Index

Preface

This manual is designed to help you to quickly get acquainted with the Integration for a Co-deployed Setup of Oracle Banking Treasury Management with Oracle Banking Payments.

- [Audience](#)
- [Acronyms and Abbreviations](#)
- [Conventions](#)
- [List of Topics](#)
- [Symbols and Icons](#)

Audience

This guide is intended for Back Office Data Entry Clerk, Back Office Managers/ Officers, Product Managers, End of Day Operators, and Financial Controller users.

Acronyms and Abbreviations

The acronyms and abbreviations are listed in this below table:

Table 1 Acronyms and Abbreviations

Abbreviations or Acronyms	Definition
AEOD	Automated End of Day
DV	Derivatives
Dr	Debit
EOFI	End of Financial Input
EOD	End of Day
FX	Foreign Exchange
GL	General Ledger
LCY	Local Currency
MM	Money Market
OBTR	Oracle Banking Treasury Management
OT	Over the Counter Options
OBPM	Oracle Banking Payments Management
WSDL	Web Services Description Language

Conventions

The following text conventions are used in this document:

Table 2 Conventions and Meaning

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

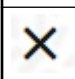

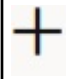

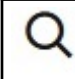

List of Topics

This guide is organized as follows:

Topics	Description
Treasury - Payments Integration	Explains how to codeploy the Oracle Banking Treasury Management & Oracle Banking Payments product in a single instance.

Symbols and Icons

Table 3 Symbols

Icons	Function
	Exit
	Add row
	Delete row
	Option List

1

Treasury - Payments Integration

You can integrate Oracle Banking Treasury Management product (OBTR) with Oracle Banking Payments product (OBPM).

To integrate these two products on the co-deployed environment, you need to do specific maintenance in OBTR, OBPM, and Common Core.

This topic has the following sub-topics:

- [Maintenance Required in OBTR](#)
This section describes the specific maintenance, needed in Oracle Banking Treasury Management (OBTR) to integrate the same with Oracle Banking Payments (OBPM).
- [Maintenance Required in OBPM](#)
This section describes the specific maintenance needed in Oracle Banking Payments (OBPM) to integrate the same with Oracle Banking Treasury Management (OBTR).
- [Common Core Maintenance](#)
This topic describes the required common core maintenance.

1.1 Maintenance Required in OBTR

This section describes the specific maintenance, needed in Oracle Banking Treasury Management (OBTR) to integrate the same with Oracle Banking Payments (OBPM).

This topic has the following sub-topics:

- [Treasury External System Maintenance](#)
The systematic instruction to maintain the active record in Treasury External System Maintenance screen is described in this topic.
- [External System Functions Maintenance](#)
The systematic instructions to perform the External System Functions Maintenance.
- [Upload Source Preference Maintenance](#)
The systematic instructions to perform the Upload Source Preference Maintenance is discussed in this topic.
- [BIC Maintenance](#)
This topic describes BIC maintenance in OBTR.
- [Other Common Maintenance](#)
This topic describes the other common maintenance.
- [Treasury External Payment System Payment Queue Summary](#)
This topic describes the systematic instructions to view the payment request send to OBPM.

1.1.1 Treasury External System Maintenance

The systematic instruction to maintain the active record in Treasury External System Maintenance screen is described in this topic.

The Treasury External System Maintenance screen with field external system type as “Payments” for different service codes with all required fields to maintain the active record.

For outgoing payments, maintain the service code as “GenPayMessage” with Single Payment Service details as below:

Table 1-1 Fields Specification

Field	Specification
Service Name	PMSinglePayOutService
Operation Code	CreateSinglePayment
Rest/Web Service User Option	Choose the preferred option
Rest/Web Service User	Provide the User to be used in Rest request
Rest/Web Service URL Service	Provide the Rest API URL of Single Payment Service

For Receive Notice, maintain the service code as “GenRecvNotice” with Inbound Cross Border Payments service details as below:

Table 1-2 Fields Specification

Field	Specification
Service Name	PMXborderInService
Operation Code	CreateXborderIn
Rest/Web Service User Option	Choose the preferred option
Rest/Web Service User	Provide the User to be used in Rest request
Rest/Web Service URL Service	Provide the Rest API URL of Inbound Cross Border Payments Service

For Incoming Cross border payments reversal, maintain the service code as “GenInTxnRev” with Cross Border Incoming Transaction Reversal Service details as below:

Table 1-3 Fields Specification

Field	Specification
Service Name	PMInTxnReversalService
Operation Code	CreatePMInTxnReversal
Rest/Web Service User Option	Choose the preferred option
Rest/Web Service User	Provide the User to be used in Rest request

Table 1-3 (Cont.) Fields Specification

Field	Specification
Rest/Web Service URL Service	Provide the Rest API URL of Inbound Cross Border Incoming Transaction Reversal Service

For Outgoing Cross border payments reversal, maintain the service code as “GenOutTxnRev” with Cross Border Outgoing Transaction Reversal Service details as below:

Table 1-4 Fields Specification

Field	Specification
Service Name	PMOutTxnReversalService
Operation Code	CreatePMOutTxnReversal
Rest/Web Service User Option	Choose the preferred option
Rest/Web Service User	Provide the User to be used in Rest request
Rest/Web Service URL Service	Provide the Rest API URL of Inbound Cross Border Outgoing Transaction Reversal Service

1. On the Home page, enter **IFDTREPM** in the text field and then click the next arrow. The **Treasury External System Maintenance** screen.

Figure 1-1 Treasury External System Maintenance

The screenshot shows the 'Treasury External System Maintenance' interface. At the top, there's a title bar with a 'Save' icon and a close button. Below the title, there are several input fields and dropdown menus arranged in two columns. The left column contains: 'External System' (text box with 'OBPM'), 'Description' (text box with 'External Payment System'), 'Inter System Bridge GL' (text box with '261100005' and a search icon), 'Source System' (text box with 'OBTR'), and 'Entity ID' (text box with 'ENTITY_ID1'). The right column contains: 'External System Type' (dropdown menu with 'Payments'), 'Read Time Out (In Seconds)' (text box with '70'), 'Connection Time Out (In Seconds)' (text box with '50'), 'Archival Days' (text box with '3'), 'Connection Timeout Retry Count' (text box with '5'), and 'Read Timeout Retry Count' (text box with '5'). Below these fields is a table with columns: 'Service Code', 'Service Name', 'Operation Code', 'Rest/Web Service User Option', 'Rest/Web Service User', and 'Rest/Web Service URL'. The table has two rows. The first row is 'GenInTxnRev' with 'PMinTxnReversalS', 'CreatePMinRevers', 'Predefined User', 'PJVWWN', and 'http://wh000ack'. The second row is 'GenOutTxnRev' with 'PMOutTxnReversa', 'CreatePMOutReve', 'Predefined User', 'PJVWWN', and 'http://wh000ack'. The second row is selected. At the bottom right of the table area, there are 'Audit' and 'Cancel' buttons.

2. On the **Treasury External System Maintenance** screen, specify the fields as describes in the above field specification tables.

Below are the scheduler jobs configured for the Integration. Make sure that these jobs are running.

- **TREPSGENPAYMENT** - Scheduler job for processing the Payment request

- TREPS_NOTIFICATION - Scheduler job for processing OBPM notifications

1.1.2 External System Functions Maintenance

The systematic instructions to perform the External System Functions Maintenance.

For the below Source codes with the service name OBTREPSService and the operation code CreateTREPSNotif, maintain the External System Functions to receive the notifications from OBPM.

For all OBTR modules when outgoing payment or receive notice is initiated, the source code is "OBTR<Module-ID>". For example, the source code for the FX module is "OBTRFX."

1. On the Home page, enter **GWDETFUN** in the text field and then click the next arrow.

The **External System Functions** screen is displayed.

Figure 1-2 External System Functions

2. On the **External System Functions** screen, specify the fields.

Table 1-5 Fields Specification

Field	Specification
Source Code	For all OBTR modules where outgoing payment or receive notice is initiated, the source code is "OBTR<Module-ID>". For example, the source code for the FX module is "OBTRFX."
Service Name	SOBTREPSService
Operation Code	CreateTREPSNotif

1.1.3 Upload Source Preference Maintenance

The systematic instructions to perform the Upload Source Preference Maintenance is discussed in this topic.

In the **Upload Source Preference Maintenance** screen, Post Upload Status field value must be selected as "Authorized".

1. On the Home page, enter **CODUPLDM** in the text field and then click the next arrow.

The **Upload Source Preference Maintenance** screen is displayed.

Figure 1-3 Upload Source Preference Maintenance

2. On the **Upload Source Preference Maintenance** screen, specify the **Post Upload Status** field as **Authorized**.

Make sure that the TRGenPayMessage.ADF file is executed in the database schema. This file contains the JSON template for the OBPM Single Payment Service.

1.1.4 BIC Maintenance

This topic describes BIC maintenance in OBTR.

Upload BIC directory & ensure that the same are listed at ISDBICDE, which OBTR will use, to transact payments.

1.1.5 Other Common Maintenance

This topic describes the other common maintenance.

Refer to Core Services User Manual, for the other Day 0 maintenance to be done for OBTR.

1.1.6 Treasury External Payment System Payment Queue Summary

This topic describes the systematic instructions to view the payment request send to OBPM.

On the home page, enter **IFSTRPQU** to invoke the **Treasury External Payment System Queue Summary** Screen (IFSTRPQ) screen and enter **IFDTRPQU** to invoke the **Treasury External Payment System Queue Detailed** Screen (IFSTRPQ) screen.

This screens are used to view the payment request send to OBPM.

Figure 1-4 Treasury External Payment System Queue Summary

Figure 1-5 Treasury External Payment System Queue Detailed

1.2 Maintenance Required in OBPM

This section describes the specific maintenance needed in Oracle Banking Payments (OBPM) to integrate the same with Oracle Banking Treasury Management (OBTR).

This topic has the following sub-topics:

- [Source Maintenance](#)
The systematic instructions to perform the External System Functions Maintenance.
- [Source Network Preference Maintenance](#)
The systematic instructions to perform the Source Network Preference Maintenance.
- [Network Code Maintenance](#)
The systematic instructions to maintain the network Code in the OBPM.
- [Network Rule Maintenance](#)
The systematic instructions to maintain the network rules in the OBPM.
- [External Notification Queue Maintenance](#)
The systematic instructions to perform the Notification Maintenance.

1.2.1 Source Maintenance

The systematic instructions to perform the External System Functions Maintenance.

Maintain the Source code with OBTR to hand off payment requests at **Source Maintenance Detailed** screen.

1. On the Home page, enter **PMDSORCE** in the text field and then click the next arrow. The **Source Maintenance Detailed** screen is displayed.

Figure 1-6 Source Maintenance Detailed

The screenshot displays the 'Source Maintenance Detailed' configuration screen. It includes several sections with various settings:

- Prefunded Payments:** Prefunded Payments Allowed (checked), Pricing Applicable (unchecked), Prefunded Payments GL (260000105), and Auto-process Claims for Prefunded Payments (unchecked).
- Duplicate Check Fields:** Duplicate Check Period in Days (0).
- Accounting & Message Preference:** Preferred Reference (Transaction Reference).
- Other Preferences:** SSI Handling (Not Required), PSD Applicable (unchecked), Validate Debit Authority (unchecked), Notification Required (checked), Incoming SWIFT (unchecked), Allow Back Value Dated Book Transfer (unchecked), and Allow External Audit Info (unchecked).
- Credit to GL Payments:** Inbound credit to GL (checked), Pricing Applicable (unchecked), and Intermediary Credit GL (260000105).
- Auto Queue Preferences:** System Action (Auto roll-over).

Buttons at the bottom include 'Duplicate Check Fields', 'Response Details', 'Audit', and 'Exit'.

2. On the **Source Maintenance Detailed** screen, specify the fields as described below.

Following are the source codes OBTR uses to initiate payment request:

- For all OBTR modules where outgoing payment or receive notice is initiated, the source code is OBTR<Module-ID>. For example, the source code for the FX module is OBTRFX.
- Each record maintained in **Source Maintenance Detailed** screen (PMDSORCE) must have the below preferences:
- **Pre-funded Payments GL** or **Intermediary Credit GL** should match Inter System Bridge GL maintained in **Treasury External System Maintenance screen (IFDTREPM)** of OBTR.
- Maintain the source code for MX maintenance.

Note:

This Inter System Bridge GL must be available for both OBTR and OBPM.

For more information on source maintenance, refer to the section *Source* in the *Payments Core* user manual.

1.2.2 Source Network Preference Maintenance

The systematic instructions to perform the Source Network Preference Maintenance.

The OBTR Source-specific preferences for each network are maintained at **Source Network Preference Maintenance** screen.

1. On the Home page, enter **PMDSORNW** in the text field and then click the next arrow.

The **Source Network Preference Maintenance** screen is displayed.

Figure 1-7 Source Network Preference Maintenance

The screenshot shows the 'Source Network Preferences Detailed' screen. It includes a 'Save' button at the top left. The main form area is divided into several sections:

- Host Code:** Text field containing 'HOST1'.
- Source Code:** Text field containing 'OBTRMM' with a search icon.
- Network Code:** Text field containing 'SWIFTISO' with a search icon.
- Transaction Type:** Dropdown menu set to 'Outgoing'.
- Description:** Text field.
- Network Description:** Text field.
- Network Type Description:** Text field.
- Preferences:**
 - Authorization Rekey Required:** Toggle switch (off).
 - MIS Group:** Text field with search icon.
 - UDF Group:** Text field with search icon.
- Sanctions System:**
 - Sanction Check Required:** Toggle switch (off).
- Pricing:**
 - External Pricing Applicable:** Toggle switch (off).
- Accounting Preference:**
 - Debit Entry on:** Text field containing 'On Activation Date'.
- Same Day Transaction Rollover Preference:**
 - Amount Block on Booking Date:** Toggle switch (off).
- Authorization Limit:**
 - Authorization Limit Currency:** Text field with search icon.
 - Authorization 1 Limit:** Text field.
 - Authorization 2 Limit:** Text field.
 - Network Release Limit:** Text field.
 - Credit Entry on:** Text field containing 'On Activation Date'.
- Future Valued Transaction Preferences:**
 - Validation on Booking Date:** Dropdown menu set to 'Required'.
- Authorization Rekey Fields:** Table with columns 'Rekey Field Name' and 'Description'. The table is currently empty, showing 'No data to display'.

At the bottom right, there are 'Audit' and 'Cancel' buttons.

2. On the **Source Network Preference Maintenance** screen, specify the fields as below.

Table 1-6 Field Specifications for MX Maintenance

Field	Specification
Network code	Specify the network code as SWIFTISO which is mapped to the source code.
Transaction Type	Specify the transaction type as Outgoing .

The preference for various payment networks through which OBTR initiate a payment request needs to be maintained on this screen for the same Source codes as in the previous section.

For more information on source network preferences maintenance, refer to the section *Source Network Preference* in the [Payments Core](#) user manual.

1.2.3 Network Code Maintenance

The systematic instructions to maintain the network Code in the OBPM.

To maintain the Network code and link it to a payment type. This screen is applicable for all existing payments types as well.

1. On the Home page, enter **PMDNWCOD** in the text field and then click the next arrow.

The **Network Rule Maintenance** screen is displayed.

Figure 1-8 Network Rule Maintenance

2. On the **Network Code Maintenance** screen, specify the fields.

Ensure to specify the **Network Code** as **SWIFTISO** for MX maintenance.

For more information on source maintenance, refer to the section *Network Code* in the [Payments Core](#) user manual.

1.2.4 Network Rule Maintenance

The systematic instructions to maintain the network rules in the OBPM.

OBPM must maintain appropriate Network Rule maintenance to route the OBTR request to the respective network.

Based on the Payment type, OBTR system send one of the below values in Service Level Proprietary field to build the network rules.

- LCL - Local clearing payments
 - SWIFT - SWIFT Payment messages
 -
1. On the Home page, enter **PMDNWRLE** in the text field and then click the next arrow.

The **Network Rule Detailed** screen is displayed.

Figure 1-9 Network Rule Detailed

2. On the **Network Rule Maintenance** screen, specify the fields.

Table 1-7 Field Specifications for MX Maintenance

Field	Specification
Channel Type	Specify the channel type as SWIFTMX .
Network Code	Specify the network code as SWIFTISO for the respective rule selected for the MX maintenance.

For more information on source maintenance, refer to the section *Payments Rule Engine* in the [Payments Core](#) user manual.

1.2.5 External Notification Queue Maintenance

The systematic instructions to perform the Notification Maintenance.

Maintain the OBTR Source specific notification preferences for each network at **External Notification Queue Detailed** screen.

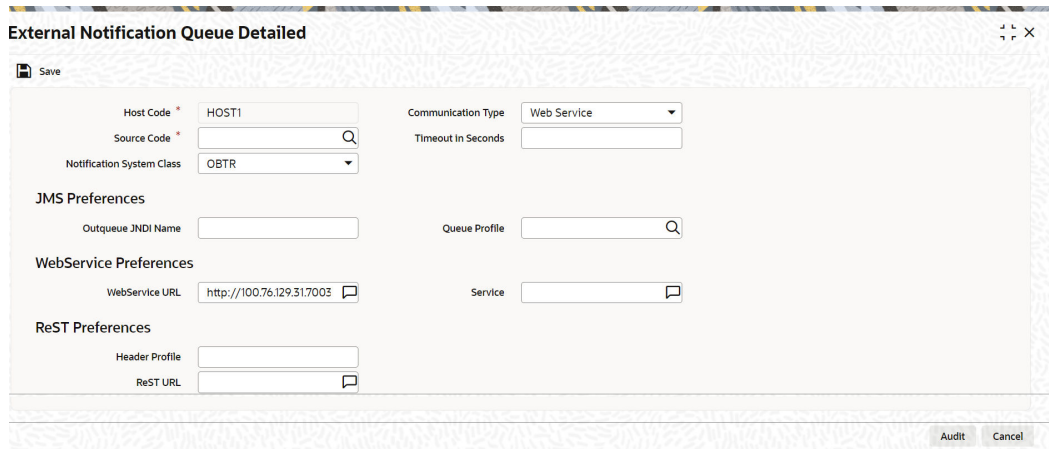

The notification is a call from OBPM to the OBTR Webservice – OBTREPSService that needs to be deployed. The gateway external system setup is required to be done for source code mentioned in the below image.

 **Note:**

It is important to give the Notification System class as OBTR and communication mode as Web Service.

1. On the Home page, enter **PMDEXTNT** in the text field and then click the next arrow.
The **External Notification Queue Detailed** screen is displayed.

Figure 1-10 External Notification Queue Detailed

2. On the **External Notification Queue Detailed** screen, specify the fields.
For more information on source maintenance, refer to the section *External Notification Queue* in the [Payments Core](#) user manual.

1.3 Common Core Maintenance

This topic describes the required common core maintenance.

The following common core maintenance need to perform for Integration.

- Customer Maintenance - Create the customers in STDCIFCR.
- Account Maintenance - Create Accounts (CASA / NOSTRO) in STDCRACC
- General Ledger - Maintenance Create a General Ledger in STDCRGLM.
- Transaction code - Maintenance Create the Transaction code in STDCRTRN.
- OBPM to use OFCUB Dates Maintain IS_CUSTOM_DATE parameter as 'Y' in cstb_param table. By this, OBPM will use Today from sttm_dates as the transaction booking date.
- Other Payments Maintenance, Refer to Oracle Banking Payments Core User Manual, for the other Day 0 maintenance.

For detailed information on above mentioned screens, refer to Oracle Banking Payments Core User Manual.
