Oracle Utilities Market Settlements Management Cloud Service Overview Guide, Release 25.10

G39762-01

Contents

1
Introduction

Welcome to the Oracle Utilities Market Settlements Management Cloud Service Overview Guide. This document provides an overview of Oracle Utilities Market Settlements Management Cloud Service, including:

- [Market Settlements Management Cloud Service Overview](#)
- [Implementation Support and Live Operate Services](#)
- [Oracle Utilities Cloud Services Third Party Software and Licenses](#)

2

Market Settlements Management Cloud Service Overview

This chapter provides an overview of the Oracle Utilities Market Settlements Management Cloud Service, including:

- [Welcome to Oracle Utilities Market Settlements Management Cloud Service](#)
- [Oracle Utilities Market Settlements Management Cloud Service Applications](#)
- [Oracle Utilities Market Settlements Management Cloud Service Documentation](#)
- [Supported Client Platforms and Browsers](#)
- [Supported Integrations](#)
- [#unique_20](#)
- [Performance Guidelines](#)
- [Functional Limitations and Restrictions](#)
- [Operational Readiness Advisory](#)

Welcome to Oracle Utilities Market Settlements Management Cloud Service

Oracle Utilities Market Settlements Management Cloud Service provides functionality for reconciling the difference between a supplier's energy purchases and its customer's usage.

Oracle Utilities Market Settlements Management Cloud Service comprises the following functional areas:

- Settlement Units: Definition of data dimensions for key market settlement processes to define the "lowest common denominator set" of aggregation dimensions for the market settlement processes.

- Load Forecasting: Creation and maintenance of usage forecasts and back cast forecasts based on weather data or other variables to make informed estimates of future usages.

- Aggregation: Aggregation of complex meter settlement data sets by market participants such as total consumption by supplier for an initial settlement period.

- Usage Calculation: Summarization and transformation of usage and settlement calculations.

- Standalone Data: Data received from external applications used in settlement calculations such as weather data from a weather station or zonal load data from an independent system operator (ISO).

- Market Awards and Contracts: Definition of awards used to allocate load to various market participants and agreements with market operators (such as an Independent System Operator, or ISO) related to how settlement calculation results are sent to the market.

- Oracle Utilities Cloud Service Foundation: tools used to orchestrate and automate infrastructure related processes, migrate data from legacy applications into the cloud service, and manage batch scheduling and processing using the SaaS Batch Scheduler.

- Oracle Utilities Analytics Visualization: a suite of analytics applications that provides access to data for self service exploration, discovery, visualization, and analysis. It includes rich pre-built analytical data models, metrics, and key performance indicators that allow you to derive strategic insights from your data.

Oracle Utilities Market Settlements Management Cloud Service Applications

Oracle Utilities Market Settlements Management Cloud Service includes the following applications:

- Oracle Utilities Market Settlements Management

- Oracle Utilities Cloud Service Foundation

- Oracle Utilities Analytics Visualization

- Oracle Utilities Testing Accelerator

- Oracle Analytics Publisher

- Oracle REST Data Services

Oracle Utilities Market Settlements Management Cloud Service Documentation

Configuration and use of Oracle Utilities Market Settlements Management Cloud Service is described in the following documentation:

- Oracle Utilities Market Settlements Management Cloud Service User Guides, comprising:

  - Oracle Utilities Meter Solution v25.10 Business User Guide

  - Oracle Utilities Meter Solution v25.10 Administrative User Guide

- Oracle Utilities Cloud Services 25.10 documentation, including:

  - Oracle Utilities Cloud Service Foundation Administrative User Guide

  - Oracle Utilities Cloud Services Administration Guide

  - Oracle Utilities Cloud Services Database Changes Guide

  - Oracle Utilities Cloud Services Frequently Asked Questions Guide

  - Oracle Utilities Cloud Services Implementation Guide

  - Oracle Utilities Cloud Services Live Operations Guide

  - Oracle Utilities Cloud Services Security Guide

- Oracle Utilities Cloud Services Activation Guide

- Oracle Utilities Cloud Services Cloud Operations Guide

- Oracle Utilities Cloud Services Cloud Service Console User Guide

- Oracle Utilities Cloud Service Update Policy Guide

- Oracle Utilities Testing Accelerator documentation

- Oracle Utilities Analytics Visualization User Guide

Supported Client Platforms and Browsers

Users access Oracle Utilities cloud services via a supported web browser.

Oracle Utilities cloud services support the following operating system & web browser combinations:

Operating System	Web Browser
Windows 10	Mozilla Firefox ESR 128+
	Mozilla Firefox 136+
	Google Chrome for Enterprise 134+
	Microsoft Edge (Chromium-based) 134+ (see the Microsoft Edge Release Schedule for more information)
Windows 11	Mozilla Firefox ESR 128+
	Mozilla Firefox 136+
	Google Chrome for Enterprise 134+
	Microsoft Edge (Chromium-based) 134+ (see the Microsoft Edge Release Schedule for more information)
iPad2 iOS 10.x (Work and Asset Cloud Service ONLY)	Apple Safari 17 (selected flows and portals only)

The recommended monitor resolution is 1920 X 1080 or higher with the browser zoom level set at 100%. The application can be used with lower resolution monitors and/or at a greater than 100% browser zoom level, but users may need to use horizontal scrolling on some pages.

Supported Integrations

Oracle Utilities Market Settlements Management Cloud Service supports integration with a number of other products. See the following section for details:

- Using Oracle Utilities Testing Accelerator with Oracle Utilities Cloud Services

Using Oracle Utilities Testing Accelerator with Oracle Utilities Cloud Services

Oracle Utilities Testing Accelerator (OUTA) is a testing framework based on Java and Selenium used for automated testing of Oracle Utilities applications and cloud services. It allows for developing, managing and executing web service and user interface based automated tests, using meta-data based approach, without any programming language. Oracle Utilities Testing Accelerator has a user friendly graphical web interface that enables people without much programming knowledge to develop automated test flows.

Along with the automation framework, Oracle Utilities Testing Accelerator includes an accelerator that supports automated testing of Oracle Utilities cloud services, such as Oracle Utilities Customer Cloud Service and Oracle Utilities Work and Asset Cloud Service. The accelerator contains several hundred re-usable components that are the modular building blocks of an automated test flow. The Oracle Utilities Testing Accelerator user interface allows for these components to be laced together to form an automated test flow. The test data can

then be coupled to the automated test flow and executed using the browser-based execution engine within the Oracle Utilities Testing Accelerator web application.

The browser-based test execution engine should be used for the execution of web service based test automation flows. In addition to the web interface, Oracle Utilities Testing Accelerator includes an eclipse IDE plugin that supports the execution of tests from local desktops or laptops. This mode should be used for executing user interface based tests that are developed using the Oracle Utilities Testing Accelerator web application. The script generation engine in the Oracle Utilities Testing Accelerator web interface auto generates the scripts for user interface based tests, which can then be executed via the Eclipse IDE (with the Oracle Utilities Testing Accelerator plugin).

The following features of Oracle Utilities Testing Accelerator have been enhanced so that they work with Oracle Utilities cloud services:

1. For executing the web service based test automation flows, the Flow Configuration that contains the web service URL along with additional properties such as smtp server, etc is pre-defined to work with Oracle Utilities cloud services. Users need not create a new Flow Configuration. **See the Executing Test Flows and Executing Test Flows Using a Browser**
sections in the *Oracle Utilities Testing Accelerator User Guide* for more information.

2. For generating components using the component generator tool, the complete WSDL URL need not be specified in the field, only the web service end point name needs to be provided. **See the Development Accelerator Tools and Component Generation Tool** sections in the *Oracle Utilities Testing Accelerator User Guide* for more information.

3. For fetching test data from the Oracle Utilities cloud services, the WSDL URL need not be specified, only the web service end point name should be specified.
See the **Fetching Test Data From an Utilities Application** section in the *Oracle Utilities Testing Accelerator User Guide* for more information.

4. Oracle Utilities Testing Accelerator is integrated with Oracle Cloud Infrastructure Identity and Access Management (IAM) with Identity Domains when using it with cloud services. The management of users in Oracle Utilities Testing Accelerator web application should be done through IAM. See **Identity and Access Management with Identity Domains** in the *Oracle Utilities Cloud Services Administration Guide* for more information about creating and managing users.

Notice Concerning Usage of DOM4J

Performance Guidelines

This section provides a number of performance-related guidelines and recommendations to take into account when implementing Oracle Utilities Market Settlements Management Cloud Service. This includes guidelines related to the following:

*   User Interfaces
*   General Topics

User Interfaces

*   **Zones**: For better performance, user interface zones should be initially collapsed when not required for 90% or more of business processes. The initial state of zones (collapsed or not) can be controlled via the **Portal Preferences** tab on the **User** portal.

*   **Number of Records**: The number of records returned to the user interface for a zone should be limited to 50 rows when building custom zones against large transactional tables.

*   **Screen Troubleshooting**: To troubleshoot a screen in the user interface, click **Preferences** in the top right corner of the application and choose the **Portal Preference**s tab. Choose the appropriate portal and set all zones to "Initially Collapsed". Navigate back to the screen that has performance issues, expand the zones one by one, and measure the execution time of each zone. This should be an accurate step-by-step representation of the full screen execution.

*   **Performance Optimization**: For optimal user interface performance, laptop users should ensure their computer is in high performance mode.

General Topics

*   **Performance Tests**: Performance tests should be performed on all configurations to ensure daily processing windows are adequate. This includes configurations for: aggregations processes and settlement calculations.

*   **Solution Changes**: Oracle should be consulted before significant solution changes are made. For example, configuration and solution extensions, adding a large number of customers, network changes, new integrations, etc.

Functional Limitations and Restrictions

This section outlines some specific limitations and restrictions regarding the functionality of Oracle Utilities Market Settlements Management Cloud Service beyond those identified in the service description, including:

- [Common Functionality](#)

Common Functionality

Oracle Utilities Meter Solution Cloud Service includes functionality used by multiple Oracle Utilities cloud services. Some of the functionality provided with Oracle Utilities Meter Solution Cloud Service is restricted, and can only be used if specific cloud services have been licensed. The table below indicates the specific functional areas included with each of the listed cloud services.

- "Yes" indicates that the functional area is included with the product.

- "No" indicates that the functional area is not included with the product.

In order to use functionality listed as "not included", customers must license the product that includes the desired functionality.

Functionality	Oracle Utilities Meter Solution Cloud Service	Oracle Utilities Market Settlements Management Cloud Service
Measurement and Service Data Model	Yes	Yes
Validation and Editing Functionality	Yes	Yes
Estimation and Forecasting Functionality	Yes	Yes
Measurement Services and Aggregations	Yes	Yes
Consumer Level Usage and Bill Determinant Calculations	Yes	No
Wholesale Usage Bill Determinant Calculations	Yes	Yes
Usage Calculations for Settlement Processes	No	Yes
Usage and Event Upload Statistics Processing	Yes	Yes
Smart Meter Command Processing	Yes	No
Outage Integration	Yes	No
Service Order Management	Yes	No
DataConnect	Yes	No
Settlement Processes	No	Yes
Wholesale Gas Operations	No	Yes

Functional Areas

The table below describes the functional areas provided with the Oracle Utilities meter solution products.

Functional Area	Description
Measurement and Service Data Model	The measurement and service data model contains database tables and related functionality used to define and store meters, devices, unmetered items, service points, and measurement data.

Functional Area	Description
Validation and Editing Functionality	The engine that provides the core functionality used to run validation and editing rules on usage data. This does not include technical validations such as valid format, valid number of readings, and so on.
Estimation and Forecasting Functionality	Processes to estimate missing usage and forecast future energy use.
Measurement Services and Aggregation	Measurement services are used to process meter reading data and manipulate measurements to support billing or other downstream processes.
Consumer Level Usage and Bill Determinant Calculations	The usage engine and usage rules provide the core functionality used to perform consumer usage and bill determinant calculations based on measurement data.
Wholesale Usage Bill Determinant Calculations	The usage engine and usage rules provide the core functionality used to perform settlement and wholesale billing calculations based on measurement data. The term wholesale relates to purchasing and selling large quantities of energy between energy companies.
Usage Calculations for Settlement Processes	The usage engine and usage rules provide the core functionality used to perform settlement.
Usage and Event Upload Statistics Processing	Processing and compiling upload statistics related to upload of usage and device events.
Smart Meter Command Processing	Executing smart meter commands and communicating with a head-end system for purposes of issuing commands such as remote connect, commission meter, etc.
Outage Integration	Communicating with Oracle Utilities Network Management System, including sending/receiving bulk ping commands, receiving device events from Oracle Utilities Meter Solution Cloud Service, and suppression of device event notifications (allowing a suppression activity to be configured for a meter or service point so that specified device event notifications will not be sent to Oracle Utilities Network Management System).
Service Order Management	Orchestration of service orders that involve field work and/or smart meter commands through integration with customer information systems, mobile field work systems, and head-end systems.
DataConnect	Components used to extract interval measurements data and master data for integration with external energy management systems.
Settlement Processes	Components used for settlement processes: schedules, unaccounted for energy (UFE) calculations, capacity calculations, procurement, and true up processes.
Wholesale Gas Operations	Components used for wholesale gas operations: nominations, bids, scheduling and transportation.
Forecasting Rules	Rules used to forecast future energy use.

Operational Readiness Advisory

This section outlines suggested validations as part of operational readiness testing:

- Confirm batch stability, day over day execution according to your production schedule, and that performance is within acceptable production window.

- Leverage production converted data, along with actual production files for critical batch inputs

- Review daily To Do entry volumes and confirm them to be acceptable based on available staffing

- Update database partitioning prior to go live. See **Go-Live Checklist** in the **Information Lifecycle Management** chapter of the *Oracle Utilities Cloud Services Implementation Guide*.

3
Implementation Support and Live Operate Services

This chapter describes implementation support and live operate services for Oracle Utilities Market Settlements Management Cloud Service:

- [Implementation Support Services](#)
- [Live Operate Services](#)

Implementation Support Services

Implementation Support Services are services that relate to the initial set up of Oracle Utilities cloud services. If Implementation Support Services are included in your Oracle Utilities cloud service(s), it will be stated in the relevant services descriptions.

The scope of the Implementation Support Services provided by Oracle is limited and currently includes (but it not limited to) the following:

Oracle will work to:

- Provide pre-configured templates (where available). These templates may be limited in scope (and may not completely align with the scope of the implementation project) and may only be available in the English language.
- Provide Utility Reference Model and other documentation describing the business processes that are the basis for the template configuration.
- To the extent necessary and under exceptional circumstances, execute scripts (authored by the customer) to resolve data issues.
  - Scripts submitted for execution to correct data issues will be subject to review for compliance with Oracle's Software Security Assurance standards. Scripts that do not comply will be returned for correction; resubmission will require a further compliance review with approval before execution will be scheduled.
  - There is a limit of four (4) script reviews in any calendar month. Review requests beyond this entitlement may be subject to additional fees.

Customers/Implementers retain complete responsibility for all other aspects of implementing the cloud service, including (but not limited to):

- Overall setup project management, including responsibility for management of the scope, the project plan/schedule and budget.
- End-user training activities and organizational change management.
- Leading and managing the user system review.
- Designing and testing all configurations and extensions to ensure they do not adversely affect performance.
- Identifying, designing, documenting and implementing any business process changes and system operation processes.

- Coordinating with external vendors or service providers to manage dependencies that could impact the overall project scope and schedule.

- Designating a project manager who shall be responsible for coordinating all customer/implementation related activities and responsibilities with respect to provisioning these Oracle Cloud Services.

- Business process change activities including end-user communication (e.g., status updates, newsletters, forums, etc.).

- Planning and executing all testing activities.

- All cut-over and roll-out activities.

- Business intelligence or data warehouse implementation/integration (if required).

- Procuring, setting up or otherwise provisioning any additional hardware, software or services as required.

- Providing any network hardware and/or software that may be required to connect to the Oracle Utilities cloud service(s).

- All data conversion/migration/cleansing activities such as:

  – Extracting, transforming and loading data into migration staging tables

  – Using cloud service data conversion tools (where available) to load data into the production environment

  – Creating or updating any required validation scripts

  – Any/all data cleansing activities that may be required (NB: these must be done in the source application(s) and not directly in the cloud service environment(s))

- Providing all in-scope data conversions and interfaces in formats supported by the relevant Oracle Utilities cloud service(s).

- The following interface/integration related activities:

  – Building and testing of any interfaces to or from the Oracle Utilities cloud service(s) (unless stated otherwise)

  – Any ongoing synchronization and interface monitoring activities between customer owned Customer Information System(s) (CIS) and Oracle Utilities cloud service(s)

  – Complete end to end integration flows using template interfaces

  – Any configuration of interfaces external to the Oracle Utilities cloud service(s) that are required to match the published specification for interfacing with the Oracle Utilities cloud service(s)

The provision of these Implementation Support Services is contingent on the following:

- Any integration middleware used to implement any integration will not be hosted within any Oracle Utilities cloud service(s).

- Turnaround time will be no longer than two (2) working days unless otherwise agreed. Turnaround time refers to time taken by the customer/implementation team to respond to and confirm design elements and decision points during the performance of the Implementation Support Services.

Live Operate Services

Live Operate services are services that Oracle provides to assist you with the ongoing operation of supported Oracle Utilities cloud services, once live and in production. If Live

Operate Services are included in your Oracle Utilities cloud service(s), it will be stated in the relevant services descriptions.

The scope of the Live Operate Services provided by Oracle is limited and currently includes the following:

Oracle will work to:

- Provide you with access to a Customer Success Manager ("CSM") who will deliver customer success services. To learn more about what you can expect from a CSM, please visit https://www.oracle.com/customer-hub/utilities/working-with-customer-success/.

- Provide access to information about incidents and changes made to any of your Oracle Utilities cloud service environment(s).

- Upon request, create and deliver a Quarterly Status Report summarizing the activities undertaken over the past quarter and those scheduled as major future events.

- Upon request, offer quarterly meetings with customer/implementation oversight team to present, review and discuss the Quarterly Status Report.

- Monitor infrastructure and application availability and resolve any incident that is within Oracle's scope or responsibility.

- Provide primary Help Desk Services from 08:00 to 17:00 your local time on Oracle working days.

- Respond to severity 1 incidents 24 hours per day, 365 days per year.

- Provide incident management and problem management services for events related to Oracle Utilities Cloud Services, including:

  – Analyzing issues and resolving any incidents that are within Oracle's scope or responsibility

  – Escalating any issues not within Oracle's scope or responsibility to you for resolution

  – Provide infrastructure logs to assist in the diagnosis and remediation of incidents within your scope or responsibility. NB: these logs may be scrubbed for security purposes and other sensitive data.

Customers remain completely responsible for all other aspects of using or otherwise operating the cloud service. Examples of customer obligations in this regard would be to:

- Assign a manager to act as the primary conduit for all issues relating to the delivery of these services.

- Provide Oracle with the dates for key business and technology events (i.e. testing calendar, refresh schedule etc.) at least thirty (30) days prior to the event.

- Assign appropriate resources to support your activities.

- Support scheduling of meetings as required.

- Participate in all scheduled meetings.

- Manage all activities, including:

  – Prioritizing work activities

  – Providing coordination across any teams and/or interested parties external to Oracle.

  – Escalation of issues to the Oracle CSM in a timely manner.

  – Providing any information required to progress service requests. Oracle is not responsible for meeting any agreed (or stated) targets or objectives if required or requested information is not forthcoming in a timely manner.

- – Assigning appropriate resources to conduct all required acceptance testing for all software packages delivered.

- – Accepting all software packages prior to promotion to the Production environment.

- – Maintaining a contact list for all persons performing governance functions.

- – Participating in Oracle's internal quality assurance processes on a mutually agreed schedule.

- Manage the Oracle Utilities cloud services, including:

  - – Defining and (as necessary) modifying batch schedules to meet business needs.

  - – Monitoring batch and interface processes to confirm and verify completion.

  - – Defining, implementing, testing and deploying any changes to the configuration and extensions required to:

    - * Resolve incidents or problems within the customers scope or responsibility

    - * Meet evolving business needs

    - * Conform with upgrades, patches or any other Oracle Utilities cloud service requirements or prerequisites.

- Notify Oracle of any incidents detected.

- Action each SR in accordance with the relevant Oracle Cloud Hosting and Delivery Policies.

- Establish the method of communication between the incident management team and the Oracle team for each incident.

- Redirect any SRs to the correct (non- Oracle) support team if the SR is not within the scope of the Oracle Utilities cloud service(s).

- Assist the Oracle team with SR analysis of data originating outside the applications.

- Correct business data as reasonably requested by Oracle to achieve closure of an identified problem.

- Monitor customer network and network connections to ensure sufficient bandwidth and performance.

- Conduct all functional, regression, performance, system integration, acceptance and/or user acceptance testing as appropriate, and accept and approve all software changes, prior to the production roll out of any change, in accordance with any agreed-on release management process, for any change resulting from:

  - – An incident remedy or fix, or

  - – Any service pack update or upgrade.

- Provide suitably qualified support personnel who are able to extract, interpret, analyze and respond to information provided in the Performance Hub reports.

- Provide authorizations and/or validations for data correction and/or adjustments to the supported environments.

- Apply configuration changes that are within the customer's or implementation's scope as recommended by Oracle to prevent recurring incidents.

- At Oracle's request, provide approval through the environment change management process for the installation of fixes to prevent recurring incidents.

- Initiate documented escalation processes when the urgency of the incident has increased due to business requirements.

- Provide incident support where the remediation is within Oracle's scope or responsibility, specifically:

    – Provide Oracle with access to the user who reported the problem.

    – Provide all information as reasonably requested by Oracle and participate in diagnostics, including, but not limited to, business/access logs and Performance Hub reports.

    – Provide a test case and access to an environment where the SR incident is reproducible.

- Provide Oracle, as necessary, with access to any other support teams.

- Acknowledge that the supplied break-fix resolves the incident or problem and accept the SR closure.

- Provide internal approvals to Oracle before the migration of any change recommended by Oracle into a production environment.

- When an incident or problem is determined by Oracle to be unrelated to an Oracle Utilities cloud service or to be caused by data problems arising from data conversion or some other error, a separate, paid contract may be required to cover Oracle's time spent investigating and, if relevant, correcting the problem at Oracle's prevailing time and materials rates, and to reimburse Oracle for all reasonable out of pocket expenses.

4

Oracle Utilities Cloud Services Third Party Software and Licenses

This chapter provides information regarding third-party software used in Oracle Utilities cloud services, including:

- [Third Party Software Notices](#)
- [Third Party Software Licenses](#)

Third Party Software Notices

Required notices for open source or other separately licensed software products or components distributed in this product are identified in the following table along with the applicable licensing information. Additional notices and/or licenses may be found in the

included documentation or readme files of the individual third party software.

> ⓘ **Note**
>
> A copy of each license appears in the **Third Party Licenses** section, unless otherwise noted

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.
   "License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

   "Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

   "Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

   "You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

   "Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:
You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License. You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use
or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Head End System Integrations

Oracle Utilities Customer Cloud Service with Advanced Meter Solution and Oracle Utilities Meter Solution Cloud Service support integration with a number of vendor- specific head end systems via Oracle Smart Grid Gateway Adapters. The table below lists the supported versions of the head end systems for each Adapter available with Oracle Utilities Cloud Service with Advanced Meter Solution and Oracle Utilities Meter Solution Cloud Service.

Adapter	HeadEnd System Version
Adapter for Itron OpenWay	7.0
	Itron OpenWay Operations Center SR 5.3, 5.4
Adapter for Itron Field Collection System	Field Collection System 4.63
Adapter for Landis+Gyr	Gridstream Command Center 7.5, 8.1, 8.4, 8.5
Adapter for Sensus RNI	Sensus RNI 4.4, 4.5.1, 4.10, 4.12, 4.14, 4.15, 4.16
Adapter for Silver Spring Networks (Itron AMM)	UtilityIQ Version 4.4, 4.7, 4.10, 4.12, 4.14, 5.0, 5.1
MV-90 Adapter for Itron	N/A
	Smart Grid Gateway supports the .mv9 binary, mainframe data format.

COPYING.libtabe END

COPYING.ipadic BEGIN

Copyright 2000, 2001, 2002, 2003 Nara Institute of Science and Technology. All Rights Reserved.

Use, reproduction, and distribution of this software is permitted.

Any copy of this software, whether in its original form or modified, must include both the above copyright notice and the following paragraphs.

Nara Institute of Science and Technology (NAIST), the copyright holders, disclaims all warranties with regard to this software, including all implied warranties of merchantability and fitness, in no event shall NAIST be liable for any special, indirect or consequential damages or any damages whatsoever resulting from loss of use, data or profits, whether in an action of contract, negligence or other tortuous action, arising out of or in connection with the use or performance of this software.

A large portion of the dictionary entries originate from ICOT Free Software. The following conditions for ICOT

Free Software applies to the current dictionary as well.

Each User may also freely distribute the Program, whether in its original form or modified, to any third party or parties, PROVIDED that the provisions of Section 3 ("NO WARRANTY") will ALWAYS appear on, or be attached to, the Program, which is distributed substantially in the same form as set out herein and that such intended distribution, if actually made, will neither violate or otherwise contravene any of the laws and regulations of the countries having jurisdiction over the User or the intended distribution itself.

NO WARRANTY

The program was produced on an experimental basis in the course of the research and development conducted during the project and is provided to users as so produced on an experimental basis. Accordingly, the program is provided without any warranty whatsoever, whether express, implied, statutory or otherwise. The term "warranty" used herein includes, but is not limited to, any warranty of the quality, performance, merchantability and

fitness for a particular purpose of the program and the nonexistence of any infringement or violation of any right of any third party.

Each user of the program will agree and understand, and be deemed to have agreed and understood, that there is no warranty whatsoever for the program and, accordingly, the entire risk arising from or otherwise connected with the program is assumed by the user.

Therefore, neither ICOT, the copyright holder, or any other organization that participated in or was otherwise related to the development of the program and their respective officials, directors, officers and other employees shall be held liable for any and all damages, including, without limitation, general, special, incidental and consequential damages, arising out of or otherwise in connection with the use or inability to use the program or any product, material or result produced or otherwise obtained by using the program, regardless of whether they have been advised of, or otherwise had knowledge of, the possibility of such damages at any time during the project or thereafter. Each user will be deemed to have agreed to the foregoing by his or her commencement of use of the program. The term "use" as used herein includes, but is not limited to, the use, modification, copying and distribution of the program and the production of secondary products from the program.

In the case where the program, whether in its original form or modified, was distributed or delivered to or received by a user from any person, organization or entity other than ICOT, unless it makes or grants independently of ICOT any specific warranty to the user in writing, such person, organization or entity, will also be exempted from and not be held liable to the user for any such damages as noted above as far as the program is concerned.

5. Time Zone Database
ICU uses the public domain data and code derived from Time Zone Database for its time zone support. The ownership of the TZ database is explained in BCP 175: Procedure for Maintaining the Time Zone Database section 7.

7. Database Ownership

The TZ database itself is not an IETF Contribution or an IETF document. Rather it is a pre-existing and regularly updated work that is in the public domain, and is

intended to remain in the public domain. Therefore, BCPs 78 [RFC5378] and 79 [RFC3979] do not apply to the TZ Database or contributions that individuals make to it. Should any claims be made and substantiated against the TZ Database, the organization that is providing the IANA Considerations defined in this RFC, under the memorandum of understanding with the IETF, currently ICANN, may act in accordance with all competent court orders. No ownership claims will be made by ICANN or the IETF Trust on the database or the code. Any person making a contribution to the database or code waives all rights to future claims in that contribution or in the TZ Database.

Using Oracle Utilities Testing Accelerator with Oracle Utilities Cloud Services

Oracle Utilities Testing Accelerator (OUTA) is a testing framework based on Java and Selenium used for automated testing of Oracle Utilities applications and cloud services. It allows for developing, managing and executing web service and user interface based automated tests, using meta-data based approach, without any programming language. Oracle Utilities Testing

Accelerator has a user friendly graphical web interface that enables people without much programming knowledge to develop automated test flows.

Along with the automation framework, Oracle Utilities Testing Accelerator includes an accelerator that supports automated testing of Oracle Utilities cloud services, such as Oracle Utilities Customer Cloud Service and Oracle Utilities Work and Asset Cloud Service. The accelerator contains several hundred re-usable components that are the modular building blocks of an automated test flow. The Oracle Utilities Testing Accelerator user interface allows for these components to be laced together to form an automated test flow. The test data can then be coupled to the automated test flow and executed using the browser-based execution engine within the Oracle Utilities Testing Accelerator web application.

The browser-based test execution engine should be used for the execution of web service based test automation flows. In addition to the web interface, Oracle Utilities Testing Accelerator includes an eclipse IDE plugin that supports the execution of tests from local desktops or laptops. This mode should be used for executing user interface based tests that are developed using the Oracle Utilities Testing Accelerator web application. The script generation engine in the Oracle Utilities Testing Accelerator web interface auto generates the scripts for user interface based tests, which can then be executed via the Eclipse IDE (with the Oracle Utilities Testing Accelerator plugin).

The following features of Oracle Utilities Testing Accelerator have been enhanced so that they work with Oracle Utilities cloud services:

1. For executing the web service based test automation flows, the Flow Configuration that contains the web service URL along with additional properties such as smtp server, etc is pre-defined to work with Oracle Utilities cloud services. Users need not create a new Flow Configuration. **See the Executing Test Flows and Executing Test Flows Using a Browser**
sections in the *Oracle Utilities Testing Accelerator User Guide* for more information.

2. For generating components using the component generator tool, the complete WSDL URL need not be specified in the field, only the web service end point name needs to be provided. **See the Development Accelerator Tools and Component Generation Tool** sections in the *Oracle Utilities Testing Accelerator User Guide* for more information.

3. For fetching test data from the Oracle Utilities cloud services, the WSDL URL need not be specified, only the web service end point name should be specified.
See the **Fetching Test Data From an Utilities Application** section in the *Oracle Utilities Testing Accelerator User Guide* for more information.

4. Oracle Utilities Testing Accelerator is integrated with Oracle Cloud Infrastructure Identity and Access Management (IAM) with Identity Domains when using it with cloud services. The management of users in Oracle Utilities Testing Accelerator web application should be done through IAM. See **Identity and Access Management with Identity Domains** in the *Oracle Utilities Cloud Services Administration Guide* for more information about creating and managing users.
