3.5.1 Reconciliation Rule Definition

This topic describes the information to configure recon rules for reconciliation category in Cash Management system.

There are two types of rules can be configured; **Exact** and **Generic**.

For the 'Exact' type of rule, attributes of one entity are mapped with attributes of another entity, e.g.: for 'Expected Debit/Credit to Payment' recon category attributes of expected debit/credit entity are mapped to attributes of payment entity and similarly for 'Invoice to Payment' recon category, attributes of invoice are mapped to attributed of payment for matching purpose. Also, multiple recon rules can be defined at global/default level or mapped to the corporate with priority assignment.

For the 'Generic' type of rule, user can configure generic reconciliation methods such as FIFO, LIFO, HAFO, and LAFO. As per selected method: one can choose 'Based on' attribute. For example, in 'FIFO' for Expected Cashflow recon category, one can choose 'Expected Date' or 'Revised Expected Date'. Similarly, in 'FIFO' for Invoice Payment recon category, one can choose 'Invoice Date' or 'Invoice Due Date'.

3.6 Tolerance Maintenance

This topic describes the information to configure an acceptable discrepancy between invoice/cashflow outstanding amount and payment amount to enable automatic matching of invoices/cashflow with the respective payment records.

Reconciliation of repayments with invoices/cashflows are executed basis configured exact and generic reconciliation rules such as FIFO, LIFO etc. Through this

functionality, user can configure an acceptable discrepancy between invoice/cashflow outstanding amount and payment amount to enable automatic matching of invoices/cashflow with the respective payment records. Tolerances allow outstanding payments and invoice/cashflow records to match even if the respective amount differ. Similarly, tolerance can be configured for other categories as well. Without the tolerance configuration, user intervention would be required for matching invoices/cash-flows and payment records that does not have equated amounts.
