Application Root Object Conversion

- [Introduction](#)
This document explains the process involved in object conversion in Approot.
- [Pre-requisites](#)
This topic provides systematic instructions for pre-requisites.
- [Application Root - PDB Model Configuration](#)
To build the application for setup using the installer, follow the steps given below.

1.1 Introduction

This document explains the process involved in object conversion in Approot.

1.2 Pre-requisites

This topic provides systematic instructions for pre-requisites.

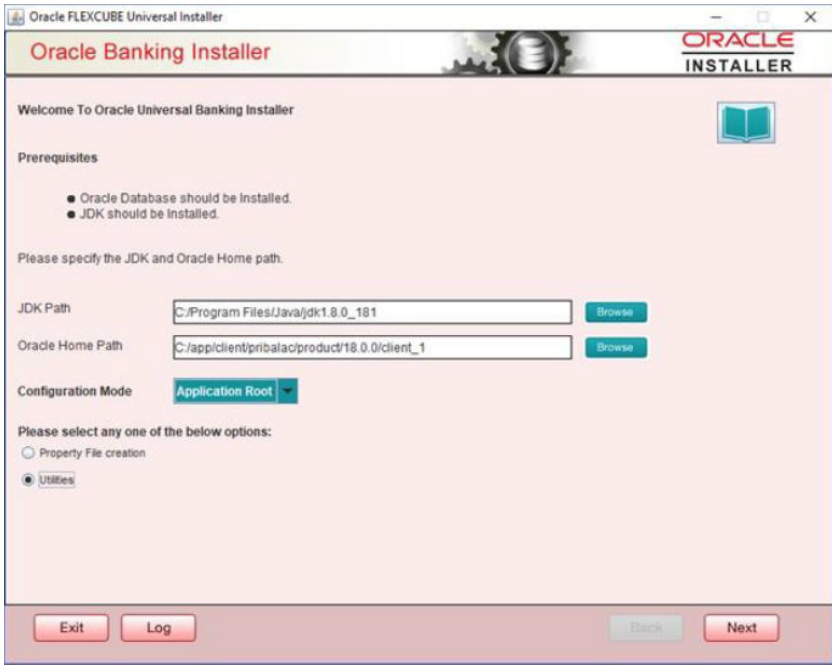

The below steps has to be completed in a sequential order before using this utility.

1. CDB is created with 18c database and 'Application Template PDB' is created under this CDB and the OBTFobjects are loaded.
2. Application root creation followed by application seed creation.
3. Application installation version 1.0 has to be done in approot with user being made explicit.[Application_Installation.sql](#)

1.3 Application Root - PDB Model Configuration

To build the application for setup using the installer, follow the steps given below.

1. Double-click 'FCUBSInstaller.bat' batch file to launch Oracle Banking Trade Finance Installer. The following screen is displayed. Select **Utilities** option, configuration mode as "**Application Root**" and click '**Next**' button.

2. Select 'Approot object Conversion' in Utility Screen and click **Next** as shown below:

3. In the Approot object conversion screen, enter application name and Approot Schema details.

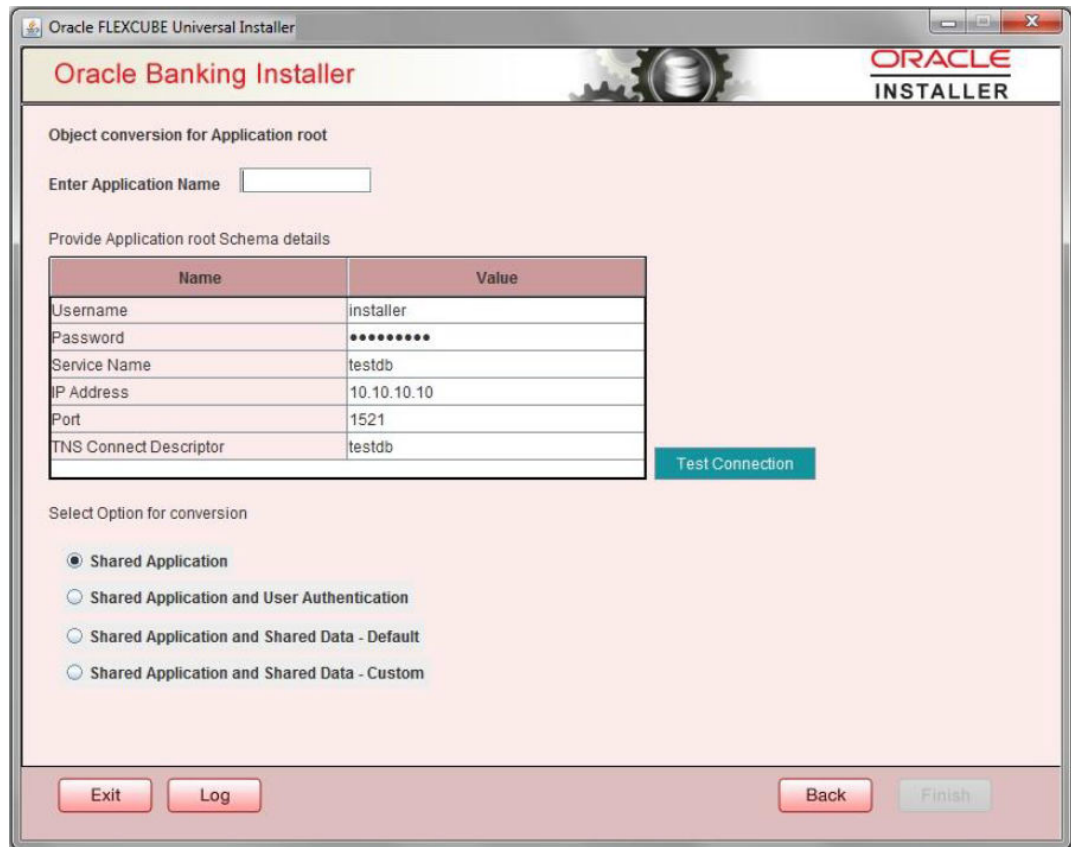

Options of conversion include:

- **Shared Application**
- **Shared Application and User Authentication**
- **Shared Application and Shared Data – Default**
- **Shared Application and Shared Data – Custom**

Shared Application

1. When **'Shared Application'** is selected, there will not be any common data and only application is shared.
2. After selecting the radio button, user will have to input the Application name and the Application root schema details where the conversion has to be applied and click on **'Test Connection'**.
3. When Application name is not inputted, error will be displayed to input the same. User has to make sure that application name is the one mentioned in pre-requisites with installation done for version 1.0.
4. Once the Connection is successful, **'Finish'** button will be enabled and the object conversion will be completed at this step.
5. Execution will take few minutes and post completion, a dialog box displays **'Compilation Success'** message in the front end.

[Application_Installation.sql](#)

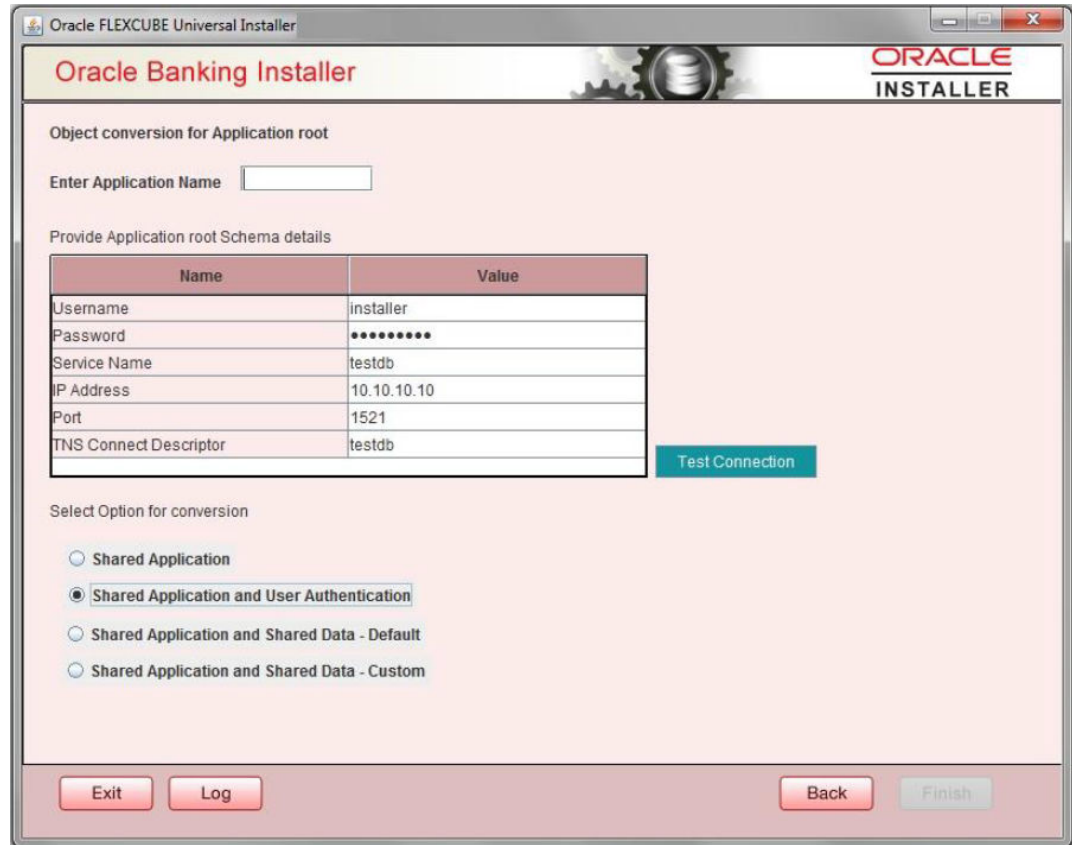

[Application_PDB_Creation.sql](#)

Shared Application and User Authentication

1. When **'Shared Application and User authentication'** is selected, only user authentication related data will be shared along with a shared application,

2. After selecting the radio button, user will have to input the Application name and Application root schema details where the conversion has to be applied and click on '**Test Connection**'.
3. When Application name is not inputted, error will be displayed to input the same. User has to make sure that application name is the one mentioned in pre-requisites with installation done for version 1.0.
4. Once the Connection is successful, '**Finish**' button will be enabled and the object conversion will be completed at this step.
5. Execution will take few minutes and post completion, a dialog box displays '**Compilation Success**' message in the front end.

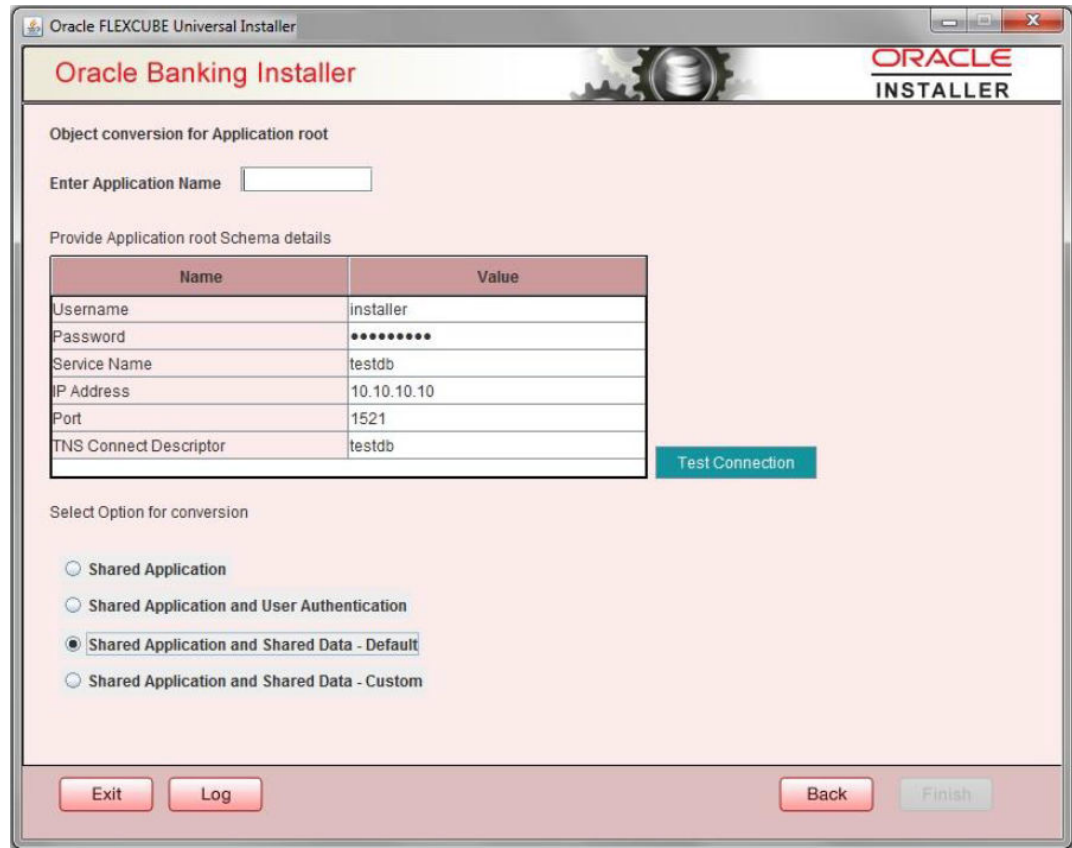

[Application_Template_PDB_Creation.sql](#)

Shared Application & Shared Data - Default

1. When Shared Application & Shared Data - Default is selected, all the function groups listed will be installed in the application root.
2. After selecting the Radio button, user will have to input the Application name and Application root schema details where the conversion has to applied and click on '**Test Connection**'.
3. When Application name is not inputted, error will be displayed to input the same. User has to make sure that application name is the one mentioned in pre-requisites with installation done for version 1.0.

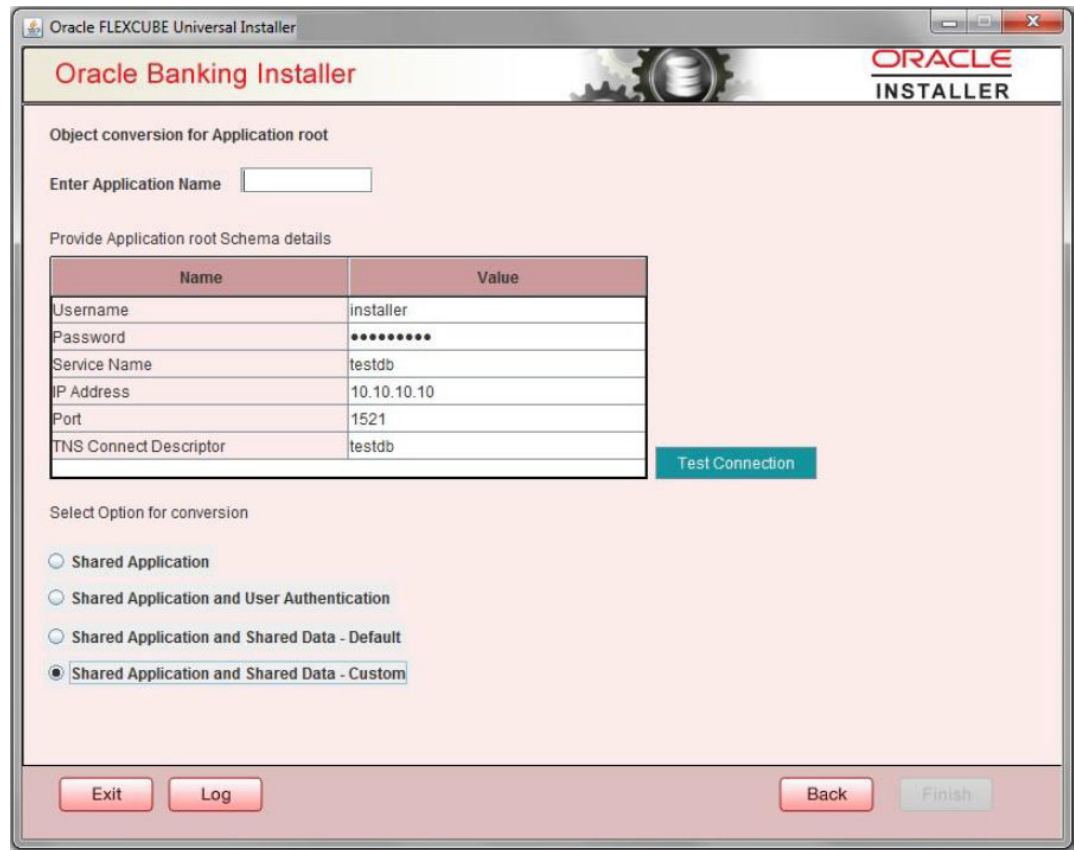

4. Once the Connection is successful, **'Finish'** button will be enabled and the object conversion will be completed at this step.
5. Execution will take few minutes and post completion, a dialog box displays **'Compilation Success'** message in the front end.

Shared Application & Shared Data - Custom

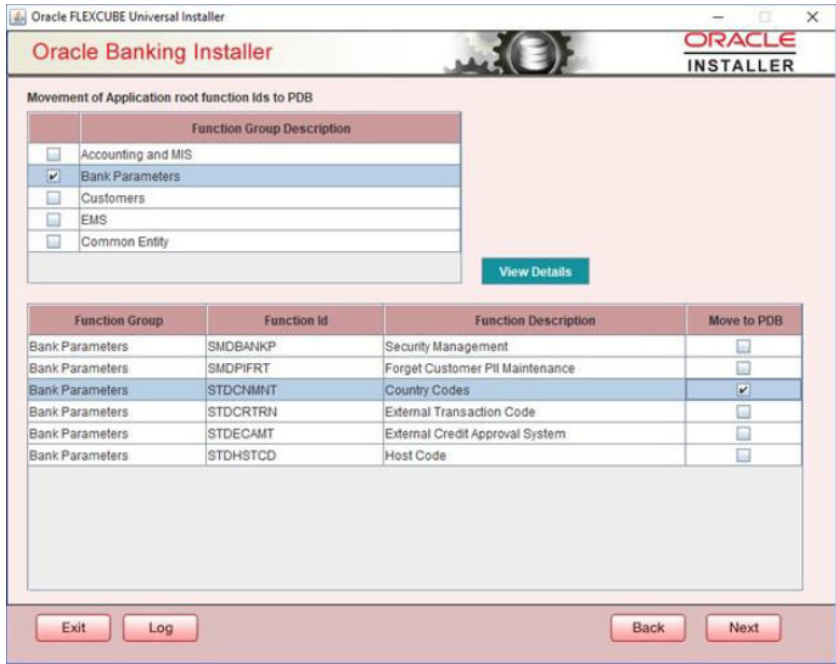

1. When Shared Application & Shared Data – Custom is selected, all the function groups listed will be installed in the application root.
2. After selecting the Radio button, user will have to input the Application name and Application root schema details where the conversion has to applied and click on 'Test Connection'.
3. When Application name is not inputted, error will be displayed to input the same. User has to make sure that application name is the one mentioned in pre-requisites with installation done for version 1.0.
4. Once the Connection is successful, 'Next' button will be enabled to take through the steps of movement of function ids to pdbs.
5. After selecting the Radio button, user will have to input the Application name and Application root schema details where the conversion has to applied and click on 'Test Connection'.
6. Once the Connection is successful, 'Finish' button will be enabled to continue with the next steps of object conversion.

[Approot_AppSeed_sync.sql](#)

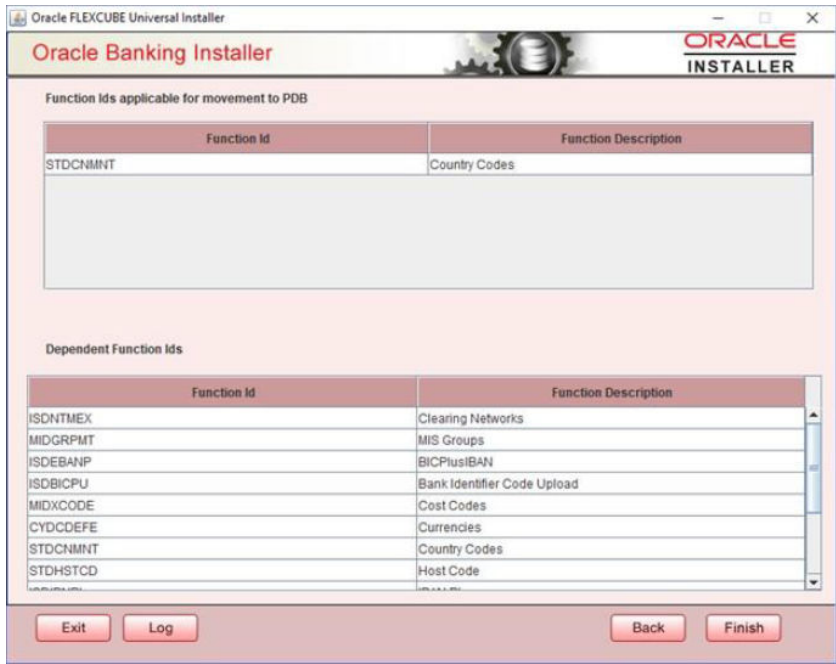

[Approot_PDB_Sync.sql](#)

7. In the Next Screen, user can opt-out the entities which are not required to be the candidates of approot and those function ids will be moved to PDB.
8. There will be two multiblocks available.
 - a. First multiblock will list the details of function groups which are the Approot candidates.
 - b. Second multiblock will list the function ids corresponding to each of the function group in the first block.
9. Second multiblock will have the check box '**Move to PDB**' against each function ID.

10. User can select more than one function group and the respective function ids will also be appended to the second multiblock against the function group on click of 'View Details' button.
11. Once the selection is completed, 'Next' button has to be clicked to move to the next screen where the complete list of function ids.
12. The dependent function ids of the selected functions opted to move to PDB will be listed in the below section.

[fn_error_handler.sql](#)

13. Object conversion can be completed by clicking on the **Finish** button.
14. Execution will take few minutes and post completion, a dialog box displays '**Compilation Success**' message in the front end.

Application Installation

Purpose

It is used for application installation.

Syntax

```
SET VERIFY ON
SET HEAD ON
SET FEEDBACK 1
SET ARRAY 1
SET LINESIZE 10000
SET PAGESIZE 50000
SET LONG 10000
SET ECHO ON
SET TRIMSPOOL ON
SET COLSEP ';'
SET SERVEROUT OFF
clear screen
SPOOL ON
SET SQLBLANKLINES ON
SET SERVEROUTPUT ON
SET ERRORLOGGING ON
SET ECHO ON
prompt Welcome to Application PDB Configuration
