This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

1.2	Source File List	1-4
1.3	Log Files	1-4

Preface

This document describes the steps to develop the notification XML and notification trigger using Oracle FLEXCUBE Development Workbench.

- [Purpose](#)
- [Audience](#)
- [Documentation Accessibility](#)
- [Critical Patches](#)
- [Diversity and Inclusion](#)
- [Conventions](#)
- [Screenshot Disclaimer](#)
- [Prerequisite](#)
- [Related Resources](#)

Purpose

This manual is designed to help FLEXCUBE Application developers/users to familiarize with ORACLE FLEXCUBE Development Workbench.

Audience

This document is intended for FLEXCUBE Application developers/users that use Development Workbench to develop various FLEXCUBE components.

To Use this manual, you need conceptual and working knowledge of the below:

Table 1 Proficiency and Resources

Proficiency	Resources
FLEXCUBE Functional Architecture	Training programs from Oracle Financial Software Services.
FLEXCUBE Technical Architecture	Training programs from Oracle Financial Software Services.
FLEXCUBE Object Naming Conventions	Development Overview Guide
Working knowledge of Web based Applications	Self-Acquired
Working knowledge of Oracle Database	Oracle Documentations
Working knowledge of PLSQL developer	Respective vendor documents

Table 1 (Cont.) Proficiency and Resources

Proficiency	Resources
Working knowledge of PLSQL and SQL Language	Self-Acquired
Working knowledge of XML files	Self-Acquired

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Critical Patches

Oracle advises customers to get all their security vulnerability information from the Oracle Critical Patch Update Advisory, which is available at [Critical Patches](#), [Security Alerts and Bulletins](#). All critical patches should be applied in a timely manner to ensure effective security, as strongly recommended by [Oracle Software Security Assurance](#).

Diversity and Inclusion

Oracle is fully committed to diversity and inclusion. Oracle respects and values having a diverse workforce that increases thought leadership and innovation. As part of our initiative to build a more inclusive culture that positively impacts our employees, customers, and partners, we are working to remove insensitive terms from our products and documentation. We are also mindful of the necessity to maintain compatibility with our customers' existing technologies and the need to ensure continuity of service as Oracle's offerings and industry standards evolve. Because of these technical constraints, our effort to remove insensitive terms is ongoing and will take time and external cooperation.

Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

Screenshot Disclaimer

Personal information used in the interface or documents is dummy and does not exist in the real world. It is only for reference purposes.

Prerequisite

Specify **User ID** and **Password**, and log in to **Home Screen**.

Related Resources

The functions of ORACLE FLEXCUBE Development Workbench for Investor Servicing system is organized into various guides, each discussing a component.

For more information, see these Open Development Tool documents:

- *Development of Launch Forms and Other Screens*
- *Development of Dashboard Form*
- *Development Workbench Service XML Development*
- *Development Workbench Performance Tuning Enhancements*
- *Development Workbench - Rest Services Development*

1

Bulk Generation

This topic provides information on the Development Workbench - Bulk Generation module.

Oracle FLEXCUBE Universal Banking Development Workbench provides bulk generation (all files at one time) of both front-end and back-end units for both Extensible and Non-Extensible RADXMLs.

Note:

For Non-Extensible function IDs (RADXMLs), the bulk generation of only front-end files are supported.

This topic contains the following sub-topics:

- [Generate Bulk Files](#)
This topic provides the systematic instructions to generate both front-end and back-end units in bulk.
- [Source File List](#)
This topic provides the systematic instructions on how to prepare a source file.
- [Log Files](#)
This topic provides information on Log Files.

1.1 Generate Bulk Files

This topic provides the systematic instructions to generate both front-end and back-end units in bulk.

On the Development Workbench Login page, specify the **User ID** and **Password**, and log in to the Development Workbench Landing Page.

1. On **Expand Menu**, click **Bulk Generation** node.

The **Bulk Generation** screen is displayed.

Figure 1-1 Bulk Generation

- On the **Bulk Generation** screen, specify the fields.
For more information on fields, refer to the field description table.

Table 1-1 Bulk Generation - Field Description

Field	Description
Source File List	The user must create a text file containing the absolute path of the RADXML for which bulk generation has to be done. Refer to the topic Source File List
Destination Path	Enter the path where files will be generated. The Destination Path must be in the Client Machine if the Save Mode is Client, and it must refer to a path in Server if the Save Mode is Server. Note: The Zip mode is not supported for the Bulk generation activity.
Sources Files	Select the sources files from the drop-down list: Extensible - On the selection of this option, only extensible files will be considered for a generation. Non-Extensible - On the selection of this option, only non-extensible files will be considered for a generation. Both - Both extensible and non-extensible files get generated. The Data XML Path field is defunct. The user has to select the required files to be generated for all RADXML's.

- Workbench will generate the required files into respective folders.
The workbench generates the required files into respective folders.

Figure 1-2 Bulk Generation after Selection of Required Fields

4. On the **Bulk Generation** screen, click **Generate**.
The **Information** window displays the generation status.

Figure 1-3 Information Message on successful bulk generation

On the successful generation of files, the file status displays as generated, and on failure, the file status displays as failed.

Note:

No front-end units will be generated for the notification and purge-entity RADXMLs.

The time taken for bulk generation of units depends on the number of files, the number of units to be generated for each file, the client, and server machine configuration, etc.,

1.2 Source File List

This topic provides the systematic instructions on how to prepare a source file.

Prepare a text file with an absolute path.

If all the files are placed in one folder, dos commands (as shown below) can be used to generate the text file.

```
Z:\FLEXCUBE_Kernel\FCUBS_11.4.0\MAIN>Dir /b /s *_RAD.xml >  
D:\BulkGeneration\Console.txt
```

Figure 1-4 Source File list sample

Include Call form List

If the user is generating function IDs which has call forms attached to them, then the call form list should be included as a part of the source file list. If the call form is not included, then the generation fails.

If units for call form files are not required to be generated, then call form paths can be prefixed with a **Double Hyphen (--)**. All lines starting with a double hyphen will not be taken up for the bulk generation.

As it is difficult to search and put each call form for individual screens, prepare a call form list upfront and add the files to be generated at the end of the call form list. Even if any of the call forms is repeated in the generation list it won't affect the generation of that file.

For example, include call form to the source list, --

```
Z:\FLEXCUBE_Kernel\FCUBS_11.4.0\MAIN\AM\RADXML\AMCPRPCL_RAD.xml
```

If the user is generating a complete RADXML from the baseline area, a call form list is not required.

1.3 Log Files

This topic provides information on Log Files.

1. To view the generated file status, navigate to the bulk generation console path.

Development Workbench generates a file status log in the **Destination Path**.

Figure 1-5 Status Log files Path

2. You can view the details of all the files processed and their status in the Status Log Files.

Figure 1-6 Status Log files

3. You can view the details of all the missing label information which are generated for each function ID for the generated units.

Figure 1-7 Missing Labels files Path
