Purpose

This guide is designed to help acquaint you with the Oracle Banking Digital Experience application. This guide provides answers to specific features and procedures that the user need to be aware of the module to function successfully.

Audience

This document is intended for the following audience:

- Customers
- Partners

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customer access to and use of Oracle support services will be pursuant to the terms and conditions specified in their Oracle order for the applicable services.

Critical Patches

Oracle advises customers to get all their security vulnerability information from the Oracle Critical Patch Update Advisory, which is available at [Critical Patches, Security Alerts and](#)

Bulletins. All critical patches should be applied in a timely manner to ensure effective security, as strongly recommended by [Oracle Software Security Assurance](#).

Diversity and Inclusion

Oracle is fully committed to diversity and inclusion. Oracle respects and values having a diverse workforce that increases thought leadership and innovation. As part of our initiative to build a more inclusive culture that positively impacts our employees, customers, and partners, we are working to remove insensitive terms from our products and documentation. We are also mindful of the necessity to maintain compatibility with our customers' existing technologies and the need to ensure continuity of service as Oracle's offerings and industry standards evolve. Because of these technical constraints, our effort to remove insensitive terms is ongoing and will take time and external cooperation.

Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
<code>monospace</code>	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

Related Resources

For more information on any related features, refer to the following documents:

- [Oracle Banking APIs Installation Manuals](#)

Screenshot Disclaimer

Personal information used in the interface or documents is dummy and does not exist in the real world. It is only for reference purposes.

Acronyms and Abbreviations

The list of the acronyms and abbreviations used in this guide are as follows:

Table 1 Acronyms and Abbreviations

Abbreviation	Description
OBAPI	Oracle Banking APIs

1

Objective and Scope

- [Background](#)
- [Objective and Scope](#)

1.1 Background

JMS (Java Message Service) is an API that provides the facility to create, send and read messages. It provides loosely coupled, reliable communication. Messaging enables distributed communication that is loosely coupled. A component sends a message to a destination, and the recipient can retrieve the message from the destination. However, the sender and the receiver do not have to be available at the same time in order to communicate. In fact, the sender does not need to know anything about the receiver; nor does the receiver need to know anything about the sender. The sender and the receiver need to know only which message format and which destination to use. JMS configuration is required to send message (request) to external system and receive processed message (response) from external system.

1.2 Objective and Scope

Define a common set of messaging concepts and facilities. The scope of this document is to provide steps to configure foreign server for connecting external system using JNDI provider and configure JMS queue to receive data from external system. Foreign server is used to send message to external system with help of JNDI Initial, JNDI connection url, JNDI connection factory and JNDI destination. To configure JMS receiver queue in web logic we have to create JMS server and JMS module. Where JMS module include creation of JMS connection factory, JMS queue and SubDeployment.

2

JMS Step 1 - Create foreign server in a weblogic server

- [Introduction and Definitions](#)

2.1 Introduction and Definitions

A Foreign Server represents a JNDI provider that is outside WebLogic server. It contains information that allows a local WebLogic Server instance to reach a remote JNDI provider, thereby allowing for a number of foreign connection factory and destination objects to be defined on one JNDI directory.

- [Create a JMS Module](#)
- [Create a foreign Server](#)
- [Configure additional properties for the new foreign server](#)
- [Create foreign connection factories](#)
- [Create foreign destinations](#)

2.1.1 Create a JMS Module

- Services → Messaging → JMS Modules
- Select **New**
- Name: HostSystemModule
- Leave the other options empty
- Targets: obapi_server
- Press **Next**
- Leave “Would you like to add resources to this JMS system module” unchecked and press **Finish** .

New Delete		Showing 1 to 7 of 7 Previous Next		
☐ Name	Type	Scope	Domain Partitions	
☐ AsyncFailureLogJMS	JMSSystemResource	Global		
☐ AuditJMS	JMSSystemResource	Global		
☐ EndPointJMSModule	JMSSystemResource	Global		
☐ extDfaceJMSModule	JMSSystemResource	Global		
☐ FileUploadJMS	JMSSystemResource	Global		
☐ HostSystemModule	JMSSystemResource	Global		
☐ UBSSystemModule	JMSSystemResource	Global		
New Delete		Showing 1 to 7 of 7 Previous Next		

2.1.2 Create a foreign Server

- Services → Messaging → JMS Modules
- Select HostSystemModule and press **New**
- Select Foreign Server and **Next**
- Name: ForeignServer (Once you create a foreign server, you cannot rename it. Instead, you must delete it and create another one that uses the new name) and Click **Next** to proceed to the targeting page or click **Finish** to create the foreign server.

Summary of Resources

New	Delete	Showing 1 to 1 of 1 Previous Next			
☐	Name	Type	JNDI Name	Subdeployment	Targets
☐	ForeignServer	Foreign Server	N/A	Default Targeting	obdx_server
New	Delete	Showing 1 to 1 of 1 Previous Next			

2.1.3 Configure additional properties for the new foreign server

- Services → Messaging → JMS Modules
- Select HostSystemModule
- Click on ForeignServer
- On the Configuration → General tab
- Enter Following details.
 - JNDI Initial: enter the name of the class that must be instantiated to access the JNDI provider. For example (weblogic.jndi.WLInitialContextFactory)
 - JNDI Connection URL: enter the URL that WebLogic Server uses to contact the JNDI provider. (http://IP:port)
- Click **Save**.

Configuration Subdeployment Notes

General Destinations Connection Factories

Save

A foreign server represents a JNDI provider that resides outside a WebLogic Server. It contains information that allows WebLogic Server to reach the remote JNDI provider. This way, a number of connection factory and destination objects (queues or topics) can be defined on one JNDI directory. Use this page to configure a foreign server.

Name:	ForeignServer	The name of this foreign server. More Info...
JNDI Initial Context Factory:	weblogic.jndi.WLInitialCont	The name of the class that must be instantiated to access the JNDI provider. This class name depends on the JNDI provider and the vendor that are being used. More Info...
JNDI Connection URL:	http://mum00aoz.in.oracle.com:6003	The URL that WebLogic Server will use to contact the JNDI provider. The syntax of this URL depends on which JNDI provider is being used. For WebLogic JMS, leave this field blank if you are referencing WebLogic JMS objects within the same cluster. More Info...
JNDI Properties Credential:		Any Credentials that must be set for the JNDI provider. These Credentials will be part of the properties will be passed directly to the constructor for the JNDI provider's InitialContext class. Note: For secure credential management, use the Credential field. Using the Properties field results in the credential being stored and displayed as originally entered More

2.1.4 Create foreign connection factories

- Services → Messaging → JMS Modules
- Select HostSystemModule
- Click on ForeignServer
- On the Configuration → **Connection** Factories tab press **New**
- Enter Following details
 - Name: enter a name for the foreign connection factory.
 - Local JNDI Name: specify the name that the remote object will be bound to in the local server's JNDI tree and is used to look up the object on the local server.
 - Remote JNDI Name: specify the name of the remote object that will be looked up in the remote JNDI directory.
- Click **OK**.

Settings for ForeignConnectionFactory

Configuration Notes

Save

A foreign connection factory is a connection factory that resides on another server instance and is accessible via JNDI. A remote connection factory can be used to refer to another instance of WebLogic Server running in a different cluster or server, or a foreign provider, as long as that provider supports JNDI.

Use this page to create a foreign connection factory.

Name: ForeignConnectionFactory The name of this foreign connection factory. [More Info...](#)

Local JNDI Name: HostQCF The name that the remote object will be bound to in the local server's JNDI tree. This is the name that should be used to look up the object on the local server. [More Info...](#)

Remote JNDI Name: HostQCF The name of the remote object that will be looked up in the remote JNDI directory. [More Info...](#)

Settings for ForeignServer

Configuration Subdeployment Notes

General Destinations **Connection Factories**

A foreign connection factory represents a connection factory that resides on another server, and which is accessible via JNDI. A remote connection factory can be used to refer to another instance of WebLogic Server running in a different cluster or server, or a foreign provider, as long as that provider supports JNDI.

This page summarizes the foreign connection factories that have been created for this domain.

2.1.5 Create foreign destinations

- Services → Messaging → JMS Modules
- Select HostSystemModule

- Click on ForeignServer
- On the Configuration → Destination tab press **New**
- Enter Following details
 - Name: enter a name for the foreign destination.
 - Local JNDI Name: specify the name that the remote object will be bound to in the local server's JNDI tree and is used to look up the object on the local server.
 - Remote JNDI Name: specify the name of the remote object that will be looked up in the remote JNDI directory.
- Click **Ok**.

Settings for ForeignDestination

Configuration Notes

Save

A foreign destination (topic or queue) is a destination on a remote server. When this destination is looked up on the local server, a look-up will be performed automatically on the remote JNDI directory, and the object will be returned from that directory.

Use this page to configure a foreign destination.

Name: ForeignDestination The name of this foreign destination. [More Info...](#)

Local JNDI Name: HostProcess The name that the remote object will be bound to in the local server's JNDI tree. This is the name that should be used to look up the object on the local server. [More Info...](#)

Remote JNDI Name: HostProcess The name of the remote object that will be looked up in the remote JNDI directory. [More Info...](#)

Configuration Subdeployment Notes

General Destinations Connection Factories

A foreign destination (topic or queue) can be found on a remote server. When this destination is looked up on the local server, a look-up will be performed automatically on the remote JNDI directory, and the object will be returned from that directory.

This page summarizes the foreign destinations that have been created for this domain.

3

JMS Step 2 - How to Create a Simple JMS Queue in Weblogic Server

- [Introduction and Definitions](#)

A JMS queue in Weblogic Server is associated with a number of additional resources:

3.1 Introduction and Definitions

A JMS queue in Weblogic Server is associated with a number of additional resources:

JMS Server

A JMS server acts as a management container for resources within JMS modules. Some of its responsibilities include the maintenance of persistence and state of messages and subscribers. A JMS server is required in order to create a JMS module.

JMS Module

A JMS module is a definition which contains JMS resources such as queues and topics. A JMS module is required in order to create a JMS queue.

Subdeployment

JMS modules are targeted to one or more WLS instances or a cluster. Resources within a JMS module, such as queues and topics are also targeted to a JMS server or WLS server instances. A subdeployment is a grouping of targets. It is also known as advanced targeting.

Connection Factory

A connection factory is a resource that enables JMS clients to create connections to JMS destinations.

JMS Queue

A JMS queue (as opposed to a JMS topic) is a point-to-point destination type. A message is written to a specific queue or received from a specific queue.

The objects used in this example are:

Table 3-1

Object Name	Type
ExtXfaceJMSServer	JMS Server
extXfaceJMSModule	JMS Module
extXfaceSubdeployment	Subdeployment
ReceiverQCF	Connection Factory
ReceiverQueue	JMS Queue

1. Configuration Steps-The following steps are done in the WebLogic Server Console, beginning with the left-hand navigation menu.
Create Persistent store-

- Here you have to Create a new persistent store (Once the persistent store is created that can be used for both sender and receiver server. Hence there is no need to create a different persistent store for two different servers.) Hence Before creating a JMS server you need to create the Persistent store if its not already created. Follow the steps shown below for creating a persistent store.
- Select **Services** → **Persistent Stores**.

First Select Lock & Edit as shown-

- Select new and the select create FileStore from the list as shown below-

Customize this table

3.1.3 Create a SubDeployment

A subdeployment is not necessary for the JMS queue to work, but it allows you to easily target subcomponents of the JMS module to a single target or group of targets. We will use the subdeployment in this example to target the following connection factory and JMS queue to the JMS server we created earlier.

- Services → Messaging → JMS Modules.
- Select **ExtbfacerReceiverModule**.

Settings for ExtxfaceReceiverModule

Configuration **Subdeployments** Targets Security Notes

This page displays subdeployments created for a JMS system module. A subdeployment is a mechanism by which JMS module resources (such as queues, topics, and connection factories) are grouped and targeted to a server resource (such as JMS servers, server instances, or cluster).

Connection Factory Properties

The following properties will be used to identify your new connection factory. The current module is ExtfaceReceiverModule.

* Indicates required fields

What would you like to name your new connection factory?

* Name:

What JNDI Name would you like to use to look up your new connection factory?

JNDI Name:

The Connection Factory Subscription Sharing Policy Subscribers can be used to control which subscribers can access new subscriptions. Should subscriptions created using this factory be sharable?

Subscription Sharing Policy:

The Client ID Policy indicates whether more than one JMS connection can use the same Client ID. Oracle recommends setting the Client ID policy to Unrestricted if sharing durable subscribers. Subscriptions created with different Client ID policies are always treated as independent subscriptions. What Client ID Policy would you like to use?

Client ID Policy:

A connection factory can limit the number of messages that can be queued for an asynchronous session. Should this connection factory impose a limit?

Maximum Messages per Session:

- Select **Default Targeting Enabled** and Press **Finish**

- The connection factory should be listed on the following page with **Default Targeting** as Subdeployment and WebLogic cluster as the target.

3.1.5 Create a JMS Queue

- Services → Messaging → JMS Modules
- Select **ExtxfaceReceiverModule** and Click **New**.

The following properties will be used to target your new JMS system module resource

Use this page to select a subdeployment to assign this system module resource. A subdeployment is a mechanism by which JMS resources are grouped and targeted to a server instance, cluster, or SAF agent. If necessary, you can create a new subdeployment by clicking the **Create a New Subdeployment** button. You can also reconfigure subdeployment targets later by using the parent module's subdeployment management page.

Select the subdeployment you want to use. If you select (none), no targeting will occur.

Subdeployments: ExtxfaceReceiverSubDep Create a New Subdeployment

What targets do you want to assign to this subdeployment?

Targets :

JMS Servers
☐ AsyncFailureLogJMSServer
☐ AuditJMSServer
☒ ExtxfaceReceiverServer
☐ ExtxfaceSenderServer
☐ FileUploadJMSServer
☐ ReportsJMSServer

The **ReceiverQueues** should be listed on the following page with Sub-deployment as **ExtxfaceReceiverSubDep** and target as **ExtxfaceReceiverServer**.

JMS Creation

- [Sample creation of Queue](#)
- [Sample Creation of Topic](#)
- [Sample creation of Connection Factory](#)

4.1 Sample creation of Queue

1. Step 1:
Go to the path where you want to create the Queue.
(E.g., Home → Services → Messaging → JMS Modules → MultipleTransactionApprovalJMSModule)
Get the lock and edit in WebLogic.
Click on **New**.
Then select uniform Queue from the options.

WebLogic: MultipleTransactionApprovalJMSModule

Choose the type of resource you want to create.

Use these pages to create resources in a JMS system module, such as queues, topics, templates, and connection factories.

Depending on the type of resource you select, you are prompted to enter basic information for creating the resource. For targetable resources, the stand-alone queues and topics, connection factories, distributed queues and topics, foreign servers, and JMS SAA destinations, you can also proceed to targeting pages for selecting appropriate server targets. You can also associate targetable resources with subdeployments, which is an advanced mechanism for grouping JMS module resources and the members to server resources.

☐ Connection Factory	Defines a set of connection configuration parameters that are used to create connections for JMS clients. More Info...
☐ Queue	Defines a point-to-point destination type, which are used for asynchronous peer communications. A message delivered to a queue is distributed to only one consumer. More Info...
☐ Topic	Defines a publish/subscribe destination type, which are used for asynchronous peer communications. A message delivered to a topic is distributed to all topic consumers. More Info...
☒ Distributed Queue	Defines a set of queues that are distributed on multiple JMS servers, but which are accessible as a single, logical queue to JMS clients. More Info...
☐ Distributed Topic	Defines a set of topics that are distributed on multiple JMS servers, but which are accessible as a single, logical topic to JMS clients. More Info...
☐ Foreign Server	Defines foreign messaging providers or remote WebLogic Server instances that are not part of the current domain. More Info...
☐ Queue	Controls the allocation of system resources available to destinations. More Info...
☐ Destination Sort Key	Defines a unique sort order that destinations can apply to incoming messages. More Info...
☐ JMS Template	Defines a set of default configuration settings for multiple destinations. More Info...
☐ SAA Supported Destinations	Defines a collection of supported store-and-forward (SAF) destinations. A SAF destination is a representation of a queue or topic in a remote server instance or cluster that is imported into the local cluster or server instance, so that the local server instance or cluster can send messages to the remote server instance or cluster. More Info...

2. Step 2 : Then fill in the data such as Name of the Queue and the JNDI Name from the Table given at the start of the document. Then click on **Next**.

Create a New JPS System Module Resource

[Back](#) [Next](#) [Finish](#) [Cancel](#)

JPS Distributed Destination Properties

The following properties will be used to identify your new Distributed Queue. The current module is MultipleTransactionApprovalJMS

* Indicates required fields

What would you like to name your new destination?

* Name:

What J2EE Name would you like to use to look up your new destination?

J2EE Name:

Queue members may be either created uniformly from a common configuration, or created and weighted individually to fine tune performance. How would you like to create queue members?

Destination Type:

Templates provide an efficient means of defining multiple destinations with similar configuration values. Would you like to use a template for this destination?

Template:

5.7 GCIF Functionality

- [Onboarding Draft updation functionality](#)

- Access point functionality
- Report mapping functionality at GCIF level
- GCIF onboarding draft functionality
- GCIF party functionality
- GCIF processing party
- GCIF profile creation and updation functionality
- GCIF report mapping functionality at user level
- GCIF Rule functionality
- GCIF USER ACCESS functionality
- GCIF USERGROUP functionality
- GCIF User create and update functionality
- GCIF workflow create functionality
- GCIF Onboarding Draft cancellation functionality
- Subdeployment View

5.7.1 Onboarding Draft updation functionality

Updation of GCIF Status after the GCIF is System Rejected by approval.

Sr No.	Name	Type	JNDI Name	Subdeployments	Target
1.	GcifOnboardingDraftUpdateQCF	ConnectionFactory	GcifOnboardingDraftUpdateQCF	Default Targeting	obdx_cluster
2.	GcifOnboardingDraftUpdateQueue	Uniform Distributed Queue	GcifOnboardingDraftUpdateQueue	Default Targeting	obdx_cluster

5.7.2 Access point functionality

Changes to Party Account Access is handled by these queues.

Sr No.	Name	Type	JNDI Name	Subdeployments	Target
1.	GCIF_ACCESS_POINT_UPDATE_QCF	ConnectionFactory	GCIF_ACCESS_POINT_UPDATE_QCF	Default Targeting	obdx_cluster
2.	GCIF_ACCESS_POINT_UPDATE_QUEUE	Uniform Distributed Queue	GCIF_ACCESS_POINT_UPDATE_QUEUE	Default Targeting	obdx_cluster
3.	GCIF_ACCESS_SUBMIT_QCF	ConnectionFactory	GCIF_ACCESS_SUBMIT_QCF	Default Targeting	obdx_cluster
4.	GCIF_ACCESS_SUBMIT_QUEUE	Uniform Distributed Queue	GCIF_ACCESS_SUBMIT_QUEUE	Default Targeting	obdx_cluster

5.7.3 Report mapping functionality at GCIF level

Sr No.	Name	Type	JNDI Name	Subdeployments	Targest
1.	GCIF_GCIFRE PORT_MAPPIN G_QCF	Connection Factory	GCIF_GCIFRE PORT_MAPPIN G_QCF	Default Targeting	obdx_cluster
2.	GCIF_GCIFRE PORT_MAPPIN G_QUEUE	Uniform Distributed Queue	GCIF_GCIFRE PORT_MAPPIN G_QUEUE	Default Targeting	obdx_cluster

5.7.4 GCIF onboarding draft functionality

Submission of GCIF Onboarding Wizard.

Sr No.	Name	Type	JNDI Name	Subdeployments	Targest
1.	GCIF_ONBOA RDING_DRAFT _QCF	Connection Factory	GCIF_ONBOA RDING_DRAFT _QCF	Default Targeting	obdx_cluster
2.	GCIF_ONBOA RDING_DRAFT _QUEUE	Uniform Distributed Queue	GCIF_ONBOA RDING_DRAFT _QUEUE	Default Targeting	obdx_cluster

5.7.5 GCIF party functionality

Sr No.	Name	Type	JNDI Name	Subdeployments	Targest
1.	GCIF_PARTY_ FINAL_MIGRAT ION_QCF	Connection Factory	GCIF_PARTY_ FINAL_MIGRAT ION_QCF	Default Targeting	obdx_cluster
2.	GCIF_PARTY_ FINAL_MIGRAT ION_QUEUE	Uniform Distributed Queue	GCIF_PARTY_ FINAL_MIGRAT ION_QUEUE	Default Targeting	obdx_cluster
3.	GCIF_PARTY_ MOVEMENT_R EPORT_RESP ONSE_QCF	Connection Factory	GCIF_PARTY_ MOVEMENT_R EPORT_RESP ONSE_QCF	Default Targeting	obdx_cluster
4.	GCIF_PARTY_ MOVEMENT_R EPORT_RESP ONSE_QUEUE	Uniform Distributed Queue	GCIF_PARTY_ MOVEMENT_R EPORT_RESP ONSE_QUEUE	Default Targeting	obdx_cluster

5.7.6 GCIF processing party

Updation of GCIF Processing status based on status of various transactions performed in the individual steps.

Sr No.	Name	Type	JNDI Name	Subdeployments	Targest
1.	GCIF_PROCES SING_STATUS _QCF	Connection Factory	GCIF_PROCES SING_STATUS _QCF	Default Targeting	obdx_cluster
2.	GCIF_PROCES SING_STATUS _QUEUE	Uniform Distributed Queue	GCIF_PROCES SING_STATUS _QUEUE	Default Targeting	obdx_cluster

5.7.7 GCIF profile creation and updation functionality

Sr No.	Name	Type	JNDI Name	Subdeployments	Targest
1.	GCIF_PROFILE _CREATE_QCF	Connection Factory	GCIF_PROFILE _CREATE_QCF	Default Targeting	obdx_cluster
2.	GCIF_PROFILE _CREATE_QUE UE	Uniform Distributed Queue	GCIF_PROFILE _CREATE_QUE UE	Default Targeting	obdx_cluster
3.	GCIF_PROFILE _UPDATE_QCF	Connection Factory	GCIF_PROFILE _UPDATE_QCF	Default Targeting	obdx_cluster
4.	GCIF_PROFILE _UPDATE_QUE UE	Uniform Distributed Queue	GCIF_PROFILE _UPDATE_QUE UE	Default Targeting	obdx_cluster

5.7.8 GCIF report mapping functionality at user level

Sr No.	Name	Type	JNDI Name	Subdeployments	Targest
1.	GCIF_REPORT _MAPPING_QCF	Connection Factory	GCIF_REPORT _MAPPING_QCF	Default Targeting	obdx_cluster
2.	GCIF_REPORT _MAPPING_QUE EUE	Uniform Distributed Queue	GCIF_REPORT _MAPPING_QUE EUE	Default Targeting	obdx_cluster

5.7.9 GCIF Rule functionality

Sr No.	Name	Type	JNDI Name	Subdeployments	Targest
1.	GCIF_RULE_C REATE_QCF	Connection Factory	GCIF_RULE_C REATE_QCF	Default Targeting	obdx_cluster
2.	GCIF_RULE_C REATE_QUEU E	Uniform Distributed Queue	GCIF_RULE_C REATE_QUEU E	Default Targeting	obdx_cluster
3.	GCIF_RULE_D ELETE_QCF	Connection Factory	GCIF_RULE_D ELETE_QCF	Default Targeting	obdx_cluster
4.	GCIF_RULE_D ELETE_QUEU E	Uniform Distributed Queue	GCIF_RULE_D ELETE_QUEU E	Default Targeting	obdx_cluster

Sr No.	Name	Type	JNDI Name	Subdeployments	Targest
5.	GCIF_RULE_UPDATE_QCF	Connection Factory	GCIF_RULE_UPDATE_QCF	Default Targeting	obdx_cluster
6.	GCIF_RULE_UPDATE_QUEUE	Uniform Distributed Queue	GCIF_RULE_UPDATE_QUEUE	Default Targeting	obdx_cluster

5.7.10 GCIF USER ACCESS functionality

Any changes to User account access in GCIF flow will be handled by these queues.

Sr No.	Name	Type	JNDI Name	Subdeployments	Targest
1.	GCIF_USERACCESS_SUBMIT_QCF	Connection Factory	GCIF_USERACCESS_SUBMIT_QCF	Default Targeting	obdx_cluster
2.	GCIF_USERACCESS_SUBMIT_QUEUE	Uniform Distributed Queue	GCIF_USERACCESS_SUBMIT_QUEUE	Default Targeting	obdx_cluster

5.7.11 GCIF USERGROUP functionality

Create and Update UserGroup for a GCIf via Onboarding Wizard.

Sr No.	Name	Type	JNDI Name	Subdeployments	Targest
1.	GCIF_USERGROUP_CREATE_QCF	Connection Factory	GCIF_USERGROUP_CREATE_QCF	Default Targeting	obdx_cluster
2.	GCIF_USERGROUP_CREATE_QUEUE	Uniform Distributed Queue	GCIF_USERGROUP_CREATE_QUEUE	Default Targeting	obdx_cluster
3.	GCIF_USERGROUP_UPDATE_QCF	Connection Factory	GCIF_USERGROUP_UPDATE_QCF	Default Targeting	obdx_cluster
4.	GCIF_USERGROUP_UPDATE_QUEUE	Uniform Distributed Queue	GCIF_USERGROUP_UPDATE_QUEUE	Default Targeting	obdx_cluster

5.7.12 GCIF User create and update functionality

Create and Update User for a GCIf via Onboarding Wizard.

Sr No.	Name	Type	JNDI Name	Subdeployments	Targest
1.	GCIF_USER_CREATE_QCF	Connection Factory	GCIF_USER_CREATE_QCF	Default Targeting	obdx_cluster

Sr No.	Name	Type	JNDI Name	Subdeployments	Targest
2.	GCIF_USER_CREATE_QUEUE	Uniform Distributed Queue	GCIF_USER_CREATE_QUEUE	Default Targeting	obdx_cluster
3.	GCIF_USER_UPDATE_QCF	Connection Factory	GCIF_USER_UPDATE_QCF	Default Targeting	obdx_cluster
4.	GCIF_USER_UPDATE_QUEUE	Uniform Distributed Queue	GCIF_USER_UPDATE_QUEUE	Default Targeting	obdx_cluster

5.7.13 GCIF workflow create functionality

Create and Update Workflow for a GCIF via Onboarding Wizard.

Sr No.	Name	Type	JNDI Name	Subdeployments	Targest
1.	GCIF_WORKFLOW_CREATE_QCF	Connection Factory	GCIF_WORKFLOW_CREATE_QCF	Default Targeting	obdx_cluster
2.	GCIF_WORKFLOW_CREATE_QUEUE	Uniform Distributed Queue	GCIF_WORKFLOW_CREATE_QUEUE	Default Targeting	obdx_cluster
3.	GCIF_WORKFLOW_UPDATE_QCF	Connection Factory	GCIF_WORKFLOW_UPDATE_QCF	Default Targeting	obdx_cluster
4.	GCIF_WORKFLOW_UPDATE_QUEUE	Uniform Distributed Queue	GCIF_WORKFLOW_UPDATE_QUEUE	Default Targeting	obdx_cluster

5.7.14 GCIF Onboarding Draft cancellation functionality

The Following Topic and QCF is used in the below two cases :

1. Used in case of Cancellation of GCIF by maker.
2. Used in case where the GCIF is rejected by one of its approvers.

Sr No.	Name	Type	JNDI Name	Subdeployments	Targest
1.	OnboardingDraftDeleteQCF	Connection Factory	OnboardingDraftDeleteQCF	Default Targeting	obdx_cluster
2.	OnboardingDraftDeleteTopic	Uniform Distributed Queue	OnboardingDraftDeleteTopic	Default Targeting	obdx_cluster

5.7.15 Subdeployment View

Sr No.	Name	Resources	Subdeployment
1	GcifSD		GcifJmsServer

5.8 jpa-cache Functionality

- [jpa-cache Functionality](#)
- [Subdeployment View](#)

5.8.1 jpa-cache Functionality

Sr No.	Name	Type	JNDI Name	Subdeployments	Target
1.	ms/jpa-cache-cf	Connection Factory	jms/jpa-cache-cf	Default Targeting	obdx_cluster
2.	jms/jpa-cache-topic	Uniform Distributed Queue	jms/jpa-cache-topic	Default Targeting	obdx_cluster

5.8.2 Subdeployment View

Sr No.	Name	Resources	Subdeployment
1	jpa-cache-sd		jpa-cache

5.9 Multiple Transaction Approval Functionality

- [Multiple Transaction Approval Functionality](#)
- [Subdeployment View](#)

5.9.1 Multiple Transaction Approval Functionality

Approval of any transactions from the pending-for-approval listing screen

Sr No.	Name	Type	JNDI Name	Subdeployments	Target
1.	MultipleTransactionServiceInvocationQueue	Uniform Distributed Queue	MultipleTransactionServiceInvocationQueue	MultipleTransactionApprovalSD	MultipleTransactionApprovalJMServer
2.	MultipleTransactionServiceInvocationQCF	Connection Factory	MultipleTransactionServiceInvocationQCF	MultipleTransactionApprovalSD	MultipleTransactionApprovalJMServer
3.	MultipleTransactionServiceInvocationResponseQCF	Connection Factory	MultipleTransactionServiceInvocationResponseQCF	MultipleTransactionApprovalSD	MultipleTransactionApprovalJMServer
4.	MultipleTransactionServiceInvocationResponseQueue	Uniform Distributed Queue	MultipleTransactionServiceInvocationResponseQueue	MultipleTransactionApprovalSD	MultipleTransactionApprovalJMServer

5.9.2 Subdeployment View

Sr No.	Name	Resources	Subdeployment
1	MultipleTransactionAppr ovalSD	MultipleTransactionServi ceInvocationResponseQ ueue, MultipleTransactionServi ceInvocationQueue, MultipleTransactionServi ceInvocationQCF, MultipleTransactionServi ceInvocationResponseQ CF	MultipleTransactionAppr ovalSD

5.10 NotificationServer Functionality

- [NotificationServer Functionality](#)
- [Subdeployment View](#)

5.10.1 NotificationServer Functionality

This contains Queues/Topics which are consumed by Demand Deposit, Term Deposit, Loan, Insights, Config modules

1. Queues which listens to Host(UBS) queues and transfers messages to internal topics for various operation. This includes Account Access automapping, sending host alerts to customer, insights updates.
2. Queues which listens to any changes to dayone configuration and update the cache.

Sr No.	Name	Type	JNDI Name	Subdeployme nts	Targest
1.	NotificationQCF	Connection Factory	NotificationQCF	Default Targeting	obdx_cluster
2.	NotificationTCF	Connection Factory	NotificationTCF	Default Targeting	obdx_cluster
3.	NOTIFICATION _QUEUE	Uniform Distributed Queue	NOTIFICATION _QUEUE	Default Targeting	obdx_cluster
4.	NOTIFICATION _TOPIC	Uniform Distributed Queue	NOTIFICATION _TOPIC	Default Targeting	obdx_cluster
5.	UBSNotification TCF	Connection Factory	UBSNotification TCF	Default Targeting	obdx_cluster
6.	UBS_NOTIFIC ATION_TOPIC	Uniform Distributed Topic	UBS_NOTIFIC ATION_TOPIC	Default Targeting	obdx_cluster

5.10.2 Subdeployment View

Sr No.	Name	Resources	Subdeployment
1	NotificationSD		NotificationServer

5.11 OBPMSysModule

- [OBPMSysModule](#)
- [Subdeployment View](#)

5.11.1 OBPMSysModule

Sr No.	Name	Type	JNDI Name	Subdeployments	Target
1.	OBPMForeignServer	Foreign Server	N/A	OBPMSubdeployment	obdx_cluster

5.11.2 Subdeployment View

Sr No.	Name	Resources	Subdeployment
1	OBPMSubdeployment		obdx_cluster

5.12 Payment Functionality

- [Payment Functionality](#)
- [Subdeployment View](#)

5.12.1 Payment Functionality

Sr No.	Name	Type	JNDI Name	Subdeployments	Target
1.	DMS_QUEUE_FOREIGN_SERVER	Foreign Server	N/A	PaymentSD	PaymentJMSServer

5.12.2 Subdeployment View

Sr No.	Name	Resources	Subdeployment
1	PaymentSD		PaymentJMSServer

5.13 Policies Functionality

- [Policies Functionality](#)

- [Subdeployment View](#)

5.13.1 Policies Functionality

PoliciesTopic is used to update RTM cache asynchronously after creating or updating role so that RTM changes get reflected on the fly without server restart.

Sr No.	Name	Type	JNDI Name	Subdeployments	Target
1.	POLICIESQCF	Connection Factory	POLICIESQCF	Default Targeting	obdx_cluster
2.	PoliciesTopic	Uniform Distributed Queue	PoliciesTopic	Default Targeting	obdx_cluster

5.13.2 Subdeployment View

Sr No.	Name	Resources	Subdeployment
1	PoliciesSD		PoliciesJMS

5.14 Reports Functionality

- [Reports Functionality](#)
- [Subdeployment View](#)

5.14.1 Reports Functionality

This queues are used in Adhoc and schedules reports.

Sr No.	Name	Type	JNDI Name	Subdeployments	Target
1.	REPORTADHOC	Uniform Distributed Queue	REPORTADHOC	Default Targeting	obdx_cluster
2.	REPORTSCHEDULED	Uniform Distributed Queue	REPORTSCHEDULED	Default Targeting	obdx_cluster
3.	ReportsQCF	Connection Factory	ReportsQCF	Default Targeting	obdx_cluster

5.14.2 Subdeployment View

Sr No.	Name	Resources	Subdeployment
1	PoliciesSD		PoliciesJMS

5.15 UBSSystemModule functionality

- [UBSSystemModule functionality](#)

- [Subdeployment View](#)

5.15.1 UBSSystemModule functionality

Sr No.	Name	Type	JNDI Name	Subdeployments	Targest
1.	UBSForeignServer	Foreign Server	N/A	UBSSubdeployment	obapi_cluster

5.15.2 Subdeployment View

Sr No.	Name	Resources	Subdeployment
1	UBSSubdeployment		obdx_cluster

5.16 UserGroupUser Functionality

- [UserGroupUser Functionality](#)
- [Subdeployment View](#)

5.16.1 UserGroupUser Functionality

Sr No.	Name	Type	JNDI Name	Subdeployments	Targest
1.	UserGroupUser QCF	Connection Factory	UserGroupUser QCF	Default Targeting	obapi_cluster
2.	UserGroupUser Topic	Topic	UserGroupUser Topic	UserGroupUser SD	UserGroupUser JMSServer

5.16.2 Subdeployment View

Sr No.	Name	Resources	Subdeployment
1	UserGroupUserSD	UserGroupUserTopic	UserGroupUserJMSServer

5.17 Party Movement Report Functionality

- [Party Movement Report Functionality](#)
- [Subdeployment View](#)

5.17.1 Party Movement Report Functionality

Sr No.	Name	Type	JNDI Name	Subdeployments	Targest
1.	PartyMovementReportQCF	Connection Factory	PartyMovementReportQCF	Default Targeting	obdx_cluster

Sr No.	Name	Type	JNDI Name	Subdeployments	Target
2.	PartyMovementReportTopic	Uniform Distributed Topic	PartyMovementReportTopic	Default Targeting	obdx_cluster

5.17.2 Subdeployment View

Sr No.	Name	Resources	Subdeployment
1	PartyMovementReportSD		PartyMovementReportJMS
