This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

1

Object Migration

Object Migration is the process to define, export and import objects across environments (prod and non-prod)/instances. This feature also facilitates to migrate within the same setup or different setups.

Objects refer to the various metadata definitions defined for various domains. You may want to migrate objects for several reasons such as manage global deployments on multiple environments or to create multiple environments so that you can separate the development, testing, and production processes.

For example, you can use the object migration feature to define PMF process object such as balance computation on your testing environment. After successful testing, you can use this feature to export the object to production/non-production environment.

You can migrate the following object types:

- **Schedule** Schedule provides the instruction to schedule the execution of defined processes. When a schedule is migrated, the associated batch is also migrated.
- **Batch** Batch is a group of jobs that are scheduled to automatically execute at a preset interval of time, without any user's intervention. When a batch is migrated, the batch and the associated pipeline information are also migrated.
- **Batch_Group** A set of individual batches are consolidated to form a single Batch_Group. When we migrate a Batch_Group all the batches, tasks and pipeline information associated with that Batch_Group are also migrated.
- **Pipeline** A pipeline is an embedded data processing engine that runs inside the application to filter, transform, and migrate data on-the-fly. Pipelines are a set of data processing elements called widgets connected in series, where the output of one widget is the input to the next element.
- Threshold The threshold limit associated with set variables values for scenarios in FCCM Cloud Service. These threshold values are set when scenarios are created or installed and can be changed, if required.
- Job Jobs provide set of instructions to execute Workflow Pipelines, based on the set threshold values.
- Roles Roles are used to map functions to a defined set of groups to ensure user access system security.
- Groups Groups are used to map Roles. Specific User Groups can perform only set of functions associated with that group.
- **CM_ADMIN** The CM_ADMIN object type refers to all the case management related admin screens. Under this object type, you can export case management related admin metadata and settings for Business Domain, Case Actions/Statuses, Case Priority, Case Rules, Case System Parameters, Case Types, Jurisdictions and Security Mapping.

Migration Object Types

You can create Object Export and Import definitions for the following object types using Object Export/Import feature.

The Migration object types are categorized as follows:

Asset Liability Management

- Standardized_IRRBB_Shock
- Static_deterministic_process
- Time_bucket
- Dynamic_deterministic_process
- Forecast_balances
- Multi_dimensional_balance_sheet
- Pricing_margin
- Product_characteristics
- Behaviour_pattern_rule
- Discount_methods
- Forecast_rates
- Prepayment_model
- Prepayment_rules
- Transferring_Price_Rules

Cash Flow Edits

- Cash_flow_edits_rule
- Cash_flow_edits

Cash Flow Engine

Cashflow_Process

Common Objects

Batch

Ensure to have BATCH_SUMM, BATCH_VIEW and BATCH_ADD riles to view, export and import batches.

Batch_group

Note:

Ensure to have BATCH_SUMM, BATCH_VIEW and BATCH_ADD riles to view, export and import batches.

- Currency
- Datamodel_extension_dimension
- Data_file_specification
- Dimensions

Note:

Dimension definitions should be migrated before migrating the dependent object definitions. The source and the target dimension of the dependent objects should be the same.

- Expressions
- Filters
- Folder
- Hierarchy

Note:

Dimension definitions should be migrated before migrating the Hierarchy associated with it. The Dimension should be the same in both source and target environments.

- Holiday_calendar
- Job
- Pipeline
- Schedule

Note:

Ensure to have BATCH_SUMM, BATCH_VIEW and BATCH_ADD riles to view, export and import batches.

Slowly Changing Dimensions

Funds Transfer Pricing

- Add-on Rate Rule
- Alternate_Rate_Output_Mapping
- Replicating Portfolio

Standard_Process

Identity Management

- **Groups** For more information, refer to Groups Summary in Admin Console.
- Roles For more information, refer to Roles Summary in Admin Console

Patterns

- Behaviour_pattern
- Payment_pattern
- Reprice_pattern

Profitability Management

- Allocation Model
- Lookup Table
- Allocation Specification
- Static_Table

Profitability Analytics

- Financial Element Mapping
- Segmentation Mapping
- Line Item Display Order
- Geography Mapping

Rate Management

- Interest Rates
- Economic_indicator
- Volatility_surface

3

Accessing Object Export and Object Import Features

Using the Object Export and Import features, you can create Export and Import Object definitions.

To access the Object Export and Import feature, from the left Navigation pane in the PBSM Console, click **Operations and Processes > Object Administration**.

- To access Object Export feature, click **Export Object**.
- To access Object Import feature, click Import Object.

4

Object Export Definitions

Object Export Definition is a collection of objects that can be exported across environments.

You can view the list of object export definitions that are already created in the **Object Export Summary**. You can also view the following details about each object definition.

- Name The unique name assigned to the collection when the export definition was created.
- Object Migration Status The export status of a specific object definition.
 - Success Indicates that the export is completed successfully.
 - Failed Indicates that the export was not successful. You can reintiate the migration of the specific object definition.
 - Saved Indicates that the object definition is created successfully and is yet to be exported.
 - In Progress -Indicates that the export is in progress. Once the export is complete, the status will change to Success/Failed.
- Last Modified By The ID of the Last Modified by user who has modified the definition.
 On mouse over, the Last Modified Time and Date are displayed.

To filter the list and view specific Object Definition, use one of the following search options:

- To search for a specific Export Object Definition, type the first few letters of the export definition that you want to search in the Search Box and click **Search**. The search results display the names that consist of your search string in the list of available definitions.
- Enter the number of records to be viewed in a single page, in the **Records** box, at the bottom of the page. You can increase or decrease the number of entries that are displayed using the up and down arrows.
- You can navigate between pages in the View bar, use the navigation buttons present at the bottom of the page.

Creating Export Definitions

You can create export Meta data objects using the System Configuration tab in Admin Console.

For more information about the supported object types, refer to Migration Object Types. Refer to the following steps, to create a migration export object.

- 1. Click Add in the Object Export Summary Page to view the Migration Definition page.
- 2. Enter the following details, in the **Migration Definition** page.
 - Migration Name: Enter the code of the export of objects to be migrated definition.
 This is a unique identifier.
 - **File Name**: The system auto-creates the file name of the objects that can be used to export the definition in the following format:

- For Business Objects: Migration Name_BO_Time Stamp (MMDDYYY HHMMSS)
- For Identity Objects: Migration Name_IDM_Time Stamp (MMDDYYY HHMMYY)
- 3. Click **Apply** to save the details and view the **Object Selection** Page.
- 4. Click **Add** to include Migration objects to the definition.
- 5. select the required **Object Type** from the Object Types drop-down list.
- Select the objects to be added to the Migrate Definition and click Save, to create a new migration object.

A confirmation message is displayed, when the definition is saved successfully. The new migration definition is listed in the Object Export Summary Page and the status is set to **Saved**.

You can also click **Export**, to export the object.

Editing Export Object Definitions

You can edit the Export Object definitions that are not exported and their status is **Saved** or **Failed**.

If the definitions is already exported and the status is set to **Success**, you cannot edit that definition.

To edit an Export Object definition, follow these steps.

 In the Object Export Summary page, highlight the definition and click Menu, and select Edit.

The **Object Selection** page is displayed.

- 2. Modify the following details, if required, and click **Save** to changes.
 - Select the required Object Type from the Object Types drop-down list.
 - Select the objects to be added to/deleted from the definition.
- 3. After adding/deleting all the required objects, click **Save**.

The Export definition is saved successfully and a confirmation message is displayed. The new definition is listed in the Object Export Summary page and the status is set to **Saved**.

4. If you want to Save and Export the Definition, click **Export**.

Exporting Object Definition

After creating the object definitions, you can export them for migrating between environments, using Object Migration (Export) feature.

You can export object definitions in **Saved** or **Failed** state from the object Summary page.Refer to the following steps, to export definitions.

- 1. In the Object Summary Page, highlight the migration definition and click **Menu**.
- 2. Select **Export** from the menu.

After you export, the following Export status types are displayed:

- Success Indicates that the definition is exported successfully.
- Failed Indicates that the definition was not exported. Right-click and select Export, to reintiate the export process.
- **In Progress** -Indicates that the export is in progress. Once the export is completed, the status will change to Success/Failed.

Viewing Export Object Details

Using the **View** option, you can view the list of objects and the dependancies added to an Object definition. You can also view the object details.

- 1. Highlight the Export definition and click Menu.
- 2. Select **View**. The object types, list of objects and the dependent objects added to the export definition are listed in the left pane.
- 3. Double-click an object to view the object attribute details.

View Object Definition Export Log Details

View log facilitates you to view the export log information of the object definition with the migration status.

The View Log page for an object definition with status **Saved** will be empty.

To view the log details of object with migration status **Success** or **Failed**, follow these steps.

- 1. In the Object Export Summary page, mouseover the object definition and click Menu.
- Select View Log from the drop-down menu, to access the View Log page.

The migration status of the objects with following details is displayed.

- Object Migration ID The migration ID associated with the definition.
- Object Type The object type of the definition.
- Object Code The object code associated with the definition.
- Creation Date The date of creation of the definition.
- Created By The User Id of the User who created the definition.
- Status The migration status of the definition.
 - Success Indicates that the export migration was completed successfully.
 - Failed Indicates that the export migration did not complete.
 - Export Status Message The complete export status message.

Export status message currently not supported for GL reconcilation.

3. Click **OK** to close the page, after viewing the log details.

Downloading Dump File

You can download the export dump file for exported definitions to a local directory, using Download Dump file option.

The downloaded export dump file can be used to upload objects to a different environment.

This option is enabled, only if the definition is exported successfully and the **Migration Status** is set to **Success**.

To download a export dump file, refer to the following procedure.

- 1. Mouseover a migrated object and select **Menu**.
- Select Download Dump File from the drop-down menu, to download the associated dump file and store it to the local directory.

Deleting Export Object Definition

You can delete only definitions that are set to **Saved** or **Failed** status.

To delete a export object definition, follow these steps.

- In the Object Export Summary page, mouseover the definition to be deleted and click **Delete**.
- 2. Click **Yes** to confirm and proceed with the deletion.

Object Import Definitions

Object Import Definitions is a collection of objects that can be imported across environments. .

You can view the list of Object Import Definitions that are already created in the **Object Import Summary**. You can also view the following details about each Object definition.

- Name The unique name assigned to the collection when the Import definition was created.
- Object Migration Status The import status of a specific Object definition.
 - Success Indicates that the import is completed successfully.
 - Failed Indicates that the import was not successful. You can reintiate the migration of theSpecific Object Definition.
 - Saved Indicates that the Object Definition is created successfully and is yet to be imported.
 - In Progress -Indicates that the import is in progress. Once the import is complete, the status will change to Success/Failed.
- Last Modified By The ID of the Last Modified by user who has modified the definition.
 On mouse over, the Last Modified Time and Date are displayed.

To filter the list and view Specific Object Definition, use one of the following search options.

- To search for a Specific Import Object definition, type the first few letters of the Import definition that you want to search in the Search box and click **Search**. The search results display the names that consist of your search string in the list of available definitions.
- Enter the number of records to be viewed in a single page, in the **Records** box, at the bottom of the page. You can increase or decrease the number of entries that are displayed using the up and down arrows.
- You can navigate between pages in the View bar, use the navigation buttons present at the bottom of the page.

Creating Object Import Definitions

You can create Import definitions and add Import Objects using the Object Migration (Import) feature.

- 1. Click **Add** in the **Object Import Summary** page to view the **Migration Definition** page.
- 2. Enter the following details, in the **Migration Definition** page.
 - ID The Unique Name for the New Import Object definition.
 The migration ID should not contain any space and exceed 30 characters.
 Underscore (_) and hyphen (-) are allowed.
 - Dump File -Select the .DMP file to be uploaded for creating the Import definition.

Figure 5-1 Importing Dump File

You can select the dump file using one of the following options:

- Select the option **Object Store**, to select the dump file (.DMP file) from the list of dump files available in the same environment.
- Select the option Local Machine and click Drag and Drop, to add a .DMP file, from the local directory. You can only Add Dump file that are downloaded using Download Dump file option.

- Uploading a dmp file either created or edited locally will generate an error.
- You can rename the .DMP file, if required. Ensure to follow the naming convention. For more information, refer to File Naming Conventions for Migrate Objects.
- Import All Select an option to import the objects that are associated with the selected object type. You can edit this option if required, in the Object Selection page.
 - Yes Imports all the objects that are included in the dump file.
 - No Imports only those objects that you can select in the Object Selection page.
- **Fail on Error** Select an option to proceed with the definition creation in case of an error. You can edit this option if required, in the **Object Selection** page.
 - Yes Stops the creation process, if error is generated.
 - No Creates the import definition even when error is generated. The object with the error is not included in the object creation.
- **Overwrite** Select an option to overwrite the existing definition. You can edit this option if required, in the **Object Selection** page.

- Yes Replaces the existing Import definition.
- No Creates a new Import definition.
- 3. Click **Apply** to save the details.

The Import definition is created and **Object Selection** page is displayed. You can add objects to this import definition.

- 4. Click **Add** to include objects to the definition.
- 5. Select the required **Object Type** from the Object Types drop-down list.

Objects that are defined in the environment with respect to the selected object type are are listed. For example, if Schedule is selected as the Object Type, all the Objects defined with respect to Schedule, in the environment are only listed.

You can also enter the first few letters of the object name in the Search Field, to narrow down the search.

- 6. Click the check box adjacent to each object, to include the objects associated with a specific object type, to the import definition.
- 7. Repeat steps 4, 5 and 6, to include objects associated with various object types.
- 8. After adding all the required objects, click **Save**.

The Import definition is saved successfully and a confirmation message is displayed. The new definition is listed in the Object Import Summary page and the status is set to **Saved**.

9. If you want to Save and Export the Definition, click Import.

Editing Import Definitions

You can edit the Import definitions that are not imported and their status is Saved or Failed.

If the definitions is already imported and the status is set to **Success**, you cannot edit that definition.

To edit an Import definition, follow these steps.

1. In the Object Import Summary page, highlight the definition and click **Menu**, and select **Edit**.

The **Object Selection** page is displayed.

- 2. Edit the following details, if required, and click **Save** to changes.
 - Select the required Object Type from the Object Types drop-down list.
 - Select the objects to be added to/deleted from the definition.
- 3. After adding/deleting all the required objects, click **Save**.

The import definition is saved successfully and a confirmation message is displayed. The new definition is listed in the Object Import Summary page and the status is set to **Saved**.

- 4. Click **Save** to update the changes.
- 5. If you want to Save and import the Definition, click **Import**.

Importing Object Definitions

After creating the object definitions, you can export them for migrating between environments, using Object Migration (Import) feature.

You can import object definitions in **Edited** state from the object Summary page. Refer to the following steps to import Object definitions.

Comments and Documents attached to an Issue/Action will not be migrated.

- 1. In the Object Summary Page, mouse-over the definition and click **Menu**.
- 2. Select **Import** from the drop-down menu.

After you import, the following Import status types are displayed:

- Success Indicates that the definition is imported successfully.
- Failed Indicates that the definition was not imported. Right-click and select Import, to restart the import process.
- **In Progress** -Indicates that the import is in progress. Once the import is completed, the status will change to Success/Failed.

Viewing Import Object Details

Using the **View** option, you can view the list of objects and the dependancies added to an Object definition. You can also view the object details.

- 1. Mouseover the migration definition and click **Menu**.
- Select View. The object types, list of objects and the dependent objects added to the export definition are listed in the left pane.
- 3. Double-click an object to view the object attribute details.

Viewing Object Import Log Details

View log facilitates you to view the log information of the object definition with the migration status.

The View Log page for a definition with migration status **Saved** will be empty.

To view the log details of definition with migration status **Success** or **Failed**, follow these steps.

 In the Object Import Summary window, mouseover the migration definition and click Menu.

2. Select View Log from the drop-down menu, to access the View Log page.

The migration status with following details is displayed.

- Object Migration ID The migration ID associated with the import object.
- Object Type The object type of the import object.
- **Object Code** The object code associated with the import object.
- Creation Date The date of creation of the import object.
- Created By The User Id of the User who created the import object.
- Status The import status of the specific object.
 - Success Indicates that the specific object was imported successfully.
 - Failed Indicates that the specific object was not imported.
- **Import Status Message** The complete import status message.

Import status message currently not supported for GL reconcilation.

3. Click **OK** to close the page, after viewing the log details.

Deleting Import Definition

You can delete only definitions that are set to **Saved** or **Failed** status.

To delete an import definition, follow these steps.

- In the Object Import Summary page, mouseover the definition to be deleted and click Delete.
- 2. Click **Yes** to confirm and proceed with the deletion.
