Pre-Installation Requirements and How to Apply This Maintenance Level Release?

This chapter describes the pre-installation requirements and how to apply the maintenance release Oracle Financial Services Enterprise Case Management (OFS ECM) Application Pack v8.1.2.0.0 Minor Release #11 8.1.2.11.0.

2.1 Pre-Installation Requirements

This section describes the pre-installation requirements.

> **Note**
>
> The OFS AAI 8.1.2.5.x release supports Oracle Linux 9 Server in addition to the continued support on Oracle Linux 8 and Oracle Linux 7. For more information see, the AAI Pre-installation Requirements.

Refer to the following pre-installation prerequisites:

> **Note**
>
> - The SYS DB user must provide the following grant to the ATOMIC DB user:
>   - `GRANT execute on ctx_ddl to<ATOM- IC_USER>;`
> - Take backup of `fic_home` and `ftpshare` folders, also Atomic and Config schemas. Any customizations done must be re-applied after the installation. See the Files Modified Due to This Patch for a list of files modified due to this Patch.

1. Configure the Server Time Zone as:

   For ECM standalone installation:

   - The `SERVER_TIMEZONE` parameter must be configured in the `CONFIGURATION` table in `CONFIG` schema with the correct time zone name.
     - The Date/Timestamps are displayed according to the user's browser timezone.
     - Once the user time zone is saved, the browser date is converted to the Server time zone date and saved in the database.

   For Pack-on-Pack installation:

   - Update the `SERVER_TIMEZONE` parameter in the `CONFIGURATION` table in `CONFIG` schema with the following query:

     ```
     UPDATE CONFIGURATION SET PARAMVALUE='', DESCRIPTION='DB Server Timezone'
            WHERE PARAMNAME='SERVER_TIMEZONE';
     ```

2. Download and copy `38376346_LINUX.zip` (in Binary mode) to the server where OFSAA is installed.
3. Navigate to `<USER_PATCH_DIR>` and extract the contents of the patch archive file using the command: `unzip -a <name of the file to be unzipped>`.

   For example: `unzip -a 38376346_LINUX.zip`

> **Note**
>
> `<USER_PATCH_DIR>` is the location of the `<patch>.zip` file.
>
> The following are the contents of the folder when the folder is unzipped:

2. As part of introducing the Suppression Condition, you must bring Binding-related additional information to ECM from BD. To populate this data for the existing Events in the system: Navigate to the `$FIC_HOME/ECM_Common_Scripts/Event_binding` path and run the `fcc_event_biding_update.sql` script. Before running the script, follow the instructions in `fcc_event_biding_update.sql`.
3. If OFS BD and ECM are on the same schema, run the following query in the Config schema and commit the changes:

```
Update PR2_PROCESS_TASK_PARAMETER set V_TASK_PARAMETER_VALUE =
replace(replace(V_TASK_PARAMETER_VALUE,
'"SOURCENAME=##OFS_ECM_AML_SOURCE##"', '"SOURCENAME=”'),
'"LOADTYPE=##OFS_ECM_AML_LOADTYPE##”','"LOADTYPE=”') where V_PROCESS_ID in
('1552025714669','1552025648676','1552025714670');
```

4. If OFS BD and ECM are on different schemas, run the following query after replacing `##REPLACE_SOURCENAME##` and `##REPLACE_LOADTYPE##` with their respective values in the Config schema and commit the changes:

```
Update PR2_PROCESS_TASK_PARAMETER set V_TASK_PARAMETER_VALUE =
replace(replace(V_TASK_PARAMETER_VALUE,'”SOURCENAME=##OFS_ECM_AML_SOURCE
##”'
      '"SOURCENAME=##REPLACE_SOURCENAME##”'),
'"LOADTYPE=##OFS_ECM_AML_LOADTYPE##”','”LOADTYPE=##REPLACE_LOADTYPE##”')
      where V_PROCESS_ID in
    ('1552025714669','1552025648676','1552025714670');
```

5. After the patch application is successful, perform the following steps to map the respective party-party relationship processes:
   a. Login to the KYC application.
   b. Navigate to `Common Tasks -> Rule Run Framework -> Process` select **Business Data Load For Oracle KYC**, and click **Edit**.

c. In the Atomic schema, a new table `FCC_GROUP_SEC_ATTR_MAP` is introduced to configure the security attributes mapping to the Application User Groups. Login to Atomic schema and configure security attributes to the User Groups.

i. Populate the **V_GROUP_CD** column with the User groups mapped to User in step *b* above.

ii. For ECM, valid values for the **V_SEC_ATTR_CD** column are *JRSDCN,ORG, BUSDMN* and *CASETYPE*.

iii. For ECM, valid values for the **V_SEC_ATTR_VAL** column are *Jurisdiction, Organization, Business Domain* and *Case type* values. Ensure that those are available in the `KDD_JRSDCN and KDD_JRSDCN_TL,KDD_ORG and KDD_ORG_TL, KDD_BUS_DMN and KDD_BUS_DMN_TL,KDD_CASE_TYPE_SUBTYPE and KDD_CASE_TYPE_SUBTYPE_TL` tables respectively.

d. Perform the following User Attribute configuration:

i. *Case Own Flag*: Create a **CMCASEOWNFLUG** group in LDAP Server and map it to the User in LDAP. If *CaseOwn Flag* for a user needs to be **Y**, then map this group to the user. If *CaseOwn Flag* for a user needs to be **N**, then make sure it is not mapped to the user.

ii. *Reporting/Line Organization*: Create a User group with Prefix as `ORG_CD` (from the *KDD_ORG* table) and a suffix as `LORG`. For example: if `TestOrgA` is the Line organization, create a User group as ***TESTORGALORG***.

> **Note**
>
> The above User Group must be created and mapped to the Infodom/Segment and CMLINEORG Role in the OFSAA application. In LADP, it must similarly be created and mapped to the User. Ensure that only one `LORG` group is assigned to each given User. If the `LORG` group mapping is already available as part of any other Application then there is no need to map again.

e. The `FCC_GROUP_SEC_ATTR_MAP` table in Atomic Schema is used for Configuring Security Mapping for the Pool Users.

i. The ***V_GROUP_CD*** column must be populated with the LORG group created in *step ii* in *point d* above.

ii. For ECM, valid values for the **V_SEC_ATTR_CD** column are *JRSDCN, BUSDMN* and *CASETYPE*.

iii. For ECM, the valid values for the **V_SEC_ATTR_VAL** column are *Jurisdiction, Business Domain* and *Casetype* values. Ensure that those are available in the `KDD_JRSDCN and KDD_JRSDCN and KDD_JRSDCN_TL,KDD_ORG and KDD_ORG_TL,KDD_BUS_DMN and KDD_BUS_DMN_TL,KDD_CASE_TYPE_SUBTYPE and KDD_CASE_TYPE_SUBTYPE_TL` tables respectively.

f. Login with the New User in the Application and observe the security attributes mapping all done. Users can view pages based on their Roles and the Cases based on the security attribute mapping.

g. For an existing user:

Copyright © 1994, 2026, Oracle and/or its affiliates.

i. If extra User groups are mapped in the LDAP Server, then once the User logs in to the application, confirm that the security attributes mapping is done. Also, ensure that the Users can view pages based on their Roles and can see the Cases based on the security attribute mapping.

ii. If few User groups are unmapped in the LDAP server, then:

- Unmap the User groups from the application.
- Follow the step under *point iii*:

iii. If User group mapping does not have any change and there are only changes in security attribute mapping to be done:

- Login with Admin user. Navigate to **Batch Maintenance** and create a **Batch**. For ECM, add the ECM task **FCC_ECM_JIT_SYNCH** to it.
- Execute the *Batch* via the **Batch Execution** screen. This can be monitored via the **Batch Monitor** screen. Once the *Batch* is executed, it will sync up the security attributes mapping for all the users in the kdd_review_owner *table*.

h. To disable a user/user(s) disabled on LDAP, log in with Admin user, navigate to **Batch Maintenance** and create a **Batch**.

i. For ECM, add the ECM task **FCC_ECM_JIT_DIS_USR** to it.

ii. Edit the Task. Mention the User/User IDs, separated by commas, in the **Parameter** section. This has to be enclosed in Single Quotes. For example: *CMSUP, CASEANA* where *CMSUP*, *CASEANA* are users who need to be disabled in the `kdd_review_owner` table.

15. To display the status of historical migrated FCCM alerts in related events, navigate to **Atomic Schema** and run the procedure `P_ECM_EVENT_MIGRATED_STATUS_POPULATION`.

16. To view the next periodic re-review on the **KYC Case Context** screen, update end *Point / DnextRereviewDate* in ECM UI as follows:

a. Go to **Case Management Configuration** then to the **Open Manage Common Parameters**

b. Select **Deployment Based** from the **Parameter Category** drop-down.

c. Select **KYC Deployment** from the **Parameter Name** drop-down.

d. Update**Attribute8 Value** with `http://hostname:portnumber/contextname/restapi/kycrest/DnextRereviewDate` end pointed.

17. To create Customer Screening events based on the Quantifind output JSON file, update the endpoint in the properties file. Perform the following steps to make the update:

a. Go to `<<FICDB>>/conf/`.

b. Open the `ECMQuantifindBulkService.properties` file.

c. Update **ECM_SERVICE_URL** with `http://hostname:portnumber/contextname/rest-api/ CMRestService/RealTimeCaseCreationService/saveEvents`.

18. To access the `AIF_ANOMALY_SCORE` and `AIF_ANOMALY_SCORE_ECM_DETAILS` tables available in BD schema from ECM schema, when BD and ECM setups are not pack on pack.

Create synonyms using the following scripts:

a. If KYC and ECM are in the same DB, execute the following scripts:

i. Create or replace synonym `AIF_ANOMALY_SCORE` for `&&bd_schema_owner.AIF_ANOMALY_SCORE;`

Copyright © 1994, 2026, Oracle and/or its affiliates.

ii. Create or replace synonym `AIF_ANOMALY_SCORE_ECM_DETAILS` for `&&bd_schema_owner.AIF_ANOMALY_SCORE_ECM_DETAILS;`

b. If KYC and ECM are in different DBs, replace the `AMDBLINK` with the DB link of the current setup in the following scripts and execute them. `@AMDBLINK` is a placeholder.

i. Create or replace synonym `AIF_ANOMALY_SCORE` for `AIF_ANOMALY_SCORE@AMDBLINK;`

ii. Create or replace synonym `AIF_ANOMALY_SCORE_ECM_DETAILS` for `AIF_ANOMALY_SCORE_ECM_DETAILS@AMDBLINK;`

19. Navigate to `$FIC_HOME/ECM_Common_Scripts/Tags/Transaction` and execute `Tag_utility.sql` in Atomic Schema.
