Purpose

This guide enables the user to integrate Oracle Products with External Product Processor through Oracle Banking Routing Hub Platform.

Audience

This guide is intended for the customers and partners.

Acronyms and Abbreviations

The list of the acronyms and abbreviations used in this guide are as follows:

Table 1 Acronyms and Abbreviations

Abbreviation	Description
API	Application Programming Interface
JSON	Java Script Object Notation
XML	Extensible Markup Language
WSDL	Web Services Description Language

List of Topics

This guide is organized as follows:

Table 2 List of Topics

Topics	Description
Introduction	This topic provides the general information about the guide.
Configuration	This topic provides the information about the Configuration.
Service Consumer	This topic provides the information about the Service Consumer.

Table 2 (Cont.) List of Topics

Topics	Description
Service Providers	This topic provides the information about the Service Providers.
Implementation	This topic provides the information about the Implementation.
Consumer Services	This topic provides the information about the Consumer Services.
Transformation	This topic provides the information about the Transformation.
Routing	This topic provides the information about the Routing.
Request - Audit Log	This topic provides the information about the Request Audit logs.
Chaining	This topic provides the information about the chaining.
Extensibility	This topic provides the information about the extensibility in Routing Hub.
Audit Purging / Archiving	This topic provides the information about the process for audit purging and archiving.
Multipart Request	This topic provides the information about the multipart request template.
Dashboard	This topic provides the information about the dashboard.
Transformation Type	This topic provides the information about the transformation type.
Oracle Banking Routing Hub Integration Specification	This topic provides the information about the Oracle Banking Routing Hub Integration Specification.
Oracle Banking Routing Hub VM Arguments	This topic provides the information about the Oracle Banking Routing Hub VM Arguments.

1

Introduction

Oracle Banking Routing Hub is a routing hub that enables seamless & standardized integrations between FSGBU Banking Product using configurations provided as part of the product infrastructure.

Consumer application does not need to know the points given below.

- Servicing Providers or Product Processors: Product processor to which the integration is required.
- Name of the Service: logical name of the service. For example, Funds Transfer and Letter of Credit Initiation.
- Messaging structure of Service: structure of the message. For example, JSON and XML files.
- Communication Protocol: Web services, Rest API and Queue.
- Can be integrated with different versions of a Product processors.

This guide shows the maintenance of two product as given below.

- Oracle Service Consumer as Service Consumer
- External Product Processor as Service Provider

Figure 1-1 UI Based Interface for Configurations

2

Configuration

This topic describes the systematic instructions to perform the configuration.

End-user can configure the properties w.r.t. monitoring, alert and export.

End-user can configure the same at System level and granular levels such as Consumer, Consumer Service and Routing.

The **Configuration** screen contains the following sections.

- **Monitoring** - It has the features required by the breaker to store and aggregate the result of calls.
- **Alert** - It has the features required for transitioning circuit breaker.
- **Email Alert** - It has the feature required for mail notification.
- **Export** - It has the properties that are required for exporting the configuration JSON and will be visible at system level only.

Specify **User ID** and **Password**, and login to **Home** screen.

1. On **Home** screen, click **Core Maintenance**. Under **Core Maintenance**, click **Routing Hub**.
2. Under **Routing Hub**, click **Configuration**.

The **Configuration** screen displays.

Figure 2-1 Configuration

The screenshot shows a web-based configuration interface titled "Configuration". It is divided into four main sections, each with a collapse/expand icon on the left:

- Monitoring:** Contains "Window Type" with radio buttons for "Count" (selected) and "Time", and "Window Size" with a numeric input field set to "100" and up/down arrows.
- Alert:** Contains "Minimum number of calls" with a numeric input field set to "100" and up/down arrows, and "Failure rate threshold" with a percentage input field set to "50%" and up/down arrows.
- Email Alert:** Contains "Email Addresses" with a text input field containing "ddd".
- Export:** Contains "Mark data as factory shipped" with a toggle switch currently turned on.

At the bottom right of the form, there are three buttons: "Clear", "Reset", and "Save".

3. Specify the fields on **Configuration** screen.

 **Note:**

The fields, which are marked with an asterisk, are mandatory.

For more information on fields, refer to the field description table.

Table 2-1 Configuration - Field Description

Field	Description
Window Type	Select the type of the window. The available options are: <ul style="list-style-type: none"> Count: The count-based sliding window aggregates the outcome of the last N calls (Window Size). Time: The time-based sliding window aggregates the outcome of the calls of the last N seconds (Window Size).
Window Size	Specify the window size to record the outcome of the calls when the circuit breaker is closed. <ul style="list-style-type: none"> For Count window type, The window size is N calls. For Time window type, The window size has N seconds.
Minimum number of calls	Specify the minimum number of calls. For example: If the minimum number of calls are 10, then at least 10 calls must be recorded before calculating the failure rate. If only nine calls are recorded, the circuit breaker is not transitioned to open even if all nine calls are failed.
Failure rate threshold	Specify the failure rate threshold in percentage. When the failure rate is equal or greater than the threshold, the circuit breaker transitions to open and starts short-circuiting calls.
Email Addresses	Specify the E-mail address. The user can use semi-colon to add more email addresses. Once the failure rate crosses the Failure rate threshold , a mail is sent to the end-user about the event.
Mark data as factory shipped	Select the toggle to mark the exported configuration JSON as factory shipped JSON. The end-user will not be able to modify or delete the certain data once imported. By default, the toggle is OFF.

Example:

Table 2-2 Configuration - Field Entry Values

Field	Entry Values
Window Type	Count
Window Size	20
Minimum number of calls	10
Failure rate Threshold	50%

Configured properties will result as below:

After 10 (minimum number of calls) calls, routing would get shutdown if 50% (failure rate) of almost last 20 (window size) calls have failed. If the email address property is configured, then the end-user is notified as well.

4. Click **Clear** to clear all the specified details.

5. Click **Reset** to reset the details.
6. Click **Save** to save all the details.

3

Service Consumers

This topic describes the systematic instructions to configure the service consumers.

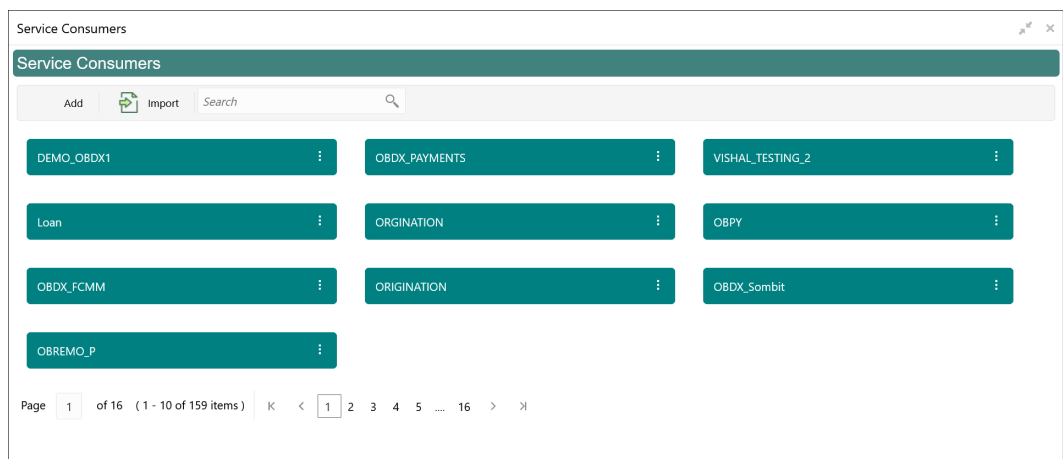

The **Service Consumer** is an Oracle product that invokes Oracle Banking Routing Hub API. Oracle Banking Routing Hub analyses, evaluates the destination product processor, and transforms the data into a format of the same. It comprises the source and destination integration details.

Specify **User ID** and **Password**, and login to **Home** screen.

1. On **Home** screen, click **Core Maintenance**. Under **Core Maintenance**, click **Routing Hub**.
2. Under **Routing Hub**, click **Service Consumers**.

The **Service Consumers** screen displays.

Figure 3-1 Service Consumers

Add Service Consumer

The user can create new Service Consumer manually.

3. Click **Add**.

The **Add Service Consumer** screen displays.

Figure 3-2 Add Service Consumer

4. Specify the fields on **Add Service Consumer** screen.

 **Note:**

The fields, which are marked with an asterisk, are mandatory.

For more information on fields, refer to the field description table.

Table 3-1 Add Service Consumer - Field Description

Field	Description
Name	Specify the unique service consumer name. <div style="border: 1px solid #ccc; padding: 5px; margin-top: 10px;"> <p> Note:</p> <ul style="list-style-type: none"> • Enter 0 to maximum of 255 characters. • No numeric value at beginning and no space allowed. </div>

Table 3-1 (Cont.) Add Service Consumer - Field Description

Field	Description
Add	To add, refer to step 5. Select the group from the drop-down list. The available options are: <ul style="list-style-type: none"> • Group • Variable
Group	Select the group from the drop-down list.
Action	Displays the action. The user can edit or delete the header.
Name	Displays the name of the header.
Value	Displays the value of the header.

Environment Variables

The user must define the group of variables which can be accessed throughout the specific consumer's configuration. The syntax for accessing environment variables is below: \$env.Environment_Group_Name.Environment_Variable_Name

For example, \$env.COMMON.BRANCH_CODE

5. To add **Environment Variables**, follow the below steps.
 - a. Click **Add** on the **Add Service Consumers** screen, and select **Group** from drop-down list to add the group.

The **Add Environment Group** screen displays.

Figure 3-3 Add Environment Group

- b. Specify the fields on **Add Environment Group** screen and click **OK**.

 **Note:**

The fields, which are marked with an asterisk, are mandatory.

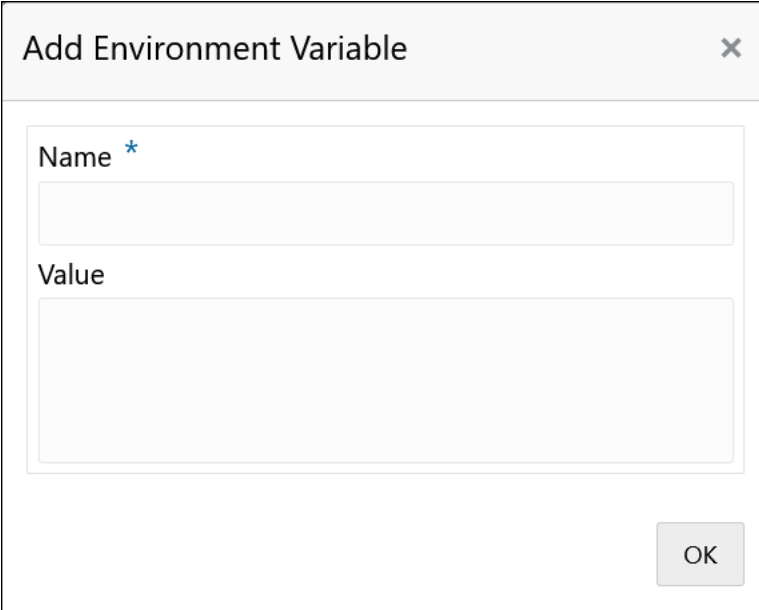

For more information on fields, refer to the field description table.

Table 3-2 Add Environment Group - Field Description

Field	Description
Name	Specify the name of the environment group. <div style="border: 1px solid #0070C0; padding: 5px; background-color: #E6F2FF;"> <p> Note:</p> <ul style="list-style-type: none"> • Enter 0 to maximum of 255 characters. • No numeric value at beginning and no space allowed. </div>

- c. Click **Add** on **Add Service Consumer** screen and select **Variable** from drop-down list to add the variable.

The **Add Environment Variable** screen displays.

Figure 3-4 Add Environment Variable

- d. Specify the fields on **Add Environment Variable** screen and click **OK**.

 **Note:**

The fields which are marked with asterisk are mandatory.

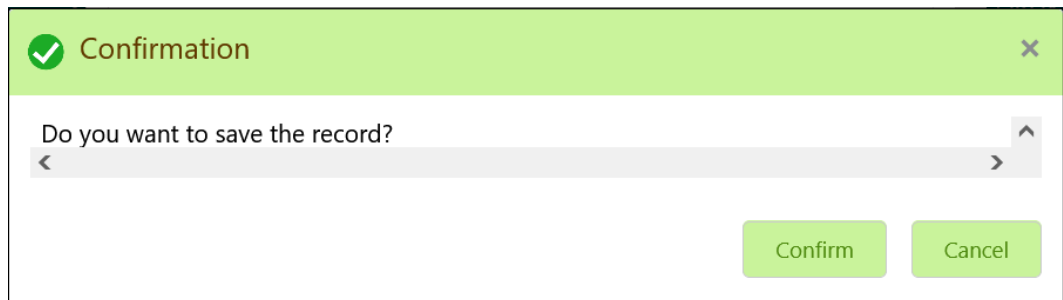

For more information on fields, refer to the field description table below.

Table 3-3 Add Environment Variable - Field Description

Field	Description
Name	Specify the name of the environment variable. <div style="border: 1px solid #ccc; background-color: #e6f2ff; padding: 10px;"> <p> Note:</p> <ul style="list-style-type: none"> • Enter 0 to maximum of 255 characters. • No numeric value at beginning and no space allowed. </div>
Value	Specify the value of the environment variable. The value can either be hardcoded or Velocity mapping.

6. Click **Save** to save the details.

The **Confirmation** screen displays.

Figure 3-5 Confirmation - Add Service Consumers

7. Click **Confirm** to save the record.

Import Service Consumer

The user can create a service consumer by importing the JSON file and manually selecting the service providers or select all providers that needs to be imported. The user can also import zip file in order to import all the configuration JSON files together.

8. Click **Import**.

The **Import Service Consumer** screen displays.

Figure 3-6 Import Service Consumer

9. Specify the fields on **Import Service Consumer** screen.

 **Note:**

The fields, which are marked with an asterisk, are mandatory.

For more information on fields, refer to the field description table.

Table 3-4 Import Service Consumer - Field Description

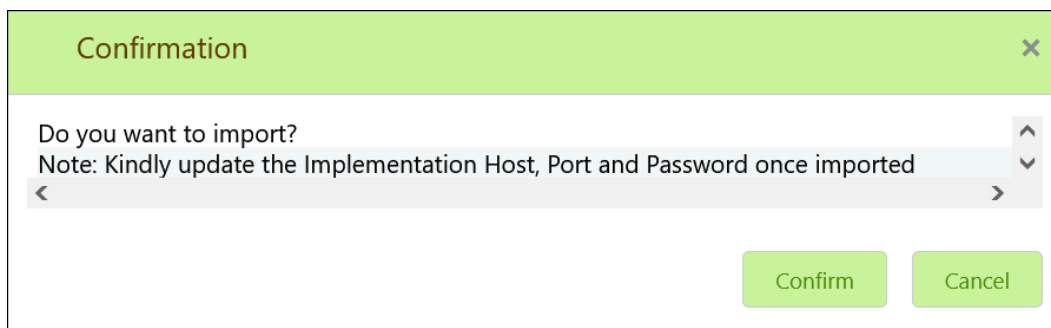

Field	Description
File	Select the file using Select .  Note: Allows only to select one file and accepts JSON and ZIP file.
Extract	Extracts the consumer name and service provider list from JSON file only and displays it in the respective elements.

Table 3-4 (Cont.) Import Service Consumer - Field Description

Field	Description
Name	Specify the name of the service provider. <div style="border: 1px solid #0070C0; padding: 5px; background-color: #E6F2FF;"> <p> Note:</p> <ul style="list-style-type: none"> Name cannot be blank and required only for JSON file. Enter 0 to maximum of 255 characters. No numeric value at beginning and no space allowed. </div>
Overwrite extended templates	Select the respective radio button to overwrite the extended templates. The available options are: <ul style="list-style-type: none"> Yes - This option overwrites the extended templates. No - This option retains the existing extended templates.
Service Providers	Displays the service provider details.
Name	Displays the list of service providers names that are present in JSON file only.

10. Click **Import** to import the selected service consumer file.

The **Confirmation** screen displays.

Figure 3-7 Confirmation - Import Service Consumer

11. Click **Confirm** to import the file.

 **Note:**

Below data needs to be changed after importing provider configuration file:

- Implementation Host and Port
- Implementation Authentication Password

View Service Consumer

The user can view consumer details and can also switch to edit form by clicking on edit icon.

12. On the **Service Consumer** tile, click **Operation Menu** (3 dot icon), and select **View** from the dropdown list.

The **View Service Consumer** screen displays.

Figure 3-8 View Service Consumer

The screenshot shows a window titled "View Service Consumer". It contains a "Name" input field, an "Environment Variables" section with a chevron icon, a "Group" dropdown menu, and a table with columns "Actions", "Name", and "Value". The table has two rows, each with a vertical ellipsis in the "Actions" column and placeholder boxes in the "Name" and "Value" columns.

13. Click **Edit** button to edit the Service Consumer.

Edit Service Consumer

The user can modify the consumer details.

14. On the **Service Consumer** tile, click **Operation Menu** (3 dot icon), and select **Edit** from the dropdown list.

The **Edit Service Consumer** screen displays.

Figure 3-9 Edit Service Consumer

The user can delete the Service Consumer.

- On the **Service Consumer** tile, click **Operation Menu** (3 dot icon), and select **Delete** from the dropdown list.

The **Confirmation** screen displays.

Figure 3-11 Confirmation - Delete

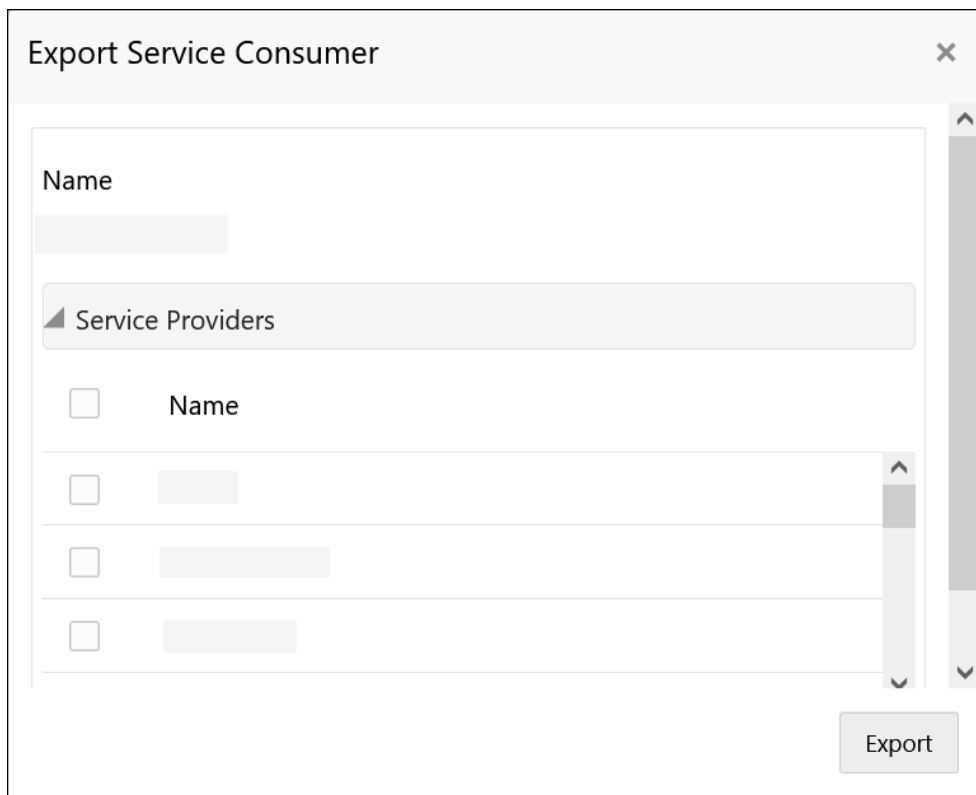

18. Click **Confirm** to delete the service consumer.

JSON Export

The user can export the consumer configuration as JSON file.

19. On **Service Consumer** tile, click **Operation Menu** (3 dot icon).
20. On **Export** option, select **JSON** from the list.

The **Export Service Consumer** screen displays.

Figure 3-12 Export Service Consumer

 **Note:**

- The user has an option to select the service providers from the list which needs to be exported or can click on select all for all service providers.
- The JSON Export feature exports below data:
 - Selected service consumer
 - All consumer services
 - Selected service providers with services
 - All implementations of selected service providers with services (without Host, Port and Authentication Password)
 - All transformations
 - All routes

21. Select the required service providers and click **Export**.

The **Confirmation** screen displays.

Figure 3-13 Confirmation - JSON Export

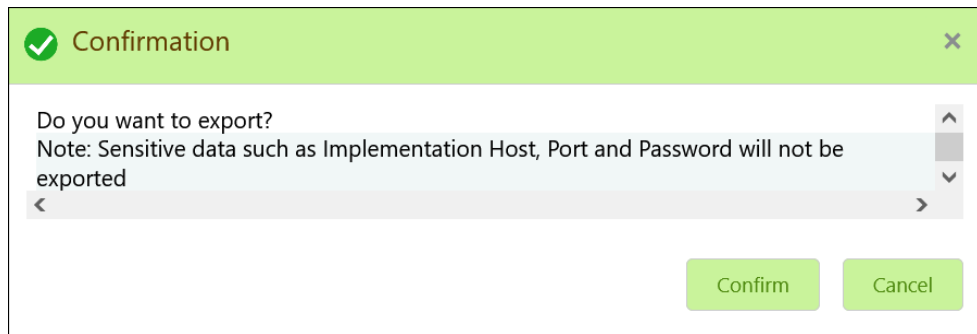

22. Click **Confirm** to export the service consumer in JSON file.

SQL Export

The user can export the consumer configuration as SQL file.

23. On **Service Consumer** tile, click **Operation Menu** (3 dot icon).
 24. On **Export** option, select **SQL** from the list.

The **Confirmation** screen displays.

Figure 3-14 Confirmation

 **Note:**

The SQL Export feature exports entire configuration without Host, Port, and Authentication Password details.

25. Click **Confirm** to export the consumer configuration as SQL file.

Configuration

26. On **Service Consumer** tile, click **Operation Menu** (3 dot icon), and click **Configuration**.

The **Configuration** screen displays.

 **Note:**

Refer to [Configuration](#) topic for the screen and field description.

Request Audit

27. On **Service Consumer** tile, click **Operation Menu** (3 dot icon), and click **Request Audit**.

The **Request Audit** screen displays.

 **Note:**

Refer to [Request Audit](#) topic for the screen and field description.

4

Service Providers

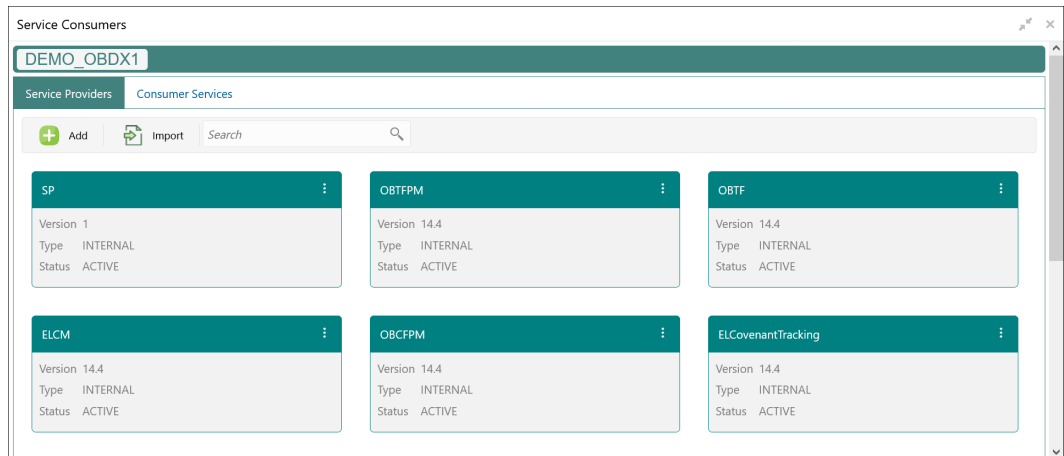

This topic describes the systematic instructions to configure the service providers.

The **Service Providers** are the product processors configure to process request send by Oracle Banking Routing Hub on behalf of service consumers. It comprises destination integration details.

1. On **Service Consumers** screen, click the required service consumer.

The **Service Providers** screen displays.

Figure 4-1 Service Providers

Add Service Provider

The user can create Service Provider manually.

2. Click **Add**.

The **Add Service Provider** screen displays.

Figure 4-2 Add Service Provider

3. Specify the fields on **Add Service Provider** screen.

 **Note:**

The fields, which are marked with an asterisk, are mandatory.

For more information on fields, refer to the field description table.

Table 4-1 Add Service Provider - Field Description

Field	Description
Product Name	Specify the product name of the service provider.  Note: <ul style="list-style-type: none"> • Enter 0 to maximum of 255 characters. • No numeric value at beginning and no space allowed.
Type	Select the type of service provider from drop-down list The available options are: <ul style="list-style-type: none"> • INTERNAL: Used for Oracle products • EXTERNAL: Used for non-Oracle products
Version	Specify the provider version.  Note: <ul style="list-style-type: none"> • Enter 0 to maximum of 255 characters. • Only numeric or decimal values are allowed.
Active	Predefined values are Active / Inactive If provider is marked as inactive, then all related routes will be stopped.
Add	To add, refer to the below steps.
Actions	Displays the action. The user can edit or delete the header.
Name	Displays the name of the header.
Value	Displays the value of the header.
Type	Select the type of service from drop-down list. The available options are: <ul style="list-style-type: none"> • WSDL • SWAGGER • OTHERS
Name	Specify the name of the operation.  Note: <p>This field appears only if the Type is selected as OTHERS.</p>

Table 4-1 (Cont.) Add Service Provider - Field Description

Field	Description
Http Method	<p>Select the HTTP method. The available options are:</p> <ul style="list-style-type: none"> • GET • POST • PUT • PATCH • DELETE <p> Note: This field appears only if the Type is selected as OTHERS.</p>
Endpoint	<p>Specify the endpoint URL for the operation.</p> <p> Note: This field appears only if the Type is selected as OTHERS.</p>

Table 4-1 (Cont.) Add Service Provider - Field Description

Field	Description
Service Headers	<p>Specify the Endpoint specific headers. Value can either be hardcoded or can be Velocity mapping.</p> <div style="border-left: 2px solid #0070C0; padding-left: 10px; margin-top: 10px;"> <p> Note: This field appears only if the Type is selected as OTHERS.</p> </div>
Service Query Params	<p>Specify the Endpoint specific query parameters. Value can either be hardcoded or can be Velocity mapping.</p> <div style="border-left: 2px solid #0070C0; padding-left: 10px; margin-top: 10px;"> <p> Note: This field appears only if the Type is selected as OTHERS.</p> </div>
Service	Displays the extracted service from the selected URL.
Operation	Displays the extracted operation from the selected URL.

Headers

External product processor might require some standard headers to be passed along with the request. The user can specify the headers which are required by service endpoints for its all implementations but not present in swagger file.

4. To add **Headers**, follow the below steps.
 - a. Under **Headers** section, click **Add**.
The **Add Header** screen displays.

Figure 4-3 Add Header

The screenshot shows a dialog box titled "Add Header". It contains two text input fields. The first field is labeled "Name *" and the second is labeled "Value". There is an "OK" button at the bottom right of the dialog.

- b. Specify the fields on **Add Header** screen.

 **Note:**

The fields, which are marked with an asterisk, are mandatory.

For more information on fields, refer to the field description table.

The **Confirmation** screen displays.
6. Click **Confirm**.

Service

- **WSDL:**
The Web Services Description Language (WSDL) is an XML-based interface description language that is used for describing the functionality offered by a web service.

Both SSL and non-SSL WSDL URL are supported.

Note:

If there is a change in wsdl file, then same wsdl file need to be imported again to update the provided service information in Routing Hub.

- **SWAGGER:**
Swagger is an Interface Description Language for describing RESTful APIs expressed using JSON.
Currently, Swagger 2.0 & OpenAPI 3.0 both are supported.

Note:

If there is a change in swagger file, then same swagger file need to be imported again in order to update the provided service information in Routing Hub.

- **OTHERS:**
OTHERS option is selected for adding REST API details manually when provider does not have swagger file.

Note:

If there is a change in existing endpoint, then the same endpoint details need to be entered again with the new changes in order to update the existing provided service information in Routing Hub.

Import Service Provider

The user can create a service provider by importing the JSON file and also can import zip file in order to import all the configuration JSON files together (except parent level configuration JSON files).

7. Click **Import**.

The **Import Service Provider** screen displays.

8. Click **Import** to import the selected file.

The **Confirmation** screen displays.

 **Note:**

The following data needs to be changed after importing provider configuration file:

- Implementation Host and Port
- Implementation Authentication Password

View Service Provider

9. On **Service Provider** tile, click **Operation** menu (3 dots button), and click **View**.

The **View Service Provider** screen displays.

Figure 4-5 View Service Provider

The screenshot shows a window titled "View Service Provider" with a close button in the top right. The main content area displays the following details:

Product Name	Type
SP	INTERNAL
Version	Active
1	On

Below the details is a section titled "Headers" with a table that has three columns: "Actions", "Name", and "Value". The table content is empty, with the text "No data to display." below the headers.

10. Click **Edit** button to edit the Service Provider.

Edit Service Provider

The user can modify the provider details.

11. On **Service Provider** tile, click **Operation menu** (3 dots button), and click **Edit**.

The **Edit Service Provider** screen displays.

Figure 4-6 Edit Service Provider

The screenshot shows a window titled "Edit Service Provider" with a close button in the top right. The main content area displays the following input fields:

- Product Name ***: Text input field containing "SP".
- Type ***: Dropdown menu showing "INTERNAL".
- Version ***: Text input field containing "1".
- Active**: Toggle switch currently turned on (blue).

Below the input fields is a section titled "Headers" with a table that has three columns: "Actions", "Name", and "Value". The table content is empty, with the text "No data to display." below the headers. There is an "Add" button below the table. At the bottom right of the window is a "Save" button.

12. Click **Save** once the edit is done.

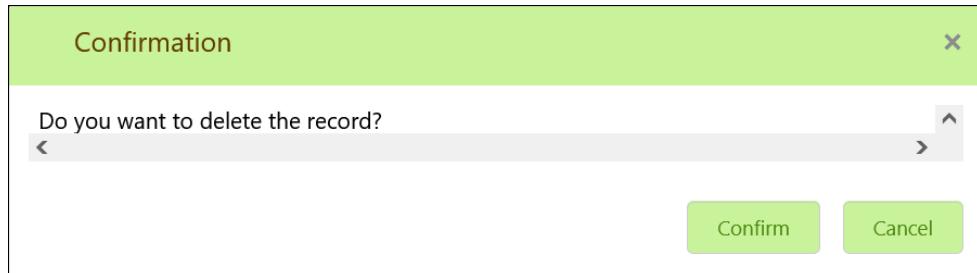

The **Confirmation** screen displays.

Delete Service Provider

The user can delete the provider.

13. On **Service Provider** tile, click **Operation menu** (3 dots button), and click **Delete**.
The **Confirmation** screen displays.

Figure 4-7 Confirmation - Delete

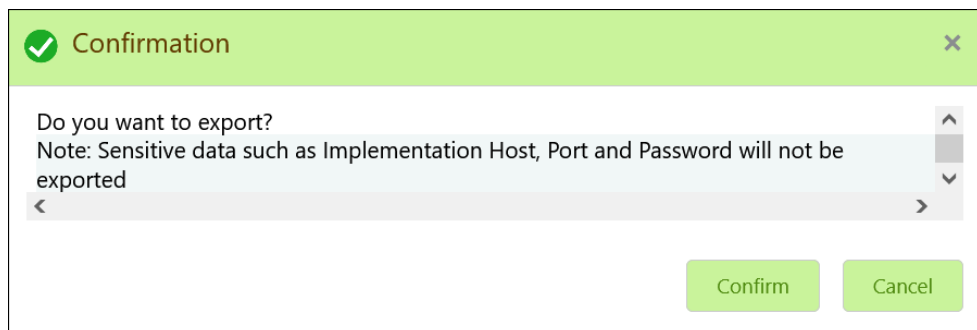

14. Click **Confirm** to delete the selected Service Provider.

Export Service Provider

The user can export the provider configuration as JSON file.

15. On **Service Provider** tile, click **Operation menu** (3 dots button), and click **Export**.
The **Confirmation** screen displays.

Figure 4-8 Confirmation - Export

Note:

The below data cannot be exported:

- Implementation Host
- Implementation Port
- Implementation Authentication Password

The above data needs to be configured manually after importing the configuration file. Same has been mentioned in Import section.

16. Click **Confirm** to export the selected Service Provider.

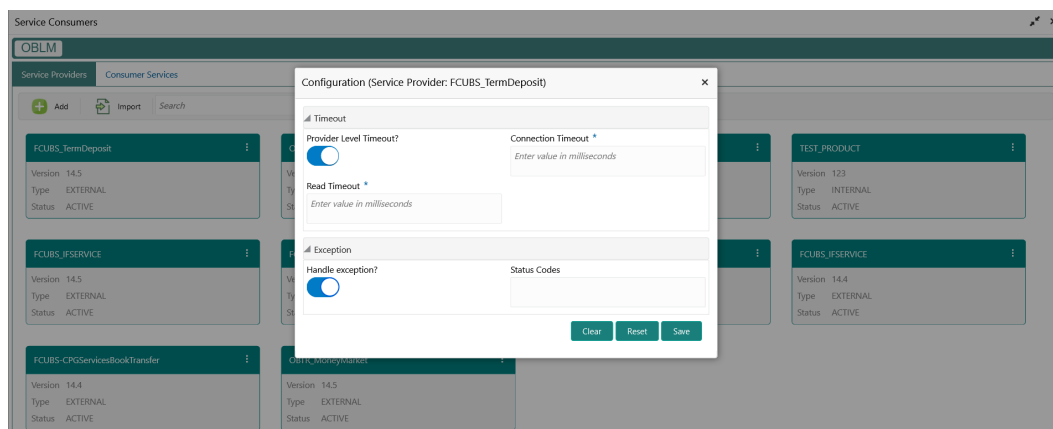

Configuration

End-user can configure the properties for failing the routing hub requests.

17. On **Service Provider** tile, click **Operation menu** (3 dots button), and click **Configuration**.

The **Configuration** screen displays.

Figure 4-9 Configuration

For more information on fields, refer to the field description table below

Table 4-4 Configuration Service Provider - Field Description

Field	Description
Provider level timeout	<p>This property is used to override the global timeout values.</p> <p> Note: Default value is false.</p>
Connection Timeout	<p>This property is used to set the timeout in making the initial connection i.e. connection handshake.</p> <p> Note: Value should be in milliseconds.</p>
Read Timeout	<p>This property is used to set the timeout on waiting to read data.</p> <p> Note: Value should be in milliseconds.</p>

Table 4-4 (Cont.) Configuration Service Provider - Field Description

Field	Description
Handle exception	<p>This property is used to fail the routing hub request for failed provider requests.</p> <div style="border-left: 2px solid #0070C0; padding-left: 10px; margin-top: 10px;"> <p> Note: Default value is false.</p> </div>
Status Codes	<p>This property is used to fail routing hub request for specific status codes of failed provider requests. If not specified, then routing hub request will fail for all 4xx and 5xx status codes of failed provider requests.</p>

Request Audit

18. On **Service Provider** tile, click **Operation menu** (3 dots button), and click **Request Audit**.

The **Request Audit** screen displays.

 **Note:**

Refer to [Request Audit](#) topic for the screen and field description.

Clear Cache

The user can clear the SOAP client cache for the service providers.

19. On **Service Provider** tile, click **Operation menu** (3 dots button), and click **Clear Cache**.

5

Implementation

This topic provides the systematic instructions to configure the implementation.

The implementation comprises of Eureka client instance, Host, Port, authentication, and implementation specific service details. Oracle Banking Routing Hub supports web services and Rest API.

Note:

Default implementation is created whenever a new service provider is added.

1. On **Service Provider** screen, click on the required service provider tile.
The **Implementation** screen displays.

Figure 5-1 Implementation

Actions	Name	Description	Service Name	Host	Port	Queue
:	FCUBS_Default	Default Implementation		xxxx	0	

Add Implementation

The user can create the implementation manually.

2. Click **Add**.
The **Add Implementation** screen displays.

Figure 5-2 Add Implementation

3. Specify the fields on **Add Implementation** screen.

 **Note:**

The fields, which are marked with an asterisk, are mandatory.

For more information on fields, refer to the field description table.

Table 5-1 Add Implementation - Field Description

Field	Description
Name	Specify the name of the implementation. <p> Note:</p> <ul style="list-style-type: none"> • Enter 0 to maximum of 255 characters. • No numeric value at beginning and no space allowed.
Description	Specify the description of the implementation. <p> Note:</p> <ul style="list-style-type: none"> • Enter 0 to 1000 characters. • No space allowed at beginning or ending of the characters.

Table 5-1 (Cont.) Add Implementation - Field Description

Field	Description
Type	Select the type of implementation from drop-down list The available options are: <ul style="list-style-type: none"> • DEFAULT • QUEUE DEFAULT type is for REST and SOAP API calls.
Default	Toggle the button if user wants to default. Each type can have one default implementation.
Eureka Instance	Eureka Instance is available only for internal providers and default type. By default, Eureka Instance will be toggled ON for internal providers and OFF for external providers.
Scheme	Select the scheme from drop-down list The available options are: <ul style="list-style-type: none"> • http • https Scheme option is available only for default type.
Service Name	If Eureka Instance is toggled ON and type is default, then only service name is required.
Host	Specify the host. <div style="border: 1px solid #ccc; background-color: #e6f2ff; padding: 10px; margin-top: 10px;"> <p> Note:</p> <ul style="list-style-type: none"> • Host cannot be blank. • Enter 0 to 255 characters. • Space is not allowed. </div> <p>If Eureka Instance is toggled OFF and type is default, then only host and port is required.</p>
Port	Specify the port number. <div style="border: 1px solid #ccc; background-color: #e6f2ff; padding: 10px; margin-top: 10px;"> <p> Note:</p> <ul style="list-style-type: none"> • Enter 0 to 6 characters. • Enter only numeric value. </div> <p>If Eureka Instance is toggled OFF and type is default, then only host and port is required.</p>
Authentication	The below fields appear only if Eureka Instance is toggled OFF and Implementation Type is selected as Default .

Table 5-1 (Cont.) Add Implementation - Field Description

Field	Description
Type	Select the type of authentication from drop-down list. The available options are: <ul style="list-style-type: none"> • BASIC • JWT_TOKEN • OAUTH_TOKEN • SSO • OAUTH_TOKEN_OIC
Username	Specify the name of the user.  Note: <ul style="list-style-type: none"> • Enter 0 to maximum of 255 characters. • No numeric value at beginning and no space allowed.
Password	Specify the password.
Headers	The below fields appear only if the Implementation Type is selected as Default .
Add	Click this button to add header.
Actions	Displays the action. The user can edit or delete the header.
Name	Displays the name of the header.
Value	Displays the value of the header.
Service	The below fields appear only if the Implementation Type is selected as Default .
Type	Select the type of service from drop-down list. The available options are: <ul style="list-style-type: none"> • WSDL • SWAGGER • OTHERS
URL	Specify the service URL of the file location.  Note: <p>This field appears only if the Type is selected as WSDL and SWAGGER.</p>
Name	Specify the name of the operation.  Note: <p>This field appears only if the Type is selected as OTHERS.</p>

Table 5-1 (Cont.) Add Implementation - Field Description

Field	Description
Http Method	<p>Select the HTTP method. The available options are:</p> <ul style="list-style-type: none"> • GET • POST • PUT • PATCH • DELETE <p> Note: This field appears only if the Type is selected as OTHERS.</p>
Endpoint	<p>Specify the endpoint URL for the operation.</p> <p> Note: This field appears only if the Type is selected as OTHERS.</p>
Gateway Prefix	<p>Gateway Prefix is context path of below formatted URL. http://host:port/gateway-prefix/endpoint</p>
Import	<p>Click Import to extract the service information from URL and displays it in the Service list.</p> <p> Note: This field appears only if the Type is selected as WSDL and SWAGGER.</p>
Service Headers	<p>Specify the Endpoint specific headers. Value can either be hardcoded or can be Velocity mapping.</p> <p> Note: This field appears only if the Type is selected as OTHERS.</p>

Table 5-1 (Cont.) Add Implementation - Field Description

Field	Description
Service Query Params	Specify the Endpoint specific query parameters. Value can either be hardcoded or can be Velocity mapping. <div style="border: 1px solid #0070C0; padding: 5px; background-color: #E6F2FF;">  Note: This field appears only if the Type is selected as OTHERS. </div>
Add	Click this button to add the endpoint details in the Service list.
Service	Displays the extracted service from the selected URL.
Operation	Displays the extracted operation from the selected URL.

Authentication:

If External Product processor require authentication to connect to it, Oracle Banking Routing Hub provides standard authentication mechanism schemes like BASIC, JWT, OAUTH_TOKEN, SSO, OAUTH_TOKEN_OIC.

 **Note:**

In case of no authentication, NONE needs to be set as Authentication Type.
In case of identity propagation, SSO needs to be set as Authentication Type.
In case of OIC integration, OAUTH_TOKEN_OIC needs to be set as Authentication Type.
In case of JWT, OAUTH_TOKEN and OAUTH_TOKEN_OIC, token will be cached by default.

Services

- **WSDL:**
The Web Services Description Language (WSDL) is an XML-based interface description language that is used for describing the functionality offered by a web service.

Both SSL and non-SSL WSDL URL are supported.

 **Note:**

If there is a change in wsdl file, then same wsdl file need to be imported again to update the provided service information in Routing Hub.

- **SWAGGER:**
Swagger is an Interface Description Language for describing RESTful APIs expressed using JSON.

Currently, Swagger 2.0 & OpenAPI 3.0 both are supported.

Note:

If there is a change in swagger file, then same swagger file need to be imported again in order to update the provided service information in Routing Hub.

- **OTHERS:**

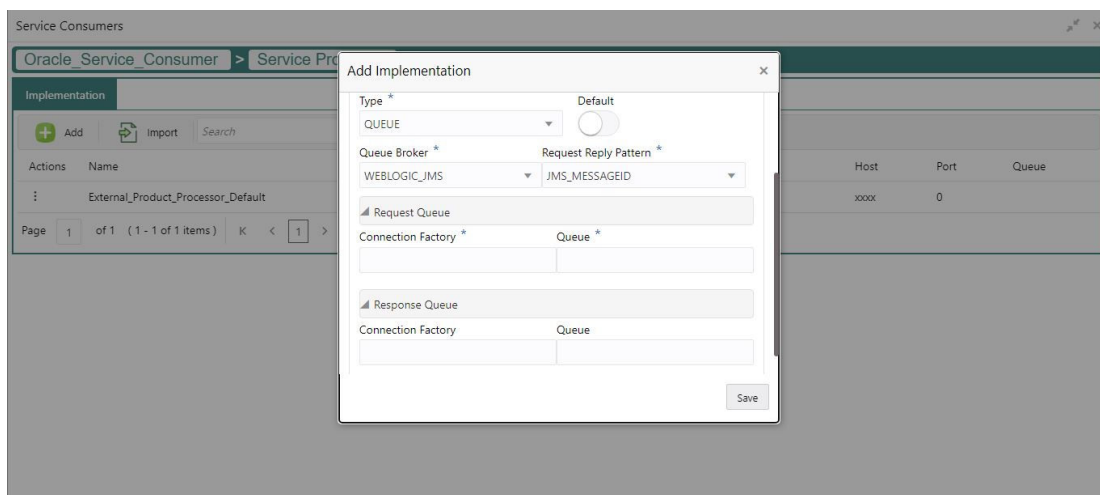

OTHERS option is selected for adding REST API details manually when provider does not have swagger file.

Note:

If there is a change in existing endpoint, then the same endpoint details need to be entered again with the new changes in order to update the existing provided service information in Routing Hub.

Queue

If the Implementation **Type** is selected as **Queue**,

Figure 5-3 Add Implementation - Queue

For **QUEUE** type, refer to the field description table below.

Table 5-2 Add Implementation - Queue - Field Description

Field	Description
Type	Select the type of implementation from drop-down list The available options are: <ul style="list-style-type: none"> • DEFAULT • QUEUE DEFAULT type is for REST and SOAP API calls.
Default	Select the toggle if the user wants to default.

Table 5-2 (Cont.) Add Implementation - Queue - Field Description

Field	Description
Queue Broker	Select the queue broker from drop-down list. The available options are: <ul style="list-style-type: none"> • WEBLOGIC_JMS
Request Reply Platform	Select the queue broker from drop-down list. The available options are: <ul style="list-style-type: none"> • JMS_MESSAGEID • JMS_CORRELATIONID JMS_MESSAGEID is default request-reply pattern.
Connection Factory	Specify the connection factory. Connection Factory is JNDI based connection factory name which is used to create connection for JMS client.
Queue	Specify the queue. Queue Name is JNDI based destination name.
Connection Factory	Specify the connection factory. Response Connection Factory is needed when destination is going to respond back after processing the request.
Queue	Specify the queue. Response Queue Name is needed when destination is going to respond back after processing the request.

Headers:

External product processor might require some standard headers to be passed along with the request. User can specify the headers which are required by service endpoints for its all implementations but not present in swagger file.

4. Follow the below steps to add **Headers**.
 - a. Click **Add** under **Header** section.
- The **Add Header** screen displays.

Figure 5-4 Add Header

- b. Specify the fields on **Add Header** screen and click **OK**.

 **Note:**

The fields, which are marked with an asterisk, are mandatory.

For more information on fields, refer to the field description table.

Table 5-3 Add Header - Field Description

Field	Description
Name	Specify the name for the header.
Value	Specify the value for the header.

5. Click **OK** to save the details.

The **Confirmation** screen displays.

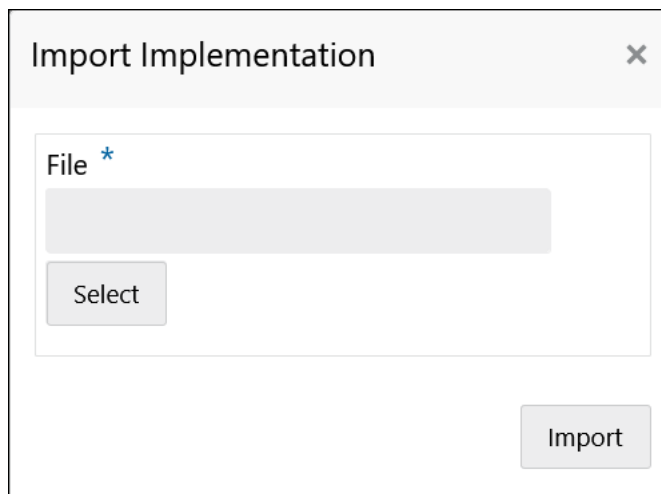

Import Implementation

The user can create an implementation by importing the JSON file. The user can also import zip file in order to import all the configuration JSON files together (except parent level configuration JSON files).

6. On **Implementation** screen, click **Import**.

The **Import Implementation** screen displays.

Figure 5-5 Import Implementation

For more information on fields, refer to the field description table.

Table 5-4 Import Implementation - Field Description

Field	Description
File	<p>Click Select to select the file.</p> <div style="border: 1px solid #ccc; background-color: #e6f2ff; padding: 10px; margin-top: 10px;"> <p> Note:</p> <p>Allows only to select one file and accepts JSON and ZIP file.</p> </div>

- Click **Import** to import the selected file.

The **Confirmation** screen displays.

The below data needs to be changed after importing provider configuration file:

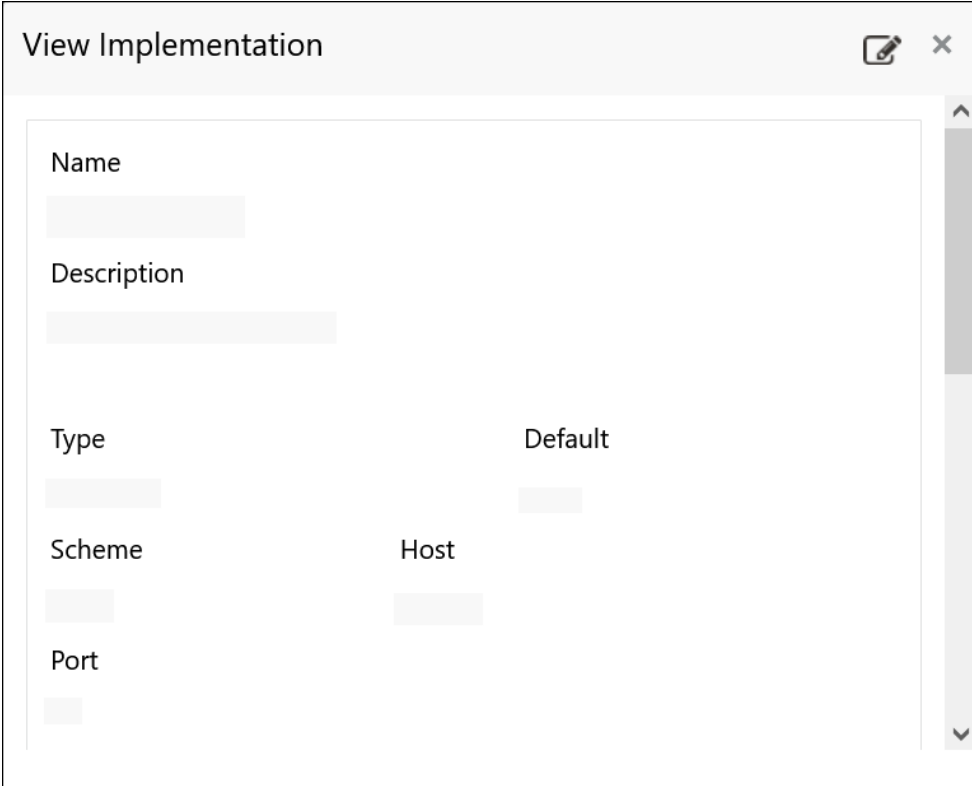

- Implementation Host and Port
- Implementation Authentication Password

View Implementation

The user can view implementation details and can also switch to edit form by clicking on edit icon.

- On **Implementation** screen, click **Operation menu** (3 dots button) and click **View**.

The **View Implementation** screen displays.

Figure 5-6 View Implementation

The screenshot shows a window titled "View Implementation" with a close button (X) and an edit icon (pencil). The window contains a form with the following fields:

- Name**: A text input field.
- Description**: A text input field.
- Type**: A text input field.
- Default**: A text input field.
- Scheme**: A text input field.
- Host**: A text input field.
- Port**: A text input field.

Edit Implementation

The user can modify the implementation details.

- On **Implementation** screen, click **Operation menu** (3 dots button) and click **Edit**.

The **Edit Implementation** screen displays.

Figure 5-7 Edit Implementation

The screenshot shows a dialog box titled "Edit Implementation" with a close button (X) in the top right corner. The dialog contains the following fields and controls:

- Name ***: A text input field.
- Description ***: A text area input field.
- Type ***: A dropdown menu.
- Scheme ***: A dropdown menu.
- Host ***: A text input field.
- Port ***: A text input field.
- Default**: A toggle switch, currently turned on (blue).
- Save**: A button located at the bottom right of the dialog.

- Click **Save** once the edit is done.

The **Confirmation** screen displays.

Figure 5-8 Confirmation

The screenshot shows a dialog box titled "Confirmation" with a green header bar containing a checkmark icon and a close button (X). The dialog contains the following elements:

- Confirmation**: The title of the dialog.
- Do you want to save the record?**: A question displayed in the main content area.
- Confirm**: A button located at the bottom right of the dialog.
- Cancel**: A button located at the bottom right of the dialog, next to the Confirm button.

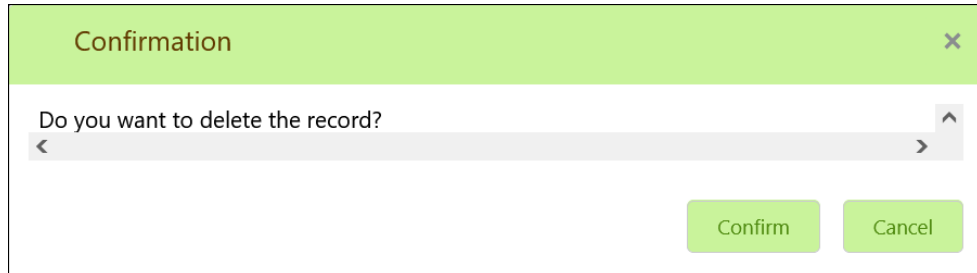

Delete Implementation

The user can delete the implementation details.

11. On **Implementation** screen, click **Operation menu** (3 dots button) and click **Delete**.

The **Confirmation** screen displays.

Figure 5-9 Confirmation - Delete

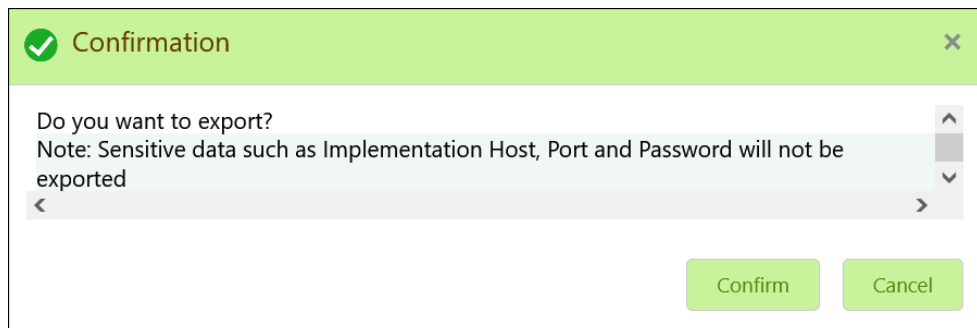

Export Implementation

The user can export the implementation configuration as JSON file.

12. On **Implementation** screen, click **Operation menu** (3 dots button) and click **Export**.

The **Confirmation** screen displays.

Figure 5-10 Confirmation - Export Implementation

Below data cannot be exported:

- Implementation Host
- Implementation Port
- Implementation Authentication Password

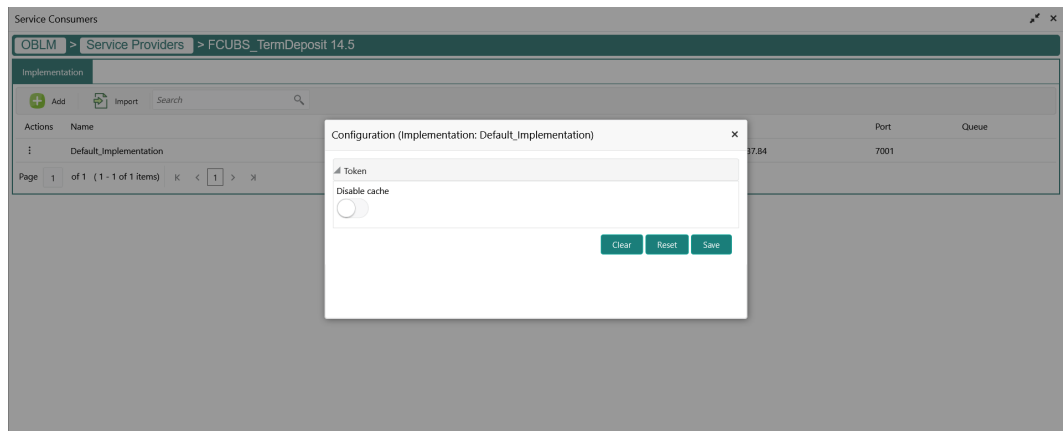

The above data needs to be configured manually after importing the configuration file. Same has been mentioned in Import section.

Configuration

End-user can configure the properties for failing the routing hub requests.

13. On **Implementation** tile, click **Operation menu** (3 dots button), and click **Configuration**.

The **Configuration** screen displays.

Figure 5-11 Configuration

For more information on fields, refer to the field description table.

Table 5-5 Configuration - Field Description

Field	Description
Disable cache	<p>This property is used to disable the token caching.</p> <div style="border-left: 2px solid #0070C0; border-right: 2px solid #0070C0; border-bottom: 2px solid #0070C0; padding: 10px; margin-top: 10px;"> <p> Note:</p> <p>Default value is false.</p> </div>

Request Audit

- On **Implementation** screen, click **Operation menu** (3 dots button) and click **Request Audit**.

The **Request Audit** screen displays.

Note:

Refer to **Request Audit** topic for screen and field description.

Clear Cache

The user can clear the SOAP client cache.

- On **Implementation** screen, click **Operation menu** (3 dots button) and click **Clear Cache**.

6

Consumer Services

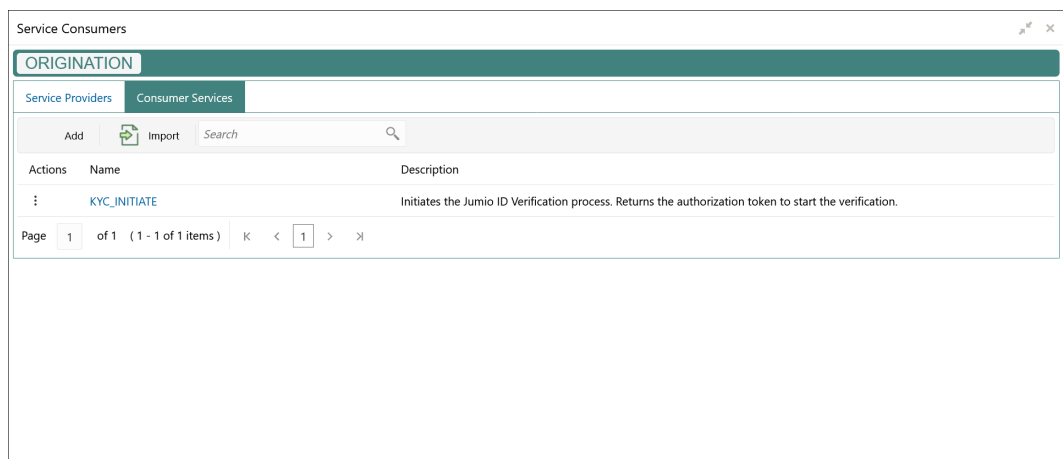

This topic describes the systematic instructions to configure the consumer services.

The **Consumer Services** defines the service ID, which sends from the service consumer. It also caters the transition and route definition. It comprises of source integration details.

1. On **Service Consumers** screen, click **Consumer Services**.

The **Consumer Services** screen displays.

Figure 6-1 Consumer Services

Add Consumer Service

The user can create Consumer Service manually.

2. On **Consumer Services** screen, click **Add**.

The **Add Service** screen displays.

Figure 6-2 Add Service

The screenshot shows a web form titled "Add Service". At the top right is a close button (X). The form contains the following elements:

- ID ***: A text input field with an asterisk indicating it is mandatory.
- Status**: A blue toggle switch that is currently turned on.
- Description ***: A large text area with an asterisk indicating it is mandatory.
- + Add**: A button with a green plus icon and the text "Add".
- Table**: A table with three columns: "Actions", "Attribute Name", and "json path". The table content is "No data to display."
- Save**: A button at the bottom right of the form.

- Specify the fields on **Add Service** screen.

 **Note:**

The fields, which are marked with an asterisk, are mandatory.

For more information on fields, refer to the field description table.

Table 6-1 Add Service - Field Description

Field	Description
ID	<p>Specify the ID of the consumer service.</p> <p> Note:</p> <ul style="list-style-type: none"> Enter 0 to maximum of 255 characters. No numeric value at beginning and no space allowed.

Table 6-1 (Cont.) Add Service - Field Description

Field	Description
Status	Active / Inactive If consumer service is marked as inactive, then all related routes will be stopped.
Description	Specify the description of the consumer service. <div style="border: 1px solid #ccc; background-color: #e6f2ff; padding: 10px;"> <p> Note:</p> <ul style="list-style-type: none"> • Enter 0 to 1000 characters. • No space allowed at beginning or ending of the characters. </div>
Add	To add, refer to the below step.
Actions	Displays the action. The user can edit or delete the header.
Attribute Name	Displays the name of the attribute.
json path	Displays the JSON path.

4. To add **Attributes**, follow the below steps.

- a. Click **Add**.

The **Add Attribute** screen displays.

Figure 6-3 Add Attribute

- b. Specify the fields on **Add Attribute** screen.

Note:

The fields, which are marked with an asterisk, are mandatory.

For more information on fields, refer to the field description table.

Table 6-2 Add Header - Field Description

Field	Description
Name	Specify the name of the attribute.
json path	Specify the json path.

Note:

- Using `$.body`, the user can access the request body.
Syntax: `$.body.fieldName`
Example: `$.body.branchCode`
- Using `$.headers`, the user can access the request headers.
Syntax: `$.headers["fieldName"][0]`
Example: `$.headers["branchCode"][0]`
- Using `$.env`, the user can access the environment variables.
Syntax: `$.env.group.variable`

- c. Click **OK** to save the attributes.
5. Click **Save** to save the details.
The **Confirmation** screen displays.

Figure 6-4 Confirmation

6. On **Confirmation** screen, click **Confirm** to add the service.

Import Consumer Service

The user can create a consumer service by importing the JSON file.

The user can also import zip file in order to import all the configuration JSON files together (except parent level configuration JSON files).

7. On **Consumer Services** screen, click **Import**.

The **Import Service** screen displays.

Figure 6-5 Import Service

The screenshot shows a web interface for importing a service. At the top, there's a header bar with the text 'Import Service' and a close button (X). Below this is a form area. The first part of the form is labeled 'File *' and contains a text input field that is currently empty, followed by a 'Select' button. Below the input field, there's a section for 'Overwrite extended templates' with two radio buttons: 'Yes' (which is unselected) and 'No' (which is selected). At the bottom right of the form area, there is an 'Import' button.

For more information on fields, refer to the field description table.

Table 6-3 Import Service - Field Description

Field	Description
File	Select the file using Select button. <div style="background-color: #e6f2ff; padding: 5px; border: 1px solid #0070c0;"> <p> Note: Allows only to select one file and accepts only JSON file.</p> </div>
Overwrite extended templates	Select the respective radio button to overwrite the extended templates. The available options are: <ul style="list-style-type: none"> • Yes - This option overwrites the extended templates. • No - This option retains the existing extended templates.

- Click **Import** to import the selected file.

The **Confirmation** screen displays.

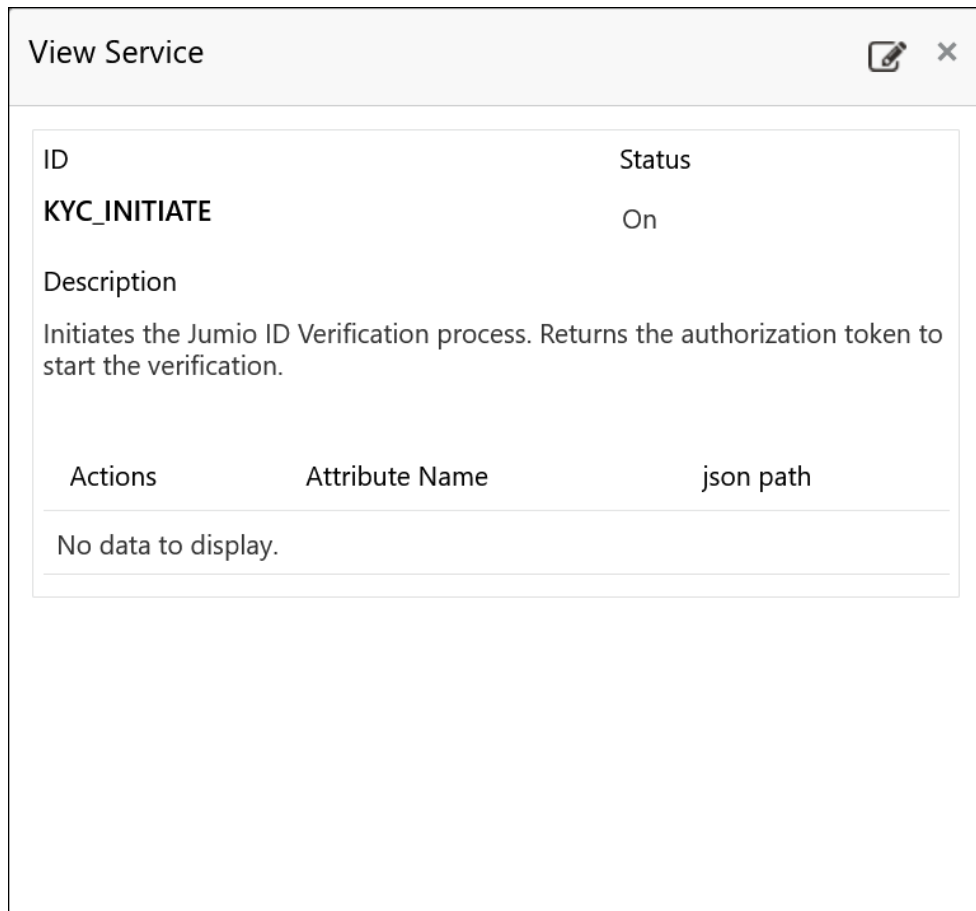

View Consumer Service

The user can view consumer service details and can also switch to edit form by clicking on edit icon.

- On **Consumer Service** tile, click **Operation menu** (3 dots button), and click **View**.

The **View Service** screen displays.

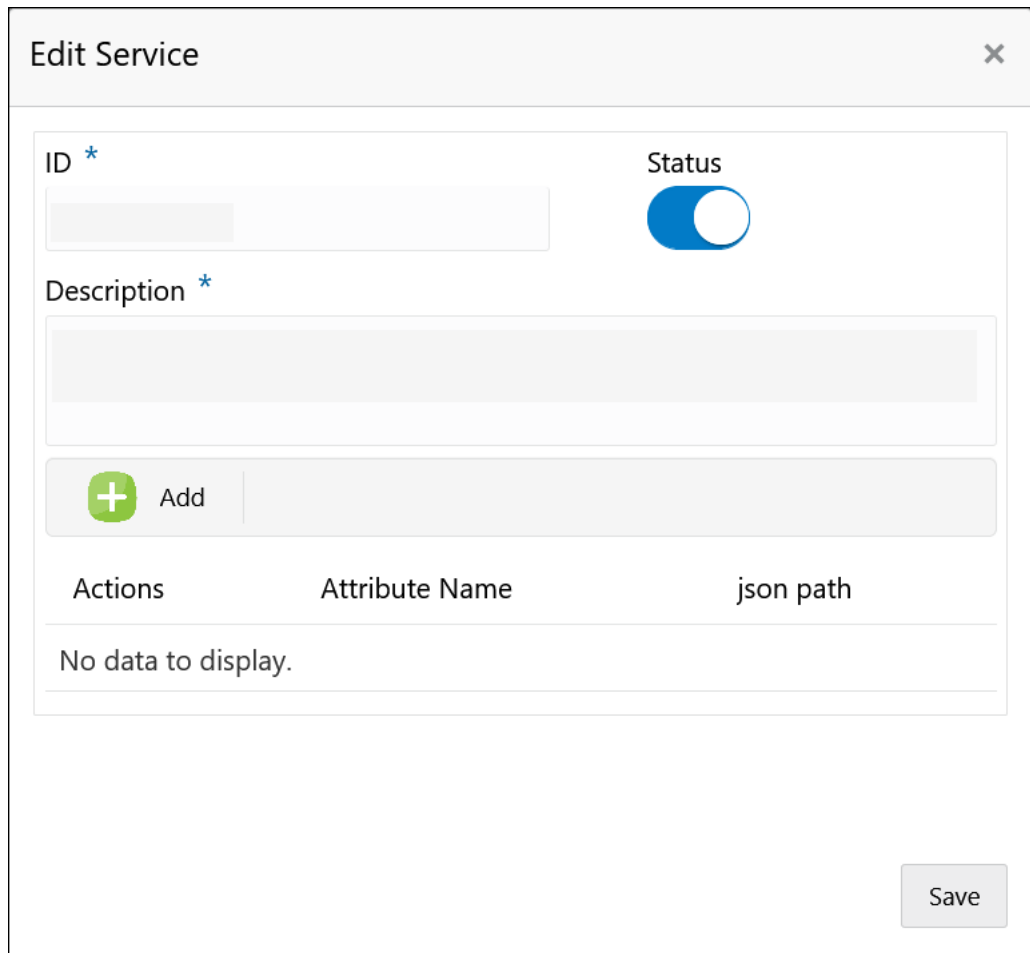

Figure 6-6 View Service

**Edit Consumer Service**

The user can modify the consumer service details.

10. On **Consumer Service** tile, click **Operation menu** (3 dots button), and click **Edit**. The **Edit Service** screen displays.

Delete Consumer Service

The user can delete the consumer service.

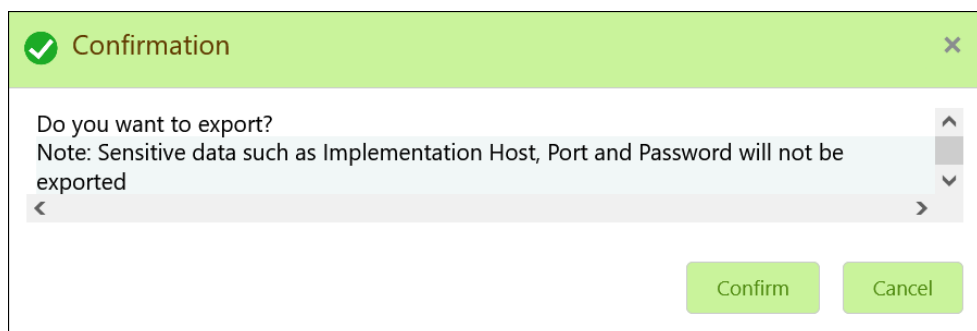

12. On **Consumer Service** tile, click **Operation menu** (3 dots button), and click **Delete**.
The **Confirmation** screen displays.

Figure 6-9 Confirmation**Export Consumer Service**

The user can export the consumer service configuration as JSON file.

13. On **Consumer Service** tile, click **Operation menu** (3 dots button), and click **Export**.

The **Confirmation** screen displays.

Figure 6-10 Confirmation - Export**Consumer Service - Configuration**

14. On **Consumer Service** tile, click **Operation menu** (3 dots button), and click **Configuration**.

The **Configuration** screen displays.

 **Note:**

Refer to [Configuration](#) topic for the screen and field description.

Consumer Service - Request Audit

15. On **Consumer Service** tile, click **Operation menu** (3 dots button), and click **Request Audit**.

The **Request Audit** screen displays.

 **Note:**

Refer to [Request Audit](#) topic for the screen and field description.

7

Transformation

This topic describes the systematic instructions to configure the transformation.

The **Transformation** acts as assembling and transforming data from source to destination and vice-versa. This takes place under consumer service. This converts the data of service consumer into service provider.

1. On **Consumer Services** screen, click the required consumer service tile.

The **Transformation** screen displays.

Figure 7-1 Transformation

Actions	Name	Status	Product Processor	Implementation	Service

8

Routing

This topic describes the systematic instructions to configure the routing.

Routing defines no rule or rule-based route configuration. Route decide the actual request to be send to which service provider based on maintenance and evaluation.

1. On **Consumer Services** screen, click **Routing**.

The **Routing** screen displays.

Figure 8-1 Routing

Actions	Name	Start/Stop	Rule	Product Processor	Implementation	Service
:	OBTF_OBTFBCService_QueryDocs_R1	On	OBTF 14.4	OBTF_Default	OBTFBCService (OBTFBCServiceSEI) - QueryDocsIO	

Add Route

The user can create routing manually.

2. On **Routing** screen, click **Add**.

The **Add Route** screen displays.

Figure 8-2 Add Route

The screenshot shows the 'Add Route' dialog box with the following elements:

- Name ***: A text input field.
- Start/Stop**: Two buttons, 'START' (blue) and 'STOP' (grey).
- Auto Shutdown**: A toggle switch currently turned on.
- Default Rule** and **Custom Rule**: Radio buttons, with 'Custom Rule' selected.
- Rule**: A section header above a text area.
- Expression Editor ***: A section header above a text area.
- Transformations**: A section header above an 'Add' button.
- Table**: A table with columns: Actions, Product Processor, Implementation, Transformation. The table is currently empty.
- Save**: A button at the bottom right.

3. Specify the fields on **Add Route** screen.

 **Note:**

The fields, which are marked with an asterisk, are mandatory.

For more information on fields, refer to the field description table.

Table 8-1 Add Route - Field Description

Field	Description
Name	Specify the name for the route. <div style="border-left: 2px solid #0070C0; border-right: 2px solid #0070C0; border-bottom: 2px solid #0070C0; padding: 5px; background-color: #E6F2FF;"> <p> Note:</p> <ul style="list-style-type: none"> Enter 0 to maximum of 255 characters. No numeric value at beginning and no space allowed. </div>
START / STOP	START / STOP If routing is marked as STOP, then consumer request fails at routing hub level only.
Auto Shutdown	ON / OFF If AutoShutdown flag is ON, then route state will be changed to STOP if route failure goes beyond the threshold failure limit based on the monitoring and alert configuration.
Rule Type	Select the rule type. The available options are: <ul style="list-style-type: none"> Default Rule Custom Rule
Expression Editor	Displays the expression that is formed through expression editor.
Add	To add, refer to the below steps.
Actions	Displays the action. The user can edit or delete the header.
Product Processor	Displays the product processor.
Implementation	Displays the implementation.
Transformation	Displays the transformation.

Add Custom Rule using Expression Editor

4. To add **Editor**, follow the below steps.
 - a. On **Add Route** screen, click **Editor** button.
The **Expression Editor** screen displays.

Figure 8-3 Expression Editor

- b. Specify the fields on **Expression Editor** screen.

 **Note:**

The fields, which are marked with an asterisk, are mandatory.

For more information on fields, refer to the field description table.

Table 8-2 Expression Editor - Field Description

Field	Description
Attribute	Select attribute relevant to consumer service from drop-down list.
Operator	Select the logical operators to form an expression from drop-down list.
Value	Specify the value.  Note: Enter 0 to 255 characters.
Condition Type	Select the condition type from drop-down list.

- c. Click **Save** to save the details.

 **Note:**

String value should be quoted using single quotes (') Example: 'abc'
List value should be comma separated values and quoted using single quotes (') Example: 'abc,xyz,1.23,true'

Transformations

The user can define the sequence of transformations for each routing in which request should be processed. Sequence of transformations in list can be changed by using drag-n-drop feature.

5. To add **Transformations**, follow the below steps.
 - a. On **Add Route** screen, click **Add**.
The **Add Transformation** screen displays.

Figure 8-4 Add Transformation

Template Type	Template

Mocking required? Mock Template

- b. Specify the fields on **Add Transformation** screen.

 **Note:**

The fields, which are marked with an asterisk, are mandatory.

For more information on fields, refer to the field description table.

Table 8-3 Add Transformation - Field Description

Field	Description
Product Processor	Select the product processor from the drop-down list.
Implementation	Select the implementation from the drop-down list.
Transformation	Select the transformation from the drop-down list.
Action	Displays the action. The user can edit or delete the header.
Name	Displays the name of the header.
Value	Displays the value of the header.
Service	Displays the service of the product processor.
Template Type	Displays the template type for the request transformation.
Template	Displays the template for the request transformation.
Template Type	Displays the template type for the response transformation.
Template	Displays the template for the response transformation.
Mocking required?	Displays whether the mocking required for the response transformation or not.
Mock Template	Displays the mock template for the response transformation.

- c. Click **OK**.
6. Click **Save** to save the details.
The **Confirmation** screen displays.
7. Click **Confirm** to add the routing details.

View Route

The user can view the routing details and can also switch to edit form by clicking on edit icon.

8. On **Routing** screen, click **Operation menu** (3 dots button), and click **View**.
The **View Route** screen displays.

Figure 8-5 View Route

Edit Route

The user can modify the routing details.

9. On **Routing** screen, click **Operation menu** (3 dots button), and click **Edit**.
The **Edit Route** screen displays.

Figure 8-6 Edit Route

Delete Route

The user can delete the routing details.

10. On **Routing** screen, click **Operation menu** (3 dots button), and click **Delete**.

The **Confirmation** screen displays.

Figure 8-7 Confirmation - Delete

11. Click **Confirm** to delete the selected routing.

Routing - Configuration

12. On **Routing** screen, click **Operation menu** (3 dots button), and click **Configuration**.

The **Configuration** screen displays.

 **Note:**

Refer to [Configuration](#) topic for screen and field description.

Routing - Request Audit

13. On **Routing** screen, click **Operation menu** (3 dots button), and click **Request Audit**.

The **Request Audit** screen displays.

 **Note:**

Refer to [Request Audit](#) topic for screen and field description.

9

Request Audit - Log

This topic describes the systematic instructions to check the audit log in Oracle Banking Routing Hub.

Specify **User ID** and **Password**, and login to **Home** screen.

1. On **Home** screen, click **Core Maintenance**. Under **Core Maintenance**, click **Routing Hub**.
2. Under **Routing Hub**, click **Request Audit**.

The **Request Audit - Log** screen displays.

Figure 9-1 Request Audit - log

3. Specify the fields on **Request Audit - log** screen.

 **Note:**

The fields, which are marked with an asterisk, are mandatory.

For more information on fields, refer to the field description table.

Table 9-1 Request Audit - log - Field Description

Field	Description
Request ID	Specify the request ID.
Consumer	Specify the consumer.
Consumer Service	Specify the consumer service.
Provider	Specify the provider.

Table 9-1 (Cont.) Request Audit - log - Field Description

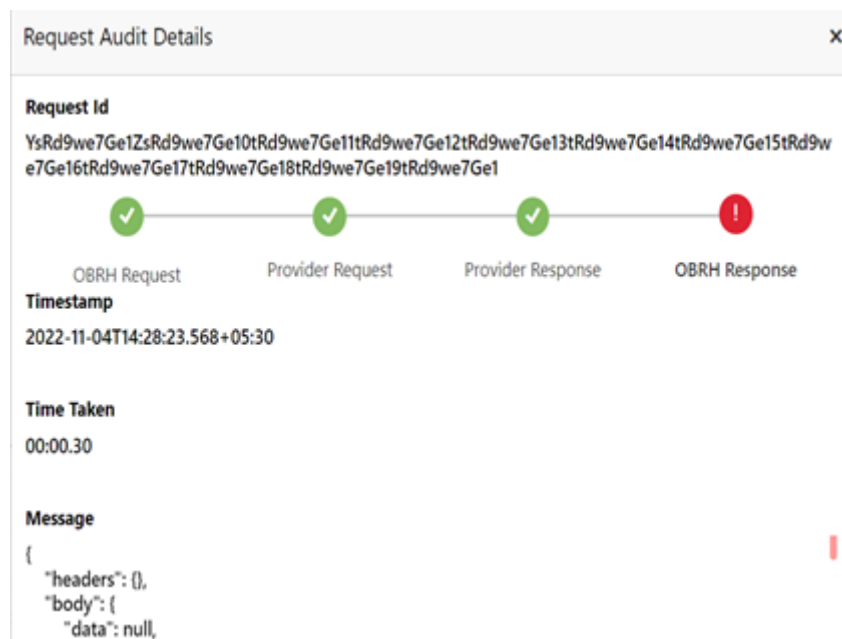

Field	Description
Provider Implementation	Specify the provider implementation.
Provider Service	Specify the provider service.
Transformation	Specify the transformation name.
Route	Specify the route.
User ID	Specify the user ID.

4. Click **Search**.

The list of request ID's displays with relevant details.

5. Click on the **Request ID** to view the step by step execution of request audit details.

The **Request Audit Details** screen displays.

Figure 9-2 Request Audit Details

For more information on fields, refer to the field description table.

Table 9-2 Request Audit Details - Field Description

Field	Description
Request ID	Displays the selected request ID.
OBRH Request	Displays the status of Routing Hub request.
Provider Request	Displays the status of provider request.
Provider Response	Displays the status of provider response.
OBRH Response	Displays the status of Routing Hub response.

Table 9-2 (Cont.) Request Audit Details - Field Description

Field	Description

Message	Displays the message.

- [Request Audit - Summary](#)
This topic describes the systematic instructions to check the audit summary in Oracle Banking Routing Hub.

9.1 Request Audit - Summary

This topic describes the systematic instructions to check the audit summary in Oracle Banking Routing Hub.

Audit summary screen will show top 5 long running provider requests of each provider for specific date range.

Specify **User ID** and **Password**, and login to **Home** screen.

1. On **Home** screen, click **Core Maintenance**. Under **Core Maintenance**, click **Routing Hub**.
2. Under **Routing Hub**, click **Request Audit**.

The **Request Audit - Summary** screen displays.

Figure 9-3 Request Audit - Summary

Consumer	Consumer Service	Provider	Provider Version	Provider Service	Request Id	Time Taken
Oracle_Service_Con...	List_Facilities	External_Product_Pr...	1.0	{http://elvalidimitservice...	CPMyxgTAie1DPMy...	46528

Oracle_Service_Con...	List_Facilities	External_Product_Pr...	1.0	{http://elvalidimitservice...	g2FGkd08ie1h2FGk...	5435
Oracle_Service_Con...	List_Facilities	External_Product_Pr...	1.0	{http://elvalidimitservice...	kcrlVUyzie1lcrLVUY...	4176

This screen requires summary job to be executed using `plato-batch-server` periodically basis.

The below steps are required to schedule summary job (`routingHubAuditSummaryJob`). If the `cmc-obrh-services` and `plato-batch-server` is UP and RUNNING:

3. From **Home** screen, click **Task Management**.
4. Under **Task Management**, click **Configure Task**.
5. Under **Configure Task**, Select **Schedule** option.

6. Select the **Task Name** as `routingHubAuditSummaryJob`. The **Task Trigger Name** field is generated automatically.
7. Specify the CRON expression to daily EOD

In order to resolve table space issue of Audit summary table, (CMC_RH_AUDIT_SUMMARY), Database Management Team has to configure database job to truncate table periodically basis.

10

Chaining

This topic provides the information about chaining of the transformation.

The end-user can define the sequence of transformations for each routing in which the request needs to be processed.

Chaining can be achieved by using the snapshot list. The snapshot list stores the response body and response headers whenever the transformation is processed. Therefore, the end-user can access the response body or headers of all processed transformations at any stage.

Syntax: `$snapshot.get(index).body` or `$snapshot.get(index).headers`

Note:

`$body` and `$headers` refers to the response body and headers of previous step.

Figure 10-1 Chaining

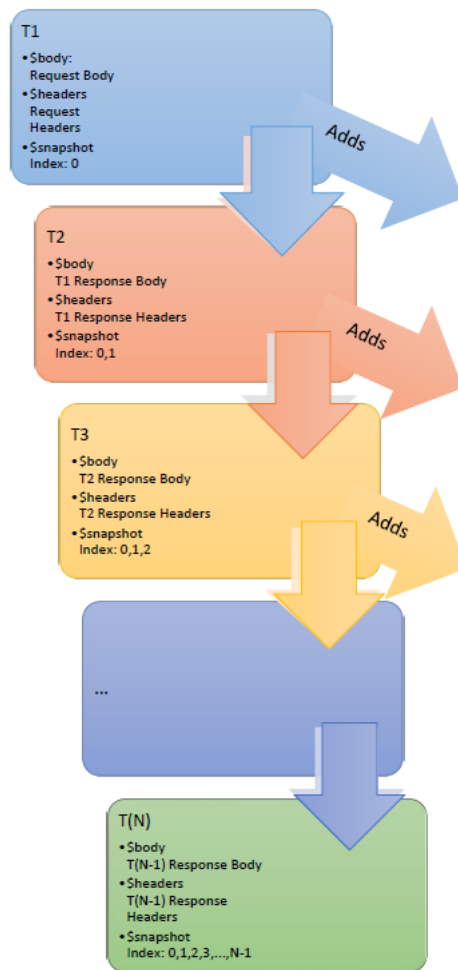

Table 10-1 Snapshot List

Index	Body	Headers
1	Request Body	Request Headers
2	T1 Response Body	T1 Response Headers
3	T2 Response Body	T2 Response Headers
4	T3 Response Body	T3 Response Headers
...
N	T(N-1) Response Body	T(N-1) Response Headers

11

Extensibility

Extensibility in Routing Hub refers to template extensibility and is achieved by specifying the extended templates for request and response kernel transformation templates. And as part of extensibility, Routing Hub merges the output of kernel template and custom template in terms of JSON / XML merging.

In case of request, Routing Hub will send the merged output as request payload to provider.

In case of response, Routing Hub will return the merged output as response back to consumer

Figure 11-1 Extensibility - Example

- [XML merging attributes](#)

11.1 XML merging attributes

This topic contains the following subtopics:

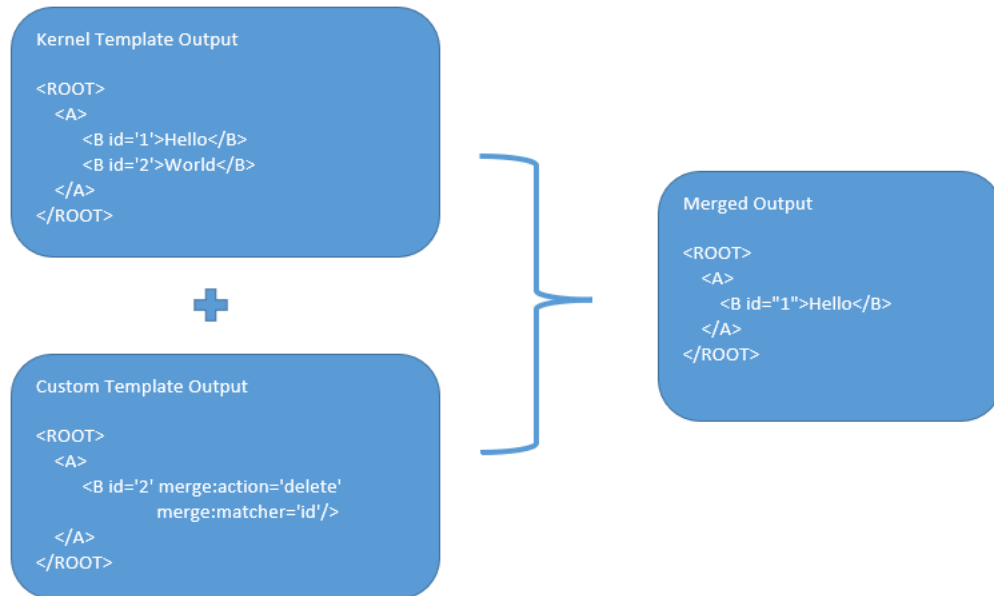

- [Match strategy](#)
- [Override](#)
- [Replace](#)
- [Delete](#)

11.1.1 Match strategy

Matcher attribute must be used when merge action has to be performed for specific element.

Syntax: `merge:matcher='<ATTRIBUTE_NAME>'`

Figure 11-2 Match strategy

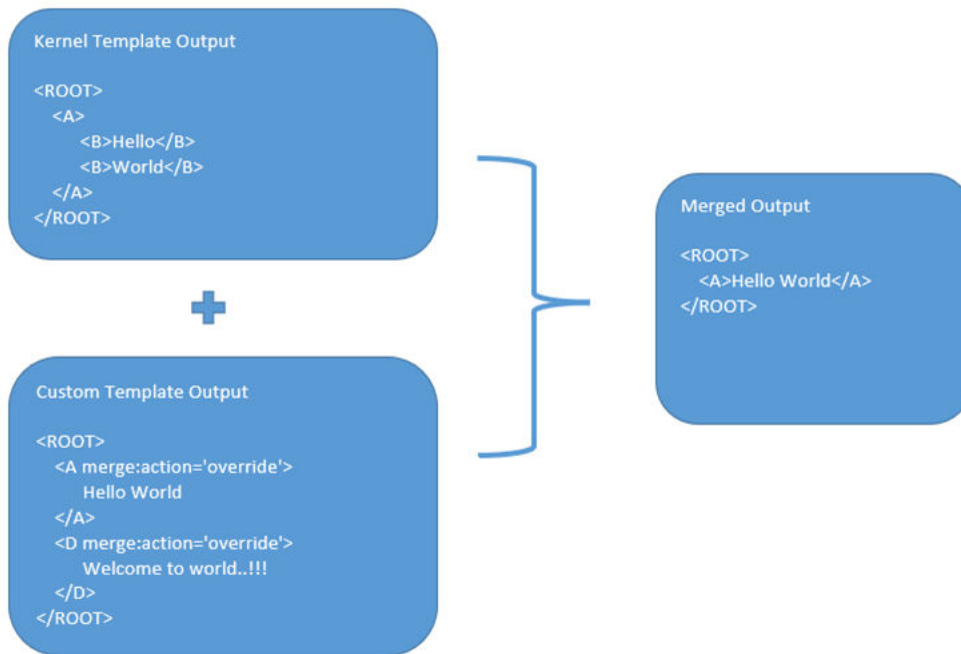

11.1.2 Override

Replaces the original element with the patch element only if it exists in kernel/mock template.

Syntax: `merge:action='override'`

Figure 11-3 Override

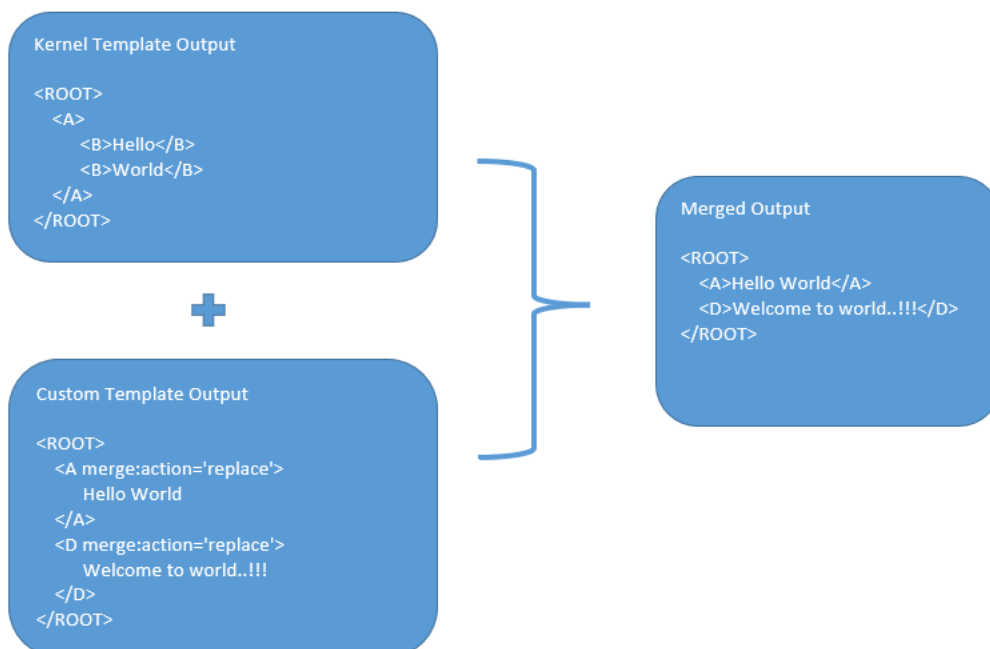

11.1.3 Replace

Replaces the original element with the patch element or creates the element if it does not exist in kernel/mock template.

Syntax: `merge:action='replace'`

Figure 11-4 Replace

11.1.4 Delete

Deletes the original element.

Syntax: `merge:action='delete'`

Figure 11-5 Delete

12

Audit Purging / Archiving

Purging/Archiving of audit data is done on the basis of retention policy.

This process uses plato-batch-server for Job execution.

The following steps are required to schedule purging/archiving job (routingHubAuditRetentionJob) once cmc-obrh-services and plato-batch-server is UP and RUNNING:

1. On **Home** screen, click **Task Management**. Under **Task Management** menu, click **Configure Tasks**.
2. Select **Schedule** option.
3. Select **Task Name** as routingHubAuditRetentionJob and **Task Trigger Name** will be generated automatically.
4. Specify the CRON expression to daily EOD.

In order to resolve table space issue of Audit table (CMC_RH_AUDIT_EVENT_LOG), Database Management Team has to configure database job which should be triggered after routingHubAuditRetentionJob. This database job can be redefining the table (DBMS_REDEFINITION) after purging/archiving is done or other approach. So, the unused LOB segment space can be released. And in order to resolve table space issue of Audit history table (CMC_RH_AUDIT_EVENT_LOG_HISTORY), Database Management Team has to configure database job to truncate table periodically basis.

13

Multipart Request

This topic provides the sample template for the multipart request

Example 13-1 Multipart Request

```
[
  {
    "key": "file",
    "type": "FILE",
    "value": "$body.files.get(0).file"
  },
  {
    "key": "name",
    "type": "TEXT",
    "value": "$body.name"
  }
]
```

14

Dashboard

This topic provides information about dashboard widgets.

Routing Health Indicator Widget

The user can view the metric information Successful calls vs Failed calls ratio of each routing.

 **Note:**

For failed calls, refer to the calls that are failed due to timeout issue.

Figure 14-1 Routing Health Indicator Widget

15

Transformation Type

This topic provides the information about the transformation types.

Velocity

Velocity is a Java-based template engine. It is used to generate XML files, SQL, PostScript, and most other text-based formats.

Note:

In Routing Hub, velocity is used to generate JSON and XML files.

- Using **\$body**, user can access request/response body.
Syntax: \$body.fieldName
Example: \$body.branchCode
- Using **\$headers**, user can access request/response headers.
Syntax: \$headers["fieldName"][0]
Example: \$headers["branchCode"][0]
- Using **\$bodyAsString**, user can access response body as string.
Syntax: \$bodyAsString
- Below are some available extension methods:
 - Date Conversion
Syntax: \$dateUtil.convert(inputDate, fromPattern, toPattern)
Parameters:
 - * inputDate - String
 - * fromPattern - String
 - * toPattern - String**Returns:** String
Refer to <https://docs.oracle.com/javase/8/docs/api/java/text/SimpleDateFormat.html> for different patterns
 - Default Value
Syntax: \$custom.defaultValue(inputValue, defaultValue)
Parameters:
 - * inputValue - Object
 - * defaultValue - String**Returns:** Object
 - Null Check

Syntax: \$custom.isNull(inputValue)

Parameters:

* inputValue - Object

Returns: Boolean

- Random Number

Syntax: \$mathUtil.getRandom()

Returns: Object of Random class (java.util.Random)

- Xml Tool

Syntax: \$xml.methodName()

Refer to <https://velocity.apache.org/tools/3.1/apidocs/org/apache/velocity/tools/generic/XmlTool.html>

- Date Tool

Syntax: \$date.methodName()

Refer to <https://velocity.apache.org/tools/3.1/apidocs/org/apache/velocity/tools/generic/DateTool.html>

- Json Tool

Syntax: \$json.methodName()

Refer to <https://velocity.apache.org/tools/3.1/apidocs/org/apache/velocity/tools/generic/JsonTool.html>

- Math Tool

Syntax: \$math.methodName()

Refer to <https://velocity.apache.org/tools/3.1/apidocs/org/apache/velocity/tools/generic/MathTool.html>

- Number Tool

Syntax: \$number.methodName()

Refer to <https://velocity.apache.org/tools/3.1/apidocs/org/apache/velocity/tools/generic/NumberTool.html>

- Escape Tool

Syntax: \$esc.methodName()

Refer to <https://velocity.apache.org/tools/3.1/apidocs/org/apache/velocity/tools/generic/EscapeTool.html>

- Serialization of object into its equivalent Json representation

Syntax: \$custom.toJson(src)

Parameters:

* src - Object

Returns: String

- Get additional field's value based on fieldname

Syntax: \$custom.getFieldValueById(jsonString, fieldname)

Parameters:

* jsonString – String

* fieldname - String

Returns: String

- Get list of additional fields based on fieldname prefix
Syntax: `$custom.getAdditionalFieldSetByType(jsonString,prefixval)`

Parameters:

- * jsonString - String
- * prefixval - String

Returns: String

- If issue occurred with hyphen in velocity template of Request or Response Transformation, then use get method.

Example:

```
<FCUBS_BODY>
  <Customer-IO>
    <CUSTNO>003942</CUSTNO>
  </Customer-IO>
</FCUBS_BODY>
```

If `$in.FCUBS_BODY.Customer-IO.CUSTNO` does not work ,
use `$in.FCUBS_BODY.get("Customer-IO").CUSTNO` to get customer number.

XSLT

XSLT is a language for transforming XML documents into other XML documents, or other formats such as HTML for web pages, plain text or XSL formatting objects, which may subsequently be converted to other formats, such as PDF, PostScript and PNG.

**Note:**

In Routing Hub, XSLT is used to transform arbitrary XML to JSON.

JSLT

JSLT is a complete query and transformation language for JSON.

16.1 Token Generation

This topic provide information about the Token Generation.

PlatoJWTAuth endpoint signature -

- **Path:** /platojwtauth
- **Headers:**
 - appld : SECSRV001
 - Content-Type : application/json
- **Request Body:**

```
{  
  "username": "",  
  "password": ""  
}
```

– Username and password is base64 encoding of plaintext.

- **Response Body:**

```
{  
  "token": "",  
  "userAlreadyLoggedIn": "Y",  
  "expires_in": 3180,  
  "home_entity_id": "DEFAULTENTITY",  
  "multi_entity_admin": "N",  
}
```

```
    "multi_entity_admin_locale": ""
  }
```

Refer the below sample screenshots:

Figure 16-1 Headers

Figure 16-2 Request Payload

Figure 16-3 Response Payload

16.2 Synchronous Dispatch API Specification

This topic provides information about the Synchronous Dispatch API Specification.

Dispatch endpoint is the single entry-point for invoking the routes configured in Oracle Banking Routing Hub for services of a Service Consumer.

Dispatch Endpoint signature -

- **Method:** POST / GET
- **Path:** /route/dispatch
- **Headers:**
 - appid : CMNCORE
 - entityId : DEFAULTENTITY

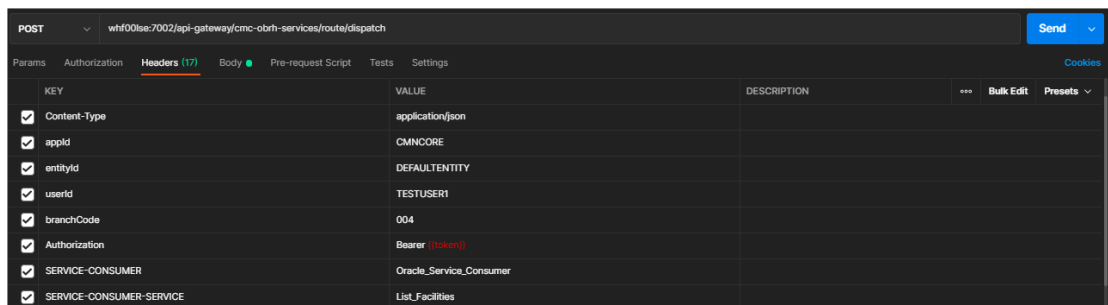

- userId : <user id>
 - branchCode : <branch code>
 - Authorization : Bearer <Token>
 - SERVICE-CONSUMER : <name of service consumer>
 - SERVICE-CONSUMER-SERVICE : <name of service consumer service>
- **Request Body:**
 - Any valid JSON/XML payload which shall act as input to the transformation template in request transformer.
 - **Response Body:**

```
{
  "data": {}
  "messages": {}
}
```

- If the route invocation succeeds, data JSON member would contain the transformed (optional) response of the provided service. If it is a provided web service and no response transformation template is supplied, XML Soap Body of response would be converted into JSON object and sent in data JSON member.
- If the route invocation fails due to misconfigured route or connection time out to ServiceProviderImpl or some other reason, relevant error messages would be sent in messages JSON member. In that case, data JSON member would be null or empty.

Examples: Refer the below screenshots of route dispatch for Service-Consumer **Oracle_Service_Consumer** and Service-Consumer Service **List_Facilities**.

Figure 16-4 Headers

KEY	VALUE	DESCRIPTION
<input checked="" type="checkbox"/> Content-Type	application/json	
<input checked="" type="checkbox"/> appld	CMNCORE

16.3 Asynchronous Dispatch API Specification

This topic provide information about the Asynchronous Dispatch API Specification.

Dispatch endpoint is the single entry-point for invoking the routes configured in Oracle Banking Routing Hub for services of a Service Consumer.

Dispatch endpoint signature -

- **Path:** /route/dispatch
- **Query Params:**

- isAsync : true
- **Headers:**
 - appld : CMNCORE
 - entityId : DEFAULTENTITY
 - userId : <user id>
 - branchCode : <branch code>
 - Authorization : Bearer <Token>
 - SERVICE-CONSUMER : <name of service consumer>
 - SERVICE-CONSUMER-SERVICE : <name of service consumer service>
- **Request Body:**
 - Any valid JSON/XML payload which shall act as input to the transformation template in request transformer.
- **Response Body:**

```
{
  "data": { "correlationId" : "" },
  "messages": {}
}
```

Example: Refer the below screenshots of route dispatch for Service-Consumer **Oracle_Service_Consumer** and Service-Consumer Service **List_Facilities**.

Figure 16-8 Query Params

Figure 16-9 Headers

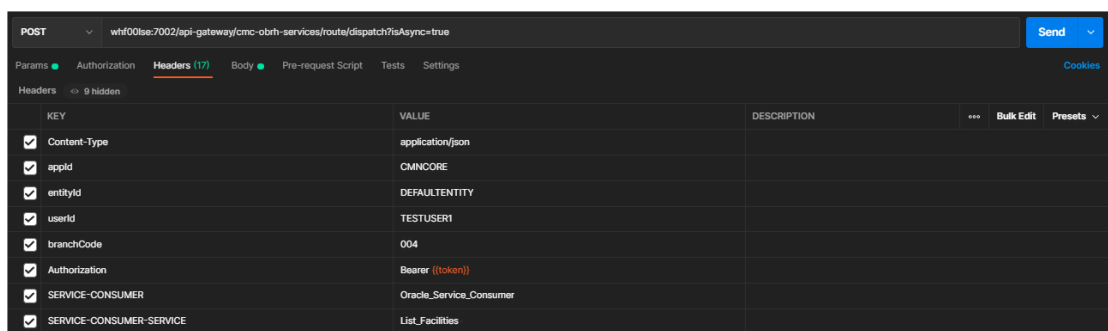

Figure 16-10 Request Payload

Figure 16-11 Response Payload

16.4 Asynchronous Dispatch Response API Specification

This topic provide information about the Asynchronous Dispatch Response API Specification.

Response endpoint signature -

- **Path:** /route/dispatchResponse/{Correlation-Id}
 - Correlation-Id will be coming from the response of dispatch endpoint.
- **Headers:**
 - appId : CMNCORE
 - entityId : DEFAULTENTITY
 - userId : <user id>
 - branchCode : <branch code>
 - Authorization : Bearer <Token>
- **Response Body:**

```

{
  "data": {}
}

```

```
"messages": {}
}
```

- If the route invocation succeeds, data JSON member would contain the transformed (optional) response of the provided service. If it's a provided web service and no response transformation template is supplied, XML Soap Body of response would be converted into JSON object and sent in data JSON member.
- If the route invocation fails due to misconfigured route or connection time out to ServiceProviderImpl or some other reason, relevant error messages would be sent in messages JSON member. In that case, data JSON member would be null or empty.

Example: Refer the below screenshots of route dispatch for Service-Consumer **Oracle_Service_Consumer** and Service-Consumer Service **List_Facilities**.

6      "codes": [
7        {
8          "args": null,
9          "arg": null,
10         "information": false,
11         "override": false,
12         "error": false,
13         "overrideAuthLevelsRead": null,
14         "desc": "Unknown ServiceConsumerService[list_facilities ] for ServiceConsumer[Oracle_Service_consumer]",
15         "language": null,
16         "code": null,
17         "type": null
18       }
19     ]
20   },
21   "requestId": null,
22   "httpStatusCode": "BAD_REQUEST",
23   "overrideAuthLevelsRead": null
24 }

```

16.5 Template evaluation API Specification

This topic provide information about the Template evaluation API Specification.

Template evaluation endpoint will return the evaluated output of transformation template.

End-user can validate the template based on the returned output.

Template evaluation endpoint signature -

- **Method:** POST
- **Path :** /template/evaluate
- **Headers:**
 - applId : CMNCORE
 - entityId : DEFAULTENTITY
 - userId : <user id>
 - branchCode : <branch code>
 - Authorization : Bearer <Token>
 - SERVICE-CONSUMER : <name of service consumer>

- SERVICE-CONSUMER-SERVICE : <name of service consumer service>
- SERVICE-TRANSFORMATION : <name of service transformation>
- **Query Parameters:**
 - transformationType : REQUEST / RESPONSE / MOCK_RESPONSE
 -  **Note:**
Default value is REQUEST if not specified.
- **Request Body:**
 - Any valid JSON / XML payload which shall act as input to the transformation template in request transformer.
- **Response Body:**

```
{  
  "data": {}  
  "messages": {}  
}

Oracle Banking Routing Hub VM Arguments

This topic provides information about Oracle Banking Routing Hub VM arguments.

Common Core Managed Server

```
-Dcmc-obrh-services.server.port=<SERVER_PORT>
-Dobrh.db.jndi=<CMNCORE_JNDI>
-Dcmc-obrh-services.oic.oauth.scope=<OIC_OAUTH_SCOPE>
-Dcmc-obrh-services.oic.secretStore.url=<OIC_SECRET_STORE_URL>
-Dcmc-obrh-services.oic.idcs.url=<OIC_IDCS_URL>
-Dcmc-obrh-services.audit.retention.days=<AUDIT_RETENTION_POLICY_DAYS>
-Dcmc-obrh-services.audit.retention.archival=<AUDIT_RETENTION_POLICY_APPROACH>
(Y for archiving and N for purging)
```

To receive routing failure mail notification via plato-alerts-management-service, then set the following property to true, (Default value is false)

```
-Dobrh.alerts.enabled=<ALERTS_ENABLED>
```

In order to change the behavior of auditing, then set the below property from predefined values (DEFAULT / KAFKA / LOG / OFF), (Default value is DEFAULT)

```
-Dobrh.audit.type=<AUDIT_TYPE>
```

Note:

For KAFKA option, cmc-obrh-kafka-consumer service needs to be deployed.

In order to overwrite the customization that is not part of configuration JSON,

```
-Dobrh.import.override=<IMPORT_OVERWRITE> (Default value is false)
```

To use Custom Keystore and Truststore for HTTPS scheme,

```
-Dobrh.keystore.password.encoded=<IS_PASSWORD_ENCODED> (true, if password is base 64 encoded)
-Dobrh.truststore.path=<TRUSTSTORE_PATH>
-Dobrh.truststore.password=<TRUSTSTORE_PASSWORD>
-Dobrh.usekeystore=<USE_KEYSTORE> (true, if keystore is required along with truststore)
-Dobrh.keystore.path=<KEYSTORE_PATH> -
Dobrh.keystore.password=<KEYSTORE_PASSWORD>
-Dobrh.keystore.alias=<KEYSTORE_ALIAS>
-Dobrh.keystore.aliaspassword=<KEYSTORE_ALIAS_PASSWORD>
-Dobrh.ssl.protocol=<SSL_PROTOCOL> (Default value is TLS)
```

To perform the tomcat deployment,

```
-Dobrh.server.isJavaEE=false (mandatory)
-Dobrh.taskexecutor.corepoolsize=<CORE_POOLSIZE> (default is 50) (optional)
```

```
-Dobrh.taskexecutor.maxpoolsize=<MAX_POOLSIZE> (default is 50) (optional)
-Dobrh.taskexecutor.queuecapacity=<QUEUE_CAPACITY> (default is 100) (optional)
```

To set Proxy settings for HTTPS,

```
-Dhttps.proxyHost=<PROXY_HOST_NAME>
-Dhttps.proxyPort=<PROXY_PORT>
-Dhttps.nonProxyHosts=<NON_PROXY_HOST_LIST>
-Dhttp.nonProxyHosts=<NON_PROXY_HOST_LIST>
```

 **Note:**

As per the Java Networking documentation, HTTPS protocol handler uses the same as the http handler (http.nonProxyHosts). in case of Weblogic, http.nonProxyHosts do not work for some reason. So, use https non proxy host argument (https.nonProxyHosts).

To set logger level,

```
- Dplato.service.logging.level=
```

To do SSL based SOAP provider calls and if RoutingHub is deployed on weblogic environment,

```
-DUseSunHttpHandler=true
```

 **Note:**

This property will enforce WebLogic Server to use SUN SSL implementation (javax package) rather than the WebLogic one.

Plato Core Managed Server

Oracle Banking Routing Hub is using Multipart for Import feature. By default, spring supports max 1MB file size and 10MB request size for Multipart.

To import bigger files,

```
plato-api-gateway.multipart.max-file-size=<MAX_FILE_SIZE> (default is 1MB)
plato-api-gateway.multipart.max-request-size=<MAX_REQUEST_SIZE> (default is 10MB)
```

 **Note:**

-1 for no size constraint

Example,

```
plato-api-gateway.multipart.max-file-size=-1
plato-api-gateway.multipart.max-request-size=-1
```

CMC-OBRH-KAFKA-CONSUMER

```
-Dcmc-obrh-kafka-consumer.server.port=<SERVER_PORT>
```
