

Oracle® Banking Treasury Management

Oracle Access Manager

Release 14.7.4.0.0
G10913-01
June 2024

The Oracle logo, consisting of a solid red square with the word "ORACLE" in white, uppercase, sans-serif font centered within it.

ORACLE®

Oracle Banking Treasury Management Oracle Access Manager, Release 14.7.4.0.0

G10913-01

Copyright © 2020, 2024, Oracle and/or its affiliates.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

1 Pre-Requisites

1.1 Software Requirements	1-1
1.2 Background of SSO related components	1-1
1.2.1 Oracle Access Manager	1-2
1.2.2 LDAP Directory Server	1-2
1.2.3 WebGate/AccessGate	1-2
1.2.4 Identity Asserter	1-3

2 Configuration

2.1 Pre-Requisites	2-1
2.2 Change the web.xml file	2-1
2.3 Configuring SSO in OAM Console	2-2
2.4 Launching Oracle Banking Treasury Management	2-7
2.4.1 SSO Parameters	2-8
2.4.2 Maintaining LDAP DN for OBTR Users	2-8
2.4.3 Launching Oracle Banking Treasury Management	2-8
2.4.4 Signoff in a SSO Situation	2-8

Preface

This guide helps the user to understand single sign-on can be enabled for a Oracle Banking Treasury Management deployment using Oracle Fusion Middleware 12c.

The images used in the documentation are of illustration purpose and need to be used only for reference.

This preface has the following topics:

- [Audience](#)
- [Acronyms and Abbreviations](#)
- [Related Resources](#)

Audience

This guide is intended for anyone responsible for installing Oracle Banking Application.

Acronyms and Abbreviations

The acronyms and abbreviations are listed in this below table:

Table 1 Acronyms and Abbreviations

Abbreviations or Acronyms	Definition
DV	Derivatives
ETD	Exchange Traded Derivatives
FX	Foreign Exchange
MM	Money Market
OBTR	Oracle Banking Treasury Management
ODT	Open Development Tool
OT	Over the Counter Options
SE	Securities
SR	Securities Repo

Related Resources

For more information, see these Oracle Banking Treasury Management resources:

- *Oracle Banking Treasury Management Release Notes*
- *Oracle Banking Treasury Management Installer Index*

- *Oracle Banking Treasury Management Installer Prerequisite*

1

Pre-Requisites

The following are the pre-requisites for Oracle Access Manager (OAM) and LDAP Directory Server.

This topic has the following sub-topics:

- [Software Requirements](#)
- [Background of SSO related components](#)

1.1 Software Requirements

1. Oracle Access Manager – OAM (12.2.1.4.0)

- Access Server
- Webtier Utilities 12.2.1.4.0
- Web Gate 12.2.1.4.0
- Http Server

2. LDAP Directory Server

Please make sure that the LDAP which is been used for Oracle Banking Treasury Management Single Sign on deployment is certified to work with OAM.

List of few LDAP Directory servers supported as per OAM document (note – this is an indicative list. The conclusive list can be obtained from the Oracle Access Manager documentation):

- Oracle Internet Directory
- Active Directory
- ADAM
- ADSI
- Data Anywhere (Oracle Virtual Directory)
- IBM Directory Server
- NDS
- Sun Directory Server

3. Web Logic 12.2.1.4.0

For the purpose of achieving single sign on for OBTR in FMW 12c, it is necessary for the weblogic instance to have an explicit Oracle HTTP server (OHS).

1.2 Background of SSO related components

The SSO related components are listed below:

- Oracle Access Manager (OAM)
- LDAP Directory Server

- [WebGate/AccessGate](#)
- [Identity Asserter](#)

This topic has the following sub-topics:

- [Oracle Access Manager](#)
- [LDAP Directory Server](#)
- [WebGate/AccessGate](#)
- [Identity Asserter](#)

1.2.1 Oracle Access Manager

Oracle Access Manager (OAM) consists of the Access System, and the Identity System. The Access System secures applications by providing centralized authentication, authorization and auditing to enable single sign-on and secure access control across enterprise resources. The Identity System manages information about individuals, groups and organizations. It enables delegated administration of users, as well as selfregistration interfaces with approval workflows. These systems integrate seamlessly.

The backend repository for the Access Manager is an LDAP-based directory service that can be a combination of a multiple directory servers, which is leveraged for two main purposes:

- As the store for policy, configuration and workflow related data, which is used and managed by the Access and Identity Systems
- As the identity store, containing the user, group and organization data that is managed through the Identity System and is used by the Access System to evaluate access policies

1.2.2 LDAP Directory Server

To integrate Oracle Banking Treasury Management with OAM to achieve Single Sign-on feature, Oracle Banking Treasury Management's password policy management, like password syntax and password7 expiry parameters can no longer be handled by Oracle Banking Treasury Management.

Instead, the password policy management can be delegated to the Directory Server. All password policy enforcements would be on the LDAP user id's password and Not Oracle Banking Treasury Management application users' passwords.

1.2.3 WebGate/AccessGate

A WebGate is a Web server plug-in that is shipped out-of-the-box with Oracle Access Manager. The WebGate intercepts HTTP requests from users for Web resources and forwards it to the Access Server for authentication and authorization.

Whether you need a WebGate or an AccessGate depends on your use of the Oracle Access Manager Authentication provider. For instance, the:

- **Identity Asserter for Single Sign-On:** Requires a separate WebGate and configuration profile for each application to define perimeter authentication. Ensure that the Access Management Service is On.
- **Authenticator or Oracle Web Services Manager:** Requires a separate AccessGate and configuration profile for each application. Ensure that the Access Management Service is On.

1.2.4 Identity Asserter

Identity Asserter uses Oracle Access Manager Authentication services and also validates already authenticated Oracle Access Manager Users through the ObSSOCookie and creates a WebLogicauthenticated session. It also provides single sign-on between WebGates and portals. We can get more details on Identity asserter

Note:

This document contains the configuration of Oracle Internet Directory as LDAP server and its configuration in weblogic. This document will not discuss the configuring and setting up of OAM and LDAP directory server of other LDAP servers. This will be provided by the corresponding Software provider.

2

Configuration

This topic explains the configuration of Oracle Access Manager to enable single sign-on using Oracle Internet Directory as a LDAP server.

This topic has the following sub-topics:

- [Pre-Requisites](#)
- [Change the web.xml file](#)
- [Configuring SSO in OAM Console](#)
- [Launching Oracle Banking Treasury Management](#)

2.1 Pre-Requisites

The steps provided below assume that Oracle Banking Treasury Management has already been deployed and is working (without single sign-on)

The provided below steps assume that Oracle Access Manager and the LDAP server have been installed already and the requisite setup already done with respect to connecting the two along Weblogic's Identity Asserter.

2.2 Change the web.xml file

(Optional) Enter contextual information here, including the purpose of the task.

1. Locate the web.xml file in the application (OBTR) EAR file.
2. Add the following lines under login-config.

```
<login-config>
<auth-method>CLIENT-CERT</auth-method>
<realm-name>myRealm</realm-name>
</login-config>
```

Figure 2-1 web.xml file

```

426 <local>com.iflex.fcc.ejb.FCJEJBLocal</local>
427 <ejb-link>FCJEJB</ejb-link>
428 </ejb-local-ref>
429 <ejb-local-ref>
430 <ejb-ref-name>FCUBS_BATCHEJB_LOCAL</ejb-ref-name>
431 <ejb-ref-type>Session</ejb-ref-type>
432 <local-home>com.iflex.fcc.ejb.batch.BatchEJBLocalHome</local-home>
433 <local>com.iflex.fcc.ejb.batch.BatchEJBLocal</local>
434 <ejb-link>BatchEJB</ejb-link>
435 </ejb-local-ref>
436 <login-config>
437 <auth-method>CLIENT-CERT</auth-method>
438 <realm-name>myRealm</realm-name>
439 </login-config>
440 </web-app>

```

3. Save the file and redeploy and restart the application.

2.3 Configuring SSO in OAM Console

After installing OAM, Webtier Utilities and Webgate, extend the weblogic domain to create OAM server.

Follow the post installation scripts `deployWebGate` and `EditHttpConf` as provided in [Post Installation Steps](#).

1. Identity Store Creation.
2. To create new User Identity Store, Login to OAM Console.
3. Navigate to **System Configuration > Common configuration > Data Sources > User Identity Store**.
4. Input below information in the User Identity Store.

Choose Store Type as Oracle Internet Directory.

Location:

LDAP server Host name and Port Number in <HOSTNAME>:PORT format

Bind DN:

User name to connect the LDAP Server

Password:

Password to connect the LDAP Server

User Name Attribute:

The attribute created in LDAP, which will be the User Name for the other application (here it will be treated as the OBTR Username)

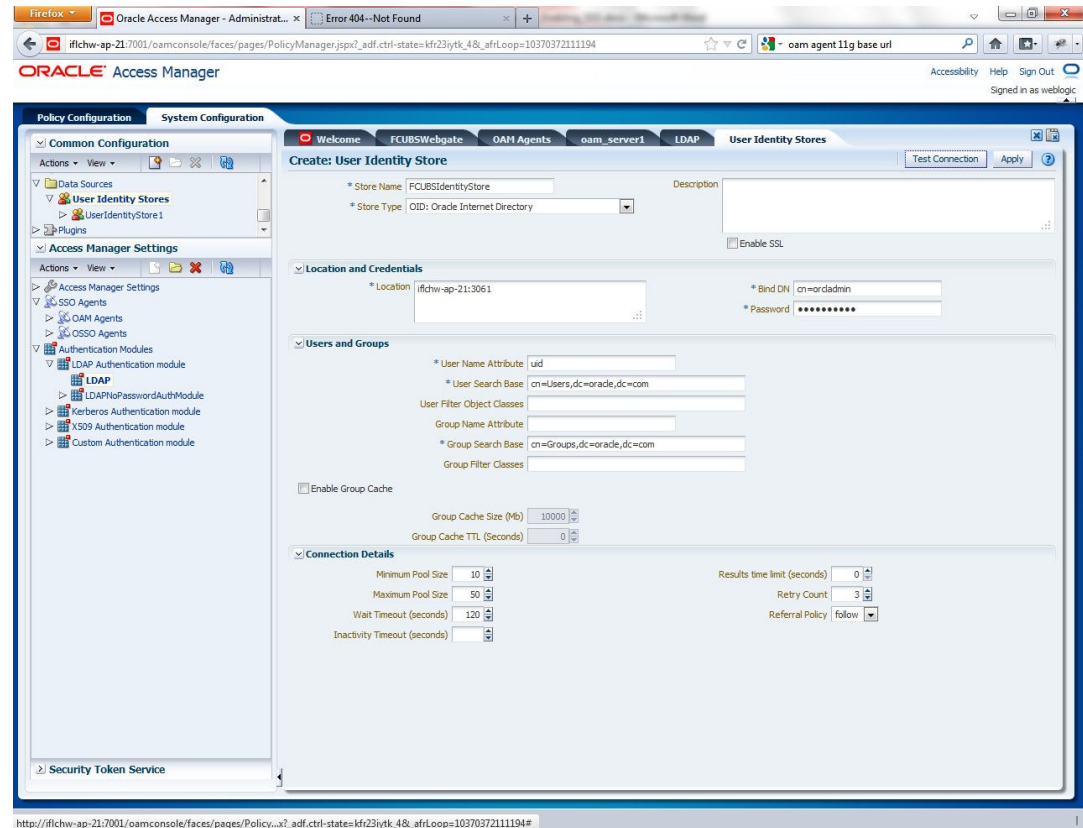

User Search Base:

The container of the User Name in the LDAP server.

Group Search Base:

The container of the Group Name in the LDAP server.

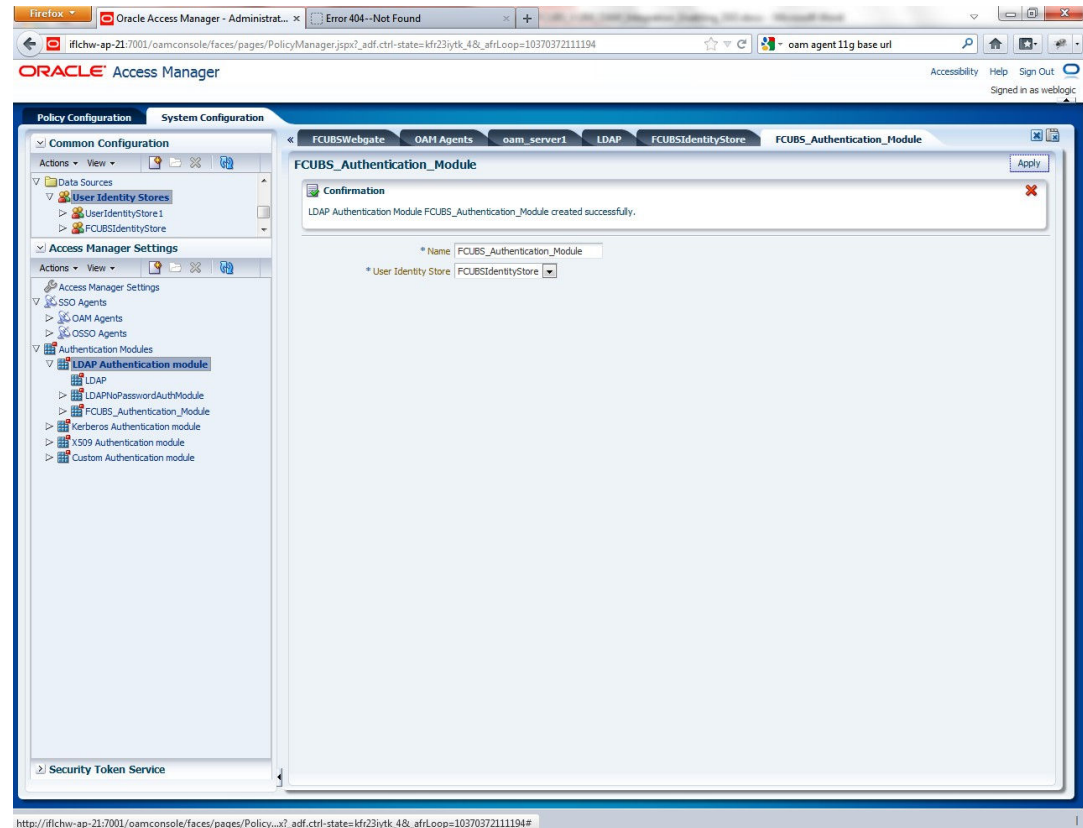

Figure 2-2 Oracle Access Manager- System Configuration

5. Click on **Apply** button after entering the above information.
6. On successful creation, click **Test connection** button to verify whether the LDAP connection is working fine.
7. To create Authentication Module, navigate to **System Configuration > Access Manager Settings > Authentication Modules > LDAP Authentication Module**.

The LDAP Authentication Module screen is displayed.

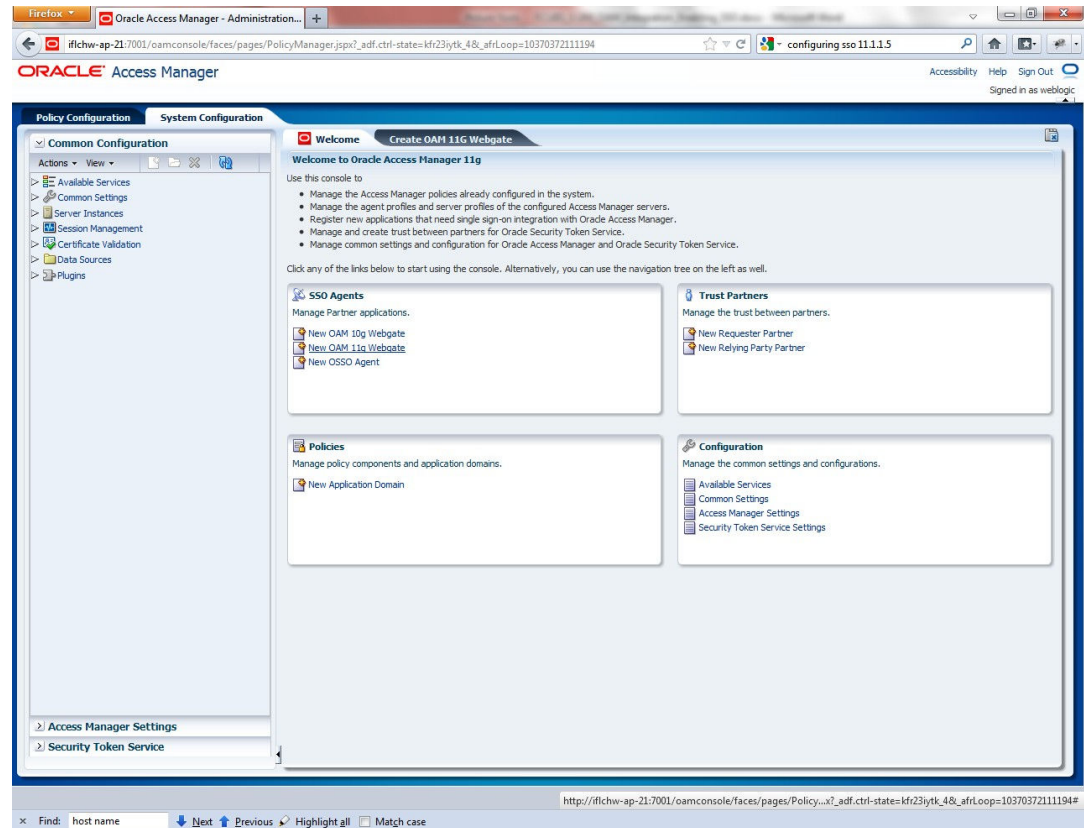

Figure 2-3 LDAP Authentication Module

8. Click the **New** button to create new Authentication Module. Input the Name of the authentication module and choose the User Identity Store we created in step 1.
9. To create OAM 12c Webgate, navigate to **System Configuration > Access Manager Settings > SSO Agents > OAM Agents**

The OAM Agents page is displayed.

Figure 2-4 OAM Agents

10. Click on the **Create 12c webgate** button or Click on New OAM 12c Webgate link available in welcome page.
11. Enter any name for Webgate and Base URL (The host and port of the computer on which the Web server for the Webgate is installed) and click on apply.

Once the OAM 12c Webgate created, add filterOAMAuthnCookie=false parameter along with default parameters in User Defined Parameters. Click 'Apply' button to save the changes.

12. Post OAM Webgate 12c Creation Steps

Perform the following steps to copy the artifacts to the Webgate installation directory: □

- On the Oracle Access Manager Console host, locate the updated OAM Agent ObAccessClient.xml configuration file (and any certificate artifacts). For example: \$DOMAIN_HOME/output/\$Agent_Name/ObAccessClient.xml
- On the OAM Agent host, copy artifacts (to the following Webgate directory path). For example: 12cWebgate_instance_dir/webgate/config/ObAccessClient.xml (for instance WebTier_Middleware_Home/Oracle_WT1/instances/instance1/config/OHS/ohs1/webgate/config/ObAccessClient.xml)

13. To create Authentication Scheme, navigate to **Policy Configuration > Authentication Schemes** and click on 'Create' button to create new Authentication Scheme.

Name : Any name to identify Authentication Scheme

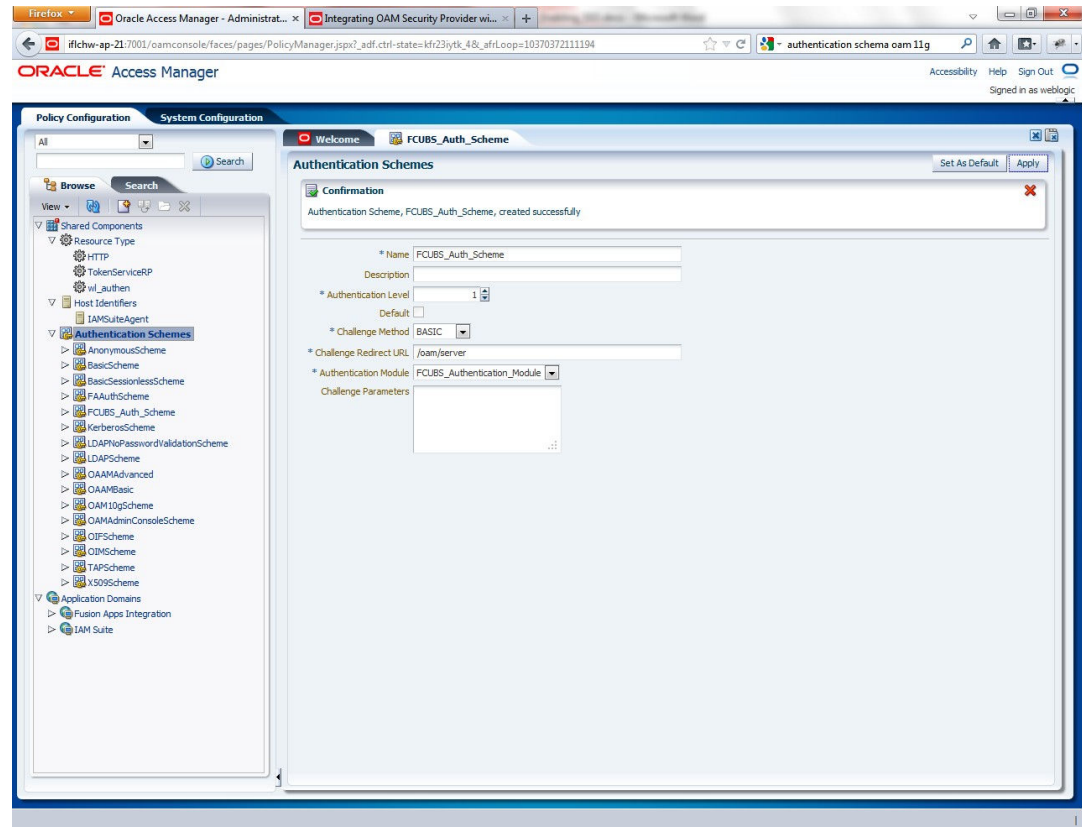

Challenge Method : BASIC

Challenge Redirect URL : /oam/server

Authentication Module : Choose the authentication module created in step 2.

If it is a basic authentication scheme, we need to add the 'enforce-valid-basic-auth-credentials' tag to the config.xml file located under /user_projects/domains/<MyDomain>/config/. The tag must be inserted within the <security-configuration> tag as follows: [Just before the end of security configuration tag] <enforce-valid-basic-auth-credentials>>false</enforce-valid-basic-auth-credentials> </security-configuration>

Figure 2-5 Authentication Schemes

14. To create authentication policy, navigate to **Policy Configuration > Application Domains > [Webgate agent name] > Authentication Policies** .
15. Click new button and input the below information
 Name: Enter any name to identify the Authentication Policy (eg. OBTRWebPolicy)
 Authentication Scheme: Choose the authentication scheme created in step 5.
 Resources: Add the resources which are all need to be protected. If <WebgateName>:/.../ and <WebgateName>:/ are added in the resources then all the sources are protected.
16. Add DN in the Responses section. Enter the value as \$user.attr.dn. The responses maintained in the tab will be added in the response header during the authentication.
17. To add Resources, navigate to **Policy Configuration > Application Domains > OBTRWebgate > Resources**.
 - Click on Create New Resource button .
 - Select the type as HTTP.
 - Select the Host Identifier as OBTRWebgate
 - Enter the resource URL as /FCJNeoWeb

- Select the protection level as Protected
 - Click on apply button to update the resource added.
18. Select the Authentication policy and Authorisation policy as Protected Resource Policy.
 19. Check whether the resources available in the authentication policies are available in Authorization Policy. During web gate creation these values are defaulted.
 20. Add DN in the Responses section. Enter the value as \$user.attr.dn. The responses maintained in the tab will be added in the response header during the authorization.
 21. To enable the Oracle HTTP Server instances to route to applications deployed on the Oracle Weblogic Server Clusters, add the directive shown below to the mod_wl_ohs.sh file available in <Weblogic Home> /Oracle_WT1/instances/instance1/config/OHS/ohs1.

```
<Location /console>
SetHandler weblogic-handler
WebLogicHost idmhost1.mycompany.com
```

```
WeblogicPort 7001
</Location>
```

22. After configuration of webgate 12c agent launch the URL *http://<hostname>:<ohs_Port>/ohs/modules/webgate.cgi?progid=1* to verify whether the webgate configuration is fine. If the URL launches a screen as below then the webgate configuration is working fine.
23. Using OAM Test Tool (This step is not mandatory)

There is a test tool provided in OAM software which helps us to check the response parameter values. The test tool is available in <OAM Install Dir>\oam\server\tester. For eg. *D:\weblogic\Middleware\Oracle_IDM1\oam\server\tester*

Use `java -jar oamtest.jar` to launch the OAM test tool.

2.4 Launching Oracle Banking Treasury Management

After setting up Oracle Banking Treasury Management to work on Single Sign on mode, perform the below procedure:

1. Navigate to the interim servlet URL from your browser.

For e.g.: `http://<hostname>:[port]/FCJNeoWeb`

Since the resource is protected, the WebGate challenges the user for credentials as shown below.
2. Once the user is authenticated and authorized to access the resource, the servlet gets redirected to normal Oracle Banking Treasury Management application server URL and now the new signon form will appear as below. The application will automatically redirect Oracle Banking Treasury Management home page.

This topic has the following topics:

- [SSO Parameters](#)
- [Maintaining LDAP DN for OBTR Users](#)
- [Launching Oracle Banking Treasury Management](#)
- [Signoff in a SSO Situation](#)

2.4.1 SSO Parameters

To maintain the parameters required for SSO, perform the below procedure:

1. Go to **Security Maintenance > Sys. Administration > SSO Maintenance**.
2. Provide all the details like Directory Server host name, Port number, LDAP admin User id , admin Password, LDAP base and Login time out duration (in Sec).

2.4.2 Maintaining LDAP DN for OBTR Users

For each user id in OBTR a user has to be created in the LDAP. When creating the user in LDAP ensure that the DN used is same as the LDAP DN value that will be updated in user maintenance form.

1. Once the user is created in LDAP go to the user creation form in OBTR.
. If the OBTR user already exists then unlock the user and update the LDAP DN value which was set when creating the user in LDAP.
2. Click on **Validate** button to check whether any other user is having the same LDAP DN value.

2.4.3 Launching Oracle Banking Treasury Management

After setting up Oracle Banking Treasury Management to work on Single Sign on mode, perform the below procedure:

1. Navigate to the interim servlet URL from your browser.

For e.g.: `http://<hostname>:[port]/FCJNeoWeb`

Since the resource is protected, the WebGate challenges the user for credentials as shown below.

2. Once the user is authenticated and authorized to access the resource, the servlet gets redirected to normal Oracle Banking Treasury Management application server URL and now the new signon form will appear as below. The application will automatically redirect Oracle Banking Treasury Management home page.

This topic has the following topics:

- [SSO Parameters](#)
- [Maintaining LDAP DN for OBTR Users](#)
- [Launching Oracle Banking Treasury Management](#)
- [Signoff in a SSO Situation](#)

2.4.4 Signoff in a SSO Situation

Oracle Banking Treasury Management does not provide for single signoff currently, i.e., when a user signs off in Oracle Banking Treasury Management, the session established with Oracle Access Manager by the user will not be modified in any manner.

In a SSO situation the 'Exit' and 'Logoff' actions in Oracle Banking Treasury Management will function as 'Exit', i.e., on clicking these, the user will 'exit' Oracle Banking Treasury Management and will need to re-launch Oracle Banking Treasury Management using the Oracle Banking Treasury Management launch URL.
