Preface

- [Purpose](#)
- [Audience](#)
- [Documentation Accessibility](#)
- [Diversity and Inclusion](#)
- [Conventions](#)
- [Related Resources](#)
- [Acronyms and Abbreviations](#)

Purpose

This guide provides details of the events published by Oracle Banking Party during different processes of party onboarding and party amendment.

Audience

This guide is intended for the bankers who are responsible for onboarding retail customers into the bank.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Diversity and Inclusion

Oracle is fully committed to diversity and inclusion. Oracle respects and values having a diverse workforce that increases thought leadership and innovation. As part of our initiative to build a more inclusive culture that positively impacts our employees, customers, and partners, we are working to remove insensitive terms from our products and documentation. We are also mindful of the necessity to maintain compatibility with our customers' existing technologies and the need to ensure continuity of service as Oracle's offerings and industry standards evolve. Because of these technical constraints, our effort to remove insensitive terms is ongoing and will take time and external cooperation.

Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

Acronyms and Abbreviations

The following acronyms and abbreviations are used in this guide:

Table 1 Acronyms and Abbreviations

Acronym/ Abbreviation	Description
KYC	Know Your Customer
SMB	Small and Medium Business
SME	Small and Medium Enterprise

1

Event Notifications

Oracle Banking Party is designed to publish events during key business processes including party amendments and party onboarding. This capability ensures that real-time updates and changes are communicated effectively across integrated systems, enabling seamless data synchronization and efficient operations.

Overview of Event Publishing

Oracle Banking Party publishes event notifications during the following processes:

- [Party Onboarding \(All Party Type\)](#)
- [KYC Status Update](#)
- [Party Onboarding](#)
- [Retail Party Amendment](#)
- [Small & Medium Business \(SMB\) Party Amendment](#)
- [Party to Account](#)

1.1 Party Onboarding (All Party Type)

Upon completion of the party onboarding process, the system publishes a Party Onboarding (All Party Type) event notification, notifying the party management of a new party onboarding. Retail, SMB, SME, and Corporate parties are published for onboarding events.

Topic Name

platoPartyHandoffToHostStatus

Avro Format

```
{
  "namespace": "avro.oracle.fsgbu.plato.eventhub.events",
  "name": "PartyHandoffToHostStatusGenerated",
  "type": "record",
  "fields" :
  [
    { "name": "branchCode", "type": ["null", "string"] },
    { "name": "userId", "type": ["null", "string"] },
    { "name": "applicationNumber", "type": "string" },
    { "name": "partyId", "type": "string" },
    { "name": "handoffStatus", "type": "string" },
    { "name": "externalCustomerId", "type": "string" },
    { "name": "eventType", "type": "string" }
  ]
}
```

Sample Event

```
{"branchCode": "000", "userId": "USER1", "applicationNumber": "STP21TEST000B20",  
"partyId": "PTY00000001", "handoffStatus": "SUCCESS", "externalCustomerId": "CIF00001",  
"eventType": "HANDOFF"}
```

Event Attributes

Attribute	Description
branchCode	Branch Code, where party is onboarded using Oracle Banking Party Management application.
userId	User ID of the user, who is onboarding party using Oracle Banking Party Management application.
applicationNumber	Application number of the amendment.
partyId	Unique Party ID generated by Oracle Banking Party Management.
handoffStatus	Hand off status of party information to host/core such as Success, Failure etc.
externalCustomerId	Customer Identification number generated by external system, in case party information is handed off to external systems/backend system. Else, Party ID generated by Oracle Banking Party Management.
eventType	Event type as HANDOFF.

1.2 KYC Status Update

KYC Status Update event notification is published on completion of a KYC process during a **Party Onboarding** and **Party Amendment** process. This event is published for Retail and SMB party types.

Topic Name

PartyKYCStatusUpdate

Avro Format

```
{  
  "namespace": "avro.oracle.fsgbu.plato.eventhub.events",  
  "name": "PartyKYCStatusUpdateGenerated",  
  "type": "record",  
  "fields" :  
  [  
    {"name": "branchCode", "type": ["null", "string"]},  
    {"name": "userId", "type": ["null", "string"]},  
    {"name": "applicationNumber", "type": "string"},  
    {"name": "partyId", "type": "string"},  
    {"name": "kycStatus", "type": "string"},  
    {"name": "kycLastUpdateDate", "type": "string"},  
    {"name": "eventType", "type": "string"}  
  ]  
}
```

Sample Event

```
{ "branchCode": "000", "userId": "USER1", "applicationNumber": "STP21TEST000B20",  
  "partyId": "PTY0000001", "kycStatus": "CMP", "kycLastUpdateDate":  
  "2021-12-23T06:21:13.575", "eventType": "KYC" }
```

Event Attributes

Attribute	Description
branchCode	Branch Code, where party is onboarded using Oracle Banking Party Management application.
userId	User ID of the user, who is onboarding party using Oracle Banking Party Management application.
applicationNumber	Application number of the amendment.
partyId	Unique Party ID generated by Oracle Banking Party Management.
kycStatus	KYC Status of party such as Compliant, Non-Compliant, etc.
kycLastUpdateDate	Last KYC status update date for a party.
eventType	Event type as KYC.

1.3 Party Onboarding

This topic contains the following subtopics:

- [Retail Party Onboarding](#)
- [Small & Medium Business \(SMB\) Party Onboarding](#)

1.3.1 Retail Party Onboarding

Upon completion of the retail party onboarding process, the system publishes a notification for the Retail Party Onboarding event, notifying Party Management of a new retail party. Retail Party Onboarding event is published only for Retail parties.

Topic Name

obpyRetOnboard

Avro Format

```
{

1.4 Retail Party Amendment

On completion of Party Amendment process in Oracle Banking Party Management, an event is published to kafka queue. Avro format for the event is as below.

AVRO Format

```

{
  "namespace":"avro.oracle.fsgbu.plato.eventhub.events",
  "name":"ObpyRetAmendGenerated",
  "type":"record",
  "fields" : [
    {"name":"applicationNumber","type":"string"},
    {"name":"branchCode","type":["null","string"]},
    {"name":"userId","type":["null","string"]},
    {"name":"partyId","type":"string"},
    {"name":"externalCustomerId","type":"string"},
    {"name":"partyType","type":"string"},
    {"name":"eventType","type":"string"},
    {"name":"handoffStatus","type":"string"},
    {"name":"sourceProductId","type":["null","string"]},
    {"name":"datasegmentCode","type":["null","string"]},
    {"name":"datasegmentName","type":["null","string"]},
    {"name":"httpMethod","type":["null","string"]},
    {"name":"amendPayload","type":["null","string"]},
    {"name":"amendDateTime","type":"string"},
    {"name":"applicationDate","type":"string"}
  ]
}

```

Table 1-1 Attribute

Attribute	Description
applicationNumber	Application number of the amendment
branchCode	Branch Code, where party is onboarded using Oracle Banking Party Management application.
userId	User ID of the user, who is onboarding party using Oracle Banking Party Management application.
partyId	Unique Party ID generated by OBPY.
externalCustomerId	Customer Identification number generated by external system, in case party information is handed off to external systems/back end system. Else, party id generated by Oracle Banking Party Management.
eventType	Type of Event.
handoffStatus	Hand off status of party information to host/core such as Success, Failure etc.
sourceProductId	Transaction initiation source product ID such as Oracle Banking Party Management.
datasegmentCode	Data Segment Code.
datasegmentName	Name of the Data Segment.
amendDateTime	Date and Time of Amendment.
applicationDate	Date of Application.
amendPayload	Object for the fields amended during amendment event. amendPayload will be populated based on the Data Segment Amended such as Basic Info, ID Details etc.

 **Note:**
For more information about the fields supported by **Basic Info and Citizenship** data segment, refer to the **Retail Onboarding User Guide**.

- [Retail Party Info](#)
An single event is published during an amendment process with consolidated amendments across data segments of retail party.
- [Basic Info and Citizenship](#)
Event notification for amendment in basic info and citizenship details of the party.
- [Identification Details \(ID Details\)](#)
Event notification for amendment in ID details of the party.
- [Contact Details](#)
Event notification for amendment in contact details of the party.
- [Current Address](#)
Event notification for amendment in current address details of the party.
- [Previous Details](#)
Event notification for amendment in previous details of the party.

- [Tax Declaration](#)
Event notification for amendment in tax details of the party.
- [Visa Details](#)
Event notification for amendment in visa details of the party.
- [Key Dates](#)
Event notification for amendment in key dates of the party.
- [Education Qualification](#)
Event notification for amendment in education details of the party.
- [Supporting Documents](#)
Event notification for amendment in supporting documents of the party.
- [Signatures](#)
Event notification for amendment in signatures details of the party.
- [Household](#)
Event notification for amendment in household relationship of the party.
- [Power of Attorney](#)
Event notification for amendment in power of attorney relationship of the party.
- [Service Member](#)
Event notification for amendment including addition, deletion, and update in party-to-party relationship of the party.
- [Related to Insider](#)
Event notification for amendment in related to insider relationship of the party.
- [Guardian](#)
Event notification for amendment in guardian relationship of the party.
- [Custodian](#)
Event notification for amendment in custodian relationship of the party.
- [Solicitor](#)
Event notification for amendment in solicitor relationship of the party.
- [Related Party](#)
Event notification for amendment in related party relationship of the party.
- [Employment](#)
Event notification for amendment in employment relationship of the party.
- [Consent and Preferences](#)
Event notification for amendment in consent details of the party.
- [Additional Information](#)
Event notification for amendment in additional info of the party.
- [Service Member Information](#)
Event notification for amendment in service member details of the party.
- [Membership and Associations](#)
Event notification for amendment in membership details of the party.
- [Financial Information \(Asset\)](#)
Event notification for amendment in asset details of the party.
- [Financial Information \(Liability\)](#)
Event notification for amendment in liability details of the party.
- [Financial Information \(Income\)](#)
Event notification for amendment in income details of the party.

- [Financial Information \(Expense\)](#)
Event notification for amendment in expense details of the party.
- [Other Financial Relationship](#)
Event notification for amendment in financial relationship details of the party.
- [Beneficially Owned Company](#)
Event notification for amendment in beneficially owned details of the party.

1.4.1 Retail Party Info

An single event is published during an amendment process with consolidated amendments across data segments of retail party.

Retail Party Information event is published during an amendment process through.

- User Interface (PUT API Request)
- PUT API Request
- PATCH API Request

Table 1-2 Data Segment

Data Segment Code	Data Segment Name	Topic Name	Party Type
DS0105	RET_PARTY_AMEND	obpyRetAmendPartyInfo	Retail

Note:

For PUT API Request, "httpMethod" is populated as "PUT" and for PATCH API Request "httpMethod" is populated as "PATCH".

Event for PUT API

The PUT API method, an HTTP request method, is utilized for updating the party information. PUT method replaces the existing information with the new data provided in the request.

Using the PUT API method for amendments, event publishing will not be contingent on the information provided in the request and will include all the attributes based on the amendment process.

Event for PATCH API

The PATCH API method, an HTTP request method, is utilized for record and field-level modifications of party information, rather than updating the entire party or data segment information. This event encompasses modifications such as addition, deletion, modification of party information.

Using PATCH API method for amendments, event publishing will be contingent on the information provided in the request and will solely include the attributes that have been modified. Through PATCH API method specific fields can be added, updated, or removed by specifying the attributes requiring modification.

1.4.2 Basic Info and Citizenship

Event notification for amendment in basic info and citizenship details of the party.

Event for PUT API

Basic Info and Citizenship event is published during an amendment process through.

- User Interface (PUT API Request)
- PUT API Request
- PATCH API Request

Table 1-3 Data Segment

Data Segment Code	Data Segment Name	Topic Name	Party Type
DS0003	BASIC_INFO	obpyRetAmendBasicInfo	Retail

User Interface and PUT API Request

The PUT API method, an HTTP request method, is utilized for updating the entire Data Segment of customer information. PUT method replaces the entire Data Segment with the new data provided in the request.

Using the PUT API method for amendments, event publishing will not be contingent on the information provided in the request and will include all the attributes of the data segment.

PATCH API Request

The PATCH API method, an HTTP request method, is utilized for field-level modifications within a Data Segment of customer information, rather than updating the entire Data Segment Information. This event encompasses modifications such as addition, deletion, modification of party information.

Using PATCH API method for amendments, event publishing will be contingent on the information provided in the request and will solely include the attributes that have been modified. Through PATCH API method specific fields can be added, updated, or removed by specifying the attributes requiring modification.

Event Payload**Note:**

For PUT API Request, "httpMethod" is populated as "PUT" and for PATCH API Request "httpMethod" is populated as "PATCH".

Event for PATCH API

The PATCH API method, an HTTP request method, is utilized for record and field-level modifications within a Data Segment of customer information, rather than updating the entire Data Segment Information.

Using PATCH API method for amendments, event publishing will be contingent on the information provided in the request and will solely include the attributes that have been modified. Through PATCH API method specific records can be added, updated, or deleted. During record update specific fields can be added, updated, or removed by specifying the attributes requiring modification.

Structure of the Event generated through PATCH API

The Event body is divided into the following key sections:

- "op": Defines the applicable operation to identify the nature of the action as
 - Update of existing record ("op": "replace"): Update of specific fields in an existing record.
 - New record ("op": "add"): New record added to the data segment.
 - Delete of existing Record ("op": "remove"): Delete of an existing record from the data segment.
- "param": Attributes used to identify a unique record within the multi-record data segment.
- "values": Contains the attributes that are modified within the uniquely identified record.

Note:

For PATCH API Request "httpMethod" is populated as "PATCH".

Table 1-6 Param and Value availability with respect to Operation

Operation	param	values
"op": "replace"	Attribute or combination of attributes used to uniquely identify the record	Modified fields
"op": "add"	Empty	New record added to the data segment.

Table 1-6 (Cont.) Param and Value availability with respect to Operation

Operation	param	values
"op": "remove"	Attribute or combination of attributes used to uniquely identify the record	Empty

1.4.7 Tax Declaration

Event notification for amendment in tax details of the party.

Tax Declaration event is published during an amendment process through.

- User Interface (PUT API)
- PUT API Request
- PATCH API Request

Table 1-12 Data Segment

Data Segment Code	Data Segment Name	Topic Name	Party Type
DS0010	TAX_DECLARATION	obpyRetAmendTax	Retail

Event for PUT API

The PUT API method, an HTTP request method, is utilized for updating the entire Data Segment of customer information. PUT method replaces the entire Data Segment with the new data provided in the request.

Using the PUT API method for amendments, event publishing will not be contingent on the information provided in the request and will include all the attributes of the data segment.

Note:

For PUT API Request "httpMethod" is populated as "PUT".

Event Payload

Event for PATCH API

The PATCH API method, an HTTP request method, is utilized for record and field-level modifications within a Data Segment of customer information, rather than updating the entire Data Segment Information.

Using PATCH API method for amendments, event publishing will be contingent on the information provided in the request and will solely include the attributes that have been modified. Through PATCH API method specific records can be added, updated, or deleted. During record update specific fields can be added, updated, or removed by specifying the attributes requiring modification.

Structure of the Event generated through PATCH API

The Event body is divided into the following key sections:

- "op": Defines the applicable operation to identify the nature of the action as
 - Update of existing record ("op": "replace"): Update of specific fields in an existing record.
 - New record ("op": "add"): New record added to the data segment.
 - Delete of existing Record ("op": "remove"): Delete of an existing record from the data segment.
- "param": Attributes used to identify a unique record within the multi-record data segment.
- "values": Contains the attributes that are modified within the uniquely identified record.

**Note:**

For PATCH API Request "httpMethod" is populated as "PATCH".

Table 1-13 Param and Value availability with respect to Operation

Operation	param	values
"op": "replace"	Attribute or combination of attributes used to uniquely identify the record	Modified fields
"op": "add"	Empty	New record added to the data segment.
"op": "remove"	Attribute or combination of attributes used to uniquely identify the record	Empty

```

Event for PATCH API

The PATCH API method, an HTTP request method, is utilized for record and field-level modifications within a Data Segment of customer information, rather than updating the entire Data Segment Information.

Using PATCH API method for amendments, event publishing will be contingent on the information provided in the request and will solely include the attributes that have been modified. Through PATCH API method specific records can be added, updated, or deleted. During record update specific fields can be added, updated, or removed by specifying the attributes requiring modification.

Structure of the Event generated through PATCH API

The Event body is divided into the following key sections:

- "op": Defines the applicable operation to identify the nature of the action as
 - Update of existing record ("op": "replace"): Update of specific fields in an existing record.
 - New record ("op": "add"): New record added to the data segment.
 - Delete of existing Record ("op": "remove"): Delete of an existing record from the data segment.
- "param": A combination of Party ID and Associated Party ID to identify unique relationship records.
- "values": Contains the attributes that are modified within the uniquely identified record.

Note:

For PATCH API Request "httpMethod" is populated as "PATCH".

Table 1-20 Param and Value availability with respect to Operation

Operation	param	values

1.4.14 Power of Attorney

Event notification for amendment in power of attorney relationship of the party.

Power of Attorney Relationship event is published during an amendment process through.

- User Interface (PUT API)
- PUT API Request
- PATCH API Request

Table 1-21 Data Segment

Data Segment Code	Data Segment Name	Topic Name	Party Type
DS0013	POWER_OF_ATTORNEY_REL	obpyRetAmendPoaRel	Retail

Event for PUT API

The PUT API method, an HTTP request method, is utilized for updating the entire Data Segment of customer information. PUT method replaces the entire Data Segment with the new data provided in the request.

Using the PUT API method for amendments, event publishing will not be contingent on the information provided in the request and will include all the attributes of the data segment.

**Note:**

For PUT API Request "httpMethod" is populated as "PUT".

Event Payload

```
{

```

Event for PATCH API

The PATCH API method, an HTTP request method, is utilized for record and field-level modifications within a Data Segment of customer information, rather than updating the entire Data Segment Information.

Using PATCH API method for amendments, event publishing will be contingent on the information provided in the request and will solely include the attributes that have been modified. Through PATCH API method specific records can be added, updated, or deleted. During record update specific fields can be added, updated, or removed by specifying the attributes requiring modification.

Structure of the Event generated through PATCH API

The Event body is divided into the following key sections:

- "op": Defines the applicable operation to identify the nature of the action as
 - Update of existing record ("op": "replace"): Update of specific fields in an existing record.
 - New record ("op": "add"): New record added to the data segment.
 - Delete of existing Record ("op": "remove"): Delete of an existing record from the data segment.
- "param": A combination of Party ID and Associated Party ID to identify unique relationship records.
- "values": Contains the attributes that are modified within the uniquely identified record.

Note:

For PATCH API Request "httpMethod" is populated as "PATCH".

Table 1-22 Param and Value availability with respect to Operation

Operation	param	values
"op": "replace"	Combination of Party ID and Associated Party ID used to uniquely identify the record	Modified fields
"op": "add"	Empty	New record added to the data segment.
"op": "remove"	Combination of Party ID and Associated Party ID used to uniquely identify the record	Empty

Event Payload

```

Event for PATCH API

The PATCH API method, an HTTP request method, is utilized for record and field-level modifications within a Data Segment of customer information, rather than updating the entire Data Segment Information.

Using PATCH API method for amendments, event publishing will be contingent on the information provided in the request and will solely include the attributes that have been modified. Through PATCH API method specific records can be added, updated, or deleted. During record update specific fields can be added, updated, or removed by specifying the attributes requiring modification.

Structure of the Event generated through PATCH API

The Event body is divided into the following key sections:

- "op": Defines the applicable operation to identify the nature of the action as
 - Update of existing record ("op": "replace"): Update of specific fields in an existing record.
 - New record ("op": "add"): New record added to the data segment.
 - Delete of existing Record ("op": "remove"): Delete of an existing record from the data segment.
- "param": A combination of Party ID and Associated Party ID to identify unique relationship records.

- "values": Contains the attributes that are modified within the uniquely identified record.

**Note:**

For PATCH API Request "httpMethod" is populated as "PATCH".

Table 1-24 Param and Value availability with respect to Operation

Operation	param	values
"op": "replace"	Combination of Party ID and Associated Party ID used to uniquely identify the record	Modified fields
"op": "add"	Empty	New record added to the data segment.
"op": "remove"	Combination of Party ID and Associated Party ID used to uniquely identify the record	Empty

Event for PATCH API

The PATCH API method, an HTTP request method, is utilized for record and field-level modifications within a Data Segment of customer information, rather than updating the entire Data Segment Information.

Using PATCH API method for amendments, event publishing will be contingent on the information provided in the request and will solely include the attributes that have been modified. Through PATCH API method specific records can be added, updated, or deleted. During record update specific fields can be added, updated, or removed by specifying the attributes requiring modification.

Structure of the Event generated through PATCH API

The Event body is divided into the following key sections:

- "op": Defines the applicable operation to identify the nature of the action as
 - Update of existing record ("op": "replace"): Update of specific fields in an existing record.
 - New record ("op": "add"): New record added to the data segment.
 - Delete of existing Record ("op": "remove"): Delete of an existing record from the data segment.
- "param": A combination of Party ID and Associated Party ID to identify unique relationship records.
- "values": Contains the attributes that are modified within the uniquely identified record.

Note:

For PATCH API Request "httpMethod" is populated as "PATCH".

Table 1-30 Param and Value availability with respect to Operation

Operation	param	values
"op": "replace"	Combination of Party ID and Associated Party ID used to uniquely identify the record	Modified fields
"op": "add"	Empty	New record added to the data segment.
"op": "remove"	Combination of Party ID and Associated Party ID used to uniquely identify the record	Empty

Event for PATCH API

The PATCH API method, an HTTP request method, is utilized for record and field-level modifications within a Data Segment of customer information, rather than updating the entire Data Segment Information.

Using PATCH API method for amendments, event publishing will be contingent on the information provided in the request and will solely include the attributes that have been modified. Through PATCH API method specific records can be added, updated, or deleted. During record update specific fields can be added, updated, or removed by specifying the attributes requiring modification.

Structure of the Event generated through PATCH API

The Event body is divided into the following key sections:

- "op": Defines the applicable operation to identify the nature of the action as
 - Update of existing record ("op": "replace"): Update of specific fields in an existing record.
 - New record ("op": "add"): New record added to the data segment.
 - Delete of existing Record ("op": "remove"): Delete of an existing record from the data segment.
- "param": Attributes used to identify a unique record within the multi-record data segment.
- "values": Contains the attributes that are modified within the uniquely identified record.

Note: For PATCH API Request "httpMethod" is populated as "PATCH"

Table 1-38 Param and Value availability with respect to Operation

Operation	param	values
"op": "replace"	Attribute or combination of attributes used to uniquely identify the record	Modified fields
"op": "add"	Empty	New record added to the data segment.
"op": "remove"	Attribute or combination of attributes used to uniquely identify the record	Empty

1.4.23 Additional Information

Event notification for amendment in additional info of the party.

Additional Info event is published during an amendment process through.

- User Interface (PUT API Request)
- PUT API Request
- PATCH API Request

Table 1-39 Data Segment

Data Segment Code	Data Segment Name	Topic Name	Party Type
DS0028	ADDITIONAL_INFO	obpyRetAmendAddInfo	Retail

User Interface and PUT API Request

The PUT API method, an HTTP request method, is utilized for updating the entire Data Segment of customer information. PUT method replaces the entire Data Segment with the new data provided in the request.

Using the PUT API method for amendments, event publishing will not be contingent on the information provided in the request and will include all the attributes of the data segment.

PATCH API Request

The PATCH API method, an HTTP request method, is utilized for field-level modifications within a Data Segment of customer information, rather than updating the entire Data Segment Information. This event encompasses modifications such as addition, deletion, modification of party information.

Using PATCH API method for amendments, event publishing will be contingent on the information provided in the request and will solely include the attributes that have been modified. Through PATCH API method specific fields can be added, updated, or removed by specifying the attributes requiring modification.

Note:

For PUT API Request, "httpMethod" is populated as "PUT" and for PATCH API Request "httpMethod" is populated as "PATCH".

```

- [SMB Party Info](#)
An single event is published during an amendment process with consolidated amendments across data segments of SMB party.
- [Business Details](#)
Event notification for amendment in business details of the party.
- [Current Address](#)
Event notification for amendment in current address of the party.

- [Previous Address](#)
Event notification for amendment in previous address of the party.
- [Contact Details](#)
Event notification for amendment in contact details of the party.
- [Tax Declaration](#)
Event notification for amendment in tax details of the party.
- [Supporting Document](#)
Event notification for amendment in supporting documents of the party.
- [Owner](#)
Event notification for amendment including addition, deletion and update in party-to-party relationship of the Owner relationship.
- [Authorized Signatory](#)
Event notification for amendment including addition, deletion and update in party-to-party relationship of the authorized signatory relationship.
- [Guarantor](#)
Event notification for amendment including addition, deletion and update in party-to-party relationship of the guarantor relationship.
- [Supplier](#)
Event notification for amendment including addition, deletion and update in party-to-party relationship of the supplier relationship.
- [Trustee](#)
Event notification for amendment in trustee relationship of the party.
- [Beneficiary](#)
Event notification for amendment in beneficiary relationship of the party.
- [Related Party](#)
Event notification for amendment in related party relationship of the party.
- [Membership and Associations](#)
Event notification for amendment in membership and association details of the party.
- [Consent and Preferences](#)
Event notification for amendment in consent details of the party.
- [Financial Information \(Asset\)](#)
Event notification for amendment in asset details of the party.
- [Financial Information \(Liability\)](#)
Event notification for amendment in liabilities details of the party.
- [Financial Information \(Income\)](#)
Event notification for amendment in income details of the part.
- [Financial Information \(Expense\)](#)
Event notification for amendment in expense details of the party.
- [Profit and Financial Ratios](#)
Event notification for amendment in profit and financial details of the party.
- [Other Financial Relationship](#)
Event notification for amendment in relationship with other financial institution of the party.
- [Beneficially Owned Company](#)
Event notification for amendment in beneficially owned company relationships of the party.

1.5.1 SMB Party Info

An single event is published during an amendment process with consolidated amendments across data segments of SMB party.

SMB Party Information event is published during an amendment process through.

- User Interface (PUT API Request)
- PUT API Request
- PATCH API Request

Table 1-50 Data Segment

Data Segment Code	Data Segment Name	Topic Name	Party Type
DS0106	SMB_PARTY_AMEND	obpySmbAmendPartyInfo	SMB

Note:

Note: For PUT API Request, "httpMethod" is populated as "PUT" and for PATCH API Request "httpMethod" is populated as "PATCH".

Event for PUT API

The PUT API method, an HTTP request method, is utilized for updating the party information. PUT method replaces the existing information with the new data provided in the request.

Using the PUT API method for amendments, event publishing will not be contingent on the information provided in the request and will include all the attributes based on the amendment process.

Event for PATCH API

The PATCH API method, an HTTP request method, is utilized for record and field-level modifications of party information, rather than updating the entire party or data segment information. This event encompasses modifications such as addition, deletion, modification of party information.

Using PATCH API method for amendments, event publishing will be contingent on the information provided in the request and will solely include the attributes that have been modified. Through PATCH API method specific fields can be added, updated, or removed by specifying the attributes requiring modification.

1.5.2 Business Details

Event notification for amendment in business details of the party.

Basic Info and Citizenship event is published during an amendment process through.

- User Interface (PUT API Request)
- PUT API Request
- PATCH API Request

Table 1-51 Data Segment

Data Segment Code	Data Segment Name	Topic Name	Party Type
DS0081	BUSINESS_DETAILS	obpySmbAmendBusines sDetails	SMB

User Interface and PUT API Request

The PUT API method, an HTTP request method, is utilized for updating the entire Data Segment of customer information. PUT method replaces the entire Data Segment with the new data provided in the request.

Using the PUT API method for amendments, event publishing will not be contingent on the information provided in the request and will include all the attributes of the data segment.

PATCH API Request

The PATCH API method, an HTTP request method, is utilized for field-level modifications within a Data Segment of customer information, rather than updating the entire Data Segment Information. This event encompasses modifications such as addition, deletion, modification of party information.

Using PATCH API method for amendments, event publishing will be contingent on the information provided in the request and will solely include the attributes that have been modified. Through PATCH API method specific fields can be added, updated, or removed by specifying the attributes requiring modification.

Note:

For PUT API Request, "httpMethod" is populated as "PUT" and for PATCH API Request "httpMethod" is populated as "PATCH".

```

Event for PATCH API

The PATCH API method, an HTTP request method, is utilized for record and field-level modifications within a Data Segment of customer information, rather than updating the entire Data Segment Information.

Using PATCH API method for amendments, event publishing will be contingent on the information provided in the request and will solely include the attributes that have been modified. Through PATCH API method specific records can be added, updated, or deleted. During record update specific fields can be added, updated, or removed by specifying the attributes requiring modification.

Structure of the Event generated through PATCH API

The Event body is divided into the following key sections:

- "op": Defines the applicable operation to identify the nature of the action as
 - Update of existing record ("op": "replace"): Update of specific fields in an existing record.
 - New record ("op": "add"): New record added to the data segment.
 - Delete of existing Record ("op": "remove"): Delete of an existing record from the data segment.

- "param": Attributes used to identify a unique record within the multi-record data segment.
- "values": Contains the attributes that are modified within the uniquely identified record.

Note:

For PATCH API Request "httpMethod" is populated as "PATCH".

Table 1-54 Param and Value availability with respect to Operation

Operation	param	values
"op": "replace"	Attribute or combination of attributes used to uniquely identify the record	Modified fields
"op": "add"	Empty	New record added to the data segment.
"op": "remove"	Attribute or combination of attributes used to uniquely identify the record	Empty

1.5.6 Tax Declaration

Event notification for amendment in tax details of the party.

Tax Declaration event is published during an amendment process through.

- User Interface (PUT API)
- PUT API Request
- PATCH API Request

Table 1-58 Data Segment

Data Segment Code	Data Segment Name	Topic Name	Party Type
DS0010	TAX_DECLARATION	obpySmbAmendTax	SMB

Event for PUT API

The PUT API method, an HTTP request method, is utilized for updating the entire Data Segment of customer information. PUT method replaces the entire Data Segment with the new data provided in the request.

Using the PUT API method for amendments, event publishing will not be contingent on the information provided in the request and will include all the attributes of the data segment.

Note:

For PUT API Request "httpMethod" is populated as "PUT".

Event for PATCH API

The PATCH API method, an HTTP request method, is utilized for record and field-level modifications within a Data Segment of customer information, rather than updating the entire Data Segment Information.

Using PATCH API method for amendments, event publishing will be contingent on the information provided in the request and will solely include the attributes that have been modified. Through PATCH API method specific records can be added, updated, or deleted. During record update specific fields can be added, updated, or removed by specifying the attributes requiring modification.

Structure of the Event generated through PATCH API

The Event body is divided into the following key sections:

- "op": Defines the applicable operation to identify the nature of the action as
 - Update of existing record ("op": "replace"): Update of specific fields in an existing record.
 - New record ("op": "add"): New record added to the data segment.
 - Delete of existing Record ("op": "remove"): Delete of an existing record from the data segment.
- "param": Attributes used to identify a unique record within the multi-record data segment.
- "values": Contains the attributes that are modified within the uniquely identified record.

Note:

For PATCH API Request "httpMethod" is populated as "PATCH".

Table 1-59 Param and Value availability with respect to Operation

Operation	param	values
"op": "replace"	Attribute or combination of attributes used to uniquely identify the record	Modified fields
"op": "add"	Empty	New record added to the data segment.
"op": "remove"	Attribute or combination of attributes used to uniquely identify the record	Empty

Event for PATCH API

The PATCH API method, an HTTP request method, is utilized for record and field-level modifications within a Data Segment of customer information, rather than updating the entire Data Segment Information.

Using PATCH API method for amendments, event publishing will be contingent on the information provided in the request and will solely include the attributes that have been modified. Through PATCH API method specific records can be added, updated, or deleted. During record update specific fields can be added, updated, or removed by specifying the attributes requiring modification.

Structure of the Event generated through PATCH API

The Event body is divided into the following key sections:

- "op": Defines the applicable operation to identify the nature of the action as
 - Update of existing record ("op": "replace"): Update of specific fields in an existing record.
 - New record ("op": "add"): New record added to the data segment.

- Delete of existing Record ("op": "remove"): Delete of an existing record from the data segment.
- "param": A combination of Party ID and Associated Party ID to identify unique identifier guarantor relationship records.
- "values": Contains the attributes that are modified within the uniquely identified record.

Note:

For PATCH API Request "httpMethod" is populated as "PATCH".

Table 1-66 Param and Value availability with respect to Operation

Operation	param	values
"op": "replace"	Combination of Party ID and Associated Party ID used to uniquely identify the record	Modified fields
"op": "add"	Empty	New record added to the data segment.
"op": "remove"	Combination of Party ID and Associated Party ID used to uniquely identify the record	Empty

Event for PATCH API

The PATCH API method, an HTTP request method, is utilized for record and field-level modifications within a Data Segment of customer information, rather than updating the entire Data Segment Information.

Using PATCH API method for amendments, event publishing will be contingent on the information provided in the request and will solely include the attributes that have been modified. Through PATCH API method specific records can be added, updated, or deleted. During record update specific fields can be added, updated, or removed by specifying the attributes requiring modification.

Structure of the Event generated through PATCH API

The Event body is divided into the following key sections:

- "op": Defines the applicable operation to identify the nature of the action as
 - Update of existing record ("op": "replace"): Update of specific fields in an existing record.
 - New record ("op": "add"): New record added to the data segment.
 - Delete of existing Record ("op": "remove"): Delete of an existing record from the data segment.
- "param": A combination of Party ID and Associated Party ID to identify unique identifier supplier relationship records.
- "values": Contains the attributes that are modified within the uniquely identified record.

Note:

For PATCH API Request "httpMethod" is populated as "PATCH".

Table 1-68 Param and Value availability with respect to Operation

Operation	param	values
"op": "replace"	Combination of Party ID and Associated Party ID used to uniquely identify the record	Modified fields
"op": "add"	Empty	New record added to the data segment.

Event for PATCH API

The PATCH API method, an HTTP request method, is utilized for record and field-level modifications within a Data Segment of customer information, rather than updating the entire Data Segment Information.

Using PATCH API method for amendments, event publishing will be contingent on the information provided in the request and will solely include the attributes that have been modified. Through PATCH API method specific records can be added, updated, or deleted. During record update specific fields can be added, updated, or removed by specifying the attributes requiring modification.

Structure of the Event generated through PATCH API

The Event body is divided into the following key sections:

- "op": Defines the applicable operation to identify the nature of the action as
 - Update of existing record ("op": "replace"): Update of specific fields in an existing record.
 - New record ("op": "add"): New record added to the data segment.
 - Delete of existing Record ("op": "remove"): Delete of an existing record from the data segment.
- "param": A combination of Party ID, Associated Party ID and Relationship Sub-type to identify unique relationship records.
- "values": Contains the attributes that are modified within the uniquely identified record.

Note:

For PATCH API Request "httpMethod" is populated as "PATCH".

Table 1-74 Param and Value availability with respect to Operation

Operation	param	values
"op": "replace"	Combination of Party ID and Associated Party ID used to uniquely identify the record	Modified fields
"op": "add"	Empty	New record added to the data segment.
"op": "remove"	Combination of Party ID and Associated Party ID used to uniquely identify the record	Empty

1.5.16 Consent and Preferences

Event notification for amendment in consent details of the party.

Consent and Preference event is published during an amendment process through.

- User Interface (PUT API)
- PUT API Request

Table 1-76 Data Segment

Data Segment Code	Data Segment Name	Topic Name	Party Type
DS0026	CONSENT	obpySmbAmendConsent	SMB

Event for PUT API

The PUT API method, an HTTP request method, is utilized for updating the entire Data Segment of customer information. PUT method replaces the entire Data Segment with the new data provided in the request.

Using the PUT API method for amendments, event publishing will not be contingent on the information provided in the request and will include all the attributes of the data segment.

Note:

For PUT API Request "httpMethod" is populated as "PUT".

    }
  }
]
}

```

1.6.2 Update Party to Account

Event notification for update of a party to account relationship.

Table 1-85 Data Segment

Data Segment Code	Data Segment Name	Topic Name	Party Type
DS0103	PARTY_TO_ACCOUNT_AMEND	obpyAmendPartyToAccount	Retail/SMB

Event for PUT API

The PUT API method, an HTTP request method, is utilized for updating the entire Data Segment of customer information. PUT method replaces the entire Data Segment with the new data provided in the request.

Using the PUT API method for amendments, event publishing will not be contingent on the information provided in the request and will include all the attributes of the data segment.

**Note:**

For PUT API Request “methodType” is populated as “PUT”.

Event Payload

```
{
  "branchCode": "000",
  "userId": "USER1",
  "eventType": "amend",
  "sourceProductId": "OBPY",
  "externalCustomerNo": "PTY001",
  "datasegmentCode": "DS0103",
  "datasegmentName": "PARTY_TO_ACCOUNT_AMEND",
  "methodType": "PUT",
  "partyToAccountDetails": [
    {
      "op": null,
      "params": null,
      "values": {
        "externalCustomerNo": "PTY001",
        "accountNumber": "AC0001",
        "accountType": "05",
        "partyRelationship": "BEN",
        "partyRole": "PRIIND",
        "ownershipType": null,
        "responsibilityType": "D",
        "applicationType": "AC",
        "productGroup": "AX",
        "combinedStatement": "true",
        "nickName": null,
        "secondNickName": null,
        "percentOwner": "0",
        "titlePosition": null,
        "startDate": "2025-03-31",
        "endDate": null,
        "versionNo": 2,
        "recordStat": "O",
        "createdBy": "USER1",
        "createdDate": "2020-03-26T12:37:03",
        "updatedBy": "USER1",
        "updatedAt": "2020-03-26T12:55:26"
      }
    }
  ]
}
```

PATCH

The PATCH API method, an HTTP request method, is utilized for record and field-level modifications within a Data Segment of customer information, rather than updating the entire Data Segment Information.

Using PATCH API method for amendments, event publishing will be contingent on the information provided in the request and will solely include the attributes that have been modified. Through PATCH API method specific records can be added, updated, or deleted. During record update specific fields can be added, updated, or removed by specifying the attributes requiring modification.

Structure of the Event generated through PATCH API

The Event body is divided into the following key sections:

- "op": Defines the applicable operation to identify the nature of the action as
 - Update of existing record ("op": "replace"): Update of specific fields in an existing record.
 - New record ("op": "add"): New record added to the data segment.
 - Delete of existing Record ("op": "remove"): Delete of an existing record from the data segment.
- "param": Account Number to identify unique identifier for party to account relationship records.
- "values": Contains the attributes that are modified within the uniquely identified record.

Note:

For PATCH API Request "methodType" is populated as "PATCH".

Table 1-86 Param and Value availability with respect to Operation

Operation	param	values
"op": "replace"	Account Number used to uniquely identify the record	Modified fields
"op": "add"	Empty	New record added to the data segment.
"op": "remove"	Account Number used to uniquely identify the record	Empty

Event Payload

```
{
  "branchCode": "000",
  "userId": "USER1",
  "eventType": "amend",
  "sourceProductId": "OBPY",
  "externalCustomerNo": "PTY0001",
  "datasegmentCode": "DS0103",
  "datasegmentName": "PARTY_TO_ACCOUNT_AMEND",
  "methodType": "PATCH",
  "partyToAccountDetails": [
    {
      "op": "replace",
      "params": {
        "accountNumber": "AC001"
      },
      "values": {
```

```
        "externalCustomerNo": null,  
        "accountNumber": null,
