Purpose

This guide provides the guidance to users for the issues within the application. It describes the various methods to figure out the error and then troubleshoot it.

Audience

This guide is intended for the software developers and software testers.

Acronyms and Abbreviations

The list of the acronyms and abbreviations used in this guide are as follows:

Abbreviation	Description	
SMS	Security Management System	
CMC	Common Core	
MOC	Mid office Common Core	
ELK	Elasticsearch Logstash Kibana	

Table 1 Acronyms and Abbreviations

List of Topics

This guide is organized as follows:

Table 2 List of Topics

Topics	Description
Troubleshooting Technical FlowsThis topic provides the information about the platform-wid troubleshooting of technical flows. It includes UI side cher Service side logs, tracing using Zipkin, debugging using B stack, and some environmental issues of Weblogic.	
Troubleshooting Kafka	This topic provides the information on the troubleshooting kafka.
Health Checks	This topic provides the information about the health check measures and observability required.
Troubleshooting Functional Workflows	This topic provides the information about the Oracle Banking Virtual Account Management specific troubleshooting flows and specific data stores that can be checked for issues. It includes Oracle Banking Virtual Account Management sub-domain (wars) and high-level flow of Cash Deposit transaction and key Process Log table to be checked to troubleshoot transaction flow.
Troubleshooting OutOfMemory issues	This topic provides the information on troubleshooting OutOfMemory issues.

Prerequisites

Prerequisites

The prerequisites are as follows:

- Basic understanding of Eventing platform
- Basic understanding application log analysis using tools
- Basic understanding DB changes

Pre-installed Softwares

The following softwares should be pre-installed:

- Zipkin
- Kafka
- ELK
- Any SQL Database like SQLDEVELOPER
- WinSCP

General Prevention

Do not make any changes to Flyway scripts manually.

Best Practices

The best practices are as follows:

• It is ideal to have ELK stack installed on a separate VM outside the product VMs to ensure the flow of logs in case of an app crash.

• Log levels can be adjusted to INFO and above to enable relevant logs to flow in.

1 Troubleshooting Technical Flows

This topic describes about various programming issues, possible causes, and solutions to resolve the issues.

This topic contains the following subtopics:

- Where is the Problem This topic describes about troubleshooting the problem in the distributed system.
- Preliminary Checks from UI This topic provides systematic instructions to launch the application and check for the basic errors.
- Troubleshooting Environmental Issues
 This topic describes about the troubleshooting environmental issues.

1.1 Where is the Problem

This topic describes about troubleshooting the problem in the distributed system.

Troubleshooting the problem in the distributed system can be challenging, if not understood fully. Each product has UI application components and service side application components. Each side requires different troubleshooting techniques and various logs that can be used to corroborate the problem.

It is important to establish the area of the problem on the service side. It can be achieved by a complete understanding of UI and service side flows along with the data architecture of an application.

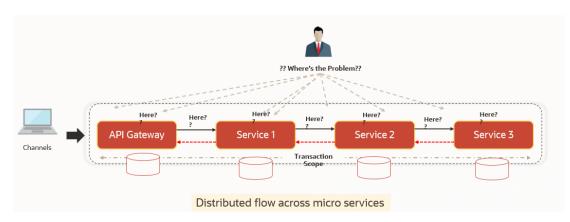

Figure 1-1 Distributed Flow Across Micro Services

1.2 Preliminary Checks from UI

This topic provides systematic instructions to launch the application and check for the basic errors.

- 1. Launch the application with delegated URL.
- 2. Press F12 key and select Inspect and See network.
- 3. Verify that all the call responses are successful.

Example: The user can see the export option as shown below in Chrome.

1.3 Troubleshooting Environmental Issues

This topic describes about the troubleshooting environmental issues.

This topic contains the following subtopics:

- Possible Issues While Deploying Services
 This topic describes about the possible issues while deploying services
- Possible Issues in Login and Screen Launch This topic describes the possible issues that may occur while logging in and launching the screens.

1.3.1 Possible Issues While Deploying Services

This topic describes about the possible issues while deploying services

Service Deployment is failing due to Flyway

If the service deployment is failing due to flyway, verify that the object or record is already present and make changes in the flyway scripts accordingly.

You may check **flyway_schema_history** table of the respective schema for finding the flyway script entries.

Other Possible Issues

The other possible issue while deploying services could be multiple versions of dependency jars present in the war file.

Example: weblogic.application.naming.EnvironmentException: duplicate persistence units with name PLATO in scope cmc-customer-services-{version}.war.

1.3.2 Possible Issues in Login and Screen Launch

This topic describes the possible issues that may occur while logging in and launching the screens.

Login Page is not Launching

Perform the following checks if the login page is not launching.

- **1.** Check whether the app-shell war file is deployed.
- 2. Make sure that the war file is up and running in the deployed managed server and try to login again.
- 3. Check whether the user has logged in with the appshell URL according to the war file deployed.
- 4. Check whether the required component-server wars like cmc-component-server, obvam-component-server etc are also deployed along with the app-shell.

Example: http://<ip-address>:<Port>/app-shell/index.jsp will load the login page of the application.

In the above URL, the name <code>app-shell</code> is dynamic which depends on the name of war file deployed.

Unable to login after launching the application

Perform the following check if you are not able to login after the application is launched.

• Make sure that the plato-api-gateway service, plato-ui-config service, sms-core-service, and common core services are up and running.

Figure 1-6 Services

Unable to login after restarting the services

Perform the following check if you are not able to login after restarting the services.

 Make sure that the LDAP server is up and running, and check if the entered credentials are correct.

Menus are not displayed after logging in

Perform the following checks if the menus are not displayed after logging in.

- **1.** Map the functional activity codes in the table **SMS_TM_ROLE_ACTIVITY**.
- 2. Once it is mapped, check if the corresponding role is assigned to your user id.

Screens are not launching after logging in

Perform the following check if you are not able to launch the screens after logging in.

• Make sure that the respective services are up and running.

Note:

Verify the VPN connection while trying to troubleshoot the issues related to page launching, etc.

2 Troubleshooting Kafka

This topic describes about the troubleshooting Kafka.

This topic contains the following subtopics:

- Consumer Services
 This topic describes about the Consumer Services provided in Oracle Banking Virtual Account Management.
- Producer Services
 This topic describes about the Producer Services on Oracle Banking Virtual Account Management.
- Debugging Consumer/Producer health and troubleshooting This topic describes about the Debugging Consumer/Producer health and troubleshooting.
- Configurations
 This topic describes about the various configurations for the kafka and integration services.

2.1 Consumer Services

This topic describes about the Consumer Services provided in Oracle Banking Virtual Account Management.

Oracle Banking Virtual Account Management consumer service can be referred at **Async API**

2.2 Producer Services

This topic describes about the Producer Services on Oracle Banking Virtual Account Management.

Oracle Banking Virtual Account Management Producer service can be referred at Async API

2.3 Debugging Consumer/Producer health and troubleshooting

This topic describes about the Debugging Consumer/Producer health and troubleshooting.

Logs to analyze

- Under the domain folder of Weblogic Logs related to any issue in Kafka connection and authentication can be found here.
- On a user defined log path if we are facing issues in produce/consume operation of event.

Tables to analyze

The below table provides the values to be verified to confirm accurate functioning of the consumer/producer service.

Table 2-1 Tables to analyze

Table Name	Column Name	Possible Values			
plato_eventhub_in_log	-	-			
plato_eventhub_out_log	status	SENT -> Published successfully			

2.4 Configurations

This topic describes about the various configurations for the kafka and integration services.

Refer to *Oracle Banking Microservices Platform Foundation Installation Guide* for kafka setup and all the properties are declared in the yaml file of integration services for the application-level setup.

3 Health Checks

This topic describes about Health Checks.

This topic contains the following subtopics:

- Eureka Dashboard This topic describes about Eureka Dashboard.
- Application Services This topic describes about application services.
- Database This topic describes about the data source configuration in Weblogic and Day0 scripts on Database.

3.1 Eureka Dashboard

This topic describes about Eureka Dashboard.

Until the heath check API's implemented, the health must be monitored using WebLogic JVM managed server status and Eureka instance.

3.3 Database

This topic describes about the data source configuration in Weblogic and Day0 scripts on Database.

This topic contains the following subtopics:

- Configure Data Sources
 This topic provides the systematic instructions to configure the data sources in WebLogic.
- Day0 Scripts This topic describes about the Day0 Scripts.

3.3.1 Configure Data Sources

This topic provides the systematic instructions to configure the data sources in WebLogic.

To add the Data Sources, follow the below steps:

Specify User ID and Password, and login to Oracle WebLogic Administration Console.

1. On Domain Structure, click Services.

The Domain Structure screen displays.

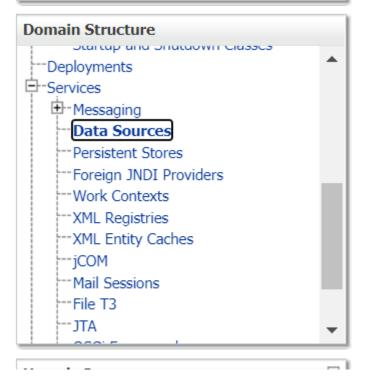

Change Center

View changes and restarts

Configuration editing is enabled. Future changes will automatically be activated as you modify, add or delete items in this domain.

2. Under Services, click Data Sources.

The Summary of JDBC Data Sources screen displays.

Code Error in GCS Side

If there is any error in GCS side codes, use java de-complier to debug the error.

404 Error

The possible causes for 404 error are as follows:

- Check service is not running on Eureka.
- Check service is not deployed in WebLogic.

500 Internal Error

The possible causes for 500 Internal error are as follows:

- Issue with Plato entries
- Issue with Eureka
- Issue with any peace of code

The server-side debugging is needed for the above-mentioned issues, if it is not captured in logs.

4.1.3 Transaction Data Verification

This topic provides the systematic instruction to verify the transaction data.

- 1. In the **IN** request and **OUT** response, make sure that all the field data is going to service side.
- 2. If there is any error related to SMS, check for the availability of SMS entries.

- 3. Validate the endpoints and data.
- 4. Make sure that the data entered on the screen is accurate.

For example, the Account Number should be valid.

4.1.4 OBIC Call is Failing

This topic provides the systematic instructions if OBIC call is failing.

- If the OBIC call is failing, check the EIE_TB_MSG_REQ_LOG and EIE_TB_MSG_RES_LOG in EIE schema for getting the response (SUCCESS or FAILURE).
- 2. Select the following query to verify results.

4.2 Troubleshooting SMS Errors

This topic describes about Troubleshooting SMS Errors.

The possible issues occur in Security Management System are mentioned below.

- Unable to login after launching the application.
- Menus are not displayed after logging in.

4.3 Oracle Banking Routing Hub Configuration

This topic describes about Oracle Banking Routing Hub configuration.

Refer to Routing Hub Configuration User Guide for the detailed explanation.

5 Troubleshooting OutOfMemory issues

This topic describes about Troubleshooting OutOfMemory issues

This topic contains the following subtopics:

- Extract Heapdump This topic describes about the troubleshooting information to extract Heapdump.
- JFR Tool in Java This topic describes about JFR Tool in Java.
- Quick Recovery
 This topic provides the systematic instruction to troubleshoot the application for quick
 recovery.

5.1 Extract Heapdump

This topic describes about the troubleshooting information to extract Heapdump.

If there is an error like GC Overhead limit exceeded or OutOfMemoryException is thrown while starting the services, the following details need to be shared.

Heap Dump

A heap dump is a snapshot of objects that are in memory in the JVM at a certain timestamp in a transaction. Heap dumps help to troubleshoot memory-leak problems and optimize memory usage in microservices. Heap dumps are usually stored in binary format hprof files.

The HeapDumpOnOutOfMemoryError command-line option that generates a heap dump when a java.lang.OutOfMemoryError is thrown can be used to generate heap dumps:

java -XX:+HeapDumpOnOutOfMemoryError -XX:HeapDumpPath=<file-or-dir-path>

Remote Heap Monitor Setup

Alternatively, one can setup remote heap monitor to observe the memory leaks in the product. Perform the following steps:

- 1. To enable jmx, set the following environment variable to start jmx:
 - Dcom.sun.management.jmxremote
 - -Dcom.sun.management.jmxremote.port=8888
 - -Dcom.sun.management.jmxremote.authenticate=false
 - -Dcom.sun.management.jmxremote.ssl=false

Note:

If the above variable are set, a jmx service will start on specified port.

- 2. Setup JVisualVM as follows, to collect heap dumps:
 - Start JVisualVM.
 - Under "Remote" option, add a host.
 - Under the new host, add new jmx connection.

Note:

With this setup, the JAVA process can be monitored remotely.

5.2 JFR Tool in Java

This topic describes about JFR Tool in Java.

Java Flight Recorder (JFR) is a tool for collecting diagnostic and profiling data about a running Java application. It is integrated into the Java Virtual Machine (JVM) and causes almost no performance overhead, so it can be used even in heavily loaded production environments.

The below documentation provides steps to use JFRs to collect performance details and profiling data of services and can be used to report performance issues for OBMA services.

5.3 Quick Recovery

This topic provides the systematic instruction to troubleshoot the application for quick recovery.

As a quick fix, try to restart the managed server or try to increase the memory allocated to the managed server.

Perform the following steps to increase the memory:

1. Click Servers.

- 2. Select the managed server from which you are getting OutOfMemoryException or GC Overhead Limit exceeded.
- 3. Click Server Start tab.

Figure 5-2 Server Start

4. Specify the memory (which needs to be increased) according to requirement in 512, 1024, 2048 etc., and restart the managed server to fix the issue.

 (Cont.) List of Error Codes

Error Code	Description
VAC-BGP-002	Cannot close the Branch Group as there are active Branches linked
VAC-BGP-003	Failed to validate Branch linkage to this Branch Group
VAC-BNK-001	Only one bank can be maintained
VAC-BNK-002	Structured Address cannot be deactivated once activated
VAC-BNK-003	Bank Code is not valid
VAC-BNK-004	Transaction allowed related parameters cannot be ON when Sanction check required is OFF
VAC-COM-001	Transaction controller reference number is mandatory
VAE-BNK-01	Bank code is invalid
VAE-BNK-111	Only one bank code is allowed
VAM-BNK-001	Only one bank code is allowed
VAM-BNK-002	Invalid Virtual Customer No Mask. It can have only a and n as identifiers
VAM-BNK-003	There are accounts created on bank parameters. Cannot modify the start account number
VAM-BNK-004	End Account No cannot be less or equal to the last virtual account number created for this branch
VAM-BNK-005	For Auto account generation, Account Mask should be numeric, and Checksum Algorithm has to be blank
VAM-BNK-006	On selecting Modulo 97 Checksum algorithms, All components of the account mask have to be numeric
VAM-BNK-007	Start or End account number is not required when auto account generation flag is disabled
