Preface

Below is brief description on major components in Weblogic JMS Server architecture.

- [Purpose](#)
- [Documentation Accessibility](#)
- [Critical Patches](#)
- [Conventions](#)
- [Screenshot Disclaimer](#)
- [Diversity and Inclusion](#)
- [Weblogic 12c New Features](#)
- [Components Diagram & Data Flow](#)

Purpose

The purpose of this document is to explain the steps required for JMS Configuration in cluster mode for

1. FCUBS 12.1
2. WebLogic Server 12.1.3.0.0

JMS Server

JMS server acts as management container for JMS queue and topic resources defined within JMS modules that are targeted to specific that JMS server. A JMS server's main responsibility is to maintain persistent storage for these resources, maintain the state of durable subscriber and etc. JMS servers can host a defined set of modules and any associated persistent storage that reside on a WebLogic Server instance.

JMS Module

JMS modules are application-related definitions that are independent of the domain environment. JMS modules group JMS configuration resources (such as queues, topics, and connections factories).

These are outside domain configuration. JMS modules are globally available for targeting to servers and clusters configured in the domain and therefore are available to all the applications deployed on the same targeted. JMS modules contain configuration resources, such as standalone queue and topic destinations, distributed destinations, and connection factories.

Subdeployment

Subdeployment is also known as Advanced Targeting. Subdeployment resource is a bridge between the group of JMS resources and JMS Servers. When you create a JMS resource you need to choose one Subdeployment.

JMS Resources

1. **Queue** defines a point-to-point destination type, which are used for asynchronous peer communications. A message delivered to queue is distributed to only one customer.
2. **Topic** defines a publish/subscribe destination type, which are used for asynchronous peer communication. A message delivered to topic is distributed to all topic consumers.
3. **Distributed queue** defines a set of queues that are distributed on multiple JMS servers, but are accessible as a single, logical queue to JMS clients
4. **Distributed topic** defines a set of topics that are distributed on multiple JMS servers, but which as accessible as a single, logical topic to JMS clients.
5. **Uniform Distributed Queue:** queue members are created uniformly from a common configuration.

Persistence store

A persistent store provides a built-in, high-performance storage solution for weblogic server subsystems and services that required persistence. There are two type of mechanism to store the message.

1. File based persistence store → Message is stored in a file
2. DB based persistence store → Message is stored in Database.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customer access to and use of Oracle support services will be pursuant to the terms and conditions specified in their Oracle order for the applicable services.

Critical Patches

Oracle advises customers to get all their security vulnerability information from the Oracle Critical Patch Update Advisory, which is available at [Critical Patches, Security Alerts and Bulletins](#). All critical patches should be applied in a timely manner to ensure effective security, as strongly recommended by [Oracle Software Security Assurance](#).

Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
<code>monospace</code>	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

Screenshot Disclaimer

Personal information used in the interface or documents is dummy and does not exist in the real world. It is only for reference purposes.

Diversity and Inclusion

Oracle is fully committed to diversity and inclusion. Oracle respects and values having a diverse workforce that increases thought leadership and innovation. As part of our initiative to build a more inclusive culture that positively impacts our employees, customers, and partners, we are working to remove insensitive terms from our products and documentation. We are also mindful of the necessity to maintain compatibility with our customers' existing technologies and the need to ensure continuity of service as Oracle's offerings and industry standards evolve. Because of these technical constraints, our effort to remove insensitive terms is ongoing and will take time and external cooperation.

Weblogic 12c New Features

Before weblogic 12c JMS Servers and stores are targeted to individual WLS Servers. Scaling up requires configure the JMS server, the store and target it to new WLS Server.

In 12c JMS Servers and stores are targeted to WLS cluster. Scaling up requires to add a WLS server to the cluster.

Figure 1 Architecture Previous to 12c

Figure 2 Architecture in 12c

Components Diagram & Data Flow

Below is the flow diagram which indicates various components that are used and the document explain steps to create.

1

Pre-Requisites

The document assumes that the below are created before proceeding JMS creation.

- [Machines](#)
- [Dynamic Clusters and Managed Servers](#)
- [DataSource](#)
- [Shared Folder](#)

1.1 Machines

Figure 1-1 MAC-1 & MAC-2

1.2 Dynamic Clusters and Managed Servers

Ensure Dynamic cluster for FCUBS (4 Managed Servers) and Dynamic cluster for JMS Deployment (2 Managed Servers).

The screenshot shows the Oracle WebLogic Server Administration Console. The left sidebar contains the 'Change Center' and 'Domain Structure' panels. The 'Domain Structure' panel shows a tree view with 'Clusters' selected. The main content area displays the 'Summary of Clusters' page. It includes a message: 'All changes have been activated. No restarts are necessary.' Below this is a table of clusters.

Name	Cluster Address	Cluster Messaging Mode	Migration Basis	Default Load Algorithm	Replication Type	Cluster Broadcast Channel	Servers
Cluster-App		Unicast	Database	Round Robin	(None)		DC_FCUBS_1, DC_FCUBS_2, DC_FCUBS_3, DC_FCUBS_4
Cluster-JMS		Unicast	Database	Round Robin	(None)		DC_JMS_1, DC_JMS_2

The screenshot shows the Oracle WebLogic Server Administration Console. The left sidebar contains the 'Change Center' and 'Domain Structure' panels. The 'Domain Structure' panel shows a tree view with 'Servers' selected. The main content area displays the 'Summary of Servers' page. It includes a message: 'A server is an instance of WebLogic Server that runs in its own Java Virtual Machine (JVM) and has its own configuration.' Below this is a table of servers.

Name	Type	Cluster	Machine	State	Health	Listen Port
AdminServer(admin)	Configured			RUNNING	OK	7001
DC_FCUBS_1	Dynamic	Cluster-App	MAC-1	SHUTDOWN	Not reachable	7101
DC_FCUBS_2	Dynamic	Cluster-App	MAC-2	SHUTDOWN	Not reachable	7102
DC_FCUBS_3	Dynamic	Cluster-App	MAC-1	SHUTDOWN	Not reachable	7103
DC_FCUBS_4	Dynamic	Cluster-App	MAC-2	SHUTDOWN	Not reachable	7104
DC_JMS_1	Dynamic	Cluster-JMS	MAC-1	SHUTDOWN	Not reachable	7106
DC_JMS_2	Dynamic	Cluster-JMS	MAC-2	SHUTDOWN	Not reachable	7107

1.3 DataSource

Ensure that DataSource required for the MDB ear is created with Target as Cluster-App.

The screenshot shows the Oracle WebLogic Server Administration Console. The left sidebar contains the 'Change Center' and 'Domain Structure' panels. The 'Domain Structure' panel shows a tree view with 'Data Sources' selected. The main content area displays the 'Summary of JDBC Data Sources' page. It includes a message: 'A JDBC data source is an object bound to the JNDI tree that provides database connectivity through a pool of JDBC connections. Applications can look up a data source on the JNDI tree and then borrow a database connection from a data source.' Below this is a table of data sources.

Name	Type	JNDI Name	Targets
FLEXTST.WORLD	Generic	FLEXTST.WORLD	Cluster-App

1.4 Shared Folder

A shared folder for File Store Creation is required and this folder should be accessible across both the servers (eg, NFS mount).

2

JMS Configuration

- Persistence Store Creation
- JMS Server Creation
- Cluster Configuration for Service Migration

2.1 Persistence Store Creation

1. Navigate to Services → Persistent Stores → New → **Create FileStore**.

2. Select **Cluster-JMS** under target drop-down and Click on **OK**.

3. FileStore-1 is created.

2.2 JMS Server Creation

1. Navigate to Services > Messaging > JMS Servers > Click on **New**.

2. Select FileStore-1, Click **Next**.

ORACLE WebLogic Server Administration Console 12c

Home Log Out Preferences Record Help

New Delete Showing 1 to 1 of 1 Previous | Next

How do I...

- Configure JMS servers
- Configure JMS system modules

5. In NFS below filestores can be seen.

```
[root@JMS_FILESTORE]# ll
total 2056
-rw-r----- 1 w112c oinstall 1049088 Jun 16 14:10 FILESTORE-1@DC_JMS_1000000.DAT
-rw-r----- 1 w112c oinstall 1049088 Jun 16 14:10 FILESTORE-1@DC_JMS_2000000.DAT
[root@JMS_FILESTORE]# pwd
/scratch/work_area/JMS_FILESTORE
[root@JMS_FILESTORE]#
```

2.3 Cluster Configuration for Service Migration

1. Click on Environment > Clusters > Cluster-JMS

2. Click on **Migration** Tab.

3. Change Migration Basis to Consensus and Click on **Save**.

3

JMS Module Creation

- Module Creation
- Sub Deployment Creation
- Resource Creation

3.1 Module Creation

1. Navigate to Services > Messaging > JMS Modules and Click on **New**.

2. Enter name as JMS_MODULE and Click on **Next**.

3. Select Target as Cluster-JMS and Click on **Next**.

4. Select the checkbox and Click on **Finish**.

5. JMS_MODULE is created.

3.2 Sub Deployment Creation

1. In JMS_MODULE, Click on **SubDeployment** tab, Click on **New**.

2. Enter name as JMS_SUB and click on **Next**.

3. Select Target as Cluster-JMS and Click on **Finish**.

4. Sub-Deployment is created

3.3 Resource Creation

- Queue Creation
- Connection Factory Creation

3.3.1 Queue Creation

1. In JMS_MODULE Click on **New**.

2. Select Distributed Queue and Click on **Next**.

3. Enter the queue name and Click on **Next**.

4. Click on **Advance Targeting**.

5. Select Subdeployment as JMS_SUB and Click on **Finish**.

6. MDB_QUEUE is created

7. Similarly Create MDB_QUEUE_RESPONSE and MDB_QUEUE_DLQ

1. Deploy the EAR with Target as Cluster-App.

Settings for GWMDB

Overview | Deployment Plan | Configuration | Security | **Targets** | Control | Testing | Monitoring | Notes

Use this page to specify the WebLogic Server instances and clusters to which you want to deploy this Enterprise application. These settings determine where the application is deployed at server startup time.

Target Assignments

Change Targets | Showing 1 to 1 of 1 | Previous | Next

Component	Type	Current Targets
GWMDB	Enterprise Application	Cluster-App
GW_MDB_Bean.jar	EJB	(None specified)

Change Targets | Showing 1 to 1 of 1 | Previous | Next

2. Health Should be OK if JMS is configured properly, otherwise Warning will be displayed.

Summary of Deployments

Control | Monitoring

This page displays a list of Java EE applications and stand-alone application modules that have been installed to this domain. Installed applications and modules can be started, stopped, updated (redeployed), or deleted from the domain by first selecting the application name and using the controls on this page.

To install a new application or module for deployment to targets in this domain, click the Install button.

7.1 Application and JMS Cluster Deployed on Same Cluster

Application and JMS Module can be deployed on the same cluster. In this document both are on different clusters, however it is possible to deploy on the one cluster. When it is deployed on same cluster then.

1. Foreign Server Creation is not required.
2. Targets should be given accordingly during SubDeployment Creation.

7.2 Application Shows Warning upon Restart of Managed Servers

Managed Servers Start Order:

1. Stop all managed servers.
2. Start only the JMS Cluster managed servers.
3. After these are started then start the App Cluster managed servers.

Even after proper JMS setup when the managed servers are restarted Health of the Application is Warning.

The screenshot shows the Oracle WebLogic Server Administration Console. The 'Summary of Deployments' page is active, displaying a table of installed applications and modules. The table has columns for Name, State, Health, Type, and Deployment Order. The GWHDB deployment is highlighted with a red box, showing a 'Warning' health status. The other deployments (FCUBSApp, GWEJB, JMS-12.1.1.2.3, and SWEB) show 'OK' health status.

Name	State	Health	Type	Deployment Order
FCUBSApp (12.0.3.0)	Active	OK	Enterprise Application	100
GWEJB	Active	OK	Enterprise Application	100
GWHDB	Active	Warning	Enterprise Application	100
JMS-12.1.1.2.3	Active	OK	Library	100
SWEB	Active	OK	Enterprise Application	100

1. Force Stop the Application.
2. Then Start the Application, this would resolve the Warning and the Health of Deployment is changed to **OK**.

7.3 Securing File Store Data

In order to properly secure file store data, set appropriate directory permissions on all file store directories. If data encryption is required, use appropriate third-party encryption software.

7.4 t3s Protocol

To secure the communication with the JMS Server use t3s protocol instead of t3. This is applicable when connecting to the connection factory to send or receive messages and also in the JNDI Connection URL provided in foreign server creation.

Note:

when using the t3s protocol SSL Listen Port Enabled should be checked in server template and the port number used in the URL should be secure port.

7.5 How to Test the Deployment

1. Navigate to Services ▢ JMS Modules ▢ JMS_MODULE ▢ MDB_QUEUE ▢ MONITORING.

Name	Consumers Current	Consumers High	Consumers Total
JMS_MODULE:JMS-1-MDB_QUEUE	64	64	64
JMS_MODULE:JMS-2-MDB_QUEUE	64	64	64

2. Select any one Server and Click on **Show Messages**.

ID	Corrid	Time Stamp	State String	JMS Delivery Mode	Message Size
There are no items to display					

3. Click on **New** and enter the Message in Body and Click on **OK**.

4. Message is Sent.

5. Verify at backend or in the MDB log if the message is processed successfully.

7.6 Increase Maximum Number of Message-Driven Bean Threads

Default number of consumers for an MDB is 16. To increase or restrict this number create Custom Work Manager with a Max Threads Constraint in conjunction with MDBs. The solution is to create a work manager with a max threads constraint and assign the proxy services dispatch policy to this work manager.

Steps to create custom work manager

1. Modify the MDB deployment description and deploy the EAR.
2. Create Custom Workmanager and add constraints to limit the number of the max MDB threads
 - [Modify weblogic-ejb-jar.xml](#)
 - [Work Manager Creation](#)

7.6.1 Modify weblogic-ejb-jar.xml

1. Add below line to the weblogic-ejb-jar.xml of the MDB Ear.

<dispatch-policy>GWMDBWM</dispatch-policy>

2. Remove if any of the below tags present in weblogic-ejb-jar.xml
max-beans-in-free-pool and initial-beans-in-free-pool
3. Save the ear file and redeploy the EAR file.

7.6.2 Work Manager Creation

1. Login into weblogic console, navigate to Domain > Environment > WorkManager Create new workmanager with the name GWMDBWM(as mentioned in property file) by following below steps:

ORACLE WebLogic Server Administration Console 12c

Home Log Out Preferences Record Help

Welcome, weblogic Connected to: FCUBSDomain

Home > Summary of Work Managers > MaxThreadConstraint-0 > Summary of Work Managers > WorkManager-0 > Summary of Work Managers > MaxThreadConstraint-0 > Summary of Servers > Summary of Environment > Summary of Servers > Summary of Work Managers

Create a New Work Manager Component

Back Next Finish Cancel

Work Manager Properties

The following properties will be used to identify your new Work Manager.
* Indicates required fields

What would you like to name your new Work Manager?

* Name: **GWMDBWM**

Back Next Finish Cancel

ORACLE WebLogic Server Administration Console 12c

Home Log Out Preferences Record Help

Welcome, weblogic Connected to: FCUBSDomain

Home > Summary of Work Managers > MaxThreadConstraint-0 > Summary of Work Managers > WorkManager-0 > Summary of Work Managers > MaxThreadConstraint-0 > Summary of Servers > Summary of Environment > Summary of Servers > Summary of Work Managers

Create a New Work Manager Component

Back Next Finish Cancel

Select deployment targets

You can target the Work Manager to any of these WebLogic Server instances or Clusters. Select the same targets on which you will deploy applications that reference the Work Manager.

Available targets :

Servers

☐ AdminServer

Clusters

☒ Cluster-App
All servers in the cluster

☐ Cluster-JMS
All servers in the cluster

Work Manager created successfully

Summary of Work Managers

A Work Manager defines a set of request classes and thread constraints that manage work performed by WebLogic Server instances. This page displays the global Work Managers, request classes and thread constraints defined for this domain.

Global Work Managers are defined at the domain level. You can also define application-level and module-level Work Managers.

Customize this table

Global Work Managers, Request Classes and Constraints

New Clone Delete Showing 1 to 1 of 1 Previous Next

Name	Type	Targets
GWMDBWM	Work Manager	Cluster-App

New Clone Delete Showing 1 to 1 of 1 Previous Next

2. Create new Max Thread Constraint and in the Count field give the desired thread count.

3. Modify the newly created workmanager and assign the Maximum Thread Constraint that is created in above step.

4. Restart managed servers and notice the change in the number of consumers for the QUEUE's.

7.7 How High Availability is Achieved

1. Application Server:

MDB_MODULE and the GWEJB ear are deployed in a cluster. Cluster has 4 managed servers, if any server goes down then the messages are processed by other managed servers.

2. JMS Provider:

JMS is deployed on 2 managed servers, JMSServer1 and JMSServer2, if any one goes down other will handle the messages.

3. FileStore:

File store is a cluster file system or database where if one node goes down then other will handle the requests.

4. DB Server:

Database is installed in RAC mode where it has more than 1 node, if a node goes down then other nodes will handle messages.

7.8 How to setup for Scheduler/Notifications

The above document can be used for setting up JMS for scheduler/notifications but additional queues and connection factory needs to be created.

7.9 What other modules uses JMS Queue's

JMS is used by following modules, relevant queues and factories needs to be created additionally,

1. EMS for swift messages
2. GI for upload
3. ELCM
4. BIP
