This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Oracle customer access to and use of Oracle support services will be pursuant to the terms and conditions specified in their Oracle order for the applicable services.

## About the Guide

This section provides release information for the Oracle Insurance Accounting Analyzer Extension Pack Application

### Intended Audience

This document is intended for users of the Oracle Insurance Accounting Analyzer Extension Pack Application.

### Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info>

### Related Information Sources

You can access the following online documents from the Oracle Help Center (OHC) Documentation Library for the [Oracle Insurance Accounting Analyzer Extension Pack Application](#) :

- Oracle Insurance Accounting Analyzer Extension Pack Release Notes
- Oracle Insurance Accounting Analyzer Extension Pack Installation Guide
- Oracle Insurance Accounting Analyzer Extension Pack User Guide

You can access the OFS AAI documentation online from the OHC Documentation Library for [Oracle Financial Services Analytical Applications Infrastructure](#):

- Oracle Financial Services Analytical Applications Infrastructure Installation and Configuration Guide
- Oracle Financial Services Analytical Applications Infrastructure User Guide

## About Oracle Financial Services Analytical Applications (OFSAA)

In turbulent markets today, financial institutions require a better understanding of their risk-return while strengthening their competitive advantage and enhancing long-term customer value. Oracle Financial Services Analytical Applications (OFSAA) enable financial institutions to measure and meet risk-adjusted performance objectives, cultivate a risk management

culture through transparency, lower the costs of compliance and regulation, and improve insight into customer behavior.

OFSAA uses industry-leading analytical methods, shared data models, and application architecture to enable integrated risk management, performance management, customer insight, and compliance management. OFSAA actively incorporates risk into decision-making, enables you to achieve a consistent view of performance, promotes a transparent risk management culture, and provides pervasive intelligence.

Oracle Financial Services Analytical Applications delivers a comprehensive, integrated suite of financial services analytical applications for both banking and insurance domains.

## About Oracle Financial Services Analytical Applications Infrastructure (OFS AAI)

Oracle Financial Services Analytical Applications Infrastructure (OFS AAI) powers the Oracle Financial Services Analytical Applications family of products to perform the processing, categorizing, selection, and manipulation of data and information required to analyze, understand and report on specific performance, risk, compliance, and customer insight issues by providing a strong foundation for the entire family of Oracle Financial Services Analytical Applications across the domains of Risk, Performance, Compliance, and Customer Insight.

## About Oracle Insurance Accounting Analyzer Extension Pack Application

Oracle Insurance Accounting Analyzer Extension Pack comes with a lot of features that will enable insurers to not just achieve IFRS 17 compliance but also:

- Perform a detailed and granular analysis of change of their insurance liabilities using the extension pack calculation templates and reports.
- Provide a framework to build on the existing calculation templates i.e, modify the templates as per their needs using a friendly user interface.
- Provide a framework to build on the existing reports i.e, modify the reports as per their needs using a friendly user interface.
- Perform premium earnings computations applying methods commonly used in the industry.
- Perform conversion of IBNR, and IBNER reserves from AY basis to UY basis and allocate the reserves to the insurance-group level.
- Compute UPR, URR and generate future claim payments using claim payment patterns.
- Perform reinsurance settlement computations for outward reinsurance.

# Understanding Oracle Insurance Accounting Analyzer Extension Pack

This section provides information and the functional flow of the Application.

## Logging in to the Oracle Insurance Accounting Analyzer Extension Pack Application

To log in to the Oracle Insurance Accounting Analyzer Extension Pack Application, perform the following steps:

1. Access the Oracle Insurance Accounting Analyzer Extension Pack Application by using the login credentials (User ID and Password) provided and select the preferred language to navigate. The built-in security system ensures that you are only permitted to access the window and actions based on the authorization.
2. After logging in to the OFSAA Home screen, the landing page is displayed. Use the information provided in the following table to set the application preferences.

**Table 2-1 The Application Preferences**

| Field                         | Description                                                                                                                                                                                                                                                      |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| User Menu                     | The following options are available in this drop-down: <ul style="list-style-type: none"><li>• Preferences</li><li>• About</li><li>• Change Password</li><li>• Log Out.</li></ul>                                                                                |
| Application                   | Click this icon to view all the applications installed in your environment.                                                                                                                                                                                      |
| Language                      | This menu displays the language you selected in the OFSAA Login window. The language options displayed in the Language Menu are based on the language packs installed in your OFSAA instance. Using this menu, you can change the language at any point in time. |
| Administration                | Click this icon to navigate to the Administration window. The Administration window displays modules such as: <ul style="list-style-type: none"><li>• Translation Tools</li><li>• Object Administration</li><li>• Utilities.</li></ul>                           |
| Last Failed Login Date & Time | Click this icon to view the details of the last login and the last failed login.                                                                                                                                                                                 |

Table 2-1 (Cont.) The Application Preferences

| Field                     | Description                                                                                                                                                                                                                                                                                                                                                                         |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Object Administration     | Object Administration is an integral part of the infrastructure and facilitates system administrators to define the security framework. See the <a href="#">OFS Advanced Analytics Infrastructure User Guide</a> for details.                                                                                                                                                       |
| Common Object Maintenance | Common Object Maintenance is an integral part of the infrastructure system and facilitates system administrators to define the security framework with the capacity to restrict access to the data and metadata in the warehouse, based on a flexible, fine-grained access control mechanism. See the <a href="#">OFS Advanced Analytics Infrastructure User Guide</a> for details. |

## Mapping the User Groups

Before configuring the Calculation Preference templates, you must map the users' groups:

1. Log in as a System Administrator.
2. On the landing page, select **Identity Management**.

Figure 2-1 The Landing Page

3. Click **User – User Group Map** from the LHS menu to open the **User – User Group Map** page.

Figure 2-2 The User – User Group Map Page

4. Map the desired users to the **IAAEP Application Analyst Group** and **IAAEP Application Admin Group**. For more information on User – User Group Mapping, see the **User-User Group Map** section in the [OFS Advanced Analytics Infrastructure User Guide](#).
5. Log in as a System Authorizer.
6. Navigate to **Identity Management**, click **User Group Authorization**, and authorize the user groups.

# 3

## Oracle Insurance Accounting Analyzer Extension Pack Workflow

This chapter provides the functional as well as a business overview of the Oracle Insurance Accounting Analyzer Extension Pack workflow. The Extension Pack, as the name suggests, is an extension of Oracle Insurance Accounting Analyzer, therefore the features that are available on Oracle Insurance Accounting Analyzer are also available on the Extension Pack. Refer to the user guide of for the features that are common to both.

### Application Configuration

Use the application configuration screen to configure the Seeded Data in the **setup\_master** table. The changes made to this table in the **Application Configuration** window have an impact on the insurance cash flow loader, the discounting engine, and the liability calculation run.

### Access Application Configuration

You can access the Application Configuration window by clicking the Application Configuration element from the left pane in the application. When you click this element, the Application Configuration window appears:

**Figure 3-1 The Application Configuration window**

The screenshot displays the 'Application Configuration' window. It features a table with two columns: 'Property Name' and 'Property Value'. The 'Property Name' column lists various configuration items, and the 'Property Value' column shows their current settings. Some values are displayed in a dropdown menu, while others are in text boxes. The 'Application Type' property is highlighted in yellow. The 'Transition Date' property has a calendar icon next to its value.

| Property Name                                                                                                                                                                                                                                              | Property Value                                 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------|
| Application Type *                                                                                                                                                                                                                                         | IFRS17 X<br>Reinsurance Settlement X<br>LDTI X |
| Frequency for Retrospective calculation(including net premium ratio) during LDTI Liability calculation run *                                                                                                                                               | Annually                                       |
| Day for Retrospective calculation during LDTI Liability calculation run. If the value is 25, it means retrospective calculation will be executed if FIC_MIS_DATE is on and after 25th of the frequency month *<br>specified in IIA_RETROSPECTIVE_FREQUENCY | 25                                             |
| IRC Forward Rate Max Term *                                                                                                                                                                                                                                | 50                                             |
| Degree of Parallelism for the execution of DT *                                                                                                                                                                                                            | 1                                              |
| Transition FRA Batch wait time *                                                                                                                                                                                                                           | 10                                             |
| Flag for assumption scenario projection index *                                                                                                                                                                                                            | Annually                                       |

This window displays the current configuration for the seeded data in the **setup\_master** table. After you modify the values in the **ApplicationConfiguration** pane, you can save your changes.

## Configure the Seeded Data

Perform the following steps to modify the seeded data in the **Application Configuration** window:

Application Configuration

| Property Name                                                                                                                                                                                                                                              | Property Value                                 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------|
| Application Type *                                                                                                                                                                                                                                         | IFRS17 X<br>Reinsurance Settlement X<br>LDTI X |
| Frequency for Retrospective calculation(including net premium ratio) during LDTI Liability calculation run *                                                                                                                                               | Annually                                       |
| Day for Retrospective calculation during LDTI Liability calculation run. If the value is 25, it means retrospective calculation will be executed if FIC_MIS_DATE is on and after 25th of the frequency month *<br>specified in IIA_RETROSPECTIVE_FREQUENCY | 25                                             |
| IRC Forward Rate Max Term *                                                                                                                                                                                                                                | 50                                             |
| Degree of Parallelism for the execution of DT *                                                                                                                                                                                                            | 1                                              |
| Transition FRA Batch wait time *                                                                                                                                                                                                                           | 10                                             |

Select <i>No</i> to provide URR cashflows as an input.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Calculate Deferred Acquisition Cost                                                                                                  | Select the check box to calculate the deferred acquisition cost. Deselect this check box to provide the deferred acquisition cost as an input.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| General Ledger Hierarchy pane                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| General Ledger Hierarchy applicable for Subledger*                                                                                   | <p>This is the Ledger Account Hierarchy that is used by the Subledger Definition</p> <p>Select a folder and a property value from the <b>Folder</b> and <b>PropertyValue</b> Columns, respectively.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

# Calculation Preference Configuration

Perform the following steps to configure the Calculation Preference Templates:

1. From the Oracle Insurance Accounting Analyzer Extension Pack Landing page, select **Oracle Insurance Accounting Analyzer** on the OFSAA Landing page, and then select **Calculation Preference Configuration** to open the **Extension Pack Template** page.

**Figure 3-4 The Calculation Preference Configuration Page**

The screenshot shows the 'Calculation Preference Configuration' page. At the top, there's a header with the Oracle logo and 'Oracle Insurance Accounting Analyzer'. Below this, there's a 'General Measurement Model' dropdown menu and a 'Reinsurance Held' toggle switch. To the right of these is a 'Save' button. Below the toggle, there's a table with three columns: 'Output Tree', 'Action', and 'Map'. The table contains two rows: 'Movement Analysis' and 'Reconciliation', each with an 'Add Section' button in the 'Action' column.

2. Select a calculation method from the drop-down list. The available options are:

## **Note**

Depending on the selections made from the **Application Type** field on the **Application Configuration** screen, the methods will appear accordingly.

- General Measurement Model (GMM)
- Long Duration Contracts
- Premium Allocation Approach (PAA)
- Variable Fee Approach (VFA)
- Reinsurance Settlement

## **Note**

The **Reinsurance Held** slider is only available for the GMM, PAA, LDTI, and Reinsurance Settlement methods. Note the following if the **Reinsurance Held** slider is selected for a specific method:

- If the GMM method is selected and the **Reinsurance Slider** is enabled, then the Ratios from underlying Insurance Contracts row appears.
- If the Long Duration Contracts method is selected and the **Reinsurance Slider** is enabled, then only the Movement Analysis row appears.
- If the Reinsurance Settlement method is selected, the **Reinsurance Slider** will get enabled.

3. In this window, select an output variable from the list. You can also type the name of an output variable in the Filter field to filter the output variables in the list.

- In the **Output Tree** pane, click the arrow icons to expand or collapse the Output Parameters.

**Figure 3-5 The Extension Pack Template Page**

- To add a new section, click **Add** section to open the Section window.

**Figure 3-6 The Section Window**

- In this window, click **New**.
- Enter a name and description in the **Name** and **Description** fields and then click **Create**. The **Calculation Preference Configuration** page automatically appears.
- Click **Save** to add the newly created section.

9. To add an Output Variable as a Child or as a Sibling, click the **Add Child** or the **Add Sibling** button adjacent to an Output Parameter, respectively. The **Output Variable** window is displayed.

**Figure 3-7 The Output Variable Window**

The screenshot shows the 'Output Variable' window. At the top right are buttons for 'New', 'Close', and 'Add'. Below these is a 'Filter' input field. The main area contains a table with two columns: 'Name' and 'Path Reference'.

| Name                                                                | Path Reference                                                 |
|---------------------------------------------------------------------|----------------------------------------------------------------|
| Insurance Finance Income or Expense<br>N_MA_PV_LFRC_INS_FIN_INC_EXP | Movement Analysis -> Present Value Of Future Cash Flows (LFRC) |
| Inception Value - New Business<br>N_MA_RA_CHG_FUT_SERV_NEW          | Movement Analysis -> Risk Adjustment (LFRC)                    |
| Insurance Finance Expense<br>N_MA_RA_LFRC_INS_FIN_EXP               | Movement Analysis -> Risk Adjustment (LFRC)                    |
| Changes In Estimates Impacting CSM<br>N_MA_CSM_CHG_EST_IMP_CSM      | Movement Analysis -> Contractual Service Margin                |
| Interest Accretion<br>N_MA_CSM_INTEREST_ACCR                        | Movement Analysis -> Contractual Service Margin                |
| Insurance Finance Expense (OCI)<br>N_MA_CSM_INS_FIN_EXP_OCI         | Movement Analysis -> Contractual Service Margin                |
| Release for Current Period<br>N_MA_CSM_REL_CUR_PERIOD               | Movement Analysis -> Contractual Service Margin                |

- a. In the **Filter** field, enter a value, for example, **Insurance**, to filter the Output Variables.
- b. Click the **New** button to open the window for creating a new Output Variable.

**Figure 3-8 The Window for Creating a New Output Variable if the Reinsurance Held slider is enabled**

The screenshot shows the 'Output Variable' window with a 'Cancel' button at the top right. The main area contains a form with the following fields and controls:

- Code**: A text input field.
- Name**: A text input field.
- Default Constant**: A text input field.
- Reinsurance Held**: A toggle switch currently set to 'On'.
- Opening Balance**: A toggle switch currently set to 'Off'.
- Closing Balance**: A toggle switch currently set to 'Off'.
- Create**: A blue button at the bottom left.

**Figure 3-9 The Window for Creating a New Output Variable if the Reinsurance Held slider is not enabled**

- c. Enter values in the following fields:
  - **Code:** Enter a code for the Output Variable.
  - **Name:** Enter a name for the Output Variable.
  - **Default Constant:** Enter a default constant for the Output Variable. This is used when the output variable that is created is an opening balance. For example, the user can give the *Closing balance of the last reporting period* as the default constant for the opening balance output variables, then the given default constant will be displayed on the calculation template.
  - **Reinsurance Held:** This button is *On* if the **Reinsurance Held** slider was enabled on the **Calculation Preference Configuration** page. If the **Reinsurance Held** slider was disabled on the **Calculation Preference Configuration** page, then this button will be *Off*.
  - **Opening Balance:** Click the slider to enable the mark the output variable as an Opening Balance Feature variable. This is to facilitate mapping the closing balance variables to the respective opening balance variables.
  - **Closing Balance:** Click the slider to mark the output variable as a Closing Balance variable. This is to facilitate mapping the closing balance variables to the respective opening balance variables.
- d. Click **Create**.
10. All Closing Balances must have an Opening Balance mapped to it. Click the **Map Opening Balance** icon in the **Map** column to map an Opening Balance to a Closing Balance.
11. Additionally, click the **Delete Node** button adjacent to the required node to delete it. Deletion is possible only if the changes are not saved.
12. Click **Save** to save the changes.

## Calculation Preference Definition

Perform the following steps to create a new Calculation Preference Definition by using a new Output Variable:

**Note**

You must complete mapping the financial element and transaction type to the Cash Flow type as part of the process for calculating the Input Variables. For more information, see **Dimension Management** and **Batch Execution** in the [Oracle Insurance Accounting Analyzer User Guide](#).

1. In the **Calculation Preference** window, click **Add** to open the **Calculation Preferences** window.

**Figure 3-10 The Calculation Preferences Window**

**Output Parameters**

**Movement Analysis** **Reconciliation**

Present Value Of Future Cash Flows (LFRC)

Present Value Of Future Cash Flows (LFRC) - Premium

Present Value Of Future Cash Flows (LFRC) - Commission

Note the following conditions for the **Output Parameters** section when the **LDTI** method is selected:

- **Default** - Only the **Movement Analysis** and **Net Premium Ratio** sections are enabled.
  - **Market Risk** - If the **Market Risk** slider is enabled, then only the **Movement Analysis** and **Benefit Ratio** sections are enabled.
  - **Reinsurance Held** - If the **Reinsurance Held** slider is enabled, then only the **Movement Analysis** section is enabled.
3. Perform the steps mentioned in the **Create a New Calculation Preferences Definition** section in the [Oracle Insurance Accounting Analyzer User Guide](#).
  4. The **Soft Delete** icon in the **Output Parameters** pane, enables you to delete a variable:
    - a. Click the **Soft Delete** icon to open the **Soft Delete** window.

**Figure 3-12 Soft Delete Window**

- b. In this window, select the variables that you want to hide and then click the **Hide** button.  
The selected variables are hidden from the list.
  - c. To restore the list of variables to its default state, in the **Soft Delete** window, click the **Restore** button.  
The variables that were previously hidden will appear in the list of variables.
5. For each approach, you can give an Expression in a single Template starting with the **Non Transition Expression** box at the top. Click the **Acquired Expression** field at the bottom expression builder box and then select the required Input Parameters from the list to populate the **Acquired** field pane. The other fields **Fair Value Approach Expression**, **Full Retrospective Expression**, **Modified Retrospective Expression** and **Acquired Full Retrospective Expression** can be seen by clicking on the right arrow at the top corner of the bottom expression builder box. Separate expressions can be built for each of these using the input variables, output variables, macros and functions.

**Figure 3-13 The Acquired Expression field in the Calculation Configuration Window**

The screenshot shows a window titled "Acquired Expression" with a large text area for input. The window has a light blue header bar with the title "Acquired Expression" and a small navigation bar with left and right arrows. At the bottom right, there are "OK" and "Cancel" buttons.

**Figure 3-14 The Fair Value Approach Expression field in the Calculation Configuration Window**

The screenshot shows a window titled "Fair Value Approach Expression" with a large text area for input. The window has a light blue header bar with the title "Fair Value Approach Expression" and a small navigation bar with left and right arrows. At the bottom right, there are "OK" and "Cancel" buttons.

**Figure 3-15 The Full Retrospective Expression field in the Calculation Configuration Window**

The screenshot shows a window titled "Full Retrospective Expression" with a large text area for input. The window has a light blue header bar with the title "Full Retrospective Expression" and a small navigation bar with left and right arrows. At the bottom right, there are "OK" and "Cancel" buttons.

**Figure 3-16 The Modified Retrospective Expression field in the Calculation Configuration Window**

The screenshot shows a window titled "Modified Retrospective Expression" with a large text area for input. The window has a light blue header bar with the title "Modified Retrospective Expression" and a small navigation bar with left and right arrows. At the bottom right, there are "OK" and "Cancel" buttons.

**Figure 3-17 The Acquired Full Retrospective Expression field in the Calculation Configuration Window**

The screenshot shows a window titled "Calculation Configuration Window". Inside, there is a section labeled "Acquired Full Retrospective Expression" with a large text area for input. At the bottom right, there are "OK" and "Cancel" buttons.

6. Additionally, in the **Output Parameters** pane, click the **Download** icon to download the Calculation Preference formula in an Excel format to your local system. You can modify the formula in this downloaded template and then click the **Import** icon in the **Output Parameters** pane to import the modified formula to the application.

## Reinsurance Settlement Computation

This chapter provides information on the Reinsurance Settlement Computation feature.

### Access Reinsurance Settlement

You can access the **Reinsurance Settlement** window by clicking the **Reinsurance Settlement Computation** element from the left-hand side menu. When you click this element, the **Reinsurance Settlement** window is displayed:

**Figure 3-18 Reinsurance Settlement Window**

The screenshot shows the "Reinsurance Settlement" window in the Oracle Insurance Accounting Analyzer. It includes a search bar, a "Name" input field, and a "Folder" dropdown set to "IIA81SEG". Below is a table listing various settlements.

| Name                            | Folder   | Legal Entity         | Line of Business     | Creation Date       | Created By | Workflow status | Status  |

This window displays the existing reinsurance settlement in the **Reinsurance Settlement** pane. This window also enables you to define new reinsurance settlement, edit the existing reinsurance settlement, and view the details of existing reinsurance settlement.

### Create a New Reinsurance Settlement

Perform the following steps to create new reinsurance settlements:

1. In the **Reinsurance Settlement** pane, click **Add** to open the **Reinsurance Settlement** window.

Figure 3-19 Reinsurance Settlement Window

2. Populate the **Reinsurance Settlement** form as tabulated.

**Note**

Except for the **Description** field, all the fields are mandatory.

Table 3-2 The Reinsurance Settlement pane

| Field               | Description                                                                                        |
|---------------------|----------------------------------------------------------------------------------------------------|
| Name                | Enter a name for the reinsurance settlement.<br>This is a mandatory field.                         |
| Description         | Enter a description for the reinsurance settlement.                                                |
| Folder              | Select a folder from the drop-down list.<br>This is a mandatory field.                             |
| Legal Entity        | Click the <b>Launch Hierarchy</b> icon to select a legal entity.<br>This is a mandatory field.     |
| Line of Business    | Click the <b>Launch Hierarchy</b> icon to select a line of business.<br>This is a mandatory field. |
| Product             | Click the <b>Launch Hierarchy</b> icon to select a line of business.<br>This is a mandatory field. |
| Business Segment    | Select a business segment from the drop-down list.                                                 |
| Reinsurer           | Select a reinsurer from the drop-down list.                                                        |
| Currency            | Select a currency from the drop-down list.<br>This is a mandatory field.                           |
| Calculation Method* | Select a calculation template from the drop-down list.<br>This is a mandatory field.               |

3. Click **Submit** or click **Save** and then **Submit** to submit the reinsurance settlement to the approver.

## Edit a Reinsurance Settlement

Perform the following steps to edit a reinsurance settlement:

1. In the **Reinsurance Settlement** table, select the checkbox adjacent to the reinsurance settlement that you want to edit.
2. Click **Edit**, to open the **Reinsurance Settlement** window.
3. Update the available fields. For more information, see [Create a reinsurance settlement](#).

### Note

Reinsurance settlements that are in the *Approved* state are not available for editing.

4. Click **Save**.  
The saved reinsurance settlement is displayed in the **Reinsurance Settlement** pane on the **Reinsurance Settlement** window.

## Create a New Version of a Reinsurance Settlement

Perform the following steps to add a new version of a reinsurance settlement:

1. On the **Reinsurance Settlement** pane, select the desired reinsurance settlement and click **Create New Version**, to open the reinsurance settlement window.
2. Select a calculation preference template from the **Calculation Preference** drop-down list, and then click **Modify** to open the **Modify** window.
3. In the **Effective From \*** field, click the **Select Date.** icon and select a date. This is a mandatory field.
4. In the **Justification** field, enter a justification for modifying the reinsurance settlement. This is a mandatory field.  
A new version of the reinsurance settlement is added to the **Reinsurance Settlement** pane.

## View a Reinsurance Settlement

Perform the following steps to view a reinsurance settlement:

1. In the **Reinsurance Settlement** table, select the checkbox adjacent to the reinsurance settlement that you want to view.
2. Click **View**, to open the **Reinsurance Settlement** window.
3. Click **Cancel** to go back to the **Reinsurance Settlement** page.

## View a Reinsurance Settlement Version

Perform the following steps to view the version of a reinsurance settlement:

1. On the **Reinsurance Settlement** pane, click **Version History** to open the **Version Details** window.

**Figure 3-20 Version History Window**

2. View the version details of the Reinsurance Settlement and then click **Close**

## Delete a Reinsurance Settlement

### **Note**

reinsurance settlement versions that have been executed with the *Success* status are not available for deletion.

1. In the **Reinsurance Settlement** table, select the checkbox adjacent to the reinsurance settlement that you want to view.
2. Click **Delete**.
3. Click **Yes**.  
The selected reinsurance settlements are deleted.

## Create a New Liability Calculation Definition

Perform the following steps to create a new Liability Calculation Definition:

1. In the **Liability Calculations** table, click **Add** to open the **Liability Calculation** window.

## Report Configuration

### Access Reports Configuration

The Reports Configuration feature allows the user to modify the reports pre-packaged with the extension pack.

You can access the **Reports Configuration** window by clicking the **Reports Configuration** element from the left-hand side menu. When you click this element, the **Reports Configuration** window is displayed:

Figure 3-31 The Reports Window

The screenshot shows the 'Reports' window with a search bar at the top. Below the search bar are filters for 'Name', 'Reinsurance Type', and 'Method'. The main area displays a table of reports. The table has columns: Name, Method, Creation Date, Created By, Default, and Reinsurance Type. The table contains 12 rows of data, including reports like 'Roll Forward Analysis - VFA - DI-Default', 'Roll Forward Analysis - VFA - DI', 'Roll Forward Analysis - Premium Allocation Approach - RI', etc.

| Name                                                     | Method                      | Creation Date       | Created By | Default | Reinsurance Type |
|----------------------------------------------------------|-----------------------------|---------------------|------------|---------|------------------|
| Roll Forward Analysis - VFA - DI-Default                 | Variable Fee Approach       | 09/23/2024 09:43:15 | SYSADMIN   | Yes     | Insurance        |
| Roll Forward Analysis - VFA - DI                         | Variable Fee Approach       | 09/23/2024 09:43:03 | SYSADMIN   | No      | Insurance        |
| Roll Forward Analysis - Premium Allocation Approach - RI | Premium Allocation Approach | 09/23/2024 09:43:01 | SYSADMIN   | No      | Reinsurance Held |
| Roll Forward Analysis - Premium Allocation Approach - DI | Premium Allocation Approach | 09/23/2024 09:43:00 | SYSADMIN   | No      | Insurance        |
| Roll Forward Analysis - PAA - RI-Default                 | Premium Allocation Approach | 09/23/2024 09:43:13 | SYSADMIN   | Yes     | Reinsurance Held |
| Roll Forward Analysis - PAA - DI-Default                 | Premium Allocation Approach | 09/23/2024 09:43:12 | SYSADMIN   | Yes     | Insurance        |
| Roll Forward Analysis - GMM - RI-Default                 | General Measurement Model   | 09/23/2024 09:43:14 | SYSADMIN   | Yes     | Reinsurance Held |
| Roll Forward Analysis - GMM - RI                         | General Measurement Model   | 09/23/2024 09:43:02 | SYSADMIN   | No      | Reinsurance Held |
| Roll Forward Analysis - GMM - DI-Default                 | General Measurement Model   | 09/23/2024 09:43:14 | SYSADMIN   | Yes     | Insurance        |
| Roll Forward Analysis - GMM - DI                         | General Measurement Model   | 09/23/2024 09:43:01 | SYSADMIN   | No      | Insurance        |
| Reconciliation - Variable Fee Approach - DI-Default      | Variable Fee Approach       | 09/23/2024 09:43:12 | SYSADMIN   | Yes     | Insurance        |
| Reconciliation - Variable Fee Approach - DI              | Variable Fee Approach       | 09/23/2024 09:42:50 | SYSADMIN   | No      | Insurance        |

This window displays the existing repline configurations in the Reports table. This window also enables you to modify and view repline configurations.

The reports suffixed as *Default* are non-editable and the product related changes, if any, to the reports for future releases will be reflected in these reports. The reports that are not suffixed as *Default* are editable and the product related changes, if any, to the reports for future release will not impact these reports.

### Search for a Report

The search feature enables you to filter the list of existing reports and find the reports that you require. To search for a repline, enter the keyword in the **Name** field or select a value from the **Folder**, **Method**, and **ReinsuranceHeld** drop-down lists before clicking the **Search** icon.

The list of reports that match your search criteria are displayed.

# Modify a Report

Perform the following steps to modify or add a report:

①

**Note**  
Only reports that contain the status as *No* under **Default** columns can be modified.

- 1. On the **Reports** page, select the checkbox adjacent to the report that you want to edit.
- 2. Click **Edit**, to open the **Reports Configuration** window.

| Mapping (Section Details)                                  | <p>Select a repline and a section from the <b>Reports Details</b> and <b>Section Details</b> sections respectively and then click the <b>Mapping</b> icon. The mapping window for the selected repline and section appears:</p> <ol style="list-style-type: none"> <li>Select a value from the <b>Section</b> drop-down list</li> <li>Select a value from the <b>Expression Type</b> drop-down list. <ul style="list-style-type: none"> <li><b>Output Formula</b> - If <i>Output Formula</i> is selected as the expression type then you can use output variables in the <b>Expression</b> section.</li> <li><b>Input Formula</b> - If <i>Input Formula</i> is selected, the <b>Assumption Type</b> field appears. Select an assumption type and select the desired input variables to populate the <b>Expression</b> section.</li> </ul> </li> <li>Select the desired output variables to build the expression in the <b>Expression</b> field.</li> <li>Click <b>Apply</b>.</li> </ol> |

- Click **Save**.
- Click **Publish**.  
The updated repline appears in the list of replines on the **Reports** page.

## View a Report

Perform the following steps to view a report:

- On the **Reports** page, select the checkbox adjacent to the report you want to view.
- Click the **View** icon, to open the **Reports Configuration** window.

**Note**

You cannot edit any of the fields in *View* mode.

3. Click **Cancel** to go back to the **Reports** page.

# Subledger Attributes

In the Subledger Accounting Attribute screen, the **Extension Pack Enabled** feature is available.

## Create New Subledger Definition

**Note**

When creating a Subledger definition with a Subledger Attribute, it can only be created with an Approved Subledger Attribute.

Perform the following steps to create new sub-ledger definitions:

**Note**

If you want to import definitions created by you, then see the Object Migration section in the [OFS Analytical Applications Infrastructure User Guide](#).

1. In the **Subledger Definition** pane, click **Add** to open the **Subledger Process** window.

| Field                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Select General Ledger Accounts | <p>Click Hierarchy Selection to select a value from the following fields:</p> <p>Note: You must create the members and hierarchies in the Member and Hierarchy Maintenance window to populate data in this field. For more information about creating members and hierarchies, see the <a href="#">OFS Analytical Applications Infrastructure User Guide</a>.</p> <ul style="list-style-type: none"> <li>• Hierarchy Folder: Select a hierarchy folder from the drop-down.</li> <li>• Hierarchy: Select a hierarchy from the drop-down.</li> <li>• Members: Add or remove members from the Selected Members pane. By default, all accounts will appear in this list.</li> </ul> |
| Execution Type                 | <p>This feature enables the execution of Incremental or YTD runs as per the respective calculations and produces entries that are aligned with the CSM engine-generated disclosures.</p> <p>Select either <i>Incremental</i> or <i>YTD</i> from the drop-down list.</p> <p><b>Note:</b> Once a definition is saved, the Execution Type cannot be changed</p>                                                                                                                                                                                                                                                                                                                    |
| Extension Pack Enabled         | <p>When this feature is enabled, <a href="#">Liability Calculation definitions</a> that were created with the <b>Extension Pack</b> feature enabled in the <b>Liability Calculations</b> screen will be available.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Business Segment               | Select a value from the drop-down list.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Product                        | <p>Click Hierarchy Selection adjacent to this field. Select the required Legal Entity from the Hierarchy Selection Window.</p> <p>For more information, see <a href="#">Hierarchy Selection</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

3. Click **Save**.
4. Select the **Accounting Rules** tab.

**Figure 3-37 The Accounting Rules Tab**

The screenshot shows the 'Subledger Process' window with the 'Accounting Rules' tab selected. The 'Import Accounting Rules' section is expanded, displaying several input fields: 'Legal Entity' (Life and Pensions Ltd), 'Line Of Business' (Life Insurance), 'Run Type' (Solo), 'GAAP Code' (Afghanistan GAAP), 'Calculation Method' (General Measurement Model), and 'Version'. An 'Import' button is located below these fields. At the bottom of the window, there are 'Save', 'Submit', and 'Cancel' buttons.

5. Populate the **Import Accounting Rules** pane in the **Accounting Rules** tab.

**Table 3-6 The Import Accounting Rules pane**

| Field                                                         | Description                                                                                                                                                                                                                                                                                                                                                                  |

7. Populate the **Accounting Rules** pane.

**Table 3-7 The Accounting Rules pane**

| Field                                | Description                                                                                                                |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------|
| Hide Empty Rows                      | Click <b>Enable</b> if you want to hide empty rows. When enabled, the empty rows in the Accounting Rules table are hidden. |
| Accounting Attributes                | Select an attribute from the drop-down list.                                                                               |
| Debit Account                        | Select a debit account from the drop-down list.                                                                            |
| Debit Source Account                 | Select a credit account from the drop-down list.                                                                           |
| Credit Account                       | Select a debit account from the drop-down list.                                                                            |
| Credit Source Account                | Select a credit account from the drop-down list.                                                                           |
| Modify Accounts for Opposite Signage | Select this checkbox if you want to modify accounts for opposite signage.                                                  |
| Journal Comments                     | Enter the required journal comments for the sub-ledger.                                                                    |
| Workflow Comments                    | Enter the required workflow comments for the sub-ledger.                                                                   |

The pane allows you to perform the following actions:

- Insert a new row before
  - Insert a new row after
  - Delete selected rows
  - Copy
  - Export the entries into an Excel spreadsheet that is automatically downloaded into your system.
8. If you want to view the information about the GL accounts and account attributes, in the upper-right corner of the table, click the icon to download the Excel file.
  9. Additionally, click **Export Accounting Rules** to download the Excel file on your system.
    - Fill the Excel file with the required data.
    - Copy the data from Excel and paste it into the respective columns in the **Copy Accounting Rules** pane.

**Note**

You must ensure the following:

- The data in the columns in the application must exactly match the data as per the columns in the Accounting Rules Excel. If the rules data was not added correctly, then the system will give you a validation error and you must add the rules data correctly in the corresponding columns in the application.
- Your system must contain the same GL entries as per the entries in the Debit Account column in the Accounting Rules Excel. If you copy and paste a GL entry that your system does not contain from Excel into the Debit Account column in the application, then the system will not validate it.

10. Click **Save**.
11. Click the **Accounting Rules Criteria** tab.

**Figure 3-39 The Accounting Rules Criteria tab**

12. Click **Add** to open the **Accounting Rules Criteria Window**.

**Figure 3-40 The Accounting Rules Criteria Window**

- a. In the **Assumptions** drop-down list, select an assumption. You can link an input variable to multiple assumptions for a single expression. The available options are:
  - Closing Position
  - Credit Risk
  - Current Accident Year Accident Period
  - Current Accident Year Prior Accident Period
  - Economic Assumptions
  - Economic Experience
  - Experience Adjustment – Lapse
  - Experience Adjustment – Morbidity
  - Experience Adjustment – Mortality
  - Experience Adjustment – Others
  - Future Inflation Assumption
  - Lapse Assumption
  - Market Volatility

- Morbidity Assumption
  - Mortality Assumption
  - New Business
  - Non Economic Assumptions
  - Non-Economic Experience
  - Opening Adjustment
  - Opening position
  - Other Future Assumptions
- b. In the **Period Type** drop-down list, select either *Incremental* or *YTD*.
- c. In the Input Variables pane, select the required input variables from the list to populate the Expression pane.
- d. In the Output Variables pane, select the required output variables from the list to populate the Expression pane.
- e. In the Accounting Attributes pane, select the required accounting attribute from the list to populate the Expression pane.
- f. In the Other Parameters pane, select the required functions and operators. The following are the available functions and operators:
- Functions
  - AND
  - ABS
  - Case
  - Floor
  - Greatest
  - Least
  - MOD
  - OR
  - Operators
  - Greater than
  - Plus
  - Minus
  - Less Than
  - Equal
- g. After you have built your Expression, click **Validate** and **Apply**.
13. Click **OK**.  
The condition is added to the accounting attribute.

**Note**

A condition can be mapped to multiple attributes but an accounting attribute can be mapped only to a single condition. For example, you have created Condition A and Condition B. You have mapped Condition A to Accounting Attributes A1, A2, and A3. But the same accounting attributes cannot be mapped to Condition B.

**14. Click the **Aggregation Logic** tab.**

The AggregationAttributes tab is displayed and contains the Cohort, Coveragetype, Inceptionyear, Levelofaggregation, Lineofbusiness, Location, Onerousclassification, and Productsattributes.

This tab allows you to aggregate the results and pass journal entries at a chosen consolidated level. Consolidated entries might give added insights into the impact of changes on the chosen grouping.

**Note**

Only those credit and debit general ledgers' total balances that are associated with an accounting attribute are checked and added to the journal entry. This ensures that only balanced journal entries are passed. If there is an imbalance between the accounting attributes, then the accounting attributes' general ledger balances will not be passed to the journal entries.

**18. Select the required source runs. This is the list of CSM or Liability Calculation runs that have been executed. The source runs that appear in this tab, depending on the values that you selected in the **Legal Entity**, **Line of Business**, **Calculation Method**, **Run Type**, fields in the **Definition Details** tab.**

19. Click **Save**.
20. If you want to send it to the approver then click **Submit**.  
After a subledger definition has been submitted for approval, you cannot modify any fields. You can modify the fields only if the Approver has rejected the Subledger Definition.

The **Audit Trail** pane at the bottom of the Definition window displays the **Created By**, **Creation Date**, **last modified by**, and **Last modification date details**. The **User Comments** field enables you to add additional information as a comment.

## Subledger Reports Configuration

This chapter provides information on the subledger reports configuration feature.

### Access Subledger Reports Configuration

The Subledger Reports Configuration feature allows the user to modify the subledger reports pre-packaged with the extension pack.

You can access the **Subledger Reporting Line Summary** window by clicking the **Subledger Reports Configuration** element from the left-hand side menu. When you click this element, the **Subledger Reporting Line Summary** window is displayed:

**Figure 3-43 The Subledger Reporting Line Summary Page**

Subledger Reporting Line Summary

| <input type="checkbox"/> | Balance Sheet Abstract Report-EP-Default | B           | 2025-05-07 03:11:47 | SYSADMN    | IFRS17             | Yes     | Yes    |
| <input type="checkbox"/> | Statement of Profit and Loss-EP-Default  | P           | 2025-05-07 03:11:47 | SYSADMN    | IFRS17             | Yes     | Yes    |

This window displays the existing subledger reports configurations in the **Subledger Reporting Line** table. This window also enables you to modify and view subledger reports configurations.

The reports suffixed as *Default* are non-editable and the product related changes, if any, to the reports for future releases will be reflected in these reports. The reports that are not suffixed as *Default* are editable and the product related changes, if any, to the reports for future release will not impact these reports

### Search for a Subledger Reports Configuration

The search feature enables you to filter the list of existing configurations and find the configurations that you require. To search for a subledger reports configuration, enter the keyword in the **Name** field before clicking the **Search** icon.

The list of subledger reports that match your search criteria are displayed.

## Edit a Subledger Reporting Line Summary

Perform the following steps to edit a Subledger Reporting Line:

1. In the **Subledger Reporting Line** pane, select the checkbox adjacent to the subledger reporting line that you want to edit.
2. Click **Edit**, to open the **Subledger Reporting Line** window.

**Figure 3-44 Subledger Reporting Line**

3. Update the **Name** and **Description** fields.
4. In the **Reporting Line Details** section select a reporting line.
5. In the **Expression** section, from the **GL List** section select the desired expressions and then click **Apply**.
6. Click **Publish** and then click **Save**.  
The edited Subledger Reporting Line is displayed in the **Subledger Reporting Line** pane.

## View a Subledger Report Configuration

Perform the following steps to view a Subledger Reporting Line:

1. In the **Subledger Reporting Line** pane, select the checkbox adjacent to the Subledger Reporting Line that you want to view.
2. Click **View**, to open the **Subledger Reporting Line** window.
3. Click the desired Reporting Line Details to view the current expression.

### Note

You cannot edit any of the fields in View mode.

4. Click **Cancel** to go back to the **Subledger Reporting Line Summary** window.

## References

This section covers the reference topics.

### Object Migration

Object Migration of multiple versions of Oracle Insurance Accounting Analyzer Extension PAAK definitions are supported.

The following OIAA EP features definition versions are supported in Object Migration:

- [Calculation Preference](#)
- [Liability Calculation](#)
- [Reinsurance Settlement](#)

Specific versions of a definition can be selected for object migration. Note that when the parent definition is selected for migration, only the parent is migrated and not the underlying children. But when a child is selected for migration, the parent too is migrated.
