Preface

Welcome to the Oracle Utilities Work and Asset Cloud Service Integration to Oracle Field Service Migration Guide for release 24C.

The preface includes the following:

- [Audience](#)
- [Documentation and Resources](#)
- [Updates to Documentation](#)
- [Documentation Accessibility](#)
- [Conventions](#)
- [Acronyms](#)

Audience

This document is intended for anyone implementing the integration of the following products with Oracle Field Service:

- Oracle Utilities Work and Asset Cloud Service

Documentation and Resources

For more information regarding this integration, foundation technology and the edge applications, refer to the following documents:

Product Documentation

Topic	Location
Oracle Utilities Work and Asset Cloud Service Integration to Oracle Field Service documentation	https://docs.oracle.com/en/industries/energy-water/integrations-index.html
Oracle Utilities Work and Asset Cloud Service documentation	https://docs.oracle.com/en/industries/energy-water/work-asset-cloud-service/index.html
Oracle Field Service Cloud documentation	https://docs.oracle.com/en/cloud/saas/field-service/index.html

Additional Documentation

Resource	Location
Oracle Integration Cloud Service documentation	Refer to the OIC documentation at: https://docs.oracle.com/en/cloud/paas/integration-cloud/index.html
Oracle Support	Visit My Oracle Support at https://support.oracle.com regularly to stay informed about updates and patches. Access the support site for the Edge Application Certification Matrix for Oracle Utilities products (Doc ID 1454143.1).
Oracle Technology Network (OTN) Latest versions of documents	http://www.oracle.com/technetwork/index.html
Oracle University for training opportunities	http://education.oracle.com/

Updates to Documentation

The complete Oracle Utilities Work and Asset Cloud Service Integration to Oracle Field Service documentation set is available from Oracle Help Center at <https://docs.oracle.com/en/industries/energy-water/index.html>.

Visit [My Oracle Support](#) for additional and updated information about the product.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customers have access to electronic support for the hearing impaired. Visit: <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs>

Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

Acronyms

The following terms are used in this document:

Term	Expanded Form
OUWACS/WACS	Oracle Utilities Work and Asset Cloud Service
OUWAM/WAM	Oracle Utilities Work and Asset Management
OFS	Oracle Field Service
OIC	Oracle Integration Cloud

Chapter 1

Migrating the Integration from Test to Production

This chapter focuses on how to promote the Oracle Utilities Work and Asset Cloud Service Integration to Oracle Field Service 24C package from test environment to production.

Note: The assumption is that the current production environment code is same as that of the test environment.

Make sure that all the test cases are executed without any issues in the test environment and want to migrate the same code base to production environment.

The following topics are included:

- [Taking the Backup](#)
- [Cleaning Up](#)
- [Importing the OIC Package](#)
- [Migrating from OIC Test Environment to Production](#)
- [Migrating from OFS Test to Production Environment](#)

Taking the Backup

It is important to take a backup of all the existing artifacts from the production environment.

If the accelerator is project-based, export the accelerator file using the **Export** option available in the list on the navigation bar for the respective project.

Take a backup of the following Oracle Integration Cloud artifacts:

- All lookups
- All connection values
- Integration package/project
- All integration flows

Take a backup of the following Oracle Field Service artifacts:

- Properties
- User types
- Plugins
- Glossary

Cleaning Up

Remove all the existing artifacts from the Oracle Integration Cloud environment:

- Lookups
- Connections
- Integration package/project
- Libraries

Importing the OIC Package

After a successful backup and clean up, download the Oracle Utilities Work and Asset Cloud Service Integration to Oracle Field Service 24C Oracle Integration Cloud accelerator project from Marketplace and import it into the Oracle Integration Cloud environment.

After the project import is successful, re-import the backup lookups in the **Lookups** section of the Accelerator project.

Note: Do not re-import the WAMOFSC_ConfigProps lookup. However, update the properties with respective values.

Migrating from OIC Test Environment to Production

Make sure all Oracle Integration Cloud artifacts are imported successfully.

To import the customizations added in the test environment to production:

1. Export the **wacs_ofsc_fieldwork_custom_24C** package from the test environment and import it into the production environment.

Note: For information about upgrading an older version of integration to 24C, please refer to the *Oracle Utilities Work and Asset Cloud Service Integration to Oracle Field Service Upgrade Guide* included in this release. The documentation is available on Oracle Help Center at: <https://docs.oracle.com/en/industries/energy-water/integrations-index.html>

2. Configure all your connections in the **Connections** section of the Accelerator project.
3. Activate the base integrations and customized integrations, and configure the respective end point URL into the Oracle Utilities Work and Asset Cloud Service Message Sender.
4. Deactivate the base integrations for which a cloned, customized integration copies were created.
5. Deactivate the base integrations that are pointing to the older versions.

Migrating from OFS Test to Production Environment

Migrate the following Oracle Field Service components from test to production environment:

- [Properties](#)
- [Plugins](#)
- [User Types](#)
- [Glossary](#)

Properties

To migrate properties from the Oracle Field Service test environment to production:

1. Export the properties that have names starting with “wam_” from test environment and import them into the production environment.
2. Export the `common_utilities_product_code` property from the test environment and import it into the production environment.

Note: Make sure that the properties added manually in the test environment have been successfully imported in production environment.

Plugins

To migrate plugins from the Oracle Field Service test environment to production:

1. Export the **AssetComponentInstallExchangeUndo** plugin from test environment and import it into production environment. Configure the plugin secure parameters with production Oracle Integration Cloud details.
2. Export the **LockUnlock** plugin from test environment and import it into the production environment.
3. Export the **Materials** plugin from test environment and import it into the production environment. Configure the plugin secure parameters with Oracle Integration Cloud production environment details.
4. Export the **Measurements** plugin from test environment and import it into the production environment.
5. Export the **PickUpWork** plugin from test environment and import it into the production environment.
6. Export the **PlannedServiceHistory** plugin from test environment and import it into the production environment.
7. Export the **ResourceUsage** plugin from test environment and import it into the production environment.
8. Export the **ServiceHistory** plugin from test environment and import it into the production environment.
9. Export the **ValidateCompletion** plugin from test environment and import it into the production environment.
10. Export the **AssetAttribute** plugin from test environment and import it into the production environment. Configure the plugin secure parameters with Oracle Integration Cloud production environment details.
11. Export the **AssetHistory** plugin from the test environment and import it into the production environment. Configure the plugin secure parameters with Oracle Integration Cloud production environment details.

User Types

To migrate user types from the Oracle Field Service test environment to production, export the customized user types from the test environment and import them into the production environment.

Glossary

To migrate glossaries from the Oracle Field Service test environment to production, export them from the test environment and import them into production environment.
