

# Oracle® Financial Services Lending and Leasing Cloud Service

## Lease Collection Setup Guide

Release 15.0.0.0.0  
G48642-01  
December 2025

ORACLE®

Copyright © 2022, 2025, Oracle and/or its affiliates.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

## 1 Navigation

---

1.1	Audience	1
1.2	Conventions Used	1
1.3	Logging In	1
1.4	Template and Navigation	2
1.4.1	Home Screen	2
1.4.1.1	Time Zone Preference	13
1.4.2	Screens	14
1.5	Common Operations	15
1.5.1	Basic Operations	15
1.5.2	Basic Actions	16
1.5.3	Personalization Options	17
1.5.4	De-supported Special characters	21
1.5.5	Skip Zip Code Validation	21
1.5.6	Export data to Excel	23
1.6	Keyboard Compatibility	24
1.6.1	Keyboard Compatibility	24
1.7	Tool Tips	25
1.8	Accessibility	25
1.8.1	Understanding Accessibility	25
1.8.2	Application Accessibility Preferences	25
1.8.3	Documentation Accessibility Preferences	25

## 2 Administration System

---

2.1	System Parameters	2
2.1.1	System Parameters Setup	2
2.1.1.1	FCUBS Integration	3
2.1.2	Organization Parameters	4
2.1.3	Company Parameters	6
2.2	Lookups	8
2.3	User Defined Tables	10
2.4	Audit Tables	13
2.5	User Defined Defaults	16

2.6	User Defined Parameters	19
2.6.1	Formula Definition	27
2.6.2	Selection Criteria	29
2.7	Transaction Codes	30
2.7.1	Transaction Codes sub screens	35
2.7.1.1	Parameters	35
2.7.1.2	Access Grid	36
2.7.1.3	Products	37
2.8	Data Files	37
2.8.1	Output tab	38
2.8.1.1	Data File Definitions	38
2.8.1.2	Record Definitions	39
2.8.1.3	Column Definitions	40
2.8.2	Input tab	41
2.8.2.1	Input Data File Definitions	41
2.8.2.2	Column Definitions	42
2.8.2.3	Configurable Bulk Upload	43
2.9	Dedupe	45
2.10	Securitization	47
2.11	Events	50
2.11.1	Events (Existing Framework)	50
2.11.1.1	Event Types	51
2.11.1.2	Event Action Types	53
2.11.1.3	Online	55
2.11.1.4	Batch	60
2.11.2	Events (New Framework)	64
2.11.3	Monitoring JMS Event Actions	71
2.12	Batch Jobs	71
2.12.1	Batch Jobs	71
2.12.1.1	Batch Jobs	71
2.12.1.2	Job Holidays	75
2.12.2	Batch Jobs Available	76
2.13	Producer Cycles	167
2.14	Vendors	169
2.14.1	Cycles Tab	169
2.14.2	Vendor Services Tab	172
2.14.3	Vendor Fees Tab	173

## 4 Product

---

4.1	Asset Types	2
4.1.1	Usage/Rental Details	5
4.1.2	Usage Charge Matrix	8
4.1.3	Rental Charge Matrix	8
4.2	Index Rates	9
4.3	Regulatory Rates	11
4.4	Currency Exchange	13
4.5	Scoring Parameters	14
4.6	Products	16
4.6.1	Product Itemizations	22
4.6.2	Rate Adjustments	23
4.7	Pricings	24
4.8	Contract	36
4.8.1	Staged Funding	78
4.8.2	Balances	80

4.8.3	Amortized Balances	82
4.8.4	Itemizations	83
4.8.5	Fees	85
4.8.6	Depreciation Rate Schedule	87
4.8.7	Passthrough Fees	87
4.9	Edits	88
4.9.1	Interfacing OFSLL with Oracle Rule Author	94
4.10	Cycles	94
4.11	Scoring Models	102
4.11.1	Credit Score Models	102
4.11.2	Behavioral Score Models	107
4.12	Fees	111
4.13	Asset Billing Rate	116
4.13.1	Asset Billing Rate Definition	117
4.13.2	Asset Billing Rate Details	119
4.13.2.1	Tiered Rate Details sub tab	120
4.13.3	Asset billing Calculations	121
4.13.3.1	Flat Amount Calculation	121
4.13.3.2	Rate Calculation	121
4.13.3.3	Flat Amt + Rate Calculation	122
4.13.3.4	Tiered Rate Calculation	122
4.13.3.5	Slab Formula Calculation	123
4.13.4	Asset Billing Rate Setup - File upload	123
4.13.5	Asset Billing Batch Job	124
4.14	Origination Fees	126
4.15	Compensation	128
4.16	Commission	133
4.17	Insurance	136
4.18	Checklists	140
4.19	Stipulations	144
4.20	Spreads	146
4.20.1	Spread Definition	147
4.20.2	Spread Matrix	150
4.21	Statement Messages	152
4.22	Letters	155
4.23	Promotions	159
4.24	Subvention	164
4.24.1	LoanLease Subvention Plans	165
4.25	Escrow	169
4.25.1	Escrow	169
4.25.1.1	Escrow	170
4.25.1.2	Shortage/Cushion Rules	171

## A Appendix : System Parameters

---

A.1	Introduction	A-1
A.2	System Parameters	A-1
A.3	Organization Parameters	A-22
A.4	Company Parameters	A-25
A.5	Other Parameters	A-29

## B Appendix : Variable and Fixed Interest Rate

---

B.1	Variable Interest Rate LoansLease	B-1
B.1.1	'Rate Adjustments' for Variable Rate LoansLease	B-2
B.2	Fixed Interest Rate LoansLease	B-3

## C Appendix : Lease Sales and Usage Tax

---

C.1	Introduction	C-1
C.2	Internal Lease Tax Calculation	C-2
C.2.1	Sales Tax Setup	C-3
C.2.1.1	To setup sales tax	C-3
C.2.1.2	Origination	C-5
C.2.1.3	Customer Service	C-6
C.2.1.4	Range	C-8
C.2.2	Sales Tax Calculation at Origination	C-9
C.2.2.1	Calculate Tax in Decision/Contract tab	C-9
C.2.2.2	Exempt Sales Tax in Decision/Contract tab	C-9
C.2.2.3	Attach Sales Tax Exemption Certificate	C-10
C.2.2.4	Generate Lease Sale and Usage Tax Report	C-11
C.2.3	Sales Tax Calculation at Customer Service	C-11
C.2.3.1	Calculate Tax in Customer Service	C-12
C.2.3.2	Exempt Sales Tax in Customer Service	C-13
C.2.3.3	Attach Sales Tax Exemption Certificate	C-13
C.2.3.4	Sales tax in Account Statement	C-14
C.2.3.5	Generate Lease Sale and Usage Tax Report	C-15
C.3	External Lease Tax Calculation	C-15
C.3.1	OFSLL Vertex Integration	C-16
C.3.2	Setup changes	C-17
C.3.3	Changes in Origination Module	C-17
C.3.4	Changes in Customer Service Module	C-18
C.3.5	Limitations of Vertex integration	C-19

## D Appendix : Usage Based Leasing

---

D.1	Introduction	D-1
D.2	Pre-requisites	D-1
D.3	Usage Based Leasing Workflow	D-1
D.3.1	Lease Usage Calculation	D-3
D.3.2	Lease Usage Methods	D-3
D.3.3	Tiered and Non Tiered Usage Calculation	D-4
D.3.4	Lease Usage Batch Jobs	D-5
D.3.5	Lease Usage Account Statement	D-6
D.3.6	Elastic Usage Term	D-6

## E Appendix : Webhooks

---

E.1	Introduction	E-1
E.2	Webhook Architecture	E-1
E.3	Webhook Workflow	E-2
E.4	Webhook Message Format	E-3
E.5	Processing Webhook Request	E-3
E.6	Webhook Support for OBRH Integration	E-4
E.6.1	OBRH Interfacing support	E-5

## F Appendix : Configuration at Company Level

---

F.1	Introduction	F-1
F.2	Existing Configuration	F-1
F.3	Configuration at Company Level	F-2
F.4	Setup Company Definition	F-2
F.4.1	Holiday Setup and Processing	F-4
F.4.2	Batch Jobs Processing	F-4
F.5	Setup Multiple Companies in Same/Different Time Zone	F-4
F.5.1	Setup for New Company Added Subsequently	F-5
F.6	Impact on Defining Configuration at Company Level	F-5
F.6.1	Company Level Configuration Settings	F-6
F.6.2	Scheduler	F-6
F.6.3	Debug Logs	F-6
F.6.4	Setup Screens	F-6
F.6.5	File Uploads	F-6
F.6.5.1	Input File	F-7
F.6.5.2	Output File	F-7

F.6.6	Transactions	F-7
F.6.7	Web Services	F-7
F.6.8	Letters, Correspondence	F-8
F.6.9	Reports	F-8
F.6.10	Credit Bureau & Metro II	F-8
F.6.11	GL	F-8
F.6.12	ODD1, ODD2, ODD3	F-8
F.6.13	Migration	F-8
F.6.14	Conversion	F-8
F.6.15	Archive	F-8
F.6.16	Purge	F-9
F.6.17	Standard Payees	F-9
F.6.18	Data Masking	F-9
F.6.19	WFP Module	F-9
F.6.20	Batch Jobs and File uploads	F-9
F.6.21	Assumptions	F-9

# 1

## Navigation

This document provides an overview of the basic template, navigation, common operations that can be performed, and keyboard short cuts available in Oracle Financial Services Lending and Leasing. Since this section details the general options available in the User Interface, some or all the parts of this section are applicable to you as per access provisions & licensing.

### Note

The application can be best viewed in 1280 x 1024 screen resolution.

The document is organized into below topics:

- [Audience](#)
- [Conventions Used](#)
- [Logging In](#)
- [Template and Navigation](#)
- [Common Operations](#)
- [Keyboard Compatibility](#)
- [Tool Tips](#)
- [Accessibility](#)

## 1.1 Audience

This document is intended to all Prospective Users who would be working on the application.

## 1.2 Conventions Used

**Table 1-1 Conventions**

Term	Refers to
The system/application	Oracle Financial Services Lending and Leasing
Mnemonic	The underlined character of the tab or button

## 1.3 Logging In

The pre-requisites to log into the system are a valid user ID and a password, defined by the system administrator in Administration > User screen.

You can login to the system using a valid user ID and a password defined by the system administrator, in Administration > User screen. A User ID is disabled automatically by the system if it is inactive for a specified number of days.

When you invoke the application, the **Sign In** screen is displayed.

**Figure 1-1 Login page**

- **User ID** – Specify a valid User ID.
- **Password** – Specify a valid password for the specified User ID.

The system accepts the User ID and password in upper case only. After specifying valid credentials, click **Sign In** to sign into the application.

## 1.4 Template and Navigation

This section provides a brief input on the template and navigation of the system.

Details are grouped into two categories to enable easy understanding. These include:

- [Home Screen](#)
- [Screens](#)

### 1.4.1 Home Screen

Once you login to the application with valid credentials, the system authenticates the details and displays the Home screen.

The Home screen consists of the following components:

- Header
- Left Pane
- Right Pane/Work Area

**Figure 1-2 Home screen**

You can view the application version details and copyright information by clicking **About** link at the right bottom corner of the screen.

**Figure 1-3 About**

## Header

In the Header, system displays the following:

- **Sign Out [Environment]** - Sign Out option along with the application environment details based on information maintained in ENVIRONMENT\_TYPE\_CD lookup code.
- **User ID** that you have currently logged/Signed in. Click the adjoining drop-down arrow, the system displays the following options:

**Figure 1-4 User ID - Options**

- Change Password – Click to change the current password.

**Figure 1-5 Change Password**

Specify the current password in the **Current Password** field and a valid password, you wish to maintain as a new password, in the **New Password** field. Re-enter the password in **Confirm Password** field and click **Submit** to change the password.

- User Info – Click to view the current user info.

**Figure 1-6 User Info**

In this screen, apart from viewing the user info, you can also set Session Language, enable error log, and specify the time zone preference.

**Session Language** – Select a language that you need to set for the session, from the drop-down list.

**Debug Enabled Ind** – Check this box to enable the debug indicator.

On selection, system records all the debugs into logs files depending on the following two types of system parameters:

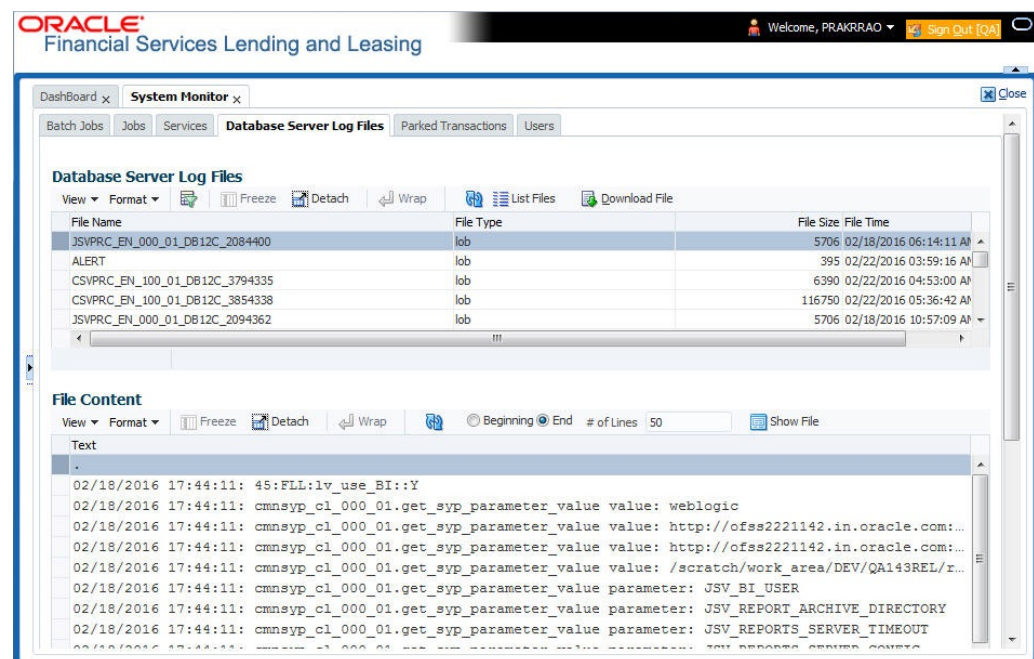

**Table 1-2 System Parameter**

System Parameter	Condition to record debug data
CMN_DEBUG_METHOD	If parameter value is 1, then debug data is recorded into a file in Database Server.  If parameter value is 4, then debug data is recorded into the table LOG_FILES_HEADER.
CMN_DEBUG_LEVEL	If parameter value is greater than 0, only then the debug data is recorded.

The debug data can be viewed from Dashboard > System Monitor > Database Server Log Files.

You can click on  **List Files** button to view the list of logged files.

**Figure 1-7 Database Server Log files**

Click on  **Show File** button to view the selected file contents in the **File Content**

section. You can also click **Download File** button to extract a copy of debug details.

**Time Zone Level** - Select the time zone preference as User/Company Branch/ Application Server Time Zone from the adjoining options list.

*For more details on time zone selection, refer to Time Zone Preference section of this user manual.*

Click **Submit** to save the changes or **Close** to close the screen without changes.

- **Accessibility** – Click the link to view accessibility features of the system.  
*Refer accessibility document for further details.*
- **NextGenUI** - This is Next Generation User Interface option which is an enhanced interface provided in OFSLL using the Oracle JavaScript Extension Toolkit (Oracle JET) frame work. This is an additional interface supported from OFSLL to the existing system and both intended to coexist in the system till further updates.  
This option is enabled only if the corresponding system parameter is enabled in the base system as configured by your system administrator. For more information, refer to **Appendix - Oracle JET Interface** section in Servicing guide.
- **Sign Out** – Click the link to sign off from the application. You can also click on  icon to sign off from the application.

### Left Window

In the left pane, system lists and provides drop-down links for various modules available in the product. Click  to expand the Module Master Tabs and  to collapse them.

Figure 1-8 Left Pane

To open a screen, navigate to Module Master Tab to which the screen belongs, expand the tabs, and click the screen link you wish to open.

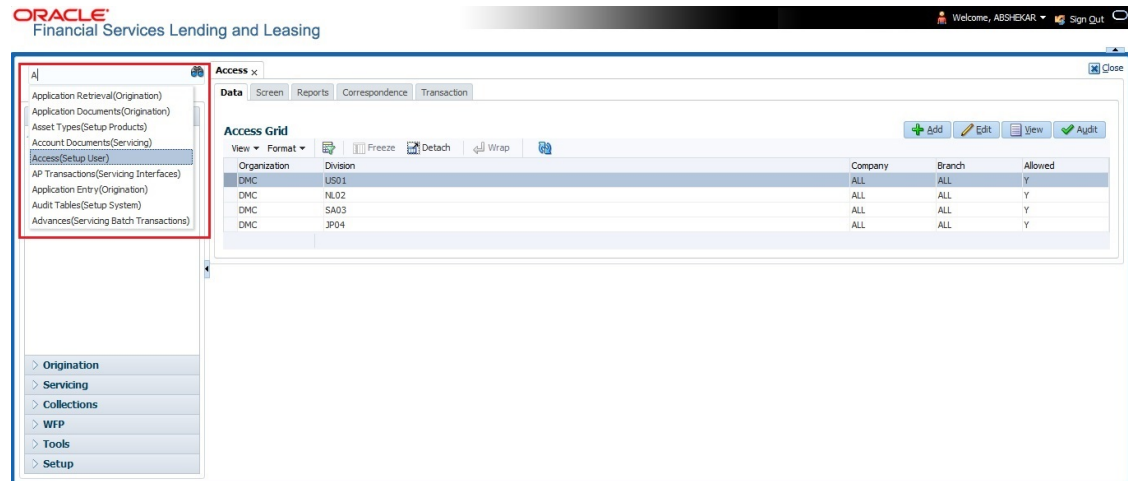

### Menu Search in Left Window

In the left window you can make use of the search option to directly search and open the screen that you are familiar with, and avoid multiple steps of navigation from the LHS menu.

The Search box in the LHS facilitates for an intuitive search of required screens in Oracle Financial Services Lending and Leasing. For example, on typing the first letter of the screen, the search box displays a list of all available screens starting with the letter entered in alphabetical order. You can click on the required screen and press **Enter**. The screen is displayed in the main window/work area.

Figure 1-9 Left Pane Search

When there are multiple matches with same screen name, you can filter the results through the module from which the screen is accessed which is indicated in angular brackets. For example typing **VEN** displays the following options for selection - Vendors(Collections), Vendors(Origination), Vendors(Servicing), Vendors(Setup System). For subsequent search, you need to clear the data in the search field.

### Right Window

The Right Window can also be termed as work area. When you click the screen link on left pane, system displays the corresponding screen in the right pane.

Figure 1-10 Right Pane

You can open a maximum of 15 screens at a go. Once the maximum limit is reached, the system displays an error message.

Figure 1-11 15 Screens

Each active screen is displayed as a tab at the top of right pane, across its width. To view a screen, click the screen tab. You can identify the active screen with its white background. Also, operation on any of the screen will not affect the data in other screens.

You can also open multiple Applications Accounts at the same time as separate tabs in the right window, provided your system administrator has enabled the option '**Mac\_Multi\_tab\_Ind**' = 'Y' in MENU\_ACCESS table.

Having this option enabled you can view and update a maximum of 15 ApplicationsAccounts in parallel tabs and Oracle Financial Services Lending and Leasing renders dynamic data across all the opened tabs.

However, this option is restricted only to the following screens in OriginationServicing Module Master Tab. In the Left Menu of Origination Module Master Tab, you can open multiple applications by clicking on the following links. Each successive click, opens a new Origination tab.

- Simple Application Entry
- Application Entry
- Underwriting
- Funding

Few screens in OriginationServicing and CollectionsWFP are identical and are linked. Hence, when multi tab option is not enabled, you can open only one screen at a time from the group. A sample of the grouping structure is given below, based on stages of the screens:

### Origination:

- Simple Application Entry
- Application Entry
- Underwriting
- Funding

#### Collection:

- Collection
- Bankruptcy
- Repossession
- Deficiency

#### WFP

- Producers
- Credit Lines
- Units

As per the above listing, you will be able to open only one screen in the corresponding list and need to close the same to open any other screen.

#### Right Splitter/Action Window

The Right Splitter/Action Window has quick access to search and other options to avoid switching between tabs or navigating into sub tabs periodically. You can access the Right Splitter/Action Window while working on Application and Customer Service screens. You can click  and  to toggle the view of Right Splitter/Action Window.

#### Origination Screens

In Origination > Application screens, you can use the Right Splitter/Action Window to do the following:

**Figure 1-14 Right Split Window Application**

- Use **Quick Search** to search for an application based on application number, last 4 digits of SSN (SSN of the primary applicant) or identification number. If multiple applications or

accounts are found during **Identification #** search, the system displays an error message as “**Multiple Matches found for the Identification #, Please use normal Search**”.

- **Summary** section displays critical information that has to be referred repeatedly during origination like – DTI, PTI, Book Value, Grade, FICO Score, Approved Advance, Rate and Term.
  - Use **Change Status** section to change the application status to next level. If the application edit status is restricted, then the **Change Status** will be read-only.
  - Use **Add Comment** section to post an alert or comment during Underwriting and Funding stages.
- For detailed information on the above options, refer to respective sections in the document.

## Servicing and Collection Screens

In Servicing and Collection > Customer Service screens, you can use the Right Splitter/Action Window to do the following:

**Figure 1-15 Right Split Window Customer Service**

The screenshot shows the Oracle Financial Services Lending and Leasing Customer Service interface. The main window displays account details for account 20170100010097. The interface includes a top navigation bar with tabs like Summary, Collections, Customer Service, Account Details, Customer Details, Customer Preferences, Transaction History, Print Modes, Bankruptcy, Repo/Foreclosure, Delinquency, Collateral, Bureau, Timeline, Cross-Up Sell Activities, and External Interfaces. The main content area is divided into several sections: Alerts, Conditions, Other Information, Collateral Information, Customer Information, Address Information, and Employment Information. A right-hand pane contains a 'Quick Search' section with fields for Account #, Customer Id, SSN, and Identification #, along with buttons for 'Next Account' and 'Filtered Account'. Below this is an 'Add Comment' section with fields for Alert, Type, Sub Type, and Comment, and an 'Add Call Activity' section with fields for Action, Promise, Condition, Promise Dt, and Followup Dt.

- Use **Quick Search** to search for an account based on account number, or customer Id, or last 4 digits of SSN (SSN of the primary applicant) or identification number. If multiple applications or accounts are found during **Identification #** search, the system displays an error message as “**Multiple Matches found for the Identification #, Please use normal Search**”. You can also select the Queue Condition and Auto Run options during search. Clicking **Next Account** button opens the subsequent account listed in search and clicking **Filtered Account** opens the subsequent account fetched during a queue search and listed in Queue Assignment section.
  - Use **Add Comment** section to post an alert or comment based on Type and Sub Type.
  - Use **Add Call Activity** section to post all types of call activities including promise to pay, account conditions and so on, irrespective of the screen you are working on. This is similar to the option available in **Call Activities sub tab** under Customer Service tab.
- For detailed information on the above options, refer to respective sections in the document.

The height of Header and width of the Left and Right Panes do not change, with resizing of application screen.

The system facilitates toggling Header and Left and Right Panes of the home screen to increase the visible area of the screens. Click  to toggle upper pane and  to toggle left pane. To un-toggle click  and  respectively.

This section consists of the following topic:

- [Time Zone Preference](#)

### 1.4.1.1 Time Zone Preference

**Figure 1-16 User Info**

User Info	
Organization	DMC
Division	US01
First Name	VARSHA
Last Name	VAIDYA
Responsibility	SUPERUSER
GL Post Date	02/10/2016
Last Login Date	02/10/2016 03:21:07 AM
Session Language	DEFAULT
Debug Enabled Ind	<input type="checkbox"/>
Time Zone Level	USER TIME ZONE
User Time Zone	UNDEFINED
Company	US/CENTRAL (CENTRAL STANDARD TIME)
Branch Time Zone	
Server Time Zone	ASIA/CALCUTTA (INDIA STANDARD TIME)
Skin Family	Skyros (Default)

You can select any of the following three time zones from the User Info screen:

- Application Server Time Zone
- Company Branch Time Zone
- User Time Zone

The time zones set up at each of these levels are displayed in the user info screen. However, data is always stored in the application server time zone and based on the user preference of time zone, the display time would be User or Company or Application Server time zone. Any time zone related changes done at UI does not impact the other time bound activities which are dependant on database time.

#### **Application Server Time Zone (Server Time Zone)**

The Application Server Time Zone by default is the Production Server Time Zone. Selecting this time zone will have all date and time fields defined as per the time stored in application server. There is no offset in time if both storage (database server) and display (application server) are in the same time zone.

#### **Company Branch Time Zone (Organization - Division Time Zone)**

This is the Company time zone and is setup at the organization - division definition level. The various divisions defined under an organization can be set up with different time zones depending on geographical locations. This time can be modified as per requirement.

To modify the Company Branch Time Zone:

- Navigate to Setup > Administration > User > Organization and select the company or division listed under **Division Definition**.
- In the Display Formats tab, select **Time Zone** and click **Edit**.
- In the Format field, select the required time zone from the adjoining options list and click **Save**.

If **Company Branch Time Zone** is selected as the time zone in User Info screen, then on save, all the time and date fields are automatically updated with the time zone of the company branch.

### User Time Zone

User Time Zone or User Preference Time Zone can be set up at the User Level in the User Definition screen. Various Users under same divisions defined under an organization can be set up with different time zones depending on geographical locations.

To modify the User Time Zone:

- Navigate to Setup > Administration > User > Users.
- Select the required User record listed in **User Definition** section and click **Edit**.
- In the Time Zone field, select the required time zone from the adjoining options list and click **Save**.

If **User Time Zone** is selected as the time zone in User Info screen, then on save, all the time and date fields are automatically updated with the current updated time.

## 1.4.2 Screens

Details in few main screens are grouped into different sections. These sections are displayed as tabs, horizontally within the screen. In turn, details in few of these tabs are again grouped horizontally. The details are displayed when you click the tab under which they are grouped. As similar to the main screen tabs, you can identify the active tab with its white background.

For example, Customer Service main screen has four main tabs. When you click on **Customer Service** tab, the corresponding tabs are displayed.

**Figure 1-17 Customer Service\_Example**

The screenshot displays the 'Customer Service' screen for account 20120200010231, belonging to YUTAKA OZAKA / AKANE. The account is currently active with a status of 'ACTIVE' and a due date of 02/10/2015. The screen is divided into several tabs: Summary, Customer Service (selected), Account Details, Customer Details, Transaction History, Pmt Modes, Bankruptcy, Repo/Foreclosure, Deficiency, Collateral, Bureau, and Cross/Up Sell Activities. The 'Customer Service' tab is further divided into sub-tabs: Call Activities (selected), Maintenance, Comments, Promises, Checklists, Tracking Attributes, References, Correspondence, Letters, and Document Tracking. The 'Call Activities' sub-tab shows a table of call records with columns for Action, Result, Contact, Reason, Cancel, Promise Dt, Promise Amt, Condition, Appointr Followup Dt, Time Zone, Adj Followup Dt, and Cor. The table contains two rows of data for 'ANSWERING MACHINE' calls on 12/30/2015.

Action	Result	Contact	Reason	Cancel	Promise Dt	Promise Amt	Condition	Appointr Followup Dt	Time Zone	Adj Followup Dt	Cor
AT	PH	ANSWERING MACHINE		N	12/30/2015	1,000.00	NONE	N	12/30/2015	12/29/2015 12:30:00 PM	
AT	PH	ANSWERING MACHINE		N	12/30/2015	1,000.00	NONE	N	12/30/2015	12/29/2015 12:30:00 PM	

You can click » to view the hidden tabs, if any.

## 1.5 Common Operations

Some of the operations are common to most of the screens.

These are grouped into following categories, based on their features.

- [Basic Operations](#)
- [Basic Actions](#)
- [Personalization Options](#)
- [De-supported Special characters](#)
- [Skip Zip Code Validation](#)
- [Export data to Excel](#)

### 1.5.1 Basic Operations

All the screens contain buttons to perform all or few of the basic operations. The four basic operations available are:

- Add
- Edit
- View
- Audit

When you click any of the operation tabs, system displays the corresponding records inline, below the respective setup tables.

The table below gives a snapshot of them:

**Table 1-3 Basic Operation**

Basic Operation	Description
Add	Click to add a new record. When you click <b>Add</b> , the system displays a new record enabling you to specify the required data. It is mandatory to specify details for the fields marked with '**' symbol.
Edit	Click to edit an existing record. Select the record you want to edit and click <b>Edit</b> . The system displays an existing record in editable mode. Edit the required details.
View	Click to view an existing record. Select the record you want to view and click <b>View</b> . The system displays the record details in display mode.
Audit	Click to view audit info. If an audit is set for a field, then the system tracks the changes for that field. Select the record for which you want to view the audit info and click <b>Audit</b> . The system displays the details tracked for that field.

Table 1-3 (Cont.) Basic Operation

Basic Operation	Description
Close	Click to close a screen or a record. When you try to close an unsaved, modified record, then the system alerts you with an error message. You can click <b>Yes</b> to continue and <b>No</b> to save the record.

## 1.5.2 Basic Actions

Most of the screens contain buttons to perform all or few of the basic actions.

All or few of these actions are enabled when you select any of the Basic Operations.

The table below gives a snapshot of them:

Table 1-4 Basic Actions

Basic Actions	Description
Save And Add	Click to save and add a new record. This button is displayed when you click <b>Add</b> button.
Save and Stay	Click to save and remain in the same page. This button is displayed when you click <b>Add/Edit</b> button.
Save And Return	Click to save and return to main screen. This button is displayed when you click <b>Add</b> or <b>Edit</b> buttons.
Return	Click to return to main screen without modifications. This button is displayed when you click <b>Add</b> , <b>Edit</b> or <b>View</b> buttons.

The Payment maintenance screens consist of the following actions.

The table below gives a snapshot of them:

Table 1-5 Basic Actions

Basic Actions	Description
Post and Stay	Click to post the transaction and remain in the same section. This button is displayed when you click <b>Modify Payment/Modify Payment Transaction</b> button.
Post and Return	Click to save and return to main section. This button is displayed when you click <b>Modify Payment/Modify Payment Transaction</b> buttons.
Return	Click to return to main section without modifications. This button is displayed when you click <b>Modify Payment/Modify Payment Transaction</b> buttons.

The summary screens consist of the following navigations. The table below gives a snapshot of them:

**Table 1-6 Navigations**

Basic Actions	Description
	Click to navigate to the first record.
	Click to navigate to the previous record.
	Click to navigate to the next record.
	Click to navigate the last record.

Along with the basic actions, the following buttons are available for specific actions. The table below gives a snapshot of them:

**Table 1-7 Buttons for Specific actions**

Basic Actions	Description
	Show File - Click to view the details of selected file.
	List Files - Click to generate and view the list of files maintained in the system.
	Download File - Click to download the details of selected data.

### 1.5.3 Personalization Options

You can personalize the data displayed in setup tables. Once personalized, system saves the settings for that User ID until next personalization.

**Figure 1-18 Personalization Operations**

The table below gives a snapshot of them:

**Table 1-8 Personalization Options**

Options	Description
View	<p>Click to personalize your view. The drop-down list provides the following options of customization:</p> <ul style="list-style-type: none"> <li>• Customize columns you wish to view</li> <li>• Sort the order of displayed data</li> <li>• Reorder columns</li> </ul> <p>Additionally, the drop-down list provides selection of options adjoining <b>View</b>.</p> 
Format	<p>Click to resize columns or wrap a data in the table cells.</p>  <p>Select the column you need to resize and select <b>Resize Columns</b> option from the <b>Format</b> drop-down list.</p>  <p>Specify the <b>Width</b> and unit for the selected column. Click <b>OK</b> to apply changes and <b>Cancel</b> to revert.</p>
Query by Example	<p>Click to query for the data by an example. When this option is selected, the system displays an empty row above column heads. You can specify all or any of the details of the record you wish to query.</p> 
Freeze	<p>Select the column at which you need to freeze the table and click <b>Freeze</b>. Function is similar to the freeze option in MS excel.</p>
Detach	<p>Click to detach the setup table from the screen. An example of the detached table is provided below.</p>

Table 1-8 (Cont.) Personalization Options

Options	Description
Wrap	Select the column in which the data needs to be wrapped and click <b>Wrap</b> .

The screenshot shows a 'Product Definition' window with a table of loan products. The table has columns: Product, Description, Start Dt, End Dt, Direct, Flexible Repayment, Enabled, Collateral Type, Collateral Sub Type, and Credit Bureau Portfolio Type. The 'Wrap' button in the toolbar is highlighted with a red box.

Product	Description	Start Dt	End Dt	Direct	Flexible Repayment	Enabled	Collateral Type	Collateral Sub Type	Credit Bureau Portfolio Type
LOAN-HH	LOAN HOME (VR)	11/01/2000	12/31/4000	Y	Y	Y	HOME COLLATERAL	REAL PROPERTY HOB	INSTALLMENT
LOAN-SG	LOAN SECURED HOUSEHOLD GOODS (VR)	11/01/2000	12/31/4000	N	N	Y	HOUSEHOLD GOODS	PERSONAL PROPERTY	INSTALLMENT
LOAN-UN	LOAN UNSECURED (VR)	11/01/2000	12/31/4000	Y	Y	Y	UNSECURED COLLAT	UNSECURED	INSTALLMENT
LOAN-VE	LOAN VEHICLE (VR)	11/01/2000	12/31/4000	N	Y	Y	VEHICLE COLLATERAL	PERSONAL PROPERTY	INSTALLMENT
NOP1	NOP1	11/01/2000	12/31/4000	Y	N	Y	VEHICLE COLLATERAL	PERSONAL PROPERTY	INSTALLMENT
MURABAH	MURABAH LOAN (VR)	11/01/2000	03/13/2013	Y	N	Y	HOME COLLATERAL	REAL PROPERTY HOB	INSTALLMENT
NDS1	NDS1	11/01/2000	12/31/4000	Y	N	Y	UNSECURED COLLAT	UNSECURED	INSTALLMENT
NPO1	NPO1	11/01/2000	12/31/4000	Y	N	Y	HOME COLLATERAL	REAL PROPERTY HOB	MORTGAGE

|  | Click to refresh the data in the table. |
| View Last | For usability and performance, some of the data intensive screens have **View Last** option to sort the volume of data being displayed on screen based on elapsed days. |

The screenshot shows a filter bar with the following options: View Last, 1 Day, 1 Week, 1 Month, By Date, Start Dt, End Dt. The 'By Date' option is selected.

You can select the **View Last** option as 1 Day / 1 Week / 1 Month / By Date. When **By Date** is selected you can specify a date range (within 3 months) in **Start Dt** and **End Dt** fields using the adjoining calendar and clicking **Search**.

Print option in Customer Service screen

The Print button  option in Customer Service/Collection screen facilitates you to print the contents on the screen as is without scroll bars. This button is available along with other options in the Action block. Clicking on this provides a browser print functionality and a new tab is opened where the print content is displayed.

Detach

Figure 1-19 Detached Table

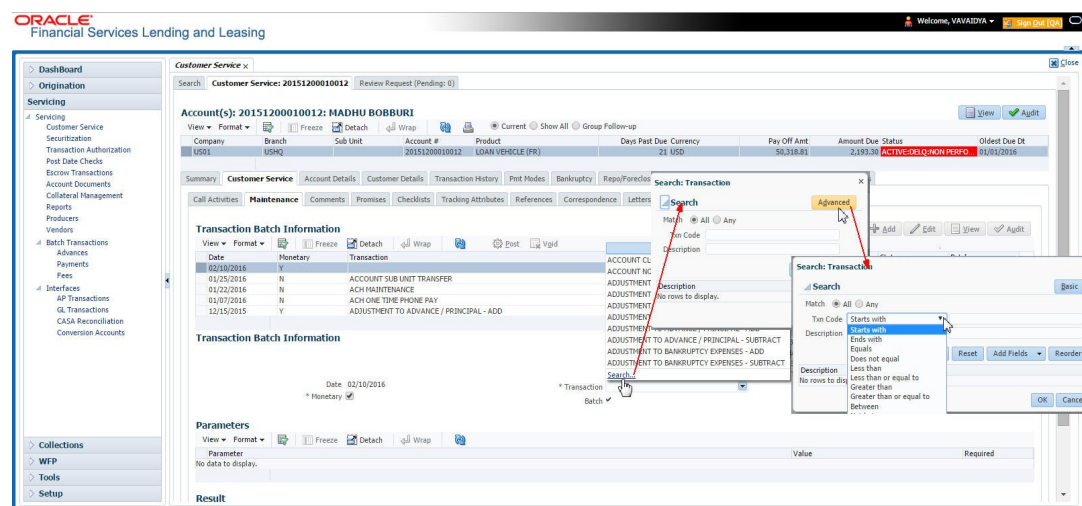

Click **Add**, **Edit** or **View** button to open a new screen in expanded mode with details.

### Drop-down List

The system provides an option to select the required data from LOV, for few fields. You can either select the record from list or enter first alphabet of the value you want. When you provide the alphabet, system limits the selection to the values starting with the specified alphabet. These lists are grouped into two types:

- Drop-down list – Provides the selection option. You can either select a record from the list or enter first alphabet of the required value.
- Combo drop-down list – The LOV contains huge data and provides both selection and search option. These drop-down arrows are smaller in size, when compared to normal drop-down arrows, thus enabling easy identification.

Figure 1-20 Combo drop-down

Click the arrow button available before **Search** to toggle the search options.

**Table 1-9 Search options**

Buttons/Menu	Do this
Basic	Click <b>Basic</b> for normal search.
Advanced	Click <b>Advanced</b> for advanced search. In this mode, you can select the search option from drop-down list adjoining the search criteria. Selected record will be highlighted (Hover to select).
Match	Select <b>All</b> to display results exactly matching the specified characters. Select <b>Any</b> to display results matching any of the specified characters.
Search	Click to search for values based on the specified search criteria. The search results are displayed below with the details in respective columns.
Reset	Click to reset the search criteria.
Add Fields	Click to add additional fields to search criteria.

The search criteria are provided below the **Match** field. These criteria vary based on the Field for which the search is executed.

Also, the system remembers your recent search options and demarcates them from the actual ones.

**Figure 1-21 Search Memory**

Search...

### Comments

In all the user input screens wherever comments are accepted, the system allows an input of 4000 characters of information in the comment(s) field.

## 1.5.4 De-supported Special characters

OFSLL **does not** support the following special characters while accepting data through UI, web service and file upload process.

< > { } | \ ^ [ ] `

Hence, ensure that the same is not used while processing any input data in the system.

## 1.5.5 Skip Zip Code Validation

While accepting data for interdependent fields through User Interface, OFSLL validates and auto-populates the values for subsequent fields based on previous selection.

Accordingly, when a specific **Country** is selected from drop-down list which is populated based on COUNTRY\_CD (COUNTRY CODE) lookup code, OFSLL validates and populates the list of corresponding zip codes maintained in Zip Code setup.

However, in case the zip code validation is to be skipped for a specific Country, then define the Sub Code as NO\_ZIP\_VAL against the COUNTRY\_CD in lookups screen as indicated below:

**Figure 1-22 Skip Zip Code Validation**

The screenshot shows the 'Lookups' window with two sections: 'Lookup Type' and 'Lookup Code'. The 'Lookup Code' section contains a table with columns: Lookup Code, Description, Sort, Sub Code, System Defined Yes/No, and Enabled. The table has two rows: UK (UNITED KINGDOM) and SG (SINGAPORE). Both rows have a Sub Code of 'NO\_ZIP\_VAL', which is highlighted with a red box. The 'System Defined' column for both rows has radio buttons for 'Yes' and 'No', with 'No' selected. The 'Enabled' column for both rows has a 'Y' in a yellow box.

Lookup Code	Description	Sort	Sub Code	System Defined Yes/No	Enabled
UK	UNITED KINGDOM	1	NO_ZIP_VAL	<input checked="" type="radio"/> Yes <input type="radio"/> No	Y
SG	SINGAPORE	1	NO_ZIP_VAL	<input checked="" type="radio"/> Yes <input type="radio"/> No	Y

On Selecting that particular Country from drop-down in any of the UI screen, only the default value '000000000' is available for Zip field drop-down list. On selecting the same, the City and State fields are set as UNDEFINED.

**Figure 1-23 Skip Zip Code Validation**

The screenshot shows the 'Producer Details' window. The 'Country' dropdown is set to 'UNITED KINGDOM'. The 'Zip' dropdown shows '000000000' and 'UNDEFINED'. The 'City' and 'State' fields are set to 'UNDEFINED'. The 'Subvention Participation' section shows 'Participant' as 'STATEMENT', 'Collection Type' as 'MONTHLY', 'Refund Disbursement' as 'NONE', 'Region' as 'ALL', and 'Territory' as 'ALL'. The 'License Details' section shows 'Valid From' as '01/01/1800' and 'Valid To' as '12/31/4000'.

**Note**

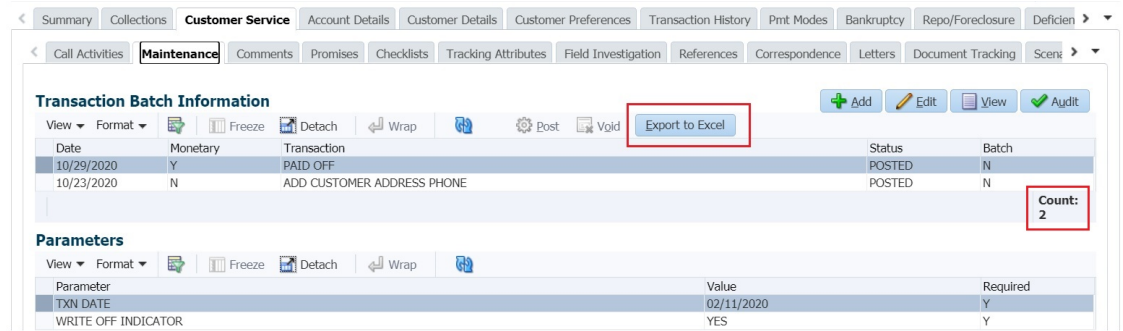

Skipping zip code validation has significant impact in the system since the change impacts all the UI screens - Setup screens, Origination, Servicing and Collection module screens, Interface, Customer Credit Limit, Collateral Management, and so on. Hence it is recommended to be done with careful consideration and OFSLL is not responsible for any impact/ mismatch resulting out of this change.

## 1.5.6 Export data to Excel

While working on any of the screens in User Interface, OFSLL provides a flexibility to Export the data that is displayed on screen to an Excel file. This helps to download and view the data offline especially with data intensive screens.

Clicking **Export to Excel** option provides option to save the data to .xls file.

**Figure 1-24 Export to Excel**

However, **Export to Excel** option is currently available only to following screens and is also access controlled depending on configuration defined in setup.

- Queues/Search Results - Origination, Servicing, and Collections
- Account Information
- Balances
- Call Activities
- Maintenance
- Promises
- Due Date History
- Collateral
- Tracking Attributes
- Condition Details / Condition / Queue History

In addition, OFSLL displays the total count of records fetched from database. The count is displayed in the right bottom corner of records table. However, note that this is not the total count of all the records in the database but only the records which are fetched based on specific selection. For example, if there are 50,000 records in database and UI is fetching 1,000 records, then the count is displayed as 1,000.

## 1.6 Keyboard Compatibility

The system facilitates keyboard compatibility. You can perform most of your tasks using keyboard short cuts also termed as **Hot Keys**. These hot keys are single keyboards or a combination of keyboards. The available options are listed below:

1. **Shift + Alt** + mnemonic to activate buttons in the screen. For example, to open **Accessibility** screen, press '**Shift + Alt + y**'.
  2. **Tab** for forward navigation in the application. **Shift + Tab** for backward navigation in the application. When the required link/tab/button/field is highlighted, press enter on the keyboard to edit.
  3. **Space bar** to check or uncheck **Check Box**.
  4. **Arrow Keys** to hover within the drop-down list.
- [Keyboard Compatibility](#)

### 1.6.1 Keyboard Compatibility

The application is made compatible with keyboard only-operations. However, there is a change in key combination based on the browser on which the application is running.

**Table 1-10 Keyboard Compatibility**

Browser	Operating System	Key Combination	Action
Google Chrome	Linux	Alt + mnemonic	Click
Google Chrome	Mac OS X	Control + Option + mnemonic	Click
Google Chrome	Windows	Alt +mnemonic	Click
Mozilla Firefox	Linux	Alt + Shift + mnemonic	Click
Mozilla Firefox	Mac OS X	Control + mnemonic	Click
Mozilla Firefox	Windows	Alt + Shift + mnemonic	Click
Microsoft Internet Explorer 7	Windows	Alt + mnemonic	Set focus
Microsoft Internet Explorer 8	Windows	Alt + mnemonic	Click or set focus
Apple Safari	Windows	Alt + mnemonic	Click
Apple Safari	Mac OS X	Control + Option + mnemonic	Click

Also, one can use the following keyboard shortcuts in order to increase or decrease the zoom level.

**Table 1-11 Keyboard shortcuts**

Shortcut	Action
Ctrl++	To increase zoom level.
Ctrl+-	To decrease zoom level.
Ctrl+0	To set zoom level to default level.

## 1.7 Tool Tips

The system is facilitated with tool tip option.

When the cursor is moved on any of the user interface field in the screen, a popup is displayed. It consists of a tip with the action that has to be performed.

## 1.8 Accessibility

This section consists of the following:

- [Understanding Accessibility](#)
- [Application Accessibility Preferences](#)
- [Documentation Accessibility Preferences](#)

### 1.8.1 Understanding Accessibility

Accessibility is making the application usable for multiple user groups, which includes users with physical challenges. One of the most important reasons to make the application accessible is to provide them the opportunity to work. The four main categories of disabilities are visual, hearing, mobility and cognitive.

A person with disability might encounter one or more barriers that can be eliminated or minimized by making the electronic information user-friendly and approachable.

### 1.8.2 Application Accessibility Preferences

Oracle Financial Services Lending and Leasing is facilitated with the feature of Accessibility to make the application more usable for the people who are differently abled.

By default, the following accessibility options are provided and there is no need to define special accessibility preference in the application:

- The application user interface contents are readily accessible for all types of users without the need to select special accessibility modes.
- The components within the user interface are optimized for use with a screen reader by default.
- The contents are zoomable by default, eliminating the need for an application large fonts mode.
- The user interface components auto-detect if operating system (OS) is set to high contrast mode and automatically render content that is compatible with OS high contrast, eliminating the need for an application high contrast mode.

Note that, Oracle Financial Services Lending and Leasing application user interface is built on Oracle Application Development Framework (ADF) and the default accessibility feature supported by ADF are made available. For additional information, refer to ADF documentation on accessibility preferences.

### 1.8.3 Documentation Accessibility Preferences

Apart from assigning the logical sequence and organizing topics, the following techniques are used to enhance the accessibility of documentation.

- Addition of text equivalent to all graphics
- Usage of standard fonts and avoiding shadow or reversed text
- Usage of strong foreground and background color contrast
- Color usages as per Oracle Accessibility guidelines have been ensured
- Usage of styles and formatting elements
- Documentation in simple language to ensure easy understanding
- Including accurate and effective navigational features, such as cross-reference, tables of content and bookmarks as appropriate.

# 2

## Administration System

In **Administration > System**, you can record setup data related to the application's overall functionality and performance. This data affects;

- The mechanics of the system
- The processes of the system
- The search for Location of files to complete the tasks.

### Navigating to Administration System

On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > System**

The **System** drop-down link records the following data. Using the below screens, you can control the behavior of the system from a technical perspective. For example, determine parameter values, define what information is audited, and record default values. However, note that the product provides default values for parameters in all these screens.

- [System Parameters](#)
- [Lookups](#)
- [User Defined Tables](#)
- [Audit Tables](#)
- [User Defined Defaults](#)
- [User Defined Parameters](#)
- [Transaction Codes](#)
- [Data Files](#)
- [Dedupe](#)
- [Securitization](#)
- [Events](#)
- [Batch Jobs](#)
- [Producer Cycles](#)
- [Vendors](#)
- [Collection Cycles](#)
- [Reports](#)
- [Error Messages](#)
- [Translation](#)
- [Label Configuration](#)
- [Seed Data](#)
- [Sales Tax](#)
- [Data Masking](#)

- [Webhook](#)

## 2.1 System Parameters

System parameters define information or values used throughout the system. They act as switches that control the manner in which a function is implemented, or whether or not the system performs a particular task. Parameters are used throughout the system to control everything from user access to what information is stored on any given form. Parameters also define configuration data, such as the location of the system files, the URLs for the report and image servers, and other administration controlled data. Some of the system parameters are setup when the system is installed, but the values associated with the parameters need to be reviewed and maintained.

There are three types of parameters in the system, grouped by what part of the system they affect:

**Table 2-1 Types of Parameters**

Parameter Type	Parameter Range
System parameters	These parameters apply to the entire system. Examples: batch processes, archiving, aging.
Organization parameters	These parameters apply to the organization, division, and user responsibility. Examples: User login control, password expiration.
Company parameters	These parameters apply to the company and branch. Examples: decision fax control, scoring model.

Hence, the System Parameters screen contains the following three tabs:

- [System Parameters Setup](#)
- [Organization Parameters](#)
- [Company Parameters](#)

### 2.1.1 System Parameters Setup

The System Parameters Setup screen displays and records each system wide parameter, along with its current value and whether or not it is enabled. These parameters relate to the overall processing of the system, such as application server file locations and data purging configuration.

#### Note

You can only define these parameters. Changing the values of any of these parameters affects the related processing.

#### To set up the System Parameters

1. Click **Setup > Setup > Administration > System > System Parameters > System**. The system displays the **System Parameter** screen.

- In the **System Parameters** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 2-1 System Parameters**

A brief description of the fields is given below:

**Table 2-2 System Parameters setup**

Parameter Type	Parameter Range
Parameter	System parameter of the specified parameter description is displayed here.
Parameter Description	Select the description of system parameter from the drop-down list.
Parameter Value	Specify the value for the system parameter (required).
Enabled	Check this box to enable the parameter.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

For a detailed list of available parameters, refer to Appendix [System Parameters](#) chapter.

This section consists of the following topic:

- [FCUBS Integration](#)

### 2.1.1.1 FCUBS Integration

Oracle Financial Services Lending and Leasing (OFSLL) is integrated with Oracle FLEXCUBE Universal Banking System (FCUBS) with the capability to integrate the centralized CIF

(Customer Information Files), ELCM (Enterprise Limits and Collateral Management) and CASA (Current Account and Savings Account) modules.

To work with the integrated environment functionalities, you need to enable the following core banking indicator.

**Table 2-3 FCUBS Integration**

Parameter	Parameter Description
CMN_CORE_BANK	CORE BANKING INTERFACE INDICATOR

**Note**

Re-qualification is pending for Core and Direct Banking Integration.

*For detailed information about integration changes, you can refer to 'FCUBS Integration Documents' section at OTN library ([http://docs.oracle.com/cd/E59770\\_01/homepage.htm](http://docs.oracle.com/cd/E59770_01/homepage.htm)).*

## 2.1.2 Organization Parameters

The Organization parameters control the system functions related to user log in, such as passwords and expiration dates, responsibility levels and the ability to access the system features. Individual parameters can be created with different values for uniquely defined organizations, divisions, and responsibility combinations.

When determining which parameter to use, the system selects the best match based on a hierarchical sort by the Organization, Division, and Responsibility fields, with values of ALL being a lower order match than an exact match.

For example:

Assume the organization parameter `UIX_APP_VIEW_ALL_APPS` (VIEW ALL APPLICATIONS) is as follows:

- If a user belongs to an organization as **DMC** with a responsibility of **SUPERUSER** and is using the Underwriting screen of Lending menu, the system will return with a value **N**, and the system will not allow the user to view all applications.
- If the user belongs to any organization with a responsibility of **SUPERUSER**, and is using the Underwriting screen of Lending menu, the system will return with a value **Y**, and the system will allow the user to view all applications.

**Note**

Be aware that while the system allows for Organization parameters to be defined at all three hierarchical (organization, division, and responsibility) levels, not all will be applicable to each parameter. For example, while you can define the `UIX SMTP_SERVER` (EMAIL SERVER FOR USER) for a responsibility, you would normally want only to define this parameter based on organization or division.

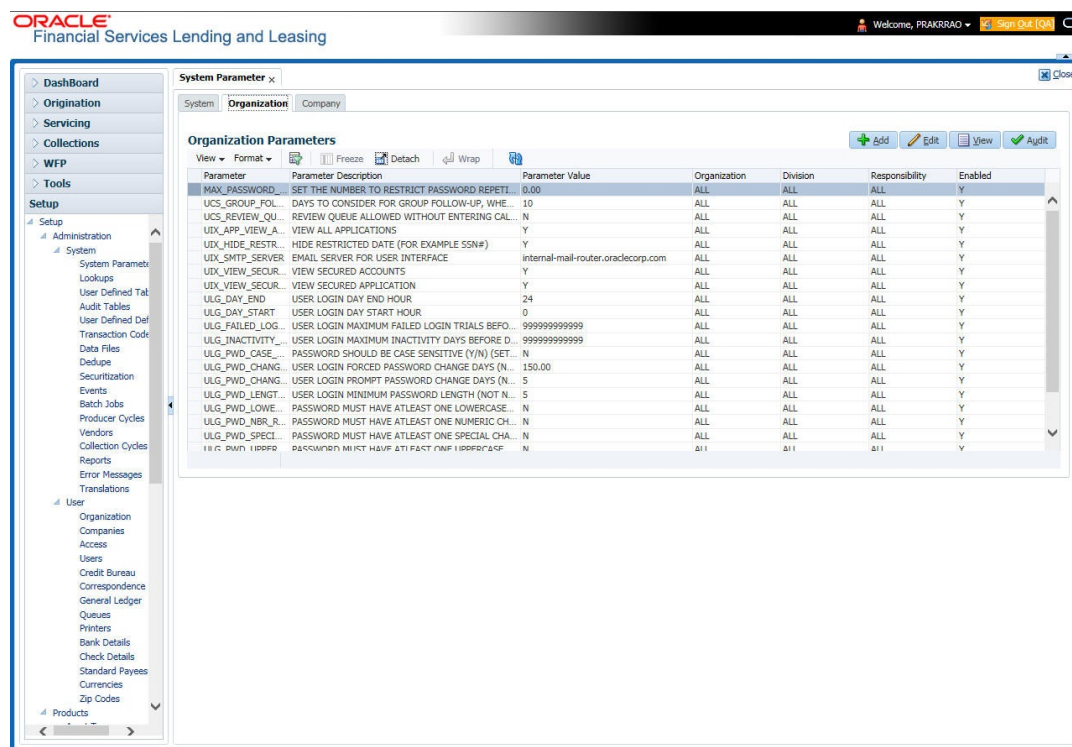

### To set up the Organization Parameters

1. Click **Setup > Setup > Administration > System > System Parameters > Organization** tab.

2. In the **Organization Parameters** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

### Figure 2-2 Origination System Parameters Setup

A brief description of the fields is given below:

### Table 2-4 Organization Parameters

Field	Do this
Parameter	Parameter of the specified parameter description is displayed here.
Parameter Description	Select the description of system parameter from the drop-down list.
Parameter Value	Specify the value for the system parameter.
Organization	Select the organization for which the parameter will be valid from the drop-down list.
Division	Select the department for which the parameter will be valid from the drop-down list.

**Table 2-4 (Cont.) Organization Parameters**

Field	Do this
Responsibility	<p>Select the responsibility for which the parameter will be valid from the drop-down list.</p> <p><b>IMPORTANT:</b> In selecting which organization parameter to use, the system searches for a best match using the following attributes:</p> <ol style="list-style-type: none"> <li>1. Organization</li> <li>2. Division</li> <li>3. Responsibility</li> </ol> <p>Hence, Oracle Financial Services Software recommends creating a version of each organization parameter, where ALL is these fields.</p>
Enabled	Check this box to enable the parameter.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

For a detailed list of available parameters, refer to Appendix [System Parameters](#) chapter.

## 2.1.3 Company Parameters

The Company parameters control the system processes associated with functions that may vary for different companies or branches. These parameters address credit scoring, credit bureau interfaces, fax services, and fax generation. Individual parameters may be set up with different values for uniquely defined company and branch combinations.

When these parameters values are requested by the system, the system responds with the **best** match based on a hierarchical sort ordered on company and branch fields, with values of ALL being a lower order match than an exact match. For example, assume the company parameter `UIX_RUN_AAI_ACT` (ONLINE ACCOUNT CREATION AND ACTIVATION) has been defined as:

The system uses these two parameters to determine whether to create and activate an account online.

- When processing items for the company US01, the system will return a value N and not create and activate an account online.
- When processing items for the company other than US01 and within the value ALL, the system will return with a value Y and create and activate an account online.

### To set up the Company Parameters

1. Click **Setup > Setup > Administration > System > System Parameters > Company** tab.
2. On the Company Parameters screen, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 2-3 Company Parameters

The screenshot shows the Oracle Financial Services Lending and Leasing interface. The 'System Parameter' window is open, with the 'Company' tab selected. The 'Company Parameters' table lists various parameters and their values. Below the table, there are input fields for adding or editing a parameter.

Parameter	Parameter Description	Parameter Value	Company	Division	Enabled
AUD_ADV_REASON	AUTO DECISION ADVERSE ACTION REASON MODEL	PICO	ALL	ALL	Y
AUD_SCORING_METHOD	APPLICATION SCORING METHOD WITH IN ALL BUREAU	PRIM	ALL	ALL	Y
AUD_SCORING_METHOD	APPLICATION SCORING METHOD WITH IN ALL BUREAU	MAX_SCORE	ALL	ALL	Y
CBU_DATA_SET_S...	METRO 2 FILE DATA SELECTION CRITERIA	MONTHLY	ALL	ALL	Y
CBU_DATA_SET_S...	METRO 2 FILE DATA SELECTION CRITERIA	MONTHLY	US01	USHQ	N
CBU_FILE_FORMAT	METRO 2 FILE FORMAT	B80	ALL	ALL	Y
CMN_ASE_VALIDA...	VALIDATE ASSET MAKE MODEL DURING DATA ENTRY	N	ALL	ALL	Y
CMN_CMB_DEFAL...	DEFAULT PRINTER NAME	UNDEFINED	ALL	ALL	Y
CMN_WEEKLY_NO...	WEEKLY NON-BUSINESS DAYS	UNDEFINED	ALL	ALL	Y
COR_STORAGE_O...	ORACLE DIRECTORY OBJECT NAME FOR CORRESPONDENCE DOC STORAGE	COR_DIR_QA143REL_HQ	ALL	ALL	Y
DBR_JOINT_INC...	COMBINE INCOME AND DEBT WITH SPOUSE AND ZNDRY	N	ALL	ALL	Y
DBR_JOINT_INC...	COMBINE INCOME AND DEBT WITH SPOUSE	N	ALL	ALL	Y
DDP_CRB_EXPIRA...	DEDUPING CREDIT BUREAU EXPIRATION DAYS	999999	ALL	ALL	Y
DDP_DEDUP_DEB...	DEDUP CREDIT BUREAU LIABILITIES WITH SPOUSE AND SECONDARY	N	ALL	ALL	Y
DDP_DEDUP_DEB...	DEDUP CREDIT BUREAU LIABILITIES WITH SPOUSE	N	ALL	ALL	Y
DOT_STORAGE_O...	ORACLE DIRECTORY OBJECT NAME FOR ACCOUNT DOCUMENT LOADING	DOT_DIR_QA143REL_HQ	ALL	ALL	Y
ECB_EDIT_FAIL_A...	CREDIT BUREAU EDIT WILL FAIL IF ANY BUREAU FOR ANY APL WILL NO...	N	ALL	ALL	Y
ECB_USE_APL_OU...	RUN CREDIT BUREAU EDITS ONLY ON CURRENT SCORED APPLICANT BU...	Y	ALL	ALL	Y
FIN_IMAGP_STAT	DEFAULT IMAGP STATUS CODE FOR PAY IN GROUP	N	US01	SH	Y

Below the table, there are input fields for adding or editing a parameter:

- Parameter:
- Parameter Description:
- Parameter Value:
- \* Company:
- \* Branch:
- \* Enabled: ☐

A brief description of the fields is given below:

Table 2-5 Company Parameters setup

Field	Do this
Parameter	The system displays the parameter, when you select parameter description.
Parameter Description	Select the description of system parameter from the drop-down list.
Parameter Value	Specify the value for the system parameter.
Company	Select the portfolio company for which the parameter will be valid from drop-down list.
Branch	Select the portfolio branch for which the parameter will be valid from the drop-down list (required).  <b>IMPORTANT:</b> In selecting which company parameter to use, the system searches for a best match using the following attributes: <ol style="list-style-type: none"> <li>1. Company</li> <li>2. Branch</li> </ol> For this reason, the Software recommends creating a version of each company parameter where ALL is the value in these fields.
Enabled	Check this box to enable the parameter.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

For a detailed list of available parameters, refer to Appendix [System Parameters](#) chapter.

## 2.2 Lookups

The Lookups setup screen defines the contents in many drop-down fields used throughout the system. Fields that make use of drop-down field will accept only entries that are stored on this screen.

The Lookups screen contains two sections: **Lookup Types** and **Lookup Codes**. Lookup types and codes can be system-defined or user-defined. The lookup types describe the function of the related lookup codes.

For system-defined lookup types, only the Description field may be changed.

A system-defined lookup type (**Lookup Types** block, **System Defined** is selected) is one that is critical to the system and cannot be changed. However, you can still modify the lookup type description and Record indicator (Enabled/Disabled).

A user-defined lookup type (**Lookup Types** block, **System Defined** is not selected) is one that can be modified, depending on a user's business needs. You can modify the description, system indicator and record indicator. If a lookup type is user-defined, the lookup code belonging to that lookup type can either be system-defined or user-defined.

A system-defined lookup code (**Lookups** screen, **System Defined** is selected) is one on which the system processing is dependent. Without this lookup code, the process produces incorrect results or fails.

A user-defined lookup code (**Lookups** screen, **System Defined** is not selected) is one that can be defined or altered by a user.

**WARNING:** System-defined lookup types are those that are required by the system. Their related lookup codes will also be system defined. If you update and save a user-defined lookup type as a system-defined-lookup type (that is, change the System Defined button from **No** to **Yes** in the Lookup Type sub screen), the system will not allow you to change the lookup type back to user-defined in the future.

### Note

Lookup codes cannot be deleted, as they may have been used in the past, and the display and processing of that data is still dependent on the existing setup.

Typically, the system Administrator would modify the descriptions of lookup codes and add new lookup codes to the existing lookup types as needed.

### To set up the Lookups

1. Click **Setup > Setup > Administration > System > Lookups**. The system displays the **Lookups** screen. The details are grouped into two:
  - Lookup Types
  - Lookup Codes
2. In the **Lookup Types** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 2-4 Lookups

The screenshot displays the 'Lookups' setup interface in Oracle Financial Services Lending and Leasing. The interface includes a navigation pane on the left with options like Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. The main area is titled 'Lookups' and contains two sections: 'Lookup Type' and 'Lookup Code'.

**Lookup Type Section:**

Lookup Type	Description	System Defined Yes/No	Enabled
1098_POINTS_DISCOUNTS_ITM_CD	1098 ITEMIZATION TYPES	<input type="radio"/> Yes <input checked="" type="radio"/> No	<input checked="" type="checkbox"/> Y
ACCESS_GRID_TYPE_CD	ACCESS GRID TYPE CODES	<input type="radio"/> Yes <input checked="" type="radio"/> No	<input checked="" type="checkbox"/> Y
ACCRUAL_BASE_METHOD_CD	ACCRUAL BASE METHOD CODES	<input type="radio"/> Yes <input checked="" type="radio"/> No	<input checked="" type="checkbox"/> Y
ACCRUAL_CALC_METHOD_CD	ACCRUAL CALCULATION METHOD CODES	<input type="radio"/> Yes <input checked="" type="radio"/> No	<input checked="" type="checkbox"/> Y
ACCRUAL_START_DT_BASIS_CD	ACCRUAL START DT BASIS CODES	<input type="radio"/> Yes <input checked="" type="radio"/> No	<input checked="" type="checkbox"/> Y
ACCRUED_TXN_TYPE_CD	ACCRUED TXN BALANCE TYPE CODES	<input type="radio"/> Yes <input checked="" type="radio"/> No	<input checked="" type="checkbox"/> Y
ACC_CONDITION_CD	ACCOUNT CONDITIONS / ACCOUNT QUEUE TYPES (SUB CODE USED FOR DEFAULT QUEUE)	<input type="radio"/> Yes <input checked="" type="radio"/> No	<input checked="" type="checkbox"/> Y
ACC_STATUS_CD	ACCOUNT STATUS CODES	<input type="radio"/> Yes <input checked="" type="radio"/> No	<input checked="" type="checkbox"/> Y
ACH_ACCOUNT_TYPE_CD	ACH ACCOUNT TYPE CODES	<input type="radio"/> Yes <input checked="" type="radio"/> No	<input checked="" type="checkbox"/> Y

Below the table, there are input fields for 'Lookup Type', 'Description', and 'System Defined Yes/No' (radio buttons for Yes and No). There is also an 'Enabled' checkbox.

**Lookup Code Section:**

Lookup Code	Description	Sort Sub Code	System Defined Yes/No	Enabled
No data to display.				

A brief description of the fields is given below:

Table 2-6 Lookups setup

Field	Do this
Lookup Type	Specify the lookup type.
Description	Specify the description for the lookup type.
System Defined Yes/No	Select <b>Yes</b> , if you wish to maintain the lookup type as system defined and <b>No</b> , if you wish to maintain lookup type as User defined.
Enabled	Check this box to enable the lookup type.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Lookup Codes** section, you can setup individual codes that a field or process using the related lookup type can have. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Table 2-7 Lookup Codes

Field	Do this
Lookup Code	Specify the lookup code. These are solely dependent on the function of the Lookup Type.
Description	Specify the lookup code description. This may be changed as per your business requirement.

Table 2-7 (Cont.) Lookup Codes

Field	Do this
Sort	Specify the sort order for the lookup code. This determines the order these lookup codes are displayed or processed.
Sub Code	Specify the sub code for the lookup code.
System Defined Yes/No	Select <b>Yes</b> , if you wish to maintain the lookup code as system defined and <b>No</b> , if you do not want to maintain it as system defined. System defined lookup codes cannot be modified, except for changing the Description or Sorting fields. If the lookup type is not system defined, then the code can be modified.
Enabled	Check this box to enable the lookup code.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.3 User Defined Tables

In User Defined Tables you can maintain user-defined tables, such as the data attributes the system uses on its Search screens.

In the following example, the list of attributes in the Criteria column are computed from the User Defined Tables screen.

### To set up a user-defined table, you must:

1. Define the fields on the table.
2. Join the related tables.
3. Assign the table a lookup type.

You can create tables for different products, funding, and collateral types.

After creating the user-defined tables, the system sorts the attributes to make the system usage more efficient. These details are used with different functions of the system, including:

- Searching applications and accounts
- Tracking follow-up items
- Creating details in bankruptcy, foreclosure/repossession, and deficiency

### Note

Many of these tables, (ASSET TRACKING ATTRIBUTES for example) may be configured during the initial setup of the application to provide for your specific business needs. Others, such as APPLICATION SEARCH, may be changed whenever your business needs change. Still others should not be changed without consulting Oracle Financial Services Software, as changing them would require changes to existing code for the expected results to be implemented. As a thumb rule, it is better to add or disable information on the User Defined Tables screen than to edit existing entries.

### To set up the User Defined Tables

1. Click **Setup > Setup > Administration > System > User Defined Tables**. The system displays the User Defined Tables screen. The details are grouped into two:
  - User Defined Tables
  - User Defined Table Attributes
2. In the **User Defined Tables** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 2-5 User Defined Tables

A brief description of the fields is given below:

Table 2-8 User Defined Tables

Field	Do this
Table	Specify the user-defined table name.
User Table Type	Select the user-defined table type from the drop-down list. This determines where and how the related data is being used.
Description	Specify the description for user-defined table.
System Defined Yes/NO	Select <b>Yes</b> , if you wish to maintain the User table type as system defined and <b>No</b> , if you do not want to maintain it as system defined. System defined entries cannot be modified. If the entry is not system defined, then it can be modified.
Enabled	Check this box to enable the user-defined table (optional).

Table 2-8 (Cont.) User Defined Tables

Field	Do this
Product Type	Select the product type from the drop-down list.
Funding Type	Select the funding type associated with the user-defined table from the drop-down list.
Collateral Type	Select the collateral type associated with the user-defined table from the drop-down list.
View Name	Specify the view name.
SQL Statement	Specify the SQL version of the statement.  For Example: For SEARCH_ACC_ACCOUNTS table, the SQL is as follows:  SELECT /*+ FIRST_ROWS */ ACC_AAD_ID FROM ACCOUNTS WHERE  <b>Note:</b> For the above SQL, the where criteria is part of the User Defined Table Attributes
Sort	Specify the sort order for the user-defined table relative to other tables of the same type.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **User Defined Table Attributes** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 2-6 User Defined Table Attributes

The screenshot displays the Oracle Financial Services Lending and Leasing application interface. The top navigation bar includes the Oracle logo, the application name, and user information. The left sidebar contains a navigation menu with options like Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. The main content area is titled 'User Defined Tables' and shows a table with columns: Table, User table Type, Description, System Defined Yes/No, Enabled, Product Type, Funding Type, Collateral Type, View Name, and SQL Statement. Below this, the 'User Defined Table Attributes' section is visible, showing a table with columns: Attribute, Description, Data Type, Length, Sort, Operator, System Defined Yes/No, Enabled, Sub Attribute, and LOV Type. The bottom section contains input fields for adding or editing attributes, including fields for Attribute, Description, Data Type, Length, Sort, Operator, System Defined Yes/No, Enabled, Sub Attribute, LOV Type, and Default Value.

A brief description of the fields is given below:

**Table 2-9 User Defined Table Attributes**

Field	Do this
Attribute	Specify the user-defined table attribute.
Description	Specify the description for the user-defined table attribute.
Data Type	Select the data type for the attribute (CHARACTER, NUMBER, or DATE) from drop-down list.
Length	Specify the maximum length of the user-defined table attribute.
Sort	Specify the sort order of the user-defined table attribute. If the sort order is changed it will only affect new instances of the User Defined Table, and will not affect existing data.
Operator	Select the operator for the user-defined table attribute from the dropdown list.
System Defined Yes/No	Select <b>Yes</b> , if you wish to maintain the User table attribute as system defined and <b>No</b> , if you do not want to maintain it as system defined. System defined entries cannot be modified. If the entry is not system defined, then it can be modified.
Enabled	Check this box to enable the user-defined table attribute so that the attribute will be considered when creating new instances of the User Defined Table.
Sub Attribute	Specify the sub-attribute for the attribute (sub attributes are used to associate related attributes).
LOV Type	Select the list of value (LOV) type for the user-defined table attribute from the drop-down list.
LOV Validation Ind	Check this box to enable LOV validation of the user-defined table attribute. This indicates whether the data must come from the LOV.
Lookup Types	Specify the lookup type of the LOV associated with the user-defined table attribute.
Default Value	Specify the default value for the user-defined table attribute.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.4 Audit Tables

The system allows you to track changes in the database during line of creditloan origination. This includes the tracking of:

- Application status history
- Account status history
- Audit history of specified fields

The Audit Tables Setup screen records the tables and columns requiring an audit. the system stores the following details for the fields you want to audit for changes:

- Current value in field
- New value field

- User who changed the field's content
- Date and time when the value was changed

**IMPORTANT:** The system recommends that only a database administrator perform the following steps.

### To set up the Audit Tables

1. Click **Setup > Setup > Administration > System > Audit Tables**. The system displays the Audit Tables screen. The details are grouped into two:
  - Audit Tables
  - Audit Columns
2. In the **Audit Tables** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 2-7 Audit Tables**

A brief description of the fields is given below:

**Table 2-10 Audit Tables**

Field	Do this
Table	The table name on which audit trigger needs to be created is displayed here (the system table being audited).
Description	Specify the table description.

**Table 2-10 (Cont.) Audit Tables**

Field	Do this
Display Description	Specify the column description to be displayed on audit screen.
Display Column	Select the table column to be displayed on audit screen from the drop-down list.
Enabled	Check this box to enable the audit table so that it will be considered while generating the database triggers.
Reset Row ID	Check this box to allow resetting the row identifier.
Primary Key 1 (unlabeled)	The table primary key column 1 is displayed here. (These columns define how to access the data in the table.)
Primary Key 2 (unlabeled)	The table primary key column 2 is displayed here.
Primary Key 3 (unlabeled)	The table primary key column 3 is displayed here.
Primary Key 4 (unlabeled)	The table primary key column 4 is displayed here.
Primary Key 5 (unlabeled)	Table primary key column 5 is displayed here.
Primary Key 6 (unlabeled)	Table primary key column 6 is displayed here.
Primary Key 7 (unlabeled)	The table primary key column 7 is displayed here.
Primary Key 8 (unlabeled)	The table primary key column 8 is displayed here.
Primary Key 9 (unlabeled)	The table primary key column 9 is displayed here.
Primary Key 10 (unlabeled)	The table primary key column 10 is displayed here.
Primary Key 11 (unlabeled)	The table primary key column 11 is displayed here.
Primary Key 12 (unlabeled)	The table primary key column 12 is displayed here.
Primary Key 13 (unlabeled)	The table primary key column 13 is displayed here.
Primary Key 14 (unlabeled)	The table primary key column 14 is displayed here.
Primary Key 15 (unlabeled)	The table primary key column 15 is displayed here.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Audit Tables Columns** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 2-11 Audit Tables Columns**

Field	Do this
Column	Specify the column name on which the audit needs to be created from drop-down list (column in the table that is being audited)

**Table 2-11 (Cont.) Audit Tables Columns**

Field	Do this
Description	Specify the column description (description of the data contained in the column).
Data Type	The data type for the attribute is displayed here.
Enabled	Check this box to enable the audit column.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
6. Once the required fields data is created or updated, click **Generate** in Audit Tables section to initiate a trigger to update the details in the system.

## 2.5 User Defined Defaults

The User Defined Defaults Setup screen allows you to set up default values to automatically populate in frequently used fields on the Application Entry screen. This streamlines the data entry process when entering an application.

### To set up the User Defined Defaults

1. Click **Setup > Setup > Administration > System > User Defined Defaults**. The system displays User Defined Defaults screen.
2. In the **Application Defaults** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 2-8 Application Defaults**

The screenshot displays the 'User Defined Defaults' window in the Oracle Financial Services Lending and Leasing application. The window is divided into two main sections: a table of 'Application Defaults' and a detailed 'Application Defaults' form.

**Application Defaults Table:**

Organization	Division	Company	Branch	Priority	Channel	Producer Type	Class	Purpose	Product
DMC	NL02	NL02	NLR1	NORMAL	FAX IN	DEALER	SMALL BUSINESS	VEHICLE LOAN O...	LOAN VEHICLE (
DMC	SA03	US01	USHQ	HIGH	WEB ENTRY	DEALER	SMALL BUSINESS	HOME EQUITY LO...	HOME LOAN VEHICLE
DMC	US01	US01	USHQ	NORMAL	WEB ENTRY	DEALER	INDIVIDUAL	VEHICLE LOAN O...	LOAN VEHICLE (
DMC	JP04	JP04	JPR1						

**Application Defaults Form:**

The form allows users to define default values for various fields. Key sections include:

- Organization Defaults:** \* Organization (DMC), \* Division (US01).
- Application Defaults:** Company, Branch, Priority, Channel, Producer Type, Class, Purpose, Product.
- Postal Defaults:** Postal Type (NORMAL ADDRESS), Street Pre, Street Type, Street Post, Country (UNITED STATES).
- Vehicle Defaults:** Asset Type, Sub Type, Class, Valuation Source.
- Employment Defaults:** Type (FULL TIME), Occupation, Country (UNITED STATES), Stated Frequency (MONTHLY), Actual Frequency (MONTHLY).
- Home Defaults:** Asset Type, Sub Type, Class, Occupancy, Valuation Source.
- Applicant Defaults:** Relation Type, Gender, Marital Status, Language, ECOA, Class Type (NORMAL).
- Telecom Defaults:** Income Type, Frequency.
- Income Defaults:** Asset Type, Sub Type, Class.
- Other Defaults:** Asset Type, Sub Type, Class.

A brief description of the fields is given below:

**Table 2-12 Application Defaults**

Field	Do this
Org	Select the organization for which these defaults are applicable from drop-down list.
Division	Select the division for which these defaults are applicable from dropdown list.
<b>Application Defaults</b>	
Company	Select the company from the drop-down list.
Branch	Select the branch from the drop-down list.
Priority	Select the priority from the drop-down list.
Channel	Select the channel from the drop-down list.
Producer Type	Select the producer type from the drop-down list.
Purpose	Select the purpose from the drop-down list.
Product	Select the product from the drop-down list.
<b>Applicant Defaults</b>	
Relation Type	Select the applicant relation type from the drop-down list.
Gender	Select the applicant gender from the drop-down list.
Marital Status	Select the applicant marital status from the drop-down list.
Language	Select the applicant language from the drop-down list.
ECOA	Select the applicant ecoa from the drop-down list.
Class Type	Select the applicant class type from the drop-down list.
Race National Origin	Select the applicant race or national origin from the drop-down list.
Privacy Opt-Out	Check this box to indicate that the applicant has elected to refrain from the non-public sharing of information.
<b>Address Defaults</b>	
Address Type	Select the address type from the drop-down list.
Postal Type	Select the postal address type from the drop-down list
Street Pre	Select the street pre type from the drop-down list.
Street Type	Select the street type from the drop-down list.
Street Post	Select the street post type from the drop-down list.
Country	Select the country from the drop-down list.
Rent Amount	Specify the rent amount. The system defaults this rent amount if the rent amount received from the interface is zero.  This rent amount will be defaulted for a new application also.
State Frequency	Select the stated frequency from the drop-down list.
Actual Frequency	Select the actual frequency from the drop-down list.

**Table 2-12 (Cont.) Application Defaults**

Field	Do this
Ownership	Select the ownership type from the drop-down list.
<b>Employment Defaults</b>	
Type	Select the employment type from the drop-down list.
Occupation	Select the occupation from the drop-down list.
Country	Select the country from the drop-down list.
Stated Frequency	Select the stated frequency from the drop-down list.
Actual Frequency	Select the actual frequency from the drop-down list.
<b>Income Defaults</b>	
Income Type	Select the income type from the drop-down list.
Frequency	Select the frequency from the drop-down list.
<b>Liability Defaults</b>	
Liability Type	Select the liability type from the drop-down list.
Frequency	Select the frequency from the drop-down list.
<b>Asset Defaults</b>	
Status	Select the asset status from the drop-down list.
Condition	Select the asset condition from the drop-down list.
Country	Select the country from the drop-down list.
<b>Vehicle Defaults</b>	
Asset Type	Select asset type from the drop-down list.
Sub Type	Select asset sub type from the drop-down list.
Class	Select the asset class from the drop-down list.
Valuation Source	Select the asset valuation source from the drop-down list.
<b>Home Defaults</b>	
Asset Type	Select asset type from the drop-down list.
Sub Type	Select asset sub type from the drop-down list.
Class	Select the asset class from the drop-down list.
Occupancy	Select the occupancy type from the drop-down list.
Valuation Source	Select the asset valuation source from the drop-down list.
<b>Other Defaults</b>	
Asset Type	Select asset type from the drop-down list
Sub Type	Select asset sub type from the drop-down list.
Class	Select the asset class from the drop-down list.
Valuation Source	Select the asset valuation source from the drop-down list
<b>Comment Defaults</b>	
Comment Type	Select the comment type from the drop-down list.
Comment Sub Type	Select the comment sub type from the drop-down list.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.6 User Defined Parameters

The User Defined Parameters setup screen facilitates to define field-level configurations which helps to perform various day to day business specific calculations. In this screen you can define parameters and logic for each field to compute and populate data.

For example, you can setup User Defined Parameters in the system to calculate Trade Equity, Collateral Coverage Ratio, Net Rental Yield and so on.

### Note

Currently system supports defining user defined parameters for entities like Account and Collateral. The computed values are populated into Customer Service > Account Details > Account Information section and Servicing > Collateral Management > Collateral Details screen respectively on clicking Calculate Parameters button.

Defining user defined parameters basically involves identifying a scenario and creating/configuring the required parameters. Here, a scenario can refer to what category of accounts are to be considered for computation.

User defined parameters consists of the following two types of configurable parameters:

**Table 2-13 Types of configurable parameters**

Parameter	Description
Target Parameters	<p>These parameters store values for the customizable user defined fields in user defined tables and is used for calculation based on Selection Criteria.</p> <p>These parameters are available as per the <b>View Name</b> defined in user defined tables for each Account and Collateral Entity and persist the calculation values into the table columns of database after its first execution.</p>
Formula Parameters	<p>These parameters are used for computation of the target parameters. These contain the generic formula/logic that can be used for any computation based on System Defined Functions and Table Columns. These parameters does not persist the calculation values into the table columns of database.</p>

Since system supports Account and Collateral entity types, the configurable user defined Target/Formula parameters along with selection criteria can be defined using specific table type as indicated below:

**Table 2-14 Account and Collateral entity types**

Entity Type	Parameter Type	Description
Accounts	Formula Parameters	<p>Formula parameters are used for computation of the target parameters for Account Entity.</p> <p>OFSLL supports predefined set of calculation based Formula Parameters. These parameter definitions start with \$ in User Defined Tables.</p> <p>These parameters does not have any selection criteria.</p> <p>Existing factory shipped seed data provided by OFSLL product like GL date, System Date, ACC_DLQ_DAYS and so on is based on below User Defined Table Type:</p> <p>USER DEFINED: ACCOUNTS FORMULA PARAMETERS</p> <p>USER DEFINED: COMMON FORMULA PARAMETERS</p> <p>USER DEFINED: COMMON CUSTOMER SERVICE FORMULA PARAMETERS</p>
	Target Parameters	<p>These calculations are based on formula parameters and other target parameters.</p> <p>A selection criteria is available for each calculation.</p> <p>These are based on User Defined Table Type: USER DEFINED: ACCOUNT TARGET PARAMETERS</p>
	Selection Criteria	<p>These parameters define the criteria on which accounts are picked for calculation of defined target parameters.</p> <p>These are available only for Target parameters and are based on User Defined Table Type: USER DEFINED: ACCOUNT CRITERIA PARAMETERS</p>

**Table 2-14 (Cont.) Account and Collateral entity types**

Entity Type	Parameter Type	Description
Collateral	Formula Parameters	These Formula parameters are used for computation of the target parameters for Collateral Entity. They are based on below User Defined Table Type: USER DEFINED: COLLATERAL FORMULA PARAMETERS USER DEFINED: COMMON FORMULA PARAMETERS USER DEFINED: COMMON CUSTOMER SERVICE FORMULA PARAMETERS
	Target Parameters	These are based on User Defined Table Type: USER DEFINED: COLLATERAL TARGET PARAMETERS
	Selection Criteria	These are available only for Target parameters and are based on User Defined Table Type: USER DEFINED: COLLATERAL CRITERIA PARAMETERS

**Note**

The execution of User Defined Parameters require additional processing at the server level and can have significant performance impact delaying the EOD processing. Hence it is recommended to have careful consideration while defining the Target and Formula parameter configurations.

In this framework, you can either create new parameters and/or use the available pre-defined formula parameters to populate computed values to custom user defined fields.

For example - a formula parameter can be defined with an expression as `*$TOTAL_ITM_GRP_IEQ + $PAID_BAL_ADV` which is total equity in itemizations on account added with total advance amount paid. An expression can have a stored function (represented with \$ sign) and Account Columns (fields).

There are some formula parameters in the system with basic pre-defined calculation which can readily be used for configuration along with account fields. Pre-defined formula parameters are associated with specific acronyms appended with parameter name for identification. The table below lists the available pre-defined formula parameters. However, you can also define custom formula parameters with acronyms.

**Table 2-15 Pre-defined formula parameters**

User Defined Column Description	Description
\$GL_DATE	Value of GL Date System Parameter
\$SYSTEM_DATE	Current System Date

**Table 2-15 (Cont.) Pre-defined formula parameters**

User Defined Column Description	Description
\$COLLATERAL_VALUE	Sum of all collateral current valuation
\$PRIMARY_COLLATERAL_VALUE	Sum of all primary collateral current valuation
\$ASE_GRAND_FATHER_POINTS	Sum of all grandfather points
\$ASE_TIER_POINTS	Total Tier Points
\$INTEREST_ACCRUED	Interest Accrued on Account for a specific date. This is used to calculate Trade Equity Calculation.
\$OUTSTANDING_AMOUNT	Current Account Outstanding Amount
\$OUTSTANDING_BAL_ (BALANCE TYPE *)	<p>This is a dynamic balance value calculation based on type variable.</p> <p>For example:</p> <ul style="list-style-type: none"> <li>• \$OUTSTANDING_BAL_ADV - Will calculate outstanding Advance/Principal amount</li> <li>• \$OUTSTANDING_BAL_LSR - Will calculate outstanding Lease Receivable amount</li> </ul>
\$PAID_BAL_ (BALANCE TYPE *)	<p>This is a dynamic balance value calculation based on type variable.</p> <p>For example:</p> <ul style="list-style-type: none"> <li>• \$PAID_BAL_ADV - Will calculate paid Advance/ Principal amount</li> <li>• \$PAID_BAL_LSR - Will calculate paid Lease Receivable amount</li> </ul>
\$SUM_PRIN_ESC_MAX_EXPIRY_DT	This is used to calculate sum of total principal amount till Extended Service Warranty Max Expiry Date.
\$TOTAL_ITM_GRP_ (ITM GROUP*)	<p>This is a dynamic itemization group value calculation based on type variable.</p> <p>For example:</p> <ul style="list-style-type: none"> <li>• \$TOTAL_ITM_GRP_IDC - Will calculate total ITM DOWN PAYMENT CASH group amount</li> <li>• \$TOTAL_ITM_GRP_IPF - Will calculate total ITM PREPAID FEE group amount</li> </ul>
\$TOTAL_ITM_ (ITM*)	<p>This is a dynamic itemization value calculation based on type variable.</p> <p>For example:</p> <ul style="list-style-type: none"> <li>• \$TOTAL_ITM_IDC_1 - Will calculate total ITM DOWN PAYMENT amount</li> <li>• \$TOTAL_ITM_IUN_4 - Will calculate total ITM CASH DOWN amount</li> </ul>

Both the parameters (formula and target) supports the following data types:

- Number / Integer (both are considered as floating numbers)
- Date
- Character

While defining specific parameter, system auto-filters the variable list based on the supported data type.

To enable any target parameters, ensure that there is at the least one enabled formula parameter and selection criteria defined. Also while defining target parameters, ensure that

there is no circular dependency where two or more parameters are either directly or indirectly dependent on each other. For example, If formula parameter A is defined as ACC\_FIELD1 + formula parameter B, and formula parameter B is defined as ACC\_FIELD2 + formula parameter A. In such a case, system displays an error indicating 'CIRCULAR DEPENDENCY DETECTED FOR PARAMETER:<<PARAMETER NAME>>'.

The user defined parameters calculation can be triggered in any of the following ways:

**Table 2-16 User Defined Parameters**

Option	Trigger	Action Type
User Interface	Clicking <b>Calculate Parameters</b> button in Account Details screen, Account Information section.  Target parameters of Frequency = None and Daily are computed and updated for an account and all collaterals associated to the account.	System calculates and updates target parameter through background job process which is created to update UDP values asynchronously.  Error/Validation messages received during calculation of user defined fields are displayed under Background job and not displayed in UI.
	Clicking <b>Calculate Parameters</b> button in Collateral Management, Collateral Details screen.  Target parameters of Frequency = None and Daily are computed and updated only for the selected collateral.	
Batch Job for Account Target Parameters update	On executing batch jobs - USER DEFINED ROOT BATCH JOB and USER DEFINED ACCOUNT TARGET PARAMETER CALCULATOR in SET-CUP batch job-set	On execution, this batch job calculates all target parameters defined for Account that satisfy the selection criteria.  Root batch job is parent batch job and is executed first to pick all accounts eligible for calculation for the child batch job i.e. Account Target Parameter Calculator. This helps to enhance system performance.  The batch job periodically calculates for target parameters of frequency other than None and updates the Next Run Date for parameter as per frequency defined.  Note that, batch job picks-up accounts only once per day and refers to company specific GL date.  Accounts in OFSLL are associated to specific company - branch combination. Hence this batch set and job should be configured at every company branch level.

Table 2-16 (Cont.) User Defined Parameters

Option	Trigger	Action Type
Batch Job for Collateral Target Parameters update	On executing batch jobs - USER DEFINED ROOT BATCH JOB and USER DEFINED COLLATERAL TARGET PARAMETER CALCULATOR in SET-CUP1 batch job-set	<p>On execution, this batch job calculates all target parameters defined for collateral entity that satisfy the selection criteria.</p> <p>Root batch job is parent batch job and is executed first to pick all accounts eligible for calculation for the child batch job i.e. Collateral Target Parameter Calculator. This helps to enhance system performance.</p> <p>The batch job periodically calculates for target parameters of frequency other than None and updates the Next Run Date for parameter as per frequency defined.</p> <p>Note that, batch job picks-up accounts only once per day and refers to company = ALL GL date.</p> <p>Collateral in OFSLL are not associated to any specific company hence this batch set and job should be configured for company = All.</p>
Event	<p>Configured Event Action Type -</p> <ol style="list-style-type: none"> <li>1. UPDATE ACCOUNT USER DEFINED PARAMETERS</li> <li>2. UPDATE COLLATERAL USER DEFINED PARAMETERS</li> </ol> <p>For more details on defining event action type, refer to <a href="#">Events (New Framework)</a> section.</p>	<p>Update Account/Collateral Target Parameters of frequency = None and Daily when specific type of changes occurs in OFSLL for Account/Collateral event entity.</p>
Restful Web Service	Calculate Parameter Update Service (available in common Swagger module)	<p>When third-party system post a request to update specific or all Target Parameters for a single Account, single Collateral or all collateral associated to an account based on <b>Entity Type</b> parameter updated in web service request.</p> <p>This parameter accepts only ACC for accounts and ASE for Collateral target parameters. Target parameter of frequency None and Daily are updated through this web service.</p> <p>Refer swagger documentation for more details.</p>

During executing, system looks into the enabled user defined parameters, and considering only those accounts matching the selection criteria, values are computed into the user defined fields.

During computation of target parameters, system displays an error if there are more than one definition defined for a target parameter.

### To set up the User Defined Parameters

1. Click **Setup > Setup > Administration > System > User Defined Parameters**.

**Figure 2-9 User Defined Parameters Setup**

The screenshot displays the 'User Defined Parameters' setup window. At the top, there's a header with the Oracle logo and 'Financial Services Lending and Leasing'. Below this, a toolbar contains icons for 'Add', 'Edit', 'View', and 'Audit'. The main area is divided into two sections: 'Parameters' and 'Formula Definition'.

The 'Parameters' section contains a table with the following columns: Module, Entity Type, Parameter Type, Parameter Name, Description, Data type, Priority, Frequency, Run Date Next, and Enabled. The table lists several parameters, including 'ASE\_UDF2\_CHAR', 'ACC\_UDF2\_CHAR', 'ASE\_UDF1\_DATE', 'ASE\_UDF1\_NUM', 'ACC\_UDF2\_NUM', 'ACC\_UDF1\_DATE', 'ACC\_UDF8\_NUM', 'ACC\_UDF7\_NUM', 'ACC\_UDF5\_NUM', and 'ACC\_UDF4\_NUM'. The 'Enabled' column shows 'Y' for most parameters.

Below the table, there's a 'Parameters' section with fields for 'Module' (CUSTOMER SERVICE), 'Entity Type' (COLLATERALS), and 'Parameter type' (TARGET PARAMETER). It also has fields for 'Parameter Name' (ADDITIONAL PLACEHOLDER STRING 2), 'Description' (ADDITIONAL PLACEHOLDER STRING 2), and 'Data type' (CHARACTER). There are checkboxes for 'Priority' (0), 'Frequency' (NONE), and 'Enabled' (checked). A 'Formula Expression' field is also present.

The 'Formula Definition' section at the bottom has a 'Formula Definition' tab and a 'Selection Criteria' tab. It includes a toolbar with 'Add', 'Edit', 'View', and 'Audit' icons. Below the tabs, there's a 'Seq' field and a 'Variable' field.

2. In the **Parameters** section, do one of the following:
  - Use the **Create Copy** feature to quickly create new parameter with the existing parameter details. For Target Parameters, select required record and click **Create Copy**. For Formula Parameters, select required record, specify **New Parameter** name and click **Create Copy**. The new parameter created this way will be in disabled state by default.
  - Add/Edit user defined parameter by performing any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 2-17 Parameters section**

Field	Do this
Module	Select the module from the drop-down list. The list is displayed based on the modules that support User Defined Parameters calculation. Currently only Customer Serving (accounts) is supported.

Table 2-17 (Cont.) Parameters section

Field	Do this
Entity Type	<p>Select the required entity for which calculation is to be defined from the drop-down list. The list is populated based on entity type maintained in CUP_ENTITY_CD lookup code. Currently, system supports ACCOUNTS and COLLATERALS entity types.</p> <p>Note that, entity can be selected only while creating User Defined Parameter and the same cannot be modified in Edit mode.</p>
Parameter Type	Select the type of parameter to be defined as either Target Parameter or Formula Parameter from the drop-down list.
Parameter Name	<p>For Target Parameter, system displays the list of custom fields available in user defined table for selection. Select the required Parameter from the drop-down list. By default the first field in the user defined table is selected.</p> <p>For Formula Parameter, this is a text field to record the new parameter name. Specify the name of the formula parameter.</p>
Description	<p>For Target Parameter, the description is auto-populated from user defined table and is Read-Only.</p> <p>For Formula Parameter, specify the description of the formula parameter.</p>
Data Type	<p>For Target Parameter, the data type associated for the parameter is auto-populated from user defined table and is Read-Only.</p> <p>For Formula Parameter, select the data type as one of the following from the drop-down list - INTEGER, DATE, NUMBER, or CHARACTER</p>
Priority	<p>Specify the order in which system should evaluate the parameter definitions while executing the batch job or on clicking <b>Calculate Parameters</b> button.</p> <p>For example, if a formula parameter A has dependency on parameter B, then B has to be calculated first in the order and priority is set as <b>0</b>.</p>

Table 2-17 (Cont.) Parameters section

Field	Do this
Frequency	<p>Select the required frequency at which the target parameters are to be calculated from the drop-down list.</p> <p>Frequency field is applicable only for Target Parameters and the list of frequency supported is populated based on values maintained in CUP_FREQUENCY_TYPE_CD lookup code.</p> <p>Note the following:</p> <ul style="list-style-type: none"> <li>– Frequency can be defined only in Edit mode.</li> <li>– Frequency is not applicable for Formula Parameters.</li> <li>– Frequency <b>None</b> can be selected for target parameters that are required to be calculated on adhoc basis.</li> </ul>
Run Date Next	<p>View the date on which the Target parameter is calculated. The Run Date Next is auto calculated based on frequency defined.</p> <p>This field is applicable only for Target parameters and for frequency other than <b>None</b>.</p> <p>Note the following:</p> <ul style="list-style-type: none"> <li>– For multi-company implementation, it is recommended to add same User Defined Parameter definition multiple times for each company. This in-turn updates <b>Run Date Next</b> for each company and supports updating values at different zone based on batch job setup.</li> <li>– Currently the <b>Run Date Next</b> is updated even if not all the records are computed based on selection criteria. Since this impacts to restart failed records, the same shall be addressed in subsequent patch releases.</li> </ul>
Enabled	Check this box to enable the parameter definition.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

This section consists of the following topics:

- [Formula Definition](#)
- [Selection Criteria](#)

## 2.6.1 Formula Definition

The **Formula Definition** section allows you to define a mathematical expression of the formula to evaluate the parameter definition. The expression may consist of one or more sequenced entries. All arithmetic rules apply to the formula definition. If errors exist in the formula definition, the system displays an error message in this section when you choose Show Expression.

1. In the **Formula Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 2-18 Formula Definition**

Field	Do this
Seq	Specify the sequence number (the order in which the formula definition variable will be assembled and evaluated).
(	Specify a left bracket, if you need to group part of your formula definition.
Variable	<p>Select the variable from the drop-down list which consists of a validated list derived from user defined table type as indicated below:</p> <ul style="list-style-type: none"> <li>• For Number, system displays only numeric fields</li> <li>• For Date, system displays numeric + date fields</li> <li>• For String, system displays numeric + character fields</li> </ul> <p>Parameters for <b>Account</b> entity type in Customer Service is derived from:            USER DEFINED: ACCOUNTS FORMULA PARAMETERS            USER DEFINED: COMMON FORMULA PARAMETERS            USER DEFINED: COMMON CUSTOMER SERVICE FORMULA PARAMETERS</p> <p>Parameters for <b>Collateral</b> entity type in Customer Service is derived from:            USER DEFINED: COLLATERAL FORMULA PARAMETERS            USER DEFINED: COMMON FORMULA PARAMETERS            USER DEFINED: COMMON CUSTOMER SERVICE FORMULA PARAMETERS</p>
Constant Value	<p>Specify the constant value (optional).</p> <ul style="list-style-type: none"> <li>• For Number, system supports only numeric constants</li> <li>• For Date, system supports only numeric constants</li> <li>• For String, system supports both numeric and character constants</li> </ul> <p><b>Note:</b> System displays an error indicating 'VARIABLE OR CONSTANT VALUE IS REQUIRED' if both Variable and Constant Value or None is provided.</p>

**Table 2-18 (Cont.) Formula Definition**

Field	Do this
Mathematical Operator	<p>Select the math operator to be used on the adjacent formula definition rows, from the drop-down list. The list is derived and displayed based on data type / variable as indicated below:</p> <ul style="list-style-type: none"> <li>For Number, system allows all numeric operators (+, -, x, and %).</li> <li>For Date, system supports (+ and -) operators.</li> <li>For String, system supports concatenation (i.e. +) operator.</li> </ul>
<div>  <b>Note</b>            In the Parameter's section if the Data Type is selected as 'Character', then the mathematical operator can be selected as either Blank or Plus. System does not allow to select other mathematical operators and displays an error 'Operation Minus, Multiplication and Division not allowed for Parameter of CHARACTER data type'.         </div>	
)	Specify a right bracket, if you are grouping part of your formula definition.
Enabled	Check this box to enable the formula and indicate that it is included when building a parameter definition.

2. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
3. In the Parameters section, click **Show Expression**. The mathematical expression appears in the Formula Expression section (in sequential order) in the Expression field.

## 2.6.2 Selection Criteria

The sub tab is enabled only for Target Parameters and facilitates to define the selection criteria indicating the type of accounts to be picked for computation. The parameters are derived from user defined table - USER DEFINED: ACCOUNT CRITERIA TYPE CODE and USER DEFINED: COLLATERAL TYPE CODE as per Account and Collateral Entity type.

1. In the Selection Criteria section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

### Note

Although system allows to define customized selection criteria, the execution of additional selection criteria requires additional processing at server level and can have significant performance impact delaying the EOD processing/web services. Hence it is recommended to have careful consideration while defining the additional selection criteria (like using user-defined tables and columns) and/or get approval from your database administrator before using any selection criteria.

A brief description of the fields is given below:

**Table 2-19 Selection Criteria**

Field	Do this
Seq	Specify sequence numbers.
(	Specify left bracket.
Parameter	Select the parameter from the drop-down list. The list is populated based on the values maintained in user defined table - Customer Service: USER DEFINED: CUSTOMER SERVICE CRITERIA PARAMETERS.
Comparison Operator	Select comparison operator from the drop-down list.
Criteria Value	Specify criteria value.
)	Specify right bracket.
Logical Expression	Select logical operator from the drop-down list.
Enabled	Check this box to enable the selection criteria.

2. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
3. Click **Check Criteria** for system to validate the query and display the results.

If the formula expression is mathematically incorrect when parameters are calculated, system displays error indicating 'INVALID FORMULA EXPRESSION: <<FORMULA PARMETER>>'.

## 2.7 Transaction Codes

The system uses transaction codes to define the actions and tasks it can perform; for example, activating an account, changing a due date, applying a late fee, and charging off an account.

The system uses transaction codes to define the actions and tasks it can perform; for example, defining itemization, menu items, setting up lock and unlock, and generating reports.

The Transaction Codes Setup screen catalogs and defines these core system actions.

The system organizes transaction codes in **Super Groups**. All transaction codes within a particular super group are processed in a similar manner. The transaction super groups in the system are as follows:

**Table 2-20 Transaction Super Group**

Super Group Type	Description
ACCOUNT CONDITION TXN	These transaction codes control a user's ability to open and close account conditions.
ACCOUNT MONETARY TXN	These transaction codes affect the monetary value of accounts in the system; for example, activating accrual of interest, the assessment of fees, and closing the account.
ACCOUNT NON MONETARY TXN	These transaction codes do not have a direct effect on the monetary value of the account, but are used in maintaining account information. This includes changing a customer's driving license, or adding information for automated clearing house (ACH).

Table 2-20 (Cont.) Transaction Super Group

Super Group Type	Description
AMORTIZATION TXN	These transaction codes affect the amortized balances of the accounts in the system.
CORRESPONDENCES	These transaction codes relate to the system correspondences.
ESCROW ANALYSIS AND DISBURSEMENTS	These transaction codes allow for reviewing and approving escrow analysis, stopping an escrow override, and posting escrow disbursement.
ESCROW MONETARY TRANSACTIONS	These transaction codes affect the monetary value of escrow accounts in the system; for example, disbursing escrow to a customer and insurance, and receiving payment.
ESCROW NON MONETARY TRANSACTIONS	These transaction codes do not have a direct effect on the monetary value of an escrow account, but are used in maintaining account information, such as changing insurance maturity date and adding new escrow tax details.
FEE ASSESSMENTS	These transaction codes determine if fees such as nonsufficient funds fees or membership fees are to be applied.
FUNDING TXN	These transaction codes affect the funding of applications and accounts within the system.
ITEMIZATION TXN	These transaction codes affect the itemization of applications and accounts within the system.
MENU TXN	These transaction codes affect the menus within the system.
PRODUCER MONETARY TXN	These transaction codes relate to the monetary transactions that apply to the system producers (or <b>dealers</b> ).
REPORTS	These transaction codes are related to generating the system reports.
SECURITIZATION TXN	These transaction codes affect the pools of securitized loanslease or accounts within a pool of securitized loanslease.
SETUP LOCK/UNLOCK	These transaction codes limit a user's ability to change the existing setup data, even if they are allowed access to the form, by restricting access to the Lock/ Unlock Record icon on the system tool bar.
ACCOUNT CONDITION TXN	These transaction codes control a user's ability to open and close account conditions.
CORRESPONDENCES	These transaction codes relate to the system correspondences.
MENU TXN	These transaction codes affect the menus within the system.
REPORTS	These transaction codes are related to generating the system reports.
SECURITIZATION TXN	These transaction codes affect the pools of securitized loanslease or accounts within a pool of securitized loanslease.

Table 2-20 (Cont.) Transaction Super Group

Super Group Type	Description
SETUP LOCK/UNLOCK	These transaction codes limit a user's ability to change the existing setup data, even if they are allowed access to the form, by restricting access to the Lock/ Unlock Record icon on the system tool bar.

Three sub screens, Parameters, Access Grid, and Products, record any additional information required to perform a transaction, the user types that can perform the transaction, and the product type to which the transaction codes apply.

### Note

The Software recommends that you restrict the access to the seed data once you are in production.

### To set up the Transaction Codes

1. Click **Setup > Setup > Administration > System > Transaction Codes**. The system displays the Transaction Codes screen.
2. In **Transaction Super Group** section, you can view the following information.

Figure 2-10 Transaction Super Group

A brief description of the fields is given below:

**Table 2-21 Transaction Super Group Fields**

Field	Do this
Super Group	Select the Super Group you want to work with in the Transaction Codes screen.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Transaction Codes** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 2-11 Transaction Codes**

A brief description of the fields is given below:

**Table 2-22 Transaction Codes Fields**

Field	Do this
Txn Code	Specify the transaction code (required).
Description	Specify the description for the transaction.
Group	Select the transaction group (the group within the Transaction Super Group that the transaction code belongs to) from the drop-down list.
Action	Select the action type code for the transaction (what action will take place when the transaction occurs) from the drop-down list.
Monetary	Check this box to maintain the transaction as a monetary transaction. If unchecked, then the transaction is nonmonetary.

Table 2-22 (Cont.) Transaction Codes Fields

Field	Do this
System Defined Yes/ No	Select <b>Yes</b> , if you wish to maintain the transaction code as system defined and <b>No</b> , if you do not want to maintain it as system defined. System defined entries cannot be modified. If entry is not system defined, then it can be modified.
Enabled	Check this box to enable the transaction.
Txn/Bal Type	Select the transaction / balance type affected by the Transaction from the drop-down list.
Statement Txn Type	Select the statement transaction type (how the transaction should appear on the customer statement) from the drop-down list.
Batch	Check this box to perform the transaction in a batch process.
Manual	Check this box, if the transaction is a manual transaction. If you define a transaction as manual, the system recommends that the transaction that reverses it also be defined as manual.
Stmt Print	Check this box to print the transaction on customer statements.
GL	Check this box, if the transaction is a general ledger transaction.
Event	On selecting this check box, the particular Monetary/Non-Monetary transaction is considered for triggering of respective Monetary and Nonmonetary transaction posting Event type. The particular Monetary/Non-Monetary transaction is available while defining Event Actions.  For more information, refer to <a href="#">Events (New Framework)</a> section.
Recalc Master Txns	Check this box for system to recalculate and repost consolidated fee at Master Account level. This is done automatically by identifying those monetary transactions which should trigger recalculation of Late Charge, Cycle Based Late Fee and Cycle Based Collection Late Fee at Master Account level when backdated transaction is posted on any Associated Account that is marked for fee consolidation.  For more information, refer to <b>Cycle Based Fees</b> and <b>Fee Consolidation</b> sections in <b>Contract</b> setup screen.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

This section consists of the following topic:

- [Transaction Codes sub screens](#)

## 2.7.1 Transaction Codes sub screens

### Note

Please contact your System Administrator / Implementation Manager before making any changes in these sub screens.

The Transaction Codes screen contains three sub screens:

- [Parameters](#)
- [Access Grid](#)
- [Products](#)

### 2.7.1.1 Parameters

Here, you can define the parameter information for the associated transaction. The Parameters apply exclusively to these super groups:

- ITEMIZATION TXN
- ACCOUNT MONETARY TXN
- ACCOUNT NON MONETARY TXN
- SECURITIZATION TXN
- ESCROW MONETARY TRANSACTIONS
- ESCROW NON MONETARY TRANSACTIONS
- ESCROW ANALYSIS AND DISBURSEMENTS
- AMORTIZATION TXN
- PRODUCER MONETARY TXN
- FUNDING TXN
- ACCOUNT CONDITION TXN
- CORRESPONDENCES
- FEE ASSESSMENTS

(For manual transactions, these are the parameters that appear when you click **Load Parameters** on the Customer Service screen's Maintenance screen.)

### Note

Treat the Transaction Parameters sub screen as containing view-only information. This is very sensitive data and you should not change it without consulting Oracle Financial Services Lending and Leasing.

#### To set up the Parameters

1. Click **Setup > Setup > Administration > System > Transaction Codes > Parameters**.

2. In the **Transaction Parameters** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 2-23 Transaction Parameters**

Field	Do this
Parameter Code	Select the parameter code associated with the transaction code, from the drop-down list.
Default	Specify the default value for the transaction parameter (value to initially populate, or used if no value is supplied).
Sort	Specify the sort order for the transaction parameter.
Displayed? Yes/No	Select <b>Yes</b> to display the parameter and <b>No</b> if you do not want to display in current use.
Required? Yes/No	Select <b>Yes</b> if the parameter is required and <b>No</b> if you do not require the parameter. (You must select Required as empty values are not allowed.)

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.7.1.2 Access Grid

The Access Grid sub screen allows you to control access to each transaction according to user responsibility, account status, and account condition. It allows the administrator to control when these transactions may be conducted. Normally, you would create or modify the access based on either the user responsibility or account condition. Account status access is left unchanged.

### To set up the Access Grid sub screen

1. Click **Setup > Setup > Administration > System > Transaction Codes > Access Grid**.
2. In the **Transaction User Access Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 2-24 Transaction User Access Definition**

Field	Do this
Access Type	Select the access grid function type (ACCOUNT CONDITION AND ACCOUNT STATUS) that is being used to control the creation of the associated transaction, from the drop-down list.
Access Value	Select the access function grid value from the drop-down list (based on a lookup associated with the Access Type. Multiple entries for each access type may be created as long as each has a different access value).
Allowed? Yes/No	Select <b>Yes</b> if the access is allowed and <b>No</b> if the access is not allowed (indicates whether the current Access Type / Access Value may create the associated transaction).

**Table 2-24 (Cont.) Transaction User Access Definition**

Field	Do this
System Defined Yes/ No	Select <b>Yes</b> , if you wish to maintain access type as system defined and <b>No</b> , if you do not want to maintain it as system defined. System defined entries cannot be modified. If entry is not system defined, then it can be modified.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 2.7.1.3 Products

The Products sub screen allows you to define the products to which the transaction codes apply. It allows the administrator to control if the associated transaction code will be available for use for specific product types and or funding types.

Normally, an Access Value of ALL is defined for one or more Access Types with a given Allowed value. Additional Access Values are then defined for the same Access Types with the opposite Allowed value. This controls access to the associated transaction.

#### To set up the Products sub screen

1. Click **Setup > Setup > Administration > System > Transaction Codes > Products**.
2. In the **Transaction Product Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 2-25 Transaction Product Definition**

Field	Do this
Product Type	Select the product type associated with the transaction code from the drop-down list.
Funding Type	Select the funding type associated with the transaction code from the drop-down list.
Allowed? Yes/No	Select <b>Yes</b> if the transaction is allowed and <b>No</b> if the transaction is not allowed (indicates whether the current Access Type / Access Value may create the associated transaction).

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.8 Data Files

The Data Files Setup screen organizes information pertaining to the various input/output data files that the system can generate. The system uses the Data Files Setup screen to outline the file layouts of each data file produced/received within the system, including the length and data type of each column name.

These files are typically produced during the nightly process.

One major advantage for the system-defined data files is the format mask of each column name within each data file. A format mask is like a stencil that forces data input to be of the same format before accepting the data.

You can change the order in which the fields are displayed in the file.

**Note**

Any addition or removal of a field or change in the data type length requires the Software involvement.

Data Files screen consists of the following two tabs:

- [Output tab](#)
- [Input tab](#)

## 2.8.1 Output tab

The "Output tab" in the **Data Files screen** allows you to define the structure of output data file through the following sections:

- [Data File Definitions](#)
- [Record Definitions](#)
- [Column Definitions](#)

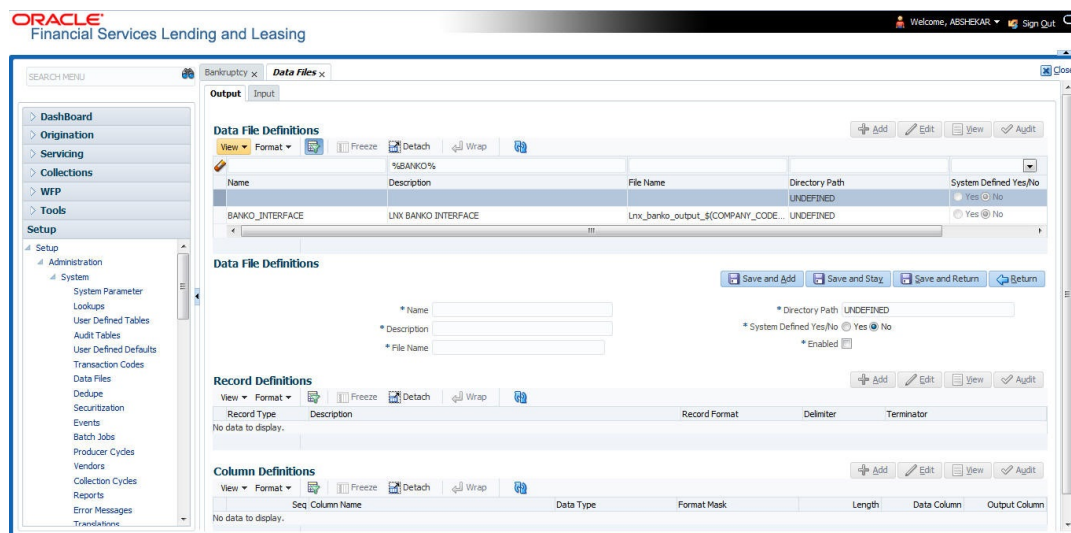

### 2.8.1.1 Data File Definitions

The Data File Definitions section defines specific data files. Each is associated with a specific Output Data Definition (ODD) batch job that gathers the data that the file will contain. While new data file definitions may be created they will have no use unless a batch job is also created to populate the data.

#### To set up Data File Definitions

1. Click **Setup > Setup > Administration > System > Data Files > Output tab**.
2. In the **Data Files Definitions** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 2-12 Data Files Definitions**

A brief description of the fields is given below:

**Table 2-26 Data Files Definitions**

Field	Do this
Name	Specify data file type (name of data file definition).
Description	Specify data file description.
File Name	Specify data file name. Prefix used for files generated for this Data File. This is the only field on the Data File Definitions screen that can or should be modified by your Administrator. The generated file name will be in the form of <FILE NAME>_<COMPANY ID>_<BRANCH ID>_<MMDDYYYY>_<PROCESS ID>.DAT. The inclusion of _<COMPANY ID> and _<BRANCH ID> depends entirely on the associated batch process.
Directory Path	Specify the directory path.
System Defined Yes/No	Select <b>Yes</b> , if you wish to maintain the data file definition as system defined and <b>No</b> , if you do not want to maintain it as system defined. System defined entries cannot be modified. If the entry is not system defined, then it can be modified.
Enabled	Check this box to enable the data file definition.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.8.1.2 Record Definitions

Each data file definition is made up of one or more record definitions. These define organization of the data. The associated batch file determines how these records are used. The order in which the data is populated determines the order in which those records will appear in the output file. This is generally related to the order the records appear in the Data File Definition section.

1. In the **Record Definitions** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

**Table 2-27 Record Definitions**

Field	Do this
Record Type	Specify the type of record being defined.
Description	Specify record description.
Record Format	Select the format of output data (FIXED, VARIABLE) from the dropdown list.
Delimiter	Specify the delimiter (column separator used with VARIABLE format).
Terminator	Select the record terminator code (how the end of each record is indicated within the file -- CARRIAGE RETURN, LINE FEED, or CARRIAGE RETURN AND LINE FEED) from the drop-down list.

2. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 2.8.1.3 Column Definitions

Each record definition is made up of one or more column definitions. These define the output of the data. Much of this data is informational; it indicates what data is being provided by the associated batch job. Unless otherwise noted, the data should not be changed without changing the associated batch job.

1. In the **Column Definitions** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 2-28 Column Definitions**

Field	Do this
Seq	Specify the order in which the output data dump will process the column information.
Column Name	Specify name/description of the column (informational only).
Data Type	Specify the data type. This describes the type of data the column is expected to contain (CHARACTER, DATE, or NUMBER). This effects how the ODD process handles the data, and should not be changed.
Format Mask	Select the format mask for the column from the drop-down list. For DATE or NUMBER columns, this field defines the output format of the data. For example; Date fields may be entered using the MM/DD/ YYYY format, Number fields may be entered as decimal numbers with varying degrees of precision. Other formats for each data type are available.
Length	Specify the column length (the maximum number of characters of the output data to be included in the output file). Each output data details column may contain up to 240 characters of data. If the output data details column contains more data than the length value the data will be truncated. For VARIABLE records the length should be set to "-1" or a Delimited file will be created with FIXED LENGTH columns.
Data Column	Specify the data column sequence. This is the column that will be used to select the data that is being output. This should not be changed.
Output Column	Specify the output column sequence. This is the column that will appear in Output File. The Output Data Dump process allows for the output of 250 columns of data per record. No output column should be repeated in the setup for a record.

2. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.8.2 Input tab

Oracle Financial Services Lending and Leasing facilitates processing of a input data file received from external interface into the system through an automated batch job (IDDPRC\_BJ\_000\_01) triggered on regular intervals.

The "Input tab" in the **Data Files screen** allows you to define the input data file through the following sections:

- [Input Data File Definitions](#)
- [Column Definitions](#)
- [Configurable Bulk Upload](#)

### 2.8.2.1 Input Data File Definitions

In the Input Data File Definitions section, you can define and maintain the structure of input data file to populate data from external system.

Oracle Financial Services Lending and Leasing also supports bulk upload of data into the system through input file processing for a set of process listed in Setup > Administration > System > Lookups > Lookup Code section.

Lookup Type: INCOMING\_FILE\_TYPE\_CD

Description: INCOMING LOG FILE TYPE CODE

In addition, there is also an option for configurable bulk upload of data in which the input file delimiter is configurable to required value. For more information, refer to [Configurable Bulk Upload](#) section.

#### To set up Input Data File Definitions

1. Click **Setup > Setup > Administration > System > Data Files > Input tab**.
2. In the Input Data Files Definitions section, you can make use of the copy option to copy the Input file definition and corresponding column definitions. To do so, click on the required record in the list, select the target company for which records needs to be created from **Company** drop-down list and click **Create Copy**. The following records are copied:
  - ITU\_TXN\_UPLOAD
  - ASSET\_ASE\_UPLOAD
  - ASSET\_ATA\_UPLOAD
  - ASSET\_ATR\_UPLOAD
  - ASSET\_AVL\_UPLOAD
  - CURE\_LTR
  - BKRP\_NEW
  - BKRP\_UPDATERecords for above files are created with **External Table Name** as **External Table Name\_Company code**.
3. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 2-13 Input Data File Definitions

The screenshot shows the 'Data Files' window in Oracle Financial Services Lending and Leasing. It has two tabs: 'Output' and 'Input'. The 'Input' tab is active, showing 'Input Data File Definitions'. Below this, there are two sections: 'Input Data File Definitions' and 'Column Definitions'. Both sections have a table with columns: Name, File Name, Description, Directory Path, Delimiter, Record Format, External Table Name, Company, and Enabled. The 'Input Data File Definitions' table lists various input files like APLACCOUNTS, APLACCOUNT\_ACH\_DETAILS, etc. The 'Column Definitions' table lists columns like ACC\_AAG\_END\_DT, ACC\_AAG\_IND, etc.

Name	File Name	Description	Directory Path	Delimiter	Record Format	External Table Name	Company	Enabled
APLACCOUNTS	aplasec_111.dat	ACCOUNTS RECORD	API	,	VARIABLE	APL_ACC_LOAN_E...	ALL	Y
APLACCOUNT_ACH_DETAILS	aplach_111.dat	ACCOUNT ACH RECORD	API	,	VARIABLE	APL_ACH_LOAN_E...	ALL	Y
APLACCOUNT_BALANCES	aplabl_111.dat	ACCOUNT BALANCES REC...	API	,	VARIABLE	APL_ABL_LOAN_EXT	ALL	Y
APLACCOUNT_BALANCES_AMORTIZE	aplabl_111.dat	ACCOUNT BALANCES AMO...	API	,	VARIABLE	APL_ABL_LOAN_E...	ALL	Y
APLACCOUNT_BKRP_HISTORY	aplabh_111.dat	ACCOUNT BANKRUPTCY H...	API	,	VARIABLE	APL_ABL_LOAN_E...	ALL	Y
APLACCOUNT_CONDITIONS	aplaco_111.dat	ACCOUNT CONDITIONS R...	API	,	VARIABLE	APL_ACO_LOAN_E...	ALL	Y
APLACCOUNT_PMT_CHG_SCH	aplart_111.dat	ACCOUNT PAYMENT CHAN...	API	,	VARIABLE	APL_ART_LOAN_E...	ALL	Y
APLACCOUNT_RATE_SCHEDULE	aplrqt_111.dat	ACCOUNT RATE SCHEDUL...	API	,	VARIABLE	APL_ACR_LOAN_E...	ALL	Y
APLACCOUNT_REPAY_SCHEDULE	aplrqt_111.dat	ACCOUNT REPAYMENT SC...	API	,	VARIABLE	APL_ACR_LOAN_EXT	ALL	Y
APLASSETS	aplasec_111.dat	ASSETS RECORD	API	,	VARIABLE	APL_ASE_LOAN_EXT	ALL	Y

Seq	Column Name	Column Description	Data Type	Format Mask	Length	Sort	Enabled
194	ACC_AAG_END_DT	ACCOUNT AAG END DATE	DATE	MM/DD/YYYY	8	194	Y
195	ACC_AAG_IND	ACCOUNT AAG INDICATOR	CHARACTER	NOT APPLIC...	30	195	Y
193	ACC_AAG_START_DT	ACCOUNT AAG START DATE	DATE	MM/DD/YYYY	8	193	Y
8	ACC_ACCRUAL_DT_LAST	ACCOUNT ACCRUAL DATE LAST	DATE	MM/DD/YYYY	8	8	Y
210	ACC_ACCRUAL_DT_START	ACCOUNT ACCRUAL DATE START	DATE	MM/DD/YYYY	8	210	Y
9	ACC_ACCRUAL_STOP_IND	ACCOUNT ACCRUAL STOP INDICATOR	CHARACTER	NOT APPLIC...	30	9	Y
24	ACC_ACH_ACCOUNT_NBR_CUR...	ACH ACCOUNT NUMBER CURRENT	CHARACTER	NOT APPLIC...	30	24	Y
23	ACC_ACH_ACCOUNT_TYPE...	ACH ACCOUNT TYPE CODE INDICATOR	CHARACTER	NOT APPLIC...	30	23	Y
21	ACC_ACH_BANK_NAME_CUR	ACCOUNT ACH BANK NAME CURRENT	CHARACTER	NOT APPLIC...	30	21	Y
22	ACC_ACH_BANK_ROUTING...	ACCOUNT ACH BANK ROUTING NUMBER CURRENT	CHARACTER	NOT APPLIC...	30	22	Y

A brief description of the fields is given below:

Table 2-29 Input Data File Definitions

Field	Do this
Name	Specify a unique name for the input data file.
File Name	Specify the data file name with the correct prefix.
Description	Specify data file description.
Directory Path	Specify the directory path configured within OFSLL Database server to process the input data file.
Delimiter	Specify the delimiter used to separate column data. (Ex: Comma).
Record Format	System defaults the record format as <b>VARIABLE</b> .
External Table Name	View the name of external table from which input data is populated.
Company	View the company name selected in external table.
Enabled	Check this box to enable the input data file definition.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.8.2.2 Column Definitions

Each input data file definition is made up of one or more column definitions. These define the structure of data to be loaded from external system.

1. In the **Column Definitions** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 2-30 Column Definitions**

Field	Do this
Seq	Specify the order in which the input data dump will process the column information.
Column Name	Specify name of the column.
Column Description	Specify description of the column.
Data Type	Select the data type from the drop-down list. The selected data type describes the type of data the column is expected to contain such as INTEGER/DATE/NUMBER/CHARACTER. This effects how the input data file processing handles the data, and should not be changed.
Format Mask	Select the format mask for the column from the drop-down list. The list displays the format depending on the Data Type selected.  For example; Date fields may be entered using the MM/DD/YYYY format, Number fields may be entered as decimal numbers with varying degrees of precision. Other formats for each data type are available.
Length	Specify the column length (the maximum number of characters of the data to be included in the input file)  Each input data details column may contain up to 240 characters of data. If the output data details column contains more data than the length value the data will be truncated. For VARIABLE records the length should be set to "-1" or a Delimited file will be created with FIXED LENGTH columns.
Sort	Specify the order in which the column definitions are to be sorted for display in the external interface screen (Customer Service > External Interfaces). There can be a maximum of 61 column definitions.
Enabled	Default selected. If not, you can check this box to enable the column definition.

2. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 2.8.2.3 Configurable Bulk Upload

In the process of configurable bulk upload of data, the input file delimiter is configurable to required value and data is processed based on the column definitions defined. This option is supported for Transactions and Collateral uploads to create new transactions and asset records in bulk.

For bulk upload of data, the input CSV (comma separated values) file is to be constructed in specific format as defined in Setup > Data Files > Input screen's **Input Data File Definitions** and **Column Definitions** sections.

For example, consider the following Column Definition details:

**Table 2-31 Column Definition Details**

Seq	Column Name	Column Description	Data Type	Length	Sort
1	ASE_OPERATI ON_IND	OPERATION IND	CHARACTER	30	1
2	ASE_NBR	ASSET NUMBER	NUMERIC	30	2
3	ASE_REGN_D T	REGISTRATIO N DATE	DATE	30	3

If the delimiter in Input Data file definitions is set as ',' (comma), then the csv can be constructed in same format and sequence of column definition as indicated below with each row as one record:

ASE\_OPERATION\_IND,ASE\_NBR,ASE\_REGN\_DT

NEW,20151200010476,12/08/2015

EXISTING,20111300010468,13/10/2011

NEW,20101400010812,14/11/2016

The CSV file is to be placed in the directory path/work area which is the base path defined in system parameter - `UIX_INCOMING_FILE_PATH` (INCOMING FILE PATH OF APP SERVER) by the system administrator and further appended by the configurable sub folder name such as ITU or ICC. For example: `/scratch/work_area/<domain name>/input/itu`.

Following are the Lookup code maintained in Setup > Administration > System > Lookups > Lookup Code section for respective process type:

**Table 2-32 Lookup Code**

Process Type	Lookup Code	Description
Transaction File Upload	ITU	TRANSACTION UPLOAD
Asset File Upload	ICC	INPUT CREATE COLLATERAL

- For Transaction File Upload, only one csv file can be created with multiple records and on processing, the data is populated into Servicing > Customer Service > Transaction > History > Transactions tab.
- For Asset File Upload, separate csv files are to be created to upload the data into Collateral Management screen's Collateral details, Valuation, Addons/Attributes, and Tracking sections respectively.

On executing the scheduled batch job in SET-IFP, IDDP RC\_BJ\_000\_02 (BULK INPUT DATA INSERTION), the data in csv file is processed and is displayed in Servicing Customer Service > External Interfaces tab. Such data does not need authorization and is directly uploaded on validating the sequence, position, and format.

The status of batch job can be viewed in DashBoard > System Monitor > Batch Jobs screen. The records which resulted in error are listed in the bad file.

## 2.9 Dedupe

Oracle Financial Services Lending and Leasing's dedupe feature can be configured to identify possible fraudulent information and misrepresentation of details on an application based on duplicate information between applications.

The system checks for duplicate information from existing applications, already rejected applications, and applications currently being processed.

The following application entry information is used as the dedupe criteria.

**Table 2-33 Dedupe**

Label	Description
First Name	First name of the applicant.
Last Name	Last name of the applicant.
Date of Birth	Date of Birth of the applicant.
Mother's Maiden Name	Applicant's mother name.
National ID	National ID of the applicant.
SSN	Applicant's SSN number.
Driving License	Applicants driving license number.
Passport Number	Passport number of the applicant.
Customer SSN	Customer's SSN number.
Customer First Name	First name of the customer.
Customer Last Name	Last name of the customer.
Customer Date of Birth	Date of Birth of the customer.
Customer Mother's Maiden Name	Customer's mother name.
Customer National ID	National ID of the customer.
Customer Driving License	Customer's driving license number.
Customer Passport Number	Passport number of the customer.

The Dedupe Setup screen enables you to define the dedupe criteria from the fields listed above. In the Criteria section of Dedupe screen, you can specify the logical operators AND or OR while defining the criterion.

If you choose AND as the logical operator between the criterion components, the system retrieves the records that are matching with the details in the criterion components.

For example, if you define the dedupe criteria as First Name and Passport Number, the system retrieves all records in which both the first name and passport number match the current application. On the contrary, if you choose OR as the logical operator, the system retrieves all the records in which either the First Name or Passport Number match the current application.

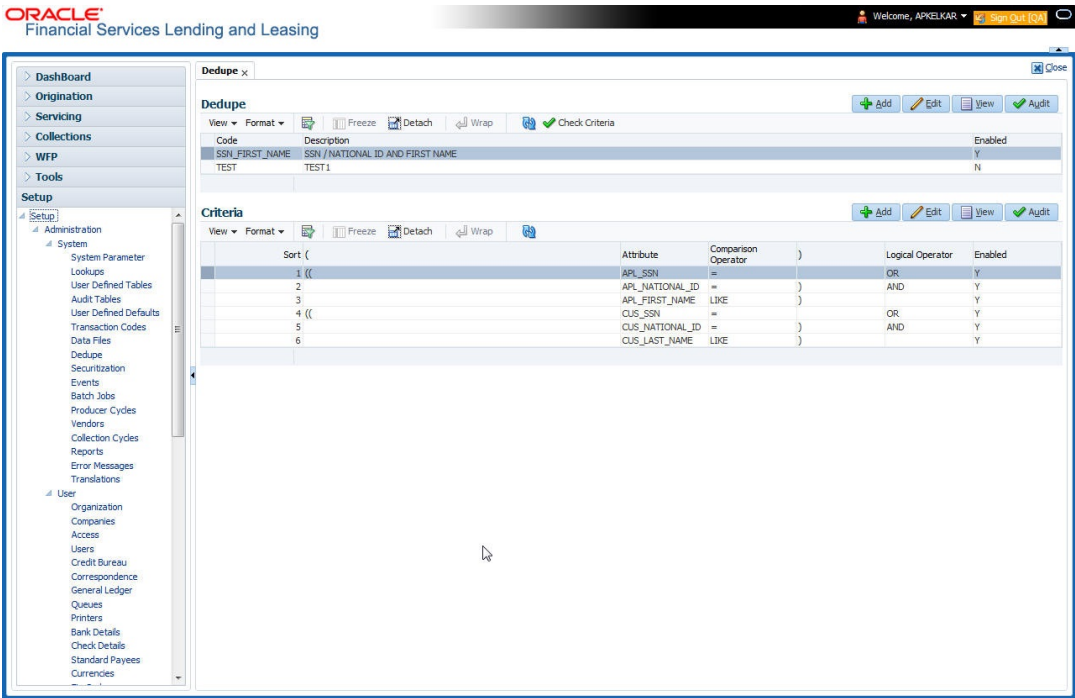

### To set up the Dedupe screen

1. On the Oracle Financial Services Lending and Leasing home screen, click Setup > Setup > Dedupe.
2. The system displays the Dedupe screen. The details are grouped into two:
  - Dedupe
  - Criteria

3. In the **Dedupe** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 2-14 Dedupe

A brief description of the fields is given below:

Table 2-34 Fields

Field	Do this
Code	Specify the code of the dedupe.
Description	Specify a description of the dedupe.
Enabled	Check this box to enable the dedupe.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
5. In the **Criteria** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Table 2-35 Criteria

Field	Do this
Sort	Specify the sequence numbers.
(	Specify left bracket.
Attribute	Select the attribute from the drop-down list.
Comparison Operator	Select comparison operator from the drop-down list.

**Table 2-35 (Cont.) Criteria**

Field	Do this
)	Specify right bracket.
Logical Operator	Select logical operator from the drop-down list.
Enable	Check this box to enable the criteria.

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

**Note**

A dedup code can have one or more criteria.

7. Click **Check Criteria** button on the Dedupe screen.
8. The system reviews the selection criteria for errors.
- If the Error Message box displays **NO ERROR**, click **OK**.
  - If the Error Message box displays errors, make the necessary modifications in the Criteria section.

During the underwriting and funding processes, you can initiate the de-dupe check by clicking Dedupe Liabilities in Liabilities section of Applicant and **Dedupe Applicant** in the Duplicate Applicant section of Applicants Details respectively.

## 2.10 Securitization

With the Securitization Setup screen, the system provides a powerful tool that enables financial institutions to create account pools, to track and manage portfolios.

The Securitization Setup screen enables you to:

- Query account information
- Select accounts based on selection criteria
- Create a pool of selected accounts for sale
- Maintain the pools created and report transactions on these accounts
- Report on investors
- Repurchase pools or specific accounts from pools.

Securitization screen enables you to define the securitization cycles, as well as the responsibilities that can access the various statuses in each cycle. The following diagram demonstrates the status cycle:

Figure 2-15 Securitization Status Cycle

**To create a cycle**

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > System > Securitization**. The system displays the Status Cycle set up screen. The details are grouped into three:
  - Status Cycle
  - Current/Next Status
  - Status Change Responsibilities
2. In the **Status Cycle** section, you can view the following details.

Figure 2-16 Securitization Cycle

A brief description of the fields is given below:

Table 2-36 Status Cycle

Field	Do this
Cycle	View the cycle code.
Type	View the cycle type.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
- In the **Current/Next Status** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Table 2-37 Status Cycle

Field	Do this
Current Status	Select the current status from the adjoining drop-down list.
Next Status	Select the next status from the adjoining drop-down list.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
- In the **Status Change Responsibilities** section, you can define the responsibilities that are authorized to change the code. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Table 2-38 Status Change Responsibilities

Field	Do this
Responsibility	Select the responsibility that will be capable of executing this transition, from the drop-down list.

**Table 2-38 (Cont.) Status Change Responsibilities**

Field	Do this
Allowed	Select <b>Yes</b> to allow change to the status responsibility and <b>No</b> to disallow.

7. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.11 Events

In the current version of Oracle Financial Service Lending and Leasing, the Events framework has undergone changes in the processing type from earlier Engine based framework to Entity based framework and OFSLL is enabled to support both old and new type of events processing.

If you have upgraded from an older version of OFSLL, the existing events listed in **Event Types** tab and action types listed in **Event Action Types** tab will still be functional as intended but cannot be added or modified. Along with these two tabs, the data in **Online** and **Batch** tab are also displayed in read-only mode. However, new events and action types can only be created in **Events** tab.

- For existing events defined in the system, refer to [Events \(Existing Framework\)](#).
- To work with new events framework, refer to [Events \(New Framework\)](#).

This section consists of the following topics:

- [Events \(Existing Framework\)](#)
- [Events \(New Framework\)](#)
- [Monitoring JMS Event Actions](#)

### 2.11.1 Events (Existing Framework)

During Origination account processing, when an application account moves from one status/sub status to another, or changes condition, the system can trigger an event and perform the associated event actions. This can occur either online or in batch mode.

#### **Note**

Only predefined events and actions can be set up on the Events Setup screen. You cannot create new event types or action types.

As processing events and associated actions require additional processing at the server level, the performance of the transactions, for which the events are setup, may be adversely affected dependent upon your specific configuration.

In the Events screen you can view **trigger events** with associated actions which the system performs during application entry account processing. The fields on this screen are both system and user defined. There are four sub screens on the Events screen to set up and maintain these events:

- Events Types
- Event Action Types
- Online

- Batch

Event Types and Action Types sections of this screen provide a master table for setting up the online and batch events. This setup triggers the event, which in turn triggers the actions associated with the events, during application entry account processing.

### Navigating to Events

On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Events**.

This section consists of the following topics:

- [Event Types](#)
- [Event Action Types](#)
- [Online](#)
- [Batch](#)

## 2.11.1.1 Event Types

1. Click **Setup > Setup > Administration > System > Events > LoanLine of creditLease > Events Types**.
2. In the Event Types tab, you can view the existing events and its details maintained in the system.

**Figure 2-17 Events Setup**

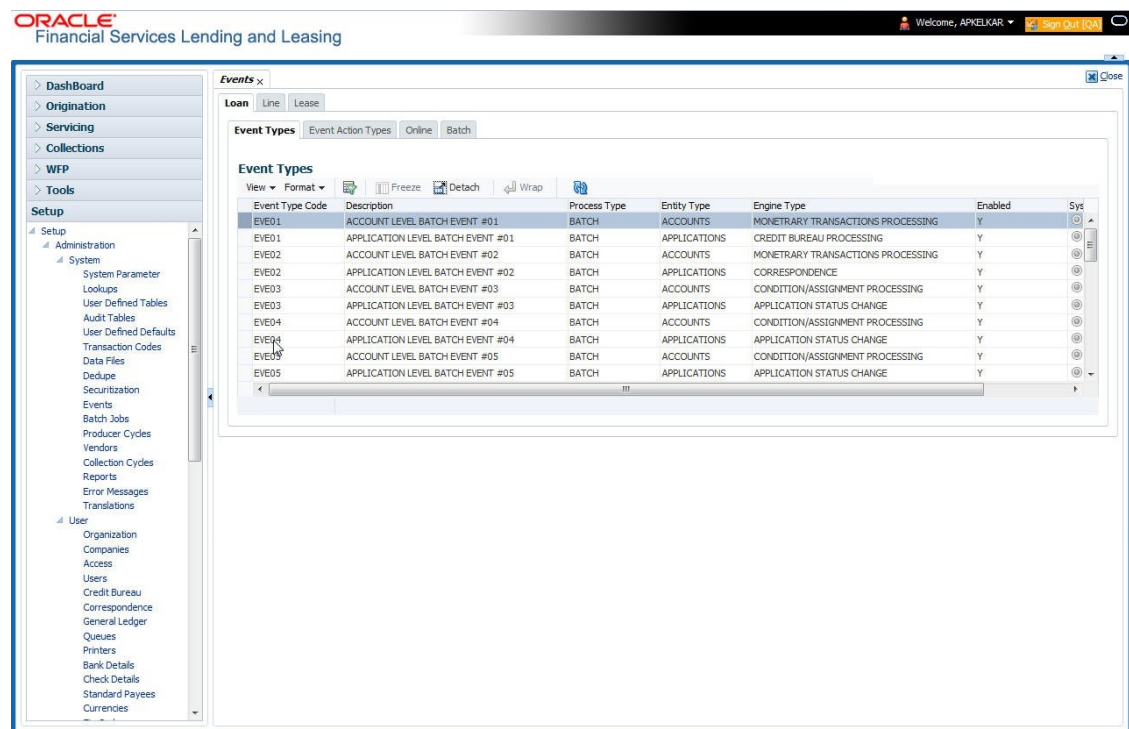

Figure 2-18 Events Setup

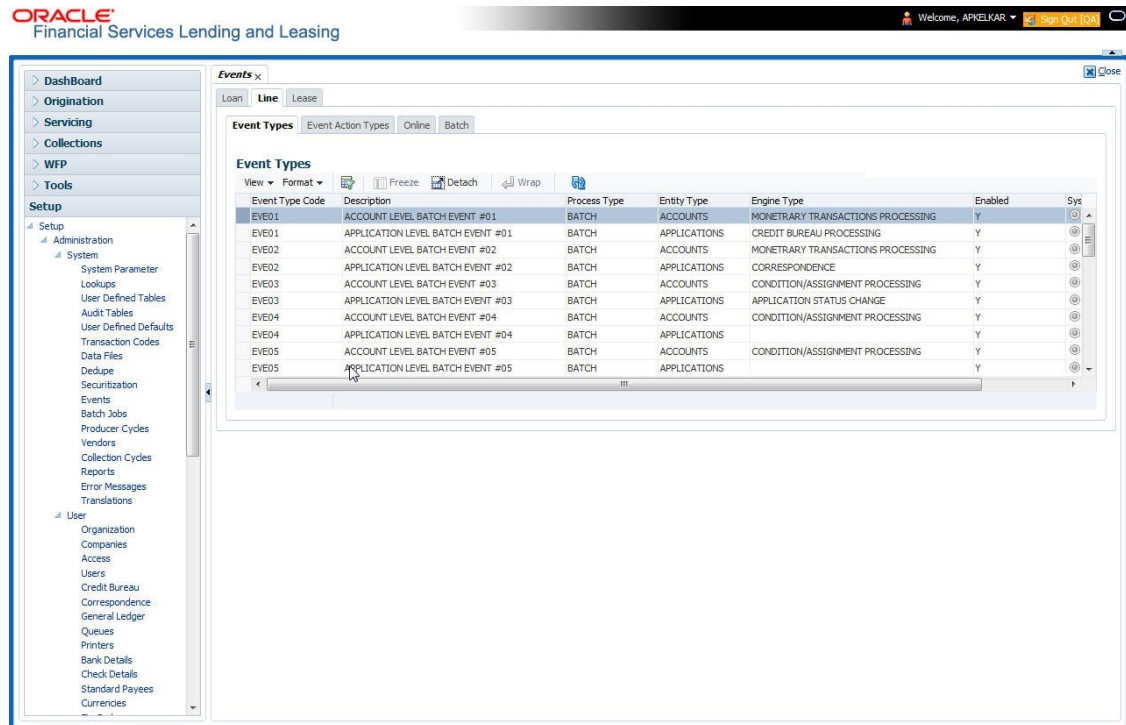

Figure 2-19 Events Setup

A brief description of the fields is given below:

**Table 2-39 Event Types**

Field	Do this
Event Type Code	View the event type code.
Description	View the event description.
Process Type	View the event action processing type (BATCH or ONLINE).
Entity Type	View the entity type (ACCOUNTS or APPLICATIONS).
Engine Type	View the engine type (MONETARY TRANSACTIONS PROCESSING, NON-MONETARY TRANSACTION PROCESSING, CONDITION/ASSIGNMENT PROCESSING, APPLICATION STATUS CHANGE, CREDIT BUREAU PROCESSING, LETTERS PROCESSING or CORRESPONDENCE).
Enabled	<b>Y</b> indicates event type is enabled and <b>N</b> indicates disabled.
System Defined	If <b>Yes</b> indicates that the event type is system defined. If <b>No</b> indicates that the event type is user defined.

### 2.11.1.2 Event Action Types

The Event Action Types section is system defined and lists the action codes supported in the system.

1. Click **Setup > Setup > Administration > System > Events > LoanLine of creditLease > Event Action Types**.

Figure 2-20 Events Action Setup

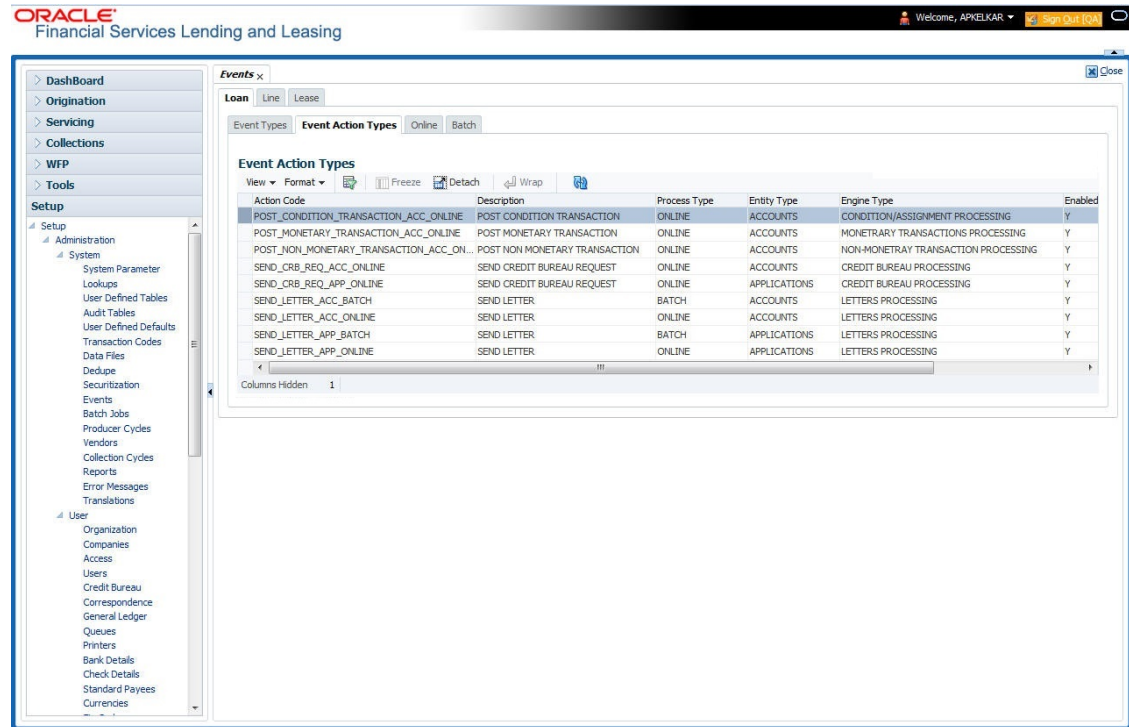

Figure 2-21 Events Action Setup

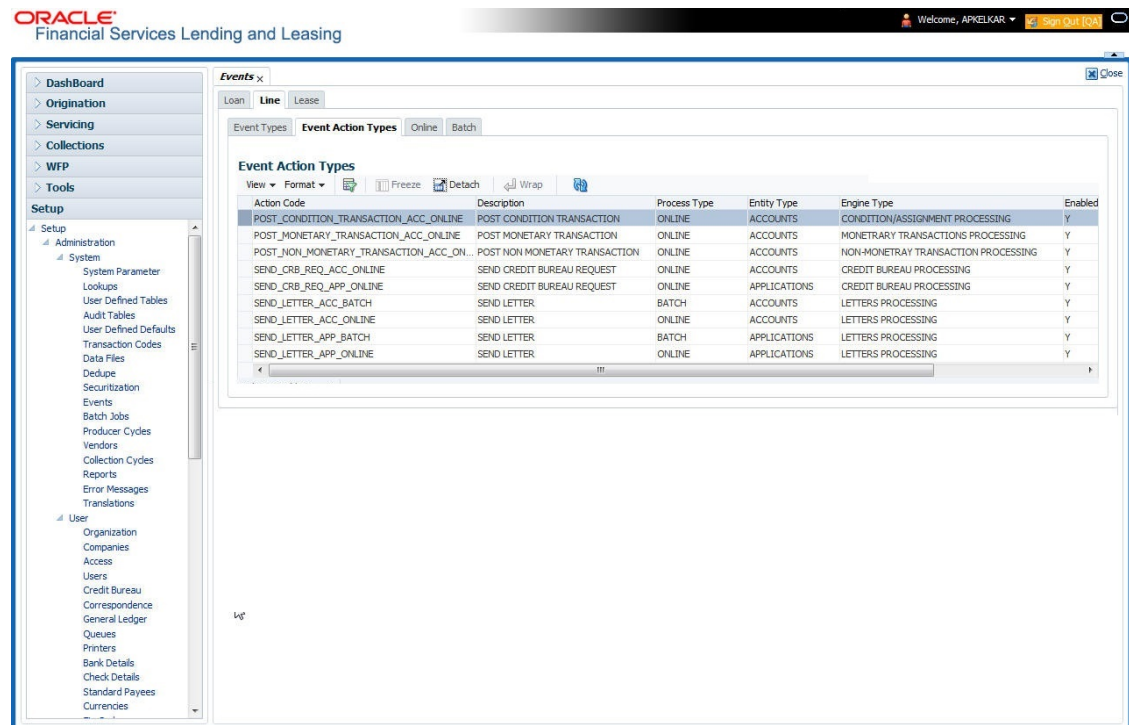

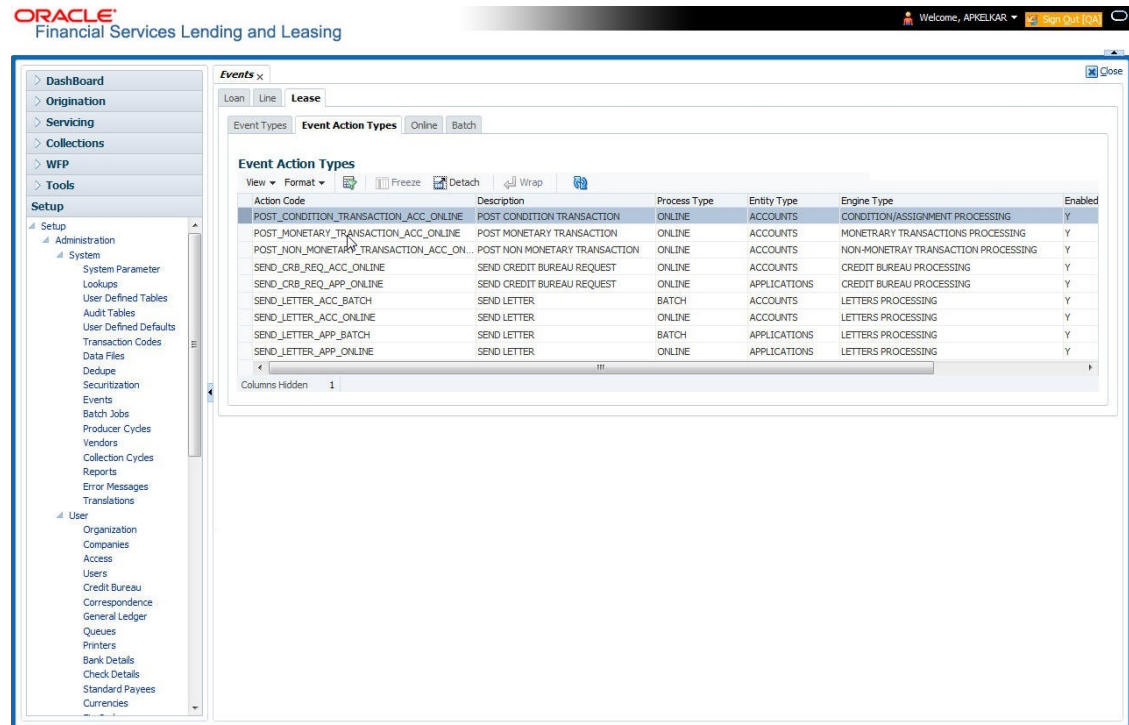

Figure 2-22 Events Action Setup

A brief description of the fields is given below:

Table 2-40 Event Action Types

Field	Do this
Action Code	View the action code.
Description	View the action description.
Process Type	View the event action processing type (BATCH or ONLINE).
Entity Type	View the entity type.
Engine Type	View the engine type.
Enabled	<b>Y</b> indicates event action type is enabled and <b>N</b> indicates disabled.
System Defined	If <b>Yes</b> indicates that the event action type is system defined. If <b>No</b> indicates that the event action type is user defined.

### 2.11.1.3 Online

The Online tab allows you to view the online events defined in the system along with the event criteria actions. The system supports the following online events:

- For change in account's status system processes the event's actions when the:
  - Account status of ACTIVE is reversed
  - Account status is changed to PAID
  - Account status change to PAID is reversed

- Account status is changed to CHARGE OFF
  - Account status change to CHARGE OFF is reversed.
2. The opening or closing of an accounts conditions. The system processes the event's actions during:
- Account condition DELINQUENT is opened
  - Account condition DELINQUENT is closed
  - CHG OFF Reversal
  - Paid Off Reversal
  - BKRP is closed
  - BKRP Is Opened
  - When Queue is Closed
  - When status/ Sub status changed to **Approved- Rehashed**
  - Account condition SCHG is closed
  - Account condition SCHG is Opened
  - Change in application status / sub status to APPROVED – REHASHING
3. The change in application status / sub status to APPROVED – REHASHING.
4. The posting of a non-monetary transaction to the account.

The events that can be performed online after each of the events listed above are as follows:

- Send correspondence for an account
- Generate correspondence for an account
- Send a credit bureau request for an account
- Post a monetary transaction for an account
- Post a condition transaction for an account
- Generate correspondence for an application
- Send a credit bureau request for an application.

#### To view Online Event

Click **Setup > Setup > Administration > System > Events > LoanLine of creditLease > Online.**

Figure 2-25 Online Setup

A brief description of the fields is given below:

Table 2-41 Online Event

Field	Do this
Event Code	View the event code.
Event Type	View the event type.
Synchronous	<b>S</b> indicates that the event is synchronous (i.e. any failure in triggering the event will fail to trigger the entire transaction). If <b>A</b> indicates that the event is asynchronous (i.e. any failure in the event will not affect the transaction, which will be successfully completed).
Enabled	<b>Y</b> indicates event type is enabled and <b>N</b> indicates disabled.

The **Event Criteria** section allows you to view the query defined for an event.

A brief description of the fields is given below:

Table 2-42 Event Criteria

Field	Do this
Query Name	View the query name.
Description	View the query description.
Enabled	<b>Y</b> indicates event criteria is enabled and <b>N</b> indicates disabled.

## Criteria Details

The Criteria Details sub tab allows you to view the defined selection criteria for the event. System uses these criteria to determine which application account to include in the event action.

### Note

Although system allows to define customized selection criteria, the execution of additional selection criteria requires additional processing at server level and can have significant performance impact delaying the EOD processing/web services. Hence it is recommended to have careful consideration while defining the additional selection criteria (like using user-defined tables and columns) and/or get approval from your database administrator before using any selection criteria.

A brief description of the fields is given below:

**Table 2-43 Criteria Details**

Field	Do this
Seq	View sequence number.
(	Indicates opening bracket.
Parameter	View the parameter selected for the criteria.
Comparison Operator	View the comparison operator selected for the criteria.
Criteria Value	View the criteria value.
)	Indicates closing bracket.
Logical Expression	View the logical operator selected for the criteria.
Enabled	<b>Y</b> indicates event selection criteria is enabled and <b>N</b> indicates disabled.

## Actions

In the Actions sub tab, you can view the actions that the system performs when event is triggered. There can be more than one event action for a particular event and the Seq field defines the order in which the event action should occur.

A brief description of the fields is given below:

**Table 2-44 Actions**

Field	Do this
Description	View the event action description.
Seq	View sequence number defined for the action.
Enabled	<b>Y</b> indicates event action is enabled and <b>N</b> indicates disabled.

For each event action, view the **Action Parameters** defined. A brief description of the fields is given below:

**Table 2-45 Action Parameters**

Field	Do this
Description	View the parameter description.
Value	View the parameter value.
Required	<b>Y</b> indicates action parameter is required and <b>N</b> indicates not-required

## 2.11.1.4 Batch

The Batch screen allows you to view the events performed as a batch transaction by the system. The system supports the following predefined batch events for applicationaccount processing. (These batch events are listed in the Events Types tab):

- ACCOUNT LEVEL BATCH EVENT #01
- APPLICATION LEVEL BATCH EVENT #01
- ACCOUNT LEVEL BATCH EVENT #02
- APPLICATION LEVEL BATCH EVENT #02
- ACCOUNT LEVEL BATCH EVENT #03
- APPLICATION LEVEL BATCH EVENT #03
- ACCOUNT LEVEL BATCH EVENT #04
- APPLICATION LEVEL BATCH EVENT #04
- ACCOUNT LEVEL BATCH EVENT #05
- APPLICATION LEVEL BATCH EVENT #05
- ACCOUNT LEVEL BATCH EVENT #06
- APPLICATION LEVEL BATCH EVENT #06
- ACCOUNT LEVEL BATCH EVENT #07
- APPLICATION LEVEL BATCH EVENT #07
- ACCOUNT LEVEL BATCH EVENT #08
- APPLICATION LEVEL BATCH EVENT #08
- ACCOUNT LEVEL BATCH EVENT #09
- APPLICATION LEVEL BATCH EVENT #09
- ACCOUNT LEVEL BATCH EVENT #10
- APPLICATION LEVEL BATCH EVENT #10

### To view the Batch Event

Click **Setup > Setup > Administration > System > Events > LoanLine of creditLease > Batch**.

Figure 2-26 Batch Setup

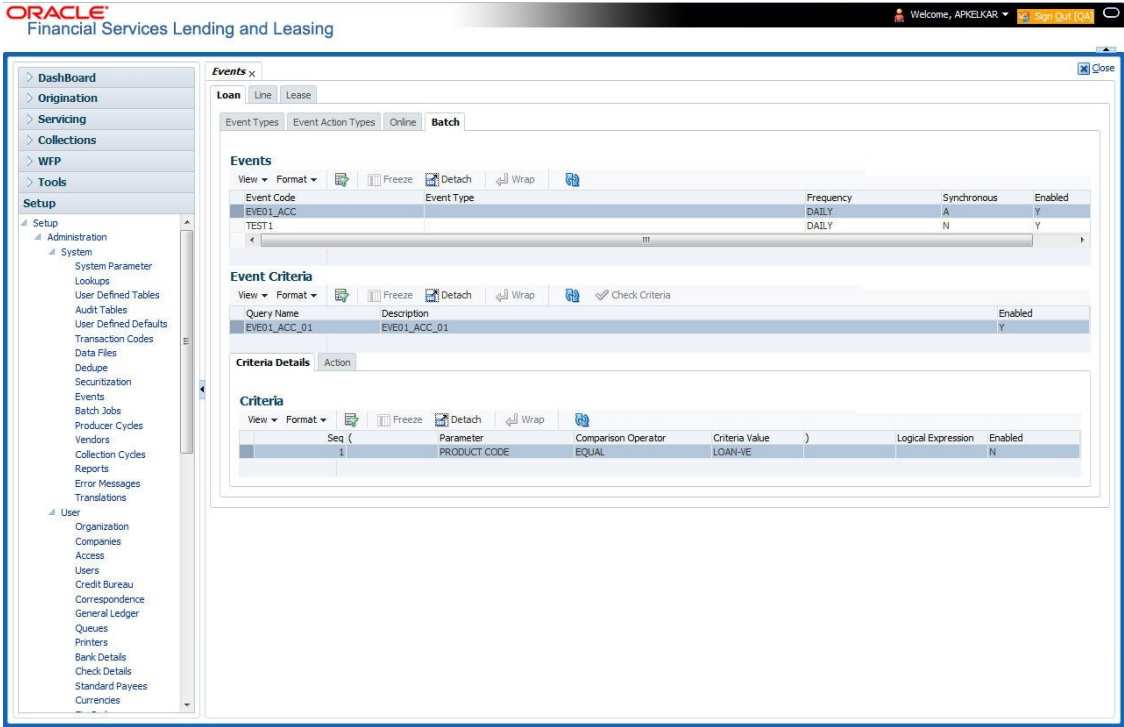

Figure 2-27 Batch Setup

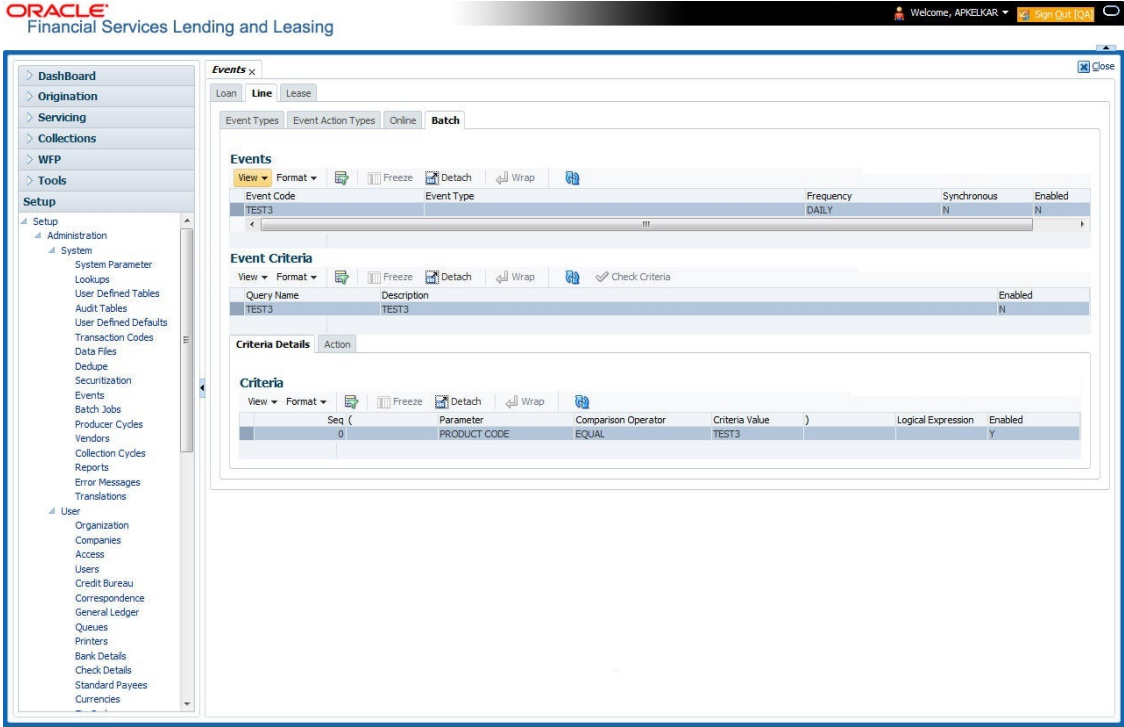

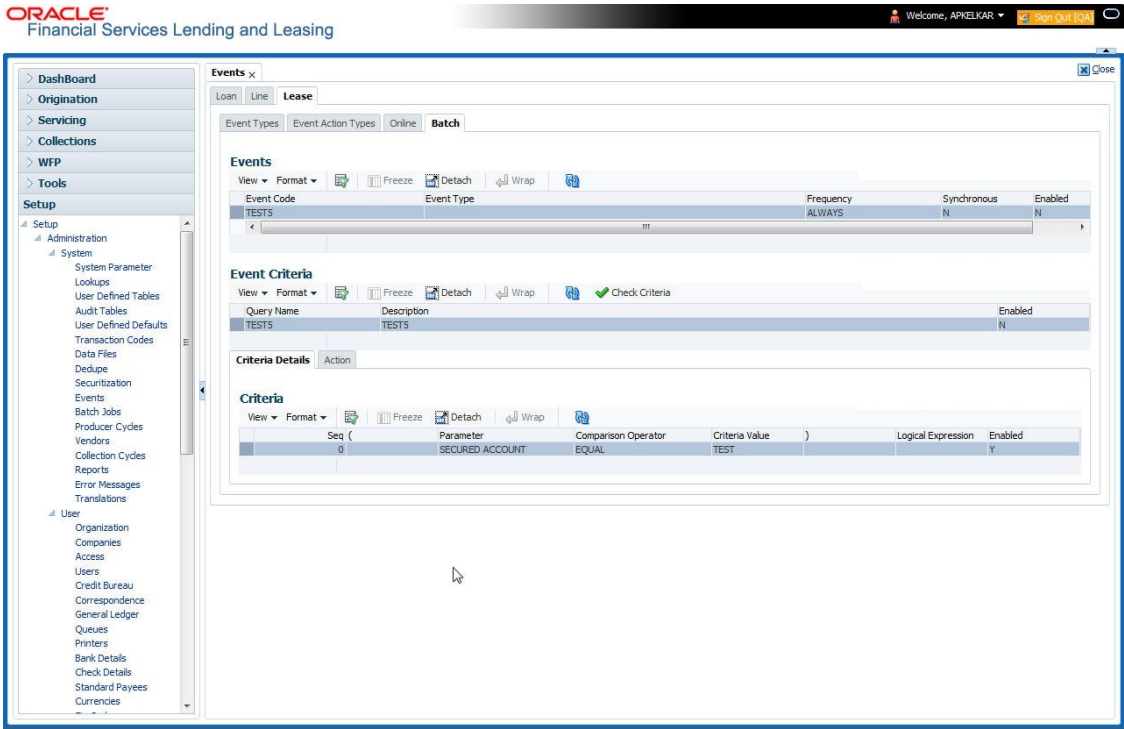

Figure 2-28 Batch Setup

A brief description of the fields is given below:

Table 2-46 Batch Event

Field	Do this
Event Code	View the event code.
Event Type	View the event type.
Frequency	View the event frequency.
Enabled	<b>Y</b> indicates event type is enabled and <b>N</b> indicates disabled.

The **Events Criteria** section allows you to view the query name and event description defined for an event.

A brief description of the fields is given below:

Table 2-47 Events Criteria

Field	Do this
Query Name	View the query name.
Description	View the event description
Enabled	<b>Y</b> indicates event criteria is enabled and <b>N</b> indicates disabled.

Criteria Details

The Criteria Details sub tab allows you to view the defined selection criteria for the event. System uses these criteria to determine which applicationaccount to include in the event action.

**Note**

Although system allows to define customized selection criteria, the execution of additional selection criteria requires additional processing at server level and can have significant performance impact delaying the EOD processing/web services. Hence it is recommended to have careful consideration while defining the additional selection criteria (like using user-defined tables and columns) and/or get approval from your database administrator before using any selection criteria.

A brief description of the fields is given below:

**Table 2-48 Criteria Details**

Field	Do this
Seq	View sequence number.
(	Indicates opening bracket.
Parameter	View the parameter selected for the criteria.
Comparison Operator	View the comparison operator selected for the criteria.
Criteria Value	View the criteria value.
)	Indicates closing bracket.
Logical Expression	View the logical operator selected for the criteria.
Enabled	<b>Y</b> indicates event selection criteria is enabled and <b>N</b> indicates disabled.

**Action**

In the Actions sub tab, view the actions that the system performs after the event is triggered. There can be more than one event action for a particular event. The Seq field defines the order in which the event action should occur. System supports the following batch event actions:

- Send letter for an applicationaccount
- Generate correspondence for an applicationaccount

A brief description of the fields is given below:

**Table 2-49 Action**

Description	View the event action description.
Seq	View sequence number defined for the action.
Enabled	<b>Y</b> indicates event action is enabled and <b>N</b> indicates disabled.

For each event action, view the **Action Parameters** defined. A brief description of the fields is given below:

Table 2-50 Action Parameters

Field	Do this
Description	View the parameter description.
Value	View the parameter value.
Required	<b>Y</b> indicates action parameter is required and <b>N</b> indicates not-required

## 2.11.2 Events (New Framework)

Events in OFSLL refers to user/system generated actions on the system such as updating an account condition as delinquent or moving the status of a collateral from **INACTIVE** to **ACTIVE** and so on. Whenever such a type of event occurs some defined action can be performed by the system.

When there is change in entities like Account, Customer and so on by performing an insert/update operation on the base table, system can trigger a defined event with an associated event action to expose the same for third-party applications through JMS message or perform OFSLL actions like posting Comment/Call Activity and so on.

The Events tab serves as a common framework for LoanLineLease module. In a single flow you can define **events** with associated actions for entities like Account, Customer and so on with the type of processing mode as either Online or Batch mode. Further, you can define one or more event criteria as a trigger when the corresponding event occurs. For each defined criteria you can define the available event action and associated action parameter(s) to initiate corresponding action in external / internal system.

Figure 2-29 Events Workflow

As per the above workflow:

- During Servicing stage, when an event is triggered, the main transaction is committed and a new parallel transaction is created to check if there is an event definition available.
- If there is an event definition available, system places an AQ (Advanced Queueing) message in database to check for any matching event criteria. There can be one or more criteria for an event in database which is further evaluated to get the matching criteria. On identifying a matching criteria, the defined event with criteria is logged into event entities.
- Based on the Event Type, system executes the associated Event Actions.
  - If the event is configured to Batch mode, the event action is performed when the following batch jobs - EVEPRC\_BJ\_100\_01 (BATCH EVENTS PROCESSING for the Entities Account/Application/Assets) and/or EVEPRC\_BJ\_100\_03 (BATCH EVENTS PROCESSING for the Entities Customer/Business/Vendors/Producers) is executed.
  - If the event is configured to Online mode, system performs the corresponding actions immediately.

- If the Event Action is defined as JMS, a json message is generated with the below format. You can configure additional details into the message by using response User Defined Tables. The data added in this table will be represented in Custom Block as illustrated in the example below.

**Figure 2-30 Events\_Json\_format**

```
{
  "EventDetail": {
    "EventID": 8535,
    "EventType": "ACC_CREATE",
    "EventMessage": "ACO CREATE ACCOUNT LINE",
    "EntityNbr": "201XXXXXXXX9",
    "EventStartDt": "2019-04-05T02:48:35",
    "EventProcessedDt": "2019-04-05T02:48:35",
    "Custom": [
      {
        "CustomTabName": "User Defined Table 1",
        "DateData": [{
          "KeyName": "CreationDate",
          "KeyValue": "2017-12-18T00:00:00"
        }],
        "NumberData": [{
          "KeyName": "BusinessPhoneNumber",
          "KeyValue": 1234567890
        }],
        "StringData": [{
          "KeyName": "OrgName",
          "KeyValue": "Oracle"
        }]
      },
      {
        "CustomTabName": "User Defined Table 2",
        "DateData": [{
          "KeyName": "CreationDate",
          "KeyValue": "2017-12-18T00:00:00"
        }],
        "NumberData": [{
          "KeyName": "BusinessPhoneNumber",
          "KeyValue": 1234567890
        }],
        "StringData": [{
          "KeyName": "OrgName",
          "KeyValue": "Oracle"
        }]
      }
    ]
  }
}
```

- The following table indicates parameters available for JMS action type definition.

**Table 2-51 JMS action type definition**

Parameter	Description	Display
EVENTID	System Generated Sequence	N
EVENTTYPE	Lookup Code of Event Type Code	N
EVENTMESSAGE	User entered event action message	Y
ENTITYNBR	Entity Number. For example, Account / Customer Number	N

Table 2-51 (Cont.) JMS action type definition

Parameter	Description	Display
EVENTSTARTDATE	Event Generation Date and Time	N
EVENTPROCESSDATE	Event Process Date and Time	N

**Note**

The parameter marked as **Y** in Display column are only available in event action screen for user configuration. Other parameters are system defined and will be part of every event.

- For each Event Action, there is a User Defined Table maintained in the system and the same is configurable. There is also User Defined Table maintained based on Response Parameters and the response fields can be used to configure Entity Key, Non-Key and Data columns for custom block of json message. Following combination of Event to UDT mapping are maintained in the system:
  - Entity Type | Event | Criteria UDT Type
  - Entity | Event Action | UDT Type | UDT Response Type

For complete list of the Events and Actions mapping maintained in the table **event\_action\_type\_mapping**, refer to the reference below: [https://docs.oracle.com/cd/F40454\\_01/pdf/refdocs/Events\\_UDT\\_Mapping.pdf](https://docs.oracle.com/cd/F40454_01/pdf/refdocs/Events_UDT_Mapping.pdf)

**Navigating to Events**

On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Administration > System > Events > Events** tab.

**To define an Event**

- Click **Setup > Setup > Administration > System > Events > Events** tab.

Figure 2-31 Define an Event

The screenshot displays the 'Events' configuration interface. At the top, there's a navigation bar with 'Loan', 'Line', 'Lease', and 'Events' tabs. The 'Events' tab is active. Below the navigation bar, there's a table of events. The table has columns: Event Code, Description, Entity Type, Event Type, and Processing Type. The events listed include 'CUST ADDR UPDATE', 'EVENT\_TTM\_POST', 'INSERT\_CALL\_ACTIVITY', 'SEC\_ADD\_ACC\_POOL\_BATCH', 'SEC\_ADD\_ACC\_POOL\_ONLINE', 'SEC\_REM\_ACC\_POOL\_BATCH', and 'SEC\_REM\_ACC\_POOL\_ONLINE'. Below the table, there are sections for 'Event Criteria' and 'Actions'. The 'Event Criteria' section shows a query named 'CUST ADDR UPDATE ONLINE'. The 'Actions' section shows a table of actions with columns: Action Type, Action Code, and Seq Enabled. The 'Action Parameters' section is also visible at the bottom.

A brief description of the fields is given below:

**Table 2-52 Navigation to Events**

Field	Do this
Event Code	Specify the unique event code.
Description	Specify the event description.
Entity Type	Select the entity type from the drop-down list. The list is populated based on EVENT_ENTITY_TYPE_CD lookup code.
Event Type	Select the event identification type for the entity from the dropdown list. The list is populated based on EVENT_TYPE_CD lookup code.
Processing Type	Specify the processing type as either ONLINE or BATCH from the drop-down list. The list is populated based on EVENT_PROCESS_TYPE_CD lookup code. <ul style="list-style-type: none"> <li>For Online events, when the event is triggered corresponding actions are processed immediately. Here all the event action executions are asynchronous and does not impact main transaction.</li> <li>For Batch events, the event is triggered when the following batch jobs - EVEPRC_BJ_100_01 (BATCH EVENTS PROCESSING for the Entities Account/Application/Assets) and/or EVEPRC_BJ_100_03 (BATCH EVENTS PROCESSING for the Entities Customer/Business/Vendors/Producers) is executed and actions are processed.</li> </ul>
Enabled	Check this box to activate the event type.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter. In the **Event Criteria** sub tab, you can create a query to an event.
- In the **Event Criteria** sub tab, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 2-53 Event Criteria**

Field	Do this
Query Name	Specify the unique query name.
Description	Specify the event criteria description.
Enabled	Check this box to enable the event criteria.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.  
**Criteria Details**

The Criteria Details sub tab allows you to define the selection criteria for the event. System uses these criteria to determine which application account to include in the event action.

- In the **Criteria Details sub tab**, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Note**

Although system allows to define customized selection criteria, the execution of additional selection criteria requires additional processing at server level and can have significant performance impact delaying the EOD processing/web services. Hence it is recommended to have careful consideration while defining the additional selection criteria (like using user-defined tables and columns) and/or get approval from your database administrator before using any selection criteria.

A brief description of the fields is given below:

**Table 2-54 Criteria Details**

Field	Do this
Seq	Specify sequence number.
(	Specify the opening bracket.
Parameter	Select the parameter from the drop-down list.
Comparison Operator	Select comparison operator from the drop-down list.
Criteria Value	Specify the criteria value.
)	Specify the closing bracket.
Logical Expression	Select the logical operator from the drop-down list.
Enabled	Check this box to enable the criteria details.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

**Actions**

In the Actions sub tab, you can define the event action that the system need to perform when the event is triggered. You can define more than one event action for a particular event and use the Seq field to define the order in which the event action should occur.

- In the Action sub tab, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

**Table 2-55 Actions**

Field	Do this
Action Type	Select the action type from the drop-down list. The list is populated based on EVENT_ACTION_TYPE_CD lookup code.
Action Code	The action code is displayed as <b>None</b> by default.
Seq	Specify the sequence number of executing the event action.
Enabled	Check this box to enable the event action.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

**Action Parameters**

In the **Action Parameters** sub tab, you can define the action parameters with corresponding values for each event action.

9. To define the Action Parameters, in the **Action** sub tab, click Add or Edit. You can also perform any of the [Basic Operations](#) mentioned in Navigation chapter.
10. Click **Load Parameters**. The applicable Action Parameters are loaded for update. A brief description of the fields is given below:

**Table 2-56 Action Parameters**

Field	Do this
Description	System auto populate the description from user defined table based on Action code selected.
Value Type	<p>Select the value type as one of the following which is to be included during event action execution from the drop-down list. The list is populated based on EVENT_VALUE_TYPE_CODE lookup code.</p> <ul style="list-style-type: none"> <li>• CONSTANT</li> <li>• SYSTEM DRIVEN</li> <li>• USER INPUT</li> <li>• COLUMN VALUE (For this value type, the Action Parameter values are displayed from User Defined Tables based on the Event Type. However, note that if the column value cannot be fetched due to multiple records or if no record exist, then action parameter value is displayed blank/null).</li> </ul> <p>Currently the Column Value is configured to refer only Accounts table (Entity Type) and can process the following Event Actions Type:</p> <ul style="list-style-type: none"> <li>• POST COMMENT</li> <li>• POST MONETARY TRANSACTION</li> <li>• POST NON MONETARY TRANSACTION</li> </ul> <p>For SEND CORRESPONDENCE Action Type, there are additional parameters - USER DEFINED ELEMENT and USER DEFINED CONSTANT available in Setup &gt; Correspondence screen to provide input during execution of Event Action. The same is available in Events screen and can be modified before triggering the event action.</p>
Value	<p>If the Value Type is selected as CONSTANT, specify the required action parameter value.</p> <p>If the Value Type is selected as SYSTEM DRIVEN, you can add the following values for system to derive the parameter values during the execution of the Event.</p> <p>\$GLDATE - GL DATE System Parameter Value</p> <p>\$PAYMENTAMOUNT - Account Monthly Payment Amount</p> <p>\$OUTSTANDINGAMOUNT - Account Total Outstanding Amount</p> <p>\$RATE - Account Rate</p> <p>\$TOTALTERM - Account Total Term</p> <p>\$AVAILABLETERM - Account Available Term</p>
Required	<b>Y</b> indicates the action parameter is required, else <b>No</b> .

11. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.11.3 Monitoring JMS Event Actions

You can verify the status of events and event actions on the Monitor Jobs screen of the System Monitor screen.

### To monitor events

1. On the Oracle Financial Services Lending and Leasing home screen, click **Dashboard > Dashboard > System Monitor > JMS Queues**.  
The JMS Queues screen displays the **Status** for all asynchronous events processed in the system.

For more details, refer to Dashboard > System Monitor section in any of the User Guides.

## 2.12 Batch Jobs

**Batch jobs** refer to the back-end processes that automatically run at a certain time. There are two types of batch jobs:

- Business processes (such as billing and delinquency processing)
- Housekeeping tasks (such as application aging and application purging)
- [Batch Jobs](#)
- [Batch Jobs Available](#)

### 2.12.1 Batch Jobs

The Batch Job screen allows you to set up, monitor, and maintain batch jobs in the system.

Batch jobs can be set up to be performed on a daily, weekly, monthly, and ad-hoc basis. Batch jobs can also be configured to trigger an e-mail or phone message if a batch job fails.

Critical batch jobs control job flow and system date rollover to allow recovery during errors. Errors are instances where a process did not successfully complete. Failures indicate that a particular job encountered errors that require remedial action. The number of errors allowed before failure is defined for each job. Some errors automatically result in a failure.

#### Navigating to Batch Jobs:

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > System > Batch Jobs**. The Batch Jobs details are further grouped into two tabs:
  - [Batch Jobs](#)
  - [Job Holidays](#)

#### 2.12.1.1 Batch Jobs

In the Batch Job Setup screen, you can track and maintain all batch processes within the system. Using this form, the system administrator can configure the frequency and start time of each batch process, as well as set the number of threads to improve performance.

**Threading** allows a specific job to be separated into smaller units that are processed at the same time. This allows Oracle Financial Services Lending and Leasing to complete the job in less time.

You can set up multiple batch jobs within a batch set. In the Batch Job Sets section, each process is listed with the last run date (Last Run Dt field) and the next scheduled process date (Next Run Dt field). In the Freq Code and Freq Value fields, you can determine the frequency of each batch set, such as daily, weekly and monthly. You can also set up batch sets to incorporate a dependency on another batch set. This way, if the initial batch fails, the dependent set will not be processed.

In the Batch Jobs section, you can configure the process to run on weekends and holidays using the respective option boxes.

**CAUTION:** As the batch job setup widely affects the Oracle Financial Services Lending and Leasing system, Oracle Financial Services Software suggests that the system administrator has a clear understanding of the various functionalities within Oracle Financial Services Lending and Leasing before creating and updating the batch processes.

For the standard job set please review the Visio document, **dbk\_std\_detail\_design\_job\_sets.vsd**

### Configure Batch Jobs at Company Level

OFSL is enabled to process the configured batch jobs at each Company level giving a flexibility to schedule and run batch job or EOD processing at desired time zone. Irrespective of Company or Branch, the batch jobs can be run independently on specific time in scheduler. For more details on configuring the batch job at each company definition level, refer to Appendix - Configuration at Company Level chapter.

#### To setup a Batch job

1. Click **Setup > Setup > Administration > System > Batch Jobs**.
2. In the Batch Job Sets section, you can make use of the copy option to copy the whole batch job set at one go with header and detailed records for each company definition. To do so, select the Company from drop-down list and click **Create Copy**. System copies the batch job sets from the selected Company record to the Company selected from dropdown list. All those batch job set which are not already available in the selected Company are copied.  
Note that:
  - The **Create Copy** option can be used multiple times.
  - The Company drop-down list is displayed based on the User Access defined for the logged-in user.
3. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Table 2-57 Batch job - Setup

Field	Do this
Company	Select the company from the drop-down list. The list is populated only with those Company Definitions to which you have been provisioned access.  This company is considered if system is setup to process batch jobs at Company level. For more information, refer to <b>Appendix - Company Level GL Date Configuration</b> section.
Set Code	Specify the code for the batch job set.
Job Set Description	Specify the description for the batch job set.
Frequency	Select the frequency at which the job set is to be executed from the drop-down list.
Frequency Value	Select the frequency value from the drop-down list. The frequency value will be displayed based on the frequency code selected.
Start Time	Specify the start time for the job set.
Critical	Check this box to set job as critical. A <b>critical</b> job is one that prevents the General Ledger (GL) post date from rolling forward, should the job fail.
Enabled	Check this box to enable the job set.
Last Run Dt	The system displays the last run date of the job set.
Next Run Dt	Specify the next run date for job set. You can select the data from adjoining calendar icon.
Parent	Select the parent job set from drop-down list.

**Table 2-57 (Cont.) Batch job - Setup**

Field	Do this
Dependency	Select the type of dependency on the parent from drop-down list.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
5. In the **Batch Job** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 2-58 Batch Job - Navigation**

Field	Do this
Seq	Specify the batch job sequence number. <b>Note:</b> Within a job set, jobs are executed sequentially based on the sequence number assigned.
Job Type	Select the batch job request type from the drop-down list.
Job Code	Specify the batch job request code.
Job Description	Specify the batch job description.
Threads	The system displays the number of threads used by the job.
Commit Count	Specify the number of rows after which auto-commit is triggered.
Errors Allowed	Specify the number of errors allowed.
Weekend	Check this box to perform batch jobs on weekend.
Holiday	Check this box to perform batch jobs on a holiday. (Holidays are defined on the Job Holidays screen.)
Enabled	Check this box to enable the batch job.
Parent	Select the parent batch job from the drop-down list.
Dependency	Select the dependency clause of the batch job from the drop-down list.
Command	Specify the command line for the job (required).
RollbackSegment	If you choose, use this field to specify the rollback segment for job.

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
7. In the **Batch Job Thread** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 2-59 Batch Job Thread**

Field	Do this
Thread	Specify the name of thread.

Table 2-59 (Cont.) Batch Job Thread

Field	Do this
Trace	Specify the SQL trace level (0, 1, 4, 8, 12). The higher the number, the more activities the system can trace.
Enabled	Check this box to enable the thread.

8. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.12.1.2 Job Holidays

The system allows you to define holidays within the company on Job Holidays screen. You can then use the Batch jobs screen to set up whether you want the system to perform batch jobs on these days or not, using the Holiday box of Batch Jobs section.

### To define job holidays

1. Click **Setup > Setup > Administration > System > Batch Jobs > Job Holidays**.
2. In the **Job Holidays** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 2-33 Job Holidays

The screenshot shows the Oracle Financial Services Lending and Leasing interface. The top navigation bar includes the Oracle logo and the text "Financial Services Lending and Leasing". The user is logged in as "Welcome ADSH EKAR" and the page is titled "Batch Jobs". The "Job Holidays" section is active, showing a table of job holidays. The table has columns for "Holiday Dt", "Description", "Company", and "Enabled". Below the table, there are input fields for "Holiday Dt", "Description", and "Company", and a checkbox for "Enabled".

Holiday Dt	Description	Company	Enabled
06/13/2020	QUEENS BIRTHDAY	UK01	Y
06/13/2020	QUEENS BIRTH DAY	AUS01	Y
12/25/2002	CHRISTMAS	ALL	Y
09/21/2002	THANKS GIVING DAY	ALL	Y
07/05/2002	INDEPENDENCE DAY	ALL	Y
12/25/2001	CHRISTMAS	ALL	Y
09/22/2001	THANKS GIVING DAY	ALL	Y
07/04/2001	INDEPENDENCE DAY	ALL	Y
12/25/2000	CHRISTMAS	ALL	Y

Below the table, the "Job Holidays" section is visible. It includes input fields for "Holiday Dt" (06/13/2020), "Description" (QUEENS BIRTHDAY), and "Company" (UK01). There is also a checkbox for "Enabled" which is checked.

A brief description of the fields is given below:

Table 2-60 Job Holidays

Field	Do this
Holiday Dt	Specify the date of the job holiday. You can select the date from the adjoining calendar icon.
Description	Specify the job holiday description (required).

**Table 2-60 (Cont.) Job Holidays**

Field	Do this
Company	Select the company from the drop-down list. The list is populated only with those Company Definitions to which you have been provisioned access.  This company is considered if system is setup to process holiday at Company level. For more information, refer to <b>Appendix - Company Level GL Date Configuration</b> section.
Enabled	Check this box to enable the holiday.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.12.2 Batch Jobs Available

The below table provides a list of Batch Jobs maintained in the system and a brief description to each:

**Table 2-61 Batch Jobs Available**

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
AAE	Application Account Interface	aaiprc_bj_100_01	APPLICATION TO ACCOUNT INTERFA CE	No	Yes	No	Common	This process periodically picks up applications in <b>Approved-Verified</b> status and creates accounts.
ACH	ACH Accounts	acaprc_bj_100_01	ACCOUNT ACH PROCESSING	No	Yes	No	Common	This process produces the ACH file for the eligible customer payments.
ACH	ACH Producers	acpprc_bj_100_01	PRODUCER ACH PROCESSING	Yes	Yes	No	Common	This process produces the ACH file for the eligible producer payments

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
ACH	ACH Vendors	acvprc_bj_100_01	VENDOR ACH PROCESSING	No	Yes	No	Common	This process produces the ACH file for the eligible vendor payments.
ACH	ACH Producer/Vendors/Customer/Third Party	acxprc_bj_100_01	ACH Producer/Vendors/Customer/Third Party	Yes	Yes	No	Common	This process produces the ACH file for the eligible Producer/Vendors/Customer/Third Party
AGE	Aging Applications	agaapp_bj_100_01	APPLICATION AGING PROCESS	Yes	No	No	Common	This process puts applications into <b>Aged-Application</b> substatus.
AGE	Aging Contracts	agccon_bj_100_01	CONTRACT AGING PROCESS	Yes	No	No	Common	This process puts contracts into <b>Aged-Contract</b> substatus.
ALTPFS	ALLOTMENT EXTRACT FILE DUMP	PFSEFTP RC_BJ_11_01	BACKUP EFT	No	Yes	No	Common	This process creates the Backup EFT file
ALTPFS	ALLOTMENT EXTRACT FILE DUMP	PFSLBAP RC_BJ_00_01	POSTING ALLOTMENT PAYMENTS	No	Yes	No	Common	This process posts the payments from the allotment file received from the bank

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
ALTPFS	ALLOTMENT EXTRACT FILE DUMP	PFSODD ALT_BJ_1 00_01	ALLOTMENT EXTRACT FILE DUMP	No	Yes	No	Common	This process sends the allotment draft notice to the bank
ALTPFS	ALLOTMENT EXTRACT FILE DUMP	PFSNSFP RC_BJ_1 00_01	NSF BATCH	No	Yes	No	Common	This process posts the NSF file received from the bank
API	API Accounts	accaai_bj _100_01	API AAI	No	Yes	No	Common	This process creates accounts from validated conversion applications/ contracts
API	API Accounts	accdmp_bj _100_01	MOVE API_XX TO ITABS	No	Yes	No	Common	This process copies data from conversion API tables to conversion applications table
API	API Accounts	accval_bj _111_01	VALIDATE ITABS (LOAN)	No	Yes	No	Loan	This process validate all conversion applications loan accounts by running the edits

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
API	API Accounts	accval_bj_112_01	VALIDATE ITABS (LINE)	No	Yes	No	Line	This process validate all conversion applications line of credit accounts by running the edits
API	API Accounts	acmprc_bj_100_01	LOAD API_COMMENTS	No	Yes	No	Common	This process creates account comments from conversion applications/ contracts

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
API	API Accounts	APIDMP_BJ_100_01	LOAD API RECORDS	No	Yes	Yes	Common	<p>This process directly reads data from database folder and using the external tables loads it into API tables for creating accounts.</p> <p>This eliminates the need/dependency of SQL loader and Control files.</p> <p>Ensure that account data in Input file has same structure as defined in Setup &gt; Data Files &gt; Input definition specifically for Loan, Line &amp; Lease accounts.</p>

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originated	Servicing	Collection	Product	Comment
SETAPI2	ASYNCHRONOUS ACCOUNT CREATION	ACXVAL_BJ_100_01	VALIDATE IAPP TABS	Yes	Yes	Yes	Common	<p>This process is used to validate the data from the Account On-Boarding request.</p> <p>This process is the first stage in processing asynchronous account creation using Account on-boarding web service and is controlled based on value defined in system parameter - ACCOUNT_PROCESSING_THRESHOLD.</p>

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
SETAPI2	ASYNCHRONOUS ACCOUNT CREATION	ACXAAI_BJ_100_01	ASYNCHRONOUS ACCOUNT CREATION	Yes	Yes	Yes	Common	<p>This process is used for asynchronous accounts creation using Account onboarding web service.</p> <p>This process is the next stage after successful validation of account creation request without any errors.</p> <p>Based on the request and system parameter value in ACCOUNT_PROCESSING_THRESHOLD accounts are created in the system with all the details and with Status of account as Active, Error, Void.</p> <p><b>Note:</b> These</p>

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
								Accounts can have Account Number generated externally or require OFSLL to generate these number.
COL	Appointment Cancellation	capprc_bj_100_01	APPOINTMENT CANCEL PROCESSING	No	Yes	Yes	Common	This process cancels all the expired appointments.
COL	Payment Promise Processing	cppprc_bj_100_01	BROKEN PROMISE PROCESSING	No	Yes	No	Common	This process updates any broken promises as of the run time.
CRB	Credit Bureau Reporting	cbuutl_bj_100_01	CREATE METRO2 FILE	No	Yes	No	Common	This process creates the METRO2 file for Credit Bureau reporting for the specified date.

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
DOT	Document Tracking Load	dolprc_bj_000_01	ACCOUNT DOCUMENT LOAD	No	Yes	Yes	Common	This process reads acct_doc_load directory. Attach the documents to specified accounts and move documents to appropriate directory.
DLX	Accounts Dialer Exclusion	ODXPRC_BJ_100_01	ACCOUNTS DIALER EXCLUSION	No	Yes	Yes	Common	This process generates a dialer exclusion file with account details and checks if the maintained call action result entry is made on any account during the specified time interval.
GLP	GL Interface	gliprc_bj_100_01	GL SUMMARIZATION	No	Yes	No	Common	This process summarizes GL transactions for the day.

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
GOV	Debt Reporting IRS 1099A / 1099C	gdraap_bj_100_01	IRS 1099-A PROCESSING	No	Yes	No	Common	This process generates the 1099-A flat file for government reporting.
GOV	Debt Reporting IRS 1099A / 1099C	gdrCAD_bj_100_01	IRS 1099-C PROCESSING	No	Yes	No	Common	This process generates the 1099-C flat file for government reporting.
GOV	HMDA Reporting	ghrprc_bj_100_01	IRS HMDA PROCESSING	Yes	No	No	Common	This process generates the HMDA flat file for government reporting.
GOV	Interest Reporting IRS 1098	girprc_bj_100_01	IRS 1098 PROCESSING	No	Yes	No	Common	This process generates the 1098 flat file for government reporting.
JOB	Scheduler	jsctst_bj_000_01	Scheduler	Yes	Yes	Yes	Common	This process tests the job scheduler.
LBP	Lockbox	lbprc_bj_100_01	LOAD LOCKBOX PROCESSING	No	Yes	No	Common	This process loads any lockbox files available. This process can be set to run periodically throughout the day.

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
LNT	Lien Tracking	OFDPRC_BJ_111_03	OUTPUT LIEN TRACKING FOR DATA CHANGE	No	Yes	No	Common	This process generates output file with changes in customer information such as Address/ Phone no./ Borrower/ Coborrower name.
LNT	Lien Tracking	OFDPRC_BJ_111_04	OUTPUT LIEN TRACKING FOR VOID ACCOUNT	No	Yes	No	Common	This process generates output file for <b>Void Accounts</b> to be sent to dealer track.
LTR	Collections Letter	lcolt1_bj_100_01	GENERATE FIRST COLLECTION LETTER	No	No	Yes	Common	This process generates the first collection letter for eligible accounts.
LTR	Collections Letter	lcolt2_bj_100_01	GENERATE SECOND COLLECTION LETTER	No	No	Yes	Common	This process generates the second collection letter for eligible accounts.
LTR	Collections Letter	lcolt3_bj_100_01	GENERATE THIRD COLLECTION LETTER	No	No	Yes	Common	This process generates the third collection letter for eligible accounts.

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Origination	Servicing	Collection	Product	Comment
LTR	Customer Service Letter	lcspdf_bj_111_01	PAID IN FULL LETTER	No	Yes	No	Loan	This process generates the paid-in full letter for the relevant accounts.
LTR	Customer Service Letter	lcspeq_bj_111_01	PAYOFF QUOTE LETTER	No	Yes	No	Common	This process generates the payoff quote letter for the requested accounts.
LTR	Customer Service Letter	lcsstm_bj_100_01	CUSTOMER STATEMENT LETTER	No	Yes	No	Common	This process generates the customer/business statement letter for requested accounts.
LTR	Customer Service Letter	lcswel_bj_111_01	WELCOME LETTER	No	Yes	No	Loan	This process generates the welcome letter for the newly funded accounts.
LTR	Origination Letter	loraco_bj_111_01	Origination Adverse Action Letter (Conditional) (Loan)	Yes	No	No	Loan	This process generates the adverse action letter for relevant applications.

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Origination	Servicing	Collection	Product	Comment
LTR	Origination Letter	loradv_bj_111_01	Origination Adverse Action Letter (Loan)	Yes	No	No	Loan	This process generates the adverse action letter for relevant applications.
ODD	Coupon Book Dump File	ocnprc_bj_100_01	CUSTOMER COUPON BOOK GENERATION	No	Yes	No	Common	This process generates coupon books, if appropriate.
ODD	Output Data Dump File	oddprc_bj_000_01	CREATE OUTPUT DATA DUMP FILES	Yes	Yes	Yes	Common	This process creates any defined output data dump files set in the system.
ODD	Collections Letter	olclt1_bj_100_01	COLLECTION LETTER 1 FILE CREATION	No	No	Yes	Common	This process generates the first collection letter for eligible accounts.
ODD	Collections Letter	olclt2_bj_100_01	COLLECTION LETTER 2 FILE CREATION	No	No	Yes	Common	This process generates the second collection letter for eligible accounts.
ODD	Collections Letter	olclt3_bj_100_01	COLLECTION LETTER 3 FILE CREATION	No	No	Yes	Common	This process generates the third collection letter for eligible accounts.

RDB1	RDB1 Setup	rstdmp_bj_100_01	LOAD SETUP RELATED DATA INTO T TABLES	Yes	Yes	Yes	Common	This process transfers the setup data from (OLTP) Regular tables to Temporary T table
RDB1	RDB1 Txns	rtxdmp_bj_100_01	LOAD TXN DATA INTO T TABLES	No	Yes	No	Common	This process transfers the account transactions data from (OLTP) Regular tables to Temporary T tables
RDB2	RDB2 Accounts	racacc_bj_100_01	Load Reporting Tables Accounts	No	Yes	Yes	Common	This process transfers the account data from T tables to RDB tables
RDB2	RDB2 Accounts (Derived Fields)	racdrv_bj_100_01	Update Reporting Tables Accounts	No	Yes	Yes	Common	This process updates the codes with description for account RDB tables
RDB2	RDB2 Applications	rapapp_bj_100_01	Load Reporting Tables Applications	Yes	No	No	Common	This process transfers the application data from T tables to RDB tables

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originated	Servicing	Collection	Product	Comment
RDB2	RDB2 Applications (Derived Fields)	rapdrv_bj_100_01	Update Reporting Tables Applications (Derived Fields)	Yes	No	No	Common	This process updates the codes with description for application RDB tables
RDB2	RDB2 Asset Tracking	ratase_bj_100_01	Load Reporting Tables Asset Tracking	No	Yes	No	Common	This process transfers the account asset tracking data from T tables to RDB tables
RDB2	RDB2 Asset Tracking (Derived Fields)	ratdrv_bj_100_01	Update Reporting Tables Asset Tracking (Derived Fields)	No	Yes	No	Common	This process updates the codes with description for account asset tracking RDB tables
RDB2	RDB2 Bankruptcy	rbkabd_bj_100_01	Load Reporting Tables Bankruptcy	No	No	Yes	Common	This process transfers the account bankruptcy data from T tables to RDB tables

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
RDB2	RDB2 Call Activities	rcacac_bj_100_01	Load Reporting Tables Call Activities	No	No	Yes	Common	This process transfers the account call activities data from T tables to RDB tables
RDB2	RDB2 Deficiency	rchaof_bj_100_01	Load Reporting Tables Deficiency	No	No	Yes	Common	This process transfers the account deficiency data from T tables to RDB tables
RDB2	RDB2 Contracts	rcocon_bj_100_01	Load Reporting Tables Contracts	Yes	Yes	No	Common	This process transfers the account contract data from T tables to RDB tables
RDB2	RDB2 Contracts (Derived Fields)	rcodrv_bj_100_01	Update Reporting Tables Contracts (Derived Fields)	Yes	Yes	No	Common	This process updates the codes with description for account contract RDB tables
RDB2	RDB2 Repossessions	rfoafr_bj_100_01	Load Reporting Tables Repossessions	No	No	Yes	Common	This process transfers the account repossession data from T tables to RDB tables

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
RDB2	RDB2 Producers (Derived Fields)	rprdrv_bj_100_01	Update Reporting Tables Producers (Derived Fields)	No	Yes	No	Common	This process updates the codes with description for producer and producer transactions RDB tables
RDB2	RDB2 Producers	rprpro_bj_100_01	Load Reporting Tables Producers	No	Yes	No	Common	This process transfers the producer and producer transactions data from T tables to RDB tables
RDB2	RDB2 Setup	rststp_bj_100_01	Load Reporting Tables Setup	Yes	Yes	Yes	Common	This process transfers the setup data from T tables to RDB tables
RDB2	RDB2 Txns	rtxdrv_bj_100_01	Load Reporting Tables Txns	No	Yes	Yes	Common	This process transfers the account transaction data from T tables to RDB tables

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
RDB2	RDB2 Txns (Derived Fields)	rttxn_bj_100_01	Update Reporting Tables Txns (Derived Fields)	No	Yes	Yes	Common	This process updates the codes with description for account transactions RDB tables
SEC	Pool Summary	ssmprc_bj_100_01	POOL SUMMARY TABLE POPULATION	No	Yes	No	Common	This process populates summary tables for all pools
SETOVR	OVERPAYMENT REALLOCATIONS	PFSTXN_OVR_BJ_100_01	OVERPAYMENT REALLOCATIONS	No	Yes	No	Common	This process handles the overpayments/overages existing on an account
TPE	Earning/Amortization	tamprc_bj_100_01	AMORTIZATION TRANSACTIONS PROCESSING	No	Yes	No	Common	This process creates the monthend interest accrual transactions on monthend .
TPE	Earning/Amortization	tamprc_bj_111_01	MONTH END AMORTIZATION TRANSACTIONS	No	Yes	No	Loan	This process creates the monthend interest accrual transactions on monthend .

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originati on	Servicing	Collectio n	Product	Comment
TPE	Escrow Non Monetary Transactions	tenbmt_bj_100_01	Escrow Non Monetary Batch Transactions	No	Yes	Yes	Common	This process posts escrow non monetary transactions in the background at the specified time interval.
TPE	Escrow Analysis & Disbursements	tesanl_bj_100_01	Escrow Analysis Posting	No	Yes	No	Common	This process posts all approved escrow analysis to the account
TPE	Escrow Analysis & Disbursements	tesanl_bj_100_02	Create batches for Customer Refund Requests	No	Yes	No	Common	This process creates company branch wise batches for customer refund requests.
TPE	Escrow Analysis & Disbursements	tesanl_bj_100_03	Create Transaction of Customer Refund Requests	No	Yes	No	Common	This process populate customer refund request in respective batch created above
TPE	Escrow Analysis & Disbursements	tesanl_bj_100_04	Compute control totals for customer refund request batches	No	Yes	No	Common	This process populates control totals for the bathes created for customer refund requests.

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
TPE	Escrow Analysis & Disbursements	tesanl_bj_100_05	Escrow compliance checking	No	Yes	No	Common	This process checks escrowable account for compliance
TPE	Escrow Analysis & Disbursements	tesdsb_bj_100_05	Escrow disbursement posting & requisition creation	No	Yes	No	Common	This process posts processed escrow disbursement and creates requisitions.
TPE	Non Monetary Transactions	tnmbmt_bj_100_01	NON MONETARY TRANSACTIONS POSTING	No	Yes	Yes	Common	This process posts non monetary transactions in the background at the specified time interval.
TPE	Compensation	tprcom_bj_111_01	Compensation	No	Yes	No	Loan	This process creates transaction for month-end producer compensation
TPE	Statement	tprpsg_bj_111_01	Producer Statement	No	Yes	No	Loan	This process creates the monthend interest accrual transactions on monthend.

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
TPE	Monetary Transactions	txnacrbj_100_01	INTEREST ACCRUAL AND DELINQUENCY PROCESSING	No	Yes	No	Common	This process posts any payment batches open in the system. This process can be set to run periodically.
TPE	Monetary Transactions	txnactbj_100_01	ACCOUNT ACTIVATION	No	Yes	No	Common	This job activates new accounts i.e. changes status from PENDING to ACTIVE.
TPE	Monetary Transactions	txnadvbj_112_01	Advance Posting	No	Yes	No	Line	This process posts any advance batches open in the system. This process can be set to run periodically.
TPE	Monetary Transactions	txnannbj_100_01	ANNIVERSARY PROCESSING	No	Yes	No	Common	This process carries out the anniversary processing for eligible accounts

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
TPE	Monetary Transactions	txnbmt_bj_100_01	MONETARY TRANSACTIONS POSTING	No	Yes	No	Common	This process posts monetary transactions in the background at the specified time interval.
TPE	Monetary Transactions	txnchg_bj_100_01	Chargeoff Processing	No	Yes	No	Common	This process charges off eligible or scheduled for chargeoff accounts.
TPE	Monetary Transactions	txnchg_bj_100_03	Chargeoff reversal	No	Yes	No	Common	On posting charge off reversal transaction, this process moves the remaining expense and fee from charge off balance to active balance.
TPE	Monetary Transactions	txncs_bj_100_01	VOID/PAID ACCOUNT CLOSE PROCESSING	No	Yes	No	Common	This process closes void and paid off accounts.

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
TPE	Monetary Transactions	txnddt_bj_100_01	BILLING/DUE DATES PROCESSING	No	Yes	No	Common	This process creates/updates the due dates for the accounts in the system.  In addition, this process can also do Asset Billing using asset parameters defined for <b>Home</b> collateral. For more details, refer to <a href="#">Asset Billing Rate</a> section.
TPE	Monetary Transactions	txnfpr_bj_100_01	FIRST PMT DEDUCTION PROCESSING	No	Yes	No	Common	This process posts the first payment deduction payment to the eligible accounts.
TPE	Monetary Transactions	txnfpr_bj_111_01	FIRST PMT REFUND PROCESSING	No	Yes	No	Loan	This process posts the first payment deduction payment to the eligible accounts.

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
TPE	Monetary Transactions	txnltc_bj_100_01	LATE CHARGE PROCESSING	No	Yes	No	Common	This process assesses late charge depending on the rules, for all accounts in the system.
TPE	Monetary Transactions	txnmtd_bj_100_01	MONTH END PROCESSING	No	Yes	No	Common	This process populates the month end balances and carries over the balances to next month.
TPE	Monetary Transactions	txnpmt_bj_100_01	Payment Posting	No	Yes	No	Common	This process does the daily accrual and delinquency processing.
TPE	Monetary Transactions	txnprm_bj_100_01	PROMOTION END PROCESSING	No	Yes	No	Common	This process <b>ends</b> the promotion on the account.
TPE	Monetary Transactions	txnprm_bj_100_03	TLP PROMOTION CANCEL PROCESSING	No	Yes	No	Common	This process <b>cancels</b> the promotion on the account.
TPE	Monetary Transactions	txnrat_bj_100_01	RATE CHANGE PROCESSING	No	Yes	No	Common	This process changes the prevalent rate on an account.

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
TPE	Monetary Transactions	txnsch_bj_100_01	SCHEDULE FOR CHARGE OFF PROCESSING	No	Yes	No	Common	This process puts the <b>Schedule for Charge Off</b> condition on eligible accounts.
TPE	Monetary Transactions	txntip_bj_100_01	TERMINATION PROCESSING	No	Yes	No	Common	This process puts the <b>Paid</b> status on eligible accounts
TPE	Monetary Transactions	txnytd_bj_100_01	YEAR END PROCESSING	No	Yes	No	Common	This process populates the year end balances and carries over the balances to next year.
TPE	Usage Charge Processing	TXNUSG_BJ_100_01	Billing Batch job to process and post lease usage/ rental fees on account	No	Yes	Yes	Common	This process is used to derive the billing amount to be charged for Lease Usage/ Rental based asset for consumed units calculated by the applicable charge matrix.

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
TPE	MOCK BILLING/DUE DATES PROCESSING	TXNMDT_BJ_100_01	MOCK BILLING/DUE DATES PROCESSING	Yes	Yes	Yes	Common	This process generates the future dues/balances based on the parameters defined in the criteria. This batch job is a prerequisite run for the mock statements to get generated.
TPE	CAPITALIZATION PROCESSING	TXNCPT_BJ_100_01	CAPITALIZATION PROCESSING	Yes	Yes	Yes	Common	This process is used to capitalize the balance on all qualified accounts and is configured to run after running the billing batch job.

Table 2-61 (Cont.) Batch Jobs Available

Engine Type	Description	Batch Job	Description	Originator	Servicing	Collection	Product	Comment
TPE	POST MATURITY EVERGREEN TRANSACTION PROCESSING	TXNEGC_BJ_121_01	POST MATURITY EVERGREEN TRANSACTION PROCESSING		Yes			This process is used to pick-up accounts matching the criteria for evergreen renewal, waits for maturity date based on grace days and posts Evergreen Lease transaction.
TPE	CYCLE BASED COLLECTION LATE FEE PROCESSING	TXNCBC_BJ_100_01	CYCLE BASED COLLECTION LATE FEE PROCESSING	Yes	Yes	Yes	Common	This process facilitates to calculate <b>Cycle based Collection Late Fee</b> at account level and update the balances.
TPE	CYCLE BASED LATE FEE PROCESSING	TXNCBL_BJ_100_01	CYCLE BASED LATE FEE PROCESSING	Yes	Yes	Yes	Common	This process facilitates to calculate <b>Cycle Based Late Fee</b> at account level and update the balances.

SET-PUR	ARCHIVE PURGE JOB SET	POMOBM_BJ_100_02	ARCHIVING OUTBOUND MESSAGES TABLES	Yes	Yes	Yes	Common	This process archives data in 'o' outbound messages tables based on the days defined in system parameter POM_ORCHIVE_DAYS.

## 2.13 Producer Cycles

The Producer setup screen enables you to define the dealer or producer status cycle. This tells the system which status a producer can cycle through. (This information is recorded in the Status field on the Producers section of the Producer setup screen.

For example,

Figure 2-34 Producer Cycle

The Producer Setup screen also defines the user responsibilities capable of changing the producer status.

**Note**

The system enables only producers/dealers with a status of ACTIVE to fund contracts.

**To set up Producer Cycles**

- 1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > System > Producer Cycles**.
- 2. The system displays the Producer Cycles screen. The producer cycle screen contains three section:
  - Cycle Definition
  - Current/Next Status
  - Status Change Responsibilities

**Figure 2-35    Producer Cycles**

- 3. In the **Cycle Definitions** section, you can view the following information.

**Table 2-62    Cycle Definitions**

Field	View This
Cycle	Displays the cycle name.
Type	Displays the cycle type.

- 4. In the **Cycle/Next Status** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 2-63 Cycle/Next Status**

Field	Do this
Current Code	Select the current code from which you need to perform transition, from the drop-down list.
Next Code	Select the code to which you need to perform transition, from the drop-down list.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
6. In the **Status Change Responsibilities** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 2-64 Status Change Responsibilities**

Field	Do this
Responsibility Code	Select the responsibility that will be capable of executing this transition, from the drop-down list.
Allowed Indicator	Check this box to enable the responsibility to execute the transition.

## 2.14 Vendors

During the life of an account, a financial institution might require the use of specialized services of a vendor for various purposes; for example, repossessing a vehicle, retaining an attorney for bankruptcy court proceedings, or making field calls. With the system's Vendors screen, you can define the following:

- [Cycles Tab](#)
- [Vendor Services Tab](#)
- [Vendor Fees Tab](#)
- [Invoice Rules tab](#)

### 2.14.1 Cycles Tab

The Cycle link allows you to define the various vendor cycles and the responsibilities that can gain access to the various transactions in each cycle. The different categories are:

- You can define vendor status cycle and restrict the status change based on responsibility.

**Figure 2-36 Vendor Status Cycle**

- You can define vendor invoice status cycle and restrict the status change based on responsibility.

Figure 2-37 Vendor invoice status cycle

- You can define vendor assignment status cycle and restrict the status change based on responsibility.

Figure 2-38 Vendor assignment status cycle

- You can define vendor invoice payment status cycle and restrict the status change based on responsibility.

Figure 2-39 Vendor invoice payment status cycle

### To set up the vendor cycles

- Click **Setup > Setup > Administration > System > Vendors > Cycles**. The screen contains three sections:
  - Status Cycle
  - Current/Next Status
  - Status Change Responsibilities

Figure 2-40 Vendor cycles

2. In the **Status Cycle** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields are given below:

**Table 2-65 Status Cycle**

Field	View this
Cycle	Specify the status cycle for the vendor.
Type	Displays the type of vendor assignment status cycle.
Order Type	Select the work order type for the vendor from the drop-down list.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Current/Next Status** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 2-66 Vendor cycles**

Field	Do this
Current Code	Select the current code from which you need to transition, from the drop-down list
Next Code	Select the Next status code to which you need to transition, from the drop-down list
Action Code	Select the call activity action code from the drop down list.
Result Code	Depending on the call activity action code, you can select the result code from the drop down list.

**Note**

When there is a change in status from **Current** to **Next**, system posts respective call activity on the account based on selected Action and Result code.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
6. In the **Status Change Responsibilities** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter:  
A brief description of the fields is given below:

**Table 2-67 Status Change Responsibilities**

Field	Do this
Allowed	Select <b>Yes</b> to enable the responsibility to execute the transition and <b>No</b> to disable
Responsibility	Select the responsibility that will be capable of executing this transition (from current code to the next code), from the drop-down list.

7. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.14.2 Vendor Services Tab

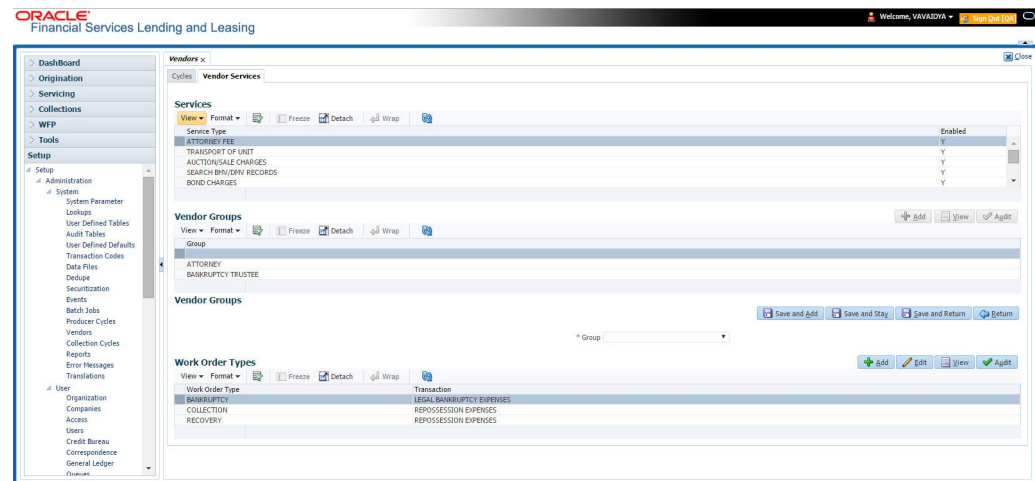

The Vendor Service screen enables you to establish the links between the service type, vendor group, and the work order type. It records which vendor groups can provide which type of services and which service type belongs to which work order types.

For each service type (Service Type field), there can be multiple vendor groups and/or multiple work order type(s). Each vendor (Group field) can belong to one or multiple vendor group(s).

1. Click **Setup > Setup > Administration > System > Vendors > Vendor Services**. The screen contains three sections:

- Services
- Vendor Groups
- Work Order Types

**Figure 2-41 Vendor Services**

2. In the **Services** section, you can view the following information:

**Table 2-68 Services**

Field	View this
Service Type	Displays the service type.
Enabled	Displays if the service is enabled or not.

3. In the **Vendor Groups** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 2-69 Vendor Groups**

Field	Do this
Group	Select the vendor group from the drop-down list.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

- In the **Work Order Types** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter:  
A brief description of the fields is given below:

**Table 2-70 Work Order Types**

Field	Do this
Work Order Type	Select the work order type from the drop-down list.
Transaction	Select the associated transaction for the service type from the drop-down list.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.14.3 Vendor Fees Tab

The Vendor Fees tab allows you to define fee structure (with specific amount) for each service offered by specific vendor. The defined fees is auto populated as the estimated cost of the assignment when a specific vendor and service is selected during work order creation.

### To define vendor fees

- Click **Setup > Setup > Administration > System > Vendors > Vendor Fees**. The screen consists of Vendor Service Fee Definition section with option to define vendor fees.

**Figure 2-42 Vendor Fees**

The screenshot displays the Oracle Financial Services Lending and Leasing application interface. The top navigation bar includes the Oracle logo, the text 'Financial Services Lending and Leasing', and a user profile 'Welcome, ABSHEKAR' with a 'Sign Out' button. The left sidebar contains a navigation menu with categories like Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. The 'Setup' category is expanded, showing a tree view with 'System' selected. The main content area is titled 'Vendors' and has tabs for 'Cycles', 'Vendor Services', and 'Vendor Fees'. The 'Vendor Fees' tab is active, showing the 'Vendor Service Fee Definition' section. This section includes a table with columns: Start Dt, End Dt, Enabled, Amt, Vendor Group, Vendor, Services, and C. The table contains four rows of fee definitions. Below the table, there are buttons for 'Save and Add', 'Save and Stay', 'Save and Return', and 'Return'. A 'Selection Criteria' section is also visible, containing fields for 'Start Dt' (08/05/2016), 'End Dt' (12/31/4000), 'Enabled' (checked), 'Amt' (0.00), 'Vendor Group' (ALL), 'Vendor' (empty), 'Services' (empty), 'Company' (ALL), 'Branch' (ALL), 'Vendor Channel' (ALL), and 'State' (ALL).

Start Dt	End Dt	Enabled	Amt	Vendor Group	Vendor	Services	C
08/05/2016	12/31/4000	Y	0.00				
01/01/2000	12/31/4000	Y	10.00	ATTORNEY	PA-02001-MAC VENDOR	ATTORNEY FEE	U
08/01/2016	12/31/4000	Y	7.00	ATTORNEY	PR-03002-TEST_VENDOR	ATTORNEY FEE	U
01/01/2000	12/31/4000	Y	9.00	REPO AGENCY	ALL	REPOSESSION	A
08/04/2000	12/31/4000	Y	200.00	ATTORNEY	ALL	ATTORNEY FEE	A

- In the **Vendor Service Fee Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 2-71 Vendor Service Fee Definition**

Field	Do this
Start Dt	System defaults the current date as the start date. You can modify the same to a future date using the adjoining calendar.
End Dt	Specify the end date from the adjoining Calendar.
Enabled	Select the check box to enable the fee structure.
Amt	Specify the amount charged by the vendor for a specific service.
<b>Selection Criteria</b>	
Vendor Group	Select the vendor group from the drop-down list. You can also select <b>ALL</b> (default option) if the fee structure is applicable across vendor groups.
Vendor	Select the vendor from the drop-down list. You can also select <b>ALL</b> if you have selected the <b>Vendor Group</b> as <b>ALL</b> . The list is sorted depending on the vendor group selected.
Services	Select the service from the drop-down list. The list is sorted depending on the services offered by the selected Vendor.
Company	System defaults this value based on the vendor selected. You can also select the required company from the drop-down list.
Branch	System defaults this value based on the vendor selected. You can also select the required branch from the drop-down list.
Vendor Channel	System defaults this value based on the vendor selected. You can also select the required vendor channel from the drop-down list.
State	System defaults the state in which the vendor operates. You can also select the state from the drop-down list.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.14.4 Invoice Rules tab

The Invoice Rules tab allows you to define state specific rules with a combination of service and work order status. This helps to decide if a particular service fees in a work order is **Collectable or Not** from the customer.

When the same combination of service, work order status and state is detected during auto invoice validation, the **Collectible** check box in Vendors > Invoice tab > Invoice Details section is selected. Further, the collectible amount is posted as an expense on the customer account.

### To define invoice rules

1. Click **Setup > Setup > Administration > System > Vendors > Invoice Rules**.
2. In the **Invoice Rules** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 2-72 Invoice Rules**

Field	Do this
Service	Select the service from the drop-down list. The list consists of services offered by Vendors which can be associated with a work order.
Work Order Status	Select the work order status from the drop-down list.
Close Reason	Select the close reason from the drop-down list. This field is enabled only if the work order status is selected as <b>CLOSE</b> .
State	Select the state from the drop-down list. The selection here indicates that the state rules allow to collect the service fee for selected service from the customer.
Enabled	Select the check box to enable the invoice rule.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.15 Collection Cycles

The Collection Cycles screen allows you to setup the collection workflow cycles.

### To set up collection cycles

1. Click **Setup > Setup > Administration > System > Collection Cycles** link. The system displays the Collection Cycles screen. The details are grouped into two:
  - Status Cycle
  - Current/Next Status
  - Status Change Responsibilities

Figure 2-43 Collection Cycles

In the Collection Cycles section, you can view the following details:

Table 2-73 Collection Cycles

Field	Do this
Cycle	The system displays the status cycle.
Type	The system displays the type of status cycle.

- 2. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
- 3. In the **Current/Next Status** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

Table 2-74 Current/Next Status

Field	Do this
Current Code	Select the current code from the drop-down list.
Next Code	Select the next code from the drop-down list.

- 4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
- 5. In the **Status Change Responsibilities** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Table 2-75 Status Change Responsibilities**

Field	Do this
Responsibility	Select the responsibility from the drop-down list.
Allowed Ind	Check this box to allow a record

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.16 Reports

The Reports screen allows you to setup reports in the system.

### To set up the Reports

1. Click **Setup > Setup > Administration > System > Reports** link. The system displays the Report screen. The details are grouped into two:
  - Reports
  - Report Parameters
2. In the **Reports** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 2-44 Reports**

The screenshot displays the Oracle Financial Services Lending and Leasing Reports screen. The interface includes a navigation pane on the left with options like Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. The main area is titled 'Reports' and contains a table with the following data:

Code	Description	Package	Module	System Defined	Enabled
ACCESS_BY_RESPONSIBILITY	ACCESS BY RESPONSIBILITY	OUNRAC_EM_100_01	ORIGINATION	<input type="radio"/> Yes <input checked="" type="radio"/> No	N
ACCOUNT_WISE_PDC	ACCOUNT WISE PDC LIST	OCSPOC_EM_100_03	SERVICING	<input checked="" type="radio"/> Yes <input type="radio"/> No	Y
ACC_LIST_LEASE	ACCOUNTS AND LISTING - LEASE	OCSACC_EM_121_01	COLLECTIONS	<input checked="" type="radio"/> Yes <input type="radio"/> No	Y
ACC_LIST_LINE	ACCOUNTS AND LISTING - LINE	OCSACC_EM_112_01	COLLECTIONS	<input checked="" type="radio"/> Yes <input type="radio"/> No	Y

Below the table, there are sections for 'Reports' and 'Report Parameters'. The 'Reports' section includes fields for Code, Description, Package, and Module, along with System Defined and Enabled checkboxes. The 'Report Parameters' section includes a table with columns: Parameter, Description, Parameter Type, Parameter Sub Type, Default, Sort, and Enabled.

A brief description of the fields is given below:

**Table 2-76 Reports**

Field	Do this
Code	Specify the code of the report.
Description	Specify the description of the report.
Package	Specify the package.
Module	Select the code of the report from the drop-down list.
System Defined Yes/ No	Select <b>Yes</b> , if you wish to maintain the Report as system defined and <b>No</b> , if you do not want to maintain it as system defined. System defined entries cannot be modified. If the entry is not system defined, then it can be modified.
Enabled	Check this box to enable the report definition.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Report Parameters** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 2-77 Report Parameters**

Field	Do this
Parameter	Specify the parameter code of the report.
Description	Specify the description of the parameter.
Parameter Type	Select the parameter type of the report from the drop-down list.
Parameter Sub Type	Select the parameter sub type of the report from the drop-down list.
Default	Specify the default value for the report parameter (value to initially populate, or used if no value is supplied) (optional).
Sort	Specify the sort order for the look up code. This determines the order these report parameters are displayed or processed.
Enabled	Check this box to enable the report definition.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.17 Error Messages

In the Error Messages Setup screen, you can translate or modify the text of error messages. the system displays all messages as they appear to the system users in the Error Message section's Message field.

New messages created with the Error Messages screen can then be translated with the **Setup > Setup > Administration > System > Translation > Message Translation** screen.

### To set up the Error Messages Setup screen

1. Click **Setup > Setup > Administration > System > Error Messages**. The system displays the Error Message screen.

- On the **Error Messages Setup** screen's **Error Type** section, use the **Error Type** field to select the error type. These are the categories of error messages available for creating or editing.
- The error messages associated with the error type you selected appear in the Error Message section.
- In the **Error Messages** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 2-45 Error Messages

The screenshot displays the Oracle Financial Services Lending and Leasing interface. The left sidebar contains navigation options: Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. The Setup menu is expanded, showing options like Administration, System Parameters, Lookups, User Defined Tables, Audit Tables, User Defined Definitions, Transaction Codes, Data Files, Dedupe, Securitization, Events, Batch Jobs, Producer Cycles, Vendors, Collection Cycles, Reports, Error Messages, and Translations. The main window is titled 'Error Messages' and contains two sections. The top section, 'Error Message', shows a list of error types: SERVER MESSAGE, CLIENT ERROR, CLIENT MESSAGE, CLIENT QUESTION, and SERVER ERROR. The bottom section, 'Error Message', displays a table of error messages with columns: Region, Country, Customer #, Engine, Error Code, Error Message, System Defined, and Enabled. Below the table are input fields for creating or editing an error message, including fields for Region, Country, Customer #, Engine, Error Code, System Defined (Yes/No), and Error Message.

Region	Country	Customer #	Engine	Error Code	Error Message	System Defined	Enabled
UNDEFINED	UNDEFINED	UNDEFINED	UNDEFINED	UNDEFINED			
SYS	SYS	SYS	TXN	000001	Transaction Locked, Transaction Posting Failed	<input type="radio"/> Yes <input checked="" type="radio"/> No	N
SYS	SYS	SYS	TXN	000002	***** Transaction Posting Successful *****	<input type="radio"/> Yes <input checked="" type="radio"/> No	Y
SYS	SYS	SYS	TXN	000003	Transaction Posting will occur on Txn Dt	<input type="radio"/> Yes <input checked="" type="radio"/> No	Y
SYS	SYS	SYS	TXN	000004	Invalid Account Number - ~ACC_NBR~, Transaction Posting Failed	<input type="radio"/> Yes <input checked="" type="radio"/> No	Y
SYS	SYS	SYS	TXN	000005	Transaction Posting Failed	<input type="radio"/> Yes <input checked="" type="radio"/> No	Y
SYS	SYS	SYS	TNM	000006	Transaction Locked, Transaction Posting Failed	<input type="radio"/> Yes <input checked="" type="radio"/> No	Y
SYS	SYS	SYS	TNM	000007	***** Transaction Posting Successful *****	<input type="radio"/> Yes <input checked="" type="radio"/> No	Y
SYS	SYS	SYS	TNM	000008	Transaction Posting will occur on Txn Dt	<input type="radio"/> Yes <input checked="" type="radio"/> No	Y
SYS	SYS	SYS	TNM	000009	Invalid Account Number - ~ACC_NBR~, Transaction Posting Failed	<input type="radio"/> Yes <input checked="" type="radio"/> No	Y

A brief description of the fields is given below:

Table 2-78 Error Messages

Field	Do this
Region	Specify the region code.
Country	Specify the country code.
Customer	Specify the customer code.
Engine	Specify the engine code.
Error Code	Specify the error code.
System Defined	Displays whether the record is system defined or not.
Enabled	Check this box to enable the data error message.
Error Message	Specify the error message.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.18 Translation

You can setup translation properties.

### Navigating to Translation

1. Click **Setup > Setup > Administration > System > Translation**. The system displays the Translation screen.
2. In this screen you can Setup Translation and Translate Error Messages in the following tabs:
  - [Setup Translation](#)
  - [Message Translation Setup](#)

### 2.18.1 Setup Translation

In the Setup Translation tab, you can translate the contents of a predefined list of setup description fields into a different language.

After you translate an entry in the Translation Data section, the system adds the new data to the setup form.

#### To set up the Translation Setup

1. Click **Setup > Setup > Administration > System > Translation > Setup Translation**.
2. In the **Language** section, you can select the language for which you need to setup the translation.

Figure 2-46 Translation Setup

The screenshot displays the Oracle Financial Services Lending and Leasing 'Translations' setup screen. The interface includes a left-hand navigation menu with options like Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. The main area is titled 'Translations' and contains two primary sections: 'Source Type' and 'Translation Data'.

The 'Source Type' section features a dropdown menu with the following options: ASSIGNMENTS, ASSET TYPES, AUDIT TABLES, AUDIT TABLE COLUMNS, and CALL ACTION TYPES. Below this, the 'Translation Data' section contains a table with the following columns: Key 1, Key 2, Key 3, Key 4, Key 5, Key 6, System Defined, Enabled, Desc 1, and Translated. The table lists various setup items, including '30-DAY DELQ', 'AGED\_APP\_QUEUE', 'AJK', 'APPROVED\_APP...', 'B-1', 'BKRP\_CH\_13', 'BKRP\_CH\_7', 'C1', 'CONTRACT\_QUEUE', 'DATA\_ENTRY\_QUEUE', 'DEF', 'DELQ\_DAYS\_0\_30', and 'DELQ\_DAYS\_30+'. Each row in the table has radio buttons for 'System Defined' and 'Enabled' status, and a 'Translated' column with a radio button.

At the bottom of the screen, there is a 'Translation Data' section showing details for 'Key 1: 30-DAY DELQ'. It includes a 'System Defined' status of 'Yes' and a list of translations for 'Desc 1: 30 DAYS DELQ ACCOUNTS', 'Desc 2: 30 DAYS DELQ ACCOUNTS', 'Desc 3: 30 DAYS DELQ ACCOUNTS', and 'Desc 4: 30 DAYS DELQ ACCOUNTS'. A 'Return' button is located at the bottom right of this section.

**Note**

For more information, refer Language setup at the end of this chapter.

3. In the **Source Type** section, you can select the source (or location in the system) of the item you want to translate.
4. Click **Populate All** in the **Source Type** section and the system loads the setup data descriptions in the Translation section screen for the selected source type.  
If you have new entries and are unsure as to which setup items have been updated since the last translation, click **Populate All**, the system loads the additional data for all items with no impact to the previously translated data for any of the entries.
5. In the **Translation Data** section, Select:
  - **All** – to view all the records (both translated and un-translated) in the Translation Data section.
  - **Translated** – to view all the translated records in the Translation Data section.
  - **Un Translated** – to view all the un-translated records in the Translation Data section.
6. In the **Translation Data** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Note**

You cannot add a new record.

A brief description of the fields is given below:

**Table 2-79 Translation Data**

Field	Do this
Key 1	Displays the first reference key value.
Key 2	Displays the second reference key value.
Key 3	Displays the third reference key value.
Key 4	Displays the fourth reference key value.
Key 5	Displays the fifth reference key value.
Key 6	Displays the sixth reference key value.
System Defined	Select <b>Yes</b> , if you wish to maintain the data as system defined and <b>No</b> , if you do not want to maintain it as system defined.
Enabled	Check this box to indicate that the record is active.
Desc 1 Translation 1	Specify the first translated description.
Desc 2 Translation 2	Specify the second translated description.
Desc 3 Translation 3	Specify the third translated description.
Desc 4 Translation 4	Specify the fourth translated description.

7. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.18.2 Message Translation Setup

In the Message Translation tab, you can translate the contents of a predefined list of error messages into a different language.

After you translate an entry in the Error Message section, the system adds the new data to the error message.

### To set up the Message Translation Setup

1. Click **Setup > Setup > Administration > System > Translation > Message Translation**.
2. In the **Language** section, you can select the language for which the translation needs to be done.

**Figure 2-47 Message Translation Setup**

English Translation	Specify the English translated description.

7. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### Language setup

On the Lookup master tab's Lookup Types screen, you can add other languages to the TRD\_LANGUAGE\_CD lookup type and perform translations for those languages.

However, translated data only appears in one language, which is defined by the User Language parameter. This parameter can be defined in the system configuration file, typically named `DBKWEB.CFG`, which defines the parameter as:

Parameter: otherparams=ORA\_USER=<schema\_name> USR\_LANG=<native language>

**Note**

<native language> should match lookup codes in the TRD\_LANGUAGE\_CD lookup type on the Administration form's Lookups screen.

The system supports the following pre-defined list of setup items for translation:

1. Asset Sub Types
2. Asset Types

3. Assignments
4. Audit Table Columns
5. Audit Tables
6. Call Action Result Types
7. Call Action Types
8. Checklist Action Types
9. Checklist Types
10. Commission Plans
11. Companies
12. Company Branch Departments
13. Company Branches
14. Compensation Plans

## 2.19 Label Configuration

The Label Configuration screen facilitates for field label customizations to modify the default field's label which are provided as part of seed data during product installation / upgrade. Using this screen, you can modify the field's User Defined Label, update Tool tip, set Default Value (if required), set display (Y/N) option and enable / disable the field. The changes done here are populated to respective screen in the application.

### Note

- Label configuration is controlled by the value defined for system parameter `UIX_CUSTOM_LABEL_ENABLED_IND` and indicates whether configurable option is enabled or not.
- Also the **Update** button in Label Configuration screen is enabled only if `UIX_CUSTOM_LABEL_ENABLED_IND` is set to **Y**.

Field in the UI are categorized into two types:

- Base fields - these are default fields in the UI consisting of both mandatory and non-mandatory fields.
- User Defined Fields - these are additional fields provided in disabled status which can be enabled and customized as required.

Note the following:

- Configuring field details is only an optional functionality and has to be used sensitively.
- Field customizations are to be done cautiously and is recommended to be performed by someone who is well-versed with the product. For example, label change of a particular field is to be done at both **Section** and **Header** block to avoid inconsistency.
- Field customizations are to be performed at your sole discretion and OFSLL is not responsible for any impact/damage/mismatch in the data being represented or resulting out of this change.

The Label Configuration screen displays all the Base and User defined fields provided for the below listed screens and its sub tabs. Apart from base fields, there are additional **User Defined Fields** provided with the below combination in disabled status.

- 10 free text fields - **User Defined Field Char**
- 30 numeric fields - **User Defined Field Num**
- 10 date fields - **User Defined Field Date**

List of screens enabled with the above User Defined Fields for configuration:

- Producer Screen
- Customer Service > Checklists > Checklist Types, Action - Regular sub tab, and Action - Document sub tab.

- Customer Service > Correspondence > Correspondences sub tab, Documents sub tab, and Document Elements sub tab.
- Customer Service > Letters
- Customer Service > Collateral
- Customer Service > Account Details
- Servicing > Collateral Management > Collateral Details
- Conversion Accounts > Account Boarding > Collateral and Account Details sub tab
- Origination > Underwriting > Bureau > Report Header sub tab and all 10 sub tabs

### Note

The corresponding web services are also enhanced to include the User Defined Fields. Refer to swagger web service release documentation available in OTN library ([https:// docs.oracle.com/cd/F22291\\_01/webservice.htm](https://docs.oracle.com/cd/F22291_01/webservice.htm)).

Ensure that the field(s) for which label changes are to be done is enabled in the UI from Access setup screen. For more information, refer to Field Access Definition section.

You can update the field properties for all the user defined fields. For Base -non mandatory fields, you can set the display (Y/N) option, define as mandatory / non mandatory and enable or disable the same in UI.

The below table indicates the supported field update options based on field type.

**Table 2-81 The supported field update options based on field type**

Parameter	Base Field	User Defined Field	Comment
Label change	Allowed to modify	Allowed to modify	
Data Type	Not allowed to modify - Display only	Not allowed to modify - Display only	Default data type supported by the field
Default Value	Allowed to modify	Allowed to modify	No default value
Required	Not allowed to modify	Allowed to modify	
Display (Yes/ No)	Allowed to modify for non-mandatory fields	Allowed to modify for non-mandatory fields	Cannot modify mandatory Base field

The Label Configuration screen displays the field records based on specific combination of **Language** and **Division**. By default the combination is set to **ALL** and can further be filtered by selecting required combination from respective drop-down list.

Note that the Label Configuration done for a specific division (for example US01) is displayed to those users who are mapped to the same division (US01). Else, the default labels defined for **ALL** division is displayed.

After updating the required changes in Label Configuration screen, you need to logout and relogin for changes to appear in respective UI. This is basically to refresh session cache and fetch the updated field information from database server. Though, there is **Update** option, clicking on the same only refreshes the cache and reloads the record.

### To customize Label Configuration

1. Click **Setup > Setup > Administration > System > Label Configuration**.

Figure 2-48 Label Configuration

**Label Configuration**

View: Format: Freeze Detach Wrap Language Division Load Update Edit View Audit

Language	Division	Object Type	Object Name	Field Name	Data Type	User Defined Label	Tooltip	Required	Display (Yes/No)	Enabled
ENGLISH	OD-001	FIELD	UPRPOWIO	PcnUdf2Num	NUMBER	User Defined Field Num 2	Enter the User Defined Field Num 2	N	N	Y

**Label Configuration**

Language: ENG Division: OD-001 Object Type: FIELD Object Name: UPRPOWIO

Field Name: PCNUDF2NUM

\* User Defined Label: User Defined Field Num 2

\* Tooltip: Enter the User Defined Field Num 2

\* Default Value: 0

Required: ☐ Display (Yes/No): ☐ System Required: ☐ Enabled: ☒

Save and Stop Save and Return Return

- To filter the records in Label Configuration section, select the required combination of **Language** and **Division** from the drop-down list and click **Load**.
- Select the required record and click **Edit**. You can also perform any of the [Basic Operations](#) mentioned in Navigation chapter. While looking for a specific field to customize, you might notice multiple records with similar data since one record is populated in section and other on header. Carefully differentiate and select the required record for update.

A brief description of the fields is given below:

Table 2-82 Label Configuration

Field	Do this
Language	View the language category of the field.
Division	View the division category of the field.
Object Type	View the type of object category of the field such as Tab / Field / Button / Header / Sub header.
Object Name	View the object name maintained in database.
Field Name	View the field name maintained in database.
User Defined Label	Specify the field label name to be updated in the UI.
Tooltip	Enter the tooltip indicating the type of value to be populated for the field. The same is displayed on mouse over.
Default Value	Specify the default value to be populated in UI. Based on field type, the default value set to UNDEFINED for varchar, 0 for Number, and system date for Date.
Required	Check this box to mark the field as mandatory for input in UI.

**Table 2-82 (Cont.) Label Configuration**

Field	Do this
Display (Yes /No)	Check this box to display the field in UI. By default, the same checked for Base - non mandatory fields.  <b>Note:</b> Option defined here takes precedence with the display (Y/ N) option selected in Setup > Administration > Access > Screen > Field Access Configuration tab.
System Required	<b>Y</b> indicates the field is system required and other parameters such as Required, Display, and Enabled options are disabled.  <b>N</b> indicates the field is user configurable.
Enabled	Check this box to enable the field and apply the label configuration changes on save.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
5. Click **Update**. System refreshes the cache automatically and fetches the updated field details from database server to display in header section.

## 2.20 Seed Data

Seed data in general is referred to as any data delivered with the standard product installation and is required to be present in the production environment for application to work properly. Seed data basically consists of Table with its associated data that are uploaded into the system through DAT files.

Seed Data screen in Oracle Financial Services Lending and Leasing displays the seed data details maintained in the system along with the updated seed data provided with the latest release or patch installation.

Note that, when you upgrade OFSLL from an existing version to higher version,

- New seed data provided as part of that release is automatically updated into the system.
- Seed data which are modified from previous release to current release needs to be manually accepted and updated into the system.

The modified seed data can have updates on base tables and/or its associated data and the changes can either be updated or skipped depending on the need.

### Navigating to Seed Data screen

1. Click **Setup > Setup > Administration > System > Seed Data**. The system displays the Seed Data screen.
2. On this screen you can do the following:
  - View the factory shipped seed data and update/skip the seed data differences between existing and updated seed data in **Factory Data** tab.
  - View the customized (i.e. changed or configured) seed data as part of implementation in **Current Data** tab.
  - View the differences between Factory data and Current data in **Comparison Data** tab
  - Download all or only the required table specific seed data in **Download Data** tab.

This section consists of the following topics:

- [Factory Data](#)
- [Current Data](#)
- [Comparison Data](#)
- [Download Data](#)

## 2.20.1 Factory Data

The Factory Data tab displays the list of both existing and updated seed data which are provided through release/patch installation. In the Factory Data tab you can select and update only the required seed data changes into the respective seed data tables. During update, you can also skip the seed data changes for later updates (if required).

Accordingly, you can sort the view in Factory Data tab by selecting **Skipped**, **Update** or **All** options to display the list of corresponding seed data.

In the **Patch #** drop-down list, you can further sort the list to display **ALL** the seed data or only the additions or updates available as part of latest patch which has seed data changes.

### To View Factory Data

Click **Setup > Setup > Administration > System > Seed Data > Factory Data** tab.

**Figure 2-49 Seed Data\_Factory**

The **Factory Data** section displays the list of seed data with the following details:

**Table 2-83 Factory Data**

Field	View this
Table	Displays the seed data table name.
Type	Displays the category of seed data as either System or Combination Data.
Key Column	Displays the unique identifier columns.
Key Column Type	Displays the unique identifier column data types.
Other Columns	Displays the non unique identifier column names.

**Table 2-83 (Cont.) Factory Data**

Field	View this
Other Column Types	Displays the non unique identifier column data types.
Count	Displays the total count of updated records in the seed data table.

The **Factory Data Details** section displays the associated data of the selected seed data table along with the following details:

**Table 2-84 Factory Data Details**

Field	View this
Key Column Data	Displays the unique identifier column names.
Other Column Data	Displays the non unique identifier column names.
Patch #	Displays the patch number with which the seed data changes are identified.
Status	<p>Displays the current status of seed data as one of the following:</p> <p><b>INSERT:</b> This status indicates new seed data.</p> <p><b>UPDATE:</b> This status indicates if there are changes in the record when compared to the seed data released in previous patch.</p> <p><b>POSTED:</b> This status indicates that the seed data changes are updated into the main tables and is subsequently updated from previous status - SKIPPED OR UPDATE OR INSERT.</p> <p><b>SKIPPED:</b> This status indicates that the seed data is not updated into the main tables</p> <p><b>DEPRECATED</b> - This status indicates that the seed data is no longer used.</p>

In the **Factory Data** tab, you can click  (refresh) to fetch the latest details and click **View** to display the detailed information of the selected record.

This section consists of the following topic:

- [Update/Skip Seed Data](#)

### 2.20.1.1 Update/Skip Seed Data

The **Update** option in the Factory Data tab allows you to replace the existing seed data with the current update. However, ensure to double check the details before performing **Update** operation since the same can have significant impact on system behaviour.

#### To Update/Skip Data

1. In the **Factory Data** tab, select **Update**. System displays those records which can be updated to the existing seed data tables.
2. Inspect the required record in Factory Data section with the Factory Data Details in subsequent section.

3. Select the required record to be updated by clicking on the adjacent check box. You can also click **Select All** to select all the records.
4. Do one of the following:
  - Click **Update Data**. This action updates the existing seed data with the updated seed data provided as part of the current patch release.
  - Click **Skip Data**. This action skips the seed data changes received as a part of the patch release. The skipped records can be viewed by selecting **Skipped** option in Factory Data tab. However, the same can further be updated into the system, by selecting **Update Data**.
5. Click **Yes** in confirmation dialog to confirm the setup data changes. On successful update, system does the following:
  - When individual records are selected and updated, the same is removed from Factory Data Details section and the **Count** column in Factory Data section is updated with the remaining number of records.
  - In case of Bulk update, the record is removed from Factory Data tab.

## 2.20.2 Current Data

The Current data tab displays the customized seed data which are changed or configured as part of implementation. In the **Current Data** tab, you can click  (refresh) to fetch the latest details and click **View** to display the detailed information of the selected record.

Additionally you can click **Refresh Data** to pull the seed data details from the production system and update the current seed data tables.

### To View Current Data

Click **Setup > Setup > Administration > System > Seed Data > Current Data** tab.

**Figure 2-50 Seed Data\_Current**

The **Current Data** section displays the following details:

**Table 2-85 Current Data**

Field	View this
Table	Displays the current seed data table name.
Type	Displays the category of seed data as either System or Combination Data.
Key Column	Displays the unique identifier columns.
Key Column Type	Displays the unique identifier column data types.
Other Columns	Displays the non unique identifier column names.
Other Column Types	Displays the non unique identifier column data types.
Count	Displays the total count of records in the seed data table.
Last Refreshed Dt	Displays the date and time when seed data for the selected table was last updated in the system.

The subsequent **Current Data Details** section displays the associated data of the selected seed data table along with the following details:

**Table 2-86 Current Data Details**

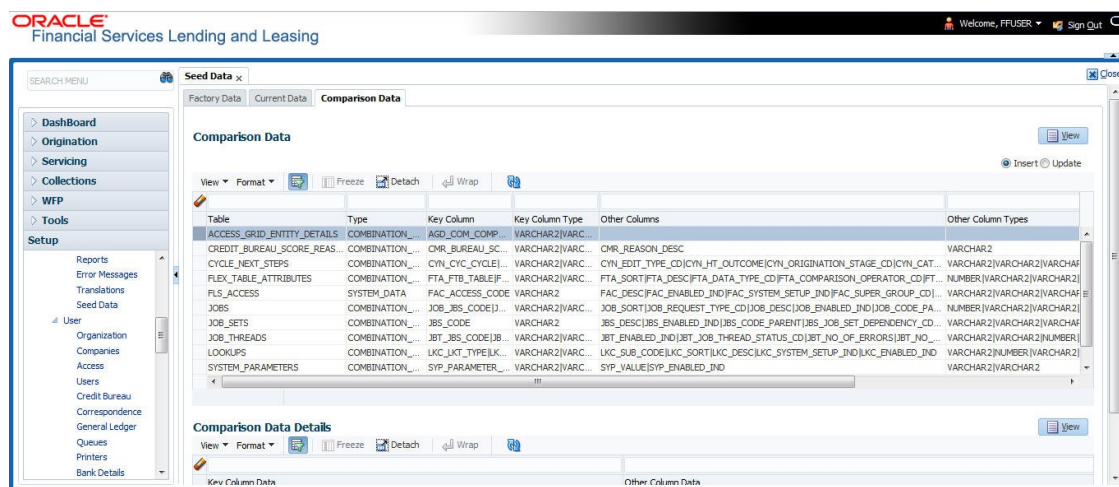

Field	View this
Key Column Data	Displays the unique identifier column names.
Other Column Data	Displays the non unique identifier column names.

## 2.20.3 Comparison Data

The **Comparison Data** tab displays the differences between factory shipped seed data and current customized seed data.

### To View Comparison Data

Click **Setup > Setup > Administration > System > Seed Data > Comparison Data** tab.

**Figure 2-51 Seed Data\_Comparison**

The **Comparison Data** section displays the list of seed data records with the following details:

**Table 2-87 Comparison Data**

Field	View this
Table	Displays the seed data table name to be inserted or updated.
Type	Displays the category of seed data as either System or Combination Data.
Key Column	Displays the unique identifier columns.
Key Column Type	Displays the unique identifier column data types.
Other Columns	Displays the non unique identifier column names.
Other Column Types	Displays the non unique identifier column data types.
Count	Displays the total count of records in the seed data table.

The subsequent **Comparison Data Details** section displays the associated data of the selected seed data table along with the following details:

**Table 2-88 Comparison Data Details**

Field	View this
Key Column Data	Displays the unique identifier column names.
Other Column Data	Displays the non unique identifier column names.
Patch #	Displays the patch release version with which the seed data was inserted/updated.

In the **Comparison Data** tab, you can click  (refresh) to fetch the latest details and click **View** to display the detailed information of the selected record.

## 2.20.4 Download Data

The Download Data tab allows you to download table specific seed data available in the system in .dat format. While migrating from one environment to other, you can use the Download Data tab to download the existing seed data and perform a bulk upload of all/required files.

Similar to other file download process, based on the value defined for the system parameter CMN\_FILE\_PROCESS\_TO\_LOB, the seed data download file can be accessed from the Process Files interface (if value is **Y**) or Database Files system (if value is **N**). For more information on handling Incoming/Outgoing process files, refer to **Dashboard** section in User Guides.

### To Download Data

1. Click **Setup > Setup > Administration > System > Seed Data > Download Data** tab.

Figure 2-52 Seed Data\_Download

The Download Data section displays the list of tables maintained in the system with **Table Name** and **Table Type**. Click  (refresh) to fetch the latest details.

2. Select the check box adjacent to the required table in the list. You can choose **Select All** check box to select all the tables with seed data maintained in the system.
3. Click **Submit For Download** button. System displays an information message in the header indicating that the request has been submitted along with a reference number. The reference number is generated in format - useridDDMMHHMISS# followed by table name with .dat extension. For example, (USER1230603121517#lookups.dat)
4. (Optional) If CMN\_FILE\_PROCESS\_TO\_LOB is set to **Y**, navigate to Dashboard > Process Files screen > Outgoing Process File tab to download the selected seed data file which will be listed with the same reference number. The file can be downloaded to Application server.

## 2.21 Sales Tax

The Sales Tax screen facilitates to define state and county-wise Lease Sales and Usage Tax rules which are used in Origination and Customer Service modules to calculate the taxes on lease asset sales.

For information about this screen, refer to Sales Tax Setup section in Appendix chapter.

For detailed information on how lease sales tax calculation is supported in OFSLL, refer to Lease Sales and Usage Tax Appendix chapter.

## 2.22 Data Masking

Data masking screen in Oracle Financial Services Lending and Leasing facilitates to mask Personally Identifiable Information (PII) displayed in the application to safeguard the sensitive and confidential information while protecting them from offenders.

As part of the product installation, standard set of identified fields (seed data) which is likely to contain either organization / customer PI information are provided for data masking in disabled status. Based on need, the required fields can be enabled and masked for specific user responsibility in the Data Masking screen. Also if there are additional PII fields identified for

masking, the same can be pooled into the system using input file processing method and masked using Data Masking screen.

The data masking process involves the following steps:

- Identify and enable field(s) (seed data) to be masked
- Select user responsibility for whom the data has to be masked
- Execute batch job to create data redaction policy
- Compile the data redaction policy
- (Optional) Process user identified PII data for masking.

The following table indicates the standard pre-defined fields (seed data) identified in respective screens/tabs which can be readily masked using the Data Masking screen.

**Table 2-89 Data Masking**

Tab Name	Field Names
<b>Origination</b>	
Applicant	First Name, MI, Last Name, Family Name, Birth Dt, Nationality, National ID, Visa #, Passport #, License #, Marital status, Mother's maiden name, Passport number, Gender, Language, Dependents, Ethnicity, Disability, Email, Race, and Education.
Applicant > FATCA	Birth Place, Birth Country, and Permanent US Resident Status.
Applicant > Power of Attorney	Holder Name, Address, Country, Nationality, and Telephone Number.
Applicant	Active Military Duty, Military Effective Date, Duty Order Number, and Active Military duty Release date.
Addresses	Country, Postal Address Type, Address #, Street Pre, Street Name, Street Type, Street Post, Apt #, Address 1, Address 2, Address 3, Zip, Zip Extn, City, State, and Phone.
Telecoms	Phone and Extn
Employments	Employer, Country, Address #, Address 1, Address 2, Zip, Zip Extn, City, State, Phone, Extn, Income Amt - Stated, Income Amt - Actual, Salary - Stated, Salary - Actual, and Title.
Applicant > Financials	Type, Source, Account #, and Currency.
Existing Accounts	Account # and Title.
<b>Servicing</b>	
Customer	Name, Birth Dt, Nationality, National ID, Visa #, Passport #, License #, Marital status, Mother's maiden name, Passport #, Language, Disability, Email, and Education.
Customer > FATCA	Birth Place, Birth Country, and Permanent US Resident Status.
Customer > Power of Attorney	Holder Name, Address, Country, Nationality, and Telephone Number.
Customer	Active Military Duty, Military Effective Date, Duty Order Number, and Active Military duty Release date.

**Table 2-89 (Cont.) Data Masking**

Tab Name	Field Names
Addresses	Country, Postal Address Type, Address #, Street Pre, Street Name, Street Type, Street Post, Apt #, Address 1, Address 2, Address 3, Zip, Zip Extn, City, State, Phone, and Address.
Employments	Employer, Country, Address #, Address 1, Address 2, Zip, Zip Extn, City, State, Phone, Extn, and Title.
<b>Assets tab</b>	
Assets	Identification #, Lien Status, Lien Event Date, Second Lien Holder, Comments, Lien Release Entity, and Entity Name.

**Masking Format**

Oracle Financial Services Lending and Leasing supports only complete masking (not partial) of both factory shipped and user identified PII data. On masking, the masked data is presented in same structural format to facilitate internal validations. The below table indicates the default values used for masking fields based on data type:

**Table 2-90 Masking Format**

Data Type	Masking Value
NUMBER	9
VARCHAR	X
DATE	31/12/9999
Phone number	For UI represented format - 000-000-0009 (Masked with 0's and last digit as 9) and for generic, masked as 9999999999
Email	xxxxx.xxx@<domain>.com

**Note**

It is recommended to avoid modifying masked data for user(s) with masked responsibility. However, while editing masked data (if permitted) requires to input full data replacing the masked characters. For example, editing a masked SSN (xxx.xx.xxxx) requires to specify all nine digits of SSN and not just the last four digits.

This section consists of the following topics:

- [Setup Data Masking](#)
- [Create data redaction policy](#)
- [Masking User defined data](#)

## 2.22.1 Setup Data Masking

1. Click **Setup > Administration > System > Data Masking**.
2. Define the parameters available in following tabs.

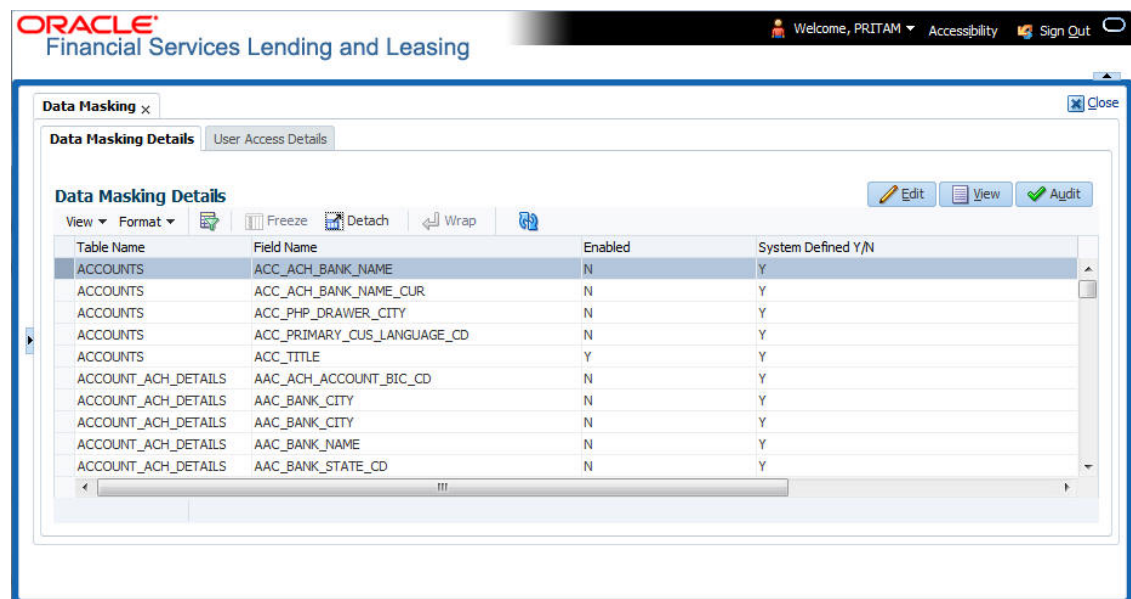

- [Data Masking Details](#)
- [User Access Details](#)

### 2.22.1.1 Data Masking Details

On clicking Data Masking link, the Data Masking Details tab is displayed by default and allows you to enable the required fields for masking.

**Figure 2-53 Data Masking Details**

1. In the Data Masking Details section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields are given below:

**Table 2-91 Data Masking Details**

Field	Do this
Table Name	View the table name which contains the selected field details.
Field Name	View the selected field name.
Enabled	Check this box to enable masking of the selected field.
System Defined	View the type of seed data maintained in the system. <b>Y</b> indicates factory shipped seed data and <b>N</b> indicates user defined seed data.

2. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

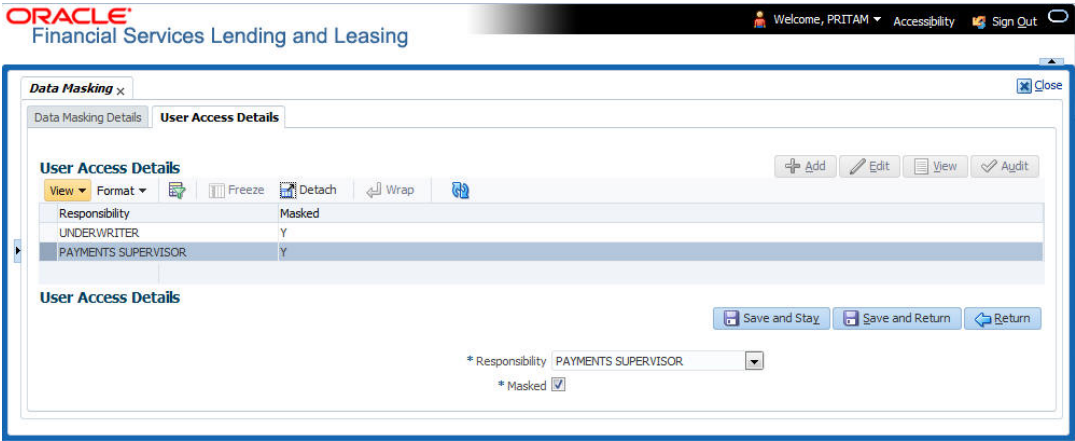

### 2.22.1.2 User Access Details

The User Access Details tab facilitates to define the user responsibility to whom the PII data should be masked. By default, all the selected PII data in Data Masking Details tab appears as masked for one or more user(s) selected in this tab.

1. Click **Setup > Administration > System > Data Masking > User Access Details**.

Figure 2-54 User Access Details

2. In the User Access Details section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields are given below:

Table 2-92 User Access Details

Field	Do this
Responsibility	Select the user responsibility from the drop-down list.
Masked	Check this box to enable masking for the selected user. <b>Note:</b> Defining a user and not selecting the masked check box will only create the record and masking rules are not applied.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 2.22.2 Create data redaction policy

Once the data masking details are defined and stored in the database, you need to create a data redaction policy which facilitates for field level masking while displaying the details to the respective user. A data redaction policy file contains the policies on the columns enabled in the Data Masking Details screen.

#### To create data redaction policy

Click **Setup > Administration > System > Batch Jobs** and execute the following batch job (in single thread mode only):

Table 2-93 Create data redaction policy

Set Code	Description	Job Code
SET-RED	POLICY CREATION FOR PERSONAL IDENTIFIABLE INFORMATION DATA	REDPRC_BJ_100_01

This batch job can either be scheduled for regular run or executed on-demand and facilitates to generate data redaction policy picking only the enabled data masking field information from database. On every run, the batch job drops and re-creates new set of policies in the file based on the details updated in Data Masking Details screen.

The generated policy is either written into CLOB or sql file depending on the following option:

- if the value of system parameter `CMN_FILE_PROCESS_TO_LOB` is set to **Y**, the policy file is generated in CLOB and can be accessed by navigating to Dashboard > Process Files screen. For more information on handling Incoming/Outgoing process files, refer to **Dashboard** section in User Guides.
- If the value of system parameter `CMN_FILE_PROCESS_TO_LOB` is **N**, the policy is generated as an sql file and stored in the repository path as defined in the system parameter - `CMN_SERVER_HOME`. For example, `/scratch/OFSLL/<release>/sql`.

Further, the policy file needs to be manually compiled into database schema to apply the masking rules for respective fields for that particular user. Either a system administrator or any other user having administration privileges needs to compile the policies in the database.

#### ① Note

For every change in the data masking details such as masking additional fields or unmasking / disabling masked fields, a new policy is to be created by executing the batch job.

## 2.22.3 Masking User defined data

Apart from factory shipped seed data, additional user identified PII data can be masked by uploading an input file with field details and processing it in Data Masking screen using input file processing method.

1. On identifying the fields, create an input file (in text file format) with table name, column name, and enabled indicator (Y/N) for each field level record. If enabled indicator is **N**, the record is not processed for data masking.  
For example, `BUSINESS_APPL_DETAILS,BSD_LEGAL_NAME,N`
2. Place the input file to the path as defined in system parameter `IPI_DIRECTORY`. For example, `$OFSLL_HOME/input/ipi`
3. Navigate to **Setup > Administration > System > Batch Jobs** screen and execute the following batch job:

**Table 2-94 Masking User defined data**

Set Code	Description	Job Code
SET-IFP	PI INFORMATION FILE UPLOAD PROCESSING	IPIPRC_BJ_100_01

On execution, the batch job picks the file from the location, processes it and loads the seed data into Data Masking screen. By default, all the user identified PII data from input file is categorized separately in Data Masking screen by assigning the value of **System Defined** property as **N**.

Once the data is available in Data Masking screen, enable the required fields, assign user responsibility and run the processing batch job - `redprc_bj_100_01` to generate a redaction policy. For more details, refer [Create data redaction policy](#) section.

**Note**

In addition, an xml sample file with PII fields data is provided in the installation bundle (docs folder). The same is generated through Application Data Model (ADM) and can be imported to view the details of PII masked fields. However to do so, you need to have Oracle Cloud 13c installed.

## 2.23 Webhook

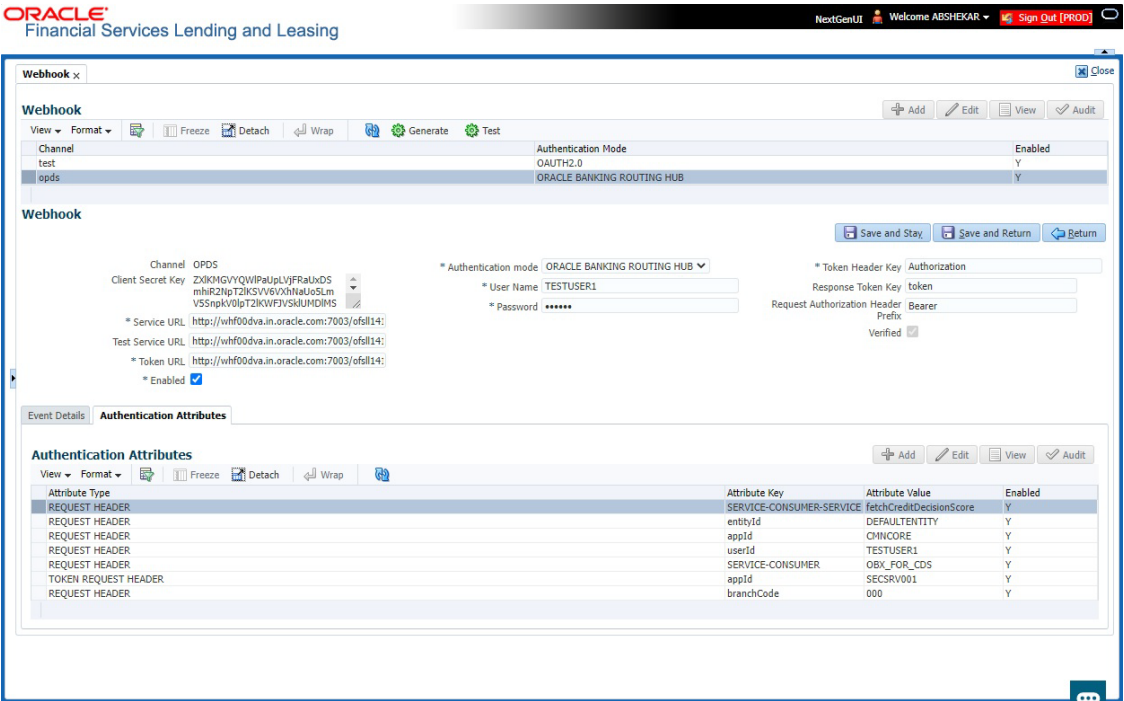

Webhook in OFSLL provides a facility to integrate with third-party external applications by sending REST API based notifications of changes through system generated Webhook event actions.

In the Webhook screen, you can register third-party applications to which you can notify the changes that are done in OFSLL by triggering Webhook request as an event action.

In this type of integration, the server which is OFSLL propagates the information to the dependant third-party applications (client) when a specific type of change has happened in OFSLL. For example, when customer details are updated in OFSLL. For detailed information, refer to [Appendix : Webhooks](#) chapter.

In the Webhook screen, you can maintain Webhook definition details and associate Event Details along with Authentication Attributes.

**Figure 2-55 Webhook**

This section consists of the following topics:

- [Webhook Definition](#)

- [Event Details](#)
- [Authentication Attributes](#)
- [Monitoring Webhook Events](#)

## 2.23.1 Webhook Definition

In a Webhook definition, you can create a Channel with specific third party authentication mode, provide test and service url and generate secret key.

### To setup Webhook Definition

1. Select Setup > Administration > System > Webhook.
2. In the **Webhook** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields are given below:

**Table 2-95 Webhook Definition**

Field	Do this
Channel	Specify the channel name of interfaced third-party application for identification. The same will be added into weblogic Key Store.
Client Secret Key	The client secret key is auto generated by the system on clicking <b>Generate</b> button after defining the details. If already generated, the same can be used to regenerate
Service URL	Specify the context path of third-party application's Webhook Service URL used for communication where POST request is to be provided. You can define multiple service end-point URLs for the same channel.
Test Service URL	Specify the GET web service Webhook URL of third-party application to check service availability.  Click <b>Test</b> button to generate sample test call. The status, either success or error of the test call is displayed on the screen as SERVICE URL TEST SUCCESSFUL/FAILED. Refer step 4 below for more information.
Enabled	Check this box to enable the Webhook definition.

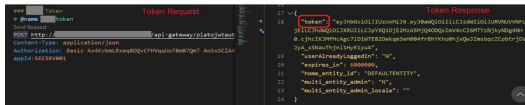

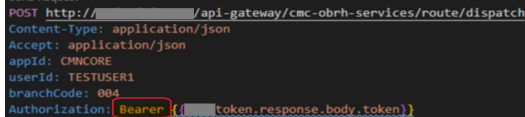

Table 2-95 (Cont.) Webhook Definition

Field	Do this
Authentication mode	<p>Select the authentication mode of third-party application from the drop-down list. The list is displayed based on lookup code WHK_AUTH_MODE_CD. System supports the following options:</p> <p>BASIC - On selecting this option, you need to define User Name and Password to authenticate.</p> <p>OAUTH2.0 - On selecting this option, you need to define additional enabled fields such as Grant Type, Client Id, Client Secret, Identity Domain, Token and Header Key.</p> <p>ORACLE BANKING ROUTING HUB - On selecting this option, you need to define User Name, Password, Token Header Key, Response Token Key, and Request Authorization Header Prefix to authenticate.</p> <p><b>Note:</b> Based on the above selection, additional Webhook definition fields are enabled and need to be populated accordingly.</p>
The following additional fields are available for BASIC type of Authentication mode:	
User Name	Specify the Basic Authentication User Name.
Password	Specify the Basic Authentication User Password.
The following additional fields are enabled for OAUTH2.0 type of Authentication mode:	
Token URL	Specify the third-party OAUTH 2.0 token generation URL.
Grant Type	Select the OAUTH 2.0 grant type from the drop-down list. The list is populated based on lookup code WHK_GRANT_TYPE_CD.
Client Id	Specify the identification name of third-party OAUTH 2.0 client.
Client Secret	Specify the secret code of third-party OAUTH 2.0 client.
Identity Domain	Specify the domain name of the third-party OAUTH 2.0 client.
Token Header Key	Specify the token header key of third-party OAUTH 2.0 client.
Response Token Key	<p>Specify the Response Token Key of third-party OAUTH 2.0 client which is the key name of Authentication Response Header. The same is used to identify token value used as input for subsequent calls.</p> <p><b>Note:</b> If value is not provided, system defaults to access_token.</p>
Request Authorization Header Prefix	<p>Specify the Request Authorization Header Prefix of third-party OAUTH 2.0 client. This is the prefix used to Request Authorization Header based on token generation mechanism like Basic, Bearer, JWT and so on.</p> <p><b>Note:</b> If value is not provided, system defaults to Bearer.</p>

Table 2-95 (Cont.) Webhook Definition

Field	Do this
User Name	If Authentication mode is selected as OAUTH2.0 and Grant Type as <b>Resource Owner Password</b> , specify the third-party OAUTH 2.0 Resource Owner User Name.
Password	If Authentication mode is selected as OAUTH2.0 and Grant Type as <b>Resource Owner Password</b> , specify the third-party OAUTH 2.0 Resource Owner User Password.
The following additional fields are enabled for ORACLE BANKING ROUTING HUB (OBRH) type of Authentication mode:	
User Name	Specify the third-party OBRH Resource Owner User Name.
Password	Specify the third-party OBRH Resource Owner Password.
Token Header Key	Specify the token header key of third-party OBRH client.
Response Token Key	Specify the Response Token Key of third-party OBRH client which is the key name of Authentication Response Header. The same is used to identify token value used as input for subsequent calls.  <b>Note:</b> If value is not provided, system defaults to <code>access_token</code> . An example is indicated below where token element is the key name:
	
Request Authorization Header Prefix	Specify the Request Authorization Header Prefix of third-party OBRH client This is the prefix used to Request Authorization Header based on token generation mechanism like Basic, Bearer, JWT and so on.  <b>Note:</b> If value is not provided, system defaults to Bearer. An example is indicated below:
	

**Table 2-95 (Cont.) Webhook Definition**

Field	Do this
Bureau <Check if required>	<p>Select the Credit Bureau from the drop-down list. This is required if the Credit Bureau report format is to be processed externally as defined in Setup &gt; Administration &gt; User &gt; Credit Bureau screen.</p> <p>The list is populated with credit bureau details maintained in CRB_SOURCE_CD lookup. This field is enabled only during ADD process and is Read-Only during EDIT.</p> <p>Ensure that the selected Bureau is not already selected for the enabled record. Else, system displays an error indicating <b>Record already exist with same bureau</b> and need to disable the existing record and enable the new record with the new Bureau.</p> <p><b>Note:</b> The <b>Event Details</b> section is not displayed if the Credit Bureau report format is to be processed externally.</p>
Verified	<p>This check box is auto selected on verifying the channel data by clicking <b>TEST</b> button and if the test server connection is successful.</p>

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. Click **Test** button to verify the configuration details of third-party application.
  - Th external system generates base 64 X-Hmac header using HMAC SHA 256 and propagate this as part of response header to OFSLL.
  - Channel name is used in HMAC digest as given below. This will be passed to the external interface using HTTP Header Key **ChannelName**. This value will be in base 64 encoded format.
  - System will validate this response and update the Verified indicator. Only HTTP status code 200 is considered as success.

Format: "OFSLL": Base64 Encoded [HMAC SHA 256 of ["Http Method Types":"Base64 Encoded Channel Name": "Service URL"] with Client Secret Key]

For example:

Client Secret Key

```
ZXlKMgVYQWlPaUpLVjFRaUxDSmhiR2NpT2lKSVV6VXhNaUo5LmV5SnpkV0lp
T2lKWFJVSklUMDlMSWl3aVEwaEJUazVGVENJNklrVllWRVZTVGtGTvNVNVVS
VkpHUVVORkxVOUJWVlJjTWpBaUxDSnBjM0lpT2lKUFJsTk1URjlyU1VKSVQw
OUxJaXdpWlhod0lqb3hOVFUxTmFnMUlqSXpMQ0pwVWVhRaU9qRTFOVFUyT0
RRNUlqTjkuemxMb0lzdWdueklFRnhyblcxYXJJeXNMSFlhSmVQd0R5SUxvdDdU
aXZDMEFVUktEbm5WcDJpWmRiTlplald5aHNfSWxNaG1lV1dWZUF0YmZRUnl
1X2c=
```

Cipher Text for HMAC SHA 256

```
GET:RVhURVJOQUxjTlRFUkZBQ0UtT0FVVEgyMA==:application/json:https://
Hostname:Port/webhook_oauthqa/service/api/resources/webhook/test
```

Generated Sample **X-Hmac** header

```
OFSLL:F/jj07qhgm3g5z91EHU/rdxYbaJ266SRnXsBRoUxgUc=
```

**Note**

Configuration details for OBRH application cannot be verified using Test option since OBRH currently does not support return of customizing HTTP header [X-Hmac].

- Clicking **Generate** button OFSLL generates Client Secret Key. This key is used in generation of X-HMAC header that is sent to the third-party channel to validate origination of the request.

System generated **X-HMAC** header uses base 64 encoded HMAC SHA 256 algorithm. This algorithm uses below logic:

Format: "OFSLL": Base64 Encoded [HMAC SHA 256 of ["Http Method Types":"Base64 Encoded Payload":" Http Content Types": "Service URL"] with Client Secret Key]

For example.

Client Secret Key

```
T0ZTTExfQjJCX1RFU1RfQ0xJRu5UOndlbGNvbWUx
```

Cipher Text for HMAC SHA 256

```
POST:ewogICAgIlJlcXVlc3RUeXBBIjogIk9VVEJpVU5EIgp9:application/json:http://  
Hostname:Port/webhook/service/api/resources/webhook/basic
```

Generated Sample **X-Hmac** header

```
OFSLL:q6xCpZrnuDFB8owvYEi2+Aac4c1M3b/XFVTvrChdQKA=
```

## 2.23.2 Event Details

The Event Details section acts as a single point of entry to define and update required Webhook Events in the system. In Event Details, you can define service end points of thirdparty application which accepts the communicated changes. Multiple end points can be defined to a single channel for each Event Criteria. These details are displayed as Webhook Event Action in Setup > Administration > System > Events screen.

### To define Event Details

- Select Setup > Administration > System > Webhook.
- Select the required definition in **Webhook** section.
- In the Event Details section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields are given below:

**Table 2-96 Event Details**

Field	Do this
Event	Select the event code from the drop-down list. The list is populated based on the enabled event codes maintained in Events setup screen.
Event Criteria	Select the event criteria from the drop-down list. The list is populated based on the enabled event criteria maintained for the selected event in Events setup screen.
Service End Point	Specify the third-party application end point URL which is propagated to Event Definition as an Event Action Parameter.
Event Message	Specify the event message which is propagated to Event Definition as an Event Action Parameter.
Enabled	Select this check box to enable the event details in the system.

- Click  button and add the event details to the list.
- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.23.3 Authentication Attributes

For connecting to some of the third-party applications, addition Authentication attributes and Request Header is required to be sent from OFSLL. In the Authentication Attributes, you can define those specific attributes required for authentication. Multiple authentication attributes can be defined to a Webhook definition.

### To define Authentication Attributes

- Select Setup > Administration > System > Webhook.
- Select the required definition in **Webhook** section and click **Authentication Attributes** sub tab.
- Perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields are given below:

**Table 2-97 Authentication Attributes**

Field	Do this
Attribute Type	Select the required Attribute Type which is used to record HTTP header type from the drop-down list: <ul style="list-style-type: none"> <li>TOKEN REQUEST HEADER: This is used to add Authentication request header details.</li> <li>REQUEST HEADER: This is used to add Request header details.</li> </ul>
Attribute Key	Specify the HTTP header key.
Attribute Value	Specify the HTTP header value.
Enabled	Select this check box to enable the Authentication Attributes details in the system.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 2.23.4 Monitoring Webhook Events

You can verify the status of all Webhook Event Actions on the JMS Queues screen of the System Monitor screen.

### To monitor Webhook events

1. On the Oracle Financial Services Lending and Leasing home screen, click Dashboard > Dashboard > System Monitor > JMS Queues.  
The Messages tab displays the **Status** for all outbound Webhook events processed to third-party applications and their request in **Response Message Details** section.

For more details, refer to Dashboard > System Monitor section in any of the User Guides.

# 3

## Administration User

In the **Administration > User**, you can record setup data that define your organization structure and its users. Information in this link is more **data** related, whereas the information stored on the System drop-down link functions more like switches that control system behavior.

### Navigating to Administration User

On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > User**.

The User drop-down link records the following data:

- [Organization](#)
- [Companies](#)
- [Access](#)
- [Users](#)
- [Credit Bureau](#)
- [Correspondence](#)
- [General Ledger](#)
- [Queues](#)
- [Printers](#)
- [Intelligent Segmentation](#)
- [Bank Details](#)
- [Standard Payees](#)
- [Check Details](#)
- [Currencies](#)
- [Zip Codes](#)
- [Payment Hierarchy](#)
- [Number Generation](#)

### 3.1 Organization

The Organization screen records the operational hierarchy of your business in terms of people. It groups the human resources of your business in three categories: organization, division, and department. The system uses this data to control access of users to applicationsaccounts. (The Companies screen allows you to setup the location of these applicationsaccounts.)

#### Note

You can have only one active organization, so use the Organization field to define your organization at its highest level.

Divisions are groups within your organization that will have access to the same applications accounts. Larger organizations often define their divisions by region. Smaller organizations may define division as branch offices or even departments, and might only have one division defined.

Departments are smaller units within a division. They expand on who is in the corresponding Division field. The system uses this sub screen, for example, when setting up the Services screen on the Utility form. At least one department must be defined for each division.

**Figure 3-1 Organization Flowchart 1**

As an example of an organization setup, Oracle Corp. might be defined as:

**Organization:** O-0001Oracle Corp.ORA

**Division:** OD-001Central RegionC01

**Department:** ODD-01OriginationORG

**Department:** ODD-02FundingFUN

**Department:** ODD-03ServicingSER

**Division:** OD-002Eastern RegionE01

**Department:** ODD-11ServicingSER

**Department:** ODD-12CollectionCOL

Figure 3-2 Organization Flowchart 2

**Note**

The Short Name field on the Organization screen allows you to create the ID that Oracle Financial Services Lending and Leasing will use when referring to the organization, division, and department throughout the system.

**To setup the Organization screen**

1. Click **Setup > Setup > Administration > User > Organization**.
2. In the **Organization Definition** section, there can be only one active entry, so use this screen to define your organization at its highest level. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Table 3-1 Organization Definition

Field	Do this
Organization	Specify the organization ID (the ID is the unique identifier used internally by Oracle Financial Services Lending and Leasing to represent your organization). <b>Note:</b> Do not edit this field.
Organization Name	Specify the organization name.
Short Name	Specify the short name for the organization. <b>Note:</b> This ID represents this organization throughout the system.
Enabled	Check this box to enable the organization. <b>Note:</b> Only one enabled organization is currently allowed by Oracle Financial Services Lending and Leasing.
Country	Select the country where the organization is located from the drop-down list.
City	Specify the city where the organization is located.
State	Select the state where the organization is located from the drop-down list.
Address Line 1	Specify the address line 1 for the organization.
Address Line 2	Specify the address line 2 for the organization.

**Table 3-1 (Cont.) Organization Definition**

Field	Do this
Zip	Select the zip code of the location where the organization is located from the drop-down list.
Extn	Specify the extension of the selected zip code.
Phone 1	Specify the primary phone number for the organization.
Extn 1	Specify the phone extension for the primary phone number.
Phone 2	Specify the alternate phone number for the organization.
Extn 2	Specify the phone extension for the alternate phone number, if specified.
Fax 1	Specify the primary fax number for the organization.
Fax 2	Specify the alternate fax number for the organization.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Division Definition** section, you can setup the information for the groups within your organization that will have access to the same applications and accounts. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-2 Division Definition**

Field	Do this
Division	Specify the division ID. The ID is the unique identifier used internally by the system to represent the division within the organization. <b>Note:</b> Once specified, do not edit this field.
Division Name	Specify the division name.
Short Name	Specify the short name for the division. <b>Note:</b> This ID represents this division throughout the system (required).
Enabled	Check this box to enable the division.
Country	Select the country where the division is located from the dropdown list.
City	Specify the city where the division is located.
State	Select the state where the division is located from the drop-down list.
Address Line 1	Specify the address line 1 for the division.
Address Line 2 (unlabeled)	Specify the address line 2 for the division.
Zip	Select the zip code of the location where the division is located from the drop-down list.
Extn	Specify the extension of the selected zip code.
Phone 1	Specify the primary phone number for the division.
Extn 1	Specify the extension for the primary phone number.

**Table 3-2 (Cont.) Division Definition**

Field	Do this
Phone 2	Specify the alternate phone number for the division.
Extn 2	Specify the extension for the alternate phone number.
Fax 1	Specify the primary fax number for the division.
Fax 2	Specify the alternate fax number for the division.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
6. Click **Setup > Setup > Administration > User > Organization > Department Definition**.
7. On the **Department Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-3 Department Definition**

Field	Do this
Department	Specify the department ID. <b>Note:</b> The ID is the unique identifier used internally by the system to represent the department within the division.
Department Name	Specify the department name.
Short Name	Specify the short name for the department. <b>Note:</b> This is the ID that appears throughout the system to represent this department.
Enabled	Check this box to enable the department.
Country	Select the country where the department is located from the drop-down list.
City	Specify the city where the department is located.
State	Select the state where the department is located from the dropdown list.
Address Line 1	Specify the address line 1 for the department.
Address Line 2	Specify the address line 2 for the department.
Zip	Select the zip code where the department is located from the drop-down list.
Extn	Specify the zip extension where the department is located.
Phone 1	Specify the primary phone number for the department.
Extn 1	Specify the phone extension for the primary phone number.
Phone 2	Specify the alternate phone number for the department.
Extn 2	Specify the phone extension for the alternate phone number.
Fax 1	Specify the primary fax number for the department.
Fax 2	Specify the alternate fax number for the department.

8. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
9. In the **Display Formats** section, you can setup various display formats such as Date Format, Time Format, National ID Format and Time Zone. Click **Setup > Setup > Administration > User > Organization > Display Formats**.

**Note**

During the Date Format setup, note that this is a one-time setup before starting to use the product. These date-format changes will result in data issues, so changing is not recommended.

10. On the **Display Format** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-4 Display Format**

Field	Do this
Format Type	Select the type of format from the drop-down list.
Format Sub Type	Select the sub type of the format from the drop-down list. The format sub type will be displayed based on the format type selected.
Format	Specify or select the format based on the format type and format sub type selected. For Date and Time Zone format, select the required option from the drop-down list.
Format Mask	Specify the format mask.
Format Filler	Specify the format filler.
Special Data	Specify the special data, if any.
Enabled	Check this box to enable the display format.

**Note**

If Format Type = Date Format, system does not limit the date format as MM/DD/YYYY but supports different date formats which are dependent on 'Flex Table' attributes maintained in Date Format Sub Type lookup code FORMAT\_SUB\_TYPE\_CD.

11. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 3.2 Companies

The Companies screen records the hierarchical structure of your portfolio companies and their branches. Just as Oracle Financial Services Lending and Leasing uses the Organization screen to determine the location of people, it uses the information on the Companies screen to determine the location of applicationsaccounts. In completing the Companies screen, there can be more than one company, and each company can have more than one branch.

Accounting is performed at the company level. applications accounts can be sorted down to the branch level. For this reason, branches are set up to reflect different business practices. You would set up different branches if, for example:

- The General Ledger (GL) differs between branches
- The branches work with different accounts
- There is a difference between branches in terms of the tasks they perform (origination, servicing, collections, and so on).

**Figure 3-4 Company Flowchart 1**

As an example of the companies setup, Oracle Corp. might have the following companies and branches defined as:

**Company:** C-0001TrustOne Financial CorpTOFC

**Branch:** CB-01TOFC - HeadquartersHQ

**Branch:** CB-02Kennedy Plaza KP

**Company:** C-0002Credtyme Credit CorpCCC

**Branch:** CB-11CCC - HeadquartersHQ

**Branch:** CB-12CCC - MissoulaMT

Figure 3-5 Company Flowchart 2

**Note**

- The system does not limit the number of companies or associated branches with the company you can enter.
- The Short Name field on the Companies screen allows you to create the ID that the system will use while referring to the company and branch.

KEY CONCEPT: Note the difference between the Company screen and the Organization screen:

- On the **Organization** screen, Oracle Financial Services Lending and Leasing users belong to an organization and division.
- On the **Companies** screen, credit applications and accounts belong to a company and branch.

As you can see in the following Access screen section, the information on the Organization and Companies screens define the operational hierarchy of your companies in terms of which Oracle Financial Services Lending and Leasing users will have access to which applications accounts.

**To setup the Companies**

1. Click **Setup > Setup > Administration > User > Companies**. The **Companies** screen defines entities within your organization that originate and/or service LoansLeasesLine of Credit.
2. In the **Company Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Table 3-5 Company Definition

Field	Do this
Company	Specify the portfolio company ID. (This ID is the unique identifier used internally by the system to represent the company).
Name	Specify the name of the portfolio company (required).
Short Name	Specify the short name for the portfolio company (ID displayed to represent the company).
Currency	Select the currency of the portfolio company from the drop-down list. The system displays the default value as <b>US DOLLAR</b> .
Enabled	Check this box to enable the portfolio company.
Country	Select the country where the portfolio company is located from the drop-down list. The system displays the default value as <b>UNITED STATES</b> .
Address Line 1	Specify the address line 1 for the portfolio company.
Address Line 2	Specify the address line 2 for the portfolio company.
Zip	Select the zip code of the location where the portfolio company is located from the drop-down list.
Extn	Specify the extension of the zip code where the portfolio company is located.
City	Specify the city where the portfolio company is located.

**Table 3-5 (Cont.) Company Definition**

Field	Do this
State	Select the state where the portfolio company is located from the drop-down list.
Company Time Zone	Select the time zone in which the company operates using the drop down list. This time zone is considered if system is setup to process GL at Company level. For more information, refer to <b>Appendix - Configuration at Company Level</b> chapter.
<b>Remittance Address section</b>	
Country	Select the remittance address country from the drop-down list. The system displays the default value as <b>UNITED STATES</b> .
Remittance Address 1	Specify the remittance address line 1, if it is different from the company address. This address is included as the remittance address on statements.
Remittance Address 2	Specify the remittance address line 2.
Zip	Select the zip code of the remittance address line 1 from the drop down list.
Extn	Specify the extension of the remittance address zip code.
City	Specify the remittance address city.
State	Select the remittance address state from the drop-down list.
Phone 1	Specify the primary phone number for the portfolio company.
Extn 1	Specify the phone extension for the primary phone number.
Phone 2	Specify the alternate phone number for the portfolio company.
Extn 2	Specify the phone extension for the alternate phone number.
Fax 1	Specify the primary fax number for the portfolio company.
Fax 2	Specify the alternate fax number for the portfolio company.
Tax ID #	Specify the tax identification number for the portfolio company.
TCC	Specify the transmitter control code for the portfolio company (1098 Electronic Filing).
Contact	Specify the contact information about the portfolio company.
Coupon Order Code	If you are using coupons, Specify the coupon order code to be used by a third party printing the coupons for billing statements.
HMDA	Select the HMDA agency (Home Mortgage Disclosure Act reporting agency for the company).

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

4. On the **Branch Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-6 Branch Definition**

Field	Do this
Branch	Specify the portfolio branch ID. (This ID is the unique identifier used internally by the system to represent the branch within your company).
Name	Specify the name of the portfolio branch (required).
Short Name	Specify the short name for the portfolio branch (ID displayed to represent the branch) (required).
Enabled	Check this box to enable the portfolio branch.
Sub Unit	Select the Sub Unit from the drop-down list. Sub Unit refers the entity which is the source of funds for the credit application/Account. System associates the selected sub unit with the particular company/ branch combination and displays by default when the same is selected during an application/Account creation.
Country	Select the country from the drop-down list. The system displays the default value as <b>UNITED STATES</b> .
City	Specify the city where the portfolio branch is located.
State	Select the state from the drop-down list.
Address Line 1	Specify the address line 1 for the portfolio branch.
Address Line 2	Specify the address line 2 for the portfolio branch.
Zip	Select the zip code of the location where the portfolio branch is located.
Zip Extn	Specify the extension of the zip code, where the portfolio branch is located.
Phone 1	Specify the primary phone number for the portfolio branch.
Extn 1	Specify the phone extension for the primary phone number.
Phone 2	Specify the alternate phone number for the portfolio branch.
Extn 2	Specify the phone extension for the alternate phone number.
Fax 1	Specify the primary fax number for the portfolio branch.
Fax 2	Specify the alternate fax number for the portfolio branch.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

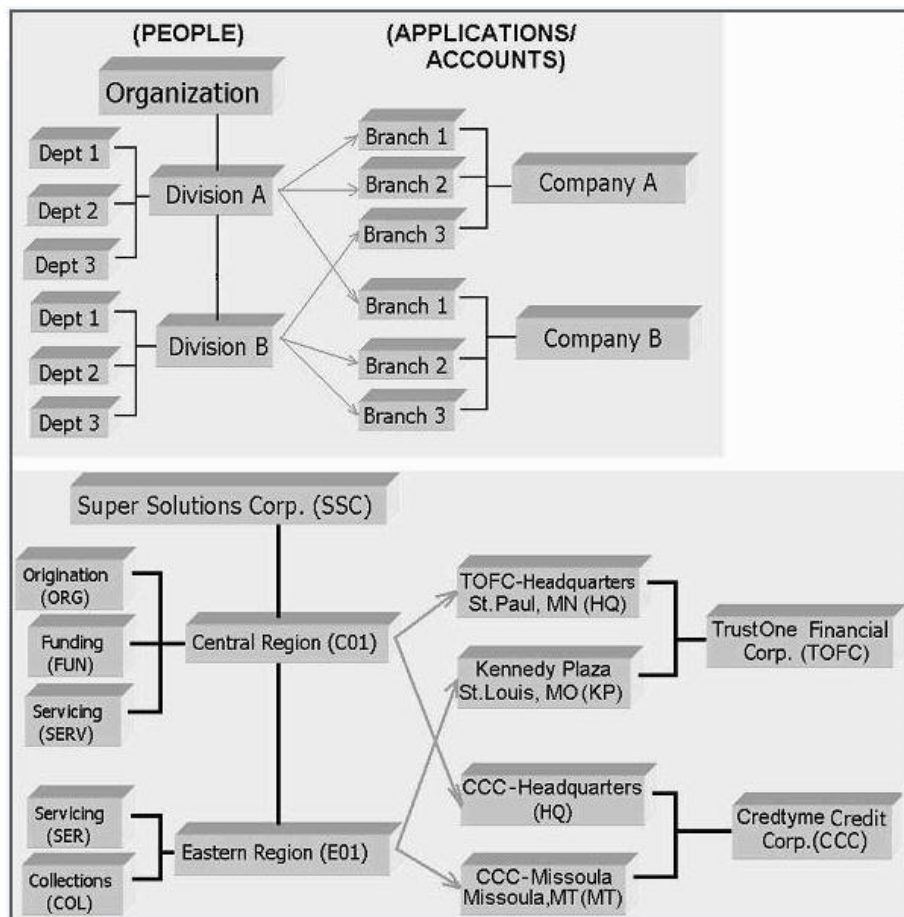

## 3.3 Access

Using the organizations, divisions, companies, and branches created on the Organization and Companies screens, you can control the access privileges of applications accounts. On the Access screen, you define which organization/division (users) can gain access to which company/branch (applications accounts) locations.

Normally, for each division within an organization, you would define a record with Company value of ALL and a Branch value of ALL, then select the Allowed box. You then define other records for the same Organization and Division for other Company and Branch combinations with the Allowed box cleared to restrict access.

**Figure 3-7 Access Flowchart**

### To setup the Access

1. Click **Setup > Setup > Administration > User > Access**. The system displays the Access screen.

2. In this screen, you can control the access privileges of the user for the following categories:
  - [Data](#)
  - [Screen](#)
  - [Reports](#)
  - [Correspondence](#)
  - [Transaction](#)
  - [Webservice](#)

### 3.3.1 Data

The Data screen allows you to restrict access to different data.

#### To setup the Data

1. Click **Setup > Setup > Administration > User > Access > Data**.
2. In the **Access Grid** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 3-8 Access Grid**

The screenshot displays the Oracle Financial Services Lending and Leasing interface. The main window is titled 'Access Grid' and contains a table with the following data:

Organization	Division	Company	Branch	Allowed
DMC	US01	ALL	ALL	N
DMC	NL02	ALL	ALL	Y
DMC	SA03	ALL	ALL	Y
DMC	JP04	ALL	ALL	Y

Below the table, there is an 'Access Grid' section with filters:

- \* Organization: [Dropdown]
- \* Division: [Dropdown]
- \* Company: [Dropdown]
- \* Branch: [Dropdown]
- \* Allowed: ☐

The left sidebar contains a navigation menu with the following items:

- Dashboard
- Origination
- Servicing
- Collections
- WFP
- Tools
- Setup
  - Administration
    - System
      - System Parameters
      - Lookups
      - User Defined Tab
      - Audit Tables
      - User Defined Def
      - Transaction Code
      - Data Files
      - Dedupe
      - Securitization
      - Events
      - Batch Jobs
      - Producer Cycles
      - Vendors
      - Collection Cycles
      - Reports
      - Error Messages
      - Translations
    - User
      - Organization
      - Companies
      - Access
      - Users
      - Credit Bureau
      - Correspondence
      - General Ledger
      - Queues
      - Printers
      - Bank Details
      - Check Details
      - Standard Payees
      - Currencies
      - Zip Codes
    - Products

A brief description of the fields is given below:

**Table 3-7 Access Grid**

Field	Do this
Organization	Select the organization for which you are defining access privileges from the drop-down list.
Division	Select the division within the organization for which you are defining Access privileges from the drop-down list.
Company	Select the portfolio company to which you are defining access privileges for the organization and division specified from the drop-down list.
Branch	Select the portfolio branch of the company to which you are defining access privileges for the organization and division specified from the drop-down list.
Allowed	Check this box to provide access to the data pertaining to the company and branch, for the organization and division specified.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 3.3.2 Screen

In the screen, you can control the access to the following:

1. Menu – Control access at the application menu level. For example, for **Setup** menu you can provide access only to an Administrator.
2. Screens – Control access to the screens available in the application.
3. Buttons – Control access based on the stage.  
For example, Add and Edit buttons can be disabled once an application is funded. If you want to restrict updating the Applicant details, then edit button has to be disabled for the stage.
4. Fields - Control access to base and user defined fields.  
The screen allows you to restrict access to different screens and fields using the following tabs:
  - [Security Access Definition](#)
  - [Field Access Definition](#)
  - [Security User Access Definition Details](#)

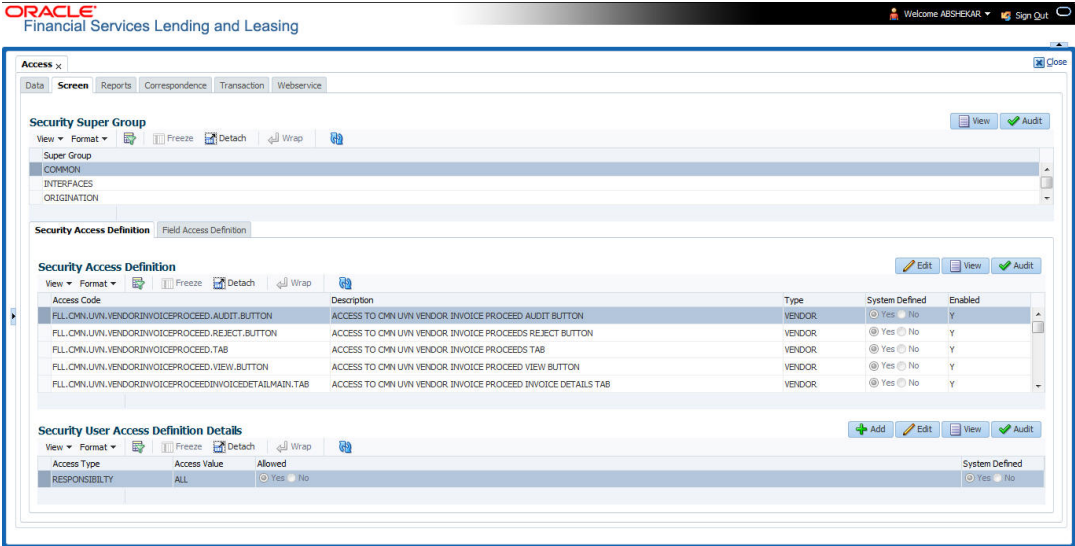

### 3.3.2.1 Security Access Definition

#### To set the Screen Security

1. Click **Setup > Setup > Administration > User > Access > Screen**.
2. In the **Security Super Group** section, you can view the details of the super group you want to work with.

Figure 3-9 Security Super Group

3. In the **Security Access Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Note**

You can not add a new record.

A brief description of the fields is given below:

Table 3-8 Security Access Definition

Field	Do this
Access Code	The system displays the selected access code.
Description	Modify the description of the access code.
Type	The system displays the type of security access definition.
System Defined	If <b>Yes</b> is selected, the security access definition entry is system defined. If <b>No</b> is selected, the security access definition entry is manually defined.
Enabled	Check this box to enable the security access definition entry is enabled.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
5. In the **Security User Access Details** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.
- A brief description of the fields is given below:

**Table 3-9 Security User Access Details**

Field	Do this
Access Type	Select the access type of the user who will have access to this screen from the drop-down list.
Active Value	Select the active value of the user who will have access to this screen from the drop-down list.
Allowed	Select <b>Yes</b> to allow access to this screen or <b>No</b> to deny access to this screen.
System Defined	Select <b>Yes</b> , if the screen user access definition entry is system defined. Select <b>No</b> , if the screen user access definition entry is manually defined.

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.3.2.2 Field Access Definition

The Field Access Definition tab facilitates for field customization in the User Interface (UI) screen. In this tab, you can do the following:

- Enable User Defined Fields (UDFs) to be displayed in respective UI which are provided as part of product installation/upgrade
- Allow or restrict user access to base non-mandatory fields and UDFs maintained in the system
- Regroup base fields to another section in UI

**Figure 3-10 AccessGrid\_field**

Note the following:

- The Field Access Definition tab displays User defined Fields maintained in the system for which you can specifically define access permissions based on user responsibility.

- The base mandatory fields are loaded automatically and Access Responsibility is set to ALL by default during product installation/upgrade. The same cannot be modified and hence are not displayed in this tab.
- Field access and customizations are to be performed at your sole discretion and OFSLL is not responsible for any impact/damage/mismatch in the data being represented or resulting out of this change.
- Field labels can further be customized in Administration > System > [Label Configuration](#) screen.

Before defining field access, refer to the table below which indicates the possible combinations of a particular field being displayed and allowed to edit in UI.

**Table 3-10 Field Definition**

View Type	Access	Result
VIEW	NO	NON VIEWABLE
VIEW	YES	VIEWABLE AND EDITABLE
LOCK	NO	READONLY
LOCK	YES	VIEWABLE AND EDITABLE

#### To add/enable new User Defined Fields

1. In the **Field Access Definition** section, click **Add** and populate the following details:

**Table 3-11 Field Access Definition**

Field	Do this
Language	Select the language of the user(s) who will have access to this field from the drop-down list.
Division	Select the division or group within the organization to which the user belongs from the drop-down list.
Object Name	Select the Object Name from the drop-down list. You can use the search option to query based on specific name. The list is populated based on the combination of Language and Division selected above.
Field Name	Select the field to be updated from the drop-down list. The list is displayed based on the object selected.
Access Type	Select the access type as one of the following from the drop-down list. View - to display and make the field editable. Lock - to only display the field. <b>Note:</b> Option defined here takes precedence with the display (Y/N) option selected in Setup > Administration > System > Label Configuration tab.
System Defined	Select <b>Yes</b> , if the field access definition is system defined. Select <b>No</b> , if the field access definition is manually defined.

**Table 3-11 (Cont.) Field Access Definition**

Field	Do this
Enabled	Check this box to enable the field access definition.

2. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
3. Click **Update**. System refreshes the cache and automatically updates the Field Access Details from database to display in header section. After updating the required changes in screen, you need to logout and re-login for changes to be effective. This is basically to refresh session cache and update Field Access information from database server. Though, there is **Update** option, clicking on the same only refreshes the cache and reloads the record.

**To enable/disable Base fields**

1. In the **Field Access Definition** section, click **Edit** and populate the following details:

**Table 3-12 Field Access Definition**

Field	Do this
Access Code	View the access code defined for the field.
Description	View the access code description. You can modify the details if required.
Type	By default, system displays the name of the group inside which the field is displayed in UI. To move the field to a different group, select the required type from the drop-down list.
System Defined	Select <b>Yes</b> , if the screen field access definition is system defined. Select <b>No</b> , if the screen field access definition is manually defined.
Enabled	Check this box to enable the field access definition.

### 3.3.2.3 Security User Access Definition Details

The **Security User Access Definition Details** sub tab is available only for base - non mandatory fields and user defined fields. In the **Security User Access Definition Details** sub tab you can defined field access and set restrictions to specific user responsibility.

1. In the **Security User Access Definition Details** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields is given below:

**Table 3-13 Security User Access Definition Details**

Field	Do this
Access Type	Select RESPONSIBILITY as the access type from the drop-down list since access to field is based on responsibility by default. This field is disabled during edit.
Active Value	Select the user role who needs to have access to this field from the drop-down list.

**Table 3-13 (Cont.) Security User Access Definition Details**

Field	Do this
Allowed	Select <b>Yes</b> to allow access to this field or <b>No</b> to deny access to this field.
System Defined	Select <b>Yes</b> , if the field user access definition is system defined. Select <b>No</b> , if the field user access definition is manually defined.

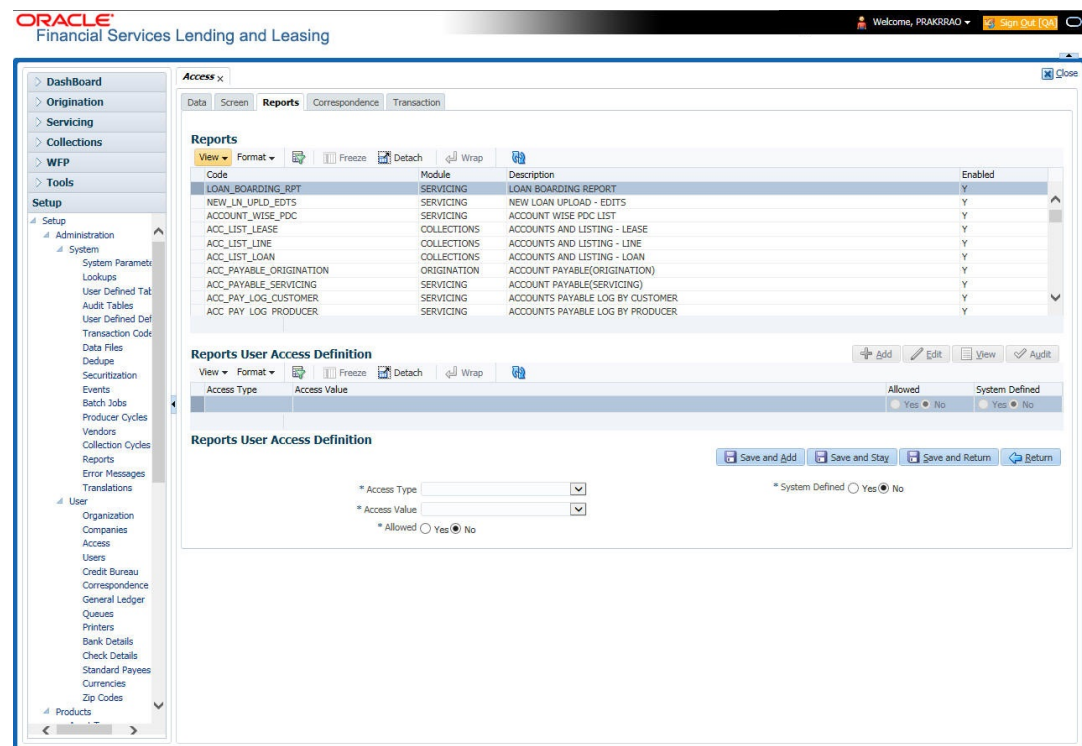

2. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.3.3 Reports

In the Reports screen you can control access to generate certain reports.

#### To set up Reports

1. Click **Setup > Setup > Administration > User > Access > Reports**.
2. In the **Reports** section, you can view the following information:

**Figure 3-11 Reports**

A brief description of the fields is given below:

**Table 3-14 Reports**

Field	View this
Code	Displays the code of the report.
Module	Displays the code of the report from the drop-down list.
Description	Displays the description of the report.
Enabled	Displays whether the report definition is enabled or not.

3. In the **Reports User Access Definition** section, you can set the access rights for the report selected in the Reports section. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-15 Reports User Access Definition**

Field	Do this
Access Type	Select the access grid function type from the drop-down list.
Access Value	Select the access function grid value from the drop-down list.
Allowed	Select <b>Yes</b> to allow access or <b>No</b> to restrict access to the entry based on the access type and value.
System Defined Yes/No	Select <b>Yes</b> , if the report user access definition entry is system defined. Select <b>No</b> , If the report user access definition entry is manually defined.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 3.3.4 Correspondence

The Correspondence screen allows you to restrict access to different correspondence commands on the Letters menu, thus restricting your ability to generate certain correspondence.

If you do not have the responsibility to create a type of correspondence, the corresponding command on the Letters menu is unavailable (dimmed).

### To setup the Correspondence

1. Click **Setup > Setup > Administration > User > Access > Correspondence**.
2. In the **Correspondence Codes** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 3-12 Correspondence Codes**

The screenshot displays the Oracle Financial Services Lending and Leasing application interface. The left sidebar shows a navigation menu with categories like Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. The main window is titled 'Access' and contains two sections:

**Correspondence Codes**

Code	Description	Enabled
CBK_01	01 BANKRUPTCY SET	<input checked="" type="checkbox"/>
CCO_01	01 COLLECTION SET	<input type="checkbox"/>
CCS_01	01 CUSTOMER SERVICE SET	<input type="checkbox"/>
CDI_01	01 DEFICIENCY SET	<input type="checkbox"/>
CPN_01	01 FUNDING SET	<input type="checkbox"/>
CRF_01	01 REPO/PRECILOSURE SET	<input type="checkbox"/>
CUN_01	01 UNDERWRITING SET	<input type="checkbox"/>

**Correspondence User Access Definition**

Access Type	Access Value	Allowed	System Defined
RESPONSIBILITY	ALL	<input checked="" type="radio"/> Yes <input type="radio"/> No	<input type="radio"/> Yes <input checked="" type="radio"/> No

A brief description of the fields is given below:

**Table 3-16 Correspondence Codes**

Field	Do this
Code	The system displays the correspondence code name you want to work with.
Description	The system displays the description for the correspondence code (display only).
Enabled	Check this box to enable the selected correspondence code entry.

- In the **Correspondence User Access Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-17 Correspondence User Access Definition**

Field	Do this
Access Type	Select the access grid function type from the drop-down list.
Access Value	Select the access function grid value from the drop-down list.
Allowed	Select <b>Yes</b> to allow access or <b>No</b> to restrict access to the entry based on the access type and value.

**Table 3-17 (Cont.) Correspondence User Access Definition**

Field	Do this
System Defined Yes/No	<p>Select <b>Yes</b>, if the correspondence user access definition entry is system defined.</p> <p>Select <b>No</b>, if the correspondence user access definition entry is manually defined.</p>

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.3.5 Transaction

The transaction screen allows you to view and restrict access to the following account transactions maintained in the system.

- ACCOUNT MONETARY TXN
- ACCOUNT NON MONETARY TXN
- PRODUCER MONETARY TXN
- ACCOUNT CONDITION TXN
- SECURITIZATION TXN
- ESCROW MONETARY TRANSACTIONS
- ESCROW NON MONETARY TRANSACTIONS
- FEE ASSESSMENTS
- ESCROW ANALYSIS AND DISBURSEMENTS

Along with restricting access, you can also define authorization permissions for monetary transactions. While defining authorization permissions, you can allow transactions to Authorize through assigned Maker/Check responsibilities with/without having specific authorization criteria defined. However, authorization criteria can be defined only for monetary transactions which needs authorization.

To define access/authorization rights for Transaction

1. Click **Setup > Setup > Administration > User > Access > Transaction**.
2. In the **Transaction Super Group** section, select the super group you want to work with.

Figure 3-13 Transaction Super Group

3. In the **Transaction Codes** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

Table 3-18 Transaction Codes

Field	Do this
Code	The system displays the transaction code you want to work with.
Description	Specify/Edit the description for the transaction.
Authorize	<p>Check this box to enable authorization by another user. Such transactions can be authorized on the Authorization tab of Transaction Authorization screen in Servicing Module.</p> <p><b>Note:</b> For monetary transactions, system allows you to define both Maker and Checker Responsibility tabs respectively. For non-monetary transactions, you can define maker responsibility for authorization.</p> <p>When the Authorization check box is not selected, any new transactions posted will not go for authorization.</p> <p>For more information, please refer the <b>Transaction Authorization (Maker-Checker)</b> chapter in the <b>Oracle Financial Services Lending and Leasing User Guide</b>.</p>
Enabled	Select this box to enable the transaction.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.  
You can define the authorization restrictions using the following sub tab:
- Maker Responsibility
  - Checker Responsibility

- Authorization Criteria

**Note**

**Checker Responsibility** and **Authorization Criteria** tabs are available only for monetary transactions (i.e. Authorize flag set to Y).

### To define Maker Responsibility

1. Click **Setup > Setup > Administration > User > Access > Transaction**.
2. In the **Transaction Super Group** section, select the super group you want to work with.
3. In the **Maker Responsibility** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-19 Maker Responsibility**

Field	Do this
Access Type	Select <b>RESPONSIBILITY</b> as the access type from the drop-down list.
Access Value	Select the user responsibility from the drop-down list.
Allowed	Select <b>Yes</b> to allow access or <b>No</b> to restrict access to the entry in the Transaction Codes section, based on the access type and value.
System Defined	Select <b>Yes</b> , if the transaction user access definition entry is system defined. Select <b>No</b> , if the transaction user access definition entry is manually defined.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### To define Checker Responsibility

When a particular monetary transaction needs checker authorization you can define the same in **Checker Responsibility** tab and also specify the Authorization Criteria for the transaction.

1. Click **Setup > Setup > Administration > User > Access > Transaction**.
2. In the **Transaction Super Group** section, select the super group you want to work with.
3. In the **Transaction Codes** section, select the monetary transaction with the Authorize flag as Y.
4. In the **Checker Responsibility** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-20 Checker Responsibility**

Field	Do this
Access Type	Select <b>CHECKER RESPONSIBILITY</b> as the access type from the drop-down list.
Access Value	Select the user responsibility from the drop-down list.

**Table 3-20 (Cont.) Checker Responsibility**

Field	Do this
Allowed	Select <b>Yes</b> to allow access or <b>No</b> to restrict access to the entry in the Transaction Codes section, based on the access type and value.
System Defined	Select <b>Yes</b> , if the transaction user access definition entry is system defined. Select <b>No</b> , if the transaction user access definition entry is manually defined.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

#### To define Authorization Criteria

You can define conditional authorization by creating a sql statement based on required criteria. For example, you can define a condition to allow transaction authorization in an account for amount greater than 500.

1. Click **Setup > Setup > Administration > User > Access > Transaction**.
2. In the **Transaction Super Group** section, select the super group you want to work with.
3. In the **Transaction Codes** section, select the monetary transaction with the Authorize flag as Y.
4. In the **Authorization Criteria** section, you can add/edit the following details in the **Criteria Name** and **Criteria Details** section.
5. In the **Criteria Name** section perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-21 Criteria Name**

Field	Do this
Name	Specify a name for the criteria.
Description	Specify a description for the criteria.
Authorization Level	Specify the level of authorization responsibility in numeric value. <b>Note:</b> You will need to specify the same value as defined for each user within <b>Checker Responsibility</b> Lookup Type (CHECKER_RESPONSIBILITY_CD) in Setup > Administration > System > Lookups screen.
Enabled	Select this box to enable the criteria.

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
7. In the **Criteria Details** section perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Note**

Although system allows to define customized selection criteria, the execution of additional selection criteria requires additional processing at server level and can have significant performance impact delaying the EOD processing/web services. Hence it is recommended to have careful consideration while defining the additional selection criteria (like using user-defined tables and columns) and/or get approval from your database administrator before using any selection criteria.

A brief description of the fields is given below:

**Table 3-22 Criteria Details**

Field	Do this
Seq	Specify a sequence number.
(	Specify the open/entry criteria.
Parameter	Select the transaction parameter from the drop-down list.  The list displays transaction parameters for the selected transaction and the parameters in user defined table <b>INP_BMP_ACC</b> .
Comparison Operator	Select the comparison operator from the drop-down list.
Criteria Value	Specify the required criteria value for validation.
)	Specify the close/exit criteria.
Logical Expression	Select the logical operator from drop-down list.
Enabled	Select this box to enable the criteria.

8. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
9. Click **Check Criteria** to validate the correctness of the statement and to resolve errors, if any.  
You can add multiple checker responsibility and define multiple selection criteria for each checker responsibility.

### 3.3.6 Webservice

The Webservice screen in Access setup allows you to configure access to the available RESTful webservices in the system. The associated seed data for all the RESTful webservices are loaded during product installation and process of installing the same is detailed in the Installation guide.

As an administrator/superuser, you can Enable/Disable Web Service access to users based on their responsibility and ensure that only authorized user have access to specific type of data in the system. Following list indicates some of the available RESTful webservices in the system and the complete list is made available in swagger JSON file shared in OTN library.

- Generic Post Transaction Service
- Call Activity Service
- Scheduler Service
- Account Search Service
- Account Boarding Service

- Payment Posting Service
- Account Detail Service
- Calculator Service
- Application Search Service
- Get Scenario Analysis Service
- Post Scenario Analysis Service
- Lookup Service
- Dialer Integration Service
- Application GET Service
- Application Entry service
- Application Update Service
- Application Status Change
- Application Checklist
- Application ACH GET Service
- Application ACH POST Service
- Application Comment GET Service
- Application Comment POST Service
- Application Document GET Service
- Application Document POST Service
- Account Comment GET Service
- Account Comment POST Service
- Account Document GET Service
- Account Document POST Service
- Process File Upload Service
- Process File Download Service
- Process File List Service
- Product Service
- Asset Service
- Asset Sub-Type Service
- Scheduler Force ReSubmit
- Remarketing GET Service
- Remarketing POST Service
- Invoice GET Service
- Invoice POST Service

#### To setup the Webservice access

1. Click **Setup > Setup > Administration > User > Access > Webservice**. The screen consists of the following tabs:
  - Security Super Group

- Security Access Definition
- Security User Access Definition Details
- Security Access Definition Details (This sub tab is available only for **SERVICING AND COLLECTION** Super Group).

**Figure 3-14 Webservice**

- The **Security Super Group** section, contains the following super group categories for selection:
  - COMMON
  - INTERFACES
  - ORIGINATION
  - SERVICING and COLLECTIONS
  - SETUP
  - WHOLESALE FLOOR PLANNING
- Select the required Super Group and the associated data in sub tabs are categorized accordingly.
- In the **Security Access Definition** section, you can view the following field details and edit only the **Description** and **Enabled** status of selected Security Access Definition.

**Table 3-23 Security Access Definition**

Field	Do this
Access Code	The system displays the webservice access code.
Description	The system displays the description of the associated webservice access code and can be edited for required changes.
Type	The system displays the type of security access definition.

**Table 3-23 (Cont.) Security Access Definition**

Field	Do this
System Defined	If selected as <b>Yes</b> , the security access definition entry is system defined. If selected as <b>No</b> , the security access definition entry is manually defined.
Enabled	Check this box to enable the selected webservice access code.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
6. In the **Security User Access Details** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields are given below:

**Table 3-24 Security User Access Details**

Field	Do this
Access Type	Select <b>Responsibility</b> (default) as the access type from the dropdown list. For this access type to be available in the drop-down list, ensure that the Lookup Type <b>ACCESS_GRID_TYPE_CD</b> is maintained in the system.
Access Value	This field is <b>Read-only</b> for <b>System Defined</b> Security Access Definitions which are loaded as part of seed data during installation.  For non-system defined Security Access Definitions, select the access value which is the user responsibility who needs to have access to this webservice from the drop-down list.  For user responsibilities to be populated in the drop-down list, ensure that the Lookup Type <b>RESPONSIBILITY_CD</b> is maintained in the system.
Allowed	Select <b>Yes</b> to allow user access to this webservice or <b>No</b> to deny access. By default, <b>No</b> is selected.
System Defined	Select <b>Yes</b> , if the webservice user access definition entry is system defined.  Select <b>No</b> , if the webservice user access definition entry is manually defined.

7. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### Security Access Definition Details

If you have selected the Security Super Group as **SERVICING and COLLECTIONS**, there is an additional sub section **Security Access Definition Details** enabled. This sub tab facilitates you to further restrict and control access to specific type of data within the accessible RESTful web services. The restriction can be defined based on specific **Account Condition** or **Account Status**.

For example, out of all the account types maintained in the system you can restrict data access to only delinquent account(s) to a particular user responsibility by selecting Access Type as **Account Condition** and Access Value as **Delinquent**.

## Controlling web service data access to permitted user(s)

For any user to access web service data, you need to define atleast one positive (allowed) definition defined in **Security Access Definition Details** section. Else, webserivce data is not displayed for that particular user even if that user responsibility has permissions to access web service.

OFSLL supports multiple user conditions on an Account and system requires to have atleast one account condition defined as **Allowed** in setup to display the data. In case, even if any one of the account condition is defined as **Not Allowed** in setup, then system does not allow to access the data.

During the following scenarios, data is either displayed/not displayed in Webservice screen:

**Table 3-25 Data in Webservice screen**

Scenario	Data displayed
No condition is available on the account and also no condition defined in setup	Data is displayed since there is no restriction.
Condition is available on the account but not defined in setup	Data is not displayed since restriction is applied
Multiple conditions are available on the account and one condition is defined in setup as <b>Allowed</b>	Data is displayed
Multiple conditions are available on the account and one condition is defined in setup as <b>Not Allowed</b>	Data is not displayed

Whenever user with specific responsibility tries to access the restricted data, following type of error messages are displayed:

- For POST/PUT service, system displays error as **Access denied** with HTTP Error Code 401.
- For GET service with single account record, system displays error message as **No data found** with http error code 400.
- For GET service with multiple account records, of which some have access restriction and other don't, then system displays only the unrestricted records and does not display the restricted records. In such a case, error message is not displayed.

### Note

When multiple user access definitions are defined in the system, while processing the data access request to a web service OFSLL first validates for any access restrictions on the user responsibility. If not, then validates the same against **ALL** responsibility before displaying the data in Webservice screen.

For example, if data access restriction is defined for ALL and SUPERUSER responsibilities. when logged in with SUPERUSER responsibility, the data restriction of SUPERUSER is applied. In case, if the user logs in with any other responsibility other than SUPERUSER, then restriction defined for **ALL** is applied.

## To define Security Access Definition Details

1. Click **Setup > Setup > Administration > User > Access > Webservice** tab.
2. Select the module in Security Super section as **SERVICING and COLLECTIONS**.

3. Select the user responsibility in **Security User Access Definition Details** section.
4. In the **Security Access Definition Details** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields are given below:

**Table 3-26 Security Access Definition Details**

Field	Do this
Access Type	Select the access function type (as either ACCOUNT CONDITION OR ACCOUNT STATUS) that is being used to control the user access from the drop-down list.
Access Value	Select the access value from the drop-down list. The list is sorted based on the Access Type selected. Also, based on a lookup associated with the Access Type multiple entries for each access type can be created as long as each has a different access value.
Allowed? Yes/No	Select <b>Yes</b> if the access is allowed and <b>No</b> if the access is not allowed. This indicates whether the selected combination of Access Type and Access Value is allowed to access the data.
System Defined Yes/ No	Select <b>Yes</b> , if you wish to maintain access type as system defined and <b>No</b> , if you do not want to maintain it as system defined. However, system defined entries cannot be modified.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 3.4 Users

The Users screen allows you to create and set up an user. In the User Definition section, you can assign a user an identification name and password to log on to the system. You can also assign the organization, division, and department where each user is located. Additional fields allow you to record information for contacting the user. You can also define the time frame within which a user has access to the system to ensure compliance to the company's schedule. This is a very useful feature to prevent logins during scheduled maintenance.

The Responsibility field records the job function of the user and defines the level of access that user has within the system; in particular:

- What menu items does the user have access to?
- What transactions can the user perform on the Maintenance screen on the Customer Service screen?
- What edits can the user perform on the Verification link during origination?

### Note

The system's SUPERUSER responsibility grants access to the entire system. Give careful consideration to the number and type of users who receive this responsibility.

### To set up the Users screen

1. Click **Setup > Setup > Administration > User > Users**. The system displays the Users screen.
2. In the **User Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 3-15 User Definition

The screenshot shows the Oracle Financial Services Lending and Leasing Users screen. The top navigation bar includes the Oracle logo, the text 'Financial Services Lending and Leasing', and a user profile 'Welcome, HMACHA' with a 'Sign Out' button. The left sidebar contains a 'SEARCH MENU' and a list of navigation items: Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. The 'Setup' item is expanded, showing a tree structure with 'Seed Data' and 'User' selected. The main area is titled 'Users x' and contains a 'User Definition' section. This section has a table with columns: User, Organization, Division, Department, Start Dt, End Dt, System Defined, Enabled, First Name, and MI. The table lists several users, including 988476, 988477, 988567, ABSEKAR, AQMISRA, ARJUN, DEMOLEAD, DEMOSALES, and DEMOSUPR. Below the table is a detailed form for the selected user 'ABSEKAR'. The form includes fields for Organization (DMC), Division (US D1), Department (ORG), Start Dt (11/16/2016), End Dt (12/31/2020), System Defined (Yes), Enabled (checked), First Name (ANAND), MI, Last Name (SHEKAR), Responsibility (PROCESSOR), Review Request Supervisor (DEMO LEAD), Phone 1 (3243(232)-523-6532), Phone 2 (2352(352)-352-3523), Fax 1 (2354235(252)-352-3523), Fax 2 (2(354)-235-2352), Replacement User, DT, Type (EMPLOYEE), Reference #, Email, Default Language (DEFAULT), Time Zone, and Time Zone Level (USER TIME ZONE). The form has buttons for 'Save and Add', 'Save and Stay', 'Save and Return', and 'Return'.

A brief description of the fields is given below:

Table 3-27 User Definition

Field	Do this
User	Specify the user ID. <b>Note:</b> This field is a unique indicator and cannot be updated, edited, or deleted once saved.
Organization	Select the organization to which the user belongs, from the dropdown list.
Division	Select the division to which the user belongs, from the drop-down list.
Department	Select the department to which the user belongs, from the dropdown list.
Start Dt	Specify the start date for the user. You can also select from the adjoining calendar icon.
End Dt	Specify the end date for the user. You can also select from the adjoining calendar icon.
System Defined	Select <b>Yes</b> , if the entry is system defined. System defined entries cannot be modified. Select <b>No</b> , if the entry is not system defined and it can be modified.
Enabled	Check this box to enable the user.
First Name	Specify the first name of the user.

Table 3-27 (Cont.) User Definition

Field	Do this
MI	Specify the middle initial of the user.
Last Name	Specify the last name of the user.
Responsibility	Select the responsibility for the user from the drop-down list.  <b>Note:</b> The users mapped to the role <b>Responsibility</b> can only view the screens.
Review Request Supervisor	Select the supervisor responsibility who can also review and respond to review requests from the drop-down list.  The list displays the corresponding Review Request Supervisors who are either one or more levels higher from the above selected user <b>Responsibility</b> as maintained in <b>RESPONSIBILITY_CD</b> lookup code.
Phone 1	Specify the user's primary phone number.
Extn 1	Specify the phone extension for the primary phone number.
Phone 2	Specify the user's alternate phone number.
Extn 2	Specify the phone extension for the alternate phone number.
Fax 1	Specify the user's primary fax number.
Fax 2	Specify the user's alternate fax number.
Replacement User	Select the user ID of the replacement user from the drop-down list.
Dt	Specify the date from when the replacement is effective. You can also select from the adjoining calendar icon.  <b>Note:</b> These two fields allow you to create a replacement user for the current user. This is particularly useful when a new employee assumes the duties of a former. By completing the Replacement User and Replacement Dt field, the system recognizes the replacement user as the current user on the effective date. For more information, refer the section, <b>Replacement Users</b> .
Type	Select the user type from the drop-down list.
Reference #	Specify the reference number for the user from the drop-down list.
Email	Specify user's email address.
Default language	Select the default language from the drop-down list.
Time Zone	Select the required Time Zone from the drop-down list, The specified time zone would be applicable at company level.
Time Zone Level	Select the time zone level (Organization, Company or User) that would apply by default, when specific time zone is not specified at Company and User level.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

This section consists of the following topics:

- [Replacement users](#)
- [Application and Oracle Identity Manager Synchronization](#)

### 3.4.1 Replacement users

By completing the **Replacement User** and **Dt** fields on the Users screen, you can replace an existing user with a new user. The system assigns all responsibilities of the original user to the new user as of the date of the replacement.

The **Replacement User** and **Dt** fields allow you to designate a replacement for the current user in the User ID field. When you complete the **Replacement User** and **Dt** fields, save your entry, and then enable the record, the system replaces the original user. The system changes the **End Dt** field to the date when the original user was replaced (the same date in the Dt field).

The system assigns the queues of the original user to only those replacement users who have the same user responsibilities (or Super User responsibility) as set in the system.

The system updates the following when replacing users:

1. Assigns all applications in the replaced user's underwriting queue with the status NEW to the replacement user's queue.
2. Assigns all applications in the replaced user's funding queue with a status other than FUNDED to the replacement user's queue. The system currently stores the collector name in the back end tables, which are updated with the replacement users ID in the case of the replacement of any user.
3. Also updates the Producer Management screen with the replacement user in the **Underwriter** and **Collector** fields. The system assigns all applications routed to the original user to the replacement user. This also includes any future applications for the replaced user.
4. The system automatically updates the **Collector ID** field in all accounts to the replacement user and routes all accounts assigned to the original user to the replacement user.

#### Note

The system will not update the replacement user ID for accounts that are closed.

5. On the queue setup of Customer Service screen's Responsibilities sub screen, the record for the original user will be disabled and a new record will be created for the replacement user. If the replacement user already exists in the setup, The system will not create a new record. It updates the user ID and routes all accounts that were assigned to the original user, based on the account condition, to the replacement user.

### 3.4.2 Application and Oracle Identity Manager Synchronization

Oracle Identity Manager is for user administration. Oracle Financial Services Lending and Leasing has been developed in such a way that it can be implemented with or without Oracle Identity Manager. In case OID has been employed, the user definition is done in OID and then synchronized to the Oracle Financial Services Lending and Leasing Users table using a utility JAR called OID Synchronization JAR. In OID, users are defined across various groups belonging to a realm which is nothing but the directory structure in OID. A user can be configured to belong to multiple groups in a realm. Every time the user tries to login to Oracle

Financial Services Lending and Leasing or OBIEE, the system validates the login ID and the password with OID and provides access to those applications.

## 3.5 Credit Bureau

In the system, an important part of the origination process is pulling a credit report from a credit bureau and scoring that information against a user-defined risk model. These credit reports can be pulled both automatically and manually.

After you enter an application, the system compares its contents against pre-screen criteria. If the application passes a pre-screen edits check, the system advances the status of the application and automatically pulls a credit report.

You can manually request a credit report for an applicant or any other party included on the application, such as co-signers and spouses by selecting the bureau from which you want to pull the report. If more than one report type is defined for the selected bureau, then you can indicate the type of report you want to pull.

The following are few additional Credit Bureau Setup details:

- The credit bureau from which the report is pulled is determined by the applicant's zip code. The credit bureau interface searches the information in the Credit Bureau Zip Matrix tab and matches the applicant's zip code to determine the bureau(s) from which to request a report.
- The number of credit reports automatically pulled per applicant is controlled through the credit request parameter CRB\_MAX\_BUREAU\_PULL. If this parameter is set to 1, a credit bureau request will be made for the Bureau1 credit bureau from the zip code matrix. Likewise, if this parameter is set to 2, a credit bureau request will be made for the Bureau1 and the Bureau2 credit bureaus from the zip code matrix.
- The system automatically pulls credit reports for only the primary applicant and the primary applicant's spouse (for joint applications) unless the CRB\_ALL\_APL\_BUREAU\_PULL credit request parameter is set to Y. However, if the parameter is set to Y, the system pulls credit reports for all of the applicants on the LoanLine of creditLease, regardless of their relationship to the primary borrower.
- Passwords, default report formats, and other required information from the credit bureaus are set up in the Report Formats screen.
- For identity scan data to flow into Equifax ACRO/ACRO Plus credit reports, the add-on has to be enabled at contract level. Please speak to your representative for enabling the add-on.

Member codes and passwords when switching credit bureau access methods (moving from dial-up to Net Connect). The member codes and passwords are not dependent on the connection method used to access the bureau.

Frame relay access is from the database server to the Experian host though a TCP/IP socket connection. The connection is outbound only and it is to a specific port (699 or 700) on the Experian host.

The credit bureau service will be accessing Experian Net Connect service through HTTP to the ECALS URL supplied by Experian as well as by the HTTPS to the URL returned as a response to the ECALS URL inquiry (the credit request URL). This access is from the database server access.

This section consists of the following topics:

- [Credit Bureau](#)

- [Special Metro II Code reporting](#)
- [Oracle Wallet Manager setup](#)
- [Oracle JVM Security setup](#)
- [Importing a trusted certificate into an Oracle Wallet](#)
- [Importing the Certificates into an Oracle Wallet](#)
- [De-duping Credit Bureau data](#)

## 3.5.1 Credit Bureau

### Navigating to Credit Bureau

On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > User > Credit Bureau**.

The setup for Credit Bureau spans across the following links:

- [Report Formats](#)
- [Connections](#)
- [Zip Matrix](#)
- [Parameters](#)
- [Score Reasons](#)
- [Reporting](#)

### 3.5.1.1 Report Formats

The Reports Formats screen captures and tracks the attributes related to the multiple types of reports offered by the credit bureau agencies. When a company enlists the service of a credit bureau, the credit bureau provides a membership code and password. This information needs to be entered on the Reports Formats screen before you can request a credit report. You must define at least one report for each credit bureau from which you want to pull reports.

The information on the Report Formats screen is location-specific. If the business requires different membership codes for each location, be it a company or branch, then individual records must be set up.

The Score Type, Additional Product, and Inquiry Limit fields on the Credit Report Setup section are optional. They may not apply to all credit bureau types and even if they do apply, you may want to leave them blank and rely on a default value set up at the credit bureau.

#### Note

For more information, refer to the application Installation Guides.

### To setup Report Formats

1. Click **Setup > Setup > Administration > User > Credit Bureau > Report Formats**.
2. In the **Credit Bureau** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 3-16 Credit Bureau Report Formats

A brief description of the fields is given below:

Table 3-28 Credit Bureau Report Formats

Field	Do this
Bureau Name	Specify the name of the credit bureau company.
Short Name	Specify the abbreviated or short name for the bureau.
Source	Select the credit bureau source from the drop-down list.
Country	Select the country of the credit bureau address from the drop-down list.
City	Specify the city for the credit bureau address.
State	Select the state of the credit bureau address from the drop-down list.
Address Line 1	Specify the address line 1 for the credit bureau.
Address Line 2	Specify the address line 2 for the credit bureau.
Zip	Select the zip code for the credit bureau address from the dropdown list.
Extn	Specify the extension of the zip code for the credit bureau address.
Phone 1	Specify the primary phone number for the credit bureau.
Extn 1	Specify the extension for the primary phone number.
Phone 2	Specify the secondary phone number for the credit bureau.
Extn 2	Specify the extension for the secondary phone number.
Fax 1	Specify the primary fax number for the credit bureau.

**Table 3-28 (Cont.) Credit Bureau Report Formats**

Field	Do this
Fax 2	Specify the alternative fax number for the credit bureau.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Credit Bureau Report Formats** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-29 Credit Bureau Report Formats**

Field	Do this
Company	Select the portfolio company that will be using the above credit bureau from the drop-down list.
Branch	Select the portfolio branch from the company that will be using the above credit bureau from the drop-down list.
Description	Specify the credit report format description.
Member Code	Specify the credit bureau member code (assigned by bureau).
Password	Specify the credit bureau password.
Customer Code	Specify the customer code.
Auth Password Change Dt	Display the last authorization password change date. The Experian Net Connect product requires that the Auth Password (or SSP Password in Experian jargon) be changed every 90 days (or sooner). Equifax may have similar requirements, but they were not known at the time of this writing. Use the date displayed in this field to identify when the password needs to be changed.  <b>Note:</b> The password needs to be changed both in the system and at the credit bureau. Changing the password does not initiate or perform a change at the bureau. Changing the password at the bureau must be done outside the system. Contact the credit bureau for the procedure for changing the password (display only).
Auth User ID	Displays the authorization user ID (display only).
Auth Password	Displays the authorization password (display only).  <b>Note:</b> This field is not displayed to the user and is also encrypted before being stored in the database (display only).
<b>Change Authorization User Id/Password section</b>	
New Auth User Id	Specify the authorization user ID.
New Auth User Password	Specify the authorization user password.
<b>TransUnion Details section</b> ( <b>Note:</b> This is only applicable for TransUnion.)	
Market	Specify the TransUnion market id.
Sub Market	Specify the TransUnion Sub Market id.

**Table 3-29 (Cont.) Credit Bureau Report Formats**

Field	Do this
Industry	Specify the TransUnion Industry code.
<b>Experian Details section</b> (Note: This is only applicable for Experian.)	
Preamble	Specify the Experian preamble code.
Host Code	Specify the Experian host ID.
UIC	Specify the Experian UIC.
<b>Equifax Details section</b> (Note: This is only applicable for Equifax.)	
Service Name	Specify the equifax service name. The service name will be provided to you by Equifax when your company's Internet System to System account is created. Possible values for pulling credit reports are acrotest (for access to the test system) and acro (for access to the production system).

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
- In the **Report Format Details** section, you can choose the various parameters of report format and also indicate if the report is to be processed internally or externally. To support geography specific Credit Bureau integration, external interface is also supported in OFSLL. In such case, a webhook request for Credit Bureau Onboarding report is initiated from OFSLL. The same is processed in external bureau service depending on the endpoint configuration (type of bureau to be used as defined in Setup > Administration > System > Webhook screen).

Based on the response received the **Credit Bureau Put** web service is triggered to update the details. Also on processing CREDIT\_REQUEST\_DETAILS the **Status** of the request received in CRL\_CRB\_REP\_STATUS\_CD is updated in **Bureau** tab of Origination and Servicing screens in the following combination:

**Table 3-30 Report Format Details**

CRL_CRB_REP_STATUS_CD		Bureau Details > Status
Primary	Secondary	
Completed	Completed	Completed
Completed	Failed	Failed
Failed	Completed	Failed
Failed	Failed	Failed
Submitted	Completed	Submitted
Completed	Submitted	Submitted

- Perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields is given below:

**Table 3-31 Report Formats**

Field	Do this
Report	Specify the report name to be accessed from the credit bureau.
Report Type	Select the report type of the credit bureau report from the drop-down list.
Report Class	Select the report class as either Consumer or Business from the dropdown list.
Multi Request Allowed	Check this box to allow report request from multiple bureaus.
Score Type	Select the credit score type from the drop-down list.
Addl Product	Select the product code from the drop-down list.
Inquiry Limit	Select the inquiry limit for the credit report from the drop-down list.
Default	Check this box set this as default report format.
External Report	<p>Check this box if the Credit Bureau Onboarding report request format is to be processed from external system. If selected, the encoding and decoding of request details and pooling of data into report is handled externally.</p> <p>By default, this check box is not selected and Credit Bureau Onboarding report request is processed within the system.</p>

8. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-32 Report Output**

Field	Do this:
Report	Specify the report name to be accessed from the credit bureau.
Report Type	Select the report type of the credit bureau report from the drop-down list.
Score Type	Select the credit score type from the drop-down list.
Addl Product	Select the product code from the drop-down list.
Inquiry Limit	Select the inquiry limit for the credit report from the drop-down list.
Enabled	Check this box to enable the report as default.

9. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.5.1.2 Connections

The Connections screen records and supports various connections to the credit bureau to receive reports from the agencies. The system supports connections to the bureaus through one or more modems attached to the database server, network accessed modem server, or direct network connection (usually frame relay).

For modem-based connections, multiple credit bureaus can be accessed over the same modem. If there are multiple requests in the queue, the order in which the bureaus are listed determines the order in which the requests are processed.

For example,

If the credit bureau service checks the submitted credit requests and finds three Experian, one Equifax, and two TransUnion credit requests and the connections setup is Bureau1=TUC, Bureau2=EFX, and Bureau3=EXP, the two TransUnion requests will be processed first, the Equifax request next, and then the three Experian requests.

**Note**

For this above example, adding two more modems and assigning a specific bureau to each one would help to avoid the delay caused by queuing all requests through a single modem.

**IMPORTANT:** Direct network connections must be set up for only one bureau.

Like the Credit Bureau section on the Report Formats screen, the data fields used on the Connections screen are generic and not all fields are used for all access methods. The following table summarizes the data needed for each access method:

**Figure 3-17 Credit Bureau\_Methods Table**

Method	Name	Bureau 1	Bureau 2	Bureau 3	Device	Device Speed
Dial-up	Required	Required (can be EXP, TUC, or EFX)	Optional (can be EXP, TUC, or EFX)	Optional (can be EXP, TUC, or EFX)	Required (can be either a local serial port device or an IP address and port number of a network modem)	Required for locally attached modems
Experian Frame-relay	Required	Must be EXP	Leave blank	Leave blank	Must be the IP address and port number of Experian host	Not applicable
Equifax Frame-relay	Required	Must be EFX	Leave blank	Leave blank	Must be the IP address and port number of Equifax host	Not applicable
TransUnion Frame-relay	Required	Must be TUC	Leave blank	Leave blank	Must be the IP address and port number of TransUnion host	Not applicable
Experian Net Connect	Required	Must be EXP	Leave blank	Leave blank	Must be the ECALS URL provided by Experian	Not applicable
Equifax Internet System to System	Required	Must be EFX	Leave blank	Leave blank	Must be the URL provided by Equifax for connecting to the Internet System to System service	Not applicable
CSC Internet	Required	Must be CSC	Leave blank	Leave blank	Must be the URL provided by CSC	Not applicable
CredcoConnect	Required	Must be CRD	Leave blank	Leave blank	Must be the URL provided by Credco	Not applicable

For frame relay access, specify the IP address provided by the bureau followed by a space and then the port number (for example, 192.168.36.2.700).

### Experian Net Connect

At the time of this writing, the Experian product ECALS URL is:

```
http://www.experian.com/lookupServlet1?lookupService  
Name=AccessPoint&lookupServiceVersion=1.0&serviceName=Net  
Connect&serviceVersion=2.0&responseType=text/plain
```

**Note**

The URL given above is one continuous string. This can be verified by entering the URL with a browser. The displayed value will be an HTTPS URL.

Enter the entire ECALS URL provided by Experian into the Device field. Notice that this URL does not start with https. The ECALS URL is a URL used by the credit bureau service to request the HTTPS URL. The HTTPS URL is not displayed on any setup screen and is only known to the credit bureau interface at runtime.

### Equifax Internet System to System

At the time of this writing, the Equifax Internet System to System URL is:

```
https://transport5.ec.equifax.com/servlet/stspost
```

### CSC Tri-Merge

At the time of this writing, the CSC URL is:

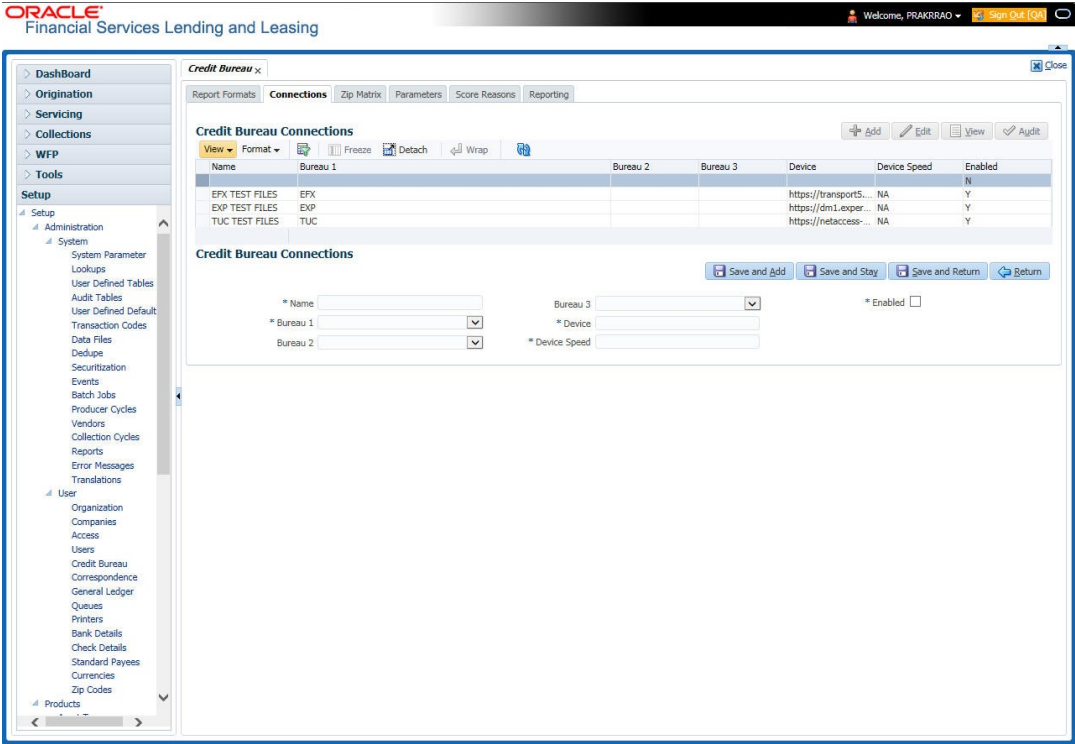

```
https://www.emortgage.Equifax.com/cgi-bin/emspop.exe
```

### To setup the Connections

1. Click **Setup > Setup > Administration > User > Credit Bureau > Connections**.
2. In the **Credit Bureau Connections** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 3-18 Credit Bureau Connections

A brief description of the fields is given below:

Table 3-33 Credit Bureau Connections

Field	Do this
Name	Specify connection name.
Bureau 1	Select first credit bureau from the drop-down list.
Bureau 2	Select 2nd credit bureau from the drop-down list.
Bureau 3	Select 3rd credit bureau from the drop-down list. <b>Note:</b> The Bureau1, Bureau2, and Bureau3 fields in the Credit Bureau Connections section specify which bureau types can be accessed over the connection.
Device	Specify the connection device name. The Device field lists the physical device name for a modem, or the IP address for a network accessed connection.
Device Speed	Select the connection device speed. The Device Speed field is only applicable to server-attached modems. It is used to specify the communications speed between the server and the modem.
Enabled	Check this box to enable the connection.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.5.1.3 Zip Matrix

The system uses the zip code of the applicant's current home address to determine which credit bureau to use when automatically pulling a report. The Zip Matrix screen allows you to record the credit bureau from which a report is pulled based on a range of zip codes, as well as the company, branch and country of the account.

When searching for a zip code match, the system:

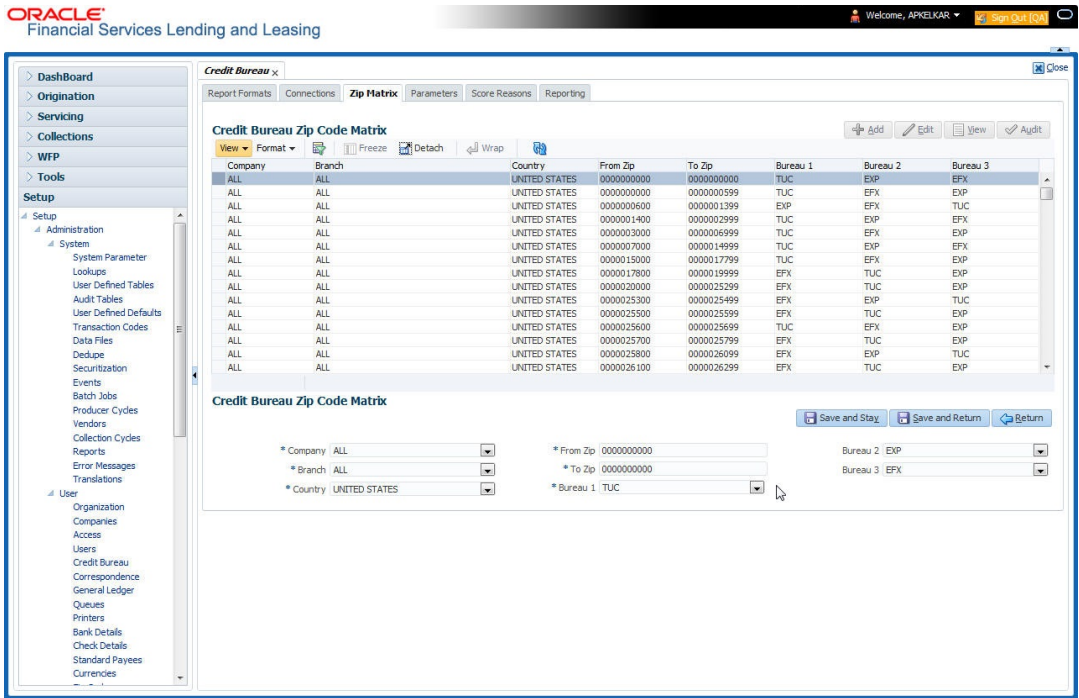

1. Reads the first credit bureau defined in the matrix
2. Reads the credit report format to get the appropriate membership code and password for the user's location
3. Requests a credit report.

If the system cannot pull a report from the first bureau, it pulls one from the second. If the zip code you entered does not fall in the matrix setup, then the system uses a default zip matrix (0000000000 to 0000000000) to select the required bureau.

#### To set up the Zip Matrix

1. Click **Setup > Setup > Administration > User > Credit Bureau > Zip Matrix**
2. In the **Credit Bureau Zip Code Matrix** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 3-19 Credit Bureau Zip Code Matrix

A brief description of the fields is given below:

**Table 3-34 Credit Bureau Zip Code Matrix**

Field	Do this
Company	Select the portfolio company from the drop-down list.
Branch	Select the portfolio branch from the drop-down list. The branch will be displayed based on the company selected.
Country	Select the country from the drop-down list.
From Zip	Specify the starting zip code (From).
To Zip	Specify the ending zip code (To).
Bureau 1	Select the preferred bureau #1 (first bureau pulled), from the drop-down list. You must enter at least one credit bureau in the Bureau 1 field for each zip code range. The bureau entered in the Bureau 1 field for each range is the primary bureau. For any given range, do not list the same credit bureau in more than one field.
Bureau 2	Select the preferred bureau #2 (second bureau pulled) from the dropdown list.
Bureau 3	Select the preferred bureau 3 (third bureau pulled) from the drop-down list.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.5.1.4 Parameters

The Parameters screen records parameters specifically dealing with credit bureau information. These parameters are divided into three groups:

- Parsing parameters
- Request parameters
- Configuration parameters

Parameters can be defined at the company or branch level. The following credit bureau parameters are configured during the installation:

PARSING PARAMETERS FOR CREDIT BUREAU SERVICE

CONFIGURATION PARAMETERS FOR CREDIT BUREAU SERVICE

The following credit bureau parameters are configured during implementation:

REQUEST PARAMETERS FOR CREDIT BUREAU SERVICE

#### To setup the Parameters

1. Click **Setup > Setup > Administration > User > Credit Bureau > Parameters**.
2. In the **Credit Bureau Parameters** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 3-20 Credit Bureau Parameters

**Credit Bureau Parameter**

A brief description of the fields is given below:

Table 3-35 Credit Bureau Parameters

Field	Do this
Company	Select the portfolio company from the drop-down list.
Branch	Select the portfolio branch from the drop-down list. The branch will be displayed based on the company selected.
Parameter Group	Select the credit bureau parameter group from the drop-down list.
Parameter	Select the credit bureau parameter from the drop-down list
Parameter Value	Specify the credit bureau parameter value.
Enabled	Check this box to enable the credit bureau parameter.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.5.1.5 Score Reasons

The Score Reasons screen allows you to define or modify the scoring reason codes and descriptions for the predefined scoring models used by the credit bureau agencies.

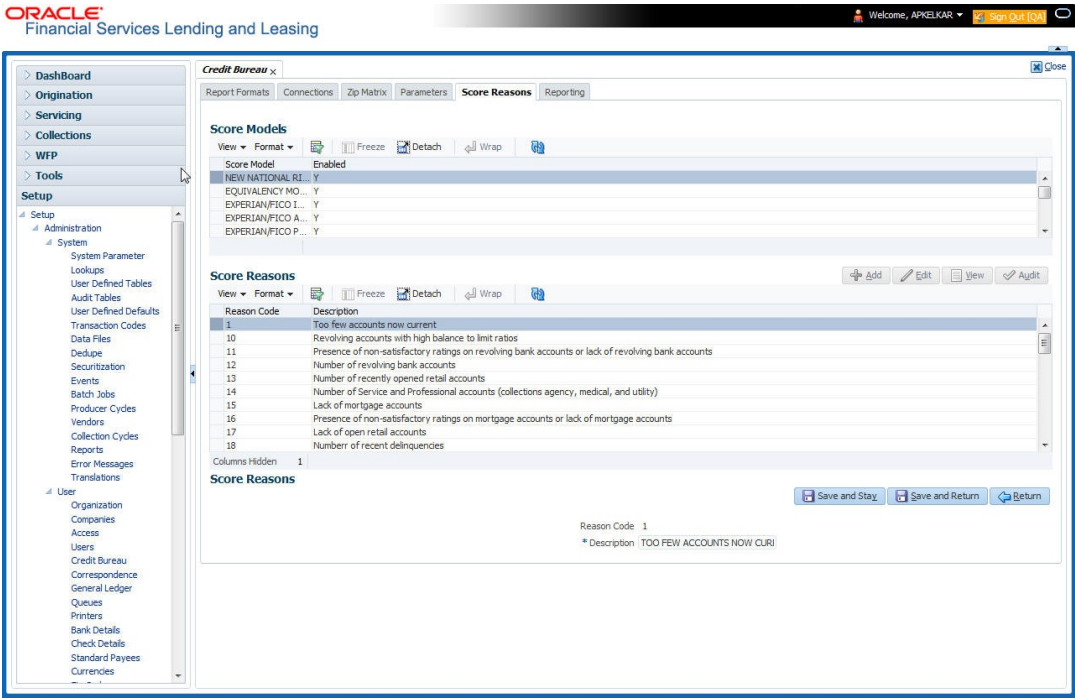

**Note**

This information is not associated with the user-defined scores determined by the internal Oracle Financial Services Lending and Leasing model during product setup.

**To setup the Score Reasons**

- 1. Click **Setup > Setup > Administration > User > Credit Bureau > Score Reasons**.
- 2. In the **Score Models** section, you can view the following information.

**Figure 3-21    Score Models**

A brief description of the fields is given below:

**Table 3-36    Score Models**

Field	Do this
Score Model	Displays the credit bureau score model (display only).
Enabled	Displays if the credit bureau score model is enabled or not.

- 3. On the **Score Reasons** sub screen, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-37 Score Reasons**

Field	Do this
Reason Code	Specify the reason code.
Description	Specify the description.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.5.1.6 Reporting

The system reports to the credit bureau agencies in the Metro 2 format with the payment and account status information of each account holder. The Credit Bureau Reporting screen contains the program identifier to be reported to the bureaus.

#### To setup the Reporting

1. Click **Setup > Setup > Administration > User > Credit Bureau > Reporting**.
2. In the **Credit Bureau Reporting** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 3-22 Credit Bureau Reporting**

The screenshot shows the Oracle Financial Services Lending and Leasing interface. The top bar includes the Oracle logo and the text 'Financial Services Lending and Leasing'. The user is logged in as 'Welcome, PRAKRRAD' with a 'Sign Out' button. The left navigation pane has 'Setup' expanded, showing a tree structure including 'Administration', 'System', 'User', and 'Products'. The main area is titled 'Credit Bureau Reporting' and contains a table with columns 'Company', 'Program Identifier', and 'Enabled'. The table has one row with 'Bureau' in the 'Company' column, 'N' in the 'Program Identifier' column, and 'N' in the 'Enabled' column. Below the table are form fields for 'Company', 'Bureau', and 'Program Identifier', each with a dropdown menu. There are also buttons for 'Save and Add', 'Save and Stay', 'Save and Return', and 'Return'.

A brief description of the fields is given below:

**Table 3-38 Credit Bureau Reporting**

Field	Do this
Company	Select the portfolio company from the drop-down list.
Bureau	Select the bureau from the drop-down list.
Program Identifier	Specify the program identifier. The customer receives this from the bureau and uses it to identify itself to that bureau. You will need to update this information.
Enabled	Check this box to enable the program.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 3.5.2 Special Metro II Code reporting

The system allows you to report the following special Metro II segments to the credit bureau output file:

- Consumer Information Indicator Code (CIIC)
- Compliance Condition Code (CCCD)
- Special Comment Code (SPCC).

The system users will need to use call Action/Results and Reason fields on the Call Activities sub screen of the Customer Service form (Lending > Customer Service > Customer Service (2) master tab > Account Details tab > Call Activities sub tab) to place specific account conditions where these Metro II segments are to be reported. The specific segment reported for a given condition will be based on the account condition and call activity reason codes.

### Note

It is the responsibility of the Administrator or individual user to setup Special Metro II Code reporting functionality.

When users open one of the following conditions:

**Table 3-39 Special Metro II Code reporting**

Code	Description
CIIC	CONSUMER INFORMATION INDICATOR CODE (METRO2 - FCRA)
CCCD	COMPLIANCE CONDITION CODE (METRO2)
SPCC	SPECIAL COMMENT CODE (METRO2)

The system recognizes the condition, processes the selected Metro II reporting call activity reason code, and generates the Metro II reporting segment in the Metro II reporting output file.

**Note**

- You are responsible for selecting the correct Metro II reporting segment reason code to be reported. If you do not select a Metro II reporting segment reason code, the system will not generate information to Metro II output file. If you select an incorrect Metro II reporting segment reason code, the system will report the selected Metro II reporting segment. The system does not validate the contents of the Reason field with the contents of the Condition field.
- To end the reported Special Metro II Special Code, close the open Special Metro II Condition (no reason code needed). The system recognizes the closing of the open Special Metro II Condition and will not create a Metro II reporting segment in the output file.
- The CBU\_FILE\_FREQUENCY (METRO 2 FILE FREQUENCY) Company system parameter determines if output file is generated and created daily or output file is written with daily data and output monthly.

**To setup Metro II Code reporting**

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > User > Queues > Call Action Results** to open and close the following system defined condition codes:

**Table 3-40 Metro II Code reporting**

Action Code	Description
CIIC	CONSUMER INFORMATION INDICATOR CODE (METRO2 - FCRA)
CCCD	COMPLIANCE CONDITION CODE (METRO2)
SPCC	SPECIAL COMMENT CODE (METRO2)

When setup is completed, you can open and close Special Metro II code conditions.

**Note**

Opening and closing Special Metro II Code reporting is a manual process.

The CBU\_FILE\_FREQUENCY (METRO 2 FILE FREQUENCY) Company system parameter determines, if output file is generated and created daily or output file is written with daily data and output monthly.

### 3.5.3 Oracle Wallet Manager setup

The Experian Net Connect, Equifax Internet System to System, and CSC interfaces within the system credit bureau service use functionality provided by the Oracle Wallet feature. Use the Oracle Wallet Manager on the database server to create and export a wallet for use by the credit bureau service.

**Note**

All of the above mentioned interfaces use the same Oracle wallet. If a wallet already exists and is in use by one of the credit bureau interfaces, there is no need to create another wallet. Due to differing certificate requirements, there may be a need to import additional trusted certificates into the wallet, but there will not be a need to create a new one. The credit bureau parameter `ORA_WALLET_PATH` contains the location of the Oracle Wallet used by the credit bureau service.

**To create and export a wallet suitable for use by the credit bureau**

Refer to the Oracle documentation for more detailed instructions on how to use the Oracle Wallet Manager to create and manage a wallet:

1. If a wallet does not already exist, create one somewhere on the database server. The location must be readable and writable by the Oracle user. Make a note of the full path where the wallet is stored (for example, `/etc/ORACLE/WALLETS/oracle` or `C:\oracle\WALLETS`).  
For Transunion credit bureau, a separate wallet file is needed under transunion folder inside the main wallet path (for example: `/etc/ORACLE/WALLETS/oracle/transunion` or `C:\oracle\WALLETS\transunion`).
2. The wallet needs to contain the public key for the certificate authority that issued the server certificate for each HTTPS web site that will be connected to by the credit bureau interface. At the time of this document, those sites are:

**Table 3-41 Credit Bureau Location**

Location	Credit Bureau
Experian Credit Bureau ( <a href="https://dm1.experian.com/netconnect2_0Demo/servlets/NetConnectServlet">https://dm1.experian.com/netconnect2_0Demo/servlets/NetConnectServlet</a> )	Experian
Equifax Credit Bureau ( <a href="https://api.uat.equifax.com/business/sts-reports/v1/report">https://api.uat.equifax.com/business/sts-reports/v1/report</a> )	Equifax
CSC Credit Bureau ( <a href="https://emsws.equifax.com/emsws/services/post/MergeCreditWWW">https://emsws.equifax.com/emsws/services/post/MergeCreditWWW</a> )	CSC
Transunion Credit Bureau ( <a href="https://netaccess-test.transunion.com">https://netaccess-test.transunion.com</a> )	TUC

This list may change. Use the URL provided to you by the credit bureau when they set up your service. To get the proper Experian HTTPS URL, enter the ECALS URL that was provided by Experian into a web browser. The response returned to the browser is the HTTPS URL that will be used to communicate with Experian.

1. Import the necessary certificate authority's certificate files into the Oracle wallet that was created in Step 1. See the appendix of this chapter for detailed instructions of how to download and install a trusted certificate.
2. Test the wallet by connecting to each web site with a simple command issued from SQLPlus.

```
SQL> select utl_http.request('https://ssl.experian.com', NULL,
'file:/etc/ORACLE/WALLETS/oracle', 'password') from dual;
```

Replace the URL in the above command with each HTTPS URL given to you for use by the credit bureaus. Also replace the wallet path with the path to your wallet and your wallet password. The output from the command is not important, what is important is that it runs without displaying an Oracle error. If there is an Oracle error, then something is wrong with the contents of the wallet, the path to the wallet, and/or the wallet password.

3. When the wallet contains all of the required trusted certificates, export the wallet to a text file. On the **Operations** menu of the Oracle Wallet Manager, choose **Export All Trusted Certificates**. The text file **MUST** be located in the same directory as the wallet and the filename **MUST** be `default.txt`. Anytime a change is made to the trusted certificates in the wallet, the wallet must be re-exported to the same text file.
4. In the **Setup > Setup > Credit Bureau > Parameters** set the `ORA_WALLET_PATH` and `ORA_WALLET_PASSWORD` parameters.

### 3.5.4 Oracle JVM Security setup

The Experian Net Connect interface within the credit bureau service requires the use of the Oracle Java Virtual Machine (JVM) that is resident in the Oracle database. Furthermore, specific permissions must be granted to the Java classes used by the credit bureau service. These permissions have been added to the `set_java_perms.sql` script that is part of the distribution. This script (as well as many other useful SQL scripts) is available from the Oracle Financial Services Software technical support Oracle Financial Services Lending and Leasing patches web site.

The `set_java_perms.sql` script needs to run as the SYS user (or a user with SYS privileges). The script will prompt for SYS user id and password. Be prepared to provide it when prompted. Also, the script will select the value of the `ORA_WALLET_PATH` parameter from the credit bureau parameters table. Make sure that it has been updated with the proper wallet path before running the `set_java_perms.sql` script (although the script can be safely run again if necessary).

#### Credit Bureau Service operation

The basic operation of the credit bureau service has not changed. Once setup, there is no operational difference between accessing the credit bureaus via dial-up, frame relay, or the Internet.

### 3.5.5 Importing a trusted certificate into an Oracle Wallet

The HTTPS servers used by Experian, Equifax, and CSC for their Internet based credit report services (as well as all HTTPS servers) contain a site certificate signed by a trusted Certificate Authority (CA). The CA is an entity that guarantees the identity of the HTTPS server. If the client trusts the CA, and the CA says that the HTTPS server is who they say they are, then the client inherently trusts the HTTPS server. Normally, a client tool such as Microsoft Internet Explorer has a large store of trusted CA certificates which makes secure communication between a client and a trusted HTTPS server relatively seamless and uneventful. Unfortunately, the store of CA certificates in the default Oracle wallet is rather small and it is likely that it will not contain the certificate of the CA that is certifying one or more of the credit bureau web sites. This means that the CA certificate must be imported into the wallet. To do this, the certificates must first be exported from a browser and then imported into the Oracle wallet using the Oracle Wallet Manager.

#### Using Microsoft Internet Explorer to Export a Certificate

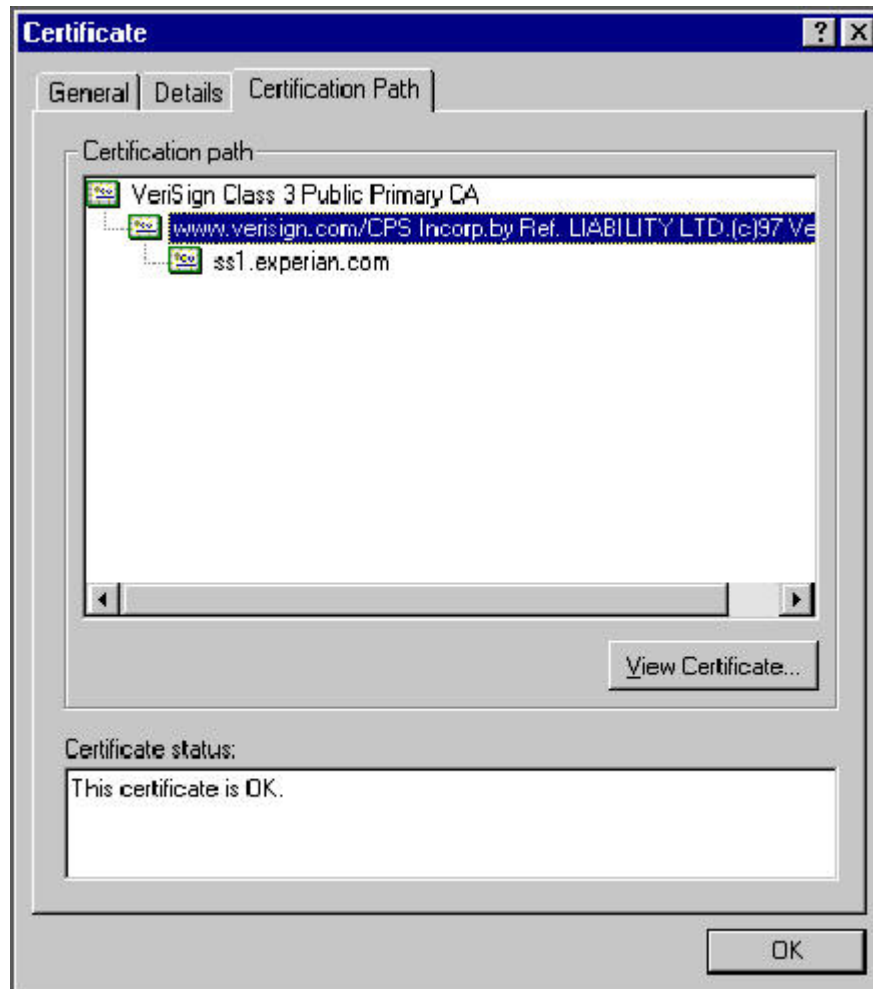

1. Use Microsoft Internet Explorer and connect to one of the HTTPS URLs referenced in the Oracle Wallet Manager Setup section of this document.

If the web site asks for a user id and password, cancel the dialog box and remain on the top-level HTTPS screen.

2. Once connected, from the browser's **File** menu, choose **Properties**.
3. Click the **Certificates** button.
4. Click the **Certification Path** tab. The bottom-most certificate is the one generated by the host itself. The one or more certificates above the bottom-most one are of greater importance to this task. The screen shot below displays a web site with two CAs (an intermediate, and a primary). Whether it is an intermediate CA or a primary one, the steps are the same for saving the certificate as a text file.

**Figure 3-23 CreditBureau\_Certificate**

5. Click the first certificate above the bottom-most certificate (it may be the only certificate above the bottom-most certificate).
6. Click the **View Certificate** button.
7. Click the **Details** tab.
8. Click the **Copy to File** button.
9. Click the **Next** button.
10. Choose the **Base 64** encoded format.

11. Click the **Next** button.
12. Enter a filename and location for the file.
13. Click the **Next** button.
14. Click the **Finish** button.
15. Repeat steps 5 through 14 for the next certificate in the certification path, if any.

### 3.5.6 Importing the Certificates into an Oracle Wallet

1. Copy the certificates exported and saved during the process described above onto the database server (not the iAS server).
2. As the Oracle user (or Administrator on Windows), start the Oracle Wallet Manager.
3. Open the wallet that will be used by the credit bureau service. Create a new wallet if one does not already exist.
4. View the list of Trusted Certificates in the wallet.
5. Check the list of certificates against the list of certificates that are in use on the HTTPS servers used by the credit bureaus (and that were exported and saved during the export process described above).
6. Click the **Trusted Certificates** heading in the left list box of the Oracle Wallet Manager.

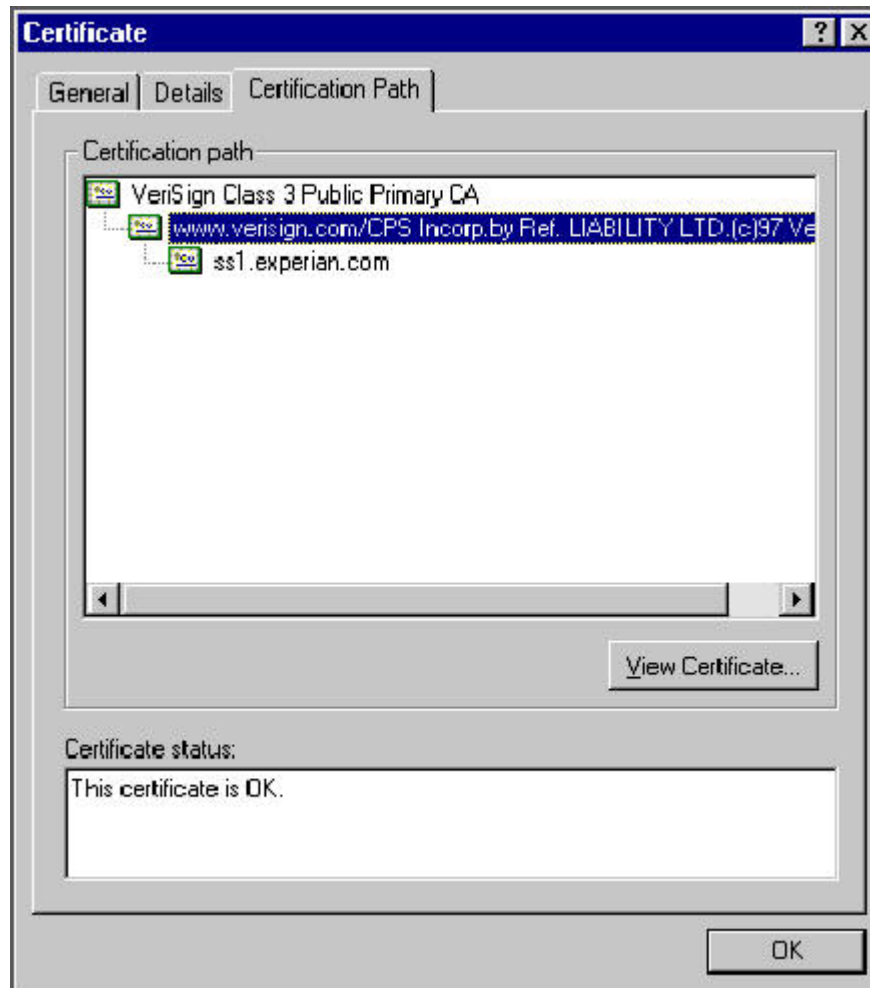

Figure 3-24 Oracle Wallet Manager

7. Use Microsoft Internet Explorer to view the certificate details for the HTTPS web sites (**File > Properties > Certificates > Certification Path > View Certificate > General**) that will be contacted by the credit bureau service. Look through the list of certificates shown in the right panel of the Oracle Wallet Manager and look for a match between the **Issued To** and **Valid To** dates shown in the Internet Explorer View Certificate screen. The screen shot below shows a certificate that is already in the wallet's list of trusted certificates (see the last entry for the **www.verisign.com/CPS** certificate).

Figure 3-25 Certificate

8. On the **Operations** menu, choose **Import Trusted Certificate** and follow the prompts for locating and loading the files that were copied onto the database server in step 1 for any certificate not already stored in the wallet.
9. On the **Wallet** menu, choose **Save** when finished loading certificates.

### 3.5.7 De-duping Credit Bureau data

Oracle Financial Services Lending and Leasing allows you to remove duplicate (**de-dupe**) liabilities data from the credit bureau information.

#### De-duping logic

The de-duping logic is based on a number of parameters that the system compares among tradelines (**only**) to determine if they are duplicates. The following fields are used to determine if two tradelines are duplicates:

**Table 3-42 De-duping logic**

Field	Description
Account #	The account number of the consumer with the lender for the particular account.

**Table 3-42 (Cont.) De-duping logic**

Field	Description
Open Date	The date the account was opened.
Member Code	<p>The subscriber code of the lender with the respective credit bureau.</p> <p><b>Note:</b> Since member codes for the same lender differ across bureaus, this field is used only for tradelines reported by the same bureau. Since reports obtained from CSC can have tradelines from different bureaus, this field is only for reports pulled from the credit bureaus.</p>

All available bureau reports pulled later than DEDUP\_CRB\_EXPIRATION\_DAYS days old will be used.

The following system parameters will be set up to provide switches to allow the functionality to be turned on and off:

**Figure 3-26 System Parameters**

Parameter	Description	Valid Values	Setup Value
JOINT_DEDUP_SPOUSE_LIABILITIES	De-deup the tradelines with spouse	Y, N	Y
JOINT_DEDUP_ALLAPL_LIABILITIES	De-deup the tradelines with spouse and secondary applicants(s).	Y, N	Y
DEDUP_CRB_EXPIRATION_DAYS	Credit report expiration days	Number	90

Whenever two (or more) items are identified as duplicates, Oracle Financial Services Lending and Leasing uses the following hierarchy to pick one of the items as the **correct** one:

1. **Last Reported Date:** The row that has been reported most recently is used.
2. **Owner:** In case of a tie on the last reported date, one of the tradelines is picked in the descending order of priority depending on who the tradeline belongs to: Primary, Spouse, then Secondary.

#### Debt Ratio combination

Oracle Financial Services Lending and Leasing uses the system parameter DBR\_JOINT\_INC\_DEBT\_WITH\_SPOUSE to decide whether to combine debt ratios of the spouse with the primary applicant. The DBR\_JOINT\_INC\_DEBT\_WITH\_COAPP parameter decides whether to do the same on a non-spousal joint application.

When this indicator is checked, all liabilities in the Liability section on the Summary sub screen of the Applicant (2) master tab with the Include box selected will be used in the debt ratio calculation.

The following system parameter will be set up to provide switches to allow the functionality to be turned on and off:

#### De-duping process

The de-duping logic will be integrated into the system decision-making process in the following manner:

**Initial credit pulls on new applications**

- If the JOINT\_DEDUP\_SPOUSE\_LIABILITIES/ JOINT\_DEDUP\_ALLAPL\_LIABILITIES system parameters are set to **Y**, uses the de-duping logic described above to uncheck the duplicate liabilities in the spouse's/co-applicant's liabilities.
- If the DBR\_JOINT\_INC\_DEBT\_WITH\_SPOUSE/ DBR\_JOINT\_INC\_DEBT\_WITH\_ALLAPL parameters are set to **Y**, the system includes the liabilities of the spouse/ co-applicant while calculating the debt ratio of the primary applicant.
- The system will use all available credit reports at the time.

**Subsequent credit pulls (manual)**

- To remove duplicate liabilities from the calculation, choose the **Dedup Liabilities** button on the **Underwriting** form (**Applicants** master tab > **Summary** sub screen > **Liability** section). (Potential record locking situations force the action to remain manual versus the system automatically doing it).
- If the **Populate Debt** and **Include Debt** boxes are selected in the **Applicant/Customer Detail** section on the **Bureau** master tab on the **Underwriting** form for the credit request and the JOINT\_DEDUP\_SPOUSE\_LIABILITIES/ JOINT\_DEDUP\_ALLAPL\_LIABILITIES system parameters are set to **Y**, the system will use the de-duping logic described above to uncheck the duplicate liabilities in the spouse's/co-applicant's liabilities.
- If the DBR\_JOINT\_INC\_DEBT\_WITH\_SPOUSE/ DBR\_JOINT\_INC\_DEBT\_WITH\_COAPL parameters are set to **Y**, the system will include the liabilities of the spouse/ co-applicant while calculating the debt ratio of the primary applicant.
- The system will use all available credit reports at the time of the request that have been requested within the number of days specified in the DEDUP\_CRB\_EXPIRATION\_DAYS parameter.

**Restrictions**

The de-duping logic will be limited based upon the discussion above. If the system cannot identify two tradelines as duplicates based upon the logic mentioned above, the individual tradelines will be retained. In such circumstances, both tradelines will be used in the debt ratio calculation and it will be the user's responsibility to disregard one of them by clearing the Include check box.

## 3.6 Correspondence

The Correspondence screen enables you to setup the system's correspondence.

The system provides two types of correspondence: predefined and ad hoc. The following chart provides a quick summary of both:

**Figure 3-27 Correspondence Types**

TYPE OF CORRESPONDENCE:	AD HOC	PREDEFINED
Created automatically		X
Created manually	X	X
Generated for accounts	X	X
Generated for applications	X	X
Set up with the Correspondence link	X	
Set up with the Letters link on the Product link		X

This chapter explains how to setup ad hoc correspondence with the Correspondence form.

The Correspondence screens provide a cost-effective and easy to use method to build custom documents that draw information from the system's database without additional programming. You can choose what to include in a letter, create a template, and then use this template to produce a letter.

The core of the Correspondence module is the document element -- the information stored in the database merged into the correspondence. The system has document elements defined for commonly used data elements in correspondence, such as account numbers, account balances, customer addresses, telephone numbers, and due dates.

Correspondence consists of a document file with text of your choice and the document elements from the system's database.

You can create a correspondence set that consists of one or more documents. If a correspondence set consists of more than one document, such as the account details letter and a payment overdue letter, it prints both documents every time the system generates correspondence for a customer.

The Correspondence module creates the following standard ad hoc correspondence:

- Microsoft Word (RTF)
- Adobe Acrobat (PDF/XFDF)

**Note**

In this document and in the system, the term BANKERS SYSTEM is synonymous with Adobe Acrobat.

This section consists of the following topics:

- [Correspondence](#)
- [Creating Correspondence](#)
- [Generating Correspondence](#)

## 3.6.1 Correspondence

### Navigating to Correspondence

On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > User > Correspondence**.

The Correspondence screen contains the following sub screens:

- [System Functions](#)
- [Elements](#)
- [E-Form Elements](#)
- [Documents](#)
- [Correspondence](#)

### 3.6.1.1 System Functions

The System Functions screen enables you to view the predefined functions for the appropriate LoanLine of creditLease product in the system. These are attributes from the database.

Functions define how the system retrieves data to include in correspondence. The data is retrieved as elements which are either specific database columns or calculated values. Elements are recorded on the Elements screen.

#### To view the predefined system functions

1. Click **Setup > Setup > Correspondence > LoanLine of creditLease > System Functions**.
2. In the **Function Definition** section, you can view the following information.

**Figure 3-28 Correspondence - System Functions**

**Function Definition**

Function Name	Description	Function Type	Source Program
GET_ACC_111_DTLS	Get ACC Details (Loan CE)	COR_ELM_PROC	CQNAAC_EL_111_01
GET_ACP_111_DTLS	Get Account Repayment Schedule Details	COR_ELM_PROC	CQNAAC_EL_111_01
GET_ACR_111_DTLS	Get Account Rate Schedule Details	COR_ELM_PROC	CQNAAC_EL_111_01
GET_ACS_111_DTLS	Get APP Payment Change Schedule Details	COR_ELM_PROC	CQNAAC_EL_111_01
GET_APC_111_DTLS	Get APP Repayment Schedule Details	COR_ELM_PROC	CQNAAC_EL_111_01
GET_APP_111_DTLS	Get APP Details (Loan CE)	COR_ELM_PROC	CQNAAC_EL_111_01
GET_APP_ADC_111_DTLS	Get Application Decisions (Loan Close Ended)	COR_ELM_PROC	CQNAAC_EL_111_01
GET_APP_CON_111_DTLS	Get Application CON Details (Loan CE)	COR_ELM_PROC	CQNAAC_EL_111_01
GET_ARC_111_DTLS	Get APP Rate Schedule Details	COR_ELM_PROC	CQNAAC_EL_111_01
GET_ART_111_DTLS	Get Account Payment Change Schedule Details	COR_ELM_PROC	CQNAAC_EL_111_01
GET_CON_111_DTLS	Get CON Details (Loan CE)	COR_ELM_PROC	CQNAAC_EL_111_01

**Function Parameters**

Position	Parameter	Description
1	iv_id_ACC_id	Account ID
2	iv_name_ar	Parameter Name
3	iv_value_ar	Parameter value

Figure 3-29 Correspondence - System Functions

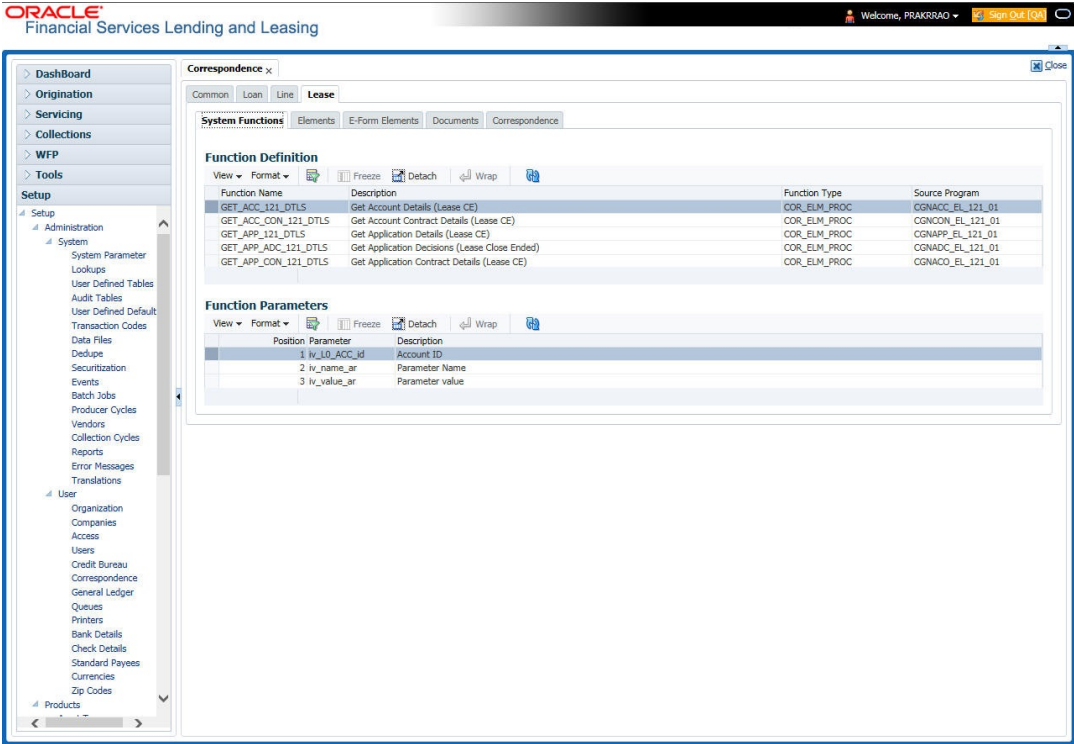

Figure 3-30 Correspondence - System Functions

A brief description of the fields is given below:

**Table 3-43 Function Definition**

Field	View this
Function Name	Displays the function name.
Description	Displays the function description.
Function Type	Displays the function type.
Source Program	Displays the source program.

3. In the **Functions Parameters** section, you can view the following information. A brief description of the fields is given below:

**Table 3-44 Functions Parameters**

Field	View this
Position	Displays the parameter position.
Parameter	Displays the function parameter.
Description	Displays the function parameter description.

### 3.6.1.2 Elements

The Elements screen displays the predefined document elements retrieved from the database when the correspondence is generated.

In the Element Definitions section, you can update or edit only the Description field.

#### To view the Elements

1. Click **Setup > Setup > Administration > User > Correspondence > LoanLine of creditLease > Elements**
2. On the **Element Definitions** screen, perform any of the [Basic Operations](#) mentioned in Navigation chapter. You cannot add a new record.

Figure 3-33 Correspondence\_Lease\_Elements

A brief description of the fields is given below:

Table 3-45 Element Definitions

Field	Do this
Level0 Type	Displays the element Level0 type.
Element Name	Displays the element name.
Element Type	Displays the element type.
Description	Specify the element description.
Data Type	Displays the element data type.
Source Function	Displays the element function.
Enabled	Displays if the element is enabled or not.
Default Value	Displays the default value.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.6.1.3 E-Form Elements

The E-forms Elements screen defines elements included when the system generates online correspondence with a browser. The E-forms screen is set up only for PDF elements using the XDF format. These definitions translate the external element required by the vendor to a systems correspondence element.

For example,

**Table 3-46 E-Form Elements**

Type	Details
Vendor Element	AllBorrowers.FullNameStreetCityStateZip (Contains names of all borrowers with address of primary customer)
The system's Elements	PRIM_APL_NAME SPOUSE_APL_NAME PRIM_APA_ADDRESS1 PRIM_APA_ADDRESS2 PRIM_APA_ADDRESS3
Translation	PRIM_APL_NAME    ', '    SPOUSE_APL_NAME    ' '    PRIM_APA_ADDRESS1    ', '    PRIM_APA_ADDRESS2    ', '    PRIM_APA_ADDRESS3

**To setup the E-forms Elements**

1. Click **Setup > Setup > Administration > User > Correspondence > LoanLine of creditLease > E-Form Elements**.
2. In the **E-form Elements Definitions** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

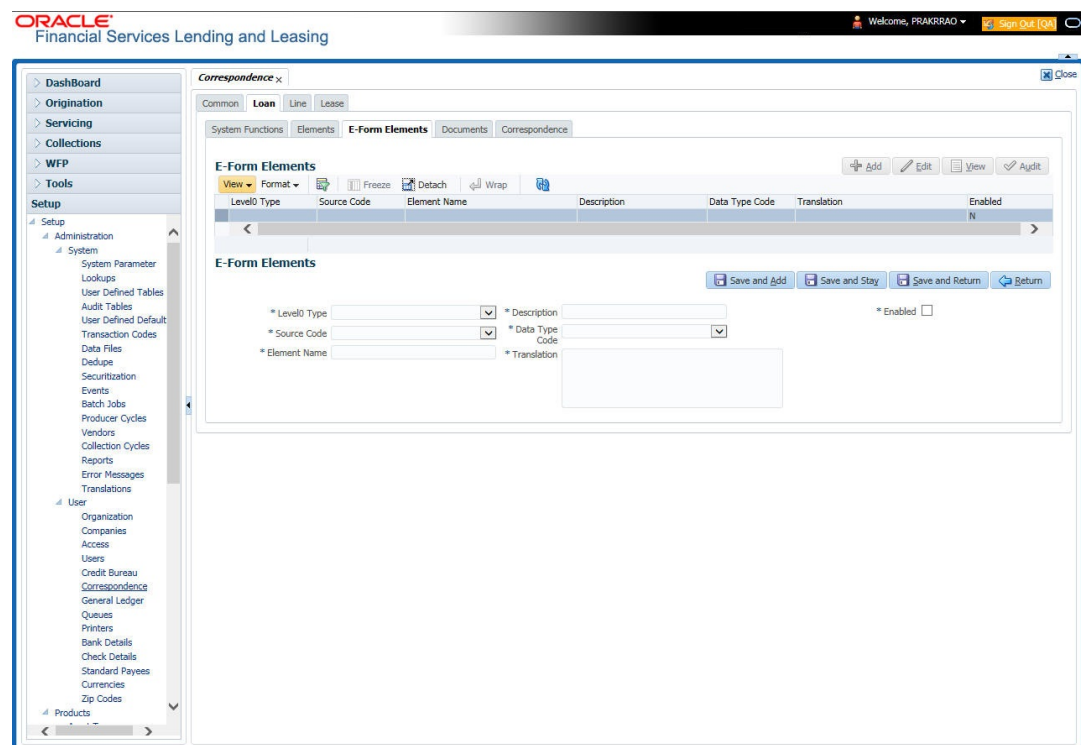

**Figure 3-34 Correspondence - E-Form Elements**

Figure 3-35 Correspondence - E-Form Elements

Figure 3-36 Correspondence - E-Form Elements

A brief description of the fields is given below:

**Table 3-47 E-form Elements Definitions**

Field	Do this
Level0 Type	Select the element Level0 type from the drop-down list.
Source Code	Select the element e-form source code from the drop-down list.
Element Name	Specify the element name (the name used in the external form).
Description	Specify the element description.
Data Type Code	Select the element data type code from the drop-down list.
Translation	Select the translation for the e-form element (SQL statement fragment defining the element data), from the drop-down list.
Enabled	Check this box to enable the e-form element.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.6.1.4 Documents

The Documents screen enables you to set up the various documents and the data fields that the system compiles together when creating a correspondence. The system provides two different document formats: Word or XFDF: XML-based form.

#### Note

Oracle Financial Services Software assumes that the user is familiar with Word and the Merge Document command. If the user is creating e-form documents with XFDF, then Oracle Financial Services Software assumes that person is familiar with Adobe forms.

#### To setup documents to be compiled in correspondence

1. Click **Setup > Setup > Administration > User > Correspondence > LoanLine of creditLease > Documents**.
2. In the **Document Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 3-37 Correspondence - Documents

Figure 3-39 Correspondence - Documents

A brief description of the fields is given below:

Table 3-48 Document Definition

Field	Do this
Code	Specify the document code to define the name for the new document.
Description	Specify the document description for the new document. This entry appears in the <b>Correspondence</b> section on the Request screen, when you generate an ad hoc correspondence.
File Name	Specify the document file name for the resulting file (Word or XFDF document). Ensure that the name specified here is same as the BIP Template name since system refers to this file name for generating the correspondence.
Level0 Type	Select the level0 type from the drop-down list.
E-form Source	Select the element e-form source from the drop-down list.
Product	Select the document product from the drop-down list.
Source	Select the document source type from the drop-down list.
Enabled	Check this box to enable the document definition.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

4. In the **Document Elements** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-49 Document Elements**

Field	Do this
Seq	Specify the sequence number to order the document elements.
Type	<p>Select element type from the following from the drop-down list. This list provides the following options:</p> <p><b>System-defined</b> – If you select, the value is supplied by the system and cannot be changed in the Correspondence Request screen.</p> <p><b>Constant.</b></p> <p><b>User Defined Element</b> – If you select, you can choose the value and change it in the Correspondence Request screen.</p> <p><b>User Defined Constant</b> – If you choose, you can choose the value, but you cannot change it in the Correspondence Request screen.</p> <p><b>Translated Element</b> – If a document contains an e-form element and you do not select this option, then the value will not be translated.</p>
Element Name	Select the element name from the drop-down list.
Description	<p>Specify element description.</p> <p><b>Notes:</b></p> <ol style="list-style-type: none"> <li>1. Check that the element name does not have blank spaces or special characters, such as the forward slash "/" or backward slash "\".</li> <li>2. If the element is system-defined, then the system will automatically complete this field.</li> </ol>
Data Type	Select the element data type from the drop-down list.
Format Mask	Select the element format mask from the drop-down list.
Default Value	Specify the element default value.
Enabled	Check this box to include the element in the document.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
6. In the **Document Template** section, you can set the information about the template which is attached to the correspondence documents. The template thus saved is similar to the template functionality available in MS word. Perform any of the Basic Operations mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-50 Document Template**

Field	Do this
File Name	Specify the file name to define the name for the new template.

**Table 3-50 (Cont.) Document Template**

Field	Do this
Product	Select the product for which the template is valid, from the dropdown list.
Customer State	Select the customer state for which the product is valid, from the drop-down list.
Producer State	Select the Producer state for which the product is valid, from the drop-down list.
App/Acc St	Select the Applicant/Account state for which the product is valid, from the drop-down list.
New Template	Check this box to load the template as a new template.
Loaded	Check this box to indicate that the template is loaded.
Enabled	Check this box to enable the template.

**Note**

You can define multiple templates for each document and the template file name (BIP template) is picked based on following criteria – Product and Producer / Account / Customer State.

7. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.  
The Document Elements sub screen records the system's application or account information that appears in the ad hoc correspondence.

**To generate a data file for a document**

1. In the **Document Definition** section of **Setup > Setup > Administration > User > Correspondence > LoanLine of creditLease > Documents**, select the record for which you want to generate a data file.
2. Click **Gen. Data File** button.  
The system displays a new screen with the following options:

**Figure 3-40 Generate a data file**

- **Open with** – Select to view the data file in the format you want. The adjacent drop-down list provides a list of formats compatible with the system. The system downloads the file and displays it.
  - **Save File** – Select to save the data file on your system.
3. Check the box **Do this automatically for files like this from now on** to apply selected properties for the files which are similar to the current one.

### 3.6.1.5 Correspondence

The Correspondence screen enables you to define who will receive the documents you created on the Document Definition screen by creating correspondence sets. Each document must belong to a set, and a set can have more than one document.

#### To set up a correspondence set

1. Click **Setup > Setup > Administration > User > Correspondence > LoanLine of creditLease > Correspondence**. The correspondence setup is classified into two:
  - Documents
  - Functions
2. In the **Correspondence** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 3-41 Correspondence

**Correspondence**

**Documents**

No data to display.

Figure 3-43 Correspondence

The screenshot displays the Oracle Financial Services Lending and Leasing application interface. The left-hand navigation pane includes sections for Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. The Setup section is expanded, showing various administrative options. The main window is titled 'Correspondence' and features a tabbed interface with 'Common', 'Loan', 'Line', and 'Lease' tabs. The 'Common' tab is active, showing a table with columns: Code, Description, Print Schedule, Level, Group, Company, and Branch. A single row is visible with the following values: TEST10, TEST10, ONLINE, ACCOUNT, 01 BANKRUPTCY SET, ALL, and ALL. Below the table, there are input fields for \* Code, \* Description, \* Print Schedule, \* Level, \* Group, \* Company, \* Branch, \* Product, and \* Enabled. There are also buttons for 'Save and Add', 'Save and Stay', 'Save and Return', and 'Return'. At the bottom, there is a 'Documents' section with a table that has columns 'Documents' and 'Recipient', and an 'Include' button.

A brief description of the fields is given below:

Table 3-51 Set up a correspondence set

Field	Do this
Code	Specify the correspondence code.
Description	Specify the correspondence description (required).
Print Schedule	Select the correspondence output schedule type from the dropdown list.
Level	Select the correspondence level type from the drop-down list.
Group	Select correspondence group from the drop-down list.
Company	Select the correspondence company from the drop-down list.
Branch	Select the correspondence branch from the drop-down list.
Product	Select the correspondence product from the drop-down list.
Enabled	Check this box to enable the correspondence.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. Click **Setup > Setup > Administration > User > Correspondence > LoanLine of creditLease > Correspondence > Documents**.

5. In the **Documents** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-52 Documents**

Field	Do this
Document	Select the correspondence document from the drop-down list.
Recipients	Select the recipients for the document from the drop-down list.
Enabled	Check this box to enable the recipient selected.

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
7. Click **Setup > Setup > Correspondence > LoanLine of creditLease > Correspondence > Functions**.
8. In the **Functions** sub screen, you can define the functions that should be executed before or after correspondence is generated. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-53 Functions**

Field	Do this
Function	Select the correspondence functions from the drop-down list.
Execute When?	Select when to execute the correspondence function from the drop-down list.

9. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 3.6.2 Creating Correspondence

1. To create a correspondence add a record in the document definition block. For example: SAMPLE\_LOAN\_APP
2. In the **Document Elements** section, add the elements required in the correspondence.
3. Click on **Gen.Data File** to generate PDF file of the report.

**Figure 3-44 To generate PDF file of the report**

4. Copy and save the content in the pdf file as an xml file. The saved xml file should have the same name as entered in the Code column of Document Definition section. For Example: SAMPLE\_LOAN\_APP.xml.
5. Open MS Word.

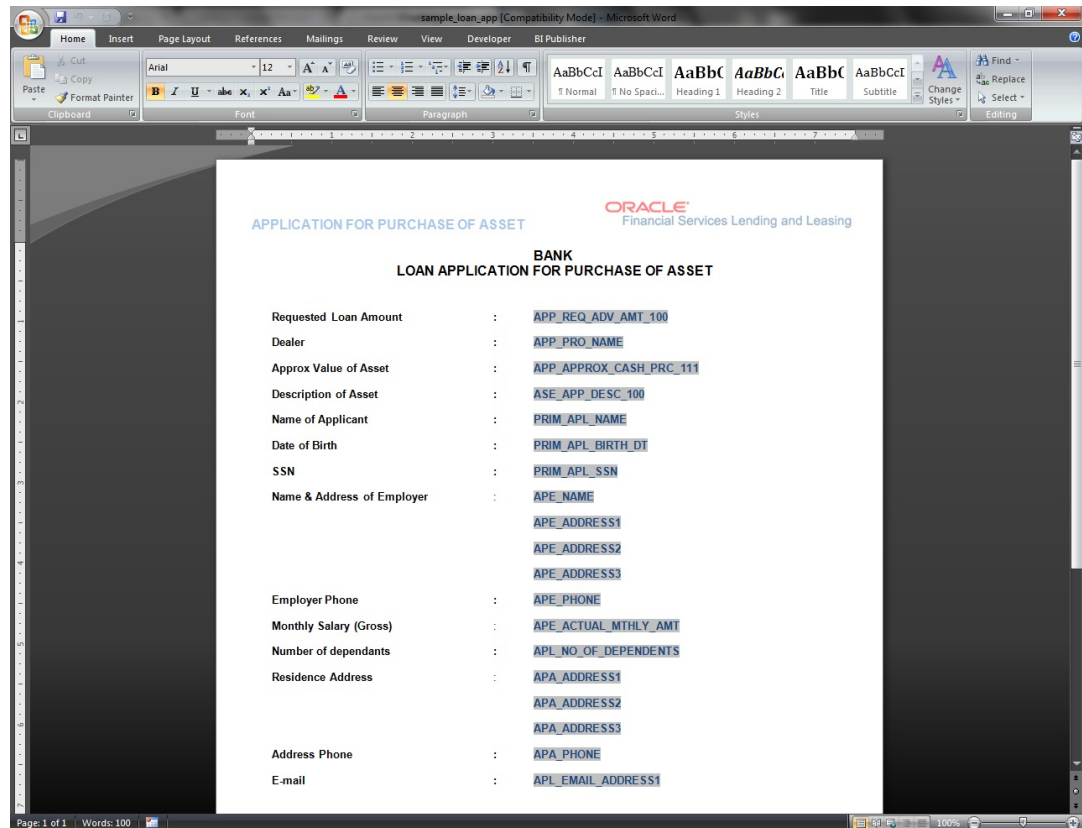

**Note**

Oracle Financial Services Software assumes that BIP Desktop Tool is installed and the user is familiar with the BIP Report Tool.

6. In BI Publisher Tab in MS Word, click on **Sample XML** and import the saved xml file. For Example: SAMPLE\_LOAN\_APP.xml.
7. Create the template by inserting required elements tag.

Figure 3-45 Creating Template

8. The template created in MS Word should be saved with .rtf extension. For Example: SAMPLE\_LOAN\_APP.rtf

#### Note

The .xml and .rtf file should be saved with the same name as entered in the **Code** column of Document Definition section.

9. Upload the rtf template in the BIP and create the data model with SQL query as select CDO\_XML\_DOCUMENT from correspondence\_docs where cdo\_id = :docId.
10. After the data model creation, launch the correspondence screen and click **Correspondence** tab.
11. You can setup a correspondence with the created doc.

### 3.6.3 Generating Correspondence

1. To generate a correspondence open the application for which the correspondence should be generated.
2. Click **Correspondence** tab. In the **Correspondence** section, click on **Add**.
3. Select the created **Correspondence**. Click **Save and Add** to save and add a new record. Click **Save and Return** to save and return to main screen. Click **Return** to return to main screen without modifications.

Figure 3-46 Correspondence

4. Click **Generate** to generate the selected correspondence and **View Correspondence** to view the Correspondence in PDF format.

Figure 3-47 Generated Correspondence

## 3.7 General Ledger

The application's General Ledger Setup screen can generate and transfer transactions to the accounting software your company uses. It is the interface that transfers all financial transactions to the accounting system. It provides your accounting software with an ASCII data file containing the GL (general ledger) entries for the process date.

This chapter explains the General Ledger form - the system interface that enables you to:

- Map system transactions to your GL transactions.

- Define the requirements for header and derived segments

The system supports the bulk uploading of general ledger setup data. This enables you to upload multiple setup data, avoid reentering setup data, and more importantly, reduce data entry mistakes. The system currently supports uploading using a fixed-length format only, where each data is at a pre-fixed position only. You can run batch jobs with the Set Code SETBLK to upload pricing and GL data.

### Accounting Company Definition

The **accounting company** is the entity for which the financial statements are prepared for legal reporting. You must define your accounting company when implementing Oracle Financial Services Lending and Leasing GL Interface. The accounting company is based upon the portfolio company set up in the system. For example, if there are two companies set up within one organization, the two portfolio companies will be used as accounting companies. Each of these companies will have its own GL set up.

- [General Ledger](#)

## 3.7.1 General Ledger

In **Setup > Setup > Administration > User > General LedgerWfpGeneral Ledger**, you can setup data that needs to be setup in the system to export transactions to the user's general ledger application.

The system uses segments to create the complete GL account to which the amount is to be posted. The defined segments are linked together to create the GL account. One of the segments is bound to be the natural account. The other segments could be direct values (like the natural account) or derived values. The segment is grouped into four categories:

1. Translation Definition
2. Attribute Definitions
3. Transaction Definition
4. Transaction Links

### Navigating to General Ledger

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > User > General LedgerWfpGeneral Ledger**.
2. In the **Company** section of the **General Ledger** screen, select the portfolio company you want to work with.

This section consists of the following topics:

- [Translation Definition](#)
- [Attribute Definitions](#)
- [Transaction Definition](#)
- [Transaction Links](#)

### 3.7.1.1 Translation Definition

GL segment values are defined on the Translation Definition.

#### To setup the Translation Definition

1. Click **Setup > Setup > Administration > User > General LedgerWfpGeneral Ledger > Translation Definition**.
2. In the **Segment Definitions** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Buttons: Add, Edit, View, Audit

A brief description of the fields is given below:

**Table 3-54 Segment Definitions**

Field	Do this
Segment #	Select the segment number. the system can support up to 10 segments, from the drop-down list. Valid values range from 01 to 10.
Source	<p>Specify the Source to record a <b>direct value</b> or <b>translated value</b>.</p> <p><b>Direct Value:</b> In case the segment value is not a derived value (more on derived segments later), the Source field contains the same value as the <b>Translated Value</b> field. This would contain a list of all the valid values for each segment (for example, GL account number).</p> <p><b>Translated Value:</b> In case the segment value is a derived value, the Source field is used to store the value of the condition string that will be applicable for the particular segment. For example, if the value 02 value in the <b>Segment #</b> field is derived using the branch of the customer as a source criteria, then the entry would read as:</p> <p>Segment #: 02 Source: CB-001 Translated Value: HQ Description: HEADQUARTERS</p> <p>Therefore, for all accounts in branch CB-001 for segment 02, the translated value of HQ will be used in the GL account number (required).</p> <p><b>CAUTION:</b> Use of derived value segment requires additional programming by SSC. You should not add derived value segments without consulting SSC.</p>
Translated Value	Specify the actual segment value. All valid segment values for all segments are defined here.
Description	Specify the description of the segment.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.7.1.2 Attribute Definitions

The General Ledger interface uses two types of segments:

- Header segment types
- Detail segment types

The Attributes Definitions screen records the Header and Detail segments. Both are recorded on the Attribute Definitions screen in the Segment Type field.

**Note**

The Header and Detail segment attributes that you configure should be part of accounts or transactions table as configured in the following views - TXN\_ACC\_EVW and TXN\_TXN\_EVW.

**Header segment types**

The header segment types are the account attributes used as selection criteria to map a transaction to GL segments. The system supports 10 configurable header segments. For each header segment, you can define specific Account and Transaction attributes which are used as the criteria to categorize the transactions to GL segment. However, note that a header segment must be an account attribute.

By default, the first five header segments (1 to 5) are updated with sample data provided as part of seed data during the base installation / upgrade.

The first five sample segments are:

**Table 3-55 Sample segments**

Segment #	Attribute Name	Description
01	ACC_PRODUCT_TYPE_CD	Product Type
02	TXN_BACKDATE_IND	Backdated Transaction
03	ACC_PRD_PRODUCT	Product Code
04	ACC_STATUS_CD	Account Status
05	ACC_NON_PERFORM_TYPE_CD	Account Non-performing Indicator

This means that the system will allow the account attributes listed above to be used as criteria for categorizing the transactions. Here header segment name defined can be either from Accounts/Transactions table (TXN\_ACC\_EVW/TXN\_TXN\_EVW). Segment selections depend on the values in the header segment fields. You can define all the 10 header segments.

**Detail segment types**

Detail segment types allow you to set up components of the GL account number. A GL account number can be composed of multiple segments that are combined to create the composite GL account number. The detail segments can be configured to direct values (like the natural account) or derived values. Natural account here can be a constant value which is not part of any existing Account or Transaction table.

By default, the first four detail segments (1 to 4) are updated with sample data provided as part of seed data during the base installation / upgrade. Following are the sample detail segments provided in the system:

**Table 3-56 Detail segment types**

Segment #	Attribute Name	Description
01	ACC_CONSTANT_GL_ATTR	The natural account number in the GL for the transaction
02	ACC_PCB_BRANCH	Customer Branch
03	ACC_POO_POOL	Account Pool

**Table 3-56 (Cont.) Detail segment types**

Segment #	Attribute Name	Description
04	ACC_SUBUNIT_CD	Account Sub Unit

All the 10 available detail segments can be defined. One of the segments can be the **natural account**. (A natural account is an account from the client's master listing of all general ledger accounts, or **chart of accounts**) The Details segment Attribute name defined can be either from Accounts/Transactions table or a constant value (ACC\_CONSTANT\_GL\_ATTR).

**Note**

Ensure to have careful consideration while adding a header or detail segment. For any additional programming support, consult Oracle Financial Services Software.

### To setup the Attribute Definitions

1. Click **Setup > Setup > Administration > User > General Ledger > Attribute Definitions**.
2. In the **Attribute Definitions** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-57 Attribute Definitions**

Field	Do this
Segment Type	Select the segment type from the drop-down list.
Segment #	Select the required segment out of 10 segments from the drop-down list.
Attribute Name	Select the attribute name from the drop-down list to indicate the value is to be populated in attributes.  The list is populated with only 'Enabled' attributes and based on account parameters maintained in User Defined Table GL ATTRIBUTES available in Setup > Administration > System > User Defined Tables screen. The same is configurable and you add/update account parameters.
Description	View the attribute description maintained in GL ATTRIBUTES User Defined Table.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.7.1.3 Transaction Definition

The Transaction Definition screen enables you to define GL transactions and to associate the Debit and Credit segments for each GL Transaction.

In GL Transactions sub screen, the Transaction Code column contains GL transactions defined by the client team. The Segments section contains a Debt and Credit section. These are both detail segments.

**To setup Transaction Definition**

1. Click **Setup > Setup > Administration > User > General LedgerWfpGeneral Ledger > Transaction Definition**.
2. In the **GL Transactions** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-58 GL Transactions**

Field	Do this
Transaction Code	Specify unique GL transaction code.
Description	Specify description for the GL transaction.
Product Type	Specify the product type.
Backdated Txn	Specify the back dated transactions.
Product	Specify the product.
Status	Specify the status.
Enabled	Check this box to enable the transaction.
Attribute 5	Specify the header attribute 5.
Attribute 6	Specify the header attribute 6.
Attribute 7	Specify the header attribute 7.
Attribute 8	Specify the header attribute 8.
Attribute 9	Specify the header attribute 9.
Attribute 10	Specify the header attribute 10.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Segments** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-59 Segments**

Field	Do this
Sort Seq	Specify the sort sequence (optional).
Enabled	Check this box to enable the segment.
<b>Debit section</b>	
Debit ACC #	Select the segment value from the drop-down list.
Branch	Select the segment value from the drop-down list.
Segment #3	Select the segment value from the drop-down list.
Segment #4	Select the segment value from the drop-down list.
Segment #5	Select the segment value from the drop-down list.
Segment #6	Select the segment value from the drop-down list.
Segment #7	Select the segment value from the drop-down list.

**Table 3-59 (Cont.) Segments**

Field	Do this
Segment #8	Select the segment value from the drop-down list.
Segment #9	Select the segment value from the drop-down list.
Segment #10	Select the segment value from the drop-down list.
<b>Credit section</b>	
Credit ACC #	Select the segment value from the drop-down list.
Branch	Select the segment value from the drop-down list.
Segment #3	Select the segment value from the drop-down list.
Segment #4	Select the segment value from the drop-down list.
Segment #5	Select the segment value from the drop-down list.
Segment #6	Select the segment value from the drop-down list.
Segment #7	Select the segment value from the drop-down list.
Segment #8	Select the segment value from the drop-down list.
Segment #9	Select the segment value from the drop-down list.
Segment #10	Select the segment value from the drop-down list.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.  
As mentioned in the **Attributes Definitions screen** section, the system can support up to 10 header segments.

Each transaction can be mapped to one or more GL accounts using the segment mapping section. A segment number can be a natural account or can be a derived segment. In case of a natural account, you need to select the segment value (from the list of predefined segments).

Entering DERIVED in the Segment Number field instructs the system to look for the derived value from the segments defined in the Segments Definition section on the Translation Definition screen.

Let's take an example:

Company: ABC BANK

Transaction Code: ADV

Description: ADVANCE

Product Type: FUNDING TRANSACTION

Branch: CB-001

Segment #1: 200000

Segment #2: DERIVED

Let's assume segment #2 is derived from the branch where the account belongs. While calculating the account number, the system interprets segment #2 as follows:

The system will look for a segment value for segment #2 for the account in question using the branch of the account (CB-001). It will use the segment value it finds, say HQ. This will be segment value for segment #2.

**IMPORTANT:** The derived segment logic can be used for all segments except for the one designated as the natural account segment.

**CAUTION:** Please note that the logic for calculation of the derived segments is customized for each client. You will need to contact Oracle Financial Services Software inc. in case you want to change the logic or add new derived segments.

### “Best Match Feature” for General Ledger (GL) Transactions

The system provides the functionality wherein for each monetary transaction, you can generate entries in the General Ledger (GL) based on the setup. For a single transaction (for example, a late charge), the system allows GL entries to be generated based on different criteria regarding the loan line of credit lease account (for example, product type, product, status, and so on). A late charge entry for one product type can differ from a late charge entry for a different product type.

For example,

Assume you have set up the following four late charge fee GL transactions based on product and status.

**Table 3-60 GL Transactions section**

Transaction Code	Description	PRODUCT	STATUS
FLC_A	LATE CHARGE	Product 1	
FLC_AA	LATE CHARGE	Product 1	ACTIVE
FLC_B	LATE CHARGE	Product 2	
FLC_BB	LATE CHARGE	Product 2	ACTIVE

For a late fee for an ACTIVE account for a Product 1, Oracle Financial Services Lending and Leasing will process the GL Transaction FLC\_AA. However, if the late fee is for a CHARGED OFF account for a Product 2, Oracle Financial Services Lending and Leasing will process the GL Transaction FLC\_B.

## 3.7.1.4 Transaction Links

The system enables you to map the various transactions to your General Ledger transaction types with the Transaction Links screen. The list of transactions available in the Transaction Code will be derived from the transactions setup on the Transaction Definition screen.

### To setup the Transaction Links

1. Click **Setup > Setup > Administration > User > General LedgerWfpGeneral Ledger > Transaction Links**.
2. In the **Transaction Links** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-61 Transaction Links**

Field	Do this
Transaction Code	Specify the transaction code.
Description	Select the transaction description from the drop-down list.
GL Transaction Code	Specify the corresponding GL transaction code.
Description	Select the GL transaction description from the drop-down list.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.  
You can have more than one transaction mapped to a user-defined GL transaction. In that case, the system summarizes all the transactions to the GL transaction. For example, the system uses separate transaction codes for fees, such as LATE\_FEE and SERVICING\_FEE. If a client site would rather have all fees go into one debt and one credit account, they would define a GL transaction and link all transactions to that defined transaction.

You could also have one transaction linked to more than one GL transaction. The system will use the setup on the header segments to identify the correct GL transaction setup to use.

For example, if the FLC (Late Charge) transaction is mapped to the CHG\_LC and CHGR\_LC transactions, then the system will look at the header segment definitions to identify the correct GL transaction. Let's say the header segment used is Account status and that CHG\_LC is used for **active** accounts and CHGR\_LC is used for **charged off** accounts. In this case, the system will identify the correct GL transaction depending on the account status.

## 3.8 Queues

When processing an application, various users might work on the application to complete different tasks. A data entry person might complete the Application Entry screen before an underwriter works on the application using the Applications screen. Later, another user might use the Applications screen to fund the application.

The application processing workflow facilitates the movement of the application from one person to another with queues. Queues create a work section of accounts waiting for a particular and common task to be performed, such as application entry or verification. The system's powerful queuing module automates this otherwise manual process.

In the Queues setup screen, you can setup and manage workflow and work assignments on a daily basis to ensure that all applications are in the queues of the appropriate users at all times.

Any time an application's status is changed, the system checks whether the application is in the right queue.

The system will sort queues based on an application's status and sub status.

When processing an account, various users might work on the accounts to complete different tasks.

The account processing workflow facilitates the movement of the account from one person to another with queues. Queues create a work section of accounts waiting for a particular and common task to be performed. The system's powerful queuing module automates this otherwise manual process.

In the Queues setup screen, you can setup and manage workflow and work assignments on a daily basis to ensure that the appropriate queues are available for users at all times.

Any time an account's status is changed, the system checks whether the account is in the right queue.

The system will sort queues based on an account's status and condition. A condition is the state of an account at a particular time, such as a delinquent, which determines the action a user needs to take.

Queues in the system are distinguished to two types of queues:

1. Origination Queues
2. Customer Service Queues.

### Customer service queues

In the Customer Service screen, queues create a work list of accounts waiting for a particular and common task to be performed, such as collecting on a delinquency. The system's powerful queuing module automates this otherwise manual process. The Queue Setup form allows you to manage workflow and work assignments and ensure that all accounts are in the queues of the appropriate users at all times.

Customer Service queues distribute and route accounts that require some particular action to be performed to specific users or departments. The system sorts customer service queues based on an account's status and condition.

Accounts become available for queue assignment when an account receives a condition. Conditions can be applied automatically by the system or manually by users. For example, during nightly processing, the system recognizes an account as delinquent and automatically assigns it a condition of DELQ (**Delinquent**). The users can manually change an account's condition using combination of Action and Result field entries on the **Servicing > Servicing > Customer Service > Customer Service > Customer Service > Call Activities**.

These Action and Result field entry combinations are set up on **Setup > Setup > Administration > User > Queues > Call Actions Results**.

The system associates an account with one or more queues based on multiple parameters, including user-defined criteria and the follow-up date. For example, customer service queues might be configured so accounts are parsed to users according to:

- Due date changes
- Deferment requests
- Title and insurance follow-up dates

Collections queues are included in the Customer Service queue. These queues focus on:

- General collections
- Bankruptcy
- Foreclosure
- Repossession
- Deficiency

Customer Service queues can be built online or in a nightly batch job. Within each queue, the order of the accounts can be sorted based on user-defined criteria.

**Note**

- Although, the system allows you to define your own selection criteria in creating queues, the system's performance depends on how the selection criterion is defined. The application highly recommends that you get approval from your database administrator before using any queue selection criteria. Also, avoid using user-defined tables and columns in the selection criteria.
- You can use these same methods for creating and closing queues in the case of repossession, foreclosure and deficiency.

The Call Actions Results screen allows you to define the contents of the Action and Result fields on the Customer Service screen's Add Call Activities section. The system uses this information to allow users to manually change the condition of an account, and thus assign or remove the account to a queue.

Depending on how you set up call action result codes on the Call Actions screen, conditions and queues are created or closed. You can also restrict the use of certain call activities based on responsibility.

The lookup type ACC\_CONDITION\_CD defines which account conditions can be created. The application's queuing engine determines, if queues need to be created based on the information in the Lookups sub screen for this lookup type.

The following table displays the possible combinations of condition and queue.

**Figure 3-50 Combinations of condition and queue**

QUEUE	CONDITION		
	Open	Close	NA
Open	YES	NO	NO
Close	NO	YES	YES
NA	YES	NO	NO

**1. Condition: **Open**, Queue: **Open****

- In this state, both the account condition and queue are created or opened at the same time.
- The system's transaction-processing engine automatically creates DELQ, TIP, SCHGOFF conditions and queues; therefore, you need not setup any call action result with these conditions.
- CHGOFF is an account status, so no queues are created. To follow-up on charged-off accounts, create DEFICIENCY condition with this option.
- BKRP (Bankruptcy), REPO (Repossession), FORC (Foreclosure) account conditions and queues can be opened with this option. Also, account level indicators (for reporting purpose) are set.

**Note**

- An account is moved to the condition, when a Call activity is posted; however, the Queue is moved only when you click Update queue manually or in the EOD batch.
- Accounts are automatically moved based on the system parameter set up.

**2. Condition: **Open**, Queue: **NA****

- In this state, only the account condition is created or opened.
- This option should be used only if queuing is not necessary on this account condition.

**3. Condition: **NA**, Queue: **Close****

- In this state, the queue associated to the account condition is closed.
- This is a bankruptcy condition and delinquency follow-up is not necessary. In such case, DELQ queue can be closed while the condition is still open. This option should only be used if an existing queue on this account condition should be closed. For example, for accounts with bankruptcy condition, delinquency follow-up is not necessary. In such case, DELQ queue can be closed while the condition is still open.
- DELQ, TIP, SCHGOFF queues can be closed by using this option.

**4. Condition: **Close**, Queue: **Close****

- In this state, both the account condition and queue are closed.
- The system's transaction-processing engine automatically closes DELQ, TIP, SCHGOFF conditions and queues; therefore, don't setup any call action result with these conditions.
- BKRP (Bankruptcy), REPO (Repossession), FORC (Foreclosure) account conditions and queues can be closed with this option. Also, account level indicators (for reporting purposes) are set.

**Note**

Condition will be removed from the Summary conditions section.

**Navigating to Queues screen**

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Queues**.
2. The system displays the Queue Setup screen. You can setup queues related to:
  - Customer Service
  - Call Action Results
  - [Criteria Based Condition](#)
  - [Customer Service Tab](#)
  - [Call Action Results tab](#)
  - [Origination Tab](#)
  - [Activity Tracking](#)
  - [User Groups Tab](#)

## 3.8.1 Criteria Based Condition

OFSLL supports various conditions on an Account with the ability for users to open and close required account conditions. A condition can either be posted **automatically** by the system (like updating DELQ delinquency condition on account) or **manually** through a transaction or call activity.

The Criteria Based Condition screen facilitates to automate the manual process of opening or closing conditions on account by defining criteria which helps to categorize specific accounts and post conditions on to those accounts in bulk.

For example,

- You can define specific conditions to Send Letters, Post Transaction and so on if Account Maturity date is less than 90 days from current system date.
- You can post a condition to allow Extension transactions on an account if 50% of financed amount is received.
- When there is a natural calamity, you can post a condition to allow Extension transactions on Accounts belonging to that particular zip code.

However, note that the following conditions are controlled only by the system and cannot be defined to process automatically.

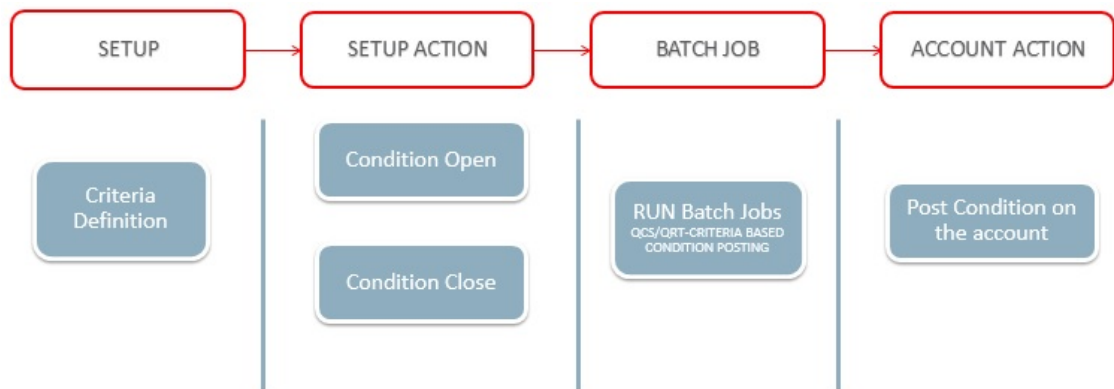

- DELINQUENT
- SCHEDULE FOR CHARGEOFF
- PAYOFF/TERMINATION IN PROGRESS
- NON ACCRUAL
- BANKRUPTCY
- DEFICIENCY
- REPOSSESSION
- FORECLOSURE

In the Criteria Based Condition screen, you can setup Criteria Definitions and define Actions to Open or Close a condition on account. This in-turn is processed during the execution of automated batch job QCCPRC\_BJ\_100\_01 (CRITERIA BASED CONDITION POSTING) in SET-QCS batch job set and while executing the batch job QCCPRC\_BJ\_100\_02 in SET\_QRT batch job set.

At account level once the condition is opened/closed, system posts a comment with the Criteria definition details.

Figure 3-51 Criteria Definition details

This section consists of the following topics:

- [Criteria Definition](#)
- [Criteria Details](#)
- [Conditions](#)

### 3.8.1.1 Criteria Definition

In this section, you can define Criteria definition which can perform specific action on the Accounts.

#### To Setup Criteria Definition

You can either define new Criteria Definition or specify a new name in the New Criteria field and click **Create Copy** to create a copy of selected criteria with header and child tab details.

1. Click **Setup > Administration > User > Queues > Criteria Based Condition** tab.

Figure 3-52 Setup Criteria Definition

**Criteria Definition**

Criteria Name	Criteria Desc	Start Dt	End Dt	Seq	Company	Branch
TEST-ABH1	TEST-PAVAN	03/21/2000	12/31/4000	0	SA03	ALL
TESTABH1232	TEST-PAVAN	03/21/2000	12/31/4000	0	SA03	ALL
TESTABH123	TEST-PAVAN	03/21/2000	12/31/4000	0	SA03	ALL
TEST PAVAN	TEST-PAVAN	03/21/2000	12/31/4000	0	SA03	ALL
TEST-01	TEST-PAVAN	03/21/2000	12/31/4000	1	ALL	ALL
TEST26	DEMO	03/21/2000	12/31/4000	1	ALL	ALL
DEMO	DEMO	03/21/2000	12/31/4000	1	ALL	ALL
NAVEEN1	DEMO	03/21/2000	12/31/4000	2	ALL	ALL

**Criteria Details**

Seq	Parameter	Comparison Operator	Criteria Value	Logical Operator	Enabled
0	DELINQUENCY DAYS	GREATER THAN	40	AND	Y
1	PRODUCT CODE	LIKE	NAVEEN VEHICLE		Y

2. In the **Criteria Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-62 Criteria Definition**

Field	Do this
Name	Specify an unique Criteria definition code.
Description	Specify the description of the criteria.
Start Dt	Select the start date from when the Criteria is to be considered for execution using the adjoining calendar.
End Dt	Select the end date till when the Criteria is to be considered for execution using the adjoining calendar.
Company	Select the company from the drop-down list.
Branch	Select the branch drop-down list.
Seq	Specify the sequence for criteria execution. When there are multiple conditions to be posted on account, the same is processed based on the sequence defined here.  However, there cannot be more than one enabled Criteria with same sequence and this condition is auto validated by the system.
Enabled	Check this box to enable the Criteria Definition.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.8.1.2 Criteria Details

The Criteria Details section helps you to define the account selection criteria.

1. Click the **Setup > Setup > Administration > User > Queues > Criteria Based Condition tab**.
2. Select the required **Criteria definition**.
3. In the **Criteria** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

#### Note

Although system allows to define customized selection criteria, the execution of additional selection criteria requires additional processing at server level and can have significant performance impact delaying the EOD processing/web services. Hence it is recommended to have careful consideration while defining the additional selection criteria (like using user-defined tables and columns) and/or get approval from your database administrator before using any selection criteria.

A brief description of the fields is given below:

**Table 3-63 Criteria Details**

Field	Do this
Seq	Specify sequence numbers.
(	Specify left bracket.
Parameter	Select the parameter from the drop-down list.
Comparison Operator	Select comparison operator from the drop-down list.
Criteria Value	Specify criteria value.
)	Specify right bracket.
Logical Expression	Specify logical operator from the drop-down list.
Enabled	Check this box to enable the selection criteria.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.8.1.3 Conditions

The Condition section determines whether the Condition in the selected Criteria Definition is to be opened or closed on the matching accounts.

1. Click the **Setup > Setup > Administration > User > Queues > Criteria Based Condition tab**.
2. Select the required **Criteria definition**, define **Criteria** and click **Conditions** tab.
3. In the **Condition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

**Table 3-64 Condition**

Field	Do this
Condition	Select the Condition from the drop-down list. This list is populated based on lookup code ACC_CONDITION_CD which consists of all the matching conditions associated with the selected Criteria Definition.  Note that, some of the conditions like Delinquency, Scheduled for Charge-Off and so on (listed above) are automatically opened/ closed by system and is not available in this list for selection.
Action	Select the action as Open / Close by clicking on the adjacent radio button.
Enabled	Check this box to enable the Condition.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 3.8.2 Customer Service Tab

The Customer Service section allows you to set up the customer service queues. The screen includes a Hard Assigned box. When selected, the system assigns an equal amount of accounts to each individual user working on a that queue. Also, an account that is hard assigned will remain assigned to the individual who opens that account until that person is no longer working that queue.

## Customer Service command buttons

The Customer Service screen contains following three command buttons:

**Table 3-65 Customer Service command buttons**

Command button	Function
Update Queue	Queues can be updated whenever selection criteria has been updated. They may also be updated manually, if the nightly batch fails.
Un-Assigned	Depends on location of the cursor when you choose this button.  <b>Customer Service - Un-assigns</b> all accounts in this queue.  <b>Responsibilities and Users &gt; Responsibilities - Un-assigns</b> all accounts in this queue.  <b>Responsibilities and Users &gt; User - Un-assigns</b> all accounts assigned to the specific user. Unassigned accounts may now be selected by updating the queue and re-assigned.
Check Criteria	Reviews the selection criteria for errors. The system will not allow you to enable a queue with invalid selection criteria.

## To set up the Customer Service queues

You can either define new Customer Service Queue Definition or specify a new name in the New Queue field and click **Create Copy** to create a copy of selected Queue Definition with header and child tab details. The new Queue Definition created this way will be in disabled state by default.

- On the Queue Setup screen, click **Setup > Setup > Administration > User > Queues > Customer Service**. Queues are further filtered based on the following criteria:
  - Selection Criteria
  - Sort
  - Responsibilities and Users
  - Data node assignments
  - Group Assignment
- In the **Queue Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 3-53 Queues\_Customer Service

The screenshot displays the 'Queues' window in the Oracle Financial Services Lending and Leasing application. The 'Queue Definition' tab is active, showing a list of queue entries. The table below summarizes the data visible in the screenshot.

Queue Name	Queue Desc	Account Condition	Priority	Company
NAVEEN	NAVEEN	NO ACTIVE CONDITION	0	SA03
DAY2	DAY2	DELINQUENT	0	SA03
ML_DELO_20220222_080239	ML_DELO_20220222_080239	DELINQUENT	0	SA03
DAY4	DAY4	DELINQUENT	0	SA03
DAY1	DAY1	DELINQUENT	0	SA03
NAVEEN9	NAVEEN	CLAIM	0	NL01
ABHI_DAYS_DELO_TEST	ABHI_DAYS_DELO_TEST	DELINQUENT	0	ALL
TST_ML_DELO_20210713_100711	ML_DELO_20210713_100711	DELINQUENT	0	SA03

Below the queue list, the 'Selection Criteria' section is visible, showing a table for defining criteria based on parameters.

Seq	Parameter	Comparison Operator	Criteria Value	Logical Expression	Enabled
0	PRODUCT CODE	LIKE	LOAN-VE-PAVAN	AND	Y
1	DELINQUENT DAYS	LESS THAN	30		Y

A brief description of the fields is given below:

Table 3-66 Queue Definition

Field	Do this
Queue Name	Specify queue name.
Queue Desc	Specify queue description.
Account Condition	Select account condition from the drop-down list.
Priority	Specify the priority.
Company	Select the company from the drop-down list.
Branch	Select the branch from the drop-down list.
Hard Assigned	Check this box to assign an equal amount of accounts to each individual user working on a that queue. Also, an account that is hard assigned remains assigned to the individual who opens that account until that person is longer working that queue.
Group Follow-up Ind	Check this box to enable the bank to indicate whether the accounts belonging to the same customer have to be followed-up in groups.
Near Real-Time	Check this box to select the queues for the near real time refresh. You can specify the time interval and frequency to run this queue. When a batch is run, it picks only customer service queues marked as <b>Real Time</b> queues for re-assignment.

**Table 3-66 (Cont.) Queue Definition**

Field	Do this
Dialer Extract	Check this box to indicate if the accounts satisfying the selection criteria should be extracted from the batch process or not. If the user is hard-assigned, then user gets identified by the dialer system as <b>Permission to call</b> user. The extract will also have data pertaining to customer time zone and privacy opt out indicator.
Enabled	Check this box to activate the queue.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. Click the **Setup > Setup > Administration > User > Queues > Customer Service > Selection Criteria**.
5. In the **Selection Criteria** section, you can define the account selection criteria with the following fields. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Note**

Although system allows to define customized selection criteria, the execution of additional selection criteria requires additional processing at server level and can have significant performance impact delaying the EOD processing/web services. Hence it is recommended to have careful consideration while defining the additional selection criteria (like using user-defined tables and columns) and/or get approval from your database administrator before using any selection criteria.

A brief description of the fields is given below:

**Table 3-67 Selection Criteria**

Field	Do this
Seq	Specify sequence numbers.
(	Specify left bracket.
Parameter	Select the parameter from the drop-down list.
Comparison Operator	Select comparison operator from the drop-down list.
Criteria Value	Specify criteria value.
)	Specify right bracket.
Logical Expression	Specify logical operator from the drop-down list.
Enabled	Check this box to enable the selection criteria.

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
  7. Click the **Setup > Setup > Administration > User > Queues > Customer Service > Sort**.
  8. In the **Sort** section, you can define the order to sort the account selection criteria with the following fields. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.
- A brief description of the fields is given below:

**Table 3-68 Sort section**

Field	Do this
Seq	Specify sequence number.
AssAgpCode	Select sort field from the drop-down list.
Order	Select sort order from the drop-down list.

9. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
10. Click **Setup > Setup > Administration > User > Queues > Customer Service > Responsibilities and Users**.
11. In the **Responsibilities** section, you can define the responsibilities that are authorized to work on the queue. Perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields is given below:

**Table 3-69 Responsibilities**

Field	Do this
Responsibility	Select the responsibility from the drop-down list.
Enabled	Check this box to enable the responsibility.

12. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
13. In the **Users** section, you can define the users who are authorized to work on the queue. Also, you can hard assign the queues to the user. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Note**

The system allows the work queue list to be sorted by user-defined criteria.

A brief description of the fields is given below:

**Table 3-70 Users**

Field	Do this
Name	Select user name from the drop-down list.
# Assigned	Specify number of accounts assigned.
Hard Assigned	Check this box to hard assign. (For more information, see the following section in this chapter, <b>Using the Hard Assigned Feature</b> ).
Enabled	Check this box to enable.

14. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
15. Click **Setup > Setup > Administration > User > Queues > Customer Service > Data Node Assignments**. You can enable the administrator to configure the User interface nodes that should be made available for the applications that are being processed in that particular origination queue.
16. In the **Data Node Assignments** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields is given below:

**Table 3-71 Data Node Assignments**

Field	Do this
Node	Specify the node.
Enabled	Check this box to enable the record.

17. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
18. Click **Load Queue Nodes** on the Node Assignments sub screen to display the respective UI nodes in the origination module.
19. Click **Setup > Administration > User > Queues > Origination > Group Assignment**. In the Group Assignment sub tab, you can add user groups to Customer Servicing Queue and also if required, you can un-assign users from the user group.

**Note**

Modification of user details (adding or disabling users) within a user group which is added to Group Assignment will implicitly be updated in Responsibilities and Users tab also.

20. In the **User Group** section, Click **Add**. You can also perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-72 User Group**

Field	Do this
Group Name	Select the user group name from the drop-down list. The list displays the pre-defined user groups available in the system.
Enabled	Check this box to enable the user group.

21. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
22. (Optional) Click **Un-Assigned** button to un-assign all the users of the group in the queue. Note the following:
  - If the queue is **Hard Assigned**, then it implies that all users in the user group(s) attached to that queue are not **Hard Assigned**. Hence all those Users should have to be explicitly marked as hard assigned in the queue added through user group.
  - User added directly to the queue should be disabled manually. For common users present at Queue and User Group, you need to manually maintain the data in sync.
  - Following table indicates various combinations for enabling and disabling Users and User Group(s) from Queue and User group(s).

**Table 3-73 Users and User Group(s)**

Entity	Added in Queue	Added in User Groups	Enabling and Disabling options
User	Yes	No	User should be disabled /enabled only in that particular Queue.

Table 3-73 (Cont.) Users and User Group(s)

Entity	Added in Queue	Added in User Groups	Enabling and Disabling options
	No	Yes	User should be disabled / enabled in all the Queues where the user group is attached.
User Group	Yes	No	User group should be disabled /enabled only in that particular Queue.
	No	Yes	User group should be disabled / enabled in all the Queues where the user group is attached.

### Group Follow-up

The system enables lending institution to conduct **one time only** follow-up activity on the Customer Service screen, if the customer has multiple accounts in various conditions or in various queues. This avoids unnecessary confusions that arise when more than one user is performing collection tasks on multiple accounts belonging to the same customer.

You can follow-up on multiple accounts in the same condition at the same time using the group follow-up functionality. The system locks the accounts in the low priority queues and displays the same in the high priority queues. You can perform the follow-up activity on all the accounts when the account in the high priority queue becomes due for follow-up.

For example,

Suppose a customer holds three accounts, one that's 30 days delinquent and in the 0\_30\_DAYS\_DEL queue, one that's 60 days delinquent and in the 30\_60\_DAYS\_DEL queue and one that's 90 days delinquent and in the 90+\_DAYS\_DEL.

- If each of the queues Group Followup Ind is unchecked on the Customer Service screen, then no group follow-up will be performed.
- If each of the queues Group Followup Ind is checked on the Customer Service screen, while updating the follow-up date for the low priority days queue, then the system will use the 90 days follow-up date.
- If the Group Followup Ind is checked on Customer Service screen for the 0\_30\_DAYS\_DEL and 30\_60\_DAYS\_DEL queues and note the 90+\_DAYS\_DEL queue, and the customer has accounts in each of the queue, then the system will use the follow-up date of 60 days for the low priority account.

### Using the Hard Assigned feature

The system's **Hard Assigned** queues feature allows companies to evenly distribute accounts between users. The following example explains how it works:

Let's say there are 40 unassigned accounts in a queue. Three users are assigned to the queue, Hard Assigned is checked for two.

When you select Update Queue on the Customer Service screen (or Oracle Financial Services Lending and Leasing processes the CUSTOMER SERVICE QUEUE PROCESSING nightly

batch) each of the two Hard Assigned users receives 20 accounts, while the one that isn't marked as Hard Assigned receives zero.

If users already have accounts assigned to them, the system attempts to balance the workload when assigning new accounts. For example, let's say there are three users in a queue. The first has 15 accounts, the second has ten and the third has five. If there are ten new accounts, the system would give the third user the first 5 accounts, thus bringing that user's total to ten. The system splits the next five between the second and third, bringing their totals to 13 and 12, respectively.

**Note**

The system randomly assigns these accounts.

### To set up a user as Hard Assigned feature

1. Click **Setup > Setup > Administration > User > Queues > Customer Service > Responsibilities and Users**.
2. In the **Responsibilities** section, select the level responsibility of the users you want to hard assign in the queue.
3. In the **Users** section, check the **Hard Assigned** check box for each user you want to hard assign.
4. On **Setup > Setup > Administration > User > Queues > Customer Service**, click **Update Queue** to distribute the applications in the queue to the hard assigned users. The system displays an Information section with the message as **Queue creation submitted in background**.
5. Choose **OK** beneath the **Error Message** section box containing the words NO ERROR. The system distributes and hard assigns the accounts in the queue to the selected users in the Users section.
6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter

### To remove a user

1. In the **Responsibilities** section, select the responsibility of the user you want to remove.
2. In the **Users** section, select the user you want to work with.
  - If you don't want that user to be hard assigned any longer, uncheck the **Hard Assigned** check box.
  - If you don't want that user to be assigned to that queue any longer, uncheck the **Enabled** check box.
3. The system updates the number of accounts assigned to a user only after:
  - Running the nightly batch job
  - Clicking the **Update Queue** button.
4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### Queue Activity

The queue Activity sub tab allows you to add specific activities which are defined in Queues > Activity Tracking tab for the selected queue in **Queue Definition** section. These activities can be tracked for updates in Customer Service > Queue Assignment tab.

1. In the Queue Activity Definition section, Click **Add**. You can also perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields is given below:

**Table 3-74 Queue Activity**

Field	Do this
Activity Code	Select the Activity Code from the drop-down list. The list displays only those activities which are Enabled in Queues > Activity Tracking tab.  In case the same <b>Activity</b> is disabled in Queues > Activity Tracking tab after adding it here, the same needs to be manually disabled.
Enabled	Check this box to enable the selected activity.

2. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.8.3 Call Action Results tab

1. Click **Setup > Setup > Administration > User > Queues > Call Action Results**. The screen contains two sections:
  - Call Actions
  - Call Results
2. In the **Call Actions** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
You can either define new Call Action details or specify a new action code in the **New Action** field and click **Create Copy** to create a copy of selected call action with details.

**Figure 3-54 Call Action Results**

The screenshot displays the Oracle Financial Services Lending and Leasing application interface. The top navigation bar shows the Oracle logo and the text 'Financial Services Lending and Leasing'. The user is logged in as 'Welcome, ABSHEKAR' with a 'Sign Out' option. The left sidebar contains a tree view with the following items: Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. Under 'Setup', there is a sub-menu 'Administration' which is expanded, showing 'System', 'System Parameter', 'Lookups', 'User Defined Tables', 'Audit Tables', 'User Defined Defaults', 'Transaction Codes', 'Data Files', 'Dedupe', 'Securitization', 'Events', 'Batch Jobs', and 'Producer Cycles'. The main content area is titled 'Queues' and has tabs for 'Origination', 'Customer Service', 'Call Action Results' (selected), and 'User Groups'. The 'Call Action Results' tab is active, showing two sections: 'Call Actions' and 'Call Results'. The 'Call Actions' section has a table with columns: Action Code, Description, Call Type, and Enabled. The 'Call Results' section has a table with columns: Result Code, Description, Report Type, Right Person Contact, Followup Advance Unit, Value, and Enabled. Both tables contain several rows of data.

Action Code	Description	Call Type	Enabled
AT	ATTORNEY/GENERAL TELEPHONED	INCOMING CALL	Y
CBB	TELEPHONED COBUYER BUSINESS	OUTGOING CALL	Y
CC	CUSTOMER CALLED	OUTGOING CALL	Y
CR	CHARGE-OFF REQUEST SUBMITTED	EXCLUDE FROM REPORTS	Y
DC	DEALER CALLED	INCOMING CALL	Y

Result Code	Description	Report Type	Right Person Contact	Followup Advance Unit	Value	Enabled
CB	CALL BACK	OTHERS	N	DAY	3 Y	Y
HU	HUNG UP	OTHERS	N	DAY	3 Y	Y
NP	NO PROMISE	OTHERS	N	DAY	3 Y	Y
PH	PAYMENT IN HAND (STORE)	PROMISE TO PAY	N	DAY	3 Y	Y
PP	PROMISE TO PAY	PROMISE TO PAY	N	DAY	3 Y	Y
PS	PAYMENT SENT BY MAIL	PROMISE TO PAY	N	DAY	3 Y	Y
RC	RETURN CALL	OTHERS	N	DAY	3 Y	Y

A brief description of the fields is given below:

**Table 3-75 Call Action Results**

Field	Do this
Action Code	Specify the action type code.
Description	Specify the description for the call action type.
Call Type	Select the call type from the drop-down list.
Enabled	Check this box to enable the call action.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Call Results** section, you can define call action result codes and corresponding descriptions. Perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields is given below:

**Table 3-76 Call Results**

Field	Do this
Result Code	Specify the result type code for the specified call action type.
Description	Specify the description for the result type.
Report Type	Select the report type for the result type, from the drop-down list.
Right Person Contact	Check this box to indicate that result type is a right person contact.
Follow-up Advance Unit	Select the unit for advancing the follow-up date/ time from the dropdown list.
Value	Specify the value for the follow-up advance unit.
Enabled	Check this box to enable the result.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter. Queues are further filtered based on the following criteria:

- Conditions
- Responsibilities

The Conditions section determines whether the selected action/result will cause the listed conditions to be opened or closed. It also determines whether the queue will be opened or closed.

6. In the **Conditions** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields is given below:

**Table 3-77 Conditions**

Field	Do this
Condition	Select the account condition to be open/close for the action from the drop-down list.
Condition	Select <b>Open</b> to open the listed condition, <b>Close</b> to open the listed condition, or <b>NA</b> , if the condition is not applicable.
Queue	Select <b>Open</b> to open the listed Queue, <b>Close</b> to open the Queue, or <b>NA</b> , if the Queue is not applicable.

**Table 3-77 (Cont.) Conditions**

Field	Do this
Enabled	Check this box to enable the account condition.

7. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
8. In the **Responsibilities** section, define the responsibilities that are authorized to use the call action result combination. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-78 Responsibilities**

Field	Do this
Responsibility	Select the responsibility that can perform the action result from the drop-down list.
Allowed	Select <b>Yes</b> if access is allowed.
Enabled	Check this box to enable the responsibility.

9. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 3.8.4 Origination Tab

The Origination screen on the Queue Setup form allows you to set up queues that direct applications to users during the loanline of creditlease origination cycle. Origination queues are based on an application's status and sub status. Whenever an application changes its status/sub status, the system moves the application to a queue based on the information on this screen.

You can define the loanline of creditlease origination queues and the corresponding selection criteria based on:

- Application status
- Application sub status
- Product type
- Funding type
- Product
- Underwriter
- State
- Channel
- Producer type
- Producer

With loanline of creditlease origination queues set up, the applications in your work queue automatically appear on the Results screen when you open the Underwriting or Funding screen. The queue to which you are assigned appears in the Queue Name field. You would then begin processing the applications in the order of which they are listed, double-clicking the application at the top of the list to load it.

On the **Setup > Setup > Queues** screen, you can determine the direction of the applications to users who process them. Whenever there is a change in the status or sub status of the

application, the system places the application in a appropriate queue based on the information available in this screen.

Applications are further filtered based on the following criteria:

- Selection Criteria
- Sort Order
- Responsibilities and Users
- Data Node Assignments
- Group Assignment

### To setup Origination Queues

You can either define new Queue Definition details or specify a new name in the **New Queue** field and click **Create Copy** to create a copy of selected queue definition with header and child tab details (except Group Assignment tab).

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Queues > Origination**.
2. In the **Origination Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 3-55 Origination Definition**

A brief description of the fields is given below:

**Table 3-79 Origination Definition**

Field	Do this
Queue Name	Specify queue name.

**Table 3-79 (Cont.) Origination Definition**

Field	Do this
Queue Description	Specify queue description. <b>Note:</b> The system uses this entry when referring to the queue on other forms.
Override Responsibility	Select an override responsibility code from the drop-down list.  The system uses this data to determine the User who holds the override responsibility for the specified queue, if an application triggers an <b>override</b> edit.
Priority	Specify the priority number.  The system sorts applications by the higher number. For example, an application with a priority # 5 is considered to have a higher priority than the one with a priority # 3.
Company	Select the company from the drop-down list.
Branch	Select the branch drop-down list.
Enabled	Check this box to enable the queue.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

This section consists of the following topics:

- [Selection Criteria](#)
- [Sort](#)
- [Responsibilities and Users](#)
- [Data Node Assignments](#)
- [Group Assignment](#)

### 3.8.4.1 Selection Criteria

Here, you can further filter the applications in a particular queue. This criteria is generally used by organizations to categories and allocate large number of applications to different queues.

#### **Note**

If you want to execute search on like operators, then use %.

#### To setup Selection Criteria

1. Click **Setup > Setup > Queues > Origination > Selection Criteria > Application Status**.
2. In the **Application Status** section, use the **Status** and **Sub Status** fields to define the credit application status/sub status combinations that should be considered for the queue.
3. To setup, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-80 Setup Selection Criteria**

Field	Do this
Status	Select application status from drop-down list.
Sub Status	Select application sub status drop-down list.
Enabled	Select the check box to enable the application status.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

**Note**

All is the default value for each field.

5. Click **Setup > Setup > Queues > Origination > Selection Criteria > Selection Criteria**. In the **Selection Criteria** section, use the fields to define the credit application that should be considered for the queue.
6. To setup, perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields is given below:

**Table 3-81 Selection Criteria**

Field	Do this
Product Type	Select the product type as loanline of creditlease from the drop-down list.
Funding Type	Select funding type from the drop-down list.
Product	Select product from the drop-down list.
State	Select state from the drop-down list.
Channel	Select channel from the drop-down list
Underwriter	Select underwriter from the drop-down list.
Producer Type	Select producer type from the drop-down list.
Producer Group	Select producer Group from the drop-down list
Producer	Select producer from the drop-down list.
Region	Select region of the producer from the drop-down list.
Territory	Select territory of the producer from the drop-down list.
Sales Agent	Select sales agent for the producer from the drop-down list.
Funder	Select funder for the producer from the drop-down list.

7. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.8.4.2 Sort

In the Sort sub tab of Queue Definition, the new applications which are in origination queue are displayed here based on sort criteria defined. In case of any overrides, applications would be sorted automatically without the need of a setup definition. However, there is no impact if sort is not defined for a queue.

#### To setup Sort Criteria

1. Click **Setup > Setup > Queues > Origination > Selection Criteria > Sort**.
2. In the **Sort** section, use the Seq, Sort field, and Order to rearrange the queue.
3. To setup, perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields is given below:

**Table 3-82 Setup Sort Criteria**

Field	Do this
Seq	Specify the sequence number representing the sorting priority.
Sort Field	Select the sort criteria from the list of parameters available in the dropdown list.
Order	Select either <b>ascending</b> or <b>descending</b> as the sort order.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.8.4.3 Responsibilities and Users

1. Click **Setup > Setup > Queues > Origination > Responsibilities and Users**.
2. In the **Responsibilities** section, use the **Responsibilities** field to define the responsibilities roles which are authorized to work on the queues.
3. To setup, perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields is given below:

**Table 3-83 Responsibilities and Users**

Field	Do this
Responsibility	Select the responsibility from the drop-down list.
Enabled	Check this box to enable the responsibility.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
5. In the **Users** section, use the **User** field to define the users who are authorized to work on the queue.
6. To setup, perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields is given below:

**Table 3-84 Users**

Field	Do this
User	Select user from the drop-down list.
Enabled	Check this box to enable.

7. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.8.4.4 Data Node Assignments

Data node Assignments provides user with the flexibility to view the tabs in origination. User will have option to enable/disable Tabs. All the enabled tabs will be displayed when application

is in that particular queue. Disabled tabs for the tabs will not be shown when applications is in respective queue.

For example: Application entry Queue

If summary tab to be disabled, the search for the ULN Summary tab and Disable. IN application Entry summary will not be shown.

1. Click **Setup > Setup > Queues > Origination > Node Assignments**. You can enable the administrator to configure the User interface nodes that should be made available for the applications that are being processed in that particular origination queue.
2. In the **Node Assignments** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-85 Node Assignments**

Field	Do this
Node	Select the node from the drop-down list.
Enabled	Check this box to enable the record.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. Click **Load Queue Nodes** to display the respective UI nodes in the origination module.

### 3.8.4.5 Group Assignment

The Group Assignment sub tab allows you to add user groups to Origination Queue.

#### Note

Modification of user details (adding or disabling users) within a user group which is added to Group Assignment will implicitly be updated in Responsibilities and Users tab also.

#### To add User Group to Group Assignment

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Administration > User > Queues > Origination > Group Assignment**.
2. In the **User Group** section, Click **Add**. You can also perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-86 User Group**

Field	Do this
Group Name	Select the user group name from the drop-down list. The list displays the pre-defined user groups available in the system.
Enabled	Check this box to enable the user group.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.8.5 Activity Tracking

The Activity Tracking tab in Queues screen allows you to define 36 different activities at any given time. You can define unique Action and Result for each activity and also set the activity expiry duration beyond which new actions can be defined for the same activity.

The Activity defined in this tab is used in User > Queues > Customer Service > Queue Activity tab to define activities for selected **Queue Definition** which in-turn is used in Customer Service > Queue Assignments tab to track the updates from call activity results.

**Figure 3-56 Activity Tracking**

Activity Code	Description	Action	Result	Activity Expiry Days	Enabled
A33	ACTIVITY 33	PAID ACCOUNT	ACCOUNT BROUG...	32	N
A07	ACTIVITY 7	CUSTOMER CALLED	UNABLE TO PAY	5	Y
A06	ACTIVITY 6	CUSTOMER CALLED	RETURN CALL	7	Y
A05	ACTIVITY 5	CUSTOMER CALLED	CALL BACK	8	Y

1. In the **Activity Definition** section, Click **Add**. You can also perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields is given below:

**Table 3-87 Activity Definition**

Field	Do this
Activity Code	Select the activity code from the drop-down list. The list displays pre-defined activity codes which are enabled as part of <b>QUEUE_ACTIVITY_TYPE_CD</b> lookup code maintained in the system.
Description	View the description of activity code.
Action	Select the Action for the activity from the drop-down list. The list displays all the customer service call actions available in the system.
Result	Select the appropriate Result for the action from the drop-down list. The list is sorted with results based on the action selected.
Activity Expiry Days	Specify the number of days after which the activity has to expire (i.e. status set <b>N</b> ). An activity code in <b>N</b> status can be used to associate new action for tracking.
Enabled	Check this box to enable the activity.

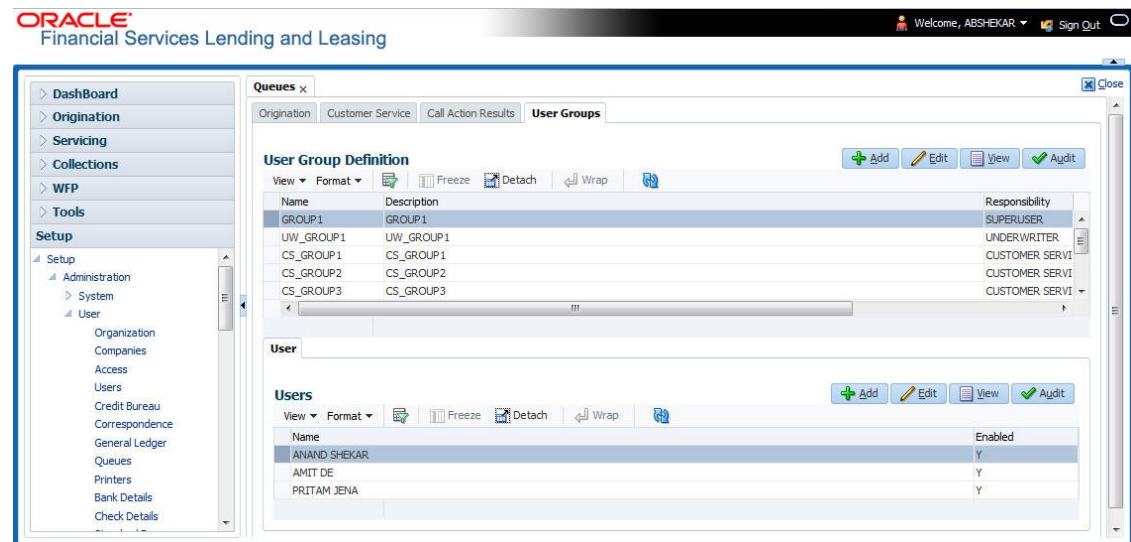

2. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### 3.8.6 User Groups Tab

The User Groups tab in Queues is a centralized repository which allows you to define user groups, add and remove users from user groups.

The User Groups tab consists of User Group Definition section listing the defined User Groups and User section below listing the associated users of the selected User Group.

**Figure 3-57 User Groups**

#### To define a User Group

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Administration > User > Queues > User Groups**.
2. In the **User Groups** section, Click **Add**. You can also perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-88 User Groups**

Field	Do this
Name	Specify user group name.
Description	Specify an appropriate user group description. The same is used while referring this User Group on other screens.
Responsibility	Select the responsibility of the user group from the drop-down list. You can later add only those <b>Users</b> who have the selected responsibility into the user group.
Enabled	Check this box to enable the user group.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

#### To add Users to User Group

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Administration > User > Queues > User Groups**.
2. In the **User Groups** section, select the required User Group.
3. In the **Users** section, Click **Add**. You can also perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-89 Users**

Field	Do this
Name	Select the user from the drop-down list, The list displays the available users based on the responsibility defined for the user group.
Enabled	Check this box to enable the user.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 3.9 Printers

The Printers screen allows you to set up an unlimited number of network printers and fax devices to be used with the system server. The system uses the information on this screen while selecting a printer, when the printing process involves a batch job or uses a job scheduler. Examples include printing reports and correspondence.

The printers and fax devices can be set up at each organization, division, or department to promote efficient printing of documents, and reports. The system uses this information during product setup and on the Letters screen in the **Batch Printer** field.

### Special printer names

The following printer names are predefined and have specific functions within the system:

**Table 3-90 Printer names**

Name	Description
UNDEFINED	Indicates that the document to be printed is to be previewed in your browser instead of actually printing the document.
ARCHIVE	Instead of sending an item to the printer, the system generates a PDF document and saves it in the archive directory on your server.
EMAIL	For LoanLeaseLine of Credit origination correspondences that can be faxed, the system e-mails the document as a PDF attachment to the consumer for direct LoanLeaseLine of Credit or to the producer in the case of in-direct LoanLeaseLine of Credit.
FAX	For LoanLeaseLine of Credit origination correspondences that can be faxed, the system generates a PDF document and will send to the fax server defined in System Parameters.

Additionally, you may set up composite entries in the Printer Name field to perform two or more functions at the same time. This can be done by defining a printer name with the following format:

PRINTER NAME = <PRINTER\_NAME1> + <PRINTER\_NAME2>

For example, if a printer named JET4050 was previously defined, as were the special printer names listed above, then the following additional printers could be defined:

**Table 3-91 Additional printers**

Name	Description
JET4050+ARCHIVE	Prints the document with the jet4050 printer and archives the document.
FAX+ARCHIVE	Faxes and archives the document.
EMAIL+ARCHIVE+JET4050	E-mails, archives, and prints the document with the jet4050 printer.

### To set up the Printers

1. Click **Setup > Setup > Administration > User > Printers**. The system displays the Printers screen.
2. In the **Printers** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 3-58 Printers**

The screenshot displays the 'Printers' setup window in the Oracle Financial Services Lending and Leasing system. The window has a sidebar with navigation options like Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. The 'Setup' section is expanded, showing 'Administration' and 'User' sub-sections. The 'User' section is further expanded to show 'Printers'. The main area shows a 'Printer Definition' table with the following data:

Printer Name	Description	Organization	Division	Department	Default	Enabled
UNDEFINED		DMC	ALL	ALL	N	N
archive	ARCHIVE	DMC	ALL	ALL	Y	Y
email	EMAIL	DMC	ALL	ALL	N	Y
fax	FAX	DMC	ALL	ALL	N	Y
gkgkgkjk	KGGGKG	DMC	ALL	ALL	N	N

Below the table, there is a 'Printer Definition' form with the following fields and controls:

- \* Printer Name: Text input field
- \* Description: Text input field
- \* Organization: Dropdown menu
- \* Division: Dropdown menu (set to ALL)
- \* Department: Dropdown menu (set to ALL)
- \* Default: Check box
- \* Enabled: Check box

At the bottom of the form, there are four buttons: 'Save and Add', 'Save and Stay', 'Save and Return', and 'Return'.

A brief description of the fields is given below:

**Table 3-92 Printers**

Field	Do this
Printer Name	Specify the printer name. The name of the printer as defined by the server. For a UNIX server, the name might be JET4050, while to access the same printer from a Windows server the name would be: \\servername\jet4050.
Description	Specify the description for the printer.
Organization	Select the organization to which the printer belongs, from the dropdown list.
Division	Select the division to which the printer belongs, from the drop-down list. The division will be displayed based on the organization selected.
Department	Select the department to which the printer belongs, from the drop-down list. The department will be displayed based on the division selected.  <b>IMPORTANT:</b> When you select a printer to use, the system searches for a best match using the following attributes: <ol style="list-style-type: none"> <li>1. Organization</li> <li>2. Division</li> <li>3. Department</li> </ol> Hence, Oracle recommends creating a version of each edit, where ALL is the value in these fields. It is also recommended that, you define a default printer for an Organization, Division and Department.
Default	Check this box to set the printer as a default printer.
Enabled	Check this box to enable the printer and that the printer is active.  <b>Note:</b> Never disable the UNDEFINED printer

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 3.10 Intelligent Segmentation

OFSLL is equipped to leverage the Machine Learning (ML) feature of Oracle Database to suggest and create Customer Servicing Queues by analysing the current system data. Using this functionality, system automatically identifies the possible Queue/Segmentation for Account data using the Machine Learning Algorithm thereby creating an Intelligent Segmentation.

This helps to automate the manual process of queue creation which is otherwise done by identifying different segments of Accounts and assigning day to day Customer Service Activities. Further queue processing workflow continues as detailed in [Queues](#) section.

- [Machine Learning for Queue Creation](#)
- [Machine Learning Data visualization](#)
- [View Machine Learning Generated Queue](#)
- [Create ML Based Queue](#)

### 3.10.1 Machine Learning for Queue Creation

The Intelligent Segmentation screen in OFSLL is based on the Oracle JavaScript Extension Toolkit (Oracle JET) framework. This facilitates to identify different clusters of data and create queues.

In order to access the Intelligent Segmentation screen from the User Interface menu link, you need to enable the system parameter FLL\_SET\_JET\_INTELLIGENTSEG\_URL (JET INTELLIGENT SEGMENTATION URL). For more details on installing and deploying this feature in OFSLL, refer to Installation Manual.

**Note**

The input data for Machine Learning (ML) data set cluster creation is provided by the Batch Job QMLPRC\_BJ\_100\_03 (ML DATASET CREATION FOR INTELLIGENT SEGMENTATION) available in batch job set SET-QCS.

In this screen, you do the following:

**Figure 3-59 Intelligent Segmentation - Workflow**

- Identify Cluster of Data for a given Account Condition.
- View hierarchy of cluster and list of accounts falling into different levels of cluster.
- Create a queue by selecting Cluster.

### 3.10.2 Machine Learning Data visualization

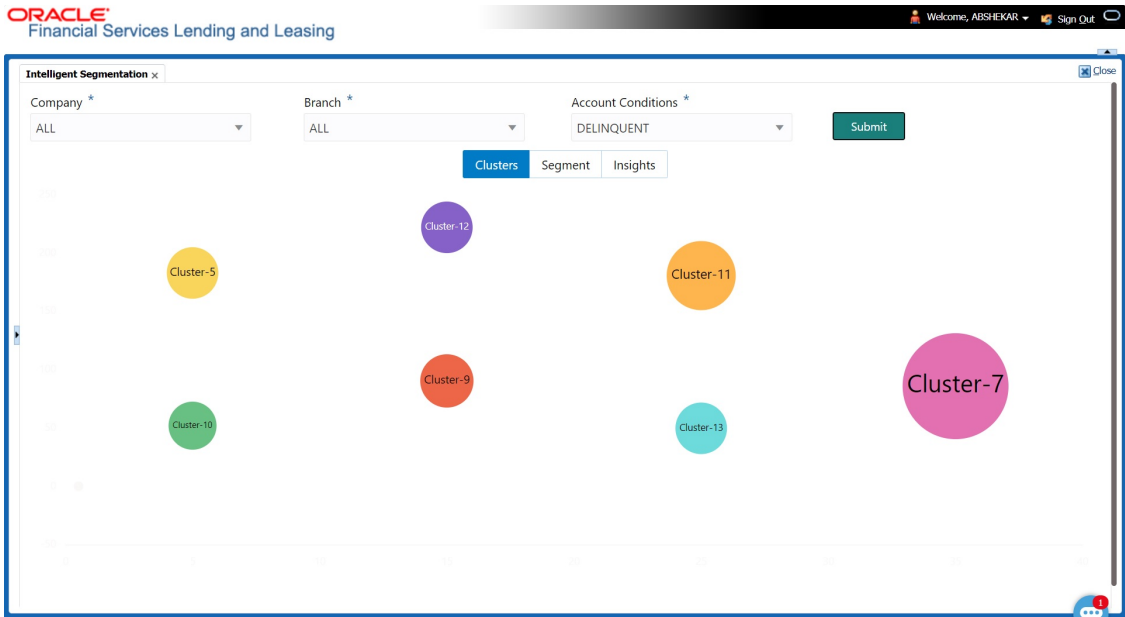

The data generated by the system is represented in the following view formats.

- [Cluster view](#)
- [Segment View](#)
- [Insights View](#)
- [Selection Criteria Attributes](#)

3.10.2.1 Cluster view

Figure 3-60 Cluster view

3.10.2.2 Segment View

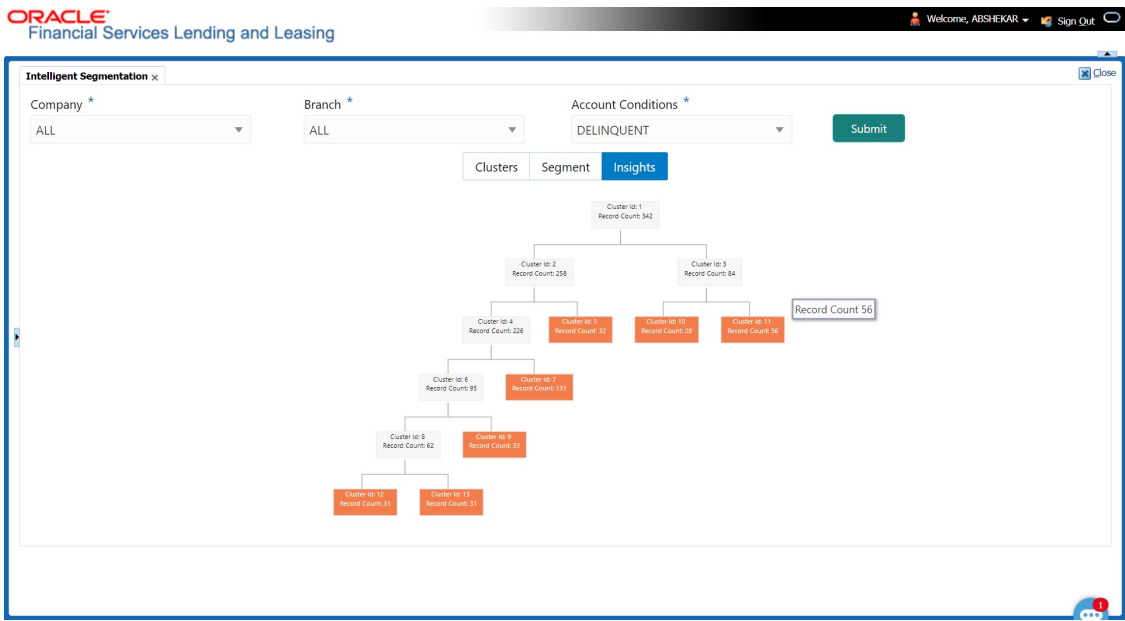

Figure 3-61 Segment View

3.10.2.3 Insights View

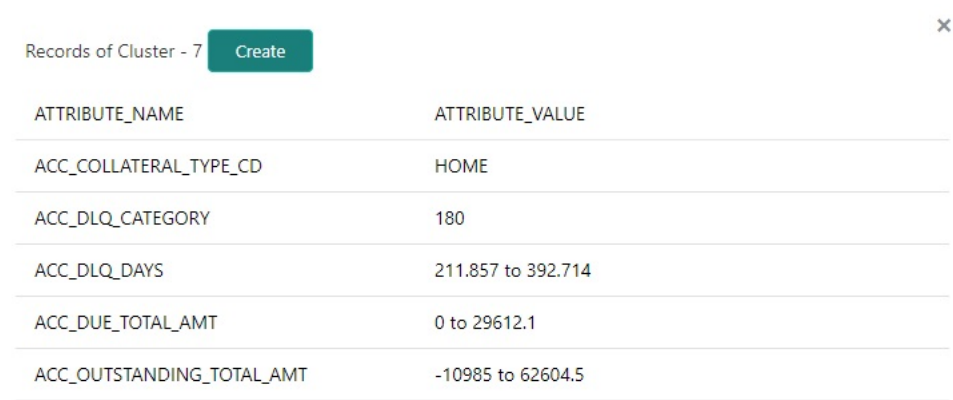

Figure 3-62    Insights View

3.10.2.4 Selection Criteria Attributes

Clicking on any of the data segment system displays dynamic record details (Attribute Name and Attribute Value) along with the option to create queue.

Figure 3-63    Selection Criteria Attributes

3.10.3 View Machine Learning Generated Queue

To view ML based queue

1. Click **Setup > Setup > Administration > User > Intelligent Segmentation**. The following screen is displayed:

**Figure 3-64 View Machine Learning Based Queue**

2. Select the following option:

**Table 3-93 View Machine Learning Generated Queue**

Field	Do this
Company	Select the company from the drop-down list. The list is populated only with those Company Definitions to which you have been provisioned access.
Branch	Select the branch within the company from the drop-down list. This may be ALL or a specific branch. This must be ALL, if you have selected <b>ALL</b> in the Company field.
Account Conditions	Select the required account conditions. There are various Account Conditions which are either posted <b>automatically</b> by the system (like updating DELQ delinquency condition on account) or <b>manually</b> through a transaction or call activity.

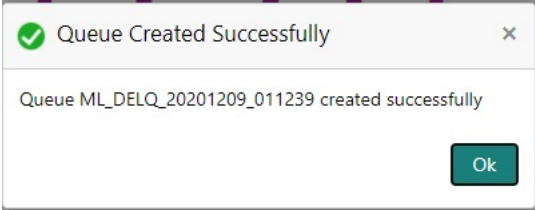

3. Click **Submit**. System generates different data segments based on above selected combination using a background job process. By default, the data is represented in clusters and can be viewed on other view formats as detailed in [Machine Learning Data visualization](#) section.

### 3.10.4 Create ML Based Queue

On generating the data segments in the Intelligent Segmentation screen, you can further drill down to each cluster and view details with different selection criteria. However, the details of each record is based on the data maintained in the system.

Table 3-94 Create ML Based Queue

Button	Action
Create	<p>Clicking on this option creates a Queue in OFSLL and the selection criteria of the Queue is populated with the Cluster Attributes. The queue sequence is based on Queue name/Description and is displayed as a confirmation message in the format <b>Queue ML &lt;Account Condition &gt; &lt;Date YYYYMMDD &gt; &lt;Time HHMMSS&gt; created successfully.</b></p>  <p>The newly created queue is available in Setup &gt; Administration &gt; User &gt; Queues screen.</p>

Note that following with ML generated Queues:

- All Queues are created in **Disabled** status with Selection Criteria **Enabled**.
- Priority is defaulted to 0.
- Company/Branch is defaulted to selected combination.
- Hard Assigned/Group Follow-up/Near Real-Time/Dialler actions are marked as disabled.

## 3.11 Bank Details

The Banks screen defines the banks, a company/branch uses for processing Automatic Clearing House (ACH) and lock box payments.

### Note

This is **behind the scenes** information that the system uses for payments and does not appear on any other forms.

### To set up the Banks

1. Click **Setup > Setup > Administration > User > Bank Details** link. The system displays the Bank Details screen.
2. In the **Banks Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 3-65 Banks Definition

The screenshot shows the 'Bank Definition' window in Oracle Financial Services Lending and Leasing. The window has a left-hand navigation pane with a tree structure including Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. The 'Setup' section is expanded, showing sub-sections like Administration, System, User, and Products. The main area displays a table of bank definitions and a form for adding a new bank.

Code	Name	Short Name	Enabled	Account #	Routing #	BIC	IBAN	Country	City
FSB	US BANK	FSB	Y	xxxxx8736	363763665			UNITED STATES	MIN
JPB	JP BANK	JPB	Y	xxxxx1115	831232246	NOT PROVIDED	WEQE	JAPAN	TOH
NLB	NL BANK	NLB	Y	xxxxx8779	884447474			NETHERLANDS	AMC
SAB	SA BANK	SAB	Y	xxxxx6468	755665678			SAUDI ARABIA	JED

Below the table is a form for adding a new bank. The form includes fields for Code, Name, Short Name, Enabled (checkbox), Account #, Routing #, BIC, IBAN, Country (dropdown), Address Line 1, Address Line 2, Zip (dropdown), Creditor Id, City, State (dropdown), Phone 1, Ext 1, Phone 2, Ext 2, Fax 1, Fax 2, and ACH Format (dropdown). There are buttons for 'Save and Add', 'Save and Stay', 'Save and Return', and 'Return'.

Below the form is an 'ACH' section with a 'Lock Box' button and an 'ACH Definition' table. The 'ACH Definition' table has columns for Company, Branch, ACH Identifier, and Enabled. It currently shows 'No data to display'.

A brief description of the fields is given below:

Table 3-95 Banks Definition

Field	Do this
Code	Specify the bank code (ID used internally by Oracle Financial Services Lending and Leasing to represent the bank).
Name	Specify the name for the bank.
Short Name	Specify the short name for the bank (ID displayed to represent the bank. This may be included in any output files).
Enabled	Check this box to enable and indicate this as an active bank
Account #	Specify the account number used for banking transactions with the bank. <b>Note:</b> If the organizational parameter <code>UIX_HIDE_RESTRICTED_- DATA</code> is set to Y, this appears as a masked number; for example, <code>XXXXX1234</code> .
Routing #	Specify the routing number of the bank.
BIC	Select the Business Identifier Code from the drop-down list. The list displays the BIC codes defined in the system.

**Table 3-95 (Cont.) Banks Definition**

Field	Do this
IBAN	<p>Specify the IBAN (International Bank Account Number). IBAN is used for identifying bank accounts across national borders with a minimal of risk of propagating transcription errors.</p> <p>Ensure that value entered satisfies the check-digit validation based on modulo 97. On save, system automatically validates the IBAN number length based on country code, characters, white spaces, and checksum. Validation is also done during posting non-monetary transaction (ACH Maintenance).</p> <p>You can maintain the IBAN length and other details required as per the country code in the user defined table (Setup &gt; Administration &gt; System &gt; User Defined Tables).</p> <p><b>Note:</b> IBAN for <b>NL</b> country code (IBAN_FORMAT_NL) is defined by default with length of IBAN as 18.</p>
Country	Select the country where the bank is located, from the drop-down list.
City	Specify the city where the bank is located.
State	Select the state where the bank is located, from the drop-down list.
Address Line 1	Specify the address line 1 for the bank.
Address Line 2	Specify the address line 2 for the bank.
Zip	Specify the zip code where the bank is located, from the drop-down list.
Extn	Specify the extension of the zip code where the bank is located.
Creditor Id	Specify the creditor identification details.
Phone 1	Specify the primary phone number of the bank.
Extn 1	Specify the phone extension for the primary phone number.
Phone 2	Specify the alternate phone number for the bank.
Extn 2	Specify the phone extension for the alternate phone number.
Fax 1	Specify the primary fax number for the bank.
Fax 2	Specify the alternate fax number for the bank.
ACH Format	<p>Select the ACH format accepted by this bank from the drop-down list. The list displays the following options:</p> <ul style="list-style-type: none"> <li>NACHA Format</li> <li>SEPA Format</li> </ul>

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. Click **Setup > Setup > Administration > User > Bank Details > ACH**.
5. On the **ACH Definition** sub screen, you can create ACH files for the bank listed in the Banks section. Perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields is given below:

**Table 3-96 ACH Definition**

Field	Do this
Company	Select the portfolio company from the drop-down list.
Branch	Select the portfolio branch from the drop-down list.
ACH Identifier	Specify the lock box ID provided by the bank. This field is used in the ACH files to identify the bank.
Enabled	Check this box to enable the ACH and indicate this as an active ACH identifier.

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
7. Click **Setup > Setup > Administration > User > Bank Details > Lock Box**.
8. On the **Lock Box** sub screen, you can create lock box files for the bank listed in the Banks screen. Perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields is given below:

**Table 3-97 Lock Box**

Field	Do this
Lock Box Identifier	Specify the lock box ID provided by bank. This field is used in the lock box files to identify the bank.
Company	Select the portfolio company from the drop-down list.
Branch	Select the portfolio branch from the drop-down list.
Enabled	Check this box to enable the lock box.

9. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 3.12 Standard Payees

The Standard Payees screen defines the third parties that are frequent payees for checks issued within your organization. These payees are then available on the Consumer Lending screen's Advance Entry screen. When you select the Payee # in the Advance Allocation section, the system completes the remaining fields in this screen with information from the Standard Payees screen.

### Note

The Payee # field on the Advance Payment forms is a non-validated field. This allows you to select an entry or enter one of your own.

### To set up the Standard Payees

1. Click **Setup > Setup > Administration > User > Standard Payee**. The system displays the Standard Payees screen.

2. In the **Payee Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 3-66 Standard Payee**

The screenshot displays the 'Standard Payees' window in Oracle Financial Services Lending and Leasing. It features a 'Payee Definition' section with a table of payees and a detailed form for editing a specific payee.

Payee #	Name	Pmt Mode	Enabled	Country	City	State	Address Line 1	Address Line 2	Zip	Extn
1001	ACH	ACH	Y	UNITED STATES	LEXINGTON	ILLINOIS	LINE1	LINE2	85587	(012)-34
1002	ACH	ACH	Y	UNITED STATES	NEW JERSEY	NEW JERSEY	LINE1	LINE2	59868	(012)-34

The 'Payee Definition' form for Payee # 1001 includes the following fields:

- Payee #**: 1001
- Name**: ACH
- Pmt Mode**: ACH
- Enabled**: ☒
- Country**: UNITED STATES
- Address Line 1**: LINE1
- Address Line 2**: LINE2
- Zip**: 85587
- Extn**: (012)-34
- City**: LEXINGTON
- State**: ILLINOIS
- Phone 1**: (012)-345-6789
- Phone 2**:
- Bank Name**: BANK OF VISA CARD
- Routing #**: 53847658
- Account Type**: CHECKING
- ACH Account #**: 767254588
- Company**: ALL
- Branch**: ALL
- BIC**:
- IBAN**:
- Start Dt**: 06/28/1997
- Comment**:

A brief description of the fields is given below:

**Table 3-98 Payee Definition**

Field	Do this
Payee #	Specify the payee number (Identifier for the payee).
Name	Specify the payee name.
Pmt Mode	Select the payment method for the payee from the drop-down list.
Enabled	Check this box to enabled the payee.
Country	Select the country where the payee is located from the drop-down list.
City	Specify the city where the payee is located.
State	Select the state where the payee is located from the drop-down list.
Address Line 1	Specify the address line 1 for the payee (optional).
Address Line 2	Specify the address line 2 for the payee (optional).
Zip	Select the zip code where the payee is located from the drop-down list.
Extn	Specify the extension of the zip code where the payee is located.
Phone 1	Specify the primary phone number for the payee.
Phone 2	Specify the alternate phone number for the payee.

**Table 3-98 (Cont.) Payee Definition**

Field	Do this
Bank Name	Specify the payee ACH bank name used by the standard payee.
Routing #	Specify the payee ACH bank routing number of bank used by the standard payee.
Account Type	Select the payee type of ACH bank account maintained by the Standard Payee from the drop-down list.
ACH Account #	Specify the payee ACH bank account number.
Company	Select the company from the drop-down list. The list is populated with Company definitions based on the Country selected.
Branch	Select the branch drop-down list. The list is populated with Company branch based on the Country selected.
BIC	Select the Business Identifier Code from the drop-down list. The list displays the BIC codes defined in the system.
IBAN	<p>Specify the IBAN (International Bank Account Number). IBAN is used for identifying bank accounts across national borders with a minimal of risk of propagating transcription errors.</p> <p>Ensure that value entered satisfies the check-digit validation based on modulo 97. On save, system automatically validates the IBAN number length based on country code, characters, white spaces, and checksum. Validation is also done during posting non-monetary transaction (ACH Maintenance).</p> <p>You can maintain the IBAN length and other details required as per the country code in the user defined table (Setup &gt; Administration &gt; System &gt; User Defined Tables).</p> <p><b>Note:</b> IBAN for <b>NL</b> country code (IBAN_FORMAT_NL) is defined by default with length of IBAN as 18.</p>
Start Dt	Specify the payment mode start date, the date the current payment method was implemented (defaults on Pmt Mode change). you can also select from the adjoining calendar icon.
Comment	Specify a comment for this advance allocations. This is the default comment to include with payments to this Payee.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 3.13 Check Details

The Check Details screen allows you to set up check details.

### To setup the Check Details

1. Click **Setup > Setup > Administration > User > Check Details**. The system displays the Check Details screen.

- In the **Check Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 3-67 Check Details**

The screenshot displays the 'Check Details' window in the Oracle Financial Services Lending and Leasing application. The window is titled 'Check Details x' and has a 'Close' button in the top right corner. The main area is divided into two sections: 'Check Definition' and 'Check Definition'.

The top 'Check Definition' section contains a table with the following columns: Company, Branch, Payee Type, Check #, Printer Name, and Enabled. The table has one row with the following values: ALL, ALL, CUSTOMER, 112233, PRINT-11, and Y.

The bottom 'Check Definition' section contains input fields for the same fields as the table, each with a label and a value:

- \* Company: ALL
- \* Branch: ALL
- \* Payee Type: ALL
- \* Check #: 0
- \* Printer Name: PRINT-11
- \* Enabled: ☒

At the top of the window, there is a navigation menu with the following items: Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. The 'Setup' item is selected, and its sub-items are listed on the left: Administration, System, System Parameter, Lookups, User Defined Tables, Audit Tables, User Defined Defaults, Transaction Codes, Data Files, Dedupe, Securitization, Events, Batch Jobs, Producer Cycles, Vendors, Collection Cycles, Reports, Error Messages, Translations, User, Organization, Companies, Access, Users, Credit Bureau, Correspondence, General Ledger, Queues, Printers, Bank Details, Check Details, Standard Payees, Currencies, Zip Codes, Products, and Asset Types.

A brief description of the fields is given below:

**Table 3-99 Check Definition**

Field	Do this
Company	Select the company from the drop-down list.
Branch	Select the branch from the drop-down list.
Payee Type	Select the payee type from the drop-down list.
Check #	Specify the check number (required).
Printer Name	Specify the printer name (required).
Enabled	Check this box to enable the check details entry.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 3.14 Currencies

The Currencies link allows you to set up currency details.

### Navigating to currencies

Click **Setup > Setup > Administration > User > Currencies**. The system displays the Currencies screen. In this screen, you can set up:

- [Currency Definition](#)
- [Currency Pair link](#)

### 3.14.1 Currency Definition

The Currency Definition screen allows you to set up currency details.

#### To set up the currency definition information

1. Click **Setup > Setup > Administration > User > Currencies > Currency**. The system opens the Currency Definition tab by default.
2. In the **Currency** section, perform any of the Basic Operations mentioned in Navigation chapter.

**Figure 3-68 Currencies**

The screenshot displays the Oracle Financial Services Lending and Leasing interface. The main window is titled 'Currencies' and contains a table with the following data:

Currency	Currency Name	Country	Enabled
INR	INDIAN RUPEE	INDIA	Y
EUR	EURO	IRELAND	Y
JPY	JAPANESE YEN	JAPAN	Y
OMR	RIAL	SAUDI ARABIA	Y
USD	US DOLLAR	UNITED STATES	Y

Below the table, there are input fields for Currency, Currency Name, and Country, and a checkbox for Enabled. The left sidebar shows the navigation menu with 'Currencies' selected under 'Setup'.

A brief description of the fields is given below:

**Table 3-100 Currency Definition**

Field	Do this
Currency	Select the currency you want to define, from the drop-down list.
Currency Name	The system displays the currency name based on the currency selected.
Country	Select the country for which the currency is defined, from the dropdown list.

**Table 3-100 (Cont.) Currency Definition**

Field	Do this
Enabled	Check this box to enable the currency entry.

3. Perform any of the Basic Actions mentioned in Navigation chapter.

## 3.14.2 Currency Pair link

The Currency Pair Definition link allows you to set up currency pair details.

**To set up the currency pair definition information:**

1. Click **Setup > Setup > Administration > User > Currencies > Currency Pair**. The system displays the Currency Pair Definition screen.
2. In the **Currency Pair Definition** section, perform any of the Basic Operations mentioned in Navigation chapter.

**Figure 3-69 Currency Pair**

The screenshot displays the 'Currency Pair' definition screen in the Oracle Financial Services Lending and Leasing application. The left sidebar shows the navigation menu with 'Setup' expanded. The main area contains a table of currency pairs and a form for adding new pairs.

Currency	Currency Pair Code	Through Currency	Through Currency Code	Enabled
EURO	RIAL OMANI	N		N
EURO	YEN	N		Y
EURO	US DOLLAR	N		Y
YEN	EURO	N		Y
YEN	US DOLLAR	N		Y
RIAL OMANI	EURO	Y	US DOLLAR	Y
RIAL OMANI	YEN	Y	US DOLLAR	Y
RIAL OMANI	US DOLLAR	N		Y
US DOLLAR	EURO	N		Y
US DOLLAR	YEN	N		Y
US DOLLAR	RIAL OMANI	N		Y
EURO	EURO	N	EURO	N
INDIAN RUPEE	YEN	N		Y

Below the table, there are input fields for:

- \* Currency (dropdown)
- \* Currency Pair Code (dropdown)
- \* Through Currency (checkbox)
- Through Currency Code (dropdown)
- \* Enabled (checkbox)

Buttons at the bottom right include: Save and Add, Save and Stay, Save and Return, and Return.

A brief description of the fields is given below:

**Table 3-101 Currency Pair Definition**

Field	View this
Currency Code	Select the currency code from the drop-down list.
Currency Pair Code	Select the currency pair code from the drop-down list.

**Table 3-101 (Cont.) Currency Pair Definition**

Field	View this
Through Currency	Check this box to set the selected currency as a through currency.
Through Currency Code	Select the through currency code from the drop-down list.
Enabled	Check this box to enable the currency pair entry.

3. Perform any of the Basic Actions mentioned in Navigation chapter.

## 3.15 Zip Codes

The Zip Codes screen allows you to set up zip code details.

### To set up the zip codes information

1. Click **Setup > Setup > Administration > User > ZipCodes**. The system displays the Zip Codes screen.
2. In the **Zip Codes** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 3-70 Zip Codes**

The screenshot displays the Oracle Financial Services Lending and Leasing application interface. The main window is titled "Zip Codes" and contains a table with the following columns: Country, State, Zip, City, and County. The table lists various zip codes for Puerto Rico and the US Virgin Islands. Below the table, there are input fields for Country, Zip, City, and State, along with buttons for Save and Add, Save and Stay, Save and Return, and Return.

Country	State	Zip	City	County
UNITED STATES	PUERTO RICO	00769	COAMO	COAMO
UNITED STATES	PUERTO RICO	00771	LAS PIEDRAS	LAS PIEDRAS
UNITED STATES	PUERTO RICO	00772	LOIZA	LOIZA
UNITED STATES	PUERTO RICO	00773	LUQUILLO	LUQUILLO
UNITED STATES	PUERTO RICO	00775	CULEBRA	CULEBRA
UNITED STATES	PUERTO RICO	00777	JUNCOS	JUNCOS
UNITED STATES	PUERTO RICO	00778	GURABO	GURABO
UNITED STATES	PUERTO RICO	00780	COTO LAUREL	PONCE
UNITED STATES	PUERTO RICO	00780	PONCE	PONCE
UNITED STATES	PUERTO RICO	00782	COMERIO	COMERIO
UNITED STATES	PUERTO RICO	00783	COROZAL	COROZAL
UNITED STATES	PUERTO RICO	00784	GUAYAMA	GUAYAMA
UNITED STATES	PUERTO RICO	00785	GUAYAMA	GUAYAMA
UNITED STATES	PUERTO RICO	00786	LA PLATA	ALBONITO
UNITED STATES	PUERTO RICO	00791	HUMACAO	HUMACAO
UNITED STATES	PUERTO RICO	00792	HUMACAO	HUMACAO
UNITED STATES	PUERTO RICO	00794	BARRANQUITAS	BARRANQUITAS
UNITED STATES	PUERTO RICO	00795	JUANA DIAZ	JUANA DIAZ
UNITED STATES	US VIRGIN ISLANDS	00801	CHARLOTTE AMA	SAINT THOMAS
UNITED STATES	US VIRGIN ISLANDS	00801	CHARLOTTE AMAL	SAINT THOMAS
UNITED STATES	US VIRGIN ISLANDS	00801	ST THOMAS	SAINT THOMAS
UNITED STATES	US VIRGIN ISLANDS	00802	CHARLOTTE AMA	SAINT THOMAS
UNITED STATES	US VIRGIN ISLANDS	00802	CHARLOTTE AMAL	SAINT THOMAS
UNITED STATES	US VIRGIN ISLANDS	00802	CT THOMAS	SAINT THOMAS

Below the table, there are input fields for Country, Zip, City, and State, along with buttons for Save and Add, Save and Stay, Save and Return, and Return.

A brief description of the fields is given below:

**Table 3-102 Zip Codes**

Field	View this
Country	Select the country from the drop-down list.
State	Select the state from the drop-down list.
Zip Code	Specify the zip code (required).
City	Specify the city.
County	Specify the county.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 3.16 Payment Hierarchy

The Payment Hierarchy screen facilitates to define hierarchy definition along with payment appropriation, excess payment handling, account selection criteria and sort order. These details are required by the system to allocate payments to the matching accounts of a customer, when customer based payments are being processed in **Payment Entry** screen.

Below is an illustration on how payment hierarchy is used to post customer based payments.

**Figure 3-71 Payment Hierarchy - Illustration**

Any Payment transaction generated in the system either from UI / Web Service Call or through a Payment Batch (Generic Payment Upload) can be directly posted to an Account or at Customer level.

- If payment is posted directly to an Account, the funds are allocated based on the defined spread with funds appropriation sequence of balance type i.e. Charges, Interest, Principle and so on.
- If payment is posted at Customer level having two accounts and if the payment amount is less than the due, then appropriation sequence is required. Else, one of the account can have a short fall with payment allocation.

In such case, the Payment Hierarchy determines the sequence of payment as to which account is to be appropriated first and which is to be appropriate next. This is based on **order by clause** and **appropriation sequence** defined.

Also the Balance Type determines the distribution type as one of the following:

- Equally to all the accounts

- Prorated by Due amount (i.e. highest due or lowest due first)
- Prorated by Outstanding Amount.

Once the account is narrowed down and payment amount is decided, then based on spread the payment is appropriated. This gives additional flexibility for defining payment modes at the master account level.

If Payment Hierarchy is not defined while funding an application or needs correction, the same can be done by posting **MASTER ACCOUNT PAYMENT HIERARCHY MAINTENANCE** non-monetary transaction in Servicing > Maintenance > Transaction Batch Information section. At Customer level, Payment hierarchy can be updated by posting CUSTOMER MAINTENANCE transaction.

This section consists of the following topics:

- [Payment Appropriation Methods](#)
- [Excess Payment Appropriation](#)

### 3.16.1 Payment Appropriation Methods

While creating Hierarchy definition in the Payment Hierarchy screen, you can use any of the following payment appropriation methods available in Hierarchy Type field. On selecting the specific Hierarchy definition at Application or Account level, the defined method is used to allocate payments to corresponding accounts.

However in all the methods, the payment criteria is also used for identifying the due accounts and careful consideration is required while defining the same.

**Table 3-103 Payment Appropriation Methods**

Method	Description
EQUAL AMOUNT	To allocate payment equally to all the accounts picked.  This is traditional method of payment allocation in which the total payment amount received is divided and adjusted equally to all customer linked accounts.

Table 3-103 (Cont.) Payment Appropriation Methods

Method	Description																																
DELQ DUE AMOUNT RATIO	<p>To allocate payment based on the ratio of amount due on all accounts.</p> <p>In this method, the due accounts are identified based on the defined selection criteria and the payment appropriation is done on the ratio of amount due on each account using the below formula.</p> $\frac{\text{Amount Due} * \text{Payment Amount}}{\text{Total Due Amount}}$ <p>Following is an illustration on payment allocation:</p> <table><tr><th></th><th>Amount Due</th><th>Outstanding Amount</th></tr><tr><td>Master Account</td><td>30</td><td>200</td></tr><tr><td>Associated Account 1</td><td>50</td><td>250</td></tr><tr><td>Associated Account 2</td><td>100</td><td>400</td></tr></table> <table><tr><th></th><th>Due Amount Ratio</th><th>Outstanding Amount Ratio</th><th>Equal Amount</th></tr><tr><td>Payment Amount</td><td>\$90</td><td>\$90</td><td>\$90</td></tr><tr><td>Master Account</td><td>\$15</td><td>\$21.18</td><td>\$30</td></tr><tr><td>Associated Account 1</td><td>\$25</td><td>\$26.47</td><td>\$30</td></tr><tr><td>Associated Account 2</td><td>\$50</td><td>\$42.35</td><td>\$30</td></tr></table>		Amount Due	Outstanding Amount	Master Account	30	200	Associated Account 1	50	250	Associated Account 2	100	400		Due Amount Ratio	Outstanding Amount Ratio	Equal Amount	Payment Amount	\$90	\$90	\$90	Master Account	\$15	\$21.18	\$30	Associated Account 1	\$25	\$26.47	\$30	Associated Account 2	\$50	\$42.35	\$30
	Amount Due	Outstanding Amount																															
Master Account	30	200																															
Associated Account 1	50	250																															
Associated Account 2	100	400																															
	Due Amount Ratio	Outstanding Amount Ratio	Equal Amount																														
Payment Amount	\$90	\$90	\$90																														
Master Account	\$15	\$21.18	\$30																														
Associated Account 1	\$25	\$26.47	\$30																														
Associated Account 2	\$50	\$42.35	\$30																														
DUE AMOUNT RATIO (INCLUDING CURRENT DUE)	<p>To allocate payment by including the existing unpaid delinquent due amount of pre-bill days on all accounts.</p> <p>This is calculated as: (Single Account Total Due Amount Ratio (Including Current Due) * Payment Amount) / All Accounts Total Due Amount Ratio (Including Current Due)</p> <p>The value is derived from lookup code DUE_RATIO_CUR_DUE.</p>																																
OUTSTANDING BALANCE RATIO	<p>To allocate payment based on the ratio of total outstanding due on all accounts.</p> <p>Similar to above, even in this method the due accounts are identified based on the defined selection criteria and the payment appropriation is done on the ratio of outstanding amount due on each account using the below formula.</p> $\frac{\text{Outstanding Balance} * \text{Payment Amount}}{\text{Total Outstanding Balance}}$ <p>This method can be selected if the received payment amount is equal to total outstanding due on all linked accounts indicated in Customer Service &gt; Transaction History &gt; Balances screen.</p>																																

**Table 3-103 (Cont.) Payment Appropriation Methods**

Method	Description
ACCOUNT COLUMN BASE	To allocate payment based on hierarchy order. In this method, the due accounts are identified based on the defined selection criteria and the payment appropriation is done as per the sequence of due accounts defined either in ascending/ descending order.

During payment appropriation, system allocates the payment amount only up to the total of resulted accounts and remaining amount (if any) are processed based on the excess payment method value.

While onboarding accounts through web services, system considers the value of system parameter PMT\_HIERARCHY\_CODE to default the payment allocation in Customer/ Business Details screen after account activation.

Also while onboarding if the Payment Hierarchy is not passed as part of the request (Applicant/ Application), then system parameter value is considered.

## 3.16.2 Excess Payment Appropriation

During or after payment appropriation, there can be a residual amount pending for allocation. For example, \$0.01 remains when \$100 is equally paid to 3 accounts. In such case the residual amount is transferred to last account in the hierarchy sequence. However, note that system performs this residual payment allocation only once.

In other case where there is an excess payment received which is more than account dues, the same can be processed for payment allocation using any of the following **Excess Handling Method** while defining the Hierarchy Definition.

**Table 3-104 Excess Handling Method**

Method	Description
SUSPENSE	To post the excess amount as suspense on Customer or Master account.
HIERARCHY BASED	To allocate the excess payment based on any of the Hierarchy Definitions maintained in the system.

Based on the selection, system re-allocates the excess amount to corresponding accounts.

### To set up payment hierarchy

1. Click **Setup > Setup > Administration > User > Payment Hierarchy**.
2. In the **Hierarchy Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 3-72 Hierarchy Definition

**Payment Hierarchy**

**Hierarchy Definition**

Field	View this
Excess Hierarchy Name	<p>This field is enabled and is mandatory if the Excess Handling Method is selected as <b>Hierarchy Based</b>.</p> <p>Select the Hierarchy Definition from the drop-down list. This list is populated with all the pre-defined and enabled hierarchy definitions maintained in the system.</p> <p>For more information on the above methods, refer to <a href="#">Excess Payment Appropriation</a> section.</p>
Enabled	By default this check box is enabled for new hierarchy definition.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### Account Selection Criteria

This sub tab facilitates to define the account selection criteria that is used to identify due account for payment allocation. Atleast one valid account selection criteria is required for all the Hierarchy Types.

1. In the **Account Selection Criteria** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

#### Note

Although system allows to define customized selection criteria, the execution of additional selection criteria requires additional processing at server level and can have significant performance impact delaying the EOD processing/web services. Hence it is recommended to have careful consideration while defining the additional selection criteria (like using user-defined tables and columns) and/or get approval from your database administrator before using any selection criteria.

A brief description of the fields is given below:

**Table 3-106 Account Selection Criteria**

Field	Do this
Seq	Specify sequence numbers.
(	Specify left bracket.
Parameter	Select the parameter from the drop-down list. The list is populated based on the values maintained in CUSTOMER PAYMENT HIERARCHY ORDER PARAMETERS user defined table.
Comparison Operator	Select comparison operator from the drop-down list.
Criteria Value	Specify criteria value.
)	Specify right bracket.
Logical Expression	Select logical operator from the drop-down list.
Enabled	Check this box to enable the selection criteria.

2. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
3. You can click **Check Criteria** for system to validate the query and display the results.

### Hierarchy Order

This sub tab facilitates you to define hierarchy order that is used to sort the due account for payment allocation. This sub tab is enabled only for **ACCOUNT COLUMN BASED** Hierarchy type.

1. In the **Hierarchy Order** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields is given below:

**Table 3-107 Hierarchy Order**

Field	Do this
Seq	Specify sequence number.
Sort Field	Select sort field from the drop-down list. The list is populated based on values maintained in CUSTOMER PAYMENT HIERARCHY ORDER PARAMETERS user defined table.
Order	Select sort order as either Ascending or Descending from the drop-down list.

2. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 3.17 Number Generation

Users can create and manage custom auto number generation definitions on the Number Generation screen, which can then be linked to applications, accounts, and other entities.

This topic contains the following subtopics:

- [Overview](#)
- [Navigation](#)
- [Number Generation Definition](#)

### 3.17.1 Overview

A Number Generation Definition includes the rules a system follows to create unique numbers according to certain criteria. This ensures the production of unique, non-duplicate numbers that validate the related entities and attributes, rather than producing random numbers..

### 3.17.2 Navigation

Number Generation sub menu link is available under **Setup > Administrator > User** in LHS menu. Clicking on **Number Generation** link, the screen is as displayed:

ORACLE® Financial Services Lending and Leasing

Welcome, ABSHEKAR | Sign Out | 15.0 ITR1

### Number Generation

#### Number Generation Definition

View | Format | Freeze | Detach | Wrap | Validate Sequence

Entity	Company	Branch	Channel	User Sequence Reset Freq	Max Length	Limit Length	Checksum Digit	Enabled
STATEMENT NUM...	SA03	ALL	ALL	NONE	20	FIXED	N	N
ACCOUNT NUMBER	SA03	ALL	ALL	NONE	30	VARIABLE	N	N
PRODUCER NUMB...	VARUN IND01	INDAP1	ALL	NONE	10	VARIABLE	N	N
PRODUCER NUMB...	VARUN IND01	INDDH1	ALL	NONE	30	FIXED	N	N
PRODUCER NUMB...	VARUN IND01	INDTG1	ALL	NONE	30	FIXED	N	Y
VENDOR NUMBER	VARUN IND01	INDTN	ALL	NONE	10	FIXED	N	N
PRODUCER NUMB...	VARUN IND01	INDDH	ALL	NONE	30	FIXED	N	Y
PRODUCER NUMB...	VARUN IND01	INDMH1	ALL	NONE	30	FIXED	N	Y
VENDOR NUMBER	VARUN IND01	INDDH1	ALL	NONE	10	FIXED	N	N
VENDOR NUMBER	VARUN IND01	INDTGHQ	ALL	NONE	30	FIXED	N	Y

#### Number Sequence

View | Format | Freeze | Detach | Wrap

Sequence	Unit	Value	Enabled
0	CONSTANT	SA03STMTNO	Y
1	SYSTEM SEQUENCE NUMBER LENGTH	4	Y

The Number Generation screen consists of the following:

1. Number Generation Definition
2. Number Sequence

### 3.17.3 Number Generation Definition

The Number Generation Definition section outlines the criteria for generating numbers for specific entities like Account Number and Application Number, based on combinations of Company, Branch, and Entity. However, please note that the system permits only one definition for each unique combination of Company, Branch, and Entity.

In this section, user can do the following:

- Include a new definition and check the list of existing definitions stored in the system.
- Validate the number generation sequence based on the selected parameters.
- Enable or Disable a number generation definition.

#### Add Number Generation Definition

1. In the **Number Generation Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-108 Number Generation Definition**

Field Name	Description
Entity	Select the entity from drop-down list for which the system should generate the number. The list is populated with values maintained in NUM_GEN_ENTITY user defined table.
Company	Select the company from drop-down list for which the system should generate the number.
Branch	Select the branch for the selected company from the drop-down list. If company is selected is ALL, then all the Branches are populated.
Channel	Select the channel from the drop-down list on which the system should generate the Number. This can be ALL or a specific channel. For entity as Application or Account Number, system refers to APP_SOURCE_CD lookup.
User Sequence Reset Freq	Select the sequence reset frequency from the drop-down list. This is the interval at which system should reset the sequence and the same can be used as a counter to the number of record within that sequence duration.  The list is populated based on values maintained in NUM_GEN_USR_SEQ_RESET_FREQ_CD lookup code.
Max Length	Specify the value between 1 to 80 to indicate the maximum length of the number to be generated.
Limit Length	Select the limit length as either <b>Variable</b> or <b>Fixed</b> . This indicates the system to generate either fixed sequence number or variable sequence number. <ul style="list-style-type: none"> <li>If limit length is Fixed, system ensures that the auto number generated is up to the Max Length field. If it is shorter, zeros are prefixed.</li> <li>If limit length is Variable, then auto number is generated as per format.</li> </ul> However, system displays an error if the sequence number generated exceeds the specified Max length.
Checksum Digit	Select the checkbox to indicate the system to add a check sum digit at the end of the auto number generated.

2. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

Specify a number sequence in the flow to show the order for the system to apply the number generation logic. Additionally, you can add or modify entries in the **Number Sequence** section.

- [Number Sequence](#)

### 3.17.3.1 Number Sequence

This section displays the Number Sequence set for an entity and allows you to add and modify the number sequence for an existing number generation definition. A number sequence must be established for a Number Generation Definition. The system uses this sequence to perform the number generation process and produce a number for a specific entity

**Add Number Sequence**

1. In the **Add Number Sequence** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 3-109 Number Sequence**

Field Name	Description
Sequence	Specify the sequence number in which system should use in the number generation logic. Once specified, the same can be incremented or decremented using the up or down arrow buttons.
Units	<p>Select the Units using which system should generate the number from the drop-down list. This list is populated based on entity type and values maintained in NUM_GEN_UNIT_CD lookup code.</p> <p>The available options are:</p> <ul style="list-style-type: none"> <li>• Constant</li> <li>• Record Creation Date (DD)</li> <li>• Record Creation Month (MM)</li> <li>• Random Number Length</li> <li>• System Sequence Number Length</li> <li>• User Sequence Number Length</li> <li>• Record Creation Year (YY)</li> <li>• Record Creation Year (YYYY)</li> <li>• Record Creation Year/Month (YYYYMM)</li> </ul> <p>It is mandatory to add and enable the System Sequence Number Length. The length of the all units plus the Check Digit (if enabled) together should not be greater than the maximum length specified in the Max Length field.</p>
Value	Specify the value which can either be a Constant or Index Number in reference to the unit selected. Once specified, the same can be incremented or decremented using the up or down arrow buttons.
Enabled	Select the check box to enable and use this parameter in the number generation.

**Note**

If number generation definition does not exist then you can autogenerate the number using the system sequence number alone. This can work as a mechanism to identify if number should be generated by system or as per user defined logic in this screen.

2. Click **Validate Sequence** in 'Number Generation Definition' to validate the number generation sequence based on the selected parameters.

- a. On validation, system displays the errors if any duplicate sequence exist.
  - b. After successful validation, the system shows a popup with the sample number and an option to Enable the record. Clicking **Yes** saves the record as Enabled. Clicking **No** saves it as Disabled, which can be enabled later by clicking **Validate Sequence** in the 'Number Generation Definition' section.
  - c. If 'Xref/External Application number/Application Number' is enabled, then system sequence is not mandatory.
  - d. Ensure that the Length of all units + Check Digit (if enabled) together should not be greater than the Max Length at the parent record.
3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

# 4

## Product

Under the Setup master tab's drop-down link bar, the product Setup link opens screens that enable you to configure the basic business guidelines necessary to support one or more products in the system. This includes defining the types of collateral your company supports, creating lending instruments, and determining what is included in credit bureau reporting. Setting up the Products screens requires a thorough understanding of the current rules of your business and must be completed before you can use Oracle Financial Services Lending and Leasing. The Products drop-down link opens screens to record data of all the products supported by the system and contains the following links:

### Navigating to Products

In the Setup > Setup > Products link enables you to setup the options related to the following closed ended products that your company offers. Below sections explain how to setup the screens associated with each one.

- [Asset Types](#)
- [Index Rates](#)
- [Regulatory Rates](#)
- [Currency Exchange](#)
- [Scoring Parameters](#)
- [Products](#)
- [Pricings](#)
- [Contract](#)
- [Edits](#)
- [Cycles](#)
- [Scoring Models](#)
- [Fees](#)
- [Asset Billing Rate](#)
- [Origination Fees](#)
- [Compensation](#)
- [Commission](#)
- [Insurance](#)
- [Checklists](#)
- [Stipulations](#)
- [Spreads](#)
- [Statement Messages](#)
- [Letters](#)
- [Promotions](#)

- [Subvention](#)
- [Escrow](#)

## 4.1 Asset Types

In Assets types you can setup the asset types that can serve as an application or account's collateral. In addition, you can also define USAGE/RENTAL details along with USAGE/RENTAL charge matrix to facilitate usage billing calculation for Leased/Rented asset types.

The information on the Assets screen is used by the system to automatically display the appropriate collateral screen (Vehicle, Home, or Other) on the Application Entry screen.

The system recognizes the following four types of collateral:

**Table 4-1 Collateral**

Collateral Type	Description
Home collateral	Homes, manufactured housing, or any real estate collateral.
Vehicle collateral	All vehicle types, such as cars, trucks, and motorcycles.
Household goods and other collateral	All other collateral types not defined as home, vehicle, or unsecured; for example, household items such as water heaters, televisions, and vacuums.
Unsecured collateral	All unsecured lending instruments. (This collateral type makes the collateral tabs on the system forms unavailable.)

The Asset Sub Type section allows you to further categorize an asset; for example, the asset type VEHICLE might be categorized as CAR, TRUCK, or VAN.

The Attributes/Addons and Makes and Models sub screens continue to further detail the asset both in description and value. For example, a VEHICLE asset might include addons such as LEATHER SEATS and CRUISE CONTROL.

### Note

Neither asset types nor asset sub types can be deleted. As they may have been used in the past, the display and processing of that data is still dependent on the existing setup.

### To set up the Asset Types

You can either define new Asset Type or specify a new name in the **New Asset Type** field and click **Create Copy** to create a copy of selected asset with details.

1. Click **Setup > Setup > Products > Asset Types**.
2. In the **Asset Type** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 4-1 Asset Type

**Asset Type**

Asset Type	Description	Collateral Type	Company	Branch	Enabled
BUS	BUS	VEHICLE COLLATERAL	ALL	ALL	Y
BUS_TEST	BUS_TEST	VEHICLE COLLATERAL	ALL	ALL	Y
CAR	CAR	VEHICLE COLLATERAL	ALL	ALL	Y
CAR_CP	CAR_CP	VEHICLE COLLATERAL	ALL	ALL	N
CAR_CP2	CAR_CP2	VEHICLE COLLATERAL	ALL	ALL	N

**Asset Sub Type**

Asset Sub Type	Description	Asset Property Type	Enabled
MINI BUS	MINI BUS	INTERMEDIATE	Y

Asset Sub Type: MINI BUS  
 \* Description: MINI BUS  
 \* Asset Property Type: INTERMEDIATE  
 \* Enabled: ☒

**Attributes / Addons** | Makes and Models | Usage/Rental Details | Usage Charge Matrix | Rental Charge Matrix

**Asset Attributes**

Attribute/Addn	Description	Default	Value	Enabled
No data to display.				

A brief description of the fields is given below:

Table 4-2 Asset Type

Field	Do this
Asset Type	Specify the asset type.
Description	Specify the description for the asset. (This is the asset type which will appear throughout the system).
Collateral Type	Select the collateral type (the general category that the asset type falls within) from the drop-down list.  <b>Note:</b> There is no need to define an asset for UNSECURED COLLATERAL, as by definition there is no asset on such account.
Company	Select the portfolio company to which the asset type belongs, from the drop-down list. These are the companies within your organization that can make LoanLineLease using this asset type. This may be ALL or a specific company.

**Table 4-2 (Cont.) Asset Type**

Field	Do this
Branch	<p>Select the portfolio branch to which the asset type belongs, from the drop-down list. This is the branch within the selected company that can make LoanLineLease using this asset type. This may be ALL or a specific branch. This must be ALL if in the Company field you selected ALL.</p> <p><b>IMPORTANT:</b> By selecting which asset type to use, the system searches for a best match using the following attributes:</p> <ol style="list-style-type: none"> <li>1. Company</li> <li>2. Branch</li> </ol> <p>Hence, the system recommends creating one version of each asset type where ALL is the value in these fields.</p>
Enabled	Check this box to enable the asset type and indicate that the asset type is currently in use.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Asset Sub Type** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-3 Asset Sub Type**

Field	Do this
Asset Sub Type	Specify the asset sub type.
Description	Specify the description for the asset subtype.
Asset Property Type	Select the type of property from the drop-down list.
Enabled	Check this box to enable the asset sub type.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
6. Click **Setup > Setup > Products > Assets > Attributes/Addons**.
7. In the **Attributes/Addons** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-4 Attributes/Addons**

Field	Do this
Attribute/Addon	Displays the asset attribute or addon name for the selected asset).
Description	Select the description for the asset attribute/addon from the dropdown list.
Default	Specify the default text to be copied or displayed when the asset attributes and addons fields are completed on an application for this asset.

**Table 4-4 (Cont.) Attributes/Addons**

Field	Do this
Value	Specify the default monetary value to be copied or displayed when the asset attributes and addons fields are completed on an application for this asset.
Enabled	Check this box to enable the asset attribute/Addon and indicate that it is available for this type of asset.

8. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
9. Click the **Setup > Setup > Products > Assets > Makes and Models**.
10. In the **Makes and Models** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-5 Makes and Models**

Field	Do this
Make	Specify asset make.
Model	Specify asset model.
Style	Specify asset style type.
Model Year	Specify asset model year.
Enabled	Check this box to enable the asset make and model and indicate that it is included on fields for this asset type.

11. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

This section consists of the following topics:

- [Usage/Rental Details](#)
- [Usage Charge Matrix](#)
- [Rental Charge Matrix](#)

## 4.1.1 Usage/Rental Details

The Usage / Rental Details sub tab allows you to define Usage/Rental definition details to categorize the incoming asset usage/rental data based on different parameters. The details maintained here are populated in Origination screen for billing calculation and can also be modified based on requirement.

For more information on how OFSLL handles Usage based leasing, refer to [Appendix : Usage Based Leasing](#) chapter and for Rental based leasing, refer to **Rental Agreement** section in Lease OriginationServicingCollections User Guide.

1. In the **Usage/Rental Details** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.
2. A brief description of the fields is given below:

Table 4-6 Usage/Rental Details

Field	Do this
Agreement Type	<p>Select the agreement type as one of the following from the drop-down list. The selected Agreement Type defines the criteria for pricing selection during billing calculation.</p> <ul style="list-style-type: none"> <li>• USAGE</li> <li>• RENTAL</li> <li>• USAGE RENTAL</li> </ul> <p><b>Note:</b> Based on the above selected option, the other fields are either enabled or disabled for selection as indicated below:</p> <p>For Usage Agreement Type, the following fields are editable:</p> <ul style="list-style-type: none"> <li>• Calc Method</li> <li>• Usage Cycle</li> <li>• Min Usage</li> <li>• Max Usage</li> <li>• Discount %</li> <li>• Usage Rollover / Advance</li> <li>• Usage Term Calc Method</li> </ul> <p>For Rental Agreement Type, the following fields are editable:</p> <ul style="list-style-type: none"> <li>• Discount %</li> <li>• Discount Amount</li> <li>• Security Deposit</li> </ul> <p>For Usage Rental Agreement Type, the following fields are editable:</p> <ul style="list-style-type: none"> <li>• Usage Cycle</li> <li>• Max Usage</li> <li>• Discount %</li> <li>• Discount Amount</li> <li>• Security Deposit</li> </ul>
Calc Method	<p>Select the calculation method as one of the following from the dropdown list.</p> <ul style="list-style-type: none"> <li>• TIERED (billing is based on the defined Usage/Rental Charge Matrix)</li> <li>• NON-TIERED (system automatically chooses the applicable slab based on the final usage value)</li> </ul>
Usage Cycle	Select the frequency of billing the asset usage from the drop-down list. This field is disabled for RENTAL agreement type.
Min Usage	Specify the minimum usage value of the allowed range. This field is disabled for RENTAL agreement type.
Max Usage	Specify the maximum usage value of the allowed range. This field is disabled for RENTAL agreement type.
Discount %	Specify the percentage of discount exempted from final billing.

Table 4-6 (Cont.) Usage/Rental Details

Field	Do this
Usage Rollover / Advance	<p>Select the type of asset usage calculation as one of the following:</p> <ul style="list-style-type: none"> <li>• ROLLOVER (remaining usage balance is carried forward to next cycle)</li> <li>• NO-ROLLOVER (remaining usage balance is not carried forward)</li> <li>• ROLLOVER AND ADVANCE (remaining usage balance is carried forward to next cycle + total usage limit for current cycle can be utilized upfront)</li> <li>• ADVANCE (total usage limit for current cycle can be utilized upfront)</li> </ul> <p><b>Note:</b> This field is disabled for RENTAL and USAGE RENTAL agreement type and <b>NO-ROLLOVER</b> option is applicable by default.</p>
Reset Frequency	<p>Specify the reset frequency of the billing cycle. This field is disabled for RENTAL and USAGE RENTAL agreement types and is available for ROLLOVER, ADVANCE and ROLLOVER AND ADVANCE methods of asset usage billing.</p>
Usage Term Calc Method	<p>Select the type of asset usage term for billing calculation as one of the following from the drop-down list:</p> <ul style="list-style-type: none"> <li>• ACTUAL - here the current details updated/received is treated as the final record for usage term calculation.</li> <li>• AVERAGE - here system takes the average of usage details received in previous cycles for usage term calculation.</li> </ul> <p>The calculation method selected here is populated to <b>Elastic Term Calc Method</b> field in Origination/Servicing Collateral screen. This field is disabled for RENTAL and USAGE RENTAL agreement type.</p>
Discount Amount	<p>If you are defining Usage/Rental Details for RENTAL or USAGE RENTAL type of agreements, specify the discount amount allowed upfront from the final billing. This field is disabled for USAGE agreement type.</p>
Security Deposit	<p>If you are defining Usage/Rental Details for RENTAL or USAGE RENTAL type of agreements, specify the security deposit amount paid upfront for the term. This field is disabled for USAGE agreement type.</p>
Excess Rent Collection Method	<p>If you have selected the Agreement Type as USAGE RENTAL, select one of the following type of Charge Matrix to be used to derive the Excess Rent Collection Method from the drop-down list.</p> <ul style="list-style-type: none"> <li>• USING USAGE MATRIX</li> <li>• USING RENTAL MATRIX</li> </ul>

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.1.2 Usage Charge Matrix

The Usage Charge Matrix sub tab allows you to define and maintain different chargeable slabs based on the combination of Billing Cycle and Charge Type. The details maintained here are used for billing calculation based on a particular asset usage.

For more information on how OFSLL handles Usage based leasing, refer to [Appendix : Usage Based Leasing](#) chapter and for Rental based leasing, refer to **Rental Agreement** section in Lease OriginationServicingCollections User Guide.

1. In the **Usage Charge Matrix** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-7 Usage Charge Matrix**

Field	Do this
Billing Cycle	Select the frequency of the billing cycle for the asset from the drop-down list.
Units From	Specify the minimum number of units from which the current usage charge matrix is applicable.
Charge Per Unit	Specify the amount to be charged for every unit.
Charge Type	<p>Select the Charge Type as one of the following from the drop-down list. The list is displayed based on CHARGE_TYPE_CD lookup.</p> <ul style="list-style-type: none"> <li>• BASE (Units considered as base and chargeable at base rate)</li> <li>• EXCESS CYCLE (Units beyond base units and chargeable considering excess cycle)</li> <li>• EXCESS LIFE (Units exceeding the total contracted units and chargeable considering excess life cycle)</li> </ul> <p>Excess life is not applicable for Rental agreement type.</p>
Enabled	Check this box to enable the charge matrix for usage calculation.

2. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.1.3 Rental Charge Matrix

The Rental Charge Matrix sub tab allows you to define and maintain different chargeable slabs based on the combination of Billing Cycle, Rental Duration, Charge Per Cycle and Charge Type. The details maintained here are used for billing calculation based on a particular asset usage.

For more information on how OFSLL handles Usage based leasing, refer to [Appendix : Usage Based Leasing](#) chapter and for Rental based leasing, refer to **Rental Agreement** section in Lease OriginationServicingCollections User Guide.

1. In the **Rental Charge Matrix** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-8 Rental Charge Matrix**

Field	Do this
Billing Cycle	Select the frequency of the billing cycle for the asset from the drop-down list.
Rental Duration From	Specify the minimum duration for which the rental charge is applicable.
Charge Per Cycle	Specify the amount to be charged for every rental cycle.
Charge Type	<p>Select the Charge Type as one of the following from the drop-down list. The list is displayed based on CHARGE_TYPE_CD lookup.</p> <ul style="list-style-type: none"> <li>• BASE (Chargeable units exceeding from base units allowed)</li> <li>• EXCESS CYCLE (Chargeable units exceeding from billing cycle units)</li> <li>• EXCESS LIFE (Chargeable units exceeding the total contract term)</li> </ul> <p>Excess life is not applicable for Rental / Usage, Rental agreement types.</p>
Enabled	Check this box to enable the charge matrix for usage calculation.

2. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.2 Index Rates

The Index Rates screen maintains your organization's history of periodic changes in index rates. It allows you to define index rates to support variable rate lines of credit. The index rate provides the base rate for a credit line where:

`interest rate = index rate + margin rate.`

The Index section displays the currently defined indexes on the Lookups screen. You may create additional user-defined lookup codes for this lookup type as needed.

### Note

You cannot tie an index rate to a product rate.

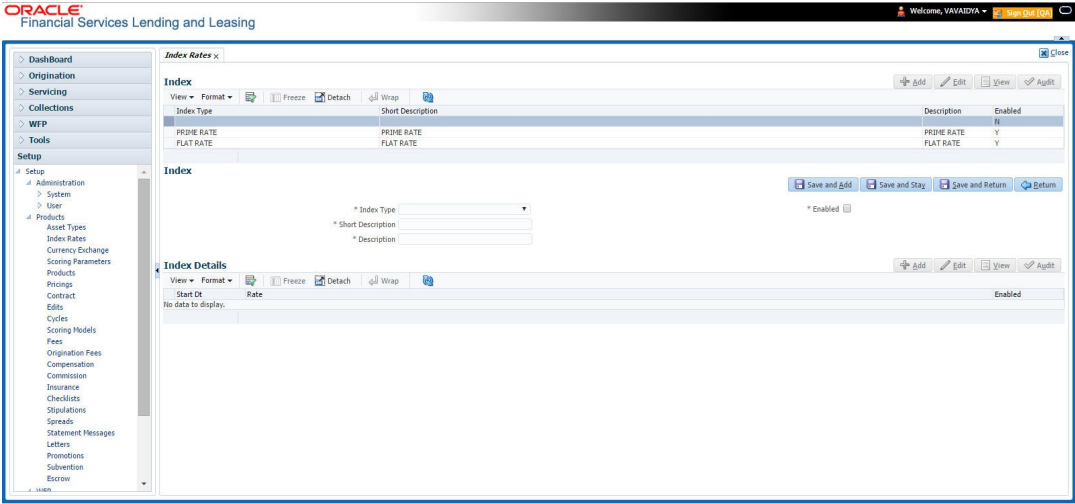

You can also record any index rate change on the Index Rates screen. During nightly batch processing, all the accounts with that index type are included when posting the RATE CHANGE transaction. After the system processes the batch, the interest rate of the account is changed. The system will use this new interest rate when computing all future interest calculations.

### To set up Index Rates

1. Click **Setup > Setup > Products > Index Rates**.
2. In the **Index** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.:

Figure 4-2 Index Rates

3. A brief description of the fields is given below:

Table 4-9 Index

Field	Do this
Index Type	Select the type of index from the drop-down list.
Short Description	Specify a short description of the index.
Description	Specify the index description.
Enabled	Check this box to activate the index type.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.  
The Index Details section allows you to define multiple index values using the Start Dt and Rate fields.

**Note**

The history appears in descending order, with the most current record at the top.

5. In the **Index Details** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

Table 4-10 Index Details

Field	Do this
Start Dt	Specify the effective start date for the index rate. You can even select the date from the adjoining Calendar icon.
Rate	Specify the new index rate effective from above mentioned date as a percentage. <b>Note:</b> For the FLAT RATE index there should be only one entry with a Start Dt. = 01/01/1900 and a RATE = 0.0000.

**Table 4-10 (Cont.) Index Details**

Field	Do this
Enabled	Check this box to activate the index rate effective from start date mentioned above.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

**Note**

Variable rate functionality is not extended to pre-compute accounts.

## 4.3 Regulatory Rates

Regulatory rate is the interest rate offered while funding a loan contract which may or may not vary from the contract rate (market rate). The regulatory rates tab allows you to maintain various regulatory rate definitions with specific interest rates and criteria which are used in Origination > Contract screen while defining a loan contract with imputed interest. For more information, refer to **Imputed Interest** section in Loan Origination User guide.

### To set up Regulatory Rates

- Click **Setup > Setup > Products > Regulatory Rates**.
- In the **Regulatory Rates Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 4-3 Regulatory Rates Definition**

The screenshot displays the 'Regulatory Rates Definition' window in Oracle Financial Services Lending and Leasing. At the top, there's a header bar with the Oracle logo and 'Financial Services Lending and Leasing'. Below this, a 'Regulatory Rates' tab is active. The main area contains a table with the following data:

Name	Description	Start Dt	End Dt	Enabled	Rate	Company	Branch	Billing Cycle	Product	Asset Class	Asset Type	Sub Type
IMP-ITR2	IMP-ITR2	11/29/2000	12/31/4000	Y	8.0000	ALL	ALL	MONTHLY	ALL	ALL	ALL	ALL

Below the table, there's a 'Regulatory Rates Definition' section with input fields for Name, Description, Start Dt, End Dt, Enabled, Rate, and Selection Criteria (Company, Branch, Billing Cycle, Product, Asset Class, Asset Type, Sub Type, Asset Make, Asset Model, State, Currency). The fields are populated with the same data as the table above.

- A brief description of the fields is given below:

**Table 4-11 Regulatory Rates Definition**

Field	Do this
<b>Regulatory section</b>	

**Table 4-11 (Cont.) Regulatory Rates Definition**

Field	Do this
Name	Specify an unique name for the regulatory rate definition. This field is not editable once you save the record.
Description	Specify a description for the regulatory rate definition.
Start Dt	Select the start date from when the regulatory rate definition is effective using the adjoining calendar.
End Dt	Select the end date up to when the regulatory rate definition is effective using the adjoining calendar.
Enabled	Check this box to enable the regulatory rate definition.
Rate	Specify the regulatory interest rate to be used for calculation. The rate specified here is populated to Origination > Contract screen while defining loan contract with imputed interest.
<b>Selection Criteria section</b>	
Company	Select the company for the instrument from the drop-down list. This may be ALL or a specific company.
Branch	Select the branch within the company for the instrument from the drop-down list. This may be ALL or a specific branch. This must be ALL, if you have selected <b>ALL</b> in the Company field.
Billing Cycle	Select the billing cycle frequency for the instrument as one of the following from the drop-down list. <ul style="list-style-type: none"> <li>MONTHLY (Default)</li> <li>WEEKLY</li> <li>BI WEEKLY</li> <li>QUARTERLY</li> <li>SEMI ANNUAL</li> <li>ANNUAL</li> </ul>
Product	Select the product for the instrument from the drop-down list. This may be ALL or a specific product defined in the system.
Asset Class	Select the asset class for the instrument from the drop-down list. This may be ALL or a specific asset class. The list is populated based on Class setup defined in the system.
Asset Type	Select asset type for the instrument from the drop-down list. This may be ALL or a specific asset type. The list is populated based on Asset Types setup defined in the system.
Sub Type	Select the asset sub type for the instrument from the drop-down list. This may be ALL or a specific asset sub type. The list is populated based on Asset Types setup defined in the system.
Asset Make	Specify the asset make from the drop-down list. If ALL was selected for either Asset Type or Asset Sub Type, then ALL will be the only available option for selection.

**Table 4-11 (Cont.) Regulatory Rates Definition**

Field	Do this
Asset Model	Specify the asset model from the drop-down list. If ALL was selected for either Asset Type or Asset Sub Type, then ALL will be the only available option for selection.
State	Select the state for the instrument from the drop-down list. This may be ALL or a specific state.
Currency	Select the currency for the instrument from the drop-down list. This may be ALL or a specific currency.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.4 Currency Exchange

The Currency Exchange screen maintains currency exchange rates. You can define the currency exchange details and schedule a batch job (SET-IFP- ICEPRC\_BJ\_100\_01 - CURRENCY EXCHANGE RATE FILE UPLOAD) which in-turn pulls the currency exchange rates from desired source at scheduled intervals through input file processing.

### To set up the Currency Exchange

1. Click **Setup > Setup > Products > Currency Exchange**.
2. In the **Currency Exchange Rates** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 4-4 Currency Exchange Rates**

Currency	Currency Pair	Effective Dt and Time	Rate	Enabled
EUR	JPY	12/23/2015 05:50:49 AM	0.0000	N
EUR	JPY	12/23/2015 05:50:49 AM	4.0000	Y
EUR	JPY	12/24/2015 12:48:25 AM	2.9000	Y
INR	JPY	01/24/2016 11:55:30 PM	0.0000	N
EUR	JPY	08/14/2012 06:12:42 AM	98.3324	Y
EUR	USD	08/14/2012 06:12:42 AM	1.2360	Y
JPY	EUR	08/14/2012 06:12:42 AM	0.0102	Y
JPY	USD	08/14/2012 06:12:42 AM	0.0128	Y
OMR	EUR	08/14/2012 06:12:42 AM	2.1014	Y
OMR	JPY	08/14/2012 06:12:42 AM	203.7920	Y
OMR	USD	08/14/2012 06:12:42 AM	2.5973	Y
USD	EUR	08/14/2012 06:12:42 AM	0.8091	Y
USD	JPY	08/14/2012 06:12:42 AM	78.8900	Y
USD	OMR	08/14/2012 06:12:42 AM	55.7165	Y
EUR	JPY	12/23/2015 05:50:49 AM	3.5000	Y
EUR	JPY	12/23/2015 05:50:49 AM	3.6000	Y
EUR	OMR	12/23/2015 05:52:36 AM	5.1000	Y
EUR	JPY	12/24/2015 12:16:26 AM	4.5000	Y
EUR	JPY	12/24/2015 12:48:25 AM	3.9000	Y

A brief description of the fields is given below:

**Table 4-12 Currency Exchange Rates**

Field	Do this
Currency	Select the currency being exchanged from the drop-down list.
Currency Pair	Select the currency to be paired with from the drop-down list.
Effective Date and Time	Specify date and time of the exchange rate. You can even select the date from the adjoining Calendar icon.
Rate	Specify the exchange rate (required).
Enabled	Check this box to activate the currency exchange rate.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.5 Scoring Parameters

With the Scoring Parameters, you can define the scoring parameters of a company's credit scorecard and behavioral scoring.

The system's pricing scores apply to applications and are based on information recorded during origination.

The behavioral scoring applies to accounts and is based on account history attributes and performed on a monthly basis.

### Behavioral scoring

Behavioral scoring examines the repayment trends during the life of the account and provides a current analysis of the customer. This logical and systematic method identifies which accounts are more likely to perform favorably versus accounts where poorer performance is probable. This is useful when determining which other LoanLines of creditLease products a customer may qualify for. However note that, Behavioral scoring applies to all the three products: loans, lines of credit and leases.

This information appears on the Customer Service screen in the Account Details screen's Activities section.

### Credit Scoring

Parameters define the factors that can be used when scoring an application during underwriting and generating an initial decision on whether you wish to fund an amount. The combination of the flexible definition of these parameters, along with the scoring set up on the Scoring Models screen, allows you to automate much of the initial decision process in underwriting accounts.

The Formula Definition section on the Scoring Parameters screen allows you to build a mathematical expression to express the scoring parameter, test its validity, and locate specific information with the resulting scoring parameters. The system calculates scoring parameters using application data, credit bureau information, and applicant details.

### To set up the Scoring Parameters

You can either define new **Scoring Parameters** or specify a new name in the **New Parameter** field and click **Create Copy** to create a copy of selected parameter with details.

1. Click **Setup > Setup > Products > Scoring Parameters**.

- In the **Parameters** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 4-5 Parameters**

The screenshot displays the Oracle Financial Services Lending and Leasing application interface. The main window is titled 'Scoring Parameters'. On the left, there is a navigation pane with a tree view containing categories like Dashboard, Origination, Servicing, Collections, WFP, and Tools. The 'Parameters' section is selected. The main area shows a table of parameters:

Parameter	Description	Data Type	Scoring Type	Enabled
BEHAVIORAL_SCORE	BEHAVIORAL SCORE	NUMBER	BEHAVIORAL SCORING	Y
FICO_SCORE	FICO SCORE	NUMBER	CREDIT SCORING	Y
SC	SC	NUMBER	CREDIT SCORING	N
TEST	TEST	CHARACTER	CREDIT SCORING	N

Below the table, the 'Parameters' section for 'BEHAVIORAL\_SCORE' is shown with fields for Description, Data Type (NUMBER), Scoring Type (BEHAVIORAL SCORING), and Enabled (checked). The 'Formula Definition' section below it shows a table with one entry:

Seq	Variable	Constant Value	Mathematical Operator	Enabled
1	ACC_INQ_DAYS			Y

A brief description of the fields is given below:

**Table 4-13 Parameters**

Field	Do this
Parameter	Specify the name of the scoring parameter. The system recommends entering a name that in some way reflects how the parameter is used; for example, use FICO_SCORE instead of PARAMETER_1.
Description	Specify a description of the parameter. Again, Specify a name that reflects how the parameter is used; for example, use FICO SCORE and WEIGHTED FICO SCORE instead of FICO SCORE NUMBER 1 and FICO SCORE NUMBER 2.
Data Type	Select the data type of the scoring parameter being defined from the drop-down list. This determines how the system handles the values. (While DATE and CHARACTER are available data types, generally only NUMBER should be used when defining a scoring parameter.
Scoring Type	Select the scoring type from the drop-down list: CREDIT SCORING or BEHAVIORAL SCORING.
Enabled	Check this box to enable and indicate that the scoring parameter is available.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter. The **Formula Definition** section allows you to define a mathematical expression of the scoring parameter you want to define. The expression may consist of one or more sequenced entries. All arithmetic rules apply to the formula definition. If errors exist in the formula definition, the system displays an error message in this section when you choose Show Expression.

4. In the **Formula Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-14 Formula Definition**

Field	Do this
Seq	Specify the sequence number (the order in which the formula definition variable will be assembled and evaluated).
(	Specify a left bracket, if you need to group part of your formula definition.
Variable	Select the variable from a validated field based on the user-defined table SCR_CRED_SUMMARY: SCORING PARAMETERS, from the drop-down list.
Constant Value	Specify the constant value (optional). You can specify varchar values which includes Numbers, Alphabets/ letters, special character/ symbols.
Mathematical Operator	Select the math operator to be used on the adjacent formula definition rows, from the drop-down list.
)	Specify a right bracket, if you are grouping part of your formula definition.
Enabled	Check this box to enable the formula and indicate that it is included when building a definition for the scoring parameter.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
6. In the **Parameters** section, click **Show Expression**.  
The mathematical expression appears in the Formula Expression section (in sequential order) in the Expression field.

## 4.6 Products

The Product screen defines the closed ended products your organization offers. This screen is enhanced to support Islamic along with the conventional.

A product is based on the following attributes:

- The collateral type and sub type
- The billing cycle
- Whether the amount is paid directly or indirectly to the customer

The Product Definition section records details about the product such as the description, start and end dates, collateral type and sub type, credit bureau reporting attributes, billing cycle, index and rate calculation attributes.

System supports **Biennial** (once every 2 years) and **Triennial** (once every 3 years) type of billing cycles. Based on the following lookups, the billing cycle **frequency** can be defined:

- BILL\_CYCLE\_CD
- LEASE\_BILL\_CYCLE\_CD - For lease accounts, the Biennial and Triennial billing cycles are applicable only for **Interest Rate** type of Calculation Method and for both Advance and

Arrears type of Rent Collection Methods. However, these billing cycles are allowed for Balloon Method - N+1 and **not allowed** for Flexible repayment > Skip Months and for Agreement type, Usage, Rental, Rental Usage types.

- **LOAN\_BILL\_CYCLE\_CD** - For Loan accounts, the Biennial and Triennial billing cycles are applicable only for **Standard** Product Category and for both Advance and Arrears type of Rent Collection Methods - Advance (if First Payment Date is equal to Contract Date) and Arrears (if First Payment Date is greater than Contract Date). However, these billing cycles are allowed for Balloon Methods N and N+1 and **not allowed** for Flexible repayment > Skip Months.
- **LOC\_BILL\_CYCLE\_CD** - for Line of Credit accounts.

For a lease product definition, the calculation is based on either Rent Factor or Interest Rate and Contract and Pricing definition will be driven depending on one of the above option selected.

The Product Itemization section is used to define itemized entries for a product. This information is used on the Itemization sub screens of the Application Entry and Application screens.

The Rate Adjustments section is used to define the frequency of rate change allowed during interest rate calculations.

### To set up the Product

You can either define new Product details or specify a new product code in the **New Product** field and click **Create Copy** to create a copy of selected product with details.

1. On the Oracle Financial Services Lending and Leasing home screen, **Setup > Setup > Administration > User > Products > Products > LoanLineLease**.
2. In the **Product Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 4-6 Product Definition**

The screenshot displays the Oracle Financial Services Lending and Leasing interface. At the top, the Oracle logo and 'Financial Services Lending and Leasing' text are visible. The user is logged in as 'Welcome ABHIRAM' with a 'Sign Out' button. The main window is titled 'Products' and has tabs for 'Loan', 'Line', and 'Lease'. The 'Loan' tab is active, showing a 'Loan Product' section with a table of existing products.

Product	Description	Start Dt	End Dt	Direct	Flexible Repayment	Close Account After Paid-Off	Customer Credit Limit	Same Billing C
LOAN-UN	LOAN UNSECURED (VR)	02/03/2020	12/31/4000	Y	Y	Y	N	N
AUS LOAN VEHICL...	BCM LOAN VEHICLE (FR)	12/17/1997	12/31/4000	N	Y	Y	N	N
AUTO_LOAN	AUTO_LOAN	12/17/1997	12/31/4000	Y	N	Y	N	N
BARAK_LOAN	BARAK AUTO LOAN	12/17/1997	12/31/4000	Y	Y	Y	Y	N
IJARA-HOME-LN	IJARA HOME LOAN (FR)	12/17/1997	12/31/4000	Y	N	Y	N	N
ISTISNA-HOME-LN	ISTISNA HOME LOAN (FR)	12/17/1997	12/31/4000	Y	N	Y	N	N
LOAN-AUS	AUS LOAN VEHICLE (FR)	12/17/1997	12/31/4000	N	Y	Y	N	N
LOAN-CHAT	LOAN CHATTEL (FR)	12/17/1997	12/31/4000	Y	N	Y	N	N

Below the table, there is a 'Loan Product' section with a form for defining a new product. The form includes fields for Product, Description, Start Dt, End Dt, Direct, Flexible Repayment, Close Account After Paid-Off, Customer Credit Limit, Same Billing Cycle, Billing Cycle, Category, Index Rounding, Reschedule Method, and Reschedule Value. There are also checkboxes for 'Enabled', 'Skip Credit Bureau Reporting', 'Collateral Type', 'Collateral Sub Type', and 'Credit Bureau Portfolio Type'. At the bottom, there is a 'Product Itemizations' section with a table for defining itemized entries.

A brief description of the fields is given below:

Table 4-15 Product Definition

Field	Do this
Product	Specify the product code as defined by your organization (in other words, how you want to differentiate the products). For example, products can be differentiated according to asset. The product code, or name, is unique.

Table 4-15 (Cont.) Product Definition

Field	Do this
Description	Specify the description of the product. (This is the product description as it appears throughout the system).
Start Dt	Specify the start date for the product. You can even select the date from the adjoining Calendar icon.
End Dt	Specify the end date for the product. You can even select the date from the adjoining Calendar icon.
Direct	Check this box, if you need the product to be originated directly to customer. (In this case, the compliance state is the state listed in the customer's current mailing address.) If unchecked, the product is an indirect lending product; that is, payment is made to the producer. (In this case, the compliance state is the state listed in the producer's address.)
Flexible Repayment	<p>Check this box to allow flexible repayment for the Product. When you check this check box, the Flexible Repayment Allowed box of Repayment Options section available under Funding tab &gt; Contract sub tab &gt; Replacement sub tab of Funding screen.</p> <p>Note: On the Repayment sub screen of Contract link on Funding screen, you may only enter the desired repayment schedule type in the Repayment section's Type field if the Flexible Repayment Allowed is selected.</p>
Close Account After Paid- Off	<p>Check this box to allow the account to be closed once the account is paid off i.e. system closes the account after the number of days specified in the system parameter has elapsed. This option is selected by default.</p> <p>If not selected, system ignores the system parameter and does not close the account even if the account is paid off i.e. system keeps the accounts active so that the equity can be traded with other accounts. For information on accounts trading, refer to <b>Appendix - Trading of Accounts</b> chapter.</p> <p>Note: If the business practice of a financial institution is <b>not</b> to close the accounts then this Indicator need to be unchecked. Mainly in the Vacation Ownership where a Timeshare product can be traded anytime even if the account is paid-off, this feature is used.</p>
Customer Credit Limit	<p>Check this box to enable <b>Customer Credit Limit</b> tab in Origination module. Using the <b>Customer Credit Limit</b> tab, an underwriter can define a specific credit limit for the customer while funding the first application and based on that credit limit, subsequent applications can be funded.</p> <p>For more information, refer to <b>Customer Credit Limit</b> details in User Guide.</p>

Table 4-15 (Cont.) Product Definition

Field	Do this
Same Billing Cycle	Check this box to set the same billing cycle (supported only billing cycles Monthly and Weekly) for all the future applications funded for an existing customer.
Enabled	Check this box to activate the product. <b>Note:</b> You can check this box only when Rate adjustment schedule is maintained, i.e., All the products should be variable rate products.
Skip Credit Bureau Reporting	Check this box to skip credit bureau reporting of all Accounts funded with this product type - i.e. on funding an application, that particular account is enabled with this parameter and is excluded when the metro II batch job is run for credit bureau reporting.  This option can also be enabled/disabled at individual account level in Servicing by posting <b>Skip Credit Bureau Reporting Maintenance</b> nonmonetary transaction.  However note that existing behaviour of <b>Stop Bureau Account</b> condition would still be applicable.
Collateral Type	Select the collateral type for the product, from the drop-down list. This field identifies what type of collateral is associated with the and assists the system in identifying the correct screen(s) to display.
Collateral Sub Type	Select the collateral sub type for the product, from the drop-down list.
Credit Bureau Portfolio Type*	Select the credit bureau portfolio type for the product, from the dropdown list.
Credit Bureau Account Type*	Select the account type for the product, from the drop-down list.  <b>*Note:</b> The Credit Bureau Portfolio Type and Credit Bureau Account Type fields determine how the portfolio is reported back to the credit bureaus.
Billing Cycle	Select the billing cycle for the product, from the drop-down list.  <b>Note:</b> This field is not editable and the billing cycle is selected as MONTHLY by default if the lease calculation method is selected as RENT FACTOR.
Category	Select the category as Standard for the conventional product and Islamic for the Islamic product, from the drop-down list. This serves to group products for reporting purposes. By default the category of the product is selected as STANDARD and is not editable.
<b>Calculation Parameters:</b> This section allows you to define the parameters for lease calculation starting from choosing the calculation method.	

Table 4-15 (Cont.) Product Definition

Field	Do this
Calculation Method	<p>Select the type of lease calculation method as one of the following:</p> <ul style="list-style-type: none"> <li>• RENT FACTOR (selected by default)</li> <li>• INTEREST RATE</li> </ul> <p>If the lease calculation method is selected as <b>Interest Rate</b>, the following fields are enabled in the screen and also the <b>Rate Adjustments</b> sub tab is available to specify the details:</p> <ul style="list-style-type: none"> <li>• Flexible Repayment</li> <li>• Index Rounding</li> <li>• Reschedule Method</li> <li>• Reschedule Value</li> </ul>
Flexible Repayment	<p>Check this box to allow flexible repayment for the Product. When you check this check box, the Flexible Repayment Allowed box of Repayment Options section available under Funding tab &gt; Contract sub tab &gt; Replacement sub tab of Funding screen.</p> <p><b>Note:</b> On the Repayment sub screen of Contract link on Funding screen, you may only enter the desired repayment schedule type in the Repayment section's Type field if the Flexible Repayment Allowed is selected.</p>
Index Rounding	<p>Select the index rate rounding factor for the product, from the drop-down list.</p> <p><b>Note:</b> For more information, refer Appendix C: Rounding Amounts and Rate Attributes.</p>
Reschedule Method	<p>Select the rate change reschedule method for the variable rate product, from the drop-down list. Select CHANGE PAYMENT, if you want to automatically recalculate the repayment amounts on the interest rate change. Select UNDEFINED (the default value), if you do not want to take any action on interest rate change.</p>
Reschedule Value	<p>Specify the value in percent (%) to decide the repayment change. For example, if you enter 10, then the periodic repayment amount will change only if the newly computed repayment amount is higher by 10% of the previous repayment amount. Specify 0 if you want to change repayment amounts with every index rate change.</p>

Table 4-15 (Cont.) Product Definition

Field	Do this
Agreement Type	<p>If you have selected the <b>Collateral Type</b> as either VEHICLE COLLATERAL or HOUSEHOLD GOODS AND OTHER COLLATERAL, you can select one of the following types of lease agreement from the drop-down list for further calculation:</p> <ul style="list-style-type: none"> <li>• USAGE</li> <li>• RENTAL</li> <li>• USAGE RENTAL</li> </ul> <p><b>Note:</b> For each Usage or Rental details defined in <b>Asset Type</b> screen, you can define only one record for each asset type (i.e. one for Usage and one for Rental).</p> <p>Based on the selected option, OFSLL handles the lease calculation and billing. For more information on Usage based leasing, refer to <a href="#">Appendix : Usage Based Leasing</a> chapter and for Rental based leasing, refer to <b>Rental Agreement</b> section in Lease Origination User Guide.</p>
Skip User Parameters Calculation	<p>Select this check box to exclude accounts from target parameter calculation.</p> <p>If unchecked, system picks-up the account during the processing of following batch jobs:</p> <ul style="list-style-type: none"> <li>• CUPACC_BJ_111_01 (LOAN)</li> <li>• CUPACC_BJ_112_01 (LINE)</li> <li>• CUPACC_BJ_121_01 (LEASE)</li> </ul>

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

**Note**

The 'Reschedule Method' and 'Reschedule Value' fields allows you to define and control the changes in loan paymentlease amount for Variable and Fixed rate loanslease during originating, funding, and servicing. For more information, refer [Appendix : Variable and Fixed Interest Rate](#).

This section consists of the following topics:

- [Product Itemizations](#)
- [Rate Adjustments](#)

## 4.6.1 Product Itemizations

1. Click **Setup > Setup > Administration > User > Products > Products > LoanLineLease > Product Itemizations**.
2. In the Product Itemization sub screen, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-16 Product Itemization**

Field	Do this
Itemization	Select the itemization type for the product selected in product definition section, from the drop-down list.
Discount Rate	Specify the discount rate.
Sort	Specify the sort order.
Sign	Select +ve for a positive number and -ve for a negative number.  <b>Note:</b> The +ve and -ve buttons determine whether the values will increase or decrease the itemization total for the product based on the selected product. Together the contents of the Product Itemization sub screen, positive and negative, add up to the amount.
Enabled	Check this box to indicate that this product itemization is currently available.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.6.2 Rate Adjustments

The Rate Adjustment sub tab is enabled for lease calculation based on Interest Rate.

1. Click **Setup > Setup > Administration > User > Products > Products > LoanLease > Rate Adjustments**.
2. On the Rate Adjustments sub tab, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-17 Rate Adjustments**

Field	Do this
Seq	Specify the sequence number of the rate change adjustments. Consider 1 as the initial (first) rate change adjustment frequency. All subsequent frequencies will be considered for rate change adjustments according to their sequence number.
Adjustment Frequency	Select the frequency value for adjustments, from the drop-down list. Currently, the following values are available in the system: RATE CHANGE OCCURS EVERY X YEARS RATE CHANGE OCCURS EVERY X MONTHS RATE CHANGE OCCURS EVERY X DAYS RATE CHANGE OCCURS EVERY BILLING DATE RATE CHANGE OCCURS EVERY DUE DATE RATE CHANGE OCCURS AT MATURITY

**Table 4-17 (Cont.) Rate Adjustments**

Field	Do this
Period	Specify the period associated to adjustment frequency. For example, if you select the adjustment frequency as RATE CHANGE OCCURS EVERY X YEARS and enter 5, the rate change occurs every five years.
# of Adjustments	Enter the number of adjustments associated with the adjustment frequency. For example, in above example, if you enter the value as 2, then rate payment adjustment occurs on the product every five years and will happens 2 times before switching to the next adjustment frequency.
Enabled	Check this box to indicate that this rate adjustment is currently available.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.7 Pricings

The Pricing screen records pricing information related to your products. the system uses the information in the Pricing Definition section to identify the correct pricing for an application, depending upon the product and the specific application parameters. the system will always search for a unique match.

When you choose the **Select Pricing** while making a decision on the **Underwriting** window, the system displays the best match and completes the Pricing and Approved sections under Summary sub tab. The information in the Approved section cite the minimum amounts for the selected product, though the user can edit these figures.

The system determines the best match by looking at all enabled pricing strings on the Pricing screen that meet the following criteria:

- Exactly match the application values for the Promotion and Billing Cycle fields.
- Are less than or equal to the application values for the Term, Amount, Age, and Start Date fields.
- Match either the application value or ALL for all other criteria.

Exact matches for each field are given a higher weight than matches of ALL. The returned rows are then ranked based on the weighted values and the hierarchical position of the field (see above). They are then ranked by start date. The system recognizes the first row returned as the best match.

**Note**

- You should set up a default pricing for each billing cycle and pricing that the system can select to ensure error-free performance. Oracle Financial Services Software recommends creating a single version of each edit type, where ALL is the value in the selection criteria fields listed above. If the system cannot find a pricing match, it will display an error message.
- The system supports the bulk uploading of product pricing setup data. This allows you to upload multiple setup data, avoid re-entering setup data, and more importantly, reduce data entry mistakes. The system currently supports uploading using a fixed-length format only, where each data is at a pre-fixed position. You can run batch jobs with the Set Code SET-BLK to upload pricing and GL data.

System supports **Biennial** (once every 2 years) and **Triennial** (once every 3 years) type of billing cycles. Based on the following lookups, the billing cycle **frequency** can be defined:

- BILL\_CYCLE\_CD
- LEASE\_BILL\_CYCLE\_CD - For lease accounts, the Biennial and Triennial billing cycles are applicable only for **Interest Rate** type of Calculation Method and for both Advance and Arrears type of Rent Collection Methods. However, these billing cycles are allowed for Balloon Method - N+1 and **not allowed** for Flexible repayment > Skip Months and for Agreement type, Usage, Rental, Rental Usage types.
- LOAN\_BILL\_CYCLE\_CD - For Loan accounts, the Biennial and Triennial billing cycles are applicable only for **Standard** Product Category and for both Advance and Arrears type of Rent Collection Methods - Advance (if First Payment Date is equal to Contract Date) and Arrears (if First Payment Date is greater than Contract Date). However, these billing cycles are allowed for Balloon Methods N and N+1 and **not allowed** for Flexible repayment > Skip Months.
- LOC\_BILL\_CYCLE\_CD - for Line of Credit accounts

**To set up the Pricing**

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > User > Products > Pricings > LoanLineLease**.
2. In the Pricing Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Table 4-18 Pricing Definition

Field	Do this
Pricing*	Specify the code for the pricing.
Description*	Specify the description for the pricing.
* Together these two fields define the name of the pricing.	
Start Dt	Specify the start date for this pricing. You can even select the date from the adjoining Calendar icon.
End Dt	Specify the end date for this pricing. You can even select the date from the adjoining Calendar icon.
Enabled	Check this box to enable the pricing.
<b>Result section</b> - You can create edits during implementation to note when amounts in applications are outside the range of tolerance.	
Max Loan Amt	Specify the maximum amount financed for this rate pricing.
Max Term	Specify the maximum term financed for this rate pricing.
Buy Rate	Specify the buy rate.
Index	Select the index type associated with this rate pricing from the drop-down list.
Rate From	Specify the minimum rate allowed for loans using this rate pricing.
Rate To	Specify the maximum rate allowed for using this variable rate pricing.
Maturity Index	Select the maturity index type associated with this variable rate pricing from the drop-down list.

**Table 4-18 (Cont.) Pricing Definition**

Field	Do this
Maturity From	Specify the lowest maturity rate allowed for loans using this variable rate pricing. Maturity rate is the rate to be charged on the product if it remains unpaid after its last term has been billed.
Maturity To	Specify the maximum maturity rate allowed for products using this pricing.
Profit Rate From	Specify the minimum profit rate allowed for the product using this pricing. <b>Note:</b> This field will be displayed only if you select the category as Islamic in the Product screen.
Profit Rate To	Specify the maximum profit rate allowed for the loan using this pricing. <b>Note:</b> This field will be displayed only if you select the category as the Islamic in the Product screen.
<b>Selection Criteria</b> - allows you to specify pricing at different levels and determine how the system matches specific pricing to the applicant's request.	
Company	Select the portfolio company for this pricing, from the dropdown list. This may be ALL or a specific company.
Branch	Select the portfolio branch for this pricing. This may be ALL or a specific branch. (This must be ALL if in the Company field you selected ALL), from the drop-down list.
Billing Cycle	Select the billing cycle for this pricing, from the drop-down list.
Product	Select the product for this pricing, from the drop-down list. This may be ALL or a specific product. The available values come from a validated field based on the selected billing cycle and the product setup.
State	Select the state for this pricing, from the drop-down list. This may be ALL or a specific state.
Pro Group	Select the producer group for this pricing, from the drop-down list. This may be ALL or a specific producer group.
Pro Type	Select the producer type for this pricing, , from the drop-down list. This may be ALL or a specific producer type.
Producer Region	Select the region of the producer.
Producer Territory	Select the territory of the producer.
Producer	Select the producer from the drop-down list. This may be ALL or a specific producer. The available values come from a validated field based on the product group and product type.
Grade	Select the credit grade for this pricing, from the drop-down list. This may be ALL or a specific grade.
Amt	Specify the minimum amount financed for this pricing.

Table 4-18 (Cont.) Pricing Definition

Field	Do this
Loan Term	Specify the minimum term for this pricing.
Asset Class	Select the asset class from the drop-down list. This may be ALL or a specific asset class. The available values come from a validated field based on the collateral type. You may create additional user-defined lookup codes for these lookup types as needed.
Asset Type	Select the asset type from the drop-down list. This may be ALL or a specific asset type. The available values come from a validated field based your assets setup.
SubType	Select the asset sub type from the drop-down list. This may be ALL or a specific asset sub type. The available values come from a validated field based your assets setup, and is linked to the selected asset type.
Asset Make	Select the asset make from the drop-down list. The available values come from a validated field based your assets setup and is restricted based on the selected Asset Type and Asset Sub Type. For example, If ALL was selected for either Asset Type or Asset Sub Type, then ALL will be the only available selection for the asset make.
Asset Model	Select the asset model from the drop-down list. The available values come from a validated field based your assets setup, and is restricted based on the selected Asset Type and Asset Sub Type. If ALL was selected for either Asset Type or Asset Sub Type, then ALL will be the only available selection for the asset model.
Age	Specify the asset age (the minimum age for the selected pricing).  <b>Note:</b> If your entry in this field is based on the number of years of age of the asset and not the actual year of make, you must update this entry annually to ensure that the proper pricing is available.
Trade-In	Specify if there is a trade in of an asset by selecting Yes/No.
Mileage	If there is a Trade-In of an existing asset, then specify its mileage in km.
Currency	Select the currency for this pricing, from the drop-down list.
Promotion	Select the promotion applicable to this pricing from the dropdown list. The available values come from a validated field based on the promotions setup.
Subvention	Select the subvention plan from the drop-down list, if pricing is specific for any subvention plan.
Down Pmt	Specify the down payment for the pricing.
Asset Value	Specify the asset value.
LTV	Specify the loan to value ratio.

**Table 4-18 (Cont.) Pricing Definition**

Field	Do this
Existing Customer	Select one of the following options from the drop-down list to define the applicability of the current pricing definition: ALL - Applicable to both existing and new customers YES - Applicable to existing customer only NO - Applicable to new customer only. <b>Note:</b> This field refers to the Primary applicant <b>Existing Customer</b> flag.
Existing Customer Since (In Years)	Specify the duration from when customer was created in the system up to the current date in years.
<b>Selection Criteria</b> : Business - allows you to specify number of years in business and determines how the system matches specific pricing to the business applicant's request.	
Years In Business	Specify the total number of years in business.

**Table 4-19 Pricing Definition**

Field	Do this
Pricing*	Specify the code for the pricing.
Description*	Specify the description for the pricing.
* Together these two fields define the name of the pricing.	
Start Dt	Specify the start date for this pricing. You can even select the date from the adjoining Calendar icon.
End Dt	Specify the end date for this pricing. You can even select the date from the adjoining Calendar icon.
Enabled	Check this box to enable the pricing.
<b>Result section</b>	
Draw Period	Specify the draw term for which this pricing is valid.
Repmt Period	Specify the repayment term for which this pricing is valid.
Max Credit	Specify the maximum credit Limit for this pricing.
Index	Select the index type associated as FLAT/PRIME RATE from the drop-down list.
Margin From	Specify the minimum margin rate for the selected index type.
Margin To	Specify the maximum margin rate for the selected index type.
Maturity Index	Select the maturity index type associated as FLAT/PRIME RATE from the drop-down list.
Maturity Margin Rt From	Specify the minimum margin rate for the selected maturity index type.
Maturity Margin To	Specify the maximum margin rate for the selected maturity index type.
<b>Selection Criteria</b>	

**Table 4-19 (Cont.) Pricing Definition**

Field	Do this
Company	Select the portfolio company for this pricing, from the drop-down list. This may be ALL or a specific company.
Branch	Select the portfolio branch for this pricing. This may be ALL or a specific branch. (This must be ALL if in the Company field you selected ALL), from the drop-down list.
Billing Cycle	Select the billing cycle for this pricing, from the drop-down list.
Product	Select the product for this pricing, from the drop-down list. This may be ALL or a specific product. The available values come from a validated field based on the selected billing cycle and the product setup.
State	Select the state for this pricing, from the drop-down list. This may be ALL or a specific state.
Pro Group	Select the producer group for this pricing, from the drop-down list. This may be ALL or a specific producer group.
Pro Type	Select the producer type for this pricing, , from the drop-down list. This may be ALL or a specific producer type.
Producer Region	Select the region of the producer.
Producer Territory	Select the territory of the producer.
Producer	Select the producer from the drop-down list. This may be ALL or a specific producer. The available values come from a validated field based on the product group and product type.
Grade	Select the credit grade for this pricing, from the drop-down list. This may be ALL or a specific grade.
Credit Limit	Specify the minimum credit limit for which this pricing is valid.
Asset Class	Select the asset class from the drop-down list. This may be ALL or a specific asset class. The available values come from a validated field based on the collateral type. You may create additional user-defined lookup codes for these lookup types as needed.
Asset Type	Select the asset type from the drop-down list. This may be ALL or a specific asset type. The available values come from a validated field based your assets setup.
SubType	Select the asset sub type from the drop-down list. This may be ALL or a specific asset sub type. The available values come from a validated field based your assets setup, and is linked to the selected asset type.

Table 4-19 (Cont.) Pricing Definition

Field	Do this
Asset Make	Select the asset make from the drop-down list. The available values come from a validated field based your assets setup and is restricted based on the selected Asset Type and Asset Sub Type. For example, If ALL was selected for either Asset Type or Asset Sub Type, then ALL will be the only available selection for the asset make.
Asset Model	Select the asset model from the drop-down list. The available values come from a validated field based your assets setup, and is restricted based on the selected Asset Type and Asset Sub Type. If ALL was selected for either Asset Type or Asset Sub Type, then ALL will be the only available selection for the asset model.
Age	Specify the asset age (the minimum age for the selected pricing).  <b>Note:</b> If your entry in this field is based on the number of years of age of the asset and not the actual year of make, you must update this entry annually to ensure that the proper pricing is available.
Trade-In	Specify if there is a trade in of an asset by selecting Yes/No.
Mileage	If there is a Trade-In of an existing asset, then specify its mileage in km.
Currency	Select the currency for this pricing, from the drop-down list.
Promotion	Select the promotion applicable to this pricing from the dropdown list. The available values come from a validated field based on the promotions setup.
Asset Value	Specify the asset value.
LTV	Specify the loan to value ratio.
Existing Customer	Select one of the following options from the drop-down list to define the applicability of the current pricing definition:  ALL - Applicable to both existing and new customers YES - Applicable to existing customer only NO - Applicable to new customer only.  Based on the selection criteria, system defaults the first pricing for applications with <b>Existing customer flag = Y</b> at primary applicant details.
Existing Customer Since (In Years)	Specify the duration from when customer account was created in the system up to the current date in years.
<b>Selection Criteria : Business</b> - allows you to indicate the age of business by evaluating the total number of years elapsed.	
Years In Business	Specify the total number of years in business.

Table 4-20 Pricing Definition

Field	Do this
Pricing*	Specify the code for the pricing.
Description*	Specify the description for the pricing.
* Together these two fields define the name of the pricing.	
Start Dt	Specify the start date for this pricing. You can even select the date from the adjoining Calendar icon.
End Dt	Specify the end date for this pricing. You can even select the date from the adjoining Calendar icon.
Enabled	Check this box to enable the pricing.
<b>Result section</b>	
Residual % From	Specify the minimum residual percentage valid with this pricing.
Residual % To	Specify the maximum residual percentage applicable with this pricing.
Index	<p>The index type associated with this rate pricing is autopopulated based on lease calculation method selected in Selection Criteria section. The same is derived from INDEX_TYPE_CD lookup.</p> <p>Note: For RENT FACTOR calculation method, only FLAT RATE index is applicable and is selected by default.</p>
Rate From	Specify the minimum applicable rate.
Rate To	Specify the maximum applicable rate.
Buy Rate	Specify the buying rate.
Rent Factor From	<p>Specify the minimum money factor valid with this pricing.</p> <p>Note: This field is disabled if the lease calculation method is selected as <b>Interest Rate</b> in Selection Criteria section.</p>
Rent Factor To	<p>Specify the maximum money factor valid with this pricing.</p> <p>Note: This field is disabled if the lease calculation method is selected as <b>Interest Rate</b> in Selection Criteria section.</p>
Buy Rent Factor	<p>Specify the ratio of buy rent factor.</p> <p>Note: This field is disabled if the lease calculation method is selected as <b>Interest Rate</b> in Selection Criteria section.</p>
Maturity Index	<p>Select the maturity index type associated with this variable rate pricing from the drop-down list.</p> <p>Note: This field is disabled if the lease calculation method is selected as <b>Rent Factor</b> in Selection Criteria section.</p>

Table 4-20 (Cont.) Pricing Definition

Field	Do this
Maturity From	Specify the lowest maturity rate allowed using this variable rate pricing. Maturity rate is the rate to be charged on the product if it remains unpaid after its last term has been billed.  Note: This field is disabled if the lease calculation method is selected as <b>Rent Factor</b> in Selection Criteria section.
Maturity To	Specify the maximum maturity rate allowed for products using this pricing.  Note: This field is disabled if the lease calculation method is selected as <b>Rent Factor</b> in Selection Criteria section.
Maximum Capital Cost	Specify the maximum capital cost valid for this pricing.
Maximum Term	Specify the maximum term financed for this pricing.
<b>Selection Criteria</b>	
Company	Select the portfolio company for this pricing, from the drop-down list. This may be ALL or a specific company.
Branch	Select the portfolio branch for this pricing. This may be ALL or a specific branch. (This must be ALL if in the Company field you selected ALL), from the drop-down list.
Calculation Method	Select the type of lease calculation method for this pricing as one of the following: <ul style="list-style-type: none"> <li>• RENT FACTOR (selected by default)</li> <li>• INTEREST RATE</li> <li>• AMORTIZED</li> </ul>
Billing Cycle	Select the billing cycle for this pricing, from the drop-down list.  Note: The billing cycle is defaulted as Monthly if the lease calculation method is selected as <b>Rent Factor</b> .
Agreement Type	Select the lease agreement type as one of the following from the drop-down list. The selected Agreement Type defines the criteria for pricing selection during further calculation. <ul style="list-style-type: none"> <li>• USAGE</li> <li>• RENTAL</li> <li>• USAGE RENTAL</li> </ul> <p>For more information on how OFSLL handles Usage based leasing, refer to <a href="#">Appendix : Usage Based Leasing</a> chapter and for Rental based leasing, refer to <b>Rental Agreement</b> section in Lease Origination User Guide.</p>

Table 4-20 (Cont.) Pricing Definition

Field	Do this
Product	Select the product for this pricing, from the drop-down list. This may be ALL or a specific product. The available values are filtered and displayed based on the lease calculation method selected.  Note: Selecting <b>ALL</b> here refers to all the products associated with the calculation method and not to the total list of products maintained in the system.
State	Select the state for this pricing, from the drop-down list. This may be ALL or a specific state.
Pro Group	Select the producer group for this pricing, from the drop-down list. This may be ALL or a specific producer group.
Pro Type	Select the producer type for this pricing, from the drop-down list. This may be ALL or a specific producer type.
Producer Region	Select the region of the producer.
Producer Territory	Select the territory of the producer.
Producer	Select the producer from the drop-down list. This may be ALL or a specific producer. The available values come from a validated field based on the product group and product type.
Grade	Select the credit grade for this pricing, from the drop-down list. This may be ALL or a specific grade.
Gross Capital Cost	Specify the minimum gross capital cost which is valid for this pricing.
Lease Term	Specify the minimum lease term for which this pricing is valid.
Asset Class	Select the asset class from the drop-down list. This may be ALL or a specific asset class. The available values come from a validated field based on the collateral type. You may create additional user-defined lookup codes for these lookup types as needed.
Asset Type	Select the asset type from the drop-down list. This may be ALL or a specific asset type. The available values come from a validated field based your assets setup.
SubType	Select the asset sub type from the drop-down list. This may be ALL or a specific asset sub type. The available values come from a validated field based your assets setup, and is linked to the selected asset type.
Asset Make	Select the asset make from the drop-down list. The available values come from a validated field based your assets setup and is restricted based on the selected Asset Type and Asset Sub Type. For example, If ALL was selected for either Asset Type or Asset Sub Type, then ALL will be the only available selection for the asset make.

Table 4-20 (Cont.) Pricing Definition

Field	Do this
Asset Model	Select the asset model from the drop-down list. The available values come from a validated field based your assets setup, and is restricted based on the selected Asset Type and Asset Sub Type. If ALL was selected for either Asset Type or Asset Sub Type, then ALL will be the only available selection for the asset model.
Age	Specify the asset age (the minimum age for the selected pricing).  <b>Note:</b> If your entry in this field is based on the number of years of age of the asset and not the actual year of make, you must update this entry annually to ensure that the proper pricing is available.
Trade-In	Specify if there is a trade in of an asset by selecting Yes/No.
Mileage	If there is a Trade-In of an existing asset, then specify its mileage in km.
Currency	Select the currency for this pricing, from the drop-down list.
Promotion	Select the promotion applicable for this pricing from the dropdown list. The list is populated based on the promotions setup.
Subvention	Select the subvention plan from the drop-down list, if pricing is specific for any subvention plan.
Down Pmt	Specify the down payment for the pricing.
Asset Value	Specify the asset value.
LTV	Specify the loan to value ratio.
Existing Customer	Select one of the following options from the drop-down list to define the applicability of the current pricing definition:  ALL - Applicable to both existing and new customers  YES - Applicable to existing customer only  NO - Applicable to new customer only.  Based on the selection criteria, system defaults the first pricing for applications with <b>Existing customer flag = Y</b> at primary applicant details.
Existing Customer Since (In Years)	Specify the duration from when customer account was created in the system up to the current date in years.
<b>Selection Criteria: Business</b> - allows you to indicate the age of business by evaluating the total number of years elapsed.	
Years In Business	Specify the total number of years in business.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.8 Contract

The Contract screen allows you to define the instruments used within your system. A instrument is a contract used by a financial organization with specific rules tied to it. When

processing an application, an instrument associated with the application informs the system of the type of contract being used for the approved product. This ensures that all parameters tied to the instrument are setup for the account as it is booked - without requiring you to do it.

Instruments can be setup at different levels:

- Company
- Branch
- Product
- Application state
- Currency

The following groups of parameters are setup at the instrument level (Each has its own section on the Contract screen):

- Selection Criteria
- Accrual
- Rebate
- Imputed Interest
- Capitalization
- Scheduled Dues
- Billing
- Delinquency
- Lease Contract
- Tax
- Early Termination
- Ever Green Details
- Residual Details
- Payment Caps
- Extension
- Advance Details
- Rate Cap And Adjustments
- Other

Items defined in the contract are **locked in** when you choose Select Instrument on the Funding form's Contract link.

The Contract screen's Instrument and Description fields allow you to enter the financial instrument's name and description, for example; INS-LOAN: VEHICLE.

System supports **Biennial** (once every 2 years) and Triennial (once every 3 years) type of billing cycles. Based on the following lookups, the billing cycle **frequency** can be defined:

- BILL\_CYCLE\_CD
- LEASE\_BILL\_CYCLE\_CD - For lease accounts, the Biennial and Triennial billing cycles are applicable only for **Interest Rate** type of Calculation Method and for both Advance and Arrears type of Rent Collection Methods. However, these billing cycles are allowed for

Balloon Method - N+1 and **not allowed** for Flexible repayment > Skip Months and for Agreement type, Usage, Rental, Rental Usage types.

- **LOAN\_BILL\_CYCLE\_CD** - For Loan accounts, the Biennial and Triennial billing cycles are applicable only for **Standard** Product Category and for both Advance and Arrears type of Rent Collection Methods - Advance (if First Payment Date is equal to Contract Date) and Arrears (if First Payment Date is greater than Contract Date). However, these billing cycles are allowed for Balloon Methods N and N+1 and **not allowed** for Flexible repayment > Skip Months.
- **LOC\_BILL\_CYCLE\_CD** - for Line of Credit accounts

### To set up the Contract

You can either define new Contract Definition details or specify a new name in the **New Instrument** field and click **Create Copy** to create a copy of selected contract with details.

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > Products > Contract > LoanLineLease**.
2. On the Contract Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Table 4-21 Contract Definition

Field	Do this
<b>Instruments section</b>	
Instrument	Specify the code identifying the instrument.

Table 4-21 (Cont.) Contract Definition

Field	Do this
Description	Specify the description of the instrument being defined.
Start Dt	Specify the start date for the instrument. You can even select the date from the adjoining Calendar icon.
End Dt	Specify the end date for the instrument. You can even select the date from the adjoining Calendar icon.
Enabled	<p>If you check this box, the system will consider this contract definition when selecting a instrument for an application.</p> <p><b>Note:</b> Once the field is enabled load balances button in balances sub tab will be disabled.</p>
<b>Selection Criteria section</b>	
Company	Select the company for the instrument from the drop-down list. This may be ALL or a specific company.
Branch	Select the branch within the company for the instrument from the drop-down list. This may be ALL or a specific branch. This must be ALL, if you have selected <b>ALL</b> in the Company field.
Billing Cycle	Select the billing cycle selected from the drop-down list.
Product	Select the product for the instrument from the drop-down list. This may be ALL or a specific product.
State	Select the state in which the instrument is used from the drop-down list. This may be ALL or a specific state.
Currency	<p>Select the currency for the instrument from the drop-down list.</p> <p><b>IMPORTANT:</b> By selecting which type to use, the system searches for a best match using the following attributes:</p> <ul style="list-style-type: none"> <li>a. Billing Cycle</li> <li>b. Start Date</li> <li>c. Company</li> <li>d. Branch</li> <li>e. Product</li> <li>f. State</li> </ul> <p>Hence, Oracle Financial Services Software recommends creating one version of each type, where ALL is the value in these fields.</p>
Pricing	Select the pricing in which the instrument is used from the drop-down list. This may be ALL or a specific pricing.
<b>Accrual section</b>	

Table 4-21 (Cont.) Contract Definition

Field	Do this
Accrual Method	Select the accrual method used to calculate interest accrual for this instrument from the drop-down list.
Base Method	Select the base method used to calculate interest accrual for this instrument from the drop-down list.
Start Dt Basis	<p>Select to define the start date from when the interest accrual is to be calculated for this instrument from the drop-down list.</p> <p><b>Note:</b></p> <p>If you select the Effective Date, then the interest is calculated from the Contract date + Start Days (indicated below).</p> <p>If you select the Payment Date, then the interest is calculated based on (first payment date + Start Days (indicated below) minus one billing cycle).</p>
Start Days	Specify the number of grace days after which the interest accrual is to be calculated. Ensure that the number of grace days is less than first payment date.
Time Counting Method	Select the time counting method used to calculate interest accrual for this instrument from the drop-down list.
Installment Method	<p>Select the payment installment method from the drop-down list.</p> <p><b>Note:</b> the system supports an amortized repayment schedule with the final payment potentially differing from the regular payment amount in the other billing cycles. You may choose:</p> <p>Whether the equal installments for each billing cycle includes any minute final payment differences (EQUAL PAYMENTS)</p> <p>-or-</p> <p>If the final payment amount may be slightly different (FINAL PAYMENT DIFFERS).</p>

Table 4-21 (Cont.) Contract Definition

Field	Do this
Int Amortization Freq	<p>Select one of the following interest amortization frequency from the drop-down list:</p> <ul style="list-style-type: none"> <li>DAILY - if selected, the interest amortization (TAM) GL entries hand-over happens every day.</li> <li>EVERY BILLING CYCLE MONTH END - if selected, the interest amortization (TAM) GL entries hand-over happens on month end of the account billing cycle. For example, if account billing cycle is quarterly, the GL handover happens on month end of the quarter.</li> <li>EVERY MONTH END - if selected, the interest amortization (TAM) GL entries hand-over happens on month end of every calendar month. For example, even if the account billing cycle is quarterly, the GL handover happens on the calendar month.</li> </ul>
<b>Imputed Interest</b> This section allows you to enable/disable the imputed interest calculation options in Origination > Contract screen. These options are required while funding a loan application with imputed interest for system to calculate <b>Imputed Interest Amortization Schedule</b> . For more information, refer to <b>Imputed Interest</b> section in Loan Origination User guide.	
Imputed Interest	Check this box to enable imputed interest related fields in Origination > Contract screen. By default, this option is un-checked.
<b>Capitalization section</b> This section allows you to define capitalization parameters which helps to capitalize the corresponding account balances to the principal balance of the account based on specific frequency. For example, you can capitalize the accumulated Interest or Late Fees to principal balance of the account.  You can either capitalize all the balances based on same frequency or define different frequency for each type of balance. Balance capitalization is processed during the execution of batch job TXNCPT_BJ_100_01 (CAPITALIZATION PROCESSING) which is executed after running the billing batch job.  <b>Note:</b> Capitalization parameters can also be updated by posting <b>CAPITALIZATION MAINTENANCE</b> monetary transaction.	
Capitalize	<p>Check this box to enable capitalization parameters for the contract. By default, this option is un-checked.</p> <p>The option is available only for Interest Bearing Loans and Mortgage Loans.</p>

Table 4-21 (Cont.) Contract Definition

Field	Do this
Frequency	<p>Select the required capitalization frequency from the drop-down list. The list contains the following types of frequency to either capitalize all the balances based on same frequency or define different frequency for each type of balance.</p> <ul style="list-style-type: none"> <li>Based on specific intervals such as Monthly, Quarterly, Annual and so on.</li> <li>Based on contract Billing Frequency, Billing Date, or Due date.</li> <li>Specifically on every Month End.</li> </ul> <p>-Or-</p> <ul style="list-style-type: none"> <li>Based on Balance Frequency to define different capitalization frequency for each balance. This can further be defined in Balances sub tab.</li> </ul>
Capitalization Start Basis	<p>Select the capitalization start date from the drop-down list as either Contract Date or First Payment Date to calculate the capitalization frequency accordingly.</p> <p>However, this field is not enabled for Billing date or Due Date type of capitalization frequency.</p>
Grace Days	<p>Specify the grace days allowed in the frequency (minimum 0, maximum 31) before capitalizing the balances to account. This is also the deciding factor for executing the capitalization batch job which is based on Capitalization Frequency + Grace Days.</p> <p>However, note that Grace Days are not accounted for Month End type of capitalization frequency and is ignored even if specified.</p>
Cap Tolerance Amt	<p>Specify the capitalization tolerance amount which is the minimum amount to qualify for capitalization. Any amount less than this is not considered for capitalization of balances.</p> <p>This helps to avoid capitalization of nominal or decimal amounts.</p> <p><b>Note:</b> There is no specific accounting maintained for non-capitalized decimals with reference to setup.</p>
<b>Rebate section</b>	
Pre Compute	Check this box to indicate that this is a precomputed loan.
Rebate Method	Select the rebate calculation method from the drop-down list.
Rebate Term Method	Select the rebate term method from the drop-down list.
Rebate Min Fin Chg Mthd	Select the rebate minimum finance charge calculation method from the drop-down list.
Min Finance Charge	Specify the minimum finance charge value.
Acquisition Charge Amt	Specify the acquisition charge amount.
<b>Scheduled Dues section</b>	

Table 4-21 (Cont.) Contract Definition

Field	Do this
Due Day Min	Specify the minimum value allowed for the due day for this instrument.
Due Day Max	Specify the maximum value allowed for the due day for this instrument. <b>Note:</b> If billing cycle is selected as weekly, then Due Day Max field value cannot be greater than 7.
Max Due Day Change / Year	Specify the maximum number of due day changes allowed within a given year for this instrument.
Max Due Day Change / Life	Specify the maximum number of due day changes allowed over the life of a product funded with this instrument.
Max Due Day Change Days	Specify the maximum number of days a due date can be moved.
Pmt Tolerance Amt*	Specify the payment tolerance amount. This is the threshold amount that must be achieved before a due amount is considered PAID or DELINQUENT. If (Payment Received + Pmt Tolerance: \$Value) >= Standard Monthly Payment, the Due Date will be considered as satisfied in terms of delinquency. The amount unpaid is still owed.
Pmt Tolerance%*	Specify the payment tolerance percentage. This is the threshold percentage that must be achieved before a due amount is considered PAID or DELINQUENT. If Payment Received >= (Standard Monthly Payment * Pmt Tolerance% / 100), the due date will be considered satisfied in terms of delinquency. The amount unpaid is still owed.  The system uses the greater of these two values.
Promise Tolerance Amt*	Specify the promise tolerance amount. This is the threshold amount that must be achieved before a due amount is considered KEPT or BROKEN. If (Payment Received + Promise Tolerance: \$Value) >= Promise Amount, the Due Date will be considered KEPT (satisfied).
Promise Tolerance %*	Specify the promise tolerance percentage. This is the threshold percentage that must be achieved before a due amount is considered KEPT or BROKEN. If Payment Received >= (Promised Amt * Promise Tolerance%), the due date will be considered KEPT (satisfied).  The system uses the greater of these two values.
<b>Billing section</b>	

Table 4-21 (Cont.) Contract Definition

Field	Do this
Prebill Days	Specify the prebill days. This is the number of days, before the first payment due, that accounts funded with this instrument will be billed for the first payment. Thereafter, the accounts will be billed on the same day every month. If an account has a first payment date of 10/ 25/2003 and Pre Bill Days is 21, then the account will bill on 10/04/ 2003, and then bill on the 4th of every month.
Billing Type	Select the billing type for accounts funded using this instrument from the drop-down list.
Billing Method	Select the billing method for accounts funded using this instrument from the drop-down list.
Balloon Method	Select the balloon payment method for accounts funded using this instrument from the drop-down list.
Multiple Billing Asset Rate	Check this box to indicate if multiple asset rates are applicable for one billing period.  System considers billing period from current due date to the next due date. Multiple rates are fetched only when rate end date (rate start date + rate frequency) ends one or more cycle(s) before the next due date i.e. current rate record does not cover the entire billing period.
<b>Delinquency section</b>	
Late Charge Grace Days	Specify the number of grace days allowed for the payment of a due date before a late charge is assessed on the account.
Stop Accrual Days	Specify the number of days a contract can be in delinquent state, after which the interest accrual must stop for an account.  A Batch Job is run daily to select accounts in delinquent status for a pre-defined number of days and post <b>No Accrual transaction</b> for such accounts on current date. When the account recovers from Delinquency, the system will then post a <b>Start Accrual Transaction</b> on the date the account is recovered from delinquency.
Delq Grace Days	Specify the number of grace days allowed for the payment of a due date before an account is considered delinquent. This affects DELQ Queues, the system reporting, and the generation of collection letters.
Time Bar Years	Specify the total number of years allowed to contact the customer starting from the first payment date and beyond which the account is considered delinquent. You can specify any value between 0-999.
Cure Letter Gen Days	Specify the number of delinquency days to initiate cure letter generation.

**Table 4-21 (Cont.) Contract Definition**

Field	Do this
Cure Letter Valid Days	Specify the number of days during which the issued cure letter is valid. Usually financial institutions will start the collection activities after the lapse of cure letter validity date.
Delq Category Method	Select the delinquency category method to determine how the system populates delinquency counters on the Customer Service form.  <b>Note:</b> This value does not affect credit bureau reporting.
Accrual Post Maturity	Check this box to indicate that this is the post maturity default rate.  Extensions allow you to extend the maturity of the contract by one or more terms by allowing the customer to skip one or more payments. The skipped terms are added to the end of the contract.

**Cycle Based Fees** - This section allows to define the parameters for calculating cycle based fees at individual account level. Using the below parameters, system derives the Cycle Base Fees and updates the account balances on processing the following batch jobs - TXNCBC\_BJ\_100\_01 (CYCLE BASED COLLECTION LATE FEE PROCESSING) and TXNCBL\_BJ\_100\_01 (CYCLE BASED LATE FEE PROCESSING). For more information, refer to 'Fee Consolidation Maintenance' section in Appendix chapter.

System calculates the below type of fee in combination of associated and master account and is assessed only when total due crosses **Threshold** amount (that is defined in Setup > Products > Contract > Fees tab and Setup > Products > Fees screen):

**Fee Late Charge (FLC)**

- Percentage of sum of payment due
- Percentage of sum of standard payment
- Percentage of sum of billed amount

**Cycle Based Collection Late Fee**

- Flat amount
- Percentage of sum of payment due
- Percentage of sum of standard payment
- Percentage of sum of billed amount
- Percentage of payment due
- Percentage of standard payment
- Percentage of billed amount
- Percentage of total due amount
- Percentage of sum of total due amount

**Cycle Based Late Fee**

- Flat amount
- Percentage of sum of total due amount
- Percentage of sum of payment due
- Percentage of sum of standard payment
- Percentage of sum of billed amount
- Percentage of total due amount
- Percentage of payment due
- Percentage of standard payment
- Percentage of billed amount

Table 4-21 (Cont.) Contract Definition

Field	Do this
Cycle Based Collection Late Fee	<p>Check this box to enable cycle based collection late fee assessment on the account.</p> <p>If selected, the balance type CYCLE BASED COLLECTION LATE FEE is made available in the Balances tab which further allows to define how system should derive the balances when an account is booked and funded.</p> <p>If unchecked (default), system does not display the <b>Cycle based Collection Late Fee</b> balance in Contract &gt;Balances tab on clicking <b>Load Balances</b> button.</p>
Cycle Based Late Fee	<p>Check this box to enable cycle based late fee assessment on the account.</p> <p>If selected, the balance type CYCLE BASED LATE FEE is made available in the Balances tab which further allows to define how system should derive the balances when an account is booked and funded.</p> <p>If unchecked (default), system does not display the <b>Cycle Based Late Fee</b> balance in Contract &gt;Balances tab on clicking <b>Load Balances</b> button.</p>
Cycle Based Collection Late Fee Grace Days	Specify the number of grace days allowed before cycle based collection late fee is assessed on the account. This field is enabled only if the Cycle Based Collection Late Fee option is checked above.
Cycle Based Late Fee Grace Days	Specify the number of grace days allowed before cycle based late fee is assessed on the account. This field is enabled only if the Cycle Based Late Fee option is checked above.
<b>Fee Consolidation</b> - If Cycle Based Late Fee is assessed based on above parameters, this section allows to enable/disable the option to consolidate the late fee at Master Account level.	
Late Charge at Master Account	Check this box to allow system to consolidate the late charge assessment at master account level.
Cycle Based Collection Late Fee at Master Account	<p>Check this box to allow system to consolidate the cycle based collection late fee assessment at master account level.</p> <p>Ensure that, the option <b>Cycle Based Collection Late Fee</b> is also checked for fee consolidation at Master Account level.</p>
Cycle Based Late Fee at Master Account	<p>Check this box to allow system to consolidate cycle based late fee assessment at master account level.</p> <p>Ensure that, the option <b>Cycle Based Late Fee</b> is also checked for fee consolidation at Master Account level.</p>
<b>Extension section</b>	
Max Extn Period / Year	Specify the maximum number of terms that the contract may be extended, within a given rolling calendar year.

**Table 4-21 (Cont.) Contract Definition**

Field	Do this
Max Extn Period / Life	Specify the maximum number of terms that the contract may be extended, within the life of the loan.
Max # Extn / Year	Specify the maximum number of extensions that may be granted within a given rolling calendar year.
Max # of Extn / Life	Specify the maximum number of extensions that may be granted within the life of the loan.
Minimum # Payments	Specify the minimum number of payments that must be made before extension.
Extension Gap in Months	Specify the gap between previous extension provided in the account and current one as specific number of months.
<b>Advance Details section</b>	
Multi Disbursements Allowed	Check this box, if this contract allows disbursement of funds to customers through multiple advances or draws up to the approved amount within a specified <b>draw period</b> . If you select the Multiple Disbursements Permitted box, complete the Advance Details section on the Contract section. (For more information, see the Stages Funding section in this chapter.)
Min Initial Advance	Specify the minimum initial advance amount allowed. This is the smallest possible initial advance that can be disbursed to the borrower after funding.
Max Initial Advance	Specify the maximum initial advance amount allowed. This is the largest possible initial advance that can be disbursed to the borrower after funding.
Late Charge Allowed	Check this box to allow disbursement period late charge.
Min Advance	Specify the minimum advance amount. This is the smallest advance amount that a borrower may subsequently request after the initial advance.
Max Advance	Specify the maximum advance amount. This is the largest advance amount that a borrower may subsequently request after the initial advance.
Billing Allowed	Check this box to allow stage funding with draw period billing.
Draw Period Billing Method	Select the method for billing during the draw period from the drop-down list.
Reschedule Ind	Select this check box to indicate that the rescheduling is allowed at the draw period.
<b>Rate Cap &amp; Adjustments section</b>	
Max Rate Inc / Year	Specify the maximum rate increase allowed in a year.
Max Rate Inc / Life	Specify the maximum rate increase allowed in the life of the loan.
Max Rate Dec / Year	Specify the maximum rate decrease allowed in a year.

Table 4-21 (Cont.) Contract Definition

Field	Do this
Max Rate Dec / Life	Specify the maximum rate decrease allowed during the life of the loan.
Max # Adjust / Year	Specify the maximum number of rate changes allowed in a year.
Max # Adjust / Life	Specify the maximum number of rate changes allowed during the life of the loan.
Min Int Rate (Floor)	Specify the minimum rate.
Max Int Rate (Ceiling)	Specify the maximum rate.
<b>Payment Caps section</b>	
Max Pmt Inc / Year	Specify the maximum payment increase allowed in a year.
Max Pmt Inc / Life	Specify the maximum payment increase allowed in the life of the loan.
<b>Statement section</b>	
<p>This section allows to define the preferences for Mock Statement generation at Master Account level. Generating a Mock Statement helps to mock the asset billing process with a future date and to get an upfront statement indicating future dues of Master and Associated Accounts. In <b>Vacation Ownership</b> industry, such statements are required to forecast future dues based on current <b>Timeshare</b> holdings.</p> <p>The selected preference here are propagated to Application &gt; Contract screen when the instrument is loaded.</p>	
<b>Mock Statement Req</b>	<p>Select this check box to indicate if the account is to be include in Mock statement Generation.</p> <p><b>Note:</b> Based on this selection, others fields related to Mock Statement below are enabled and becomes mandatory for providing details.</p>
<b>Mock Start Month</b>	<p>Select the start month of Mock Statements period from the dropdown list.</p> <p><b>Note:</b> During the <b>Mock Statement Next Run Date</b> validation if next run date is less than Contract Date or GL Date, system moves the <b>Mock Start Month</b> to same month of next year. For more information, refer to <b>Mock Statement Maintenance</b> in Appendix - Non Monetary transactions sections.</p>
<b>Mock Statement Cycles</b>	Select the total number of billings (between 1-12) that are to be generated post Mock Statement Start Date.
<b>Mock Pre Statement Days</b>	Specify the number of Pre bill days for Mock Statements generation.
<b>Stmt Preference Mode</b>	<p>Select the account statement preference mode as either Email or PHYSICAL from the drop-down list.</p> <p>The selected preference will be propagated to Application &gt; Contract screen when the instrument is loaded.</p>
<b>Other section</b>	
1st Pmt Deduction Allowed	Check this box to indicate that the first payment for fixed rate loans using this instrument may be deducted from the producer's proceeds.

Table 4-21 (Cont.) Contract Definition

Field	Do this
1st Pmt Refund Allowed	Check this box to indicate that refunding first payment deductions to the producer is allowed.
1st Pmt Deduction Days	Specify the first payment deduction days. If the first payment for fixed rate loans using this instrument is less than this number of days from funding, the first payment will be deducted from the producer's proceeds if 1st Pmt Deduction.
1st Pmt Refund Days	Specify the first payment refund days. If the first payment for fixed rate loans using this instrument is received within this number of days from the first payment date, the first payment deduction will be refunded to the producer if 1st Pmt Refund.
Refund Allowed	Check this box to indicate that refunding of customer over payments are allowed.
Refund Tolerance Amt	Specify the refund tolerance amount. If the amount owed to the customer is greater than the refund tolerance, the over payment amount will be refunded if Refund Allowed box is selected.
Anniversary Period	Specify the anniversary term that define the anniversary period. This is based on billing cycle, so normally for MONTHLY the value is 12 and for WEEKLY the value is 52.
WriteOff Tolerance Amt	Specify the write off tolerance amount. If the remaining outstanding receivables for accounts funded using this instrument is less or equal to the write off tolerance amount, the remaining balance on the account will be waived.
Pre Pmt Penalty	Check this box, if there is a prepayment penalty charged for accounts funded using this instrument.
% of Term for Penalty	Specify percentage of term for prepayment penalty. If the (remaining terms / total terms) expressed as a percentage exceeds this amount, a prepayment penalty will be assessed if the Pre-Pmt Penalty box was selected.
Recourse	Check this box if recourse is allowed. This indicates whether the unpaid balance may be collected from the producer if the consumer fails to perform on the loan.
Max Recourse%	Specify the maximum percentage of the outstanding receivables that may be collected from the producer if the Recourse Allowed box was selected.
Pay Off Fee Allowed	<p>Check this box to allow for a payoff quote fee to be assessed to the account attached to this contract.</p> <p><b>Note:</b> This will require you to set up a payoff fee at the contract (Fees sub screen) or state (Fee screen) level. For more information, see the following Contract screen (Loan)'s Fees sub screen or Fee screen (Loan) sections in this chapter.</p>

Table 4-21 (Cont.) Contract Definition

Field	Do this
Escrow Allowed	Check this box, if this contract can do escrow of tax and insurances. (For more information, see the Escrow Setup Form chapter.)
Repmnt Currency	Select the designated repayment currency for this contract from the drop-down list.
PDC Security Check	Check this box to indicate that post dated checks are the method of repayment for this contract.
Default Pmt Spread	Select the default payment spread to be used when receiving payments for this account if one is not explicitly chosen, from the drop-down list.
Calendar Method	Select the required calendar method for this contract from the dropdown list. The calendar method <b>Hijri</b> should be selected, if the product category is selected as Standard in the Products screen. For <b>Islamic</b> product category, the calendar method can be either Gregorian or Hijri.
ACH Fee Ind	Check this box to indicate that direct debit fee is included.  <b>Note:</b> The ACH Fee/Direct Debit Fee balance will be displayed in <b>Balances</b> sub tab only when this checkbox is selected.
Track Down Payment Balance	Select this check box for system to validate if <b>Down Payment Balance</b> is loaded. This helps to record the Down Payment balance Agreed and Paid by the customer.  If selected, system validates if Down Payment Balance is loaded in the contract setup. However, system does not validate Down Payment Balance if unchecked. This check box is available only for Loan contracts.

Table 4-22 Contract Definition

Field	Do this
<b>Instruments section</b>	
Instrument	Specify the code identifying the instrument.
Description	Specify the description of the instrument being defined.
Start Dt	Specify the start date for the instrument. You can even select the date from the adjoining Calendar icon.
End Dt	Specify the end date for the instrument. You can even select the date from the adjoining Calendar icon.
Enabled	If you check this box, the system will consider this contract definition when selecting a instrument for an application.  <b>Note:</b> Once the field is enabled load balances button in balances sub tab will be disabled.
<b>Selection Criteria section</b>	

Table 4-22 (Cont.) Contract Definition

Field	Do this
Company	Select the company for the instrument from the drop-down list. This may be ALL or a specific company.
Branch	Select the branch within the company for the instrument from the drop-down list. This may be ALL or a specific branch. This must be ALL, if you have selected <b>ALL</b> in the Company field.
Billing Cycle	Select the billing cycle selected from the drop-down list.
Product	Select the product for the instrument from the drop-down list. This may be ALL or a specific product.
State	Select the state in which the instrument is used from the drop-down list. This may be ALL or a specific state.
Currency	<p>Select the currency for the instrument from the drop-down list.</p> <p><b>IMPORTANT:</b> By selecting which type to use, the system searches for a best match using the following attributes:</p> <ul style="list-style-type: none"> <li>a. Billing Cycle</li> <li>b. Start Date</li> <li>c. Company</li> <li>d. Branch</li> <li>e. Product</li> <li>f. State</li> </ul> <p>Hence, Oracle Financial Services Software recommends creating one version of each type, where ALL is the value in these fields.</p>
Pricing	Select the pricing in which the instrument is used from the dropdown list. This may be ALL or a specific pricing.
<b>Accrual section</b>	
Accrual Post Maturity	<p>Check this box to indicate that this is the post maturity default rate.</p> <p>Extensions allow you to extend the maturity of the contract by one or more terms by allowing the customer to skip one or more payments. The skipped terms are added to the end of the contract.</p>
Accrual Method	Select the accrual method used to calculate interest accrual for this instrument from the drop-down list.

Table 4-22 (Cont.) Contract Definition

Field	Do this
Start Dt Basis	<p>Select to define the start date from when the interest accrual is to be calculated for this instrument from the drop-down list.</p> <p><b>Note:</b></p> <p>If you select the Effective Date, then the interest is calculated from the Contract date.</p> <p>If you select the Payment Date, then the interest is calculated based on (first payment date minus one billing cycle).</p>
Base Method	Select the base method used to calculate interest accrual for this instrument from the drop-down list.
Accrual Start Days	Specify the number of days for which the interest accrual is to be calculated.
Int Amortization Freq	<p>Select one of the following interest amortization frequency from the drop-down list:</p> <ul style="list-style-type: none"> <li>DAILY - if selected, the interest amortization (TAM) GL entries hand-over happens every day.</li> <li>EVERY BILLING CYCLE MONTH END - if selected, the interest amortization (TAM) GL entries hand-over happens on month end of the account billing cycle. For example, if account billing cycle is quarterly, the GL handover happens on month end of the quarter.</li> <li>EVERY MONTH END - if selected, the interest amortization (TAM) GL entries hand-over happens on month end of every calendar month. For example, even if the account billing cycle is quarterly, the GL handover happens on the calendar month.</li> </ul>
<p><b>Capitalization section</b></p> <p>This section allows you to define capitalization parameters which helps to capitalize the corresponding account balances to the principal balance of the account based on specific frequency. For example, you can capitalize the accumulated Interest or Late Fees to principal balance of the account.</p> <p>You can either capitalize all the balances based on same frequency or define different frequency for each type of balance.</p> <p><b>Note:</b> Capitalization parameters can also be updated by posting <b>CAPITALIZATION MAINTENANCE</b> monetary transaction.</p>	
Capitalize	<p>Check this box to enable capitalization parameters for the contract. By default, this option is un-checked.</p> <p>The option is available only for Average daily balance Method Line of Credit.</p>

Table 4-22 (Cont.) Contract Definition

Field	Do this
Frequency	<p>Select the required capitalization frequency from the drop-down list. The list contains the following types of frequency to either capitalize all the balances based on same frequency or define different frequency for each type of balance.</p> <ul style="list-style-type: none"> <li>Based on specific intervals such as Monthly, Quarterly, Annual and so on.</li> <li>Based on contract Billing Frequency, Billing Date, or Due date.</li> <li>Specifically on every Month End.</li> </ul> <p>-Or-</p> <ul style="list-style-type: none"> <li>Based on Balance Frequency to define different capitalization frequency for each balance. This can further be defined in Balances sub tab.</li> </ul>
Capitalization Start Basis	<p>Select the capitalization start date from the drop-down list as either Contract Date or First Payment Date to calculate the capitalization frequency accordingly.</p> <p>However, this field is not enabled for Billing date or Due Date type of capitalization frequency.</p>
Grace Days	<p>Specify the grace days allowed in the frequency (minimum 0, maximum 31) before capitalizing the balances to account. This is also the deciding factor for executing the capitalization batch job which is based on Capitalization Frequency + Grace Days.</p> <p>However, note that Grace Days are not accounted for Month End type of capitalization frequency and is ignored even if specified.</p>
Cap Tolerance Amt	<p>Specify the capitalization tolerance amount which is the minimum amount to qualify for capitalization. Any amount less than this is not considered for capitalization of balances.</p> <p>This helps to avoid capitalization of nominal or decimal amounts.</p> <p><b>Note:</b> There is no specific accounting maintained for non-capitalized decimals with reference to setup.</p>
<b>Scheduled Dues section</b>	
Max Due Day Change Days	Specify the maximum number of days a due date can be moved.
Due Day Min	Specify the minimum value allowed for the due day for this instrument.
Due Day Max	<p>Specify the maximum value allowed for the due day for this instrument.</p> <p><b>Note:</b> If billing cycle is selected as weekly, then Due Day Max field value cannot be greater than 7.</p>
Max Due Day Change / Year	Specify the maximum number of due day changes allowed within a given year for this instrument.

Table 4-22 (Cont.) Contract Definition

Field	Do this
Max Due Day Change / Life	Specify the maximum number of due day changes allowed over the life of a product funded with this instrument.
<b>Billing section</b>	
Pre Bill Days	Specify the prebill days. This is the number of days, before the first payment due, that accounts funded with this instrument will be billed for the first payment. Thereafter, the accounts will be billed on the same day every month. If an account has a first payment date of 10/ 25/2003 and Pre Bill Days is 21, then the account will bill on 10/04/ 2003, and then bill on the 4th of every month.
Billing Type	Select the billing type for accounts funded using this instrument from the drop-down list.
Draw Period Billing Method	Select the draw period billing method for accounts funded using this instrument from the drop-down list.
Repmnt Billing Method	Select the billing method for the repayment period from the dropdown list.
Draw Billing %	Enter the payment percentage for the draw period.
Repmnt Term Payment %	Enter the payment percentage for the repayment draw period.
Multiple Billing Asset Rate	Check this box to indicate if multiple asset rates are applicable for one billing period.  System considers billing period from current due date to the next due date. Multiple rates are fetched only when rate end date (rate start date + rate frequency) ends one or more cycle(s) before the next due date i.e. current rate record does not cover the entire billing period.
<b>Delinquency section</b>	
Late Charge Grace Days	Specify the number of grace days allowed for the payment of a due date before a late charge is assessed on the account.
Stop Accrual Days	Specify the number of days a contract can be in delinquent state, after which the interest accrual must stop for an account.  A Batch Job is run daily to select accounts in delinquent status for a pre-defined number of days and post <b>No Accrual transaction</b> for such accounts on current date. When the account recovers from Delinquency, the system will then post a <b>Start Accrual Transaction</b> on the date the account is recovered from delinquency.
Delq Grace Days	Specify the number of grace days allowed for the payment of a due date before an account is considered delinquent. This affects DELQ Queues, the system reporting, and the generation of collection letters.

Table 4-22 (Cont.) Contract Definition

Field	Do this
Time Bar Years	Specify the total number of years allowed to contact the customer starting from the first payment date and beyond which the account is considered delinquent. You can specify any value between 0-999.
Cure Letter Gen Days	Specify the number of delinquency days to initiate cure letter generation.
Cure Letter Valid Days	Specify the number of days during which the issued cure letter is valid. Usually financial institutions will start the collection activities after the lapse of cure letter validity date.
Delq Category Method	Select the delinquency category method to determine how the system populates delinquency counters on the Customer Service form.  <b>Note:</b> This value does not affect credit bureau reporting.

**Cycle Based Fees** - This section allows to define the parameters for calculating cycle based fees at individual account level. Using the below parameters, system derives the Cycle Base Fees and updates the account balances on processing the following batch jobs - TXNCBC\_BJ\_100\_01 (CYCLE BASED COLLECTION LATE FEE PROCESSING) and TXNCBL\_BJ\_100\_01 (CYCLE BASED LATE FEE PROCESSING). For more information, refer to **Fee Consolidation Maintenance** section in Appendix chapter.

System calculates the below type of fee in combination of associated and master account and is assessed only when total due crosses **Threshold** amount (that is defined in Setup > Products > Contract > Fees tab and Setup > Products > Fees screen):

**Fee Late Charge (FLC)**

- Percentage of sum of payment due
- Percentage of sum of standard payment
- Percentage of sum of billed amount

**Cycle Based Collection Late Fee**

- Flat amount
- Percentage of sum of payment due
- Percentage of sum of standard payment
- Percentage of sum of billed amount
- Percentage of payment due
- Percentage of standard payment
- Percentage of billed amount
- Percentage of total due amount
- Percentage of sum of total due amount

**Cycle Based Late Fee**

- Flat amount
- Percentage of sum of total due amount
- Percentage of sum of payment due
- Percentage of sum of standard payment
- Percentage of sum of billed amount
- Percentage of total due amount
- Percentage of payment due
- Percentage of standard payment
- Percentage of billed amount

Table 4-22 (Cont.) Contract Definition

Field	Do this
Cycle Based Collection Late Fee	<p>Check this box to enable cycle based collection late fee assessment on the account.</p> <p>If selected, the balance type CYCLE BASED COLLECTION LATE FEE is made available in the Balances tab which further allows to define how system should derive the balances when an account is booked and funded.</p> <p>If unchecked (default), system does not display the <b>Cycle based Collection Late Fee</b> balance in Contract &gt;Balances tab on clicking <b>Load Balances</b> button.</p>
Cycle Based Late Fee	<p>Check this box to enable cycle based late fee assessment on the account.</p> <p>If selected, the balance type CYCLE BASED LATE FEE is made available in the Balances tab which further allows to define how system should derive the balances when an account is booked and funded.</p> <p>If unchecked (default), system does not display the <b>Cycle Based Late Fee</b> balance in Contract &gt;Balances tab on clicking <b>Load Balances</b> button.</p>
Cycle Based Collection Late Fee Grace Days	Specify the number of grace days allowed before cycle based collection late fee is assessed on the account. This field is enabled only if the Cycle Based Collection Late Fee option is checked above.
Cycle Based Late Fee Grace Days	Specify the number of grace days allowed before cycle based late fee is assessed on the account. This field is enabled only if the Cycle Based Late Fee option is checked above.
<b>Fee Consolidation</b> - If Cycle Based Late Fee is assessed based on above parameters, this section allows to enable/disable the option to consolidate the late fee at Master Account level.	
Late Charge at Master Account	Check this box to allow system to consolidate the late charge assessment at master account level.
Cycle Based Collection Late Fee at Master Account	<p>Check this box to allow system to consolidate the cycle based collection late fee assessment at master account level.</p> <p>Ensure that, the option <b>Cycle Based Collection Late Fee</b> is also checked for fee consolidation at Master Account level.</p>
Cycle Based Late Fee at Master Account	<p>Check this box to allow system to consolidate cycle based late fee assessment at master account level.</p> <p>Ensure that, the option <b>Cycle Based Late Fee</b> is also checked for fee consolidation at Master Account level.</p>
<b>Extension section</b>	
Max Extn Period / Year	Specify the maximum number of terms that the contract may be extended, within a given rolling calendar year.

**Table 4-22 (Cont.) Contract Definition**

Field	Do this
Max Extn Period / Life	Specify the maximum number of terms that the contract may be extended, within the life of the line of credit.
Max # Extn / Year	Specify the maximum number of extensions that may be granted within a given rolling calendar year.
Max # of Extn / Life	Specify the maximum number of extensions that may be granted within the life of the line of credit.
Minimum # Payments	Specify the minimum number of payments that must be made before extension.
Extension Gap in Months	Specify the gap between previous extension provided in the account and current one as specific number of months.
<b>Advance Details section</b>	
Min Initial Advance	Specify the minimum initial advance amount allowed. This is the smallest possible initial advance that can be disbursed to the borrower after funding.
Max Initial Advance	Specify the maximum initial advance amount allowed. This is the largest possible initial advance that can be disbursed to the borrower after funding.
Min Advance	Specify the minimum advance amount. This is the smallest advance amount that a borrower may subsequently request after the initial advance.
Max Advance	Specify the maximum advance amount. This is the largest advance amount that a borrower may subsequently request after the initial advance.
<b>Rate Cap &amp; Adjustments section</b>	
Max Rate Increase / Year	Specify the maximum rate increase allowed in a year.
Max Rate Increase / Life	Specify the maximum rate increase allowed in the life of the line of credit.
Max Rate Decrease / Year	Specify the maximum rate decrease allowed in a year.
Max Rate Decrease / Life	Specify the maximum rate decrease allowed during the life of the line of credit.
Max # Adjustments / Year	Specify the maximum number of rate changes allowed in a year.
Max # Adjustments / Life	Specify the maximum number of rate changes allowed during the life of the line of credit.
Min Interest Rate (Floor)	Specify the minimum rate.
Max Interest Rate (Ceiling)	Specify the maximum rate.

Table 4-22 (Cont.) Contract Definition

Field	Do this
<b>Statement section</b>	
This section allows to define the preferences for Mock Statement generation at Master Account level. Generating a Mock Statement helps to mock the asset billing process with a future date and to get an upfront statement indicating future dues of Master and Associated Accounts. In <b>Vacation Ownership</b> industry, such statements are required to forecast future dues based on current <b>Timeshare</b> holdings.	
The selected preference here are propagated to Application > Contract screen when the instrument is loaded.	
<b>Mock Statement Req</b>	Select this check box to indicate if the account is to be include in Mock statement Generation. <b>Note:</b> Based on this selection, others fields related to Mock Statement below are enabled and becomes mandatory for providing details.
<b>Mock Start Month</b>	Select the start month of Mock Statements period from the dropdown list. <b>Note:</b> During the <b>Mock Statement Next Run Date</b> validation if next run date is less than Contract Date or GL Date, system moves the <b>Mock Start Month</b> to same month of next year. For more information, refer to <b>Mock Statement Maintenance</b> in Appendix - Non Monetary transactions sections.
<b>Mock Statement Cycles</b>	Select the total number of billings (between 1-12) that are to be generated post Mock Statement Start Date.
<b>Mock Pre Statement Days</b>	Specify the number of Pre bill days for Mock Statements generation.
<b>Other section</b>	
Refund Allowed	Check this box to indicate that refunding of customer over payments are allowed.
Refund Tolerance	Specify the refund tolerance amount. If the amount owed to the customer is greater than the refund tolerance, the over payment amount will be refunded if Refund Allowed box is selected.
WriteOff Tolerance Amt	Specify the write off tolerance amount. If the remaining outstanding receivables for accounts funded using this instrument is less or equal to the write off tolerance amount, the remaining balance on the account will be waived.
Pmt Tolerance Amt*	Specify the payment tolerance amount. This is the threshold amount that must be achieved before a due amount is considered PAID or DELINQUENT. If (Payment Received + Pmt Tolerance: \$Value) >= Standard Monthly Payment, the Due Date will be considered as satisfied in terms of delinquency. The amount unpaid is still owed.

Table 4-22 (Cont.) Contract Definition

Field	Do this
Pmt Tolerance%*	Specify the payment tolerance percentage. This is the threshold percentage that must be achieved before a due amount is considered PAID or DELINQUENT. If Payment Received $\geq$ (Standard Monthly Payment * Pmt Tolerance% / 100), the due date will be considered satisfied in terms of delinquency. The amount unpaid is still owed.  The system uses the greater of these two values.
Promise Tolerance Amt*	Specify the promise tolerance amount. This is the threshold amount that must be achieved before a due amount is considered KEPT or BROKEN. If (Payment Received + Promise Tolerance: \$Value) $\geq$ Promise Amount, the Due Date will be considered KEPT (satisfied).
Promise Tolerance %*	Specify the promise tolerance percentage. This is the threshold percentage that must be achieved before a due amount is considered KEPT or BROKEN. If Payment Received $\geq$ (Promised Amt * Promise Tolerance%), the due date will be considered KEPT (satisfied).  The system uses the greater of these two values.
Adv Tolerance	Enter the advance tolerance amount.
Adv Tolerance %	Enter the advance tolerance percentage
Default Pmt Spread	Select the default payment spread to be used when receiving payments for this account if one is not explicitly chosen, from the drop-down list.
Min Finance Charge	Enter the minimum finance charge amount.
Minimum Pmt	Enter the minimum billed amount.
Anniversary Period	Enter the anniversary term.
Repmt Currency	Select the currency from the drop-down list.
PDC Security Check	Check this box to indicate that post dated checks are the method of repayment for this contract.
ACH Fee Ind	Check this box to indicate that direct debit fee is included.  <b>Note:</b> The ACH Fee/Direct Debit Fee balance will be displayed in <b>Balances</b> sub tab only when this checkbox is selected.

Table 4-23 Contract Definition

Field	Do this
<b>Instruments section</b>	
Instrument	Specify the code identifying the instrument.
Description	Specify the description of the instrument being defined.
Start Dt	Specify the start date for the instrument. You can even select the date from the adjoining Calendar icon.

Table 4-23 (Cont.) Contract Definition

Field	Do this
End Dt	Specify the end date for the instrument. You can even select the date from the adjoining Calendar icon.
Enabled	<p>If you check this box, the system will consider this contract definition when selecting a instrument for an application.</p> <p><b>Note:</b> Once the field is enabled load balances button in balances sub tab will be disabled</p>
<b>Selection Criteria section</b>	
Company	Select the company for the instrument from the drop-down list. This may be ALL or a specific company.
Branch	Select the branch within the company for the instrument from the drop-down list. This may be ALL or a specific branch. This must be ALL, if you have selected <b>ALL</b> in the Company field.
Calculation Method	<p>Select the type of lease calculation method for the contract as one of the following:</p> <ul style="list-style-type: none"> <li>• RENT FACTOR (selected by default)</li> <li>• INTEREST RATE</li> <li>• AMORTIZED</li> </ul> <p><b>Note:</b> Based on the above selection, some of the fields in lease contract definition screen are either disabled or is displayed in view only mode with default supported option. The same is detailed in respective fields.</p>
Billing Cycle	<p>Select the billing cycle frequency for the contract as one of the following from the drop-down list.</p> <ul style="list-style-type: none"> <li>• MONTHLY (Default)</li> <li>• WEEKLY</li> <li>• BI WEEKLY</li> <li>• QUARTERLY</li> <li>• SEMI ANNUAL</li> <li>• ANNUAL</li> </ul> <p><b>Note:</b> The billing cycle is selected as <b>Monthly</b> by default and is not editable if the lease calculation method is selected as <b>Rent Factor</b>.</p>
Agreement Type	<p>Select the lease agreement type as one of the following from the drop-down list for further calculation:</p> <ul style="list-style-type: none"> <li>• USAGE</li> <li>• RENTAL</li> <li>• USAGE RENTAL</li> </ul> <p>For more information on how OFSLL handles Usage based leasing, refer to <a href="#">Appendix : Usage Based Leasing</a> chapter and for Rental based leasing, refer to <b>Rental Agreement</b> section in Lease Origination User Guide.</p>

Table 4-23 (Cont.) Contract Definition

Field	Do this
Product	Select the product for the instrument from the drop-down list. This may be ALL or a specific product. If the Agreement Type is selected as either USAGE or RENTAL, then the drop-down list displays only those products associated with USAGE or RENTAL type of lease.
State	Select the state in which the instrument is used from the drop-down list. This may be ALL or a specific state.
Currency	<p>Select the currency for the instrument from the drop-down list.</p> <p>By selecting which type to use, the system searches for a best match using the following attributes:</p> <ul style="list-style-type: none"> <li>a. Billing Cycle</li> <li>b. Start Date</li> <li>c. Company</li> <li>d. Branch</li> <li>e. Product</li> <li>f. State</li> </ul> <p>Hence, Oracle Financial Services Software recommends creating one version of each type, where ALL is the value in these fields.</p>
Pricing	Select the pricing in which the instrument is used from the dropdown list. This may be ALL or a specific pricing.
<b>Accrual section</b>	
Rent Accrual Method	<p>Depending on the lease calculation method selected, the applicable rent accrual method which is used to calculate interest accrual for this instrument is defaulted from the drop-down list.</p> <ul style="list-style-type: none"> <li>• For Rent Factor calculation method, ACTUARIAL - MONTHLY method is selected by default.</li> <li>• For Interest Rate calculation method, INTEREST BEARING method is selected by default.</li> <li>• For Amortized Rent Accrual Method, the Calculation Method also has to be selected as AMORTIZED which is the fixed repayment schedule method. Here the repayment schedule of lease is predefined / fixed at the beginning of the lease and no subsequent changes are allowed to lease payment until the maturity date and/or no further extension of lease at the end of lease period.</li> </ul> <p><b>Note:</b> System displays an error on save if any of the above default options are interchanged.</p>

Table 4-23 (Cont.) Contract Definition

Field	Do this
Base Method	<p>Select the base method used to calculate interest accrual for this instrument from the drop-down list. The list is populated with the values defined in ACCRUAL_BASE_METHOD_CD lookup code.</p> <p><b>Note:</b> The base method is selected as 30/360 by default if the lease calculation method is selected as <b>Rent Factor</b>.</p>
Start Dt Basis	<p>If the lease calculation method is selected as Interest Rate, select to define the start date from when the interest accrual is to be calculated for this instrument from the drop-down list.</p> <ul style="list-style-type: none"> <li>• If you select the Effective Date, then the interest is calculated from the Contract date + Start Days (indicated below).</li> <li>• If you select the Payment Date, then the interest is calculated based on (first payment date + Start Days (indicated below) minus one billing cycle).</li> </ul> <p>If the lease calculation method is selected as Rent Factor or Amortized, this field is disabled since it is not applicable.</p>
Start Days	<p>Specify the number of grace days after which the interest accrual is to be calculated. Ensure that the number of grace days is less than first payment date.</p> <p><b>Note:</b> If the lease calculation method is selected as Rent Factor or Amortized, this field is disabled since it is not applicable.</p>
Maturity Dt Basis	<p>This field is enabled only for 'Amortized' Lease calculation method.</p> <p>Select the basis of maturity date which is the 'Lease Closing Date' as either Payment Date or Effective Date from the drop-down list. The selection decides the basis of calculating the maturity date i.e. contract date or first payment date.</p>

**Note**

Stub/Broken periods can be at the start and end of the Contract.

- If maturity date basis is 'Payment Date', then last bill will always have full payment days in the cycle, and no stub is applicable.
- If maturity date basis is 'Effective Date', then first and last bills will have stub days included.

Table 4-23 (Cont.) Contract Definition

Field	Do this
Time Counting Method	<p>Select the time counting method used to calculate interest accrual for this instrument from the drop-down list.</p> <p><b>Note:</b> If the lease calculation method is selected as Rent Factor, this field is disabled since it is not applicable.</p>
Installment Method	<p>System supports an amortized repayment schedule with the final payment potentially differing from the regular payment amount in the other billing cycles.</p> <p>If the lease calculation method is selected as Interest Rate, then the installment method by default is EQUATED PAYMENTS where-in the equal installments for each billing cycle includes any minute final payment differences.</p> <p>If the lease calculation method is selected as Rent Factor, this field is disabled since it is not applicable.</p>
Int Amortization Freq	<p>Select one of the following interest amortization frequency from the drop-down list:</p> <ul style="list-style-type: none"> <li>• DAILY - if selected, the interest amortization (TAM) GL entries hand-over happens every day.</li> <li>• EVERY BILLING CYCLE MONTH END - if selected, the interest amortization (TAM) GL entries hand-over happens on month end of the account billing cycle. For example, if account billing cycle is quarterly, the GL handover happens on month end of the quarter.</li> <li>• EVERY MONTH END - if selected, the interest amortization (TAM) GL entries hand-over happens on month end of every calendar month. For example, even if the account billing cycle is quarterly, the GL handover happens on the calendar month.</li> </ul>

**Note**

Lease amortization for accounting of accrued interest can be calculated on a monthly basis, irrespective of the billing cycle of the account using Scheduled Based amounts. While processing the batch job TAMPRC\_BJ\_100\_01 (AMORTIZATION TRANSACTIONS PROCESSING) if Amortize Balance Type = Rent + Amortization Method = Scheduled Based (Month End) + Int Amortization Freq = EVERY MONTH END, then Amortization will happen for the whole month, on month end date from the subsequent months.

Table 4-23 (Cont.) Contract Definition

Field	Do this
<b>Capitalization section</b> This section allows you to define capitalization parameters which helps to capitalize the corresponding account balances to the principal balance of the account based on specific frequency. For example, you can capitalize the accumulated Interest or Late Fees to principal balance of the account. You can either capitalize all the balances based on same frequency or define different frequency for each type of balance. <b>Note:</b> Capitalization parameters can also be updated by posting <b>CAPITALIZATION MAINTENANCE</b> monetary transaction.	
Capitalize	Check this box to enable capitalization parameters for the contract. By default, this option is un-checked. The option is available only for Interest Rate Method Lease.
Frequency	Select the required capitalization frequency from the drop-down list. The list contains the following types of frequency to either capitalize all the balances based on same frequency or define different frequency for each type of balance. <ul style="list-style-type: none"> <li>Based on specific intervals such as Monthly, Quarterly, Annual and so on.</li> <li>Based on contract Billing Frequency, Billing Date, or Due date.</li> <li>Specifically on every Month End.</li> <li>-Or-</li> <li>Based on Balance Frequency to define different capitalization frequency for each balance. This can further be defined in Balances sub tab.</li> </ul>
Capitalization Start Basis	Select the capitalization start date from the drop-down list as either Contract Date or First Payment Date to calculate the capitalization frequency accordingly. However, this field is not enabled for Billing date or Due Date type of capitalization frequency.
Grace Days	Specify the grace days allowed in the frequency (minimum 0, maximum 31) before capitalizing the balances to account. This is also the deciding factor for executing the capitalization batch job which is based on Capitalization Frequency + Grace Days. However, note that Grace Days are not accounted for Month End type of capitalization frequency and is ignored even if specified.
Cap Tolerance Amt	Specify the capitalization tolerance amount which is the minimum amount to qualify for capitalization. Any amount less than this is not considered for capitalization of balances. This helps to avoid capitalization of nominal or decimal amounts. <b>Note:</b> There is no specific accounting maintained for non-capitalized decimals with reference to setup.

Table 4-23 (Cont.) Contract Definition

Field	Do this
<b>Scheduled Dues section</b>	
Due Day Min	Specify the minimum value allowed for the due day for this instrument.
Due Day Max	Specify the maximum value allowed for the due day for this instrument. <b>Note:</b> If billing cycle is selected as weekly, then Due Day Max field value cannot be greater than 7.
Max Due Day Change / Year	Specify the maximum number of due day changes allowed within a given year for this instrument.
Max Due Day Change / Life	Specify the maximum number of due day changes allowed over the life of a product funded with this instrument.
Max Due Day Change Days	Specify the maximum number of days a due date can be moved.
Pmt Tolerance Amt*	Specify the payment tolerance amount. This is the threshold amount that must be achieved before a due amount is considered PAID or DELINQUENT. If (Payment Received + Pmt Tolerance: \$Value) >= Standard Monthly Payment, the Due Date will be considered as satisfied in terms of delinquency. The amount unpaid is still owed.
Pmt Tolerance%*	Specify the payment tolerance percentage. This is the threshold percentage that must be achieved before a due amount is considered PAID or DELINQUENT. If Payment Received >= (Standard Monthly Payment * Pmt Tolerance% / 100), the due date will be considered satisfied in terms of delinquency. The amount unpaid is still owed.  The system uses the greater of these two values.
Promise Tolerance Amt*	Specify the promise tolerance amount. This is the threshold amount that must be achieved before a due amount is considered KEPT or BROKEN. If (Payment Received + Promise Tolerance: \$Value) >= Promise Amount, the Due Date will be considered KEPT (satisfied).
Promise Tolerance %*	Specify the promise tolerance percentage. This is the threshold percentage that must be achieved before a due amount is considered KEPT or BROKEN. If Payment Received >= (Promised Amt * Promise Tolerance%), the due date will be considered KEPT (satisfied).  The system uses the greater of these two values.
<b>Billing section</b>	

Table 4-23 (Cont.) Contract Definition

Field	Do this
Prebill Days	Specify the prebill days. This is the number of days, before the first payment due, that accounts funded with this instrument will be billed for the first payment. Thereafter, the accounts will be billed on the same day every month. If an account has a first payment date of 10/ 25/2003 and Pre Bill Days is 21, then the account will bill on 10/04/ 2003, and then bill on the 4th of every month.
Bill Type	Select the billing type for accounts funded using this instrument from the drop-down list.
Bill Method	Select the billing method for accounts funded using this instrument from the drop-down list.
Balloon Method	If the lease calculation method is selected as Interest Rate, then the balloon payment method for accounts funded using this instrument is <b>N + 1 PMTS</b> by default. Amortization happens based on N+1 payments. However, this field is not applicable if the lease calculation method is <b>Rent Factor</b> .
Multiple Billing Asset Rate	Check this box to indicate if multiple asset rates are applicable for one billing period.  System considers billing period from current due date to the next due date. Multiple rates are fetched only when rate end date (rate start date + rate frequency) ends one or more cycle(s) before the next due date i.e. current rate record does not cover the entire billing period.
Prorate Stub Pmt	This checkbox is enabled only for 'Amortized' Lease calculation method.  Select this box to indicate if the interest during stub/broken period is to be collected on prorated basis. Else, the interest is collected for the full amount applicable for the selected cycle.  By default system prorates the interest rate by calculating the number of days in the cycle up to the next billing date.
<b>Delinquency section</b>	
Late Charge Grace Days	Specify the number of grace days allowed for the payment of a due date before a late charge is assessed on the account.
Stop Accrual Days	Specify the number of days a contract can be in delinquent state, after which the interest accrual must stop for an account.  A Batch Job is run daily to select accounts in delinquent status for a pre-defined number of days and post <b>No Accrual transaction</b> for such accounts on current date. When the account recovers from Delinquency, the system will then post a <b>Start Accrual Transaction</b> on the date the account is recovered from delinquency.

**Table 4-23 (Cont.) Contract Definition**

Field	Do this
Delq Grace Days	Specify the number of grace days allowed for the payment of a due date before an account is considered delinquent. This affects DELQ Queues, the system reporting, and the generation of collection letters.
Time Bar Years	Specify the total number of years allowed to contact the customer starting from the first payment date and beyond which the account is considered delinquent. You can specify any value between 0-999.
Cure Letter Gen Days	Specify the number of delinquency days to initiate cure letter generation.
Cure Letter Valid Days	Specify the number of days during which the issued cure letter is valid. Usually financial institutions will start the collection activities after the lapse of cure letter validity date.
Delq Category Method	<p>Select the delinquency category method to determine how the system populates delinquency counters on the Customer Service form.</p> <p><b>Note:</b> This value does not affect credit bureau reporting.</p>
Accrual Post Maturity	<p>Check this box to indicate that this is the post maturity default rate.</p> <p>Extensions allow you to extend the maturity of the contract by one or more terms by allowing the customer to skip one or more payments. The skipped terms are added to the end of the contract.</p> <p><b>Note:</b> If the lease calculation method is selected as Rent Factor, this field is disabled since it is not applicable.</p>

Table 4-23 (Cont.) Contract Definition

Field	Do this
<p><b>Cycle Based Fees</b> - This section allows to define the parameters for calculating cycle based fees at individual account level. Using the below parameters, system derives the Cycle Base Fees and updates the account balances on processing the following batch jobs - TXNCBC_BJ_100_01 (CYCLE BASED COLLECTION LATE FEE PROCESSING) and TXNCBL_BJ_100_01 (CYCLE BASED LATE FEE PROCESSING). For more information, refer to <b>Fee Consolidation Maintenance</b> section in Appendix chapter.</p> <p>System calculates the below type of fee in combination of associated and master account and is assessed only when total due crosses <b>Threshold</b> amount (that is defined in Setup &gt; Products &gt; Contract &gt; Fees tab and Setup &gt; Products &gt; Fees screen):</p> <p><b>Fee Late Charge (FLC)</b></p> <ul style="list-style-type: none"> <li>• Percentage of sum of payment due</li> <li>• Percentage of sum of standard payment</li> <li>• Percentage of sum of billed amount</li> </ul> <p><b>Cycle Based Collection Late Fee</b></p> <ul style="list-style-type: none"> <li>• Flat amount</li> <li>• Percentage of sum of payment due</li> <li>• Percentage of sum of standard payment</li> <li>• Percentage of sum of billed amount</li> <li>• Percentage of payment due</li> <li>• Percentage of standard payment</li> <li>• Percentage of billed amount</li> <li>• Percentage of total due amount</li> <li>• Percentage of sum of total due amount</li> </ul> <p><b>Cycle Based Late Fee</b></p> <ul style="list-style-type: none"> <li>• Flat amount</li> <li>• Percentage of sum of total due amount</li> <li>• Percentage of sum of payment due</li> <li>• Percentage of sum of standard payment</li> <li>• Percentage of sum of billed amount</li> <li>• Percentage of total due amount</li> <li>• Percentage of payment due</li> <li>• Percentage of standard payment</li> <li>• Percentage of billed amount</li> </ul>	<p>Check this box to enable cycle based collection late fee assessment on the account.</p> <p>If selected, the balance type CYCLE BASED COLLECTION LATE FEE is made available in the Balances tab which further allows to define how system should derive the balances when an account is booked and funded.</p> <p>If unchecked (default), system does not display the <b>Cycle based Collection Late Fee</b> balance in Contract &gt; Balances tab on clicking <b>Load Balances</b> button.</p>

Table 4-23 (Cont.) Contract Definition

Field	Do this
Cycle Based Late Fee	<p>Check this box to enable cycle based late fee assessment on the account.</p> <p>If selected, the balance type CYCLE BASED LATE FEE is made available in the Balances tab which further allows to define how system should derive the balances when an account is booked and funded.</p> <p>If unchecked (default), system does not display the <b>Cycle Based Late Fee</b> balance in Contract &gt;Balances tab on clicking <b>Load Balances</b> button.</p>
Cycle Based Collection Late Fee Grace Days	Specify the number of grace days allowed before cycle based collection late fee is assessed on the account. This field is enabled only if the Cycle Based Collection Late Fee option is checked above.
Cycle Based Late Fee Grace Days	Specify the number of grace days allowed before cycle based late fee is assessed on the account. This field is enabled only if the Cycle Based Late Fee option is checked above.
<b>Fee Consolidation</b> - If Cycle Based Late Fee is assessed based on above parameters, this section allows to enable/disable the option to consolidate the late fee at Master Account level.	
Late Charge at Master Account	Check this box to allow system to consolidate the late charge assessment at master account level.
Cycle Based Collection Late Fee at Master Account	<p>Check this box to allow system to consolidate the cycle based collection late fee assessment at master account level.</p> <p>Ensure that, the option <b>Cycle Based Collection Late Fee</b> is also checked for fee consolidation at Master Account level.</p>
Cycle Based Late Fee at Master Account	<p>Check this box to allow system to consolidate cycle based late fee assessment at master account level.</p> <p>Ensure that, the option <b>Cycle Based Late Fee</b> is also checked for fee consolidation at Master Account level.</p>
<b>Lease Contract section</b>	
Lease Type	<p>Select the lease type from the drop-down list. You can select the lease type as either Direct Finance or Operating Lease.</p> <p>If the lease Type is selected as Direct Finance, system enables the field <b>Residual Value in Final Bill</b> under Residual Details section for selection.</p>
Tax Book Type	Select the lease tax book type for depreciation from the drop-down list.

Table 4-23 (Cont.) Contract Definition

Field	Do this
<b>Depreciation section</b> In this section you can define asset depreciation method and frequency. The same is used for asset depreciation calculation when the batch job TAMDEP_BJ_121_01 (DEPRECIATION RATE PROCESSING) is executed. If asset is associated to an account then an <b>Asset Depreciation</b> amortization transaction is posted on to the account with new delta depreciated value. Asset depreciation is calculated till the entire lease term or till the asset residual amount becomes <b>0</b> .	
Depreciation Method	Select the asset depreciation method to be used for calculation as one of the following from the drop-down list. <ul style="list-style-type: none"> <li>• <b>FLAT RATE:</b> This method is used to depreciate the asset over a fixed time using a fixed rate. This method of calculation is similar to Written Down Value Method (Diminishing Balance Method / Reducing Installment Method). On selecting this option, the following fields - Base Rate, Adjusting Rate and Bonus Rate are enabled to define the flat rate.</li> <li>• <b>LIFE BASED:</b> This method is used to depreciate the asset over a fixed time using the specified rates. This method of calculation is similar to Straight Line Method (Original Cost Method / Fixed Installment Method). On selecting this option and saving the record, <b>Depreciation Rate Schedule</b> sub tab is enabled to define depreciation rates slab.</li> </ul>
Depreciation Convention	Select the frequency at which the leased account should be updated with depreciation details from the drop-down list. The list is populated with frequency details (i.e. monthly, weekly, and so on) maintained in <b>FIRST_LAST_YEAR_CONVENTION_CD</b> lookup code.
Base Rate	If you have selected the Depreciation Method as <b>Flat Rate</b> , specify the estimated base depreciation rate.
Adjusting Rate	If you have selected the Depreciation Method as <b>Flat Rate</b> , specify the adjusting rate at which the above base rate should be increased to derive the flat rate of depreciation. For example, <ul style="list-style-type: none"> <li>• If base rate is 10 and adjusted rate is 10 then flat rate is 11</li> <li>• If base rate is 10 and adjusted rate is 20 then flat rate is 12</li> </ul>

Table 4-23 (Cont.) Contract Definition

Field	Do this
Bonus Rate	<p>If you have selected the Depreciation Method as <b>Flat Rate</b>, specify the bonus rate (if any) which is additional depreciation allowed on base rate for calculating flat rate depreciation.</p> <p>Bonus rate is a tax incentive offered to deduct a percentage of the purchase price of eligible business assets and as a measure of relief for small to medium sized businesses to buy additional equipment.</p> <p>For example,</p> <ul style="list-style-type: none"> <li>• If base rate is 10 and bonus rate is 10 then flat rate is 20</li> <li>• If base rate is 10 and bonus rate is 2 then flat rate is 12</li> </ul>
Depreciation Rate	<p>View the system calculated flat rate depreciation value which is calculated as:</p> $\text{Depreciation Rate\%} = (\text{Base Rate} \times (1 + \text{Adjusting Rate}/100)) + \text{Bonus Rate.}$
<b>Tax section</b>	
Sales Tax Mode	Select the sales tax mode from the drop-down list.
Sales Tax Method	Select the sales tax method from the drop-down list.
<b>Early Termination section</b>	
Allowed To Terminate	<p>Check this box to indicate if the contract is allowed to be terminated before the maturity date.</p> <p>Note that, system validates and allows termination only if either the Billed Term or Lease Amount Recovered % is met.</p>
Billed Term	Specify the minimum number of bills that needs to be generated before allowing for early termination.
Lease Amt Recovered %	<p>Specify the percentage of lease amount to be recovered to allow early termination.</p> <p>The calculation for minimum lease amount to be recovered for Rent Factor and Interest Rate is as indicated below:</p> <p>For calculation method as Rent Factor, Minimum lease amount = (Depreciation + Rent Charge i.e. Lease Receivable balance) that needs to be recovered before allowing early termination.</p> <p>For calculation method as Interest Rate, the Minimum lease amount = (Depreciation + Rent Charge i.e. Lease Receivable balance + Interest balance) that needs to be recovered before allowing early termination.</p>

Table 4-23 (Cont.) Contract Definition

Field	Do this
Lease Recovery Type	<p>Select the Lease Recovery Type from the drop-down list.</p> <p>You can either select as 'FIXED' to recover the full lease amount or 'PROPORTIONATE' (default) to recover only the prorated lease amount.</p> <p>The type selected here is updated as the value for parameter 'LEASE CHANGE RECOVERY TYPE' in Lease Account Maintenance, Lease Termination and Payoff Quote transactions.</p>
<b>Ever Green Details</b> <p>This section allows you to define Evergreen lease parameters that are required for system to decide if the contract is eligible and automatically put the account on Evergreen mode on maturity. These parameters also indicates when to post auto renewal transaction, the renewal term, and billing based on the derived evergreen billing amount.</p> <p>Evergreen lease transaction is posted on running the schedule batch job TXNEGC_BJ_121_01 (POST MATURITY EVER GREEN TRANSACTION PROCESSING).</p> <p><b>Note:</b> Evergreen Lease in OFSLL supports Stub/Broken/Fiscal Period billing and Evergreen Lease is not supported for RENT FACTOR type of lease calculation method.</p> <p>The Ever Green details maintained here are propagated to Origination on selecting the instrument. Also on funding, the details are updated to Servicing - Account Details and Contract Details screens. However, the Ever Green parameters in Account Details screen can further be updated by posting LS_EVER_GREEN_MAINT (EVER GREEN MAINTENANCE non-monetary transaction).</p>	
Auto Post & Renew on Maturity	<p>Check this box to allow system to auto post and renew the evergreen lease contract on maturity date + ever green grace days.</p> <p>When a contract is in evergreen lease terms, this option allows to renew the contract automatically for specific terms without any intervention. In addition, you can also specify the number of payments for which the Contract must be renewed during evergreen.</p>
<div>  <b>Note</b> <ul style="list-style-type: none"> <li>On selecting this check box: <ul style="list-style-type: none"> <li>All the fields in <b>Ever Green Details</b> section are enabled and mandatory to be updated with required details.</li> <li>If check box is unselected, any predefined values in this section is set to default value.</li> <li>The <b>Auto Include Residual Value</b> option in <b>Residual Details</b> section is disabled.</li> </ul> </li> </ul> </div>	
Number of Unpaid Bills	Specify a value. Auto renewal of contract to evergreen lease is allowed only when actual number of unpaid bills is greater than the specified value.

**Table 4-23 (Cont.) Contract Definition**

Field	Do this
Unpaid Bills %	Specify the percentage (0 - 100) of total unpaid bills remaining for system to consider for auto renewal of contract to evergreen lease.  System uses the greater of these two values i.e. Number of Unpaid Bills and Unpaid Bills %
Pmt Amount Method	Select one of the following payment amount method from drop-down list which is to be accounted for billing on auto renewal of contract to evergreen lease. This is the rental amount for asset usage. <ul style="list-style-type: none"> <li>• % on Maturity Bill - Percentage of lease payment amount as on maturity.</li> <li>• Fixed Amount - Fixed lease amount</li> <li>• % on Standard Payment Amount - If the account has multiple payments, then the last payment cycle amount is considered as standard payment Amount. For example: In a 6-month term account, if first 3 terms Pmt Amount is 1000\$ and next 3 terms Pmt Amount is 2000\$, system considers 2000\$ as the standard payment amount.</li> </ul>
Value	Specify the value to derive the asset usage billing amount based on any of the above Payment Amount Method.
Grace Days	Specify the total number of grace days allowed after maturity for system to consider for auto renewal of contract to evergreen lease.
Evergreen Term	Specify the new extension term which is the agreed term between customer and financial institution.  This term is mapped to extension term of EVER GREEN LEASE monetary transaction.
Residual Reduction %	Specify a percentage value to indicate how much residual value has to be reduced while posting Evergreen transaction. You can specify numerical value up to 2 decimal with minimum as zero and maximum of 100.  For example, if the residual value of asset =1000 and Residual Reduction % is 100, then system considers residual value of asset as ZERO.
<b>Residual Details section</b>	
Minimum Residual %	Specify the minimum residual percentage that is allowed to be specified in Origination > Contract screen (Residual % field).
Maximum Residual %	Specify the maximum residual percentage that is allowed to be specified in Origination > Contract screen (Residual % field).

Table 4-23 (Cont.) Contract Definition

Field	Do this
Auto Include Residual Value	<p>Check this box to indicate if the Residual value of the asset is to be included in the final bill. This check box is disabled if the lease Agreement Type in <b>Selection Criteria</b> section is selected as USAGE RENTAL.</p> <p>When bill is generated, system validates if the generated bill is last bill and includes the Residual Value (either Contract Value or FMV (fair market value) based on selection) in the final bill. For FMV, the total value of all collaterals are considered.</p> <p>Here, Contract value is the value determined as residual value during the contract agreement time and FMV is the value of asset at the end of the lease term.</p> <p>Also when residual value is included in final bill, system does not allow to post an Extension transaction and displays an error while posting the same.</p>
Residual Valuation	<p>If the above check box is selected, you need to select the Residual Valuation as either Contract Value or Fair Market value from the drop down list.</p> <p><b>Note:</b> Fair Market Value is referred from Collateral &gt; Valuation tab.</p>
<b>Payment Caps section</b>	
Max Pmt Inc / Year	<p>Specify the maximum payment increase allowed in a year.</p> <p><b>Note:</b> If the lease calculation method is selected as Rent Factor, this field is disabled since it is not applicable.</p>
Max Pmt Inc / Life	<p>Specify the maximum payment increase allowed in the life of the lease.</p> <p><b>Note:</b> If the lease calculation method is selected as Rent Factor, this field is disabled since it is not applicable.</p>
<b>Extension section</b>	
Note: If the lease calculation method is selected as <b>Rent Factor</b> , the fields in this section are disabled since it is not applicable.	
Max Extn Period / Life	Specify the maximum number of terms that the contract may be extended, beyond the life of the Lease.
Max # Extn / Life	Specify the maximum number of extensions that may be granted beyond the life of the Lease.
Minimum # of Payments	Specify the minimum number of payments that must be made before lease extension.
<b>Rate Cap &amp; Adjustments section</b>	
Note: If the lease calculation method is selected as <b>Rent Factor</b> , the fields in this section are disabled since it is not applicable.	
Max Rate Inc / Year	Specify the maximum rate increase allowed in a year.

Table 4-23 (Cont.) Contract Definition

Field	Do this
Max Rate Inc / Life	Specify the maximum rate increase allowed in the life of the lease.
Max Rate Dec / Year	Specify the maximum rate decrease allowed in a year.
Max Rate Dec / Life	Specify the maximum rate decrease allowed during the life of the lease.
Max # Adjust / Year	Specify the maximum number of rate changes allowed in a year.
Max # Adjust / Life	Specify the maximum number of rate changes allowed during the life of the lease.
Min Int Rate (Floor)	Specify the minimum rate.
Max Int Rate (Ceiling)	Specify the maximum rate.
<b>Statement section</b>	
This section allows to define the preferences for Mock Statement generation at Master Account level. Generating a Mock Statement helps to mock the asset billing process with a future date and to get an upfront statement indicating future dues of Master and Associated Accounts. In <b>Vacation Ownership</b> industry, such statements are required to forecast future dues based on current <b>Timeshare</b> holdings.	
The selected preference here are propagated to Application > Contract screen when the instrument is loaded.	
<b>Mock Statement Req</b>	Select this check box to indicate if the account is to be include in Mock statement Generation. <b>Note:</b> Based on this selection, others fields related to Mock Statement below are enabled and becomes mandatory for providing details.
<b>Mock Start Month</b>	Select the start month of Mock Statements period from the dropdown list. <b>Note:</b> During the <b>Mock Statement Next Run Date</b> validation if next run date is less than Contract Date or GL Date, system moves the <b>Mock Start Month</b> to same month of next year. For more information, refer to <b>Mock Statement Maintenance</b> in Appendix - Non Monetary transactions sections.
<b>Mock Statement Cycles</b>	Select the total number of billings (between 1-12) that are to be generated post Mock Statement Start Date.
<b>Mock Pre Statement Days</b>	Specify the number of Pre bill days for Mock Statements generation.
<b>Other section</b>	

Table 4-23 (Cont.) Contract Definition

Field	Do this
Rent Collection Method	<p>Select the applicable rent collection method from the drop-down list.</p> <p>If the lease calculation method is selected as Rent Factor, the rent collection method is set to ADVANCE by default. For Interest Rate calculation method, you can either select ADVANCE or ARREARS.</p> <p>In case of ADVANCE, the first payment date must be equal to contract date and first bill would be generated on contract date.</p> <p>In case of ARREARS, you can specify the first payment date as future date and bill would be generated accordingly.</p>
Refund Allowed	Check this box to indicate that refunding of customer over payments are allowed.
Refund Tolerance Amt	Specify the refund tolerance amount. If the amount owed to the customer is greater than the refund tolerance, the over payment amount will be refunded if Refund Allowed box is selected.
Anniversary Period	Specify the anniversary term that define the anniversary period. This is based on billing cycle, so normally for MONTHLY the value is 12 and for WEEKLY the value is 52.
Contract Expiry Letter Days	Specify the number of days before the maturity to generate the <b>Contract Maturity</b> letter.
WriteOff Tolerance Amt	Specify the write off tolerance amount. If the remaining outstanding receivables for accounts funded using this instrument is less or equal to the write off tolerance amount, the remaining balance on the account will be waived.
Recourse	Check this box if recourse is allowed. This indicates whether the unpaid balance may be collected from the producer if the consumer fails to perform on the lease.
Max Recourse%	Specify the maximum percentage of the outstanding receivables that may be collected from the producer if the Recourse Allowed box was selected.
Repmnt Currency	Select the designated repayment currency for this contract from the drop-down list.
PDC Security Check	Check this box to indicate that post dated checks are the method of repayment for this contract.
Default Pmt Spread	Select the default payment spread to be used when receiving payments for this account if one is not explicitly chosen, from the dropdown list.
ACH Fee	<p>Check this box to indicate that direct debit fee is included.</p> <p><b>Note:</b> The ACH Fee/Direct Debit Fee balance will be displayed in <b>Balances</b> sub tab only when this checkbox is selected.</p>

**Table 4-23 (Cont.) Contract Definition**

Field	Do this
Track Down Payment Balance	<p>Select this check box for system to validate if <b>Down Payment Balance</b> is loaded. This helps to record the Down Payment balance Agreed and Paid by the customer.</p> <p>If selected, system validates if Down Payment Balance is loaded in the contract setup. However, system does not validate Down Payment Balance if unchecked. This check box is available only for Lease contracts.</p>

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### Extension of Terms

The system facilitates extension of terms, provided the following conditions are satisfied:

- Specified number or more payments made in the account
- Gap between the previous and current extension provided in the account must be a specific number of months that could be specified

If the above conditions are not satisfied, then the system displays an appropriate error message.

A new transaction Force Extension will be available. This transaction will be posted when you want the system to bypass the extension validations defined at the contract level.

When a backdated transaction with TXN Date exists before the transaction date of extension, all the transactions are reversed and posted again. If extension transaction is posted again, then the validation rules are not validated again.

This section consists of the following topics:

- [Staged Funding](#)
- [Balances](#)
- [Amortized Balances](#)
- [Itemizations](#)
- [Fees](#)
- [Depreciation Rate Schedule](#)
- [Passthrough Fees](#)

## 4.8.1 Staged Funding

### Staged Funding

Staged funding for closed-end loans allows you to disburse funds to customers through multiple advances or draws up to the approved amount within a specified **draw period**.

#### To create a multiple disbursement contract for a transaction

1. In the Contract Definition section, click **Add** and complete the fields following the instructions above, making sure to complete the following steps:
  - In the Advance Details section, select the Multiple Disbursement Permitted check box. When you select a contract instrument that permits staged funding (multiple

disbursements) on the Funding screen, the system copies the information for that instrument from the Setup Module screen's Contract screen to the Funding screen's Contract screen.

**Note**

You cannot clear the Multi Disbursement Allowed box in the Advance section on the Contract screen.

- Complete the fields in the Advance Details section to define the limits for initial and subsequent advances for staged funding.

**Note**

This information appears in the Advance section of the Funding screen's Contract link.

2. If you choose, set the following APPLICATION CONTRACT EDITS as an ERROR or WARNING on the Setup Module screen's Edits screen.

**Note**

For more information, see the Edits link (Edits screen) section in this chapter.

1. REQUIRED: ADV DRAW END DATE
2. XVL: ADV DRAW END DT MUST BE AFTER CONTRACT DT
3. XVL: ADV DRAW END DT MUST BE LESS THAN FIRST PMT DT - PREBILL DAYS

These edits appear on the Funding screen's Verification screen.

### Repayment scheduling for staged funding

When funding a loan, the system computes repayment schedules from the contract date, irrespective of whether funds have been disbursed or not. The system uses the approved amount (amount financed) for computing repayment schedules on the contract date.

As the might have been disbursed through multiple draws, or the draws have been less than the approved amount, or the amount may have been repaid in some amount before the draw end date, you may need to change the payment amount. In such cases, you can manually change the payment in the system by posting the monetary transaction CHANGE PAYMENT AMOUNT on the Customer Service screen's Maintenance link.

### Disbursements for staged funding

The approved amount for staged funding can be disbursed with the Funding screen or at a later time using the Advances screen. If the first disbursement is requested during funding, you may enter it on the Itemization sub screen of the Funding screen's Contract screen.

If the entire approved amount is not disbursed during initial funding, it can be disbursed using the Advances screen's Advance Entry screen.

If the initial amount on the Advance Entry screen is not within the minimum or maximum limits (as entered in the Advance Details section on the Setup Module screen's Contract screen), the system displays any of the following error or warning messages in the Advances section's Error Reason field:

- ADVANCE AMOUNT IS LESS THAN THE INITIAL ADVANCE AMOUNT MINIMUM  
-or-
- ADVANCE AMOUNT IS MORE THAN THE INITIAL ADVANCE AMOUNT MAXIMUM

The Advance Entry screen also allows you to enter subsequent funding / disbursements. If subsequent advances are not within the predetermined minimum or maximum amounts, the system displays any of the following warning or error messages in the Advances section's Error Reason field:

- ADVANCE AMOUNT IS LESS THAN THE ALLOWED SUBSEQUENT ADVANCE AMOUNT  
-or-
- ADVANCE AMOUNT IS MORE THAN THE ALLOWED SUBSEQUENT ADVANCE AMOUNT

#### Additional messages in the Error Field regarding Staged Funding

If you attempt to post an advance after the draw end date, then the system displays the message in the Advances section's Error Reason field as, **ADVANCE DT IS AFTER DRAW PERIOD END DATE.**

If you attempt to post an advance above the approved amounts, including tolerance, the system displays the message in the Advances section's Error Reason field as **ADVANCE AMOUNT IS MORE THAN THE TOTAL APPROVED AMOUNT INCLUDING TOLERANCE.**

Since this is not a revolving loan, if any repayment is made against the approved amount principal balance, the system will not adjust the disbursed amount allowing for subsequent additional staged funding or advances.

#### Note

There is no change to the payoff quote functionality in the system. The system uses the actual amount of the advance(s) and any interest accrued since the date of the last payment or credit in the PAYOFF QUOTE VALID UPTO DATE value when the payoff quote is requested before the draw end date.

## 4.8.2 Balances

The Balances sub screen lists the balances that will be established when an account is booked and funded.

**CAUTION:** Please contact your Implementation Manager for changes to this section.

#### To set up the Balances

1. Click **Setup > Setup > Administration > User > Products > Contract > LoanLineLease > Balances.**
2. On the Balances sub screen, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-24 Balances**

Field	Do this
Balance Type	Displays the balance type.

Table 4-24 (Cont.) Balances

Field	Do this
Displays the balance type.	Select the charge off method to determine how the outstanding amount of this balance type will be handled from the drop-down list, if the account becomes uncollectable and the product is charged off.
Writeoff Method	Select the write off method to determine how the outstanding amount of this balance type will be handled from the drop-down list, if the account is within the write off tolerance of being PAID.
Reschedule Method	Select the reschedule method to determine how the outstanding amount of this balance type will be handled from the drop-down list, if the account is rescheduled.
Sort	Specify the sort order of how account balances will appear on the Customer Service form's Balance screen.
Billed	Check this box to indicate that outstanding amounts for this balance type are considered a part of the billed amount. This also determines whether payments applied to this balance type are considered when satisfying outstanding amounts due.
Accrued	Check this box to indicate that outstanding amounts for this balance type will be included when interest is accrued against the account.
Non Performing Rollover	<p>Check this box to indicate that <b>non-performing</b> is used as an intermediary status on your general ledger prior to charge off and want to create balances for non-performing accounts for this balance type.</p> <p><b>Note:</b> (The Non-Performing Rollover box applies only to Balance Types of ADVANCE/PRINCIPAL and INTEREST. For all other Balance Types, this box would be cleared).</p>
Non Performing Balance Type	Select the balance type you want to rollover from drop-down list, if you select the Non-Performing Rollover box (Advance/ Principal).
Enabled	Check this box to indicate that this balance type will be created when the account is booked and funded.
<p>This section is applicable if the capitalization frequency is selected as Balance Frequency for the contract and allows you to define capitalization parameters for a specific type of account balance such as <b>Interest</b>.</p> <p><b>Note:</b> The value of parameters defined in this section supersedes the values defined in header section.</p>	
Capitalize	<p>Check this box to enable capitalization parameters for the selected balance type. By default, this option is un-checked.</p> <p><b>Note:</b> The option is disabled for <b>Advance / Principal</b> type of Loan Line contracts and for Lease Receivables.</p>

**Table 4-24 (Cont.) Balances**

Field	Do this
Vendor Passthrough	<p>'Passthrough' in financial term refers to a portion of a payment made to a vendor for specific service. This amount is basically collected by lessor from a lessee and is passed to vendor. For example, maintenance fee paid to a vendor for servicing/maintaining photocopier in corporate office based on a service agreement. Here, the corporate office (lessee) pays to the supplier (lessor) and is transferred to vendor.</p> <p>Select the check box to indicates if there is certain balance enabled for 'Vendor Passthrough'.</p>
	<div> <p><b>Note</b></p> <p>Vendor Passthrough is supported only for 'Fee Balances' and for fee type 'FPMF'. If any other fee type is selected for passthrough, system displays an error as 'Passthrough flag supported for Fee Periodic Types only'.</p> </div>
Frequency	<p>Select the capitalization frequency from the drop-down list. Frequency can be selected using any of the following options:</p> <ul style="list-style-type: none"> <li>Based on specific intervals such as Monthly, Quarterly, Annual and so on.</li> <li>Based on contract Billing Frequency, Billing Date, Due date.</li> <li>Specifically on every Month End.</li> </ul>
Grace Days	<p>Specify the grace days allowed in the frequency (minimum 0, maximum 31) before capitalizing the balances to account. This is also the deciding factor for executing the capitalization batch job which is based on Capitalization Frequency + Grace Days.</p> <p>However, note that Grace Days are not accounted for Month End type of capitalization frequency and is ignored even if specified.</p>

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter. The system loads the currently defined balances for accounts.

If your organization maintains additional balances, contact your Implementation Manager for information regarding those balances.

## 4.8.3 Amortized Balances

With the Amortize Balances sub screen, you can select one or more balances to be amortized over the life of the LoanLine of CreditLease. You can also define the amortization method.

### To set up the Amortization Balances

1. Click **Setup > Setup > Administration > User > Products > Contract > LoanLineLease > Amortized Balances**.
2. In the Amortization Balances section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-25 Amortization Balances**

Field	Do this
Amortize Balance Type	Select the amortize transaction type from the drop-down list.
Amortization Method	Select the amortization method used to calculate the net amortization amount from the drop-down list.
Cost/Fee method	Select the amortization cost/fee method.
Sort	Specify the sort sequence to define the order of the amortize balances.
Enabled	Check this box to enable the amortize balance to be created when the account is booked and funded.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.8.4 Itemizations

On the Itemizations sub screen, you can define the itemized components for each type of contract, indicate if it is required, and determine whether it has a positive or negative bearing on the contract itemization math. You can establish the following groups of itemization transactions:

Advance	Total amount of the product that is not a part of financed fees; in other words, the total amount the customer requested to be advanced.
Financed Fees	Fees rolled into the principal balance of the product. Financed fees are also considered to be a part of the finance charge.
Pre-Paid Fees	Fees that are paid by the consumer prior to the funding of the LoanLine of CreditLease. These fees are not rolled into the balance of the product but are considered as part of the finance charge and are included in the calculation of the APR.
Producer	Fees that are paid to or by the producer of the LoanLine of CreditLease; for example, a fee that is being charged to the producer. These transactions will affect proceeds.
Escrow	Allows you to connect the actual escrow itemization with the escrow type and the funding transaction.

**To set up the Itemizations**

1. Click **Setup > Setup > Administration > User > Products > Contract > LoanLineLease > Itemizations**.
2. On the Itemization sub screen select the option button to indicate the type of itemization you are working with: Advance, Financed Fees, Pre-Paid Fees, Producer, or Escrow.
3. On the Itemization sub screen, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

**Table 4-26 Itemizations**

Field	Do this
Itemization	Select the itemization from the drop-down list.
Disbursement Type	Select the disbursement type from the drop-down list.
Transaction	Select the funding transaction type from the drop-down list.
Itemization Type	Select the itemization type from the drop-down list.  <b>Note:</b> On selecting the <b>Prefunding Txns</b> as itemization type, it indicates that this particular itemization expects a payment from the customer prior to funding.
Sort	Specify the sort order to define the order of the itemization transactions.
Sign	If the itemized transaction increases the group balance, click +ve. -or- If the itemized transaction decreases the group balance, click -ve.
Enabled	Check this box to enable the itemization and indicate that this itemization transaction will be created when the account is booked and funded.
Amortize Balance	Select the amortize balance affected by this itemization transaction from the drop-down list. <b>Note:</b> Advance itemizations do not affect amortize balances.
Refund Calculation Method	Select the refund calculation method from the drop-down list.
Taxable	Check this box, if the itemization type is taxable. However, note that the taxable option defined in Setup > Administration > System > Sale Tax screen will supersede with this preference.
Seller Pmt	Check this box to enable seller payment.
Escrow	Select the escrow from the drop-down list.
Itemization Formula	Select the itemization formula description from the drop-down list.
Refund Calculation Method	Check this box to enable Refund calculation Method.

**Table 4-26 (Cont.) Itemizations**

Field	Do this
Escrow Required	If this is an escrow account, check this box to indicate that an escrow is required during the application process (though at that time the user can choose Opt Out to decline.)
Discount Rate	Specify the discount rate for the itemization.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.8.5 Fees

Any fees that are defined in the contract are set up on the Fees sub screen. The system currently supports the following contract fees:

- Late charges
- Non sufficient funds
- Extensions
- Prepayment penalties
- Delay Fee
- ACH Fee

The Fees sub screen allows you to define those fees whose value and method of calculation are set at the time of the LoanLine of CreditLease. As these amounts cannot be changed after the product is booked and funded, you should only set up fees here that will not change over the life of the LoanLine of CreditLease. Individual contract fee types may be defined multiple times in order to create graduated fees.

### Note

Certain fees, like late fees, can be set up at contract, as well as state level. In such cases, the contract fee, if present, is used first.

### To set up the Fees

1. Click **Setup > Setup > Administration > User > Products > Contract > LoanLineLease > Fees**.
2. In the Fees section, perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields is given below:

**Table 4-27 Contract Fees**

Field	Do this
Type	Select the fee type from the drop-down list.
Txn Amt From	Specify the lowest transaction amount or balance amount against which this contract fee definition may be applied.

Table 4-27 (Cont.) Contract Fees

Field	Do this
Amount Financed From	Specify the minimum value of amount financed on the contract.  <b>Note:</b> This is the <b>Contracted loan amount</b> during origination and would always be the <b>Amount Financed</b> on contract even if principal addition is done through a transaction in servicing.
Credit Limit From	Specify the minimum value of credit limit for the pricing.
Gross Capitalized Cost From	Specify the minimum value of gross capitalization cost.
Method	Select the method of calculating the fee to be assessed from the dropdown list.
Frequency	Select the frequency of calculating the fee to be assessed from the drop-down list.
Threshold Amt	This field is enabled only if the Contract Fee type is either CYCLE BASED COLLECTION LATE FEE or CYCLE BASED LATE FEE.  Specify the threshold amount which is less than or equal to minimum fee amount to be assessed. Based on this amount, system calculates and posts the Cycle Based Collection Late Fee or Cycle Based Late Fee based on the account.  If calculated fee amount is less than threshold amount, fee is posted with transaction amount = 0.  If calculated fee amount is greater or equal to threshold amount, fee is posted based on existing min amt and max amt comparing logic.
Min Amt	Specify the minimum fee amount to be assessed.
Max Amt	Specify the maximum fee amount to be assessed. If you selected FLAT in the Method field, then this field is not used and is normally populated as \$0.00.
Percent	Specify the fee percentage of the outstanding transaction amount to be assessed as a fee. This amount will be adjusted to fall within the Min Amount and the Max Amount.
<b>Passthrough</b> - This is applicable only for Lease Contracts - Rent Factor, Interest Rate, Amortized Methods including Usage/ Rental Methods. 'Passthrough' in financial term refers to a portion of a payment made to a vendor for specific service. This amount is basically collected by lessor from a lessee and is passed to vendor.	
Post Maturity	'Post Maturity' is applicable for 'Evergreen Lease' type of contracts and to indicate if there is an 'Evergreen Lease' transaction posted for account or not.  Select the 'Post Maturity' checkbox to indicate if the passthrough rate is applicable for post maturity also of the account.
Enabled	Check this box to create the selected contract fee when the account is booked and funded.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.8.6 Depreciation Rate Schedule

This tab is enabled if you have selected LIFE BASED depreciation method in Contract Definition and allows to define depreciation rates slab.

### To define Life Based Depreciation Rate Schedule

1. Click **Setup > Administration > User > Products > Contract > Lease > Depreciation Rate Schedule** tab.
2. Perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields is given below:

**Table 4-28 Depreciation Rate Schedule**

Field	Do this
Period	Specify the cycle period sequence for life based depreciation calculation.
Duration	Specify the tenure for which the rate slab is applicable.  For example, if duration is 12, and depreciation convention frequency is Monthly, then rate slab is applicable for first 12 months.
Depreciation %	Specify the percentage of depreciation to be calculated during the above duration.
Enabled	Select the check box to enable the rate schedule.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.8.7 Passthrough Fees

'Passthrough' in financial term refers to a portion of a payment made to a vendor for specific service. This amount is basically collected by lessor from a lessee and is passed to vendor. For example, maintenance fee paid to a vendor for servicing/maintaining photocopier in corporate office based on a service agreement. Here, the corporate office (lessee) pays to the supplier (lessor) and is transferred to vendor.

This sub screen allows you to define Passthrough Fee definition which is used in evergreen lease contracts.

### To set up Passthrough Fees

1. Click **Setup > Setup > Administration > User > Products > Contract > Lease > Passthrough Fees**.
2. In the Passthrough Fees section, perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields is given below:

**Table 4-29 Passthrough Fees**

Field	Do this
Balance Type	Select the required account balance that is enabled for vendor pass through from the drop-down list. The list displays all the 'FPMF (Fee Periodic Maintenance Fee)' balances attached to the contract fee type.
Disbursement Type	Select the type of passthrough disbursement type as either <b>Billing date</b> or <b>Full Fee Receipt</b> from the drop-down list.
<div>  <b>Note</b> System supports only Full Pass through and not Partial. </div>	
Passthrough %	Specify the passthrough percentage to be processed.
Retaining Bal Type	Select the lessor retention balance type from the drop-down list. The list displays all the balances attached to the contract for selection.
Enabled	Check this box to enable the Passthrough feed definition.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.9 Edits

Edits ensure your organization's guidelines are properly followed and that all exceptions are sent to the appropriate personnel to review.

You can configure your system so that during the origination process, at each change to an application's status, the system will perform a set of edits on the Verification link's Edits screen (found on the Application Entry, Underwriting, and Funding windows).

Edits ensure your organization's guidelines are properly followed and that all exceptions are sent to the appropriate personnel to review. If the edits check fails, then the system will not allow the change of status, and the application will remain in its current status. This screen allows you to define the validations the system must perform on the Verification master tab, as the status of application changes.

Origination edits are used to validate applications entered through the standard Application Entry and Applications windows. The Edits screen contains two sections, the Edit Type Definition section and the Edit Sub Type Definition section.

### To set up the Edits

You can either define new Edit Type Definition details or specify a new name in the **New Edit Type** field and click **Create Copy** to create a copy of selected edit type definition with details.

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > User > Products > Edits > LoanLineLease**.
2. On the Edits screen, choose Origination or Open Interface.

3. In the Edit Type Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 4-15 Edits

Figure 4-16 Edits

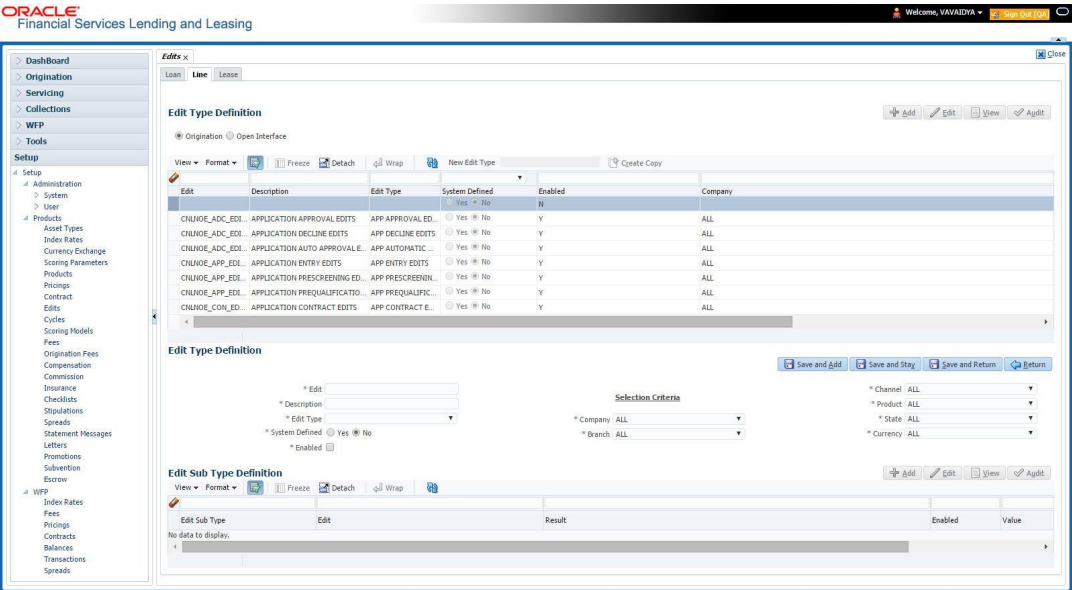

Figure 4-17 Edits

The screenshot shows the 'Edit Type Definition' window in Oracle Financial Services Lending and Leasing. The window has a sidebar with navigation options like Dashboard, Origination, Servicing, Collections, WFP, and Tools. The main area is titled 'Edit Type Definition' and contains a table of edit types. The table has columns: Edit, Description, Edit Type, System Defined, Enabled, and Company. Below the table are input fields for 'Edit', 'Description', 'Edit Type', 'System Defined', 'Enabled', and 'Company'. There are also dropdown menus for 'Channel', 'Product', 'State', and 'Currency'. At the bottom, there is a section for 'Edit Sub Type Definition' with a table for 'Edit Sub Type', 'Result', 'Enabled', and 'Value'.

A brief description of the fields is given below:

Table 4-30 Edit Type Definition

Field	Do this
Edit	Specify the edit name.
Description	Specify the description for the edit.
Edit Type	Select the edit type code from the drop-down list.
System Defined	Select <b>Yes</b> , if the entry is system defined. System defined entries cannot be modified. Select <b>No</b> , if the entry is not system defined and it can be modified.
Enabled	Check this box to enable the edit.
Company	Select the portfolio company associated with this edit, from the drop-down list. This may be ALL or a specific company.
Branch	Select the portfolio branch within the company associated with this edit, from the drop-down list. This may be ALL or a specific branch. This must be ALL if you selected ALL in the <b>Company</b> field.
Channel	Select the channel from the drop-down list, This can be ALL or a specific channel.
Product	Select the product associated with this edit, from the drop-down list. This may be ALL or a specific product.
State	Select the state with this edit from the drop-down list. This may be ALL or a specific product.
Currency	Select the currency associated with this edit, from the drop-down list. This may be ALL or a specific branch.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

5. In the Edit Sub Type Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-31 Edit Sub Type Definition**

Field	Do this
Edit Sub Type	Select the edit sub type for the edit, from the drop-down list.
Edit	Select the description for the edit, from the drop-down list.
Result	Select the result type for the edit, from the drop-down list.
Enabled	Check this box to enable the edit.
Value	Specify the expected value for the first edit. The Value field records the threshold value for the edit. The actual function of the entered value is dependent on the edit category.
Override Responsibility	Select the responsibility that can override the edit, from the drop-down list, if the edit result is an override. Designates the user responsibility level required to continue processing applications that fail the edit based on the Value field. You may define the same edit multiple times with a Result = OVERRIDE and different Value and Override Responsibility combinations to encompass various results.
System Defined	Select <b>Yes</b> , if the entry is system defined. System defined entries cannot be modified. Select <b>No</b> , if the entry is not system defined and it can be modified.

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.  
Using the **Edit Type** field of the **Edit Type Definition** section, you can define when you want the edits check to occur by selecting from the following list of edit types:

**Table 4-32 Edit Type Definition**

Edit type	Description
APP ENTRY EDITS	Edits that normally run on Application Entry form.
APP PRESCREENING EDITS	Edits that run between application entry and the pulling of a credit bureau. These edits determine whether the application should be reviewed further, and whether a credit bureau should be pulled.
PRE Qualify Edits	Edits that run to check whether the minimum details which are required to prequalify the application are satisfied or not.
APP AUTOMATIC APPROVAL EDITS	Edits that run after a credit bureau has been pulled and scored. These edits determine whether an application should be automatically approved or declined.

**Table 4-32 (Cont.) Edit Type Definition**

Edit type	Description
APP APPROVAL EDITS	Edits that run whenever an application is manually changed to a status/sub status that indicates the application (in its current state) should be approved.
APP DECLINE EDITS	Edits that run whenever an application is manually changed to a status/sub status that indicates the application (in its current state) should be declined.
APP CONTRACT EDITS	Edits that run whenever an APPROVED or CONDITIONEDAPPROVED application is about to be funded. These edits ensure the validity of the contract data.

Each entry in the Edit Sub Type field is grouped into the following categories:

**Table 4-33 Edit Sub Type field**

Origination edit sub types	Description
ORIGINATION APPLICANT EDITS	Edits that pertain to data entered for an applicant on an application.
ORIGINATION APPLICATION EDITS	Edits that pertain to data entered for the requested loanline of creditlease.
ORIGINATION ASSET EDITS	Edits that pertain to data entered for asset entered on the application.
ORIGINATION CONTRACT EDITS	Edits that pertain to data entered for the contract on the application.
ORIGINATION CREDIT BUREAU EDITS	Edits that pertain to data gathered from the credit bureau reports for the applicants on the application.
ORIGINATION DECISION EDITS	Edits that pertain to data required to make a decision on the application.

Each entry in the Edit Sub Type field can be set up with more than one entry in the Description field. The purpose of specific edits fall into the following types:

**Table 4-34 Description**

Description starts with	(Edit Category) Description of Edit Category
CHD:	(RECORD POPULATION EDITS) Check for the existence of an entire data record.
DUPLICATE:	(DUPLICATION EDITS) Check for duplication of existing data.
RANGE:	(VALUE RANGE/TOLERANCE EDITS) Check to determine whether data entered for a specific data field is within the specific tolerance.
REQUIRED:	(REQUIRED FIELD EDITS) Check to determine whether a specific data field has been populated within a data record.
FLK:	(LOOKUP VALUE EDIT) Check API entered data against the existence of that value in the related lookup types lookup codes.

**Table 4-34 (Cont.) Description**

Description starts with	(Edit Category) Description of Edit Category
XVL:	(CROSS VALIDATION EDIT) Check to determine whether specific field, or set of fields, value corresponds to a value obtained by calculating them from another field or set of fields (for example, Total Payments = Terms * Standard payment amount).

An Edits check can produce one of three results: an ERROR, a WARNING, or an OVERRIDE.

**Table 4-35 Edits check**

Edit type	Results
ERROR	The system will prevent you from proceeding when an edits check fails. The only option is to change the source data. The application will revert to its previous status/sub status. The user will be directed to correct the specific error. Until the edits that return an ERROR value are addressed, the user cannot continue processing the application.
Warning	When an edits check fails in these cases, the system allows the process to continue. Warnings serve as informational messages and can be ignored. The user will be notified that an edit failed, but the failure need not stop the current processing of the application. The user can either ignore the error, or have the application revert to its previous status/sub status and address the error before processing the application further.
Override	The edit check has failed; however, the system allows users with the responsibility specified in the Override Responsibility field to continue. Multiple override levels can be setup depending upon the resulting value of the edit. If the user has override responsibility, the application will process as if the edit had not failed. If the user does not have override responsibility, the application will revert to its previous status/sub status and the sub status changes to OVERRIDE REQUIRED. The system will then direct the application to a user with the authority to process the application. (See the Queues chapter for more information).

**Note**

Do not set the Result field to Override for credit application edits.

This section consists of the following topic:

- [Interfacing OFSLL with Oracle Rule Author](#)

## 4.9.1 Interfacing OFSLL with Oracle Rule Author

Oracle Business Rules is a component of Oracle Application Server that enables applications to rapidly adapt to regulatory and competitive pressures. This increased agility is possible due to the adoption of Oracle Rule author wherein a lending Institution can create or change a business rule without having to indulge in coding and also without stopping the business process. Also, externalizing business rules allows to manage business rules directly, without involving programmers. It provides best of breed solutions that would help in configuring the rules very quickly by a business analyst or user with some insight on the database.

## 4.10 Cycles

The Cycles screen allows you to define the origination workflow process of your organization. As you delineate the steps in the origination process, you will also define:

- The user responsibilities that have access to perform the steps
- Any edits you want the system to perform between changes in status/sub status.

The following diagram displays the general concept of workflow:

**Figure 4-18 Application Entry - Flowchart**

Cycle code definitions drive the application cycle. The following pairs of status/sub status define status/sub statuses that have system defined meanings and should be included in your origination workflow, if they are not already included.

After entering the basic details of the applicant, you can check whether the application prequalifies or not. If the pre-qualified edits are satisfied, the status is changed to **NEW-PREQUALIFY APPROVED** and you can modify or update any further details in the Application Entry screen. If the edits are not satisfied, the application will be pushed to the REJECTED APPLICATIONS queue with a status update to **REJECTED-PREQUALIFY REJECTED**, then you can also view the rejected pre-qualification in the Underwriting window.

**Note**

The system status and sub status lists are predefined and cannot be changed by the administrator. If you require additional sub status codes, please contact Oracle Financial Services Software to determine whether they can be added.

**Table 4-36 Cycle code definitions**

Status/Sub status	Description
NEW-BLANK	This is the status/sub status of applications during data entry. Applications remain NEW-BLANK until you choose the <b>Next Application</b> on the Application Entry form and the system successfully performs the application edits check.
NEW-PRESCREEN	The system processes the prescreen edits to determine whether a credit report should be pulled for this application or not.
NEW-PRESCREEN APPROVED	Applications in this status/sub status have passed the prescreen edits. The system will now request a credit bureau pull.
NEW-PREQUALIFICATION	The system checks the applicant details whether it is qualified or not.
NEW-PREQUALIFY APPROVED	If the pre-qualified edits are satisfied, the status is changed to <b>NEW-PREQUALIFY APPROVED</b> and you can modify or update any further details in the Application Entry screen.
REJECTED-PREQUALIFY REJECTED	If the edits are not satisfied, the application will be pushed to the REJECTED APPLICATIONS queue with a status update to REJECTED-PREQUALIFY REJECTED.
REJECTED-PRESCREEN REJECTED	Applications in this status/sub status failed the prescreen edits. These applications will receive no further processing. The producer will be sent a decision fax and the consumer will receive an adverse action letter.
NEW-REVIEW REQUIRED	Either based on the scoring of the application's credit bureau(s) pull, or the fact that a credit bureau report was not successfully obtained, the application needs to be reviewed by an underwriter.
NEW-RECOMMEND APPROVAL	Based on the scoring of the application's credit bureau(s) pull, the application should be reviewed by an underwriter. However, based on the current setup, the system recommends approving this application.
NEW-RECOMMEND REJECTION	Based on the scoring of the application's credit bureau(s) pull, the application should be reviewed by an underwriter. However, based on the current setup, the system recommends rejecting this application.
APPROVED-AUTO APPROVED	Based on the scoring of the application's credit bureau(s) pull, the system automatically approves the application. The producer will be sent a decision fax, and the application will be passed to funding.

Table 4-36 (Cont.) Cycle code definitions

Status/Sub status	Description
REJECTED-AUTO REJECTED	Based on the scoring of the application's credit bureau(s) pull, the system automatically rejects the application. The producer will be sent a decision fax and the consumer will receive an adverse action letter.
APPROVED-BLANK	Application has been manually approved. Normally this occurs when an application is in the NEW-RECOMMEND APPROVAL, NEWRECOMMEND APPROVAL status/sub status, or less often in the NEW-RECOMMEND REJECTION status/sub status. Any cycle code definition with next values of APPROVED-BLANK should have a lookup value of APP APPROVAL EDITS to ensure that all of the required data has been gathered in making the decision to approve the application (unless the application is currently in a status/sub status that assures the APP APPROVAL EDITS have been run).
NEW-OVERRIDE REQUIRED	A user without sufficient override authority attempted to approve an application, which, based on setup, required a higher over-ride authority to approve.
APPROVED-VERIFYING	Contract has been received from the producer.
APPROVED-FINAL DOCUMENT CHECK	The contract has been reviewed and the data is correct. Normally this occurs when an application is in APPROVED-FINAL DOCUMENT CHECK OR CONDITIONED-FINAL DOCUMENT CHECK status/sub status. Any cycle code definition with next values of APPROVED-FINAL DOCUMENT CHECK or CONDITIONED-FINAL DOCUMENT CHECK should have a value of APP CONTRACT EDITS to ensure that all of the required data has been gathered in making the decision to approve the application, unless the application is currently in a status/ sub status that assures the APP CONTRACT EDITS have run.
APPROVED-VERIFIED	The application has been processed and is awaiting funding.
APPROVED-FUNDED	The application has been funded, and a check requisition has been created. If Customer Service form is being used, then an account is also created at this time.
REJECTED-BLANK	The application for whatever reason is being manually rejected regardless of its current status/sub status. Any cycle code definition with Next values of REJECTED-BLANK should have a lookup value of APP DECLINE EDITS to ensure that all of the required data has been gathered in making the decision to approve the application (unless the application is currently in a status/sub status that assures the APP DECLINE EDITS have run).
WITHDRAWN-BLANK	The applicants have indicated that they are no longer pursuing this loanline of creditlease.

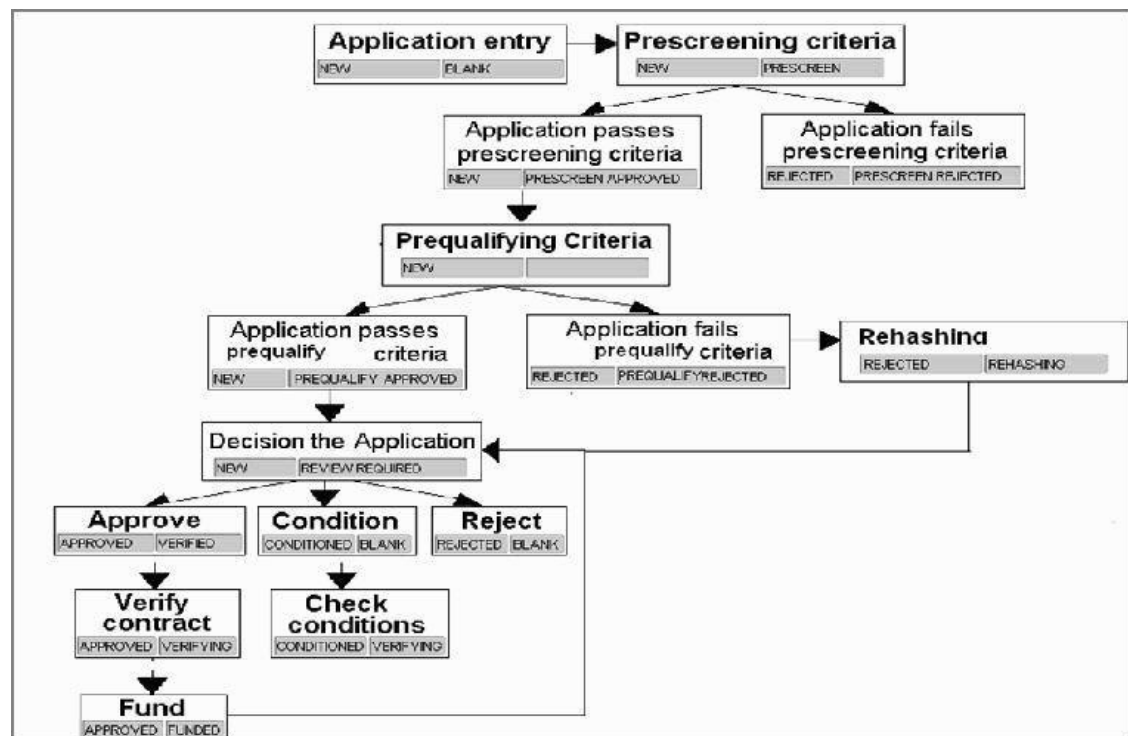

Table 4-36 (Cont.) Cycle code definitions

Status/Sub status	Description
CONDITIONED -<ANY>	These status/sub status pairs are analogous to the corresponding APPROVED-<ANY> pair and indicate that the application has had additional conditions placed on its approval.
<ANY>-<ANY OVERRIDE>	Requires OVERRIDE approval. The meaning of the sub status is analogous to the corresponding OVERRIDE sub status, and may require that specific EDITS run before proceeding.
<ANY>-AGED APPLICATION	These applications have been decisioned but no contract has been received after a period of time determined by setup. If not acted on, these applications will become VOID.
<ANY>-AGED CONTRACT	Contracts have been received after a period of time determined by setup. If not acted on these applications will become VOID.
<ANY>-VOID	Indicate application previously had a sub status of AGED CONTRACT or AGED APPLICATION. These applications have not been completed and were made VOID after another period of time had passed.

Using these status and sub status, let us re-examine the early workflow diagram in this section.

Figure 4-19 Application Entry - Flowchart 2

In the Cycles setup screen, you can also define how Status change of an application is to be permitted in the system i.e. you can configure the system to validate and allow a specific user / responsibility to perform the subsequent status change of the application.

It is like either same **User/Responsibility** is **Permitted** or **Not Permitted** to perform subsequent cycle changes of an application. This can be achieved in Cycle Code Definition section in **Validate Successive Change** field.

### Note

It is extremely important that the APP CONTRACT EDITS run prior to an application being funded. All cycle code definitions should be reviewed to ensure that there are no paths through the origination cycle that bypass this EDIT type.

### To set up the Cycles

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > User > Products > Cycles > LoanLineLease**.
2. While defining new cycle definition, you can make use of copy feature to quickly create new cycle using the existing cycle definition details. Click on the required record in **Cycle Definition** section and specify the product name (available in Products setup screen) in New Product Cycle field. Click **Create Copy**. New cycle definition is created with selected cycle setup details but without user responsibility.
3. In the **Cycle Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Table 4-37 Cycle Definition

Field	Do this
Cycle	Specify the cycle code.

**Table 4-37 (Cont.) Cycle Definition**

Field	Do this
Type	Displays the cycle type.
Product	Select the product from the drop-down list.

4. In the **Cycle Code Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-38 Cycle Code Definition**

Field	Do this
Current Code	Select the current code to transition FROM, from the drop-down list.
Current Sub Code	Select the current sub code to transition FROM, from the dropdown list.
Next Code	Select the current code to transition TO from the drop-down list.
Next Sub Code	Select the next sub code to transition TO, from the drop-down list.
Origination Stage Code	Select the origination stage code of the application from the adjoining drop-down list.
Edit Type	Select the edit type to associate to the cycles, from the drop-down list.

Table 4-38 (Cont.) Cycle Code Definition

Field	Do this
Validate Successive Change	<p>Select the type of user / responsibility who is permitted to perform application status change. The following options are available in the drop-down list as maintained in the Lookup Type STATUS_CHANGE_VALIDATION_CD.</p> <p>NONE: (Default option) Here system does not validate for User / Responsibility while making status change.</p> <p>USER - SAME: Here system validates for same User while making the status change.</p> <p>USER - DIFFERENT: Here system validate for different User while making the status change.</p> <p>RESPONSIBILITY - SAME: Here system validates for same Responsibility of the Current User while making the status change.</p> <p>RESPONSIBILITY - DIFFERENT: Here system validates for different Responsibility of the Current User while making the status change.</p> <p>Note that, the application status change is further controlled by <b>Sub Code</b> value defined in cycle setup for Lookup Type STATUS_CHANGE_VALIDATION_CD. For example, if Sub Code =2 for USER - SAME Lookup Code, then the previous 2 cycles of status change has to be performed by the same user.</p> <p>When a wrong user/responsibility is trying to change the status of the application, system validates with above selection and displays an error indicating <b>User/Responsibility must be same or different between current and previous status change.</b></p> <p>During such cases, to know which User or Responsibility has performed the previous application status change, refer to appropriate columns in Underwriting / Funding &gt; Verification tab &gt; History sub tab.</p>

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
  6. In the Cycle Code Responsibility Definition section, you can define the responsibilities that are authorized to change the code. If you have selected a specific user / responsibility in the **Validate Successive Change** field in the above section, it is recommended to define the user responsibility in this section. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.
- A brief description of the fields is given below:

Table 4-39 Cycle Code Responsibility Definition

Field	Do this
Responsibility	Select the responsibility that will be capable of executing this transition, from the drop-down list.
Allowed	Select <b>Yes</b> to allow change to the status responsibility and <b>No</b> to disallow.

7. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.11 Scoring Models

The Scoring screen allows you to setup individual and multiple scoring models. You can define different scoring models by company, branch, currency and product. Scoring models are used to automate the decisioning process during underwriting and grade applications.

When you complete the Application Entry process, the system determines which scoring model to use by finding a best match. The system searches the Company, Branch, Currency and Product fields of all enabled scoring models that contain either the exact value on the application or ALL. (Exact matches for each field are given a higher weight than matches to ALL.) The system then ranks the returned matches in descending order, based on the weighted values and the hierarchical position of the field and then by Start Date. The system recognizes the first row returned as the best match. This scoring model information is then used to determine the next status and sub status of the application.

If you use a standard bureau score as a scoring model, you can set up the system to use the adverse action reasons provided by the standard bureau score on the Stipulations sub screen.

### To set up the Scoring

On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > User > Products > Scoring Models > LoanLineLease**. You can set the following categories of scoring models:

- [Credit Score Models](#)
- [Behavioral Score Models](#)

### 4.11.1 Credit Score Models

You can either define new Credit Score Model or specify a new name in the **New Credit Model** field and click **Create Copy** to create a copy of selected score model with details.

1. Click **Setup > Setup > Administration > User > Products > Scoring Models > LoanLineLease > Credit Score Models**.
  - In the **Score Models** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 4-23 Score Models

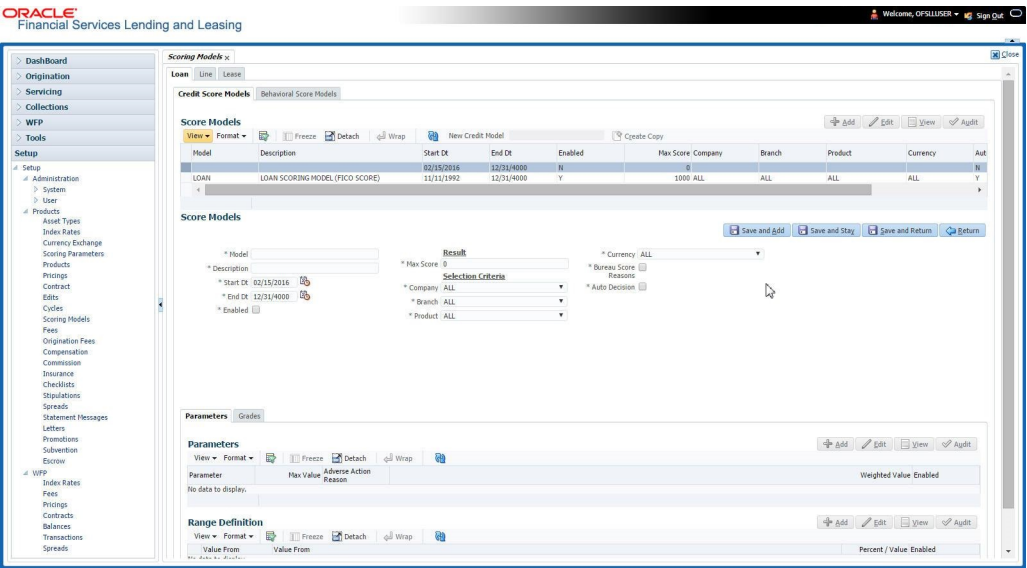

Figure 4-24 Score Models

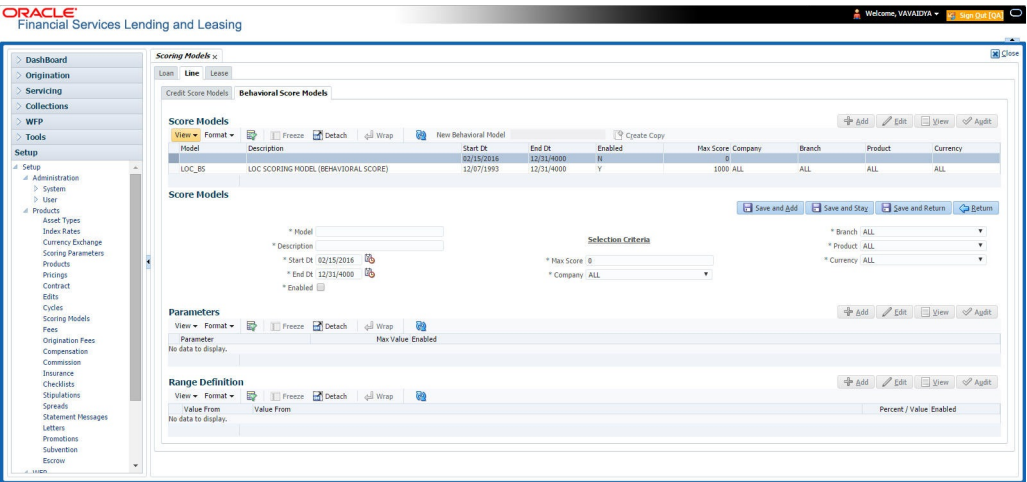

Figure 4-25 Score Models

A brief description of the fields is given below:

Table 4-40 Score Models

Field	Do this
Model	Specify the code for the scoring model.
Description	Specify a description of the scoring model.
Start Dt	Specify the start date for the scoring model. You can even select the date from the adjoining Calendar icon.
End Dt	Specify the end date for the scoring model. You can even select the date from the adjoining Calendar icon.
Enabled	Check this box to enable the scoring model.
<b>Results section</b>	
Max Score	Specify the maximum score allowed. (This is normally the sum of the Max Value fields within the scoring parameters.).
<b>Selection Criteria section</b>	
Company	Select the company for the scoring model, from the drop-down list. This may be ALL or a specific company.
Branch	Select branch within the company for the scoring model, from the drop-down list. (This may be ALL or a specific branch. However, if you have selected <b>ALL</b> in Company field, then you must select <b>ALL</b> for this field).
Product	Select the product for the scoring model, from the drop-down list. This may be ALL or a specific product.

**Table 4-40 (Cont.) Score Models**

Field	Do this
Currency	Select the currency for the scoring model, from the drop-down list. This may be ALL or a specific currency.
Bureau Score Reasons	Check this box to use the score reasons supplied by the credit bureau. If unchecked, then automatically rejected applications scored using this scoring model display the Adverse Action Reasons from the Parameters sub screen.
Auto Decision	Check this box to assign an application, a status/sub status based on the grade associated with the score returned for this scoring model. If not selected, the system assigns applications scored using this scoring model a status/sub status of NEW-REVIEW REQUIRED.

2. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### Parameters

The Parameters records the parameters used to determine the score calculated by the scoring model. You can define multiple parameters and adverse action reason associated with each parameter in a scoring model. Each scoring parameter can have maximum values set. The score range is based upon the information in the Range Definition section on the Parameters sub tab.

The system calculates a final score by adding the score for each parameter in the scoring model. A parameter weighted value is used to find the four adverse action reasons, if bureau reasons are not used.

#### ① Note

- A character parameter range definition should contain the exact value of the parameter.
- Each scoring parameter should have range definitions defined that encompass all of the values that might result.

1. Click **Setup > Setup > Administration > User > Products > Scoring Models > LoanLineLease > Credit Score Models > Parameters**.
2. In the Parameters section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-41 Parameters**

Field	Do this
Parameter	Select the parameter from the field, from the drop-down list.

**Table 4-41 (Cont.) Parameters**

Field	Do this
Max Value	Specify the maximum value allowed for the selected parameter.
Adverse Action Reason	Select the adverse action reason, from the drop-down list. (If, on the Scoring Models screen, the Bureau Screen check box is checked for the scoring model, you cannot update this field).
Weighted Value	Specify the adverse action weighted value. This indicates the priority of this parameter when determining which adverse action reasons to use on the application. The top ten adverse action reasons based on the weighted value of the parameter will be populated.
Enabled	Check this box to enable the parameter.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. The Range Definition section allows you to translate the calculated value for a scoring parameter into the value to be used, depending on the returned value of the parameter.
5. In the Range Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-42 Range Definition**

Field	Do this
Value From	Specify the lowest calculated value to apply the specific translation. The ceiling of the range definition is based on the range definition with the next highest Value From or the Max Value of the scoring parameter (whichever is less).
Value From	Select the following options to determine how values for a scoring parameters are translated: % Max Value – If selected, then the calculated values within the range definition receives a value based on a percentage of the Max Value of the scoring parameter. % Param – If selected, then the calculated values within the range definition receives a value based on a percentage of the calculated value of the scoring parameter. Value – If selected, then the calculated values with in the range definition receives a specific value.
Percent / Value	Specify the percent or value to be used in the translation of the calculated value of the scoring parameter.
Enabled	Check this box to consider this range definition while translating values for this scoring parameter.

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## Grades

The Grades sub screen allows you to define how the system translates the scoring model scores into your organization's grade. The system uses these grades in the auto-decisioning process. Each grade has a specific status/sub status that informs the system what to do with the application of a particular grade as it continues through the origination cycle.

#### **Note**

Each scoring model should have grade definitions defined that encompass all of the values that might result.

1. Click **Setup > Setup > Administration > User > Products > Scoring Models > LoanLineLease > Credit Score Models > Grades**.
2. In the Grade Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-43 Grade Definition**

Field	Do this
Score	Specify the score the application receives.
Credit Grade	Select the grade to assign to an application, from the dropdown list.
Application Status	Select the status to assign to applications with a score starting with the value of this grade definition, from the drop-down list.
Sub Status	Select the sub status to assign to applications with a score starting with the value of this grade definition, from the dropdown list.  Credit scoring allows you to select the following status/sub status pairs: APPROVED - AUTO APPROVED REJECTED - AUTO REJECTED NEW - REVIEW REQUIRED NEW - RECOMMEND APPROVAL NEW - RECOMMEND REJECTION.
Enabled	Check this box to indicate that this grade definition will be considered when grading an application using this scoring model.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.11.2 Behavioral Score Models

You can either define new Behavioral Score Model details or specify a new name in the **New Behavioral Model** field and click **Create Copy** to create a copy of selected score model with details.

1. Click **Setup > Setup > Administration > User > Products > Scoring Models > Loan Line Lease > Behavioral Score Models**.
2. In the Score Models section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 4-26 Behavioral Score Models

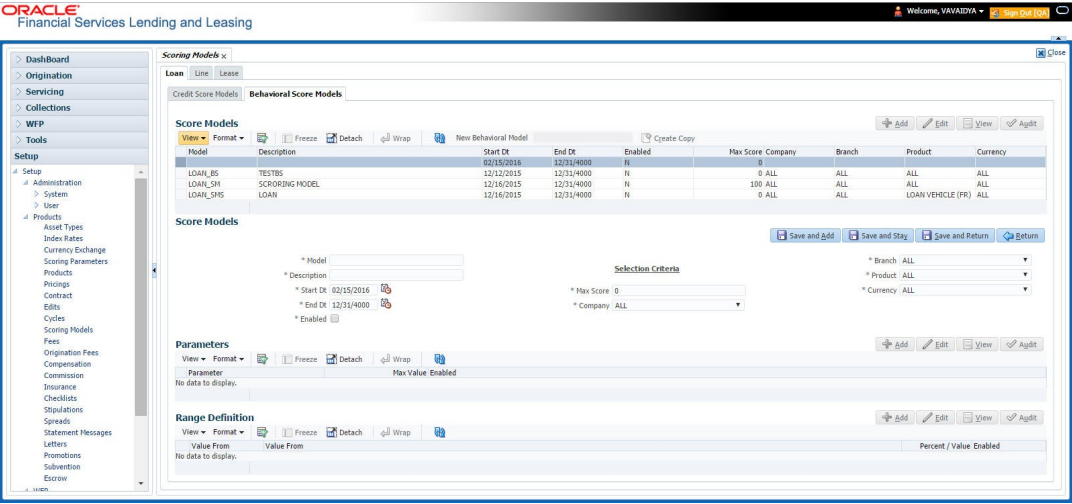

Figure 4-27 Behavioral Score Models

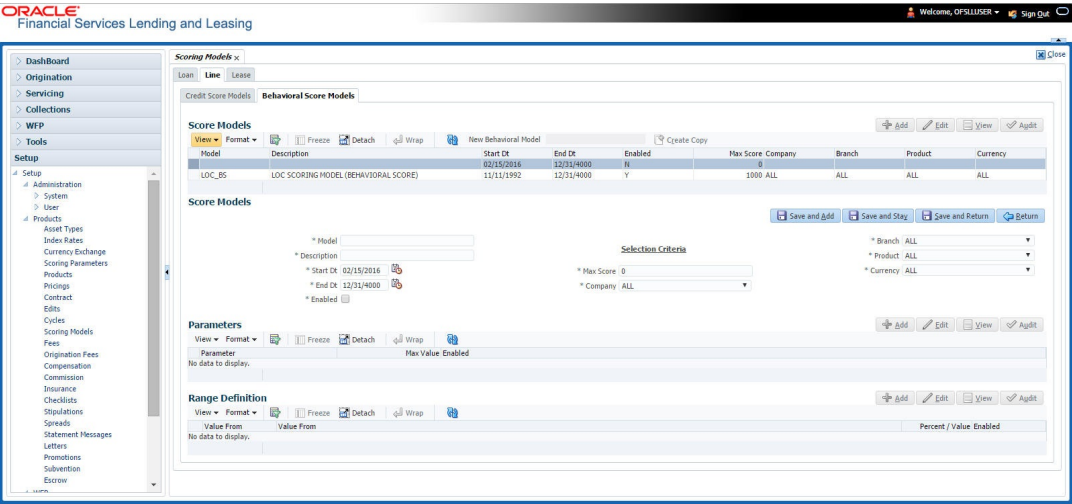

Figure 4-28 Behavioral Score Models

The screenshot displays the 'Scoring Models' window in the Oracle Financial Services Lending and Leasing application. The window has a sidebar with navigation options like Dashboard, Origination, Servicing, Collections, WFP, and Tools. The main area is titled 'Behavioral Score Models' and contains a table of existing models. Below the table are sections for 'Score Models', 'Parameters', and 'Range Definition', each with input fields and buttons for adding, editing, and deleting records.

Model	Description	Start Dt	End Dt	Enabled	Max Score	Company	Branch	Product	Currency
LEASE_B5	LEASE SCORING MODEL (BEHAVIORAL SCORE)	12/07/1993	12/31/4000	N	1000	ALL	ALL	ALL	US DOLLAR
LEASE_B5_TEST_1	LEASE TEST 1	12/17/2015	12/31/4000	N	0	US01	US01	LEASE HOME	US DOLLAR

**Score Models Section:**

- \* Model: [Text Field]
- \* Description: [Text Field]
- \* Start Dt: [Date Picker]
- \* End Dt: [Date Picker]
- \* Enabled: [Checkbox]
- \* Max Score: [Text Field]
- \* Company: [Drop-down List]

- \* Product: [Drop-down List]
- \* Currency: [Drop-down List]

**Parameters Section:**

- \* Parameter: [Text Field]
- \* Value: [Text Field]
- \* Max Value: [Text Field]

**Range Definition Section:**

- \* Value From: [Text Field]
- \* Value To: [Text Field]
- \* Percent / Value: [Text Field]

A brief description of the fields is given below:

Table 4-44 Behavioral Score Models

Field	Do this
Model	Specify the code for the scoring model.
Description	Specify a description of the scoring model.
<b>Result section</b>	
Max Score	Specify the maximum score allowed. (This is normally the sum of the Max Value fields within the scoring parameters.).
<b>Selection Criteria section</b>	
Company	Select the company for the scoring model, from the drop-down list. This may be ALL or a specific company.
Branch	Select branch within the company for the scoring model, from the drop-down list. (This may be ALL or a specific branch. However, if you have selected <b>ALL</b> in Company field, then you must select <b>ALL</b> for this field).
Product	Select the product for the scoring model, from the drop-down list. This may be ALL or a specific product.
Currency	Select the currency for the scoring model, from the drop-down list. This may be ALL or a specific currency.
Bureau Score Reasons	Check this box if bureau score reason is applicable.
Auto Decision	Check this box if auto decision is applicable.
Start Dt	Specify the start date for the scoring model. You can even select the date from the adjoining Calendar icon.

**Table 4-44 (Cont.) Behavioral Score Models**

Field	Do this
End Dt	Specify the end date for the scoring model. You can even select the date from the adjoining Calendar icon.
Enabled	Check this box to enable the scoring model.
<b>Result section</b>	
Max Score	Specify the maximum score allowed. (This is normally the sum of the Max Value fields within the scoring parameters.).
<b>Selection Criteria section</b>	
Company	Select the company for the scoring model, from the drop-down list. This may be ALL or a specific company.
Branch	Select branch within the company for the scoring model, from the drop-down list. (This may be ALL or a specific branch. However, if you have selected <b>ALL</b> in Company field, then you must select <b>ALL</b> for this field).
Product	Select the product for the scoring model, from the drop-down list. This may be ALL or a specific product.
Currency	Select the currency for the scoring model, from the drop-down list. This may be ALL or a specific currency.
Bureau Score Reasons	Check this box if bureau score reason is applicable.
Auto Decision	Check this box if auto decision is applicable.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. Click **Create Copy** button on the Score Models screen to create copy of the selected record with details.  
 The Parameters section records the parameters used to determine the score calculated by the scoring model. You can define multiple parameters and adverse action reason associated with each parameter in a scoring model. Each scoring parameter can have maximum values set. The score range is based upon the information in the Range Definition section on the Parameters sub tab.  
  
 The system calculates a final score by adding the score for each parameter in the scoring model. A parameter weighted value is used to find the four adverse action reasons, if bureau reasons are not used.

**Note**

- A character parameter range definition should contain the exact value of the parameter.
- Each scoring parameter should have range definitions defined that encompass all of the values that might result.

5. In the Parameters section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
 A brief description of the fields is given below:

**Table 4-45 Parameters**

Field	Do this
Parameter	Select the parameter from the field, from the drop-down list.
Max Value	Specify the maximum value allowed for the selected parameter.
Adverse Action Reason	Select the adverse action reason.
Weighted Value	Specify the weighted value.
Enabled	Check this box to enable the parameter.

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
7. The Range Definition section allows you to translate the calculated value for a scoring parameter into the value to be used, depending on the returned value of the parameter.
8. In the Range Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-46 Range Definition**

Field	Do this
Value From	Specify the lowest calculated value to apply the specific translation. The ceiling of the range definition is based on the range definition with the next highest Value From or the Max Value of the scoring parameter (whichever is less).
Value From	Select the following options to determine how values for a scoring parameters are translated: % Max Value – If selected, then the calculated values within the range definition receives a value based on a percentage of the Max Value of the scoring parameter. % Param – If selected, then the calculated values within the range definition receives a value based on a percentage of the calculated value of the scoring parameter. Value – If selected, then the calculated values with in the range definition receives a specific value.
Percent / Value	Specify the percent or value to be used in the translation of the calculated value of the scoring parameter.
Enabled	Check this box to consider this range definition while translating values for this scoring parameter.

9. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.12 Fees

The Fee screen allows you to define fees that may be automatically assessed by the system. The Fee Definition section records fees not defined within the Contract screen's Fees sub screen.

The following fee types are currently supported for automatic assessment:

- Late charge
- NSF
- Extension
- Advance
- Over Credit Limit
- Membership
- Prepayment penalty
- Phone Pay
- Payoff Quote
- Periodic Maintenance Fee
- Rental Fee
- ACH Fee
- Delay Fee
- Other Fee and Tax

Fees can be calculated as either a flat amount or a percentage of payment due based on fee type.

You can specify minimums and maximums for fee amounts in the Min Amt and Max Amt fields. Different fee rules can be setup at the company/branch level.

During the life cycle of a LoanLine of creditLease, it is required to post certain recurring charges or payments that occur at regular intervals, such as monthly, quarterly, or annually which is termed as periodic fees. System allows to post multiple Periodic fees to handle recurring auto-post fee definitions on account by the corresponding batch job. Accordingly you can configure multiple Periodic Fee definitions using Fee Type = FEE PERIODIC MAINTENANCE and FEE PERIODIC MAINTENANCE 1 up to 5 i.e. FPMF, FPMF1, FPMF2, FPMF3, FPMF4, and FPMF5.

When Fees are assessed, the system determines the best match using all enabled fee definitions that meet the following criteria:

- Exactly match the fee type being assessed.
- Have an effective date that is greater than or equal to the start date.
- Have a Txn Amt From that is greater than or equal to the outstanding amount related to the fee assessment.
- Match either the value or ALL for all other criteria (Exact matches for each field are given a higher weight than matches to ALL.)

The returned rows are then given a descending rank based on the weighted values and the hierarchical position of the following criteria:

1. Company
2. Branch
3. Product
4. Application state
5. Transaction amount

6. Start date
7. End date
8. Currency

On the ranked rows, the first row is returned as the best match.

### Note

Certain fees, like late fees, can be set up at contract, as well as state level. In such cases, the contract fee, if present, is used first. Only if the contract fee is not present in the state fee used.

### To set up the Fee

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > User > Products > Fees > LoanLineLease**.
2. In the Fee Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 4-29 Fee Definition

The screenshot displays the Oracle Financial Services Lending and Leasing application. At the top, the Oracle logo and 'Financial Services Lending and Leasing' text are visible. The user is logged in as 'Welcome ABHIRAM' with a 'Sign Out (0)' button. The main window is titled 'Fees' and has tabs for 'Loan', 'Line', and 'Lease'. The 'Fee Definition' section is active, showing a table of fee rules and a detailed form for editing a specific fee rule.

Fee Rule	Fee Type	Start Dt	End Dt	Enabled	Calc Method	Threshold Amt	Min Amt	Max Amt	Percent	Company	Branch
CBCLF	CYCLE BASED COL...	01/01/2000	12/31/4000	Y	FLAT AMOUNT	15.00	20.00	100.00	0.0000	IN01	ALL
CBFLF	CYCLE BASED LAT...	01/01/2000	12/31/4000	Y	FLAT AMOUNT	15.00	20.00	100.00	0.0000	IN01	ALL
FEE LATE CHARGE	FEE LATE CHARGE	01/01/2000	12/31/4000	N	FLAT AMOUNT	0.00	0.00	1,500.00	2.0000	ALL	ALL

FNSF	FEE NSF	11/02/1990	12/31/4000	N	FLAT AMOUNT	0.00	0.00	10.00	0.0000	ALL	ALL
FEE	FEE USAGE	01/01/2000	12/31/4000	N	FLAT AMOUNT	0.00	0.00	100.00	0.0000	ALL	ALL

Below the table, the 'Fee Definition' form is shown for the selected fee rule 'CBCLF'. The form includes fields for Fee Type, Start Dt, End Dt, Enabled, Calc Method, Threshold Amt, Min Amt, Max Amt, Percent, Company, Branch, Channel, Product, State, Currency, Ten Amt From, and Amount Financed From. The 'Enabled' checkbox is checked. The 'Calc Method' is set to 'FLAT AMOUNT'. The 'Threshold Amt' is 15.00 and the 'Min Amt' is 20.00. The 'Max Amt' is 100.00. The 'Percent' is 0.00. The 'Company' is IN01 and the 'Branch' is ALL. The 'Channel' is ALL, 'Product' is ALL, 'State' is ALL, and 'Currency' is ALL. The 'Ten Amt From' is 0.00 and the 'Amount Financed From' is 0.00.

A brief description of the fields is given below:

Table 4-47 Fee Definition

Field	Do this
Fee Rule	Specify the fee rule used to identify the particular fee definition.

Table 4-47 (Cont.) Fee Definition

Field	Do this
Fee Type	Select the fee type from the drop-down list. The system computes these drop-down values from the TXN_TYPE_CD Lookup, with FEE as the sub type.
Start Dt	Specify the start date. You can even select the date from the adjoining Calendar icon.
End Dt	Specify the end date. You can even select the date from the adjoining Calendar icon.
Enabled	Check this box to enable the fee.
Calc Method	<p>Select one of the following method of calculating the fee, from the drop-down list.</p> <p>If <b>Flat Amount</b> is selected, then minimum fee will be charged.</p> <p>If <b>Percentage</b> is selected, then the amount charged will be based on percentage defined subject to minimum and maximum amount (i.e. <b>Txn Amt From</b>).</p>
Threshold Amt	<p>This field is enabled only if the Contract Fee type is either CYCLE BASED COLLECTION LATE FEE or CYCLE BASED LATE FEE.</p> <p>Specify the threshold amount which is less than or equal to minimum fee amount to be assessed. Based on this amount, system calculates and posts the Cycle Based Collection Late Fee or Cycle Based Late Fee based on the account.</p> <p>If calculated fee amount is less than threshold amount, fee is posted with transaction amount = 0.</p> <p>If calculated fee amount is greater or equal to threshold amount, fee is posted based on existing min amt and max amt comparing logic.</p>
Min Amt	Specify the minimum amount for the fee.
Max Amt	Specify the maximum amount for the fee. If you selected FLAT AMOUNT in the Calc Method field, then this field is not used and is normally populated as \$0.00.
Percent	Specify the percentage value of the outstanding transaction amount to be assessed as a fee. This amount will be adjusted to fall within the Min Amount and the Max Amount.
<b>Selection Criteria section</b>	
Company	Select the portfolio company from the drop-down list. This may be ALL or a specific company.
Branch	Select the portfolio branch from the drop-down list. This may be ALL or a specific branch. (This must be ALL, if you have selected <b>ALL</b> in the Company field).
Channel	Select the channel from the drop-down list, This can be ALL or a specific channel.

Table 4-47 (Cont.) Fee Definition

Field	Do this
Product	Select the product from the drop-down list. This may be ALL or a specific product. The available values come from a validated field based on the selected Billing Cycle setup and the Product setup.
State	Select the state for this fee, from the drop-down list. This may be ALL or a specific state.
Currency	Select the currency for this fee, from the drop-down list. This may be ALL or a specific currency.
Txn Amt From	<p>Specify the transaction or balance amount. The fee is calculated using the specifications of this record only if the transaction amount is greater than the value specified in this field (and less than this field in another record for the same fee).</p> <p><b>IMPORTANT:</b></p> <p>When you select the fee to use, the system searches for a best match using the following attributes:</p> <ul style="list-style-type: none"> <li>a. Company</li> <li>b. Branch</li> <li>c. Product</li> <li>d. State</li> <li>e. Amount (Txn Amt From)</li> <li>f. Effective/start date (Start Dt)</li> </ul> <p>Hence, Oracle Financial Services Software recommends creating a version of each fee, where ALL is the value in these fields.</p> <p>It is also recommended that you define a default printer for an Organization, Division and Department.</p>
Amount Financed From	<p>Specify the minimum value of amount financed on the contract.</p> <p><b>Note:</b> This is the <b>Contracted loan amount</b> during origination and would always be the <b>Amount Financed</b> on contract even if principal addition is done through a transaction in servicing.</p>
Credit Limit From	Specify the minimum value of credit limit for the pricing.
Gross Capitalized Cost From	Specify the minimum value of gross capitalization cost.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.13 Asset Billing Rate

In Asset Billing Rate screen you can setup the various parameters associated with **Home** collateral which serves as the input for **Asset Billing** batch job to process and post the dues on to respective accounts in the system.

This section consists of the following topics:

- [Asset Billing Rate Definition](#)
- [Asset Billing Rate Details](#)
- [Asset billing Calculations](#)
- [Asset Billing Rate Setup - File upload](#)
- [Asset Billing Batch Job](#)

### 4.13.1 Asset Billing Rate Definition

In the Asset Billing Rate Definition tab you can create and maintain **Timeshare** specific Home collateral and account details of an account which are used as a selection criteria.

#### To set up Asset Billing Rate Definition

1. On the Oracle Financial Services Lending and Leasing home screen, click Setup > Setup > Administration > User > Products > Asset Billing Rate.

**Figure 4-32 Asset Billing Rate**

The screenshot displays the Oracle Financial Services Lending and Leasing interface. At the top, the Oracle logo and 'Financial Services Lending and Leasing' text are visible. The user is logged in as 'Welcome ABSHEKAR' with a 'Sign Out' button. The main window is titled 'Asset Billing Rate' and contains two tabs: 'Asset Billing Rate Definition' and 'Asset Billing Rate Details'. The 'Asset Billing Rate Definition' tab is active, showing a table with the following data:

Name	Description	Enabled	Company	Branch	Product	State	Channel	Asset Type	Asset Sub Type
ITR2_PPS3	ITR1	Y	SG01	SGHQ	LOAN HOME (VR)	ALL	ALL	ALL	ALL
ITR2_PPS8	ITR1	Y	SG01	SGHQ	LINE HE (VR)	ALL	ALL	ALL	ALL
SG_RATE	SG RATE	Y	SG01	SGHQ	ALL	ALL	ALL	ALL	ALL
SG_FLAT_AMOUNT	SG FLAT AMOUNT	Y	SG01	SGHQ	ALL	ALL	ALL	ALL	ALL
ITR2_UDX_TESTL...	ITR2_UDX_TESTL...	Y	SG01	SGHQ	ISTISNA HOME LO...	ALL	ALL	ALL	ALL

Below the table, the 'Asset Billing Rate Details' tab is visible, showing a table with columns: Start Date, Transaction, Calc Method, Flat Amt, Rate, Frequency, % of Calc Amt, Min Amt, Max Amt, and Base Points. The details table is currently empty, displaying 'No data to display.'

2. In the Asset Billing Rate Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of fields are given below:

**Table 4-48 Asset Billing Rate Definition**

In this field	Do this
<b>Name</b>	Enter a unique name for Asset Billing Rate definition. This field is not editable after saving the record or during EDIT.
<b>Description</b>	Enter the description for Asset Billing Rate definition.
<b>Enabled</b>	Check this box to enable the record.
<b>Selection Criteria</b>	
<b>Company</b>	Select the portfolio company from the drop-down list. This list is populated based on Enabled Company definitions maintained in the system.

Table 4-48 (Cont.) Asset Billing Rate Definition

In this field	Do this
<b>Branch</b>	Select the portfolio branch from the drop-down list.
<b>Product</b>	Select the type of product associated with the collateral from the drop-down list.
<b>State</b>	Select the state to which the account operates from the drop-down list.
<b>Channel</b>	Select the channel from the drop-down list.
<b>Asset Type</b>	Select asset type from the drop-down list. The list is populated based on assets setup.
<b>Asset Sub Type</b>	Select the asset sub type from the drop-down list.
<b>Club Name</b>	Select the Club Name from the drop-down list.
<b>Phase Number</b>	Select the Phase Number from the drop-down list.
<b>Site of Inventory</b>	Select the Site of Inventory from the drop-down list.
<b>Building</b>	Select the Building from the drop-down list.
<b>Unit</b>	Select the Unit from the drop-down list.
<b>Week</b>	Select the Week from the drop-down list.
<b>Room/Unit Type</b>	Select the Room/Unit Type from the drop-down list.
<b>Usage Type</b>	Select the Usage Type from the drop-down list.
<b>Resort Identifier</b>	Select the Resort Identifier from the drop-down list.
<b>Min Actual Points</b>	Specify the minimum actual points for the asset billing definition.
<b>Max Actual Points</b>	Specify the maximum actual points for the asset billing definition.
<b>Min Billing Points</b>	Specify the minimum billing points which is used as the selection criterion in the Asset Billing Rate Definition. Billing points are used to derive the transaction amount that is to be charged to an asset linked to a product of the account.
<b>Max Billing Points</b>	Specify the maximum billing points which is used as the selection criterion in the Asset Billing Rate Definition. Billing points are used to derive the transaction amount that is to be charged to an asset linked to a product of the account.
<b>Association Id</b>	Select the Association Id from the drop-down list.
<b>Club Indicator</b>	Check this box to indicate Club Indicator.
<b>Plus Membership Type</b>	Check this box to indicate Plus Membership Type.
<b>PR Marking</b>	Check this box to indicate PR Marking.
<b>Signature Grand Father</b>	Check this box to indicate Signature Grand Father.

**Table 4-48 (Cont.) Asset Billing Rate Definition**

In this field	Do this
<b>Additional Attributes</b> - This section consists of additional 15 configurable fields as indicated below.	
5 check boxes - Membership 1-5 Opt	
5 drop-down lists - Other Attribute 1-5	
5 Calendar fields - Other Attribute 5-10	

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.13.2 Asset Billing Rate Details

In the Asset Billing Details sub tab, you can define Transactions, their Calculation Method, and other parameters which are posted by Billing Batch Job.

Note that once a record is created in this section, the same is available in Read-Only mode and you can only Enable or Disable the record in Edit mode.

### To set up Asset Billing Rate Details

1. On the Oracle Financial Services Lending and Leasing home screen, click Setup > Setup > Administration > User > Products > Asset Billing Rate.
2. In the Asset Billing Rate Details section, perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of fields are given below:

**Table 4-49 Asset Billing Rate Details**

In this field	Do this
<b>Start Date</b>	Select the date of asset billing from adjoining calendar.
<b>Transaction</b>	Select the transaction from the drop-down list. This list is populated with transactions where the Transaction code = FOTH%.
<b>Calc Method</b>	Select one of the following calculation method from dropdown list. <ul style="list-style-type: none"> <li>• Flat Amt</li> <li>• Rate</li> <li>• Flat Amt + Rate</li> <li>• Tiered Rate</li> <li>• Slab Formula</li> </ul> For more information on above calculation methods, refer to <a href="#">Asset billing Calculations</a> section.
<b>Flat Amt</b>	Specify the flat amount or fixed amount to be charged during asset billing calculation. This field is available if the Calc Method is Flat Amt, Flat Amt + Rate, and Slab based Formula.
<b>Rate</b>	Specify the rate for asset billing calculation. This field is available if the Calc Method is Rate and Flat Amt + Rate.

Table 4-49 (Cont.) Asset Billing Rate Details

In this field	Do this
<b>Frequency</b>	Select the frequency of asset billing calculation from the drop-down list. The list is populated based on frequency maintained in lookup code.
<b>% of Calc Amt</b>	Specify the percentage of amount for calculation. By default, this is set to 100.
<b>Base Points</b>	Specify the base points for asset billing calculation. By default this is set to 1 since a value is required system does not allow to enter 0.  This field is available if the Calc Method is Rate, Flat Amt + Rate, Tiered Rate, and Slab Formula.
<b>Slab Points</b>	Specify the slab points for asset billing calculation. This field is available if the Calc Method is Slab Formula.
<b>% Increase</b>	Specify the percentage increase in each slab for asset billing calculation. This field is available if the Calc Method is Slab Formula.
<b>Min Amt</b>	Specify the base minimum amount to be configured for the resulted transaction amount.  If the resulted Transaction Calculation Amount is less than the Min Amt defined here, system posts the transaction with Min Amt.
<b>Max Amt</b>	Specify the maximum amount to be configured for the resulted transaction amount.
<b>Billing Year</b>	Specify the year in which the Rate is applicable.  The Billing Year is stamped in billing amount transaction description only for FOTH% transactions.
<b>Enabled</b>	Check this box to enable the Asset Billing Rate.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

This section consists of the following topics:

- [Tiered Rate Details sub tab](#)

### 4.13.2.1 Tiered Rate Details sub tab

The Tiered Rate Details sub tab you can define **points** specific tiers with different rates. This sub tab is enabled only if the transaction calculation method is selected as **Tiered Rate** in Asset Billing Rate Details section. For calculation details, refer to [Tiered Rate Calculation](#) section.

#### To set up Tiered Rate Details

1. On the Oracle Financial Services Lending and Leasing home screen, click Setup > Setup > Administration > User > Products > Asset Billing Rate.
2. In the Tiered Rate Details section, perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of fields are given below:

**Table 4-50 Tiered Rate Details**

In this field	Do this
<b>From Points</b>	Specify the points from where the respective rate is applicable.
<b>Rate</b>	Specify the rate for defined points range.
<b>Enabled</b>	Check this box to enable Tiered Rate detail.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.13.3 Asset billing Calculations

This section explains the following calculation methods based on which the Asset Billing is processed in the system:

- [Flat Amount Calculation](#)
- [Rate Calculation](#)
- [Flat Amt + Rate Calculation](#)
- [Tiered Rate Calculation](#)
- [Slab Formula Calculation](#)

### 4.13.3.1 Flat Amount Calculation

In **Flat Amount** calculation, system calculates the Transaction Amount using below formula:

**Table 4-51 Flat Amount Calculation**

Frequency	Billing Cycle	Transaction Amount Calculation
Annual	Monthly	(Flat Amt/12)
Monthly	Annual	(Flat Amt*12)
Annual	Quarterly	(Flat Amt/4)
Quarterly	Annual	(Flat Amt*4)
Annual	Semi Annual	(Flat Amt/2)
Semi Annual	Annual	(Flat Amt*2)
Annual	Annual	(Flat Amt /1)

Consider the above calculation as reference for other combinations of Rate Frequency and Billing cycle.

### 4.13.3.2 Rate Calculation

In **Rate** calculation, system calculates the Transaction Amount using below formula:

**Table 4-52 Rate Calculation**

Frequency	Billing Cycle	Transaction Amount Calculation
Annual	Monthly	(Rate/12)*(Billing Points at collateral / Base Points)

Table 4-52 (Cont.) Rate Calculation

Frequency	Billing Cycle	Transaction Amount Calculation
Monthly	Annual	$(\text{Rate} \times 12) \times (\text{Billing Points at collateral} / \text{Base Points})$
Annual	Quarterly	$(\text{Rate} / 4) \times (\text{Billing Points at collateral} / \text{Base Points})$
Quarterly	Annual	$(\text{Rate} \times 4) \times (\text{Billing Points at collateral} / \text{Base Points})$
Annual	Semi Annual	$(\text{Rate} / 2) \times (\text{Billing Points at collateral} / \text{Base Points})$
Semi Annual	Annual	$(\text{Rate} \times 2) \times (\text{Billing Points at collateral} / \text{Base Points})$
Annual	Annual	$(\text{Rate} / 1) \times (\text{Billing Points at collateral} / \text{Base Points})$

Consider the above calculation as reference for other combinations of Rate Frequency and Billing cycle.

### 4.13.3.3 Flat Amt + Rate Calculation

In **Flat Amt + Rate** calculation, system calculates the Transaction Amount using below formula.

$$\text{Transaction Amount} = \text{Flat Amt} + \text{Rate} \times (\text{Billing Points at Collateral} / \text{Base Points})$$

#### Note

The Rate and Flat amount are adjusted based on Frequency and Billing Cycle.

### 4.13.3.4 Tiered Rate Calculation

In **Tiered Rate** calculation, system selects the **Asset Billing Rate Details** using the Billing Points at Asset and other asset parameters and calculates the transaction amount by deriving the rate from Tiered Rate table.

$$\text{Transaction Amount} = (\text{Tiered Rate}) \times (\text{Tiered Points} / \text{Base Points})$$

For example, if an Asset has 1.5 million points and the range is maintained as - for first million points rate=0.66 with Base Points =1000 and for remaining points rate=0.60 with Base Points = 1000, the Transaction Amount = 1million \* (0.66/1000) + 0.5 million \* (0.6/1000) = 660 + 300 = 960.

Note the following:

- If the range for specific points are not maintained correctly, the same is considered as 0 rate and in-turn the Transaction Amount derived also becomes 0.

For example, if Billing Points are 8000 but if range maintained points is from 10000 with Rate = 0.55 and Base Points = 1, the transaction amount results as  $0 \times (8000 / 1) = 0$ .

- Rate is adjusted based on Frequency and Billing Cycle as mention in **Rate Method**.

### 4.13.3.5 Slab Formula Calculation

In **Slab Formula** calculation, system calculates the Transaction Amount using below formula.

**Transaction Amount = [Flat Amt] + Ceil[{Billing Points - Base Points}/Slab Points]\*{ %Increase / 100}\*Flat Amt}]**

The resultant amount will always be rounded-down.

For example,

Transaction Amount = [491.32+[{(61000-5000)/2500}\*(30.4/100)\*491.32]]

= [491.32+ [Round-down {22.4}\*{149.36}]]

= [491.32+3435.28]

Transaction Amount = 3926.6

#### Note

The Rate and Flat amount are adjusted based on Frequency and Billing Cycle.

### 4.13.4 Asset Billing Rate Setup - File upload

The data in Asset Billing Rate screen can also be created and updated from an external file through SET-IFP input file upload process. While doing so, ensure that the file format of Header and Details record are maintained in required order and the input file is placed in upload area.

During the scheduled batch job run, the asset billing batch job picks-up the data in input file and loads on to the system to create Asset Billing Rate setup records.

However, before processing the details, system performs the following validations:

- If Name of the record is unique and duplicate record is not being updated.
- For Tiered Rate, the details are added only if the Calc Method = Tiered Rate. If not, system displays an error indicating **Tiered Rate Details are not required for <Calc Method>** and the record is added in bad file.
- For update to existing record details, only Enable/Disable option is supported. If there is a mismatch in the name of the record, batch job errors out with message **Record not found** and the record is added in bad file.
- For new records, all the fields are mandatory and default values are applicable.
- Values provided in fields which are of lookup type are validated with lookup code. In case of mismatch, batch job errors out with message **Lookup value not matching** and the record is added in bad file.
- Negative values is not added for number fields.
- Base Point's field does not contain negative, 0, or decimal values.

## 4.13.5 Asset Billing Batch Job

The billing batch job TXNDDT\_BJ\_100\_01 (BILLING/DUE DATES PROCESSING) facilitates to process the asset billing dues on account for **Home** collateral and posts the corresponding transactions.

Listed below is the sequence of processing steps:

1. Billing batch job picks-up the Vacation Ownership (VO) parameters from Servicing > Account > Collateral (Home) > Vacation Ownership tab.
  - The required accounts for Asset billing batch job processing is selected based on the type of account selected in **Due Amt Account Type** field. I.e. in **Vacation Ownership Details** section if the **Billing** option is checked and the Due Amt Account Type is selected as Current or Linked or Master Account, then the billing batch job posts the transactions based on Asset Billing Rate setup in Current account or Linked Account of current Account or Master Account of current Account respectively.
  - In addition, system includes the asset billing points of Linked Account/Associated Account only if the status of those accounts are in any of the status defined in lookup code **ACC\_STATUS\_BILLING\_CD** (ACCOUNT STATUS FOR ASSET BILLING CODES). Account statuses which are not maintained in the lookup code are excluded for asset billing calculation. However, If no statuses are maintained in the lookup, then system will consider all statuses for consolidation.
    - If billing flag is checked and Due Amt Account Type = Current Account, billing batch job posts the transactions based on Asset Billing Rate setup in **Current** account.
    - If billing flag is checked and Due Amt Account Type = Linked Account, billing batch job post the transactions based on Asset Billing Rate setup in **Linked Account of current Account**.
    - If billing flag is checked and Due Amt Account Type = Master Account, billing batch job post the transactions based on Asset Billing Rate setup in **Master Account of current Account**.

Before the due calculation, batch job validates VO parameters with the following:

- If the selected Usage Type sub code is **FULL**, system considers Full points for rate derivation and **Billing points** is considered for Transaction Amount calculation.
- If the selected Usage Type sub code is **HALF**, system considers **Billing Points** for Transaction Amount calculation but rate is derived using full points.
- If the **First Year Proration** check box is selected, then the rate is derived using full points and the Transaction Amount is calculated based on prorated points (not on full points).
- The prorated points are calculated based on Asset **Usage Start Date**.
  - If the usage start date year is equal to first due year, then system prorates the points as indicated in example below:

If First Due Date = 01/01/2018, Usage Start Date = 01/10/2018,

Prorated Points = Billing Points \* (13-1)/12= Billing Points \*1

If First Due Date = 01/01/2018, Usage Start Date = 03/10/2018

Prorated Points = Billing Points \* (13-3)/12= Billing Points\*10/12

**Note:** Number **13** here is used as constant.

- If the usage start date year is before the due date year, system considers the full points for calculating the Transaction Amount and no proration is required here.
- 2. Batch job looks of best matching Asset Rate details and Asset Billing definition in Setup.
- 3. Batch job checks for status (Y/N) of **Multiple Billing Asset Rate** indicator at Account Details > Contract > Billing level to decide if multiple asset rates are applicable for one billing period or not.
  - If **N**, system picks the latest rate which is less than or equal to DUE DATE. In this case only one best match record is fetched to derive Transaction Amount and no multiple asset rates are applicable for one billing period.
  - If **Y**, system fetches multiple rates only when rate End Date (i.e. rate start date + rate frequency) ends with one or more cycle(s) before the next due date. This implies that current rate record does not cover the entire billing period.
  - However, if **Multiple Billing Asset Rate** is set to **Y** but there is no **Rate** available for Due period beyond the Rate End date, system applies the same rate that is picked for Due Period which is Less than or Equal to Due End Date.
- 4. Batch job posts the matched transactions at account level based on calculation method. The following Asset Billing Rate Details are stamped on the transaction posted:
  - Asset Id (Assets)
  - Asset Rate Id (Asset Billing Rate Definition)
  - Asset Rate Details Id (Asset Billing Rate Details)
  - Rate Start Date (Asset Billing Rate Details)
  - Rate Frequency (Asset Billing Rate Details)
  - Calculation Method (Asset Billing Rate Details)
  - Rate (Asset Billing Rate Details)
  - In case of Tiered Rate, Effective Rate is stamped
  - Base Points (Asset Billing Rate Details)
  - Slab Points (Asset Billing Rate Details)
  - % Increase (Asset Billing Rate Details)
  - Billing Year (Asset Billing Rate Details)

On posting the transactions, following validations and outcome are handled:

- If the respective balance for transaction is missing, batch job fails with an error message indicating **Account #: Transaction posting failed Balance not available** in Batch > Request Results block and does not process the account due amount calculation.
  - This can be rectified by posting **Add balance to Account** non-monetary transaction. For more information, refer to Appendix - Non-Monetary transactions section in Servicing User Guides.
- If the transaction posting failed due to an issue in Access grid configuration or Product configuration at transaction codes, batch job displays error indicating **Account #: Transaction posting failed <Reason>** and does not process the account due amount calculation.
- If the Resulted transaction amount is less than Min Amount defined, batch job considers the Min amount and posts the transaction.

- If the Resulted transaction amount is greater than Max Amount defined, batch job considers the Max amount and posts the transaction.

## 4.14 Origination Fees

The system supports the auto computation of origination itemized fees. System administrators can define and maintain the itemization formula on the Origination Fees screen.

An itemization formula can be set up as a computation of other itemizations (such as adding or subtracting one itemization from another) and can consist of multiple itemizations. An itemization formula will have a minimum and maximum value. You can set up a formula value range to be used as the final value.

Itemizations are linked to a product with the Products screen's Product Itemizations subtab.

One itemization can be based on one formula, while the same formula can be attached to multiple itemizations. If a formula is attached to a contract itemization and that formula requires an itemization not present in Formula Definitions screen, then the system displays an error message.

The system will search for any **circular dependency** at the time the contract is enabled. An example of a circular dependency is when Itemization1 has Formula1 attached requiring Itemization2 for computation and Itemization2 has Formula2 attached requiring Itemization1 for computation.

### To set up the Origination Fees

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > User > Products > Origination Fees > LoanLineLease**.
2. In the **Formula Definitions** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 4-33 Origination Fees**

The screenshot displays the 'Origination Fees' screen in the Oracle Financial Services Lending and Leasing application. The left sidebar shows the navigation menu with 'Setup' expanded. The main area is titled 'Origination Fees x' and contains two sections: 'Formula Definition' and 'Formula Details'.

**Formula Definition Section:**

Formula	Description	Min Amt	Max Amt	Enabled
DOC_STAMP_FEE_VR	DOCUMENT STAMP FEE (VR)	0.00	0.00	N
		100.00	300.00	Y

Below the table are input fields for 'Formula', 'Description', and 'Max Amt', along with a 'Save and Add' button.

**Formula Details Section:**

Itemization	Percent	Sort Sign	Enabled
No data to display.			

The 'Formula Details' section also includes buttons for 'Add', 'Edit', 'View', and 'Audit'.

Figure 4-34 Origination Fees

Figure 4-35 Origination Fees

3. A brief description of the fields is given below:

Table 4-53 Formula Definitions

Field	Do this
Formula	Specify the formula code to define computation.
Description	Specify the description for the formula.
Min Amt	Specify the minimum value that should be considered to compute the final value of formula.
Max Amt	Specify the maximum value that should be considered to compute the final value of formula.
Enabled	Check this box to allow the origination fees.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

5. In the Formula Details section of **Setup > Setup > Administration > User > Products > Origination Fees > LoanLineLease > Detail**, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-54 Formula Details**

Field	Do this
Itemization	Select the itemization based on which the itemization formula will derive its computed value, from the drop-down list.
Percentage	Specify the percentage value that should be considered while computing value for itemization formula.
Sort	Specify the sort sequence for the itemization to be considered while computing the value of the itemization formula.
Sign	Select the +ve or -ve sign that needs to be considered between two itemizations for computing the value of the itemization formula.
Enabled	Check this box to allow the itemization details to be used by the system.

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
7. In the Range Details section of **Setup > Setup > Administration > User > Products > Origination Fees > LoanLineLease**, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-55 Range Details**

Field	Do this
Amt From	Specify the value up to which the percentage of final value of the itemization formula to be considered for the final value of itemization formula.
Percent	Specify the percentage value that should be considered while computing the value for the final value of the itemization formula.
Enabled	Check this box to allow the range details to be used by the system.

8. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.15 Compensation

With the Compensation screen, you can define compensation plans for producers who supply the financial institution with applications for loansLease. These compensation plans can be set up at various levels depending upon your organization's needs.

This information is used on the Compensation sub tab on the Origination > Application > Contract tab. The Compensation Plan field lists the plans available based on the contract in use for the application. When you click **Load** on the Compensation sub tab, the system adds the information setup on the Compensation screen.

Compensation can be paid to a producer in a number of ways:

**Table 4-56 Compensation**

Payment calculation method	Description
AS EARNED	The compensation amount is paid out in pieces over the life of the product based upon the interest earned.
PAY AS U GO	The compensation amount is paid out in pieces over the life of the product based upon the interest received by virtue of the payment.
UPFRONT	The entire compensation amount is paid at the time of booking the loanLease.
UPFRONT MONTH END	The entire compensation amount is paid at the month-end of booking the loanLease.
UPFRONT MONTH END (amortize spread formula)	<p>The amount financed will be amortized at a rate equal to the difference between the contract rate and buy rate. The finance charge thus derived would be considered the base compensation amount. the system then allows this base compensation to be split into two components:</p> <ol style="list-style-type: none"> <li>1. Upfront compensation amount</li> <li>2. Remaining compensation amount.</li> </ol> <p>The disbursement method will apply to the remaining compensation portion (total compensation minus the upfront amount).</p>

Compensations can be charged back from a producer, if a product is prematurely paid or charged off. The charge back amount can be calculated using the following methods:

- Earned
- Percentage

You can specify whether the unearned portion or a certain percentage of the total compensation is to be charged back in case of early payoff or charge off.

The period for which the charge back plan can remain active can be set up according to:

- Number of days
- Term (number of months)

#### To set up the Compensation

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > User > Products > Compensation > LoanLease**.
2. In the Compensation Plan Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Table 4-57 Compensation Plan Definition

Field	Do this
Code	Specify the compensation code.
Description	Specify a description of the compensation plan being defined.

**Table 4-57 (Cont.) Compensation Plan Definition**

Field	Do this
Start Dt	Specify the start date for the compensation plan. You can even select the date from the adjoining Calendar icon.
End Dt	Specify the end date for the compensation plan. You can even select the date from the adjoining Calendar icon.
Enabled	Check this box to enable the compensation plan.
<b>Result section</b>	
Disbursement Method	Select the method for calculating the compensation disbursement to be paid, from the drop-down list.
Formula Method	<p>Select the type of formula to be used to calculate the compensation to be paid, from the drop-down list. The system uses following formula methods:</p> <p>FLAT AMOUNT</p> <ul style="list-style-type: none"> <li>Flat amount is paid.</li> </ul> <p>SPREADMARKUP BASE FORMULA</p> <ul style="list-style-type: none"> <li>A formula based on the spreadmarkup between the buy rate and the interest rate offered to the consumer is used.</li> </ul> <p>PERCENTAGE OF ASSET COSTAMOUNT FINANCED</p> <ul style="list-style-type: none"> <li>To calculate the compensation based on percentage of amount financedasset cost using the below formula.            Compensation Amount = (Adjusted Capitalized Cost) * (Max Markup Percentage / 100) * (Factor / 100) * (Additional Factor / 100);</li> </ul>
Formula	Select the formula to be used to calculate Compensation, from the dropdown list. The list is sorted with available option based on Formula method selected.
Factor	Specify the compensation factor; that is, the percentage applied to the compensation to be paid. If this value is not 100.00, it will reduce the compensation amount.
Addl Factor	Specify the additional compensation factor. If this value is not 100.00, it will further reduce the compensation amount.
Max SpreadMark up Or Percent	Specify the maximum compensation SpreadMark up. This limits the SpreadMark up on which compensation will be paid. Spreads exceeding this value will be treated as if the spread was the specified value.
Flat Amt	Specify the flat compensation amount.
Upfront%	Specify the percentage of the compensation allocated upfront.
Paid Off Method	Select the method of the compensation that will be recovered by the producer, from the drop-down list, if the amount is paid early.

**Table 4-57 (Cont.) Compensation Plan Definition**

Field	Do this
Paid Off Basis	Select the basis used to determine the amount of compensation to be recovered from the producer, from the drop-down list, if the amount is paid early.
Paid Off Days	Specify the number of days in which the compensation can be recovered, if the Basis is selected as Days.
Paid Off Term	Specify the term in which the compensation can be recovered, if the Basis is selected as Term.
Paid Off Percent	Specify the percent of the compensation that will be recovered by producer, if the amount is paid off.
Charge off Method	Select the method of the compensation that will be recovered by the producer, from the drop-down list, if the amount is charge off.
Charge off Basis	Select the basis used to determine the amount of compensation to recover from the producer, from the drop-down list, if the product is charged off as uncollectable.
Charge off Days	Specify the number of days in which compensation can be recovered, if the <b>Basis</b> is <b>DAYS</b> .
Charge off Term	Specify the number of terms in which compensation can be recovered, if the <b>Basis</b> is <b>TERM</b> .
Charge off Percent	Specify the percent of the compensation that will be recovered by producer if the account is charged off as uncollectable, and the charge off basis is <b>PERCENTAGE</b> .
<b>Selection Criteria section</b>	
Company	Select the portfolio company, from the drop-down list. This may be <b>ALL</b> or a specific company.
Branch	Select the portfolio branch within the company for the selected compensation plan, from the drop-down list. This may be <b>ALL</b> or a specific branch. This must be <b>ALL</b> if in the Company field you selected <b>ALL</b> .
Billing Cycle	Select the billing cycle for the compensation plan, from the drop-down list.
Product	Select the product for the selected compensation plan, from the dropdown list. This may be <b>ALL</b> or a specific product. The available values come from a validated field based on the selected Billing Cycle setup and the Product setup.
State	Select the state for the selected compensation plan, from the drop-down list. This may be <b>ALL</b> or a specific state.
Currency	Select the currency for the selected compensation plan, from the dropdown list. This may be <b>ALL</b> or a specific currency.
Pro Group	Select the producer group for the compensation plan, from the dropdown list. This may be <b>ALL</b> or a specific producer group.

**Table 4-57 (Cont.) Compensation Plan Definition**

Field	Do this
Pro Type	Select the producer type for the compensation plan, from the drop-down list. This may be ALL or a specific producer type.
Producer	Select the producer for the compensation plan, from the drop-down list. This may be ALL or a specific producer. The available values come from a validated field based on the Pro Group and Pro Type.
Grade	Select the credit grade for this compensation plan, from the drop-down list. This may be ALL or a specific grade.
Amt	Specify the minimum amount financed for the compensation plan.
Term	Specify the minimum term for the compensation plan.
Asset Class	Select the asset class for the compensation plan, from the drop-down list. This may be ALL or a specific asset class. The available values come from a validated field based on the Collateral Type.
Asset Type	Select asset type for the compensation plan, from the drop-down list. This may be ALL or a specific asset type. The available values come from a validated field based on your assets setup.
SubType	Select the asset sub type for this compensation plan, from the dropdown list. This may be ALL or a specific asset sub type. The available values come from a validated field based on your assets setup.
Asset Make	Specify the asset make from the drop-down list. If ALL was selected for either Asset Type or Asset Sub Type, then ALL will be the only available selection for the asset make.
Asset Model	View the asset model from the drop-down list. If ALL was selected for either Asset Type or Asset Sub Type, then ALL will be the only available selection for the asset model (display only).
Age	Specify the asset age.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.16 Commission

The Commission screen allows you to calculate dealer commissions for additional products (for example, life insurance and disability insurance) for loans sold by the dealer and entered in the Itemization sub screen during loan origination. You can setup the various commission plans, which you use or select during funding.

In addition to the criteria, you can also define the insurance itemization, as well as the commission itemization for which the plan is valid.

You can select one of the following two system-defined methods to calculate the commissions:

- Flat amount
- Percentage of itemization amount.

To set up the LoanLease Commission Plan

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > User > Products > Commission > LoanLease**.
2. In the Commission Plan Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Asset Make	Select the asset make associated with the commission, from the drop-down list.
Asset Model	Select the asset model associated with the commission, from the drop-down list.
Age	Specify the asset age associated with the commission.
Ins/Warranty Itemization	Select the insurance or warranty itemization associated with the commission, from the drop-down list.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.17 Insurance

Most financial institutes offer financing for insurance to the borrowers; examples include credit life, credit disability, and GAP. The insurance product offer permits the customer to cancel the insurance in mid term or automatically end when the product matures or is paid-off. The system supports financing of insurance products during origination and automatically end the insurance when the product is paid-off. The system also can compute the rebate premium based on **Rule of 78** or **Actuarial** method. As the customer might cancel the insurance in mid term of the loanlinelease, the system computes the premium rebate on a prorated basis. This also applies to additional insurance purchase during the life of the loanlinelease. Normally, mid term insurance cancellations have associated fees and grace period. In such cases, the customer may cancel the insurance during the grace period without accruing any fees. However, when a customer cancels after the grace period, the result is a predefined fees which the system deducts from the computed rebate.

The system supports mid term insurance cancellation with and without grace period and cancellation fees. With this enhancement of insurance processing, you can define the premium rebate computation with a prorated basis.

You can define financed insurance related itemizations in the Origination Fees screen, as you have in previous releases with the Insurance screen. You can also set the refund method to **Pro Rate Basis** in the Refund Method field in the Contract Itemization section on the Itemization sub screen during setup with the on the Contracts screen.

### To set up the Insurances

You can either define new Insurance details or specify a new code in the **New Insurance** field and click **Create Copy** to create a copy of selected insurance with details.

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Products > Insurance > LoanLineLease**.
2. In the Insurance Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 4-42 Insurance

The screenshot shows the Oracle Financial Services Lending and Leasing Insurance Definition window. The window has a title bar with the Oracle logo and the text 'Financial Services Lending and Leasing'. The main area is divided into several sections:

- Table:** A table with columns: Code, Description, Start Dt, End Dt, Enabled, Insurance Type, Insurance Company, Cancellation/Refund Allowed, and Grace Days. The first row is highlighted in yellow and contains the following data: Code: INS DIS FLAT, Description: INS DIS FLAT AMOUNT, Start Dt: 01/01/1993, End Dt: 12/31/4000, Enabled: Y, Insurance Type: INSURANCE DISAB., Insurance Company: UNDEFINED, Cancellation/Refund Allowed: Y, and Grace Days: 15 FLAT BASIS.
- Insurance Section:** A section with buttons for 'Save and Stay', 'Save and Return', and 'Return'. It also contains a 'Result' section with a dropdown for 'Insurance Type' (set to 'INSURANCE DISABILITY') and a 'Selection Criteria' section with dropdowns for 'Company', 'Branch', 'Product', 'State', and 'Currency' (all set to 'ALL').
- Insurance Details Section:** A section with a 'View' dropdown (set to 'Format'), a 'Format' dropdown, and a 'Freeze' button. It contains a table with columns: Insurance Sub Type, Term From, Rate, and Max Coverage Amt. The first row is highlighted in yellow and contains the following data: Insurance Sub Type: SINGLE, Term From: 0, Rate: 0.0000, and Max Coverage Amt: 0.00 Y.

A brief description of the fields is given below:

Table 4-59 Insurance Definition

Field	Do this
Code	Specify the code associated with the insurance product.
Description	Specify a brief description of the insurance product.
Start Dt	Specify the date from which you can start offering the product to customers. You can even select the date from the adjoining Calendar icon.
End Dt	Specify the date from which to stop offering the product to customers. You can even select the date from the adjoining Calendar icon.
Enabled	Check this box to allow the offering of this insurance product.
<b>Result section</b>	
Insurance Type	Select the insurance types available for financing, from the drop-down list.
Insurance Company	Specify the name of the company through which the insurance product is offered.
Calculation Method	Select the insurance calculation method from the drop down list.
Max Age	Enter the maximum age allowed by the insurance.
Cancellation /Refund Allowed	Check this box to allow the insurance rebate or refund for cancellation or paid-off.
Grace Days	Specify the number of grace days allowed for cancellation without charging a cancellation fee.
Tier	Select the tier from the drop-down list.
Base	Select the base from the drop-down list.
Category	Select the category from the drop-down list.
Days	Enter the number of category days.

**Table 4-59 (Cont.) Insurance Definition**

Field	Do this
Refund Calculation Method	Select the insurance premium refund/rebate calculation method to be used when insurance is cancelled, from the drop-down list.
Cancellation Fee	Specify the amount of the cancellation fee to be charged when the insurance is cancelled.
Grace Day's Cancellation Fee Allowed	Check this box to allow cancellation fees during grace period.
Deduct Fee From	Select one of the followings option from the drop-down list to deduct the cancellation fee: Premium amount - which is deducted upfront before computation Rebate amount - which is deducted after computation
<b>Selection Criteria Section</b>	
Company	Select the portfolio company that can offer the insurance product, from the drop-down list. Select ALL if offered by all companies.
Branch	Select the branch of the specified portfolio company that can offer the insurance product, from the drop-down list. Select ALL if offered by all the branches of the specified portfolio company.
Product	Select the product for which you can offer the insurance product, from the drop-down list. Select ALL if offered for all the products.
State	Select the state for which you can offer the insurance product, from the drop-down list. Select ALL if this is offered for all the states.
Currency	Select the currency for which you can offer the insurance product, from the drop-down list. Select ALL if this is offered for all the states.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. Click **Create Copy** button in the Insurance Definition section to create copy of selected record with details.
5. In the Insurance Details section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-60 Insurance Details**

Field	Do this
Insurance Sub Type	Select the insurance sub type you want to define for the entry in the Insurance section, from the drop-down list. For example SINGLE.
Term From	Specify the minimum term for the insurance sub type.
Rate	Specify the rate for premium calculation per \$1,000.00 for the insurance sub type.

**Table 4-60 (Cont.) Insurance Details**

Field	Do this
Max Coverage Amt	Specify the maximum coverage amount covered by the insurance sub type.
Enabled	Check this box to enable the insurance.

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.18 Checklists

A checklist is an optional set of steps to follow when completing a task in the system, such as the underwriting and funding processes.

Checklists can be used as guidelines to help ensure that the system users follow your business's standard operating procedures and enter all required data. Some checklists are optional, but others such as those related to application decisions or contract verification, may be required depending on the edit sets defined in your system. The Checklists screen allows you to specify the contents of the checklist.

You can define additional checklists for your organization. You can set up multiple checklists for a single type of checklist. These checklists can be differentiated by:

- Company
- Branch
- Product
- Account state

### To set up the Checklists

You can either define new Checklist Type Definition details or specify a new code in the **New Checklist** field and click **Create Copy** to create a copy of selected checklist type definition with details.

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > User > Products > Checklists > LoanLineLease**.
2. In the Checklist Type Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 4-43 Checklists

The screenshot displays the 'Checklists' window in the Oracle Financial Services Lending and Leasing application. The window is divided into a left-hand navigation pane and a main content area. The navigation pane includes sections for Dashboard, Origination, Servicing, Collections, WFP, and Tools, with a 'Setup' section expanded to show various configuration options like Printers, Bank Details, Check Details, Standard Payees, Currencies, Zip Codes, Products, Asset Types, Index Rates, Currency Exchange, Scoring Parameters, Products, Prings, Contract, Edits, Cycles, Scoring Models, Fees, Origination Fees, Compensation, Commission, Insurance, Checklists, Stipulations, Spreads, Statement Messages, Letters, Promotions, Subvention, Escrow, WFP, Index Rates, Fees, and Prings.

The main content area is titled 'Checklists' and contains two tabs: 'Loan' and 'Lease'. The 'Loan' tab is active, showing a table of 'Checklist Type Definition' with columns for Checklist Code, Description, Checklist Type, Company, Branch, and Channel. The table lists several checklist types, including 'APPLICATION ENTRY CHECKLIST', 'BANKRUPTCY CHECK LIST', 'CHARGE OFF CHECKLIST', 'CONTRACT VERIFICATION', and 'DECISION'. Below the table, there is a 'Checklist Type Definition' section with fields for Checklist Code (APP-0001), Description (APPLICATION ENTRY CHECKLIST), Checklist Type (APPLICATION ENTRY VERIFICATION), Company (US01), Branch (USHQ), and Channel (ALL). There are also 'Selection Criteria' fields for Product, State, and Currency, all set to 'ALL'. The 'Checklist Action Definition - Regular' section shows a table with columns for Action Code, Description, and Sort Enabled. The table lists one action: '2 DATA ENTRY COMPLETE?' with a Sort Enabled value of '2 Y'.

Figure 4-44 Checklists

The screenshot displays the 'Checklists' window in the Oracle Financial Services Lending and Leasing application, showing a different checklist type. The navigation pane is the same as in Figure 4-43. The main content area is titled 'Checklists' and contains two tabs: 'Loan' and 'Lease'. The 'Lease' tab is active, showing a table of 'Checklist Type Definition' with columns for Checklist Code, Description, Checklist Type, Company, Branch, and Channel. The table lists several checklist types, including 'CONTRACT VERIFICATION CHECKLIST FOR LINE OF CREDIT', 'DECISION VERIFICATION CHECKLIST', and 'APPLICATION ENTRY VERIFICATION CHECKLIST'. Below the table, there is a 'Checklist Type Definition' section with fields for Checklist Code (CHNLOE-CON-01), Description (CONTRACT VERIFICATION CHECKLIST F), Checklist Type (CONTRACT VERIFICATION CHECKLIST), Company (ALL), Branch (ALL), and Channel (ALL). There are also 'Selection Criteria' fields for Product, State, and Currency, all set to 'ALL'. The 'Checklist Action Definition - Regular' section shows a table with columns for Action Code, Description, and Sort Enabled. The table is empty, with the text 'No data to display.' shown below the table.

Figure 4-45 Checklists

**Checklist Type Definition**

Checklist Code	Description	Checklist Type	Company	Branch	Channel
CHLSCE-CON-0001	CONTRACT VERIFICATION	CONTRACT VERIFICATION CHECKLIST	ALL	ALL	ALL
CHLSCE-DEC-0001	DECISION	DECISION VERIFICATION CHECKLIST	ALL	ALL	ALL
TEST1	TEST1	DECISION VERIFICATION CHECKLIST	ALL	ALL	ALL
TEST_CHK_LEASE_1	TEST_CHK_LEASE_1	APPLICATION ENTRY VERIFICATION CHECKLIST	ALL	ALL	WEB ENTRY

**Checklist Action Definition - Regular**

Action Code	Description	Sort	Enabled
No data to display.			

3. A brief description of the fields is given below:

Table 4-61 Checklist Type Definition

Field	Do this
Checklist Code	Specify the checklist code that identifies checklist being defined.
Description	Specify the description for the checklist.
Checklist Type	Select the checklist type from the drop-down list, to define where the specific checklist will be available in the system.
Company	Select the portfolio company associated with the checklist from the drop-down list. This may be ALL or a specific company.
Branch	Select the portfolio branch associated with the checklist from the drop-down list. This may be ALL or a specific branch. This must be ALL if in the Company field you selected ALL).
Channel	Select the channel from the drop-down list, This can be ALL or a specific channel.
Product	Select the product associated with the checklist from the drop-down list. This may be ALL or a specific product. The available values come from a validated list based on the selected Billing Cycle setup and the Product setup.

**Table 4-61 (Cont.) Checklist Type Definition**

Field	Do this
State	<p>Select the state associated with the checklist type from the drop-down list. This may be ALL or a specific state.</p> <p><b>IMPORTANT:</b> By selecting which edits type to use, the system searches for a best match using the following attributes:</p> <ul style="list-style-type: none"> <li>1 Company</li> <li>2 Branch</li> <li>3 Product</li> <li>4 State</li> </ul> <p>Hence, Oracle Financial Services Software recommends creating one version of each checklist type where ALL is the value in these fields.</p>
Currency	Select the currency associated with the checklist from the drop-down list. This may be ALL or a specific currency.
Enabled	Check this box to enable the checklist.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter. Checklist actions are steps (a set of one or more tasks) related to the checklist you are creating. They are loaded on the Checklist Action Definition section.
5. In the Checklist Action Definition - **Regular** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter  
A brief description of the fields is given below:

**Table 4-62 Checklist Action Definition**

Field	Do this
Action Code	Specify the action code for the checklist.
Description	Specify the description for the action type.
Sort	Specify the sort order to define the placement of the action type on the Checklist sub screen.
Enabled	Check this box to include this action in the checklist.

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
7. In the Checklist Action Definition - **Document** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-63 Checklist Action Definition**

Field	Do this
Action Code	Specify the action code for the checklist.
Description	Specify the description for the action type.
Document Type	Select the document type from the drop-down list.

**Table 4-63 (Cont.) Checklist Action Definition**

Field	Do this
Document Sub Type	Select the document sub type from the drop-down list.
Document Mandatory	Check this box to indicate that the document is mandatory.
Sort	Specify the sort order to define the placement of the action type on the Checklist sub screen.
Enabled	Check this box to include this action in the checklist.

8. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.19 Stipulations

The system supports the automatic generation of default stipulations for loanline of creditlease during origination on the Underwriting window's **Stipulation** sub screen (Decision link). The default stipulations can be maintained by company, branch, product, state, application status and application sub-status on the Stipulations screen.

### To set up the Stipulations

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > User > Products > Stipulations > LoanLineLease**.
2. In the Stipulation Setup section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 4-46 Stipulations**

The screenshot displays the Oracle Financial Services Lending and Leasing interface for the Stipulations screen. The top navigation bar includes 'Dashboard', 'Origination', 'Servicing', 'Collections', 'WFP', and 'Tools'. The left sidebar shows a tree view with 'Setup' expanded, leading to 'Administration', 'User', 'Products', and 'Stipulations'. The main content area is titled 'Stipulations x' and contains a table of stipulations. The table has columns for Company, Branch, Product, State, Currency, Grade, Pricing, Application Status, Application Sub-Status, and Enabled. Below the table is a 'Stipulation Setup' section with dropdown menus for Company, Branch, Product, State, Currency, Grade, Pricing, and Application Status, along with an 'Enabled' checkbox. At the bottom is a 'Stipulation Details' section with a 'Sort' dropdown and an 'Enabled' checkbox.

Figure 4-47 Stipulations

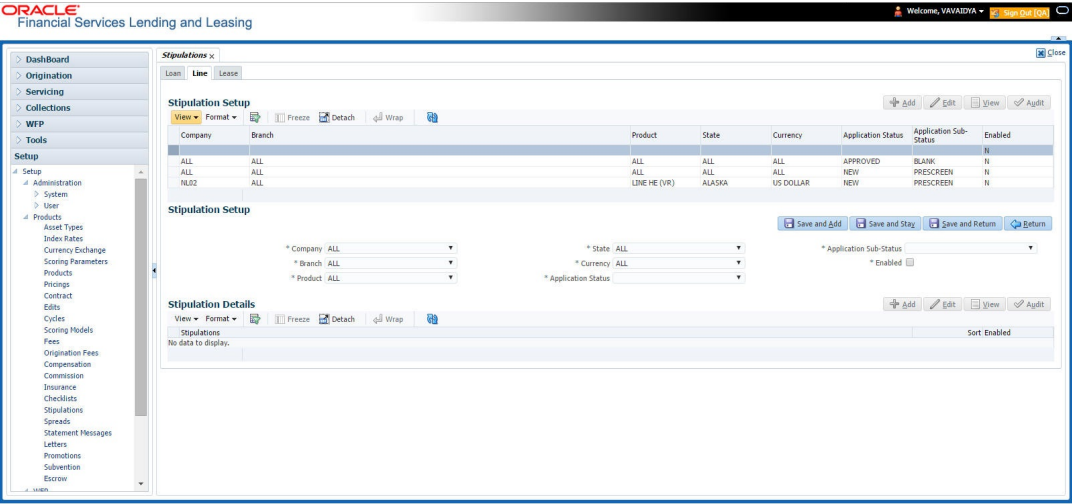

Figure 4-48 Stipulations

A brief description of the fields is given below:

Table 4-64 Stipulation Setup

Field	Do this
Company	Select the portfolio company associated with the default stipulations, from the drop-down list.
Branch	Select the portfolio branch associated with the default stipulations, from the drop-down list.
Product	Select the product associated with the default stipulations, from the drop-down list.
State	Select the state associated with the default stipulations, from the drop-down list.

**Table 4-64 (Cont.) Stipulation Setup**

Field	Do this
Currency	Select the currency associated with the default stipulations, from the drop-down list.
Grade	Select the credit grade from the drop-down list. The list consists of grade parameters defined in Admin User setup to load stipulations during underwriting and funding.
Pricing	Select the pricing from the drop down list. The list consists of pricing parameters defined in Admin User setup to load stipulations during underwriting and funding.
Application Status	Select the application status associated with the default stipulations, from the drop-down list.
Application Sub-Status	Select the application sub status associated with the default stipulations, from the drop-down list.
Enabled	Check this box to allow the default stipulations to be used.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the Stipulation Details section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-65 Stipulation Details**

Field	Do this
Stipulations	Select the stipulation from the drop-down list.
Sort	Specify the sort sequence for the stipulation.
Enabled	Check this box to allow the stipulations details to be used by the system.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.20 Spreads

The Spreads screens allows you to define the payment allocation strategy used by your business while applying payments to accounts. Spreads are selected on the Payment Entry (Payment Maintenance) screens.

Depending on account status and condition, you can also define various combinations of spreads for same account using the Spread Matrix, which can be defaulted when particular accounts are selected for payments.

The Spreads screens consists of the following tabs:

- [Spread Definition](#)
- [Spread Matrix](#)

## 4.20.1 Spread Definition

The Spread Definition section is used to define individual spreads. Many common spreads have already been defined. With each spread, you can define the due date advancement method to use, BRING CURRENT, FUTURE, or NONE.

The Spreads screen records the order in which balances are satisfied when a payment is applied to an account. (Unless someone indicates otherwise, payments will be applied against each balance type, in sort order, until either there is no remaining balance, or the payment has been completely allocated.)

### To set up the Spreads

You can either define new Spread Definition details or specify a new name in the **New Spread** field and click **Create Copy** to create a copy of selected spread definition with details.

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Products > Spreads > LoanLineLease > Spread Definition**. In the Spread Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 4-49 Spreads

The screenshot displays the 'Spreads' configuration page in the Oracle Financial Services Lending and Leasing application. The left sidebar contains a navigation menu with options like Dashboard, Origination, Servicing, Collections, WFP, and Tools. The main content area is titled 'Spreads' and includes tabs for 'Loan', 'Line', and 'Lease'. The 'Spread Definition' section features a table with the following data:

Spread	Description	Due Dt Adv	Enabled
AC	ACTIVE SPREAD	BRING CURRENT	Y
ACEXP	ACTIVE EXPENSE SPREAD	NONE	Y
ACFEE	ACTIVE FEE SPREAD	NONE	Y
CO	CHG OFF SPREAD	BRING CURRENT	Y
CONV	CONVERSION SPREAD	NONE	Y
CONVCHG OFF	CONVERSION CHG OFF SPREAD	NONE	Y
RENTAL_FEE	RENTAL FEE	BRING CURRENT	Y

Below the table, there are input fields for 'Spread', 'Description', and 'Due Dt Adv', along with an 'Enabled' checkbox. At the bottom, the 'Spread Transaction Definition' section shows a table with columns for 'Balance Type', 'Cycle', 'Sort', and 'Enabled'. The 'Balance Type' column currently displays 'No data to display'.

Figure 4-50    Spreads

Figure 4-51    Spreads

A brief description of the fields is given below:

Table 4-66    Spread Definition

Field	Do this
Spread	Specify the code identifying the spread.
Description	Specify the description for the spread. (This usually reflects when this spread is used.).

**Table 4-66 (Cont.) Spread Definition**

Field	Do this
Due Dt Adv	<p>Select the due date advancement code that determines how payments applied using this spread will affect due amounts, from the drop-down list. The system uses the following predefined Due Dt Adv Codes:</p> <p>NONE – Payments applied using this spread will not affect the due amounts of the account in any way.</p> <p>BRING CURRENT – The payment allocations for transactions against an account's outstanding balances that make up the billed balances. This will be applied against billed due amounts.</p> <p>FUTURE – The payment allocations for transactions against an accounts outstanding balances that make up the billed balances. This will be applied against billed due amounts. Any remaining amount allocated against billed balances will be accumulated and applied against future due amounts.</p> <p>FUTURE WITH PRINCIPAL, INTEREST THEN ESCROW</p> <p>FUTURE WITH ESCROW, THEN PRINCIPAL AND INTEREST</p>
Enabled	Check this box to enable the spread.

2. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
3. In the Spread Transaction Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-67 Spread Transaction Definition**

Field	Do this
Balance Type	<p>Select the balance type to allocate a portion of the received payment, from the drop-down list.</p> <p><b>Note:</b> Oracle Financial Services Software recommends that you always setup an ADVANCE/PRINCIPAL balance type for each spread.</p>
Cycle	<p>Specify the balance cycle during which to apply payments. This collects payment on bad (unpaid) cycles. You can go back by only five cycles. Cycle will have a value of <b>0</b> for loans.</p>
Sort	<p>Specify the sort order in which the balance type has payments allocated against it.</p>
Enabled	Check this box for the system to consider this spread transaction when allocating payments.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

**To Load Details**

1. Create a record in Spread Definition section, with Enabled check box unchecked.

- Click **Load Details** button, the system will load the spread transaction definition details.

## 4.20.2 Spread Matrix

The Spread Matrix tab in Spreads screens allows you to define and maintain different combinations of spreads depending on a particular account status, Conditions, Primary Customer State, Amount Financed/Credit Limit/Capitalized Cost and Priority.

When there are multiple spreads defined for an account with different conditions, you can set the priority for the system to sequence the same.

The details maintained here are used to default the **Spread** when a particular account is selected in the Payment Entry or Payment Maintenance screen.

### To set up the Spread Matrix Details

- On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Products > Spreads > LoanLineLease > Spread Matrix**.

Figure 4-52 Spread Matrix

The screenshot displays the Oracle Financial Services Lending and Leasing interface. The main window is titled 'Spreads' and has tabs for 'Loan', 'Line', and 'Lease'. The 'Spread Matrix' tab is active. On the left, there is a navigation menu with options like Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. The 'Setup' menu is expanded, showing various setup options including Pricings, Contract, Edits, Cycles, Scoring Models, Fees, Origination Fees, Compensation, Commission, Insurance, Checklists, Stipulations, Spreads, and Statement Messages. The main area shows the 'Spread Matrix' table with the following data:

Account Status	Account Condition	State	Loan Amt From	Priority	Spread
ACTIVE	BANKRUPTCY	ARMED FORCES AMERICANS...	0.00	2	BKRP-SPRE
ALL	ALL	ALL	0.00	1	FRENTAL_F
ACTIVE	REPOSSESSION	ARMED FORCES AMERICANS...	0.00	1	REPO SPRE

Below the table is the 'Spread Definition' section, which includes fields for Start Dt (08/09/2016), End Dt (12/31/4000), Enabled (checked), Spread, Selection Criteria, and State (ALL). There are also buttons for Save and Add, Save and Stay, Save and Return, and Return.

Figure 4-53 Spread Matrix

A brief description of the fields is given below:

Table 4-68 Spread Matrix

Field	Do this
Start Dt	Select the start date for the spread from the adjoining calendar.
End Dt	Select the end date for the spread from the adjoining calendar.
Enabled	This check box is selected by default indicating that the spread is enabled.
Spread	Select the required product active spread from the drop-down list.

**Table 4-68 (Cont.) Spread Matrix**

Field	Do this
<b>Selection Criteria</b>	
Account Status	Select the account status for the spread from the drop-down list.
Account Condition	Select the account condition for the spread from the dropdown list. <b>Note:</b> You can define multiple conditions for the same account.
State	Select the state of the primary applicant from the drop-down list.
Loan Amt From	Specify the value of Loan amount from where the system should consider the current spread.
Credit Limit From	Specify the value of credit limit amount from where the system should consider the current spread.
Capitalized Cost From	Specify the value of capitalization cost from where the system should consider the current spread.
Priority	Specify the priority when there are multiple conditions posted on the same account. System considers the least numbered priority as first in the sequence.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.21 Statement Messages

The Messages screen allows you to set up messages that appear on account statements sent to customers. You can set up statement messages for different products. When the system generates a statement for an account, all statement messages matching the selection criteria are included in the statement file for that account.

The system inserts the message in the Text field into the statement file produced during the nightly batch job for the appropriate consumers.

A record of an account's statement history, including the messages included in the statement, appears on the Statement's screen on the Customer Service screen.

### To set up the Messages

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > User > Products > Statement Messages > LoanLineLease**.
2. In the Statement Messages section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Figure 4-55 Statement Messages

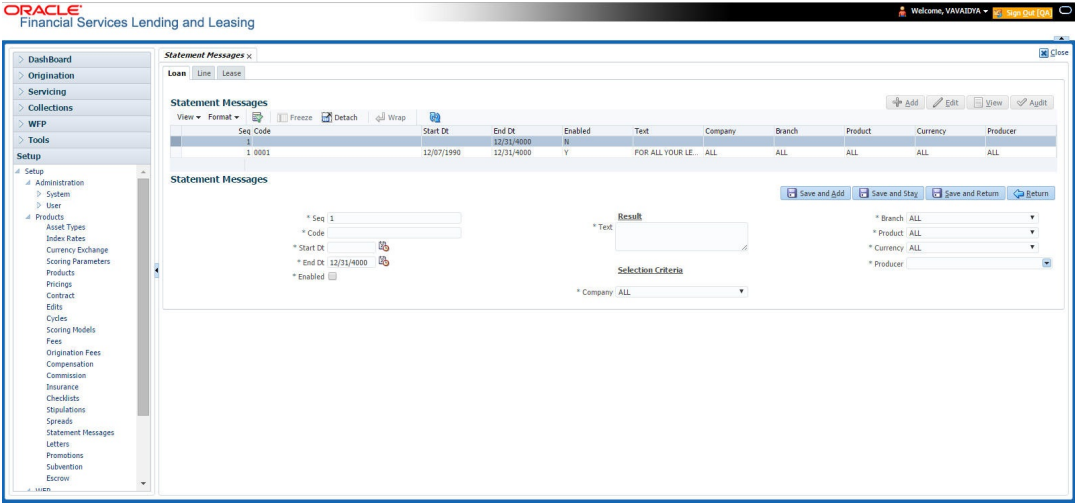

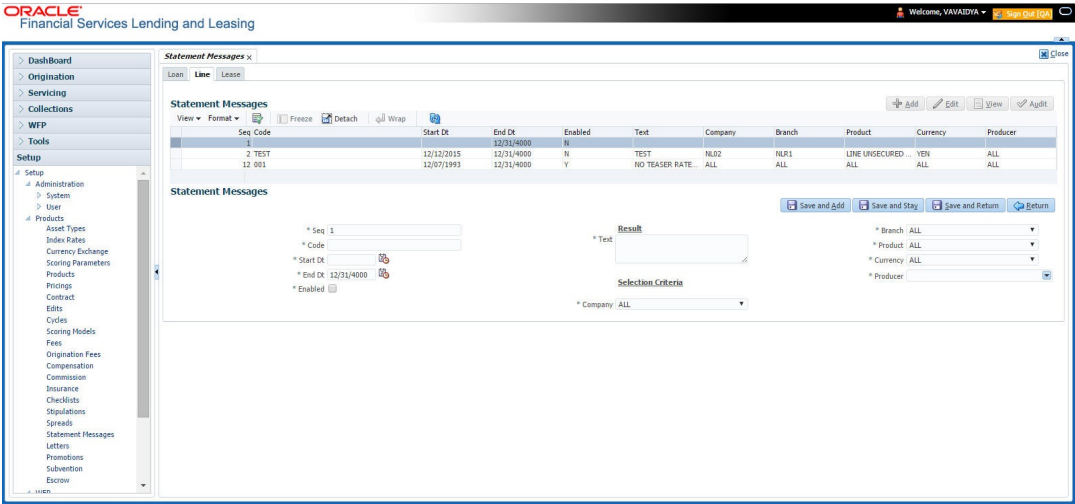

Figure 4-56 Statement Messages

**Figure 4-57 Statement Messages**

A brief description of the fields is given below:

**Table 4-69 Statement Messages**

Field	Do this
Seq	Specify the sort sequence of how the statement message should be printed.
Code	Specify the message code identifying the statement message.
Start Dt	Specify the first date the statement message is available. You can even select the date from the adjoining Calendar icon.
End Dt	Specify the last date the statement message is available. You can even select the date from the adjoining Calendar icon.
Enabled	Check this box to enable the message.
<b>Result section</b>	
Text	Specify the text of the statement message.
<b>Selection Criteria section</b>	
Company	Select the company for the statement message from the drop-down list. This may be ALL or a specific company.
Branch	Select the branch within the company for the statement message from the drop-down list. This may be ALL or a specific branch. This must be ALL if in the Company field you selected ALL.
Product	Select the product for which this statement message will be used from the drop-down list. This may be ALL or a specific product.
Currency	Select the currency for the statement message from the drop-down list. This may be ALL or a specific currency.

**Table 4-69 (Cont.) Statement Messages**

Field	Do this
Producer	<p>Select the producer for the statement message from the drop-down list. This may be ALL or a specific producer. The available values come from a validated field based on the Pro Group and Pro Type.</p> <p><b>IMPORTANT:</b> By selecting which message to use, the system searches for a best match using the following attributes:</p> <ol style="list-style-type: none"> <li>1. Company</li> <li>2. Branch</li> <li>3. Product</li> <li>4. Producer</li> <li>5. Currency</li> </ol> <p>Hence, Oracle Financial Services Software recommends creating one version of each edit type where ALL is the value in these fields.</p>

## 4.22 Letters

The Letters screen allows you to define letters that the system automatically generates when the application or the account for a products meets certain conditions, or **trigger events**. Each letter has its own trigger event. For example, you can configure the system to automatically send a welcome letter when an application becomes an account or send a collection letters when an account becomes delinquent.

The system supports the following types of letters:

**Table 4-70 Types of letters**

Type of letter	Definition
ACCOUNT STATEMENT	Generated when account is to receive a billing statement (this time is defined in contract setup). Letter is sent to customer.
ADVERSE Action letter	Generated in nightly batch jobs for applications that were declined. This letter is sent to the consumer to indicate the reasons why the application was declined.
CONDITIONAL ADVERSE	Generated in nightly batch jobs for applications that were declined.
ACTION LETTER	This letter is sent to the consumer to indicate the reasons why the application was declined. This letter also indicates steps that the consumer may take to gain approval of the application.
COLLECTION LETTER 1	Generated when an account becomes delinquent. This is the first dunning letter sent to the customer.
COLLECTION LETTER 2	Generated when an account remains in delinquency for an extended period. This is the second dunning letter sent to the customer.

**Table 4-70 (Cont.) Types of letters**

Type of letter	Definition
COLLECTION LETTER 3	Generated when an account remains in delinquency for an extended period, even after having received previous notices. This is the final dunning letter sent to the customer.
CONTRACT FUNDING fax/ email	Generated when an application is APPROVED: FUNDED or CONDITIONED: FUNDED. This letter is sent to the producer.
DECISION FAX/ EMAIL	Generated when an application is APPROVED, CONDITIONED, or REJECTED. This letter is sent to the consumer or producer, depending on whether the product is a direct or in-direct loan.
PAID IN FULL LETTER	Generated in nightly batch jobs when the account pays off. This letter is sent to the customer.
PAYOFF QUOTE LETTER	Generated when a payoff quote is created for an account. This letter is sent to the customer.
WELCOME LETTER	Generated when an application is APPROVED: FUNDED. This letter is sent to the consumer. STATEMENT PAST MATURITY Generated when an accounts are matured but unpaid. This letter is sent to the account holders as a reminder to make their payments.

When the system generates letters, it searches the Letters screen for letter definitions that meet the following criteria:

- Definition is enabled.
- Definition is an exact match of the letter code being generated.
- Definition is a match of either the application/account value or ALL for all other criteria.

Exact matches for each field are given a higher weight than matches to ALL.

The returned rows are then given a descending rank based on the weighted values and the hierarchical position of these fields:

1. Company
2. Branch
3. Product
4. State
5. Currency

On the ranked rows, the first row is returned as the best match.

#### To set up the Letters

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > User > Products > Letters > LoanLineLease**.
2. In the Letter Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

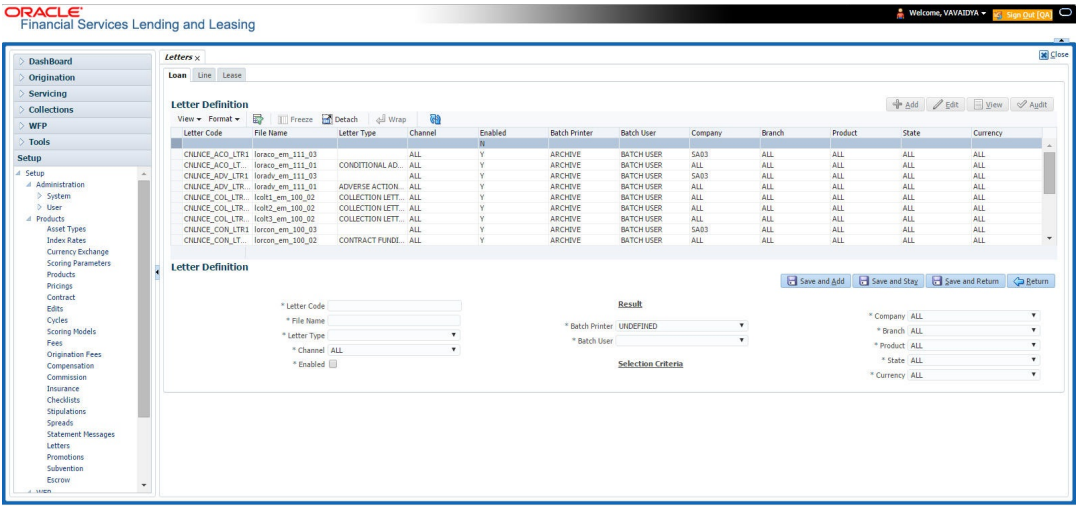

Figure 4-59 Letters

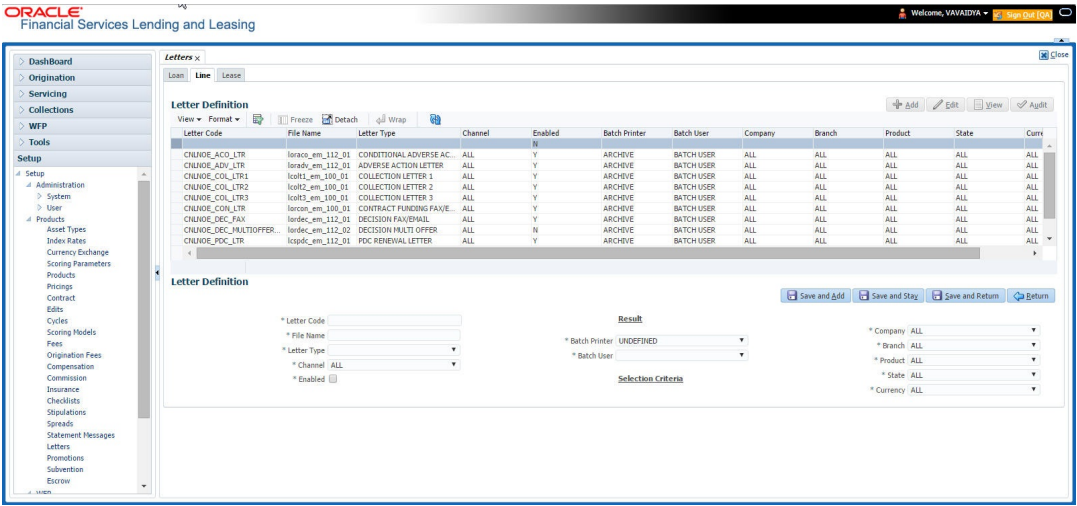

Figure 4-60 Letters

The screenshot displays the 'Letters' window in the Oracle Financial Services Lending and Leasing application. The window is titled 'Letters x' and has tabs for 'Loan', 'Line', and 'Lease'. The 'Letter Definition' section is active, showing a table of letter definitions. The table has the following columns: Letter Code, File Name, Letter Type, Channel, Enabled, Batch Printer, Batch User, Company, Branch, Product, State, and Currency. Below the table, there is a 'Letter Definition' form with fields for Letter Code, File Name, Letter Type, Channel, Enabled, Batch Printer, Batch User, Company, Branch, Product, State, and Currency. The 'Result' section shows 'Batch Printer: UNDEFINED' and 'Batch User: UNDEFINED'. The 'Selection Criteria' section shows 'Company: ALL', 'Branch: ALL', 'Product: ALL', 'State: ALL', and 'Currency: ALL'.

Letter Code	File Name	Letter Type	Channel	Enabled	Batch Printer	Batch User	Company	Branch	Product	State	Currency

A brief description of the fields is given below:

Table 4-71 Letter Definition

Field	Do this
Letter Code	Specify the code for the letter.
File Name	Specify the file name of the Oracle report used to generate the letter. The file should be named <File Name>.rep on your server.
Letter Type	Select the type of letter you want to generate from the drop-down list.
Channel	Select the application source (channel) for the letter from the drop-down list. This may be ALL or a specific channel.
Enabled	Check this box to enable this letter definition.
<b>Result section</b>	
Batch Printer	Select the batch printer being used to generate the letter from the drop-down list.
Batch User	Select the user who will submit this letter from the drop-down list. This will normally be set to BATCH.
<b>Selection Criteria section</b>	
Company	Select the portfolio company for which this letter will be used from the drop-down list. This may be ALL or a specific company.
Branch	Select the portfolio branch for which this letter will be used from the drop-down list. This may be ALL or a specific branch. This must be ALL if in the Company field you selected ALL).
Product	Select the product for which this letter will be used from the drop-down list. This may be ALL or a specific product.

**Table 4-71 (Cont.) Letter Definition**

Field	Do this
State	Select the state for which this letter will be used from the drop-down list. This may be ALL or a specific state.
Currency	Select the currency for which this letter will be used from the drop-down list. This may be ALL or a specific currency.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.23 Promotions

The Introductory tab of Promotions screen allows you to set up the promotions that a financial institution can offer its customers. Promotion details defined here can be selected during Application Entry and Application processing.

You can define multiple promotions for a product, then select the appropriate promotion at the time the application is processed. Promotions also serve as a selection criteria on the Pricing screen.

**CAUTION:** The system supports promotions selected only when a product is funded.

### Note

Promotions will not be supported for amortized and pre-compute loans only be supported for **Interest Rate** type of lease calculation method.

### Same as Cash promotions

In the case of the same as cash promotion:

- If the outstanding amount at the end of the promotional period is within the tolerance amount, then the customer receives the full benefit of the promotion and the system will not charge any interest on the borrowers' account.
- If the outstanding amount is higher than the authorized tolerance amount, then the customer loses the benefit of the promotion and the system computes and charges the borrower interest from the date the product was funded.

### Interest & Payments

Interest still continues to accrue for a account that is funded using the SAME AS CASH promotion. However, the interest accrued during the promotion period is not charged or collected on the account until the end of the promotion period.

Any repayment made by the customer during the promotion period is applied towards the loanlinelease receivables amount. The system then calculates the interest accrual using the reduced loanlinelease receivables amount, if applicable.

If the product remains unpaid after the end of the promotion period and the loanlinelease receivables balance is above any stated tolerance amount, then the system starts collecting interest earned and accrued during the promotion period.

### Pay-off quote during promotion period

If the account is set-up using the SAME AS CASH promotion, then during the promotion period:

1. On the Customer Service > Account Details screen, the system displays only the principal amount and any fees/expenses due. Interest amounts will not be included.
2. The payoff quote generated through the Customer Service > Maintenance screen displays only the principal amount and any fees/expenses due from the borrower(s). If all or any portion of the account is unpaid at the end of the promotion period and is over any set tolerance limit, then the PAYOFF amount displays the total amount (Principal + Interest + other charges, if any) using the current amounts.

### Reduced Rate Introductory Promotions

Oracle Financial Services Lending and Leasing's promotion method PROMOTIONAL RATE allows you to create and specify promotions where customers can be charged lower interest rates during a specific promotional period of time. You may define the length of the promotion in either terms or days. Also, you will be able to set the specific interest rate you want to attach to the promotion. During the promotional period, interest on an account is accrued at the promotional rate. When the promotional period expires, the system changes the interest rate of the product to the contractual interest rate to accrue interest. The promotion expires on the promotion end date defined by the length of the promotion. However, the system allows you to set a grace period for extending the automatic cancellation of the promotion due to delinquency, similar to the grace period associated with a payment date.

### To set up the LoanLineLease Introductory

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > User > Products > Promotions > LoanLineLease Introductory**.
2. In the Promotion Definitions section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 4-61 Promotions-Loan Introductory**

The screenshot displays the Oracle Financial Services Lending and Leasing 'Promotions' interface. The 'Loan Introductory' tab is selected, showing a table of promotion definitions. The table has columns for Code, Description, Type, Period Type, Period, Tolerance Amt, Index, Margin, and Cancel Delq Days. Below the table is a 'Promotion Definition' form with fields for Code, Description, Type, Period, Tolerance Amt, Index, Margin, and Cancel Delq Days.

A brief description of the fields is given below:

Table 4-72 Promotion Definitions

Field	Do this
Code	Specify the code identifying the promotion.
Description	Specify a description of the promotion being offered.
Type	Select the promotion type from the drop-down list.
Period Type	Select the period type from the drop-down list. <b>Note:</b> Select PROMOTIONAL DAYS, if the length of the promotion is to be measured in days. Select PROMOTION TERM, if the length of the promotion is more accurately measured in terms.
Period	Specify the specific promotion period. If you have selected PROMOTIONAL DAYS in the Period Type field, then enter the number of days of the promotion period duration. If you selected PROMOTION TERM, then enter the number of terms for which the promotion applies. Remember that the system uses the same length of the term increment that is used in the billing cycle for the loanLease; for example, weekly, monthly, semi-annual, or annual.
Tolerance Amt	Specify the dollar amount of the allowed <b>tolerance</b> , if applicable. This is the amount that can be outstanding at the end of the promotion period. <b>Note:</b> This applies only to the promotion type SAME AS CASH.
Index	Select the promotional index rate from the drop-down list.
Margin	Specify the promotional margin rate.

**Table 4-72 (Cont.) Promotion Definitions**

Field	Do this
Cancel Delq Days	Specify the tolerance days for the promotion cancellation due to delinquency.
Enabled	Check this box to enable the promotion.
Lease Calc Method	The lease calculation method is selected as <b>INTEREST RATE</b> on save since lease promotion is applicable only for <b>Interest Rate</b> type of calculation method.

**Table 4-73 Promotion Definitions**

Field	Do this
Code	Specify the code identifying the promotion.
Description	Specify a description of the promotion being offered.
Type	Select the promotion type from the drop-down list. Oracle Financial Services Lending and Leasing supports the following promotion types for lines of credit:  NO PAYMENT DUE ANY INTEREST DUE (No payments are required and no interest is accrued on the outstanding accrual balances for x terms).
Term	Select the promotion term from the drop-down list.
Index	Select the promotion index from the drop-down list.
Margin	Specify the promotion margin rate.
Cancel Delq Days	Specify the promotion cancellation delinquency days.
Cancel Overlimit%	Specify the promotion cancellation over limit percentage.
Enabled	Check this box to enable the promotion.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Administration > User > Products > Promotions > Line Incentive**.
5. In the Promotion Definitions section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 4-63 Promotions-Line Incentive**

State	Select the state from the drop-down list.

7. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.24 Subvention

The Subvention Setup screen's loanlease Subvention tab allows you to set up loanlease subvention plans for producers (groups or individuals). Multiple producers may contribute to one subvention plan or a plan can be set for a specific producer.

### Subvention Types

Subvention can be offered in many forms for vehicle loansleases. The most common format is the rate subventionRent factor for vehicle loansleases. RateRent factor subvention involves sharing the finance charge (interest) by the participant (most frequently with the manufacturer). The finance company sets its buy rate (the minimum cost to the company to extend the loanslease to a customer). If the customer rate is less than this buy rate, then the amount is equivalent to the interest amount for the difference (the buy rate minus the customer rate) is paid by the participant as the subvention amount.

Currently Oracle Financial Services Lending and Leasing supports the following subvention types:

LoanLease subvention types:

- Rent factor
- Residual
- Deposit waiver
- Rate
- Cash bonus
- Buy down

Subvention plans can be defined for one participant (for example, a manufacturer or a particular dealer) or group of participants (such as a dealer association). One subvention plan could have multiple sub plans and multiple participants could participate to each sub plan.

### Example

Subvention plan:

- "Summer Special Event"  
Subvention sub-plans for above plan:
- 1.9% for 36 months  
-or-
- 2.99% for 48 months  
-or-
- 3.99% for 60 months  
-or-
- \$1500.00 cash bonus

Multiple participants may participate in each sub plan. For example, for the 1.9% rate, 1% might be shared by the manufacturer and 0.9% might be shared by the dealer. Similarly, for the \$1,500 cash bonus, \$1,000 might be shared by the manufacturer and \$500 by the dealer. Or, the complete \$1,500 might be covered by the manufacturer.

Collection of subvention amounts can be set for each participant in the subvention plan with the Collection Method.

Oracle Financial Services Lending and Leasing supports following collection methods:

**Table 4-75 Collection Method**

Type	Details
UPFRONT	The entire subvention amount is collected at the booking of the LoanLease from the producer proceed.
UPFRONT STATEMENT	The entire subvention amount is collected at the time of the subvention statement.
PAY AS U GO	The subvention amount is billed to the producer when the customer pays the LoanLease payment. The producer is due for the amount at each statement.

### Subvention Refund

There are times when a LoanLease is either paid-off early or gets charged off and the finance company refunds the unearned subvention amount back to the producer. The refund is available only when the subvention amount is collected from the producer proceeds (UPFRONT) or the whole amount is billed in the first statement (UPFRONT STATEMENT).

You can set up the system to allow refunds only for a certain period and not beyond that. The period can be set differently for charge offs and paid offs and can be based on two methods:

1. Days
2. Term

The system provides the following methods for refund amount calculation:

1. Earned
2. Percentage

The earned method is used to refund the unearned portion of the collected subvention amount. The percentage method is used to refund a certain percentage of the subvention amount collected.

This section consists of the following topic:

- [LoanLease Subvention Plans](#)

## 4.24.1 LoanLease Subvention Plans

The LoanLease Subvention Plans screen allows you to set up subventions for LoansLeases.

### To set up the LoanLease Subvention Plans screen.

1. On the Oracle Financial Services Lending and Leasing home screen, Click **Setup > Setup > Products > Subvention > LoanLease**.
2. The system displays the LoanLease Subvention screen. The details are grouped into three.
  - Plan Definition
  - Sub Plan Definition
  - Plan Details.

3. In the **Plan Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Field	Do this
Participant	Select the participant from the drop-down list.
Collection Method	Select the collection method for the subvention plan from the drop-down list.
Transaction	Select the transaction code from the drop-down list.
Rate	Specify the subvention rate.
Enabled	Check this box to activate the record.
<b>Calculation section:</b>	
Method	Select the subvention calculation method from the drop-down list. The list displays the following values: <ul style="list-style-type: none"> <li>• SPREAD DEFAULT</li> <li>• SPREAD DEFAULT - (minus) PRESENT VALUE</li> <li>• FLAT AMOUNT</li> <li>• % OF AMT FINANCED</li> <li>• % OF AMT FINANCED + FLAT AMOUNT</li> <li>• % OF CAPITALIZATION COST GROSS</li> <li>• % of CAPITALIZATION COST GROSS + FLAT AMOUNT</li> </ul>
Override	Check this box to allow overriding the rate at the time of underwriting / funding.
Max Amt	Specify the maximum subvention amount.
% Amt Financed	Specify the percentage of amount financed to derive the Subvention Amount. For example: If Amount Financed = 100\$, and % of Amt Financed = 5%, then the Subvention Amount = $100 * 0.05 = 5\$$
% Capitalized Cost	Specify the percentage of capitalized cost to derive the Subvention Amount. For example: If Capitalized Cost = 100\$, and % of Capitalized Cost = 5%, then the Subvention Amount = $100 * 0.05 = 5\$$
Flat Amt	Specify the flat amount.
Factor	Specify the subvention factor.

**Table 4-78 (Cont.) Plan Details**

Field	Do this
Spread Max	Specify the maximum subvention spread value.
<b>Refund section:</b>	
Paid Off Method	Select the method from the drop-down list, if the account is paid-off early.
Paid Off Basis	Select the basis from the drop-down list, if the account is paid-off early.
Paid Off Period	Specify the number of terms in which the subvention can be refunded to the producer, if the account is paid-off early.
Paid Off Percent	Specify the refund percentage, if the account is paid-off.
Charge Off Calc Method	Select the calculation method from the drop-down list, if the account is charged-off.
Charge Off Basis	Select the charge off basis from the drop-down list.
Charge Off Period	Select the charge off period from the drop-down list.
Charge Off Percent	Select the charge off percent from the drop-down list.
<b>Amortization section:</b>	
Balance Type	Select the amortize balance type from the drop-down list.
Method	Select the amortize method from the drop-down list.
Frequency	Select the amortize frequency from the drop-down list.
Cost / Fee	Select the cost / fee from the drop-down list.

Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.25 Escrow

Oracle Financial Services Lending and Leasing provides tax and insurance escrow for loans. The Escrow screen contains subsection that allow you to set up these features.

This chapter explains the Escrow screen and how to set up escrow in the system.

- [Escrow](#)

### 4.25.1 Escrow

The Escrow Definition screen allows you to review or set up escrow definitions for taxes and insurance and note whether or not cushion is allowed.

#### Navigating to Escrow

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup > Setup > Products > Escrow**. The Escrow details can be setup across three subsections:
  - [Escrow](#)
  - [Shortage/Cushion Rules](#)

- [Disbursement Rules](#)

## 4.25.1.1 Escrow

### To setup Escrow

1. Click **Setup > Setup > Products > Escrow > Escrow**.
2. In the **Escrow Definitions** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 4-66 Escrow Definition**

Escrow	Description	Escrow Type	Cushion Allowed	Incl 1098	Enabled
UNDEFINED			N	N	N
EIH51	PROPERTY MORTGAGE INSURANCE (PMI)	INSURANCES	N	N	Y
EIH52	HAZARD INSURANCE	INSURANCES	Y	N	Y
EIH59	NON ESCROWED INSURANCE	INSURANCES	N	N	Y
ETX51	COUNTY TAX	TAXES	Y	N	Y
ETX50	NON ESCROW TAX	TAXES	N	N	Y

A brief description of the fields is given below:

**Table 4-79 Escrow Definitions**

Field	Do this
Escrow	Specify the escrow code. This is protected against update and cannot be changed after initial set up.
Description	Specify the escrow description.
Escrow Type	Select the escrow type, usually INSURANCES or TAXES from the drop-down list.
Cushion Allowed	Check this box if the escrow you are defining allows for cushion. <b>Note:</b> Cushion rules are used to determine how much cushion should be retained.
Incl 1098	Check this box to include in 1098 reporting.
Enabled	Check this box to enable the escrow definition.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## 4.25.1.2 Shortage/Cushion Rules

In Shortage/Cushion Rules, you can review and set up escrow analysis shortage/cushion rules. Shortage/cushion rules determine how much cushion you are allowed on a particular escrow line and if there is a predicted shortage, how to eliminate it by increasing payment.

### To setup Shortage/Cushion Rules

1. Click **Setup > Setup > Products > Escrow > Shortage/Cushion Rules**.
2. In the **Rules** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 4-67 Shortage/Cushion Rules**

The screenshot shows the Oracle Financial Services Lending and Leasing interface. The left navigation pane has 'Setup' selected, with a sub-menu showing 'Administration', 'System', 'User', 'Products', 'Asset Types', 'Index Rates', 'Currency Exchange', 'Scoring Parameters', 'Products', 'Pricings', 'Contract', 'Edits', 'Cycles', 'Scoring Models', 'Fees', 'Origination Fees', 'Compensation', 'Commission', 'Insurance', 'Checklists', 'Stipulations', 'Spreads', 'Statement Messages', 'Letters', 'Provisions', 'Subvention', and 'Escrow'. The main window is titled 'Escrow.x' and shows the 'Shortage/Cushion Rules' section. It contains a table of rules and a detailed form for editing a rule.

Rule	Description	Start Dt	End Dt	Enabled	Shortage Threshold	Shortage Value	Shortage Spread Increase %	Term	Max Term	Surplus Amt	Company
0001	UNDEFINED	12/07/1993	12/31/4000	N	Y AMOUNT	50.00	30.0000	6	48	1.00	ALL

The 'Rule Details' section shows the following fields:

- \* Rule: UNDEFINED
- \* Description: UNDEFINED
- \* Start Dt: 12/07/1993
- \* End Dt: 12/31/4000
- \* Enabled: ☐
- \* Shortage Threshold: Y AMOUNT
- \* Shortage Value: 50.00
- \* Shortage Spread Increase %: 30.0000
- \* Term: 6
- \* Max Term: 48
- \* Surplus Amt: 1.00
- \* Company: ALL
- \* Branch: ALL
- \* Product: ALL
- \* State: ALL

A brief description of the fields is given below:

**Table 4-80 Rules**

Field	Do this
Rule	Specify the rule code. This is protected against update and cannot be changed after initial set up.
Description	Specify the rule description.
Start Dt	Specify the start date for this rule. You can even select the date from the adjoining Calendar icon.
End Dt	Specify end date for this rule. You can even select the date from the adjoining Calendar icon.
Enabled	Check this box to enable the rule.
<b>Parameters section</b>	
Shortage Threshold	Select the shortage threshold, either an amount or number of installments, from the drop-down list.
Shortage Value	Specify shortage threshold value.
Shortage Spread Increase%	Specify shortage spread increase percent.

**Table 4-80 (Cont.) Rules**

Field	Do this
Term	Specify shortage spread term.
Max Term	Specify the maximum amount of shortage spread terms.
Surplus Amt	Specify surplus threshold amount for this rule.
Company	Select the company for this rule from the drop-down list.
Branch	Select the branch for this rule from the drop-down list.
Product	Select the product for this rule from the drop-down list.
State	Select state for this rule (required).  <b>IMPORTANT:</b> When you select which escrow rule to use, the system searches for a best match using the following attributes: 1. Company 2. Branch 3. Product 4. State  Hence, the system recommends creating one version of each rule, where ALL is the value in these fields.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Rule Details** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.  
A brief description of the fields is given below:

**Table 4-81 Rule Details**

Field	Do this
Escrow Type	Select escrow type from the drop-down list.
Cushion Type	Select cushion type from the drop-down list.
Cushion Value	Specify cushion value.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

**Note**

While considering the cushion rules, preference is provided either for all records and then for Insurances or taxes maintained in a particular shortage or cushion rule.

### 4.25.1.3 Disbursement Rules

The Rules screen allows you to define the disbursement rules for your escrow.

#### To setup Disbursement Rules

1. Click **Setup > Setup > Products > Escrow > Disbursement Rules**.

2. In the **Escrow Disbursement Rules** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

**Figure 4-68 Escrow Disbursement Rules**

The screenshot shows the Oracle Financial Services Lending and Leasing application. The left navigation pane includes sections like Dashboard, Origination, Servicing, Collections, WFP, and Tools. The main window is titled 'Escrow Disbursement Rules' and contains a table with columns: Disbursement Rule, Description, Company, Branch, Start Dt, End Dt, Enabled, Jan %, Feb %, Mar %, Apr %, May %, Jun %, Jul %, and Aug %. Below the table is a form for creating or editing a rule, with fields for Disbursement Rule, Description, Company, Branch, Start Dt, End Dt, Enabled, and a Disbursement % section with input fields for each month and a Total % field.

A brief description of the fields is given below:

**Table 4-82 Escrow Disbursement Rules**

Field	Do this
Disbursement Rule	Specify the disbursement rule. This is protected against the update and cannot be changed after initial set up.
Description	Specify the description.
Company	Select the company from the drop-down list.
Branch	Select the branch from the drop-down list.
Start Dt	Specify the start date. You can even select the date from the adjoining calendar icon.
End Dt	Specify the end date. You can even select the date from the adjoining calendar icon.
Enabled	Check this box to enable this disbursement rule.
<b>Disbursement section</b>	
Jan%	Specify the percent to be disbursed in January.
Feb%	Specify the percent to be disbursed in February.
Mar%	Specify the percent to be disbursed in March.
Apr%	Specify the percent to be disbursed in April.
May%	Specify the percent to be disbursed in May.
Jun%	Specify the percent to be disbursed in June.
Jul%	Specify the percent to be disbursed in July.
Aug%	Specify the percent to be disbursed in August.

**Table 4-82 (Cont.) Escrow Disbursement Rules**

Field	Do this
Sep%	Specify the percent to be disbursed in September.
Oct%	Specify the percent to be disbursed in October.
Nov%	Specify the percent to be disbursed in November.
Dec%	Specify the percent to be disbursed in December.
Total%	Displays total annual disbursement percentage. This figure is the sum of the monthly disbursements and must equal 100 percent.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

**Note**

You cannot save the disbursement rule, if the Total% is not equal to 100.

# A

## Appendix : System Parameters

This topic consists of the following sections:

- [Introduction](#)
- [System Parameters](#)
- [Organization Parameters](#)
- [Company Parameters](#)
- [Other Parameters](#)

### A.1 Introduction

System defined parameters help in configuring system specific data, User-access, location of system files; reports related URLs and other administration controlled data. These are essential to be configured during installation and some of them by nature of application will have to be reviewed and maintained in a regular and periodic manner.

Following are the types of parameters are used in OFSLL system depending on the areas of the system that these would apply and impact:

- [System Parameters](#)
- [Organization Parameters](#)
- [Company Parameters](#)
- [Other Parameters](#)

#### Note

All the above parameters can be controlled (enabled/disabled) only by System Administrators, and users with Admin/Super User privileges who would be involved in setting-up OFSLL system.

### A.2 System Parameters

System parameters apply to the entire system. They relate to the overall processing of the system like application server file locations, data purging configurations and so on.

Table below details the list of system parameters with their description and pre-defined values.

**Table A-1 System Parameters**

Parameter	Description
ACA_DLQ_AMT_EXCLUDED	This parameter is used to exclude delinquency amount for account ACH

Table A-1 (Cont.) System Parameters

Parameter	Description
ACA_PAYMENT_AUTO_LOAD	This parameter is used to control posting directly from the ACH file that has been created for customer payments. Input parameter value is Boolean (Yes/No). If the parameter is set to <b>Y</b> , the system automatically creates payment batches for the payments in the ACH file and posts them on the day of payment.
ACA_PRENOTE_DAYS	This parameter is used to define the number of days the prenote should be initiated for customer ACH (Automated Clearing House) accounts. Input parameter value is numeric.
ACA_PRE_PROCESS_DAYS	This parameter is used to specify the number of days before draft day for Account ACH process. Input parameter value is numeric.
ACH_PAYEE_PRENOTE_DAYS	This parameter is used to define the number of days for prenote to occur for Producer or Vendor ACH accounts. Input parameter value is numeric.
ADMIN_SERVER_URL	This parameter is used to define the admin server URL.
ADR_DIRECTORY	This parameter is used to define the Oracle Directory Object Name for ADR file location.
ADR_PROCESSED_DIRECTORY	This parameter is used to define the Oracle Directory Object Name for ADR file location.
AGE_APPROVED_CONDITIONED_DAYS	This parameter is used to specify the number of days by which an application in <b>Approved</b> or <b>Conditioned</b> status is treated as Aged Application. Input parameter value is numeric with no upper limit.
AGE_CONTRACT_DAYS	This parameter is used to specify the number of days by which a contract is treated as Aged Contract. Input parameter value is numeric with no upper limit.
ASC_COL_SER_ENABLED_IND	This parameter is used as the Collection Servicing Enabled Indicator.
CAC_DIRECTORY	This parameter is used to define the Oracle Directory Object Name for CAC file location.
CAC_PROCESSED_DIRECTORY	This parameter is used to define the Oracle Directory Object Name for CAC file location.
CHECK_PRINT_PREVIEW	Using this parameter we can allow preview of application in pdf form before printing. Input parameter value is Boolean (Yes/No).
CMN_AMOUNT_ROUND_FACTOR	This parameter is used to define the rounding factor for applicable fields (in this case calculated amounts). Input parameter value is <b>ROUND AMOUNT TO 2 DECIMALS</b> . Currently system supports rounding factor 2 only.

Table A-1 (Cont.) System Parameters

Parameter	Description
CMN_AMOUNT_ROUND_METHOD	<p>This parameter is used to define the amount round method during system set-up and would be applicable for all calculated amounts (calculated fees, payment etc.) across the application. Input values are ROUND, RAISE and CUTOFF:</p> <p><b>ROUND:</b> Rounded to nearest number higher or lower</p> <p><b>RAISE:</b> Rounded to the nearest higher number</p> <p><b>CUTOFF:</b> Truncate the digits without rounding or raising</p>
CMN_APP_ACC_TITLE_FN_LN	<p>This parameter is used to set the Application or Account title in one of the formats – First/Last Name or Last/First Name. Input parameter value is Boolean (Yes/No). If <b>Yes</b> is chosen, title would be in the format – First/Last Name, else the other option.</p>
CMN_APP_SERVER_HOME	<p>This parameter is used to set the Application Server Home Directory. Input parameter value is user defined.</p>
CMN_CURRENT_MODEL_YEAR	<p>This parameter is used to default the Current Model Year.</p>
CMN_DEBUG_LEVEL	<p>This is the Common Debug Level</p>
CMN_DEBUG_METHOD	<p>This parameter allows to define the location to which generic debug logs (other than Alert/Warning and GRI) are to be written. If set to <b>ADVANCE_QUEUE</b>, system writes the logs in Logs table and if set to <b>UTL_FILE</b>, system generates the alert log file.</p>
CMN_FILE_PROCESS_TO_LOB	<p>This parameter allows to define the location from where the incoming or outgoing files/documents are to be processed. If set to <b>Y</b>, system processes the data to/from LOB and if set to <b>N</b>, system processes the data to/from FILE.</p> <p>The same is used by the batch jobs available in SET-IFP (input file processing) Batch Job Set.</p>
CMN_GL_POST_DT	<p>This parameter is used to specify the General Ledger Posting date. If scheduler is enabled, it automatically updates this to current system date. Else Admin User would need to set this date manually to ensure correct posting dates in GL.</p>
CMN_HTTP_PROXY_PORT	<p>This parameter is enabled to specify the port to be used for outgoing HTTP connections. Input parameter value is user defined.</p>
CMN_HTTP_PROXY_SERVER	<p>This parameter is enabled to specify the proxy server to be used for outgoing HTTP connections. Input parameter value is user defined. There exists an interdependency of this parameter with CMN_HTTP_PROXY_PORT mentioned above.</p>

Table A-1 (Cont.) System Parameters

Parameter	Description
CMN_INT_360_ACCRUAL_DAYS_MTHD	This parameter is used to specify the interest accrual method for 360 days, to be used by the System for all calculations with interest. Currently two methods are supported. Input parameter value is <b>US</b> or <b>EU</b> representing American and European method of interest accrual for 360 days.
CMN_TEST_TOOL_LOGGING	This parameter is used to set testing tool logging parameter
CMN_SCHEMA_ID	This is used to specify the schema identifier for all users.
CMN_SCHEMA_NAME	This is used to specify the Oracle User Name for a specific schema. Input parameter value is user defined.
CMN_SCHEMA_PASSWORD	This captures the password for Oracle, for the specific schema. Input parameter value is user defined. This parameter need not be enabled when in Oracle Network.
CMN_SERVER_HOME	This parameter captures the Server Home Directory. Input parameter value is user defined.
CMN_SERVER_TEMP_DIR	This parameter is used to specify the temporary directory on the server along with the path. Input parameter value is user defined.
CMN_SER_ENVIRONMENT_FILE	This parameter captures the environment file (and its path) for running the Operating System commands from Job Service. Input parameter value is user defined.
CMN_WALLET_PASSWORD	This parameter is used to specify the common wallet password. Input parameter value is user defined.
CMN_WALLET_PATH	This parameter is used to specify the common wallet path for oracle database. Input parameter value is user defined.
CPP_NO_OF_PROMISES	This parameter is used to define the maximum number of promises/chances allowed for a customer who is delinquent and promises to pay. Input parameter value is numeric with no upper limit.
CPP_PROMISE_HELD_DAYS	This parameter is used to define the maximum number of days after the promises made by the customer to pay are broken to initiate further actions. Input parameter value is numeric with no upper limit.
CRD_CHS_BIN	This parameter holds the value of the credit card BIN (Bank Identification Number for Credit Cards), for CHASE interface. Input parameter value is user defined. (P.S: OFSLL supports CHASE interface for credit card payments processing)
CRD_CHS_CUR_CODE	This parameter is used to specify the currency code of the transacting currency for CHASE interface. Input parameter value is user defined.

**Table A-1 (Cont.) System Parameters**

Parameter	Description
CRD_CHS_DIR_PATH	This parameter is used to specify the directory path for CHASE payment interface for Credit Cards. Input parameter value is user defined.
CRD_CHS_IND_TYPE	This is used to specify the industry type for CHASE payment interface for Credit Cards. Input parameter value is user defined.
CRD_CHS_MERCHANT_ID	This captures the merchant ID number for CHASE payment interface for Credit Cards. Input parameter value is user defined.
CRD_CHS_REMOTE_HOST_NAME	This captures the remote host name for seeking approvals for CHASE payment interface. Input parameter value is user defined.
CRD_CHS_SEC_REMOTE_HOST_NAME	Similar to the previous parameter this captures the secondary remote host name of CHASE interface for seeking approvals for credit card payments. Input parameter value is user defined.
CRD_CHS_TIMEOUT	This parameter is used to define the timeout limit when polling the interface for processing credit card payments. Input parameter value is numeric.
CRD_CHS_USR_ID	This parameter captures the user id for CHASE interface which is required whenever the System needs to access/ seek authorizations/process payments for credit cards etc. Input parameter value is user defined.
CRD_PTB_REMOTE_HOST_NAME	This is the Protobase Remote Host Name
CRD_PTB_REMOTE_HOST_PORT	This is the Protobase Remote Host Port
CRD_PTB_TIMEOUT	This is the Protobase Timeout Value
CRD_SOURCE_TYPE_CD	This is the Source Type Code
DDT_CREATE_DUE_DATE_HISTORY	This parameter must be enabled to create a due date history for any account. Due date history sub tab under Transaction history displays the delinquency history of an account in a tabular format detailing Due date, Due Amount, Last Payment date, Payment Amount, Balance Amount, Days past due and Payment received flag. The input parameter value for this parameter is Boolean (Yes/ No).
DECISION_BUY_RATE_TOLERANCE	This parameter is used to define the variance in buy rate
EDF_DIALER_ACCT_TYPE	This parameter is used to set up the account number reference for the dialer file to pick-up records for Auto dialer interface. Input parameter value is account number.
FLL_BPEL_PROCESS	This parameter is set to use BPEL process in OFSLL. Input parameter value is Boolean (Yes/No).
ICA_INPUT_FILE_FORMAT	This parameter is used to define the input call activity file format
IFD_DIRECTORY	This parameter is used to define the Oracle directory object name for IFD file location
IFD_PROCESSED_DIRECTORY	This parameter is used to define the Oracle directory object name for IFD file location

**Table A-1 (Cont.) System Parameters**

Parameter	Description
INCOMING_LOB_PURGE_DAYS	This parameter is used to define the incoming process file table purge days
INPUT_DIRECTORY	This parameter is used to define the Oracle directory object name for INPUT file location
ITU_DIRECTORY	This parameter is used to define the Oracle directory object name for ITU file location
ITU_PROCESSED_DIRECTORY	This parameter is used to define the Oracle directory object name for ITU file location
IVR_DIRECTORY	This parameter is used to define the Oracle directory object name for IVR file location
IVR_PROCESSED_DIRECTORY	This parameter is used to define the Oracle directory object name for IVR file location
JSC_TIMEOUT	This parameter is used to set the polling interval for job scheduler. Input parameter value is numeric. To check whether it represents minutes/seconds.
JSV_ARCHIVE_SERVER_CONFIG	This parameter is used to set the configuration file for reports archive server. Input parameter value is user defined.
JSV_ARCHIVE_SERVER_URL	This parameter is used to specify the archive server url. Input parameter value is user defined.
JSV_BI_PASSWORD	This parameter is used to define the BI Publisher Password
JSV_BI_USER	This parameter is used to define the BI Publisher User ID
JSV_TEMPORARY_DIRECTORY	This parameter is used to define Oracle directory object name for Job Service Temp file location
JSV_BI_PASSWORDJSV_REPORTS_RUNTIME	This parameter is to specify the reports runtime program. Input parameter value is user defined.
JSV_REPORTS_RUNTIME_CMDFILE	This parameter is used to specify the reports runtime command file. Input parameter value is user defined.
JSV_REPORTS_SERVER_CONFIG	This parameter is used to specify the configuration file for reports server. Input parameter value is user defined.
JSV_REPORTS_SERVER_URL	This is used to specify the URL for the reports server. Input parameter value is user defined.
JSV_REPORT_ARCHIVE_DIRECTORY	This is used to specify the path and directory of Reports archive, input parameter value being numeric.
JSV_SMTP_SERVER	This parameter specifies the SMTP server used by job service for sending email messages. Input parameter value is user defined.
JSV_TIMEOUT	This is to specify the polling interval for the job service during time out. Input parameter value is numeric. To check whether it represents minutes/seconds.
JSV_USE_BI_PUBLISHER	This parameter defines whether BI publisher should be used to process reports are not. Input parameter value is Boolean (Yes/No).

**Table A-1 (Cont.) System Parameters**

Parameter	Description
JSV_USE_REPORTS_SERVER	This parameter is used to specify whether reports server from job service should be used or not. Input parameter value is Boolean (Yes/No).
LBX_TXN_GROUPING_CNT	This parameter is used to specify the no. of records per batch for payment transactions and lock box batch records. Input parameter value is numeric.
LCO_COL_LETTER1_GEN_DAYS	This parameter specifies the number of days post which first collection letter should be generated for accounts with dues unpaid. Input parameter value is numeric.
LCO_COL_LETTER2_GEN_DAYS	This parameter specifies the number of days post which second collection letter should be generated for accounts with dues unpaid. Input parameter value is numeric.
LCO_COL_LETTER3_GEN_DAYS	This parameter specifies the number of days post which third collection letter should be generated for accounts with dues unpaid. Input parameter value is numeric.
LIEN_RELEASE_DAYS	This parameter is used to define the Lien Release Days
LOCKBOX_DIRECTORY	This parameter is used to define the Oracle directory object name for Lockbox file location
LOCKBOX_PROCESSED_DIRECTORY	This parameter is used to define the Oracle directory object name for processed Lockbox file location
LOR_ADVERSE_ACTION_GEN_DAYS	This parameter is used to specify the number of days after the third collection letter post which the adverse action letter is to be generated. Input parameter value is numeric.
LOG_LOB_PURGE_DAYS	This parameter is used to log files header table purge days
MAX_AGED_TXN_AUTHORIZE_DAYS	This parameter is used to specify the maximum number of days within which a transaction should be authorized. Input parameter value is numeric and represents the number of days.
MAX_VOID_TXN_AUTHORIZE_DAYS	This parameter is used to set the maximum days to authorize transaction
OCP_CUSTOMER_PMT_SITE_ID	This parameter is used to set the customer payment extract file site id
OCP_INCLUDE_ACH_ACC	This parameter is used to set the customer payment extract including ach accounts
OUTGOING_LOB_PURGE_DAYS	This parameter is used to define the outgoing process file table purge days
OUTPUT_DIRECTORY	This parameter is used to define Oracle directory object name for OUTPUT file location
PAC_ARCHIVE_DAYS	This parameter is used to define number of days for periodic archiving of account. Input parameter value is numeric.
PAC_OARCHIVE_DAYS	This parameter is used to define the number of days for archiving accounts from <b>O</b> tables i.e. old tables. Input parameter value is numeric

**Table A-1 (Cont.) System Parameters**

Parameter	Description
PAP_ARCHIVE_DAYS	This parameter is used to define the number of days for archiving applications on a periodic basis. Input parameter value is numeric.
PAP_OARCHIVE_DAYS	This parameter is used to define the number of days for archiving applications from <b>O</b> tables. Input parameter value is numeric.
PCU_CHECK_REFUND_DAYS	This parameter is used to specify the maximum number of days within which an overpayment from the customer can be refunded. Input parameter value is numeric.
PDC_PRE_PROCESS_DAYS	This parameter value will define the number of days prior to the due day, regular account PDC process should be initiated. Input parameter value is numeric.
PENDING_PDC_DAYS	This parameter value will define the number of days before the initiation day for pending PDC accounts.
PGL_ARCHIVE_DAYS	This parameter defines the number of days, post which the transactions in GL would be archived. Input parameter value is numeric.
PGL_OARCHIVE_DAYS	This parameter is used to define the number of days, post which the transactions in GL will be moved to the <b>O</b> tables. Input parameter value is numeric.
PJR_PURGE_DAYS	This parameter is used to specify the days post which the job requests are to be purged. Input parameter value is numeric.
POD_PURGE_DAYS	This parameter is used to define the number of days after which the Output data file headers are to be purged. Input parameter value is numeric.
PPA_ARCHIVE_DAYS	This parameter is used to specify number of days after which pools and its transactions archiving is to be done to <b>O</b> tables. Input parameter value is numeric.
PPA_OARCHIVE_DAYS	This parameter is used to specify number of days after which pools and its transactions archiving is to be done to <b>OO</b> tables. Input parameter value is numeric.
PPR_ARCHIVE_DAYS	This is used to specify the days for archival of producers details on a regular basis. Input parameter value is numeric.
PPR_OARCHIVE_DAYS	This is used to specify the days after which the producers details from <b>O</b> tables need to be archived. Input parameter value is numeric.
PPX_ARCHIVE_DAYS	This is used to specify the days after which producer transactions are to be archived. Input parameter value is numeric.
PPX_OARCHIVE_DAYS	This is used to specify the days after which the producer transactions are to be moved from <b>O</b> tables. Input parameter value is numeric.
PJR_COPY_PURGED_DATA	This parameter is used to copy data into purge tables.

**Table A-1 (Cont.) System Parameters**

Parameter	Description
PST_ARCHIVE_DAYS	This parameter specifies the number of days for which the statements are to be archived. Input parameter value is numeric.
PST_OARCHIVE_DAYS	This parameter specifies the number of days for which the statements are to be archived in the <b>O</b> tables. Input parameter value is numeric.
PTT_PURGE_DAYS	This is used to specify the number of days after which the PTT table is to be purged. Input parameter value is numeric.
PTX_ARCHIVE_DAYS	This parameter is used to specify the number of days the transactions are to be archived. Input parameter value is numeric.
PTX_OARCHIVE_DAYS	This parameter is used to specify the number of days after which the archived transactions from <b>O</b> tables are to be moved. Input parameter value is numeric.
PUL_PURGE_DAYS	This parameter is used to specify the number of days post which the User login details are to be purged. Input parameter value is numeric.
PVA_ARCHIVE_DAYS	This parameter stores the number of days for archival of regular vendor assignments. Input parameter value is numeric.
PUP_ARCHIVE_DAYS	This parameter stores the number of days for archival of transaction upload. Input parameter value is numeric.
PUP_OARCHIVE_DAYS	This parameter is used to specify the number of days after which the archived transactions from <b>O</b> tables are to be moved. Input parameter value is numeric.
PVA_OARCHIVE_DAYS	This parameter value specifies the number of days for archival of vendor assignments from <b>O</b> tables to <b>OO</b> tables. Input parameter value is numeric.
PVI_ARCHIVE_DAYS	This parameter is used to specify the number of days for which the regular vendor invoices are to be archived. Input parameter value is numeric.
PVI_OARCHIVE_DAYS	This parameter is used to specify the number of days post which the regular vendor invoices are to be moved from <b>O</b> tables to <b>OO</b> tables. Input parameter value is numeric.
RAC_LOAD_FREQUENCY	This parameter is used to specify Accounts RDH Load Frequency
RAP_LOAD_FREQUENCY	This parameter is used to specify Applications RDH Load Frequency
RAT_LOAD_FREQUENCY	This parameter is used to specify Asset Tracking RDH Load Frequency
RBK_LOAD_FREQUENCY	This parameter is used to specify Bankruptcy Details RDH Load Frequency
RCA_LOAD_FREQUENCY	This parameter is used to specify Call Activities RDH Load Frequency
RCH_LOAD_FREQUENCY	This parameter is used to specify Deficiency Details RDH Load Frequency

Table A-1 (Cont.) System Parameters

Parameter	Description
RCO_LOAD_FREQUENCY	This parameter is used to specify Contracts RDH Load Frequency
RFO_LOAD_FREQUENCY	This parameter is used to specify Repo-Foreclosure RDH Load Frequency
RPR_LOAD_FREQUENCY	This parameter is used to specify Producers Rdh Load Frequency
RST_LOAD_FREQUENCY	This parameter is used to specify Setup Data RDH Load Frequency
RTX_LOAD_FREQUENCY	This parameter is used to specify Txns RDH Load Frequency
SALESAGENT_MAIL_SEND_IND	This parameter is used to specify whether decision fax needs to be sent to sales agent (yes/no)
SCORING_PARAMETER_ALERT	This parameter is used to set the scoring parameter alert
SQL_DIRECTORY	This parameter is used to set the Oracle directory object name for SQL file location
TES_ANA_PRE_PROCESS_CYCLES	This parameter is used to specify the pre-process cycles required for Escrow analysis. Input parameter value is numeric.
TES_DSB_ANALYSIS_PERCENT	This parameter is used to specify the percentage for escrow disbursements. Input parameter value is numeric.
TES_DSB_PRE_PROCESS_DAYS	This is used to specify the number of days for pre-process for escrow disbursements. Input parameter value is numeric.
TPE_AMORTIZE_ACCRUED_INT_ONLY	This parameter is used to specify that system has to amortize accrued interest at month end
TPE_APPLY_LTC_FROM_CURR_DUE_DT	This parameter is used for pyramid law fee method to apply late charge from current due date
TPE_ESC_ANALYSIS_DELQ_AMT	Parameter considers billed but uncollected amount for escrow analysis
TPE_EXCESS_PAYMENT_TO_MEMO	Excess payment on the account will be moved to memo payment.
TPE_EXCLUDE_ESC_LTC	This parameter defines whether escrow should be included or excluded while calculating late charge. Input parameter value is Boolean (Yes/No).
TPE_EXT_CYCLES_BACKDATED	This parameter is used to define the maximum extension cycles allowed for back dating. Input parameter value is numeric with no upper limit
TPE_FUTURE_PAYOFF_DAYS	The value specified in this parameter validates the <b>Valid Up to Date</b> with <b>Payoff quote</b> during monetary transactions posting.
TPE_GL_REFUND_HOLD_DAYS	This parameter is used to define the number of days the non-refunded amount can be held in GL. Input parameter value is numeric.

**Table A-1 (Cont.) System Parameters**

Parameter	Description
TPE_MAX_CYCLES_BACKDATED	This parameter is used to define the maximum cycles that are allowed for backdating an account in OFSLL. Only when a status change transaction is reversed, account backdate field is set based on this parameter. The input parameter value is numeric.
TPE_MIN_1098_INT_AMT_PAID	This parameter is used to specify the lower limit or minimum interest amount paid for 1098 i.e. Mortgage Interest Statement. In the US, FIs need to report mortgage interest of \$600 or more received from individuals, during the course of their business. Input parameter value is 600, the minimum value above which reporting by FI is required in form 1098 for each mortgage account.
TPE_OLDEST_DUE_DT_NEW_MTHD	This parameter is enabled to specify whether new method for calculation of oldest due date based on given data should be used or not. Input parameter value is Boolean (Yes/No).
TPE_PAID_TO_CLOSE_DAYS	This parameter is used to specify the number of days allowed post which a paid account would be closed. Input parameter value is numeric.
TPE_PAYMENT_TO_MULTI_ACCOUNTS	This parameter is enabled to allow one payment for dues in multiple accounts. Input parameter value is Boolean (Yes/ No).
TPE_PAYOFF_VALID_THRU_DAYS	This parameter is used to specify the number days the pay-off quote is valid by default. i.e. if the parameter is set as 7, the payoff quote is valid for 7 days and customer can pay the quoted amount as final closure amount within those days. Input parameter value is numeric.
TPE_PMT_POST_EOD	This parameter is used to allow payments when the batch process for End of Day is running. Input parameter value is Boolean (Yes/No). If this is set to Y, payments can be allowed during EOD.
TPE_SCHGOFF_DLQ_DAYS	This parameter is used to define the number of delinquent days to treat an account for SCHGOFF (charge – off). Input parameter value is numeric. (To verify)
TPE_SCHGOFF_REVIEW_DAYS	This parameter is used to define the number of days allowed for review of SCHGOFF accounts. Input parameter value is numeric.
TPE_SCRA_DEFAULT_INTEREST_RATE	This parameter is used to define the default interest rate that is to be applied for customers who are in military duty. OFSLL will apply the lower of the prevailing interest rate or SCRA default interest rate specified through this parameter. Input parameter value is numeric (in this case 6, which is interest rate to be applied for SCRA accounts).
TPE_SHOW_BACKDATE_WARNING	This parameter is used to define whether a warning message is to be shown if monetary transaction is backdated.

**Table A-1 (Cont.) System Parameters**

Parameter	Description
TPE_STM_INC_ALL_TXNS	This parameter is enabled to define whether all transactions should be included in the statements or otherwise. Input parameter value is Boolean (Yes/No).
TPE_STOP_COMP_DELQ_DAYS	This parameter is used to stop computation when delq days > 60
TPE_TXN_POST_DEFAULT_GLDATE	This parameter is used to default GL date in date type parameters during txn posting (y/n)
TPE_VOID_TO_CLOSE_DAYS	This parameter is used to define the number of days allowed for closing Void accounts. Input parameter value is numeric.
UIX_DEFAULT_IMAGE_PATH	This parameter is used to define the default image directory maintained for the purpose of online attachment of document images to an application using documents maintenance section under Account documentation. Input parameter value is user defined.
UIX_DIRECT_LOAN_COMBO_ULN_UFN	This parameter when set to yes allows underwriting and funding to be carried on by a single responsibility for direct loans only. Input parameter value is Boolean (Yes/No).
UIX_INCOMING_FILE_PATH	This parameter is used to specify incoming file path of app server
UIX_LOCAL_COUNTRY_CD	Through this parameter we can set the local country where an FI has multiple branches across different geographies. Input parameter value is user defined.
UIX_LOCK_UNLOCK_AND_COPY	This parameter is used to enable the user interface lock / unlock and copy features. Input parameter value is Boolean (Yes/No).
UIX_MAX_ACC_SEARCH_ROWS	This parameter is used to specify the maximum number of account rows to be returned for search functionality. Input parameter value is numeric.
UIX_MAX_APP_SEARCH_ROWS	This parameter is used to specify the maximum number of application rows to be returned for search functionality. Input parameter value is numeric.
UIX_OUTGOING_FILE_PATH	This parameter is used to specify outgoing file path of app server
UIX_REPORTS_SERVER_CONFIG	This parameter can be used to specify the user interface reports server configuration file. This is not required for OFSLL.
UIX_REPORTS_SERVER_URL	This parameter sets the URL for Reports server. Input parameter value is user defined.
UIX_SHOW_LN_VARIABLE_RATE_TABS	This parameter can be used to show loan variable rate tabs. Input parameter value is Boolean (Yes/No). This is not required for OFSLL.
UIX_UTILITIES_SERVLET_URL	This parameter can be used to specify the User Interface utilities servlets URL. This is not required for OFSLL.

**Table A-1 (Cont.) System Parameters**

Parameter	Description
UPR_PRO_NBR_SYS_GENERATED	This parameter can be used to specify whether producer number should be system generated or seek input from user. Input parameter value is Boolean (Yes/No). Generally this is set to yes for system generation.
VEV_NADA_TOKEN_URL	This parameter is used to set the token URL for vehicle evaluation interface NADA. Input parameter value is user defined.
VEV_NADA_UPDATE_DAY	This parameter is used to specify the day of the month to update the vehicle evaluations every month. Input parameter value is numeric.
VEV_NADA_URL	This parameter is used to set the URL for vehicle evaluation interface NADA. Input parameter value is user defined.
VEV_NADA_USER_ID	This parameter is used to specify the User id for login to the NADA interface. Input parameter value is user defined.
VEV_NADA_USER_PASSWORD	This parameter is used to specify the password for login to the NADA interface. Input parameter value is user defined.
VEV_VALUATION_REGION	This parameter is used to define the default region for vehicle evaluation. Input parameter value is the region name, and is user defined.

**Table A-1 (Cont.) System Parameters**

Parameter	Description
VEV_VALUATION_SOURCE_CD	<p>This parameter is used to specify the default vehicle evaluation source code. Input parameter value is user defined. A number of parameters are possible in OFSLL as below:</p> <ol style="list-style-type: none"> <li>1. Appraisal Company</li> <li>2. Broker</li> <li>3. BUC GUIDE</li> <li>4. DATA QUICK</li> <li>5. NAMS/SAMS SURVEY – USED</li> <li>6. REALTOR</li> <li>7. NADA INTERFACE USED CARS</li> <li>8. BLACKBOOK INTERFACE USED CARS</li> <li>9. KELLY INTERFACE</li> <li>10. NADA – NEW</li> <li>11. NADA – USED</li> <li>12. KELLY NEW BLUE BOOK</li> <li>13. KELLY USED BLUE BOOK</li> <li>14. INVOICE</li> <li>15. BLACK BOOK</li> <li>16. NADA INTERFACE COMMERCIAL TRUCKS</li> <li>17. COMPANY INVOICE</li> <li>18. GOLD BOOK</li> <li>19. GALVS</li> <li>20. OTHER</li> <li>21. ALG</li> </ol>
WFP_DIRECTORY	This parameter is used to specify the Oracle directory object name for WFP file location.
WFP_MAX_CYCLES_BACKDT	This parameter is used to specify the back dated cycles date for WFP.
WFP_PROCESSED_DIRECTORY	This parameter is used to define oracle directory object name for wfp file location.
WFP_REVERSE_TXN_IND	This parameter is enabled to define the WFP reversal indicator. Input parameter value is Boolean (Yes/No).
XAE_DEALUPD_MAX_ALLOWED_DAYS	This parameter is used to define the max allowed days for Deal Update.
XAE_DEALUPD_ALLOWED_IND	This parameter is used to indicate whether deal update is allowed or not.
OUTBOUND_CALL_Q	This parameter is used to generate reports (including emailing statements/letters) using Application Server instead of Database server.

Table A-1 (Cont.) System Parameters

Parameter	Description
ACA_PRE_PROCESS_DAYS_FIRST	This parameter is used to configure the number of days before the debit day for ACH process in first time/ one-time case.
IPR_PROCESSED_DIRECTORY	This parameter is used to define the Oracle directory object name for processed IPR file location
IPR_DIRECTORY	This parameter is used to define the Oracle directory object name for IPR file location
UIX_PWD_MGMT_EXTERNAL_URL	This parameter is used to set external password management url, if applicable.
UIX_PWD_MGMT_EXTERNAL	This parameter is used to define the parameter if password management is external. (SET Y IF PASSWORD MANAGEMENT IS EXTERNAL (Y/ N)).
ICU_PROCESSED_DIRECTORY	This parameter is used to define the Oracle directory object name for processed ICU file location
ICU_DIRECTORY	This parameter is used to define the Oracle directory object name for ICU file location
UIX_BILL_CYCLE_ALLOWED_IND	This parameter is used to indicate whether Billing cycle is allowed at the application level
CMN_EOD_SLEEP_MINS	This parameter is used to set in minutes the EOD sleep time
CMN_CORE_BANK_TXN_CD	This parameter is used to set code for OFSLL and Core Banking integration
UIX_DIRECT_DISB_MANUAL_SELECT	This parameter will allow manual selection of disbursement mode for direct loans
ICC_DLQ_AMT_EXCLUDED	This parameter enabling will exclude delinquency amount for CASA account
CMN_CORE_BANK_IND	This parameter is used to set whether OFSLL can integrate with Core Banking.
BKRP_FILE_REC_LIMIT	This parameter is used to set the limit of total number of records allowed to be added in the <b>Input Data File</b> shared from external interface. <b>Note:</b> If the number of records exceeds the set limit, multiple <b>Input Data Files</b> are to be created.
UVN_VEN_NBR_SYS_GENERATED	This parameter is used to validate if <b>Vendor Number</b> has to be auto generated (if set to <b>Y</b> ) or to be specified manually in the Vendor details screen.
METRO_WITHOUT_COLL_IND	This parameter indicates whether Metro II reporting is handled without OFSLL Collections module being used. If the parameter value is set as <b>Y</b> i.e. collection module is not used, system updates the collateral status directly as part of <b>REPO</b> call activity.  However when Collections module is being used, the Collateral status is tracked with the repossession details updated in <b>Repo/Foreclosure</b> screen of Collections module.

Table A-1 (Cont.) System Parameters

Parameter	Description
METROII_FIRST_DELQ_DT_ADD_DAY	<p>This parameter is used to calculate the first delinquency date that needs to be reported in the Metro II reporting file.</p> <p>By default the parameter is <b>disabled</b> indicating that the initial delinquency date calculated by the system is used for Metro II reporting. The same needs to be enabled to add the parametrized number of days to the system calculated first delinquency date for the Metro II reporting purpose.</p>
DAYS_TO_PULL_CRB_REPORT	<p>This parameter is used to configure the number of days permitted to pull a Bureau report from the same company and for the same customer.</p>
XWS_ACS_RESP_MULTI_RECORD_IND	<p>This parameter is used to indicate if multiple records exist in the response file received for account search.</p> <p>Accordingly, when there are multiple records found and this parameter is enabled and set to <b>No</b> (default), system displays an error message <b>Too Many Records Found. Please Refine Search by Adding One More Parameter</b>.</p> <p>However, when this parameter is set to <b>Yes</b>, system only indicates that there are multiple records/rows in response file.</p>
GRI_DLQ_DAYS_AUTO_STATUS_CHG	<p>This parameter is used to define the delinquency days which return is used to automatically update the status of a work order to <b>PENDING ON HOLD</b> status.</p>
TPE_PMT_POSTING_CLS_ACCOUNT	<p>This parameter is used to define the payment posting criteria for Closed - Paid Off/ Charged-off accounts.</p> <p>Accordingly, OFSLL accepts payment posting on closed accounts only when the parameter is set to <b>Y</b> and all the payments received through Payment Entry screen or <b>Payment Upload</b> file are posted to a <b>Suspense</b> account.</p>
TPE_BACKDT_PMT_POSTING	<p>This parameter is used to define the payment posting criteria for backdated payments for the following type of account conditions:</p> <ul style="list-style-type: none"> <li>• Paid off</li> <li>• Charged-off</li> <li>• Account under activation</li> <li>• Account under conversion</li> <li>• Non-performing Account</li> <li>• PC2 SI (Pre-computed to Simple Interest) Reschedule</li> </ul> <p>Accordingly, OFSLL accepts backdated payment posting only when the parameter is set to <b>Y</b> and all the payments received through Payment Entry screen or <b>Payment Upload</b> file are posted to a <b>Suspense</b> account.</p>

Table A-1 (Cont.) System Parameters

Parameter	Description
EXP_PA_SOFT_PULL_IND	This parameter when enabled allows <b>Soft Pull</b> Credit Bureau request, specifically for Experian Premier Attribute Consumer Report without impacting the consumer FICO score.
PMT_BATCH_POSTING	This parameter (PAYMENT BATCH POSTING PREFERENCE) is used to define the status of payment transactions which are uploaded in bulk through a batch process.
POOL_ACTIVE_ACCOUNTS_ONLY	This parameter controls the type of accounts that can be added to a Securitization Pool and allows adding only <b>Active</b> status accounts since the same is enabled (value set to <b>Y</b> ) by default. To add accounts with other status such as Active, Paid Off, Charged Off, Void, Terminate. and so on, set the value of system parameter to <b>N</b> .
AUTO_GEN_ACC_NBR_CONV	This parameter is used for conversion accounts to decide option of account number generation. If the value of parameter is set to <b>Y</b> the account number is automatically generated in OFSLL during conversion and if the value is <b>N</b> , then external reference number (generated in third party system) itself is appended as the account number.
OUTBOUND_DLR_TRACK_Q	<p>This parameter defines the settings for batch job <b>SET_XPR</b> to either use MDB (Message Driven Bean) flow (if value set to <b>Y</b>) or existing work flow (if value set to <b>N</b>) to dump producer details maintained in the system into Dealer Track.</p> <p>MDB flow generates outbound JMS message though the configured MDB interface and can avoid current database outbound calls and session timeout.</p> <p>In the existing workflow, the database makes synchronous outbound calls to producer data dump web service, to dump the data and acknowledge the database with the status (success or failure).</p>
OUTBOUND_ROUTEONE_Q	<p>This parameter defines the settings for batch job <b>SET_XPR</b> to either use MDB (Message Driven Bean) flow (if value set to <b>Y</b>) or existing work flow (if value set to <b>N</b>) to dump producer details maintained in the system into ROUTEONE.</p> <p>MDB flow generates outbound JMS message though the configured MDB interface and can avoid current database outbound calls and session timeout.</p> <p>In the existing workflow, the database makes synchronous outbound calls to producer data dump web service, to dump the data and acknowledge the database with the status (success or failure).</p>

Table A-1 (Cont.) System Parameters

Parameter	Description
GRI_WEBSERVICE_LOG_IND	<p>This parameter is used to decide on logging GRI (Generic Recovery Interface) communications. If enabled, system logs all the GRI related web service communications between OFSLL and external interfaced system.</p> <p>The recorded logs can be viewed in Dashboard &gt; System Monitor &gt; Database Server Log Files tab by selecting <b>Interfaces</b> view option.</p>
PVE_ARCHIVE_DAYS	This parameter stores the number of days for archival of regular vendors. Input parameter value is numeric.
PVE_OARCHIVE_DAYS	This parameter is used to specify the number of days post which the regular vendors are to be moved from <b>O</b> tables to <b>OO</b> tables. Input parameter value is numeric.
LBX_DR_CR_VALIDATE_AMT_IND	This parameter (VALIDATE LOCKBOX DR/CR BATCH TOTALS) is used to facilitate NACHA file validation. Based on the status of the parameter, system is either allowed to validate the file or process without validation.
PAP_PURGE_DAYS	This parameter allows to define the number of days after which the application data from archival folders are to be deleted permanently. Purging happens based on elapsed number of days i.e. if value is set to 60 days, only those records which are older by 60 days in archival folder are deleted.
PAC_PURGE_DAYS	This parameter allows to define the number of days after which the accounts data from archival folders are to be deleted permanently. Purging happens based on elapsed number of days i.e. if value is set to 60 days, only those records which are older by 60 days in archival folder are deleted.
CMN_SED_FILE_PROCESS_TO_LOB	This parameter allows to define the location from where the incoming or outgoing seed data is to be processed. If set to <b>Y</b> , system processes the data to/from LOB and if set to <b>N</b> , system processes the data to/from FILE.
CMN_EDF_FILE_PROCESS_TO_LOB	<p>This parameter allows to define the location from where the incoming or outgoing data from Dialer Interface is to be processed. If set to <b>Y</b>, system processes the data to/from LOB and if set to <b>N</b>, system processes the data to/from FILE.</p> <p>The same is used by the batch jobs EDFADR_BJ_100_01 and EDFIVR_BJ_100_01 which are available in SET-EDF Batch Job Set.</p>
CMN_FAX_FILE_PROCESS_TO_LOB	This parameter allows to define the location from where the incoming or outgoing Fax data is to be processed. If set to <b>Y</b> , system processes the data to/from LOB and if set to <b>N</b> , system processes the data to/from FILE.

Table A-1 (Cont.) System Parameters

Parameter	Description
CMN_RED_FILE_PROCESS_TO_LOB	This parameter allows to define the location from where the outgoing details of Data Masking Policy (i.e. Redaction policy output file) is to be processed. If set to <b>Y</b> , system processes the data from LOB and if set to <b>N</b> , system processes the data from FILE.
CMN_WFP_FILE_PROCESS_TO_LOB	This parameter allows to define the location from where the incoming or outgoing WFP Unit details are to be processed. If set to <b>Y</b> , system processes the data to/from LOB and if set to <b>N</b> , system processes the data to/from FILE.  The same is used by the batch job WUPPRC_BJ_132_01 available in SET-WFP Batch Job Set.
CMN_AUD_FILE_PROCESS_TO_LOB	This parameter allows to define the location from where the outgoing Audit scripts are to be processed. If set to <b>Y</b> , system processes the data from LOB and if set to <b>N</b> , system processes the data from FILE.
CMN_LBT_FILE_PROCESS_TO_LOB	This parameter allows to define the location from where the incoming or outgoing Lockbox files are to be processed. If set to <b>Y</b> , system processes the data to/from LOB and if set to <b>N</b> , system processes the data to/from FILE.  The same is used by the batch jobs LBXPRC_BJ_100_01 and LBXSEP_BJ_100_01 available in SET-LBT Batch Job Set.
CMN_ODD_FILE_PROCESS_TO_LOB	This parameter allows to define the location from where the outgoing ODD or Output Data Dump files are to be processed. If set to <b>Y</b> , system processes the data from LOB and if set to <b>N</b> , system processes the data from FILE.  The same is used by the batch job ODDPRC_BJ_000_01 available in SET-ODD3 Batch Job Set.
CMN_ALERT_DEBUG_METHOD	This parameter allows to define the location to which Alert and Warning logs are to be written. If set to <b>ADVANCE_QUEUE</b> , system writes the logs in Logs table and if set to <b>UTL_FILE</b> , system generates the alert log file.
CMN_GRI_WS_DEBUG_METHOD	This parameter allows to define the location to which GRI (Generic Recovery Interface) web service logs are to be written. If set to <b>ADVANCE_QUEUE</b> , system writes the logs in Logs table and if set to <b>UTL_FILE</b> , system generates the log file.

Table A-1 (Cont.) System Parameters

Parameter	Description
UIX_CUSTOMER_BASED_PMT_IND	<p>If this parameter is set to <b>Y</b> and is <b>Enabled</b>, system accepts posting direct payment to an account and also accepts customer based payments to all linked accounts.</p> <p>To facilitate customer based payments, <b>Customer/ Business #</b> and <b>Payment Hierarchy</b> fields along with <b>Populate Accounts</b> button are enabled in <b>Payment Entry</b> screen to specify required values.</p>
PMT_HIERARCHY_CODE	<p>In this parameter, you can specify a payment hierarchy which is populated by default in Customer Details and Business Details (if applicable) screen after account activation.</p> <p>However, the specified value is selected by default only if there is a matching hierarchy definition enabled record maintained in Setup &gt; Administration &gt; User &gt; Payment Hierarchy screen. Else, <b>Equal Amount</b> value is selected which in-turn adjusts the payment equally to all customer/ business linked accounts.</p> <p><b>Note:</b> System does not consider this parameter value while <b>creating account using existing customer/business details</b> since the default selection is done during the creation of existing customer / business account.</p>
EVI_MAX_RETRY_COUNT	<p>This parameter records and controls the maximum attempts to re-trigger FAILED Webhook requests which cannot exceed more than 5 times. However, this parameter can be modified if the maximum re-trigger attempts is to be less than 5 times.</p>
UIX_CUSTOM_LABEL_ENABLED_IND	<p>This parameter indicates if the field label customizations are allowed i.e. ability to change label and provide access to fields in Label Configuration and Security User Access Definition Details screens.</p> <p>If set to <b>Y</b>, system refers data from database If set to <b>N</b>, system refers data from XLIB file.</p>
UIX_MASTER_ACC_BASED_PMT_IND	<p>If this parameter is set to <b>Y</b> and is <b>Enabled</b>, system accepts posting direct payment to a master account and also accepts master account based payments to all linked accounts.</p> <p>To facilitate master account based payments, <b>Master Account #</b> field is enabled in <b>Payment Entry</b> screen.</p>
TPE_PMT_REFUND_CURRENCY_SRC_CD	<p>This parameter indicates the currency in which payment refund has to be processed in the system as either <b>Payment Currency</b> or <b>Account Currency</b>. The same is considered during payment refund operation in Payment Maintenance screen.</p>

Table A-1 (Cont.) System Parameters

Parameter	Description
AUTO_GEN_ACTIVE_TXN_CONV	This parameter if enabled, auto posts a dummy ACTIVE transaction on all <b>migrated accounts</b> during the schedule batch job run. This in-turn allows to post RESCISSION / VOID transaction specifically for migrated accounts by selecting the dummy transaction from Customer Service > Maintenance screen or Transaction History transactions tab,  For more information, refer <b>Voiding an Account</b> section Servicing user guides.
FLL_CMN_JET_JWT_ENABLED_IND (JET JWT TOKEN ENABLE INDICATOR)	This parameter if set to <b>Y</b> , enables the <b>Account Dashboard</b> screen in Servicing LHS menu. This screen is based on Oracle JET framework and facilitates to view Account summary details maintained in the system. For information on screen functionality, refer to Servicing User Manuals and for details on deployment and configuration, refer to Installation Manuals.
FLL_CMN_JET_JWT_TOKEN_URL (JET JWT TOKEN GENERATION URL)	Define the value of the O-JET URL (app-shell application URL) in the format https://<hostname>:<port no>/ofsl-appshell/< token>
FLL_SER_JET_ACC_CREATE_URL (JET SIMPLE ACCOUNT CREATE URL)	Define the value of the O-JET URL (app-shell application URL) in the format https://<hostname>:<port no>/ofsl-appshell?root=accountonboarding
FLL_SER_JET_ACC_DASHBOARD_URL (JET ACCOUNT DASHBOARD URL)	Define the value of the O-JET URL (app-shell application URL) in the format https://<hostname>:<port no>/ofsl-appshell?root=accountdetailsdashboard
FLL_SET_JET_INTELLIGENTSEG_URL (JET INTELLIGENT SEGMENTATION URL)	Define the value of the O-JET URL (app-shell application URL) in the format https://<hostname>:<port no>/ofsl-appshell?root=queuecreation
ACCOUNT_PROCESSING_THRESHOLD (ACCOUNT ON-BOARDING ASYNCHRONOUS PROCESSING THRESHOLD)	This parameter allows to restrict the number of accounts that can be created <b>synchronously</b> using Account onboarding WebService.  However, creating accounts asynchronously in the system is further processed by the below batch jobs based on valued defined in this parameter. SET-API2 (ASYNCHRONOUS ACCOUNT CREATION) <ul style="list-style-type: none"> <li>ACXVAL_BJ_100_01 (VALIDATE IAPP TABS)</li> <li>ACXAAI_BJ_100_01 (ASYNCHRONOUS ACCOUNT CREATION)</li> </ul>
VTX_OUTBOUND_URL (OUTBOUND CALL URL FOR VERTEX)	This parameter defines the URL of the external adapter (Vertex) that is used to integrate with OFSLL.
VTX_VERSION (VERTEX VERSION)	This parameter defines the version of Vertex adapter that is required to be configured by the system.

Table A-1 (Cont.) System Parameters

Parameter	Description
AUTO_GEN_AGREEMENT_NBR (AUTO GENERATE AGREEMENT NUMBER FOR ACCOUNT ONBOARDING)	<p>This parameter defines the mode by which agreement number is generated to an account. If set to <b>Y</b>, system generates the agreement number. If set to <b>N</b>, system accepts the external agreement number provided in Account on-boarding payload.</p> <p><b>Note:</b> When system parameter is set to <b>Y</b>, the agreement number is also used as an identifier to validate the contract details and decide on which accounts should get same Agreement number.</p>

## A.3 Organization Parameters

Organization parameters control the functions related to User login, password expirations, responsibilities and accessibility limits in the OFSLL system. Individual parameters can be created with different values for uniquely defined organizations, divisions, and responsibility combinations.

There are three more dimensions other than parameter name, description and enabling (similar to system parameters) as indicated below:

1. Organization
2. Division
3. Responsibility

These dimensions help to define the applicability of the responsibility for specific User in an Organization across selected Divisions/departments.

When determining which parameter to use, OFSLL system selects the best match based on a hierarchical sort by the Organization, Division, and Responsibility fields, with values of **ALL** being a lower order match than an exact match.

While the system allows for Organization parameters to be defined at all three hierarchical levels (organization, division, and responsibility), not all will be applicable to each parameter.

Table A-2 Organization Parameters

Parameter	Description
MAX_PASSWORD_HISTORY_CHECK	This is used to set limit for number of times a password has been repeated during password change. This can be set for specific branches of the Organization, Divisions and Users based on responsibilities. Numeric value to be input to specify the limit.
UCS_GROUP_FOLLOWUP_DAYS	This parameter is used to set up the number of days range for Group follow-up field in customer service screen which displays the set of accounts that share same account condition as the selected account and bear the same customer ID. The pre-requisite for this is Group Follow-up indicator should be enabled in queue setup. Input value is numeric.

Table A-2 (Cont.) Organization Parameters

Parameter	Description
UCS_REVIEW_QUEUE_ALLOWED	This is used to specify whether review can be done by the specific responsibility (user group) without entering details in call activities/activities. Parameter value to be input is Boolean (Yes/No).
UIX_APP_VIEW_ALL_APPS	The system uses this parameter to determine which users have the ability to view all applications. The system selects the best match based on a hierarchical sort by Organization, Division and Responsibility fields, with values of <b>ALL</b> being a lower order match than an exact match. Input parameter value is Boolean (Yes/No).
UIX_HIDE_RESTRICTED_DATA	This is used to hide sensitive data relating to the Contract / Applicant to a specific group/ responsibility etc. Suppose there is a need to hide data relating to SSN, Bank account details etc. to a specific user responsibility who will not need such data, this parameter can be enabled with input value Boolean (Yes/No). If this parameter is set to <b>Y</b> , the details appear in a masked format (for e.g. SSN – XXXXX- 456)
UIX_SMTP_SERVER	This parameter is used to set up the email server for user interface. The input value would be <b>SETME</b> and check the <b>Enable</b> flag.
UIX_VIEW_SECURED_ACCOUNTS	This is used to specify whether an account can be viewed by a specific responsibility (users). Parameter value is Boolean (Yes/No) and when flagged as Yes, such accounts would be viewable only by users defined in the Organization, Division hierarchy with the specified responsibilities. For example, all employee accounts may not be viewable by all users and should be made available only to the HR department with specific responsibility levels. <b>Note:</b> While creating application, selecting appropriate applicant's classification would be essential for this parameter to be effective.
UIX_VIEW_SECURED_APPLICATION	This is used to specify whether an application can be viewed by a specific responsibility (users). Parameter value is Boolean (Yes/No) and when flagged as <b>Yes</b> , such applications would be viewable only by users defined in the Organization, Division hierarchy with the specified responsibilities. For example, all employee accounts may not be viewable by all users and should be made available only to the HR department with specific responsibility levels. <b>Note:</b> While creating application, selecting appropriate applicant's classification would be essential for this parameter to be effective.
ULG_DAY_END	This is used to specify the upper limit time in day for a user to be able to work in the System. Parameter value is numeric and range is 1-24, else system will throw error.

Table A-2 (Cont.) Organization Parameters

Parameter	Description
ULG_DAY_START	This is used to specify the lower limit time in day for a user to be able to work in the System. Parameter value is numeric and range is 0-24, else system will throw error.
ULG_FAILED_LOGIN_TRIALS_MAX	This parameter is used to specify the maximum number of login trials allowed before disabling the User ID due to security reasons. Input parameter value is numeric with upper limit of 999999999999.
ULG_INACTIVITY_DAYS_MAX	This parameter is used to specify the maximum number of days the User ID can be without utilization before disabling the User ID due to security reasons. Within the specified number of days the User Id must be utilized for sign in at least once. Input parameter value is numeric with upper limit of 999999999999.
ULG_PWD_CASE_SENSITIVE_REQ	This is used to allow all passwords to be case sensitive or otherwise. Input parameter value is Boolean (Yes/No). When this parameter is set as <b>NO</b> , password would be stored in Upper case. If this parameter is set to <b>N</b> then the ULG_PWD_LOWER_CHAR_REQ parameter should also be set to <b>N</b> .
ULG_PWD_CHANGE_DAYS_ACTUAL	This is used to set the maximum number of days after which system will force a password change, in cases where the User has not changed the password. Input parameter value is numeric with upper limit of 999999999999.
ULG_PWD_CHANGE_DAYS_PROMPT	This is used to set the maximum number of days after which system will prompt the User for password change, in cases where password has not been changed within the set period. Input parameter value is numeric.
ULG_PWD_LENGTH_MIN	This is used to set the minimum length of password string that is required. If this criterion is not met, system would throw an alert specifying minimum character length required to be input.
ULG_PWD_LOWER_CHAR_REQ	This is used to allow at least one lower case character in password strings. Input value is Boolean (Yes/No). Setting this as <b>NO</b> would mean passwords would be allowed in uppercase only.
ULG_PWD_NBR_REQ	This parameter allows setting password with at least one numeric character. Input value is Boolean (Yes/No) and setting this as <b>YES</b> would require passwords to have at least one numeric character.
ULG_PWD_SPECIAL_CHAR_REQ	This parameter is used to allow special characters like '\$', '#', '@', in passwords. Input value is Boolean (Yes/No) and setting this as <b>YES</b> would require passwords to have at least one special character.
ULG_PWD_UPPER_CHAR_REQ	This is used to allow at least one upper case character in password strings. Input value is Boolean (Yes/No). Setting this as <b>NO</b> would mean passwords would be allowed in lowercase only.

Table A-2 (Cont.) Organization Parameters

Parameter	Description
ULG_WEEK_END	This parameter enables to set the last day of the week when a user can have access to the system. Input parameter value is numeric ranging from 1 to 7. This is useful in business requirements where the Organization does not need a specific set of responsibilities (users) to not access the system on a weekend / week-off day etc.
ULG_WEEK_START	This parameter is used to set the start day of the week when a user is allowed to access the system. Input parameter value is numeric.
CRB_ERROR_VALIDATION_IND	<p>This parameter is used to validate the Credit Bureau report generation request depending on the number of days permitted to pull a Bureau report from the same company and for the same customer and report as either warning/error.</p> <p>When the number of days is less than or equal to the permitted days (as defined in parameter DAYS_TO_PULL_CRB_REPORT), system displays an <b>Error</b> message stating <b>Bureau Report exists for the same Customer from the same Bureau for Account# XYZ</b> along with list of account number(s) and/or application number( s). If not, a <b>Warning</b> message is display and request is accepted for processing.</p> <p><b>Note:</b> Both <b>CRB_ERROR_VALIDATION_IND</b> and <b>DAYS_TO_PULL_CRB_REPORT</b> are to be enabled for Credit Bureau report processing.</p>
OCP_CUST_PMT_PREF	This parameter MASTER ACCOUNT ROLLUP FOR PMT EXTRACT FILE is used to decide the basis of dues consolidation at master account level based on the parameter values selected. For more information, refer to <b>Outbound Customer Extracts To Payment Agencies Batch</b> section.

## A.4 Company Parameters

Company parameters control the processes associated with functions that vary for different companies and branches. These parameters address credit scoring, credit bureau interfaces, fax services, and fax generation.

Individual parameters may be set up with different values for uniquely defined company and branch combinations (i.e. these can be defined to the level of branches in each company or a group of companies in terms of applicability).

Table A-3 Company Parameters

Parameter	Description
AUD_ADV_REASON_MODEL	This parameter is used to set-up default adverse action reasons for scoring models during set-up in the Parameters sub page. Whenever the flag <b>Bureau Score Reasons</b> is unchecked during credit bureau scoring model set-up, then automatically rejected applications scored using this scoring model picks up the Adverse Action Reasons from the Parameters sub page.
AUD_SCORING_METHOD	This parameter is used to set when/where the application scoring method has to be applied within the company. So when the parameter value is chosen as <b>primary applicant only</b> , the system will perform the application scoring for the primary applicant only and according to other applicable parameters specified. Other parameter input values are Minimum Score, Maximum Score, Minimum Tier (Grade), Maximum Tier (Grade).
AUD_SCORING_METHOD_IN_BUREAU	This parameter is used to define what value to be picked up for application scoring from the scores returned from the various bureaus. The input parameter values are Maximum Score and Minimum Score. If Maximum score is setup in company parameters, then for all applications where a bureau report is pulled, the system will pick-up the Maximum score from the different bureaus.
CBU_DATA_SET_SIZE	Parameter to define the metro 2 file data selection criteria, option values are monthly, Daily, weekly, semi monthly.
CBU_FILE_FORMAT	Metro 2 file format definition, user need to select from the parameter value drop down.
CMN_ASE_VALIDATE_MAKE_MODEL	This parameter is set up to specify to the system whether it needs to validate the asset make and model at the time of data entry. In parameter value is Boolean (Yes/No).
CMN_CMB_DEFAULT_PRINTER	This is used to define the default printer for printing. The input parameter value is the printer name. There is no LOV for this field. If no default printer is defined and the parameter enabled, the system would display <b>Undefined</b> .
CMN_WEEKLY_NONBUSINESS_DAYS	This parameter is used to set-up the weekly holidays at the company level. The input parameter value is character string; if no details specified and parameter is enabled, system would display <b>UNDEFINED</b> .
COR_STORAGE_DIRECTORY	This parameter is used to specify the path/location for Oracle directory object template for correspondence documents. Input parameter value is <b>SETME</b> ; if none is specified and parameter enabled, <b>UNDEFINED</b> .

Table A-3 (Cont.) Company Parameters

Parameter	Description
DBR_JOINT_INC_DEBT_WITH_2NDRY	This parameter defines whether system should consider income and debt details of the Spouse and Secondary Applicant along with that Primary Applicant. Input parameter value is Boolean (Yes/No).
DBR_JOINT_INC_DEBT_WITH_SPOUSE	This parameter is used to define whether system should consider the income and debt details of Spouse alone along with that of Primary applicant details. Input parameter value is Boolean (Yes/No).
DDP_CRB_EXPIRATION_DAYS	This parameter is used to define the credit bureau report expiration days. So if this is set as 30, system will use all available credit bureau reports pulled which are not older than 30 days from current day, during de-dupe. Input value is numeric with no upper limit.
DDP_DEDUP_DEBT_WITH_2NDRY	This parameter defines whether the system should dedupe credit bureau liabilities for Spouse and Secondary Applicants, in addition to de-duping Primary applicant's liabilities. Input parameter value is Boolean (Yes/No).
DDP_DEDUP_DEBT_WITH_SPOUSE	This parameter defines whether the system should dedupe credit bureau liabilities for Spouse, in addition to deduping Primary applicant's liabilities. Input parameter value is Boolean (Yes/No).
DOT_STORAGE_DIRECTORY	This parameter is used to define the location/path of the Oracle Directory Object name for Account Document Loading. Input parameter value is <b>SETME</b> .
ECB_EDIT_FAIL_ANY_APL	This parameter is used to set the credit bureau edit to fail in case the bureau report for any of the applicant fails. Input parameter value is Boolean (Yes/No). So if this parameter is set to <b>YES</b> , the edit will fail even if one of the applicant's bureau score fails to qualify.
ECB_USE_APL_CURRENT_SCORE_CRH	This parameter is used to define whether the system should run the credit bureau edits only on the current scored applicant bureau. Input parameter value is Boolean (Yes/No).
LOR_AUTOMATIC_CON_FUND_FAX	This is used to define the decision fax generation when an application is funded. The input parameter value is Boolean (Yes/No), and when this is set as <b>YES</b> , system automatically generates the fax approval in the predefined template whenever an application is approved.
LOG_STORAGE_DIRECTORY	This parameter is used to define the Oracle storage directory. Input parameter value is user (System Administrator) defined.
LOR_AUTOMATIC_APPROVAL_FAX	This is used to define the decision fax generation when an application is approved. The input parameter value is Boolean (Yes/No), and when this is set as <b>YES</b> , system automatically generates the fax approval in the predefined template whenever an application is approved.

Table A-3 (Cont.) Company Parameters

Parameter	Description
LOR_AUTOMATIC_REJECTION_FAX	This is used to define the decision fax generation when an application is rejected. The input parameter value is Boolean (Yes/No), and when this is set as <b>YES</b> , system automatically generates the rejection fax in the pre-defined template whenever an application is declined.
MAX_LEAD_DAY_AGE	This parameter is used to define the maximum no. of days, post which the sales lead would be considered cold. Input parameter value is numeric with no upper limit.
MULTI_OFFER	Through this parameter the multiple offers (sub-tab) in pricing can be enabled or disabled for a Company/Branch. Input parameter value is Boolean (Yes/No). If the flag is set as <b>Y</b> , the underwriter can view multiple offers and select one of them to be applied for the specific application.
MULTI_OFFER_MAX_NUMBER	This parameter is used to specify the maximum number of multiple offers that can be permitted for an application. Input parameter value is numeric with no upper limit. If MULTI_OFFER company parameter is set as <b>N</b> , this parameter can be ignored as there is no use specifying a value.
MULTI_OFFER_MAX_TERM	This company parameter sets the maximum term (as in no. of instalments, whichever billing cycle is selected) for which multiple offers are calculated and displayed during pricing. Input parameter value is numeric.
MULTI_OFFER_MIN_TERM	This company parameter sets the minimum term (as in no. of instalments, whichever billing cycle is selected) for which multiple offers are calculated and displayed during pricing. Input parameter value is numeric.
MULTI_OFFER_PMT_TOLERANCE	For Multi offer variance in payment is defined in this parameter.
MULTI_OFFER_TERM_VAR	For multi offer Term variance will be defined in the parameter.
PRESENT_VALUE_COMPUTE_RATE	This parameter will perform Present Value Computation Rate (Inflation/Discounting Rate).
RATE_CHG_LTR_PRE_PROCESS_DAYS	This parameter is used to set up the number of days prior to rate change effective date to generate rate change letters in order to provide advance intimation to customers. Input parameter value is numeric with no upper limit.
STM_GEN_AFTER_MATURITY_IND	This parameter is used to enable the statement generation for an account after the maturity date but Account remains unpaid. Input parameter value is Boolean (Yes/No). If this is set to <b>Y</b> , statements will get generated for accounts that remain unpaid even after maturity.
UIX_RUN_AAI_ACT	This parameter is used by the system to determine whether to create and activate an account online. Input parameter value is Boolean (Yes/No).

Table A-3 (Cont.) Company Parameters

Parameter	Description
UIX_UCS_CAC_MAX_FOLLOWUP_DAYS	This parameter is used to set up the maximum number of days for follow up when the account is in delinquent state. Input parameter value is numeric with no upper limit.
UIX_UCS_CAC_MAX_PROMISE_DAYS	This parameter is used to set up the maximum number of days allowed for customers who promise to pay when following up for delinquent accounts. Input parameter value is numeric.
AUD_QUEUE_INITIAL_CRB_FAILED	This parameter enabling will Queue the application if any bureau failed.
UIX_UCS_CUA_MAX_FOLLOWUP_DAYS	This parameter will allow the user to maintain the Collections maximum follow-up days that are allowed in the system.
XSL_TAX_INTERFACE	This parameter is used to specify the sales tax interface in OFSLL. Input parameter value is user defined. In this case it is held as <b>Manual</b> .
CMN_SYSTEM_UNDER_MAINTENANCE	This parameter specifies whether the system is under maintenance or not. Input parameter value is Boolean (Yes/No).
CMN_GL_POST_DT	This parameter is used to define the GL Post Date of Company in MM/DD/YYYY format. The same is also updated by Scheduler if ENABLED.
PTX_TXN_LAST_PURGE_DT	This parameter stores the date when transactions were purged last in the OFSLL system. Input parameter value is date.
PUP_TUP_LAST_PURGE_DT	This parameter stores the date when transactions upload were purged last in the OFSLL system. Input parameter value is date.
JSC_START_OF_BUSINESS_TIME	This parameter is used to set the start of business time. Input parameter value is time in 24 hour format.
CMN_PROMISE_FUTURE_MTHD	<p>This parameter helps to define the future promise handling method in the system.</p> <p>When multiple <b>Promise to Pay</b> records are defined on an account and if any one of the promise is not satisfied i.e. if there is no credit / Payment transaction of the corresponding amount on the promise date, then system uses any of the following method defined in this parameter to update the future promises.</p> <ul style="list-style-type: none"> <li>• No Action on future promises (default)</li> <li>• Mark current and future promises as broken</li> <li>• Mark current as broken but future promise as cancelled</li> </ul>

## A.5 Other Parameters

The following additional set of parameters are also available to control system specific data and other administration process.

**Table A-4 Other Parameters**

Parameter	Description
CRB_MAX_BUREAU_PULL	This parameter is used to determine the number of credit reports automatically per applicant. Input parameter value is numeric.
CRB_ALL_APL_BUREAU_PULL	This parameter is used to set up whether credit bureau reports should be pulled for the primary applicant only or to all other applicants also (for joint applications), regardless of their relationship with the primary applicant. Input parameter value is Boolean (Y/N).
CBU_FILE_FREQUENCY	This parameter is used to set the Metro II File Frequency and determine whether output file is to be generated daily or monthly. If this is monthly, then output file is written with daily data but generated monthly.
JOINT_DEDUP_SPOUSE_LIABILITIES	This parameter is used to determine duplicate liabilities in the Spouse's liabilities in de-duping logic. Input parameter value is Boolean (Yes/No).
JOINT_DEDUP_ALLAPL_LIABILITIES	This parameter is used to determine duplicate liabilities of all applicants' liabilities in de-duping logic, irrespective of whether they are related to each other. Input parameter value is Boolean (Yes/No).
ASC_COL_SER_ENABLED_IND	This parameter is used for enabling the Collection Servicing Indicator. Input parameter value is Boolean (Y/N).
CMN_TEST_TOOL_LOGGING	This parameter is used to set the testing tool logging to enable or disable testing tool log in. Input parameter value is Boolean (Yes/No).
ICA_INPUT_FILE_FORMAT	This parameter is used to specify the Input format for call activity file. Two Parameter values are possible – US format and OFSLL format.
JSV_BI_USER	This parameter is used to define the BI publisher User ID. Input parameter value is user defined (Admin user).
JSV_BI_PASSWORD	This parameter is used to define the BI publisher User password. Input parameter value is user defined (Admin user).
PJR_COPY_PURGED_DATA	This parameter is used to specify whether data should be copied into the purge tables or not. Input parameter value is Boolean (Yes/No).
PUP_ARCHIVE_DAYS	This parameter is used to specify the number of days after which the transactions upload details are to be archived. Input parameter value is numeric.
PUP_OARCHIVE_DAYS	This parameter is used to specify the number of days after which the transactions upload details are to be moved from O tables. Input parameter value is numeric.
TPE_APPLY_LTC_FROM_CURR_DUE_DT	This parameter is used to specify whether late charge should be applied from current due date for Pyramid Law fee method. Input parameter value is Boolean (Yes/No).

**Table A-4 (Cont.) Other Parameters**

Parameter	Description
TPE_EXCESS_PAYMENT_TO_MEMO	This parameter will make excess payment to the memo payment by marking this Parameter as YES.
TPE_STOP_COMP_DELQ_DAYS	This parameter is enabled to stop computation if the account is delinquent for more than 60 days.

# B

## Appendix : Variable and Fixed Interest Rate

This section consists of the following topics:

- [Variable Interest Rate LoansLease](#)
- [Fixed Interest Rate LoansLease](#)

### B.1 Variable Interest Rate LoansLease

Variable interest rate loanlease is one in which the interest component of payable loanlease can fluctuate over time. Fluctuation can be either due to periodic changes in index rate or varying interest rates in market. Accordingly, loanlease amount may increase or decrease depending on variable interest rate.

For Variable rate loanslease, the interest rate basically consists of two components:

- Index rate - The index rate component is based on the financial market and may fluctuate accordingly.
- Margin rate - The margin rate component is the fixed rate, which normally does not change during life of the loanlease.

#### Note

Interest rate = Index rate + Margin rate.

During loanlease origination and up to the funding process, the interest rate is computed based on the prevailing index rate at the time of approval. However, once the loanlease is funded, the interest rate on the loanlease may change when the index rate changes. This interest rate change may causes changes in the loan'slease repayment amount, if specified in the terms of the contract.

Oracle Financial Services Lending and Leasing supports the variable rate functionality for closed-end loanslease during the originating, funding, and servicing of new products and loanslease with interest rates based on various industry-standard interest rate indices.

Variable rate calculation for Lease is supported for **Interest Rate** calculation method only. During product setup, on selecting the lease calculation method as **Interest Rate**, the following fields are enabled and also the **Rate Adjustments** sub tab is available to specify the details:

- Flexible Repayment
- Index Rounding
- Reschedule Method
- Reschedule Value

Note the following for lease variable rate calculation:

- The index rate changes are bound by **Rate Cap & Adjustments** and **Payment Caps** which are defined at Setup > Contract level.

- If the change payment is greater than **Max Pmt Inc/ Life**, system does not post **Rate Change** and **Term Change** transactions and displays an error indicating '**Rate Change not allowed, as new payment amount exceeds max increase life**' to avoid impact on residual value usage.

During the Product setup, you can define and control the changes in loan paymentlease amount using **Reschedule Method** and **Reschedule Value** fields.

**Figure B-1 Variable and Fixed Interest Rate**

The screenshot shows the 'Products' window with the 'Loan Product' tab selected. The 'Loan Product' section contains various fields for defining a loan product. The 'Reschedule Method' dropdown is highlighted with a red box, showing options 'UNDEFINED' and 'CHANGE PAYMENT'. The 'Reschedule Value' dropdown is also visible, showing 'CHANGE PAYMENT'.

- When Reschedule Method is selected as **UNDEFINED**, no payment changes are allowed.
- When Reschedule Method is selected as **CHANGE PAYMENT**, and Reschedule Value is specified as **0**, loan paymentlease amount changes every time depending on the variable rate.
- When Reschedule Method is selected as **CHANGE PAYMENT**, and Reschedule Value is specified in percentage (i.e. 5%, 10%) loan paymentlease amount changes only when the variable rate increases upto the defined percentage. (For example, if change percentage is specified as 10%, loan paymentlease amount changes only if the variable rate increases by 10%. Else, no change is allowed.)

Hence the impact of variable rates on loan paymentlease amount can be controlled to stop negative amortization.

This section consists of the following topic:

- ['Rate Adjustments' for Variable Rate LoansLease](#)

## B.1.1 'Rate Adjustments' for Variable Rate LoansLease

Every loanlease contract can have different limits on interest rate change as indicated below:

- Allowed amount for each minimum and maximum interest rate change
- Number of minimum and maximum interest rate changes allowed within a year and life of the account

**Note**

These limits are enforced when processing the interest rate change on the loanlease.

OFSLL supports such Adjustable-Rate Mortgages (ARM) by defining them accordingly in the **Rate Adjustment** tab of Product setup screen.

In the **Rate Adjustment** tab (Setup > Products screen > **Rate Adjustment** tab), multiple records can be created depending on the limits defined for each ARM's.

For example:

- For a particular ARM if interest rate change is allowed only once in a year, then a corresponding record in Rate Adjustments tab can be created with following field details:
  - Adjustment Frequency 'RATE CHANGE OCCURS EVERY X YEARS', Period '1', and # of Adjustment '1'.
- For a particular ARM if interest rate change is allowed only once in 5 years during life of a loanlease, then a corresponding record in Rate Adjustments tab can be created with following field details:
  - Adjustment Frequency 'RATE CHANGE OCCURS EVERY X YEARS', Period '5', and # of Adjustment '1'.
- Similarly, for an ARM if desired number of interest rate changes are to be allowed during first 10 years of a loanlease, the record in Rate Adjustments tab can have the following field details:
  - Adjustment Frequency 'RATE CHANGE OCCURS EVERY X YEARS', Period '10', and # of Adjustment 'any value upto 999'.

## B.2 Fixed Interest Rate LoansLease

Fixed interest rate loanlease is one in which the rate of interest remains fixed from funding till the loan's lease entire term. Hence, the loan paymentlease amount does not change with fluctuations in index rate or market rates.

In Oracle Financial Services Lending and Leasing, fixed interest rate loanslease can be defined in the following way:

- Create a **FLAT RATE** Index Type record in Index Rates screen (Setup > Products > Index Rates) with Rate=0.00

**Figure B-2 Index Rates**

Index Rates			
<b>Index</b>			
Index Type	Short Description	Description	Enabled
PRIME RATE	PRIME RATE	PRIME RATE	Y
FLAT RATE	FLAT RATE	FLAT RATE	Y
<b>Index Details</b>			
Start Dt	Rate	Enabled	
05/12/1994	0.0000	Y	

- Select this Index Type record during Origination/Servicing for Fixed Rate loanslease.

Since the index rate is always zero for this Index Type, the loanlease interest rate will always be the Margin rate (i.e. contract rate) which does not change during life of the loanlease.

# C

## Appendix : Lease Sales and Usage Tax

This section consists of the following topics:

- [Introduction](#)
- [Internal Lease Tax Calculation](#)
- [External Lease Tax Calculation](#)
- [Manual Lease Tax Calculation](#)

### C.1 Introduction

In general, **Sales Tax** is a tax paid to a governing body for the sales of certain goods and services. Similarly, Lease sales tax is the tax collected either on the total up-front lease price or during the lease period.

The sales tax for lease depends on the state and county where the asset is registered and every country has a governing body to collect, monitor and regulate Sales and Usage Tax collection. Depending on the country, the rules to collect sales and usage tax can be controlled by individual State or generalized across states. However, in most of the regions the Sales and Usage tax collection process is categorized as indicated below:

**Table C-1 Tax collection type**

Category	Tax collection type
Upfront	This type of tax is collected while funding the lease application and a customer has the flexibility to include the tax amount as part of Lease Receivables.
Stream	This type of tax is collected as part of the Customer Service and tax is estimated during billing process, fee assessment and so on. The opening balances are updated and calculated tax is indicated in customer statements.
Exemption	If a customer is eligible for tax exemption during a period of time, an exemption certificate is issued by tax authorities to confirm and exclude the allowed tax components.

OFSLL supports recording, calculating, billing and collecting lease sales and usage tax and provides multiple options to process the calculation internally or through an external third-party vendor like **Vertex O Series**.

Following are the methods by which you can record and calculate lease tax:

**Table C-2 Methods to calculate lease tax**

Method	Description
Internal	In this method, you can use the Origination and Servicing modules to calculate lease sales tax based on setup parameters.
External / Vertex	In this method, you can use the external integrated lease tax compliance applications like Vertex to calculate Sales and Usage Tax. Here, you need to only configure the required components in OFSLL which quantify for tax calculation and outsource the actual tax calculation to Vertex.
Manual	In this method, you can calculate the lease tax externally and only update the details into OFSLL Origination and Customer Service modules.

Based on the value defined in the Company parameter `XSL_TAX_INTERFACE` (SALES TAX INTERFACE), OFSLL determines the method selected for sales tax calculation.

Lease Sales and Usage tax can either be origin based or destination based. Origin based tax or production tax is levied where goods or services are produced. Destination based tax or consumption tax are levied where goods and services are consumed.

During the lease tax calculation, below are the address reference used to refer Source and Destination address.

- Source Address refers to the Producer Address
- Destination Address refers to the Asset Address

OFSLL supports two Sales Tax Modes (UPFRONT and CYCLE) and two Tax Methods (PURCHASE\_PRICE and PAYMENT\_STREAM) to determine if the Sales and Usage Tax has to be collected during Origination or Customer Service. Based on state specific rules, the tax details are updated in respective modules with the following combination:

- If a Lease contract is configured as UPFRONT/ PURCHASE\_PRICE, then Sales and Usage Tax is collected during Origination process.
- If a Lease contract is configured as CYCLE/ PAYMENT\_STREAM, then Sales and Usage Tax is collected during Customer Service as part Bill/Due generation.

This document contains the following sections:

- [Internal Lease Tax Calculation](#)
- [External Lease Tax Calculation](#)
- [Manual Lease Tax Calculation](#)

## C.2 Internal Lease Tax Calculation

In this method, the lease sales and usage tax details are updated and computed within OFSLL using the Setup, Origination and Customer Service modules.

This section contains the following details:

- [Sales Tax Setup](#)
- [Sales Tax Calculation at Origination](#)

- [Sales Tax Calculation at Customer Service](#)

## C.2.1 Sales Tax Setup

The Sales Tax screen facilitates to capture tax rules for Origination and Customer Service using itemizations or transactions.

This section contains the following details:

- [To setup sales tax](#)
- [Origination](#)
- [Customer Service](#)
- [Range](#)

### C.2.1.1 To setup sales tax

1. Navigate to **Setup > Administration > System > Sales Tax** screen.

**Figure C-1 Sales Tax**

The screenshot displays the Oracle Financial Services Lending and Leasing interface. The main window is titled 'Sales Tax' and contains two primary sections: 'Sales Tax Definition' and 'Formula Details'. The 'Sales Tax Definition' section includes a table with columns for Tax, Description, Start Dt, End Dt, Enabled, Channel, Company, Branch, Billing Cycle, and Product. A single entry is shown: 'JC\_INTERNAL' for both Tax and Description, with a start date of '04/19/1990' and an end date of '04/19/4000'. The 'Formula Details' section below it contains a table with columns for Calc Method, Itemization, Sign, Value, Tax Exemption, and Enabled. Two entries are listed: 'FLAT ITEMIZATION... ITM DOWN PAYMENT' and 'PERCENTAGE OF I... ITM CASH SALES'.

2. In the **Sales Tax Definition** section, click **Add**. You can also perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields are given below:

**Table C-3 Sales Tax Definition**

Field	Description
Tax	Specify a unique value to identify the tax rule definition.
Description	Specify a description for the tax rule.
Start Dt	Select the start date for tax rule definition from the adjoining calendar.
End Dt	Select the end date for tax rule definition from the adjoining calendar.
Enabled	Check this box to enable the tax rule definition.

**Table C-3 (Cont.) Sales Tax Definition**

Field	Description
<b>Selection Criteria</b> section	
Channel	Select the method to calculate lease tax as either Internal or External (Vertex) from the drop-down list. The list is populated based on values maintained in <b>TAX_CHANNEL_CD</b> lookup code.
Company	Select the portfolio company from the drop-down list.
Branch	Select the portfolio branch from the drop-down list.
Billing Cycle	Select the frequency of billing cycle from the drop-down list. The list is populated based on values maintained in <b>LEASE_BILL_CYCLE_CD</b> lookup code.
Product	Select the product to which the sale tax rule is applicable from the drop-down list.
Asset Class	Select the asset class from the drop-down list.
Asset Type	Select the asset type from the drop-down list. The list is populated with all enabled Asset Types.
Sub Type	Select the asset sub type from the drop-down list.
Asset Make	Select the asset make from the drop-down list.
Asset Model	Select the asset model from the drop-down list.
Age	Specify the age of the asset.
<b>Source Address</b> section - This section facilitates to record the location details where asset is manufactured.	
Country	Select the country from the drop down list. The list is populated based on values defined in <b>COUNTRY_CD</b> lookup code.
Zip From	Select the zip code from where the territory starts from the drop down list.
Zip To	Select the zip code up to where the territory ends from the drop down list.
City	Select the city from the drop-down list.
State	Select the state from the drop-down list.
County	Select the county from the drop-down list. The list is populated based on values defined in <b>COUNTY_CD</b> lookup code.
<b>Destination Address</b> section - This section facilitates to record the location details where asset is sold.	
Country	Select the country from the drop down list. The list is populated based on values defined in <b>COUNTRY_CD</b> lookup code.
Zip From	Select the zip code from where the territory starts from the drop down list.
Zip To	Select the zip code up to where the territory ends from the drop down list.
City	Select the city from the drop-down list.
State	Select the state from the drop-down list.

**Table C-3 (Cont.) Sales Tax Definition**

Field	Description
County	Select the county from the drop-down list. The list is populated based on values defined in COUNTY_CD lookup code.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## C.2.1.2 Origination

The Origination tab of Sales Tax screen facilitates to capture details for **upfront** tax calculation during Origination which is based on Purchase Price, Itemization/Lease Payment amount, and Total of Lease Payments.

1. Navigate to **Setup > Administration > System > Sales Tax > Origination** tab.
2. In the **Formula Details** section, click **Add**. You can also perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields are given below:

**Table C-4 Formula Details**

Field	Description
Calc Method	<p>Select the lease tax calculation method as one of the following from the drop-down list. The list is populated based on SALES_TAX_INT_AMT_CD lookup code for Internal calculation method and SALES_TAX_EXT_AMT_CD lookup code for Vertex.</p> <ul style="list-style-type: none"> <li>• <b>Lease Payment Amount:</b> fixed tax on lease installment amount</li> <li>• <b>Total of Lease Payment:</b> fixed tax on total lease amount</li> <li>• <b>Flat Itemization:</b> fixed tax amount charged for configured itemizations</li> <li>• <b>Percentage of Itemization Amount:</b> fixed tax percentage charged for configured itemizations</li> <li>• <b>Purchase Price Amount:</b> fixed tax on purchase price of asset retail valuation.</li> </ul> <p>Refer to example <a href="#">Illustration - Upfront Tax Calculation</a> below for information on calculation methods.</p>
Itemization	<p>Select the required itemization from the drop-down list. You can define multiple itemization for the selected calculation method to determine sales tax.</p> <p><b>Note:</b> This field is available only if the calculation method is either FLAT ITEMIZATION AMOUNT or PERCENTAGE OF ITEMIZATION AMOUNT.</p>

**Table C-4 (Cont.) Formula Details**

Field	Description
Sign	Select <b>+ve</b> option (default) if the calculated sales tax amount is to be added to the lease application or <b>-ve</b> option if a tax rebate is given on the lease application.  <b>Note:</b> This field is displayed only for Internal sales tax calculation method.
Value	Based on the calculation method selected, specify either amount or percentage of tax to be calculated.  <b>Note:</b> This field is displayed only for Internal sales tax calculation method.
Tax Exemption	Check this box to indicate if the tax formula can be exempted from sales tax calculation for lease applications having valid exemption details. Else, sales tax is assessed for lease application using this tax formula.  <b>Note:</b> This check box is displayed only for Internal sales tax calculation method.
Enabled	Check this box to enable the tax formula.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### Illustration - Upfront Tax Calculation

The table below is an illustration on how upfront tax is determined for different calculation methods:

**Table C-5 Upfront tax calculation**

Payment Amt	Total Amt	MSRP	Item Amt	Calc Method	Tax %	Tax Amt	Payment Amt	Total Amt
\$558.17	\$20,093.72	\$20,000	\$20,000	Purchase Price	5%	NA	\$558.17	\$21,093.72
\$558.17	\$20,093.72	\$20,000	\$20,000	Percent of Itm Amt	5%	NA	\$558.17	\$21,093.72
\$558.17	\$20,093.72	\$20,000	\$20,000	Flat of Itm Amt	-	\$1,000	\$558.17	\$21,093.72
\$558.17	\$20,093.72	\$20,000	\$20,000	Lease Payment Amt	5%	NA	\$586.08	\$21098.83
\$558.17	\$20,093.72	\$20,000	\$20,000	Total of Lease Payment Amt	5%	NA	\$558.17	\$21098.41

## C.2.1.3 Customer Service

The Customer Service tab of Sales Tax screen facilitates to capture details for **Stream** tax calculation when Bill/Due date or Late Charge transactions are posted, and also to estimate tax for Payoff Quote lease on unpaid lease amount.

1. Navigate to **Setup > Administration > System > Sales Tax > Customer Service** tab.

2. In the **Formula Details** section, click **Add**. You can also perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields are given below:

**Table C-6 Formula Details**

Field	Description
Calculation Method	<p>Select the lease tax calculation method as one of the following from the drop-down list. The list is populated based on SALES_TAX_INT_AMT_CD lookup code for Internal calculation method and SALES_TAX_EXT_AMT_CD lookup code for Vertex.</p> <ul style="list-style-type: none"> <li>• <b>Flat Transaction Amount</b> - fixed tax amount charged for configured transactions.</li> <li>• <b>Percentage of Transaction Amount</b> - fixed tax percentage charged for configured transactions.</li> </ul> <p>** Refer to the illustrated example for information on calculation methods.</p>
Txn Code	<p>Select the transaction code from the drop-down list. The list is populated with the following values based on SALES_TAX_TXNS_CD lookup code.</p> <ul style="list-style-type: none"> <li>• Bill/Due date</li> <li>• Late Charge</li> <li>• Payoff Quote lease</li> </ul> <p>Refer to example <a href="#">Illustration - Stream Tax Calculation</a> below for information on how tax is calculated based on combination of calculation method and transaction code.</p>
Sign	<p>Select <b>+ve</b> option (default) if the calculated sales tax amount is to be added to the lease account or <b>-ve</b> option if a tax rebate is given on the lease account.</p> <p><b>Note:</b> This field is displayed only for Internal sales tax calculation method.</p>
Value	<p>Based on the calculation method selected, specify either amount or percentage of tax to be calculated.</p> <p><b>Note:</b> This field is displayed only for Internal sales tax calculation method.</p>
Tax Exemption	<p>Check this box to indicate if the tax formula can be exempted from sales tax calculation for lease accounts having valid exemption details. Else, sales tax is assessed for lease account using this tax formula.</p> <p><b>Note:</b> This check box is displayed only for Internal sales tax calculation method.</p>
Enabled	Check this box to enable the tax formula.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

**Illustration - Stream Tax Calculation**

The table below is an illustration on how stream tax is calculated with the combination of calculation method and transaction code selected.

**Table C-7 Stream tax calculation**

Txn Code	Calc Method	Tax %	Tax Amt	Txn Amt	Total Txn Amt
BILL/DUE DATE	Percentage of Transaction Amt	5%	-	\$558.17	\$586.08
BILL/DUE DATE	Flat Transaction Amt	-	\$100	\$558.17	\$658.17
LATE CHARGE	Percentage of Transaction Amt	5%	-	\$20	\$21
LATE CHARGE	Flat Transaction Amt	-	\$5	\$20	\$25

### C.2.1.4 Range

The Range tab of Sales Tax screen facilitates to define range (gradual increase in tax rate) for tax calculation based on different charges levied for Product/Service.

For example if the cost of the vehicle is less than or equal to \$20,000 then Sales and Usage Tax slab is 20% and if the cost is greater than \$20,000 then slab is 30%. To facilitate this, below configuration should be maintained in the system.

**Table C-8 Origination**

Calculation Method	Itemization	Sign	Value	Enabled
PERCENTAGE OF ITEMIZATION AMOUNT	ITM CASH SALES	+	100	Y

**Table C-9 Range**

Amount From	Percentage	Enabled
20000	20	Y
20001	30	Y

#### To define Range for Sales tax calculation

1. Navigate to **Setup > Administration > System > Sales Tax > Range** tab.
2. In the **Range Details** section, click **Add**. You can also perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields are given below:

**Table C-10 Range Details**

Field	Description
Amt From	Specify the minimum amount from which tax has to be determined.
Percent	Specify the percentage of tax to be calculated based on amount.
Enabled	Check this box to enable the range.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

## C.2.2 Sales Tax Calculation at Origination

The sales and usage tax details defined in setup are used to calculate tax in Origination Decision / Contract screen.

This section contains the following details:

- [Calculate Tax in Decision/Contract tab](#)
- [Exempt Sales Tax in Decision/Contract tab](#)
- [Attach Sales Tax Exemption Certificate](#)
- [Generate Lease Sale and Usage Tax Report](#)

### C.2.2.1 Calculate Tax in Decision/Contract tab

1. Navigate to **Origination > Underwriting / Funding > Decision/Contract** screen.

**Figure C-2 Calculate Tax in Decision/Contract tab**

2. Click **Calculate Tax** button. Based on the setup details, system calculates the sales tax for **Upfront** and **Stream** category in the following way:
  - If Sales Tax Mode and Tax Method is UPFRONT/ PURCHASE\_PRICE, the Sales and Usage Tax is calculated and updated into the itemization **Cash Sale tax** (ITM\_CSH\_SALES\_TAX). On Funding, the tax amount calculated during origination will be part of Lease Receivable based on itemization adjustments.
  - If Sales Tax Mode and Tax Method is CYCLE/ PAYMENT\_STREAM, the Sales and Usage Tax is calculated and updated into the Contract fields - **Estimated Sales Tax** and **Sales Tax** to record the estimated tax amount and percentage. However, this data is not propagated to Account.

### C.2.2.2 Exempt Sales Tax in Decision/Contract tab

The **Tax Details** sub tab in Decision/Contract tab facilitates to record tax exemption details. If exemption details are provided for the application, all the tax details marked with Exemption Indicator **Y** in setup are exempted for this application.

Since the **Tax Details** sub tab is available in both Decision and Contract tabs, you can choose to define sales tax exemption either during Decisioning or Funding. However, exemption selected during decisioning will be applicable on funding if no changes are made.

1. Navigate to **Origination > Underwriting / Funding > Decision/Contract > Tax Details** sub tab.
2. Click **Edit**. You can also perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields are given below:

**Table C-11 Exempt Sales Tax in Decision/Contract tab**

Field	Description
Exemption	Check this box to indicate that application is eligible for tax exemption Else, all the sales tax defined in setup are applicable for the application. <b>Note:</b> Sales tax exemption is eligible only if the exemption option is checked in both Origination (Tax Details tab) and Setup screen (Setup > Administration > System > Sales Tax screen).
Exemption Start Dt	Select the exemption start date from the adjoining calendar.
Exemption End Dt	Select the exemption end date from the adjoining calendar. This field is enabled on selecting the exemption start date.
Reason	Select the exemption reason from the drop-down list. This field is enabled only if <b>Exemption</b> check box is selected.
Tax Code	View the tax code applied for this application.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

### C.2.2.3 Attach Sales Tax Exemption Certificate

For every sales tax exemption, you can provide a proof of verification by attaching the exemption certificate to the application. However, validating the authenticity of the certificate is not handled in OFSLL.

To attach sales tax certificate to an application, you need to first upload the document into the system through **Application Documents** screen and attached it to the application through Application > Document tab.

1. From the LHS menu, click **Origination > Application Documents** link.
2. In the Document Maintenance > Action section, select **Attach Document (Client)** option.
3. In **Select Document** section, browse for the file location and **Upload**.
4. In **Document Details** section, select the uploaded document and click **Edit**.
  - Select Document Sub Type as **Tax Exemption Proof** from the drop-down list.
  - Similarly update other details of Document Type, Application #, and select the **Attach** check box.
  - Click **Save and Return** and in Document Details section, click **Post**.
5. Navigate to **Origination > Underwriting / Funding** and select the lease application.

- Click **Document** tab. In **Application Document Details** section, select the uploaded document and click **Upload**.
- (Optional) You can also edit the document details before upload by adding additional information as comments.

The sales tax exemption certificate is linked to the application. For more information on the process of document upload, refer to **Application Documents** chapter in the User Guide.

### C.2.2.4 Generate Lease Sale and Usage Tax Report

After the sales tax details are calculated, you can retrieve the information to view the sales tax amount recorded during calculation and actual tax collected after funding, by generating **Sales usage tax (Lease)** report. This report can be generated for all applications with Sales Tax Mode and Tax Method **UPFRONT/ PURCHASE\_PRICE**.

In the report, the tax recorded before funding is referred as **Quotation Tax Amt** and actual tax recorded for the application is referred as **Invoice Tax Amt**. Since this is a system generated report, any difference in these amount are to be manually updated into the account.

- From the LHS menu, click **Origination > Reports** link.
- In the **Reports** section, filter report with description **SALES USAGE TAX - LEASE**.
- In the **Report Parameters** section, select/specify the required parameters and click **Run Report**.

The report is generated in the selected format with the details as indicated below. For detailed information on report generation process, refer to **Reports** chapter in User Guide.

**Figure C-3 Reports - Origination - Sales Tax**

Report : Sales usage tax (Lease)  
Date: 4/25/2018 18:53 PM

ORACLE®

### C.2.3 Sales Tax Calculation at Customer Service

The sales and usage tax details defined in Setup > Sales Tax > Customer Service tab are used to calculate sales tax for **Stream** accounts. OFSLL records sales tax by posting Sales / Use Tax transaction which in-turn updates the Sales / Usage Tax balance on the account.

This section contains the following details:

- [Calculate Tax in Customer Service](#)
- [Exempt Sales Tax in Customer Service](#)
- [Attach Sales Tax Exemption Certificate](#)
- [Sales tax in Account Statement](#)
- [Generate Lease Sale and Usage Tax Report](#)

## C.2.3.1 Calculate Tax in Customer Service

- For the calculation method defined in setup as either **Flat Transaction Amount** or **Percentage of Transaction Amount**, the scheduled batch job posts the following type of transactions:

**Table C-12 Type of transactions**

Transaction Code	Batch Job	Transaction
Bill/Due Date	TXNDDT_BJ_100_01 BILLING/DUE DATES PROCESSING	DDT BILL/DUE DATE
Late Charge	TXNLTC_BJ_100_01 LATE CHARGE PROCESSING	FLC LATE CHARGE

- Along with the above transaction, system automatically posts **SALES / USE TAX** linking transaction to determine and update the tax component separately.
  - For accounts with tax exemption, sales tax will not be calculated and link transaction is not posted.
  - In case of reversal, if the parent transaction is reversed then corresponding child **SALES / USE TAX** tax transaction will also be reversed.
- On successfully posting the transaction, the details are updated on to the customer account in **Customer Service > Transaction History > Transactions** tab.

**Figure C-4 Transaction History**

### C.2.3.2 Exempt Sales Tax in Customer Service

If exemption details are provided in Origination, system automatically propagates the same to Customer Service account. You can update exemption details during Customer Service for an account by posting a non-monetary **SALES TAX EXEMPTION DETAILS MAINTENANCE** transaction.

Figure C-6 Sales Tax Exemption Details Maintenance

**Transaction Batch Information**

Date: 04/26/2018  
Monetary:

Transaction: SALES TAX EXEMPTION DETAILS MAINTENANCE  
Batch:

Status: OPEN

**Parameters**

Parameter	Value	Required
TXN DATE	<input type="text"/>	Y
TAX EXEMPTION INDICATOR	<input type="text"/>	Y
TAX EXEMPTION REASON CODE	<input type="text"/>	Y
TAX EXEMPTION START DATE	<input type="text"/>	Y
TAX EXEMPTION END DATE	<input type="text"/>	Y

For information on populating the parameter values, refer to [Exempt Sales Tax in Decision/Contract tab](#) section.

On successfully posting the transaction, the exemption details are updated in **Servicing > Customer Service > Account Details > Tax Details** tab.

### C.2.3.3 Attach Sales Tax Exemption Certificate

For every sales tax exemption, you can provide a proof of verification by attaching the exemption certificate to the account. However, validating the authenticity of the certificate is not handled in OFSLL.

To attach sales tax certificate to an application, you need to first upload the document into the system through **Account Documents** screen and attached it to the application through Customer Service > Document Tracking tab.

1. From the LHS menu, click Servicing > Account Documents link.
2. In the Document Maintenance > Action section, select **Attach Document (Client)** option.
3. In **Select Document** section, browse for the file location and **Upload**.
4. In **Document Details** section, select the uploaded document and click **Edit**.
  - Select Document Sub Type as **Tax Exemption Proof** from the drop-down list.
  - Similarly update other details of Document Type, Account #, and select the **Attach** check box.
  - Click **Save and Return** and in Document Details section, click **Post**.
5. Navigate to **Servicing > Customer Service > Document Tracking** tab and select the lease application.
6. Click **Document** tab. In **Account Document Details** section, select the uploaded document and click **Upload**.
7. (Optional) You can also edit the document details before upload by adding additional information as comments.

The sales tax exemption certificate is linked to the application. For more information on the process of document upload, refer to **Account Documents** chapter in User Guide.

### C.2.3.4 Sales tax in Account Statement

The sales and usage tax calculated on the account is captured in **Servicing > Customer Service > Account Details > Statements** tab so that the customer is updated about lease sales tax amount levied on the account. Updating the sales tax details in **Statement Details** section is done through a scheduled batch job.

**Figure C-7 Sales tax in Account Statement**

The screenshot displays the Oracle Account Statement interface. The top navigation bar includes tabs for Summary, Collections, Customer Service, Account Details (selected), Customer Details, Customer Preferences, Transaction History, Pmt Modes, Bankruptcy, Repo/Foreclosure, Deficiency, and Col. The Account Details section has sub-tabs for Account Details, Statements (selected), Rate Schedule, Insurances, Condition Details, Securitization, Contract Information, and Tax Details. The Statements section shows a table with columns for Closing Dt, Due Dt, and Generation Dt. The Statement Details section shows a table with columns for Current Due(+), PastDue(+), Late Charge(+), Other Charges(+), Tax Charges(+), and Total Due. The Tax Charges(+) value is highlighted with a red box.

Current Due(+)	PastDue(+)	Late Charge(+)	Other Charges(+)	Tax Charges(+)	Total Due =
1,132.13	2,264.26	60.00	0.00	0.00	3,456.39

Statement Details

Current Due(+) 1,132.13  
 PastDue(+) 2,264.26  
 Late Charge(+) 60.00  
 Other Charges(+) 0.00  
 Tax Charges(+) 0.00  
 Total Due = 3,456.39

### C.2.3.5 Generate Lease Sale and Usage Tax Report

After the sales tax details are calculated, you can retrieve the information to view the sales tax amount recorded on the account, by generating **Sales usage tax (Lease)** report. This report can be generated for all accounts with Sales Tax Mode and Tax Method **CYCLE/PAYMENT\_STREAM**.

1. From the LHS menu, click **Servicing > Reports** link.
2. In the **Reports** section, filter report with description **SALES USAGE TAX - LEASE**.
3. In the **Report Parameters** section, select/specify the required parameters and click **Run Report**.

The report is generated in the selected format with the details as indicated below. For detailed information on report generation process, refer to **Reports** chapter in User Guide.

**Figure C-8 Servicing Reports - SalesTax**

Report : Sales usage tax (Lease)

ORACLE®  
Financial Services Lending and Leasing

## C.3 External Lease Tax Calculation

In this method, the lease sales and usage tax details are computed in an external integrated system called Vertex® - Indirect Tax for Leasing and on a successfully tax computation, the sales tax details are updated into OFSLL setup, Origination and Customer Service modules.

Vertex® Indirect Tax for Leasing facilitates with tax calculation solutions to address the needs of leasing software vendors and their enterprise customers within the equipment and vehicle leasing industries. Vertex Leasing leverages the Vertex O Series platform and automates the taxability and ongoing maintenance of rental and leasing rules.

This section contains the following details:

- [OFSLL Vertex Integration](#)
- [Setup changes](#)
- [Changes in Origination Module](#)
- [Changes in Customer Service Module](#)

- [Limitations of Vertex integration](#)

### C.3.1 OFSLL Vertex Integration

The below image indicates Vertex integration with OFSLL and the associated components.

**Figure C-9 OFSLL Vertex Integration**

A brief description of the integrated components are provided below:

**Vertex Adapter** - This adapter is used to receive OFSLL interface data and create Vertex Specific SOAP Request/Response. Vertex provides **FlexibleFields** to exchange implementation specific customization data. These fields are mapped to PL/SQL custom fields in Vertex Adapter and can be customized during implementation. However, this is Vertex specific adapter and has to be replaced specifically to support other Tax Vendor.

**Common Tax API** - When Vertex Adapter receives a response, OFSLL uses Common Tax API to update Sale and Usage Tax details. This adapter contains exit point and can be used to update Tax details from External System.

**MDB Interface** - To support Vertex interface new message types, following services are added:

- QUOTATION\_SERVICE
- INVOICE\_SERVICE
- CREATE\_CERTIFICATE\_SERVICE
- CUSTOMER\_SERVICE

Also the existing error queue [OFSLL\_OUTBOUND\_Q] is enhanced to record Vertex interface error messages during the integration.

For more details on integration, refer to OFSLL technical documentation. During the process of integration, there observed discrepancies are noted. Refer to [Limitations of Vertex integration](#) section for details.

**Note**

During Origination, all Vertex interface calls are handled through user interface and on Funding/Customer Service, these calls are made from database using MDB flow.

Following Vertex services are used in OFSLL with the integration. For detail information, refer Vertex O Series documentation.

**Table C-13 Vertex services**

Service	Description
Quotation Request	It is used to estimate the Tax of the proposed Lease Contract. This service is triggered by OFSLL to estimate tax during Decision/Contract and Lease Payoff Quote.
Invoice Request	It is used to bill the Tax for the Lease Contract. This service is triggered by OFSLL to record tax during Funding and Lease transaction posting.
Delete Request	It is used to reverse Vertex Invoice request. Every Vertex Invoice request trigged from OFSLL use <b>transactionId</b> to stamp OFSLL internal transaction reference. This internal transaction id is used by this service to reverse Vertex Invoice request based on OFSLL reversal.
Create Customer Request	It is used to register a Customer.
Create Certificate Request	It is used to upload Tax Exception Certificate Id for Customer.

## C.3.2 Setup changes

To enable Vertex integration, the company parameter `XSL_TAX_INTERFACE` has to be updated as **VERTEX** and the system parameter `VTX_OUTBOUND_URL` needs to be updated with valid Vertex URL.

Also, in the system parameter `VTX_VERSION` (VERTEX VERSION), the Parameter Value has to be updated with the version of Vertex being used. For example, V8S is used for version 8. Based on this value, system configures the required API changes automatically.

The sales tax information recorded in OFSLL **Setup > Administration > System > Sales Tax** screen is exchanged with Vertex interface through vertex adapter using SOAP Request/Response.

For information on recording sales tax rules in setup, refer to [Sales Tax Setup](#) section.

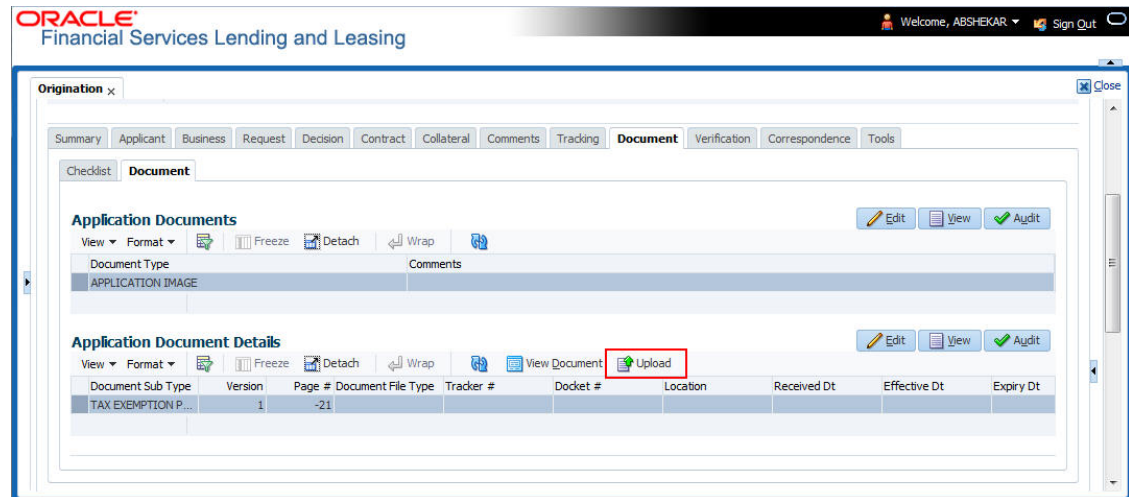

## C.3.3 Changes in Origination Module

Since the process of sales tax collection is handled from external system, the information received from Vertex are only updated into the respective tables in OFSLL. The same is available in the UI as detailed in [Sales Tax Calculation at Origination](#) section.

To load exemption certificate into OFSLL, follow the same process as detailed for internal sale tax calculation method using in **Origination > Underwriting / Funding > Document** tab. To upload sales tax exemption certificate to vertex, click **Upload** button in the Application documents tab.

Figure C-10 Upload exemption certificate

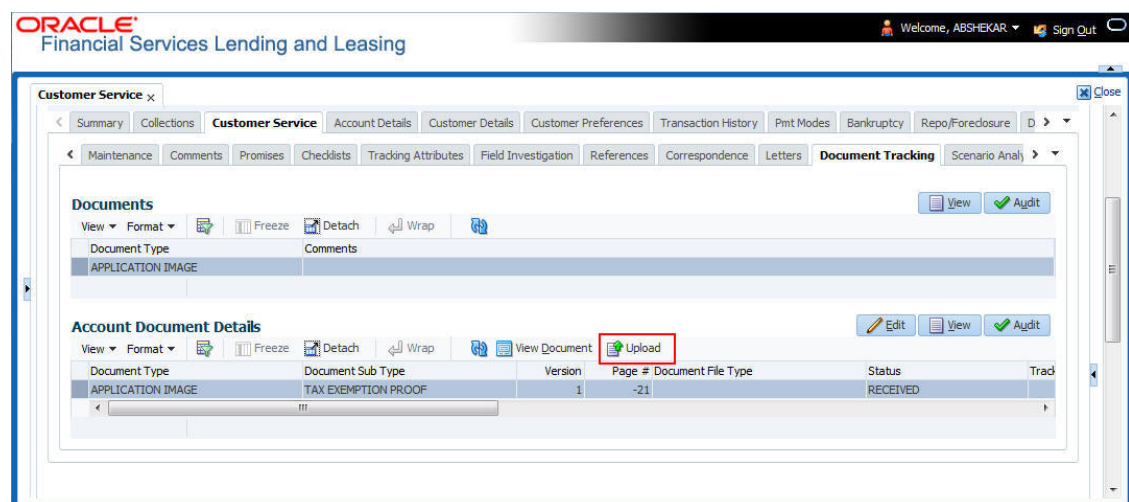

On successful upload, a **Tax Exemption Certificate ID** is updated in to the system and the **Upload** button is disabled.

### C.3.4 Changes in Customer Service Module

The sales tax calculation process is similar to the internal method as detailed in [Sales Tax Calculation at Customer Service](#) section except that the Sales/Usage Tax - link transactions is posted only on receiving the tax details from Vertex. This transaction will be posted after posting the main transaction.

To load exemption certificate into OFSLL, follow the same process as detailed for internal sale tax calculation method using in **Servicing > Customer Service > Document Tracking** tab. To upload sales tax exemption certificate to vertex, click **Upload** button in the Account Document Details section tab.

Figure C-11 Upload exemption certificate

On successful upload, a **Tax Exemption Certificate ID** is updated in to the system and the **Upload** button is disabled.

## C.3.5 Limitations of Vertex integration

Following are the limitation noticed with Vertex integration:

- Use of **TABLE** value for company parameter `XSL_TAX_INTERFACE` is deprecated and replaced with **INTRENAL** for consistency.
- Existing data of `SALES_TAX` has to be revisited before and after upgrade. This table is enhanced to support multiple criteria.
- Current solution does not support Sales and Usage Tax calculation for multiple assets as part of Origination and Customer Servicing.
- OFSLL currently supports to capture only following three transactions for Sales and Usage Tax calculation - BILL/DUE, LATE FEE and PAYOFF QUOTE. This is not a finite list of transaction. Based on different implementation specification system can facilitate addition of multiple transactions. Any requirement of additional transaction should be requested to product team, based on analysis support will be provided.
- Existing use of **Setup > Products > Contract > Itemizations > Taxable Indicator** is depreciated and can rely on new Lease Origination Sales and Usage Tax Setup.
- As part of current release, OFSLL does not provide support for CASH basis of Sales and Usage Tax calculation.
- When uploading tax Exemptions Certificate to Vertex, OFSLL calls Vertex Create Customer service followed by Create Certificate. Due to any internal error if OFSLL is unable to complete Vertex Create Certificate request, OFSLL will enter into a dead lock mode and will try to call Create Customer followed by Create Certificate which will fail as customer already exist in Vertex. This has to be operationally handled based on messages in the error queue.
- Care should be taken to disable **Calculate Tax** tax button in Decision for Stream based Lease application.
- Vertex use Imposition codes to identify multiple tax rules that can be levied on application/account. OFSLL records all the tax details into single itemization/transaction amount. Split of tax details should be gathered outside the system using Vertex **transactionId** stored in `SALES_USAGE_TAX_DETAILS [SUD_ID]`.
- Adjustment, Void, Charge off and Wave of tax balance based on parent transaction has to be handled manually.
- For manual transactions posted from User Interface/Web Service that are requesting for Vertex Tax update, a delay of 30 seconds is introduced to get response from Vertex. If response is received in the due time, transaction will be posted with Vertex tax data else transaction will be marked as Error and user is requested to repost the transaction based on Vertex interface availability.
- In current release, we are unable to support re-triggering of failed transaction during Vertex integration. Support will be added in future.
- Vertex Address cleansing is currently out of scope of this release. Address cleansing adapter has to be written to interact with Vertex and get source and destination address updated before using based OFSLL-Vertex integration.
- Sale and Usage Tax is not part of Bill/Due amount. Care should be taken to disable billed indicator **Setup Products Contract Lease**.

- Currently Vertex tax data is not getting updated in Lease **Customer Service Account Details** Statements [Tax Charges (+)]. This bug will be fixed in future release.
- Tax calculation support for API and Account On-boarding will be added in subsequent patch release.

## C.4 Manual Lease Tax Calculation

In this method, the Lease Sales and Usage tax are computed manually and only the calculated details are recorded into OFSLL Setup, Origination, and Customer Service modules. For information on updating the details in the respective modules, refer to [Internal Lease Tax Calculation](#) section.

Since OFSLL interface only supports to record and display the information, validating and processing the same has to be done outside the system.

# D

## Appendix : Usage Based Leasing

This section consists of the following topics:

- [Introduction](#)
- [Pre-requisites](#)
- [Usage Based Leasing Workflow](#)

### D.1 Introduction

The Usage based leasing option extends OFSLL support of lease functionality and facilitates to charge the asset usage fee for the customer not at the time of the Termination/Payoff Quote but based on the actual usage as per the defined Cycle (i.e. Daily, Weekly, Monthly and so on). Also for usage based lease contracts, customer has option to pay the minimum monthly lease payment and the usage fee based on the actual usage.

Whenever customer sends asset usage details to OFSLL, the details are categorized to applicable rate slabs, for tiered and not-tiered types and based on usage methods (i.e. rollover/advance) and charge matrix, the usage fee is calculated and charged on to the account. The same is communicated to the customer through account statement.

In such type of billing, customers would benefit by being charged only when they use a product or service, rather than having to buy something outright.

Consider the following example of a company which leases a photocopying machine. The monthly billing amount consists of two components - a flat rate (rental) that covers the fixed costs and a fee for usage charge (such as 1 cent per copy). Here, Usage is billed based on total number of units utilized from last bill to current billing date and customer pays the following two components:

- Lease Rental Payment
- Usage-based Charge component (included in the monthly bill)

### D.2 Pre-requisites

- To support usage based leasing, ensure that all the basic setup of defining Usage Details, Usage Charge Matrix in Asset Types screen is done and the lease Agreement Type is selected appropriately in Products, Pricing and Contract setup screens.
- When usage details are to be processed through File Upload, ensure that the file received from external system contains all the required information for mapping to respective fields in Usage History screen.

### D.3 Usage Based Leasing Workflow

Consider the below image which indicates the complete usage based leasing workflow supported in the system. A brief detailing of the same is provided below.

Figure D-1 Usage Based Leasing Workflow

- The process starts from defining usage based parameter (agreement type) in Setup > Products, Pricing, and Contract screens.
- In Setup > Asset Types screen, you can define the **Usage Details** and **Usage Charge Matrix** which are used to classify the incoming data for charging and billing calculation.
- In Origination > Collateral screen, select the usage based leasing application, select asset type, sub type, and load the usage details from setup. The details are allowed to be modified here. In Decisioning stage, system picks the pricing with Usage details and during Contract, the application is funded with lease usage agreement type.
- In Servicing, the chargeable units for usage is derived from the details populated in Customer Service > Collateral tab > **Usage History** section. The details can be populated by File upload or through web services. The chargeable units are categorized based on Usage Details and Charge Matrix defined in Setup > Asset types screen.

- On receiving the usage data from external system, the same is validated if it is Actual or Incremental data and also accounts for Rollover - yes/no and Advance - yes/no type of combinations supported to derive the net chargeable units (subject to minimum units consumed). The same is discussed in subsequent section.
- The chargeable units are further classified into Base and Excess consumed units, and charge is applied based on Charge Matrix as per TIERED and NON TIERED category. This data is populated into Servicing > Collateral > Usage Summary tab.
- Based on **Usage / Rental Cycle**, system runs the Usage billing batch job to calculate and post the usage fee on the account as per the billing cycle. While generating the account statement, the usage details are explicitly indicated along with charges of the same.
- [Lease Usage Calculation](#)
- [Lease Usage Methods](#)
- [Tiered and Non Tiered Usage Calculation](#)
- [Lease Usage Batch Jobs](#)
- [Lease Usage Account Statement](#)
- [Elastic Usage Term](#)

### D.3.1 Lease Usage Calculation

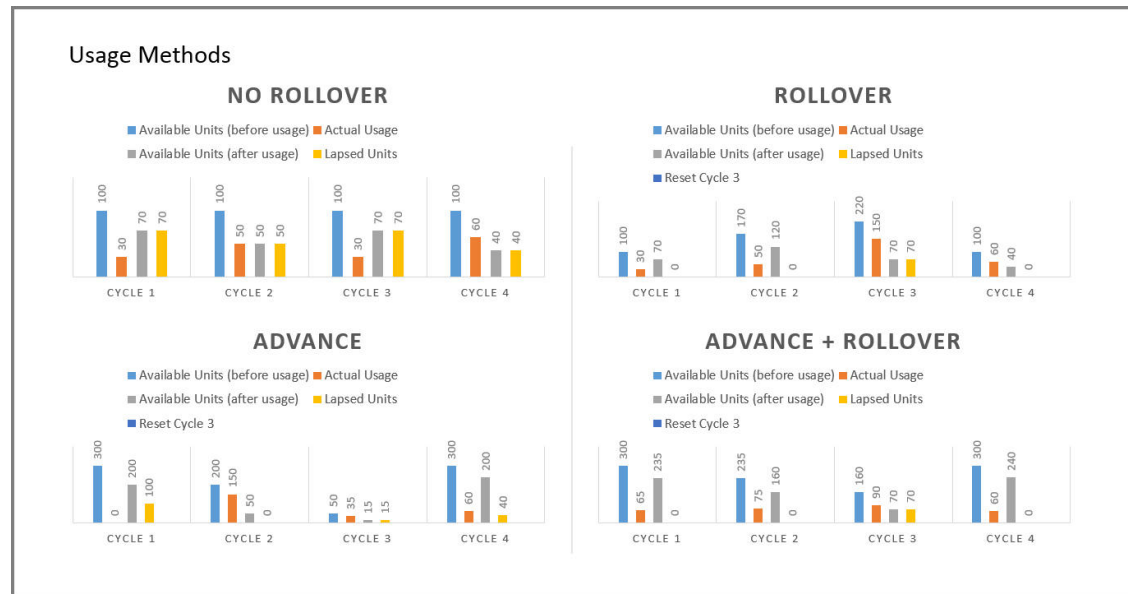

- Min Usage - indicates the minimum units to be considered as **Chargeable Units**. During calculation, the Chargeable Units = Net Units, subject to **Min Usage**.
- Max Usage - indicates that usage is to be charged as **Base** value for the given billing cycle. Any usage units beyond **Max Usage** should be charged based on **Calculation Method** as either Tiered (based on multiple rate slabs) or Non-Tiered (applicable slab at total usage volume).
- Discount % - based on discount %, system calculates the applicable discount units on **Gross - Non chargeable Units** to arrive Net Usage in **Usage History** tab.

### D.3.2 Lease Usage Methods

Following image indicates four types of asset usage lapse / rollover combinations supported:

Figure D-2 Lease Usage Methods

As per the above usage methods, usage units billing is accounted as indicated below:

#### Note

The usage lapse / rollover is subject to maximum usage as defined for a Collateral.

- **Non-Rollover Usage** - This option indicates that non utilized units in current cycle will be lapsed.
- **Rollover Usage** - This option indicates that non utilized units from previous cycle is carried over and added as **base** units to next cycle incrementally.
- **Rollover & Advance Usage** - This option indicates that system bills the customer at the base rate, considering the usage available for the life of account and includes the non utilized units from the previous cycle.
- **Advance Usage** - This option indicates that system bills the customer at the base rate, considering the usage available for the life of account. Here non utilized previous units will be lapsed.

The Rollover / Advance is accounted for fixed reset period. For example, if Contract starts at Jan and rollover is set to 3 months for a monthly usage billing cycle, the rollover resets at end of 3rd month and from April new rollover set starts.

## D.3.3 Tiered and Non Tiered Usage Calculation

Consider the following type of charge matrix defined:

**Table D-1 Tiered and Non Tiered Usage Calculation**

Rate Chart	From Units	To Units
Base	0	1
Base	30	2
Base	75	3
Cycle Excess	0	4
Cycle Excess	50	5
Life Excess	0	6
Life Excess	50	7

On receiving the following type of usage data from customer, the chargeable units are derived based on lapse and rollover rules. The chargeable units are charged based on Tiered and Non Tiered preference indicated for a collateral. The sample usage calculation is as indicated below:

Base Units:76, Cycle Excess:51, and Life Excess=65

#### **Tiered Calculation**

Base Charge =  $(29*1)+(45*2)+(2*3) = 125$

Cycle Excess Charge= $(49*4)+(2*5)=206$

Life Excess Charge= $(49*6)+(16*7)=406$

Total Charge= $125+206+406=737$

#### **Non Tiered Calculation**

Base Charge = $(76*3) = 228$

Cycle Excess Charge= $(51*5)=255$

Life Excess Charge= $(65*7)=455$

Total Charge= $228+255+455=938$

## D.3.4 Lease Usage Batch Jobs

Following two batch jobs are provided for usage based leasing:

#### **To upload usage details**

Batch job set - SET-IFP (INPUT FILE PROCESSING)

Batch job - IUHPRC\_BJ\_100\_01 (ASSET USAGE HISTORY FILE UPLOAD)

This process uploads asset usage details into the system. To do so, place the usage details file in `iuh` folder available under `input > ifp > iuh` directory and run the batch job.

#### **For billing usage details**

Batch job set - SET-TPE (Transaction Processing Engine)

Batch job - TXNUSG\_BJ\_100\_01 (Usage Charge Processing)

This process is used to derive the billing amount to be charged for Lease Usage/Rental based asset for consumed units which is calculated by the applicable charge matrix and posts lease usage/rental fees on account.

## D.3.5 Lease Usage Account Statement

The Statements tab in **Customer Service > Account Details** tab displays the **Fee Usage Charge(+)** that is posted to lease usage account. On generating a report of lease account, the Fee Usage Charges are indicated as separate line item.

**Figure D-3 Lease Usage Account Statement**

**Account Statement**

**ORACLE®**  
Financial Services Lending and Leasing

## D.3.6 Elastic Usage Term

The Elastic Usage Term in OFSLL refers to a system predicted value to indicate customer about the remaining term to reach the asset usage life as per current usage pattern.

The Elastic Usage Term is available in Collateral > Usage Summary tab and is calculated by the following methods:

- Actual Usage - Elastic Term is calculated based on Usage Factor
- Average Usage - Elastic Usage Term is calculated based on Average Usage

# E

## Appendix : Webhooks

This section consists of the following topics:

- [Introduction](#)
- [Webhook Architecture](#)
- [Webhook Workflow](#)
- [Webhook Message Format](#)
- [Processing Webhook Request](#)
- [Webhook Support for OBRH Integration](#)

### E.1 Introduction

The Webhook option in OFSLL extends the support of interfacing with third-party applications by sending REST API based notifications of changes through system generated Webhook event actions.

In the Webhook integrated model, it is the server to client direction of conversation in which the server pushes data to the client that hosts an HTTP based API endpoint. OFSLL uses the existing weblogic key-store to register third-party application credentials such as User Name, Password and SSL/TSL Certificate.

### E.2 Webhook Architecture

**Figure E-1 Webhook Architecture**

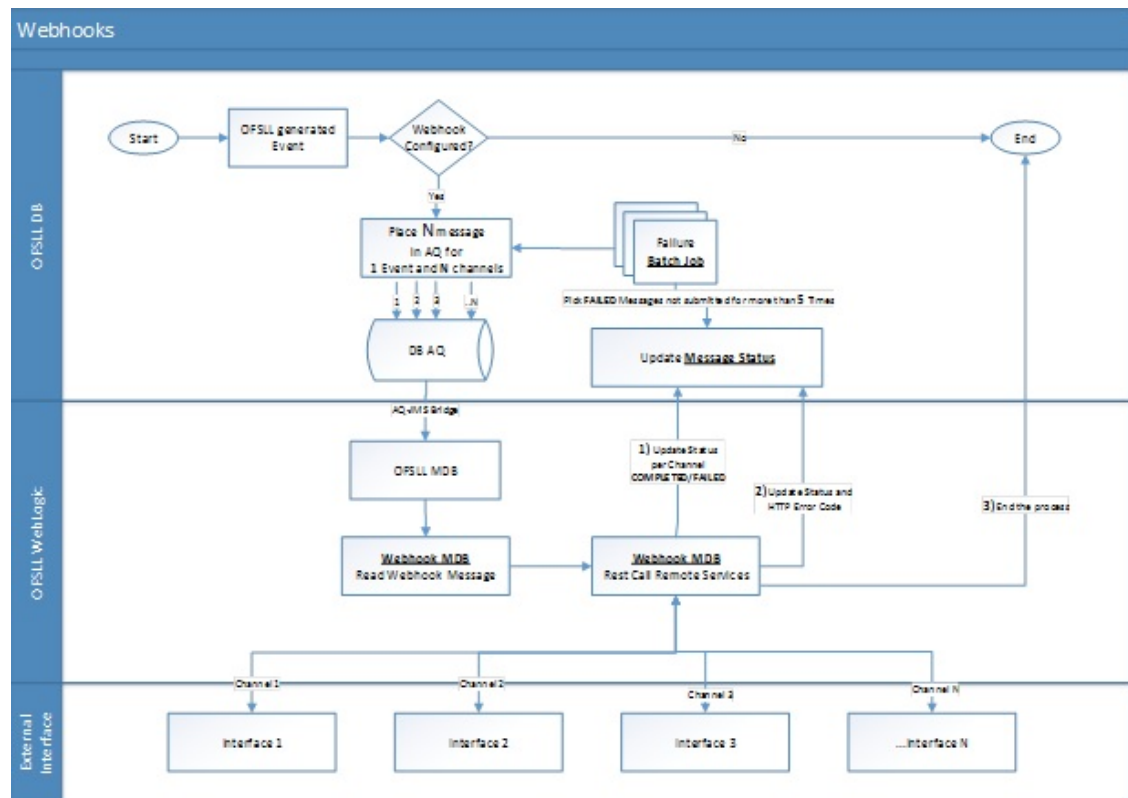

As per the above image:

- A change in the base system can either be triggered by an user performed action or through REST API call.
- The **Events** refer to system generated information indicating the change in system which is to be propagated to third-party applications that are interfaced with OFSLL. For more information on configuring events in the system, refer to **Events** section.
- The **Webhook UI** is the Webhook setup screen in which Webhook definitions (channel) and Event Details are defined by registering third-party applications that are interested in OFSLL events. For more information on configuring Webhook in the system, refer to **Webhook** section.
- The **Webhook Adapter** is Webhook MDB (Message Driven Bean) and is used to propagate OFSLL messages to thrid-party applications.

## E.3 Webhook Workflow

Figure E-2 Webhook Workflow

As per the above workflow:

- On defining WEBHOOK, a WEBHOOK action is added to Events framework.
- Based on the Event definition defined in setup, system triggers Events.
- For all Events with WEBHOOK as the associated action, AQ JMS message is generated and the same is consumed by WEBHOOK MDB adapter. If there is one Event subscribed to 5 channels then system places 5 WEBHOOK messages into MDB.
- WEBHOOK MDB read the channel configuration detail from both Database and WebLogic CSF to propagate JSON message.

- Based on the outcome of call to the third-party application, system updates the STATUS and HTTP response code for the message.
- A retry batch job picks the failed messages and then resubmit into AQ. The number of retries is based on System Parameter which cannot exceed more than 5.

## E.4 Webhook Message Format

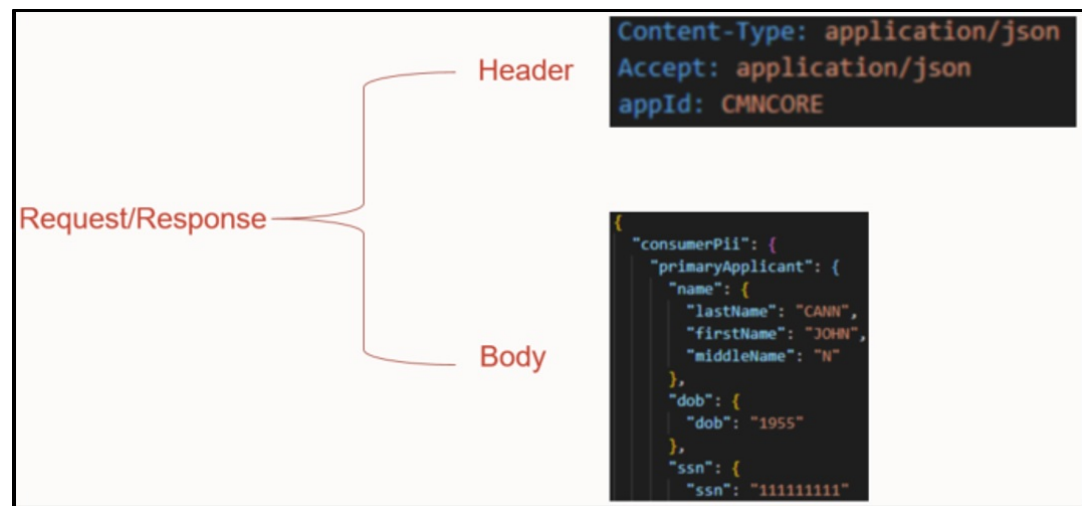

Webhook Events are published in json message format. This message content can be customized using Response User Defined Tables. For more information on json message format, refer to **Events** section.

To send/receive data between OFSLL and external systems Request/Response entities are used. OFSLL allows to send Header/Body details for data transfer with each Request/Response.

As indicated below,

- Header consists of key value pairs some are standardized and other can be specific to implementation.
- Body details are defined either in XML/JSON.

**Figure E-3 Webhook Request/Response**

## E.5 Processing Webhook Request

- When an event is triggered in OFSLL, system checks if there are any Webhook actions defined for different channels.
- If there are multiple registries available, OFSLL creates multiple WEBHOOK messages to propagate event details to the third-party applications.
- WEBHOOK MDB reads the messages and generates response based on User Defined Table available for individual Events.
- When response data is generated, system generates POST request to third-party applications and marks these requests as COMPLETED on successful notification.
- If the third-party notification is failed, OFSLL updates the message as FAILED.

- On receiving the notifications, OFSLL expects third-party application's POST service to return one of the following HTTP status code:

**Table E-1 Processing Webhook Request**

HTTP Status Code	MDB Dashboard Status	Description
2XX, 3XX	COMPLETED	
4XX	FAILED	Need to resubmit manually. MDB will update retry count to 5
5XX	FAILED	Will be resubmitted by batch job

- The system parameter `EVI_MAX_RETRY_COUNT` records and controls the maximum attempts to re-trigger FAILED Webhook requests which cannot exceed more than 5 times. However, this parameter can be modified if the maximum re-trigger attempts is to be less than 5 times.
- The batch job `EVEPRC_BJ_100_02` in SET-EVE batch job set picks the FAILED status messages for re-trigger and considers the above system parameter to control the maximum attempts to re-trigger.
- The system parameter `CMN_HTTP_CONNECTION_TIMEOUT` determines the maximum allowed response time (in seconds) from the third-party application. If response time exceeds than the system parameter configured value, then the status of request is updated as FAILED with 500 HTTP Status Code.
- If the system is running behind a firewall/proxy network, OFSLL provides below system parameters to configure proxy details.

**Table E-2 System Parameters**

System Parameter	Description
<code>CMN_HTTP_PROXY_ENABLED_IND</code>	PROXY INDICATOR FOR ALL OUTSIDE HTTP/HTTPS CONNECTION
<code>CMN_HTTP_PROXY_PORT</code>	HTTP PROXY SERVER PORT FOR OUTGOING HTTP CONNECTIONS
<code>CMN_HTTP_PROXY_SERVER</code>	HTTP PROXY SERVER FOR OUTGOING HTTP CONNECTIONS

## E.6 Webhook Support for OBRH Integration

OFSLL supports integration with OBRH (Oracle Banking Routing Hub) which is used to Authenticate, Invoke and Route request from Source to Destination using SOAP/Rest Api.

Below is a representation of OBRH process indicating how data from source (Service Consumer) is processed to destination (Service Provider) using OBRH gateway which supports transforming, routing, authenticating the request and response.

For details about the request and response format, refer to [Webhook Message Format](#) section.

Figure E-4 Webhook OBRH

This section consists of the following topic:

- [OBRH Interfacing support](#)

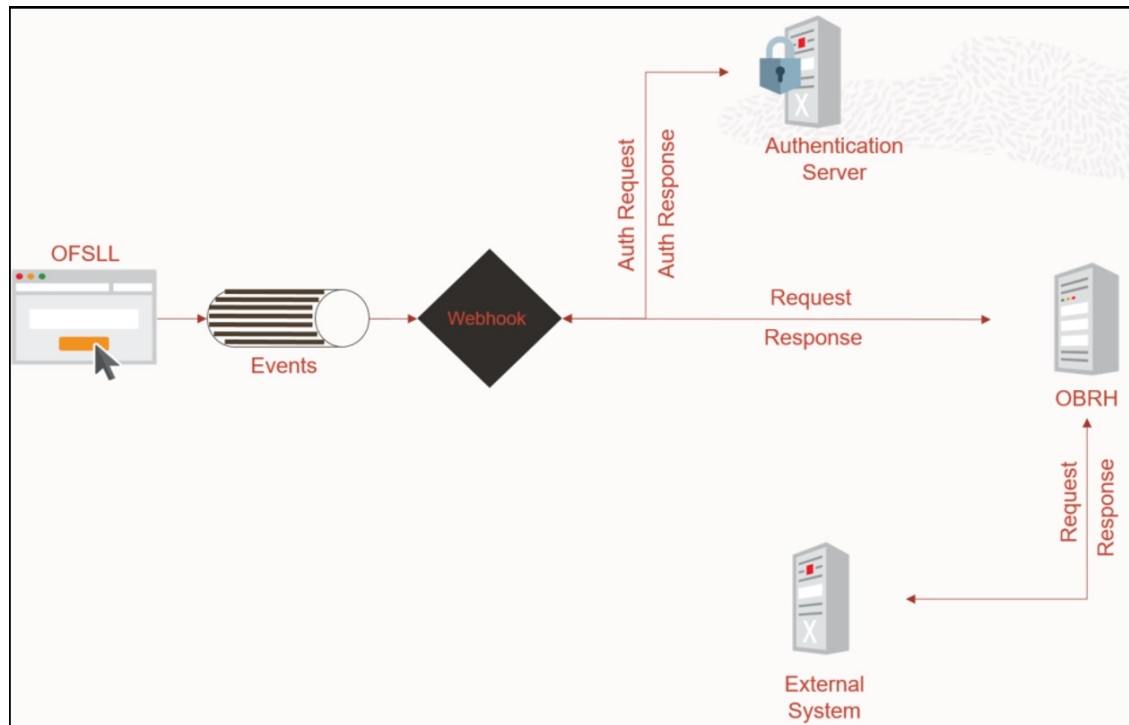

## E.6.1 OBRH Interfacing support

Webhook in OFSLL facilitates to send Event outcome data to external system. If the external system is OBRH which is the endpoint to receive and process Event data payload from OFSLL, ensure that the Authentication Mode in Webhook is configured to ORACLE BANKING ROUTING HUB. For more information, refer to **Webhook Definition** section.

Below is an illustration indicating the flow of data between OFSLL and OBRH.

Figure E-5 Webhook - OBRH Process

- OFSLL Webhook generates events which are configured for specific actions.
- From Webhook, the data is transferred in the form of Request using http protocol and is first authenticated in an Authentication Server. On authentication, a response is received in Response Token Key.
- Post authentication, to connect OBRH, OFSLL further needs to send additional Authentication attributes and Request Header. The same can be defined in Attribute Value field of Webhook definition. For more information, refer to **Authentication Attributes** section.  
Below are some of the example of Attribute Values that can be defined for OBRH headers:

Table E-3 OBRH Interfacing support

Attribute Value	Example
TOKEN REQUEST HEADER	– appld
REQUEST HEADER	– entityId
	– appld
	– branchCode
	– userId
	– SERVICE-CONSUMER
	– SERVICE-CONSUMER SERVICE

**Note**

OBRH currently does not support return of customizing HTTP header [X-Hmac] because of which enable of Verified indicator using Test button cannot be done. Verification functionality should be done manually/via script and needs to be automated using OBRH once new feature of customizing HTTP header is enabled.

# F

## Appendix : Configuration at Company Level

This section consists of the following topics:

- [Introduction](#)
- [Existing Configuration](#)
- [Configuration at Company Level](#)
- [Setup Company Definition](#)
- [Setup Multiple Companies in Same/Different Time Zone](#)
- [Impact on Defining Configuration at Company Level](#)

### F.1 Introduction

OFSLL supports defining multiple Portfolio Companies in an Organization and facilitates to configure these Portfolio Companies to operate in different time zones. The nightly batch jobs for processing can also be configured to run as per the operating hours of the Portfolio Companies.

Using this, system can be configured in Setup to either process at Organization level or at Company level. To process at Organization level, no specific change is required since it is the default setup.

The below details in this section is intended to give an overview of the changes required to setup the system to process at Company level.

### F.2 Existing Configuration

In the default setup, there is no definition of GL date at company level and this implies that organization can define the independent companies to which accounts belongs. But the EOD scheduling and job run happens at organization level and '**not**' at each company level. Also the GL date is defined at **System Parameters** Level.

**Figure F-1 Existing Configuration**

## F.3 Configuration at Company Level

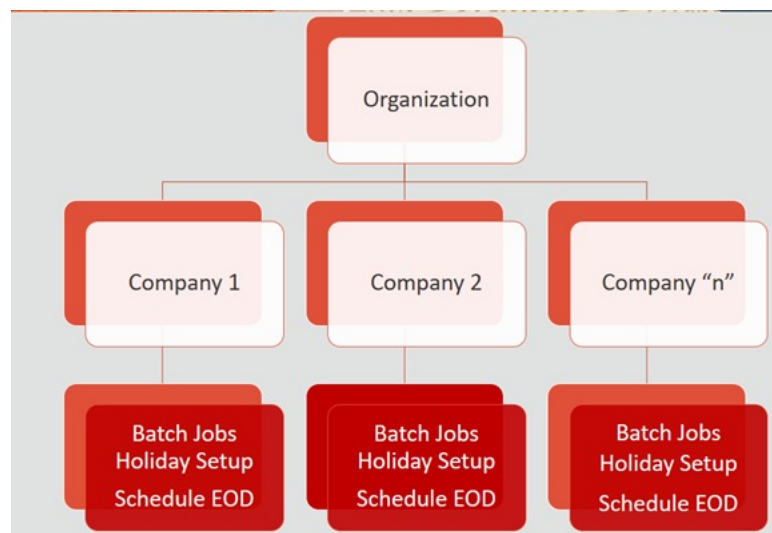

In the configuration at Company level (not Branch level), the following options are supported:

- To configure only one EOD schedule for one or all companies - Configure batch jobs at ALL level with or without having multiple company definitions. If OFSLL is upgraded from earlier to current release version, this helps to continue with existing ALL company level scheduling of batch job run.
- To configure EOD for each company independently - Define GL date at each Company level to schedule and run batch jobs at each company level. The scheduler changes the GL date of specific company, after successful completion of batch job run.

However in this setup, note that:

- It is advised to **Enable** flag at ALL GL date level, but disable batch jobs at ALL level so that scheduler does the rollover of date but does not pick-up batch jobs for EOD run.
- After EOD run, system rollovers the GL date or ALL company entry, after completion of run of other specific company GL date rollover.
- Ensure the Company parameter **System Under Maintenance** is also set to **Y** for corresponding company during EOD run of same company.
- Company Start of Business Time can be configured at company level. If the parameter value is set to **0500**, it implies that scheduler rollovers the GL date based on this time.
- System refers the **Company Time Zone** (new field at company definition page) to identify the time zone in company parameter.

**Figure F-2 Configuration at Company Level**

## F.4 Setup Company Definition

In this setup, define the company and company parameters.

1. Define Company and date format

- Define the company in **Companies Definition** screen and ensure to maintain **Company Time Zone**.
- Define company code with **Alphanumeric** characters only.
- Ensure to define the **Display Format** organization Definition **Division Definition** Display Formats.

**Note**

Fixed simple date format definition is one time setup for each company and Admin user is not expected to change it again in life time. Currently it is allowed to select only MM/DD/YYYY format.

2. Define the following company parameters:  
The default shipped seed data of Company level GL date is set to All.
  - GL POST DATE - COMPANY IN MM/DD/YYYY FORMAT (UPDATED BY SCHEDULER IF ENABLED)
  - CMN\_SYSTEM\_UNDER\_MAINTENANCE - SYSTEM UNDER MAINTENANCE
  - JSC\_START\_OF\_BUSINESS\_TIME (COMPANY START OF BUSINESS TIME (24HR FORMAT))
  - PTX\_TXN\_LAST\_PURGE\_DT - LAST PURGE DATE OF TXNS
  - PUP\_TUP\_LAST\_PURGE\_DT - LAST PURGE DATE OF TXNS UPLOAD

Example: The following is an illustration on how 3 companies are defined with 3 different time Zones in USA, UK and Australia.

**Figure F-3 Setup Company Definition**

**Table F-1 Company Parameters**

Parameter	USA	UK	AUS
GL Post Date	31 Dec 2019	02 Jan 2020	02 Jan 2020

Table F-1 (Cont.) Company Parameters

Parameter	USA	UK	AUS
CMN_SYSTEM_UNDER_Y _MAINTENANCE		N	N
JSC_START_OF_BUSIN ESS_TIME	0500	0500	0500
PTX_TXN_LAST_PURG E_DT	01/01/2019	01/01/2019	01/01/2019
PUP_TUP_LAST_PURG E_DT	01/01/2019	01/01/2019	01/01/2019

This section consists of the following topics:

- [Holiday Setup and Processing](#)
- [Batch Jobs Processing](#)

## F.4.1 Holiday Setup and Processing

The holiday defined in setup is processed as indicated below:

- Scheduler picks up the jobs for EOD run based on **Next Date and time** set at each batch job level.
- After successful completion of job run for the individual company, system rollovers the date for respective company.
- Once the EOD run and date rollover is completed for individual company, system verifies the **Enabled** indicator for **All** company. If none of batch jobs are enabled - rollovers the ALL GL date.
- If **01 Jan 2020** is recorded as holiday in setup, scheduler will/will not execute the batch jobs based on the Batch job holiday maintenance and subsequently rollovers the next date to 02 Jan 2020, at proper start of business time for the company.

## F.4.2 Batch Jobs Processing

The default shipped seed data of Batch Jobs is set to All. Define the company and copy the batch jobs. Note that the **Copy** option copies all the batch jobs at one go.

## F.5 Setup Multiple Companies in Same/Different Time Zone

- Define company level time zone using the field **Company Time Zone** at Companies Definition screen.
- This parameter is used to consider the Company level and Start of Business Time. The same can be configured to the same time zone or different time zone for scheduler to process EOD / BOD.
- Company wise file upload facility is supported as follows:  
As part of creating company, following are automated:
  - Directory objects in db is created
  - System parameter is created for directories

- External table is created for selected uploads - collateral and txn upload automatically
- Physical directories are not created
- Directory permissions is to be defined manual
- If Company specific file upload jobs are used, the file upload process happens from company specific folders.

This section consists of the following topics:

- [Setup for New Company Added Subsequently](#)

## F.5.1 Setup for New Company Added Subsequently

For New Company Added Subsequently (not on Day zero), follow the same steps to be followed on Day zero setup. Raise SR to execute script of directory creation of new company for file upload.

## F.6 Impact on Defining Configuration at Company Level

System displays the following details at each configured Company level.

- [Company Level Configuration Settings](#)
- [Scheduler](#)
- [Debug Logs](#)
- [Setup Screens](#)
- [File Uploads](#)
- [Transactions](#)
- [Web Services](#)
- [Letters, Correspondence](#)
- [Reports](#)
- [Credit Bureau & Metro II](#)
- [GL](#)
- [ODD1, ODD2, ODD3](#)
- [Migration](#)
- [Conversion](#)
- [Archive](#)
- [Purge](#)
- [Standard Payees](#)
- [Data Masking](#)
- [WFP Module](#)
- [Batch Jobs and File uploads](#)
- [Assumptions](#)

## F.6.1 Company Level Configuration Settings

Company level LOV selection is available at following screens to configure:

- System Monitor > Batch Jobs
- System Monitor > Jobs > Batch
- System Monitor > Jobs > Background
- System Monitor > Jobs > Credit Request
- System Monitor > JMS Queues > Messages
- System Monitor > Events
- Data Files > Input folder

## F.6.2 Scheduler

Once the batch jobs are completed for that specific company, scheduler picks-up the company specific scheduled batch jobs and updates the GL Post Date of that specific company.

### Note

- No two companies should be configured to run jobs by scheduler at the same time.
- Ensure to setup the Parent and child batch jobs with marginal difference in time setup to get picked-up by the scheduler.

## F.6.3 Debug Logs

- Batch level Debug logs are maintained at system parameter level and allowed to enable / disable debug batch job logging at system parameter level only.
- System allows to enable batch job level debug jobs by enabling in User Defined Table.
- The debug log file generated is appended with **Company Name**.
- The date format in debug logs is MM/DD/YYYY - standard format only, irrespective of logs generated for any company.

## F.6.4 Setup Screens

All setup screens refers to system date for validation. Example: Start and End Date.

## F.6.5 File Uploads

If only ALL Company Definition is used, the file upload process continues to use the existing folder and infrastructure.

- As part of creating company, following are automated:
  - Directory objects in db is created
  - System parameter is created for directories

- External table is created for selected uploads - collateral and txn upload automatically
- Physical directories are not created
- Directory permissions is to be defined manual
- If Company specific file upload jobs are used, the file upload process happens from company specific folders.

This section consists of the following topics:

- [Input File](#)
- [Output File](#)

### F.6.5.1 Input File

The Input File is processed based on the following conditions:

- Changes are accepted in same file structure and input file has to be placed under input/ directory/company specific folder.
- In case certain file does not have company definition like **Asset Upload**, the same can be placed in any company folder to process and upload records.
- Some input files are not programmed to refer Data Files > Input file definitions and hence any date in the file will follow MM/DD/YYYY format. For example, Call activity posting, promise date are to be given in the same format.
- Some input files are programmed to refer Data Files > Input file definitions and hence system expects the date in the file as defined as date format in definition.

### F.6.5.2 Output File

Output file name is appended with **Company Name** and is generated in one folder.

#### Note

A script **crt\_company\_directories.sh** is provided with installer in the path `core_db\ofslldb.zip\dba_utils\` to create directories and to create folders for each defined Company. The same is to be run during installation. Also, the CLOB indicator is retained at system parameter level.

## F.6.6 Transactions

- Monetary transaction refers to the company specific GL date.
- Non-Monetary transactions refers to system date.
- Transactions data in the account continues to show the dates with reference to **Fixed simple date format** maintained at company level.

## F.6.7 Web Services

- GL date of service refers to company level GL date.
- **Company** has to be passed for certain web services to take reference of corresponding company GL date.

## F.6.8 Letters, Correspondence

- Letters are generated based on company level batch job run.
- Date format in letter is not controlled by company level display format and refers to the letter template.

## F.6.9 Reports

- Changes are done to report template and reports are generated with **Company Name** appended to file and generated data for specific company, where the job is run.
- Date format in report is not controlled by company level display format and refers to the report template.

## F.6.10 Credit Bureau & Metro II

- Bureau pull does not have any impact to handle because user has to select the specific company and then bureau triggers the pull from UI.
- Metro II - No impact. System generates file for all companies; but based on product level flag and with configured setup.

## F.6.11 GL

Current GL Setup (Attributes, Translations and Transaction Links and so on) is at Company level and hence there is no impact.

## F.6.12 ODD1, ODD2, ODD3

If job is run at company level,

- ODD1 (Producer ACH, Adverse Action letters, Adverse Action Condition Letter file) job generates the data at company level.
- ODD2 (Account ACH, Vendor ACH, Statement, Letter File and so on) job generates the data at company level.
- ODD3 job generates the data at company level.

## F.6.13 Migration

For all screens where company has been added, the default value ALL is provided and user is expected to enable this in seed data screen.

## F.6.14 Conversion

No specific impact since API tables have definition of company. User can upload the conversion files based on company.

## F.6.15 Archive

Parameter to specify the archive days are defined at system level but user can run the Archive batch jobs at each company level and the same archives data for that specific company.

## F.6.16 Purge

Parameter to specify the purge days and following parameters are moved to company level.

- PTX\_TXN\_LAST\_PURGE\_DT - LAST PURGE DATE OF TXNS
- PUP\_TUP\_LAST\_PURGE\_DT - LAST PURGE DATE OF TXNS UPLOAD

## F.6.17 Standard Payees

- User would be able to define payee bank account for each company / branch combination.
- AP Requisition batch job generates the requisition considering the account number defined at company level.

## F.6.18 Data Masking

Not handled and hence data masking can be configured at organization level only.

## F.6.19 WFP Module

Not handled.

## F.6.20 Batch Jobs and File uploads

For list of batch jobs and File uploads handled to run at company level, refer to product release notes.

## F.6.21 Assumptions

System considers the criteria defined for company in Queues > Criteria Based Condition screen and ignores the branch level differentiation across application. Hence, even if user defines multiple records (as indicated below), system considers the combination as same and executes records are company level.

Company = AUS and Branch = ALL

Company = AUS and Branch = Sydney
