This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

Contents

- 1 Introduction
- 2 AI Services Overview
- 3 Implementation Overview

1

Introduction

Welcome to the Oracle Utilities AI Services Overview Guide. This document provides an overview of Oracle Utilities AI Services, including:

- [AI Services Overview](#)
- [Implementation Overview](#)

2

AI Services Overview

Oracle Utilities AI Services are Artificial Intelligence (AI) services that utilize Oracle Cloud Infrastructure (OCI) AI features. This topic provides an overview of the services available through Oracle Utilities AI Services, including:

- [Call Summarization](#)

Call Summarization

Call Summarization is an industry-specific AI service that utilizes the OCI Generative AI service, tailored to summarizing utility contact center calls. This cloud service:

- Provides preamble and instructions for this specific kind of summarization task
- Accesses both utility industry and company-specific glossary to ensure the summary has the right context
- Provides options for configuration: summary output format
- Provides input and output guardrails to mask PII and filter out toxicity
- Provides ability to tag the call with relevant, pre-defined topics to categorize the call for downstream analytics

This service is accessed via a REST API. Configuration settings for this service can be maintained and updated via a REST API.

3

Implementation Overview

This section provides an overview of how Oracle AI Services are implemented.

Components

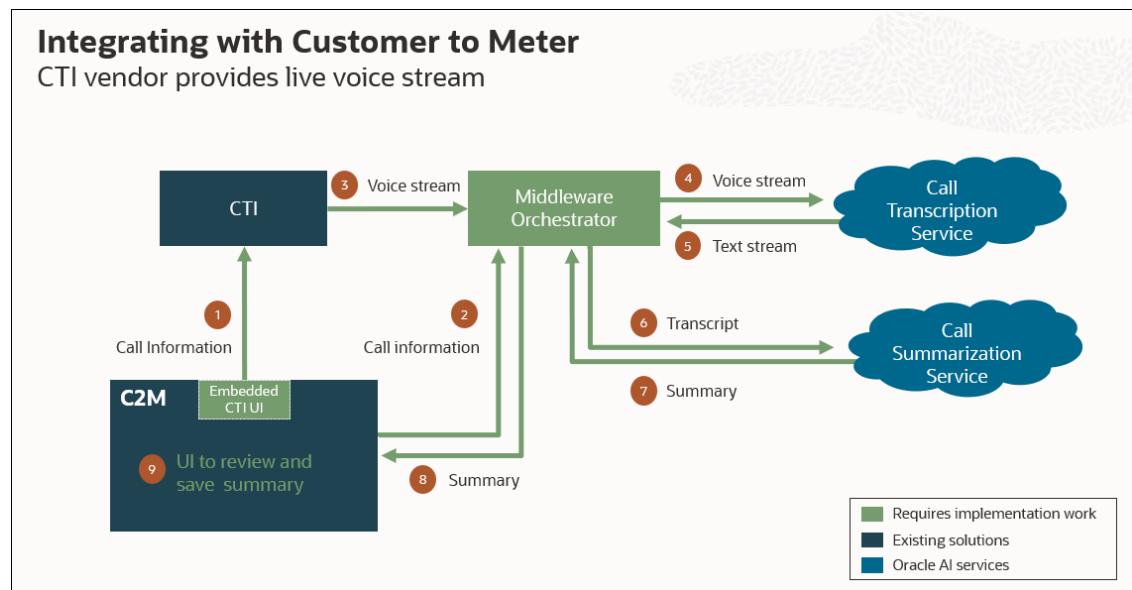

The components and systems involved in implementing Oracle Utilities AI Services include the following:

- A customer information system (CIS), such as Oracle Utilities Customer to Meter (C2M) or Oracle Utilities Customer Care and Billing (CCB)
- A Computer Telephony Integration (CTI) system
- A middleware orchestrator system capable of facilitating messages and API calls between the CIS, CTI, and the AI services
- The individual Call Transcription and Call Summarization services

Implementation Guidelines

The diagram below illustrates how Oracle Utilities AI Services can be integrated with Oracle Utilities Customer to Meter (C2M) and a CTI system.

Figure 3-1 AI Services - Integrating with Customer to Meter

The transaction flow for this implementation includes the following (numbers are based on the above diagram):

1. An agent receives a call. The CTI system provides Call ID, Agent, customer phone number, and IVR information.

- Implementation Option 1: Develop a C2M javascript to embed a CTI user interface within C2M. Use this option if your current CTI solution and current C2M version support embedding UI iFrame.
 - Implementation Option 2: If option 1 is not supported, develop an inbound web call from CTI to C2M to pass call status and other relevant information (such as call ID, phone number, etc.).
2. At the beginning of a call, C2M initiates a call to the middleware orchestrator.
 - This involves development of a customization in the middleware to orchestrate the transcription and summarization process.
 3. The middleware orchestrator establishes a WebSocket connection with the CTI system for each call participant.
 - WebSocket connections are used to access the call's voice stream.
 4. The middleware orchestrator establishes a WebSocket connection to the Call Transcription service for each call participant.
 - The middleware orchestrator establishes the transcription session with Oracle Transcription Service and forwards the audio streams of the received call.
 - The Transcription Services utilizes the OCI Speech Service for voice-to-text conversion and accumulates transcription chunks separately for each call.
 5. Upon call completion, C2M notifies the middleware orchestrator to obtain a full transcript of the call.
 - The middleware orchestrator obtains the full transcript from the Transcription Service and terminates the streaming session for the completed call.
 6. The middleware orchestrator calls the Call Summarization service providing the call transcript and client-specific configuration.
 - The Call Summarization service utilizes the OCI GenAI Service for summarization.
 - The Call Summarization service provides the generated summary along with the call classification tags.
 7. The middleware orchestrator calls the Call Summarization service requesting the call summary and client-specific configuration.
 8. The middleware orchestrator sends the generated summary to C2M via an API call.
 - Depending on specific requirements, this could be a base product or custom API.
 9. C2M displays the generated summary on the user interface for agent review and update (if necessary).
 - Depending on specific requirements, the user interface could be a customer contact in C2M where the summary is captured as customer contact notes, or a custom user interface that displays the summary that users can copy & paste to a customer contact.

Considerations

Other considerations related to implementations of Oracle Utilities AI Services include the following:

1. If not already set up, establish single sign-on (SSO) verification between CTI and the CIS.
2. Oracle will provide a single authentication credentials that can be used for 'service to service' or 'system to system' authentication to use the transcription and summarization

APIs. This is aligned with typical implementation approach of using a single integration user ID. Ensure to define appropriate user group and policies for this.

3. Allocate sufficient time in your implementation plan for performance testing, which is critical for any real-time and/or cloud-to-on-premises integrations.
