Discount** and the specific discount is configured as alterations to the pricing.

A discount offering gets synced to Siebel CRM as a simple product and to PDC as a discount offer.

[Table 2-7](#) describes the details you provide in Launch while creating a discount offering and how this information is synchronized across the participating applications in Digital Business Experience.

Table 2-7 Attribute Mapping for a Discount Offering

Name of the Attribute in Launch	Description	Name of the Attribute in Siebel CRM	Name of the Attribute in PDC
Name	Name of the discount offering you want to create.	Product Name	Name of the discount offer
Description	A description for the discount offering.	Product Description	Description of the discount offer
Start Date	The date from which the discount offering is valid.	Start Date of the product	Start Date of the discount offer
End Date	The date till which the discount offering is valid.	End Date of the product	End Date of the discount offer
Product Specification	The product specification associated with the discount offering.	Product Class of the product	Not Synced
Billing Type	The Billing Type of the discount offering. This can either be Subscription or Item . If you select Item , you can only select a one-time fee, as Item indicates an entity for which you pay once. An offering with Billing Type Item cannot include usage or recurring charges. However, an offering with the billing type Subscription can include all types of fees.	This is always synced to Siebel CRM as Discount	Billing Type of the discount offer
Billing Service Type	The Billing Service Type of the discount offering. It can be Account or any other user configured services.	Billing Service Type of the product	Service Type of the discount offer
Service Instance	This flag determines whether an offering can be configured as simple service bundle or not. Digital Business Experience recommends that you to set this flag to false for discount offering.	Service Instance of the product	Not Synced
Pricing Commit Type	The Pricing Commit Type of the discount offering. The value of this attribute has no impact on discount offering.	Pricing Commit Type of the product	Not Synced
Dynamic Discount Method	The Dynamic Discount Method of the discount offering. The value of this attribute has no impact on discount offering.	Dynamic Discount Method of the product	Not Synced
Fulfillment Item Code	The Fulfillment Item Code of the discount offering.	Fulfillment Item Code of the product	Not Synced
Composition Type	The Composition Type of the discount offering. It can either be Partial Item or Whole Item . Digital Business Experience recommends that you set this as Whole Item for discount offering.	Composition Type of the product	Not Synced
Orderable	This flag determines whether the discount offering can be ordered or not. Digital Business Experience recommends that you set this flag to true for discount offering.	Orderable attribute of the product	Not Synced
Configurable	This flag determines whether the discount offering can be customized or not.	Customizable attribute of the product	Not Synced
Bill on Purchase	This flag determines whether the discount offering is billed at purchase or not. Digital Business Experience recommends that you set this flag to true for discount offering.	Billable attribute of the product	Not Synced

Table 2-7 (Cont.) Attribute Mapping for a Discount Offering

Name of the Attribute in Launch	Description	Name of the Attribute in Siebel CRM	Name of the Attribute in PDC
Trackable as Asset	This flag determines whether the discount offering can be tracked as an asset or not. Digital Business Experience recommends that you set this flag to true for discount offering.	Trackable as Asset attribute of the product	Not Synced
Product Line	The product line of the discount offering.	Product Line of the product	Not Synced
Discount Priority	The priority of a specific discount if there are multiple discounts. The discount priority determines the sequence in which the charging engine evaluates discounts when multiple discounts are applicable. A higher number indicates a higher priority.	Discount Priority of the product	Discount priority of the discount product offer

Pricing for Discount Offering

Launch lets you create discounts for one-time, recurring, and usage fees. You can create discounts by creating a specific fee with a price of zero and adding the required discount as an alteration to the specific fee.

You can add an alteration for a discount offering by selecting one of the following options from the drop-down list for **Add Price Alteration**:

- **Discount-Fixed**: Lets you set a fixed amount as discount.
- **Discount Percentage**: Lets you set a fixed percentage as discount
- **Consumption Discount Model**: Lets you to add composite alterations and apply discount triggers on the existing allowances and usage fee to set a pattern of consumption and billing.
- **Allowance Grant**: Lets you add an allowance as discount.

Note

- **Consumption Discount Model** only apply to usage fees and allowances, while **Discount-Fixed** and **Discount Percentage** are applicable to all kinds of fees.
- For **Discount-Fixed** and **Discount Percentage**, you add an alteration without any discount triggers.

See Set Up Price Alterations in *Oracle Communications Launch Cloud Service User's Guide* for more information about setting up price alterations.

[Table 2-8](#) describes all the required attributes to create a one-time fee.

Table 2-8 Attributes of a One-Time Fee

Attribute	Description
Price Type	Purchase , Cancel , and Penalty are the three available options for Price Type. It is recommended to select Purchase for Digital Business Experience. This gets synced to PDC as purchase charge event of the discount offer. This gets synced to Siebel CRM as the price type attribute of the product.
Price List	Price list associated with one-time fee. A single price list is synced to PDC as a single charge, while a multi price-list is synced as a charge selector. This gets synced to Siebel CRM as price list of the product.
Start Date and End Date	The starting and ending date of the fee. This gets synced to both PDC and Siebel CRM.
Price	The value of the one-time fee. Digital Business Experience recommends to set this to Zero . This gets synced to both PDC and Siebel CRM.
Name	Name of the alteration if Discount-Fixed , Discount Percentage , or Allowance Grant is selected for Add Price Alteration .
Discount Amount or Discount Percent	The value of the discount in amount or percentage.
Discount Mode	This specifies the method by which the charging system should apply a discount. The available options are Sequential or Parallel . A sequential discount implies that the discount offer is applied to the remaining charge amount after previous discounts have been deducted. Conversely, a parallel discount is applied to the original charge amount, irrespective of any reductions from prior discount offers.
Alteration Amount	The alteration amount you want to add. Digital Business Experience recommends to set this to 0 for Grant Allowance .
Allowance Type	The type of allowance that you want to provide. This could be Text , Voice_Minutes , or Data .
Allowance Quantity	The amount of data, voice, or text that you want to provide as the allowance.
Period Quantity	The amount of time for which this allowance is provided.
Period Units	The unit of the Period Quantity . This could be days, months, or year.
Apply To	The option that decides whether to add the allowance or discount to User Balance or Sharer Balance . You can choose Sharer Balance if this particular allowance or discount is supposed to be shared between different lines in a package.

[Table 2-9](#) describes all the attributes of a recurring fee.

Table 2-9 Attributes of a Recurring Fee

Attributes	Description
Recurring Fee Type	Cycle , Cycle Arrears , and Cycle Forward Arrears are the three available options for Recurring Fee Type . This gets synced to PDC as the relevant (cycle, cycle_arrears, and cycle_forward_arrears) recurring event of the discount offer. This gets synced to Siebel CRM as the price type attribute of the product.
Period	The interval at which the recurring fee is billed. Digital Business Experience recommends you to set this as Monthly for discount offering.

Table 2-9 (Cont.) Attributes of a Recurring Fee

Attributes	Description
Price List	Price list associated with recurring fee. A single price list gets synced to PDC as single charge and a multi price-list gets synced as a charge selector. This gets synced to Siebel CRM as price list of the product.
Start Date and End Date	The starting and ending date of the price. This gets synced to both PDC and Siebel CRM.
Price	The value of the recurring fee. Digital Business Experience recommends to set this to Zero . This gets synced to both PDC and Siebel CRM.
Name	Name of the alteration if Discount-Fixed , Discount Percentage , or Allowance Grant is selected for Add Price Alteration .
Discount Amount or Discount Percent	The value of the discount in amount or percentage.
Discount Mode	This specifies the method by which the charging system should apply a discount. The available options are Sequential or Parallel . A sequential discount implies that the discount offer is applied to the remaining charge amount after previous discounts have been deducted. Conversely, a parallel discount is applied to the original charge amount, irrespective of any reductions from prior discount offers.
Alteration Amount	The alteration amount you want to add. Digital Business Experience recommends to set this to 0 for Grant Allowance .
Allowance Type	The type of allowance that you want to provide. This could be Text , Voice_Minutes , or Data .
Allowance Quantity	The amount of data, voice, or text that you want to provide as the allowance.
Period Quantity	The amount of time for which this allowance is provided.
Period Units	The unit of the Period Quantity . This could be days, months, or year.
Apply To	The option that decides whether to add the allowance or discount to User Balance or Sharer Balance . You can choose Sharer Balance if this particular allowance or discount is supposed to be shared between different lines in a package.

[Table 2-10](#) describes the attributes of a usage fee.

Table 2-10 Attributes of a Usage Fee

Attribute	Description
Price List	Price list associated with the usage fee. A single price list gets synced to PDC as single charge and a multi price-list gets synced as a charge selector. This gets synced to Siebel CRM as price list of the product.
Usage Specification	Usage specification that is to be associated with the usage fee. This gets synced to PDC as the usage event of the discount offer. This does not get synced to Siebel CRM.
Metering Rule	The metering rule determines how the usage fee is measured. Digital Business Experience supports the values: Duration , Volume , and Occurrence . This does not get synced to Siebel CRM.
Unit of Measure	The unit of measure that is to be used for the usage fee. This gets synced to the usage event of the discount offer. This does not get synced to Siebel CRM.
Price Format	The pricing format of the usage fee. This gets synced to the usage event of the discount offer. This does not get synced to Siebel CRM.

Table 2-10 (Cont.) Attributes of a Usage Fee

Attribute	Description
Start Date and End Date	The starting and ending date of the usage fee. This gets synced to both PDC and Siebel CRM.
Price	The value of the usage fee. Digital Business Experience recommends to set this to Zero . This gets synced to both PDC and Siebel CRM.
Name	Name of the alteration if Consumption Discount Model , Discount-Fixed , Discount Percentage , or Grant Allowance is selected for Add Price Alteration .
Start Date and End Date	Effective date of the alteration.
Name	Name of the discount trigger. Discount trigger gets synced as Discount Filters to PDC.
Operator	The operator indicates the point at which the trigger is applied.
Value	The value applied on the operator.
Discount Amount or Discount Percentage	The value of the discount in amount or percentage.
Discount Mode	This specifies the method by which the charging system should apply a discount. The available options are Sequential or Parallel . A sequential discount implies that the discount offer is applied to the remaining charge amount after previous discounts have been deducted. Conversely, a parallel discount is applied to the original charge amount, irrespective of any reductions from prior discount offers.
Alteration Amount	The alteration amount you want to add. Digital Business Experience recommends to set this to 0 for Grant Allowance .
Allowance Type	The type of allowance that you want to provide. This could be Text , Voice_Minutes , or Data .
Allowance Quantity	The amount of data, voice, or text that you want to provide as the allowance.
Period Quantity	The amount of time for which this allowance is provided.
Period Units	The unit of the Period Quantity . This could be days, months, or year.
Apply To	The option that decides whether to add the allowance or discount to User Balance or Sharer Balance . You can choose Sharer Balance if this particular allowance or discount is supposed to be shared between different lines in a package.

[Table 2-11](#) describes how a discount offering gets synced across the applications in Digital Business Experience.

Table 2-11 Entity Mapping for Discount Offerings

Launch	Siebel CRM	PDC
Discount offering	Product with Billing Type Discount and Price zero .	Discount offer

Creating a Time-Based Offering

You can create a time-based offering to restrict a discount to a specific time period after purchase. You can create a time-based offering by creating a product specification with a set of attributes and associating it with the time-based offering.

A time-based offering gets synced to Siebel CRM as a simple product and to PDC as a discount offer.

[Table 2-12](#) describes a set of attributes you can define for a product specification to create a time-based offering:

Table 2-12 Attributes of a Product Specification to Create a Time-Based Offering

Name	Data Type	Value	Description
Duration	Number	1,2,3...	This attribute is used along with DurationUnitOfMeasure to calculate the validity of a time-based offering.
DurationUnitOfMeasure	Text	Days and Months	The unit used to measure the duration
DurationValidityStart	Text	Now Original Start Original End	This attribute is used by Siebel to re-calculate the end date of the offering when the duration of the already purchased offering changes due to a promotion upgrade or downgrade. Now: The duration of the validity starts at the due date. Siebel CRM calculates end date of a service by adding the validity period to the due date. Original Start: The duration of the validity starts at the start date. Siebel CRM calculates the end date of a service by adding the validity period to the original start date of the purchase. Original End: The duration of the validity starts at the original end date. This value is used in change orders. Siebel CRM calculates the end date of a service by adding the validity period to the original end date.

The information you provide while creating a time-based offering in Launch impacts the flow of the run-time module and the entire solution.

[Table 2-13](#) describes the information you provide while creating a time-based offering and how the attributes are translated across participating applications in Digital Business Experience:

Table 2-13 Attribute Mapping for a Time-Based Offering

Name of the Attribute in Launch	Description	Name of the Attribute in Siebel CRM	Name of the Attribute in PDC
Name	Name of the time-based offering you want to create.	Product Name	Name of the time-based offer
Offering Type	Type of the simple product offering you want to create. Select Time-Based Offering to create a time-based offering.	Product Type	Not Synced
Description	A description for the time-based offering.	Product Description	Description of the time-based offer
Start Date	The date from which the time-based offering is valid.	Start Date of the product	Start Date of the time-based offer
End Date	The date till which the time-based offering is valid.	End Date of the product	End Date of the time-based offer

Table 2-13 (Cont.) Attribute Mapping for a Time-Based Offering

Name of the Attribute in Launch	Description	Name of the Attribute in Siebel CRM	Name of the Attribute in PDC
Product Specification	The product specification associated with the time-based offering.	Product Class of the product	Not Synced
Billing Type	The Billing Type of the time-based offering. This can either be Subscription or Item . If you select Item , you can only select a one-time fee, as Item indicates an entity for which you pay once. An offering with Billing Type Item cannot include usage or recurring charges. But, for an offering with Billing Type Subscription , you can associate all types of fees with it.	This is always synced to Siebel CRM as Discount	Billing Type of the time-based offer
Billing Service Type	The Billing Service Type of the time-based offering. It can be Account or any other user configured services.	Billing Service Type of the product	Service Type of the time-based offer
Service Instance	This flag determines whether an offering can be configured as simple service bundle or not. Digital Business Experience recommends that you set this flag to false for a time-based offering.	Service Instance of the product	Not Synced
Pricing Commit Type	The Pricing Commit Type of the time-based offering. The value of this attribute has no impact on time-based offering.	Pricing Commit Type of the product	Not Synced
Dynamic Discount Method	The Dynamic Discount Method of the time-based offering. The value of this attribute has no impact on time-based offering.	Dynamic Discount Method of the product	Not Synced
Fulfillment Item Code	The Fulfillment Item Code of the time-based offering.	Fulfillment Item Code of the product	Not Synced
Composition Type	The Composition Type of the time-based offering. It can either be Partial Item or Whole Item . Digital Business Experience recommends that you set this as Whole Item for time-based offering.	Composition Type of the product	Not Synced
Orderable	This flag determines whether the time-based offering can be ordered or not. Digital Business Experience recommends that you set this flag to true for time-based offering.	Orderable attribute of the product	Not Synced
Configurable	This flag determines whether the time-based offering can be customized or not.	Customizable attribute of the product	Not Synced
Bill on Purchase	This flag determines whether the time-based offering is billed at purchase or not. Digital Business Experience recommends that you set this flag to true for time-based offering.	Billable attribute of the product	Not Synced
Trackable as Asset	This flag determines whether the time-based offering can be tracked as an asset or not. Digital Business Experience recommends that you set this flag to true for time-based offering.	Trackable as Asset attribute of the product	Not Synced
Product Line	The product line of the time-based offering.	Product Line of the product	Not Synced

Table 2-13 (Cont.) Attribute Mapping for a Time-Based Offering

Name of the Attribute in Launch	Description	Name of the Attribute in Siebel CRM	Name of the Attribute in PDC
Discount Priority	The priority of a specific time-based offer synced to PDC as a product with a discount if there are multiple discounts. The discount priority determines the sequence in which the charging engine evaluates discounts when multiple discounts are applicable. A higher number indicates a higher priority.	Discount Priority of the product	Discount priority of the discount product offer

Pricing For Time-Based Offering

Launch lets you create time-based offerings with one-time, recurring, and usage fees. You can create discounts on various fees by creating a specific fee with a price of zero and adding the required discount as an alteration to the specific fee.

Discount - Fixed and **Discount Percentage** are the two available ways of adding an alteration for a time-based offering. You can select one of these options from the drop-down list for **Add Price Alteration**. Fixed and percentage discounts let you set a fixed discount in terms of amount or percentage that will be reduced from the base price. See Set Up Price Alterations in *Oracle Communications Launch Cloud Service User's Guide* for more information about setting up price alterations.

[Table 2-14](#) describes all the required attributes to create a one-time fee.

Table 2-14 Attributes of a One-Time Fee

Attribute	Description
Price Type	Purchase , Cancel , and Penalty are the three available options for Price Type. It is recommended to select Purchase for Digital Business Experience. This gets synced to PDC as purchase charge event of the discount offer.
Price List	price list associated with one-time fee. A single price list gets synced to PDC as single charge and a multi-price list gets synced as a charge selector. This gets synced to Siebel CRM as price list of the product.
Start Date	Start date of the one-time fee. This gets synced to both PDC and Siebel CRM.
End Date	End date of the one-time fee. This gets synced to both PDC and Siebel CRM.
Price	The value of the one-time fee. Digital Business Experience recommends to set this to Zero . This gets synced to both PDC and Siebel CRM.
Name	Name of the alteration if Discount-Fixed or Discount Percentage is selected for Add Price Alteration .
Discount Amount or Discount Percent	The value of the discount in amount or percentage.

[Table 2-15](#) describes all the required attributes to create a recurring fee.

Table 2-15 Attributes of a Recurring Fee

Attributes	Description
Recurring Fee Type	Cycle , Cycle Arrears , and Cycle Forward Arrears are the three available options for Recurring Fee Type . This gets synced to PDC as the relevant (cycle, cycle_arrears, and cycle_forward_arrears) recurring event of the discount offer. This gets synced to Siebel CRM as the price type attribute of the product.
Period	The interval at which the recurring fee is billed. Digital Business Experience recommends you to set this as Monthly for time-based offering.
Price List	price list associated with recurring fee. A single price list gets synced to PDC as single charge and a multi-price list gets synced as a charge selector. This gets synced to Siebel CRM as price list of the product.
Start Date and End Date	The starting date of the price. This gets synced to both PDC and Siebel CRM.
Price	The value of the recurring fee. Digital Business Experience recommends to set this to Zero . This gets synced to both PDC and Siebel CRM.
Name	Name of the alteration if Discount-Fixed or Discount Percentage is selected for Add Price Alteration .
Discount Amount or Discount Percent	The value of the discount in amount or percentage.

[Table 2-16](#) describes all the required attributes to create a usage fee.

Table 2-16 Attributes of a Usage Fee

Attribute	Description
Price List	price list associated with the usage fee. A single price list gets synced to PDC as single charge and a multi-price price list gets synced as a charge selector. This gets synced to Siebel CRM as price list of the product.
Usage Specification	Usage specification that is to be associated with the usage fee. This gets synced to PDC as the usage event of the discount offer. This does not get synced to Siebel CRM.
Metering Rule	The metering rule determines how the usage fee is measured. Digital Business Experience supports the values Duration , Volume , and Occurrence . This does not get synced to Siebel CRM.
Unit of measure	The unit of measure that is to be used for the usage fee. This gets synced to the usage event of the discount offer. This does not get synced to Siebel CRM.
Price Format	The pricing format of the usage fee. This gets synced to the usage event of the discount offer. This does not get synced to Siebel CRM.
Start Date and End Date	The starting and ending date of the usage fee. This gets synced to both PDC and Siebel CRM.
Price	The value of the usage fee. Digital Business Experience recommends to set this to Zero . This gets synced to both PDC and Siebel CRM.
Name	Name of the alteration if Discount-Fixed or Discount Percentage is selected for Add Price Alteration .
Discount Amount or Discount Percent	The value of the discount in amount or percentage.

[Table 2-17](#) describes how a time-based offering gets synced across the applications in Digital Business Experience.

Table 2-17 Entity Mapping for Time-Based Offerings

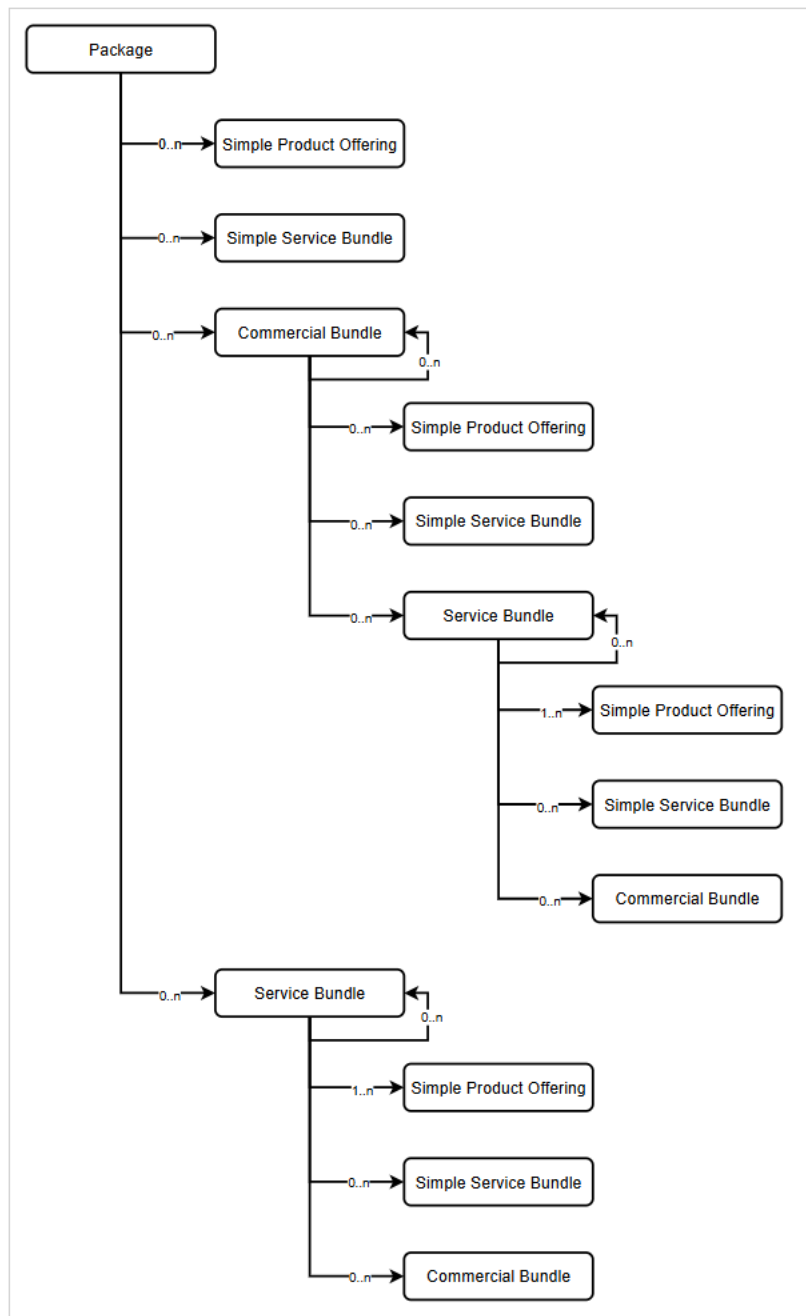

Launch	Siebel CRM	PDC
Time-based offering	Product with Billing Type Discount and Price zero .	Discount offer

Creating a Bundled Product Offering

In Digital Business Experience, Launch lets you create bundled product offerings from the **Offering Management** page. Launch has three types of offerings under bundled product offerings; package, commercial bundle, and service bundle.

To create a bundled product offering in Launch, see *Create a Bundle Offer* in *Oracle Communications Launch Cloud Service User's Guide*.

[Figure 2-1](#) depicts the hierarchy and cardinality of the bundled product offerings.

Figure 2-1 Hierarchy of Product Offerings

This section contains the following topics:

- **Creating a Service Bundle:** This topic describes the entities and attributes required to create a service bundle.
- **Creating a Commercial Bundle:** This topic describes the entities and attributes required to create a commercial bundle.
- **Creating a Package:** This topic describes the entities and attributes required to create a package.

- About Offer Aggregation and Options Groups: This topic provides information on offer aggregation and option group.

Creating a Service Bundle

You create service bundles to bundle the services of similar type in Digital Business Experience. When a service bundle is purchased along with its components, a service instance is created in PDC and its components are purchased as product instances.

Here are some examples:

- You can add a broadband service having a recurring fee and a broadband installation service with a one-time fee to a broadband service bundle.
- You can add a broadband service having a recurring fee and a broadband service with 25% discount on its recurring fee to a broadband service bundle.
- You can add a voice service having a recurring fee, some credit allowance, a usage fee, and a discount offer with a consumption rule to a voice service bundle.

The information you provide while creating a service bundle in Launch impacts the flow of the run-time module and the entire solution. A service bundle only gets synced to Siebel CRM.

[Table 2-18](#) describes the information you provide while creating a service bundle and how the attributes are translated to Siebel CRM by Digital Business Experience:

Table 2-18 Attribute Mapping for a Service Bundle

Name of the Attribute in Launch	Description	Name of the Attribute in Siebel CRM
Name	Name of the service bundle.	Product Name
Description	A description for the service bundle.	Product Description
Start Date	The date from which the service bundle is valid.	Start Date of the product
End Date	The date till which the service bundle is valid.	End Date of the product
Product Specification	The product specification associated with the service bundle.	Product Class of the product
Attributes	The attributes of the offerings imported from the product specification associated with the service bundle.	Attributes of the product
Billing Type	The Billing Type of the service bundle. Digital Business Experience recommends to set this as service bundle .	Billing Type attribute of the product
Billing Service Type	The Billing Service Type of the service bundle.	Billing Service Type attribute of the product
Pricing Commit Type	The Pricing Commit Type of the service bundle. This value has no impact on service bundle.	Pricing Commit Type attribute of the product
Dynamic Discount Method	The Dynamic Discount Method of the service bundle. This value has no impact on service bundle.	Dynamic Discount Method attribute of the product

Table 2-18 (Cont.) Attribute Mapping for a Service Bundle

Name of the Attribute in Launch	Description	Name of the Attribute in Siebel CRM
Fulfillment Item Code	The Fulfillment Item Code associated with the service bundle.	Fulfillment Item Code attribute of the product.
Composition Type	The Composition Type of the service bundle. It can either be a Partial Item or a Whole Item . Digital Business Experience recommends to set this as Whole Item for a service bundle.	Composition Type attribute of the product
Orderable	The orderable attribute of the service bundle. This flag determines whether the service bundle can be ordered or not. Digital Business Experience recommends you to set this flag to true for a service bundle.	Orderable attribute of the product
Configurable	The configurable attribute of the service bundle. This flag determines whether a service bundle can be customized or not. Digital Business Experience recommends you to set this flag to true for a service bundle.	Customizable attribute of the product
Bill on Purchase	This flag determines whether a service bundle is billed at purchase or not. Digital Business Experience recommends you to set this flag to true for a service bundle.	The billable attribute of the product.
Trackable as Asset	This flag determines whether a service bundle can be tracked as an asset or not. Digital Business Experience recommends you to set this flag to true for a service bundle.	Trackable as Asset attribute of the product.
Components	The components of the service bundle.	Children of the product.

Recommendations for Service Bundles

- You should set **Billing Type** as **Service Bundle** for service bundles.
- You should not set the **Account** as **Billing Service Type** for service bundles.
- You can include service, device, accessory, discount, and time-based offerings as components of service bundles.
- You must include at least one subscription type service, device, or accessory in every service bundle.
- You can also include option group as a component of service bundles.
- All the components of the service bundle must be of the same **Billing Service Type** as of the service bundle itself.

- You can include simple service bundle offerings as a component of service bundles. **Billing Service Type** of the component simple service bundle and the specific service bundle need not be the same.
- You can nest service bundles. **Billing Service Type** of nested service bundles need not be same as the parent service bundle.
- You can also include a commercial bundle as a component of service bundles. Immediate child of the commercial bundle in this case must have the same **Billing Service Type** as that of the parent service bundle.

Creating a Commercial Bundle

You can create a commercial bundle to bundle the related services. For example, you can add a voice service bundle, text service bundle, data service bundle, and a SIM Card together as a commercial bundle.

A commercial bundle only gets synced to Siebel CRM, and not to PDC. It gets synced to Siebel CRM as product with product type **Bundle**.

The information you provide while creating a commercial bundle in Launch impacts the flow of the run-time module and the entire solution.

[Table 2-19](#) describes the information you provide while creating a commercial bundle and how the attributes are translated to Siebel CRM by Digital Business Experience:

Table 2-19 Attribute Mapping for a Commercial Bundle

Name of the Attribute in Launch	Description	Name of the Attribute in Siebel CRM
Name	Name of the commercial bundle.	Product Name
Description	A description for the commercial bundle.	Product Description
Start Date	The date from which the commercial bundle is valid.	Start Date of the product
End Date	The date till which the commercial bundle is valid.	End Date of the product
Product Specification	The product specification associated with the commercial bundle.	Product Class of the product
Attributes	The attributes of the offerings imported from the Product Specification associated with the commercial bundle.	Attributes of the product
Billing Type	The Billing Type of the commercial bundle. Digital Business Experience recommends to leave this field empty for a commercial bundle.	Billing Type attribute of the product
Billing Service Type	The Billing Service Type of the commercial bundle. Digital Business Experience recommends to leave this field empty for a commercial bundle.	Billing Service Type attribute of the product

Table 2-19 (Cont.) Attribute Mapping for a Commercial Bundle

Name of the Attribute in Launch	Description	Name of the Attribute in Siebel CRM
Pricing Commit Type	The Pricing Commit Type of the commercial bundle. This value has no impact on a commercial bundle.	Pricing Commit Type attribute of the product
Dynamic Discount Method	The Dynamic Discount Method of the commercial bundle. This value has no impact on a commercial bundle.	Dynamic Discount Method attribute of the product
Fulfillment Item Code	The Fulfillment Item Code associated with the commercial bundle.	Fulfillment Item Code attribute of the product
Composition Type	The Composition Type of the commercial bundle. It can either be a Partial Item or a Whole Item . Digital Business Experience recommends to set this as Whole Item for a commercial bundle.	Composition Type attribute of the product
Orderable	The orderable attribute of the commercial bundle. This flag determines whether the commercial bundle can be ordered or not. Digital Business Experience recommends you to set this flag to true for a commercial bundle.	Orderable attribute of the product
Configurable	The configurable attribute of the commercial bundle. This flag determines whether a commercial bundle can be customized or not. Digital Business Experience recommends you to set this flag to true for a commercial bundle.	Customizable attribute of the product
Bill on Purchase	This flag determines whether a commercial bundle is billed at purchase or not. Digital Business Experience recommends you to set this flag to true for a commercial bundle.	Billable attribute of the product
Trackable as Asset	This flag determines whether a commercial bundle can be tracked as an asset or not. Digital Business Experience recommends you to set this flag to true for a commercial bundle.	Trackable as Asset attribute of the product
Components	The components of the commercial bundle.	Children of the product

Creating a Package

You can create a package to bundle the related services and make it available to the customers. Some examples are as follows:

- You can add a wireless package, Over-the-Top (OTT) services, and device offer aggregation to a mobile package. See [About Offer Aggregation and Option Groups](#) to learn about offer aggregation.
- You can add a broadband bundle, email service, routers, and modems to a broadband package.
- You can add a wireless package, broadband bundle, OTT services, mobile devices, routers, and modems to create a dual play package.

Packages can have upgrade and downgrade rules and offer aggregations.

Packages get synced only to Siebel CRM as products with a Product Type **Promotion**, and not to PDC.

The information you provide while creating a package in Launch impacts the flow of the run-time module and the entire solution.

[Table 2-20](#) describes the details you provide while creating a package and how these details are populated and synchronized across participating applications in Digital Business Experience:

Table 2-20 Attribute Mapping for a Package

Name of the Attribute in Launch	Description	Name of the Attribute in Siebel CRM
Name	Name of the package.	Promotion product Name
Description	A description for the package.	Promotion product Description
Start Date	The date from which the package is valid.	Start Date of the promotion product
End Date	The date till which the package is valid.	End Date of the promotion product
Product Specification	The product specification associated with the package.	Product Class of the promotion product
Attributes	The attributes of the offerings imported from the product specification associated with the package.	Attributes of the promotion product
Pricing Commit Type	The Pricing Commit Type of the package. This value has no impact on package.	Pricing Commit Type attribute of the promotion product
Dynamic Discount Method	The Dynamic Discount Method of the package. This value has no impact on package.	Dynamic Discount Method attribute of the promotion product.
Fulfillment Item Code	The Fulfillment Item Code associated with the package.	Fulfillment Item Code of the promotion product

Table 2-20 (Cont.) Attribute Mapping for a Package

Name of the Attribute in Launch	Description	Name of the Attribute in Siebel CRM
Composition Type	The Composition Type of the package. It can either be a Partial Item or a Whole Item . Digital Business Experience recommends to set this as Whole Item for a package.	Composition Type of the promotion product
Orderable	The orderable attribute of the package. This flag determines whether the package can be ordered or not. Digital Business Experience recommends you to set this flag to true for a package.	Orderable attribute of the promotion product
Configurable	The configurable attribute of the package. This flag determines whether a package can be customized or not. Digital Business Experience recommends you to set this flag to true for a package.	Customizable attribute of the promotion product
Bill on Purchase	This flag determines whether a package is billed at purchase or not. Digital Business Experience recommends you to set this flag to true for a package.	Billable attribute of the promotion product
Trackable as Asset	This flag determines whether a package can be tracked as an asset or not. Digital Business Experience recommends you to set this flag to true for a package.	Trackable as Asset attribute of the promotion product
Components	The components of the package.	Children of the promotion product

About Offer Aggregation and Option Groups

Offer Aggregation

An offer aggregation is a collection of offerings associated with a product line or a product specification with a default value and cardinality limit. You can create an offer aggregation for a package. For example, brand A has 15 phones associated with a product line, of which 8 belong to a single product specification and the other 7 to another set of product specifications with similar characteristics. If you want to provide a discount on all 15 phones, then instead of selecting all 15 of the phone offerings, you could create an aggregation with the product specifications that are common to all 15 phone offerings. This way, all the offerings associated with the product specification get the discount without the need to create different packages for different offerings.

To create an offer aggregation, see "Create an Offer Aggregation" Product Offers in *Oracle Communications Launch Cloud Service User's Guide*.

An offer aggregation within a package is synced to Siebel CRM as a Promotion. For more information, see [Specifying Product Lines or Product Classes for a Product Promotion](#) in *Oracle Communications Siebel Pricing Administration Guide*.

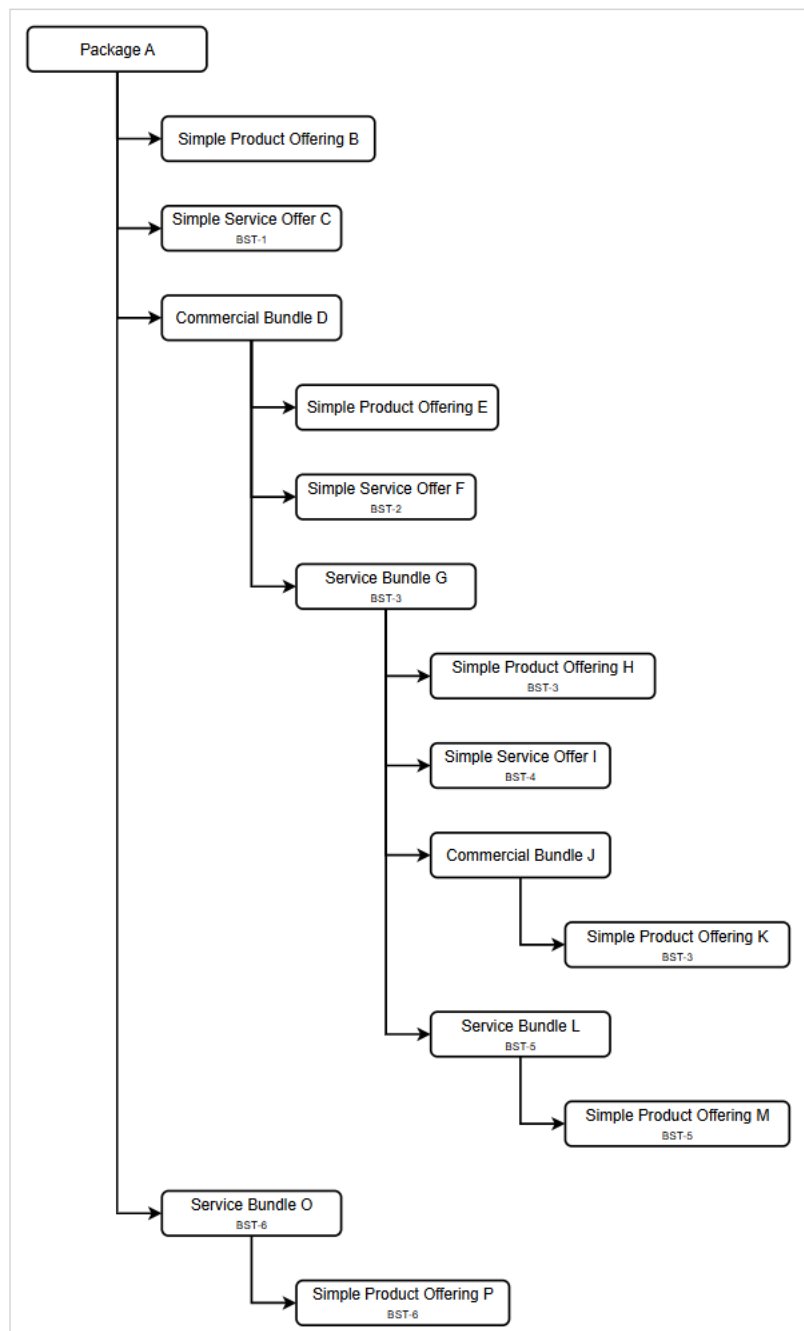

Option Groups

An option group is a grouping of similar offerings. This gets synced to Siebel CRM as dynamic class. You can create option groups while creating service or commercial product bundles. As a product manager, you can use option groups to group similar offerings and set cardinality at the group level. For example, if a wireless data bundle groups a 1GB, 5GB, and 10 GB data offerings, you can set one of the offerings within the option group as the default. You can override the default value of an option group at the package level. This enables you to set a different default value within the context of a package and avoid proliferation of bundled product offerings.

To create an option group, see the topic "Create Product Option Groups" in the chapter Product Offers in *Oracle Communications Launch Cloud Service User's Guide*.

Package Models in Design-Time and Run-Time

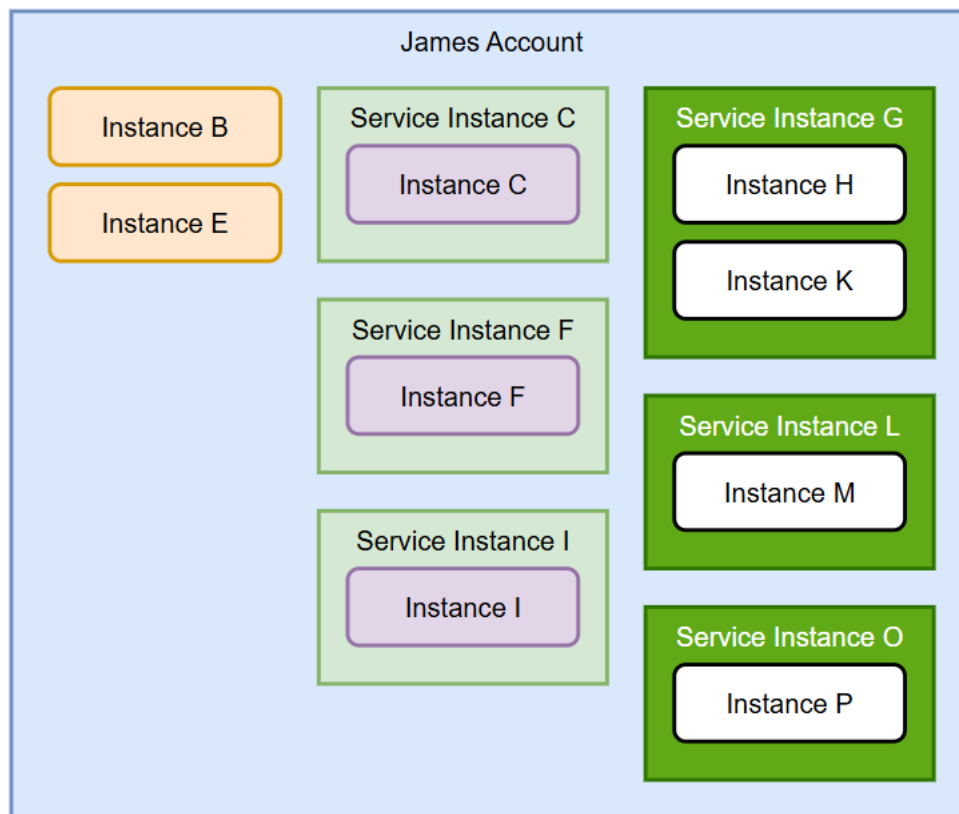

[Figure 2-2](#) depicts a package (Package A) in a design-time environment:

Figure 2-2 Package A in a Design-Time Environment

In the diagram above:

- Simple product offering B and E can only be account-level products.
- Billing Service Type of simple product offering H and K must be same as that of service bundle G.
- Billing Service Type of simple product offering M must be same as that of service bundle L.
- Billing Service Type of simple product offering P must be same as that of service bundle O.

[Figure 2-3](#) represents the same package (Package A) in a run-time environment (PDC).

Figure 2-3 Package A in a Run-Time Environment

Creating a Family Share Plan

About Family Share Plans

A family share plan is modeled as a package in Launch Cloud Service. A family share plan package includes multiple lines, each corresponding to a member of the family. Each line provides access to required services such as data, voice, and text. You must have a mandatory primary line and a secondary line in the package for a family share plan.

A family share plan allows the Product Manager to provide discounts on all the additional lines. For example, you can offer a family share plan for a wireless phone line with a secondary line at 25 percent discount and add-on lines at 50 percent discount.

Note

Use family share plans to share discounts for wireless products only.

Creating Family Share Plans

You can configure a family share plan via a package. See [Creating a Package](#) for more information about packages.

To configure a family share plan using a package offering:

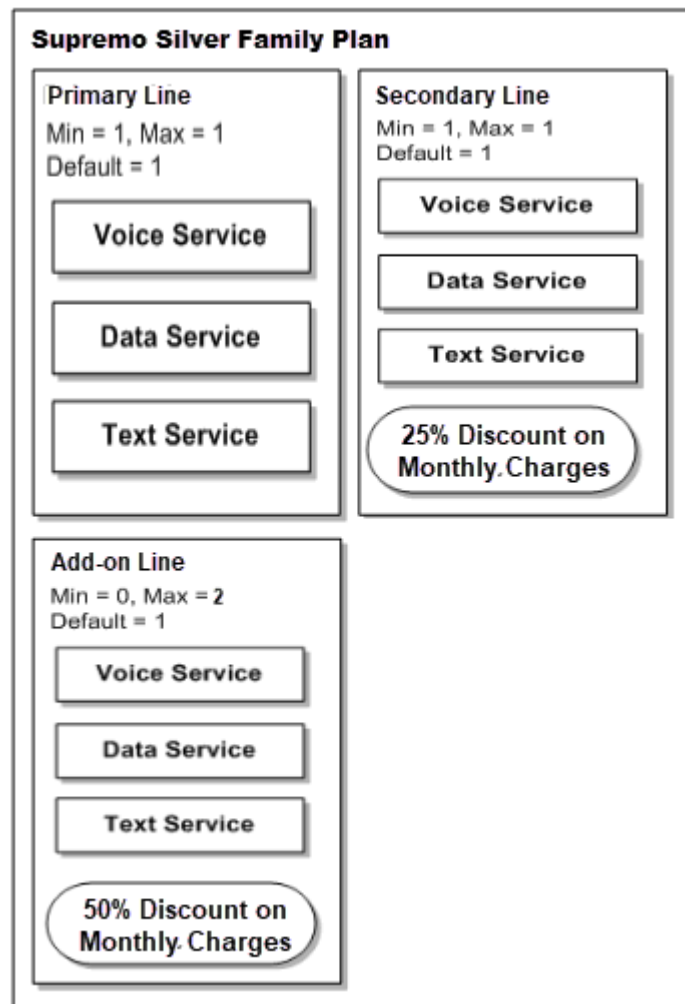

1. Create a discount offering for the desired discount. See [Creating a Discount Offering](#) for information on creating discount offerings.
2. Create separate simple offerings for all the services (data, voice, and text) you want to provide as part of the plan. See [Creating a Service, Device, or Accessory Offering](#) for information on creating simple offerings for services.
3. Group all the simple offerings created in step 2 to service bundles to represent various services such as data, voice, and service. See [Creating a Service Bundle](#) for information on creating a service bundle.
4. Add the service bundles for various services under one commercial bundle to represent a line.
5. Create simple offerings, discounts, service bundles, and commercial bundles for all the lines.
6. Add all the commercial bundles, discount offerings, and other simple offerings if any, to a package.

[Figure 2-4](#) depicts Supremo Silver Family Plan.

The figure shows a product called Supremo Silver Family Plan that contains the following components:

- A commercial bundle representing the primary line with nested service bundles for voice, data, and text.
- A commercial bundle representing a secondary line with nested service bundles for voice, data, and text.
- A commercial bundle representing up to 2 add-on lines with nested service bundles for voice, data, and text.

Figure 2-4 Supremo Silver Family Plan

Creating Special Rate Calling List

The friends and family list, which is implemented as a Special Rate Calling list and is included in service bundles, lets the CSPs rate calls to certain phone numbers differently than others.

Special rate calling list is enabled through extended rating attributes (ERAs) in PDC. See *Working with Extended Rating Attributes in Oracle Communications PDC Creating Product Offerings Guide* for more information. Friends and family ERA is used to create a special rate calling list. The name of the ERA profile is FRIENDS_FAMILY and all the lists are added to this profile. A Product Manager can create a special rate calling list through a special rating product offering.

To create a special rating product offering:

1. Create a simple offering with **Offer Type Service**.

Note

The name of the simple offering should be the name of the list you are creating.

2. Add the required product specifications and service specifications.
3. Select the **Billing Type** as **Special Rating** from the drop-down list.
4. Select the required **Billing Service Type** from the drop-down list.
5. Select the **Pricing Commit Type** as **Dynamic**.
6. Select the **Dynamic Discount Method** as **Percentage**.
7. Set the **Special Rating Max Items**. This indicates the number of phone numbers you want to add in the list.
8. Select the **Special Rating Type** as **Phone Number**.
9. Select the required **Fulfillment Item Code**.
10. Enable the following flags:
 - Track as Asset
 - Configurable
 - Orderable
 - Shippable

You can add only usage fee for a special rating product offering as it leverages attribute-based pricing with custom event analyzer to create a special rate calling list. In short, special rate calling lists are made possible via custom event analyzer rules. See Pricing Structures in *Oracle Communications Launch Cloud Service User's Guide* to know more about setting up usage fee using custom event analyzer rules.

Fulfillment Item Code

Fulfillment Item Code is one of the attributes of a product offering. A Fulfillment Item Code is required to map an OSM product specification with a product offering in Siebel CRM so that all order lines are mapped to a product specification. It is either the value of the product specification or one of the values from the product specification hierarchy of the product offering. OSM determines the product specification of an order line from the Fulfillment Item Code. It processes the order line based on Product Type Code, Fulfillment Item Code, and Billing Type. OSM further determines the fulfillment actions and dependencies based on product specification and fulfillment request type. The Fulfillment Mode Order header attribute determines the fulfillment request type (deliver or qualify).

Simple Service Bundle

You can create a simple service bundle by setting the **Service Instance** flag to **True** and **Billing Type** to **Subscription** for a service, device, and accessory offering in Launch. In Order-to-Cash scenarios, the integration treats such products as a regular service bundle in BRM. You can model a simple service bundle by itself, nest it within a regular service bundle, commercial bundle, or a package.

Simple service bundles can only ever have one product. They cannot include other products, discounts, special rating products, or regular service bundles. To combine multiple products and discounts, you must use a regular service bundle.

You should not convert simple service bundles into regular service bundles, nor convert regular service bundles into simple service bundles because of possible effects on the processing of change orders for existing assets. Do not flag a product that is already in a regular service bundle as a simple service bundle. If your product bundling requirements change, you must create a different product. Although you can nest a simple service bundle within a regular service bundle at design time, this does not make the simple service bundle a component of the regular service bundle in the order time. When processing an order containing a simple service bundle nested within a regular service bundle, the integration creates a separate service instance in BRM for each service bundle and each service is billed separately. If you want the service represented by the simple service bundle to be a component of the regular service bundle, you must create a new product, and bundle it as part of the regular service bundle.

If you disconnect a simple service bundle, the integration disconnects both the service instance and the purchased product instance in BRM. You cannot change from one simple service bundle to another while retaining the same service instance.

Defining Overrides on a Product Definition

An override on a product definition can be implemented in two ways; price override and discount override. You can add an override via **Pricing Commit Type**.

If you have set the **Pricing Commit Type** to **Dynamic**, you can define discount override and a price override if it is set to **Committed**.

A pricing override sets the new net price charged for the product. The final price is mapped to the product's General Ledger and there is no financial traceability of this override. A pricing override is always a fixed amount. Changing prices for multiple existing accounts requires a custom script.

A discount override provides a discount to the start price and the difference is reflected in the net price as a discount override. The discount override amount can be traced to a separate General Ledger account.

You can set the discount as a percentage or an amount using **Dynamic Discount Method**.

Setting Up Commitment Terms and Penalty

A commitment term is a period of time the subscriber commits to in order to purchase a particular product offering. For example, you can set a two-year commitment period for a product offering to indicate that when you sell this offering, the customer has committed to this offering for a period of two years. You can set up any of the following types of penalties:

- **None**
- **Flat:** The customer pays a flat fee, such as 100 US dollars or 75 euros.
- **Fixed Proration:** The customer pays a flat fee regardless of the remaining length of the contract, plus an additional penalty for each remaining month in the contract. The system calculates and evenly spreads the penalty percentage across the contract duration.
- **Variable Proration:** The customer pays a flat fee regardless of the remaining length of the contract, plus an additional penalty that varies according to how long is remaining on the contract.

Commitment terms are synced only to Siebel CRM. Siebel calculates the penalty at run-time.

Recommendations for Commitment Terms

- You should define only one commitment term per offering.

- To set up a commitment term, you should copy the Siebel Penalty Offer name and create a simple product offering of Billing Type **Item** in Launch with the same name and publish it to Siebel CRM and PDC.

Creating Price Alterations

Attribute-Based Alteration

You can define attribute-based alterations for one-time and recurring fees on service, device, and accessory offerings with a Billing Service Type of **Account**. Attribute-based price alteration is only synced to Siebel CRM and is synced as Discount Matrix.

Price Alteration for Packages

You can provide percentage-based price alterations for first-level components including offer aggregations of a package. This price alteration is only synced to Siebel CRM as a Promotion Component Discount.

Configuring Zone Models for Attribute-Based Pricing

Digital Business Experience enables you to add attribute-based pricing with zone models for a usage fee associated with a service offering. You can configure zone models for attribute-based pricing using Standard Zone or Value Maps.

To use zone models, you must first configure Zone Impact Category in Launch Cloud Service. See Configure the Business Configurations in *Oracle Communications Launch User's Guide* for more information.

A Standard Zone model is based on the origin and destination numbers of a call. It contains rules that associate a pair of origin and destination numbers with a Zone Impact Category. To specify origin and destination numbers, you must include an international access code (the code used to dial out of the country in which the phone number is located). Optionally, you can also include additional details such as a country code (the code used to dial into the country in which the phone number is located), area code, region code, city code, phone number prefix, or even the complete phone number. See the topic "Attribute-based pricing with Standard Zone" in the chapter Product Offer Pricing in *Oracle Communications Launch Cloud Service User's Guide* for more information.

You can also configure zone models using Value Maps. A Value Map is a hierarchical structure that associates zone names with values that apply to a single event attribute, such as an area code, an IP address, or a broadband bit rate. A Value Map can have multiple nested zones. See the topic "Attribute-based pricing with Value Maps" in the chapter Product Offer Pricing in *Oracle Communications Launch Cloud Service User's Guide* for more information.

To use Value Maps in attribute-based pricing, you must first configure the required Value Maps in Launch Cloud Service application. You can configure Value Maps using REST APIs for Launch. The Value Maps you configure in Launch and PDC have to be the same. See Configuring Value Maps in *Oracle Communications Billing Revenue Management PDC Creating Product Offerings Guide* for more information.

Creating Rules

Rules are different types of conditions that you can set for product offerings. These conditions are applied during the ordering process to validate the order. Digital Business Experience supports three kinds of rules: Migration Rules, Eligibility Rules, and Compatibility Rules.

Refer to the following guides to know more about these rules and creating them in different applications involved:

- In Launch, see Rules in *Oracle Communications Launch Cloud Service User's Guide*.
- In Siebel, see [Product and Promotion Eligibility and Compatibility](#) in *Oracle Communications Siebel Product Administration Guide*.

Recommendations for Rules

While creating a Compatibility Rule, Digital Business Experience only supports **REQUIRES** and **EXCLUDES**.

Publishing a Product Offering

This topic describes the tasks for publishing a product offering you have created in Launch. To publish the product offerings you designed in Launch, you need to add all the product offerings along with all the entities you want to publish to the downstream systems to an Initiative. Initiatives are used to consolidate all the entities you want to publish. See Initiatives and Entity Lifecycle Management in *Oracle Communications Launch Cloud Service User's Guide* for information on managing lifecycle status of catalog entities using initiatives in Launch.

Launch lets you do a single-click sequential publishing to Siebel CRM and BRM PDC. In this sequential publishing, all entities are first synced to Siebel CRM and notified to Launch which then initiates publishing to BRM PDC. See Publish Catalogs in *Oracle Communications Launch Cloud Service Implementation Guide* for more information on publishing catalogs and catalog entities to downstream systems.

3

Assessment-to-Relaunch

Learn about the Assessment-to-Relaunch business process and tasks in Oracle Communications Digital Business Experience.

About Assessment-to-Relaunch

The Assessment-to-Relaunch business process handles all design time modifications to existing catalogs. This business process supports creating, updating, and publishing product offerings using existing services and domains. Some use cases that are supported in Digital Business Experience are:

- Assess and repackage your product offerings to include different services and provide new combinations of services and bundles.
- Change the price of a product offering and propagate this change across all references to this product offering in Digital Business Experience.
- Change the structure of a product offering and modify its cardinality.
- Launch the product offering and publish all the changes to Oracle Siebel CRM and BRM Oracle Communications Pricing Design Center (PDC).

To relaunch product offerings, you perform (at minimum) the following tasks in Oracle Communications Launch Cloud Service:

- Create a package that offers a different default service
- Create a package that offers a service with different parameters
- Create a package that offers new services and some existing services
- Create a package that offers a new bundle of services along with an existing bundle of services
- Create a new package by bundling existing bundles
- Offer a package and its component services in a new price list

Once the changes are published to Siebel CRM and PDC, these changes are committed and can be used for any future customer orders. Also, changes in the pricing of the existing product offerings that have been already purchased through an earlier order reflect these changes in the subsequent billing cycle.

4

Reference Product Models and Seed Data

Learn about the Oracle Communications Digital Business Experience reference implementation and seed data, which give a starting place for your custom products and services.

The product models and the seed data are available in the Digital Business Experience Reference Solution (the Reference Solution). The Reference Solution helps you to deploy the base environment so that you can quickly accept new orders, customize sample orders, and test the end-to-end flow of orders.

See *About the Reference Solution in Oracle Communications Digital Business Experience Concepts Guide* for more information about the Reference Solution.

About Seed Data

The Reference Solution contains seed data, which provides configuration that you can load into each application before loading the reference product model. The seed data consists of preconfigured setup information (for Oracle Communications Launch Cloud Service, BRM, and Oracle Communications Pricing Design Center (PDC)), which can be customized based on your business model, market region, jurisdiction, business policies, and accounting practices.

The following sections provide details about the seed data that is available in the Reference Solution.

Seed Data for Launch Cloud Service

[Table 4-1](#) describes the Launch Cloud Service seed data included in the reference solution.

About the Product Models

The Reference Solution includes product models, that can be loaded in Launch Cloud Service. It includes sample product catalogs for Broadband, Postpaid Mobile, Home Phone, TV with Over-the-Top (OTT) services, Dual Play, Triple Play, and Quad Play bundles. It also includes reusable or customizable product bundles and offerings defined based on the Digital Business Experience best practices. These sample product models allow you to immediately create orders and test the features of the solution.

The Reference Solution contains of the following preconfigured product models:

- Broadband
 - Supremo Broadband - Basic
 - Supremo Broadband - Premium
 - Supremo Broadband - Gigabit
- Postpaid mobile
 - Supremo 5G Lite
 - Supremo 5G Premium
 - Supremo 5G Unlimited
- Home phone
 - Supremo Starter Home Phone
 - Supremo Premium Home Phone
- Digital TV services
 - Supremo TV - Basic
 - Supremo TV - Premium
- Dual Play
 - Supremo Mobile and Broadband Packages
 - Supremo Broadband and Home Phone Packages
 - Supremo Broadband and TV Packages
- Triple Play (Mobile - Broadband - TV)
 - Supremo Mobile - Broadband - TV Packages
- Quad Play (Mobile - Broadband - Home phone - TV)
 - Supremo Mobile - Broadband - Phone - TV Basic
- Family Share Plans
 - Supremo Silver Family Plan
 - Supremo Gold Family Plan

The following sections provide more information about the product model hierarchies, product specifications, product offerings, and various rules.

Supremo Broadband Product Models

This section provides information about various Supremo Broadband product models and the attributes available in each product model. The tables below provide information, such as name, cardinality $[n,n,n]$, type, product specification (Product Spec), Fulfillment Item Code (FIC), and billing type (BT) of each broadband product model.

① Note

The dashes in the **Name** column indicate hierarchy within child components of the product model.

Table 4-7 Supremo Broadband Basic Product Model

About Product Specifications

The Reference Solution contains the following product specifications:

- Product Specifications with predefined attributes:
 - Broadband PS
 - Broadband Bandwidth PS
 - Firewall PS
 - Email Service PS
 - Broadband Router PS
 - Broadband Modem PS
 - SIM Card PS
 - Voice PS
 - Voice Talktime PS
 - Voice Roaming PS
 - Text PS
 - Text Features PS
 - Text Roaming PS
 - Wireless Data PS
 - Wireless Data Bandwidth PS
 - Data Roaming PS
 - Wireless Data CPE PS
 - Digital TV PS
 - Wireless Handset PS
 - Wireless Mustang Handset PS
 - Wireless Vola Handset PS
 - Wireless Accessory PS
 - Allowance Sharing PS
 - Offer Discount PS
 - TBO Discount PS
 - VoIP PS
 - Value Added Features PS
 - VoIP Voicemail PS
 - VoIP Visual Voicemail PS
 - Web Conferencing PS
 - VoIP Adapter PS
 - VoIP Phone PS
- Product specifications without attributes:

- Broadband Offer Charge Class
- High-Speed Internet Installation Class
- Bundled Offering PS
- VoIP PS
 - * Child Product Specifications: Voice PS, Text PS, Wireless Data PS, and Allowance Sharing PS
- VoIP Offer Charge Class
 - * Child Product Specifications: Voice Talktime PS, Voice Roaming PS, Text Features PS, Text Roaming PS, Wireless Data Bandwidth PS, and Data Roaming PS
- VoIP Pricing Event Billing Validation Class
 - * Child Product Specifications: Offer Discount PS and TBO Discount PS
- Pricing Event Class
- VoIP Adapter PS
 - * Child Product Specifications: SIM Card PS, Wireless Data CPE PS, and Wireless Accessory PS
- VoIP Phone PS
 - * Child Product Specifications: Wireless Mustang Handset PS and Wireless Vola Handset PS
- Internet Media PS
 - * Child Product Specifications: Digital TV PS
- VoIP Fax Service PS
- Special Rating PS
- VoIP Soft Phone PS
- VoIP Service Feature Billing Validation Class
 - * Child Product Specifications: VoIP PS
- Digital TV Installation PS
- Digital TV STB PS
- Digital TV Music PS

The following tables provide details, such as product attributes, data types, units of measure (UoM), required (Yes or No), lists of values (LoV), and default values for each of the product specifications with predefined attributes.

Table 4-24 Broadband PS

Attribute	Data Type	UoM	Required	LoV	Default Value
AAA Account	String	NA	Yes	NA	NA

Table 4-25 Broadband Bandwidth PS

Attribute	Data Type	UoM	Required	LoV	Default Value
Download Speed	String	NA	Yes	50Mbps, 75Mbps, 150Mbps, 2450Mbps	50Mbps
Upload Speed	String	NA	Yes	30Mbps, 50Mbps, 75Mbps	50Mbps
Access Technology	String	NA	Yes	Default, DSL, Cable, Fiber, VDSL	Fiber
IP Address Type	String	NA	Yes	StaticIPv4, Dynamic	Dynamic
Number of Static IP Address	Number	NA	Yes	1, 2, 3, 4, 5, 0	0
IsIPv6	String	NA	Yes	Y, N, N/A	N
IP Address	String	NA	No	NA	NA

Table 4-26 Firewall PS

Attribute	Data Type	UoM	Required	LoV	Default Value
Security Level	String	NA	Yes	NA	NA

Table 4-27 Email Service PS

Attribute	Data Type	UoM	Required	LoV	Default Value
Email Storage	String	NA	Yes	2Gb, 5Gb, 10Gb	2Gb
Max Number of Accounts	Number	NA	Yes	1, 5, 10	1
Username	String	NA	NA	NA	NA
Password	String	NA	NA	NA	NA

Table 4-28 Broadband Router PS

Brand	String (LOV)	NA	Yes	[Cisco, Grandstream]	NA
Model	String (LOV)	NA	Yes	[7940, GXP2200]	NA

In addition to the above product specifications, the following product specifications are also available for product models, but without any product attributes:

About Product Offerings

The following product offerings are available in the Digital Business Experience solution:

- [Simple product offering](#)
- [Bundled product offering](#)
- [Discount product offering](#)
- [Device and accessory-based product offering](#)

The following sections provide details about the offers and offer types available in each product offering and other components of the product offerings.

Simple Product Offering

Simple product offerings have the following properties:

- Orderable = **Y**
- Pricing Commit Type = **Dynamic**
- Dynamic Discount Method = **Percentage**
- Billing Flag = **Y**

[Table 4-56](#) provides details about various type of simple product offerings available for product models. It also provides details, such as offer type, product specification, attribute override, fulfillment item code (FIC), billing type (BT), billing service type (BST), charges or discounts, service instance (SI), and track as asset.

Note

- **NA** = Not applicable
- **N** = No
- **Y** = Yes

Table 4-56 Simple Product Offering

Name	Offer Type	Product Specification	Attribute Override	FIC	BT	BST	Charges	SI	Track as Asset

About Business-to-Business Product Models

The Reference Solution consists of various business-to-business (B2B) product models, which are the artifacts that can be loaded in Launch. It includes sample product catalogs for Broadband and VoIP bundles. It also includes reusable or customizable product bundles and offerings that have been defined based on the solution's best practices. These sample B2B product models allow you to immediately create orders and test the features of the solution.

The Reference Solution consists of the following pre-configured B2B product models:

- Broadband
 - Supremo Business Broadband - Basic
 - Supremo Business Broadband - Premium

- VoIP
 - Supremo Business VoIP - Basic
 - Supremo Business VoIP - Premium
- Combo Plans
 - Supremo Business Broadband and VoIP - Basic
 - Supremo Business Broadband and VoIP - Premium

The following sections provide more information about the B2B product model hierarchies, product specifications, product offerings, and various rules.

Supremo Business Broadband Product Models

This section provides information about various Supremo Business Broadband product models and various attributes available in each product model. The tables below provides information, such as name, cardinality $[n,n,n]$, type, product specification (Product Spec), Fulfillment Item Code (FIC), and billing type (BT) of each broadband product model.

Note

The dashes in the **Name** column indicate hierarchy within child components of the product model.
