## About This Guide

This guide provides information on the newly released Oracle Insurance Accounting Analyzer Application.

### Audience

This document is intended for users of the Oracle Insurance Accounting Analyzer Application.

### Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

### Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

### Related Resources

### Conventions

The following text conventions are used in this document.

Convention	Meaning
<b>boldface</b>	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

## Intended Audience

This document is intended for users of the Oracle Insurance Accounting Analyzer Application Pack.

## Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> if you are hearing impaired.

## Introduction to Oracle Insurance Accounting Analyzer Application Pack

IFRS 17 and LDTI are new accounting standards that supersede the current existing practice. The new standards provide the users of financial statements with a new perspective on the financial accounts of insurance companies.

Insurance companies must identify the risks that arise from the insurance contracts along with the calculation of assets and liabilities. IFRS 4 was introduced in March 2004 and was intended to provide limited improvements to accounting for insurance contracts. IFRS 4 permitted companies to continue previous accounting practices for insurance contracts but did enhance the disclosure requirements.

IFRS 17 standards, released in May 2017, supersede the current reporting standards in IFRS 4 on accounting for insurance contracts and have an effective date of 1 January 2021. The new standards provide users of financial statements with a new perspective of the financial accounts of insurance companies. IFRS 17 introduces an approach that tackles some challenges in accounting for insurance contracts currently addressed inconsistently when a company applies IFRS 4.

- IFRS 17 provides updated information about the obligations, risks, and performance of insurance contracts.

- Increases transparency in financial information reported by insurance companies, which gives investors and analysts more confidence in understanding the insurance industry.
- Introduces consistent accounting for all insurance contracts based on a current Measurement Model.

Amendments in LDTI apply to all insurance entities that issue long-duration contracts and emphasize the following:

- Improves the timeliness of recognizing changes in the liability for future policy benefits and modifies the rate used to discount future Cash Flows.
- Simplifies and improves the accounting for certain market-based options or guarantees associated with deposit (or account balance) contracts.
- Simplify the Amortization of deferred acquisition costs.
- Improve the effectiveness of the required disclosures.

## Why Oracle Insurance Accounting Analyzer?

Oracle Insurance Accounting Analyzer Application enables compliance with accounting standards for insurance contracts issued by FASB and IASB. The solutions help them adhere to the disclosure requirements as proposed under these standards. IFRS 17 requires insurance companies to have consistent accounting standards for the insurance contracts which ensures timely recognition of losses in the book of accounts. Insurance companies are required to identify and report the Fulfillment Cash Flows and Contractual Service Margin at every reporting date, based on the current market conditions. Oracle Insurance Accounting Analyzer Application helps the organizations to conclude the insurance obligations (insurance contract liabilities reported on the balance sheet), using different methodologies for a set of portfolios, by assessing the net liability for every insurance contract.

IFRS 17 standard also requires the entities to perform initial recognition of insurance contracts and execute periodical reassessment of the insurance liabilities, based on the current assumption sets. The insurance liabilities are presented in every reporting period and those reflect the change in the amount since inception. The profitability of insurance contracts is amortized over the duration of the contract, based on the services provided. One of the critical requirements of IFRS 17 is to estimate the measurements at the most granular level, rather than at the aggregated portfolio level. Groups are formed with a portfolio to reflect the insurance contract that shares similar risks. The financial report separately showcases the asset and liabilities of the groups of contracts. This primarily involves showcasing the insurance and finance results separately per insurance group.

The Oracle Insurance Accounting Analyzer with the LDTI solution provides the capability to execute the calculations of disaggregated liability estimates with calculation logic easily configured for different product types. The calculations can be executed at the granularity chosen by the user based on the business needs. The solution also supports the calculation of the net premium and the retrospective calculations based on the standard requirements. The solution also comes with multiple out-of-box reports to adhere to the standard enhancement.

## What is New in this Release

Oracle Insurance Accounting Analyzer bundles the following new features:

- A new weighted-average interest accretion macro is introduced. It is calculated by weighted-averaging the locked-in interest rates with the input variables as weights that can be configured on the **Calculation Preference** user interface. Refer to the **Weighted-average Interest Accretion Macro Illustration** spreadsheet on MOS for further details.

- **FSI\_INS\_GROUP\_INPUT\_DETAILS** and **FSI\_INS\_CONTRACT\_INPUT\_DETAIL** tables are nearing the maximum allowed column limit of 1000 columns each. Two new tables – **FSI\_INS\_CONTR\_INPUT\_DETAIL\_EXT** and **FSI\_INS\_GROUP\_INPUT\_DETAIL\_EXT** – are added to support addition of the new pre-seeded input variables.

## Deprecated Features

There are no deprecated features in this release.

## De-supported Features

There are no de-supported features in this release.

## Installing this Maintenance Level Release

For detailed instructions to install this Maintenance Level Release, see the [Oracle Insurance Accounting Analyzer Installation Guide Release 8.1.2.9.0](#).

## Oracle Insurance Accounting Analyzer Release 8.1.2.10.0

Oracle Insurance Accounting Analyzer Release 8.1.2.10.0 is a separately licensed product.

**38753773**- OFS IAA Pack Release 8.1.2.10.0 includes all enhancements and bug fixes that are done since the 8.1.2.9.0 release.

### Bugs Fixed in this Release

The following bugs are fixed in this release:

**Table 2-1 The List of Fixed Bugs in Release 8.1.2.10.0**

Sr.No.	Bug ID	Description
1	38746397	NEWLY CREATED SUBLEDGER ACCOUNTING ATTRIBUTES IS HAVING ZERO GL AMOUNT DURING SL RUN

### Known Issues or Limitations

The following are the Limitations in Release 8.1.2.10.0:

- IFRS17 Reinsurance Transition Method (MRA for GMM and PAA) is not supported.
- Exporting Subledger Accounting Rules in *View Mode* is not supported.
- Macros are not supported when Onerous Classification Code is given as **OTH** (*Others*) or **MSG** (*Missing*) in the Stage Group Dimension Map table.
- Two DQ Rules, **DQINSCONTRACT683** and **DQINSCONTRACT663** are failing for the positive scenario in the **stg\_health\_ins\_contracts** table.
- The report batches fail when two different liability calculations are run with same FIC date at the same time.
- Bug 38814462 : PERFORMANCE: CSM BATCH : PROJECTIONS (3): TASK 3 IIA PROJECTION CSM DATA TAKING 55 MINS FOR COMPLETION FOR ONE FIC\_MIS\_DATE: This bug will be fixed in a future release.
