- · List of Topics
- · Symbols and Icons

Audience

This guide is intended for Back Office Data Entry Clerk, Back Office Managers/ Officers, Product Managers, End of Day Operators, and Financial Controller users.

Acronyms and Abbreviations

The acronyms and abbreviations are listed in this below table:

Table 1 Acronyms and Abbreviations

Abbreviations or Acronyms	Definition
AEOD	Automated End of Day
DV	Derivatives
Dr	Debit
EOFI	End of Financial Input
EOD	End of Day
FX	Foreign Exchange
GL	General Ledger
LCY	Local Currency
MM	Money Market
OBTR	Oracle Banking Treasury Management
ОТ	Over the Counter Options
ОВРМ	Oracle Banking Payments Management
WSDL	Web Services Description Language

Conventions

The following text conventions are used in this document:

Table 2 Conventions and Meaning

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
italic	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

List of Topics

This guide is organized as follows:

Topics	Description
Treasury - Payments Integration	Explains how to codeploy the Oracle Banking Treasury Management & Oracle Banking Payments product in a single instance.

Symbols and Icons

Table 3 Symbols

Icons	Function
×	Exit
+	Add row
-	Delete row
Q	Option List

1

Treasury - Payments Integration

You can integrate Oracle Banking Treasury Management product (OBTR) with Oracle Banking Payments product (OBPM).

To integrate these two products on the co-deployed environment, you need to do specific maintenance in OBTR, OBPM, and Common Core.

This topic has the following sub-topics:

Maintenance Required in OBTR

This section describes the specific maintenance, needed in Oracle Banking Treasury Management (OBTR) to integrate the same with Oracle Banking Payments (OBPM).

Maintenance Required in OBPM

This section describes the specific maintenance needed in Oracle Banking Payments (OBPM) to integrate the same with Oracle Banking Treasury Management (OBTR).

Common Core Maintenance

This topic describes the required common core maintenance.

1.1 Maintenance Required in OBTR

This section describes the specific maintenance, needed in Oracle Banking Treasury Management (OBTR) to integrate the same with Oracle Banking Payments (OBPM).

This topic has the following sub-topics:

Treasury External System Maintenance

The systematic instruction to maintain the active record in Treasury External System Maintenance screen is described in this topic.

External System Functions Maintenance

The systematic instructions to perform the External System Functions Maintenance.

Upload Source Preference Maintenance

The systematic instructions to perform the Upload Source Preference Maintenance is discussed in this topic.

BIC Maintenance

This topic describes BIC maintenance in OBTR.

Other Common Maintenance

This topic describes the other common maintenance.

Treasury External Payment System Payment Queue Summary

This topic describes the systematic instructions to view the payment request send to OBPM.

1.1.1 Treasury External System Maintenance

The systematic instruction to maintain the active record in Treasury External System Maintenance screen is described in this topic.

The Treasury External System Maintenance screen with field external system type as "Payments" for different service codes with all required fields to maintain the active record. For outgoing payments, maintain the service code as "GenPayMessage" with Single Payment Service details as below:

Table 1-1 Fields Specification

Field	Specification
Service Name	PMSinglePayOutService
Operation Code	CreateSinglePayment
Rest/Web Service User Option	Choose the preferred option
Rest/Web Service User	Provide the User to be used in Rest request
Rest/Web Service URL Service	Provide the Rest API URL of Single Payment Service

For Receive Notice, maintain the service code as "GenRecvNotice" with Inbound Cross Border Payments service details as below:

Table 1-2 Fields Specification

Field	Specification
Service Name	PMXborderInService
Operation Code	CreateXborderIn
Rest/Web Service User Option	Choose the preferred option
Rest/Web Service User	Provide the User to be used in Rest request
Rest/Web Service URL Service	Provide the Rest API URL of Inbound Cross Border Payments Service

For Incoming Cross border payments reversal, maintain the service code as "GenInTxnRev" with Cross Border Incoming Transaction Reversal Service details as below:

Table 1-3 Fields Specification

Field	Specification
Service Name	PMInTxnReversalService
Operation Code	CreatePMInTxnReversal
Rest/Web Service User Option	Choose the preferred option
Rest/Web Service User	Provide the User to be used in Rest request
Rest/Web Service URL Service	Provide the Rest API URL of Inbound Cross Border Incoming Transaction Reversal Service

For Outgoing Cross border payments reversal, maintain the service code as "GenOutTxnRev" with Cross Border Outgoing Transaction Reversal Service details as below:

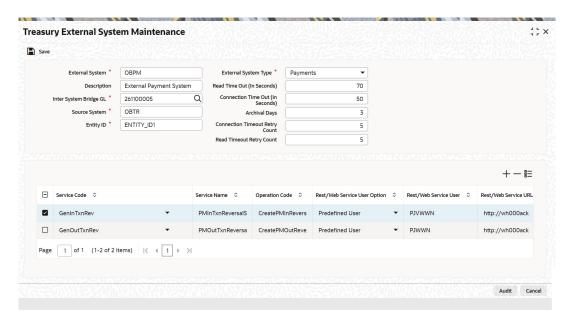

Table 1-4 Fields Specification

Field	Specification
Service Name	PMOutTxnReversalService
Operation Code	CreatePMOutTxnReversal
Rest/Web Service User Option	Choose the preferred option
Rest/Web Service User	Provide the User to be used in Rest request
Rest/Web Service URL Service	Provide the Rest API URL of Inbound Cross Border Outgoing Transaction Reversal Service

1. On the Home page, enter **IFDTREPM** in the text field and then click the next arrow.

The Treasury External System Maintenance screen.

Figure 1-1 Treasury External System Maintenance

On the Treasury External System Maintenance screen, specify the fields as describes in the above field specification tables.

Below are the scheduler jobs configured for the Integration. Make sure that these jobs are running.

- TREPSGENPAYMENT Scheduler job for processing the Payment request
- TREPS_NOTIFICATION Scheduler job for processing OBPM notifications

1.1.2 External System Functions Maintenance

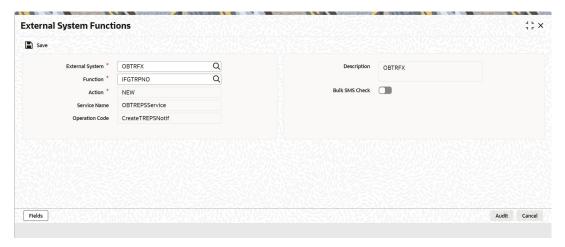

The systematic instructions to perform the External System Functions Maintenance.

For the below Source codes with the service name OBTREPSService and the operation code CreateTREPSNotif, maintain the External System Functions to receive the notifications from OBPM.

For all OBTR modules when outgoing payment or receive notice is initiated, the source code is "OBTR<Module-ID>". For example, the source code for the FX module is "OBTRFX."

On the Home page, enter GWDETFUN in the text field and then click the next arrow.
 The External System Functions screen is displayed.

Figure 1-2 External System Functions

On the External System Functions screen, specify the fields.

Table 1-5 Fields Specification

Field	Specification
Source Code	For all OBTR modules where outgoing payment or receive notice is initiated, the source code is "OBTR <module-id>". For example, the source code for the FX module is "OBTRFX."</module-id>
Service Name	SOBTREPSService
Operation Code	CreateTREPSNotif

1.1.3 Upload Source Preference Maintenance

The systematic instructions to perform the Upload Source Preference Maintenance is discussed in this topic.

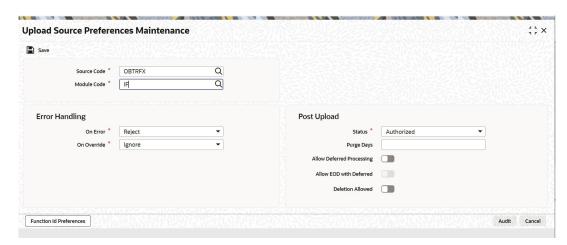

In the **Upload Source Preference Maintenance** screen, Post Upload Status field value must be selected as "Authorized".

1. On the Home page, enter CODUPLDM in the text field and then click the next arrow.

The **Upload Source Preference Maintenance** screen is displayed.

Figure 1-3 Upload Source Preference Maintenance

On the Upload Source Preference Maintenance screen, specify the Post Upload Status field as Authorized.

Make sure that the TRGenPayMessage.ADF file is executed in the database schema. This file contains the JSON template for the OBPM Single Payment Service.

1.1.4 BIC Maintenance

This topic describes BIC maintenance in OBTR.

Upload BIC directory & ensure that the same are listed at ISDBICDE, which OBTR will use, to transact payments.

1.1.5 Other Common Maintenance

This topic describes the other common maintenance.

Refer to Core Services User Manual, for the other Day 0 maintenance to be done for OBTR.

1.1.6 Treasury External Payment System Payment Queue Summary

This topic describes the systematic instructions to view the payment request send to OBPM.

On the home page, enter IFSTRPQU to invoke the Treasury External Payment System Queue Summary Screen (IFSTRPQ) screen and enter IFDTRPQU to invoke the Treasury External Payment System Queue Detailed Screen (IFSTRPQ) screen.

This screens are used to view the payment request send to OBPM.

Figure 1-4 Treasury External Payment System Queue Summary

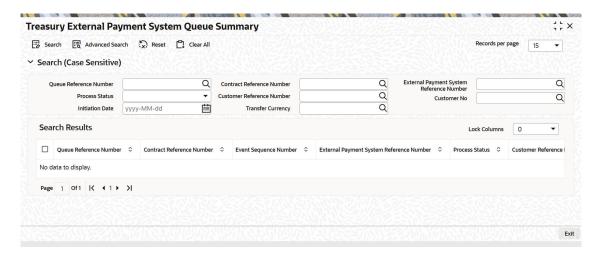

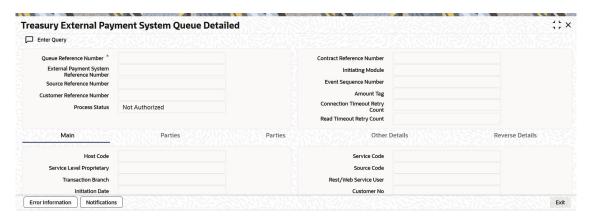

Figure 1-5 Treasury External Payment System Queue Summary

1.2 Maintenance Required in OBPM

This section describes the specific maintenance needed in Oracle Banking Payments (OBPM) to integrate the same with Oracle Banking Treasury Management (OBTR).

This topic has the following sub-topics:

- Source Maintenance
 - The systematic instructions to perform the External System Functions Maintenance.
- Source Network Preference Maintenance
 - The systematic instructions to perform the Source Network Preference Maintenance.
- Network Code Maintenance
 - The systematic instructions to maintain the network Code in the OBPM.
- Network Rule Maintenance
 - The systematic instructions to maintain the network rules in the OBPM.
- External Notification Queue Maintenance
 - The systematic instructions to perform the Notification Maintenance.

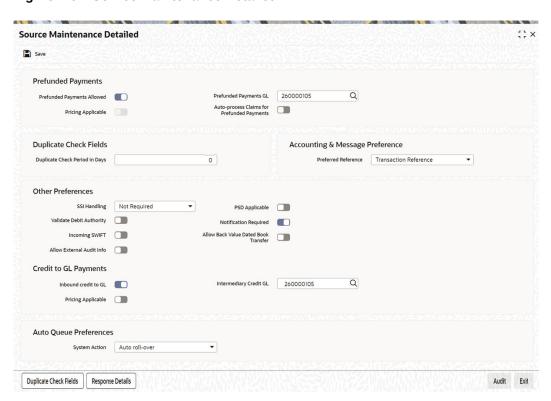

1.2.1 Source Maintenance

The systematic instructions to perform the External System Functions Maintenance.

Maintain the Source code with OBTR to hand off payment requests at **Source Maintenance Detailed** screen.

On the Home page, enter PMDSORCE in the text field and then click the next arrow.
 The Source Maintenance Detailed screen is displayed.

Figure 1-6 Source Maintenance Detailed

2. On the **Source Maintenance Detailed** screen, specify the fields as described below.

Following are the source codes OBTR uses to initiate payment request:

- For all OBTR modules where outgoing payment or receive notice is initiated, the source code is OBTR<Module-ID>. For example, the source code for the FX module is OBTRFX.
- Each record maintained in Source Maintenance Detailed screen (PMDSORCE) must have the below preferences:
- Pre-funded Payments GL or Intermediary Credit GL should match Inter System Bridge GL maintained in Treasury External System Maintenance screen (IFDTREPM) of OBTR.
- Maintain the source code for MX maintenance.

This Inter System Bridge GL must be available for both OBTR and OBPM.

For more information on source maintenance, refer to the section *Source* in the *Payments Core* user manual.

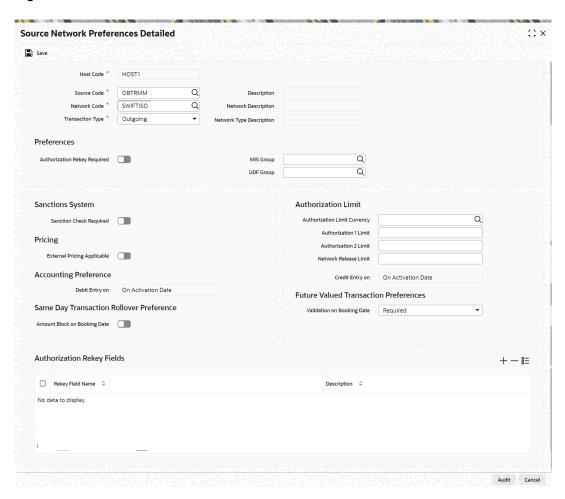

1.2.2 Source Network Preference Maintenance

The systematic instructions to perform the Source Network Preference Maintenance.

The OBTR Source-specific preferences for each network are maintained at **Source Network Preference Maintenance** screen.

On the Home page, enter PMDSORNW in the text field and then click the next arrow.
 The Source Network Preference Maintenance screen is displayed.

Figure 1-7 Source Network Preference Maintenance

2. On the **Source Network Preference Maintenance** screen, specify the fields as below.

Table 1-6 Field Specifications for MX Maintenance

Field	Specification
Network code	Specify the network code as SWIFTISO which is mapped to the source code.
Transaction Type	Specify the transaction type as Outgoing .

The preference for various payment networks through which OBTR initiate a payment request needs to be maintained on this screen for the same Source codes as in the previous section. For more information on source network preferences maintenance, refer to the section *Source Network Preference* in the *Payments Core* user manual.

1.2.3 Network Code Maintenance

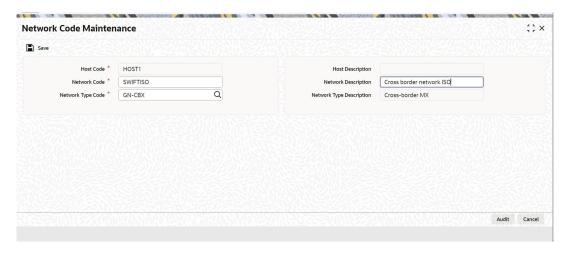

The systematic instructions to maintain the network Code in the OBPM.

To maintain the Network code and link it to a payment type. This screen is applicable for all existing payments types as well.

1. On the Home page, enter **PMDNWCOD** in the text field and then click the next arrow.

The **Network Rule Maintenance** screen is displayed.

Figure 1-8 Network Rule Maintenance

2. On the **Network Code Maintenance** screen, specify the fields.

Ensure to specify the **Network Code** as **SWIFTISO** for MX maintenance. For more information on source maintenance, refer to the section *Network Code* in the *Payments Core* user manual.

1.2.4 Network Rule Maintenance

The systematic instructions to maintain the network rules in the OBPM.

OBPM must maintain appropriate Network Rule maintenance to route the OBTR request to the respective network.

Based on the Payment type, OBTR system send one of the below values in Service Level Proprietary field to build the network rules.

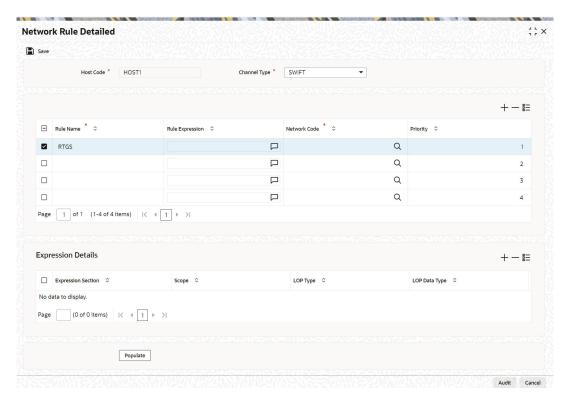

LCL - Local clearing payments

SWIFT - SWIFT Payment messages

.

On the Home page, enter PMDNWRLE in the text field and then click the next arrow.
 The Network Rule Detailed screen is displayed.

Figure 1-9 Network Rule Detailed

2. On the **Network Rule Maintenance** screen, specify the fields.

Table 1-7 Field Specifications for MX Maintenance

Field	Specification
Channel Type	Specify the channel type as SWIFTMX .
Network Code	Specify the network code as SWIFTISO for the respective rule selected for the MX maintenance.

For more information on source maintenance, refer to the section *Payments Rule Engine* in the *Payments Core* user manual.

1.2.5 External Notification Queue Maintenance

The systematic instructions to perform the Notification Maintenance.

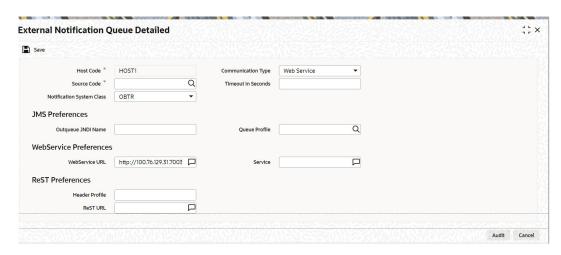

Maintain the OBTR Source specific notification preferences for each network at **External Notification Queue Detailed** screen.

The notification is a call from OBPM to the OBTR Webservice – OBTREPSService that needs to be deployed. The gateway external system setup is required to be done for source code mentioned in the below image.

It is important to give the Notification System class as OBTR and communication mode as Web Service.

On the Home page, enter PMDEXTNT in the text field and then click the next arrow.
 The External Notification Queue Detailed screen is displayed.

Figure 1-10 External Notification Queue Detailed

On the External Notification Queue Detailed screen, specify the fields.

For more information on source maintenance, refer to the section *External Notification Queue* in the *Payments Core* user manual.

1.3 Common Core Maintenance

This topic describes the required common core maintenance.

The following common core maintenance need to perform for Integration.

- Customer Maintenance Create the customers in STDCIFCR.
- Account Maintenance Create Accounts (CASA / NOSTRO) in STDCRACC
- General Ledger Maintenance Create a General Ledger in STDCRGLM.
- Transaction code Maintenance Create the Transaction code in STDCRTRN.
- OBPM to use OFCUB Dates Maintain IS_CUSTOM_DATE parameter as 'Y' in cstb_param table. By this, OBPM will use Today from sttm_dates as the transaction booking date.
- Other Payments Maintenance, Refer to Oracle Banking Payments Core User Manual, for the other Day 0 maintenance.

For detailed information on above mentioned screens, refer to Oracle Banking Payments Core User Manual.
